- Ant-proof kitchen garbage pails with sticky barriers such as petroleum jelly under the lip and pet dishes by placing them in a moat of water.
- Remove sweet food sources next to your house such as aphid-infested bushes and ripened fruit on trees.

When ants invade your house, take these steps:

- Sponge invaders with soapy water as soon as they enter.
- Plug up ant entryways with caulk or petroleum jelly.
- Remove infested potted plants.
- Clean up food sources.
- Rely on baits to control the ant colony.
- Indoor sprays are not usually necessary.

How and why baits work best:

When using bait, place it along ant trails and at nest openings. Worker ants will be attracted to bait and take it back to the nest where the entire colony, including queens, may be killed. The bait must be slow-acting so workers won't be killed before they get back to the nest. It may take several weeks for results to be evident. Just killing workers foraging in your home or garden does little to control the colony, because as few as one percent of a colony's foraging worker ants are able to provide sufficient food to support nestbound queens and larvae. Baits in bait stations or ant stakes are easiest to use and safest for the environment.

Aphids

Almost every plant has one or more aphid species that occasionally feeds on it, but low to moderate numbers of aphids are usually not damaging in gardens or on landscape trees. Although aphids can curl leaves and produce sticky honeydew, they rarely kill plants and can often be washed off with water. When aphid numbers get high, natural enemies frequently feed on them, eliminating the need for pesticides. Insecticidal soaps and oils are less toxic pesticides that can be used when treatment is necessary.

Aphids are common in your garden because:

- Aphids like lush new growth. Don't over fertilize. Use organic fertilizers or slow-release products.
- Aphids build up on flowering plums, roses, tulip trees, crape myrtles, apples, and many vegetables. Expect aphids when you grow these plants.
- Ants protect aphids from their natural enemies. Keep ants off plants to get more benefit from these beneficial insects.

To reduce aphids:

- Prune out infested leaves and stems.
- Knock aphid populations off plants by shaking or spraying with a strong stream of water.
- Protect seedlings with covers or aluminum soil mulches.
- Wait for hot weather; most aphids are heat-intolerant and will be gone by mid-June.

Protect aphids' natural enemies:

- Lady beetles, both adults and larvae
- Lacewings
- Syrphid fly larvae
- Soldier beetles
- Parasitic mini-wasps that turn aphids into crusty mummies (See reverse for insect drawings)

Natural enemies of aphids such as lady beetles and lacewings will come into your garden naturally when aphids are abundant. Protect these good bugs by avoiding the use of insecticides that may be toxic to a broad variety of insects.

If insecticides seem necessary, use the safest products:

- Nonchemical pest control methods should be used first to manage aphid populations. However, if you feel insecticides are necessary, choose less toxic products.
- Insecticidal oils and soaps are the safest products. When properly used, these materials solve most pest problems.
- Oils and soaps work by smothering aphids, so application must be thorough. Don't apply to drought-stressed plants or when it is very hot. A few plants are sensitive to these products.
- Insecticidal soaps, soap-pyrethrum mixtures, or neem oils are often applied on vegetables or small bushes like roses.
- Narrow range oils, like parafinic, supreme or superior oils, are appropriate for larger trees.
- Oils and soaps don't kill aphids hidden within curled leaves. Prune these out. Systemic insecticides can kill hidden aphids, but they are much more toxic and not registered for use on garden vegetables or fruit trees.

Cockroaches

HEALTHY GARDEN HEALTHY HOME

Cockroaches thrive in warm environments that provide food, water, and shelter. Roaches hide in cracks, crawl spaces, and other dark places during the day and come out at night to feed. Pesticide sprays alone will not control roaches and are not usually required. Baits provide better control. You must integrate several strategies to make your home a less roach-friendly environment. Thoroughness is essential for effective control.

Identify your cockroach species first:

- Effective management options vary according to species.
- Cockroach traps provide an easy way to catch roaches for identification.
- Control practices for outdoor invaders (American, oriental roaches) and indoor residents (brownbanded and German roaches) differ.
- For help with identification go to www.ipm.ucdavis.edu.

Remove food and water sources:

- Even tiny crumbs or liquids in cracks provide good food sources.
- Store food in sealed containers.
- Keep trash in containers with tight lids.
- Eliminate plumbing leaks.
- Vacuum cracks and crevices and clean floors and counters daily.

Remove roach hiding places:

- Seal cracks and other openings to prevent invaders from the outside.
- Seal cracks in false bottoms of cupboards and other indoor hiding places.
- Seal or clean up other areas where you find roaches or their egg cases hiding.
- Remove old newspapers, boxes, and other clutter in kitchens and bathrooms.
- The oriental cockroach hides outdoors under ivy and other shelter. Check to see if you have this roach and remove outdoor hiding places or bait.

Use traps to identify and track cockroach populations:

- Cockroach traps are available in hardware stores.
- Place traps on the floor around edges of walls, in cupboards and other places where you think roaches are foraging. Place bait stations at locations where you trap roaches.
- Check traps daily.
- Sticky traps with pheromones may provide some control of German cockroaches.

Using chemicals to control cockroaches:

- Avoid use of foggers, bombs, or aerosol sprays — they just disperse populations.
- Boric acid powder blown into cracks, crevices, hollow walls, under refrigerators, or other undisturbed hiding places is very effective (allow 7 days or more for an effect to be seen).
- Bait stations containing boric acid, abamectin, fipronil, or hydramethylnon placed near hiding places can be effective if other food sources are removed (allow 7 days or more for an effect to be seen). Replace stations as needed as long as roaches are being caught.
- Insecticide sprays alone do not give long-term control. They are not necessary if other methods such as baits and boric acid powder are combined along with cleanup and removal of hiding places.
- Contact a professional pest control operator for very serious infestations, but be sure they use an integrated program as described above.

Earwigs

HEALTHY GARDEN HEALTHY HOME

While their prominent tail-end pincers may look ferocious, earwigs are not harmful to people. Earwigs may seriously damage seedling vegetables and chew holes in annual flowers, soft fruit, and corn silks, but earwigs also play a beneficial role by feeding on aphids and other insects. Nocturnal in habit, earwigs feed at night and hide during the day in dark, cool, moist places in the yard or within flowers or vegetables. To manage earwigs, reduce hiding places and moisture, and employ a vigilant trapping program.

Should you be concerned about earwigs in your garden?

- Yes, if you are growing vegetables, herbaceous flowering plants, sweet corn, or plants with soft fruits like strawberries and apricots.
- No, if your garden is primarily lawn, trees, and woody ornamentals or native plants.

Reduce outdoor hiding places:

- Eliminate dense undergrowth of vines, ground cover and weeds around vegetable and flower gardens.
- Prune away fruit tree suckers.
- Remove leaves, boards, boxes, trash, and other debris from planting areas.
- Move flower pots and other garden objects and structures that can harbor earwigs.
- Check plastic or organic mulches and remove them to limit earwig numbers.

Trap earwigs until they are gone!

- Trap earwigs with rolled newspaper, bamboo tubes, or short pieces of hose. Place these traps on the soil near plants just before dark, and shake accumulated earwigs out into a pail of soapy water in the morning. A low-sided can filled with oil and a drop of bacon grease or fish oil also makes a good trap. Daily trapping will reduce earwig populations to tolerable levels.

Other ways to reduce earwig problems:

- Drip irrigate where possible to reduce surface moisture.
- Keep earwigs out of stone fruit trees with a band of sticky substance like Tanglefoot, around the trunk, and harvest fruit as soon as it ripens.
- Insecticides should rarely be needed.

Inside the home:

Earwigs may seek refuge indoors when conditions outside are too dry, hot, or cold. Large accumulations of earwigs can be annoying but present no health hazards. When earwigs invade your home follow these steps:

- Sweep or vacuum up invading earwigs.
- Seal up cracks or other entry points.
- Remove debris from gutters and around entryways.
- Keep water and moisture away from structures.
- Replace white outdoor lights with yellow ones, which are less attractive to earwigs.
- Indoor application of pesticides is not recommended.

*Use **NON-CHEMICAL** methods & **LEAST TOXIC** pesticides. **WHY?** Runoff from around your home and garden carries water containing pesticides that pollute our streams, rivers, lakes and oceans.*

Learn more about San Diego regional water quality at: www.ThinkBlueSD.org & www.ProjectCleanWater.org.

Fleas

Fleas are particularly annoying to people and pets, especially during spring and early summer when their numbers tend to increase dramatically. The common flea in California is the cat flea. Despite its name, it attacks both dogs and cats and will also bite humans. To keep fleas out of your home, control fleas on your pet and regularly clean pet sleeping areas.

On the pet:

Recently, a number of very effective and safe new products for flea control on the pet have become available. Remember to supplement pet treatments with regular cleaning of your home and periodic combing with a pet flea comb to detect new infestations.

- Spot-on formulations are applied to the animal's coat, providing flea control for 1 to 3 months. Available from veterinarians or over-the-counter.
- Systemic flea control products, available from vets, are given as a pill or food additive. While they do not kill adult fleas, they prevent reproduction.
- Flea collars containing insect growth regulators (IGRs) give protection for up to 6 months on dogs and up to a year on cats. Be sure to choose collars containing methoprene or pyriproxyfen.
- Flea shampoos and soaps, powders and dusts, spray-on liquids, and dips are less effective and more hazardous to pets, people, and the environment than the three types of products above.

In the yard:

Outdoor treatment is rarely needed, but if your pet regularly sleeps outside and flea numbers are high, these areas can be treated with a spray containing pyriproxyfen. If possible, open sleeping areas to sunlight by removing low hanging vegetation. Immature fleas are unlikely to survive in areas with exposure to sunlight.

Inside the home:

Whether or not you are aware of fleas in your home, regularly vacuum and launder areas where your pet rests to avoid flea buildup. If you have a major flea problem, treat your pet with one of the options on the front of this card and follow the steps below.

- Locate heavily infested areas (usually areas where the pet rests) and concentrate treatment there.
- Wash throw rugs and pet bedding.
- Vacuum upholstered furniture, cleaning under cushions and in crevices.
- Vacuum carpets, especially beneath furniture.
- Use a hand sprayer or aerosol to treat all carpets and unwashable upholstered furniture with an insecticide that contains an IGR (methoprene or pyriproxyfen). This treatment kills larvae but not pupae, so fleas may continue to emerge for up to 2 weeks.
- Over the next 2 weeks vacuum regularly to remove adult fleas that emerge from pupae. Do not reapply pesticides.
- Seal vacuum bags and discard them so fleas don't escape.

*Use **NON-CHEMICAL** methods & **LEAST TOXIC** pesticides. **WHY?** Runoff from around your home and garden carries water containing pesticides that pollute our streams, rivers, lakes and oceans.*

Gardening with Good Bugs

HEALTHY GARDEN HEALTHY HOME

Most gardens contain far more types of good bugs,or beneficial insects, than pest insects. Beneficial insects and other organisms that kill pest insects are called natural enemies. In any pest management or plant care program, it is important to encourage these natural enemies by avoiding pesticides that kill them. You can also encourage beneficial insects by choosing plants that provide them with pollen, nectar, and shelter and keeping ants out of pest-infested plants. Learn to identify good bugs, both in their adult forms and immature (larval) stages.

Common good bugs found in California gardens include:

- Lady beetles: Both adults and larvae consume aphids.
- Lacewings: Lacewing larvae feed on many insect pests; adults are often seen around lights.
- Syrphid flies: Syrphid fly larvae consume aphids; adults hover around flowers.
- Parasitic mini-wasps: Many species of tiny wasps lay their eggs in pests like aphids or caterpillars; their hatching larvae consume the pest and kill it.
- Spiders: All spiders feed on insects or other arthropods and are beneficial in the garden.

(See reverse for drawings of good bugs mentioned above.)

What is Integrated Pest Management?

Integrated pest management (IPM) uses environmentally sound, yet effective, ways to keep pests from annoying you or damaging plants. IPM programs usually combine several pest control methods for long- term prevention and management of pest problems without harming you, your family, or the environment — IPM also reduces pollution in California waterways. Successful IPM begins with correct identification of the pest. Only then can selection of the appropriate IPM methods and materials be made.

Preferred IPM methods include:

- Planting pest-resistant or well-adapted plant varieties like native plants.
- Discouraging pests by modifying the way you design, irrigate, fertilize, and manage your garden.
- Altering the garden or home environment to deprive pests of the food, water, shelter or other requirements they need to thrive.
- Keeping pests out of the home and garden using barriers, screens, and caulking.
- Squashing, trapping, washing off or pruning out pests.
- Relying on good bugs in your garden to eat pests, thereby eliminating the need for insecticides that may end up in our waterways.

Turning to pesticides:

- Only use pesticides when non-chemical controls are ineffective and pests are reaching intolerable levels.
- Use pesticides in combination with the methods described above.
- Choose pesticides carefully so that the least toxic, most effective material is used to protect human health and the environment.

*Use **NON-CHEMICAL** methods & **LEAST TOXIC** pesticides. **WHY?** Runoff from around your home and garden carries water containing pesticides that pollute our streams, rivers, lakes and oceans.*

Head Lice

HEALTHY GARDEN HEALTHY HOME

Head lice can infest anybody, but children are prone to infestations because they play closely and share items that come in contact with the head like hats, headphones, and combs. Head lice are not known to transmit any infectious diseases; they are more of a nuisance than a health risk. Children with head lice, however, are generally not allowed to attend school as long as nits are found in their hair.

Head lice facts:

- Head lice cannot hop, fly, or jump; they crawl. Lice spread only through direct contact with an infested object or person.
- Head lice spend their entire life in head hair and can only survive off a human head for about 1 or 2 days.
- A newly hatched louse must ingest blood within minutes of birth to survive.
- Head lice cannot live on family pets.
- Nits (eggs) that are more than 1 1/4 inch from the scalp probably are dead or have already hatched.

What to look for:

- Intense scratching on the back of the head or neck.
- Tiny white eggs (nits) glued to hair near the scalp.
- Small, rapidly crawling flat insects.

Four steps necessary to manage an infestation of head lice:

1 Use a head louse shampoo if you observe active lice or viable eggs.

- Avoid shampoo products containing lindane, which are available by prescription only. Pyrethrin and permethrin are safer, more effective, and less polluting to wastewater than lindane. Not all eggs will be killed.
- To avoid insecticides entirely, use soap shampoos that contain coconut or olive oils. Most soap shampoos kill all stages of the louse except the egg. Because they are not as effective as products containing pesticides, you must be sure to comb and repeat these shampoos four times at 3-day intervals. Successive shampooing kills newly hatched lice.

2 Remove nits from the head by combing with a specially designed nit comb.

- This step is the key to successful control. Repeat daily as long as you find live lice or nits within 1¦4 inch of the scalp. Use a metal comb specially designed for removing head lice and their eggs. Combs sold with head lice shampoos are not generally effective. Infested hair can also be cut out with small safety scissors.

3 Remove lice and nits from the household.

- Wash clothing and bedding of the infested person in hot water (at least 140°F) and dry in a hot dryer or have them dry cleaned. Place other items (earphones, bike helmets) in plastic and put in a freezer that is 5°F or lower for at least 10 hours. Clean any object that might have come in contact with the infested person's head (stuffed animals, car seats). Vacuum carpets and upholstery. Pesticide sprays are not recommended.

4 Check heads and remove nits daily until infestation is gone. Follow with weekly head checks to detect reinfestation.

Lawn Insects

HEALTHY GARDEN HEALTHY HOME

Contrary to popular belief, insects are not a common cause of residential lawn damage in California. Poor lawn care, especially improper watering and planting inappropriate grass species, are more likely causes of unhealthy or dying lawns. Disease-causing agents, excess orinappropriate use of chemicals such as fertilizer and herbicides, or dog urine also produce lawn damage resembling that of insects. Many insects in the lawn are beneficial. Never apply an insecticide unless a damaging level of a known insect pest is confirmed. Insecticides are only effective if applied at the right time and in the right manner. Some insecticides may kill good bugs too.

How do you know if insects are causing damage?

- Brown spots in lawns can be caused by over- or under-irrigation, plant disease, improper use of chemicals, or dog urine as well as insects.
- Confirm presence of insects before applying an insecticide. For grubs, dig around roots, for other insects perform a drench test. (See reverse.)

Keep your lawn healthy by:

- Planting grass species that do well in your area
- Irrigating deeply and infrequently
- Doing routine maintenance on sprinkler heads
- Applying only 3 to 6 pounds of actual nitrogen per 1000 square feet per year when fertilizing
- Aerating your lawn annually; remove thatch if it exceeds 1/2 inch
- Cutting only one-third to one-half of grass height at each mowing and keeping lawnmower blades sharp

See the UC Guide to Healthy Lawns at www.ipm.ucdavis.edu

If a damaging level of insects is confirmed, do the following:

- Choose an insecticide based on the pest you're targeting.
- Find out which insecticide ingredients target specific lawn insects:
  - *Bacillus thuringiensis* (Bt) kills only caterpillars, including cutworms, lawn moths, and skippers.
  - Insect-attacking nematodes control caterpillars or grubs.
  - Azadirachtin controls cutworms, armyworms, and larvae of lawn moths.
  - Imidacloprid is effective against young lawn grubs.
  - Pyrethroids (e.g., cyfluthrin, bifenthrin) are broadly toxic insecticides that kill chinch bugs, lawn moths, and cutworms, but also kill beneficial insects and should be avoided.
- Get help from UC Cooperative Extension.

HOW TO PERFORM A DRENCH TEST

- Mix 3–4 tablespoons of dishwashing liquid to 2 gallons of water.
- Evenly apply the 2 gallons to 1 square yard of your lawn.
- Monitor the area for 10 minutes and count the number of armyworms, cutworms, or lawn moth larvae that rise to the surface.
- Treat the area only if insect numbers exceed 5 armyworms or cutworms or 15 lawn moths per square yard.

Safe Use & Disposal of Pesticides

HEALTHY GARDEN HEALTHY HOME

Pesticides are designed to be toxic to the pests they target — insects, weeds, and other unwanted home and garden invaders. Always read pesticide product labels carefully and follow all directions on proper use, storage, and disposal of empty pesticide containers. Product labels are your main source of information on how to use a product safely and legally. They include guidelines needed to protect you, your family, and pets. The only allowable way to dispose of unused pesticides is through a household hazardous waste collection site. For the site nearest you in San Diego County call 1-877-713-2784 .

If you must use pesticides, follow these tips to reduce pesticide effects on your local waterways:

- Identify your pest problem and choose the least toxic pesticide that targets your pest and achieves the results you want. If you need help identifying the least toxic pest control method, contact your University of California Cooperative Extension office.
- Determine the right amount of pesticide to purchase. Purchasing exactly the amount you need for the application eliminates the need for storing unused pesticides.
- Use spot treatments whenever possible.

Outdoors

- Avoid overwatering after applying pesticides. Never let pesticide runoff flow into storm drains.
- Do not apply pesticides outdoors when rain is forecast or when it is windy.
- Avoid applying pesticides on paved areas.

Indoors

- Avoid applying pesticides in or near floor drains or sinks.
- Avoid applying pesticides on areas that will be washed or mopped with water, or where food is prepared or stored.

When using and storing pesticides take these precautions:

- Always wear a long-sleeved shirt, pants, and eye protection, and other equipment suggested on the label.
- Store products tightly capped in a locked cabinet out of reach from children and pets.
- Always keep pesticides in their original container.
- Know where to call for help in an emergency!

Pesticide disposal:

- If you cannot use up your pesticides, fertilizers, and weed killers, give them to a friend who may need them.
- Sewage treatment plants are not designed to treat for certain toxic pesticides like diazinon and chlorpyrifos — dumping pesticides into the stormdrain or down the sink is never an option.
- The only allowable way to dispose of unused pesticides is through a household hazardous waste collection site. For household pesticide disposal information for San Diego County, call 877-713-2784.

Finding active ingredients on a pesticide label:

Pesticide labels are required by law to show the active ingredient and its percentage. Minimize or avoid the use of products that contain diazinon and chlorpyrifos – these materials are polluting our waterways. Always read the label before you buy!

Active Ingredient
Chlorpyrifos 4.38%
Inactive Ingredients 95.62%
KEEP OUT OF REACH OF CHILDREN
CAUTION See back panel booklet for additional precautionary statements.
NET CONTENTS 32 FL OZ (1 QT) 946mL

Snails & Slugs

Snails and slugs rank among our most despised garden pests. These slimy mollusks emerge from hiding at night and chew holes in leaves and flowers of many succulent garden plants and fruit. Slugs and snails are similar in structure and biology, except slugs lack the snails' external spiral shell. Management requires a vigilant and integrated approach that includes eliminating moisture and hiding spots, trapping, barriers, and handpicking. Baits can be helpful, but by themselves, don't provide adequate control in gardens that contain plenty of shelter, food, and moisture.

How do you know snails and slugs are causing damage?

- You may not observe these pests at first because they feed at night and hide during the day. Go out at night or early morning to view them in action.
- Other pests can cause holes in leaves, flowers, and fruit. Look for the shiny, slimy trails slugs and snails leave behind.

What must be done to reduce snails and slugs?

- Remove daytime hiding places — ivy, weedy areas, debris, or boards.
- Regularly remove snails from shelters you cannot eliminate such as low ledges on fences, undersides of decks, meter boxes.
- Place traps in your garden and dispose of trapped snails and slugs daily.
- Reduce moist surfaces by switching to drip irrigation or sprinkling in the morning rather than later in the day.
- Consider snail-proof plants such as impatiens, geraniums, begonias, lantana, nasturtiums, and many plants with stiff leaves and highly scented foliage like sage, rosemary,and lavender.

How can I manage snails and slugs without using pesticides?

- Make sure the garden is mollusk-free before planting. Then erect a copper barrier around it. Use a 4- to 6-inch-wide band of copper, buried an inch below the soil and bent over at the top or attach it around the edge of a raised bed.
- Place your garden in the sunniest spot possible. Remove garden objects or adjacent plants or ground cover that may serve as shady shelter. Reduce moist surfaces as much as possible.
- Build a trap using a 12"x15" board raised off the ground by 1-inch runners. As the mollusks collect under the board, scrape them off and destroy them daily.

What about baits?

- Baits will not be very effective unless you also remove shelter, food, and moisture.
- Metaldehyde baits are especially poisonous to dogs and birds. Metaldehyde also loses its effectiveness rapidly in sunlight and after rain or irrigation.
- Iron phosphate baits are safe for use around dogs, children, and wildlife.
- Irrigate before applying bait and apply in evening on warm days when mollusks are active.
- Scatter bait around sprinklers and in moist and protected areas where snails and slugs travel.

*Use **NON-CHEMICAL** methods & **LEAST TOXIC** pesticides. **WHY?** Runoff from around your home and garden carries water containing pesticides that pollute our streams, rivers, lakes and oceans.*

Learn more about San Diego regional water quality at: www.ThinkBlueSD.org & www.ProjectCleanWater.org. For more pest information visit the University of California IPM website at: www.ipm.ucdavis.edu or the UCCE Master Gardeners at: (858) 694-2860, Mon - Fri, 9 am to 3 pm

Spiders

HEALTHY GARDEN HEALTHY HOME

Spiders are mostly beneficial because they feed on pest insects. However, many people think that all spiders are dangerous and aggressive. In California, the main spider capable of causing serious injury is the black widow, which generally remains outdoors and out of sight. Spiders seen out in the open during the day are unlikely to bite people. Focus pest management efforts on removing webs and hiding places. Pesticides are not generally recommended.

What to know about spiders:

- In California, the main spider capable of causing serious injury is the black widow:
  - The poisonous black widow spider is commonly found outdoors, in sheltered, dry, undisturbed areas such as wood piles.
  - Female black widows have shiny black bodies with a red hourglass marking on the underside.
  - Only large female black widows can injure people.

    Anyone bitten by a black widow spider should remain calm and seek medical advice, or call California's Poison Control Center at 1-800-8-POISON (1-800-876-4766).
- The brown recluse spider does not live in California.
- The jaws of most spiders are too small to bite humans.
- Some other spiders bite when trapped in clothing, but the reaction is usually no more severe than itching or a bee sting. See www.ipm.ucdavis.edu for more information about these spiders.

To prevent spiders from entering your house, take these steps:

- Seal home foundation cracks and other access holes.
- Inspect window and door screens for good seals that keep out spiders and the insects they prey on.
- Keep areas around home foundations free of clutter.

Manage spiders using these tips:

- Indoors, regular housecleaning provides adequate spider control.
- Vacuum up the spider and its web.
- Prevent clutter buildup that can provide hiding places.
- Remove spider webs from the exterior of the house with a broom or high pressure hose.
- Indoors, squash spiders or capture them in a jar and release them outdoors.

When removing spiders, don't overlook the fact that spiders eat a large number and variety of nuisance and pest insects. Spiders also have natural enemies — wasps, other spiders, birds, reptiles, and others — that sometimes keep them from becoming too numerous.

black widow spider

longbodied cellar spider

Termites

Because of the serious damage they can cause to wooden structures, termites are among the pests most feared by homeowners. However, swarms of flying termites do not always mean your building is infested. A careful inspection of the structure is required to confirm an infestation. People also frequently mistake swarms of flying ants for termites. If you suspect that your house is infested, call a professional. Do-it-yourself sprays cannot be relied on to reduce a damaging infestation. Common termites in California are the subterranean termites that build nests in soil, dampwood termites that nest in moist wood and soil, and drywood termites that nest above ground in dry wood. Management of each termite species is different.

Distinguish flying ants from termites:

- Check the antennae, wings and waist to confirm that pest insects are termites. (Please refer to ant vs. termite drawing on back.)

Design your building to keep termites out:

- Keep a 12-inch barrier of smooth concrete, sand, or other material between the soil surface and substructure wood beneath a building.
- Choose termite-resistant wood for fences or other structures that must contact soil.
- Remove wood piles, untreated fence posts, and buried scrap wood near structures.
- Provide adequate ventilation to substructures and keep them dry.
- Immediately repair foundation cracks.

If termites are invading your home:

- Destroy shelter tubes that subterranean termites build between soil and wood structures.
- If dampwood termite nests are accessible, remove infested wood and eliminate excess moisture.
- Drywood termites can be controlled with heat, freezing, electricity, microwaves, fumigation, or spot treatments of chemicals.
- For any infestation, contact a professional for help. Pesticides licensed only for use by a pest control operator are usually necessary to control subterranean and dampwood infestations.

Using pesticides for termite control:

- Pesticides may be injected into the soil by professional applicators through drilling or rodding. Special procedures must be followed to prevent contamination of ground or surface water.
- For soil injections, ask your applicator to use a product other than chlorpyrifos. Newer types of products such as fipronil and chloronicotinyls are safer for your health and the environment.
- Baits can be effective in some cases, but may take several months to control the problem and must be followed up with constant monitoring.

*Use **NON-CHEMICAL** methods & **LEAST TOXIC** pesticides. **WHY?** Runoff from around your home and garden carries water containing pesticides that pollute our streams, rivers, lakes and oceans.*

Giant Whitefly

HEALTHY GARDEN HEALTHY HOME

Giant whiteflies can cover a beautiful plant with white fuzzy wax and sticky honeydew, turning it into an unsightly mess. First discovered in San Diego County in October 1992, this whitefly has spread northward into other areas of California. Since its introduction into San Diego, giant whitefly has spread rapidly northward along the coast. Although affected plants may be weakened, they rarely die. To manage giant whitefly, wash plants off with water and encourage natural enemies.

What plants are affected?

- Many ornamentals including hibiscus, giant bird of paradise, begonia, Xylosma.
- Fruit trees including citrus, avocado, mulberry and banana.

Look for these damage symptoms on affected plants:

- Long, white, waxy filaments produced by the whitefly give the leaf surface a bearded appearance. These hairlike strands may be mistaken for a fungal infection.
- Large amounts of sticky honeydew excreted by the whitefly as it feeds on plant sap.
- Black sooty mold growing on the honeydew.

How to recognize the whitefly:

- Adults are small (3/16") and white with light brown markings on wings and usually found in groups on undersides of leaves.
- Nymphs are yellowish, small, oval, have no legs and don't move.

To reduce problems, use an integrated program that includes:

- Removing infested leaves.
- Washing giant whiteflies off leaves with a strong stream of water.
- Planting species less susceptible to giant whitefly.
- Avoiding insecticides that injure natural enemies, such as lacewings, lady beetles, syrphid flies, and parasitic wasps.

What about insecticides?

- **Don't use insecticides if beneficial insects, including parasites and predators, are present in the area.**
- **To confirm the presence of parasitic wasps, use a magnifying glass to look for parasite exit holes on giant whitefly nymphs or darkened nymphs as indicated in drawings below.**
- **If you do choose to use an insecticide, select least toxic products such as insecticidal soaps or oils. Remember to follow label directions and spray the undersides of the leaves where whitefly colonies are found.**

(adult) (actual size) I

Examine whitefly colonies for grayish-black or yellow nymphs with exit holes (a), or darkened nymphs (b), or healthy nymphs (c).

Use NON-CHEMICAL methods & LEAST TOXIC pesticides. WHY? Runoff from around your home and garden carries water containing pesticides that pollute our streams, rivers, lakes, and oceans.

Learn more about San Diego regional water quality at www.ThinkBlueSD.org & www.ProjectCleanWater.org.

www.ci.la-mesa.ca.us

GROUNDBREAKING CEREMONY

HELD FOR NEW LIBRARY/POST OFFICE BUILDING

Celebrating the breaking of ground for the new library/post office building on May 23 were (l to r) La Mesa Postmaster Rose Estrada, Councilmember Dave Allan, City Manager Sandra Kerl, Councilmember Mark Arapostathis, Mayor Art Madrid, Vice Mayor Ruth Sterling, County Library Director Jose Aponte, and Councilmember Ernie Ewin.

On May 23, the City broke ground for a new library/post office building on the site of the former La Mesa city hall parking lot. The new building will take up 17,725 square feet, house over 100,000 books and periodicals, and feature a full-service postal retail space. An estimated 1,000 to 1,500 people will visit the building daily.

The library will occupy approximately 10,000 square feet in the front of the building facing Allison Ave. The San Diego County Library will continue to operate the new facility under an agreement with the City. A new U.S. post office retail center will occupy slightly more than 7,000 square feet facing north. Estimated completion of the building is spring 2008.

The groundbreaking marks the successful culmination of three years of negotiations between the City of La Mesa, the County of San Diego, and the U.S. Postal Service. The La Mesa City Council, County Library Director Jose Aponte and Postmaster Rose Estrada from the La Mesa post office were among the dignitaries in attendance at the ceremonial event.

During construction, the existing 40-year-old library building will remain open as will all existing post office operations on Allison Ave. Parking for visitors to city hall is provided in lots on Date Ave., with access from Allison Ave. Parking for library patrons remains in adjacent lots where signs have been posted, with entrance from both University Ave. and Date Ave. Parking for post office customers remains unchanged.

Following in the wake of the grand opening of the new fire station headquarters in summer 2006, the latest construction project is part of a master plan to completely redevelop the La Mesa Civic Center. Once the library/post office building opens, construction will begin on a 36,000-square-foot police station on the site of the current library.

Funding for the two state-of-the-art public safety facilities is provided by the passage of the Proposition D, Police, Fire and Emergency Services bond measure, approved by La Mesa voters in March 2004. The library/post office is being funded by bonds issued in August 2006, which will be repaid from monies owed to the City's general fund from the Redevelopment Agency and a lease with the U.S. Postal Service. No Proposition D funds will be used to pay for any costs related to this new building.

Construction and planning of the new buildings is being done concurrently with planned street improvements that will include street trees, new sidewalks and diagonal street parking. The street improvements are being funded by a "smart growth" grant the City received from SANDAG. The architecture of both the library/post office building and the police station, enhanced by street improvements, will complement the new fire station and will fit into the overall design of the Civic Center Master Plan.

YOUR INPUT IS NEEDED...

Respond to the "Sidewalks" Survey by September 1!

The City is in the process of creating a map to show proposed sidewalk locations, and we are interested in citizen input. We want to make La Mesa as walkable as possible, while realizing that some neighborhoods are not suited for sidewalks.

Please visit our website at www.ci.la-mesa.ca.us/sidewalk.htm to take a brief survey, or contact us by phone, e-mail or regular mail with your answer to this question: Should there be sidewalks in front of my house?

This topic affects us all, so please get involved. We are looking for people with opinions on both sides of this issue.

Contact Dirk Epperson, assistant engineer, at 619-667-1152, e-mail depperson@ci.le-mesa.ca.us, or send a note via regular mail to Dirk at 8130 Allison Ave., La Mesa, CA 91941. Be sure to include your name and mailing address. Phone and e-mail are optional. The deadline to respond is September 1, 2007.

NEW LA MESA LOGO DEVELOPED FROM CITIZEN INPUT

The City of La Mesa unveiled its new, revised logo June 12 when the first two of six new police vehicles were put into service with the new logo imprinted on their doors. The logo, a three-color rectangular design that includes a gold circular element with dark blue text and a teal bar, also will be seen in monochrome formats, such as the all-white version used on the new FOCUS newsletter banner.

According to City Manager Sandra Kerl, the revised city logo will be used to "brand" (i.e., identify) La Mesa and to present a unified and focused image for the City. The new logo is being phased into use on all City publications and stationery as well as on City vehicles and uniforms. Eventually, it will be seen on all directional and street signs. The approach will be to immediately utilize the new logo in applications that will not cost additional money and phase in other areas over time as funding becomes available through grants and other outside funding sources.

For several years, one of the priorities for the City Council has been to focus on economic development to help spur activity that will positively impact the City's finances and thus our ability to provide services. With Council approval, a graphic design firm was hired to work with City staff and participants in two community outreach workshops held in the spring and summer of 2006. Subsequently, further outreach to the community was conducted through a City website survey. As a result, the City Council approved a new design for all types of City signs. The new, revised logo also developed from that process.

CITY OF LA MESA
JEWEL of the HILLS

LA MESA APPRECIATION DAY

Get Involved!

Saturday, November 3, 2007
8 a.m. – 12 noon

Help make La Mesa beautiful. On La Mesa Appreciation Day there are two ways to help your community:

- La Mesa's parks are our city's jewels. Help make them shine! Encourage your civic, church or social group to adopt a park for a clean-up day on November 3. We will help you find a project that all your members can do. Give us a call!
- Individuals and families are invited to come to a La Mesa neighborhood park at 8 a.m. on November 3. Sign up with an Adopt-a-Park volunteer who will be visible in a Park Appreciation Day T-shirt at each park. Bring a rake or grab a trash bag at the park and help your local La Mesa jewel shine! General clean-up includes picking up trash, light raking, trimming and weeding.

Please bring your own gloves and rakes or trowels to La Mesa Appreciation Day. Each participant will receive a free T-shirt. You don't have to be a La Mesa resident – you just need to love La Mesa! All ages are welcome. Signed waivers are required for all participants. Download waivers from the City website and complete them prior to November 3 to expedite the signup process at the park of your choice. Parents must accompany children under the age of 18 at individual parks unless the child is with a supervised group.

Download an application form at www.ci.la-mesa.ca.us. For more information, call 619-667-1300 or e-mail commservices@ci.la-mesa.ca.us.

ARE YOU OKAY?

Family members who worry about homebound seniors or disabled relatives in the La Mesa and greater East County area can arrange for a safety check through the SHARP Grossmont Senior Resource Center. The "Are You Okay?" telephone reassurance program makes a computer-generated daily telephone call, seven days a week, to homebound or disabled residents. If there is no answer after a few attempts, someone is sent to check on the individual. There is no charge for the service. To register call the Senior Resource Center at 619-740-4214.

For additional information on resources to assist the elderly, call the La Mesa Adult Enrichment Center at 619-464-0505.

LA MESA TO PARTICIPATE IN THE CX3 WELLNESS PILOT PROGRAM

The City of La Mesa has been selected by the County of San Diego to participate in a pilot program called CX3, which stands for Communities of Excellence in Nutrition, Physical Activity and Obesity Prevention.

The program involves teams of youth and adult volunteers who will walk a targeted neighborhood mapping community indicators such as walkability to parks, schools and food markets. They will also look at advertising in the area and the number of establishments selling fresh produce. Once these items are mapped, the data will be used to develop local action plans for policy and environmental change.

The program was developed by the California Nutrition Network and was piloted in six counties across the state. San Diego County has decided to use this model and is piloting the program in select areas of La Mesa and Chula Vista.

The La Mesa CX3 asset mapping project will target West La Mesa streets and corridors bordered by Spring St., 70th St., Junior High Dr. and El Cajon Blvd. This area of La Mesa has been designated by the La Mesa City Council as a neighborhood targeted for increased services and infrastructure upgrades. The effort began with a new teen center at Highwood Park and sidewalk improvements in the area. Future improvements include additional upgrades to Highwood Park. This project will further enhance the City's efforts to improve this neighborhood.

The La Mesa CX3 project is a collaboration among the La Mesa Park and Recreation Foundation, City of La Mesa Community Services Department, Helix High School, the County of San Diego Maternal Child and Family Services Department, and the East Region Health and Human Services Agency. The project is expected to take six months to complete.

As part of the CX3 project, Helix Charter High School students and their volunteer mentors receive training in what to look for to make a city walkable.

WATCH YOUR CITY COUNCIL IN ACTION!

Tune in to Cox cable channel 24 and watch the La Mesa City Council in action. Televised meetings make City Council deliberations available to residents who are unable to attend meetings, making government more accessible to the community.

La Mesa residents can view La Mesa City Council meetings each month on the second Tuesday at 4 p.m. and on the fourth Tuesday at 6 p.m.

A NEW CITY OF LA MESA WEBSITE IS COMING TO A COMPUTER NEAR YOU!

The City Council has recommended two significant steps that contribute to the enhancement of services to the community. The first, a new City website, underscores the commitment by the City Council to keep La Mesa residents well informed about all that occurs at City Hall and throughout the community. The second, a newly revised logo, keeps La Mesa's image unified and focused and is an initial step to "brand" our City in the minds of the public. (See the New Logo article on the front page.)

Set to launch in late summer, the new City website will feature a fresh new look. More important, it will contain easy-to-access, up-to-date content and will feature a new e-mail notification system and a request tracker for coordinating citizen requests. The address of the new City of La Mesa website will be www.ci.la-mesa.ca.us. Website visitors may begin using the new web address now to access the current City website.

www.ci.la-mesa.ca.us to launch in Late Summer

Integrating the new website and the new logo into the mainstream of daily activity at the City of La Mesa takes time. Undoubtedly, there will be some "tweaking" needed on these two projects to make them as beneficial as possible for La Mesa residents, business owners and visitors.

LA MESA SELECTED FOR WELLNESS INITIATIVE

La Mesa has been selected as one of six cities to partner with the National League of Cities' (NLC) Institute for Youth, Education and Families (YEF Institute) in combating childhood obesity and promoting youth and community wellness. La Mesa was selected by NLC's YEF Institute because of its work with the Communities of Excellence in Nutrition, Physical Activity and Obesity Prevention (CX3) program developed by the California Nutrition Network. The CX3 program determines community strengths and weaknesses for wellness and helps the City develop appropriate policies. (See the associated article on page 2.)

As part of the City and School Leaders Collaborating on Local Wellness Policies initiative, the one-year technical assistance initiative will provide municipal and school leaders with peer learning opportunities and consultation with national experts in the areas of local wellness policies, childhood obesity, healthy eating, active living, and school health councils.

The City of La Mesa's Wellness Task Force and the La Mesa-Spring Valley School District Wellness and Physical Education Committee hope to form a Wellness Oversight Committee. The La Mesa Wellness Task Force has already approached the City Council to approve a broad-based wellness program.

The other cities selected for the initiative are: Charleston, SC; Jackson, TN; Oakland, CA; San Antonio, TX; and Savannah, GA. The YEF Institute is working with the American Association of School Administrators on this project, with support provided by The Robert Wood Johnson Foundation.

KEEP UP THE GOOD WORK LA MESA!

The California Integrated Waste Management Board has acknowledged La Mesa's accomplishment in meeting the State's mandated 50 percent diversion rate. This means that 50 percent of everything that we are disposing of is being diverted away from our landfills and being reused, recycled, or in the case of some hazardous materials, disposed of properly and safely. This is the accumulation of years of hard work and a positive partnership between the City and you, the community.

Our work, however, is not finished! California law requires all cities and counties in the State to maintain the 50 percent diversion rate. We must continue to do the right thing and keep waste out of our landfills, which are running low on space.

Here are five tips to continued improvement:

- **Recycle, recycle, recycle!** Are you recycling as much as you can? Look at things before you throw them away and ask yourself: Is it unsoiled paper or cardboard, or CRV # 1 or 2 plastic, glass or aluminum? If the answer is Yes, rinse the items, if needed, and place them in your blue cart or recycling bin.
- **Put toxic waste in its place!** If you have household hazardous waste (HHW), such as batteries, fluorescent lights, paint, chemicals, mercury devices (including thermometers), or electronics, take advantage of the City's free HHW disposal program by calling 619-287-5696 x4270.
- **Paper or Plastic?** That's sooo 20th century! Get yourself some reusable produce and shopping bags. Most grocers now sell them at a reasonable price, and reusable bags work much better than plastic.
- **Collect construction debris!** EDCO's SANCO Resource Recovery facility is now open in Lemon Grove for mixed loads of debris that will save you time and money. Call 619-287-7555 for more information.
- **Try composting!** This is a great way to cut down on food waste going into the trash and gives you a great source of material for your yard. For more information, visit www.ci.la-mesa.ca.us and click on Trash, Recycling & Hazardous Waste – Internet Resources.

WHAT DO YOU KNOW ABOUT TRASH, RECYCLING AND CONSERVATION?

Q1. What is California's waste diversion mandate (amount of waste that must be kept out of landfills)?
a) 25% b) 50% c) 100%
d) It is a guideline only, not a mandate

Q2. Which of the following can be thrown in the trash?
a) Batteries b) Latex paint c) Compact fluorescent bulbs
d) Cellular telephones e) None of the above

Q3. Plastic bags can be recycled at most grocery stores.
True or False?

Q4. EDCO will not accept paper, plastic, and glass mixed together in blue bins.
True or False?

Q5. Shade trees should be planted on which side of your house for the best effect?
a) North b) South c) East d) West

Q6. Compact Fluorescent Lights (CFLs) are extremely hazardous if broken.
True or False?

Q7. Hand washing your dishes uses more water than your dishwasher.
True or False?

Q8. Which of the following is not collected at household hazardous waste events?
a) Used motor oil b) Rechargeable batteries c) Tires
d) Household cleaners e) They are all accepted

Q9. Screensavers should be used to save energy when your computer is inactive.
True or False?

Q10. Disposing of household hazardous waste and electronic waste is inconvenient and expensive.
True of False?

ANSWERS: *Q1-b; Q2-e; Q3-True; Q4-False; Q5-d (That's where the hot afternoon sun hits most directly); Q6-False (There is limited danger due to the trace amounts of mercury, but they should be handled cautiously); Q7-True (But use your appliances after 7 pm); Q8-c (Tires can be recycled at six locations in La Mesa, visit www.ci.la-mesa.ca.us or call 1-800-237-BLUE for more info); Q9-False (Screensavers don't save energy, only "sleep modes" do that); Q10-False (The City of La Mesa provides at least six free collection events yearly in or near the city that require you only to bring the waste and we'll do the rest! Call 287-5696 x4270).*

COOL SPOTS IN & AROUND LA MESA

La Mesa residents who may be at risk from extreme heat can seek relief at several community locations.

The County of San Diego has established a network of Cool Zones at public and community facilities across the County. Most of the sites are open to the public during regular weekday hours. Cool Zone sites, mostly located in the hottest areas of the county, help older adults and others keep cool and save energy costs.

The following sites and facilities in and around La Mesa serve as Cool Zones:

COOL ZONE

SITE/FACILITY	ADDRESS	CITY, ZIP	HOURS
La Mesa Adult Enrichment Center	8450 La Mesa Blvd	La Mesa, 91941	M-F 8-5
La Mesa Branch Library	8055 University Ave	La Mesa, 91941	M-Th 10-8, F & Sat 10-5, Sun 1-5
El Cajon Branch Library	201 E. Douglas	El Cajon, 92020	M-Th 10-8, F & Sat 10-5, Sun 1-5
Fletcher Hills Branch Library	576 Garfield Ave	El Cajon, 92020	T & Th 10-6, W 10-8, F & Sat 10-5
Lemon Grove Branch Library	8073 Broadway	Lemon Grove, 91945	M & Th 10-6, T & W 10-8, F & Sat 10-5

Parkway Plaza Mall	415 Parkway Plaza	El Cajon, 92020	All Day & Evening, during regular mall hours
Herrick Community Health Care Library	9001 Wakarusa St	La Mesa, 91942	T 9-8, W-F 9-5:30, Sat 8-Noon

ONE PHONE CALL CAN HELP STOP STORM WATER POLLUTION

Residents may call the City of La Mesa's Storm Water Pollution Prevention Hotline (619-667-1134) at any time to help stop storm water pollution. City personnel will verify the complaint and address the problem immediately.

Potential pollutants include: sediment (soil/dirt), fertilizers (plant food), metals, detergents (soap), pesticides (chemicals to kill plants or bugs), organic compounds (solvents), trash and debris, oil and grease, and bacteria or viruses.

What should you look for and report?

Commercial/Industrial Areas
- Hosing down a parking lot/water running into the street
- Washing company vehicles without capturing runoff
- Storing equipment outside uncovered
- Overflowing trash cans

Construction Sites
- Tracking soil onto the street
- Storing stockpiles of soil without covering it for extended periods of time
- Discharging water into the street

Residential
- Washing soil off the property and into the street
- Significant over-irrigation
- Fixing a car on the street
- Significant overspray of pesticides or fertilizers
- Not cleaning up pet waste

If you observe any of these violations, call the City's Storm Water Pollution Prevention Hotline at 619-667-1134 and City staff will address the issue. Protecting our environment protects our quality of life!

FIRE SAFETY AND BARBEQUES

For those of us in the community who are backyard barbeque chefs, summer time means grilling time. Here are some simple safety precautions you can take to protect the food and the chef:

- Make sure your grill is in good working order, with no cracks, holes or leaks, especially if you are using propane.
- Use the grill at least 10 feet away from your house or any building. Never use any type of barbeque grill indoors.
- Do not leave the grill unattended, especially when children or pets are nearby.
- Never use gasoline or kerosene to light a charcoal fire.
- Do not attempt to restart a fire by adding additional lighter fluid to an already lit grill. This can cause a flare-up.
- Dispose of charcoal, away from kids and pets, in a metal container. Cool the coals with water first. Coals get hot – up to 1,000 degrees – and can stay hot for several days.
- Use long-handled utensils and oven mitts to help prevent burns.
- Do not wear loose clothing that hangs from your arms or upper body.
- Keep a fire extinguisher near the grill and know how to use it.
- Call 911 if you have a fire or receive a serious burn injury.

Stay safe by following the basic safety tips above. Consumer Products Safety Commission statistics show that approximately 20 deaths and 400 injuries occur each year due to carbon monoxide poisoning from grilling fires.

The La Mesa Fire Department hopes you have a great summer and many safe grilling experiences.

ATTENTION MIDDLE AND HIGH SCHOOL STUDENTS!

La Mesa is seeking teen residents between the ages of 13 and 20 who are interested in serving their community by becoming a member of La Mesa's Youth Advisory Commission.

The Commission serves as an advisory body to the City Council on matters pertaining to programs, projects, and issues that address the concerns of youth in La Mesa. It is the Commission's responsibility to explore and develop activities that will promote positive youth relations in the City. Current activities include a reading program at La Mesa Dale Elementary School and participating in National Youth Service Day.

Commission meetings are held the second Monday of each month at 4:30 p.m. in the Community Center Conference Room, 4975 Memorial Drive, La Mesa.

Applications are available on the City's website at www.ci.la-mesa.ca.us, at La Mesa City Hall, 8130 Allison Avenue, or by calling the City Clerk's office at 619-667-1120.

Applications must be received in the City Clerk's office no later than 5:30 p.m., Friday, August 31, 2007 to be included in the September interview process.

EVERYONE'S A WINNER!

JOIN THE TEAM FOR THE 2007 INTERGENERATIONAL GAMES

The City of La Mesa is stepping up to the plate again this fall to present the 2nd Annual Intergenerational Games. The event will be held on Friday, October 12, from 9 a.m. until 1 p.m. on the La Mesa Middle School athletic fields.

Intergenerational Games brings together mature, active adults, students and volunteers from La Mesa elementary, middle and high schools for an energetic, fun-filled half-day event. The focus is on non-competitive fun, physical activity, wellness and healthy lifestyle.

Active adults age 55 or older are encouraged to sign up for this enjoyable and rewarding event. Adults will be paired with students from grades 4 through 6, and teams will be made up of one student and one adult. Each team will take part in a circuit of eight games and two knowledge challenges. Activities will include a Frisbee toss, trashcan basketball, hockey net shot, skeeball, soccer kick, bocce roll, horseshoe throw and similar games. There is no charge to participate and the rewards are great.

The event will kick off with a motivational opening address and will conclude with a group picnic-style lunch and awards ceremony. Everyone is a winner in the Intergenerational Games!

For information and registration, call the La Mesa Community Center at 619-667-1300 or the Adult Enrichment Center at 619-464-0505. Intergenerational Games is sponsored by the City of La Mesa, La Mesa Commission on Aging, County of San Diego Aging & Independence Services, La Mesa-Spring Valley School District, La Mesa 55+ Senior Softball League and many other community partners and business sponsors. For sponsorship opportunities, call Judy Stern at 619-667-1490.

TOUR HISTORIC LA MESA HOMES

On Saturday, November 3, from 10 a.m. until 3 p.m., the La Mesa Historical Society (LMHS), along with the City's Historic Preservation Commission, will sponsor the second Historic Home Tour of La Mesa.

The tour will highlight five historic homes dating from 1907 that are in or adjacent to the Date Avenue Historic District. All the properties are carried in the Inventory of Historic Resources. Each will have displays of La Mesa history and the buildings as they were, and each will be decorated in a fall motif and have artists working in the yards.

An art show/art mart, co-sponsored by La Mesa's Foothills Art Association, will display original art by local artists featuring the theme "Historic La Mesa." The artwork will be available for sale.

Free Old Town trolley shuttle buses – which proved so popular in 2006 – will again operate from the tour center at the corner of Palm Ave. and Lemon Ave. in La Mesa's downtown Village. There is limited parking and vehicle access for most of the homes. Abundant parking is available adjacent to the tour center and in City parking lots.

Full-day tickets will be priced at $15 for individuals ten years and older. Advance sale tickets and tickets for LMHS members will be $12 ($5 of the ticket price may be applied to a new membership in LMHS at the time of purchase). The advance sale ticket price is good only through October 19.

Mark your calendar now! Call 619-465-1883 for additional information or to reserve your spot on the tour.

SAN DIEGO SENIOR OLYMPIC GAMES

To Get Underway in September

It's never too late to be an Olympic champion! The San Diego Senior Olympics (SDSO) is the premier multi-sport competition in California for amateur athletes age 50 and older. The games are open to competitive, recreational and novice athletes. The SDSO offers 23 sports including individual and team sports such as softball, tennis, swimming, cycling, golf and bowling.

Each sport is organized by volunteer commissioners. If you are interested in helping to organize one of the events, e-mail info@sdseniorgames.org or call the office at 619-226-1324. You may also call SDSO Board member Jim Campbell in La Mesa at 619-466-6764.

The San Diego Senior Olympics is a local affiliate of the California Senior Games Association and the National Senior Games Association.

"LEGENDS OF BROADWAY AND OTHER TALES"

Bruno Leone, pianist, humorist, and storyteller, will perform August 19 at the La Mesa Community Center.

Annual Fundraiser for the La Mesa Arts Alliance

The La Mesa Arts Alliance presents "Legends of Broadway and Other Tales" featuring Bruno Leone. Mr. Leone is a pianist, a humorist and a storyteller. He will perform his piano artistry and tell great stories about the lives and times of America's leading composers and lyricists.

The event will be held on Sunday, August 19, from 4-7 p.m. in the Arbor View Room at the La Mesa Community Center, 4975 Memorial Drive. Tickets are $25 per person and $40 per couple. Admission includes the show, hors d'oeuvres, adult beverages at intermission and membership in the La Mesa Arts Alliance.

Your support of this event will allow the Arts Alliance to continue its programs including the La Mesa Walking Art Trail utility box project, youth art education at Kids Care Fest, Sundays at Six summer concert series, Harp Fest and artist programs. The La Mesa Arts Alliance believes that a diverse community of artists and arts organizations is essential to the cultural, educational, social and economic vitality of our community.

For ticket information, call 619-667-1300, e-mail commservices@ci.la-mesa.ca.us or go to www.ci.la-mesa.ca.us.

PREPARING FOR THE PANDEMIC FLU

– Third in a Series of Articles –

Through this series of articles, we have presented information that has illustrated the differences between a pandemic flu and the seasonal flu. We have also provided information on caring for sick individuals. This issue will address preparedness.

For many years, preparedness organizations have been stressing the need for pre-disaster preparation. Each individual, family and place of business should have a stockpile of provisions sufficient to meet their needs for three days. Three days is the time necessary for disaster support organizations to mobilize their resources.

In the case of the pandemic flu, the event may span several months and return in sequential waves. Large numbers of people will be affected, and the event will have an impact on logistical supply chains including food and fuel. Banking and many other services will be less accessible. Provision of medical care will be severely impacted. Support organizations, which we would normally depend upon, may be unable to respond. Knowing this, it is imperative that we begin to think beyond three days.

Current recommendations for a pandemic event are to be self-sufficient for two weeks. A preparedness guide issued by the County of San Diego Office of Emergency Services encourages the use of "Ready Kits," which are supplied with the following:

- Battery-operated flashlight, radio and TV
- Extra supply of prescription medications and a cooler if refrigeration for the prescriptions is necessary
- A two-week supply of non-perishable foods that meet dietary needs
- Manual can opener
- One gallon of water per person per day
- Cash money and change
- Items for sanitation: toilet tissue, plastic bags, feminine hygiene products, etc.
- Medical equipment and assistive devices: oxygen and portable unit, hearing aids, walkers, glasses, etc.
- Paper towels, masks, industrial respirators, etc. for chemical sensitivities, respiratory ailments, and similar conditions
- Emergency List that includes personal information such as: doctor's information, personal support network contact information, medication names, dosages, and frequencies
- Items for infants: formula, diapers, etc.
- White distress flag, whistle, glow sticks
- Important documents: photo ID, birth certificates, proof of address, medical insurance, etc.
- Heavy gloves
- Supplies for service and companion animals: such as food, ID tags, etc.

In addition to the Ready Kit items, it is recommended that additional supplies should also be stockpiled that are necessary to care for sick individuals and for keeping the household environment clean. These items include:

- Labeled household disinfectants or chlorine bleach mixtures
- Masks for respiratory protection, which meet the N95 standard
- Soap
- Tissues
- Paper towels

For additional preparedness information, the following web sites are recommended:

- www.readysandiego.org
- www.sdarc.org
- www.salvationarmyusa.org

Pandemic flu information is readily available from the County of San Diego at www.sdbirdflu.org and from the Centers for Disease Control at www.cdc.gov.

PLAN – PREPARE - STAY INFORMED

CLEARER SKIES FOR LA MESA

Recently, cables were taken down and utility poles were removed as the last leg of the Jackson Drive Undergrounding Project was completed.

Utility undergrounding is the removal of overhead wires and poles and placement of wires under the street and/or sidewalk. Undergrounding removes unsightly wires and poles in neighborhoods, enhances views, and may add value to neighborhood properties. New streetlights are installed to replace the existing streetlights that were previously on wooden utility poles.

The Jackson Drive Underground Project (District 23) included the portion of Jackson Drive from Interstate 8 to Lemon Avenue. The project converted 14 residential customers and 2 commercial customers and benefited many more. As part of the project, the City installed/replaced five street lights and removed 24 poles. The total project cost was $2.3 million.

Future underground districts have been identified for Spring Street and Parkway Drive. The Undergrounding Program is a combined effort of the City of La Mesa and SDG&E.

LA MESA RECYCLES USED OIL & OIL FILTERS

Used oil is hazardous to the environment. La Mesa has 10 State-certified collection centers that will take your used oil. Visit www.ci.la-mesa.ca.us or call 1-800-237-BLUE for locations and more information. Help keep La Mesa beautiful!

RECYCLE USED OIL

VOLUNTEER DRIVERS NEEDED FOR NEW

Rides4Neighbors PROGRAM

Starting this fall, *Rides4Neighbors* will be a volunteer-based transportation assistance program for La Mesa's older adult residents and adult residents with disabilities. Rides will be provided by screened, trained volunteers, who will use their own vehicles to assist transit-dependent La Mesa neighbors in need of a lift.

As a volunteer, you will be part of a rewarding and meaningful civic program. Community surveys consistently find that what residents like best about La Mesa is the neighborly, small town feel. *Rides4Neighbors* will help build that spirit of community and old-fashioned neighborliness. So join us by opening your heart and car door to a rider in need of a lift.

Volunteer drivers will be reimbursed for mileage and receive secondary liability insurance. As a volunteer, you decide your availability and choose the rides you wish to provide. There is no minimum time commitment or number of rides required to be a volunteer. We can either call you when a ride is needed, or notify you via e-mail.

The City of La Mesa will be receiving a federal New Freedom grant award through SANDAG to cover most of the start-up costs for developing and providing this new service. The Adult Enrichment Center will take ride requests, explain ridership rules and match ride requests with volunteers.

For more information, call the Adult Enrichment Center at 619-464-0505, or go online to www.ci.la-mesa.ca.us to download a volunteer application form.

KNOW THE DANGERS OF AIRSOFT GUNS

In recent months there have been several instances in which the police have responded to reports of guns on school campuses, only to find that the gun is an Airsoft / BB / or realistic toy gun.

Airsoft guns can be easily mistaken for real guns, with potentially deadly consequences. Many of these replica guns have all the markings of real guns including the trademarks of the real gun manufacturers. Just as you would not display a real firearm in public, the same is true with airsoft guns. Airsoft guns are not "cap" guns or "squirt" guns.

Remember this – it is very difficult to visibly distinguish an airsoft gun from a real gun. Here is an example:

AIRSOFT GLOCK HANDGUN **REAL GLOCK HANDGUN**

California Penal Code section 626.10(a) makes it illegal to bring any BB, pellet or airsoft gun that is operated by forced air (CO2) or spring action onto a school campus. This section also covers many other illegal weapons, such as knives, daggers, tasers and stun guns. If someone is caught with any of these weapons on campus, he or she can be arrested. California Penal Code section 12553(a)(1) makes it a misdemeanor to alter a replica gun (removing the orange or red tip) to make the gun look more realistic.

In addition to criminal charges, and the potential for a deadly encounter with police, there is a State zero-tolerance policy. California Education Code section 48915(c) provides that all schools require mandatory suspension and the recommendation for expulsion for any student who possesses any weapon on campus.

The La Mesa Police Department urges parents to discuss this very important issue with their children and make clear to them the dangers and consequences of taking any weapon or simulated weapon to school or any public place.

THE INS AND OUTS OF PORTABLE STORAGE CONTAINERS

You may have seen portable metal storage and shipping containers around town. Most of these containers were originally used to import goods to the United States from overseas. The containers have found a second life as storage containers on residential and commercial property throughout the United States.

Unfortunately, these metal storage containers are not allowed in residential zones in La Mesa. In fact, portable storage containers are only allowed in the City of La Mesa in very limited circumstances. Moreover, the use of these containers can create attractive nuisances and potential safety hazards when used for permanent storage purposes.

La Mesa Municipal Code Section 24.05.020.D.1 states that only "permitted accessory uses and structures" are allowed in residential zones. Portable storage containers – metal or otherwise – are not listed as a permitted accessory use or structure in this code section. Authorized accessory structures in a residential zone include garages and storage sheds.

What about commercial zones? According to La Mesa Municipal Code Section 24.06.040.I.b, "Portable storage containers…are only permitted when authorized as part of a permanent structure subject to the appropriate site plan approval and building permits." In short, portable storage containers are only allowed by permit in a commercial zone.

If you have questions regarding the use of portable storage containers in La Mesa, call Code Compliance Officer Allen Edwards at 619-667-1189.

ARE YOUR CHILDREN HOME ALONE?

If you are like many American parents who work and have to leave their children on their own after school every day, you might be anxious about your child's safety. By following the safeguards listed below, you can help ease some of the worry and take measures that will protect your children even when you are not around.

What you can do:

- First, make sure your children are old enough and mature enough to care for themselves
- Know local resources such as the La Mesa Teen Center and other after-school programs
- Teach your children basic safety rules
- Know the answers to the three W's:
  - Where are your children?
  - What are they're doing?
  - Whom are they with?

Are your children ready?

Can your children:

- Be trusted to go straight home after school or activities?
- Use the telephone properly?
- Operate locks and kitchen appliances easily?
- Follow rules and instructions well?
- Handle unexpected situations without panicking?
- Stay home without being afraid?

If you answered "Yes" to the above questions, then teach your children:

- To check in with you immediately after arriving home
- How to give directions to your home, in case of an emergency
- To never accept gifts or rides from anyone without your permission
- How to use the door and window locks and alarm system if you have one
- To never open the door and let anyone into your home
- To never let a caller on the phone know that they are home alone
- To carry a house key with them in a safe place
- How to escape in case of an emergency
- To let you know about anything that frightens them or makes them feel uncomfortable
- To keep important phone numbers near the phone
- How and when to call 9-1-1

City of La Mesa

CITY COUNCIL ACTIONS

April 10, 2007
Authorized the acceptance of a grant from the California Department of Alcoholic Beverage Control Grant Assistance Program.

Denied the appeal of the Planning Commission's approval of Tentative Tract Map TTM-05 11 and Site Development Plan DAB-05-27 proposed by Zigman Properties LP for a one-lot subdivision of a 0.52-acre property at 8135 El Paso Street in the CN-D (Neighborhood Commercial/Urban Design Overlay) Zone for the development of 15 new residential condominium units with 4 commercial suites, and ratified Design Review DRB-05-27.

Endorsed the U.S. Mayors Climate Protection Agreement calling for a reduction in greenhouse gas emissions.

April 24, 2007
Declared there are weeds, rubbish and refuse existing upon certain streets, sidewalks and private property in the City of La Mesa, which constitute a public nuisance and declared the intention of the Council to order its abatement.

Approved the installation of three speed humps on Lake Park Way between Baltimore Drive and Lake Murray Boulevard.

Authorized staff to proceed with the Proposition 218 notification and public hearing processes in connection with proposed sewer rates and EDCO trash rates.

Approved the Allocation of Community Development Block Grant (CDBG) and HOME Funds and adopted the Annual Plan for Community Development activities for Fiscal Year 2007-2008.

Adopted the Fee Schedule for Fiscal Year 2007-2008.

May 8, 2007
Approved the ratification of Parcel Map Tract No. 06-09, for a one lot subdivision of property for 76 residential condominium units at the "Villages of La Mesa," a proposed residential care facility by Briercrest Development LP at 9000 Murray Drive.

Authorized the application and acceptance of funding from the California Department of Conservation's Division of Recycling for beverage container recycling and litter cleanup activities.

Authorized the nomination of Porter Hall as a local historic landmark.

Authorized the application and acceptance of grant funding from the California Integrated Waste Management Board for waste reduction and diversion of hazardous materials.

May 22, 2007
Approved a cooperative agreement between the Helix Water District and the City of La Mesa for the joint construction of water and storm drain improvements on Alamo Way.

Awarded a contract to Dudek and Associates, Inc. for the preparation of an Environmental Impact Report for the Mixed Use Urban Overlay Zone.

June 12, 2007
Authorized the acceptance and expenditure of the 2007 Edward Byrne Memorial Justice Assistance Program Grant Funds.

Authorized the acceptance of the California Air Resources Board grant for the purchase of low-emission construction equipment for the Public Works Department to meet new state-mandated Tier III diesel emission requirements for off-road diesel equipment.

June 26, 2007
Ratified the Planning Commission's approval of Tentative Tract Map TTM-07 01, Site Development Plan DAB-07-05 and Special Permit SP-07-04, and ratified the Design Review Board's approval of Design Review DRB-07-05, for a 5-unit, 6-lot planned residential development at 5475 Heidi Street.

Authorized the execution of an Exclusive Negotiation Agreement between the City of La Mesa and Citymark Communities LLC for the development of a mixed-use project on the existing police station site.

Approved the designation of the property located at 4628 Third Street as a historic landmark and a Historic Landmark Property Preservation Agreement (Mills Act) with the property owner.

Authorized rate adjustments for EDCO Disposal Corporation for the collection of refuse and recycling to become effective July 1, 2007.

Authorized rate adjustments for sewer service effective September 1, 2007 and the introduction and first reading of an ordinance amending Chapter 17.12 of the La Mesa Municipal Code adjusting sewer rates for the next two years.

WALK LA MESA

LAST CALL FOR 2 EVENTS ON SATURDAY, NOVEMBER 3RD!

#1 **Don't miss the tour of historic La Mesa homes on November 3 from 10 a.m. until 3 p.m. Cost is $15 for individuals 10 and older. Call 619-465-1883 for information.**

#2 **Last Chance to Sign Up!**

LA MESA PARK APPRECIATION DAY

Saturday, November 3
8 a.m. – Noon

Bring a rake or trowel or grab a trash bag at a neighborhood La Mesa park at 8 a.m. on Saturday, November 3, and help your local La Mesa jewel shine! General cleanup includes picking up trash, light raking, trimming and weeding. Sign up with an Adopt-a-Park volunteer who will be visible in a Park Appreciation Day T-shirt at each park.

Each participant will receive a free T-shirt. You don't have to be a La Mesa resident – you just need to love La Mesa!

All ages are welcome. Parents must accompany children under the age of 18 at individual parks unless the child is with a supervised group. Signed waivers are required for all participants. Call 619-667-1300 for more information.

CITY LAUNCHES NEW WEBSITE OCTOBER 31ST!
See article on page 3.

IT'S CHILD'S PLAY...

PLAY TODAY FOR A HEALTHIER TOMORROW

The La Mesa Park & Recreation Foundation launched its latest capital campaign called "It's Child's Play" this past summer. The Foundation proposes to raise $1 million to upgrade community playgrounds in Northmont, Vista La Mesa, Collier, La Mesita and Jackson Parks. The new venture follows a successful campaign to raise $8 million that created a youth sports complex at Parkway Middle School and revamped Briercrest Park.

The new campaign is a result of community input and evaluation of need within the City, including new, age-appropriate, accessible playgrounds for neighborhood parks. In addition, the City of La Mesa has agreed to partner with the Foundation to make other improvements to the five parks by refurbishing restrooms, adding security lighting and refreshing landscaping and irrigation.

Joe Drew, CEO of Drew Ford, and Ed Burr, CEO of EDCO, will chair the volunteer fundraising committee for "It's Child's Play." Initial support for the campaign comes from these two prominent La Mesa businesses as well as Grossmont Shopping Center. Private fundraising opens up greater opportunities for creative play environments when combined with City funding for parks that often is dependent upon the municipality's limited resources. Over the last several years, the trend has been to combine the assets of public and private partnerships to refurbish parks because municipal leaders see upgrading parks as a way to revitalize a neighborhood.

What are the benefits to supporting upgrades in City parks? Statistics indicate that the current generation of children will not have as long a life span as their parents due to complications from obesity. Sedentary lifestyles are causing a multitude of problems in our youth. According to the Centers for Disease Control, the percentage of children and teens who are overweight has tripled in the last 20 years. While the solution for this problem is multi-pronged and complicated, there is no question that having attractive, safe and close parks is a first step in encouraging regular physical activity for families.

If you are interested in getting involved in this project, please call the La Mesa Park & Recreation Foundation at 619-667-1331 or e-mail parkfndn@ci.la-mesa.ca.us. The La Mesa Park & Recreation Foundation is a private, non-profit organization that improves the lives of East County families through recreational, educational and cultural services. The Foundation's mission is to develop quality projects and programs that provide positive activities for youth, strengthen family bonds, and enhance community pride.

CITY RECEIVES 3 AWARDS!

In less than two months, the City of La Mesa has received recognition for these three outstanding projects:

The County of San Diego awarded the City of La Mesa the "Shaping a Healthy Future Award" at the Childhood Obesity Conference on September 20. The award was presented to the City for its work on citywide walkability, the CX3 youth engagement activity (Communities of Excellence in Nutrition, Physical Activity and Obesity Prevention), and the approval and implementation of the La Mesa Community Wellness Program. The County has issued a Call to Action on Childhood Obesity that includes seven domains or focal areas including: county and city government, schools, media and marketing, businesses, preschools/childcare and after school activities, faith/community and youth-based organizations, and healthcare systems and providers.

The California Chapter of the American Planning Association has awarded a major honor to the City of La Mesa for the Grossmont Trolley Station Project, including the Alterra and Pravada residential developments. The award was presented October 2 at a statewide conference. Called the "Outstanding Planning Project Award," the tribute is the fourth such planning prize awarded to the smart-growth, transit-oriented, mixed-use project currently under construction along Fletcher Parkway. Combining 527 dwelling units with 2,700 square feet of retail space oriented toward the trolley platform, the buildings incorporate "green building" features for energy and environmental design.

On September 13, the City received the American Public Works Association (APWA) "Honor Award" for its renovation of Porter Hall. Porter Hall originally was constructed in 1928 and recently was designated a Historical Landmark. Remodeling of Porter Hall was necessary to repair fire and termite damage and to bring the building and site into compliance with the Americans with Disabilities Act (ADA). The renovation also prepared the building for its new tenant, the Foothills Art Gallery. The award recognizes the City's creative design plan that provided the necessary improvements and dealt with the fire damage, while still maintaining the building's historical integrity.

For additional information, see the accompanying "Frequently Asked Questions" (FAQs) about sewer lateral maintenance, or contact the Engineering Division of the Department of Public Works at 619-667-1166.

PRIVATE SEWER LATERALS

SEWER LATERAL FAQS

Q – How do I know if there is a blockage and what can I do about it?

A – If water does not drain or drains at a slower rate than normal, it may be an indication of a full or partial blockage. If this happens, you should call a licensed plumber and minimize the use of water until the problem is resolved.

You should also call Public Works at 619-667-1450 during working hours (6:00 a.m. to 3:30 p.m., Mondays through Thursdays and alternate Fridays) or 619-667-1400 during non-working hours. Crews will inspect the public sewer main to ensure that there are no problems in the main.

Q – How is a lateral cleaned?

A – A plumber normally sends a rod or a snake into the lateral through a cleanout to remove any blockage.

Q – What is a cleanout, and do I need one if I don't already have one?

A – A cleanout is a "Y" fitting on the sewer lateral that provides access to clean the lateral. It is advisable to install one if you do not have one. For further information, contact the City's Building Division at 619-667-1176.

Q – How can I have my lateral inspected?

A – A licensed plumber may videotape the sewer lateral to assess the lateral's condition.

1005

YOUTH SPORTS LEAGUES WORK TO PROVIDE HEALTHY SNACKS FOR PLAYERS AND SPECTATORS

For the past several months, the La Mesa Wellness Task Force, a coalition of professionals and community members working for a healthier La Mesa, has collaborated with the La Mesa Athletic Council to promote awareness of healthier snacks among the Council's member organizations. In September, the board of directors and members of the Athletic Council unanimously approved a resolution to make an effort to conform to the combined wellness policies of the Grossmont Union High School District, La Mesa-Spring Valley School District and City of La Mesa's Community Wellness Program.

The resolution called upon the Athletic Council's members to implement plans to incrementally offer healthier snack options. The first step encourages members to begin an awareness and educational campaign on the importance of healthy eating for players and spectators. This will be followed by providing healthy food choices for team snacks and at snack bars. The final step will reduce the availability of foods which are promoting poor health and, in some cases, eliminating these foods entirely from sponsored events, snack bars, food services and programs.

According to a study released by the California Center for Public Health Advocacy, using 2004 state Department of Education Physical Fitness Test data for students in grades 5, 7 and 9, the rate of overweight children in the La Mesa-Spring Valley School District was 24.9 percent. With some 4,500 youth participating in youth sports on La Mesa fields, providing educational materials and ultimately healthy snacks is a significant step in local efforts to improve the health and vitality of East County children and to combat childhood obesity.

City of La Mesa Launches New Website!

Starting October 31, log on to **www.ci.la-mesa.ca.us** and check out the **NEW** City of La Mesa website. The redesigned site features a fresh, new look and includes easy-to-access, up-to-date content. Stay informed about upcoming events and public meetings by regularly checking the Calendar or News & Announcements sections, sign up to be notified by e-mail about City happenings that are important to you, or report a problem or concern by clicking on "La Mesa Listens." Our new website is still a work in progress. Over the next few months, more features will be added. For example, an upgrade to "La Mesa Listens" will allow you to track your request, and e-commerce opportunities will be expanded. With news and information about La Mesa at your fingertips, we hope you will visit often.

A LA MESA TRADITION NEEDS YOU!

The La Mesa Parade Committee needs you! Volunteers are now being recruited to help with the 2008 parade to be held on Saturday, May 31, 2008. This year's theme is…

"A Salute to Ol' Glory – Celebrate America."

Volunteer meetings are held once a month from January to June. Volunteers are needed to recruit business participation and floats and to coordinate cars for the parade. To volunteer, please contact Yvonne Garrett at 619-667-1300 or commservices@ci.la-mesa.ca.us.

And . . . mark your calendar for May 31 at 10 a.m. so you won't miss the parade! Watch for more details in the next two issues of the FOCUS newsletter.

SENIOR HOUSING EXPO RETURNS

The City of La Mesa will host the 4th annual Senior Housing Expo on Wednesday, February 6, 2008. The event will take place at the La Mesa Community Center, 4975 Memorial Drive, from 10:00 a.m. to 1:30 p.m.

The Senior Housing Expo is a free event open to adults interested in learning more about San Diego area housing alternatives such as assisted living, 55+ residential communities, low-income senior and disabled rental housing, reverse mortgages, granny flat construction, home modifications, shared housing, and housing-related legal concerns. NBC 7/39's Consumer Bob will be the featured keynote presenter. He will share information about good deals, how to save money and how to avoid scams.

The event will feature more than 50 exhibitors, interesting speakers, and valuable resources on housing alternatives. It is open to area seniors as well as adult children of aging parents. Shuttle service will be available from the parking areas.

The Housing Expo is sponsored by Union Bank of California. It is hosted by the City of La Mesa, the La Mesa Park & Recreation Foundation and the La Mesa Commission on Aging, in partnership with Aging and Independence Services, AARP and other community organizations. For general event information, call the La Mesa Adult Enrichment Center at 619-464-0505.

Event sponsorship and exhibitor opportunities are still available. Interested businesses and organizations may direct inquiries to Judy Stern at 619-667-1490.

ENVIRONMENTAL – Preserving Your

DISPOSE OF OLD ELECTRONIC DEVICES, PAINT AND OTHER TOXIC ITEMS . . .

But Do It Safely And Responsibly

Common household items, such as batteries, fluorescent light bulbs or tubes, paint, chemicals, or electronic devices, can't be thrown in the trash. State law requires that these types of items, called "household hazardous waste" or "HHW" not be placed in trash containers because of their destructive effect on the environment. Instead, they can be recycled and reused.

If you reside within the city limits of La Mesa, you are eligible to participate in the City's free HHW drop-off program. And . . . while supplies last . . . event participants may bring a mercury thermometer and exchange it for a FREE non-hazardous thermometer.

The next event will be held on Saturday, November 17.
An appointment is required.
Call EDCO at 619-287-5696 x 4270 to schedule your drop-off time.

EXAMPLES OF HHW ARE:

- General: Batteries, fluorescent lights, latex and oil based paints, solvents, cleaners, pesticides and garden products, pool products, propane, and any items labeled flammable, hazardous, toxic or corrosive.
- Electronic: TVs, computer monitors and hardware, telephones, VCRs and radios.
- Automotive: Used oil and filters, batteries and antifreeze.

For more information on HHW, log on to www.ci.la-mesa.ca.us. Information on recycling, energy conservation and other topics also is available.

2008 HHW DROP-OFF SCHEDULE

January 26	August 16
March 29	September 27
May 17	November 22
July 12	

RECYCLING CONTAINERS MAKING THEIR WAY INTO CITY PARKS

With help from a grant from the California Parks and Recreation Department's Land and Water Conservation Fund, there are now seven recycling containers in Briercrest Park. These high-quality containers have covered lids and clearly visible signs and are located next to the existing unmarked trash cans.

All materials collected are part of the City's commingled recycling program. This means that all recyclable materials go into one container – aluminum, plastic, glass, paper and cardboard. All park visitors are encouraged to help conserve valuable resources and protect the environment by using the recycling containers.

With funding from the California Department of Conservation's Division of Recycling, the City will soon be adding recycling containers to other parks in La Mesa. Look for recycling opportunities soon in a park near you!

FREE OIL FILTERS!

RECYCLE
USED OIL FILTERS

Participate in the City of La Mesa Oil Filter Exchange. Bring your used oil filters to be recycled and receive a FREE oil filter!
Saturday, November 10
10 a.m. – 2 p.m.
Kragen Auto Parts, 5350 Jackson Dr.

This free oil filter offer is valid only at the specific location and on the date and time indicated above.
Funded by a grant from the California Integrated Waste Management Board.

Zero Waste – You Make It Happen!

CONSERVE WATER OUTDOORS AND BE ELIGIBLE FOR A REBATE

Helix Water District has two programs to help single-family homeowners conserve water outdoors. Residents are eligible to apply for an artificial turf rebate worth up to $1,000 or a smart controller rebate worth up to $350. For more information, call 619-466-0585, visit www.hwd.com/conserv or e-mail conserve@helixwater.org.

Recycle your Christmas tree at EDCO Station. Call 619-466-3355.

Donate your healthy, live tree.

See article on page 5.

PROGRAM UPDAT
Quality of Life –

BE AWARE OF WHAT YOU WASH DOWN THE STORM DRAIN

With La Mesa's clay soils, it doesn't take much to moisten the ground before water starts running off your property to the curb, down the street and into the storm drain. Eventually, the runoff will reach the region's waterways, carrying with it pollutants such as pesticides, fertilizers, automobile fluids and pet waste.

The pollutants, which are diluted and transported from different areas or sources (called "non-point source pollution"), contribute significantly to the impairment and degradation of our receiving water bodies. Moreover, water pollution compromises our quality of life by affecting family health; destroying habitats for animals, birds and fish; and impacting recreational areas used for swimming, boating and fishing.

Here are a few tips that you can follow that will help keep pollutants from entering our waterways:

- Irrigate to meet site-specific conditions to prevent over watering.
- Ensure that your irrigation system has control devices, sensors or shut-off switches to address malfunctions.
- Place or group plants with similar water needs within the same area.
- Don't irrigate non-planted areas.
- Inspect your irrigation system regularly for potential problems.
- Consider drip irrigation to save water and prevent over-irrigation and runoff.
- Adjust irrigation rates according to seasons, weather conditions and the soil's ability to absorb water.
- Irrigate in the early morning; it's the most efficient time to water plants with minimal evaporation.
- Refrain from irrigation during hot, windy periods of the day.

Please share this information with your family, friends and neighbors.

LA MESA FIRE DEPARTMENT REMINDS RESIDENTS . . .

PRACTICE YOUR ESCAPE PLAN!

The La Mesa Fire Department has joined forces with the nonprofit National Fire Protection Association (NFPA) to remind residents to "Practice Your Escape Plan." Firefighters and safety advocates are spreading the word about the dangers of home fires and teaching residents how to plan and practice escape from a home in case a fire occurs.

Develop a fire escape plan that identifies two ways out of each room and a family meeting place outside. Make sure your plan allows for any specific needs in your household. If everyone knows what to do, everyone can get out quickly. Then practice using the plan at least twice a year.

Install working smoke alarms on every level of your home and inside and outside each sleeping area. Keep in mind that studies have shown that some people may not awaken to the sound of a smoke alarm; they may need help waking up. If the smoke alarm sounds, go to your closest exit; if you run into smoke, turn and use another way out. If you must exit through smoke, get low and go under the smoke to your exit. Don't take time to pick up belongings; just get out and help others get out. Move fast but stay calm.

According to the latest NFPA research, in 2006, 3,245 people died in home fires – that's nearly nine people every day. Being alerted to a fire and knowing what to do to escape from one are extremely important, yet less than one-quarter of households have planned and practiced a home fire escape plan. Sometimes there are only seconds to escape, but there's no question that having a plan in place that has been practiced saves precious time and makes survival more likely.

Are you prepared for a fire? Although it's difficult to prepare for the unexpected, reviewing the information above and taking action based on it to plan for a fire is strongly recommended. And . . . don't forget to practice your escape plan!

Check www.nfpa.org for more information.

PREPARING FOR THE PANDEMIC FLU

– Fourth in a Series of Articles –

Business and Workplace Preparation

In previous editions of the FOCUS, we offered advice to assist you and your family in preparing for a pandemic flu or similar events. This edition will present a planning tool to assist businesses.

Maintaining the lifestyles enjoyed by those who live and work in La Mesa are dependent on a strong, thriving economic base. The composition of business in our city ranges from merchants and entrepreneurs with a few employees to corporations that employ hundreds. Profits, expenditures and wages all add to the economic base. A single lost job removes tens of thousands of dollars from the amount available to be spent within the community. This loss touches every citizen and every business.

A pandemic flu would certainly affect business operations. Businesses can expect loss of customers, interruption of supplies, diminished access to currency and financial services, and an absent workforce who may be sick or caring for sick family members.

Planning for the eventuality of a pandemic flu or public health event is critical to a business's survival. The United States Department of Health and Human Services provides two checklists to assist businesses in their planning efforts. These can be found at www.pandemicflu.gov/plan/checklists.html; they are titled "Business Pandemic Influenza Planning Checklist" and "Pandemic Preparedness Planning for US Businesses with Overseas Operations."

We recommend that each business within the community make use of these planning tools to help ensure its continued existence through a catastrophic event such as a pandemic. These resources provide points of thought and guidance but do not build a plan; it is up to each business to develop a plan that will meet its own unique circumstances.

Each document assists in an evaluation of how a pandemic flu would affect a business, its employees and customers. Each also provides guidance in establishment of policy, allocation of resources, and working with employees and within the community. The Health and Human Services web page offers numerous links to planning resources for businesses as well as for individuals and communities.

Further resources and guidance can be found at the following web sites:

- www.birdflu.org – County of San Diego Health and Human Services
- www.cdc.gov – Centers for Disease Control
- www.who.int/en – World Health Organization

Pandemic flu information is readily available from the County of San Diego at www.sdbirdflu.org and from the Centers for Disease Control at www.cdc.gov.

PLAN – PREPARE - STAY INFORMED

La Mesa Fire Dept. to Celebrate Centennial in 2008

Join us in commemorating the La Mesa Fire Department's 100-year anniversary! The department was established in February 1908, and we will kick off the festivities with a community open house on February 29, 2008. The celebration will continue throughout the year with a pancake breakfast on March 30 and participation in the City's annual parade on May 31, among other activities.

Watch for more details about these events on the City's website at www.ci.la-mesa.ca.us. Click on the Fire Department's page for all the latest, and sign up to receive e-mail notification of all our upcoming community events.

ARE YOU PREPARED FOR AN EMERGENCY?

How prepared are you to survive a natural or man-made emergency? Most people don't take the time to think about what they would do in the event of an emergency until something happens, and then it is too late.

There is a good possibility that power, water and other services will be disrupted during an earthquake or other disaster. You should be prepared to survive on your own for 72 hours. How comfortable you are during those first 72 hours depends on how well prepared you are. It only takes a few minutes a day to get prepared. Start by putting together a 72-hour survival kit for your home. Your kit should include things like water, food, flashlight, radio and a change of clothes. You should also put together a smaller kit for your car.

Some other simple ways to prepare are to: secure your water heater and other heavy or tall items to the wall; know how to shut off your water, gas and electricity; and write down a family reunification plan in the event you and your family are separated.

La Mesa Survive is an emergency preparedness program designed to help you prepare to be on your own for the first 72 hours after an emergency. You can download a copy of the *La Mesa Survive* booklet from the City website or call the Fire Department at 619-667-1355 to request a copy.

You never know when an emergency will strike, so take the time now to prepare.

You will be glad you did.

USE 9-1-1 TO REPORT A DRUNK DRIVER

The La Mesa Police Department has established partnerships with citizens and federal, state and local law enforcement agencies to reduce the number of persons who drive while under the influence of alcohol. The Department has received grant funding from the California Office of Traffic Safety through the Business, Transportation & Housing Agency. The funding stretches police staffing with other police agencies for overtime patrols, DUI checkpoints, probation checks, and joint anti-DUI operations in and around La Mesa.

One Call Could Save A Life

Have you ever wondered where a police officer was when you've observed someone driving recklessly? The person was, at a minimum, driving dangerously. Perhaps, more seriously, he or she was alcohol impaired. In 2005, 120 persons were killed and 2,981 persons were injured in alcohol-related crashes in San Diego County.

You can do something to help get drunk drivers off the road. If you see a drunk driver on the road, dial 9-1-1. When you call, provide the following information:

1. State that you wish to report a drunk driver.
2. Give the exact location of the vehicle, including the name of the road or cross streets, and the direction the vehicle is traveling.
3. Give a complete description of the vehicle, including make, model, color and license plate.
4. Describe the manner in which the vehicle is being driven.

What You Should Look For

The following signs can help you detect impaired drivers:

- Turning with a wide radius
- Straddling the center of the road or lane marker
- Appearing to be drunk (i.e., eye fixation, face close to windshield, drinking in the vehicle)
- Almost striking an object or another vehicle
- Weaving or zigzagging across the road
- Driving on surfaces other than a designated roadway
- Swerving or abruptly turning away from a generally straight course
- Turning abruptly or illegally
- Driving slower than 10 mph below the speed limit
- Stopping without cause in a traffic lane
- Stopping inappropriately
- Following others too closely
- Drifting or moving in a straight line
- Erratic braking
- Driving into opposing or crossing traffic
- Signaling that is inconsistent with driving actions
- Slow response to traffic signals, including sudden stops and delayed starts
- Driving with headlights off at night

Citizens who use the 9-1-1 emergency system to notify law enforcement of suspected drunk drivers create a partnership that connects individuals and communities with law enforcement and the goal of improving public safety.

THERE IS NO SAFE WAY TO DRINK AND DRIVE

There is no safe way to drive while under the influence. Always designate a sober driver if you know you will be drinking. Even one drink can make you an unsafe driver. A lot depends on the type of drink; if you are drinking on an empty stomach; your body type, gender and health status; and other factors including medicines and drugs you may have taken. Each drink increases your chances of having an accident from five times higher to 25 times higher, and more. Drinking alcohol affects your Blood Alcohol Concentration (BAC). It is unlawful to drive with a BAC that is:

- **.08% or more,**
- **.04% or more if you drive commercial vehicles, and**
- **.01% or more if you are under 21 years of age.**

An effective deterrent to drunk driving involves personal responsibility, education on the effects of alcohol on driving, and a public intolerance of impaired drivers.

HAVE A SAFE AND SECURE HOLIDAY SEASON

Santa may not be the only one who'll be coming to town for the holidays. Make your holiday season safer by following these simple tips:

- **Pair up with your neighbors.** Become acquainted with your neighbors. When you are away from home shopping or at a holiday party, your neighbors can watch for any unusual activity at your home. You can return the favor.
- **Shop in pairs.** Don't go into holiday crowds alone. A lone shopper is more vulnerable than a couple or group.
- **No cash, No credit cards, No ID in your wallet.** Have a purse or wallet with you if you like; they might be useful as decoys. Keep the real stuff – minimal cash, one credit card and your ID – in a fanny pack placed in front of you or in the inside pocket of your coat, jacket or other overgarment.
- **Use only indoor ATMs.** This is much safer than standing or sitting in your car in a dark, lonely parking lot.
- **Photocopy your vehicle registration, proof of insurance and the contents of your wallet.** If your car is broken into or stolen while you are shopping, or if your wallet is lost or stolen, you will have a record of the contents. Making a copy of the contents, front and back, can possibly speed the recovery of your vehicle.
- **Don't forget your garage door opener.** If you have an electric garage door opener, take it with you if you are driving when you go shopping, visiting or partying.
- **Will you be partying this holiday season? If so, please don't drink and drive.**

For additional safety information, contact the La Mesa Police Department Crime Prevention Unit at 619-667-1445.

CITY COUNCIL ACTIONS

July 10, 2007
Ratified the Design Review Board's approval of DRB 07 02, a request by Cricket Communications to construct a wireless communications facility in the parking lot serving 8809 La Mesa Boulevard.

Authorized an amendment to the contract for the management and implementation of a Home Investment Partnerships Program with the County of San Diego to fund the La Mesa Down Payment and Closing Cost Assistance (DCCA) Loan Program and accept the Home Allocation of $1,289,901.34.

Adopted an ordinance amending Chapter 17.12 of the La Mesa Municipal Code to adjust the schedule of sewer service charges commencing September 1, 2007 by the minimum amount necessary to operate and maintain the sewer system in a safe, adequate and sanitary manner.

July 24, 2007
Approved the first amendment to the National Pollutant Discharge Elimination System San Diego Regional Stormwater Co-permittees Memorandum of Understanding.

Ordered the vacation of a portion of Quarry Road right-of-way dedicated on American Homes, Map no. 2203, fronting 3915-3917 Quarry Road.

Upheld the Planning Commission's approval of Variance A-03-07 (Pruitt), to reduce the south side setback for a new garage at 8430 La Mesa Boulevard.

August 14, 2007
Amended Section 12.44.130 of the La Mesa Municipal Code for the installation of a disabled persons parking space at 6070 Nancy Drive.

Authorized the application for a technical assistance grant for "Communities for Healthy Kids," a program of the Institute for Local Government.

Approved a revised priority list of streets for future underground utility districts.

Accepted the Annual Report on the Neighborhood Traffic Management Program and approved the 2007 ranked list of streets requesting traffic calming.

August 28, 2007
Ratified the Design Review Board's approval of DRB 07 11, an exterior remodel of a commercial building at 8047-8049 La Mesa Boulevard.

Ratified the Design Review Board's approval of DRB 07 16, a request to add a second dwelling unit to the property at 4505 Spring Street.

Authorized the execution of an agreement to negotiate between the City of La Mesa and Citymark Communities LLC for the development of a mixed-use project on the Allison Avenue parking lot site.

Adopted an urgency ordinance adding Chapter 10.50.47 of the La Mesa Municipal Code for purposes of regulating the presence of animals at outdoor assemblages.

Approved traffic calming on High Street between Waite Drive and Lemon Grove Avenue.

September 11, 2007
Ratified the Design Review Board's approval of DRB 06-16 (City of La Mesa) – a proposed police facility at 8085 University Avenue in the La Mesa Civic Center.

Adopted a Resolution expressing support for San Diego Gas & Electric's Sunrise Powerlink Transmission Project.

September 18, 2007
Adopted a resolution taking legislative action to resolve the labor contract impasse with the Police Officers' Association for fiscal year 2007-2008.

September 25, 2007
Approved the 2007 Christmas in the Village outdoor assemblage permit and authorized the temporary closure of portions of La Mesa city streets for the event sponsored by the La Mesa Village Merchants Association.

Adopted the biennial budget for fiscal year 2007-2008 and fiscal year 2008-2009.

Ratified the Design Review Board's approval of DRB 07 06 (City of La Mesa) – for Downtown Village Design Guidelines.

Ordered the vacation of a portion of the High Street right-of-way at 3812 Costa Bella Drive.

Established Underground Utility District No. 26 from 7434 to 7463 Orien Avenue and 7323 University Avenue (Helix High School).

Approved the designation of Porter Hall, located at 4910 Memorial Drive in MacArthur Park, as a historic landmark.

WALK LA MESA

Just for the Fun of It

The La Mesa Wellness Task Force wants you to know that there are organized walks nearby every day of the week. Check the City's website at www.ci.la-mesa.ca.us/News for a list of options, or pick up a flyer at La Mesa City Hall or Community Center.

NEW LA MESA LIBRARY AND POST OFFICE

Construction timeline is on target for completion of new library and post office building

The City is making good progress toward completing construction of the new branch library and post office building. The 17,000 sq. ft. structure will include a new 10,000 sq. ft. La Mesa branch of the County Library System and a 7,000 sq. ft. post office. The new library will be over 40% larger than the existing library, one of the most visited branches in the County system. The new post office will provide retail postal services with better access in a more modern facility. The majority of the existing post office building, located just east of City Hall, provides space for mail sorting and local carrier routes. In the future, these carrier services will be moved to another location away from the Civic Center.

Construction progress is being carefully monitored to ensure timely completion. The new La Mesa Police Station is scheduled to begin construction once the library is moved into the new facility and the existing site is transferred to the City from the County. The new Proposition D funded Police Station will be located on the site where the current library and the former Helix Water District office is located as outlined in the Civic Center Master Plan.

continued on page 2

UPCOMING STREET RESURFACING

The City of La Mesa plans to continue with its street resurfacing program in 2008. This past year portions of Glen Street, Washington Avenue, Cypress Street, Grant Avenue, Lemon Avenue, Normal Avenue, Windsor Drive, Canterbury Drive, Date Avenue, Finley Avenue, and Third Street were resurfaced following the replacement of sewer pipes in those streets. Additionally, the commitment to the annual slurry seal program is paying dividends by extending the useful life of much of the street network, so that repaving is not needed as soon. More information on street maintenance is available on the City's website. Go to www.cityoflamesa.com and enter *street* in the search field. This past year approximately 3 million square feet of pavement was slurry sealed.

THE FOLLOWING STREETS ARE SCHEDULED TO BE RESURFACED IN 2008:

- University Avenue from Allison Avenue to Spring Street
- Allison Avenue from University Avenue to Palm Avenue
- Jackson Drive from Fletcher Parkway to the City limits
- Baltimore Drive from University Avenue to the City limits
- These streets will be resurfaced after sewer pipes are replaced:
  Boulder Drive, Boulder Place, Crowder Lane, Hillcrest Avenue, Chevy Chase Drive (from Hillcrest to Sunrise), Grape Street, Normal Avenue (from Windsor to Lemon), Lee Avenue (from University to Grape), Maiden Lane, and Summit Drive (from Eastridge to the end)

There will be some traffic delays associated with these projects and residents will be informed prior to the start of any work. Your patience is requested while the City upgrades this important infrastructure.

Continued from page 1

New La Mesa Library and Post Office

The new La Mesa Library will continue to be operated by the County library services staff who have been working closely with the City on design of the new building and interior improvements. José Aponte, Library Director, states that the new La Mesa library will "build on its reputation as a community asset for kids, families and the greater population. La Mesa is taking the first steps towards building the library necessary to support our kids and our community to compete in the 21st century world marketplace."

The library staff is looking forward to moving into the new library so they can better serve the La Mesa community by this spring. The new library will include a children's area, a young adult section, and computer stations; as well as traditional reference, fiction, and periodical sections. Library staff has worked closely with the City's architect and design team to create an exciting and functional new space. Betty Waznis of the County library staff states "The City of La Mesa provides an outstanding setting for families and businesses to grow and thrive. We welcome the opportunity to continue to support the residents of La Mesa with cutting edge library service in this enhanced new environment."

This cooperative arrangement between the City and the County will provide the community with a fantastic new library, while also taking another giant step toward completing the vision established by the City Council for a new civic center. The first civic center project to be completed was the new Fire Station 11 and Emergency Operations Facility on the corner of Allison Avenue and University Avenue, just west of the library project. The library and post office facility, scheduled for completion in March 2008, is the second project in this master plan. The third major project will be construction of the new two-story police station on the north side of the Civic Center site at University Avenue and Baltimore Drive. This new facility will provide much needed space for current and future public safety needs in La Mesa. The project will include below grade parking for police vehicles to provide more security and better function for police operations, as well as create more space for future uses within the Civic Center block.

New Police Station to be located at University and Baltimore

COLLIER PARK MASTER PLAN

The design team of Architects Bundy & Thompson/Garbini & Garbini have been retained to prepare a master plan for Collier Park. The current goal is to present a final master plan to the City Council in June 2008.

The process to develop the master plan will include a comprehensive and interactive outreach program of interviews, surveys, and workshops conducted by the design team. After an initial phase of information gathering, research, etc. the design team has scheduled the first interactive workshop for March 1, 2008, 8:30am to 4:00pm at the Nan Couts Cottage. This first workshop will focus on developing the community's wants, needs, and desires for the future of Collier Park. A second workshop is schedule for April 26, 2008, 8:30am to 4:00pm at Nan Couts Cottage. At this workshop, attendees will work on master plan ideas for Collier Park.

Representatives from a broad spectrum of the community will be invited to participate in these two workshops and an open invitation will be made to anyone who wants to attend and participate. That word "participate" is important because there will be no place on the sidelines for spectators at these all day workshops.

Questions and comments should be sent to the Design Team, Attention: Dick Bundy, FAIA at abtdick@pacbell.net or mailed to Architects Bundy & Thompson, 715 J Street, Suite207, San Diego CA 92101.

Collier Park is the City's first park

BRIERCREST PARK IS AN ALL AROUND WINNER

The annual Kids Care Fest is a regular event at Briercrest Park

The City of La Mesa received an Orchid Award for Briercrest Park in the San Diego Orchids and Onions Awards ceremony held on Friday, November 30, 2007. The Park was given the Orchid in the Landscape Architecture-Sustainable Design category. The architectural improvements ongoing at Briercrest Park promote healing and wellness values. The park provides access to education, rehabilitation, and interactive recreational activities in a highly visible and creative setting. Briercrest Park also won the Orchid Award because of sustainable design which relies on a streambed concept for the hydrology cycle. The entire park drains into a natural basin so that all on-site storm water is captured and runoff is used to feed nearby shrubs and trees.

With a design from the Schmidt Design Group, Briercrest Park was redeveloped in 2005. The park plan was the result of an extensive community planning effort resulting in the Parks Master Plan. "The vision was to design a place where people of all ages and abilities will find balance, peace, and harmony. Briercrest Park is an asset to the community and is a treasure for all to enjoy," said Mayor Art Madrid.

Adjacent to Briercrest Park a development will soon begin construction for a Senior Assisted Living Project that will take advantage of the location next to the award winning park and near the amenities and services of Grossmont Hospital. The City Council approved an amendment to the ground lease that will allow the Village at Briercrest to include 120 residential units and a 24-bed special care unit to be known as the Vintage Club. The Village at Briercrest will be developed by the Health Care Group. The building will be one to four stories, containing approximately 120,000 square feet, and will be located on a 2½- acre City-owned site. A portion of the annual lease payments to the City for this project go to the ongoing maintenance and improvement of Briercrest park. The concept for integrating a private development that complements the "wellness" theme for Briercrest park was approved as part of the Parks Master Plan.

OPEN YOUR HEART & CAR DOOR TO A LA MESA NEIGHBOR WHO NEEDS A LIFT…

Become a part of La Mesa's newest community production, now in full swing!

Inaugural rider Margaret Gaines(r) and her driver, Doris Tuley, were honored at the Rides4Neighbors kickoff event held December 11, 2007 at the La Mesa Community Center.

Rides4Neighbors is our volunteer-based transportation assistance program for La Mesa's older adult residents and adult residents with disabilities. Rides are provided by screened and trained volunteers who use their own vehicles to assist transit dependent La Mesa neighbors in need of a lift.

The City of La Mesa received a federal New Freedom grant award through the San Diego Association of governments (SANDAG) to cover most of the start-up costs and two year's operation for developing and providing this new service. In December 2007 the City was recommended for continued funding for an additional three years and is awaiting the SANDAG Board's final approval. The La Mesa Adult Enrichment Center accepts ride requests, explains ridership rules and the suggested donation system, and matches ride requests with volunteers.

Volunteer drivers are reimbursed for mileage and receive secondary liability insurance. As a volunteer, you decide your availability and choose the rides you wish to provide. There is no minimum time commitment or number of rides required to be a volunteer. We can either call you when a ride is needed, or notify you via e-mail.

As a volunteer, you will be part of a rewarding and meaningful civic program. Community surveys consistently find that what residents like best about La Mesa is the neighborly small town feel. Rides4Neighbors will help build that spirit of community and old-fashioned neighborliness. Join us by opening your heart and car door to a rider in need of a lift!

For more information, call the Adult Enrichment Center at 619-464-0109, or go online to www.cityoflamesa.com/Rides4NeighborsVolunteer to download a volunteer application form.

WHAT IS RIDES4NEIGHBORS?

- Rides4Neighbors a volunteer-based transportation program for adults age 65 and older and persons with a disability who are residents of La Mesa.
- Rides are provided by trained volunteers who use their personal vehicle.
- Rides are scheduled for essential transportation needs, like medical appointments, grocery and other essential shopping, personal care, personal business.
- Ride destinations are not limited to La Mesa, but are contingent upon finding a volunteer willing to transport you to your destination.

The City of La Mesa provides eligibility screening for riders and volunteers, scheduling, ride coordination, volunteer training, mileage reimbursement and secondary insurance.

SCHEDULING A RIDE

- Call 619.464.0109 to schedule a ride.
- First time riders complete an application and service agreement prior to the first ride.
- Request your ride at least one week in advance of your trip date; new callers should allow even more time in order to process your initial application.
- Rides4Neighbors makes every effort to match you with a screened volunteer driver, but ride availability is not guaranteed.
- Eligible riders may receive the equivalent of up to $100 of service per month, based on mileage reimbursement and/or purchased rides fees.
- Riders must be residents of the City of La Mesa, age 65 or older, or have a disability that prevents use of existing public transit services including ADA Paratransit.

PAYING FOR A RIDE

- Rides are donation-based; the minimum suggested donation is $3 per one-way trip; the suggested donation scale is based on the trip distance, or geographical zone.
- Donation statements are mailed to riders monthly and donation checks may be made payable to the "City of La Mesa."
- Volunteer drivers do not accept payment, donations or tips from riders, but a heartfelt Thank You is always welcome!

VOLUNTEERING

- We are seeking adult volunteers with an excellent driving record who are willing to use their personal vehicle to provide a ride to a neighbor in need.
- Volunteers complete an application, provide a copy of a valid Drivers' License and insurance certificate, authorize the City to make a DMV records check, complete a Live Scan background check, and complete an orientation and training.
- Volunteer drivers are reimbursed for mileage and receive secondary liability insurance.
- As a volunteer, you decide your availability and choose the rides you wish to provide. There is no minimum time commitment or number of rides required to be a volunteer.
- Call 619.464.0109 for information on becoming a Rides4Neighbors volunteer!

Rides4Neighbors

PUBLIC ACCESS DEFIBRILLATORS

Public access defibrillators are available in many City facilities and a growing number of private buildings. The use of these devices, in conjunction with cardio pulmonary resuscitation or CPR, increases the chances of survival for victims of a heart attack who are in cardiac arrest.

The use of public access defibrillators is now incorporated into the current CPR training as an additional module. They are easy to use. Simply open the device and follow the pre-recorded instructions and prompts.

Defibrillators are located for public access at the following City of La Mesa sites: Police Department, Municipal Pool, Adult Enrichment Center, City Hall, Community Center, Public Works Operations Center, and the Fire Department Administrative Office.

THE AWARD WINNING PROJECT AT GROSSMONT TROLLEY STATION

The Transit Oriented Development at Grossmont Trolley Station is fully under construction by Fairfield Residential LLC. The Smart Growth development, Alterra and Pravada, consists of two levels of structured parking, topped by three and four levels of apartments and site amenities. The lower level of the parking structure will replace the 600 surface public parking spaces and the second level of parking will serve the new apartments.

Though not fully completed, this development has already been recognized with four awards. It won a San Diego Chapter American Planning Association award for Outstanding Planning and for Outstanding Planning Project, and garnered the California Chapter of American Planning Association for the same named award. The project has also received an award from the Urban Land Institute for distinguished planning and design achievement. The smart growth transit oriented development is sure to garner more local, State, and national award recognition when complete.

The project is located on both sides of the Grossmont Center Drive bridge. The west side, Pravada, is under construction at the present time and will have 297 apartment homes. Alterra, to be constructed on the east side of the bridge, will have 230 apartment homes and will begin construction in 2008. When construction is started on the east side of the bridge, parking will be closed on the east side and trolley patron parking will be allowed in the first level garage at Pravada on the west side. In total, there will be 2,700 square feet of retail space oriented to the transit station platform, and 527 one and two-bedroom apartments on the eight acre site. Of the 527 units, 15% or 80 units will be made available to very low and moderate-income households, funded through a $2.7 million contribution from the La Mesa Community Redevelopment Agency's housing fund. In addition, the San Diego Association of Governments (SANDAG) awarded a $2 million Smart Growth Grant and the Metropolitan Transit System (MTS) included a $1.7 million capital improvement project that implements a community-wide objective to achieve better access to and from the trolley station. These public improvements will include two elevators and a bridge structure, along with other pedestrian amenities and improvements.

Pravada is currently under construction and should be ready for occupancy by late summer

The developer, Fairfield Residential, stated that most apartment units on the west side in Pravada should be ready for occupancy sometime in late summer 2008. Anyone who is interested in the Pravada apartment community can call Fairfield's interest line at 858.824.6464 or contact them via their website at www.pravada-apts.com.

Project site at Fletcher Parkway on both sides of Grossmont Center Drive

LA MESA UNVEILS TWO NEW PLAQUES ON THE WALK OF FAME

On January 9, 2007 two new plaques were unveiled on La Mesa's Walk of Fame. Along La Mesa Boulevard in the La Mesa Village, bronze plaques in the sidewalk recognize individuals whose achievements and contributions have been important to the livelihood of La Mesa. The new inductees to the Walk of Fame are James "Jim" Culbert and James "J.O." Orsborn.

Jim Culbert was known worldwide in sprint car racing circles as a builder, seller and driver of sprint and super-modified cars. In the late 1940s, he founded Culbert Automotive Engineering (CAE) that evolved into an auto racing superstore. James was also the record holder for speed in sprint and modified roadsters, and in 1957 he was the first driver to exceed 200 mph in a sprint car. Shortly before his death in 2004, Mr. Culbert was inducted into the National Sprint Car Hall of Fame in Knoxville, Iowa.

James Orsborn resided in La Mesa his entire life and was a well-known member of the community. Known to many simply by his initials, J. O. began his career as a volunteer fireman with the La Mesa Fire Department at the age of 15. He was appointed La Mesa's Fire Chief in 1981 and retired in 1990 after 46 years of service. He was also active in scouting, serving in various capacities with the San Diego Boy Scouts, and was awarded the Silver Beaver Medal for his long service.

Prior inductees to the Walk of Fame are: Elmer Drew, founder of Drew Ford; Shuttle Astronaut Dr. Ellen Ochoa; longtime resident Sarah "Nan" Couts; Basketball Hall of Fame and Helix High graduate Bill Walton; and Ed and Sandra Burr, founders of EDCO Disposal Corporation.

JOHN A. DAVIS FAMILY YMCA

Expansion and Remodel

The finishing touches are being made to the expansion and remodel of the John A. Davis Family YMCA in La Mesita Park. This $2.7 million project is scheduled for completion in spring 2008. The facility will double in size, add more than 20 parking spaces, and receive a fresh coat of paint inside and out. The new facility will provide additional programming in individual fitness programs, group fitness classes, Pilates, youth and pee wee sports, youth day camps, and senior activities. For more information on the East County Family YMCA, John A. Davis Facility, please log on to eastcounty.ymca.org or call (619) 464-1323.

Construction nears completion on the YMCA facility in La Mesita Park

CITY ASSISTING FIRST TIME HOMEBUYERS!

La Mesa recently reopened its first-time homebuyers Down Payment and Closing Cost Assistance (DCCA) Program. The DCCA Program can provide qualified low-income households with up to $120,000 for use as a down payment on an eligible single-family or condominium unit in La Mesa. The money comes in the form of a deferred interest loan, a "silent second," that requires no monthly payment of principle or interest. "The program's funding comes from the County of San Diego HOME Consortium and their dollars come from the federal government, so we have to operate the program under some rigid guidelines. Still, this type of program is as important as ever because while housing prices are falling, providing an opportunity for first-time buyers, private financing is becoming harder to obtain without some form of assistance. La Mesa is extremely pleased to be able to offer this type of assistance once again," says program administrator Chris Gonzales (619.667.1192).

Despite the strong initial interest in the DCCA Program, only six households have recently qualified for the program. Each of the six qualified households is currently working with their lender and shopping for property in La Mesa. It is anticipated that each could close purchase transactions before spring. The City's mission now is to continue to promote the program so that remaining available funds can assist qualified households to become first time homebuyers. Interested parties can read more about the DCCA Program on the City website www.cityoflamesa.com and search *DCCA*.

HONORING OUR HISTORY

The La Mesa Register of Historic Landmarks continued to grow in 2007 with the addition of two residences, one civic building, and a commercial storefront. Each site was nominated by the property owners and considered by the Historic Preservation Commission and the City Council. These latest additions bring the total number of designated historic sites to 28.

Porter Hall, located in MacArthur Park and owned by the City, underwent exterior restoration and tenant improvements in 2007 and is the new home of the Foothills Art Association. The oldest, octagonal portion of the structure was constructed c.1928 across the street (to the south) from its current location. It was once a flower shop and housed the local branch of the San Diego County library from 1932 until 1957.

The Old Post Office Building at the southwest corner of La Mesa Boulevard and 4th Street was constructed in 1939. It was designed by local architect Frank L. Hope, Sr. in the Art Moderne style and is the first commercial building to achieve landmark status.

The Staveley House, 4628 3rd Street, is a well-preserved 1924 single-story California bungalow. It is notable for having an upswept gable roof typical of the Oriental variation on the Craftsman style.

The Staples-Orcutt House at 4576 Acacia Avenue was built in 1910. It has a cast cement concrete veneer that mimics the rusticated stone of the numerous retaining walls found in the older residential sections of the City. This house was used as a duplex for many years and has recently been converted back to a single-family residence.

ARE YOU PREPARED?

How prepared are you to survive a natural or man made emergency? Most people don't take time to think about what they would do in the event of an emergency until something happens and then it is too late. There is a good possibility that power, water, and other services will be disrupted during an earthquake or other disaster. You should be prepared to survive on your own for 72 hours. How comfortable you are during those first 72 hours depends on how well prepared you are. It only takes a few minutes a day to get prepared. Start with putting together a 72 hour survival kit for your home. Your kit should include things like water, food, flashlight, radio, and a change of clothes. You should also put together a smaller kit for your car.

Some other simple ways to prepare are to: Secure your water heater and other heavy or tall items to the wall; know how to shut off your water, gas, and electricity; and write down a family reunification plan in the event that you and your family are separated.

La Mesa Survive is an emergency preparedness program designed to help you prepare to be on your own for the first 72 hours after an emergency. As part of the year-long celebration of our 100th anniversary, the Fire Department is updating the La Mesa Survive program to provide you with the most current information available. You can download a copy of the current La Mesa Survive booklet from the city website at www.cityoflamesa.com/ LaMesaSurvive. You may also call the Fire Department at 619-667-1355 to request a booklet. Watch for announcements when the updated La Mesa Survive booklet becomes available later this year.

The City of La Mesa is in the process of planning a community disaster response exercise in 2008. During the October 2007 wildfires thousands of volunteers showed up at relief centers and evacuation sites all over the county to offer assistance. Ordinary citizens wanted to help out wherever they could. If you would like to get involved here are just a few places to start. All types of volunteer positions are available through the San Diego/Imperial Counties Chapter of the American Red Cross. Visit their website at www.sdarc.org or call 858.309.1200. Another way to volunteer is to become a Citizen Emergency Response Team (CERT) member. East County CERT will hold three academies in 2008 with the first one starting February 2. For more information on CERT visit the website at www.eastcountycert.org or call 619-667-1472. Watch for future information about the La Mesa disaster response exercise.

You never know when an emergency will strike. Take the time now to prepare yourself. You will be glad that you did.

SPRING FIRE SAFETY

Spring cleaning is a long standing tradition that calls for household cleanup. It's also the perfect time to ensure your home is safe from potential fire hazards. We encourage you to use this tradition to help make your home fire safe, inside and out. Here are some simple tasks that can help make your home a safer place.

While cleaning the inside of your house, check the batteries in smoke detectors to make sure they are operating properly. Smoke detectors should be checked monthly and batteries replaced twice a year. Fire extinguishers should also be checked. Make sure that the gauge is not in the red and that extinguishers are easily accessible in case of emergency. Another important item is to inspect all electrical cords for damage and loose connections.

Fire safety extends to the outside of your house as well. While cleaning the outside of your house, check for trees growing into power lines. Be sure to contact SDG&E (www.sdge.com/safety/trees.shtml) prior to pruning around power lines. Prune branches that could be a potential fire hazard, and clear dead grass and brush from around fire hydrants. Next, clean dead leaves and needles from your roof and gutters, and install spark arresters on your chimney outlets and stovepipes. Make sure any firewood is stored safely away from your house. Finally, make sure all household chemicals are locked out of reach of children.

Following these simple fire and life safety tips, along with rehearsing your home escape plan, will help ensure that your home is not only cleaner, but also safer for you and your family. For more safety information contact the La Mesa Fire Department at 619.667.1355 or visit the following websites:

www.firesafety.gov/

www.sandiego.gov/fireandems/safety/tips.shtml

www.usfa.dhs.gov/citizens/index.shtm

NEW LAWS FOR 2008

During 2007 the California Legislature considered more than 2,700 measures introduced by the members of the Senate and Assembly. About 750 of those measures resulted in additions or amendments to State laws, most of which took effect on January 1. Many of the changes are technical in nature but some are more substantive and may have a direct effect on you. Police Department staff have reviewed summaries of the changes for 2008 and have provided information on several new laws that may be of interest to you.

Provisions have been added to the Health & Safety Code and the Vehicle Code, that make it illegal to smoke a pipe, cigar, or cigarette in a vehicle in which a person under the age of 18 is an occupant. The offense is an "infraction," punishable by a fine of no more than $100. Other provisions of the law prohibit an officer from stopping the vehicle to investigate a violation of this law only. The officer may enforce the law if the driver has been stopped or contacted for some other violation or lawful purpose. (Senate Bill 7, "SB7," by Oropeza)

The Vehicle Code has been amended to prohibit the use or sale of spray coating products that impair the reading or recognition of license plates by electronic devices such as license plate readers used by law enforcement agencies or on toll roads. (Assembly Bill 801, "AB801," by Walters)

Many people are aware that new laws were adopted that will restrict the use of cell phones when driving. These laws do not take effect until July 1, 2008. At that time, it will be unlawful to talk or listen on a cell phone while driving unless you are doing so in "hands free" mode. Drivers under the age of 18 cannot talk or listen on a cell phone at all, whether or not they are doing so in "hands free" mode. Certain exemptions are provided including: allowing the use of a cell phone to make emergency calls; and allowing the use of cell phones by emergency services professionals such as police and fire personnel, in the course of their duties, while driving emergency vehicles. Exemptions are also provided for the use of cell phones with "push to talk" features, where the driver does not have to hold the cell phone to his or her ear, but only for drivers of certain vehicles, including tow trucks. (Senate Bill 33, "SB33," by Simitian)

You can find the complete text of these and other new laws at www.leginfo.ca.gov/bilinfo.html.

PROPERLY DISPOSE OF OR RECYCLE YOUR HAZARDOUS ITEMS!

If you're like most of us, you probably have some things at your home like batteries, fluorescent lights, chemicals, or electronics that can't be just thrown in the trash. These items are considered household hazardous waste (HHW) and are not allowed to be placed in the trash because of their destructive effect on the environment and their ability to be recycled and reused.

DISPOSAL IS FREE! If you reside within the incorporated city limits of La Mesa, you are eligible to participate in the City's free HHW drop-off program.

2008 HHW DROP-OFF SCHEDULE:

March 29	*May 17*	*July 12*
August 16	*September 27*	*November 22*

Call EDCO Disposal Corporation at (619) 287-5696 ext. 4270 to make an appointment.

While supplies last, participants may bring a mercury thermometer and exchange it for a FREE non-hazardous thermometer.

EXAMPLES OF HHW ARE:

General: Batteries, fluorescent lights, latex & oil based paints, solvents, cleaners, pesticides and garden products, pool products, propane, and any items labeled flammable, hazardous, toxic, or corrosive.

Electronics: TVs, computer monitors and hardware, telephones, VCRs, and radios.

Automotive: Used oil and filters, batteries, and antifreeze.

Call EDCO at 619.287.5696, ext. 4270 to schedule an appointment or to request additional information.
To discover more information on HHW or other disposal or recycling options, visit www.cityoflamesa.com and search *hhw*.

ANNOUNCING SPRING CLEAN-UP 2008

The City of La Mesa and EDCO Disposal Corporation will be holding the annual Spring Clean-Up on two Saturdays in April. Your opportunity is here to simplify your life! And it's all for free!

The event will be held between 7:00 am and 2:00 pm at EDCO Station, 8184 Commercial Street.

If you live SOUTH of Interstate 8, your clean-up day is April 12

If you live NORTH of Interstate 8, your clean-up day is April 19

DISPOSE OF OR RECYCLE:

- Reusable Items
- Unwanted Furniture
- Large Appliances
- Landscape Material
- Waste Debris from Improvement Projects
- Just Plain Junk

This annual event is for residents who live within the incorporated city limits ONLY. You MUST bring a California Driver's License listing your La Mesa address. DO NOT bring items from a household outside of the City of La Mesa.

There are some restrictions on the items than can be accepted. This is NOT a Household Hazardous Waste (HHW) Collection Event. We will NOT accept batteries, fluorescent lights, televisions, computer monitors, home electronics, tires, or items labeled poison, flammable, corrosive, or explosive. To dispose of HHW for free, please call 619.287.5696 ext. 4270.

We also will not accept waste from businesses, contractors or professional landscapers.

Free mulch will be available on a self-loading, first-come-first-served basis.

City Employee Recognized for "Peer Support" Efforts

Maxine Lynch, the City's Safety Volunteer Coordinator, was honored last November at the annual conference of the International Critical Incident Stress Foundation for her work and achievements in the field of "Peer Support." Maxine received the Foundation's "Jefferson Cup" award during ceremonies at the conference in San Diego.

Maxine first came to work for the City of La Mesa in 1981 as an Animal Control Officer. Her talents and skills led her to other positions within the Police Department, first as a Crime Prevention Specialist, and then to her current position as the Safety Volunteer Coordinator, working primarily with the City's Retired Senior Volunteer Patrol members, or RSVPs.

In 1995 Maxine proposed the creation of a "Peer Support Team" for the La Mesa Police Department. Her proposal was approved and Maxine, working with other Police Department staff, developed the guidelines and training standards for the new "Peer Support Team." She has gone on to become one of the leading figures in the California peer support community and is the current President of the California Peer Support Association.

Among the many achievements that were cited when Maxine was presented with the Jefferson Cup award were: development of the La Mesa Police Department Peer Support Team; subsequent development of the La Mesa Police & Fire Peer Support Team; proposal and implementation work on a Police & Fire Peer Support Trailer for use at critical incidents; and her years of service in providing peer support, and training and supervising peer support personnel.

On January 8 Maxine was honored by the La Mesa City Council with a Commendation for her dedication and accomplishments in the peer support field.

MISS LA MESA PAGEANT

The 2008 Miss La Mesa and Miss La Mesa Teen Pageant is right around the corner. Young women ages 13-26, who are residents of La Mesa, may apply through the end of February to become an ambassador in their community.

For pageant information, contact Ms. Alex Stathoulis at 619.200.1567 or misslamesapageant@yahoo.com.

SENIOR HOUSING EXPO

Visitors get helpful information on housing alternatives for seniors

The City of La Mesa hosts the 4th Annual Senior Housing Expo on Wednesday, February 6, 2008. The event takes place at the La Mesa Community Center, 4975 Memorial Drive, from 10:00 am to 1:30 pm.

The Senior Housing Expo is a FREE event featuring more than 50 exhibitors, interesting speakers, and valuable resources on housing alternatives. The event is open to area seniors as well as adult children of aging parents who are interested in learning more about San Diego area housing alternatives such as: assisted living, 55+ residential communities, low income senior and disabled rental housing, reverse mortgages, granny flat construction, home modifications, shared housing, and home safety. NBC 7/39's Consumer Bob will be the featured keynote presenter, sharing information about good deals, how to save money, and how to avoid scams. Shuttle service is available from the parking areas and attendees may also use nearby street parking.

The event is sponsored by Union Bank of California, AARP California, and MDC, Inc. Event hosts include the City of La Mesa, the La Mesa Park & Recreation Foundation, and the La Mesa Commission on Aging, in partnership with Aging and Independence Services, AARP and other community organizations. For more event information call the La Mesa Adult Enrichment Center at 619.464.0505.

LA MESA LOVES A PARADE!

On Saturday, May 31, 2008 downtown La Mesa will dress up in red, white, and blue for the Annual Flag Day Parade, "A Salute to Old Glory!" The parade marches through downtown La Mesa Village beginning at 10 a.m. Seventy-five units are featured including: area marching bands, floats, military vehicles, active and retired war heroes, equestrian units, and youth groups.

Businesses and civic groups are encouraged to participate in the "Jewel of the Hills" Float contest and get your organization highlighted in the La Mesa FOCUS! Another crowd pleaser is a 20-foot wide flag carried down La Mesa Boulevard by community volunteers. Spectators are encouraged to dress in patriotic attire and cheer on the participants.

2007 Jewel of the Hills Float Award presented to the American Legion

There will be two patriotic pre-parade concerts for your listening pleasure. La Mesa Middle School band will perform at La Mesa Boulevard and Palm Avenue and The Granger Middle School Jazz Band will perform at La Mesa Boulevard and Nebo Drive. Each band will play from 9:00 am – 10:00 am.

The City extends its heartfelt thanks to La Mesa Flag Day sponsors: La Mesa Rotary, Wal-Mart, KSON 97.3 and 92.1 Country Radio, and La Mesa Community Welfare Association.

For more information visit the City's website at www.cityoflamesa.com or call the Parade hotline at 619.667.1172.

PRIVATE SEWER LATERAL MAINTENANCE TIPS

In the November 2007 issue of the Focus there was an article explaining that it was the responsibility of homeowners to maintain their own sewer lateral (www.cityoflamesa.com search for *FOCUS* and select the November 2007 issue from archives). This followup article will provide some tips on how to best maintain your sewer lateral.

The entire length of the sewer lateral from the house to the public main is owned by the private homeowner and is the homeowner's responsibility to maintain. The major maintenance concerns with sewer laterals are:

- There are no cracks or breaks
- There is no grease build up
- There are no roots

The best way to investigate whether or not you have any of these concerns in your sewer lateral is to have a licensed plumber conduct a video inspection of your lateral. The plumber may have to clean the lateral prior to doing the video inspection. After cleaning and taking the video ask the plumber to report any deficiencies and if possible show them to you.

In order for a plumber to be able to video your sewer lateral there needs to be a cleanout. Cleanouts are good to have because they provide an access point for cleaning and videoing. Most plumbers can install a cleanout if you do not already have one.

A crack or break in your lateral could let sewage leak out into the ground or could let groundwater into the lateral. Cracks or breaks can also allow roots to intrude into a sewer lateral. Cracks or breaks should be repaired by a licensed plumber. The plumber may be able to replace a portion of the lateral or in some cases re-line the inside of the lateral. The re-lining of a sewer lateral can be a cost effective method of repairing a sewer lateral because it requires minimal ground disturbance and excavation.

Do not pour any oil or fat down your sink drains. Oils and fats will solidify in to grease, can cause your lateral to become clogged, and can cause the public sewer main in the street to become clogged. The number one maintenance problem in City sewer pipes is the presence of grease.

Property owners are advised to consult the Building Division at 619.667.1176 or the Engineering Division at 619.667.1166 for additional information. A permit from the City is required for any excavation work.

American Cancer Society's Relay For Life Unites La Mesa

Hearts and Feet Are Used To Fight Cancer

Walkers and runners can join in the battle against cancer during the American Cancer Society's Relay For Life in La Mesa. Teams of La Mesa residents, businesses, and City officials will gather at Parkway Middle School on Saturday, April 5, 2008 for a 24-hour relay against cancer. Relay for Life is a family-oriented team event where participants can walk or run relay-style around a course and take part in fun activities off the course. Teams can include co-workers, club members, families and friends who obtain donations prior to the event.

The La Mesa Relay for Life is not a "race" and you do not have to be at any particular fitness level to participate, you just have to be able to move around the track at your own pace.

A Relay For Life is a unique opportunity for the community to come together in the fight against cancer. Many participants are cancer survivors, serving as reminders that our community is not immune to this disease and that we can actually help our friends,

families, and neighbors that have been touched by cancer. Increased wellness plays a part in the battle against cancer as new evidence has shown that physical activity and better nutrition are factors in preventing this awful disease. The City of La Mesa has made a commitment to encouraging community wellness and this event is one way the City can encourage physical activity for its residents. The City will also be sponsoring a team.

For more information about the event call Brad Pagano, American Cancer Society at 619.682.7449.

STORM WATER: DID YOU KNOW?

Did you know that La Mesa has two main channels with flowing water year-round? The Alvarado Channel runs parallel to Fletcher Parkway and flows into the San Diego River while the University Channel runs parallel to University Avenue and flows into Chollas Creek. Segments of these channels are open and support various plants and animals. Moreover, water from these channels help support downstream wetlands and eventually flow into the Ocean.

Did you know that all the inlets you see along the streets are storm drains that convey runoff into these channels? Car washing activities, hosing down the driveway, vehicles leaking oil, and over-irrigating are either a source of or transport mechanism of harmful pollutants to these channels.

Did you know that the San Diego River within the San Diego River Watershed and Chollas Creek within the San Diego Bay Watershed are listed on a State list as being impaired for various pollutants? The Regional Water Quality Control Board in San Diego has issued Total Maximum Daily Loads (TMDLs) for diazinon and dissolved metals for Chollas Creek. Jurisdictions and agencies that drain into Chollas Creek are required to monitor water quality and eliminate these pollutants transported in urban runoff from entering the storm drains and channels. TMDLs for harmful bacteria are also being issued for both Chollas Creek and the San Diego River.

We need your help to stop these harmful pollutants from entering Alvarado and University channels. Over-irrigation generates runoff that transports these harmful pollutants into the storm drains and channels. Check your irrigation system often and adjust it to minimize runoff. Instead of hosing down your driveway, sweep it or allow the water to run into your lawn and not into the street. Use biodegradable soap when you wash your car and direct wastewater onto your lawn, not into the street. Minimize the use of pesticides on landscaping. La Mesa City Hall offers free Integrated Pest Management Tip Cards on how to control pests without using harmful chemicals. For more information visit www.projectcleanwater.org. If your car is leaking, place an oil pan beneath the car until it is fixed. Do your part and help prevent harmful pollutants from entering our creeks!

Visit www.cityoflamesa.com (search *storm water*) for additional information or visit any of the following websites: projectcleanwater.org; portofsandiego.org; swrcb.ca.gov; waterboards.ca.gov; or hwd.com/conserv.

WALK LA MESA

Just for the Fun of It!

The La Mesa Wellness Task Force wants you to know that there are organized walks nearby every day of the week. Check the City's website at www.cityoflamesa.com, search *health & wellness,* and click on Walk La Mesa under Quick Links for a list of options or pick up a flyer at La Mesa City Hall or the La Mesa Community Center.

Call 619-667-1300 for more information

La Mesa – it's made for walking!

ABANDONED SHOPPING CARTS

Have you seen a shopping cart abandoned in your neighborhood? In addition to being an eyesore, misplaced shopping carts mean loss of revenue to the businesses where they rightfully belong. The California Shopping Cart Retrieval Corporation (CSCRC) will pick it up and return it to the appropriate retailer and they can use your help in locating these errant carts.

The phone number to call at CSCRC is: 800-252-4613. Be sure to give a detailed location of the shopping cart. For example:

"One Wal-Mart shopping cart was abandoned at the intersection of Nagel Street and Mellmanor Drive," or, "Two Vons shopping carts are on the sidewalk at 7501 University Avenue."

The City of La Mesa works with grocery stores and other retailers to retrieve shopping carts as quickly as possible. If you know of a particularly pesky shopping cart that hasn't been picked up in your neighborhood, or you just have a question, please call Code Compliance Officer Allen Edwards at 619.667.1189.

CITY OF LA MESA
PARK APPRECIATION DAY

Saturday, March 29, 2008 8:00 AM – 12 noon

On La Mesa Park Appreciation Day you can help make La Mesa beautiful!

- La Mesa's parks are our City's jewels. Help make them shine! Encourage your civic, church, or social group to adopt a park for a clean up day on March 29th. We will help you find a project that all your members can do! Give us a call!
- Individual and families are invited to come to a La Mesa neighborhood park at 8:00 am on Saturday, March 29th. Sign up with an Adopt-a-Park volunteer who will be visible in a Park Appreciation Day t-shirt at each park. Bring a rake or grab a trash bag at the park and help your local La Mesa jewel shine! General cleanup includes picking up trash, light raking, trimming, and weeding.

Please bring your own gloves and rakes or trowels to La Mesa Park Appreciation Day. Free t-shirts for all participants. You don't have to be a La Mesa resident – just love La Mesa's parks! All ages are welcome to participate. Signed waivers are required. Download waivers from www.cityoflamesa.com/ParkAppreciationWaiver and complete them prior to the event to speed the signup process at the park of your choice. Parents must accompany children under the age of 18 years at individual parks unless their participation is with a supervised group previously arranged with the City.

Survey: Smoke Free Zones in La Mesa

The La Mesa City Council has directed the Community Services Commission to gather data and public input on restricting smoking in outdoor patios where food is served and in areas of public access where children are present such as entryways and commercial walkways. (The La Mesa Municipal Code currently prohibits smoking in City parks and playgrounds.) The Commission is distributing a survey to City of La Mesa businesses and residents as a first step in developing a report to the City Council concerning the designation of smoke-free zones. Thank you for your participation – your responses are very important!

To complete the survey online go to www.cityoflamesa.com/Survey

To hear the survey questions and respond via a voice mail message call 619.667.1172 and select the "smoke free zones" option.

If you prefer to submit your response in writing, survey forms are available at City Hall, 8130 Allison Avenue; Adult Enrichment Center, 8540 La Mesa Boulevard; and the La Mesa Community Center, 4975 Memorial Drive.

Public input on this subject will be heard at the La Mesa Community Center, 4975 Memorial Drive as follows:

- For business owners on February 13, 2008 at 6:00 pm
- For residents on March 12, 2008 at 6:00 pm

LA MESA PARTICIPATES IN COMMUNITIES FOR HEALTHY KIDS

The City of La Mesa is proud to be designated as the first Level 1 Community to participate in the Communities for Healthy Kids program, a program of the Institute for Local Government. The project will help La Mesa reach a primary goal of the City's Community Wellness Program, which is to help increase awareness of low and no cost health insurance programs available for eligible uninsured children and help increase the number of eligible La Mesa children enrolled in those programs.

The Level 1 Community designation is significant because it demonstrates La Mesa is far beyond that of other cities in California in its readiness to address promotion of health and wellness issues in our community.

The La Mesa Wellness Task Force, made up of representatives from varied organizations including city officials, schools, non-profits, residents, hospitals and businesses, was conceived to locally address national concerns about obesity-related illnesses and health problems steming from sedentary lifestyles. In July 2006 the La Mesa Council approved the Community Wellness Program developed by the Task Force. With technical assistance from Communities for Healthy Kids, city staff and members of the Task Force will develop materials and procedures for distribution of information and provide enrollment opportunities for children eligible for low and no cost health insurance (generally Medi-Cal and Healthy Families). The materials and procedures to be developed can then be replicated in communities throughout the state. Outreach events will include presence at school functions, events at Grossmont Center, and local special events to name a few.

Watch the City's website at www.cityoflamesa.com for future wellness events in your area.

"Sundays At Six" Summer Concerts

Launches 7th year of free summer music!

Save the dates of June 8, 15, 22, 29, July 13, and 20 for fun summer concerts in the park!

"Sundays At Six" features an hour-long concert from 6 -7 pm, at the Harry Griffen Park Amphitheatre. These FREE summer concerts feature quality musical entertainment. Concert goers can enjoy a picnic dinner under the setting sun in this lovely setting.

The 2008 concert committee is looking for volunteers to assist with the concert series as well as community sponsorships to support the cost of providing these concerts. To volunteer or provide financial support for the concert series please contact La Mesa Community Services at 619.667.1300 or commservices@ci.la-mesa.ca.us.

GET INVOLVED IN YOUR COMMUNITY

The City of La Mesa is seeking citizens who are interested in volunteering their time and talent in service to the community by becoming a member of one of the City's boards, commissions, or committees. The City has a number of citizen boards, commissions, and committees that provide input or make recommendations to the City Council and staff.

Public involvement is crucial to the City's decision-making process. By advising the City Council and staff, bringing new ideas to the table, and representing the community, you will be helping your City government make the best, most informed decisions possible for the benefit of the entire community.

Following is a brief summary of the roles and responsibilities of the advisory bodies for which vacancies will exist in June. (Youth Advisory Commission terms expire in September.) With a few exceptions, most advisory groups meet only once a month for a couple of hours. It is a wonderful way to help your City, as well as to meet and work with people having similar interests and knowledge.

COMMISSION ON AGING serves as an advisory body to the City Council on policy matters pertaining to programs, projects, and issues that address the concerns and needs of older adults in the community. The Commission plans and coordinates community education and information forums on senior topics and issues, provides support to projects and activities for the elderly, and advises on the development of senior programs and initiatives.

Members shall be residents of the City and must be at least 55 years of age at the time of appointment.

COMMUNITY SERVICES COMMISSION serves as an advisory body to the City Council on parkland acquisition and policies relating to recreation and park purposes. It is the responsibility of the Commission to develop and recommend ordinances and/or resolutions establishing administrative rules and regulations for park and recreation facilities; review the proposed department budget; prepare, as needed, a program of park/public facility improvement; and recommend desirable contractual relations between the City and other agencies for use of buildings, playgrounds, and other facilities.

Members must be resident electors of the City of La Mesa.

DESIGN REVIEW BOARD reviews and approves development plans for compliance with the Urban Design Program, and makes recommendations on development proposals and other design related issues as directed by the City Council.

The Board consists of five members, three of which shall be design professionals, defined as registered architect or landscape architect, a building designer, urban designer, or urban planner. One design professional shall be appointed chairperson. The remaining members are the Community Development Director and a designated Planning Department staff member.

HISTORIC PRESERVATION COMMISSION acts as an advisory body to the City Council on matters of historic preservation, including review of development plans and the La Mesa Historic Resources Inventory, nominate structures to the register of designated landmarks, encourage private efforts to protect historic resources, and provide advice and guidance to property owners of historic resources.

Members of the Commission shall have the following qualifications: two are registered voters and are licensed architects, landscape architects, city planners, urban designers, architectural historians, individuals practicing structural or interior design; two are current resident electors of the City of La Mesa; and three are registered voters and are recommended by the La Mesa Historical Society. Members must be registered voters and meet one of the qualifications outlined in this paragraph.

HUMAN RELATIONS ADVISORY COMMISSION serves as an advisory body to the City Council on matters pertaining to programs, projects, and issues that promote goodwill in the community. It is the responsibility of the Commission to explore issues and develop activities that respect diversity and promote positive human relations in La Mesa.

Members must be resident electors of the City of La Mesa, and two members shall represent the disabled citizens of the community.

INDEPENDENT CITIZENS' BOND OVERSIGHT COMMITTEE informs the public concerning the City's expenditure of revenues received from bond proceeds authorized by the voter approval of Proposition D – La Mesa Fire, Police, Emergency Services Measure.

The committee appointments will include representatives from the following groups: one member active in the business community; one member active in senior citizen organizations; one member a resident and active in the community at large; one member of a bona fide taxpayers organization; one member who is a qualified professional in a construction related field such as architecture, construction management or civil engineering; one member who is a qualified professional in a financial or accounting-related field; and one member acceptable to the San Diego Building and Construction Trades Council.

LA MESA COMMUNITY PARKING COMMISSION acts in an advisory capacity to the City Council regarding parking issues within the Parking District. The Commission is committed to ensuring cost-effective public parking that meets the needs of the City's businesses, residents and patrons by involving the community in parking management decisions.

The Commission appointments will include representatives from the following categories: one retail merchant; one commercial business member; one resident; and two members at large shall be appointed as members. No category shall have more than two representatives on the Commission. At least one of the retail/commercial merchants shall be a member of the La Mesa Village Merchants Association. Merchant representation from east and west of Spring Street shall be preferred. The appointed members shall be registered voters and residents or business owners in the City of La Mesa.

LOAN COMMITTEE FOR REAL ESTATE REHABILITATION approves or disapproves all loan and grant applications for the rehabilitation of qualifying homes in the City of La Mesa. It reviews and makes

continued on page 17

Continued from page 16

Get Involved in Your Community

disposition of all cases involving deferred payment loans and lead-based paint grants.

The appointed members shall be registered voters and residents or business owners in the City of La Mesa with experience in lending, construction, real estate or related fields.

PERSONNEL APPEALS BOARD ensures an impartial and independent review of personnel matters. Employees in the classified service may appeal certain grievances and disciplinary actions to the Personnel Appeals Board.

Two of the five members are chosen from persons recommended by City employees. Members shall be resident electors of the City of La Mesa.

PLANNING COMMISSION serves as an advisory body to the City Council on land use matters, including review of development plans for consistency with General Plan, Zoning Ordinance, Subdivision Ordinance and Sign Ordinance; review of Special Permits, Conditional Use Permits and Variances; review of appeals from staff and Development Advisory Board determinations; and other duties as required by State law.

Members must be resident electors of the City of La Mesa.

TRAFFIC COMMISSION serves as an advisory body to the City Council on matters relating to traffic issues that require City Council approval as provided in the traffic ordinances of the City. In addition, the Commission may approve other traffic issues as directed by the City Council of the City of La Mesa and as set forth within the Organization, Rules, and Procedures of the Commission.

Members must be residents of the City of La Mesa.

YOUTH ADVISORY COMMISSION serves as an advisory body to the City Council on matters pertaining to programs, projects, and issues that address the concerns of youth in the community. It is the responsibility of the Commission to explore and develop activities and issues that will promote positive youth relations in La Mesa.

Members must be at least 13 years and not more than 20 years of age at the time of appointment.

Please give serious consideration to serving on a board, commission or committee. Applications and specific information regarding qualifications, requirements for serving, and meeting days and times are available by accessing the City's website at www.cityoflamesa.com and selecting "Boards and Commissions" under the Government tab, visiting the Clerk's office at City Hall, 8130 Allison Avenue, or calling the City Clerk's office at 619.667.1120. Applications must be submitted to the City Clerk's office no later than 5:30 p.m., Friday, June 6, 2008 to be included in the June interview and selection process.

COUNCIL ACTIONS

October 9, 2007
Ratified the Design Review Board's approval of DRB 07-13 (La Jolla Investment Group, Inc.) – for proposed exterior alterations to a commercial center at 7520 El Cajon Boulevard.

Ratified the Design Review Board's approval of DRB 07-19 (Whitlow) – for a proposed addition of a second story to an existing detached garage at 4433 Acacia Avenue.

Adopted a resolution encouraging and supporting the California Department of Corrections and Rehabilitation's actions to notify 2,741 sex offenders to relocate their residences outside of the 2,000-foot "Predator Free" zones (around schools and parks) for purposes of enforcing Jessica's Law.

La Mesa Seeks Your Perspective on Service Priorities

WE WANT TO HEAR FROM YOU!

The City of La Mesa has worked to present the most fiscally responsible budget while protecting the health and safety of the community. However, due to declining revenue, increased costs and years of "state money grabs" the City is unable to continue to fund the essential public services at the level necessary to meet current and future needs.

Complicating matters, the State has now declared a projected multi-billion dollar deficit for fiscal year 2008 – and the Governor and State Legislature are expected to make significant funding cuts, which may take more money away from cities like ours. Without a local funding solution, we are facing devastating cuts and potential disruption of essential City services.

As you may know, recently there has been a sharp increase in robberies, auto thefts, burglaries and violent crime in La Mesa. We must attract and retain experienced police officers to keep crime and gangs out of La Mesa.

We also need funding for essential services such as fixing potholes, repairing sidewalks and repaving local streets, which will improve safety and traffic flow throughout La Mesa.

A recent community survey found that residents would support a potential Vital City Services Measure to address these service needs. Before we move forward with any solution, we want to hear from you about your service priorities. If you haven't yet filled out our community survey, go to our website www.ci.la-mesa.ca.us to tell us your priorities. Your feedback is important to us!

CITY COUNCIL 2008 STRATEGIC PLANNING WORKSHOP

On March 18, 2008 the City Council and management staff met for a day-long strategic planning workshop. This annual process is one of the early steps taken by the Council to review past accomplishments, gather community input from the year, and to project how the financial conditions on the horizon will be affecting the City. This process assists the Council and staff in preparation of adopting and/or updating the City's two-year budget. This year the City is facing some very significant financial challenges to fill the gap between falling revenues and increasing costs to provide services. As a result, the major focus of this workshop was on financial issues. At the end of the workshop, based on policy direction, each City Department prepares

GOAL OF COMMUNITY WELLNESS PROGRAM:

TO INCREASE AWARENESS OF NO AND LOW COST HEALTH INSURANCE FOR ELIGIBLE CHILDREN

Referrals and Enrollment Opportunities Planned

It comes as no surprise that the cost of everyday living has increased in the past few years. Many families have had to cut back on treats such as movies, eating out, and vacations just to provide the basic necessities. In addition, many employers have had to cut back on employee benefits such as dependent health insurance programs just to stay in business. In a domino effect, the additional high cost of health care can make a visit to the doctor unaffordable for uninsured or underinsured children. What may come as a surprise to many families is the availability of no and low cost health insurance programs for eligible children.

One goal of La Mesa's Community Wellness Program is to increase awareness of health, dental, and vision insurance available for eligible children through the Medi-Cal for Families and the California Healthy Families program. Eligibility is determined by family income, family size, and age of each child. Medi-Cal is provided at no cost for eligible children from birth to age 19 or 21 if in school. Healthy Families covers eligible children from birth to age 19. Actual premiums for children through the Healthy Families program depend on family income, size, and the health plan chosen; for example, a family of four with an income of $53,000 may qualify for this program. No family pays

DONT MISS THE 11TH ANNUAL LA MESA FLAG DAY PARADE

The charm of downtown La Mesa Village is the ideal backdrop for La Mesa's annual Flag Day parade on Saturday, May 31st. The parade festivities will begin with two free patriotic concerts; one featuring La Mesa Middle School Band at La Mesa Boulevard and Palm Avenue and the 2nd featuring Granger Junior High Jazz Band at La Mesa Boulevard and Date Avenue. The parade kicks off at 10 a.m. beginning at the La Mesa Adult Enrichment Center at the intersection of La Mesa Boulevard and University Avenue and continues through the downtown village, ending at City Hall. This year's invited Grand Marshals are the 2007 AFC West Division Champions San Diego Chargers!

Red, white and blue will be visible everywhere as La Mesa celebrates our country and Salutes Old Glory! Businesses are invited to enter a patriotic themed float into the parade and be entered into the Jewel of the Hills Float Award. A photo of the winning float will be featured in future City of La Mesa publications. Six marching units including the popular Marine Corps Band, will march in the parade as well as floats, local service organizations, equestrian groups, specialized vehicles, performance groups, drill teams, color guards, clowns, dogs, vintage cars, and pageant winners.

We are fortunate again this year to have KSON Country FM 97.3 and 92.1 radio station as one of our sponsors. KSON personalities will be along the parade route announcing the entries. Free flags will be given out along the route while supplies last. The La Mesa Community Welfare Association, La Mesa Rotary, Wal-Mart and City of La Mesa are also sponsoring the event.

Spectators are encouraged to arrive early on parade day for the best viewing. The parade committee suggests that people ride the trolley to the La Mesa Boulevard station since parking in the immediate vicinity will be limited.

You and your family won't want to miss this free, fun-filled family event. For more information call 619.667.1172 or email commservices@ci.la-mesa.ca.us.

The Marine Corps band steps off in the 2007 parade

6TH ANNUAL La Mesa Kiwanis Club Soap Box Derby Race

June 7, 9 a.m.-5 p.m.

Junior High Drive by La Mesa Middle School

Sponsored by Drew Ford in cooperation with City of La Mesa.

Winners will be sent to National All-American Soap Box Derby in Akron, Ohio, in July. Youngsters ages 8 to 17 wishing to enter the race should contact Dennis Wilkes at 619.469.7353.

GREEN STYLE TIP

Printing the La Mesa FOCUS

In the February issue feedback survey, several readers said they preferred the feel of a printed version of FOCUS in their hands but wanted to conserve on the expensive color ink. Here's a tip for printing a black & white version.

With the document displayed in Adobe Reader® select print from the file menu. Select properties in the print dialogue box and look for the option to print in black & white. The location of selection boxes may vary depending on your operating system and type of printer.

ENRICH YOUR SUMMER!

Looking for something to do during those lazy days of summer?

A recreation class may add some sizzle to the season!

Browse our weekly youth class selections or look for summer day camp programs. We have weekly classes for adults too!

Convenient enrollment is available online or you can access a printable version of our enrollment form to mail in.

Classes fill quickly. DON'T DELAY!

TAKES TO THE STREETS

Engineering Division Awarded Safe Routes to School Grant

La Mesa Teens Make a Difference with CX3 Project

The Public Works Engineering Division is happy to announce the award of a California Safe Routes to School grant in the amount of $550,800. These funds will be used for street and sidewalk improvements in the West La Mesa area along Lowell Street and Orien Avenue in the area surrounding Helix Charter High School. This is the largest amount the City of La Mesa has received through this grant program to date. The scope of work includes installing new curb, gutter and sidewalk where none currently exists on Lowell Street and Orien Avenue around Helix High School. The success of the grant proposal was due to several years of research, public sensing, planning, and strong collaborative efforts between various City departments and other agencies. Six agencies are collaborating on and contributing resources to the project: Helix Charter High School, Grossmont Union High School District, San Diego Gas & Electric, AT&T, Cox Communications, and the City of La Mesa.

In February 2006 the City published a Walkability Plan outlining fundamental planning concepts that the City now uses to enhance pedestrian access to essential destinations such as schools, work places, transit, shopping, and services as well as encourage walking as a method to improve fitness and expand social interaction within the community. You can review the complete text of the Walkability Plan on the City's website. Later that year, the La Mesa Community Wellness Program, adopted by City Council in July 2006, included as one of its primary goals the promotion of a more walkable city. The complete text of the La Mesa Community Wellness Program can also be reviewed on the City's website.

In June 2007 six La Mesa teens, along with volunteer adult mentors, began a civic engagement program called CX3. CX3, which stands for Communities of Excellence in Nutrition, Physical Activity and Obesity prevention. It is a community wellness strategy that involves identifying benchmarks or community indicators and observing these items to target communities' strengths and gaps. Once the items are mapped, the data is used to develop local action plans for policy, systems and environmental change. The La Mesa teens set about mapping a portion of West La Mesa in June 2007 measuring indicators that included: number of fast food restaurants; availability of fresh produce in local markets; advertisements on billboards, bus benches, and in store windows; and an audit of walkability to schools, markets, and recreation.

Following data collection and mapping, three of the teens involved in the project developed a plan of action to advocate for community change. Their decision to advocate for walkability in the area around Helix Charter High School was based on knowledge of the City's focus with the Walkability Plan and Community Wellness Program and their commitment to the safety and security of fellow students. The area surrounding the school is described as having limited sidewalks, poorly marked crosswalks, poles and other barriers in the middle of existing sidewalks, and lacks landscaping to buffer the pedestrian pathway from the street. The teens developed a PowerPoint presentation, a website, and photo essay boards to advocate their message locally to La Mesa Youth Advisory Commission, Helix High School Charter Board, and La Mesa City Council. The photo essays are currently on display at the Grossmont Healthcare District Herrick Library. The West La Mesa area was specifically selected for the CX3 project to compliment other La Mesa revitalization projects focusing on the area.

La Mesa teens used photo essays to advocate for street improvements

The earlier walkability study and wellness document published in 2006 were enhanced by the efforts of the CX3 team in 2007. The total scope of work for the project includes: undergrounding conflicting overhead utilities, replacing a storm drain beneath Lowell Street through the intersection of Normal Avenue, constructing new sidewalks, street lights and landscaping on Lowell Street and Orien Avenue, and installing pedestrian ramps and curb bulb-outs at the intersection of Normal Avenue and Lowell Street. In addition to this work, Helix Charter High School plans to renovate its student parking lot this summer. If all goes according to plan all work should be completed in about a year.

CX3 was developed by the California Nutrition Network and piloted in six counties across the state. San Diego County decided to use this program and chose Chula Vista and La Mesa as their first CX3 communities. In addition to support from the County, the La Mesa CX3 project received a grant from the Grossmont Healthcare District.

Teen civic engagement, street improvements, and community wellness may seem like very diverse issues but they serve to illustrate the positive impacts and importance of collaborative efforts in accomplishing La Mesa's community improvement goals.

WHAT IS RIDES4NEIGHBORS?

- Rides4Neighbors a volunteer-based transportation program for adults age 65 and older and persons with a disability who are residents of La Mesa.
- Rides are provided by trained volunteers who use their personal vehicle.
- Rides are scheduled for essential transportation needs, like medical appointments, grocery and essential shopping, personal care, and personal business.
- Ride destinations are not limited to La Mesa, but are contingent upon finding a volunteer willing to transport you to your destination.

The City of La Mesa provides eligibility screening for riders and volunteers, scheduling, ride coordination, volunteer training, mileage reimbursement and secondary insurance.

SCHEDULING A RIDE

- Call 619.464.0109 to schedule a ride.
- First time riders complete an application and service agreement prior to the first ride.
- Request your ride at least one week in advance of your trip date; new callers should allow even more time in order to process your initial application.
- Rides4Neighbors makes every effort to match you with a screened volunteer driver, but ride availability is not guaranteed.
- Eligible riders may receive the equivalent of up to $100 of service per month, based on mileage reimbursement and/or purchased rides fees.
- Riders must be residents of the City of La Mesa, age 65 or older, or have a disability that prevents use of existing public transit services including ADA Paratransit.

PAYING FOR A RIDE

- Rides are donation-based; the minimum suggested donation is $3 per one-way trip; the suggested donation scale is based on the trip distance, or geographical zone.
- Donation statements are mailed to riders monthly and donation checks may be made payable to the "City of La Mesa."
- Volunteer drivers do not accept payment, donations or tips from riders, but a heartfelt "Thank You" is always welcome!

VOLUNTEERING

- We are seeking adult volunteers with an excellent driving record who are willing to use their personal vehicle to provide a ride to a neighbor in need.
- Volunteers complete an application, provide a copy of a valid Drivers' License and insurance certificate, authorize the City to make a DMV records check, complete a Live Scan background check, and complete an orientation and training.
- Volunteer drivers are reimbursed for mileage and receive secondary liability insurance.
- As a volunteer, you decide your availability and choose the rides you wish to provide. There is no minimum time commitment or number of rides required to be a volunteer.
- Call 619.464.0109 for information on becoming a Rides4Neighbors volunteer!

Rides4Neighbors

STATE GRANT

Funds Used to Target Selling or Furnishing Alcohol to Minors

April marks the beginning of the last quarter of a year-long grant program, where $37,720 was awarded to the police department from the California Department of Alcoholic Beverage Control (A.B.C.) to target those who sell or furnish alcohol to minors. The program objectives are to educate the 124 alcohol establishments in La Mesa to conform to all A.B.C. laws and regulations, train police department personnel to investigate A.B.C. violations, purchase undercover investigative equipment, and to conduct several undercover operations targeting underage drinking.

The police department has used these grant funds to conduct 17 operations, including working with other police agencies in task force operations, targeting business employees who sell alcohol to minors, and targeting business customers who are willing to buy alcohol for minors loitering near stores. There have been 19 arrests and the compliance rate for alcoholic establishments to comply with A.B.C. regulations has increased from an initial 27% to over 97%.

Grant undercover operations will continue through June 30, 2008. Police department personnel will continue to monitor A.B.C. licensed establishments and investigate those who sell and furnish alcohol to minors on an ongoing basis beyond the grant period.

FIRE STATION DEDICATION

On February 29, 2008 La Mesa Fire Station 11 was officially dedicated as the "J.O. Orsborn Memorial Fire Station." The small ceremony was well attended by the Orsborn family, City staff, elected officials, and Fire Department retirees. The newly installed dedication sign is clearly visible on the administration side of the building.

James "J.O." Orsborn resided in La Mesa his entire life and was a well-known member of the community. At the age of 15, in 1941, he began his career as a volunteer fireman with the La Mesa Fire Department. He was appointed Fire Chief in 1981. Chief Orsborn retired in 1990 after 46 years of service. He served with the California Fire Chiefs Association, Fire Training Officer's Division, and Pioneer Hook & Ladder Museum in San Diego. J.O. also was active with San Diego Boy Scouts, serving in various capacities and was awarded the Silver Beaver Medal for his long service.

Shortly after his passing on May 11, 2007 the La Mesa City Council voted to rename Station 11 in his honor. J.O. also holds a spot on the City of La Mesa Walk of Fame.

Dedication of Fire Station 11 is part of the year-long Fire Department Centennial celebration

La Mesa Police Department's

Citizens Academy 2008

Ever wonder how the police department operates on a daily basis?

Come see for yourself at our FREE Citizens Academy!

Participants will track a real homicide case and learn about police tactics through interactive demonstrations, hands-on evidence collection and scenarios. The Academy will consist of six classes, one class per week.

The classes will be held every Thursday evening beginning May 29 from 6:00 p.m. to 9:00 p.m. at the La Mesa Police Department. Snacks and soft drinks are included.

Class size is limited to 20 participants, so sign up early. The deadline for applications is May 8, 2008.

*All applicants must pass a background screening in order to be admitted to the Academy.

For more information call the Crime Prevention Unit at 619.667.1445.

Applications can be picked up at the La Mesa Police Department or downloaded from the City website.

FIRE DEPARTMENT CENTENNIAL CELEBRATIONS

On February 29 the La Mesa Fire Department marked 100 years of service to the community. A mention of the fire company appeared in *La Mesa Springs Scout* newspaper on March 16, 1908. Since no official date could be found, the Centennial Planning Committee decided to designate Leap Day as the official start of the celebration.

La Mesa firefighters prepared breakfast for more than 650 people

A community kick off event was held at Station 11 on February 29. The California State Firefighters Association's (CSFA) antique fire steamer was present, complete with Blaze the Dalmatian. There was a historical video and various photo displays and items for people to admire. Starbucks on Fletcher Parkway generously provided refreshments to the dozens of people who attended.

Next was a Pancake Breakfast on March 30, also at Station 11. The event was timed to coincide with the La Mesa Village Merchant's Association's Antique Street Fair. Even though the weather was slightly grey and drizzly, it was still a great time for residents and visitors to come out and spend the day in downtown La Mesa. The event was a fundraiser to help the Department restore its antique Kenmore fire engine. The breakfast was well attended with 678 people paying $5 each for pancakes, eggs, sausage, orange juice, and coffee donated by Starbucks Fletcher Parkway. Between breakfast and merchandise sales it is estimated that about $4,000 was raised.

The next event will be the La Mesa Flag Day Parade: A Salute to Old Glory, on May 31. The Fire department is having an opportunity drawing for three people to ride in the parade on the CSFA antique fire steamer, which will be led by a team of horses. Tickets for the drawing are $2.00 each or three for $5.00. Tickets can be purchased at the Fire Administration Office, 8054 Allison Ave. Tickets are on sale until May 16. The drawing will be held May 17 at 5:00 pm at Fire Station 11.

See antique and current fire apparatus in the Salute to Old Glory parade on May 31.

Until the end of February next year all sworn staff will wear a special badge in commemoration of the centennial. If you see fire department personnel out in the community be sure and check out the great retro design of the badge. Commemorative merchandise is on sale as well. Stop by an event, one of the stations, or the administration office to purchase miniature badge lapel pins, T-shirts, or window decals.

There will be additional events throughout the year, so be sure and check the City's website at www.cityoflamesa.com. From this site you can also sign up to be notified by e-mail of Fire Department or other City events.

NEIGHBORHOOD WATCH

Crime and the fear of crime threaten a community's well-being. People become afraid to walk on the streets and play in the parks. In turn, crime feeds on the isolation it creates and the problem continues to grow. The La Mesa Police Department is committed to preserving the peaceful lifestyle we have all come to enjoy in our city. However, we need your help to serve as the eyes and ears of the community.

Today's busy lifestyles mean that homes and valuables are left unattended for long periods of time. You and your neighbors can help prevent crimes in your neighborhood simply by watching out for one another. Neighborhood Watch is one of the most effective ways to reach out to your neighbors.

Neighborhood Watch is one of the most widespread crime prevention efforts in the United States because it has a long track record of success. Typically, Neighborhood Watch groups organize to respond to an immediate threat such as a series of robberies, a sharp increase in burglaries, or a rising fear of street crime. Often, when the crisis is resolved, membership and commitment to the program start to fade away. After all, why keep an eye out for criminals if they've been arrested or gone elsewhere? This attitude ignores the key benefits of the contemporary Neighborhood Watch. A Neighborhood Watch group empowers people to prevent crime, forges a bond between law enforcement and the community they serve, and builds a foundation for broader community improvement. As you can see, Neighborhood Watch is far more than a quick fix for an existing crime problem.

The success of the Neighborhood Watch program rests with the citizens that take the initiative to help each other and assist law enforcement in their crime fighting efforts. Don't wait until something occurs in your neighborhood, be proactive and help prevent crime before it happens. Visit the Police Department pages on the City of La Mesa website for more Crime Prevention tips, alerts about crime in your area, and press releases from the Police Department. To obtain information about starting and maintaining a Neighborhood Watch in your area, please contact the La Mesa Police Department's Crime Prevention Unit at 619.667.1445.

LA MESA TRASH CART REGULATIONS

THINGS YOU NEED TO KNOW

Are you storing your trash, recycling and green waste carts properly?

Your EDCO carts cannot be placed in the street until the evening before collection and must be removed on collection day. The rest of the time, your carts must be stored away from the curb, off sidewalks and out of public view. You may never store your carts in the street or use them to reserve parking.

Be a good neighbor. Help keep our streets clear and neighborhoods looking nice!

If you have any questions about trash collection and recycling in La Mesa call 619.667.1338 or visit the City website.

Trash cans may be placed at the curb the evening before collection and must be removed on collection day.

KEEP UP THE GOOD WORK LA MESA!

Great job La Mesa, keep up the good work! The City has met the State mandated 50% waste diversion goal for the second consecutive year. In fact, in the City's most recent report to the California Integrated Waste Management Board for 2006, we actually increased our diversion rate to 54%. This means that La Mesa is keeping an estimated 54% of our waste stream out of landfills. The materials are being reused, recycled, or in the case of some hazardous materials, disposed of properly and safely. This is the accumulation of years of hard work and a positive partnership between the City, EDCO, and you, the community.

Our work, however, is not finished! California law requires all cities and counties in the State to maintain the 50% diversion rate. We must continue to do the right thing and keep waste out of our landfills which are running low on space.

HERE'S WHAT YOU CAN DO TO HELP:

- Recycle, recycle, recycle! Are you recycling as much as you can? Look at things before you throw them away and ask yourself: is it unsoiled paper or cardboard, or CRV # 1 or 2 plastic, glass, or aluminum? If the answer is yes, rinse them if needed and place them in your blue bin or recycling dumpster.
- Put toxic waste in its place! If you have household hazardous waste (HHW), such as batteries, fluorescent lights, paint, chemicals, mercury devices (including thermometers), or electronics, do the right thing and use the City's HHW disposal program by calling 619.287.5696 x4270 to schedule an appointment.
- Paper or Plastic? That's sooo 20th century! Get yourself some reusable produce and shopping bags. Most grocers now sell them cheap and they work much better than plastic!
- Collect construction debris! EDCO's SANCO Resource Recovery is now open in Lemon Grove for mixed loads of debris that will save you time and money. Call 619.287.7555 for more info.
- Try composting! This is a great way to cut down on food waste going into the trash and gives you a great source of material for your yard. For more info, visit our website at www.cityoflamesa.com/composting.

WELLNESS NEWS

PERSONAL MENU PLANNER

Most people have little idea whether they're eating a balanced diet or not. The USDA wants to change that. On March 11, the U.S. Department of Agriculture announced the release of the MyPyramid Menu Planner, a new state-of-the-art nutrition guidance tool to help individuals and homemakers plan healthiermenus based on the recommendations of the MyPyramid food guidance system and the Dietary Guidelines for Americans.

To use the Planner, go to www.mypyramid.gov and click on the MyPyramid Menu Planner link.

The Menu Planner will be useful to not only those interested in healthful and nutritious diets but also high school and middle school classes, and dietitians, health professionals, and nutrition educators for use in counseling and educational programming. Please help get the word out that the Menu Planner is provided free of charge to the public and can help motivate consumers to make healthier food choices.

Information furnished by the San Diego Nutrition Network.

RECYCLING RAMPS UP IN LA MESA

The City adopted a mandatory recycling ordinance in the early 1990s to help meet a State mandated 50% waste stream diversion goal. Under the ordinance, all residents and businesses in La Mesa are required to recycle reusable materials. The City and EDCO Disposal Corporation recently reviewed recycling accounts to ensure that everyone is in compliance. Those multi-family residences and businesses that are not recycling were given 90 days to set up their service. There are no exemptions to the recycling requirement.

Non-compliant multi-family residential properties and non-compliant businesses were notified by the City of La Mesa that recycling service arrangements must be made. Staff from EDCO Disposal Corporation, the City's contracted waste hauler, is in the process of conducting site visits at the affected properties to discuss appropriate service levels, assist with bin location, and resolve issues and concerns.

Approximately 10,500 residences and businesses throughout La Mesa receive waste hauling services from EDCO. However, the account review showed that 5% of these accounts needed help to comply with La Mesa's mandatory recycling ordinance. Single-family residences and most businesses were found to be already in compliance.

Further information about La Mesa's recycling ordinance is available by contacting Scott Munzenmaier in the City of La Mesa at 619.667.1338 or smunzenmaier@ci.la-mesa.ca.us. Recycling service from EDCO is available by calling 619.287.7555.

Recycling dumpsters like these can be found at multi-family residences and businesses in La Mesa

RECYCLING REMINDER!

Here is a reminder of the types of items you can recycle in your blue EDCO recycling bin.

GLASS BOTTLES & JARS

Recycle all food and beverage containers—clear and colored glass. Please rinse. No need to remove labels though.

CARDBOARD

Flatten or cut boxes to a maximum size of 3 ft. x 3 ft.

NEWSPAPERS

Recycle your newspaper and all paper inserts, coupons, etc. that are delivered with it (but not the plastic bags – those can go to your local grocery or large retail store).

CANS

Recycle aluminum cans and steel cans—including clean & dry paint cans, and empty aerosol cans. Also recycle aluminum foil.

PLASTIC CONTAINERS

Recycle plastic bottles & jugs marked ♻ or ♻ , and all beverage containers labeled "CA Redemption Value" or "CA Cash Refund" including:

- Food & Beverage Containers — Milk, soda, water, salad dressings, cooking oil, etc.
- Jars & Canisters — Peanut butter jars, mayonnaise jars, aspirin bottles and 35mm film canisters.
- Cleaning Products & Detergents — Bleach, detergent, soap, shampoo, drain cleaners, etc. (Containers must be empty.)
- Automotive & Yard Care Products — EMPTY motor oil, antifreeze, plant food and herbicide containers.

MIXED PAPER

Recycle virtually all clean and dry paper including: writing paper (all colors), computer paper, copy paper, "no carbon required" (NCR) forms, catalogs, brochures, magazines, junk mail, phone books, Post-It® type notes, and shredded paper. EDCO accepts them all, PLUS if those items have staples, window envelopes, or even those little metal clasps on legal envelopes, they're OK, too! But, please, no large metal items like clasps on envelopes, folders, or three-ring binders.

Place all your recyclable materials in your blue trash container

You can also recycle cereal boxes and other clean food packaging, including cake boxes, flour bags, frozen dinner boxes, paper egg cartons, and soda/beer 12-pack carrying boxes. Also recycle paper grocery bags, gift boxes, shoe boxes, paper gift wrap, calendars, and core tubes from paper towels, etc.

"Before you know it, recycling becomes second-nature..."

DON'T FORGET ABOUT HOUSEHOLD HAZARDOUS WASTE!

Like most people, you probably have some things at your home that can't be just thrown away like batteries, fluorescent lights, chemicals, or electronics. These items are considered household hazardous waste (HHW) and are not allowed to be placed in the trash because of their destructive effect on the environment and their ability to be recycled and reused.

DISPOSAL IS FREE! If you reside within the City limits of La Mesa, you are eligible to participate in the City's free HHW drop-off program.

2008 HHW DROP-OFF SCHEDULE:
May 17, July 12, August 16
September 27, November 22

Call EDCO Disposal Corporation at 619.287.5696 x 4270 to make an appointment.

While supplies last, participants may bring a mercury thermometer and exchange them for a FREE non-hazardous thermometer.

EXAMPLES OF HHW ARE:

General: Batteries, fluorescent lights, latex and oil-based paints, solvents, cleaners, pesticides and garden products, pool products, propane, and any items labeled flammable, hazardous, toxic, or corrosive.

Electronics: TVs, computer monitors and hardware, telephones, VCRs, and radios.

Automotive: Used oil and filters, batteries, and antifreeze.

Call EDCO at 619.287.5696 x4270, to schedule an appointment or to request additional information. For more information on HHW or other disposal or recycling options, log on to www.cityoflamesa.com.

LA MESA VOLUNTEERS MAKE THEIR PARK JEWELS SHINE

More than 200 volunteers celebrated La Mesa Park Appreciation Day on March 29, 2008. Workers picked up trash, pulled weeds, spread mulch, raked leaves, and painted tables in La Mesa parks.

The event, normally held in October, was postponed until March of this year due to last fall's wildfires.

Park Appreciation Day 2008 is scheduled for October 25. Watch for more information in the August edition of the *La Mesa FOCUS*.

Volunteers spruce up landscaping at Northmont Park

VOLUNTEERS NEEDED!

The City of La Mesa's Community Participation Program currently has volunteer positions and special assignments available in the departments and project areas listed here. Volunteers play an important role in the enhancement and expansion of services to City residents. You not only provide a valuable service for the community, but also enjoy flexible scheduling for most assignments, develop new skills and meet new friends. For more information stop by the Adult Enrichment Center, 8450 La Mesa Blvd., or call 619.464.0505 for an application.

RIDES4NEIGHBORS

We need Volunteer Drivers for Rides4Neighbors, a new transportation program for La Mesa's older residents and residents with disabilities. Volunteer drivers use their own vehicles, are reimbursed for mileage and provided with supplemental liability insurance. You decide availability and choose the rides you wish to provide.

CITY OF LA MESA FINANCE DIVISION

Accounts Payable has need for a volunteer for Alpha filing. Requires basic office skills: filing, copy/fax machine, and mail processing. Computer knowledge a plus. Time commitment: monthly as needed.

ADOPT A BLOCK!

Help preserve and enhance the beauty and cleanliness of La Mesa by volunteering for Adopt A Block. The City provides a vest, bags, and a pick-up tool. All you need to do is commit at least 5 hours a month for one year!

CITY OF LA MESA SEWER BILLING

Volunteer position available monthly or "as needed" to help with filing. Requires basic office skills: filing, copy/fax machine, and mail processing. Computer knowledge a plus.

CITY OF LA MESA FINANCE

Has need for a volunteer to help organize the internal filing system. Requires basic office skills: filing, copy/fax machine, and mail processing. Computer knowledge a plus. Time needs: 1-3 days/wk.

CITY OF LA MESA PARKING CITATIONS

Needs a volunteer to help out with filing. Requires basic office skills: filing, copy/fax machine, and mail processing. Computer knowledge a plus. Time needs: 1 hour per week.

Friday Night Dance-La Mesa Adult Enrichment Center

Needs volunteers to help with front door cashiering and cash out. Times needs: once a month for a 3½ hour shift.

LA MESA PET THERAPY NEEDS YOU & YOUR DOG!

Would you and your dog be willing to be trained and spend 2 hours a month visiting patients in La Mesa convalescent homes? If you have questions about the program, we can put you in touch with a current Pet Therapy volunteer.

ADOPT THE MOFFATT GARDEN AT THE LA MESA ADULT ENRICHMENT CENTER!

Seeking a dedicated garden-lover or group to help us with upkeep for our memorial garden. Weekly weeding, watering, and sprucing up is what is needed.

Down load a volunteer application from www.cityoflamesa.com

COUNCIL APPOINTMENTS

The City of La Mesa is looking for volunteers to serve on various advisory boards, commissions and committees. Serving on a City board or commission offers residents a unique opportunity to become involved in local government and in the community.

The City encourages citizen participation in municipal government and welcomes your interest in serving on a board, commission or committee. These groups provide valuable public input into government and assist in the decision making process.

Recruitment is currently underway for openings. Serving in an advisory capacity, each group has specific roles and responsibilities. You can learn more about the various boards, commissions and committees by the following links:

- ***Building Codes Review Board***
- ***Commission on Aging***
- ***Community Services Commission***
- ***Design Review Board***
- ***Historic Preservation Commission***
- ***Human Relations Advisory Commission***
- ***Independent Citizens' Bond Oversight Committee***
- ***La Mesa Community Parking Commission***
- ***Loan Committee for Real Estate Rehabilitation***
- ***Personnel Appeals Board***
- ***Planning Commission***
- ***Traffic Commission***
- ***Youth Advisory Commission***

Most advisory groups meet once a month for a couple of hours. It is a wonderful way to meet and work with people who have similar interests and knowledge.

Please consider this opportunity to serve on a board, commission, or committee. Find applications and specific information regarding qualifications, requirements for serving, and meeting days and times on the City website, by visiting the City Clerk's office at City Hall, 8130 Allison Avenue, or calling the Clerk's office at 619.667.1120.

Applications for advisory boards must be submitted to the City Clerk's office no later than 5:30 pm, Friday, June 6, 2008, to be included in the June interview and selection process.

2008 LA MESA GARDEN AWARDS

NOMINATION FORM

How Does Your Garden Grow? This year marks the 28th anniversary of La Mesa Beautiful's annual contest involving property owners within the city limits of La Mesa who have done a great job landscaping their property.

Nominate any property. Include blocks or even neighborhoods which have helped make La Mesa the "Jewel of the Hills."

Winners will be recognized at the Annual Garden Awards Luncheon scheduled for October 15, 2008 at the La Mesa Community Center. A team of judges will evaluate all nominations. Their decision is final. Nominations may be filed throughout the year.

Winners will be notified prior to the award luncheon. For consideration this year, nominations should be submitted before July 1st.

Notice of Upcoming
SLURRY SEAL
in Maintenance Zone 5

As part of the City's Street Maintenance Program, many of the streets in Maintenance Zone 5 will be slurry sealed later this spring. To find out what maintenance zone you live in, go to www.cityoflamesa.com/StreetMaintenance. Before the application of slurry seal, repairs and improvements are made to the concrete sidewalks and pedestrian ramps in the same maintenance zone. Slurry seal helps extend the useful life of the street asphalt pavement.

STAFF PREDICTS CLEAR SKIES FOR LA MESA

No, City staff isn't into predicting the weather, or anything else having to do with La Mesa's climate. However, with six Underground Districts established within the last year and a half, we can safely say that there will be clearer skies ahead for the County's Jewel of the Hills. What is an Underground District? An Underground District is an established area where utility cables owned by SDG&E, AT&T, and Cox Communications are placed underground, and all cables and poles within the area are removed. With City Council direction, staff has taken an aggressive approach to clearing these vertical obstacles, making way for clear skies. The most recent street completed as part of this City program was Jackson Drive between the I-8 and Lemon Avenue, and there are six more areas on the way. Is your home in one of these areas? Visit the City web-site at www.cityoflamesa.com/UndergroundUtilities for upcoming districts and additional information.

ADULT SOFTBALL

(18 years and older)

REGISTRATION: July 21, 2008, 5:30 – 6:30 p.m.
- La Mesa Community Center 4975 Memorial Drive

** Subject to change based on the number of teams*
Note: Minimum 4 teams required per night or league night subject to change or cancellation.

$14.5 MILLION SEWER UPGRADE PROJECT CONTINUES

The City of La Mesa secured a $14.5 million low-interest loan from the State Water Resources Control Board in 2006. The loan is being used to rehabilitate and upgrade the City's aging sewer system in older sections of La Mesa.

The project has been divided into four phases. **PHASE 2** construction is currently underway and is scheduled for completion in May of 2008. **PHASE 3** construction is scheduled to start in early summer of 2008 and Phase 4 will start next year. The combined phases represent the largest infrastructure project ever undertaken by the City.

During construction, residents may be inconvenienced by restricted traffic flows and construction noise in areas close to the construction zones. The City apologizes in advance for any inconvenience. However, this project will enhance health and safety for La Mesa residents for many years.

PHASE 3 construction will take place on the following streets: Pasadena Ave., Orchard Ave., Lemon Ave., Finley Ave., 4th St., Sunrise Ave., and Hillcrest Ave., as well as in easements between Avon Dr. and Summit Dr., Normal Ave., and Pasadena Ave., and off of Chevy Chase Dr.

The accompanying diagram shows the locations of the proposed work. Residents in each neighborhood affected by the work will be notified of the start dates 48 hours prior to the start of construction.

Highlighted streets show locations of sewer upgrades

UPDATES TO THE CITY'S STORM WATER PROGRAM

You know you should protect the environment, you want to protect the environment, and now you have to protect the environment. Under provisions of the federal Clean Water Act and the State Porter-Cologne Water Quality Control Act, the City of La Mesa is required to implement various pollution prevention programs geared towards protecting water quality. The Regional Water Quality Control Board issued a permit on January 24, 2007 to the City of La Mesa and other cities within the region that requires the protection of water quality to the maximum extent practicable.

To meet the permit requirements, the City updated its Jurisdictional Urban Runoff Management Program, Watershed Urban Runoff Management Programs, Development Manuals, and Chapter 7.18 Storm Water Ordinance as of March 24, 2008. The aforementioned programs and policy are now in effect. How do these new programs and policies aimed at controlling storm water pollution affect you? Remember, the only water to enter into the storm drain system is rainwater. Listed below are tips to keep you on the right side of the law.

RESIDENTIAL AREAS

The following activities are prohibited:

1. Discharge of wash water from cleaning or hosing of impervious (ie pavement/concrete/asphalt) surfaces such as driveways, sidewalks and patios. Instead of washing, dry sweep and collect the debris or direct the wastewater into a lawn or vegetated area so that it does not flow onto the street and into the storm drain.
2. Discharge of pool or fountain water containing chlorine, biocides, or other chemicals. If you plan to drain a pool, the water pH should be 7 to 8 and there should be no chlorine in the pool or fountain water. Chlorine will naturally evaporate from pool water, use your test kit to check for chlorine every 24 hours until the pool or fountain water is chlorine free.
3. Discharge of sediment, pet waste, vegetation clippings, or other landscape. Make sure you sweep and pickup after your pets and dispose of waste appropriately.
4. Discharge of wastewater from car washes for school or club fundraisers.
5. Discharge associated with vehicle maintenance on City streets.

INDUSTRIAL/COMMERCIAL FACILITIES

Industrial and Commercial facilities are required to ensure the following:

1. Discharge of wash water from the facility or into the storm drain within the facility is prohibited. Dry sweep rather than using water.
2. Storage of material outside shall be covered and contained. If liquid material is stored outside, it should be placed over secondary containment.
3. Discharge resulting from cleaning, repair of any type of equipment is prohibited.
4. Discharge of wash water from mobile operations such as vehicle washing/detailing, steam cleaning, power washing, and carpet cleaning is prohibited.

CONSTRUCTION/DEVELOPMENT SITES

The following are required of construction sites:

1. Cover and contain soil, material, or waste stockpiles throughout the year.
2. Develop hydromodification plans for projects greater than 50 acres.
3. Implement advanced treatment for projects planned on steep hillside slopes to prevent erosion.
4. Grade no more than 17 acres at one time until site is protected.
5. Incorporate low impact development such as porous pavement and grass swales to increase rainwater infiltration.
6. Ensure erosion control, sediment control, material and waste management are implemented at the site.

Should you witness illegal discharges, please contact the City's Storm Water Hotline at 619.667.1134. Thank you for protecting our environment and preserving our quality of life.

Continued from page 1

Strategic Planning Workshop

"Targets for Action" that outline specific steps and target dates to achieve community goals within the core areas defined by Council, including:

- Offer a safe community
- Maintain a financially sound and affordable city government
- Continue to improve high quality municipal services
- Revitalize neighborhoods and corridors
- Enhanced recreation and quality of life opportunities
- Provide effective and efficient traffic circulation and transportation

City Manager Sandra Kerl outlined the full day of topics to develop policy direction from the Council on how to meet both community expectations and the many financial challenges facing the City in the future. The hard work of the day began with a very thorough financial forecast prepared by the City's Administrative Services Director Gary Ameling. The forecast evaluates economic trends that are expected to have an affect on the City, including sales tax, property tax, employment projections, fees for services and permits, and other sources of revenue from State and Federal sources. The Council asked many questions in getting a handle on the City's financial forecast for the next six years.

The second part of the workshop focused on the ongoing efforts throughout the year by the Council to reach out and communicate with the citizens of La Mesa and gather information and opinions about the key issues in the community. This was the second year of success for the Town Hall meetings to gather input from concerned citizens and property owners. A summary of the comments received at the meetings and follow-up actions by staff was presented to the Council. Later in the workshop the Council also reviewed the results of a community phone survey that asked several questions about how well the City is doing in the view of the citizens in terms of providing services and meeting community expectations.

Continuing with the importance of focusing on the economy and the City's budget issues, there were several sections of the workshop dedicated to evaluating various actions the City can take to address new sources of revenue. These discussions included a thorough review of the City's "Cost Recovery Policies" for the various permits, services and facilities provided by the City. Each City department provided a detailed review of the fees and recommended changes to insure that the Council's objectives are being met. The Council provided direction to the City Manager on some changes to the departmental policies and the updated fee schedule which reflects these changes, which will go back to the Council for formal adoption later this spring.

The "community survey" was further discussed during this portion of the Workshop to listen to the preliminary data from citizens of La Mesa about their opinions on the idea of a local sales tax measure to provide an ongoing revenue source to maintain services and facilities in the City. A key issue in this discussion was the ability of the City to find long-term solutions that will avoid the ongoing impacts on La Mesa's budget that are a direct result of continual financial difficulties at the State level.

The other financial program that was presented at the Workshop was information from the Buxton Company. This group has developed information about potential new retail and service businesses that could be attracted to La Mesa as part of the City's economic development strategy. The data indicated that there is a very strong pool of shopping and service demand within a nine minute drive-time area around La Mesa. Demographic information from this data will be used to match the City with various retail and restaurant franchises that can be approached about interest in coming to La Mesa to provide quality services and products as well as providing much needed sales tax revenues to sustain City services and facilities.

In addition, the Council discussed the potential use of a site at the corner of Waite Drive and Murray Hill Road as a future neighborhood park location. The site is owned by the County and because it was formerly a fueling station, it has been undergoing remediation for several years. When the cleanup is completed, the Council has expressed interest to the County in acquiring the property.

In all, it was a long day and a very successful workshop to assess how the City is doing, what looms on the horizon, and provide direction to the City Manager in how the City will be going forward into the budget preparation process. A summary of the various programs and projects for that will be reflected in each City department work program and in the upcoming budget process outlined in the City Council's "Targets for Action." This document is updated annually to define the Council's core values and objectives based on community input and Council policies. By viewing the "Targets for Action" you can see an outline of the many programs and projects that the City will be undertaking in the next year by key areas.

The La Mesa Wellness Task Force wants you to know that there are organized walks nearby every day of the week. Check the City's website at www.cityoflamesa.com, search *health & wellness,* and click on Walk La Mesa under Quick Links for a list of options or pick up a flyer at La Mesa City Hall or the La Mesa Community Center.

Goal of Community Wellness Program

more than $45 per month. Co-payments at the time of services are $5 and some services are offered free of charge.

With help from the Institute for Local Government through the Communities for Healthy Kids Program, the City of La Mesa has planned a multi-pronged campaign to increase awareness and ultimately the number of eligible La Mesa children enrolled in these programs. Outreach efforts and a number of enrollment opportunities are planned this year. Several of these events are conducted in partnership with the La Mesa-Spring Valley School District and other community partners. Watch for specific informational materials coming home from school with your children. Enrollment opportunities will also be available at a number of community events this fall. Watch the City's website www.cityoflamesa.com for specific information when it becomes available.

To find out if you are eligible for Medi-Cal or California Healthy Families and to receive an application call toll-free 1.888.747.1222. For telephone assistance completing the application call toll-free 1.800.880.5305.

Additionally, Certified Applicant Assistants (CAAs) are available to help your family complete the application. For easy referral you can call the La Mesa Community Center office at 619.667.1300 for referral to a Communities for Healthy Kids project partner. Community Center office hours are Monday through Thursday 7:30 a.m. to 5:30 p.m. and alternate Fridays 7:30 a.m. to 4:30 p.m. Please note that City offices are closed alternate Fridays. Via email, send your name, residence address, and best daytime phone number(s) to commservices@ci.la-mesa.ca.us and we will forward your information to one of our area project partners for application assistance.

COUNCIL ACTIONS

January 8, 2008

Adopted a resolution amending Section 12.44.130 of the La Mesa Municipal Code installing a disabled persons parking space at 4231 Lowell Street.

Adopted a resolution adding Subsections 12.28.030 (50.9) and (82.8) to the La Mesa Municipal Code, establishing Amarillo Avenue as a stop street at Mellmanor Drive and Nentra Street as a stop street at Amarillo Avenue.

Adopted a resolution approving the Sidewalk Master Plan and Negative Declaration.

Approved the La Mesa Community Parking Commission's Capital Improvement Program (CIP) recommendations for improvements within the Downtown Parking District.

February 12, 2008

Ratified the Design Review Board's approval of DRB-07-25 (Starbucks Coffee Company), for a proposed carryout restaurant at 4200 Spring Street.

Ratified the Design Review Board's approval of DRB-07-20 (Chili's Restaurant), for proposed exterior improvements to an existing restaurant at 8285 Fletcher Parkway.

Adopted an ordinance repealing Chapter 7.18 of the Municipal Code in its entirety and adopting a new Chapter 7.18 to update regulations pertaining to storm water and non-storm water discharges.

February 26, 2008

Ratified the Design Review Board's approval of DRB-07-15 (KFC/Taco Bell), for a proposed fast-food restaurant at 5454 Jackson Drive.

Appointed members to the Human Relations Advisory Commission and the Youth Advisory Commission.

February 28, 2008

Directed the City Manager to initiate a third party independent investigation, under the authority of the Municipal Code, of the incident on February 20, 2008 involving the Mayor; and, if individual City Councilmembers so desired, they may contact the District Attorney or Grand Jury to invite either or both of these entities to initiate an investigation.

March 11, 2008

Adopted a resolution approving the City of La Mesa to apply for a grant to the CA Endowment for the "Live Well" Community Wellness Initiative.

Adopted a resolution approving the City of La Mesa to apply for three-year grant funding for the San Diego Association of Governments (SANDAG) Transnet Senior Mini-Grant Program.

Adopted a resolution authorizing the Mayor to execute Caltrans Program Supplement Agreements for all phases of the Smart Growth Incentive Grant Program for the Allison Avenue and University Avenue Pedestrian Enhancement Project.

Adopted a resolution designating La Mesa Fire Stations as Safely Surrendered Baby Sites.

March 25, 2008

Adopted a resolution authorizing the application and acceptance of funding from the California Department of Conservation's Division of Recycling for beverage container recycling and litter cleanup activities.

Adopted a resolution authorizing the application and acceptance of grant funding from the California Integrated Waste Management Board for waste reduction and diversion of hazardous materials.

Ratified the Design Review Board's approval of DRB-07-35 (Village Garden), for a proposed remodel to an existing restaurant at 8384 La Mesa Boulevard.

Ratified the Design Review Board's approval of DRB-07-30 (Sprint/Nextel), for a modification to an existing wireless communications facility at 7840 El Cajon Boulevard.

Adopted a resolution amending Section 12.40.010 (1) of the La Mesa Municipal Code designating a no parking zone on the west side of Acacia Avenue from Pasadena Avenue to Beverly Drive.

Adopted a resolution authorizing acceptance of a grant from the California Office of Traffic Safety to conduct a local seat belt compliance traffic safety project and approving the addition of the grant funds to the FY 2007-2008 Budget.

Adopted a resolution approving updated rules for parade entries.

Adopted a resolution of intention to authorize the allocation of a maximum of $300,000 from the Downtown Parking Fund to pay for professional services to prepare the Downtown Streetscape Improvement Program to revitalize public infrastructure in the downtown area.

RESIDENTIAL OUTREACH MATERIALS

City of La Mesa
Department of Public Works

Notice of Excessive Runoff

You are receiving this notice because excess water runoff has been observed coming from your property. Typically, this runoff is due to excessive or malfunctioning irrigation. Urban water runoff is a major contributor to storm water pollution. This runoff picks up litter, yard waste, fertilizer, pesticides, oil residue and sediment. All together, these compounds add up to storm water pollution. Storm water flows into streams and the ocean, not wastewater treatment plants. While this specific runoff carries only a small amount of pollutants, the hundreds of inlets around the City of La Mesa can add up to a much larger problem. Excess runoff can not only lead to storm water pollution but also to increased water bills. By inspecting and properly maintaining your irrigation system, you will insure you're not wasting water.

Please attempt to locate the source of this runoff and eliminate it, if possible. Make any necessary repairs or adjustments to irrigation systems and/or reroute and contain excess drainage.

For more information, you may call 619-667-1450.

City of La Mesa
Department of Public Works

Maintaining your Infrastructure

The Department of Public Works is responsible for the maintenance of $450 million of public infrastructure. By properly maintaining that infrastructure, the Department protects the public's safety and improves the quality of life for the citizens of La Mesa.

This Department is responsible for:

- 150 miles of streets
- 156 miles of sewer pipe
- 53 miles of storm drain pipe
- 14 parks
- 37 buildings
- 200 vehicles and pieces of equipment
- 58 traffic signals
- 1,900 street lights
- 7,200 signs
- 8,150 street and park trees

Pollutants of Concern

As rainfall flows over the ground, it picks up a variety of pollutants and deposits them into our watersheds. The following pollutants are commonly transported in the storm drain system and have been found to degrade water quality.

- Sediments
- Fertilizers
- Metals
- Detergents
- Pesticides
- Organic Compounds (solvents)
- Trash and Debris
- Oil and Grease
- Bacteria and Viruses

The following Best Management Practices (BMPs) are required to be used in residential areas to reduce urban runoff pollution in our streams and waterways. To do your part in protecting our water quality, please implement the following BMPs, where applicable or checked by the City inspector.

Maintenance & Good Housekeeping

- ❑ Regularly, dry sweep exterior paved areas. **Do Not use a hose!** Place debris in the dumpsters.
- ❑ If you must use water for cleaning, use a mop and bucket. Dispose of wash water into the sanitary sewer (sink or toilet).
- ❑ Water used for cleaning exterior surfaces must be contained and disposed of into the sanitary sewer in compliance with local regulations. Wash water is not allowed to enter the storm drain or leave the property.
- ❑ Regularly inspect and maintain storm drain inlets.

Landscaping

- ❑ Only irrigate during early morning or late evening to avoid evaporation.
- ❑ Aim sprinklers to avoid watering other areas.
- ❑ Time sprinklers to avoid over watering and causing runoff.
- ❑ Minimize pesticide, herbicide and fertilizer use, which are harmful to animals downstream.
- ❑ Hand pull weeds instead of using herbicides.
- ❑ Do not use pesticides that eliminate beneficial insects (i.e., Integrated Pest Management).

Outdoor Material Storage

- ❑ Store all material indoors or under a covered area not exposed to rain. Include secondary containment for liquid material.
- ❑ Have a spill response kit available to clean up potential spills such as kitty litter or other absorbents.
- ❑ Keep material storage areas free from rainwater accumulation.
- ❑ Keep lids closed on all outdoor storage containers and ensure containers are labeled.

Waste Management

- ❑ Keep all outdoor garbage and dumpster areas free of trash, sediment and debris.
- ❑ Keep lids closed on dumpsters and trash cans and never wash down dumpsters.
- ❑ Fix any leaks in garbage cans or dumpsters.
- ❑ Schedule regular waste pick-up.

Vehicle /Equipment Maintenance

- ❑ Perform all vehicle maintenance indoors when possible.
- ❑ Use drip-pans to collect fluids from leaky vehicles.
- ❑ Clean up spills immediately using kitty litter or other absorbents. Properly dispose of used absorbents.

Vehicle /Equipment Washing

- ❑ Wash vehicles at a commercial car wash when possible. (Commercial car washes drain to the sanitary sewer and not to the storm drain).
- ❑ Wash vehicles over a pervious (absorbent) surface such as dirt, gravel or grass to prevent runoff.
- ❑ Minimize the use of soaps and water while washing.
- ❑ Protect storm drains or curb inlets and then collect all wash water by vacuum. Recycle or dispose of wash water via the sanitary sewer system.
- ❑ Drain excess wash water to the sanitary sewer (sink or toilet), not to storm drains.

Loading Areas & Operations

- ❑ Load and unload in designated areas.
- ❑ Regularly dry sweep loading and unloading areas.
- ❑ If possible, cover loading areas.
- ❑ Divert storm water away from all loading and unloading areas.
- ❑ Check shipments and trucks for leaks and spills.
- ❑ Cleanup spills/leaks immediately and dispose of properly.
- ❑ If you must use water for cleaning, use a mop and bucket and dispose of wash water into the sanitary sewer.
- ❑ Major cleaning of exterior surfaces must include capturing all wash water and disposing of it into the sanitary sewer in compliance with local regulations. Wash water should not be allowed to enter the street gutter or storm drains.

Sanitary Sewer vs. Storm Drain System

The water that drains down a sink or toilet in a home or business flows to the sanitary sewer and is treated by the City of San Diego at a wastewater treatment plant.

The storm drain system, on the other hand, is designed to carry rainwater from City streets and driveways to prevent flooding. This water does not receive any treatment. It flows directly to creeks and rivers – terminating at the Pacific Ocean!

Unfortunately, as rainfall flows over the ground it picks up debris and pollutants and deposits them into our watersheds.

Preventing Urban Runoff Pollution

A Guide for Residents

Urban storm water runoff is the **largest contributor** to **watershed pollution** in San Diego County.

The City of La Mesa's Storm Water Ordinance Requires the implementation of **Best Management Practices** (BMPs) to prevent urban runoff pollution.

The City monitors activities within the City's jurisdiction and may take enforcement measures to ensure the prevention of urban runoff pollution.

ATTACHMENT 8.1

TIPS FOR OUTDOOR VENDORS ATTACHMENT 7.1

CITY OF
LA MESA
JEWEL of the HILLS

City of La Mesa
Storm Water Pollution Prevention
Tips for Outdoor Vendors

You may not be aware that in Southern California, the sewer system and storm drain system are separate. Storm drain inlets are commonly found along curbs with the intent of transporting or conveying storm water runoff into receiving water bodies, such as creeks, lakes and oceans. Unlike the sewer system, storm water runoff entering the storm drain system is not treated. Harmful pollutants, as listed below, can be transported during non-storm water discharges such as hosing down side walks or equipment. These types of pollutants are harmful to the environment and negatively impact water quality, aquatic animal and plant life as well as our quality of life. Non-storm water discharges are prohibited and in violation of the City Ordinance. A list of common pollutants and pollution prevention tips are provided below.

Pollutants of Concern

1. Sediment
2. Fertilizers
3. Metals
4. Detergents
5. Pesticides
6. Organic Compounds (solvents)
7. Trash and Debris
8. Oil and Grease
9. Bacteria

Good House Keeping

- Dry sweep exterior paved areas. **Do not use a hose or water!** Place debris in dumpster and keep dumpster lid closed.
- If you must use water for cleaning, use a mop and bucket. Dispose of wash water into the sanitary sewer system (sink or toilet). Wash water is not allowed to enter the storm drain.

Outdoor Material and Equipment Management

- Store material under covered areas.
- Place liquid material in secondary containment to ensure spills are contained.
- Ensure that frying oil is contained and managed properly without dropping/leaking on to the pavement.
- If using frying oil, ensure that you purchase absorbent material (absorbent pads) to address cleanup of potential oil spills.
- Inspect/fix equipment to ensure no leaks.
- Do not wash equipment at the event!

Waste Management

- Place trash in dumpsters with lids always closed.
- Cleanup leaks/spills immediately and place waste material into the dumpster

Should you require clarification or additional information on storm water pollution prevention, please contact the City's Storm Water Hotline (619) 667-1134.

ATTACHMENT 8.2

CONSTRUCTION BMP TRIFOLD

6) **Sediment Tracking** – Construct a stabilized construction entrance and conduct frequent street sweeping to keep sediment off of roadways.

7) **Materials Management** – Protect stockpiles of soil and paving materials from wind and water erosion. Have a spill prevention and control plan for hazardous materials such as fuel, paints and solvents.

8) **Waste Management** – properly store and dispose of solid, hazardous, concrete, and sanitary wastes. Cleanup spills immediately.

9) **Non-Storm Water Discharges**

- **Paving/grinding** – Protect inlets from slurry seal operations and vacuum saw cut slurry and grinding residue.
- **De-watering** – Use accumulated water for dust suppression or consult with City staff and the Regional Water Quality Control Board when dewatering operation is proposed.
- **Potable Water/Irrigation** – Shut off water source to broken lines, sprinklers or valves as soon as possible and direct water away from pollutant sources.

For further assistance, detailed BMP information from the above list can be downloaded from the City's Storm Water Pollution Prevention website.

Department of Public Works
Storm Water Program

8130 Allison Ave
La Mesa, CA
91941

(619) 667-1134
www.cityoflamesa.com

Storm Water Pollution

Construction activities can have a significant impact on water quality due to soil disturbances and the types of materials and equipment used. As storm water flows over a construction site, it can pick up pollutants such as sediment, oil, fuels, paints, adhesives, trash, debris and fertilizers. Polluted storm water runoff can harm or kill fish and other wildlife, and can destroy aquatic habitat.

Best Management Practices (BMPs)

In order to reduce, or eliminate, erosion and pollutant discharges into La Mesa's storm drain system, owners and operators of all construction sites are required to implement Best Management Practices (BMPs). BMPs are techniques or physical controls utilized to prevent pollution.

Permit/Regulatory Requirements

The following permits and ordinances must be considered before construction or grading activity commences:

- **State Construction General Permit** – Projects which disturb one acre or more of soil must obtain coverage by submitting a Notice of Intent to the State Water Resources Control Board and preparing a Storm Water Pollution Prevention Plan (SWPPP).
- **Storm Water Management Ordinance -** Review Chapter 7.18 of the La Mesa Municipal Code (LMC) for local storm water requirements and penalties for noncompliance.
- **Grading Ordinance** – Chapter 14.05 of the LMC requires additional erosion control requirements during grading activities. Consult with the Engineering Division to determine if a grading permit is needed.
- **Building Permits** – Contact the Building Division to determine what building permits may be needed. Storm water BMP notes must be shown on site plans.
- **Encroachment Permits** – A permit is needed when working in the public right-of-way. Please contact the Engineering Division for specific requirements.

Inspection Program

City staff monitors constructions sites for proper erosion and sediment controls all year long, with more frequent inspections occurring during the wet season (October 1 through April 30). Inspectors will evaluate BMP implementation, effectiveness and maintenance.

Sites Covered Under State Construction General Permit (Over 1 Acre):

- These sites are also subject to inspections by the Regional Water Quality Control Board (RWQCB).
- Self-inspections are required before forecasted rain events, during each 24-hour rain event, and following a rain event.

Minimum BMPs

Construction projects within the City will be required to implement at least one of the BMPs from each category below when applicable to the site. Please refer to the following list while planning your project to ensure compliance with City and State requirements and to prevent storm water pollution. Brief examples of BMPs have been mentioned within each category, but do not represent a complete list.

1) **Planning and Scheduling** – Minimize land disturbance during the wet season.

2) **Slope Stabilization** – Preserve existing vegetation and stabilize slopes with hydraulic mulch or erosion control blankets.

3) **Site Drainage** – Install outlet protection devices to reduce velocity and erosion potential of storm water flows.

4) **Sediment Perimeter Protection** – Install silt fencing, straw rolls or a gravel bag barrier to prevent sediment discharges.

5) **Sediment Capture** Protect all storm drain inlets with gravel bags. For sites over an acre, inlet controls should be used in conjunction with a sediment basin/trap.

ATTACHMENT 8.3

CONSTRUCTION SWPPP GUIDE TRIFOLD

SEDIMENT CONTROL	**A.8**
Description/Illustration of BMPs to prevent increase of sediment load in discharge	A.8
Construction phase / BMP sequencing schedule including supplemental pre-rain action plan for sediment control measures	A.8
NON-STORM WATER	**A.9**
Description of non-storm water discharges to receiving waters	A.9
Locations of discharges	A.9
Description of BMPs	A.9
Name and phone number of qualified person responsible for non-storm water management	A.9
POST-CONSTRUCTION	**A.10**
Description and location of BMPs	A.10
Operation/Maintenance of BMPs after project completion (including funding)	A.10
MAINTENANCE, INSPECTIONS, AND REPAIR	**A.11**
Name and phone number of qualified person responsible for inspections	A.11
Inspection checklist: date, weather, inadequate BMPs, visual observations of BMPs, corrective action, inspector's name, title, signature	A.11.a-f
OTHER REQUIREMENTS	**A.12-16**
Documentation of all training	A.12
List of Contractors/Subcontractors	A.13

Section B. Monitoring and Reporting Requirements	
Description of site inspection plans	B.3
Compliance certification (annually 7/1) if project is under active construction	B.4
Noncompliance reporting	B.5
Records of all inspections; compliance certifications; noncompliance reports, etc. should be kept for at least three years	B.6
Monitoring program for sediment contribution from direct discharges to impaired water bodies	B.7
Monitoring program for pollutants not visually detectable in storm water (non-visible pollutants)	B.8
Section C. Standard Provisions Construction Activities	
Signed Certification for SWPPP, reports, amendments, etc. Who is authorized to sign and by what authority has the duly authorized representative been assigned?	C.9,10
Location of General Permit and SWPPP on site during construction activities	C. 17

City of La Mesa

CONSTRUCTION SWPPP INFORMATION

State General Construction Permit

Your construction project may be subject to the State of California General Construction Permit. Construction activities subject to this permit include clearing, grading, disturbances to the ground such as stockpiling, or excavation that results in soil disturbances of a at least one acre of total land area. Construction activity that result in soil disturbances of less than one acre is subject to this permit if the construction activity is part of a larger common plan of development that encompasses one or more acres of soil disturbance or if there is significant water quality impairment as a result.

Planning Document Review

If your project is subject to the General Construction Permit, a Notice of Intent (NOI) and filing fee, and preparation of a Storm Water Pollution Prevention Plan (SWPPP) and Monitoring Program are required prior to commencement with project activities. The SWPPP is required to be submitted to the City of La Mesa for review. Prior to submitting a SWPPP to the City for Review, ensure that the following items are addressed

Common Problems

- ☑ Provide a copy of the NOI Application, letter sent to you by the State Water Resources Control Board with Waste Discharge Identification Number (WDID).
- ☑ Ensure the owner and or contractor sign the certification forms.
- ☑ Ensure personnel assigned to various tasks i.e. inspections are presented in the SWPPP and their role is clearly defined.

- ☑ Ensure vicinity map shows the general topography.
- ☑ Provide selected Best Management Practices (BMPs) specifically for the project.
- ☑ Place BMPs on the map.
- ☑ Provide site-specific information for materials list.
- ☑ Ensure text correspond with appendices and is consistent.
- ☑ Provide information on Post-Construction BMPs and funding source.
- ☑ Review the General Construction Permit to ensure all components have been addressed.

Ensure the following items are incorporated into your SWPPP & Monitoring Program:

	Permit Section
Vicinity Map (graphic)	***A.5.a.1***
Major roadways, geographic features or landmarks	A.5.a.1
Site perimeter	A.5.a.1
Geographic features	A.5.a.1
General topography	A.5.a.1
Site Map (graphic) (can modify Parcel Map)	***A.5.a.2***
Site perimeter	A.5.a.2
Existing and proposed buildings, lots, and roadways	A.5.a.2
Storm water collection and discharge points	A.5.a.2
General topography before and after construction	A.5.a.2
Anticipated discharge location(s)	A.5.a.2
Drainage patterns	A.5.a.2
Relevant drainage areas	A.5.a.2
Temporary on-site drainage	A.5.a.2
Drainage (graphic)	***A.5.b.1***
Drainage patterns	A.5.b.1
Slopes after major grading	A.5.b.1
Calculations for storm water run-on	A.5.b.1
BMPs that divert off-site drainage from going through site	A.5.b.1
Storm Water Inlets (graphic)	***A.5.b.2***
Drainage patterns to storm water inlets or receiving water	A.5.b.2
BMPs that protect storm water inlets or receiving water	A.5.b.2
Site History/Past Site Usage (Real Estate Broker Disclosure may be sufficient)	***A.5.b.3***
Description of toxic materials treated, stored, or spilled on site	A.5.b.3
BMPs that minimize contact of contaminants with storm water	A.5.b.3
Location of Areas Designated for: (graphic)	***A.5.b.4***
Soil or waste storage	A.5.b.4
Vehicle storage & service	A.5.b.4
Construction material loading, unloading, and access	A.5.b.4
Equipment storage, cleaning, maintenance	A.5.b.4
BMP Descriptions for: (graphic or narrative)	***A.5.b.5***
Waste handling and disposal areas	A.5.b.5
On-site storage and disposal of construction materials and waste	A.5.b.5
BMPs to minimize exposure of storm water to construction materials, equipment, vehicles, waste	A.5.b.5
Post Construction BMPs	***A.5.b.6 See A. 10***
Additional Information	***A.5. c***
Description of other pollutant sources and BMPs that cannot be shown graphically	A.5.c.1
Pre-construction control practices	A.5.c.1
Inventory of materials and activities that may pollute storm water	A.5.c.2
BMPs to reduce/eliminate potential pollutants listed in the inventory	A.5.c.2
Runoff coefficient (before & after)	A.5.c.3
Percent impervious (before & after)	A.5.c.3
Copy of the NOI and WDID #	A.5.c.4
Construction activity schedule	A.5.c.5
Contact information	A.5.c.6
EROSION CONTROL	**A.6**
SWPPP shall include: (graphic)	***A.6.a-c***
Areas of vegetation on site	A.6.a.1
Areas of soil disturbance that will be stabilized during rainy season	A.6.a.2
Areas of soil disturbance which will be exposed during any part of the rainy season	A.6.a.3
Construction phase / BMP sequencing schedule including supplemental pre-rain action plan for erosion control measures	A.6.a.4
BMPs for erosion control	A.6.b
BMPs to control wind erosion	A.6.c

CERTIFICATION STATEMENT

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete.

I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Sandra L. Kerl
City Manager

Telephone Number: (619) 667-1105

8130 ALLISON AVENUE • LA MESA, CA 91941 • TEL: 619.667.1105 FAX: 619.462.7528

INTRODUCTION AND CONTENTS

Introduction

The 2007/2008 reporting period as originally written in Regional Water Quality Control Board (RWQCB) Order No. R9-2007-0001 (Municipal Permit) was defined as July 1, 2007 through June 30, 2008. Reporting on the City of La Mesa's implementation of all components of its JURMP was originally required to be submitted to the RWQCB by September 30, 2008. However, on September 10, 2008, the RWQCB adopted Addendum No. 2 to the Municipal Permit, which required that the City of La Mesa (City) discuss its 2008 Dry Weather Monitoring Program activities in Section 7 of its 2007/2008 JURMP Annual Report.

Section 7 of the Annual Report discusses the implementation of the illicit discharge detection and elimination (IDDE) component of the City's storm water program. This program component includes both dry weather monitoring activities and other activities to prevent and respond to illicit connection and illicit discharges, such as operating a storm water hotline. The reporting period for the portions of this section that discuss dry weather monitoring activities was changed to extend through September 30, 2008, but the reporting period for other activities described in the section was not changed and thus extends through June 30, 2008, the same reporting period as applies to the rest of the JURMP Annual Report. Because the field work for the dry weather monitoring program is not required to be completed until September 30, 2008, the same day that the JURMP Annual Report is to be submitted, the RWQCB extended the submittal deadline for all of Section 7 of the 2007/2008 JURMP Annual Report until December 15, 2008.

Contents

This submittal includes a certification statement, the text of Section 7 of the 2007/2008 JURMP Annual Report, and the attachments associated with that section. For clarity, the items included in this submittal are listed below.

- Certification Statement for Section 7 Submittal
- Introduction and Contents
- Section 7 (IDDE Component) of the 2007/2008 JURMP Annual Report
- JURMP Annual Report Requirements Checklist (for Section 7 only)
- Attachment 7.1, City of La Mesa Dry Weather Field Screening and Analytical Monitoring Program 2007
- Attachment 7.2, City of La Mesa Dry Weather Field Screening and Analytical Monitoring Program 2008

Please note that the complaint log, referenced as Appendix B in Section 7, was already provided with the main JURMP Annual Report submittal in September 2008 and is not included again with this December submittal.

7.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION

7.1 INTRODUCTION

Recognizing that illicit connections and illicit discharges can be significant sources of pollutants to the City's MS4, the City maintains several programs to prevent and to seek out and eliminate IC/IDs. Illicit discharges may result from activities such as vehicle washing or equipment cleaning without the use of proper BMPs. Sewer pipes and drains in car washes connected to the MS4 are examples of illicit connections. City storm water personnel work with residents, businesses, and City staff to make them aware of BMPs to prevent IC/IDs and to encourage reporting of IC/IDs. The following activities are the primary components of the City's program to combat IC/IDs:

- Inspecting local businesses, construction sites, and municipal facilities
- Conducting the Dry Weather Monitoring Program
- Operating a public complaint hotline

These mechanisms enable the City to provide a comprehensive system to better the quality of storm water and urban runoff throughout the City.

7.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the illicit discharge detection and elimination component during the 2007/2008 reporting period are presented in the following bulleted list. Please note that per Addendum No. 2 to the Municipal Permit, the reporting period for the Dry Weather Monitoring Program extended through September 30, 2008. The reporting period for all other components of the City's IDDE program ended on June 30, 2008. The following subsections provide more details on how the City complied with both the 2001 permit and the new 2007 Municipal Permit during the reporting period.

- Six IC/IDs were discovered/reported during the 2007/2008 reporting period. All six were followed up on by City personnel, and enforcement measures were applied as necessary.
- The City recorded and investigated 137 Storm Water Hotline complaints (Appendix B).
- The City performed both of the recommended corrective actions proposed in the 2007 Dry Weather Field Screening and Analytical Monitoring Program Report to prevent possible pollutants from entering the storm drain system.
- The City conducted the 2008 Dry Weather Field Screening and Analytical Monitoring Program.

7.2 Public Reporting of Illicit Discharges and Connections

Reporting and Response

Public and municipal involvement are crucial to preventing and eliminating IC/IDs from the storm water conveyance system. The Storm Water Hotline provides an effective means for individuals in the City to report suspected IC/IDs. The hotline number is provided on the City's website, in distributed storm water educational material, in storm water articles in the *La Mesa Focus* newsletter, and on the Storm Water Bulletin Board. Storm water complaints may also be reported through the City's website. All complaints received through the hotline and website are logged onto a spreadsheet for documentation and tracking. Each logged complaint is investigated by City personnel to determine if an IC/ID is present. Responsible parties for any confirmed IC/ID are sought out and educated and/or cited as necessary and required to stop any and all illegal discharges. The Public Works Department also receives complaints regarding storm water, often due to infrastructure concerns. Complaints to the Public Works Department are also tracked and investigated.

Complaints received by the City during the 2007/2008 reporting period and the City's response to each are listed in Appendix B. One hundred thirty-seven complaints were documented this year, an increase from the 89 recorded last year. The increase in documented complaints may indicate that individuals in the City are more aware of the impact of certain activities on the storm drain system as well as the need to report such activities to the Storm Water Hotline and/or the City website.

Enforcement

As previously stated, investigated complaints from the Storm Water Hotline and City website are included in a table in Appendix B. The table also includes relevant Public Works Department complaints and a description of how each complaint was resolved during the reporting period. Resolutions to investigated complaints included issuing warnings, violations, and/or educational material. Table 7-1 summarizes the enforcement actions taken in response to complaints received by the City's Storm Water Hotline.

Table 7-1
Enforcement Actions Resulting from Complaints Received by the Storm Water Hotline

Category	Verbal Warning	Written Notice to Comply	Written Warning	NOV
Commercial	6	1	1	9
Industrial	0	0	1	0
Mobile	0	0	0	6
Municipal	4	0	0	0
Residential	4	2	17	5
Construction	2	0	0	2

7.3 Spill Reporting, Response, and Prevention

The City has documented procedures for preventing and responding to various types of spills. The City has established protocols to prevent spills and to properly respond to and report spills if they do occur. The City has a detailed program to prevent sanitary sewer overflows (SSO). Preventative maintenance is regularly conducted on the City's sanitary sewer system, and video inspections and sewer surveys are regularly conducted to monitor the condition of the public sewer lines and to determine the necessity of maintenance. Private lateral lines do not receive preventative maintenance, but the City assists in the containment and cleanup of sewer spills if the spill could potentially reach the City's MS4. Individuals in the City are encouraged to report any SSOs to the City's Storm Water Hotline. More detail about the City's spill prevention, response, and reporting procedures for SSOs and other spills can be found in the City's JURMP.

During the 2007/2008 reporting period, no SSOs were recorded; however, one non-SSO spill occurred. The City responded immediately and sent the RWQCB a detailed email regarding the spill within 24 hours. The RWQCB deemed it unnecessary to produce a formal report on the event. A summary of that spill is provided below.

- On 6/4/2008, the City received a complaint about a homeowner rinsing/discharging wastewater from a 500 gallon tank from their residence at 4950 Pine Street. When the La Mesa Fire Department arrived at the site no active discharge was observed, but red staining was apparent on the curb of the street. The hazmat team advised the homeowner to place kitty litter along the curb and issued an NOV for the illegal discharge. Educational material and instructions for proper disposal of the kitty litter were provided to the resident.

7.4 Urban Runoff Monitoring

The City has continued to conduct a Dry Weather Monitoring Program, as required by the Municipal Permit. This program assists the City in detecting and eliminating IC/IDs to the storm drain system. There are three major components to the Dry Weather Monitoring Program:

- Field observations, which includes site description and qualitative observations
- Field screening monitoring, which includes flow estimation and sample testing using meters and test kits at the site
- Analytical monitoring, which involves submittal of collected samples from selected sites to an analytical laboratory for additional testing

Numeric action levels are used as the primary approach for the interpretation of most constituent concentrations measured in the field and laboratory. The California Toxics Rule (CTR) Criteria Maximum Concentration (CMC) is used as the action level for dissolved trace metals. Temperature and turbidity parameters are evaluated using best

professional judgment to determine the necessity of an upstream investigation. The action levels for all other pollutants were adopted in 2003 and were based on statistical analyses of previous Dry Weather Monitoring Program data and established water quality benchmarks from the Basin Plan and the United States Environmental Protection Agency Multi-Sector General Permit.

The City visits all designated primary monitoring stations to collect Dry Weather Monitoring Program data. When a primary monitoring station is found to be dry, the City visits designated alternate monitoring stations.

7.4.1 2007 Dry Weather Monitoring Program

During the 2007 Dry Weather Monitoring Program, 18 primary monitoring stations and one alternate monitoring station were visited. One of the primary sites was observed to be dry, so an alternate site, Site 60, was chosen as a replacement for field screening. Only one field exceedance and one bacteria exceedance were noted in 2007. The 2007 Dry Weather Field Screening and Analytical Monitoring Program Report is provided as Attachment 7.1. For further information about how the City addressed notable findings of the 2007 Dry Weather Monitoring Program and responded to the resulting recommendations, see Section 7.5.1 of this report.

7.4.2 2008 Dry Weather Monitoring Program

Program Updates

In early 2008, the City's Dry Weather Monitoring Program site locations and procedures were updated in response to new Municipal Permit requirements as part of the City's JURMP update.

To provide better overall coverage of the City's MS4, some new sites were added, and some site locations were changed. Through this process the number of designated primary sites was increased from 18 to 20. The sampling location site names were also changed using a format similar to the site naming format employed by the State's Surface Waters Ambient Monitoring Program. More detail about the changes in site locations and naming procedures is provided in the City's updated JURMP that was submitted to the RWQCB in March 2008. The new site names and locations have been used beginning with the 2008 Dry Weather Monitoring Program and are provided in Table 7-4 in this section. They were also updated on the City's dry weather monitoring locations map. No other updates to the map were made during the reporting period.

In addition to changes in site locations and names, the City also made some modifications to Dry Weather Monitoring Program procedures. A new trash assessment component developed regionally by the Dry Weather Monitoring sub-workgroup with input from the RWQCB was incorporated into the City's program. More detail about the new trash assessment program is provided later in this subsection. The City also began following up on laboratory exceedances within two business days of receiving analytical laboratory results. Note that the City had already been following up on field

exceedances within two business days and testing for methylene blue active substances (MBAS) in the field in the past, so no changes were necessary to comply with those new requirements. The City did, however, remove MBAS from its list of constituents tested in the laboratory since the 2007 Municipal Permit no longer requires it and the City tests for it in the field.

2008 Results

The City's storm water consultant, D-MAX, conducted the 2008 Dry Weather Monitoring Program in July and August of 2008. Twenty primary monitoring stations and one alternate monitoring station were visited. Since primary Site 907-ALV-003 was dry, alternate Site 907-ALV-580 was visited for monitoring.

A summary of action level exceedances for field and laboratory constituents is provided below in Table 7-2. The results of all follow-up investigations are presented in Table 7-3, in Section 7.5.2 of this report. Also in this section, analytical field and laboratory results are included as Table 7-5 and Table 7-6, respectively.

Table 7-2
Summary of Action Level Exceedances

Field Screening (20 samples)			
Analyte	**Number of Exceedances**	**Percentage of Sites with Exceedance**	**Site(s) Exceeding Action Level**
pH	0	0 %	---
Conductivity	0	0 %	---

Chlorpyrifos	0	0 %	---

Table 7-2 (Continued)
Summary of Action Level Exceedances

Laboratory Analyses (6 samples)			
Analyte	**Number of Exceedances**	**Percentage of Sites with Exceedance**	**Site(s) Exceeding Action Level**
Total Coliforms	3	50%	907-ALV-002, 908-UNI-002, 908-UNI-004
Fecal Coliforms	1	17%	907-ALV-002
Enterococci	2	33%	907-ALV-002, 908-UNI-002

Note: Data is from the initial site visits only; data from follow-up investigations is not included.

Follow-up investigations conducted in response to action level exceedances are summarized in Section 7.5.2 of this report.

A formal trash assessment was performed for the first time in 2008 in accordance with the Municipal Permit requirements. The San Diego Copermittee Dry Weather Monitoring Workgroup developed five categories to describe the amount and extent of trash. The definitions are primarily qualitative, although numbers of trash pieces are also included in each category as a rough guideline. The five categories are listed below.

- *Optimal:* On first glance, no trash is visible. Little or no trash (<10 pieces) is evident when the evaluated area is closely examined for litter and debris.
- *Suboptimal:* On first glance, little or no trash is visible. After close inspection, small levels of trash (~10-50 pieces) are evident in the evaluated area.
- *Marginal:* Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing are present.
- *Submarginal:* Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100-400 pieces). Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing are present.
- *Poor:* Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

The threat to human health and threat to aquatic health is assessed at each site using the following definitions:

- *Threat to Human Health* - Site poses a threat to human health via swimming, wading, or walking through the area. Trash and debris have the potential to contain chemicals that may bioaccumulate, transmit dangerous bacteria (e.g.,

medical waste, diapers, human waste), or have the potential for physical harm (sharps, entanglement, nails, etc.).

- *Threat to Aquatic Health* – Site poses a threat to aquatic health or other wildlife (via contact, ingestion, entanglement, etc.) from the trash and debris present. Trash and debris such as small floatable material that is persistent and can be transported long distances may resemble food and may be ingested. Wire, plastic, fishing line, and other material that has the potential for entanglement. Oil and other visible chemicals or chemical containers fall in this category.

Twenty-one sites were assessed during the 2008 Dry Weather Monitoring Program, and most of the sites were scored as "optimal," having little or no trash. Five sites were scored as "suboptimal," and one site had a "marginal" trash score. Notably, none of the sites visited had "submarginal" or "poor" levels of trash. Additionally, none of the trash observed was determined to pose a threat to human or aquatic health. Actions taken by the City in response to the results of the trash assessment are described in Section 7.5.2 of this report.

The 2008 Dry Weather Monitoring Program Report can be found as Attachment 7.2.

7.5 Follow-up and Enforcement

7.5.1 Actions Taken in Response to the 2007 Dry Weather Monitoring Program Findings

Based on the 2007 Dry Weather Monitoring Program results, two follow-up recommendations were made. In response to these recommendations, trash was removed from Site 57, Site 52, and the conveyance along Sarita Street (upstream of Site 4A). Follow-up visits were also performed later in the reporting period to check whether trash had again accumulated at these sites. No notable trash was observed during those follow-up visits. Also, the City contacted the California Shopping Cart Retrieval Corporation to remove a shopping cart from Site 4A, and the cart was removed from the channel.

7.5.2 2008 Dry Weather Monitoring Follow-Up Investigations

If the results of the field or laboratory analyses exceed specific action levels, follow-up investigations are required within two business days. Upstream investigations are performed when exceedances are verified during confirmation visits. See the City's JURMP for a complete discussion of upstream investigation procedures.

Table 7-3 presents conclusions based on the results of confirmation visits and, where necessary, upstream investigations conducted at three sites during the 2008 Dry Weather Monitoring Program.

Table 7-3
Summary of Follow-up Investigations

Site	Follow-Up Investigation Target Constituent(s)		Results / Probable Source
	Field	Laboratory	
907-ALV-002	Turbidity	Total Coliforms, Fecal Coliforms, *Enterococci*	Turbidity, fecal coliforms, and *Enterococci* were below the action level at the confirmation visit. The total coliform exceedances may have resulted from decaying leaves in storm drains upstream, which were observed during the upstream investigation.
908-UNI-002	---	Total Coliforms, *Enterococci*	Based on confirmation visit and upstream investigation, litter and decomposing leaf debris located at and near the site were likely sources of the bacterial exceedances.
908-UNI-004	---	Total Coliforms	The total coliform exceedance was likely due to stagnant water and organic debris.

The City is in the process of responding to the 2008 Dry Weather Monitoring Program findings.

Any other actions taken during the remainder of the Reporting Period will be described in the 2008/2009 JURMP Annual Report.

7.6 Illicit Discharge Detection and Elimination Component Effectiveness Assessment

The assessment of the effectiveness of this program component is provided in Section 11 of this JURMP Annual Report.

7.7 Program Review and Modification

The City's JURMP was recently updated in March 2008. The RWQCB extended the reporting period for the Dry Weather Monitoring Program through passing Addendum No. 2 in September 2008. No changes to the City's illicit discharge detection and elimination component have been made since that time.

Table 7-4
2008 Dry Weather Monitoring Locations

Site ID	Location	Conveyance	Primary Land Use	Secondary Land Use	Hydrologic Subarea	Latitude	Longitude
907-ALV-001	Alvarado Road, east of the trolley station, on the channel	Concrete Channel	Commercial	Residential	907.11	32.77209	-117.04136
907-ALV-002	Along the south edge of the Costco parking lot, just south of the Marengo Avenue and Fletcher Parkway intersection	Manhole	Industrial	Commercial	907.11	32.77414	-117.02287
907-ALV-003	Parkway Drive located in the southeast corner of Coleman College property	Manhole	Residential	Commercial	907.11	32.77362	-117.03794
907-ALV-004	7780 Parkway Drive, inside Parkway Manor Condominiums' parking lot, by visitor parking at the top of the driveway	Manhole	Residential	None	907.11	32.77546	-117.02918
907-ALV-005	Alvarado Channel, underneath the intersection of Fletcher Parkway and Baltimore Drive, north side of channel	Outlet	Residential	Commercial	907.11	32.77380	-117.02737
907-ALV-006	Fletcher Parkway and Marengo Avenue intersection, in planter	Manhole	Residential	None	907.11	32.77550	-117.02309
907-ALV-007	Jackson Drive and Parkway Drive, behind Amex Auto Repair	Manhole	Residential	Commercial	907.11	32.77832	-117.01821

Permit Annual Reporting Requirement—Section J.3.a.(3).(f)	Location in Report
i. Correction of any inaccuracies in either the MS4 map or the Dry Weather Field Screening and Analytical Stations Map.	7.4
ii. Reporting of all dry weather field screening and analytical monitoring results. The data should be presented in tabular and graphical form. The reporting shall include station locations, all dry weather field screening and analytical monitoring results, identification of sites where results exceeded action levels, follow-up and elimination activities for potential illicit discharges and connections, the rationale for why follow-up investigations were not conducted at sites where action levels were exceeded, any Copermittee or consultant program recommendations/changes resulting from the monitoring, and documentation that these recommendations/changes have been implemented. Dry weather field screening and analytical monitoring reporting shall comply with all monitoring and standard reporting requirements in Attachment B of Order No. R9-2007-0001 and Receiving Waters Monitoring and Reporting Program No. R9-2007-0001.	7.4, 7.5; Tables 7-2 hrough 7-6; Attachments 7.1 and 7.2
iii. Any dry weather field screening and analytical monitoring consultant reports generated, to be provided as an attachment to the annual report.	Attachments 7.1 and 7.2
iv. A brief description of any other investigations and follow-up activities for illicit discharges and connections.	7.5, Appendix B
v. The number and brief description of illicit discharges and connections identified.	7.5, Appendix B
vi. The number of illicit discharges and connections eliminated.	7.5, Appendix B
vii. Identification and description of all spills to the MS4 and response to the spills.	7.3, Appendix B
viii. A description of activities implemented to prevent sewage and other spills from entering the MS4.	7.3
ix. A description of the mechanism whereby notification of sewage spills from private laterals and septic systems is received.	7.3
x. Number of times the hotline was called, as compared to previous reporting periods, and a summary of the calls.	7.2, Appendix B
xi. A description of efforts to publicize and facilitate public reporting of illicit discharges.	7.2
xii. The number of violations and enforcement actions (including types) taken for illicit discharges and connections, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	7.5, Appendix B
xiii. A description of notable activities conducted to manage illicit discharges and connections.	7.1, 7.5

IDDE—Additional Dry Weather Monitoring Program Requirements

Permit Annual Reporting Requirement—Attachment B and Receiving Waters Monitoring and Reporting Program No. R9-2007-0001, Section II.B.3.c,d	Location in Report
Meets applicable standard monitoring and reporting requirements listed in Municipal Permit Attachment B.	Attachments 7.1 and 7.2
c. (1) Determining Sampling Frequency: Dry weather field screening and analytical monitoring shall be conducted at each identified station at least once between May 1st and September 30th of each year or as often as the Copermittee determines is necessary to comply with the requirements of section D.4 of Order No. R9-2007-0001.	7.4, Attachments 7.1 and 7.2
c. (2) If flow or ponded runoff is observed at a dry weather field screening or analytical monitoring station and there has been at least seventy-two (72) hours of dry weather, make observations and collect at least one (1) grab sample. Record general information such as time since last rain, quantity of last rain, site descriptions (i.e., conveyance type, dominant watershed land uses), flow estimation (i.e., width of water surface, approximate depth of water, approximate flow velocity, flow rate), and visual observations (i.e., odor, color, clarity, floatables, deposits/stains, vegetation condition, structural condition, and biology).	7.4, Attachments 7.1 and 7.2
c. (3) At a minimum, collect samples for analytical laboratory analysis of the following constituents for at least twenty five percent (25%) of the dry weather monitoring stations where water is present: (a) Total Hardness, (b) Oil and Grease, (c) Diazinon and Chlorpyrifos, (d) Cadmium (Dissolved), (e) Lead (Dissolved), (f) Zinc (Dissolved), (g) Copper (Dissolved), (h) Enterococcus bacteria, (i) Total Coliform bacteria, (j) Fecal Coliform bacteria	7.4, Table 7-6, Attachments 7.1 and 7.2
c.(4) At a minimum, conduct field screening analysis of the following constituents at all dry weather monitoring stations where water is present:	(n/a)
c. (a) Specific conductance (calculate estimated Total Dissolved Solids), (b) Turbidity, (c) pH, (d) Reactive Phosphorus, (e) Nitrate Nitrogen, (f) Ammonia Nitrogen, (g) Surfactants (MBAS)	7.4, Table 7-5, Attachments 7.1 and 7.2
c. (5) If the station is dry (no flowing or ponded runoff), make and record all applicable observations and select another station from the list of alternate stations for monitoring.	7.4, Attachments 7.1 and 7.2
c. (6) Develop and/or update criteria for dry weather field screening and analytical monitoring results whereby exceedance of the criteria will require follow-up investigations to be conducted to identify and eliminate the source causing the exceedance of the criteria.	7.4, Attachments 7.1 and 7.2
c. (7) Assess the presence of trash in receiving waters and urban runoff at each dry weather field screening or analytical monitoring station. Assessments of trash shall provide information on the spatial extent and amount of trash present, as well as the nature of the types of trash present.	7.4, Attachment 7.2

IDDE—Additional Dry Weather Monitoring Program Requirements

Permit Annual Reporting Requirement—Attachment B and Receiving Waters Monitoring and Reporting Program No. R9-2007-0001, Section II.B.3.c,d	Location in Report
c. (8) Dry weather field screening and analytical monitoring stations identified to exceed dry weather monitoring criteria for any constituents shall continue to be screened in subsequent years.	7.4, Attachments 7.1 and 7.2
c. (9) Develop and/or update procedures for source identification follow up investigations in the event of exceedance of dry weather field screening and analytical monitoring result criteria. These procedures shall be consistent with procedures required in section D.4.d of Order No. R9-2007-0001.	7.5, Attachments 7.1 and 7.2
c. (10) Develop and/or update procedures to eliminate detected illicit discharges and connections. These procedures shall be consistent with each Copermittees Illicit Discharge and Elimination component of its Jurisdictional Urban Runoff Management Plan as discussed in section D.4 of Order No. R9-2007-0001.	7.5, Attachments 7.1 and 7.2
d. The Copermittees shall commence implementation of dry weather field screening and analytical monitoring under the requirements of this Order by May 1, 2008. Each Copermittee shall conduct dry weather analytical and field screening monitoring in accordance with its storm water conveyance system map and dry weather analytical and field screening monitoring procedures as described in section II.B.3 above. If monitoring indicates an illicit connection or illegal discharge, conduct the follow-up investigation and elimination activities as described in submitted dry weather field screening and analytical monitoring procedures and sections D.4.d and D.4.e of Order No. R9-2007-0001. Until the dry weather field screening and analytical monitoring program is implemented under the requirements of this Order, each Copermittee shall continue to implement dry weather field screening and analytical monitoring as it was most recently implemented pursuant to Order No. 2001-01.	7.4, 7.5, Attachments 7.1 and 7.2

Re: 2007 Dry Weather Field Screening and Analytical Monitoring Program City of La Mesa, California

Dear Mr. Hashemian:

Enclosed please find the final report for the City of La Mesa 2007 Dry Weather Field Screening and Analytical Monitoring Program. This report presents the results of the monitoring program conducted in the City of La Mesa during the 2007 dry weather season. The contents include field screening data and analytical laboratory test results, analysis of the collected data, and photographs of the sampling locations. The report also presents the results of follow-up investigations conducted to identify the sources of pollutants detected during the field screening program and our recommendations for additional actions. Your reviewed comments have been incorporated in this final report.

It has been a pleasure working with the City of La Mesa on this project. If you have any questions regarding this report, please call me at (858) 586-6600 ext. 22.

Sincerely,
D-MAX Engineering Inc.

Arsalan Dadkhah, Ph.D., P.E.
Project Manager

1 INTRODUCTION

1.1 Regulatory Requirements

San Diego Regional Water Quality Control Board (RWQCB) Order No. R9-2007-0001 (the recently adopted Municipal Permit) requires that the Dry Weather Field Screening and Analytical Monitoring Program (Dry Weather Monitoring Program) in 2007 be conducted in accordance with RWQCB Order 2001-01 (the previous Municipal Permit) requirement. Under Order No. 2001-01, each of the Copermittees, including the City of La Mesa, must annually conduct dry weather field screening of discharges into its storm drain system. This procedure consists of recording field observations, estimating observed flow rates, and conducting field testing at selected locations along the storm drain conveyance system during the dry weather season (May 1st through September 30th). The Permit also requires Copermittees to conduct laboratory analysis for at least 25 percent of the visited sites that have flowing or ponded water. At each sampling location that exhibits no flowing or ponded water, an alternate sampling station must be selected and sampled. If the results of the field or laboratory analyses exceed specific action levels, follow-up investigations are required. The results from the current year's Dry Weather Field Screening and Analytical Monitoring Program, including both field screening and analytical monitoring, are presented herein.

1.2 Hydrologic Setting

The City of La Mesa encompasses an area of nine square miles just east of the City of San Diego. The primary land use in La Mesa is residential with 55,000 residents. Other land uses in La Mesa include roads and streets, commercial, mixed use, schools, and industrial. An estimated 52 percent of La Mesa falls within the San Diego River Watershed, Hydrologic Unit (HU) 907, while the remaining 48 percent is located in the San Diego Bay Watershed. In both the San Diego Bay and the San Diego River watersheds, the City of La Mesa makes up about one percent of the overall land area of the watershed respectively. Runoff generated in the City is conveyed through five drainage basins. The boundaries of these drainage basins are illustrated in Figure 1. Table 1-1 lists the drainage basins along with the approximate percentage of drainage area in La Mesa, the corresponding hydrologic unit of the basin, and the receiving water body to which each basin drains.

TABLE 1-1
CITY OF LA MESA DRAINAGE BASINS

Drainage Basin	Percentage of City Area	Hydrologic Unit	Receiving Water Body	Watershed
Alvarado	51	907	San Diego River	San Diego River
University	28	908	Chollas Creek	San Diego Bay
Spring Valley	14	909	Sweetwater River	San Diego Bay
Lemon Grove	6	908	Chollas Creek	San Diego Bay
Lake Murray	1	907	San Diego River	San Diego River

The San Diego Bay Watershed is comprised of three hydrologic units: Pueblo San Diego (HU 908), Sweetwater (HU 909), and Otay (HU 910). Each hydrologic unit is essentially a separate watershed, but these three watersheds all drain to San Diego Bay. For regulatory purposes, they have been combined into one watershed management area, referred to as the San Diego Bay Watershed. The City of La Mesa includes areas within two of those hydrologic units, the

Pueblo San Diego Watershed and the Sweetwater Watershed. Runoff from the Spring Valley Basin eventually enters the Sweetwater River, which terminates in San Diego Bay. Runoff collected in the University and Lemon Grove basins drains to Chollas Creek, which also flows into San Diego Bay.

The San Diego River Watershed is the second largest hydrologic unit in San Diego County. It also has the highest population (~475,000) of the County's watersheds. In addition to runoff from La Mesa, the San Diego River carries water from other large portions of the cities of San Diego, El Cajon, Poway, and Santee and several unincorporated jurisdictions. The mouth of the river eventually discharges into the Pacific Ocean, south of Mission Bay. Runoff collected in the Lake Murray Basin eventually enters the Alvarado Drainage Basin, which drains to the San Diego River.

1.3 Constituents of Concern

Based primarily on wet weather monitoring data from mass loading stations (MLS) located on Chollas Creek, bioassessments, the 2005-2006 San Diego Bay Watershed Urban Runoff Management Program (WURMP) Annual Report, and the Clean Water Act Section 303(d) List of Water Quality Limited Segments (303(d) List), the constituents that have been established as targeted pollutants in the Pueblo San Diego Watershed are diazinon, copper, zinc, bacterial indicators, trash, and turbidity. Total Maximum Daily Load (TMDL) regulations have continued for diazinon and for dissolved metals. Monitoring in recent years, however, indicates that the recent ban on diazinon use has essentially eliminated diazinon as a pollutant of concern. The Sweetwater Watershed, which is significantly less urbanized than the Pueblo San Diego watershed, does not have any 303(d) Listings. Turbidity and bacteria were identified as constituents of concern in the WURMP Annual Report for the Sweetwater watershed.

In the San Diego River Watershed, constituent data have been collected annually. The 2005-2006 San Diego River WURMP Annual Report lists bacterial indicators, copper and zinc as high priority Constituents of Concern (COC). The WURMP Annual Report also notes that diazinon, turbidity, and trash are non-high priority COCs.

1.4 Program Overview

The Municipal Permit adopted by the San Diego RWQCB requires all Copermittees, including the City of La Mesa, to conduct field screening and analytical monitoring at different sampling locations throughout the City during the dry weather season (May 1st through September 30th). The purpose of the Dry Weather Monitoring Program is to detect and eliminate illicit connections and illicit discharges (IC/ID) to the storm drain system, minimizing the negative impacts of human activities on receiving water bodies. The Dry Weather Monitoring Program consists of the following three components:

- Field screening observations
- Field screening analytical monitoring
- Laboratory analytical monitoring

Information collected from the Dry Weather Monitoring Program is also used to characterize dry weather discharges in the storm drain system and identify conveyances that are discharging elevated levels of pollutants. Follow-up studies and source investigations are conducted as necessary to detect and eliminate the sources of these pollutants. This report presents the results of the City of La Mesa 2007 Dry Weather Monitoring Program conducted by D-MAX Engineering, Inc. (D-MAX).

1.5 Previous Work

The City of La Mesa has conducted an annual Dry Weather Monitoring Program since 1993. A summary of the screening results obtained for each year (1993 through 2006) is discussed below and presented in Table 1-2. Before 2002, laboratory analyses were not required. Laboratory testing was added to the program in 2002 as required by the current Municipal Permit. The same laboratory and field tests used in 2007 were also used from 2002 through 2006. Graphical representations of the data for both the San Diego River and San Diego Bay watersheds have also been prepared and are included as Attachments 1 and 2, respectively. The graphs display the results of both field and laboratory analyses for the 2002 through 2007 Dry Weather Monitoring Programs. Where applicable, averages for each constituent have been calculated, and error bars displaying average plus and minus one standard deviation have also been included on the graphs. Trend lines have been prepared for constituents where multiple values above the method reporting limit were recorded. The equations and R^2 values for the lines have been indicated on the graphs. Note that an R^2 value of 0.0 indicates a very poor fit and 1.0 indicates a perfect fit. Since the trend lines have been based on only five years of data, conclusions regarding pollution trends cannot be drawn with a large degree of certainty.

In 1993, all 15 of the visited sites showed concentrations of ammonia at or above 1.0 milligrams per liter (mg/L) NH_3-N. Of these sites, 13 showed concentrations of copper at or above 1.0 mg/L, and six had concentrations of surfactants greater than 1.0 mg/L. Concentrations of chlorine and phenols greater than 1.0 mg/L were recorded at three and five sites, respectively.

In 1994, 11 of the 16 visited sites had ponded or flowing water. Ammonia was detected at 10 of these sites, with seven showing concentrations above 1.0 mg/L. Concentrations of surfactants ranging between 0.3 mg/L and 0.8 mg/L were detected at all 11 sites. Copper was detected at nine sites with concentrations ranging from the detection limit to 3.0 mg/L, and concentrations of phenols ranged between 0.04 mg/L and 4.9 mg/L at eight of the sites. Chlorine was detected at all 11 sites, but no concentrations were above 1.0 mg/L.

In 1995, ammonia was detected at all 11 sites with ponded or flowing water, but only one site showed a concentration above 1.0 mg/L. Surfactants were also detected at all 11 sites, but only two concentrations were at or above 1.0 mg/L. Chlorine was detected at 10 sites but in very low concentrations (0.1 to 0.4 mg/L), and phenols were not detected at any sites.

In 1996, the Dry Weather Monitoring Program consisted of seven previously-screened sites along with eight new sites. Six sites showed concentrations of ammonia above 0.5 mg/L, with only two of those being at or above 1.0 mg/L. Five of these sites were located along Jackson Drive and Grossmont Shopping Center. Surfactant concentrations of 0.5 mg/L and greater were observed at seven sites, with one site showing a surfactant concentration of >3.0 mg/L. In general, the concentrations of phenols, copper, and chlorine were very low or below the reporting limits.

In 1997, the Dry Weather Monitoring Program consisted of six previously-screened sites and six new sites. Surfactants and ammonia were detected throughout the City. All ammonia concentrations were between 0.0 mg/L and 1.0 mg/L except one, which exceeded 10 mg/L, and only one site showed a concentration of surfactants above 1.0 mg/L. Chlorine in low concentrations (< 0.5 mg/L) was also detected at the majority of the sites visited. Copper was detected at a concentration of 0.1 mg/L at three sites, and only one site showed a detectable phenol concentration of 0.3 mg/L. During visual observations, a strong odor was observed at most of the sites located within the Grossmont Shopping Center. This odor, along with the presence of high levels of ammonia and low levels of copper, prompted an investigation within

the Grossmont Center. The investigation found the primary source of the ammonia to be fertilizers used on the lawns and flowerbeds. Copper concentrations could be attributed to the chemicals used to control algae and to the pennies thrown into the fountains, where they remain until periodic cleaning of the pools.

In 1998, the City conducted one round of dry weather field screening at 14 sites. Ammonia was detected at all 11 sites with ponded or flowing water, and concentrations ranged from below the field test detection limit to 9.5 mg/L. Surfactant concentrations ranging from 0.25 to 0.75 mg/L were also detected at 11 sites. Copper was detected at only one site inside Grossmont Shopping Center. Chlorine concentrations at a low range of 0.1 to 0.2 mg/L were detected at five sites. Phenols were not detected at any of the sites visited.

In 1999, the City conducted two rounds of field screening at 14 sites. In round one, the ammonia levels ranged from 0.2 to 7.0 mg/L. Surfactant concentrations were in the 0.25 to 0.75 mg/L range for this round and were detected at all visited sites with ponded or flowing water. Phenols and copper were detected at five and nine sites, respectively, at concentrations of 0.1-0.2 mg/L. Chlorine concentrations were detected at a maximum of 0.3 mg/L and a minimum that was below the detection limit.

In round two of the 1999 sampling, ammonia concentrations generally ranged from 0.2 to 4.0 mg/L, although one site was found to have a concentration of 30 mg/L. An upstream investigation revealed that a sewer overflow was the cause of this elevated value, and later sampling showed that the concentration had dropped to 1.0 mg/L. This site also had the highest recorded surfactant concentration, >3.0 mg/L, which later fell to 0.25 mg/L. Surfactant concentrations between 0.25 and 2.0 mg/L were detected at all other tested sites. Phenols, copper, and chlorine all had minimum values below the detection limit. The maximum value measured for phenols was 0.1 mg/L. The maximum copper concentration value was 0.6 mg/L, and the maximum chlorine concentration was 0.5 mg/L.

In 2000, the City performed two rounds of the field screening program at 15 sites. In round one, ammonia concentrations ranged between 0.2 and 2.0 mg/L, surfactant concentrations ranged from 0.25 to 2.5 mg/L, and chlorine ranged from a value below the detection limit to 0.4 mg/L. Copper and phenol levels were only detected at two sites each; the copper concentration peaked at 0.7 mg/L, and the phenol concentration peaked at 0.2 mg/L.

During round two, ammonia concentrations ranged from 0.1 to 5.0 mg/L, surfactant concentrations ranged from 0.25 to 0.75 mg/L, and chlorine ranged from a value below the detection limit to 0.6 mg/L. As found in round one, copper and phenols concentrations were typically undetectable, but several sites showed traces of these constituents. The copper concentration reached a maximum of 0.4 mg/L, and the phenol concentration reached a maximum of 0.1 mg/L.

In 2001, two rounds of field screening were performed throughout the City, at 15 and 16 sites, respectively. Surfactant concentrations ranged from 0.25 to 0.75 mg/L. Ammonia concentrations ranged from 0.1 to 8.0 mg/L. Only one site showed a detectable concentration of copper (0.2 mg/L), and a chlorine concentration of 0.1 mg/L was also only detected at one site. Phenols were detected only during the second visit to Site 35, where field analysis resulted in a concentration of 0.1 mg/L.

During round two, surfactant concentrations ranged from 0.25 to 1.5 mg/L. Ammonia was detected between 0.1 and 5.0 mg/L. Chlorine concentrations ranged from a value below the detection limit to 0.4 mg/L. Copper was not detected during this round of sampling. Phenols were only detected during the second visit to Site 13C, at a concentration of 1.0 mg/L.

In 2002, the City conducted one round of field screening at a total of 19 sites. As one of the stations was observed dry, an alternate site (Site 14) was selected for monitoring with this site having measurable flow. Ammonia concentrations of 1.0 mg/L or higher were found at five of the sites, with the highest concentration reaching 8.0 mg/L at Site 4A. The ammonia concentration at Site 4A dropped to 0.4 upon a follow-up visit. Nitrate concentrations at all the sites were found below 5.0 mg/L NO_3-N, with two sites having concentrations below the detection limit. Orthophosphate-P concentrations generally were measured below 1.0 mg/L PO_4-P, but Site 40 had an orthophosphate-P concentration reaching 7.83 mg/L. Upon a return visit to Site 40, the orthophosphate-P concentration had dropped to 0.82 mg/L. Surfactant concentrations exceeded 1.0 mg/L at three of the sites. The maximum surfactant concentration was recorded greater than 24 mg/L at Site 40, but dropped to 0.75 mg/L on a return visit. Laboratory analysis for surfactants detected contamination at one site (Site 4A) with a concentration of 4.8 mg/L. Oil and grease were detected at three of the sites, with the maximum concentration reaching 8.0 mg/L. Laboratory results for dissolved metals and pesticides found all concentrations below the method detection limit.

In 2003, the City conducted one round of field screening at a total of 18 sites. Alternate Site 14 was substituted for primary Site 61, which was dry. 16 sites had measurable flowing water; the flow rate ranged from 1.0 gallons per minute (gpm) to 118.5 gpm. Two of the sites had ponded water. An ammonia concentration of 1.0 mg/L or higher was found at three sites. There were no sites with nitrate concentrations at or above the action level of 10 mg/L. An orthophosphate-P concentration exceeding the action level of 2.0 mg/L was found at one site, while the rest of the sites had detectable orthophosphate-P concentrations at low levels. A surfactant concentration of 1.0 mg/L was measured at one of the sites. Laboratory analyses were conducted at five sites and indicated bacterial contamination at three sites. The organophosphate pesticide diazinon was detected at one of the sites but was below the action level of 0.5 micrograms per liter (µg/L). Chlorpyrifos was not detected at any of the sites. Surfactants were detected at one site, but the concentration was below the action level of 1.0 mg/L. None of the laboratory samples had detectable amounts of dissolved metals, oil, or grease.

In 2004, the City conducted one round of field screening at the 18 primary monitoring stations, all of which had ponded or flowing water. Ammonia was detected above the action level at two sites, which were found to have the common upstream source of an illicit sewage connection. No sites were found to have orthophosphate-P or surfactant concentrations above the respective action levels. Laboratory analyses were again conducted for five sites and, as in 2003, three sites were found to have bacterial indicators in excess of established action levels. No other constituents assessed by laboratory analysis were found to be in excess of established action levels.

In 2005, the City again conducted one round of field screening at all 18 primary monitoring stations. All of the visited sites had either flowing or ponded water. Surfactants were detected above the action level at one site during the first visit, but had fallen below the action level by the time of a follow-up visit the next day. Ammonia action level exceedances were detected at two sites. For one site, the ammonia level dropped below the action level by the following day. For the other site, located in Grossmont Shopping Center, the ammonia concentration had dropped significantly by the time of a follow-up visit but remained above the action level. Three of the five sites receiving laboratory analysis had bacterial indicators exceeding action levels; no other constituents tested for in the lab were above set action levels.

In 2006, the City conducted one round of field screening at all 18 primary monitoring stations. All of the visited sites had either flowing or ponded water. Surfactants were detected above the action level at one site during the first visit, but had fallen below the action level by the time

of a follow-up visit the next day. Ammonia action level exceedances were detected at three, although the concentrations at all three sites fell below the action level by the time of the follow-up visits. Two of these sites had had elevated ammonia concentrations in previous years. As in previous years, there were no sites with nitrate concentrations at or above the action level. Furthermore, there were no sites that exceeded the action level for orthophosphate-P concentrations. Four of the five sites receiving laboratory analysis had bacterial indicators exceeding action levels. No other constituents tested in the lab were above set action levels.

1.6 Report Outline

Section 1, Introduction, includes regulatory background, the City of La Mesa hydrologic setting, previous monitoring results, and a report outline.

Section 2, Sampling Locations, describes the field screening sampling locations and the criteria used to select sampling locations.

Section 3, Field and Laboratory Analytical Methods, includes field screening and laboratory analytical procedures, quality assurance protocols, and follow-up action levels.

Section 4, Field Screening Results, presents qualitative observations of the sampling locations and results of the field screening analyses.

Section 5, Laboratory Analytical Results, presents results of the laboratory analyses.

Section 6, Data Analysis, provides an analysis and description of each site with evidence of physical, chemical or biological pollution.

Section 7, Upstream Investigations, includes follow-up investigations of sites with recurring evidence of physical, chemical or biological pollution.

Section 8, Summary and Recommendations, provides a summary of the program results and recommendations for follow-up actions.

Appendix A Photographs of the investigated sites

Appendix B Laboratory analytical reports

Appendix C Copies of the original field data sheets

2 SAMPLING LOCATIONS

The City of La Mesa prepared a Jurisdictional Urban Runoff Management Program (JURMP) in 2002. Table 8-1 in Section 8 of the JURMP identifies 18 primary monitoring stations where data will be collected during the Dry Weather Monitoring Program. Table 8-2 of the JURMP lists nine alternate stations to be monitored if any of the primary stations do not have flowing or ponded water. Sampling sites are located in hydrologic unit (HU) 907, HU 908, and HU 909.

During the 2007 Dry Weather Monitoring Program, all 18 primary sampling locations were visited, and 17 of them had flowing or ponded water. Site 61 at Center Drive, Commercial Street, west of Industrial Lane, in front of City Public Work was dry, and thus Site 60 at Jackson Drive, north of Fletcher Parkway, across from Mesa Ridge Apartments was selected as an alternate location for monitoring.

Table 2-1 provides the site number, location, conveyance configuration, primary and secondary land uses, hydrologic unit, and Global Positioning System (GPS) coordinates of the sampling locations that were visited. Figure 1 displays the sampling locations on a map of the City that also shows storm drain lines, roads, and drainage basin boundaries. Photographs of all the sampling locations are included as Appendix A. Laboratory analytical reports are included in Appendix B, and Appendix C contains the field data sheets for each site visit. A map of the watersheds in and around the City of La Mesa is included as Figure 2.

TABLE 2-1
2007 DRY WEATHER MONITORING STATIONS

Site ID	Location	Conveyance	Primary Land Use	Secondary Land Use	Hydrologic Unit	Latitude	Longitude

61	Center Drive, Commercial Street, west of Industrial Lane in front of City Public Works	Catch Basin	Commercial	Industrial	907	32.77259	-117.02238
64	North side of Seton Hall Street, between Swarthmore Street and Wheaton Street	Concrete Channel	Residential	Residential	907	32.77651	-117.03462

Note
* Alternate Site 60 was substituted for dry primary monitoring Site 61.

3 FIELD AND LABORATORY ANALYTICAL METHODS

3.1 Field Screening Procedures and Methods

Field screening techniques consisted of qualitative field observations, flow measurement, and field analyses of selected water quality parameters. Information relating to weather conditions, the amount of time since last rainfall, and the type of storm water conveyance was recorded. Specific observations and results of the field water quality analyses were recorded on the field data sheets, which are included as Appendix C. The data sheets also serve as a record of the field visit and were completed for every site visit regardless of whether or not samples were collected.

Field screening and analyses were conducted according to the following procedures and methods:

Qualitative Observations

Qualitative field observations were made during each site visit whether or not ponded or flowing water was observed. These observations are intended to provide a general assessment of the site and include variables like odor, water clarity, the presence of floatables, visible deposits, stains and biological status. Evidence of present or past illicit connections and illegal discharges to the storm drain system may be ascertained by careful field observations. Each field screening location was photographed to provide additional information and documentation of site conditions. Photos are included in Appendix A.

Flow Measurement

Flow measurements can be used to estimate pollutant mass loading, prioritize storm drains for future investigation, and identify significant changes in discharge that may be indicative of an illegal release upstream. Various field methods can be used to estimate the discharge rate. These include measuring the velocity, depth, and width of the flowing water, or recording the amount of time required to fill a bottle of known volume with sample water.

Field Water Quality Analyses

At each site with ponded or flowing water, water samples were collected and analyzed in the field for the following constituents:

- Specific Conductance
- Temperature
- pH
- Turbidity
- Surfactants, measured as methylene blue active substances (MBAS)*
- Nitrate-N
- Ammonia-N
- Orthophosphate Phosphorus (Orthophosphorus- P)

* Surfactants are also referred to as detergents, specifically with respect to discussion of field test kit results. Due to the importance of surfactants, the City conducted analyses for this parameter in both the field and laboratory.

The methods that were used to perform the above field analyses along with the detection limit, range, and accuracy, are listed in Table 3-1.

TABLE 3-1
FIELD ANALYTICAL METHODS

Parameter	Method	Reporting Limit	Range	Accuracy
Specific Conductance	Hanna Instruments HI 991301 Portable pH/EC/TDS/Temperature Meter***	0.01 mS/cm	0 – 20 mS/cm	± 2% of functional sensitivity[1]

Notes:

[1] Functional sensitivity (FS) represents the lowest limit at which quantitative information is reliable. FS is estimated as the mean concentration for a spiked sample whose coefficient of variance (CV) is 20%. CV is the standard deviation divided by the mean.

[2] ± 0.13 for the range of 0.0 to 1.0 mg/L, ± 0.25 mg/L for the range of 1.0 to 2.0 mg/L and 0.5 mg/L for the range of 2.0 to 3.0 mg/L.

[3] This method determines the concentration of nitrate in mg/L NO_3. To determine the amount of nitrate-nitrogen, the concentration of nitrogen must be adjusted for the presence of oxygen in the NO_3 molecule. Therefore, the result is multiplied by a conversion factor of 0.226, the ratio of the molecular weight of N (14g/mol) to NO_3 (62 g/mol). The detection limit for nitrate is 10.0 mg/L; however, the detection limit for nitrate-nitrogen is lowered due to the conversion.

[4] Practical Detection Limit (PDL) is defined as the lower limit of the stated test range.

[5] Percent error adjusts as follows: ±30% at PDL, ±20% for 25% of full range, ±10% for 75% of full range, ±10% for 120% of full range.

[6] This method determines the concentration of orthophosphate in mg/L PO_4. To determine the amount of orthophosphate-P, the concentration of phosphate must be adjusted for the presence of oxygen in the PO_4 molecule. Oxygen is 67.4% of phosphate by mass but is not a plant nutrient in this form. Therefore, the result is multiplied by a conversion factor of 0.326, the ratio of the molecular weight of P (31g/mol) to PO_4 (95 g/mol). The detection limit for orthophosphate is 0.75 mg/L; however, the detection limit for orthophosphate phosphorus is lowered due to the conversion.

*Extended ranges in chemical analyses can be achieved through dilutions. Accuracies decrease proportionally with further dilutions.

** Readings below the PDL have increased percent error; measurements are reported, but are flagged as being below the PDL.

***Reporting limit, range, and accuracy information taken from Hanna Instruments and CHEMetrics manuals, available online at www.hannainst.com and www.chemetrics.com.

3.2 Laboratory Analytical Methods

In accordance with Order 2001-01 requirements, water samples were collected at five sites (greater than 25 percent of the sites) where ponded or flowing water was observed. Samples were submitted to EnviroMatrix Analytical, Inc., a California Department of Health Services certified laboratory, for analysis of the following constituents:

- Total hardness
- Surfactants, measured as MBAS
- Oil and grease
- Diazinon
- Chlorpyrifos
- Cadmium (Dissolved)
- Copper (Dissolved)
- Lead (Dissolved)
- Zinc (Dissolved)
- Total Coliform bacteria
- Fecal Coliform bacteria
- *Enterococcus*

The methods used to perform each of the above analyses along with method reporting limits and holding times are listed in Table 3-2.

TABLE 3-2
LABORATORY ANALYTICAL METHODS

Analyte	Analytical Method	Method Detection Limit	Maximum Holding Time**
Surfactants, measured as MBAS	SM 5540 C	0.5 mg/L	48 hours
Oil and Grease	USEPA 1664	5 mg/L	28 days
Total Hardness	USEPA 200.7	10 mg/L	14 days
Cadmium	USEPA 6010, 6020, 200.8	0.005 mg/L	6 months
Copper	USEPA 6010, 6020, 200.8	0.005 mg/L	6 months
Lead	USEPA 6010, 6020, 200.8	0.005 mg/L	6 months
Zinc	USEPA 6010, 6020, 200.8	0.020 mg/L	6 months
Diazinon	USEPA 8141A	0.05 µg/L	7 days
Chlorpyrifos	USEPA 8141A	0.05 µg/L	7 days
Total Coliforms	SM 9221	20* – 1,600,000 MPN/100 mL	6 hours
Fecal Coliforms	SM 9221	20* – 160,000 MPN/100 mL	6 hours
Enterococci	SM 9230	20* – 160,000 MPN/100 mL	6 hours

Notes:

*For D-Max's Dry Weather Monitoring Program, EnviroMatrix Analytical, Inc. (EMA) performs standard dilutions for total coliforms to quantify from 20-1,600,000 most probable number per 100 milliliters (MPN/100mL). For fecal coliforms and enterococci, EMA performs standard dilutions to quantify from 20-160,000 MPN/100 mL. During the analysis and interpretation of the results, the number of tubes used to quantify the sample must fit the MPN index table from Standard Method 9221. The dilution set used will determine the detection limit. A standard dilution analysis is set up with 15 tubes at different concentrations. The reporting limit will always be adjusted depending on the dilution factor used for quantifying the actual results based on the MPN table. If the result for the analysis was less than 16,000 MPN/100 mL, the reporting limit will always be 20, and the dilution factor will be 10. As the dilution factor goes up, the reporting limit listed in the results from EMA will also go up based on the calculation made with EMA's data system. However, the lowest quantifiable number or reporting limit would still be 20 based on how the standard tubes for the sample is set up.

**Maximum Holding Time values listed here apply to samples collected and preserved in accordance with the QA/QC procedures listed in Section 3.3.2.

3.3 Quality Assurance and Quality Control (QA/QC)

The QA/QC Plan utilized for this project included the United States Environmental Protection Agency (USEPA) approved test methods for the field and laboratory analysis of water samples, calibration of test equipment, and pre- and post-rinsing of sample collection containers and test vials. Key components of the QA/QC Plan are described below.

3.3.1 Field Sampling and Analysis QA/QC

The pH meters were calibrated periodically with sodium/potassium phosphate, monobasic buffer solutions with pH values equal to 4.00 ± 0.01, 7.00 ± 0.01, and 10.00 ± 0.01 units. The glass electrode tube was kept moist to preserve the meter's accuracy during fieldwork. The turbidity meter was calibrated and periodically checked for accuracy using standard solutions. The conductivity meter was checked periodically with standard solutions and calibrated as necessary.

Field sample collection containers were first rinsed with distilled water and then with the sample water before sample collection. Upon completion of sampling at each site, sample collection containers, test vials, and ion-sensitive electrodes were rinsed twice with distilled water.

The accuracy of field analytical techniques was assessed at the beginning of the sampling program by analyzing solutions of known concentrations for ammonia, surfactants, nitrate, and orthophosphate. The results of the assessment are shown in Table 3-3.

TABLE 3-3
FIELD ANALYSIS QA/QC RESULTS

Date	Analyte	Known Concentration	Field Test Kit Results
6/12/07	Ammonia Nitrogen	1.0 mg/L	1.0 mg/L
6/12/07	Surfactants	1.0 mg/L	1.0 mg/L
6/12/07	Nitrate Nitrogen	10.0 mg/L	10.0 mg/L
6/12/07	Orthophosphate	3.0 mg/L	3.0 mg/L

3.3.2 Laboratory Sampling and Analysis QA/QC

Samples for laboratory analysis were collected concurrently with field samples and utilized the same sampling procedures. Pre-sterilized sample bottles were obtained from the laboratory and thus did not require rinsing with sample water prior to sample collection. After sample collection, all laboratory samples were kept in a cooler on ice until picked up by the lab. Strict chain of custody procedures were followed, and samples were delivered and analyzed within the appropriate holding times, as listed in Table 3-2. Completed chain of custody forms are included in Appendix B.

3.4 Follow-up Action Levels

Based on dry weather field screening results, immediate follow-up investigations are sometimes necessary to identify and eliminate pollutant sources. In order to determine whether an immediate source investigation was necessary, numeric action levels and best professional judgment (described below) were used to interpret the field screening results. If visual and/or analytical evidence of gross contamination was present at a site (e.g., substantial petroleum sheen, extremely high ammonia concentration, evidence of a sewage release, etc.), then an immediate source identification investigation was initiated. For sites that exceeded numeric action levels but were not perceived as an immediate threat to water quality, a re-sampling was conducted within 24 hours. A comprehensive source investigation was conducted thereafter if elevated concentrations persisted.

The results of these investigations are included in Section 7 of this report. Recommendations based on these investigations are included in Section 8.

If elevated levels of pollutants were detected after laboratory analyses, a comprehensive follow-up investigation including re-sampling was conducted. The following three methods were employed to determine whether immediate or comprehensive follow-up investigations were necessary: (1) Numeric Action Levels; (2) California Toxics Rule (CTR); and (3) Best Professional Judgment. All three approaches are described in detail below and presented in Table 3-4.

Numeric Action Levels

Numeric action levels were used as the primary approach for interpreting pH, orthophosphate, nitrate, ammonia, surfactants, oil and grease, diazinon, chlorpyrifos, total coliforms, fecal coliforms, and *Enterococcus* analytical results (Table 3-4). Prior to the 2003 dry weather season, no standard action levels had been adopted for use throughout San Diego County. D-MAX calculated the current set of numeric action levels, which are based on county-wide sampling data and have been used by all Copermittees since the 2003 dry weather season. If pH, orthophosphate-P, nitrate, ammonia, or surfactants were observed above the numeric action level, a follow-up investigation was conducted within 24 hours to investigate the source unless best professional judgment indicated otherwise. If oil and grease, diazinon, chlorpyrifos, total coliforms, fecal coliforms, or *Enterococcus* laboratory analytical results exceeded numeric action levels, then source investigations were conducted.

California Toxics Rule

The CTR criterion maximum concentration (CMC) was used to determine appropriate action levels for dissolved trace metals, including cadmium, copper, lead, and zinc. The CTR equations, as provided in USEPA Federal Register Doc. 40 Code of Federal Regulations (CFR) Part 131, are used to calculate benchmarks based on the total hardness of the sampled water, with the action levels increasing as hardness increases.

Best Professional Judgment

Best professional judgment was utilized as the primary approach for interpreting turbidity, conductivity, and water temperature. Best professional judgment was also the secondary approach for interpreting the results of all other field and laboratory analyses. Under best professional judgment, the need for a follow-up investigation is left to the discretion of the D-MAX field crew due to their familiarity with the City of La Mesa Dry Weather Monitoring Program and their knowledge of typical levels for the tested parameters. Best professional judgment may indicate that results which either exceed certain action levels or are statistical outliers may be the result of natural or background factors.

TABLE 3-4
ACTION LEVELS FOR FIELD SCREENING AND LABORATORY PARAMETERS

Field Screening Analytes	Action Levels[1]	Source/ Notes
pH	<6.5 or >9.0	Basin Plan[2], with allowance for elevated pH due to excessive photosynthesis. Elevated pH is especially problematic in combination with high ammonia.
Orthophosphate-P (mg/L)	2.0	USEPA Multi-sector General Permit
Nitrate-N (mg/L)	10.0	Basin Plan and drinking water standards
Ammonia-N (mg/L)	1.0	Based on Workgroup experience. May also consider unionized ammonia fraction.
Turbidity (NTU)[2]	Best Professional Judgment	WQOs relevant to inland surface waters are not available. Base judgment on channel type and bottom, time since last rain, background levels, and most importantly visual observation (e.g. unusual colors and lack of clarity) and unusual odors.
Temperature (°C)	Best Professional Judgment	Base judgment on season, air temperature, channel type, shading, etc.
Conductivity (mS/cm)	Best Professional Judgment	Conductivity may be highly elevated in some regions due to high TDS, groundwater exfiltration to surface water, mineral dissolution, drought, and seawater intrusion. Normal source ID and discharge elimination work is not effective in these situations. Knowledge of area background conditions is important. Values <0.75 may indicate excessive potable water discharge or flushing.
Laboratory Analytes	**Action Levels**	**Source/ Notes**
Surfactants (mg/L MBAS)	1.0	Basin Plan, with allowance based on Workgroup field experience and possible field reagent interferences.
Oil and Grease (mg/L)	15	USEPA Multi-sector General Permit. If petroleum sheen is observed, the sample should be collected from the water surface. Visual observations may justify immediate investigation.
Diazinon (µg/L)	0.5	Response to diazinon and chlorpyrifos levels above 0.5 µg/L should focus on education and outreach to potential dischargers in the target drainage basin. Highly elevated levels should be investigated aggressively as with other potential IC/IDs.
Chlorpyrifos (µg/L)	0.5	
Dissolved Cadmium (µg/L)	California Toxics Rule	Use California Toxics Rule, 1-hour criteria to determine appropriate action level for individual samples. Table provides benchmarks based on hardness and dissolved metals concentration. For example, at 300 mg/L hardness the following action levels would apply: Cd – 14 ppb; Cu – 38 ppb; Pb – 209 ppb; and Zn – 297 ppb.
Dissolved Copper (µg/L)	California Toxics Rule	
Dissolved Lead (µg/L)	California Toxics Rule	
Dissolved Zinc (µg/L)	California Toxics Rule	
Total Coliforms (MPN/100 mL)	50,000	Bacteria levels in many storm drains are likely to exceed public health guidance criteria. Use confidence interval test and best professional judgment to identify conveyances for source ID.
Fecal Coliforms (MPN/100 mL)	20,000	
Enterococci (MPN/100 mL)	10,000	

Notes

[1]The referenced action levels should not be the sole criteria for initiating a source identification investigation. Dry weather monitoring data should be interpreted using a variety of available information. Factors that should be considered include within-site and between-site sample variability.

[2]Basin Plan = Water Quality Control Plan for the San Diego Basin

WQO = Water Quality Objective

TDS = Total Dissolved Solids

ppb = parts per billion

4 FIELD SCREENING RESULTS

The Dry Weather Monitoring Program commenced on June 12, 2007 and was completed on June 14, 2007. A total of 19 monitoring stations were visited; however, field screening was only conducted at the 18 sites where ponded or flowing water was observed. Since primary sampling Site 61 was observed to be dry, alternate Site 60 was selected as a replacement. In addition, one follow-up visit was performed at a site where one constituent was found to exceed accepted action levels. Completed field data sheets for each site visit are included in Appendix C.

4.1 Qualitative Observations

Qualitative observations are a routine and important part of the Dry Weather Monitoring Program. Weather conditions were recorded at each site, and any evidence of dry weather flows was documented. Visual observations of the sample water, such as odor, color, clarity, floatable materials, vegetation, organisms, and the condition of the sampling location, were also recorded. Observations are summarized below and presented in Table 4-1.

Atmospheric Conditions
Sunny weather was the dominant light condition during field screening.

Odor
None of the visited sites had noticeable odors during field screening.

Color
Water samples collected from most of the sites were colorless, with the exception of five sites that had water with a yellowish hue.

Clarity
The majority of water samples collected from visited sites were clear with negligible suspended particles observed.

Floatable Materials
During routine field screening visits, 10 of the sites that had flowing or ponded water were observed to have small amounts of trash in or around the sampling location. The trash observed included materials such as paper, plastics, Styrofoam, aluminum cans, glass bottles, and shopping carts.

Vegetation
Vegetative growth ranged from no growth to naturally vegetated riparian areas. No growth was observed at 14 sites, which included concrete channels with no soil and manholes or catch basins that received limited sunlight. Five of the 19 visited sites had normal vegetation; that is, vegetation not considered significantly limited by man-made structures (e.g., a manhole which blocks sunlight and access to soil) nor so overgrown that it significantly impaired flow at the site.

Biology
Many of the sites exposed to sunlight had algal growth, which indicates that water flow is consistent at the site. Insects were observed at six sites.

Deposits
Sediment deposition was observed at all the sampling location sites except Site 12A.

TABLE 4-1
SUMMARY OF FIELD OBSERVATIONS

Site No.	Date	Time	Light Conditions	Odor	Color	Clarity	Floatables	Deposits	Vegetation	Biology
4A	6/13/07	9:20	Sunny	None	None	Clear	Trash	Coarse & Fine Particulates	None	Insects, Algae

ns = not sampled (dry site)

4.2 Field Analytical Results

Field analyses were conducted at all sites with ponded or flowing water. Chemical analyses were conducted using a CHEMetrics field test kits for surfactants and CHEMetrics V-2000 Multi-Analyte LED Photometer and Vacu-vials® for nitrate, ammonia, and ortho-phosphate; pH, specific conductance, and temperature were measured using a Hanna Instruments Portable pH/EC/TDS/Temperature Meter (HI 991301). Turbidity was measured using a Hanna Instruments Turbidity Meter (HI 93203-11). Flow was estimated either visually or, when possible, by measuring the velocity, depth, and width of the flowing water. A statistical summary of the routine field analytical results is presented in Table 4-2. Table 4-3 presents the results of all field analyses conducted at the sampled sites. Graphs of each parameter analyzed and appropriate action levels for follow-up investigations are included at the end of this section.

TABLE 4-2
FIELD ANALYSIS STATISTICAL SUMMARY

Parameter (units)	Maximum	Minimum	Average	Median
Flow Rate (gpm)	162	<1.0	14.5	4.0
Temperature (° Celsius)	26.4	20.0	23.0	22.8
pH	10.0	7.2	8.2	8.0
Conductivity (mS/cm)	5.3	1.08	2.0	2.19
Turbidity (NTU)	14.63	1.27	5.4	3.74
Ammonia (mg/L NH_3-N)	0.5	0.1	0.2	0.2
Surfactants (mg/L MBAS)	0.75	0.25	0.5	0.5
Nitrate (mg/L NO_3-N)	5.85	0.1	2.1	1.76
Orthophosphate-P (mg/L PO_4-P)	0.52	0.03	0.2	0.23

The **flow rates** at sites with measurable flow ranged from less than 1.0 gpm to 162 gpm, with an average of 14.5 gpm and a median of 4.0 gpm, as shown in Table 4-2. The highest flow rate of 162 gpm was measured at Site 4A.

Water temperature is an important physical parameter and can help interpret the significance of other parameters, such as pH and conductivity. Also, the aquatic habitat must remain within a certain temperature range in order to sustain sensitive aquatic life. Water temperature was measured in the field immediately upon sample collection at each site with ponded or flowing water. During routine visits, temperature readings ranged from 20.0 to 26.4 degrees Celsius (°C), with an average of 23.0°C and a median of 22.8°C. The minimum temperature of 20.0°C was recorded at Site 64 during the second visit to the site. The maximum temperature of 26.4°C was recorded at Site 59. Graph 4-1 presents the results of temperature readings at all sites.

The **pH** is a measure of whether a water body is acidic or basic. This is a critical factor in determining water quality, as the pH of an aquatic system will drive a multitude of chemical reactions, including the availability of nutrients or the solubility of chemical substances. The pH values ranged from 7.2 to 10.0, with an average of 8.2 and median of 8.0. The lowest pH reading of 7.2 was observed at Site 12, while the highest pH of 10.0 was recorded at Site 64. Graph 4-2 presents the results of pH readings at all sites.

Specific Conductance (Conductivity) values indicate the total concentration of ions in an aquatic system and the ability of the water to conduct electricity. This parameter can be used to assess the mineral content of water or potentially help indicate the presence of dissolved pollutants. Conductivity readings ranged from 1.08 to 5.30 millisiemens per centimeter (mS/cm) during routine field screening, with an average of 2.0 mS/cm and a median of 2.19 mS/cm. The lowest reading of 1.08 mS/cm was recorded at Site 64 during follow-up investigation, while the highest conductivity of 5.30 mS/cm measured during routine field screening at Site 50. Graph 4-3 illustrates the results of conductivity measurements at all sites.

Turbidity indicates the clarity or cloudiness of a water sample, or the degree to which light is blocked by suspended material in the water. Turbid waters not only limit the amount of light that reaches submerged vegetation (thus reducing photosynthetic capacity), but excessive suspended particles can also absorb heat and elevate water temperatures. Turbidity measurements ranged from 1.27 to 14.63 Nephelometric Turbidity Unit (NTU), with an average of 5.4 NTU and a median of 3.74 NTU. The lowest measurement of 1.27 NTU was documented at Site 14A. The highest turbidity reading of 14.63 NTU was recorded at Site 58. Graph 4-4 presents the results of turbidity measurements at all sites.

Ammonia is a common indicator of pollution from decomposing organic matter, agricultural or household fertilizer runoff, or the presence of sewage. Ammonia occurs naturally in the environment; however, in higher quantities it can become toxic to fish and other organisms. Ammonia concentrations measured in the water samples ranged from 0.1 to 0.5 mg/L NH_3-N, with an average of 0.2 mg/L and a median of 0.2 mg/L. The lowest ammonia concentration of 0.1 mg/L was found at sites 55 and 64, while the highest ammonia concentration of 0.5 mg/L was observed at Site 12. Graph 4-5 shows the results of the ammonia analyses at all sampling locations.

Nitrate is a common indicator of nutrient pollution from agricultural or household fertilizer runoff. Nitrate pollution can cause excessive algal growth, which will later cause the suffocation of fish and other aquatic organisms by depleting oxygen from the water during decomposition. During the field analysis, nitrate was measured in mg/L NO_3 and converted into mg/L nitrate-N using a conversion factor of 0.226. This process is explained above in footnote 4 of Table 3-1. Nitrate concentrations measured in the water samples ranged from 0.1 to 5.85 mg/L NO_3-N, with an average of 2.1 mg/L and a median of 1.76 mg/L. Nitrate was measured at the lowest detectable concentration, 0.10 mg/L, at sites 57 and 64. The highest nitrate concentration of 5.85 mg/L was observed at Site 50. Graph 4-6 presents the results of nitrate analyses at all sampling locations.

Orthophosphate Phosphorus (orthophosphate-P) is also a common indicator of nutrient pollution from agricultural or household fertilizer runoff. Similar to nitrate, orthophosphate-P pollution can cause nutrient enrichment (eutrophication), stimulate algal growth, and thus deplete oxygen in the water to levels that are dangerous for aquatic life. Even low levels of orthophosphate-P can cause significant algal growth, as it is commonly the limiting nutrient in plant growth. During the field analysis, orthophosphate was measured in mg/L PO_4 and

converted into mg/L orthophosphate-P using a conversion factor of 0.326 (See Note 6 to Table 3-1). Orthophosphate-P was found at concentrations ranging from 0.03 to 0.52 mg/L PO_4-P, with an average of 0.2 mg/L and a median of 0.23 mg/L. The lowest orthophosphate-P concentration of 0.03 mg/L was observed at sites 35 and 58. The highest concentration of 0.52 mg/L was found at Site 13B. Graph 4-7 illustrates the results of orthophosphate-P at all sampling locations.

Surfactant concentrations in water samples often indicate illegal discharge from industrial, commercial or residential sources. Pollution resulting from surfactants alters the surface tension of water and disrupts the breathing mechanisms of fish gills and other aquatic organisms. During field analysis, surfactant concentrations ranged from 0.25 mg/L to 0.75 mg/L, with an average of 0.5 mg/L and a median of 0.5 mg/L. The lowest concentration of 0.25 mg/L was found at four sites. The highest concentration of 0.75 mg/L was found at Site 13B. Graph 4-8 reflects the results of the surfactants analyses at all sampling locations.

TABLE 4-3
SUMMARY OF FIELD ANALYTICAL RESULTS

Site No.	Date	Time	Flow gpm	Temp. °C	pH	Turbidity NTU	Conductivity mS/cm	Surfactants MBAS mg/L	Ammonia NH_3-N mg/L	Nitrate NO_3-N mg/L	Orthophosphate-P PO_4-P mg/L

5 LABORATORY ANALYTICAL RESULTS

5.1 Summary

Laboratory analyses were conducted at five sites, representing over 25 percent of all sites with ponded or flowing water. A summary of the laboratory analytical results is presented in Table 5-1. Table 5-2 presents all of the results from the laboratory analyses. The laboratory reports are included in Appendix B.

TABLE 5-1
LABORATORY ANALYSIS STATISTICAL SUMMARY

Parameter (units)	Maximum	Minimum
Surfactants (mg/L MBAS)	nd	nd
Oil and grease (mg/L)	nd	nd
Total hardness (mg/L $CaCO_3$)	688	564
Cadmium (dissolved, mg/L)	nd	nd
Copper (dissolved, mg/L)	0.005	nd
Lead (dissolved, mg/L)	nd	nd
Zinc (dissolved, mg/L)	nd	nd
Diazinon (µg/L)	nd	nd
Chlorpyrifos (µg/L)	nd	nd
Total Coliforms (MPN/100 mL)	17,000	2,200
Fecal Coliforms (MPN/100 mL)	8,000	nd
Enterococcus (MPN/100 mL)	14,000	170

nd = not detected

Surfactants (MBAS) are analyzed to detect detergent pollution from residential, commercial or industrial washing activities. Surfactants were not detected at any sites during the 2007 Dry Weather Monitoring Program.

Oil and grease analysis is used to detect hydrocarbon pollution from a variety of sources including parking lots, washing activities, illegal discharges, and automobile repair facilities. Oil and grease were not detected at or above the reporting limit at any of the sampled sites.

Total hardness measures the amount of calcium and magnesium ions in a water sample, with results expressed in mg/L of $CaCO_3$. Although it is not itself considered a pollutant, total hardness is measured to calculate CTR limits for dissolved metals. Hardness affects the solubility of dissolved metals, as well as other minerals and ions. Total hardness values varied from 564 to 688 mg/L $CaCO_3$. The lowest value of 564 mg/L was observed at Site 39, while the highest total hardness value of 688 mg/L $CaCO_3$ was found at Site 12A.

Diazinon and **chlorpyrifos** are organophosphate pesticides that can be harmful to aquatic organisms if transported in urban runoff. Diazinon and chlorpyrifos are highly toxic to birds, mammals, and insects. They are also highly toxic to freshwater fish and invertebrates following acute exposure. Diazinon and Chlorpyrifos were not detected at any of the sampled sites during the 2007 Dry Weather Monitoring Program.

.

Metal concentrations in the environment can originate from a variety of sources including automobile operation, automobile repair facilities, car washing, galvanizing of metal, and electronics manufacturing. Certain dissolved metals are toxic pollutants that are hazardous to the survival and development of aquatic organisms, including fish and waterfowl. The laboratory samples collected during the 2007 Dry Weather Monitoring Program were analyzed for the presence of dissolved cadmium, copper, lead, and zinc. Cadmium, lead, and zinc were not detected at any site. Dissolved copper was detected at Site 4A with a concentration of 0.005 mg/L. According to the CTR (1-hour) for Dissolved Metals in Fresh Waters,[1] which defines metal toxicity as a function of water hardness, the action level for dissolved copper in water samples with hardness values of 631 mg/L $CaCO_3$ is 0.076 mg/L. Therefore, since measured copper concentration was significantly below the action levels corresponding to the measured hardness values, source investigations were not deemed necessary.

Coliform bacteria are relatively harmless to humans and are present in all mammalian digestive tracts. They are also present in soil and decomposing organic matter, so measurements of total coliforms are not typically considered to be very accurate indicators of fecal contamination. Water samples are analyzed for total coliform bacteria because it is a historically accepted public health practice and because the Municipal Permit requires it. During the 2007 Dry Weather Monitoring Program, total coliform counts ranged from 2,200 to 17,000 MPN/100 mL. The highest level, 17,000 MPN/100 mL was found at Site 4A, which is below the action level of 50,000 MPN/100 mL.

Fecal coliforms, a subset of coliform bacteria, and **enterococci** are found primarily in the gastro-intestinal tracts of humans and animals, so they are commonly used as indicators of water contamination by fecal matter. Without the use of significantly more expensive methods, such as ribotyping, it is not possible to determine whether the source of fecal material was human or animal. Human fecal material is known to contain pathogens dangerous to humans, but the relationship between animal waste and threat to human health is less certain. Fecal coliform counts were below the action level of 20,000 MPN/100 mL and ranged from a value below the detection limit to 8,000 MPN/100 mL. *Enterococcus* counts ranged from 170 to 14,000 MPN/100 mL. Site 39, was the only site with an *Enterococcus* count above the action level of 10,000 MPN/100 mL.

[1] For equations and constants used in CTR calculations, see http://www.USEPA.gov/ost/standards/ctr/toxic.pdf

Notes

Red Bold Type = Values that exceed action levels
nd = Not detected
nt = Not tested
CTR = California Toxics Rule (based on hardness)
*= Total hardness is not considered a pollutant (see Section 3.4 for details) and thus has no established action level for the purposes of dry weather monitoring. Total hardness is measured because the CTR action levels for metals are dependant on the total hardness value of the water sample. Total hardness measurements are thus required to calculate action levels for dissolved metals.

6 DATA ANALYSIS

When contaminant levels were detected above established action levels during field screening, upstream investigations were conducted to identify the source(s) of the contaminants. Since the laboratory requires several days to analyze samples, sites with contamination detected by laboratory analyses were investigated during a later round of visits. Based on the visual observations and the field and laboratory analytical testing that was conducted, the following sites demonstrated physical and chemical evidence of possible illegal discharges and/or illicit connections:

Site 39

Site 39 is located in a manhole junction box about 25 feet deep located in the Grossmont Shopping Center parking lot between Staples and Mattress Discounters. Approximately halfway down the walls of the manhole, lateral pipes carrying drainage from the immediate commercial area discharge into the manhole. The main pipe at the bottom of the manhole carries flow westward and eventually discharges to the Alvarado Channel. No constituents were above their respective action levels during field screening. Laboratory analysis of the water sample detected an *Enterococcus* count above the established action level of 10,000 MPN/100 mL. An upstream investigation was later conducted at this site to identify potential source(s) of this bacterial indicator (see Section 7).

Site 64

Site 64 is a concrete channel on the north side of Seton Hall Street, between Swarthmore Street and Wheaton Street (see Appendix A). The concrete channel had algal growth throughout its length. A pH level of 10.0 and a water temperature of 26.0° C were observed during the initial visit. The field crew returned the next morning to observe a pH level of 9.3, still above the action level of 9.0. An investigation upstream in the concrete channel found lower pH readings when samples were taken from water located in shaded areas where temperatures were decreased. Approximately 500 yards upstream from the sampling site, a pH reading was taken from an outlet that was the main source of the flow observed. The pH reading was 7.9 with a temperature of 17.0. The field crew believes that the high pH at the sampling site resulted primarily from algal photosynthesis and increased temperature, which removes carbon dioxide from the water. Because carbon dioxide forms carbonic acid when dissolved in water, removal of carbon dioxide from water makes the water more basic and results in higher pH readings. Typically the pH increases during daylight hours as sunlight stimulates algal photosynthesis and carbon dioxide is removed from water. During the night when algae is not photosynthesizing, the carbon dioxide level in the water increases due to biological respiration and physical diffusion of carbon dioxide from air into water, and the pH decreases. Because the solubility of gas in water is inversely proportional to the water temperature, carbon dioxide is less soluble in warmer water. Sunlight heats the shallow, unshaded water in the concrete channel, resulting in lower solubility for carbon dioxide later in the day when the water is warmer. The effects of temperature and algal photosynthesis lead to lower pH values in the morning and higher values in the afternoon. Since the majority of the concrete channel was not shaded, even in the earlier hours of the day, the pH reading continued to be elevated from increased summer temperatures.

7 UPSTREAM INVESTIGATIONS

7.1 Purpose

The purpose of the upstream investigations is to find the sources of the pollutants that exceeded action levels during initial field screening and laboratory testing.

Dry Weather Monitoring in 2007 revealed elevated levels of pollutants at only one site, as described in Section 6. In addition, Site 64 was investigated for pH levels above the action level and received a follow-up visit within 24 hours of the initial visit.

Five sites of the 18 were sampled for laboratory analysis during the initial round of field screening. Only one site had one analyte observed above established action levels. Site 39 showed *Enterococcus* above action levels. Upstream investigations were undertaken at this site to identify potential source(s) of the high bacteria count.

7.2 Investigation Procedures

7.2.1 General Procedures

Upstream investigations were conducted in two rounds. The first upstream investigations were for the sites at which field tests indicated elevated constituent levels. These investigations were conducted immediately after confirming the elevated concentrations via additional field testing. The second round of upstream investigations was carried out for the sites at which laboratory testing had found elevated constituent levels. These investigations were conducted after receiving the test results from the laboratory.

During the investigations, the D-MAX field crew measured flow rates, performed visual observations, and conducted field testing. Visual observations, such as water color, clarity, odor, floatable materials, vegetation and biology, and physical parameters, such as temperature, pH and conductivity, were recorded on field data sheets at each official sampling site. Field data sheets are included in Appendix C.

Field investigators began the source identification investigations by testing the water at the site itself; they then gradually worked upstream until potential pollutant sources could be identified. If follow-up field testing at a site resulted in constituent concentrations below specified action levels, it was concluded that the pollution found during the initial field screening and laboratory analysis was due to a transient flow.

7.2.2 Bacterial Investigation Procedures

In order to determine potential sources for sites with high bacteria, the D-MAX field crew used 3M Petrifilm *Escherichia coli* / Coliform Count plates as a rapid method to trace sources of both total coliform bacteria and *E. coli* bacteria in the storm water conveyance system. Because laboratory microbiological analyses take a significant amount of time, relying primarily on laboratory analyses can significantly delay an upstream investigation for bacteria. Also, due to the cost of these tests, often only a few locations can be examined, giving a less comprehensive picture. The Petrifilm plates allowed the field crew to quickly sample numerous branches or locations upstream of the sites.

Samples were taken in the field and preserved with Butterfield's phosphate buffer to keep the pH close to 7. Sample containers were kept on ice in a cooler and then plated within 6 hours of collection to ensure proper holding times were observed. The plates were then incubated at

35℃ ± 1℃. After 24 hours of incubation, total coliform bacterial concentrations were enumerated and, after an additional 24 hours (48 hours incubation total), *E. coli* levels could be read from the same plates, helping investigators identify potential bacterial sources over a large area in a timely manner.

This method is an improvement over the technique used in the past because it tests for *E. coli* bacteria. *E. coli* bacteria are a subset of fecal coliform bacteria and are better indicators of fecal contamination than total coliforms. Additionally, since total coliforms and *E. coli* are enumerated on the same plate, a rough ratio of *E. coli* (more likely to be from fecal sources) to total coliforms can be ascertained. While not unequivocally conclusive, this information allows for a better determination as to whether observed high bacteria levels likely come from fecal or non-fecal sources. Note that although *E. coli* are a major subset of fecal coliform bacteria, they are not enumerated for upstream analyses as an equivalent replacement for laboratory fecal coliform testing.

It should be noted that although laboratory analyses are done for total coliforms, fecal coliforms, and *enterococcus*, field bacteria analyses using Petrifilm plates are used to test only for total coliform bacteria and *E. coli*. As noted in Section 4, total coliform bacteria are generally harmless to humans but are a commonly-used indicator of harmful, pathogenic organisms, especially those found in fecal matter. Because the total coliform group of bacteria includes many species of bacteria of non-fecal origin, it is not as precise an indicator of fecal contamination as fecal coliforms or enterococci. A high total coliform count does not necessarily indicate fecal contamination of water, as total coliforms can also be found in soil, grain, and water, especially stagnant water. Therefore, a water sample with a high level of total coliform bacteria does not necessarily have a correspondingly high level of pathogens.

Fecal coliforms and enterococci are found mainly (but not solely) in the digestive tracts of humans and warm-blooded animals. With a few notable exceptions, fecal coliforms and enterococci are not hazardous to humans, but their presence is usually a good indication of the presence of animal or human waste. Fecal contamination from animal sources may be less hazardous to humans than fecal contamination from human sources; however, standard tests for fecal coliform and *Enterococcus* cannot reliably distinguish between human and animal sources.

Field bacteria tests using Petrifilm plates use Colony Forming Units per milliliter (CFU/mL) as the measurement unit, rather than the Most Probable Number (of colony forming units) per 100 milliliters (MPN/100 mL) unit used in laboratory analyses. These units are generally comparable, although the laboratory volume, and thus value, is one hundred times greater. D-MAX has created a stringent field protocol to control sample development as consistently as possible. Sterile dilution vials containing pre-measured amounts of sterile buffer solution for dilution are used for sample collection, the diluted samples are kept on ice in a cooler while in the field, and chilled samples are collected from the field crew twice daily to be plated within the proper holding time. Plated samples are then developed in an incubator for a total of 48 hours. While this method is not conducted at a certified laboratory, it is still useful for determining which locations have relatively higher or relatively lower bacteria levels. The action level for total coliform bacteria is 50,000 MPN/100 mL, which roughly corresponds to 500 CFU/mL. However, only about 150 or fewer colony forming units can be accurately enumerated using a Petrifilm plate. This would correspond to 15,000 MPN/100 mL. Therefore, all samples were first diluted 1:10 with sterile buffer solution before Petrifilm analysis, thus adjusting the detection limits for Petrifilm plates from the standard value of 1-150 CFU/mL to 10-1,500 CFU/mL. This adjusted range corresponds to approximately 10,000

to 150,000 MPN/100 mL, a much more useful range when dealing with total coliform bacteria levels around the action level of 50,000 MPN/mL.

7.3 Investigated Sites

7.3.1 Site 39

Site 39 is a manhole junction box about 25 feet deep located in the Grossmont Shopping Center. Laboratory analysis of the water sample at Site 39 detected an *Enterococcus* count of 14,000 MPN/100 mL, above the established action level of 10,000 MPN/100 mL. After receiving the results from the laboratory, the field crew conducted a follow-up investigation of the area and several of the lateral branches that join the main pipe at Site 39 to attempt to locate the source(s) of the exceedance in this area.

The total coliform bacterial count from the follow-up investigations at Site 39 was 10 CFU/mL. To the northeast of Site 39, upstream locations 39-1 and 39-2 were visited next. Both of those sites are located near the Murray Drive and Grossmont Center Drive intersection; see Figure 7-1 and Table 7-1 for more specific information. The total coliform level at 39-1 was higher than Site 39, with a count of 300 CFU/mL. The water sample from the loading dock at Sharp Grossmont Hospital (location 39-2) indicated very high levels of total coliform bacteria, as the bacteria growth on the plate was too numerous to count (TNTC). No *E. coli* was detected at either of those two upstream locations or at Site 39. No flow was observed further upstream from upstream locations 39-1 and 39-2.

A sample was taken from a manhole along the exit ramp of Interstate-8 just northwest of the Ford dealership, Site 39-3, where the storm drain map indicated a line from the south that drains toward Site 39 is located. The flow was observed traveling northwest at about 1 gpm. The total coliform bacteria count for this site was 90 CFU/mL, but *E. coli* was still fairly low.

To investigate whether the bacteria levels at the site extended to areas farther downstream, a sample was taken downstream from Site 39 at a manhole located in front of Sports Authority. A sample was taken from the eastern line at this location, which comes from Site 39. The sample was taken from this line that would consist of only water from Site 39 unless there is an additional, unknown connection. The total coliform count was 20 CFU/mL, which is similar to Site 39.

An additional sample was taken from Site 39 for laboratory analysis on June 27, 2007 to confirm the bacterial concentrations. Results were 13,000 MPN/100 mL for both total and fecal coliforms, both of which are below their respective action levels. *Enterococcus* bacterial counts were 800 MPN/100 mL, which is significantly lower than the initial reading of 14,000 MPN/100 mL and well below the action level. Nonetheless, because the analyses indicated that essentially all the total coliforms were fecal coliforms and an illicit sewer connection had been detected upstream of this site in the past at Sharp Grossmont Hospital, an additional sample was taken at upstream location 39-2. That location also had a high total coliform count during the upstream investigation. That additional sample was submitted for laboratory analysis for total coliforms, fecal coliforms, and enterococci, and ammonia, which is an indicator of sewage releases. The laboratory reported total coliform and *Enterococcus* counts of 40 MPN/100 mL and 300 MPN/100 mL, respectively. Fecal coliforms were not detected. Ammonia was measured at a concentration of 0.47 mg/L, these results do not suggest a sewage leak or other illegal discharge. The overall results of the investigation suggest that bacteria levels are not consistently high at Site 39, and relatively higher levels may be the result of transient flows. The locations and results of follow-up sampling events are summarized in the Table 7-1 and Figure 7-1.

8 SUMMARY AND RECOMMENDATIONS

8.1 Summary

8.1.1 Summary of Field Screening and Laboratory Analysis Data

During the course of dry weather monitoring, 19 sites were visited, of which 18 had measurable flow and one was dry. The 2007 field screening was resulted in only one follow-up investigation, compared to four in 2006 and three in 2005. Flow rates at the observed sites ranged from a trickle of less than 1 gallon per minute to 162 gpm. As in the past, the highest flow rate was recorded in the Alvarado Channel.

All but one site had measurements of pH that fell between 6.5 and 9.0. Site 64 had a pH of 10.0 during the initial visit and a reading of 9.3 on the following day. Elevated pH levels were likely a result of algal photosynthetic activity (see Section 6). Conductivity readings were not considered an indication of threat to water quality based on the field crew's best professional judgment.

All measurements of ammonia were below concentrations of 0.50 mg/L, below the action level of 1.0 mg/L.

As in the past five years, nitrate concentrations among all sites were below the action level of 10.0 mg/L. The highest nitrate concentration, measured at Site 50, was 5.85 mg/L. The action level for reactive phosphorous concentrations, 2.0 mg/L, was not exceeded at any of the sites.

The highest concentration of surfactants among all sites was 0.75 mg/L, below the action level of 1.0 mg/L, which was detected at Site 13B.

As per the Permit, laboratory analyses were conducted at five sites. Results detected bacteria levels in water sampled from Site 39 that exceeded the established action level for *Enterococcus*, which is 10,000 MPN/100 mL.

Dissolved copper was detected at Site 4A, but it was below the CTR action level. No other dissolved metals were detected at any of the sites. As it was for 2006, no chlorpyrifos, diazinon, oil and grease, and surfactants were detected at any sites.

Trash was observed at 10 of the visited sites, up from eight sites in 2006 and up from four sites in 2005. Sediment was present at all but one of the sites visited, but no other floatables were observed.

Vegetation was present at many of the sites where sunlight was accessible to the site. Those sites located in darker areas, normally had no vegetation.

8.1.2 Summary of Upstream Investigation Data

Follow-up visits were performed on the following business day whenever field tests showed one or more parameters above their respective action levels at the initial field screening visit. During the Dry Weather Monitoring Program in 2007, only one site required a follow-up visit for a pH reading that exceeded action levels. Only one site required upstream investigations after laboratory results were concluded.

Site 39 required upstream investigations to locate potential sources of the elevated bacteria levels indicated by laboratory analyses. To facilitate a prompt, comprehensive survey of potential sources of bacterial contamination, Petrifilm plates were used to conduct field

microbacterial analyses. Note that total coliforms levels alone are considered a poor indicator of fecal material and an even poorer indicator of pathogens. Based on the results of the upstream investigations and follow-up actions conducted at Site 39,the elevated bacterial count observed was transient.

8.2 Recommendations

Based on the results of the 2007 Dry Weather Monitoring Program for the City of La Mesa, the following follow-up actions are recommended for consideration:

Inspection and Maintenance

- Consider checking sites where trash was noted during the 2007 Dry Weather Monitoring Program for trash and debris accumulation as deemed necessary. A notable amount of trash was observed in the following three locations: Site 52, the channel upstream of Site 57, and the conveyance along Sarita Street (upstream of Site 4A).

- Retrieve the shopping cart from the channel at Site 4A and contact California Shopping Cart Retrieval Corporation (1-800-667-4613) to pick up the cart.

Site ID	50		Latitude	32.75516	Watershed	Hydrologic Unit	908
Location	Harbison Ave. and University Ave. intersection, west sidewalk, east of CB Hair and Nails		Longitude	-117.04584		Hydrologic Area	908.2
			TB Page	1270-F4		Hydrologic Subarea (Optional)	908.22
Date	6/12/07	Time 11:15	Observer	MD, MC		Discharge Area (Optional)	

Land Use (Primary) ☑ Residential ☐ Commercial ☐ Industrial ☐ Agricultural ☐ Parks ☐ Open

Land Use (Secondary) ☐ Residential ☑ Commercial ☐ Industrial ☐ Agricultural ☐ Parks ☐ Open

Conveyance ☑ Manhole ☐ Catch Basin ☐ Outlet ☐ Concrete Channel ☐ Natural Creek ☐ Earthen Channel

ATMOSPHERIC CONDITIONS

Weather ☑ Sunny ☐ Partly Cloudy ☐ Overcast ☐ Fog
Tide ☑ N/A ☐ Low ☐ Incoming ☐ High ☐ Outgoing **Tide Height:**_____ft.
Last Rain ☑ > 72 hours ☐ < 72 hours
Rainfall ☑ None ☐ < 0.1" ☐ > 0.1"

RUNOFF CHARACTERISTICS

Odor ☑ None ☐ Musty ☐ Rotten Eggs ☐ Chemical ☐ Sewage ☐ Other _____
Color ☑ None ☐ Yellow ☐ Brown ☐ White ☐ Gray ☐ Other _____
Clarity ☑ Clear ☐ Slightly Cloudy ☐ Opaque ☐ Other _____
Floatables ☐ None ☑ Trash ☐ Bubbles/Foam ☐ Sheen ☐ Fecal Matter ☐ Other
Deposits ☐ None ☐ Coarse Particulate ☑ Fine Particulates ☐ Coarse & Fine ☐ Stains ☐ Oily Deposit ☐ Other
Vegetation ☑ None ☐ Limited ☐ Normal ☐ Excessive ☐ Other _____
Biology ☑ None ☐ Insects ☐ Algae ☐ Snails/Fish ☐ Mussels/Barnacles ☐ Other _____

Flow Observed ☑ Yes ☐ No ☐ Ponded ☐ Tidal

Does the storm drain flow reach the Receiving Water? ☐ Yes ☐ No ☑ N/A

Evidence of Overland Flow? ☐ Yes ☑ No ☐ Irrigation Runoff ☐ Other: _____

Photo Taken ☑ Yes ☐ No **Photo #** 3

Field Screening Samples Collected? ☑ Yes ☐ No

Water Temp (°C)	22.5	NH_3-N (mg/L)	0.2	NO_3 (mg/L)	25.9	Ortho -PO_4 (mg/L)	1.1
pH (pH units)	8.0	MBAS (mg/L)	0.5	NO_3-N (mg/L)	5.85	Ortho –PO4-P(mg/L)	0.34

Surfactants (Laboratory Analysis)
San Diego River Watershed

Note: All "nd" values have been plotted as 0.25 mg/L, which equals (reporting limit)/2

Oil & Grease
San Diego River Watershed

Note: All "nd" values have been plotted with a value of (reporting limit)/2; this is 0.5 mg/L for 2002-2004 and 2.5 mg/L for 2005

Dissolved Cadmium
San Diego River Watershed

Note: No detectable levels of cadmium have been noted; all "nd" values have been plotted as 0.0025 mg/L, which equals (reporting limit)/2

Dissolved Copper
San Diego River Watershed

Note: No detectable levels of copper have been noted; all "nd" values have been plotted as 0.0025 mg/L, which equals (reporting limit)/2

Dissolved Lead
San Diego River Watershed

Note: No detectable levels of lead have been noted; all "nd" values have been plotted as 0.0025 mg/L, which equals (reporting limit)/2

Dissolved Zinc
San Diego River Watershed

Note: All "nd" values have been plotted as 0.01 mg/L, which equals (reporting limit)/2

Diazinon
San Diego River Watershed

Note: All "nd" values have been plotted as 0.025 µg/L, which equals (reporting limit)/2

Chlorpyrifos
San Diego River Watershed

Note: No detectable levels of chlorpyrifos have been noted; all "nd" values have been plotted as 0.025 µg/L, which equals (reporting limit)/2

Re: 2008 Dry Weather Field Screening and Analytical Monitoring Program City of La Mesa, California

Dear Mr. Tamimi:

Per your request D-MAX Engineering, Inc., conducted the routine phase of the Dry Weather Field Screening and Analytical Monitoring Program for the City of La Mesa during the 2008 dry weather season. Subsequently, follow-up investigations were conducted to identify the sources of pollutants detected during the monitoring program.

This report presents the results of the monitoring program and follow-up investigations. The contents include field screening data and analytical laboratory test results, analyses of collected data, and photographs of sampling locations. The report also presents the results of follow-up investigations and recommendations for additional actions.

Review comments from the draft report submitted to the City have been incorporated into this final report. It has been our pleasure working with the City of La Mesa on this project. If you have any questions regarding this report, please call me at (858) 586-6600 ext. 22.

D-MAX Engineering, Inc.

1 INTRODUCTION

1.1 Regulatory Requirements

In accordance with San Diego Regional Water Quality Control Board (RWQCB) Order No. R9-2007-0001 (Municipal Permit), each of the Copermittees, including the City of La Mesa, is required to annually perform dry weather field screening of discharges into its storm drain system. This procedure is comprised of recording field observations, estimating observed flow rates, and conducting field testing at selected locations along the storm drain conveyance system during the dry weather season, May 1 through September 30. The Municipal Permit also necessitates that Copermittees conduct laboratory analyses for at least 25 percent of the visited sites with flowing or ponded water. If a sampling location is dry, meaning there is no flowing or ponded water, an alternate sampling station should be visited. If the results of the field or laboratory analyses exceed specific action levels, follow-up investigations are required within two business days. The results from the current year's Dry Weather Monitoring Program conducted by D-MAX Engineering, Inc., (D-MAX) are presented herein.

1.2 Program Overview

The purpose of the Dry Weather Monitoring Program is to detect and eliminate illicit connections and illicit discharges (IC/ID) to the storm drain system, minimizing the negative impacts of human activities on receiving water bodies. The Dry Weather Monitoring Program consists of the following three components:

- Field screening observations
- Field screening analytical monitoring
- Laboratory analytical monitoring

The data gathered from dry weather monitoring is used to characterize discharges to the storm drain system and identify conveyances that are discharging elevated levels of pollutants. As needed, follow-up studies and source investigations are conducted to detect and eliminate the sources of these pollutants.

1.3 Hydrologic Setting

The City of La Mesa (City) encompasses an area of nine square miles just east of the City of San Diego. The primary land use in La Mesa is residential with over 56,000 residents. Other land uses include roads and streets, commercial, mixed use, schools, and industrial. Approximately 52 percent of La Mesa is located within the San Diego River Watershed, while the remaining 48 percent is located in the San Diego Bay Watershed. The City of La Mesa makes up about one percent of the overall land area in both the San Diego Bay and the San Diego River watersheds. Runoff generated in La Mesa is conveyed through five drainage basins. The boundaries of these drainage basins are illustrated in Figure A. Table 1-1 lists the drainage basins along with the approximate percentage of drainage area in La Mesa, the corresponding hydrologic unit (HU) of the basin, and the receiving water body to which each basin drains.

TABLE 1-1
CITY OF LA MESA DRAINAGE BASINS

Drainage Basin	Percentage of City Area	Hydrologic Unit	Receiving Water Body	Watershed
Alvarado	51	907	San Diego River	San Diego River
University	28	908	Chollas Creek	San Diego Bay
Spring Valley	14	909	Sweetwater River	San Diego Bay
Lemon Grove	6	908	Chollas Creek	San Diego Bay
Lake Murray	1	907	San Diego River	San Diego River

The San Diego River Watershed is the second largest hydrologic unit in San Diego County. It also has the highest population (~475,000) of the County's watersheds. In addition to runoff from La Mesa, the San Diego River carries water from other large portions of the cities of San Diego, El Cajon, Poway, and Santee and several unincorporated jurisdictions. The mouth of the river eventually discharges into the Pacific Ocean, south of Mission Bay. Runoff collected in the Lake Murray Basin eventually enters the Alvarado Drainage Basin, which drains to the San Diego River.

The San Diego Bay Watershed is comprised of three hydrologic units: Pueblo San Diego (HU 908), Sweetwater (HU 909), and Otay (HU 910). Each hydrologic unit is essentially a separate watershed, but these three watersheds all drain to San Diego Bay. For regulatory purposes, they have been combined into one watershed management area, referred to as the San Diego Bay Watershed. The City of La Mesa includes areas within two of those hydrologic units, the Pueblo San Diego Watershed and the Sweetwater Watershed. Runoff from the Spring Valley Basin eventually enters the Sweetwater River, which terminates in San Diego Bay. Runoff collected in the University and Lemon Grove basins drains to Chollas Creek, which also flows into San Diego Bay.

1.4 Constituents of Concern (COC)

Based primarily on wet weather monitoring data from mass loading stations (MLS) located on Chollas Creek, bioassessments, the 2008 San Diego Bay Watershed Urban Runoff Management Program (WURMP) Annual Report, and the Clean Water Act Section 303(d) List of Water Quality Limited Segments (303(d) List), several constituents have been established as targeted pollutants in hydrologic areas (HA) located within City of La Mesa's Jurisdiction. In HA 908.2, part of the Pueblo San Diego Watershed, the COCs identified are bacteria, metals, sediment, trash, and pesticides. For HA 909.1 within the Sweetwater Watershed, bacteria has been listed as a COC.

In the San Diego River Watershed, constituent data have been collected annually. The 2008 San Diego River WURMP Annual Report lists bacteria indicators, phosphorus, total dissolved solids, low dissolved oxygen and turbidity as the COCs.

1.5 Previous Work

The City of La Mesa has conducted an annual dry weather monitoring program since 1993. A summary of the screening results obtained for each year is displayed in Table 1-2. Historical dry weather monitoring data is included in Appendix A.

TABLE 1-2
SUMMARY OF HISTORICAL DRY WEATHER SITES

Year	Number of Field Screening Sites [1]	Number of Flowing Sites	Number of Ponded Sites	Number of Dry Sites	Number of Lab Analysis Sites [2]
1993	15	10	4	1	0
1994 [3]	11	11	0	4	0
1995 [4]	11	11	0	2	0
1996	12	12	0	3	0
1997	9	8	1	3	0
1998	11	8	3	3	0
1999-R1	10	10	0	4	0
1999-R2	11	11	0	3	0
2000-R1	11	11	0	4	0
2000-R2	11	11	0	4	0
2001 R1	11	11	0	4	0
2001 R2	12	12	0	4	0
2002	18	18	0	1	5
2003	18	16	2	1	5
2004	18	17	1	0	5
2005	18	16	2	0	5
2006	18	17	1	0	5
2007	18	18	0	1	5

Notes:

- The City of La Mesa conducted two separate rounds of dry weather monitoring in years 1999-2001.
  R1 = Round one
  R2 = Round two

[1] Number of Field Screening Sites = Number Flowing + Number Ponded. Field screening cannot be conducted at sites found to be dry. Dry sites are replaced by either a flowing or ponded site.

[2] Laboratory testing commenced in 2002 as required by San Diego Regional Water Quality Control Board Order 2001-001.

[3] The 1994 *City of La Mesa Dry Weather Non-Point Source Outfall Screening Program* by Cooper Engineering Associates states that 13 sites showed evidence of flow. However, in "Table 3. Summary of Dry Weather Screening Chemical Analysis" of the report, flow rates and chemical test results are provided for 11 sites only. For the purposes of this table, number of sites tested is listed as 11 and the remaining sites have been added to the number of dry sites.

[4] Per the *City of La Mesa Dry Weather Non-Point Source Outfall Screening Program* by Cooper Engineering Associates for 1995, 12 sites had flowing water and one site was ponded. Chemical analysis data is provided for 11 sites only. Thus, number of sites tested is listed as 11 and the remaining two sites are listed as dry.

The San Diego RWQCB did not require laboratory analyses to be performed as part of the dry weather program until 2002. The same laboratory and field tests have been used since 2002 until present. Graphical representations of the data for both the San Diego River and San Diego Bay watersheds are included as Attachments 1 and 2, respectively. The graphs display the results of both field and laboratory analyses for the 2002 through 2008 dry weather monitoring programs. Where applicable, averages for each constituent have been calculated, and error bars displaying average plus and minus one standard deviation have also been included on the graphs. Trend lines have been prepared for constituents where multiple values above the method reporting limit were recorded. The equations and R^2

values for the lines have been indicated on the graphs. Note that an R^2 value of 0.0 indicates a very poor fit and 1.0 indicates a perfect fit. Since the trend lines have been based on only seven years of data, conclusions regarding pollution trends cannot be drawn with a large degree of certainty.

1.6 Report Outline

Section 1, Introduction, includes regulatory background, a program overview, a discussion of the City of La Mesa's hydrologic setting and constituents of concern, a summary of historical field screening data, and the report outline.

Section 2, Sampling Locations, describes the field screening sampling locations and site selection criteria.

Section 3, Field and Laboratory Analytical Methods, includes field screening and laboratory analytical procedures, quality assurance protocols, and follow-up action levels.

Section 4, Field Screening Results, presents qualitative observations of the sampling locations and results of the field screening analyses.

Section 5, Trash Assessment, discusses the procedure and results of the trash assessment.

Section 6, Laboratory Analytical Results, presents results of the laboratory analyses.

Section 7, Data Analysis, provides an analysis of field and laboratory data collected in 2008, as well as a comparison of past results.

Section 8, Upstream Investigations, details the results of follow-up investigations undertaken to isolate the sources of water contamination detected during the field screening program.

Section 9, Summary and Recommendations, provides a summary of the program results and recommendations for follow-up actions.

Appendix A Historical Dry Weather Monitoring Table

Appendix B Photographs of the Investigated Sites

Appendix C Laboratory Analytical Reports

Appendix D Copies of the original Field Data Sheets

Attachment 1 Historical Data Graphs: San Diego River Watershed

Attachment 2 Historical Data Graphs: San Diego Bay Watershed

2 SAMPLING LOCATIONS

The City of La Mesa updated its Jurisdictional Urban Runoff Management Program (JURMP) in 2008. Table 9-4 in Section 9 of the JURMP identifies 20 primary monitoring stations where data will be collected during the Dry Weather Monitoring Program. Table 9-5 of the JURMP lists nine alternate stations to be monitored if any of the primary stations do not have flowing or ponded water. Sampling sites are located in HU 907, HU 908, and HU 909.

During the 2008 Dry Weather Monitoring Program, all 20 primary sampling locations were visited, 19 of which had flowing or ponded water. Site 907-ALV-003 was dry, and thus Site 907-ALV-580 was selected as an alternate location for monitoring.

Table 2-1 provides the site number, location, conveyance configuration, primary and secondary land uses, hydrologic subareas, and Global Positioning System (GPS) coordinates of the sampling locations that were visited. Photographs of all the sampling locations are included as Appendix B. Figure A displays the sampling locations on a map of the City that also shows storm drain lines, roads, and drainage basin boundaries. A map of the watersheds in and around the City of La Mesa is included as Figure B.

TABLE 2-1
2008 DRY WEATHER MONITORING STATIONS

Site ID	Location	Conveyance	Primary Land Use	Secondary Land Use	Hydrologic Subarea	Latitude	Longitude
907-ALV-001	Alvarado Road, east of the trolley station, on the channel	Concrete Channel	Commercial	Residential	907.11	32.77209	-117.04136
907-ALV-002	Along the south edge of the Costco parking lot, just south of the Marengo Avenue and Fletcher Parkway intersection	Manhole	Industrial	Commercial	907.11	32.77414	-117.02287

Note
Alternate Site 907-ALV-580 was substituted for dry primary monitoring Site 907-ALV-003

3 FIELD AND LABORATORY ANALYTICAL METHODS

3.1 Field Screening Procedures and Methods

Field screening techniques consist of flow measurement, quantitative field analyses of selected water quality parameters, and qualitative field observations. Information relating to weather conditions, the amount of time since last rainfall, and the type of storm water conveyance are recorded. Specific observations and results of the field water quality analyses are documented on field data sheets, which are included in Appendix D. The data sheets also serve as a record of the field visit and are completed for every site visit regardless of whether or not samples were collected.

For 2008, field data sheets were updated to include three categories of visits. Previously the sheets included check boxes for either routine field screening or follow-up visits. This year there are check boxes for routine field screening, confirmation and IC/ID follow-up visits. A confirmation visit is a revisit of the original site within one business day, whereas an IC/ID follow-up is an upstream investigation. For the purposes of this report, confirmation and IC/ID follow-up visits are both referred to as "follow-up" visits.

Field screening and analyses were conducted according to the following procedures and methods:

Qualitative Observations

Irrespective of flow, qualitative field observations are made during each site visit. These observations provide a general site assessment and describe factors like water odor, clarity, the presence of floatables, visible deposits or stains, vegetation and biological organisms. Evidence of present or past illicit connections and illegal discharges to the storm drain system may also be ascertained through careful field observations. Each field screening location is photographed to provide additional information and documentation of site conditions. Photographs are included in Appendix B.

Flow Measurement

Flow measurements can be utilized to estimate pollutant mass loading, prioritize storm drains for future investigation, and identify significant changes in discharge that may indicate an illegal discharge upstream. Various field methods are used in formulas to estimate the flow rate. These include measuring the velocity, depth and width of the flowing water; recording the amount of time required to fill a bottle of known volume with sample water; or, if measuring flow within a cylindrical pipe, measuring the pipe diameter as well as the depth and velocity of the flow. Low levels of flow may also be assessed visually.

Field Water Quality Analyses

At each site with ponded or flowing water, water samples were collected and analyzed in the field for the following constituents:

- Specific Conductance
- Temperature
- pH
- Turbidity
- Surfactants, measured as methylene blue active substances (MBAS)*
- Nitrate-Nitrogen (Nitrate-N)
- Ammonia-Nitrogen (Ammonia-N)

- Orthophosphate-Phosphorus (Orthophosphate-P)

* Surfactants are also referred to as detergents, specifically with respect to discussion of field test kit results.

The methods used to perform the above field analyses, along with the detection limit, range and accuracy of each method, are listed in Table 3-1.

3.2 Laboratory Analytical Methods

In accordance with Order R9-2007-0001, laboratory samples were collected at six sites, representing over 25 percent of the sites where ponded or flowing water was observed. Samples were submitted to EnviroMatrix Analytical, Inc, a laboratory certified by the California Department of Health Services, for analysis of the following constituents:

- Total hardness
- Oil and grease
- Diazinon
- Chlorpyrifos
- Cadmium (Dissolved)
- Copper (Dissolved)
- Lead (Dissolved)
- Zinc (Dissolved)
- Total Coliform bacteria
- Fecal Coliform bacteria
- *Enterococcus* bacteria

The methods used to perform each of the above analyses along with method reporting limits and holding times are listed in Table 3-2.

3.3 Quality Assurance and Quality Control (QA/QC)

The QA/QC Plan utilized for this project includes the United States Environmental Protection Agency (USEPA) approved test methods for the field and laboratory analysis of water samples, calibration of test equipment, and pre- and post-rinsing of sample collection containers and test vials. Key components of the QA/QC Plan are described in Section 3.3.1 and Section 3.3.2.

TABLE 3-1
FIELD ANALYTICAL METHODS

Parameter	Method	Reporting Limit	Range	Accuracy
Specific Conductance	Hanna Instruments HI 991301 Portable pH/EC/TDS/Temperature Meter***	0.01 mS/cm	0 – 20 mS/cm	± 2% of functional sensitivity[1]
Temperature	Hanna Instruments HI 991301 Portable pH/EC/TDS/Temperature Meter***	0.1 °C	0.0 °C – 60.0 °C	± 0.5 °C
pH	Hanna Instruments HI 991301 Portable pH/EC/TDS/Temperature Meter***	0.01	0.00 – 14.00	± 0.01 pH
Turbidity	Hanna Instruments HI 93703 Portable Turbidity Meter***	0.01 NTU	0.01 – 50.00 NTU and 50 – 1000 NTU	± 0.5 NTU or 5% of reading (whichever is greater)
Surfactants	CHEMetrics CHEMets Kit (K-9400) methylene blue active substances	0.13 mg/L	0.0 mg/L – 3.0 mg/L*	± 0.13 & ± 0.5 mg/L[2]
Nitrate-N	CHEMetrics V-2000 Multi-Analyte LED Photometer – Nitrate 3 Vacu-vials® (K-6933) Cadmium reduction[3]***	2.26 mg/L**	2.26 mg/L –13.6 mg/L**	± 30%of practical detection limit[4]
Ammonia-N	CHEMetrics V-2000 Multi-Analyte LED Photometer – Ammonia 3 Vacu-vials® (K-1403) Salicylate***	0.10 mg/L**	0.10 mg/L – 3.00 mg/L**	Varies with measured concetration[4,5]
Ortho-phosphate-P	CHEMetrics V-2000 Multi-Analyte LED Photometer – Phosphate 2 Vacu-vials® (K-8513) Stannous chloride chemistry[6]***	0.25 mg/L**	0.25 mg/L – 2.61 mg/L**	Varies with measured concetration[4,5]

Notes:

TDS = total dissolved solids
EC = electrical conductivity
mS/cm = millisiemens per centimeter
°C = degrees Celsius
NTU = nephelometric turbidity unit
mg/L = milligrams per liter
LED = light-emitting diode

[1] Functional sensitivity (FS) represents the lowest limit at which quantitative information is reliable. FS is estimated as the mean concentration for a spiked sample whose coefficient of variance (CV) is 20%. CV is the standard deviation divided by the mean.

[2] ± 0.13 for the range of 0.0 to 1.0 mg/L, ± 0.25 mg/L for the range of 1.0 to 2.0 mg/L and 0.5 mg/L for the range of 2.0 to 3.0 mg/L.

[3] This method determines the concentration of nitrate in mg/L NO_3. To determine the amount of nitrate-nitrogen, the concentration of nitrogen must be adjusted for the presence of oxygen in the NO_3 molecule. Therefore, the result is multiplied by a conversion factor of 0.226, the ratio of the molecular weight of N (14g/mol) to NO_3 (62 g/mol). The detection limit for nitrate is 10.0 mg/L; however, the detection limit for nitrate-nitrogen is lowered due to the conversion.

[4] Practical Detection Limit (PDL) is defined as the lower limit of the stated test range.

[5] Percent error adjusts as follows: ±30% at PDL, ±20% for 25% of full range, ±10% for 75% of full range, ±10% for 120% of full range.

[6] This method determines the concentration of orthophosphate in mg/L PO_4. To determine the amount of orthophosphate-P, the concentration of phosphate must be adjusted for the presence of oxygen in the PO_4 molecule. Oxygen is 67.4% of phosphate by mass but is not a plant nutrient in this form. Therefore, the result is multiplied by a conversion factor of 0.326, the ratio of the molecular weight of P (31g/mol) to PO_4 (95 g/mol). The detection limit for orthophosphate is 0.75 mg/L; however, the detection limit for orthophosphate-phosphorus is lowered due to the conversion.

*Extended ranges in chemical analyses can be achieved through dilutions. Accuracies decrease proportionally with further dilutions.

** Readings below the PDL have increased percent error; measurements are reported, but are flagged as being below the PDL.

***Reporting limit, range, and accuracy information taken from Hanna Instruments and CHEMetrics manuals, available online at www.hannainst.com and www.chemetrics.com.

TABLE 3-2
LABORATORY ANALYTICAL METHODS

Analyte	Analytical Method	Method Detection Limit	Maximum Holding Time [1]
Oil and Grease	USEPA 1664	5 mg/L	28 days
Total Hardness	USEPA 200.7	10 mg/L	14 days
Dissolved Cadmium	USEPA 6020	0.005 mg/L	24 hours
Dissolved Copper	USEPA 6020	0.005 mg/L	24 hours
Dissolved Lead	USEPA 6020	0.005 mg/L	24 hours
Dissolved Zinc	USEPA 6020	0.020 mg/L	24 hours
Diazinon	USEPA 8141A	0.05 µg/L	7 days
Chlorpyrifos	USEPA 8141A	0.05 µg/L	7 days
Total Coliforms	SM 9221	20 – 1,600,000 MPN/100 mL [2]	6 hours
Fecal Coliforms	SM 9221	20 – 160,000 MPN/100 mL [2]	6 hours
Enterococci	SM 9230	20 – 160,000 MPN/100 mL [2]	6 hours
Total Coliforms	SM 9223 (IDEXX Colilert) [3]	10 – 2,400,000 MPN/100 mL	6 hours
Escherichia coli (*E. coli*) [4]	SM 9223 (IDEXX Colilert) [3]	10 – 2,400,000 MPN/100 mL	6 hours
Enterococci	IDEXX Enterolert [3]	10 – 240,000 MPN/100 mL	6 hours

Notes:

µg/L = micrograms per liter

MPN/100 mL = most probable number (of colony-forming units) per 100 milliliters

[1] Maximum Holding Time values listed here apply to samples collected and preserved in accordance with the quality assurance and quality control procedures listed in Section 3.3.2.

[2] For D-MAX's Dry Weather Monitoring Program, EnviroMatrix Analytical, Inc. (EMA) performs standard dilutions for total coliforms to quantify from 20-1,600,000 MPN/100mL. For fecal coliforms and Enterococci, EMA performs standard dilutions to quantify from 20-160,000 MPN/100 mL. During the analysis and interpretation of the results, the number of tubes used to quantify the sample must fit the MPN index table from Standard Method 9221. The dilution set used will determine the detection limit. A standard dilution analysis is set up with 15 tubes at different concentrations. The reporting limit will always be adjusted depending on the dilution factor used for quantifying the actual results based on the MPN table. If the result for the analysis was less than 16,000 MPN/100 mL, the reporting limit will always be 20, and the dilution factor will be 10. As the dilution factor goes up, the reporting limit listed in the results from EMA will also go up based on the calculation made with EMA's data system. However, the lowest quantifiable number or reporting limit would still be 20 based on how the standard tubes for the sample is set up.

[3] IDEXX Colilert and Enterolert tests are performed by EnviroMatrix Analytical. This test is used during upstream investigations only.

[4] Number of fecal coliforms is derived from number of *Escherichia coli* (*E. coli*) through the following formula: Fecal Coliforms = *E. coli* / 0.85. The converted fecal coliform count, not the number of *E.coli*, is reported in this report's data tables.

3.3.1 Field Sampling and Analysis QA/QC

The pH meters are calibrated periodically with sodium/potassium phosphate, monobasic buffer solutions with pH values equal to 4.00 ± 0.01, 7.00 ± 0.01, and 10.00 ± 0.01 units. The glass electrode tube is kept moist to preserve the meter's accuracy during fieldwork. The turbidity meter is calibrated and periodically checked for accuracy using standard solutions. The conductivity meter is checked periodically with standard solutions and calibrated as necessary.

Field sample collection containers are first rinsed with distilled water and then with the sample water before sample collection. Upon completion of sampling at each site, sample collection containers, test vials, and ion-sensitive electrodes were rinsed twice with distilled water and dried.

The accuracy of field analytical techniques is assessed at the beginning of each sampling week by analyzing solutions of known concentrations for ammonia-nitrogen, surfactants, nitrate, and orthophosphate. The results of the assessment are shown in Table 3-3.

TABLE 3-3
FIELD ANALYSIS QA/QC RESULTS

Date	Analyte	Known Concentration (mg/L)	Acceptable Range* (mg/L)	Field Test Kit Results (mg/L)
07/29/08	Ammonia-Nitrogen	1.0	0.8 – 1.2	0.9
07/29/08	Surfactants	1.0	0.75 – 1.25	1.0
07/29/08	Nitrate *	44.3	31.0 – 57.6	50.4
07/29/08	Orthophosphate *	1.0	0.75 – 1.25	0.8
08/05/08	Ammonia-Nitrogen	1.0	0.8 – 1.2	1.0
08/05/08	Surfactants	1.0	0.75 – 1.25	1.0
08/05/08	Nitrate *	44.3	31.0 – 57.6	48.0
08/05/08	Orthophosphate *	1.0	0.75 – 1.25	0.8

Notes:
* Acceptable range is calculated based on the error associated with the methods as listed in Table 3-1.

** Nitrate and orthophosphate are converted to nitrate-nitrogen and orthophosphate-phosphorus, respectively, when conducting standard field screening. This is accomplished by dividing the results by 4.43 for nitrate and 3.06 for orthophosphate. To simplify the calibration process, the unconverted numbers are used when calibrating the instruments.

3.3.2 Laboratory Sampling and Analysis QA/QC

Samples for laboratory analysis are collected concurrently with field samples and utilized the same sampling procedures. Pre-sterilized sample bottles are obtained from the laboratory and thus do not require rinsing with sample water prior to sample collection. After sample collection, all laboratory samples are kept in a cooler on ice until picked up by the lab. Strict chain of custody procedures are followed, and samples are delivered and analyzed within the appropriate holding times, as listed in Table 3-2. Completed chain of custody forms are included in Appendix C.

3.4 Follow-up Action Levels

Based on dry weather field screening results, immediate follow-up investigations are sometimes necessary to identify and eliminate pollutant sources. In order to determine

whether an immediate source investigation is necessary, numeric action levels and best professional judgment are used to interpret the field screening results. If visual and/or analytical evidence of gross contamination are present at a site (e.g., substantial petroleum sheen, extremely high ammonia concentration, evidence of a sewage release, etc.), then an immediate source identification investigation is initiated. For sites that exceed numeric action levels but are not perceived as an immediate threat to water quality, a re-sampling is conducted within one day. An upstream pollutant source investigation is conducted thereafter if elevated concentrations persist and no sources can be identified in the immediate vicinity of the monitoring station. If elevated levels of pollutants are detected by the laboratory analyses, a comprehensive follow-up pollutant source investigation is conducted within two days of receiving the analytical reports from the lab. The results of these investigations are included in Section 8 of this report. Recommendations based on these investigations are included in Section 9.

The following three methods are employed to determine whether immediate or comprehensive follow-up investigations are necessary: (1) Numeric Action Levels; (2) California Toxics Rule (CTR); and (3) Best Professional Judgment. All three approaches are described in detail below and presented in Table 3-4.

Numeric Action Levels

Numeric action levels are used as the primary approach for interpreting pH, orthophosphate-P, nitrate-N, ammonia-N, surfactants, oil and grease, diazinon, chlorpyrifos, total coliforms, fecal coliforms, and *Enterococcus* analytical results (see Table 3-4). Prior to the 2003 dry weather season, no standard action levels had been adopted for use throughout San Diego County. D-MAX calculated the current set of numeric action levels, which are based on county-wide sampling data and have been used by all Copermittees since the 2003 dry weather season. If pH, orthophosphate-P, nitrate-N, ammonia-N, or surfactants are observed above the numeric action level, a follow-up investigation is conducted within 24 hours to investigate the source unless best professional judgment indicated otherwise. If oil and grease, diazinon, chlorpyrifos, total coliforms, fecal coliforms, or *Enterococcus* laboratory analytical results exceeded numeric action levels, then source investigations are conducted within two business days of receiving the test results from the lab.

California Toxics Rule

The CTR criterion maximum concentration (CMC) is used to determine appropriate action levels for dissolved trace metals, including cadmium, copper, lead, and zinc. The CTR equations, as provided in USEPA Federal Register Doc. 40 Code of Federal Regulations (CFR) Part 131, are used to calculate benchmarks based on the total hardness of the sampled water, with the action levels increasing as hardness increases. More information on the CTR is available at http://www.epa.gov/region09/water/ctr.

Best Professional Judgment

Best professional judgment is utilized as the primary approach for interpreting turbidity, water temperature, and conductivity and as a secondary approach for interpreting the results of all other field and laboratory analyses. Under best professional judgment, the need for a follow-up investigation is left to the discretion of the D-MAX field crew due to their familiarity with the City of La Mesa Dry Weather Monitoring Program and their knowledge of typical levels for the tested parameters. Best professional judgment may indicate that results which either exceed certain action levels or statistical outliers may be the result of natural or background factors.

TABLE 3-4
ACTION LEVELS FOR FIELD SCREENING AND LABORATORY PARAMETERS

Field Screening Analytes	Action Levels[1]	Source/ Notes
pH	<6.5 or >9.0	Basin Plan[2], with allowance for elevated pH due to excessive photosynthesis. Elevated pH is especially problematic in combination with high ammonia.
Orthophosphate-P (mg/L)	2.0	USEPA Multi-sector General Permit
Nitrate-N (mg/L)	10.0	Basin Plan and drinking water standards
Ammonia-N (mg/L)	1.0	Based on Workgroup experience. May also consider unionized ammonia fraction.
Surfactants (MBAS) (mg/L)	1.0	Basin Plan, with allowance based on Workgroup field experience and possible field reagent interferences.
Turbidity (NTU)[2]	Best Professional Judgment	WQOs relevant to inland surface waters are not available. Base judgment on channel type and bottom, time since last rain, background levels, and most importantly visual observation (e.g. unusual colors and lack of clarity) and unusual odors.
Temperature (°C)	Best Professional Judgment	Base judgment on season, air temperature, channel type, shading, etc.
Conductivity (mS/cm)	Best Professional Judgment	Conductivity may be highly elevated in some regions due to high TDS, groundwater exfiltration to surface water, mineral dissolution, drought, and seawater intrusion. Normal source ID and discharge elimination work is not effective in these situations. Knowledge of area background conditions is important. Values <0.75 may indicate excessive potable water discharge or flushing.
Laboratory Analytes	**Action Levels**	**Source/ Notes**
Oil and Grease (mg/L)	15	USEPA Multi-sector General Permit. If petroleum sheen is observed, the sample should be collected from the water surface. Visual observations may justify immediate investigation.
Diazinon (µg/L)	0.5	Response to diazinon and chlorpyrifos levels above 0.5 µg/L should focus on education and outreach to potential dischargers in the target drainage basin. Highly elevated levels should be investigated aggressively as with other potential IC/IDs.
Chlorpyrifos (µg/L)	0.5	
Dissolved Cadmium (µg/L)	California Toxics Rule	Use California Toxics Rule, 1-hour criteria to determine appropriate action level for individual samples. Table provides benchmarks based on hardness and dissolved metals concentration. For example, at 300 mg/L hardness the following action levels would apply: Cd – 14 ppb; Cu – 38 ppb; Pb – 209 ppb; and Zn – 297 ppb.
Dissolved Copper (µg/L)	California Toxics Rule	
Dissolved Lead (µg/L)	California Toxics Rule	
Dissolved Zinc (µg/L)	California Toxics Rule	
Total Coliforms (MPN/100 mL)	50,000	Bacteria levels in many storm drains are likely to exceed public health guidance criteria. Use confidence interval test and best professional judgment to identify conveyances for source ID.
Fecal Coliforms (MPN/100 mL)	20,000	
Enterococci (MPN/100 mL)	10,000	

Notes

[1] The referenced action levels should not be the sole criteria for initiating a source identification investigation. Dry weather monitoring data should be interpreted using a variety of available information. Factors that should be considered include within-site and between-site sample variability.

[2] Basin Plan = Water Quality Control Plan for the San Diego Basin

WQO = Water Quality Objective

ppb = parts per billion

4 FIELD SCREENING RESULTS

The 2008 Dry Weather Monitoring Program began July 29, 2008, and was completed August 8, 2008. A total of 21 monitoring stations were visited. Field screening was conducted at the 20 sites where ponded or flowing water was observed. Since primary sampling Site 907-ALV-003 was dry, alternate Site 907-ALV-580 was selected as a replacement. Completed field data sheets for each site visit are included in Appendix D.

4.1 Qualitative Observations

Qualitative observations, which are a routine part of the Dry Weather Monitoring Program, are summarized below and presented in Table 4-1:

Light Conditions
Light conditions were primarily sunny, with a few occurrences of overcast and partly cloudy weather.

Odor
Water samples from the majority of sites were odorless. Two sites displayed a musty odor.

Color
Water samples taken from most of the sites were colorless, with the exception of four sites displaying water with a yellow hue.

Clarity
Despite showing negligible suspended particles, all but one site showed clear water samples.

Floatable Materials
During routine field screening visits, small amounts of trash were noted at several sites. Section 5 of this report includes a complete Trash Assessment. No other floatables were noted.

Deposits
Sediment, gravel or fine particulates were observed at all sites. While no sampled sites contained oily deposits or stains, one dry site had small stains likely resulting from mineral deposits.

Vegetation
Taking into account exposure to sunlight and soil, all sites displayed appropriate vegetation. Manholes lacking soil and sunlight showed no vegetation. Concrete channels displayed either limited or normal vegetation, and the natural creeks showed normal vegetative growth. No sites showed excessive vegetation that would significantly impaired flow.

Biology
The presence of biological organisms typically implies healthy water conditions. Also, algal growth indicates that water flow is persistent at the site. No sites visited displayed excessive algal growth, which can indicate nutrient enrichment (eutrophication). Many of the sampling locations were host to other biological organisms including fish, tadpoles, snails and various insects.

4.2 Field Analytical Results

Field analyses are conducted at all sites with flowing or ponded water. The measured constituents are described below.

Flow rates are the measurements of the volume of fluid passing through a given surface per unit time. Flow rate measurements are needed to calculate the load or particular amount of a pollutant discharged.

Water temperature is needed to assess the significance of other parameters, such as pH and conductivity. Also, the aquatic habitat must remain within a certain temperature range in order to sustain sensitive aquatic life. In the field, water temperature is measured immediately upon sample collection at each site with ponded or flowing water.

The **pH** is an expression of acidity or alkalinity of a water sample. The pH of an aquatic system will drive a variety of chemical reactions, including the availability of nutrients or the solubility of chemical substances, particularly heave metals.

Turbidity describes the clarity or cloudiness of a water sample, or the degree to which light is blocked by suspended material in the water. Turbid waters not only limit the amount of light that reaches submerged vegetation, thus reducing photosynthetic capacity, but excessive suspended particles can also absorb heat and increase water temperatures.

Specific Conductance (Conductivity) values indicate the total concentration of ions in an aquatic system and the ability of the water to conduct electricity. This parameter can be used to assess the mineral content of water and potentially help indicate the presence of dissolved pollutants.

Surfactant concentrations in water samples often reflect illegal discharge from industrial, commercial or residential sources. Pollution resulting from surfactants alters the surface tension of water and disrupts the breathing mechanisms of fish gills and other aquatic organisms.

Ammonia-Nitrogen (ammonia-N) is an indicator of pollution from decomposing organic matter, agricultural or household fertilizer runoff, or the presence of sewage. Ammonia occurs naturally in the environment; however, in higher quantities it can become toxic to fish and other organisms.

Nitrate-Nitrogen (nitrate-N) is a common sign of nutrient pollution from agricultural or household fertilizer runoff. Nitrate pollution can cause excessive algal growth, which can deplete oxygen from the water during decomposition and eventually suffocate other aquatic life. During the field analysis, nitrate is measured in milligrams per liter (mg/L) NO_3 and converted into mg/L nitrate-N using a conversion factor of 0.226. This process is explained in Note 3 of Table 3-1.

Orthophosphate-Phosphorus (orthophosphate-P) is also an indicator of nutrient pollution from agricultural or household fertilizer runoff. Similar to nitrate-N, orthophosphate-P pollution can cause nutrient enrichment (eutrophication), stimulate algal growth, and thus deplete oxygen in the water to levels that are dangerous for aquatic life. Even low levels of orthophosphate-P can cause significant algal growth, as it is commonly the limiting nutrient in plant growth. During the field analysis, orthophosphate is measured in mg/L PO_4 and converted into mg/L orthophosphate-P using a conversion factor of 0.326. This process is explained in Note 6 of Table 3-1.

A statistical summary of the routine field analytical results is presented in Table 4-2. Table 4-3 shows the results of all field analyses conducted at the sampled sites. Graphs of the

various parameters and appropriate action levels for follow-up investigations are included at the end of this section.

TABLE 4-2
FIELD ANALYSIS STATISTICAL SUMMARY

Parameter (units)	Maximum	Minimum	Average	Median	Standard Deviation	Number of Exceed-ances	Graph Number
Flow Rate (gpm)	187	< 1	19.6	4.0	45.2	---	4-1

5 TRASH ASSESSMENT

5.1 Regulatory Requirements

Section II.B.3.C.(7) of the Municipal Permit's Receiving Waters and Urban Runoff Monitoring and Reporting Program requires Copermittees to assess the presence of trash in receiving waters and urban runoff at each dry weather field screening site. This trash assessment program is designed to provide information on the spatial extent and relative amount of trash present, as well at the nature and origin of the trash at the site.

5.2 Procedure and Definitions

The San Diego Copermittee Dry Weather Monitoring Workgroup developed a two-page Trash Assessment Form to document the amount and extent of trash and the threat to human and aquatic health. The first page is completed at every site. The second page, which includes information about the types, prevalence, potential routes, and sources of trash, is also completed at sites where a larger amount of trash is observed.

A qualitative estimate of the abundance of trash is made based upon a general impression of the site. The Trash Assessment Form includes five categories to describe the amount and extent of trash. The definitions are primarily qualitative, although a number of trash pieces is also included in each category as a rough guideline. The five categories are listed below.

- *Optimal:* On first glance, no trash is visible. Little or no trash (<10 pieces) is evident when the evaluated area is closely examined for litter and debris.
- *Suboptimal:* On first glance, little or no trash is visible. After close inspection, small levels of trash (~10-50 pieces) are evident in the evaluated area.
- *Marginal:* Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing are present.
- *Submarginal:* Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100-400 pieces). Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing are present.
- *Poor:* Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

The threat to human health and threat to aquatic health is assessed at each site using the following definitions:

- *Threat to Human Health* - Site poses a threat to human health via swimming, wading, or walking through the area. Trash and debris have the potential to contain chemicals that may bioaccumulate, transmit dangerous bacteria (e.g., medical waste, diapers, human waste), or have the potential for physical harm (sharps, entanglement, nails, etc.).
- *Threat to Aquatic Health* – Site poses a threat to aquatic health or other wildlife (via contact, ingestion, entanglement, etc.) from the trash and debris present. Trash and debris such as small floatable material that is persistent and can be transported long distances may resemble food and may be ingested. Wire, plastic, fishing line, and

other material that has the potential for entanglement. Oil and other visible chemicals or chemical containers falls in this category.

In the event that a site is noted as potentially posing a threat to human or aquatic health, additional descriptive comments are recorded in the "Comments" section of the Trash Assessment Form.

If a site is labeled as submarginal or poor, it is then assessed for types of trash present (e.g., automotive, biohazard, food waste), which are ranked based on the prevalence and potential threat to water quality of the items. Lastly, the potential mechanism through which trash reached the site (e.g., dumping, littering, upstream sources) and the potential source of the trash (e.g., construction, commercial, transient) are identified.

5.3 Trash Assessment Results

The majority of sites sampled in the City of La Mesa were rated "optimal." No sites were considered to have "submarginal" or "poor" trash levels. Additionally, no sites were determined to pose a threat to human or aquatic health.

Table 5-1 and Graph 5-1 summarize the trash assessment results. Figure 5-1 provides a map of sampling sites and their corresponding trash assessment.

TABLE 5-1

6 LABORATORY ANALYTICAL RESULTS

6.1 Summary

Laboratory analyses were conducted at six sites, representing over 25 percent of all sites with ponded or flowing water. The laboratory constituents measured are defined below.

Oil and grease analysis is used to detect hydrocarbon pollution from a variety of sources, including parking lots and streets, washing activities, illegal discharges, and automobile repair facilities.

Total hardness measures the amount of calcium and magnesium ions in a water sample, with the result expressed in mg/L of $CaCO_3$. Hardness itself is not considered a pollutant, but is measured to calculate CTR limits for dissolved metals. Hardness affects the solubility of dissolved metals as well as other minerals and ions.

Diazinon and **chlorpyrifos** are organophosphate pesticides that can be harmful to aquatic organisms if transported in urban runoff. Diazinon and chlorpyrifos are highly toxic to birds, mammals, and insects. They are also highly toxic to freshwater fish and invertebrates following acute exposure.

Metal contamination of water can arise from a variety of sources, including automobile operation, automobile repair, vehicle washing, galvanizing of metal, and electronics manufacturing. Certain dissolved metals are toxic pollutants that are hazardous to the survival and development of aquatic organisms.

The California Toxics Rule for Dissolved Metals in Fresh Waters defines metal toxicity as a function of water hardness, with toxicity decreasing as hardness increases. Therefore, each dissolved metal has a CMC for a specific total hardness. The laboratory samples are analyzed for the presence of dissolved cadmium, copper, lead, and zinc. Table 6-1 shows the sites with detectable metal concentrations, the measured total hardness of the sample, and the associated CMC.

TABLE 6-1
CTR – CMC FOR DISSOLVED METALS

Dissolved Copper			
Site	**Total Hardness (mg/L)**	**CMC (mg/L)**	**Concentration (mg/L)**
ALV 002	536	0.0654	0.014
UNI-002	1570	0.1799	0.01
UNI-004	646	0.078	0.005
Dissolved Zinc			
Site	**Total Hardness (mg/L)**	**CMC (mg/L)**	**Concentration (mg/L)**
ALV 002	536	0.486045	0.075
UNI 002	1570	1.208206	0.038

Notes:
Sites listed are those at which a particular dissolved metal was detected.
For equations and constants used in California Toxics Rule calculations, see http://www.epa.gov/ost/standards/ctr/toxic.pdf

Coliform bacteria are relatively harmless to humans and are present in mammalian digestive tracts and are naturally found in most surface waters and soils. Testing water samples for total coliform bacteria is a standard practice in public health since a high level of total coliform bacteria often may indicate the presence of other more harmful, pathogenic

organisms, sometimes of fecal origin. Total coliform is measured in lieu of these pathogens since the various pathogens are generally present in much smaller quantities and are difficult to detect.

Fecal coliform, a subset of coliform bacteria, and **Enterococci** are found primarily in the gastro-intestinal tracts of humans and animals and are commonly used as indicators of water contamination by fecal matter. A host of human diseases, particularly those of the gastro-intestinal tract, are spread through water contaminated with fecal matter. Without the use of significantly more expensive methods, such as ribotyping, it is not possible to determine whether the source of fecal material was human or animal. Human fecal material is known to contain pathogens dangerous to humans, but the relationship between animal waste and threat to human health is less certain.

A summary of the laboratory analytical results is presented in Table 6-2. Table 6-3 presents the laboratory results from all samples. Laboratory reports are included in Appendix C.

TABLE 6-2
LABORATORY ANALYSES STATISTICAL SUMMARY

Parameter (units)	Maximum	Minimum	Number of Exceedances
Total Hardness (mg/L $CaCO_3$)	1570	527	*

Notes:
Red Bold Type = value exceeds action level
denotes a confirmation visit
nd = not detected
na = not analyzed
CTR = California Toxics Rule; CTR action levels for metals are calculated based upon on the total hardness value of the water sample.
* Number of fecal coliforms is derived from *E.coli* count. Number of fecal coliforms = (Number of *E.coli*) / 0.85
** = Total hardness is not considered a pollutant (see section 3.4 for details), and thus has no established action level for the purposes of dry weather monitoring.

7 DATA ANALYSIS

This first part of this section provides an overall evaluation of test results obtained from the 2008 Dry Weather Monitoring Program. The second portion of this section describes historical trends for various constituent exceedances.

7.1 2008 Results

Of the 20 sites sampled, three sites had exceedances in total coliform levels, one site in fecal coliforms and two sites in *Enterococcus* levels. Turbidity was also in exceedance at one site.

TABLE 7-1
2008 EXCEEDANCES SUMMARY

Site No.	Turbidity	Total Coliforms	Fecal Coliforms	Enterococci
907-ALV-002	✓	✓	✓	✓
907-UNI-002		✓		✓
908-UNI-004		✓		

Note: Table reflects exceedances occurring during routine visits only, not confirmation or follow-up visits.

7.2 Previous Results

Historical results of exceedances are presented in Table 7-2, Graph 7-1 and Graph 7-2. Table 7-2 shows the percentage of sampled sites that have had exceedances each year of the Dry Weather Monitoring Program. Graph 7-1 illustrates the percentage of exceedances for field constituents, and Graph 7-2 presents the percentage exceedances by year for laboratory analyses.

Since 2002, no exceedances were measured in water temperature, nitrate-nitrogen, oil and grease, cadmium, copper, lead, zinc, diazinon , or chlorpyrifos. Thus, these constituents have not been included in the following table and graphs.

The historical data for the results of field analyses presented in Graph 7-1 indicate a decreasing trend in surfactants, ammonia-nitrogen, and orthophosphate-phosphorus concentrations. There have been no exceedances in surfactants and ammonia-nitrogen since 2006 and no exceedance in orthophosphate-phosphorus levels since 2005. No discernable trend is apparent for pH, turbidity, or conductivity.

Historical data for laboratory analyses presented in Graph 7-2 indicate that total coliforms and fecal coliform exceedance rates have decreased somewhat over the years. Since 2003, *Enterococcus* exceedances have been 20 percent per year with the exception of 2006 and 2008. There were no *Enterococcus* exceedances in 2006. This year, 33 percent of laboratory sampled sites had *Enterococcus* measurements above the action level.

TABLE 7-2
PERCENT OF SITES WITH EXCEEDANCES BY YEAR

	Field Testing							Laboratory Analyses			
Year	**Number of Field Testing Sites**	*pH*	*Turbidity*	*Conductivity*	*Surfactants*	*Ammonia-N*	*Orthophosphate-P*	**Number of Laboratory Sampling Sites**	*Total Coliforms*	*Fecal Coliforms*	Enterococci

2003	18	0	0	6	6	17	6	5	60	60	20
2004	18	0	0	0	0	11	0	5	60	20	20
2005	18	0	0	0	6	11	6	5	60	20	20
2006	18	0	0	0	6	17	0	5	80	20	0
2007	18	6	0	0	0	0	0	5	0	0	20
2008	20	0	5	0	0	0	0	6	50	17	33

Notes:

Results based on complete routine visits only. Confirmation visits, follow-up visits and dry sites not included.

* By regional consensus, the action level for conductivity has been changed during past years from numeric values to best professional judgment in order to account for sites in which salt water and groundwater increase conductivity. High conductivity levels at these sites are not necessarily exceedances or considered to be a water quality concern.

PERCENT OF SITES WITH LABORATORY ANALYSIS EXCEEDANCES BY YEAR

8 FOLLOW-UP INVESTIGATIONS

The purpose of follow-up investigations is to find the sources of pollutants that exceeded action levels during the initial field screening and laboratory testing.

8.1 Investigation Procedures

When a constituent is found to be over the action limit, follow-up investigations are conducted. Follow-up investigations are divided into two categories. The first type is a confirmation visit to retest the constituent that had been measured above its respective action level. For field test exceedances, the confirmation visit occurs within one business day. For exceedances of laboratory constituent action levels, the confirmation visit is conducted within two business days of receiving the results.

If the constituent in question remains above the action limit during the confirmation visit, an upstream investigation will occur. The upstream investigation consists of "IC/ID follow-up" visits, which intend to identify any illicit connections or illegal discharges into the storm water conveyance system. If follow-up field screening or laboratory analysis at a site results in constituent concentrations below the respective action levels, the initial high result may have been due to a transient flow.

The laboratory test for investigating upstream bacteria sources differs from routine field screening bacteria testing through the use of the IDEXX Colilert and IDEXX Enterolert tests. Information about these methods is provided in Table 3-2. Results for the Colilert and Enterolert tests are typically available within 24 hours, as opposed to the five days needed for routine testing.

The quicker turnaround time allows for additional upstream investigations as needed. During all follow-up visits, flow rates are measured and visual observations are performed. For confirmation visits, physical parameters such as temperature, pH and conductivity are recorded as well. Field data sheets are included in Appendix D.

8.2 Investigated Sites

In the 2008 Dry Weather Monitoring Program, three sites were revisited and also required upstream investigations. Water at Site 907-ALV-002 had exceedances in turbidity, total coliforms, fecal coliforms and Enterococci. The samples at Site 908-UNI-002 had high levels of total coliforms and Enterococci. Lastly, water at Site 908-UNI-004 was above the action level in total coliforms.

Site 907-ALV-002

Water from Site 907-ALV-002 was yellow and opaque with an elevated turbidity of 421 NTU. An immediate upstream investigation did not reveal any potential sources of increased turbidity. At the confirmation visit the next day, water was clear and colorless with a turbidity of 14.20 NTU. The turbidity was measured again several days later during the bacteria investigation and was measured at 8.05 NTU. Since the turbidity was no longer in exceedance, it was concluded that the previous sample's exceedance was due to a transient flow.

Laboratory results of water from Site 907-ALV-002 indicated elevated levels of total coliforms, fecal coliforms and Enterococci. Upon the confirmation visit, total coliforms continued to be elevated, but fecal coliforms and *Enterococcus* bacteria were no longer above the action level.

An industrial area immediately upstream was investigated, followed by Sun Valley Golf Course, MacArthur Park and areas surrounding La Mesa Boulevard. Very small amounts of runoff were seen in the industrial area. The golf course and park were well-irrigated and were contributing to the storm drain flow. Bacteria levels from a sample taken at Site 907-ALV-002-1, which drains water from the golf course and MacArthur park, were below the action level.

Farther upstream a sample was taken at Site 907-ALV-002-2, which was previously Site 29, last sampled in 2001. This manhole contained a notable amount of trash and leaf debris. Water from this site had total coliforms above the action level.

Since fecal coliform and *Enterococcus* measurements were only elevated during the first visit to Site 907-ALV-002, these exceedances were most likely due to a transient flow. The elevated levels of total coliforms likely resulted from decaying organic matter, primarily leaves around Site 907-ALV-002. Farther upstream, decaying leaf debris and trash were the most probable causes of elevated total coliforms at Site 907-ALV-002-2.

Table 8-1 and Figure 8-1 summarize the locations and results of this follow-up investigation.

TABLE 8-1
SITE 907-ALV-002 BACTERIA UPSTREAM INVESTIGATION

Site	Location	Flow (gpm)	Total Coliforms (MPN/100 mL)	Fecal Coliforms (MPN/100 mL)	Enterococci (MPN/100 mL)
907-ALV-002 *(Routine Visit)*	Along the south edge of the Costco parking lot, just south of the Marengo Avenue and Fletcher Parkway intersection	10	**300,000**	**50,000**	**90,000**
907-ALV-002 *(Confirmation Visit)*	*(same as above)*	3	**141,000**	1,318	3,448
907-ALV-002-1	South of I-8, north of golf course, north side of fence, by the freeway	2	24,200	1,098	383
907-ALV-002-2	Next to 8515 La Mesa Boulevard	1	**141,000**	2,282	1,679

Notes:

Red Bold Type = value exceeds action level

Number of fecal coliforms was derived from the *E. coli* count using the following formula:

Number of fecal coliforms = (Number of *E. coli*) / 0.85.

FIGURE 8-1
SITE 907-ALV-002 UPSTREAM INVESTIGATION MAP

Site 908-UNI-002

Laboratory results for Site 908-UNI-002 yielded elevated total coliform and *Enterococcus* bacteria levels at both the routine and confirmation visits. The site is a manhole receiving water from primarily residential areas and some commercial. The water was clear, colorless, and odorless with no vegetation and some larvae present. A notable amount of food wrappers and trash was observed.

PHOTO 8-1: Trash at Site 908-UNI-002

Upstream streets appeared fairly clean and street sweeping was observed to be currently underway. However, inspected manholes in these neighborhoods had a significant amount of decaying leaves and small amounts of litter. Some irrigation runoff was noted.

Site 908-UNI-002-1 is a manhole on the main storm drain line upstream. A small amount of flow was observed and sampled here. Total coliform and *Enterococcus* levels were below the action level here. Farther upstream, the storm drains were dry but contained decaying leaves and litter.

As bacteria levels were high at the Site 908-UNI-002 and not upstream, the most probable source of the elevated bacteria levels was litter and decaying leaves in the storm drain system near and at the site. A summary of the locations and follow-up sampling events are presented in Table 8-2 and Figure 8-2.

TABLE 8-2
SITE 908-UNI-002 BACTERIA UPSTREAM INVESTIGATION

Site	Location	Flow (gpm)	Total Coliforms (MPN/100 mL)	Enterococci (MPN/100 mL)

FIGURE 8-2
SITE 908-UNI-002 UPSTREAM INVESTIGATION MAP

Base Data Sources: USGS, SanGIS, SANDAG

0 700 1,400 Feet

Site 908-UNI-004

Site 908-UNI-004 is a manhole that had clear, colorless and odorless water. Total coliform counts were at the action level initially, but had subsided upon the confirmation visit. At the initial visit, ponded water was observed in a parking lot several feet upstream of the site. There was no observable water at the confirmation visit.

PHOTO 8-2: Ponded water just upstream of Site 908-UNI-004

A shopping center immediately upstream was inspected, but storm drains were only damp and samples could not be taken. It was noted that these storm drains were cluttered with leaves and some litter, including food wrappers and soda bottles. Farther upstream, a manhole was sampled and did not have total coliforms above the action level.

The overall results of the investigation suggest that the high reading of total coliform bacteria at Site 908-UNI-004 was the result of a transient flow. The stagnant water observed during the routine visit may have supported bacterial growth, which had since dried up. The decomposing organic waste such as leaves and food observed in the shopping

center may contribute to bacterial growth, but without a sufficient flow, the bacteria could no longer survive.

The locations and results of sampling for this follow-up investigation are summarized in Table 8-3 and Figure 8-3.

9 SUMMARY AND RECOMMENDATIONS

9.1 Summary

9.1.1 Summary of Field Screening and Laboratory Analysis Data

In the City of La Mesa 2008 Dry Weather Monitoring Program, 21 sampling sites were visited, 20 of which had flowing or ponded water for field screening. Site 907-ALV-580 was sampled in place of Site 907-ALV-003, which was dry. Samples from six of these were sent for laboratory analyses. Confirmation visits and upstream investigations for sites showing constituents at or above respective action levels were performed at three sites. A summary of action level exceedances is provided in Table 9-1. Conclusions based on confirmation visits and upstream investigations are presented in Table 9-2.

TABLE 9-1
SUMMARY OF ACTION LEVEL EXCEEDANCES

Field Screening (20 samples)			
Analyte	**Number of Exceedances**	**Percentage of Sites with Exceedance**	**Site(s) Exceeding Action Level**
pH	0	0 %	---
Conductivity	0	0 %	---
Turbidity	1	5%	907-ALV-002
Surfactants	0	0 %	---
Ammonia-Nitrogen	0	0 %	---
Nitrate-Nitrogen	0	0 %	---
Orthophosphate-Phosphorus	0	0 %	---
Laboratory Analyses (6 samples)			
Analyte	**Number of Exceedances**	**Percentage of Sites with Exceedance**	**Site(s) Exceeding Action Level**
Oil & Grease	0	0 %	---
Cadmium	0	0 %	---
Copper	0	0 %	---
Lead	0	0 %	---
Zinc	0	0 %	---
Diazinon	0	0 %	---
Chlorpyrifos	0	0 %	---
Total Coliforms	3	50%	907-ALV-002, 908-UNI-002, 908-UNI-004
Fecal Coliforms	1	17%	907-ALV-002
Enterococci	2	33%	907-ALV-002, 908-UNI-002

Note: Data is from the initial site visits only.

The majority of sites had flowing water, ranging from less than 1 gpm to 187 gpm. Most sites displayed very little amounts of trash. Water at two sites had a musty odor. The remainder of the sites' water samples were odorless. Samples at four sites were yellow in color; the remainder were colorless. One site had opaque water at the initial visit, but was clear upon the confirmation visit. Sediments and fine particulates were present at nearly all sites. A dry site had small stains, likely resulting from mineral deposits. Algae grew at five sites, and several other sites were host to insects, snails, tadpoles and fish.

9.1.2 Summary of Follow-up Data

Table 9-2 presents the conclusions based on the results of the confirmation and upstream investigations conducted at three sites for the 2008 Dry Weather Monitoring Program.

TABLE 9-2
SUMMARY OF FOLLOW-UP INVESTIGATIONS

Site	Upstream Investigation Target Constituent(s)		Results / Probable Source
	Field	Laboratory	
907-ALV-002	Turbidity	Total Coliforms, Fecal Coliforms, Enterococci	Turbidity, fecal coliforms and Enterococci were below the action level at the confirmation visit. The total coliform exceedances may have resulted from decaying leaves in storm drains upstream, which were observed during the upstream investigation.
908-UNI-002	---	Total Coliforms, Enterococci	Based on confirmation visit and upstream investigation, litter and decomposing leaf debris located at and near the site were likely sources of the bacterial exceedances.
908-UNI-004	---	Total Coliforms	The total coliform exceedance was likely due to stagnant water and organic debris.

9.2 Recommendations

Based on the results of the year 2008 Dry Weather Field Screening Program for the City of La Mesa, the following actions are recommended for consideration.

- Remove leaves and trash from sites 907-ALV-002 and 907-ALV-002-2.
- Clean up trash from Site 908-UNI-002.
- Contact property management of the Vons shopping center located upstream of Site 908-UNI-004 regarding removal leaf debris and litter from storm drain inlets.

Laboratory Analytical Reports

EnviroMatrix Analytical, Inc.

06 August 2008

D-Max Engineering
Attn: Arsalan Dadkhah
7220 Trade Street, Suite 119
San Diego, California 92121

EMA Log #: 0807579

Project Name: La Mesa Dry Weather Monitoring
Project Desc./#:200827W-1

Enclosed are the results of analyses for samples received by the laboratory on 07/31/08 13:13. Samples were analyzed pursuant to client request utilizing EPA or other ELAP approved methodologies. I certify that this data is in compliance both technically and for completeness.

Dan Verdon
Laboratory Director

CA ELAP Certification #: 2564

4340 Viewridge Avenue, Suite A - San Diego, California 92123 - (858) 560-7717 - Fax (858) 560-7763

Notes and Definitions

QR-04	The RPD between the sample and sample duplicate is not valid since both results are below the reporting limit for this analyte.
GC-05	Results confirmed by GCMS.
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Notes and Definitions

QR-04	The RPD between the sample and sample duplicate is not valid since both results are below the reporting limit for this analyte.
GC-05	Results confirmed by GCMS.
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

FLOW ESTIMATION WORKSHEETS

Flowing Creek or Box Culvert

Width	42	in
Depth	0.75	in
Velocity	15/15	ft/sec
Flow	98	gpm

Filling a Bottle or Known Volume

Volume		mL
Time to Fill		sec
Flow		gpm

Flowing Pipe

Diameter		ft
Depth		ft
Velocity		ft/sec
Flow		gpm

COMMENTS: 2 pieces of trash visible - soda can, bag of chips.
insects - flies, larvae; tadpoles, snails

Trash Assessment Form

SITE ID: 907-ALV-001 **DATE:** 7/31/2008

LOCATION: alvarado Rd, east of the trolley station, on the channel **TIME:** 10:40

OBSERVER: MD, SD

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE):

ESTIMATED AREA OF ASSESSMENT L x W (FT): 50 x 5

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☒ **MS4** ☐ **RECEIVING WATER** ☐ **BOTH**	
☒ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Threat to Human Health and/or Aquatic Health	
☐ **Threat Human Health**	Site poses a threat to human health via swimming, wading, or walking through the area. Trash and debris has the potential to contain chemicals that may bioaccumulate, transmit dangerous bacteria (e.g. medical waste, diapers, human waste), or has the potential for physical harm (sharps, entanglement, nails, etc...). Comments should be added for clarification.
☐ **Threat to Aquatic Health**	Site poses a threat to aquatic health or other wildlife (via contact, ingestion, entanglement, etc...) from the trash and debris present. Trash and debris such as small floatable material that is persistent and can be transported long distances may resemble food and may be ingested. Wire, plastic, fishing line, and other material that has the potential for entanglement. Oil and other visible chemicals or chemical containers falls in this category. Comments should be added for clarification.

- **Complete the following section for Submarginal, and Poor Evaluations ONLY**

TYPE	Ranking or Count by Type *	POTENTIAL ROUTE (CHECK UP TO 2)				POTENTIAL SOURCE (CHECK UP TO 2)						
		Dumping	Littering	Upstream	Unable to determine	Household	Construction	Commercial	Industrial	School	Transient	Unable to determine
Automotive												
Biohazard Waste												
Business Related												
Cigarette Butts												
Construction												
Fabric/Clothing												
Food Packaging												
Food Waste												
Household												
Shopping Carts												
Toxic												
Yard Waste												

* Only rank the types of trash PRESENT in evaluated area from 1 through 12 (1 is most prevalent – 12 is least prevalent). DO NOT rank types of trash that are not present in evaluated area.

Trash Assessment Form

SITE ID: 907-ALV-003 DATE: 07/31/2008

LOCATION: Parkway Dr. located in SE corner of Coleman College property TIME: 1536

OBSERVER: MD SD

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): —

ESTIMATED AREA OF ASSESSMENT L x W (FT): 4 x 4

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☑ MS4 ☐ RECEIVING WATER ☐ BOTH	
☑ Optimal	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ Suboptimal	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ Marginal	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ Submarginal	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ Poor	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Threat to Human Health and/or Aquatic Health	
☐ Threat Human Health	Site poses a threat to human health via swimming, wading, or walking through the area. Trash and debris has the potential to contain chemicals that may bioaccumulate, transmit dangerous bacteria (e.g. medical waste, diapers, human waste), or has the potential for physical harm (sharps, entanglement, nails, etc...). Comments should be added for clarification.
☐ Threat to Aquatic Health	Site poses a threat to aquatic health or other wildlife (via contact, ingestion, entanglement, etc...) from the trash and debris present. Trash and debris such as small floatable material that is persistent and can be transported long distances may resemble food and may be ingested. Wire, plastic, fishing line, and other material that has the potential for entanglement. Oil and other visible chemicals or chemical containers falls in this category. Comments should be added for clarification.

- **Complete the following section for Submarginal, and Poor Evaluations ONLY**

TYPE	Ranking or Count by Type *	POTENTIAL ROUTE (CHECK UP TO 2)				POTENTIAL SOURCE (CHECK UP TO 2)						
		Dumping	Littering	Upstream	Unable to determine	Household	Construction	Commercial	Industrial	School	Transient	Unable to determine
Automotive

☐ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☑ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Threat to Human Health and/or Aquatic Health	
☐ **Threat Human Health**	Site poses a threat to human health via swimming, wading, or walking through the area. Trash and debris has the potential to contain chemicals that may bioaccumulate, transmit dangerous bacteria (e.g. medical waste, diapers, human waste), or has the potential for physical harm (sharps, entanglement, nails, etc...). Comments should be added for clarification.
☐ **Threat to Aquatic Health**	Site poses a threat to aquatic health or other wildlife (via contact, ingestion, entanglement, etc...) from the trash and debris present. Trash and debris such as small floatable material that is persistent and can be transported long distances may resemble food and may be ingested. Wire, plastic, fishing line, and other material that has the potential for entanglement. Oil and other visible chemicals or chemical containers falls in this category. Comments should be added for clarification.

Trash Assessment Form

SITE ID: 907-ALV-590 DATE: 7/29/08

LOCATION: SE corner of Prkwy Dr & Amarillo Ave intersection TIME: 14:25

OBSERVER: MD, SD

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): _____

ESTIMATED AREA OF ASSESSMENT L x W (FT): 10 x 4

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☒ MS4 ☐ RECEIVING WATER ☐ BOTH	
☒ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Threat to Human Health and/or Aquatic Health	
☐ **Threat Human Health**	Site poses a threat to human health via swimming, wading, or walking through the area. Trash and debris has the potential to contain chemicals that may bioaccumulate, transmit dangerous bacteria (e.g. medical waste, diapers, human waste), or has the potential for physical harm (sharps, entanglement, nails, etc...). Comments should be added for clarification.
☐ **Threat to Aquatic Health**	Site poses a threat to aquatic health or other wildlife (via contact, ingestion, entanglement, etc...) from the trash and debris present. Trash and debris such as small floatable material that is persistent and can be transported long distances may resemble food and may be ingested. Wire, plastic, fishing line, and other material that has the potential for entanglement. Oil and other visible chemicals or chemical containers falls in this category. Comments should be added for clarification.

Trash Assessment Form

SITE ID: 909-SPR-002 DATE: 7/30/08

LOCATION: Bancroft Dr. just South of Golondrina in front of 4621 Bancroft Dr TIME: 14:20

OBSERVER: MD, SD

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE): _____

ESTIMATED AREA OF ASSESSMENT L x W (FT): 5 x 3

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☒ MS4 ☐ RECEIVING WATER ☐ BOTH	
☒ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Threat to Human Health and/or Aquatic Health	
☐ **Threat Human Health**	Site poses a threat to human health via swimming, wading, or walking through the area. Trash and debris has the potential to contain chemicals that may bioaccumulate, transmit dangerous bacteria (e.g. medical waste, diapers, human waste), or has the potential for physical harm (sharps, entanglement, nails, etc...). Comments should be added for clarification.
☐ **Threat to Aquatic Health**	Site poses a threat to aquatic health or other wildlife (via contact, ingestion, entanglement, etc...) from the trash and debris present. Trash and debris such as small floatable material that is persistent and can be transported long distances may resemble food and may be ingested. Wire, plastic, fishing line, and other material that has the potential for entanglement. Oil and other visible chemicals or chemical containers falls in this category. Comments should be added for clarification.

- **Complete the following section for Submarginal, and Poor Evaluations ONLY**

TYPE	Ranking or Count by Type *	POTENTIAL ROUTE (CHECK UP TO 2)				POTENTIAL SOURCE (CHECK UP TO 2)

Trash Assessment Form

SITE ID: 908-UNI-003 DATE: 7/30/08

LOCATION: Along Lowell St. South of University Ave. TIME: 12:10

OBSERVER: MD SD

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE):

ESTIMATED AREA OF ASSESSMENT L x W (FT): 6 x 4

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☒ MS4 ☐ RECEIVING WATER ☐ BOTH	
☒ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Threat to Human Health and/or Aquatic Health	
☐ **Threat Human Health**	Site poses a threat to human health via swimming, wading, or walking through the area. Trash and debris has the potential to contain chemicals that may bioaccumulate, transmit dangerous bacteria (e.g. medical waste, diapers, human waste), or has the potential for physical harm (sharps, entanglement, nails, etc...). Comments should be added for clarification.
☐ **Threat to Aquatic Health**	Site poses a threat to aquatic health or other wildlife (via contact, ingestion, entanglement, etc...) from the trash and debris present. Trash and debris such as small floatable material that is persistent and can be transported long distances may resemble food and may be ingested. Wire, plastic, fishing line, and other material that has the potential for entanglement. Oil and other visible chemicals or chemical containers falls in this category. Comments should be added for clarification.

- **Complete the following section for Submarginal, and Poor Evaluations ONLY**

TYPE	Ranking or Count by Type *	POTENTIAL ROUTE (CHECK UP TO 2)				POTENTIAL SOURCE (CHECK UP TO 2)

Trash Assessment Form

SITE ID: 908-UNI-004 **DATE:** 7/30/08

LOCATION: manhole approximately at 7851 University Ave, S. side of St **TIME:** 9:15

OBSERVER: SD, MD

PREVIOUS TRASH ASSESSMENT RATING (IF APPLICABLE):

ESTIMATED AREA OF ASSESSMENT L x W (FT): 4 x 4

Amount and Extent of Trash	
EVALUATION OF TRASH INCLUDES*: ☑ MS4 ☐ RECEIVING WATER ☐ BOTH	
☑ **Optimal**	On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
☐ **Suboptimal**	On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
☐ **Marginal**	Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
☐ **Submarginal**	Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (>100- 400) . Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
☐ **Poor**	Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

* In areas where receiving water is accessible and adjacent to dry weather site, trash evaluation must include receiving water.

Site Evaluation for Threat to Human Health and/or Aquatic Health	
☐ **Threat Human Health**	Site poses a threat to human health via swimming, wading, or walking through the area. Trash and debris has the potential to contain chemicals that may bioaccumulate, transmit dangerous bacteria (e.g. medical waste, diapers, human waste), or has the potential for physical harm (sharps, entanglement, nails, etc...). Comments should be added for clarification.
☐ **Threat to Aquatic Health**	Site poses a threat to aquatic health or other wildlife (via contact, ingestion, entanglement, etc...) from the trash and debris present. Trash and debris such as small floatable material that is persistent and can be transported long distances may resemble food and may be ingested. Wire, plastic, fishing line, and other material that has the potential for entanglement. Oil and other visible chemicals or chemical containers falls in this category. Comments should be added for clarification.

- **Complete the following section for Submarginal, and Poor Evaluations ONLY**

TYPE	Ranking or Count by Type *	POTENTIAL ROUTE (CHECK UP TO 2)				POTENTIAL SOURCE (CHECK UP TO 2)						
		Dumping	Littering	Upstream	Unable to determine	Household	Construction	Commercial	Industrial	School	Transient	Unable to determine

Surfactants (Laboratory Analysis)
San Diego River Watershed

Note: All "nd" values have been plotted as 0.25 mg/L, which equals (reporting limit)/2. The last year of surfactants laboratory analyses was 2007.

Oil & Grease
San Diego River Watershed
Note: All "nd" values have been plotted with a value of (reporting limit)/2; this is 0.5 mg/L for 2002-2004 and 2.5 mg/L for 2005

EXECUTIVE SUMMARY

In January 2007, the Regional Water Quality Control Board (RWQCB) issued Order No. R9-2007-0001, a National Pollution Discharge Elimination (NPDES) Permit regulating discharges to the storm drain system within 18 municipalities in San Diego County, the County of San Diego, the San Diego County Regional Airport Authority, and the San Diego Unified Port District (collectively referred to as "Copermittees"). Order No. R9-2007-0001, generally referred to as the Municipal Permit, required each Copermittee, including the City of La Mesa (City), to update the existing Jurisdictional Urban Runoff Management Program (JURMP) document. The City's JURMP includes Best Management Practices (BMP) standards for businesses, construction and development projects, residents, and the City's own activities. The JURMP also includes programs for water quality monitoring and educational outreach.

This JURMP Annual Report presents the City's activities to implement its JURMP during the 2008/2009 fiscal year, which began on July 1, 2008 and ended on June 30, 2009. Each section of this JURMP Annual Report discusses how the City's efforts during 2008/2009 met the requirements of the Municipal Permit. Key actions taken for the major components of the City's storm water program are summarized below.

Development Planning Component

During 2008/2009, the City continued to oversee development activities occurring in the City in order to mitigate potential threats to water quality. The City implemented its treatment control BMP operation and maintenance verification program, which included maintaining the treatment control BMP database, conducting an inspection program, and implementing an annual self maintenance verification program. Eight sites in the City with approved treatment control BMPs were inspected and all eleven sites were required to complete annual maintenance verification forms. Enforcement actions were taken as needed for sites with BMP maintenance violations and/or which failed to return maintenance verification forms.

Construction Component

During 2008/2009, a total of 56 routine construction inspections were completed at 36 sites. Enforcement actions were taken where necessary and were effective in bringing about compliance. The City's plan check and inspection program required projects to comply with the City's minimum BMP requirements.

Municipal Component

The City inspected all high threat to water quality (TTWQ) municipal fixed facilities and continued its rigorous street sweeping and MS4 maintenance programs. A total of 568 tons of trash and debris was removed during street sweeping activities, and 122.25 cubic yards of debris was removed during standard MS4 maintenance. An additional 10.5 cubic yards of debris was removed during the cleaning of 21 filter inserts installed along University Avenue. The City also replaced or rehabilitated over 11,000 linear feet of sewer line and continued to maintain its sanitary sewer system to decrease the potential

for sanitary sewer overflows (SSO). City personnel were regularly trained regarding storm water pollution prevention concepts and practices.

Industrial and Commercial Component

During 2008/2009, the City met the Municipal Permit requirement to inspect at least 25 percent of the City's industrial and commercial inventory. The City inspected all high threat to water quality (TTWQ) sites on the City's industrial and commercial inventory as well as additional medium TTWQ sites. During the inspections conducted during 2008/2009, the City notified industrial and commercial businesses of the City's BMP requirements through discussions with facility personnel. Inspectors also assessed each facility's compliance with the General Industrial Permit (Industrial Permit). The City also conducted additional data collection programs focused on assessing pollutant discharge potential and other watershed-specific issues.

Residential Component

Residential areas comprise more than half of the City of La Mesa's land use, and the City worked to educate these residents through a variety of means. The City provided its quarterly *La Mesa Focus* newsletter to City residents via email and the City's website. Each newsletter published during 2008/2009 contained storm water articles relating to residential activities. During 2008/2009 the City hosted a variety of waste disposal events and encouraged residents to participate in these events. The City also responded to complaints made to the City storm water hotline regarding residential areas. The complaint investigations were used as opportunities to enforce BMP requirements and to educate residents about storm water pollution prevention.

Illicit Discharge Detection and Elimination Component

On September 10, 2008, the RWQCB adopted Addendum No. 2 to the Municipal Permit. This addendum requires the City to wait to submit the illicit discharge detection and elimination (IDDE) section of its JURMP Annual Report until the report for 2009 Dry Weather Monitoring Program, which took place after July 1, 2009, is finalized. The section must be submitted to the RWQCB no later than December 15, 2009.

While the full section will not be submitted until after September 30, 2009, the City did still implement its IDDE program component during 2008/2009. During this period, the City responded to and resolved 107 complaints made to its storm water hotline and the Public Works maintenance hotline. The City completed its 2008 Dry Weather Field Screening and Analytical Monitoring Program (Dry Weather Monitoring Program). The recommendations in the final report for the Dry Weather Monitoring Program were addressed during this reporting period. The City continued maintenance of the sanitary sewer system to prevent SSOs.

Education Component

As a means to raise storm water awareness in various communities, the City continued to conduct various education and outreach activities throughout 2008/2009. The City's efforts resulted in an estimated 30,510 impressions. City staff attended eight training sessions, and the City continued to circulate the quarterly *La Mesa Focus* newsletter to

businesses and residents. Each newsletter sent during 2008/2009 included storm water-related articles aimed at both residents and businesses in the City. Additionally, the City continued to maintain a storm water bulletin board at City Hall, which is strategically located to maximize exposure to both City personnel and project proponents that visit the Engineering Division. To better serve the City's diverse population, some educational materials were distributed in Spanish and English.

Public Participation Component

Public participation activities in 2008/2009 included cleanup events, which have a direct effect on water quality, and outreach activities, through which the City works to increase general knowledge and awareness regarding storm water issues. The City participated in Coastal Cleanup Day and the Creek to Bay Cleanup with two clean–up sites in the City for each event. During these events 857 pounds of trash and recyclables were collected. Other cleanup activities completed during 2008/2009 included Park Appreciation Day, Adopt-a-Park, Adopt-a-Block, and the La Mesa Spring Cleanup. The City partnered with local Eagle Scouts to install a storm water information kiosk at Jackson Park. A variety of waste disposal events, including household hazardous waste (HHW) disposal events, were also held in the City.

Fiscal Analysis Component

The City continued to fund its storm water program though the City's Sanitation Fund. Itemized expenditures for 2008/2009 were $679,674 and $844,912 has been budgeted for 2009/2010.

Effectiveness Assessment Component

The City continued evaluating the effectiveness of its storm water program based on the approach presented in the City's March 2008 JURMP update. The City has seen lower amounts of pollutants in its Dry Weather Monitoring Program in recent years. The City has also implemented additional treatment control BMPs for University Avenue and its Public Works Operation Center, and it conducts additional street sweeping to aid in meeting watershed requirements. An audience in need of additional education and outreach has been determined to be parties responsible for treatment control BMP operation and maintenance. The City's new treatment control BMP operation and maintenance verification program will help assist in providing knowledge regarding the proper upkeep of these BMP features.

Special Investigations

The City continued implementation of an additional water quality monitoring program, which includes sampling at sites in the San Diego River and San Diego Bay watersheds. The City also completed additional data gathering during industrial and commercial inspections to assess knowledge of watershed-specific storm water concepts and to assess the potential for inspected sites to be significant sources of watershed pollutants of concern.

Conclusions and Recommendations

The City will continue to implement the programs in its JURMP during 2009/2010; it is anticipated that some program refinements will be made as implementation progresses. The City will also collaborate with the other Copermittees to improve the efficiency of its program and to develop updated methods of assessing program effectiveness.

1.0 INTRODUCTION

1.1 BACKGROUND

This Jurisdictional Urban Runoff Management Program (JURMP) Annual Report presents a summary of the activities of the City of La Mesa (City) during the 2008/2009 fiscal year. Preparation and submittal of the JURMP Annual Report is required by San Diego Regional Water Quality Control Board (RWQCB) Order No. R9-2007-0001 (Municipal Permit).

1.1.1 REGULATORY BACKGROUND

The 1987 amendments to the Federal Water Pollution Control Act (also known as the Clean Water Act, or CWA) established a framework for regulating Municipal Separate Storm Sewer System (MS4) discharges under the National Pollutant Discharge Elimination System (NPDES). The RWQCB issued the first regional NPDES permit for municipalities in the San Diego Region in 1990, followed by a revised permit in 2001. The current Municipal Permit in turn replaced the 2001 permit, RWQCB Order No. 2001-01, in 2007.

Like all the other regulated municipalities in the San Diego region, collectively referred to as Copermittees, the City developed and submitted a JURMP to the RWQCB in 2002. As required by the Municipal Permit, the City submitted an updated JURMP in March 2008. The JURMP includes management measures for a variety of different sectors and activity types such as municipal, industrial, commercial, construction, and significant development and re-development.

Annual reports on the implementation of the JURMP are required to be submitted to the RWQCB September 30 of each year. This JURMP Annual Report presents information from the 2008/2009 fiscal year, which extended from July 1, 2008 to June 30, 2009.

1.1.2 CITY SETTING

The City of La Mesa includes an area of approximately nine square miles and has a population of over 56,000 residents. The primary land use in La Mesa is residential. Grossmont Center and businesses along major roads in the City make up the bulk of the commercial development, and a small light industrial area is located close to the geographic center of the City, just north of Interstate 8.

Approximately 52 percent of La Mesa is located within the San Diego River Watershed, while the remaining 48 percent is located in the San Diego Bay Watershed. The City of La Mesa makes up about one percent of the overall land area in both the San Diego Bay and the San Diego River watersheds. Runoff generated in La Mesa is conveyed through five drainage basins. Figure 1-1 on the following page shows the drainage basins and the land uses in the City. Table 1-1 lists the drainage basins along with the approximate

percentage of drainage area in La Mesa, the corresponding hydrologic unit (HU) of the basin, and the receiving water body to which each basin drains.

Table 1-1
City of La Mesa Drainage Basins

Drainage Basin	Percent of City Area	Hydrologic Unit	Receiving Water Body	Watershed
Alvarado	51	907	San Diego River	San Diego River
University	28	908	Chollas Creek	San Diego Bay
Spring Valley	14	909	Sweetwater River	San Diego Bay
Lemon Grove	6	908	Chollas Creek	San Diego Bay
Lake Murray	1	907	San Diego River	San Diego River

Please note that while runoff from the City drains to these water bodies, the actual water bodies are not themselves located within the City.

Figure 1-1
City of La Mesa Land Use and Drainage Basins

0 0.45 0.9 Miles

1.2 Purpose and Objectives

The City's JURMP presents a strategy to reduce the discharge of pollutants from the MS4 to the maximum extent practicable (MEP). The JURMP includes a variety of programs intended to minimize or eliminate the effects of urban runoff from the City on receiving water bodies. This JURMP Annual Report has been prepared to document the City's implementation of its JURMP during the 2008/2009 reporting period.

1.3 Report Organization

This report follows the standard reporting outline jointly developed by the Copermittees and submitted to the RWQCB in July 2007. The following sections are included in the JURMP Annual Report.

Section 1	**Introduction**
Section 2	**Development Planning Component**
Section 3	**Construction Component**
Section 4	**Municipal Component**
Section 5	**Industrial and Commercial Component**
Section 6	**Residential Component**
Section 7	**Illicit Discharge Detection and Elimination Component**
Section 8	**Education Component**
Section 9	**Public Participation Component**
Section 10	**Fiscal Analysis Component**
Section 11	**Effectiveness Assessment Component**
Section 12	**Special Investigations**
Section 13	**Non-Emergency Fire Fighting**
Section 14	**JURMP Revisions**
Section 15	**Conclusions and Recommendations**
Section 16	**References**

Each section includes all the sections required by the standard JURMP Annual Report format. In some cases, additional subsections within the standardized sections have been added to provide a clearer explanation of the City's activities during the reporting period. For example, in this introduction section, the standard reporting format only includes subsections 1.1 and 1.2. Subsection 1.1, Background, has been divided into subsections 1.1.1, Regulatory Background, and 1.1.2, City Setting, for the sake of clarity.

2.0 DEVELOPMENT PLANNING COMPONENT

2.1 INTRODUCTION

The development planning component of the City's JURMP aims to improve overall storm water quality by reducing the discharge of pollutants from development projects to the MEP and managing increase in runoff from development project that have the potential to negatively affect downstream water bodies. During the 2008/2009 fiscal year, the City accomplished these goals through implementation of its JURMP document.

2.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the development planning component during the 2008/2009 reporting period are presented in the following bulleted list. The remainder of this section provides more detail about the City's implementation of this component of its storm water program.

- Distributed the City's development requirements checklist (Appendix A of BMP Manual Part II) to projects applying for permits.
- Collaborated with the Copermittee Land Development Workgroup to discuss key Model SUSMP and Hydromodification Management Plan (HMP) development issues.
- Used the City's treatment control BMP database to track completed Priority Development Projects.
- Conducted maintenance inspections of treatment control BMPs at eight completed development projects in the City.
- Provided annual BMP maintenance verification forms to eight private and three public completed development projects prior to the start of the wet season.
- Issued six NOVs to development projects for failure to adequately maintain treatment control BMPs and failure to submit required annual maintenance verification forms in a timely fashion.

2.2 LAND USE PLANNING

2.2.1 BACKGROUND

The City's General Plan was last updated in 2002 and contains water quality and watershed protection principles in its Public Services and Facilities Element. The comprehensive principles established in 2002 provide an ample framework for implementing the requirements of the current Municipal Permit, and no changes to these policies were necessary during the reporting period.

2.2.2 Source Characterization

The City's General Plan contains established restrictions on the types of new development projects based on their planned land uses to ensure public safety and limit negative impacts to the surrounding environment. No changes to the development restrictions in the City's General Plan for storm water purposes were implemented during the reporting period.

2.2.3 Best Management Practice Requirements

Please refer to the City's updated JURMP document for a list of the water protection policies included in the City's General Plan. These policies remained the same throughout the reporting period.

2.2.4 Program Implementation

The City implemented its water protection related land use policies during the reporting period mainly through the City's Municipal Code. The City's Storm Water Ordinance and BMP Manual Part II were updated during the 2007/2008 reporting period to comply with the latest Municipal Permit. No changes to either of these documents were made during the 2008/2009 reporting period.

Details on how the City implemented its established water protection policies through its environmental review process and its development project approval and verification processes during the reporting period are provided in Sections 2.3 and 2.4 of this JURMP Annual Report document.

2.3 Environmental Review Process

The City's current environmental review process is detailed in the City's updated JURMP. The overall structure of the review process, such as the City's departments involved and the document submissions required, remains the same as in previous reporting years. No modifications to the City's environmental review process have been made since the submittal of the updated JURMP.

2.4 Development Project Approval and Verification Process

2.4.1 Background

During the 2008/2009 fiscal year, the City implemented the watershed protection principles in the City's General Plan through various aspects of the City's development project approval and verification process, as detailed below.

2.4.2 Source Characterization

The different priority pollutants, sources, and activities associated with development projects within the City are addressed through the implementation of the City's BMP Manual Part II, which contains the City's SUSMP regulations. No changes to the City's BMP Manual Part II were made during the 2008/2009 reporting period. However, the City will be updating this document to incorporate the recently approved Model SUSMP by the March 2010 deadline.

2.4.3 Best Management Practice Requirements

No changes were made to the development BMP requirements presented in the City's current JURMP during the 2008/2009 reporting period.

2.4.4 Program Implementation

During the 2008/2009 fiscal year, the City required implementation of its BMP requirements for all development projects through education, a comprehensive development project approval process, and a treatment control BMP inspection and maintenance verification program.

2.4.4.1 Outreach and Staff Training

The City provides training for staff involved in the planning and review of development projects within the City and works closely with the development community to communicate its development requirements throughout the entire approval process. The City also contracts with an outside consultant to perform reviews of Post Construction Water Quality Technical Reports (PCWQTR) submitted for development projects. Details on trainings conducted and educational materials developed and distributed during the reporting period can be found in Section 8 of this JURMP Annual Report document. Based on initial results from the first year of the program, distribution of treatment BMP maintenance verification letters seems to be increasing the level of knowledge of regulated parties.

2.4.4.2 Urban Runoff Approval Process for Development Projects

All development projects that required City permits were required to undergo the City's urban runoff approval process as detailed in the City's JURMP. Forms completed by project applicants are kept with the project's file at the City for future reference. As discussed in the City's JURMP, the City required all projects applying for construction and building permits to complete an "Appendix 'A' –Storm Water Requirements and Project Data Sheet" that guides project applicants to submit proper documents to the City for review. Features of the Appendix A form are discussed in the City's updated JURMP, and a copy of the form was included as an attachment to the 2007/2008 JURMP Annual Report document.

All development projects determined to be Priority Projects after completing the Appendix A form were required to implement the City's SUSMP requirements and prepare PCWQTRs. The City developed a Post Construction WQTR Report Guidelines sheet to detail all the information required to be included in a project's PCWQTR, which was included as an attachment to the 2007/2008 JURMP Annual Report. Table 2-1 lists the development projects subject to the City's SUSMP requirements during the 2008/2009 reporting period, the number of document reviews for each project, and their current approval statuses as of the end of the 2008/2009 reporting period.

Table 2-1
Development Projects Subject to SUSMP Requirements During 2008/2009

#	Project Name	Location	Project Type	Number of Reviews in 2008/2009	Approved? (Yes/No)
1	Severin Drive	5980 Severin Drive	Priority	1	No
2	La Mesa Hilltop	Westerly extension of Orien Avenue	Priority	3	No

La Mesa Hilltop first submitted a WQTR late in the 2004-2005 reporting period. After some time of inactivity, a new developer took over the project. City staff met with the City's stormwater consultant D-MAX Engineering, Inc. (D-MAX) and REC Consultants to discuss changes to the City's SUSMP Ordinance since the first review, and the project submitted an updated PCWQTR in early 2009. The submittals for the project received in 2008/2009 proposed BMPs such as retention areas and pervious pavement for driveways, but none of the submittals were approved due to BMP sizing issues. The City will continue to work with the project proponent to ensure proposed BMPs are appropriately sized prior to approving the project design.

Severin Drive is a proposed two-story commercial medical building to be built on an existing empty lot. The project submitted an initial package, and conditions were accepted by the design review board and planning commission, and the project was ratified by City Council in May 2009. No detailed grading or building plans have been submitted to the Engineering Department, but the City will continue to work with the project proponents to ensure proper site, source, and treatment control BMPs are proposed for the development prior to approval of any construction plans.

Two development projects that submitted documents to the City for review during the 2007/2008 reporting period, KFC/Taco Bell and Montbello South, did not submit revised documents during this 2008/2009 reporting period. Currently these two projects are on hold and it is unknown when or if they will resume development in the future. If any project is resumed, they will be subject to the City's current SUSMP requirements and the document review process detailed in the updated JURMP.

No Priority Projects were allowed to implement treatment control BMPs with low removal efficiency rankings during the reporting period. The City makes every effort to encourage development projects to select treatment controls with high and medium

pollutant removal efficiencies and does not expect to approve many projects with low removal efficiency BMPs. However, if projects proposing a low removal efficiency treatment control BMP with a defensible infeasibility analysis are approved, details of those projects and their feasibility analyses will be reported as required in future JURMP annual reports.

During the reporting period, no projects received a SUSMP waiver for implementation of treatment control BMPs. The City has never issued a SUSMP waiver in the past either, and at this time the City has no plans to develop a SUSMP waiver mitigation program.

Model SUSMP and Hydromodification Management Plan

The Copermittee Land Development Workgroup met regularly to discuss key Model SUSMP and Hydromodification Management Plan (HMP) development issues and provide updates on the status of consultant work products. The City of La Mesa regularly participated in the Land Development Workgroup during 2008/2009.

During the reporting period, the Copermittees submitted the Model SUSMP and HMP to the Regional Board for approval in January 2009. The Model SUSMP was approved by the Regional Board in March 2009, and the City will update its local SUSMP accordingly by the March 2010 deadline. The Land Development Workgroup did not receive approval or comments from the Regional Board regarding the HMP during the reporting period. The City's current BMP Manual Part II contains detailed Interim Hydromodification Criteria (IHC), which the City will continue to implement until the HMP is finalized. None of the development projects undergoing the City's review process during the reporting period were subject to the IHC since all of these projects are less than 50 acres. Once the Final HMP is approved, the City will also incorporate these requirements into its local SUSMP and update project applicant guidance documents.

BMP Installation Verification

During the course of 2008/2009, after maintenance verification letters had been sent out during the summer of 2008, the City identified recently completed Priority Projects within the City's jurisdiction to be added to the treatment control BMP inventory. When a project is completed, the City checks for BMPs prior to occupancy, records the site information, assigns it a TTWQ priority, and then adds it to the inventory of projects subject to the City's inspection and annual maintenance verification program the following fiscal year. This process helps the City focus its inspection resources on sites more likely to have maintenance deficiencies, as maintenance deficiencies are generally less likely at sites with recently installed BMPs. A table of the projects identified after distribution of verification letters is presented in Table 2-2 at the end of this JURMP Section. These projects will be added to the City's treatment control BMP inventory in 2009/2010.

2.4.4.3 Treatment Control BMP Inspection and Maintenance Verification Program

2008/2009 Annual Maintenance Verification

The Municipal Permit requires annual verification of operation and maintenance of treatment control BMPs installed within the City's jurisdiction. Annual verification must be provided by the party responsible for treatment control BMP maintenance and must be returned to the City prior to the start of the wet season (October 1st). While most of the implementation materials used for this program were developed during the 2007/2008 reporting period, 2008/2009 was the City's first year implementing the program. Using the property owner names and addresses recorded in the City's BMP database, BMP maintenance verification forms were mailed to all the projects included in the City's BMP database in early 2008/2009. The template letter, BMP maintenance verification form, and FAQ sheet were included as an attachment to the 2007/2008 JURMP Annual Report.

The City required that completed maintenance verification forms be returned by late August 2008, to give the City time to follow-up with non-responders. Out of the 11 projects on the City's inventory, three public projects and one private project returned their verification forms by the deadline. Seven projects did not respond, two of which were found to have new responsible party information. Contact information for these two projects was updated in the City's database, and verification forms were resent to the new responsible parties. NOVs were issued in September 2008 to the remaining five projects. Of the 5 projects that received NOVs in September 2008 for failure to return annual maintenance verification forms, Providence Square was the only site that failed to comply. An additional NOV was issued for the project and the site was again non-responsive. A routine inspection was conducted at the project in June 2009 to assess condition of the BMPs on site. Results of this inspection and further follow up actions for Providence Square are described below.

Operation and Maintenance Inspections

During the 2008/2009 fiscal year, the City contracted D-MAX to conduct inspections of projects with treatment control BMPs in accordance with the inspection frequencies outlined in the City's JURMP. Table 2-3 provides a summary of the number of inspections performed and how these met the requirements of the Municipal Permit. All high TTWQ inspections were performed prior to October 1, 2008.

Table 2-3
2008/2009 Inspection Numbers versus Municipal Permit Requirements

Site Class	Number of Sites	Full BMP Assessments	Percent Inspected	Permit Requirement	Requirement Met
All Inventoried Sites	11	8	73%	20%	**Yes**
Medium TTWQ	9	6	67%	50%	**Yes**

Site Class	Number of Sites	Full BMP Assessments	Percent Inspected	Permit Requirement	Requirement Met
High TTWQ	2	2	100%	100%	**Yes**

During the inspection, each BMP was visually inspected, inspection results were documented, GPS Coordinates were recorded for each BMP, and photos of BMPs with maintenance deficiencies were taken. Table 2-4 lists the development projects inspected, the number of BMPs installed at each site, the number of BMPs inspected, the number of BMPs found in need of maintenance, a brief description of inspection findings, and, if applicable, any follow-up actions taken. Public Priority Projects are indicated with the marker "(CIP)", which is short for capital improvement project. The BMP types installed at these sites and the sites' TTWQ priorities are included in the City's treatment control BMP inventory, which is included in Appendix A.1 of this JURMP Annual Report. Further discussion of some of the inspection results and follow-up actions is provided in the text below.

Kaiser and the Fire Station, the only two high TTWQ sites on the City's 2008/2009 treatment control BMP inventory, were inspected prior to October 1st 2008, at which time no maintenance deficiencies were found. While the Former Car Dealership project is not a high TTWQ site, it was also inspected in September 2008. This site was found to have maintenance deficiencies during last year's inspection program and failed to return the site's annual maintenance verification form by the August 2008 deadline. This BMP is located on a vacant lot due to the previous facility going out of business; however, the lot owner was informed that they were still responsible for the BMP regardless of whether or not the property was in use. The City wanted to assess if the site had improved its BMP maintenance prior to the start of the wet season, so a routine inspection was conducted in September 2008. During the inspection, it was observed that all vegetation in the swale was dead, and the inlet holes to the swale were completely clogged with sediment. The City issued an NOV to the site and worked directly with the party responsible for maintenance to bring the site into compliance. The swale was repaired and a maintenance verification form for the site was returned to the City in early October 2008, before the first rain event of the season.

Follow-up actions were recommended for all development projects with BMPs observed in need of maintenance. Since sites are notified by mail of deficiencies in BMP maintenance, with specific corrective actions listed, official verbal and written warnings are typically not used; however, the City has found that there is often significant turnover at property management companies responsible for BMP maintenance, and the City typically follows-up with non responders by phone to verify that documents have reached the correct individual prior to issuance of an NOV. Enforcement actions are administered in an escalating manner as described in the City's updated JURMP. Since inspections were conducted at the end of the reporting period, aside from the high priority sites and the Former Car Dealership which were inspected prior to the wet season, not all follow-up actions were able to be conducted during 2008/2009. Early in

the 2009/2010 reporting period, the City sent out its annual maintenance verification forms. For sites with noted maintenance deficiencies during 2008/2009, the cover letter included an additional summary report of the previous year's inspection findings and necessary corrective actions. The City will follow-up with any sites that fail to verify that the required corrective actions and regular BMP maintenance were conducted prior to the start of the 2009/2010 rainy season.

As mentioned previously, Providence Square was issued two NOVs prior to its routine inspection during the reporting period. As presented in Table 2-3, while one BMP was observed in need of maintenance, three were observed in adequate condition and it appeared that maintenance of BMPs is being conducted at the site. The site was notified of the observed maintenance deficiency with another request for the annual maintenance verification early in the 2009/2010 reporting period. After the City contacted the responsibly party of the project by phone, they promptly filled out the maintenance verification form and sent it in to the City. No further enforcement action is necessary at this time.

Copies of the forms utilized to administer the above enforcement actions can be found in Appendix D of the City's updated JURMP.

During the reporting period, no sites were observed to present a significant threat to human health or the environment during inspections, so none were reported to the RWQCB.

2.5 Development Planning Component Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

2.6 Program Review and Modification

The inspection frequency for treatment control BMPs has been revised to match the Municipal Permit language more closely. Table 4-2 of the JURMP has been revised to read as follows:

Table 4-2
Treatment Control BMP Inspection Frequencies

Site Type	Inspection Frequency
High Priority	Annual, Completed Prior to Wet Season
Contains Drainage Inserts	50 Percent of All Sites with Drainage Inserts Per Year
All Other Sites	As Needed

Table 2-2
Completed SUSMP Projects to Add to Appendix A.1

No.	Project Name	Project Address	Development Type	BMPs	HSA	TTWQ
1	Grossmont Medical Offices	8860/8870 Center Dr	Commercial	Bioretention, drainage inserts, hydrodynamic separator	907.11	Medium
2	Davis YMCA Expansion** (CIP)	8881 Dallas St	Commercial	Media filter, bioswale	907.11	Medium
3	Commercial Trolley Theaters	8555 Fletcher Pkwy	Commercial	Drainage inserts	907.11	High
4	La Mesita	7360 La Mesita Place	Residential	Drainage inserts	908.22	Medium

Table 2-4
Summary of Treatment Control BMP Inspection Results

#	Project Name	Inspection Date	BMP(s) Installed	BMP(s) Inspected	BMPs Requiring Maintenance	Inspection Notes	Follow Up Notes	Resolution Status
1	Kaiser	9/30/2008	1	1	0	No maintenance deficiencies noted.	Maintenance verification form returned in August 2009.	NA
2	Former Car Dealership	9/30/2008	1	1	1	Dead vegetation in swale and clogged inlet holes observed.	NOV sent to responsible party. Vegetation reestablished and inlet holes confirmed clear prior to start of wet season.	Resolved
3	Fire Station (CIP)	9/30/2008	1	1	0	No maintenance deficiencies noted.	NA	NA
4	Bougainvillea Walk	6/29/2009	3	3	1	One drainage insert observed full of sediment and debris.	Written notice of maintenance required sent to responsible party in early 2009/2010. Follow-up to continue in 2009/2010.	In progress
5	La Mesa Teen Center (CIP)	6/29/2009	4	4	2	Two drainage inserts observed full of sediment and debris.	Written notice of maintenance required sent to responsible party in early 2009/2010. Maintenance verification form returned in September 2009.	Resolved
6	Providence Square (Formerly Talmadge East Apartments)	6/29/2009	4	4	1	One drainage insert observed full of sediment and debris.	Written notice of maintenance required sent to responsible party in early 2009/2010. Maintenance verification form returned in August 2009.	Resolved
7	Lowell Street Condominiums	6/29/2009	4	4	1	One drainage insert observed full of sediment and debris.	Written notice of maintenance required sent to responsible party in early 2009/2010. Maintenance verification form returned in August 2009.	Resolved

#	Project Name	Inspection Date	BMP(s) Installed	BMP(s) Inspected	BMPs Requiring Maintenance	Inspection Notes	Follow Up Notes	Resolution Status
8	Parkview	6/29/2009	16	16	0	No maintenance deficiencies noted.	NA	NA

3.0 CONSTRUCTION

3.1 INTRODUCTION

The City's construction program is designed to control construction and grading activities in the City. These types of projects have the potential to impact nearby water bodies due to the presence of disturbed soils and building materials and the potential for associated pollutants to be transported off site by storm water or non-storm water flows. The City continued to implement its construction program throughout 2008/2009.

3.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the development planning component during the 2008/2009 reporting period are presented in the following bulleted list. The following subsections provide more detail on how the City complied with the Municipal Permit during the reporting period.

- Distributed appropriate checklists to all projects applying for grading and building permits.
- Conducted plan checks of erosion control plans to ensure construction projects comply with the City's minimum BMP requirements.
- Conducted training for applicable City staff.
- Conducted 56 construction inspections at 36 sites during 2008/2009.
- Issued 13 verbal warnings, two written warnings, and four NOVs to non-compliant construction sites and activities during 2008/2009.
- As part of the updated JURMP, required construction sites less than one acre to complete a Construction Storm Water Management Plan (CSWMP), similar to a Storm Water Pollution Prevention Plan, that details the planned construction phase BMPs for the project.

3.2 SOURCE CHARACTERIZATION

An inventory of active construction projects during the reporting period is presented in Appendix A.2 of this JURMP Annual Report. The City's inventory was maintained throughout the reporting period by the City's Engineering Division. New construction projects were added to the inventory at the start of construction, and projects were removed from the inventory after construction was completed. Since construction projects were continually being added and removed throughout the fiscal year, inventory updates were usually performed more frequently than the minimum once per month.

Since construction activities that involve grading activities are generally more of a threat to water quality than other construction activities such as tenant improvements, the City has chosen to include only projects that have applied for grading permits on the construction inventory. Even though other, smaller, construction projects are not included on the City's construction inventory, the City still requires BMP implementation and maintains oversight of these projects. The City's building inspectors inspect these sites for proper BMP implementation during their routine building construction inspections. Building inspectors issue a BMP stamp of approval on the building permit if all BMPs are being implemented properly. Building inspectors will notify the Engineering Division of the Public Works Department if any major BMP deficiencies are noted or if a facility is required to submit an application for a grading permit and thus be included on the City's construction inventory. Inspections by the Building Department are not tracked as are the City's construction inspections, but these inspections are used as a supplemental tool to implement the City's construction storm water requirements.

3.3 Updates to Ordinances and Approval Processes

The City did not make any changes or updates to City ordinances or approval processes during 2008/2009.

3.4 Best Management Practice Requirements

The City's updated construction and grading project requirements are detailed in the City's updated BMP Manual Part II, which can be found as Appendix C in the City's JURMP. The City did not make any changes to these BMPs during 2008/2009.

3.5 Program Implementation

The City implemented the construction component of its JURMP throughout the reporting period through education and staff training, its comprehensive construction and grading approval process, and its construction inspection program, as detailed below.

3.5.1 Education and Staff Training

During 2008/2009, City staff involved in construction program implementation were trained on dry weather and wet weather requirements, erosion control, material management BMPs, enforcement action and procedures. Please see Section 8 of this JURMP Annual Report document for details on trainings performed and construction-related educational materials distributed.

3.5.2 Construction and Grading Approval Process

The City's grading approval process is described thoroughly in Section 5 of the City's JURMP. During 2008/2009, City personnel verified that all construction projects planned

to implement the City's minimum BMP requirements prior to issuing any building or grading permits. The City continued to distribute the updated version of Appendix A, which helps the City and the project proponent identify whether coverage under the State of California General Construction Permit (Construction Permit) is needed. Additionally, the City continued to require construction projects that are not subject to the General Construction Permit to complete a Construction Storm Water Management Plan (CSWMP), which details BMPs planned for construction sites not required to develop a storm water pollution prevention plan (SWPPP). A copy of the City's CSWMP form is included as Attachment 3.1. Approved forms and documents completed by project proponents are kept with the each project's file at the City for reference.

During 2008/2009, the City continued to enforce a 17 acre maximum disturbed area for grading activities. None of the City's active construction sites were larger than 17 acres, and the maximum disturbed area limitation did not apply. However, all construction sites were still required to limit exposed cleared or graded areas to the amount of area that could be protected prior to a rain event, as prescribed in the City's seasonal BMP requirements.

The City also continued implementing advanced treatment requirements during the reporting period. Criteria for determining when advanced treatment is required are detailed in the City's updated JURMP. During the reporting period, the City's minimum BMP requirements were adequate at controlling sediment discharges at all of the active construction sites within the City's jurisdiction, and advanced treatment methods were not required at any construction sites.

3.5.3 Inspection of Construction Sites

Construction projects that were active during 2008/2009, along with their assigned TTWQ, the number of weeks the site was activity within the rainy season, and the number of inspections conducted during both the wet and dry seasons, the number of follow-up inspections, and the total number of inspections for each site is included in Appendix A.2. A total of 55 routine construction inspections were performed for 36 construction sites during 2008/2009.

Construction inspections conducted during the reporting period were performed as described in the City's updated JURMP. Key components of the inspections include checks for coverage under the General Construction Permit during the initial inspection and assessments of compliance with the City's BMP and discharge requirements during all inspections. Responsible parties at the sites are educated as needed during inspections. Copies of the inspection forms are kept on file at the City.

3.5.4 Enforcement Measures

Any violations were noted on the project's inspection form, and the sites were given a list of corrective actions necessary to fix the observed violation. When necessary, a

verbal or written warning was issued for the violation, and the City followed up with the site until compliance was achieved. Table 3-1, below, includes the number of violations and enforcement actions taken during the reporting period in response to violations of the City's minimum construction BMP requirements. Enforcement actions are administered in an escalating manner as described in the City's updated JURMP.

Table 3-1
Construction Enforcement Actions Taken

Enforcement Context	Verbal Warnings	Written Warnings	Follow-Up Inspections	NOVs	Stop Work Orders
Routine Inspections	11	2	1	2	0
Other Construction-Related Enforcement	2	0	0	2	0

Copies of the forms utilized to administer the above enforcement actions can be found in Appendix D of the City's updated JURMP.

None of the violations observed at construction sites during the reporting period were found to endanger human health or the environment. The City was able to bring about compliance at all sites for which enforcement actions were taken, and it was not necessary to report any of these sites to the RWQCB.

3.6 Construction Activities Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

3.7 Program Review and Modification

The City's JURMP was recently updated in March 2008. No changes to the City's construction component have been made since that time.

4.0 MUNICIPAL COMPONENT

4.1 INTRODUCTION

Throughout 2008/2009, the City of La Mesa continued to manage municipal areas and activities to reduce municipal discharges of pollutants to the MS4 to the MEP. As discussed in detail in the City's JURMP, the City owns and operates a variety of municipal facilities and activities. Public parks and recreation facilities, administrative buildings, fire stations, and public works facilities make up the bulk of the municipal areas in the City. Municipal activities conducted by the City or City contractors include power washing, graffiti abatement, building maintenance, landscaping activities, street sweeping, street and sidewalk repair, and MS4 and sanitary sewer system maintenance. Information about the City's prioritized street sweeping program can be found in Table 4-1, and information about the City's MS4 maintenance program can be found in Table 4-2. Information about sanitary sewer overflows (SSO) that occurred during 2008/2009 can be found in Table 4-3. The City continued to respond to complaints made to the City's Storm Water Hotline. All complaints made to the City's Storm Water Hotline are included in Appendix B; enforcement actions taken in response to complaint investigations are included in Table 4-4. The City's municipal inspection results can be found in Table 4-5 and Table 4-6.

4.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the municipal component during the 2008/2009 reporting period are presented in the following bulleted list. Additional details about the City's implementation of the municipal component and of its storm water program during the reporting period are provided in the remainder of Section 4.

- The City inspected all high TTWQ fixed municipal facilities.
- The City hosted eight training events/meetings for approximately 54 municipal personnel.
- The City maintained an informational storm water bulletin board in City Hall.
- The City removed a total of 568 tons of sediment and debris from street sweeping activities.
- The City removed a total of 122.25 cubic yards of sediment and debris from standard MS4 cleaning activities, not including drainage insert maintenance.
- The City removed over 10 cubic yards of sediment and debris from 21 filter inserts in University drainage basin.
- City personnel continued to restock the pet waste bag dispensers in City parks, using 18,000 pet waste bags during 2008/2009.

- A total of 121,089 linear feet of sewer line were televised during 2008/2009, which led to the discovery of some areas of the sanitary sewer in need of repair. The City replaced or rehabilitated 11,195 linear feet of sanitary sewer line.

4.2 FIXED FACILITIES

4.2.1 BACKGROUND

The City owns and operates a variety of municipal fixed facilities. As mentioned in the City's JURMP, municipal fixed facilities have been grouped under one category, fixed facilities. This is because these facilities receive routine inspections as part of the City's municipal program, making program implementation generally similar.

4.2.2 SOURCE CHARACTERIZATION

All fixed facilities are included on the City's municipal inventory, which was revised during the JURMP update in early 2008. Additional descriptions of the facilities and activities conducted at them can be found in the City's JURMP. The City's inventory is included in this JURMP Annual Report as Appendix A.3.

4.2.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

The City continues to implement and assess the effectiveness of BMPs at fixed municipal facilities. As mentioned in the City's JURMP, the City uses the California Stormwater Quality Association (CASQA) Municipal BMP Handbook to establish appropriate BMPs for fixed municipal facilities. Table 6-2 in the City's JURMP describes the CASQA fact sheets that are used for specific facility types.

The City continues to implement strict minimum BMP requirements for the use and management of pesticides, herbicides, and fertilizers, as described in the City's JURMP. The City also continues to use Calsense Computerized Irrigation Control (Calsense) at a number of fixed municipal facilities to reduce water use and decrease the chance of transporting pollutants to the City's MS4 by over-irrigation. BMP implementation for parks and recreational facilities, as described in the City's JURMP, has not changed.

City public works employees, fire station employees, and employees at other fixed facilities in the City continue to implement BMPs appropriate to the facility type as described in the City's JURMP. City fire response personnel continue to be trained in implementing BMPs for non-emergency fire fighting activities as described in Section 3 of the City's JURMP. There have been no changes in BMP requirements for any fixed municipal facilities.

4.2.4 PROGRAM IMPLEMENTATION

As mentioned above, the City's BMP requirements have not changed since the development of the revised JURMP. Some notable examples of implementation of those BMPs are provided below.

Calsense Computerized Central Irrigation Control

The City continues to use Calsense, an advanced automated irrigation system designed to prevent over irrigation at several fixed municipal facilities. Since Calsense is automated, it has a lower chance of malfunction than manual irrigation systems and allows the City to monitor irrigation activity from a central computer. A total of 21 municipal facilities, including both parks and various fixed facilities, are equipped with Calsense technology.

The Calsense system monitors irrigation by including the use of master valves and flow sensing to prevent over-irrigation and also decrease the amount of water that is used. A break in the system is recognized as a high flow, and the system is shut off until it is repaired. The use of this technology allows the City to prevent major leaks by detecting smaller leaks that might otherwise go undetected earlier than with a manual system. The automatic shutoff by Calsense saves thousands of gallons of water and prevents the runoff generated by a leak from carrying pollutants from parks and other fixed municipal facilities to the storm drain system. The irrigation system can be controlled by a central computer, which calculates the best time for irrigation based on moisture readings, weather, and real time flow rates at every valve. Additionally, the system allows staff to manage the system more efficiently and with less chance of over-irrigation. The irrigation schedules can be designed for a long period of time or easily modified for weekly or daily needs if necessary. The system allows for the most efficient usage of water while minimizing the chance of over-irrigation and consequent introduction of pollutants to the City's storm drain system.

Parks and Recreational Facilities

During 2008/2009, City continued to maintain the 34 pet waste bag dispensers installed throughout 14 parks. City personnel restock the dispensers as necessary; 18,000 pet waste bags were used during the reporting period. As mentioned in the City's JURMP, a number of volunteers continue to assist in keeping the designated dog area at Harry Griffin Park free of pet waste as part of the Canine Corners Program. The City also continues to host the Adopt-A-Park program, which engages residents of the City in volunteering to pick up trash throughout local parks. The City continued its partnership with the St. Madeline's Sophie Center, which employs developmentally disabled individuals in park maintenance activities.

In partnership with a local Eagle Scout, the City installed a third informational storm water kiosk during 2008/2009. There are now kiosks in three City parks: La Mesita Park, Vista La Mesa Park, and Jackson Park. These kiosks present storm water pollution prevention information to park patrons and are updated with information regarding upcoming outreach events. The Adopt-A-Park program, the partnership with St.

Madeline's Sophie Center, and the storm water kiosks are also discussed in Section 9 of this Annual Report.

Public Works Facilities, Fire Stations, Other Fixed Facilities
As previously mentioned, City personnel continued to implement appropriate BMPs for municipal fixed facilities as described in the City's JURMP. BMPs are also implemented during regular maintenance (i.e. landscaping, building maintenance, etc.) as necessary. Parking facilities associated with fixed municipal facilities are conducted as part of the regular sweeping activities and were swept weekly during 2008/2009. The large paved area at the City's Public Works Operation Center was swept at least once weekly during 2008/2009, and twice weekly if needed. Public Works employees continued to implement the storm water management plan (SWMP) at the Public Works Operations Center. Public Works employees also continued to maintain the seven filter inserts on the property; these inserts are cleaned twice annually.

Municipal Inspections
During 2008/2009, the City conducted follow-ups inspections of fixed municipal facilities recommended for follow-up based on the results of the 2007/2008 routine municipal inspections. As mentioned in the 2007/2008 JURMP Annual Report, these facilities received routine inspections at the end of 2007/2008, so follow-ups were completed in 2008/2009. The City distributed the corrective actions needed based on inspection findings to the municipal staff responsible for the maintenance of each of these facilities in 2008/2009. Following this notice, follow-up inspections were completed. The status of corrections was also checked during routine inspections conducted later in 2008/2009. Table 4-5, at the end of this section, lists all five facilities where follow-up inspections were conducted and the results of the inspections.

All high TTWQ fixed municipal facilities received a routine annual inspection in 2008/2009. Table 4-6 at the end of this section lists all high TTWQ municipal fixed facilities requiring inspection in 2008/2009, the date the inspection was performed, and the recommended corrective actions from the inspection. The City's inspection approach, as described in the JURMP, was implemented for all municipal inspections conducted in 2008/2009. The City's municipal inspection form is included as Attachment 4.1.

4.3 Roads, Streets, Highways, and Parking Facilities

4.3.1 Background

The City conducts regular maintenance of roads, streets, highways, and parking facilities in the City to control pollutants such as sediment, metals, and litter and debris.

4.3.2 Source Characterization

The City maintains roads, streets, and highways; the City also maintains four stand-alone parking facilities. Roads, streets, and highways, are included as one entity on the

City's municipal inventory and each individual stand-alone parking facility is also included on the City's municipal inventory, which is included in Appendix A.3.

4.3.3 BEST MANAGEMENT PRACTICES

The City's primary BMP for roads, streets, highways, and parking facilities is street sweeping. Other BMPs are chosen as needed based on the CASQA Municipal Handbook. The City's sweeping frequency is outlined in the JURMP and described in the following subsection. There were no changes to the BMPs implemented for roads, streets, highways, and parking facilities in 2008/2009.

4.3.4 PROGRAM IMPLEMENTATION

During 2008/2009, the City swept a total of 8,285 curb miles, removing approximately 568 tons of debris. Similar to previous reporting periods, the debris removed by sweeping activities was approximately 80 percent sediment and 20 percent leaves, debris, and trash. Table 4-1, below, describes the areas assigned high, medium, and low sweeping priorities, and the associated sweeping frequency. The City met the sweeping frequency requirements of the high, medium, and low priority streets as described in both the JURMP and in the table below. Parking lots associated with City parks were swept every two weeks; parking lots associated with all other fixed facilities in the City were swept every week during 2008/2009.

As a means to address priority pollutants in the San Diego Bay and the San Diego River Watersheds, the City conducted additional sweepings of some City streets. Designated residential areas that are low priority were swept monthly during 2008/2009 and selected high priority streets were swept weekly.

Table 4-1
Street Sweeping Prioritization and Frequency

Category	Description	Approximate Mileage of Route	Sweeping Frequency
High	Downtown areas, designated residential areas, designated commercial areas, stand-alone parking facilities	10.6 miles	At least every two weeks
Medium	Center islands	9 miles	At least once per month
Low	Designated residential areas	140 miles	As needed, at least annually
Fixed Facilities	Parking lots associated with municipal fixed facilities	N/A*	Weekly

Table 4-1
Street Sweeping Prioritization and Frequency

Category	Description	Approximate Mileage of Route	Sweeping Frequency
Fixed Facilities - Parks	Parking lots associated with parks	N/A*	Every two weeks
Fixed Facilities – PW Operations Center	Public Works Operation Center	N/A*	At least weekly, twice weekly if needed
Total Amount of Debris Collected from Street Sweeping Activities: 568 tons			

* Mileage data is not available for the swept area of stand-alone parking facilities, parking facilities associated with municipal facilities, and the PW Operations Center. Mileage accrued while sweeping these facilities is included in the total mileage.

Inspections
Trash, debris, and sediment that have accumulated on City streets is identified and cleaned up via street sweeping, so additional inspections beyond this effort are not necessary.

4.4 MS4

4.4.1 Background

The City's storm water conveyance system is designed to collect and convey surface runoff to receiving waters to prevent flooding during rain events. The City's MS4 consists of approximately 56 miles of pipes of varying materials, natural channels, concrete channels, and culverts and over 400 curb inlets and catch basins.

4.4.2 Source Characterization

The City's MS4 as one complete entity is included on the City's high TTWQ municipal inventory.

4.4.3 Best Management Practices

The City maintains a strict MS4 maintenance and cleaning schedule. Maintenance and cleaning are conducted to keep the MS4 in good operating condition and remove any trash or debris that may otherwise be carried to receiving waters. As described in the City's JURMP, BMPs for MS4 maintenance activities are chosen based on the CASQA Municipal Handbook and have not changed during 2007/2008.

The City has installed and maintains 21 filter inserts in catch basins in the University drainage basin, which are designed to prevent debris from entering the MS4. These filter inserts are maintained as part of the routine MS4 maintenance schedule. Figure 4-1 shows the locations of these drainage inserts.

4.4.4 PROGRAM IMPLEMENTATION

The City implemented a rigorous MS4 inspection and cleaning schedule during 2008/2009. The City inspected and cleaned all MS4 cleanout locations twice in 2008/2009; at least one cleaning was conducted between May 1 and September 30. The City's MS4 inspection and cleaning schedule for 2008/2009 is shown in Table 4-2, below.

Table 4-2
MS4 Maintenance Data

	Percent Inspected and/or Cleaned*	Percent of Open Channels Found with Anthropogenic Litter Cleaned	Amount of Debris Removed from Cleaning Activities
Catch Basins/Self Cleaning MS4 Facilities	**100%**	N/A	**52.25 cubic yards**
Open Channels	**100%**	**100%**	**70 cubic yards**
Drainage Inserts	**100%**	N/A	**10.5 cubic yards**
Total Debris Removed From MS4 Maintenance Activities: 132.75 cubic yards			

* No structures were observed at least 33% of capacity during the reporting period. However, the City cleans out any structures, including self-cleaning structures, in which trash and debris is observed at the time of inspection.

The City's cleanout locations are access points to various sections in the City's MS4, so no additional pipe beyond the cleanout location is typically cleaned. The City may flush the MS4 line and then reclaim the water in the event of a spill. During 2008/2009, there was no need to flush any MS4 line, so there is no data to report for additional MS4 cleanout activities. The City continued to maintain the filter inserts installed in the University drainage basin.

During 2008/2009, the City continued to inspect the open channels in the City and remove trash and debris as necessary. If litter or debris is observed during the routine inspections, it is removed immediately. The total length of the channel segments inspected and cleaned by City staff was approximately 4,930 feet.

As described in Table 4-2, 132.75 cubic yards of debris was removed during MS4 maintenance activities. The weight of the material removed was not recorded, though an overall estimation of the composition of debris removed from MS4 maintenance activities is 80 percent trash and leaves and 20 percent rocks and soil. The volumes were converted to estimated weights using the percent composition estimates from City maintenance staff and conversion factors of 2,300 pounds per cubic yard of rocks and

soil and 400 pounds per cubic yard of trash, leaves, and similar material. The total weight of material removed was estimated at 52.44 tons.

4.5 SANITARY SEWER SYSTEM

4.5.1 BACKGROUND

To reduce the possibility of a spill or leak caused by a malfunction of a component of the City's sanitary sewer system, the City conducts routine maintenance of the system. A spill that introduces untreated sewage to receiving waters can contain high concentrations of bacteria, viruses, and even hazardous chemicals. Routine inspection and maintenance of the sanitary sewer system works to reduce the potential for a spill or SSO and also helps prevent the infiltration of seepage from the sanitary sewer system to the City's MS4.

4.5.2 SOURCE CHARACTERIZATION

The City maintains a system of public sanitary sewer pipes to convey wastewater from the City to be treated. The sanitary sewer system, as one complete entity, is included on the City's high TTWQ municipal inventory.

4.5.3 BEST MANAGEMENT PRACTICES

The City implements BMPs from the CASQA Municipal Handbook, as described in the City's JURMP, during sanitary sewer maintenance. There have been no changes to these BMPs during 2008/2009. The City inspects and maintains the sanitary sewer system as part of regular wastewater activities. The City clears blockages and repairs leaks as needed.

4.5.4 PROGRAM IMPLEMENTATION

The City continued to maintain 33 posted signs at various canyon locations providing emergency contact information to report possible SSOs. These signs help the City in responding to illegal discharges and SSOs that may otherwise go unnoticed for a longer period of time.

As part of the City's regular maintenance schedule, the City maintains areas known to be "hot spots" for grease buildup on a monthly basis. The City has also worked to develop a Fats, Oils, and Grease (FOG) program that targets grease-producing facilities, such as eating establishments. The goal of the program is to reduce grease buildup in the sanitary sewer system, which can cause or contribute to SSOs. During 2008/2009, the City began to implement a Fats, Oils, and Grease (FOG) program that targets grease-producing facilities, such as eating establishments. The goal of the program is to reduce grease buildup in the sanitary sewer system, which can cause or contribute to SSOs. Additionally, the City introduced a FOG Ordinance, No. 2009-2794 and 2009-2795 which provides legal authority and outlines specific details of the program.

In addition to the monthly maintenance at known grease "hot spots," the City seeks to eliminate seepage from the sanitary sewer system to the MS4 by routine preventative maintenance of both systems. Routine maintenance of both systems allows the City to find areas that are likely to become problems in the future and make the necessary repairs/replacements before any larger issues arise. The City also continued to conduct flow metering in its sanitary sewer system to monitor for evidence of potential problems. During 2008/2009, the City replaced or rehabilitated 11,195 linear feet of sewer line. A total of 121,089 linear feet of sewer line was televised during 2008/2009, which led to the discovery of some areas of the sanitary sewer in need of repair. This prevented these areas from becoming future seepage points.

In case of an SSO, the City maintains a spill response plan that establishes procedures for responding to an SSO. Detailed information about the City's SSO spill response plan is included in the City's JURMP. During 2008/2009, there were eight SSOs. All spills were reported to the State Water Resources Control Board (SWQCB) within 24 hours through the California Integrated Water Quality System (CIWQS), as required by the Municipal Permit. Table 4-3, below, provides a description of each SSO event that occurred during 2008/2009. In each instance the City responded by recovering as much of the spill as possible and cleaning up and mitigating the effects of the spill.

Table 4-3
SSO Information

Spill Location	Spill Date	Estimated Spill Volume	Approximate Percentage of Volume Recaptured
6180 Sarita St.	9/1/2008	825 gallons	36%
4401 Palm Ave.	9/18/2008	360 gallons	69%
4401 Palm Ave.	1/11/2009	250 gallons	100%
7777 Alvarado Rd.	1/14/2009	300 gallons	83%
4426 Bellflower Dr.	3/8/2009	400 gallons	100%
3669 Harris St.	3/9/2009	600 gallons	100%
5016 Pine St.	3/29/2009	105 gallons	100%
7700 University Ave.	4/14/2009	400 gallons	100%

4.6 Mobile Municipal Activities, Including Power Washing

4.6.1 Background

The City conducts a variety of different mobile municipal activities, typically involving infrastructure maintenance, landscape maintenance, graffiti removal, and power washing. Power washing is not considered a part of any normal maintenance activities, but it is used when other methods of cleaning or graffiti removal are not effective.

4.6.2 Source Characterization

Both power washing and graffiti removal are listed on the City's high TTWQ municipal inventory. Infrastructure maintenance and landscape maintenance are listed on the City's medium TTWQ municipal inventory.

4.6.3 Best Management Practices

The City implements BMPs for mobile activities as described in the City's JURMP and as applicable to the activity. City personnel are trained to implement BMPs for the specific activity in which they are involved. For example, City personnel performing power washing are trained to collect all waste water and City personnel conducting graffiti removal are trained to store and handle any chemicals properly.

4.6.4 Program Implementation

Power washing and graffiti removal, both high TTWQ activities, are conducted on an as needed basis and are therefore not on a set schedule. Neither power washing nor graffiti removal was scheduled to be conducted during the timeframe that routine municipal inspections were conducted. Facility personnel responsible for graffiti removal and power washing were contacted, however, to discuss BMP implementation and verify that BMPs are implemented during these activities to prevent discharge of any pollutants to the storm drain system. Facility personnel reported that water is either directed to landscaping or storm drains are blocked and water is vacuumed up once the project is complete.

Municipal personnel that conduct other mobile activities such as infrastructure maintenance and landscape maintenance are trained regularly regarding BMPs for material use and disposal. Emergency vehicle maintenance personnel are trained on the proper handling and use of pesticides, herbicides, and fertilizers as described in the City's JURMP.

4.7 Special Events

4.7.1 Background

There is one annual special event in La Mesa: Oktoberfest, which is an annual three-day celebration occurring in early October each year. There are no other regular major special events, although smaller events may occur from time to time.

4.7.2 Source Characterization

As required by the Municipal Permit, special events are included on the city's high TTWQ municipal inventory.

4.7.3 BEST MANAGEMENT PRACTICES

As detailed in the City's JURMP, the City has selected BMPs for special events hosted in the City. In general, the goal of the City's special event BMPs are to properly manage trash and litter generated by the event, keep catch basins and other nearby MS4 facilities free of litter/debris from the event, and raise storm water awareness among the vendors and patrons of the event, as applicable. During smaller events, City staff ensure that any trash and debris left over from the events is cleaned up.

Individuals or groups wishing to host events in the City meeting certain criteria are required to obtain a permit from the City. Both Community Assembly Permits and Block Party Permits are available from Public Works and Park Use Permits are available from the Community Services Department. Permits require individuals responsible for the event to control trash and clean up after the event. If vendors are anticipated at the event, Vendor Fact Sheets (Attachment 8.1) are provided to the permit applicant.

4.7.4 PROGRAM IMPLEMENTATION

During 2008/2009, the City provided vendors of the Oktoberfest event a handout entitled "Tips for Outdoor Vendors." This fact sheet informed the vendors of the difference between the storm drain system and the sanitary sewer system and the effects of polluted urban runoff. The sheet also included event-specific BMPs, such as using dry cleaning methods, having spill response materials if using cooking grease, and managing trash and other wastes properly. The City distributed 330 copies of the aforementioned fact sheet.

The City also conducted an inspection of Oktoberfest during one of the days of the event. Minor amounts of litter and debris were observed on the ground and portable toilet facilities lacked secondary containment. The portable toilets were clean and free of any leaks, and the City plans on ensuring secondary containment trays are ordered with the portable toilets for the Oktoberfest occurring in 2009/2010. Trash and debris observed during the event was cleaned up as part of the routine special event BMPs that occurred at the close of the event.

4.8 PUBLIC REPORTING OF ILLICIT DISCHARGES AND CONNECTIONS

Reporting and Response

Public and municipal involvement are crucial to preventing and eliminating illicit connections and illegal discharges (IC/ID) from the storm water conveyance system. The Storm Water Hotline provides an effective means for individuals in the City to report suspected IC/IDs. The hotline number is provided on the City's website, in distributed storm water educational material, in storm water articles in the *La Mesa Focus* newsletter, and on the Storm Water Bulletin Board. Storm water complaints may also be reported through the City's website. All complaints received through the hotline and

website are logged onto a spreadsheet for documentation and tracking. Each logged complaint is investigated by City personnel to determine if an IC/ID is present. Responsible parties for any confirmed IC/ID are sought out and educated and/or cited as necessary and required to stop any and all illegal discharges. The Public Works Department also receives complaints regarding storm water, often due to infrastructure concerns. Complaints to the Public Works Department are also tracked and investigated.

Complaints received by the City during the 2008/2009 reporting period and the City's response to each are listed in Appendix B. A total of 107 complaints were documented this year.

Enforcement

As previously stated, complaints received via the Storm Water Hotline, City website, and Public Works hotline are included in a table in Appendix B. The table also includes a description of how each complaint was resolved during the reporting period. Resolutions to investigated complaints included issuing warnings, violations, and/or educational material. Table 4-4, below, summarizes the enforcement actions taken in response to complaints received.

Table 4-4
Enforcement Actions Resulting from Complaints Received by the Storm Water Hotline

	Verbal Warning	Written Notice to Comply	Written Warning	NOV
Commercial	5	4	0	5
Industrial	0	0	0	0
Mobile	2	0	0	0
Municipal	0	0	0	0
Residential	1	5	5	2
Construction	2	0	0	0

4.9 Spill Reporting, Response, and Prevention

The City has documented procedures for preventing and responding to sanitary sewer overflows. Preventative maintenance is regularly conducted on the City's sanitary sewer system, and video inspections and sewer surveys are regularly conducted to monitor the condition of the public sewer lines and to determine the necessity of maintenance. City crews do not maintain private laterals, but the City assists in the containment and cleanup of spills from private laterals if the spill could potentially reach the City's MS4.

Individuals in the City are encouraged to report any SSOs to the City's Storm Water Hotline. As previously mentioned, there were eight SSOs during 2008/2009; there were no other spills during the reporting period.

4.10 Education and Outreach

During 2008/2009, the City continued to educate municipal personnel regarding proper BMP implementation and other storm water and watershed concepts. The City held a variety of training sessions for City personnel. The City also continued to maintain a storm water bulletin board in City Hall, which provided storm water information and brochures. A photo of the bulletin board is included as Attachment 4.2. Detailed information regarding the education and outreach conducted for City personnel is described in detail in Section 8 of this Annual Report.

4.11 Municipal Component Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

4.12 Program Modification and Review

The following modifications were made to the municipal component of the City's JURMP during 2008/2009:

Fixed Facilities (Section 6.2 in the City's JURMP)
In the municipal inventory presented in the City's JURMP, there are four listings for public works facilities located at 8152 Commercial Street: PW Yard, PW Fleet, PW Storage and Maintenance, and PW Storage. During 2008/2009, the City chose to consolidate these four facilities into one listing on the City's municipal inventory. Since the facilities are located at the same address and operate in a shared space, the listings were consolidated to be more straightforward for inspection purposes. The consolidated listing included on the municipal inventory is now titled "Public Works Operation Center" and is high TTWQ.

Table 4-5
Follow-Up Compliance Table

#	Facility Name	Address	Reason for Violation (2007/2008 Routine Inspection)	Follow-Up	Resolution Status
1	Community Pool	5100 Memorial Drive	Chemical storage area lacks containment and chlorine residue is hosed off to nearby storm drains and channel. Pool deck is pressure washed, water discharges to pool deck drains, which are connected to the storm drain system.	See Table 4-6 on the following for progress made during 2008/2009	In Progress
2	Harry Griffin Park	9550 Milden Street	Portable toilets lack secondary containment.	Not resolved at time of follow-up inspection, but confirmed corrected during 2008/2009 routine inspection	Resolved
3	Northmont Park	Severin Drive and Amaya Drive	Significant debris in and around inlet. Herbicide reside observed on sidewalk.	Not resolved at time of follow-up inspection, but confirmed corrected during 2008/2009 routine inspection	Resolved
4	Public Works (PW) Yard (including PW Storage Yard, PW Fleet, PW Storage and Maintenance)	8152 Commercial Street	Significant amounts of sediment in the stockpile area, storage area and near an inlet on site.	Follow-up inspection found the corrections had been made. Confirmed continued implementation of corrections during 2008/2009 routine inspection.	Resolved
5	Rolando Park	Alamo Way & Vigo Street	Significant sediment and uncontained hillsides and stockpiles. Significant debris in storm drains. Construction BMPs failing or not implemented.	Follow-up inspection found the corrections had been made. Confirmed continued implementation of corrections during 2008/2009 routine inspection.	Resolved

Table 4-6
Routine Municipal Inspection Results

#	Facility Name	TTWQ	Municipal Category	Inspection Date	Corrective Actions Needed	Follow-Up Steps Taken	Resolution Status
1	Allison Avenue Lot (Parking Facility)	High	Roads, Streets, Highways, and Parking Facilities	5/28/2009	• Provide secondary containment for portable toilet and sink Remove food, debris and trash stains from dumpster areas	• City staff are currently investigating whether the portable toilet at this location is meant to be wheelchair accessible. If so, equipping the portable toilet with secondary containment will make the facility inaccessible to wheelchairs. • Portable toilet is clean, there is no evidence of spills or leaks	In Progress
2	Aztec Park	High	Parks and Recreation Facilities	5/6/2009	• No significant corrective actions	N/A	N/A
3	Briercrest Park	High	Parks and Recreation Facilities	5/26/2009	• No significant corrective actions	N/A	N/A
4	Collier Park and Pump House	High	Parks and Recreation Facilities	5/26/2009	• Provide stabilization for hillsides on site to prevent sediment transport to channel. • Remove leaf and sediment debris around culvert and throughout site; consider increasing frequency of sweeping • Ensure catch basin is kept free of trash and debris.	• City installed wall at base of hillsides to help stabilize hillsides in June 2009. • Parks Staff cleaned out culvert and catch basins in the park in June 2009.	Resolved

Table 4-6 (Continued)
Routine Municipal Inspection Results

#	Facility Name	TTWQ	Municipal Category	Inspection Date	Corrective Actions Needed	Follow-Up Steps Taken	Resolution Status
5	Community Pool	High	Parks and Recreation Facilities	5/29/2009	• Remove sediment build up around concrete channel. • Stabilize loose sediment in the landscaping to prevent erosion and sediment transport. • Use dry methods or collect all water used to cleanup pool chemicals and dispose of appropriately to a sewer drain. • Provide some documentation of this change of practice. • Minimize discharge of water to deck drains that are not directed to the sewer	• Stormwater Program Manager met with pool staff in June to discuss necessary changes to current practices. Hosing will be minimized to ensure water, which drains to landscaping, is fully contained by the landscaping • Spill kit was obtained • City is investigating potential options for providing secondary containment to chemical storage areas	In Progress
6	Harry Griffin Park	High	Parks and Recreation Facilities	5/26/2009	• No significant corrective actions	N/A	N/A
7	Highwood Park	High	Parks and Recreation Facilities	5/27/2009	• No significant corrective actions	N/A	N/A
8	Jackson Park	High	Parks and Recreation Facilities	5/27/2009	• No significant corrective actions	N/A	N/A
9	Junior Sean Sports Complex	High	Parks and Recreation Facilities	5/28/2009	• No significant corrective actions	N/A	N/A
10	La Mesa Blvd (Parking Facility)	High	Roads, Streets, Highways, and Parking Facilities	5/28/2009	• No significant corrective actions	N/A	N/A
11	La Mesita Park and Gardener's Shack	High	Parks and Recreation Facilities	5/27/2009	• No significant corrective actions	N/A	N/A

19	Rolando Park	High	Parks and Recreation Facilities	5/27/2009	• No significant corrective actions	N/A	N/A
20	Sunset Park, Gardener's Shack and Recreational Building	High	Parks and Recreation Facilities	5/27/2009	• No significant corrective actions	N/A	N/A
21	Sunshine Park	High	Parks and Recreation Facilities	5/27/2009	• No significant corrective actions	N/A	N/A
22	Vista La Mesa Park	High	Parks and Recreation Facilities	5/28/2009	• No significant corrective actions	N/A	N/A

Note: Roads, streets, highways, and parking lots; the MS4; and the sanitary sewer system were inspected via the maintenance effort described earlier in this section.

Figure 4-1
City Maintained Drainage Inserts Installed in the University Drainage Basin

5.0 INDUSTRIAL AND COMMERCIAL

5.1 INTRODUCTION

During 2008/2009, the City continued to implement a storm water program to reduce urban runoff pollution from the areas and activities of industrial and commercial businesses. The City aims to reduce the amount of pollutants discharged from industrial and commercial facilities by implementing various aspects of its industrial and commercial program.

5.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Notable achievements for the industrial and commercial component during the 2008/2009 reporting period are outlined below. Additional details about the City's implementation of the industrial and commercial component and of its storm water program during the reporting period are provided in the remainder of Section 5.

- The City met the Municipal Permit requirement of inspecting at least 25 percent of its stationary industrial and commercial inventory.
- The City inspected all high TTWQ stationary industrial and commercial facilities.
- The City completed pollutant discharge potential assessment (PDPA) forms and additional watershed-specific questionnaires at inspections to aid watershed management and source identification efforts.
- Based on inspection findings and complaints made to the hotline, the City issued 46 NOVs, four notices to comply, and seven verbal warnings to industrial and commercial businesses.

5.2 STATIONARY INDUSTRIAL AND COMMERCIAL SITES / SOURCES ELEMENT

5.2.1 BACKGROUND

The City's updated industrial and commercial inventories can be found in appendices A.4 and A.5, respectively, and include all stationary facilities known to be operating in the City that are required to be included on the City's inventories. Stationary facilities in the City include, but are not limited to, manufacturing facilities, wholesalers, auto dealerships, auto repair shops, and restaurants. The City requires industrial and commercial businesses to implement pollution prevention measures and minimum, activity-specific BMPs to mitigate the impacts of business activities on water quality.

5.2.2 SOURCE CHARACTERIZATION

The City's industrial and commercial inventories include both stationary and mobile businesses, as required by the Municipal Permit, and were updated during 2008/2009.

Information on how the City prioritizes the industrial and commercial inventories based on TTWQ is discussed in detail in the City's JURMP. The City considers factors including those listed below when prioritizing the inventories:

- Industrial Permit subjectivity
- Consideration of downstream waterbody and whether the business is likely to discharge pollutants for which the waterbody is impaired
- Results from previous inspections and institutional knowledge
- Proximity to the receiving waterbody

The City's updated inventory includes 468 stationary industrial and commercial facilities.

5.2.3 Best Management Practice Requirements

Industrial and commercial businesses in the City are required to implement pollution prevention methods and other designated BMPs to reduce or potentially eliminate the generation of pollutants from business areas/activities. The City has established a set of minimum BMPs based on the CASQA Industrial and Commercial Handbook. The requirements include BMPs applicable to all facilities as well as activity-specific BMPs. The City's BMP requirements are described in more detail in the City's BMP Manual Part I, which is an attachment to the City's JURMP. BMP requirements for stationary industrial and commercial businesses did not change during 2008/2009.

5.2.4 Program Implementation

As previously mentioned, the City updated its industrial and commercial inventory during 2008/2009. The updated industrial and commercial inventories are included as Appendix A.4 and Appendix A.5, respectively, to this JURMP Annual Report.

Industrial and Commercial Inspections
During 2008/2009, the City conducted storm water compliance inspections at selected stationary industrial and commercial facilities. All high TTWQ sites were selected for routine inspection. Additional sites selected for routine inspection were medium TTWQ and were typically restaurants and auto-related facilities. The City chose to select mainly restaurants and auto-related facilities for the additional industrial and commercial inspections due to those industry categories' potential to discharge bacteria and heavy metals, respectively.

Table 5-1, on the following page, provides a summary of the industrial and commercial site visits. In the table, full inspections have been counted as one full inspection. Because facilities move/go out of business, are duplicates of other businesses listed on the City's inventory, or are conducting activities for which inclusion on the City's inventory is not necessary, full inspections are not conducted at all visited facilities. Since time and effort is spent to visit these facilities, visits where a full inspection is not conducted are considered equivalent to one half of a full inspection. The only time a site visit would not count as half of a full inspection is if the facility moved and was replaced

by a facility where a full inspection was conducted or the facility was a duplicate of another facility selected for inspection.

Table 5-1
Summary of Routine Site Visits

Facility Category	Inventoried Stationary Sites	Equivalent Full Inspections	Percentage of Total Inventory
High TTWQ Sites	42	42	9%
Additional Sites	426	109	23%
Totals	**468**	**151**	**32%**

Facility inspections were conducted in accordance with the protocol set in the City's JURMP. Inspections involved a thorough examination of the facility and all outdoor activities. BMP deficiencies and corrective actions were recorded on the City's industrial and commercial inspection form and discussed with facility personnel present during the inspection. During 2008/2009 the City revised the Microsoft Access Industrial and Commercial Database, which stores industrial and commercial inspection information, to allow for inspectors to enter data directly into the database in the field rather than using a paper form. Information collected during the inspection was the same whether the inspector was using the paper form or inputting information directly into the database using a tablet computer. Inputting inspection results directly into the database during the inspection streamlines the inspection process as it eliminates the need for data entry. Additionally, the inspector has all previous inspection records on hand during the inspection if any questions about previous inspections arise.

During the inspection process, the City also checked Industrial Permit compliance status when applicable. The City also reviews storm water pollution prevention plans (SWPPP) and monitoring results when applicable. Businesses observed to be in violation of the Industrial Permit are included in Table 5-2, at the end of this section. The City also completed PDPA forms and supplemental watershed questionnaire forms during the inspections in an effort to collect more data from inspected facilities. These forms are included with the City's inspection form, which is included in Attachment 5.1. More information about the results of the watershed questionnaire analysis is presented in Section 12.

During 2008/2009, the City conducted several types of inspections:

- Follow-up inspections at sites not in compliance in 2007/2008
- Routine inspections for 2008/2009
- Follow-up inspections at sites not in compliance in 2008/2009

The results of these inspections are presented in Table 5-3.

In some cases, a facility recommended for follow-up during 2007/2008 was observed to be in compliance during the follow-up inspection conducted during 2008/2009. These sites received routine inspection subsequent to the follow-up to confirm continued compliance with City requirements. In some cases, businesses were out of compliance in the 2008/2009 routine inspections. The City will conduct further follow-up and enforcement activities at these sites to bring them back into compliance in 2009/2010.

The City did not rely on third party inspections to satisfy its industrial and commercial inspection requirements during the reporting period. The City does not presently maintain a third party inspection program.

General Industrial Permit

Subjectivity to the Industrial Permit was evaluated during the industrial and commercial inspection process. If the business was new and had not previously been inspected, or if the business had recently changed activities, the inspector gathered information about the business activities that occur on site and assigned or reassigned the business' standard industrial classification (SIC) code(s). Based on the assigned SIC code, the inspector evaluated the Industrial Permit subjectivity of the business. Any violations of the Industrial Permit requirements were recorded on the standard industrial and commercial inspection form and are presented in Table 5-2, at the end of this section. The table includes businesses directed to file a Notice of Intent (NOI) and develop a SWPPP and monitoring program, as well as businesses that had filed an NOI but had failed to develop a SWPPP and monitoring program. The table also includes facilities that could potentially gain exemption from Industrial Permit requirements by completing notice of non-applicability/no exposure certification (NONA/NEC) paperwork. Each business was notified of any Industrial Permit-related non-compliance by the inspector.

Education and Outreach

In addition to checking for compliance with the City's requirements and the Industrial Permit, inspections provide a venue to provide site-specific one-on-one education regarding storm water concepts and BMPs. Inspectors discussed a variety of topics such as watershed concepts, the Industrial Permit and minimum, activity-specific BMP requirements. Prior to performing industrial and commercial inspections, the City sent a letter to all businesses informing them of the upcoming inspection. This notification letter also authorized the City's consultant, D-MAX Engineering, Inc., to perform the facility inspections on behalf of the City.

In previous years, a copy of the hand written inspection form was sent to businesses as record of the inspection and to provide corrective actions to facility personnel. It was determined that some businesses had a difficult time understanding what actions were needed or viewed the actions more as recommendations than requirements. A database generated report, which clearly states the required corrective actions, was developed and distributed to businesses during the routine inspections conducted in late 2008/2009.

Ideally, this method of inspection result notification will more effectively convey inspection results and required corrective actions to facility personnel.

During 2008/2009, updates were also made to the instructional sheets that are provided with NOI and NONA/NEC paperwork. It was common for facility personnel to call the inspector or Storm Water Program Manager to ask about completing paperwork for Industrial Permit status. NONA/NEC paperwork is relatively long and tends to be confusing for business personnel, so most Industrial Permit-related questions were about NONA/NEC paperwork. The instruction sheets for both the NOI and NONA/NEC paperwork were revised to provide more guidance in filling out the paperwork properly. The revisions in the City's guidance materials should simplify the process of completing NOI and NONA/NEC paperwork. NOI and NONA/NEC cover sheets are included as Attachment 5.2.

The City continued to partner with Target and Dixieline Lumber in the City to provide English and Spanish Integrated Pest Management (IPM) cards (Attachment 5.3) available to the public at each business's garden center. This continued collaboration between the businesses and the City's Stormwater Program Manager in distributing educational material is a valuable asset to the City's storm water program. During 2008/2009, a total of 62 packets of English IPM cards and 60 packets of Spanish IPM cards were distributed through Target and Dixieline Lumber.

The City continued to publish storm water-related articles in the widely distributed *La Mesa Focus* newsletter. The 2008 issues were distributed electronically to residents and businesses in the City. Summaries of the articles in the newsletter can be found in Section 6; the newsletters are included as Attachment 5.4 to this JURMP Annual Report.

Enforcement

Several industrial and commercial facilities were observed to be out of compliance with the City's municipal storm water ordinance and/or the Industrial Permit during inspections conducted in 2008/2009. As previously mentioned, some inspections were conducted near the end of the 2008/2009 reporting period, so actions to bring the sites into compliance will continue into the 2009/2010 reporting period. The City did, however, send NOVs to all businesses in violation of the City's municipal storm water ordinance and/or the Industrial Permit during routine inspections conducted in 2008/2009. A total of 41 NOVs were mailed in response to the 2008/2009 inspections for businesses failing to properly implement BMPs. No industrial and commercial IC/IDs were discovered during routine inspections.

During the course of the 2008/2009 reporting period, the City received 20 complaints through the City's storm water hotline regarding stationary industrial and commercial businesses. Details of the industrial and commercial complaint investigations are included in the City's complaint log, which is included as Appendix B. The City took the following enforcement actions during investigations conducted in response to complaints to the storm water hotline:

- Issued four notices to comply

- Issued seven verbal warnings
- Issued five NOVs

There were no instances of noncompliance that posed significant threat to human health or the environment observed during 2008/2009. Other than the non-filers discussed earlier in this section, no other businesses were reported to the RWQCB.

5.3 Mobile Sources

5.3.1 Background

Due to the nature of activities of most mobile businesses, a major area of concern tends to be illegal discharges. In general, mobile businesses can difficult to identify, as many may not have City business licenses. Additionally, many mobile businesses may be home based and activities do not occur in one fixed location, inspections of such facilities are impractical.

5.3.2 Source Characterization

Known mobile industrial and commercial businesses, as described in the City's JURMP, are included on the City's inventory and are marked as mobile. Toward the end of the fiscal year, the Regional Industrial and Commercial Workgroup also developed a web-based mobile business database for use by all Copermittees. The goal of developing this database is to allow Copermittees to share information about mobile businesses, which may be active in more than one jurisdiction. The City contributed its mobile business inventory for upload to the regional database.

5.3.3 Best Management Practice Requirements

BMPs for stationary industrial and commercial facilities are required to be implemented for all outdoor activities, as applicable. BMPs for mobile businesses, including key principles, such as proper collection and disposal of any discharge, are discussed in the City's JURMP. The City has also established a program that requires mobile businesses operating in the City to sign an affidavit making businesses aware of the City's BMP requirements and commits them to implementing the required BMPs.

During 2008/2009, the Regional Industrial and Commercial Workgroup, in which the City participated, developed regional mobile business BMP standards. These standards were devised to create a uniform set of minimum BMPs for mobile businesses operating within the region. The regional mobile business BMP standards were adopted at the end of June 2009.

5.3.4 PROGRAM IMPLEMENTATION

During the 2008/2009 inspection program, the City responded to three calls to the City's storm water hotline regarding mobile businesses. A notable occurrence of mobile non-compliance as well as the City's response is discussed below:

- An anonymous caller reported to the storm water hotline that mobile pressure washing activities were being conducted at La Mesa Middle School without the use of effective BMPs. Overflow from washing activities was observed in street. The City's Stormwater Program Manager contacted Gary Olsen of Steam Glow Inc., the business performing pressure washing, who vacuumed the excess water and altered pressure washing procedures to ensure compliance with minimum BMP requirements.

More detail about the complaints made to the City's storm water hotline regarding mobile businesses is included in the City's complaint log in Appendix B.

In addition to the regional effort to standardize mobile business BMPs, the Regional Industrial and Commercial Workgroup worked to develop a regional mobile business database. The database is designed to store information regarding mobile businesses operating within the region and facilitate communication regarding mobile business activities and enforcement actions between Copermittees.

Mobile Affidavits
The City requires mobile businesses to sign an affidavit when applying for a business license to acknowledge the City's BMP requirements. Additionally, the affidavit states that the business owner agrees to implement BMPs as required by the City's JURMP and acknowledges that failure to do so will result in enforcement action and possible legal action. During 2008/2009, there were no applications for a business license by a mobile business; therefore no affidavits were signed during this reporting period.

Education and Outreach and Enforcement
As previously mentioned, three complaints were made to the City's Storm Water Hotline regarding mobile businesses. In each instance, City personnel discussed the BMP requirements of mobile businesses with business personnel.

There were no instances of noncompliance of mobile businesses that were believed to present potential threats to human health or the environment observed during 2008/2009, so none were reported to the RWQCB.

5.4 INDUSTRIAL AND COMMERCIAL COMPONENT EFFECTIVENESS ASSESSMENT

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

5.5 PROGRAM REVIEW AND MODIFICATION

The City's JURMP was recently updated in March 2008. No changes to the City's industrial and commercial component have been made since that time.

Table 5-2
Violations of the Industrial Permit

#	Business Name	Street Address	Permit Subjectivity	SIC Code(s)	Notes	Action to Correct Violation

6.0 RESIDENTIAL

6.1 INTRODUCTION

Over half the land use in the City of La Mesa is designated as residential. Due to the large residential area, activities that take place within these areas have the potential to impact the quality of the receiving water bodies. Residential activities such as vehicle washing, over-irrigation, pesticide and fertilizer application, and home maintenance can potentially contribute pollutants to the City's MS4 if BMPs are not properly implemented. Additionally, improper disposal of household hazardous waste (HHW) can also contribute pollutants to the MS4. Pollutants of concern include sediment, pesticides, herbicides, fertilizers, surfactants, oil and grease, and metals. The City has worked to implement a range of programs to address these residential activities with the goal of reducing pollutant loads associated with such activities.

Figure 6-1 depicts the residential land use in the City. Yellow areas signify single-family homes, orange areas are multi-family homes such as duplexes and apartment buildings, brown areas are mobile home parks, and purple areas are other residential areas such as nursing homes.

Figure 6-1
Residential Land Use in the City

Base Data Sources: USGS, SanGIS, SANDAG

6.1.1 Summary of Notable Accomplishments

Some notable achievements for the residential component during the 2008/2009 reporting period are presented in the following bulleted list. Additional details about the City's implementation of the residential component and of its storm water program during the reporting period are provided in the remainder of Section 6.

- The City worked with local Eagle Scouts to construct and install an informational storm water kiosk in Jackson Park.
- The City hosted eight HHW events; 804 participants dropped off 999 loads of HHW.
- The City hosted the La Mesa Spring Clean Up on two consecutive Saturdays during 2008/2009. The event was held at the City's EDCO station and allowed residents to dispose of large items, unwanted household materials (not including HHW), and green waste free of charge.
- The City continued to distribute the *La Mesa Focus* newsletter to residents in the City.
- The City continued to respond to complaints made to the City's Storm Water Hotline regarding residential areas and activities.

6.2 Source Characterization

The City has identified several high TTWQ residential areas within its jurisdiction and has designated various high TTWQ residential activities, which are discussed in the following subsections.

6.2.1 High TTWQ Activities

During 2008/2009, the City continued to identify the following activities as high TTWQ:

- Automobile repair and maintenance
- Automobile washing
- Automobile parking
- Home and garden care activities and product use
- Disposal of pet waste

6.2.2 High Threat to Water Quality Areas

In addition high TTWQ activities, the City has identified several residential areas that pose a high TTWQ. High TTWQ residential areas are designated by considering complaint investigations, institutional knowledge, data from the City's Dry Weather Monitoring, and criteria as defined in the Municipal Permit. The following residential areas have been designated high TTWQ.

East of Helix High School
This area drains to University Channel and includes the residential area east of Helix High School around Lowell Street, Normal Avenue, and Olive Avenue. University Channel serves as a part of the storm water conveyance system for the City and is part of the Chollas Creek Watershed. During the 2009 Dry Weather Monitoring Program, a transient dissolved copper exceedance was detected in this area.

Baltimore Drive, North of Interstate 8
The area surrounding Baltimore Drive is largely composed of high-density housing. Runoff from this area drains to Alvarado Channel via two internal storm drain networks. Storm Water Hotline calls related to high TTWQ activities in this area have been recorded in past years. Some past Dry Weather Monitoring results have indicated that this area could be a source of bacteria, although that has not been found in monitoring programs during recent sampling years. The area is still classified as a high TTWQ to be conservative, although the City may reevaluate the prioritization in future years if recent dry weather monitoring trends continue. Potential runoff sources include residences located on Parkway Drive, Aztec Drive, and Baltimore Drive.

Nagel Street and Sarita Street
The residential area around the intersection of Nagel Street and Sarita Street drains to Alvarado Channel. Past Dry Weather Monitoring Program upstream investigations have indicated that this area has been a source of bacteria.

6.3 Best Management Practice Requirements

The City has continued to provide information regarding the implementation of pollution prevention measures, such as good housekeeping practices, for residential areas and activities. The City's BMP Manual Part I includes lists of general residential BMP requirements and BMP requirements for specific residential activities. The manual is included in Appendix C of the JURMP. General residential BMPs include erosion control; non-storm water discharge management, including elimination of IC/IDs; and good housekeeping measures, such as sweeping rather than hosing off driveways and sidewalks. Specific BMPs for the high priority activities outlined above are also included in the City's BMP Manual Part I. There have been no changes to the City's residential BMP requirements as discussed in Appendix C of the City's JURMP.

6.4 Program Implementation

The City's residential program has been designed to ensure that adequate City enforcement, complaint investigation, and complaint reporting is conducted. This ensures that pollutants associated with residential activities and areas are minimized. The residential program has an education component so that residents are made aware of appropriate BMPs and high TTWQ activities.

6.4.1 TRAINING, EDUCATION, AND OUTREACH

The City has continued to conduct training, education, and outreach activities for residents, which are described below.

***La Mesa Focus* Newsletter Articles**

The City publishes storm water related articles in the quarterly *La Mesa Focus* newsletter. Four newsletters were printed during the reporting period. Each edition was mailed to approximately 17 residential addresses. These issues were also archived on the City's website; 795 individuals are signed up to receive e-mail notification when a new newsletter has been posted on the website. Approximately 12 copies were provided to individuals upon request and three copies were left out at the Community Center for visitors to the center to read. The articles published in 2008/2009 are summarized below and included as Attachment 5.4.

The August 2008 newsletter contained the following storm water-related articles and announcements:

- "LA MESA ENVIRONMENTAL AWARENESS FESTIVAL" informed residents of the upcoming event. The event was advertised to provide information and resources on water conservation, urban runoff, and other environmental issues.
- "7th ANNUAL KIDS CARE FEST" provided information for an event this event. I Love a Clean San Diego (ILACSD) provided information about watersheds and storm water during this event.
- "24th ANNUAL COSTAL CLEANUP DAY" encouraged residents to participate in and informed residents of the upcoming coastal cleanup event.
- "PARK APPRICIATION DAY" encouraged residents to participate in and informed residents of the upcoming park cleanup event.
- "MEDICAL SHARPS BANNED FROM LANDFILL" provided information regarding proper disposal methods of sharps and HHW.
- "DO THE RIGHT THING!" identified different types of HHW and notified residents of drop-off dates and locations for recycling HHW free of charge.
- "RECYCLING NOW AVAILABLE AT CITY PARKS" informed residents of the additions of recycling containers to City parks and encouraged use of the containers.

The November 2008 newsletter contained the following storm water-related articles and announcements:

- "RECYCLE USED OIL FILTERS" notified residents of drop-off dates and locations to recycle used oil filters free of charge.
- "CITY OF LA MESA PARK APPRICIATION DAY" announced the amount of debris removed from City parks during the event and informed residents of the next cleanup event.

- "CALL US TO HELP STOP STORM WATER POLLUTION!" informed residents of the City's Storm Water Hotline, potential storm water pollutants to be aware of, and what to look for and report based on the facility or area type.
- "GOT ELECTRONICS?" highlighted how and where to properly dispose of electronic waste and HHW.
- "CALIFORNIA COSTAL CLEAN UP DAY IN LA MESA" announced the participants' efforts during the cleanup event and the total debris removed during the cleanup.
- "DO THE RIGHT THING!" identified different types of HHW and notified residents of drop-off dates and locations for recycling HHW free of charge.
- "SUSTAINABLILTY CELEBRATED AT THE ENVIRONMENTAL AWARENESS FESTIVAL" reported on the celebrated Environmental Awareness Festival and provided a web site for information about next year's festival.

The February 2009 edition included a two page informational section of storm water-related articles, which included:

- "DO THE RIGHT THING!" which highlighted examples of HHW, as well as drop-off dates and locations.
- "MEDICAL SHARPS DISPOSAL IS NOW EASIER" listed types of sharps, HHW, and information regarding proper disposal methods.
- "LA MESA RECIEVES GRANT TO ENHANCE MULTIFAMILY RECYCLING OPPORTUNITIES" informed residents of the City's recycling grant that would provide eligible apartments and condominiums with better recycling opportunities.
- "ANNOUNCING SPRING CLEANUP 2009!" notified residents of the City's free event for unwanted items and waste disposal event.

The May 2009 newsletter contained the following storm water-related articles and announcements:

- "FORCAST FOR LA MESA RESTAURANTS - FOG CLEARING" informed the public of the new state law for fats, oils, and grease (FOG) control program and inspections. Information for a free workshop on program requirements was also provided.
- "MANDATORY RECYCLING AND YOU" outlined types of recyclable materials and how recycling helps to improve the environment.
- "DOING OUR PART TO SAVE H_2O" informed residents of the importance of conserving water and La Mesa's efforts to reduce water usage.
- "DO THE RIGHT THING!" identified different types of HHW and notified residents of drop-off dates and locations for recycling HHW free of charge.

- "FREE OIL FILTERS" notified residents of the time, date, and location of the free used oil filter exchange event for La Mesa.
- "IRRIGATION WATER POLLUTION PREVENTION IN YOUR WATERSHED" informed residents of storm water, constituents of concern, and tips on how to eliminate pollutant discharges.

Other Educational Outreach Materials and Activities
The City has continued to provide storm water information and contacts on their website (www.cityoflamesa.com). The City's Storm Water Hotline also provides a medium for City residents to obtain storm water information and file storm water related complaints. Other educational outreach materials and activities that targeted residents are discussed in detail in Sections 8 of this report.

During 2008/2009, the City continued to participate in the Regional Residential Education Program.

6.4.1.1 HHW Events

The City hosted eight HHW collection events throughout the 2008/2009 reporting period at the City's EDCO station on Commercial Street. Door-to-door pick-up was also offered for disabled and senior residents. A total of 804 people participated in the events, and 999 loads of HHW were collected. HHW flyers or the Regional Guide for Household Hazardous Waste Reduction & Disposal in San Diego County were on hand if residents requested educational materials. About five pieces of educational material were distributed per event.

Other Collection Events
In addition to the HHW disposal events, the City hosted the La Mesa Spring Clean Up on two consecutive Saturdays during 2008/2009. The event was held at the City's EDCO station and allowed residents to dispose of large items, unwanted household materials (not including HHW), and green waste without charge. Details about this event can be found in Section 9 of this report.

6.4.2 Compliance and Enforcement

The City continues to implement compliance and enforcement measures by identifying potential sources of pollutants in residential areas from Dry Weather Monitoring Program data, complaints received by the Storm Water Hotline, and observations made by the City's municipal personnel. To help focus efforts on high priority areas, the City generated a map of the high TTWQ areas in the City and distributed it to Public Works staff. Staff were instructed to be especially vigilant for potential threats to storm water quality in these areas of the City and were told to report any observed threats to the Storm Water Hotline. A copy of the map is included as Attachment 6.1. If a potential to impact water quality is present the City provides a verbal warning, written warning, Notice to Comply (NTC), and NOVs as applicable. The City received 22 residential-related complaints during this reporting period. Complaints were submitted through

the Storm Water Hotline and internally through the Public Works Department; the City's complaint log is included as Appendix B to this report.

Five written warnings, two NOVs, one verbal warning, and five NTCs were issued to residents and/or landlords during this reporting period. Many of the complaints verified involved residents who were unaware of residential BMPs. These issues were resolved with a verbal warning and distribution of educational materials. The City issued NOVs to more serious violations such as vehicle maintenance without BMPs or washing debris into the street. City personnel also cleaned areas in the public right of way as necessary to resolve complaints. All residential complaints were resolved and no further actions, such as fines or reports to the RWQCB aside from this JURMP Annual Report, were deemed necessary.

6.5 Residential Component Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

6.6 Program Review and Modification

The City's JURMP was updated in March 2008. No changes to the City's residential component have been made since that time.

7.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION

7.1 INTRODUCTION

In accordance with the September 10, 2008 RWQCB adoption of Addendum No. 2 to Order No. R9-2007-0001, the City will submit the 2008/2009 illicit discharge detection and elimination section and attachments to the RWQCB no later than December 15, 2008.

8.0 EDUCATION COMPONENT

8.1 INTRODUCTION

During 2008/2009, the City continued to provide education and outreach to a variety of audiences within the City. The City's education program targets municipal personnel, industrial and commercial businesses, construction site owners and operators, residents, and underserved audiences. The City aims to reduce storm water pollution by increasing awareness about the storm water conveyance system and promoting the implementation of BMPs. Through education and outreach, the City works to foster change in both the attitude and behaviors of the regulated community.

8.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the education component during the 2008/2009 reporting period are presented in the following bulleted list. Additional details about the City's implementation of the education component and of its storm water program during the reporting period are provided in the remainder of Section 8.

- The City has hosted eight training events/meetings for approximately 54 municipal personnel.
- The City hosted a training session for 20 local industrial and commercial business representatives.
- During 2008/2009, the City's quarterly newsletter, the *La Mesa Focus*, featured several articles highlighting storm water topics aimed at businesses and residents of the City.
- Educational materials were made available to project proponents and City personnel at City Hall through the informational Storm Water Bulletin Board.
- The City worked closely with the local Eagle Scouts to construct and install an informational storm water kiosk at Jackson Park.
- The City partnered with ILCASD to education residents at special events and through school presentations during 2008/2009.
- The City provided financial support and educational materials for a booth hosted by the Solana Center for Environmental Innovations (Solana Center) at Earth Fair in Balboa Park on 4/19/2009.
- Approximately 330 vendors at the City's Oktoberfest event were provided with a handout entitled "Tips for Outdoor Vendors".

8.2 STAFF TRAINING ELEMENT

The City has provided extensive training and educational outreach to its municipal personnel. Many municipal personnel are out in the field on a daily basis, so it is important that they understand the importance of implementing BMPs. Additionally, municipal personnel are encouraged to report any IC/IDs observed to the appropriate City staff and to educate other municipal personnel and the general public about storm water pollution prevention.

The informational storm water bulletin board at City Hall is continually updated with information on storm water topics such as BMPs. The bulletin board is visible to City personnel, project proponents, and other City Hall visitors. A photo of the bulletin board is included in Attachment 4.2. Additionally, the City's sent e-mails to City staff encouraging participation in California Coastal Clean-Up Day and the City's Park Appreciation Day. Each e-mail was sent to over 200 City staff.

Table 8-1, below, includes all training sessions that were provided for various municipal departments during 2008/2009.

Table 8-1
Municipal Training Sessions

#	Date	Event	Topic(s)	Participants
1	8/20/2008	Process Improvement Team (PIT) Meeting	Presentation of storm water issues by the Storm Water Program Manager	10 Development and Engineering Staff
2	9/24/2008	Construction Projects Meeting presented by the Storm Water Program Manager	Discussion of dry weather and wet weather requirements, erosion control, material management BMPs, and enforcement action and procedures	7 Public Works and Engineering Staff
3	9/25/2008	Construction Projects Meeting presented by the Storm Water Program Manager	Discussion of dry weather and wet weather requirements, erosion control, material management BMPs, enforcement action and procedures	7 Public Works and Engineering Staff
4	9/25/2008	Escondido PAPA Seminar	Seminar on worker safety, laws and regulations, alternatives to synthetic herbicides, and cultural practices on athletic fields	3 Parks Division Employees

Table 8-1
Municipal Training Sessions

#	Date	Event	Topic(s)	Participants
5	12/5/2008	Low-impact Development (LID) Treatment Control (TC) BMPs	Discussion of porous pavement as an LID TC BMP lead by the Storm Water Program Manager	7 Development, Engineering, Public Works and Environmental Services Staff
6	5/13/2009	Sustainable Landscape Practices Training	Training on sustainable horticultural practices, fertilizer application, water quality, and sustainable turf grass management	3 Parks Division Employees
7	5/19/2009	Integrated Pest Management (IPM) Training for Landscape Professionals	Training on IPM, water conservation methods, organics and sustainable practices, and herbicide calibration techniques	3 Parks Division Employees
8	6/23/2009	Park Tailgate Meeting	NPDES Training	14 Parks Division Employees

8.3 EDUCATIONAL OUTREACH ELEMENT

In addition to municipal staff, the City has continued to provide education and outreach to industrial and commercial businesses, construction site owners and developers, residential areas, and underserved audiences. These efforts promote storm water awareness and BMP implementation.

8.3.1 INDUSTRIAL AND COMMERCIAL BUSINESSES

As required by the Municipal Permit, the City inspects its inventoried businesses to evaluate compliance with the City's BMP requirements and provides site-specific education outreach to business owners and operators. Violations of the City's BMP requirements are corrected through enforcement actions as necessary. For each inspection, facility personnel received verbal education on the importance of implementing proper BMPs. Additionally, a letter describing the City's inspection program and BMP requirements was sent to all industrial and commercial businesses selected for routine inspection during 2008/2009.

As previously mentioned, the City's quarterly *La Mesa Focus* newsletter 2008/2009 featured several articles highlighting storm water topics that were aimed at businesses and residents of the City. Examples of such articles included "Do the Right Thing," "Call Us to Help Stop Storm Water Pollution," "Forecast for La Mesa Restaurants - Fog

Clearing," and "Irrigation Pollution Prevention in Your Watershed." Newsletters published during 2008/2009 are included as Attachment 5.4.

During 2008/2009 reporting period, the City distributed a handout with tips for outdoor commercial vendors (Attachment 8.1). These handouts were distributed to vendors that had booths at the Oktoberfest event, which is the City's largest special event. A total of 330 of these handouts were distributed. The handout detailed specific BMPs that could be implemented by the vendors at the event and detailed the difference between the storm drain system and the sanitary sewer system.

A Code Update Workshop was also provided to local business representatives during 2008/2009, which included a discussion of pollution prevention BMPs and inspection frequency. Good housekeeping practices, eliminating outdoor exposure, and preventing illegal discharges, were among the BMPs topics discussed in the workshop. A total of 20 representatives from industrial and commercial business throughout La Mesa attended this workshop.

8.3.2 Construction Site Owners and Developers

Due to the nature of activities, construction sites have the potential to discharge many types of pollutants to receiving waters if not managed properly. Many construction site owners, contractors, and developers visit the City's Engineering Division to apply for necessary permits. The Storm Water Bulletin Board (Attachment 4.2), located across from the front counter where permits are issued, includes material about construction BMPs to provide education for these parties. Several construction related brochures, specifically the construction site management tri fold and a construction SWPPP tri fold (Attachments 8.2 and 8.3) are available for project proponents to take from the bulletin board.

8.3.3 Residential Areas

Since residential areas make up more than half the City, the City understands the importance of reaching this particular audience through educational outreach programs. During May of 2009, ILACSD visited several schools of various aged students with prepared storm water presentations. The City also continued to publish the *La Mesa Focus* newsletter (Attachment 5.4), which reaches residents in the City. As previously mentioned, several storm water articles were included in the newsletters distributed in 2008/2009.

Despite its location near the City's Engineering counter, the City's Storm Water Bulletin Board provided information to residents that may have been visiting City Hall. Various posters provide storm water information and information about clean-up events. Additionally, there are several brochures and fact sheets available for the public to take, which included IPM cards (Attachment 5.3), Over-irrigation Fact Sheet (Attachment 8.4), Chollas Creek TDML Fact Sheet (Attachment 8.5), residential Preventing Urban Runoff

Pollution brochure (Attachment 8.6), and the Pools and Spas Fact Sheet (Attachment 8.7).

The City also continued to partner with Target and Dixieline Lumber in La Mesa to provide English and Spanish versions of the IPM cards at the checkouts of each business's garden center (Attachment 5.3). Educational material was also distributed at various events in the City, such as the Environmental Awareness Fair, Intergenerational Games, and Kidscarefest. Materials distributed included the residential Preventing Urban Runoff brochure (Attachment 8.6), San Diego River and San Diego Bay factsheets (Attachment 8.8), and magnets encouraging residents to recycle used oil and used oil filters. Other media like pencils, temporary tattoos, and stickers with storm water messages on them were also provided during special events. Details of the events are included in Section 9. Table 8-2, below, describes the materials provided to residents and the approximate number distributed.

Table 8-2
Educational Materials Distributed to Residents

Educational Material	Number Distributed
English IPM Cards	62 English
Spanish IPM Cards	60 Spanish
Residential Preventing Urban Runoff Pollution Tri fold	9
Recycle Your Used Motor Oil and Filter Magnet	14
San Diego Bay Fact Sheet	4
San Diego River Fact Sheet	3
Storm Water Pencils	45
Storm Water Key Chains	50
Recycling Flyers	58
Temporary Storm Water Tattoos	80
Alternative Pesticide Stickers	33

In addition to the educational materials that were provided at various locations and during various events, the City continued to display storm water-related educational material at storm water kiosks at select City parks. In July 2008, the City partnered with local Eagle Scouts to construct a kiosk for Jackson Park. The City now maintains three kiosks in three City parks. Education material such as the San Diego River Watershed Fact Sheet (Attachment 8.8), Over-irrigation Fact Sheet (Attachment 8.4), Pool and Spas Fact Sheet (Attachment 8.7), the residential Preventing Urban Runoff Pollution brochure (Attachment 8.6), and a Helix Water District tri fold were displayed for patrons of the park.

Figure 8-1. Storm Water Kiosk at Jackson Park

The City website, www.cityoflamesa.com, is another way in which City residents can become familiar with the design and intended utilization of the storm drain system, proper HHW disposal, alternatives to hazardous household products, find information regarding volunteer opportunities, applicable City contact information, and IPM cards. As previously mentioned, the City provided electronic copies of each *La Mesa Focus* newsletter on the website during 2008/2009.

8.3.4 Underserved Communities

As discussed in the City's JURMP, the City has identified the several residential areas along University Avenue as "underserved" communities. Two residential areas have been identified as Low/Moderate Income Block Groups. A third area has been identified as a Hispanic Household Concentration area. In an effort to promote outreach and education in these underserved communities, the City has developed Spanish versions of several educational materials distributed to residents. Another effort implemented by the City is the utilization of the Spanish language option on the City's Storm Water Hotline. The City plans to continue outreach to these underserved communities by providing more educational programs in future reporting years.

8.3.5 Complaint Investigations

To further aid the process of identifying illegal discharges, the City encourages the public and City staff to report IC/IDs. In addition to the City's Storm Water Hotline, Public Works also has a maintenance hotline for complaints regarding issues with the MS4 and sewer lines. These complaints are followed up by Public Works personnel. If a representative for the targeted business, residential area, or construction site is present, the inspector will provide site-specific information regarding storm water issues

including applicable educational materials. Included in Table 8-3 are the names and the quantity of each educational material distributed during complaint investigations in 2008/2009.

Table 8-3
Educational Materials Distributed During Complaint Investigations

Educational Material	Number Distributed
Chollas Creek TMDL Fact Sheet	1
Informational Door Hanger	1
Over-Irrigation Fact Sheet	8
Pool and Spa Fact Sheet	2
San Diego Bay Watershed Fact Sheet	3
San Diego River Watershed Fact Sheet	8
Residential Preventing Urban Runoff Pollution Tri fold	6

8.4 OUTREACH COMPONENT EFFECTIVENESS ASSESSMENT

The estimated number of impressions made by the City's education and outreach efforts during 2008/2009 is presented and described below. Please refer to Section 11 of this JURMP Annual Report for the remainder the effectiveness assessment for this program component.

Impressions Made

The City has continued to provide residents and businesses storm water-related education through inspections, distribution and mailing of educational materials, and various events throughout the year. The City calculates an estimate of impressions based on the number and type of educational materials distributed. Estimates of the numbers of impressions generated by the City's efforts allow for a more realistic evaluation of the effectiveness of the NPDES storm water program.

The estimated number of impressions was generated by multiplying each effort by the number of impressions thought to be generated by that particular effort. For example, inspections have been presumed to generate three impressions, with the exception of municipal inspections. Municipal inspections generally involve more people and are assumed to generate five impressions. Training sessions and cleanup events have been assumed to generate a number of impressions equal to four times the number of attendees because it is likely that the attendees will discuss the content with others after the training session. Printed educational materials distributed are assumed to generate three impressions each.

Table 8-4 details the number of impressions made by the City during this reporting year. The number of impressions decreased during 2008/2009 as compared to other reporting

periods. The City discontinued the distribution of hard copies of the *La Mesa Focus* newsletters to conserve paper, which accounts for this decrease.

Table 8-5
Impressions Made by the City

Impression Type	Count	Unit	Estimated Impressions
Municipal Inspections	28	Inspections	140
Industrial/Commercial Inspections	147	Inspections	441
Construction Inspections	56	Inspections	168
Letter from the City – "Re: Storm Water Compliance Inspections"	144	Letters	432
San Diego River Watershed Fact Sheet	11	Brochures	33
San Diego Bay Watershed Fact Sheets	7	Brochures	21
Residential Preventing Urban Runoff Pollution	15	Brochures	45

Park Appreciation Day E-mail	200	E-Mails	600
Complaint Investigation	107	Investigations	428
Total City Impressions			***30,510***

8.5 Program Review and Modification

The City's JURMP was updated in March 2008. No changes to the City's education component have been made since that time.

9.0 PUBLIC PARTICIPATION COMPONENT

9.1 INTRODUCTION

The City encourages public participation in the City's JURMP as a means to foster storm water awareness and improve water quality. Public participation includes, but is not limited to, cleanup events, special community projects, reporting observed IC/IDs, and participating in City-hosted waste disposal events. Collaboration between the City and the community should help encourage a sense of shared responsibility in protecting water quality both locally and regionally. The City has encouraged public participation through the programs discussed in this section.

9.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the public participation component during the 2008/2009 reporting period are presented in the following bulleted list. Additional details about the City's implementation of the public participation component and of its storm water program during the reporting period are provided in the remainder of Section 9.

- During 2008/2009, the City hosted clean-up events at Alvarado and University channels as part of California Coastal Cleanup and Creek to Bay Cleanup. Approximately 113 volunteers removed over 857 pounds of trash and debris during these events.
- The City hosted 8 HHW collection events. A total of 804 individuals disposed of 115,842 pounds of HHW in these events.
- The Solana Center hosted two used oil filter exchange events at Kragen Auto Parts in La Mesa. A total of 85 individuals traded a used oil filter for a new one.
- Similar to previous years, the City hosted the La Mesa Spring Cleanup event on two separate weekends during 2008/2009. A total of 1,261 participants and disposed of 894,840 pounds of large items, green waste, and other trash.
- Volunteers for the City's Adopt-a-Block, Adopt-a-Park, and Canine Corner programs, which involve residents in keeping local streets and parks free of litter and pet waste, logged over 3,900 hours.
- Similar to previous years, the City held Park Appreciation Day, a clean up event occurring throughout 12 City parks. A total of 369 volunteers participated in this event.
- The City contracted ILACSD to present the Enviroscape watershed model at the Intergenerational Games and Kidscarefest.

9.2 Public Participation Activities

Cleanup Events and Programs

During 2008/2009, the City hosted various cleanup events and activities at various locations in the City. Cleanup events provide a direct benefit to water quality and provide an opportunity for the City to distribute educational materials and information to the event's volunteers.

California Coastal Cleanup Day

The City hosted the California Coastal Cleanup Day in specific areas of Alvarado and University channels on 9/20/2008. A total of 46 volunteers removed over 370 pounds of trash and recyclables at the Alvarado site, and 12 volunteers removed 82 pounds of trash and recyclables in the channel and surrounding walkways at the University site.

At University Channel, volunteers were given a pre and post event knowledge assessment tests. The pre-test was given to participants before City personnel presented an overview of storm water pollution prevention and watershed concepts. A post test was given immediately after City personnel finished the brief presentation. The results of the survey showed that the event left participants with a better understanding of what watershed they were in, what defines a watershed, and that the Chollas Creek has a TMDL for pesticides and metals. On the pre-test, only 45 percent of participants knew which watershed they were in. After the presentation, all volunteers were aware that they were in the San Diego Bay Watershed.

Park Appreciation Day

Park Appreciation Day was a cleanup event held throughout 12 parks in the City on 10/24/2008. A short presentation was given by the site captain regarding watershed concepts, local watersheds' constituents of concern, the benefits of cleanups, and the different kinds of information available on the City's website. Chollas Creek was mentioned at the parks that fell within the San Diego Bay Watershed. A total of 369 volunteers worked to collect over 65 cubic yards of green waste and 10 cubic yards of trash between all 12 locations.

Creek to Bay Cleanup

The City hosted the Creek to Bay Cleanup in specific areas of Alvarado and University channels on 4/18/2009. Forty-four volunteers participated in removing 296 pounds of trash from Alvarado Channel; 11 volunteers removed 83 pounds of trash and 26 pounds of recyclables from the site at University Channel (Figure 9-1). City personnel briefly explained watershed concepts, pollutants of concern, and required BMPs to all event volunteers. At the University Channel site, event volunteers were also presented with information on the TMDL for Chollas Creek. These cleanup events and results were advertised on the City website and were posted on the City's Storm Water Bulletin Board.

Similar to the California Coastal Cleanup Day event, volunteers received a pre and post knowledge assessment tests at the University Channel site. The pre-test was given to participants before City personnel presented an overview of storm water pollution prevention and watershed concepts. A post test was given immediately after City personnel finished the brief presentation. The results of the survey showed that the event left participants with a better understanding of what watershed they were in, what defines a watershed, and that the Chollas Creek has a TMDL for pesticides and metals. Overall the level of storm water understanding increased in post-test results.

Figure 9-1 – Creek to Bay Cleanup at University Channel

Adopt-a-Park and Adopt-a-Block

The City's Adopt-a-Park Program has continued to involve local businesses, schools, service organizations, families, and other individuals in keeping the City's parks free of trash. Currently, half of the public parks in La Mesa have been adopted. Volunteers involved in this program are encouraged to remove trash on a regular basis from City parks and open spaces.

Similarly, the City's Adopt-a-Block Program promotes cleanliness in the City by encouraging City residents to keep neighborhoods free of trash and debris. Volunteers pick up trash during normal daily activities, such as daily walks in their neighborhood. There are approximately 60 volunteers who are active participants of this program. Individuals utilize City-provided trash bags or may choose to collect trash prior to trash collection day so that litter and debris can be deposited into any available trash can along the street.

Canine Corners

Canine Corners volunteers pick up pet waste in designated areas of Harry Griffin Park. Volunteers also advocate patrons of the park to pick up after their pets. This prevents pet waste and associated bacteria and viruses from being discharged to the

City's MS4. In combination with the City's Adopt-a-Park and Adopt-a-Block programs, volunteers have logged over 3,919 hours of removing trash and pet waste from various parks and streets throughout the City.

Saint Madeline's Sophie Center
The City maintains a contract with Saint Madeline's Sophie Center, which employs developmentally disabled individuals to aid in picking up trash and debris at various parks throughout the City. The scope of services includes trash and debris cleanup, emptying trash receptacles and replacement of plastic liners, sweeping/cleaning picnic area tables, as well as some janitorial responsibilities at the park restrooms. Crews consist of three individuals and one job coach. Parks included in this program are Aztec Park, Collier Park, Highwood Park, Jackson Park, La Mesita Park, Northmont Park, Rolando Park, Sunset Park, Sunshine Park, and Vista La Mesa Park. A similar program is conducted at the Jr. Seau Sports Complex, also with a crew consisting of three individuals and one job coach.

Hazardous Waste Collection and Used Oil Recycling Program
The City's Community Hazardous Waste Collection and Used Oil Recycling Programs encourage City residents and business owners to properly dispose of HHW. The City hosted eight HHW collection events at EDCO's disposal transfer station facility, which is located near the center of the City. As previously mentioned, events were advertised in the City's *La Mesa Focus* newsletter (Attachment 5.4), which was circulated to thousands of residents and businesses in the City. A total of 804 people participated in the events; a total of 115,842 pounds of HHW was collected. Door-to-door pickup service was also provided for the senior and disabled communities.

By means of the California Integrated Waste Management Board grant and the Solana Center, La Mesa also organized two used motor oil filter exchange events on 12/6/08 and 6/13/09 at Kragen Auto Parts. A total of 85 people came with one used oil filter each to exchange it for a new oil filter. In addition to the filter exchange, participants were provided with various educational materials. The events were advertised in the *La Mesa Focus* newsletter. Throughout the City of La Mesa, there are also nine certified collection centers for used oil. An estimated total of 11,189 gallons of used oil and 1,200 used oil filters were collected by these facilities during the 2008/2009 reporting year. These figures do not include used oil that was disposed of during HHW disposal events.

Other Waste Disposal
The City hosted the La Mesa Spring Clean Up event on two consecutive Saturdays in 2008/2009 (4/11/2009 and 4/18/2009). Residents were allowed to bring large items, unwanted household materials (not including HHW), and green waste to the EDCO location in the City for free disposal. There were a total of 1,261 participants and 894,840 pounds of waste were collected. Participants were provided with a flyer for re-entry that included information regarding HHW and C&D (EDCO's Sanitation Company Facility).

Public Reporting
As discussed in Section 4, complaints are received through the City's Storm Water Hotline and online website reporting system. The number for the hotline is advertised in articles published in the *La Mesa Focus* newsletter and on various educational materials given out at public outreach events. The residential, industrial and commercial, construction, and municipal communities are encouraged to utilize the hotline to report IC/IDs. The City investigates each complaint and tracks the complaint and follow-up actions, as applicable.

9.3 Outreach Events

The City has continued to provide educational outreach programs for a variety of different communities in the City. Since it is an effective way of reaching large numbers of individuals, educational outreach is typically associated with an event. Other outreach events in the City include the participation of commercial businesses in distributing educational materials and the City's participation in regional meetings and events.

Kidscarefest
Kidscarefest is a free event designed to promote healthy living and mindsets for children and their families. The festival was held at Briercrest Park on 9/20/2008. ILACSD hosted a booth and used the Enviroscape watershed model (Figure 9-2) to demonstrate storm water pollution concepts and emphasize the importance of keeping waterways free of pollutants. Approximately 130 people visited the ILACSD storm water booth during Kidscarefest. During this event, 33 recycling flyers, 80 storm water tattoos, and 33 sets of alternative pesticide stickers were distributed to the public.

Figure 9-2 – Demonstration of Enviroscape Watershed Model at Kidscarefest

Intergenerational Games
ILACSD also hosted a booth at the Intergenerational Games at the La Mesa Middle School on 10/10/2008. During this event, ILACSD used the Enviroscape watershed to demonstrate watershed and storm water pollution prevention concepts to over 250 people. A total of 25 recycling flyers, 45 storm water pencils, and 50 storm water key chains were distributed to booth visitors.

Oktoberfest
Oktoberfest is the largest festival in the City and was held from 10/3/2008 through 10/5/2008. As previously mentioned in Section 8.3.1, 330 vendors at the event were provided a handout entitled Tips for Outdoor Vendors (Attachment 8.1). This handout listed constituents of concern and BMPs during events designed to eliminate pollutant discharges.

Environmental Awareness Festival
On 9/13/2008, the first Environmental Awareness Festival for the City was held at Harry Griffin Park that was attended by about 500 people. There were booths and activities emphasizing water conservation, storm water pollution, energy efficiency, sustainable gardening techniques, and recycling. ILACSD had a booth with a Coastal Cleanup Day sign-up sheet and educational materials, such as San Diego Bay and River fact sheets and residential Preventing Urban Runoff Pollution tri folds. A HHW model house was also on display for visitors to learn about proper disposal methods and types of HHW.

ILACSD School Presentations
During 2008/2009, ILACSD was contracted to conduct storm water pollution prevention presentations for several La Mesa schools. Two presentations were given at La Mesa Dale Elementary and were attended by 28 students each day. Thirty students attended the La Mesa Middle School presentation and 80 students from Helix High School attended the storm water presentation on their campus.

Storm Water Information Kiosks
As mentioned in Section 8, the City has continued to work with local Eagle Scouts to construct storm water kiosks. An additional kiosk was installed during 2008/2009. The park kiosks present storm water pollution prevention information to park patrons.

Business Participation
As previously discussed in this report, the City's Stormwater Program Manager has continued to work with two businesses in La Mesa, Target and Dixieline Lumber, to distribute IPM cards (Attachment 5.3). The IPM cards were developed as part of a regional effort to combat pesticide pollution and increase the utilization of IPM techniques. Target keeps the educational materials in its garden center due to the likelihood of individuals visiting that portion of the store purchasing pesticides. Dixieline Lumber keeps the cards at the registers for those checking out to take. Providing educational materials that customers may take home and review before using the purchased products may mitigate the negative impacts they have on receiving water bodies.

Chollas Creek TMDL Stakeholder Meetings
The jurisdictions named as dischargers for Chollas Creek TMDLs regularly meet to share information, develop reports, and discuss strategies. The City actively partook in several of these meetings during the reporting period.

Storm Water Copermittee Meetings and Other City Participation
The meetings of various storm water Copermittee workgroups provide a forum for representatives from various jurisdictions within San Diego County and other interested parties, including the general public, to exchange information and ideas regarding the management of storm water programs. The City continued to attend several of these meetings during the reporting period and will continue to do so during the 2009/2010 reporting period.

During 2008/2009, the City provided funding and educational materials for the Solana Center for a regional collection event at the Earth Day Festival on 4/19/2009. Thousands of people from all over San Diego County attended the event.

9.4 Public Participation Component Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

9.5 Program Review and Modification

The City's JURMP was updated in March 2008. No changes to the City's public participation component have been made since that time.

10.0 FISCAL ANALYSIS

10.1 INTRODUCTION

The City's Sanitation Fund provides funding for the Storm Water Program. There have not been any changes to this funding mechanism during this reporting period. The total expenditures in 2008/2009 were $679,764. The proposed budget for the 2009/2010 Fiscal Year is $844,912. The itemized costs within six different categories are presented in Table 10-1, below. Note that 2008/2009 contractor costs in the table below are based on funds encumbered during the reporting period. The budget for fiscal year 2009/2010 includes a new line item for "TMDL Chollas Creek Implementation" shown in "Permit Fees and Regional Shared Costs" in the table below.

Table 10-1
Itemized Expenditures and Budget For Fiscal Years 2008/2009 and 2009/2010

Storm Water Program Fiscal Analysis	Expenditures FY08/09	Budget FY 09/10
Engineering Division	$ 200,067	$ 200,860
Program Mgmt.	$ 97,970	$ 100,510
Land Use	$ 16,975	$ 15,300
Construction	$ 18,497	$ 17,230
Existing Development	$ 33,490	$ 31,830
Education	$ 10,675	$ 12,720
IC/ID	$ 21,320	$ 22,240
Admin	$ 1,140	$ 1,030
Public Works Operations	$ 116,254	$ 117,072
SSO/MS4 Cleaning	$ 109,440	$ 110,210
Streets Division	$ 4,260	$ 4,290
Parks Division	$ 2,554	$ 2,572
Equipment and Supplies	$ 46,332	$ 54,800
Storm drain pipe and supplies	$ 15,756	$ 22,990
Vactor	$ 30,576	$ 31,810
BMPs	$ 116,408	$ 205,180
Street Sweeping	$ 108,408	$ 175,180
WURMP - San Diego River	$ 4,000	$ 15,000
WURMP - San Diego Bay	$ 4,000	$ 15,000
Consultant Services	$ 146,318	$ 165,000
Jurisdictional Dry Weather Monitoring	$ 33,858	$ 40,000
Jurisdictional Wet Weather Monitoring	$ 23,494	$ 60,000
Inspections	$ 29,273	$ 10,000

Storm Water Program Fiscal Analysis	Expenditures FY08/09	Budget FY 09/10
JURMP Annual Report and Update	$ 25,667	$ 30,000
WURMP - San Diego River	$ 15,371	$ 5,000
WURMP - San Diego Bay	$ 15,371	$ 5,000
Public Education/Outreach Program	$ 3,284	$ 10,000
Training & Development	$ -	$ 5,000
Miscellaneous As-Needed Services	$ -	$ -
Permit fees and Regional Shared Costs	$ 54,385	$ 102,000
Annual Permit Fee to RWQCB	$ 13,499	$ 20,000
NPDES Regional Shared Costs	$ 40,886	$ 55,000
MOU San Diego River WURMP	$ -	$ 13,500
MOU San Diego Bay WURMP	$ -	$ 13,500
TMDL Chollas Creek Implementation	$ -	$ 50,000
TOTAL	**$ 679,764**	**$ 844,912**

11.0 EFFECTIVENESS ASSESSMENT

11.1 INTRODUCTION

The City continued to use the standardized program effectiveness assessment soon after it was developed by the Copermittees during the last permit cycle. Since the submittal of the JURMP in March 2008, no additional progress has been made on regional standardized approaches to program effectiveness assessment. It is likely that the Copermittees' Fiscal, Reporting, and Assessment Workgroup will revisit the issue of standardized assessment metrics and procedures in the near future. The City anticipates participating in the process of developing such regional standards and incorporating work products produced into its own local program effectiveness assessment system.

Implementation of the City's JURMP is intended to reduce discharges of urban runoff related pollution to the MEP. The City regularly evaluates its program to make it as effective as possible. The overall structure of the City's storm water program is composed of three primary components:

- Program Planning
- Program Implementation
- Effectiveness Assessment

The process typically proceeds from planning to implementation to assessment, although in practice all three may be in progress at the same time. The initial step is program planning, which requires identifying potential pollutant sources, establishing BMP requirements, and establishing targeted outcomes and ways to measure those outcomes. Next the program developed during the planning step is implemented. Program implementation is assessed each year using the methods developed in the program planning stage and reported in JURMP annual reports. The conclusions from these assessments are used during the next round of program planning to incorporate improvements to the program and refine the assessment technique.

The City has identified a variety of metrics to assess progress toward targeted outcomes. At the end of each reporting year, the City uses selected metrics to assess the effectiveness of its program implementation. Example metrics were provided in Section 13 of the City's 2008 JURMP. The effectiveness assessment approach developed by the Copermittees during the last permit cycle includes six different levels of targeted outcomes. Each successive level represents a step up from more easily measured, activity-based outcomes to more difficult to measure, quality-based outcomes. The levels are listed below.

Level 1: Compliance with Activity-Based Permit Requirements
Level 2: Changes in Knowledge/Awareness
Level 3: Behavioral Change/BMP Implementation
Level 4: Load Reductions

Level 5: Changes in Discharge Quality
Level 6: Changes in Receiving Water Quality

11.2 Effectiveness Assessment Results

The Municipal Permit requires the City to assess the effectiveness of each significant activity for each program component, for each program component as a whole, and for the storm water program as a whole. Level 1, Level 5, and Level 6 outcomes are discussed in the text below. At this time the City is not able to assess Level 5 or Level 6 outcomes for individual program activities or individual programs. As has been noted in the recently released CASQA effectiveness assessment guidance, methods for integrated assessment—assessment that combines both monitoring data and programmatic data—are still under development at regional and statewide levels (CASQA, 2007).

11.2.1 Outcome Level Assessments

Level 1
Level 1 outcomes essentially are measures of permit compliance. The component-specific sections in this JURMP Annual Report provide details of programmatic actions taken to comply with the applicable Municipal Permit requirements. Appendix C of this JURMP Annual Report also includes a checklist that matches the Municipal Permit's annual reporting requirements with the section(s) or appendix of this report that addresses each requirement.

Levels 2 and 3
See the tables 11-1 through 11-8 at the end of this section for discussions of Level 2 and Level 3 outcomes for significant activities within each program component. Please note that only a Level 1 assessment applies to fiscal analysis, so no table for fiscal analysis is included.

Level 4
The tables at the end of this section provide information for Level 4 assessments where feasible. Assessment of Level 4 outcomes is feasible for some programs that directly measure the amounts of pollutant removal, such as MS4 cleaning. For most other programs reliable load estimation methods have not yet been developed. Note that the City has installed Calsense in various City parks and medians, as described in Section 4. Calsense is designed to decrease water usage, which is likely to have reduced the load of pollutants potentially transported by irrigation runoff.

Level 5
The Dry Weather Monitoring Program is the City's primary mechanism of measuring the quality of discharges. The City also performs an additional monitoring program at six sites; five of these sites are located in the City's MS4, and one is located in an improved channel that has also been identified as a receiving water body. Beginning in 2009, the City is collecting MS4 outfall water quality data to characterize pollutant

discharges and to assess whether these discharges contribute to the receiving water quality.

Figures 11-4 through 11-7 are graphs demonstrating historical Dry Weather Monitoring results and trends. Ammonia –nitrogen and detergents, the two constituents with the longest historical data record, both show decreasing trends over time. No discernable trend is apparent for other field screening constituents.

It had been noted in the 2007/2008 annual report that sediment and metals values in runoff from the area upstream of Site 907-ALV-002 was higher than those recorded at the other sites. The City performed additional inspections in this area in the 2008/2009 year. During the 2009 Dry Weather Monitoring Program, no metal exceedances or signs of excess sedimentation were detected.

Level 6

No Regional Monitoring Program stations are located within or close to the City of La Mesa. The western portion of Alvarado Channel is the only receiving water body within City limits. The City has placed two special study monitoring sites, one in Alvarado Channel at the point where the channel exits the City and one in University Channel at the most downstream point in the City. Two wet weather samples and three dry weather samples have been collected at these sites over the past three years. See Section 12 for a discussion of findings. The City will also continue to work with the San Diego River and San Diego Bay WURMP workgroups to improve the quality of water bodies downstream of the City of La Mesa.

11.2.2 OVERALL COMPONENT ASSESSMENTS

Development Planning

The City's review process for development projects is effectively requiring higher removal efficiency BMPs. Based on interaction with responsible parties during the reporting period, and the results of the treatment control inspections, there is a greater level of awareness of the need for regular treatment control BMP maintenance within the City. The City will continue to work with the parties responsible for maintenance of treatment control BMPs during 2009/2010.

Construction

The available data indicate that on the whole the City's construction program effectively requires BMP implementation. Any BMP deficiencies noted are typically remedied promptly. The City has received some hotline calls about poor BMP implementation at a few small projects, so the City will continue its efforts to notify small projects and homeowners of the City's BMP requirements.

Municipal

The City's municipal activities effectively implement BMPs and reduce pollutant loading. The City's municipal staff are regularly trained on storm water issues, and the City's MS4 cleaning and street sweeping programs meet or exceed minimum Municipal Permit frequency requirements. In particular, the City sweeps its streets more often than the permit requirements to aid in WURMP efforts. The City has also installed drainage inserts along University Avenue and at the Public Works Operation Center to reduce the discharge of pollutants. The City has implemented a sophisticated system, Calsense, to control irrigation runoff from parks and medians. The City also distributes pet waste bags through dispensers in its parks.

Industrial and Commercial

The City has a comprehensive inspection program that utilizes experienced consultant inspectors. Results are tracked through a database. During 2008/2009 the City continued to follow-up with non-compliant sites and the City will continue to do so into 2009/2010.

As discussed in Section 5, the City began mailing out database generated reports of inspection results rather than copies of the inspection form during 2008/2009. The City identified that facility personnel may have a difficult time understanding the required corrective actions from the copy of the inspection report itself. Ideally, this method of inspection result notification will more effectively convey inspection results and required corrective actions to facility personnel. Additionally, updated NOI and NONA/NEC instructional coversheets (Attachment 5.2) were developed to assist industrial facilities in successfully completing appropriate paperwork to be in compliance with Industrial Permit requirements.

The City has also begun invoicing businesses in order to recover costs of inspections, and it appears that this practice has stimulated more interest in and a higher desire for

awareness about the program. Businesses also have an increased incentive to comply with the regulations, as compliant businesses will be inspected less frequently.

Residential
The City's residential component achieves BMP implementation through complaint response, education, and routine monitoring to detect IC/IDs. The City is also conducting additional wet weather monitoring studies to help identify and mitigate residential sources of pollution more effectively.

Illicit Discharge Detection and Elimination
The City's IDDE program has effectively responded to complaints. No IC/IDs were identified during the 2009 Dry Weather Monitoring Program. There were eight SSOs during the reporting period; City staff worked to mitigate the effects of each of the spills by containing and cleaning the spill as necessary. City staff were able to fully capture the volume of the spill in most of the spills, indicating the City's response and SSMP are effective. The City will continue to respond appropriately to SSOs and take action to prevent and eliminate IC/IDs.

Education
During 2008/2009, the City continued to educate various communities in the City. During 2008/2009 the City worked with local Eagle Scouts to install a third informational storm water kiosk in a City park and continued to work with local garden supply retailers to distribute IPM cards.

Public Participation
The City continued to encourage participation in public events, such as clean-ups and reporting potential storm water violations via the City's Storm Water Hotline. Though the number of hotline calls decreased between 2007/2008 and 2008/2009, the number of storm water hotline calls has increased over the years, which may indicate an increased level of awareness of the Storm Water Hotline rather than an increase in the number of storm water issues occurring in the City.

11.3 Program Review and Modification

No significant changes to the effectiveness assessment approach presented in the City's March 2008 JURMP have been made since the submittal of that document.

Table 11-1
Development Planning Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4
Review and approve project plans	External A small number of projects submitted reports during 2008/2009. Based on meetings with applicants and BMPs proposed, it appears that the level of knowledge is increasing. Internal The City's storm water consultant and the City's Stormwater Program Manager worked with engineers in the City to improve their level of understanding of the SUSMP program. The City's consultant reviews WQTRs submitted to the City.	Overall WQTR approval rate during reporting period	0%	N/A, addressed through other significant activities for this component
		Number of projects requiring three or more reviews prior to WQTR approval	N/A, no projects approved	
		Percent of projects proposing BMPs besides filter inserts		
		Percent of approved projects implementing BMPs with high or medium removal efficiencies for key pollutants of concern		
Verify proposed BMPs are implemented	External N/A, knowledge is evaluated by appropriate implementation of BMPs as shown in Level 3 Internal The City contracts with a qualified consultant to perform treatment control BMP inspections.	Percent of projects implementing proposed BMPs	100%	BMP implementation is likely to have reduced pollutant loads.
		Resolution status of enforcement actions	See Section 2	
Verify BMPs are properly maintained	External Verification letters were sent to all 11 projects on the City's inventory. Internal N/A, verification letters were prepared by the City's consultant.	Percent of sites properly maintaining BMPs	33%	Additional load reduction could be achieved through improved BMP maintenance.
		Resolution status of enforcement actions	See Section 2	
		Percent of sites submitting proper verification forms	91%	
		Percent of sites certifying proper maintenance	91%	
Maintain an accurate inventory	N/A, data management only	N/A, data management only		N/A, data management only

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-2
Construction Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4
Review proposed plans and BMPs	External Projects submit plans for construction BMP implementation for their projects; the level of awareness of construction BMP requirements is fairly high. Internal Training for City staff is described in Section 8. City staff are familiar with relevant construction BMPs.	BMPs proposed for construction projects generally meet requirements; no significant problems have been noted.		Proper pre-project planning is likely to have reduced pollutant loading.
Verify proposed BMPs are implemented	External Grading projects implement BMPs as required by permit conditions, and contractors are familiar with the City's requirements. Internal Training for City staff is described in Section 8. City inspectors are familiar with relevant construction BMPs.	Percent of projects implementing required BMPs by end of reporting period	100%	Proper BMP implementation is likely to have reduced pollutant loading.
		Resolution status of enforcement actions	See Section 3	
		Number of dry weather monitoring exceedances traced to construction sources	0	
Maintain an accurate inventory	N/A, data management only	N/A, data management only		N/A, data management only

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-3
Municipal Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4	
Verify proposed BMPs are implemented at facilities	City staff are regularly trained on BMP implementation; see sections 4 and 8.	Percent of inspected facilities/activities in compliance with BMP requirements	86%	Proper BMP implementation is likely to have reduced pollutant loading.	
		Resolution status of sites requiring follow-up inspections	See Section 4	Number of pet waste bags distributed	18,000
		Number of dry weather monitoring exceedances traced to municipal sites	0		
Sweep streets and parking facilities		N/A, streets and parking facilities are swept as often as directed by management.		Amount of sediment and debris removed (weight or volume)	568 tons
				Amount of sediment and debris removed per length of street swept (weight or volume per curb mile)	0.10 tons/ curb mile
Maintain and clean out MS4		N/A, MS4 structures are maintained as often as directed by management.		Amount of sediment and debris removed (weight or volume)	122.25 cubic yards
Maintain sanitary sewer system		N/A, the sanitary sewer system is maintained as often as directed by management.		Total volume of SSO discharge to MS4 (gallons)	685 gallons
Maintain municipal treatment control BMPs		N/A, treatment control BMPs are maintained as often as directed by management.		Amount of sediment and debris removed from treatment BMPs	10.5 cubic yards
				BMP effectiveness studies	N/A
Maintain an accurate inventory	N/A, data management only	N/A, data management only		N/A, data management only	

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-4
Industrial and Commercial Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4	
Require BMP implementation	External Knowledge assessment scores indicated a slightly low level of understanding of relevant storm water concepts. See Figure 11-1 on the following page for a score distribution. See Section 8 for more detail on educational materials and other outreach efforts. Internal The City contracts with a qualified consultant to perform industrial and commercial inspections.	Percent of inspected sites in compliance with BMP requirements (not including additional study or follow-ups)	69%	Proper BMP implementation is likely to have reduced pollutant loading.	
		Resolution status of enforcement actions	See Section 5		
		Number of dry weather monitoring exceedances traced to industrial or commercial sources	0	Number of IC/IDs eliminated (inspections and complaint investigations)	23
		Consistent with the intentional selection of sites with the highest TTWQ potential, many sites had a low BMP score of 1, though fewer sites than 2007/2008. Aside from those problem sites, the most common score was three. See Figure 11-2 on the following page for a score distribution.			
Maintain an accurate inventory	N/A, data management only	N/A, data management only		N/A, data management only	

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Figure 11-1
Knowledge Assessment Scores

Figure 11-2
BMP Assessment Scores

Table 11-5: Residential Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4
Require BMP implementation	External Residents were educated in variety of ways in 2008/2009; see sections 6 and 8 for details. Internal The City's Stormwater Program Manager is heavily involved in the implementation of the residential component. Other City staff involved in the program also have a good understanding of the goals of the storm water program.	Number of residential incidents reported to storm water hotline	22	Resolution of residential incidents reported to the hotline likely resulted in a decrease in pollutant loading through improved BMP implementation.
		Resolution of enforcement actions	See Section 6	
		Number of dry weather monitoring exceedances traced to residential sources	0	
Maintain an accurate inventory	N/A, data management only	N/A, data management only		N/A, data management only

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-6: Illicit Discharge Detection and Elimination Component Assessment Measures

Significant Activity	Level 2	Level 3	Level 4
Conduct Dry Weather Monitoring Program	The City contracts with a qualified consultant to perform its Dry Weather Monitoring Program.	N/A, personnel conduct monitoring as directed by management.	No significant, long term IC/IDs were eliminated, so a reliable estimate of load reduction cannot be made.
Respond to incidents reported to storm water hotline	The City's Stormwater Program Manager trains City staff as needed. See sections 4 and 8. City staff were responsible for many of the reports made to the hotline, as shown in Section 7.	N/A, personnel respond to incidents as directed by management.	Resolution of the incidents reported to the hotline and listed in Section 7 are likely to have resulted a pollutant loading reduction.
Respond to and clean up SSOs	City staff are thoroughly trained on how to respond to SSOs.	The City conducts additional preventative inspections and maintenance in areas with a higher history of problems. See Section 4 for details.	There were eight SSOs during the reporting period; overflow was fully captured in the majority of the overflows.

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-7: Education Component Assessment Measures

Significant Activity	Level 2		Level 3	Level 4
Provide storm water education to the public	External The City actively educates the various audiences in its jurisdiction. See Section 8 for details.		See Level 3 outcomes for other program components for information about behavior change.	Sufficient data to estimate load reductions due to educational efforts is not available for 2008/2009.
	Estimated number of impressions made	30,510		

Notes
Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

Table 11-8: Public Participation Component Assessment Measures

Significant Activity	Level 2	Level 3		Level 4	
Involve the public in activities that relate to storm water protection	External The City and City partners put on a number of opportunities for the public to participate. See section 9 for details. See Figure 11-3 for a summary of hotline reports in recent years.	Number of attendees at events	3,812	Amount of trash and debris collected at cleanup events	475 lbs.
		Number of calls received to the storm water hotline	107	Amount of HHW collected	115,842 pounds of HHW, 1,200 oil filters, and 11,189 gallons of used oil

Notes: Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

12.0 SPECIAL INVESTIGATIONS

During the reporting period the City conducted two special investigations: wet weather water quality monitoring and additional data collection during industrial and commercial inspections. Details of these investigations are presented below.

12.1 ADDITIONAL WATER QUALITY MONITORING

During the reporting period, the City continued the additional wet and dry weather water quality monitoring program it initiated during the 2006/2007 fiscal year. The goal of this additional study is to use sampling results during both dry and wet weather monitoring to identify potential sources of pollutants. Data from the monitoring is included as Attachment 12.1 to this Annual Report.

12.2 ADDITIONAL DATA COLLECTED DURING INDUSTRIAL AND COMMERCIAL INSPECTIONS

During routine industrial and commercial inspections conducted in 2008/2009 the City collected additional inspection information. Several of the questions were asked to gauge the level of knowledge of the facility contact person, and other questions were based on inspector observations.

The last question on the Supplemental Watershed Assessment Questionnaire and Inspection Form prompts the inspector to assign either significant or not significant to the overall source ranking for watershed pollutants of concern. This box was checked "Significant" when two or more of the watershed pollutants of concern were assigned a pollutant discharge potential (PDP) of three (3) or higher, or one watershed pollutant of concern was assigned a PDP of a four (4) or higher. If the site did not meet the aforementioned criteria, the box was checked "Not Significant."

If the site was ranked as a "Significant" source for watershed pollutants of concern, the site was marked as being in violation of the City's Municipal Storm Water Ordinance. Some sites were observed to be in violation of the City's Municipal Storm Water Ordinance but were ranked as "Not Significant" sources for watershed pollutants of concern. In these cases, any high PDP scores for the businesses were assigned to pollutant categories that are not considered watershed pollutants of concern and therefore did not meet the criteria of "Significant." More information on enforcement actions for industrial and commercial businesses is present in Section 5 of this JURMP Annual Report.

Information gathered from the questionnaire during 2008/2009 routine industrial and commercial inspections is discussed below, and split up between the San Diego River and San Diego Bay Watersheds. The City collected the same additional data during routine inspections conducted in 2007/2008; a comparison between the 2007/2008 and 2008/2009 data is included in Section 12.2.3, below.

12.2.1 SAN DIEGO RIVER WATERSHED RESULTS

Most facility personnel (approximately 65%) did not have any knowledge of receiving any information or education about what businesses should be doing to prevent pollution from entering the environment. Other information gathered from the questions asked to facility personnel are presented in the following tables.

Table 12-1
Question: When water (from rain, sprinklers, etc.) leaves your site where does it go?

Answer	Frequency of Answer
A Water Body (Any)	30%
Don't Know/Unsure	20%
Storm Drain System	40%
Storm Drain System, A Water Body (any)	0%
Treatment Plant/Sewer	10%

Table 12-2
Question: Runoff leaving your site eventually reaches what water body?

Answer	Frequency of Answer
Don't Know/Unsure	65%
Mission Bay	0%
Pacific Ocean	35%
Pacific Ocean, San Diego River	0%
Pacific Ocean, San Diego River, Mission Bay	0%
San Diego Bay	0%
San Diego River	0%

Table 12-3
Question: What is your impression of the water quality/condition of the downstream water body?

Answer	Frequency of Answer
Don't Know	20%
Fair	20%
Good	50%
Poor	10%

Table 12-4
Question: In General, what do you think are the main areas or activities at local businesses that could contribute to pollution of runoff (more than one answer is checked in some instances)?

Answer	Frequency of Answer
Washing Activities	20%
Washing Activities Done by Mobile Businesses	0%
Material Storage	0%
Material Processing	0%
Landscaping	0%
Repair Services	10%
Illegal Dumping	15%
Trash Area	10%
Don't Know	55%
Other	20%

About half of facility personnel (approximately 45%) were receptive in their attitude toward compliance with storm water regulations. Other information regarding observations recorded during the inspection is included in the tables below:

Table 12-5
Observation: Was evidence of any non-storm water discharges (including allowable discharges) observed?

Observation	Frequency of Answer
Minimal	10%
No	85%
Significant	5%

Table 12-6
Observation: If irrigation system is present, which sprinkler head types are present (more than one answer is checked in some instances)?

Observation	Frequency of Answer

Rotor	5%
Microspray	0%
Drip	0%
Bubblers	0%
Water by Hand	15%
Other	0%
N/A	50%

Table 12-7
Sites observed to be a significant source for watershed pollutants of concern in the San Diego River Watershed

#	Business Name	Business Address
1	Dan's Automotive	7501 University Avenue
2	Panda Express #226	8011 University Avenue
3	Centre City Shell #2	3810 Massachusetts Avenue

12.2.2 SAN DIEGO BAY WATERSHED

Similar to the San Diego River Watershed, most facility personnel (approximately 62%) did not have any knowledge of receiving any information or education about what businesses should be doing to prevent pollution from entering the environment. Other information gathered from the questions asked to facility personnel are presented in the following tables.

Table 12-8
Question: When water (from rain, sprinklers, etc.) leaves your site where does it go?

Answer	Frequency of Answer
A Water Body (Any)	8%
Don't Know/Unsure	14%
Storm Drain System	73%
Storm Drain System, A Water Body (any)	1%
Treatment Plant/Sewer	4%

Table 12-9
Question: Runoff leaving your site eventually reaches what water body?

Answer	Frequency of Answer
Don't Know/Unsure	35%
Mission Bay	2%
Pacific Ocean	4%
Pacific Ocean, San Diego River	4%
Pacific Ocean, San Diego River, Mission Bay	1%
San Diego Bay	4%
San Diego River	8%

Table 12-10
Question: What is your impression of the water quality/condition of the downstream water body?

Answer	Frequency of Answer
Don't Know	18%
Fair	21%
Good	49%
Poor	12%

Table 12-11
Question: In General, what do you think are the main areas or activities at local businesses that could contribute to pollution of runoff (more than one answer is checked in some instances)?

Answer	Frequency of Answer
Washing Activities	16%
Washing Activities Done by Mobile Businesses	5%
Material Storage	15%
Material Processing	7%
Landscaping	9%
Repair Services	15%
Illegal Dumping	17%
Trash Area	12%
Don't Know	33%
Other	8%

Most facility personnel (approximately 84%) were receptive in their attitude toward compliance with storm water regulations. Other information regarding observations recorded during the inspection is included in the tables below:

Table 12-12
Observation: Was evidence of any non-storm water discharges (including allowable discharges) observed?

Observation	Frequency of Answer
Minimal	15%
No	74%
Significant	11%

Table 12-13
Observation: If irrigation system is present, which sprinkler head types are present?

17	Vons Grocery Co #2137	5630 Lake Murray Boulevard

12.2.3 Comparison of the 2007/2008 and 2008/2009 Data

Industrial and commercial facilities inspected during 2008/2009 made up the second group of routine inspections from which data was collected using the Supplemental Watershed Assessment Questionnaire. Although many of the sites inspected in 2007/2008 are different from those inspected in 2008/2009, data from the two different years were compared to identify possible overall trends or issues on which the City

needs to focus its outreach/education efforts. Below are the comparisons between the 2007/2008 and 2008/2009 information for inspections conducted in the San Diego River and San Diego Bay watersheds, respectively.

San Diego River

During the 2008/2009, inspectors noted that the percentages of facility owners/operators who were unaware of any storm water educational materials received at their site was about the same for inspections conducted in 2008/2009 and those conducted 2007/2008. Results from the questionnaire conducted in 2007/2008 and 2008/2009 were largely the same. Personnel appeared to be less receptive to the regulation requirements in 2008/2009, however. Due to the poor economy, it is possible that individuals were less receptive to the inspections because they were concerned that corrective actions will be costly for them to implement.

San Diego Bay

Similar to the San Diego River Watershed, results from the questionnaires were largely the same between 2007/2008 and 2008/2009. In contrast to the questionnaires completed in the San Diego River Watershed, most (84 percent) of facility personnel were receptive to the inspection, which is an increase from 2007/2008 where only 64 percent of facility personnel were identified as being receptive to the inspection.

12.3 Pollutant Discharge Potential Assessment

During 2008/2009, the City conducted pollutant discharge potential assessments (PDPA) at industrial and commercial facilities that received full inspection; the purpose of the assessment is to assist in source identification. The assessment is intended to be a semi-quantitative tool to identify which sites are major sources of the principal pollutants of concern for storm water. For each of several main categories of pollutants, a numeric pollutant discharge potential (PDP) on a scale from 0 (not present) to 5 (severe) is assigned. A copy of the PDPA form is included with the standard inspection form in Attachment 5.1.

Sediment, trash, and oil and grease were observed to be the largest issues during the industrial and commercial inspections conducted during 2008/2009. The City uses this information to help target businesses for inspection. Figure 12-2, on the following page, shows the distribution of PDP scores for each pollutant on the PDPA table.

Figure 12-2
PDPA Score Distribution for Facilities That Received Routine Inspection in 2008/2009

13.0 NON-EMERGENCY FIRE FIGHTING

Please reference Section 4.2.3 of this JURMP Annual Report for information about BMPs and procedures associated with non-emergency fire fighting activities.

14.0 JURMP REVISIONS

Changes to the JURMP made since the overall JURMP update in the spring of 2008 are discussed in the individual "Program Review and Modification" subsections in the preceding sections in this JURMP Annual Report.

15.0 Conclusions and Recommendations

During 2008/2009, the City of La Mesa continued to implement its storm water program based on the revised 2008 JURMP. Additionally, the City continued to work collaboratively with the other Copermittees to facilitate sharing of information about how best to run these programs and to provide regional guidance on standardized implementation where applicable. The City will continue to refine and improve its storm water program based on information made available by these collaborative efforts.

Appendix A.2 (Continued)
Construction Inventory and Inspection Summary

Notes and Definition

* These facilities were completed prior to the start of the 2008/2009 wet season

[1] Inspections of Alvarado Channel were conducted by SANDAG, which provided funding for this project

[2] Construction is currently on hold; however, the City conducted one inspection at this site during the wet season to ensure erosion control BMPs were fully implemented.

104	5/6/2009	Public Works	4180 Hybeth Drive	Municipal	The storm drain is backing up at 4180 Hybeth. Thinks someone may be dumping in it.	WO# 23940	N/A
105	5/11/2009	Public Works	4200 Woodland Drive	Municipal	The storm drain at 4200 Woodland needs to be fixed like the one on Merritt was done. Neighbors are afraid a kid is going to get stuck down there.	WO# 23962	N/A

Appendix B
Complaint Log

#	Date Received	Complaint Origin	Responsible Party/ Location of Problem	Responsible Party Type	Issue/Problem	Response	Enforcement Type/ Educational Material Distributed
106	6/1/2009	Public Works	Lake Murray Blvd.	Municipal	Replace the storm drain box at the NW corner of Lake Murray Blvd. & Cowles Mtn. Coordinate with Dirk.	WO# 24060	N/A
107	6/9/2009	Public Works	Highfield Avenue	Municipal	There is heavy debris blocking the culvert at the bottom of Highfield.	WO# 24124	N/A

APPENDIX C

Appendix C
JURMP Annual Report Requirements Checklist

Development Planning Component

Permit Annual Reporting Requirement—Section J.3.a.(3).(a)	Location in Report
i. A description of any amendments to the General Plan, the environmental review process, development project approval processes, or development project requirements.	2.2, 2.3
ii. Confirmation that all development projects were required to undergo the Copermittee's urban runoff approval process and meet the applicable project requirements, including a description of how this information was tracked.	2.4.3
iii. A listing of the development projects to which SUSMP requirements were applied.	Table 2-1
iv. Confirmation that all applicable SUSMP BMP requirements were applied to all priority development projects, including a description of how this information was tracked.	2.4.4.2
v. At least one example of a priority development project that was conditioned to meet SUSMP requirements and a description of the required BMPs.	2.4.4.2
vi. A listing of the priority development projects which were allowed to implement treatment control BMPs with low removal efficiency rankings, including the feasibility analyses which were conducted to exhibit that more effective BMPs were infeasible.	2.4.4.2
vii. An updated treatment control BMP inventory.	Appendix A (inventory)
viii. The number of treatment control BMPs inspected, including a summary of inspection results and findings.	2.4.4.3, Table 2-3 and 2-4
ix. A description of the annual verification of operation and maintenance of treatment control BMPs, including a summary of verification results and findings.	2.4.4.3
x. Confirmation that BMP verification was conducted for all priority development projects prior to occupancy, including a description of how this information was tracked.	2.4.4.2, Table 2-2
xi. A listing of any projects which received a SUSMP waiver.	2.4.4.2
xii. A description of implementation of any SUSMP waiver mitigation program.	2.4.4.2
xiii. A description of Hydromodification Management Plan (HMP) development collaboration and participation.	2.4.4.2
xiv. A listing of development projects required to meet HMP requirements, including a description of hydrologic control measures implemented.	2.4.4.2
xv. A listing of priority development projects not required to meet HMP requirements, including a description of why the projects were found to be exempt from the requirements.	2.4.4.2

Development Planning Component

Permit Annual Reporting Requirement—Section J.3.a.(3).(a)	**Location in Report**
xvi. A listing of development projects disturbing 50 acres or more, including information on whether Interim Hydromodification Criteria were met by each of the projects, together with a description of hydrologic control measures implemented for each applicable project.	2.4.4.2
xvii. The number of violations and enforcement actions (including types) taken for development projects, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	2.4.4.3, Table 2-4
xviii. A description of notable activities conducted to manage urban runoff from development projects.	Throughout Section 2

Construction

Permit Annual Reporting Requirement—Section J.3.a.(3).(b)	**Location in Report**
i. Confirmation that all construction sites were required to undergo the Copermittee's construction urban runoff approval process and meet the applicable construction requirements, including a description of how this information was tracked.	3.5
ii. Confirmation that a regularly updated construction site inventory was maintained, including a description of how the inventory was managed.	3.2
iii. A description of modifications made to the construction and grading ordinances and approval processes.	3.3
iv. Confirmation that the designated BMPs were implemented, or required to be implemented, for all construction sites.	3.5
v. Confirmation that a maximum disturbed area for grading was applied to all applicable construction sites.	3.5
vi. A listing of all construction sites with conditions requiring advanced treatment, together with confirmation that advanced treatment was required at such construction sites.	3.5
vii. For each construction site within each priority category (high, medium, and low), identification of the period of time (weeks) the site was active within the rainy season, the number of inspections conducted during the rainy season, and the number of inspections conducted during the dry season, and the total number of inspections conducted for all sites.	3.5, Appendix A (inventory)
viii. A description of the general results of the inspections.	3.5
ix. Confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance.	3.5
x. The number of violations and enforcement actions (including types) taken for construction sites, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	3.5 Table 3-1
xi. A description of notable activities conducted to manage urban runoff from construction sites.	3.1

Municipal

Permit Annual Reporting Requirement—Section J.3.a.(3).(c)	**Location in Report**
i. Any updates to the municipal inventory and prioritization.	Appendix A (inventory)
ii. Confirmation that the designated BMPs were implemented, or required to be implemented, for municipal areas and activities, as well as special events.	4.2.4, 4.3.4, 4.4.4, 4.5.4, 4.6.4, 4.7.4
iii. A description of inspections and maintenance conducted for municipal treatment controls.	2.4.3.2
iv. Identification of the total number of catch basins and inlets, the number of catch basins and inlets inspected, the number of catch basins and inlets found with accumulated waste exceeding cleaning criteria, and the number of catch basins and inlets cleaned.	4.4.4 Table 4-2
v. Identification of the total distance (miles) of the MS4, the distance of the MS4 inspected, the distance of the MS4 found with accumulated waste exceeding cleaning criteria, and the distance of the MS4 cleaned.	4.4.4, Table 4-2
vi. Identification of the total distance (miles) of open channels, the distance of open channels inspected, the distance of open channels found with anthropogenic litter, and the distance of open channels cleaned.	4.4.4, Table 4-2
vii. Amount of waste and litter (tons) removed from catch basins, inlets, the MS4, and open channels, by category.	4.4.4, Table 4-2
viii. Identification of any MS4 facility found to require inspection less than annually following two years of inspection, including justification for the finding.	**(N/A for 08-09)**
ix. Confirmation that the designated BMPs for pesticides, herbicides, and fertilizers were implemented, or required to be implemented, for municipal areas and activities.	4.2.3
x. Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating the highest volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.	4.3.4, Table 4-1
xi. Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating moderate volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.	4.3.4, Table 4-2
xii. Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating low volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.	4.3.4, Table 4-1

Municipal

Permit Annual Reporting Requirement—Section J.3.a.(3).(c)	**Location in Report**
xiii. Identification of the total distance of curb-miles swept.	4.3.4, Table 4-1
xiv. Identification of the number of municipal parking lots, the number of municipal parking lots swept, and the frequency of sweeping.	4.3.4, Table 4-1
xv. Amount of material (tons) collected from street and parking lot sweeping.	4.3.4, Table 4-1
xvi. A description of efforts implemented to prevent and eliminate infiltration from the sanitary sewer to the MS4	4.5.4
xvii. Identification of the number of sites requiring inspections, the number of sites inspected, and the frequency of the inspections.	4.2.4, 4.3.4, Table 4-3
xviii. A description of the general results of the inspections.	Table 4-3
xix. Confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance.	4.2.4
xx. The number of violations and enforcement actions (including types) taken for municipal areas and activities, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	4.2.4
xxi. A description of notable activities conducted to manage urban runoff from municipal areas and activities.	Throughout Section

Industrial and Commercial

Permit Annual Reporting Requirement—Section J.3.a.(3).(d)	**Location in Report**
i. Any updates to the industrial and commercial inventory.	5.2.2 (stationary), 5.3.2 (mobile), Appendix A (inventory)
ii. Confirmation that the designated BMPs were implemented, or required to be implemented, for industrial and commercial sites/sources.	5.2.4, 5.3.4
iii. A description of efforts taken to notify owners/operators of industrial and commercial sites/sources of BMP requirements, including mobile businesses.	5.2.4, 5.3.4
iv. Identification of the total number of industrial and commercial sites/sources inventoried and the total number inspected.	5.2.2, 5.3.2; 5.2.4, 5.3.4; Table 5-1
v. Justification and rationale for why the industrial and commercial sites/sources inspected were chosen for inspection.	5.2.4
vi. Confirmation that all inspections conducted addressed all the required inspection steps to determine full compliance.	5.2.4
vii. Identification of the number of third party inspections conducted.	5.2.4
viii. Identification of efforts conducted to verify third party inspection effectiveness.	5.2.4
ix. A description of efforts implemented to address mobile businesses.	5.3.4
x. The number of violations and enforcement actions (including types) taken for industrial and commercial sites/sources, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	5.2.4, 5.3.4
xi. A description of steps taken to identify non-filers and a list of non-filers (under the General Industrial Permit) identified by the Copermittees.	5.2.4, Table 5-2
xii. A description of notable activities conducted to manage urban runoff from industrial and commercial sites/sources.	Throughout Section

Residential

Permit Annual Reporting Requirement—Section J.3.a.(3).(e)	**Location in Report**
i. Identification of the high threat to water quality residential areas and activities that were focused on.	6.2
ii. Confirmation that the designated BMPs were implemented, or required to be implemented, for residential areas and activities.	6.4
iii. A description of efforts implemented to facilitate proper management and disposal of used oil and other household hazardous materials.	6.4
iv. Types and amounts of household hazardous wastes collected, if applicable.	6.4
v. A description of any evaluation of methods used for oversight of residential areas and activities, as well as any findings of the evaluation.	6.4 (see discussion in JURMP)
vi. The number of violations and enforcement actions (including types) taken for residential areas and activities, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	6.4
vii. A description of collaboration efforts taken to develop and implement the Regional Residential Education Program.	6.4
viii. A description of notable activities conducted to manage urban runoff from residential areas and activities.	6.4

IDDE*

Permit Annual Reporting Requirement—Section J.3.a.(3).(f)	Location in Report
i. Correction of any inaccuracies in either the MS4 map or the Dry Weather Field Screening and Analytical Stations Map.	7.4
ii. Reporting of all dry weather field screening and analytical monitoring results. The data should be presented in tabular and graphical form. The reporting shall include station locations, all dry weather field screening and analytical monitoring results, identification of sites where results exceeded action levels, follow-up and elimination activities for potential illicit discharges and connections, the rationale for why follow-up investigations were not conducted at sites where action levels were exceeded, any Copermittee or consultant program recommendations/changes resulting from the monitoring, and documentation that these recommendations/changes have been implemented. Dry weather field screening and analytical monitoring reporting shall comply with all monitoring and standard reporting requirements in Attachment B of Order No. R9-2007-0001 and Receiving Waters Monitoring and Reporting Program No. R9-2007-0001.	7.4, Table 7-2, 7-3, and 7-4
iii. Any dry weather field screening and analytical monitoring consultant reports generated, to be provided as an attachment to the annual report.	7.4, Attachment 7.1
iv. A brief description of any other investigations and follow-up activities for illicit discharges and connections.	7.5
v. The number and brief description of illicit discharges and connections identified.	7.5, Appendix B
vi. The number of illicit discharges and connections eliminated.	7.5, Appendix B
vii. Identification and description of all spills to the MS4 and response to the spills.	7.3, Appendix B
viii. A description of activities implemented to prevent sewage and other spills from entering the MS4.	7.3
ix. A description of the mechanism whereby notification of sewage spills from private laterals and septic systems is received.	7.3
x. Number of times the hotline was called, as compared to previous reporting periods, and a summary of the calls.	7.2, Appendix B
xi. A description of efforts to publicize and facilitate public reporting of illicit discharges.	7.2
xii. The number of violations and enforcement actions (including types) taken for illicit discharges and connections, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance.	7.5, Table 7-1, Appendix B

IDDE*

Permit Annual Reporting Requirement—Section J.3.a.(3).(f)	Location in Report
xiii. A description of notable activities conducted to manage illicit discharges and connections.	7.5, Table 7-1

IDDE—Additional Dry Weather Monitoring Program Requirements*

Permit Annual Reporting Requirement—Attachment B and Receiving Waters Monitoring and Reporting Program No. R9-2007-0001, Section II.B.3.c,d	Location in Report
Meets applicable standard monitoring and reporting requirements listed in Municipal Permit Attachment B.	7.4
c. (1) Determining Sampling Frequency: Dry weather field screening and analytical monitoring shall be conducted at each identified station at least once between May 1st and September 30th of each year or as often as the Copermittee determines is necessary to comply with the requirements of section D.4 of Order No. R9-2007-0001.	7.4
c. (2) If flow or ponded runoff is observed at a dry weather field screening or analytical monitoring station and there has been at least seventy-two (72) hours of dry weather, make observations and collect at least one (1) grab sample. Record general information such as time since last rain, quantity of last rain, site descriptions (i.e., conveyance type, dominant watershed land uses), flow estimation (i.e., width of water surface, approximate depth of water, approximate flow velocity, flow rate), and visual observations (i.e., odor, color, clarity, floatables, deposits/stains, vegetation condition, structural condition, and biology).	7.4
c. (3) At a minimum, collect samples for analytical laboratory analysis of the following constituents for at least twenty five percent (25%) of the dry weather monitoring stations where water is present: (a) Total Hardness, (b) Oil and Grease, (c) Diazinon and Chlorpyrifos, (d) Cadmium (Dissolved), (e) Lead (Dissolved), (f) Zinc (Dissolved), (g) Copper (Dissolved), (h) Enterococcus bacteria, (i) Total Coliform bacteria, (j) Fecal Coliform bacteria	7.4
c.(4) At a minimum, conduct field screening analysis of the following constituents at all dry weather monitoring stations where water is present:	7.4
c. (a) Specific conductance (calculate estimated Total Dissolved Solids), (b) Turbidity, (c) pH, (d) Reactive Phosphorus, (e) Nitrate Nitrogen, (f) Ammonia Nitrogen, (g) Surfactants (MBAS)	7.4
c. (5) If the station is dry (no flowing or ponded runoff), make and record all applicable observations and select another station from the list of alternate stations for monitoring.	7.4

IDDE—Additional Dry Weather Monitoring Program Requirements*

Permit Annual Reporting Requirement—Attachment B and Receiving Waters Monitoring and Reporting Program No. R9-2007-0001, Section II.B.3.c,d	Location in Report
c. (6) Develop and/or update criteria for dry weather field screening and analytical monitoring results whereby exceedance of the criteria will require follow-up investigations to be conducted to identify and eliminate the source causing the exceedance of the criteria.	7.4
c. (7) Assess the presence of trash in receiving waters and urban runoff at each dry weather field screening or analytical monitoring station. Assessments of trash shall provide information on the spatial extent and amount of trash present, as well as the nature of the types of trash present.	7.4
c. (8) Dry weather field screening and analytical monitoring stations identified to exceed dry weather monitoring criteria for any constituents shall continue to be screened in subsequent years.	7.4
c. (9) Develop and/or update procedures for source identification follow up investigations in the event of exceedance of dry weather field screening and analytical monitoring result criteria. These procedures shall be consistent with procedures required in section D.4.d of Order No. R9-2007-0001.	7.4
c. (10) Develop and/or update procedures to eliminate detected illicit discharges and connections. These procedures shall be consistent with each Copermittees Illicit Discharge and Elimination component of its Jurisdictional Urban Runoff Management Plan as discussed in section D.4 of Order No. R9-2007-0001.	7.4
d. The Copermittees shall commence implementation of dry weather field screening and analytical monitoring under the requirements of this Order by May 1, 2008. Each Copermittee shall conduct dry weather analytical and field screening monitoring in accordance with its storm water conveyance system map and dry weather analytical and field screening monitoring procedures as described in section II.B.3 above. If monitoring indicates an illicit connection or illegal discharge, conduct the follow-up investigation and elimination activities as described in submitted dry weather field screening and analytical monitoring procedures and sections D.4.d and D.4.e of Order No. R9-2007-0001. Until the dry weather field screening and analytical monitoring program is implemented under the requirements of this Order, each Copermittee shall continue to implement dry weather field screening and analytical monitoring as it was most recently implemented pursuant to Order No. 2001-01.	7.4

* Section 7, the Illicit Discharge Detection and Elimination component, of the 2008/2009 Annual Report, will be submitted to the RWQCB no later than December 15, 2008.

Education

Permit Annual Reporting Requirement—Section J.3.a.(3).(g)	Location in Report
i. A description of education efforts conducted for each target community.	8.3
ii. A description of how education efforts targeted underserved target audiences, high-risk behaviors, and "allowable" behaviors and discharges.	8.3
iii. A description of education efforts conducted for municipal departments and personnel.	8.2
iv. A description of education efforts conducted for the new development and construction communities.	8.3
v. A description of jurisdictional education efforts conducted for residents, the general public, and school children.	8.3

Public Participation

Permit Annual Reporting Requirement—Section J.3.a.(3).(h)	Location in Report
i. A description of public participation efforts conducted.	9.2 and 9.3

Effectiveness Assessment

Permit Annual Reporting Requirement—Section J.3.a.(3).(i)	Location in Report
i. An assessment of the effectiveness of the Jurisdictional Urban Runoff Management Program which meets all requirements of section I.1 of this Order.	11

Fiscal Analysis

Permit Annual Reporting Requirement—Section J.3.a.(3).(j)	Location in Report
i. A fiscal analysis of the Copermittee's urban runoff management programs which meets all requirements of section G of this Order. (For 2007-2008, the requirements that apply are essentially the same as those found in Order No. 2001-01)	10

Same as old Permit for 2007-2008

Special Investigations

Permit Annual Reporting Requirement—Section J.3.a.(3).(k)	Location in Report
i. A description of any special investigations conducted.	12

Non-Emergency Firefighting

Permit Annual Reporting Requirement—Section J.3.a.(3).(l)	**Location in Report**
i. A description of efforts conducted to reduce pollutant discharges from non-emergency fire fighting flows.	4.2.3, 13

JURMP Revisions

Permit Annual Reporting Requirement—Section J.3.a.(3).(m)	**Location in Report**
i. A description of any proposed revisions to the JURMP.	14 and each program component section

ATTACHMENT 3.1

CONSTRUCTION STORM WATER MANAGEMENT PLAN

CITY OF LA MESA
JEWEL of the HILLS

CONSTRUCTION STORM WATER MGMT. PLAN

PUBLIC WORKS DEPARTMENT / ENGINEERING DIVISION
8130 Allison Avenue, La Mesa, CA 91941
Phone: (619) 667-1166 • Fax: (619) 667-1380

Project Name: _____ Project Address: _____
Person completing form: _____ Telephone number: (_____)_____-_____
Signature: _____ Date: ____/____/_____

Construction projects less than one acre but answer "Yes" to questions 2, 3, or 4 in Section 2 Part C of the City's Appendix A document are required to prepare a Construction Storm Water Management Plan (CSWMP). Completion of this form along with submittal of a site map with the features described at the end of this form can adequately meet this requirement.

Planning and Organization

Person responsible for implementing items in this CSWMP:_____

Is this project subject to other construction regulations? ~ Yes ~ No
If yes, please list: _____

Significant Materials

List all significant materials that will be stored and handled at the site in the table below.
Include a brief description of the location where the materials will be stored and expected quantities.

Material	Storage Location	Expected Quantity

Potential Pollutant Sources

Provide a brief narrative description of the site's activities and list the potential pollutants that could be transported from the site by storm water in the following table.

Activity	Potential Pollutants Sources and Pollutants Generated by Activity

Best Management Practices

Every construction site within the City's jurisdiction is required to select, install, and maintain construction BMPs to reduce, retain, and manage pollutant discharges to the maximum extent practicable. The BMPs listed below are required by the City where applicable. The corresponding Caltrans fact sheet for the listed BMPs is indicated in parenthesis. These fact sheets are obtainable from the Caltrans Storm Water Quality Handbooks Construction Site BMP Manual (2003) and provide additional details on how to implement the BMP.

Please check all BMPs below that are applicable and feasible for the construction that will be implemented and maintained for the length of construction.

- ☐ Preserve natural hydrologic features where feasible
- ☐ Preserve riparian buffers and corridors where feasible
- ☐ Minimize areas that are cleared and graded to only the portion of the site that is necessary for construction
- ☐ Minimize exposure time of disturbed soil areas
- ☐ Minimize grading during the wet season and correlate grading with seasonal dry weather periods to the extent feasible
- ☐ Temporarily stabilize and reseed disturbed soil areas as rapidly as feasible
- ☐ Preserve existing vegetation where feasible (SS-2)
- ☐ Establish permanent re-vegetation or landscaping as early as feasible

Prevent the contamination of storm water from vehicles and equipment through proper management of the following types of activities:

- ☐ Cleaning (NS-8)
- ☐ Fueling (NS-9)

☐ Maintenance (NS-10)

Prevent the contamination of storm water from construction materials through proper management of the following types of activities:

☐ Material Delivery and Storage (WM-1)
☐ Material Use (WM-2)
☐ Stockpile Management1 (WM-3)
☐ Spill Prevention and Control (WM-4)

Prevent the contamination of storm water by wastes through proper management of the following types of wastes:

☐ Solid Waste (WM-5)
☐ Hazardous Waste (WM-6)
☐ Contaminated Soil (WM-7)
☐ Concrete (WM-8)
☐ Sanitary Waste (WM-9)
☐ Liquid (WM-10)

Prevent the contamination of storm water through proper management of the follow activities:

☐ Water Conservation Practices (NS-1)
☐ Dewatering Operations (NS-2)
☐ Paving and Grinding (NS-3)
☐ Potable Water/Irrigation and Flushing (NS-7)

Prevent erosion and sediment runoff from exposed graded areas through physical stabilization and/or vegetation stabilization[2] by implementing <u>one or more</u> of the following BMPs:

☐ Hydraulic Mulch (SS-3)
☐ Hydroseeding (SS-4)
☐ Soil Binders (SS-5)
☐ Straw Mulch (SS-6)
☐Geotextiles, Plastic Covers, and Erosion Control Blankets/Mats (SS-7)
☐ Wood Mulch (SS-8)
☐ Earth Dikes/Drainage Swales (SS-9)

Reduce the velocity of storm water by using <u>one or more</u> of the following:

☐ Outlet Protection/Velocity Dissipation (SS-10)
☐ Slope Drains (SS-11)

Protect the Perimeter of the site or exposed area from sediment discharge using <u>one or more</u> of the following:

☐ Silt Fence (SC-1)
☐ Gravel Bag Berm (SC-6)
☐ Fiber Rolls (SC-5)

Capture sediments in channeled storm water by using <u>one or more</u> of the following:

☐ De-silting Basin3 (SC-2)
☐ Storm Drain Inlet Protection (SC-10)
☐ Sediment Trap (SC-3)
☐ Gravel Bag Barrier (SC-8)

Prevent sediment from being tracked off-site by using <u>one or more</u> of the following:

☐ Stabilized Construction Entrance (TC-1)
☐ Construction Road Stabilization (TC-2)
☐ Entrance/Exit Tire Wash (TC-3)
☐ Street Sweeping (SC-7)

Notes on above BMPs:

1. Stockpiles should be fully covered when materials are not being added or removed.
2. Vegetation stabilization BMPs must be installed, irrigated, and established (uniform vegetative coverage with 70% coverage established) prior to October 1st. In the event stabilizing vegetation has not been established by October 1st, other forms of physical stabilization must be employed to prevent erosion until the stabilizing vegetation is established.
3. De-silting basins must be designed in accordance with industry standards such as Caltrans.

All construction sites must implement the above BMPs in accordance with the City's dry and wet season requirements, which are detailed below.

A. Dry Season Requirements (May 1 through September 30) include but are not limited to:

- All exposed disturbed areas must have erosion prevention controls properly installed including building pads, unfinished roads, and slopes. (Slopes greater than 33.3% or 3:1 vertical vs. horizontal may use properly designed and installed de-silting basins at all discharge points in lieu of this requirement)
- Adequate perimeter protection BMPs must be installed and maintained to comply with performance standards (above).
- Adequate sediment containment BMPs must be installed and maintained to comply with performance standards (above).
- Adequate BMPs designed to control off-site sediment tracking must be installed and maintained.
- At a minimum, 125% of the materials needed to install standby BMPs necessary to completely protect exposed portions of the site from erosion and to prevent sediment discharges must be stored on the site. Areas that have already been protected from erosion using physical stabilization or vegetation stabilization BMPS are not considered to be "exposed" for purposes of this requirement.
- The owner/contractor must have an approved "weather triggered" action plan and have the ability to deploy standby BMPs as needed to completely protect the exposed portions of the site within 24 hours of prediction of a storm event (a forecasted 40% chance of rain).
- Deployment of physical or vegetation erosion control BMPs must commence as soon as grading and/or excavation is completed for any portion of the site. The project proponent may not continue to rely on the ability to deploy standby BMP materials to prevent erosion of graded areas that have been completed.
- The amount of cleared or graded areas left exposed at any given time is limited to 17 acres or to the alternate maximum area approved by the City in writing.
- A washout area shall be designated and maintained for materials such as concrete, stucco, paint, caulking, sealants, drywall plaster, etc.
- Properly protected, designated storage areas are required for materials and wastes.
- All stockpiles of materials and wastes should be covered when materials are not being actively added or removed.
- Remnant trash and debris shall be removed and/or properly stored/disposed of daily.
- Storage, service, cleaning, and maintenance areas for vehicles and equipment shall be identified and protected accordingly.
- Materials for spill control/containment must be stockpiled onsite.
- Non-storm water discharges must be eliminated or controlled to the MEP.

B. Rainy Season Requirements (October 1 through April 30) include but are not limited to:

- All exposed disturbed areas must have erosion prevention controls properly installed including building pads, unfinished roads, and slopes. (Slopes greater than 33.3% or 3:1 vertical vs. horizontal may use properly designed and installed de-silting basins at all discharge points in lieu of this requirement)
- Adequate perimeter protection BMPs must be installed and maintained to comply with performance standards (above).
- Adequate sediment containment BMPs must be installed and maintained to comply with performance standards (above).
- Adequate BMPs designed to control off-site sediment tracking must be installed and maintained.
- At a minimum, 125% of the materials needed to install standby BMPs necessary to completely protect exposed portions of the site from erosion and to prevent sediment discharges must be stored on the site. Areas that have already been protected from erosion using physical stabilization or vegetation stabilization BMPS are not

considered to be "exposed" for purposes of this requirement.

- The owner/contractor must have an approved "weather triggered" action plan and have the ability to deploy standby BMPs as needed to completely protect the exposed portions of the site within 24 hours of prediction of a storm event (a forecasted 40% chance of rain).
- Deployment of physical or vegetation erosion control BMPs must commence as soon as grading and/or excavation is completed for any portion of the site. The project proponent may not continue to rely on the ability to deploy standby BMP materials to prevent erosion of graded areas that have been completed.
- The amount of cleared or graded areas left exposed at any given time is limited to 17 acres or to the alternate maximum area approved by the City in writing.
- A washout area shall be designated and maintained for materials such as concrete, stucco, paint, caulking, sealants, drywall plaster, etc.
- Properly protected, designated storage areas are required for materials and wastes.
- All stockpiles of materials and wastes should be covered when materials are not being actively added or removed.
- Remnant trash and debris shall be removed and/or properly stored/disposed of daily.
- Storage, service, cleaning, and maintenance areas for vehicles and equipment shall be identified and protected accordingly.
- Materials for spill control/containment must be stockpiled onsite.
- Non-storm water discharges must be eliminated or controlled to the MEP.
- Erosion control BMPs must be upgraded if necessary to provide sufficient protection for storms likely to occur during the rainy season.
- Perimeter protection and sediment containment BMPs must be upgraded if necessary to provide sufficient protection for storms likely to occur during the rainy season.
- adequate soil stabilization and erosion prevention BMPs must be installed and established for all completed slopes prior to October 1 and maintained throughout the wet season. If a selected BMP fails, it must be repaired, improved, or replaced with an acceptable alternate as soon as it is safe to do so.
- All vegetation erosion prevention BMPs must be established prior to the rainy season to be considered as a BMP.
- Standby erosion and sediment control BMPs must be able to protect all exposed soil areas. A disturbed area that is not completed but that is not being actively graded must be fully protected from erosion if left for seven or more calendar days. The ability to deploy standby BMP materials is not sufficient for these areas.

Project Site Map

A site map of the project must be attached to this form and contain the following features:

- An outline of the entire property
- Drainage areas on the property and direction of flow
- Areas of soil erosion
- Nearby water bodies and municipal storm drain inlets
- Location of storm water conveyance systems (ditches, inlets, storm drains, etc.)
- Location of existing storm water controls (oil water separators, sumps, etc.)
- Location of impervious areas (paved areas, buildings, covered areas)
- Locations where toxic or hazardous materials spilled in the past
- Location of building and activity areas (e.g. fueling islands, garages, waste container areas, wash racks, hazardous material storage areas, etc.)
- Locations where BMPs proposed in this document will be installed
- Locations where materials will be temporarily stored onsite

City Use Only

MUNICIPAL INSPECTION FORM

City of La Mesa

Storm Water Quality Inspection for Municipal Facilities

Inspected by D-MAX Engineering, Inc.

Inspector Name _____

Date____/____/_____Time_____AM / PM Type of Inspection: ☐ Routine ☐ Follow-up ☐ Complaint Investigation

A. CONTACT INFORMATION

Facility Name_____

Street Address_____ Mailing Address_____

_____ _____

Manager/Operator(s)_____

Telephone # (_____) _____ - _____ ext._____ Fax # (_____) _____ - _____

Manager/Operator(s) Email:_____

Facility Personnel Present_____

B. FACILITY/SITE INFORMATION

Principal activity:_____

JURMP Classification_____

New JURMP Classification?_____

Does facility maintain SWPPP/BMP Plan? ☐ Yes ☐ No

If yes, what is the date of last SWPPP/BMP Plan revision?_____

If yes, does the SWPPP/BMP Plan include applicable minimum BMPs from the JURMP? (if no, describe in Section E) ☐ Yes ☐ No

If yes, does the SWPPP/BMP Plan include a current list of individuals Responsible for implementing BMPs at the site? ☐ Yes ☐ No

Does facility have a map/sketch of the site with flow lines and storm drains? ☐ Yes ☐ No

C. INITIAL OBSERVATIONS

Drainage basin: ☐ Alvarado ☐ University ☐ Spring Valley ☐ Lemon Grove ☐ Lake Murray

Nearest conveyances or water bodies: _____ Hydrologic Area: _____

Approximate distance to water bodies: ☐ < 200 ft. ☐ 200 – 1000 ft. ☐ > 1000 ft.

Sensitivity of receiving waters: ☐ Sensitive (ESA, 303(d), or other) ☐ Non-sensitive

Discharge points along perimeter: _____

_____

Discharge observed: ☐ Yes ☐ No

If yes, describe: _____

Approximate area covered by industrial or commercial activities: _____ square feet

Approximate % impervious surface of this area_____%

Exposed areas of intensive outdoor activity: _____

City of La Mesa

Storm Water Quality Inspection for Municipal Facilities

Inspected by D-MAX Engineering, Inc.

D. BMP ASSESSMENT

BMPs	N/A	Yes	No	Comments
D.1 General				
Is the site free of excessive litter and debris?				
Are discharge locations free of excessive sediment and debris?				
Are parking lots, sidewalks and streets free of excessive sediment and debris?				
Are roof downspouts directed away from areas of potential pollutants?				
Is wash water from pressure washing / hosing managed appropriately?				
Are employees trained in storm water management?				
Does the facility have a current log of employees who have participated in training?				
D.2 Landscaping				
Are adequate erosion prevention measures employed? (vegetation or physical stabilization)				
Are irrigation systems programmed to minimize over-watering and runoff?				
If reclaimed water is used for irrigation, is the site free of evidence of irrigation water entering the storm drain?				
Are stockpiles of soil or landscape waste covered when feasible and equipped to prevent runoff transport?				
Are pesticides, herbicides, and fertilizers managed in accordance with the JURMP BMPs?				
D.3 Materials and Wastes				
Are adequate trash containers provided?				
Are adequate recycling containers provided?				
Is the trash/recycling area adequately covered (closed lids or permanent overhead cover)?				
Is the trash/recycling area free of litter and debris?				
Is timely service and removal provided to prevent waste containers and sanitary facilities from overflowing?				
Are outdoor materials that pose a threat to water quality stored appropriately (covered or in sealed containers)?				
Are outdoor storage containers properly labeled?				
Is there an accessible, appropriate spill response kit?				
Is there a written spill response plan? If so, please provide to inspector. (NA if no significant materials to spill)				
Are liquid storage containers/tanks equipped with secondary containment?				
Is secondary containment free of spills and rainwater?				
Are loading and unloading areas free of spills and debris?				
Is water from pools and/or fountains disposed of properly?				
D.4 Equipment and Vehicles				
Are exposed parking areas free of significant spills and leaks?				

City of La Mesa

Storm Water Quality Inspection for Municipal Facilities

Inspected by D-MAX Engineering, Inc.

BMPs	N/A	Yes	No	Comments
Are vehicle maintenance activities conducted within contained areas when feasible (garage, canopy, work shop)?				
Are equipment and vehicles inspected daily for leaks and repaired as necessary?				
Are storm drain inlets near vehicle-fueling areas protected from spills and leaks?				
Is vehicle washing preformed in a designated area where runoff does not enter the MS4?				
Are biodegradable soaps used when appropriate?				
D.5 Building Repair/Construction				
Are adequate erosion prevention measures employed throughout the site? (vegetation or physical stabilization)				
Are adequate sediment control BMPs employed throughout the site? (sandbags, gravel bags, inlet filters)				
Are impervious areas free of debris and spills from painting, scraping, and/or sandblasting activities?				
D.6 Structural BMPs				
Are structural BMPs adequately maintained? (NA if no structural BMPs at facility)				
D.7 Non-Storm Water Management				
Is the site free of evidence of illicit connections and illegal discharges?				
Is the site free of evidence of unauthorized releases to storm drains?				
If not, have the appropriate authorities been notified?				
D.8 Other				
Are there any other potential storm water pollution issues or concerns? If yes, explain below.				
E. ADDITIONAL COMMENTS (describe any additional deficiencies not represented above and/or notable BMP improvements)				

City of La Mesa

Storm Water Quality Inspection for Municipal Facilities

Inspected by D-MAX Engineering, Inc.

BMPs	N/A	Yes	No	Comments

F. CORRECTIVE ACTION

Is corrective action needed? ☐ Yes ☐ No (If **BMP-related** corrective action is required, describe below.)

Operator has been notified of recommended corrective actions both verbally and by: ☐ Hand ☐ Mail ☐ Fax ☐ E-Mail

G. VIOLATIONS

☐ No violations have been noted at this time

☐ No violations have been noted, but recommend taking corrective action described in Section F.

☐ Violation of City Ordinance(s):

- ☐ Illegal discharge(s) of pollutants to the storm drain system or to receiving waters
  Description_____
- ☐ Illegal connection(s) to the storm drain system
  Location_____
- ☐ Littering
- ☐ Failure to properly implement required BMPs

☐ Other Violation_____

SPECIFIC ACTION(S) REQUIRED TO CORRECT THE VIOLATION DESCRIBED ABOVE:

☐ Implement the recommended corrective actions listed in Section F.

Additional actions required:

H. ADDITIONAL RECOMMENDED CITY ACTIONS*

*Recommended City Actions listed at the time of inspection are subject to change based on later review by office staff

Does this facility require a follow-up inspection? ☐ Priority 1 ☐ Priority 2 ☐ Priority **3** ☐ None

D. BMP ASSESSMENT

BMPs	No Corrections Required		Corrections Required		Comments
	N/A	Fully Implemented	Partially Implemented	Not Implemented	
D.1 General					
Keep site free of litter, debris, and sediment using dry methods					
Keep storm drains on site free of litter and debris					
Keep outdoor areas free of spills and leaks					
Collect water from pressure washing or hosing and dispose of appropriately					☐ Unknown Performed by:
Direct roof downspouts away from areas of potential pollutants					
D.2 Landscaping					
Properly manage pesticides/fertilizer; use IPM when feasible					☐ Unknown Landscaping Co:
Employ adequate erosion prevention measures (vegetation or physical stabilization)					
Eliminate over watering/over-irrigation					
Properly store stockpiles to prevent material transport					
Properly store and dispose of green waste					☐ Unknown
D.3 Materials and Wastes					
Protect trash area from contact with storm water					
Keep trash area free of litter and debris, liquids, powders, sediment					
Adequately cover materials stored outside					
Prevent run-on from contacting materials stored outdoors					
Properly label outdoor storage containers					
Provide an accessible, functional spill response kit					
Equip liquid storage containers with spill containment					
Keep spill containment free of spills and rainwater					
Properly store and dispose of hazardous materials					
Keep loading and unloading areas, including drains, free of debris					
Dispose of water generated by processing activities appropriately					
Dispose of pool, spa, fountain, and filter backwash water properly					☐ Unknown Performed by:
Clean floor mats in locations that do not drain to street or storm drain system					

BMPs	No Corrections Required		Corrections Required		Comments
	N/A	Fully Implemented	Partially Implemented	Not Implemented	
D.4 Equipment, Vehicles, and Outdoor Activities					
Conduct outdoor activities within contained areas (garage, under canopy, work shop)					
Use drip pans to collect leaks/spills					
Provide materials (berm, mat, etc.) to protect storm drain inlets from spills and leaks					
Perform vehicle/equipment washing in a contained area where runoff does not enter the MS4					
D.5 Other					
Manage animals and animal waste in a manner that prevents animal waste from being transported in runoff					
Identify and eliminate illicit connections and illegal discharges					

D.6 Additional Required Actions

D.7 Additional Questions	**Comments/Results**
Are there any potential air sources that could contribute to atmospheric deposition of pollutants?	☐ Painting ☐ Sandblasting ☐ Fuel Distribution ☐ Dust dispersion or mineral processing ☐ Metal smelting ☐ Metal plating or anodizing ☐ Chemical production or mixing ☐ Large fuel burning device ☐ Incinerator
Are there any treatment control BMPs on site?	☐ Filter insert ☐ Hydrodynamic separator ☐ Debris screen ☐ Sewer diversion ☐ Vegetated swale ☐ Vegetated filter strip ☐ Biofiltration ☐ Detention/sedimentation basin ☐ Containment and evaporation or reuse ☐ Filtration
Are treatment control BMPs regularly maintained?	☐ Yes ☐ No ☐ Unknown ☐ N/A
What is the approximate percentage of the site that drains to the treatment control BMPs?	☐ N/A
Do major potential pollutant sources drain to treatment BMP(s)?	☐ All ☐ Some ☐ None ☐ N/A
If any illicit connections and/or illegal discharges were identified have the appropriate authorities been notified?	☐ Yes ☐ No ☐ N/A
If any illicit connections and/or illegal discharges were identified, were they eliminated during the site visit?	☐ Yes ☐ No ☐ N/A
Were any non IC/ID related corrective actions implemented during the site visit?	☐ Yes ☐ No ☐ N/A
Were any educational materials distributed?	NOI NONA/NEC

E. STATE GENERAL INDUSTRIAL PERMIT COMPLIANCE*

☐ Non-compliance with the State Industrial Storm Water General Permit noted.

SPECIFIC ACTION(S) REQUIRED TO CORRECT THE VIOLATION DESCRIBED ABOVE*:

☐ File a Notice of Intent (NOI) with the State Water Resources Control Board (SWRCB) to obtain coverage under the Industrial Permit—see Attachment 3 of the Industrial Permit (www.waterboards.ca.gov/stormwtr/industrial.html).

- ☐ For "Conditional" facilities only: this site presently has outdoor exposure that requires filing for coverage under the Industrial Permit. If you implement all the recommended BMPs and eliminate outdoor exposure, you may be able to qualify for exemption from obtaining Industrial Permit coverage. Please contact the RWQCB for details.

☐ Develop and implement a Storm Water Pollution Prevention Plan (SWPPP)—see Section A of the Industrial Permit.

☐ Develop and implement a storm water monitoring program--see section B of the Industrial Permit for guidelines.

☐ Complete the provided Notice of Non-Applicability (NONA) and accompanying No Exposure Certification (NEC).

Additional notes and/or actions required:

_____

_____

_____

F. CORRECTIVE ACTION SUMMARY

☐ **Corrective Actions Required.** Please refer to sections D.1-D.6, E, and F of this form and, if applicable, the Food Establishment Storm Water BMP Assessment form (if applicable, it is attached).

☐ No Corrective Actions Required at this time.

G. RECOMMENDED CITY ACTIONS**

_____

_____

_____

Follow Up Inspection Priority: ☐ **Priority 1** ☐ **Priority 2** ☐ **Priority 3**

ASSESSMENT

Level of knowledge regarding stormwater issues:	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5
Level of cleanliness, BMP implementation, orderliness of site:	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5

*Please note that the Regional Water Quality Control Board (RWQCB) is the final arbiter of Industrial Permit compliance; please contact the RWQCB at (858) 467-2952 for details of what is necessary to comply with the Industrial Permit.

**Recommended City actions listed at the time of inspection are subject to change based on later review by office staff.

POLLUTANT DISCHARGE POTENTIAL ASSESSMENT

Site Name:_____

Pollutant	PDP	Sources Needing More BMPs							Recommended BMPs (check if applicable)			
		Trash Area	Material Storage	Prkng Lot	Load/ Unload	Land-scape	Veh/Eqp Maint	Exposed Work Area	Emp. Training	House-keeping	Minor Struct.	Major Struct.
Sediments												
Nutrients												
Aluminum												
Iron												
Heavy Metals												
Check if evidence indicates specific metals may have significant PDPs: ☐ Copper ☐ Cadmium ☐ Lead ☐ Zinc ☐ Mercury												
Organic Compounds												
Check if evidence indicates there may be historical soil contamination associated with any of the following: ☐ PCBs ☐ PAHs ☐ Chlordane ☐ DDT												
Trash & Debris												
Oxygen Demanding												
Oil & Grease												
Bacteria & Viruses												
Pesticides												
Check if evidence indicates the following are used on site: ☐ Diazinon ☐ Chlorpyrifos												
Acid/Base (pH effects)												
Others (list):												

"RW 303(d)" = Receiving water impairments, as listed in the most recent 303(d) list
"WS COC" = High priority watershed constituents of concern (COC), as listed in the most recent WURMP Annual Report
"PDP" = pollutant discharge potential.
"Emp. Training" = employee training activities focused on storm water pollution prevention
"Housekeeping" = standard good housekeeping BMPs, such as sweeping, regular trash pickup, etc.
"Minor Struct." = minor structural BMPs that do not require building permits, such as covering with tarps or building berms
"Major Struct." = major structural BMPs that require a building permit or are especially expensive, such as detention basins, oil/water separators, grease interceptors, overhead coverage for storage areas, etc.

Criteria

0 - no appreciable quantity observed on site
1 - very small potential for pollutant discharge; monitoring results* are well below the EPA benchmark
2 - Small potential for pollutant discharge; monitoring results* are close to the EPA benchmark but still below it
3 - Moderate potential for pollutant discharge; monitoring results* are at or slightly above the EPA benchmark
4 - Large potential for pollutant discharge; monitoring results* above the EPA benchmark but are within an order of magnitude
5 - Severe potential for pollutant discharge; monitoring results* exceed the EPA benchmark by an order of magnitude or more

ATTACHMENT 5.2

UPDATED NOI AND NONA/NEC INSTRUCTIONAL COVER SHEETS

Compliance with the Industrial Storm Water General Permit, NONA/NEC

Your business is conditionally subject to the Industrial Storm Water General Permit ("General Industrial Permit"). The General Industrial Permit, which applies to facilities throughout California, regulates businesses according to their Standard Industrial Classification (SIC) codes.

Since your business is conditionally subject to the General Industrial Permit, you may fill out the attached paperwork to gain potential exemption from General Industrial Permit requirements if you can certify that the following minimum conditions at your facility are met:

1. All prohibited non-storm water discharges have been eliminated or otherwise permitted.
2. All areas of past exposure have been inspected and cleaned, as appropriate.
3. All materials related to industrial activity (including waste materials) are not exposed to storm water or authorized non-storm water discharges.
4. All industrial activities and industrial equipment are not exposed to storm water or authorized non-storm water discharges.
5. There is no exposure of materials associated with industrial activity through other direct or indirect pathways such as particulates from stacks and exhaust systems.

If the above conditions are not met or the above conditions are not certified with the attached paperwork, your business will be required to submit a Notice of Intent (NOI) to file for coverage under the General Industrial Permit. Requirements associated with this include an annual fee of $1,008, development of a Storm Water Pollution Prevention Plan, and collecting and analyzing at least two samples of storm water during each year's wet season (October 1 through April 30).

Satisfactorily completing the attached Notice of Non-Applicability (NONA) and its accompanying No Exposure Certification (NEC) will serve as certifying the above conditions. This paperwork is to be completed as soon as possible and retained on site in an accessible location. In addition, the City requests that a copy be sent to both the City and the Regional Water Quality Control Board (RWQCB). Please note there is periodic re-evaluation of the facility to ensure these conditions are continuously met.

City of La Mesa
Attn: Hamed Hashemian
Storm Water Pollution Prevention Program
City of La Mesa
P.O. Box 937
La Mesa, CA 91944-0937

Regional Water Quality Control Board
Attn: Region 9 Storm Water Permitting Unit
Regional Water Quality Control Board
9174 Sky Park Court
Suite 100
San Diego, CA 92123

Tips for completing the paperwork

- Even if your site has no exposure, you need to complete and submit the NONA/NEC paperwork to be in compliance with the General Industrial Permit
- On the Notice of Non-Applicability, complete the
  - Facility Information
  - Regulatory Status (in most cases the answer to the first question will be no)
  - Basis of Non-Applicability
    - Your business's basis of non-applicability is **reason 2**, you do not have to fill out anything relating to other reasons for basis of non-applicability. Your SIC code can be found on your inspection report; since you are being provided your SIC code, Table 3 is not necessary for completing this section.
  - Certification
- Answer the series of yes/no questions on the No Exposure Certification and sign and date
- Attach some photos of the outdoor areas of your facility

Additional Resources

- For further questions regarding completing the NONA/NEC paperwork, contact
  - Your inspector (name is listed on your copy of the inspection report) from D-MAX Engineering, Inc., the firm contracted by the City to conduct your inspection, at (858) 586-6600.
  - City of La Mesa: Hamed Hashemian at (619) 667-1153
  - Regional Water Quality Control Board: (858) 467-2952, ask for General Industrial Permit Compliance
- **For more information about the General Industrial Permit, visit:**

http://www.waterboards.ca.gov/water_issues/programs/stormwater/industrial.shtml

Compliance with the Industrial Storm Water General Permit, NOI

Your facility is currently not in compliance with the requirements of the Industrial Storm Water General Permit ("General Industrial Permit"). The General Industrial Permit applies to industrial facilities throughout California and is overseen by the State Water Resources Control Board (SWRCB). In the San Diego region, it is administered and enforced by the San Diego Regional Water Quality Control Board (SDRWQCB). The following sources can provide more information regarding the process of coming into compliance, which includes filing a Notice of Intent (NOI), preparing a Storm Water Pollution Prevention Plan (SWPPP), and implementing a storm water quality monitoring program.

A copy of the General Industrial Permit can be found on the State Water Resources Control Board (SWRCB) Industrial Storm Water Program website:

http://www.waterboards.ca.gov/water_issues/programs/stormwater/industrial.shtml

The website also offers additional information about the General Industrial Permit compliance, as well as forms and other documents. A checklist for submitting an NOI and NOI paperwork are attached; NOI instructions, as referred to on the checklist, are included in the General Industrial Permit.

Additional Resources:

- Industrial and Commercial Best Management Practices (BMP) Handbook can be found on the California Stormwater Quality Association (CASQA) website:

  http://www.cabmphandbooks.com/Industrial.asp

- Guidelines regarding SWPPP development and storm water quality monitoring can be found at:

  http://www.cabmphandbooks.com/Documents/Industrial/Section_2.pdf

- A sample SWPPP can be found at:

  http://www.cabmphandbooks.com/Documents/Industrial/Appendix_C.pdf

For further questions regarding coming into compliance with the General Industrial Permit, contact:

- Your inspector (name is listed on your copy of your inspection report) from D-MAX Engineering, Inc., the firm contracted by the City to conduct your inspection, at (858) 586-6600.
- City of La Mesa: Hamed Hashemian at (619) 667-1153
- San Diego Regional Water Quality Control Board at (858) 467-2952, ask for General Industrial Permit Compliance

ATTACHMENT 5.3

INTEGRATED PEST MANAGEMENT CARDS

Ants

Ants are one of the most prevalent pests in California. Although ants are annoying when they come indoors, they can be beneficial by feeding on fleas, termites, and other pests in the garden. While spraying chemicals inside the house may seem effective, it won't prevent more ants from entering your home, which is essential for control because most ants nest outside. Focus management efforts on excluding ants from buildings or valuable plants.

Make your house less attractive to ants:

- Caulk cracks and crevices that provide entry inside.
- Store attractive food in closed containers.
- Clean up grease and spills.
- Look for and remove indoor nesting sites, such as inside potted plants.
- Ant-proof kitchen garbage pails with sticky barriers such as petroleum jelly under the lip and pet dishes by placing them in a moat of water.
- Remove sweet food sources next to your house such as aphid-infested bushes and ripened fruit on trees.

When ants invade your house, take these steps:

- Sponge invaders with soapy water as soon as they enter.
- Plug up ant entryways with caulk or petroleum jelly.
- Remove infested potted plants.
- Clean up food sources.
- Rely on baits to control the ant colony.
- Indoor sprays are not usually necessary.

How and why baits work best:

When using bait, place it along ant trails and at nest openings. Worker ants will be attracted to bait and take it back to the nest where the entire colony, including queens, may be killed. The bait must be slow-acting so workers won't be killed before they get back to the nest. It may take several weeks for results to be evident. Just killing workers foraging in your home or garden does little to control the colony, because as few as one percent of a colony's foraging worker ants are able to provide sufficient food to support nestbound queens and larvae. Baits in bait stations or ant stakes are easiest to use and safest for the environment.

(actual size)

*Use **NON-CHEMICAL** methods & **LEAST TOXIC** pesticides. **WHY?** Runoff from around your home and garden carries water containing pesticides that pollute our streams, rivers, lakes and oceans.*

Learn more about San Diego regional water quality at: www.ThinkBlueSD.org & www.ProjectCleanWater.org. For more pest information visit the University of California IPM website at: www.ipm.ucdavis.edu or the UCCE Master Gardeners at: (858) 694-2860, Mon-Fri, 9 am to 3 pm

UC IPM
University of California Cooperative Extension

UNIVERSITY of CALIFORNIA

MASTER GARDENER ASSOCIATION SAN DIEGO COUNTY

It's the water that connects us!

Aphids

Almost every plant has one or more aphid species that occasionally feeds on it, but low to moderate numbers of aphids are usually not damaging in gardens or on landscape trees. Although aphids can curl leaves and produce sticky honeydew, they rarely kill plants and can often be washed off with water. When aphid numbers get high, natural enemies frequently feed on them, eliminating the need for pesticides. Insecticidal soaps and oils are less toxic pesticides that can be used when treatment is necessary.

Aphids are common in your garden because:

- Aphids like lush new growth. Don't over fertilize. Use organic fertilizers or slow-release products.
- Aphids build up on flowering plums, roses, tulip trees, crape myrtles, apples, and many vegetables. Expect aphids when you grow these plants.
- Ants protect aphids from their natural enemies. Keep ants off plants to get more benefit from these beneficial insects.

To reduce aphids:

- Prune out infested leaves and stems.
- Knock aphid populations off plants by shaking or spraying with a strong stream of water.
- Protect seedlings with covers or aluminum soil mulches.
- Wait for hot weather; most aphids are heat-intolerant and will be gone by mid-June.

Protect aphids' natural enemies:

- Lady beetles, both adults and larvae
- Lacewings
- Syrphid fly larvae
- Soldier beetles
- Parasitic mini-wasps that turn aphids into crusty mummies (See reverse for insect drawings.)

Natural enemies of aphids such as lady beetles and lacewings will come into your garden naturally when aphids are abundant. Protect these good bugs by avoiding the use of insecticides that may be toxic to a broad variety of insects.

If insecticides seem necessary, use the safest products:

- Nonchemical pest control methods should be used first to manage aphid populations. However, if you feel insecticides are necessary, choose less toxic products.
- Insecticidal oils and soaps are the safest products. When properly used, these materials solve most pest problems.
- Oils and soaps work by smothering aphids, so application must be thorough. Don't apply to drought-stressed plants or when it is very hot. A few plants are sensitive to these products.
- Insecticidal soaps, soap-pyrethrum mixtures, or neem oils are often applied on vegetables or small bushes like roses.
- Narrow range oils, like parafinic, supreme or superior oils, are appropriate for larger trees.
- Oils and soaps don't kill aphids hidden within curled leaves. Prune these out. Systemic insecticides can kill hidden aphids, but they are much more toxic and not registered for use on garden vegetables or fruit trees.

Cockroaches

HEALTHY GARDEN HEALTHY HOME

Cockroaches thrive in warm environments that provide food, water, and shelter. Roaches hide in cracks, crawl spaces, and other dark places during the day and come out at night to feed. Pesticide sprays alone will not control roaches and are not usually required. Baits provide better control. You must integrate several strategies to make your home a less roach-friendly environment. Thoroughness is essential for effective control.

Identify your cockroach species first:

- Effective management options vary according to species.
- Cockroach traps provide an easy way to catch roaches for identification.
- Control practices for outdoor invaders (American, oriental roaches) and indoor residents (brownbanded and German roaches) differ.
- For help with identification go to www.ipm.ucdavis.edu.

Remove food and water sources:

- Even tiny crumbs or liquids in cracks provide good food sources.
- Store food in sealed containers.
- Keep trash in containers with tight lids.
- Eliminate plumbing leaks.
- Vacuum cracks and crevices and clean floors and counters daily.

Remove roach hiding places:

- Seal cracks and other openings to prevent invaders from the outside.
- Seal cracks in false bottoms of cupboards and other indoor hiding places.
- Seal or clean up other areas where you find roaches or their egg cases hiding.
- Remove old newspapers, boxes, and other clutter in kitchens and bathrooms.
- The oriental cockroach hides outdoors under ivy and other shelter. Check to see if you have this roach and remove outdoor hiding places or bait.

Use traps to identify and track cockroach populations:

- Cockroach traps are available in hardware stores.
- Place traps on the floor around edges of walls, in cupboards and other places where you think roaches are foraging. Place bait stations at locations where you trap roaches.
- Check traps daily.
- Sticky traps with pheromones may provide some control of German cockroaches.

Using chemicals to control cockroaches:

- Avoid use of foggers, bombs, or aerosol sprays — they just disperse populations.
- Boric acid powder blown into cracks, crevices, hollow walls, under refrigerators, or other undisturbed hiding places is very effective (allow 7 days or more for an effect to be seen).
- Bait stations containing boric acid, abamectin, fipronil, or hydramethylnon placed near hiding places can be effective if other food sources are removed (allow 7 days or more for an effect to be seen). Replace stations as needed as long as roaches are being caught.
- Insecticide sprays alone do not give long-term control. They are not necessary if other methods such as baits and boric acid powder are combined along with cleanup and removal of hiding places.
- Contact a professional pest control operator for very serious infestations, but be sure they use an integrated program as described above.

Earwigs

HEALTHY GARDEN HEALTHY HOME

While their prominent tail-end pincers may look ferocious, earwigs are not harmful to people. Earwigs may seriously damage seedling vegetables and chew holes in annual flowers, soft fruit, and corn silks, but earwigs also play a beneficial role by feeding on aphids and other insects. Nocturnal in habit, earwigs feed at night and hide during the day in dark, cool, moist places in the yard or within flowers or vegetables. To manage earwigs, reduce hiding places and moisture, and employ a vigilant trapping program.

Should you be concerned about earwigs in your garden?

- Yes, if you are growing vegetables, herbaceous flowering plants, sweet corn, or plants with soft fruits like strawberries and apricots.
- No, if your garden is primarily lawn, trees, and woody ornamentals or native plants.

Reduce outdoor hiding places:

- Eliminate dense undergrowth of vines, ground cover and weeds around vegetable and flower gardens.
- Prune away fruit tree suckers.
- Remove leaves, boards, boxes, trash, and other debris from planting areas.
- Move flower pots and other garden objects and structures that can harbor earwigs.
- Check plastic or organic mulches and remove them to limit earwig numbers.

Trap earwigs until they are gone!

- Trap earwigs with rolled newspaper, bamboo tubes, or short pieces of hose. Place these traps on the soil near plants just before dark, and shake accumulated earwigs out into a pail of soapy water in the morning. A low-sided can filled with oil and a drop of bacon grease or fish oil also makes a good trap. Daily trapping will reduce earwig populations to tolerable levels.

Other ways to reduce earwig problems:

- Drip irrigate where possible to reduce surface moisture.
- Keep earwigs out of stone fruit trees with a band of sticky substance like Tanglefoot, around the trunk, and harvest fruit as soon as it ripens.
- Insecticides should rarely be needed.

Inside the home:

Earwigs may seek refuge indoors when conditions outside are too dry, hot, or cold. Large accumulations of earwigs can be annoying but present no health hazards. When earwigs invade your home follow these steps:

- Sweep or vacuum up invading earwigs.
- Seal up cracks or other entry points.
- Remove debris from gutters and around entryways.
- Keep water and moisture away from structures.
- Replace white outdoor lights with yellow ones, which are less attractive to earwigs.
- Indoor application of pesticides is not recommended.

*Use **NON-CHEMICAL** methods & **LEAST TOXIC** pesticides. **WHY?** Runoff from around your home and garden carries water containing pesticides that pollute our streams, rivers, lakes and oceans.*

Learn more about San Diego regional water quality at: www.ThinkBlueSD.org & www.ProjectCleanWater.org.
For more pest information visit the University of California IPM website at: www.ipm.ucdavis.edu or the UCCE Master Gardeners at: (858) 694-2860, Mon - Fri, 9 am to 3 pm

Fleas

Fleas are particularly annoying to people and pets, especially during spring and early summer when their numbers tend to increase dramatically. The common flea in California is the cat flea. Despite its name, it attacks both dogs and cats and will also bite humans. To keep fleas out of your home, control fleas on your pet and regularly clean pet sleeping areas.

On the pet:

Recently, a number of very effective and safe new products for flea control on the pet have become available. Remember to supplement pet treatments with regular cleaning of your home and periodic combing with a pet flea comb to detect new infestations.

- Spot-on formulations are applied to the animal's coat, providing flea control for 1 to 3 months. Available from veterinarians or over-the-counter.
- Systemic flea control products, available from vets, are given as a pill or food additive. While they do not kill adult fleas, they prevent reproduction.
- Flea collars containing insect growth regulators (IGRs) give protection for up to 6 months on dogs and up to a year on cats. Be sure to choose collars containing methoprene or pyriproxyfen.
- Flea shampoos and soaps, powders and dusts, spray-on liquids, and dips are less effective and more hazardous to pets, people, and the environment than the three types of products above.

In the yard:

Outdoor treatment is rarely needed, but if your pet regularly sleeps outside and flea numbers are high, these areas can be treated with a spray containing pyriproxyfen. If possible, open sleeping areas to sunlight by removing low hanging vegetation. Immature fleas are unlikely to survive in areas with exposure to sunlight.

Inside the home:

Whether or not you are aware of fleas in your home, regularly vacuum and launder areas where your pet rests to avoid flea buildup. If you have a major flea problem, treat your pet with one of the options on the front of this card and follow the steps below.

- Locate heavily infested areas (usually areas where the pet rests) and concentrate treatment there.
- Wash throw rugs and pet bedding.
- Vacuum upholstered furniture, cleaning under cushions and in crevices.
- Vacuum carpets, especially beneath furniture.
- Use a hand sprayer or aerosol to treat all carpets and unwashable upholstered furniture with an insecticide that contains an IGR (methoprene or pyriproxyfen). This treatment kills larvae but not pupae, so fleas may continue to emerge for up to 2 weeks.
- Over the next 2 weeks vacuum regularly to remove adult fleas that emerge from pupae. Do not reapply pesticides.
- Seal vacuum bags and discard them so fleas don't escape.

*Use **NON-CHEMICAL** methods & **LEAST TOXIC** pesticides. **WHY?** Runoff from around your home and garden carries water containing pesticides that pollute our streams, rivers, lakes and oceans.*

Learn more about San Diego regional water quality at: www.ThinkBlueSD.org & www.ProjectCleanWater.org. For more pest information visit the University of California IPM website at: www.ipm.ucdavis.edu or the UCCE Master Gardeners at: (858) 694-2860, Mon - Fri, 9 am to 3 pm

Gardening with Good Bugs

HEALTHY GARDEN HEALTHY HOME

Most gardens contain far more types of good bugs,or beneficial insects, than pest insects. Beneficial insects and other organisms that kill pest insects are called natural enemies. In any pest management or plant care program, it is important to encourage these natural enemies by avoiding pesticides that kill them. You can also encourage beneficial insects by choosing plants that provide them with pollen, nectar, and shelter and keeping ants out of pest-infested plants. Learn to identify good bugs, both in their adult forms and immature (larval) stages.

Common good bugs found in California gardens include:

- Lady beetles: Both adults and larvae consume aphids.
- Lacewings: Lacewing larvae feed on many insect pests; adults are often seen around lights.
- Syrphid flies: Syrphid fly larvae consume aphids; adults hover around flowers.
- Parasitic mini-wasps: Many species of tiny wasps lay their eggs in pests like aphids or caterpillars; their hatching larvae consume the pest and kill it.
- Spiders: All spiders feed on insects or other arthropods and are beneficial in the garden.

(See reverse for drawings of good bugs mentioned above.)

What is Integrated Pest Management?

Integrated pest management (IPM) uses environmentally sound, yet effective, ways to keep pests from annoying you or damaging plants. IPM programs usually combine several pest control methods for long- term prevention and management of pest problems without harming you, your family, or the environment — IPM also reduces pollution in California waterways. Successful IPM begins with correct identification of the pest. Only then can selection of the appropriate IPM methods and materials be made.

Preferred IPM methods include:

- Planting pest-resistant or well-adapted plant varieties like native plants.
- Discouraging pests by modifying the way you design, irrigate, fertilize, and manage your garden.
- Altering the garden or home environment to deprive pests of the food, water, shelter or other requirements they need to thrive.
- Keeping pests out of the home and garden using barriers, screens, and caulking.
- Squashing, trapping, washing off or pruning out pests.
- Relying on good bugs in your garden to eat pests, thereby eliminating the need for insecticides that may end up in our waterways.

Turning to pesticides:

- Only use pesticides when non-chemical controls are ineffective and pests are reaching intolerable levels.
- Use pesticides in combination with the methods described above.
- Choose pesticides carefully so that the least toxic, most effective material is used to protect human health and the environment.

*Use **NON-CHEMICAL** methods & **LEAST TOXIC** pesticides. **WHY?** Runoff from around your home and garden carries water containing pesticides that pollute our streams, rivers, lakes and oceans.*

Head Lice

HEALTHY GARDEN HEALTHY HOME

Head lice can infest anybody, but children are prone to infestations because they play closely and share items that come in contact with the head like hats, headphones, and combs. Head lice are not known to transmit any infectious diseases; they are more of a nuisance than a health risk. Children with head lice, however, are generally not allowed to attend school as long as nits are found in their hair.

Head lice facts:

- Head lice cannot hop, fly, or jump; they crawl. Lice spread only through direct contact with an infested object or person.
- Head lice spend their entire life in head hair and can only survive off a human head for about 1 or 2 days.
- A newly hatched louse must ingest blood within minutes of birth to survive.
- Head lice cannot live on family pets.
- Nits (eggs) that are more than 1 1/4 inch from the scalp probably are dead or have already hatched.

What to look for:

- Intense scratching on the back of the head or neck.
- Tiny white eggs (nits) glued to hair near the scalp.
- Small, rapidly crawling flat insects.

Four steps necessary to manage an infestation of head lice:

1 Use a head louse shampoo if you observe active lice or viable eggs.

- Avoid shampoo products containing lindane, which are available by prescription only. Pyrethrin and permethrin are safer, more effective, and less polluting to wastewater than lindane. Not all eggs will be killed.
- To avoid insecticides entirely, use soap shampoos that contain coconut or olive oils. Most soap shampoos kill all stages of the louse except the egg. Because they are not as effective as products containing pesticides, you must be sure to comb and repeat these shampoos four times at 3-day intervals. Successive shampooing kills newly hatched lice.

2 Remove nits from the head by combing with a specially designed nit comb.

- This step is the key to successful control. Repeat daily as long as you find live lice or nits within 1¦4 inch of the scalp. Use a metal comb specially designed for removing head lice and their eggs. Combs sold with head lice shampoos are not generally effective. Infested hair can also be cut out with small safety scissors.

3 Remove lice and nits from the household.

- Wash clothing and bedding of the infested person in hot water (at least 140°F) and dry in a hot dryer or have them dry cleaned. Place other items (earphones, bike helmets) in plastic and put in a freezer that is 5°F or lower for at least 10 hours. Clean any object that might have come in contact with the infested person's head (stuffed animals, car seats). Vacuum carpets and upholstery. Pesticide sprays are not recommended.

4 Check heads and remove nits daily until infestation is gone. Follow with weekly head checks to detect reinfestation.

Lawn Insects

HEALTHY GARDEN HEALTHY HOME

Contrary to popular belief, insects are not a common cause of residential lawn damage in California. Poor lawn care, especially improper watering and planting inappropriate grass species, are more likely causes of unhealthy or dying lawns. Disease-causing agents, excess orinappropriate use of chemicals such as fertilizer and herbicides, or dog urine also produce lawn damage resembling that of insects. Many insects in the lawn are beneficial. Never apply an insecticide unless a damaging level of a known insect pest is confirmed. Insecticides are only effective if applied at the right time and in the right manner. Some insecticides may kill good bugs too.

How do you know if insects are causing damage?

- Brown spots in lawns can be caused by over- or under-irrigation, plant disease, improper use of chemicals, or dog urine as well as insects.
- Confirm presence of insects before applying an insecticide. For grubs, dig around roots, for other insects perform a drench test. (See reverse.)

Keep your lawn healthy by:

- Planting grass species that do well in your area
- Irrigating deeply and infrequently
- Doing routine maintenance on sprinkler heads
- Applying only 3 to 6 pounds of actual nitrogen per 1000 square feet per year when fertilizing
- Aerating your lawn annually; remove thatch if it exceeds 1/2 inch
- Cutting only one-third to one-half of grass height at each mowing and keeping lawnmower blades sharp

See the UC Guide to Healthy Lawns at www.ipm.ucdavis.edu

If a damaging level of insects is confirmed, do the following:

- Choose an insecticide based on the pest you're targeting.
- Find out which insecticide ingredients target specific lawn insects:
  - *Bacillus thuringiensis* (Bt) kills only caterpillars, including cutworms, lawn moths, and skippers.
  - Insect-attacking nematodes control caterpillars or grubs.
  - Azadirachtin controls cutworms, armyworms, and larvae of lawn moths.
  - Imidacloprid is effective against young lawn grubs.
  - Pyrethroids (e.g., cyfluthrin, bifenthrin) are broadly toxic insecticides that kill chinch bugs, lawn moths, and cutworms, but also kill beneficial insects and should be avoided.
- Get help from UC Cooperative Extension.

HOW TO PERFORM A DRENCH TEST

- Mix 3–4 tablespoons of dishwashing liquid to 2 gallons of water.
- Evenly apply the 2 gallons to 1 square yard of your lawn.
- Monitor the area for 10 minutes and count the number of armyworms, cutworms, or lawn moth larvae that rise to the surface.
- Treat the area only if insect numbers exceed 5 armyworms or cutworms or 15 lawn moths per square yard.

Safe Use & Disposal of Pesticides

HEALTHY GARDEN HEALTHY HOME

Pesticides are designed to be toxic to the pests they target — insects, weeds, and other unwanted home and garden invaders. Always read pesticide product labels carefully and follow all directions on proper use, storage, and disposal of empty pesticide containers. Product labels are your main source of information on how to use a product safely and legally. They include guidelines needed to protect you, your family, and pets. The only allowable way to dispose of unused pesticides is through a household hazardous waste collection site. For the site nearest you in San Diego County call 1-877-713-2784 .

If you must use pesticides, follow these tips to reduce pesticide effects on your local waterways:

- Identify your pest problem and choose the least toxic pesticide that targets your pest and achieves the results you want. If you need help identifying the least toxic pest control method, contact your University of California Cooperative Extension office.
- Determine the right amount of pesticide to purchase. Purchasing exactly the amount you need for the application eliminates the need for storing unused pesticides.
- Use spot treatments whenever possible.

Outdoors

- Avoid overwatering after applying pesticides. Never let pesticide runoff flow into storm drains.
- Do not apply pesticides outdoors when rain is forecast or when it is windy.
- Avoid applying pesticides on paved areas.

Indoors

- Avoid applying pesticides in or near floor drains or sinks.
- Avoid applying pesticides on areas that will be washed or mopped with water, or where food is prepared or stored.

When using and storing pesticides take these precautions:

- Always wear a long-sleeved shirt, pants, and eye protection, and other equipment suggested on the label.
- Store products tightly capped in a locked cabinet out of reach from children and pets.
- Always keep pesticides in their original container.
- Know where to call for help in an emergency!

Pesticide disposal:

- If you cannot use up your pesticides, fertilizers, and weed killers, give them to a friend who may need them.
- Sewage treatment plants are not designed to treat for certain toxic pesticides like diazinon and chlorpyrifos — dumping pesticides into the stormdrain or down the sink is never an option.
- The only allowable way to dispose of unused pesticides is through a household hazardous waste collection site. For household pesticide disposal information for San Diego County, call 877-713-2784.

Finding active ingredients on a pesticide label:

Pesticide labels are required by law to show the active ingredient and its percentage. Minimize or avoid the use of products that contain diazinon and chlorpyrifos – these materials are polluting our waterways. Always read the label before you buy!

*Use **NON-CHEMICAL** methods & **LEAST TOXIC** pesticides. **WHY?** Runoff from around your home and garden carries water containing pesticides that pollute our streams, rivers, lakes and oceans.*

Learn more about San Diego regional water quality at: www.ThinkBlueSD.org & www.ProjectCleanWater.org. For more pest information visit the University of California IPM website at: www.ipm.ucdavis.edu or the UCCE Master Gardeners at: (858) 694-2860, Mon - Fri, 9 am to 3 pm

Snails & Slugs

HEALTHY GARDEN HEALTHY HOME

Snails and slugs rank among our most despised garden pests. These slimy mollusks emerge from hiding at night and chew holes in leaves and flowers of many succulent garden plants and fruit. Slugs and snails are similar in structure and biology, except slugs lack the snails' external spiral shell. Management requires a vigilant and integrated approach that includes eliminating moisture and hiding spots, trapping, barriers, and handpicking. Baits can be helpful, but by themselves, don't provide adequate control in gardens that contain plenty of shelter, food, and moisture.

How do you know snails and slugs are causing damage?

- You may not observe these pests at first because they feed at night and hide during the day. Go out at night or early morning to view them in action.
- Other pests can cause holes in leaves, flowers, and fruit. Look for the shiny, slimy trails slugs and snails leave behind.

What must be done to reduce snails and slugs?

- Remove daytime hiding places — ivy, weedy areas, debris, or boards.
- Regularly remove snails from shelters you cannot eliminate such as low ledges on fences, undersides of decks, meter boxes.
- Place traps in your garden and dispose of trapped snails and slugs daily.
- Reduce moist surfaces by switching to drip irrigation or sprinkling in the morning rather than later in the day.
- Consider snail-proof plants such as impatiens, geraniums, begonias, lantana, nasturtiums, and many plants with stiff leaves and highly scented foliage like sage, rosemary,and lavender.

How can I manage snails and slugs without using pesticides?

- Make sure the garden is mollusk-free before planting. Then erect a copper barrier around it. Use a 4- to 6-inch-wide band of copper, buried an inch below the soil and bent over at the top or attach it around the edge of a raised bed.
- Place your garden in the sunniest spot possible. Remove garden objects or adjacent plants or ground cover that may serve as shady shelter. Reduce moist surfaces as much as possible.
- Build a trap using a 12"x15" board raised off the ground by 1-inch runners. As the mollusks collect under the board, scrape them off and destroy them daily.

What about baits?

- Baits will not be very effective unless you also remove shelter, food, and moisture.
- Metaldehyde baits are especially poisonous to dogs and birds. Metaldehyde also loses its effectiveness rapidly in sunlight and after rain or irrigation.
- Iron phosphate baits are safe for use around dogs, children, and wildlife.
- Irrigate before applying bait and apply in evening on warm days when mollusks are active.
- Scatter bait around sprinklers and in moist and protected areas where snails and slugs travel.

*Use **NON-CHEMICAL** methods & **LEAST TOXIC** pesticides. **WHY?** Runoff from around your home and garden carries water containing pesticides that pollute our streams, rivers, lakes and oceans.*

Learn more about San Diego regional water quality at: www.ThinkBlueSD.org & www.ProjectCleanWater.org. For more pest information visit the University of California IPM website at: www.ipm.ucdavis.edu or the UCCE Master Gardeners at: (858) 694-2860, Mon - Fri, 9 am to 3 pm

Spiders

HEALTHY GARDEN HEALTHY HOME

Spiders are mostly beneficial because they feed on pest insects. However, many people think that all spiders are dangerous and aggressive. In California, the main spider capable of causing serious injury is the black widow, which generally remains outdoors and out of sight. Spiders seen out in the open during the day are unlikely to bite people. Focus pest management efforts on removing webs and hiding places. Pesticides are not generally recommended.

What to know about spiders:

- In California, the main spider capable of causing serious injury is the black widow:
  - The poisonous black widow spider is commonly found outdoors, in sheltered, dry, undisturbed areas such as wood piles.
  - Female black widows have shiny black bodies with a red hourglass marking on the underside.
  - Only large female black widows can injure people.

  Anyone bitten by a black widow spider should remain calm and seek medical advice, or call California's Poison Control Center at 1-800-8-POISON (1-800-876-4766).
- The brown recluse spider does not live in California.
- The jaws of most spiders are too small to bite humans.
- Some other spiders bite when trapped in clothing, but the reaction is usually no more severe than itching or a bee sting. See www.ipm.ucdavis.edu for more information about these spiders.

To prevent spiders from entering your house, take these steps:

- Seal home foundation cracks and other access holes.
- Inspect window and door screens for good seals that keep out spiders and the insects they prey on.
- Keep areas around home foundations free of clutter.

Manage spiders using these tips:

- Indoors, regular housecleaning provides adequate spider control.
- Vacuum up the spider and its web.
- Prevent clutter buildup that can provide hiding places.
- Remove spider webs from the exterior of the house with a broom or high pressure hose.
- Indoors, squash spiders or capture them in a jar and release them outdoors.

When removing spiders, don't overlook the fact that spiders eat a large number and variety of nuisance and pest insects. Spiders also have natural enemies — wasps, other spiders, birds, reptiles, and others — that sometimes keep them from becoming too numerous.

*Use **NON-CHEMICAL** methods & **LEAST TOXIC** pesticides. **WHY?** Runoff from around your home and garden carries water containing pesticides that pollute our streams, rivers, lakes and oceans.*

Learn more about San Diego regional water quality at: www.ThinkBlueSD.org & www.ProjectCleanWater.org. For more pest information visit the University of California IPM website at: www.ipm.ucdavis.edu or the UCCE Master Gardeners at: (858) 694-2860, Mon - Fri, 9 am to 3 pm

Termites

Because of the serious damage they can cause to wooden structures, termites are among the pests most feared by homeowners. However, swarms of flying termites do not always mean your building is infested. A careful inspection of the structure is required to confirm an infestation. People also frequently mistake swarms of flying ants for termites. If you suspect that your house is infested, call a professional. Do-it-yourself sprays cannot be relied on to reduce a damaging infestation. Common termites in California are the subterranean termites that build nests in soil, dampwood termites that nest in moist wood and soil, and drywood termites that nest above ground in dry wood. Management of each termite species is different.

Distinguish flying ants from termites:

- Check the antennae, wings and waist to confirm that pest insects are termites. (Please refer to ant vs. termite drawing on back.)

Design your building to keep termites out:

- Keep a 12-inch barrier of smooth concrete, sand, or other material between the soil surface and substructure wood beneath a building.
- Choose termite-resistant wood for fences or other structures that must contact soil.
- Remove wood piles, untreated fence posts, and buried scrap wood near structures.
- Provide adequate ventilation to substructures and keep them dry.
- Immediately repair foundation cracks.

If termites are invading your home:

- Destroy shelter tubes that subterranean termites build between soil and wood structures.
- If dampwood termite nests are accessible, remove infested wood and eliminate excess moisture.
- Drywood termites can be controlled with heat, freezing, electricity, microwaves, fumigation, or spot treatments of chemicals.
- For any infestation, contact a professional for help. Pesticides licensed only for use by a pest control operator are usually necessary to control subterranean and dampwood infestations.

Using pesticides for termite control:

- Pesticides may be injected into the soil by professional applicators through drilling or rodding. Special procedures must be followed to prevent contamination of ground or surface water.
- For soil injections, ask your applicator to use a product other than chlorpyrifos. Newer types of products such as fipronil and chloronicotinyls are safer for your health and the environment.
- Baits can be effective in some cases, but may take several months to control the problem and must be followed up with constant monitoring.

*Use **NON-CHEMICAL** methods & **LEAST TOXIC** pesticides. **WHY?** Runoff from around your home and garden carries water containing pesticides that pollute our streams, rivers, lakes and oceans.*

Giant Whitefly

HEALTHY GARDEN HEALTHY HOME

Giant whiteflies can cover a beautiful plant with white fuzzy wax and sticky honeydew, turning it into an unsightly mess. First discovered in San Diego County in October 1992, this whitefly has spread northward into other areas of California. Since its introduction into San Diego, giant whitefly has spread rapidly northward along the coast. Although affected plants may be weakened, they rarely die. To manage giant whitefly, wash plants off with water and encourage natural enemies.

What plants are affected?

- Many ornamentals including hibiscus, giant bird of paradise, begonia, Xylosma.
- Fruit trees including citrus, avocado, mulberry and banana.

Look for these damage symptoms on affected plants:

- Long, white, waxy filaments produced by the whitefly give the leaf surface a bearded appearance. These hairlike strands may be mistaken for a fungal infection.
- Large amounts of sticky honeydew excreted by the whitefly as it feeds on plant sap.
- Black sooty mold growing on the honeydew.

How to recognize the whitefly:

- Adults are small (3/16") and white with light brown markings on wings and usually found in groups on undersides of leaves.
- Nymphs are yellowish, small, oval, have no legs and don't move.

To reduce problems, use an integrated program that includes:

- Removing infested leaves.
- Washing giant whiteflies off leaves with a strong stream of water.
- Planting species less susceptible to giant whitefly.
- Avoiding insecticides that injure natural enemies, such as lacewings, lady beetles, syrphid flies, and parasitic wasps.

What about insecticides?

- **Don't use insecticides if beneficial insects, including parasites and predators, are present in the area.**
- **To confirm the presence of parasitic wasps, use a magnifying glass to look for parasite exit holes on giant whitefly nymphs or darkened nymphs as indicated in drawings below.**
- **If you do choose to use an insecticide, select least toxic products such as insecticidal soaps or oils. Remember to follow label directions and spray the undersides of the leaves where whitefly colonies are found.**

(adult)  (actual size) I

Examine whitefly colonies for grayish-black or yellow nymphs with exit holes (a), or darkened nymphs (b), or healthy nymphs (c).

Use NON-CHEMICAL methods & LEAST TOXIC pesticides. WHY? Runoff from around your home and garden carries water containing pesticides that pollute our streams, rivers, lakes, and oceans.

Learn more about San Diego regional water quality at www.ThinkBlueSD.org & www.ProjectCleanWater.org.

NEW LA MESA LIBRARY OPENS IN JUNE

Officials cut the ribbon for the new La Mesa Library on July 18.

The new La Mesa Branch of the San Diego County Library, located at 8074 Allison Avenue, opened for business on Monday, June 16. Already the new facility appears to be very popular with the community. The Library was built in order to make room for the new Proposition D locally funded Police Station that will start construction in early fall on the old Library and former Helix Water District sites. The new Library is much larger than the former facility and provides many improvements. A grand opening and open house was held to recognize all the individual efforts by the City and the County to complete this new facility and to invite everyone in the community to visit their new Library. Councilmembers acknowledged the success of this project at a ribbon-cutting ceremony on July 18. A community open house was held to celebrate the opening on Saturday, July 19.

Jose Aponte, Library Director for the County of San Diego, commented on visiting the new facility that "It is open, airy, and inviting. The new La Mesa Library will delight library and book lovers alike. Working together with the City of La Mesa, the County Library is proud to deliver seven days a week of quality services in our new Library home." Numbers from the first few weeks since the opening seem to support this. Staff at the new branch reported that the daily circulation of materials averaged 1,370 items per day, up 43% from last year's average. Total attendance at the new Library was nearly 13,000 visitors for the month of June, which represents an almost 30% increase over the annual average daily attendance.

Continued on page 13

COOL SPOTS

IN & AROUND LA MESA

La Mesa residents who may be at risk from extreme heat can seek relief during the hot summer months at several community locations. You can find a list of Cool Zones in and around La Mesa on the City's website.

The County of San Diego establishes this network of Cool Zones at public and community facilities across the County. Most of these sites are open to the public during regular weekday hours. Cool Zone sites, mostly located in the hottest areas of the County, help older adults and others keep cool and save energy costs. For a list of Cool Zones throughout the County and tips to stay cool visit the San Diego Aging and Independence Services website at www.ais-sd.org or call 1.800.510.2020.

MULTICULTURAL FESTIVAL to be held in January 2009

The Annual Multicultural Festival will be held once again in January. Sponsored by the Human Relations Advisory Commission, the Festival will feature music and entertainment in celebration of the rich cultural heritage of our great nation. The event will take place at the La Mesa Community Center, 4975 Memorial Drive. There is no admission charge and refreshments will be served following the program. Specific information about the date and time will be posted on the City's website in December.

LA MESA ENVIRONMENTAL AWARENESS FESTIVAL

September 13

10:00 am – 2:00 pm — Harry Griffen Park
9550 Milden Street, La Mesa

- Activities and games for all ages!
- Information and resources on water conservation, energy efficiency, recycling, composting, solar cooking, storm drain runoff, master gardeners, and more.
- Recycling drop off: metal, paper, electronics, glass, all plastics (1-7), plastic bags, and clean formed Styrofoam.
- Free shade tree program.
- Energy saving light bulb rebate program.

For more details visit the City's website at www.cityoflamesa.com or contact Greg Humora at 619.667.1146.

La Mesa COMMUNITY SERVICES

24TH ANNUAL CALIFORNIA COASTAL CLEANUP DAY

Mark your calendars for Saturday, September 20 to participate in the 24th Annual California Coastal Cleanup Day here in La Mesa. The City will be hosting two cleanup sites; Alvarado Channel off Fletcher Parkway and University Channel off University Avenue. Refreshments, snacks, trash bags, and prizes will be provided at the cleanup site. The cleanup event is tentatively scheduled to start at 9:00 am and end at 12:00 pm.

The California Coastal Cleanup Day, which is coordinated by I Love A Clean San Diego and San Diego Coastkeeper, is the largest volunteer event in San Diego County and one of the largest single environmental volunteer events in the state. Last year, in San Diego alone, 6,212 volunteers covered 165 miles of coastline and open space, removing close to 100,000 pounds of debris. Throughout the state, an estimated 61,000 volunteers removed nearly 1 million pounds of debris.

Please come join us to help keep our environment trash free. Should you have any questions on how to get involved, feel free to contact Malik Tamimi at the City of La Mesa 619.667.1340 and or signup for the event at www.cleansd.org .

CITY OF LA MESA HOSTS A CASTING CALL FOR VOLUNTEER DRIVERS!

Become a part of La Mesa's community production, now in its first year's run…

"Rides4Neighbors"

Katrina Lee, Rides4Neighbors Transportation Specialist, is seen here with Volunteer Drivers Larry Shaw and Virginia Kellogg at a recent luncheon honoring City of La Mesa Volunteers.

Rides4Neighbors is a volunteer-based transportation assistance program for La Mesa's older adult residents and adult residents with disabilities who are unable to use regular public transit. Rides are provided by screened, trained volunteers, who use their own vehicles to assist transit dependent La Mesa neighbors in need of a lift.

A rider testimonial provides only a glimpse of how much this volunteer based transportation program has touched those we serve: "Thank you so very much for all your services – and patience – for the enrichment this valuable program has provided to my well being."
– A grateful rider

The City of La Mesa receives funding from a federal New Freedom grant award through the San Diego Association of Governments (SANDAG) to cover most costs for developing and providing this new service. The La Mesa Adult Enrichment Center takes ride requests, explains ridership rules and the suggested donation system and matches ride requests with volunteers.

Volunteer drivers are reimbursed for mileage and receive secondary liability insurance. We currently have 16 volunteer drivers and are continuing to recruit for more. As a volunteer, you decide your availability and choose the rides you wish to provide. There is no minimum time commitment or number of rides required to be a volunteer. We can either call you when a ride is needed, or notify you via an e-mail blast.

As a volunteer, you will be part of a rewarding and meaningful civic program. Community surveys consistently find that what residents like best about La Mesa is the neighborly, small town feel. Rides4Neighbors helps build that spirit of community and old-fashioned neighborliness. So join us by opening your heart and car door to a rider in need of a lift!

Questions? For more information, call Katrina Lee, Transportation Specialist at 619-464-0109, or go online to www.cityoflamesa.com to download a volunteer application form.

THE LA MESA COMMISSION ON AGING

Presents: **SUMMER COMMUNITY FORUMS**

Thursday, August 14 9:00 AM

"Coffee with George Chamberlin"

Tuesday, September 23 1:30 PM

"La Mesa Candidates' Forum"

Moderator: League of Women Voters

Location: La Mesa Adult Enrichment Center, 8450 La Mesa Blvd

RSVPs required to ensure adequate seating 464-0505

VOLUNTEERS NEEDED

The City of La Mesa's Citywide Volunteer Program has volunteer positions and special assignments available throughout the year in various departments and for special projects. Volunteers play an important role in the enhancement and expansion of services to City residents. They not only provide a valuable service for the community, but also enjoy flexible scheduling for most assignments, develop new skills, meet new friends, and are officially recognized by the City of La Mesa at the Annual Volunteer Appreciation Luncheon.

- The Purchasing Division of the Finance Department currently has an opening for a Volunteer Clerical Aide for the summer. This position assists with data entry and administrative assignments. The position requires a volunteer who is proficient in Microsoft Word and Excel. Preference is for someone who can volunteer on a regular basis through the summer, at least 4 hours per week. The schedule is flexible—Monday through Friday. Call 619.464.0505 for additional information and an application.

- Senior adult volunteers are needed for the KAST (Kids and Seniors Together) Program. Volunteers work with elementary school children from 2:30 to 4:30 pm during the school year. The program is designed to provide an opportunity for senior adults to share their talents, skills or special interests with students who will benefit from individualized one on one mentoring. The La Mesa Dale School serves as the program site. Call 619.667.1333 for additional program information.

AND THAT'S NOT ALL! If you have a special skill to share or an area of interest where you would like to help the City government, please let us know. Download a volunteer application from www.cityoflamesa.com or call the Adult Enrichment Center at 619.464.0505.

REMINDER ON UPCOMING DIGITAL TV TRANSITION

A federally mandated transition from analog to digital television (DTV) will occur on February 17, 2009. This means if you currently use a traditional antenna, either on the roof or inside (often referred to as rabbit ears), you will not continue to receive free television after the conversion date without taking one of the three following actions:

DTV CONVERTER BOXES. Owners of traditional analog TVs without cable service will need to purchase a DTV converter box. The cost is estimated to be $50-$70. The National Telecommunications and Information Administration (NTIA) issues coupons valued at $40 for converter boxes (limit 2 per household). For more information on this coupon program visit www.ntia.doc.gov/dtvcoupon or call 1.888.388.2009.

DIGITAL TV SETS. TVs with a built-in digital tuner will be able to receive the broadcast digital signals and you can still get free programming without paying a monthly fee.

PAID SERVICE. Current subscribers to a cable, satellite, or telephone company service provider will continue to be able to use their existing TV to receive the stations carried by the service provider with no additional changes necessary to their TVs.

You can find more information about the transition to digital television from the National Association of Broadcasters at www.dtvanswers.com.

TEAMING UP TO BRING YOU *Intergenerational Games!*

The City of La Mesa announces the 3rd Annual Intergenerational Games in La Mesa! The event takes place Friday, October 10th from 9 AM – 12:30 PM at the La Mesa Middle School athletic fields. Intergenerational Games teams active adults age 55+ with local students in grades four through six for a fun-filled half-day event completing a circuit of 8 game and 2 knowledge challenges. The focus is on non-competitive fun, physical activity, wellness and healthy lifestyle. Everyone's a winner!

Active adults age 55+ and La Mesa students in grades 4 through 6 are encouraged to sign up for this fun FREE event! For information and registration call the La Mesa Community Center at 667-1300 or the Adult Enrichment Center at 464-0505.

Partners include: City Of La Mesa, La Mesa Commission on Aging, County of San Diego Aging & Independence Services, La Mesa-Spring Valley School District, La Mesa 55+ Senior Softball League, and many other community partners and business sponsors. For sponsorship opportunities call Judy Stern at 619.667.1490.

SKATE PARK TO REOPEN

The La Mesa Skate Park in La Mesita Park, 8855 Dallas Street, La Mesa, has undergone some recent modifications and is scheduled to open late August as an unsupervised skate park. In January 2008 the La Mesa City Council adopted Municipal Code Chapter 10.21, Sections 10.21.011 through 10.21.019 that establishes the following rules of conduct for skate parks:

RULES OF CONDUCT

- Skateboarding and in-line skating are hazardous activities
- Skate at your own risk. Skateboards and in-line skates only
- Skate park hours are dawn to dusk
- No skateboarding or in-line skating on wet surfaces
- Helmets, kneepads, and elbow pads required in the designated skate park area
- Failure to wear helmets, kneepads, and elbow pads in the designated skate park area will subject persons to citation per Section 10.21.010(e) of the La Mesa Municipal Code
- Skating on park curbs, parking lot, and entrance sidewalk is prohibited
- No graffiti or tagging
- No glass bottles
- Dispose of trash in trash receptacles
- No smoking, alcohol, or drug use
- No intimidation, hazing, or fighting
- No spectators are permitted in the designated skate park area
- No unauthorized pieces of equipment, obstacles, or apparatus may be brought into the designated skate park area
- No food or drink allowed in the designated skate park area
- No special events or contests are allowed in the designated skate park area unless authorized by the City of La Mesa
- The City of La Mesa reserves the right to eject anyone from the skate park at any time for any reason

PARK APPRECIATION DAY

Saturday, Oct 25 • 8:00 am to 12 noon

Individuals and families are invited to pick a La Mesa park on Saturday morning, Oct 25, sign up with an Adopt-a-Park volunteer (visible in a Park Appreciation Day t-shirt) and help spruce up your favorite neighborhood park. General clean up includes picking up trash, light raking, trimming, and weeding.

If you have a large group, we can help you find a project that all your members can do! Give us a call at 619.667.1300.

Bring your own gloves, rakes, or trowels. Free t-shirts for all participants. Signed waivers are required – download from www.cityoflamesa.com and bring with you to the park. Parents must accompany children under age 18 unless with a supervised group.

La Mesa's parks are our City's jewels. Help make them shine!

MISSION ESTONIA

THE SWIM ACROSS THE GULF OF FINLAND

On August 8 La Mesa Community Services Recreation Supervisor Becky Jackman plans to accomplish a swim that by all accounts has never been accomplished before. She will be swimming 35 – 40 miles across the Gulf of Finland from Tallinn, Estonia to Helsinki, Finland, in an estimated time of over 20 hours in the water.

Becky is a 23-year employee of the City. She began her employment as a part-time lifeguard/swim instructor and advanced to her current position as Recreation Supervisor of Aquatics and Sports. An avid swimmer since early childhood, she started swimming competitively at age 10 and continued swimming in high school where she competed on the varsity swim team at Helix High School for four years. In 1990 Becky began competing with an adult "Masters" swim team and began long distance open water swimming in 1995. Her previous distance swims include the Maui Channel in 2000, Catalina Channel in 2001, around Manhattan Island in 2002, and across the English Channel in 2003.

Becky has dedicated her 2008 swim to raise funds for the Burn Institute of San Diego. T-shirts commemorating Becky's swim are for sale. For more information, to buy a shirt, or to donate to the Burn Institute in Becky's name, please call Jeff Beeler at 619.206.6414.

GOOD OUTDOOR LA MESA FUN

Free Youth Golf Clinic
La Mesa Residents Only
Sat., Sept. 20 – 3:00 p.m.

Complete this coupon and return to:
Sun Valley Golf Club
5080 Memorial Dr., La Mesa CA 91941

ADULT SOFTBALL

(Ages 18 and up)

New leagues forming later this year. Watch for more details in the November issue of the La Mesa FOCUS or leave your contact information on the Sports Information Line 619.667.1319.

WATER POLO

Fall Youth Program

If you like swimming and team sports come learn water polo! Classes will run during the months of September and October.

Look for detailed information on the City's website or call the Municipal Pool information line at 619.667.1494.

LA MESA FIRE DEPARTMENT URGES RESIDENTS TO *"Prevent Home Fires"*

A pot holder too close to a lit burner or a space heater left on overnight could be all it takes to start a home fire. In fact, cooking and heating are among the leading causes of home fires in the United States, according to the nonprofit National Fire Protection Association (NFPA).

The La Mesa Fire Department is teaming up with NFPA from October 5-11 to urge La Mesa residents to "Prevent Home Fires" during Fire Prevention Week. This year's campaign focuses on preventing all the leading causes of home fires – cooking, heating and electrical equipment, and smoking materials. Additionally, fire safety educators will be teaching local residents how to plan and practice escape from a home in case a fire occurs.

According to the latest research from NFPA, more than 2,500 people died in home fires in the United States in 2006, and 12,500 were injured. Fire departments responded to 396,000 home fires, which accounted for 80% of civilian deaths and 76% of injuries that year.

"While the number of home fires is daunting, the good news is that many are easily preventable when residents take simple steps to increase their safety from fire," said La Mesa Fire Marshal Greg McAlpine. "Whether it's smoking outside the home, keeping space heaters at least three feet away from anything that can burn, or staying in the kitchen when you are using the stovetop, there are easy things you can do to keep your home and family safe from fire."

Do you know how to keep your home safe from fire hazards? Reviewing the following information and taking action can help you "Prevent Home Fires" during Fire Prevention Week and year-round.

- **Cooking:** Stay in the kitchen when you are frying, grilling, or broiling food. If you leave the kitchen for even a short period of time, turn off the stove.
- **Heating:** Keep all things that can burn, such as paper, bedding or furniture, at least 3 feet away from heating equipment.
- **Electrical:** Replace cracked and damaged electrical cords; use extension cords for temporary wiring only. Consider having additional circuits or receptacles added by a qualified electrician.
- **Smoking:** If you smoke, smoke outside; wherever you smoke, use deep, sturdy ashtrays.

Fire Prevention Week is actively supported by fire departments across the country. For 85 years fire departments have observed Fire Prevention Week, making it the longest running public health and safety observance on record.

Crime Prevention Update from the La Mesa Police Department

The La Mesa Police Department has been hard at work on its crime prevention efforts. Since the beginning of 2008, several projects have been completed. Some of the highlights include:

- **Crime Prevention DVD** for residents- The La Mesa Police Department has created an informative video to instruct residents on common sense tactics to keep yourself and your property safe. The video can be viewed by topic segments on the City's website or you can pick up a copy of the complete DVD at the La Mesa Police Station, 8181 Allison Avenue.
- **Citizens Academy-** The La Mesa Police Department's Citizens Academy was a huge success! The Academy was held every Thursday evening from May 29th to July 3rd. The participants learned about the Traffic Unit, the Communications Center, police car features, gangs, the Investigations Unit, evidence collection, the Special Response Team (SWAT), defensive tactics, and the Peer Support Team. At the end of the Academy, the citizens participated in a mock trial. Another Citizens Academy will be held in 2009. Keep your eyes open for more information on this exciting program!
- **Neighborhood Watch-** Our Neighborhood Watch program has grown tremendously over the last few months. The City of La Mesa now has over 75 active Neighborhood Watch groups. A meeting of the Neighborhood Watch captains was held in May to brainstorm new and exciting ideas for the program. National Night Out will be held August 5th. Neighborhoods are encouraged to conduct outdoor activities that evening in order to send the message to criminals that the residents of La Mesa are watching and will not tolerate illegal activity. Simultaneously, an event will be held at Grossmont Center to promote the Neighborhood Watch Program. Target will be providing giveaways and activities for the whole family!

For information on these and other upcoming projects, please call the Crime Prevention Unit at .619.667.1445.

City of La Mesa Offers $25 Rebate Voucher for an Inspection Fee

by Attending Free Code Update Workshop for Local Industrial & Commercial Businesses

Within the past year, new environmental, fire and building codes have changed due to recently adopted state and federal regulations. The City of La Mesa is providing an opportunity to clarify how these new requirements will affect your business. This workshop will be held on Thursday, August 28 at the La Mesa Community Center (4975 Memorial Drive, La Mesa). Registration is at 8:00 am and followed by three 45 minute presentations.

Presentation Topics

1. City of La Mesa Storm Water Program Update
2. Fire & Building Department Update
3. Fats Oil & Grease (FOG) Program (Restaurants)

To help your business meet these new requirements, the City will provide information on what your business can expect during annual storm water, building, fire, and Fats Oil & Grease (FOG) program inspections. Information on new inspection fees for the storm water and FOG programs will also be presented. The City will offer a $25 rebate voucher off your next storm water, fire, and FOG inspection fee for attending this workshop.

This workshop is being endorsed by the East County Chamber of Commerce, La Mesa Chamber of Commerce, and the La Mesa Village Merchants Association. Should you have any questions on the workshop, please feel free to contact Malik Tamimi at .619.667.1340.

LA MESA POLICE OFFICERS RECEIVE COMMENDATIONS

Two La Mesa Police Detectives, Detectives Shawn Wray and Scott Hildebrand, were recently honored for their heroic efforts to save a man's life during the Firestorm of 2007. The San Diego County Burn Institute recognized their efforts, as well as the police department and the F.B.I. Law Enforcement Bulletin, an international magazine published by the Federal Bureau of Investigation.

Both detectives had volunteered to participate in the mutual aid response to a rural part of the county during the firestorm. The detectives entered an area burning out of control in an attempt to locate and rescue an injured man. They disregarded their own safety, risking their lives to save another. The injured man was found and removed from the burn area as the fire was closing in on them. It was later learned that two persons had died in their homes in the same area. A supervisor recognized the detectives for saving the injured man's life.

BEWARE OF GAS SIPHONING

With the rising price of gas, an inevitable side effect is the theft of gasoline from cars, trucks, and recreational vehicles. It is imperative to protect your valuable investment in your vehicle. Be aware of the location you park your car. Always park in a well-lit area where other people can observe your vehicle. When at home, park in your garage if it is available or park as close to your home as possible. Also, consider a secure gas cap. Your original gas cap can be replaced with a locking gas cap found at any auto supply store.

POLICE DEPARTMENT OBTAINS NEW SPEED TRAILER

The La Mesa Police Department recently obtained a brand new speed trailer thanks to Officer Jeff Raybould of the Traffic Division. Officer Raybould submitted a grant request to the Office of Traffic Safety in 2007 for the purchase of new equipment. As a result of this request, the La Mesa Police Department was awarded a grant in the amount of $115,605.00.

One of the items purchased with the grant money is a Kustom Signal Smart Model 1 speed trailer with a solar panel. Other grant-funded purchases are pending. The speed trailer will be used to educate the public, help slow traffic on roadways, and monitor speed complaints from citizens. The speed trailer is capable of tracking vehicles and logging their speed as they approach the trailer and as they pass by the trailer. The on board computer allows police to recall this information so they can utilize resources in the most efficient manner.

The La Mesa Police Department's Traffic Division can be reached at 619.667.1444 or online at www.cityoflamesa.com.

GRANT UPGRADES AGING SEWER SYSTEM

The City of La Mesa secured a $14.5 million low-interest loan from the State Water Resources Control Board in 2006. The loan is being used to rehabilitate and upgrade the City's aging sewer system in older and hillside sections of La Mesa.

The project has been divided into four phases. Phase 2 construction is substantially complete. Phase 3 is scheduled to begin in the summer of 2008 with Phase 4 following in 2009. The combined phases represent the largest infrastructure project ever undertaken by the City.

During construction, residents may be inconvenienced by restricted traffic flows and construction noise in areas close to the construction zones. The City apologizes in advance for any inconvenience. However, this project will enhance the health and safety of La Mesa residents for many years.

Phase 3 construction will take place on portions of the following streets: Pasadena Ave., Orchard Ave., Lemon Ave., Finley Ave., 4th Street, Sunrise Ave., and Hillcrest Ave, as well as in easements between Avon Dr. and Summit Dr., Normal Ave. and Pasadena Ave, and off of Chevy Chase Drive.

The accompanying diagram shows the locations of the proposed work. Residents in each neighborhood affected by the work will be notified of the start dates 48 hours prior to the start of construction.

Highlighted streets show locations of sewer upgrades

a's west end, the City has scheduled
o be replaced in and around Normal

dents may be inconvenienced by

. The City apologizes in advance
However, this project will enhance
Mesa residents for many years.

Normal Avenue Sewer Group Improvements will take place on the streets as shown in the diagram. Residents in each neighborhood affected by the work will be notified of the start dates 48 hours prior to the start of construction.

Following the replacement of the sewer pipes, the utilities will be undergrounded on Normal Avenue from Lowell Street to Windsor Drive. After the utility undergrounding the street will be resurfaced.

1846

MEDICAL SHARPS BANNED FROM LANDFILLS

On September 1, 2008 a statewide ban will take effect under California Health and Safety Code Section 118286, prohibiting the disposal of sharps in California landfills. Sharps are defined as, any device having acute rigid corners, edges, or protuberances capable of cutting or piercing, including, but not limited to, all of the following:

- Hypodermic needles, hypodermic needles with syringes, blades, needles with attached tubing, syringes contaminated with biohazardous waste, acupuncture needles, and root canal files.
- Broken glass items, such as Pasteur pipettes and blood vials contaminated with biohazardous waste.
- Any item capable of cutting or piercing that is contaminated with trauma scene waste.

What to do? There are several possible options for legally and safely disposing of sharps:

Pharmacies and Hospitals – Contact the pharmacy or hospital where you obtained your sharps to see if they have a take-back program to assist you with safe disposal.

Mail-Back Services – These services are available which can provide you with postal-approved packaging allowing you to return sharps to the point of manufacture for disposal. You can find these services through the California Integrated Waste Management Board website at www.ciwmb.ca.gov/HHW/sharps.

La Mesa's Household Hazardous Waste Program – City of La Mesa residents may now dispose of sharps, along with other banned items and household hazardous waste (HHW), such as batteries, fluorescent bulbs, household chemicals, and electronics through the City's HHW drop-off program. Call EDCO Disposal Corporation at 619.287.5696 x4270 to schedule an appointment for the next event. See the HHW article posted in this issue of FOCUS for more info.

DO THE RIGHT THING!

Do you have batteries, fluorescent lights, chemicals, electronics, or anything else that you know you can't just throw away, but don't know what to do with them? These items are considered household hazardous waste (HHW) and are not allowed to be placed in the trash because of their destructive effect on the environment.

DISPOSAL IS FREE! If you reside within the City limits of La Mesa, you are eligible to participate in the City's free HHW drop-off program.

2008 HHW DROP-OFF SCHEDULE:

August 16 • September 27
November 22

Call EDCO Disposal Corporation at 619.287.5696 x4270 to make an appointment or more information.

While supplies last, participants may bring a mercury thermometer and exchange it for a FREE non-hazardous thermometer. Please ask for your new thermometer upon arriving.

EXAMPLES OF HHW ARE:

GENERAL: Batteries, fluorescent lights, latex & oil based paints, solvents, cleaners, pesticides & garden products, pool products, propane, medical needles (sharps), and any items labeled flammable, hazardous, toxic, or corrosive.

ELECTRONICS: TVs, computer monitors and hardware, telephones, VCRs, and radios.

AUTOMOTIVE: Used oil & filters, batteries, and antifreeze.

For more information on HHW or other disposal or recycling options, log on to www.cityoflamesa.com

Continued from page 1 – ## *New Library Open*

The Library was constructed along with the new La Mesa Post Office branch as part of the City's Civic Center Master Plan. Although these projects represent a significant investment, they were initiated as a means to maximize the City's property assets. The library construction was completed to make way for the new Proposition D funded Police Station without having to purchase additional land or absorb significant relocation costs for Police operations if the new facility had been constructed on the station's existing site. Additionally, the U. S. Postal Service is an existing tenant of the City and has agreed, as part of a long-term lease agreement, to move into the new facility in the Civic Center area. Rent from the Post Office will offset expenditures for its share of the new building. The Post Office is working on final plans for its space and is expected to relocate to the new building in the very near future.

RECYCLING NOW AVAILABLE AT CITY PARKS

Recycling in La Mesa just keeps getting easier! In addition to the recycling containers that now serve both sides of La Mesa Boulevard in the village, you can now find recycling in all City parks. Thanks to funding from the California Department of Conservation's Division of Recycling we've added over 40 recycling containers throughout the City.

These sturdy blue containers have covered lids and clearly visible signs and are located near existing unmarked trash cans. All materials collected are part of the City's commingled recycling program. This means that all recyclable materials go into one container- aluminum, plastic, glass, paper, and cardboard. We encourage all users of the parks to take advantage of this opportunity to take care of the environment!

If you are interested in starting a recycling program at your school, office, store, or commercial or residential property, the City and EDCO Disposal Corporation can help! All it takes is a few materials and a little determination. It's a little effort for a great reward by helping the environment and it can pay for itself if you take what you collect to a recycling buyback center. Visit our website at www.cityoflamesa.com or call EDCO at 619.287.7555 for more info.

When you visit our parks use the blue recycling cans to dispose of beverage containers. Help keep La Mesa green!

LA MESA HISTORIC HOMES TOUR

On Saturday, November 8 the La Mesa Historical Society (LMHS) will present the 3rd Annual Historic Home Tour. The event is co-sponsored by the Historic Preservation Commission of the City of La Mesa. The tour will feature homes that helped make La Mesa what it was and is today.

The tour, which highlights five La Mesa historic homes dating from 1908, will run 10:00 am to 3:00 pm. All five properties are carried in the City's Inventory of Historic Resources. Each will be decorated in a fall motif and have displays of La Mesa history and of the buildings as they were in La Mesa's early days. Visitors can watch local artists at work in the yards.

Free shuttle buses will operate from the Tour Center at the corner of Palm and Lemon Avenues in the downtown Village of La Mesa since there is limited parking and vehicle access for most of the homes. Abundant parking is available adjacent to the Tour Center and in City lots.

An art show/art mart, co-sponsored by La Mesa's Foothills Art Association, will display original art by local artists with works available for sale. The Tour Center will also feature historical displays, antique automobiles and sources of information for other special events in East County.

Tickets purchased the day of the event will be $15 for LMHS members and $18 for non-members. Pre-sale tickets at $12 for LMHS members and $15 non-members are available by telephoning 619.465.1883.

100TH BIRTHDAY CELEBRATION

The Reverend Henry A. Mc Kinney's House has been the official location of the La Mesa Historical Society since 1975. This year the house is turning 100 years old. To celebrate this passage of time, 1908-2008, the Historical Society is throwing a Birthday Party. The celebration is being combined with an old fashioned Quilt Show. The house and backyard will be decorated with many special quilts from the past.

Join the La Mesa Historical Society for an afternoon of fun, refreshments, opportunity drawing, and a Quilt Show. If you have yet to visit the house, this event is the perfect opportunity.

Saturday, Sept. 27, 2008
1:00 – 4:00 pm
The McKinney House, 8369 University Ave.

ADMISSION IS FREE

WALKING COUNTS!
Make your goal 10,000 steps a day

You've heard it before but it bears repeating. Walking is one of the most beneficial forms of exercise we can do. It is easy to adapt for any age and fitness level. All you really need to get started is a good pair of walking shoes and, of course, a little motivation!

A good goal to work toward is an average of 10,000 steps per day. In terms of distance that's about five miles each day. That may seem like a lot but you'd be surprised at how you can fit in some extra steps per day each week until you reach that goal. Find helpful information on how to get started at www.thewalkingsite.com.

Here are some ideas to increase the number of steps you take each day:

- Walk to a park to eat your lunch.
- Skip the elevator and take the stairs.
- Walk the kids to school.
- Walk the dog – you'll both benefit!
- Park at the far end of the parking lot.
- Get off the bus one stop early.
- Make a walk part of your lunch hour.
- Invite a friend along.

The La Mesa Wellness Task Force supports the City's goal to make La Mesa a more walkable community. Steps have already been taken (please pardon the pun) to create ways to make walking La Mesa more fun. Aside from all the organized walking groups in town, La Mesa's Walking Art Trail is a great way to start adding those extra steps and view some public art along the way. The not too distant future will bring grant-funded street and sidewalk improvements to the area surrounding Helix Charter High School. City staff members are also working on a project to map out walking routes throughout the community that will vary by distance and difficulty to add variety to your walking regimen. Watch the City's website for more information as it becomes available.

WALK LA MESA
Just for the Fun of It!

The La Mesa Wellness Task Force wants you to know that there are organized walks nearby every day of the week. Check the City's website at www.cityoflamesa.com, search *health & wellness,* and click on Walk La Mesa under Quick Links for a list of options or pick up a flyer at La Mesa City Hall or the La Mesa Community Center.

Call 619.667.1300 for more information

La Mesa – it's made for walking!

COUNCIL ACTIONS

April 8, 2008
Adopted a resolution making required findings and certifying the final Environmental Impact Report, including a Mitigation Monitoring and Reporting Program, (City of La Mesa, Case File ZOA-07-01) for a proposed Mixed Use Overlay Zone to be applied to properties designated as "Mixed Use Urban" on the City of La Mesa General Plan Map.

Adopted a resolution approving the Design Guidelines for properties located in the Mixed Use Overlay Zone.

Adopted a resolution appropriating funds for the purchase and installation of a fabric shade structure at the Rolando Park playground.

Adopted an ordinance adding Chapter 24.18 to the La Mesa Municipal Code establishing a Mixed Use Overlay Zone governing mixed use development and assigning the Mixed Use Overlay Zone to certain property per ZOA-07-01.

Adopted an ordinance amending Chapters 7 and 24 of the La Mesa Municipal Code by adding, repealing and amending various code sections relating to adult businesses per ZOA-07-02.

April 22, 2008
Adopted a resolution declaring there were weeds, rubbish and refuse existing upon certain streets, sidewalks and private property in the City of La Mesa, which constitute a public nuisance and declaring the intention of the Council to order its abatement.

Adopted a resolution amending Section 12.28.030 (5.1) and adding Sections 12.28.030 (59.81) and 12.28.030 (71.01) of the La Mesa Municipal Code designating Eastridge Drive as a stop street at Highwood Avenue and Highwood Avenue as a stop street at Eastridge Drive.

Approved the allocation of Community Development Block Grant (CDBG) and HOME funds and adopted the Annual Plan for Community Development activities for Fiscal Year 2008-2009.

Adopted a Fee Schedule for Fiscal Year 2008-2009.

April 24, 2008
Accepted the findings and conclusions of the third party independent investigation report regarding the Police Department's response to an incident involving the Mayor on February 20, 2008.

May 13, 2008
Ratified the Design Review Board's approval of DRB-08-01 (CCRT Properties) for a proposed exterior remodel to an existing commercial building at 8401 Fletcher Parkway.

Adopted a resolution accepting bid of Portillo Concrete Inc. and awarding a contract for Bid 07-15, construction of intersection improvements at University Avenue and Yale Avenue.

May 27, 2008
Adopted a resolution amending Section 12.64.010 of the La Mesa Municipal Code adopting a 45 mph speed limit for Riviera Drive.

Adopted an ordinance adding Chapter 10.17 to the Municipal Code prohibiting the sale and distribution of novelty lighters.

Adopted a resolution approving Site Development Plan DAB-07-32 and ratified the Design Review Board's approval of Design Review DRB-07-32 (Crosspointe Life Church) for alterations to an existing church at 8809 La Mesa Boulevard.

June 10, 2008
Adopted a resolution approving Program Supplement No. 0E40 Rev. 000 for construction of sidewalks on Orien Avenue and Lowell Street.

Adopted a resolution waiving formal bidding and authorizing the purchase of an aerial ladder truck.

Adopted a resolution of the City Council declaring its official intent to reimburse itself with the proceeds of a future tax-exempt borrowing for certain capital expenditures undertaken by the City of La Mesa.

Authorized the appropriation of funds for the design and construction of the La Mesa Skate Park Repair and Upgrade Project, and adopted a resolution rejecting the apparent low bidder as non-responsive and non-responsible and awarding the contract to the responsive and responsible second low bidder, Team C Construction, Inc., Bid No. 07-27.

June 24, 2008
Ratified the Planning Commission's approval of Tentative Tract Map TTM-08-02 and Site Development Plan DAB-08-07 (PDM-La Mesa, LLC/Bradley Land Group) a proposal to subdivide a 0.76-acre site for the purpose of creating 19 residential condominium units with 1 commercial suite fronting on El Cajon Boulevard, and ratified the Design Review Board's approval of Design Review DRB-08-07 at 7561 El Cajon Boulevard.

Ratified the Planning Commission's approval of Tentative Tract Map TTM-08-01 and Site Development Plan DAB-08-06 (PDM-La Mesa, LLC/Bradley Land Group) a proposal to subdivide a 1.5 acre site for the purpose of creating 45 residential condominium units with 2 commercial suites fronting on El Cajon Boulevard, and ratified the Design Review Board's approval of Design Review DRB-08-06 at 7353 El Cajon Boulevard and 4888 Jessie Avenue.

Adopted resolutions calling and giving notice of the holding of a General Municipal Election to be held in the City on Tuesday, November 4, 2008; requesting the County Board of Supervisors to conduct the election and to consolidate it with the Statewide General Election; and adopting regulations for candidates for elective office pertaining to candidates' statements.

Adopted resolutions approving the fourth amendment to the American Dream Down Payment Initiative (ADDI) Agreement and the allocation of the ADDI funds for Fiscal Year 2008-2009 to the Down Payment and Closing Cost Assistance (DCCA) Program; and approving the execution of the second amendment to the Agreement for management and implementation of a Home Investment Partnerships Program Project with the County of San Diego to fund the La Mesa Down Payment and Closing Cost Assistance (DCCA) Loan Program and accept the Home allocation of $1,550,269.95.

Adopted resolutions approving the 2008-2009 amended final budget; and adopting the Appropriations Limit for Fiscal Year ending June 30, 2009 and the annual adjustment factors used to calculate the limit.

GREEN STYLE TIP

Printing the La Mesa FOCUS

In the February issue feedback survey, several readers said they preferred the feel of a printed version of FOCUS in their hands but wanted to conserve on the expensive color ink. Here's a tip for printing a black & white version.

With the document displayed in Adobe Reader® select print from the file menu. Select properties in the print dialogue box and look for the option to print in black & white. The location of selection boxes may vary depending on your operating system and type of printer.

WHERE IS THE NEW LA MESA POLICE STATION LOCATED?

City officials breaking ground for new police station

Police Department personnel have had many comments over the last few months from excited La Mesa residents regarding the new police station. They exclaim, "You guys must be so excited, the new station is beautiful!" Police staff wonder, "Where have we been? What new police station?" Many people believe that the new building between Fire Station 11 and City Hall is the new police station. The new building that completed construction in April 2008 is the new La Mesa Branch Library and US Post Office building.

So where will the new police station be located? The new police station address

LA MESA VILLAGE FARMERS MARKET TURNS 15

Time flies when you're having fun. It's a common saying but if the La Mesa Village Farmers Market is any indicator, it's absolutely true. Since August 1993, the City of La Mesa has sponsored the weekly market every Friday, rain or shine, from 3:00 pm to 6:00 pm in the Allison Ave. municipal parking lot. This past August the Farmers Market achieved its 15th season in downtown La Mesa. It's been a fun ride for La Mesa citizens and the staff, managers, and volunteers working behind the scenes to make the market happen each week.

Many readers may recall that warm August day in 1993 when the market first started operations. That day 19 local farmers — five of whom still sell at the market — and a throng of curious shoppers converged on the Allison Ave. municipal parking lot to inaugurate the market and launch what was to become a long-standing La Mesa Village tradition. The first tent stands were set up and the first table legs landed on the pavement bearing the weight of the fruits, vegetables, and flowers heaped upon them, fresh and ready for sale to an eager public.

Continued on page 15

KIDS CARE FEST

September 20 was a day for kids of all ages at Briercrest Park. The 7th Annual Kids Care Fest treated more than 1200 children and their families to interactive games, educational activities, public safety displays, and attractions. In the street fair atmosphere, children had opportunities to try their hand at watercolor painting, take a turn on the bungee jumper, ride the ponies, be fingerprinted, step into a fire truck or police car, and interact with strolling clowns. Local healthcare providers and advocates were on hand to provide a variety of health screenings and information on staying healthy and active. For the first time this year, health insurers were on hand to provide information on low and no cost health insurance for children and to assist eligible families with the enrollment process as part of the City's participation in Communities for Healthy Kids.

We extend many thanks to our partners, sponsors, exhibitors, and volunteers for another successful regional event. A tentative date of September 19, 2009 has been set for the 8th Annual Kids Care Fest. Watch the City of La Mesa and Grossmont Healthcare District websites for more information. You won't want to miss it!

Students from San Diego State University Department of Exercise and Nutritional Sciences talk to young visitors about the benefits of healthy eating and physical activity

CITY OF LA MESA
PARK APPRECIATION DAY 2008

Was Held on Saturday, October 25th

Our thanks to all the volunteers who helped out at La Mesa parks

BEAUTIFUL JOB EVERYONE!

Thank you

October 25 was the 2008 La Mesa Park Appreciation Day. If you participated at your favorite park, City staff would like to take this opportunity to thank you for all the hard work and to share what you accomplished. A total of 75 cubic yards of debris were removed, tables painted, landscaping trimmed, and leaves raked. City park sites are cleaner, spruced up, and ready for the change of season.

If you missed this year's event, you missed a wonderful opportunity to take a hands-on approach to improve your park facilities. This is a great event for groups and special projects can be assigned depending on the size of your group. Park Appreciation Day is an annual event, so plan ahead for next year on October 24, 2009.

Individuals or groups who are interested in helping to keep City parks green and in tip top condition can join our Adopt-a-Park program. Adopt-a-Park assigns one person or group to a specific park and that person or group spruces up the park each weekend by picking up litter, emptying trash cans into the dumpster, and stocking the restrooms. Park adopters get their name on a sign posted at the park. For more information about the Adopt-a-Park program, or if you are interested in adopting a park, contact the City's Volunteer Coordinator Judy Stern at 619.667.1490 or the Department of Public Works at 619.667.1450.

Call Us To Help Stop Storm Water Pollution!

You can call the City's Storm Water Pollution Prevention Hotline at 619.667.1134 any time to stop storm water pollution. City personnel will verify the complaint and respond to the problem immediately. Below is a list of several storm water pollutants you should be aware of.

Storm Water Pollutants

- Sediment (soil/dirt)
- Fertilizers (plant food)
- Metals
- Detergents (soap)
- Pesticides (chemicals to kill plants or bugs)
- Organic Compounds (solvents)
- Trash and Debris
- Oil and Grease
- Bacteria and Viruses

What should you report?

You may either ask the person to stop polluting the environment or count on the City to respond appropriately. The following are examples of what you should look out for and report to the City.

Commercial/Industrial Areas

- Hosing down the parking lot/water running off onto the street
- Washing company vehicles without capturing the runoff
- Storing equipment outside without covering it
- Overflowing trash cans or dumpsters

Construction Sites

- Tracking soil onto the street
- Storing stockpiles of soil without covering it for extended periods of time
- Discharging water into the street

Residential

- Washing soil off property and into the street
- Significant over-irrigation
- Fixing car on the street
- Significant overspray of pesticides or fertilizers
- Not picking up after pets

If you see any of these activities, talk to the responsible party or contact the City immediately. Protecting our environment protects our quality of life!

Gather your gear it's time
FOR THE...

Friday 6:00 – 10:00 pm

** Subject to change based on the number of teams*

***Minimum 4 teams required per night or league night subject to change or cancellation.*

PLAY BALL!

Don't Leave Valuables in Your Car

Vehicle burglaries continue to be a huge problem for law enforcement and citizens alike. During the summer months May through August the La Mesa Police Department received 239 reports of vehicle burglaries. Many of the cases seen at the La Mesa Police Department on a daily basis are due to an attractive item being left in the vehicle. GPS devices, iPods, cameras, laptops, cell phones, and cash have all been reported stolen out of vehicles. It is important to note that the thieves were able to defeat the door locks or break windows in many of these cases! Do not assume that simply locking your car doors is enough to scare a burglar away. In recent months, many of the burglaries occurred during the day when the victim was running errands or going to work. Shopping centers, medical facilities, and gyms are popular targets for car burglars due to the high volume of cars in one area. The thief simply looks into all the cars and breaks into the ones where valuables are visible. Several victims left their car for only a few minutes and returned to find their valuables stolen.

In recent months we have also seen many residential neighborhoods become a target for overnight car burglars. In most all of these cases, it was clear the burglar was looking in car windows to see if there was anything valuable in plain sight. Lock all car doors and close all windows, even in your garage or driveway. Set the alarm if you have one installed and watch out for your neighbor's vehicles. The most important thing you can do to prevent your vehicle from being burglarized is to make it a habit to take everything out of your car whenever you exit. Do not, under any circumstances, leave valuables in your car. Many innocent victims thought that they could "hide" their valuable electronic devices and wallets under the seat or in the trunk. If you see anything suspicious, do not hesitate to call the La Mesa Police Department. In an emergency or if you witness a crime in progress dial 9-1-1. For non-emergency calls dial 619.667.1400.

If you have specific questions regarding vehicle security you can contact the Crime Prevention Unit at 619.667.1445 or visit the City website at www.cityoflamesa.com for additional safety information and crime prevention tips.

Street Resurfacing on Jackson Drive, Baltimore Drive, and Other Streets

In early October the City started work on resurfacing Jackson Drive from Fletcher Parkway to the north City limit just past Dallas Street. The project will replace pavement and make improvements to the intersection of Jackson Drive and El Paso Drive, near Murray Manor Elementary school, to increase safety for cars, bicycles and pedestrians. The work is scheduled to be completed the beginning of December.

Following the work on Jackson Drive, the City plans to resurface Baltimore Drive from University Avenue to the north City limit just past El Paso Street. Portions of several other streets will also be resurfaced following sewer pipe replacement including: Lee Avenue, Grape Street, Normal Avenue, Mills Street, Colina Drive, Maiden Lane, Hillcrest Avenue, Crowder Lane, Chevy Chase Drive, Boulder Place, and Boulder Drive. These streets are being resurfaced following the replacement of old, under-capacity sewer pipes.

Jackson Drive and Baltimore Drive are major collector streets vital to the City's road network. Please pardon our dust as we conduct these infrastructure improvement projects to better serve the community and provide you with many years of continued service from these roads.

Resurfacing is underway on Jackson Drive

Popular Historic Homes Tour Coming Soon

Don't miss the 3rd Annual La Mesa Historic Home Tour on Saturday, November 8 10:00 am to 3:00 pm. Tickets are $15 for Historical Society members, $18 for non-members. Shuttle trolleys to the five homes are available at the tour center located at Lemon and Palm Avenues in the Village of La Mesa. Call 619.465.1883 for more information.

HOLIDAY DRINKING AND DRIVING

During this holiday season your safety is the La Mesa Police Department's number one priority, which is why we encourage you to "THINK BEFORE YOU DRINK." With the volume of holiday parties and family gatherings this time of year the La Mesa Police Department recommends that if you plan to drink an alcoholic beverage, prior to going out for the night you need to designate a driver who will not be drinking.

The La Mesa Police Department recently received a $90,000 grant from the California Office of Traffic Safety for Driving Under the Influence (DUI) Awareness and Enforcement programs. This grant will run from October 1, 2008 to September 30, 2009. The grant allows the La Mesa Police Department to conduct several DUI and Driver's License checkpoints as well as DUI saturation patrols during the next year.

A typical DUI arrest could end up costing in excess of $10,000 with attorney's fees, court costs, and increases in your insurance. Please remember that "buzzed driving" is still "drunk driving" with the same serious consequences. This is why the La Mesa Police Department encourages you to designate a driver, or take the trolley, bus, or a cab home if you do decide to drink. A $50 cab ride is much less expensive than a $10,000 expense for a DUI arrest.

VOLUNTEERS NEEDED!

Are you interested in becoming a volunteer with the City of La Mesa? Check out our volunteer opportunities below or download a Volunteer Application from www.cityoflamesa.com.

The City of La Mesa's Community Participation Program has volunteer positions and special assignments available in the departments and project areas listed below. Volunteers play an important role in the enhancement and expansion of services to City residents. You not only provide a valuable service for the community, but also enjoy flexible scheduling for most assignments, develop new skills, meet new friends, and are officially recognized by the City of La Mesa at our Annual Volunteer Appreciation Luncheon.

Rides4Neighbors

We need Volunteer Drivers for Rides4Neighbors, a new transportation program for La Mesa's older residents and residents with disabilities. Rides are provided by trained volunteers, who use their own vehicles. We reimburse for mileage and provide supplemental liability insurance. Read more about the program on the City's website or call the Adult Enrichment Center at 619.464.0109.

City of La Mesa Greeter/Host for City Council Meetings

The City Clerk's office has a need for a volunteer(s) to host City Council meetings. This position involves greeting attendees, distributing speaker sign-up sheets, and providing the agenda upon request. City Council meetings are held on the 2nd and 4th Tuesday of each month. For information on this position, please call the City Clerk's office at 619.667.1120.

Adult Enrichment Center Coffee Klatch

We are seeking volunteers for Coffee Klatch, a volunteer-run coffee "shop" for Adult Center participants. Coffee Klatch is scheduled on Mondays, Wednesdays, and Fridays from 9:00 to 11:00 am in the Drop-In Center. Volunteers prepare and serve coffee and pastries donated by Starbucks. Flexible day scheduling is available. For information or a volunteer application call 619.464.0505.

Adopt A Block!

You can help preserve and enhance the beauty and cleanliness of La Mesa by volunteering for Adopt A Block. If you are a regular walker in your neighborhood, whether alone, with a pet or a neighbor, you can join this dedicated team of volunteers. The City provides a program vest, bags and a pick-up tool. All you need to do is commit to spending at least 5 hours a month for one year! You make your own hours, plus you are recognized at the City's annual luncheon celebration! Sign up TODAY by calling 619.464.0505.

Friday Night Dance at La Mesa Adult Enrichment Center

We need volunteers to help with front door cashiering and cash out. Time needs: once a month for a 3½ hour shift. Please pick up a volunteer application at the Adult Enrichment Center or call 619.464.0505 to have one mailed to you.

La Mesa Pet Therapy Needs You and Your Dog!

Would you and your dog be willing to spend 2 hours a month visiting patients in La Mesa convalescent homes? Call the Adult Enrichment Center to pick up an application or call 619.464.0505. If you have more questions about the program, we will put you in touch with a current Pet Therapy volunteer.

Adopt the Moffatt Garden at the La Mesa Adult Enrichment Center!

We are seeking a dedicated garden lover, or group of garden lovers, to help us with tender loving care and upkeep for our beautiful memorial garden. A weekly weeding, helping meet the needs of thirsty plants, and sprucing up would be just the right stuff needed to keep this special place a treasure for all to enjoy. Please stop in the office to pick up a volunteer application, or call 619.464.0505.

COMMUNITY EMERGENCY NOTIFICATION SYSTEM

La Mesa has a new tool to help residents in the event of a disaster or large scale emergency. The Community Emergency Notification System (CENS) is a mass notification telephone system that allows City officials to call any or all residents in the City of La Mesa to alert them to emergency situations. It is like 911 operators calling you. The system called "Alert-SanDiego" is used to warn the public about imminent threats to life or property, disaster notifications, evacuation notices, public health emergencies, and any other notification to provide emergency information. City officials now have the ability to record a message or instructions to help you during an emergency. The system will only be used in emergency situations and will not be used for routine messages.

The system utilizes the region's 911 database to contact land line telephones. You do not have to register your home phone unless it is a VoIP internet service. You can register your mobile phone, VoIP, and email address. The system is also TTY/TDD capable. By registering your mobile or VolP phone, you are allowing emergency response personnel to provide you with information you need to be aware of or action you need to take during an emergency or disaster such as alerts and evacuations. To register, please visit www.readysandiego.org. Select "AlertSanDiego" and follow the instructions. You may register more than one mobile phone associated with your home address. If you have already registered and you have moved or changed your mobile number, you will need to re-register your new information

This is another way to help get critical information in the event of a disaster. You never know when an emergency will strike so take the time now to prepare yourself. Download a copy of the La Mesa Survive booklet from the City's website. You may also stop by or call the Fire Department at 619.667.1355 to request a print version of the booklet.

GOT ELECTRONICS?

Do you have electronic waste that you need to get rid of? Disposal of e-waste just got easier! Bring your old TV or computer monitor to the new and convenient free* recycling drop-off location at EDCO Station, 8184 Commercial Street, La Mesa for www.edcodisposal.com or call 619.466.3355. This service is open to all residents and businesses and no appointment is necessary. All electronics can be recycled. **A small fee may apply to some items.*

Electronic waste is a growing segment of our waste stream. Because numerous electronic devices are made with components that contain lead, mercury, nickel, cadmium, and other toxic elements that can harm the environment, they are prohibited from disposal in landfills under Title 22 of the California Code of Regulations, the Universal Waste Rule.

Do you have other household hazardous wastes for disposal? La Mesa residents can also use the City's regular appointment-only collection events to drop off items like paint and solvents, fluorescent bulbs, batteries, chemicals, medical sharps, and pool and garden products, as well as electronics. See the Household Hazardous Waste info on page 9 of this issue of the FOCUS for upcoming dates and more information or call 619.287.5696 x4270 to make an appointment.

California Coastal Cleanup Day in La Mesa

California Coastal Cleanup Day was held on Saturday, September 20. The state-wide cleanup event included over 750 cleanup sites with more than 60,000 volunteers throughout the state removing 900,000 pounds of debris from the shorelines, coast, and inland areas.

This year will mark the third year the City of La Mesa has hosted two cleanup sites; Alvarado Channel and University Channel. Fifty-eight volunteers participated in the cleanup event and removed over 400 pounds of trash and debris. It was a successful community event to help protect our environment and preserve our quality of life.

Removing trash from University Channel as part of California Coastal Cleanup Day in La Mesa

DO THE RIGHT THING!

Do you have batteries, fluorescent lights, chemicals, electronics, or anything else that you know you can't just throw away, but don't know what to do? These items are considered household hazardous waste (HHW) and are not allowed to be placed in the trash because of their destructive effect on the environment.

DISPOSAL IS FREE! If you reside within the city limits of La Mesa, you are eligible to participate in the City's free HHW drop-off program.

The next event is on November 22, 2008. An appointment is required. Call 619.287.5696 x4270.

Announcing the 2009 Event Schedule!

January 31	June 6	October 10
March 14	July 18	November 21
May 2	August 29	

The above events are by appointment only. Call EDCO Disposal Corporation at 619.287.5696 x4270 for an appointment.

While supplies last, participants may bring a mercury thermometer and exchange it for a FREE non-hazardous thermometer. Please ask for your new thermometer upon arriving.

EXAMPLES OF HHW ARE:

GENERAL: Batteries, fluorescent lights, latex & oil based paints, solvents, cleaners, pesticides & garden products, pool products, propane, and any items labeled flammable, hazardous, toxic, or corrosive.

ELECTRONICS: TVs, computer monitors and hardware, telephones, VCRs, and radios.

AUTOMOTIVE: Used oil & filters, batteries, and antifreeze.

MEDICAL SHARPS (needles) can also be disposed of through this program. They must be properly secured in a sharps container.

E-WASTE can now be recycled at the EDCO Station buy back center during business hours without an appointment. See the announcement in this issue of FOCUS.

Call EDCO at 619.287.5696 x4270 to schedule an appointment or to request additional information. For more information on HHW or other disposal or recycling options, log on to www.cityoflamesa.com/HHW.

Sustainability Celebrated at the Environmental Awareness Festival

The first La Mesa Environmental Awareness Festival was a big success with hundreds of people in attendance from around the county. The event took place at Harry Griffen Park on Saturday, September 13 and was organized by La Mesa's Environmental/Sustainable Committee.

Twenty-one organizations offered everything from giveaway items such as mercury-free thermometers and reusable shopping bags, a compact fluorescent for incandescent light bulb exchange program, and workshops on solar cooking and shade tree planting. A drive-thru recycling zone was provided for e-waste, all plastics, glass, metal, cardboard, and paper. The electricity for the event was generated by solar power. The event catered to all ages and included information and discussion on topics including water conservation, energy efficiency, recycling, composting, solar power, storm water pollution prevention, gardening and more.

The City plans to make this an annual event. Look for announcements regarding the 2009 Environmental Awareness Festival next summer.

CHALLENGE CENTER

Did you know that the San Diego Chargers used to have practice facilities here in La Mesa? In spring 1964 the Chargers were looking for a practice location during the football season. The La Mesa City Council made available the field that is now the David Madrid Memorial Field (where La Mesa Little League and Senior Softball League play) at Sunset Park. The Chargers also needed locker and classroom facilities so local businessmen came to the rescue and personally underwrote the cost of a building in Sunset Park. After several years the Chargers moved away and the City took over the building turning it into Sunset Gym. In 1999 the Challenge Center moved into Sunset Gym where it remains to this day.

Challenge Center is a facility that provides physical therapy, assisted, and independent fitness memberships with no enrollment fees and no contracts to sign. You simply pay as you go ($20 / month for independent membership). Challenge Center is well equipped with machine and free weights, an aquatics program (at the Joan Kroc Center), and personal training. Challenge Center also is the only facility in San Diego County that has CFES (computerized functional electrical stimulation) bicycles. CFES bikes use computer-controlled electrical current to stimulate muscular contractions in paralyzed extremities of individuals with spinal cord injury allowing them to pedal on their own.

Recently, Challenge Center started a low-impact exercise class on Wednesday mornings that incorporates strength, aerobic, and flexibility training in a fun and friendly setting. For a limited time, Challenge Center would like to invite you to try the group exercise class for free. Challenge Center is located at 5540 Lake Park Way off of Lake Murray Boulevard. If you need directions or would like to learn more about Challenge Center visit the website at www.challengecenter.org or call 619.667.8644.

SHARP Grossmont Hospital

Will hold a
FLU SHOT CLINIC

Monday, November 3, 2008
9:00 am - 11:00 am
La Mesa Community Center
4975 Memorial Drive 91941

For adults 62+ years of age
and those with a chronic illness

No appointments necessary

$2 Donation

For other flu shot sites call toll free
1.877.358.0202

FLU SEASON IS HERE!

Here are some easy tips to stay flu free. Wash your hands!! Stay away from sick people, and avoid hospitals and doctors offices. Stay home when you are sick. Avoid touching your mouth, nose, and eyes. Get plenty of sleep. Be physically active. Manage your stress. Drink plenty of fluids and eat nutritious food.

If you want some added protection you might want to get a flu shot. A flu shot is an inactivated vaccine (containing killed virus) that is given with a needle, usually in the arm. The flu shot is approved for use in people older than six months, including healthy people and people with chronic medical conditions. About two weeks after vaccination, antibodies that provide protection against influenza virus infection develop in the body.

Flu shot are recommended for:

- Children 6 months to 19 years old
- Pregnant women
- People 50+ years of age
- People with chronic medical conditions
- People who live in nursing homes or other long-term care facilities

People who need to see their doctor before getting a flu shot are:

- Those with a severe allergy to eggs
- Those who have had a reaction to the influenza vaccination before
- Those who get Guillain-Barré syndrome (GBS) within 6 weeks of a flu shot
- Those less than 6 months old
- Those who are sick at the time of vaccination

Source: The Centers for Disease Control and Prevention

Rides4Neighbors Partners Offer a Community Shopping Shuttle Service!

Older adults and area residents with disabilities now have another new option for meeting essential transportation needs! In mid-October the City of La Mesa's Rides4Neighbors program teamed with the La Mesa First United Methodist Church to offer a new weekly shuttle service to the Grossmont Center area.

Each Wednesday, the church's 9-passenger van will be put into operation to help seniors and disabled individuals who are dependent on public transportation with their shopping and medical trips. The van will pick up scheduled riders at their homes between 10:00 am and 11:00 am and return home about 1½ to 2 hours later. The shuttle will make stops at Grossmont Center destinations such as Target, Longs, and Wal-Mart; the nearby Ralph's; and SHARP Grossmont Hospital facilities and surrounding medical offices.

The service is available to residents of the 91941, 91942 and 92119 zip code areas. All riders must be pre-enrolled in the Rides4Neighbors program before a reservation can be made. Once approved for the service, riders must make their reservations at least one week in advance.

Shuttle service is donation-based, and riders may mail in the suggested donation at the end of each month to the Rides-4Neighbors office. Friends and relatives may purchase gift coupon booklets that seniors and other eligible riders may use to make a donation. Coupons booklets will be available at both the La Mesa Adult Enrichment Center, 8450 La Mesa Blvd., and the La Mesa First United Methodist Church, 4690 Palm Ave. Program donations will be used to expand and sustain specialized community transit services.

The group shopping and medical shuttle is made possible through grant funding from the Grossmont Healthcare District and San Diego Association of Government's federal New Freedom program.

For more information on program enrollment and shuttle scheduling, call the Rides4Neighbors Program at 619.464.0109 or go to www.cityoflamesa.com to download an enrollment form.

The La Mesa Fire Department Reminds Citizens to Practice Fireplace Safety This Winter

If you plan to use your wood burning fireplace this winter you will want to take these important precautions to make sure the fire stays in the fireplace where it belongs. Creosote buildup, a sooty residue in your chimney, can pose a real fire hazard. Chimneys need to be cleaned out frequently and should be inspected for obstructions and cracks to prevent deadly chimney and roof fires. Check to make sure the damper is open before starting any fire. Never burn trash, paper, or green wood in your fireplace. These materials cause heavy creosote buildup and are difficult to control. Use a screen heavy enough to stop rolling logs and big enough to cover the entire opening of the fireplace to catch flying sparks. Don't wear loose-fitting clothes near any open flame. Make sure the fire is completely out before leaving the house or going to bed. Store cooled ashes in a tightly sealed metal container outside the home.

Don't forget - having a working smoke alarm dramatically increases your chances of surviving a fire, and remember to practice a home escape plan frequently with your family.

Visit the City's website at www.cityoflamesa.com for more fire prevention tips or call the La Mesa Fire Department at 619.667.1355 for additional fire prevention information.

HAVE A SAFE HOLIDAY SEASON

While most people are spending their holidays enjoying friends and family, thieves are on the prowl for unsuspecting victims. The holidays are the prime season for robberies, home burglaries, and vehicle burglaries. Be careful not to get complacent with your daily activities during the holidays. By following a few simple rules, you can reduce your chances of becoming a victim.

When you are out shopping, be aware of those around you. Con artists often take advantage of people's generosity in order to scam them out of their hard-earned cash. Keep an eye on anyone hovering around you or following too closely. Be extra careful not to get distracted. Any distraction can give a thief an open opportunity to steal your belongings.

Avoid carrying large amounts of cash and don't wear expensive jewelry. Take one credit card with you and leave the rest at home. If possible don't carry a purse or backpack. Put your credit card, cell phone, and identification in your front pocket to reduce the likelihood that someone will pickpocket you in the large holiday crowds. Should you find that your credit card has been lost or stolen, cancel the credit card immediately.

If you must shop alone, try to go during daylight hours. Never leave packages in your car. If you must carry packages with you, lock them in your trunk, where they are out of sight. Park in a well-lit parking lot and ask a security guard to accompany you to your car if it is dark outside or the lot is deserted.

If children accompany you on your shopping trips, make sure they know your cell phone number by heart. Make sure your children know to go to a security guard or store employee if they get separated from you.

Check that all doors and windows are locked when you leave your home. Set the alarm if you have one and leave lights on if you plan to be out past dark. Make sure gifts and cash are not visible from any windows. If you will be gone for an extended period of time, have your neighbors watch your home for you. If they bring in your mail and newspapers everyday, it will not appear as if the house is empty. Put timers on both indoor and outdoor lights to make the house appear occupied.

You will find more valuable information on the City website at www.cityoflamesa.com, including a video that explains home security, vehicle security, and personal safety. For more information about preventing crime during the holidays and year round, call the La Mesa Police Department Crime Prevention Unit at 619.667.1445.

CITY OF LA MESA HOSTS CASTING CALL FOR VOLUNTEER DRIVERS

Become a part of La Mesa's community production, now in its first year's run…"Rides4Neighbors"

Rides4Neighbors

Rides4Neighbors is a volunteer-based transportation assistance program for La Mesa's older adult residents and adult residents with disabilities who are unable to use regular public transit. Rides are provided by screened, trained volunteers, who use their own vehicles to assist transit dependent La Mesa neighbors in need of a lift.

Volunteer drivers are reimbursed for mileage and receive secondary liability insurance. As a volunteer, you decide your availability and choose the rides you wish to provide. There is no minimum time commitment or number of rides required to be a volunteer. We can either call you when a ride is needed, or notify you via an e-mail blast.

As a volunteer, you will be part of a rewarding and meaningful civic program. Community surveys consistently find that what residents like best about La Mesa is the neighborly, small town feel. Rides-4Neighbors will help build that spirit of community and old-fashioned neighborliness. So join us by opening your heart and car door to a rider in need of a lift!

For more information, call the Adult Enrichment Center at 619.464.0109, or go to www.cityoflamesa.com to download a volunteer driver application form.

Police Station... *Continued from page 1*

will be 8085 University Avenue. It will be located on the property where the old La Mesa Branch Library and the old Helix Water District building were located. Please excuse our dust!

Demolition of the old structures is underway and construction on the new facility will begin soon.

In 2004, La Mesa residents overwhelmingly passed Proposition D, a public safety bond measure in the amount of $25 million to build Fire Station 11, remodel Fire Station 13, and build a new police station.

The current police facility, located at 8181 Allison Avenue, was built in 1966 and is approximately 15,000 square feet. At the time the building was constructed the Police Department had about 40 employees. The La Mesa Police Department currently has 68 sworn officers and 29 non sworn employees. Needless to say the department has outgrown the old facility.

The old Helix Water District building is readied for demolition to make room for a new police station

While waiting for the new library and post office building to be completed, the Police Department and other City staff have been working with Leach Mounce Architects over the past two years to develop plans for the new station. In August 2008 Edge Development from Temecula, California was awarded the bid for construction on the project in the amount of $14,727,000. This bid was within the budget of the Proposition D funds allocated for the police station.

The new police station is a two-story building with secured underground parking. The underground parking will hold the entire fleet of City-owned police vehicles and provides space for employee parking as well. The building will be approximately 40,000 square feet in size and the underground parking structure approximately 45,000 square feet.

The City held an official ground breaking ceremony on Tuesday, October 14, 2008 at 2:00 pm. The new state-of-the-art police station is scheduled to be completed in spring 2010. The Police Department will provide quarterly update reports on the new police facility at City Council Meetings.

POOL CLOSED FOR MAINTENANCE

The La Mesa Municipal Pool will be closed for winter maintenance from November 24, through February 2, 2009. Watch the City's website next year for information on spring aquatic classes and programs.

Farmers Market... Continued from page 1

Back then few people involved in the market's creation could have imagined it would endure so long, especially Mark and Suzanne Bendixen. The Bendixens were the on-site market managers that first day and remain so today. They've done an outstanding job for 15 years and they deserve much of the credit for the market's longevity and bright future. Thanks to the Bendixens, not only has the market endured, it has thrived, emerging as one of the longest-running farmers markets operating in San Diego County and the only such market operating in East County.

On-site manager Mark Bendixen reviews a stand before the market opens.

Today the market operates much the same as it did on that first day. Boundaries are blocked off by volunteers or Public Works staff in the early morning. Around mid-day, farmers and food vendors arrive to start setting up their tents and stands and the marketplace begins to take shape. Fresh flowers are put out on display, colorful fruits and vegetables are carefully arranged and stacked, herbs, breads, unique specialty foods, and imports are set out. Kettle corn is popped and succulent plants sunbathe.

Early-bird customers survey the grounds previewing the wares before the market opens. Vendors chat across the aisle and answer questions from patrons, cutting samples for tasting. Young student musicians from a local music store nervously tune their guitars before entertaining the patrons. The motion is constant. The crowd builds and the sense of anticipation mingles with the fragrance of freshness. At 3:00 pm sharp, Mark Bendixen strikes a metal triangle like a trail boss calling the hands in for supper, officially signaling the start of the market. The pent up anticipation is released in a flurry of buying and selling. The fun begins and time takes flight.

These happy customers think the Farmers Market is just "peachy."

So, what has been the key to the La Mesa Village Farmers Market's success, you ask? "The City has always focused on maintaining the character, scale, and charm that people have come to appreciate from this market and that has kept the market strong," says Chris Gonzales the Community Development Program Coordinator who recently took over from long-time City employee Elke Ertle. Ertle was involved in setting up the market originally and had managed the business affairs of the market for the City until her retirement in 2006. "Shoppers tell us that the items they buy here are fresher, sweeter, and taste better than what they can buy in a store and they have more fun shopping here. They appreciate the quality, variety, and availability we provide week-in and week-out, rain or shine."

John Brothers of Baba Foods Hummus makes another sale.

If you're a regular visitor to the La Mesa Village Farmers Market, the City thanks you for your support. Next time bring a friend or neighbor and make a day of it by visiting the many shops and dining establishments in the La Mesa Village. If you've never been to the market you can find directions and a list of products in season on the City's website at www.cityoflamesa.com. Come on out and join the fun!

WALK LA MESA

Just for the Fun of It!

The La Mesa Wellness Task Force wants you to know that there are organized walks nearby every day of the week. Check the City's website at www.cityoflamesa.com, search *health & wellness,* and click on Walk La Mesa under Quick Links for a list of options or pick up a flyer at La Mesa City Hall or the La Mesa Community Center.

Call 619.667.1300 for more information

La Mesa – it's made for walking!

COUNCIL ACTIONS

July 8, 2008
Adopted a resolution approving the City to apply for a federal Safe Routes to School Grant in support of the Community Wellness Initiative.

Adopted a resolution authorizing the City to negotiate and execute a Financial Assistance Agreement with the State Water Resources Control Board.

Approved a Joint Use and Operation Agreement for District and City facilities between the City of La Mesa and the La Mesa-Spring Valley School District.

Appointed members to fill vacancies on various City boards, commissions and committees.

July 22, 2008
Adopted a resolution approving a purchase order for household hazardous waste services provided by Clean Harbors Environmental Services

Closed the 2008 Weed Abatement Program.

July 29, 2008
Adopted a resolution ordering the submission to the qualified electors of the City a measure relating to the establishment of a local transactions and use tax (sales tax) at the General election to be held on Tuesday, November 4, 2008 as called by resolution.

August 12, 2008
Ratified DRB-08-09 (Land & Design, Inc.) – a proposal for a remodel to an existing commercial building at 4330 Palm Avenue.

Adopted a resolution accepting Bid 08-06 and awarding the contract for the Jackson Drive Rehabilitation Project to Marathon General, Inc.

Adopted a resolution awarding a contract for Bid 07-14, Lowell Street Storm Drain Replacement Project to Rentex Construction Incorporated.

Adopted a resolution authorizing the acceptance of a grant from the California Office of Traffic Safety to conduct a local DUI Enforcement and Awareness Program and approved the addition of the grant funds to the FY 2008-2009 Budget.

September 9, 2008
Ratified the Design Review Board's approval of DRB-07-33 (Comerica Bank) – a proposed 3,300 square foot bank at 5450 Jackson Drive.

Adopted a resolution awarding a professional services contract for construction management services for the La Mesa Police facility to Vanir Construction Management, Inc.

Adopted a resolution authorizing the acceptance and expenditure of the 2007 Law Enforcement Terrorism Prevention Program grant funds.

Adopted a resolution authorizing acceptance of a grant from the McCormick Foundation for wildland firefighting equipment.

Adopted a resolution approving a Memorandum of Agreement between the County of San Diego and the City of La Mesa for the use of the Community Emergency Notification System.

Adopted a resolution authorizing the execution of an agreement for Mass Casualty/ Mass Decontamination Cache Program between the City of La Mesa and San Diego County Emergency Services Organization for temporary transfer of mass casualty apparatus.

Adopted an ordinance, subject to voter approval, adding Chapter 5.28 to the Municipal Code establishing a transactions and use tax to be administered by the State Board of Equalization.

Approved the plans and conditions for the 2008 Oktoberfest and authorized the temporary closure of portions of City streets for the event.

Approved transportation shuttle assistance for elderly and disabled attendees at City-organized events.

Adopted a resolution acknowledging elder abuse as a community concern and the adoption of prevention strategies

September 23, 2008
Adopted a resolution executing fourth option to renew Bid 04-05 and award contract for structural firefighting clothing to L. N. Curtis & Sons.

Adopted a resolution authorizing the Chief of Police to enter into an agreement for the "East County Regional Gang Task Force/ Safe Streets Task Force" Memorandum of Understanding.

Adopted a resolution approving reversion to acreage of Parcel Map No 20274, a one lot subdivision of property for 76 residential units at the "Villages of La Mesa," a proposed residential care facility by Briercrest Development LP at 9000 Murray Drive.

A Newsletter for the Citizens of La Mesa • February 2009

2009 TOWN HALL MEETINGS

As part of La Mesa's commitment to staying in touch with the community, the City Council has scheduled two Town Hall Meetings for 2009. These open forum meetings provide an opportunity for citizens to provide input on issues in their neighborhood and throughout the City. The two meetings are held in different parts of the City to give all residents a chance to participate. The City Council encourages all who are interested in the present and future of La Mesa to attend and provide their ideas, comments, and opinions. Information gathered from these meetings will be used by staff and the Council to recommend and set priorities for the City's next budget.

The next Town Hall Meetings are:

Tuesday - February 3, 2009 from 6:30 to 8:30 pm
Northmont Elementary School
9405 Gregory Street

Thursday - February 5, 2009 from 6:30 to 8:30 pm
Rolando Elementary School
6925 Tower Street

City Council Budget Workshops

In keeping with the Council's commitment to keep an open and transparent budget process, the Council will be holding their annual Strategic Planning Workshop this spring in preparation for adoption of a new Budget. This process includes community input through Town Hall Meetings to be held in February and a special budget workshop held January 20, 2009 to address short-term budget actions due to the significant fiscal impacts from regional and national economic downward trends.

The Council welcomes community input throughout this process. This is important to meet community expectations and to allow an open view of how the City's expected revenues can be most effectively allocated among all the competing interests. Key challenges in the process this year will be trying to accurately model expected fiscal conditions for the next two year budget. The Council will use this Workshop to set policies and provide staff direction for projects and programs needed to maintain vital City services as effectively and efficiently as possible. From this Workshop, the Council's budget policies and "Targets for Action" will be developed that become the basis for preparation of the next City Budget for fiscal years 2009 to 2011.

The Strategic Planning Workshop will be held:

Tuesday, March 17, 2009 from 8:00 am to 4:00 pm
Fire Administration Building
8054 Allison Avenue

CATCHING THE VILLAGE WAVE

Public projects spur a wave of private investment in La Mesa's Downtown Village

La Mesa's charming, historic Downtown Village is experiencing a wave of public and private investment that is revitalizing the area and diversifying the mix of tenants. Once dominated by antique shops and second-hand retailers, the Village of La Mesa is now home to a wider range of eateries, professional firms, and personal services. A number of wonderful antique shops remain in the Village, but in recent years they have been joined by new restaurants, professional firms in finance, insurance, real estate, legal, engineering, medical/dental offices, and health and beauty salons.

It is difficult to say with certainty what triggered this new investment in the heart of La Mesa, but some business owners point to the City's projects at Civic Center as being one catalyst. In 2007 and 2008, respectively, the City completed work on the construction of a new fire station and a state-of-the-art County library. Both civic projects have made a positive contribution to the image of the City and the Downtown Village. The City is currently constructing a new Police Department headquarters on the Civic Center site, with completion expected in 2010. These projects and the continued attractive value of the Village seem to have caught the attention of a diverse mix of users. Examples of Village businesses that have recently invested in their facilities include Johnny B's Burgers and Brew, Centifonti's Bar & Restaurant, State Farm Insurance, LPL Financial, Stowe Biotherapy, McRea & Associates/Assist2Sell, Hoffer's Cigar Bar, Tres Fabu Design Studios, and Advanced Painting Specialists. Pete's Place bar and lounge, a long-time tenant in the Village, recently also completed a complete interior remodel, which is profiled later in this article.

Continued on page 4

ECONOMIC DEVELOPMENT SUCCESS
The Fletcher Parkway Corridor

Redevelopment projects have transformed the Fletcher Parkway corridor during the last two decades. One of the first major projects was The Villages at Amaya, a housing development near Fletcher Parkway and Amaya Drive that was completed in early1988. That development also incorporated the Amaya Trolley Station. Fletcher Parkway itself was expanded and beautifully landscaped in the early 1990s in coordination with other Redevelopment projects along this significant commercial corridor.

Following these projects were two major retail redevelopment projects. First was transformation of older industrial buildings from the AAA building west to Jackson Drive, including the Grossmont Trolley Center project with nationally recognized retail businesses and a multi-screen theater complex.

Next was the Gateway Center retail project completed in late 1998. This project runs from Jackson Drive west to Baltimore Drive and includes major retailers BabiesRUs, Ethan Allen, and Costco, as well as four new restaurant facilities.

Sometimes Redevelopment projects must also reinvent themselves to keep up with rapidly changing commercial trends. The theater complex fronting Trolley Court, originally redeveloped in the early 1990s, became a new redevelopment project during 2008 due to the closure of the movie theaters that lacked the now popular "stadium seating." The east end of the Grossmont Trolley Center, in the former theater building, now has new eateries including: Sammy's Woodfired Pizza, Quiznos, and Banbu; other new commercial venues, and a new parking area. At the west end of the Gateway Center, near Jackson Drive, a Best Buy opened last fall in a space that was vacant for over a year.

The latest Redevelopment project in the Fletcher Parkway Corridor is at the Grossmont MTS Trolley Station. Fairfield Residential in partnership with the City and the San Diego Metropolitan Transit System (MTS) is constructing the Pravada and Alterra apartments along with a small amount of commercial space. This "smart growth" project will be recognized by Leadership in Energy and Environmental Design (LEED) certification with its many sustainable environmental features that include photovoltaic solar panels. There will be 527 new housing units, with 80 designated to be more affordable units for qualifying incomes. The project also replaced existing public transit parking on the ground level of the parking structure, and provides secure parking for the project residences on the second level. Public improvements to the transit platform will be completed by the San Diego Association of Governments (SANDAG) as part of the project. These long overdue public improvements will include upgrading the Alvarado Creek channel behind the AAA building to alleviate problem flooding of the trolley tracks. More important, the public improvements being constructed by SANDAG will include two elevators and a bridge structure that will greatly improve transit passenger access to facilities at the Grossmont Hospital campus and Grossmont Center.

These important economic development efforts along the Fletcher Parkway corridor have greatly added to the employment, service, business, and residential mix in La Mesa through very successful long-term public/private partnerships that help to maintain vital services in the community. The goal of the Redevelopment areas has been to remove blight and eliminate flooding problems along Alvarado Channel through actively developing under-utilized properties and creating financially sound public and private partnerships. This has been achieved as promised to the community. La Mesa has benefited from these improvements to the Fletcher Parkway corridor both physically and fiscally. Economic development through redevelopment has made an impressive difference in this area over the last 20 years and will continue to make a positive impact to the community in the future.

WHAT IS SENIOR TAXI SCRIP?

- SENIOR TAXI SCRIP helps provide affordable and reliable transportation to older adults and persons with disabilities who are residents of East County communities within the Grossmont Healthcare District.
- Through the SENIOR TAXI SCRIP program, eligible older adults and persons with disabilities purchase discounted Yellow Cab scrip booklets for $10 each (actual value is $20) at the La Mesa Adult Enrichment Center.
- The City of La Mesa provides eligibility screening for SENIOR TAXI SCRIP riders and reserves the right to limit scrip sales based on availability.
- Scrip coupons are used like cash to pay for Yellow Cab fares and tips for travel needs such as medical appointments, grocery and other essential travel.
- Ride destinations are not limited to East County communities, but are contingent on scheduling in advance with Yellow Cab and service availability.

What are the rules of the SENIOR TAXI SCRIP program?

- You must be a resident of a community within the Grossmont Healthcare District.
- You must be age 65 or older, or have a disability that prevents you from driving or using existing public-transit services to meet your health-related transportation needs.

- Scrip is non-transferable, non-negotiable and non-replaceable.
- Scrip can only be used to pay for your taxicab rides. If you need assistance, a caregiver, relative or other support person may accompany you.
- Scrip can only be used with the Yellow Cab Company. Inform the dispatcher you will be paying with scrip purchased through the City of La Mesa when scheduling your ride. Although scrip can be used at any time or day, scrip riders are encouraged to use "off hours" Mon – Thu 10:00 am to 2:00 pm whenever possible.
- Scrip participants must meet eligibility requirements and complete an application and service agreement prior to purchasing scrip booklets. Physician's certificate may be required.
- Once approved, you can purchase SENIOR TAXI SCRIP for $10 a 50% discount. Up to five booklets of scrip can be purchased each month.

Applications for ***SENIOR TAXI SCRIP*** should be downloaded from the city website. Applications can also be obtained at the La Mesa Adult Enrichment Center, 8450 La Mesa Blvd., La Mesa, CA 91941, or call 619.464.0505.

"Love Letters" A. R. Gurney's

The La Mesa ARTS Alliance (LMAA) presents its first theatrical production, featuring La Mesa residents in A.R. Gurney's popular "Love Letters", Thursday, February 12 at the La Mesa Community Center. The evening begins with no host refreshments at 6:00 pm. A "meet the actors" reception follows the play. Tickets are available on an open seating basis and can be purchased at the La Mesa Community Center for $10 each. Call 619.667.1300 for more information.

The LMAA is a volunteer association whose goal is to foster arts in our community by: expanding the arts into youth education; increasing public/individual involvement; supporting cultural activities that enhance understanding of and respect for art; integrating art into daily life through public art; and creating support for artists and non-profit art groups.

The LMAA continues to follow this ideal through collaborative activities, support of the City of La Mesa and the La Mesa Park and Recreation Foundation, and a calendar of events throughout the year. The LMAA also hosts *Sundays At Six* summer concerts at Harry Griffen Park, created the La Mesa Walking Art Trail utility box project, and jointly participates in *Kids Care Fest* and *Spring HarpFest*.

CATCHING THE VILLAGE WAVE...*continued from page 1*

Adding to this trend of economic development in La Mesa's Village is the arrival of several major new businesses that have located downtown, making substantial physical and financial investments in their properties. Below are profiles of four projects that opened in the Village in 2008, representing at least $8 million of private investment in the Village.

Millicent & Company Salon

Millicent Hultenius, owner of Millicent & Company Salon, is proud of her new salon in the Village. As a salon owner and operator for over 20 years, she understands the business of looking good and taking pride in appearance and her new shop exemplifies the principle. In the fall of 2008, Millicent & Company Salon, a full-service beauty salon, opened for business at the southeast corner of Lemon Avenue and Palm Avenue, occupying an underutilized former bank building that she purchased, gutted, and completely remodeled, inside and out.

Just a year earlier, she couldn't have imagined having a brand new shop in the Village. At the time, she was operating two thriving salons elsewhere, one in El Cajon and another on Baltimore Drive in La Mesa. Then, in early 2008, the El Cajon shop was destroyed by fire. Unable to finance a re-build of the burned-out shop, all the employees and customers from the El Cajon salon crowded into the remaining La Mesa location at a time when Hultenius and the property owner were at an impasse in negotiations on the terms of a shop expansion. In the midst of this business turmoil, Hultenius' mother, also named Millicent, passed away, leaving behind an inheritance and an inspiration to persevere. Hultenius forged ahead and found the resources to start over and consolidate both salons into a single new location in La Mesa Village. Hultenius estimates the total cost of acquisition and renovation at approximately $2 million. Serving roughly 1,000 customers per month and employing 50 stylists and technicians, the salon brings customers and employees into the Village. "It's been an incredibly difficult year, but we're overjoyed to be here in the Village in this great new space. Our customers like being able to meet for lunch or shop before or after their appointments and we want to be a positive neighbor in the Village and help other businesses do well," says Hultenius.

Millicent & Company Salon's new location (on cover) and the interior is a thing of beauty.

GIO's Wine Bar & Restaurant

GIO's quality has raised the bar in the Village, along with an elegant outdoor dining area.

Entrepreneur and new restaurateur Gabe Giordano grew up in La Mesa. As a child and young adult, he once played in the Village and dined in the Village Garden restaurant that used to operate in the space that is now GIO Wine Bar & Restaurant. "I always wanted to own a restaurant and, more specifically, I always wanted own one in this particular location," says Giordano. After achieving financial success in a series of endeavors, Giordano had not only the financial resources to make his dream come true, but also the confidence that the Village was changing and could support a new restaurant concept. He sensed a pent-up demand for high-quality, sit-down dining in La Mesa and believed such a restaurant would appeal to a broad cross-section of patrons. Giordano was so confident that an upscale restaurant and wine bar could succeed in the Village that he invested nearly $2 million in design and interior and exterior improvements.

Giordano's vision produced a stylish, yet elegant, dining venue with diverse and affordably-priced cuisine that was an instant hit with patrons. So far, Giordano's vision and confidence have been well-rewarded. According to Bill Bender, Giordano's restaurant operations consultant, since opening GIO in August 2008, the response has been overwhelmingly positive and the restaurant's gross sales are well in excess of projected levels. That type of sales activity translates into greater foot traffic in the Village, greater exposure for existing businesses, and spin-off sales from both customers and the 56 employees working at GIO.

Randall Lamb Engineering

Formerly located in downtown San Diego in the One America Plaza high-rise office building, Randall Lamb Engineering, a well-established electrical engineering firm with 45 employees, relocated to the Village in 2008. Randall Lamb's lease in One America Plaza was up and the firm was facing a hefty increase to remain in its offices. Though the firm enjoyed the prestige of its downtown address and the vitality of downtown San Diego, the firm's leadership realized that La Mesa offered excellent transportation infrastructure and good regional centrality. "Locating in the Village allowed us to be closer to some major clients yet still very accessible to other clients and prospects. We were worried that some employees would not move with us to La Mesa, but the close trolley access and carpooling helped resolve any initial transportation concerns," recalls Olga Fisher, Associate Principal with Randall Lamb.

Most important, the Village provided Randall Lamb an opportunity to become a property owner instead of a lessee. Kurt Kohler of Randall Lamb, a long-time La Mesa resident, spotted the vacant La Mesa Appliance and Grossmont Escrow storefronts on Palm Avenue while driving through the Village in early 2007 and immediately envisioned their potential as a headquarters for Randall Lamb. By September 2007, the firm had closed escrow on both buildings and started an ambitious project to join the two structures into a single building while preserving the historically significant features of each. The adaptive re-use project culminated in a state-of-the-art office space, incorporating the latest in "green" technology and utilization of recycled materials. The total cost of the project is estimated above $4 million.

Randall Lamb's dazzling new interior, and above right is Randall Lamb's new Village facility.

Pete's Place

In with the new – Pete's is ready for another 40 years in the Village.

Pete's Place has been in the Village since the mid 1940s. Originally located at the corner of Spring Street & Allison Avenue on what is now the AT&T building site, Pete's has been owned by the Favero family for over 40 years. During that time, the family-owned bar & cocktail lounge developed a loyal customer base and become a Village landmark. John & Michelle Huey, co-owners of the bar along with Michelle's brother, Scott Favero, felt that after 41 years the building, which they rent, was due for some upgrades. They also acknowledged that the Village was improving, citing the introduction of a broader range of tenants, the Civic Center projects, and the arrival of GIO Wine Bar & Restaurant as examples. They wanted to be a positive part of the change and saw an opportunity to give their customers a new experience and also appeal to a new customer base starting to discover the Village.

Initially, the project started as an effort to bring the building up to standards called for under the Americans with Disabilities Act (ADA) and to repair some plumbing and electrical issues. However, they soon realized that in order to correct those problems they'd have to practically gut the facility. They decided to change direction and proceed with a full renovation of the interior of the building, replacing floors, installing ADA compliant restrooms, restoring the original brick walls, installing a new bar, new lighting, and new electrical and plumbing systems. The transformation is startling, converting a dark, cramped lounge into an airy, rustic tavern with modern amenities. Michelle Huey estimates the cost of the project at approximately $200,000 and feels the investment was well worth it based on the expected return and on the overwhelmingly positive reaction from customers, both old and new.

In addition to the four examples profiled above, three new storefronts have opened on La Mesa Boulevard, west of Spring Street. These include Unleashed Fitness, a boxing and fitness gym, Edible Arrangements, makers of fruit baskets and edible gift bouquets, and Readers, Inc., a children and youth bookstore. Each of these new investments in the Downtown Village highlight the viability of the Downtown Village as a commercial district and hint at its continued future success. The City of La Mesa is also planning to invest additional resources into the Downtown Village in the coming years. The City is currently retaining a team of consultants to prepare design and engineering plans for the renovation and upgrade of public infrastructure and streetscape improvements in the Downtown area (e.g., sidewalks, lighting, landscaping, street furniture, and other amenities). The design work is funded with revenues from the Downtown Parking Fund and is the critical first step toward a long-overdue renovation of the public realm in the Village. Construction of the streetscape improvements is planned to be phased over several years with capital projects funded from a variety of sources. The first phase, which is already designed, is expected to start construction in 2009 with the improvement on Allison Avenue. It is hoped that this public investment will help to provide the impetus for even more private investments and prosperity in the Downtown Village. The La Mesa City Council is committed to the public and private partnership that is key to achieving long-term vitality and success in the Village.

CATCHING THE VILLAGE WAVE…continued from page 4

La Mesa Residents Vote to Maintain Vital City Services

La Mesa voters came to the polls on November 4 and approved Proposition L – The La Mesa Vital City Services Measure. The Measure authorized a ¾ cent transactions and use tax (commonly referred to as a sales tax) that will go into effect on April 1, 2009. The proceeds from this new tax will allow the City to continue providing the level of service that La Mesans enjoy today. The tax will be effective on April 1 and the first payment to the City will come from the State Board of Equalization (SBOE) in June. Once the tax is enacted, the sales tax rate in La Mesa will go from 7.75% to 8.50%, or an additional ¾ cent on each dollar.

There are several differences in how these local sales taxes are applied. The major difference is for vehicle sales (cars, boats, RVs, etc.). The new tax will only be collected on vehicles sold to La Mesa residents (even if the transaction takes place outside of the City) as opposed to the base sales tax which is applied to all vehicle sales that take place in La Mesa (even if the vehicle is purchased by a non-resident). For example, if you are buying a new vehicle in La Mesa and indicate that you will register the vehicle within the city limits, the dealership will apply the additional tax to the transaction.

If you are buying the new vehicle in San Diego or any other city outside of La Mesa, the additional tax will still apply if your vehicle will be registered in incorporated La Mesa. However, someone from another city who will register the vehicle purchase to an address outside of incorporated La Mesa, even if they have a La Mesa zip code, will not pay the higher tax. This State law protects dealerships from lost sales. For most other transactions, the tax is applied just like the regular sales tax (for example, the Proposition L tax does not apply to prescription drugs or food sold for home preparation). The difference is that the full amount collected from the new ¾ cent tax will stay here in La Mesa providing the funding necessary for the services that make La Mesa a great place to live, work, and visit.

The City is posting information about Proposition L on the website. View a copy of the enabling legislation, including the guiding principles approved by the City Council in placing this measure before the community for consideration.

AVOID THE BITE

In early November, a reporter at the White House got more than an interview from then "First Dog" Barney—he got a bite. With statistics showing that about 4.7 million people in the U.S. are bitten by dogs every year, and 80 percent of those bites from familiar dogs, it's a safe assumption that any dog can bite, even if that dog belongs to the President.

Children are three times more likely to sustain a serious dog bite than an adult. They are often excited to see a dog and may run towards the animal talking loudly and using quick movements. They may even try to hug the animal. Any of these actions can easily result in a bite.

The good news is most dog bites to both adults and children are preventable. By following some basic guidelines and educating your children, you can approach dogs the right way. Remember, even the friendliest dog can be uncomfortable meeting new people.

Simple Rules for Approaching a Dog: Before petting someone else's dog always ask the owner for permission. After getting permission, approach slowly and calmly. Let the dog sniff the back of your hand first. Slowly pet the dog from the side, not from above the dog. Pet the dog's sides or back gently, and avoid the dog's face and mouth.

When to NOT Approach a Dog: Never sneak up on or pet a dog that is eating or sleeping. Animals may bite when they are startled or frightened. Avoid petting a dog that is playing with a toy. Some dogs are protective of toys and may think you or your child are trying to take it away. Never pet a dog in a car or one that is behind a fence. Most dogs naturally protect their property and space.

Although most people, children in particular, will often interact with their family's and neighbors' dogs, they need to know what to do should they encounter an unknown dog, especially if that dog is off-leash and without a caregiver. If you see a dog running loose in La Mesa it is best to contact La Mesa Animal Control who can get the dog to safety and search for the owner through licensing or a microchip scan. If a strange dog approaches you, stand still like a tree with your hands at your sides. Never try to run away from a dog, their natural instinct is to chase you. It is best to back away slowly from a dog until you are in a safe spot.

For more animal information or if you find a stray dog contact La Mesa Animal Control at 619.667.1436.

POLICE DEPARTMENT ANNOUNCES PROMOTIONS

Chief Alan Lanning announced the promotions of Sergeant Matt Nicholass to Lieutenant and Officer Angela DeSarro to Sergeant, both effective December 19, 2008.

Lieutenant Nicholass joined the Police Department in 1998. He previously worked for the Oceanside Police Department as a reserve officer. Following his initial assignment as a patrol officer, he was selected for a special assignment as a traffic accident investigator in the Police Department's Traffic Unit in 2000. Later that year he was selected for assignment as a motor officer and worked as one of the Police Department's three motorcycle officers. In 2004 he was appointed as a master officer, responsible for the training of new police officers and supervising patrol officers from time to time. He was promoted to sergeant in 2007 and assigned to the Patrol Division where he supervised a squad of patrol officers.

In addition to his regular duties, over the years Lieutenant Nicholass has served as one of the Police Department's driving instructors and is a member of the Special Response Team. He is a past recipient of the California Highway Patrol "10851 Pin" for excellence in the identification and recovery of stolen vehicles. He has twice been selected as the Police Department's Employee of the Quarter. He has consistently been recognized by his supervisors as a dedicated professional with excellent skills and knowledge, and for his work in training and mentoring personnel.

Sgt. DeSarro joined the Police Department in 2001 and worked as a patrol officer until 2005, when she was selected for a special assignment as a detective, assigned to the Investigations Unit. In 2008 she was chosen for another special assignment, as a member of the Police Department's Special Enforcement Detail.

Sergeant DeSarro has excelled throughout her career and has been honored a number of times for her outstanding work. In 2003 she was recognized by the La Mesa Sunrise Rotary as its Officer of the Year. She was similarly honored by the Scottish Rite of Mission Valley in 2005 and also received the San Diego Crime Stoppers "Enough Is Enough" award that year. She is a past recipient of the Police Department's Employee of the Quarter award and currently serves as a member of the Peer Support Team.

These items are considered hazardous and are not allowed to be placed in the trash because of their destructive effect on the environment. If you reside within the City limits of La Mesa, you are eligible to participate in the City's free HHW drop-off program.

Collection events are available by appointment only by calling EDCO at 619.287.5696 x4270. Upcoming dates are:

March 14 May 2 June 6 July 18 August 29 October 10 November 21

Make your own non-toxic cleaning supplies cheap and easy! For a limited time, request free green cleaning recipe decals when you arrive at the event and we'll throw in a free spray bottle.

Medical sharps (needles) can also be disposed of through this program. They must be properly secured in a sharps container. See our announcement for easier disposal. Call 619.667.1338 or visit www.cityoflamesa.com/hhw for more info.

E-waste can now be recycled at the EDCO Station buyback center during business hours without an appointment. The center is open Monday through Saturday from 8:00 am to 4:00 pm. A small fee may apply to some items.

Call EDCO at 619.287.5696 x4270 or email at lmhhw@edcodisposal.com, to schedule an appointment for HHW drop-off. To request additional information about the program, please contact the Department of Public Works Environmental Services Division at 619.667.1338 or by email at envirosvcs@ci.la-mesa.ca.us. For general HHW information or other disposal and recycling options, visit www.cityoflamesa.com/hhw.

MEDICAL SHARPS DISPOSAL IS NOW EASIER

The City of La Mesa is now offering free sharps disposal through our household hazardous waste (HHW) program without an appointment. Sharps are defined as, "any device having acute rigid corners, edges, or protuberances capable of cutting or piercing, including, but not limited to, all of the following:

- Hypodermic needles, hypodermic needles with syringes, blades, needles with attached tubing, syringes contaminated with biohazardous waste, acupuncture needles, and root canal files.
- Broken glass items, such as Pasteur pipettes and blood vials contaminated with biohazardous waste.
- Any item capable of cutting or piercing that is contaminated with trauma scene waste."

Sharps must be properly secured in a sharps container. See our HHW announcement for upcoming drop-off event dates. For more info, call the Department of Public Works Environmental Services Division at 619.667.1338 or email us at envirosvcs@ci.la-mesa.ca.us.

Here are other possible options for legally and safely disposing of sharps:

Pharmacies and Hospitals – Contact the pharmacy or hospital where you obtained your sharps to see if they have a "take-back" program or can assist you with safe disposal.

Mail-Back Services – Sharps can be sent to businesses that provide proper disposal using safe, postal-approved packaging. You can find these services through the California Integrated Waste Management Board website at www.ciwmb.ca.gov/HHW/sharps.

An appointment is required for disposal of other types of HHW such as batteries, fluorescent bulbs, household chemicals, and electronics. Call EDCO at 619.287.5696 x4270 or email at lmhhw@edcodisposal.com to schedule an appointment for the next event.

LA MESA RECEIVES GRANT TO ENHANCE MULTIFAMILY RECYCLING OPPORTUNITIES

The City of La Mesa was recently awarded a grant for $113,000 from the California Department of Conservation, Division of Recycling to improve recycling opportunities for apartment and condominium complexes. Under the grant, eligible properties may receive indoor/outdoor recycling receptacles for use in common areas, can crushers, and smaller below-the-counter containers for indoor use. The goal of the grant is to increase recycling opportunities for items with a California Redemption Value (CRV) such as beverage containers. Notices of the program inviting participation will be mailed directly to property owners and managers.

Look for your eligibility notice and the program flyer in the mail in the coming months. For more information about the program or to be placed on the multifamily participation list, please contact the Department of Public Works Environmental Services Division at 619.667.1338 or by email at envirosvcs@ci.la-mesa.ca.us.

The California Department of Conservation, Division of Recycling also provides recycling information and assistance for residents, businesses and organizations. They can be reached at 1.800.RECYCLE or online at www.conservation.ca.gov.

ANNOUNCING SPRING CLEANUP 2009!

Your opportunity is here to simplify your life! The City of La Mesa and EDCO Disposal Corporation will be holding the annual Spring Clean-Up event on two Saturdays in April. And it's all free for La Mesa residents!

The event will be held between 7:00 am and 2:00 pm at EDCO Station, 8184 Commercial Street.

If you live SOUTH of Interstate 8, your clean-up day is April 11

If you live NORTH of Interstate 8, your clean-up day is April 18

WHAT YOU CAN BRING:

- *Reusable Items*
- *Unwanted Furniture*
- *Large Appliances*
- *Landscape Material*
- *Waste Debris from Improvement Projects*
- *Trash and Yard Waste*
- *Just plain junk*

This annual event is for residents who live within the incorporated City limits ONLY. You MUST bring a California Identification Card or Driver's License listing your La Mesa address. DO NOT bring items from a household outside of the City of La Mesa.

There are some restrictions on the items than can be accepted. This is NOT a Household Hazardous Waste (HHW) Collection Event. We will NOT accept batteries, fluorescent lights, televisions, computer monitors, home electronics, tires, or items labeled poison, flammable, corrosive, or explosive. To dispose of HHW, please call 619.287.5696 x4270. To get more info see the HHW flyer in this issue of the FOCUS or visit www.cityoflamesa.com/hhw.

We also will not accept waste from businesses, contractors or professional landscapers.

Free mulch will be available on a self-loading, first-come, first-serve basis.

PHASE IV OF $14.5 MILLION SEWER
Upgrade Project Continues

The following streets and easements will be affected as part of Phase 4:

El Capitan Dr.

Culowee St.

Sheldon Dr.

Beverly Dr.

Westview Dr.

University Pl.

Summit Dr.

Madison Ave.

Larsen Wy.

Pasadena Ave. between Date Ave. and Vista Dr.

Fairview Ave. between Normal Ave. and Pasadena Ave.

Lemon Ave. between Date Ave. and Acacia Ave.

Garfield St. between Madison Ave. and Jefferson Ave.

Alley between Madison Ave. and Jefferson Ave.

Easement between Summit Dr. and Valle Dr.

Easement between Valle Dr. and Vista Dr.

Easement between Summit Dr. and Sheldon Dr.

The accompanying diagram shows the locations of the proposed work. Residents in each neighborhood affected by the work will be notified of the start dates 48 hours prior to the start of construction.

In 2006 the City of La Mesa secured a $14.5 million low-interest loan from the State Water Resources Control Board. These funds are being used to rehabilitate and upgrade the City's aging sewer system in older and hillside sections of La Mesa.

The project was divided into four phases. Phase 3 construction is currently underway and is scheduled for completion in March 2009 (see the August 2008 issue of FOCUS for sites of Phase 3 construction). Phase 4 construction is scheduled to start this year in early spring. The combined phases represent the largest infrastructure project ever undertaken by the City.

During construction, residents may be inconvenienced by restricted traffic flows and construction noise in areas close to the construction zones. This infrastructure improvement project will enhance health and safety for La Mesa residents for many years. The City apologizes in advance for any inconvenience.

NEW LEFT TURN SIGNAL AT LAKE MURRAY AND EL PASO

Federal grant money will provide funding for upgrading the traffic signal at the intersection of Lake Murray Boulevard and El Paso Street. The project will install a protected left turn arrow for the Lake Murray Boulevard approaches to the intersection. This means that vehicles turning left from Lake Murray onto El Paso will have a separate signal to help protect them from oncoming traffic.

The signal will be upgraded to include state-of-the-art pedestrian countdown features that show how many seconds remain to safely cross the street. An audible voice will tell pedestrians when it is safe to cross, and a vibrotactile feature will cause the push button to vibrate indicating that the button has been pushed. Since the intersection is near Murray Manor Elementary School, new high visibility crosswalks will be installed at the intersection.

These improvements provide greater safety by helping to reduce vehicle crashes and increasing the visibility of school children and other pedestrians using the crosswalks. Additional work at the intersection includes updating the curb ramps to comply with the Americans with Disabilities Act (ADA).

San Diego Gas & Electric has begun work placing the overhead utility wires below ground on Parkway Drive between Marengo Avenue and Amarillo Avenue. This project is part of the City's utility undergrounding program and is expected to take six months to complete. For more information visit http://www.cityoflamesa.com/undergroundutilities.

Parkway Drive Utility Undergrounding Begins

Waite Drive Sound Wall
Construction Begins

Caltrans began construction of a sound wall just north of State Route 94 in December. This project has been in the planning stages for several years, and it is the only sound wall funded for construction in San Diego County. The wall will be on the north side of the freeway between Murray Hill Road and Massachusetts Avenue. The cost of the project is around $1 million. Work is expected to be completed in 10 months.

WHO'S THERE?

Respond Safely When Door-to-Door Marketers Knock

On December 10, 2008 the media reported a disturbing situation in which an elderly female was kidnapped from her home. Although this incident did not occur within the City of La Mesa, but rather the unincorporated (County) area of La Mesa, the La Mesa Police Department would like to remind our citizens of the dangers associated with letting strangers into your home. In this kidnapping case, the victim had previously purchased a vacuum from the suspect. The suspect returned on a different day asking to borrow the victim's phone to make a call. It was during this second visit that the kidnapping took place. Citizens are encouraged to be extremely careful when answering the door to solicitors. The City of La Mesa has strict guidelines solicitors must follow when conducting door-to-door sales or marketing.

All individuals going door-to-door selling products or conducting marketing activities in the City of La Mesa are required to obtain a Solicitor Business License. Each individual representative of an organization must have their own Solicitor Business License. Solicitors must provide the following to the City before their Business License is approved and they are allowed to go door-to-door:

1. **Proof of $1,000 surety bond naming the City of La Mesa**
2. **Three 2x2 passport-style photographs**
3. **Set of fingerprints**

Non-profit organizations are not exempt from this requirement. To obtain the license, each solicitor must undergo a background check by the Police Department. The license includes a color picture, as well as their business name, address, and phone number. Solicitors must have the license in their possession and make it available for your review upon request.

Solicitors are not allowed to do business on sidewalks, streets, or other public property and may only operate between the hours of 9:00 am and 8:00 pm. They do not need to carry their product or provide their service at that time to be considered a solicitor.

The following La Mesa Municipal Code sections are associated with solicitation:

6.04.050 License to Conduct Business Required--Compliance. 6.04.340 Displaying in Vehicle. 6.28.020 License Required. 6.28.080 Possession and Exhibition of License. 6.28.120 Prohibitory Signs

View the text of these Municipal Code sections here or enter "Municipal Code" in the search field on the City website and select "Title 6 BUSINESS LICENSES AND REGULATIONS."

If a solicitor calls on you at home, ask to see their City of La Mesa business license before beginning any business with them.

- *The license is approximately 8½" x 3½" in size, cream in color, and will say "City of La Mesa" at the top.*
- *If the solicitor cannot provide a business license they are most likely operating illegally in the City of La Mesa.*
- *Call the Police Department at 619.667.1400 to report any unlicensed individual conducting solicitation activity. Be ready to provide your location, a description of the individual, and their direction of travel.*
- *The City of La Mesa would like to stop unlicensed solicitation. Please also contact the City's Business License Officer at 619.667.1118 whenever you have an unlicensed solicitor in your neighborhood.*

Having good home security and safety practices will also aid in preventing crimes related to solicitors or people posing as solicitors.

- *DO NOT, under any circumstances, allow solicitors into your home.*
- *Only make purchases from organizations in which you initiated the contact, or have checked through the Better Business Bureau or local Chamber of Commerce.*
- *Visit the Police Department Crime Prevention section to find an informative video with tips on home security and personal safety. If you are unable to view the video online, copies of the DVD are available free of charge at the Police Station located at 8181 Allison Avenue.*
- *Please contact the Crime Prevention Unit at 619.667.1445 or the Business Licensing Unit at 619.667.1118 if you have additional questions.*

PORTION DISTORTION

Serving Savvy

What's the difference between a portion and a serving? A definition to remember is a portion is the amount of an individual food item you choose to eat and a serving is a unit of measure for the amount of food recommended from each food group by the United States Department of Agriculture (USDA). The National Institutes of Health (NIH) recommends the average person consume 6-11 servings of whole grains each day. A serving of whole grains is typically defined as 1 ounce, or the equivalent of 1 slice of bread or ½ cup of rice or pasta. If you aren't careful it can be easy to confuse this recommendation to mean 6-11 portions of grain with no consideration of the actual number of servings in the portions you are eating, thus falling into the portion distortion trap. A plate of spaghetti at your favorite Italian restaurant will most likely be more than a single ½ cup serving.

The prospect of having to measure or weigh everything you eat may seem impractical or at best inconvenient. To help put things in perspective, the USDA has developed some comparative examples of serving sizes in the basic food groups against some everyday items that are easy to remember.

- **1 cup of cereal flakes = a fist**
- **1 pancake = compact disc**
- **½ cup cooked rice or pasta = ½ baseball**
- **1 cup salad greens = 1 baseball**
- **¼ cup of raisins = 1 large egg**
- **3 oz. meat, fish, or poultry = 1 deck of playing cards**
- **2 tablespoons of peanut butter = 1 ping pong ball**

A good source of information on healthy eating is the USDA's website www.mypyramid.com. The site offers a variety of nutrition information as well as tips for losing weight and menu planners and nutrition trackers designed just for you. Portions of the website are designed especially for kids so the whole family can take part. Best of all it's free! There is even a serving size example card to print out and laminate. If you don't have access to Internet at home, you can access this important information from computers located at the new La Mesa Branch of the San Diego County Library on Allison Avenue between City Hall and the Fire Administration buildings. Remember, the best way to fight portion distortion is to become serving savvy!

KNOW WHAT'S IN THE FOOD YOU BUY

- Watch out for words you don't know or can't pronounce. They most often mean chemicals or artificial ingredients have been added during processing.
- Ingredients on the nutrition label are listed according to amount from most to least. If an item has sugar as the first ingredient it means the product contains more sugar than any other single ingredient.
- Be aware that "sugar" goes by many different names: dextrose, fructose, glucose, and high-fructose corn syrup.
- Choose foods that have the word "whole" in front of grains. Such as whole wheat or whole grain products. They typically have more dietary fiber, antioxidants and protein than processed grains.
- To be "low fat" foods should have less than three grams of fat per serving. Try to eat more low fat foods. They are healthier for your body.

Information compiled by: Intern Sara Kloack

WANT TO MAKE A DIFFERENCE?

VOLUNTEER FOR A CITY BOARD, COMMISSION OR COMMITTEE

The City of La Mesa is now recruiting for City boards, commissions, and committees. Members of boards and commissions provide an invaluable service to our city. They advise the City Council and City staff on a wide variety of subjects by making recommendations on important policy matters.

Serving on a board or commission can be a rewarding experience for community service-minded residents. It is an excellent way to participate in the functioning of local government and to make a personal contribution to the improvement of our community. Citizen participation helps ensure our local government is addressing the needs of the La Mesa community through the services, planning, and decision making provided by each board.

You can learn more about the roles and responsibilities of the various boards, commissions, and committees by visiting the Boards & Commissions overview page of the City website. Most advisory groups meet once a month for a couple of hours.

Please consider this opportunity to serve on a board, commission, or committee. Find an application and specific information regarding qualifications, requirements for serving, and meeting days and times on the City's website, by visiting the City Clerk's office at City Hall, 8130 Allison Avenue, or calling the Clerk's office at 619.667.1120.

Applications for advisory boards must be submitted to the City Clerk's office no later than 5:30 pm, Thursday, June 11, 2009, to be included in the June interview and selection process. The interview and selection process for the Youth Advisory Commission occurs in September.

Applications are now being accepted for appointment on the following boards, commissions, and committees:

Building Codes Review Board

Commission on Aging

Community Services Commission

Design Review Board

Human Relations Advisory Commission

La Mesa Community Parking Commission

Loan Committee for Real Estate Rehab

Personnel Appeals Board

Planning Commission

Traffic Commission

Youth Advisory Commission

WALK LA MESA

Just for the Fun of It!

The La Mesa Wellness Task Force wants you to know that there are organized walks nearby every day of the week. Check the City's website at www.cityoflamesa.com, search *live well,* and click on Walk La Mesa under Quick Links for a list of options or pick up a flyer at La Mesa City Hall or the La Mesa Community Center. Call 619-667-1300 for more information.

EVERY KID'S LIFE LIST

In July 2006 the La Mesa City Council adopted a Community Wellness Program that encourages everyone in our community to make nutritious food choices and increase their physical activity as part of a healthy lifestyle plan. The La Mesa Community Services Department offers a variety of classes and seasonal activities designed to introduce participants to activities that provide physically, mentally, and emotionally healthful benefits. Our intent is to promote lifelong health and wellness and we are especially interested in helping children develop positive lifestyle choices at an early age. Responses to the City's latest Community Survey indicated that La Mesan's love their parks, ranking them one of the most important assets in La Mesa. Community Services staff understands the importance of outdoor recreational opportunities, especially to children's cognitive, emotional, and social development.

Throughout the country other public and private organizations are working in a variety of ways to address the growing epidemic of childhood obesity in an effort to reverse the startling prediction that today's children will not live as long as their parents. One such group is the California Roundtable on Recreation, Parks and Tourism, a consortium of State, federal, local, academic, private, and non-profit organizations whose mission is to encourage California's children to participate in outdoor recreational activities and discover their heritage. The Roundtable has developed a list of experiences every child should have by the time they enter high school. This list represents a giant step towards encouraging children to get up, get out, get active, and develop a lasting appreciation for the outdoor environment around them. Governor Arnold Schwarzenegger issued a proclamation on July 6, 2007 recognizing the Children's Outdoor Bill of Rights. Many of these experiences are available without leaving La Mesa city limits. All of these experiences are available within San Diego County.

We are happy to share this list and encourage every one of you to seize every opportunity to introduce the children in your family to these life-building experiences.

EVERY CHILD SHOULD HAVE THE OPPORTUNITY TO:

Discover California's Past • Splash in the Water • Play in a Safe Place
Camp Under the Stars • Explore Nature • Learn to Swim • Follow a Trail
Play on a Team • Catch a Fish • Celebrate their Heritage

NOTIFY ME

Notify Me is the City of La Mesa email notification system that instantly alerts citizens of important City news, events and services. Notify Me allows community members to subscribe to a number of email lists including the La Mesa City Council Agenda, Recreation Classes Schedule and La Mesa Police Department Press Releases. It provides residents with another means of communicating with and obtaining information from City Hall. It is a powerful tool that easily keeps them informed, reduces the need to call or visit City Hall, and provides easy access to new information on the City's website.

To sign up for this service, please visit Notify Me. Enter your complete email address, select the email type you would like to receive (html or text), and select each email list you would like to subscribe to. Finally, click the Subscribe/ Manage button.

You will receive a confirmation email for each category you select. You can make changes to your email notification subscription by entering your email address and clicking the Subscribe/Manage button. If at any time you decide you no longer wish to receive notifications, each email contains instructions to remove your email address from our notification service.

CITY OF LA MESA
JEWEL of the HILLS

FOCUS

A Newsletter for the Citizens of La Mesa • May 2009

COMING SOON

New Signs in the Downtown Village

The City of La Mesa will be replacing the signs in and around the Downtown Village this summer. New sign designs were created as part of La Mesa's effort to enhance the community image and will provide a fresh look for the Downtown Village. The new signs are being funded by a combination of state grants and revenue from the Downtown Parking Fund.

Interested in City Government?

Consider serving on a Board or Commission.

See Page 7

FIRE STATION 13

CONSTRUCTION UPDATE

Fire Station 13, located at 9110 Grossmont Boulevard, is currently closed while undergoing a renovation to abate asbestos within the building as well as bring the building up to current "Essential Services Building" standards. Some of the improvements include: upgraded HVAC system, a new roof, a fresh coat of paint, new sleeping quarters, and a dedicated fitness room. The abatement process has been completed and construction for the upgrades began in April.

Originally built in 1961, Fire Station 13 has been home to many La Mesa firefighters. Fire Station 13 is the third and final La Mesa Fire Station in the City to be upgraded. Funding for this project comes from Proposition D approved by voters in 2004.

Everyone in the Fire Department is excited about the project and we eagerly await reopening of the station anticipated in the fall.

Community Emergency Notification System

La Mesa has a new tool to help residents in the event of a disaster or large scale emergency. The Community Emergency Notification System (CENS) is a mass notification telephone system that allows City officials to call any or all residents in the City of La Mesa to alert them to emergency situations. It is like 911 operators calling you. The system is called "AlertSanDiego" and is used to warn the public about imminent threats to life or property, disaster notifications, evacuation notices, public health emergencies, and any other notification to provide emergency information. City officials now have the ability to record a message or instructions to help you during an emergency. The system will only be used in emergency situations and will not be used for routine messages.

La Mesa Flag Day Parade

Saturday, May 30–Starts at 10:00 am
in the Downtown Village

Firemen's Association Post-Parade Barbecue

at Nebo Drive

Two Pre-Parade Concerts at 9:00 – 10:00 am

La Mesa Blvd. at Nebo Drive and Palm Ave.

"A Salute to Old Glory"

SUMMER'S ALMOST HERE!

Community Services has some COOL activities to help beat the heat (and the boredom)!

Browse our weekly youth class selections or check out our exciting day camp programs.

There are weekly classes for adults too!

Convenient enrollment is available 24/7 online or access a printable version of our enrollment form to mail in.

Classes and camps fill quickly.
DON'T DELAY – ENROLL TODAY!

La Mesa COMMUNITY SERVICES

7TH ANNUAL La Mesa Kiwanis Club Soap Box Derby Race

May 16, 6 am-6 pm

Junior High Drive by La Mesa Middle School

Sponsored by Drew Ford in cooperation with City of La Mesa.

Winners will be sent to National All-American Soap Box Derby in Akron, Ohio, in July. Youngsters ages 8 to 17 wishing to enter the race should contact Dennis Wilkes at 619.469.7353.

ALL-AMERICAN SOAP BOX DERBY

DIVE-IN MOVIE

SAVE THE DATE
Mark your calendar for July 17

FREE family movie (to be announced)

Take the Hollywood plunge, bring your favorite flotation device and cool off with us for a dive-in movie at the La Mesa Municipal Pool. Watch the City website for details as they become available.

If you or your organization would like to be a sponsor for this event, contact Aquatics Supervisor Becky Jackman at 619.667.1495.

SUN VALLEY GOLF COURSE

5080 Memorial Dr., La Mesa, CA 91941

7:00 am to dark Mon – Fri
6:30 am to dark Weekends

Adults $10 for 9 holes
$14 for 18 holes

Students*
$6 for 9 holes
$10 for 18 holes
*(*includes college with valid student ID)*

Clinics, lessons, and special programs are available.
For details go to
www.sunvalleygolfclub.com
or call 619.466.6102

GOLFERS WANTED

Cinco de Mayo Pro-Am Golf Classic

Tuesday, May 5, 2009

7:30 am Breakfast and Registration
9:00 am Shotgun Start
Play will be in a Shamble Format

Steele Canyon Golf Course
3199 Stonefield Drive, Jamul

Individual player $275 donation
Foursome $1,000 donation

Complete the player participation form and fax back to 619.464.3761

Funds raised during this tournament will benefit "It's Child's Play" La Mesa Park & Recreation Foundation's drive to raise $1 million to provide accessible, age-appropriate, and fun playgrounds in La Mesa parks.

CITY ANNOUNCES 2009

MISS LA MESA & MISS LA MESA TEEN

On March 6, 2009 the City of La Mesa held one of its most grand traditions, the Miss La Mesa and Miss La Mesa Teen Pageants. These pageants have been a La Mesa tradition since the late 1960s and have been an outstanding mentoring program for young women. Contestants were judged on a personal interview, essay, speech, poise and personality, sportswear, evening gown, and response to an on-stage question. Winners of the pageant will advance to the Miss Greater San Diego Pageant, the official preliminary to Miss California USA and Miss USA.

Congratulations to La Mesa's 2009 City Ambassadors.

Miss La Mesa 2009
Stephanie Packard

1st Runner Up – *Allison Williams*
Miss Congeniality – *Keilani Fite*
Miss Photogenic – *Stephanie Packard*
Speech Award – *Hope Rosemary*
Interview Award – *Allison Williams*
Essay Award – *Hope Rosemary*

Miss La Mesa Teen 2009
Katarina Schweitzer

1st Runner Up – *Rosa Chaves-Frank*
2nd Runner Up – *Abby Lehto*
Miss Congeniality – *Danamarie Carter*
Miss Photogenic – *Katarina Schweitzer*
Speech Award – *Rosa Chaves-Frank*
Interview Award – *Rosa Chaves-Frank*
Essay Award – *Katarina Schweitzer*

Designing for Pedestrian and Bicycle Safety

FREE TRAINING WORKSHOP

Friday, May 15
8:45 am – 4:00 pm

Spring Valley Community Church
730 Concepcion Avenue
Spring Valley, CA 91977

Interactive workshop sponsored by the Healthy Transportation Network and County of San Diego Health and Human Services Agency (HHSA) East Region aimed at providing the latest bicycle and pedestrian design tools to community advocates and practicing transportation, planning, and design professionals. Morning coffee/snacks and lunch provided.

Workshop is free but space is limited RSVP to Rails-to-Trails Conservancy 415.814.1100 or western@railstotrails.org

Questions? Contact Katie Judd, HHSA East Region 619.668-3758 or Katherine.Judd@sdcounty.ca.gov

OUTDOOR WEDDINGS

Amphitheatre at Harry Griffen Park

West Terrace Patio at the La Mesa Community Center

Warm weather and the sight of blooming spring flowers bring thoughts of an outdoor wedding to the bride and groom-to-be. Outdoor weddings capture nature and the beauty of the ceremony. The City of La Mesa offers two unique outdoor wedding sites to assist in planning your dream wedding.

The amphitheatre at Harry Griffen Park has been the site of many memorable weddings. The gazebo is the ideal location for the bride and her attendants to begin their procession along the walkway to the staging area. Lush mature trees and other landscaping enhance the area.

A second outdoor venue is located at the La Mesa Community Center. The West Terrace Patio is a semi-circular patio that is complimented by vine covered brick columns. City staff sets up chairs, aisle runner, and decorated trellis in the rental package. For those weather questionable spring days the ceremony can be moved indoors. For Information call: 619.667.1305.

SUNDAYS AT SIX

Summer Concert Series

at Harry Griffen Park, 9550 Milden Street, La Mesa
Concerts from 6:00 – 7:00 pm

Enjoy FREE concerts featuring performances from some of San Diego's premiere recording artists, musicians, and singers. Bring a picnic and spend "Sundays at Six" relaxing to concert band, country, jazz, and variety music in the company of friends.

June 14	**Navy Jazz Band Southwest**
June 21	**San Diego Concert Band**
June 28	**Paradise (Latin soul that rocks)**
July 12	**Mark Jackson Country Band**
July 19	**Breez'n Variety Band**
July 26	**Strange Woods Celtic Band**

Note: Performance lineup is subject to change without notice

Up-to-date concert information is available on the City website or call 619.667.1300

Thanks to our sponsors:

LA MESA ARTS ALLIANCE – fostering the arts in our community

CITY OF LA MESA – JEWEL of the HILLS

WELLS FARGO

La Mesa ARTS Alliance presents:

2nd ANNUAL Spring Classical Concert

with the East County Youth Symphony

Sunday, May 3 — 3:00 pm

La Mesa Community Center, 4975 Memorial Drive

Conductor Olga Teztsova will direct the amazing talents of 80 of East County's most promising young musicians in a presentation of classical selections from some of the world's great composers.

The concert is FREE to the public. No-host refreshments will be available and a silent auction will be held during intermission. Donations will be gratefully accepted. Proceeds will be divided equally between the La Mesa ARTS Alliance and the East County Youth Symphony. Please RSVP as seating is limited 619.667.1300.

Community Emergency Notification System

Continued from page 1

The system utilizes the region's 911 database to contact land-line telephones. You do not need to register your home phone unless it is a VoIP internet service. You can register your mobile phone, VoIP, and email address. It is also TTY/TDD capable. By registering, you are allowing emergency response personnel to notify you with information and/or actions to take, such as an evacuation that you need to be aware of during an emergency or disaster. To register, please visit www.readysandiego.org and select "AlertSanDiego," then follow the instructions. You may register more than one mobile phone associated with your home address. If you have already registered and you have moved or changed your mobile number, you will need to re-register your new information

This is just another way to help get you information in the event of a disaster. You never know when an emergency will strike so take the time now to prepare yourself. Download a copy of the La Mesa Survive booklet from the City website or call the Fire Department at 619.667.1355 to have one mailed to you.

WALK LA MESA

Just for the fun of it!

Did you know there are organized walks nearby every day of the week? For a list of options visit Walk La Mesa under Quick Links – Live Well. You may also pick up a flyer at La Mesa City Hall or the La Mesa Community Center. Call 619.667.1300 for more information.

La Mesa... it's made for walking.

NEW LEFT TURN SIGNAL AT LAKE MURRAY AND EL PASO

Federal grant money will provide funding for upgrading the traffic signal at the intersection of Lake Murray Boulevard and El Paso Street. The project will install a protected left turn arrow for the Lake Murray Boulevard approaches to the intersection. This means that vehicles turning left from Lake Murray onto El Paso will have a separate signal to help protect them from on-coming traffic.

The signal will be upgraded to include state-of-the-art pedestrian countdown features that show how many seconds remain to safely cross the street. An audible voice will tell pedestrians when it is safe to cross, and a vibrotactile feature will cause the push button to vibrate indicating that the button has been pushed. Since the intersection is near Murray Manor Elementary School, new high visibility crosswalks will be installed at the intersection.

These improvements provide greater safety by helping to reduce vehicle crashes and increasing the visibility of school children and other pedestriaans using the crosswalks. Additional work at the intersection includes updating the curb ramps to comply with the Americans with Disabilities Act (ADA).

WANT TO MAKE A DIFFERENCE?

Volunteer for a City Board, Commission, or Committee!

The City of La Mesa is now recruiting for City boards, commissions, and committees. Members of boards and commissions provide an invaluable service to our city. They advise the City Council and City staff on a wide variety of subjects by making recommendations on important policy matters.

Serving on a board or commission can be a rewarding experience for community service-minded residents. It is an excellent way to participate in the functioning of local government and to make a personal contribution to the improvement of our community. Citizen participation helps ensure our local government is addressing the needs of the La Mesa community through the services, planning, and decision making provided by each board.

Applications are now being accepted for appointment on the following boards, commissions, and committees:

Building Codes Review Board

Commission on Aging

Community Services Commission

Design Review Board

Human Relations Advisory Commission

La Mesa Community Parking Commission

Loan Committee for Real Estate Rehab

Personnel Appeals Board

Planning Commission

Traffic Commission

Youth Advisory Commission

You can learn more about the roles and responsibilities of the various boards, commissions, and committees by visiting the Boards & Commissions overview page. Most advisory groups meet once a month for a couple of hours.

Please consider this opportunity to serve on a board, commission, or committee. Find an application and specific information regarding qualifications, requirements for serving, and meeting days and times on the City's website by visiting the City Clerk's office at City Hall, 8130 Allison Avenue, or calling the Clerk's office at 619.667.1120.

Applications for advisory boards must be submitted to the City Clerk's office no later than 5:30 pm, Thursday, June 11, 2009, to be included in the June interview and selection process. The interview and selection process for the Youth Advisory Commission occurs in September.

More Head Room for La Mesa

The City and SDG&E continue recent progress to give La Mesa residents more head room.

In early spring construction to put overhead cabling underground began on two of the six districts currently approved by City Council. If you've encountered roadwork along the westbound lanes of Fletcher Parkway, you've seen San Diego Gas & Electric's (SDG&E's) contractor working to underground the overhead lines along Parkway Drive. Over half of the conduit is already installed for the district which extends from Marengo Avenue to Lambda Lane.

In the area of Helix Charter High School, the school is not the only one making changes. SDGE's contractor recently completed installation of all conduit for the Orien Avenue underground district in anticipation of upcoming street and sidewalk improvements by the City.

Finally, Massachusetts Avenue, a major corridor in La Mesa, is in the final stages of acquiring easements to allow for undergrounding of the overhead utilities. The overhead utilities on Waite Drive will also be undergrounded beginning this summer.

What's all the hoopla? If you've lived in La Mesa long enough to see the impact of removing poles and cabling from our skies, you know that these projects are more than technological upgrades; they are a great way to remove eyesores and make our Jewel of the Hills shine.

Stay tuned, there's more work to come!

Baltimore Drive Street Resurfacing

On March 10, 2009 the City Council awarded a contract to Hazard Construction to resurface various streets in the City. The largest street will be Baltimore Drive from University Avenue to the north City limit.

Resurfacing follows replacement of the sewer pipes in portions of these streets as part of La Mesa's effort to coordinate infrastructure improvements. Other streets to be resurfaced are: portions of Lee Avenue, Grape Street, Normal Avenue, Mills Street, Colina Drive, Orchard Avenue, Hillcrest Avenue, Crowder Lane, Chevy Chase Drive, Boulder Place, Boulder Drive, and 4th Street. This project also includes installation and upgrade of pedestrian ramps.

Keep up-to-date on the schedule and find additional information at cityoflamesa.com/resurfacing.

For your safety, drivers are encouraged to stay alert and follow all no parking and traffic control signs in construction zones. Please contact Dirk Epperson at depperson@ci.la-mesa.ca.us with questions or concerns.

City Responds to Concerns About Homeless

From time to time City residents or visitors to La Mesa report people who appear to be homeless on our City streets and in parks or other areas. The presence of homeless people in our community is not new and is an issue that impacts the entire San Diego region. In July 2004 the Regional Task Force on the Homeless estimated there were nearly 10,000 homeless people in the San Diego region.

The immediate concern of many of our residents and visitors are the potential risks posed by the homeless or that the homeless themselves may face. Based on contacts our police officers have had with the homeless, we know that many have criminal histories, issues with substance abuse, and may commit various crimes to help support their day-to-day existence.

As we can all imagine, being homeless presents a whole set of dangers to the homeless themselves, including poor health, lack of health care, and a greater danger of being victimized by crime. Make-shift shelters set up by the homeless in secluded areas pose certain dangers to both the homeless and public, primarily due to uncontrolled trash and waste and small fires or stoves used for cooking and warmth.

Due to these concerns, a number of the City's departments are working together in an effort to address homeless issues in La Mesa. Members of the Police, Fire, and Community Development Departments have recently identified and closed a number of homeless encampments throughout the City. Police officers make periodic checks of areas where encampments are typically found and respond to citizen reports of new encampments. The officers' first goal is to address any public safety issues they find, and officers also provide information to the homeless they contact about where they can obtain services. Government agencies and private sector service providers in the San Diego region offer a variety of programs to provide assistance to the homeless. These include providing food, short-term lodging, and counseling and education services.

In closing, we feel it is important to keep the following information in mind when you see or encounter the homeless.

- As an individual, you should not give food or money to the homeless, but encourage them to seek assistance through government or private agency providers.
- Generally, it is not illegal to ask for food or money, or offer to work for food or money, but it is unlawful to do so in an aggressive or harassing manner.
- It is illegal to offer to work for food or money in close proximity to a freeway on-ramp or off-ramp.
- Stopping your car on a street or at an intersection to give money to a homeless person creates a hazard for other vehicles and for the homeless who step into the street to accept your gift of money.

More information on the homeless issue in the San Diego region can be found at the website for the Regional Task Force on the Homeless www.rtfhsd.org.

PHASE IV OF $14.5 MILLION SEWER
Upgrade Project Continues

The following streets and easements will be affected as part of Phase 4:

El Capitan Dr.

Culowee St.

University Pl.

Sheldon Dr.

Summit Dr.

Beverly Dr.

Madison Ave.

Westview Dr.

Larsen Way

Pasadena Ave. between Date Ave. and Vista Dr.

Fairview Ave. between Normal Ave. and Pasadena Ave.

Lemon Ave. between Date Ave. and Acacia Ave.

Garfield St. between Madison Ave. and Jefferson Ave.

Alley between Madison Ave. and Jefferson Ave.

Easement between Summit Dr. and Valle Dr.

Easement between Valle Dr. and Vista Dr.

Easement between Summit Dr. and Sheldon Dr.

The accompanying diagram shows the locations of the proposed work. Residents in construction areas will be notified prior to the start of construction.

In 2006 the City of La Mesa secured a $14.5 million low-interest loan from the State Water Resources Control Board. These funds are being used to rehabilitate and upgrade the City's aging sewer system in older and hillside sections of La Mesa.

The project was divided into four phases. Phase 3 construction is scheduled to be completed in May. Phase 4 construction is scheduled to start this summer. The combined phases represent the largest infrastructure project ever undertaken by the City.

During construction, residents may be inconvenienced by restricted traffic flow and higher than normal noise levels in areas close to the construction zones. This project will enhance health and safety for La Mesa residents for many years. The City apologizes in advance for any inconvenience.

SPRING FIRE SAFETY

Spring cleaning is the perfect time to ensure your home is safe from potential fire and life safety hazards. La Mesa Fire Department encourages you to use this tradition to help make your home fire safe, inside and out. We've provided you with some simple tasks that can help make your home a safer place.

While cleaning the inside of your house, check the batteries in smoke detectors to make sure they are operating properly. Smoke detectors should be checked monthly, and the batteries should be replaced semiannually. Fire extinguishers should be checked to make sure that the gauge is not in the red and that they are easily accessible in case of an emergency. Another important item to check is electrical cords. You should inspect all cords for damage and loose connections.

Fire safety extends to the outside of your house as well. While cleaning the outside of your house, you should check for trees growing into power lines. Be sure to contact SDG&E prior to pruning around power lines. Clean dead leaves and needles from your roof and gutters, and install a spark arrester on your chimney outlets and stovepipes. Prune branches that could be a potential fire hazard, and clear dead grass and brush from around fire hydrants. Make sure any firewood is stored safely away from your house. Finally, make sure all household chemicals are locked out of reach of children.

Following these simple fire and life safety tips, along with rehearsing your home escape plan, will help ensure that your home is not only cleaner, but also safer for you and your family. For more information, please contact La Mesa Fire Department at 619.667.1355 or visit the following websites:

University Ave. Improvements

Allison Ave. to Spring St.

The City of La Mesa has secured TransNet funding through the Smart Growth Incentive Grant Program to make streetscape improvements to University Avenue around the Civic Center. The University Avenue Improvements are consistent with the concept plans developed during the University Avenue Revitalization public input process. The project is being built in phases as the Civic Center buildings are completed. The first phase included sidewalk improvements in front of the new library.

The next phase will include installation of new sidewalk, street trees, street lights, upgraded traffic signal, high visibility crosswalks, median landscaping and street resurfacing, around the new police station. As part of this project, access to Nebo Drive and Date Avenue will be closed permanently at University Avenue. The old Helix Water District driveway accessing the Civic Center will be relocated adjacent to the Police Station building after construction is completed.

Residents looking to access the Civic Center are advised to park on Allison Avenue or City Hall's back parking lot accessible from Date Avenue off of Allison Avenue. We apologize for any inconvenience during the construction.

WIPES CLOG PIPES

Did you know that not all "flushable" wipes are really flushable? Despite that claim, many are not suitable for flushing and can snag in pipes and cause clogs in the sewer system.

While many personal care, diaper, and home cleaning wipes advertise that they are "flushable", testing shows this doesn't mean that they disappear. Two different "flushable" wipes were compared to regular toilet paper in a water test and only the toilet paper disintegrated quickly. After an hour of soaking, one wipe began to dissolve, but not completely until torn apart and the other did not degrade at all. When these wipes are flushed they can clog the sewer pipes, blocking the flow of waste water. Please exercise caution when disposing anything in the toilet!

FORECAST FOR LA MESA RESTAURANTS - FOG CLEARING

The State of California has issued a new law requiring cities to implement fats, oils and grease (FOG) control programs. The number one maintenance problem in the La Mesa sewer system is the presence of fats, oils, and grease.

The new law becomes effective July 1, 2009. The FOG control program requires restaurants to install and maintain equipment that limits the amount of fats, oils and grease that enters the sewer collection system.

Under the FOG control program, restaurants are required to obtain a permit and undergo inspection. There will be a small fee required for the permit and inspections.

The City will be holding a free workshop presentation of the program requirements on June 1 from 8:30 am to 10:00 am at the La Mesa Community Center, 4975 Memorial Drive. All restaurant owners and/or managers are encouraged to attend.

2009 LA MESA GARDEN AWARDS

NOMINATION FORM

How Does Your Garden Grow? This year marks the 29th Anniversary of La Mesa Beautiful's annual contest involving property owners within the city limits of La Mesa who have done a great job landscaping their property.

Nominate any property. Include blocks or even neighborhoods which have helped make La Mesa the "Jewel of the Hills."

Winners will be recognized at the Annual Garden Awards Luncheon scheduled for October 14, 2009 at the La Mesa Community Center. A team of judges will evaluate all nominations. Their decision is final. Nominations may be filed throughout the year.

Winners will be notified prior to the award luncheon. For consideration this year, nominations should be submitted before July 1st.

JUVENILES AND SOCIAL NETWORKING ON THE INTERNET

Let's face it, social networking websites are here to stay… so is text messaging…so is gaming with web connectivity. Five years ago the police would have advised that no juvenile should ever connect to a social networking site. We realize now that it is impractical to restrict young adults from all technology-related activities. Now is the time to educate yourself on the proper use of these social networking websites.

What is a social networking site?

A social networking site is a combination of a yearbook and a diary. The users can post photos of themselves, listen to music, chat live with their friends, search for others and list their interests. Many of the sites also allow the user to list their location. Users can also make comments and postings on other people's pages; like a blog. Most juveniles use the sites to display information and photos for their friends to look at and comment on. The juveniles talk to one another using the real time chat option or they send messages to be viewed at a later time, similar to an e-mail. Users connect with one another by requesting access to their friend's profiles. The profiles can be set to private, so anyone searching the site would only see the username and a photo (if the user posts one). Users request access to others profiles and if accepted, they can view the entire page.

Popular social networking sites include MySpace, Facebook and Bebo. The benefit to these sites is that they allow the user to search for people they may have lost touch with or send messages to multiple users. The sites are widely used to discover new music or connect with others with similar interests. However, if not used responsibly, social networking sites can become a huge problem for juveniles.

It seems innocent, so how does trouble occur?

Oftentimes juveniles do not think about what they are posting online. Posting personal information can lead to extreme danger. These websites can be viewed by anyone in the world. Social networking sites have been linked to kidnappings, murders, child pornography, gang and drug activity, bullying, blackmail, and sexual assault. A recent news report indicated that MySpace had identified and removed 90,000 registered sex offenders from the website!

The following is a list of tips for users to follow when utilizing a social networking website:

- Do not post provocative photos, even if you are over 18 years of age.
- Give your real age when signing up. Most sites have age requirements. If you do not meet them, then you should not be on the site.
- Do not post personal information such as sports teams you belong to, bands you like and hobbies. Of course, you should never post your address or phone number. Even the most inexperienced predator can use personal information to find you or gain your trust.
- Set your page to private. Never let anyone onto your page that you don't know.
- Set a display name (screen name) that is not your actual name. Instead, make up a generic name such as "123girl." Do not use any information in your display name that indicates personal interests or location such as "SoccerLover123" or "SanDiegoGal."
- Never use the site for dating purposes.
- Never say anything online that you wouldn't say to someone's face. Also, never post anything that you would be embarrassed for your parents to see. Remember that anyone can look at the sites, including colleges and employers.
- Do not post your school name or mascot. This shows predators where you are in the world.
- If someone threatens you or makes you uncomfortable while on the site, tell an adult and report the abuse to the website. Most sites have a section where you can report misuse.
- If you are being bullied by someone, it is important to tell a parent or guardian. Make sure to print the messages.

Continue on page 13

Continued from page 12

The following is a list of precautions parents must take to protect their children online:

- Talk to them about their online activities.
- Ask to see their online profiles.
- Keep the computer in an open living room or kitchen, so your children are not behind closed doors while using the Internet. Position the monitor so that it is facing the room and is not hidden from view.
- Many times children make more than one profile page. Ensure that you have access to all of them.
- Do not allow your children to lie about their age online.
- Their online profile should not be treated like a diary. It's your house and your computer, you have every right to view their online activities.
- Check your browser's history and look at the websites you children have visited.
- Create your own profile so you can become familiar with the site your child is using. Request to be allowed on your child's page as a "friend." If your child is embarrassed that their friends will see that their parent is on their page, use a picture of an inanimate object or a celebrity for your profile.
- Encourage your child to tell you about any online contacts that make them uncomfortable. Report any online abuse to authorities.
- Know more than your child about the computer. Take classes, read articles, and explore the features on the computer.

Important information parents should know:

There are several websites that tell teens how to set up profiles on social networking sites without their parent's knowledge. By being armed with this information, you can better protect your children. Some of the tips given to children by these sites are:

- Make sure you close the door while you are using the computer. If your parents require that you leave the door open, close it halfway and put something loud (like a bell or beads) on the door so you are alerted when someone is entering the room.
- Develop quick reflexes in order to close out of the page quickly, if needed.
- Don't let your computer save your passwords.
- Don't tell your siblings that you have an online profile.
- Make sure your friends don't tell their parents that you have an online profile.
- Use a free e-mail service to make a secret e-mail account that your parents don't know about.
- Delete the history in the browser every time you use the computer. However, don't delete everything because it will look suspicious.
- Keep the volume low on your speakers.
- Have other applications open so that you can easily hide the page on the computer desktop.
- Don't talk about the website in front of your parents or use a code word for it.

As of January 2009 some new laws went into effect as part of California's Penal Code. You can review text from these new laws on the City website. It is imperative that you stay one step ahead of your child on the Internet. Teach them the proper use of the Internet, rather than them teaching you.

Do you have additional questions about safety and cyber crime? Please call Crime Prevention Specialist Heather Lindquist at the La Mesa Police Department's Crime Prevention Unit, 619.667.1445.

MANDATORY RECYCLING AND YOU

In the early 1990s the City of La Mesa passed a mandatory recycling ordinance to comply with State Assembly Bill (AB) 939 that required eventual 50% diversion of materials from landfills. The City ordinance requires that all recyclable materials be separated from trash and recycled. EDCO's collection program handles most materials covered under the ordinance such as paper, plastic, glass and aluminum. Some materials such as home appliances and construction and demolition debris (concrete, asphalt, drywall etc.) can be recycled through EDCO but are not part of the normal collection system. A few additional materials

What is mandatory recycling?

are required to be recycled under State law, such as electronics, batteries, and fluorescent lights. More information is available at www.cityoflamesa.com/hhw.

What does this mean to you? Everyone in the City (residents, workers and visitors) must have access to recycling. The City has installed recycling containers in all public areas with trash service such as the Downtown Village, all parks, and most City facilities with funding from the California Department of Conservation's Division of Recycling. If you live or work in La Mesa, you should have access to convenient recycling as well. If you don't, ask for it or let the City know by calling 619.667.1338 or email envirosvcs@ci.la-mesa.ca.us. Last year over 500 La Mesa businesses and multi-family properties were contacted and informed of the need to have recycling available and over 90% became compliant within a year. Field checks by City staff for compliance are ongoing and La Mesa is aiming for 100% participation.

RECYCLING RULES!

We mean that in two ways:

1. **Recycling is essential to preserving our environment and**
2. **Don't forget the rules of recycling!**

Thanks to your recycling efforts, the City of La Mesa has met the State's 50% diversion requirement for the third straight year by keeping more than 50% of what we discard out of the landfills. In the most recent reporting year, 2007, we had an estimated diversion rate of 62%, eight points higher than the year before.

Here is a reminder of the types of items you can combine in your blue EDCO recycling bin:

GLASS BOTTLES & JARS

Recycle all food and beverage containers—clear and colored glass. Please rinse. No need to remove labels though.

CARDBOARD

Flatten or cut boxes to a maximum size of 3 ft. x 3 ft.

NEWSPAPERS

Recycle your newspaper and all paper inserts, coupons, etc. that are delivered with it (but not the plastic bags – those can go to your local grocery or large retail store).

CANS

Recycle aluminum cans and steel cans—including clean & dry paint cans, and empty aerosol cans. Also recycle aluminum foil.

PLASTIC CONTAINERS

Recycle plastic bottles & jugs marked ♻ or ♻ , and all beverage containers labeled "CA Redemption Value" or "CA Cash Refund" including:

- Food & Beverage Containers — Milk, soda, water, salad dressings, cooking oil, etc.
- Jars & Canisters — Peanut butter jars, mayonnaise jars, aspirin bottles, and 35mm film canisters.
- Cleaning Products & Detergents — Bleach, detergent, soap, shampoo, drain cleaners, etc. (Containers must be empty.)
- Automotive & Yard Care Products — EMPTY motor oil, antifreeze, plant food, and herbicide containers.

MIXED PAPER

Recycle virtually all clean and dry paper including: writing paper (all colors), computer paper, Xerox paper, "no carbon required" (NCR) forms, catalogs, brochures, magazines, junk mail, phone books, post-it type notes, and shredded paper. EDCO accepts them all, PLUS if those items have staples, window envelopes, or even those little metal clasps on legal envelopes, they're OK, too! But please, no large metal items like clasps and paper fasteners from notebooks or 3-ring binders.

You can also recycle cereal boxes and other clean food packaging, including cake boxes, flour bags, frozen dinner boxes, paper egg cartons, and soda/beer 12-pack carrying boxes. Also recycle paper grocery bags, gift boxes, shoe boxes, paper gift wrap, calendars, and core tubes from paper towels, etc.

STEERING CLEAR OF CAR CLONING

CAR CLONING: ***stealing the identity of a legitimately-owned vehicle and slapping it onto a stolen car.***

How does car cloning work? It begins with a stolen vehicle—usually a luxury car or fully-loaded SUV. Then, the vehicle is "cloned"—its manufacturer-installed Vehicle Identification Number (VIN) plate is pried off and replaced with another one.

This second VIN plate actually holds a legitimate number that came from a vehicle of a similar make and model in a different state. Other phony ownership documents complete the cloning. At that point it can be easily registered with a motor vehicle agency in another state. Once the stolen vehicle is registered anew, it can be sold.

In Tampa, more than 1,000 cloned cars were sold to witting and unwitting buyers in 20 states and several countries.

So how big is the possible impact of cloning on consumers? If you buy a cloned vehicle and its true pedigree is discovered, the car will be confiscated, and you'll still be responsible for any outstanding loans. If your vehicle is the victim of car cloning, you could be accused of a variety of offenses—from parking tickets or cutting somebody off in traffic...to serious criminal activity like organized crime. And you could spend a great deal of time and money trying to prove that it wasn't you or your car after all.

The National Motor Vehicle Title Information System is a U. S. Department of Justice database that links state motor vehicle departments together…and once fully operational should go a long way towards shutting down car cloning activities. If a car is titled in one state, a criminal should not be able to steal its VIN and use it on another vehicle in another state. So far, 37 states participate or are in the process of participating in the system. The program should be in all 50 states by next year.

Tips on how to steer clear of car cloning:

1. If you think your car was cloned (for example: if you receive notice of unpaid parking tickets that aren't yours), contact your local police.
2. When car shopping, beware of a car being sold for substantially less than comparable makes and models.
3. Get a copy of the car's vehicle history report.
4. Check out the VIN plate on the dashboard for any evidence of tampering such as scratches or pry marks.
5. Look for incorrect spellings on paperwork, like vehicle titles.
6. Trust your intuition—if it sounds too good to be true, it probably is!

More details about car cloning are available at www.fbi.gov/page2/march09/cloning_032409.html.

New Trend to Vehicle Burglaries

Imagine this scenario:

You get your credit card bill in the mail. You open it and notice several thousand dollars worth of charges that you didn't make. You think back and cannot remember a time when your credit card may have been compromised. In fact, the charges are on a credit card that you rarely use! You check your wallet and the credit card is missing, but nothing else has been disturbed. You have likely been the victim of an emerging trend in vehicle burglary.

It is no secret that vehicle burglaries continue to be a problem for La Mesa residents and the entire county alike. The La Mesa Police Department has learned through interviews with actual vehicle burglars that on some types of vehicles, thieves can break into cars that leave virtually no signs that a burglary has occurred.

The new trend is that when a suspect locates a purse or wallet in the vehicle, he takes only one credit card from the wallet. The suspect then returns the wallet back where it was found and relocks the vehicle. The only way the victim finds out about the burglary is when fraudulent charges begin to appear on the credit account. Many times, thousands of dollars of the victim's money has already been spent by the time they notice the credit card is missing.

Be sure to check your wallet frequently and make sure all cards are in your wallet.

Of course, the only way to truly prevent a crime like this is to take your belongings with you when you leave your car. If your wallet and valuables are with you at all times, instead of being left in plain sight, the likelihood is significantly decreased that your vehicle will be burglarized. Make sure everything is taken out of your car, even if you will only be gone for a few minutes. This includes iPods, cell phones, chargers and removable GPS systems.

If you have questions about vehicle burglary, please visit the La Mesa Police Department's Crime Prevention page at www.cityoflamesa.com.

Drought tolerant landscaping, such as that seen here in front of the Fire Administration Offices, has helped the City reduce water usage by 25% since 1990.

DOING OUR PART TO SAVE H_2O

Water is becoming an increasingly valuable commodity as water agencies struggle to keep up with demand. The City of La Mesa continually strives to reduce water consumption and save tax dollars at the same time. The following are some of La Mesa's significant water savings efforts:

- All parks and building renovations have been retrofit with Calsense® irrigation controllers. The controllers have a master valve sensor with a shutoff that shuts down the system in the event of a break eliminating water waste. The last phase of the Calsense project currently underway will allow the irrigation cycles to be modified automatically based on weather changes. Purchase of some of the controllers was made possible through grants from the Helix Water District for conversion from older irrigation controllers.
- Drought tolerant vegetation is being used for all new or replacement landscaping.
- Artificial turf is being utilized at the Junior Seau Sports Complex
- Irrigation upgrades were completed in 2008 to the medians of Baltimore Drive and Lake Murray Boulevard reducing water consumption.
- Using these combined methods, outdoor water usage has been reduced by 25% since 1990, even while the amount of acreage maintained has been increased.
- Utilizing the Empower Partnership program with the City of Chula Vista, kitchen sink spray valves were exchanged for low-flow pre-rinse spray valves at local restaurants.
- The City plans to install waterless urinals in one park and one fire station to assess their feasibility.
- Courtesy notices are provided to homes where over irrigation is observed.
- In 2007 the Environmental/Sustainable Committee was formed to address issues including water conservation.
- The first ever Environmental Awareness Festival was held in September 2008 at Harry Griffen Park. The event included information and demonstrations concerning water conservation and information and displays provided by representatives from Helix Water District.

Links to water conservation web sites are posted on the Environmental Awareness page of this website.

CENSUS BUREAU NEWS

Address Canvassers Take to the Streets April 2009

The 2010 Census launched its next operation, Address Canvassing. A preliminary wave began on March 29th, and the mass effort launched on April 6, 2009. The entire phase concludes by June 19, 2009.

During Address Canvassing, the Census Bureau will put to work approximately 140,000 people to canvass all known streets and roads throughout the country. The canvassers identify every living quarter where people live or could potentially live, and verify more than 145 million addresses.

For the first time in Decennial Census history, census workers will confirm, add, and delete addresses using a GPS-equipped handheld computer. Each computer is so secure that it will work only when activated by the fingerprint of its assigned operator.

Each building or structure receives Global Positioning System (GPS) coordinates to make sure it is also recorded in the right location.

Census workers also will update maps by adding new roads. This work ensures that the census address list is complete so that everyone can be counted in the 2010 census.

DO THE RIGHT THING!

Did you know that household hazardous waste (HHW) disposal is *FREE FOR LA MESA RESIDENTS* for the following items?

Batteries	**Fluorescent lights**	**Latex & oil based paints**
Solvents & cleaners	**Pesticides & garden products**	**Pool products**
Propane	**Any items labeled flammable, hazardous, toxic, or corrosive.**	

Electronics TVs	**Computer monitors & hardware**	**Cell phones & telephones**
MP3 players	**VCRs**	**Radios**
Automotive batteries	**Used oil & filters**	**Antifreeze**

These items are considered hazardous and are not allowed to be placed in the trash because of their destructive effect on the environment. If you reside within the City limits of La Mesa, you are eligible to participate in the City's free HHW drop-off program.

Collection events are available by appointment only by calling EDCO at 619.287.5696 x4270. Upcoming dates are:

May 2 **June 6** **July 18** **August 29** **October 10** **November 21**

Make your own non-toxic cleaning supplies cheap and easy! For a limited time, request free green cleaning recipe decals when you arrive at the event and we'll throw in a free spray bottle.

Medical sharps (needles) can also be disposed of through this program. They must be properly secured in a sharps container. See our announcement for easier disposal. Call 619.667.1338 or visit www.cityoflamesa.com/hhw for more info.

E-waste can now be recycled at the EDCO Station buyback center during business hours without an appointment. The center is open Monday through Saturday from 8:00 am to 4:00 pm. A small fee may apply to some items.

Call EDCO at 619.287.5696 x4270 or email at lmhhw@edcodisposal.com, to schedule an appointment for HHW drop-off. To request additional information about the program, please contact the Department of Public Works Environmental Services Division at 619.667.1338 or by email at envirosvcs@ci.la-mesa.ca.us. For general HHW information or other disposal and recycling options, visit www.cityoflamesa.com/hhw.

FREE OIL FILTERS

La Mesa Oil Filter Exchange Event

Saturday, June 13
10:00 am – 2:00 pm

Kragen Auto Parts, 5350 Jackson Drive

Bring your used oil filters to be recycled and receive a FREE oil filter!

This offer valid only on the specific date, time, and location above. Used filters accepted during business hours only. Thank you!

This program is funded by a grant from the California Integrated Waste Management Board.

Irrigation Pollution Prevention in Your Watershed!

Non-point source pollution (pollutants that are diluted and transported from different areas or sources) contributes significantly to the impairment of our receiving water bodies. The City of La Mesa falls within two watersheds; San Diego River and San Diego Bay. The San Diego River Watershed encompasses the area north of El Cajon Boulevard and I-8, while the San Diego Bay Watershed includes the area south of the I-8 and El Cajon Boulevard. The San Diego River Watershed is drained primarily by Alvarado Channel (just parallel to the I-8), while University Channel (just parallel to University Avenue) drains the San Diego Bay Watershed within our jurisdiction.

Creeks within these watersheds have been listed under the Clean Water Act as being impaired by various pollutants. The various jurisdictions that fall within the watersheds have been working together to educate and eliminate pollutants from entering our receiving water bodies under a Watershed Urban Runoff Management Program (WURMP). The WURMP identifies several pollutants that are considered priority pollutants within the watershed. For example, priority pollutants in the San Diego Bay Watershed include: bacteria, diazinon, copper/zinc, as well as lower priority pollutants including turbidity (measurement of suspended particulates in water column i.e., cloudy water) and trash. Priority pollutants within the San Diego River Watershed includes bacteria, total dissolved solids, total phosphorous, dissolved oxygen, pH as well as lower priority pollutants such as turbidity, copper, diazinon, and eutrophication.

The aforementioned pollutants are associated with a wide range of sources and are easily transported to our receiving water bodies through runoff. Over-irrigation is a significant factor in transporting these pollutants to the nearby storm water conveyance system or directly discharging them into a creek. Pesticides, fertilizers, pet waste, and bacteria may be transported from your landscaped areas by over-irrigation runoff to our storm drain system and creeks. Preventing these pollutants from making their way into the storm water conveyance system ultimately improves our quality of life.

The following are tips that you can follow to help eliminate pollutants from entering our creeks.

- Design your irrigation to meet site-specific conditions to prevent over watering.
- Application rate should not exceed soil's ability to absorb water
- Irrigation system should be designed with control devices or sensors or shut-off switches to address malfunctions.
- Place or group plants with similar water needs within the same area.
- Do not irrigate non-planted areas.
- Regularly inspect your irrigation system for potential problems.
- Consider drip irrigation to save water and prevent over-irrigation and runoff
- Adjust irrigation rates according to seasons and weather conditions.
- Irrigate in the early morning because it is the most efficient time to water plants with minimal evaporation.
- Refrain from irrigation during hot windy periods of the day.

Please share the above information with your family, friends, and neighbors.
For more information you may contact the City's Storm Water Hotline 619.667.1134.

STAY UP-TO-DATE ON IMPORTANT CITY NEWS, EVENTS, AND SERVICES.

Through the City's Notify Me website service you can subscribe to one or more categories of information and have email alerts sent to you whenever special announcements are made in your categories. Use the button at the left to sign up for this service. Enter your email address, select the type of email you would like to receive (html or text) and select each email list you wish to subscribe to. Finally, click the Subscribe/Manage button. You will receive a confirmation email for each category you select.

COUNCIL ACTIONS

January 13, 2009
Adopted a Resolution authorizing a Memorandum of Understanding with the California Bureau of Investigation, State Department of Justice, for the reimbursement of training funds from the San Diego Sexual Assault Felony Enforcement (SAFE) Grant.

Adopted a resolution authorizing the acceptance of the Fireman's Fund Grant for fire equipment and fire prevention materials.

Adopted a resolution approving the City of La Mesa, in partnership with the La Mesa branch of the San Diego County Library, to apply to the ICMA Public Library Innovation Grant Program for the "Ready…Set… Live Well" Community Wellness Initiative.

January 20, 2009
Approved short-term cost cutting measures for the General Fund.

January 27, 2009
Adopted a resolution authorizing the application and acceptance of funding from the California Department of Conservation's Division of Recycling for beverage container recycling and litter cleanup activities.

Adopted a resolution authorizing the filing of an application for Smart Growth Incentive Program funds through the San Diego Association of Governments for the La Mesa Downtown Streetscape Project.

Adopted a resolution authorizing the filing of an application for Smart Growth Incentive Program funds through the San Diego Association of Governments for Grossmont Trolley Station improvements.

Adopted a resolution authorizing the filing of an application for Smart Growth Incentive Program funds through the San Diego Association of Governments for the La Mesa Boulevard / El Cajon Boulevard intersection improvements.

Adopted a resolution authorizing the filing of an application for Smart Growth Incentive Program funds through the San Diego Association of Governments for the Spring Street Trolley Station Smart Growth Implementation Plan.

Adopted a resolution in support of a grant proposal by the San Diego Childhood Obesity Initiative to the Robert Wood Johnson Foundation to enhance the Live Well initiative.

Approved the expansion of administrative citations to include non-compliant foreclosured and abandoned properties.

February 10, 2009
Adopted a resolution accepting the M.O.U. between the Chula Vista Police Department and the La Mesa Police Department regarding the California Office of Traffic Safety "Operation Crack Down on Illegal Street Racing" grant and approving the addition of personnel costs to the FY 2008-2009, 2009-2010 budgets.

February 24, 2009
Adopted a resolution to amend the fiscal year 2008-09 Capital Improvement Program to include replacement of trash receptacles within the parking district and allocate up to $23,000 from the Downtown Parking Fund to pay for the new receptacles as recommended by the La Mesa Community Parking Commission.

Adopted a resolution amending Section 12.28.030 (24) and adding Section 12.28.030 (91.25) to the La Mesa Municipal Code designating Pomona Avenue as a stop street at Stanford Avenue.

March 10, 2009
Adopted a resolution approving amendments to Heartland Communications Facility Authority (HCFA) Joint Powers Agreement (JPA) deleting the East County Fire Protection District as a member agency and revising the formula for allocation of expenses.

Adopted a resolution authorizing execution of an agreement with the American Red Cross for use of La Mesa Community Services facilities in times of disaster.

Adopted a resolution accepting Bid No. 07-25 awarding a contract for Fire Station 13 renovation to Randall Construction, Inc. and appropriating available investment interest earnings to the project.

Adopted a policy related to placing items on the agenda by the public.

March 24, 2009
Ratified the Design Review Board's approval of DRB-09-01 (Henry's Farmers Market) - a proposed exterior remodel to an existing supermarket at 4630 Palm Avenue.

Ratified the Design Review Board's approval of DRB-09-03 (At&T) - a proposal for murals and roof screening at the At&T building located at 4711 Spring Street.

Adopted a resolution authorizing the acceptance of the FY08 State Homeland Security Grant Program (SHSGP) Grant for terrorism preparedness.

Adopted a resolution accepting an increase in the Hazard Elimination Safety Grant amount, accepting Bid. No 07-06, and awarding the construction contract for traffic signal modifications at Lake Murray Boulevard and El Paso Street to T & M Electric, Inc. DBA Perry Electric.

Adopted a resolution approving installation of three speed cushions on Dale Avenue between University Avenue and Normal Avenue.

Adopted a resolution authorizing a Memorandum of Understanding between the San Diego County Sheriff's Department and the La Mesa Police Department for mutual aid responses to emergency situations.

ADULT SOFTBALL
(18 YEARS AND OLDER)

REGISTRATION: Wed., July 22, 2009, 5:30 – 6:30 pm
- La Mesa Fire Station #12
  8844 Dallas Street
- Voice Mail 619.667.1172 #6
- Team rosters and game rules will be issued at time of registration.

SEASON*: 10 or more weeks beginning the week of August 17, 2009 (weather permitting).

FEE: $525 for season.
- Umpire fees not included - $15/game each team. The entire fee must be paid at time of registration. No partial payments.
- Payment options:
  a) one check b) all cash
  c) one check and the remainder cash
  d) credit card
- A $25 service charge and postage will be required on all returned checks. Payees will have one day to correct the problem to guarantee a position.
- A waiting list will be taken after reaching the maximum number of teams.

LOCATION: Junior Seau Complex, Field #1, 9009 Park Plaza Drive, entrance to La Mesita Park.

LEAGUES:** Wed/Fri. – Men
Mon/Tues/Thurs – Coed

GAME TIMES: Wed/Fri: 6:00 – 10:00 pm
Mon/Tues/Thurs: 6:00 – 9:00 pm

**Season length subject to change based on the number of teams*

***Minimum 4 teams required per night or league night is subject to change or cancellation.*

Storm Water Pollution Prevention
Tips for Outdoor Vendors

You may not be aware that in Southern California, the sewer system and storm drain system are separate. Storm drain inlets are commonly found along curbs with the intent of transporting or conveying storm water runoff into receiving water bodies, such as creeks, lakes and oceans. Unlike the sewer system, storm water runoff entering the storm drain system is not treated. Harmful pollutants, as listed below, can be transported during non-storm water discharges such as hosing down side walks or equipment. These types of pollutants are harmful to the environment and negatively impact water quality, aquatic animal and plant life as well as our quality of life. Non-storm water discharges are prohibited and in violation of the City Ordinance. A list of common pollutants and pollution prevention tips are provided below.

Pollutants of Concern

1. Sediment
2. Fertilizers
3. Metals
4. Detergents
5. Pesticides
6. Organic Compounds (solvents)
7. Trash and Debris
8. Oil and Grease
9. Bacteria

Good House Keeping

- Dry sweep exterior paved areas. **Do not use a hose or water!** Place debris in dumpster and keep dumpster lid closed.
- If you must use water for cleaning, use a mop and bucket. Dispose of wash water into the sanitary sewer system (sink or toilet). Wash water is not allowed to enter the storm drain.

Outdoor Material and Equipment Management

- Store material under covered areas.
- Place liquid material in secondary containment to ensure spills are contained.
- Ensure that frying oil is contained and managed properly without dropping/leaking on to the pavement.
- If using frying oil, ensure that you purchase absorbent material (absorbent pads) to address cleanup of potential oil spills.
- Inspect/fix equipment to ensure no leaks.
- Do not wash equipment at the event!

Waste Management

- Place trash in dumpsters with lids always closed.
- Cleanup leaks/spills immediately and place waste material into the dumpster

Should you require clarification or additional information on storm water pollution prevention, please contact the City's Storm Water Hotline (619) 667-1134.

ATTACHMENT 8.2

CONSTRUCTION SITE MANAGEMENT TRI FOLD

6) **Sediment Tracking** – Construct a stabilized construction entrance and conduct frequent street sweeping to keep sediment off of roadways.

7) **Materials Management** – Protect stockpiles of soil and paving materials from wind and water erosion. Have a spill prevention and control plan for hazardous materials such as fuel, paints and solvents.

8) **Waste Management** – properly store and dispose of solid, hazardous, concrete, and sanitary wastes. Cleanup spills immediately.

9) **Non-Storm Water Discharges**

- **Paving/grinding** – Protect inlets from slurry seal operations and vacuum saw cut slurry and grinding residue.
- **De-watering** – Use accumulated water for dust suppression or consult with City staff and the Regional Water Quality Control Board when dewatering operation is proposed.
- **Potable Water/Irrigation** – Shut off water source to broken lines, sprinklers or valves as soon as possible and direct water away from pollutant sources.

For further assistance, detailed BMP information from the above list can be downloaded from the City's Storm Water Pollution Prevention website.

Storm Water Best Management Practices (BMPs)

A Guide for Construction Activity

Provided by the City of La Mesa
Department of Public Works
Storm Water Program

8130 Allison Ave
La Mesa, CA
91941

(619) 667-1134
www.cityoflamesa.com

Storm Water Pollution

Construction activities can have a significant impact on water quality due to soil disturbances and the types of materials and equipment used. As storm water flows over a construction site, it can pick up pollutants such as sediment, oil, fuels, paints, adhesives, trash, debris and fertilizers. Polluted storm water runoff can harm or kill fish and other wildlife, and can destroy aquatic habitat.

Best Management Practices (BMPs)

In order to reduce, or eliminate, erosion and pollutant discharges into La Mesa's storm drain system, owners and operators of all construction sites are required to implement Best Management Practices (BMPs). BMPs are techniques or physical controls utilized to prevent pollution.

Permit/Regulatory Requirements

The following permits and ordinances must be considered before construction or grading activity commences:

- **State Construction General Permit** – Projects which disturb one acre or more of soil must obtain coverage by submitting a Notice of Intent to the State Water Resources Control Board and preparing a Storm Water Pollution Prevention Plan (SWPPP).
- **Storm Water Management Ordinance -** Review Chapter 7.18 of the La Mesa Municipal Code (LMC) for local storm water requirements and penalties for noncompliance.
- **Grading Ordinance** – Chapter 14.05 of the LMC requires additional erosion control requirements during grading activities. Consult with the Engineering Division to determine if a grading permit is needed.
- **Building Permits** – Contact the Building Division to determine what building permits may be needed. Storm water BMP notes must be shown on site plans.
- **Encroachment Permits** – A permit is needed when working in the public right-of-way. Please contact the Engineering Division for specific requirements.

Inspection Program

City staff monitors constructions sites for proper erosion and sediment controls all year long, with more frequent inspections occurring during the wet season (October 1 through April 30). Inspectors will evaluate BMP implementation, effectiveness and maintenance.

Sites Covered Under State Construction General Permit (Over 1 Acre):

- These sites are also subject to inspections by the Regional Water Quality Control Board (RWQCB).
- Self-inspections are required before forecasted rain events, during each 24-hour rain event, and following a rain event.

Minimum BMPs

Construction projects within the City will be required to implement at least one of the BMPs from each category below when applicable to the site. Please refer to the following list while planning your project to ensure compliance with City and State requirements and to prevent storm water pollution. Brief examples of BMPs have been mentioned within each category, but do not represent a complete list.

1) **Planning and Scheduling** – Minimize land disturbance during the wet season.

2) **Slope Stabilization** – Preserve existing vegetation and stabilize slopes with hydraulic mulch or erosion control blankets.

3) **Site Drainage** – Install outlet protection devices to reduce velocity and erosion potential of storm water flows.

4) **Sediment Perimeter Protection** – Install silt fencing, straw rolls or a gravel bag barrier to prevent sediment discharges.

5) **Sediment Capture** Protect all storm drain inlets with gravel bags. For sites over an acre, inlet controls should be used in conjunction with a sediment basin/trap.

CONSTRUCTION SWPPP INFORMATION

State General Construction Permit

Your construction project may be subject to the State of California General Construction Permit. Construction activities subject to this permit include clearing, grading, disturbances to the ground such as stockpiling, or excavation that results in soil disturbances of a at least one acre of total land area. Construction activity that result in soil disturbances of less than one acre is subject to this permit if the construction activity is part of a larger common plan of development that encompasses one or more acres of soil disturbance or if there is significant water quality impairment as a result.

Planning Document Review

If your project is subject to the General Construction Permit, a Notice of Intent (NOI) and filing fee, and preparation of a Storm Water Pollution Prevention Plan (SWPPP) and Monitoring Program are required prior to commencement with project activities. The SWPPP is required to be submitted to the City of La Mesa for review. Prior to submitting a SWPPP to the City for Review, ensure that the following items are addressed

Common Problems

- ☑ Provide a copy of the NOI Application, letter sent to you by the State Water Resources Control Board with Waste Discharge Identification Number (WDID).
- ☑ Ensure the owner and or contractor sign the certification forms.
- ☑ Ensure personnel assigned to various tasks i.e. inspections are presented in the SWPPP and their role is clearly defined.

- ☑ Ensure vicinity map shows the general topography.
- ☑ Provide selected Best Management Practices (BMPs) specifically for the project.
- ☑ Place BMPs on the map.
- ☑ Provide site-specific information for materials list.
- ☑ Ensure text correspond with appendices and is consistent.
- ☑ Provide information on Post-Construction BMPs and funding source.
- ☑ Review the General Construction Permit to ensure all components have been addressed.

Ensure the following items are incorporated into your SWPPP & Monitoring Program:

	Permit Section
Vicinity Map (graphic)	***A.5.a.1***
Major roadways, geographic features or landmarks	A.5.a.1
Site perimeter	A.5.a.1
Geographic features	A.5.a.1
General topography	A.5.a.1
Site Map (graphic) (can modify Parcel Map)	***A.5.a.2***
Site perimeter	A.5.a.2
Existing and proposed buildings, lots, and roadways	A.5.a.2
Storm water collection and discharge points	A.5.a.2
General topography before and after construction	A.5.a.2
Anticipated discharge location(s)	A.5.a.2
Drainage patterns	A.5.a.2
Relevant drainage areas	A.5.a.2
Temporary on-site drainage	A.5.a.2
Drainage (graphic)	***A.5.b.1***
Drainage patterns	A.5.b.1
Slopes after major grading	A.5.b.1
Calculations for storm water run-on	A.5.b.1
BMPs that divert off-site drainage from going through site	A.5.b.1
Storm Water Inlets (graphic)	***A.5.b.2***
Drainage patterns to storm water inlets or receiving water	A.5.b.2
BMPs that protect storm water inlets or receiving water	A.5.b.2
Site History/Past Site Usage (Real Estate Broker Disclosure may be sufficient)	***A.5.b.3***
Description of toxic materials treated, stored, or spilled on site	A.5.b.3
BMPs that minimize contact of contaminants with storm water	A.5.b.3
Location of Areas Designated for: (graphic)	***A.5.b.4***
Soil or waste storage	A.5.b.4
Vehicle storage & service	A.5.b.4
Construction material loading, unloading, and access	A.5.b.4
Equipment storage, cleaning, maintenance	A.5.b.4
BMP Descriptions for: (graphic or narrative)	***A.5.b.5***

OVER IRRIGATION FACT SHEET

City of La Mesa
Storm Water Pollution Prevention
Over-Irrigation

You may not be aware that in Southern California, the sewer system and storm drain system are separate. Storm drain inlets are commonly found along curbs with the intent of transporting or conveying runoff to the nearest receiving water body, such as creeks, lakes and oceans. Unlike the sewer system, runoff entering the storm drain system is not treated but directly discharged into a receiving water body. Pollutants ultimately impact water quality, aquatic animal and plant life as well as our quality of life. Releasing pollutants into the storm water system is a violation of our City Ordinance.

With La Mesa's clay soils, it doesn't take much to moisten the ground before water starts running off your property to the curb, down the street and into the storm drain. Runoff from over-irrigation may transport pollutants such as sediment, pesticides, fertilizers, pet waste, bacteria, and automobile fluids. These pollutants enter our local creeks and streams and discharge into the ocean.

Over-irrigation is not prohibited; however, the following measures are recommended.

1. Over-irrigation runoff shall not carry or transport sediment, leaf debris, and other pollutants into the storm drain inlets.
2. Irrigate to meet site-specific conditions to prevent over-watering.
3. Ensure that your irrigation system has control devices, sensors or shut-off switches to address malfunctions.
4. Place or group plants with similar water needs within the same area.
5. Don't irrigate non-planted areas.
6. Inspect your irrigation system regularly for potential problems
7. Consider drip irrigation to save water and prevent over-irrigation and runoff.
8. Adjust irrigation rates according to seasons, weather conditions and the soil's ability to absorb water. Instead of watering for 15-minutes straight, break up the session into 5-minute intervals, allowing water to soak in before the next application.
9. Irrigate in the early morning; it's the most efficient time to water plants with minimal evaporation.
10. Refrain from irrigation during hot, windy periods of the day. Do not let water run out into the street.

Do the right thing, stay in compliance and protect our environment. For more information contact the City's Storm Water Hotline (619) 667-1134.

ATTACHMENT 8.5

CHOLLAS CREEK TMDL FACT SHEET

Chollas Creek TMDL Fact Sheet

What are the Chollas Creek TMDLs?
In 2003 and 2007, Total Maximum Daily Load (TMDL) allocations for the pesticide diazinon and for heavy metals (copper, lead, and zinc), respectively, were adopted by the Regional Water Quality Control Board (a State Regulatory Agency) for Chollas Creek. The regulations establish strict numeric limits on the amounts of heavy metals and diazinon that can be present in urban runoff. Southwestern La Mesa, roughly bounded by El Cajon Boulevard to the north and Spring Street to the east (see map), eventually drains to Chollas Creek and is subject to these requirements. Businesses within this area are impacted by these new requirements. The City is monitoring water quality near your business to identify and eliminate sources of these pollutants to comply with new State regulations. The following activities/sources contribute to the discharge of heavy metals and diazinon.

Heavy metals are commonly associated with industrial waste, uncontained storage of certain metal products or materials (such as galvanized steel), cutting and grinding activities, atmospheric deposition, metal smelting or plating, and automobile tires and brakes.
Diazinon is a pesticide associated with landscaping activities. It has been banned for use and is no longer available at retail outlets. Diazinon acquired prior to the ban should be disposed of in accordance with state and federal regulations.

What is the City of La Mesa doing about these TMDLs?
The City's many efforts to protect water quality and comply with State regulations include regularly sweeping its streets and cleaning out its storm drain system, inspecting businesses and construction sites, and applying strict water pollution control standards to new development projects.

What do these TMDLs mean for my business?
The City's Municipal Code requires that businesses take measures to ensure that urban runoff (water that leaves your business and enters storm drains) is not contaminated with pollutants. Chapter 7.18 of the Municipal Code requires businesses to implement measures including those listed below. Taking these actions will help meet TMDL requirements.

- Eliminate non-storm water discharges, such as hosing off property and allowing the water to leave the site, dumping liquids into a storm drain, and runoff from excessive irrigation.
- Cover and contain metal products or materials that may contain heavy metals where feasible. Examples of such materials include galvanized metal, brake pads, tires, and metal recycling bins.
- Conduct metal cutting, grinding, welding, automotive or equipment repair, and similar activities in indoor, contained areas where feasible.
- Regularly sweep paved areas of your site to keep them clean and dispose of debris appropriately.
- Do not use any product containing diazinon. Contact County of San Diego Hazmat for instructions on proper disposal (619-338-2231).
- Store all pesticides and fertilizers in covered and contained areas. Consider alternative, non-chemical pest control methods.
- Do not apply pesticides before storms and eliminate overspray of pesticides onto paved surfaces.

If you observe illegal dumping into a storm drain, please report it to the City at 619-667-1134.

ATTACHMENT 8.6

RESIDENTIAL PREVENTING URBAN RUNOFF POLLUTION BROCHURE

Pollutants of Concern

As rainfall flows over the ground, it picks up a variety of pollutants and deposits them into our watersheds. The following pollutants are commonly transported in the storm drain system and have been found to degrade water quality.

- Sediments
- Fertilizers
- Metals
- Detergents
- Pesticides
- Organic Compounds (solvents)
- Trash and Debris
- Oil and Grease
- Bacteria and Viruses

The following Best Management Practices (BMPs) are required to be used in residential areas to reduce urban runoff pollution in our streams and waterways. To do your part in protecting our water quality, please implement the following BMPs, where applicable or checked by the City inspector.

Maintenance & Good Housekeeping

- ❑ Regularly, dry sweep exterior paved areas. **Do Not use a hose!** Place debris in the dumpsters.
- ❑ If you must use water for cleaning, use a mop and bucket. Dispose of wash water into the sanitary sewer (sink or toilet).
- ❑ Water used for cleaning exterior surfaces must be contained and disposed of into the sanitary sewer in compliance with local regulations. Wash water is not allowed to enter the storm drain or leave the property.
- ❑ Regularly inspect and maintain storm drain inlets.

Landscaping

- ❑ Only irrigate during early morning or late evening to avoid evaporation.
- ❑ Aim sprinklers to avoid watering other areas.
- ❑ Time sprinklers to avoid over watering and causing runoff.
- ❑ Minimize pesticide, herbicide and fertilizer use, which are harmful to animals downstream.
- ❑ Hand pull weeds instead of using herbicides.
- ❑ Do not use pesticides that eliminate beneficial insects (i.e., Integrated Pest Management).

Outdoor Material Storage

- ❑ Store all material indoors or under a covered area not exposed to rain. Include secondary containment for liquid material.
- ❑ Have a spill response kit available to clean up potential spills such as kitty litter or other absorbents.
- ❑ Keep material storage areas free from rainwater accumulation.
- ❑ Keep lids closed on all outdoor storage containers and ensure containers are labeled.

Waste Management

- ❑ Keep all outdoor garbage and dumpster areas free of trash, sediment and debris.
- ❑ Keep lids closed on dumpsters and trash cans and never wash down dumpsters.
- ❑ Fix any leaks in garbage cans or dumpsters.
- ❑ Schedule regular waste pick-up.

Vehicle /Equipment Maintenance

- ❑ Perform all vehicle maintenance indoors when possible.
- ❑ Use drip-pans to collect fluids from leaky vehicles.
- ❑ Clean up spills immediately using kitty litter or other absorbents. Properly dispose of used absorbents.

Vehicle /Equipment Washing

- ❑ Wash vehicles at a commercial car wash when possible. (Commercial car washes drain to the sanitary sewer and not to the storm drain).
- ❑ Wash vehicles over a pervious (absorbent) surface such as dirt, gravel or grass to prevent runoff.
- ❑ Minimize the use of soaps and water while washing.
- ❑ Protect storm drains or curb inlets and then collect all wash water by vacuum. Recycle or dispose of wash water via the sanitary sewer system.
- ❑ Drain excess wash water to the sanitary sewer (sink or toilet), not to storm drains.

Loading Areas & Operations

- ❑ Load and unload in designated areas.
- ❑ Regularly dry sweep loading and unloading areas.
- ❑ If possible, cover loading areas.
- ❑ Divert storm water away from all loading and unloading areas.
- ❑ Check shipments and trucks for leaks and spills.
- ❑ Cleanup spills/leaks immediately and dispose of properly.
- ❑ If you must use water for cleaning, use a mop and bucket and dispose of wash water into the sanitary sewer.
- ❑ Major cleaning of exterior surfaces must include capturing all wash water and disposing of it into the sanitary sewer in compliance with local regulations. Wash water should not be allowed to enter the street gutter or storm drains.

treated by the City of San Diego at a wastewater treatment plant.

The storm drain system, on the other hand, is designed to carry rainwater from City streets and driveways to prevent flooding. This water does not receive any treatment. It flows directly to creeks and rivers – terminating at the Pacific Ocean!

Unfortunately, as rainfall flows over the ground it picks up debris and pollutants and deposits them into our watersheds.

City of La Mesa
Storm Water Pollution Prevention
Pools & Spas

You may not be aware that in Southern California, the sewer system and storm drain system are separate. Storm drain inlets are commonly found along curbs with the intent of transporting or conveying runoff to the nearest receiving water body, such as creeks, lakes and oceans. Unlike the sewer system, runoff entering the storm drain system is not treated but directly discharged into a receiving water body. Pollutants ultimately impact water quality, aquatic animal and plant life as well as our quality of life. Releasing pollutants into the storm water system is a violation of our City Ordinance.

Discharging of pool or spa water is not prohibited; however, the following measures are required.

1. Water shall not carry or transport sediment, leaf debris, and other pollutants into the storm drain inlets.
2. Pool water must be dechlorinated
3. Water pH acceptable range from 7 to 8
4. No algae present in water
5. Water shall not contain chemicals to counteract the chlorine
6. Water does not contain hydrogen peroxide based products
7. Controlled discharge eliminating potential for erosion

Chlorine

Test pool or spa water for chlorine prior to discharge. Chlorine naturally dissipates overtime and if pool or spa water is left 3 to 5 days, it will become dechlorinated. Pool water needs to be drained before it turns green. Draining pool water gradually over landscaped areas will help prevent erosion problems.

Pool Filters

Pool filters should be cleaned over landscaped areas or anything that will absorb the discharge. Material may be collected over a filter cloth and disposed of in the trash. Filter backwash must be discharged into the sewer system with a pH of 5 to 12.5.

Pool Construction

Material must be contained and disposed of appropriately. Waste generated from plaster, gunite, cement, sediment, and other construction materials is prohibited from entering the storm drain system.

Do the Right Thing, Stay in Compliance and Protect Our Environment. For more information, contact the City's Storm Water Hotline (619) 667-1134.

ATTACHMENT 8.8

SAN DIEGO RIVER AND SAN DIEGO BAY FACT SHEETS

San Diego River Watershed Fact Sheet

What is a watershed? A watershed consists of all land and waterways that drain into the same body of water. There are 11 watersheds within San Diego County. Drainage from La Mesa flows through two of these watersheds: the San Diego River and the San Diego Bay. Your business or facility is located within the San Diego River Watershed.

San Diego River Watershed

The San Diego River Watershed is comprised of 443 square miles. It extends from the mountains near Julian to the Pacific Ocean. Portions of the watershed fall within the cities of El Cajon, Poway, San Diego, Santee, several unincorporated areas, and the City of La Mesa. Primary tributaries to the San Diego River include Boulder Creek, Conejos Creek, Los Coches Creek, San Vicente Creek, and Forester Creek. Alvarado Creek in La Mesa is also tributary to the San Diego River. Alvarado Creek flows into the San Diego River and ultimately into the Pacific Ocean between South Mission Beach and Ocean Beach near Dog Beach.

Pollutants of concern listed in the 2002 Clean Water Act Section 303(d) List Of Water Quality for the lower San Diego River Watershed include fecal coliform (sewage/urban runoff), low dissolved oxygen (decay of organic matter), total dissolved solids (industrial waste/chemical spills), and phosphorus (phosphate based detergents). Between 1996 and 1999, coliform bacteria more than doubled due to urban runoff and sewage.

Other pollutants of concern not listed above include pesticides such as Diazinon and Chlorpyrifos (commercial, agricultural, and residential application), Total Suspended Solids/Turbidity (suspended sediment/solids, construction, sewage, eutrophication), Copper and Zinc (industrial waste or automobiles), and pH/Phosphate (industrial waste, automobiles, sewage, fertilizers, eutrophication, hardening/concrete of creeks).

Ensuring that urban runoff is not contaminated with pollutants as a result of your business activities is an integral component in preserving the quality of life in San Diego County. It is your responsibility to help prevent these pollutants from entering the watershed in order to protect the environment and safe guard the natural resources. Introducing pollutants into the environment as a result of your business activities may contribute to beach closures and limit other recreational activities.

What Can You Do?

Remember, the only water that should enter the storm drain is rainwater. Do not hose down your property to ensure pollutants such as sediment, oil and grease, fertilizers, herbicides and pesticides, surfactants (soap), metals, trash, and other debris are not inadvertently flushed into the storm drain contributing to gross contamination of urban runoff. Store materials properly to ensure it is not exposed to storm water. Do not over-irrigate your landscape. If you observe illegal dumping into a storm drain, you should call the City's storm water pollution prevention hotline at (619) 667-1134 to report the incident or visit the City's Website *www.cityoflamesa.com/Departments/PublicWorks/NPDES.htm*.

Good housekeeping and pollution prevention equates to improved water quality, and a cleaner environment equates to a better quality of life for everyone.

San Diego Bay Watershed Fact Sheet

What is a watershed? A watershed consists of all land and waterways that drain into the same body of water. There are 11 watersheds within San Diego County. Drainage from La Mesa flows through two of these watersheds: the San Diego Bay and the San Diego River. Your business or facility is located within the San Diego Bay Watershed.

San Diego Bay Watershed

The San Diego Bay Watershed is comprised of 415 square miles. It extends from the Laguna Mountains to San Diego Bay. The watershed falls within the cities of La Mesa, Chula Vista, Coronado, Imperial Beach, Lemon Grove, National City, San Diego, and unincorporated areas of the County. Approximately 4 square miles in the southern portion of the City of La Mesa is part of this watershed. The major discharge sources to San Diego Bay include Sweetwater River, Otay River, Chollas Creek, Paleta Creek, Paradise Creek, and Switzer Creek.

Three drainage basins in the City of La Mesa are part of the San Diego Bay Watershed. Runoff from the Spring Valley Basin flows to the Sweetwater River. Runoff from the University Channel and Lemon Grove Basin contribute to Chollas Creek. The aforementioned creek and river flow into San Diego Bay.

Pollutants of concern associated with the watershed include diazinon, copper and zinc, fecal coliform, turbidity, and total suspended solids. The sources of these pollutants are a result of residential, agriculture or commercial pesticide application, automobiles and industrial waste, sewer spills, encampments, wildlife, erosion, suspended sediment, and fertilizers. Pollutants of concern for Chollas Creek in particular include metals such as copper, lead, zinc, cadmium, and coliform bacteria.

Ensuring that urban runoff is not contaminated with pollutants as a result of your business activities is an integral component in preserving the quality of life in San Diego County. It is your responsibility to help prevent these pollutants from entering the watershed in order to protect the environment and safe guard the natural resources. Introducing pollutants into the environment as a result of your business activities may contribute to beach closures and limit other recreational activities.

What Can You Do?

Remember, the only water that should enter the storm drain is rainwater. Do not hose down your property to ensure pollutants such as sediment, oil and grease, fertilizers, herbicides and pesticides, surfactants (soap), metals, trash, and other debris are not inadvertently flushed into the storm drain contributing to gross contamination of urban runoff. Moreover, store materials properly to ensure it is not exposed to storm water and do not over-irrigate your landscape. If you observe storm water pollution or illegal dumping into a storm drain, you should call the City's Storm Water Pollution prevention hotline at (619) 667-1134 to report the incident or visit the City's Website *www.cityoflamesa.com/Departments/PublicWorks/NPDES.htm*.

Good housekeeping and pollution prevention equates to improved water quality, and a cleaner environment equates to a better quality of life for everyone.

DAVID E. WITT, A.I.C.P.
INTERIM CITY MANAGER

CERTIFICATION STATEMENT

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete.

I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

David E. Witt
Interim City Manager

Date: December 2009

Telephone Number: (619) 667-1195

8130 ALLISON AVENUE • LA MESA, CA 91942 • TEL: 619.667.1195 FAX: 619.462.7528

INTRODUCTION AND CONTENTS

Introduction

Section 7 of the Annual Report discusses the implementation of the illicit discharge detection and elimination (IDDE) component of the City's storm water program. This program consists of dry weather monitoring activities and other activities intended to prevent and respond to illicit connection and illicit discharges, such as operating a storm water hotline. The reporting period for the portions of this section that discuss dry weather monitoring activities have been extended through September 30, 2009, but the reporting period for other activities described in the section was not changed and thus extends through June 30, 2009, consistent with rest of the JURMP Annual Report. Because the field work for the dry weather monitoring program is not required to be completed until September 30, 2009, the same day that the JURMP Annual Report is to be submitted, the RWQCB extended the submittal deadline for all of Section 7 of the 2008/2009 JURMP Annual Report until December 15, 2009.

Contents

This submittal includes a certification statement, the text of Section 7 of the 2008/2009 JURMP Annual Report, and the attachments associated with that section. For clarity, the items included in this submittal are listed below.

- Certification Statement for Section 7 Submittal
- Introduction and Contents
- Section 7 (IDDE Component) of the 2008/2009 JURMP Annual Report
- JURMP Annual Report Requirements Checklist (for Section 7 only)
- Attachment 7.1, City of La Mesa Dry Weather Field Screening and Analytical Monitoring Program 2009

Please note that the complaint log, referenced as Appendix B in Section 7, was already provided with the main JURMP Annual Report submittal in September 2009 and is not included again with this December submittal.

7.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION

7.1 INTRODUCTION

The City maintains several programs to prevent and to seek out and eliminate illicit connections and illicit discharges (IC/IDs), which can be significant sources of pollutants to the City's MS4. Illicit discharges may result from activities such as vehicle washing or equipment cleaning without the use of proper BMPs. Illicit connections include improper links to the MS4, typically of conveyances that should be plumbed to the sanitary sewer system, such as car wash facility drains. City storm water personnel work with residents, businesses, and City staff to make them aware of BMPs to prevent IC/IDs and to encourage reporting of IC/IDs. The following activities are the primary components of the City's program to combat IC/IDs:

- Inspecting local businesses, construction sites, and municipal facilities
- Conducting the Dry Weather Field Screening and Analytical Monitoring Program (Dry Weather Monitoring Program)
- Operating a public complaint hotline

These activities enable the City to provide a comprehensive system to improve the quality of storm water and urban runoff throughout the City through detection and elimination of IC/IDs.

7.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the illicit discharge detection and elimination component during the 2008/2009 reporting period are presented in the following bulleted list. Please note that per Addendum No. 2 to the Municipal Permit, the reporting period for the Dry Weather Monitoring Program was extended through September 30, 2009. The reporting period for all other components of the City's illicit discharge detection and elimination (IDDE) program ended on June 30, 2009.

- Twenty IC/IDs were discovered and reported during the 2008/2009 reporting period. All were followed up on by City personnel, and enforcement measures were applied as necessary.
- The City recorded and investigated 107 Storm Water Hotline complaints (Appendix B, which was included with the September 2009 JURMP Annual Report submittal).
- The City performed the recommended corrective actions proposed in the 2008 Dry Weather Monitoring Program Report to remove trash and leaves from the storm drain system.
- The City conducted the 2009 Dry Weather Monitoring Program.

7.2 Public Reporting of Illicit Discharges and Connections

See also Section 4.8 of this JURMP Annual Report.

Reporting and Response

Public and municipal involvement are crucial to preventing and eliminating IC/IDs from the storm water conveyance system. The Storm Water Hotline provides an effective means for individuals in the City to report suspected IC/IDs. The hotline number is provided on the City's website, in distributed storm water educational material, in storm water articles in the *La Mesa Focus* newsletter, and on the Storm Water Bulletin Board. Storm water complaints may also be reported through the City's website. All complaints received through the hotline and website are logged onto a spreadsheet for documentation and tracking. Each logged complaint is investigated by City personnel to determine if an IC/ID is present. Responsible parties for any confirmed IC/ID are sought out and educated and/or cited as necessary and required to stop any and all illegal discharges. See Figure 7-1 for a map of complaints within the City and their corresponding responsible party type. The Public Works Department also receives complaints regarding storm water, often due to infrastructure concerns. Complaints to the Public Works Department are also tracked and investigated. See Figure 7-2 for a map of all complaints reported to Public Works and to the Storm Water Hotline.

Complaints received by the City during the 2008/2009 reporting period and the City's response to each are listed in Appendix B, which was included with the September 2009 JURMP Annual Report submittal. A total of 107 complaints were documented this year.

Enforcement

As previously stated, complaints received via the Storm Water Hotline, City website, and Public Works hotline are included in a table in Appendix B. The table also includes a description of how each complaint was resolved during the reporting period. Resolutions to investigated complaints included issuing warnings, violations, and/or educational material. See Figure 7-3, at the end of this section, for a map of these enforcement actions within the City.

7.3 Spill Reporting, Response, and Prevention

See Section 4.9 of this JURMP Annual Report.

7.4 Urban Runoff Monitoring

The City has continued to conduct a Dry Weather Monitoring Program, as required by the Municipal Permit. This program assists the City in detecting and eliminating IC/IDs to the storm drain system. There are three major components to the Dry Weather Monitoring Program:

- Field observations, which include site descriptions and qualitative observations

- Field screening, which includes flow estimation and sample testing using meters and test kits at the site
- Analytical monitoring, which involves submittal of collected samples from selected sites, constituting 25 percent of all flowing or ponded sites, to an analytical laboratory for additional testing

The City visits all designated primary monitoring stations each year between May 1 and September 30 to collect dry weather monitoring data. When a primary monitoring station is found to be dry, the City visits designated alternate monitoring stations.

Numeric action levels are used as the primary approach for the interpretation of most constituent concentrations measured in the field and laboratory. Action levels for dissolved metals follow the California Toxics Rule (CTR) Criteria Maximum Concentration (CMC). Temperature, turbidity, and conductivity parameters are evaluated using best professional judgment to determine if further investigation is needed. The action levels for pH, surfactants, ammonia-nitrogen, nitrate-nitrogen, orthophosphate-phosphorus, oil and grease, diazinon, and chlorpyrifos were adopted in 2003 and were based on statistical analyses of previous Dry Weather Monitoring Program data, established water quality benchmarks from the Basin Plan, and the United States Environmental Protection Agency Multi-Sector General Permit.

The Regional Monitoring Workgroup in November 2008 requested the Dry Weather Monitoring Sub-workgroup to evaluate dry weather action levels that were submitted in April 2003 by the County of San Diego on behalf of the Copermittees. The Dry Weather Monitoring Sub-workgroup determined that the bacterial indicators action levels required additional analysis. All other action levels were deemed appropriate and will not change. The Dry Weather Monitoring Sub-workgroup contracted the services of D-MAX Engineering (D-MAX) through the City of La Mesa to conduct the evaluation of historical bacterial data collected from dry weather monitoring from 2002 through 2007. Details of their evaluation are posted on the Project Clean Water Website at http://www.projectcleanwater.org/pdf/science_mon/dry_weather_2009bacteria_action_level_report_draft.pdf. The Regional Monitoring Workgroup on May 19, 2009 evaluated the recommendations of the Dry Weather Monitoring Sub-workgroup and selected the 80th percentile values to be proposed as the dry weather action levels for bacterial indicators beginning on May 1, 2010. The current levels and the levels proposed for use beginning May 1, 2010 are presented in Table 7-1.

TABLE 7-1
Bacterial Indicators Action Levels for Dry Weather Monitoring Program

	Total Coliform (MPN/100 mL)	**Fecal Coliform (MPN/100 mL)**	***Enterococcus* (MPN/100 mL)**
2003-2009 Action Levels	50,000	20,000	10,000
Proposed 2010 -2012 Action Levels	130,000	13,000	7,000

7.4.1 2008 DRY WEATHER MONITORING PROGRAM

During the 2008 Dry Weather Monitoring Program, 20 primary monitoring stations and one alternate monitoring station were visited. One of the primary sites was observed to be dry, so alternate Site 907-ALV-580 was chosen as a replacement for field screening. Only three sites had constituents measured above action levels in 2008, primarily for indicator bacteria. For further information about how the City addressed notable findings of the 2008 Dry Weather Monitoring Program and responded to the resulting recommendations, see Section 7.5.1 of this report.

7.4.2 2009 DRY WEATHER MONITORING PROGRAM

2009 Results

The City's storm water consultant, D-MAX, conducted the 2009 Dry Weather Monitoring Program in June 2009. Twenty primary monitoring stations and one alternate monitoring station were visited. Since primary Site 907-ALV-003 was dry, alternate Site 907-ALV-580 was visited.

A summary of action level exceedances for field and laboratory constituents is provided in Table 7-2. The results of all follow-up investigations are presented in Table 7-3, in Section 7.5.2 of this report. A list of all the monitoring stations visited is displayed in Table 7-4. Also in this section, the complete field analytical and laboratory analytical results are included as Table 7-5 and Table 7-6, respectively.

Table 7-2
Summary of Action Level Exceedances

Field Screening (20 samples)			
Analyte	**Number of Exceedances**	**Percentage of Sites with Exceedance**	**Site(s) Exceeding Action Level**
pH	1	5	907-ALV-640
Conductivity	0	0	---
Turbidity	0	0	---
Surfactants	3	15	907-ALV-006 908-LEM-520 908-UNI-002
Ammonia-Nitrogen	0	0	---
Nitrate-Nitrogen	1	5	908-UNI-005
Orthophosphate-Phosphorus	0	0	---

Laboratory Analyses (6 samples)			
Analyte	**Number of Exceedances**	**Percentage of Sites with Exceedance**	**Site(s) Exceeding Action Level**
Oil & Grease	0	0	---
Cadmium	0	0	---
Copper	1	5	908-UNI-003
Lead	0	0	---
Zinc	0	0	---
Diazinon	0	0	---
Chlorpyrifos	0	0	---
Total Coliforms	1	5	907-ALV-002
Fecal Coliforms	0	0	---
Enterococci	1	5	907-ALV-002

Note: Data is from the initial site visits only; data from follow-up investigations is not included.

Follow-up investigations conducted in response to action level exceedances are summarized in Section 7.5.2 of this report.

A formal trash assessment was performed in 2009 in accordance with the Municipal Permit requirements. A qualitative estimate of the abundance of trash is made based upon a general impression of the site. The Trash Assessment Form's five categories are primarily qualitative descriptions of the amount and extent of trash although a number of trash pieces is also included in each category as a rough guideline. The five categories are defined as follows.

- Optimal: On first glance, no trash visible. Little or no trash (<10 pieces) evident when evaluated area is closely examined for litter and debris.
- Suboptimal: On first glance, little or no trash visible. After close inspection small levels of trash (~10-50 pieces) evident in evaluated area.
- Marginal: Trash is evident in low to medium levels (~51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
- Submarginal: Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (~100-400 pieces). Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
- Poor: Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (>400 pieces).

The threat to human health and threat to aquatic health is also assessed at each site. Prior to the beginning of the 2009 dry weather season, the Dry Weather Monitoring Sub-workgroup added additional detail to the definitions of these categories to help achieve a greater level or inter-jurisdictional consistency. The definitions are as follows:

- *Threat to Human Health* – Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment.
- *Threat to Aquatic Health* – Large amount (50 pieces or more) of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amounts of settleable, degradable, and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries, or spray cans; any evidence of large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment.

Twenty-one sites were assessed during the 2009 Dry Weather Monitoring Program, and most of the sites were rated optimal, having little or no trash. Five sites were rated as suboptimal, and two sites had a marginal trash score. Notably, none of the sites visited had conditions warranting a submarginal or poor trash rating. Additionally, none of the trash observed was determined to pose a threat to human or aquatic health. Actions taken by the City in response to the results of the trash assessment are described in Section 7.5.2 of this report.

The 2009 Dry Weather Monitoring Program Report can be found as Attachment 7.1.

7.5 Follow-up and Enforcement

7.5.1 Actions Taken in Response to the 2008 Dry Weather Monitoring Program Findings

Based on the 2008 Dry Weather Monitoring Program results, three follow-up recommendations were made. In response to these recommendations, leaves and trash were removed from the storm water conveyance at Site 908-ALV-002, and upstream location 908-ALV-002-2. Trash was also removed from Site 908-UNI-002. The City has worked with the Vons Shopping Center property management upstream of Site 908-UNI-004 regarding removal of leaf debris and litter from storm drains onsite. In the past, the City had discussed general storm water pollution prevention issues and had requested a Storm Water Monitoring Plan and Best Management Practices Plan from the property owner. Since the 2008 Dry Weather Monitoring Program, the City has

followed up with property management regarding catch basin cleaning, dumpster maintenance, and other required pollution prevention issues.

7.5.2 2009 Dry Weather Monitoring Follow-Up Investigations

If the results of the field or laboratory analyses exceed specific action levels, follow-up investigations are required within two business days. Upstream investigations are performed when exceedances are verified during confirmation visits. See the City's JURMP for a complete discussion of upstream investigation procedures.

Table 7-4 presents conclusions based on the results of confirmation visits and, where necessary, upstream investigations conducted at three sites during the 2009 Dry Weather Monitoring Program.

Table 7-3
Summary of Follow-up Investigations

Site	Upstream Investigation Target Constituent(s)		Results / Probable Source
	Field	Laboratory	
907-ALV-002	---	Total Coliforms, Enterococci	Decomposing organic material and trash upstream of the site
907-ALV-006	Surfactants	---	Likely due to a transient flow from vehicle washing by resident in neighborhood upstream
907-ALV-640	pH	---	Sunlight and higher temperatures encouraging the removal of carbon dioxide through decreased solubility and increased photosynthesis
908-LEM-520	Surfactants	---	Transient flow
908-UNI-002	Surfactants	---	Transient flow from residential and commercial area
908-UNI-003	---	Copper	Transient flow
908-UNI-005	Nitrate-nitrogen	---	Transient flow, potentially due to fertilizer usage in surrounding residential and park areas

The City is in the process of responding to the 2009 Dry Weather Monitoring Program findings. These actions and any other actions taken with respect to the City's Dry Weather Monitoring Program during the remainder of 2009/2010 will be described in the 2009/2010 JURMP Annual Report.

7.5.3 IC/IDs Identified

The IC/IDs identified in 2008/2009 are discussed in Section 4 of the September 2009 JURMP Annual Report submittal.

7.6 Illicit Discharge Detection and Elimination Component Effectiveness Assessment

The effectiveness assessment of this program component is provided in Section 11 of this JURMP Annual Report, which was submitted in September 2009.

7.7 Program Review and Modification

Changes to the definitions of threat to human health and threat to aquatic health used during the trash assessment component of the Dry Weather Monitoring Program and proposed bacteria action levels to be used in the 2010 dry weather season are discussed earlier in this section. No other changes to the City's illicit discharge detection and elimination component were made during the reporting period.

Table 7-4
2009 Dry Weather Monitoring Locations

Site ID	Location	Conveyance	Primary Land Use	Secondary Land Use	Hydrologic Subarea	Latitude	Longitude
907-ALV-001	Alvarado Road, east of the trolley station	Concrete Channel	Commercial	Residential	907.11	32.77209	-117.04136
907-ALV-002	Along the southern edge of the Costco parking lot, just south of the Marengo Avenue and Fletcher Parkway intersection	Manhole	Industrial	Commercial	907.11	32.77414	-117.02287
907-ALV-003*	Parkway Drive located in the southeast corner of Coleman College property	Manhole	Residential	Commercial (School)	907.11	32.77362	-117.03794
907-ALV-004	7780 Parkway Drive, inside Parkway Manor Condominiums parking lot, by visitor parking at the top of the driveway	Manhole	Residential	None	907.11	32.77546	-117.02918
907-ALV-005	Alvarado Channel, underneath the intersection of Fletcher Parkway and Baltimore Drive, north side of channel	Outlet	Residential	Commercial	907.11	32.77380	-117.02737
907-ALV-006	Fletcher Parkway and Marengo Avenue intersection, in planter	Manhole	Residential	None	907.11	32.77550	-117.02309
907-ALV-007	Jackson Drive and Parkway Drive, behind Amex Auto Repair	Manhole	Residential	Commercial	907.11	32.77832	-117.01821
907-ALV-008	South of Fletcher Parkway, under SR-125 overpass, west of the outfalls from the north	Concrete Channel	Residential	Commercial	907.11	32.78400	-117.00570
907-ALV-120	Jackson Drive, 100 feet west of Murray Drive, north side of street	Manhole	Commercial	None	907.11	32.77630	-117.01423
907-ALV-12A	Jackson Drive, 100 feet west of Murray Drive, south side of street, in front of 5304 Jackson Drive	Manhole	Commercial	Residential	907.11	32.77605	-117.01434
907-ALV-580*	Northeast corner of Amaya Drive and Amaya Court intersection	Manhole	Residential	None	907.11	32.78640	-117.00116

Table 7-4 (Continued)
2009 Dry Weather Monitoring Locations

Site ID	Location	Conveyance	Primary Land Use	Secondary Land Use	Hydrologic Subarea	Latitude	Longitude
907-ALV-590	Southeast corner of Parkway Drive and Amarillo Avenue intersection	Natural Creek	Residential	None	907.11	32.78180	-117.01328

Notes:
Red Bold Type = value exceeds action level
[yellow box] denotes a confirmation visit
nd = not detected
na = not analyzed
CTR = California Toxics Rule; CTR action levels for metals are calculated based upon on the total hardness value of the water sample.
* Number of fecal coliforms is derived from *E. coli* count. Number of fecal coliforms = (Number of *E. coli*) / 0.85
** Total hardness is not considered a pollutant, and thus has no established action level for the purposes of dry weather monitoring.

IDDE

Permit Annual Reporting Requirement—Section J.3.a.(3).(f)	Location in Report
i. Correction of any inaccuracies in either the MS4 map or the Dry Weather Field Screening and Analytical Stations Map.	7.4
ii. Reporting of all dry weather field screening and analytical monitoring results. The data should be presented in tabular and graphical form. The reporting shall include station locations, all dry weather field screening and analytical monitoring results, identification of sites where results exceeded action levels, follow-up and elimination activities for potential illicit discharges and connections, the rationale for why follow-up investigations were not conducted at sites where action levels were exceeded, any Copermittee or consultant program recommendations/changes resulting from the monitoring, and documentation that these recommendations/changes have been implemented. Dry weather field screening and analytical monitoring reporting shall comply with all monitoring and standard reporting requirements in Attachment B of Order No. R9-2007-0001 and Receiving Waters Monitoring and Reporting Program No. R9-2007-0001.	7.4, 7.5; Tables 7-2 through 7-6; Attachment 7.1
iii. Any dry weather field screening and analytical monitoring consultant reports generated, to be provided as an attachment to the annual report.	Attachment 7.1
iv. A brief description of any other investigations and follow-up activities for illicit discharges and connections.	7.5; Appendix B
v. The number and brief description of illicit discharges and connections identified.	7.5; Appendix B
vi. The number of illicit discharges and connections eliminated.	7.5; Appendix B
vii. Identification and description of all spills to the MS4 and response to the spills.	4.9, 7.3; Appendix B
viii. A description of activities implemented to prevent sewage and other spills from entering the MS4.	4.9, 7.3

IDDE—Additional Dry Weather Monitoring Program Requirements

Permit Annual Reporting Requirement—Attachment B and Receiving Waters Monitoring and Reporting Program No. R9-2007-0001, Section II.B.3.c,d	Location in Report
Meets applicable standard monitoring and reporting requirements listed in Municipal Permit Attachment B.	Attachment 7.1
c. (1) Determining Sampling Frequency: Dry weather field screening and analytical monitoring shall be conducted at each identified station at least once between May 1st and September 30th of each year or as often as the Copermittee determines is necessary to comply with the requirements of section D.4 of Order No. R9-2007-0001.	7.4; Attachment 7.1
c. (2) If flow or ponded runoff is observed at a dry weather field screening or analytical monitoring station and there has been at least seventy-two (72) hours of dry weather, make observations and collect at least one (1) grab sample. Record general information such as time since last rain, quantity of last rain, site descriptions (i.e., conveyance type, dominant watershed land uses), flow estimation (i.e., width of water surface, approximate depth of water, approximate flow velocity, flow rate), and visual observations (i.e., odor, color, clarity, floatables, deposits/stains, vegetation condition, structural condition, and biology).	7.4; Attachment 7.1
c. (3) At a minimum, collect samples for analytical laboratory analysis of the following constituents for at least twenty five percent (25%) of the dry weather monitoring stations where water is present: (a) Total Hardness, (b) Oil and Grease, (c) Diazinon and Chlorpyrifos, (d) Cadmium (Dissolved), (e) Lead (Dissolved), (f) Zinc (Dissolved), (g) Copper (Dissolved), (h) Enterococcus bacteria, (i) Total Coliform bacteria, (j) Fecal Coliform bacteria	7.4; Table 7-6; Attachment 7.1
c.(4) At a minimum, conduct field screening analysis of the following constituents at all dry weather monitoring stations where water is present:	(n/a)
c. (a) Specific conductance (calculate estimated Total Dissolved Solids), (b) Turbidity, (c) pH, (d) Reactive Phosphorus, (e) Nitrate Nitrogen, (f) Ammonia Nitrogen, (g) Surfactants (MBAS)	7.4; Table 7-5, Attachment 7.1
c. (5) If the station is dry (no flowing or ponded runoff), make and record all applicable observations and select another station from the list of alternate stations for monitoring.	7.4; Attachment 7.1
c. (6) Develop and/or update criteria for dry weather field screening and analytical monitoring results whereby exceedance of the criteria will require follow-up investigations to be conducted to identify and eliminate the source causing the exceedance of the criteria.	7.4; Attachment 7.1
c. (7) Assess the presence of trash in receiving waters and urban runoff at each dry weather field screening or analytical monitoring station. Assessments of trash shall provide information on the spatial extent and amount of trash present, as well as the nature of the types of trash present.	7.4; Attachment 7.1

IDDE—Additional Dry Weather Monitoring Program Requirements

Permit Annual Reporting Requirement—Attachment B and Receiving Waters Monitoring and Reporting Program No. R9-2007-0001, Section II.B.3.c,d	Location in Report
c. (8) Dry weather field screening and analytical monitoring stations identified to exceed dry weather monitoring criteria for any constituents shall continue to be screened in subsequent years.	7.4; Attachment 7.1
c. (9) Develop and/or update procedures for source identification follow up investigations in the event of exceedance of dry weather field screening and analytical monitoring result criteria. These procedures shall be consistent with procedures required in section D.4.d of Order No. R9-2007-0001.	7.5; Attachment 7.1
c. (10) Develop and/or update procedures to eliminate detected illicit discharges and connections. These procedures shall be consistent with each Copermittees Illicit Discharge and Elimination component of its Jurisdictional Urban Runoff Management Plan as discussed in section D.4 of Order No. R9-2007-0001.	7.5; Attachment 7.1
d. The Copermittees shall commence implementation of dry weather field screening and analytical monitoring under the requirements of this Order by May 1, 2008. Each Copermittee shall conduct dry weather analytical and field screening monitoring in accordance with its storm water conveyance system map and dry weather analytical and field screening monitoring procedures as described in section II.B.3 above. If monitoring indicates an illicit connection or illegal discharge, conduct the follow-up investigation and elimination activities as described in submitted dry weather field screening and analytical monitoring procedures and sections D.4.d and D.4.e of Order No. R9-2007-0001. Until the dry weather field screening and analytical monitoring program is implemented under the requirements of this Order, each Copermittee shall continue to implement dry weather field screening and analytical monitoring as it was most recently implemented pursuant to Order No. 2001-01.	7.4, 7.5; Attachment 7.1

Re: 2009 Dry Weather Field Screening and Analytical Monitoring Program City of La Mesa, California

Dear Mr. Kuhn:

Enclosed please find our final report for the City of La Mesa 2009 Dry Weather Field Screening and Analytical Monitoring Program. This report presents the results of the monitoring program conducted in the City of La Mesa during the 2009 dry weather season. The contents include field screening results, trash assessment data, analytical laboratory test results, analyses of the collected data, and photographs of sampling locations. The report also presents the results of follow-up investigations conducted to identify the sources of pollutants detected during the field screening program and our recommendations for additional actions.

Review comments from the draft report submitted to the City have been incorporated into this final report. It has been our pleasure working with the City of La Mesa on this project. If you have any questions regarding this report, please call me at (858) 586-6600 ext. 22.

1 INTRODUCTION

1.1 Program Overview

The purpose of the Dry Weather Field Screening and Analytical Monitoring Program is to detect and eliminate illicit connections and illegal discharges (IC/ID) to the storm water conveyance system, minimizing the negative impact of human activities on receiving water bodies. The Dry Weather Monitoring Program consists of the following components:

- Field screening observations
- Field screening analytical monitoring
- Trash assessments
- Laboratory analytical monitoring

The data gathered from dry weather monitoring is used to characterize discharges to the storm drain system and identify conveyances that are discharging elevated levels of pollutants. Follow-up studies and source investigations are conducted as needed to detect and eliminate the sources of these pollutants.

1.2 Hydrologic Setting

The City of La Mesa (City) encompasses an area of nine square miles just east of the City of San Diego. The primary land use in La Mesa is residential with over 56,000 residents. Other types of land use include roads and streets, commercial, mixed use, schools, and industrial. Approximately 52 percent of La Mesa is located within the San Diego River Watershed, while the remaining 48 percent is located in the San Diego Bay Watershed. The City of La Mesa makes up about one percent of the overall land area in both the San Diego Bay and the San Diego River watersheds. Runoff generated in La Mesa is conveyed through five drainage basins. The boundaries of these drainage basins are illustrated in Figure A. Table 1-1 lists the drainage basins along with the approximate percentage of drainage area in La Mesa, the corresponding hydrologic unit (HU) of the basin, and the receiving water body to which each basin drains.

TABLE 1-1
CITY OF LA MESA DRAINAGE BASINS

Drainage Basin	Percentage of City Area	Hydrologic Unit	Receiving Water Body	Watershed
Alvarado	51	907	San Diego River	San Diego River
University	28	908	Chollas Creek	San Diego Bay
Spring Valley	14	909	Sweetwater River	San Diego Bay
Lemon Grove	6	908	Chollas Creek	San Diego Bay
Lake Murray	1	907	San Diego River	San Diego River

The San Diego River Watershed is the second largest hydrologic unit in San Diego County. It also has the highest population (approximately 475,000) of the County's watersheds. The San Diego River carries runoff from other large portions of the cities of San Diego, El Cajon, Poway, and Santee and several unincorporated jurisdictions in addition to that of La Mesa.

The mouth of the river eventually discharges into the Pacific Ocean, south of Mission Bay. Runoff collected in the Lake Murray Basin eventually enters the Alvarado Drainage Basin, which drains to the San Diego River.

The San Diego Bay Watershed is comprised of three hydrologic units: Pueblo San Diego (HU 908), Sweetwater (HU 909), and Otay (HU 910). These three watersheds all drain into San Diego Bay, even though each hydrologic unit is essentially a separate watershed. For regulatory purposes, they have been combined into one watershed management area, referred to as the San Diego Bay Watershed. The City of La Mesa includes areas within two of those hydrologic units, the Pueblo San Diego Watershed and the Sweetwater Watershed. Runoff from the Spring Valley Basin eventually enters the Sweetwater River, which terminates in San Diego Bay. Runoff collected in the University and Lemon Grove basins drains to Chollas Creek, which also flows into San Diego Bay.

1.3 Regulatory Requirements

In accordance with San Diego Regional Water Quality Control Board (RWQCB) Order No. R9-2007-0001 (Municipal Permit), each of the Copermittees, including the City of La Mesa, is required to annually perform dry weather field screening of discharges into its storm drain conveyance system. During the dry weather season, May 1 through September 30, selected locations along the storm drain conveyance system are evaluated. This procedure includes recording field observations, estimating observed flow rates, and conducting field testing. The Municipal Permit also necessitates that Copermittees conduct laboratory analyses for at least 25 percent of the visited sites with flowing or ponded water. If a sampling location is dry, meaning there is no flowing or ponded water, an alternate sampling station is selected. If the results of the field or laboratory analyses exceed specific action levels, follow-up investigations are required within two business days.

1.4 Constituents of Concern (COC)

Based primarily on wet weather monitoring data from mass loading stations (MLS) located on Chollas Creek, bioassessments, the 2009 San Diego Bay Watershed Urban Runoff Management Program (WURMP) Annual Report, and the Clean Water Act Section 303(d) List of Water Quality Limited Segments (303(d) List), several constituents have been established as targeted pollutants in hydrologic areas (HA) located within City of La Mesa's Jurisdiction. In HA 908.2, part of the Pueblo San Diego Watershed, the COCs identified are bacteria, metals, sediment, trash, and pesticides. For HA 909.1 within the Sweetwater Watershed, bacteria has been listed as a COC.

Constituent data have been collected annually in the San Diego River Watershed. The 2008 San Diego River WURMP Annual Report lists bacteria indicators, phosphorus, total dissolved solids, low dissolved oxygen and turbidity as the COCs.

1.5 Previous Work

The City of La Mesa has conducted annual dry weather monitoring programs since 1993. A summary of the screening results obtained for each year is displayed in Table 1-2. Historical dry weather monitoring data is included in Appendix A.

TABLE 1-2
SUMMARY OF HISTORICAL DRY WEATHER SITES

Year	Number of Field Screening Sites [1]	Number of Flowing Sites	Number of Ponded Sites	Number of Dry Sites	Number of Lab Analysis Sites [2]
1993	15	10	4	1	0
1994 [3]	11	11	0	4	0
1995 [4]	11	11	0	2	0
1996	12	12	0	3	0
1997	9	8	1	3	0
1998	11	8	3	3	0
1999-R1	10	10	0	4	0
1999-R2	11	11	0	3	0
2000-R1	11	11	0	4	0
2000-R2	11	11	0	4	0
2001 R1	11	11	0	4	0
2001 R2	12	12	0	4	0
2002	18	18	0	1	5
2003	18	16	2	1	5
2004	18	17	1	0	5
2005	18	16	2	0	5
2006	18	17	1	0	5
2007	18	18	0	1	5
2008	20	19	0	1	6

Notes:
The City of La Mesa conducted two separate rounds of dry weather monitoring in years 1999-2001.
R1 Round one
R2 Round two

[1] Number of Field Screening Sites Number Flowing Number Ponded. Field screening cannot be conducted at sites found to be dry. Dry sites are replaced by either a flowing or ponded site.

[2] Laboratory testing commenced in 2002 as required by San Diego Regional Water Quality Control Board Order 2001-001.

[3] The 1994 *City of La Mesa Dry Weather Non-Point Source Outfall Screening Program* by Cooper Engineering Associates states that 13 sites showed evidence of flow. However, in Table 3. Summary of Dry Weather Screening Chemical Analysis of the report, flow rates and chemical test results are provided for 11 sites only. For the purposes of this table, number of sites tested is listed as 11 and the remaining sites have been added to the number of dry sites.

[4] Per the *City of La Mesa Dry Weather Non-Point Source Outfall Screening Program* by Cooper Engineering Associates for 1995, 12 sites had flowing water and one site was ponded. Chemical analysis data is provided for 11 sites only. Thus, number of sites tested is listed as 11 and the remaining two sites are listed as dry.

The San Diego RWQCB did not require laboratory analyses to be performed as part of the dry weather program until 2002. The same laboratory and field tests have been used since 2002 until present. Graphical representations of the data for both the San Diego River and San Diego Bay watersheds are included as Attachments 1 and 2, respectively. The graphs display the results of both field and laboratory analyses for the 2002 through 2009 dry weather monitoring programs. Where applicable, averages for each constituent have been calculated, and error bars displaying average plus and minus one standard deviation have also been included on the graphs. Trend lines have been prepared for constituents where

multiple values above the method reporting limit were recorded. The equations and R^2 values for the lines have been indicated on the graphs. Note that an R^2 value of 0.0 indicates a very poor fit and 1.0 indicates a perfect fit. Since the trend lines have been based on only eight years of data, conclusions regarding pollution trends cannot be drawn with a large degree of certainty.

1.6 Report Outline

Section 1, Introduction, includes an overview of the program, a discussion of the City of La Mesa's hydrologic setting, regulatory background, a description of constituents of concern, a summary of historical field screening data, and the report outline.

Section 2, Sampling Locations, describes the field screening sampling locations and site selection criteria.

Section 3, Field and Laboratory Analytical Methods, includes field screening and laboratory analytical procedures, quality assurance protocols, and follow-up action levels.

Section 4, Field Screening Results, presents qualitative observations of the sampling locations and results of the field screening analyses.

Section 5, Trash Assessment, discusses the procedure and results of the trash assessment.

Section 6, Laboratory Analytical Results, presents results of the laboratory analyses.

Section 7, Data Analysis, provides an analysis of field and laboratory data collected in 2009, as well as a comparison of past results.

Section 8, Follow-up Investigations, details the results of follow-up investigations undertaken to isolate the sources of water contamination detected during the field screening program.

Section 9, Summary and Recommendations, provides a summary of the program results and recommendations for follow-up actions.

Appendix A Historical Dry Weather Monitoring Table

Appendix B Photographs of the Sampling Locations

Appendix C Laboratory Analytical Reports

Appendix D Field Data and Trash Assessment Sheets

Attachment 1 Historical Data Graphs: San Diego River Watershed

Attachment 2 Historical Data Graphs: San Diego Bay Watershed

2 SAMPLING LOCATIONS

The City of La Mesa's 2008 JURMP identifies 20 primary dry weather monitoring stations. During the 2009 Dry Weather Monitoring Program, all 20 primary sampling locations were visited, 19 of which had flowing or ponded water. Since Site 907-ALV-003 was dry, alternate Site 907-ALV-580 was selected as a replacement.

Table 2-1 lists site information including site name, location, conveyance configuration, primary and secondary land uses, hydrologic subareas, and Global Positioning System (GPS) coordinates. Photographs of all sites visited in 2009 are included in Appendix B. Figure A shows site locations on a map of the City in relation to storm drain lines, roads, and drainage basin boundaries. A map of the watersheds in and around the City of La Mesa is included as Figure B.

Note: Alternate Site 907-ALV-580 was substituted for dry primary monitoring Site 907-ALV-003

3 FIELD AND LABORATORY ANALYTICAL METHODS

3.1 Field Screening Procedures and Methods

Field screening techniques consist of qualitative field observations, flow measurements, and quantitative field analyses of selected water quality parameters. Weather conditions, time since last rainfall, and the type of storm water conveyance are recorded as well. Specific observations and results of the field water quality analyses are documented on field datasheets, which also serve as a record of the field visit. Datasheets are completed for every site visit regardless of whether or not samples were collected. Check boxes on the datasheets indicate if the visit is for routine field screening, confirmation of an exceedance, or an IC/ID follow-up visit. A confirmation visit is a revisit of the original site, whereas an IC/ID follow-up is an upstream investigation. Datasheets from the 2009 Dry Weather Monitoring Program are included as Appendix D.

Field screening and analyses were conducted according to the following procedures and methods:

Qualitative Observations

Qualitative field observations are made during each site visit. These observations include a general site assessment and record water odor, clarity, the presence of floatables, visible deposits or stains, vegetation, and biological organisms. Evidence of present or past illicit connections and illegal discharges to the storm drain system can also be discovered through careful field observations. Each field screening location is photographed to document site conditions. Photographs are included in Appendix B.

Flow Measurement

Flow measurements can help estimate pollutant mass loading, prioritize storm drains for future investigation, and identify significant changes in discharge that may be indicative of an illegal discharge. Various field methods are used in formulas to estimate the flow rate. These include measuring the velocity, depth, and width of the flowing water; recording the amount of time required to fill a bottle of known volume with sample water; or, if measuring flow within a cylindrical pipe, measuring the pipe diameter as well as the depth and velocity of the flow. Low levels of flow may also be assessed visually.

Field Water Quality Analyses

At each site with ponded or flowing water, water samples were collected and analyzed in the field for the following constituents:

- Specific Conductance
- Temperature
- pH
- Turbidity
- Surfactants, measured as methylene blue active substances (MBAS)
- Nitrate-Nitrogen (Nitrate-N)
- Ammonia-Nitrogen (Ammonia-N)
- Orthophosphate-Phosphorus (Orthophosphate-P)

Surfactants are also referred to as detergents.

The methods used to perform the above field analyses, along with the reporting limit, range, and accuracy of each method, are listed in Table 3-1.

TABLE 3-1
FIELD ANALYTICAL METHODS

Notes:

TDS □total dissolved solids
EC □electrical conductivity
mS/cm □millisiemens per centimeter
□C □degrees Celsius
NTU □nephelometric turbidity unit
mg/L □milligrams per liter
LED □light-emitting diode

[1] Functional sensitivity (FS) represents the lowest limit at which quantitative information is reliable. FS is estimated as the mean concentration for a spiked sample whose coefficient of variance (CV) is 20□. CV is the standard deviation divided by the mean.

[2] ± 0.13 for the range of 0.0 to 1.0 mg/L, ± 0.25 mg/L for the range of 1.0 to 2.0 mg/L and 0.5 mg/L for the range of 2.0 to 3.0 mg/L.

[3] This method determines the concentration of nitrate in mg/L NO_3. To determine the amount of nitrate-nitrogen, the concentration of nitrogen must be adjusted for the presence of oxygen in the NO_3 molecule. Therefore, the result is multiplied by a conversion factor of 0.226, the ratio of the molecular weight of N (14g/mol) to NO_3 (62 g/mol). The practical detection limit for nitrate is 5.0 mg/L; however, the practical detection limit for nitrate-nitrogen is lower due to the conversion.

[4] Practical Detection Limit (PDL) is defined as the lower limit of the stated test range.

[5] Percent error adjusts as follows: ±30□ at PDL, ±20□ for 25□ of full range, ±10□ for 75□ of full range, ±10□ for 120□ of full range.

[6] This method determines the concentration of orthophosphate in mg/L PO_4. To determine the amount of orthophosphate-P, the concentration of phosphate must be adjusted for the presence of oxygen in the PO_4 molecule. Oxygen is 67.4□ of phosphate by mass but is not a plant nutrient in this form. Therefore, the result is multiplied by a conversion factor of 0.326, the ratio of the molecular weight of P (31g/mol) to PO_4 (95 g/mol). The practical detection limit for orthophosphate is 0.3 mg/L; however, the practical detection limit for orthophosphate-phosphorus is lower due to the conversion.

□Extended ranges in chemical analyses can be achieved through dilutions. Accuracies decrease proportionally with further dilutions.

□□Readings below the PDL have increased percent error; measurements are reported, but are flagged as being below the PDL.

□□□Test method information taken from Hanna Instruments and CHEMetrics manuals, available online at www.hannainst.com and www.chemetrics.com.

3.2 Laboratory Analytical Methods

In accordance with Order R9-2007-0001, laboratory samples were collected at six sites, representing over 25 percent of the sites where ponded or flowing water was observed. Samples were submitted to EnviroMatrix Analytical, Inc, a laboratory certified by the California Department of Health Services, for analysis of the following constituents:

- Total hardness
- Oil and grease
- Diazinon
- Chlorpyrifos
- Cadmium (Dissolved)
- Copper (Dissolved)
- Lead (Dissolved)
- Zinc (Dissolved)
- Total Coliform bacteria
- Fecal Coliform bacteria
- *Enterococcus* bacteria

The methods used to perform each of the above analyses along with method reporting limits and holding times are listed in Table 3-2.

3.3 Quality Assurance and Quality Control (QA/QC)

The QA/QC Plan utilized for this project includes the United States Environmental Protection Agency (USEPA) approved test methods for the field and laboratory analysis of water samples, calibration of test equipment, and pre- and post-rinsing of sample collection containers and test vials. Key components of the QA/QC Plan are described in Section 3.3.1 and Section 3.3.2.

3.3.1 Field Sampling and Analysis QA/QC

The pH meters, turbidity meter and conductivity meter are tested daily before field screening begins. The pH meters are calibrated as needed with sodium/potassium phosphate, monobasic buffer solutions with pH values equal to 4.00 ± 0.01, 7.00 ± 0.01, and 10.00 ± 0.01 units. The glass electrode tube is kept moist to preserve the meter's accuracy during fieldwork. The turbidity meter and conductivity meter are calibrated as needed using standard solutions.

Field sample collection containers are rinsed first with distilled water and then with the sample water prior to sample collection. Upon completion of sampling and testing at each site, sample collection containers, test vials, and ion-sensitive electrodes were rinsed twice with distilled water and dried.

The accuracy of field analytical techniques and equipment is assessed at the beginning of each sampling week by analyzing solutions of known concentrations for ammonia-nitrogen, surfactants, nitrate, and orthophosphate. The results of the assessment are shown in Table 3-3.

TABLE 3-2
LABORATORY ANALYTICAL METHODS

Analyte	Analytical Method	Method Reporting Limit	Maximum Holding Time [1]
Oil and Grease	USEPA 1664	5 mg/L	28 days
Total Hardness	USEPA 200.7	10 mg/L	14 days
Dissolved Cadmium	USEPA 200.8	0.001 mg/L	24 hours
Dissolved Copper	USEPA 200.8	0.001 mg/L	24 hours
Dissolved Lead	USEPA 200.8	0.001 mg/L	24 hours
Dissolved Zinc	USEPA 200.8	0.020 mg/L	24 hours
Diazinon	USEPA 8141A	0.05 g/L	7 days
Chlorpyrifos	USEPA 8141A	0.05 g/L	7 days
Total Coliforms [2]	SM 9221	20 1,600,000 MPN/100 mL	6 hours
Fecal Coliforms [2]	SM 9221	20 160,000 MPN/100 mL	6 hours
Enterococci [2]	SM 9230	20 160,000 MPN/100 mL	6 hours
Total Coliforms	SM 9223 (IDEXX Colilert) [3]	10 2,419,600 MPN/100 mL	6 hours
Escherichia coli (*E. coli*) [4]	SM 9223 (IDEXX Colilert) [3]	10 2,419,600 MPN/100 mL	6 hours
Enterococci	IDEXX Enterolert [3]	10 241,960 MPN/100 mL	6 hours

Notes:

g/L micrograms per liter

MPN/100 mL most probable number (of colony-forming units) per 100 milliliters

[1] Maximum Holding Time values listed here apply to samples collected and preserved in accordance with the quality assurance and quality control procedures listed in Section 3.3.2.

[2] For D-MAX's Dry Weather Monitoring Program, EnviroMatrix Analytical, Inc. (EMA) performs standard dilutions for total coliforms to quantify from 20-1,600,000 MPN/100mL. For fecal coliforms and Enterococci, EMA performs standard dilutions to quantify from 20-160,000 MPN/100 mL. During the analysis and interpretation of the results, the number of tubes used to quantify the sample must fit the MPN index table from Standard Method 9221. The dilution set used will determine the detection limit. A standard dilution analysis is set up with 15 tubes at different concentrations. The reporting limit will always be adjusted depending on the dilution factor used for quantifying the actual results based on the MPN table. If the result for the analysis was less than 16,000 MPN/100 mL, the reporting limit will always be 20, and the dilution factor will be 10. As the dilution factor goes up, the reporting limit listed in the results from EMA will also go up based on the calculation made with EMA's data system. However, the lowest quantifiable number or reporting limit would still be 20 based on how the standard tubes for the sample is set up.

[3] IDEXX Colilert and Enterolert tests are performed by EnviroMatrix Analytical. This test is used during upstream investigations only.

[4] Number of fecal coliforms is derived from number of *Escherichia coli* (*E. coli*) through the following formula: Fecal Coliforms *E. coli* / 0.85. The converted fecal coliform count, not the number of *E. coli*, is reported in this report's data tables.

TABLE 3-3
FIELD ANALYSIS QA□QC RESULTS

Date	Analyte	Known Concentration (mg□L)	Acceptable Range* (mg□L)	Field Test Kit Results (mg□L)
06/02/09	Ammonia-Nitrogen	0.82	0.66 □0.98	0.694
06/02/09	Surfactants	1.0	0.75 □1.25	1.0
06/02/09	Nitrate □	44.3	31.0 □57.6	46.43
06/02/09	Orthophosphate □	3.07	2.45 □3.68	2.693
06/08/09	Ammonia-Nitrogen	0.82	0.66 □0.98	0.863
06/08/09	Surfactants	1.0	0.75 □1.25	1.0
06/08/09	Nitrate □	44.3	31.0 □57.6	46.42
06/08/09	Orthophosphate □	3.07	2.45 □3.68	3.014
06/15/09	Ammonia-Nitrogen	0.82	0.66 □0.98	0.884
06/15/09	Surfactants	1.0	0.75 □1.25	1.0
06/15/09	Nitrate □	44.3	31.0 □57.6	48.28
06/15/09	Orthophosphate □	3.07	2.45 □3.68	3.050

Notes:
□Acceptable range is calculated based on the error associated with the methods as listed in Table 3-1.
□□Nitrate and orthophosphate are converted to nitrate-nitrogen and orthophosphate-phosphorus, respectively, when conducting standard field screening. This is accomplished by dividing the results by 4.43 for nitrate and 3.06 for orthophosphate. To simplify the calibration process, the unconverted numbers are used when calibrating the instruments.

3.3.2 Laboratory Sampling and Analysis QA□QC

Samples for laboratory analysis are collected concurrently with field samples and utilized the same sampling procedures. Pre-sterilized sample bottles are obtained from the laboratory and thus do not require rinsing with sample water prior to sample collection. After sample collection, all laboratory samples are kept in a cooler on ice until picked up by the lab. Strict chain of custody procedures are followed, and samples are delivered and analyzed within the appropriate holding times, as listed in Table 3-2. Completed chain of custody forms are included in Appendix C.

3.4 Follow-up Action Levels

Based on dry weather field screening results, immediate follow-up investigations are sometimes necessary to identify and eliminate pollutant sources. In order to determine whether an immediate source investigation is necessary, numeric action levels and best professional judgment are used to interpret the field screening results. If visual and/or analytical evidence of gross contamination are present at a site (e.g., substantial petroleum sheen, extremely high ammonia concentration, evidence of a sewage release, etc.), then an immediate source identification investigation is initiated. For sites that exceed numeric action levels but are not perceived as an immediate threat to water quality, a re-sampling is conducted within one day. An upstream pollutant source investigation is conducted thereafter if elevated concentrations persist and no sources can be identified in the immediate vicinity of the monitoring station. If elevated levels of pollutants are detected by

the laboratory analyses, a comprehensive follow-up pollutant source investigation is conducted within two days of receiving the analytical reports from the lab. The results of these investigations are included in Section 8 of this report. Recommendations based on these investigations are included in Section 9.

The following three methods are employed to determine whether immediate or comprehensive follow-up investigations are necessary: (1) Numeric Action Levels; (2) California Toxics Rule (CTR); and (3) Best Professional Judgment. All three approaches are described in detail below and presented in Table 3-4.

Numeric Action Levels

Numeric action levels are used as the primary approach for interpreting pH, orthophosphate-P, nitrate-N, ammonia-N, surfactants, oil and grease, diazinon, chlorpyrifos, total coliforms, fecal coliforms, and *Enterococcus* analytical results (see Table 3-4). Prior to the 2003 dry weather season, no standard action levels had been adopted for use throughout San Diego County. D-MAX calculated the current set of numeric action levels, which are based on county-wide sampling data and have been used by all Copermittees since the 2003 dry weather season. If pH, orthophosphate-P, nitrate-N, ammonia-N, or surfactants are observed above the numeric action level, a follow-up investigation is conducted within 24 hours to investigate the source unless best professional judgment indicated otherwise. If oil and grease, diazinon, chlorpyrifos, total coliforms, fecal coliforms, or *Enterococcus* laboratory analytical results exceeded numeric action levels, then source investigations are conducted within two business days of receiving the test results from the lab.

California Toxics Rule

The CTR criterion maximum concentration (CMC) is used to determine appropriate action levels for dissolved trace metals, including cadmium, copper, lead, and zinc. The CTR equations, as provided in USEPA Federal Register Doc. 40 Code of Federal Regulations (CFR) Part 131, are used to calculate benchmarks based on the total hardness of the sampled water, with the action levels increasing as hardness increases. More information on the CTR is available at http://www.epa.gov/region09/water/ctr.

Best Professional Judgment

Best professional judgment is utilized as the primary approach for interpreting turbidity, water temperature, and conductivity and as a secondary approach for interpreting the results of all other field and laboratory analyses. Under best professional judgment, the need for a follow-up investigation is left to the discretion of the D-MAX field crew due to their familiarity with the City of La Mesa Dry Weather Monitoring Program and their knowledge of typical levels for the tested parameters. Best professional judgment may indicate that results which either exceed certain action levels or statistical outliers may be the result of natural or background factors.

TABLE 3-4
ACTION LEVELS FOR FIELD SCREENING AND LABORATORY PARAMETERS

Field Screening Analytes	Action Levels[1]	Source□Notes
pH	□6.5 or 9.0	Basin Plan[2], with allowance for elevated pH due to excessive photosynthesis. Elevated pH is especially problematic in combination with high ammonia.
Orthophosphate-P (mg/L)	2.0	USEPA Multi-sector General Permit
Nitrate-N (mg/L)	10.0	Basin Plan and drinking water standards
Ammonia-N (mg/L)	1.0	Based on Workgroup experience. May also consider unionized ammonia fraction.
Surfactants (MBAS) (mg/L)	1.0	Basin Plan, with allowance based on Workgroup field experience and possible field reagent interferences.
Turbidity (NTU)	Best Professional Judgment	WQOs relevant to inland surface waters are not available. Base judgment on channel type and bottom, time since last rain, background levels, and most importantly visual observation (e.g. unusual colors and lack of clarity) and unusual odors.
Temperature (□C)	Best Professional Judgment	Base judgment on season, air temperature, channel type, shading, etc.
Conductivity (mS/cm)	Best Professional Judgment	Conductivity may be highly elevated in some regions due to high TDS, groundwater exfiltration to surface water, mineral dissolution, drought, and seawater intrusion. Normal source ID and discharge elimination work is not effective in these situations. Knowledge of area background conditions is important. Values □0.75 may indicate excessive potable water discharge or flushing.
Laboratory Analytes	**Action Levels**	**Source□Notes**
Oil and Grease (mg/L)	15	USEPA Multi-sector General Permit. If petroleum sheen is observed, the sample should be collected from the water surface. Visual observations may justify immediate investigation.
Diazinon (□g/L)	0.5	Response to diazinon and chlorpyrifos levels above 0.5 □g/L should focus on education and outreach to potential dischargers in the target drainage basin. Highly elevated levels should be investigated aggressively as with other potential IC/IDs.
Chlorpyrifos (□g/L)	0.5	
Dissolved Cadmium (□g/L)	California Toxics Rule	Use California Toxics Rule, 1-hour criteria to determine appropriate action level for individual samples. Table provides benchmarks based on hardness and dissolved metals concentration. For example, at 300 mg/L hardness the following action levels would apply: Cd □14 ppb; Cu □38 ppb; Pb □209 ppb; and Zn □297 ppb.
Dissolved Copper (□g/L)	California Toxics Rule	
Dissolved Lead (□g/L)	California Toxics Rule	
Dissolved Zinc (□g/L)	California Toxics Rule	
Total Coliforms (MPN/100 mL)	50,000	Bacteria levels in many storm drains are likely to exceed public health guidance criteria. Use confidence interval test and best professional judgment to identify conveyances for source ID.
Fecal Coliforms (MPN/100 mL)	20,000	
Enterococci (MPN/100 mL)	10,000	

Notes

[1] The referenced action levels should not be the sole criteria for initiating a source identification investigation. Dry weather monitoring data should be interpreted using a variety of available information. Factors that should be considered include within-site and between-site sample variability.

[2] Basin Plan □ Water Quality Control Plan for the San Diego Basin

WQO □Water Quality Objective

ppb □parts per billion

4 FIELD SCREENING RESULTS

The 2009 Dry Weather Monitoring Program was conducted in June 2009. A total of 21 monitoring stations were visited including one site that was dry. Field screening was conducted at the 20 sites where ponded or flowing water was observed. Completed field data sheets for each site visit are included in Appendix D.

4.1 Qualitative Observations

Qualitative observations, which are a routine part of the Dry Weather Monitoring Program, are summarized below and presented in Table 4-1:

Light Conditions
Light conditions were primarily partly cloudy during field screenings, with occasionally overcast or sunny weather.

Odor
Water samples from the majority of sites were odorless, with one site having a chemical odor and one smelling musty.

Color
Water samples taken from most of the sites were colorless, with the exception of six sites having water that appeared yellow.

Clarity
Two sites had slightly cloudy water. The remaining sites had clear water samples.

Floatable Materials
During routine field screening visits, six sites had trash floating on the water's surface, and the water at one site had a visible sheen. Section 5 of this report includes a complete Trash Assessment.

Deposits
Sediment, gravel, or fine particulates were observed at most sites. No other types of deposits were noted.

Vegetation
All sites had either normal or no vegetation present, appropriate to sunlight and soil conditions at that location. Manholes and concrete conveyances did not support vegetative growth. Vegetation did not impair the flow of water at any locations.

Biology
The presence of organisms in and around sampling sites typically implies healthy water conditions. Algae and insects were the organisms most commonly seen, with occasional snails and spiders noted. Spiders were typically found within manholes. Snails were typically present in areas having algae and yellow-colored water. Insects were also most commonly found where algae was growing.

Notes:

ns not sampled (dry site)

denotes a confirmation visit

Two routine visits were made to this site to test for different constituents. Field observations for both visits are presented in this table.

4.2 Field Analytical Results

Field analyses are conducted at all sites with flowing or ponded water. The measured constituents are described below.

Flow rate quantifies the volume of fluid passing across a given surface per unit time. Flow rate measurements are needed to calculate the load or particular amount of a pollutant discharged.

Water temperature is needed to assess the significance of other parameters, such as pH and conductivity. Also, the aquatic habitat must remain within a certain temperature range in order to sustain sensitive aquatic life. In the field, water temperature is measured immediately upon sample collection at each site with ponded or flowing water.

The **pH** is an expression of acidity or alkalinity of a water sample. The pH of an aquatic system can affect a variety of chemical reactions, including the availability of nutrients and the solubility of chemical substances, particularly heavy metals.

Turbidity describes the clarity or cloudiness of a water sample, or the degree to which light is blocked by suspended material in the water. Turbid waters not only limit the amount of light that reaches submerged vegetation, thus reducing photosynthetic capacity, but excessive suspended particles can also absorb heat and increase water temperatures.

Specific Conductance (Conductivity) measurements indicate the total concentration of ions in an aquatic system and the ability of the water to conduct electricity. This parameter can be used to assess the mineral content of water and potentially help indicate the presence of dissolved pollutants.

Surfactant concentrations in water samples often reflect illegal discharges from industrial, commercial or residential sources. Pollution resulting from surfactants alters the surface tension of water and disrupts the breathing mechanisms of fish gills and other aquatic organisms.

Ammonia-Nitrogen (ammonia-N) is an indicator of pollution from decomposing organic matter, agricultural or household fertilizer runoff, or the presence of sewage. Ammonia occurs naturally in the environment; however, in higher quantities it can become toxic to fish and other organisms.

Nitrate-Nitrogen (nitrate-N) is a common sign of nutrient pollution from agricultural or household fertilizer runoff. Nitrate pollution can cause excessive algal growth, resulting in oxygen depletion as algae decomposes and may eventually suffocate other aquatic life. During the field analysis, nitrate is measured in milligrams per liter (mg/L) NO_3 and converted into mg/L nitrate-N using a conversion factor of 0.226. This process is explained in Note 3 of Table 3-1.

Orthophosphate-Phosphorus (orthophosphate-P) is also an indicator of nutrient pollution from agricultural or household fertilizer runoff. Similar to nitrate-N, orthophosphate-P pollution can cause nutrient enrichment (eutrophication), stimulate algal growth, and thus deplete oxygen in the water to levels that are dangerous for aquatic life. Even low levels of orthophosphate-P can cause significant algal growth, as it is commonly the limiting nutrient in plant growth. During the field analysis, orthophosphate is measured in mg/L PO_4 and converted into mg/L orthophosphate-P using a conversion factor of 0.326. This process is explained in Note 6 of Table 3-1.

A statistical summary of the routine field analytical results is presented in Table 4-2. Table 4-3 shows the results of all field analyses conducted at the sampled sites. Graphs of the various parameters and appropriate action levels for follow-up investigations are included at the end of this section.

TABLE 4-2
FIELD ANALYSIS STATISTICAL SUMMARY

Parameter (units)	Maximum	Minimum	Average	Median	Standard Deviation	Number of Exceed-ances	Graph Number

5 TRASH ASSESSMENT

5.1 Regulatory Requirements

Section II.B.3.C.(7) of the Municipal Permit's Receiving Waters and Urban Runoff Monitoring and Reporting Program requires Copermittees to assess the presence of trash in receiving waters and urban runoff at each dry weather monitoring site. This trash assessment program is designed to provide information on the spatial extent and relative amount of trash present, as well at the nature and origin of the trash at the site.

5.2 Procedure and Definitions

The San Diego Copermittee Dry Weather Monitoring Workgroup developed a Trash Assessment Form to document the amount and extent of trash at each evaluated site. The form categorizes the site into one of five trash categories: optimal, suboptimal, marginal, submarginal, or poor. The form also addresses any potential threats that the trash may pose to human or aquatic health. For sites rating submarginal or poor, the form includes a section to record types, prevalence, potential routes, and sources of trash.

A qualitative estimate of the abundance of trash is made based upon a general impression of the site. The Trash Assessment Form's five categories are primarily qualitative descriptions of the amount and extent of trash although a number of trash pieces is also included in each category as a rough guideline. The five categories are defined as follows.

- Optimal: On first glance, no trash visible. Little or no trash (□10 pieces) evident when evaluated area is closely examined for litter and debris.
- Suboptimal: On first glance, little or no trash visible. After close inspection small levels of trash (□10-50 pieces) evident in evaluated area.
- Marginal: Trash is evident in low to medium levels (□51-100 pieces) on first glance. Evaluated area contains litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, or clothing present.
- Submarginal: Trash distracts the eye on first glance. Evaluated area contains substantial levels of litter and debris (□100-400 pieces). Evidence of site being used frequently by people: many cans, bottles, food wrappers, blankets, or clothing present.
- Poor: Site is significantly impacted by trash. Evidence of trash accumulation behind a constriction point or evidence of excessive dumping. Evaluated area contains substantial levels of litter and debris (400 pieces).

The threat to human health and threat to aquatic health is assessed at each site using the following definitions:

- *Threat to Human Health* □ Presence of more than one of, or a combination of the following items: hypodermic needles or other medical waste; used diapers, animal waste, or human feces; any toxic substance such as chemical containers, vehicle batteries, or fluorescent light bulbs. Alternatively high prevalence of any one item (e.g. Greater than 50 items that present a puncture or laceration hazard); or observations of mosquito larvae directly observed in water ponded due to trash. All subject to best professional judgment.

- *Threat to Aquatic Health* Large amount of persistent, buoyant litter such as: hard or soft plastics, balloons, Styrofoam (equivalent to a cup), or large amounts of settleable, degradable, and nontoxic debris; cigarette butts. Presence of more than one of, or a combination of the following items: toxic items such as vehicle batteries, or spray cans; any evidence of large clumps of yard waste from landscape maintenance such as yard waste or dumped leaf litter (not naturally occurring). All subject to best professional judgment. Large amount is defined as 50 pieces or more.

In the event that a site is noted as potentially posing a threat to human or aquatic health, additional descriptive comments are recorded in the Comments section of the Trash Assessment Form.

If a site is labeled as submarginal or poor, it is assessed for types of trash present (e.g., automotive, biohazard, food waste), which are ranked based on their prevalence and the potential threat to water quality they pose. Lastly, the potential mechanism through which trash reached the site (e.g., dumping, littering, upstream sources) and the potential source of the trash (e.g., construction, commercial, transient) are identified.

5.3 Trash Assessment Results

The majority of sites evaluated during the 2009 Dry Weather Monitoring Program were rated optimal. Of the remaining seven sites, five were rated suboptimal, two sites were rated marginal, and one was considered to be submarginal. No sites were considered to be in the poor category. Additionally, one site (Site 907-ALV-004) was observed to pose a threat to human health due to accumulation of animal feces. The feces were not considered an immediate threat to human health since they were not in contact with flow at the site; however in the event of rainfall or significant runoff, water could contact or transport the feces.

Table 5-1 and Graph 5-1 summarize the trash assessment results. Figure 5-1 provides a map of sampling sites and their corresponding trash assessment.

GRAPH 5-1
2009 TRASH ASSESSMENT RESULTS

5.3.1 Submarginal Site

Site 907-ALV-590 is located at a natural creek near the southeast corner of the Parkway Drive and Amarillo Avenue intersection. A couch, shopping carts, clothing, and food packaging were observed at the site. The types of trash present appeared to have arrived at the site via illegal dumping and littering. The area also appeared to be used by transients. Table 5-2 presents a breakdown of the types, potential routes, and potential sources of trash to Site 907-ALV-590.

6 LABORATORY ANALYTICAL RESULTS

6.1 Summary

Laboratory analyses were conducted at six sites, representing over 25 percent of all sites with ponded or flowing water. The laboratory constituents measured are defined below.

Oil and grease analysis is used to detect hydrocarbon pollution from a variety of sources, including parking lots and streets, washing activities, illegal discharges, and automobile repair facilities.

Total hardness measures the amount of calcium and magnesium ions in a water sample, with the result expressed in mg/L of $CaCO_3$. Hardness itself is not considered a pollutant, but is measured to calculate CTR limits for dissolved metals. Hardness affects the solubility of dissolved metals as well as other minerals and ions.

Diazinon and **chlorpyrifos** are organophosphate pesticides that can be harmful to aquatic organisms if transported in urban runoff. Diazinon and chlorpyrifos are highly toxic to birds, mammals, and insects. They are also highly toxic to freshwater fish and invertebrates following acute exposure.

Metal contamination of water can arise from a variety of sources, including automobile operation, automobile repair, vehicle washing, galvanizing of metal, and electronics manufacturing. Certain dissolved metals are toxic pollutants that are hazardous to the survival and development of aquatic organisms.

The California Toxics Rule for Dissolved Metals in Fresh Waters defines metal toxicity as a function of water hardness, with toxicity decreasing as hardness increases. For a specific hardness, each dissolved metal has a Criterion Maximum Concentration (CMC), a short term concentration limit in which aquatic life can be sustained. The laboratory samples are analyzed for the presence of dissolved cadmium, copper, lead, and zinc. Table 6-1 shows the sites with detectable metal concentrations, the measured total hardness of the sample, and the associated CMC.

Coliform bacteria are present in mammalian digestive tracts and are relatively harmless to humans. Coliform bacteria is naturally found in most surface waters and soils. Water samples are tested for total coliform in the interest of public health, serving as an indicator of the presence of other more harmful pathogenic organisms of potentially fecal origin. Water is tested for total coliform in lieu of these pathogens as they occur in much smaller quantities that may be difficult to detect.

Fecal coliform, a subset of coliform bacteria, and **Enterococci** are found primarily in the gastrointestinal tracts of humans and animals and are commonly used as indicators of water contamination by fecal matter. Without the use of significantly more expensive methods, such as ribotyping, it is not possible to determine whether the source of fecal material present in water is human or animal. Human fecal material is known to contain pathogens dangerous to humans, but the relationship between animal waste and threat to human health is less certain.

A summary of the laboratory analytical results is presented in Table 6-2. Table 6-3 presents the laboratory results from all samples. Laboratory reports are included in Appendix C.

CTR California Toxics Rule; CTR action levels for metals are calculated based upon on the total hardness value of the water sample.
Number of fecal coliforms is derived from *E. coli* count. Number of fecal coliforms (Number of *E. coli*) / 0.85
Total hardness is not considered a pollutant (see section 3.4 for details), and thus has no established action level for the purposes of dry weather monitoring.

7 DATA ANALYSIS

This first part of this section provides an overall evaluation of test results obtained from the 2009 Dry Weather Monitoring Program. The second portion of this section describes historical trends for various constituent exceedances.

7.1 2009 Results

Of the 20 sites sampled, the most frequent exceedance was in surfactants concentrations with water from three sites testing over the action level. One site had exceedances in both total coliform and *Enterococcus* counts, but no other bacteria exceedances were measured. There was one occurrence each of pH, nitrate-nitrogen, and copper exceedances, occurring at different sites. Table 7-1 presents a summary of the exceedances found during the 2009 Dry Weather Monitoring Program.

TABLE 7-1
2009 EXCEEDANCES SUMMARY

Site	pH	Surfactants	Nitrate-N	Copper	Total Coliforms	Enterococci
907-ALV-002					✓	✓
907-ALV-006		✓				
907-ALV-640	✓					
908-LEM-520		✓				
907-UNI-002		✓				
908-UNI-003				✓		
908-UNI-005			✓			

Note: Table reflects exceedances occurring during routine visits only, not confirmation or follow-up visits.

7.2 Previous Results

Historical results of exceedances are presented in Table 7-2, Graph 7-1 and Graph 7-2. Table 7-2 shows the percentage of sampled sites that have had exceedances each year of the Dry Weather Monitoring Program. Graph 7-1 illustrates the percentage of exceedances for field constituents, and Graph 7-2 presents the percentage exceedances by year for laboratory analyses.

Since 2002, no exceedances were measured in water temperature, oil and grease, cadmium, lead, zinc, diazinon, or chlorpyrifos, so these constituents have not been incorporated into the following table and graphs.

The historical data for the results of field analyses presented in Graph 7-1 indicate a decreasing trend in ammonia-nitrogen and orthophosphate-phosphorus concentrations. There have been no exceedances in ammonia-nitrogen since 2006 and no exceedance in orthophosphate-phosphorus levels since 2005. No discernable trend is apparent for pH, turbidity, conductivity or surfactants. Since these trends have been based on only eight years of data, conclusions regarding pollution trends cannot be drawn with a large degree of certainty.

Historical data for laboratory analyses presented in Graph 7-2 indicate that total coliform, fecal coliform, and *Enterococcus* exceedance rates have decreased somewhat over the years. This year, only one analytical monitoring site had total coliform and *Enterococcus* measurements above the action level, and no sites has fecal coliform exceedances.

2009	20	5	0	0	15	0	5	0	6	17	0	17	17

Notes:

Results based on complete routine visits only. Confirmation visits, follow-up visits and dry sites not included.

By regional consensus, the action level for conductivity has been changed during past years from numeric values to best professional judgment in order to account for sites in which salt water and groundwater increase conductivity. High conductivity levels at these sites are not necessarily exceedances or considered to be a water quality concern.

GRAPH 7-1
PERCENT OF SITES WITH FIELD CONSTITUENT EXCEEDANCES BY YEAR

GRAPH 7-2
PERCENT OF SITES WITH LABORATORY ANALYSIS EXCEEDANCES BY YEAR

8 FOLLOW-UP INVESTIGATIONS

The purpose of follow-up investigations is to find the sources of pollutants that exceeded action levels during the initial field screening and laboratory testing.

8.1 Investigation Procedures

When a constituent is found to be over the action limit, follow-up investigations are conducted. Follow-up investigations are divided into two categories. The first type is a confirmation visit to retest the constituent that had been measured above its respective action level. For field test exceedances, the confirmation visit occurs within one business day. For exceedances of laboratory constituent action levels, the confirmation visit is conducted within two business days of receiving the results.

If the constituent in question remains above the action limit during the confirmation visit, an upstream investigation will occur. The upstream investigation consists of IC/ID follow-up visits, which intend to identify any illicit connections or illegal discharges into the storm water conveyance system. If follow-up field screening or laboratory analysis at a site results in constituent concentrations below the respective action levels, the initial high result may have been due to a transient flow.

The laboratory test for investigating upstream bacteria sources differs from routine field screening bacteria testing through the use of the IDEXX Colilert and IDEXX Enterolert tests. Information about these methods is provided in Table 3-2. Results for the Colilert and Enterolert tests are typically available within 24 hours, as opposed to the five days needed for routine testing. The quicker turnaround time allows for additional upstream investigations as needed.

During all follow-up visits, flow rates are measured and visual observations are performed. For confirmation visits, physical parameters such as temperature, pH, and conductivity are recorded as well. Field data sheets are included in Appendix D.

8.2 Investigated Sites

In the 2009 Dry Weather Monitoring Program, seven sites had constituents testing above the action levels. Three sites were investigated for excess surfactants, one for elevated pH, one for nitrate-nitrogen levels, one for high *Enterococcus,* and one for a high copper concentration. All field screening exceedances were below the action level during the confirmation visit. Upstream investigations were conducted for the two sites with laboratory constituent exceedances. Discussion of the follow-up investigations and results are presented below for each investigated site.

Site 907-ALV-002

Site 907-ALV-002 is located within a manhole on the south side of the Costco parking lot, just south of the Marengo Avenue and Fletcher Parkway intersection. Laboratory results indicated an *Enterococcus* exceedance at 17,000 MPN/100 mL and total coliform levels at the action level of 50,000 MPN/100 mL. Flow was measured at 5 gpm. At the confirmation visit bacteria levels were below action levels at the site, where the water was flowing at a rate of 3 gpm. Upstream location 907-ALV-002-1, a manhole located on the south side of Interstate 8 on the north end of a golf course, was sampled and also did not have any exceedances in bacteria levels. Farther upstream, two locations within the same manhole were tested to determine if the large amounts of decomposing leaves and trash in the

Photo 8-1: Decomposing leaves and trash within the concrete box at upstream locations 907-ALV-002-2 (top center) and 907-ALV-002-3 (bottom left).

concrete box were contributing bacteria to storm water flows (see Photo 8-1). Location 907-ALV-002-2 is situated in the pipe entering the concrete box, and location 907-ALV-002-3 is in the outgoing pipe. The flow through the concrete box was 1 gpm. Both samples measured over the action level for total coliform with values of 51,700 and 54,800 MPN/100 mL, respectively. The high level of bacteria in the water before it entered the concrete box indicated that other sources of bacteria were present upstream of the manhole, with the conditions within the concrete box having an additive effect. Upstream along Memorial Street, significant leaf litter was observed, which may have been a source of decomposing leaves and bacteria to the storm water conveyance at locations 907-ALV-002-2 and 907-ALV-002-3.

It is possible that bacteria at Site 907-ALV-002 was a result of decomposing leaves and trash at upstream locations. Since the flow at 907-ALV-002-2 and 907-ALV-002-3 measured only 1 gpm on the same day that the flow at Site 907-ALV-002 measured 3 gpm, it seems likely that the bacteria levels were diluted by the input of water further downstream. This is supported by the fact that there was no total coliform exceedance at 907-ALV-002-1, where the flow had increased to 2 gpm downstream of Sites 907-ALV-002-2 and 907-ALV-002-3. No leaf litter or trash accumulation was noted along Commercial Street, surrounding Site 907-ALV-002, indicating that leaf litter and trash decomposition upstream of the site, when combined with higher flow through the area, is the most likely cause of the transient elevated bacteria levels. Table 8-1 and Figure 8-1 present the locations and results of this follow-up investigation.

TABLE 8-1
SITE 907-ALV-002 BACTERIA UPSTREAM INVESTIGATION

Site	Location	Flow (gpm)	Total Coliforms (MPN/100 mL)	Fecal Coliforms (MPN/100 mL)	Enterococci (MPN/100 mL)
907-ALV-002 *(Routine Visit)*	Along the south edge of the Costco parking lot, just south of the Marengo Avenue and Fletcher Parkway intersection	5	**50,000**	17,000	**17,000**
907-ALV-002 *(Confirmation)*	*(same as above)*	3	15,500	554	780
907-ALV-002-1	South of I-8, north of golf course, north side of fence, by the freeway	2	26,100	418	657
907-ALV-002-2	Next to 8515 La Mesa Boulevard, before entering concrete box	1	**51,700**	1,200	1,918
907-ALV-002-3	Next to 8515 La Mesa Boulevard, after leaving concrete box	1	**54,800**	1,035	2,755

Notes:
Red Bold Type □ value exceeds action level
Number of fecal coliforms was derived from the *E. coli* count using the following formula:
Number of fecal coliforms □ (Number of *E. coli*) / 0.85.

FIGURE 8-1
SITE 907-ALV-002 UPSTREAM INVESTIGATION MAP

Site 907-ALV-006

Site 907-ALV-006 is located in a manhole near the intersection of Fletcher Parkway and Marengo Avenue, in a landscaped planter. During the initial visit, the level of surfactants was 2.0 mg/L, which is above the 1.0 mg/L action level. The water was flowing at about 1 gpm and had a white film visible on the surface.

The primary land use upstream of the site is residential. Just after the exceedance was noted, evidence of car washing was observed in the driveway of a home on Kato Street. The driveway was wet and runoff reached the storm drain inlet nearby. As this inlet is directly upstream of Site 907-ALV-006 and the only other sources of flow noted were that of irrigation runoff, it is likely that this vehicle washing was the source of elevated surfactants levels.

Upon revisiting the site the following day, general conditions at the site appeared to be the same and the flow was less than 1 gpm. At this confirmation visit, surfactants measured 0.63 mg/L. It was concluded that the initial elevated level of surfactants was transient and most likely due to upstream vehicle washing.

Site 907-ALV-640

Site 907-ALV-640 is located in a concrete channel in a residential neighborhood on the north side of Seton Hall Road, between Swarthmore Street and Wheaton Street. During the initial field screening, the water was flowing slowly at a rate of less than 1 gpm, with a temperature of 24.8 °C. A sample that was taken from a sunny portion of the channel had a pH of 10.1, which is over the action level of 9.0.

Photo 8-2: Water entering a shaded portion of Site 907-ALV-640

At that time, pH measurements were taken at various other locations just upstream and downstream of the site. One upstream location was a small landscaping drain contributing flow to Site 907-ALV-640. The pH of water at this location was 8.6. Further upstream, the pH in a shaded area of the channel was 8.3. Downstream of Site 907-ALV-640, the flow was sampled just prior to entering a pipe in a shaded area. The pH at this location was 8.8. At the confirmation visit to Site 907-ALV-640 the following day, the pH was 8.1 and the temperature was 20.4 °C. No sources of runoff with high pH levels were found entering the channel.

Given that the water's pH decreased from the sunny portion to the shaded portion of the channel, and the pH level was lower in the same location when the water was cooler the following day, it was concluded that the high pH level was a result of sunlight and increased temperature, which remove carbon dioxide from the water. Because carbon dioxide forms carbonic acid when dissolved in water, removal of carbon dioxide from water makes the water more basic and results in higher pH readings. Typically the pH increases during daylight hours as sunlight stimulates algal photosynthesis and carbon dioxide is removed from water. During the night when algae is not photosynthesizing, the carbon dioxide level in the water increases due to biological respiration and physical diffusion of carbon dioxide from 0air into water, and the pH decreases. Because the solubility of gas in water is inversely proportional to the water temperature, carbon dioxide is less soluble in warmer water. Sunlight heats the shallow, unshaded water in a concrete channel, resulting in lower solubility for carbon dioxide.

Site 908-LEM-520

Site 908-LEM-520 is located at an outlet by the south end of Harris Street near Waite Drive. This site receives flow from the surrounding residential neighborhoods. At the time of the initial visit, the water was yellow in color, with trash floating on the surface and a flow rate of 1 gpm. The surfactants concentration of the initial sample exceeded the 1.0 mg/L action level, measuring 1.5 mg/L. Overland flow was observed traveling down Harris Street and entering the inlet contributing to Site 908-LEM-520 (see Photo 8-3). The flow appeared to

Photo 8-3: Sump-pump discharge water entering Harris Street upstream of Site 908-LEM-520

originate from drains in the curb in front of numerous houses. A resident informed the field crew that the neighborhood is situated in a shallow groundwater area and that most of the houses in the area use sump-pumps to prevent water from accumulating beneath their homes. The resident reported that flow is always present in the streets for this reason, which is consistent with the presence of algae along the curbs. Since Site 908-LEM-520 collects water from the drains of numerous properties and no washing activities were observed, the exact source of surfactants at the time of the first visit could not be identified. At the confirmation visit the next day, surfactants were measured below the action level at 0.75 mg/L. The source of the surfactant exceedance was therefore determined to be transient.

Site 908-UNI-002

Site 908-UNI-002 is located in a manhole near the intersection of Harbison Avenue and University Avenue intersection. During the initial visit, surfactants were measured at 2.0 mg/L, and the water had a chemical odor. An immediate upstream investigation on Harbison Avenue and the surrounding residential areas was performed, but a potential source of surfactants could not be identified. Manholes opened upstream of the site were found to have approximately the same amount of flow as Site 908-UNI-002, appearing to originate from irrigation runoff. At the confirmation visit the following day, the surfactants level was below the action level at 0.63 mg/L. The flow was again approximately 2 gpm and but no longer had a detectable odor. It was concluded that the initial high level of surfactants was likely due to a transient flow.

Site 908-UNI-003

Site 908-UNI-003 is located where two pipes converge in a manhole on the north side of Lowell Street, between University Avenue and Normal Avenue. Laboratory results indicated a copper concentration of 0.076 mg/L, exceeding the CMC for water at this site. During the follow-up investigation, a sample was collected from Site 908-UNI-003 and also from each of the contributing pipes, referred to as sampling locations 908-UNI-003-1 and 903-UNI-003-2. The laboratory results and respective CMC values for each location are presented in Table 8-2. Copper concentrations from all three follow-up samples were below CMC values. Areas surrounding the site and upstream drainage area were examined during the upstream investigation, but no clear source of the copper exceedance could be identified. It was concluded that the exceedance was most likely the result of a transient flow.

TABLE 8-2
SITE 907-UNI-003 COPPER UPSTREAM INVESTIGATION

Site	Location	Hardness (mg/L $CaCO_3$)	Copper (mg/L)	CMC (mg/L)
908-UNI-003	Along Lowell Street, about halfway between University Avenue and Normal Avenue, north side of street, 4291 Lowell Street driveway	529	**0.076**	0.0496
908-UNI-003 *(Confirmation)*	*(Same as above)*	634	0.005	0.0496

Notes:
CMC Criterion Maximum Concentration, short term concentration limit in which aquatic life can be sustained
Red Bold Type value exceeds action level

Site 908-UNI-005

Site 908-UNI-005 is located in a manhole in Rolando Park, within a gated dirt area on the left side of the baseball field. At the time of the first visit, a flow of less than 1 gpm was observed and a nitrate-nitrogen level of 17.25 mg/L, above the action level of 10 mg/L, was measured. At the confirmation visit the following day, nitrate-nitrogen was measured 1.81 mg/L.

Photo 8-4: Site 908-UNI-005

The initial exceedance was likely due to a transient flow. The drainage area to Site 908-UNI-005 is made up of parks and residential areas. It is possible that fertilizer use in Sunshine Park, upstream of Rolando Park, and surrounding community may have been a source of nitrate-nitrogen. At the time of the routine and confirmation visit, no clear source could be identified.

9 SUMMARY AND RECOMMENDATIONS

9.1 Summary of Field Screening and Laboratory Analysis Data

In the City of La Mesa 2009 Dry Weather Monitoring Program, 21 sites were visited, 20 of which had flowing or ponded water. Site 907-ALV-580 was sampled in place of Site 907-ALV-003, which was dry. Samples from six sites were submitted for laboratory analyses. Confirmation visits and upstream investigations were performed for seven sites having constituents at or above respective action levels. A summary of action level exceedances is provided in Table 9-1. Conclusions based on confirmation visits and upstream investigations are presented in Table 9-2.

TABLE 9-1
SUMMARY OF ACTION LEVEL EXCEEDANCES

Field Screening (20 samples)			
Analyte	**Number of Exceedances**	**Percentage of Sites with Exceedance**	**Site(s) Exceeding Action Level**
pH	1	5	907-ALV-640
Conductivity	0	0	-
Turbidity	0	0	-
Surfactants	3	15	907-ALV-006 908-LEM-520 908-UNI-002

Oil & Grease	0	0	-
Cadmium	0	0	-
Copper	1	5	908-UNI-003
Lead	0	0	-
Zinc	0	0	-
Diazinon	0	0	-
Chlorpyrifos	0	0	-
Total Coliforms	1	5	907-ALV-002
Fecal Coliforms	0	0	-
Enterococci	1	5	907-ALV-002

Note: Data is from the initial site visits only. Confirmation visits, follow-up visits and dry sites not included.

All but one site had flowing water. The majority of sites had odorless water, with one sample having a chemical odor. Samples at six sites were yellow in color; the remainder were colorless. Two sites had slightly cloudy water, and the rest of the water samples were clear. Sediments and fine particulates were present at most sites. Algae grew at ten sites, insects were present at eleven sites, and several other sites were host to snails and spiders. Trash levels were optimal at most sites, five sites were ranked suboptimal, two marginal, and one submarginal site.

9.2 Summary of Follow-up Data

Table 9-2 presents the conclusions based on the results of the confirmation and upstream investigations conducted at seven sites for the 2009 Dry Weather Monitoring Program.

TABLE 9-2
SUMMARY OF FOLLOW-UP INVESTIGATIONS

Site	Upstream Investigation Target Constituent(s)		Results □Probable Source
	Field	Laboratory	
907-ALV-002	---	Total Coliforms, Enterococci	Decomposing organic material and trash upstream of the site
907-ALV-006	Surfactants	---	Likely due to a transient flow from vehicle washing by resident in neighborhood upstream
907-ALV-640	pH	---	Sunlight and higher temperatures encouraging the removal of carbon dioxide through decreased solubility and increased photosynthesis
908-LEM-520	Surfactants	---	Transient flow
908-UNI-002	Surfactants	---	Transient flow from residential and commercial area
908-UNI-003	---	Copper	Transient flow
908-UNI-005	Nitrate-nitrogen	---	Transient flow, potentially due to fertilizer usage in surrounding residential and park areas

9.3 Recommendations

9.3.1 2008 Recommendation Implementation

In response to the recommendation presented in the 2008 Dry Weather Field Screening Program, the City took the following actions:

- Leaves and trash were removed from sites 907-ALV-002 and 907-ALV-002-2 prior to the beginning of the 2008/2009 and the 2009/2010 rainy seasons.
- Trash was removed from Site 908-UNI-002 prior to the beginning of the 2008/2009 and the 2009/2010 rainy seasons.
- The City has worked with the Vons Shopping Center property management upstream of Site 908-UNI-004 regarding removal of leaf debris and litter from storm drains onsite. The City discussed general storm water pollution prevention issues and requested a Storm Water Monitoring Plan and Best Management Practices Plan from the property owner. Since the 2008 Dry Weather Monitoring Program, the City has followed up with property management regarding catch basin cleaning, dumpster maintenance, and other required pollution prevention issues.

9.3.2 2009 Recommendations

Based on the results of the 2009 Dry Weather Field Screening Program, the following actions are recommended. It is also noted below where recommended actions have already been implemented.

- Remove leaf debris from Memorial Avenue, located along the conveyance upstream of Site 907-ALV-002. The City has removed decomposing leaves and trash from location 907-ALV-002-2, an upstream concrete box, as well as from Site 907-ALV-002.
- Remove the household debris and trash from the area surrounding Site 907-ALV-590, which received a submarginal trash rating. Clean up trash from sites 908-UNI-001 and 908-UNI-002, which received marginal trash ratings.
- Consider substituting primary Site 907-ALV-003, which has been dry for several years, with alternate Site 907-ALV-580, which has been sampled for the past two years.

Laboratory Analytical Reports

EnviroMatrix Analytical, Inc.

10 June 2009

D-Max Engineering
Attn: Arsalan Dadkhah
7220 Trade Street, Suite 119
San Diego, California 92121

EMA Log #: 0906093

Project Name: La Mesa MSH Sampling 200912W-23

Enclosed are the results of analyses for samples received by the laboratory on 06/02/09 16:52. Samples were analyzed pursuant to client request utilizing EPA or other ELAP approved methodologies. I certify that this data is in compliance both technically and for completeness.

Dan Verdon
Laboratory Director

CA ELAP Certification #: 2564
