California Regional Water Quality Control Board, San Diego Region, Order No. R9-2010-0016, 11-TC-03; County of Riverside, Riverside County Flood Control and Water Conservation District, Cities of Murrieta, Temecula and Wildomar, Co-Claimants

Dear Ms. Halsey:

By letter dated May 8, 2017, the Commission on State Mandates (Commission) requested that the California Regional Water Quality Control Board, San Diego Region (San Diego Water Board) and the State Water Resources Control Board (State Water Board) provide copies of the official administrative records of their respective agencies for adoption or review of San Diego Water Board Order No. R9-2010-0016 (NPDES No. CAS0108766). Following subsequent extensions of time, the administrative record is now due September 22, 2017.

Attached is the San Diego Water Board's official administrative record for adoption of Order No. R9-2010-0016, the 2010 Municipal Separate Storm Sewer System Permit for the County of Riverside Copermittees. While petitions for review of Order No. R9-2010-0016 were filed with the State Water Board, the State Water Board has not exercised jurisdiction over these petitions and no administrative record exists regarding any discretionary action taken by that board in this matter. Copies of the petitions for review and/or State Water Board correspondence concerning receipt of the petitions and regarding abeyance status will be provided upon request.

Please do not hesitate to contact me with any questions. I can be reached at (619) 521-3012 or by email at catherine.hagan@waterboards.ca.gov.

Sincerely,

Catherine George Hagan

Catherine George Hagan
Attorney IV

Attachment – Administrative Record for Order No. R9-2010-0016

MONITORING AND REPORTING PROGRAM No. R9-2004-001

FINDINGS

The California Regional Water Quality Control Board, San Diego Region (hereinafter SDRWQCB), finds that:

1. The Riverside County Flood Control and Water Conservation District (District), the County of Riverside and the Cities of Murrieta and Temecula (hereinafter called Permittees), own or operate municipal separate storm sewer systems (MS4s), through which urban runoff is discharged into waters of the United States (U.S.) within the Santa Margarita Watershed area of Riverside County in the San Diego Region (hereinafter referred to as the Upper Santa Margarita Watershed).

2. The SDRWQCB has previously issued two MS4 permits for the Upper Santa Margarita Watershed. The first-round MS4 permit was issued on July 16, 1990, and the second-round MS4 permit was issued on May 13, 1998 (Order No. R9-98-02). On May 26, 1998, the United States Environmental Protection Agency (EPA), Region IX, objected to Order No. 98-02 due to concerns regarding the Receiving Water Limitations (RWL) language. The EPA concluded that the RWL language in the permit did not comply with the federal Clean Water Act (CWA) and its implementing regulations. On April 27, 1999, the EPA reissued the MS4 permit, which the SDRWQCB adopted as Addendum No. 1 to Order No. R9-98-02 on November 8, 2000. On May 30, 2003 and in accordance with Order No. R9-98-02, the District, as the Principal Permittee, submitted a Report of Waste Discharge (ROWD) for renewal of their MS4 Permit.

3. The Water Quality Control Plan for the San Diego Basin (Basin Plan), identifies the following beneficial uses for water bodies in the Santa Margarita Watershed: Municipal and Domestic Supply (MUN), Agricultural Supply (AGR), Industrial Process Supply (PROC), Industrial Service Supply (IND), Ground Water Recharge (GWR), Contact Water Recreation (REC1) (potential use), Non-contact Water Recreation (REC2), Warm Freshwater Habitat WARM, Cold Freshwater Habitat (COLD), Wildlife Habitat (WILD), and Rare, Threatened, or Endangered Species (RARE).

4. Urban runoff contains waste, as defined in the California Water Code (CWC), and pollutants that adversely affect the quality of the waters of the State. The discharge of urban runoff from an MS4 is a "discharge of pollutants from a point source" into waters of the U.S. as defined in the CWA.

5. The most common categories of pollutants in urban runoff include total suspended solids, sediment (due to anthropogenic activities); pathogens (e.g., bacteria, viruses, protozoa); heavy metals (e.g., copper, lead, zinc and cadmium); petroleum products and polynuclear aromatic hydrocarbons; synthetic organics (e.g., pesticides, herbicides, and PCBs); nutrients (e.g., nitrogen and phosphorus fertilizers), oxygen-demanding substances (decaying vegetation, animal waste), and trash.

6. The discharge of pollutants and/or increased flows from MS4s may cause or threaten to cause the concentration of pollutants to exceed applicable receiving water quality objectives and impair or threaten to impair designated beneficial uses resulting in a condition of pollution (i.e., unreasonable impairment of water quality for designated beneficial uses), contamination, or nuisance.

7. Pollutants in urban runoff can threaten human health. Human illnesses have been clearly linked to recreating near storm drains flowing to coastal waters. Also, urban runoff pollutants in receiving waters can bioaccumulate in the tissues of invertebrates and fish, which may be eventually consumed by humans.

8. Development and urbanization especially threaten environmentally sensitive areas (ESAs), such as water bodies designated as supporting a RARE beneficial use (supporting rare, threatened or endangered species) and CWA 303(d) impaired water bodies. Such areas have a much lower capacity to withstand pollutant shocks than might be acceptable in the general circumstance. In essence, development that is ordinarily insignificant in its impact on the environment may become significant in a particular sensitive environment. Therefore, additional control to reduce pollutants from new and existing development may be necessary for areas adjacent to or discharging directly to an ESA.

9. Urban runoff often contains pollutants that cause toxicity to aquatic organisms (i.e., adverse responses of organisms to chemicals or physical agents ranging from mortality to physiological responses such as impaired reproduction or growth anomalies). Toxic pollutants impact the overall quality of aquatic systems and beneficial uses of receiving waters.

10. The Final 2002 CWA Section 303(d) List of Water Quality Limited Segments identifies the entire length of Murrieta Creek (12 miles) and the upper portion of the Santa Margarita River (18 miles) as impaired for phosphorus. Potential sources of the phosphorus impairment include urban runoff and unknown point and nonpoint sources. The Santa Margarita Lagoon is listed as impaired for eutrophication.

11. The Permittees' water quality monitoring data submitted to date documents persistent exceedances of Basin Plan water quality objectives for various urban runoff-related pollutants (chlorpyrifos, chromium, diazinon, dissolved oxygen, fecal coliform, MBAS, phosphorus, etc.) at eight different monitoring stations in the Upper Santa Margarita Watershed. The data indicate that urban runoff from activities such as over-application of pesticides and potential illicit discharges from industrial and commercial activities may be contributing to potential water quality impairments. Also, bioassessment monitoring, conducted by the California Department of Fish and Game, and physical assessments, conducted as part of the development of the Draft Operational Guidebook For Referenced Based Assessment of the Functions of Riverine Waters/Wetlands in the Santa Margarita Watershed, indicate that impacts to the biological and physical integrity of receiving waters have occurred as a result of urbanization in the upper watershed.

12. Peak storm water discharges rates, velocities and durations must be controlled to prevent downstream erosion and protect stream habitat. When natural vegetated pervious ground cover is converted to impervious surfaces such as paved highways, streets, rooftops, and parking lots, the natural absorption and infiltration abilities of the land are lost. Therefore, runoff leaving a developed urban area is significantly greater in volume, velocity, peak flow rate, and pollutant load than pre-development runoff from the same area. The increased volume, velocity, rate, and duration of runoff greatly accelerate the erosion of downstream natural channels.

13. As part of the ROWD, the Permittees proposed to update and modify their existing Drainage Area Management Plan (DAMP), dated March 1993, to incorporate new programs, requirements, and commitments. Direction to the Permittees in revising the DAMP, hereinafter referred to as a Storm Water Management Plan (SWMP), is necessary to ensure that the document provides a written description of the specific urban runoff management measures and programs that each Permittee will implement to fulfill its individual responsibilities and the area-wide and watershed-based activities necessary to meet the maximum extent practicable (MEP) standard. It is practicable for the Permittees to update the SWMP within one year. The SWMP is an integral and enforceable component of this Order.

14. The MEP standard is an ever-evolving, flexible, and advancing concept, which considers technical and economic feasibility. As knowledge about controlling urban runoff continues to evolve, so does that which constitutes MEP. Reducing the discharge of pollutants in urban runoff to the MEP requires Permittees to conduct and document evaluation and assessment of each program component and revise activities, control measures, best management practices (BMPs), and measurable goals, as necessary to meet MEP. Because MEP is a dynamic performance standard, it is necessary to describe in greater detail, measures that are essential for compliance.

15. Pollutants can be effectively reduced in urban runoff by the application of a combination of pollution prevention, source control, and treatment control BMPs. Pollution prevention is the reduction or elimination of pollutant generation at its source and is the best "first line of defense". Source control BMPs (both structural and non-structural) minimize the contact between pollutants and flows (e.g., rerouting run-on around pollutant sources or keeping pollutants on-site and out of receiving waters). Treatment control BMPs remove pollutants from urban runoff.

16. Developing minimum BMPs and implementing or requiring their implementation at industrial and commercial facilities, construction sites, and residential areas is necessary for the Permittees to ensure that, ultimately, discharges of pollutants into and from its MS4 are reduced to the MEP.

17. Controlling urban runoff pollution by using a combination of onsite source control BMPs augmented with treatment control BMPs before the runoff enters the MS4 is important for the following reasons: (1) Many end-of-pipe BMPs (such as diversion to the sanitary sewer) are typically ineffective during significant storm events. Whereas, onsite source control BMPs can be applied during all runoff conditions; (2) End-of-pipe BMPs are often incapable of capturing and treating the wide range of pollutants which can be generated on a sub-watershed scale; (3) End-of-pipe BMPs are more effective when used as polishing BMPs, rather than the sole BMP to be implemented; (4) End-of-pipe BMPs do not protect the quality or beneficial uses of receiving waters between the source and the BMP; and (5) Offsite end-of-pipe BMPs do not aid in the effort to educate the public regarding sources of pollution and their prevention.

18. Urban runoff treatment and/or mitigation must occur prior to the discharge of urban runoff into a receiving water. Federal regulations at 40 CFR 131.10(a) state that in no case shall a state adopt waste transport or waste assimilation as a designated use for any waters of the U.S. Authorizing the construction of an urban runoff treatment facility within a water of the U.S., or using the water body itself as a treatment system or for conveyance to a treatment system, would be tantamount to accepting waste assimilation as an appropriate use for that water body. Furthermore, the construction, operation, and maintenance of a pollution control facility in a water body can negatively impact the physical, chemical, and biological integrity, as well as the beneficial uses, of the water body. This is consistent with EPA guidance to avoid locating structural controls in natural wetlands.

19. Historic and current developments make use of natural drainage patterns and features as conveyances for urban runoff. Urban streams used in this manner are both MS4s and receiving waters.

20. As operators of the MS4s, the Permittees cannot passively receive and discharge pollutants from third parties. By providing free and open access to an MS4 that conveys discharges to waters of the U.S., the operator essentially accepts responsibility for discharges into the MS4 that it does not prohibit or control. These discharges may cause or contribute to a condition of contamination or exceedances of water quality objectives.

21. In accordance with federal NPDES regulations and to ensure the most effective oversight of industrial and construction site discharges, discharges of runoff from industrial and construction sites are subject to dual (state and local) storm water regulation. Under this dual system, the SDRWQCB is responsible for enforcing the General Construction Activities Storm Water Permit, SWRCB Order 97-03 DWQ, NPDES No. CAS000001 (General Construction Permit) and the General Industrial Activities Storm Water Permit, SWRCB Order 99-08 DWQ, NPDES No. CAS000002 (General Industrial Permit), and each municipal Permittee is responsible for enforcing its local permits, plans, and ordinances, which may require the implementation of additional BMPs than required under the statewide general permits.

22. This Order implements the federal CWA, the Porter-Cologne Water Quality Control Act (Division 7 of the CWC, commencing with section 13000), applicable state and federal regulations, all applicable provisions of statewide Water Quality Control Plans and Policies adopted by the State Water Resources Control Board (SWRCB), and the Basin Plan.

23. The RWL language specified in this Order is consistent with language recommended by the EPA and established in SWRCB Water Quality Order 99-05, adopted by the SWRCB on June 17, 1999. The RWL in this Order require compliance with water quality standards through an iterative approach requiring the implementation of improved and better-tailored BMPs over time.

24. The Standard Urban Storm Water Management Plan (SUSMP) requirements contained in this Order are consistent with Order WQ-2000-11 adopted by the SWRCB on October 5, 2000. In the precedential order, the SWRCB found that the design standards, which essentially require that urban runoff generated by 85 percent of storm events from specific development categories be infiltrated or treated, reflects the MEP standard. The order also found that the design standards are appropriately applied to the majority of the Priority Development Project categories contained in Section F of this Order. It gave Regional Water Quality Control Boards (RWQCBs) the discretion to include additional categories and locations, such as retail gasoline outlets (RGOs) and ESAs, in future SUSMPs.

25. RGOs are significant sources of pollutants in urban runoff. RGOs are points of convergence for motor vehicles for automotive related services such as repair, refueling, tire inflation, and radiator fill-up and consequently produce significantly higher loadings of hydrocarbons and trace metals (including copper and zinc) than other urban areas. To meet MEP, source control and treatment control BMPs are needed at RGOs that meet the following criteria: (a) 5,000 square feet or more, or (b) a projected Average Daily Traffic (ADT) of 100 or more vehicles per day. These are appropriate thresholds since vehicular development size and volume of traffic are good indicators of potential impacts of urban runoff from RGOs on receiving waters.

26. This Order is in conformance with SWRCB Resolution No. 68-16 and the federal Antidegradation Policy described in 40 CFR 131.12.

27. Section 6217(g) of the Coastal Zone Act Reauthorization Amendments of 1990 (CZARA) requires coastal states with approved coastal zone management programs to address non-point pollution impacting or threatening coastal water quality. CZARA addresses five sources of non-point pollution: agriculture, silviculture, urban, marinas, and hydromodification. This NPDES permit addresses the management measures required for the urban category, with the exception of septic systems. The adoption and implementation of this NPDES permit relieves the Permittee from developing a non-point source plan, for the urban category, under CZARA. The SDRWQCB addresses septic systems through the administration of other programs.

28. Each Permittee is individually responsible for adoption and enforcement of ordinances and/or policies, implementation of identified control measures/BMPs needed to prevent or reduce pollutants in storm water runoff, and for the allocation of funds for the capital, operation and maintenance, and enforcement expenditures necessary to implement and enforce such control measures/BMPs under its jurisdiction.

29. Although dependent on several factors, the risks typically associated with properly managed infiltration of runoff (especially from residential land use areas) are not significant. The risks associated with infiltration can be managed by many techniques, including (1) designing landscape drainage features that promote infiltration of runoff, but do not "inject" runoff (injection bypasses the natural processes of filtering and transformation that occur in the soil); (2) taking reasonable steps to prevent the illegal disposal of wastes; and (3) ensuring that each drainage feature is adequately maintained in perpetuity.

30. If not properly designed or maintained, certain BMPs implemented or required by municipalities for urban runoff management may create a habitat for vectors (e.g. mosquitoes and rodents). However, proper BMP design to avoid standing water can prevent the creation of vector habitat. Nuisances and public health impacts resulting from vector breeding can be prevented with close collaboration and cooperative effort between municipalities and local vector control agencies and the State Department of Health Services during the development and implementation of the SWMP.

31. The issuance of waste discharge requirements and an NPDES permit for the discharge of urban runoff from MS4s to waters of the U.S. is exempt from the requirement for preparation of environmental documents under the California Environmental Quality Act (CEQA) (Public Resources Code, Division 13, Chapter 3, section 21000 et seq.) in accordance with the CWC section 13389.

32. The SDRWQCB has notified the Permittees, all known interested parties, and the public of its intent to consider adoption of an Order prescribing waste discharge requirements that would serve to renew an NPDES permit for the existing discharge of urban runoff.

33. The SDRWQCB has, at public meetings on February 11, 2004 and July 14, 2004, held public hearings and heard and considered all comments pertaining to the terms and conditions of this Order.

PERMIT PROVISIONS

IT IS HEREBY ORDERED: That the Permittees, in order to meet the provisions contained in Division 7 of the CWC and regulations adopted thereunder, and the provisions of the CWA and regulations adopted thereunder, shall each comply with the following:

A. PROHIBITIONS

1. Discharges into and from MS4s in a manner causing, or threatening to cause, a condition of pollution, contamination, or nuisance (as defined in CWC section 13050), in waters of the State are prohibited.

2. Discharges from MS4s that cause or contribute to exceedances of water quality objectives for surface water or groundwater are prohibited.

3. Discharges from MS4s containing pollutants which have not been reduced to the MEP are prohibited.

4. In addition to the above prohibitions, discharges from MS4s are subject to all Basin Plan prohibitions cited in **Attachment A** to this Order.

B. NON-STORM WATER DISCHARGES

1. Each Permittee shall effectively prohibit all types of non-storm water discharges into its MS4 unless such discharges are either authorized by a separate NPDES permit; or authorized in accordance with Requirements B.2 and B.3 below.

2. The following categories of non-storm water discharges are not prohibited unless a Permittee or the SDRWQCB identifies the discharge category as a source of pollutants to waters of the U.S. For such a discharge category, the Permittee shall either prohibit the discharge category or develop and implement appropriate control measures under the SWMP to reduce pollutants to the MEP and submit the report to the SDRWQCB pursuant to section III.A.1.d of Monitoring and Reporting Program No. R9-2004-001 (hereafter referred to as the MRP).

   a) Diverted stream flows;
   b) Rising ground waters;
   c) Uncontaminated ground water infiltration [as defined at 40 CFR 35.2005(20)] to MS4s;
   d) Uncontaminated pumped ground water;
   e) Foundation drains;
   f) Springs;
   g) Water from crawl space pumps;
   h) Footing drains;
   i) Air conditioning condensation;
   j) Flows from riparian habitats and wetlands;
   k) Water line flushing;
   l) Landscape irrigation;
   m) Discharges from potable water sources not subject to NPDES Permit No. CAG679001, other than water main breaks;
   n) Irrigation water;
   o) Lawn watering;

p) Individual residential car washing;
q) Non-emergency fire fighting flows; and
r) Dechlorinated swimming pool discharges.

3. Discharges from emergency fire fighting activities are not prohibited. If discharges are determined to be a significant source of pollutants to waters of the U.S., the Permittees shall require the implementation of appropriate BMPs to reduce the discharge of pollutants to the MEP, when not interfering with the protection of health and property.

4. Each Permittee shall examine its Illicit Discharge Monitoring results collected in accordance with Requirement J.3 of this Order and section II.B of the MRP to identify water quality problems which may be the result of any non-prohibited discharge category(ies) listed above in Requirement B.2. Follow-up investigations shall be conducted as necessary to identify and control any non-prohibited discharge category(ies) listed above.

C. RECEIVING WATER LIMITATIONS

1. Discharges from MS4s that cause or contribute to the violation of water quality standards (designated beneficial uses and water quality objectives developed to protect beneficial uses of receiving waters) are prohibited.

2. Each Permittee shall comply with Requirement C.1, Prohibition A.2, and Prohibition A.4 as it applies to Prohibition No. 5 in **Attachment A** of this Order through timely implementation of control measures and other actions to reduce pollutants in urban runoff discharges in accordance with the SWMP and other requirements of this Order including any modifications. The SWMP shall be designed to achieve compliance with Requirement C.1, Prohibition A.2, and Prohibition A.4 as it applies to Prohibition 5 in **Attachment A** of this Order. If exceedance(s) of water quality standards persist notwithstanding implementation of the SWMP and other requirements of this Order, the Permittee shall assure compliance with Requirement C.1, Prohibition A.2, and Prohibition A.4 as it applies to Prohibition 5 in **Attachment A** of this Order by complying with the following procedure:

   a) Upon a determination by either a Permittee or the SDRWQCB that MS4 discharges are causing or contributing to an exceedance of an applicable water quality standard, the Permittee shall promptly notify and thereafter submit a report to the SDRWQCB that describes BMPs that are currently being implemented and additional BMPs that will be implemented to prevent or reduce any pollutants that are causing or contributing to the exceedance of water quality standards. The report may be incorporated in the SWMP Annual Report unless the SDRWQCB directs an earlier submittal. The report shall include an implementation schedule. The SDRWQCB may require modifications to the report;

   b) Submit any modifications to the report required by the SDRWQCB within 30 days of notification;

   c) Within 30 days following SDRWQCB approval of the report described above, the Permittee shall revise its SWMP and monitoring program to incorporate the approved modified BMPs that have been and will be implemented, the implementation schedule, and any additional monitoring required;

   d) Implement the revised SWMP and monitoring program in accordance with the approved schedule.

   So long as the Permittee has complied with the procedures set forth above and are implementing

the revised SWMP, the Permittee does not have to repeat the same procedure for continuing or recurring exceedances of the same receiving water limitations unless directed by the SDRWQCB to develop additional BMPs.

D. LEGAL AUTHORITY

1. Each Permittee shall establish, maintain, and enforce adequate legal authority to control pollutant discharges into and from its MS4 through ordinance, statute, permit, contract or similar means. This legal authority must, at a minimum, authorize the Permittee to:

   a) Control the contribution of pollutants in discharges of runoff associated with industrial and construction activity to its MS4 and control the quality of runoff from industrial and construction sites. This requirement applies both to industrial and construction sites that have coverage under the General Industrial Permit and General Construction Permit, as well as to those sites that do not. Grading ordinances shall be upgraded and enforced as necessary to comply with this Order.

   b) Prohibit all identified illicit discharges not otherwise allowed pursuant to Requirement B.2 including but not limited to:

      (1) Sewage;

      (2) Discharges of wash water resulting from the hosing or cleaning of gas stations, auto repair garages, or other types of automotive services facilities;

      (3) Discharges resulting from the cleaning, repair, or maintenance of any type of equipment, machinery, or facility including motor vehicles, cement-related equipment, and port-a-potty servicing, etc.;

      (4) Discharges of wash water from mobile operations such as mobile automobile washing, steam cleaning, power washing, and carpet cleaning, etc.;

      (5) Discharges of wash water from the cleaning or hosing of impervious surfaces in municipal, industrial, commercial, and residential areas including parking lots, streets, sidewalks, driveways, patios, plazas, work yards and outdoor eating or drinking areas, etc.;

      (6) Discharges of runoff from material storage areas containing chemicals, fuels, grease, oil, or other hazardous materials;

      (7) Discharges of pool or fountain water containing chlorine, biocides, or other chemicals; discharges of pool or fountain filter backwash water;

      (8) Discharges of sediment, pet waste, vegetation clippings, or other landscape or construction-related wastes; and

      (9) Discharges of food-related wastes (e.g., grease, fish processing, and restaurant kitchen mat and trash bin wash water, etc.).

   c) Prohibit and eliminate illicit connections to the MS4;

   d) Control the discharge of spills, dumping, or disposal of materials other than storm water to its MS4;

   e) Require compliance with conditions in Permittee ordinances, permits, contracts or orders (i.e., hold dischargers to its MS4 accountable for their contributions of pollutants and flows);

f) Require the use of BMPs to prevent or reduce the discharge of pollutants into MS4s to the MEP.

g) Carry out all inspections, surveillance, and monitoring necessary to determine compliance and noncompliance with local ordinances and permits and with this Order, including the prohibition on illicit discharges to the MS4. This means the Permittee must have authority to enter, sample, inspect, review and copy records, and require regular reports from industrial facilities discharging into its MS4, including construction sites;

h) Utilize enforcement mechanisms to require compliance with Permittee storm water ordinances, permits, contracts, or orders; and

i) Control the contribution of pollutants from one portion of the shared MS4 to another portion of the MS4 through interagency agreements among Permittees;

2. Each Permittee shall include as part of its Individual SWMP, which must be submitted within 365 days of adoption of this Order, a statement certified by its chief legal counsel that the Permittee has adequate legal authority to implement and enforce each of the requirements contained in 40 CFR 122.26(d)(2)(i)(A-F) and this Order.

E. STORM WATER MANAGEMENT PLAN (SWMP)

1. Within 365 days from the date of this Order, the Principal Permittee shall submit a SWMP to the SDRWQCB. The SWMP shall describe the various urban runoff management programs that will be implemented to comply with this Order and to reduce pollutants in urban runoff to the MEP for the duration of this Order. The SWMP is an integral and enforceable component of this Order and shall consist of the following:

   a) Individual SWMP - The written description of each Permittee's individual programs that address Sections B through J of this Order. **Attachment D** contains direction for the preparation of the Individual SWMP. Each Permittee shall submit their Individual SWMP to the Principal Permittee by a date determined by the Principal Permittee for inclusion in the SWMP.

   b) Watershed SWMP - The written account of all area-wide and watershed-based programs and activities conducted by the Permittees. The Watershed SWMP shall contain the programs and items required above in Requirements K.1 – K.4 of this Order.

2. Unless otherwise specified, within 365 days of the adoption of this Order, each Permittee shall have completed full implementation of the SWMP and all requirements in this Order. Prior to the implementation of new or revised programs, each Permittee shall, at a minimum, continue implementation of existing programs developed pursuant to Order No. R9-98-02 and described in the 2002-2003 Annual Progress Report.

3. Each Permittee shall incorporate a mechanism for public participation during the development and implementation of its SWMP.

F. DEVELOPMENT PLANNING

Permittees shall implement a program, including but not limited to, the requirements in this section, to reduce pollutants in urban runoff from developments to the MEP.

1. Assess General Plan

Each Permittee's General Plan or equivalent plan (e.g., Comprehensive, Master, or Community Plan) shall include water quality and watershed protection principles and policies to direct land-use decisions and require implementation of consistent water quality protection measures for development projects. As part of its Individual SWMP, each Permittee shall provide a workplan with a time schedule detailing any changes to its General Plan regarding water quality and watershed protection. Examples of water quality and watershed protection principles and policies to be considered include the following:

a) Minimize the amount of impervious surfaces and directly connected impervious surfaces in areas of development and, where feasible, slow runoff and maximize on-site infiltration of runoff.

b) Implement pollution prevention methods supplemented by source control and treatment control BMPs. Use small collection strategies located at, or as close as possible to, the source (i.e., the point where water initially meets the ground) to minimize the transport of urban runoff and pollutants offsite and into an MS4.

c) Preserve, and where possible, create or restore areas that provide important water quality benefits, such as riparian corridors, wetlands, and buffer zones. Encourage land acquisition of such areas.

d) Limit disturbances of natural water bodies and natural drainage systems caused by development including roads, highways, and bridges.

e) Prior to making land use decisions, utilize methods available to estimate increases in pollutant loads and flows resulting from projected future development. Require incorporation of appropriate BMPs to mitigate the projected increases in pollutant loads and flows.

f) Avoid development of areas that are particularly susceptible to erosion and sediment loss; or establish development guidance that identifies these areas and protects them from erosion and sediment loss.

g) Reduce pollutants associated with vehicles and increasing traffic resulting from development.

h) Post-development runoff from a site shall not contain pollutant loads that cause or contribute to an exceedance of receiving water quality objectives and which have not been reduced to the MEP.

2. <u>Modify Development Project Approval Processes</u>

a) Requirements for all Development Projects (New Development and Redevelopment)

During the planning process, prior to the issuance of permits, Permittees shall require all proposed development projects to implement BMPs to ensure that the discharge of pollutants from the development will be reduced to the MEP and will comply with this Order and all local ordinances, plans, and permits. Development project requirements shall ensure that water quality objectives are not violated throughout the life of the development. At a minimum, requirements shall:

(1) Require project proponent to implement applicable pollution prevention and source control BMPs for applicable development projects.

(2) Require project proponent to implement site design/landscape characteristics where feasible which maximize infiltration, provide retention, slow runoff, and minimize impervious land coverage for all development projects.

(3) Require project proponent to incorporate buffer zones for natural water bodies, where feasible. Where buffer zones are infeasible, require project proponent to implement other buffers such as trees, access restrictions, etc.

(4) When known, require industrial facility operators subject to the General Industrial Permit to provide evidence of permit coverage prior to occupancy.

(5) Require project proponent to ensure its grading or other construction activities meet the provisions specified in Section G of this Order.

(6) Require project proponent to provide proof of a mechanism which will ensure ongoing long-term maintenance of all structural post-construction BMPs.

b) Standard Urban Storm Water Mitigation Plans (SUSMPs) – Requirements for Priority Development Projects

Within 365 days of adoption of this Order, each Permittee shall develop, adopt, and implement a SUSMP to reduce pollutants to the MEP and to maintain or reduce downstream erosion and protect stream habitat from all Priority Development Projects. Priority Development Projects are: a) all new development projects, and b) those redevelopment projects that create, add or replace at least 5,000 square feet of impervious surfaces on an already developed site, that are listed under the project categories or locations in Requirement F.2.b.(1) below. Redevelopment includes, but is not limited to: the expansion of a building footprint or addition or replacement of a structure; structural development including an increase in gross floor area and/or exterior construction or remodeling; replacement of impervious surface that is not part of a routine maintenance activity; and land disturbing activities related with structural or impervious surfaces. Where redevelopment results in an increase of less than fifty percent of the impervious surfaces of a previously existing development, and the existing development was not subject to SUSMP requirements, the numeric sizing criteria discussed in Requirement F.2.b.(3) applies only to the addition, and not to the entire development. Each Permittee shall submit both the adopted SUSMP and amended ordinances to the SDRWQCB no later than 365 days after the adoption of this Order.

Immediately following adoption of its SUSMP, each Permittee shall review and ensure that all Priority Development Projects meet SUSMP requirements. The SUSMP requirements shall apply to all Priority Development Projects or phases of Priority Development Projects that have not yet begun grading or construction activities. If a Permittee determines that lawful prior approval of a project exists, whereby application of SUSMP requirements to the project is infeasible, SUSMP requirements need not apply to the project. Where feasible, the Permittees shall utilize the 12-month SUSMP development and implementation period to ensure that projects undergoing approval processes include application of SUSMP requirements in their plans.

(1) Priority Development Project Categories

(a) *Housing subdivisions of 10 or more dwelling units.* This category includes single-family homes, multi-family homes, condominiums, and apartments.

(b) *Commercial developments greater than 100,000 square feet.* This category is defined as any development on private land that is not for heavy industrial or residential uses where the land area for development is greater than 100,000 square feet. The category includes, but is not limited to: hospitals; laboratories and other medical facilities; educational institutions; recreational facilities; municipal facilities; commercial nurseries; multi-apartment buildings; car wash facilities; mini-

malls and other business complexes; shopping malls; hotels; office buildings; public warehouses; automotive dealerships; airfields; and other light industrial facilities.

(c) *Automotive repair shops.* This category is defined as a facility that is categorized in any one of the following Standard Industrial Classification (SIC) codes: 5013, 5014, 5541, 7532-7534, or 7536-7539.

(d) *Restaurants.* This category is defined as a facility that sells prepared foods and drinks for consumption, including stationary lunch counters and refreshment stands selling prepared foods and drinks for immediate consumption (SIC code 5812), where the land area for development is greater than 5,000 square feet. Restaurants where land development is less than 5,000 square feet shall meet all SUSMP requirements except for structural treatment BMP and numeric sizing criteria requirement F.2.b.(3) and peak flow rate requirement F.2.b.(2)(a).

(e) *All hillside development greater than 5,000 square feet.* This category is defined as any development which creates 5,000 square feet of impervious surface which is located in an area with known erosive soil conditions, where the development will grade on any natural slope that is twenty-five percent or greater.

(f) *Environmentally Sensitive Areas (ESAs).* All development located within or directly adjacent to or discharging directly to an ESA (where discharges from the development or redevelopment will enter receiving waters within the ESA), which either creates 2,500 square feet of impervious surface on a proposed project site or increases the area of imperviousness of a proposed project site to 10% or more of its naturally occurring condition. "Directly adjacent" means situated within 200 feet of the ESA. "Discharging directly to" means outflow from a drainage conveyance system that is composed entirely of flows from the subject development or redevelopment site, and not commingled with flows from adjacent lands.

(g) *Parking lots 5,000 square feet or more.* Parking lot is defined as a land area or facility for the temporary parking or storage of motor vehicles used personally, for business, or for commerce.

(h) *Street, roads, highways, and freeways.* This category includes any paved surface that is 5,000 square feet or greater used for the transportation of automobiles, trucks, motorcycles, and other vehicles.

(i) *Retail Gasoline Outlets.* This category includes RGOs that meet the following criteria: (a) 5,000 square feet or more or (b) a projected Average Daily Traffic (ADT) of 100 or more vehicles per day

(2) BMP Requirements – The SUSMP shall include a list of recommended source control and treatment control BMPs. The SUSMP shall require all Priority Development Projects to implement a combination of on-site source control and on-site/shared treatment control BMPs (to treat the runoff specifically generated from each project) selected from the recommended BMP list. The BMPs shall, at a minimum:

(a) Control the post-development urban runoff discharge velocities, volumes, durations, and peak rates to maintain or reduce pre-development downstream erosion, and to protect stream habitat;

(b) Conserve natural areas where feasible;

(c) Minimize storm water pollutants of concern in urban runoff from the Priority Development Projects (through implementation of source control BMPs). Identification of pollutants of concern shall include, at a minimum, all pollutants for which water bodies receiving the development's runoff are listed as impaired under CWA section 303(d), all pollutants associated with the land use type of the development, and all pollutants commonly associated with urban runoff;

(d) Be effective at removing or treating the pollutants of concern associated with the project;

(e) Minimize directly connected impervious areas where feasible;

(f) Protect slopes and channels from eroding;

(g) Include storm drain stenciling and signage;

(h) Include properly designed outdoor material storage areas;

(i) Include properly designed trash storage areas;

(j) Include proof of a mechanism, to be provided by the project proponent or Permittee, which will ensure ongoing long-term BMP maintenance;

(k) Include additional water quality provisions applicable to individual Priority Development Project categories;

(l) Be correctly designed so as to remove pollutants to the MEP;

(m) Be implemented close to pollutant sources, when feasible, and prior to discharging into receiving waters; and

(n) Ensure that post-development runoff does not contain pollutant loads which cause or contribute to an exceedance of water quality objectives and which have not been reduced to the MEP.

Under no circumstances can a BMP be constructed in a receiving water.

(3) Numeric Sizing Criteria – The SUSMP shall require treatment control BMPs to be implemented for all Priority Development Projects. All treatment control BMPs shall be located so as to infiltrate, filter, or treat the required runoff volume or flow prior to its discharge to any receiving water. Treatment control BMPs may be shared by multiple Priority Development Projects as long as construction of any shared treatment control BMPs is completed prior to the use of any development project from which the treatment control BMP will receive runoff, and prior to discharge to a receiving water.

In addition to meeting the BMP requirements listed in Requirement F.2.b.(2) above, all treatment control BMPs for a single Priority Development Project shall collectively be sized to comply with the following numeric sizing criteria:

(a) *Volume* - Volume-based BMPs shall be designed to mitigate (infiltrate, filter, or treat) either:

(i) The volume of runoff produced from a 24-hour 85th percentile rainfall depth, as determined from the local historical rainfall record (0.6 inch approximate average for the Riverside County area)[1]; or

(ii) The volume of runoff produced by the 85th percentile 24-hour runoff event, determined as the maximized capture storm water volume for the area, from the formula recommended in Urban Runoff Quality Management, WEF Manual of Practice No. 23/ASCE Manual of Practice No. 87, (1998); or

(iii) The volume of annual runoff based on unit basin storage volume, to achieve 90% or more volume treatment by the method recommended in *California Stormwater Best Management Practices Handbook New Development and Redevelopment* (2003)); or

(iv) The volume of runoff, as determined from the local historical rainfall record, that achieves approximately the same reduction in pollutant loads and flows as achieved by mitigation of the 85th percentile 24-hour runoff event;[2]

OR

(b) *Flow* - Flow-based BMPs shall be designed to mitigate (infiltrate, filter, or treat) either:

(i) The maximum flow rate of runoff produced from a rainfall intensity of 0.2 inch of rainfall per hour, for each hour of a storm event; or

(ii) The maximum flow rate of runoff produced by the 85th percentile hourly rainfall intensity (for each hour of a storm event), as determined from the local historical rainfall record, multiplied by a factor of two; or

(iii) The maximum flow rate of runoff for each hour of a storm event, as determined from the local historical rainfall record, that achieves approximately the same reduction in pollutant loads and flows as achieved by mitigation of the 85th percentile hourly rainfall intensity multiplied by a factor of two.

(4) Equivalent Numeric Sizing Criteria - The Permittees may develop, as part of the SUSMP, any equivalent method for calculating the volume or flow which must be mitigated (i.e., any equivalent method for calculating numeric sizing criteria) by post-construction treatment control BMPs. Such equivalent sizing criteria may be authorized by the SDRWQCB for use in place of the above criteria. In the absence of development and subsequent authorization of such equivalent numeric sizing criteria, the above numeric sizing criteria requirement shall be implemented.

[1] This volume is not a single volume to be applied to all of Riverside County. The size of the 85th percentile storm event is different for various parts of the County. The Permittees are encouraged to calculate the 85th percentile storm event for each of their jurisdictions using local rain data pertinent to their particular jurisdiction (inch standard is a rough average for the County and should only be used where appropriate rain data is not available). In addition, isopluvial maps may be used to extrapolate rainfall data to areas where insufficient data exists in order to determine the volume of the local 85th percentile storm event in such areas. Where the Permittees will use isopluvial maps to determine the 85th percentile storm event in areas lacking rain data, the Permittees shall describe their method for using isopluvial maps in their SUSMPs.

[2] Under this volume criteria, hourly rainfall data may be used to calculate the 85th percentile storm event, where each storm event is identified by its separation from other storm events by at least six hours of no rain. Where the Permittees may use hourly rainfall data to calculate the 85th percentile storm event, the Permittees shall describe their method for using hourly rainfall data to calculate the 85th percentile storm event in their SUSMPs.

(5) Pollutants or Conditions of Concern – As part of the SUSMP, the Permittees shall develop a procedure for pollutants or conditions of concern to be identified for each Priority Development Project. The procedure shall address, at a minimum: (1) Receiving water quality (including pollutants for which receiving waters are listed as impaired under CWA section 303(d)); (2) Land use type of the development project and pollutants associated with that land use type; (3) Pollutants expected to be present on site; (4) Changes in storm water discharge flow rates, velocities, durations, and volumes resulting from the development project; and (5) Sensitivity of receiving waters to changes in storm water discharge flow rates, velocities, durations, and volumes.

(6) Implementation Process – As part of the SUSMP, the Permittees shall develop a process by which SUSMP requirements will be implemented. The process shall identify at what point in the planning process development projects will be required to meet SUSMP requirements. The process shall also include identification of the roles and responsibilities of various municipal departments in implementing the SUSMP requirements, as well as any other measures necessary for the implementation of SUSMP requirements.

(7) Waiver Provision – A Permittee may provide for a project to be waived from the requirement of implementing all treatment control BMPs (Requirements F.2.b.(2) & F.2.b.(3)) if infeasibility can be established. A waiver of infeasibility shall only be granted by a Permittee when all available treatment control BMPs have been considered and rejected as infeasible. Permittees shall notify the SDRWQCB within 5 days of each waiver issued and shall include the following information in the notification:

(a) Name of the person granting each waiver;

(b) Name of developer receiving the waiver;

(c) Site location;

(d) Reason for waiver; and

(e) Description of BMPs required.

As part of the SUSMP, the Permittees may develop a program to require project proponents who have received waivers to transfer the savings in cost, as determined by the Permittee(s), to a storm water mitigation fund. This program may be implemented by all Permittees that choose to provide waivers. Funds may be used on projects to improve urban runoff quality within the watershed of the waived project. The waiver mitigation program should, at a minimum, identify:

(a) The entity or entities that will manage the storm water mitigation fund (i.e., assume full responsibility for);

(b) The range and types of acceptable projects for which mitigation funds may be expended;

(c) The entity or entities that will assume full responsibility for each mitigation project including its successful completion; and

(d) How the dollar amount of fund contributions will be determined.

(8) Infiltration and Groundwater Protection – To protect groundwater quality, each Permittee shall apply restrictions to the use of treatment control BMPs that are designed to primarily function as infiltration devices (such as infiltration trenches and infiltration

basins). Such restrictions shall ensure that the use of such infiltration treatment control BMPs shall not cause or contribute to an exceedance of groundwater quality objectives. At a minimum, use of treatment control BMPs that are designed to primarily function as infiltration devices shall meet the following conditions.[3] As part of the SUSMP, the Permittees may develop alternative restrictions on the use of treatment control BMPs which are designed to primarily function as infiltration devices.

(a) Urban runoff shall undergo pretreatment such as sedimentation or filtration prior to infiltration;

(b) All dry weather flows shall be diverted from infiltration devices;

(c) Pollution prevention and source control BMPs shall be implemented at a level appropriate to protect groundwater quality at sites where infiltration treatment control BMPs are to be used;

(d) Infiltration treatment control BMPs shall be adequately maintained so that they remove pollutants to the MEP;

(e) The vertical distance from the base of any infiltration treatment control BMP to the seasonal high groundwater mark shall be at least 10 feet. Where groundwater basins do not support beneficial uses, this vertical distance criteria may be reduced, provided groundwater quality is maintained;

(f) The soil through which infiltration is to occur shall have physical and chemical characteristics (such as appropriate cation exchange capacity, organic content, clay content, and infiltration rate) which are adequate for proper infiltration durations and treatment of urban runoff for the protection of groundwater beneficial uses;

(g) Infiltration treatment control BMPs shall not be used for areas of industrial or light industrial activity; areas subject to high vehicular traffic (25,000 or greater average daily traffic on main roadway or 15,000 or more average daily traffic on any intersecting roadway); automotive repair shops; car washes; fleet storage areas (bus, truck, etc.); nurseries; and other high threat to water quality land uses and activities as designated by each Permittee; and

(h) Infiltration treatment control BMPs shall be located a minimum of 100 feet horizontally from any water supply wells. As part of the SUSMPs, the Permittees may develop alternative restrictions on the use of treatment control BMPs that are designed to primarily function as infiltration devices.

(9) Downstream Erosion – The Permittees shall develop numeric criteria to ensure that discharges from Priority Development Projects maintain or reduce pre-development downstream erosion and protect stream habitat. At a minimum, numeric criteria shall be developed to control urban runoff discharge velocities, volumes, durations, and peak rates in order to maintain or reduce pre-development downstream erosion and protect stream habitat. The Permittees shall propose numeric criteria and a time-schedule for implementation of the criteria on new development projects within 365 days of the identification of the criteria and no later than the fourth-year Annual Report, or the application for permit renewal, to be submitted no later than October 31, 2008.

[3] These conditions do not apply to treatment control BMPs that allow incidental infiltration and are not designed to primarily function as infiltration devices (such as grassy swales, detention basins, vegetated buffer strips, constructed wetlands, etc.).

The Permittees shall be prepared to implement the numeric criteria upon renewal of this Order.

3. Revise Environmental Review Processes

Permittees shall revise their current environmental review processes as necessary to include requirements for evaluation of water quality effects and identification of appropriate mitigation measures for all development projects. The following questions are examples to be considered in addressing increased pollutants and flows from proposed projects:

a) Could the proposed project result in an increase in pollutant discharges to receiving waters? Consider water quality parameters such as temperature, dissolved oxygen, turbidity and other typical storm water pollutants (e.g., heavy metals, pathogens, petroleum derivatives, synthetic organics, sediment, nutrients, oxygen-demanding substances, and trash).

b) Could the proposed project result in significant alteration of receiving water quality during or following construction?

c) Could the proposed project result in increased impervious surfaces and associated increased runoff?

d) Could the proposed project create a significant adverse environmental impact to drainage patterns due to changes in runoff flow rates or volumes?

e) Could the proposed project result in increased erosion downstream?

f) Is the project tributary to an already impaired water body, as listed on the CWA section 303(d) list? If so, can it result in an increase in any pollutant for which the water body is already impaired?

g) Is the project tributary to other environmentally sensitive areas? If so, can it exacerbate already existing sensitive conditions?

h) Could the proposed project have a potentially significant environmental impact on surface water quality of marine, fresh, or wetland waters?

i) Could the proposed project have a potentially significant adverse impact on groundwater quality?

j) Could the proposed project cause or contribute to an exceedance of applicable surface or groundwater receiving water quality objectives or degradation of beneficial uses?

k) Can the project impact aquatic, wetland, or riparian habitat?

4. Conduct Education Efforts Focused on Development

a) Internal: Municipal Staff

Each Permittee shall implement an education program that includes annual training to ensure that planning and development review staffs (and Planning Boards and Elected Officials, if applicable) have an understanding of:

(1) Federal, state, and local water quality laws and regulations applicable to development projects;

(2) The connection between land use decisions and short and long-term water quality impacts (i.e., impacts from land development and urbanization); and

(3) How impacts to receiving water quality resulting from development can be minimized (i.e., through implementation of various source control and treatment control BMPs).

b) External: Project Applicants, Developers, Contractors, Property Owners, Community Planning Groups

As early in the planning and development process as possible, each Permittee shall implement a program to educate project applicants, developers, contractors, property owners, and community planning groups on the following topics:

(1) Federal, state, and local water quality laws and regulations applicable to development projects;

(2) Required federal, state, and local permits pertaining to water quality;

(3) Water quality impacts of urbanization; and

(4) Methods for minimizing the impacts of development on water quality.

G. CONSTRUCTION

Each Permittee shall implement a program to address construction sites to reduce pollutants in runoff to the MEP during all construction phases. At a minimum the construction component shall address:

1. Pollution Prevention

Each Permittee shall implement pollution prevention methods in its Construction Component and shall require its use by construction site owners, developers, contractors, and other responsible parties, where appropriate.

2. Grading Ordinance Update

Within 365 days of adoption of this Order, each Permittee shall review and update its grading ordinances as necessary for compliance with its storm water ordinances and this Order. The updated grading ordinance shall require implementation of BMPs designated by the Permittees pursuant to Requirements G.5 of this Order and other measures during all construction activities.

3. Modify Construction and Grading Approval Process

Each Permittee shall develop and implement a process to ensure that BMPs to reduce the discharge of pollutants to the MEP are applicable to construction and grading permits and plans prior to their approval and issuance. Such BMPs shall include the following requirements or their equivalent:

a) Require project proponent to develop and implement a plan to manage storm water and non-storm water discharges from the site at all times;

b) Require project proponent to minimize grading during the wet season and coincide grading with seasonal dry weather periods to the extent feasible. If grading does occur during the wet season, require project proponent to implement additional BMPs for any rain events which may occur, as necessary for compliance with this Order;

c) Require project proponent to emphasize erosion prevention as the most important measure for keeping sediment on site during construction;

d) Require project proponent to utilize sediment controls as a supplement to erosion prevention for keeping sediment on-site during construction, and never as the single or primary method;

e) Require project proponent to minimize areas that are cleared and graded to only the portion of the site that is necessary for construction;

f) Require project proponent to minimize exposure time of disturbed soil areas;

g) Require project proponent to temporarily stabilize and reseed disturbed soil areas as rapidly as possible;

h) Require project proponent to permanently revegetate or landscape as early as feasible;

i) Require project proponent to stabilize all slopes; and

j) Require project proponents subject to the General Construction Permit to provide evidence of existing permit coverage.

4. Source Identification

Each Permittee shall annually develop and update, prior to the rainy season, an inventory of all construction sites within its jurisdiction regardless of site size or ownership. This requirement is applicable to all construction sites regardless of whether the construction site is subject to the General Construction Permit, or other individual NPDES permit. The use of an automated database system, such as Geographical Information System (GIS) is highly recommended, but not required.

5. BMP Implementation

a) Each Permittee shall designate a set of minimum BMPs that ensure the following at all construction sites:

(1) Erosion prevention;

(2) Slope stabilization;

(3) Phased grading;

(4) Revegetation as early as feasible;

(5) Preservation of natural hydrologic features where feasible;

(6) Preservation of riparian buffers and corridors where feasible;

(7) Maintenance of all source control and treatment control BMPs; and

(8) Retention and proper management of sediment and other construction pollutants on site.

b) Each Permittee shall implement, or require the implementation of, the designated minimum BMPs at each construction site within its jurisdiction year round. If a particular minimum BMP is infeasible at any specific site, each Permittee shall implement, or require the implementation of, other equivalent BMPs. Each Permittee shall also implement or require any additional site specific BMPs as necessary to comply with this Order, including BMPs which are more stringent than those required under the General Construction Permit.

c) Each Permittee shall implement, or require the implementation of, BMPs year round; however, BMP implementation requirements can vary based on wet and dry seasons.

d) Each Permittee shall implement, or require implementation of, additional controls for construction sites tributary to CWA section 303(d) water bodies impaired for sediment as necessary to comply with this Order. Each Permittee shall implement, or require implementation of, additional controls for construction sites within or adjacent to or discharging directly to receiving waters within ESAs as necessary to comply with this Order.

6. Inspection of Construction Sites

   a) Each Permittee shall conduct construction site inspections for compliance with its local ordinances (grading, storm water, etc.), permits (construction, grading, etc.), and this Order.

   b) During the wet season Permittees shall, at a minimum, inspect the following sites every two weeks[4]:

      (1) All sites 50 acres or more in size and grading will occur during the wet season;

      (2) All sites 5 acres or more, and tributary to a CWA section 303(d) water body impaired for sediment or within or directly adjacent to or discharging directly to a receiving water within ESA; and

      (3) Other sites determined by the Permittees or the SDRWQCB as a significant threat to water quality. In evaluating threat to water quality, the following factors shall be considered: (1) soil erosion potential; (2) site slope; (3) project size and type; (4) sensitivity of receiving water bodies; (5) proximity to receiving water bodies; (6) non-storm water discharges; and (7) any other relevant factors.

   c) The Permittees, at a minimum, shall inspect all construction sites that do not meet the criteria specified in Requirement G.6.b above, but encompass 1 acre or more of soil disturbance at least three times during the wet season.

   d) The Permittees shall inspect construction sites less than 1 acre in size on as needed basis.

   e) Permittees shall inspect all construction sites as needed during the dry season.

   f) Based upon site inspection findings, each Permittee shall implement all follow-up actions necessary to comply with this Order.

7. Enforcement of Construction Sites

   Each Permittee shall enforce its ordinances (grading, storm water, etc.) and permits (building, grading, etc.) at all construction sites as necessary to maintain compliance with this Order. Permittee ordinances or other regulatory mechanisms shall include sanctions to ensure compliance. Sanctions shall include the following or their equivalent: stop work authority, non-monetary penalties, fines, financial security, and/or permit denials for non-compliance.

8. Education Focused on Construction Activities

   a) Internal: Municipal Staff

      Each Permittee shall implement an education program that includes annual training to ensure that its construction, building, and grading review staff and inspectors have, at a minimum, an understanding of:

      (1) Federal, state, and local water quality laws and regulations applicable to construction and grading activities;

[4] Any site may be inspected on a monthly basis if the responsible Permittee certifies in a written statement to the SDRWQCB ALL of the following (certified statements may be submitted to the SDRWQCB at any time for one or more sites):

- Permittee has record of construction site's WDID number documenting the site's coverage under the General Construction Permit;
- Permittee has reviewed the construction site's SWPPP and finds the SWPPP to be in compliance with all local ordinances, permits, and plans; and
- Permittee finds that the SWPPP is being properly implemented on site.

(2) The connection between construction activities and water quality impacts (i.e., impacts from land development and urbanization);

(3) How erosion can be prevented;

(4) How impacts to receiving water quality resulting from construction activities can be minimized (i.e., through implementation of various source control and treatment control BMPs); and

(5) How to assess construction sites for adequate BMP implementation and compliance with local codes, ordinances, and permits, and this Order.

b) External: Project Applicants, Contractors, Developers, Property Owners, and other Responsible Parties

Each Permittee shall implement an education program to ensure that project applicants, contractors, developers, property owners, and other responsible parties have an understanding of the topics outlined above.

H. EXISTING DEVELOPMENT

Each Permittee shall develop and implement programs to prevent or reduce pollutants in runoff to the MEP from all existing development under its jurisdiction. The Existing Development programs shall address Sections H.1 through H.3 for municipal facilities and activities, industrial and commercial facilities, and residential activities.

1. Municipal Program

a) Pollution Prevention

Each Permittee shall require the use of pollution prevention methods by municipal departments, contractors, and personnel, where appropriate.

b) Source Identification

Each Permittee shall develop, and update annually, an inventory of the name, address (if applicable), and description of all of the Permittee's municipal facilities and activities that generate pollutants. Municipal facilities and activities to be inventoried shall include, but are not limited to, the following:

- Roads, streets, highways, and parking facilities;
- Flood management projects and flood control devices;
- Drainage facilities;
- Active or closed municipal landfills;
- Publicly owned treatment works (including water and wastewater treatment plants) and sanitary sewage collection systems;
- Incinerators;
- Solid waste transfer facilities;
- Land application sites;
- Uncontrolled sanitary landfills;
- Corporate yards including maintenance and storage yards for materials, waste, equipment and vehicles;
- Sites for disposing and treating sewage sludge;
- Hazardous waste treatment, disposal, and recovery facilities;
- Household hazardous waste collection facilities;

- Municipal airfields;
- Parks and recreational facilities;
- Golf courses;
- Cemeteries;
- Other landscaped areas;
- Channel maintenance activities involving mowing and pesticide/herbicide application;
- Municipal facilities and activities tributary to a CWA section 303(d) impaired water body, where an area or activity generates pollutants for which the water body is impaired. Facilities and activities within or adjacent to or discharging directly to receiving waters within ESAs; and
- Other municipal facilities and activities that the Permittee determines may contribute a significant pollutant load to the MS4.

c) BMP Implementation

(1) Within 365 days from the date of this Order, each Permittee shall implement or require the implementation of BMPs to reduce pollutants in urban runoff to the MEP from all of the Permittee's municipal facilities and activities. The required BMPs shall be facility or activity specific as appropriate.

(2) For facilities and/or activities tributary to CWA section 303(d) impaired water bodies that generate pollutants for which the water body is impaired, each Permittee shall implement or require the implementation of additional BMPs to target that pollutant. Each Permittee shall implement, or require implementation of, additional controls for municipal facilities and activities within or directly adjacent to or discharging directly to receiving waters within ESAs as necessary to comply with this Order.

d) MS4 Maintenance

(1) Each Permittee shall implement a schedule of maintenance activities for its structural source and treatment control BMPs designed to reduce pollutant discharges to or from its MS4s and related drainage structures.

(2) Each Permittee shall implement a schedule of maintenance activities for its MS4. The maintenance activities must, at a minimum, include:

(a) Inspection of all of the Permittee's catch basins and storm drain inlets at least once a year between May 1 and September 30. If accumulated waste is visible, the catch basin, or storm drain inlet, shall be cleaned out. Additional cleaning shall be conducted as necessary;

(b) Removal of anthropogenic litter from the Permittee's open channels at least once a year between May 1 and September 30, with additional removal as necessary;

(c) Record keeping of the Permittee's MS4 cleaning activities;

(d) Proper disposal of waste removed from the Permittee's MS4 pursuant to applicable laws; and

(e) Measures to eliminate waste discharges during MS4 maintenance and cleaning activities.

e) Management of Pesticides, Herbicides, and Fertilizers

The Permittees shall implement BMPs to reduce the contribution of pollutants to the MEP

associated with the application, storage, and disposal of pesticides, herbicides and fertilizers from municipal facilities and activities to MS4s. Such BMPs shall include, at a minimum: (1) educational activities, permits, certifications and other measures for municipal applicators and distributors; (2) integrated pest management measures that rely on non-chemical solutions; (3) the use of native vegetation; (4) schedules for irrigation and chemical application; and (5) the collection and proper disposal of unused pesticides, herbicides, and fertilizers.

f) Inspection of Municipal Facilities and Activities

At a minimum, each Permittee shall inspect all municipal facilities and activities annually. Inspections shall include an assessment of BMP implementation and effectiveness. Based upon site inspection findings, each Permittee shall implement all follow-up actions necessary to comply with this Order.

g) Enforcement of Municipal Facilities and Activities

Each Permittee shall enforce its storm water ordinance at all of its municipal facilities and activities as necessary to maintain compliance with this Order.

2. Industrial/Commercial Facilities Program

a) Pollution Prevention

Each Permittee shall require the use of pollution prevention methods by industrial/commercial facilities, where appropriate.

b) Source Identification

Each Permittee shall develop an inventory or database of all industrial and commercial facilities under its jurisdiction (regardless of site ownership) that could contribute a significant pollutant load to the MS4. At a minimum, the following facilities shall be included:

(1) Commercial Facilities:

- Automobile mechanical repair, maintenance, fueling, or cleaning;
- Airplane mechanical repair, maintenance, fueling, or cleaning;
- Boat mechanical repair, maintenance, fueling, or cleaning;
- Equipment repair, maintenance, fueling, or cleaning;
- Automobile and other vehicle body repair or painting;
- Mobile automobile or other vehicle washing (base of operations);
- Automobile (or other vehicle) parking lots and storage facilities;
- Retail or wholesale fueling;
- Pest control services (base of operations);
- Eating or drinking establishments;
- Mobile carpet, drape or furniture cleaning (base of operations);
- Concrete mixing or cutting (base of operations);
- Masonry (base of operations);
- Painting and coating (base of operations);
- Landscaping (base of operations);
- Nurseries and greenhouses;
- Golf courses, parks and other recreational areas/facilities;

- Cemeteries;
- Pool and fountain cleaning (base of operations);
- Port-a-Potty servicing (base of operations);

(2) Industrial Facilities:

- Industrial facilities, as defined at 40 CFR 122.26(b)(14), including those subject to the General Industrial Permit;
- Operating and closed municipal landfills;
- Facilities subject to SARA Title III;
- Hazardous waste treatment, disposal, storage and recovery facilities;

(3) All other facilities tributary to a CWA section 303(d) impaired water body, where a facility generates pollutants for which the water body is impaired; and

(4) All other facilities that the Permittee determines may contribute a significant pollutant load to the MS4.

The inventory shall include the following minimum information for each facility: name; address; a narrative description that best reflects the principal products or services provided by each facility, and the SIC code for industrial facilities.

Each Permittee shall maintain an up-to-date inventory. New information obtained during inspections or through other intra-agency informational sources (e.g. business licenses, pretreatment permits, sanitary sewer hook-up permits, yellow pages, etc.) shall be used to update the inventory on a regular basis.

c) BMP Implementation

(1) Within 365 days from the date of this Order, each Permittee shall designate a set of minimum BMP requirements for all inventoried industrial/commercial facilities to reduce the discharge of pollutants in runoff to the MEP. Designated BMPs may be specific to facility types or to pollutant-generating activities conducted at the facilities.

(2) For facilities and/or activities tributary to CWA section 303(d) impaired water bodies that generate pollutants for which the water body is impaired, each Permittee shall designate additional BMPs to target that pollutant. Each Permittee shall implement, or require implementation of, additional controls for industrial/commercial facilities and activities within or directly adjacent to or discharging directly to receiving waters within ESAs as necessary to comply with this Order.

(3) Within 365 days from the date of this Order, each Permittee shall notify all inventoried facilities of their applicable minimum BMP requirements, and a description of the local codes or ordinances requiring compliance with reducing the discharge of pollutants in runoff to the MEP.

(4) Each Permittee shall implement, or require the implementation of, the designated minimum BMPs at each inventoried facility within its jurisdiction. If a particular minimum BMP is infeasible at any specific site, each Permittee shall implement, or require implementation of, other equivalent BMPs. Each Permittee shall also implement or require any additional site specific BMPs as necessary to comply with this Order including BMPs which are more stringent than those required under the General Industrial Permit.

d) Inspection of Industrial/Commercial Facilities

(1) To establish priorities for inspections and oversight of industrial/commercial facilities, the Permittees shall prioritize each inventory described in Requirement H.2.b. above by threat to water quality (high, medium, or low). In evaluating threat to water quality, each Permittee shall consider, at a minimum, the following:

- Type of facility (SIC Code);
- Materials used at the facility;
- Wastes generated;
- Exposure of activities and pollutant discharge potential;
- History of non-storm water discharges;
- Size of facility;
- Proximity to receiving water bodies and sensitivity of receiving water bodies;
- Whether the industrial site is subject to the General Industrial Permit;
- Any available source monitoring data; and
- Any other relevant factors.

(2) Each Permittee shall inspect and ensure minimum BMP implementation at all inventoried industrial/commercial facilities in accordance with the following schedule:

(a) High priority facilities shall be inspected annually;

(b) Medium priority facilities shall be inspected biannually (twice during the 5-year term of the permit);

(c) Low priority facilities shall be inspected once during the 5-year term of the permit; and

(d) Mobile operations shall be inspected as needed.

(3) Inspections of industrial facilities shall include, but not be limited to:

(a) Check for coverage under the General Industrial Permit (Notice of Intent (NOI) and/or Waste Discharge Identification No.);

(b) Assessment of compliance with Permittee ordinances and permits related to urban runoff, including the implementation and maintenance of designated minimum BMPs;

(c) Assessment of BMP effectiveness;

(d) Visual observations for non-storm water discharges, potential illicit connections, and potential discharge of pollutants in storm water runoff; and

(e) Education and outreach on storm water pollution prevention.

(4) Inspections of commercial facilities shall include, but not be limited to:

(a) Assessment of compliance with Permittee ordinances and permits related to urban runoff, including the implementation and maintenance of designated minimum BMPs;

(b) Assessment of BMP effectiveness;

(c) Visual observations for non-storm water discharges, potential illicit connections, and potential discharge of pollutants in storm water runoff; and

(d) Education and outreach on storm water pollution prevention.

(5) To the extent that the SDRWQCB has conducted an inspection of an industrial facility during a particular year, the requirement for the responsible Permittee to inspect this site during the same year will be satisfied.

(6) Based upon facility inspection findings, each Permittee shall implement all follow-up actions necessary to comply with this Order.

e) Enforcement of Industrial/Commercial Facilities

Each Permittee shall enforce its storm water ordinance at all industrial/commercial facilities as necessary to maintain compliance with this Order. Permittee ordinances or other regulatory mechanisms shall include sanctions to ensure compliance. Sanctions shall include the following or their equivalent: Non-monetary penalties, fines, bonding requirements, and/or permit denials for non-compliance.

f) Reporting of Industrial Non-Filers

As part of each Annual Report, each Permittee shall report a list of industrial facilities, including the name, address, and SIC code, that may require coverage under the General Industrial Permit for which a NOI has not been filed.

g) Industrial/Commercial Inspection Training

Each Permittee shall train staff responsible for conducting inspections of industrial/commercial facilities at least once a year. Permittees are encouraged to conduct training programs and provide compliance assistance to industrial/commercial facility owners, operators, and employers.

3. Residential Program

a) Pollution Prevention

Each Permittee shall encourage the use of pollution prevention methods by residents, where appropriate.

b) Source Identification

Each Permittee shall identify high priority residential activities that may contribute a significant pollutant load to the MS4. These activities may include:

- Automobile repair and maintenance;
- Automobile washing;
- Automobile parking;
- Home and garden care activities and product use (pesticides, herbicides, and fertilizers);
- Disposal of household hazardous waste;
- Disposal of pet waste;
- Disposal of green waste; and
- Any other residential source that the Permittee determines may contribute a significant pollutant load to the MS4.

c) BMP Implementation

(1) Within 365 days from the date of this Order, each Permittee shall designate a set of minimum BMP requirements for all high priority residential activities to reduce the discharge of pollutants in urban runoff to the MEP.

(2) For residential activities tributary to CWA section 303(d) impaired water bodies that generate pollutants for which the waterbody is impaired, each Permittee shall designate additional BMPs to target that pollutant. Each Permittee shall implement, or require implementation of, additional controls for high priority residential activities within or directly adjacent to or discharging directly to receiving waters within ESAs as necessary to comply with this Order.

(3) Each Permittee shall implement, or require implementation of, the designated minimum BMPs for the high priority residential activities identified pursuant to Requirement H.3.b. above. If a particular minimum BMP is infeasible for any specific site/source, each Permittee shall require implementation of other equivalent BMPs. Each Permittee shall also implement, or require implementation of, any additional BMPs necessary to comply with this Order.

(4) Within 365 days from the date of this Order, each Permittee shall notify residents of the applicable minimum BMP requirements, and a description of the local codes or ordinances requiring compliance with reducing the discharge of pollutants in runoff to the MEP.

d) Enforcement of Residential Areas and Activities

Each Permittee shall enforce its storm water ordinance for residential activities as necessary to maintain compliance with this Order.

I. EDUCATION

Each Permittee shall implement an Education Component using all media as appropriate to (1) measurably increase the knowledge of the target communities regarding MS4s, impacts of urban runoff on receiving waters, and potential BMP solutions for the target audience; and (2) to measurably change the behavior of target communities and thereby reduce pollutant releases to MS4s and the environment. At a minimum the education component shall address the following target communities:

1. Municipal Departments and Personnel
2. Construction Site Owners and Developers
3. Industrial Owners and Operators
4. Commercial Owners and Operators
5. Residential Community, General Public, and School Children
6. Quasi-Governmental Agencies/Districts (i.e., educational institutions, water districts, sanitation districts, etc.)

J. ILLICIT DISCHARGE DETECTION AND ELIMINATION PROGRAM

Each Permittee shall implement an Illicit Discharge Detection and Elimination program containing measures to actively seek and eliminate illicit discharges and connections. At a minimum the Illicit Discharge Detection and Elimination program shall address:

1. Illicit Discharges and Connections

Each Permittee shall implement a program to actively seek and eliminate illicit discharges and connections into its MS4. The program shall address all types of illicit discharges and connections excluding those non-storm water discharges not prohibited by the Permittee in accordance with Section B of this Order.

2. Develop/Maintain MS4 Map

   Each Permittee shall develop or obtain an up-to-date labeled map of its entire MS4 and the corresponding drainage areas within its jurisdiction. The use of a GIS is highly recommended. The accuracy of the MS4 map shall be confirmed and updated at least annually.

3. Illicit Discharge Monitoring

   Each Permittee shall implement the Illicit Discharge Monitoring Program in accordance with Section II.B of the MRP to detect illicit discharges and connections.

4. Investigation/Inspection and Follow-Up

   Each Permittee shall investigate and inspect any portion of its MS4 that, based on visual observations, monitoring results or other appropriate information, indicates a reasonable potential for illicit discharges, illicit connections, or other sources of non-storm water (including non-prohibited discharge(s) identified in Section B of this Order). Each Permittee shall develop numeric criteria in accordance with section II.B.3. of the MRP to determine when follow-up actions will be necessary. Numeric criteria and follow-up procedures shall be described in each Permittees' Individual SWMP.

5. Elimination of Illicit Discharges and Connections

   Each Permittee shall eliminate all illicit discharges, illicit discharge sources, and illicit connections as soon as possible after detection. Elimination measures may include an escalating series of enforcement actions for those illicit discharges that are not a serious threat to public health or the environment. Illicit discharges that are a serious threat to public health or the environment must be eliminated immediately.

6. Enforce Ordinances

   Each Permittee shall implement and enforce its ordinances, orders, or other legal authority to prevent illicit discharges and connections to its MS4. Each Permittee shall also implement and enforce its ordinance, orders, or other legal authority to eliminate detected illicit discharges and connections to it MS4.

7. Sewage Spill Prevention and Response

   Each Permittee shall take appropriate actions to prevent, respond to, contain and cleanup sewage spills (including private laterals and failing septic systems) into the MS4 and to prevent the contamination of surface water, ground water and soil to the MEP. Appropriate actions may include the following:

   - Develop and implement a mechanism to be notified of all sewage spills from private laterals and failing septic systems into the MS4;
   - Coordinate sewage spill prevention, containment and response activities throughout all appropriate departments, programs and agencies to ensure maximum water quality protection at all times;
   - Require adequately sized and properly maintained private property sewerage systems, such as at residential and commercial complexes;
   - Require proper connections of private laterals to the public sewer main;
   - Require adequately-sized, and properly maintained grease control devices at food establishments which otherwise could result in sewer line grease blockages;

- Conduct municipal activities such as street repair or tree plantings in a manner that minimizes sewer line damages or root blockages;
- Identify priority areas, produce maps and other information on systems obtained during development review;
- Educate the public on measures to prevent sewage spills; and
- Ensure that private sewer lines are inspected.

8. Facilitate Public Reporting of Illicit Discharges and Connections - Public Hotline

   Each Permittee shall promote, publicize and facilitate public reporting of illicit discharges or water quality impacts associated with discharges into or from MS4s. Each Permittee shall facilitate public reporting through development and operation of a public hotline. Public hotlines can be Permittee-specific or shared by Permittees. All storm water hotlines shall be capable of receiving reports in both English and Spanish 24 hours per day / seven days per week. Permittees shall respond to and resolve each reported incident. All reported incidents, and how each was resolved, shall be summarized in each Permittee's Individual Annual Report.

9. Facilitate Disposal of Used Oil and Toxic Materials

   Each Permittee shall facilitate the proper management and disposal of used oil, toxic materials, and other household hazardous wastes. Such facilitation shall include educational activities, public information activities, and establishment of collection sites operated by the Permittee or a private entity. Neighborhood collection of household hazardous wastes is encouraged.

K. WATERSHED-BASED ACTIVITIES

1. Each Permittee shall collaborate with other Permittees to identify, address, and mitigate the highest priority water quality issues/pollutants in the Upper Santa Margarita Watershed.

2. Each Permittee shall collaborate with all other Permittees to develop and implement a Watershed SWMP for the Upper Santa Margarita Watershed. The Watershed SWMP shall, at a minimum, contain the following:

   a) An accurate map of the Upper Santa Margarita Watershed (preferably in GIS format) that identifies all receiving waters, all CWA section 303(d) impaired receiving waters, existing and planned land uses, MS4s, major highways, jurisdictional boundaries, and industrial and commercial facilities, municipal sites, and residential areas.

   b) A description of any interagency agreement, or other efforts, with non-Permittee owners of the MS4 (such as Caltrans, Native American Tribes, and school districts) to control the contribution of pollutants from one portion of the shared MS4 to another portion of the shared MS4;

   c) An assessment of the water quality of all receiving waters in the watershed based upon (1) existing water quality data; and (2) results from the Receiving Waters and Illicit Discharge Monitoring Programs described in the MRP;

   d) An identification and prioritization of major water quality problems in the watershed caused or contributed to by MS4 discharges and the likely source(s) of the problem(s);

   e) An implementation time schedule of short and long-term recommended activities (individual and collective) needed to address the highest priority water quality problem(s) identified in Requirement K.2.d. above. For this section, "short-term activities" shall mean those activities

that are to be completed during the life of this Order and "long-term activities" shall mean those activities that are to be completed beyond the life of this Order;

f) A watershed-based education program, which focuses on water quality issues specific to the Santa Margarita watershed;

g) A mechanism to facilitate collaborative "watershed-based" (i.e., natural resource-based) land use planning with neighboring local governments in the watershed.

h) A description of any other urban runoff management programs or activities being conducted collectively by the Permittees to address water quality issues;

i) A description of Permittee responsibilities for implementing the programs described in the Watershed SWMP;

j) The expenditures and funding sources for the area-wide and watershed-based activities and programs;

k) Standardized reporting formats developed collectively by the Permittees, as specified in Requirement M.1;

l) Short-term strategy for assessing the effectiveness of the activities and programs implemented as part of the Watershed SWMP. The short-term assessment strategy shall identify methods to assess program effectiveness and include specific direct and indirect performance measurements that will track the immediate progress and accomplishments of the Watershed SWMP towards improving receiving water quality impacted by urban runoff discharges. The short-term strategy shall also discuss the role of monitoring data collected by the Permittees in substantiating or refining the assessment; and

m) Long-term strategy for assessing the effectiveness of the Watershed SWMP. The long-term assessment strategy shall identify specific direct and indirect performance measurements that will track the long-term progress of the Watershed SWMP towards achieving improvements in receiving water quality impacted by urban runoff discharges. Methods used for assessing effectiveness shall include the following or their equivalent: surveys, pollutant loading estimations, receiving water quality monitoring, and achievement of measurable goals. The long-term strategy shall also discuss the role of monitoring data in substantiating or refining the assessment.

3. Permittees shall, as appropriate, participate in watershed management efforts to address storm water quality issues within the entire Santa Margarita Watershed, including efforts conducted by other entities in the watershed, such as San Diego County, U.S. Marine Corps Base Camp Pendleton, Native American tribes, and other state, federal, and local agencies.

4. At least once a year, all Permittees shall meet to review and assess available water quality data (from the MRP and other reliable sources), assess program effectiveness, and to review and update the Watershed SWMP.

L. MONITORING AND REPORTING PROGRAM

Pursuant to CWC section 13267, the Permittees shall comply with all requirements contained in the **MRP**.

M. PRINCIPAL PERMITTEE RESPONSIBILITIES

The Principal Permittee shall, at a minimum:

1. Coordinate the joint development by all of the Permittees of standardized format(s) for all reports required under this Order (e.g., annual reports, monitoring reports, fiscal analysis reports, and program effectiveness reports, etc.). The standardized reporting format(s) shall be submitted to the SDRWQCB for review as part of the SWMP. The standardized format(s) shall be used by all Permittees and shall include protocols for electronic reporting.

2. Integrate individual Permittee documents and reports required under this Order into single unified documents and reports for submittal to the SDRWQCB as described below. If a reporting date falls on a non-working day or State holiday, then the report is to be submitted on the following working day.

   a) SWMP – The Principal Permittee shall submit the SWMP in its entirety to the SDRWQCB within 365 days of the adoption of this Order. The Principal Permittee shall be responsible for preparing the Watershed SWMP and its Individual SWMP. The Principal Permittee shall also be responsible for collecting and assembling the Individual SWMPs describing the activities and programs to be implemented by each individual Permittee.

   b) MRP - The Principal Permittee shall submit the SWMP Annual Reports and the Monitoring Program Annual Reports in accordance with MRP No. R9-2004-001. The Principal Permittee shall be responsible for producing the Watershed SWMP Annual Report as well as its Individual Annual Report, and for collecting and assembling the Individual SWMP Annual Reports covering the activities conducted by each Permittee. The Principal Permittee shall also be responsible for coordinating the implementation of and reporting on the Receiving Waters Monitoring Program, described in sections II.A and III.B of the MRP.

   c) Interagency Agreement - The Principal Permittee shall submit a copy of the Interagency Agreement to the SDRWQCB, if and when the agreement is updated.

N. STANDARD PROVISIONS

1. Each Permittee shall comply with the standard provisions contained in **Attachment B** of this Order. This includes 24 hour/5day reporting requirements for any instance of non-compliance with this Order as described in Section 1.1.6 of **Attachment B**.

2. All documents submitted to the SDRWQCB pursuant to this Order, including but not limited to SWMP documents, annual reports, monitoring reports, and SUSMPs, shall include an executive summary, introduction, conclusion, recommendations, and signed certified statement.

3. All plans, reports and subsequent amendments submitted in compliance with this Order shall be implemented immediately (or as otherwise specified) and shall be an enforceable part of this Order upon submission to the SDRWQCB. All submittals by Permittees must be adequate to implement the requirements of this Order.

*I, John H.Robertus, Executive Officer, do hereby certify the foregoing is a full, true, and correct copy of an Order adopted by the California Regional Water Quality Control Board, San Diego Region, on **July 14, 2004.***

John H. Robertus
Executive Officer

ATTACHMENT A

BASIN PLAN PROHIBITIONS

California Water Code (CWC) section 13243 provides that a California Regional Water Quality Control Board (RWQCB), in a water quality control plan, may specify certain conditions or areas where the discharge of waste, or certain types of waste is not permitted. The following discharge prohibitions are applicable to any person, as defined by section 13050(c) of the CWC, who is a citizen, domiciliary, or political agency or entity of California whose activities in California could affect the quality of waters of the state within the boundaries of the SDRWQCB.

1. The discharge of waste to waters of the state in a manner causing, or threatening to cause a condition of pollution, contamination or nuisance as defined in CWC section 13050, is prohibited.

2. The discharge of waste to land, except as authorized by waste discharge requirements or the terms described in CWC section 13264 is prohibited.

3. The discharge of pollutants or dredged or fill material to waters of the United States except as authorized by an NPDES permit or a dredged or fill material permit (subject to the exemption described in CWC section13376) is prohibited.

4. Discharges of recycled water to lakes or reservoirs used for municipal water supply or to inland surface water tributaries thereto are prohibited, unless the SDRWQCB issues a NPDES permit authorizing such a discharge; the proposed discharge has been approved by the State Department of Health Services and the operating agency of the impacted reservoir; and the discharger has an approved fail-safe long-term disposal alternative.

5. The discharge of waste to inland surface waters, except in cases where the quality of the discharge complies with applicable receiving water quality objectives, is prohibited. Allowances for dilution may be made at the discretion of the SDRWQCB. Consideration would include streamflow data, the degree of treatment provided and safety measures to ensure reliability of facility performance. As an example, discharge of secondary effluent would probably be permitted if streamflow provided 100:1 dilution capability.

6. The discharge of waste in a manner causing flow, ponding, or surfacing on lands not owned or under the control of the discharger is prohibited, unless the discharge is authorized by the RWQCB.

7. The dumping, deposition, or discharge of waste directly into waters of the state, or adjacent to such waters in any manner which may permit its being transported into the waters, is prohibited unless authorized by the SDRWQCB.

8. Any discharge to a MS4 that is not composed entirely of "*storm water*" is prohibited unless authorized by the SDRWQCB. [The federal regulations, 40 CFR 122.26 (b) (13), define storm water as storm water runoff, snow melt runoff, and surface runoff and drainage. 40 CFR 122.26 (b) (2) defines an illicit discharge as any discharge to a MS4 that is not composed entirely of storm water except discharges pursuant to a NPDES permit and discharges resulting from fire fighting activities. [40 CFR 122.26 amended at 56 FR 56553, November 5, 1991; 57 FR 11412, April 2, 1992].

9. The unauthorized discharge of treated or untreated sewage to waters of the state or to a MS4 is prohibited.

10. The discharge of industrial wastes to conventional septic tank/subsurface disposal systems, except as authorized by the terms described in CWC section 13264, is prohibited.

11. The discharge of radioactive wastes amenable to alternative methods of disposal into the waters of the state is prohibited.

12. The discharge of any radiological, chemical, or biological warfare agent into waters of the state is prohibited.

13. The discharge of waste into a natural or excavated site below historic water levels is prohibited unless the discharge is authorized by the SDRWQCB.

14. The discharge of sand, silt, clay, or other earthen materials from any activity, including land grading and construction, in quantities which cause deleterious bottom deposits, turbidity or discoloration in waters of the state or which unreasonably affect, or threaten to affect, beneficial uses of such waters is prohibited.

ATTACHMENT B
STANDARD PROVISIONS

1. FEDERAL NPDES STANDARD PROVISIONS [40 CFR 122.41]

(a) *Duty to comply* [40 CFR 122.41(a)]. The permittee must comply with effluent standards or prohibitions established under section 307(a) of the CWA for toxic pollutants and with standards for sewage sludge use or disposal established under section 405(d) of the CWA within the time provided in the regulations that establish these standards or prohibitions or standards for sewage sludge use or disposal, even if the Order has not yet been modified to incorporate the requirement.

(1) The permittee shall comply with effluent standards or prohibitions established under section 307(a) of the CWA toxic pollutants and with standards for sewage sludge use or disposal established under section 405(d) of the CWA within the time provided in the regulations that establish these standards or prohibitions or standards for sewage sludge use or disposal, even if the Order has not yet been modified to incorporate the requirement.

(2) The CWA provides that any person who violates section 301, 302, 306, 307, 308, 318 or 405 of the Act, or any permit condition or limitation implementing any such sections in a permit issued under section 402, or any requirement imposed in a pretreatment program approved under sections 402(a)(3) or 402(b)(8) of the Act, is subject to a civil penalty not to exceed $25,000 per day for each violation. The CWA provides that any person who negligently violates section 301, 302, 306, 307, 308, 318 or 405 of the Act, or any condition or limitation implementing any of such sections in a permit issued under section 402 of the Act, or any requirement imposed in a pretreatment program approved under section 402(a)(3) or 402(b)(8) of the Act, is subject to criminal penalties of $2,500 to $25,000 per day of violation, or imprisonment of not more than 1 year, or both. In the case of a second or subsequent conviction for a negligent violation, a person shall be subject to criminal penalties of not more than $50,000 per day of violation, or by imprisonment of not more than 2 years, or both. Any person who knowingly violates such sections, or such conditions or limitations is subject to criminal penalties of $5,000 to $50,000 per day of violation, or imprisonment for not more than 3 years, or both. In the case of a second or subsequent conviction for a knowing violation, a person shall be subject to criminal penalties of not more than $100,000 per day of violation, or imprisonment of not more than 6 years, or both. Any person who knowingly violates section 301, 302, 306, 307, 308, 318 or 405 of the Act, or any permit condition or limitation implementing any of such sections in a permit issued under section 402 of the Act, and who knows at that time that he thereby places another person in imminent danger of death or serious bodily injury, shall, upon conviction, be subject to a fine of not more than $250,000 or imprisonment of not more than 15 years, or both. In the case of a second or subsequent conviction for a knowing endangerment violation, a person shall be subject to a fine of not more than $500,000 or by imprisonment of not more than 30 years, or both. An organization, as defined in section 309(c)(3)(B)(iii) of the CWA, shall, upon conviction of violating the imminent danger provision, be subject to a fine of not more than $1,000,000 and can be fined up to $2,000,000 for second or subsequent convictions.

(3) Any person may be assessed an administrative penalty by the Administrator for violating section 301, 302, 306, 307, 308, 318 or 405 of the CWA, or any permit condition or limitation implementing any of such sections in a permit issued under Section 402 of the CWA. Administrative penalties for Class I violations are not to exceed $10,000 per violation, with the maximum amount of any Class I penalty assessed not to exceed $25,000. Penalties for Class II violations are not to exceed $10,000 per day for each day during which the violation continues, with the maximum amount of any Class II penalty not to exceed $125,000.

(b) *Duty to reapply* [40 CFR 122.41(b)]. If the permittee wishes to continue an activity regulated by this Order after the expiration date of this Order, the permittee must apply for and obtain a new order.

(c) *Need to halt or reduce activity not a defense* [40 CFR 122.41(c)]. It shall not be a defense for the permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this Order.

(d) *Duty to mitigate* [40 CFR 122.41(d)]. The permittee shall take all reasonable steps to minimize or prevent any discharge or prevent any discharge or sludge use or disposal in violation of this Order which has a reasonable likelihood of adversely affecting human health or the environment.

(e) *Proper operation and maintenance* [40 CFR 122.41(e)]. The permittee shall at all times properly operate and maintain all facilities and systems of treatment and control (and related appurtenances) which are installed or used by the discharger to achieve compliance with the conditions of this Order. Proper operation and maintenance also includes adequate laboratory controls and appropriate quality assurance procedures. This provision requires the operation of back-up or auxiliary facilities or similar systems which are installed by the discharger only when the operation is necessary to achieve compliance with the conditions of this Order.

(f) *Permit actions* [40 CFR 122.41(f)]. This Order may be modified, revoked and reissued, or terminated for cause. The filing of a request by the permittee for a permit modification, revocation and reissuance, or termination, or a notification of planned changes or anticipated noncompliance does not stay any permit condition.

(g) *Property rights* [40 CFR 122.41(g)]. This Order does not convey any property rights of any sort or any exclusive privilege.

(h) *Duty to provide information* [40 CFR 122.41(h)]. The permittee shall furnish to the Director, within a reasonable time, any information which the SDRWQCB may request to determine whether cause exists for modifying, revoking and reissuing, or terminating this Order or to determine compliance with this Order. The permittee shall also furnish to the SDRWQCB upon request, copies of records required to be kept by this Order.

(i) *Inspection and entry* [40 CFR 122.41(i)]. The permittee shall allow the SDRWQCB, or an authorized representative (including an authorized contractor acting as a representative of the SDRWQCB or EPA), upon presentation of credentials and other documents as may be required by law, to:

(1) Enter upon the permittee's premises where a regulated facility or activity is located or conducted, or where records must be kept under the conditions of this Order;
(2) Have access to and copy, at reasonable times, any records that must be kept under the conditions of this Order;
(3) Inspect at reasonable times any facilities, equipment (including monitoring and control equipment), practices, or operations regulated or required under this Order; and
(4) Sample or monitor at reasonable times, for the purposes of assuring compliance with this Order or as otherwise authorized by the CWA , any substances or parameters at any location.

(k) *Signatory requirement* [40 CFR 122.41(k)]

(1) All applications, reports, or information submitted to the SDRWQCB shall be signed and certified (see 40 CFR 122.22)

(2) The CWA provides that any person who knowingly makes any false statement, representation, or certification in any record or other document submitted or required to be maintained under this Order, including monitoring reports or reports of compliance or non-compliance shall, upon conviction, be punished by a fine of not more than $10,000 per violation, or by imprisonment for not more than 6 months per violation, or by both.

(l) *Reporting requirements* [40 CFR 122.41(l)]

(1) *Planned changes.* The permittee shall give notice to the SDRWQCB as soon as possible of any planned physical alterations or additions to the permitted facility. Notice is required only when:

i) The alteration or addition to a permitted facility may meet one of the criteria for determining whether a facility is a new source in 40 CFR 122.29(b); or
ii) The alteration or addition could significantly change the nature or increase the quantity of pollutants discharged. This notification applies to pollutants, which are subject neither to effluent limitations in the permit, nor to notification requirements under 40 CFR 122.42(a)(1).
iii) The alteration or addition results in a significant change in the permittee's sludge use or disposal practices, and such alteration, addition, or change may justify the application of permit conditions that are different from or absent in the existing Order, including notification of additional use or disposal sites not reported during the permit application process or not reported pursuant to an approved land application plan;

(2) *Anticipated noncompliance.* The permittee shall give advance notice to the SDRWQCB of any planned changes in the permitted facility or activity, which may result in noncompliance with permit requirements.

(3) *Transfers.* This permit is not transferable to any person except after notice to the SDRWQCB. The SDRWQCB may require modification or revocation and reissuance of the permit to change the name of the permittee and incorporate such other requirements as may be necessary under the CWA. (See 40 CFR 122.61; in some cases, modification or revocation and reissuance is mandatory.)

(4) *Monitoring reports.* The applicable provisions from 40 CFR 122.41(l)(4) are contained in the Monitoring and Reporting Program for this Order.

(5) *Compliance schedules.* Reports of compliance or noncompliance with, or any progress reports on, interim and final requirements contained in any compliance schedule of this permit shall be submitted no later than 14 days following each schedule date.

(6) *Twenty-four hour reporting.*

i) The permittee shall report any noncompliance, which may endanger health or the environment. Any information shall be provided orally within 24 hours from the time the permittee becomes aware of the circumstances. A written submission shall also be provided within 5 days of the time the permittee becomes aware of the circumstances. The written submission shall contain a description of the noncompliance and its cause; the period of noncompliance, including exact dates and times, and if the noncompliance has not been corrected, the anticipated time it is expected to continue; and steps taken or planned to reduce, eliminate, and prevent reoccurrence of the noncompliance.
ii) The following shall be included as information, which must be reported within 24 hours under this paragraph.

(A) Any unanticipated bypass which exceeds any effluent limitation in the Order (See 40 CFR 122.41(g)).
(B) Any upset which exceeds any effluent limitation in the Order.
(C) Violation of a maximum daily discharge limitation for any of the pollutants listed by the SDRWQCB in the permit to be reported within 24 hours. (See 40 CFR 122.44(g)).

iii) The SDRWQCB may waive the written report on a case-by-case basis for reports under paragraph (l)(6)(ii) of this section if the oral report has been received within 24 hours.

(7) *Other noncompliance.* The permittee shall report all instances of noncompliance not reported under paragraphs (l)(4), (5), and (6) of this section, at the time monitoring reports are submitted. The reports shall contain the information listed in paragraph (l)(6) of this section.

(8) *Other information.* Where the permittee becomes aware that it failed to submit any relevant facts in a permit application, or submitted incorrect information in a permit application or in any report to the SDRWQCB, it shall promptly submit such facts or information.

(m) *Bypass* [40 CFR 122.41(m)]

(1) Definitions

i) "Bypass" means the intentional diversion of waste streams from any portion of a treatment facility.
ii) "Severe property damage" means substantial physical damage to property, damage to the treatment facilities which causes them to become inoperable, or substantial and permanent loss of natural resources which can reasonably be expected to occur in the absence of a bypass. Severe property damage does not mean economic loss caused by delays in production.

(2) Bypass not exceeding limitations. The permittee may allow any bypass to occur which does not cause effluent limitations of this Order or the concentrations of pollutants set forth in Ocean Plan Table A or Table B to be exceeded, but only if it also is for essential maintenance to assure efficient operation. These bypasses are not subject to the provisions of paragraphs (m)(3) and (m)(4) of this provision.

(3) Notice

i) Anticipated bypass. If the permittee knows in advance of the need for a bypass, it shall submit prior notice, if possible, at least ten days before the date of the bypass.

ii) Unanticipated bypass. The permittee shall submit notice of an unanticipated bypass as required in paragraph (1)(6) of this section (24-hour notice).

(4) Prohibition of Bypass

i) Bypass is prohibited, and the SDRWQCB may take enforcement action against the permittee for bypass, unless:

(A) Bypass was unavoidable to prevent loss of life, personal injury, or severe property damage;

(B) There were no feasible alternatives to the bypass, such as the use of auxiliary treatment facilities, retention of untreated wastes, or maintenance during normal periods of equipment downtime. This condition is not satisfied if adequate back-up equipment should have been installed in the exercise of reasonable engineering judgment to prevent a bypass which occurred during normal periods of equipment downtime or preventive maintenance; and

(C) The permittee submitted notices as required under paragraph (m)(3) of this section.

ii) The SDRWQCB may approve an anticipated bypass, after considering its adverse effects, if the SDRWQCB determines that it will meet the three conditions listed above in paragraph (m)(4)(i) of this section.

(n) *Upset* [40 CFR 122.41(n)]

(1) Definition. "Upset" means an exceptional incident in which there is unintentional and temporary noncompliance with technology based effluent limitations because of factors beyond the reasonable control of the discharger. An upset does not include noncompliance to the extent caused by operational error, improperly designed treatment facilities, inadequate treatment facilities, lack of preventive maintenance, or careless or improper operation.

(2) Effect of an upset. An upset constitutes an affirmative defense to an action brought for noncompliance with such technology based permit effluent limitations if the requirements of paragraph (n)(3) of this section are met. No determination made during administrative review of claims that noncompliance was caused by upset, and before an action for noncompliance, is final administrative action subject to judicial review.

(3) Conditions necessary for a demonstration of upset. A permittee who wishes to establish the affirmative defense of upset shall demonstrate, through properly signed, contemporaneous operating logs, or other relevant evidence that:

i) An upset occurred and that the permittee can identify the cause(s) of the upset;

ii) The permitted facility was at the time being properly operated;

iii) The permittee submitted notice of the upset as required in section (1)(6)(ii)(B) of this section (24-hour notice); and

iv) The permittee complied with any remedial measures required under paragraph (d) of this section.

(4) Burden of Proof. In any enforcement proceeding the discharger seeking to establish the occurrence of an upset has the burden of proof.

2. SIGNATORY REQUIREMENTS [40 CFR 122.22]

(a) *Applications* [40 CFR 122.22(a)(3)]. All applications shall be signed by either a principal executive officer or ranking elected official.

(b) *Reports* [40 CFR 122.22(b)]. All reports required by this Order, and other information requested by the SDRWQCB shall be signed by a person described in paragraph a. of this reporting requirement, or by a duly authorized representative of that person. A person is a duly authorized representative only if:

(1) The authorization is made in writing by a person described in section (a) above;

(2) The authorization specifies either an individual or a position having responsibility for the overall operation of the regulated facility or activity, such as the position of plant manager, operator of a well or a well field, superintendent, position of equivalent responsibility, or an individual or position having overall responsibility for environmental matters for the company. (A duly authorized representative may thus be either a named individual or any individual occupying a named position.); and,

(3) The written authorization is submitted to the SDRWQCB.

(c) *Changes to authorization.* If an authorization under paragraph (b) of this reporting requirement is no longer accurate because a different individual or position has responsibility for the overall operation of the facility, a new authorization satisfying the requirements of paragraph b. of this reporting requirement must be submitted to the SDRWQCB prior to or together with any reports, information, or applications to be signed by an authorized representative.

(d) *Certification.* Any person signing a document under paragraph (a) or (b) of this section shall make the following certification:

"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

3. ADDITIONAL STANDARD PROVISIONS

(a) *Municipal separate storm sewer systems* [40 CFR 122.42(c)]. The operator of a large or medium municipal separate storm sewer system or a municipal separate storm sewer that has been designated by the Director under 40 CFR 122.26(a)(1)(v) must submit an annual report by the anniversary of the date of the issuance of the permit for such system. The report shall include:

(1) The status of implementing the components of the storm water management program that are established as permit conditions;

(2) Proposed changes to the storm water management programs that are established as permit conditions. Such proposed changes shall be consistent with 40 CFR 122.26(d)(2)(iii); and

(3) Revisions, if necessary, to the assessment of controls and the fiscal analysis reported in the permit application under 40 CFR 122.26(d)(2)(iv) and 40 CFR 122.26(d)(2)(v);

(4) A summary of data, including monitoring data, that is accumulated throughout the reporting year;

(5) Annual expenditures and budget for year following each annual report;

(6) A summary describing the number and nature of enforcement actions, inspections, and public education programs; and

(7) Identification of water quality improvements or degradation.

(b) *Storm water discharges* [40 CFR 122.42(d)]. The initial permits for discharges composed entirely of storm water issued pursuant to 40 CFR 122.26(e)(7) shall require compliance with the conditions of

the permit as expeditiously as practicable, but in no event later than three years after the date of issuance of the permit.

(c) *Discharge is a privilege* [CWC section 13263(g)]. No discharge of waste into the waters of the State, whether or not such discharge is made pursuant to waste discharge requirements, shall create a vested right to continue such discharge. All discharges of waste into waters of the State are privileges, not rights.

(d) *Review and revision of Order* [CWC section 13263(e)]. Upon application by any affected person, or on its own motion, the SDRWQCB may review and revise this permit.

(e) *Termination or modification of Order* [CWC section13381]. This permit may be terminated or modified for causes, including, but not limited to, all of the following:

(8) Violation of any condition contained in this Order;
(9) Obtaining this Order by misrepresentation, or failure to disclose fully all relevant facts.
(10) A change in any condition that requires either a temporary or permanent reduction or elimination of the permitted discharge.

(f) *Transfers.* When this Order is transferred to a new owner or operator, such requirements as may be necessary under the CWC may be incorporated into this Order.

(g) *Conditions not stayed.* The filing of a request by the permittee for modification, revocation and reissuance, or termination of this Order, or a notification of planned change in or anticipated noncompliance with this Order does not stay any condition of this Order.

(h) *Availability.* A copy of this Order shall be kept at a readily accessible location and shall be available to on-site personnel at all times.

(i) *Duty to minimize or correct adverse impacts.* The permittees shall take all reasonable steps to minimize or correct any adverse impact on the environment resulting from noncompliance with this Order, including such accelerated or additional monitoring as may be necessary to determine the nature and impact of the noncompliance.

(j) *Responsibilities, liabilities, legal action, penalties* [CWC sections 13385 and 13387]. The Porter-Cologne Water Quality Control Act provides for civil and criminal penalties comparable to, and in some cases greater than, those provided for under the CWA.

Nothing in this Order shall be construed to protect the discharger from its liabilities under federal, state, or local laws.

Except as provided for in 40CFR 122.41(m) and (n), nothing in this Order shall be construed to relieve the permittee from civil or criminal penalties for noncompliance.

Nothing in this Order shall be construed to preclude the institution of any legal action or relieve the permittee from any responsibilities, liabilities, or penalties to which the discharger is or may be subject to under Section 311 of the CWA.

Nothing in this Order shall be construed to preclude institution of any legal action or relieve the permittee from any responsibilities, liabilities, or penalties established pursuant to any applicable state law or regulation under authoring preserved by Section 510 of the CWA.

(k) *Noncompliance.* Any noncompliance with this Order constitutes violation of the CWC and is grounds for denial of an application for modification of the Order (also see 40 CFR 122.41(a).

(l) *Director.* For purposes of this Order, the term "Director" used in parts of 40 CFR incorporated into this Order by reference and/or applicable to this Order shall have the same meaning as the term "SDRWQCB" used elsewhere in this Order, except that in 40 CFR 122.41(h) and (I), "Director" shall mean "SDRWQCB. SWRCB, and EPA."

(m) The SDRWQCB has, in prior years, issued a limited number of individual NPDES permits for non-storm water discharges to MS4s. The SDRWQCB or SWRCB may in the future, upon prior notice to the Permittee(s), issue an NPDES permit for any non-storm water discharge (or class of non-storm water discharges) to a MS4. Permittees may prohibit any non-storm water discharge (or class of non-storm water discharges) to a MS4 that is authorized under such separate NPDES permits.

(n) *Effective date.* This Order shall become effective on the date of its adoption provided the EPA has no objection. If the EPA objects to its issuance, this Order shall not become effective until such objection is withdrawn. This Order supersedes Order No. R9-98-02 upon the effective date of this Order.

(o) *Expiration.* This Order expires on **July 14, 2009**.

(p) *Continuation of expired order* [23 CCR 2235.4]. After this Order expires, the terms and conditions of this Order are automatically continued pending issuance of a new permit if all requirements of the federal NPDES regulations on the continuation of expired permits (40 CFR 122.6) are complied with.

(q) *Applications.* Any application submitted by a permittee for reissuance or modification of this Order shall satisfy all applicable requirements specified in federal regulations as well as any additional requirements for submittal of a Report of Waste Discharge specified in the CWC and the CCR.

(r) *Confidentiality.* Except as provided for in 40 CFR 122.7, no information or documents submitted in accordance with or in application for this Order will be considered confidential, and all such information and documents shall be available for review by the public at the SDRWQCB office.

(s) *Severability.* The provisions of this Order are severable, and if any provision of this Order, or the application of any provisions of this Order to any circumstance, is held invalid, the application of such provision to other circumstances and the remainder of this Order shall not be affected thereby.

(t) *Report submittal.* The discharger shall submit reports and provide notifications as required by this Order to the following:

NORTHERN WATERSHED PROTECTION UNIT
CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
SAN DIEGO REGION
9174 SKY PARK COURT, SUITE 100
SAN DIEGO CA 92123-4340
Telephone: (858) 467-2952 Fax: (858) 571-6972

EUGENE BROMLEY
US ENVIRONMENTAL PROTECTION AGENCY
REGION IX
PERMITS ISSUANCE SECTION (W-5-1)

75 HAWTHORNE STREET
SAN FRANCISCO CA 94105

Unless otherwise directed, the discharger shall submit one hard copy for the official record and one electronic copy of each report required under this Order to the SDRWQCB and one hard copy to the EPA.

ATTACHMENT C
DEFINITIONS

Anthropogenic Litter – Trash generated from human activities, not including sediment.

Basin Plan – Water Quality Control Plan, San Diego Basin, Region 9, and amendments, developed by the SDRWQCB.

BAT (Best Available Technology) – The technology-based standard established by congress in CWA section 402(p)(3)(A) for industrial dischargers of storm water. Technology-based standards establish the level of pollutant reductions that dischargers must achieve, typically by treatment or by a combination of treatment and best management practices, or BMPs. For example, secondary treatment (or the removal of 85% suspended solids and BOD) is the BAT for suspended solid and BOD removal from a sewage treatment plant. BAT generally emphasizes treatment methods first and pollution prevention and source control BMPs secondarily.

The best economically achievable technology that will result in reasonable further progress toward the national goal of eliminating the discharge of all pollutants, as determined in accordance with regulations issued by the EPA Administrator. Factors relating to the assessment of best available technology shall take into account the age of equipment and facilities involved, the process employed, the engineering aspects of the application of various types of control techniques, process changes, the cost of achieving such effluent reduction, non-water quality environmental impact (including energy requirements), and such other factors as the permitting authority deems appropriate.

Beneficial Uses - The uses of water necessary for the survival or well being of man, plants, and wildlife. These uses of water serve to promote the tangible and intangible economic, social, and environmental goals "Beneficial Uses" of the waters of the State that may be protected against include, but are not limited to, domestic, municipal, agricultural and industrial supply; power generation; recreation; aesthetic enjoyment; navigation; and preservation and enhancement of fish, wildlife, and other aquatic resources or preserves. Existing beneficial uses are uses that were attained in the waters of the State on or after November 28, 1975; and potential beneficial uses are uses that would probably develop in future years through the implementation of various control measures. "Beneficial Uses" are equivalent to "Designated Uses" under federal law. [CWC section 13050(f)].

Bioaccumulate - The progressive accumulation of contaminants in the tissues of organisms through any route including respiration, ingestion, or direct contact with contaminated water, sediment, pore water, or dredged material to a higher concentration than in the surrounding environment. Bioaccumulation occurs with exposure and is independent of the tropic level.

Bioassessment - The use of biological community information to evaluate the biological integrity of a water body and its watershed. With respect to aquatic ecosystems, bioassessment is the collection and analysis of samples of the benthic macroinvertebrate community together with physical/habitat quality measurements associated with the sampling site and the watershed to evaluate the biological integrity of a water body.

Biological Integrity - Defined in Karr J.R. and D.R. Dudley. 1981. Ecological perspective on water quality goals. Environmental Management 5:55-68 as: "A balanced, integrated, adaptive community of organisms having a species composition, diversity, and functional organization comparable to that of natural habitat of the region." Also referred to as ecosystem health.

(BMP) Best Management Practices - Defined in 40 CFR 122.2 as schedules of activities, prohibitions of practices, maintenance procedures, and other management practices to prevent or reduce the pollution of waters of the U.S. BMPs also include treatment requirements, operating procedures and practices to control plant site runoff, spillage or leaks, sludge or waste disposal, or drainage from raw material storage.

Clean Water Act Section 303(d) Impaired Water Body - An impaired water body in which water quality does not meet applicable water quality standards and/or is not expected to meet water quality standards, even after the application of technology based pollution controls required by the CWA.

Construction Site – Any project requiring a local grading or building permit, including projects requiring coverage under the General Construction Permit, that involves soil disturbing activities. Soil disturbing activities include clearing, grading, disturbances to ground such as stockpiling, and excavation.

Contamination - As defined in the Porter-Cologne Water Quality Control Act, contamination is "an impairment of the quality of waters of the State by waste to a degree which creates a hazard to the public health through poisoning or through the spread of disease. 'Contamination' includes any equivalent effect resulting from the disposal of waste whether or not waters of the State are affected."

CWA – Federal Clean Water Act

CWC – California Water Code

Designated Waste - A "nonhazardous waste which consists of pollutants which, under ambient environmental conditions at the waste management unit, could be released at concentrations in excess of applicable water quality objectives, or which could cause degradation of waters of the State" [CCR Title 27, chapter 3, subchapter 2, article 2, section 20210; CWC section 13173].

Development Projects - New development or redevelopment with land disturbing activities; structural development, including construction or installation of a building or structure, the creation of impervious surfaces; and land subdivision.

Dry Season – May 1 through September 30 of each year.

Effluent Limitations – any restriction imposed on quantities, discharge rates, and concentrations of pollutants, which are discharged from point sources into waters of the State.

Erosion – When land is diminished or worn away due to wind, water, or glacial ice. Often the eroded debris (silt or sediment) becomes a pollutant via storm water runoff. Erosion occurs naturally but can be intensified by land clearing activities such as farming, development, road building, and timber harvesting.

ESA (Environmentally Sensitive Area) – Areas "in which plant or animal life or their habitats are either rare or especially valuable because of their special nature or role in an ecosystem and which would easily be disturbed or degraded by human activities and developments" (California Public Resources Code section 30107.5). ESAs subject to urban runoff requirements include but are not limited to all CWA section 303(d) impaired water bodies, areas designated as Areas of Special Biological Significance by the SWRCB (Basin Plan); water bodies designated with the RARE beneficial use by the SWRCB (Basin Plan); areas within the Western Riverside County Multi-Species Habitat Conservation Plan (MSHCP) plan area that contain rare or especially valuable plant or animal life or their habitat; and any other equivalent environmentally sensitive areas which the Permittees have identified.

GIS – Geographic Information System

Grading - The cutting and/or filling of the land surface to a desired slope or elevation.

Hazardous Material – Any substance that poses a threat to human health or the environment due to its toxicity, corrosiveness, ignitability, explosive nature or chemical reactivity. These also include materials named by the EPA in 40 CFR 116 to be reported if a designated quantity of the material is spilled into the waters of the U.S. or emitted into the environment.

Hazardous Waste - Hazardous waste is defined as "any waste which, under Section 600 of Title 22 of this code, is required to be managed according to Chapter 30 of Division 4.5 of Title 22 of this code" [CCR Title 22, Division 4.5, Chapter 11, Article 1].

Household Hazardous Waste – Paints, cleaning products, and other wastes generated during home improvement or maintenance activities.

Illicit Connection – Any connection to the MS4 that conveys an illicit discharge.

Illicit Discharge - Any discharge to the MS4 that is not composed entirely of storm water except discharges pursuant to a NPDES permit and discharges resulting from fire fighting activities [40 CFR 122.26(b)(2)].

Inert Waste - Material that "does not contain hazardous waste or soluble pollutants at concentrations in excess of applicable water quality objectives, and does not contain significant quantities of decomposable waste" [CCR Title 27, Chapter 3, Subchapter 2, Article 2, Section 20230].

MEP (Maximum Extent Practicable) – The technology-based standard established by Congress in CWA section 402(p)(3)(B)(iii) that operators of MS4s must meet. Technology-based standards establish the level of pollutant reductions that dischargers must achieve, typically by treatment or by a combination of source control and treatment control BMPs. MEP generally emphasizes pollution prevention and source control BMPs primarily (as the first line of defense) <u>in combination</u> with treatment methods serving as a backup (additional line of defense). MEP considers economics and is generally, but not necessarily, less stringent than BAT. A definition for MEP is not provided either in the statute or in the regulations. Instead the definition of MEP is dynamic and will be defined by the following process over time: municipalities propose their definition of MEP by way of their SWMP. Their total collective and individual activities conducted pursuant to the SWMP becomes their proposal for MEP as it applies both to their overall effort, as well as to specific activities (e.g., MEP for street sweeping, or MEP for MS4 maintenance). In the absence of a proposal acceptable to the SDRWQCB, the SDRWQCB defines MEP.

In a memo dated February 11, 1993, entitled "Definition of Maximum Extent Practicable," Elizabeth Jennings, Senior Staff Counsel, SWRCB addressed the achievement of the MEP standard as follows:

> "*To achieve the MEP standard, municipalities must employ whatever Best Management Practices (BMPs) are technically feasible (i.e., are likely to be effective) and are not cost prohibitive. The major emphasis is on technical feasibility. Reducing pollutants to the MEP means choosing effective BMPs, and rejecting applicable BMPs only where other effective BMPs will serve the same purpose, or the BMPs would not be technically feasible, or the cost would be prohibitive. In selecting BMPs to achieve the MEP standard, the following factors may be useful to consider:*
>
> *a. Effectiveness: Will the BMPs address a pollutant (or pollutant source) of concern?*

b. *Regulatory Compliance: Is the BMP in compliance with storm water regulations as well as other environmental regulations?*
c. *Public Acceptance: Does the BMP have public support?*
d. *Cost: Will the cost of implementing the BMP have a reasonable relationship to the pollution control benefits to be achieved?*
e. *Technical Feasibility: Is the BMP technically feasible considering soils, geography, water resources, etc?*

The final determination regarding whether a municipality has reduced pollutants to the maximum extent practicable can only be made by the Regional or State Water Boards, and not by the municipal discharger. If a municipality reviews a lengthy menu of BMPs and chooses to select only a few of the least expensive, it is likely that MEP has not been met. On the other hand, if a municipal discharger employs all applicable BMPs except those where it can show that they are not technically feasible in the locality, or whose cost would exceed any benefit derived, it would have met the standard. Where a choice may be made between two BMPs that should provide generally comparable effectiveness, the discharger may choose the least expensive alternative and exclude the more expensive BMP. However, it would not be acceptable either to reject all BMPs that would address a pollutant source, or to pick a BMP base solely on cost, which would be clearly less effective. In selecting BMPs the municipality must make a serious attempt to comply and practical solutions may not be lightly rejected. In any case, the burden would be on the municipal discharger to show compliance with its permit. After selecting a menu of BMPs, it is the responsibility of the discharger to ensure that all BMPs are implemented."

MS4 (Municipal Separate Storm Sewer System) – A conveyance or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, or storm drains): (i) Owned or operated by a State, city town, borough, county, parish, district, association, or other public body (created by or pursuant to State law) having jurisdiction over disposal of sewage, industrial wastes, storm water, or other wastes, including special districts under State law such as a sewer district, flood control district or drainage district, or similar entity, or an Indian tribe or an authorized Indian tribal organization, or designated and approved management agency under section 208 of the CWA that discharges to waters of the United States; (ii) Designated or used for collecting or conveying storm water; (iii) Which is not a combined sewer; (iv) Which is not part of the Publicly Owned Treatment Works (POTW) as defined at 40 CFR 122.26.

NOI – Notice of Intent

Non-hazardous Solid Waste - All putrescible and nonputrescible solid, semi-sold, and liquid wastes, including garbage, trash, refuse, paper, rubbish, ashes, industrial wastes, demolition and construction wastes, abandoned vehicles and parts thereof, discarded home and industrial appliances, manure, vegetable or animal solid and semi-sold wastes and other discarded solid or semi-solid waste; provided that such wastes do not contain wastes which must be managed as hazardous wastes, or wastes which contain soluble pollutants in concentration which exceed applicable water quality objectives or could cause degradation of wasters of the state." [CCR Title 27, Chapter 3, Subchapter 2, Article 2, Section 20220]

Non-Storm Water - All discharges to and from a MS4 that do not originate from precipitation events (i.e., all discharges from a MS4 other than storm water). Non-storm water includes illicit discharges, non-prohibited discharges, and NPDES permitted discharges.

NPDES (National Pollution Discharge Elimination System) - The national program for issuing, modifying, revoking and reissuing, terminating, monitoring and enforcing permits, and imposing and enforcing pretreatment requirements, under Sections 307, 318, 402, and 405 of the CWA.

NPS (Nonpoint Source) – Diffuse, widespread sources of pollution. These sources may be large or small, but are generally numerous throughout a watershed. Non Point Sources include but are not limited to urban, agricultural, or industrial areas, roads, highways, construction sites, communities served by septic systems, recreational boating activities, timber harvesting, mining, livestock grazing, as well as physical changes to stream channels, and habitat degradation. NPS pollution can occur year round any time rainfall, snowmelt, irrigation, or any other source of water runs over land or through the ground, picks up pollutants from these numerous, diffuse sources and deposits them into rivers, lakes, and coastal waters or introduces them into ground water.

Nuisance - As defined in the Porter-Cologne Water Quality Control Act a nuisance is "anything which meets all of the following requirements: 1) Is injurious to health, or is indecent, or offensive to the senses, or an obstruction to the free use of property, so as to interfere with the comfortable enjoyment of life or property. 2) Affects at the same time an entire community or neighborhood, or any considerable number of persons, although the extent of the annoyance or damage inflicted upon individuals may be unequal. 3) Occurs during, or as a result of, the treatment or disposal of wastes."

Order – Order No. R9-2004-001 (NPDES No. CAS0108766)

Person - A person is defined as an individual, association, partnership, corporation, municipality, State or Federal agency, or an agent or employee thereof [40 CFR 122.2].

Point Source - Any discernible, confined, and discrete conveyance, including, but not limited to, any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operations, landfill leachate collection systems, vessel, or other floating craft from which pollutants are or may be discharged. This term does not include return flows from irrigated agriculture or agricultural storm water runoff.

Pollutant - Any agent that may cause or contribute to the degradation of water quality such that a condition of pollution or contamination is created or aggravated.

Pollution - As defined in the Porter-Cologne Water Quality Control Act: "the alteration of the quality of the waters of the State by waste, to a degree that unreasonably affects the either of the following: 1) The waters for beneficial uses; or 2) Facilities that serve these beneficial uses." Pollution may include contamination.

Pollutants of Concern – All pollutants for which water bodies are listed as impaired under CWA section 303(d), all pollutants associated with the land use type of a development, and all pollutants commonly associated with urban runoff. Pollutants commonly associated with urban runoff include total suspended solids; sediment; pathogens (e.g., bacteria, viruses, protozoa); heavy metals (e.g., copper, lead, zinc, and cadmium); petroleum products and polynuclear aromatic hydrocarbons; synthetic organics (e.g., pesticides, herbicides, and PCBs); nutrients (e.g., nitrogen and phosphorus fertilizers); oxygen-demanding substances (decaying vegetation, animal waste, and anthropogenic litter).

Pollution Prevention - Pollution prevention is defined as practices and processes that reduce or eliminate the generation of pollutants, in contrast to source control BMPs, treatment control BMPs, or disposal.

Post-Construction BMPs - A subset of BMPs including structural and non-structural controls which detain, retain, filter, or educate to prevent the release of pollutants to surface waters during the final functional life of developments.

Principal Permittee – Riverside County Flood Control and Water Conservation District

Priority Development Projects – New development and redevelopment projects listed in Requirement F.2.b.(1) of tentative Order No. R9-2004-001.

Receiving Waters – Waters of the U.S.

RWLs (Receiving Water Limitations) - Waste discharge requirements issued by the SDRWQCB typically include both: (1) "Effluent Limitations" (or "Discharge Limitations") that specify the technology-based or water-quality-based effluent limitations; and (2) "Receiving Water Limitations" that specify the water quality objectives in the Basin Plan as well as any other limitations necessary to attain those objectives. In summary, the "Receiving Water Limitations" provision is the provision used to implement the requirement of CWA section 301(b)(1)(C) that NPDES permits must include any more stringent limitations necessary to meet water quality standards.

Sediment - Soil, sand, and minerals washed from land into water. Sediment resulting from anthropogenic sources (i.e. human induced land disturbance activities) is considered a pollutant. This Order regulates only the discharges of sediment from anthropogenic sources and does not regulate naturally occurring sources of sediment. Sediment can destroy fish-nesting areas, clog animal habitats, and cloud waters so that sunlight does not reach aquatic plants.

Shared Treatment BMP - BMPs used by multiple developments to infiltrate, filter, or treat the required volume or flow prior to discharge to a receiving water. This could include, for example, a treatment BMP at the end of an enclosed storm drain that collects runoff from several commercial developments.

Source Control BMP – Land use or site planning practices, or structural or nonstructural measures that aim to prevent urban runoff pollution by reducing the potential for contamination at the source of pollution. Source control BMPs minimize the contact between pollutants and urban runoff.

Storm Water – Per 40 CFR 122.26(b)(13), means storm water runoff, snowmelt runoff and surface runoff and drainage.

SUSMP (Standard Urban Storm Water Mitigation Plan) – A plan developed to mitigate the impacts of urban runoff from Priority Development Projects in accordance with Requirement F.2.b. of tentative Order No. R9-2004-001.

SWMP (Storm Water Management Plan) – A written description of the specific urban runoff management measures and programs that each Permittee will implement to reduce the discharge of pollutants in urban runoff to the MEP and to comply with Order No. R9-2004-001.

TMDL (Total Maximum Daily Load) - The maximum amount of a pollutant that can be discharged into a water body from all sources (point and non-point) and still maintain water quality standards. Under CWA section 303(d), TMDLs must be developed for all water bodies that do not meet water quality standards after application of technology-based controls.

Toxicity - Adverse responses of organisms to chemicals or physical agents ranging from mortality to physiological responses such as impaired reproduction or growth anomalies). The water quality objectives

for toxicity provided in the Basin Plan state in part... *"All waters shall be free of toxic substances in concentrations that are toxic to, or that produce detrimental physiological responses in human, plant, animal, or aquatic life... The survival of aquatic life in surface waters subjected to a waste discharge or other controllable water quality factors, shall not be less than that for the same water body in areas unaffected by the waste discharge."*

Treatment Control BMP – Any engineered system designed to remove pollutants by simple gravity settling of particulate pollutants, filtration, biological uptake, media absorption or any other physical, biological, or chemical process.

Urban Runoff - All flows in a storm water conveyance system and consists of the following components: (1) storm water (wet weather flows) and (2) non-storm water illicit discharges (dry weather flows).

Waste - As defined in CWC Section 13050(d), "waste includes sewage and any and all other waste substances, liquid, solid, gaseous, or radioactive, associated with human habitation, or of human or animal origin, or from any producing, manufacturing, or processing operation, including waste placed within containers of whatever nature prior to, and for purposes of, disposal."

Article 2 of CCR Title 23, Chapter 15 (Chapter 15) contains a waste classification system that applies to solid and semi-solid waste, which cannot be discharged directly or indirectly to water of the state and which therefore must be discharged to land for treatment, storage, or disposal in accordance with Chapter 15. There are four classifications of waste (listed in order of highest to lowest threat to water quality): hazardous waste, designated waste, non-hazardous solid waste, and inert waste.

Water Quality Objective - Numerical or narrative limits on constituents or characteristics of water designated to protect designated beneficial uses of the water. [CWC section 13050 (h)]. California's water quality objectives are established by the SWRCB and RWQCBs in the Water Quality Control Plans.

Water Quality Standards - The beneficial uses (e.g., swimming, fishing, municipal drinking water supply, etc.,) of water and the water quality objectives necessary to protect those uses.

Waters of the State - Any water, surface or underground, including saline waters within the boundaries of the State [CWC section 13050 (e)]. The definition of the Waters of the State is broader than that for the Waters of the United States in that all water in the State is considered to be a Waters of the State regardless of circumstances or condition. Under this definition, a MS4 is always considered to be a Waters of the State.

Waters of the United States - As defined in 40 CFR 122.2, the Waters of the U.S. are defined as: **"(a) All waters, which are currently used, were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters which are subject to the ebb and flow of the tide;** (b) All interstate waters, including interstate "wetlands;" (c) All other waters such as intrastate lakes, rivers, streams (including intermittent streams), mudflats, sandflats, "wetlands," sloughs, prairie potholes, wet meadows, playa lakes, or natural ponds the use, degradation or destruction of which would affect or could affect interstate or foreign commerce including any such waters: (1) Which are or could be used by interstate or foreign travelers for recreational or other purposes; (2) From which fish or shellfish are or could be taken and sold in interstate or foreign commerce; or (3) Which are used or could be used for industrial purposes by industries in interstate commerce; (d) All impoundments of waters otherwise defined as waters of the United States under this definition**: (e) Tributaries of waters identified in paragraphs (a) through (d) of this definition;** (f) The territorial seas; and (g) "Wetlands" adjacent to waters (other than waters that are themselves wetlands) identified in paragraphs (a) through (f) of this

definition. Waters of the United States do not include prior converted cropland. Notwithstanding the determination of an area's status as prior converted cropland by any other federal agency, for the purposes of the CWA, the final authority regarding CWA jurisdiction remains with the EPA."

Watershed - That geographical area which drains to a specified point on a water course, usually a confluence of streams or rivers (also known as drainage area, catchment, or river basin).

WDRs – Waste Discharge Requirements

Wet Season – October 1 through April 30 of each year.

ATTACHMENT D

INDIVIDUAL SWMP CONTENTS

Pursuant to Requirement E.1.a. of tentative Order No. R9-2004-001, each Permittee shall develop an Individual SWMP that describes their specific urban runoff management programs and activities that will be implemented to comply with the Order. An individual SWMP that addresses the items listed below would provide a complete description of the programs and activities the Permittee plans to implement to comply with the Order and to reduce pollutants in urban runoff to the MEP. In the event that a specific component is not applicable to a Permittee, the Permittee shall provide an explanation of non-applicable programs with the SWMP submittal and does not need to provide the information requested below in that particular section of their Individual SWMP.

1. Administrative and Legal Procedures

a) Identification of all departments within the jurisdiction that conduct urban runoff related activities, and their roles and responsibilities under the Order. Include an up-to-date organizational chart specifying these departments and key personnel;

b) Citation of urban runoff related ordinances and the reasons they are enforceable;

c) Identification of the local administrative and legal procedures available to mandate compliance with urban runoff related ordinances and therefore with the conditions of the Order;

d) Description of how these ordinances are implemented and appealed; and

e) Description of whether the Permittee can issue administrative orders and injunctions or if it must go through the court system for enforcement actions.

2. Development Planning (Section F)

a) A description of the water quality and watershed protection principles that have been or will be included in the Permittee's General plan, and a time schedule where modifications are planned, if applicable;

b) A description of the development project approval process and how it ensures that urban runoff from new development and redevelopment will be reduced to the MEP, that post-development runoff volumes and velocities will be controlled, and that water quality objectives will not be violated throughout the life of the project;

c) A final SUSMP document that meets the requirements specified in Section F.2.b. of the Order, and a copy of the ordinance (amended or new) that gives the Permittee the authority to implement and enforce the SUSMP. The SUSMP may be submitted under separate cover as an attachment to the SWMP;

d) A description of the Permittee's current environmental review process and how it addresses impacts to water quality and appropriate mitigation measures. If the Permittee plans to modify the process during the permit term, a time schedule for modifications shall be included;

e) A description of education efforts related to development and how they will be implemented; and

f) A description of the measurable goals that will be used to assess the effectiveness of this program component.

3. Construction Component (Section G)

a) A description of which pollution prevention methods will be required for implementation, and the steps that will be taken to ensure implementation;

b) Updated grading ordinances, including adequate enforcement mechanisms;

c) A description of the modified construction and grading approval process;

d) Updated construction and grading project requirements in local grading and construction permits;

e) A completed inventory of all construction sites;

f) A list and description of minimum BMPs that will be implemented, or required to be implemented;

g) A description of the steps that will be taken to ensure the implementation of prescribed BMPs at all construction sites;

h) A description of planned inspection frequencies;

i) A description of inspection procedures;

j) A description of enforcement mechanisms and steps that will be used;

k) A description of the construction education program and how it will be implemented; and

l) A description of the measurable goals that will be used to assess the effectiveness of this program component.

4. Municipal Component (Section H.1)

a) A description of which pollution prevention methods will be required for implementation, and the steps taken to ensure implementation;

b) A completed inventory of all municipal facilities and activities;

c) A description of which BMPs will be implemented, or required to be implemented, for municipal facilities and activities;

d) A description of steps that will be taken to ensure the implementation of prescribed BMPs at municipal facilities and activities;

e) A description of municipal maintenance activities and schedules;

f) A description of the management strategy for pesticides, herbicides, and fertilizer use;

g) A description of inspection procedures;

h) A description of enforcement mechanisms and how they will be used; and

i) A description of the measurable goals that will be used to assess the effectiveness of this program component.

5. Industrial/Commercial Facilities Component (Section H.2)

a) A description of which pollution prevention methods will be required for implementation, and the steps that will be taken to ensure implementation;

b) A completed and prioritized inventory of all industrial/commercial facilities that could contribute a significant pollutant load to the MS4;

c) A list of minimum BMPs that will be implemented, or required to be implemented, for each facility type or pollutant-generating activity;

d) A description of the steps that will be taken to ensure the implementation of prescribed BMPs at industrial/commercial facilities, including notification procedures;

e) A description of inspection procedures;

f) A description of enforcement mechanisms and how they will be used;

g) A description of training efforts; and

h) A description of the measurable goals that will be used to assess the effectiveness of this program component.

6. Residential Component (Section H.3)

a) A description of which pollution prevention methods will be encouraged for implementation, and the steps that will be taken to encourage implementation;

b) A list of residential activities that have been identified as high priority;

c) A list of minimum BMPs that will be implemented, or required to be implemented, for high priority residential activities;

d) A description of the steps that will be taken to ensure the implementation of prescribed BMPs for high priority residential activities;

e) A description of enforcement mechanisms and how they will be used; and

f) A description of the measurable goals that will be used to assess the effectiveness of this program component.

7. Education Component (Section I)

a) A description of the content, form, and frequency of education efforts for each target community; and

b) A description of the measurable goals that will be used to assess the effectiveness of the public education program.

8. Illicit Discharge Detection and Elimination Component (Section J)

a) A description of the program to actively seek and eliminate illicit discharges and illicit connections;

b) An Illicit Discharge Monitoring Program, in accordance with the Monitoring and Reporting Program, to be conducted to detect illicit discharges and illicit connections;

c) A description of investigation and inspection procedures to follow up on dry weather monitoring results or other information which indicate potential for illicit discharges and illicit connections;

d) A description of procedures to promptly eliminate detected illicit discharges and illicit connections;

e) A description of enforcement mechanisms and how they will be used;

f) A description of the mechanism to receive notification of spills;

g) A description of efforts to facilitate public reporting of illicit discharges and connections, including a public hotline;

h) A description of efforts to facilitate proper disposal of used oil and other toxic materials; and

i) A description of measurable goals that will be used to assess the effectiveness of this program component.

9. Public Participation Component (Section E.3)

A description of how public participation will be included in the development and implementation of each Permittee's Individual SWMP.

10. Assessment of Individual SWMP Effectiveness Component

As part of its Individual SWMP, each Permittee shall develop a long-term strategy for assessing the effectiveness of its Individual SWMP. The long-term assessment strategy shall, at a minimum, include the following:

a) An assessment of the progress towards meeting the measurable goals identified in each program component;

b) An assessment of Illicit Discharge and Receiving Water monitoring data; and

c) An assessment of overall program effectiveness.

11. Fiscal Analysis Component

Each Permittee shall secure the resources necessary to meet the requirements of the Order. As part of its Individual SWMP, each Permittee shall describe and analyze the capital and operation and maintenance expenditures necessary to accomplish the activities required in the Order, and a description of the source of funds the Permittee proposes to use to meet those expenditures.

12. Fire Fighting

A description of a program to reduce pollutants from non-emergency fire fighting flows identified by the Permittee to be significant sources of pollutants.

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
SAN DIEGO REGION
MONITORING AND REPORTING PROGRAM No. R9-2004-001
NPDES PERMIT No. CAS0108766
FOR THE DISCHARGES OF URBAN RUNOFF FROM THE MUNICIPAL SEPARATE STORM SEWER SYSTEMS (MS4s) DRAINING THE COUNTY OF RIVERSIDE, THE CITY OF MURRIETA, THE CITY OF TEMECULA AND THE RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT WITHIN THE SANTA MARGARITA WATERSHED IN THE SAN DIEGO REGION

I. PURPOSE 2
II. MONITORING PROGRAM 2
- **A. Receiving Waters Monitoring** 2
- **B. Illicit Discharge Monitoring** 9
- **C. Monitoring Provisions** 10

III. REPORTING PROGRAM 12
- **A. SWMP Reporting Requirements** 12
- **B. Receiving Waters Monitoring Reporting Requirements** 15
- **C. Certified Perjury Statement** 17

I. PURPOSE

This Monitoring and Reporting Program (MRP) is intended to meet the following goals:

1. Assess compliance with Order No. R9-2004-001;
2. Measure and improve the effectiveness of the SWMPs;
3. Assess the chemical, physical, and biological impacts of receiving waters resulting from urban runoff;
4. Characterize urban runoff discharges;
5. Identify sources of specific pollutants;
6. Prioritize drainage and sub-drainage areas that need management actions;
7. Detect and eliminate illicit discharges and illicit connections to the MS4; and
8. Assess the overall health of receiving waters.

II. MONITORING PROGRAM

The Monitoring Program consists of the Receiving Waters Monitoring, Illicit Discharge Monitoring, Monitoring Provisions, and the program assessments required under Section III.B of this MRP. All monitoring program components shall be implemented no later than October 2004, unless otherwise specified herein.

A. Receiving Waters Monitoring

The Receiving Waters Monitoring consists of: 1) **Core Monitoring** requirements to address on-going, site-specific needs, such as estimating pollutant loads and assessing trends; 2) **Regional Monitoring** to address watershed-wide issues; and 3) **Special Studies** to address specific research or management issues.

A.I Core Monitoring

In order to achieve the above goals, the triad[1] and tributary Core Monitoring requirements are intended to generate water quality data that will build upon existing data to begin answering the following management questions:

- Are conditions in receiving waters protective, or likely to be protective, of beneficial uses?
- What is the extent and magnitude of the current or potential receiving water problems?
- What is the relative urban runoff contribution to the receiving water problem(s)?
- What are the sources of urban runoff that contribute to receiving water problem(s)?
- Are conditions in receiving waters getting better or worse?

1. Mass Loadings

   a) The Permittees shall monitor mass loadings from the following three triad stations. Alternative locations representative of urban/urbanizing drainage areas may be selected.

      (1) Lower Temecula Creek;

      (2) Lower Murrieta Creek @ USGS Weir; and

      (3) A reference station representative of natural, undeveloped conditions. Permittees shall evaluate the reference station annually for suitability and select new reference stations as needed.

[1] Triad means a station where chemical, toxicity, and bioassessment monitoring occur.

b) At each triad station, the Permittees shall monitor the first storm event of each monitoring year[2] that produces sufficient flow to collect a composite sample, and a minimum of two additional storm events during each monitoring year.

c) In the event that the required number of storm events are not sampled during one monitoring year at any given station, the Permitees shall submit, with the subsequent Annual Report, a written explanation for a lack of sampling data, including streamflow data from the nearest USGS gauging station.

d) In addition to the storm events, the Permittees shall analyze a minimum of two dry weather samples from each triad station per monitoring year. If flow is insufficient to collect a sample, this shall be documented in the subsequent annual report.

e) Sampling at triad stations shall begin no later than the first storm after October 2004 that produces sufficient flow to collect a composite sample.

f) Mass loading sampling and analysis protocols shall be consistent with 40 CFR 122.21(g)(7)(ii) and with the EPA Storm Water Sampling Guidance Document (EPA 833-B-92-001). Storm water samples shall be flow-weighted composites[3], collected during the first 3 hours of flow, or for the duration of the storm if it is less than 3 hours. A minimum of 3 sample aliquots, separated by a minimum of 15 minutes, shall be taken within each hour of discharge, unless the SDRWQCB Executive Officer approves an alternate protocol. Automatic samplers are recommended, but manual samples may be collected from mass loading stations where it is not feasible to install an automatic sampler. Grab samples[4] shall be taken for pathogen indicators and oil and grease. Grab samples are acceptable for dry weather sample collection.

g) Permittees shall measure or estimate flow rates and volumes for each triad sampling event in order to determine mass loadings of pollutants. Data from nearby USGS gauging stations may be utilized, or flow rates may be estimated in accordance with the EPA Storm Water Sampling Guidance Document (EPA-833-B-92-001), Section 3.2.1.

h) At triad stations, the first storm of every sampling year shall be analyzed for the full EPA priority pollutant list (40 CFR 122, Appendix D). For the remaining sampling events, analysis may be reduced to the constituents listed in Table below, unless data from the first storm indicate the need for additional constituents.

---

[2] A monitoring year is from July 1 through June 30.
[3] A flow-weighted composite sample is a mixed or combined sample that is formed by combining a series of individual and discrete samples of specific volume in proportion to flow.
[4] A grab sample is a discrete, individual sample taken within a short period of time (usually less than 15 minutes).

Table 1. Short List of Constituents	
Trace Metals	**Pesticides**
Total Cadmium	Diazinon
Total Chromium	chlorpyrifos
Total Copper	Other OP pesticides
Total Nickel	
Total Lead	**Conventionals**
Total Zinc	Temperature
Nutrients	pH
Ammonia (NH_3)	Hardness
Total Kjeldahl Nitrogen (TKN)	Specific conductance
Nitrate (NO_3)	Dissolved oxygen
Total phosphorus	MBAS
Bacteria	**PAHs**
Total coliform	
Fecal coliform	**Volatiles** (dry weather only)
E. coli	
	Total suspended solids

2. Water Column Toxicity Testing

The Permittees shall conduct toxicity testing at triad stations to evaluate the extent and causes of toxicity in receiving waters.

a) The Permittees shall analyze all storm samples (at least three annually) collected at the three triad stations for toxicity. The Permittees shall conduct toxicity testing using the following three species and EPA protocol for each sample:

- *Ceriodaphnia dubia* (water flea) – EPA-821-R-02-012 or EPA-821-R-02-013;
- *Hyalella azteca* (freshwater amphipod) – EPA-821-R-02-012; and
- *Pseudokirchneriella subcapitata*, formally known as *Selenastrum capricornutum*, (unicellular algae) – EPA-821-R-02-013.

b) The presence of acute toxicity shall be determined in accordance with EPA protocol (EPA-821-R-02-012). The presence of chronic toxicity shall be determined in accordance with EPA protocol (EPA-821-R-02-013).

3. Bioassessment

The Permittees shall conduct bioassessment monitoring at the three triad stations to evaluate the biological integrity of receiving waters, to detect biological responses to pollutants in urban runoff, and to identify probable causes of impairment not detected by chemical and toxicity monitoring. The program required in this section replaces the program currently being conducted by the Permittees under CWC section 13225 Directive for Assessing Water Quality Impacts of Urban Runoff in the Santa Margarita Watershed, issued by the SDRWQCB on March 6, 2003. Bioassessment monitoring shall include the following:

a) Each bioassessment station shall be monitored twice annually, in May and October of each year. A minimum of three replicate samples shall be collected at each station during each sampling event.

b) Sampling, laboratory, quality assurance, and analysis procedures shall follow the standardized procedures set forth in the California Department of Fish and Game's California Stream Bioassessment Procedure (CSBP)[5]. Analysis procedures shall include comparison between station mean values for various biological metrics and the Preliminary San Diego Index of Biotic Integrity (IBI)[6], or any subsequently developed applicable IBI. Sampling, laboratory, quality assurance, and analytical procedures shall follow the standardized "Non-Point Source Bioassessment Sampling Procedures" for professional bioassessment set forth in the CSBP. In the event that the CSBP "Point-Source Professional Bioassessment Procedure" is performed in place of the "Non Point Source Bioassessment Sampling Procedure," justification and documentation of the procedure shall be submitted with the annual monitoring report.

c) A professional environmental laboratory shall perform all sampling, laboratory, quality assurance, and analytical procedures. Permittee staff trained in CSBP methods may collect samples, but data collected by volunteer monitoring organizations shall not be submitted in place of professional assessments.

4. Follow-up Analysis and Actions Based on Triad Approach

When results from the chemistry, toxicity, and bioassessment monitoring described above indicate urban runoff-induced degradation, Permittees shall evaluate the extent and causes of urban runoff pollution in receiving waters and prioritize management actions to eliminate or reduce sources. Toxicity Identification Evaluations (TIEs) shall be used to determine the cause of toxicity, and Toxicity Reduction Evaluations (TRE) shall be used to identify sources and implement management actions to reduce pollutants in urban runoff causing toxicity. Permittees shall conduct TIE(s) and TRE(s) based on Table 2 below.

[5] California Stream Bioassessment Procedure (Protocol Brief for Biological and Physical/Habitat Assessment in Wadeable Streams), California Department of Fish and Game – Aquatic Bioassessment Laboratory, May 1999.
[6] This document can be downloaded from http://www.swrcb.ca.gov/rwqcb9/programs/bioassessment.html

Table 2. Triad Approach to Determining Follow-Up Actions

	Chemistry	Toxicity	Bioassessment	Action
1.	Persistent[7] exceedance of water quality objectives	Evidence of toxicity[8]	Indications of benthic alteration[9]	Conduct TIE to identify contaminants of concern, based on TIE metric, initiate TRE
2.	No persistent exceedances of water quality objectives	No evidence of toxicity	No indications of benthic alteration	No action necessary
3.	Persistent exceedance of water quality objectives	No evidence of toxicity	No indications of benthic alteration	Assess possible upstream sources causing exceedances
4.	No persistent exceedances of water quality objectives	Evidence of toxicity	No indications of benthic alteration	Conduct TIE to identify contaminants of concern, based on TIE metric, initiate TRE
5.	No persistent exceedances of water quality objectives	No evidence of toxicity	Indications of benthic alteration	No action necessary due to toxic chemicals Initiate TRE for physical sources of benthic alteration
6.	Persistent exceedance of water quality objective	Evidence of toxicity	No indications of benthic alteration	If chemical and toxicity tests indicate persistent degradation, conduct TIE to identify contaminants of concern, based on TIE metric, initiate TRE
7.	No persistent exceedances of water quality objectives	Evidence of toxicity	Indications of benthic alteration	Conduct TIE to identify contaminants of concern, based on TIE metric, initiate TRE
8.	Persistent exceedance of water quality objectives	No evidence of toxicity	Indications of benthic alteration	Initiate upstream source identification

[7] Persistent exceedance shall mean the exceedance of relevant Basin Plan or California Toxics Rule objectives by 20% for 3 sampling events.
[8] Evidence of toxicity shall mean a high score, in relation to other stations, on metric that combines magnitude and persistence of toxicity over an entire year.
[9] Indications of benthic alteration shall mean an IBI score of Fair, Poor, or Very Poor.

a) Toxicity Identification Evaluations (TIE)

The goal of a TIE is to identify the pollutant(s) causing toxicity in the receiving waters.

(1) Permittees shall conduct Phase I TIEs in accordance with Table 2 above. Permittees shall use EPA protocol described in *Methods for Aquatic Toxicity Identification Evaluations: Phase I Toxicity Characterization Procedures* (EPA/600/6-91/003) or subsequent editions.

(2) If the Phase I TIE is not sufficient to identify the toxicant(s), a Phase II TIE may be required in order to identify or confirm the identity of the pollutants causing toxicity. Phase II TIEs shall be conducted in accordance with Methods for Aquatic Toxicity Identification Evaluations: Phase II Toxicity Identification Procedures for Samples Exhibiting Acute and Chronic Toxicity (EPA/600/R-92/080), or subsequent editions.

(3) In the event that the pollutant causing toxicity has been sufficiently identified through previous TIEs or corresponding chemical monitoring data, a TIE may not need to be conducted.

b) Toxicity Reduction Evaluations (TRE)

The purpose of a TRE is to investigate the cause of and to identify corrective actions to eliminate toxicity from urban runoff in receiving waters.

When a TIE identifies a pollutant(s) associated with urban runoff as a cause of toxicity, Permittees shall initiate a TRE immediately. The TRE shall include all reasonable steps to identify the source(s) of toxicity and propose appropriate BMPs to eliminate the causes of toxicity. Once the source of toxicity and appropriate BMPs are identified, the Permittees shall submit the TRE to the SDRWQCB for review. Within 30 days following the approval by the SDRWQCB, Permittees shall revise their SWMPs to incorporate the modified BMPs that will be implemented. At a minimum, a TRE shall include a discussion of the following items:

(1) The potential sources of pollutant(s) causing toxicity;

(2) A list of municipalities and other entities that may have jurisdiction over sources of pollutant(s) causing toxicity; and

(3) Proposed actions that will be taken to reduce the pollutants causing toxicity and methods to measure the effectives of those actions.

5. Tributary Monitoring

a) The Permittees shall collect a grab sample from the first storm event of each monitoring year, a minimum of one additional storm event, and two dry weather events during each monitoring year at the following four tributary stations to help identify sources of pollutants. Alternative locations representative of urban/urbanizing drainage areas may be selected.

(1) Warm Springs Creek, near the confluence with Murrieta Creek;

(2) Santa Gertudis Creek, near the confluence with Murrieta Creek;

(3) Long Canyon Creek near the confluence with Murrieta Creek; and

(4) Redhawk Channel, near the confluence with Temecula Creek

b) If flow is insufficient to collect a sample, this shall be documented in the subsequent annual report.

c) Tributary samples shall be analyzed for constituents of concern. Constituents of concern shall be determined based on exceedances of water quality objectives at respective triad and dry weather monitoring stations, as well as land uses in the area.

d) Sampling at tributary stations shall begin no later than the first storm after October 2004.

A.II Regional Monitoring

The Permittees shall participate and coordinate with federal, state, and local agencies and other dischargers in the Santa Margarita Watershed in development and implementation of a regional watershed monitoring program as directed by the Executive Officer. The intent of a regional monitoring program is to maximize the efforts of all monitoring partners using a more cost-effective monitoring design and to best utilize the pooled resources of the watershed. During a coordinated watershed sampling effort, the Permittees' sampling and analytical effort may be reallocated to provide a regional assessment of the impact of discharges to the watershed.

A.III Special Studies

Special studies are intended to address specific research or management issues that are not addressed by the routine core monitoring program. The Permittees' shall conduct special studies as directed by the Executive Officer, including the study described below.

Numeric Criteria to Control Runoff from New Developments

The Permittees shall develop and implement a study to determine numeric criteria for controlling the volume, velocity, duration, and peak discharge rate of runoff from new developments (required in section F.2.b(9) of Order No. 2004-001) to minimize erosion of natural stream channels and impacts to instream habitat. The Permittees shall propose numeric criteria and a time-schedule for implementation of the criteria on Priority Development Projects within 365 days of the identification of the criteria and no later than the fourth-year Annual Report, or the application for permit renewal. In each Annual Report, the Permittees shall describe the status of this special study, details of implementation, and progress towards the development of numeric criteria. Permittees may satisfy this requirement if they can demonstrate to the SDRWQCB that criteria developed in other areas of Southern California are applicable to and protective of the conditions in the Upper Santa Margarita Watershed. This should be accomplished through demonstrating similarities in areas monitored as part of studies outside of the Santa Margarita Watershed.

B. Illicit Discharge Monitoring

Each Permittee shall develop and implement an Illicit Discharge Monitoring program that meets or exceeds the requirements of this section within 365 days of the adoption of Order No. R9-2004-001. Each Permittees' program shall be designed to emphasize frequent, geographically widespread inspections, monitoring, and follow-up investigations to detect illicit discharges and connections. Each Permittees' Illicit Discharge Monitoring Program shall be described in the Individual SWMP.

1. Station Location

   a) Each Permittee shall select Illicit Discharge Monitoring stations within its jurisdiction. The number of stations shall be sufficient to represent the MS4 and detect illicit discharges that may occur throughout the system. Stations shall be accessible points in the MS4 (i.e., outfalls, manholes or open channels) located downstream of potential sources of illicit discharges (i.e., commercial, industrial, and residential areas). Permittees shall use the MS4 map, developed pursuant to section J.2 of Order No. R9-2004-001, to help locate dry weather monitoring stations and to determine the number necessary to adequately represent the entire MS4. Each identified station shall be inspected at least twice between May 1st and September 30th of each year, and more frequently if the Permittee determines necessary to comply with section J of Order No. R9-2004-001.

   b) In addition to the stations required in section B.1.a. above, each Permittee shall inspect all other dry weather flows that are observed or reported.

2. Illicit Discharge Monitoring Methods

   a) At each inspected site, Permittees shall record the following general information:
      - Time since last rain;
      - Quantity of last rain;
      - Site descriptions (i.e., conveyance type, dominant land uses in drainage area);
      - Flow estimation (i.e., width of surface, approximate depth of water, approximate flow velocity, flow rate); and
      - Visual observations (e.g., odor, color, clarity, floatables, deposits/stains, oil sheen, surface scum, vegetation condition, structural condition, and biology).

   b) If flow or ponded water is observed at a station and there has been at least seventy-two hours of dry weather, a field screening analysis using suitable methods to estimate the following constituents shall be conducted:

      (1) Specific conductance (or calculate estimated Total Dissolved Solids);
      (2) Turbidity;
      (3) PH;
      (4) Temperature; and
      (5) Dissolved Oxygen.

   c) If field screening analysis or visual observations at a site indicate a potential illicit discharge, a sample shall be collected for laboratory analysis. At a minimum, samples shall be analyzed at a laboratory for the following constituents:

      (1) Total hardness;

(2) Oil and grease;
(3) Ammonia Nitrogen;
(4) Total phosphorus;
(5) Copper (total and dissolved);
(6) Surfactants (MBAS);
(7) Diazinon and Chlorpyrifos;
(8) Lead (dissolved);
(9) Nitrate Nitrogen;
(10) E. coli;
(11) Total coliform; and
(12) Fecal coliform.

3. As part of the Illicit Discharge Monitoring Program, the Permittees shall develop numeric criteria for field screening and analytical monitoring results that will trigger follow-up investigations to identify the source causing the exceedance of the criteria. In the event of an exceedance of the criteria, Permittees shall implement the follow-up investigation procedures developed pursuant to section J.4 of Order No. R9-2004-001.

C. Monitoring Provisions

All monitoring activities shall meet the following requirements:

a) Samples and measurements taken for the purpose of monitoring shall be representative of the monitored activity [40 CFR 122.41(j)(1)].

b) The Permittees shall retain records of all monitoring information, including all calibration and maintenance of monitoring instrumentation, copies of all reports required by this Order, and records of all data used to complete the Report of Waste Discharge and application for this Order, for a period of at least five (5) years from the date of the sample, measurement, report, or application. This period may be extended by request of the SDRWQCB or EPA at any time and shall be extended during the course of any unresolved litigation regarding this discharge. [40 CFR 122.41(j)(2), CWC section 13383(a)]

c) Records of monitoring information shall include [40 CFR 122.41(j)(3)]:

(1) The date, exact place, and time of sampling or measurements;
(2) The individual(s) who performed the sampling or measurements;
(3) The date(s) analyses were performed;
(4) The individual(s) who performed the analyses;
(5) The analytical techniques or methods used; and,
(6) The results of such analyses.

d) All sampling, sample preservation, and analyses must be conducted according to test procedures approved under 40 CFR part 136, unless other test procedures have been specified in this MRP or approved by the Executive Officer [40 CFR 122.41(j)(4)].

e) Where procedures are not otherwise specified in this MRP, sampling, analysis and quality assurance/quality control must be conducted in accordance with the Quality Assurance Program Plan (QAPP) for the State of California's Surface Water Ambient Monitoring Program, adopted

by the State Water Resources Control Board (SWRCB). The QAPP can be downloaded from the SWRCB web page at: http://www.swrcb.ca.gov/swamp/docs/swamp_qapp.pdf.

f) The CWA provides that any person who falsifies, tampers with, or knowingly renders inaccurate any monitoring device or method required to be maintained under this Order shall, upon conviction, be punished by a fine of not more than $10,000, or by imprisonment for not more than two years, or both. If a conviction of a person is for a violation committed after a first conviction of such person under this paragraph, punishment is a fine of not more than $20,000 per day of violation, or by imprisonment of not more than four years, or both. [40 CFR 122.41(j)(5)]

g) Calculations for all limitations which require averaging of measurements shall utilize an arithmetic mean unless otherwise specified in this MRP [40 CFR 122.41(l)(4)(iii)].

h) All chemical, bacteriological, and toxicity analyses shall be conducted at a laboratory certified for such analyses by the California Department of Health Services or a laboratory approved by the Executive Officer.

i) For priority toxic pollutants that are identified in the California Toxics Rule (CTR) (65 *Fed. Reg.* 31682), the Permittees shall instruct its laboratories to establish calibration standards that are equivalent to or lower than the Minimum Levels (MLs) published in Appendix 4 of the Policy for Implementation of Toxics Standards for Inland Surface Waters, Enclosed Bays, and Estuaries of California (SIP). If a Permittee can demonstrate that a particular ML is not attainable, in accordance with procedures set forth in 40 CFR 136, the lowest quantifiable concentration of the lowest calibration standard analyzed by a specific analytical procedure (assuming that all the method specified sample weights, volumes, and processing steps have been followed) may be used instead of the ML listed in Appendix 4 of the SIP. The Permittee must submit documentation from the laboratory to the SDRWQCB for approval prior to raising the ML for any priority toxic pollutant.

j) The SDRWQCB Executive Officer or the SDRWQCB may make revisions to this MRP at any time during the term of Order No R9-2004-001, and may include a reduction or increase in the number of parameters to be monitored, locations monitored, the frequency of monitoring, or the number and size of samples collected.

III. REPORTING PROGRAM

A. SWMP Reporting Requirements

The Principal Permittee shall submit a SWMP Annual Report to the SDRWQCB on or before October 31 annually. The reporting period for these annual reports shall be the previous fiscal year. For example, the report submitted on or before October 31, 2005 shall cover the reporting period July 1, 2004 to June 30, 2005. The SWMP Annual Report shall contain the Watershed Annual Report, and the four Individual Annual Reports.

1. **Individual Annual Report** - Each Individual Annual Report shall be a documentation of the activities conducted by each Permittee during the previous annual reporting period. Each Permittee shall submit their Individual Annual Report to the Principal Permittee by a date determined by the Principal Permittee for inclusion in the SWMP Annual Report. Each Individual Annual Report shall, at a minimum, contain the following:

   a) Comprehensive description of all activities conducted by the Permittee to meet all requirements of Order No. R9-2004-001, including, but not limited to, the following information:

      (1) Development Planning (Section F):
         - (i) Description of any amendments to the General Plan or the development project approval process;
         - (ii) Number of grading permits issued;
         - (iii) Number of developments conditioned to meet SUSMP requirements*;
         - (iv) Attach one example of a development project that was conditioned to meet SUSMP requirements and a description of the required BMPs;
         - (v) Description of any updates to the environmental review process;
         - (vi) Description and number of training efforts conducted during the reporting period (for staff, developers, contractors, etc.), including the number of staff trained; and
         - (vii) An assessment of program effectiveness based on the measurable goals established in the Permittee's Individual SWMP.*

      (2) Construction (Section G):
         - (i) Number of inspections conducted;
         - (ii) Number and type of enforcement actions related to construction sites;
         - (iii) Description of modifications made to the construction and grading approval process;
         - (iv) Description and number of training efforts conducted during the reporting period (for staff inspectors, contractors, and construction site operators); and
         - (v) An assessment of program effectiveness based on the measurable goals established in the Permittee's Individual SWMP.*

      (3) Municipal (Section H.1):
         - (i) Number of municipal inspections conducted;
         - (ii) Number and types of enforcement actions taken;
         - (iii) Number of catch basins and inlets that were inspected and the number that were cleaned;

* Items with an asterisk are not applicable to the first annual report.

(iv) Assessment of the amount and type of debris removed from catch basins, streets, and open channels, including an identification of problem areas that generate the most pollutants;

(v) Assessment of effectiveness of BMPs that have been implemented for municipal facilities and activities;

(vi) Description and number of training efforts conducted over the last year (for municipal facility operators and/or inspectors); and

(vii) An assessment of program effectiveness based on the measurable goals established in each Permittee's Individual SWMP.*

(4) Industrial/Commercial (Section H.2):

(i) Number of inspections conducted;

(ii) Number and type of enforcement actions taken; and

(iii) An assessment of overall program effectiveness based on the measurable goals established in the Permittee's Individual SWMP.*

(5) Residential (Section H.3):

(i) A description of residential areas that were focused on during the past year;

(ii) Number and types of enforcement actions taken; and

(iii) Assessment of overall program effectiveness based on the measurable goals established in the Permittee's Individual SWMP.*

(6) Education (Section I):

(i) Description of education efforts conducted by the Permittee (not collectively with other Permittees) during the previous year;

(ii) Assessment of overall program effectiveness based on the measurable goals established in the Permitee's Individual SWMP.*

(7) Illicit Discharge Detection and Elimination (Section J):

(i) Number of illicit discharges, connections and spills reported and/or identified during the reporting period;

(ii) Number of illicit discharges or connections investigated during the reporting period and the outcome of the investigations;

(iii) Number and types of enforcement actions taken for illicit discharges or connections during the reporting period;

(iv) Number of times your agency's hotline was called during the reporting period, as compared to previous reporting periods;

(v) Number and location of dry weather monitoring sites that were monitored during the reporting period;

(vi) Summary of Illicit Discharge Monitoring Program results, including: 1) All inspection, field screening, and analytical monitoring results; 2) All follow-up and elimination activities; and 3) Any proposed changes to station locations and/or sampling frequencies; and

(vii) An assessment of overall program effectiveness based on the measurable goals established in the Permittee's Individual SWMP.*

(8) Public Participation – a description of efforts to include the public in urban runoff management programs during the reporting period (i.e., river clean-ups, volunteer monitoring, Permittee council meetings related to the SWMP, etc.).

b) Assessment of Program Effectiveness - each Permittee shall include an assessment of the effectiveness of its Individual SWMP using the measurable goals and direct and indirect assessment measurements developed in the SWMP, in accordance with **Attachment D** of Order No. R9-2004-001.

c) Fiscal Analysis Component - each Permittee shall include an annual fiscal analysis, for each fiscal year covered by Order No. R9-2004-001, in its Individual Annual Report. This analysis shall evaluate the expenditures (such as capital, operation and maintenance, education, and administrative expenditures) necessary to accomplish the activities of the Pemittee's Individual SWMP. The analysis shall include the following:

(1) A report of the previous reporting period's budget, and a budget for the upcoming reporting period. To the extent possible, the budgets should be broken down by the following programs:

(i) Program management;
(ii) Construction Inspections;
(iii) Development plan review/SUSMP implementation;
(iv) Industrial/Commercial inspections;
(v) Illicit discharge and connection response and elimination;
(vi) Municipal activities (catch basin cleaning, BMP maintenance, etc.);
(vii) Education;
(viii) Monitoring; and
(ix) Other

(2) A description of the source(s) of funds that were utilized during the previous fiscal year and the source(s) of funds proposed to meet the necessary expenditures for the subsequent year, including legal restrictions on the use of such funds.

d) Non-Storm Water Discharges – Permittees shall report on any discharge category listed in Requirement B.2 of Order No. R9-2004-001 that was identified as a source of pollutants during the reporting period. For each identified category, the Permittee shall report whether it elected to prohibit the discharge or to require BMPs to reduce pollutants in the discharge to the MEP. If the discharge is not prohibited, the BMPs that will be implemented, or required to be implemented, shall be described in each Permittee's Individual SWMP Annual Report.

e) Receiving Water Limitations – the report required pursuant to Requirement C.2.a. of Order No. R9-2004-001, if applicable.

f) A summary of all urban runoff related data not included in the annual monitoring report (e.g., special investigations); and

g) Proposed revisions to the Individual SWMP, including areas in need of improvement based on the assessment of effectiveness of each program component.

2. **Watershed Annual Report** – The Watershed Annual Report, to be produced by the Principal Permittee shall describe the area-wide and watershed-based programs and activities (as described in

the Watershed SWMP) conducted during the previous reporting period. At a minimum, the Watershed Annual Report shall contain the following information:

a) A description of all area-wide and watershed-based activities conducted during the reporting period;

b) A description of efforts to coordinate with other stakeholders in the Santa Margarita Watershed, such as San Diego County and the U.S. Marine Corps Base Camp Pendleton;

c) An assessment of water quality in the Santa Margarita watershed area of Riverside County, this assessment shall include data from the previous monitoring report;

d) Identification of water quality improvement or degradation;

e) A prioritization of water quality problems and potential sources;

f) A description of watershed-specific educational activities conducted during the reporting period;

g) Recommended activities to be conducted jointly by the Permittees to address the identified water quality problems;

h) An assessment of overall program effectiveness based on the measurable goals established in the Watershed SWMP; and

i) Proposed revisions to the Watershed SWMP.

B. Receiving Waters Monitoring Reporting Requirements

1. Monitoring Program Annual Report

The Principal Permittee shall submit the Monitoring Program Annual Report (Monitoring Report) to the SDRWQCB on or before October 31 of each year. The Monitoring Report shall contain tabular and graphical summaries as well as discussions and interpretations of the receiving water monitoring data obtained during the previous monitoring year. At a minimum, each Monitoring Report shall include the following:

a) Description of each receiving water monitoring station, including but not limited to:

(1) Station location (latitude and longitude, and a narrative description).
(2) Photographs of triad stations.
(3) Approximate size and land uses of the drainage area.
(4) Any other relevant information.

b) A description of monitoring methods for each type of monitoring, including but not limited to:

(1) Monitoring equipment.
(2) Sampling procedures.
(3) Quality assurance/quality control (QA/QC) procedures (laboratory QA/QC documentation shall be submitted with the report).
(4) Laboratory analytical methods including the method detection limits (MDLs). Analytical data shall be reported with one of the following methods, as appropriate:

- An actual numerical value for sample results greater than or equal to the MDL;
- "Not-detected (ND)" for sample results less than the laboratory's MDL; or

- "Detected, but Not Quantified (DNQ)" if results are greater than or equal to the laboratory's MDL but less than the ML. The estimated chemical concentration of the sample shall also be reported. This is the concentration that results from the confirmed detection of the substance by the analytical method below the ML value.

c) A description of monitoring results, including but not limited to:

(1) Data and data products, including but not limited to:

- Actual data.
- Identification of exceedances of Basin Plan and CTR objectives.
- Estimated annual mass loadings at each station.
- Toxicity testing results in Toxic Units (TUs).
- Bioassessment data (including electronic data formatted to California Department of Fish and Game Aquatic Bioassessment Laboratory specifications) and analysis using metrics in the CSBP and the San Diego IBI.
- Graphical summaries of data.

(2) Methods used to evaluate data. Methods shall be appropriate to answer the management questions listed in Section II.A of this MRP and to assess the progress towards achieving the goals listed in Section I of this MRP. Examples of methods include, but are not limited to:

- Site-by-site summaries and comparisons of results at triad and tributary stations for wet and dry weather, including graphs of concentrations and toxicity.
- Rough estimates of the relative contribution of urban runoff to total pollutant loads.
- Maps of potential sources of pollutants.
- Any other appropriate analysis.

(3) Discussion of results and analyses of each Monitoring Program Component, including but not limited to:

- Discussion of pollutants of concern and their potential sources.
- Interpretation of bioassessment metric values.
- Discussion of any TIEs that were conducted and the potential sources of toxic pollutants.
- If applicable, a discussion of the development, implementation, and results of any TREs.
- Discussion of any relevant information or conclusions from the Illicit Discharge Monitoring Program.
- Discussion of the progress towards answering the management questions listed in Section II.A of this MRP and achieving the goals listed in Section I of this MRP.
- Discussion of any other data analyses performed.

d) In addition to the information required above, the fourth-year Monitoring Report due no later than October 31, 2008, shall include:

- A discussion of any long-term trends that can be detected from existing data (from all previous permit terms).
- Recommendations for future monitoring based on the results of previous efforts and the progress towards answering the management questions listed in Section II.A of this MRP and achieving the goals listed in Section I of this MRP.
- Recommended modifications to Individual or Watershed SWMPs to address identified source of pollutants in urban runoff.

e) If the Permittees monitor any pollutant more frequently than required by this MRP using test procedures approved under 40 CFR part 136, unless otherwise specified in the Order, the results

of this monitoring shall be included in the calculation and reporting of the data submitted in the Monitoring Reports [40 CFR 122.41(l)(4)(ii)].

f) All Monitoring Reports shall be submitted in both electronic and paper formats.

C. Certified Perjury Statement

All reports submitted to the SDRWQCB shall include the following signed, certified perjury statement:

> "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

I, John H. Robertus, Executive Officer, do hereby certify the foregoing is a full, true, and correct copy of a Monitoring and Reporting Program adopted by the California Regional Water Quality Control Board, San Diego Region, on July 14, 2004.

II. FACT SHEET FORMAT

This Fact Sheet briefly sets forth the principle facts and the significant factual, legal, methodological, and policy questions that the San Diego Regional Water Quality Control Board (SDRWQCB) considered in preparing Order No. R9-2004-001. In accordance with the Code of Federal Regulations (CFR) title 40 parts 124.8 and 124.56, this Fact Sheet includes, but is not limited to, the following information:

- **Contact information (Section III);**
- **Public process and notification procedures (Section IV);**
- **A brief description of the type of facility or activity that is being regulated by the Order (Section V);**
- **The type and quantity of pollutants discharged (Section VI);**
- **A brief summary of the basis for the requirements in the Order, including references to the applicable statutory or regulatory provisions (Section VII); and**
- **A discussion of the requirements in the Order (Sections VIII and IX).**

Findings contained in the Order are discussed throughout this Fact Sheet. The findings that broadly apply to the entire Order are discussed in Sections V, VI and VII. Findings that justify specific requirements in the Order are discussed in the applicable subsections of Section VIII.

IV. PUBLIC PROCESS AND NOTIFICATION PROCEDURES

The SDRWQCB followed the schedule listed below for the preparation of Order No. R9-2004-001:

- The SDRWQCB received the Report of Waste Discharge (ROWD) on May 30, 2003
- On December 15, 2003, the SDRWQCB released the Order and supporting Fact Sheet, beginning the public comment period. The documents were available on the SDRWQCB web page at http://www.swrcb.ca.gov/rwqcb9/programs/rsd_stormwater.html and mailed to the Permittees and all other parties who requested a copy.
- A public notice was published in the Riverside Press-Enterprise on December 20, 2003 notifying the public of the opportunity to submit written comments and to present verbal comments to the San Diego Regional Board at the February 11, 2004 meeting.
- The SDRWQCB held a public workshop on January 23, 2004 at the Temecula City Hall. The purpose of the workshop was to answer questions regarding the Order and to discuss the affect of potential new requirements on the business community.
- A public hearing to receive testimony at the San Diego Regional Board meeting was conducted on February 11, 2004.
- The public comment period closed at 5:00 pm on March 10, 2004.
- A response to written comments received during the public comment period and the revised Order were issued on May 7, 2004.
- After deliberation, the San Diego Regional Board adopted the Order at the July 14, 2004 meeting.

In addition to the public process described above, various informal meetings have been conducted with SDRWQCB staff and the Permittees. The meetings served as workshops for the Permittees to express their concerns and questions regarding the permit.

V. DESCRIPTION OF THE TYPE OF FACILITY OR ACTIVITY THAT IS BEING REGULATED BY THE NPDES PERMIT

A. Permit History (Finding Nos. 1 and 2)

The Riverside County Flood Control and Water Conservation District (District), the County of Riverside, and the Cities of Murrieta and Temecula (hereinafter called Permittees), own or operate municipal separate storm sewer systems (MS4s) through which urban runoff is discharged into waters of the United States (U.S.) within the portion of the Santa Margarita watershed located in Riverside County in the San Diego Region (hereinafter referred to as the Upper Santa Margarita Watershed) (**Finding No. 1**). Pursuant to the 1987 Water Quality Act (WQA) and the U. S. Environmental Protection Agency's (EPA) final storm water regulations (the "Phase I rule" at 55 Fed. Reg. 47990), the Permittees obtained a National Pollutant Discharge Elimination System (NPDES) permit for discharges from their MS4(s) to waters of the U.S. in the Upper Santa Margarita Watershed.

In July of 1990, the District, the County, and the City of Temecula obtained a first-round NPDES permit (Order No. R9-90-46). Following its incorporation, the City of Murrieta was added to that permit on May 18, 1992. Then, on May 13, 1998, the SDRWQCB adopted Order No. R9-98-02 as a second-round MS4 permit for the Upper Santa Margarita Watershed. The EPA objected to the order due to the Receiving Water Limitations (RWL) language, which EPA determined did not comply with the federal Clean Water Act (CWA) and its implementing regulations. EPA assumed responsibility and reissued the permit on April 27, 1999. Subsequently on November 8, 2000, the SDRWQCB issued Addendum No. 1 to Order R9-98-02, which incorporated EPA's permit by reference. On May 30, 2003, the District, as the Principal Permittee, submitted a Report of Waste Discharge (ROWD) for renewal of their NPDES MS4 permit (**Finding No. 2**). Order No. R9-2004-001 is the third-round Phase I NPDES MS4 permit for the Upper Santa Margarita Watershed.

B. Permit Coverage (Finding Nos. 19 and 20)

The Order regulates discharges of urban runoff from MS4s owned or operated by the Permittees, and discharges into MS4s from areas within the Permittees' jurisdiction. In the Order, urban runoff is defined as "all flows in a storm water conveyance system and consists of the following components: (1) storm water (wet weather flows) and (2) non-storm water illicit discharges (dry weather flows)."

A MS4 is defined in the federal regulations as a conveyance or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, or storm drains), owned or operated by a Permittee, and designed or used for collecting or conveying urban runoff (EPA, 2000a). In addition, natural drainage patterns and urban streams are frequently used by municipalities to convey urban runoff away from development within their jurisdiction. Therefore, as stated in **Finding No.19**, the SDRWQCB considers natural drainages that are used for conveyances of urban runoff, regardless of whether or not they've been altered by the municipality, as both part of the MS4s **and** as receiving waters. To clarify, an unaltered natural drainage, which receives runoff from a point source (channeled by a Permittee to drain an area within their

jurisdiction), which then conveys the runoff to an altered natural drainage or a man-made MS4 is both an MS4 and a receiving water (SDRWQCB, 2001c). Whereas, a natural channel which receives sheet flow from a property in a rural area is not part of the MS4.

Federal, state, regional, or local entities within the Permittees' boundaries, and which are not named in the Order, may operate storm drain facilities and/or discharge urban runoff to storm drains and water courses covered by the Order. In addition, discharges into the Permittees' MS4s from agricultural and other activities identified in 40 CFR 122.3 are excluded from federal NPDES regulations. However, the Permittees are responsible for all discharges from their MS4s to receiving waters, and discharges from entities and activities not specifically regulated by the Order may cause or contribute to a condition of contamination or exceedances of water quality objectives. Therefore, Permittees cannot passively receive and discharge pollutants from third parties. By providing free and open access to a MS4 that conveys discharges to waters of the U.S., the operator of the MS4 that does not prohibit or control discharges into its own system essentially accepts responsibility for those discharges (**Finding No. 20**).

In their comments on the Order, the Permittees proposed a procedure to address discharges from third parties outside of their jurisdictions (Permittees, 2004a). The proposed procedure includes documenting and sampling discharges, utilizing the Hazardous Materials Emergency Response Team in emergency situations, verbally notifying the discharger, notifying the appropriate enforcement agency and/or the SDRWQCB, and notifying the discharger of available assistance to address the discharge. The proposed procedure meets the SDRWQCB's expectations for addressing discharges from third parties.

C. Description of Permitted Area (Finding No. 3)

The Upper Santa Margarita Watershed is approximately 548 square miles and includes unincorporated portions of Riverside County, the Cities of Murrieta and Temecula, as well as portions of the Cleveland and San Bernardino National Forests, and the Cahuilla, Ramona, Pauma, and Pechanga Indian Reservations. Approximately 168,400 people reside within the permitted area (Permittees, 2003). Approximately 36,400 people reside in the unincorporated area while approximately 132,000 people reside within the Cities of Murrieta and Temecula (Permittees, 2003).

Temecula Creek, which drains the Palomar Mountains, and Murrieta Creek, which drains the Santa Ana Mountains, are the main drainages in the permitted area. They join to form the Santa Margarita River near the City of Temecula. Main tributaries to Murrieta Creek include Warm Springs Creek and Santa Gertrudis Creek. Main tributaries to Temecula Creek include Pechanga Creek and Arroyo Seco Creek. Vail Lake, Skinner Reservoir, and Diamond Valley Reservoir are major impoundments in the permitted area. For more information about watershed characteristics, see the ROWD (Permittees, 2003).

The Water Quality Control Plan for the San Diego Basin (SDRWQCB, 1994) identifies the following beneficial uses for water bodies in the Santa Margarita Watershed: Municipal and Domestic Supply (MUN), Agricultural Supply (AGR), Industrial Process Supply (PROC), Industrial Service Supply (IND), Ground Water Recharge (GWR), Contact Water Recreation (REC1) (potential use), Non-contact Water Recreation (REC2), Warm Freshwater Habitat

WARM, Cold Freshwater Habitat (COLD), Wildlife Habitat (WILD), and Rare, Threatened, or Endangered Species (RARE) (**Finding No. 3**).[1]

In addition to providing habitat and recreation opportunities, residents and businesses in the permitted area rely heavily on local water for drinking, agriculture, and industrial supply. Over 40% of water used in the watershed is locally produced (Jenks, 2002). In 2001, local water production in the watershed was 41,765 acre-feet. Imported supplies totaled 66,369 acre-feet. Of the total water supply, 49,212 acre-feet were used for agriculture, 5,390 acre-feet were used for commercial purposes, and 41,802 acre feet were used for domestic purposes (Jenks, 2002). In addition, portions of Fallbrook in San Diego County and the U.S. Marine Corps Base Camp Pendleton, depend on surface and ground water that originates form the Upper Santa Margarita Watershed.

The Santa Margarita River is one of the few remaining natural gorge rivers in Southern California, with approximately 70 species of special concern (rare, threatened, or endangered, regularly inhabiting the watershed, including 30 that are currently protected under the Federal Endangered Species Act (Stein, 1998). Although the majority of the river is not within the jurisdiction of the Permittees, the riparian systems in the upper watershed play an integral role in the maintenance of sensitive downstream ecological functions (Stein, 1998). The upper watershed riparian habitats are in direct hydrologic contact with downstream systems and are associated with freshwater recharge to a series of downstream aquifers (Shapiro, 1991). In addition, these riparian systems in the Upper Santa Margarita Watershed often provide breeding, migratory, or escape habitat for many animal species that reside in the lower watershed (Stein, 1998).

VI. TYPE AND QUANTITY OF POLLUTANTS DISCHARGED

A. Background

Pollutants in Urban Runoff (Finding Nos. 4, 5 and 6)

Urban runoff contains waste, as defined in the California Water Code (CWC), and pollutants that adversely affect the quality of waters of the State. The discharge of urban runoff from an

---

[1] **MUN** – Municipal and Domestic Supply – Uses of water for community, military, or individual water supply systems (i.e., drinking water).
AGR – Agricultural Supply – Uses of water for farming, horticulture, or ranching.
IND – Industrial Service Supply – Uses of water for industrial activities that do not depend primarily on water quality (i.e., mining, cooling water supply, gravel washing, fire protection).
PROC – Industrial Process Supply – Uses of water for industrial activities that depend primarily on water quality.
GWR – Ground Water Recharge – Uses of water for natural or artificial recharge of ground water for purposes of future extraction, maintenance of water quality, or halting of saltwater intrusion into freshwater aquifers.
REC1 – Contact Water Recreation – Uses of water for recreational activities involving body contact with water, where ingestion of water is reasonably possible (i.e., swimming, wading, fishing, and white water activities). * Means this is a potential use.
REC2 – Non-contact Water Recreation – Uses of water for recreational activities involving proximity to water, but not normally involving body contact with water (i.e., picnicking, hiking, camping, boating, and sightseeing).
WARM – Warm Freshwater Habitat – Uses of water that support warm water ecosystems.
COLD – Cold Freshwater Habitat – Uses of water that support cold water ecosystems including.
WILD – Wildlife Habitat – Uses of water that support terrestrial ecosystems.
RARE – Rare, Threatened, or Endangered Species – Uses of water that support habitats necessary, at least in part, for the survival and successful maintenance of plant and animal species established under state or federal law as rare, threatened, or endangered.

MS4 is a "discharge of pollutants from a point source" into waters of the United States as defined in the CWA (**Finding No. 4**). Section 13050(d) of the CWC defines "waste" as "sewage and any and all other waste substances, liquid, solid, gaseous, or radioactive, associated with human habitation, or of human or animal origin, or from any producing, manufacturing, or processing operation, including waste placed within containers of whatever nature prior to, and for purposes of, disposal." 40 CFR 122.2 defines "point source" as "any discernable, confined, and discrete conveyance, including but not limited to, any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, landfill leachate collection system, vessel or other floating craft from which pollutants are or may be discharged. This term does not include return flows from irrigated agriculture or agricultural storm water runoff." 40 CFR 122.2 defines "discharge of a pollutant" as "Any addition of any pollutant or combination of pollutants to waters of the U.S. from any point source." Also, the justification for control of pollution into Californian waters can be found at CWC section 13260(a)(1), and State Water Resource Control Board (SWRCB) Order WQ 2001-15 verifies that urban runoff contains waste (SWRCB, 2001).

The quality of urban runoff is fundamentally important to the health of the environment and the quality of life in Southern California. The discharge of pollutants and/or increased flows from MS4s may cause or threaten to cause the concentration of pollutants to exceed applicable receiving water quality objectives and impair or threaten to impair designated beneficial uses resulting in a condition of pollution (i.e., unreasonable impairment of water quality for designated beneficial uses), contamination, or nuisance (**Finding No. 6**). The 1992, 1994, and 1996 National Water Quality Inventory Reports to Congress prepared by the EPA showed a trend of impairment in the Nation's waters from contaminated storm water and urban runoff (EPA, 2000b). The 1998 National Water Quality Inventory Report showed that urban runoff discharges affect 11% of rivers, 12% of lakes, and 28% of estuaries (EPA, 2000b). The report states that ocean shoreline impairment due to urban runoff increased from 55% in 1996 to 63% in 1998. The report notes that urban runoff discharges are the leading source of pollution and the main factor in the degradation of surface water quality in California's coastal waters, rivers, and streams (EPA, 2000b).

Furthermore, the National Urban Runoff Program (NURP) Study found that pollutant levels from illicit discharges were high enough to significantly degrade receiving water quality, and threaten aquatic life, wildlife, and human health (EPA, 1993b).

The most common categories of pollutants in urban runoff include total suspended solids, sediment (due to anthropogenic activities); pathogens (e.g., bacteria, viruses, protozoa); heavy metals (e.g., copper, lead, zinc, and cadmium); petroleum products and polynuclear aromatic hydrocarbons; synthetic organics (e.g., pesticides, herbicides, and PCBs); nutrients (e.g., nitrogen and phosphorus fertilizers), oxygen-demanding substances (decaying vegetation, animal waste), and trash (**Finding No. 5**). The NURP study showed that heavy metals, organics, coliform bacteria, nutrients, oxygen demanding substances (e.g., decaying vegetation), and total suspended solids are found at relatively high levels in urban runoff (EPA, 1993b). It also found that MS4 discharges draining residential, commercial, and light industrial areas contain significant loadings of total suspended solids and other pollutants. The Basin Plan goes on to identify urban runoff pollutants to include lawn and garden chemicals, household and automotive care products dumped or drained on streets, and sediment that

erodes from construction sites (SDRWQCB, 1994). In addition, the SWRCB Urban Runoff Technical Advisory Committee (TAC) finds that urban runoff pollutants include sediments, nutrients, oxygen-demanding substances, heavy metals, petroleum hydrocarbons, pathogenic bacteria, viruses, and pesticides (SWRCB, 1994). Water that flows over streets, parking lots, construction sites, and industrial, commercial, residential, and municipal areas carries these untreated pollutants through storm drain networks directly to the receiving waters of the Upper Santa Margarita Watershed.

According to the Center for Watershed Protection, the quality of both surface and ground water in urbanizing areas of arid and semi-arid regions of the southwest is strongly shaped by urbanization. Since rain events are so rare, pollutants have more time to build up on impervious surfaces compared to humid regions. Therefore, the pollutant concentrations of storm water runoff from arid watersheds tends to be higher than that of humid watersheds (Center for Watershed Protection, Article 66).

Impacts From Urbanization (Finding No. 12)

The Natural Resources Defense Council (NRDC) 1999 Report, "Stormwater Strategies, Community Responses to Runoff Pollution" identifies two main causes of the storm water pollution problem in urban areas (NRDC, 1999). Both causes are directly related to development in urban and urbanizing areas:

1. Increased volume and velocity of surface runoff. There are three types of human-made impervious covers that increase the volume and velocity of runoff: (i) rooftop, (ii) transportation imperviousness, and (iii) non-porous (impervious) surfaces. As these impervious surfaces increase, infiltration will decrease, forcing more water to run off the surface, picking up speed and pollutants.
2. The concentration of pollutants in the runoff. As discussed above, certain industrial, commercial, residential and construction activities are large contributors of pollutant concentrations in urban runoff. As human population density increases, it brings with it proportionately higher levels of car emissions, car maintenance wastes, municipal sewage, pesticides, household hazardous wastes, pet wastes, trash, etc.

As a result of these two causes, runoff leaving developed urban areas is significantly greater in volume, velocity, and pollutant load than pre-development runoff from the same area (**Finding No. 12**). The Permittees have demonstrated their support for this finding in the DAMP (Permittees, 1993), which states:

> "Many storm water runoff problems are primarily a consequence of urbanization. Water that previously soaked into the ground, removing pollutants by filtering through soil, and eventually replenishing groundwater supplies, now must flow overland and therefore enters local streams more rapidly. The rapid transport of water increases the erosion of stream banks and hillsides and does not permit filtering of pollutants. Sediment carried by storm water runoff can build up in streambeds, harming fish and aquatic habitat. The sediment acts as a transport mechanism for pollutants which adhere to soil particles. Typical urban runoff pollutants found in surface waters include heavy metals, nutrients, petroleum products, sediment, bacteria, chemicals, and litter."

Studies have shown that the level of imperviousness in an area strongly correlates with the quality of nearby receiving waters (EPA, 1999b). One comprehensive study, which looked at numerous areas, variables, and methods, revealed that stream degradation occurs at levels of imperviousness as low as 10 – 20% (EPA, 1999b). Stream degradation is a decline in the biological integrity and physical habitat conditions that are necessary to support natural biological diversity. For instance, few urban streams can support diverse benthic communities with imperviousness greater than or equal to 25% (EPA, 1999b). To provide some perspective, a medium density, single-family home area can be from 25% to 60% impervious (variation due to street and parking design) (Schueler, 1994).

To demonstrate the principle of increased volume and velocity of runoff from urbanization, the following figure shows the flow rate of an urban vs. a natural stream. What the figure demonstrates is that urban stream flows have greater peaks and volumes, as well as shorter retention times than natural stream flows. The greater peak flows and volumes result in stream degradation through increased erosion of stream banks and damage to aquatic habitat. The shorter retention times result in less time for sediments and other pollutants to settle before being carried out to the ocean. This sediment, and the associated pollutants it carries, can be a significant cause of water quality degradation.

Source: Adapted from Schueler, 1997

Increased volume and velocity of runoff adversely impacts receiving waters and their beneficial uses in many ways. According to the TAC report (SWRCB, 1994), increases in population density and imperviousness result in changes to stream hydrology including:

1. Increased peak discharges compared to pre-development levels;
2. Increased volume of storm water runoff with each storm compared to pre-development levels;
3. Decreased travel time to reach receiving water; increased frequency and severity of floods;
4. Reduced stream flow during prolonged periods of dry weather due to reduced levels of infiltration;

5. Increased runoff velocity during storms due to a combination of effects of higher discharge peaks, rapid time of concentration, and smoother hydraulic surfaces from channelization, and
6. Decreased infiltration and diminished ground water recharge.

Even though the rainfall depths in arid watersheds are lower, watershed development can greatly increase peak discharge rates during rare flood events (Center for Watershed Protection, Article 66). A study conducted in arid watersheds around Riverside, CA showed that, over two decades, impervious cover increased from 9% to 22%, which resulted in an increase of more than 100% in the peak flow rate for the two-year storm event. The study also showed that the average annual storm water runoff volume had increased by 115% to 130% over the same time span (Center for Watershed Protection, Article 66).

Flooding caused by the increased volume and velocity of runoff from urbanization in the Upper Santa Margarita Watershed are clear examples of the effects described above. Disastrous flooding has occurred more frequently in recent years. In the last century, major flood events occurred in 1938, 1969, 1980, 1993, 1995, and 1998 (U.S. Army Corps of Engineers, 2000). In the 1993 flood event, the Cities of Murrieta and Temecula sustained $12 million dollars in damage, and Camp Pendleton sustained $88 million in damage (U.S. Army Corps of Engineers, 2000). Future flooding is expected to occur more frequently because of continued urban development within the watershed, and flood damages are expected to continue accruing at an estimated annual rate of $1,780,300 (U.S. Army Corps of Engineers, 2000).

Impacts to Aquatic Life (Finding No. 9)

In addition to chemical and physical impacts, urban runoff often contains pollutants that cause toxicity to aquatic organisms (i.e., adverse responses of organisms to chemicals or physical agents ranging from mortality to physiological responses such as impaired reproduction or growth anomalies). Toxic pollutants impact the overall quality of aquatic systems and beneficial uses of receiving waters (**Finding No. 9**). A study of urban runoff samples from Chollas Creek in San Diego County, revealed toxic concentrations of organophospate pesticides and metals (Bay, 2001). In Los Angeles County, storm water samples were found to be toxic to various aquatic organisms in the Los Angeles River, the San Gabriel River, Ballona Creek, and the Santa Monica Bay (LARWQCB, 2001). Also, a water quality data assessment conducted in Aliso Creek in Orange County showed that storm events caused varying degrees of mortality to test organisms (SDRWQCB, 2002a). To date, there has not been sufficient monitoring to determine if toxicity from urban runoff exists in the Upper Santa Margarita Watershed, however, the land uses causing toxicity in other urbanized areas of Southern California are little different than urbanized areas in Murrieta and Temecula.

Impacts to Human Health (Finding No. 7)

In addition to impairing receiving water quality and aquatic life, pollutants in urban runoff can also threaten human health. According to the EPA, spilled fuel, solvents, waste oil, paints, and other maintenance fluids pose a risk to the environment but may be especially harmful if they enter someone's drinking water supply (EPA, 2004b). "The percolation of

contaminated runoff can cause unacceptable consequences to ground water resources." Urban runoff discharges were identified in a California Department of Health Services assessment as one of the most prevalent possible contaminating activities for drinking water sources (EPA, 2004b). This issue of potential source water contamination is of fundamental importance, because of the dependence on local water for domestic use in the Santa Margarita Watershed. Rancho California Water District and Eastern Municipal Water District, which serve the Upper Santa Margarita Watershed, the Fallbrook Public Utilities District, which serves the community of Fallbrook, and Camp Pendleton are among those agencies in the watershed who are directly dependent on surface and ground water for domestic use.

Human health is also a concern related to body contact recreation. Human illnesses have been clearly linked to recreating near storm drains flowing to coastal waters (**Finding No. 7**). A landmark study, conducted by the Santa Monica Bay Restoration Project, found that there was an increased occurrence of illness in people that swam in proximity to a flowing storm drain (Haile, 1996). Although the Upper Santa Margarita Watershed is inland, the watershed drains to the Pacific Ocean, and pollutants generated in the permitted area may impact coastal waters. For example, the Santa Margarita River system provides the main source of beach sand for the beaches of northern San Diego County (Shapiro, 1991). Also, residents in the permitted area who recreate at Southern California beaches benefit from clean water.

Furthermore, urban runoff pollutants in receiving waters can bioaccumulate in the tissues of invertebrates and fish, which may eventually be consumed by humans (**Finding No. 7**). Pollutants such as heavy metals and pesticides, which are commonly found in urban runoff, have been found to bioaccumulate and biomagnify in long-lived organisms at the higher trophic levels (Abel, 1996). Since many aquatic species are utilized for human consumption, toxic substances accumulated in species' tissues can pose a significant threat to public health. The EPA supports this finding when it states, "As runoff flows over areas altered by development, it picks up harmful sediment and chemicals such as oil and grease, pesticides, heavy metals, and nutrients (e.g., nitrogen and phosphorus). These pollutants often become suspended in runoff and are carried to receiving waters, such and lakes, ponds, and streams. Once deposited, these pollutants can enter the food chain through small aquatic life, eventually entering the tissues of fish and humans" (EPA, 2000c).

Environmentally Sensitive Areas (Finding No. 8)

Development and urbanization especially threaten environmentally sensitive areas (ESAs), such as water bodies designated as supporting a RARE beneficial use and CWA section 303(d) impaired water bodies. Such areas have a much lower capacity to withstand pollutant shocks than might be acceptable in the general circumstance. In essence, development that is ordinarily insignificant in its impact on the environment may become significant in a particularly sensitive environment. Therefore, additional control to reduce pollutants from new and existing development may be necessary for areas adjacent to or discharging directly to an environmentally sensitive area (**Finding No. 8**). ESAs are defined in the Order as "areas in which plant or animal life or their habitats are either rare or especially valuable because of their special nature or role in an ecosystem and which would easily be disturbed or degraded by human activities and developments (California Public Resources Code section 30107.5). ESAs subject to urban runoff requirements include but are not limited to

all CWA section 303(d) impaired water bodies; areas designated as Areas of Special Biological Significance by the SWRCB (Basin Plan); water bodies designated with the RARE beneficial use by the SWRCB (Basin Plan); areas within the Western Riverside County Multi-Species Habitat Conservation Plan (MSHCP) plan area that contain rare or especially valuable plant or animal life or their habitat; and any other equivalent environmentally sensitive areas which the Permittees have identified." Areas that meet this definition are inherently sensitive habitats containing unique, rare, threatened, or endangered species, or are not achieving their designated beneficial uses. As discussed above, urban runoff is known to contain a wide range of pollutants and have demonstrated toxicity to plants and animals. Therefore, it is necessary to apply additional controls for developments within, adjacent to, or directly discharging to ESAs. This need for additional controls is addressed within each component of the Order.

The EPA supports the requirement for additional controls, stating "For construction sites that discharge to receiving waters that do not support their designated use or other waters of special concern, additional construction site controls are probably warranted and should be strongly considered" (EPA, 1992a). Further support for requiring additional controls to reduce pollutants in discharges to ESAs can be found in *Mitigation of Storm Water Impacts From New Developments in Environmentally Sensitive Areas*, a technical report written by the LARWQCB (LARWQCB, 2001b).

B. Water Quality Concerns in the Upper Santa Margarita Watershed

In addition to the general information about typical urban runoff-related pollutants discussed above in Section VI.A, various sources document water quality concerns in the Upper Santa Margarita Watershed. **Tables 1 and 2** below summarize existing and potential problems. **Table 3** summarizes exceedances of urban runoff-related pollutants reported in the Permittees water quality monitoring reports, and **Table 4** lists potential sources of the reported exceedances.

Table 1. Water Quality Concerns in the Santa Margarita Watershed

Source	Existing or Potential Problem
SWRCB 303(d) List[2]	**Listings:** Phosphorus (entire 12 miles of Murrieta Creek and upper 18 miles of Santa Margarita River) Eutrophication (estuary) **Constituents of concern:** sedimentation/siltation, iron, manganese, TDS
Riverside County General Plan[3]	Sediment from construction-related erosion; Pollution due to urban storm water runoff
San Diego County WURMP[4]	Eutrophication, nitrogen, phosphorus, diazinon, TDS, other toxic substances, trash
SDRWQCB	Degraded biological and physical integrity

[3] County of Riverside. October 2003. County of Riverside General Plan: Multipurpose Open Space Element. Chapter 5, OS-10.

[4] County of San Diego. January 2003. Watershed Urban Runoff Management Program for the Santa Margarita Watershed. Table 4-5.

Bioassessment Data[5]	
SDRWQCB, EPA Draft Operational Guidebook for reference based assessment[6]	Severe physical impacts (Excessive erosion, down cutting, sedimentation, etc.) from rapid and high volumes of urban runoff and a lack of effective runoff management practices
Santa Margarita Regional DAMP[7]	Oxygen demanding substances, heavy metals, pesticides, herbicides, oil and grease, nutrients, settleable solids, TDS, TSS Volatile organic carbon, pathogens, and debris

Impairments and Pollutants of Concern (Finding Nos. 10 and 11)

According to the *Final 2002 CWA Section 303(d) List of Water Quality Limited Segments* (SDRWQCB, 2003a), the entire length of Murrieta Creek (12 miles) and the upper 18 miles of the Santa Margarita River are impaired for phosphorus. Potential sources of the phosphorus impairment include urban runoff and unknown point and nonpoint sources. The Santa Margarita Lagoon is listed as impaired for eutrophication. (**Finding No. 10**). In addition to the impairments, the SDRWQCB has identified various constituents of potential concern (SWRCB, 2003b). These constituents, listed above in Table 1, were not included on the 2002 303(d) list as impairments because available data was not adequate and more information is needed to determine whether water quality objectives and beneficial uses are being met. The impairments and constituents of concern were based on quarterly data collected and analyzed by Camp Pendleton from 1997-2000, data collected and analyzed by the Department of Water Resources from May 1998-November 2000, Rancho California Water District's receiving water monitoring, and grab sampling conducted by the SDRWQCB in June 1998.

The San Diego County's *Watershed Urban Runoff Management Program (WURMP) for the Santa Margarita Watershed* (San Diego County, 2003) states that eutrophication (associated with low dissolved oxygen, and the presence of solids and excessive nutrients), toxic substances (trace elements and synthetic organics), diazinon contamination, and high levels of TDS are potential water quality issues in the watershed, and that these constituents of concern may have detrimental impacts to the beneficial uses. The WURMP prioritizes the problems based on potential beneficial use impairment (Table 2 below). The WURMP states that data is limited and further data collection and assessment should be made to substantiate concerns.

Table 2. WURMP Prioritization of Water Quality Problems[8]

[6] EPA. November 2003. Draft Operational Guidebook for reference based assessment of the functions of riverine waters/wetlands in the Santa Margarita Watershed, Riverside County. Chapter 4.

[7] Permittees, 1993

[8] Table 2 was modified from Table 4-5 of the WURMP (San Diego County, 2003)

Constituents of Concern	Potential Beneficial Use Impairment	Priority
Eutrophication, nitrogen, phosphorus	MUN, REC1, REC2, WARM, COLD, WILD, and RARE	High
Toxic substances – diazinon	WARM, COLD, WILD and RARE	Medium
TDS	MUN and AGR	Medium
Toxic substances – other	WARM, COLD, WILD and RARE	Low
Trash	REC1, REC2, WARM, COLD, WILD and RARE	Low

In addition to the sources discussed above, the Permittees have been conducting water quality monitoring pursuant to the MS4 permit since 1993. Although the program has many deficiencies (SDRWQCB, 2002b), the data shows various persistent exceedances of water quality objectives for urban runoff-related pollutants. Table 3 below lists the monitoring stations and the constituents for which multiple or persistent exceedances of water quality objectives have been reported (Permittees, 2002a, 2002b, and 2003b). Due to inadequate monitoring and reporting, it was not possible to conduct a detailed analysis.

Table 3. MS4 Monitoring Results[9]

Stn #	Station Name	Multiple or Persistent Exceedances of Water Quality Objectives[10] (from 1993 – 2003)
188	Cole Creek	Color, Total Nitrogen, Total Phosphorus, Iron, Manganese
404	Wildomar outlet	MBAS, Color, Total Nitrogen, Total Phosphorus, Fecal Coliform, Chromium, Iron, Manganese, Nitrogen-Nitrate, Ammonia, Odor, Thallium, Turbidity, pH, Antimony, Beryllium, Chlorpyrifos, Diazinon
768	Redhawk Channel	Boron, MBAS, Color, Total Nitrogen, Total Phosphorus, Fecal Coliform, Fluoride, Iron, Manganese, Nitrogen-Nitrate, Ammonia, Odor, DO, TDS, Sulfate, Turbidity, pH, Antimony, Beryllium, Chlorpyrifos, Diazinon
769	Empire Creek	Boron, MBAS, Color, Total Nitrogen, Total Phosphorus, Fecal Coliform, Chromium, Iron, Manganese, Nitrogen-Nitrate, Odor, DO (increasing trend), TDS, Thallium, Turbidity, pH, Antimony, Beryllium, Chlorpyrifos, Diazinon
776	Cal Oaks Channel (Line F)	MBAS, Color, Total Nitrogen, Total Phosphorus, Fecal Coliform, Chromium, Iron, Manganese, Nitrogen-Nitrate, Ammonia, Odor, TDS, Turbidity, pH, Antimony, Chlorpyrifos, Diazinon
777	Temecula Creek	Color, Total Nitrogen, Total Phosphorus, Fecal Coliform, Iron, Manganese, Nitrogen-Nitrate, DO, TDS, Sulfate, Turbidity, Antimony
778	Lower Murrieta	Color, Total Nitrogen, Total Phosphorus, Fecal Coliform,

[9] Information obtained from Permittee Annual Program Reports (Permittees, 2002a, 2002b, and 2003b).

[10] Does not include California Toxics Rule

	Creek	Iron, Manganese, Nitrogen-Nitrate, Odor, DO, TDS, Sulfate, Turbidity, Antimony, Chlorpyrifos, Diazinon
779	Upper Murrieta Creek	Color, Total Nitrogen, Total Phosphorus, Fecal Coliform, Iron, Manganese, Nitrogen-Nitrate, Ammonia, TDS, Turbidity, pH, Antimony
828	Santa Margarita River near Temecula	Color, Total Nitrogen, Total Phosphorus, Fecal Coliform, Chromium, Iron, Manganese, Nitrogen-Nitrate, Odor, DO, TDS, Turbidity, Antimony, Chlorpyrifos, Diazinon

Table 4 below identifies potential sources of the pollutants that exceeded water quality objectives at the majority of the MS4 monitoring stations. This information indicates that urban runoff from construction, residential, industrial, commercial and municipal activities is contributing to the degradation of water quality. Specifically, the data indicate potential illicit discharges from industrial and commercial activities, over-application of pesticides and fertilizers by residents and/or businesses, and sediment discharges from construction sites and/or eroding channels.

Table 4. Potential Sources of Pollutants[11]

Pollutant	Potential Sources
Antimony	Industrial activity
Chlorpyrifos	Organophosphate pesticide commonly used in residential areas
Chromium	Industrial activity (plating operations, manufacture of paints, dyes, explosives, ceramics, and paper)
Diazinon	Organophosphate pesticide commonly used in residential areas
Dissolved oxygen	Biodegradable organics, increased temperatures and salinity decrease dissolved oxygen
Fecal coliform	Bacteria originating from humans, animals, amphibians and birds
Iron	Industrial activity, acid mine drainage, corrosion from iron pipes and other material
Manganese	Industrial sources (manufacture of steel alloys, dry-cell batteries, glass and ceramics, paints and varnishes, inks and dyes, matches and fireworks and agriculture
MBAS	Detergents typically associated with dry cleaners
Nitrogen	Excessive application of fertilizer in agriculture and urban areas, septic tank leachate
Phosphorus	Excessive application of fertilizer in agriculture and urban areas
PH	Industrial wastes can be strongly acidic, and laundry waste, and soda and sulfate-pump rinse water are alkaline wastes
Sulfate	Agricultural runoff, mining, tanneries, sulfate-pump mills, and other plants that use sulfates or sulfuric acid

[11] Potential source information from Permittees, 2003b and San Diego County, 2003.

Turbidity	Microorganisms, detritus, mineral substances, manganese compounds, industrial wastes, and eroded soil and silt.
TDS	Urban runoff, imported water, irrigation practices

Biological and Physical Concerns

In addition to the chemical water quality data described above, biological and physical monitoring in the Upper Santa Margarita Watershed also indicates impacts to receiving waters from urbanization.

According to the *San Diego Regional Water Quality Control Board: 2002 Biological Assessment Report*, based on data collected from 1998 – 2001, the bioassessment stations located in lower Murrieta Creek, lower Temecula Creek, and upper Santa Margarita River exhibited degraded biological and physical integrity (Index of Biotic Integrity (IBI) ranged from "Very Poor" to "Good"). As a comparison, the reference stations in the watershed, located in Sandia Creek and DeLuz Creek, were characterized by a high degree of biological and physical integrity (IBI was consistently "Very Good"). This data indicates that urbanization, not agriculture, is contributing to the impairment of the biological and physical integrity of the receiving waters.

The *Draft Operational Guidebook for reference based assessment of the functions of riverine waters/wetlands in the Santa Margarita Watershed, Riverside and San Diego Counties, California* (EPA, 2003) documents the physical impacts that have resulted from urbanization, including but not limited to:

- Temecula and Murrieta Creeks have been moderately to severely impacted by development and degradation of their watersheds. No hydrogeomorphic reference standard conditions were observed. Local effects are caused by **(a) massive earthwork associated with flood control projects, (b) channelization, (c) hardening of the channel bed and banks with concrete, rip-rap, etc., (d) rapid and high volume inputs of storm water runoff from impervious surfaces associated with urbanizing areas, (e) rapid and concentrated inputs of urban pollutants associated with untreated storm water, and (f) large accumulations of trash/debris**. "Currently, development pressures along the Temecula, Murrieta and Wilson Creeks are severe and apparently irreversible in the context of current land use practices and rates of urbanization."
- **Storm water inputs from roads, yards, and parking areas tend to be direct, without benefit of oil-water separators, grit removal, or retention/detention of storm flows**. "The consequences of poor watershed, riparian, and channel management practices in agricultural and developing areas are clear."
- **It is clear that Murrieta and Temecula Creeks are not performing hydrologic functions to their potential.** Specifically, given the urban setting of these creeks, the degree of development taking place within and near their floodplains, and **the current lack of effective stormwater management practices**, improvements in ecosystem functioning within these systems are likely to occur very slowly, if at all. **"Functional improvements in Murrieta and Temecula Creeks depend not only on changes in stream management techniques, but also upon BMPs throughout the upper watershed."**

- "As a result of urban/suburban development, infiltration rates have decreased, peak flows have increased, and base flows have been diminished in both durations and volume"
- "Significant impacts from erosion resulted from poor sediment and erosion control practices and/or development of impervious and smoothed surfaces in the contributing area."
- **"Landscape-scale development in the Santa Margarita watershed appears to be causing main stem hydrologic and biogeochemical functions to degrade at unprecedented rates."**

A recent environmental assessment of Murrieta Creek (USFWS, 2000) further describes some of the physical impacts that have occurred as a result of urbanization in the Upper Santa Margarita Watershed:

> "Since the 1980's, rapid development and urbanization in Murrieta Creek's watershed, including its floodplain and riparian corridor, has severely altered the watershed's drainage. The urbanization has simultaneously introduced artificial flows from activities such as landscape irrigation, washing down of parking lots, and washing of personal vehicles, and has increased impervious surface, which reduces groundwater recharge. Consequently, the volumes and velocities of the discharges from the surface flows and flows through the storm water conveyance systems into Murrieta Creek have increased dramatically. The changes in the hydrology and the hydraulics of Murrieta Creek and its watershed caused by development, flood control activities, ground water dewatering, and a reduction in groundwater recharge, have upset the natural fluvial processes and greatly diminished the ecological value of Murrieta Creek and its riparian corridor. The increased volumes and velocities have intensified the erosion along the stream bed and banks of Murrieta Creek, its tributaries, and downstream of Murrieta Creek. This erosion has exacerbated the sediment loading into Murrieta Creek and the Santa Margarita River."

The assessment goes on to say that, without appropriate controls, water quality is expected to continue to decline. "Advancing erosion and downcutting of stream channels will continue to feed larger amounts of sediment into the system. [...] Increasing development of the watershed is expected to continue to impact available habitat. In addition, an elimination of infiltration zones, increase in peak discharges with associated impacts on downstream riparian area, and the replacement of native plants with non-native species would likely occur." (USFWS, 2000)

Overall, the chemical, biological, and physical data and information described above indicate that urban runoff is causing degradation of the quality and the biological and physical integrity of the receiving waters in the Santa Margarita Watershed.

VII. BASIS FOR PERMIT REQUIREMENTS

This section discusses the broad legal authority that supports the requirements contained in Order No. R9-2004-001. It also discusses the intent of the federal NPDES storm water regulations and several findings that broadly support all requirements in the Order.

A. Broad Legal Authority (Finding No. 22)

Order No. R9-2004-001 implements the CWA, the Porter-Cologne Water Quality Control Act (Division 7 of the CWC, commencing with Section 13000), applicable state and federal regulations, all applicable provisions of statewide Water Quality Control Plans and Policies adopted by the SWRCB, and the Basin Plan adopted by the SDRWQCB (**Finding No. 22**).

In 1987, Congress established CWA Amendments to create requirements for storm water discharges under the NPDES program, which provides for permit systems to regulate the discharge of pollutants. Under the Porter-Cologne Water Quality Control Act, the SWRCB and each Regional Water Quality Control Board (RWQCB) have primary responsibility for the coordination and control of water quality, including the authority to implement the CWA. Porter Cologne (section 13240) directs the RWQCBs to set water quality objectives via adoption of Basin Plans that conform to all state policies for water quality control. As a means for achieving those water quality objectives, Porter Cologne (section 13243) further authorizes the RWQCBs to establish waste discharge requirements (WDRs) to prohibit waste discharges in certain conditions or areas. Since 1990 the SDRWQCB has issued area-wide MS4 NPDES permits. The Order will renew Order No. R9-98-02 as a means to attain water quality objectives in the Basin Plan by limiting the contributions of pollutants conveyed by urban runoff and to comply with CWA. Further discussions of the broad and specific legal authority associated with the prohibitions and directives of the Order are provided throughout this document.

Specific federal regulations include 40 CFR parts 122, 123, 124 (NPDES Permit Application Regulations for Storm Water Discharges, Final Rule), Part II of 40 CFR Parts 9, 122, 123, and 124 (NPDES – Regulations for Revision of the Water Pollution Control Program Addressing Storm Water Discharges; Final Rule), and 40 CFR 131 Water Quality Standards; Establishment of Numeric Criteria for Priority Toxic Pollutants for the State of California; Rule (California Toxics Rule).

The following broad legal authority citations generally apply to all requirements in Order No. R9-2004-001, and provide the SDRWQCB with ample underlying authority to require each of the directives.

CWA 402(p)(3)(B)(ii) – The CWA requires in section 402(p)(3)(B)(ii) that permits for discharges from MS4s "shall include a requirement to effectively prohibit non-stormwater discharges into the storm sewers."

CWA 402(p)(3)(B)(iii) – The CWA requires in section 402(p)(3)(B)(iii) that permits for discharges from MS4s "shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants."

40 CFR 122.26(d)(2)(i)(B,C,E, and F) – Federal NPDES regulations 40 CFR 122.26(d)(2)(i)(B,C,E, and F) provide that each Permittee's permit application "shall consist of: (i) Adequate legal authority. A demonstration that the applicant can operate pursuant to legal authority established by statute, ordinance or series of contracts which authorizes or enables the applicant at a minimum to: [...] (B) Prohibit through ordinance, order or similar means, illicit discharges to the municipal separate storm sewer; (C) Control through

ordinance, order or similar means the discharge to a municipal separate storm sewer of spills, dumping or disposal of materials other than storm water; [...] (E) Require compliance with condition in ordinances, permits, contracts or orders; and (F) Carry out all inspection, surveillance and monitoring procedures necessary to determine compliance and noncompliance with permit conditions including the prohibition on illicit discharges to the municipal separate storm sewer."

40 CFR 122.26(d)(2)(iv) – Federal NPDES regulation 40 CFR 122.26(d)(2)(iv) provides that the Permittee shall develop and implement a proposed management program which "shall include a comprehensive planning process which involves public participation and where necessary intergovernmental coordination, to reduce the discharge of pollutants to the maximum extent practicable using management practices, control techniques and system, design and engineering methods, and such other provisions which are appropriate. The program shall also include a description of staff and equipment available to implement the program. [...] Proposed programs may impose controls on a systemwide basis, a watershed basis, a jurisdiction basis, or on individual outfalls. [...] Proposed management programs shall describe priorities for implementing controls."

CWC section 13377 – CWC section 13377 provides that "Notwithstanding any other provision of this division, the state board or the regional boards shall, as required or authorized by the Federal Water Pollution Control Act (CWA), as amended, issue waste discharge requirements and dredged or fill material permits which apply and ensure compliance with all applicable provisions of the act and acts amendatory thereof or supplementary, thereto, together with anymore stringent effluent standards or limitation necessary to implement water quality control plans, or for the protection of beneficial uses, or to prevent nuisance."

In addition to the broad legal authority items cited above, which underlie all of the directives in Order No. R9-2004-001, additional specific legal authority citations applicable to particular directives of the Order are provided in this Fact Sheet as necessary.

Order No. R9-2004-001 is an essential mechanism for achieving the water quality objectives that have been established for protecting the beneficial uses of the water resources in the Santa Margarita Watershed. Federal NPDES regulation 40 CFR 122.44(d)(1) requires MS4 permits to include any requirements necessary to "achieve water quality standards established under CWA section 303, including State narrative criteria for water quality." The term "water quality standards" in this context refers to a water body's beneficial uses and the water quality objectives necessary to protect those beneficial uses, as established in the Basin Plan.

B. Maximum Extent Practicable (Finding No. 14)

Under CWA section 402(p), municipalities are required to reduce the discharge of pollutants from their MS4s to the maximum extent practicable (MEP). MEP is the critical technology-based performance standard that municipalities must attain in order to comply with their MS4 permits. The MEP standard establishes the level of pollutant reductions the municipality must achieve. The MEP standard can be achieved by means of implementing pollution prevention and source control BMPs (as the first line of defense) in combination with treatment control BMPs serving as a backup (additional line of defense).

The MEP standard is an ever-evolving, flexible, and advancing concept, which considers technical and economic feasibility. As knowledge about controlling urban runoff continues to evolve, so does that which constitutes MEP. Reducing the discharge of storm water pollutants to the MEP requires Permittees to conduct and document evaluation and assessment of each program component and revise activities, control measures, best management practices (BMPs), and measurable goals, as necessary to meet MEP. Because MEP is a dynamic performance standard, it is necessary to describe in greater detail, necessary and effective measures that are essential for compliance. **(Finding No. 14)**

To achieve the MEP standard, municipalities must employ whatever BMPs are technically feasible (i.e., are likely to be effective) and are not cost prohibitive. The major emphasis is on technical feasibility. Reducing pollutants to the MEP means choosing effective BMPs, and rejecting applicable BMPs only where other effective BMPs will serve the same purpose, or the BMPs would not be technically feasible, or the cost would be prohibitive. In selecting BMPs to achieve the MEP standard, the following factors may be useful to consider:

1. Effectiveness: Will the BMPs address a pollutant (or pollutant source) of concern?
2. Regulatory Compliance: Is the BMP in compliance with storm water regulations as well as other environmental regulations?
3. Public Acceptance: Does the BMP have public support?
4. Cost: Will the cost of implementing the BMP have a reasonable relationship to the pollution control benefits to be achieved?
5. Technical Feasibility: Is the BMP technically feasible considering soils, geography, water resources, etc?

If a municipality reviews a lengthy menu of BMPs and chooses to select only a few of the least expensive BMPs, it is likely that MEP has not been met. On the other hand, if a municipal discharger employs all applicable BMPs except those where it can show that they are not technically feasible in the locality, or whose cost is prohibitive, it would have met the standard. Where a choice may be made between two BMPs that should provide generally comparable effectiveness, the discharger may choose the least expensive alternative and exclude the more expensive BMP. However, it would not be acceptable either to reject all BMPs that would address a pollutant source, or to pick a BMP base solely on cost, which would be clearly less effective. In selecting BMPs the municipality must make a serious attempt to comply and practical solutions may not be lightly rejected. In any case, the burden would be on the municipal discharger to show compliance with its permit. After selecting a menu of BMPs, it is the responsibility of the discharger to ensure that all BMPs are implemented. (SWRCB, 1993)

A definition of MEP is not provided in either the federal statute or in the federal regulations. The final determination regarding whether a municipality has reduced pollutants to the MEP can only be made by the SDRWQCB or the SWRCB, and not by the municipal discharger. While the SDRWQCB or the SWRCB ultimately define MEP, it is the responsibility of the Permittees to initially propose actions that implement BMPs to reduce pollution to the MEP. In other words, the Permittees' Individual and Watershed SWMPs to be developed under the Order are the Permittees' proposals of MEP. Their total collective and individual activities

conducted pursuant to their SWMPs become their proposal for MEP as it applies both to their overall effort, as well as to specific activities.

It is the SDRWQCB's responsibility to evaluate the proposed programs and specific BMPs to determine what constitutes MEP, using the above guidance and the court's 1994 decision in NRDC v. California Department of Transportation, Federal District Court, Central District of California. The federal court stated that a permittee must evaluate and implement BMPs except where (1) other effective BMPs will achieve greater or substantially similar pollution control benefits; (2) the BMP is not technically feasible; or (3) the cost of BMP implementation greatly outweighs the pollution control benefits. In the absence of a proposal acceptable to the SDRWQCB, the SDRWQCB will define MEP by requiring implementation of additional measures by the Permittees.

The Order represents the SDRWQCB's definition of MEP. The Order provides a minimum framework that allows Permittees the flexibility to develop and implement their own unique programs and BMP requirements and to improve and modify them as necessary to achieve and maintain compliance with the Order, and therefore, the MEP standard. The EPA supports the SDRWQCB's finding that the Order is consistent with the MEP standard when it states, "Overall, we believe that the permit [Order No. R9-2004-001] is fully consistent with the Clean Water Act (CWA), EPA regulations, and is appropriate for the Santa Margarita Watershed..." (EPA, 2004).

C. BMP Implementation (Finding Nos. 15, 16 and 17)

Pollutants can be effectively reduced in urban runoff by the application of a combination of pollution prevention, source control, and treatment control BMPs. Pollution prevention is the reduction or elimination of pollutant generation at its source and is the best "first line of defense". Source control BMPs (both structural and non-structural) minimize the contact between pollutants and flows (e.g., rerouting run-on around pollutant sources or keeping pollutants on-site and out of receiving waters). Treatment control BMPs remove pollutants from urban runoff. (**Finding No. 15**)

The SWRCB finds in its Order WQ 98-01 that BMPs are effective in reducing pollutants in urban runoff, stating that "implementation of BMPs [is] generally the most appropriate form of effluent limitations when designed to satisfy technology requirements, including reduction of pollutants to the maximum extent practicable." The TAC further supports this finding by recommending "that nonpoint source pollution control can be accomplished most effectively by giving priority to [BMPs] in the following order:

1. Pollution Prevention – implementation of practices that use or promote pollution free alternatives;
2. Source Control – implementation of control measures that focus on preventing or minimizing urban runoff from contacting pollution sources;
3. Treatment Control – implementation of practices that require treatment of polluted runoff either onsite or offsite."

Pollution prevention, the reduction or elimination of pollutant generation at its source, is an essential aspect of BMP implementation. By limiting the generation of pollutants by urban activities, less pollutants are available to be washed from urban areas, resulting in reduced

pollutant loads in storm water discharges from these areas. In addition, there is no need to control or treat pollutants that are not initially generated. Furthermore, pollution prevention BMPs are generally more cost effective than removal of pollutants by treatment facilities or cleanup of contaminated media (Schueler, 2000).

In the Pollution Prevention Act of 1990, Congress established a national policy that emphasizes pollution prevention over control and treatment. CWC section 13263.3(a) also supports pollution prevention, stating "The Legislature finds and declares that pollution prevention should be the first step in a hierarchy for reducing pollution and managing wastes, and to achieve environmental stewardship for society. The Legislature also finds and declares that pollution prevention is necessary to support the federal goal of zero discharge of pollutants into navigable waters." Finally, the Basin Plan also supports this finding by stating "To eliminate pollutants in storm water, one can either clean it up by removing pollutants or prevent it from becoming polluted in the first place. Because of the overwhelming volume of storm water and the enormous costs associated with pollutant removal, pollution prevention is the only approach that makes sense" (SDRWQCB, 1994).

Controlling urban runoff pollution by using a combination of onsite source control BMPs augmented with treatment control BMPs before the runoff enters the MS4 is important for the following reasons: (1) Many end-of-pipe BMPs (such as diversion to the sanitary sewer) are typically ineffective during significant storm events. Whereas, onsite source control BMPs can be applied during all runoff conditions; (2) End-of-pipe BMPs are often incapable of capturing and treating the wide range of pollutants which can be generated on a sub-watershed scale; (3) End-of-pipe BMPs are more effective when used as polishing BMPs, rather than the sole BMP to be implemented; (4) End-of-pipe BMPs do not protect the quality or beneficial uses of receiving waters between the source and the BMP; and (5) Offsite end-of-pipe BMPs do not aid in the effort to educate the public regarding sources of pollution and their prevention (**Finding No. 17**).

The EPA also supports the utilization of a combination of BMPs to address pollutants in urban runoff. For example, the EPA has found there has been success in addressing illicit discharge related problems through BMP initiatives like storm drain stenciling and recycling programs, including household hazardous waste special collection days (EPA, 1999b). Structural BMP performance data has also been compiled and summarized by the EPA (EPA, 1999e). This data indicates that structural BMPs can be effective in reducing pollutants in urban runoff discharges. The summary provides the performance ranges of various types of structural BMPs for removing suspended solids, nutrients, pathogens, and metals from storm water flows. These pollutants are in general the pollutants of most concern in storm water in the San Diego Region. For suspended solids, the least effective structural BMP type was found to remove 30-65% of the pollutant load, while the most effective was found to remove 65-100% of the pollutant load. For nutrients, the least effective structural BMP type was found to remove 15-45% of the pollutant load, while the most effective was found to remove 65-100% of the pollutant load. For pathogens, the least effective structural BMP type was found to remove <30% of the pollutant load, while the most effective was found to remove 65-100% of the pollutant load. For metals, the least effective structural BMP type was found to remove 15-45% of the pollutant load, while the most effective was found to remove 65-100% of the pollutant load.

As discussed above, developing minimum BMPs and implementing or requiring their implementation at industrial and commercial facilities, construction sites, and residential areas is necessary for the Permittees to ensure that, ultimately, discharges of pollutants into and from its MS4 are reduced to the MEP (**Finding No. 16**). Therefore, **Sections F through H of the Order** require Permittees to develop and require the implementation of minimum BMPs, including pollution prevention as a first line of defense, to reduce the discharge of pollutants in urban runoff to the MEP from all areas and activities with their jurisdictions.

D. Permittee Responsibility for Requiring BMPs (Finding No. 28)

Through its permitting processes, each Permittee authorizes the three major phases of urban development within its jurisdiction. Therefore, each Permittee must assume responsibility for its urban development decisions. The federal regulations clearly require municipalities to address urban runoff during each stage of development. Regarding BMP implementation during each stage of urban development, the EPA recommends that Permittees ensure the appropriate implementation of the structural BMPs by considering some or all of the following: pre-construction review of BMP designs; inspections during construction to verify BMPs are built as designed; post-construction inspection and maintenance of BMPs; and penalty provisions for noncompliance with design, construction or operation and maintenance (EPA, 1999b).

Since municipalities approve and permit construction and land use within their jurisdiction, they must assume responsibility for urban runoff discharges from these activities and land uses. The Federal NPDES regulations 40 CFR 122.26(d)(2)(iv)(A – D) are clear in placing responsibility on municipalities for control of urban runoff from third party activities and land uses to their MS4 (EPA, 2000a). In order for municipalities to assume this responsibility, they must implement ordinances, permits, and plans addressing urban runoff from third parties. Assessments for compliance with their ordinances, permits, and plans are essential for a municipality to ensure that third parties are not causing the municipality to be in violation of its municipal storm water permit. When conditions of non-compliance are determined, enforcement is necessary to ensure that violations of municipality ordinances and permits are corrected. As stated in **Finding No. 28**, each Permittee is responsible for adoption and enforcement of ordinances and/or policies, implementation of identified BMPs, and for the allocation of funds for the capital, operation, and maintenance, and enforcement expenditures necessary to implement and enforce such BMPs within its jurisdiction. Therefore, when a Permittee determines a violation of its storm water ordinance, it must pursue correction of the violation. Without enforcement, third parties do not have incentive to correct violations. The EPA supports inspections and enforcement by municipalities when it states "Effective inspection and enforcement requires [...] penalties to deter infractions and intervention by the municipal authority to correct violations. Enforcement mechanisms [...] also must be described" (EPA, 1992a).

MS4 permits are issued to municipalities because of their land use authority. The ultimate responsibility for the pollutant discharges, increased runoff, and inevitable long-term water quality degradation that results from urbanization lies with local governments. This responsibility is based on the fact that it is the local governments that have authorized the urbanization (i.e., conversion of natural pervious ground cover to impervious urban surfaces) and the land uses that generate the pollutants and runoff. Furthermore, the MS4 through which

the pollutants and increased flows are conveyed, and ultimately discharged into natural receiving waters, are owned and operated by the same local governments. In summary, the Permittees under the Order are responsible for discharges into and out of their MS4s because (1) they own and operate the MS4; and (2) they have the legal authority that authorizes the very development and land uses with generate the pollutants and increased flows in the first place.

For example, since grading cannot commence prior to the issuance of a local grading permit, the Permittees have a built-in mechanism to ensure that all grading activities are protective of receiving water quality. The Permittee has the authority to withhold issuance of the grading permit until the project proponent has demonstrated to the satisfaction of the Permittee that the project will not violate the Permittee's ordinances or cause the Permittee to be in violation of its MS4 permit. Since the Permittee will ultimately be held responsible for any discharges from the grading project by the SDRWQCB, the Permittee will want to use its own permitting authority to ensure that whatever measures the Permittee deems necessary to protect discharges into its MS4 are in fact taken by the project proponent.

Order No. R9-2004-001 holds the local government accountable for this direct link between its land use decisions and water quality degradation. The Order recognizes that each of the three major stages in the urbanization process (development planning, construction, and the use or operational stage) are controlled by and must be authorized by the local government. Developing minimum BMPs and implementing or requiring their implementation at industrial and commercial facilities, construction sites, and residential areas is necessary for the Permittees to ensure that, ultimately, discharges of pollutants into and from its MS4 are reduced to the MEP (**Finding No. 16**). As discussed in **Finding No. 20**, Permittees cannot passively receive and discharge pollutants from third parties (within or outside of their jurisdiction). In the absence of BMPs, these discharges may cause or contribute to a condition of contamination or exceedances of receiving water quality objectives. Accordingly, the Order requires the local government to implement, or require others to implement, appropriate BMPs to reduce pollutant discharges and increased flow during each of the three stages of urbanization.

E. Dual Regulation of Industrial and Construction Sites (Finding No. 21)

In accordance with federal NPDES regulations and to ensure the most effective oversight of industrial and construction site discharges, discharges of runoff from industrial and construction sites are subject to dual (state and local) storm water regulation. Under this dual system, the SDRWQCB is responsible for enforcing the statewide General Construction Activities Storm Water Permit, SWRCB Order 97-03 DWQ, NPDES No. CAS000001 (General Construction Permit) and the statewide General Industrial Activities Storm Water Permit, SWRCB Order 99-08 DWQ, NPDES No. CAS000002 (General Industrial Permit), and each municipal Permittee is responsible for enforcing its local permits, plans, and ordinances, which may require the implementation of additional BMPs than required under the statewide general permits. (**Finding No. 21**)

According to the EPA, the storm water regulations envision that NPDES permitting authorities [SDRWQCB] and municipal operators [the Permittees] will cooperate to develop programs to monitor and control pollutants in storm water discharges from industrial facilities (EPA, 1992a).

The EPA discusses the "dual regulation" of construction sites in its Storm Water Phase II Compliance Assistance Guide (EPA, 2000c), which states "Even though all construction sites that disturb more than one acre are covered nationally by an NPDES storm water permit, the construction site runoff control minimum measure [...] is needed to induce more localized site regulation and enforcement efforts, and to enable operators [...] to more effectively control construction site discharges into their MS4s." While the Storm Water Phase II Compliance Assistance Guide applies to small municipalities, it is applicable to the Permittees, because they are similar in size and have the potential to discharge similar pollutant types as Phase II municipalities.

Municipalities assume initial responsibility for enforcement against illegal discharges from land uses and activities within their jurisdiction because of their land use authority. Since the municipality approves and permits development and land use, it must ensure that its development or land use decisions do not result in receiving water quality degradation. The SDRWQCB will assist municipalities in enforcement against non-compliant sites after the municipality has exhibited a good faith effort to bring the site into compliance.

VIII. DISCUSSION OF PERMIT REQUIREMENTS

This section discusses each component of Order No. R9-2004-001. Each discussion includes the specific legal authority in addition to the broad legal authority discussed in section VII.A of this Fact Sheet, a discussion of the requirements, and comments on the Permittees' existing and proposed programs related to each component.

A. PROHIBITIONS (Order Section A)

1. Specific Legal Authority for Prohibitions

- CWA section 402(p)(3)(B)(ii) states that municipalities shall "effectively prohibit non-stormwater discharges **into** the storm sewers."
- CWA section 402(p)(3)(B)(iii) requires that permits for discharges from MS4s "shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants."
- Federal NPDES regulations 40 CFR 122.26(d)(2)(i)(A - D) require municipalities to have legal authority to control various discharges **to** their MS4.
- Federal NPDES regulations 40 CFR 122.26(d)(2)(iv)(A - D) require municipalities to implement controls to reduce pollutants in urban runoff **from** commercial, residential, industrial, and construction land uses or activities.
- Federal NPDES regulation 40 CFR 122.44(d)(1)(i) requires NPDES permits to include limitations to "control all pollutants or pollutant parameters (either conventional, nonconventional, or toxic pollutants) which the Director determines are or may be discharged at a level which will cause, have reasonable potential to cause, or contribute to an excursion above any State water quality standard, including State narrative criteria for water quality."

- The Basin Plan contains the following waste discharge prohibition: "The discharge of waste to waters of the state in a manner causing, or threatening to cause a condition of pollution, contamination, or nuisance as defined in California Water Code section 13050, is prohibited."
- CWC section 13050(l) states "(1) 'Pollution' means an alteration of the quality of waters of the state by waste to a degree which unreasonably affects either of the following: (A) The water for beneficial uses. (B) Facilities which serve beneficial uses. (2) 'Pollution' may include 'contamination'."
- CWC section 13050(k) states "'Contamination' means an impairment of the quality of waters of the state by waste to a degree which creates a hazard to public health through poisoning or through the spread of disease. 'Contamination' includes any equivalent effect resulting from the disposal of waste, whether or not waters of the state are affected."
- CWC section 13050(m) states "'Nuisance' means anything which meets all of the following requirements: (1) Is injurious to health, or is indecent or offensive to the senses, or an obstruction to the free use of property, so as to interfere with the comfortable enjoyment of life or property. (2) Affects at the same time an entire community or neighborhood, or any considerable number of persons, although the extent of the annoyance or damage inflicted upon individuals may be unequal. (3) Occurs during, or as a result of, the treatment or disposal of wastes."
- CWC section 13241 requires each RWQCB to "establish such water quality objectives in water quality control plans as in its judgment will ensure the reasonable protection of beneficial uses and the prevention of nuisance [...]."
- CWC section 13243 provides that "A regional board, in a water quality control plan or in waste discharge requirements, may specify certain conditions or areas where the discharge of waste, or certain types of waste, will not be permitted."
- CWC section 13263(a) provides that waste discharge requirements prescribed by the SDRWQCB implement the Basin Plan.

2. Discussion of Prohibitions

The entire thrust of Order No. R9-2004-001 is to prevent discharges from MS4s from causing, or threatening to cause, a condition of pollution, contamination, or nuisance. In fact, **Prohibition A.1** exhibits a major component of the SDRWQCB's mission, and is included in its Basin Plan. The SDRWQCB seeks to preserve and enhance the quality of the region's waters, and one primary method to achieve this is by preventing conditions of pollution, contamination, or nuisance in the region's waters.

Because discharges that enter the MS4 are generally discharged unimpeded directly into receiving waters, **Prohibition A.1** applies to both discharges into and from MS4s. Federal NPDES regulations clearly provide the SDRWQCB with the legal authority to require municipalities to control discharges from third parties into their MS4. 40 CFR 122.26(d)(2)(iv)(A - D) require municipalities to implement controls to reduce pollutants in urban runoff from commercial, residential, industrial, and construction land uses or activities. Federal NPDES regulations 40 CFR 122.26(d)(2)(i)(A - D) require municipalities to have legal

authority to control various discharges to their MS4. This concept is further supported in the Preamble to the Phase II Final Rule NPDES storm water regulations, which states "The operators of regulated small MS4s cannot passively receive and discharge pollutants from third parties" (EPA, 1999b). As discussed in section VII.E of this Fact Sheet, Phase II Final Rule findings are applicable to the Permittees. Finally, underlying the Federal NPDES storm water regulations is the CWA, which states in Section 402(p)(3)(B)(ii) that municipalities shall "effectively prohibit non-stormwater discharges into the storm sewers."

As with Prohibition A.1, **Prohibition A.2** also characterizes a primary goal of Order No. R9-2004-001 and the SDRWQCB. This goal is to protect the beneficial uses of the region's waters and achieve the water quality objectives necessary to protect those uses. The overarching intent of the CWA embodies **Prohibition A.2** as well; the CWA's objective is to "restore and maintain all chemical, physical and biological integrity of the Nation's waters [to make all surface waters] fishable [and] swimmable."

Prohibition A.3 is consistent with the direction provided in SWRCB Order WQ 2001-15 (SWRCB, 2001). The CWA and Federal NPDES regulations clearly require operators of MS4s to reduce pollutants in discharges from MS4s to the MEP. Therefore, the SDRWQCB has prohibited discharges that do not meet this requirement.

Prohibition A.4 pertains to the Basin Plan Prohibitions, which were established by the SDRWQCB pursuant to CWC section 13243. The SDRWQCB is required to implement Basin Plan Prohibitions in Order No. R9-2004-001 pursuant to CWC section 13263(a).

3. Comments on Existing and Proposed Programs Related to Prohibitions

The Permittees report in Section 2.5 of the ROWD states "The Permittees shall continue to maintain adequate legal authority to control the contribution of pollutants to the MS4s by urban runoff and enforce those authorities." The Permittees further report that they are taking "the necessary steps… to ensure that non-storm water discharges to their MS4s do not cause or contribute to violations of water quality objectives or discharge pollutants to waters of the U.S." In addition, Section 3.1 of the ROWD states "The Permittees shall prohibit illicit discharges from entering into the MS4 and require controls to reduce the discharge of pollutants to the [MEP]." The Permittees should determine if they need to revise their existing ordinances to provide the authority to specifically prohibit discharges from their MS4s that have not been reduced to the MEP.

Discharge Prohibition A.4 is not specifically addressed in the ROWD. Again the Permittees should determine if they need to revise their existing ordinances to provide the authority to specifically prohibit discharges in violation of Basin Plan prohibitions cited in Attachment A to Order No. R9-2004-001.

B. NON-STORM WATER DISCHARGES (Order Section B)

1. Specific Legal Authority for Non-Storm Water Discharge Requirements

- Federal NPDES regulation 40 CFR 122.26(d)(2)(iv)(B) requires MS4 operators "to detect and remove (or require the discharger to the municipal separate storm sewer to obtain a separate NPDES permit for) illicit discharges and improper disposal into the storm sewer."

0000104

- Federal NPDES regulation 40 CFR 122.26(d)(2)(iv)(B)(1) provides that the Permittees shall prevent all types of illicit discharges into the MS4 except for the non-storm water discharges listed in Prohibition B.2, provided that these discharges are not found to be a significant source of pollutants to waters of the U.S.
- CWA section 402(p)(3)(B)(ii) requires each Permittee to prohibit non-storm water discharges into its MS4.
- Federal NPDES regulation 40 CFR 122.26(d)(2)(iv)(B)(2) requires that Permittees shall provide "A description of procedures to conduct on-going field screening activities during the life of the permit, including areas or locations that will be evaluated by such field screens."
- Federal NPDES regulation 40 CFR 122.26(d)(2)(iv)(B)(3) provides that Permittees shall "investigate portions of the separate storm sewer system that, based on the results of a field screen, or other appropriate information, indicate a reasonable potential of containing illicit discharges or other sources on non-storm water."
- CWC section 13267 provides that "the regional board may require that any person who has discharged [...] shall furnish, under penalty of perjury, technical or monitoring reports which the regional board requires."

2. Discussion of Non-Storm Water Discharge Requirements

The discharges listed in Non-Storm Water Discharges **Requirement B.2** are referred to as "de minimis" discharges in the Federal NPDES regulations. However, if a municipality identifies any of these discharges as a source of pollutants to waters of the U.S., they must be addressed in the municipalities storm water management plan (40 CFR 122.26(d)(2)(iv)(B)(1)).

The list of "de minimis" discharges in **Requirement B.2** is essentially the same as the current list prescribed by EPA in NPDES Permit No. CAS0108766 and identical to the list in State Board Order No. 2003-0005-DWQ, the General Storm Water Permit for small MS4s (SWRCB, 2003).

3. Comments on Existing and Proposed Programs Related to Non-Storm Water Discharge Requirements

The Permittees currently have the legal authority to prohibit non-storm water discharges to the MS4, and their existing ordinance contains a list of non-prohibited non-storm water discharges that is consistent with the Order.

In Section 3.1 of the ROWD, the Permittees proposed to add street wash water, fire hydrant testing and flushing, and other types of discharges identified and recommended by the Permittees to their list of allowable non-storm water discharges. Fire hydrant testing and flushing is a category of discharge that is considered by the SDRWQCB as a Non-emergency fire fighting flow (**Requirement B.2.q.**). Order No. R9-2004-001 requires that Permittees address discharges from non-emergency fire fighting activities when those discharges are identified as a significant source of pollutants. However, the EPA determined street wash water to be contaminated and deleted it as a non-prohibited discharge when it issued NPDES Permit CAS0108766 in April 1999 (EPA, 1999d). The Permittees have not provided

monitoring data to document that street wash water does not contain pollutants that pose a threat to water quality. In addition, SWRCB Order No. 99-06-DWQ, the Statewide Storm Water permit for Caltrans and State Board Order No. 2003-0005-DWQ, the General Storm Water Permit for small MS4s do not include street wash water as a non-prohibited discharge. Therefore, the SDRWQCB did not include street wash water on the list in **Requirement B.2** of the Order.

The discharge categories in 40 CFR 122.26(d)(2)(iv)(B)(1) comprise an inclusive and not exemplary list. Consequently, the SDRWQCB does not have the authority to add other discharge categories to the list. Pursuant to **Requirement B.1**, discharges other than those listed in Requirement B.2. are allowed if authorized by a separate NPDES permit.

Although Section 3.1 of the ROWD states that Permittees will prohibit any of the listed discharges if they are identified by the Permittees or the SDRWQCB as a source of pollutants, **Requirement B.2** of the Order allows the Permittees the option to implement BMPs to reduce pollutants to the MEP.

Pursuant to Order No. R9-98-02, the Permittees developed BMPs to address fire fighting activities (Permittees, 2000). These BMPs should be incorporated into the Permittees' SWMPs.

C. RECEIVING WATER LIMITATIONS (Order Section C)

1. Specific Legal Authority for Receiving Water Limitations (RWL) Requirements

- CWC section 13241 provides that the "SDRWQCB shall establish such water quality objectives in water quality control plans as in its judgment will ensure the reasonable protection of beneficial uses and the prevention of nuisance."
- CWC section 13263(a) provides that waste discharge requirements prescribed by the SDRWQCB implement the Basin Plan.

2. Discussion of RWL Requirements

As stated in **Finding No. 23**, the RWL language specified in the Order is consistent with language recommended by the EPA and established in SWRCB Order WQ-99-05 (SWRCB, 1999a). The RWL in the Order require compliance with water quality standards through an iterative approach for implementing improved and better-tailored BMPs over time.

The iterative BMP process requires the implementation of increasingly stringent BMPs until receiving water standards are achieved. This is necessary because implementation of BMPs alone cannot ensure attainment of receiving water quality objectives. For example, a BMP that is effective in one situation may not be applicable in another. An iterative process of BMP development, implementation, and assessment is needed to promote consistent compliance with receiving water quality objectives. If assessment of a given BMP confirms that the BMP is ineffective, the iterative process should be restarted, with redevelopment of a new BMP that is anticipated to result in compliance with receiving water quality objectives.

On October 14, 1999, the SWRCB issued a legal opinion on the federal appellate decision and provided advice to the RWQCBs on how to proceed in the future (SWRCB, 1999b). In the memorandum, the SWRCB concludes that the recent Ninth Circuit opinion upholds the

discretion of the EPA and the State to (continue to) issue permits to MS4s that require compliance with water quality standards through iterative BMPs. Moreover, the memorandum states, "[...] because most MS4 discharges enter impaired water bodies, there is a real need for permits to include stringent requirements to protect those water bodies. As total maximum daily loads (TMDLs) are developed, it is likely that MS4s will have to participate in pollutant load reductions, and the MS4 permits are the most effective vehicles for those reductions." In summary, the SWRCB concludes that the RWQCBs should continue to include the RWL language established in SWRCB Order WQ 99-05 in all future permits.

It should be noted that while implementation of the iterative BMP process is a means to achieve compliance with water quality objectives, it does not shield the discharger from enforcement actions for continued non-compliance with water quality objectives. Consistent with EPA guidance (EPA, 1998a and 1998b) regardless of whether or not an iterative process is being implemented, discharges that cause or contribute to an exceedance of water quality objectives are in violation of Order No. R9-2004-001.

3. Comments on Existing and Proposed Programs Related to RWL Requirements

The RWL requirements were not discussed in the ROWD.

D. LEGAL AUTHORITY (Order Section D)

1. Specific Legal Authority for Legal Authority Requirements

- Federal NPDES regulation 40 CFR 122.26(d)(2)(i)(A) provides that the Permittees shall develop and implement legal authority to "Control through ordinance, order or similar means, the contribution of pollutants to the municipal storm sewer by storm water discharges associated with industrial activity and the quality of storm water discharged from sites of industrial activity."
- Federal NPDES regulation 40 CFR 122.26(d)(2)(i)(D) provides that the Permittees shall develop and implement legal authority to "Control through interagency agreements among coapplicants the contribution of pollutants from one portion of the municipal system to another portion of the municipal system."
- Illicit discharge is defined under Federal NPDES regulation 40 CFR 122.26(b)(2) as "any discharge to a municipal separate storm sewer system that is not composed entirely of storm water except discharges pursuant to a NPDES permit (other than the NPDES permit for discharges from the municipal separate storm sewer) and discharges resulting from fire fighting activities."
- Federal NPDES regulation 40 CFR 122.26(b)(14) provides that "The following categories of facilities are considered to be engaging in 'industrial activity' for purposes of this subsection: [...] Construction activity including clearing, grading and excavation activities [...]."
- Federal NPDES regulation 40 CFR 122.26(d)(1)(ii) requires from the Permittee "A description of existing legal authority to control discharges to the municipal separate storm sewer system."

- Federal NPDES regulations 40 CFR 122.26(d)(2)(iv)(A - D) require municipalities to implement controls to reduce pollutants in urban runoff from commercial, residential, industrial, and construction land uses or activities.
- CWC section 13243 also provides that a "regional board, in a water quality control plan or in waste discharge requirements, may specify certain conditions or areas where the discharge of waste, or certain types of waste, will not be permitted."

2. Discussion of Legal Authority Requirements

An important means for a municipality to control the discharge of pollutants in urban runoff is through development of municipal legal authority. The EPA states "A crucial requirement of the NPDES storm water regulation is that a municipality must demonstrate that it has adequate legal authority to control the contribution of pollutants in storm water discharged **to** its MS4. [...] In order to have an effective municipal storm water management program, a municipality must have adequate legal authority to control the contribution of pollutants to the MS4. [...] 'Control,' in this context, means not only to require disclosure of information, but also to limit, discourage, or terminate a storm water discharge to the MS4" (EPA, 1992a).

Since discharges that enter the MS4 are generally discharged unimpeded directly into receiving waters, the Permittees' legal authority is to apply to both discharges **into** and **from** MS4s. Federal NPDES regulations clearly provide the SDRWQCB with the legal authority to require municipalities to control discharges from third parties into their MS4. 40 CFR 122.26(d)(2)(iv)(A - D) require municipalities to implement controls to reduce pollutants in urban runoff from commercial, residential, industrial, and construction land uses or activities. Federal NPDES regulations 40 CFR 122.26(d)(2)(i)(A - D) require municipalities to have legal authority to control various discharges **to** their MS4. This concept is further supported in the Preamble to the Phase II NPDES storm water regulations, which states "The operators of regulated small MS4s cannot passively receive and discharge pollutants **from** third parties" (EPA, 1999b). As discussed in section VII.E of this Fact Sheet, Phase II findings for small municipalities are applicable to the Permittees. Finally, underlying the Federal NPDES storm water regulations is the CWA, which states in section 402(p)(3)(B)(ii) that municipalities shall "effectively prohibit non-stormwater discharges **into** the storm sewers."

In order to effectively prohibit illicit or non-storm water discharges, legal authority addressing the discharges must be developed and implemented by each Permittee (see discussion of **Finding No. 28** in Section VII.D of this Fact Sheet). An illicit connection is a connection to the MS4 that carries an illicit discharge. Because illicit discharges to the MS4 are prohibited, illicit connections are also prohibited and must be eliminated. In order to effectively prohibit and eliminate illicit connections, legal authority addressing the discharges must be developed and implemented by each Permittee.

In order for the ordinances to be effective, each Permittee must be able to require compliance with the ordinances. Lack of ordinance enforcement by a Permittee allows third parties to violate a municipality's ordinances with little fear of retribution, leading to receiving water quality degradation. The EPA recommends that a municipality in its urban runoff management program "identify the administrative and legal procedures available to mandate compliance with appropriate ordinances, and therefore, with permit conditions. [Programs] should contain descriptions of how ordinances are implemented and appealed. In particular,

a municipality should indicate if it can issue administrative orders and injunctions or if it must go through the court system for enforcement actions" (EPA, 1992a).

Discharges from Permittees that share an MS4 eventually reach the same receiving water body. Each Permittee that discharges to the shared MS4 is therefore responsible for discharges from the shared MS4, and the impacts of those discharges on receiving waters. The Permittees of a shared MS4 must demonstrate that together they can control the contribution of pollutants over the whole shared MS4. To this effect, the EPA states "When two or more municipalities submit a joint application, each coapplicant must demonstrate that it individually possesses adequate legal authority over the entire municipal system it operates and owns. A coapplicant need not fulfill every component of legal authority specified in the regulations, as long as the combined legal authority of all coapplicants satisfies the regulatory criteria for every segment of the MS4 (including authority over all sources that discharge to the MS4). [...] Coapplicants also may use interjurisdictional agreements to show legal authority and to ensure planning, coordination, and the sharing of the resource burden of permit compliance" (EPA, 1992a).

The Permittees' ability to determine compliance and noncompliance with permit conditions is critical to control pollutant discharges to and from MS4s. Determination of compliance and noncompliance allows for significant sources of pollutants to be identified and addressed, thereby minimizing the discharge of pollutants from the MS4 and the resulting receiving water quality degradation. For this reason each Permittee must have legal authority to carry out the inspections, surveillance, and monitoring necessary to assess compliance. Regarding compliance determination, the EPA states "municipalities should provide documentation of their authority to enter, sample, inspect, review, and copy records, etc., as well as demonstrate their authority to require regular reports" (EPA, 1992a).

Permittees must demonstrate that they can operate pursuant to legal authority to meet the requirements of Federal NPDES regulations 40 CFR 122.26(d)(2)(A-F). For the Permittee to demonstrate this legal authority, the EPA suggests that "One acceptable way to support a declaration of adequate legal authority, including the ability to enforce appropriate ordinances, is for the municipality to provide a certification from the Municipal General Counsel or equivalent. The certification should state that the applicant has the legal authority to apply and enforce the requirements of 40 CFR 122.26(d)(2)(i)(A-F) in State or local courts. The certification would, therefore, cite specific ordinances and the reasons why they are enforceable. The statement should discuss what the municipality can do to ensure full compliance with 40 CFR 122.26(d)(2)(i)" (EPA, 1992a).

3. Comments on Existing and Proposed Programs Related to Legal Authority

Section 2.4.1 of the ROWD states that the Permittees have adopted a comprehensive storm water ordinance and have previously provided a certification of adequate legal authority to the SDRWQCB. The Permittees may have had adequate legal authority to implement Order No. R9-98-02, but the existing ordinances may need to be updated to reflect requirements contained in Order No. R9-2004-001 (i.e. the required implementation of designated minimum BMPs that each Permittee develops for industrial and commercial sites, residential areas and activities, and construction sites), and a new certification will need to be submitted. The Permittees report in Section 2.4 of the ROWD that the Permittees have the legal authority

to prohibit the disposal of pollutants onto public or private land, to prohibit illicit connections and discharges and to prohibit non-storm water discharges (except for those specifically listed).

Section 2.4.1 of the ROWD states that Permittees have the authority to require construction activity to comply with local erosion and sediment control ordinances. Industrial sites are not specifically addressed in the ROWD. However, the ordinances that are currently in place in Riverside County and the City of Temecula state that any industrial discharger, discharger associated with construction activity, or other discharger subject to an NPDES permit shall comply with all requirements of such permit. Compliance with the General Industrial Permit and the General Construction Permit is specifically required.

Section 2.4.1 of the ROWD states that the Permittees have the authority to prohibit illicit connections and discharges to the MS4 and to prohibit the disposal of pollutants on public or private land.

Section 2.4.2.2 of the ROWD lists various enforcement/compliance mechanisms, but is vague about how they will be used. The ROWD states that the SDRWQCB will take the lead in initiating enforcement actions related to high priority incidents. This is incorrect and must be revised in the SWMP. Permittees are responsible for enforcing compliance with all aspects of Order No. R9-2004-001.

Although specific **Requirements D.1.g., D.1.h. and D.1.i**. are not addressed in the ROWD, the model urban runoff ordinance adopted by the Permittees (Riverside County, 1995), requires compliance with existing and future MS4 permits. This general statement may provide adequate legal authority to comply with these requirements of Order No. R9-2004-001.

It should be noted that the ROWD states that the SDRWQCB will take the lead in initiating enforcement actions related to high priority incidents. This is incorrect and must be revised in the SWMP. Permittees are responsible for enforcing compliance with all aspects of Order No. R9-2004-001.

It should also be noted that the District does not have an ordinance to prohibit illicit discharges to its MS4(s) or to require implementation of MS4 permits. The District relies on the legal authority of the municipalities that have jurisdiction over the land uses within the District.

E. STORM WATER MANAGEMENT PLAN (SWMP) (Order Section E)

1. Specific Legal Authority for SWMP Requirements

Federal NPDES regulations 40 CFR 122.26(d)(2)(iv)(A) – (D) require that permittees develop a management program that covers the duration of the permit. The regulations require that permittee plans include descriptions of each required program component to demonstrate how they will reduce pollutants to the MEP using management practices, control techniques and systems, design and engineering methods.

2. Discussion of SWMP Requirements

To meet the above-referenced federal requirements, Section E of the Order requires the development of **Individual and Watershed SWMPs**, and Attachment D provides specific

0000110

information that, where applicable, must be included in each Permittee's SWMP. The framework provided in Attachment D allows the Permittees to develop the programs, activities, and measures that will satisfy or exceed the requirements of the federal regulations, and therefore, the Order. It provides the Permittees with the flexibility and discretion to build upon existing programs and develop BMP requirements most appropriate for their jurisdiction.

The Order requires each Permittee to develop its own **Individual SWMP**. This is necessary for each Permittee to describe their own specific programs and activities that will be implemented to reduce pollutants in discharges of urban runoff within their jurisdiction to the MEP. For example, Permittees may have different enforcement protocol or development project review procedures, while another Permittee may lack a program component altogether (i.e., the District has no jurisdiction over residential, commercial, or industrial areas). Therefore, individual plans specific to each Permittee are necessary.

Section E of the Order also requires the development of a **Watershed SWMP**. This is necessary because watershed-wide issues should be addressed collectively (see Section VIII.K of this Fact Sheet for a discussion of the watershed management approach). Also, some programs are conducted collectively by the Permittees, or solely by the Principal Permittee on behalf of the Permittees. For example, the Permittees collaborate to develop materials and implement the public education program. These area-wide programs and activities should be described in an area-wide plan.

The Order requires the Permittees to develop, submit, and implement the SWMP within one year from the date of adoption (**Finding No. 13**). The one-year time schedule is both necessary and feasible for the following reasons:

- In accordance with 40 CFR 122.26(d)(2)(iv)(A) – (D), the Permittees should have developed a comprehensive SWMP as part of their application for permit renewal. In various correspondence, beginning in July of 2002, the SDRWQCB provided the Permittees with specific information that should have been addressed in the management plan to be submitted as an application. The Permittees have disregarded these requests for a detailed SWMP and submitted an application that stated that the DAMP would be revised within 18 months of permit adoption. Providing the Permittees 365 days from the date of permit adoption, is essentially providing them with an additional year. Further additional time is not justified.
- The requirements are based on federal NPDES regulations that have been in place for 13 years. Therefore, the Permittees should have an existing plan that can feasibly be improved to meet the current expectation of the MEP standard within one year.
- 34 other permittees in the San Diego Region were given 365 days to develop and implement similar requirements. All of these permittees met the requirements in a timely fashion. The City of Escondido said the one-year schedule was reasonable, including the inter-departmental planning and review, public meetings, Planning Commission review and approval, and City Counsel approval. The Permittees have not proven that they are significantly different procedurally from the 34 other permittees to warrant additional time.

- The SDRWQB has provided the Permittees with several acceptable models that can be used as examples.
- In order to reduce pollutants in runoff to the MEP, the Permittees, in the rapidly-developing Upper Santa Margarita Watershed, must implement improved urban runoff management programs as soon as possible.

3. Comments on Existing and Proposed Programs Related to SWMP Requirements

As part of the ROWD, the Permittees proposed to update and modify their existing DAMP, dated March 1993, to incorporate new programs and commitments. Section E and Attachment D of the Order provide direction to the Permittees in revising the DAMP, which serves the purpose of, and should be referred to as, a SWMP. It is not required or necessary for the Permittees to abandon existing programs and management measures. The SWMP is just a framework for each Permittee to describe existing and improved programs that will be implemented during the permit term.

The Permittees proposed to improve the DAMP within 18 months from the adoption of the Order. For the reasons described above, and considering that Permittees will be building on existing programs, one year is ample time to develop a SWMP (consisting of the Individual and Watershed SWMPs).

F. DEVELOPMENT PLANNING (Order Section F)

1. Specific Legal Authority for Development Planning Requirements

Federal NPDES regulation 40 CFR 122.26(d)(2)(iv)(A)(2) provides that Permittees' proposed SWMPs must include "A description of planning procedures including a comprehensive master plan to develop, implement and enforce controls to reduce the discharge of pollutants from municipal storm sewers which receive discharges from areas of new development and significant redevelopment. Such plan shall address controls to reduce pollutants in discharges from municipal separate storm sewers after construction is completed." This regulation generally applies to all directives contained in Requirements F.1-F.4 of Order No. R9-2004-001.

2. Discussion of Development Planning Requirements

As discussed in section VI of this Fact Sheet, urban development can negatively impact water quality by increasing the pollutant load, volume, and velocity of urban runoff. An effective means for minimizing these impacts is to address water quality concerns during the planning phase of urban development. The EPA supports this, stating "Post-construction storm water management in areas undergoing new development or redevelopment is necessary because runoff from these areas has been shown to significantly effect receiving water bodies. Many studies indicate that prior planning and design for the minimization of pollutants in post-construction storm water discharges is the most cost-effective approach to storm water quality management" (EPA, 2000c). The Preamble to the Phase I Final Rule emphasizes that municipalities with large areas of new development have a greater opportunity to focus controls to reduce pollutants in storm water generated by new developments during the planning phase (55 Fed. Reg. 48053). For these reasons, section F

of the Order No. R9-2004-001 includes requirements for the development and implementation of BMPs to reduce the discharge of pollutants in urban runoff from development projects to the MEP.

The EPA finds that the Permittee "must thoroughly describe how the municipality's comprehensive plan is compatible with the storm water regulations" (EPA, 1992a). To achieve this, in accordance with **Requirement F.1**, the Permittee shall incorporate water quality and watershed protection principles and policies into its general plan (or equivalent plan). The EPA supports addressing urban runoff problems in general plans (or equivalent plans) when it states "Runoff problems can be addressed efficiently with sound planning procedures. Master plans, comprehensive plans, and zoning ordinances can promote improved water quality by guiding the growth of a community away from sensitive areas and by restricting certain types of growth (industrial, for example) to areas that can support it without compromising water quality" (EPA, 2000c).

In the Santa Margarita Watershed, there is concern among resource managers that the cumulative impacts associated with rapid development of the upper watershed will degrade the ecological integrity of the entire watershed (Stein and Ambrose, 1998). Controls on new development are critical for the protection of the sensitive ecological functions and downstream aquifers in the Santa Margarita Watershed.

The principles and policies included in **Requirement F.1** are based on TAC findings (SWRCB, 1994). They incorporate basic measures that have been found to minimize pollutants in urban runoff from new development and redevelopment.

Requirement F.2 directs Permittees to incorporate post-construction BMPs into all new development and redevelopment projects during the planning and approval. The EPA finds that review of development plans during the project approval process is necessary, stating:

> "Proposed storm water management programs should include planning procedures for both during and after construction to implement control measures to ensure that pollution is reduced to the maximum extent practicable in areas of new development and redevelopment. Design criteria and performance standards may be used to assist in meeting this objective. Further, storm water management program goals should be reviewed during planning processes that guide development to appropriate locations and steer intensive land uses away from sensitive environmental areas. [...] A municipality should describe how it plans to implement the proposed standards (e.g., through an ordinance requiring approval of storm water management programs, a review and approval process, and adequate enforcement)" (EPA, 1992a).

Regarding conditions of approval in storm water permits, the EPA finds that "Proposed storm water management programs should include planning procedures for both during and after construction to implement control measures to ensure that pollution is reduced to the maximum extent practicable in areas of new development and redevelopment. Design criteria and performance standards may be used to assist in meeting this objective" (EPA, 1992a). The EPA further finds that "The municipality should consider storm water controls and structural controls in planning, zoning, and site or subdivision plan approval" (EPA, 1992a). In addition, the EPA states each Permittee should "have an ordinance or other

regulatory mechanism requiring the implementation of post-construction runoff controls [...]" (EPA 2000c).

Furthermore, in its Phase II Final Rule, EPA requires small municipalities to "Use an ordinance or other regulatory mechanism to address post-construction runoff from new development and redevelopment projects [...]" (EPA, 1999b). As discussed in section VII.E of this Fact Sheet, Phase II findings and guidance are applicable to the Permittees.

Standard Urban Storm Water Mitigation Plan (SUSMP) - (Requirement F.2.b):

As part of the SWMP, Permittees must also develop SUSMPs for Priority Development Projects. The SUSMPs include requirements for implementation of minimum source control and treatment control BMPs. The treatment control BMPs also have numeric sizing criteria that must be met based on volume or flow (of runoff). By developing and implementing the SUSMPs, the Permittees are reducing the potential negative impacts of urban runoff on receiving waters.

SUSMP requirements are necessary due to the potential for new development to increase the volume, flow velocity, and pollutant load of urban runoff. As the TAC states, "Urban development often results in impacts to the land and consequently the water bodies adjacent to the land. The two major changes that result from urbanization are changes in stream hydrology and an increase in pollutant loading" (SWRCB, 1994). To alleviate these potential negative impacts on receiving waters, each Permittee must develop and implement a SUSMP for various categories of development. This is consistent with EPA guidance, which states "Through ordinances, permits, or contracts, municipalities may mandate storm water controls for new residential, commercial, or industrial developments in order to improve or assure maintenance of the quality of receiving water at or near pre-development levels (EPA, 1992a)". Also, EPA recommends design criteria (such as numeric sizing criteria) and performance standards for post construction BMPs at development sites (EPA, 1992a).

The post-construction requirements and design standards contained in **Section F** of Order No. R9-2004-001 are consistent SWRCB guidance, Superior Court decision, and RWQCB requirements. The SWRCB and RWQCBs have made several recent decisions in regards to inclusion of SUSMP in MS4 permits. In a precendential decision, SWRCB WQ Order No. 2000-11 (SWRCB, 2000b), SWRCB found that the SUSMP provisions constitute MEP for addressing pollutant discharges resulting from Priority Development Projects (**Finding No. 24**). The provisions of Section F of the Order are consistent with those previously issued by the SDRWQCB for Orange County (Order No. R9-2002-0001) and San Diego County (Order No. R9-2001-001), as well as requirements in the Los Angeles County MS4 permit (Order No. R4-2001-182). In SWRCB Order WQ 2001-15, the SWRCB reaffirmed the inclusion of SUSMP requirements as meeting MEP (SWRCB, 2001). On February 13, 2003, the State Superior Court dismissed an appeal of the San Diego County MS4 permit (Order No. R9-2001-001) that includes the SUSMP requirements (Superior Court of CA, 2003).

Requirement F.2.b. gives the Permittees 365 days to develop, adopt, and implement local SUSMPs. This requirement is reasonable because the SUSMPs have been implemented by various neighboring municipalities and several examples of documents and programs exist for the Permittees to use in the development of their own local SUSMPs. For example, on June 12, 2002, the SDRWQCB approved a Final Model SUSMP as meeting the new development and redevelopment controls and SUSMP requirements of the San Diego County

Permit (San Diego Co-Permittees, 2002). The Orange County permittees developed a Model Water Quality Management Plan that can also be used for guidance (County of Orange, 2003). The 640 days for SUSMP implementation requested by the Permittees has not been incorporated into the Order. In addition to the multiple SUSMP examples already available for the Permittees, the City of Murrieta and Riverside County will have developed SUSMP-type requirements pursuant to the Santa Ana RWQCB MS4 permit (Order No. R8-2002-0011) by January 2005, well before the 365-day schedule contained in the Order. Furthermore, the Permittees already have the authority to require BMPs for new development through their existing storm water ordinances. Overall, the 365-day time schedule is practicable for the Permittees.

Priority Development Project Categories

Priority Development Projects include: a) all new development projects; and b) those redevelopment projects that create, add or replace at least 5,000 square feet of impervious surfaces on an already developed site[12], that are listed under the project categories or locations in **Requirement F.2.b.(1)**. The project categories generally result in the large increases in impervious surfaces, are potential significant sources of pollutants, or have a history of storm water mismanagement. SWRCB Order WQ Order 2000-11 addressed the majority of the categories included in **Requirement F.2.b.(1)** and gave RWQCBs discretion to include additional categories or locations in SUSMP requirements in future MS4 permits (SWRCB, 2000b). Those categories that were not included in the precedential outcome of the SWRCB Order are discussed below.

Requirement F.2.b.1.(h) includes streets, roads, highways, and freeways as a SUSMP Priority Development Project category. This is due to their potential to be a significant contributor of pollutants in urban runoff. A Federal Highway Administration (FHA) report finds that concentrations of total suspended solids, nitrate + nitrite nitrogen, and zinc exceed EPA benchmark values for concentrations of these pollutants in urban runoff (FHA, 1990). Another study found that, "Water quality impacts due to highway runoff could be significant particularly in environmentally sensitive areas, such as wetlands, ground-water recharge zones, and drinking water supply watershed" (CTE, 1998). Streets, roads, highways, and freeways also consist of extensive impervious surfaces, which alter flow regimes and increase potential for downstream erosion.

Requirement F.2.b.1.(i) includes retail gasoline outlets (RGOs) as a Priority Development Project category because RGOs are points of confluence for motor vehicles for automotive related surfaces such as repair, refueling, tire inflation, and radiator fill-up and consequently produce significantly greater loadings of hydrocarbons and trace metals (including copper and zinc) than other urban areas. To meet MEP, source control and structural treatment BMPs are needed at RGOs that meet the following criteria: (a) 5,000 square feet or more or (b) a projected Average Daily Traffic (ADT) of 100 or more vehicles per day. These are

[12] Redevelopment includes, but is not limited to: the expansion of a building footprint or addition or replacement of a structure; structural development including an increase in gross floor area and/or exterior construction or remodeling; replacement of impervious surface that is not part of a routine maintenance activity; and land disturbing activities related with structural or impervious surfaces. Where redevelopment results in an increase of less then fifty percent of the impervious surfaces of a previously existing development, and the existing development was not subject to SUSMP requirements, the numeric sizing criteria discussed in Requirement F.2.b.(3) applies only to the addition, and not to the entire development.

appropriate thresholds since vehicular development size and volume of traffic are good indicators of potential impacts of urban runoff from RGOs on receiving waters. (**Finding No. 25**)

In SWRCB WQ Order No. 2000-11, the SWRCB removed RGOs as a SUSMP category because they were already heavily regulated, and limited on their ability to construct infiltration devices or perform treatment. Order No. 2000-11 also acknowledged that a threshold (size, average daily traffic, etc.) appropriate to trigger SUSMP requirements should be developed and that specific findings regarding RGOs should be included in MS4 permits to justify the requirement (SWRCB, 2000b). The SWRCB removed the RGO category from the San Diego County MS4 permit (Order No. R9-2001-01) because the SDRWCB did not specifically address the issues raised in WQ Order No. 2000-11. As discussed below, the LARWQCB and the SDRWQCB have adequately addressed the issues, and RGOs have been included as a SUSMP category in the Los Angeles County MS4 permit (Order No. R4-01-182), and the statewide general Phase II MS4 permit (WQ Order No. 2003-0005-DWQ). Additional detailed supporting information can found in the technical Report, *Retail Gasoline Outlets: New Development Design Standards for Mitigation of Storm Water Impacts* (LA and SDRWQCB, 2001b).

- Heavily Regulated - The heavily regulated distinction does not remove RGOs as significant source of pollutants in urban runoff and therefore should not be a basis for exempting them. Other regulation of RGOs is separate from regulation under the CWA and does not necessarily relate to water quality from urban runoff. Other municipalities already require that RGOs implement structural BMPs even though they are regulated under other programs.

- Treatment Limitations - Structural treatment BMPs are available for RGOs to reduce pollutants and control peak flow rates and velocities that that are both inexpensive and effective. Studies have shown that catch basin inserts can remove hydrocarbons and heavy metals that are the pollutants of concern. Sand or media filters have also been found to be effective and available for use at RGOs. Cisterns are examples of established BMPs to control flow, but RGOs could also use site design measures such as small weirs, baffles, and redirecting roof runoff to pervious areas.

- Safety - No evidence has been provided to indicate that use of these structural BMPs will pose a safety risk. In fact, filter BMP have been installed at RGOs in other municipalities without apparent adverse safety effects. In addition, similar BMPs such as oil/water separators have been used for years by RGOs without apparent adverse safety risks.

- Threshold - Studies indicate that runoff from RGOs contains similar pollutants to runoff from commercial parking lots. In precedential WQ Order 2000-11, the SWRCB determined that parking lots with a size threshold of 5,000 square feet or more is an appropriate SUSMP category (SWRCB, 2000b). Based in part on the similarity of pollutants, the 5,000 square feet size threshold was also included for RGOs in the Order. In addition, other municipalities currently use similar size thresholds for RGOs to require design standards to mitigate storm water runoff. To provide additional flexibility for the Permitees, another threshold of 100 or more motor vehicles ADT has been added to the Order. This threshold is based on requirements from Washington and Oregon for what is

considered a "high use" site. This is an appropriate threshold since vehicular traffic is a good indicator of the amount of pollutants generated at a site.

The SDRWQCB followed the SWRCB's direction for the inclusion of RGOs as a Priority Development Project category by including the above discussion in this Fact Sheet, as well as a specific finding (Finding No. 25) that justifies the regulation of urban runoff from RGOs that meet certain criteria. The SWRCB also addressed the inclusion of RGOs through the appeals of MS4 permits issued by the Los Angeles and San Francisco RWQCBs that included RGOs as a priority development category. The SWRCB held a workshop that identified RGOs as significant sources of pollutants and dismissed the petitions for removal of RGOs from the SUSMP requirements in the permits. The Western States Petroleum Association, who filed the petitions to the inclusion of RGOs, did not appeal the SWRCB's dismissal of the petitions and did not comment on the Order. Finally, the SWRCB adopted a General Permit for the Discharge of Storm Water from Small MS4s (WQ Order No. 2003-0005-DWQ), which includes RGOs as a priority development category.

Considering all of the supporting documentation discussed above, it is appropriate to include RGOs as a Priority Development Project category.

ESAs are also included as a Priority Development Project location for the reasons discussed in section VI of this Fact Sheet. For further information regarding the inclusion of ESAs is contained in the technical report, *Mitigation of Storm Water Impacts from New Development in Environmentally Sensitive Areas* (LARWQCB, 2000c).

Requirement F.2.b.2 specifies that SUSMPs include a list of recommended source control and treatment control BMPs for all projects falling under the Priority Development Project categories. This requirement also establishes criteria that these BMPs must meet. The intent of the requirement is to allow the Permittees and developers flexibility in choosing which combination of source control and treatment control BMPs are to be implemented at a site and to define what minimum performance standards must be met by these selected BMPs.

As described in **Finding No. 18**, urban runoff treatment and/or mitigation in accordance with any of the requirements in Order No. R9-2004-001 must occur prior to the discharge of storm water or urban runoff into receiving waters. Allowing polluted runoff to enter a receiving water prior to treatment to the MEP will result in degradation of the water body and potential exceedances of water quality standards, from the discharge point to the point of dissipation, infiltration, or treatment. Furthermore, the construction, operation, and maintenance of a pollution control facility in a water body can negatively impact the physical, chemical, and biological integrity, as well as the beneficial uses, of the water body. This requirement is supported by federal regulation 40 CFR 131.10(a) and EPA guidance. According to the EPA, "To the extent possible, municipalities should avoid locating structural controls in natural wetlands. Before considering siting of controls in a natural wetland, the municipality should demonstrate that it is not possible or practicable to construct them in sites that do not contain natural wetlands... Practices should be used that settle solids, regulate flow, and remove contaminants prior to discharging storm water into a wetland" (EPA, 1992a).

The numeric sizing criteria is included to ensure that structural BMPs are sized effectively to remove the pollutants of concern. The sizing criteria are based on capture of runoff from a

24-hour 85th percentile rainfall depth. The 24-hour 85th percentile storm represents the "knee" of a precipitation probability curve from which it is no longer cost effective to treat runoff. The precipitation curve is calculated by using local historical rainfall data on the number and intensity of storm events. SDRWQCB staff has calculated the average 24-hour 85th percentile rainfall depth for area covered by the permit to be 0.6 inch (See Table 2 below). The San Diego SUSMP Staff Report developed for the San Diego MS4 Permit is available for example calculations on how staff determined the average 85th percentile rainfall depth t (SDRWQCB, 2001b). However, the requirements allow needed flexibility for the Permittees and developers to mitigate runoff based on either volume or flow. In addition, the requirements allow for several different options to calculate the amount of runoff to ensure that projects are not required to capture runoff from storm events beyond the point of diminishing returns. For example, a project proponent may demonstrate that the 24-hour 85th rainfall depth may be less than the average 0.6 inch by using local precipitation data.

Table 5. Calculation of 85th Percentile Rainfall Depth for the Upper Santa Margarita Watershed

Wildomar

Total Range (Inches)	Number of Storms	Cumulative	Cumulative Percent
0.01 - 0.09	917	917	29.80
0.10 - 0.49	1344	2261	73.46

Requirement F.2.b.4 allows Permittees the opportunity to develop an equivalent method for calculating the volume or flow to be mitigated. The intent of the requirement is to provide necessary flexibility to Permittees to develop equivalent methods in calculating the volume or flow that must be mitigated from the 24-hour 85th percentile rainfall depth.

As part of the SUSMP (**Requirement F.2.b.5**), the Permittees are required to develop a procedure to identify pollutants or conditions or concern for each Priority Development Project. Identifying the pollutants or conditions or concern for a project is crucial to selecting the appropriate BMPs.

Requirement F.2.b.7 allows Permittees to waive treatment control BMPs when all available BMPs have been considered and rejected as infeasible. The requirement also allows the Permittees to develop a program to require projects that receive waivers, to transfer the cost savings to a fund. The intent of the requirements is to allow Permittees necessary flexibility to waive treatment control BMPs when it can be established that the implementation of treatment control BMPs that meet numeric sizing criteria is not feasible at a given site. This provision also allows Permittees discretion to transfer the costs saving from such a waiver to a fund for water quality projects within the watershed.

Requirement F.2.b.8 defines what restrictions to protect groundwater quality are placed on treatment control BMPs that are designed to primarily function as infiltration devices, but allows Permittees to develop alternative restrictions. Applying large amounts of runoff water in a small area has the potential to adversely impact groundwater quality. The intent of these requirements is to provide necessary restrictions for use of these structural BMPs to protect the beneficial uses (municipal, agricultural, industrial) of groundwater in the Santa Margarita watershed. The intent of the requirements is also to provide the Permittees needed flexibility to develop alternative restrictions for projects or locations.

Requirement F.2.b.9 directs Permittees to develop numeric criteria to ensure discharges from Priority Development Projects maintain or reduce pre-development downstream erosion and protect stream habitat. Development can cause increases in runoff amount and velocity causing down erosion problems. Simply maintaining the peak flow rate may not be adequate to prevent increased downstream erosion because of the increase in duration of erosive flows. According to several studies, this approach is an oversimplification of geomorphological processes (Brown, 2001). Simply controlling the post-development peak discharge rate

causes the duration of erosive flows to increase, which may actually exacerbate channel erosion since bank are exposed to a longer duration of erosive events (Brown, 2001). Development of numeric criteria over the permit cycle is needed to establish a design storm type and level of discharge that is appropriate to protect downstream habitat from increased erosion. Due to urbanization, there is a substantial increase in volume and rates of runoff during smaller storm events. The intent of the requirements in the Order to control peak rates, velocities, volumes, and durations from these smaller storms (typically 1 or 2 year storm events) to maintain downstream erosion and not the larger storm events (Brown, 2001). Section II.A of Monitoring and Reporting Program No. R9-2004-001 requires the Permittees to conduct a study to help develop the numeric criteria.

The Ventura County Flood Control District and the Southern California Coastal Water Research Project are currently conducting studies to evaluate the erosive effects on urbanization in part, to quantitatively predict downstream impacts due to development. The development of numeric criteria by the Permittees should build upon these efforts and not duplicate them. The intent of these requirements is to mitigate these potential increases and prevent downstream erosion problems like the severe bank erosion and channel degradation that has occurred in Murrieta Creek (USFWS, 2000 and EPA, 2003).

The Permittees are encouraged to use any existing programs to meet these requirements and should provide detail on how these programs are implemented in the SUSMPs. It is expected that the Permittees will utilize information from any studies that are conducted on numeric criteria to protect downstream erosion and incorporate them into their development of their own numeric criteria by 2009.

Requirement F.3 requires the Permittees to consider the effects of development projects on water quality during project approval processes. This measure will help ensure that potential water quality problems resulting from the development are identified and addressed. The EPA finds that "Proposed storm water management programs should include planning procedures for both during and after construction to implement control measures to ensure that pollution is reduced to the maximum extent practicable in areas of new development and redevelopment. Design criteria and performance standards may be used to assist in meeting this objective" (EPA, 1992a). The EPA further finds that "The municipality should consider storm water controls and structural controls in planning, zoning, and site or subdivision plan approval" (EPA, 1992a). The TAC advises that the Permittees' CEQA initial study checklists be revised to include consideration of water quality effects from new development or redevelopment. The questions included in Requirement F.3. are based on questions recommended by the TAC (SWRCB, 1994).

Requirement F.4 requires Permittees to educate staff (on an annual basis) and the development community on the impacts from development and the requirements of the Order. Training of municipal planning and development review staff is a critical aspect of an urban runoff management program. With adequate training, municipal planning and development review staff can require implementation of BMPs early in the project planning process, thereby minimizing the urban runoff impacts of development in a cost effective manner. The EPA supports training of municipal staff when it identifies "training for

appropriate employees" as a measurable goal of an urban runoff management program (EPA, 2000c).

Education on urban runoff planning issues for the public sector involved with development is equally critical. When the public sector has knowledge of urban runoff issues and regulations, it is more likely to incorporate storm water planning in the development and redevelopment process. In this manner, implementation of measures to address these issues will be included in development plans, saving time and money for the developer and the municipality. The TAC finds that Permittees should "Establish an education/information dissemination program that includes such things as: brochures to distribute to developers and contractors at permit counters and by mail; reference and training manuals for planners, engineers, inspectors, developers, contractors; and training and information exchange workshops" (SWRCB, 1994).

Furthermore, in its Phase II Final Rule, EPA requires small municipalities to "...implement a public education program to distribute educational materials to the community or conduct equivalent outreach activities [...]" (EPA, 1999b). As discussed in section VII.E oft his Fact Sheet, Phase II findings are applicable to the Permittees.

3. Comments on Existing and Proposed Programs Related to Development Planning

Section 6.3 of the ROWD states that, "Within 10 months of permit adoption, each Co-Permittee will review its general plan and land use ordinances to assess whether the following principles and policies are properly considered:

1. Limit disturbance of natural water bodies and drainage systems; conserve natural areas; protect slopes and channels; minimize impacts from urban runoff on the biological integrity of natural drainage systems and water bodies;
2. Minimize changes in hydrology and pollutant loading; require incorporation of source control and structural BMPs to mitigate the projected increases in pollutant loads and flows; ensure that post-construction runoff rates and velocities from a site do not result in significant adverse impact on downstream erosion and stream habitat; limit the quantity of Urban Runoff directed to impermeable surfaces and the MS4s; and maximize the percentage of permeable surfaces to allow more percolation of Urban Runoff in to the ground;
3. Preserve wetlands, riparian corridors, and buffer zones, establish reasonable limits on the clearing of vegetation from the project site;
4. Encourage the use of BMPs to manage Urban Runoff quality and quantity;
5. Provide for appropriate permanent measures to reduce pollutant loads in Urban Runoff from the development site; and
6. Establish development guidelines for areas particularly susceptible to erosion and sediment loss.

In addition each Co-Permittee shall provide a summary of the review and assessment in that year's Annual Progress Report and within 24 months the Co-Permittees shall revise their general plans and land use ordinances as determined necessary during review and assessment."

This proposal is basically consistent with **Requirement F.1**.

Section 6.3 of the ROWD proposes that Permittees will reduce pollutants and runoff flows form new developments and significant redevelopment to the MEP by:

1. Reviewing and revising their respective land use approval and CEQA review processes to ensure that they address urban runoff issues.
2. Developing and implementing a public/business education program.

To be consistent with the **Requirement F.2.a**. the Permittees' proposal must also provide that BMPs will be required and that new developments will not cause or contribute to an exceedance of water quality standards.

Section 6.3 of the ROWD states that Permittees will continue to implement the New Development Guidelines and will continue to address the maintenance, operation and funding of structural BMPs that ensure management of Urban Runoff quality from new development. The Permittees' current processes, including the New Development Guidelines, do not contain specific requirements consistent with those in **Requirement F.2.b.(1)**.

Section 6.3 of the ROWD proposes that, within 9 months of permit adoption, the Permittees will develop a Model Water Quality Management Plan (WQMP) identifying BMPs, including design standards for source control and structural BMPs to be applied when discretionary approval is sought. The WQMP is intended to address regional and sub-regional BMPs and to provide guidelines for site-specific, post-construction BMPs to address management of urban runoff quantity and quality in new development and significant redevelopment projects. The ROWD does not specify priority development categories, numeric criteria, or any other specific provisions required in **Requirement F.b**, which must be included in the WQMP. It should also be noted that the SDRWQCB requires the use of site-specific source and treatment control BMPs and does not encourage the use of regional or sub-regional BMPs. Regional and sub-regional BMPs are sometimes necessary in an area that has already been developed without urban runoff management measures, but it is not justified for a developing area that has the opportunity to incorporate low-impact designs and management measures into new developments during the planning process.

Also, if the Permittees choose to develop a model document, this should be completed within 6 months of the permit adoption date, so that Permittees have sufficient time to begin implementation of SUSMP requirements within 1 year. Permittees are encouraged to use existing model SUSMP documents (County of Orange, 2003; San Diego Co-Permittees, 2002), which the SDRWQCB has previously approved, so that resources can be focused on program implementation instead of developing another similar model.

Section 6.3 of the ROWD proposes that, within 10 months of permit adoption, Permittees shall review their land use approval and CEQA processes to ensure that urban runoff issues are properly considered, and revise if necessary to mitigate impacts to water quality. The ROWD states that the following six factors will be considered in each Permittee's environmental assessment:

- Potential impact that construction of the project may have on urban runoff;
- Potential impact that operation of the project may have on urban runoff;

0000122

- Potential for discharge of pollutant in urban runoff from areas identified within the project site to be used for material storage, vehicle or equipment fueling, vehicle or equipment maintenance (including washing), waste handling, hazardous materials handling or storage, delivery areas or loading docks, or other outdoor work areas;
- Potential for pollutants in urban runoff discharged from a project site to affect the beneficial uses of receiving waters;
- Potential for significant changes in the flow velocity or volume of urban runoff from a project site to result in environmental harm; and
- Potential for significant increases in erosion of a project site or surrounding areas.

These factors are similar to the examples listed in **Requirement F.3**, therefore, this proposal is sufficient to comply with the **Requirement F.3**.

No specific internal or external training regarding development planning is proposed in the ROWD. It states that the New Development Guidelines, which contains the information needed to acquaint developers and contractors with the requirements for post-construction BMPs, will be made available during the review process for project planning and permitting. This proposal does not meet the MEP standard and, therefore, is insufficient to meet the requirements in **Requirement F.4**.

G. CONSTRUCTION (Order Section G)

1. Specific Legal Authority for Construction Requirements

- Federal NPDES regulation 40 CFR 122.26(d)(2)(iv)(D) provides that the proposed management program include "A description of a program to implement and maintain structural and non-structural best management practices to reduce pollutants in storm water runoff from construction sites to the municipal storm sewer system."
- Federal NPDES regulation 40 CFR 122.26(d)(2)(iv)(D)(1) provides that the proposed management program include "A description of procedures for site planning which incorporate consideration of potential water quality impacts."
- Federal NPDES regulation 40 CFR 122.26(d)(2)(iv)(D)(2) provides that the proposed management program include "A description of requirements for nonstructural and structural best management practices."
- Federal NPDES regulation 40 CFR 122.26(d)(2)(i)(A) provides that each Permittee must demonstrate that it can control "through ordinance, permit, contract, order or similar means, the contribution of pollutants to the municipal storm sewer by storm water discharges associated with industrial activity and the quality of storm water discharged from site of industrial activity."
- Federal NPDES regulation 40 CFR 122.26(b)(14) provides that "The following categories of facilities are considered to be engaging in 'industrial activity' for the purposes of this subsection: [...] Construction activity including clearing, grading and excavation activities [...]."
- Federal NPDES regulation 40 CFR 122.26(d)(2)(iv)(D)(3) provides that the proposed management program include "A description of procedures for identifying priorities for

inspecting sites and enforcing control measures which consider the nature of the construction activity, topography, and the characteristics of soils and receiving water quality."

- Federal NPDES regulation 40 CFR 122.26(d)(2)(iv)(D)(4) provides that the proposed management program include "A description of appropriate educational and training measures for construction site operators."

2. Discussion of Construction Requirements

CWA sections 402(p)(3)(B)(ii-iii) requires each Permittee to prohibit non-storm water discharges into its MS4 and to reduce the discharge of pollutants to the MEP for all urban land uses. The purpose of these two broad requirements is to minimize the short and long-term impacts of urban runoff on receiving water quality. Land used for construction activities is clearly identified in the federal regulations as one of several high priority land uses from which pollutants in urban runoff discharges must be reduced to the MEP by each Permittee.

Requirements G.2 and G.3 are consistent with the EPA statement that "A description of the local erosion and sediment control law or ordinance is needed to satisfy this requirement [i.e., Federal NPDES regulation 40 CFR 122.26(d)(2)(iv)(D)(2)]" (EPA, 1992a). Regarding Permittee approval of construction activities, the EPA further states, "applicants must propose site review and approval procedures that address sediment and erosion controls, storm water management, and other appropriate measures. Approvals should be clearly tied to commitments to implement structural and nonstructural BMPs during the construction process" (EPA, 1992a).

Furthermore, the EPA requires small municipalities to develop and implement for construction sites "An ordinance or other regulatory mechanism to require erosion and sediment controls, as well as sanctions to ensure compliance [...]" (EPA, 2000c).

Requirement G.2 provides the Permittees with 365 days to update their grading ordinances and not the 640 days requested the Permittees. The Permittees will have adequate authority to require and enforce minimum BMPs at construction sites prior to the next rainy season and 365 days is adequate to allow for the only minor changes needed in the grading ordinances.

An effective means for reducing pollutants discharges from construction and grading activities is specified under **Requirement G.3** for the Permittees to develop conditions of approval for grading and construction permits that require measures to minimize pollutant discharges. The EPA recommends approval processes which consider water quality impacts, stating that approval process requirements should "include phasing development to coincide with seasonal dry periods, minimizing areas that are cleared and graded to only the portion of the site that is necessary for construction, exposing areas for the briefest period possible, and stabilizing and reseeding disturbed areas rapidly after construction activity is completed (EPA, 1992a)". Other suggested construction and grading conditions of approval listed in this item are based on TAC recommendations (SWRCB, 1994).

During approval and issuance of grading and construction permits, each Permittee must review construction and grading plans to ensure that the conditions of approval are met. The EPA states that to determine if a construction site is in compliance with construction and

grading ordinances and permits, the "MS4 operator should review the site plans submitted by the construction site operator before ground is broken" (EPA, 2000c). Furthermore, the EPA requires small municipalities to develop and implement for construction sites "Procedures for site plan review which incorporate consideration of potential water quality impacts" (EPA, 1999b).

Development of an inventory of construction sites as specified by **Requirement G.4**. will help identify potential sources of pollutants in storm water. By assessing information provided in the inventory (such as site topography and site proximity to receiving waters), sites can be prioritized by threat to water quality. Those sites that pose the greatest threat can then be targeted for inspection and monitoring. This will allow for limited inspection and monitoring time to be most effective. The EPA requires that all construction sites be addressed (and therefore inventoried), stating: "All construction sites, regardless of size, must be addressed by the municipality. To begin to identify these sites, the applicant should obtain lists of construction site operators that are covered by general or individual storm water NPDES permits from the NPDES permitting authority. However, construction sites not covered by a storm water discharge permit also need to be addressed by the municipality. The best way to identify these construction sites and implement an effective BMP program to reduce pollutants in their runoff is through the site planning process" (EPA, 1992a).

Designation of a set of minimum BMPs for construction sites as specified by **Requirement G.5** will help ensure that appropriate, consistent controls are implemented and that discharges of pollutants from construction sites are reduced to the MEP. **Requirement G.5.c.** provides the Permittees with the flexibility to allow different BMPs for the wet and dry seasons. See the discussions regarding BMP Implementation and Permittee Responsibility for Requiring BMPs in Sections VII.C. and VII.D of this Fact Sheet.

Regarding designation of BMPs to be implemented, the EPA states, "the proposed management program should describe requirements for nonstructural and structural BMPs that operators of construction activities that discharge to MS4s must meet" (EPA, 1992a). While minimum BMPs will be required at all construction sites, implementation of particular BMPs will be site specific in order to address various conditions at different sites. Regarding site specific BMPs, the EPA states, "Appropriate structural and nonstructural control requirements will vary by project. Project type, size, and duration, as well as soil composition, site slope, and proximity to sensitive receiving waters will determine the appropriate structural and nonstructural BMPs" (EPA, 1992a).

In order to comply with Order No. R9-2004-001 requirements, implemented BMPs may need to be more stringent than those required under the General Construction Permit. The EPA implies that local sediment and erosion control requirements may be more stringent than General Construction Permit requirements when it states that "construction sites covered under NPDES permit regulations must indicate whether they are in compliance with State and local sediment and erosion control plans" (EPA, 1992a).

Requirement G.6. specifies requirements for inspecting construction sites. Inspections provide a necessary means by which Permittees can evaluate compliance with their municipal ordinances. Inspections are especially important at high-risk areas for pollutant discharges, such as industrial and construction sites. The Order (Attachment C - Definitions) defines the wet season as Oct 1 through April 30, which is consistent with Order No. R9-

2001-001, Order No. R9-2001-0001, Order No. R8-2002-0011, and the SDRWQCB implementation of the General Construction Permit. To ensure that BMPs are properly installed and maintained, the EPA states MS4 operators should "develop procedures for site inspection and enforcement of control measures to deter infractions" (EPA, 1992a).

The EPA further states that "Site inspections are expected to be the primary enforcement mechanism by which erosion and sediment controls are maintained" (EPA, 1992a). When inspections result in findings of noncompliance, follow-up by the Permittee to ensure compliance is necessary. The EPA states "Effective inspection and enforcement requires [...] intervention by the municipal authority to correct violations" (EPA, 1992a). This is supported by the North Carolina Study that provided empirical support for the importance of inspections in increasing construction site compliance with local and state ordinances. Both the frequency and duration of project inspections were positively associated with the level of installation and maintenance compliance at the construction sites (Malcom, 1990). The EPA further finds "inspections give the MS4 operator an opportunity to provide additional guidance and education, issue warnings or assess penalties" (EPA, 2000c). Frequent inspections by Permittees of high priority construction sites will keep compliance a priority, and allow opportunities for inspectors to enhance problem-solving skills among site personnel.

Construction site inspection frequencies are to be based on threat to water quality. The EPA supports this, stating that site inspection procedures should "identify priority sites for inspection and enforcement based on the nature and extent of the construction activity, topography, and the characteristics of soils and receiving water quality" (EPA, 2000c). For example, construction sites that are considered a high threat to water quality are to be given a high priority for inspection. This will allow for limited inspection and monitoring time to be most effective. Bi-weekly to monthly inspection of high threat sites is necessary due to the dynamic nature of construction activities. Medium and low threat construction sites can be inspected less frequently, due to their reduced risk of negatively impacting receiving waters. The minimum inspection schedule in the Permit is reasonable for the Permittees to ensure that construction sites are implementing adequate BMPs. More frequent inspections may be necessary due to site conditions. Review of storm water pollution prevention plans (SWPPPs) can be one effective tool for determining frequency of site inspections. Construction sites that effectively implement the measures of a comprehensive SWPPP may not need to be inspected as frequently as less diligent sites.

Each Permittee must develop grading and storm water ordinances under its Individual SWMP. When a Permittee determines a violation of its grading or storm water ordinance, it must pursue correction of the violation. A critical aspect of the correction of violations is enforcement of ordinances. Enforcement increases the probability of correction of a violation. The EPA supports development of enforceable ordinances and permits when it states "applicants must describe proposed regulatory programs to reduce pollutants in storm water runoff from construction sites to the MS4" (EPA, 1992a). The EPA supports enforcement of these ordinances and permits at construction sites when it states "Effective inspection and enforcement requires [...] penalties to deter infractions and intervention by the municipal authority to correct violations. Enforcement mechanisms [...] also must be described" (EPA, 1992a).

Furthermore, the EPA requires small municipalities to develop and implement "An ordinance or other regulatory mechanism to require erosion and sediment controls, as well as sanctions to ensure compliance [...]" (EPA, 1999b).

Implementation of an education program is an important best management practice for construction sites and activities. The TAC "recognizes that education with an emphasis on pollution prevention is the fundamental basis for solving nonpoint source pollution problems." The TAC points out several target communities for education efforts, including "Government: Educate agencies and officials to achieve better communication, consistency, collaboration, and coordination at the federal, state and local levels" and "Development Community: Educate the development community, including developers, contractors, architects, and local government planners, engineers, and inspectors, on nonpoint source pollution problems associated with development and redevelopment and construction activities and involve them in problem definitions and solutions" (SWRCB, 1994).

The EPA also supports education efforts for parties involved in construction, stating "technical information on how to incorporate storm water management with erosion and sediment control and other BMP training courses are recommended for municipal employees and construction site operators" (EPA, 1992a).

3. Comments on Existing and Proposed Programs Related to Construction

Pollution Prevention as required in **Requirement G.1** is not specifically mentioned in the ROWD.

Section 2.5 of the ROWD proposes that Permittees will, within 18 months of permit adoption, review and revise grading/erosion control ordinances in order to reduce erosion caused by new development and significant redevelopment. The ROWD proposal does not include the specific provisions required in **Requirement G.2**, and ordinances must be revised and adopted no later than 6 months following permit adoption (SWMPs must be implemented in full within 1 year).

The ROWD does not indicate that the Permittees' construction approval processes will be modified to include the requirements in **Requirement G.3**, except that the requirement for evidence of coverage under the General Construction Permit prior to issuance of grading permits.

Section 5.2 of the ROWD states that, within 10 months of permit adoption, "each Permittee will develop an inventory (database) of active construction sites within its jurisdiction for projects for which a building or grading permit has been issued for a site that is 1 acre or larger." This proposal is not consistent with **Requirement G.4** of the Order, since all construction sites, regardless of size, must be included in the inventory.

Section 5.2 of the ROWD proposed that, within 6 months of permit adoption, Permittees shall develop a list of erosion control BMPs appropriate for use during construction. The proposed time frame is adequate, but the list must also include minimum erosion prevention and sediment control BMPs that address **Requirement G.5**. Also, the ROWD does not state that the BMPs will be required, which is necessary to comply with Order No. R9-2004-001. The ROWD does not require additional controls for construction sites that are tributary to

CWA section 303(d) water bodies or within/adjacent to or discharging directly to receiving waters within environmentally sensitive areas, which is necessary to comply with the Order.

The ROWD proposes to initiate inspections of all inventoried sites within 11 months of permit adoption. The ROWD proposal is not sufficient to meet the requirements in Order No. R9-2004-001 because it does not include inspection frequencies. Also, construction inspections should be ongoing, as they were required in Order No. R9-98-02, until new programs begin. Stating that inspections will be "initiated" 11 months after permit adoption would cause Permittees to be in violation of the requirement to continue implementation of Order No. R9-98-02 until the SWMP is fully implemented.

Section 2.4.2.2. of the ROWD, which describes enforcement and compliance responses, states that Permittees will emphasize and encourage voluntary compliance and will initiate enforcement/compliance actions within 60 days form the date a violation was identified. It also says that the SDRWQCB will take all enforcement actions related to compliance with the General Construction Permit and that the SDRWQCB will take the lead in initiating enforcement actions related to high-priority incidents. The Permittees are responsible for enforcing their ordinances and permits related to all violations, especially those of high priority. The SDRWQCB is responsible for enforcement of the General Construction Permit, however, if Permittee ordinances are also violated, Permittees must address these violations. Furthermore, 60 days is an inappropriately long amount of time to allow a violation to occur. The ROWD does not include adequate sanctions to ensure that BMPs are implemented at construction sites. The authority to issue sanctions (including the authority to stop work) at construction sites for lack of adequate BMPs is necessary to proactively prevent discharges. The Enforcement/Compliance Strategy, as described in the ROWD, is insufficient to maintain compliance with Order No. R9-2004-001.

Section 5.2 of the ROWD proposes that, within 10 months of permit adoption, each Permittee will have arranged for training of its current inspection staff and on an annual basis thereafter, and new hires and transfers will be trained within 6 months of starting inspection duties. This proposal to train municipal staff on an annual basis is adequate to meet permit requirements. However, the ROWD does not address external training.

H. EXISTING DEVELOPMENT (Order Section H)

The Existing Development section contains the following three sections:

H.1 Municipal Program

H.2 Industrial/Commercial Facilities Program

H.3 Residential Program

H.1 MUNICIPAL PROGRAM (Order Section H.1)

1. Specific Legal Authority for Municipal Program Requirements

- Federal NPDES regulation 40 CFR 122.26(d)(2)(iv)(A)(1) provides that the proposed management program include "A description of maintenance activities and a

maintenance schedule for structural controls to reduce pollutants (including floatables) in discharges from municipal separate storm sewers."

- Federal NPDES regulation 40 CFR 122.26(d)(2)(iv)(A)(3) provides that the proposed management program include "A description for operating and maintaining public streets, roads and highways and procedures for reducing the impact on receiving waters of discharges from municipal storm sewer systems, including pollutants discharged as a result of deicing activities."
- Federal NPDES regulation 40 CFR 122.26(d)(2)(iv)(A)(4) provides that the proposed management program include "A description of procedures to assure that flood management projects assess the impacts on the water quality of receiving water bodies and that existing structural flood control devices have been evaluated to determine if retrofitting the device to provide additional pollutant removal from storm water is feasible."
- Federal NPDES regulation 40 CFR 122.26(d)(2)(iv)(A)(5) provides that the proposed management program include "A description of a program to monitor pollutants in runoff from operating or closed municipal landfills or other treatment, storage or disposal facilities for municipal waste, which shall identify priorities and procedures for inspections and establishing and implementing control measures for such discharges."
- Federal NPDES regulation 40 CFR 122.26(d)(2)(iv)(A)(6) provides that the proposed management program include "A description of a program to reduce to the maximum extent practicable, pollutants in discharges from municipal separate storm sewers associated with the application of pesticides, herbicides, and fertilizer which will include, as appropriate, controls such as educational activities, permits, certifications, and other measures for commercial applicators and distributors, and controls for application in public right-of-ways and at municipal facilities."
- Federal NPDES regulation 40 CFR 122.26(d)(1)(iii) requires source identification, including the location of MS4 outfalls, the location and description of the activities of each currently operating or closed municipal land fill or other treatment, storage or disposal facility for municipal waste, the location of major structural controls for storm water discharge, and the identification of publicly owned parks, recreational areas, and other open lands.

2. Discussion of Municipal Program Requirements

Municipal facilities and activities are clearly identified in the federal regulations as one of several high priority land uses from which pollutants in urban runoff discharges must be reduced to the MEP. The EPA targets municipal areas and activities "to help ensure a reduction in the amount and type of pollution that (1) collects on streets, parking lots, open spaces, and storage and vehicle maintenance areas and is discharged into local waterways; and (2) results from actions such as environmentally damaging land development and flood management practices or poor maintenance of storm sewer systems" (EPA, 2000c).

As specified by **Requirement H.1.b**, Permittees must first identify all of the municipal areas and activities that generate pollutants within their jurisdiction. The areas and activities listed in **Requirement H.1.b** are either specifically addressed in the federal NPDES regulations

referenced above, or have been determined by the Permittees (Permittees, 2003), the SDRWQCB (SDRWQCB, 2002a), or the EPA (EPA, 1992a) to contribute pollutants to the MS4. Source identification is necessary to characterize the nature and extent of pollutants in discharges and to develop appropriate control measures. It is the first step in developing a targeted approach to urban runoff management.

Regarding **Requirement H.1.d**, MS4 Maintenance is critical to the successful implementation of every SWMP. The requirement to conduct a maintenance program is specifically directed in both the Phase I and Phase II storm water regulations. The EPA finds that "Lack of maintenance often limits the effectiveness of storm water structural controls such as detention/retention basins and infiltration devices. [...] The proposed program should provide for maintenance logs and identify specific maintenance activities for each class of control, such as removing sediment from retention ponds every five years, cleaning catch basins annually, and removing litter from channels twice a year" (EPA, 1992a). Regarding catch basin cleaning, the EPA states, "The removal of sediment, decaying debris, and highly polluted water from catch basins has aesthetic and water quality benefits, including reducing foul odors, reducing suspended solids, and reducing the load of oxygen-demanding substances that reach receiving waters" (EPA, 1999c). It goes on to say, "Catch basin cleaning is an efficient and cost-effective method for preventing the transport of sediment and pollutants to receiving water bodies. The requirement (Requirement H.1.d.(d)) is necessary to identify problem areas and sources of debris in catch basins.

Requirement H.1.e, Management of Pesticides, Herbicides and Fertilizers, is supported by the EPA finding that "The proposed program should include educational measures for the public and commercial applicators, and should include integrated pest management measures that rely on non-chemical solutions to pest control. The program should also describe how educational materials will be developed and distributed. Applicants are encouraged to consider providing information for the collection and proper disposal of unused pesticides, herbicides, and fertilizers, or to establish their own program. [...] In addition, applicants must include a discussion of controls for the application of pesticides, herbicides, and fertilizers in public rights-of-way and at municipal facilities. Planting low-maintenance vegetation, such as perennial ground covers, reduces pesticide and herbicide use. Native vegetation is often preferable because there is less need to apply fertilizers and herbicides, and to perform other forms of maintenance, such as mowing" (EPA, 1992a).

Requirement No. H.1.f, Inspections of Municipal Facilities and Activities, is specified to insure that proper measures are being undertaken to reduce pollutant discharges to the MEP. The EPA supports inspections of municipal areas and activities, stating "Applicants must describe programs that identify measures to monitor and reduce pollutants in storm water discharges from facilities that handle municipal waste, including sewage sludge. [...] The types of facilities that should be included are: active or closed municipal waste landfills; publicly owned treatment works, including water and wastewater treatment plants; incinerators; municipal solid waste transfer facilities; land application sites; uncontrolled sanitary landfills; maintenance and storage yards for waste transportation fleets and equipment; sites for disposing or treating sludge from municipal treatment works; and other treatment, storage, or disposal facilities for municipal waste" (EPA, 1992a). The EPA further states, "Procedures to evaluate, inspect, monitor, and establish control measures for

municipal waste sites over the term of the NPDES permit should be described" (EPA, 1992a)."

3. Comments on Existing and Proposed Municipal Programs

Section 4.1 of the ROWD describes the Municipal Facilities Strategy, which the Permittees developed pursuant to Order No. R9-98-02 to identify BMPs for activities conducted at municipal facilities. This section of the ROWD identifies the types of municipal facilities and the activities conducted at those facilities that have the potential to contribute pollutants to urban runoff (ROWD Table 4-1). The Permittees identified maintenance yards, vehicle and equipment maintenance areas, waste transfer stations, corporation and storage yards, and parks and recreational facilities as "facilities of concern". The number of each type of facility operated by each Permittee is listed in Table 4-2 of the ROWD. All other facilities that may be sources of pollutants, including parking areas, hazardous material collection facilities, and other facilities covered under the General Industrial Permit were not identified as "facilities of concern", and were not included in Table 4-2. As discussed above, all facilities and activities listed in **Requirement H.1.b** of the Order must be identified in the inventory. Also, Table 4-2 only lists the number of each type of facility in each Permittee's jurisdiction. The inventory must include, at a minimum, the name, address, and description of activities conducted at each facility.

The ROWD also identifies potential pollutants of concern from municipal facilities and activities (Table 4-3) and "potential" source control BMPs to address the pollutant-generating activities (Table 4-4). The Permittees propose to "maintain up-to-date site-specific Urban Runoff pollution prevention plans for public agency facilities and activities." If the "potential" BMPs listed in Table 4-4 include pollution prevention methods, and are required to be implemented (as applicable) these programs are adequate to comply with **Requirements H.1.a and c** of the Order.

It is important to note that the ROWD claims that brake pad wear, the operation of internal combustion engines, and tire wear, among other thing, are beyond the ability of the Permittees to control. The EPA and the SDRWQCB do not concur with this claim. The EPA states, "proposed management programs must include a description of practices for operation and maintenance of public streets, roads, and highways, and procedures for reducing the impact of runoff from these areas on receiving waters. [...] Pollutants from traffic can be minimized by using nonstructural controls (e.g., traffic reduction and improved traffic management), structural controls (e.g., traditional and innovative BMPs), and changing maintenance activities" (EPA, 1992a).

Regarding MS4 maintenance, Section 4.2 of the ROWD proposes that, within 12 months of permit adoption, Permittees will develop "Model Maintenance Procedures" for public agency activities and drainage facilities. However, in December 1999, the Permittees submitted proposed "Storm Drain System Inspection and Maintenance" programs, pursuant to Order No. R9-98-02 (Permittees, 1999). Each Permittee's proposed program would satisfy the requirements in **Requirement H.1.d** of the Order. Because such plans have already been submitted, the Permittees do not need 12 months to develop another program, and they do not need additional time to implement maintenance activities. Considering that this is a third-round permit, the Permittees should already be conducting the proposed MS4

maintenance activities and continued implementation would be adequate for compliance with Order No. R9-2004-001 without requiring additional resources.

Regarding the management of pesticides, herbicides, and fertilizers, Section 4.2 of the ROWD proposes that "Permittees shall continue to provide training to municipal staff and to contract field operations staff on fertilizer and pesticide management, maintenance procedures, and other pollution control measures. Permittee staff shall attend at least 3 out of 5 annual training sessions." This proposal satisfies **Requirement H.1.e** of the Order, but it does not address the requirements to include integrated pest management measures that rely on non-chemical solutions.

Section 4.2 of the ROWD proposes to "review municipal activities and facilities annually to identify needed revisions of the Municipal Facilities Strategy". In order to identify needed revisions to BMP requirements and municipal programs, inspections are necessary. Therefore, it is assumed that the Permittees proposal includes inspections of municipal facilities and activities. Considering the small number of municipal facilities that each Permittee operates, with the exception of parks (ROWD Table 4-2), inspecting each facility annually is feasible.

Regarding parks and recreation facilities, the Permittees identified these areas as facilities of concern in the ROWD due to their potential to generate pollutants. Therefore, parks and recreation facilities, or the municipal activity conducted at the facilities must be inspected annually. If the same municipal maintenance staff perform similar landscaping or other activities at all parks, the inspection process could be streamlined to focus on the activities. For example, the Permittees could possibly develop one pollution prevention plan for all parks that includes all activities conducted at municipal parks, and conduct annual inspections of the activities performed to ensure that effective BMPs are being implemented (not necessarily inspecting all parks annually).

Enforcement of municipal areas and activities is not specifically addressed in the ROWD. This program will need to be developed as part of each Permittee's Individual SWMP.

Overall, with minor refinement, the existing and proposed municipal programs are adequate to meet the requirements of **Requirement H.1** of the Order.

H.2 INDUSTRIAL/COMMERCIAL FACILITIES PROGRAM (Order Section H.2)

1. Specific Legal Authority for Industrial/Commercial Facilities Requirements

- Federal NPDES regulation 40 CFR 122.26(d)(2)(iv)(C) provides that the proposed management program include "A description of a program to monitor and control pollutants in storm water discharges to municipal systems from municipal landfills, hazardous waste treatment, disposal and recovery facilities, industrial facilities that are subject to Section 313 of title III of the Superfund Amendments and Reauthorization Act of 1986 (SARA), and industrial facilities that the municipal permit applicant determines are contributing a substantial pollutant loading to the municipal storm sewer system."
- Federal NPDES regulation 40 CFR 122.26(d)(2)(iv)(C)(1) provides that the permittee must "identify priorities and procedures for inspections and establishing and implementing control measures for such discharges."

0000132

- Federal NPDES regulation 40 CFR 122.26(d)(2)(iv)(A) provides that the permittee develop a proposed management program which includes "A description of structural and source control measures to reduce pollutants from runoff from commercial and residential areas that are discharged from the municipal storm sewer system that are to be implemented during the life of the permit, accompanied with an estimate of the expected reduction of pollutant loads and a proposed schedule for implementing such controls."
- Federal NPDES regulation 40 CFR 122.26(d)(2)(ii) provides that the permittee "Provide an inventory, organized by watershed of the name and address, and a description (such as SIC codes) which best reflects the principal products or services provided by each facility which may discharge, to the municipal separate storm sewer, storm water associated with industrial activity."
- Federal NPDES regulation 40 CFR 122.44(d)(1)(i) requires NPDES permits to include limitations to "control all pollutants or pollutant parameters (either conventional, nonconventional, or toxic pollutants) which the Director determines are or may be discharged at a level which will cause, have reasonable potential to cause, or contribute to an excursion above any State water quality standard, including State narrative criteria for water quality."

2. Discussion of Industrial/Commercial Facilities Requirements

The requirements contained in Section H.2 provide a framework for developing management programs to reduce pollutants in urban runoff discharges from industrial and commercial facilities to the MEP.

The EPA supports the industrial/commercial facility requirements when it states, "NPDES permits for MS4s will establish responsibilities for municipal system operators to control pollutants from industrial storm water discharged through their system" (EPA, 1992a). The guidance further states that Permittees are ultimately responsible for discharges to their MS4. Therefore, storm water management programs should do the following:

- Identify priority industries discharging to their systems;
- Review and evaluate SWPPPs and other procedures that industrial facilities must develop under general or individual permits;
- Establish and implement BMPs to reduce pollutants from these industrial facilities (or require industry to implement them); and
- Inspect and monitor industrial facilities to verify that the industries discharging storm water to the MS4 are in compliance with their NPDES storm water permit, if required.

Source identification is necessary to characterize the nature and extent of pollutants in discharges and to develop appropriate BMPs. The industrial and commercial facilities listed in **Requirement H.2.b** are either specifically addressed in the federal NPDES regulations referenced above, or have been determined by the Permittees, or the SDRWQCB (SDRWQCB, 2002a) to contribute pollutants to the MS4. The Permittees have not provided data, or other information, documenting that any of the facilities should be removed from the list because they are not a source of pollutants in the Upper Santa Margarita Watershed.

The EPA supports the list of facilities in the Order when it states the following (EPA, 2004):

> "EPA regulations at 40 CFR 122.26(d)(2)(iv)(A) provide for a broad program of 'source control and structural control measures to reduce pollutants from runoff from commercial and residential areas…' We believe that this regulation provides a firm basis for the permit's [Order] requirements related to commercial facilities. The requirements for outreach to commercial facilities, inspections, and the follow-up enforcement would all be consistent with a program of 'source control' measures to be included in a storm water management program…"

Regarding the list of industrial facilities, EPA goes on to say:

> "The issue of industrial inspections also arose for the Los Angeles County MS4 permit. The State Board, in a memo dated November 9, 2001, from Michael Lauffer of the State Board to Dennis Dickerson, Executive Officer of the Los Angeles Regional Board, noted that under Section 402 (p)(3)(B)(iii) of the CWA, the Board has broad authority to require 'such other provisions…as the State determines appropriate…' and that this would provide a basis for requirements that go beyond specific provisions of the EPA regulations. We would agree with the State Board on this matter, and that the Regional Board would have the authority to require inspections of all the industrial facilities listed in the permit [Order], notwithstanding the specific provisions of the EPA regulations."

Regarding **Requirement H.2.c**, BMP Implementation, guidance from the EPA makes it clear that Permittees are required to designate BMPs for industrial and commercial facilities when it states that permittees should, "Establish and implement BMPs to reduce pollutants from these facilities (or require industry to implement them)" (EPA, 1992a). The EPA goes on to say that BMPs more stringent than those required under the General Industrial Permit may be necessary. The EPA finds that "nothing in the Federal regulations would prohibit the municipality from requiring additional controls beyond the permit requirements for industrial activities. For this reason, the EPA recommends that municipal applicants incorporate a provision in the proposed storm water management program that allows the municipality to require priority industrial facilities to implement the controls necessary for the municipality to meet its permit responsibilities" (EPA, 1992a). These statements from the EPA support the requirement for dual regulation of facilities covered by the General Industrial Permit (see discussion in support of **Finding No. 21** in Section VII.E of this Fact Sheet).

In support of **Requirement H.2.c.(3)**, the EPA recommends that Permittees provide BMP guidance to industrial facilities, stating, "The applicant should suggest procedures for requiring pollutant control measures in runoff from priority industrial facilities. Applicants should provide information to the industrial facilities that discharge to the MS4s and industry-specific guidance on appropriate control measures that industries discharging to the systems should follow" (EPA, 1992a). The EPA goes on to say, "Applicants should provide information to the industrial facilities that discharge to the MS4s and industry-specific guidance on appropriate control measures that industries discharging to their systems should follow" (EPA, 1992a).

Furthermore, inspections are necessary to verify that industries are in compliance with the MS4 permit and local ordinances (EPA, 1992a). According to the EPA, "The proposed management program should describe the inspection procedures that will be followed. […]

Proposed management programs should address minimum frequency for routine inspections. For example, how often, how much of the site, and how long an inspection may take are appropriate to explain in this proposed management program component. Applicants should also describe procedures for conducting inspections and provide an inspector's checklist" (EPA, 1992a). In further support of inspections and dual regulation of industrial facilities, the EPA states "Municipalities are urged to evaluate pollution prevention plans and discharge monitoring data collected by the industrial facility to ensure that the facility is in compliance with its NPDES storm water permit. Site inspections should include (1) an evaluation of the pollution prevention plan and any other pertinent documents, and (2) an onsite visual inspection of the facility to evaluate the potential for discharges of contaminated storm water from the site and to assess the effectiveness of the pollution prevention plan" (EPA, 1992a).

The EPA also finds that follow-up actions are to be implemented based upon site inspection findings: "The results of inspection may be used as a basis for requiring storm water management controls and enhanced pollution prevention measures" (EPA, 1992a).

Industrial site inspection frequencies specific in **Requirement H.2.d** are based on threat to water quality prioritization in order to allow for limited inspection resources to be most effective. Annual or bi-annual inspection of high threat sites is necessary to ensure that changes to the site that may be detrimental to water quality are identified and addressed.

Requirement H.2.f, Reporting of Non-Filers, is necessary to ensure effective oversight of industrial facilities.

3. Comments on Existing and Proposed Industrial/Commercial Programs

Pursuant to Order No. R9-98-02, the Permittees have developed and implemented an industrial/commercial facilities program that meets or exceeds several of the requirements in Section H.2 of the Order. Each Permittee has already developed a prioritized list of facilities, including industrial facilities as defined at 40 CFR 122.26(b)(14), food facilities, and all other facilities that store, generate, or handle hazardous waste. The method of prioritization used in developing the current lists is consistent with what the SDRWQCB considers to be "high", "medium", and "low". Section 7.3 of the ROWD proposes that, within 9 months of permit adoption, each Permittee will update its existing inventories of industrial and commercial facilities within its jurisdiction that have the potential to discharge pollutants to the MS4. The ROWD says that the industrial and commercial facilities databases will include the name, address, location reference, facility contact and phone number, SIC code, WDID number, assessor's parcel number, and site size.

Also pursuant to Order No. R9-98-02, the Permittees developed the Commercial/Industrial Compliance Assistance Program (CAP) as a mechanism to conduct the required inspections of inventoried facilities. The CAP was formed as an agreement between the District and the County's Department of Environmental Health and involves the completion of a "storm water compliance survey" in addition to the routine inspections that the Department Environmental Health conducts pursuant to other regulations. Through the CAP, the County currently inspects sites with underground storage tanks once per year, sites that handle and generate hazardous waste every two years (began in May 2002), and retail food facilities 1-3 times annually (began in January 2002). Section 7.3 of the ROWD proposes that, within 12

months of permit adoption, each Permittee will implement an inspection frequency for industrial and commercial facilities of no less than:

- Once a year for industrial facilities designated as high priority;
- Once biannually for commercial facilities designated as medium priority; and
- Once during the permit term for facilities designated as low priority.

Except for the facilities that are not captured under the CAP, which must be addressed by each Permittee, the Permittees existing and proposed programs are adequate to comply with the requirements in **Requirement H.2.b and H.2.d.**

Section 7.2 of the ROWD states that, "In conducting a commercial/industrial facility inspection, if it appears that the facility may be required to have coverage under the General Permit for Stormwater Discharges Associated with Industrial Activities and the facility operator has indicated that an NOI has not been filed, the inspector will provide the operator with an informational sheet on the requirements of the General Permit for Stormwater Discharges Associated with Industrial Activities. The inspector also documents the name, address, and SIC code of the facility. Subsequently, a listing of such facilities is compiled and forwarded to the San Diego Regional Board staff on a frequency to be determined by the Permittees." This proposal meets **Requirement H.2.f.**

It is important to note that there are approximately 25 industrial facilities currently covered by the General Industrial Permit within the Upper Santa Margarita Watershed. Most of these facilities are already included in the Permittees' inventories and covered under the CAP. The remaining few that will require inspections and oversight will not constitute a significant burden on the Permittees. Therefore, dual regulation of these sites should not be an issue. In the Permittees comments on the Order, they proposed BMP requirements to comply with Requirement H.2.c.1. The proposed BMPs may be adequate minimum requirements for food facilities and for facilities that store hazardous waste. However, broadly applying these few BMPs to all types of inventoried industrial and commercial facilities may not be adequate or appropriate. Adequate minimum BMPs should address all facility types and activities that could potentially contribute pollutants to the MS4.

Regarding enforcement, Section 2.4.2.2. of the ROWD states that Permittees will emphasize and encourage voluntary compliance and will initiate enforcement/compliance actions within 60 days form the date a violation was identified. It also says that the SDRWQCB will take all enforcement actions related to compliance with the General Industrial Permit and that the SDRWQCB will take the lead in initiating enforcement actions related to high-priority incidents. These statements are incorrect and do not meet the requirements of **Requirement H.2.e**. As discussed in Sections VII.D and VII.E of this Fact Sheet, the Permittees are responsible for enforcing their ordinances and permits related to ALL violations, especially those of high priority. The SDRWQCB is responsible for enforcement of the General Industrial Permit, however, if Permittee ordinances are also violated, Permittees must address these violations. Furthermore, 60 days is an inappropriately long amount of time to allow a violation to occur. The Permittees' Enforcement/Compliance Strategy, as described in the ROWD, is insufficient to meet the enforcement requirements contained in Order No. R9-2004-001.

Section 7.3 of the ROWD proposes that, within 1 year of permit adoption, each Permittee will have arranged for adequate training of all staff inspectors and on an annual basis thereafter. New hires that will be performing inspections will be trained within 6 months of starting field duties. This proposed training schedule meets **Requirement H.2.g** of the Order.

H.3 RESIDENTIAL PROGRAM (Order Section H.3)

1. Specific Legal Authority for Residential Requirements

- Federal NPDES regulation 40 CFR 122.26(d)(2)(iv)(A) provides that the Permittee develop a proposed management program which includes "A description of structural and source control measures to reduce pollutants from runoff from commercial and residential areas that are discharged from the municipal storm sewer system that are to be implemented during the life of the permit, accompanied with an estimate of the expected reduction of pollutant loads and a proposed schedule for implementing such controls."
- Federal NPDES regulation 40 CFR 122.44(d)(1)(i) requires NPDES permits to include limitations to "control all pollutants or pollutant parameters (either conventional, nonconventional, or toxic pollutants) which the Director determines are or may be discharged at a level which will cause, have reasonable potential to cause, or contribute to an excursion above any State water quality standard, including State narrative criteria for water quality."

2. Discussion of Residential Requirements

Land used for residential activities is clearly identified in the federal regulations as one of several high priority land uses from which pollutants in urban runoff discharges must be reduced to the MEP by each Permittee (40 CFR 122.26(d)(2)(iv)). Residential activities have the potential to be significant sources of pollutants in urban runoff. In residential areas, pollution sources conveyed by the MS4 include activities related to automobile maintenance, landscaping/gardening, home-improvement, pets, and others, including those listed in **Requirement H.3.b.** The requirements contained in Section H.3 will provide a program for the development and implementation of BMPs to reduce pollutants in urban runoff discharges from residential activities to the MEP (see discussion of **BMP Implementation** in Section VII.C of this Fact Sheet).

Pursuant to Order No. R9-98-02 and pre-existing programs, the Permittees have instituted or promoted residential pollution prevention BMPs, including street sweeping, household hazardous waste collections, and education. Nationally, education is increasingly being used as a tool for pollution prevention in residential areas, where the use of regulatory enforcement actions has traditionally been less than in other land use areas. Pollution prevention can encourage responsible residential nutrient management, such as proper fertilization rates and proper pet waste disposal, when a connection is established between such practices and local or regional water quality needs (Nonpoint Source News Notes, 2000). Similarly, source control is vital to protect urban watersheds from pesticides that are applied in residential areas and are transported to streams via the MS4. For example in a

review, "Diazinon Sources in Runoff from the San Francisco Region," the Center for Watershed Protection concluded that, "the only real tool to control diazinon in urban watersheds is source control to either reduce the use of diazinon or to apply it in a safer manner." In addition, where structural BMPs or MS4 facilities are owned or operated by the residential community, pollution prevention activities taken by local governments can include maintenance guidance.

3. Comments on Existing And Proposed Residential Programs

Section 8.0 of the ROWD states that pollution prevention is a major focus of the Permittees' existing StormWater/CleanWater Protection Program, and the following pollution prevention themes are emphasized in public outreach activities and materials:

- Proper disposal of household hazardous waste;
- Proper disposal of used motor oil;
- Pesticide and fertilizer use guidelines;
- Good housekeeping BMPs; and
- Proper disposal of pet waste.

Section 8.2 of the ROWD proposes to educate the public regarding pollutants in urban runoff. Education and outreach may be sufficient to reduce the discharge of pollutants to the MEP from residential areas, however, additional BMPs may be necessary in some cases. These minimum BMP requirements should be identified in each Permittee's Individual SWMP.

I. EDUCATION (Order Section I)

1. Specific Legal Authority for Education Requirements

- Federal NPDES regulation 40 CFR 122.26(d)(2)(iv)(A)(6) provides that the proposed management program include "A description of a program to reduce to the maximum extent practicable, pollutants in discharges from municipal separate storm sewers associated with the application of pesticides, herbicides, and fertilizer which will include, as appropriate, controls such as educational activities, permits, certifications, and other measures for commercial applicators and distributors, and controls for application in public right-of-ways and at municipal facilities."
- Federal NPDES regulation 40 CFR 122.26(d)(2)(iv)(B)(6) provides that the proposed management program include "A description of educational activities, public information activities, and other appropriate activities to facilitate the proper management and disposal of used oil and toxic materials."
- Federal NPDES regulation 40 CFR 122.26(d)(2)(iv)(D)(4) provides that the proposed management program include "A description of appropriate educational and training measures for construction site operators."

2. Discussion of Education Requirements

Education is a critical BMP and an important aspect of the SWMP. The EPA finds that "An informed and knowledgeable community is critical to the success of a storm water management program since it helps ensure the following:

> "Greater support for the program as the public gains a greater understanding of the reasons why it is necessary and important. [...]
>
> Greater compliance with the program as the public becomes aware of the personal responsibilities expected of them and others in the community, including the individual actions they can take to protect or improve the quality of area waters". (EPA, 2000c)

Regarding target audiences, EPA states "The public education program should use a mix of appropriate local strategies to address the viewpoints and concerns of a variety of audiences and communities, including minority and disadvantaged communities, as well as children" (EPA, 2000c). The target communities included in Requirement I. are based on recommendations of the TAC (SWRCB, 1994).

3. Comments on Existing and Proposed Education Programs

Public education was strongly emphasized in the Permittees' 1993 DAMP implemented under the first and second term permits. Consequently, the Permittees already have well-developed education programs that may be readily reviewed and revised, as necessary, to satisfy the requirements of Order No. R9-2004-001.

Section 8.2 of the ROWD includes several good program commitments, such as conducting a survey to measure changes in awareness, which should be incorporated into the SWMP.

J. ILLICIT DISCHARGE DETECTION AND ELIMINATION (Order Section J)

1. Specific Legal Authority for Illicit Discharge Detection and Elimination Requirements

- Federal NPDES regulations 40 CFR 122.26(d)(2)(iv)(B) and 40 CFR 122.26(d)(2)(iv)(B)(1) generally apply to all directives under Section J. Illicit Discharge Detection and Elimination of Order No. R9-2004-0001.
- Federal NPDES regulation 40 CFR 122.26(d)(2)(iv)(B)(2) provides that the permittee include in its proposed management program "a description of procedures to conduct on-going field screening activities during the life of the permit, including areas or locations that will be evaluated by such field screens."
- Federal NPDES regulation 40 CFR 122.26(d)(2)(iv)(B)(3) provides that the permittee include in its proposed management program "procedures to be followed to investigate portions of the separate storm sewer system that, based on the results of the field screen, or other appropriate information, indicate a reasonable potential of containing illicit discharges or other sources of non-storm water."
- Federal NPDES regulations 40 CFR 122.26(d)(2)(iv)(B)(5) provides that the permittee include in its proposed management program "a description of a program to promote, publicize, and facilitate public reporting of the presence of illicit discharges

or water quality impacts associated with discharges from municipal separate storm sewers."

- Federal NPDES regulations 40 CFR 122.26(d)(2)(iv)(B)(6) provides that the permittee include in its proposed management program "a description of educational activities, public information activities, and other appropriate activities to facilitate the proper management and disposal of used oil and toxic materials."

2. Discussion of Illicit Discharge Detection and Elimination Requirements

In accordance with 40 CFR 122.26(d)(2)(iv)(B) and 122.26(d)(2)(iv)(B)(1), **Requirement J.1** requires each Permittee to actively seek and eliminate illicit discharges and illicit connections. As guidance for detecting and eliminating illicit discharges and connections, the EPA suggests "The proposed management program must include a description of inspection procedures, orders, ordinances, and other legal authorities necessary to prevent illicit discharges to the MS4" (EPA, 1992a).

In order to detect illicit discharges and connections, **Requirement J.2** requires each Permittee to develop and maintain an accurate, up-to-date map of its MS4. An accurate map of the MS4 will enable the Permittees to monitor the system for illicit discharges and connections and to be aware of the entire MS4 within its jurisdiction.

Requirement J.3 requires Permittees to develop and implement an Illicit Discharge Monitoring Program as specified in **section II.B of Monitoring and Reporting Program No. R9-2004-001 (hereafter referred to as the MRP)**. If results indicate that an illicit discharge or connection may be present, **Requirement J.4** specifies that the Permittees shall conduct follow-up procedures to pinpoint the source of the illicit discharge or connection. Once the illicit discharge or connection source is identified, steps may be taken to eliminate the discharge or connection. In this manner, monitoring of dry weather urban runoff can lead to the elimination of illicit discharges and connections and the reduction of pollutants in urban runoff.

Requirement J.5 requires the elimination of illicit discharges and illicit connections as soon as possible. The time needed to eliminate the discharge/connection will depend on the nature and circumstance of the problem including conditions that are not under the control of the Permittees. However, discharges that the Permittees have the ability to eliminate immediately must be eliminated immediately. The EPA supports elimination as soon as possible when it states, "Once the source is identified, the offending discharger should be notified and directed to correct the problem. Education efforts and working with the discharger can be effective in resolving the problem before taking legal action" (EPA, 1992a).

The EPA states that the "proposed management program component should describe how the prohibition on illicit discharges will be implemented and enforced. The description could include a schedule and allocation of staff and resources. A direct linkage should exist between this program component and the adequate legal authority requirements for the ordinances and orders to effectively implement the prohibition of illicit discharges" (EPA, 1992a). Consistent with this statement, **Requirement J.6** requires Permittees to implement and enforce its ordinance, orders, or other legal authority over illicit discharges and connections.

Requirement J.7 pertains to sewage spill prevention and response. Such spills into and from the MS4 can severely impair receiving water quality and pose a significant threat to public health. To avoid these negative impacts, the Order requires Permittees to implement appropriate procedures to prevent, contain, and respond to spills that may discharge into the MS4. The Order contains suggestions of possible appropriate actions. The EPA states, "The goal of a spill prevention program is to reduce the frequency and extent of spills of hazardous materials which can cause water quality impairment" (EPA, 1992a).

Requirement J.8 pertains to public reporting of illicit discharges or water quality impacts associated with discharges from MS4s. Regarding this issue, the EPA states "Timely reporting by the public of improper disposal and illicit discharges are critical components of programs to control such sources. To enhance public awareness, programs may include setting up a public information hotline number, educating school students, community and volunteer watchdog groups, using inserts into utility bills, and newspaper, radio, and television announcements to inform the public about what to look for and how to report incidents" (EPA, 1992a).

The EPA states "If private individuals find the proper disposal of used oil or toxic materials difficult, incidents of improper disposal (such as into the MS4) increase" (EPA, 1992a). Therefore **Requirement J.9** directs the Permittees to propose a program component that will facilitate the proper disposal of used oil and toxics from households by establishing municipally operated collection sites, or ensuring that privately operated collections sites are available. The EPA suggests this program component "should describe outreach plans to handlers of used oil and to the public, and operating plans for oil and household waste collection programs" (EPA, 1992a).

3. Comments on Existing and Proposed Illicit Discharge Detection and Elimination Programs

The ROWD references a reconnaissance survey that the Permittees conducted pursuant to their first-round MS4 permit (Order No. R9-90-46), which identified and removed any illicit connections. According to the 2001-2002 Annual Progress Report, the Reconnaissance survey showed that illicit connections were almost non-existent within the Upper Santa Margarita Watershed, whereas illegal discharges were more commonplace (Permittees, 2001). Based on these results, the Permittees concluded that focusing on inspections of open channels and the curtailment of illicit discharges is a more effective use of resources than inspections of underground storm drains. The EPA concurs with this conclusion when it says, "Permits for older municipalities may emphasize control of cross-connections, while permits for municipalities with large areas of new development may emphasize the installation of permanent structural controls during construction" (EPA, 1992a). **Requirement J.1** of the Order gives the Permittees the flexibility to focus their programs on priority areas, so long as they are actively seeking and eliminating illegal discharges. It should be noted that the reconnaissance survey was conducted 10 years ago and the length of the MS4 has increased significantly. The survey, dated September 30, 1993, covered approximately 25.2 miles of underground storm drains and over 8.9 miles of open channels. According to the ROWD, the District's MS4 currently consists of about 71 miles of open and closed storm drains, and the City of Murrieta's MS4 currently consists of about 18 miles of open and closed storm drains. The total length of Temecula's MS4 is unknown. Therefore, the survey covered less than half

of the current MS4 and cannot serve as evidence that illicit connections are currently non-existent.

Section 3.2 of the ROWD states that the Permittees have programs in place to identify and eliminate illicit connections. According to the 2001-2002 Annual Progress Report, the City of Murrieta conducts annual video inspections of portions of its MS4 and investigates any illicit connections identified, and District and County staff perform visual inspections of open storm drains to check for discharges. The City of Temecula seems to have a reactive program that relies on reports of illegal discharges.

Regarding **Requirement J.2**, the District and the City of Murrieta submitted a map of their MS4s with the ROWD. The City of Temecula has not yet submitted a map.

Section 3.5 of the ROWD proposes that Permittees shall continue to implement and improve routine inspection and monitoring and reporting programs for their MS4s. In order to satisfy **Requirement J.3** of the Order, each Permittee shall describe their inspection and monitoring programs to meet the requirements of Section II.B of the MRP in their Individual SWMPs.

Section 3.5 of the ROWD proposes that, "If routine inspections or dry weather monitoring indicate illicit connections or illegal discharges, they shall be investigated and eliminated or permitted within sixty (60) calendar days of receipt of notice." Sixty days is an unreasonably long time frame for the investigation and elimination of illicit discharges and connections. As stated above, these discharges can cause or contribute to receiving water degradation and are prohibited. Also, illicit discharges are often a discrete event that must be investigated immediately to identify the source. Therefore, the proposed timeframe for investigation and elimination must be decreased to represent the most immediate response time as is possible for the Permittees. In accordance with **Requirement J.5**, illicit discharges that pose a serious threat to public health or the environment must be eliminated immediately, and all others must be eliminated as soon as possible.

Section 3.2 of the ROWD states that the Permittees have programs in place to identify, eliminate, and respond to illicit connections and discharges. However, these programs are not described. According to the 2001-2002 Annual Progress Report, the District manages a toll-free reporting hotline, which satisfies **Requirement J.8** of the Order (Permittees, 2002a). The reports do not mention hotlines for the Cities of Murrieta and Temecula and it is not clear if the countywide hotline is coordinate with the other Permittees. In order for the Cities to satisfy this requirement, Individual SWMPs must either discuss individual public reporting hotlines or describe how the countywide hotline is coordinated.

As indicated in Section 3.3 of the ROWD, the Permittees already have mechanisms in place to facilitate the proper management and disposal of used oil and toxic materials that meet or exceed **Requirement J.8**.

K. WATERSHED-BASED ACTIVITIES (Order Section K)

1. Discussion of Watershed Requirements

Management of urban runoff on a watershed basis is recommended by the SWRCB and the SDRWQCB. The TAC defines watershed-based water quality protection as "the prevention/control of pollution and management of human activities in a geographically or other defined drainage area to protect, restore, and/or enhance the natural resources and

beneficial uses within the watershed" (SWRCB, 1994). The TAC recommends that "All NPDES permits and Waste Discharge Requirements should be considered for reissuance on a watershed basis" (SWRCB, 1994). The SDRWQCB also recommends watershed-based water quality protection, stating in the Basin Plan that "Public agencies and private organizations concerned with water resources have come to recognize that a comprehensive evaluation of pollutant contributions on a watershed scale is the only way to realistically assess cumulative impacts and formulate workable strategies to truly protect our water resources" (SDRWQCB, 1994).

The requirements in Section K of the Order are necessary for the Permittees to identify and mitigate sources of pollutants in urban runoff from the entire watershed that impact common downstream receiving waters. This is the key to addressing the impacts from areas and activities within the Permittees' jurisdiction on downstream receiving waters and their beneficial uses (i.e. Camp Pendleton's drinking water supply) as well as addressing pollutant sources in the watershed which are outside the Permittees' jurisdiction. **Finding No. 20** emphasizes the need for watershed-based activities and collaboration among dischargers in a common watershed. It states, "As operators of the MS4s, the Permittees cannot passively receive and discharge pollutants from third parties. By providing free and open access to an MS4 that conveys discharges to waters of the U.S., the operator essentially accepts responsibility for discharges into the MS4 that it does not prohibit or control. These discharges may cause or contribute to a condition of contamination or exceedances of receiving water quality objectives." Permittees could be held responsible for discharges of pollutants from sources outside of their jurisdiction if they cause or contribute to exceedances of water quality objectives, therefore, it is necessary for Permittees to make efforts to address all sources of pollutants in the watershed.

2. Comments on Existing and Proposed Watershed Programs

The Permittees already collaborate with each other through monthly meetings. However, these meetings, as well as many aspects of the existing DAMP, are countywide. In order to address watershed-specific issues, the Permittees should meet separately to focus on the Upper Santa Margarita Watershed. The Permittees also already participate in San Diego County's current effort to develop a Santa Margarita Watershed Management Plan, the Southern California Stormwater Monitoring Coalition, and the Santa Margarita River Executive Management Team. At this time, this level of participation is appropriate to meet the objectives of Requirement K.3. of the Order.

L. MONITORING AND REPORTING PROGRAM (Order Section L)

See discussion in Section IX of this Fact Sheet.

M. PRINCIPAL PERMITTEE RESPONSIBILITIES (Order Section M)

1. Specific Legal Authority for Principal Permittee Responsibility Requirements

- Federal NPDES regulation 40 CFR 122.26(d)(2)(i)(D) provides that "[The Permittee must demonstrate that it can control] through interagency agreements among coapplicants the contribution of pollutants from one portion of the municipal system to another portion of the municipal system."

- Federal NPDES regulation 40 CFR 122.26(a)(3)(iii)(C) provides that "A regional authority may be responsible for submitting a permit application."

2. Discussion of Principal Permittee Responsibility Requirements

The Principal Permittee responsibilities required in Section M are necessary to facilitate intergovernmental coordination and for the standardization and compilation of required reports. Standardized documents provide for easier assessment and application of report data, making reports more useful for the SDRWQCB and the Permittees, which can result in more effective urban runoff management. The EPA recommends intergovernmental coordination, such as a memorandum of understanding, to define specific municipal roles, responsibilities and points of coordination (EPA, 1992a).

3. Comments on Existing and Proposed Principal Permittee Responsibilities

The Permittees currently operate under an Implementation Agreement, which was executed in November 1998. The Implementation Agreement sets forth the responsibilities of the Principal Permittee and the Permittees and provides for funding of "umbrella" activities. In Section 2.1 of the ROWD, the Permittees propose to amend the implementation agreement to set forth the responsibilities of the Permittees in accordance with the Order.

N. STANDARD PROVISIONS (Order Section O and Attachment B)

The standard provisions included in **Attachment B** of Order No. R9-2004-001 are consistent to all NPDES permits and are generally found in federal NPDES regulation 40 CFR sections 122.22, 122.41, 122.42 and the CWC (specific citations are provided in **Attachment B** of Order No. R9-2004-001).

IX. MONITORING AND REPORTING PROGRAM

The MRP consists of requirements for receiving waters monitoring, monitoring of dry weather flows/illicit discharges, and annual reporting.

A. RECEVING WATERS MONITORING

1. Specific Legal Authority for Receiving Waters Monitoring Requirements

Federal NPDES regulations at 40 CFR 122.26(d)(2)(iii)(D) require municipal permittees to propose a monitoring program for representative data collection for the term of the permit that describes the location of outfalls, field screening points, instream stations, why the location is representative, the frequency of sampling, parameters to be sampled, and a description of sampling equipment.

2. Discussion of Monitoring Requirements

According to the EPA, the benefits of sampling data include, but are not limited to (EPA, 1992b):

- Providing a means for evaluating the environmental risk of storm water discharges by identifying types and amounts of pollutants present;

0000144

- Determining the relative potential for storm water discharges to contribute to water quality impacts or water quality standard violations;
- Identifying potential sources of pollutants; and
- Eliminating or controlling identified sources more specifically through permit conditions.

Most importantly, monitoring programs are an essential link in urban runoff management efforts. Data collected from monitoring programs can be assessed to determine the effectiveness of management programs and practices, which is vital for the success of the iterative approach used to meet the MEP standard. Specifically, when data indicates that a particular BMP is not effective, an improved BMP can be selected. Also, when water quality data indicate that water quality standards or objectives are being exceeded, particular pollutants, sources, and drainage areas can be identified and targeted for urban runoff management and specific education efforts.

Considering the benefits described above, the MRP has been designed to determine impacts to receiving water quality and beneficial uses from urban runoff and to use the results to refine the SWMP for the reduction of pollutant loadings to the MEP. The primary goals of the MRP include:

1. Assess compliance with Order No. R9-2004-001;
2. Measure and improve the effectiveness of the SWMPs;
3. Assess the chemical, physical, and biological impacts of receiving waters from urban runoff;
4. Characterize urban runoff discharges;
5. Identify sources of specific pollutants;
6. Prioritize drainage and sub-drainage areas that need management actions;
7. Detect and eliminate illicit discharges and illicit connections to the MS4; and
8. Assess the overall health of receiving waters.

Each of the components of the Receiving Waters and Illicit Discharge Monitoring Programs is necessary to meet the objectives listed above. The justifications for each component are discussed below.

Framework

The SDRWQCB typically uses the following framework in NPDES MRPs:

1. Core monitoring to address ongoing, site-specific needs, such as estimating pollutant loads and assessing trends;
2. Regional monitoring to address large spatial scales at infrequent (i.e. every five years) intervals. Regional monitoring is useful to put localized site-specific results into context of the larger ecosystem; and
3. Special studies to address directed needs or to answer specific questions. This monitoring is useful to address unique issues, oftentimes triggered by routine monitoring

to help understand results or identify efficient management measures. Special studies are short-term studies with a predefined beginning, middle and end.

Core Monitoring

Section II.A.1 of the MRP requires mass loading monitoring at three triad[13] and four tributary stations. The mass loading monitoring will provide data representing the total pollutant loadings from specific drainage and sub-drainage areas. This data can be used to help achieve the MRP goals listed above and answer the following management questions:

- Are conditions in receiving waters protective, or likely to be protective, of beneficial uses?
- What is the extent and magnitude of the current or potential receiving water problems?
- What is the relative urban runoff contribution to the receiving water problem(s)?
- What are the sources of urban runoff that contribute t receiving water problem(s)?
- Are conditions in receiving waters getting better or worse?

The number and locations of triad and tributary stations are consistent with the Permitees' proposal (Permittees, 2004b). In addition to one reference station, the triad stations are existing Permittee monitoring stations located in lower Murrieta Creek and lower Temecula Creek. These stations are located at the downstream end of the Upper Santa Margarita Watershed and should be representative of discharges from the entire permitted area. The tributary station locations were proposed by the Permittees and are representative of urbanized sub-drainage areas. Data from these locations will allow the Permittees to better identify sources of pollutants, prioritize drainage areas for management actions, and determine the conditions of the tributary streams (MRP Goals 4,5,6 and 8).

Federal NPDES regulations at 40 CFR 122.21(g)(7)(ii) require the sampling protocols specified in **section II.A.1 of the MRP.** These protocols are necessary to ensure consistent sampling, adequate representation of storm events, and accurate, comparable data.

Section II.A.2 of the MRP requires the Permittees to conduct toxicity monitoring to evaluate the extent and causes of toxicity in receiving waters. Toxicity testing is used to assess the impact of urban runoff on the overall quality of aquatic systems (Center for Watershed Protection, 1996). Evidence of toxicity indicates that pollutants are bioavailable and have the potential to cause degradation to aquatic systems. When combined with chemical data, which by itself does not necessarily reveal the impacts of urban runoff to aquatic life or the beneficial uses of receiving waters, toxicity monitoring data can be used to better determine the extent and causes of impacts to aquatic systems (MRP Goals 3 and 8).

Toxicity testing can also be used to evaluate the effectiveness of urban runoff BMPs and other management measures (MRP Goal No. 2). The Center for Watershed Protection rated it as a "very useful" indicator for assessing municipal storm water programs. Permittees can use the results of toxicity testing to identify areas of high concern and to establish priority locations for BMPs (MRP Goal No. 6).

---

[13] Triad means a station where chemical, toxicity, and bioassessment monitoring occur.

Section II.A.2.a specifies three freshwater test species for use, because multiple species are needed to provide a more complete assessment of the causes of toxicity in urban runoff (Bay, 2001). Different species vary in their sensitivity to contaminants and, therefore, multiple species can reveal when varying contaminants are present at toxic levels (Bay, 2001). Reliance on single species tests may not provide an accurate assessment of toxicity (Center for Watershed Protection, 1996). The rationale for the specified test species is as follows:

- *Ceriodaphnia dubia* (water flea): represents the invertebrates that live in the water column and serve as a food source for larger invertebrates and small fish. This species is known to be sensitive to metals and pesticides in water, as well as other contaminants. (San Diego County, 2004)
- *Hyalella azteca* (freshwater amphipod): an invertebrate associated with the sediment at the bottom of streams and lakes. It serves as a food source for larger invertebrates as well as fish. This species is generally sensitive to metals and pesticides, as well as nitrogen compounds such as ammonia. (San Diego County, 2004)
- *Pseudokirchneriella subcapitata*, formally known as *Selenastrum capricornutum*: unicellular algae present in the water column of streams and lakes. It is the base of the food chain in freshwater systems. It is sensitive to herbicides and metals and its growth is greatly affected by nutrient loads. (San Diego County, 2004)

An additional reason to use the species listed above, is for consistency with other monitoring in the Santa Margarita Watershed. Pursuant to the County of San Diego's MS4 permit (Order No. R9-2001-01), toxicity testing using these three species occurs at the mass loading station near the mouth of the Santa Margarita River. Using the same species throughout the watershed will allow the results to be comparable and potential sources of toxicity to be better identified.

For cost purposes, toxicity testing is only required on wet weather samples.

Section II.A.3 of the MRP requires the Permittees to conduct bioassessment monitoring. Bioassessment data is a cost-effective tool that measures the effects of water quality over time (CDFG, 2002). It is an important indicator of stream health and impacts from urban runoff. It can detect impacts that chemical and toxicity monitoring cannot. The EPA encourages permitting authorities to consider requiring biological monitoring methods to fully characterize the nature and extent of impacts from urban runoff (EPA, 1996c). Therefore, the SDRWQCB and other RWQCBs commonly require bioassessment monitoring in MS4 and other types of discharge permits.

Bioassessment is the direct measurement of the biological and physical condition, and the attainment of beneficial uses (COLD, WARM, WILD, and RARE) of receiving water, using benthic macroinvertebrates. Bioassessment monitoring integrates the effects of both water chemistry and physical habitat impacts (e.g., sedimentation or erosion) of various discharges on the biological community native to the receiving waters. Moreover, bioassessment is a direct measurement of the impact of cumulative, sub-lethal doses of pollutants that may be below reasonable water chemistry detection limits, but that still have biological affects.

Because bioassessment focuses on communities of living organisms as integrators of cumulative impacts resulting from water quality or habitat degradation, it defines the ecological risks resulting from urban runoff. Bioassessment not only identifies that an

impact has occurred, but also measures the effect of the impact and tracks recovery when control or restoration measures have been taken. These features make bioassessment a powerful tool to assess compliance, evaluate the effectiveness of BMPs, and to track both short and long-term trends (MRP Goals 1,2,3, and 8).

From 1998 through 2001, the SDRWQCB implemented the Ambient Bioassessment Monitoring Program, which monitored rivers and streams in the San Diego region. The monitoring concluded that waters in the Upper Santa Margarita Watershed, including Murrieta Creek, Temecula Creek, and the upper Santa Margarita River, exhibited degraded biological and physical integrity (Index of Biotic Integrity (IBI) ranged from "Very Poor" to "Good"). As a comparison, the reference stations in the watershed, located in Sandia Creek and De Luz Creek, were characterized by a high degree of biological and physical integrity (IBI was consistently "Very Good") (CDFG, 2002). These conclusions support the need for continued bioassessment monitoring to determine the long-term health of the receiving waters and impacts from MS4 discharges.

Through a CWC section 13225 directive, issued in March 2003, the Permittees were required to begin implementing a bioassessment monitoring program. The bioassessment required in the MRP replaces that required under the directive. The program consists of sampling, monitoring, and analysis of data at the three triad stations. The Permittees began bioassessment monitoring four stations in November 2003, pursuant to the directive. For cost purposes, the number of stations was reduced to three.

Section II.A.4 of the MRP requires the Permittees to use the results of the chemistry, toxicity, and bioassessment monitoring, to determine if impacts from urban runoff are occurring and when follow-up actions are necessary. The triad approach allows a wide range of measurements to be combined to more efficiently identify pollutants, their sources, and appropriate follow-up actions. Results from the three types of monitoring shall be assessed to evaluate the extent and causes of pollution in receiving waters and to prioritize management actions to eliminate or reduce the sources. The framework provided in Table 6 below shall be used to determine conclusions from the data and appropriate follow-up actions. The framework in Table 6 was derived from the *Model Monitoring Program for Municipal Separate Storm Sewer Systems in Southern California* (SMC, 2004).

When, based on the framework in Table 6, data indicates the presence of toxic pollutants in runoff, Permittees are required to conduct a Toxicity Identification Evaluation (TIE). A TIE is a set of procedures used to identify the specific chemical(s) responsible for toxicity to aquatic organisms. When discharges are toxic to a test organism, a TIE must be conducted to confirm potential constituents of concern and rule out others, therefore allowing Permittees to determine and prioritize appropriate management actions. If a sample is toxic to more than one species, it is necessary to determine the toxicant(s) affecting each species. If the type and source of pollutants can be identified based on the data alone and an analysis of potential sources in the drainage area, a TIE is not necessary.

When a TIE identifies a pollutant associated with urban runoff as a cause of toxicity, it is then necessary to conduct a toxicity reduction evaluation (TRE). A TRE is a study conducted in a step-wise process to identify the causative agents of toxicity, isolate the sources of toxicity, evaluate the effectiveness of toxicity control options, and then confirm the reduction in toxicity. A TRE should include an analysis and discussion of all potential

source(s) causing toxicity, proposed BMPs to eliminate or reduce the pollutants causing toxicity, and suggested follow-up monitoring to demonstrate that toxicity has been removed.

Table 6. Triad Approach to Determining Follow-Up Actions

	Chemistry	Toxicity	Bioassessment	Possible Conclusion Determining Action	Action
1.	Persistent[14] exceedance of water quality objectives	Evidence of toxicity[15]	Indications of benthic alteration[16]	Strong evidence of pollution-induced degradation	Conduct TIE to identify contaminants of concern, based on TIE metric, initiate TRE
2.	No persistent exceedances of water quality objectives	No evidence of toxicity	No indications of benthic alteration	No evidence of pollutant-induced degradation	No action necessary
3.	Persistent exceedance of water quality objectives	No evidence of toxicity	No indications of benthic alteration	Contaminants are present but not bioavailable	Assess possible upstream sources of pollutants causing exceedances
4.	No persistent exceedances of water quality objectives	Evidence of toxicity	No indications of benthic alteration	Unmeasured contaminants exist with the potential to cause degradation to aquatic life	Conduct TIE to identify contaminants of concern, based on TIE metric, initiate TRE
5.	No persistent exceedances of water quality objectives	No evidence of toxicity	Indications of benthic alteration	Alteration probably not due to toxic pollutants	No action necessary due to toxic chemicals Initiate TRE for physical sources of benthic alteration
6.	Persistent exceedance of water quality objective	Evidence of toxicity	No indications of benthic alteration	Toxic contaminants are bioavailable, but in situ effects are not demonstrable	If chemical and toxicity tests indicate persistent degradation, conduct TIE to identify

[14] Persistent exceedance shall mean the exceedance of relevant Basin Plan or CTR objectives by 20% for three sampling events.

[15] Evidence of toxicity shall mean a high score, in relation to other stations, on metric that combines magnitude and persistence of toxicity over an entire year.

[16] Indications of benthic alteration shall mean an IBI score of Fair, Poor, or Very Poor.

					contaminants of concern, based on TIE metric, initiate TRE
7.	No persistent exceedances of water quality objectives	Evidence of toxicity	Indications of benthic alteration	Unmeasured toxic contaminants are causing degradation	Conduct TIE to identify contaminants of concern, based on TIE metric, initiate TRE
8.	Persistent exceedance of water quality objectives	No evidence of toxicity	Indications of benthic alteration	Inconclusive	Initiate upstream source identification (TIE cannot be conducted when toxicity is not present)

Regional Monitoring

Section II.A.II of the MRP requires that the Permittees participate and coordinate with federal, state, and local agencies and other dischargers in the Santa Margarita Watershed in development and implementation of a regional monitoring program as directed by the Executive Officer. The purpose of regional monitoring is to maximize the efforts of all monitoring partners using a more cost-effective monitoring design and to best utilize the pooled resources of the watershed. If a coordinated watershed sampling effort is approved or directed by the Executive Officer, the Permittees' sampling and analytical efforts may be reallocated.

Special Studies

Special studies are intended to address specific research or management issues that are not addressed by the routine core monitoring program. The MRP requires the Permittees to develop and implement a study to determine appropriate numeric criteria for controlling the volume, velocity, duration, and peak discharge rate of runoff to minimize erosion of natural channels and impacts to in-stream habitat. The study is necessary to comply with section F.2.b.9 of the Order.

Various similar studies and other efforts have occurred in southern California to address the issue of downstream erosion caused by increased runoff rates, volumes, velocities and durations. MS4 permits in San Diego, Orange, Los Angeles, and Ventura Counties have similar requirements, and the Southern California Stormwater Monitoring Coalition (SMC) is in the process of conducting a study (funded by Los Angeles County) to assess the connection between stream erosion and urbanization in natural drainage systems in southern California (SCCWRP, 2004). Ventura County has also conducted a similar study. It is expected that the Permittees will build on existing work and utilize the results and

conclusions of previous studies. The Permittees are encouraged to continue the SMC study in an area in the Santa Margarita Watershed.

3. Comments on Existing and Proposed Monitoring Program

The current monitoring program, the *Consolidated Program for Water Quality Monitoring* (District, 1994), was submitted as an element of the NPDES Municipal Storm Water Application for Permit Renewal, Santa Margarita Watershed, dated January 17, 1995. The objectives and components of the program are listed below (the program does not contain sampling frequencies):

1. Program Objectives:
   - Assessment of mass loadings from storm drains
   - Assess influence of land use on water quality
   - Verification and control of illicit discharges
   - Compliance monitoring of water quality
   - Assess effectiveness of various urban practices designed to control pollution
   - Identify problem areas and/or trends
   - Establish database for future reference
   - Identify baseline conditions
   - Identify pollutants of concern

2. Dry weather sampling stations:
   - Wildomar Channel
   - Cal Oaks Drain (permanent station)
   - Empire Creek Channel
   - Redhawk Parkway Drain

3. Wet weather stations:
   - Wildomar Channel
   - Cal Oaks Drain
   - Empire Creek Channel

4. Sediment sampling at the above stations plus the I-15 basin

5. Receiving water stations
   - Upper Murrieta
   - Lower Murrieta
   - Temecula Creek

6. Toxicity testing

The *Consolidated Program for Water Quality Monitoring* contains many of the same program objectives and components as the Monitoring Program. However, as determined and discussed in several documents (SDRWQCB, 2002b, 2002d, 2003b; Permittees, 2002b), the current program has been inadequate to meet its objectives and needs to be improved.

For details regarding previous monitoring, see the documents referenced herein. The Permittees did not propose a monitoring program as part of the ROWD.

B. ILLICIT DISCHARGE MONITORING PROGRAM

1. Specific Legal Authority for Illicit Discharge Monitoring Requirements

- Federal NPDES regulation 40 CFR 122.26(d)(2)(iv)(B)(2) provides that the permittee include in its proposed management program "a description of procedures to conduct on-going field screening activities during the life of the permit, including areas or locations that will be evaluated by such field screens."

2. Discussion of Illicit Discharge Monitoring Requirements

Section II.B of the MRP describes the Illicit Discharge Monitoring Program. The requirements are consistent with the specifications for developing a field screening program contained at 40 CFR 122.26 (d)(1)(iv)(D). Although the minimum number of inspections is set at twice during the period of May 1st to September 30th of each year, it is expected that more frequent inspections may be necessary. An emphasis is placed on designing a program with clear criteria and rationale. The programs designed should be flexible and implemented in a manner that will enable the Permittees to identify illicit discharges and illegal connections, respond to citizen complaints, and follow-up on ongoing investigations to identify and eliminate sources.

3. Discussion of Existing and Proposed Dry Weather Monitoring

The Permittees' current water quality monitoring program identifies four dry weather monitoring stations, but no sampling frequencies, sampling protocol, or specific screening program are specified. In order to comply with **Requirement J.3** of the Order, Permittees will need to develop an Illicit Discharge Monitoring Program that meets the requirements in **section II.B of the MRP**.

C. MONITORING COSTS

The cost of the Receiving Waters and Illicit Discharge Monitoring Programs is reasonable, considering the need for the data in the Upper Santa Margarita Watershed. All of the monitoring requirements are necessary to meet the goals of the MRP, stated in Section IX.A above, and are consistent with other MS4 monitoring programs in southern California.

As part of their written comments on the Order (Permittees, 2004b), the Permittees provided cost estimates for the MRP, dated December 15, 2003, and for their proposed revised MRP. The Permittees estimated that the annual cost of the original Receiving Waters and Dry Weather Monitoring Programs would be $468,353. They estimated the annual cost of their proposed revised program to be $255,873. Due to variability of necessary overtime, parameters to be analyzed, necessary TIEs, etc., it is difficult to estimate a total cost of the monitoring program. Therefore, the SDRWQCB is assuming that the Permittees' estimate is representative.

In response to the cost information the Permittees submitted, the SDRWQCB revised and reduced the Receiving Waters and Illicit Discharge Monitoring Program requirements to the essential equivalent of the Permittees' proposal. Therefore, the cost should be equivalent to the Permittees' estimate and is reasonable for an MS4 monitoring program in southern California.

D. REPORTING REQUIREMENTS

1. Specific Legal Authority for Reporting Requirements

- Standard provisions and reporting requirements are consistent to all NPDES permits and are generally found in federal NPDES regulation 40 CFR 122.41.
- Federal NPDES regulation 40 CFR 122.42(c) requires that "The operator of a large or medium municipal separate storm sewer system of a municipal separate storm sewer system that has been designated by the Director under section 122.26(a)(1)(v) of this part must submit an annual report by the anniversary of the date of the issuance of the permit for such system. The report shall include: (1) The status of implementing the components of the storm water management program that are established as permit conditions; (2) Proposed changes to the storm water management program that are established as permit condition. Such proposed changes shall be consistent with § 122.26(d)(2)(iii) of this part; (3) Revisions, if necessary, to the assessment of controls and the fiscal analysis reported in the permit application under § 122.26(d)(2)(iv) and (d)(2)(v) of this part; (4) A summary of data, including monitoring data, that is accumulated throughout the reporting year; (5) Annual expenditures and budget for year following each annual report; (6) A summary describing the number and nature of enforcement actions, inspections, and public education programs; and (7) Identification of water quality improvements or degradation."

2. Discussion of Annual Reporting Requirements

SWMP Reporting Requirements (Section III.A of the MRP)

All of the SWMP reporting requirements are necessary to meet the above-referenced federal requirements and to measure the effectiveness of programs and BMPs. According to the EPA, measurable goals are necessary to evaluate the effectiveness of individual BMPs and the storm water management program as a whole (EPA, 2000d). The EPA strongly recommends that measurable goals include: (1) The activity, or BMP, to be implemented; (2) A schedule or date of implementation; and (3) A quantifiable target to measure progress toward achieving the activity or BMP (EPA, 2002d). The Order is structured so that the descriptions of programs and BMPs are included in the SWMP, and the quantifiable measurements are reported in each annual report.

The current permit, Order No. R9-98-02 requires the annual report to be submitted on September 15 of each year. However, the District submitted a request, dated November 3, 2003, to change the annual report date to October 31. The District's request was based on the difficulty of obtaining necessary materials with sufficient time to prepare a report. The SDRWQCB concurs with the request.

Monitoring Provisions and Reporting Requirements (Sections II.C and III.B of the MRP)

The majority of the monitoring provisions and reporting requirements contained in sections II.C and III.B of the MRP are specified in 40 CFR 122.41. Those that are not are standard provisions in SDRWQCB NPDES permits, or are necessary to meet the objectives of the MRP.

Section II.C.h of the MRP specifies that the Minimum Levels (MLs) listed in Appendix 4 of the State Board Policy for Implementation of Toxics Standards for Inland Surface Water, Enclosed

Bays, and Estuaries of California, 2000 (SIP) shall be used for analyses of priority toxic pollutants identified in the CTR (65 Fed. Reg. 31682). The MLs from the SIP represent the lowest quantifiable concentration in a sample based on the proper application of all method-based analytical procedures and the absence of any matrix interferences (SWRCB, 2000a). The SIP's MLs therefore represent the best available science for determining the presence of toxic pollutants at concentrations of concern. If MLs are not used, concentrations of concern of priority toxic pollutants may not be detected. Detection and control of toxic pollutants in surface waters is necessary to achieve the CWA's goals and objectives (65 Fed. Reg. 31683). Using MLs will also provide quantifiable data that is necessary to better assess water quality and BMP effectiveness. Non-detects cannot be used to accurately determine mass loadings. Therefore, the method detection limits (MDLs) used for analysis of priority toxic pollutants must be equivalent to or lower than the MLs in Appendix 4 of the SIP.

1.0 EXECUTIVE SUMMARY

This annual report represents the current status of the stormwater management program for the City of Temecula (City). This report covers the reporting period between July 1, 2006, and June 30, 2007. Each section addresses individual programs that were implemented in order to comply with the requirements of the municipal separate storm-sewer system permit (MS4 permit) issued to the Santa Margarita River (SMR) watershed permittees of Riverside County. The SMR MS4 permit was issued on July 14, 2004 by the San Diego Regional Water Quality Control Board (Board) and is a third-term MS4 permit.

The following represents the major improvements to the City's NPDES program during this reporting period.

- WQMPs were conditioned on more projects during this reporting period than during the previous reporting period;
- The City completed the required High-priority business inspections. In addition, a significant number of Medium and Low-priority business inspections were also completed. These efforts increased compliance and decreased the number of citations;
- The City increased the number of Construction inspections. These efforts increased compliance and decreased the number of citations;
- The City increased its Education and Outreach efforts throughout the Construction, Industrial/Commercial, and new Residential sectors;
- The City's Stormwater and Urban Runoff ordinance was fully implemented and enforced.

2.0 INTRODUCTION

The information contained herein is presented in the same format as that outlined in Section III of the Monitoring and Reporting Program (MRP) of the MS4 permit (Permit). Each section addresses individual components of the Permit and summarizes the progress accomplished during the reporting period. These sections include the City's Development Planning process, Construction program, Municipal program, Industrial and Commercial program, Residential program, Education program, and Illicit Discharge Detection and Elimination Program (IC/ID), respectively.

This Annual Report specifically responds to the Permit's reporting requirements and includes identifying program progress and effectiveness evaluations. This report will be the second year that the new Permit programs are fully implemented and effectiveness data is collected to establish baseline conditions. The Permit also requires the Permittees to develop a long term strategy for addressing the effectiveness of each jurisdiction's Storm Water Management Plan (SWMP). The SWMP is the set of written policies and procedures for each component outlined in the MS4 permit. To that end, the Permittees have developed a long term strategy to evaluate the effectiveness of the SWMPs.

The long term strategy for the program effectiveness assessment (PEA) will be conducted at two levels described below. It should be noted that a PEA requires the initial establishment of a set of baseline conditions using measurable metrics. These baseline conditions can then be used to establish measurable goals based on the measured metrics. Thereafter, effectiveness can be evaluated by comparisons of successive years of measurable metrics against the baseline data and measurable goals.

At the first level, or Annual Assessment Level, the PEA will focus on an annual assessment of program implementation and Permit compliance. These assessments will be addressed by completing the Annual Reporting Forms, which will confirm program implementation, Permit compliance, and collection of measurable metrics. These assessments are included at the end of each Annual Report section. Inferences about the compliance of each program (new development, construction, IC/ID, etc.) will predominantly be drawn from both direct and indirect measures of progress for each program.

At the second level, or Long Term Level, the Permittees will collectively evaluate the measurable metrics, Receiving Water monitoring Data, and IC/ID monitoring data to assess changes in knowledge and behavior, load reductions and improvements in Receiving Water Quality. This long-term analysis will be conducted as part of the Report of Waste Discharge (ROWD). The results of this long-term assessment will be evaluations of the need to make significant programmatic revisions to the Permit compliance programs, as necessary, to protect Beneficial Uses of Receiving Waters. This level will place more emphasis on using direct measures of progress (monitoring data, long term trend analysis) and will support the review and any revisions to the Drainage Area Management Plan (DAMP) and Individual SWMPs using information from the water quality monitoring program, IC/ID monitoring program and measurable metrics that have been collected.

Where the period of evaluation is characterized by the implementation of new program requirements, determinations of program effectiveness will initially be limited to confirmation of program implementation and collection of measurable metrics until baseline conditions can be properly established. Further, it must be recognized that direct measures of long term program effectiveness may not be available within the timeframe of the Third Term Permits. This lack of direct measure confirmation arises because:

- Baseline water quality conditions are not readily established;
- Water quality changes in response to program implementation are likely to be very slow; and
- Establishing a link between receiving water condition and program activities is difficult at the watershed scale when programs are being implemented incrementally with the development/redevelopment cycle.

While program effectiveness assessment is a key step in the iterative process of program implementation, it should be realized that effectiveness assessment itself is a part of the management process that is also evolving. Assessing program effectiveness is recognized as a challenge for program managers across California, and the City of Temecula is supporting the effort of the California Stormwater Quality Association (CASQA) to develop guidance in this area at a statewide level.

3.0 DEVELOPMENT PLANNING PROGRAM

1) Description of any amendments to the General Plan or the development project approval process:

General Plan – On April 12, 2005, the City adopted updates to its General Plan and included, per the MS4 permit and comments from the Regional Board, water quality and watershed protection elements. The Planning Department administers any changes to the City's General Plan. According to the Planning Department, there have been no modifications to the General Plan during this reporting period. The City's goals and policies that address the MS4 are listed in Table 6-1 of Section 6.2 (under General Plan) of the City's SWMP.

Development Projects - On July 1, 2005, the City incorporated the Water Quality Management Plan (WQMP) requirements into all new-development applications and on applications for modifications to existing developments. The revised applications are listed in Section 6.3 (under CEQA Environmental Review Process) of the SWMP under Project Application Forms. All applicable projects that did not receive legal approval, in the form of an approved status by the Planning Commission, prior to July 1st 2005 were required to include a WQMP with the planning application materials. The City also required all proposed projects with prior legal approval to incorporate WQMP-related treatment BMPs into their final designs and to show the locations and details on the grading drawings themselves. Although post-construction BMPs were included on these plans, fully-developed WQMPs were not required due to their prior-legal-approval status. In addition, WQMP requirements were included in the Conditions of Approval (COAs) associated with each applicable development project.

2) Number of grading permits issued:

The City issued 38 grading permits during this reporting period, compared to 62 from the 2005-2006 reporting period, and compared to 76 from the 2004-2005 reporting period. As in the previous reporting periods, many of these projects had legal approval prior to the July 1st WQMP start date and have been in the processing phase until now. Most projects required complete WQMPs. However, those with prior legal approval were not conditioned for this requirement but were still obligated to include post-construction treatment BMPs on the grading plans at a minimum. In both cases, the City has ensured that post-construction BMPs have been designed into the site plan. The list of grading permits issued during this reporting period is included in Attachment A.

3) Number of developments conditioned to meet WQMP requirements:

The City conditioned 25 development projects for the WQMP document submittal requirement during this reporting period, compared to 30 from the 2005-2006 reporting period. It should also be noted that 29 projects were conditioned for the installation of post-construction BMPs during the 2004-2005 reporting period prior to the WQMP requirement. A WQMP tracking log is included in Attachment A.

4) Attach one example of a development project that was conditioned to meet WQMP requirements and a description of the required BMPs:

Attachment A includes an approved COA for a new development that was conditioned with the WQMP requirement. The WQMP requirement is located in item number 17, under the 'General Requirements' section.

5) Description of any updates to the environmental review process:

There have been no updates to the City's CEQA process during this reporting period. The City revised its CEQA Initial Study Checklist in June 2005 to include the submittal of a WQMP for priority projects. The revised Environmental Checklist is presented in Section 6.3 (under CEQA Environmental Review Process) of the SWMP under Initial Study Checklist. The WQMP requirement is listed as item 'f' under the 'Hydrology and Water Quality' section.

6) Description and number of municipal employee training efforts conducted during the reporting period:

a) Training:

Training (collectively with other Permittees)	Training Description	Training Dates	Number of Attendees
WQMP	Review and Approval process	Dec 10, 2004	3
WQMP	Review and Approval process	Dec 15, 2004	1
WQMP	Review and Approval process	May 4, 2005	19
WQMP	Review and Approval process	June 21, 2006	26
WQMP	Review and Approval process	Proposed for November and December 2007	TBD [(1)]

[(1)] TBD – To Be Determined.

A copy of the City's tracking log for staff training is included in Attachment A.

b) Summarize any additional education and outreach activities conducted for project applicants, contractors, developers, property owners, and/or other responsible parties in support of the Development Planning Component:

City staff also attended the annual CASQA conference on September 25, 26, and 27, 2006. This three-day conference included presentations on low impact development, and on the design, implementation, and maintenance of site-specific post-construction BMPs. Staff also attended the Low Impact Development Training seminar sponsored by the SWRCB on June 28 and 29, 2007, in Marina Del Rey. These courses also focused on low impact development and post-construction BMPs. The City's WQMP requirement began on July 1, 2005. WQMP notification flyers were posted at the Public Works and Planning counters throughout the previous reporting period, as well as on the City's web site

(www.cityoftemecula.org/Temecula/Government/PublicWorks/WQMPandNPDES/). The City's NPDES website also includes a WQMP design handbook, a downloadable project-specific WQMP template, checklists to ensure completeness, and links to CASQA's BMP handbooks.

7) An assessment of program effectiveness based on the measurable goals established in the SWMP:

The following information represents measurable data that the City collected in order to begin establishing a series of baseline values that will be used as the basis for the long-term effectiveness assessment required in the permit.

	Projects Conditioned for the WQMP	WQMPs accepted by the City	Total Staff Trained (collectively with other Permittees)
FY 2004-2005	Not Applicable	Not Applicable	23
FY 2005-2006	30	4	26
FY 2006-2007	25	14	Proposed for November and December 2007

Overall, the City has been successful in requiring WQMPs on all development projects meeting the WQMP criteria. These projects were required to incorporate, as applicable, a combination of Site, Source, and Treatment BMPs into the design of their respective projects.

4.0 CONSTRUCTION PROGRAM

1) Number of inspections conducted:

The City conducted 2,965 NPDES construction inspections during this reporting period, compared to 2,154 inspections during the 2005-2006 reporting period, and compared to 1,647 from the 2004-2005 reporting period. Attachment B includes the record of inspections performed during this reporting period. This list is based on the monthly inspection frequency sheets, presented in Appendix C of the SWMP, and provides a month-to-month tally of all of the NPDES inspections, a break-down by project priority (high, medium, low), and monthly cumulative totals.

2) Number and type of enforcement actions related to construction sites:

Enforcement and Compliance Responses	Private Projects	Public Projects	Total
Verbal Warning	633	43	676
Written Warning	116	7	123
Fines	22	2	24
Stop Work Authority	*	*	*
Permit/Certificate of Occupancy Denial	*	*	*
Referral to SDRWQCB	*	*	*

*** -** Due to increased inspections, these measures were not required.

3) Description of modifications made to the construction and grading approval process:

The City is currently in the process of updating the existing Grading Ordinance, Grading Manual, Standard Grading Notes, and Standard Erosion and Sediment Control Notes. These updates will reflect successful practices observed since the previous round of revisions. A complete set of Standard Erosion and Sediment Control Notes are required on all Erosion and Sediment Control Plans. These plans must be approved by the City prior to any Grading Permit approvals. Each Erosion and Sediment Control Plan must also include exact locations and details of each proposed BMP, WDID number if applicable, BMP legend, quantities, topography, flow directions, etc. The Grading Ordinance and standard notes are posted on the City's website, as well as included in Appendix A of the SWMP.

4) Description and number of municipal employee training efforts conducted during the reporting period.

a) Training

Training (collectively with other Permittees)	Training Description	Training Dates	Number of Attendees
Construction	Erosion and Sediment Control	Aug 18, 2004	30
Construction	Erosion and Sediment Control	Mar 2, 2005	2

Construction	Erosion and Sediment Control	May 3, 2005	7
Construction	Erosion and Sediment Control	Aug 29, 2005	15
Construction	Erosion and Sediment Control	Sep 28, 2005	3
Construction	Erosion and Sediment Control	Oct 18, 2006	29

A copy of the City's tracking log for staff training is included in Attachment A.

b) Summarize any additional education and outreach activities conducted for project applicants, contractors, developers, property owners, and/or other responsible parties in support of the Construction Component:

On September 8, 2006, the City began hand-delivering the City's annual NPDES notification letter to each active construction site currently inspected for NPDES compliance. This letter is a formal notification to all active projects obligating each one to implement wet-weather BMPs by October 1st , in addition to complying with the State General Construction Permit, and maintaining pollution prevention measures year-round during the project duration. All of the active sites listed on the September 2006 NPDES Inspection Frequency Sheet List are included in Attachment B and were provided a notification letter. As such, approximately 107 annual letters were delivered to the field superintendents; 99 of these projects were in the private sector while 8 were City-owned projects. The annual letter was also provided to plan-reviewers in the Land Development division of the Public Works department of the City to ensure consistency between the development community and municipal staff. A copy of this letter is included in Attachment B. The City also participated with the Building Industry Association's (BIA) annual all-day Construction Stormwater Compliance Workshop on September 19, 2006 as a guest speaker. The City's presentation focused on SWPPP compliance and WQMP requirements. The City also distributed workshop flyers to all field superintendents for this workshop.

5) An assessment of program effectiveness based on the measurable goals established in the SWMP:

The following information represents measurable data that the City collected in order to begin establishing a series of baseline values that will be used as the basis for the long-term effectiveness assessment required in the permit.

	Inspections	Monetary Penalties	Total Staff Trained (collectively with other Permittees)
FY 2004-2005	1,647	51	39
FY 2005-2006	2,154	67	18
FY 2006-2007	2,965	24	29

Overall, the City improved this component from the previous reporting period by increasing inspections by approximately 37%. This increase in the number of inspections allowed the city to closely monitor each active site, which in turn, increased compliance and decreased the number of citations. In addition, field observations indicate that the development community, in

general, has become more knowledgeable of the requirement. In addition, it has been noted that larger developments have hired in-house SWPPP specialists specifically to minimize non-compliance. It is also important to note that the permittees' staff training programs are category-specific for different in-house divisions. As such, all applicable staff members were directed to their respective training categories.

5.0 MUNICIPAL PROGRAM

1) Number of inspections conducted at existing Municipal facilities:

Routinely performed but not formerly documented. The City is still in the process of developing inspection tracking procedures for areas and facilities owned and/or maintained by the City. A detailed listing of these areas and facilities is presented in Appendix B of the SWMP as the 'City of Temecula Inventory of Municipal Facilities and Activities'. It is anticipated that the City will have a tracking system in place by the end of the third-term permit that will document inspection dates and any NPDES-related issues that were observed and addressed for each facility. This system will ensure that the City is actively maintaining compliance at each facility.

2) Number and type of enforcement actions related to municipal construction sites:

Enforcement and Compliance Responses	Number
Education and Information	Provided but not documented
Verbal Warning	Provided but not documented
Written Warning	8

3) Number of catch basins that were inspected and the number that were cleaned:

	Total on GIS Map (City, Caltrans, private)	City-Maintained Catchbasins	Minimum Number Inspected	Number Cleaned
Catch Basins	1,964	1,600	3,200 (1)	1,974(2)

(1) There were 40 catch basins that were routinely inspected quarterly due to their proximity to heavier trafficked areas. However, the figure listed herein represents two inspections at each catch basin.
(2) This figure represents the number of documented catch basins cleaned.

All of the 1,600 city-maintained catchbasins currently documented on the City's GIS map were visited twice during the reporting period. Many of these required cleaning during both visits, while others did not. The City maintains a monthly catch basin maintenance log that lists dates, locations, and number of catch basins cleaned during any given month. In addition, the City also maintains a monthly NPDES stencil (legends) log that also lists the dates, locations, and number of legends installed during any given month. These legends are placed at the top of each catchbasin opening and state "Only Rain In The Drain". An example of each of these monthly logs is included in Attachment C.

4) Assessment of the amount and type of debris removed from catch basins, streets, and open channels, including identification of areas that generate the most pollutants:

Facility	Type of Debris	Approx. %	Problem Areas that Generate Most Pollutants
Catch basins	Anthropogenic Litter Green Waste Sediment	35(1) 60(1) 5(1)	Residential/Commercial areas Residential areas

		100	**Total Removed: 160 CY[(1)]**
Street Sweeping[(3)]	Anthropogenic Litter Sediment	**100**	**Total Removed: 1,798 Tons[(2)] (approximately 1,798 CY)**
Open Channels	Anthropogenic Litter Green Waste Sediment	7[(1)] 3[(1)] 90[(1)] **100**	Natural channels **Total Removed: 2,000 CY[(1)]**
			Grand Total: 3,958 CY

Notes:
(1) – These figures are provided by the Maintenance Division of the PW Department.
(2) – This figure is provided by Temecula Community Services District's "City of Temecula Tonnage Report".
(3) – Street sweeping areas consist of all paved city-maintained streets. Currently, street sweeping is conducted on 283 miles of paved streets.

5) Assessment of effectiveness of BMPs implemented for municipal facilities and activities:

BMP Code	Description	Used	Notes
SC-10	Non-Stormwater Discharges	☒ Yes ☐ No	
SC-11	Spill Prevention, Control and Clean-up	☒ Yes ☐ No	
SC-20	Vehicle and Equipment Fueling	☐ Yes ☒ N/A	Fueling is conducted offsite
SC-21	Vehicle and Equipment Cleaning	☒ Yes ☐ No	City vehicles are washed onsite. Stormcepter collects all discharges.
SC-22	Vehicle and Equipment Repair	☐ Yes ☒ N/A	Repairs are conducted offsite
SC-30	Outdoor Loading/Unloading of Materials	☒ Yes ☐ No	
SC-31	Outdoor Liquid Container Storage	☒ Yes ☐ No	
SC-32	Outdoor Equipment Maintenance	☐ Yes ☒ N/A	New facility has been constructed to cover all maintenance equipment
SC-33	Outdoor Storage of Raw Materials	☒ Yes ☐ No	
SC-34	Waste Handling and Disposal	☒ Yes ☐ No	
SC-35	Safe Alternative Products	☒ Yes ☐ No	
SC-40	Contaminated or Erodible Areas	☒ Yes ☐ No	
SC-41	Building and Grounds Maintenance	☒ Yes ☐ No	
SC-42	Building Repair and Construction	☒ Yes ☐ No	
SC-43	Parking/Storage Area Maintenance	☒ Yes ☐ No	
SC-44	Drainage System Maintenance	☒ Yes ☐ No	
SC-60	Housekeeping Practices	☒ Yes ☐ No	
SC-61	Safe Alternative Products	☒ Yes ☐ No	
SC-70	Road and Street Maintenance	☒ Yes ☐ No	
SC-71	Plaza and Sidewalk Cleaning	☒ Yes ☐ No	Street sweeping has been extended into specific commercial areas
SC-72	Fountain and Pool Maintenance	☒ Yes ☐ No	
SC-73	Landscape Maintenance	☒ Yes ☐ No	
SC-74	Drainage System Maintenance	☒ Yes ☐ No	
SC-75	Waste Handling and Disposal	☒ Yes ☐ No	
SC-76	Water and Sewer Utility Maintenance	☐ Yes ☒ N/A	Provided by RCWD and EMWD

6) Description and number of municipal employee training efforts conducted during the reporting period.

a) Training:

Training (collectively with other Permittees)	Training Description	Training Dates	Number of Attendees
Municipal	Operations, Maintenance, Inspections	Oct 21, 2004	8
Municipal	Operations, Maintenance, Inspections	May 3, 2005	16

Municipal	Operations, Maintenance, Inspections	Sep 26, 2005	4
Municipal	Operations, Maintenance, Inspections	Apr 27, 2006	20
Municipal	Operations, Maintenance, Inspections	Oct 18, 2006	7
Municipal	Operations, Maintenance, Inspection	Proposed for November and December 2007	TBD

A copy of the City's tracking log for staff training is included in Attachment A.

b) Summarize any additional education and outreach activities conducted for municipal staff in support of the Municipal Component:

Due to the period between training workshops, only those who did not attend the Aril 27, 2006 session were required to attend the October 18, 2006 session. Although the fiscal year numbers only show 7 participants for the 2006-2007 fiscal year, a total of 27 participants were formally trained during the 2006 calendar year. The next round of training workshops are scheduled for November and December 2007. Although no additional formal classroom-type workshops were conducted this reporting period, numerous informal, one-on-one training has been ongoing with field crew members, the maintenance supervisor, and the maintenance superintendent on an as-needed basis.

7) An assessment of program effectiveness based on the measurable goals established in the SWMP:

The following information represents measurable data that the City collected in order to begin establishing a series of baseline values that will be used as the basis for the long-term effectiveness assessment required in the permit.

	Inspections	Pollutants Removed (CY)	Total Staff Trained (collectively with other Permittees)
FY 2004-2005	Undocumented	1,794	24
FY 2005-2006	Undocumented	11,859	24
FY 2006-2007	Documented	3,958	7

Note: The FY 2006-2007 value listed under 'Pollutants Removed' reflects 3.75" of rain during the wet-weather season.

Overall, the City improved this component from the previous reporting period by increasing the awareness for documentation.

6.0 INDUSTRIAL/COMMERCIAL PROGRAM

1) Number of inspections conducted:

Category	Number of Inspections	
Industrial/Commercial Facilities	FY 2005-2006	FY 2006-2007
High Priority Facilities	252	266
Medium Priority Facilities	52	61
Low Priority Facilities	1	96
Total	**305**	**423**

The City completed all of the annual high-priority inspections this reporting period and also addressed many medium and low priority facilities as well. The criteria used to prioritize each business is outlined in the MS4 permit and includes the facility's Standard Industrial Classification (SIC) code, materials used, wastes generated, exposure of activities to stormwater, size, proximity to receiving waters, etc. These inspections uncovered various facilities that were in different stages of compliance. However, each active facility, regardless of the stage of compliance, was provided educational materials, and verbal and written guidance and warnings through written inspection notices. These inspection notices served to document the current condition at each facility, including any deficiencies observed, and areas for improvement. Follow-up visits were also conducted at many of the more challenging sites to ensure that these were actively pursuing total compliance. The City's current prioritized inventory of industrial and commercial facilities, including the City's current inspection form, are located in Appendix D of the SWMP.

2) Number and type of enforcement actions taken:

Enforcement and Compliance Responses	FY 2005-2006	FY 2006-2007
Education and information	305	380(1)
Verbal Warning	19	380(1)
Written Warning	19	380(1)
Citation	8	1
Business License Denial	*	*
Referral to SDRWQCB	*	*

(1) - Although 423 business locations were visited, many were no longer active or had become home-based.
* - Due to increased inspections, these measures were not required.

3) An assessment of program effectiveness based on the measurable goals established in the SWMP:

The following information represents measurable data that the City collected in order to begin establishing a series of baseline values that will be used as the basis for the long-term effectiveness assessment required in the permit.

	Inspections	Monetary Penalties	Total staff trained
FY 2004-2005	161	3	1
FY 2005-2006	305	8	1
FY 2006-2007	423	1	*

* - The City contracted with AEI-CASC to conduct all business inspections. As such, municipal staff have not been required to participate in the business inspection training.

Overall, the City improved this component from the previous reporting period by inspecting more businesses, completing the high-priority inspections, and increasing the number of inspections at medium and low-priority facilities. This increase allowed the city to extend further into the business community, which in turn, increased compliance and decreased the number of citations. Field observations indicate that the business community, in general, has also become more knowledgeable of the requirements.

4) Additional Comments/Information:

Attachment D of this report includes two letters. The first letter is an outreach letter that was provided to all of the facilities that were inspected during this reporting period. The information contained in this letter describes the new NPDES regulations, the inspection criteria, and the previous outreach letter sent throughout the business community on June 7, 2005. This letter was provided to the facility representative at the time of each inspection. The second letter is provided to property management associations as an example of how to inform their respective tenants of the new discharge requirements and associated penalties for non-compliance.

7.0 RESIDENTIAL PROGRAM

1) A description of residential areas that were focused on during the past year:

Residential areas that had recently been released for occupancy continued to be the focus during this reporting period. Activities from these new residential neighborhoods generated more non-permitted discharges following occupancy than existing residential neighborhoods due to improvements incurred by the new homeowners, such as landscaping, pools, patios, etc. These areas generated limited discharges of dirt, sand, fertilizers, gravel, cement, and excess irrigation water from the newly installed lawns. The City's existing residential efforts are presented in Section 9.0 of the SWMP under Residential Sources.

2) Number and type of enforcement actions taken:

Enforcement and Compliance Responses	
Education and information	Provided but not documented
Verbal Warning	Provided but not documented
Written Warning	0
Citation	5

3) An assessment of program effectiveness based on the measurable goals established in the SWMP:

The following information represents measurable data that the City collected in order to begin establishing a series of baseline values that will be used as the basis for the long-term effectiveness assessment required in the permit.

	Residential SORs(1) Received	Monetary Penalties	Trash/Recyclables/Green Waste (Tons)
FY 2004-2005	Not documented	Not documented	Not documented
FY 2005-2006	28 (42(2))	0	54,429
FY 2006-2007	41	5	53,692

(1) – SOR – Service Order Request. SORs consist of written documentation of complaints that are called into City Hall by the general public.
(2) – This value reflects the total number of same-day field inspections conducted in response to completed written SORs as well as to inspections conducted without formal written SORs.

Overall, the City continued improving this component from the previous reporting period by further educating staff responsible for collecting SOR information to identify incoming calls associated with NPDES issues. All calls associated with NPDES issues are now being documented as formal written Service Order Requests. As such, staff have increased their base knowledge with the NPDES requirements.

4) Additional Comments/Information:

Public outreach was implemented through information contained in the City's "Inside Temecula" newsletters, "Guide to Leisure Living Activities" guide, "CityWide Clean-up" flyers, and Household Hazardous Waste Collection" flyers that are distributed biannually to

all City residents. Information pertaining to stormwater, recycling, hazardous waste disposal, community clean-up events, greenwaste management, landscape maintenance, street sweeping, etc. were presented in one or more issues of these newsletters and guides. In addition, biannual City-wide community clean-up events were conducted on November 11, 2006 and on May 19, 2007. Relevant sections from the various mailings and the community clean-up flyers are included in Attachment E.

8.0 EDUCATION PROGRAM

1) Description of education efforts conducted by the Permittee (not collectively with other Permittees) during the previous year:

Audience	Measures
Permittee Departments and Personnel	Number of Permittee employees trained for: • Construction Inspection: * • Industrial/Commercial Inspection: * • Municipal Facilities and Activities: * • Development Planning: * * - City staff are provided with continuous informal in-house training on an individual and as-needed basis. As such, these one-on-one opportunities are not formally documented. However, all formal classroom-type workshops are conducted and documented thru the regional education program administered by the Riverside County Flood Control District and paid with contributions from all permittees.
Construction Site Owners and Developers	Outreach: (1) Distributed BIA's annual workshop flyer to all field superintendents. (2) Distributed the City's annual NPDES notification letter to all active sites.
Industrial/ Commercial Owners and Operators	Outreach events conducted: Conducted inspections at 423 businesses and provided educational brochures and written inspection notices at each active facility.
Residential Community, General Public, Other Public Agencies and Students	Number of Media Impressions in: • Newspaper: Refer to watershed report • Mailings: All outreach activities took place through hand-deliveries. • Radio/TV: Refer to watershed report • Web Site: In place. The number of visitors is not documented. • Billboards: Refer to watershed report • Brochures: Distributed but not documented <u>Classroom Presentations Conducted:</u> The City contributes funds for NPDES-related presentations at elementary schools. These presentations are conducted by the Mission Resource Conservation District. 50 presentations were conducted at 6 elementary schools in Temecula during FY 2006-2007.

	Public Education Events Conducted: **Biannual Events** - "City-Wide Cleanup" & "Household Hazardous Waste Collection". **Annual Events** - Earth Day at the Promenade; Temecula Wine and Balloon Festival; SMR Watershed Cleanup.

2) Assessment of overall program effectiveness based on the measurable goals established in the SWMP:

The following information represents measurable data that the City collected in order to begin establishing a series of baseline values that will be used as the basis for the long-term effectiveness assessment required in the permit.

Total Staff Trained (collectively with other Permittees)				
	New Development	Construction	Municipal	Commercial/ Industrial
FY 2004-2005	23	39	24	1
FY 2005-2006	26	18	24	1
FY 2006-2007	(1)	29	7(2)	(3)

(1) - 26 staff members attended training in the 2006 calendar year. The next set of workshops is scheduled for Nov and Dec 2007.
(2) - 27 staff members attended training in the 2006 calendar year. The next set of workshops is scheduled for Nov and Dec 2007.
(3) - The City contracted with AEI-CASC to conduct all business inspections. As such, municipal staff have not been required to participate in the business inspection workshops.

Although no formal in-house classroom-type workshops were conducted this reporting period, numerous informal training has been ongoing with staff on an individual and as-needed basis.

9.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION PROGRAM

1) Number of illicit discharges, connections and spills reported and/or identified during the reporting period:

a) Illicit Discharges (ID): 22 (based on Service Order Requests)
b) Illicit Connections (IC): 0
c) Sewage Spills (S): 2

2) Number of illicit discharges or connections investigated during the reporting period and the outcome of the investigations:

All of the SORs were addressed. The City did not receive any calls related to illicit connections.

3) Number and types of enforcement actions taken for illicit discharges or connections during the reporting period:

Enforcement and Compliance Responses	Private Facilities	Public Facilities
Non-monetary penalties	16	
Fines (Residential & Business)	6	
Total	**22**	**0**

4) Number of times City Hall was notified (calls, e-mail, walk-ins, etc.) during the reporting period, as compared to previous reporting periods.

	Number of Notifications		
	2003-04	**2004-05**	**2006-07**
NPDES SORs	74	24	41

5) Number and location of dry weather monitoring sites that were monitored during the reporting period:

Number of Site(s): The City of Temecula selected 4 sites that were monitored during the fiscal year's dry-weather fall and spring seasons. These sites consist of the following locations:

1. Empire Creek at the Del Rio Bridge.
2. Pechanga Parkway stormdrain channel near the confluence into Temecula Creek.
3. Pechanga Creek at the Rainbow Canyon bridge.
4. Temecula Creek at the confluence into the upper reach of the Santa Margarita River.

In addition, the Riverside County Flood Control District has four separate sites throughout the City that are also monitored in like manner. These sites consist of the following locations:

1. Long Canyon Wash at the Commerce Center Drive bridge
2. Murrieta Creek at the USGS station at the end of Pujol street
3. Redhawk Parkway stormdrain channel near the confluence with Temecula Creek
4. Santa Gertrudis Creek at the Jefferson Avenue bridge.

As such, eight locations are monitored throughout the City of Temecula. The latest version of the City's Dry-Weather Illicit Discharge Monitoring Log is presented in Appendix E of the SWMP. The results of the field activities conducted during this reporting period are presented in Attachment F herein.

6) Summary of Illicit Discharge Monitoring Program results, including: 1) All inspection, field screening, and analytical monitoring results; 2) All follow-up and elimination activities; and 3) Any proposed changes to station locations and/or sampling frequencies:

Date	Location	Monitoring Results	Follow-up and Elimination Activities	Proposed Changes
August 31, 2006	Primary Locations	No indications of illicit discharges	None	No Changes Comment(s):
June 15, 2007	Primary Locations	No indications of illicit discharges	None	No Changes Comment(s):

7) Assessment of overall program effectiveness based on the measurable goals established in the SWMP:

Overall, all of the primary dry-weather monitoring locations were monitored, and all SORs were investigated. The City did not encounter any illicit discharges or connections into or at any of the monitoring locations, and all of the SORs resulted in either verbal or written warnings and citations that enforced the mitigation of each specific incident.

10.0 PUBLIC PARTICIPATION

1) A description of efforts to include the public in urban runoff management programs during the reporting period.

The City conducted various outreach efforts to the public this reporting period. The more visible programs included larger events consisting of community clean-up activities on November 11, 2006 and on May 19, 2007, a Household Hazardous Waste Collection Event on January 27, 2007, and the annual creek clean-up. The less visible programs included personal contact with the public regarding pollution prevention thru business inspections, responses to Service Order Requests, in-house meetings with project applicants, and field meetings with developers.

11.0 ASSESSMENT OF OVERALL SWMP EFFECTIVENESS

The SWMP continued to be implemented in its entirety this reporting period. Other than minor edits, each section provides enough detail to successfully implement each of the components of the permit.

12.0 FISCAL ANALYSIS

1) A summary of the reporting period's expenditures and an estimated budget for the upcoming reporting period.

Program Element	Fiscal Year 2005-2006		Fiscal Year 2006-2007		Fiscal Year 2007-2008 (Estimated)	
	Capital Expenditures	O&M/Admin Expenditure	Capital Expenditures	O&M/Admin Expenditure	Capital Expenditures	O&M/Admin Expenditure
Program Management (1)	--	116,196	--	118,261	--	122,747
Annual Fee for NPDES Permit from SWRCB	--	9,609 (actual invoice)	--	11,109 (actual invoice)	--	14,813
Implementation Agreement (I.A.) Shared Cost	--	130,147	--	129,769	--	130,173
Construction Inspections (2)	--	60,635	--	62,798	--	63,163
Development Planning (WQMP reviews) (3)	--	11,054	--	12,224	--	10,000
Industrial and Commercial Inspections (4)	--	24,650	--	51,791	--	70,000
IC/ID Program	--	1,000	--	1,000	--	1,000
Municipal Programs (PW Maint) (5)	--	250,000	--	150,000 (Dryer than average Wet-Weather Season)	--	250,000
Municipal Programs (TCSD) (6)	--	5,885,545	--	6,381,136	--	7,134,931
Public Outreach (i.e. classrooms, brochures, etc.)	--	Included in the I.A.	--	Included in the I.A.	--	Included in the I.A.
Monitoring Program	--	Included in the I.A.	--	Included in the I.A.	--	Included in the I.A.
Other (7)	--	5,000	--	15,000	--	15,000
Total (8)		**$608,291**		**$551,952**		**$676,896**
Grand Total	**$ 0**	**$6,493,836**	**$ 0**	**$6,933,088**	**$ 0**	**$7,811,827**

Notes:
(1) This cost reflects program administrator time.
(2) This costs reflects NPDES inspector time plus 10K vehicle expenses
(3) This cost reflects out-sourced WQMP reviews
(4) This cost reflects out-sourced inspection services
(5) This cost reflects drainage channel clearing, catchbasin maintenance, and stenciling.
(6) This cost reflects the operating budgets for refuse/recycling, street sweeping, landscape/slope programs through Temecula Community Services District.
(7) This cost reflects staff's time for formal classroom training, conferences, inspection forms, citation books, mailings, etc.
(8) This total does not include the refuse/recycling, street sweeping, landscape/slope programs.

2) A description of the source(s) of funds that were utilized during the previous fiscal year and the source(s) of funds proposed to meet the necessary expenditures for the subsequent year, including legal restrictions on the use of such funds.

Source of Funds	Percent of Program Funding	Restrictions on Use (if applicable)
General Fund	96	Allocations to other departments and divisions.
WQMP Review Fees	4	

13.0 NON-STORM WATER DISCHARGES

Permittees shall report on any discharge category listed in Requirement B.2 of Order No. R9-2004-001 that was identified as a source of pollutants during the reporting period. For each identified category, the Permittee shall report whether it elected to prohibit the discharge or to require BMPs to reduce pollutants in the discharge to the MEP. If the discharge is not prohibited, the BMPs that will be implemented, or required to be implemented, shall be described in each SWMP Annual Report.

Category	Prohibited	BMP to be Implemented
Diverted stream flows	☐ Yes ☒ No	Not Applicable
Rising ground waters	☐ Yes ☒ No	Not Applicable
Uncontaminated ground water infiltration [as defined at 40 CFR 35.2005(20)] to MS4s	☐ Yes ☒ No	Not Applicable
Uncontaminated pumped ground water	☐ Yes ☒ No	Not Applicable
Foundation drains	☐ Yes ☒ No	Not Applicable
Springs	☐ Yes ☒ No	Not Applicable
Water from crawl space pumps (Identified as a source of pollutants when commingled with construction-related sediment).	☐ Yes ☒ No	Filtered through gravel-bag chevrons prior to entering a CB
Footing drains	☐ Yes ☒ No	Not Applicable
Air conditioning condensation	☐ Yes ☒ No	Not Applicable
Flows from riparian habitats and wetlands	☐ Yes ☒ No	Not Applicable
Water line flushing. (Identified as a source of pollution when commingled with construction-related sediment).	☐ Yes ☒ No	Filtered through gravel-bag chevrons prior to entering a CB
Landscape irrigation	☐ Yes ☒ No	Not Applicable
Discharges from potable water sources not subject to NPDES Permit No. CAG679001, other than water main breaks. (Identified as a source of pollutants when commingled with construction-related sediment).	☐ Yes ☒ No	Filtered through gravel-bag chevrons prior to entering a CB
Irrigation water	☐ Yes ☒ No	Not Applicable
Lawn watering	☐ Yes ☒ No	Not Applicable
Individual residential car washing	☐ Yes ☒ No	Not Applicable
Non-emergency fire fighting flows	☐ Yes ☒ No	Not Applicable
Dechlorinated swimming pool discharges	☐ Yes ☒ No	Not Applicable

14.0 RECEIVING WATER LIMITATIONS

This section includes the report required pursuant to Requirement C.2.a. of Order No. R9-2004-001, if applicable. Requirement C.2.a. states:

"Upon a determination by either a Permittee or the SDRWQCB that MS4 discharges are causing or contributing to an exceedance of an applicable water quality standard, the Permittee shall promptly notify and thereafter submit a report to the SDRWQCB that describes BMPs that are currently being implemented and additional BMPs that will be implemented to prevent or reduce any pollutants that are causing or contributing to the exceedance of water quality standards. The report may be incorporated in the SWMP Annual Report unless the SDRWQCB directs an earlier submittal. The report shall include an implementation schedule. The SDRWQCB may require modifications to the report."

Not Applicable. The City has not received any indications of exceedances to an applicable water quality standard in this area during the reporting period. Please refer to the watershed monitoring data report for a detailed review of the monitoring data.

15.0 SUMMARY OF ADDITIONAL URBAN RUNOFF DATA

This section is a summary of all urban runoff related data not included in the annual monitoring report (e.g., special investigations).

The City of Temecula did not conduct any special investigations during this reporting period.

16.0 PROPOSED REVISIONS TO THE SWMP

This section includes proposed revisions to the Individual SWMP, including areas in need of improvement based on the assessment of effectiveness of each program component.

There were no revisions to the City's SWMP during this reporting period. Attachment G includes the list of revisions that were provided previously for the FY 2005-2006 reporting period as an example. This list will eventually show a cumulative summary of all revisions to the SWMP since the full implementation of all components of the third-term permit.

BOARD ORDER NO. R9-2004-001
CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
SAN DIEGO REGION

Executive Summary

The County of Riverside (County), the Riverside County Flood Control and Water Conservation District (District), and incorporated Cities of Riverside County operate municipal storm drain systems and discharge stormwater and urban runoff pursuant to NPDES Permits. The County of Riverside is unique in that there are three Permits, administered independently by three Regional Water Quality Control Boards with jurisdiction within the boundaries of the County. Specific to the Santa Margarita Watershed is the NPDES Permit governed by the San Diego Regional Water Quality Control Board (afterwards referred to as the Regional Board), which requires the County, District (Principal Permittees), and the cities of Murrieta and Temecula (afterwards referred to collectively as the Permittees) to develop and implement surface water quality protection and management programs and report annually on progress with respect to specified compliance activities.

Current History and Demographics

Population

As of January 1, 2007, the California State Department of Finance (DOF) estimates Riverside County's population at 2,031,625, making Riverside County the state's fourth largest of the fifty eight counties. This amounts to about 5.39% of California's total population. An influx of 65,000 people in 2006, ranked the County second in numerical change in California, with Los Angeles County being first. Riverside County also ranked second in percentage change at about 3.31%, with only Imperial County growing slightly faster at about 3.38%.

Precipitation

The 2006-2007 NPDES stormwater permit reporting period was perhaps one of the driest seasons on record in Riverside County with rainfall numbers equating to that of Death Valley, CA proportions at 1.93 inches.

> *2006 apparently produced the lowest amount of rainfall in Riverside County since annual rainfall had been recorded, at just 1.93 inches. That beat out the previous low of 2.94 inches reported in 1883.*-**(Source:** Riverside Press Enterprise)
>
> *"The past 12 month period was driest on record for California and Nevada. The abnormally dry conditions have led to severe-to-extreme drought from the southern California coast eastward to Arizona and north along the Sierra Nevada Mountains into the Great Basin."* **–(Source:** National Oceanic & Atmospheric Administration)

This is a significant change from the approximate 32 inches of rainfall realized in 2004-2005. With such a dramatic climate shift a dry and warming cycle is apparent.

Economic Outlook

Another significant event is the downturn of economic indicators and the reduction of assessed value growth projected for the next five years toppling to almost zero by the end of 2011. This is in comparison to a peak value of almost 22.5% in 2006-early 2007. (**Source:** Riverside County Auditor Controller)

Decline in Residential Building Permits

The number of residential building permits issued is highly correlated to the inflow of the domestic migration pattern and housing production in the County. During the mid- 1990s, residential permits issued were low due to fewer people moving to Riverside County as a result of the economic downturn. Building permits increased drastically after 2000 driven by the high demand in the housing market. A total of 179,000 residential units were issued from 2000 to 2006 according to US Department of Housing and Urban Development. In 2006, total residential unit permits issued was 24,800,

representing a significant drop (-28% or -9,600) in comparison to 34,400 in 2005. The decrease in the number of building permits in 2006 would indicate slower housing construction in the upcoming year. (**Source:** County of Riverside Demographics Unit-TLMA)

The County is in the midst of an economic decline which has not fully been realized.

> *Construction of single family homes in the first eight months of 2007 declined nearly 54 percent in Riverside County compared with the same period a year ago, according to a report released Thursday by the California Building Industry Association. Through August, Riverside and San Bernardino counties accounted for nearly half of the statewide year-to year decline, with the number of permits issued for construction of single family homes in the region plummeting from 26,508 to 13,405.*
>
> *Home construction has come to a near-standstill in the region as builders and developers react to an unexpectedly severe drop-off in buying.*
>
> *Alan Nevin, chief economist of the state builder's association, said buying has been crippled in the two-county region by rising gasoline prices, which turns off commuters, and the virtual loss of sub-prime mortgages that /some/first-time buyers, who represent a large portion of the Inland market, need to get a loan.* **Source:** Building Industry Council-Riverside Press Enterprise

Building Industry Association of Riverside County, Executive Officer Borre Winckel issued the following statement regarding the decrease in housing activity:

> *"Unfortunately, the housing market stabilization is still continuing in Riverside County. The economic link between the homebuilding industry, local economy and local government budgets is undeniable. Riverside homebuilders directly and indirectly support hundreds of thousands of jobs and add billions of dollars to the economy and local government budgets.*
>
> *With the decrease in building permit activity continuing, local governments are seeing dramatic reductions in fee revenues, countywide. Early data for 2007 shows the problem is enormous if the trend continues. The near 50% drop off in permits considering an average of over $50,000 in fees per house, could result in local government losses of up to $750 million this year.*

With these conditions continuing into the unforeseen future, The County of Riverside's NPDES Stormwater program continues to hold the line on the development review process and continues to monitor proposed projects and inspect those projects that are in-process throughout the county.

With the concern that development projects may be abandoned without maintaining Best Management Practices (BMPs) for sediment and erosion control inspectors were out early during the rainy season keeping pressure on the development community to ensure that projects were in compliance with the stormwater requirements despite the fact that the county is suffering severe drought conditions.

Leadership in Energy and Environmental Design (LEED)

The Leadership in Energy and Environmental Design (LEED) Green Building Rating System ™ is a nationally accepted benchmark for the design, construction, and operation of high performance green buildings. LEED gives building owners and operators the tools they need to have an immediate and measurable impact on their buildings' performance. LEED promotes a whole-building approach to sustainability by recognizing performance in five key areas of human and environmental health: sustainable site development, water savings, energy efficiency, materials selection, and indoor environmental quality. The County of Riverside Facilities Management Department is on the cutting edge as it begins to incorporate LEED into capital improvement projects (CIP). Although not in the Santa Margarita watershed, the county is in the process of constructing a regional library that will be the model for future municipal construction projects throughout region.

> *Riverside County will break ground for the new Woodcrest Library in a public ceremony on Thursday, November 2, 2006 at 10:00 a.m. The new 10,000 square foot library, located at Krameria and Trisha Lane in the Woodcrest area, will replace the small county library currently operating out of the shopping center at the corner of Washington and Van Buren. The new library will open to the public in early 2008.*
>
> *Planned to blend into the natural landscape of the community, the new library will be the first LEED (Leadership in Energy and Environmental Design) certified building constructed by Riverside County. "This is truly something for this community to be proud of", said First District Supervisor Bob Buster. "The new Woodcrest Library will be a model of sustainable site development, water savings, energy efficiency, sustainable materials usage, and indoor environmental quality".*
>
> *Some of the features planned for the new library and its site include low water native landscaping; a permeable parking lot and bio-swales to reduce and utilize stormwater run-off; and a building design which uses*

and directs ambient lighting from roof and windows to reduce the use of artificial light. Building materials have been selected with durability and sustainability in mind. A water-wise demonstration garden is also planned for the site.
"The building plan has already won an award for design excellence", continued Buster, referring to the 2005 Merit Award presented to HMC Architects by the local chapter of the American Institute of Architects. "I think it will serve the Woodcrest community well as an educational and recreational resource, as a community meeting place and as an attractive amenity which invites the use of both library and grounds." ***Source:-*** *County of Riverside-Nancy Johnson, County Librarian*
See attached Grand Opening flyer)

Business Registration and Licensing Program

On November 7, 2006 the Board of Supervisors for the County of Riverside approved Ordinance No. 857 which provides the regulatory and administrative framework to implement a Business Registration and Licensing Program within the unincorporated area of Riverside County. The ordinance contains a variety of administrative procedures that are outlined including: contents of the application form, license issuance protocol, description of license fee, license inspections, water quality inspections and enforcement, and business license enforcement procedures.

The business license fees are $45 for initial licensing and $30 for annual renewal. Exemptions are granted for various agricultural activities, certain residential businesses, places of worship, specific non-profit, and any business exempt by virtue of constitution law, however exempted business will be required to register. Business license fees charged under the provisions of this ordinance shall be revenue-neutral in that they may not exceed the reasonable costs of providing the regulatory services included in the business registration and licensing program. No business license fee charged under the provisions of this ordinance shall be construed as a business license tax.

Countywide over 6,000 businesses have registered. The first round of inspections of these businesses will be to evaluate their risk and impact to stormwater flows and contribution to urban runoff. In addition, educational materials on best management practices (BMPs) will be provided. Any violations observed will be corrected by progressive enforcement include written warning (Notice of violation with time frame for correction), administrative enforcement (citation with administrative penalty), and referral to the regional board for recalcitrant and gross violators.

This program will augment the program activities currently provided by the Department of Environmental Health's Compliance Assistance Program (CAP) that inspect restaurants and other food establishments, businesses that store

hazardous materials and generate hazardous waste and businesses that operate underground storage tanks.

Multi Species Habitat Conservation Plan

In the 2005-2006 Annual Report a significant amount of time was spent describing the Multi Species Habitat Conservation Plan (MSHCP) and the importance of preserving open space, biological diversity and quality of life. Progress continues with 11, 131.5 acres of private land that has been purchased since the inception of the MSHCP with the bulk of the properties being purchased in 2006-2007.

Illegal Dumping

Because of the rural nature of the unincorporated regions of the county and the transformation from rural farming to urban and suburban residential, illegal dumping has become a significant issue for the County Board of Supervisors. In an attempt to refocus on the problem of blight in the unincorporated communities, the Board of Supervisors made the Code Enforcement Division of Building and Safety a stand alone department within the Transportation Land Management Agency. This restructuring of program resources and a more enforcement oriented philosophy has made a significant impact on the community.

As an example, the number of illegal dumping cases investigated is at 439 countywide, which is 1.76 times the number of cases investigated in the previous year. Investigations for illegal dumping within the Santa Margarita watershed set a new high at 133 cases processed.

	FY 04-05	FY 05-06	FY 06-07
Whitewater	5	44	131
Santa Margarita	16	71	133
Santa Ana	51	135	175

Further in a continuing effort to provide trash cleanup days throughout the County the Code Enforcement Department has processed an estimated 380 tons of trash collected at various scheduled events during July 1 2006 through June 30, 2007 permit period. In addition, illegal roadside dumping per capita shows a decreasing trend with 97.99 tons in the last year collected and ultimately disposed of at county cost into a local landfill.

All thought this is not a significant amount of trash per person, with the sky rocketing population growth in the region and the volume of illegal dumping staying static or a little bit below the previous year is an indicator that the various environmental messages are getting out to the public, specifically on issues such as illegal dumping, "only rain in the drain", don't pollute our natural resources and other public service announcements. The Inland Empire does not have a major network for TV programming and therefore, relies on the Los Angeles based news and network TV. So dollars spent on TV advertising for stormwater pollution from other counties such as the Orange and Los Angeles have a positive collateral valued added effect on the community.

Illegal Grading

Illegal grading is another area where the Code Enforcement Department has made a significant impact with 383 investigations conducted in FY 006-2007 for the Santa Margarita Watershed.

Organizational Structure

The County of Riverside is a complex organization with numerous county departments with significant independent program oversight. The County Executive Office is tasked with bringing this diverse group together on stormwater issues.

1. Riverside County Executive Office acts as a facilitator and coordinates with county departments keeping them abreast of NPDES requirements and provides overall program oversight.
2. Flood Control and Water Conservation District (Principle Permittee with the county)
    a. Flood control infrastructure
    b. NPDES Stormwater Regulatory and Permit implementation
    c. Monitoring
    d. WQMP review
    e. Stormwater Education
3. Transportation Land Management Agency
    a. Planning Department
        i. Plan Review process and conditions of approval
    b. Building and Safety Department
        i. NPDES Construction inspections
        ii. NPDES business licensing inspections (new)
    c. Code Enforcement Department
        i. Illegal dumping and Illegal discharges
        ii. Illicit connections
    d. Transportation Department
        i. Transportation improvement projects
        ii. Repair and maintenance of stormwater facilities adjacent to roadways
    e. Environmental Programs Department
    f. TLMA Administration GIS and Demographics Unit
4. Community Health Agency
    a. Department of Environmental Health-Compliance Assistance Program (CAP)

i. District Environmental Services Division
    1. food facility and restaurant inspections
ii. Environmental Resources Management Division
    1. sewage spills > 1000 gallons
    2. Septic system moratoriums
    3. Local Enforcement Agency-Solid Waste
        a. Illegal dumping
        b. Franchise Agreements-street sweeping
        c. Mandatory trash collection
iii. Hazardous Materials Management Division
    1. Environmental Crime in coordination with the District Attorney's Office
    2. Public and private underground storage tanks
    3. Industrial and commercial hazardous materials storage
    4. Industrial and commercial hazardous waste management

5. Western Riverside County Regional Conservation Authority
    a. Land Acquisition
    b. Multi Species Habitat Plan for Western Riverside County
6. Economic Development/Redevelopment
    a. Landscape Lighting Maintenance District
    b. Community Services Districts
    c. Street Sweeping
7. Facilities Management Department
    a. Municipal projects
    b. Municipal maintenance
8. County Parks and Open Space District
    a. Park and trails construction

Concluding Remarks

The NPDES Stormwater Program in Riverside County is a collaborative and evolving effort between County Departments, the Flood Control and Water Conservation District and participating co- permittees (cities), along with the three State Regional Water Quality Control Boards. Program consistency is the goal with the acknowledgement that differences in climate, hydrology and jurisdictional philosophy exist between the three watersheds, this makes for an interesting dynamic.

Internal and external program evaluations are tools that can be used to enhance program delivery. The County is in the process of awarding a contract to an independent third party evaluator to look at program delivery and make recommendations on program effectiveness and operational structure. Implementation of these suggested program alternatives will help to enhance program delivery and operability.

The Riverside County NPDES Stormwater Program believes that partnerships between the public and private sector are vital for the program implementation efforts to be effective. Lines of communication need to be open so that dialog on stormwater issues can be debated and consensus can be reached. It is difficult to educate the public on stormwater issues when most of the streams and channels within Riverside County are ephemera and have been dry for almost two years. Many of our residents have never ventured from their communities and it's doubtful that they have been to the Pacific Ocean or have seen a lake. To these people the only interface they have with water and stormwater issues is that water comes out of a tap, and they have limited knowledge on how it gets to their home or how it is disposed. For example, many people believe that the stormwater system and the sanitary sewer are the same thing. So, the tried and true coastal public educational tools have been modified so that regionality can be incorporated into the stormwater message.

There are continuing challenges in every aspect of life and the issue of stormwater management and flows from urban discharge will continue to have an impact on new development, municipal projects and the regulated business community.

Finally, how to finance the operation and maintenance (O&M) of post construction BMPs continues to be a challenge; the Flood Control and Water Conservation District has been working with David Tausig and Associates, a respected economist to develop a strategy for structuring a funding mechanism through the formation of a District wide Community Facilities District (CFD) for stormwater quality and post construction BMP Maintenance. A proposal is being developed that must be approved by the Riverside County Board of Supervisors

Once implemented, when each new development is completed, met all conditions of approval, and the post BMPs have been accepted, the development will be annexed into the CFD. Because this action must meet Proposition 218 scrutiny existing Home Owners' Associations (HOAs) will have to receive a two thirds vote of approval prior to being annexed into the CFD. Cities within the Flood Control and Water Conservation District's jurisdiction may also choose to join the CFD so that the O&M for post construction BMPs is consolidated, coordinated and consistent.

Please join Riverside County 1st District Supervisor Bob Buster and the Riverside County Library Systems at the

1. DEVELOPMENT PLANNING
(SECTION F of ORDER NO. R9-2004-001)

1) **Description of any amendments to the General Plan or the development project approval process:** None

2) **Number of grading permits issued:** During the last year the number of grading permits issued throughout Riverside County includes the following: 300 in the Indio Inspection District, 800 in the Riverside Inspection District and 1500 in the Temecula Inspection District.

3) **Number of developments conditioned to meet SUSMP requirements:** See Flood Control and Water Conservation District Report for totals on the number of Water Quality Management Plans (WQMP) conditioned. The WQMP is equivalent to the SUSMP

4) **Attach one example of a development project that was conditioned to meet SUSMP requirements and a description of the required BMPs:** See Flood Control and Water Conservation District Report Attachment B

5) **Description of any updates to the environmental review process:** The County on an annual basis reviews all policies and procedures and makes updates as appropriate. No changes with regard to the environmental review process were noted. See Flood Control and Water Conservation District Report Attachment C .

6) **Description and number of training efforts conducted during the reporting period (for staff, developers, contractors, etc.), including the number of staff trained.**

   a) **Training:**

Training	Training Description	Training Dates	Number of Attendees
WQMP	Water Quality Management Planning Requirements	Oct 3,23 Apr 16	20
	What Triggers a WQMP?		
		Total	**20**

1. DEVELOPMENT PLANNING
(SECTION F of ORDER NO. R9-2004-001), CONT.

b) **Summarize the educational and outreach activities the Development Planning Component has conducted over the past year:** Each development project conditioned for approval is required to obtain copies of public education/outreach materials sign and sign an affidavit stating that they will distribute stormwater related educational materials to the new property owners. The affidavit is recorded with the development's individual file.

In addition the county attempts to keep the general public and the development community (Building Industry Association informed of all the training and educational opportunities. There are several organizations that sponsor training classes to include the University of California Extension, Building Industry Association, and private contractors.

The County also provides a public information kiosk located at the Transportation Land Management Agency (TLMA) counter services area. Stormwater information is provided and NPDES requirements are posted.

7) **An assessment of program effectiveness based on the measurable goals established in the Permittee's Individual SWMP:**

a) Training continues to be a priority with quality and accessibility to municipal employees being improved from year to year.

b) Low Impact Development (LID) and LEED certification of projects enhances design and also takes into consideration landscape based BMPs. As projects are approved the amount of runoff is diminish and quality of runoff is improved compared to projects that were built prior to WQMP requirements being established.

c) The County and Flood Control and Water Conservation District have hired a consultant that has made recommendations to establish a community facilities/services utility/district to deal with the operation and maintenance of post construction BMPs. These recommendations are being evaluated for future implementation. Until a final solution can be implemented the current use of landscape & lighting maintenance districts will be utilized.

8) **Additional Comments/Information:**

Describe the major accomplishments of the Development Planning Component over the past year. (General Plan or ordinance revisions, procedure/approval process changes, SUSMP guidance material): The WQMP process

Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Development Planning Component: The County continues to look at ways to consolidate and streamline program implementation and is in the process of awarding a contract to a third party program evaluator to perform a complete program audit.. Recommendations from this external audit will be used to look at options for program enhancements.

1. DEVELOPMENT PLANNING
(SECTION F of ORDER NO. R9-2004-001), CONT.

ATTACHMENT A

2. CONSTRUCTION
(SECTION G of ORDER NO. R9-2004-001)

1) **Number of inspections conducted:** During the 2006-07 Storm Season 249 construction sites were inspected for NPDES compliance in the Santa Margarita Region. Sites verified included the following, 201 single family residential site (SFR), 10 commercial sites (Com) and 38 Tracts (Tr). While overlooking the erosion and sediment control measures being implemented on construction sites, approximately 697 separate verifications were conducted in this region.

See Table 1: 2006-07 Storm Season Contruction Site Invertory.

See Attachment A: 2006-07 Storm Season Final Statistics. This attachment lists the Regional Water Quality Control Board responsible, end of storm season compliance percentage, number of verification s conducted and the date of the last verification concerning all construction sites in Riverside County.

2) **Number and type of enforcement actions related to construction sites:**

Enforcement and Compliance Responses	Private Projects	Public Projects
Non-monetary Penalties	0	0
Stop Work Authority [SFR= 32- (18 remain), Comm.= 0, Tr.= 1]	33	0
Fines	0	0
Financial Security	0	0
Permit/Certificate of Occupancy Denial	0	0
Referral to SDRWQCB [SFR= 155, Comm.= 4, Tr.= 30]	189	0
Total	**222**	**0**

See Attachment B: 2006-07 Storm Season Sites Where Enforcement Action Was Taken. This attachment lists the stop work orders, correction notices and other enforcement actions taken during the Storm Season by jobsite.

3) **Description of modifications made to the construction and grading approval process:** The County continues to enforce the requirement of adding General NPDES Inspection Notes on all grading plans that propose a disturbance of one acre or more. A copy of the Notes appears on the Department Web Site for reference and informational purposes for engineers, developers and the general public. The requirement of providing a copy of the site NOI and WDID along with the ara of proposed disturbance is incorporated into existing software and proposed software for grading permit tracking purposes. This requirement ensures that grading permits are not issued until prrof of compliance with the General Construction Permit has been provided.

2. CONSTRUCTION
(SECTION G of ORDER NO. R9-2004-001), CONT.

4) **Description and number of training efforts conducted during the reporting.**

a) **Training:**

Training	Training Description	Training Dates	Number of Attendees
Annual Staff Training	General NPDES Construction Site Inspection Training	10/2/06	
		10/10/06 10/12/06 10/16/06 10/17/06 5/3/07	- See sign in logs -
		Total	**113**

b) **Summarize any additional education and outreach activities conducted for project applicants, contractors, developers, property owners, and/or responsible parties in support of the Construction Component:** The Initial Site Verification Program was expanded this Storm Season to include SFR construction sites. This expansion of activities and effort afforded the single family developer the same opportunity as the commercial developer to be ready for the upcoming storm season. Developers are cautioned during the initial site verification regarding the need to implement site erosion and sediment control BMPs from October 1 through the end of May. Approximately 1952 Initial Site Verifications were conducted this past storm season on single family and commercial construction site throughout the County.

5) **An assessment of program effectiveness based on the measurable goals established in the Permittee's Individual SWMP:**

A. The categories shown below provide the total number of construction projects disturbing one acre or more located throughout the County of Riverside during the 2006-07 Storm Season:

1) Single Family Residential (SFR) - 269

2) Commercial Projects (Com) - 51

3) Tract Projects (Tr) - 218

2. CONSTRUCTION
(SECTION G of ORDER NO. R9-2004-001), CONT.

A method for assessing the NPDES Construction Inspection Program effectiveness is becoming identifiable. A numeric site assessment appears to be evolving that future results can be compared with. The site assessment "standard/norm" is becoming more evident as additional averages of the acceptable County percentage of compliance minimum are being tracked, evaluated and compared at the end of each storm season. Additional seasonal site statistics will assist in refining and reinforcing this overall Program "standard/ norm".

The acceptable County percentage of compliance minimum used since the inception of Riverside County's NPDES Construction Inspection Program, is a site compliance rate of 50% or better. While conducting site NPDES Verifications (Inspections), our Department NPDES Consultant compares site BMPs required in the site SWPPP with those BMPs actually installed on the site. An estimate of the percentage of compliance is awarded each site as part of the verification process. That percentage of compliance is tracked during the storm season and the site is expected to improve compliance as the storm season evolves. If however two consecutive verifications are conducted any time during the storm season and both award the site a 50% or less percentage of compliance, the site is issued a Stop Work Order. All grading and building inspections are stopped at that time. Prior to resuming grading and building inspections an acceptable site re-verification must be accomplished.

Table 2: Construction Site Compliance Comparison, below, is a comparison of the construction sites found not in compliance with those sites found in compliance at the end of the storm season for this and the preceding three storm seasons. Note that the figures reported exclude the site compliance results of SFR sites.

Date- Storm Season	Number of Commercial and Tract Sites	**Sites Not In Compliance**		**Sites In Compliance**	
		Number	Percentage	Number	Percentage
2003-04	275	128	47%	147	53%
2004-05	339	70	20%	269	80%
2005-06	329	46	14%	267	81%
2006-07	269	48	18%	221	82%

(1) Base on Table 2, the results of the 2003-2004 Storm Season should be considered entirely contrary to the results of subsequent seasons. The result of 47% of sites found <u>not in</u> compliance indicates that radical measures were needed immediately by this Department in order to improve Program results. Possible reasons for the poor results includes:

- Verification processing times by the County may have been too lengthy.
- Poor attention on the part of the developer was being paid to site NPDES issues.

2. CONSTRUCTION
(SECTION G of ORDER NO. R9-2004-001), CONT.

- A large number of sites were only verified once during the storm season. If the site was initially found not in compliance, no opportunity was available to bring the site back into compliance prior to the end of the storm season.

(2) Consideration of the results of the last three storm seasons may indicate that a "standard/norm" could be developing. Based on the results presented in Table 2 above, a percentage of compliance for sites not in compliance mean of 17% can be assumed while using the results of the last three storm seasons. While the mean for those sites found in compliance equals a respectable 81%. Possible reasons for the development of a "standard/norm" includes:

- Additional controls/measures were asserted by the County on developers for construction site compliance. The additional controls asserted dramatically improved overall site compliance. The measures included use of a dedicated staff member for the processing of verifications and coordination of the NPDES Construction Program.
- Increased site verification and educational emphasis by our NPDES Consultant and staff resulted in more attention being paid by the developer to inadequate site NPDES issues.
- The increased efficiency of processing verifications results by the County may have asserted an additional need for site compliance on behalf of the developer.

(3) While specific results and conclusions can be drawn from an evaluation of Table 2 above, all of which are of interest to the Program success, a number of non-controllable variables effecting site compliance limit why certain project types were not included in the reported results. Non-controllable site variables were also observed having a significant influence on general site compliance as well. Non-controllable variables include but are certainly not limited to the following:

- The single family development situation and its lack of NPDES compliance is considered as the major non-controllable variable issue faced by Riverside County. This situation includes the lack of responsibility being assumed by the project civil engineer concerning the need for site Storm Water Pollution Prevention Plan (SWPPP) preparation and compliance. It also includes a lack of preparedness on the part of the developer for the costs associated with implementing and maintaining SWPPP Best Management Practices. The single family development non-controllable situation remains the primary reason why the results of single family NPDES compliance are not included in the statistics presented as a part of the overall program assessment. Until this situation is resolved, compliance results of single family developers will not be included in the storm season averages.
- The issue date of the grading permit for the site. If the grading permit was issued toward the end of the storm season and the site was considered not in compliance, even though the site may be brought back into compliance, enough time may not have been available in order to conduct a follow-up site verification prior to the end of the storm season.

2. CONSTRUCTION
(SECTION G of ORDER NO. R9-2004-001), CONT.

(4) Program Assessment Summary:

The results of future storm seasons will continue to be evaluated and compiled in the Program Assessment portion of the annual NPDES reports. Although additional refinement of the Riverside County Program Assessment "standard/norm" for site compliance and non-compliance is anticipated, Program results appear to be falling within the perimeters of what appears to be an average. The evaluation of final storm season results will continue being of great interest in the future as Program seasonal results are compared and analyzed based on what is believed to be the current "standard/norm".

6) **Additional Comments/Information:**

Describe the major accomplishments of the Constrution Component over the past year:

- 250 construction sites including single family (200 SFR), commercial (10 Com) and tract (40 Tr) were verified for site compliance this storm season in the Santa Margarita Region.
- 700 total verifications were conducted on the single family, commercial and tract sites this past storm season in the Santa Margarita Region.
- A fully dedicated NPDES Construction coordinator (Senior Inspector) has been assigned to the Program in order to minimize verification processing time and to improve coordination efforts.
- The third annual Pre-Storm Season Get-Together was organized and conducted by this Department. The three RWQCBs having jurisdiction in Riverside County were invited to meet with and discuss NPDES related issues with representatives of other County departments.

Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Construction Component:

- Additional controls/measures were asserted by the County on developers for construction site compliance. The additional controls asserted dramatically improved overall site compliance. The measures included use of a dedicated staff member for the processing of verifications and coordination of the NPDES Construction Program. The additional control measures will continue being used during the upcoming storm season during the processing of site verifications.
- Pre-storm season construction site visits to remind construction superintendents of their due diligence to have BMPs in place.
- Increased educational emphasis by our NPDES Consultant and staff will continue during site verifications to ensure that additional attention is being paid by the

2. CONSTRUCTION
(SECTION G of ORDER NO. R9-2004-001), CONT.

developer to site NPDES issues. The use of educational material furnished by Riverside County Flood Control and the suggestion of seeking NPDES training from Flood Control and others will certainly continue.

(SECTION H.1 of ORDER NO. R9-2004-001), CONT.

6) **Description and number of training efforts conducted over the last year (for municipal facility operators and/or inspectors).**

a) **Training:**

Training	Training Description	Training Dates	Number of Attendees
NPDES	Municipal Training	4/16/05	
		5/1/07	
		10/2/061 0/16/061 0/17/061 0/18/06	See sign in logs
		Total	**54**

b) **Summarize the internal and external education and outreach activities the Municipal Component has conducted over the past year:** Training offered by the Flood Control and Water Conservation District. TLMA is very interested in maintaining their level of training to appropriate staff positions and will send additional staff as appropriate as more training becomes available.

7) **An assessment of program effectiveness based on the measurable goals established in the Permittee's Individual SWMP:** Employees are becoming more familiar with stormwater issues. However, if a state auditor were to walk up to an employee and ask someone about a SWMP requirement you will get a blank look. But, if the question was phrased in more layman's terms such as, tell me about the things you do in your job to prevent runoff from leaving the site then you will get an informed answer.

8) **Additional Comments/Information:**

Describe the major accomplishments of the Municipal Component over the past year: Catch basin GIS mapping is completed in the Santa Margarita Watershed and is being used as a tool to for inspection and cleaning schedules. Special attention is paid to drainage facilities located within problem areas. This information is updated into the GIS database and used for making adjustments to frequency of cleanups.

TLMA has hired a consultant to update the Stormwater Pollutions Prevention Plans for all of the municipal facilities in the department. Additional preventative BMPs have been implemented to ensure that no runoff is leaving their sites.

3. MUNICIPAL
(SECTION H.1 of ORDER NO. R9-2004-001), CONT.

Most of the TLMA-Transportation Department's municipal improvement projects (CIP) occurred in the Santa Ana watershed with Five (5) construction projects anticipated in that watershed for FY 06/07-07/08 with one (1) project planned in the Whitewater watershed. No projects were constructed or are planned in the Santa Margarita watershed.

Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Municipal Component:

- Training will continue to be a high priority
- Updates of GIS catch basin data base will be used to make informed decisions on operation and maintenance of TLMA's catch basin system.

SANTA MARGARITA ATTACHMENT A

BACKGROUND

The Transportation Department obtained general funds that supported the FY 06/07 Roadside Litter Removal Program, Catch Basin Inspection & Cleaning Program, Code Enforcement Clean up Program, and the enhancement to the integrated approach in the continued development of the MS4 map.

The Roadside Litter Removal Program has a crew of seven (7) employees that provides roadside clean up efforts. The funding for this Program is provided by each of the five Board of the Supervisors. The crew collects roadside litter from ten (10) linear miles of designated roadways in each five Supervisorial Districts within the County. Ten (10) linear miles are cleaned on a rotating basis, allowing for problems areas to be re-addressed every ten (10) weeks. Cumulatively, this program cleans approximately 60 linear miles quarterly. This effort has proven successful in reducing the amount of debris and anthropogenic litter entering the catch basins, nearby streams and waterbodies within the different watersheds. Roughly, 28.40 road miles were cleaned, and approximately 23.74 tons of anthropogenic litter was removed for FY 06/07.

The Catch Basin Inspection & Cleaning Program has a crew of three (3) employees and two (2) vacant positions that will be filled in the future. The funding for this Program is provided by the Executive Office. This Program performs inspection and maintenance on storm drainage facilities. The crew inspects and maintains catch basins, inlets, culverts, detention basins and other drainage infrastructures to ensure maximum storm water diversion from rights-of-way, while simultaneously maintaining the National Pollutant Discharge Elimination System standards. For FY 06/07, approximately 2.93 tons of anthropogenic litter, 6.66 tons of vegetative litter, and 5.75 tons of sediment litter were removed from the Santa Margarita watershed.

The Code Enforcement Clean up Program has a crew of fourteen (14) employees and three (3) vacant positions. The funding for this Program is provided by Code Enforcement Department. The crew carries out wide-ranging clean ups. Santa Margarita watershed falls in parts of Supervisorial Districts 1 & 3. For FY 06/07, approximately 1,870 tons of litter was removed in Supervisorial District 1 & 3.

ROAD REPAIR AND STREET SWEEPING

For FY 06/07, the Transportation Department received a total of 1,075 complaint calls countywide for general road repair and maintenance, of which a total of 147 complaints were within the Santa Margarita Region involving the following issues:

a. Flooding-road shoulder, ditch damage (0 complaint)
b. Ditches gutter, culvert drains, clean out (9 complaints)
c. Ditches gutter, culvert drains, cleaned out (5 complaints)
d. Mud gravel, dirt, rock, snow, swept/cleared (2 complaints)
e. Trash, debris, object removed or cleared (26 complaints)
f. Trees, palm fronds and branches (21 complaints)
g. Weed, grass, brushes and tumbleweeds (8 complaints)
h. Graffiti (1 complaint)
i. Potholes or large holes (26 complaints)
j. Improvements, grading paving & resurfacing (47 complaints)
k. Road sidewalk, curb gutter damage & repair (2 complaints)

The amount of countywide complaint calls received for FY 06/07 slightly increased in comparison to 1059 compliant calls received for FY 05/06. Even though the amounts of complaint calls were slightly higher for FY 06/07, they were still significantly lower in comparison to 2,030 complaint calls received for FY 04/05. During FY 04/05, Riverside County experienced intense storm events that increased the level of maintenance activities needed to respond to public concerns.

Additionally, new development projects within the County (with curb and gutter) are required to annex into County Service Area (CSA) 152 in order to receive street

sweeping services. These services are contracted out and roadways are swept at least once a month, and in some cases more frequently. Whenever possible, the Department has increased the frequency of street sweeping to twice a month. During FY 06/07, a total of 12,664 curb miles were swept. In comparison to last fiscal year, FY 05/06, a total of 10,704 curb miles were swept, which represents an 18.31% increase.

The amount of debris removed from street sweeping activities also increased this year. For FY 05/06 1,141 tons of debris was removed from streets, in comparison to this FY 06/07 1,753 tons of debris was removed. The increase in amount of debris removed can be explained in part by the increase in street sweeping activities and population growth.

FISCAL EXPENDITURES FOR FY 06/07

Activity	**Source**	**FY 06/07 Expenditures**
Overlay, Sealing	Gas Tax	$3,415,119
Storm Damage	Gas Tax, FEMA	$5,990,135
Municipal Inspections		$6,240
Street Sweeping CSA 152	County Assessment Area 152	$525,518
Street Sweeping		$531,624
MS4 Mapping	General Funds	$115, 051
Catch Basin Inspection & Cleaning Program - Santa Margarita	General Funds	$217,962
Code Enforcement Clean Up Program & Roadside Litter Removal Program	Code Enforcement, General Funds	$1,724,082

Total expenditures for NPDES activities for this FY 06/07 were $2,057,095, and costs are expected to increase as the program expands.

TRAINING

The Transportation Department is very supportive of NPDES training. Training was offered through Flood Control and forty-nine (49) Transportation staff attended training during FY 06/07. Furthermore, additional employees are anticipated to register for NPDES training that is anticipated to start in the fall.

ILLICIT CONNECTION/ILLEGAL DISCHARGE(IC/ID)

The Riverside County Transportation Department, as part of its normal duties, is actively involved with review of its channel and storm drain facilities. The Highway Operations Division provides the County with coverage concerning illegal connections or illegal discharges within the storm drain systems such as inlets, outlets, culverts, swales and channels which ultimately make their way to facilities owned by Riverside County Flood Control District. The Transportation Department District Road Maintenance Supervisors and Assistant Supervisors visually inspect the storm drain infrastructure on a regular basis as part of their daily routine. They pay close attention to facilities located within areas of concern, or areas with historical issues. This could involve areas where illegal dumping has occurred or other maintenance issues need to be addressed, which would require additional follow-up. These issues could necessitate additional assistance from the County illegal dumping cleanup programs and/or Code Enforcement investigation.

The Transportation Department Permit Engineer also sends a letter to property owners that encroach upon County right-of-way with illegal connections or other obstructions, and if needed is reported to Code Enforcement. The Permit Engineer is responsible for reviewing encroachment applications along County road right-of-way. If the illegal connection is not remedied in a timely manner, it is removed by the County and billed to the owner of the property.

In summary, for FY 06/07, Code Enforcement supervised three (3) types of illicit discharges, connections and spills.

a. There were 878 cases of illegal grading or grading without permit in which 589 are currently opened and 289 are closed. They were discharge of soil and

sediments.

b. There were 573 cases of illegal dumping in which 485 are currently opened and 88 are closed. They were a variety of materials from hazmat, tires, green waste, construction debris, and household waste.

c. There were 17 NPDES investigations in which 9 are currently opened and 8 are closed. The NPDES violations were for illegal pool water discharges and the cleaning of pool filters into gutters.

10. * Site Inspection Priority Level Justification: (Indicate "Site Inspection Priority Level" shown on top right of Sheet One. High Priority Level sites- inspected every two weeks, Medium -inspected at least three times during the wet season and Low Priority- inspected on an as-needed basis).

Y	N	
___	___	A. Site is 50 acres or more of disturbance.
___	___	B. Site disturbs greater than one (1) acre and is tributary (within 200') to a CWA Section 303(d) sediment impaired water body.
___	___	C. Site disturbs greater than one (1) acre and is directly adjacent or discharging to a CWA 303(d) sediment impaired water body and/or to a receiving water within an Environmental Sensitive Area.
___	___	D. Site determined by County or a RWQCB to be a significant threat to water quality.

4. INDUSTRIAL/COMMERCIAL
(SECTION H.2 of ORDER NO. R9-2004-001), CONT.

1) **Number of inspections conducted:**

Category	Number of Inspections
Industrial Facilities	**85**
High Priority Facilities	58
Medium Priority Facilities	27
Low Priority Facilities	---
Commercial Facilities	**548**
High Priority Facilities	213
Medium Priority Facilities	176
Low Priority Facilities	159
Total	**633**

2) **Number and type of enforcement actions taken:**

Enforcement and Compliance Responses	Industrial	Commercial
Non-Monetary Penalties	---	---
Fines	3	---
Bonding Requirements	---	---
Permit Denial	---	---
Referral to SDRWQCB	1	1
Total	**0**	**0**

4. INDUSTRIAL/COMMERCIAL
(SECTION H.2 of ORDER NO. R9-2004-001), CONT.

3) **Description and number of training efforts conducted over the last year (for industrial/commercial facility operators and/or inspectors).**

a. **Training:**

Training	Training Description	Training Dates	Number of Attendees
Annual Training	Industrial/Commercial Site Inspection Training presented by Riverside Co. Flood Control District	03/30/06	5
HAZMAT Training	Control of Hazardous Materials Storage	8/29/06	22
UST Compliance	UST regulations and prevention of unauthorized releases	9/4/06	20
Special/Detailed Training	Specialized Industrial/Commercial Site Inspection Training presented by AEI-CASC Engineering	06/14 and 07/07/07	8
Stormwater	Stormwater I/C compliance	10/3 & 19/06	22
Generators of Hazardous Waste	Stormwater Survey Form review	11/2/06	18
AST Storage	Review of regulations to prevent releases	6/11/07	28
Special/Detailed Training	Industrial/Commercial Prioritization Training presented by AEI-CASC Engineering	07/10/07	5
Effective Post Construction Program	Post Construction 102: US EPA Stormwater Program's Webcast Series	09/05/07	2
		Total	**130**

4) **An assessment of program effectiveness based on the measurable goals established in the Permittee's Individual SWMP:** For Building and Safety Staff this is the beginning of a completely new program that will augment the Compliance Assistance Program that is operated by the Department of Environmental Health. A Business Registration and Licensing program was implemented in November of 2006 to capture those businesses not currently inspected by the Department of Environmental Health or any other county program. Building and Safety Field inspections have received NPDES training and anticipate beginning industrial and commercial inspections of approximately 6,500 businesses in the unincorporated portions of the county. . An assessment of program effectiveness will be undertaken next storm season to gauge decreases in urban runoff, maintenance of post construction BMPs and industry specific BMPs.

5) **Additional Comments/Information:**

(A) Describe the major accomplishments of the Industrial Component over the past year:

Two major accomplishments have been undertaken by the County of Riverside involving the Industrial/Commercial NPDES components this past year. The most significant accomplishment undertaken involves the implementation of a Business Registration Program by the County of Riverside. In November 2006, the Riverside County Board of

4. INDUSTRIAL/COMMERCIAL
(SECTION H.2 of ORDER NO. R9-2004-001), CONT.

Supervisors approved County Ordinance 857 creating a Business Registration and Licensing Program which requires that all businesses within the unincorporated area of Riverside County obtain a business license. The business licensing program continues to date, registering businesses throughout the county area. To date approximately 6,500 businesses have been registered. The second major accomplishment involves Industrial/Commercial NPDES Site Inspections that are tentatively scheduled to begin in January of 2008. Field inspections of all registered business facilities will be conducted and a data base shall be created to track inspection results.

(B) Describe the major accomplishments of the Commercial Component over the past year:

Refer to Answer (A), above, for accomplishments concerning the Commercial Component.

(C) Summarize the internal and external education and outreach activities the Industrial Component has conducted over the past year:

Internal education activities: Two distinct Industrial/Commercial educational opportunities were offered to staff in June and July, 2007. A focused in-depth one-on-one class was presented by our Department Industrial/Commercial Consultant AEI-CASC Engineering. This training presented classroom and field training concerning Industrial/Commercial NPDES field inspections while presenting detailed information to eight staff members. A separate training session was present by AEI-CASC Engineering which covered site prioritization and classification using SIC codes.

External educational activities: Since Riverside County's Business Registration and Industrial/Commercial NPDES Inspection Programs are both new, a huge educational effort is being undertaken to educate the public and business owners regarding NPDES concerns. This effort is being conducted as new businesses are being registered through telephone contact as well as by pamphlet or brochure. The distribution and use of educational material from Riverside County Flood Control is also being implemented in this external educational effort. Pamphlets and posters are being provided which do an excellent job of reinforcing the County Industrial/Commercial NPDES concerns. Once field inspections begin, educational material will be distributed directly from the inspector to the business owner.

(D) Summarize the internal and external education and outreach activities the Commercial Component has conducted over the past year:

Refer to Answer (C), above for a summarization of the internal and external education and outreach activities concerning the Commercial Component.

(E) Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Industrial Component:

4. INDUSTRIAL/COMMERCIAL
(SECTION H.2 of ORDER NO. R9-2004-001), CONT.

Since the Business Registration and Industrial/Commercial Programs are both entirely new, any activities associated with the programs should be considered completely new activities and accepted as such. Therefore there is no need at this time for the consideration of new or improved activities. The establishment of new or improved activities will be considered the following year as the results of the initial Industrial/Commercial NPDES field inspections are compiled and analyzed.

(F) Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Commerical Component:

Refer to Answer (E), above for details for a summarization of new activities or improvement to be implemented resulting in the assessment of the Commercial Component.

(G) The Department of Environmental continues to perform inspections of businesses within in their inspection authority. The inspections include restaurants and other food handling facilities, businesses that handle and store hazardous materials, businesses that generate hazardous waste and businesses that have underground storage tanks. Many of the businesses that handle, store or generate hazardous materials have been classified as being higher in risk and therefore are inspected on a frequency schedule of 12 to 18 months.

5. RESIDENTIAL
(SECTION H.3 of ORDER NO. R9-2004-001)

1) **A description of residential areas that were focused on during the past year:**

2) **Number and type of enforcement actions taken:**

Enforcement and Compliance Responses	Public Projects
Education and information	
Verbal Warning	
Written Warning	13
Notice of Non-Compliance	3
Administrative Compliance Order	
Misdemeanor	
Infraction	
Citation	
Referral to SDRWQCB	
Total	**16**

3) **An assessment of program effectiveness based on the measurable goals established in the Permittee's Individual SWMP:** Educational materials are provided to new home developments, however, complaints in residential areas tend to be generated due to neighbor disputes and often times are not as described. Legitimate complaints with identifiable NPDES violation are those counted in the table above. Other complaint categories include illegal dumping at or near a residence that can not be substantiated as to who is at faults are tabulated under TLMA Code Enforcement tonnage amounts.

4) **Additional Comments/Information:**

Describe the major accomplishments of the Residential Component over the past year: community cleanup and dump days, household hazardous waste (HHW), e-waste and universal collection events continue to expand on a countywide basis.

Summarize the internal and external education and outreach activities the Residential Component has conducted over the past year: See Flood Control and Water Conservation District Report

RESIDENTIAL
(SECTION H.3), CONT.

Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Residential Component: A goal for expansion of regional collection sites for various HHW, e-waste, universal waste is anticipated.

6. EDUCATION
(SECTION I of ORDER NO. R9-2004-001)

1) **Description of education efforts conducted by the Permittee (not collectively with other Permittees) during the previous year:** See Flood Control and Waster conservation District Report

Audience	Measures
Permittee Departments and Personnel	Number of Permittee employees trained for: • Construction Inspection: • Industrial/Commercial Inspection: • Municipal Facilities and Activities: • Development Planning:
Construction Site Owners and Developers	Outreach events conducted:
Industrial/Commercial Owners and Operators	Industrial/Commercial outreach events conducted:
Residential Community, General Public, Other Public Agencies and Students	Number of Media Impressions in: • Newspaper: • Mailings: • Radio/TV: • Billboards: • Other: • Materials: Number of classroom presentations: Public Education events conducted:

2) **Assessment of overall program effectiveness based on the measurable goals established in the Permittee's Individual SWMP:** See Flood control and Water Conservation District Report

3) **Additional Comments/Information:**

The County Departments in coordination with the Flood Control and Water Conservation District partner on all educational opportunities and share in costs and time at community events throughout the county with their "Only Rain in the Drain" campaign.

7. ILLICIT DISCHARGE DETECTION AND ELIMINATION
(SECTION J of ORDER NO. R9-2004-001)

1) **Number of illicit discharges, connections and spills reported and/or identified during the reporting period:**

   a) **Illicit Discharges (ID):** 133 (Code Enforcement)
   b) **Illicit Connections (IC):** See Flood Control and Water Conservation Report
   c) **Spills (S):** 1 Sewage > 1000 gals.

2) **Number of illicit discharges or connections investigated during the reporting period and the outcome of the investigations:**

Type	Category	Substance	Outcome of Investigation
ID	Other	Other	133 cases investigated with return to complinace and 43 cases still pending.
Spill	Municpal	Sewage	> 1000 gal spill of sewage reported to Environmental Health and referred to Regional Board
ID	Residential	Oil/Grease	
ID	Residential	Oil/Grease	
ID	Residential	Oil/Grease	
ID	Residential	Oil/Grease	

3) **Number and types of enforcement actions taken for illicit discharges or connections during the reporting period:**

Enforcement and Compliance Responses	Private Facilities	Public Facilities
Non-monetary penalties	90	0
Stop work authority		
Fines		
Financial Security		
Permit/Business License Denial		
Total	**90**	**0**

7. ILLICIT DISCHARGE DETECTION AND ELIMINATION
(SECTION J of ORDER NO. R9-2004-001), CONT.

4) **Number of times your agency's hotline was called during the reporting period, as compared to previous reporting periods.** See Flood Control and Water Conservation Report

	Number of Calls		
	2004-05	**2005-06**	**2006-07**
Water Pollution Hotline	See Flood Control Report	See Flood Control Report	See Flood Control Report

5) **Number and location of dry weather monitoring sites that were monitored during the reporting period:** See Flood Control and Water Conservation Report for specific details on dry weather and wet weather monitoring.

Number of Site(s): 4

Location(s): # 781 Murrieta Creek at Clinton Keith Rd.

800 Tucaloca Creek at Murrieta Hot Springs Rd

806 Benton Creek at Van Gaale Lane

849 Pechanga Creek at Pala Rd.

7. ILLICIT DISCHARGE DETECTION AND ELIMINATION
(SECTION J of ORDER NO. R9-2004-001), CONT.

6) **Summary of Illicit Discharge Monitoring Program results, including: 1) All inspection, field screening, and analytical monitoring results; 2) All follow-up and elimination activities; and 3) Any proposed changes to station locations and/or sampling frequencies:** See Flood Control and Water Conservation Report for specific details.

Date	Location	Monitoring Results	Follow-up and Elimination Activities	Proposed Changes

				No Changes Comment(s):

0000261

7. ILLICIT DISCHARGE DETECTION AND ELIMINATION
(SECTION J of ORDER NO. R9-2004-001), CONT.

7) **An assessment of overall program effectiveness based on the measurable goals established in the Permittee's Individual SWMP:** See Flood Control and Water conservation District Report-All county staff who have NPDES specific responsibilities have received training. As IC/ID are identified, follow-up investigations are conducted and as appropriate cease and desist orders, notices of violation are issued or referrals made to administering agencies to abate conditions of non-compliance.

8) **Additional Comments/Information:**

Describe the major accomplishments of the Illicit Discharge Detection and Elimination Component over the past year: See Flood Control and Water Conservation District Report

Summarize the internal and external education and outreach activities the Illicit Discharge Detection and Elimination Component has conducted over the past year: See Flood Control and Water Conservation District Report- Transportation Department staff assigned to monitor and inspect catch basins make that there are no illegal connections- referrals are made to Code Enforcement for follow –up.

Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Illicit Discharge Detection and Elimination Component: As part of the total program external audit recommendations will be evaluated and programs implemented to Further enhance program delivery.

8. PUBLIC PARTICIPATION

1) **A description of efforts to include the public urban runoff management programs during the reporting period (i.e., river clean-ups, volunteer monitoring, Permittee council meetings related to the SWMP, etc.):** As stated in previous reports the county and the Flood Control and Water Conservation District provide public comment through a transparent public review process of the SWMP and other NPDES stormwater related activities. In addition the County and the Flood Control and Water Conservation District provide access to local government through a monthly technical advisor committee (TAC) meeting, quarterly management steering committee (MSC) meeting with city managers, and monthly water quality management committee (WQMC) meetings with county departments.

   As identified earlier, coordinated community cleanup days sponsored by various county department are scheduled throughout the year.

2) **Additional Comments/Information:**

   Assessment of overall program effectivenss based on the measurable goals established in the Permittee's Individual SWMP: Attendance to TAC, MSC, and WQMC meeting continue at a high level and is a forum for exchange of ideas, program consolidation, coordination, and county-wide consistency

   Describe the major accomplishments of the Public Participation Component over the past year: See summary of public participation from Flood Control and Water Conservation district Report

   Summarize the internal and external education and outreach activities the Public Participation Component has conducted over the past year: See Flood Control and Water Conservation District Report.

   Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Public Participation Component: Recommendations from the third party external audit may point to various options to consider.

9. FISCAL ANALYSIS COMPONENT

Fiscal Analysis Component - each Permittee shall include an annual fiscal analysis, for each fiscal year covered by Order No. R9-2004-001, in its Individual Annual Report. This analysis shall evaluate the expenditures (such as capital, operation and maintenance, education, and administrative expenditures) necessary to accomplish the activities of the Permittee's Individual SWMP. The analysis shall include the following:

1) **A report of the previous reporting period's budget and a budget for the upcoming reporting period. To the extent possible, the budgets should be broken down by the following programs:**

Approved Budget

Program Element	Fiscal Year 2006-2007		Fiscal Year 2007-2008	
	Capital Expenditures	O&M/Admin Expenditure	Capital Expenditures	O&M/Admin Expenditure
Program Management		700,000		725,000 estimate
Annual Fee for MS4 NPDES Permit		30,000		30,000
Implementation Agreement Shared Cost		90,000		150,00
Construction Inspections		485,000		485,000
SWPPPs	32,892	7,636	0	0
Development Planning		30,000*		30,000*
Industrial and Commercial Inspections		175,000*		175,000*
Illicit Connections & Illegal Discharges Program		1,610,000		1,610,000
Municipal Facilities and Activities		159,000		174,900
Catch Basin Cleaning	426,500	912,051	330,003	624,582
GIS MS4 Mapping		423,816		553,847
Street Sweeping		348,343		525,518
Public Education & Outreach		680,000*		680,000*
Monitoring Program		685,000*		685,000*
Other		581,965		416,552
Total	**$459,392**	**$ 6,356,199**	**$330,003**	**$6,890,399**

9. FISCAL ANALYSIS COMPONENT

(CONT.)

2) **A description of the source(s) of funds that were utilized during the previous fiscal year and the source(s) of funds proposed to meet the necessary expenditures for the subsequent year, including legal restrictions on the use of such funds.**

Source of Funds	Capital Expenditures	Percent of Total Program Funding	Restrictions on Use (if applicable)
General Fund	22%	N/A	Revenue provided to fund: Catch basin Inspections and Cleanout; MS4 mapping, and roadside litter removal.
County Service Area 152		N/A	Benefit assessment for street sweeping
Gas Tax		N/A	Revenues to be used for road maintenance activities within the county maintained road system
Development Revue Fees		100%	Costs associated with the review of WQMPs on projects in accordance with the permit.
Lighting and Landscape Maintenance Districts (LLMD)		N/A	Revenues are to be used solely for designated areas within the LLMD
Developer Fees	100%	N/A	Revenues to be utilized on a project specific basis
Capitol Projects	2%	N/A	Revenues to be utilized on a project specific basis

3) **Additional Comments/Information:**

Overall the direct and indirect costs for NPDES related program activities are in the range of $17,000,000-17,200,000.for countywide implementation. Program costs continue to rise each year due to new development, industrial commercial inspections increased catch basin inspections and clean out schedules, and implementation of TMDLs in all three distinctively different watersheds. Each watershed requires additional quantification of activities, tracking and funding. It is important to mention that these ancillary programs (indirect costs) provide an direct nexus and benefit to the NPDES stormwater program and include litter control, street sweeping, highway O & M repairs, HHW, e-waste, universal waste collection programs, emergency spill response and illegal dumping. It is imperative that the county continues to closely monitor program costs in this declining economy and work closely with the three

9. FISCAL ANALYSIS COMPONENT

(CONT.)

regional boards to ensure that economic considerations are taken into account when planning any new program requirements.

10. NON-STORM WATER DISCHARGES

Permittees shall report on any discharge category listed in Requirement B.2 of Order No. R9-2004-001 that was identified as a source of pollutants during the reporting period. For each identified category, the Permittee shall report whether it elected to prohibit the discharge or to require BMPs to reduce pollutants in the discharge to the MEP. If the discharge is not prohibited, the BMPs that will be implemented, or required to be implemented, shall be described in each Permittee's Individual SWMP Annual Report.

Category	Prohibited	BMP to be Implemented
Diverted stream flows	☐ Yes ☐ No	Not Applicable
Rising ground waters	☐ Yes ☐ No	Not Applicable
Uncontaminated ground water infiltration [as defined at 40 CFR 35.2005(20)] to MS4s	☐ Yes ☐ No	Not Applicable
Uncontaminated pumped ground water	☐ Yes ☐ No	Not Applicable
Foundation drains	☐ Yes ☐ No	Not Applicable
Springs	☐ Yes ☐ No	Not Applicable
Water from crawl space pumps	☐ Yes ☐ No	Not Applicable
Footing drains	☐ Yes ☐ No	Not Applicable
Air conditioning condensation	☐ Yes ☒ No	Not Applicable
Flows from riparian habitats and wetlands	☐ Yes ☐ No	Not Applicable
Water line flushing	☐ Yes ☐ No	Not Applicable
Landscape irrigation	☐ Yes ☐ No	Not Applicable
Discharges from potable water sources not subject to NPDES Permit No. CAG679001, other than water main breaks	☐ Yes ☐ No	Not Applicable
Irrigation water	☐ Yes ☐ No	Not Applicable
Lawn watering	☐ Yes ☐ No	Not Applicable
Individual residential car washing	☐ Yes ☐ No	Not Applicable
Non-emergency fire fighting flows	☐ Yes ☐ No	Not Applicable
Dechlorinated swimming pool discharges	☐ Yes ☐ No	Not Applicable

1) **Additional Comments/Information:**

0000267

11. RECEIVING WATER LIMITATIONS

This section includes the report required pursuant to Requirement C.2.a. of Order No. R9-2004-001, if applicable.

Requirement C.2.a. states:

"Upon a determination by either a Permittee or the SDRWQCB that MS4 discharges are causing or contributing to an exceedance of an applicable water quality standard, the Permittee shall promptly notify and thereafter submit a report to the SDRWQCB that describes BMPs that are currently being implemented and additional BMPs that will be implemented to prevent or reduce any pollutants that are causing or contributing to the exceedance of water quality standards. The report may be incorporated in the SWMP Annual Report unless the SDRWQCB directs an earlier submittal. The report shall include an implementation schedule. The SDRWQCB may require modifications to the report;"

The county relies on the Flood Control and Water Conservation District to conduct the water quality monitoring program. The District advises the Permittees of any pollutants of concern that have been identified. At this time the District is working with the County of San Diego on and 13267 Order issued by the Regional Board that will monitor for bacteria, nutrients, sediment, and total dissolved solids (TDS) in impaired lagoons. See the Flood Control and Water Conservation District Report for more detailed information.

12. ADDITIONAL URBAN RUNOFF DATA

This section is a summary of all urban runoff related data not included in the annual monitoring report (e.g., special investigations).

See Flood Control and Water Conservation District Report

13. PROPOSED REVISIONS

This section includes proposed revisions to the Individual SWMP, including areas in need of improvement based on the assessment of effectiveness of each program component.

Limited progress has been made on the third party program audit and evaluation discussed in last year's annual report. It was determined that due to the fact that two of the three MS4 permits were being negotiated that the third party external program review should wait until the new permits were in place. It is anticipated that a contractor will be selected and progress made during the FY 07-08 permit period with the goal of providing a report that will be a strategic implementation plan and departmental work manual for the future with recommended alternatives for program implementation.

Total Hours: 3.00 **CEU:**

Additional Schedule Information:

Maximum Class Size: **Students Scheduled:** 30 **Students Wait Listed:** 0

Date: 03/22/2006 **Time:** 01:00 PM to 04:00 PM

Instructor: Contractor, Outside

Location: CHA HAB Auditorium

Date: **Time:**

Instructor:

Location:

Student	Status	Priority	Job Title	Department	Office Phone
Abdollahi, Zarrin	Completed		Environmental Health Specialis	Distirict Environmental Services	
Alemi, Qais	Completed		Environmental Health Specialis	Distirict Environmental Services	
Amon, Kelly	Completed		Environmental Health Specialis	Distirict Environmental Services	
[illegible]tt, Sandra	Completed		Environmental Health Specialis	Distirict Environmental Services	
Bacon, Shantel	Completed		Environmental Health Specialis	Distirict Environmental Services	
Balancier, Darrel	Completed		Environmental Health Specialis	Distirict Environmental Services	
Barrios, Heidi	Completed		Environmental Health Specialis	Distirict Environmental Services	
Briones, Andrea	Completed		Environmental Health Specialis	Distirict Environmental Services	
Burnham, Kristen	Completed		Environmental Health Specialis	Distirict Environmental Services	
Cartagena, Mary	Completed		Environmental Health Specialis	Distirict Environmental Services	
Casey, Brent	Completed		Environmental Health Specialis	Distirict Environmental Services	
Consaul, Eugenie	Completed		Environmental Health Specialis	Distirict Environmental Services	
Crossman, Sarah	Completed		Environmental Health Specialis	Distirict Environmental Services	
Ellis-Merki, Dorothy	Completed		Environmental Health Specialis	Distirict Environmental Services	
Fonseca, Yesenia	Completed		Environmental Health Specialis	Distirict Environmental Services	
Fregoso, Ralph	Completed		Environmental Health Specialis	Distirict Environmental Services	
Garcia, Mike	Completed		Environmental Health Specialis	Distirict Environmental Services	
Giannini, Tamara	Completed		Environmental Health Specialis	Distirict Environmental Services	
Gribben, Robert	Completed		Environmental Health Specialis	Distirict Environmental Services	
Hunt, Robert	Completed		Environmental Health Specialis	Distirict Environmental Services	
Lewis, DeAnda	Completed		Environmental Health Specialis	Distirict Environmental Services	
Moran, David	Completed		Environmental Health Specialis	Distirict Environmental Services	
Osborn, Douglas	Completed		Environmental Health Specialis	Distirict Environmental Services	
Powell, Lester	Completed		Environmental Health Specialis	Distirict Environmental Services	
Reyes, Greg	Completed		Environmental Health Specialis	Distirict Environmental Services	
Sanchez, Angela	Completed		Environmental Health Specialis	Distirict Environmental Services	
Smith, Alicia	Completed		Environmental Health Specialis	Distirict Environmental Services	
Sybrandy, Richelle	Completed		Environmental Health Specialis	Distirict Environmental Services	
Tepetitla, Daisy	Completed		Environmental Health Specialis	Distirict Environmental Services	
Trinidad, Jesus	Completed		Environmental Health Specialis	Distirict Environmental Services	

List of Stormwater Training Attendees

1. DeAnda Lewis
2. Mike Garcia
3. Jenny Fonseca
4. Tamara Giannini
5. Daisy Tepititla
6. Jess Trinidad
7. Dottie Ellis-Merki
8. David Moran
9. Greg Reyes
10. Quais Alemi
11. Alicia Smith
12. Heidi Barrios
13. Kelly Amon
14. Sandy Arnett
15. Angela Sanchez
16. Joleen Sybrandy
17. Doug Osborn
18. Bob Hunt
19. Shantel Bacon
20. Zarrin Abdollahi
21. Sarah Crossman
22. Andrea Briones
23. Lester Powell
24. Mary Cartagena
25. Brent Casey
26. Jenay Consaul
27. Kristen Burnham
28. Darrel Balancier
29. Robert Gribben
30. Ralph Fregoso

Household Hazardous Waste

During FY 2006-2007, eight (8) HHW collection events were held within the SMR. The ABOP? events were staged at the County's Transportation Maintenance Yard in Murrieta and serviced a total of 1,460 participants. Approximately 93,700 pounds of HHW were collected. Additionally, approximately 76,500 pounds of HHW were collected in the rural HHW collection event. Approximately 350 participants attended the event. The ABOP facility was open for a total of 40 Saturdays, servicing 1,740 participants. Approximately 89,400 pounds of ABOP wastes were collected. A detailed breakdown of the HHW and ABOP waste streams is included on the next page

	FY05-06	FY06-07
HHW Participants	1,238	1,460
HHW Collected (lbs)	78,000	93,700
ABOP Participants	1,490	1,740

Environmental Health Septic and Sewage Spill Report

Environmental Resources Management Division: The Environmental Resources Management (ERM) Division is responsible for several programs including regulatory compliance for solid waste issues as the Local Enforcement Agency (LEA), water engineering (wells and onsite wastewater systems), Local Oversight Program (leaking underground storage tanks), environmental compliance construction plan review for development projects, and medical waste. On sewage releases of greater than 1000 gallons ERM provides cleanup and abatement requirements to responsible parties and provides spill notification reports to various governmental entities, agencies, departments, and the press. From July 1, 2006 through June 30, 2007, one major discharge occurred in the Watershed. This incident took place on November 14, 2006 when eight hundred thousand (800,000) gallons of untreated sewage were released to Murrieta Creek from a ruptured 10 inch force main (see attached Sewage Release/Spill Notification and Office of Emergency Services reports). ERM also makes referrals to franchise trash haulers and County departments for collection of trash illegally disposed of on public and private lands. As the LEA they investigate illegal and un-permitted landfills.

In July of 2007 ERM established a septic tank prohibition in the Cherry Valley community. This measure was taken in an attempt to curtail the ongoing nitrate degradation of the underlying groundwater basin – the only source of drinking water for the Banning Pass Communities. The prohibition was enacted under Riverside County Ordinance No. 871 (attached), and although the Cherry Valley Area is not contributory to the Santa Margarita Watershed, it does demonstrate the kind of action that can be taken to protect threatened water resources in any area of the County.

Ord. 871 - Page 1
ORDINANCE NO. 871
AN ORDINANCE OF THE COUNTY OF RIVERSIDE PROHIBITING THE INSTALLATION OF SPECIFIED SEPTIC TANK SYSTEMS IN CHERRY VALLEY

The Board of Supervisors of the County of Riverside ordains as follows:

Section 1. FINDINGS. The Board of Supervisors hereby makes the following findings of
fact:

a. The proper disposal of sewage waste as generated in homes and business is essential to protect the health and welfare of the residents and visitors to the County of Riverside.

b. High levels of nitrate in drinking water are implicated in a number of illnesses and health disorders. For that reason, both the USEPA and the State of California have established maximum contaminant levels (MCLs) that may not be exceeded in water provided to the public.

c. Rising nitrate levels have been observed in wells in the Cherry Valley Community of Interest (CVCOI) and recently nitrate concentrations in wells owned by the Beaumont Cherry Valley Water District (BCVWD) have approached the maximum contaminant level (MCL) for nitrates.

d. Two water companies in the CVCOI, Bonita Vista Mutual Water Company and Cherry Valley Mutual Water Company, have been annexed into BCVWD's service area, due in part to the high nitrate concentrations in their wells.

e. On July 12, 2006, Wildermuth Environmental Inc. published a draft report entitled Water Quality Impacts from On-Site Waste Disposal Systems in the Cherry Valley Community of Interest (Report). The report was prepared for the San Timeteo Watershed Management Authority and provides compelling evidence that groundwater in the CVCOI is becoming degraded by elevated nitrates and that local septic systems are a primary contributor to that degradation.

f. In light of the above findings, a potential health hazard exists in the Cherry Valley area due to the effects of current wastewater treatment systems in the CVCOI.

g. It is appropriate that the County initiate reasonable and prudent actions to prevent this potential public health hazard from becoming a public health emergency.

h. The current technology for septic system design includes systems that can effectively reduce the nitrates in the effluent to levels that will not lead to further degradation of the groundwater.

i. Ordinance No. 864 was adopted on October 16, 2006 establishing a

ninety (90) day moratorium on the installation of septic systems unless designed to remove fifty percent (50%) of the nitrogen in the wastewater. This was established to allow staff time to coordinate review of the relevant documents.

j. Ordinance No. 864.1 was adopted on February 27, 2007 extending the moratorium for an additional one hundred twenty (120) days to allow

for further review by staff and coordination with the Regional Water Quality Control Board.

k. Pursuant to the review of the Report and supporting documentation, discussion with the Regional Board staff and limited field investigations, staff can find no basis for challenging the conclusions of the Report and recommend that the moratorium be revised to a non-expiring prohibition.

Section 2. DEFINITIONS. As used in this ordinance, the following terms shall have the following meanings:

a. Department. The Riverside County Department of Environmental Health.

b. Cherry Valley Community of Interest. The area generally located north of the City of Beaumont, east of the City of Calimesa, west of Bellflower Avenue and south of the San Bernardino County line, with the exception of the areas south and west of the Beaumont Avenue and Brookside Avenue intersection, and the area north of Sylvania Lane and east of Taiga Road.

Section 3. PROHIBITION.

a. No application for a new septic system shall be accepted for any lot or parcel within the CVCOI unless that system is designed to remove no less than fifty percent (50%) of the nitrogen released in the effluent (advanced treatment, denitrifying systems).

b. No existing system in the area shall be expanded or otherwise modified to accommodate new construction and/or additional wastewater generating fixtures or appliances.

Section 4. REPLACING OR REPAIRING EXISTING SYSTEM. In the event that an existing system requires replacement or repair, such replacement may be approved and installed, subject to the existing requirements of Riverside County Ordinance No. 650.

Section 5. REQUIREMENT OR COMPLIANCE. Non-compliance with this ordinance shall be deemed a violation of Riverside County Ordinance No. 650.

Section 6. SEVERABILITY. If any clause, provision, sentence, or paragraph of this ordinance or the application thereof, is deemed to be invalid as to any person, entity,

establishment, or circumstance, such invalidity shall not affect the other provisions of the
ordinance which shall remain in effect.
Section 7. EFFECTIVE DATE. This ordinance is hereby declared to be an urgency
measure and shall take effect immediately upon its adoption. In accordance with the
requirements of Government Code section 25123, subdivision (d), the Board of Supervisors hereby declares that the provisions contained herein are necessary for the
immediate preservation of the public peace, health, or safety for the following reasons: 1)
the County's moratorium on installing septic systems designed to remove less than fifty
(50) percent of nitrogen in wastewater is only for one hundred twenty (120) days and is set
to expire; 2) upon expiration of the moratorium, escalation of nitrate levels in drinking water

will continue; and 3) preventing further degradation of the groundwater is necessary to
avoid a potential public health emergency in the CVCOI.
Adopted: 871 Item 3.3 of 07/31/2007 (Eff: Immediately)

Business Registration and Licensing Program

SUBMITTAL TO THE BOARD OF SUPERVISORS
COUNTY OF RIVERSIDE, STATE OF CALIFORNIA

2 le 2

FROM: TLMA/Building and Safety

SUBMITTAL DATE: October 26, 2006

SUBJECT: Business Registration and Licensing Program and NPDES Commercial/Industrial Compliance Program

RECOMMENDED MOTION: That the Board of Supervisors:

1. Adopt, pursuant to the requirements of California Government Code §§ 6062a and 66018, Ordinance 857, an Ordinance of the County of Riverside Regarding the Establishment of a Business Registration and Licensing Program (Attachment A);
2. Adopt Ordinance 754.2, an Ordinance of the County of Riverside Amending Ordinance No. 754.1 Establishing Stormwater/Urban Runoff Management and Discharge Controls (Attachment B); and,
3. Direct Building and Safety to provide a status report on the Business Registration and Licensing Program to the Board, six months after the adoption of Ordinance 857.

BACKGROUND: After two public hearings, on September 12, 2006, the Board of Supervisors concluded the public hearing for Ordinance 857 and 754.2 and tentatively approved a Business License Program for the unincorporated area of Riverside County. The Board's tentative approval was given subject to a few requested amendments to Ordinance No. 857 and to the administrative procedures to implement the Business License Program.

(Continued on page 2)

Alex Gann, Senior Management Analyst
County Executive Office

James J. Miller, Director
Department of Building and Safety

11/07/06

Agenda Number: 3.34

BACKGROUND continued:

The Board, after closing the public hearing, requested that staff prepare amendments to the draft Business License Ordinance (Ordinance No. 857) and/or the administrative procedures for the Business License Program. The amendments include the following:

1) The Board requested the following amendment regarding businesses without a fixed facility: Change the Ordinance to reflect that businesses without a fixed facility be amended so that it's clear that the activity of roadside vendors without a license in Riverside County is not permitted. Roadside vendors cannot operate without a license until such time that we have a street vendor ordinance. County Counsel is preparing a separate ordinance to address the issue of roadside vendors. The Roadside Vendor Ordinance will address the legal pathway for vendors to come into compliance with the appropriate standards. As a result, Ordinance No. 857 does not appear to be the appropriate document to reference roadside vending. It should be noted that the proposed Ord. No. 857 does not authorize roadside vending and specifically prohibits unlawful businesses as provided in Section 15 of the Ordinance.

2) Payment of License Fees to be convenient to the public and available through on-line services. The Board recommended that the payment of fees should be available through an online method in order to make the process more efficient. The Transportation Land Management Agency has researched this issue and will implement a streamlined online registration process that will allow for both online registration and payment of license fees. This process will provide the business community with a user friendly, convenient method to register their business and pay their fees electronically. The streamlined process will also assist with the overall program efficiency in terms of staff utilization and keeping program costs relatively low.

3) Exempt businesses must still obtain a business license. The Board indicated that although the exemption categories are created to exempt specified types of businesses from payment of all fees, that a complete database be developed including exempt businesses. Businesses will be given an opportunity to obtain a business license without payment of any fees. However, businesses would be subject to payment of fees if a proper claim of exemption has not been filed within 60 calendar days of notification by TLMA that a license is required.

4) The Board requested clarification regarding the definition of a Home Occupation. Staff has reviewed the Home Occupation definition within both Ordinance No. 348 and the proposed Ordinance No. 857 (which are identical), and concludes that the previously discussed example involving a large commercial truck or semi-tractor trailer rig parked on a residential property would be prohibited under the definition of a Home Occupation. The definition of Home Occupation provides in pertinent part "No vehicles or trailers except those normally incidental to residential use shall be kept on the site." The large commercial truck and semi-tractor trailer rig vehicles are also subject to regulation by the Riverside County Truck Parking Ordinance, Ordinance No. 413.

5) The Board added an exemption for federally recognized non-profits. Staff has revised the exemptions category to include language indicating that any non-profit organizations that are legally recognized as tax-exempt pursuant to the provisions of Internal Revenue Code Section 501 (c) (3) are exempt as provided within this section.

ORDINANCE NO. 857

AN ORDINANCE OF THE COUNTY OF RIVERSIDE REGARDING THE ESTABLISHMENT OF A BUSINESS REGISTRATION AND LICENSING PROGRAM

The Board of Supervisors of the County of Riverside Ordains as Follows:

Section 1. Statement of Purpose and Intent.

The purpose of the provisions of this ordinance is solely to provide for necessary regulation of lawful businesses being conducted within the unincorporated area of Riverside County, in order to protect the public health, safety, and welfare of the people of Riverside County. Business license fees charged under the provisions of this ordinance shall be revenue-neutral in that they may not exceed the reasonable costs of providing the regulatory services included in the business registration and licensing program. No business license fee charged under the provisions of this ordinance shall be construed as a business license tax.

Section 2. Definitions.

"Business" shall mean and include professions, trades, vocations, enterprises, establishments, occupations, and all and every kind of calling, any of which are conducted, transacted or carried on for the purpose of earning in whole or in part a profit or livelihood, whether or not a profit or livelihood actually is earned thereby, whether paid in money, goods, labor, or otherwise. This definition shall apply to business establishments located within the unincorporated area of Riverside County that are operated at a fixed physical location and those that are operated on a mobile basis by a mobile-operator as defined herein.

"County" shall mean the County of Riverside and its respective agencies and departments thereof.

"Home Occupation" means those uses that are customarily conducted in a residence, provided that such uses must be incidental and secondary to the principal use of a dwelling as a residence. The following criteria shall apply to any home occupation: 1) Except for large family day care homes which may require two assistants and small family day care homes which may require one assistant to be

FORM APPROVED COUNTY COUNSEL
NOV 0 1 2006
BY

a

present in addition to the licensee or provider, no person other than a resident of the dwelling shall be employed on the premises in the conduct of a home occupation; 2) A home occupation shall be conducted entirely within the dwelling and shall be incidental and secondary to the use of the dwelling as a residence; 3) A home occupation shall not be conducted in an accessory structure and there shall be no storage of equipment or supplies in an accessory structure or outside building; 4) The residential character of the exterior and interior of the dwelling shall not be changed; 5) No vehicles or trailers except those normally incidental to residential use shall be kept on the site; and 6) No signs other than one unlighted identification sign, not more than two square feet in area, shall be erected on the premises.

"License Inspector" shall mean any employee, agent, representative or contractor designated by the Director of the Transportation and Land Management Agency of the County of Riverside to carry out license inspections under the provisions of this ordinance.

"Local law enforcement or governmental entities" means any city, charter city, county, charter county, or city and county, or the respective agencies and departments thereof, in the State of California.

'Mobile-Operator" shall mean and refer to those businesses that are operated on a mobile basis utilizing a motor vehicle to visit customer locations to carry out business-related services. This term shall be expressly limited to those mobile-operated businesses involving: mobile automobile or other motor vehicle washing; pest control services; mobile carpet, drape or furniture cleaning; concrete mixing or cutting; masonry; painting and coating; landscaping; pool and fountain cleaning; and Port-a-Potty or other portable toilet servicing.

"Nuisance" shall have the same meaning as set forth in California Civil Code § 3479.

"Person" shall mean and include all domestic and foreign corporations, associations, syndicates, joint stock corporations, partnerships of every kind, clubs, common-law trusts, societies, and individuals conducting, transacting or carrying on any lawful business within the unincorporated area of Riverside County other than as an employee.

"Productive Hourly Rate" shall mean and refer to the fully burdened hourly rates for each job classification required to provide a specified service. Hourly rates for services shall be established

through the yearly budget process and adopted by the Board of Supervisors as part of the County budget public hearings.

"Retail Greenhouses" shall mean and refer to all commercial greenhouses other than those that are licensed by the State of California in the "producer" category to grow and sell nursery stock in the amount of $1,000 or more in one year and that are inspected by the County Agricultural Commissioner pursuant to California Food & Agricultural Code §§ 6701 et seq. and any applicable state regulations promulgated thereto.

"Retail Nurseries" shall mean and refer to all commercial nurseries other than those that are licensed by the State of California in the "producer" category to grow and sell nursery stock in the amount of $1,000 or more in one year and that are inspected by the County Agricultural Commissioner pursuant to California Food & Agricultural Code §§ 6701 et seq. and any applicable state regulations promulgated thereto.

"Sworn statement" shall mean a written affidavit, declaration, or statement made under penalty of perjury under the laws of the State of California.

"TLMA" shall mean and refer to the Transportation and Land Management Agency of the County of Riverside and departments thereof.

Section 3. Business Registration and License Required.

~~Except as provided by Section 4 herein,~~ Every person conducting or carrying on a business as defined in this ordinance ~~of any kind or description~~ anywhere in the unincorporated area of Riverside County shall register by obtaining a business license. A separate business license shall be obtained for each physical location (including branch establishments) or for each business operated on a mobile basis by a mobile-operator as defined herein.

Section 4. Exemption.

The payment of business license fees contained in this ordinance, including inspection and enforcement fees as provided in Sections 10 and 13, shall not be required for those businesses falling within any of the exempt categories described in this section so long as a timely claim of exemption is filed with TLMA as hereinafter provided. ~~A business license shall not be required for, and the provisions of this ordinance shall not be otherwise applicable to, those businesses described in this~~

~~section.~~ Any person claiming an exemption pursuant to the provisions of this section shall within sixty (60) calendar days of being sent initial written notification of the requirement to obtain a business license file a sworn statement with TLMA stating the facts upon which an exemption is claimed. In ~~, and in~~ the absence of such statement substantiating the claim or in the event that the statement is filed with TLMA on an untimely basis, such person shall be liable for the payment of the business license fees imposed by this ordinance, including inspection and enforcement fees as provided in Sections 10 and 13.

A. Residential Facilities. Apartments, rooming houses, and other residential facilities in which living units are rented or leased solely on a term of thirty days or longer, residential care homes for adults or children, family day care homes are exempt as provided in this section.

B. Churches, Temples or Other Places of Worship. Churches, temples or other places of worship, to the extent of their use for worship, religious education or the social affairs of the religious group are exempt as provided in this section. ~~from the provisions of this ordinance.~~ This exemption shall not apply to other activities, which are not undertaken primarily for members of the religious group, including, but not limited to, day schools, social service programs or Church-owned or operated business enterprises.

C. Home Occupations. Home occupations that operate within the limitations defined herein are exempt as provided in this section. ~~from the provisions of this ordinance.~~ This exemption shall not apply to those home occupations that are subject to compliance with water quality requirements imposed by Riverside County Ordinance Nos. 457 and 754, California Water Code §§ 13000 et seq. (Porter-Cologne Water Quality Control Act), Title 33 U.S.C. §§ 1251 et seq. (Clean Water Act) and any applicable state or federal regulations promulgated thereto, and any related administrative orders or permits issued in connection therewith.

D. Agriculture. The following agricultural activities are exempt as provided in this section: agricultural pursuits consisting of the growing of crops, raising of livestock, and dairying, including auxiliary and ancillary uses incidental to the operation of a farm or ranch, consisting of the purchase and storage of substances, materials, supplies, animal feeds and produce, and the marketing of farm products; provided however, that a business license shall be required in connection with any of the following: 1) retail nurseries; 2) retail greenhouses; and 3) wholesaling, processing, storage or manufacturing use which

involves assembly of the products of multiple farms or ranches by a cooperative or other business enterprise for marketing distribution.

E. Federal or State Law. The provisions of this ordinance shall not be deemed or construed to apply to any person transacting or carrying on any business exempt by virtue of the Constitution or applicable statutes of the United States or of the State of California from the payment of such regulatory business license fees charged pursuant to this ordinance.

F. Non-Profit Organizations. Any non-profit organizations that are legally recognized as tax-exempt pursuant to the provisions of 26 U.S.C. § 501(c)(3) are exempt as provided in this section.

Section 5. Evidence of Doing Business.

The following circumstances shall be considered prima facie evidence that a person is conducting business in the unincorporated area of Riverside County: where any person, by use of any sign, circular, card, brochure, telephone book, magazine, newspaper, website, electronic media or other publication, shall advertise, hold out or by any other means represent that the person is in business in the unincorporated area of Riverside County, or when any person holds an active license or permit issued by a governmental agency indicating that the person is in business in the unincorporated area of Riverside County, and such person fails upon request of TLMA to sign and provide to the County a sworn statement attesting that such person is not conducting or carrying on a business from the unincorporated area of Riverside County. TLMA shall provide a form for the purposes of the sworn statement required by this section.

Section 6. Application and Issuance of Business License.

A. Application Contents. Any person required to obtain a business license pursuant to this ordinance shall apply therefore by submitting the information required by TLMA on behalf of the County. Such information shall be a sworn statement, upon a form provided by TLMA, that includes the name of the applicant, the ownership of the business involved, and the following information:

1. The name, location and exact nature or kind of business for which the license is requested. In the event that the business is not carried out at a permanent location, the names and places of residence of those owning the business shall also be required.

2. A copy of any current permit issued by the State of California Board of Equalization to a person who contracts, sells or delivers any goods, wares, or merchandise in the unincorporated area of Riverside County for which sales or use tax is payable to the State of California.

3. In the event that application is made for the issuance of a license to a person doing business under a fictitious name, the application shall set forth the names and places of residence of those owning said business.

4. In the event that application is made for the issuance of a license to a corporation or partners, the application shall set forth the names and place of residence of the officers or partners thereof.

5. The urban runoff and stormwater information form shall also be completed and signed.

6. Any further information which TLMA may require to enable it to issue a business license for which the application is made.

B. Issuance. A business license shall be issued upon satisfactory completion of an application and payment of the fee prescribed in this ordinance. Said license shall remain in full force and effect for a period of one year unless one of the following events takes place: business changes address or name, business is discontinued or business ownership changes.

C. License Fee. A standard business license fee shall be charged by the County to cover the reasonable costs of providing the regulatory services included in the business registration and licensing program. The business license holder shall also be subject to periodic supplemental charges by the County in the form of an additional license inspection and enforcement fee as provided in Sections 10 and 13 of this ordinance. No business license fee charged under the provisions of this ordinance shall be construed as a business license tax.

Section 7. Renewal of Business License. Any person who has obtained a business license pursuant to this ordinance shall apply for renewal on an annual basis prior to expiration of the then-current business license term. Said renewal application shall be accompanied by payment of the business license fee prescribed by this ordinance.

Section 8. Nontransferable – Change of Location or Ownership, Name of Business. No business license issued pursuant to this ordinance shall be automatically transferable; provided however, that where a license is issued indicating a person is conducting, transacting or carrying on a business at a

particular place under a particular name, such license holder, upon application therefore, and payment of a change fee may obtain a new license showing some other location and/or name of the business and/or business ownership change. A new business registration and license shall be required as provided in Section 3 herein in the event that there are any other changes that take place with regard to a business.

Section 9. **Duplicate License.** A duplicate license may be issued to replace any license issued hereunder which has been lost or destroyed where such license holder submits a statement of such fact and provides payment of a duplicate license fee.

Section 10. **License Fees.**

A. License fees charged pursuant to the provisions of this ordinance shall be according to the rates set forth herein as follows:

1. Standard business license fee (one year) - $45
2. Business license annual renewal fee - $30
3. Change Fee - $30
4. Duplicate Fee - $10
5. Inspection Fee – Productive Hourly Rate of a Building Inspector II (currently set at $131.00/hr. in FY 2005-2006) as approved annually by the Board of Supervisors.
6. Enforcement Fee –Productive Hourly Rate of a Code Enforcement Officer II (currently set at $111.00/hr. in FY 2005-2006) as approved annually by the Board of Supervisors.

B. TLMA may require a business license holder to provide an advance deposit amount to the County to cover the cost of inspection fees in an amount not to exceed three (3) hours depending on the size and/or complexity of the business that is subject to inspection. For deposit-based inspection fee functions only, fees collected in excess of the actual cost of providing the inspection service shall be refunded. In the event that the actual cost of providing the inspection service exceeds the advance deposit amount then there shall be required an additional deposit to cover the costs incurred by the County.

Section 11. **Contents of Business License; Display Required.**

A. Every person who has submitted a satisfactory application and who has paid the required fee, as provided in this ordinance, shall be issued a business license which contains the following information:

1. The name of the person to whom the license is issued;

2. The name of the business licensed;

3. The physical location where such business is to be transacted and carried on;

4. The date of expiration of such license; and

5. Such other information as may be necessary for the enforcement of the provisions of this ordinance.

B. Any person conducting, transacting or carrying on a business at a fixed location in the unincorporated area of Riverside County shall keep the business license posted in a conspicuous place in plain public view upon the physical premises where such business is taking place.

C. Any person conducting, transacting or carrying on a business but not operating at a fixed location in the unincorporated area of Riverside County shall keep the business license on his or her person at all times while conducting, transacting or carrying on the business for which it is issued. Such person shall display the business license to any license inspector, code enforcement officer, peace officer or any other authorized representative employed by the County upon request.

Section 12. License Inspectors. License inspectors may enter free of charge, at any time, any place of business for which a business license is required by this ordinance and demand the display of any such license by any person engaged or employed in the transaction or carrying on of such business.

Section 13. Water Quality Inspections and Enforcement; Additional License Fees. A license inspector, code enforcement officer or peace officer employed by the County may enter free of charge, at any time, any place of business for which a business license is required by this ordinance and inspect the premises, grounds, facilities and structures located therein for compliance with water quality requirements imposed by Riverside County Ordinance Nos. 457 and 754, California Water Code §§ 13000 et seq. (Porter-Cologne Water Quality Control Act), Title 33 U.S.C. §§ 1251 et seq. (Clean Water Act) and any applicable state or federal regulations promulgated thereto, and any related administrative orders or permits issued in connection therewith. Failure to maintain the business premises, grounds, facilities and structures located therein in compliance with water quality requirements is a violation of this ordinance. The County may initiate enforcement actions against business license holders whose business premises are found upon inspection to be in violation of water quality requirements. The business license holder shall be liable to

the County for an additional license inspection and enforcement fee based on the hourly rates provided in Section 10 of this ordinance.

Section 14. **False Statements.** Every person who makes any false statement or representation in any application for a business license commits a violation of this ordinance.

Section 15. **Unlawful Business.** No business license issued pursuant to this ordinance shall be construed as authorizing the conduct of or continuance of any occupation, use or activity of any kind which is prohibited by County ordinance, state or federal law or regulation.

Section 16. **Violation – Penalty.** Any person in violation of this chapter is subject to the procedures and penalties set forth in Riverside County Ordinance No. 725.

Section 17. **Severability.** If any portion, provision, section, paragraph, sentence, or word of this Ordinance is rendered or declared to be invalid by any final court action in a court of competent jurisdiction, or by reason of any preemptive legislation, the remaining portions, provisions, sections, paragraphs, sentences, and words of this Ordinance shall remain in full force and effect and shall be interpreted by the court so as to give effect to such remaining portions of the Ordinance.

Section 18. This ordinance shall take effect thirty (30) days after its adoption.

BOARD OF SUPERVISORS OF THE COUNTY
OF RIVERSIDE, STATE OF CALIFORNIA

By:_____
Chairman, Board of Supervisors

ATTESTED:

NANCY ROMERO
Clerk of the Board

By: _____
Deputy

ORDINANCE NO. 754.2

AN ORDINANCE OF THE COUNTY OF RIVERSIDE AMENDING ORDINANCE NO. 754.1 ESTABLISHING STORMWATER/URBAN RUNOFF MANAGEMENT AND DISCHARGE CONTROLS

The Board of Supervisors of the County of Riverside Ordains as Follows:

ARTICLE I

TITLE, PURPOSE AND GENERAL PROVISIONS

Section 1. **Title.** This ordinance shall be known as the Riverside County Stormwater/Urban Runoff Management and Discharge Controls Ordinance and may be so cited.

Section 2. **Purpose and Intent.** The purpose of this ordinance is to ensure the future health, safety, and general welfare of County [redacted] ~~citizens~~ by:

A. Reducing pollutants in stormwater discharges to the maximum extent practicable;

B. Regulating illicit connections and discharges to the storm drain system; and

C. Regulating non-stormwater discharges to the storm drain system.

The intent of this ordinance is to protect and enhance the water quality of County watercourses, water bodies, ground water, and wetlands in a manner pursuant to and consistent with [redacted] the Federal Clean Water Act ~~(33 U.S.C. § 1342).~~ [redacted]

Section 3. **Definitions.** The terms as used in this ordinance shall have the following meanings:

A. Best Management Practice (BMPs) shall mean any activities, prohibitions, practices, procedures, programs, or other measures designed to prevent or reduce the discharge of pollutants directly or indirectly into waters of the United States. BMPs shall include, but are not limited to, those measures specified in the California Stormwater Best Management Practice Handbooks for Municipal, Industrial/Commercial and Construction Activity and those measures identified by the Director of TLMA.

FORM APPROVED COUNTY COUNSEL NOV 0 1 2006 BY

B. County shall mean the County of Riverside.

C. Commercial and Industrial Facilities shall mean and refer to a facility or facilities that consist of any of the following:

1. Auto-Related – mechanical repair, maintenance, fueling or cleaning of automobiles, airplanes, boats and equipment, body repair or painting of automobiles and other vehicles, retail or wholesale fueling, automobile parking lots and storage facilities.

2. Mobile-Related activities – mobile automobile or other motor vehicle washing; pest control services; mobile carpet, drapery or furniture cleaning; concrete mixing or cutting; masonry; painting and coating; landscaping; pool and fountain cleaning; and Port-a-Potty or other portable toilet servicing.

3. Leisure – cemeteries, nurseries, greenhouses, golf courses, parks, other recreational areas/facilities, eating and drinking establishments.

4. Industrial – industrial facilities as defined within the Federal Clean Water Act, operating and closed municipal landfills, facilities subject to SARA Title III, hazardous waste treatment, disposal, storage and recovery facilities.

~~D~~C. Illicit Discharge shall mean any discharge to the storm drain system that is not composed entirely of stormwater runoff except discharges made pursuant to a National Pollutant Discharge Elimination System (NPDES) permit or as otherwise authorized by the Santa Ana, San Diego, or Colorado River basin Regional Water Quality Control Board.

~~E~~D. Illicit Connection shall mean any physical connection to a storm drain system which has not been permitted by Riverside County, the Riverside County Flood Control and Water Conservation District, or other appropriate public agency.

~~F~~E. National Pollutant Discharge Elimination System (NPDES) Permit shall mean a stormwater discharge permit issued by the Santa Ana, San Diego, or Colorado River Basin Regional Water Quality Control Board or the State Water Resources Control Board in compliance with the Clean Water Act.

G~~F~~. Municipal NPDES Permit shall mean an area-wide NPDES permit issued to a government agency or agencies for the discharge of stormwater from a stormwater system. Such a permit is commonly referred to as a "MS4 Permit" (referring to "municipal separate storm sewer system").

H~~G~~. Non-Stormwater Discharge shall mean any discharge to the storm drain system that is not entirely composed of stormwater.

I~~H~~. Person shall mean any natural person, firm, association, club, organization, corporation, partnership, business trust, company or other entity which is recognized by law as the subject of rights or duties.

J~~I~~. Pollutant shall mean anything which causes the deterioration of water quality such that it impairs subsequent and/;or competing uses of the water. Pollutants ~~Pollutants~~ may include but are not limited to paints, oil and other automotive fluids, soil, sand, dirt, rubbish, trash, garbage, debris, refuse, waste, fecal coliform, fecal streptococcus, enterococcus, other biological materials, radiological materials, suspended solids, heavy metals, hazardous waste, chemicals, fresh concrete, yard waste from commercial landscaping operations, animal waste, materials that result from the process of constructing a building or structure, nauseous or offensive matter of any kind.

K~~J~~. Premises shall mean any building, lot, parcel of land, land or portion of land whether improved or unimproved.

L~~K~~. Storm Drain System shall mean any facility within the unincorporated areas of the County by which stormwater may be conveyed to waters of the United States. Storm drain system includes but is not limited to any roads with drainage systems, streets, curbs, gutters, catch basins, natural and artificial channels, ditches, aqueducts, storm drains, inlets, conduit or other drainage structure.

M~~L~~. Stormwater Runoff shall mean surface runoff and drainage associated with rain storm events and snow melt.

N. Suspended Solids shall mean solid materials or particles that either float on the surface of or are in suspension in, stormwater, wastewater or other liquid.

O~~M~~. Director of TLMA shall mean the Director of the County Transportation and Land Management Agency.

Section 4. **Responsibility for Administration.** This ordinance shall be administered for the County by the Director of TLMA.

Section 5. **Regulatory Consistency.** This ordinance shall be construed to assure consistency with the requirements of the Clean Water Act, Porter-Cologne Water Quality Control Act and acts amendatory thereof or supplementary thereto, applicable implementing regulations, and any existing or future municipal NPDES Permits and any amendments or revisions thereto or reissuance thereof.

Section 6. **Severability.** If any provision, clause, sentence, or paragraph of this ordinance or the application thereof to any person, establishment, or circumstances shall be held invalid, such invalidity shall not affect the other provisions or application of this ordinance which can be given effect without the invalid provision or application, and to this end, the provisions of this ordinance are hereby declared to be severable.

ARTICLE II

MANAGEMENT AND DISCHARGE CONTROLS

Section 1. **Reduction of Pollutants in Stormwater.**

A. **General.** It is a violation of this ordinance to throw, deposit, leave, maintain, keep, or permit to be thrown, deposited, placed, left or maintained, any pollutant in or upon any street, alley, sidewalk, storm drain, inlet, catch basin, conduit or other drainage structures, business place, or upon any public or private plot of land in the County. The only exception being where such pollutant is temporarily placed in an appropriate container with a spill containment system for later collection and removal. It is a violation of this ordinance to cause or permit any dumpster, solid waste bin, or similar container to leak such that any pollutant is discharged into any street, alley, sidewalk, storm drain, inlet, catch basin, conduit or other drainage structures, business place, or upon any public or private plot of land in the County.

B. **Construction Sites.** Any person performing construction work in the County shall comply with the provisions of this ordinance, Sections 4.J.12 and 4.J.13 of Ordinance No. 457 and, Sections 5.1.D. and 5.2.E. of Ordinance No. 460.

C. **New Development and Redevelopment.** New development or redevelopment projects shall control stormwater runoff so as to prevent any deterioration of water quality that would impair

subsequent or competing uses of the water. The Director of TLMA shall identify the BMP's that may be implemented to prevent such deterioration and shall identify the manner of implementation. The BMP's may, among other things, require new developments or redevelopments to do any of the following:

1. Increase Permeable Areas, by leaving highly porous soil and low lying areas undisturbed; by incorporating landscaping and open space into the project design; by using porous materials for or near driveways and walkways; and by incorporating detention ponds and infiltration pits into the project design.

2. Direct Runoff to Permeable Areas, by orienting it away from impermeable areas to swales, berms, green strip filters, gravel beds, and french drains; by installing rain-gutters oriented towards permeable areas; by modifying the grade of the property to divert flow to permeable areas and minimize the amount of stormwater runoff leaving the property; and by designing curbs, berms or other structures such that they do not isolate permeable or landscaped areas.

3. Maximize Stormwater Storage for Reuse, by using retention structures, subsurface areas, cisterns, or other structures to store stormwater runoff for reuse or slow release.

D. Existing Development. Existing development shall control stormwater runoff so as to prevent any deterioration of water quality that would impair subsequent or competing uses of the water. The Director of TLMA shall identify the BMP's that may be implemented to prevent such deterioration and shall identify the manner of implementation.

E. Commercial and Industrial Facilities. Any person or entity that owns or operates a commercial and/or industrial facility(s) shall comply with the provisions of this ordinance and Ordinance Nos. 457 and 857. All such facilities shall be subject to a regular program of inspections as required by this ordinance, Riverside County Ordinance Nos. 457 and 857, California Water Code §§ 13000 et seq. (Porter-Cologne Water Quality Control Act), Title 33 U.S.C. §§ 1251 et seq. (Clean Water Act), any applicable state or federal regulations promulgated thereto, and any related administrative orders or permits issued in connection therewith.

Section 2. **Illicit Connections/Discharges.** It is a violatio nis ordinance to establish, use, maintain, or continue illicit connections to the storm drain system. commence or continue any illicit discharges to the storm drain system. This prohibition against illicit connections and discharges is expressly retroactive and applies to connections and discharges made in the past, regardless of whether permissible under the law or practices applicable or prevailing at the time of the connection or discharge.

Section 3. **Non-Stormwater Discharges.** The discharge of non-stormwater into the storm drain system is a violation of this ordinance except as specified below.

A. The discharge prohibition shall not apply to any discharge regulated under a NDPES Permit or Waiver issued to the discharger and administered by the State of California under the authority of the EPA, provided that the discharger is in full compliance with all requirements of the permit or waiver and other applicable laws or regulations.

B. Discharges from the following activities will not be considered a violation of this ordinance when properly managed: water line flushing and other discharges from potable water sources, landscape irrigation and lawn watering, irrigation water, diverted stream flows, rising ground waters, infiltration to separate storm drains, uncontaminated pumped ground water, foundation and footing drains, water from crawl space pumps, air conditioning condensation, springs, individual residential car washing, flows from riparian habitats and wetlands, swimming pool discharges or flows from fire fighting.

Section 4. **Discharges in violation of Permit.**

A. Municipal NPDES Permit. Any discharge that would result in or contribute to a violation of an existing or future Municipal NPDES Permit(s) or any amendment or revision thereto or reissuance thereof, either separately considered or when combined with other discharges, is a violation of this ordinance and is prohibited. Liability for any such discharge shall be the responsibility of the person(s) causing or responsible for the discharge, and such persons shall defend, indemnify and hold harmless the County in any administrative or judicial enforcement action relating to such discharge.

B. NPDES Permit for Industrial/Commercial and Construction Activity. Any industrial discharger, discharger associated with construction activity, or other discharger subject to any NPDES permit issued by the United States Environmental Protection Agency, the State Water Resources Control Board, the Santa Ana Regional Water Quality Control Board, the Santa Ana Regional Water Quality

Control Board, the San Diego Regional Water Quality Control Board or the Colorado River Basin Regional Water Quality Control Board, shall comply with all requirements of such permit. Such dischargers shall specifically comply with the following permits: the Industrial Stormwater General Permit, the Construction Activity Stormwater General Permit, and the Dewatering General Permit. Proof of compliance with said NPDES General Permits may be required in a form acceptable to the Director prior to issuance of any County grading, building, or occupancy permits.

[redacted]

ARTICLE III

ENFORCEMENT

Any person in violation of this ordinance is subject to the procedures and penalties set forth in Ordinance No. 725. In addition, to the extent that the County makes any provision of this ordinance or identified BMP a condition of approval to the issuance of a permit, any person in violation of such condition is subject to the permit revocation [redacted] procedures set forth in the ordinance governing permit issuance.

ARTICLE IV

EFFECTIVE DATE OF ORDINANCE

This ordinance shall take effect thirty (30) days after its adoption.

BUSINESS REGISTRATION AND LICENSING PROGRAM

In November 2006, the Riverside County Board of Supervisors approved Ordinance No. 857 creating a Business Registration and Licensing Program. The ordinance requires that businesses within the unincorporated area of Riverside County obtain a business license. The ordinance includes information regarding the contents of the application form, license issuance protocol, description of license fee, license inspections, water quality inspections and enforcement, and business license enforcement procedures.

The ordinance requires all businesses to register; however, some businesses are exempt from paying fees. Fee exemptions will be granted for various agricultural activities, certain residential businesses, places of worship, specific non-profit, and any business exempt by virtue of constitutional law.

Business license fees will not exceed the reasonable cost of providing an inventory of county businesses and the required registration information. No business license fee charged under the provisions of this ordinance shall be construed as a business license tax.

A business registration form designed to ascertain pertinent information regarding the businesses will be mailed to every known business within unincorporated area of Riverside County. In addition, businesses have the ability to access the County of Riverside's website for an on-line registration and payment system. For more information regarding business registration requirements, please contact the Business Registration and

License Program Office at 951-955-1400. or on the website: www.rctlma.org.buslic

FEE EXEMPTIONS

Pursuant to Ordinance No. 857, some businesses are exempt from paying fees; however, they must register within 60 days of being notified by the County in order to maintain their exempt status. Exemptions apply to the following:

Residential Facility: Apartments, rooming houses, residential care homes, and family day care homes.

Church, Temple or Places of Worship: Churches, temples or other places of worship, for worship, religious education, or the social affairs of the religious group. **NOTE:** This exemption shall not apply to other activities, including, but not limited to, day schools, social service programs or Church-owned or operated business enterprises.

Home Occupations: Home occupations that are not subject to compliance with water quality restrictions. If your business affects water quality, it will not be exempt from the registration fee.

Agriculture: Agricultural pursuits consisting of the growing of crops, raising of livestock, and dairying, the purchase and storage of substances, materials, supplies, animal feeds and produce, and the marketing of farm products. **NOTE:** A business license shall be required in connection with any of the following: 1) retail nurseries, 2) retail greenhouses; and 3) wholesaling, processing, storage or manufacturing use which involves the collection of products of multiple farms or ranches .

Federal or State Law: Any businesses that are legally recognized as exempt by the U. S. Constitution or applicable statutes, or by the State of California.

Non-Profit Organizations: Any non-profit organizations that are legally recognized as tax exempt pursuant to the provisions of 26 U.S.C. Section 501 (c)(3).

Frequently Asked Questions?

WHAT IS THE PURPOSE OF THE BUSINESS REGISTRATION AND LICENSING PROGRAM?

This program provides a comprehensive inventory of businesses in unincorporated area of Riverside County, enhances public safety and helps achieve compliance with federal, state and local water quality regulations.

HOW DOES THE BUSINESS REGISTRATION PROGRAM BENEFIT BUSINESS OWNERS AND THE GENERAL PUBLIC?

There are a two major benefits to the business community and general public from the business registration program:

Public Safety

The program gives county law enforcement and fire personnel a better understanding of the business community and its processes and alerts them to potential hazards, making them more effective responding to protect residents and property. .

Water Quality

The business registration program requires that specific business types be identified, prioritized and inspected for storm water management requirements. It will ensure that those businesses have implemented best management practices to prevent illicit discharges into the storm water system that could ultimately harm water quality.

HOW MUCH WILL THE BUSINESS LICENSE COST?

License fees charged pursuant to this ordinance are as follows:

License fee (first year):	**$45**
Annual renewal fee:	**$30**
Change of name/ location:	**$30**
Duplicate license:	**$30**

WHO IS REQUIRED TO HAVE A LICENSE?

Every person conducting business as defined in Riverside County Ordinance 857 in unincorporated areas of Riverside County must obtain a business license. A separate license must be obtained for each physical location. Any person who does not obtain the required license is subject to the procedures and penalties set forth in the ordinance.

WHAT IF I OPERATE A MOBILE BUSINESS?

A business license is required for the following mobile businesses: mobile automobile or other motor vehicle washing; pest control services; mobile carpet; drape or furniture cleaning; concrete mixing or cutting; masonry; painting and coating; landscaping; pool and fountain cleaning; and portable toilet servicing.

WHAT IF MY BUSINESS ALSO CONDUCTS BUSINESS IN ANOTHER CITY OR COUNTY?

You might need a separate business license to conduct business in any city or county. Most California cities and counties have a business license ordinance. Each jurisdiction, however, has it's own filing fee and requirements. Check with the appropriate jurisdiction for its' fees.

HOW LONG IS THIS LICENSE GOOD FOR?

Your license is current for one calendar year from the effective date of license issuance. Renewal fees are due 30 days prior to the expiration date on the license.

DO STATE LICENSED CONTRACTORS NEED A BUSINESS LICENSE?

Any person licensed as a contractor by the State Contractors Board must obtain a business license if they are physically located within the unincorporated areas of the County.

DO I NEED A LICENSE IF I WORK OUT OF MY HOME?

Yes, home-based businesses also require registration. Most home occupations are exempt from paying registration fees. The fee exemption shall not apply to those home occupations that are subject to comply with water quality requirements. Please refer to the brochure's fee exemption section or go to our website at: www.rctlma.org/buslic.

IF I AM A NONPROFIT BUSINESS, DO I HAVE TO REGISTER?

You are required to register, but are exempt from paying fees if your organization is legally recognized as tax exempt pursuant to the provisions of Internal Revenue Code Section 501 (C) (3) and your exemption is filed within 60 days of notification of the County's registration requirement.

DO I NEED A LICENSE FOR GROWING OR PRODUCING AGRICULTURAL PRODUCTS?

Yes, all agricultural businesses must register; however, some agricultural activities may be exempt from fees. Refer to the fee exemption section on this brochure or go to www.rctlma.org/buslic.

WHAT IS THE APPLICATION PROCEDURE?

The process to obtain a business license takes only a few minutes and may be completed by mail or on the web based registration system. Using the internet, go to the county business registration website at: www.rctlma.org/buslic where you will find online instructions, a registration application and convenient payment system.

IF I AM EXEMPT FROM FEES, DO I STILL HAVE TO REGISTER?

Yes. Business that are exempt from paying fees still must register within 60 days of notification.

COUNTY OF RIVERSIDE

Department of Building and Safety

BUSINESS REGISTRATION AND LICENSING PROGRAM

James J. Miller
Director

January 31, 2007

Martha's Gift Shoppe
ATTN: ACCOUNTS PAYABLE
PO BOX 456
GOTHAM, CA 99999-9999

Dear Business Owner,

Your business has been identified as being located within the unincorporated area of the County of Riverside. The County has recently enacted Ordinance 857 requiring all businesses within the unincorporated areas to register and obtain a business license. The purpose of this program is to create a comprehensive inventory and data base of all businesses. This inventory will be used to assist the County in complying with Federal clean water regulations and to improve public safety services and economic development outreach to the business community.

Included with this letter are the Business License Application, a brochure about the program, the Declaration of Exemption, and a return envelope. **The first time filing fee for the Business License is $45 with an annual renewal fee of $30.** *Also, for your convenience, you can register and pay on line at www.rctlma.org/buslic.* All applications must be returned within 60 days of receipt of this letter or you may be subject to late filing fees.

If you have any questions, please contact the Business License and Registration Program Division at (951) 955-1400 or visit the web page at *www.rctlma.org/buslic*. Thank you.

Respectfully,

Ed Nicholls
County of Riverside
Business Registration and Licensing Division

Code Enforcement Program Newsletter

Many hands make light work!

Nuevo Cleanup Volunteers

Several groups came together to collect 50 tons of trash & tires.

Jurupa Valley Tire Event

Code Enforcement staff was able to assist Riverside County Waste Management in the very first Jurupa Valley Tire Collection Event that was held on Saturday, March 24th. With the help of 55 participants, we were able to collect 566 tires, 113 of these tires were collected when Code Enforcement staff took 3 volunteer Jurupa Valley High School students out to collect illegally dumped tires in a vacant lot off of Galena Street and Etiwanda Avenue across the street from the High School, along Etiwanda Avenue by the freeway off ramps and behind the Farmer Boys off of Etiwanda Avenue.

Susan Rush

50 Tons Collected

Supervisor Marion Ashley's Office and the residents of Friends of Nuevo, Juniper Flats, and Lakeview came together to participate in a successful Community Cleanup & Tire Collection Event on Saturday, March 17, 2007. The event took place at the Valley View Elementary School where over 15 agencies and groups participated, including: AAA Egg Farm, Nuview Union School District, Eastern Municipal Water District, Riverside County Public Library-Nuevo, Nuevo Citizen's Patrol, County Fire Department, Nuevo Post Office, Nuevo Municipal Advisory Council, Waste Management Inc., Riverside County Code Enforcement Department, County Waste Management Department, and Western Riverside Council of Governments. These agencies and groups offered their support ranging from informing the local residents of the cleanup, to volunteering their time and resources, as well as providing the clean up tools and support for all participants. Over 50 tons were collected because of this cleanup, including tires, all thanks to a tire bin, which was sponsored by Supervisor Marion Ashley's office.

Susana Orozco

Making a Difference

For many years, 68th Street in Mecca has been considered a mini landfill, attracting all types of illegal dumpers. Thanks to the hard work and dedication of the Transportation Department's litter crews, which are now working full force in all unincorporated areas of the County, this area is no longer an eyesore!

This is a wonderful example of the improvements we are making Countywide in our fight against illegal dumping, with the collaborated efforts between Riverside County's Transportation Department, Environmental Health Department, Waste Management and our Code Enforcement Department. The services we are providing are necessary in improving the health and safety of all community members. Way to go team!

Susan Rush

Department Updates

Code Enforcement Administration is currently revising the Department Grooming and Dress Code Standards. A final draft of the Dress Code will be in place by May 1, 2007. Starting May 1st, all field staff will be required to be in uniform. This includes Techs, Officers, Sr. Officers, and Supervising Officers. Supervising Code Officers will have the option to wear business attire. If any one doesn't have their uniforms now, please contact me as soon as possible.

The Safety Lighting (light bars) has arrived at Woodcrest Vehicle Center. A plan is currently being developed to bring the vehicles in on Thursdays so they can be worked on over the weekends. Please be flexible with this process. The plan is to do 10 vehicles per week until the entire fleet is done.

Mike Bowles

Tire Enforcement Grant

In November of 2006, our Code Enforcement Department applied for a Tire Enforcement Grant, which will provide funding to pay for personnel and equipment cost associated with carrying out a local waste tire inspection and surveillance program for the California Integrated Waste Management Board (CIWMB). Our Department has recently been awarded $300,000.00, to carry out the inspections that will begin in July of 2007. Our duties as a department will entail 1) identifying illegal waste tire piles; 2) inspecting tire facilities, points of tire generation, haulers, and end-use facilities; 3) investigating referrals and complaints; 4) examining waste tire hauler registration and manifest documents; and 5) providing outreach and education to waste tire facilities, generators, and haulers. In addition to these, we have the authority to issue Notice of Violations (NOV), but it will be up to the CIWMB to carry out enforcement action after the NOV stage. According to the CIWMB records there are over 800 of these facilities in Riverside County and our plan is to inspect all of these, during fiscal year 2007/2008, with the use of these funds.

Susana Orozco

Teamwork - District 5

Substandard structures, trailers, accumulated rubbish, unpermitted business and inoperable vehicles kept seven Team 5 Code Enforcement Officers busy in Desert Hot Springs. Danny Pike, CEO, and Regina Keyes, Sr. CEO, coordinated the effort. On 3/29/07 the team partnered with RAID, RSO, and CHP on a property that has been an eyesore for months. With the cooperation of all departments an initial investigation was conducted and the property owner was issued a Notice of the violation and necessary compliance measures.

Accumulated Rubbish in Cherry Valley. Sara Cervantes, CEO III, responded to this property and found accumulated rubbish throughout several parcels in the area. Sara notified the property owner of the violation and the property was cleaned within two months of notice, compliance gained.

On March 17, 2007 David W. Newton, Vice President of the I-10 Corridor Neighborhood Watch Program presented Tracey Towner, Supervising Code Enforcement Officer, a Certificate of Appreciation in Recognition of Participation and Cooperation with the Program. A meeting and introduction of Danny Pike, CEO, and Tony Green, CEO, was held with the Cabazon / Whitewater community members. The group was very appreciative of all the work that Code Enforcement has done and excited with the new Officers coming on board.

Tracey Towner

Tracey Towner receives award

Helping One Another - District 1

Officer Matt Jones contacted me about a tip that someone had dumped a large amount of oil in front of a home. Officer Jones investigated the allegations and found that there was approximately thirty gallons of an unknown fluid on the road gutter and in five gallon containers. I advised Officer Jones to get the information, and to stay at the scene until further notice. I called Riverside County's Transportation Department and Environmental Health's Hazmat and advised them of the situation and location. I also contacted Manuel Acueto of the SET who advised me that he was going to get someone out to the location. I drove out to assist Officer Jones and we documented the scene with photographic evidence. Using networking with other departments, and real team effort, Officers from SET, Hazmat, and the District Attorney's Environmental Crimes obtained a confession. Criminal charges are pending. GREAT JOB TO ALL!

Jose Cruz

Three Years to Clear - District 2

After three long years of diligence and hard work a major nuisance has been cleared in the Pedley area. Jurupa Code Enforcement Officers and staff have worked to gain compliance on the subject property for multiple violations including: excessive outside storage, accumulated rubbish, construction without a permit, multiple inoperative vehicles, and several substandard structures. The property had become a community problem that taxed resources from Fire Dept., Sheriff Dept., Planning Dept., and the property owner. Recently the vacant property had become a haven for the homeless, which caused the piles of rubbish to grow and created an increase in the crime rate in the surrounding area. The Jurupa Special Enforcement Team became involved when it was found out squatters were charging a tipping fee for violators to dump their trash on the lot.

On March 30, 2007 the property owner began a major clean up effort that included demolition of the substandard structures, and removal of vehicles and debris. The property is now clean, clear and secured with a chain link fence around its perimeter. The property owner has also agreed to monitor and maintain the fence.

So Much to See in District 3

Team 3 keeps a non-stop pace! Officers assigned from Hemet work the northern areas of District 3, and Murrieta officers work the southern areas. Both areas have numerous high profile cases. Currently there are several cases at counsel for injunctions. The last half of March, officers executed three seizure warrants; conducted a pre-bid job walk; and partnered with County Counsel staff on an inspection of Crossroads in Aguanga. NET officers worked with SET officers and Sheriffs in a sweep of a chronic problem area in Hemet. Thirteen notices were issued with excellent results. Officer Wayne "J" Durant has seen great success recently (see before and after below). Good job, Wayne! Kudos to Mark Slocum, SET Sr., for his great attitude, team mentality and willingness to include area officers in SET activities. Mark and SET officers have assisted NET officers in execution of warrants and shared equipment and resources. Awesome!

Mary Overholt

Reaching Our Goals - District 4

First of all, we would like to congratulate Manolito for winning the newsletter contest. "The Posting" is a great opportunity for all of us to share our successes in doing what we love doing best....making our communities a better place to live and to take pride in doing it. The goal for this inaugural event of being our own department has taken on a new meaning for all of us.

For the month of March, District 4 officers took on the challenge of setting goals with a higher expectation of such issues as gaining compliance voluntarily from property owners, especially in the Thousand Palms area. The numbers speak for themselves.

25 non-operational vehicles removed

13 vacant lots cleared of trash and debris

3 substandard structures abated

Along with our community improvement specialists, we are raising awareness of issues pertaining to accumulated rubbish, abandoned vehicles, substandard living conditions and reaching out to the residents and homeless as well. Along with District 4, we are currently working under a Tribal Gaming Grant to investigate violations of State Codes and County Ordinances in the unincorporated areas surrounding the tribal lands, utilizing a Community Enhancement Program.

The program will improve the quality of life for the citizens as well as eliminate identified health and safety issues associated with the older existing neighborhoods, thus reducing the potential for loss of property and life. With the reduction of accumulated materials in residential areas and vacant land, not excluding inoperable vehicles. This will greatly improve the aesthetics of the surrounding areas of tribal lands, and improve the quality of life. The property owner can take part in this program without the burden of expense and will know that Riverside County and the local Indian tribunal do care about these issues that affect all of us at some level.

Example of Water Quality Management Meeting (Agenda, Minutes & sign-in log)

County of Riverside
Water Quality Management Committee

County Administrative Center
4080 Lemon Street, 4th Floor – Conference Room A
Riverside, California 92501

Monday, January 29, 2007
10:00 a.m. – 12:00 p.m.

AGENDA

1. **Self Introductions**

2. **Business Registration and Licensing Ordinance 857**
   Update on Building and Safety's Progress – Ed Nicholls

3. **Santa Ana Regional Board Audit** – Alex Gann, Mike Shetler, Jason Uhley
   Regional Board Letter to the City of Calimesa

4. **Total Maximum Daily Load (TMDL) Update** – Jason Uhley
   a. Middle Santa Ana River
   b. Lake Elsinore/Canyon Lake Nutrient TMDL
   c. Coachella Valley Storm Channel Bacterial TMDL
   d. 11266 Investigative Order – Santa Margarita Watershed-Lagoons

5. **Annual Progress Reports**
   Whitewater Watershed R7-2001-0011/CAS617002, due January 7, 2006

6. **RFP for County Program Assessment**

7. **Report of Waste Discharge (ROWD) for Santa Ana Permit Renewal**
   Progress Report

8. **IC/ID Complaints**
   Audie Murphy Ranch / Dredging Material Canyon Lake (update)

9. **Non-agenda items and round table discussion**

10. **Next meeting date** Feb 19 2007

Water Quality Management Committee
Meeting Agenda
Feb 19, 2007
10:00-12:00
Conference Room A
Riverside County Executive Office

1. **Self Introductions**

Attendees: Mike Shetler, Steve Dondalski, Roger Miller, Ed Nicholls, Jason Uhley, Marc Brewer, Ron Baxter, Damian Meins, Marianna Hernandez Alex Gann, David Mares, Lou Pizatella

2. **Business Registration and Licensing Ordinance 857**
   -Update on Building and Safety's Progress.- Ed Nicholls

Ed Nichols provided status of the Business Licensing fee program the first mailing is to go out this week with about 700 applications, It is anticipated that approximately 14,000 businesses in the County unincorporated area of the County will have to register. A handout was provided and a discussion of submittal and payment options was vetted including when should new business be brought in. Dave Mares presented some options that would make sense from a planning perspective. He will forward draft language to Alex Gann and Jim Miller for review.

3. **RFP for County Program Assessment**
   March 5 will be the kick off for the RFP review with scoring of applicants to take place on March 19.

4. **Environmental Health's commitment to continue the CAP program in incorporated cities or until a full implementation of a city's program or other options.**

5. **Report from Flood Control and Water Conservation District-Jason Uhley**
   Four items to discuss.
   a. Integrated Regional Watershed Management Plan comments due in one month
   b. MS4 permit renewal-training options
      - New hires formal classroom training first six months
      - Formal classroom training for all employees in a specific career field each permit cycle.
      - Annual review or other time frame for tailgate or lunch box topic

      All training secessions must be documented
   c. Spring training classes are being organized contact Benji Cho so that appropriate classes and # of participants can be identified.

Executive Summary

This annual report describes the current status of the storm water management program for the City of Murrieta (City). This annual report is for reporting period / fiscal year 2006 – 2007 beginning July 1, 2006 through June 30, 2007. Each section addresses individual programs that were implemented to comply with the requirements of the municipal separate storm sewer system permit (MS4 Permit) issued to the Santa Margarita Watershed Permittees by the San Diego Regional Water Quality Control Board on July 14, 2004. This is the third-term MS4 Permit issued to Riverside County Flood Control and Water Conservation District, the City of Temecula, the City of Murrieta and the County of Riverside.

During this reporting period, the requirement for Water Quality Management Plans for new development projects as well as modifications to existing developments was continued to be implemented.

1.0 INTRODUCTION

The information contained herein is presented in the same format as that outlined in Section III of the Monitoring and Reporting Program (MRP) of the MS4 permit (Permit). Each section addresses individual components of the Permit and summarizes the progress accomplished during the reporting period. These sections include the City's Development Planning process, Construction program, Municipal program, Industrial and Commercial program, Residential program, Education program, and Illicit Discharge Detection and Elimination Program, respectively.

This Annual Report specifically responds to the Permit's reporting requirements and includes identifying program progress and effectiveness evaluations. The Permit requires the Permittees to develop a long term strategy to evaluate the effectiveness of the SWMP's. This report will be the first year that the new Permit programs are fully implemented and that Program Effectiveness Assessments (PEAs) are required. IT should be noted that a PEA requires the initial establishment of a set of baseline conditions using measurable metrics. These baseline conditions can then be used to establish measurable goals based on the measured metrics. Thereafter, effectiveness can be evaluated by comparisons of successive years of measurable metrics against the baseline data and measurable goals.

The long term strategy for the program effectiveness assessment (PEA) will be conducted at two levels. At the first level, or Annual Assessment Level, the PEA will focus an annual assessment of program implementation and Permit compliance. These assessments will be addressed by completing the Annual Reporting Forms, which will confirm program implementation, Permit compliance and collection of measurable metrics. Assessments will be included at the end of each Annual Report section. Inferences about the compliance of each program (development, construction, etc.) will be predominantly drawn from both direct and indirect measures of progress for each program.

At the next level, or Long Tern Level, the Permittees will collectively evaluate the measurable metrics, Receiving Water monitoring data, and IC/ID monitoring data to assess changes in knowledge and behavior, load reductions and improvements in Receiving Water Quality. This analysis will be conducted as part of the Report of Waste Discharge (ROWD). The results of this assessment will evaluate the need to make significant programmatic revisions to the Permit compliance programs to protect Beneficial Uses of Receiving Waters. This analysis will place more emphasis on using direct measures of progress (monitoring data, long term trend analysis) and will support the review and any revisions to the Drainage Area Management Plan (DAMP) and Individual SWMP's using information from the water quality monitoring program, IC/ID monitoring program and measurable metrics that have been collected.

Where the period of evaluation is characterized by the implementation of new program requirements, determinations of program effectiveness will initially be limited to confirmation of program implementation and collection of measurable metrics until baseline conditions can be properly established. Further, it must be recognized that direct measures of long term program effectiveness may not be available within the timeframe of the Third Term Permits. This lack of direct measure confirmation arises because:

- Baseline water quality conditions are not readily established;
- Water quality changes in response to program implementation are likely to be very slow;

- Establishing a link between receiving water condition and program activities is difficult at the watershed scale when programs are being implemented incrementally with the development/redevelopment cycle; and
- Inherent variability of natural systems and stormwater quality.

While program effectiveness assessment is a key step in the iterative process of program implementation, it should be realized that effectiveness assessment itself is a part of the management process that is also evolving. Assessing program effectiveness is recognized as a challenge for program managers across California, and the City of Murrieta is supporting the effort of the California Stormwater Quality Association (CASQA) to develop guidance in this area at a statewide level.

2.0 DEVELOPMENT PLANNING PROGRAM

1) Description of any amendments to the General Plan or the development project approval process:

General Plan – During the reporting year, City of Murrieta updated the General Plan twice to incorporate requests for zone changes. The first amendment to the General Plan was done on December 19, 2006 where certain properties were rezoned from Business Park (BP) to Regional Commercial (RC).

The second amendment to the General Plan was done on April 3, 2007 where 10,464 ft^2 of property located north of Kalmia Street and west of Jefferson Avenue was rezoned from Civic / Institutional to Multiple Use – 3. Copies of the ordinances authorizing the two amendments are included in Attachment 1.

Development Projects – The City incorporated Water Quality Management Plan (WQMP) requirements into all new development applications and on modifications to existing developments. All applicable projects which did not receive legal approval prior to July 1, 2005 were required to complete a WQMP. The City also required proposed projects with prior legal approval to incorporate treatment control BMPs into their final designs and to include these on the grading plans.

2) Number of grading permits issued:

City of Murrieta issued 36 grading permits between July 1, 2006 and June 30, 2007. A list of the grading permits issued during the reporting period is included in Attachment 2.

3) Number of developments conditioned to meet WQMP requirements:

City of Murrieta conditioned 15 development planning projects during the reporting period. Applicable development planning projects were required to prepare project-specific WQMPs.

4) Attach one example of a development project that was conditioned to meet SUSMP requirements and a description of the required BMPs:

Attachment 3 includes conditions of approval for a development planning project approved during the reporting year. The conditions of approval were approved on December 13, 2006 and the WQMP requirement is condition # 131.

5) Description of any updates to the environmental review process:

There have no updates to the City's CEQA process during this reporting period.

6) Description and number of municipal employee training efforts conducted during the reporting period:

a) Training:

Training Topic	Description of Training	Training Date	Number of Attendees
WQMP	Review & approval process	06/21/06	12
		Proposed for December 2007	To be determined

b) Summarize any additional education and outreach activities conducted for project applicants, contractors, developers, property owners and / or other responsible parties in support of the Development Planning program:

City staff attended the low impact development (LID) training seminar sponsored by the State Water Resources Control Board on June 28 & June 29, 2007 in Marina Del Rey, California. This seminar also focused on post construction best management practices.

7) An assessment of program effectiveness based on the measurable goals established in the SWMP:

The City continues to implement the requirement of WQMPs on all development projects meeting the WQMP criteria. Projects subject to WQMP requirements were required to incorporate site design, source control and treatment control BMPs.

3.0 CONSTRUCTION PROGRAM

1) Number of inspections conducted:

The City's NPDES inspector conducted 1,408 inspections between July 1, 2005 and June 30, 2006. In addition, the Public Works Inspectors ensured that sites were compliant with NPDES requirements during their routine construction inspections.

2) Number and type of enforcement actions related to construction sites:

Enforcement and Compliance Responses	Private Projects
Written Warning	42
Second Written Warning	73
Stop Work Notice	11
Withhold Certificate of Occupancy	-
Code Enforcement Citation	5
Notify SDRWQCB	1

3) Description of modifications made to the construction and grading approval process:

City of Murrieta is currently in the process of updating the existing grading ordinance, grading manual and standard notes. Updated ordinance and standard notes (grading notes, and erosion and sediment control notes) will be included in the next annual report.

4) Description and number of municipal employee training efforts conducted during the reporting period:

a) Training:

Training Topic	Description of Training	Training Date	Number of Attendees
Construction Site Inspections	Erosion & Sediment Control	10/10/06	13

b) Summarize any additional education and outreach activities conducted for project applicants, contractors, developers, property owners and / or other responsible parties in support of the Construction Program:

City of Murrieta began hand-delivering the annual "First Notice to All Project Developments" to site owners, project managers and filed superintendents, in the first week of September 2006, notifying them of the annual requirement for implementation of wet-weather BMPs by the 1st of October. Year-round implementation and maintenance of the erosion and sediment control at the construction sites was also emphasized in this letter. A "Second Notice to All Project Developments" emphasizing the requirement and implementation of wet-weather BMPs was distributed in the last week of September 2006.

5) An assessment of program effectiveness based on the measurable goals established in the SWMP:

The tracking of NPDES inspections of construction sites will be improved during the next reporting year to accurately reflect the compliance level of site during each inspection.

4.0 MUNICIPAL PROGRAM

1) *Number of inspections conducted at existing facilities:*

The existing facilities are maintained on a daily basis and a monthly inspection is conducted by the Maintenance Inspectors. The City is still in the process of developing inspection tracking procedures for municipal facilities owned and / or maintained by the City.

2) Number and type of enforcement actions related to municipal facilities:

Enforcement and Compliance Responses	*Number*
Education and Information	Provided but not documented
Verbal warning	Provided but not documented
Written warning	None

3) Number of catch basins and inlets that were inspected and the number that were cleaned:

	Number Inspected	Number Cleaned
Catch Basins and Inlets	1,245	250

4) Assessment of the amount and type of debris removed from catch basins, *streets, and open channels, including an identification of problem area that* generate the most pollutants:

Facility	Type of Debris	Approx. %	Problem Areas that Generate Most Pollutants
Catch Basins	Anthropogenic Litter Sediment Other man-made debris	**50** **40** **10**	Commercial areas, residential areas **Total Removed: 19,700 pounds**
Streets	Sediment		**Total Removed: 1,800 tons**
Open Channels	Anthropogenic Litter Sediment Other man-made debris	**10** **80** **10**	**Total Removed: Not applicable – open channels maintained by Riverside County Flood Control & Water Conservation District**

5) **Assessment of effectiveness of BMPs that have been implemented for municipal facilities and activities:**

BMP Code	Description	Used			Notes
SC-10	Non-Stormwater Discharges	☒ Yes	☐ No	☐ N/A	
SC-11	Spill Prevention, Control and Clean-up	☒ Yes	☐ No	☐ N/A

0000498

11/12/2009

6) Description and number of municipal employee training efforts conducted during the reported period:

a) Training:

Training Topic	Description of Training	Training Date	Number of Attendees
Municipal Facilities & Activities	Operations, Maintenance & Inspections	10/18/06	29

b) Summarize any additional education and outreach activities conducted for municipal staff in support of the Municipal Program:

No additional education and outreach activities were conducted for municipal staff in this reporting year.

7) An assessment of program effectiveness based on the measurable goals established in the SWMP:

The quantity of pollutants (debris, sediment, anthropogenic litters, etc.) from catch basins and areas owned and / or maintained by the City will be tracked on a monthly basis.

5.0 INDUSTRIAL / COMMERCIAL PROGRAM

1) Number of inspections conducted:

Category	Number of Inspections
Industrial & Commercial Facilities	
High Priority Facilities	3
Medium Priority Facilities	28
Low Priority Facilities	4
Total	**35**

City of Murrieta utilizes the Compliance Assistance Program (CAP), which generates NPDES survey reports from inspections completed by the County of Riverside Hazardous Materials Department (HMMD) for businesses storing or handling hazardous materials and also from the County of Riverside Department of Environmental Health (DEH) for inspections of food establishments. The number of food establishments inspected during the reporting year was twenty-eight and were "medium" priority facilities. DEH also inspected four "low" priority facilities and HMMD inspected three "high" priority facilities.

2) Number and type of enforcement actions related to industrial / commercial facilities:

Enforcement and Compliance Responses	Number
Education and information	12 (posters provided by Environmental Health Specialist)
Verbal Warning	Provided but not documented
Written Warning	0
Citation	None
Referral to SDRWQCB	None

3) An assessment of program effectiveness based on the measurable goals established in the SWMP:

The list of industrial & commercial facilities with the City will be reviewed to verify the priority rating and ensure that all of the identified facilities are inspected in the next reporting year. A tracking system for the inspection frequency will be established by the end of the third-term permit.

6.0 RESIDENTIAL PROGRAM

1) A description of residential areas that were focused on during the past year:

The residential program is a continuation of the construction inspection program that the City currently performs throughout new residential developments. All new residential projects, before being accepted for maintenance by the City, are required to submit a video tape inspection of the storm drain and drainage system, ensuring no illicit connections or points of discharge. This process is a good precautionary step for the City involving new residential developments. Existing residential developments are normally only inspected by City personnel as they pass through the different areas as part of their daily trips to other sites.

2) Number and type of enforcement actions taken:

Enforcement and Compliance Responses	Number
Education and information	Provided but not documented
Verbal Warning	Provided but not documented
Written Warning	0
Citation	0

3) An assessment of program effectiveness based on the measurable goals established in the SWMP:

7.0 EDUCATION PROGRAM

1) Description of education efforts conducted by the Permittee (not collectively with other Permittees) during the previous year:

Audience	Measures
Permittee Departments and Personnel	Number of Permittee employees trained for: • Construction Inspection: **13** • Industrial/Commercial Inspection: **0** • Municipal Facilities and Activities: **29** • Development Planning: **12**
Construction Site Owners and Developers	Outreach events conducted: **Distributed "first & second notice to all project developments" in September 2006.**
Industrial/ Commercial Owners and Operators	Industrial/Commercial outreach events conducted: **None**
Residential Community, General Public, Other Public Agencies and Students	Number of Media Impressions in: • Newspaper: **Not Applicable** • Mailings: **None.** • Radio/TV: **Not Applicable** • Billboards: **Not Applicable** • Brochures: **Distributed but not documented** Number of classroom presentations: • Public Education events conducted: **Annual Car Show (June 2007) and City of Murrieta's 15th Birthday Bash (June 30, 2007).**

2) An assessment of program effectiveness based on the measurable goals established in the SWMP:

The City continued to provide training to municipal staff in specific categories (i.e. new development, construction, municipal activities and industrial / commercial) through the implementation agreement with Riverside County Flood Control & Water Conservation District.

8.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION PROGRAM

1) Number of illicit discharges, connections and spills reported and / or identified during the reporting period:

Code Enforcement received about 84 NPDES related calls-for-service during the reporting period. The nature of the calls is currently not being tracked. The Code Enforcement officer does address the concern either by a follow-up telephone call or a site visit. In the event of an illegal discharge from a construction site, the Public Works inspectors were also notified.

2) Number of illicit discharges or connections investigated during the reporting period and the outcome of the investigations:

All of the NPDES related calls-for-service were addressed. During the site visit regarding the illegal discharges, either the specific source of the illegal discharge could not be determined or there was no evidence of the illegal discharge. There were instances when calls-for-service were due to disputes between private property owners / occupants.

3) Number and types of enforcement actions taken for illicit discharges or connections during the reporting period:

The tracking system to determine the nature of the calls-for-service is still being revised and the accurate number and type of enforcement action taken for illicit discharges or connections will be tracked and including in the 2007 – 2008 annual report.

4) Number of times City Hall was notified (e-mails, calls, etc.) during the reporting period, as compared to previous reporting periods:

	Number of Calls	
	2005-06	**2006-07**
NPDES related calls-for-service	**75**	**84**

5) Number and location of dry weather monitoring sites that were monitored during the reporting period:

Number of Site(s): **2**

Location(s): **Catt Road and California Oaks Channel**

6) Summary of Illicit Discharge Monitoring Program results, including: 1) All inspection, field screening, and analytical monitoring results; 2) All follow-up and elimination activities; and 3) Any proposed changes to station locations and / or sampling frequencies:

Attachment 4 contains the results of the dry weather monitoring for the two listed locations.

7) An assessment of program effectiveness based on the measurable goals established in the SWMP:

Additional dry weather monitoring sites will be established in the next reporting year and monitoring data will be included in next annual report.

9.0 PUBLIC PARTICIPATION

1) A description of efforts to include public in urban runoff management programs during the reporting period:

The City distributed educational and promotional material during the annual car show in June 2007 and at the birthday bash on June 30, 2007.

10.0 ASSESSMENT OF PROGRAM EFFECTIVENESS

Each section of the SWMP was implemented during this reporting year. Any procedural changes during FY 2007 – 2008 will be included in the 2007 – 2008 annual report.

11.0 FISCAL ANALYSIS

1) A summary of the reporting period's expenditures and an estimated budget for the upcoming reporting period.

Program Element	Fiscal Year 2006 - 2007		Fiscal Year 2007 – 2008 (Budget)	
	Capital Expenditures	O&M / Admin Expenditure	Capital Expenditures	O&M / Admin Expenditure
Program Management	-	$82,350	-	$82,350
Annual Fee for MS4 NPDES Permit	-	$7,406	-	$20,000
Implementation Agreement Shared Cost	-	$121,481	-	$150,000
Construction Inspections	-	$85,000	-	$85,000
Development Planning	-	$5,000	-	$15,000
Industrial and Commercial Inspections	-	$1,000	-	$5,000
Illicit Connections & Illegal Discharges Program	-	$10,000	-	$10,000
Municipal Facilities and Activities		$1,802,766	-	$1,950,000
Public Education & Outreach	-	Included in Implementation Agreement	-	Included in Implementation Agreement
Monitoring Program	-		-	
Other (training, promotional supplies, vehicle, etc.)	-	$5,000	-	$10,000
TOTAL =	**$0**	**$2,115,003**	**$0**	**$2,327,350**

2) A description of the source(s) of funds that were utilized during the previous fiscal year and the source(s) of funds proposed to meet the necessary expenditures for the subsequent year, including legal restrictions on the use of such funds:

Source of Funds	Percent of Total Program Funding
County Service Area (CSA) 152	27%
General Fund	73%

12.0 NON-STORM WATER DISCHARGES

Permittees shall report on any discharge category listed in Requirement B.2 of Order No. R9-2004-001 that was identified as a source of pollutants during the reporting period. For each identified category, the Permittee shall report whether it elected to prohibit the discharge or to require BMPs to reduce pollutants in the discharge to the MEP. If the discharge is not prohibited, the BMPs that will be implemented, or required to be implemented, shall be described in each Annual Report.

Category	Prohibited	BMP to be Implemented
Diverted stream flows	☒ Yes ☐ No	Not Applicable
Rising ground waters	☒ Yes ☐ No	Not Applicable
Uncontaminated ground water infiltration [as defined at 40 CFR 35.2005(20)] to MS4s	☒ Yes ☐ No	Not Applicable
Uncontaminated pumped ground water	☐ Yes ☒ No	Analyze water sample for total suspended solids, specific conductance, semi-volatiles and volatiles by EPA method's 624 & 625.
Foundation drains	☒ Yes ☐ No	Not Applicable
Springs	☒ Yes ☐ No	Not Applicable
Water from crawl space pumps (identified as a source of pollutant at a construction site)	☐ Yes ☒ No	Filtered prior to pumped into a catch basin
Footing drains	☒ Yes ☐ No	Not Applicable
Air conditioning condensation	☒ Yes ☐ No	Not Applicable
Flows from riparian habitats and wetlands	☒ Yes ☐ No	Not Applicable
Water line flushing (identified as a source of pollutant at a construction site)	☐ Yes ☒ No	Filtered prior to pumped into a catch basin
Landscape irrigation	☒ Yes ☐ No	Not Applicable
Discharges from potable water sources not subject to NPDES Permit No. CAG679001, other than water main breaks (identified as a source of pollutant at a construction site)	☐ Yes ☒ No	Filtered prior to pumped into a catch basin
Irrigation water	☒ Yes ☐ No	Not Applicable
Lawn watering	☒ Yes ☐ No	Not Applicable
Individual residential car washing	☒ Yes ☐ No	Not Applicable
Non-emergency fire fighting flows	☒ Yes ☐ No	Not Applicable
Dechlorinated swimming pool discharges	☒ Yes ☐ No	Not Applicable

13.0 RECEIVING WATER LIMITATIONS

This section includes the report required pursuant to Requirement C.2.a of Order No. R9-2004-001, if applicable. Requirement C.2.a. states:

"Upon a determination by either a Permittee or the SDRWQCB that MS4 discharges are causing or contributing to an exceedance of an applicable water quality standard, the Permittee shall promptly notify and thereafter submit a report to the SDRWQCB that describes BMPs that are currently being implemented and additional BMPs that will be implemented to prevent or reduce any pollutants that are causing or contributing to the exceedance of water quality standards. The report may be incorporated in the SWMP Annual Report unless the SDRWQCB directs an earlier submittal. The report shall include an implementation schedule. The SDRWQCB may require modifications to the report."

This section does not apply to this reporting period as there have been no indications of exceedances to applicable water quality standards established in this area.

14.0 SUMMARY OF ADDITIONAL URBAN RUNOFF DATA

This section is a summary of all urban runoff related data not included in the annual monitoring report (e.g., special investigations).

Additional data was not generated during this reporting period by the City of Murrieta.

15.0 PROPOSED REVISIONS TO THE SWMP

This section includes proposed revisions to the Individual SWMP, including areas in need of improvement based on the assessment of effectiveness of each program component.

City of Murrieta's SWMP will be revised to include the revised grading ordinance, grading manual and standard notes (grading control, and erosion and sediment control). Additional revisions, if necessary, to each program component will be included in the 2007 – 2008 annual report.

ORDINANCE NO. 378-06

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF MURRIETA, CALIFORNIA, REZONING CERTAIN PROPERTIES FROM BUSINESS PARK (BP) TO REGIONAL COMMERCIAL (RC)

The City Council of the City of Murrieta does ordain as follows:

SECTION 1. REZONING The area identified in Exhibit 1 are hereby rezoned from and the General Plan designation changed from Business Park (BP) to Regional Commercial (RC).

SECTION 2. FINDINGS The site(s) are physically suitable for the requested zoning designation and anticipated land use development including access, provision of utilities, compatibility with adjoining land uses, and absence of physical constraints, as evidenced through the staff review process, the environmental review process and the public hearing and discussion process.

SECTION 3. ADOPTION The City Clerk shall certify to the adoption of this ordinance and shall publish a summary of this ordinance and post a certified copy of the full ordinance in the office of the City Clerk at least five days prior to the adoption of the proposed ordinance; and within 15 days after adoption of this ordinance, the City Clerk shall publish a summary of the ordinance with the names of the council members voting for and against the ordinance. This ordinance shall take effect thirty days after the date of its adoption.

ADOPTED by the City Council and signed by the Mayor and attested by the City Clerk this 19th day of December, 2006.

MAYOR
City of Murrieta

ATTEST:

Mitzi Ortiz, Deputy
CITY CLERK
City of Murrieta

APPROVED AS TO FORM:

CITY ATTORNEY

I, A. Kay Vinson, City Clerk of the City of Murrieta, California, hereby certify that the foregoing ordinance was duly and regularly introduced at a meeting of the City Council on December 5, 2006, and that thereafter the said ordinance was duly and regularly adopted at a meeting of the City Council on the 19th day of December, 2006, by the following vote, to wit:

Ayes: Bennett, Gibbs, McAllister, Thomasian

Noes: None

Absent: None

Abstain: Enochs

IN WITNESS WHEREOF, I have herunto set my hand and official seal of the City of Murrieta, California, this 19th day of December, 2006.

ORDINANCE NO. 386 - 07

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF MURRIETA, CALIFORNIA AMENDING THE ZONING MAP ON 10,464 SQUARE FEET FROM CIVIC/INSTITUTIONAL TO MULTIPLE USE - 3 ON PROPERTY LOCATED NORTH OF KALMIA STREET AND WEST OF JEFFERSON AVENUE

The City Council of the City of Murrieta ordains as follows:

SECTION 1. The Zoning Map of the City of Murrieta is hereby amended from Civic/Institutional (C/I) to Multiple Use -3 (MU-3) on a 10,464 square foot property as shown on attached Exhibit "A".

SECTION 2. The City Council bases its decision on the following findings:

Findings for Approval of Zoning Change 2006-2097

1. The proposed zone change ensures and maintains internal consistency with all of the objectives, policies, general land uses, programs and actions of all elements of the General Plan.
2. The proposed amendment will not be detrimental to the public convenience, safety or general welfare of the City.
3. The proposed amendment is in compliance with the applicable provisions of the California Environmental Quality Act.
4. The site is physically suitable (including access, provision of utilities, compatibility with adjoining land uses, and absence of physical constraints) for the requested zoning designation and anticipated land use development.

SECTION 3. The City Clerk shall certify to the adoption of this Ordinance and shall publish a summary of this Ordinance and post a copy of the full ordinance in the office of the City Clerk at least five days prior to the adoption of the proposed ordinance; and within 15 days after adoption of the ordinance, the City Clerk shall publish a summary of the ordinance with the names of the council members voting for and against the ordinance. This Ordinance shall take effect thirty days after the date of its adoption.

ADOPTED by the City Council and signed by the Mayor and attested by the City Clerk this 3rd day of April, 2007.

Douglas R. McAllister, Mayor
City of Murrieta

PLANNING COMMISSION
RESOLUTION NO. PLANNING COMMISSION-2006-6

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF MURRIETA APPROVING DEVELOPMENT PLAN PERMIT 2004-251, AN APPLICATION BY MURRIETA COMMONS, LLC, TO CONSTRUCT A 147,130 SQUARE FOOT COMMERCIAL/OFFICE CENTER LOCATED AT 24490-24520 WASHINGTON AVENUE (EASTERLY SIDE OF WASHINGTON AVE. AND APPROX 420 FEET NORTH OF KALMIA STREET, MURRIETA, CALIFORNIA.

The Planning Commission of the City of Murrieta hereby resolves as follows:

SECTION 1. On July 27, 2005 an application was filed by Murrieta Commons, LLC for a Development Plan Permit, located at 24490-24520 Washington Avenue, to allow the construction of a 147,130 square foot commercial/office shopping center on 12.5 acres. The applicant proposes to construct two office buildings, two-stories high, totaling 67,485 square feet and 6 single-story commercial buildings totaling 79,645 square feet, with 622 parking spaces, and 20% of the site as landscaped area. A Development Plan is required by Section 16.56. The application was deemed complete on March 21, 2006.

SECTION 2. A public hearing was duly noticed for the Planning Commission meeting of December 13, 2006, by mailing a notice to property owners within a 500 foot radius of the site on November 22, 2006, publishing the notice in The Californian newspaper on November 22, 2006, and posting the site on December 1, 2006.

SECTION 3. An Initial Study (attached) was prepared for the project in accordance with Section 15070 of the California Environmental Quality Act (CEQA), which determined that a Mitigated Negative Declaration could be adopted for the project. The Initial Study did not identify any potentially significant environmental effects that could not be mitigated to a less-than significant level. Mitigation measures are required to reduce the impacts to transportation/circulation, cultural/historical, geology/soils, hazards, noise, air, and water quality. The Planning Commission accepts the Mitigated Negative Declaration as satisfying the requirements of CEQA and includes all mitigations measures as Conditions of Approval.

SECTION 4. In accordance with Section 16.56.040 of the Murrieta Municipal Code, the Planning Commission makes the following findings regarding Development Plan 2004-251:

1. The proposed use is allowed within the subject zoning district and complies with all applicable provisions of the Murrieta Development Code.

FACTS: The proposed commercial/office center is consistent with the Community Commercial (CC) zoning district, which allows various commercial, office, and service uses. The site complies with Development Code requirements, including but not limited to on-site parking, setbacks, building height, floor area ratio, drainage, and landscaping.

2. The proposed use would be consistent with the objectives, policies, general land uses and programs of the General Plan and any applicable specific plan.

   FACTS: The proposed use is consistent with General Plan policies and objectives of the Community Commercial General Plan designation and no specific plans are applicable. The facility meets the commercial-residential separation of use requirement of the Community Commercial zoning.

3. The site of the proposed use is physically suitable for the type and density/intensity of development being proposed.

   FACTS: The site is physically suitable for development and is compatible to the surrounding properties. The proposed facility is located on a major street complying with the General Plan requirements. The project is designed to provide a buffer between adjacent residential properties through landscaping and building setback. The site is not located within the fault hazard, flood hazard, special geologic hazard zone, liquefaction, subsidence, or dam inundation hazard zone.

4. The location, size, design and operating characteristics of the proposed use would be compatible with existing land uses within the general area in which the proposed use is to be located.

   FACTS: The site is physically suitable for development and is compatible to the surrounding properties. The proposed facility will comply with the City's architectural standards for commercial development, Section 16.10.030 of the Murrieta Development Code.

5. There are adequate provisions for sanitation, water, and public utilities to ensure public convenience, health, safety, and general welfare.

   FACTS: The Western Municipal Water District will provide sewer and water services; electricity by Southern California Edison Company; and gas by the Gas Company. These facilities are available through connections from the existing street network.

6. The proposed use is in compliance with the provisions of the California Environmental Quality Act.

FACTS: An initial study and mitigated negative declaration was prepared and circulated for the project in compliance with Section 15070 of the California Environmental Quality Act Guidelines. The project site is not listed on any hazardous waste site listings. Mitigation measures are implemented to reduce impacts to transportation/circulation, cultural/historical resources, geology/soils, hazards, noise, air, and water quality.

The City of Murrieta adopted the Multiple Species Habitat Conservation Plan (MSHCP) on September 16, 2003. The proposed development site is outside the Criteria Area defined by the Multiple Species Habitat Conservation Plan (MSHCP); therefore does not present the potential to adversely affect reserve assembly or design. Development on lands outside a defined criteria area is a lawful, "covered activity". The proposed project is found to be consistent with the MSHCP.

SECTION 5. Pursuant to the above findings, the Planning Commission of the City of Murrieta hereby approves Development Plan Permit 2004-251 subject to the following conditions:

General:

1. The applicant shall defend (with attorneys approved by the City), indemnify and hold harmless the City of Murrieta, its agents, officers, and employees from any claims, damages, action, or proceeding against the City or its agents, officers, or employees to attack, set aside, void, or annul an approval of the City, its advisory agencies, appeal boards, or legislative body concerning this approval Development Plan 2004-251. The City will promptly notify the permittee of any such claim, action, or proceeding against the City and will cooperate fully in the defense.

2. Any fees due the City of Murrieta for processing this project shall be paid to the City within thirty (30) calendar days of final action by the approval authority. Failure to pay such outstanding fees within the time specified shall invalidate any approval or conditional approval granted. No permits, site work, or other actions authorized by this action shall be processed by the City, nor permitted, authorized or commenced until all outstanding fees are paid to the City.

3. The project approval is for a 147,130 square foot commercial and office center on 12.51 acres, 622 parking spaces, and 20.3% landscape coverage. Buildings A and D consists of 67,485 s.f. of office area and Buildings B and C-G, plus "FUTURE" Building encompasses 79,645 s.f. of commercial uses. All construction plans shall be in substantial conformance with the approved site plans, floor plans, elevations, material and color board(s), landscaping plans and grading plans dated December 13, 2006. Any proposed change substantially different than the approved plan shall require an amendment to this approval in accordance with the Development Code.

4. The project shall be in substantial conformance with all adopted environmental mitigation measures, any written project proposal information and any verbal agreements or representations made to the decision making body as part of its consideration of the project. Any proposed change substantially different than the approved project shall require an amendment to this approval in accordance with the Development Code.

5. Pursuant to Section 711.4 of the State of California Fish and Game Code, the applicant is required to pay a $1314.00 handling fee. Said fees shall be paid to the Clerk/Recorder of the County of Riverside at the time the Notice of Determination is filed pursuant to Section 21152 of the Public Resources Code. If this fee is not paid, the approval of this project shall not be operative, vested, or final. In order to comply with State mandated time lines for filing of a Notice of Determination the above fee must be delivered to the Planning Department within **two (2)** working days after the date of final approval.

6. Subsequent modifications of this approval, which do not intensify the use, including but not limited to reorientation of structures, alteration of parking and circulation design, minor changes to the conditions of approval, interpretations of the conditions of approval relative to intent, necessity of, and timing, may be approved by the Planning Director, unless the Director requires a Substantial Conformance or Revised Permit application in accordance with the Development Code.

7. The applicant shall pay all applicable impact and/or mitigation fees or provide proof that all required fees have been paid in accordance with City policies and ordinances in effect at the time of permit issuance.

8. In the event the use hereby permitted under this permit is: (a) found to be in violation of the terms and conditions of this permit; (b) found to have been obtained by fraud or perjured testimony; or (c) found to be detrimental to the public health, safety or general welfare, or a public nuisance; this permit shall be subject to the revocation procedures in Section 16.82 of the Development Code.

9. The Developer shall comply with all applicable provisions of federal, state and local ordinances in effect at the time of building permit issuance.

10. The applicant shall obtain approval of all necessary plans for the construction of structures on the subject property in accordance with the Murrieta Development Code. Such plans include, but are not limited to, site plans, floor plans, building elevations, grading plans and landscaping plans.

11. This approval shall be used within two (2) years of approval date, otherwise it shall become null and void and of no effect whatsoever. "Used," means the beginning of substantial construction contemplated by this approval which is thereafter diligently pursued to completion or to the actual occupancy of existing buildings or land under the terms of the authorized use.

12. Prior to the expiration of this approval, the permittee may request a one (1) year extension of time in which to use this approval. A maximum of three one-year extensions of time requests shall be permitted. Should the time period established by any of the extension of time requests lapse, or should all three one-year extensions be obtained and no substantial construction or use of this approval be initiated within five

(5) years of the effective date of the issuance of this approval, this approval shall become null and void.

13. The project shall be developed in compliance with all applicable requirements and standards identified within the Community Commercial (CC) zone.

14. Prior to precise grade plan submittal for Building E (Future Phase), a substantial conformance application shall be submitted to the Planning Department:

    a. The review is intended to demonstrate compliance with parking and site design with the approved site plan.

    b. Architecture for "FUTURE BUILDING" shall be of similar and consistent design as other buildings within the center.

    c. Allow for the relocation of the Thompson House as provided for in Condition # 51.

15. The developer shall submit the following documents to the City for review and approval by the City Attorney. The intent is to establish a Master Association for maintenance of the common areas.

    a. A cover letter identifying the project for which approval is sought;

    b. A signed and notarized declaration of covenants, conditions, and restrictions; and

    c. A sample document conveying title to the purchaser of an individual lot or unit which provides that the declaration of covenants, conditions and restrictions (CC&R's) are incorporated therein by reference.

    The declaration of covenants, conditions and restrictions (CC&R's) submitted for review shall (a) provide for a minimum term of 60 years, (b) provide reciprocal easements for ingress, egress and parking, (c) provide for the establishment of a maintenance operator, and (d) contain the following provisions verbatim:

    > "Notwithstanding any provision in this Declaration to the contrary, the following provision shall apply:
    >
    > The maintenance operator established herein shall manage and continuously maintain the 'landscape area and common area', more particularly described on Exhibit '_', attached hereto.
    >
    > The Maintenance Operator shall have the right to assess the owners of each individual parcel for the reasonable cost of maintaining such 'landscape area and common area', and shall have the right to lien the property of any such owner who defaults in the payment of a maintenance assessment. An assessment lien, once created, shall be prior to all other liens recorded subsequent to the notice of assessment or other document creating the assessment lien.

This declaration shall not be terminated, substantially amended, or property deannexed therefrom absent the prior written consent of the Development Services Director of the City of Murrieta or the City's successor-in-interest.

A proposed amendment shall be considered substantial if it affects the extent, usage or maintenance of the 'landscape area and common area' or reciprocal easement established pursuant to the Declaration."

In the event of any conflict between this Declaration and the Articles of Incorporation, the Bylaws or the property owners association Rules and Regulations, if any, this declaration shall control.

Once approved by the city Attorney, the declaration of covenants, conditions and restriction shall be recorded with one copy retained for the case file.

16. A minimum 6-foot decorative block wall (measured from finished grade of project side) shall be constructed along the easterly property boundary to provide separation from residential zones. (Pursuant to Section 16.22.060.D., if a 6-foot block wall is existing then that wall would meet the requirement). Trees (combination of 36 and 48" box) shall be provided at minimum 25-foot intervals within the 15-foot landscape setback area. Note: Any alternative wall material shall be reviewed by staff and presented to the Planning Commission *(Added by Planning Commission)*.

17. A fencing plan shall be submitted showing all wall and fence locations and typical views of all types of fences or walls proposed. This plan shall require anti-graffiti coatings on fences and walls, where applicable.

18. Construction of this project may be done progressively in phases provided a phasing plan is submitted (with appropriate fees) to the Planning Department and approved prior to issuance of any building permits.

19. A clearance letter from Riverside County Waste management District shall be provided to the City's Planning Department verifying compliance. The developer shall provide adequate area for collecting and loading recyclable materials such as paper products, glass and green waste. Prior to placement of any recycling facility, the applicant shall submit a Development Plan application in accordance with Section 16.44.140 for review and approval.

20. Prior to the issuance of grading permits, the project applicant shall comply with the provisions of any existing City ordinance that has been established as a mitigation measure for the Stephens' Kangaroo Rat. These ordinances may include fee schedules, mechanisms for protecting habitat, or a combination thereof.

21. The project site shall be the point-of-sale for the purpose of collecting any sales tax on goods that are sold, delivered or rented on the site.

22. Prior to issuance of grading permits, the Planning Department shall determine if the deposit based fees for the project are in a negative balance. If so, any outstanding fees shall be paid by the applicant/developer.

23. Prior to building permit issuance, the applicant shall submit an application for addressing of the center.

24. Applicant shall coordinate with the telecommunications facility on the relocation of the facility to the area shown on the site plan, unless otherwise amended by a revised permit.
    a. Facility design and height shall be substantially conforming to original approval (Minor Conditional Use Permit 02-256), consisting of a 50ft high monopine pole design having a total height of 55 feet high with 12 antennae panels.
    b. Equipment enclosure shall be of an 8-foot high tubular steel (or block wall) with landscaping around the perimeter.
    c. A minimum of 2 additional pine trees shall be planted within the landscape area and in proximity to the telecommunications facility.

Design and Lighting:

25. All mechanical equipment and vents (ground or rooftop) shall be screened from public view. Screening method and location shall be reviewed and approved by the Planning Department.

26. An interior room, with direct exterior access, shall be provided for the placement of main utility electrical switch gear distribution and roof access ladders.

27. Roof gutters and downspouts are not permitted on the exterior of the building unless satisfactorily integrated into the architecture as determined by the Planning Department prior to building permit issuance.

28. The City is located within the Mt. Palomar Special Lighting Area, as defined in Section 16.18.110 of the Development Code, low pressure sodium vapor lighting or overhead high pressure sodium vapor lighting with shields or cut off luminaries, shall be utilized.

29. Any exterior lighting within parking areas adjacent to a residential zoning district shall not exceed 15-feet in pole height (specifically rear parking lot area within Lot 1 and 2 of site plan), with a maximum of 0.3 foot-candles illumination at adjacent residential property lines. All lighting fixtures shall be designed with shielding or cut-off fixtures to project in a downward manner to minimize glare and to not shine directly upon adjoining property or public rights-of-way. A detailed lighting study (photometric) shall be provided prior to building permit issuance to demonstrate compliance with this condition.

30. All parking lot lights and other outdoor lighting shall be shown on electrical plans submitted to the Department of Building and Safety for plan check approval and shall comply with the requirements of Development Code Section 16.18.100-Lighting and 16.18.110-Mt Palomar Lighting Standards.

31. All trash bins shall be stored in approved enclosures and screened in compliance with Sections 16.18.120 and 16.18.150 of the Murrieta Development Code. The location of the enclosures must be shown on the precise grade plan and shall provide a minimum of 576 square feet of refuse storage area (288 square feet for refuse and 288 for recycling).

Parking:

32. Prior to the execution of any purchase contract or tenant lease agreements, a detailed statement disclosing to perspective buyer/tenant(s) the amount of parking provided for each unit, and that the City's parking requirements could significantly restrict a proposed use. Additionally, the disclosure shall advise buyers/tenants to confirm with the City the parking requirements for the any proposed use. Any use requiring additional parking above that provided or otherwise made available shall not be permitted.

33. Parking for this project was determined primarily on the basis of Development Code Section 16.34 and requires a minimum of 491 parking spaces (1 space per 300 square feet for shopping centers over 30,000 s.f.) for a 147,130 square foot commercial center. Note: The approved site plan shows 622 parking spaces.

    The applicant shall remove and relocate the two handicap (2) parking spaces along the main drive entrance aisle, near Building G to an area approved by the Building & Safety Department (Added by Planning Commission).

34. All parking shall be designed and improved pursuant to Section 16.34 of the Murrieta Development Code, and shall be in conformance with the approved plans.

35. A minimum of thirty (30) bicycle rack spaces shall be provided in convenient locations to facilitate bicycle access to the project area a shown on approved plans. The bicycle racks shall be shown on project landscaping and improvement plans submitted for Planning Department approval, and shall be installed in accordance with those plans.

36. Parking spaces(s) for persons with disabilities shall be provided as shown on APPROVED PLANS. Each parking space reserved for persons with disabilities shall: (a) be identified by a permanently affixed reflective sign constructed of porcelain on steel, beaded text or equal, displaying the International Symbol of Accessibility; (b) not be smaller than 70 square inches in area; (c) be centered at the interior end of the parking space at a minimum height of 80 inches from the bottom of the sign to the parking space finished grade; and (d) have a surface identification sign duplicating the symbol of the accessibility in blue paint of at least 3 square feet in size.

37. A sign shall be posted in a conspicuous place at each entrance to the off-street parking area, not less than 17 inches by 22 inches, clearly and conspicuously stating the language provided by the Building and Safety Department regarding accessible parking.

38. A minimum of ten (10) loading spaces(s) shall be provided in accordance with Section 16.34.100 of the Development Code as shown on the approved plans. The loading space shall be surfaced with six (6) inches of concrete over a suitable base and shall not be less than 15 feet wide by 25 feet long, with 14 feet vertical clearance.

39. Sign(s) stating that "EXTENDED IDLING TRUCK ENGINES IS NOT PERMITED" shall be located at the loading area of the grocery use and at the truck parking area as shown on APPROVED PLANS. The sign(s) at the entrance to facility shall not be less than twenty four inches square and will provide directions to truck parking spaces with electrical hookups.

40. The hookups will provide power for refrigerated trailers that need to be parked on-sight for more than 15 minutes.

41. Applicant shall record a reciprocal access and parking easement. This easement shall be separate from the CC&R's, but can be incorporated into the CC&R's.

42. A minimum 5-foot landscape area must be provided along the southerly property line (adjacent to the parking spaces along the southerly most drive entrance). Parking spaces must be 18 feet deep and not encroach into the minimum 5-foot landscape area. Note: This will require site design changes.

43. No compact parking spaces are permitted. Any parking spaces shown as compact must be revised to meet the current parking space requirements.

Signage:

44. No signs are approved as part of this project approval except as specifically identified in these conditions. Prior to the installation of any on-site advertising or directional signs, a comprehensive sign plan shall be submitted to and approved by the Planning Department pursuant to the requirements of Section 16.38 of the City's Development Code.

45. Prior to building permit issuance, a comprehensive sign program shall be submitted for review.

    a. The proposed sign program shall be presented to the Planning Commission.
    b. Prior to occupancy, the comprehensive sign program shall be approved.

Cultural & Archaeological Resources:

46. If any human remains are encountered during ground-disturbing activities, all such activities in the vicinity of the discovery shall be terminated immediately and notification shall be provided to the County Coroner's office and the Pechanga Band of Luiseno Indians, shall be contacted to arrange for the management of the remains. Work shall not resume in the vicinity of the discovery until authorized by the Planning Department.

47. A report documenting the monitoring activities shall be submitted to the City of Murrieta within 60 days of the completion of the grading activities. This report shall document the type of cultural resources recovered and the disposition of these resources. The artifacts shall be deposited into an accredited institution that is authorized to accept these types of cultural resources.

MITIGATION MEASURES:

(Numbers in parenthesis correspond to mitigation measures identified in the initial study)

48. The following measures, which correspond to measures that have been input to the URBEMIS 2002 computer model to estimate the daily construction emissions of the

proposed project, would be included as part of the proposed project pursuant to the requirements under SCAQMD Rule 403:

a. Soil stabilizers shall be applied to inactive construction areas.
b. Ground cover in disturbed areas shall be quickly replaced.
c. Exposed surfaces shall be watered twice daily.
d. All haul roads shall be watered twice daily.
e. All stock piles of debris, dirt, or rusty materials shall be covered with a tarp.
f. Vehicle speed on unpaved roads shall be reduced to less than 15 miles per hour (mph).

49. (5-1) The Thompson House shall be preserved on- or off-site and the Developer shall submit a Historic Preservation Plan to address the following:

a. Prior to grading permit issuance, possible temporary displacement of structure on site and protection during grading;
b. Prior to occupancy, provide steps and agreements for fair market appraisal of the structure and value of the structure following restoration;
c. Relocation of structure to a site within the area generally described as bounded by south of Nighthawk, north of Guava, and west of Washington Ave. The structure shall be rehabilitated and maintained according to the Secretary of the Interior's Standards; and relocation of structure and 'certificate of appropriateness.
d. Adaptive re-use in accordance with the Secretary of the Interior's Standards, entailing convertion of the building to a use other than that for which it was originally designed, while maintaining the historical integrity of the building's exterior.

Note: Completion of the necessary documents/agreements for Conditions 49c. and 49d. is required prior to occupancy of the project, or as determined by the Planning Director. Planning staff must monitor what is occurring on the Thompson home and provide an update to the Planning Commission *(Amended and added by Planning Commission)*

50. (5-2) If any archaeological materials are encountered during the course of the project development, the project shall be halted. The services of an archaeologist shall be secured by contacting the Center for Public Archaeology - Cal State University Fullerton, or a member of the Society of Professional Archaeologist (SOPA) or a SOPA-qualified archaeologist to assess the resources and evaluate the impact. Copies of the archaeological survey, study, or report shall be submitted to the UCLA Archaeological Information Center. A covenant and agreement shall be recorded prior to obtaining a grading permit.

51. (5-3) The Pechanga Band of Luiseno Indians shall be contacted to develop a management plan for any resources that may be unearthed, to afford the Band an opportunity to monitor ground-disturbing activities and to participate in the decisions regarding collection and curation of any such resources. Pechanga monitors shall be present during any grading of previously undisturbed areas, regardless of grading depth.

52. (5-4) If any paleontological materials are encountered during the course of the project development, the project shall be halted. The services of a paleontologist shall be secured by contacting the Center for Public Paleontology - USC, UCLA, Cal State Los Angeles, Cal State Long Beach, or the County Museum to assess the resources and evaluate the impact. Copies of the paleontological survey, study or report shall be

submitted to the Los Angeles County Natural History Museum. A covenant and agreement shall be recorded prior to obtaining a grading permit.

53. (5-5) If human remains are discovered at the Project Site during construction, work at the specific construction site at which the remains have been uncovered shall be suspended, and the City of Murrieta Public Works Department and County coroner shall be immediately notified. If the remains are determined by the County coroner to be Native American, the Native American Heritage Commission (NAHC) shall be notified within 24 hours, and the guidelines of the NAHC shall be adhered to in the treatment and disposition of the remains.

54. (6-1) The design and construction of the project shall conform to the Uniform Building Code seismic standards as approved by the Murrieta Municipal Code.

55. (6-2) Excavation and grading activities shall be scheduled during dry weather periods. If grading occurs during the rainy season (October 15 through April 1), construct diversion dikes shall be constructed to channel runoff around the site. Channels shall be lined with grass or roughened pavement to reduce runoff velocity.

56. (6-3) Appropriate erosion control and drainage devices shall be provided to the satisfaction of the Building and Safety Department and Engineering and Public Works Department. These measures include interceptor terraces, berms, vee-channels, and inlet and outlet structures, as specified by the municipal code, including planting fast-growing annual and perennial grasses in areas where construction is not immediately planned.

57. (6-4) Stockpiles and excavated soil shall be covered with secured tarps or plastic sheeting.

58. (6-5) All waste shall be disposed of properly. Use appropriately labeled recycling bins to recycle construction materials including: solvents, water-based paints, vehicle fluids, broken asphalt and concrete; wood, and vegetation. Non recyclable materials/wastes shall be taken to an appropriate landfill. Toxic wastes must be discarded at a licensed regulated disposal site.

59. (6-6) Leaks, drips and spills shall be cleaned up immediately to prevent contaminated soil on paved surfaces that can be washed away into the storm drains.

60. (6-7) Pavement shall not be hosed down at material spills. Dry cleanup methods shall be used whenever possible.

61. (6-8) Dumpsters shall be covered and maintained. Place uncovered dumpsters under a roof or cover with tarps or plastic sheeting.

62. (6-9) Where truck traffic is frequent, gravel approaches shall be used to reduce soil compaction and limit the tracking of sediment into streets.

63. (6-10) All vehicle/equipment maintenance, repair, and washing shall be conducted away from storm drains. All major repairs shall be conducted off-site. Drip pans or drop clothes shall be used to catch drips and spills.

64. (6-11) Projects involving the import/export of 1,000 cubic yards or more of dirt shall obtain haul route approval by the Engineering and Public Works Department.

65. (6-12) The developer shall install appropriate traffic signs around the site to ensure pedestrian and vehicle safety. Fences shall be constructed around the site to minimize trespassing, vandalism, short-cut attractions and attractive nuisances.

66. (8-1) Prior to commencement of construction activities, the Project Applicant shall prepare and implement a project-specific Storm Water Pollution Prevention Plan (SWPPP), in conformance with the National Pollution Discharge Elimination System (NPDES) General Permit for Storm Water Discharges Associated with Construction Activity (General Permit) Water Quality Order 99-08-DWQ, dated August 27, 2004. The Project Applicant shall ensure that all BMPs provided in the project-specific SWPPP are implemented throughout the construction of the Proposed Project.

67. (8-2) All grading activities shall conform to the grading, haul route, and erosion/sedimentation requirements of the City's Grading Ordinance (Ordinance No. 346-06), adopted January 17, 2006, which amends Chapter 15.52 of the Municipal Code.

68. (8-3) Prior to the issuance of a building or grading permit, the Project Applicant shall prepare a project-specific Water Quality Management Plan (WQMP) that shall include site design, source control, and treatment control Best Management Practices (BMP's), examples of which are provided in the Riverside County WQMP for Urban Runoff, dated September 17, 2004, pp. 16 – 30. The Project Applicant shall ensure that all BMP's provided in the project-specific WQMP are implemented through the duration of the Proposed Project.

69. (9-1) Prior to construction of the Proposed Project, the Project Applicant shall procure all necessary entitlements and land use approvals from the City of Murrieta Department of City Planning, including but not limited to the various discretionary actions identified in Section II (Project Description), of this document.

70. (11-1) The project shall comply with the provisions pertaining to construction activity as stated in Section 16.30.130 of the City of Murrieta Municipal Code. Under Section 16.30.130 of the City of Murrieta Municipal Code:
    a) The operation of tools or equipment used in construction, drilling, repair, alteration, or demolition work is prohibited between the weekday hours of 7 P.M. and 7 A.M., or at any time on Sundays or holidays.
    b) Construction activities must be conducted in a manner that the maximum noise levels at the affected structures would not exceed those listed in Table IV-5 above.
    c) All mobile or stationary internal combustion engine powered equipment or machinery shall be equipped with suitable exhaust and air-intake silencers in proper working order.

71. (11-2) Construction and demolition activities shall be scheduled so as to avoid operating several pieces of equipment simultaneously, which causes high noise levels.

72. (11-3) The use of those pieces of construction equipment or construction methods with the greatest peak noise generation potential shall be minimized. Examples include the use of drills, jackhammers, and pile drivers.

73. (11-4) Noise attenuation barriers such as plywood structures or flexible sound control curtains shall be erected along the project site's western and southern boundary to reduce the amount of noise the adjacent residences would be subject to such that the noise levels would be within the construction noise standards established in the City Municipal Code.

74. (11-5) Noise construction activities whose specific location on the site may be flexible (e.g. operation of compressors and generators, cement mixing, general truck idling) shall be conducted as far as possible from the nearest noise-sensitive land uses, and natural and/or manmade barriers (e.g., intervening construction trailers) shall be used to screen propagation of noise from such activities towards these land uses to the maximum extent possible.

75. (11-6) The project developer shall require by contract specifications that construction staging areas along with the operation of earthmoving equipment on the project site would be located as far away from vibration-sensitive sites as possible. Contract specifications shall be included in the project construction documents, which shall be reviewed by the City prior to issuance of a grading permit.

76. (13-1) The Proposed Project shall provide hydrants, access, water pressure, and any other requirements of the City of Murrieta Fire Department, or as specified in the California Fire Code (2001).

77. (13-2) The Proposed Project shall pay developer mitigation fees in the sum of $0.26 per square foot of commercial space (or as otherwise increased or reduced by the City) to mitigate the costs of any new fire protection facilities, staffing, or equipment.

78. (13-3) The Proposed Project shall include on-site security features to reduce the demand for City police services. Such security features may include, but are not limited to: secured parking facilities, well-illuminated public and semi-public spaces that minimize dead space, and provision of on-site security guards, if needed.

79. (13-4) Pursuant to Section 65995 of the Government Code, the Project Applicant shall be responsible for the payment of all applicable schools fees to the Murrieta Valley Unified School District to offset the impact of additional student enrollment at schools serving the Project Site.

80. (13-5) Pursuant Section 16.36.030 (Non-Residential Public Facilities Development Impact Fee Required) of the City of Murrieta Municipal Code, the Project Applicant shall pay a public facilities development impact fee for each building proposed in an amount established by resolution of the city council.

81. The project shall participate in the fair share funding for the westbound right turn overlap phasing at the intersection of Washington Avenue at Kalmia Street.

82. (15-2) The project shall be responsible for constructing the traffic signal and roadway improvements associated with the traffic signal at the project access, including the

completion of half section street improvements to Washington Avenue adjacent to the project, as shown in Exhibit N of the revised Traffic Study dated November 16, 2006.

83. (15-3) The project shall contribute to the TUMF and DIF fee programs which are in place at the time development.

84. (15-4) The Applicant shall submit a parking and driveway plan that incorporates design features that shall reduce accidents, to the Bureau of Engineering and the Department of Transportation for approval.

85. (16-1) The Proposed Project shall install water-conserving fixtures and appliances.

86. (16-2) The Proposed Project shall incorporate the principles and practices of sound landscape design and management, particularly those conserving water and energy.

87. (16-3) Whenever appropriate and feasible, the Proposed Project shall minimize surface run off and allow replenishment of soil moisture. Such techniques may include, but not be limited to: the on-site use and retention of storm water, the use of pervious paving material (such as turf block, walk-on-bark, pea gravel, and cobble mulches), the preservation of vegetative covers, and efficiently designed and managed irrigation systems.

88. (16-4) Where appropriate, the Proposed Project shall install dual plumbing systems to provide for the use of reclaimed water.

89. (16-5) The Proposed Project shall institute a recycling program to the satisfaction of the City to reduce the volume of solid waste going to landfills in compliance with AB 939.

90. (16-6) Recycling bins shall be provided at appropriate locations to promote recycling of paper, metal, glass, and other recyclable materials. These bins shall be emptied on a regular basis and recycled appropriately as a part of the project's regular waste disposal program.

Final Inspection:

91. Unless otherwise indicated, all conditions, mitigation measures and other requirements shall be fully constructed and implemented prior to final inspection of the building and/or site improvements.

92. All existing outdoor advertising displays, signs or billboards shall be removed, except for signs permitted by the Development Code.

93. If the project has been phased, all facilities meant to serve the current phase of development shall be installed in a usable condition. Project landscaping may not all be deferred until the final phase.

Landscaping

Prior to the issuance of building permits:

94. Three copies of construction landscaping plans shall be submitted to the Planning Division and approved. A licensed Landscape Architect shall prepare the plans.

95. The above-described plans shall be in substantial conformance with the plans approved by the City Landscape Architect, City Administrative Staff, Planning Commission and/or City Council. Notes, details, and specifications shall be included.

96. All landscape and irrigation plans shall be consistent with Title 16.28 of the Murrieta Municipal Code.

97. All parking lot planting areas, curbing, irrigation, and bumper overhang shall be consistent with Title 16.34.070-H. of the Murrieta Municipal Code. Parking spaces shown at less than 18 feet in length require additional dedication of landscape area for required bumper overhang. The additional landscape area will not count towards satisfying parking lot landscaping requirements.

98. Landscape plans shall be drawn at a scale of 20 feet equal to 1 foot or larger. The City Landscape Architect will not accept plans drawn in 30 feet scale or smaller without prior approval.

99. No light fixture shall be designed for any location in a planting area, which would make it necessary to eliminate a tree. All overhead light fixtures shall be identified on the site plan prior to approval of the site plan.

100. Plant materials shall be installed from container sizes consistent with Murrieta Municipal Code, 16.28.080, Table 3-5, Minimum Required Mix of Plant Materials.

101. All ground covers shall be installed from living plant materials. Spacing shall be such that 100% coverage is achieved within 2 years of the installation.

102. All planter areas shall be a minimum of 5 feet wide excluding curbs and required concrete strip adjacent to parking spaces (12" wide by 4" deep plus 6" wide type "D" curb or 12" wide by 12" deep integrally poured curb). **The end island at Future Building and others that don't meet the minimum planting widths must be widened.**

103. Permanent, evergreen shrubs capable of mature growth to between 36 inches and 48 inches high shall be designed to screen the perimeter parking, walls and fencing, except where site distance requirements call for shrubs at 30 inches high or less.

104. An approved concrete mow strip shall separate all turf and shrub beds.

105. All trash enclosures shall be covered with a wood arbor or other approved architectural treatment to blend with the buildings. Flowering vines shall be trained on to the walls. Trees, shrubs and ground covers shall be included. **The trash enclosure at Buildings B and C must be screened with plants on all 3 sides of the wall enclosure.**

106. Planting areas adjacent to the Washington Avenue shall have trees provided at the rate of one for each 20 lineal feet of landscaped area. Street trees shall be Olea europaea (Fruitless Olive) to match the existing street tree theme. All street trees shall be installed from a combination of 24" box and 36" box containers outside the right-of-way.

107. Mature specimen trees in 36-inch and 48-inch boxes shall be supplied in sufficient quantity to provide variety and emphasis at the entry driveway within street view and other main focal areas.

108. Above ground utility locations shall be approved with prior permission of the Planning Division. Building backflow prevention units shall be located in shrub areas outside of the City right-of-way. All double detector check and backflow assemblies shall be located in shrub beds clearly identified on the grading plan prior to approval of the grading plan. The detector check/backflow devices shall be painted a neutral/earth tone color and any pipes extending above ground shall be finished and painted to match the device.

109. No required canopy shade tree planting area or shrub planting bed shall be narrower than 5 feet wide without permission from the City Landscape Architect.

110. Canopy shade trees shall be located directly adjacent to public parking spaces without walkways or paving between the tree and parking space (wherever feasible) to provide the required percentage of parking spaces shaded at 15 years growth. The trees shall be located no farther than 25 to 30 feet on center (depending on the canopy spread of the species) in continuous planting areas, or no farther than 36 feet on center in tree wells (minimum 25 square feet of planting area). **Additional shade trees are required to shade the parking spaces at Future Building, Building B, Building F and Building G.**

111. All areas of the site not intended for a specific use and for future development or phasing, shall be landscaped with at least a temporary hydro-seed mix and sub-grade irrigation system approved by the City Landscape Architect, or as directed by the Engineering Division.

112. No building roof drain shall daylight into a planter area or splash block. Roof drains located at planter areas shall be adapted to convey excess water through the planter via drain pipes, which daylight through the curb into the adjacent gutter. Roof drain outlets are permitted along the rear and side landscaping adjacent to Building D for water quality treatment purposes, unless treated by some other method.

113. Landscaping shall be incorporated and planned as an integral part of the overall project design around the building. Landscaping should not interfere with pedestrian or handicap accessibility. Pedestrian and handicap accessibility shall be designed not to interfere with landscaping required around the building.

114. All trees shall be double staked with rubber type ties nailed to the lodge pole stakes in at least two vertical locations. Trunk protection devices shall be provided to all trees located in turf grass areas.

115. A weather-based irrigation controller that measures evapo-transpiration shall be provided.

116. Drip irrigation is encouraged in all shrub and slope areas.

117. A rain shut off device shall be installed connected with the irrigation controller.

118. All plantings shall be hydrozoned according to WUCOL's or the "City of Murrieta Guide To Trees, Shrubs, and Ground Covers." The maximum applied water allowance shall not exceed 25 percent of the local annual mean precipitation.

119. All plant selections shall be appropriately sized for their location. Shamel Ash shall not be used. No plant materials that would freeze shall be used (Agave). No plants with thorns shall be used in pedestrian areas (Mahonia). At least 80% of all shrubs shall be evergreen.

120. Planting areas adjacent to residential zoned property shall provide a landscaped buffer with a minimum of fifteen feet planting area. For each 100 lineal feet of landscape area a minimum of 12 trees and 10 shrubs shall be provided.

121. The existing cell tower that is to be relocated shall be screened with approved tall, evergreen shrubs and vines on all walls, except for where access is required. A minimum 3 foot wide planting area for screening is required (excluding wall footings and curbs). At least 4 – 36" box Pinus eldarica shall be installed in close proximity of the relocated cell tower monopine.

122. All infiltration areas within landscaped areas shall be approved by the City of Murrieta Landscape Architect for appropriate visual qualities. At least 5 feet of dense tree and shrub planting area shall be designed on level grade to screen depressed infiltration areas from public view or at property lines. Infiltration areas shall be modified using currently available technology as required to achieve the appropriate visual quality.

Prior to Construction:

123. The City Landscape Architect shall meet with the job site superintendent and the landscape contractor for a pre-job meeting. A copy of the soil fertility recommendations shall be submitted to the City Landscape Architect prior to the meeting. No landscaping shall occur prior to the meeting.

Prior to the issuance of occupancy permits:

124. Performance securities, in the amount determined by the City to guarantee the adequate maintenance of the landscaping materials and irrigation system in accordance with the approved plans for a period of one (1) year from the date of final clearance of the installed landscaping by the City, shall be posted with the Planning Department. Acceptable forms of security shall be limited to cash deposit, cash bonds, or irrevocable letters of credit. The performance securities shall be released one (1) year after final clearance of the installed landscaping by the City, upon written request by the owner, if the landscaping has been adequately maintained. A deposit to cover re-inspection of the landscape, at the current City rate shall be posted with the Planning Department prior to re-inspection for maintenance bond release.

125. All required landscaping and irrigation systems shall be installed in a condition acceptable to the City. The owner's Landscape Architect shall provide inspection of the landscaping. The owner's Landscape Architect shall provide the City with a Certificate of Compliance stating that the landscaping was installed per the approved plans. The City will review the Certificate of Compliance and conduct inspections to ensure that the landscape installation is in compliance with the approved landscape plans.

ENGINEERING DEPARTMENT

GENERAL CONDITIONS

126. The applicant shall pay all applicable Development Mitigation Impact Fees, including but not limited to:

    a. Development Impact Fees, Ordinance 196-98 payable prior to issuance of building permit.

    b. Kangaroo Rat Fee, payable at issuance of grading permit.

    c. Riverside County Area Drainage Fees, payable at issuance of grading permit.

    d. Transportation Uniform Mitigation Fee (TUMF), payable at building permit issuance.

    e. MSHCP Fee, payable prior to issuance of a grading permit.

    Fees shall be based upon Commercial Development Rates.

127. Prior to any work being performed in the public right of way, fees shall be paid and an encroachment permit shall be obtained from the Engineering Department. The applicant shall apply for an encroachment permit from the City for utility trenching, utility connection or any other encroachment onto public right-of-way. The applicant shall be responsible for the associated costs and arrangements with each public utility.

128. Prior to the issuance of building permits, unless other timing is indicated, the applicant shall complete all street improvement, signing, striping, and signal plans (if required) in conformance with all applicable City ordinances and standards, submit and obtain approval, post securities and execute agreements. Prior to occupancy, unless other timing is indicated, all public improvements shall be installed in accordance with all applicable City ordinances.

129. All construction equipment shall be properly maintained and tuned to reduce emissions.

130. Access and maintenance easements shall be provided to existing utilities within the site to the satisfaction of each applicable utility. These easements shall be recorded prior to grading permit. Revisions to the development necessary to comply with the utility requirements shall be the responsibility of the applicant.

GRADING

131. Prior to issuance of a grading permit or other construction activities, the applicant shall provide the following to City staff:

a. A copy of the Notice of Intent (NOI) and waste Discharge Identification (WDID) number from the State Water Resources Control Board.

b. A project-specific Water Quality Management Plan (WQMP) shall be submitted to the City for approval with the grading plan check application. Note: the preliminary WQMP submitted at the time of these conditions was insufficient. The final WQMP, when approved, may require different or additional treatment devices than those shown on the approved development plan. Revisions to the development plan due to these changes shall be the responsibility of the applicant. The WQMP shall be approved by the Engineering Department prior to issuance of a grading permit. A copy of the final project-specific WQMP shall be provided to the Engineering Department and a copy shall be maintained by the applicant and kept on-site.

An adequate Storm Water Pollution Plan (SWPPP) shall be available to state and city inspectors at the job site prior to commencing and throughout construction. The applicant shall be responsible for implementation, monitoring, operation and maintenance of the SWPPP until construction is complete and a Notice of Termination has been filed with the State Water Resources Control Board.

132. All grading activities shall minimize dust through compliance with AQMD Rule 403 which requires watering during earth moving operations.

133. A soils investigation study shall be completed and approved prior to issuance of a grading permit. If the project is located within an earthquake fault zone, a third party review shall be required of the soils investigation report. All recommended measures identified in the soils report shall be incorporated into the project design. On the grading plan, identify all faults located within the project from the Fault Location Map. All plans and maps shall show seismic zones as well as the minimum fault setbacks. Notes shall be placed on all plans if the project is entirely within or outside the seismic zone as the case may be.

134. If appropriate, prior to issuance of any grading permit or ground disturbance, applicant shall obtain necessary approvals and permits from applicable Federal and State regulatory agencies. If the site contains regulated waters, the applicant shall obtain a 404 permit from the Corps of Engineers, a 401 certification from the Regional Water Quality Control Board, a section 1603 Department of Fish and Game stream bed alteration agreement, and file a Notice of Intent of ground disturbance with the State Water Resources Control Board.

135. Prior to commencing of any grading in excess of 50 cubic yards, paving in excess of 3,000 square feet, or alteration of existing drainage patterns, the applicant shall obtain a grading permit from the Engineering Department prior to issuance of a building permit. The developer shall have an approved grading permit prior to the commencement of any clearing or grading of the site.

136. Prior to hauling dirt or construction materials to any proposed construction site within this project, the developer shall submit to and receive approval from the City Engineer for the proposed haul route. The developer shall comply with all conditions and requirements the City Engineer may impose with regards to the hauling operation.

137. In instances where a grading permit involves import or export, the developer shall obtain approval of the import/export location by the City Engineer prior to obtaining a grading permit.

138. Permission from property owners shall be required for work located on adjacent properties. A notarized letter of permission shall be provided to the City prior to issuance of any permit.

139. Clean water measures shall be in place and designed per the guidelines provided in the latest edition California Storm Water Quality Best Management Practices Handbook.

140. Runoff discharge from the construction and fully developed site shall meet NPDES water quality requirements by implementing Best Management Practices (BMP's) on-site to prevent sediment, debris, oils, grease, and other pollutants from flowing through the public storm drain system. The plans shall specifically identify structural and non-structural BMP's that will be designed into and implemented on this project to reduce the discharge of pollutants into the storm drain system to the maximum extent practicable. Structural BMP's shall be provided on-site. Maintenance of BMP's shall be the responsibility of the applicant. Proof of a maintenance mechanism shall be provided prior to issuance of building permit.

141. Plant and irrigate all slopes greater than or equal to 3 feet in vertical height with ground cover to the satisfaction of the City Engineer. Slopes that exceed 15 feet in vertical height are to be planted with shrubs and/or trees.

FLOOD CONTROL

142. Applicant has proposed subgrade infiltration units for water quality purposes. Applicant shall provide calculations satisfactory to the City Engineer that said system will treat stormwater in compliance with Water Quality Control Board regulations. Should said system fail to be sufficient, additional treatment systems shall be provided to the satisfaction of the City Engineer. Positive drainage shall be maintained within the system. System shall have a drawdown time of 48 hours.

143. The proposed on-site storm drain connects to the existing RCFC&WCD storm drain channel. Acquire necessary permits to complete said connection. On-site detention can be waived by the City Engineer if sufficient evidence is provided in writing by RCFC&WCD.

144. Applicant shall provide a drainage study prepared by a registered Civil Engineer identifying storm water runoff quantities expected from the site and upstream of the site. The study shall show all existing and proposed off-site public or private drainage facilities intended to discharge this runoff. The study shall include a capacity analysis verifying the adequacy of said facilities. Runoff from the development or partial phase of development of the property shall not exceed the existing natural discharge quantities with respect to the following criteria:

    a. Detention shall not be required for developments of less than one acre if the development uses volume based water quality measures.

    b. For projects less than 10 acres, including those less than one acre NOT using volume based water quality measures shall analyze and mitigate the difference in

developed and undeveloped runoff based on the 1-hour duration of the 10-year intensity storm. A simplified hydrograph method shall be used that simulates the hydrograph with a triangle. The Rational method flow rate shall be the top value of the triangle and the base width shall be two times the time of concentration (Tc). The difference in area between the developed condition triangle and the existing condition triangle represents the required storage volume. Both triangles shall use time of concentration from the developed condition. Based upon the storage volume head, the outlet structure shall have an outlet flow no larger than the existing flow rate.

c. Projects that are 10 acres or greater shall analyze for the 1, 3, 6 and 24-hour duration for the 2, 5 and 10-year frequency storms.

The design of detention basins shall provide for the detention of nuisance flow. Development shall detain the year and duration incremental storm runoff developed and or increased by means of on-site detention. Detention techniques shall include, but not be limited to: Parking lot detention or on-site detention basin or other methods approved by the City Engineer. Detention shall not be required in the event facilities down stream from the point of discharge are shown to be designed for and have been constructed to convey the fully developed 100 year storm event. Evidence of a maintenance mechanism shall be provided for the basins prior to any building permit. If project discharges/connects to an off-site detention basin, provide permission to drain/connect correspondence from the owner of basin or system and provide corresponding calculations verifying adequacy of off-site basin. Off-site detention basins require a Declaration of Dedication.

145. Street storm flows shall not exceed top of curb for the 10-year storm event and must be contained within the street right-of-way for the 100-year storm event.

146. The applicant shall accept and properly dispose of all offsite drainage flowing onto or through the site.

147. If possible all drainage shall be conveyed onto public property. No cross lot drainage shall be permitted.

148. Applicant shall protect all downstream properties from damages caused by alteration of the drainage patterns, i.e., concentrations or diversion of flow. Protection shall be provided by constructing adequate drainage facilities including enlarging existing facilities and/or by securing a drainage easement. A maintenance mechanism shall be in place for any private drainage facilities constructed on-site or off-site prior to any building permit. Any grading or drainage improvements onto private off site or adjacent property shall require a written permission to grade and/or a permission to drain letter from the affected landowner.

TRANSPORTATION

149. Washington Avenue: Dedicate right-of-way and construct ½-street improvements for Washington Avenue per City of Murrieta standard 104 (modified). A meandering sidewalk design shall be incorporated along the project frontage (Added by Planning Commission).

150. The applicant shall vacate the portion of Washington Avenue that is not required by the

conditions herein. The vacation shall be submitted to the City for review, approval, and recordation prior to any building permit.

151. The applicant shall vacate or provide evidence of prior vacation of the portions of Lots C and D of Parcel Map 9357 within the development plan boundary. The vacation, if necessary, shall be submitted to the City for review, approval, and recordation prior to any building permit.

152. Prior to the issuance of a grading permit, the applicant shall prepare and submit a lot line adjustment or a parcel map for review and approval by the Engineering and Planning Departments. The lot line adjustment or parcel map shall merge or reconfigure Assessor Parcel Numbers (APN's) 906-070-008, 906-070-009, 906-070-052 and 906-070-060 in compliance with the proposed lot lines shown on the development plan or as approved by the City Engineer. Proof of recordation shall be submitted to the Planning and Engineering Departments within six (6) months of recorded deeds. The proposed parcels shall comply with the development standards of the Community Commercial (CC) zone.

153. Construct a 10-foot wide raised median on Washington Avenue from a point 100-feet north of the northerly extended property line south to a distance of not less than 350 feet per City of Murrieta Standard 115 (modified) or as approved by the City Engineer. Modified refers to changing the overall width of the median from 18-feet to 10-feet. Landscaping or hardscaping requirements for the median shall be per the City Engineer.

154. Construct a traffic signal at the intersection of Washington Avenue and the main project entrance no less than 660 feet north of Kalmia Street centerline to main entrance centerline. The intersection geometrics shall be as follows (assuming Washington Avenue is north-south):

a. North-bound: 2 through lanes, 1 right-turn lane

b. South-bound: 1 left-turn lane, 2 through lanes

c. West-bound: 1 left/through lane, 1 right-turn lane

d. East-bound: 1 left/through lane, 1 right-turn lane (City realigned driveway to the driving range)

The signal design and construction shall include fiber optic interconnect from Kalmia to the project entrance to provide signal coordination.

Applicant shall dedicate right-of-way necessary to construct said geometrics. Any off-site widening to accommodate these geometrics shall be the responsibility of the applicant.

Northerly driveway entrance shall be restricted and signed for right-in and right-out movements only. Southerly driveway entrance shall be restricted and signed for right-in movements only, to the satisfaction of the Traffic Engineer.

155. Design and construct a right-turn overlap signal modification for West-bound (Kalmia) to North-bound (Washington) traffic at the Washington/Kalmia intersection or as directed by

the Traffic Engineer.

156. Construct a 14 foot wide, 100-foot long right-turn pocket on north-bound Washington Avenue at the 2nd driveway entrance to the site. Dedicate necessary right-of-way for said improvements.

157. Coordinate with Riverside Transit Agency (RTA) to determine the need and location of a bus stop along the project frontage of Washington Avenue. If a bus stop is required, dedicate necessary right-of-way and construct improvements per City of Murrieta Standard 217 and RTA requirements.

158. Improvement plans shall be prepared by a Registered Civil Engineer based upon a centerline profile extending a minimum of 300 feet beyond the project boundaries at a grade and alignment as approved by the Civil Engineer.

159. Construct driveway approach improvements per City of Murrieta Standards.

160. Construct street lighting per City of Murrieta Standards.

161. Signage and landscaping shall be located so as not to interfere with sight distance per City of Murrieta Standards.

162. Prior to the issuance of any building permit, the applicant shall prepare and have approved signing and striping plans for all on-site, off-site and project frontage improvements as conditioned herein, unless otherwise determined by the City Engineer.

163. The applicant shall provide for the under grounding of all existing and proposed utility distribution facilities within the project unless exempt per the City of Murrieta Development Code. The applicant shall be responsible for the associated costs and arrangements with each public utility.

164. Install required water and sewer systems necessary to serve the project per the City of Murrieta Development Code.

165. All existing street and property monuments within or abutting this project site shall be preserved consistent with AB 1414. If during construction of onsite or offsite improvements monuments are damaged or destroyed, the applicant/developer shall retain a qualified licensed land surveyor or civil engineer to reset those monuments per City of Murrieta Standards and file the necessary information with the County Recorder's office as required by law (AB 1414).

COMMUNITY SERVICES DISTRICT:

166. The applicant shall pay all applicable fees to the Murrieta Community Services Department per City policies and ordinances before issuance of any permits.

BUILDING DEPARTMENT:

General:

167. All structures shall comply with the current 2001 California Building Codes (CBC), and related Codes and Ordinances of the City of Murrieta. Three (3) sets of plans shall be submitted for a building permit, and shall include building data, building use/occupancy, construction type, allowable area increases and actual building square foot area, building setbacks, related building means of egress and ensuing egress discharge to the public right-of-way.

168. Required CBC, site facility accessibility components and details, unload areas, striping and HC parking symbol, accessible exterior routes of travel, as defined in Sec.1127B of the 2001 California Building Code (CBC); routes of travel, transition components etc., shall be provided between all commercial buildings, and each building to its own accessible trash enclosure and at least one exterior route shall be from the project site, to the public right-of-way, which shall be shown on an architectural site plan, and shall correlate with the civil designed precise grade plan. All design and details shall comply with California State guidelines as outlined in Title 24 California Building Code. The property owner shall be responsible for Federal ADA compliance.

169. Plans submitted during the permitting process, including but not limited to, site plan, precise grade plans and building architectural features, shall not vary substantially, from plans previously reviewed and Approved by the Planning, Engineering or other City Departments, without prior authorization form the Planning Manager, Public Works Director and/or Building and Safety Manager.

170. All exterior lighting shall be shown on building permit plans and shall comply with the City of Murrieta's MMC Sec.16.18.110, Mt. Palomar Lighting Pollution Control Standards.

171. A detailed Site Plan and correlating civil precise grade plan shall be submitted to the Building and Safety Department for site development review and Approval, prior to the issuance of a precise grading permit from the Engineering Division. Review for overall site features including trash enclosures construction details, exterior lighting compliance with the Mt. Palomar Lighting Pollution Control; site accessibility features, including exterior routes of travel, accessible transition components, grades and details.

Building Permit Application:

172. Plans submitted for building construction shall contain a full size copy of the Final Approved set of city departments Conditions of Approval.

173. Two sets of signed soil reports shall be submitted and correlate with building foundation design by reference. The report shall be from an individual licensed by the state to prepare such report, including compaction test results and verification of satisfactory placement, of any fill material used to support the foundation of any building or structure, in accordance with accepted engineering practice or, as recommended in any engineering geology preliminary report for any engineered grading design.

174. A sewer/ water permit shall be obtained from the City of Murrieta Building & Safety Department, for on-site (private) underground "wet" utilities for multi-building parcel

development, unless dedicated easements and conveyance to local water/sewer districts is proposed. A deposit shall be paid to the Building and Safety Department at the time civil plans are submitted for plan review. Three (3) sets of civil plans shall be submitted for review, prior to grading permit Final. Maintenance agreements, reciprocal access and/or easements shall be recorded and verified prior to a Final building inspection and/or a building occupancy.

175. Separate permits shall be obtained from the City of Murrieta Building & Safety Department, for individual structures e.g., monument signs, building wall signs, masonry walls, retaining walls, temporary power etc. Temporary power and temporary wiring shall comply with Articles 230 and 305 of the 2001 California Electrical Code.

176. Separate permits shall be obtained from the City of Murrieta Building & Safety Department, for existing structures being relocated or, demolished.

Prior To Building Final:

177. Final permit approvals shall be obtained, and any outstanding fees shall be paid to all City Departments/Divisions which may include Fire, Planning, Engineering, Building & Safety, and the City Landscape Architect, prior to a tenant occupancy of a building permitted as a "shell only" building, a building shell "Notice of Inspection Completion", and the issuance of a Certificate of Occupancy from the City of Murrieta Building & Safety Division.

FIRE DEPARTMENT:

178. The applicant shall comply with all conditions as outlined in the Fire Departments letter dated December 5, 2006 incorporated herein.

179. Fire Prevention has reviewed the plans submitted to our department. The following fire protection requirements must be provided in accordance with The City of Murrieta Ordinances and/or recognized fire protection standards.

BUILDING PLAN SUBMITTAL

180. City of Murrieta Ordinance No. 546 establishes the installation of a fire protection sprinkler system in all buildings with fire flows calculated with a base of 1500 GPM or greater. The sprinkler system post indicator valve and fire department connection shall be located to the front of the project and no further than 40 feet from a super fire hydrant and on the same geographical side of any drive aisles. These appliances shall be located at a minimum of 25 feet from any building. A statement that the building(s) will be automatically fire sprinklered must appear on the title page of the building plans.

181. Comply with all conditions for explosion venting and dust collecting addressed in the Uniform Building Code Section # 307.10. If applicable.

182. Plans must illustrate designated location of fire lanes. Contact Fire Prevention for recommended designations.

183. Fire sprinkler system shall conform to NFPA 13.

184. Minimum fire sprinkler density of .33 GPM/ 2500 SF is required even if high piled stock is planned.

185. If project is planned for Business condominium or changes to business condominium project, additional conditions will apply.

186. Applicant must comply with conditions addressed in the California Administrative Code Titles 19 & 24.

187. Occupancy separation may be required as per the Uniform Building Code, Section 302.

188. All buildings within the City of Murrieta shall have fire retardant roofing with a Class "B" minimum rating. The developer must submit documented fire rated listings, supplied by the manufacturer, to the Fire Marshal if he/she chooses to use wood shingles.

PRIOR TO BUILDING PLAN RELEASE

189. A looped combination of an on-site/off-site fire protection water systems is required with (6" x 4" x 2-1/2" x 2-1/2") super fire hydrants. This system shall be designed and installed with no hydrant closer than 25 feet or no further than 165 feet from any portion of exterior walls as measured along vehicular travelways.

190. Fire Prevention has established a required minimum fire flow for protection of the above referenced project. Using UFC Table III-A for determining fire flows, 2550 GPM for a 4-hour duration at 20-PSI residual operating pressure must be available before any combustible material is placed on the job site. This fireflow is all inclusive of fire sprinkler system and inside / outside hose demand

191. Fire Flow Requirements have been based on UFC guidelines for the determination of fire flow requirements. Factors considered were Type V construction.

192. Applicant/Developer shall furnish one copy of the water system plans to the Fire Department for review. Plans shall conform to fire hydrant types, location and spacing, and, the system shall meet the fire flow requirements. Plans shall be signed/approved by the water company having jurisdiction and a registered engineer must provide the following certification statement.

> "I hereby state that the design of the water system within this project is in accordance with the requirements prescribed by the Murrieta Fire Department as to hydrant type and spacing, and will provide fire flow of 2550 GPM if sufficient water is available at the point of connection."

193. City of Murrieta Fire Department requires all commercial buildings to provide flush mount Knox Box Access Systems and must be no higher than 6' off the finished ground to the right of front and rear doors as being faced. Must also be shown on architectural plans. Applications are provided by our Planning/Prevention Bureau.

GENERAL CONDITIONS

194. All standards, regulations and policies established for public safety and the protection of property established in City of Murrieta Development Code must be in compliance with the approval of all local authorities.

ACCESS REQUIREMENTS

195. The Applicant/Developer shall agree to make application and agreements with the Murrieta Fire Protection District, to install a strobe light monitor receiver with Knox key switch backup, on all electrically controlled gates for vehicular access, prior to occupancy of any structure within this project.

196. Secondary/alternate access points shall meet the requirements established for public safety and shall be installed prior to construction of this project.

197. Access will have a 56-foot turning radius capable of accommodating fire apparatus.

198. Access will be a minimum of 28 feet wide to accommodate fire apparatus.

199. Access will have a minimum of 13 foot 6 inches vertical clearance to accommodate fire apparatus.

200. Any dead end in excess of 150' requires an approved turnaround. Contact Fire Department for details.

201. All access requirements shall be in place and approved by Fire Prevention prior to release of building permits. Foundation only permits may be issued prior to access and water systems being installed. Please contact Fire Department for any needed information or clarification.

PRIOR TO OCCUPANCY

202. Install a supervised sprinkler water flow detection alarm system as per National Fire Protection Association pamphlet No. 71. Notification of alarm to be provided for all tenant spaces. These plans must be designed by a certified fire alarm specialist and submitted for Fire Prevention approval prior to installation.

203. Fire sprinklers may need to be relocated to provide adequate coverage when improvements are installed. Engineered drawings must be submitted to the Fire Department for approval prior to any system modification.

204. Portable Multi-purpose fire extinguishers with a minimum rating of 2A-10BC must be installed. Contact a certified extinguisher company for proper placement of equipment.

205. Restaurants require a hood duct fire extinguishing system to be installed in accordance with National Fire Protection Association pamphlets No. 17 or No. 17A. Plans must be submitted to the Fire Marshal for approval prior to installation. A portable fire extinguisher with a minimum rating of 40BC (for saponification) and a type K fire extinguisher shall be installed in the kitchen area.

206. Applicant/Developer shall be responsible for obtaining underground tank permits from both the County Health and Fire Departments.

207. Federal law under SARA Title III (Right To Know Act) requires that facilities with hazardous materials must provide Material Safety Data Sheets to the local Fire Department, the local Emergency Planning Committee and the State Emergency Response Commission.

208. All buildings will comply with NFPA 704 placard requirements when applicable. Contact Fire Department for information.

209. Address directory shall be provided next to all major entranceways to this project. Alll buildings shall be clearly identified with designators 12" high with 1" strokes mounted on contrasting backgrounds. These designators shall be placed on all 4 sides of each building and show address locations and elevations on architectural plan.

210. All decorative materials must be flame resistive. Prior to release of occupancy, the Developer must submit manufactures State Fire Marshal's listings of all materials being used. Cloth and other flammables must display a label of the State Fire Marshal's seal of approval.

211. Prior to release of above referenced project, the Developer/Applicant is responsible to provide all fire protection measures and information required by Fire Prevention. If any of these conditions are not met before, during or after completion of the proposed buildings, the Developer understands that he is in violation of City of Murrieta Ordinance No. 546 and/or the Uniform Fire Code, and Fire Prevention has the authority to disrupt or permanently stop the construction of the project.

212. A check or money order in the amount of (contact Fire Department for exact amount) shall be made payable to CITY OF MURRIETA FIRE DEPARTMENT for building plan review. Project number submitted by City of Murrieta Planning Department must be referenced in order to credit the appropriate project. Refer to Plan Check Fee/Mitigation Sheet attached to Building Plan Review letter.

213. Murrieta City Resolution requires that fire impact mitigation fees totaling (see planning department) per square foot, as part of the Development Impact Fee, must be paid prior to release of building permit. Contact Planning Department for exact amount.

214. PRIOR TO ANY BUILDING RELEASE, THE APPLICANT/ DEVELOPER SHALL SUBMIT APPROVED WATER PLANS AND PAY ALL REQUIRED FIRE FEE'S.

All questions regarding the meaning of the conditions shall be referred to the Fire Department, Planning, and Engineering staff.

SCHOOL DISTRICT:

215. Prior to the issuance of building permits, the applicant shall pay the school district the required mitigation fee in effect at the time of request.

PASSED, APPROVED AND ADOPTED THIS 13TH DAY OF DECEMBER, 2006

Planning Commission Chairperson

ATTEST:

Jack McGee, Planning Director

I, Jack McGee, Planning Director, City of Murrieta, California do hereby certify under penalty of perjury that the foregoing Resolution was duly adopted at a regular meeting of the Planning Commission on the 13TH day of DECEMBER 2006 by the following roll call vote:

MOTION MADE BY COMMISSIONER Fitzpatrick

SECONDED BY COMMISSIONER LUPRO

AYES: Fitzpatrick, LUPRO, LANE
NOES: NONE
ABSENT: RAWLINGS
ABSTAINED: NONE

BOARD ORDER NO. R9-2004-001
CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
SAN DIEGO REGION

EXECUTIVE SUMMARY

The Santa Margarita Watershed Riverside County Flood Control and Water Conservation District's (District) Individual SWMP Annual Report (Annual Report) for the District's Individual Stormwater Management Plan (District SWMP) documents specific urban runoff management programs and activities implemented to comply with the requirements of the third-term Municipal Separate Storm Sewer System (MS4) Permit issued to the District by the San Diego Regional Water Quality Control Board (Regional Board) on July 14, 2004 (Board Order R9-2004-001), referred to herein as the "Third-Term MS4 Permit". This Annual Report addresses Provision III.A.1 of the Monitoring and Reporting Program to the Third-Term MS4 Permit.

The Third-Term MS4 Permit required each Permittee to develop an Individual Storm Water Management Plan and for all the Permittees to jointly develop a Watershed Storm Water Management Plan. As Principal Permittee, the District was to coordinate the development of the compliance programs. The compliance program documents, and the programs they describe, were to be completed, submitted to the Regional Board and implemented by July 14, 2005. Annual Reports for each of these documents are required and are to be submitted to the Regional Board on October 31st of each calendar year. The reporting period is specified as the preceeding fiscal year. The District specifically prepares this Annual Report and the Watershed SWMP Annual Report. In addition, as Principal Permittee, the District is tasked with coordinating the submittal of the Individual SWMP Annual Reports for the other Third-Term MS4 Permit Permittees (Riverside County and Cities of Murrieta and Temecula).

This Annual Report covers the period extending from July 1, 2006 through June 30, 2007. This report specifically responds to reporting requirements specified in the Monitoring and Reporting Program of the Third-Term MS4 Permit. This includes identifying program progress and effectiveness evaluations.

This Annual Report specifically responds to the Permit's reporting requirements and including program effectiveness evaluations. The Permit requires the Permittees to develop a long-term strategy to evaluate the effectiveness of the SWMPs. The FY 2005-2006 Annual Report reflects the first year that the new Permit programs were fully implemented and that Program Effectiveness Assessments (PEAs) were required. It should be noted that a PEA requires the initial establishment of a set of baseline conditions using measurable metrics. These baseline conditions can then be used to establish measurable goals based on the measured metrics. Thereafter, effectiveness can be evaluated by comparisons of successive years of measurable metrics against the baseline data and measurable goals.

The long-term strategy for the PEA will be conducted at two levels. At the first level or Annual Assessment Level, the PEA will focus on an annual assessment of program implementation and Permit compliance. These assessments will be addressed by completing the Annual Reporting Forms, which will confirm program implementation, Permit compliance and collection of measurable metrics. Assessments will be included at the end of each Annual Report section as required by the reporting requirements of the Third-Term MS4 Permit. Inferences about the compliance of each program [development, construction, Illicit Connection/Illicit Discharge

EXECUTIVE SUMMARY

(IC/ID), etc.] will predominantly be drawn from both direct and indirect measures of progress for each program.

At the next level or Long-Term Level, the Permittees will collectively evaluate the measurable metrics, Receiving Water monitoring Data, and IC/ID monitoring data to assess changes in knowledge and behavior, load reductions and improvements in Receiving Water Quality. This analysis will be conducted as part of the Report of Waste Discharge (ROWD). The results of this assessment will evaluate the need to make significant programmatic revisions to the Permit compliance programs to protect Beneficial Uses of Receiving Waters. This analysis will place more emphasis on using direct measures of progress (monitoring data, long term trend analysis) and will support the review and any revisions to the Riverside County Drainage Area Management Plan (DAMP) and Individual SWMPs using information from the Water Quality Monitoring Program, IC/ID Monitoring Program and measurable metrics that have been collected.

Where the period of evaluation is characterized by the implementation of new program requirements, determinations of program effectiveness will initially be limited to confirmation of program implementation and collection of measurable metrics until baseline conditions can be properly established. Further, it must be recognized that direct measures of long-term program effectiveness may not be available within the timeframe of the Third-Term Permit. This lack of direct measure confirmation arises because:

- Baseline water quality conditions are not readily established;
- Water quality changes in response to program implementation are likely to be very slow;
- Establishing a link between receiving water condition and program activities is difficult at the watershed scale when programs are being implemented incrementally with the development/redevelopment cycle; and
- Inherent variability of natural systems and stormwater quality.

While program effectiveness assessment is a key step in the iterative process of program implementation, it should be realized that effectiveness assessment itself is a part of the management process that is also evolving. Assessing program effectiveness is recognized as a challenge for program managers across California, and the District is supporting the effort of the California Stormwater Quality Association (CASQA) to develop guidance in this area at a statewide level.

For purposes of this Annual Report, the terms "Watershed Stormwater Management Plan (Watershed SWMP)" and "Standard Urban Stormwater Management Plan (SUSMP)" referenced in the Santa Margarita Region Permit are referred to as the "DAMP" and "Water Quality Management Plan (WQMP)" respectively, to be consistent with terminology previously established in prior compliance documents used by the Permittees. Additional terms and acronyms used in this Annual Report are defined in the glossary included in the DAMP.

1. DEVELOPMENT PLANNING
(SECTION F of ORDER R9-2004-001)

1) Description of any Amendments to the General Plan or the Development Project Approval Process:

The District does not have land-use authority. It, therefore, does not maintain a General Plan or have direct control over the overall development project approval process. However, the District has entered into agreements with the County of Riverside to review proposed developments in the unincorporated County area for water quality and flood control related impacts and issue appropriate conditions of approval on behalf of the County.

In support of this role, the District spent the last fiscal year either completing or initiating the following tasks:

a. On October 5, 2006, the District, in conjunction with Santa Margarita and Santa Ana co-permittees, facilitated a meeting to continue discussion of WQMP implementation issues and experiences. Attendees included representatives from various cities/county planning and engineering departments. The Permittees developed a Frequently Asked Question (FAQ) committee to facilitate consistent implementation of the WQMP. The FAQ was completed on October 10, 2006 and is included in the Watershed SWMP Annual Report. Additionally, a watershed impairment map and updated WQMP template were created on April 2007 and October 26, 2006, respectively. The WQMP meeting is anticipated to be held, as needed, but at least once a year.

b. On April 4, 2006, District and County staff held a public workshop before the Riverside County Board of Supervisors to discuss post-construction Best Management Practices (BMPs) that the County may be willing to accept, a proposed public funding mechanism to ensure that the post-construction BMPs would be fully funded for maintenance, and a proposal for identifying the entities/County departments that would be responsible for tracking and maintaining post-construction BMPs under the proposed public funding mechanism. The Board of Supervisors directed staff to move forward with development of expanded treatment control BMP design guidance with a focus on landscape-based features and to work out the precise mechanism to accomplish public funding for these BMPs. It is expected that this issue will be brought back to the Board for consideration in FY 2006-2007.

c. In support of the District's proposed LID BMP Design Manual, the District initiated a LID BMP Testing and Evaluation Facility. The proposed facility will be constructed via a retrofit of the District's compound in Riverside. The project proposes to construct, test and evaluate a variety of integrated management practices (IMPs) that serve as hydraulic and hydrologic controls consistent with the low impact development (LID) planning and design approach. The project proposes the following Integrated Management Practices (IMPs):

- The replacement of 55,800 sf of existing asphalt pavement & base with new porous asphalt pavement and new porous concrete pavement and sub drain systems.

- The construction of 3 flow-through planter systems.

1. DEVELOPMENT PLANNING
(SECTION F of ORDER R9-2004-001)
CONTINUED

- The replacement of 165' of storm drain pipe with a vegetated infiltration swale.

- The replacement of 2,800 sf landscaped area with a vegetated infiltration swale.

- The deepening of an existing infiltration basin to facilitate monitoring data collection.

In addition, the project proposes the following monitoring and testing components:

- The construction of 7 monitoring vaults with flow metering, discharge pumps and electronic control and recording equipment.

- The evaluation of a standard suite of pollutants for selected runoff events including specific pollutants of concern in the Santa Ana Watershed such as nutrients and pathogens.

- The assessment of each IMP's ability to mitigate increased runoff volumes associated with development.

- The assessment of life-cycle costs of the IMPs

- The assessment of necessary modifications to design standards to improve IMP effectiveness or ease of maintenance

The proposed project will implement a variety of LID IMPs that will be used to test and demonstrate the effectiveness of these practices in contributing to storm water capture and management, treating pollutants of concern associated with urban runoff, mitigating the impacts of hydromodification from urban development, and identifying optimum IMP design criteria and standards for LID IMPs in Riverside County. Data collected by this project will be provided to the regional SMC LID Project and will be available to benefit all SMC members.

d. The District has continued to participate in the Stormwater Monitoring Coalition's efforts to develop numeric guidance for addressing Hydrologic Conditions of Concern, including both their Hydromodification study and their LID Projects, in conformance with Permit requirement F.2.b)9. of Board Order R9-2004-001. The District has been actively participating with this effort by providing comments on the monitoring protocols used in the study, identifying sites that fit the site selection criteria, and by offering in-kind services for the survey work needed.

The goal of this project is to develop a series of tools for implementation of hydromodifcation management measures that could be used to better protect the physical, chemical, and biological integrity of streams and the associated beneficial uses. The project

1. DEVELOPMENT PLANNING
(SECTION F of ORDER R9-2004-001)
CONTINUED

would consist of four technical tasks. The first task would involve developing a mapping and classification system for streams based on their susceptibility to the effects of hydromodification. The second task would establish protocols for ongoing monitoring that is carefully designed to assess the effects of hydromodification. The third task would involve development and calibration of dynamic models to assess the effects of hydromodification on stream condition. The fourth task would involve development of a series of tools that managers can easily apply to make recommendations or set requirements relative to hydromodification for new development and redevelopment.

2) Number of Grading Permits Issued:

Not applicable. The District does not issue grading permits for the County of Riverside.

3) Number of Developments Conditioned to meet SUSMP Requirements:

The District utilizes a case tracking program (District Land Management Tracking) that tracks project statuses and produces reports identifying the number of developments conditioned with SUSMPs (See Attachment A). During this reporting period, the District has conditioned 68 developments to prepare a Preliminary WQMP.

4) Attach One Example of a Development Project that was Conditioned to Meet SUSMP Requirements and a Description of the required BMPs:

See Attachment B.

5) Description of any Updates to the Environmental Review Process:

No revisions were needed nor made.

6) Description and Number of Training Efforts Conducted during the Reporting Period (for staff, developers, contractors, etc.), including the Number of Staff Trained.

a. **Training:** (See Attachment C)

Training	Training Description	Training Dates	Number of Attendees
WQMP	New Development	10/3/06	11
WQMP	New Development	10/23/06	17
WQMP	New Development	4/16/07	1
WQMP	New Development	4/25/07	1
		Total	**30**

1. DEVELOPMENT PLANNING
(SECTION F of ORDER R9-2004-001)
CONTINUED

b. Summarize the Educational and Outreach Activities the Development Planning Component has conducted over the Past Year.

Each development project conditioned by the District is required to obtain copies of appropriate public education and outreach materials from the District's NPDES Public Information Officer or from our website. They are also required to submit an affidavit stating that they will distribute the public education materials to new property owners. This affidavit is recorded in the development's individual file. Additionally, the District has implemented a tracking mechanism to facilitate the accurate reporting of the number of affidavits received each fiscal year.

Additional public education and outreach activities undertaken by the District are considered part of the Regional Public Education Program described in the Watershed SWMP Annual Report.

In addition, an FAQ, Watershed Impairment Map, and updated template were created for the development and plan checking community.

7) An Assessment of Program Effectiveness Based on the Measurable Goals Established in the Permittee's Individual SWMP:

As mentioned above, because the District has no land use authority and provides services on the County's behalf, the District has no direct measurable goals for the Development Planning Component. As indicated in the District's Individual SWMP, we collect the metrics described in this report and forward them to the County for their analysis as part of the County's Individual SWMP Annual Report.

The District has identified the following program areas where, in conjunction with the County, we are evaluating potential ways to improve the effectiveness of post-construction BMPs for Development Planning Program:

a. A public long-term maintenance mechanism for post-construction BMPs within the unincorporated County.

b. Additional post-construction BMP guidance to ensure the effectiveness and efficiency of post-construction BMPs.

This evaluation is on-going. Currently, the District is proposed to spend approximately $1.3 million on BMP testing for the purposes of optimizing the design and verifying the effectiveness of various BMPs. Further details are provided below.

8) Additional Comments/Information:

Major accomplishments of the program are described in responses to questions 1, 3 and 5 of this reporting form.

1. DEVELOPMENT PLANNING
(SECTION F of ORDER R9-2004-001)
CONTINUED

Describe the Major Accomplishments of the Development Planning Component over the Past Year. (General Plan or ordinance revisions, procedure/approval process changes, SUSMP guidance material):

Though initiated January 2006, FY 2006-2007 marks a complete reporting period in which the District has implemented a tracking mechanism to facilitate the accurate reporting of the number of public education affidavits received each fiscal year. This identifies the successful incorporation of the public education tracking process into the development planning procedures. As mentioned above, an FAQ, Watershed Impairment Map and updated template were created for the development and plan checking community.

9) **Summarize New Activities or Improvements to be implemented Next Year as a result of your Self Assessment of the Development Planning Component:**

The District is proposing the following program improvements for the next reporting period as a result of an assessment:

The District is currently working on addressing the areas of improvement identified in Question 7 above.

a. District and County staff are working on the development of expanded treatment control BMP design guidance with focus placed on low impact development concepts such as landscape based BMPs. In addition, a proposed public funding mechanism to ensure that the post-construction BMPs would be fully funded for maintenance and a proposal for identifying the County departments that would be responsible for tracking and maintaining post-construction BMPs under the new public funding mechanism, is also proposed for consideration by the County Board of Supervisors.

b. The District is continuing to work with the Stormwater Monitoring Coalition (SMC) and others to develop numeric hydromodification guidance as required by permit requirement F.2.b)(9). The District has partnered with the SMC and Southern California Coastal Watershed Research Project (SCCWRP) to pursue grant funds to undertake the necessary studies. In addition, the District is proposing to spend approximately $1.3 million on BMP testing to evaluate the effectiveness of Low-Impact Development (LID) BMPs' abilities at addressing hydromodification. This data will be used to supplement our existing BMP design criteria, which should be published ahead of SCCWRPs results. A final set of deisgn criteria and BMP guidance will be developed upon completion of SCCWRPs work. The next steps will be determined based the result of the grant applications.

2. CONSTRUCTION
(SECTION G)

NOTE: THIS SECTION IS APPLICABLE TO DISTRICT ADMINISTERED AND ENCROACHMENT PROJECTS ONLY.

1) Number of Inspections Conducted:

There was one (1) District administered construction project within the Santa Margarita Region in the reporting period. The project was Wildomar Channel Stage 5 located within the unincorporated Wildomar area of southwestern Riverside County between Wesley Street and the northern extension of Jane Court. The project lasted for five (5) months. During the construction period, the District inspects the construction project daily.

There were fourteen (14) encroachment projects through the District within the Santa Margarita Region. A copy of the encroachment permit log, with projects located in the Santa Margarita Region highlighted, is included in Attachment D. In general, most District encroachment projects last for a month or less and do not involve significant construction activity. Occasionally, more extensive projects, like bridges, may encroach on the District property for a longer period. During the encroachment period, the District inspects the construction projects approximately three times a week. There were eleven (11) construction related encroachment permits issued in the District right-of-way.

For both construction and encroachment projects, site inspections include verifying that adequate minimum BMPs are in place to comply with Order R9-2004-001 and the General Construction Permit. Actual inspections reports are not taken during each site visit unless there is a problem which needs to be addressed, at which time a notification is given. There were no significant construction related problems during the reporting period.

2) Number and Type of Enforcement Actions Related to Construction Sites:

Enforcement and Compliance Responses	Private Projects	Public Projects
Non-monetary Penalties	0	0
Stop Work Authority	0	0
Fines	0	0
Financial Security	0	0
Permit/Certificate of Occupancy Denial	0	0
Referral to SDRWQCB	0	0
Total	**0**	**0**

3) Description of Modifications made to the Construction and Grading Approval Process:

No revisions were needed nor made.

2. CONSTRUCTION
(SECTION G)
CONTINUED

NOTE: THIS SECTION IS APPLICABLE TO DISTRICT ADMINISTERED AND ENCROACHMENT PROJECTS ONLY.

4) Description and Number of Training Efforts Conducted during the Reporting Period.

a. Training: (See Attachment C.)

Training	Training Description	Training Dates	Number of Attendees
Construction	Compliance with General Permit	10/2/06	1
Construction	Compliance with General Permit	10/12/06	5
Construction	Compliance with General Permit	10/16/06	1
Construction	Compliance with General Permit	4/30/07	5
		Total	**12**

b. Summarize any Additional Education and Outreach Activities Conducted for Project Applicants, Contractors, Developers, Property Owners, and/or other Responsible Parties in Support of the Construction Component:

The District is only directly responsible for administering District Public Works projects and does not have the authority over private development activities. As stated in the General Construction Permit (Order No. 99-08 DWQ), individuals responsible for SWPPP preparation, implementation, and permit compliance shall be appropriately trained both formally and informally. During the SWPPP review process, the District requires that these requirements are met and training certifications are provided. Additionally, as part of the preconstruction meeting for all District projects, the contractor must attend a NPDES Contractor's Training Presentation given by the District. Additional contractor education and outreach is implemented through the Regional Public Education Program and is described in the Watershed SWMP.

10) An Assessment of Program Effectiveness based on the Measurable Goals Established in the Permittee's Individual SWMP:

As indicated in the District's Individual SWMP, the District does not have land-use or police powers, and as such cannot issue grading permits or regulate private construction activities. Therefore, the District's construction program is limited to District projects or for portions of Third-Party Construction Projects that encroach upon District rights-of-way. The District's Individual SWMP, therefore, did not establish specific measurable numerical values because of our limited role and limited number of District projects in the region. The District's construction program has been found to be effective because our inspectors received training and our construction projects were inspected consistent with permit requirements.

2. CONSTRUCTION
(SECTION G)
CONTINUED

NOTE: THIS SECTION IS APPLICABLE TO DISTRICT ADMINISTERED AND ENCROACHMENT PROJECTS ONLY.

In addition, the District's specifications include minimum erosion and sediment control BMPs that are required of District Capital Improvement Projects, where applicable.

11) Additional Comments/Information:

Attachment D includes the District's standard encroachment permit conditions.

3. MUNICIPAL
(SECTION H.1 of ORDER R9-2004-001)

1) **Number of Inspections Conducted at Existing Municipal Facilities:**

Not Applicable – there are no District municipal facilities within the Santa Margarita Watershed.

2) **Number and Type of Enforcement Actions Related to Municipal Sites:**

Enforcement and Compliance Responses	Number
Education and Information	N/A
Verbal Warning	N/A
Written Warning	N/A
Other	
Total	**N/A**

3) **Number of Catch Basins and Inlets that were Inspected and the Number that were Cleaned:**

	Number Inspected	Number Cleaned
Catch Basins and Inlets	N/A	N/A

NOTE: The District does not operate nor maintain catch basins and inlets within the permit area. Catch basins and inlets are maintained by the municipalities or in rare instances, may be maintained by property owners associations (POAS) or homeowners associations (HOAs).

4) **Assessment of the Amount and Type of Debris Removed from Catch Basins, Streets and Open Channels, including an Identification of Problem Areas that Generate the most Pollutants:** (See Attachment E.)

Facility	Type of Debris	Approx. Weight	Problem Areas that Generate Most Pollutants
Catch basins	Vegetative Litter		N/A
	Anthropogenic Litter		
	Sediment		
	Other man-made debris		
Total		**0.0**	**tons (wet weight)**
Streets	Vegetative Litter		N/A
	Anthropogenic Litter		
	Sediment		
	Other man-made debris		
Total		**0.0**	**tons (wet weight)**
Open Channels	Vegetative Litter	10.4	
	Anthropogenic Litter	4.7	
	Sediment		
	Other man-made debris	2,113.0	1,204.0 cy, assuming density of 130 lbs/cf
Total		**2,128.1**	**tons (wet weight)**
Facility Total		**2,128.1**	**tons (wet weight)**

0000569

SC-76	Water and Sewer Utility Maintenance	☐ Yes ☐ No	N/A

Assessment of the effectiveness of BMPs that have been implemented for municipal facilities and activities:

THE DISTRICT DOES NOT OPERATE MUNICIPAL FACILITIES OTHER THAN MS4 IN THE SANTA MARGARITA REGION, THEREFORE THESE RESPONSES ARE LIMITED TO ADDRESSING THE DISTRICT IMPLEMENTATION OF Bmps RELATING AND APPLICABLE TO MS4 MAINTENANCE.

000050

3. MUNICIPAL
(SECTION H.1 of ORDER R9-2004-001)
CONTINUED

6) **Description and Number of Training Efforts Conducted over the last year (for Municipal Facility Operators and/or Inspectors).**

a. **Training:**

Note – Because District staff do maintain MS4 in the Santa Margarita Region, District maintenance staff do receive municipal NPDES training per the requirement of the NPDES permit (see Attachment C). Detailed curriculum and attendance logs are contained in the Watershed SWMP.

Training	Training Description	Training Dates	Number of Attendees
Municipal Training	Municipal Site Inspection	10/2/06	1
Municipal Training	Municipal Site Inspection	10/16/06	1
Municipal Training	Municipal Site Inspection	10/17/06	1
Municipal Training	Municipal Site Inspection	4/16/07	1
Municipal Training	In-house staff training	6/07/07	54
Worker Safety Training	BMP implementation during herbicide applications	5/1/07	26
Municipal Training	Hazardous Material Spill Notification and Cleanup	11/16/06	58
Municipal Training	Hazardous Material Spill Notification and Cleanup	1/17/07	24
Municipal Training	Hazardous Material Spill Notification and Cleanup	1/18/07	16
		Total	**182**

b. **Summarize the Internal and External Education and Outreach Activities the Municipal Component has Conducted over the past year:**

In compliance with Order No. R9-2004-001, the District maintains the District's corporate yard Pollution Prevention Plan (PPP), which also address field MS4 maintenance in the Santa Margarita Watershed. The PPP provides the pollution prevention strategy to address facilities and associated activities that may cause stormwater pollution without proper controls. A site inspection was conducted by the NPDES staff on September 19, 2006 to verify compliance with the plan. Site and activity assessments are performed annually prior to the storm season.

3. MUNICIPAL
(SECTION H.1 of ORDER R9-2004-001)
CONTINUED

In addition, District NPDES staff met several times with field staff to discuss the requirements of the Statewide General NPDES Permit for the Discharge of Aquatic Pesticides for Aquatic Weed Control.

NPDES staff has convened annual briefing sessions since October 2001 with District Operations and Maintenance crews to discuss BMP implementation during herbicide applications. NPDES staff reviews the Municipal Permit program framework and goal of surface water quality protection, and discuss the Municipal Activity BMPs that are listed in the DAMP, which was conducted on June 11, 2007. Staff also identifies the common features of the Municipal Activity BMPs and the standard operating procedures for herbicide/pesticide management (product label instructions and Material Safety Data Sheets) that are part of the existing education requirements for applicators. Examples of standard procedures that constitute BMPs include schedules for applications considering weather and nesting seasons, and proper storage and disposal of unused product.

Additionally, District NPDES and Maintenance staff has attended annual training events conducted by Monsanto Technologies. These venues focus on BMP implementation for specific herbicides used by the District. The BMPs and related topics included:

- Anticipated Glyphosate concentration ranges in water samples given average AquaMaster application rates and following label instruction.
- Calculation for determining estimated surfactant concentrations.
- Application techniques for effective results when applying AquaMaster.
- California laboratories that can analyze for Glyphosate, should the need arise.

c. An Assessment of Program Effectiveness Based on the Measurable Goals Established in the Permittee's Individual SWMP:

The following metrics are required to be tracked and reported on by Section 5.6 of the District's Individual SWMP:

- Amount and Types of Debris Removed from Open Channels

  Outside of the MS4, there are no District municipal facilities within the Santa Margarita Watershed. Therefore, the District's municipal program is limited to MS4 maintenance. The amount of debris removed for the last three (3) fiscal years were incorrectly reported because it did not include sediment removal amounts. Previously total amount of debris removed reported in the annual reports were 101 tons and 24 tons in FY 2004-2005 and FY 2005-2006, respectively. The type and total amount of debris removed for each fiscal year is as follows:

3. MUNICIPAL
(SECTION H.1 of ORDER R9-2004-001)
CONTINUED

Fiscal Year	Vegetative Litter	Anthropogenic Litter	Other man-made debris (Sediment)	Total Amount of Debris Removed (tons)
FY 2004-2005	55.9	0	5,763.4	5,819.3
FY 2005-2006	16.0	8.1	7,532.5	7,556.6
FY 2006-2007	10.4	4.7	2,113.0	2,128.1

The amount of debris removed decreased from 7,557 tons in FY 2005-2006 to 2,128 tons in FY 2006-2007. This is likely due to the significant wet season in FY 2004-2005, which caused an increased amount of sediment accumulated and removed from open channels in FY 2005-2006. This was then followed by the relatively dry wet season in FY 2006-2007, which reflects a decrease in sediment transport, and thus sediment removal, from the previous FY 2005-2006 totals.

- Description of Training Efforts

  See Section 6.

d. Additional Comments/Information:

The District's municipal program in the Santa Margarita Region is limited to MS4 maintenance. The District reviewed its program to make sure it meets the minimum requirements of Board Order R9-2004-001.

In addition, Section 5.1 (Planning District Facilities) of the Individual SWMP has been modified to ensure site design and source control BMPs are considered during the planning and design stages of all District administered MS4 capital improvement projects. This includes documentation of the site designs BMPs considered. These revisions are shown in Attachment G.

Summarize New Activities or Improvements to be implemented next year as a result of your Self Assessment of the Municipal Component:

As mentioned above, the District reviews the District's corporate yard Pollution Prevention Plan (PPP) at least annually to determine if any revision is necessary to reflect changes in the facility or changes in the activities conducted.

4. INDUSTRIAL/COMMERCIAL
(SECTION H.2 of ORDER R9-2004-001)

The District does not have land use powers or authority and therefore has no jurisdiction over industrial or commercial facilities.

1) **Description and Number of Training Efforts conducted over the last year (for Industrial/Commercial Facility Operators and/or Inspectors).**

   a. **Training:**

   Although the District does not have authority to inspect or regulate industrial/commercial land-uses, District staff who respond to IC/ID complaints or notifications receive this training to ensure they are familiar with minimum BMPs and issues/problems/solutions associated with commercial/industrial activities.

   Note – District staff did receive municipal NPDES training per the requirement of the NPDES permit. (See Attachment C)

Training	Training Description	Training Dates	Number of Attendees
Industrial/Commercial Training	Industrial/Commercial Facility Inspection	10/3/06	3
		Total	**3**

5. RESIDENTIAL
(SECTION H.3 of ORDER R9-2004-001)

The District does not have land use powers or jurisdiction to regulate residential activities.

6. EDUCATION
(SECTION I of ORDER R9-2004-001)

1) **Description of Education Efforts conducted by the Permittee (not collectively with other Permittees) during the previous year:**

The education programs described below were implemented as part of the Watershed SWMP requirements. Additional details regarding these programs are available in the Watershed SWMP Annual Report.

Audience	Measures Impressions are County-wide unless otherwise noted
Permittee Departments and Personnel	Number of Permittee employees trained for: • Construction Inspection: 12 • Industrial/Commercial Inspection: 3 • Municipal Facilities and Activities: 4 • Development Planning: 30
Construction Site Owners and Developers	Outreach events conducted: BIA Presentation (Temecula) Date: September 19, 2006
Industrial/Commercial Owners and Operators	Industrial/Commercial outreach conducted: SGA Home Improvement Stores 5 stores visited and training provided to 15 employees The Business Press (Trade paper) Date: 03/26/07 Impressions: 40,000
Residential Community, General Public, Other Public Agencies and Students	Number of Media Impressions in: • Newspaper: 0 • Website: 68,330: • Radio/TV: 0 • Billboards: 0 • Other: 7,079 • Materials: 72,274 Number of students: 3,884 Public Education events conducted: 5 # Attendees: 1,600

6. EDUCATION
(SECTION I of ORDER R9-2004-001)
CONTINUED

2) Assessment of Overall Program Effectiveness Based on the Measurable Goals Established in the Permittee's Individual SWMP:

Measurable goals for the public education program are defined in Section 10 of the District's Individual SWMP. However, because the District's jurisdiction covers the entire Santa Margarita Region and because the District is also required to implement the watershed-wide public education program, the District does not differentiate between education outreach efforts undertaken as part of the Watershed SWMP and Individual SWMP. Therefore, as stated in Section 10 of the District's Individual SWMP, the public education evaluation is contained in Sections G and J of the Watershed SWMP Annual Report. However, the metrics identified in the District's Individual SWMP are presented in the table on the previous page.

3) Additional Comments/Information:

As Principal Permittee, the District implements the public education program for the entire watershed. A detailed description of the regional public education program implemented by the District is contained in the Watershed SWMP Annual Report. The District generally reports all of its implemented education related activities in the Watershed SWMP.

Describe the major accomplishments of the Education Component over the past year.

See Watershed SWMP Annual Report.

Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Education Component:

See Watershed SWMP Annual Report.

7. ILLICIT DISCHARGE DETECTION AND ELIMINATION
(SECTION J of ORDER R9-2004-001)

1) **Number of Illicit Discharges, Connections and Spills Reported and/or Identified during the Reporting Period:**

   a. **Illicit Discharges (ID):** IC/ID Complaint files for complaints received by the District are included in Attachment F. In addition, the Watershed SWMP contains a Fire Department HazMat Response Team Report of other IC/ID responses acted upon directly by them.

   b. **Illicit Connections (IC):** In 1990, the District performed a detailed reconnaissance of its MS4 to identify potential illicit connections. A very small number of connections were identified. Since then, the District maintenance and construction inspectors have been trained to look for and report any illicit connections. In addition, the District requires entities wishing to connect non-stormwater discharges to its facilities to complete a Third-Party Non-Stormwater Discharge Application to ensure the discharge complies with the requirements of R9-2004-001. Discharge applications received by the District will be reported in future annual reports.

   c. **Spills (S):** Attachment F contains IC/ID complaint files, including spill notifications. In addition, the Watershed SWMP contains a report of illicit discharge spill responses by the Riverside County Fire Department Hazardous Materials Response Team.

2) **Number of Illicit Discharges or Connections Investigated during the Reporting Period and the Outcome of the Investigations:**

   Fifty-nine (59) IC/ID incidents were investigated during the reporting period. See summary reports in Appendix G.

   Number of IC/ID incidents in database for FY 06-07: 59
   Number of IC/ID incidents potentially involving District facilities: 11
   Number of IC/ID incidents requiring follow-up investigation: 5

3) **Number and Types of Enforcement Actions Taken for Illicit Discharges or Connections during the Reporting Period:**

   See Summary Report in Appendix G. Because the District's enabling act does not provide land-use powers, the District relies on combined legal authority with Co-Permittee's to control industrial, commercial or development activities within its jurisdiction. Any enforcement actions resulting from an IC/ID reported to the District would be taken by the respective Co-Permittee with jurisdiction. The District does maintain the ability to regulate third-party activities within its rights-of-way through encroachment permits, construction contracts and other legal agreements.

4) **Number of Times your Agency's Hotline was called during the Reporting Period, as Compared to Previous Reporting Periods.**

   The table below identifies the number of calls that were tracked by our 1-800 hotline. Do to a technical error, the call counters were not used during the FY 2004-2005 reporting period. The

7. ILLICIT DISCHARGE DETECTION AND ELIMINATION
(SECTION J of ORDER R9-2004-001)
CONTINUED

calls identified below for FY 2004-2005 only reflect the calls that were diverted to the District's front counter. The District has restored this service with the County Information Technology Department who hosts the hotline. These calls may have been for IC/ID, education outreach or other purposes.

	Number of Calls		
	2004-05	**2005-06**	**2006-07**
Water Pollution Hotline	100	2015	1648

5) Number and Location of Dry Weather Monitoring Sites that were Monitored during the Reporting Period:

The District maintains four IC/ID dry weather monitoring stations. These stations are identified below:

Number of Site(s): 4

Location(s): Santa Gertrudis Channel, Warm Springs Creek, Long Canyon Creek, Redhawk Channel

The exact location of these stations can be found in Section G-3.0 of the Santa Margarita Region Monitoring Annual Report (Appendix G).

6) Summary of Illicit Discharge Monitoring Program results, including: 1) All inspection, field screening and analytical monitoring results 2) All follow-up and elimination activities and 3) Any proposed changes to station locations and/or sampling frequencies:

The District conducts IC/ID dry weather monitoring at the four tributary stations. As a result, monitoring occurs more frequently than the minimum of two times required under the MRP.

All field screening and analytical monitoring results can be found in the Watershed SWMP Annual Report, Tables G-12 and G-31 for all four tributary stations: Long Canyon Creek, Santa Gertrudis Channel, Redhawk Channel and Warm Springs Creek.

Appendix H contains copies of inspection forms.

The District has developed numeric field screening criteria to determine whether a follow-up laboratory sample should be collected as summarized below:

- Specific conductance more than 25% higher than BPO
- Total dissolved solids more than 25% higher than BPO
- Turbidity more than 25% higher than long-term average

7. ILLICIT DISCHARGE DETECTION AND ELIMINATION
(SECTION J of ORDER R9-2004-001)
CONTINUED

- pH below 6 or above 9.5
- Dissolved oxygen below 4 mg/L
- Unusually low or high water temperature
- Sensory observations in the area of the discharge that indicates the presence of pollutants (e.g., staining, water sheen, water color and/or odor, algae, foaming)

Long-term averages for turbidity are still being established for comparison; it is expected that in the fourth-year report there will be sufficient data from four years of monitoring to develop reasonable comparisons.

Generally, during IC/ID field visits, visual observations and field screening did not indicate the presence of illicit connections or illegal discharges. Exemptions are summarized below:

Ponded water was observed at Redhawk Channel on September 14, 2006 and March 20, 2007. The field pH measured 9.4 and 9.8 pH units, respectively. The field pH measurement on March 20, 2007 warranted follow-up. No other specific signs of an IC/ID were noted on that day. A grab sample was taken on March 20, 2007. Laboratory analyses for the March 20, 2007 sample did not indicate any abnormal pollutant concentration that would indicate a potential illicit connection or illegal discharge to follow-up.

On August 28, 2007, as part of our IC/ID dry weather reconnaissance, field staff did notice abnormal flow at Long Canyon Wash. Staff observed flow originating from a business. It turned out to be a local businessman washing down a large coolant unit. The District staff person approached the individual regarding the discharge and asked him to cease his activities. The District staff person also forwarded a report to the City of Temecula for additional follow-up. City representatives followed up that day and again a few days later. Education regarding potential pollutants contained in the discharge and alternative approaches were discussed. The discharge has ceased.

No changes are proposed to the station locations and/or sampling frequencies.

7) An Assessment of Overall Program Effectiveness Based on the Measurable Goals Established in the Permittee's Individual SWMP:

The measurable goals are defined in Section 4.4 of the District's Individual SWMP. Specific measurable goal numbers will be established once a baseline condition had been determined for complaint calls and enforcement actions. The effectiveness of the dry weather monitoring program is addressed in Section G of the Watershed SWMP Annual Report. Three years worth of data should be sufficient to establish baselines.

In response to the Los Angeles RWQCB and the Ventura County MS4 Permit, CASQA prepared a letter identify proposed measures and goals to evaluate the effectiveness of the IC/ID Program. The measures are as follows:

- Percent (%) of IC/IDs responded to within 24 hours of receiving notice; and

7. ILLICIT DISCHARGE DETECTION AND ELIMINATION
(SECTION J of ORDER R9-2004-001)
CONTINUED

- Percent (%) of Illegal Connections eliminated or permitted once detected.

The goal identified for both measures were 80%. Based on our FY 2006-2007 IC/ID information, 98% of IC/ID incidents were responded to within 24 hours of receiving notice and 100% of Illegal Connection eliminated once detected. Only one (1) of the fifty-nine (59) incident were not responded to within 24 hours and there were no illegal connections identified.

8) **Additional Comments/Information:**

Describe the major accomplishments of the Illicit Discharge Detection and Elimination Component over the past year:

The District continues to improve its IC/ID program through refinements in our ability to track complaints, enhance our ability to gather important complaint related information through custom GIS graphic user interfaces (developed in late 2005) and efforts to enhance our coordination with other municipal agencies with authority to respond to complaints.

Summarize the internal and external education and outreach activities the Illicit Discharge Detection and Elimination Component has conducted over the past year:

During field investigations of complaint calls, field staff disseminates public education and outreach information to violators and adjacent residents/businesses. Other IC/ID education addressed through the public education program is described in the Watershed SWMP.

Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Illicit Discharge Detection and Elimination Component:

The District will continue to implement the program based on the recent improvements. Additional recommendations may be proposed for next year.

The District is also proposing to establish an electronic third-party discharge electronic reporting form and GIS layer that would allow us to quickly research known third-party discharges to our system as part of complaint call responses. Work on the system was intiated this year and may take 1-2 years to complete.

Other Comments:

N/A

8. PUBLIC PARTICIPATION

1) **A Description of Efforts to Include the Public Urban Runoff Management Programs during the Reporting Period (i.e., river clean-ups, volunteer monitoring, Permittee council meetings related to the SWMP, etc.):**

   Public involvement programs for this reporting period included:

   a) Technical Advisory Committee meetings held on a monthly basis and are open to the public.

   b) Watershed Clean-up events held on October 14, 2006.

   c) Participation in SMR Executive Management Team and Water Quality Monitoring Committee meetings.

2) **Additional Comments/Information:**

   There are no additional comments.

9. FISCAL ANALYSIS COMPONENT

Fiscal Analysis Component - each Permittee shall include an annual fiscal analysis, for each fiscal year covered by Order No. R9-2004-001, in its Individual Annual Report. This analysis shall evaluate the expenditures (such as capital, operation and maintenance, education, and administrative expenditures) necessary to accomplish the activities of the Permittee's Individual SWMP. The analysis shall include the following:

1) **A Report of the Previous Reporting Period's Budget and a Budget for the Upcoming Reporting Period. To the Extent Possible, the Budgets should be Broken Down by the following Programs:**

   Expenditures identified below reflect costs incurred by the District for implementing its own NPDES Program and for implementing the Regional Watershed Program. The District does not track its direct implementation costs separately nor does it track costs separately for many permit provisions. Costs are not directly tracked for the asterisked Program Elements identified below. However, a brief text description follows that identifies manpower requirements for those specific Program Elements.

Program Element	Fiscal Year 2005-2006		Fiscal Year 2006-2007	
	Capital Expenditures	O&M/Admin Expenditure	Capital Expenditures	O&M/Admin Expenditure
Program Management	N/A	$300,964	N/A	$439,800
Annual Fee for MS4 NPDES Permit	N/A	0	N/A	$4,000
Implementation Agreement Shared Cost	N/A	N/A	N/A	N/A
Construction Inspections*	N/A	~$10,000	N/A	~$10,000
Development Planning*	N/A	N/A	N/A	N/A
Industrial and Commercial Inspections	N/A	N/A	N/A	N/A
Illicit Connections & Illegal Discharges Program	N/A	N/A	N/A	N/A
Municipal Facilities and Activities	N/A	N/A	N/A	N/A
Public Education & Outreach	N/A	$63,547	N/A	$71,840
Monitoring Program	N/A	$78,251	N/A	$148,720
Other	N/A	$0	N/A	$0
Contributions to Other Programs	N/A	$121,725	N/A	$108,500
Total	**N/A**	**$574,487**	**N/A**	**$782,860**

9. FISCAL ANALYSIS COMPONENT
CONTINUED

Construction Inspection – The District's Construction Inspectors are trained to address construction related NPDES issues associated with District administered construction projects (storm drains, channels, levees, basins, etc.). They perform these inspections as part of their normal duties. The District's NPDES Section staff also has an individual assigned to review SWPPPs associated with District administered construction projects. The NPDES staff person also provides a training presentation on NPDES related construction issues at construction project pre-construction meetings for the benefit of the contractor. Costs for Construction Inspection permit obligations with the Santa Margarita Watershed are recovered from the District's ad-valorum tax revenues collected within the Santa Margarita Region of the County.

Development Planning – The District's Development Review staff are responsible for reviewing proposed development projects in the unincorporated Riverside County area for compliance with the SWMP, recommending conditions of approval relative to water quality/NPDES and reviewing preliminary Project-Specific WQMPs and associated plans within the unincorporated County. Costs incurred by the District's Development Review and Plan Check staff for Development Planning permit obligations are recovered via development review and plan check fees charged to the development proponent.

2) **A Description of the Source(s) of Funds that were Utilized during the Previous Fiscal Year and the Source(s) of Funds Proposed to Meet the Necessary Expenditures for the Subsequent Year, including Legal Restrictions on the use of such Funds.**

Source of Funds	Capital Expenditures	Percent of Total Program Funding	Restrictions on Use (if applicable)
Santa Margarita Watershed Benefit Assessment Fund	$384,000	56%	District NPDES compliance costs, excess funds used to fund regional NPDES activities.
Santa Margarita Watershed Permittee Implementation Agreement	$284,932	41%	Regional NPDES Compliance Programs.
Zone 7 Ad-Valorem Tax Revenue	~$10,000	1.5%	Costs associated with District's compliance with Municipal Construction component of Board Order R9-2004-001.
Developer Development Review/Plan Check Fees	Unknown	Unknown	Costs associated with review of proposed developments in the unincorporated County for compliance with the Development Planning provisions of Board Order R9-2004-001.
Spending Against Reserves	$0	0%	District NPDES Compliance Costs
Miscellaneous Revenue	~$10,000	1.5%	Interest, Other Misc.
TOTAL	**$688,932**	**100%**	

9. FISCAL ANALYSIS COMPONENT
CONTINUED

3) Additional Comments/Information:

The Permittees are working with other stakeholder groups to leverage funds for regional planning objectives including:

Prop 13/40/50 Grant Funds – Working cooperatively with San Diego County, Bureau of Reclamation and other stakeholders to implement a Watershed Management Plan for the Santa Margarita River Watershed.

Stormwater Monitoring Coalition – Partnering with other Southern California Coastal Watershed Research Project, other Southern California Counties and other stakeholders to fund monitoring projects to address high priority water quality issues including development of an appropriate bioassessment metric, determining natural background concentrations of several key pollutants in Southern California watersheds, developing Numeric Criteria for addressing Hydrologic Conditions of Concern, and funding a lab intercalibration study.

Santa Margarita Executive Management Team – Partnering with the Bureau of Land Management and other Santa Margarita Watershed stakeholders to develop water quality models of the Santa Margarita Watershed to help assess pollutant problems and sources within the Santa Margarita Watershed.

Mission Resource Conservation District – Partnering with local upper Santa Margarita stakeholders through the Mission Resource Conservation District to implement watershed education, monitoring, and clean up programs.

Santa Ana Watershed Project Authority – Jointly fund a LID BMP testing and demonstration facility

Southern California Coastal Watershed Research Project – Jointly fund a southern California wide study of hydromodification of southern California streams and assess possible mitigation measures.

10. NON-STORM WATER DISCHARGES

Permittees shall report on any discharge category listed in Requirement B.2 of Order No. R9-2004-001 that was identified as a source of pollutants during the reporting period. For each identified category, the Permittee shall report whether it elected to prohibit the discharge or to require BMPs to reduce pollutants in the discharge to the MEP. If the discharge is not prohibited, the BMPs that will be implemented, or required to be implemented, shall be described in each Permittee's Individual SWMP Annual Report.

Category	Prohibited	BMP to be Implemented
Diverted stream flows	☐ Yes ☒ No	Not Applicable, no applications
Rising ground waters	☐ Yes ☒ No	Not Applicable, no applications
Uncontaminated ground water infiltration [as defined at 40CFR35.2005(20)] to MS4s	☐ Yes ☒ No	Not Applicable, no applications
Uncontaminated pumped ground water	☐ Yes ☒ No	Not Applicable, no applications
Foundation drains	☐ Yes ☒ No	Not Applicable, no applications
Springs	☐ Yes ☒ No	Not Applicable, no applications
Water from crawl space pumps	☐ Yes ☒ No	Not Applicable, no applications
Footing drains	☐ Yes ☒ No	Not Applicable, no applications
Air conditioning condensation	☐ Yes ☒ No	Not Applicable, no applications
Flows from riparian habitats and wetlands	☐ Yes ☒ No	Not Applicable, no applications
Water line flushing	☐ Yes ☒ No	Not Applicable, no applications
Landscape irrigation	☐ Yes ☒ No	Not Applicable, no applications
Discharges from potable water sources not subject to NPDES Permit No. CAG679001, other than water main breaks	☐ Yes ☒ No	Not Applicable, no applications
Irrigation water	☐ Yes ☒ No	Not Applicable, no applications
Lawn watering	☐ Yes ☒ No	Not Applicable, no applications
Individual residential car washing	☐ Yes ☒ No	Not Applicable, no applications
Non-emergency fire fighting flows	☐ Yes ☒ No	Not Applicable, no applications
Dechlorinated swimming pool discharges	☐ Yes ☒ No	Not Applicable, no applications

10. NON-STORM WATER DISCHARGES
CONTINUED

Additional Comments/Information:

The District requires a Third-Party Non-Stormwater Discharge Application to be completed for any encroachment involving a non-stormwater discharge into District facilities. The application requires the applicant to characterize the discharge, including a chemical analysis of the flow when possible. Where the discharges would contain contaminants exceeding receiving water standards, BMPs are required or the specific discharge would be prohibited. No evidence has been identified to date that would indicate that a specific class, or classes, of allowable non-stormwater discharges are persistent sources of pollution per Requirement B.2.

11. RECEIVING WATER LIMITATIONS

This section includes the report required pursuant to Requirement C.2.a. of Order No. R9-2004-001, if applicable.

Requirement C.2.a. states:

"Upon a determination by either a Permittee or the SDRWQCB that MS4 discharges are causing or contributing to an exceedance of an applicable water quality standard, the Permittee shall promptly notify and thereafter submit a report to the SDRWQCB that describes BMPs that are currently being implemented and additional BMPs that will be implemented to prevent or reduce any pollutants that are causing or contributing to the exceedance of water quality standards. The report may be incorporated in the SWMP Annual Report unless the SDRWQCB directs an earlier submittal. The report shall include an implementation schedule. The SDRWQCB may require modifications to the report."

The District has not identified any pollutants that are contributing to an exceedance of an applicable receiving water standard. A detailed review of monitoring data is included in the Watershed SWMP.

12. ADDITIONAL URBAN RUNOFF DATA

This Section is a Summary of all Urban Runoff Related Data not included in the Annual Monitoring Report (e.g., special investigations).

The District did not collect any supplemental data that is not reported in the Annual Monitoring Report.

13. PROPOSED REVISIONS

This Section Includes Proposed Revisions to the Individual SWMP, Including Areas in Need of Improvement Based on the Assessment of Effectiveness of Each Program Component.

The following amendments have been made to the District's Individual SWMP:

Municipal Section 5.1 (Planning District Facilities) of the Individual SWMP has been modified to ensure site design and source control BMPs are considered during the planning and design stages of all District administered MS4 capital improvement projects.

The explainations of these revisions are described further in the applicable program section of this report. The proposed revisions are included in Attachment G.

OWNER'S CERTIFICATION

This project-specific Water Quality Management Plan (WQMP) has been prepared for:

Salvatore Properties by Hunsaker & Associates Irvine Inc. for the development known as Tentative Tract Map 32778, located immediately south of Anza Road near Rio Linda Road in the unincorporated area of Riverside County (Assessor's Parcel Number 952-250-005).

This WQMP is intended to comply with the requirements of the county of Riverside for Tentative Tract Map 32778, which includes the requirement for the preparation and implementation of a project-specific WQMP.

The undersigned, while developing the property/project described in the preceding paragraph, shall be responsible for the implementation of this WQMP and will ensure that this WQMP is amended as appropriate to reflect up-to-date conditions on the site. This WQMP will be reviewed with the facility operator, facility supervisors, employees, tenants, maintenance and service contractors, or any other party (or parties) having responsibility for implementing portions of this WQMP. At least one copy of this WQMP will be maintained at the project site or project office in perpetuity.

The undersigned is authorized to certify and to approve implementation of this WQMP. The undersigned is aware that implementation of this WQMP is enforceable under the *County of Riverside Water Quality Management Plan for Urban Runoff* (Order No. R8-2002-0011, NPDES No. CAS 618033 adopted by the Santa Ana Regional Water Quality Control Board on October 25, 2002).

If the undersigned transfers its interest in the subject property/project, its successor in interest the undersigned shall notify the successor in interest of its responsibility to implement this WQMP.

"I certify under penalty of law that the provision of this WQMP have been reviewed and accepted and that the WQMP will be transferred to future successors in interest."

APPENDICES

A. CONDITIONS OF APPROVAL

B. VICINITY MAP AND SITE PLAN

C. SUPPORTING DETAIL RELATED TO HYDRAULIC CONDITIONS OF CONCERN (IF APPLICABLE)

D. EDUCATIONAL MATERIALS

E. SOILS REPORT (IF APPLICABLE)

F. TREATMENT CONTROL BMP SIZING CALCULATIONS AND DESIGN DETAILS

G. AGREEMENTS – CC&RS, COVENANT AND AGREEMENTS AND/OR OTHER MECHANISMS FOR ENSURING ONGOING OPERATION, MAINTENANCE, FUNDING AND TRANSFER OF REQUIREMENTS FOR THIS PROJECT-SPECIFIC WQMP

H. PHASE 1 ENVIRONMENTAL SITE ASSESSMENT – SUMMARY OF SITE REMEDIATION CONDUCTED AND USE RESTRICTIONS

I. Project Description

The project description shall completely and accurately describe in narrative form, and with supporting figures (maps or exhibits), where facilities will be located, what activities will be conducted and where, what kinds of materials will be used and/or stored, how and where materials will be delivered, and the types of wastes that will be generated. The following required information has been described and/or addressed in this "Project Description" section of this project-specific WQMP:

- Project owner and WQMP preparer;
- Project location;
- Project size;
- Standard Industrial Classification (SIC), if applicable;
- Location of facilities;
- Activities and location of activities;
- Materials Storage and Delivery Areas;
- Wastes generated by project activities.

Tentative Tract Map No. 32778 is located immediately south of Anza Road near Rio Linda Road in the County of Riverside (see Appendix B for the Vicinity Map and Site Plan). The tentative tract map by Hunsaker & Associates Irvine, Inc. (Hunsaker) proposes 44 single-family residential lots with lot sizes from approximately 7,200 to 16,500 gross square feet. The project site is currently undeveloped and slopes towards the north. An undeveloped hillside south of the site contributes off-site surface runoff towards the site. Under pre-development conditions, the on- and off-site runoff surface flows northerly towards Anza Road.

TTM 32778 will maintain the tributary runoff in a northerly direction. Independent storm drain systems are proposed within the development to prevent co-mingling of on- and off-site runoff. One system will convey the on-site runoff within the development footprint to a water quality/detention basin within the northern portion of the site. Another system will convey off-site tributary runoff westerly through an adjacent tract.

Project Developer: Salvatore Properties, Inc.
400 South Ramona Avenue, Suite 212
Corona, CA 92879
(951) 735-6122

WQMP Preparer: Hunsaker & Associates Irvine, Inc.
43460 Ridge Park Drive, Suite 220
Temecula, CA 92590
(951) 352-7200

Project Site Address: South of Anza Road near Rio Linda Road
Riverside, CA 92592

Planning Area/ Community Name: Southwest Area Land Use Plan

APN Number(s): 952-250-005

Thomas Bros. Map: 2006 Edition, Page 980, B-4

Project Watershed: Santa Margarita Hydrologic Unit (902.00)

Sub-watershed: Pechanga Hydrologic Area (902.50), Pauba Hydrologic Subarea (902.51)

Project Site Size: 20.42 acres

Standard Industrial Classification (SIC) Code: N/A

Formation of Home Owners' Association (HOA) or Property Owners Association (POA): Yes

Additional Permits/Approvals required for the Project:

Agency	Permit required (yes or no)
State Department of Fish and Game, 1601 Streambed Alteration Agreement	No
State Water Resources Control Board, Clean Water Act (CWA) section 401 Water Quality Certification	No
US Army Corps of Engineers, CWA section 404 permit	No
US Fish and Wildlife, Endangered Species Act section 7 biological opinion	No
Other *(please list in the space below as required)*	N/A

Appendix A of this project-specific WQMP shall include a complete copy of the final Conditions of Approval, when available. Appendix B of this project-specific WQMP includes:

1. A Vicinity Map identifying the project site and surrounding planning areas in sufficient detail to allow the project site to be plotted on Co-Permittee base mapping; and
2. A Site Plan for the project. The Site Plan included as part of Appendix B depicts the following project features:
   - Location and identification of all structural BMPs, including Treatment Control BMPs;
   - Landscaped areas;
   - Paved areas and intended uses (i.e., parking, outdoor work area, outdoor material storage area, sidewalks, patios, tennis courts, etc.);
   - Number and type of structures and intended uses (i.e., buildings, tenant spaces, dwelling units, community facilities such as pools, recreation facilities, tot lots, etc.);
   - Infrastructure (i.e., streets, storm drains, etc.) that will revert to public agency ownership and operation;
   - Location of existing and proposed public and private storm drainage facilities (i.e., storm drains, channels, basins, etc.), including catch basins and other inlets/outlet structures. Existing and proposed drainage facilities should be clearly differentiated;
   - Location(s) of Receiving Waters to which the project directly or indirectly discharges;
   - Location of points where onsite (or tributary offsite) flows exit the property/project site;
   - Proposed drainage areas boundaries, including tributary offsite areas, for each location where flows exits the property/project site. Each tributary area should be clearly denoted;
   - Pre- and post-project topography.

A Homeowner's Association will be established for the project. The CC&Rs, Covenant and Agreements, and/or other mechanisms for ongoing operation, maintenance, funding, transfer and implementation of the project-specific WQMP requirements shall be included in Appendix G, when available.

II. Site Characterization

Land Use Designation or Zoning:	R-A-20 (existing), R-1 (proposed)
Current Property Use:	Vacant
Proposed Property Use:	Single-family residential, 44 lots
Availability of Soils Report:	N/A. No infiltration basins proposed.
Phase 1 Site Assessment:	N/A

Receiving Waters for Urban Runoff from Site

Receiving Waters	303(d) List Impairments	Designated Beneficial Uses[1]	Proximity to RARE Beneficial Use
Unnamed minor stream and storm drain system	N/A	N/A	N/A
Temecula Creek	N/A	MUN, AGR, IND, PROC, GWR, REC1, REC2, WARM, WILD	N/A
Santa Margarita River	Phosphorus	MUN, AGR, IND, REC1, REC2, WARM, COLD, WILD	Designated in the River, not location-specific

[1]Beneficial use categories are defined in the *Water Quality Control Plan, San Diego River Basin.*

III. Pollutants of Concern

Potential pollutants associated with Urban Runoff from the proposed project must be identified. Exhibit B of the *Riverside County WQMP for Urban Runoff* provides brief descriptions of typical pollutants associated with Urban Runoff and a table that associates typical potential pollutants with types of development (land use). It should be noted that at the Co-Permittees discretion, the Co-Permittees may also accept updated studies from the California Association of Stormwater Quality Agencies (CASQA), USEPA, SWRCB and/or other commonly accepted agenoies/associations acceptable to the Co-Permittee for determination of Pollutants of Concern associated with given land use. Additionally, in identifying Pollutants of Concern, the presence of legacy pesticides, nutrients, or hazardous substances in the site's soils as a result of past uses and their potential for exposure to Urban Runoff must be addressed in project-specific WQMPs. The Co-Permittee may also require specific pollutants commonly associated with urban runoff to be addressed based on known problems in the watershed. The list of potential Urban Runoff pollutants identified for the project must be compared with the pollutants identified as causing an impairment of Receiving Waters, if any. To identify pollutants impairing proximate Receiving Waters, each project proponent preparing a project-specific WQMP shall, at a minimum, do the following:

1. For each of the proposed project discharge points, identify the proximate Receiving Water for each discharge point, using hydrologic unit basin numbers as identified in the most recent version of the Water Quality Control Plan for the Santa Ana River Basin or the San Diego Region.
2. Identify each proximate identified above that is listed on the most recent list of Clean Water Act Section 303(d) list of impaired water bodies, which can be found at website www.swrcb.ca.gov/tmdl/303d_lists.html. List all pollutants for which the proximate Receiving Waters are impaired.
3. Compare the list of pollutants for which the proximate Receiving Waters are impaired with the pollutants expected to be generated by the project.

Urban Runoff Pollutants:

The following table lists pollutants of concern that can potentially exist at the proposed site. The pollutants are from the Riverside County WQMP.

Type of Development (Land Use)	Sediment/ Turbidity	Nutrients	Organic Compounds	Trash & Debris	Oxygen Demanding Substances	Bacteria & Viruses	Oil & Grease	Pesticides	Metals
Detached Residential	E	E	N	E	E	E	E	E	N
Streets, Highways & Freeways	E	P(1)	E(4)	E	P(1)	P(6)	E	P(1)	E

E = Expected P = Potential N = Not Expected

(1) A potential pollutant if landscaping or open area exists on the project site
(2) A potential pollutant if the project includes uncovered parking areas
(3) A potential pollutant if land use involves animal waste
(4) Specifically, petroleum hydrocarbons
(5) Specifically, solvents
(6) Bacterial indicators are routinely detected in pavement runoff

The receiving waters and their impairments are identified in the previous section. The only receiving water that is 303(d) impaired is the Santa Margarita River, which is several miles below the project site. This is impaired for phosphorus, which are nutrients. Primary sources of nutrients in urban runoff are fertilizers and eroded soils. Educational material will be provided to the Homeowner's Association regarding fertilizers. The landscape maintenance staff will be educated as to the proper selection, use, and application of fertilizers. Eroded soils will be reduced by the project because it will reduce the amount of bare soil exposed to runoff.

IV. Hydrologic Conditions of Concern

Impacts to the hydrologic regime resulting from the Project may include increased runoff volume and velocity; reduced infiltration; increased flow frequency, duration, and peaks; faster time to reach peak flow; and water quality degradation. Under certain circumstances, changes could also result in the reduction in the amount of available sediment for transport; and storm flows could fill this sediment-carrying capacity by eroding the downstream channel. These changes have the potential to permanently impact downstream channels and habitat integrity. A change to the hydrologic regime of a Project's site would be considered a hydrologic condition of concern if the change would have a significant impact on downstream erosion compared to the pre-development condition or have significant impacts on stream habitat, alone or as part of a cumulative impact from development in the watershed.

This project-specific WQMP must address the issue of Hydrologic Conditions of Concern unless one of the following conditions is met:

- **Condition A:** Runoff from the Project is discharged directly to a publicly-owned, operated and maintained MS4; the discharge is in full compliance with Co-Permittee requirements for connections and discharges to the MS4 (including both quality and quantity requirements); the discharge would not significantly impact stream habitat in proximate Receiving Waters; and the discharge is authorized by the Co-Permittee.
- **Condition B:** The project disturbs less than 1 acre. The disturbed area calculation should include all disturbances associated with larger plans of development.
- **Condition C:** The project's runoff flow rate, volume, velocity and duration for the post-development condition do not exceed the pre-development condition for the 2-year, 24-hour and 10-year 24-hour rainfall events. This condition can be achieved by minimizing impervious area on a site and incorporating other site-design concepts that mimic pre-development conditions. This condition must be substantiated by hydrologic modeling methods acceptable to the Co-Permittee.

The storm water runoff from the project and its tributary areas discharges into a natural surface conveyance on the north side of the site. The project will implement site design, source control, and treatment control BMPs to mitigate for the HCOC. These BMPs are described in the following section and consist primarily of a combined detention/water quality basin that will attenuate and treat all on-site runoff. The basin will reduce the peak flow rate and filter storm runoff from the site in order to prevent significant off-site impacts. This is essentially the same as increased runoff mitigation. Mitigation of HCOC's requires attenuation of the 2-year, 24-hour and the 10-year, 24-hour storms to pre-developed rates. The 10-yr, 24 hour storm detention volume has been determined for the tentative review. As the basin is proposed to mitigate water quality as well as increased runoff/HCOC's, the preliminary basin sizing has been based on the combination of the 10-year, 24-hour volume and the water quality volume (Vbmp). Appendix C contains supporting information on the HCOC's.

V. Best Management Practices

V.1 SITE DESIGN BMPS

Project proponents shall implement Site Design concepts that achieve each of the following:

1) Minimize Urban Runoff
2) Minimize Impervious Footprint
3) Conserve Natural Areas
4) Minimize Directly Connected Impervious Areas (DCIAs)

The project proponent should identify the specific BMPs implemented to achieve each Site Design concept and provide a brief explanation for those Site Design concepts considered not applicable. See Section 4.5.1 of the WQMP for additional guidance on Site Design BMPs.

If a particular Site Design BMP concept is found to be not applicable, please provide a brief explanation as to why the concept cannot be implemented. Also provide a narrative describing how each ***included*** BMP will be implemented. In those areas, where Site Design BMPs require ongoing maintenance, the inspection and maintenance frequency, the inspection criteria, and the entity or party responsible for implementation, maintenance, and/or inspection shall be described. The location of each Site Design BMP must also be shown on the WQMP Site Plan included in Appendix B.

Table 1. Site Design BMPs

			Included	
Design Concept	**Technique**	**Specific BMP**	**yes**	**no**
Site Design Concept 1	Minimize Urban Runoff			
		Maximize the permeable area (See Section 4.5.1 of the WQMP).	X	
		Incorporate landscaped buffer areas between sidewalks and streets.		X
		Maximize canopy interception and water conservation by preserving existing native trees and shrubs, and planting additional native or drought tolerant trees and large shrubs.	X	
		Use natural drainage systems.	X	
		Where soils conditions are suitable, use perforated pipe or gravel filtration pits for low flow infiltration.		X
		Construct onsite ponding areas or retention facilities to increase opportunities for infiltration consistent with vector control objectives.	X	
		Other comparable and equally effective site design concepts as approved by the Co-Permittee (Note: Additional narrative required to describe BMP and how it addresses Site Design concept).		X

The development will contain some slope areas around portions of its perimeter and between some lots, which will maximize the permeable area. The small lot sizes do not support landscaped buffer areas between the sidewalks and streets. However, landscaped buffer areas will be provided between the proposed homes and pavement areas. Drought tolerant landscaping will be used, where possible. Additionally, an on-site water quality basin serving nearly all of the proposed residential areas has been incorporated into the site design. The water quality basin and perimeter channels will allow for some infiltration of runoff. A separate storm drain system will be used to convey off-site runoff through the development without commingling with on-site runoff within the development footprint.

Table 1. Site Design BMPs (Cont.)

			Included	
Design Concept	**Technique**	**Specific BMP**	**Yes**	**no**
Site Design Concept 2	Minimize Impervious Footprint			
		Maximize the permeable area (See Section 4.5.1 of the WQMP).	X	
		Construct walkways, trails, patios, overflow parking lots, alleys, driveways, low-traffic streets and other low -traffic areas with open-jointed paving materials or permeable surfaces, such as pervious concrete, porous asphalt, unit pavers, and granular materials.	X	
		Construct streets, sidewalks and parking lot aisles to the minimum widths necessary, provided that public safety and a walk able environment for pedestrians are not compromised.	X	
		Reduce widths of street where off-street parking is available.		N/A
		Minimize the use of impervious surfaces, such as decorative concrete, in the landscape design.	X	
		Other comparable and equally effective site design concepts as approved by the Co-Permittee (Note: Additional narrative required describing BMP and how it addresses Site Design concept).		X
Site Design Concept 3	Conserve Natural Areas			
		Conserve natural areas (See WQMP Section 4.5.1).	X	
		Maximize canopy interception and water conservation by preserving existing native trees and shrubs, and planting additional native or drought tolerant trees and large shrubs.	X	
		Use natural drainage systems.	X	
		Other comparable and equally effective site design concepts as approved by the Co-Permittee (Note: Additional narrative required describing BMP and how it addresses Site Design concept).		X

As indicated above, the development density is reduced by the proposed slopes, which allows the permeable area to be maximized. Homeowner's will be given informational materials on the use of permeable landscaping materials. The street width has been minimized to reduce impervious area, and off-street parking lots are not being proposed. Impervious areas will only be constructed where necessary for homes, streets, and sidewalks. Natural drainages will be created along some perimeter areas of the site. Proposed landscaping in common areas will be drought tolerant to the extent practicable.

Table 1. Site Design BMPs (Cont.)

Design Concept	Technique	Specific BMP	Included yes	Included no
Site Design Concept 4	Minimize Directly Connected Impervious Areas (DCIAs)	Residential and commercial sites must be designed to contain and infiltrate roof runoff, or direct roof runoff to vegetative swales or buffer areas, where feasible.	X	
		Where landscaping is proposed, drain impervious sidewalks, walkways, trails, and patios into adjacent landscaping.	X	
		Increase the use of vegetated drainage swales in lieu of underground piping or imperviously lined swales.	X	
		Rural swale system: street sheet flows to vegetated swale or gravel shoulder, curbs at street corners, culverts under driveways and street crossings.	N/A	
		Urban curb/swale system: street slopes to curb; periodic swale inlets drain to vegetated swale/biofilter.	X	
		Dual drainage system: First flush captured in street catch basins and discharged to adjacent vegetated swale or gravel shoulder, high flows connect directly to MS4s.		X
		Design driveways with shared access, flared (single lane at street) or wheel strips (paving only under tires); or, drain into landscaping prior to discharging to the MS4.	X	
		Uncovered temporary or guest parking on private residential lots may be paved with a permeable surface, or designed to drain into landscaping prior to discharging to the MS4.	X	
		Where landscaping is proposed in parking areas, incorporate landscape areas into the drainage design.	N/A	
		Overflow parking (parking stalls provided in excess of the Co-Permittee's minimum parking requirements) may be constructed with permeable paving.	N/A	
		Other comparable and equally effective design concepts as approved by the Co-Permittee (Note: Additional narrative required describing BMP and how it addresses Site Design concept).		X

The residential development will seek to minimize directly connected drainage systems. Site runoff will be directed to landscape areas to the maximum extent practicable. A water quality basin will treat the majority of the surface runoff leaving the residential areas including streets and driveways. A minimal underground storm drain system is being proposed. Off-site runoff will be conveyed independently through the site to avoid co-mingling with untreated on-site runoff from the development footprint.

V.2 SOURCE CONTROL BMPS

Table 2. Source Control BMPs

BMP Name	Check One		If not applicable, state brief reason
	Included	Not Applicable	
Non-Structural Source Control BMPs			
Education for Property Owners, Operators, Tenants, Occupants, or Employees	X		
Activity Restrictions	X		
Irrigation System and Landscape Maintenance	X		
Common Area Litter Control	X		
Street Sweeping Private Streets and Parking Lots	X		
Drainage Facility Inspection and Maintenance	X		
Structural Source Control BMPs			
MS4 Stenciling and Signage	X		
Landscape and Irrigation System Design	X		
Protect Slopes and Channels	X		
Provide Community Car Wash Racks		X	Project is not car wash
Properly Design:			
Fueling Areas		X	Not proposed at site
Air/Water Supply Area Drainage		X	Not proposed at site
Trash Storage Areas		X	Not proposed at site
Loading Docks		X	Not proposed at site
Maintenance Bays		X	Not proposed at site
Vehicle and Equipment Wash Areas		X	Not proposed at site
Outdoor Material Storage Areas		X	Not proposed at site
Outdoor Work Areas or Processing Areas		X	Not proposed at site
Provide Wash Water Controls for Food Preparation Areas		X	Not proposed at site

Each property owner will be provided with an informational packet outlining water quality objectives, requirements, and activity restrictions. This will be enforced by the Homeowner's Association. An efficient irrigation system will be designed for the project and appropriate landscaping materials will be incorporated into the site design. Street sweeping and drainage facility inspections and maintenance will be performed by the responsible party at least semi-annually. All catch basins will be stenciled. All proposed slopes and channels will be vegetated to prevent erosion.

The location of each structural Source Control BMP is shown on the WQMP Site Plan included in Appendix B.

Appendix D includes copies of the educational materials that will be used in implementing this project-specific WQMP.

V.3 TREATMENT CONTROL BMPS

Directions for completing Table 3: Treatment Control BMP Selection Matrix

For each pollutant of concern enter "yes" if identified using Exhibit B (Riverside County WQMP - General Categories of Pollutants of Concern per the instructions specified in Section III of this Template), or "no" if not identified for the project. Check the boxes of selected BMPs that will be implemented for the project to address each pollutant of concern from the project as identified using Exhibit B. Treatment Control BMPs must be selected and installed with respect to identified pollutant characteristics and concentrations that will be discharged from the site. For any identified pollutants of concern not listed in the Treatment Control BMP Selection Matrix, provide an explanation of how they will be addressed by Treatment Control BMPs.

For identified pollutants of concern that are **causing an impairment in receiving waters**, the project WQMP shall incorporate one or more Treatment Control BMPs of medium or high effectiveness in reducing those pollutants. It is the responsibility of the project proponent to demonstrate, and document in the project WQMP, that all pollutants of concern will be fully addressed. The Agency may require information beyond the minimum requirements of this WQMP to demonstrate that adequate pollutant treatment is being accomplished.

In addition to completing the Selection Matrix, provide detailed descriptions on the location, implementation, installation, and long-term O&M of planned Treatment Control BMPs.

Note: Projects that will utilize infiltration-based Treatment Control BMPs (e.g., Infiltration Basins, Infiltration Trenches, Porous Pavement) must include a copy of the property/project soils report to the project-specific WQMP. The selection of a Treatment Control BMP (or BMPs) for the project must specifically consider the effectiveness of the Treatment Control BMP for pollutants identified as causing an impairment of Receiving Waters to which the project will discharge Urban Runoff.

Table 3: Treatment Control BMP Selection Matrix

Pollutant of Concern		Treatment Control BMP Categories[9]							
		Veg. Swale /Veg. Filter Strips	Detention Basins[2]	Infiltration Basins & Trenches/Porous Pavement[3][10]	Wet Ponds or Wetlands	Sand Filter or Filtration	Water Quality Inlets	Hydrodynamic Separator Systems [4]	Manufactured/ Proprietary Devices

Yes/No?	Yes	X	X						
Oxygen Demanding Substances		L	M	H/M	H/M	H/M	L	L	U
Yes/No?	Yes	X	X						
Bacteria & Viruses		U	U	H/M	U	H/M	L	L	U
Yes/No?	Yes	X	X						
Oils & Grease		H/M	M	U	U	H/M	M	L/M	U
Yes/No?	Yes	X	X						
Pesticides (non-soil bound)		U	U	U	U	U	L	L	U
Yes/No?	Yes	X	X						
Metals		H/M	M	H	H	H	L	L	U
Yes/No?	Yes	X	X						

Abbreviations:

L: Low removal efficiency H/M: High or medium removal efficiency U: Unknown removal efficiency

Notes:

(1) Periodic performance assessment and updating of the guidance provided by this table may be necessary.

(2) Includes grass swales, grass strips, wetland vegetation swales, and bio-retention.

0000624

(3) Includes extended/dry detention basins with grass lining and extended/dry detention basins with impervious lining. Effectiveness based upon minimum 36-48-hour drawdown time.

(4) Includes infiltration basins, infiltration trenches, and porous pavements.

(5) Includes permanent pool wet ponds and constructed wetlands.

(6) Includes sand filters and media filters.

(7) Also known as hydrodynamic devices, baffle boxes, swirl concentrators, or cyclone separators.

(8) Includes proprietary stormwater treatment devices as listed in the CASQA Stormwater Best Management Practices Handbooks, other stormwater treatment BMPs not specifically listed in this WQMP, or newly developed/emerging stormwater treatment technologies.

(9) Project proponents should base BMP designs on the Riverside County Stormwater Quality Best Management Practice Design Handbook. However, project proponents may also wish to reference the California Stormwater BMP Handbook – New Development and Redevelopment (www.cabmphandbooks.com). The Handbook contains additional information on BMP operation and maintenance.

(10) Note: Projects that will utilize infiltration-based Treatment Control BMPs (e.g., Infiltration Basins, Infiltration Trenches, Porous Pavement) must include a copy of the property/project soils report as an appendix the project-specific WQMP. The selection of a Treatment Control BMP (or BMPs) for the project must specifically consider the effectiveness of the Treatment Control BMP for pollutants identified as causing an impairment of Receiving Waters to which the project will discharge Urban Runoff.

A water quality basin is the primary BMP to be implemented at the site. The majority of the surface runoff from the residential development will be directed to the basin for filtration prior to entering the receiving facilities. In addition, grass-lined and vegetated swales should be provided, where possible, in the landscape areas and along some portions of the site perimeter for filtration. Supporting engineering calculations for the volume-based BMP, V_{BMP}, are included in Appendix F. This basin and landscaping will be maintained by the Homeowner's Association. The water quality basin will also prevent an increase in runoff from the site. The basin will provide water quality benefits as indicated in the above table.

V.4 EQUIVALENT TREATMENT CONTROL ALTERNATIVES

Not Applicable.

V.5 REGIONALLY-BASED TREATMENT CONTROL BMPS

Not Applicable.

VI. Operation and Maintenance Responsibility for Treatment Control BMPs

Operation and maintenance (O&M) requirements for all structural Source Control and Treatment Control BMPs shall be identified in the project-specific WQMP. The project-specific WQMP shall address the following:

- Identification of each BMP that requires O&M.
- Thorough description of O&M activities, the O&M process, and the handling and placement of any wastes.
- BMP start-up dates.
- Schedule of the frequency of O&M for each BMP.
- Identification of the parties (name, address, and telephone number) responsible for O&M, including a written agreement with the entities responsible for O&M. This agreement can take the form of a Covenant and Agreement recorded by the Project Proponent with the County Recorder, HOA or POA CC&Rs, formation of a maintenance district or assessment district or other instrument sufficient to guarantee perpetual O&M. The preparer of this project-specific WQMP should carefully review Section 4.6 of the WQMP prior to completing this section of the project-specific WQMP.
- Self-inspections and record-keeping requirements for BMPs (review local specific requirements regarding self-inspections and/or annual reporting), including identification of responsible parties for inspection and record- keeping.
- Thorough descriptions of water quality monitoring, if required by the Co-Permittee.

A water quality basin will be provided at the northerly portion of the site. The basin will be constructed as part of the project. All significant surface runoff from the residential development will be directed to the basin for filtration. Contact with vegetation in the basin improves water quality by plant uptake of pollutants, removal of sediment, and an increase in infiltration. Pollutants are removed by filtering and through settling of sediment and other solid particles as the design flow passes through the vegetation. The vegetation will require regular landscape maintenance. Maintenance requirements typically include activities such as irrigation, mowing, trimming, removal of invasive species, and replanting when necessary. The basin will be inspected and maintained by the Homeowner's Association as part of the routine landscape maintenance. Water quality monitoring is not required.

VII. Funding

A funding source or sources for the O&M of each Treatment Control BMP identified in the project-specific WQMP must be identified. By certifying the project-specific WQMP, the Project applicant is certifying that the funding responsibilities have been addressed and will be transferred to future owners. One example of how to adhere to the requirement to transfer O&M responsibilities is to record the project-specific WQMP against the title to the property.

The water quality basin and other BMPs will be initially installed by the developer. Ongoing maintenance will be the responsibility of the Homeowner's Association's landscaping staff.

Appendix C

Supporting Detail Related to Hydraulic Conditions of Concern

February 9, 2007

Mitigation of HCOC's requires attenuation of the 2-year, 24-hour and the 10-year, 24-hour storms to pre-developed rates. The 10-year, 24 hour storm is required for tentative review. Since the basin is proposed to mitigate water quality as well as increased runoff/HCOC's, preliminary basin sizing shall be based on the 10-year, 24 hour volume and the water quality volume (Vbmp).

The February 9, 2007, *Drainage Study for Tentative Tract Map No. 32778,* by Hunsaker & Associates contains 10-year, 24-hour detention analyses. The CivilDesign Unit Hydrograph program determined that the on-site proposed condition 10-year, 24-hour flow rate is 6.5 cfs, and the existing condition flow rate is 4.0 cfs. These results were input into a HEC-1 analysis to determine the conceptual detention volume necessary to reduce the flow rate from 6.5 to 4.0 cfs. The results indicate that at least 0.6 acre-feet will be required to achieve the detention. The ultimate storage volume will need to be larger than this to account for freeboard and the outlet works design.

Appendix F in this report contains water quality volume sizing. The results show that the treatment volume must be at least 0.55 acre-feet. The combined detention/water quality basin has been sized based on the 10-year, 24-hour detention analyses and the water quality sizing.

Model Landscape Ordinance

Section 490. Purpose

The State Legislature has found:

- that the limited supply of state waters are subject to ever increasing demands;
- that California's economic prosperity depends on adequate supplies of water;
- that state policy promotes conservation and efficient use of water;
- that landscapes provide recreation areas, clean the air and water, prevent erosion, offer fire protection, and replace ecosystems displaced by development; and
- that landscape design, installation, and maintenance can and should be water efficient.

Consistent with the legislative findings, the purpose of this model ordinance is to:

- promote the values and benefits of landscapes while recognizing the need to invest water and other resources as efficiently as possible;
- establish a structure for designing, installing, and maintaining water efficient landscapes in new projects; and
- establish provisions for water management practices and water waste prevention for established landscapes.

Authority cited: Sections 65591.5, 65594, Gov. Code. Reference: Sections 65591, 65591.5, 65597, Gov. Code.

Model Landscape Ordinance

Section 491. Definitions

The words used in this ordinance have the meaning set forth below:

"anti-drain valve" or "check valve" means a valve located under a sprinkler head to hold water in the system so it minimizes drainage from the lower elevation sprinkler heads.

"application rate" means the depth of water applied to a given area, usually measured in inches per hour.

"applied water" means the portion of water supplied by the irrigation system to the landscape.

"automatic controller" means a mechanical or solid state timer, capable of operating valve stations to set the days and length of time of a water application.

"backflow prevention device" means a safety device used to prevent pollution or contamination of the water supply due to the reverse flow of water from the irrigation system.

"conversion factor (0.62)" means a number that converts the maximum applied water allowance from acre-inches per acre per year to gallons per square foot per year. The conversion factor is calculated as follows:

- (325,851 gallons/ 43,560 square feet)/12 inches = (0.62)
- 325,851 gallons = one acre foot
- 43,560 square feet = one acre
- 12 inches = one foot

To convert gallons per year to 100-cubic-feet per year, another common billing unit for water, divide gallons per year by 748. (748 gallons = 100 cubic feet.)

"ecological restoration project" means a project where the site is intentionally altered to establish a defined, indigenous, historic ecosystem.

"effective precipitation" or "usable rainfall" means the portion of total precipitation that is used by the plants. Precipitation is not a reliable source of water, but can contribute to some degree toward the water needs of the landscape.

"emitter" means drip irrigation fittings that deliver water slowly from the system to the soil.

"established landscape" means the point at which plants in the landscape have developed roots into the soil adjacent to the root ball.

"establishment period" means the first year after installing the plant in the landscape.

"Estimated Applied Water Use" means the portion of the Estimated Total Water Use that is derived from applied water. The Estimated Applied Water Use shall not exceed the Maximum Applied Water Allowance. The Estimated Applied Water Use may be the sum of the water recommended through the irrigation schedule, as referenced in Section 492 (c) (3).

"Estimated Total Water Use" means the annual total amount of water estimated to be needed to keep the plants in the landscaped area healthy. It is based upon such factors as the local evapotranspiration rate, the size of the landscaped area, the types of plants, and the efficiency of the irrigation system, as described in Section 492 (c) (4).

"ET adjustment factor" means a factor of 0.8, that, when applied to reference evapotranspiration, adjusts for plant factors and irrigation efficiency, two major influences upon the amount of water that needs to be applied to the landscape.

A combined plant mix with a site-wide average of 0.5 is the basis of the plant factor portion of this calculation. The irrigation efficiency for purposes of the ET Adjustment Factor is 0.625.

Therefore, the ET Adjustment Factor (0.8) = (0.5/0.625).

"evapotranspiration" means the quantity of water evaporated from adjacent soil surfaces and transpired by plants during a specific time.

"flow rate" means the rate at which water flows through pipes and valves (gallons per minute or cubic feet per second).

"hydrozone" means a portion of the landscaped area having plants with similar water needs that are served by a valve or set of valves with the same schedule. A hydrozone may be irrigated or non-irrigated. For example, a naturalized area planted with native vegetation that will not need supplemental irrigation once established is a non-irrigated hydrozone.

"infiltration rate" means the rate of water entry into the soil expressed as a depth of water per unit of time (inches per hour).

"irrigation efficiency" means the measurement of the amount of water beneficially used divided by the amount of water applied. Irrigation efficiency is derived from measurements and estimates of irrigation system characteristics and management practices. The minimum irrigation efficiency for purposes of this ordinance is 0.625. Greater irrigation efficiency can be expected from well designed and maintained systems.

"landscape irrigation audit" means a process to perform site inspections, evaluate irrigation systems, and develop efficient irrigation schedules.

"landscaped area" means the entire parcel less the building footprint, driveways, non-irrigated portions of parking lots, hardscapes- such as decks and patios, and other non-porous areas. Water features are included in the calculation of the landscaped area. Areas dedicated to edible plants, such as orchards or vegetable gardens are not included.

"lateral line" means the water delivery pipeline that supplies water to the emitters or sprinklers from the valve.

"main line" means the pressurized pipeline that delivers water from the water source to the valve or outlet.

"Maximum Applied Water Allowance" means, for design purposes, the upper limit of annual applied water for the established landscaped area as specified in Section 492 (c) (2). It is based upon the area's reference evapotranspiration, the ET Adjustment Factor, and the size of the landscaped area. The Estimated Applied Water Use shall not exceed the Maximum Applied Water Allowance.

"mined-land reclamation projects" means any surface mining operation with a reclamation plan approved in accordance with the Surface Mining and Reclamation Act of 1975.

"mulch" means any material such as leaves, bark, straw or other materials left loose and applied to the soil surface for the beneficial purpose of reducing evaporation .

"operating pressure" means the pressure at which a system of sprinklers is designed to operate, usually indicated at the base of a sprinkler.

"overhead sprinkler irrigation systems" means those with high flow rates (pop-ups, impulse sprinklers, rotors, etc.)

"overspray" means the water which is delivered beyond the landscaped area, wetting pavements, walks, structures, or other non-landscaped areas.

"plant factor" means a factor that when multiplied by reference evapotranspiration, estimates the amount of water used by plants. For purposes of this ordinance, the average plant factor of low water using plants ranges from 0 to 0.3, for average water-using plants the range is 0.4 to 0.6, and for high water using plants the range is 0.7 to 1.0.

"rain sensing device" means a system which automatically shuts off the irrigation system when it rains.

"record drawing" or "as-builts" means a set of reproducible drawings which show significant changes in the work made during construction and which are usually based on drawings marked up in the field and other data furnished by the contractor.

"recreational area" means areas of active play or recreation such as sports fields, school yards, picnic grounds, or other areas with intense foot traffic.

"recycled water," "reclaimed water," or "treated sewage effluent water" means treated or recycled waste water of a quality suitable for nonpotable uses such as landscape irrigation; not intended for human consumption.

"reference evapotranspiration" or "ETo" means a standard measurement of environmental parameters which affect the water use of plants. ETo is given in inches per day, month, or year as represented in Section 495, and is an estimate of the evapotranspiration of a large field of four- to seven-inch tall, cool-season grass that is well watered. Reference evapotranspiration is used as the basis of determining the Maximum Applied Water Allowances so that regional differences in climate can be accommodated.

"rehabilitated landscape" means any relandscaping project that requires a permit.

"run off" means water which is not absorbed by the soil or landscape to which it is applied and flows from the area. For example, run off may result from water that is applied at too great a rate (application rate exceeds infiltration rate) or when there is a severe slope.

"soil moisture sensing device" means a device that measures the amount of water in the soil.

"soil texture" means the classification of soil based on the percentage of sand, silt, and clay in the soil.

"sprinkler head" means a device which sprays water through a nozzle.

"static water pressure" means the pipeline or municipal water supply pressure when water is not flowing.

"station" means an area served by one valve or by a set of valves that operate simultaneously.

"turf" means a surface layer of earth containing mowed grass with its roots. Annual bluegrass, Kentucky bluegrass, Perennial ryegrass, Red fescue, and Tall fescue are cool-season grasses. Bermudagrass, Kikuyugrass, Seashore paspalum, St. Augustinegrass, Zoysiagrass, and Buffalo grass are warm-season grasses.

"valve" means a device used to control the flow of water in the irrigation system.

"water conservation concept statement" means a one-page checklist and a narrative summary of the project as shown in Section 492 (c) (1).

Authority cited: Section 65594, Gov. Code. Reference: Section 65597, Gov. Code.

Section 492. Provisions for New or Rehabilitated Landscapes

Applicability

Except as provided in Section 492 (a) (3), this section shall apply to:

- all new and rehabilitated landscaping for public agency projects and private development projects that require a permit; and
- developer-installed landscaping in single-family and multi-family projects.
- Projects subject to this section shall conform to the provisions in Section 492.

This section shall not apply to:

- homeowner-provided landscaping at single-family and multi-family projects;
- cemeteries;
- registered historical sites;
- ecological restoration projects that do not require a permanent irrigation system;
- mined-land reclamation projects that do not require a permanent irrigation system; or
- any project with a landscaped area less than 2,500 square feet.

Landscape Documentation Package

A copy of the landscape documentation package conforming to this chapter shall be submitted to the city or county. No permit shall be issued until the city or county reviews and approves the landscape documentation package.

A copy of the approved landscape documentation package shall be provided to the property owner or site manager along with the record drawings and any other information normally forwarded to the property owner or site manager.

A copy of the Water Conservation Concept Statement and the Certificate of Substantial Completion shall be sent by the project manager to the local retail water purveyor.

Each landscape documentation package shall include the following elements, which are described in Section 492 (c):

- Water Conservation Concept Statement
- Calculation of the Maximum Applied Water Allowance
- Calculation of the Estimated Applied Water Use
- Calculation of the Estimated Total Water Use
- Landscape Design Plan
- Irrigation Design Plan
- Irrigation Schedules
- Maintenance Schedule
- Landscape Irrigation Audit Schedule

- Grading Design Plan
- Soil Analysis
- Certificate of Substantial Completion. (To be submitted after installation of the project.)
- If effective precipitation is included in the calculation of the Estimated Total Water Use, then an Effective Precipitation Disclosure Statement from the landscape professional and the property owner shall be submitted with the Landscape Documentation Package.

Elements of Landscape Documentation Package

Water Conservation Concept Statement

Each landscape documentation package shall include a cover sheet, referred to as the Water Conservation Concept Statement similar to the following example. It serves as a check list to verify that the elements of the landscape documentation package have been completed and has a narrative summary of the project.

SAMPLE WATER CONSERVATION CONCEPT STATEMENT

Project Site:_____ Project Number:_____

Project Location:_____

Landscape Architect/ Irrigation Designer/ Contractor:_____

Included in this project submittal package are:
(Check to indicate completion)

___ 1. Maximum Applied Water Allowance:

_____gallons or cubic feet/year

___ 2. Estimated Applied Water Use:

_____gallons or cubic feet/year

*__ 2.(a) Estimated Amount of Water Expected from Effective Precipitation:

_____gallons or cubic feet/year

___ 3. Estimated Total Water Use:

_____gallons or cubic feet/year

Note: * If the design assumes that a part of the Estimated Total Water Use will be provided by precipitation, the Effective Precipitation Disclosure Statement in Section 494 shall be completed and submitted.

___ 4. Landscape Design Plan

___ 5. Irrigation Design Plan

___ 6. Irrigation Schedules

___ 7. Maintenance Schedule

___ 8. Landscape Irrigation Audit Schedule

___ 9. Grading Design Plan

___ 10. Soil Analysis

Description of Project

(Briefly describe the planning and design actions that are intended to achieve conservation and efficiency in water use.)

Date:_____ Prepared By:_____

The Maximum Applied Water Allowance

A project's **Maximum Applied Water Allowance** shall be calculated using the following formula:

- MAWA = (ETo)(0.8)(LA)(0.62) where:
- MAWA = Maximum Applied Water Allowance (gallons per year)
- Eto = Reference Evapotranspiration (inches per year)
- 0.8 = ET Adjustment Factor
- LA = Landscaped Area (square feet)
- 0.62 = conversion factor (to gallons per square foot)

Two example calculations of the Maximum Applied Water Allowance are:

PROJECT SITE ONE: Landscaped area of 50,000 sq. ft. in Fresno

MAWA = (ETo)(.8)(LA)(.62)

= (51 inches)(.8)(50,000 square feet)(.62)

Maximum Applied Water Allowance = 1,264,800 gallons per year

(or 1,691 hundred-cubic-feet per year: 1,264,800/748 = 1,691)

PROJECT SITE TWO: Landscaped area of 50,000 sq. ft. in San Francisco

MAWA = (ETo)(.8)(LA)(.62)

= (35 inches)(.8)(50,000 square feet)(.62)

Maximum Applied Water Allowance = 868,000 gallons per year

(or 1,160 hundred-cubic-feet per year)

Portions of landscaped areas in public and private projects such as parks, playgrounds, sports fields, golf courses, or school yards where turf provides a playing surface or serves other recreational purposes are considered recreational areas and may require water in addition to the Maximum Applied Water Allowance. A statement shall be included with the landscape design plan, designating recreational areas to be used for such purposes and specifying any needed amount of additional water above the Maximum Applied Water Allowance.

Estimated Applied Water Use

The Estimated Applied Water Use shall not exceed the Maximum Applied Water Allowance.

A calculation of the Estimated Applied Water Use shall be submitted with the Landscape Documentation Package. It may be calculated by summing the amount of water recommended in the irrigation schedule.

Estimated Total Water Use

A calculation of the Estimated Total Water Use shall be submitted with the Landscape Documentation Package. The Estimated Total Water Use may be calculated by summing the amount of water recommended in the irrigation schedule and adding any amount of water expected from effective precipitation (not to exceed 25 percent of the local annual mean precipitation) or may be calculated from a formula such as the following:

The Estimated Total Water Use for the entire landscaped area equals the sum of the Estimated Water Use of all hydrozones in that landscaped area.

EWU (hydrozone) = [(ETo)(PF)(HA)(.62)]/(IE)

EWU (hydrozone) = Estimated Water Use (gallons per year)

Eto = Reference Evapotranspiration (inches per year)

PF = plant factor

HA = hydrozone area (square feet)

(.62) = conversion factor

IE = irrigation efficiency

If the Estimated Total Water Use is greater than the Estimated Applied Water Use due to precipitation being included as a source of water, an Effective Precipitation Disclosure Statement such as the one in Section 494 shall be included in the Landscape Documentation Package.

Landscape Design Plan

A landscape design plan meeting the following requirements shall be submitted as part of the landscape documentation package.

Plant Selection and Grouping

- Any plants may be used in the landscape, providing the Estimated Applied Water Use recommended does not exceed the Maximum Applied Water Allowance and that the plants meet the specifications set forth in (ii), (iii) and (iv).
- Plants having similar water use shall be grouped together in distinct hydrozones.
- Plants shall be selected appropriately based upon their adaptability to the climatic, geologic, and topographical conditions of the site. Protection and preservation of native species and natural areas is encouraged. The planting of trees is encouraged wherever it is consistent with the other provisions of this ordinance.
- Fire prevention needs shall be addressed in areas that are fire prone. Information about fire prone areas and appropriate landscaping for fire safety is available from local fire departments or the California Department of Forestry.

Water Features

- Recirculating water shall be used for decorative water features.
- Pool and spa covers are encouraged.

Landscape Design Plan Specifications

- The landscape design plan shall be drawn on project base sheets at a scale that accurately and clearly identifies:
- Designation of hydrozones.

- Landscape materials, trees, shrubs, groundcover, turf, and other vegetation. Planting symbols shall be clearly drawn and plants labeled by botanical name, common name, container size, spacing, and quantities of each group of plants indicated.
- Property lines and street names.
- Streets, driveways, walkways, and other paved areas.
- Pools, ponds, water features, fences, and retaining walls.
- Existing and proposed buildings and structures including elevation if applicable.
- Natural features including but not limited to rock outcroppings, existing trees, shrubs that will remain.
- Tree staking, plant installation, soil preparation details, and any other applicable planting and installation details.
- A calculation of the total landscaped area.
- Designation of recreational areas.

Irrigation Design Plan

An irrigation design plan meeting the following conditions shall be submitted as part of the Landscape Documentation Package.

Irrigation Design Criteria

- Runoff and Overspray. Soil types and infiltration rate shall be considered when designing irrigation systems. All irrigation systems shall be designed to avoid runoff, low head drainage, overspray, or other similar conditions where water flows onto adjacent property, non-irrigated areas, walks, roadways, or structures. Proper irrigation equipment and schedules, including features such as repeat cycles, shall be used to closely match application rates to infiltration rates therefore minimizing runoff.
- Special attention shall be given to avoid runoff on slopes and to avoid overspray in planting areas with a width less than ten feet, and in median strips.
- No overhead sprinkler irrigation systems shall be installed in median strips less than ten feet wide.
- Irrigation Efficiency. For the purpose of determining the maximum applied water allowance, irrigation efficiency is assumed to be 0.625. Irrigation systems shall be designed, maintained, and managed to meet or exceed 0.625 efficiency.

Equipment.

- Water meters. Separate landscape water meters shall be installed for all projects except for single family homes or any project with a landscaped area of less than 5,000 square feet.
- Controllers. Automatic control systems shall be required for all irrigation systems and must be able to accommodate all aspects of the design.
- Valves. Plants which require different amounts of water shall be irrigated by separate valves. If one valve is used for a given area, only plants with similar water use shall be used in that area. Anti-drain (check) valves shall be installed in strategic points to minimize or prevent low-head drainage.
- Sprinkler heads. Heads and emitters shall have consistent application rates within each control valve circuit. Sprinkler heads shall be selected for proper area coverage, application rate, operating pressure, adjustment capability, and ease of maintenance.
- Rain Sensing Override Devices. Rain sensing override devices shall be required on all irrigation systems.
- Soil Moisture Sensing Devices. It is recommended that soil moisture sensing devices be considered where appropriate.

Recycled Water

- The installation of recycled water irrigation systems (dual distribution systems) shall be required to allow for the current and future use of recycled water, unless a written exemption has been granted as described in the following section (B) (ii).

- Irrigation systems shall make use of recycled water unless a written exemption has been granted by the local water agency, stating that recycled water meeting all health standards is not available and will not be available in the foreseeable future.

- The recycled water irrigation systems shall be designed and operated in accordance with all local and state codes.

Irrigation Design Plan Specifications

- Irrigation systems shall be designed to be consistent with hydrozones.

- The irrigation design plan shall be drawn on project base sheets. It shall be separate from, but use the same format as, the landscape design plan. The scale shall be the same as that used for the landscape design plan described in Section 492 (c) (5) (C).

- The irrigation design plan shall accurately and clearly identify:

- Location and size of separate water meters for the landscape.

- Location, type, and size of all components of the irrigation system, including automatic controllers, main and lateral lines, valves, sprinkler heads, moisture sensing devices, rain switches, quick couplers, and backflow prevention devices.

- Static water pressure at the point of connection to the public water supply.

- Flow rate (gallons per minute), application rate (inches per hour), and design operating pressure (psi) for each station.

- Recycled water irrigation systems as specified in the Section 492 (c) (4) (B).

Irrigation Schedules

Irrigation schedules satisfying the following conditions shall be submitted as part of the Landscape Documentation Package.

An annual irrigation program with monthly irrigation schedules shall be required for the plant establishment period, for the established landscape, and for any temporarily irrigated areas.

The irrigation schedule shall:

- include run time (in minutes per cycle), suggested number of cycles per day, and frequency of irrigation for each station; and

- provide the amount of applied water (in hundred cubic feet, gallons, or in whatever billing units the local water supplier uses) recommended on a monthly and annual basis.

The total amount of water for the project shall include water designated in the Estimated Total Water Use calculation plus water needed for any water features, which shall be considered as a high water using hydrozone.

Recreational areas designated in the landscape design plan shall be highlighted and the irrigation schedule shall indicate if any additional water is needed above the Maximum Applied Water Allowance because of high plant factors (but not due to irrigation inefficiency.)

Whenever possible, irrigation scheduling shall incorporate the use of evapotranspiration data such as those from the California Irrigation Management Information System (CIMIS) weather stations to apply the appropriate levels of water for different climates.

Whenever possible, landscape irrigation shall be scheduled between 2:00 a.m. and 10:00 a.m. to avoid irrigating during times of high wind or high temperature.

Maintenance Schedules

A regular maintenance schedule satisfying the following conditions shall be submitted as part of the Landscape Documentation Package:

Landscapes shall be maintained to ensure water efficiency. A regular maintenance schedule shall include but not be limited to checking, adjusting, and repairing irrigation equipment; resetting the automatic controller; aerating and dethatching turf areas; replenishing mulch; fertilizing; pruning, and weeding in all landscaped areas.

Whenever possible, repair of irrigation equipment shall be done with the originally specified materials or their equivalents.

Landscape Irrigation Audit Schedules

A schedule of landscape irrigation audits, for all but single family residences, satisfying the following conditions shall be submitted to the city or county as part of the Landscape Documentation Package.

At a minimum, audits shall be in accordance with the State of California Landscape Water Management Program as described in the Landscape Irrigation Auditor Handbook, the entire document, which is hereby incorporated by reference. (See Landscape Irrigation Auditor Handbook (June 1990) version 5.5 [formerly Master Auditor Training].)

The schedule shall provide for landscape irrigation audits to be conducted by certified landscape irrigation auditors at least once every five years.

Grading Design Plan

Grading design plans satisfying the following conditions shall be submitted as part of the Landscape Documentation Package.

A grading design plan shall be drawn on project base sheets. It shall be separate from but use the same format as the landscape design plan.

The grading design plan shall indicate finished configurations and elevations of the landscaped area, including the height of graded slopes, drainage patterns, pad elevations, and finish grade.

Soils

A soil analysis satisfying the following conditions shall be submitted as part of the Landscape Documentation Package.

Determination of soil texture, indicating the percentage of organic matter.

An approximate soil infiltration rate (either measured or derived from soil texture/infiltration rate tables.) A range of infiltration rates shall be noted where appropriate.

Measure of pH, and total soluble salts.

A mulch of at least three inches shall be applied to all planting areas except turf.

Certification

Upon completing the installation of the landscaping and the irrigation system, an irrigation audit shall be conducted by a certified landscape irrigation auditor prior to the final field observation. (See Landscape Irrigation Auditor Handbook as referenced in Section 492 (c)(9)(A)).

A licensed landscape architect or contractor, certified irrigation designer, or other licensed or certified professional in a related field shall conduct a final field observation and shall provide a certificate of substantial completion to the city or county. The certificate shall specifically indicate that plants were installed as specified, that the irrigation system was installed as designed, and that an irrigation audit has been performed, along with a list of any observed deficiencies.

Certification shall be accomplished by completing a Certificate of Substantial Completion and delivering it to the city or county, to the retail water supplier, and to the Owner of Record. A sample of such a form, which shall be provided by the city or county is:

SAMPLE CERTIFICATE OF SUBSTANTIAL COMPLETION

Project Site:_____ Project Number:_____

Project Location:_____

Preliminary Project Documentation Submitted: (check indicating submittal)

___ 1. Maximum Applied Water Allowance:

_____ (gallons or cubic feet per year)

___ 2. Estimated Applied Water Use:

_____ (gallons or cubic feet/year)

*__ 2a. Estimated Amount of Water Expected from Effective Precipitation:

_____ (gallons or cubic feet/year)

____ 3. Estimated Total Water Use:

_____ (gallons or cubic feet/year)

Note: * If the design assumes that a part of the Estimated Total Water Use will be provided by precipitation, the Effective Precipitation Disclosure Statement in Section 495 shall be completed and submitted. The Estimated Amount of Water Expected from Effective Precipitation shall not exceed 25 percent of the local annual mean precipitation (average rainfall.)

Public Education

Publications.

- Local agencies shall provide information to owners of all new, single family residential homes regarding the design, installation, and maintenance of water efficient landscapes.
- Information about the efficient use of landscape water shall be provided to water users throughout the community.

Model Homes.

- At least one model home that is landscaped in each project consisting of eight or more homes shall demonstrate via signs and information the principles of water efficient landscapes described in this ordinance.
- Signs shall be used to identify the model as an example of a water efficient landscape and featuring elements such as hydrozones, irrigation equipment and others which contribute to the overall water efficient theme.
- Information shall be provided about designing, installing, and maintaining water efficient landscapes.

Authority cited: Section 65594, Gov. Code. Reference: Section 65597.

Section 493. Provisions For Existing Landscapes

Water Management

All existing landscaped areas to which the city or county provides water that are one acre or more, including golf courses, green belts, common areas, multi-family housing, schools, businesses, parks, cemeteries, and publicly owned landscapes shall have a landscape irrigation audit at least every five years. At a minimum, the audit shall be in accordance with the California Landscape Water Management Program as described in the Landscape Irrigation Auditor Handbook, the entire document which is hereby incorporated by reference. (See Landscape Irrigation Auditor Handbook, Dept. of Water Resources, Water Conservation Office (June 1990) version 5.5.)

If the project's water bills indicate that they are using less than or equal to the Maximum Applied Water Allowance for that project site, an audit shall not be required.

Recognition of projects that stay within the Maximum Applied Water Allowance is encouraged.

Water Waste Prevention

Cities and counties shall prevent water waste resulting from inefficient landscape irrigation by prohibiting runoff, low head drainage, overspray, or other similar conditions where water flows onto adjacent property, non-irrigated areas, walks, roadways, or structures. Penalties for violation of these prohibitions shall be established locally.

Authority cited: Section 65594, Gov. Code. Reference: Section 65597, Gov. Code.

Model Landscape Ordinance

Section 494. Effective Precipitation

If effective precipitation is included in the calculation of the Estimated Total Water Use, an Effective Precipitation Disclosure Statement (similar to the following Sample Effective Precipitation Disclosure Statement) shall be completed, signed, and submitted with the Landscape Documentation Package. No more than 25 percent of the local annual mean precipitation shall be considered effective precipitation in the calculation of the Estimated Total Water Use.

SAMPLE EFFECTIVE PRECIPITATION DISCLOSURE STATEMENT

I certify that I have informed the project owner and developer that this project depends on _____ (gallons or cubic feet) of effective precipitation per year. This represents _____ percent of the local mean precipitation of _____ inches per year.

I have based my assumptions about the amount of precipitation that is effective upon:_____

_____

_____

_____

I certify that I have informed the project owner and developer that in times of drought, there may not be enough water available to keep the entire landscape alive.

_____

Licensed or Certified Landscape Professional

I certify that I have been informed by the licensed or certified landscape professional that this project depends upon _____ (gallons or cubic feet) of effective precipitation per year. This represents _____ percent of the local mean precipitation of _____ inches per year.

I certify that I have been informed that in times of drought, there may not be enough water available to keep the entire landscape alive.

Foreword

The Environmental Protection Agency (EPA) is charged with ensuring that pesticides do not pose unreasonable risks to the public and to the environment. EPA regulates the use of pesticides under the authority of two laws—the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Federal Food, Drug and Cosmetic Act (FFDCA). Most all pesticides may legally be sold in the United States if they have been "registered" by EPA and if they bear an EPA registration number. Federal pesticide registration, however, is only the first step in preventing pesticide risks. Just as important are the steps that consumers take to control pests and use pesticides safely. EPA hopes that this booklet will help you control pests safely.

Introduction

SOONER OR LATER, we're all pestered by pests. Whether it's ants in the kitchen or weeds in the vegetable garden, pests can be annoying and bothersome. At the same time, many of us are concerned that the pesticides we use to control pests can cause problems too. How can pests be controlled safely? When and how should pesticides be used?

This booklet is intended to help answer these questions. The questions have no single right answer, but *Citizen's Guide to Pest Control and Pesticide Safety* gives the information you need to make informed decisions. You should be able to control pests without risking your family's health and without harming the environment.

The major goals of this booklet are to help you understand—

- What steps to take to control pests in and around your home.
- What alternatives to chemical pesticides are available, including pest prevention and non-chemical pest controls.
- How to choose pesticides and how to use, store, and dispose of them safely.
- How to reduce your exposure when others use pesticides.
- How to choose a pest control company.
- What to do if someone is poisoned by a pesticide.

Pests, Pest Control, and Pesticides

PLANTS, insects, mold, mildew, rodents, bacteria, and other organisms are a natural part of the environment. They can benefit people in many ways. But they can also be pests. Apartments and houses are often hosts to common pests such as cockroaches, fleas, termites, ants, mice, rats, mold, or mildew. Weeds, hornworms, aphids, and grubs can be a nuisance outdoors when they get into your lawn, flowers, yard, vegetable garden, or fruit and shade trees. Pests can also be a health hazard to you, your family, and your pets. It's easy to understand why you may need and want to control them.

Nowadays, you can choose from many different methods as you plan your strategy for controlling pests. **Sometimes a non-chemical method of control is as effective and convenient as a chemical alternative.** For many pests, total elimination is almost impossible, but it is possible to control them. **Knowing your options is the key to pest control.** Methods available to you include pest prevention, non-chemical pest controls, and chemical pesticides. Each of these methods will be described in more detail in the next three sections of this booklet (starting on pages 6, 11, and 13).

Pest Management

The most effective strategy for controlling pests may be to combine methods in an approach known as integrated pest management (IPM) that emphasizes preventing pest damage. In IPM, information about pests and available pest control methods is used to manage pest damage by the most economical means and with the least possible hazard to people, property, and the environment. An example of using the IPM approach for lawn care is presented in the next section of this booklet titled "Preventing Pests."

Some signs of pest infestation are unmistakable.

Knowing a range of pest control methods gives you the ability to choose among them for an effective treatment. Knowing the options also gives you the choice of limiting your exposure to potentially harmful chemicals. No matter what option you choose, you should follow these steps to control your pest problem:

First Steps in Pest Management

1 **Identify the pest problem.** This is the first and most important step in pest control—figuring out exactly what you're up against. Some pests (or signs of them) are unmistakable—most people recognize a cockroach or a mouse. Other signs that make you think "pest" can be misleading. For example, what may look like a plant "disease" may be, in fact, a sign of poor soil or lack of water.

Use **free sources** to help identify your pest and to learn the most effective methods to control it. These sources include library reference books (such as insect field guides or gardening books) and pest specialists at your County Cooperative Extension Service or local plant nurseries. These resources are usually listed in the telephone book.

2 **Decide how much pest control is necessary.** Pest control is not the same as pest elimination. Insisting on getting rid of all pests inside and outside your home will lead you to make more extensive, repeated, and possibly hazardous chemical treatments than are necessary. Be reasonable. Ask yourself these questions:

- Does your lawn really need to be totally weed free?
- Recognizing that some insects are beneficial to your lawn, do you need to get rid of all of them?
- Do you need every type of fruit, vegetable, or flower you grow, or could you replace ones that are sensitive to pests with hardier substitutes?
- Can you tolerate some blemished fruits and vegetables from your garden?
- Is anyone in your home known to be particularly sensitive to chemicals?

Preventing Pests

PESTS SEEK PLACES TO LIVE that satisfy basic needs for air, moisture, food, and shelter. The best way to control pests is to try to prevent them from entering your home or garden in the first place. You can do this by removing the elements that they need to survive. Take the following preventive actions:

Indoor Prevention

- **Remove water.** All living things, including pests, need water for survival. Fix leaky plumbing, and do not let water accumulate anywhere in or around your home. For example, do not leave any water in trays under your houseplants, under your refrigerator, or in buckets overnight. Remove or dry out water-damaged and wet materials. Even dampness or high humidity can attract pests.

Pests need water to survive. Fix leaky pipes.

- **Remove food.** Store your food in sealed glass or plastic containers, and keep your kitchen clean and free from cooking grease and oil. Do not leave food in pet bowls on the counter or floor for long periods of time. Put food scraps or refuse in tightly covered, animal-proof garbage cans, and empty your garbage frequently.

- **Remove or block off indoor pest hiding places.** Caulk cracks and crevices to control pest access. Bathe pets regularly and wash any mats or surfaces they lie on to control fleas. Avoid storing newspapers, paper bags, and boxes for long periods of time. Also, check for pests in packages or boxes before carrying them into your home.

- **Block pest entryways.** Install screens on all floor drains, windows, and doors to discourage crawling and flying pests from entering your home. Make sure any passageways through the floor are blocked. Place weatherstripping on doors and windows. Caulk and seal openings in walls. Keep doors shut when not in use.

Store food in sealed containers.

compacted soil and create air spaces so that water and nutrients can reach the roots, buy or rent a tiller that breaks up the dirt and turns it over. Before planting, add sand and organic matter to enrich the soil mixture in your garden plot. Also, have the soil tested periodically to see whether you need to add more organic matter or adjust the pH (acidity/alkalinity) balance by adding lime or sulfur. Your County Cooperative Extension Service, listed in the telephone book, or local nursery should be able to tell you how to do this.

- Mulch your garden with leaves, hay, grass clippings, shredded/chipped bark, or seaweed. **Do not use newspapers** to keep down weeds or to fertilize plants. **Newsprint may contain toxic metals** such as lead and mercury.

Before planting, add organic matter to enrich the soil mixture in your garden plot.

Lawn Care

Tending a garden may not be your hobby; but if you rent or own a home, you might need to care for the lawn. You don't have to be an expert to grow a healthy lawn—the key is to work with nature. You need to create the right conditions for your grass to grow strong and stay healthy. A healthy lawn can resist damage from weeds, disease, and insect pests. Set realistic weed and pest control goals for your lawn.

Think of lawn care as a preventive health care program, like one you would follow to stay healthy yourself. The goal is to prevent problems from ever occurring.

Pesticides can be effective, but should not be relied on as the quick-fix solution to any lawn problem. Serious, ongoing pest problems are often a sign that your lawn is not getting what it needs to stay healthy. Pests may be a symptom of an underlying problem. You need to correct the underlying problem to reduce the chances of pests reappearing.

Make these six steps part of a preventive health care program for your lawn:

1 **Develop healthy soil that has the right pH balance, key nutrients, and good texture.** You can buy easy-to-use soil analysis kits at hardware stores or contact your local County Cooperative Extension Service for a soil analysis.

2 **Choose a type of grass that grows well in your climate.** For instance, if your area gets very little rain, don't plant a type of grass that needs a lot of water. Your local County Cooperative Extension Service can advise you on which grasses grow best in your area.

3 **Mow high, mow often, and make sure the lawn mower blades are sharp.** Grass that is slightly long makes a strong, healthy lawn with few pest problems. Weeds have a hard time taking root and growing when grass is fairly long (around 2½ to 3½ inches for most types of grass). A foot-high meadow isn't necessary; just adding an inch to the length of your grass will give most lawns a real boost.

4 **Water deeply but not too often.** The best rule is to water only when the lawn begins to wilt from dryness—when the color dulls and footprints stay in the grass for more than a few seconds. Avoid watering during the hottest part of the day because the water will evaporate too quickly.

5 **Correct thatch buildup.** Thatch is a layer of dead plant material between the grass blades and the soil. When thatch gets too thick (deeper than ¾ of an inch), it prevents water and nutrients from getting into the soil and reaching the roots of the grass. Overusing synthetic fertilizer can create a heavy layer of thatch, and some kinds of grass are prone to thatch buildup.

Get rid of excess thatch by raking the lawn or using a dethatching rake.

In a healthy lawn, earthworms, spiders, millipedes, and a variety of microorganisms help keep the thatch layer in balance by breaking it up and using it for food, which releases nutrients into the soil. You can get rid of excess thatch by raking the lawn using a dethatching rake or by using a machine that pulls plugs out of the grass and thatch layer to break it up. Sprinkle a thin layer of topsoil or compost over the lawn after dethatching or aerating it to speed up the process of decomposition.

6 **Set realistic weed and pest control goals.** It is almost impossible to get rid of all weeds and pests. However, even a lawn that is 15 percent weeds can look almost weed-free to the casual observer. A healthy lawn will probably always have some weeds and some insect pests. But a healthy lawn will also have beneficial insects and other organisms like earthworms that keep pests under control. Improper use of pesticides can kill these beneficial organisms.

By following this preventive health care program for your lawn, you should be able to rely **very little, if at all,** on chemical pesticides for weed and insect pest control. For additional information, refer to EPA's booklet *Healthy Lawn, Healthy Environment.* (See page 42 in the Reference Section.)

Using Non-Chemical Pest Controls

YOU'VE GOT PESTS, and you want to control them with a dependable pest control method that does not contain chemical pesticides. Non-chemical pest control methods really work, and they have many advantages. Compared to chemical treatments, non-chemical methods are generally effective for longer periods of time. They are less likely to create hardy pest populations that develop the ability to resist pesticides. And many non-chemical pest controls can be used with fewer safeguards, because they are generally thought to pose virtually no hazards to human health or the environment. Two examples of non-chemical pest control methods are biological and manual treatments.

Biological Controls

Did you know that pests themselves may be eaten or otherwise controlled by birds, insects, or other living organisms? You can use a pest's natural enemies (predators) to your advantage. These "biological controls," as they are called, take many forms:

- **Beneficial predators** such as purple martins and other birds eat insects; bats can eat thousands of insects in one night; lady beetles (ladybugs) and their larvae eat aphids, mealybugs, whiteflies, and mites. Other beneficial bugs include spiders, centipedes, ground beetles, lacewings, dragonflies, big-eyed bugs, and ants. You can install a purple martin house in your yard. You can also buy and release predatory insects. They are available from sources such as gardening catalogs and magazines.

  Contact your County Cooperative Extension Service, a nursery, or a garden association for information on how to attract and protect beneficial predators.

- **Parasitoids** such as miniature wasps lay their eggs inside the eggs or bodies of insect pests such as tomato hornworms. Once the eggs hatch, the offspring kill their insect hosts, making parasitoids highly effective pest controllers.

Beneficial Predators

PURPLE MARTIN

SPIDER

LADYBUG

CENTIPEDE

MINI-WASP

Pheromone traps lure pests.

- **Microscopic pathogens** such as fungi, bacteria, and viruses control pests. An example is milky spore disease, which attacks Japanese beetles. A number of these biological pesticides are available commercially at hardware and garden stores. (See page 43 in the Reference Section for more information.)
- **Biochemical pesticides** include pheromones and juvenile insect hormones. Pheromones are chemical substances released by various organisms (including insects) as means of communicating with others of the same species, usually as an aid to mating. Pheromones lure pests inside a trap. Juvenile insect hormones interfere with an insect's normal growth and reproductive functions by mimicking the effects of compounds that occur naturally in the pest.

Manual Methods

- Spading and hoeing to cut up weeds.
- Hand-picking weeds from your lawn and pests from your plants, indoors or out.
- Using a flyswatter.
- Setting traps to control rats, mice, and some insects.
- Mulching to reduce weed growth.

One or a combination of several non-chemical treatments may be just what you need for your pest problem. You must be patient because results may not be immediate. And, you must work to prevent pests from entering your home or garden in the first place.

Using Chemical Pest Controls

IF YOU DECIDE that the best solution to your pest problem is chemical—by itself or, preferably, combined with non-chemical treatments—be aware that one of the greatest causes of pesticide exposure to humans is the use of pesticides in and around the home.

Anyone can buy a wide variety of "off the shelf" pesticide products to control weeds, unwanted insects, and other pests. No special training is required to use these pesticides. Yet many of the products can be hazardous to people, especially when stored, handled, applied, or disposed of improperly. **The results achieved by using chemical pesticides are generally temporary, and repeated treatments may be required.** Over time, some pests become pesticide-resistant, meaning they adapt to the chemical and are no longer harmed by it. This forces you to choose another product or method. If used incorrectly, home-use pesticide products can be poisonous to humans. As a result, it is extremely important for you to take responsibility for making sure that these products are used properly. The basic steps in reducing pesticide risks are—

- Choosing the right pesticide product.
- Reading the product label.
- Determining the right amount to purchase and use.
- Using the product safely and correctly.
- Storing and disposing of pesticides properly.

Each of these steps is described in more detail in the sections that follow.

Choosing the right product is a basic step in reducing pesticide risks.

Choosing the Right Pesticide Product

Once you decide to use chemical pesticides, you must decide whether to do the job yourself or hire a professional pest control service. If you are interested in hiring professionals, see pages 36–38 for advice. If you choose to tackle the job yourself, the next question is the most important. Which pesticide product is the best one for your situation?

Home-use pesticides come in many forms—including solutions, aerosols, dusts, granules, baits, and wettable powders. As the name implies, wettable powders are usually mixed with water and/or other liquids and then applied. Pesticide solutions are often diluted with water. Certain formulations work better for some pests and/or some target areas than others. Many pesticides also come in ready-to-use forms, such as aerosols and spray bottles, which are often more practical and easy to use because they don't require measuring or mixing.

Before you buy a product, read the label! Compare product labels, and learn as much as you can about the pesticide. Contact your County Cooperative Extension Service (listed in the telephone book), local pesticide dealers, the National Pesticide Telecommunications Network (NPTN) at 1-800-858-7378, or your state pesticide agency for assistance. (See pages 45–48 in the Reference Section for state contacts.)

Read the label before you buy or use a pesticide product.

When you are ready to buy a pesticide product, follow these recommendations:

- First, be certain that you have identified the problem correctly. Then, choose the least toxic pesticide that will achieve the results you want and be the least toxic to you and the environment.
- When the words "broad-spectrum" appear on the label, this means the product is effective against a broad range of pests. If the label says "selective," the product is effective against one or a few pests.
- Find the signal word—either *Danger-Poison, Danger, Warning,* or *Caution* on the pesticide label. The signal word tells you how poisonous the product is to humans. (See page 16.)

  Pesticide products labeled *Danger-Poison* are "Restricted Use" and are mainly used under the supervision of a certified applicator. For the most part, these products should not be available for sale to the consumer.
- Choose the form of pesticide (aerosol, dust, bait, or other) best suited to your target site and the pest you want to control.

Reading the Pesticide Label

The pesticide label is your best guide to using pesticides safely and effectively. The directions on the label are there primarily to help you achieve "maximum" benefits—the pest control that you desire—with "minimum" risk. Both depend on following label directions and correctly using the pesticide. ***Read the label.*** Read the label ***before buying*** the pesticide. Read the label ***before mixing or using*** the pesticide ***each time,*** and read the label before storing or disposing of the pesticide. Do not trust your memory. You may have forgotten part of the label instructions or they may have changed. Use of any pesticide in any way that is not consistent with label directions and precautions is illegal. It may also be ineffective and, even worse, dangerous.

The main sections of a pesticide label are described below:

1 **EPA Registration Number.** This number tells you that EPA has reviewed the product and determined that it can be used with minimal or low risk if you follow the directions on the label properly. The number is not a stamp of approval or guarantee of effectiveness.

2 **Ingredients Statement or Active Ingredients.** Active ingredients are the chemicals in the pesticide that kill or control the target pest(s).

3 **Signal Words.** The signal words—*Caution, Warning, or Danger*—indicate the pesticide's potential for making you sick. The word *CAUTION* appears on pesticides that are the least harmful to you. A pesticide with the word *WARNING* is more poisonous than those with a *Caution* label. Pesticides with the word *DANGER* on the label are very poisonous or irritating. They should be used with extreme care because they can severely burn your skin and eyes.

Main sections on front label.

4 **Precautionary Statements.** This part describes the protective clothing, such as gloves or goggles, that you should wear when using the pesticide. The section also tells you how to protect children or pets by keeping them away from areas treated with pesticides.

5 **Environmental Hazards.** This section tells you if the product can cause environmental damage—if it's harmful to wildlife, fish, endangered plants or animals, wetlands, or water.

6 **Directions for Use.** Make sure that the product is labeled for use against the pest(s) that you are trying to control. (For example, products labeled only for termites should not be used to control fleas.) Use only the amounts recommended, and follow the directions exactly.

7 **First Aid Instructions.** The label tells you what to do if someone is accidentally poisoned by the pesticide. Look for this information in the *Statement of Practical Treatment* section. The instructions are only first aid. ALWAYS call a doctor or your local poison control center. You may have to take the person to a hospital right away after giving first aid. Remember to take the pesticide label or container with you.

8 **Storage and Disposal.** Read carefully and follow all directions for safe storage and disposal of pesticide products. Always keep products in the original container and out of reach of children, in a locked cabinet or locked garden shed.

Main sections on back label.

Some pesticides have small foldout booklets containing the label information.

Determining the Correct Amount To Use

Many products can be bought in a convenient ready-to-use form, such as in spray cans or spray bottles, that won't require any mixing. However, if you buy a product that has to be measured out or mixed with water, prepare only the amount of pesticide that you need for the area where you plan to use the pesticide (target area). The label on a pesticide product contains much useful information, but there isn't always room to include examples of different dilutions for every home use. Thus, it is important to know how to measure volume and figure out the exact size of the area where you want to apply the pesticide. Determining the correct amount for your immediate use requires some careful calculations. Use the following example as an illustration of how to prepare only the amount of pesticide needed for your immediate pest control problem.

An example: The product label says, "For the control of aphids on tomatoes, mix 8 fluid ounces of pesticide into 1 gallon of water and spray until foliage is wet." You have only 6 tomato plants. From experience, you know that 1 gallon is too much, and that you really need only 1 quart of water to wet the leaves on these 6 plants. A quart is only ¼ of a gallon. Because you want to use less water than the label says, you need less pesticide. You need only ¼ of the pesticide amount listed on the label—only 2 fluid ounces. This makes the same strength spray recommended by the label, and is the appropriate amount for the 6 tomato plants.

In short, all you need to do is figure the amount of pesticide you need for the size of your target area, using good measurements and careful arithmetic. For help in making these calculations, see pages 39–41 in the Reference Section.

When using pesticides that must be mixed, determine the correct amount for your immediate use.

[redacted]

Using Pesticides Safely and Correctly

Once you have read the pesticide label and are familiar with all precautions, including first aid instructions, follow these recommendations to reduce your risks:

Before Using a Pesticide

- Wear the items of protective clothing the label requires: for example, long-sleeved shirts, long pants, overalls, non-absorbent gloves (not leather or fabric), rubber footwear (not canvas or leather), a hat, goggles, or a dust-mist filter. If no specific clothing is listed, gloves, long-sleeved shirts and long pants, and closed shoes are recommended. You can buy protective clothing and equipment at hardware stores or building supply stores.

When Mixing or Applying a Pesticide

- Never smoke or eat while mixing or applying pesticides. You could easily carry traces of the pesticide from your hands to your mouth. Also, some pesticide products are flammable.

- Follow the use directions on the label carefully. Use only for the purpose listed. Use only the amount directed, at the time and under the conditions specified. **Don't change the recommended amount.** Don't think that twice the amount will do twice the job. It won't. You could harm yourself, others, or whatever you are trying to protect.

- If the directions on the label tell you to mix or dilute the pesticide, do so outdoors or in a well-ventilated area. Use the amount listed on the label and measure the pesticide carefully. (Never use the same measuring cups or spoons that you use in the kitchen.) Mix only the amount that you need for each application. Do not prepare larger amounts to store for possible future use. (See "Determining the Correct Amount To Use" on page 18.)

Mix pesticides outdoors or in a well-ventilated area.

- Keep children, pets (including birds and fish), and toys (including pet toys) away from areas where you mix and apply pesticides for at least the length of time required on the label.
- Never transfer pesticides to other containers, such as empty soft drink or milk bottles. Keep pesticides in their original containers—ones that clearly identify the contents. Refasten all childproof caps tightly.
- If a spill occurs, clean it up promptly. Don't wash it away. Instead, sprinkle the spill with sawdust, vermiculite, or kitty litter. Sweep it into a plastic garbage bag, and dispose of it as directed on the pesticide product label.
- Indoors or outdoors, never put bait for insects or rats, mice, and other rodents where small children or pets can reach it. When using traps, make sure the animal inside is dead before you touch or open the trap.

Indoor Applications

- Use pesticides indoors only when absolutely necessary, and use only very limited amounts.
- Provide adequate ventilation. If the label directions permit, leave all windows open and fans operating after the application is completed. If the pesticide product is only effective in an unventilated (sealed) room or house, do not stay there. Put all pets outdoors, and take yourself and your family away from treated areas for at least the length of time prescribed on the label.
- Apply most surface sprays only to limited areas such as cracks; don't treat entire floors, walls, or ceilings.
- Remove food, pots and pans, and dishes before treating kitchen cabinets. Don't let pesticides get on any surfaces that are used for food preparation. Wait until shelves dry before refilling them. Wash any surfaces that may have pesticide residues before placing food on them.

Outdoor Applications

- Never apply pesticides outdoors on a windy day (winds higher than 10 mph). Position yourself so that a light breeze does not blow pesticide spray or dust into your face.
- Before spraying, close the doors and windows of your home.
- Use coarse droplet nozzles on your sprayer to reduce misting, and spray as close to the target as possible.
- Keep pesticides away from plants and wildlife you do not want to treat. Do not apply any pesticide to blooming plants, especially if you see honeybees or other pollinating insects around them. Do not spray bird nests when treating trees.
- Follow label directions carefully to ensure that you don't apply too much pesticide to your lawn, shrubs, or garden. Never water your lawn after applying pesticides. Before using a pesticide outdoors, check the label or contact your EPA Regional Office or County Cooperative Extension Service to find out whether the pesticide is known or suspected to run off or seep into ground water. Ground water is the underground reservoir that supplies water to wells, springs, creeks, and the like. Excessive application of pesticides could cause the pesticide to run off or seep into water supplies and contaminate them. Excess spray may also leave harmful residues on your home-grown fruit and vegetables, and could affect other plants, wildlife, and fish.
- Never mix or apply a pesticide near a wellhead.
- If you have a well, be sure it extends downward to water sources that are below, and isolated from, surface water sources. Be sure the well shaft is tightly sealed. For further information, see EPA's brochure *Pesticides in Drinking Water Wells*. (See page 42 for information on how to order a copy from EPA's Public Information Center.)
- When using total release foggers to control pests, the most important precautions you can take are to use no more than the amount needed and to keep foggers away from ignition sources (ovens, stoves, air conditioners, space heaters, and water heaters, for example). Foggers should not be used in small, enclosed places such as closets and cabinets or under tables and counters.

Keep children and pets away from areas where you apply pesticides.

After Applying a Pesticide, Indoors or Outdoors

- To remove pesticide residues, use a bucket to rinse tools or equipment three times, including any containers or utensils that you used when mixing the pesticide. Then pour the rinsewater into the pesticide sprayer and reuse the solution by applying it according to the pesticide product label directions. (See pages 24–25 for safe disposal guidelines.)

- Always wash your hands after applying any pesticide. Wash any other parts of your body that may have come in contact with the pesticide. To prevent tracking pesticides inside, remove or rinse your boots or shoes before entering your home. Wash any clothes that have been exposed to a lot of pesticide separately from your regular wash.

- Evaluate the results of your pesticide use. Consider using a different chemical, a non-chemical method, or a combination of non-chemical and chemical methods if the chemical treatment didn't work. Again, **do not assume** that using more pesticide than the label recommends will do a better job. It won't.

- Watch for negative effects on wildlife (birds, butterflies, and bees) in and near treated areas. If you see any unusual behavior, stop using that pesticide, and contact EPA's Pesticide Incident Response Officer (see page 35).

Wash clothing worn when using pesticides separately from other laundry.

Storing and Disposing of Pesticides Properly

Improper pesticide storage and disposal can be hazardous to human health and the environment. Follow these safety recommendations:

Safe Storage of Pesticides

- Don't stockpile. Reduce storage needs by buying only the amount of pesticide that you will need in the near future or during the current season when the pest is active.
- Follow all storage instructions on the pesticide label.
- Store pesticides high enough so that they are out of reach of children and pets. Keep all pesticides in a locked cabinet in a well-ventilated utility area or garden shed.
- Store flammable liquids outside your living area and far away from an ignition source such as a furnace, a car, an outdoor grill, or a power lawn mower.
- Never store pesticides in cabinets with or near food, animal feed, or medical supplies.
- Always store pesticides in their original containers, complete with labels that list ingredients, directions for use, and first aid steps in case of accidental poisoning.
- *Never* transfer pesticides to soft drink bottles or other containers. Children or others may mistake them for something to eat or drink.
- Use child-resistant packaging correctly—close the container tightly after using the product. Child resistant does not mean child proof, so you still must be extra careful to store properly—out of children's reach—those products that are sold in child-resistant packaging.
- Do not store pesticides in places where flooding is possible or in places where they might spill or leak into wells, drains, ground water, or surface water.
- If you can't identify the contents of the container, or if you can't tell how old the contents are, follow the advice on safe disposal in the next section.

Safe Disposal of Pesticides

- The best way to dispose of small amounts of excess pesticides is to use them—apply them—according to the directions on the label. If you cannot use them, ask your neighbors whether they have a similar pest control problem and can use them.

- If all of the remaining pesticide cannot be properly used, check with your local solid waste management authority, environmental agency, or health department to find out whether your community has a household hazardous waste collection program or a similar program for getting rid of unwanted, leftover pesticides. These authorities can also inform you of any local requirements for pesticide waste disposal.

- **State and local laws regarding pesticide disposal may be stricter than the Federal requirements on the label.** Be sure to check with your state or local agencies before disposing of your pesticide containers.

- If no community program or guidance exists, follow the label directions for disposal. In general, to dispose of less than a full container of a liquid pesticide, leave it in the original container with the cap tightly in place to prevent spills or leaks. Wrap the container in several layers of newspaper and tie it securely. Put the package in a covered trash can for routine collection with municipal trash. If you do not have a regular trash collection service, take the package to a permitted landfill (unless your town has other requirements).

  Note: No more than 1 gallon of liquid pesticide at a time should be thrown out with the regular trash in this manner.

- Wrap individual packages of dry pesticides in several layers of newspaper (or place the pesticides in a tight carton or bag), and tape or tie the package closed. Put the package in a covered trash can for routine collection.

  Note: No more than 5 pounds of dry pesticide at a time should be thrown out with the regular trash in this manner.

- Do **not** pour leftover pesticides down the sink, into the toilet, or down a sewer or street drain. Pesticides may interfere with the operation of wastewater treatment systems or pollute waterways. Many municipal systems are not equipped to remove all pesticide residues. If pesticides reach waterways, they may harm fish, plants, and other living things.

- An empty pesticide container can be as hazardous as a full one because of residues left inside. **Never reuse such a container.** When empty, a pesticide container should be rinsed carefully **three times** and the rinsewater thoroughly drained back into the sprayer or the container previously used to mix the pesticide. Use the rinsewater as a pesticide, following label directions. Replace the cap or closure securely. Dispose of the container according to label instructions. Do **not** puncture or burn a pressurized container like an aerosol—it could explode. Do cut or puncture other empty pesticide containers made of metal or plastic to prevent someone from reusing them. Wrap the empty container and put it in the trash after you have rinsed it.

- Many communities have programs to recycle household waste such as empty bottles and cans. Do not recycle any pesticide containers, however, unless the label specifically states that the empty container may be recycled after cleaning.

Follow the label directions for disposal.

Reducing Your Exposure When Others Use Pesticides

EVEN IF YOU NEVER USE PESTICIDES YOURSELF, you can still be exposed to them—at home, school, work, or play—by being in treated areas, as a consumer of commodities that others have treated with pesticides, or through food, water, and air that may have beencontaminated with pesticides.

This section describes sources of exposure other than your own use of pesticides. It also suggests ways to reduce your overall exposure. If you know or suspect that you, or others close to you, are sensitive to chemicals, consult an expert who can help you develop a strategy for handling your potential exposure problems.

Exposure Through Food

Commercial Food

To ensure a safe food supply, EPA regulates the safety of food by setting safety standards to limit the amount of pesticide residues that legally may remain in or on food or animal feed that is sold in the United States. Both domestic and imported foods are monitored by the Food and Drug Administration (FDA) and the U.S. Department of Agriculture (USDA) to ensure compliance with these safety standards.

Because most crops are treated with pesticides at least some of the time, foods you buy at the grocery store may contain small traces of pesticide residues. Pesticide levels tend to decline over time because the residues break down and because crops are usually washed and processed before reaching the marketplace. So, while we all consume small amounts of pesticides regularly, levels in our food generally are well below legal limits by the time the food reaches the grocery shelves.

Although EPA sets safety standards for the amount of pesticide residues allowed both in and on foods, you can take extra precautions to reduce the traces of pesticide residues you and your family consume in the food you buy. Follow these suggestions:

- Trim the fat from meat and poultry because residues of some pesticides concentrate in fat. Remove the skin from fish.
- Discard the fats and oils in broths and pan drippings.

- Rinse fruits and vegetables thoroughly with water. Scrub them with a brush and peel them, if possible. Taking these safety steps will remove most of the existing surface residues, along with any remaining dirt. Note that surface cleaning (rinsing and scrubbing) will not remove pesticide residues that are absorbed into the growing fruit or vegetable before harvest.
- Cook or bake foods to reduce residues of some pesticides even further.

Rinse fruits and vegetables with water. Scrub them with a brush and peel them, if possible.

Home-Grown Food

Growing your own food can be an enjoyable activity. It is also a way to reduce your exposure to pesticide residues in food—especially if you decide not to use chemical pesticides on your produce and you choose a garden site where drift or runoff from a neighbor's use of pesticides will not result in unintended residues on your food. If your house is regularly treated for pest prevention, don't plant your garden where the treatments are applied.

Food from the Wild

While it may seem that hunting your own game, catching your own fish, or gathering wild plant foods would reduce your overall exposure to pesticides, that isn't necessarily true. If you eat wild animals or plants from areas where pesticides are frequently used, this food may contain pesticide residues. In addition, birds such as ducks and geese may absorb pesticide residues if they have stopped to eat treated crops anywhere along their flight path.

If you eat food from the wild, you may want to take the following steps to reduce your exposure to pesticides:

- Do not fish in water bodies where contamination has occurred. Pay attention to posted signs that warn of contamination.
- Consult with fish and game officials or other appropriate officials where you plan to hunt or fish to determine whether there are any chemical problems associated with the area.
- Do not pick wild plants that are growing right next to a road, utility right-of-way, or hedgerow between farm fields. These areas may have been treated with pesticides.
- When preparing wild foods, trim fat from the meat. Discard the skin from fish.

Exposure Through Water

Do not fish in water bodies where contamination has occurred.

When pesticides are applied to land, a certain amount may run off into streams and rivers. This runoff, together with industrial waste, may result in low-level contamination of surface water. In certain settings—for example, when sandy soil lies over a ground-water source that is near the surface—pesticides can seep down through the soil to the ground water.

To ensure a safe supply of drinking water, EPA's Office of Water sets standards for pesticides and other chemicals that may be found in drinking water. Municipal water systems test their water periodically and provide treatment or alternate supply sources if residue problems occur. Generally, private wells are not tested unless the well owner requests an analysis. If you get your drinking water from a private well—

- Contact your state or local health department if you have any questions about pesticide or other chemical residues in your well water.
- If your well water is analyzed and found to contain pesticide residue levels above established or recommended health standards, use an alternate water source such as bottled water for drinking and cooking. The safest choice is distilled spring water in glass bottles. If you buy water from a local bottler, ask for the results of any recent pesticide analysis the bottled water.

EPA sets standards for chemicals that may be found in drinking water.

Exposure Through Air

Outdoors

Air currents may carry pesticides that were applied on properties nearby. You can reduce your exposure outdoors to airborne pesticide residues, or drift, by following these recommendations:

- If a close neighbor or someone else is applying pesticides outdoors near your home, you may want to stay indoors with your children and pets. Keep windows and exterior doors closed.
- If you live near fields, parks, or other areas that receive regular pesticide treatment, consider planting a group of hardy, thick-branched trees or shrubs to help serve as a buffer zone and windbreak.

- Careless application can lead to drift or direct spraying of non-target sites. If your property is accidentally sprayed during an aerial pesticide application, you should call your local, state, or regional pesticide office. (See pages 44–48 in the Reference Section for phone numbers.) If you or someone in your family is accidentally sprayed, wash pesticide off immediately and change into clean clothes. Then call your local poison control center.

Some local governments require public notice before area-wide or broad-scale pesticide spraying activities take place. Affected residents are notified through newspaper announcements, fliers, letters, or signs posted in areas to be treated. Some communities have also enacted "right-to-know" ordinances that require public notice (usually through posting) of lawn treatments and other small-scale outdoor pesticide uses.

Indoors

The air you breathe may contain low levels of pesticide residues long after a pesticide has been applied to objects inside a building or to indoor surfaces and crawl spaces, or after it has been tracked in from outside. Pesticides break down and disappear more slowly indoors than outdoors. In addition, many homes have built-in energy efficiency features that reduce the exchange of indoor and outdoor air and thus aggravate the problem. To limit your exposure to indoor pesticide residues—

- Air out the building adequately after a pesticide is applied indoors. Open doors and windows, and run overhead, whole-house, or window fans to exchange indoor air for outdoor air rapidly and completely.
- If you suspect that the air in your building is contaminated, consult knowledgeable professionals in your local or state health department or EPA's pesticide hotline (1-800-858-7378), 6:30 a.m.– 4:30 p.m. Pacific time (9:30 a.m.–7:30 p.m. Eastern time) Monday–Friday, for advice on the apropriate steps to take.

Air out the building adequately after a pesticide is applied indoors.

Poisoned by Pesticides: Don't Let This Happen to Your Child!

A 5-year-old boy drinks from a bottle of bleach that he found under the bathroom sink.

A 3-year-old girl tries to spray her hair the way mommy does, but sprays an aerosol disinfectant in her eyes instead.

A baby who has just begun to crawl eats green pebbles from behind the sofa. They look like candy, but are really rat poison.

These accidents could happen to your children or to children visiting your home if you don't store pesticides out of their reach or if you don't read the label carefully before using the pesticide product.

The dangers are real. In 1993 alone, an estimated 80,000 children were exposed to or poisoned by a household pesticide product that was used or stored incorrectly.

Whether or not you have young children in your home, take the following precautions to protecall children from unintentional pesticide poisonings or exposures:

- Always store pesticides out of children's reach, in locked cabinet or garden shed. Installing child-proof safety latches or padlocks on cupboards and cabinets is a good idea. Safety latches are available at your local hardware store or building supply warehouse.
- Before applying pesticides—indoors or outdoors—remove children and their toys, along with any pets and their toys, from the area. Keep them away from the area that has been treated until the pesticide has dried and for at least the length of time recommended on the pesticide label.
- If you are interrupted while applying a pesticide—by a phone call, for example—be sure to close the pesticide container properly and put it out of reach of any child who may come into the area while you are gone.

- Never remove labels from containers, and never transfer pesticides to other containers. Children may mistake them for food or drink.
- Never put rodent or insect baits where small children can find them, pick them up, and put them in their mouths.
- Make sure you close any container marked "child resistant" very tightly after you use the product. Check periodically to make sure the product is securely closed. Child resistant does not mean child proof, so you should still be careful with products that are sold in child-resistant packaging.
- Make sure others—especially babysitters, grandparents, and other caregivers—know about the potential hazards of pesticides.
- Teach children that "pesticides are poisons"—something they should never touch or eat.
- Keep the telephone number of youmearest poison control center near each phone. Have the pesticide container handy when you call.
- Always keep Syrup of Ipecac on hand (in your medicine cabinet) to use to induce vomiting. (Be sure the date is current.) But do not give it to your child until a physician or poison control center advises you to do so. The pesticide label may not recommend using Syrup of Ipecac.

Store pesticides out of children's reach.

Handling a Pesticide Emergency

"Help! Someone's Been Poisoned!" What To Do in a Pesticide Emergency

If the person is unconscious, having trouble breathing, or having convulsions . . .
ACT FAST! Speed is crucial.

Give needed first aid immediately.

Call 911 or your local emergency service. If possible, have someone else call for emergency help while you give first aid.

If the person is awake or conscious, not having trouble breathing, and not having convulsions . . .

Read the label for first aid instructions.

Call a doctor, a poison control center, a local emergency service (911), or the National Pesticide Telecommunications Network (toll free at 1-800-858-7378).

Give first aid.

First Aid for Pesticide Poisoning

When you realize a pesticide poisoning has occurred or is occurring, try to determine what the victim was exposed to and what part of the body was affected before you take action—taking the right action is as important as taking immediate action. If the person is unconscious, having trouble breathing, or having convulsions, ACT FAST! Speed is crucial. Give needed first aid immediately. Call 911 or your local emergency service. If possible, have someone else call for emergency help while you give first aid. If the person is awake or conscious, not having trouble breathing, and not having convulsions, read the label for first aid instructions. Call a doctor, a poison control center, a local emergency service (911), or the National Pesticide Telecommunications Network (toll free at 1-800-858-7378). Give first aid.

Read the *Statement of Practical Treatment* section on the product label. The appropriate first aid treatment depends on the kind of poisoning that has occurred. Follow these general guidelines:

- **Swallowed poison.** A conscious victim should drink a small amount of water to dilute the pesticide. Always keep Syrup of Ipecac on hand (in your medicine cabinet) to use to induce vomiting. Be sure the date on the bottle is current. Induce vomiting only if a poison control center or physician advises you to do so, or if instructions on the pesticide label say so. If there is no label available to guide you, do not induce vomiting. Never induce vomiting if the victim is unconscious or is having convulsions.

- **Poison on skin.** Drench skin with water for at least 15 minutes. Remove contaminated clothing. Wash skin and hair thoroughly with soap and water. Dry victim and wrap in blanket. Later, discard contaminated clothing or thoroughly wash it separately from other laundry.

- **Chemical burn on skin.** Drench skin with water for at least 15 minutes. Remove contaminated clothing. Cover burned area immediately with loose, clean, soft cloth. Do not apply ointments, greases, powders, or other drugs. Later, discard contaminated clothing or thoroughly wash it separately from other laundry.

If a poisoning has occurred, call for help, and be ready to read information from the pesticide label.

- **Poison in eye.** Hold eyelid open and wash eye quickly and gently with clean cool running water from the tap or a hose for 15 minutes or more. Use only water; do not use eye drops, chemicals, or drugs in the eye. Eye membranes absorb pesticides faster than any other external part of the body, and eye damage can occur in a few minutes with some types of pesticides.

- **Inhaled poison.** If the victim is outside, move or carry the victim away from the area where pesticides were recently applied. If the victim is inside, carry or move the victim to fresh air immediately. If you think you need protection like a respirator before helping the victim, call the Fire Department and wait for emergency equipment before entering the area. Loosen the victim's tight clothing. If the victim's skin is blue or the victim has stopped breathing, give artificial respiration (if you know how) and call 911 for help. Open doors and windows so no one else will be poisoned by fumes.

What To Do After First Aid

- First aid may precede but should not replace professional medical treatment. After giving first aid, call 911 or your local emergency service immediately. Have the pesticide label at hand when you call.

- Take the pesticide product container with its label to the doctor's office or emergency room where the victim will be treated. Carry the container in your trunk or flatbed away from the passengers in your vehicle. The doctor needs to know what active ingredient is in the pesticide before prescribing treatment. This information is on the label, which sometimes also includes a telephone number to call for additional treatment information.

Another good resource in a pesticide emergency is NPTN, the National Pesticide Telecommunications Network, a toll-free telephone service that operates Monday through Friday, from 6:30 a.m.– 4:30 p.m. Pacific time (9:30 a.m.– 7:30 p.m. Eastern time). NPTN provides information on pesticides and how to recognize and respond to pesticide poisonings. If necessary, staff at NPTN can transfer your call directly to a local poison control center. Call NPTN toll free at 1-800-858-7378.

NPTN staff answer questions about animal poisonings, too. To keep your pets from being poisoned, follow label directions on flea and tick products carefully. If you are concerned about the chemicals used in these products, consult your veterinarian.

How To Recognize Pesticide Poisoning

External irritants that contact skin may cause skin damage such as redness, itching, or pimples. External irritants may also cause an allergic skin reaction that produces redness, swelling, or blistering. The mucous membranes of the eyes, nose, mouth, and throat are also quite sensitive to chemicals. Pesticide exposure may cause stinging and swelling in these membranes.

Internal injuries also may occur if a pesticide is swallowed, inhaled, or absorbed through the skin. Symptoms vary from organ to organ. Lung injury may result in shortness of breath, drooling (heavy salivation), or rapid breathing. Direct injury to the stomach and intestines may produce nausea, vomiting, abdominal cramps, or diarrhea. Injury to the nervous system may cause excessive fatigue, sleepiness, headache, muscle twitching, and numbness. In general, different types of pesticides produce different sets of symptoms.

If someone develops symptoms after working with pesticides, seek medical help immediately to determine if the symptoms are pesticide related. In certain cases, blood or urine should be collected for analysis, or other specific exposure tests can be made. **It is better to be too cautious than too late.**

Avoid potential health problems by minimizing your exposure to pesticides. Follow all the safety recommendations on pages 19–25.

Choosing a Pest Control Company

IF YOU HAVE a pest control problem that you do not want to handle on your own, you may decide to turn to a professional applicator. How can you be sure that the pest control company you hire will do a good job? Before you choose a company, get answers to these questions:

1 Is the company licensed?
Most state or local agencies issue state pest control licenses. Make sure the pest control operator's licence is current if one is required in your state. Also, ask if the company's employees are bonded, meaning that the company reimburses you for any loss or damage caused by the employee.

You may want to contact your state pesticide agency to find out about its pesticide certification and training programs and to ask whether periodic recertification is required for pest control operators. (See pages 45–48 for addresses and phone numbers.)

In addition, possession of a city license—where they are issued—is one more assurance that the company you are dealing with is reputable and responsible.

2 Is the company willing and able to discuss the treatment proposed for your home?
Selecting a pest control service is just as important as selecting other professional services. Look for the same high degree of competence you would expect from a doctor or lawyer. Any company, including those advertising themselves as "green," should inspect your premises and outline a recommended control program, including the—

- Pests to be controlled.
- Extent of the problem.
- Active ingredient(s) in the pesticide chosen.
- Potential adverse health effects and typical symptoms of poisoning associated with the active ingredient.
- Form of the pesticide and application techniques.
- Non-chemical alternatives available.

- Special instructions to reduce your exposure to the pesticide (such as vacating the house, emptying the cupboards, and removing pets).
- Steps to take to minimize your pest problems in the future.

3 Does the company have a good track record?
Don't rely on the company salesperson to answer this question. Research the answer yourself. Ask neighbors and friends if they have ever dealt with the company. Were they satisfied with the service they received? Call the Better Business Bureau or local consumer office and find out if they have received complaints about the company.

4 Does the company have appropriate insurance? Can the salesperson show proof on paper that the company is insured?
Most contractors carry general liability insurance, including insurance for sudden and accidental pollution. Their insurance gives you a certain degree of protection should an accident occur while pesticides are being applied in your home. Contractors may also carry workmen's compensation insurance, which can help protect you should one of their employees be injured while working in or around your apartment or house. Although most states do not require pest control companies to buy insurance, you should think twice before hiring a company that is not insured.

5 Does the company guarantee its work?
You should be skeptical about a company that does not guarantee its work. In addition, be sure to find out what you must do to keep your part of the bargain. For example, in the case of termite control treatments, the company's guarantee may become invalid if you make structural alterations to your home without giving prior notice to the pest control company.

6 Is the company affiliated with a professional pest control association?
Professional associations—national, state, or local—keep members informed of new developments in pest control methods, safety, training, research, and regulations. Members agree to honor a code of ethics. The fact that a company, small or large, chooses to join a professional association signals its concern for quality.

Ask questions before choosing a pesticide company.

You and the company of your choice should develop the contract together. Your safety concerns should be noted and reflected in the choice of pesticides to be used. These concerns may include allergies, sensitivities, age of occupants (infants or elderly), resident pets, and treatment near wildlife and fish. Wise consumers get bids from two or three companies and look at value more than price. What appears to be a bargain may warrant a second look.

If you hire a pest control firm to do the job, ask the company to use the least toxic chemical method available that will do the job. Ask to see the label or Material Safety Data Sheet, which will show precautionary warnings.

Hiring a company to take care of your pest problem does not mean your job is over. You must evaluate the results. If you believe something has gone wrong with the pesticide application, contact the company and/or your state pesticide agency. Be a responsible, wise consumer and keep asking questions until your pests are under control.

Reference Section

Calculating the Correct Amount of Pesticide To Use for Your Target Area

To determine the size of your target area outdoors (usually a square or rectangular part of your lawn or garden), measure each side and multiply the length times the width. For example, if you want to apply a pesticide in an area that is 15 feet long and 15 feet wide, multiply 15 x 15 to get a total of 225 square feet.

When you read the label for pesticides commonly applied outdoors, you will see measurements in square feet or in square yards. A section of lawn that is 1 yard long x 1 yard wide has an area of 1 square yard. Because 1 yard = 3 feet, another way to calculate the same area is this: 3 feet long x 3 feet wide = 9 square feet = 1 square yard.

To know the size of your target area indoors, you may need to determine the volume of a room. You must calculate the volume of a room, for instance, before using a bug bomb (aerosol release) to control cockroaches or fleas. In a case like this, measure and multiply the room's length times width times height. For example, if the kitchen in your apartment is 6 feet long, 5 feet wide, and 8 feet high, its volume is 240 cubic feet (6 x 5 = 30 x 8 = 240).

Tables 1 to 3 (on pages 40–41) give examples for changing measurements you find on the pesticide label to match your specific target area and pest problem.

Not all amounts are included in the tables. For amounts not included, use the following notes as a guide:

- To figure the amount of a ready-to-use pesticide (not to be diluted with water), you must change the quantity of pesticide in the same way that you change the area/volume/number of items treated to keep the correct proportion.

  For example—

  ½ lb. of pesticide per 1,000 sq.ft. = ¼ lb. of pesticide per 500 sq.ft.

- To figure the amount of a pesticide that is to be diluted with water, you must change the quantity of pesticide and the quantity of water in the same way that you change the area/volume/number of items treated to keep the correct proportion.

  For example—

  1 lb. of pesticide in 2 gals. of water per 2,000 sq.ft. = ½ lb. of pesticide in 1 gal. of water per 1,000 sq.ft.

TABLE 1 — Diluting Pesticides with Water

Unit stands for any measure of pesticide quantity. Read across.

Pesticide Label Says: Mix "x" Units of Pesticide . . .	*You mix . . .*		
8 units *per* 1 gal water	2 units *per* 1 qt water	*or*	1 unit *per* 1 pt water
16 units *per* 1 gal water	4 units *per* 1 qt water	*or*	2 units *per* 1 pt water
32 units *per* 1 gal water	8 units *per* 1 qt water	*or*	4 units *per* 1 pt water
128 units *per* 1 gal water	32 units *per* 1 qt water	*or*	16 units *per* 1 pt water

TABLE 2 — Measuring Pesticides for a Surface Application
Unit stands for any measure of pesticide quantity. Read across.

Pesticide Label Says: Apply "x" Units of Pesticide . . .		*Your surface measures . . .* 20,000 sq.ft.	10,000 sq.ft.	500 sq.ft.
1 unit *per* 1,000 sq.ft.	*Apply:*	20 units	10 units	½ unit
2 units *per* 1,000 sq.ft.		40 units	20 units	1 unit
5 units *per* 1,000 sq.ft.		100 units	50 units	2½ units
10 units *per* 1,000 sq.ft.		200 units	100 units	5 units

TABLE 3 — Buying Pesticides for a Room Application
Read across.

Pesticide Label Says: Release One Aerosol Can . . .		*Your room measures . . .* 20,000 cu.ft.	10,000 cu.ft.	5,000 cu.ft.
1 *per* 10,000 cu.ft.	*Use:*	2 cans	1 can	don't use
1 *per* 5,000 cu.ft.		4 cans	2 cans	1 can
1 *per* 2,500 cu.ft.		8 cans	4 cans	2 cans

For More Information

For additional copies of this booklet, or for more information on subjects discussed in this booklet, contact—

EPA's Public Information Center (PIC), 401 M Street, SW, Washington, DC 20460 (Telephone: 202-260-2080); or the National Center for Environmental Publications and Information (NCEPI), P.O. Box 42419, Cincinnati, OH 45242-2419 (Telephone: 513-489-8190 or Fax: 513-489-8695).

PIC and NCEPI have the following free information available:

- *Healthy Lawn, Healthy Environment* (EPA 700-K-92-005).
- *Pesticides in Drinking Water Wells* (EPA 20T-1004).
- *Pest Control in the School Environment: Adopting Integrated Pest Management* (EPA 735-F-93-012).
- *Pesticides and Child Safety* fact sheet (English and Spanish) (EPA 735-F-93-050 and EPA 735-F-93-051).
- *Using Insect Repellents Safely* fact sheet (English and Spanish).
- *Safety Precautions for Total Release Foggers* fact sheet.
- NCEPI also has EPA's *National Publications Catalog 1995* (EPA 703-B-95-001) and the *Catalog of Office of Pesticide Programs (OPP) Publications and Other Information Media* (EPA 730-B-94-001).

Other sources for information about pesticides and pest control include—

- The National Pesticide Telecommunications Network (NPTN)—1-800-858-7378 (general public), 6:30 a.m.–4:30 p.m. Pacific time (9:30 a.m.–7:30 p.m. Eastern time) Monday–Friday. NPTN provides the following information:
  - Pesticide information.
  - Information on recognizing and managing pesticide poisonings.
  - Safety information.
  - Health and environmental effects.
  - Referrals for investigation of pesticide incidents and emergency treatment information.
  - Cleanup and disposal procedures, and much more.

- County Cooperative Extension Service offices are usually listed in the telephone directory under county or state government; these offices often have a range of resources on lawn care and landscape maintenance, including plant selection, pest control, and soil testing.
- State agriculture and environmental agencies may publish information on pests, pest management strategies, and state pesticide regulations. (See state contacts on pages 45–48.)
- Libraries, bookstores, and garden centers usually have a wide selection of books that identify various pests and discuss lawn care. Garden centers may also have telephone hotlines or experts available on the premises to answer gardening questions.
- The California Department of Pesticide Regulation's Environmental Monitoring and Pest Management Branch publishes a booklet on mail order sources of biological control organisms. Single free copies of *Suppliers of Beneficial Organisms in North America* are available by writing the Department at 1020 N Street, Room 161, Sacramento, CA 95814-5624. Telephone: 916-324-4100.
- Bio-Integral Resource Center (BIRC), a non-profit organization formed in 1978 through an EPA grant, has information on least toxic methods for pest management. Write to P.O. Box 7414, Berkeley, CA 94707.

"Help! Someone's Been Poisoned!"
What To Do in a Pesticide Emergency

If the person is unconscious, having trouble breathing, or having convulsions . . .
ACT FAST! Speed is crucial.

Give needed first aid immediately.

Call 911 or your local emergency service. If possible, have someone else call for emergency help while you give first aid.

If the person is awake or conscious, not having trouble breathing, and not having convulsions . . .

Read the label for first aid instructions.

Call a doctor, a poison control center, a local emergency service (911), or the National Pesticide Telecommunications Network (toll free at 1-800-858-7378).

Give first aid.

3. Blueprint for a Clean Ocean

Blueprint for a Clean Ocean

Best Management Practices to Prevent Stormwater Pollution from Construction-Related Activities

Introduction

Stormwater pollution is rapidly growing in importance as a national environmental issue. In California, stormwater pollution is a major source of water pollution. To help combat the problems of stormwater pollution, federal and state governments have developed a program for monitoring and permitting discharges to municipal storm drain systems, creeks, and water bodies such as the Pacific Ocean.

Municipalities in the Orange County Area are required by the Clean Water Act to develop stormwater management programs that include requirements for construction activities. Your construction project will need to comply with local municipal requirements. If your construction activity will disturb five acres or more, you must also obtain coverage under the General Construction Activity Permit (see Requirements for Dischargers).

Blueprint for a Clean Ocean is an introductory guide to stormwater quality control on construction sites. It contains several principles and techniques that you can use to help prevent stormwater pollution. This booklet has been developed as a resource for all general contractors, home builders, and subcontractors working on construction sites.

Blueprint for a Clean Ocean is not a design manual or a Stormwater Pollution Prevention Plan (SWPPP) (see Requirements for Dischargers). For more information on the General Permit, designing stormwater quality controls, or producing a Stormwater Pollution Prevention Plan, please refer to the California Storm Water Best Management Practice Handbook for Construction Activity, or consult your local program or the SWRCB (see below). Please note that this booklet is concerned only with the management of construction sites and activities during construction.

Stormwater Pollution

Storm Drain System

Stormwater or runoff from sources like sprinklers and hoses flows over the ground into the storm drain system. In the Orange County Area, storm drain systems consist of gutters, storm drains, underground pipes, open channels, culverts, and creeks. Storm drain systems are designed to drain directly to the Pacific Ocean with no treatment.

Pollution From Construction Sites

Stormwater runoff is part of a natural hydrologic process. However, land development and construction activities can significantly alter natural drainage patterns and pollute stormwater runoff. Runoff picks up pollutants as it flows over the ground or paved areas and carries these pollutants into the storm drain system. Common sources of pollutants from construction sites include: sediments from soil erosion; construction materials and waste (e.g., paint, solvents, concrete, drywall); landscaping runoff containing fertilizers and pesticides; and spilled oil, fuel, and other fluids from construction vehicles and heavy equipment.

Adverse Effects from Stormwater Pollution

Stormwater pollution is a major source of water pollution in California. It can cause declines in fisheries, disrupt habitats, and limit water recreation activities. Even more importantly, stormwater pollution poses a serious threat to the overall health of the ecosystem.

For more information on stormwater requirements call the State Water Resources Control Boards Stormwater Information Line at (916) 657-1146 or your local program.

Requirements for Dischargers

Municipal Stormwater Program

Municipalities in the Los Angeles Area are required by federal regulations to develop programs to control the discharge of pollutants to the storm drain system, including the discharge of pollutants from construction sites and areas of new development or significant redevelopment. As a result, your development and construction projects may be subject to new requirements designed to improve stormwater quality such as, expanded plan check and review, new contract specifications, and increased site inspection. For more information on municipal requirements, please contact the municipal representative listed on the back cover of this booklet.

Projects Equal To Or Greater Than 5 Acres

If your construction activity will disturb five acres or more, you must obtain coverage under the General Construction Activity Storm Water Permit (General Construction Permit) issued by the State Water Resources Control Board (SWRCB) for stormwater discharges associated with construction activity. To obtain coverage under the General Permit, a Notice of Intent (NOI) must be filed with the SWRCB. The General Construction Permit requires you to prepare and carry out a "Stormwater Pollution Prevention Plan" or SWPPP Your SWPPP must identify appropriate stormwater pollution prevention measures or best management practices (BMPs), like the ones described in this booklet, to reduce pollutants in stormwater discharges from the construction site both during and after construction is completed. A best management practice or BMP is defined as any program, technology, process, practice, operating method, measure, or device which controls, prevents, removes, or reduces pollution.

Projects Less Than 5 Acres

If your project is less than five acres, you may still need to use BMPs to comply with local municipal requirements. Check with the local planning or engineering department for details.

Best Management Practices

General Practices

The following are some general principles that can significantly reduce pollution from construction activity and help make compliance with stormwater regulations easy:

- Identify all storm drains, drainage swales and creeks located near the construction site and make sure all subcontractors are aware of their locations to prevent pollutants from entering them.
- Clean up leaks, drips, and other spills immediately so they do not contact stormwater.
- Refuel vehicles and heavy equipment in one designated location on the site and take care to clean up spills immediately.
- Wash vehicles at an appropriate off-site facility. If equipment must be washed on-site, do not use soaps, solvents, degreasers, or steam cleaning equipment, and prevent wash water from entering the storm drain. If possible, direct wash water to a low point where it can evaporate and/or infiltrate.
- Never wash down pavement or surfaces where materials have spilled. Use dry cleanup methods whenever possible.

- Avoid contaminating clean runoff from areas adjacent to your site by using berms and/or temporary or permanent drainage ditches to divert water flow around the site. Reduce stormwater runoff velocities by constructing temporary check dams and/or berms where appropriate.

- Protect all storm drain inlets using filter fabric cloth or other best management practices to prevent sediments from entering the storm drainage system during construction activities.

- Keep materials out of the rain - prevent runoff pollution at the source. Schedule clearing or heavy earth moving activities for periods of dry weather. Cover exposed piles of soil, construction materials and wastes with plastic sheeting or temporary roofs. Before it rains, sweep and remove materials from surfaces that drain to storm drains, creeks, or channels.

For more information on the General Permit, call the State Water Resources Control Board's Stormwater Information Line at 916-657-1146 or visit our website at

- Keep pollutants off exposed surfaces. Place trash cans around the site to reduce litter. Dispose of non-hazardous construction wastes in covered dumpsters or recycling receptacles.

- Practice source reduction - reduce waste by ordering only the amount you need to finish the job.

- Do not over-apply pesticides or fertilizers and follow manufacturers instructions for mixing and applying materials.

- Recycle leftover materials whenever possible. Materials such as concrete, asphalt, scrap metal, solvents, degreasers, cleared vegetation, paper, rock, and vehicle maintenance materials such as used oil, antifreeze, batteries, and tires are recyclable.

- Dispose of all wastes properly. Materials that cannot be reused or recycled must be taken to an appropriate landfill or disposed of as hazardous waste. Never throw debris into channels, creeks or into wetland areas. Never store or leave debris in the street or near a creek where it may contact runoff.

- Illegal dumping is a violation subject to a fine and/or time in jail. Be sure that trailers carrying your materials are covered during transit. If not, the hauler may be cited and fined.

- Train your employees and inform subcontractors about the stormwater requirements and their own responsibilities.

Specific Practices

Following is a summary of specific best management practices for erosion and sediment control and contractor activities. For more information on erosion and sediment control BMPs and their design, please refer to the California Storm Water Best Management Practice Handbook for Construction Activity (March 1993).

Erosion Prevention and Sediment Control

Prevent erosion

Soil erosion is the process by which soil particles are removed from the land surface, by wind, water and/or gravity. Soil particles removed by stormwater runoff are pollutants that when deposited in local creeks, lakes, and the Pacific Ocean, can have negative impacts on aquatic habitat. Exposed soil after clearing, grading, or excavation is easily eroded by wind or water. The following practices will help prevent erosion from occurring on the construction site:

- Plan the development to fit the topography, soils, drainage pattern and natural vegetation of the site.
- Delineate clearing limits, easements, setbacks, sensitive or critical areas, trees, drainage courses, and buffer zones to prevent excessive or unnecessary disturbances and exposure.
- Phase grading operations to reduce disturbed areas and time of exposure.
- Avoid excavation and grading during wet weather.
- Limit on-site construction routes and stabilize construction entrance(s).
- Remove existing vegetation only when absolutely necessary.

- Construct diversion dikes and drainage swales to channel runoff around the site.
- Use berms and drainage ditches to divert runoff around exposed areas. Place diversion ditches across the top of cut slopes
- Plant vegetation on exposed slopes. Where replanting is not feasible, use erosion control blankets (e.g., jute or straw matting, glass fiber or excelsior matting, mulch netting).
- Consider slope terracing with cross drains to increase soil stability.
- Cover stockpiled soil and landscaping materials with secured plastic sheeting and divert runoff around them.
- As a back-up measure, protect drainage courses, creeks, or catch basins with straw bales, silt fences and/or temporary drainage swales.
- Once grading is completed, stabilize the disturbed areas using permanent vegetation as soon as possible.
- Conduct routine inspections of erosion control measures especially before and immediately after rainstorms, and repair if necessary.

Control sediment

Sedimentation is defined as the process of depositing sediments picked up by runoff. Sediments consist of soil particles, clays, sands, and other minerals. The purpose of sediment control practices is to remove sediments from stormwater before they are transported off-site or reach a storm drain inlet or nearby creek. 'Me most effective sediment control practices reduce runoff velocity and trap or detain runoff allowing sediments to settle out.

- Use terracing, rip rap, sand bags, rocks, straw bales, and/or temporary vegetation on slopes to reduce runoff velocity and trap sediments. Do not use asphalt rubble or other demolition debris for this purpose.
- Use check dams in temporary drains and swales to reduce runoff velocity and promote sedimentation.
- Protect storm drain inlets from sediment-laden runoff. Storm drain inlet protection devices include sand bag barriers, filter fabric fences, block and gravel filters, and excavated drop inlet sediment traps.
- Collect and detain sediment-laden runoff in sediment traps (an excavated or bermed area or constructed device) to allow sediments to settle out prior to discharge.
- Use sediment controls and filtration to remove sediments from water generated by dewatering.
- Prevent construction vehicle tires from tracking soil onto adjacent streets by constructing a temporary stone pad with a filter fabric underliner near the site exit where dirt and mud can be removed.
- When cleaning sediments from streets, driveways and paved areas on construction sites, use dry sweeping methods where possible. If water must be used to flush pavement, collect runoff to settle out sediments and protect storm drain inlets.

Note: Performance of erosion and sediment controls is dependent on proper installation, routine inspections and maintenance of the controls. Most of the BMPs described above are temporary

and if left alone can quickly fall into disrepair and/or become ineffective. Routine inspections and maintenance, particularly before and after a storm event, must be Part of erosion and sediment control plan.

The California Storm Water Best Management Practices Handbook for Construction Activity provides specific details and design criteria for erosion and sediment control plans.

Drainage swales channel runoff around a construction site. Planting temporary vegetation on freshly graded areas, and trenching and staking straw bales and/or silt fences downslope are common techniques for preventing erosion and controlling sediment.

Make sure equipment repair area is bermed or well away from creeks and storm drains.

General Site Maintenance

Prevent spills and leaks

Poorly maintained vehicles and heavy equipment leaking fuel, oil, antifreeze, or other fluids on the construction site are common sources of stormwater pollution and soil contamination. Construction material spills can also cause serious problems. Careful site planning, preventive maintenance, and good materials handling practices can eliminate most spills and leaks.

- Maintain all vehicles and heavy equipment. Inspect frequently for and repair leaks.
- Designate specific areas of the construction site, well away from creeks or storm drain inlets, auto and equipment parking and routine vehicle and equipment maintenance.
- Perform major maintenance, repair jobs and vehicle and equipment washing off-site when feasible, or in designated and controlled areas on-site.
- If you must drain and replace motor oil, radiator coolant, or other fluids on-site, use drip pans or drop cloths to catch drips and spills. Collect all spent fluids, store in labeled separate containers, and recycle whenever possible. Note that in order to be recyclable, such liquids must not be mixed with other fluids. Non-recycled fluids generally must be disposed of as hazardous wastes.

Clean up spills immediately after they happen

When vehicle fluids or materials such as paints or solvents are spilled, cleanup should be immediate, automatic, and routine.

- Sweep up spilled dry materials (e.g., cement, mortar, or fertilizer) immediately. Never attempt to "wash them away" with water, or bury them. Use only minimal water for dust control.
- Clean up liquid spills on paved or impermeable surfaces using "dry" cleanup methods (e.g.,absorbent materials like cat litter, sand or rags).
- Clean up spills on dirt areas by digging up and properly disposing of the contaminated soil.
- Report significant spills to the appropriate spill response agencies immediately (See reference list on the back cover of this booklet for more information).

Clean up spills on dirt areas by removing contaminated soil.

Note: Used cleanup rags that have absorbed hazardous materials must either be sent to a certified industrial laundry or dry cleaner, or disposed of through a licensed hazardous waste disposal company.

Store materials under cover

Wet and dry building materials with the potential to pollute runoff should be stored under cover and/or surrounded by berms when rain is forecast or during wet weather.

- Store stockpiled materials and wastes under a temporary roof or secured plastic sheeting or tarp.
- Berm around storage areas to prevent contact with runoff.
- Plaster or other powders can create large quantities of suspended solids in runoff, which may be toxic to aquatic life and cause serious environmental harm even if the materials are inert. Store all such potentially polluting dry materials -especially open bags- under a temporary roof or inside a building, or cover securely with an impermeable tarp. By storing dry materials under a roof, you may also help protect air quality, as well as water quality.
- Store containers of paints, chemicals, solvents, and other hazardous materials in accordance with secondary containment regulations and under cover during rainy periods.

Cover and maintain dumpsters

Open or leaking dumpsters can be a source of stormwater pollution.

- Cover open dumpsters with plastic sheeting or a tarp during rainy weather. Secure the sheeting or tarp around the outside of the dumpster. If your dumpster has a cover, close it.
- If a dumpster is leaking, contain and collect leaking material. Return the dumpster to the leasing company for repair/exchange.
- Do not clean dumpsters on-site. Return to leasing company for periodic cleaning, if necessary.

Store building materials under cover. Make sure dumpsters are properly covered to keep out rain.

Collect and properly dispose of paint removal wastes

Paint removal wastes include chemical paint stripping residues, paint chips and dust, sand blasting material and wash water. These wastes contain chemicals that are harmful to the wildlife in our creeks and the water bodies they flow to. Keep all paint wastes away from the gutter, street, and storm drains.

- Non-hazardous paint chips and dust from dry stripping and sand blasting may be swept up or collected in plastic drop cloths and disposed of as trash. Chemical paint stripping residue and chips and dust from marine paints or paints containing lead or tributyl tin must be disposed of as a hazardous waste.

- When stripping or cleaning building exteriors with high-pressure water, cover or berm storm drain inlets. If possible (and allowed by your local wastewater treatment plant), collect (mop or vacuum) building cleaning water and discharge to the sanitary sewer. Alternatively, discharge non-contaminated wash water onto a dirt area and spade into the soil. Be sure to shovel or sweep up any debris that remains in the gutter and dispose of as garbage.

Clean up paints, solvents, adhesives, and cleaning solutions properly

Although many paint materials can and should be recycled, liquid residues from paints, thinners, solvents, glues, and cleaning fluids are hazardous wastes. When they are thoroughly dry, empty paint cans, used brushes, rags, absorbent materials, and drop cloths are no longer hazardous and may be disposed of as garbage.

- Never clean brushes or rinse paint containers into a street, gutter, storm drain, or creek.

- For water-based paints, paint out brushes to the extent possible and rinse to a drain leading to the sanitary sewer (i.e., indoor plumbing).
- For oil-based paints, paint out brushes to the extent possible, and filter and reuse thinners and solvents. Dispose of unusable thinners and residue as hazardous waste.
- Recycle, return to supplier or donate unwanted water-based (latex) paint. You may be able to recycle clean empty dry paint cans as metal.
- Dried latex paint may be disposed of in the garbage.
- Unwanted paint (that is not recycled), thinners, and sludges must be disposed of as hazardous waste.
- More and more paint companies are recycling excess latex paint (See separate list of "Recyclers and Disposal Services" for more information).

Keep fresh concrete and cement mortars out of gutters, storm drains, and creeks

Concrete and cement-related mortars that wash into gutters and storm drains are toxic to fish and the aquatic environment.

- Avoid mixing excess amounts of fresh concrete or cement mortar on-site.
- Store dry and wet materials under cover, protected from rainfall and runoff.
- Wash out concrete transit mixers only in designated wash-out areas where the water will flow into settling ponds or onto dirt or stockpiles of aggregate base or sand. Pump water from settling ponds to the sanitary sewer, where allowed. Whenever possible, recycle washout by pumping back into mixers for reuse. Never dispose of washout into the street, storm drains, drainage ditches, or creeks.
- Whenever possible, return contents of mixer barrel to the yard for recycling. Dispose of small amounts of excess concrete, grout, and mortar in the trash.

Service and maintain portable toilets

Leaking portable toilets are a potential health and environmental hazard.

- Inspect portable toilets for leaks.
- Be sure the leasing company adequately maintains, promptly repairs, and replaces units as needed.
- The leasing company must have a permit to dispose of waste to the sanitary sewer.

Dispose of cleared vegetation properly

Cleared vegetation, tree trimmings, and other plant material can cause environmental damage if it gets into creeks. Such "organic" material requires large quantities of oxygen to decompose, which reduces the oxygen available to fishes and other aquatic life.

- Do not dispose of plant material in a creek or drainage facility or leave it in a roadway where it can clog storm drain inlets.
- Avoid disposal of plant material in trash dumpsters or mixing it with other wastes. Compost plant material or take it to a landfill or other facility that composts yard waste.

Recycle yard waste and tree prunings at a landfill that chips and composts plant material.

Demolition Waste Management

Make sure all demolition waste is properly disposed of

- Demolition debris that is left in the street or pushed over a bank into a creek bed or drainage facility causes serious problems for flood control, storm drain maintenance, and the health of our environment. Different types of materials have different disposal requirements or recycling options.
- Materials that can be recycled from demolition projects include: metal framing, wood, concrete, asphalt, and plate glass.
- Materials that can be salvaged for reuse from old structures include: doors, banisters, floorboards, windows, 2x4s, and other old, dense lumber.
- Unusable, unrecycleable debris should be confined to dumpsters, covered at night and during wet weather, and taken to a landfill for disposal.
- Hazardous debris such as asbestos must be handled in accordance with specific laws and regulations and disposed of as a hazardous waste. For more information of asbestos handling and disposal regulations, contact the South Coast Air Quality Management District.
- Arrange for an adequate debris disposal schedule to insure that dumpsters do not overflow.

Roadwork and Pavement Construction

Plan roadwork and pavement construction to avoid stormwater pollution

Road paving, surfacing, and asphalt removal happen right in the street, with numerous opportunities for stormwater pollution from the asphalt mix, saw-cut slurry, or excavated material. Properly proportioned asphalt mix and well-compacted pavement avoid a host of water pollution problems.

- Apply concrete, asphalt, and seal coat during dry weather to prevent contaminants from contacting stormwater runoff.

- Cover storm drain inlets and manholes when paving or applying seal coat, slurry seal, fog seal, etc.
- Always park paving machines over drip pans or absorbent materials, since they tend to drip continuously.
- When making saw-cuts in pavement, use as little water as possible. Cover each catch basin completely with filter fabric during the sawing operation and contain the slurry by placing straw bales, sand bags, or gravel dams around the catch basin. After the liquid drains or evaporates, shovel or vacuum the slurry residue from the pavement or gutter and remove from site.
- Wash down exposed aggregate concrete only when the wash water can: (1) flow onto a dirt area; (2) drain onto a bermed surface from which it can be pumped and disposed of properly; or (3) be vacuumed from a catchment created by blocking a storm drain inlet. If necessary, place straw bales downslope, or divert runoff with temporary berms. Make sure runoff does not reach gutters or storm drains.
- Allow aggregate rinse to settle, and pump the water to the sanitary sewer if allowed by your local wastewater authority.
- Never wash sweepings from exposed aggregate concrete into a street or storm drain. Collect and return to aggregate base stockpile, or dispose with trash.
- Recycle broken concrete and asphalt.

Contaminated Ponded Stormwater, Groundwater, and Soil Guidance

Look for ponded stormwater, groundwater, and/or soil contamination

Ponded stormwater, groundwater and soil may become contaminated if exposed to hazardous materials. If any of the following conditions apply, contaminated ponded stormwater, groundwater, and/or soil may be present and pose a potential health and environmental hazard:

- The project site is in an area of previous commercial/industrial activity;
- There is a history of illegal dumping on the site or adjacent properties;
- The construction site is subject to a Superfund, state, or local cleanup order;
- Ponded stormwater, groundwater and/or water generated by dewatering exhibits an oily-sheen and/or smells of petroleum;
- Soil appears discolored, smells of petroleum and/or exhibits other unusual properties;
- Abandoned underground storage tanks, drums, or other buried debris are encountered during construction activities; or
- Spills have occurred on the site or adjacent properties involving pesticides and herbicides; fertilizers; detergents; plaster and other products; petroleum products such as fuel, oil, and grease; or other hazardous chemicals such as acids, lime, glues, paints, solvents, and curing compounds.

Take appropriate action

Ponded stormwater, groundwater, or water generated by dewatering that is contaminated cannot be discharged to a street, gutter, or storm drain. If contamination is suspected, the water should be contained and held for testing. Call the appropriate local agency and/or the Regional Water Quality Control Board for further guidance (See reference list on the back cover of this booklet for more information).

Remember: The property owner and the contractor share ultimate responsibility for the activities that occur on the construction site. You may be held responsible for any environmental damage caused by your subcontractors or employees.

Pollution Control Agencies and Sources of Information

Orange County Storm Water Program

(714) 567-6363

Agencies to call in the event of a spill

You are required by law to report all significant releases or suspected significant releases of hazardous materials, including oil.

To report a spill, call the following agencies:

1.Dial (800) 303-0003 or your local emergency response number.

2. Call the Governor's Office of Emergency Services Warning Center, (800) 852-7550 (24 hours).

For spills of "Federal Reportable Quantities" of oil, chemicals, or other hazardous materials to land, air, or water, notify the National Response Center (800-424-8802). If you are not sure whether the spill is of a "reportable quantity," call the federal Environmental Protection Agency (800) 424-9346 for clarification.

For further information, see *California Hazardous Material Spill Release Notification Guidance* (State Office of Emergency Services, Hazardous Materials Division).

Agencies to call if you find or suspect contaminated soil or groundwater

4. Healthy Lawn – Healthy Environment

Your lawn care program should be tailored to local conditions--the amount of rainfall you get, for example, and the type of soil you have. The sources listed at the back of this brochure can help you design a lawn care program that suits both local conditions and your own particular needs. But no matter where you live, you can use the program outlined in this brochure as a general guide to growing a healthy lawn.

A preventive health care program for your lawn should have the following steps:

1. Develop healthy soil
2. Choose a grass type that thrives in your climate
3. Mow high, often, and with sharp blades
4. Water deeply but not too often
5. Correct thatch build-up
6. Set realistic goals

1. Develop Healthy Soil

Good soil is the foundation of a healthy lawn. To grow well, your lawn needs soil with good texture, some key nutrients, and the right pH, or acidity/alkalinity balance.

Start by checking the texture of your soil to see whether it's heavy with clay, light and sandy, or somewhere in between. Lawns grow best in soil with intermediate or "loamy" soils that have a mix of clay, silt, and sand. Whatever soil type you have, you can probably improve it by periodically adding organic matter like compost, manure, or grass clippings. Organic matter helps to lighten a predominantly clay soil and it helps sandy soil retain water and nutrients.

Also check to see if your soil is packed down from lots of use or heavy clay content. This makes it harder for air and water to penetrate, and for grass roots to grow. To loosen compacted soil, some lawns may need to be aerated several times a year. This process involves pulling out plugs of soil to create air spaces, so water and nutrients can again penetrate to the grass roots.

Most lawns need to be fertilized every year, because they need more nitrogen, phosphorus, and potassium than soils usually contain. These three elements are the primary ingredients found in most lawn fertilizers. It's important not to over-fertilize--you could do more harm to your lawn than good--and it's best to use a slow-release fertilizer that feeds the lawn slowly. It's also important to check the soil's pH. Grass is best able to absorb nutrients in a slightly acidic soil, with a pH of 6.5 to 7.0. Soil that is too acidic can be "sweetened" with lime; soil that's not acid enough can be made more sour by adding sulfur.

Have your soil tested periodically to see whether it needs more organic matter or the pH needs adjusting. Your county extension agent (listed in your phone book under county government) or local nursery should be able to tell you how to do this. These experts can also help you choose the right fertilizer, compost, and other "soil amendments," and they can advise you about aerating if your soil is compacted. If a professional service takes care of your lawn, make sure it takes these same steps to develop good soil. There's no getting around it: your lawn's health is only as good as the soil it grows in.

2. Choose A Grass Type That Thrives In Your Climate

The right type of grass--one that suits your needs and likes the local weather--will always give better results. Grasses vary in the type of climate they prefer, the amount of water and nutrients they need, their resistance to pests, their tolerance for shade, and the degree of wear they can withstand.

If you are putting in a new lawn, it will be worth your while to do some research to identify the best grass type for your needs.

If you're working with an established lawn that fails to thrive despite proper care, you might consider replanting with a different type of grass.

Why struggle to grow grass that's susceptible to fungal disease if you live in a humid climate? Or a water-loving species if you live in an area with water shortages? Grass that is well-adapted to your area will grow better and resist local pests and diseases better.

New grass varieties and mixtures come out on the market every year.

Ask your county extension agent or another one of the sources listed in this brochure for recommendations.

3. Mow High, Often and With Sharp Blades

Mowing high--that is, keeping your lawn a bit long--will produce stronger, healthier grass with fewer pest problems.

Longer grass has more leaf surface to take in sunlight. This enables it to grow thicker and develop a deeper root system, which in turn helps the grass survive drought, tolerate insect damage, and fend off diseases. Longer grass also shades the soil surface keeping it cooler, helping it retain moisture, and making it difficult for weeds to germinate and grow.

A lawn's ideal length will vary with the type of grass, but many turf grass species are healthiest when kept between 2-1/2 and 3-1/2 inches. The ruler at the back of this

brochure will help the best mowing height for your grass variety. You may have to readjust your mower--most are set too low.

It's also important to mow with sharp blades to prevent tearing and injuring the grass. And it's best to mow often, because grass adjusts better to frequent than infrequent mowing. The rule of thumb is to mow often enough that you never cut more than one-third of the height of the grass blades. Save some time and help your lawn and the environment by leaving short clippings on the grass--where they recycle nitrogen--rather than sending them in bags to the landfill.

You don't have to grow a foot-high meadow to get good results. Just adding an inch will give most lawns a real boost.

4. Water Deeply But Not Too Often

Watering properly will help your lawn grow deep roots that make it stronger and less vulnerable to drought. Most lawns are watered too often but with too little water. It's best to water only when the lawn really needs it, and then to water slowly and deeply. This trains the grass roots down. Frequent shallow watering trains the roots to stay near the surface, making the lawn less able to find moisture during dry periods.

Every lawn's watering needs are unique: they depend on local rainfall, the grass and soil type, and the general health of the lawn. But even in very dry areas, no established home lawn should require daily watering.

Try to water your lawn in a way that imitates a slow, soaking rain, by using trickle irrigation, soaker hoses, or other water-conserving methods. It's also best to water in the early morning, especially during hot summer months, to reduce evaporation. Apply about an inch of water--enough that it soaks 6-8 inches into the soil. Then let the lawn dry out thoroughly before watering it again.

The best rule is to water only when the lawn begins to wilt from dryness--when the color dulls and footprints stay compressed for more than a few seconds.

5. Correct Thatch Build-Up

All grass forms a layer of dead plant material, known as thatch, between the grass blades and the soil. When thatch gets too thick--deeper than one-half inch--it prevents water and nutrients from penetrating to the soil and grass roots. Some grasses tend to form a thick layer of thatch. Overuse of fertilizer can also create a heavy layer of thatch.

You can reduce thatch by raking the lawn or using a machine that slices through the thatch layer to break it up. Sprinkling a thin layer of topsoil or compost over the lawn will also help.

In a healthy lawn, microorganisms and earthworms help keep the thatch layer in balance by decomposing it and releasing the nutrients into the soil.

6. Set Realistic Goals

Setting realistic goals will allow you to conduct an environmentally sensible lawn care program. It's probably not necessary to aim for putting-green perfection. Did you know that a lawn with 15 percent weeds can look practically weed-free to the average observer? Even a healthy lawn is likely to have some weeds or insect pests. But it will also have beneficial insects and other organisms that help keep pests under control.

Also realize that grass just can't grow well in certain spots. Why fight a losing battle with your lawn, when you have other options? At the base of a tree, for example, you might have better luck with wood chips or shade-loving ornamental plants like ivy, periwinkle, or pachysandra. If your climate is very dry, consider converting some of your lawn to dry-garden landscaping. It could save time, money, and water resources.

What Is IPM?

Integrated Pest Management is essentially common-sense pest control. IPM is not a new concept; some forms of it have been practiced for centuries.

IPM involves the carefully managed use of three different pest control tactics--biological, cultural, and chemical--to get the best long-term results with the least disruption of the environment. Biological control means using natural enemies of the pest, like lady bugs to control aphids. Cultural or horticultural control involves the use of gardening methods, like mowing high to shade out weeds. Chemical control involves the judicious use of pesticides.

IPM is a highly effective approach that minimizes the use of pesticides and maximizes the use of natural processes. Lawn care professionals who use IPM should have a sophisticated understanding of the ecosystem of your turf and the available pest control tactics. Home gardeners can also practice IPM by following the steps outlined in this brochure.

Tips For Using Pesticides

Sometimes, even with good lawn care practices, weather conditions or other factors can cause pest problems to develop. Pesticides can help control many lawn pests. But pesticides have risks as well as benefits, and it's important to use them properly.

The chemicals we call pesticides include insecticides, herbicides, and fungicides. These products are designed to kill or control pest insects, weeds, and fungal diseases. Pesticides can be very effective. But don't be tempted to rely solely on pesticides as a quick-fix solution to any lawn problem. Serious, ongoing pest problems are often a

sign that your lawn is not getting everything it needs. In other words, the pests may be a symptom of an underlying problem. You need to correct the underlying problem to reduce the chance that the pest will reappear.

All pesticides are toxic to some degree. This means they can pose some risk to you, to your children and pets, and to any wildlife that venture onto your lawn--especially if these chemicals are overused or carelessly applied. Pesticides can also kill earthworms and other beneficial organisms, disrupting the ecological balance of your lawn.

Store pesticides out of children's reach in a locked cabinet or garden shed.

When Spraying, Protect your skin, your eyes, your lungs

Wash this clothing separately before using it again.

Before Using Any Pesticide, Be Sure To Review These Basic Rules

1. Take safety precautions. Never assume a pesticide is harmless.

- Read the entire label and follow its instructions. Use only the amount directed, at the time and under the conditions specified, and for the purpose listed.
- Be sure to wear any protective clothing--like gloves, long sleeves, and long pants--indicated on the label. Wash this clothing separately before using it again.
- Keep children and pets away from pesticides, and make sure no one goes on a treated lawn for at least the time prescribed by the pesticide label.
- Remember to follow any state or local requirements for posting your treated lawn or notifying your neighbors that a pesticide has been applied.
- Store and dispose of pesticides properly, according to the label directions and any state and local regulations.

2. Use pesticides to minimize pests, not eradicate them. The latter is often impossible and unnecessary.

3. Be sure you have accurately identified the pest so you can choose the best pesticide for the job and use it most effectively. Obtain professional advice from your county extension agent or a local expert.

4. Spot treat whenever possible. In most cases, it isn't necessary to treat the whole lawn with pesticides if the problem is confined to certain areas. Spraying more than necessary is wasteful and can be environmentally damaging.

If you have questions about a pesticide, call EPA's tollfree National Pesticide Telecommunications Network (1-800-858-7378). For general information on minimizing pesticide risks, call or write EPA for a free copy of the Citizen's Guide to Pesticides. The number to call is 703-305-5017; the address is: EPA, Office of Pesticide Programs, Field Operations Division, H7506C, 401M Street, S.W., Washington, D.C. 20460.

Choosing A Lawn Care Service

Many people choose to hire a professional company to help maintain their lawn. Lawn care companies offer a range of services, from fertilizing and pest control to aerating, mowing, and renovation.

Lawn care companies should follow the same healthy lawn program outlined in this brochure. They should also follow the same precautions for minimizing pesticide risks.

How can you be sure that a service will do these things? Start by asking questions like these:

Q. Is the company licensed?

A. Nearly all states require lawn care companies to be licensed. The qualifications for obtaining a license vary from state to state, but having a license is one indication that the company is reputable and operating legally.

Q. Does the company have a good track record?

A. Ask neighbors and friends who have dealt with the company if they were satisfied with the service they received. Call the Better Business Bureau or the state or local consumer protection office listed in your phone book; have they received any complaints about the company? Determine from the state pesticide regulatory agency if the company has a history of violations.

Q. Is the company affiliated with a professional lawn care association?

A. Affiliation with a professional association helps members to stay informed of new developments in the lawn care field.

Q. Does the company offer a variety of pest management approaches? Does it apply pesticides on a set schedule or only when they are really needed? Does it use integrated pest management, or "IPM"--an approach that often reduces pesticide use by combining it with other, non-chemical methods of pest control?

A. More and more lawn companies are offering integrated pest management (IPM) in response to public concern about pesticides. Be aware that IPM is a general term and

that companies may use it to describe a wide range of activities. Find out exactly what a company means if it says it uses IPM.

Q. Is the company willing to help you understand your lawn's problems and the solutions?

A. Lawn services generally apply fertilizers and pesticides. But you may be the one who mows and waters--and poor watering and mowing practices can lead to disappointing results. The company should tell you how it plans to take care of your lawn, and advise you about the work you need to do to keep your lawn in good shape.

Q. Will the company tell you what pesticides it applies to your lawn and why, and what health and environmental risks may be presented by their use?

A. You have a right to this information. If asked, the company should readily supply it. All pesticides sold legally in the United States are registered by EPA, but such registration is not a guarantee of safety. Ask to see a copy of pesticide labels to make sure they bear an EPA registration number, and to review the directions that should be followed. If the company can't answer your questions about the chemicals it uses, call NPTN (1-800-858-7378) for more information.

For More Information

Affiliated with the Land Grant university in each state is a system of County Cooperative Extension Offices. Usually listed in the telephone directory under county or state government, these offices often have a range of resources on lawn care and landscape maintenance, including plant selection, pest control, and soil testing.

State agriculture and/or environmental agencies may publish information on pests and pest management strategies. The state pesticide regulatory agency can provide information on pesticide regulations, and may also have information on companies with a history of complaints or violations. NPTN (see below) can identify the agency responsible for pesticide regulation in each state.

The National Pesticide Information Center has a tollfree, 24-hour information service that can be reached by calling 1-800-858-7378 or by FAX at 806-743-3094. The operators can provide a wide range of information about the health effects of pesticides, and provide assistance in dealing with pesticide-related emergencies.

Libraries, bookstores, and garden centers usually have a wide selection of books that discuss lawn care and other aspects of landscape management. Garden centers may also have telephone hotlines or experts available on the premises to answer your gardening questions.

The Environmental Protection Agency can provide information on integrated pest management strategies for lawn care. Write EPA's Office of Pesticide Programs, Field Operations Division (H7506C), 401 M St., S.W., Washington, D.C. 20460.

Some suppliers of lawn care products can provide helpful tips, answer questions, and help identify problems. Look for information/hotline numbers on product packaging.

The Bio-Integral Resource Center (BIRC), a non-profit organization formed in 1978 through an EPA grant, has information on least-toxic methods for lawn care. BIRC's address is: P.O. Box 7414, Berkeley, CA 94707.

---

1. **Choosing the right plant:** You won't have to spend as much time caring for your plants if you choose plants that are suited to your environmental conditions and gardening style. Let the Floracle help you find which plants are right for you.

2. **Watering:** Test the soil in your containers every day with your finger. If it's dry an inch below the surface - water. If you can't water your plants on a regular basis, consider self-watering containers.

3. **Fertilizing:** Mix a dry, time-release fertilizer into the soil when planting, and use small amounts of liquid fertilizer for regular feeding every few weeks.

4. **Fighting Pests:** Inspect plants regularly for fungus, insects, bugs, etc. Remove any diseased or dying leaves. Spray insects with water or other natural repellants to get rid of them.

5. **Pruning:** Don't be afraid to cut or trim plants to keep their shape and encourage growth - just leave at least 2/3 of the original plant intact so it'll have enough surface area to absorb sunlight. Pinch (aka. deadhead) faded flowers regularly to encourage more blooms on annual plants.

Keep in mind that every plant is different. Take some time to read up on your plants and learn as much as you can about their individual needs. A little time spent reading and planning now can save you a lot of time and disappointment later.

5. Information on What You and Your Community Can Do to Use Water More Efficiently

Information on What You and Your Community Can Do To Use Water More Efficiently

For more information on what you and your community can do to use water more efficiently, contact:

Preventing Pollution Through Efficient Water Use

- How Efficient Water Use Helps Prevent Pollution
- What Individuals Can Do
- What Communities Can Do

How Efficient Water Use Helps Prevent Pollution

Using water more efficiently can help prevent pollution as well as protect and conserve our finite water resources. More efficient water use by you and your community has many other benefits.

Fewer Pollutants

Using less water reduces the amount of waste-water discharged into our lakes, streams, rivers, and marine waters.

The amount of pollutants wastewater carries can also be reduced, as treatment efficiency improves.

Recycled process water can reduce pollutants from industry.

More efficient irrigation can minimize runoff of agricultural pollutants and reduce the use of fertilizers and pesticides.

Protection of Aquatic Habitats

- Building fewer and smaller new water projects can help preserve wetlands, which naturally treat pollutants.
- Diverting less water preserves more stream flow to maintain a healthy aquatic environment.

Protection of Drinking Water Sources

- Less pumping of groundwater lowers the chance that pollutants will be drawn into a water supply well.
- With less water use, septic system performance can improve, reducing the risk of groundwater contamination.
- Highest quality water sources are preserved for drinking water by using treated wastewater for other uses.

Energy Conservation

- Efficient water use means less power needed to pump and treat water and wastewater.
- Less water use reduces the amount of energy required for heating hot water.
- Less energy demand results in fewer harmful by-products from power plants.

Other Reasons to Use Water Wisely

Preventing pollution is only one reason why using water efficiently makes sense. Here are a few more:

Money Saved

- Less water use results in fewer pumping and treatment costs.
- Saving money on water and wastewater operations frees money for meeting water quality, public health and water treatment goals.
- Water saved is also energy, and money, saved for you and your community.

Improved Reliability

- Water conservation provides a hedge against drought impacts.
- Improving water efficiency may be quicker and cheaper than developing a new supply.
- Reduced water use may extend the life of your water or wastewater facility.

or

- Reduced water use may increase the efficiency of wastewater treatment, and reduce overflows during storms.
- Communities which use water efficiently are better prepared to cope with effects of possible future climate change.

What Individuals Can Do

More efficient water use begins with individuals, in the home and place of work. Taking these and other steps, and encouraging others to do so, makes good economic as well as environmental sense.

In: The Home

- Install a toilet dam or plastic bottle in your toilet tank.
- Install a water-efficient showerhead (2.5 gallons or less per minute).
- When you buy a new toilet, purchase a low flow model (1.6 gallons or less per flush).

Outdoors

- Water in the morning or evening to minimize evaporation.
- Install a drip-irrigation watering system for valuable plants.
- Use drought-tolerant plants and grasses for landscaping, and reduce grass-covered areas.

At Work or School

- Adopt the same water-saving habits that are effective at home.
- Ask about installing water-efficient equipment and reducing outdoor water use.
- Encourage employers to explore the use of recycled "gray-water" or reclaimed wastewater.

What Communities Can Do

A water supplier or wastewater system operator (public or private) has cost-effective options to process and deliver water more efficiently. A community can do the same, and can foster ways to use water wisely.

Not all of these steps are expensive. The best choices vary by region and by community, start by asking if these are appropriate where you live and work.

A Water Supplier or Wastewater Processor Can:

- Identify who uses water, and reduce unaccounted for water use.
- Find and repair leaking pipes.

- Consider a new pricing scheme which encourages conservation.
- Reduce excess pressure in water lines.
- Explore the reuse of treated wastewater for uses other than drinking water.
- Charge hookup fees which encourage more efficient water use in new buildings.
- Build water efficiency into future demand projections, facility planning, and drought planning.

A Community Can:

- Adopt plumbing and building codes that require water-efficient equipment and practices.
- Adopt a water-efficient landscaping ordinance to reduce the water used for golf courses and commercial landscapes.
- Retrofit older buildings with water-efficient equipment, starting with public buildings.
- Reduce municipal water use for landscaping and other uses.

6. After the Storm

The effects of pollution

Stormwater runoff occurs when precipitation from rain or snowmelt flows over the ground. Impervious surfaces like driveways, sidewalks, and streets prevent stormwater from naturally soaking into the ground.

Polluted stormwater runoff can have many adverse effects on plants, fish, animals, and people.

- Sediment can cloud the water and make it difficult or impossible for aquatic plants to grow. Sediment also can destroy aquatic habitats.
- Excess nutrients can cause algae blooms. When algae die, they sink to the bottom and decompose in a process that removes oxygen from the water. Fish and other aquatic organisms can't exist in water with low dissolved oxygen levels.
- Bacteria and other pathogens can wash into swimming areas and create health hazards, often making beach closures necessary.
- Debris—plastic bags, six-pack rings, bottles, and cigarette butts—washed into waterbodies can choke, suffocate, or disable aquatic life like ducks, fish, turtles, and birds.
- Household hazardous wastes like insecticides, pesticides, paint, solvents, used motor oil, and other auto fluids can poison aquatic life. Land animals and people can become sick or die from eating diseased fish and shellfish or ingesting polluted water.
- Polluted stormwater often affects drinking water sources. This, in turn, can affect human health and increase drinking water treatment costs.

Stormwater can pick up debris, chemicals, dirt, and other pollutants and flow into a storm sewer system or directly to a lake, stream, river, wetland, or coastal water. Anything that enters a storm sewer system is discharged untreated into the waterbodies we use for swimming, fishing, and providing drinking water.

Recycle or properly dispose of household products that contain chemicals, such as insecticides, pesticides, paint, solvents, and used motor oil and other auto fluids. Don't pour them onto the ground or into storm drains.

Lawn care

Excess fertilizers and pesticides applied to lawns and gardens wash off and pollute streams. In addition, yard clippings and leaves can wash into storm drains and contribute nutrients and organic matter to streams.

- Don't overwater your lawn. Consider using a soaker hose instead of a sprinkler.
- *Use pesticides and fertilizers* sparingly. When use is necessary, use these chemicals in the recommended amounts. Use organic mulch or safer pest control methods whenever possible.
- Compost or mulch yard waste. Don't leave it in the street or sweep it into storm drains or streams.
- Cover piles of dirt or mulch being used in landscaping projects.

Auto care

Washing your car and degreasing auto parts at home can send detergents and other contaminants through the storm sewer system. Dumping automotive fluids into storm drains has the same result as dumping the materials directly into a waterbody.

- Use a commercial car wash that treats or recycles its wastewater, or wash your car on your yard so the water infiltrates into the ground.
- Repair leaks and dispose of used auto fluids and batteries at designated drop-off or recycling locations.

Septic systems

Leaking and poorly maintained septic systems release nutrients and pathogens (bacteria and viruses) that can be picked up by stormwater and discharged into nearby waterbodies. Pathogens can cause public health problems and environmental concerns.

- Inspect your system every 3 years and pump your tank as necessary (every 3 to 5 years).
- Don't dispose of household hazardous waste in sinks or toilets.

Pet waste

Pet waste can be a major source of bacteria and excess nutrients in local waters.

- When walking your pet, remember to pick up the waste and dispose of it properly. *Flushing* pet waste is the best disposal method. Leaving pet waste on the ground increases public health risks by allowing harmful bacteria and nutrients to wash into the storm drain and eventually into local waterbodies.

Education is essential to changing people's behavior. Signs and markers near storm drains warn users that pollutants entering the drains will be rarely untreated into a local waterbody.

Residential landscaping

Permeable Pavement—Traditional concrete and asphalt don't allow water to soak into the ground. Instead these surfaces rely on storm drains to divert unwanted water. Permeable pavement systems allow rain and snowmelt to soak through, decreasing stormwater runoff.

Rain Barrels—You can collect rainwater from rooftops in mosquito-proof containers. The water can be used later on lawn or garden areas

Rain Gardens and Grassy Swales—Specially designed areas planted with native plants can provide natural places for rainwater to collect and soak into the *ground. Rain from* rooftop areas or paved areas can be diverted into these areas rather than into storm drains

Vegetated Filter Strips—Filter strips are areas of native grass or plants created along roadways or streams. They trap the pollutants stormwater picks up as it flows across driveways and streets.

Dirt, oil, and debris that collect in parking lots and paved areas can be washed into the storm sewer system and eventually enter local waterbodies.

- Sweep up litter and debris from sidewalks, driveways and parking lots, especially around storm drains.
- Cover grease storage and dumpsters and keep them clean to avoid leaks.
- Report any chemical spill to the local hazardous waste cleanup team. They'll know the best way to keep spills from harming the environment.

Erosion controls that aren't maintained can cause excessive amounts of sediment and debris to be carried into the stormwater system. Construction vehicles can leak fuel, oil, and other harmful fluids that can be picked up by stormwater and deposited into local waterbodies.

- Divert stormwater away from disturbed or exposed areas of the construction site.
- Install silt fences, vehicle mud removal areas, vegetative cover, and other sediment and erosion controls and properly maintain them, especially after rainstorms.
- Prevent soil erosion by minimizing disturbed areas during construction projects, and seed and mulch bare areas as soon as possible.

Lack of vegetation on streambanks can lead to erosion. Overgrazed pastures can also contribute excessive amounts of sediment to local waterbodies. Excess fertilizers and pesticides can poison aquatic animals and lead to destructive algae blooms. Livestock in streams can contaminate waterways with bacteria, making them unsafe for human contact.

- Keep livestock away from streambanks and provide them a water source away from waterbodies.
- Store and apply manure away from waterbodies and in accordance with a nutrient management plan.
- Vegetate riparian areas along waterways
- Rotate animal grazing to prevent soil erosion in fields.
- Apply fertilizers and pesticides according to label instructions to save money and minimize pollution

Uncovered fueling stations allow spills to be washed into storm drains. Cars waiting to be repaired can leak fuel, oil, and other harmful fluids that can be picked up by stormwater.

- Clean up spills immediately and properly dispose of cleanup materials.
- Provide cover over fueling stations and design or retrofit facilities for spill containment.
- Properly maintain fleet vehicles to prevent oil, gas, and other discharges from being washed into local waterbodies.
- Install and maintain oil/water separators.

Improperly managed logging operations can result in erosion and sedimentation.

- Conduct preharvest planning to prevent erosion and lower costs.
- Use logging methods and equipment that minimize soil disturbance.
- Plan and design skid trails, yard areas, and truck access roads to minimize stream crossings and avoid disturbing the forest floor.
- Construct stream crossings so that they minimize erosion and physical changes to streams.
- Expedite revegetation of cleared areas.

7. Ten Ways That Will Save the Most

Ten ways that will save the most:

1. Water your lawn only when it needs it. Step on your grass. If it springs back, when you lift your foot, it doesn't need water. So set your sprinklers for more days in between watering. **Saves 750-1,500 gallons** per month. Better yet, especially in times of drought, water with a hose.

2. Fix leaky faucets and plumbing joints. **Saves 20 gallons** per day for every leak stopped.

3. Don't run the hose while washing your car. Use a bucket of water and a quick hose rinse at the end. **Saves 150 gallons** each time. For a two-car family that's **up to 1,200 gallons** a month.

4. Install water-saving shower heads or flow restrictors. **Saves 500 to 800 gallons** per month.

5. Run only full loads in the washing machine and dishwasher. **Saves 300 to 800 gallons** per month.

6. Shorten your showers. Even a one or two minute reduction can **save up to 700 gallons** per month.

7. Use a broom instead of a hose to clean driveways and sidewalks. **Saves 150 gallons** or more each time. At once a week, that's **more than 600 gallons** a month.

8. Don't use your toilet as an ashtray or wastebasket. **Saves 400 to 600 gallons** per month.

9. Capture tap water. While you wait for hot water to come down the pipes, catch the flow in a watering can to use later on house plants or your garden. **Saves 200 to 300 gallons** per month.

10. Don't water the sidewalks, driveway or gutter. Adjust your sprinklers so that water lands on your lawn or garden where it belongs--and only there. **Saves 500 gallons** per month.

In the bathroom:

1. Put a plastic bottle or a plastic bag weighted with pebbles and filled with water in your toilet tank. Displacing water in this manner allows you to use less water with each flush. **Saves 5 to 10 gallons** a day. That's **up to 300 gallons** a month, even more for large families. Better yet, for even greater savings, replace your water-guzzling five to seven gallon a flush toilet with a three and a half gallon, low flush, or one and a half gallon, ultra-low flush model.

2. If you're taking a shower, don't waste cold water while waiting for hot water to reach the shower head. Catch that water in a container to use on your outside plants or to flush your toilet. **Saves 200 to 300 gallons** a month.

3. Check toilet for leaks. Put dye tablets or food coloring into the tank. If color appears in the bowl without flushing, there's a leak that should be repaired. **Saves 400 gallons** a month.

4. Turn off the water while brushing your teeth. **Saves three gallons** each day.

5. Turn off the water while shaving. Fill the bottom of the sink with a few inches of water to rinse your razor. **Saves three gallons** each day.

In the kitchen and laundry:

1. If you wash dishes by hand--and that's the best way--don't leave the water running for rinsing. If you have two sinks, fill one with rinse water. If you only have one sink, use a spray device or short blasts instead of letting the water run. **Saves 200 to 500 gallons** a month.

2. When washing dishes by hand, use the least amount of detergent possible. This minimizes rinse water needed. **Saves 50 to 150 gallons** a month.

3. Keep a bottle of drinking water in the refrigerator. This beats the wasteful habit of running tap water to cool it for drinking. **Saves 200 to 300 gallons** a month.

4. Don't defrost frozen foods with running water. Either plan ahead by placing frozen items in the refrigerator overnight or defrost them in the microwave. **Saves 50 to 150 gallons** a month.

5. Don't let the faucet run while you clean vegetables. Rinse them in a filled sink or pan. **Saves 150 to 250 gallons** a month.

6. Use the garbage disposal less and the garbage more (even better--compost!). **Saves 50 to 150 gallons** a month.

Outside:

1. Put a layer of mulch around trees and plants. Chunks of bark, peat moss or gravel slows down evaporation. **Saves 750 to 1,500 gallons** a month.

2. If you have a pool, use a pool cover to cut down on evaporation. It will also keep your pool cleaner and reduce the need to add chemicals. **Saves 1,000 gallons** a month.

3. Water during the cool parts of the day. Early morning is better than dusk since it helps prevent the growth of fungus. **Saves 300 gallons.**

4. Don't water the lawn on windy days. There's too much evaporation. **Can waste up to 300 gallons** in one watering.

5. Cut down watering on cool and overcast days and don't water in the rain. Adjust or deactivate automatic sprinklers. **Can save up to 300 gallons** each time.

6. Set lawn mower blades one notch higher. Longer grass means less evaporation. **Saves 500 to 1,500 gallons** each month.

7. Have an evaporative air conditioner? Direct the water drain line to a flower bed, tree base, or lawn.

8. Drive your car onto a lawn to wash it. Rinse water can help water the grass.

9. Tell your children not to play with the garden hose. **Saves 10 gallons** a minute.

10. If you allow your children to play in the sprinklers, make sure it's only when you're watering the yard--if it's not too cool at that time of day.

11. Xeriscape--replace your lawn and high-water-using trees and plants with less thirsty ones. But do this only in wet years. Even drought resistant plantings take extra water to get them going. That'll **save 750 to 1,500 gallons** a month.

12. When taking your car to a car wash--a good idea for saving water--be sure it's one of the many that recycles its wash water.

13. Dispose of hazardous materials properly! One quart of oil can contaminate 250,000 gallons of water, effectively eliminating that much water from our water supply. Contact your city or county for proper waste disposal options.

While Shopping

Water is an essential ingredient in most manufacturing operations. Especially for those 1 billion of us in the high-consumption class, cutting down on our purchases of material things--from clothes and shoes to paper and appliances--**conserves and protects water supplies as effectively as installing a low-flush toilet does.** As with so many natural resources, as long as prices in the marketplace fail to reflect full social and ecological costs, voluntary changes in consumption patterns will play an important role in the quest for sustainability.

- A kilogram (2.2 lbs) of hamburger or steak produced by a typical California beef cattle operation, for instance, uses some 20,500 liters (5,400 gal.) of water.
- We rarely think about water when we see an automobile, for example, but producing a typical U.S. car requires more than 50 times its weight in water!
- Producing 1 serving (4.3 oz.) of tomatoes requires 8 gallons of water.
- Producing 1 serving (4.6 oz.) of oranges requires 14 gallons of water.
- Producing 1 serving (2 oz.) of pasta requires 36 gallons of water.
- Producing 1 serving (8 fl. oz.) of milk requires 48 gallons of water.
- Producing 1 serving (8 oz.) of chicken requires 330 gallons of water.

8. County of Riverside DAMP, Supplement A

SUPPLEMENT A

TO THE RIVERSIDE COUNTY DRAINAGE AREA MANAGEMENT PLANS

NEW DEVELOPMENT GUIDELINES

Printed by
Riverside County Printing Services

April 1996

ACKNOWLEDGMENTS

The development of this document, Supplement "A" to the Santa Ana, Santa Margarita and Whitewater Draninage Area Management Plan (better known as the New Development Guidelines), took the time and efforts of a great many people over a year and a half. First of all, the Santa Ana/Santa Margarita National Pollutant Discharge Elimination System (NPDES) Advisory Committee thanks the Orange County Environmental Management Agency for the use of their work, it helped to establish the pattern and content of this document. Special thanks to Mr. Jerry Linton for his very capable and unselfish leadership as chairman of the Constrution and New Development Sub-committee. Thanks to Arturo Diaz for keeping the sub-committee minutes and making the myrads of changes that occurred during the development of this document. Many thanks to the following sub-committee members:

Bob Brock	City of Murrieta
Jason Christie	Riverside County Flood Control
Chuck Collins	Riverside County Coordinating Comm. (Trans Pacific Consultants)
Arturo Diaz, Secretary	Riverside County Flood Control
Delia Garrison	City of Riverside
Rodney Hanway*	Building Industry Association
Shelli Lamb	Riverside-Corona RCD
Jerry Linton, Chairman	Citation Builders
John Phillips	San Diego Regional WQCB
John Pourkazemi	City of Temecula
Mark Raab	City of Norco
Mimi Rayl	Lewis Homes
John Ristow	Riverside County Transportation
Viren Shah	City of Corona
Pavlova Vitale	Santa Ana Regional WQCB

* Corresponding member

The Construction and New Development Sub-Committee would like to thank the expert participants who provided the necessary information and testimony needed to fairly develop the guidelines found in this document.

Richard Boon	Orange County EMA
Gerald Breitbart	California Restaurant Association
Melinda Luthin	Arco Products Company
Mike Shetler	County Environmental Health
Ron Wilkniss	Western States Petroleum Association
K.F. (Kim) Wiseman	Chevron U.S.A. Products Company

Their comments and assistance contributed substantially to the development of the present document.

Selection and Design of Stormwater Quality Controls
(under separate cover)

1.0 INTRODUCTION

This document is to be used by Riverside County NPDES Co-permittees county-wide as a supplement to the Drainage Area Management Plan(s) (DAMP). It was developed by the Construction and New Development Sub-committee, and approved by the NPDES Advisory Committee. Appendix G of the Orange County Drainage Area Management Plan, dated April 1993, served as a model for the development of this document.

The objective in preparing this Supplement "A" was to identify post construction source pollutant prevention and treatment measures that could be incorporated into development projects. This Supplement recommends which Best Management Practices (BMPs) should be required as standard practice. For projects with unique water quality issues additional applicable solutions may be required on a case by case basis.

The DAMP does not specify a minimum development size to be considered for BMP applications nor does it specify which land uses should receive the most attention. In general, BMPs are required on a wide variety of land uses, both residential and non-residential. BMPs should also be required on accessory uses of concern (such as outdoor material/equipment storage, vehicle/ equipment fueling and service) and certain low intensity, but potentially high polluting uses (such as golf courses and plant nurseries).

2.0 BACKGROUND

In 1987 Congress amended the Clean Water Act to require the permitting of stormwater discharges from municipal storm drain systems. The EPA promulgated regulations in 1990 to enact the new law. In the regulations (and the preceding draft regulations), EPA listed the County of Riverside as a county that must obtain an NPDES permit.

The Regional Water Quality Control Boards (RWQCB) enforce the EPA regulations and the Clean Water Act in California. Each RWQCB in Riverside County has required the County, Cities, Riverside County Flood Control and Water Conservation District and Coachella Valley Water District (as applicable) to be included in the NPDES permits.

The NPDES permits require the permittees to control the discharge of pollutants to the Waters of the United States by the implementation of BMPs. These BMPs are listed in the Santa Ana and Santa Margarita Permits and DAMPs and in the 'Proposed Management Programs' section of the Eastern Riverside County NPDES Part 2 Application.

The members of the Santa Ana/Santa Margarita Advisory Committee recognized the sensitive issue of imposing development and construction BMPs on the building industry. They, therefore, formed the Construction and New Development Sub-Committee. The sub-committee included representatives from the co-permittees, development companies, Building Industry Association, Western States Petroleum Association, engineering companies and the Riverside County Coordinating Committee. The group developed this document with particular insight from and cooperation of the development industry. The BMPs proposed herein will meet the permit requirements while not imposing undue burden on those that are to implement the actions called for.

3.0 DEVELOPMENT PLANNING PROCESS

The Municipal Storm Water Permit states that stormwater quality management should be considered during a project's planning phase, implemented during construction, and ultimately maintained for the life of the project. As such, standard conditions of approval were developed to address land use areas of concern to minimize the amount of pollution entering the drainage system.

Each municipality should require the implementation of BMPs for redevelopment and specified new development. A redevelopment project is any project where major modifications to an existing site and/or structure requiring a permit is undertaken. Routine maintenance, interior remodeling, minor structural additions, reroofing, and maintenance of parking lots are intended to be exempt. A redevelopment project is not to be confused with the projects sponsored by a Redevelopment Agency of a jurisdiction. It is assumed that each jurisdiction will further define a "redevelopment project", utilizing its own permitting criteria.

Planning review procedures must be adopted and uniformly implemented by all the municipalities to ensure consistency. The typical process is outlined as follows:

1. The present municipal procedure for approval of grading, building, and similar permits will be modified to include incorporation of the BMPs listed in Tables 1 and 2, as applicable.

2. Municipalities will make this Supplement detailing implementation of BMPs available to development applicants through the permitting/land development process. Applicants will be informed at the earliest possible point of processing of these requirements.

3. Municipalities will develop implementation procedures for the new development BMP guidelines, including training and education for the employees that will implement this Supplement.

4. Implementing staff will notify applicant at the earliest possible opportunity if there is a known water quality problem which might affect the proposed development.

The municipal permitting/development review process will verify that plans contain all the applicable BMPs. Compliance is intended to be a matter of incorporating the measures specified in this Supplement or other acceptable standard into the plans and submittals currently required by each municipality, and the review process will effectively be a verification that these are included.

GENERAL CONDITIONS to be applied by municipalities:

For discretionary actions that include a precise plan of development:

1. Prior to issuance of building permits, the permit applicant shall include in its development plans for approval by County/City Official(s) water quality management controls by specifically identifying BMPs that will be used onsite to control predictable pollutant runoff.

The permit applicant shall identify the structural and non-structural measures specified in this Supplement or other equally effective standard detailing implementation of BMPs whenever they are applicable to the project (when the project has a loading dock, for example); the assignment of long-term maintenance responsibilities (specifying the developer, parcel owner, maintenance association, lessee, etc.); and shall reference the location(s) of structural BMPs.

For Subdivisions of Land:

2. Prior to recordation and if determined applicable by County/City Official(s), applicant shall identify and include in its plans those routine structural and non-structural BMPs outlined in this Supplement or other equally effective standard, for approval of County/City officials.

Both conditions 1 and 2 also functionally apply to public projects where the local jurisdiction technically chooses not to issue formal permits to itself or hired contractors, but nonetheless undertakes the work.

SPECIAL CONDITIONS:

When a building is being proposed for which no anticipated use is designated or when an unanticipated element of land use or occupancy is proposed after a basic building has already been completed, use of language similar to the following condition is recommended for inclusion in the conditions which must be satisfied prior to issuance of the appropriate permit:

Prior to issuance of certificates of use and occupancy or building permits for individual tenant improvements or construction permits for a tank or pipeline, uses shall be identified and, for specified uses (where the proposed improvements will store, generate or handle hazardous materials in quantities that will require permitting and inspection once operational), the applicant shall propose plans and measures for chemical management (including, but not limited to, storage, emergency response, employee training, spill contingencies and disposal) to the satisfaction of the County/City Building Official(s).

Chemical management plans shall be approved by the County/City and other appropriate agencies such as County/City Fire Department, the Health Services Agency's Department of Environmental Health, and sewering and/or water agencies to ensure implementation of each agency's respective requirements. Approval by the appropriate agencies shall be furnished to the Building and Safety Department, prior to the issuance of any certificates of use and/or occupancy.

Certificates or permits may be ministerially withheld if features needed to properly manage chemicals cannot be incorporated into a previously completed building, center, or complex.

A list of specified uses and occupancies of concern should be developed by each jurisdiction according to their needs.

4.0 BMP SELECTION

The DAMP requires identification and implementation of BMPs for new development via regulatory and enforcement activities. This Supplement lists particular routine structural and non-structural BMPs that will be evaluated for application and intensity for these activities. Thus, some of the BMPs listed herein will become conditions of approval for new development and construction.

The measures identified in Tables 1 and 2 are to be deemed "standard practice" to be required on new developments, as specified. Two general terms used in this supplement are defined by example as follows:

> Structural Controls: Physical facilities or controls which may include secondary containment, first flush diversion, detention/retention basins, infiltration trenches/basins, oil/grease separators, grass swales, and engineering and design modification of existing structures. These examples include both routine structural controls and special structural controls.
>
> Non-structural Controls: In general, these would be activities or programs to educate the public on proper disposal of hazardous/toxic wastes, regulatory approaches, street sweeping and facility maintenance, detection and elimination of illicit connections and illegal dumping.

Each new development will be required to implement appropriate non-structural BMPs in keeping with the size and type of development, and potential for stormwater pollution, to minimize the introduction of pollutants onto the drainage system.

Each new development will also be required to implement appropriate "routine" structural BMPs in keeping with the size and type of development, and potential for stormwater pollution. "Routine" structural BMPs are economical, practicable, small scale measures which can be feasibly applied at the smallest unit of development.

A major concept of the County's NPDES stormwater quality program, as set forth in the Riverside County DAMP, is a regional approach to stormwater quality planning and management on a watershed basis. Later, "special" structural BMPs may be installed to address any specific water quality problems identified in the watershed planning process. "Special" structural BMPs are engineered facilities designed to address specific water quality problems identified in the watershed planning process, runoff management plan, CEQA process, or similar watershed planning. There may be the need to revisit these requirements at an as yet unspecified date or frequency.

Efforts will be directed toward determining the effectiveness of structural BMPs before they are required. Those measures which demonstrate superior cost-effectiveness, considering right-of-way, construction, operation, maintenance, monitoring, and pollutant removal, may be adopted as special structural BMPs for application as indicated during the watershed planning studies.

4.1 Non-structural Measures

N1. Education for Property Owners, Tenants and Occupants - Project conditions of approval for all new developments will require that the developer provide environmental awareness education materials on general good housekeeping practices that contribute

to protection of stormwater quality to all initial residents, occupants/tenants. Such materials will be provided to the developer through the co-permittees' County-wide education program. Different materials for residential, office commercial, retail commercial, vehicle-related commercial, and industrial uses will be involved.

N2. Activity Restrictions - If a property owners association (POA) or homeowners association (HOA) is formed, conditions, covenants, and restrictions shall include measures shown in Table No. 1 for the purpose of surface water quality protection.

N3. Common Area Landscape Management - All pesticides shall be applied in strict accordance to pesticide application laws as stated in the State of California Agricultural Code. All pesticide applicators shall be certified by the State as a Qualified Applicator or be directly supervised by a Qualified Applicator. All fertilizers shall be applied at the rate stipulated by the manufacturer. Fertilizer Applicators shall be trained in the proper procedures of determining fertilizer rates and calibration of application equipment. Fertilizer shall be applied in such a manner as to avoid application onto hardscape surfaces. Annual soil tests are recommended to advise on which fertilizer elements are needed to avoid application of unnecessary elements, or over application. The local water agency or resource conservation district can assist with detailed information concerning this BMP.

N4. Common Area Catch Basin Inspection - For developments with POAs/HOAs and privately maintained drainage systems, the association will be required to have privately owned catch basins inspected and, if necessary, cleaned prior to the storm season, no later than October 15th each year.

N5. POA/HOA Common Area Litter Control - For developments with an association, the POA/HOA will be required to implement trash management and litter control procedures in the common areas aimed at reducing pollution of drainage water. The associations may contract with their landscape maintenance firms to provide this service during regularly scheduled maintenance, which should consist of litter patrol, emptying of trash receptacles in common areas, noting trash disposal violations by homeowners or businesses, and reporting the violations to the association for investigation.

N6. Street Sweeping Private Streets and Parking Lots - For developments with POAs/HOAs, and privately owned streets and parking lots, the association will be required to have the streets and parking lots swept prior to the storm season, no later than October 15th each year.

N7. Underground Storage Tank Compliance - Compliance with State regulations dealing with underground storage tanks will be enforced by the County Department of Environmental Health on behalf of the State.

N8. Spill Contingency Plan - A spill contingency plan (Business Plan/Hazardous Materials Management Plan) shall be prepared by the owner/operator in accordance with Section 6.95 of the California Health and Safety Code. The Environmental Health Department or the Fire Department in the City of Riverside, Corona, or Banning shall be responsible for enforcement. Spills will be immediately cleaned up according to the Spill Contingency Plan.

N9. Hazardous Materials Disclosure Compliance - Compliance with County/City ordinances shall be enforced by the Environmental Health Department or the Fire Department in the City of Riverside, Corona, or Banning.

N10. Uniform Fire Code Implementation Plan - Compliance with Article 80 of the Uniform Fire Code enforced by fire protection agency will be required.

N11. Title 22 CCR Compliance - Compliance with Title 22 of the California Code of Regulations and relevant sections of the California Health & Safety Code regarding hazardous waste management will be enforced by the County Department of Environmental Health on behalf of the State.

N12. Housekeeping of Loading Docks - Loading docks for grocery, drug and discount stores, and warehouse type commercial and industrial buildings must be kept in a clean and orderly condition through a regular program of sweeping, litter control, and immediate cleanup of spills and broken containers. Polluted material or wash waters shall not be allowed to discharge into a storm drain.

N13. Employee Training/Education Program (see N1) as it would apply to future employees of individual businesses - Based on information provided through the County-wide education program, developer either prepares manual(s) for initial purchasers of business sites or, for development that is constructed for an unspecified use, conveys commitment for this responsibility to POA or purchaser.

N14. BMP Maintenance - The responsibility for implementation of each non-structural BMP and scheduled cleaning of all structural BMP controls shall be identified (owner, agency name, phone number, and address).

4.2 Routine Structural BMPs

S1. Control of Impervious Runoff - Impervious areas shall be graded and constructed so as to drain to a filtration BMP, such as a landscaped area or equally effective alternative wherever practicable and as recommended by the engineer of record. Direct drainage from impervious areas to the street or a storm drain facility is discouraged and should be avoided. For example, parking lot catch basins could be placed in landscaped areas with allowances for minor ponding.

S2. Common Area Efficient Irrigation - All sites shall employ multi-programmable irrigation controllers which have enough programs to break up all irrigation stations into hydrozones. If practical and feasible, rain shutoff devices shall be employed to prevent irrigation after significant precipitation. Irrigation systems shall be designed so areas which have different water use requirements are not mixed on the same station (hydrozones). Assistance in implementing a schedule based on plant water needs is available from CIMIS or Mobile Lab. The use of drip irrigation should be considered for all planter areas which have a shrub density that will cause excessive spray interference of an overhead irrigation system. Use flow reducers to mitigate broken heads next to sidewalks, streets and driveways.

S3. Common Area Runoff-minimizing Landscape Design - Group plants with similar water requirements in order to reduce excess irrigation runoff and promote surface filtration, where practical. Examples could include the following:

a. Use mulches in planter areas without ground cover to avoid sedimentation runoff.

b. Set irrigation times to avoid runoff. This will involve splitting nightly irrigations into several short cycles if slope and soil conditions warrant.

c. Use only enough water to provide for adequate plant health and growth.

d. Use the water budget mode to make global/weather related scheduling changes.

e. Use CIMIS data for global changes so they will accurately reflect weather changes.

f. Install appropriate plant materials for the location, in accordance with sunset climate zones.

g. Install plants with low water requirements and consider the use of native plant material where possible and recommended by the landscape architect.

S4. Community Car Wash Racks - In high density multi-family developments (apartments, stacked flats) larger than 100 units where car washing is allowed, and development having a common parking area, a designated car wash area which does not drain directly to a storm drain shall be provided for common usage. An example of such an area would be joint use of an open space or visitor parking area. Wash waters from this area may be directed to the sanitary sewer (with prior approval of the sewering agency), to an engineered infiltration, or equally effective alternative.

S5. Wash Water Controls for Food Preparation Areas - Food establishments (per State Health and Safety Code 27520) shall have contained areas, floor sink(s) and/or mop sink(s) with sanitary sewer connections for cleaning of kitchen floor mats and for disposal of wash waters containing kitchen and food wastes, if located outside. The contained area shall also be covered to prevent entry of stormwater.

S6. Trash Container (dumpster) Areas - Trash container (dumpster) areas shall have drainage from adjoining roofs and pavements diverted around the area(s), and:

a. Dumpsters shall be leak proof and have attached workable covers.

b. Trash container areas are to be screened or walled to prevent offsite transport of trash.

S7. Self-contained Areas for Vehicle Washing/Steam Cleaning/ Maintenance/Repair/ Material Processing - Self-contained areas are required for washing/steam cleaning, wet material processing, and maintenance activities, specifically:

a. For businesses where washing of vehicles without steam cleaning occurs, provide wash racks constructed in accordance with local sewering agency guidelines or other acceptable standard and with the prior approval of the sewering agency (Note: Discharge monitoring may be required by the sewering agency).

b. Where steam cleaning occurs, provide wash racks as in S7.a., or structurally contain (with a cover to restrict the entry of stormwater during rain events) runoff from such areas onsite for commercial waste removal.

c. Where wet material processing occurs (e.g., electroplating), secondary containment structures shall be provided to hold spills resulting from accidents, leaking tanks or equipment, or any other unplanned releases (Note: If these are plumbed to the sanitary sewer, the structures and plumbing shall be in accordance with State and local spill containment and reporting requirements and have the prior approval of the sewering agency). Also see N10.

d. Where vehicle repair/maintenance occurs, impermeable berms, drop inlets, trench catch basins, or overflow containment structures shall be provided around repair bays to prevent spilled materials and wash-down waters from entering the storm drain system.

S8. Outdoor Storage - Where a plan of development proposes or building plans incorporate outdoor containers of oils, fuels, solvents, coolants, wastes, and other chemicals, the areas where these materials are to be used or stored must be protected by secondary containment structures such as a berm, dike, or curb (see N10). For commercial outdoor vehicle and equipment salvage yards, and commercial outdoor recycling, the entire storage area shall drain through water quality inlets (see SP1).

S9. Motor Fuel Concrete Dispensing Areas - Areas used for fuel dispensing shall be paved with concrete (use of asphalt prohibited). Concrete surfacing must extend a minimum of 8' from the face side of each pump receptacle and 4' from the nose of the pump island. In addition, the fuel dispensing area shall be graded and constructed so as to prevent drainage flow through the concrete fueling area.

S10. Motor Fuel Dispensing Area Canopy - All motor fuel concrete dispensing areas are to have a canopy structure. Canopy roof downspouts are to be routed to prevent drainage across the concrete fueling area.

S11. Energy Dissipators - Energy dissipators such as riprap, are to be installed at the outlets of new storm drains which enter unlined channels in accordance with applicable agency specifications.

S12. Catch Basin Stenciling - Phrase "No Dumping - Only Rain in the Drain" or equally effective phrase as approved by the County/City NPDES Advisory Committee is to be stenciled on catch basins to alert the public as to the destination of pollutants discharged into stormwater.

S13. Diversion of Below Grade Loading Dock Drainage - Below grade loading docks for grocery stores and warehouse/distribution centers of fresh food items will drain through water quality inlets (see SP1), or to an engineered infiltration system, or an equally effective alternative.

S14. Inlet Trash Racks - Where appropriate to reduce intake and transport through the storm drain system of large floatable debris, trash racks shall be provided where drainage from open areas enters storm drains (Caltrans Standard Plan D96 and D98-C, or equivalent).

4.3 Special Structural BMPs

SP1. Water Quality Inlets - Water Quality Inlets designed to remove free phase liquid petroleum compounds, grease, floatable debris and settleable solids can be used in the following applications: Nos. S7, S8, and S13.

5.0 EDUCATIONAL PROGRAM FOR DEVELOPERS AND CONTRACTORS

The following defines the required educational program for developers and contractors in response to Appendix E of the Riverside County DAMP:

This DAMP Supplement "A" with its attachments will contain the legal, administrative, and technical information needed to acquaint developers and contractors with the NPDES program. Riverside County developers and contractors have been implementing erosion control plans for many years and are familiar with that portion of the program. New requirements resulting from the NPDES Permit and the DAMP are contained herein.

It is, therefore, recommended that the Building Industry Association and the Associated General Contractors be asked to use their newsletters to alert their members of the information contained in this Supplement. The Supplement text will be made available by the County and Cities as part of the development review process.

Stormwater and the Construction Industry

Pollution Prevention Techniques and Control Practices

Best Management Practice (BMP)

A BMP is a method used to prevent or control stormwater runoff and other pollution from construction activities. Silt fences, inlet protection, and stabilized construction entrances are examples of BMPs.

Operator

An operator is someone who has control over and the ability to implement plans and specifications, and to make changes to construction plans and specifications in order to meet the requirements of the general permit.

Someone who has control over the day-to-day operations at a site (i.e., owner, developer, general contractor) is responsible to ensure compliance with the permit requirements. It is the responsibility of the operator to develop a site specific plan to control stormwater runoff and prevent erosion during all stages of construction.

There may be more than one person at a site who meets these definitions and more than one operator. In this instance, there may have different definitions of the term "operator."

Soil erosion control tips...

- Design the site to influence sediment from the ground and to keep it out of storm drains. Minimize or minimize the use of environmental pollution and management systems while maintaining the use of conservation techniques and maintenance techniques.
- Minimize the amount of exposed soil on site.
  - To the extent possible, plan the project to stage or subdivide the sections of area that is bare and subject to erosion. This has will control, the areas and changes it will be or control erosion.
  - Vegetate disturbed areas with permanent or temporary seeding immediately upon reaching final grade.
  - Vegetate or cover stockpiles that will not be used immediately.
- Reduce the velocity of stormwater from area and away from the project area.
  - Interceptors, diversions, vegetated buffers, and check dams are a few of the BMPs that can be used to slow down stormwater as it travels across and away from the property.
  - Diversions or swales can also be used to divert flow away from exposed areas toward stable portions of the site.
  - Silt fences and other types of perimeter filters should never be used to reduce the velocity of runoff.
- Prevent debris elements immediately with erosion techniques to handle the water flow expected. Soil, pesticides, herbicides, debris, or other contaminant stormwater should be used to allow the elements to enter water without causing erosion. The other negative bits pesticides or vegetation where possible to prevent downstream deposits.
- Keep sediment on site.
  - Place aggregate or stone at construction gate vehicle exits to decontaminate or have into the foundation of large construction vehicles. Much of the dirt on site tires will fall off before the vehicle gets to the street.
  - Regular street sweeping at the construction entrance will prevent dirt from entering storm drains. Do not hose paved areas.
  - Sediment traps and basins are temporary structures and should be used in conjunction with other measures to reduce the amount of sediment.
- Maintaining all BMPs in addition to control their effectiveness during the life of the project.
  - Regularly remove collected sediment from silt fences, berms, traps, and other BMPs.
  - Stabilize permanently and quickly remove in place until vegetation is well established.
  - Maintain berms that prevent excessive water, silt fences, diversions structures, and other BMPs.

Other BMPs and Activities to Control Polluted Runoff

You'll need to utilize other methods to minimize potential pollutant sources on your site. Construction materials, debris, waste, fuel, paints, and contaminants becomes pollution sources when it rains. Implementation procedures can significantly reduce the amount of pollution leaving construction sites. The following are some sample processes that should be included in the Plan and implemented on site:

- Keep potential sources of pollution out of the rain or precipitation (e.g., provide a building, covered with plastic or tarps, or build slightly in a lock-proof container).
- Clearly identify a protected, level area for concrete truck washout. This area should be located away from storm drains, swale, drain inlets, or drainage and should be cleaned out periodically.
- Park, refuel, and maintain vehicles and equipment in one area of the site to minimize the area exposed to possible spills and fuel drainage. This area should be well away from wetlands, storm drain inlets, or drainage. Keep spill kits close by and clean up any spills or leaks immediately, including spills on pavement or exposed surfaces.
- Provide good housekeeping. Keep the construction site free of litter, construction debris, and building structures. Keep all waste in one area to minimize cleanup.
- Never hose down paved surfaces to clean dust, debris, or trash. This water could wash directly into storm drains or streams. Sweep up pavement and dispose of waste in the trash. Never hose down or dump.
- Dispose of hazardous materials properly.

Preconstruction Checklist

- A site description, including
  - Nature of the activity
  - Intended sequence of major construction activities
  - Total area of the site
  - Existing soil type and related runoff data
  - A site map with:
    - Drainage patterns
    - Approximate slopes after major grading
    - Area of soil disturbance
    - Outline of areas which will not be disturbed
    - Location of major structures and impervious soil erosion controls
    - Areas where stabilization practices are expected to occur
    - Surface waters
    - Stormwater discharge locations
  - Name of the receiving water(s)
- A description of controls:
  - Erosion and sediment controls, including
    - Stabilization practices for all areas disturbed by construction
    - Structural practices for all drainage/discharge locations
  - Stormwater management controls, including
    - Measures used to control pollutants occurring in stormwater discharges after construction activities are complete
    - Velocity dissipation devices to provide non-erosive flow conditions from the discharge point along the length of any conveyance channel
  - Other controls, including
    - Waste disposal practices that prevent discharge of solid materials
    - Measures to minimize offsite tracking of soil waste by construction vehicles
    - Measures to ensure compliance with state or local waste disposal, sanitary sewer, or septic tank regulations
  - Description of the timing during the construction when measures will be implemented
- State or local requirements incorporated into the Plan
- Inspection and maintenance procedures for control measures identified in the Plan
- Consistent attachments and Plan certification

Implementation Checklist

- Maintain records of construction activities, including
  - Dates when major grading activities occur
  - Dates when construction activities temporarily cease on the site or a portion of the site
  - Dates when construction activities permanently cease on the site or a portion of the site
  - Dates when stabilization measures are completed on the site
- Prepare inspection reports concerning
  - Name of person conducting BMP inspections
  - Qualifications of person conducting BMP inspections
  - BMPs/areas inspected
  - Observed conditions
  - Necessary changes to the Plan
- Report releases of reportable quantities of oil or hazardous substances
  - Notify the National Response Center at 800-424-8802 immediately
  - Report release to your permitting authority immediately, or as specified in your permit. You may also provide a written report within 14 days.
  - Modify the Plan to include
    - The date of release
    - Circumstances leading to the release
    - Steps taken to prevent recurrence of the release
- Modify Plan as necessary
  - Incorporate requests of the permitting authority to bring the Plan into compliance
  - Address changes in design, construction operation, or maintenance that affect the potential for discharge of pollutants

*Taking the time to plan and implement pollution prevention techniques and control practices on your site is not just for more efficient and cost-effective work. It's for more efficient and cost-effective work. It's for more efficient and cost-effective work. It's

12. Helpful Hints to Keep Our Water Clean

Helpful Hints To Keep Our Water Clean

There are a number of things you can do to prevent stormwater pollution. Whether you're in your home, in your yard, in the garage or in your community... be aware of how your actions affect the environment. Pollution prevention is much easier, and less costly, than clearing up "after the fact," so we're counting on YOU to do your share to help protect our environment.

- Home
- Yard
- Garage
- Community

In Your Home

Hazardous Waste: It's as close as your kitchen cupboard.

Did you know that many products used around our homes can be hazardous to our health and our environment? While products such as household cleaners, bleach, oven cleaners, spot solvents and toilet bowl cleaners serve useful purposes, you must remember to handle them as household hazardous waste (HHW) when you throw them away. Never throw HHW in the trash, on the ground or into a storm drain.

Take unwanted products to an HHW collection event. Check the HHW Collection Event Schedule for an event in your area. Bringing these items to a collection event is the proper thing to do and it's FREE!

Try environmentally friendly alternatives to household hazardous waste. Order the Easy Recipes for A Healthy House brochure to learn how to make your own environmentally friendly cleaning products.

Painting Activities: Use the proper cleanup methods.

Even though latex paint is a water based paint, you must clean paint brushes and containers in the sink. Never clean brushes or rinse paint containers into the street, gutter or storm drain. If you use oil-based paints and stains, filter, settle, and reuse the thinners and solvent.

Dispose of unusable paints, thinners, thinner residue, and paint strippers at a Household Hazardous Waste Collection Event. Empty, dry paint cans may go in household garbage, or they may be recyclable in your area - check with your local waste hauler.

Housecleaning: Use the proper disposal methods for washwater.

When washing your windows or mopping the floors, send dirty cleaning water down a sink or toilet. Don't throw washwater into the street, gutter, or storm drain. Also, if you clean your carpets, dispose of dirty washwater down a sink or toilet. If you have your carpets professionally cleaned, make sure the cleaning service either disposes of washwater in the sink or toilet or takes the dirty washwater back to his/her facility for proper discharge into a sewer system.

Back to Table of Contents

In Your Yard

What's the Scoop on Pet Waste?

Never hose pet waste into to the street or gutter. Pick-up waste and dispose of it in trash can. And, remember to take something to pick-up after your dog when you take it for a walk. You'll be helping the environment and keeping peace with your neighbors.

Overdose the Environment!

Achieving a healthy garden doesn't require the use of toxic pesticide and herbicides.

Try non-toxic alternatives for the garden. Try planting plants that deter bad pests and plant other plants that help attract beneficial insects. Chemicals should always be your last choice in the garden. Review the Home Garden Care Guide for various non-toxic alternatives in the garden, or come to a Home Garden Workshop for a live demonstration of how to achieve a healthy chemical-free garden.

Composting - a natural way of recycling organic material

Composting can provide a healthy soil amendment for your yard or garden. Compost provides natural essential nutrients for healthier plants, increases moisture retention and is less expensive then commercial fertilizers and mulches. Learn how to compost from the expert *Master Composters*. Master Composters show residents just how easy it is to compost. Join the Master Composters at a FREE Composting Workshop. Check the workshop schedule for a workshop in your community.

Properly drain your pool to help protect local waterways

If you need to drain your pool, contact your local sewering agency for drainage requirements. If you have a septic tank system or if your sewering agency has no special requirements for draining the pool, let the pool water dechlorinate (this may take up to two weeks) and then discharge the water into landscaped areas. Avoid allowing any water to flow into the street, gutter or storm drain. You may have to drain the pool over a number of days to allow dirt and landscaped areas to absorb the water.

Septic Systems: Properly maintain them to keep our environment clean.

Septic systems should never be piped into a road ditch, stream, concrete flood channel or storm drains. Avoid washing or flushing grease, alcohol, or strong chemicals into your septic system as these substances kill the bacteria needed to break down wastes.

Back to Table of Contents

In the Garage

Do you know where the nearest Certified Collection Center is?

It's probably not too far from you. Many auto service/supply stores accept used motor oil and oil filters. Certified collection centers will even give you some spare change for every gallon your bring in. Remember to bring your used motor oil in a clean container. Do not mix with antifreeze or water. Call 1-800-CLEANUP to find the nearest collection center in your area or visit www.1800CLEANUP.org.

Come to the ABOPs!

ABOPs are recycling centers for Antifreeze, Batteries (car and household), motor Oil and oil filters, and latex/water-based Paints. Bringing these items to the ABOP is the proper ways to dispose of these items and it's FREE! ABOPs are open each Saturday from 9 a.m. to 2 p.m. and are closed on holiday weekends. Check for an ABOP in your area.

Use Proper Car Wash Methods

Did you know that water runoff from carwashing activities contains various pollutants? Most detergents contain phosphates that harm aquatic life and dirty soap water usually contains oil, grease and dirt that gets washed off the car and tires. All of these pollutants can harm our environment if the washwater is allowed to flow into the street and gutter. Here's what you can do: wash cars on the lawn or in an area that will absorb the water runoff. Use biodegradable and phosphate-free detergents. If you must use wheel cleaners, use them sparingly and avoid any runoff. Or, give yourself a break and take the car to a carwash facility. Carwash facilities are constructed to capture water runoff to help protect our environment.

StormWater CleanWater PROTECTION PROGRAM

Riverside County gratefully acknowledges the Bay Area Stormwater Management Agencies Association and the Construction Equipment Trade Association for information provided in this brochure.

StormWater Pollution

What you should know for...

OUTDOOR CLEANING ACTIVITIES

NON-STORMWATER DISCHARGES

GUIDELINES for disposal of wastewater from:

- Sidewalk [illegible]
- Vehicle [illegible]
- Pavement [illegible]
- Water [illegible]
- Equipment [illegible]

Do you know ... where the water should go?

Riverside County has two drainage systems - sanitary sewers and storm drains. The storm drain system is designed to prevent flooding by carrying excess rainwater away from streets. . . it's not designed to be a waste disposal system. Since the storm drain system does not provide for water treatment, it often serves the unintended function of transporting pollutants directly to our waterways.

Unlike sanitary sewers, [illegible] connected to a treatment [illegible] to our local streams, rivers [illegible] lakes.

Non-stormwater discharges such as washwater generated from outdoor cleaning projects often transport harmful pollutants into storm drains and our local waterways. Polluted runoff contaminates local waterways and poses a threat to groundwater resources.

Soaps, degreasers, automotive fluids, litter, and a host of other materials washed off buildings, sidewalks, plazas, parking areas, vehicles, and equipment can all pollute our waterways.

The Cities and County of Riverside StormWater/CleanWater Protection Program

Since preventing pollution is much easier, and less costly than cleaning up after the fact, the Cities and County of Riverside StormWater/CleanWater Protection Program informs [illegible] and businesses of pollution prevention activities such as those described in this pamphlet.

The Cities and County of Riverside have adopted ordinances for stormwater management and discharge control. In accordance with state and federal law, these local stormwater ordinances prohibit the discharge of wastes into the storm drain system or local surface waters. This includes non-stormwater discharges containing oil, grease, detergents, degreasers, trash, or other [illegible] materials.

PLEASE NOTE: The discharge of pollutants into the street, gutters, storm drain system, or waterways - without a Regional Water Quality Control Board permit or waiver - is ***strictly prohibited*** by local ordinances and state and federal law.

0000795

Help Protect Our Waterways!

Use These Guidelines For Outdoor Cleaning Activities and Washwater Disposal

DO . . . Dispose of **small amounts of washwater from cleaning building exteriors, sidewalks, or plazas** onto landscaped or unpaved surfaces provided you have the owner's permission and the discharge will not cause flooding or nuisance problems, or flow into a storm drain.

DO NOT . . . Discharge **large amounts** of these types of washwater onto landscaped areas or soil where water may run to a street or storm drain. Wastewater from exterior cleaning may be pumped to a sewer line with specific permission from the local sewering agency.

DO . . . Check with your **local sewering agency's policies and requirements concerning waste water disposal. Water from many outdoor cleaning activities may be acceptable for disposal to the sewer system.** See the list on the back of this flyer for phone numbers of the sewering agencies in your area.

DO NOT . . . Pour **hazardous wastes** or toxic materials into the storm drain or sewer system . . . properly dispose of it instead. When in doubt, contact the local sewering agency. The agency will tell you what types of liquid wastes can be accepted.

DO . . . Understand that **water (without soap) used to remove dust from clean vehicles** may be discharged to a street or storm drain. **Washwater from sidewalk, plaza, and building surface cleaning** may go into a street or storm drain if ALL of the following conditions are met:

1) The surface being washed is free of residual oil stains, debris and similar pollutants by using dry cleanup methods (sweeping, and cleaning any oil or chemical spills with rags or other absorbent materials before using water).
2) Washing is done with water only - no soap or other cleaning materials.
3) You have not used the water to remove paint from surfaces during cleaning.

DO NOT . . . Dispose of water containing **soap or any other type of** cleaning agent into a storm drain or water body. This is a direct violation of state and/or local regulations. Because **wastewater from cleaning** parking areas or roadways normally contains metallic brake pad dust, oil and other automotive fluids, it should never be discharged to a street, gutter, or storm drain.

DO . . . Understand that **mobile auto detailers** should divert washwater to landscaped or dirt areas. Note: Be aware that soapy washwater may adversely affect landscaping; consult with the property owner. Residual washwater may remain on paved surfaces to evaporate; sweep up any remaining residue. If there is sufficient water volume to reach the storm drain, collect the runoff and obtain permission to pump it into the sanitary sewer. Follow local sewering agency's requirements for disposal.

DO NOT . . . Dispose of left over cleaning agents into the gutter, storm drain or sanitary sewer.

Regarding Cleaning Agents:

If you must use soap, use biodegradable/phosphate free cleaners. Avoid use of petroleum based cleaning products. Although the use of nontoxic cleaning products is strongly encouraged, *do* understand that these products can still degrade water quality and, therefore, the discharge of these products into

the street, gutters, storm drain system, or waterways is prohibited by local ordinances and the State Water Code.

Note: When cleaning surfaces with a high pressure washer or steam cleaning methods, additional precautions should be taken to prevent the discharge of pollutants into the storm drain system. These two methods of surface cleaning, as compared to the use of a low pressure hose, can remove additional materials that can contaminate local waterways.

Other Tips to Help Protect Our Water . . .

Screening Wash Water

A thorough dry cleanup before cleaning (no soap) surfaces such as building exteriors and [illegible] without loose paint; sidewalks, or plaza areas should *be sufficient to protect storm drains.* [illegible] debris (solids) could enter storm drains or remain in the gutter or street after cleaning, washwater should first pass through a "20 mesh" or finer screen to catch the solid material, which should then be disposed of in the trash.

Drain Inlet Protection/ Containing & Collecting Wash Water

- Sand bags can be used to create a barrier around storm drain inlets.
- Plugs or rubber mats can be used to temporarily seal storm drain openings.
- You can also use vacuum booms, [illegible] pads, or temporary berms to keep [illegible] away from the street, gutter or storm drain.

Equipment and Supplies

Special materials such as absorbents, [illegible] plugs and seals, small sump pumps, and booms are available from many vendors. For more information check catalogs such as New [illegible] (800-468-4647), Lab Safety Supply (800-356-0783), [illegible] (800-558-9966), and W.W. Grainger (800-[illegible]) or call the Cleaning Equipment Trade Association (800-441-0111) or the Power Washing [illegible] America (800-393-PWNA).

0000767

RIVERSIDE COUNTY COMMUNITY HEALTH AGENCY
DEPARTMENT OF ENVIRONMENTAL HEALTH

HOUSEHOLD HAZARDOUS WASTE COLLECTION

SCHEDULE FOR SEPTEMBER 2004 THRU JUNE 2005

ABOP Sites- (Antifreeze, Car & Home Batteries, Oil & Oil Filters, & Latex Paint Only!) are open every Saturday except Holiday weekends. Click on "ABOP Sites" to go to site locations, maps and schedules of operation. If you are just interested in recycling used motor oil there are many drop off centers throughout Riverside County in addition to our ABOP sites. Go to Drop Off Centers for a complete listing. For ways to recycle tree trimmings, construction debris scrap appliances or electronic waste (universal waste) go to recycling resources.

For the Latest information call our 24 hour Household Hazardous Waste Hot line: (951) 358-5256 or (800) 304-2226

For Household Hazardous Waste Disposal Sites outside Riverside County go to Earth 911

The following locations are scheduled for the collection of Household Hazardous Waste (HHW) on the dates indicated. The sites will be open from 9:00 a.m. until 2:00 p.m. These sites are for the use of Riverside County Residents only. State law prohibits the non-licensed transport of hazardous waste liquid greater than 5 gallons or more than 50 pounds total per vehicle per trip - enforced by CHP (multiple trips are allowed). All containers must be marked and secured so as not to leak. What are Household Hazardous Wastes?

Restrictions: No business or non-profit waste; No explosives/ammunition; No 30 or 55 gallon drums; No radioactive materials; No appliances; No tires, No TV's or Computer Monitors (CRTs) and No medical waste except syringes and hypodermic needles (sharps). CRTs can be taken to County Landfills for recycling, you may go to the Waste Management Department's website for more information.

Services - Now Available

Residents (primarily diabetics) may dispose of their syringes/hypodermic needles at our Mobile Household Hazardous Waste Collection events. Sharps containers are available at no charge, while supplies last. Please see our informational bulletin on How to Dispose of Used Needles and Syringes at Home.

Conditionally Exempt Small Quantity Generators (CESQG)
What is a CESQG? Businesses that generate 27 gallons or 220 lbs of hazardous waste or 2.2 lbs of extremely hazardous waste per month are called CESQGs. Businesses are required to use a licensed hazardous waste hauler to manifest and transport their waste. The most common CESQGs are painters, print shops, auto shops, builders, churches, schools, non-profit groups and property managers.
What is the CESQG Program? This program is a hazardous waste pick-up disposal service for eligible businesses/non-profit organizations in the County of Riverside. This program provides an affordable way to legally dispose of this waste. To arrange an appointment or request further information call 1-800-952-5566.

Collection sites are closed during inclement weather such as rain or high winds!

Household Hazardous Waste Collection
Sponsored by Riverside County Waste Management Department
For Information regarding these collection sites call (951) 486-3283 or (951) 486-3308
or go to their web site at http://www.rivcowm.org//Recycling/HHW-Flyer.htm
Hours of Operation 10:00 am to 2:00 pm

Mecca II Landfill

95-250 66th Avenue, approximately two miles east of Hwy 111 and north of the Salton Sea

Desert Center Landfill

17-991 Kaiser Road, north of I-10 and west of Hwy 177

Anza Transfer Station

40329 Terwillinger Road and the Anza Landfill property, south of Hwy 371 and adjacent to the Cahuilla Reservation

Aguanga Fire Station

Cottonwood Fire Station - 44222 Sage Road, north of Hwy 79

Pinyon Flats Dropoff Center

Southern end of Pinyon Flats Road

ABOP SITE ADDRESSES

Only Antifreeze, Batteries, Oil and Latex Paint will be accepted!
These sites are open on Saturdays only, from 9:00 a.m. until 2:00 p.m. (except Palm Springs 7:00 a.m. - 12:00 p.m. during June, July, August & September). They will be closed on Saturdays of holiday weekends. Note: Sites are closed on inclement weather days (high winds, rain, etc.)

These sites are for the use of Riverside County Residents only, who may not transport liquid hazardous waste over 5 gallons or more than 50 pounds total per vehicle per trip - enforced by CHP (multiple trips are allowed). All containers must be marked and secured so as not to leak.

No business or non-profit organization waste accepted and No 30 or 55 gallon drums.

Pedley (Riverside)

Riverside County TLMA Maintenance Facility
6851 Van Buren Blvd. (Cross of Clay Street), Riverside - 92509

What's the Scoop?

TIPS FOR A HEALTHY PET AND A HEALTHIER ENVIRONMENT

CREATE A HEALTHY ENVIRONMENT in and around your home by following these simple pet practices. Your pet, family and neighbors will appreciate their clean comfortable surroundings.

HOUSEHOLD PETS

We all love our pets, but pet waste is a subject everyone likes to avoid. Pet waste left on trails, sidewalks, streets, and grassy areas are immediately flushed into the nearest waterway when it rains. Even if you can't see water near you, the rain or waste water WASHES all that PET WASTE and BACTERIA INTO THE STORMDRAIN, where it travels to your neighborhood creek or lake untreated. These animal droppings also contain nutrients that can promote the growth of algae, in our streams and lakes. The risk of STORMWATER CONTAMINATION INCREASES, if pet waste is allowed to accumulate in animal pen areas or left on sidewalks, streets, or driveways where runoff can carry them to storm sewers.

Some of the DISEASES THAT CAN SPREAD from pet waste are E. coli, a bacterium that can cause disease, and fecal coliform bacteria, which is spread through feces. Dogs also carry salmonella and giardia. Organisms causing these diseases move from the dog into the environment. They can be carried by flies and other insects, wind and dust.

Flies and other pest insects can also increase when pet waste is disposed of improperly, becoming a nuisance and adding yet another vector for disease transmission.

WHAT CAN YOU DO?

- SCOOP up pet waste and flush it down the toilet.
- NEVER DUMP pet waste into a storm drain or catch basin.
- USE the complimentary BAGS or mutt mitts offered in dispensers at local parks.
- CARRY EXTRA BAGS when walking your dog and make them available to other pet owners who are without.
- TEACH CHILDREN how to properly clean up after a pet.
- TELL FRIENDS AND NEIGHBORS about the ill effects of animal waste on the environment. Encourage them to clean up after pets.

DID YOU KNOW ...Calling the TOLL FREE 1-800-506-2555 can be your one-stop resource to report improper storm drain practices, locate dates and times of your nearest Household Hazardous Waste Collection Event; obtain an array of free printed material on storm water pollution prevention, request classroom presentations, and free grasscycling information and composting workshops.

0000773

SCOOP THE POOP

Many communities have "Scoop the Poop" laws that govern pet waste cleanup. Some of these laws specifically require anyone who walks an animal off of their property to carry a bag, shovel, or scooper. Any waste left by the animal must be cleaned up immediately. CALL YOUR LOCAL CODE ENFORCEMENT OFFICER to find out more about pet waste regulations.

Pets are only one of the many fixtures of suburban America that add to water pollution. Lawn fertilizers, rinse water from driveways and motor oil also commonly end up in streams and lakes. **CALL 1-800-506-2555 FOR HOUSEHOLD HAZARDOUS WASTE COLLECTION LOCATIONS AND DATES** to dispose of your leftover hazardous materials. Maintain your automobile to avoid leaks. Dispose of used vehicle fluids properly. Your pets can be poisoned if they ingest gas, oil or antifreeze that drips onto the pavement or is stored in open containers.

NEVER HOSE VEHICLE FLUIDS into the street or gutter. USE ABSORBENT MATERIALS such as cat litter to clean-up spills. SWEEP UP used absorbent materials and place it in the trash.

HORSES AND LIVESTOCK

Fortunate enough to own a horse or livestock? You, too, can play a part in protecting and cleaning up our water resources. The following are a few simple Best Management Practices (BMPs) specifically designed for horse owners and landowners with horses.

- **STORE** your manure properly. Do not store unprotected piles of manure in places where runoff may enter streams, and wash the manure away. Place a cover or tarp over the pile to keep rainwater out.
- **CHECK** with your local conservation district to design manure storage facilities to protect water quality. These structures usually consist of a concrete pad to protect ground water and a short wall on one or two sides to make manure handling easier.
- **TRY** composting - A vegetative cover placed around buildings or on steeper slopes can help minimize erosion and absorb nutrients while improving the appearance of your property. In addition, vegetative covers will provide animals with better traction during wet or icy conditions.

- **KEEP** animals out of steams - Designed stream crossings provide a safe, easy way for horses and livestock to streams. Fencing encourages the use of the crossing instead of the streambed to navigate streams. This will allow vegetation to stabilize natural stream banks and reduce sediment pollution.
- **MOW** pastures to proper height, six (6") inches is typically recommended.

- **MATERIAL STORAGE SAFETY TIPS**
  Many of the chemicals found in barns require careful handling and proper disposal. When using these chemicals, be certain to follow these common sense guidelines:
  - Buy only what you need.
  - Treat spills of hoof oils like a fuel spill. Use kitty litter to soak up the oil and dispose of it in a tightly sealed plastic bag.
  - Store pesticides in a locked, dry, well-ventilated area.
  - Protect stored fertilizer and pesticides from rain and surface water.

Call 1-800-506-2555 to locate your local conservation district to find out what to do with your current backyard manure pile, how to re-establish a healthy pasture, what to do about weeds, and what grasses grow best in your soils.

Thank you for doing your part to protect your watershed, the environment, and the equestrian way of life in your community!

Treatment Control BMP Sizing Calculations and Design Details

Volume Based BMPs

General

The largest concentrations of pollutants are found in runoff from small volume storms and from the first flush of larger storms. Therefore, volume based BMPs should be sized to capture and treat the initial and more frequent runoff surges that convey the greatest concentration of pollutants. To maximize treatment and avoid health hazards, volume-based BMPs must retain and release the runoff between a 24 and 72 hour period. This handbook typically recommends a draw down time of 48 hours, as recommended by the California BMP Handbook. The drawdown time refers to the minimum amount of time the design volume must be retained.

In order to meet RWQCB requirements, the method for determining the design volume is based on capturing 85 percent of the total annual runoff. These 85 percent capture values were determined throughout Riverside County using rain gages with the greatest periods of record. Key model assumptions are based on studies used in the *Urban Runoff Quality Management, WEF Manual of Practice No. 23/ASCE Manual of Practice No. 87, (1998)* and *the California Best Management Practice Handbook*. This handbook gives a simple procedure for determining the design volume of a BMP based on the location of the project.

BMP Design Volume Calculations

Following is a step-by-step procedure for determining design volume for BMPs using Worksheet 1. Examples of the following procedure can be found in Appendix B.

1. Create Unit Storage Volume Graph:
   a) Locate the project site on the Slope of the Design Volume Curve contained in Appendix A.
   b) Read the slope value at this location. This value is the Unit Storage Volume for a runoff coefficient of 1.0.
   c) Plot this value as a point (corresponding to a coefficient of 1.0) on the Unit Storage Volume Graph shown on Figure 2.
   d) Draw a straight line from this point to the origin, to create the graph.

2. Determine the runoff coefficient (C) from Figure 1 or the following relationship:

$$C = .858i^3 - .78i^2 + .774i + .04$$

where i = impervious percentage

3. Using the runoff coefficient found in step 2, determine 85th percentile unit storage volume (V_u) using Figure 2 (created in step 1).

4. Determine the design storage volume (V_{BMP}). This is the volume to be used in the design of selected BMPs presented in this handbook.

Figure 1. Impervious – Coefficient Curve (WEF/ASCE Method[1])

[1] Imperviousness is the decimal fraction of the total catchment covered by the sum of roads, parking lots, sidewalks, rooftops, and other impermeable surfaces of an urban landscape.

TRAINING LOGS

NPDES

STORMWATER QUALITY TRAINING FOR

I.) Construction
II.) Industrial / Commercial
III.) Municipal
IV.) Water Quality Management Plan (WQMP)

NO FEE TRAINING

Training: The Riverside County National Pollutant Discharge Elimination System (NPDES) Municipal Separate Storm Sewer Systems (MS4) Permits require annual training. The Santa Ana Regional Water Quality Control Board (RWQCB) Permit also requires new employees to receive training within six months of hire.

TO REGISTER: ***INTERNET ACCESSS IS REQUIRED TO REGISTER.*** *Please have all of the information below ready and register on-line at* www.eplyevents.com/riversidenpdes. *To help maintain class sizes you can only register 1 applicant for each log-in.* **Registration deadline is September 22, 2006**. **Seating is limited, so register early!**

- ATTENDEE'S NAME
- MUNICIPALITY
- DEPARTMENT
- CONTACT
- PHONE#
- EMAIL
- CLASS THEY WISH TO ATTEND
- FAX #

Overflow classes will be held in at the Murrieta City Hall. **The overflow class location will be closed unless reservations fill up in the other sessions. Hopefully we'll have a good idea if we need to open the class well in advance of the 15th of September. If classes do fill up we can open some of the Murrieta classes and extend the registration deadline. This should provide advance notice for any cancellations that may take place for our Murrieta locations.*

WHO SHOULD ATTEND:

I.) Construction Training is for building and construction staff that conducts:

- Construction Site Inspections / Enforcement
- Public Works Construction Activities
- Grading/Building Permit review staff (should attend 1 class, either WQMP or Construction, which ever is newest)
- Any staff reviewing or preparing construction project SWPPPs.

II.) Industrial Commercial Training is for health, building and code enforcement staff that conducts:

- Industrial/Commercial Site Inspections / Enforcement for Water Quality Ordinances

III.) Municipal Training is for municipal maintenance workers in:

- Building Services
- Parks Department
- Fleet Services
- Warehouse/Receiving Personnel
- Building & Grounds Maintenance

IV.) WQMP Training is for:

- Planning staff
- Engineering staff
- Plan Review and Plan Check staff
- Grading/Building Permit review staff (should attend 1 class, either WQMP or Construction, which ever is newest)
- Post-construction BMP inspectors interested in learning about the BMP design basis

I.) CONSTRUCTION TRAINING

WORKSHOP TOPICS:

- NPDES Regulatory Framework Overview
- Overview of General Construction Permit
- Site Inspection Responsibilities
- Enforcement Options
- Erosion/Sediment Control Best Management Practices (BMPs)
- Municipal Stormwater Permit Requirements
- Runoff Sampling and Analysis
- Post Construction BMPs
- Constituents of Concern in Urban Runoff from Construction Site Activities
- Storm Water Pollution Prevention Plans (SWPPP)

III.) MUNICIPAL TRAINING

WORKSHOP TOPICS:

- NPDES Regulatory Framework Overview
- Municipal Stormwater Permit Requirements
- Best Management Practices
- Pollution Prevention Plans
- Storage & Disposal of Chemicals
- Vehicle Cleaning & Maint.
- Pesticides & Fertilizers
- Painting Activities
- Landscape Maintenance
- Outdoor Loading Activities
- Pavement & Parking Lot Cleaning
- Parks Maintenance Activities
- Constituents of Concern in Urban Runoff from Municipal Facilities and Activities

	Date and Time	Location
1	**Monday, October 2, 2006 - Half-Day Training (PM)** 1:00 P.M. – 4:00 P.M.	**Riverside County Flood Control & Water Conservation District** 1996 Market Street – Conference Room 1 Riverside, CA 92501 Phone: 951.955.1201

HAZARDOUS MATERIALS NOTIFICATION AND DISPOSAL OF SPILLED OR DISCOVERED MATERIALS

11/16/06

RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT

PROCEDURE FOR NOTIFICATION AND DISPOSAL OF SPILLED OR DISCOVERED HAZARDOUS MATERIALS

A. **Definitions:**

Emergency Event

1. Any spill that requires medical attention beyond the first aid capabilities of a trained District employee or cannot wait for transportation to a local occupational medicine clinic. A medical emergency may occur when either a District employee or a member of the public is exposed to hazardous materials. An example would be concentrated herbicide splashing into your eyes.
2. Any spill that cannot be contained with the spill kits on the trucks and threatens public health or could enter the storm or sewer systems. An example would be a large herbicide spill on a public street.
3. Any spill that involves a substantial amount of a flammable liquid. An example would be a gasoline tank leak that cannot be plugged.

Non-emergency Event

1. Any hazardous material spill that does not satisfy the above criteria. In addition, this includes discovery of unknown or possibly hazardous materials on District property. **CAUTION: These abandoned materials may have no labels or marking on the drums, gas cylinders, or batteries. Do not move the material until directed to do so by the proper agency. Moving material discovered on District property without approval from County HAZMAT or the appropriate Fire Department may create an emergency event. An example would be moving an abandoned battery and having it explode. Needles and human waste should not be handled; call the appropriate phone number for support.**

Under no circumstances should rubbish or hazardous materials be buried or disposed of in an illegal or inappropriate manner. Rubbish should be taken to a designated landfill or transfer station. Hazardous materials should be cleaned up, placed in an appropriate container, tagged, and reused or properly stored and disposed of as a hazardous waste.

B. Notification of Emergency Events

1. Call 911 and explain your situation.
2. If an employee or member of the public is injured, report the injury and the chemical being used.
3. Take care of the injured. Flush eyes or provide other first aid support until help arrives.
4. If no one is injured, report your location, the chemical spilled, the amount spilled, and the total amount on the truck.
5. Call supervisor or Mark Biloki (955-1310, cell 951.288.5254) and report situation. If they are unavailable, call NPDES at 955-4390 (David Ortega, cell 951.961.9574) or 955-1248 (Linda Garcia).
6. When emergency responders arrive, provide MSDS and follow their directions. If responders recommend outside clean up assistance, contact supervisor or Mark Biloki. If supervisor or Mark Biloki is not available, contact NPDES at the numbers listed above.

Mark Biloki, the supervisor or NPDES will contact Consolidated Waste Industries (CWI) if spill clean up is required.

C. Notification of Non-emergency Events

1. For large District created spills or hazardous materials found on District property, call your supervisor or Mark Biloki (955-1310, cell 951-288-5254). If they are unavailable, call NPDES at 955-4390 (David Ortega, cell 951-961-9574) or 955-1248 (Linda Garcia). Report location and situation.
2. Supervisor, Mark Biloki, or NPDES will call the appropriate HAZMAT support agency if required.

951.358.5055	County Hazardous Materials Management Division Ask for Christine Parsons (Cell 951.453.7842) or person on-call
951.922.3210	CDF/Banning Fire Service
951.736.2220	City of Corona Fire Department
951.826.5321	City of Riverside Fire Department

3. The Supervisor or Mark Biloki will contact NPDES, if not contacted earlier.
4. If additional clean up support is required, Supervisor, Mark Biloki, or NPDES will task Consolidated Waste Industries for large spills.
5. For small spills you can clean up with your spill kits, contact your supervisor or Mark Biloki after you have completed spill clean up. Supervisor or Mark Biloki will contact NPDES.
6. When needles are found, contact Environmental Health at 951.955.8982.
7. When human waste is found, contact your Supervisor or Mark Biloki. They will coordinate clean up with the appropriate contractor.

D. Post-Spill Clean up Reporting

After spill clean up, employee shall fill out Environmental Spill Report in SOM – 12 and submit to supervisor. Supervisor shall provide a copy to NPDES.

POST FOR EMPLOYEES

HAZARDOUS MATERIALS BUSINESS EMERGENCY PLAN: EMERGENCY NOTIFICATION

During an emergency involving a release or a threatened release of a hazardous material you must notify appropriate agencies. Information you should be prepared to supply includes:

1. Name and telephone number of the reporting party;
2. Name and address of business;
3. Time and type of release (e.g., damaged containers, malfunctioning equipment, etc.);
4. Name and quantity of material(s) involved;
5. Extent and number of injuries;
6. Actions taken or being taken to mitigate or reduce emergency;
7. Potential hazards to human health or the environment surrounding the business.

Printed 8/15/2007 2:23:39 PM

Riverside County Flood Control & Water Conservation District

NPDES Complaint No. 425

Complaint No.: 425

Complaint Date: 7/6/2006

Received By: David Ortega

Caller Name: Eastern Municipal Water District (EMWD)

Caller Phone: (0)

Caller Address: ,

APN: 959390005

Complaint Address: 32220 Highway 79 South
Temecula, CA 92592

Location: Cross street of Margarita

Watershed: SM

Complaint: Unknown amount of sewage coming out of a manhole.

Findings: 7/6/06: The EMWD called the Governor's Office of Emergency Services (OES) to report that they received a call from the Information Center; they had received a report of sewage coming out of a manhole. This blockage is possibly causing a backup inside a business that reported the over flowing man hole. The OES issued a Hazardous Materials Spill Report, Control# 06-4002, concerning this incident. The OES report states that the sewage was not contained, that it is unknown if water was involved and that no drinking water was impacted by this incident. The Riverside County Environmental Health Department was notified about this incident. A Riverside County Flood Control District facility is located near the complaint address: "Temecula Creek Line V Stage 1 Hwy. 79 South at Margarita Rd."

Printed 8/15/2007 2:23:28 PM

Complaint No.: 508

Complaint Date: 7/20/2006

Received By: Linda Garcia

Caller Name: Anonymous

Caller Phone: ( )

Caller Address: ,

APN: 904050020

Complaint Address:

Murrieta, CA 92562

Location: Schools in the Murrieta School District

Watershed: SM

Complaint: Waste streams from carpet and floor cleaning tasks at the schools of the Murrieta School District are being poured down the flood control drains.

Findings: 7/20/06: Linda Garcia of the Riverside County Flood Control (RCFC) District received an anonymous complaint call at 1015 hours today. The anonymous complainant stated that these practices have been going on for the last 14 years. The location that the complainant gave was the "old" Murrieta High School near the intersection of Washington Avenue & Nighthawk Way, in the quad at the center of the campus between the 700 and 800 buildings.

Actions: 7/20/06: Ms. Garcia called Ms. Farida Naceem at the City of Murrieta and asked if one of their Code Enforcement staff could take a look at the complaint location and to let Ms. Garcia at the RCFC know what was found. The anonymous complainant said that he will call Ms. Garcia back early next week for an update.

Caller Name: Rancho California Water District (RCWD)

Caller Phone: (951) 296-6900

Caller Address: 34295 Vail Ranch Parkway,

APN: 960081010

Complaint Address: 34295 Vail Ranch Parkway
Temecula, CA 92592

Location:

Watershed: SM

Complaint: 93,450 gallons of reclaimed water (irrigation water) spilled into Temecula Creek starting on 7/23/06 at about 1130 hours.

Findings: 7/25/06: The RCWD called the Governor's Office of Emergency Services (OES) to report this release that was caused by a rusty bolt on a flange. The OES issued a Hazardous Materials Spill Report, Control# 06-4407, concerning this incident. The OES report states that the release was contained and cleaned up by the reporting party. The OES report also states that water was involved in Temecula Creek. No drinking water was impacted due to this release. The Riverside County Environmental Health Department was notified about this incident.

Complaint Date: 7/25/2006

Received By: David Ortega

Caller Name: So. Cal. Edison

Caller Phone: (0)

Caller Address: ,

APN: 362643008

Complaint Address:

Wildomar, CA 92595

Location: Mandarin Court near Menifee

Watershed: SM

Complaint: 5 gallons of mineral oil (non-PCB, petroleum) spilled into a storm drain. A car hit a pad mounted transformer, spilling 30 gallons of oil.

Findings: 7/25/06: So. Cal. Edison called the Governor's Office of Emergency Services (OES) to report this incident. The OES issued a Hazardous Materials Spill Report, Control# 06-4412, concerning this incident. The OES report states that the substance was contained and cleaned up by the reporting party. Water was involved in a storm drain, but no drinking water was impacted due to this incident. The Riverside County Environmental Health Department was notified about this incident. The nearest Riverside County Flood Control District facility is located about 1.5 miles to the west of the complaint location: "Wildomar Bundy Canyon Channel, Line B". NOTE: The complaint APN listed on this report is a reference APN only.

Complaint No.: 530

Complaint Date: 8/2/2006

Received By: David Ortega

Caller Name: NRC

Caller Phone: (0)

Caller Address: ,

APN: 964330020

Complaint Address: 36956 Pebley Court
Winchester, CA 92596

Location:

Watershed: SM

Complaint: The reporting party advised there is a person who repairs cars and motorcycles at a home which causes a spill of materials into the street and storm drain.

Findings: 8/2/06: The NRC called the Governor's Office of Emergency Services (OES) to report this possible ongoing activity at a residence. The OES issued a Hazardous Materials Spill Report, Control# 06-4588 and NRC# 806447, concerning this complaint. The OES report states that it is unknown if any of the substances from the repair activities have been contained. The OES report also states that water is involved, but no drinking water is being impacted because of this complaint. The nearest Riverside County Flood Control District facility is located about .4 mile to the northwest of the complaint address: "Warm Springs VY Coral Tree SD, Stage 2."

Complaint: 50 gallons of diesel fuel released on the road.

Findings: 8/14/06: The Riverside County Fire Department called the Governor's Office of Emergency Services (OES) to report this incident. The OES issued a Hazardous Materials Spill Report, Control# 06-4846, for this release that was due to a traffic accident. There was damage to saddle tanks on a big rig. The diesel fuel was mixed with 100 gallons of water. The OES report states that the substance was contained and cleaned up by Cal Trans. The OES report also states that water was involved in a storm drain that goes to Temecula Creek. No drinking water was impacted due to this incident.

Complaint: Neighbor washes out his construction truck which us used for drywall, on a weekly basis. Caller states that drywall debris and dust in the bed of the truck is washed into the street. This is turn goes into the storm drain around the corner from the complaint address.

Findings: 8/23/06: A citizen near the complaint address called the Governor's Office of Emergency Services (OES) to report this complaint. The OES issued a Hazardous Materials Spill Report, Control# 06-5051, concerning this complaint. The OES report states that it is unknown if drinking water has been impacted by this complaint. Also, water is involved in a storm drain; this may be part of a City of Murrieta storm drain system. "Murrieta Valley I-215 Retention Basin", a Riverside County Flood Control District facility, is located about .25 mile to the north, northwest of the complaint address. The Riverside County Environmental Health Department was notified about this complaint.

Actions: 8/29/06: David Ortega of the Riverside County Flood Control (RCFC) forwarded a copy of this complaint call report to Tina Tuason, Jason Uhley and Linda Garcia of the RCFC. A copy of this complaint call was forwarded to Farida Naceem of the City of Murrieta.

Complaint: 25 gallons of ZEP Floor Stripper leaked and traveled to the rear of the store and outside into a storm drain.

Findings: 8/29/06: Home Depot called the Governor's Office of Emergency Services (OES) to report this incident. The OES issued a Hazardous Materials Spill Report, Control# 06-5152, concerning this incident. The OES report states that an unknown waterway was involved with this incident. No drinking water was impacted by this incident. The Riverside County Environmental Health Department was notified about this incident. The nearest Riverside County Flood Control District facility is located about 1,000' to the north, northwest of the complaint address: "Temecula Creek Lines VV Stage 4,C,D,E De Portola Rd.-Campanula Way."

Actions: 8/29/06: The OES report also states that an emergency was dispatched by the company to the site. One 55 gallon drum of solid waste and 400 gallons of liquid waste was removed from the storm drain. The chemical was contained in the catch basin and cleanup was completed by a contractor. The substance never reached a waterway.

Complaint: 600 gallons of sewage was released due to the pH meter hose that came loose releasing sewage to the curb that leads to a storm drain that releases to Murrieta Creek.

Findings: 9/9/06: The RCWD called the Governor's Office of Emergency Services (OES) to report this release of sewage. The OES issued a Hazardous Materials Spill Report, Control# 06-5388, concerning this incident. The OES report states that no drinking water was impacted from this sewage release, however, water was involved in Murrieta Creek. The area where this incident occurred appears to have impacted Riverside County Flood Control District property near the confluence of Santa Gertrudis Creek and Murrieta Creek. The Riverside County Environmental Health Department was notified about this incident.

Actions: 9/9/06: The OES report states that the sewage release was contained and that cleanup was provided by RCWD. The OES report also states that the pH meter has been secured which stopped the release.

Complaint: 7,000 to 8,000 gallons of sulfuric acid was threatened to be released due to a crack in the side of an above ground chemical storage tank.

Findings: 9/19/06: The MWD called the Governor's Office of Emergency Services (OES) to notify them of a possible release. The OES issued a Hazardous Materials Spill Report, Control# 06-5590, concerning this threatened release. The OES report states that the tank contains 7,000 to 8,000 gallons of sulfuric acid. If the product does release, it will release into a containment area with the capacity to contain it all. This tank is at a water treatment plant. They are setting up an exclusion zone, but are not evacuating the facility. The OES report also states that no water was involved from this incident. The OES report also states that the situation was contained and that clean up was provided by MWD and a contractor.

Actions: 9/20/06: At 0830 hours, a situation update about this incident came to the OES from David Johnson of the MWD. Mr. Johnson advised that the release was discovered on 9/18/06 at 1400 hours. The tank has a capacity 8,000 gallons however, the actual level of the tank was at 4,500 gallons at the time of the initial call to OES.

Complaint Address: 34288 Hidden Glen Circle
Wildomar, CA 92595

Location:

Watershed: SM

Complaint: A neighbor with a very large pine tree has pine needles plugging up the storm drain.

Findings: 9/7/06: Jason Uhley of the Riverside County Flood Control (RCFC) District passed this complaint to David Ortega of the NPDES Section at the RCFC. 9/8/06: Mr. Ortega left a message with Lou Pizatella of the County of Riverside Code Enforcement concerning this complaint and asking for a little guidance about it. 9/13/06: Ms. Julian (complainant) called again today about this complaint. Mr. Ortega has not heard from County Code Enforcement about this complaint.

Actions: 9/25/06: Mr. Ortega went to the complaint address today and took a few photos of the pine tree on the front yard, the pine needles in the street gutter and of the storm drain system in this neighborhood. Mr. Ortega determined, while on site today, that the pine needles did not pose a threat to "plug up" the storm drain system in this neighborhood. The street gutter located on Hidden Glen Circle flows south and then west on Hunters Run Court. There is a flow through storm drain located at the end of the cul-de-sac of Hunters Run Circle. This flow through appears to allow street gutter flows in this neighborhood to infiltrate in a vacant lot area just west of the cul-de-sac of Hunters Run Court and just east of Allison Lane. Mr. Ortega spent some time in the neighborhood handing out 20 public information door hangers with an "After the Storm; A Citizen's Guide to Understanding Stormwater" brochure to notify residents about Stormwater Pollution Solutions.

Complaint: Swimming pool filter water being discharged from a residence to the street gutter.

Findings: 9/25/06: Helio Takano of the Riverside County Flood Control (RCFC) received this complaint today and told the complainant to call the NPDES Hotline with the complaint, (800) 506-2555. Mr. Takano also stated to the complainant that he would talk to someone in the NPDES Section of the RCFC about this complaint. He also suggested to the complainant to take photos for evidence since she mentioned that the water sprinklers would wash away the powder (white) substance. 9/27/06: The complainant sent photos today in an email to Mr. Takano concerning this complaint. The complainant spoke to Mr. Takano today and stated that most of the evidence is almost washed away from the sprinklers in the neighborhood, and that she left a message in the NPDES Hotline. Mr. Takano spoke to Tina Tuason in the NPDES Section of the RCFC about this complaint. Ms. Tuason referred Mr. Takano to speak with David Ortega of the NPDES Section at the RCFC for further follow-up.

Actions: 10/02/06: David Ortega of the RCFC went to the neighborhood of the complaint address and handed out 20 Stormwater Pollution door hangers attached with a public information pamphlet about Swimming Pool and Fountain water maintenance.

Watershed: SM

Complaint: 11/14/06: Steve Thomas of the Riverside County Flood Control (RCFC), Operations & Maintenance Division called Jason Uhley of the RCFC, NPDES Section, to report a sewage spill into Murrieta Creek, (an RCFC District facility), from a broken EMWD force main.

Findings: 11/14/06: The spill was reported to the Governor's Office of Emergency Services (OES). The OES issued a Hazardous Materials Spill Report, Control# 06-6758. The OES report states that approximately 1,000 gallons was released at around 10:15 this morning due to a broken forced main. No drinking water was impacted due to this release. EMWD initiated clean up actions and notified the RWQCB through the OES. Riverside County Environmental Health was also notified about this release. 1438 hours: Chuck Strey, Senior Public Health Engineer, Riverside County Department of Environ. Health, issued a Sewage Release/ Spill Notification, Incident No. SA-06-08, concerning this incident. This report stated that the discharge was ongoing and that an approx. 800,000 gallons of untreated sewage has been released. NOTE: The complaint APN listed on this report is a reference APN only.

Actions: 11/14/06: Complaint information entered into system by Jason Uhley, Riverside County Flood Control (RCFC), NPDES Section. Call forwarded to David Ortega at 2:15 pm. Jason also contacted RWQCB to report per permit requirements. 1445 hours: Mr. Ortega contacted Al Javier of Eastern Municipal Water District (EMWD), (951) 928-3777, to get an update of the "on the scene" conditions. Mr. Javier noted that the approx. rate of sewage coming out of the 10" main is 3,000 gallons/minute. The flow of sewage has reached a point located about 500' downstream of the Rancho California Road bridge. Mr. Javier also stated that the EMWD just received permission to allow heavy equipment in the creek to berm up the sewage release to prevent it from flowing further down the creek. 1500 hours: Steve Clark, of the RCFC, drove to the site to provide photo documentation for the RCFC District. 11/15/06, 0855 hours: David Ortega, of the RCFC, spoke to Al Javier, of EMWD, to get an update about this incident. Mr. Javier stated that last night at 1800 hours, the flow of sewage was stopped from going into Murrieta Creek. Approx. 80,000 gallons of sewage was removed from Murrieta Creek as of 0800 hours today. EMWD is currently trying to get permission from the City of Temecula to shut down a portion of Old Front Street/Jefferson Avenue to be able to pump sewage directly from Murrieta Creek and into sewer manhole/vault.

Complaint: There are a number of kids who are biking and loitering in the street next to the drain, using trash that they bring up from the vacant lot as a skateboard ramp. Three complaints have come into the County of Riverside, Code Enforcement Office in Lake Elsinore from 2/8/07 to 2/10/07 concerning this matter. Neighbors are very concerned that when they are backing out of their driveways, they hope not to run over any pieces of wood or hit any kids who are jumping out of this basin and on to the street. One neighbor's complaint was very emphatic that this area needs to be fenced.

Findings: 2/13/07, 0913 hours: David Ortega of the Riverside County Flood Control (RCFC) District received three emails today from Michael Sanders, Supervising Code Enforcement Officer, County of Riverside Code Enforcement Office, Lake Elsinore concerning this complaint. Mr. Sanders said that this basin was most likely an RCFC District facility. 1110 hours: Mr. Ortega arrived at the complaint location and initially noticed that this drainage basin, located on the northwest corner of the complaint location, is not an RCFC District facility. There are signs at this location stating that this basin belongs to the Riverside County Parks and Open Space District. Also, there is no fencing of any kind around this basin. Mr. Ortega took a few photos of the site and of the dirt ramps located in the basin and just outside of the basin on the adjacent sidewalk.

Actions: 2/13/07: Mr. Ortega spoke with a Ruben Rodriguez, Park Ranger Supervisor for the Riverside County Parks and Open Space District, (951) 637-6981, concerning this complaint. Mr. Rodriguez did say that his District does maintain this basin. Mr. Rodriguez also said that there have been complaints in the past about this basin concerning kids playing in the basin and trash being dumped there. Mr. Rodriguez also stated that there are Rangers from his District who sometimes patrol this site on the weekends. Mr. Rodriguez did say that because of these recent complaints from the neighbors, that he may have to see how his District might be able to get some fencing installed around this basin in the near future. A copy of the complaint call report was sent to Mr. Sanders at the Code Enforcement Office in Lake Elsinore, Jason Uhley a the RCFC, NPDES Section, Alex Gann and Mike Shetler at the Riverside County Executive Office, and to Mr. Rodriguez at the Riverside County Parks and Open Space District.

Complaint: On 2/27/07, a truck accident here in Temecula caused an oil spill alongside one of our roads. The fire department responded and created a small dirt berm to contain the oil. Attached are the photos. According to our NPDES spill procedures, who do we need to report this incident to? Please advise. Thanks.

Findings:

Actions: -----Original Message----- From: Uhley, Jason Sent: Wednesday, February 28, 2007 5:24 PM To: 'Aldo.Licitra@cityoftemecula.org' Cc: Garcia, Linda; Ortega, David Subject: FW: Spill Procedures Aldo, I'm cc'ing this to our monitoring/ic/id response staff for incorporation into our records, however, I also believe that you should forward this to the Regional Board as an FYI. I believe Kristin Schwall (858) 467-2345 or kschwall@waterboards.ca.gov is the right contact. Just let her know that you are reporting an oil spill per our permit requirements. The text below is the instruction I received from Jimmy regarding these issues: Jason, Please comply with the requirements of Order No. R9-2004-001, Attachment B, Section I (1)(6) by submitting reports directly to my attention. This shall include both third party and Permittee spills. Reports to OES can often take several days to reach our office. While there will be certain cases where direct reporting to the Regional Board is duplicative (by the owner of the sewer system and by the compermittee), this increases the opportunity for immediate action if one or more persons are away from their desks. In my absence, please contact Ms. Kristin Schwall (858) 467-2345. R, -Jimmy J. Smith Senior Environmental Scientist Northern Watershed Unit California Regional Water Quality Control Board, San Diego Region 9174 Sky Park Court, Suite 100 San Diego, CA 92123 (858) 467-2732 FX (858) 571-6972 http://www.waterboards.ca.gov/sandiego/ (Excerpt from my original E-mail to Jimmy) I also thought it might be prudent to ask you what your preference was for reporting. I would like to prevent duplicative effort as much as possible. Normally, when a SSO or other Hazardous Spill occurs, either the responsible agency and/or County Fire HazMat teams will generally report the spill to OES. OES is then responsible for notifying appropriate Local, State (including appropriate RWQCB) and Federal agencies regarding the incident. The owner of the Sanitary Sewer System (EMWD) also has requirements to contact RWQCB staff (Charles Chang in this case). So on incidents such as these, there are several entities that will be reporting to Regional Board staff. In addition, the District reviews OES spill reports on at least a weekly basis (mostly daily though). Any spills which may impact MS4s are then investigated (if they were not already addressed through other processes). We then document appropriate OES reports in our complaints database and provide a summary of these reports from the complaint database as part of the

0000952

District's Individual SWMP MS4 annual reports. So, any spill impacting the MS4 is documented and reported to your staff at least annually (in compliance with Attachment B, Requirement 1(l)(7), page B-4. So, 1) Do you want us to report third-party spills to you if they have already been reported to OES and OES has contacted Region 9 staff (or if the responsible agency is already coordinating with your Board)? Or can we presume that if it was a third party incident has been reported to OES (and OES indicates that they have contacted RWQCB9 staff), or the RWQCB directly, that no additional immediate reporting is required? The purpose of the OES spill reporting system is to consolidate and simplify the spill reporting process, so I would like to be able to allow that system to function as intended. 2) If we have a District (or Permittee) initiated spill or incident, are you the correct contact person? If not, who should I tell the Permittees to contact? I just want to make sure that we are communicating properly and coordinating appropriately. Please feel free to give me a call if you wish to discuss further. Regards, Jason Uhley Senior Civil Engineer NPDES Section Riverside County Flood Control District 951.955.1273 Regards, Jason

Complaint: 100 gallons of diesel fuel when a driver hit some debris in the road and ruptured both of his fuel tanks.

Findings: 3/9/07: Haz.-Mat. 1 called the Governor's Office of Emergency Services (OES) to report this incident. The OES issued a Hazardous Materials Spill Report, Control# 07-1532, concerning this spill. The OES report states that no water and no drinking water was involved and/or impacted from this incident. The OES report also states that the diesel fuel was contained and cleaned up by Ocean Blue (Contractor). The Riverside County Environmental Health Department was notified about this spill. It is unknown exactly where is Boundary Canyon Road is not only in Temecula but in Riverside County. The complaint APN in this report is a reference APN only.

Complaint: 250 gallons of chlorine solution was released at the facility.

Findings: 3/17/07, 0730 hours: A crack occurred in a PVC line during asphalt operations causing a release. MWD called the Governor's Office of Emergency Services (OES) to report this release. The OES issued a Hazardous Materials Spill Report, Control# 07-1713, concerning this incident. The OES report states that no water and no drinking water was involved and/or impacted from this release. There are no Riverside County Flood Control District facilities in the area of the complaint address that could have been impacted from this incident.

Actions: 3/17/07: The OES report states that the substance was contained in the piping trench by a contractor. Sodium Bisulfate was used to de-chlorinate the substance. The Riverside County Environmental Health Department was notified about this incident.

Complaint: Green substance flowing into Murrieta Creek from an earthen channel. The green substance is coming from a cmp that drains some comercial area. The Investigator and the Murrieta City NPDES rep are searching for the source. TB Map Page# 958 F5.

Findings: 4/3/07, 1635 hours: Kelly Winters, Haz. Mat. mgmt. Specialist with the County of Riverside, Haz. Mat. Division, called David Ortega, NPDES Section of the Riverside County Flood Control (RCFC), concerning this incident. Mr. Ortega referred Mr. Winters to call Steve Clark and/or Linda Garcia at the RCFC concerning this discharge. Mr. Winters also contacted the Governor's Office of Emergency Services (OES) to report this incident. The OES issued a Hazardous Materials Spill Report, Control# 07-2104, concerning this discharge. The OES report states that Riverside County Haz.-Mat suspects that the substance came from Southwest Traders located at the complaint address. The green liquid (Propylene Glycol) went into a storm drain that services the Southwest Traders facility (parking lot) and then flows through a drain into Temecula Creek which is directly across the street from their facility. Per Riverside County Haz.-Mat., they found Propylene Glycol in the facility in a mop bucket (as if it has been cleaned up). Southwest Traders has barrels of the substance at their facility. It is used to keep their floors warm and not freeze. It runs under the concrete through pipes. 1951 hours: The OES received a fax copy of NRC report# 831253 concerning this incident. NOTE: The waterway that was involved with this discharge is not Temecula Creek as stated in the OES report. It is Murrieta Creek and it is also on RCFC District right-of-way.

Actions: 4/3/07: The OES report also states that a spill boom was placed on the creek to prevent furthur migration of the substance. Also the OES report emphasizes that Southwest Traders is the SUSPECTED responsible party. Kelly Winters informed the Riverside County Flood Control (RCFC) District that the spill had been cleaned up by Southwest Traders and that the substance was propylene glycol. Aldo Licitra of the City of Temecula was on scene concerning this incident. 4/9/07: Mr. Licitra sent a report about this incident to the RCFC, NPDES Section; Tracking# 6493. This report states that the liquid discharged through a 24" CMP storm drain located just south of Sarah Way in the City of Temecula on the west bank of the Murrieta Creek. The call came from a rep. from the County Environmental Health Dept. who was already onsite addressing the complaint. Mr. Licitra went out to meet with this rep. (Mr. Winters). Collectively, Mr. Winters and Mr. Licitra determined that Southwest Traders, Inc. may have been involved due to discovering a liquid similar in color on their property. However, Mr. Winters and Mr. Licitra were unable to verify that the liquid was actually discharged from their site. In other words, Mr. Winters and Mr. Licitra did not find

0000960

evidence that the liquid had been released into their storm drain system. However, Mr. Winters and Mr. Licitra did direct Southwest Traders to place absorbent booms in Murrieta Creek to capture the liquid and prevent it from migrating any furthur, in addition to having them pump the liquid out of Murrieta Creek with a pump truck and disposing of it legally. Southwest Traders complied and ordered all of their personnel to stop any kind of outside washing activities, in the event that one of their various shifts were washing down the loading docks. Currently, there is no visual indication of any furthur releases of green liquid into Murrieta Creek.

Complaint: A neighbor living at the complaint address is draining a saltwater swimming pool onto the complainants property. It has killed a tree already and he is concerned that it will do further damage to his property.

Findings: 3/26/07, 1530 hours: Linda Garcia of the NPDES Section of the Riverside County Flood Control (RCFC), received this complaint call from the complainant, Mr. McElhinney. Ms. Garcia forwarded this complaint via email to David Ortega, also in the NPDES Section of the RCFC. The complainant also said that he already called Code Enforcement, who said it is a civil matter, and Building and Safety, who told him to call Flood Control. ms. Garcia told the complainant that if the flow is not leaving hi property that it is generally a civil matter.

Actions: 4/5/06: David Ortega went to the complainants address and spoke briefly with Mr. McElhinney about this matter. Mr. Ortega took a few photos of his next door neighbors property, specifically where there is a damaged PVC or plastic type of piping that runs out of the backyard wall and out along a small sloped hill. There is visual evidence that shows some white staining and "rutting" of the sloped hill that continues from the complaint address onto the Mr. McElhinney's property. Mr. Ortega spoke to a Ms. Wendy Lopez at the complaint address while on site. She said that the recent incident that prompted Mr. McElhinney to contact us was not a draining of the pool but rather some of the pool water drained from the backyard and out into the pipe that went into Mr. McElhinney's yard. Ms. Lopez said that her and her husband will be installing new pipe and re-routing this drain line so that it drains closer to the middle of their property. She also said that this will happen in a week or two at the most. She said that when the pool drains that they keep in mind not to have the pool drain onto anybody elses property and that it will not drain out into the street. Mr. Ortega gave a Stormwater/Cleanwater brochure to both Mr. McElhinney and to Ms. Lopez specifically for proper maintenance of spa, pool and fountain water.

Complaint: An unknown amount of sewage is being reported as overflowing.

Findings: 4/22/07, 1745 hours: EMWD called the Governor's Office of Emergency Services (OES) to report this overflow. The OES issued a Hazardous Materials Spill Report, Control# 07-2468, concerning this incident. The OES report states that it is unknown at the initial time of call what the cause is or how much sewage has been spilled. Crews from EMWD are en route. The Sheriffs Office is on scene concerning this sewage spill. The Riverside County Environmental Health Department was notified about this incident. 1851 hours: A situation update came in to the OES concerning this spill. Per Gary McCance, EMWD crew is on scene and cannot find any sewer overflow in the area. The nearest Riverside County Flood Control District facility is located about .1 mile to the northwest of the complaint location: "Temecula Valley Via Del Coronado Storm Drain." Complaint: 157,500 gallons of sewage overflowed due to vandalism.

Findings: 5/6/07: The Rancho California Water District (RCWD) called the Governor's Office of Emergency Services (OES) to report this incident. The OES issued a Hazardous Materials Spill Report, Control# 07-2742, concerning this overflow. The OES report states that a manhole cover in the road was removed and debris was thrown into it causing the overflow. The debris entered into a catch basin where it was cleaned up. The RCWD state in the OES report that according to a map, it doesn't appear to enter or affect any streams. The overflow ended on 5/6/07 at 0230 hours. The OES report states that the incident started on 5/5/07 at about 1600 hours. No water and no drinking water was involved and/or impacted from this spill. The Riverside County Environmental Health Department was notified about this incident. The nearest Riverside County Flood Control District facility is located about .2 mile to the north, northeast of the complaint location: "California Oaks Stage 4 Line A Cal Oaks to Sunflower".

Complaint: An unknown amount of chlorine gas was released.

Findings: 5/12/07: MWD called the Governor's Office of Emergency Services (OES) to report this incident. The OES issued a Hazardous Materials Spill Report, Control# 07-2893, concerning this release. The OES report states that a contractor onsite broke an irrigation line that if connected to a fire water loop which is connected to the plant potable water pump. They could not located the line until they excavated and located the industrial line. The line was then shut off. When the line was shut off, the chlorinator lost its vacuum for approx. 30 seconds, which subsequently triggered a pump of chlorine gas to the pressure release/vacuum release vent box thus triggering a chlorine alarm. The OES report also states that no water and no drinking water was involved and/or impacted from this incident. The gas was contained and cleaned up by the reporting party (MWD). The Riverside County Environmental Health Department was notified about this release. There are no Riverside County Flood Control District facilities in the area of the complaint address that could have been impacted from this very brief gas release.

Complaint: Ms. Griffin (Complainant) said that the neighbor's home just upstream (and uphill) from her residence is constantly "disking" their property with a tractor. This activity has been sending sediment via blowing wind and by water runoff onto her property. The property line of her residence and her neighbor's is a sloped hill that is eroding.

Findings: 5/21/07: Kyle Gallup, Planning Section of the Riverside County Flood Control (RCFC) received this complaint today from the complainant. Mr. Gallup sent this complaint to David Ortega in the NPDES Section of the RCFC. 5/22/07: Mr. Ortega called the complainant today and asked for more details concerning her complaint. Mr. Ortega noted to her that the RCFC District does not have any facilities in the area of her address that could be impacted by this sediment issue. She mentioned that she has tried to place sandbags along the property line with her neighbor to prevent erosion, but that hasn't worked. Also, she mentioned that the drainage ditches and/or culverts on her property were filling up with sediment from her neighbor's property and are now not functioning properly.

Actions: 5/22/07: Mr. Ortega called Steve Dondalski, County of Riverside, Building & Safety Department at (951) 232-7960, cell#, and left a message about this complaint along with the complainant's home phone number. Mr. Ortega also left a message at the County of Riverside, Building & Safety office in Riverside (951) 955-2020, concerning this complaint along with the complainant's home phone number. Mr. Ortega also referred Ms. Griffin to call the County of Riverside, Building & Safety office in Riverside at (951) 955-2020 concerning her complaint.

ATTACHMENT G

PROPOSED REVISIONS TO INDIVIDUAL SWMP AND ANNUAL REPORTING FORMS

5.0 MUNICIPAL FACILITIES AND ACTIVITIES

5.1 PLANNING DISTRICT FACILITIES

District projects involve the design, construction, operation and maintenance of MS4 infrastructure, including channels, storm drains, dams, levees and basins. The District has no plans to construct any non-MS4 fixed facilities (e.g. maintenance and operations centers, field offices) within the Santa Margarita Region. District MS4 facility projects do not involve land uses that generate pollutants commonly associated with Urban Runoff [there is no actual use of the land associated with significant traffic loads (vehicle usage is <<1 vehicles per day on average], residential, commercial or industrial activities). For this reason, District MS4 infrastructure is not considered to meet the New Development or Significant Redevelopment project criteria. District projects must, however, meet the requirements of DAMP Section 6 for non-Category projects, including the incorporation of site design and source control BMPs where applicable and feasible. District administered MS4 capital improvement projects must comply with the following general procedures for implementing Site Design and Source Control BMPs:

5.1.1 Incorporation of Site Design BMPs:

As indicated in Section 6.4.4 of the DAMP, non-Category (other development) projects are required to incorporate Site Design BMPs. Most Site Design BMPs are not applicable to single use projects such as flood control facilities. Examples of non-applicable Site Design BMPs include incorporating landscape buffer areas between streets and sidewalks, constructing walkways and parking lots with open-jointed paving materials, constructing streets to minimum widths, minimizing decorative use of concrete, and containing and infiltrating roof runoff.

District planning/design engineers examine the feasibility of incorporating applicable site design BMPs that minimize the impervious footprint, minimize directly connected impervious areas and conserve natural areas where applicable and feasible. This is accomplished by examining the ability of a proposed District facility to maintain natural stream courses and reduce infiltrative capacity loss caused by channelization projects with impervious lining during the facility planning design phase, as appropriate.

The District prepares community flood management plans, or Master Drainage Plans (MDPs), which identify flood control infrastructure needs for communities in Riverside County. MDPs typically provide a sub-watershed level analysis of a community's drainage infrastructure deficiencies based on ultimate development conditions described in the appropriate City/County General Plan. The MDPs consider environmental constraints on flood control infrastructure, including Multiple Species Habitat Conservation Plans and/or Special Area Management Plans ~~adopted by the County~~. Other unique environmental concerns may be considered as well. MDPs must undergo environmental review pursuant to CEQA (Public Resources Code §21000 et seq.) and the State CEQA Guidelines (Title 14 of the California Code of Regulations) prior to their adoption ~~are adopted~~ by the District's Board of Supervisors and/or appropriate City Council ~~and must undergo CEQA review~~. Documentation of aforementioned Site Design BMP consideration will be incorporated into the MDP supporting documentation.

[illegible] as appropriate, for new MDPs. During the design process, [illegible] of the review [illegible] shall be incorporated into the facility design notebooks.

On occasion, the District constructs Flood Control Infrastructure not covered by an existing MDP, or as part of an MDP that predated NPDES MS4 Permit requirements. For these projects, examination of the feasibility and applicability to maintain natural stream course and/or reduce infiltrative capacity loss caused by projects with impervious lining is considered during the facility design process. Documentation of consideration of Site Design BMPs shall be incorporated into the facility design notebooks ~~and CEQA documentation~~. Likewise, analysis of necessary site design BMPs will be included in the CEQA documents, as appropriate, for these projects.

5.1.2 Incorporation of Source Control BMPs:

Chapter 6 of the Riverside County DAMP and the WQMP require several source control BMPs to be implemented as part of project [illegible]. Most of these BMPs are specific to land uses that are not included in the District's MS4 capital improvement projects. The following source control BMPs that are identified in the WQMP may be applicable to District MS4 facilities:

- MS4 stenciling and signage
- Protection of slopes and channels

The District will ensure that these BMPs are incorporated into District projects where applicable and feasible.

5.2 District Construction Activities

Section 5.2 of the Riverside County DAMP describes how the District ensures that its construction projects are in compliance with the latest version of the General Permit-Construction and the requirements of the Third-term MS4 Permit. District Design staff accomplishes this by incorporating standard boilerplate language regarding Third-term MS4 Permit requirements into the Special Provisions of the specifications and contract documents for the construction of District facilities. This boilerplate language is maintained by the Design and Construction Division.

SWPPPs and Facility Pollution Prevention Plans required for District administered capital improvement projects are reviewed by the NPDES Section. The NPDES Section ensures the SWPPPs are prepared in conformance with the appropriate General Permit-Construction and that SWPPPs incorporate the minimum BMPs identified in the Riverside County DAMP Section 6.4.7.1 and applicable erosion and sediment control BMPs in the Riverside County DAMP Table 7-1. In addition, the District's boilerplate Standard Specifications have been revised to specifically address the minimum BMPs requirements.

GENERAL NOTES (RCFC & WCD):

1. THE CONTRACTOR SHALL CONSTRUCT THE FLOOD CONTROL IMPROVEMENTS SHOWN ON THE DRAWINGS IN CONFORMANCE WITH THE REQUIREMENTS OF THE RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT'S SPECIAL MOU STANDARD DATED SEPTEMBER, 1984, AND DESIGN MANUAL STANDARD DRAWINGS DATED MAY, 1971.
2. THE ENCROACHMENT PERMIT IS REQUIRED FROM RIVERSIDE COUNTY FLOOD CONTROL, THEN CONTACT ED LOTZ AT (909)955-1266. AFTER THE PERMIT IS ISSUED, THE DISTRICT MUST BE NOTIFIED ONE WEEK PRIOR TO CONSTRUCTION.
3. CONSTRUCTION INSPECTION WILL BE PERFORMED BY RIVERSIDE COUNTY FLOOD CONTROL. CONTACT CLYDE JOHNSON AT (909) 955-1288. THE DISTRICT MUST BE NOTIFIED TWO WEEKS PRIOR TO CONSTRUCTION.
4. ALL STATIONING REFERS TO CENTERLINE OF CONSTRUCTION UNLESS OTHERWISE NOTED.
5. STATIONING FOR LATERALS AND CONNECTOR PIPE REFER TO THE CENTERLINE-CENTERLINE INTERSECTION STATION.
6. FORTY-EIGHT HOURS BEFORE EXCAVATION, CALL UNDERGROUND SERVICE ALERT 1-800-227-2600
7. ALL ELEVATIONS SHOWN ARE IN FEET AND DECIMALS THEREOF BASED ON U.S.C. & G.S. DATUM.
8. ALL CROSS-SECTIONS ARE TAKEN LOOKING DOWNSTREAM.
9. ELEVATIONS OF UTILITIES ARE APPROXIMATE UNLESS OTHERWISE NOTED.
10. OPENINGS RESULTING FROM CUTTING OR PARTIAL REMOVAL OF EXISTING CULVERTS, PIPES OR SIMILAR STRUCTURES TO BE ABANDONED SHALL BE SEALED WITH 6" OF CLASS "B" CONCRETE.
11. BEDDING PIPE WITH LESS THAN TWO FEET OF COVER SHALL CONFORM TO LOS ANGELES COUNTY FLOOD CONTROL DISTRICT STANDARD DRAWINGS 2-D213.3 AND D-D177 FOR CONCRETE BACKFILL IN TRENCHES. ALL OTHER PIPE SHALL CONFORM TO RCFC & WCD STD. M815.
12. B1 INDICATES SOIL BORING LOCATIONS BASED ON SOILS REPORT DATED JANUARY 10, 1996 BY GEOTECHNICAL & ENVIRONMENTAL ENGINEERS. LOCATIONS SHOWN ARE APPROXIMATE.
13. "V" IS THE DEPTH OF INLET OF CATCH BASIN MEASURED FROM THE TOP OF CURB TO INVERT OF CONNECTOR PIPE.
14. CATCH BASINS SHALL BE LOCATED SO THAT LOCAL DEPRESSION SHALL BEGIN AT EXISTING CURB RETURN JOINT, UNLESS OTHERWISE SPECIFIED.
15. ALL CURBS, GUTTER, SIDEWALKS,DRIVEWAYS AND OTHER EXISTING IMPROVEMENTS TO BE RECONSTRUCTED IN KIND AND AT THE SAME ELEVATION AND LOCATION AS THE EXISTING IMPROVEMENTS UNLESS OTHERWISE NOTED.
16. PIPE CONNECTED TO THE MAINLINE PIPE SHALL CONFORM TO JUNCTION STUCTURE NO. 4 (JS 229) UNLESS OTHERWISE NOTED.

ENGINEER'S NOTE:

CONTRACTOR AGREES THAT HE SHALL ASSUME SOLE AND COMPLETE RESPONSIBILITY FOR JOB SITE CONDITIONS DURING THE COURSE OF CONSTRUCTION OF THIS PROJECT, INCLUDING SAFETY OF ALL PERSONS AND PROPERTY; THAT THIS REQUIREMENT SHALL APPLY CONTINUOUSLY AND NOT BE LIMITED TO NORMAL WORKING HOURS; AND THAT THE CONTRACTOR SHALL DEFEND, INDEMNIFY AND HOLD THE CITY AND ENGINEER HARMLESS FROM ANY AND ALL LIABILITY, REAL OR ALLEGED IN CONNECTION WITH THE PERFORMANCE OF WORK ON THIS PROJECT, EXCEPT FOR LIABILITY ARISING FROM THE SOLE NEGLIGENCE OF THE OWNER OR THE ENGINEER.

THE EXISTENCE AND LOCATION OF ANY UNDERGROUND UTILITIES OR STRUCTURES SHOWN ON THESE PLANS ARE OBTAINED BY A DILIGENT SEARCH OF ALL AVAILABLE RECORDS. THE CONTRACTOR IS REQUIRED TO TAKE ALL PRECAUTIONARY MEASURES TO PROTECT THE UTILITIES SHOWN AND ANY OTHER LINES OR STRUCTURES SHOWN OR NOT SHOWN ON THESE PLANS, AND IS RESPONSIBLE FOR THE PROTECTION OF, AND ANY DAMAGE TO THESE LINES OR STRUCTURES.

THE PRIVATE ENGINEER SIGNING THESE PLANS IS RESPONSIBLE FOR ASSURING THE ACCURACY OF DESIGN AND ACCEPTABILITY OF THE WORK HEREON. IN THE EVENT OF DISCREPANCIES ARISING AFTER CITY APPROVAL OR DURING CONSTRUCTION, THE PRIVATE ENGINEER SHALL BE RESPONSIBLE FOR DETERMINING AN ACCEPTABLE SOLUTION AND REVISING THE PLANS FOR APPROVAL BY THE CITY.

RIVERSIDE COUNTY FLOOD CONTROL
AND
WATER CONSERVATION DISTRICT

0000977

GENERAL NOTES

1. THE CONTRACTOR SHALL CONSTRUCT THE FLOOD CONTROL IMPROVEMENTS SHOWN ON THE DRAWINGS IN CONFORMANCE WITH THE REQUIREMENTS OF THE RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT'S SPECIFICATIONS DATED SEPTEMBER 1984, AND DESIGN MANUAL STANDARD DRAWINGS DATED MAY 1971.
2. IF AN ENCROACHMENT PERMIT IS REQUIRED FROM THE RIVERSIDE COUNTY FLOOD CONTROL, CONTACT ED LOTZ AT (909) 955-1266. AFTER THE PERMIT IS ISSUED THE DISTRICT MUST BE NOTIFIED 20 DAYS PRIOR TO CONSTRUCTION.
3. CONSTRUCTION INSPECTION WILL BE PERFORMED BY RIVERSIDE COUNTY FLOOD CONTROL. CONTACT DALE ANDERSON AT (909) 955-1288. THE DISTRICT MUST BE NOTIFIED TWO WEEKS PRIOR TO CONSTRUCTION.
4. ALL STATIONS REFER TO CENTERLINE OF CONSTRUCTION UNLESS OTHERWISE NOTED.
5. STATIONING FOR LATERALS AND CONNECTOR PIPE REFER TO THE CENTER LINE CENTERLINE INTERSECTION STATION.
6. FORTY-EIGHT HOURS BEFORE EXCAVATION, CALL UNDERGROUND SERVICE ALERT 1-800-422-4133
7. ALL ELEVATIONS SHOWN ARE IN FEET AND DECIMALS THEREOF BASED ON U.S.C. & G.S. DATUM.
8. ALL CROSS-SECTIONS ARE TAKEN LOOKING DOWNSTREAM.
9. ELEVATIONS OF UTILITIES ARE APPROXIMATE UNLESS OTHERWISE NOTED.
10. OPENINGS RESULTING FROM CUTTING OR PARTIAL REMOVAL OF EXISTING CULVERTS, PIPES OR SIMILAR STRUCTURES TO BE ABANDONED SHALL BE SEALED WITH 6" OF CLASS "B" CONCRETE.
11. PIPE CONNECTED TO THE MAINLINE PIPE SHALL CONFORM TO THE JUNCTION STRUCTURE NO. 4 (JS-229) UNLESS OTHERWISE NOTED.
12. BEDDING PIPE SHALL CONFORM TO RCFC&WCD STD. MB15, EXCEPT FOR COVER < 2 FEET. FOR COVER < 2 FEET, CONCRETE SLURRY (2000 PSI - 2 SACK) SHALL BE USED. THE ENTIRE TRENCH SHALL BE SLURRY EXTENDING 4 INCHES MINIMUM AND 12 INCHES MAXIMUM ABOVE THE TOP OF THE PIPE.
13. "V" IS THE DEPTH OF INLET OF CATCH BASINS MEASURED FROM THE TOP OF CURB TO INVERT OF CONNECTOR PIPE.
14. CATCH BASINS SHALL BE LOCATED SO THAT LOCAL DEPRESSION SHALL BEGIN AT EXISTING CURB RETURN JOINT, UNLESS OTHERWISE SPECIFIED.
15. ALL CURBS, GUTTERS, SIDEWALKS, DRIVEWAYS AND OTHER EXISTING IMPROVEMENTS TO BE RECONSTRUCTED IN KIND AND AT THE SAME ELEVATION AND LOCATION AS THE EXISTING IMPROVEMENTS UNLESS OTHERWISE NOTED.
16. LOCATIONS OF PUBLIC UTILITIES SHOWN HAVE BEEN DETERMINED FROM AVAILABLE INFORMATION. HOWEVER, IT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR TO DETERMINE THE TRUE LOCATION OF ANY EXISTING UTILITIES AND TO EXERCISE PROPER PRECAUTIONS TO AVOID INJURY AND DAMAGE THERETO.
17. A SOILS INVESTIGATION DATED OCTOBER 25, 2000, PREPARED BY GEO TEK, INC. SHALL BE INCLUDED AS A PART OF THESE PLANS. ALL WORK SHALL CONFORM TO RECOMMENDATIONS AS OUTLINED IN SAID REPORT.
18. B-1 INDICATES SOIL BORING LOCATIONS BASED ON THE SOILS REPORT PREPARED BY GEO TEK, INC. DATED OCT. 5, 2000. LOCATIONS SHOWN ARE APPROXIMATE.

NOTIFICATIONS

THE CONTRACTOR SHALL NOTIFY THE FOLLOWING UTILITIES OR AGENCIES 48 HOURS PRIOR TO STARTING CONSTRUCTION OR EXCAVATION:

RIVERSIDE COUNTY FLOOD CONTROL & WATER CONSERVATION DISTRICT	(909) 955-1200
RIVERSIDE COUNTY TRANSPORTATION DEPARTMENT	(909) 955-6740

NOTICE TO CONTRACTOR

THE LOCATIONS OF EXISTING UNDERGROUND UTILITIES ARE SHOWN IN AN APPROXIMATE WAY ONLY AND HAVE NOT BEEN INDEPENDENTLY VERIFIED BY THE OWNER OR ITS REPRESENTATIVE. THE CONTRACTOR SHALL DETERMINE THE EXACT LOCATION OF ALL EXISTING UTILITIES BEFORE COMMENCING WORK, AND AGREES TO BE FULLY RESPONSIBLE FOR ANY AND ALL DAMAGES WHICH MIGHT BE OCCASIONED BY THE CONTRACTOR'S FAILURE TO EXACTLY LOCATE AND PRESERVE ANY AND ALL UNDERGROUND UTILITIES.

IT IS THE CONTRACTORS RESPONSIBILITY TO CONTACT UNDERGROUND SERVICE ALERT (PHONE: 1-800-422-4133) 48 HOURS IN ADVANCE OF ANY EXCAVATION FOR THE MARK-OUT OF THE LOCATION OF UTILITIES AND NOTIFICATION OF COMMENCEMENT OF WORK.

CONTRACTOR WILL MAKE EXPLORATION EXCAVATIONS AND LOCATE EXISTING UNDERGROUND FACILITIES SUFFICIENTLY AHEAD OF CONSTRUCTION TO PERMIT REVISIONS TO PLANS IF REVISIONS ARE NECESSARY. NOTIFY THE ENGINEER OF WORK IF ANY DISCREPANCIES IN UTILITY LINE LOCATIONS ARE FOUND.

LOCATION AND ELEVATION OF IMPROVEMENTS TO BE MET BY WORK TO BE DONE SHALL BE CONFIRMED BY FIELD MEASUREMENTS PRIOR TO CONSTRUCTION OF NEW WORK.

CONTRACTOR IS REQUIRED TO TAKE PRECAUTIONARY MEASURES TO PROTECT THE UTILITY LINES SHOWN HEREON AND ANY OTHER EXISTING LINES NOT OF RECORD OR NOT SHOWN ON THESE PLANS.

CONTRACTOR AGREES THAT HE SHALL ASSUME SOLE ANY COMPLETE RESPONSIBILITY FOR JOB SITE CONDITIONS DURING THE COURSE OF CONSTRUCTION OF THIS PROJECT, INCLUDING SAFETY OF ALL PERSONS AND PROPERTY; THAT THIS REQUIREMENT SHALL APPLY CONTINUOUSLY AND NOT BE LIMITED TO NORMAL WORKING HOURS; AND THAT THE CONTRACTOR SHALL DEFEND, INDEMNIFY AND HOLD THE OWNER AND THE ENGINEER HARMLESS FROM ANY AND ALL LIABILITY, REAL OR ALLEGED, IN CONNECTION WITH THE PERFORMANCE OF WORK ON THIS PROJECT, EXCEPTING FOR LIABILITY ARISING FROM THE SOLE NEGLIGENCE OF THE OWNER OR THE ENGINEER.

DRAWING NO. 7-352
SHEET NO. 1 OF 5

RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT
LUSHING PROPERTY- TRACT NO. 29017

0000978

THIS DESIGN REFLECTS THE CRITERIA WITHIN THE FOLLOWING TTM 29017 CONDITIONS:
10.FLOOD RI. 1 "MAP 10 YR CURB - 100 YR ROW"
10.FLOOD RI. 2 "MAP 100 YR SUMP OUTLET"

GENERAL NOTES

1. THE CONTRACTOR SHALL CONSTRUCT THE FLOOD CONTROL IMPROVEMENTS SHOWN ON THE DRAWINGS IN CONFORMANCE WITH THE REQUIREMENTS OF THE RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT'S SPECIFICATIONS DATED SEPTEMBER 1984, AND DESIGN MANUAL STANDARD DRAWINGS DATED MAY 1971.
2. IF AN ENCROACHMENT PERMIT IS REQUIRED FROM RIVERSIDE COUNTY FLOOD CONTROL, THEN CONTACT ED LOTZ AT (909) 955-1266. AFTER THE PERMIT IS ISSUED THE DISTRICT MUST BE NOTIFIED ONE WEEK PRIOR TO CONSTRUCTION.
3. CONSTRUCTION INSPECTION WILL BE PERFORMED BY RIVERSIDE COUNTY FLOOD CONTROL. CONTACT DALE ANDERSON AT (909) 955-1288. THE DISTRICT MUST BE NOTIFIED TWO WEEKS PRIOR TO CONSTRUCTION.
4. ALL STATIONS REFERS TO CENTERLINE OF CONSTRUCTION UNLESS OTHERWISE NOTED.
5. STATIONING FOR LATERALS AND CONNECTOR PIPE REFER TO THE CENTER LINE CENTERLINE INTERSECTION STATION.
6. FORTY-EIGHT HOURS BEFORE EXCAVATION, CALL UNDERGROUND SERVICE ALERT 1-800-227-2600
7. ALL ELEVATIONS SHOWN ARE IN FEET AND DECIMALS THEREOF BASED ON U.S.C. & G.S. DATUM.
8. ELEVATIONS OF UTILITIES ARE APPROXIMATE UNLESS OTHERWISE NOTED.
9. OPENINGS RESULTING FROM CUTTING OR PARTIAL REMOVAL OF EXISTING CULVERTS, PIPES OR SIMILAR STRUCTURES TO BE ABANDONED SHALL BE SEALED WITH 6" OF CLASS "B" CONCRETE.
10. BEDDING PIPE WITH LESS THAN TWO FEET OF COVER SHALL CONFORM TO LOS ANGELES COUNTY FLOOD CONTROL DISTRICT STANDARD DRAWINGS 2-D213.3. AND 2-0177 FOR CONCRETE BACKFILL IN TRENCHES. ALL OTHER PIPE SHALL CONFORM TO RCFC & WCD STD. DWG. M815.
11. ALL CROSS-SECTIONS ARE TAKEN LOOKING DOWNSTREAM.
12. ALL CURBS, GUTTERS, SIDEWALKS, DRIVEWAYS AND OTHER EXISTING IMPROVEMENTS TO BE RECONSTRUCTED IN KIND AND AT THE SAME ELEVATION AND LOCATION AS THE EXISTING IMPROVEMENTS UNLESS OTHERWISE NOTED.
13. "V" IS THE DEPTH OF INLET OF CATCH BASINS MEASURED FROM THE TOP OF CURB TO INVERT OF CONNECTOR PIPE.
14. CATCH BASINS SHALL BE LOCATED SO THAT LOCAL DEPRESSION SHALL BEGIN AT EXISTING CURB RETURN JOINT, UNLESS OTHERWISE SPECIFIED.
15. ALL CURBS, GUTTERS, SIDEWALKS, DRIVEWAYS AND OTHER EXISTING IMPROVEMENTS TO BE RECONSTRUCTED IN KIND AND AT THE SAME ELEVATION AND LOCATION AS THE EXISTING IMPROVEMENTS UNLESS OTHERWISE NOTED.

ENGINEERS NOTE:

THE PRIVATE ENGINEER SIGNING THESE PLANS IS RESPONSIBLE FOR ASSURING THE ACCURACY OF DESIGN AND ACCEPTABILITY OF THE WORK HEREON. IN THE EVENT OF DISCREPANCIES ARISING AFTER COUNTY APPROVAL OR DURING CONSTRUCTION, THE PRIVATE ENGINEER SHALL BE RESPONSIBLE FOR DETERMINING AN ACCEPTABLE SOLUTION AND REVISING THE PLANS FOR APPROVAL BY THE COUNTY.

NOTICE TO THE CONTRACTOR

THE EXISTENCE AND LOCATION OF ANY UNDERGROUND UTILITY PIPES OR STRUCTURES SHOWN ON THESE PLANS ARE OBTAINED BY A SEARCH OF THE AVAILABLE RECORDS. APPROVAL OF THIS PLAN BY THE CITY OF TEMECULA, RIVERSIDE COUNTY FLOOD CONTROL DISTRICT, EASTERN MUNICIPAL WATER DISTRICT OR RANCHO CALIFORNIA WATER DISTRICT DOES NOT CONSTITUTE A REPRESENTATION AS TO THE ACCURACY OR COMPLETENESS OR THE EXISTENCE OR NON-EXISTENCE OF ANY UNDERGROUND UTILITY PIPE OR STRUCTURE WITHIN THE LIMITS OF THIS PROJECT. THE CONTRACTOR IS REQUIRED TO TAKE ALL DUE PRECAUTIONARY MEANS TO PROTECT THE UTILITY LINES NOT OF RECORD OR SHOWN ON THIS PLAN.

RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT

WARM SPRINGS VALLEY: POURROY ROAD STORM DRAIN STAGE 1

0000979

GENERAL NOTES

THE CONTRACTOR SHALL CONSTRUCT THE FLOOD CONTROL IMPROVEMENTS SHOWN ON THE DRAWINGS IN CONFORMANCE WITH THE REQUIREMENTS OF THE RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONVERSATION DISTRICT'S MEMORANDUM OF UNDERSTANDING STANDARD SPECIFICATIONS DATED SEPTEMBER 1984, AND DESIGN MANUAL STANDARD DRAWINGS DATED MAY 1971.

IF AN ENCROACHMENT PERMIT IS REQUIRED FROM RIVERSIDE COUNTY FLOOD CONTROL, THEN CONTACT ED LOTZ AT 909-955-1266. AFTER THE PERMIT IS ISSUED THE DISTRICT MUST BE NOTIFIED ONE WEEK PRIOR TO CONSTRUCTION.

CONSTRUCTION INSPECTION WILL BE PERFORMED BY RIVERSIDE COUNTY FLOOD CONTROL. CONTACT DALE ANDERSON AT 909-955-1288. THE DISTRICT MUST BE NOTIFIED TWENTY DAYS PRIOR TO CONSTRUCTION.

ALL STATIONING REFERS TO CENTERLINE OF CONSTRUCTION UNLESS OTHERWISE NOTED.

STATIONING FOR LATERALS AND CONNECTOR PIPE REFER TO THE CENTERLINE-CENTERLINE INTERSECTION STATION.

FORTY-EIGHT HOURS BEFORE EXCAVATION, CALL UNDERGROUND SERVICE ALERT 1-800-227-2600.

ALL ELEVATIONS SHOWN ARE IN FEET AND DECIMALS THEREOF BASED ON U.S.C. & G.S. DATUM.

ALL CROSS SECTIONS ARE TAKEN LOOKING DOWNSTREAM.

ELEVATIONS AND LOCATIONS OF UTILITIES SHOWN ARE APPROXIMATE UNLESS OTHERWISE NOTED. ALL UTILITIES ARE TO BE PROTECTED IN PLACE UNLESS OTHERWISE NOTED.

OPENINGS RESULTING FROM THE CUTTING OR PARTIAL REMOVAL OF EXISTING CULVERTS, PIPES OR SIMILAR STRUCTURES TO BE ABANDONED SHALL BE SEALED WITH 6" OF CLASS "B" CONCRETE.

PIPE CONNECTED TO THE MAINLINE PIPE SHALL CONFORM TO JUNCTION STRUCTURE NO. 4 (JS 229) UNLESS OTHERWISE NOTED.

BEDDING PIPE SHALL CONFORM TO RFC&WCD STD. M 815, EXCEPT FOR COVER LESS THAN 2 FEET. FOR COVER LESS THAN 2 FEET, CONCRETE SLURRY (2,000 PSI - 2 SACK) SHALL BE USED. THE ENTIRE TRENCH SHALL BE SLURRY EXTENDING 4" MINIMUM AND 12" MAXIMUM ABOVE THE TOP OF PIPE.

"V" IS THE DEPTH OF INLET OF CATCH BASINS MEASURED FROM THE TOP OF THE CURB TO INVERT OF CONNECTOR PIPE.

CATCH BASINS SHALL BE LOCATED SO THAT LOCAL DEPRESSION SHALL BEGIN AT EXISTING CURB RETURN JOINT, UNLESS OTHERWISE SPECIFIED.

ALL CURBS, GUTTERS, SIDEWALKS, DRIVEWAYS AND OTHER EXISTING IMPROVEMENTS TO BE REMOVED IN KIND AND AT THE SAME ELEVATION AND LOCATION AS THE EXISTING IMPROVEMENTS UNLESS OTHERWISE NOTED.

HYDRAULIC GRADE LINE SHOWN IN PROFILES ARE FOR 100 YEAR FREQUENCY FLOWS, UNLESS OTHERWISE NOTED.

THE CONCRETE COVER ON THE INSIDE OF ALL REINFORCED CONCRETE PIPES MUST BE INCREASED TO PROVIDE A MINIMUM OF 1-1/2" OVER THE REINFORCING WHEN THE DESIGN VELOCITIES EXCEED 20 FEET PER SECOND. THE CONCRETE DESIGN STRENGTH IN THESE REACHES SHALL BE f'c=5,000 PSI FOR VELOCITIES EXCEEDING 20 FEET PER SECOND, AND f'c=6,000 PSI FOR VELOCITIES EXCEEDING 30 FEET PER SECOND.

THE CONTRACTOR SHALL COMPLY WITH THE STATE AND LOCAL SAFETY CODES DURING THE PROGRESS OF WORK.

THE DEVELOPER SHALL MAINTAIN ADJACENT STREETS IN A NEAT, SAFE, CLEAN AND SANITORY CONDITION AT ALL TIMES AND TO THE SATISFACTION OF THE COUNTY'S OR DISTRICT'S INSPECTOR. THE ADJACENT STREETS SHALL BE KEPT CLEAN OF DEBRIS, WITH DUST AND OTHER NUISANCE BEING CONTROLLED AT ALL TIMES. THE DEVELOPER SHALL BE RESPONSIBLE FOR ANY CLEAN-UP ON SHALL BE BY DRY SWEEPING OF ALL PAVED AREAS.

THE CONTRACTOR AGREES THAT HE SHALL ASSUME SOLE AND COMPLETE RESPONSIBILITY FOR THE JOB SITE CONDITIONS DURING THE COURSE OF CONSTRUCTION OF THIS PROJECT. INCLUDING SAFETY OF ALL PERSONS AND PROPERTY, THAT THIS REQUIREMENT SHALL APPLY CONTINUOUSLY AND NOT TO BE LIMITED TO NORMAL WORKING HOURS; AND THAT THE CONTRACTOR SHALL DEFEND, INDEMNIFY AND HOLD THE OWNER, R.C.F.C.D., COUNTY ROAD DEPARTMENT, AND THE DEVELOPER'S ENGINEER HARMLESS FROM ANY AND ALL LIABILITY, REAL OR ALLEGED, IN CONNECTION WITH THE PERFORMANCE OF WORK ON THIS PROJECT, EXCEPTING FOR LIABILITY ARISING FROM THE SOLE NEGLIGENCE OF THE OWNERS, OR THE DEVELOPERS ENGINEER.

ADJUST ALL STORM DRAIN, SEWER MANHOLES, AND WATER VALVES TO GRADE.

ALL PIPE LENGTHS AREA HORIZONTAL PROJECTIONS (:NOT TRUE LENGTHS OF PIPES) AND ARE THE BASIS OF THE ESTIMATES OF QUANTITIES. THE CONTRACTOR SHALL DETERMINE THE TRUE QUANTITY OF PIPE REQUIRED FOR THIS PROJECT PRIOR TO PLACING THE ORDER.

ALL ELEVATIONS SHOWN ARE TO THE INVERT OF PIPE, EXCEPT WHERE OTHERWISE NOTED.

AT THE DISCRETION OF THE ENGINEER, THE CONTRACTOR MAY BE REQUIRED TO VERIFY BY POTHOLING THE LOCATION OF POTENTIALLY AFFECTED UTILITIES.

CONTRACTOR SHALL DISPOSE OF ALL EXCESS EXCAVATED MATERIAL AT MANDATORY DISPOSAL SITE. MUST BE NOTIFIED ONE WEEK PRIOR TO CONSTRUCTION.

ALL BACKFILL AND BEDDING AROUND STRUCTURES AND PIPES SHALL BE COMPACTED TO NOT LESS THAN 90 PERCENT RELATIVE COMPACTION EXCEPT WHERE SUCH MATERIAL IS PLACED UNDER EXISTING PAVED ROADWAYS. THE TOP 3 FEET MEASURED FROM THE FINISHED PAVING, SHALL BE COMPACTED TO 95 PERCENT REALATIVE COMPACTION.

ADDITIONAL NOTES TO CONTRACTOR

1. CONTRACTOR AGREES THAT HE SHALL ASSUME SOLE AND COMPLETE RESPONSIBILITY FOR JOB SITE CONDITIONS DURING THE COURSE OF CONSTRUCTION OF THIS PROJECT, INCLUDING SAFETY OF ALL PERSONS AND PROPERTY; THAT THIS REQUIREMENT SHALL APPLY CONTINUOUSLY AND NOT BE LIMITED TO NORMAL WORKING HOURS; AND THAT THE CONTRACTOR SHALL DEFEND, INDEMNIFY AND HOLD THE OWNER AND THE ENGINEER HARMLESS FROM ANY AND ALL LIABILITY, REAL OR ALLEGED, IN CONNECTION WITH THE PERFORMANCE OF WORK ON THIS PROJECT, EXCEPTING FOR LIABILITY ARISING FROM THE SOLE NEGLIGENCE OF THE OWNER OR THE ENGINEER.
2. THE EXISTENCE AND LOCATION OF ANY UNDERGROUND UTILITIES OR STRUCTURES SHOWN ON THESE PLANS ARE OBTAINED BY A SEARCH OF AVAILABLE RECORDS TO THE BEST OF OUR KNOWLEDGE. THERE ARE NO EXISTING UTILITIES EXCEPT THOSE SHOWN ON THESE PLANS. THE CONTRACTOR IS REQUIRED TO TAKE ALL PRECAUTIONARY MEASURES TO PROTECT THE UTILITIES SHOWN, AND ANY OTHER UTILITIES SHOWN, AND ANY OTHER LINES OR STRUCTURES NOT SHOWN ON THESE PLANS AND IS RESPONSIBLE FOR THE PROTECTION OF OR ANY DAMAGE TO THESE LINES OR STRUCTURES.
3. ALL RETAINING WALLS SHOWN ON THESE PLANS ARE SHOWN FOR REFERENCE ONLY AND ARE TO BE CONSTRUCTED PER SEPARATE PERMIT.
4. CONTRACTOR SHALL VERIFY ALL CONDITIONS AND DIMENSIONS AND SHALL REPORT ALL DISCREPENCIES TO THE ENGINEER PRIOR TO COMMENCEMENT OF WORK.

PRIVATE ENGINEER'S NOTICE TO CONTRACTORS:

ALL CONTRACTORS AND SUB-CONTRACTORS PERFORMING WORK SHOWN ON OR RELATED TO THESE PLANS SHALL CONDUCT THEIR OPERATIONS SO THAT ALL EMPLOYEES ARE PROVIDED A SAFE PLACE TO WORK AND THE PUBLIC IS PROTECTED. ALL CONTRACTORS AND SUB-CONTRACTORS SHALL COMPLY WITH THE "OCCUPATIONAL SAFETY AND HEALTH REGULATIONS" OF THE U.S. DEPARTMENT OF LABOR AND THE STATE OF CALIFORNIA DEPARTMENT OF INDUSTRIAL RELATIONS "CONSTRUCTION SAFETY ORDERS." THE CIVIL ENGINEER SHALL NOT BE RESPONSIBLE IN ANY WAY FOR THE CONTRACTORS AND SUB-CONTRACTORS COMPLIANCE WITH SAID REGULATIONS AND ORDERS.

CONTRACTOR FURTHER AGREES THAT HE SHALL ASSUME SOLE AND COMPLETE RESPONSIBILITY FOR JOB-SITE CONDITIONS DURING THE COURSE OF CONSTRUCTION OF THIS PROJECT, INCLUDING SAFETY OF ALL PERSONS AND PROPERTY, THAT THIS REQUIREMENT SHALL APPLY CONTINUOUSLY AND NOT BE LIMITED TO NORMAL WORKING HOURS, AND THAT THE CONTRACTOR SHALL DEFEND, INDEMNIFY AND HOLD THE OWNER AND THE CIVIL ENGINEER HARMLESS FROM ANY AND ALL LIABILITY, REAL OR ALLEGED, IN CONNECTION WITH THE PERFORMANCE OF WORK ON THIS PROJECT, EXCEPTING FOR LIABILITY ARISING FROM THE SOLE NEGLIGENCE OF THE OWNER OR ENGINEER.

THE EXISTENCE AND APPROXIMATE LOCATIONS OF ANY UNDERGROUND UTILITIES OR STRUCTURES SHOWN ON THESE PLANS ARE OBTAINED BY A SEARCH OF THE AVAILABLE RECORDS. THE CIVIL ENGINEER ASSUMES NO LIABILITY AS TO THE EXACT LOCATION OF SAID LINES NOR FOR UTILITY OR IRRIGATION LINES WHOSE LOCATIONS ARE NOT SHOWN. THE CONTRACTOR SHALL BE RESPONSIBLE FOR NOTIFYING ALL UTILITY AND IRRIGATION COMPANIES PRIOR TO WORK OR EXCAVATION TO DETERMINE THE EXACT LOCATIONS OF ALL LINES AFFECTING THIS WORK, WHETHER OR NOT SHOWN HEREON, AND FOR ANY DAMAGE OR PROTECTION TO THESE LINES.

NOTICE TO CONTRACTOR:
NOTIFY ED ALVES, OPERATIONS SERVICES BRANCH, M.W.D., (213) 250 - 6432, AT LEAST TWO WORKING DAYS PRIOR TO DOING ANY WORK WITHIN THE M.W.D. EASEMENT OR WITHIN THE VICINITY OF THE M.W.D. PIPELINES NO. 1 AND NO. 2.

THE CONTRACTOR SHALL NOTIFY THE RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT IN WRITING A MINIMUM OF TWO WEEKS BEFORE BEGINNING CONSTRUCTION, AND SHALL NOT BEGIN CONSTRUCTION BEFORE OBTAINING AUTHORIZATION TO PROCEED.

ALL SHORING PLANS MUST BE SUBMITTED TO THE DISTRICT FOR APPROVAL TWO WEEKS PRIOR TO ANY WALL REMOVAL OF THE EXISTING TRIPLE BOX CULVERT IN MARGARITA ROAD.

SIGNATURE IS FOR STRUCTURAL DESIGN OF 10'x5' R.C.B. AND TRANSITION STRUCTURE TO 8'x6' R.C.B. & JUNCTION STRUCTURE TO EXISTING TRIPLE 12'x5' R.C.B.

WORK TO BE DONE

THESE IMPROVEMENTS CONSIST OF THE FOLLOWING WORK TO BE DONE ACCORDING TO THESE PLANS, THE CURRENT RIVERSIDE COUNTY FLOOD CONTROL STANDARDS AND SPECIFICATIONS, AND THE LATEST EDITION OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORK CONSTRUCTION ("GREEN BOOK").

NOTIFICATION

1. THE CONTRACTOR SHALL NOTIFY CITY OF TEMECULA DEPARTMENT OF PUBLIC WORKS, (909) 649-6411, AT LEAST 48 HOURS IN ADVANCE OF STARTING CONSTRUCTION.
2. THE CONTRACTOR SHALL NOTIFY MS HENRIETTE HOANG AT METROPOLITAN WATER DISTRICT'S OPERATIONS MAINTENANCE BRANCH, AT (213) 217-7820 AT LEAST TWO WORKING DAYS (MON THRU THURS) PRIOR TO ANY WORK IN THE VICINITY OF THEIR FACILITIES.

PRIVATE ENGINEER'S NOTE TO CONTRACTOR

ALL CONTRACTORS AND SUBCONTRACTORS PERFORMING WORK SHOWN ON OR RELATED TO THESE PLANS SHALL CONDUCT THEIR OPERATIONS SO THAT ALL EMPLOYEES ARE PROVIDED A SAFE PLACE TO WORK AND THE PUBLIC IS PROTECTED. ALL CONTRACTORS AND SUBCONTRACTORS SHALL COMPLY WITH THE OCCUPATIONAL SAFETY AND HEALTH REGULATION OF THE U.S. DEPARTMENT OF LABOR AND THE STATE OF CALIFORNIA DEPARTMENT OF INDUSTRIAL RELATIONS CONSTRUCTION SAFETY ORDERS. THE CIVIL ENGINEER SHALL NOT BE RESPONSIBLE IN ANY WAY FOR THE CONTRACTORS AND SUBCONTRACTORS COMPLIANCE WITH SAID REGULATIONS AND ORDERS.

CONTRACTOR FURTHER AGREES THAT HE SHALL ASSUME SOLE AND COMPLETE RESPONSIBILITY FOR JOB-SITE CONDITIONS DURING THE COURSE OF CONSTRUCTION OF THIS PROJECT, INCLUDING SAFETY OF ALL PERSONS AND PROPERTY, THAT THIS REQUIREMENT SHALL APPLY CONTINUOUSLY AND NOT BE LIMITED TO NORMAL WORKING HOURS, AND THAT THE CONTRACTOR SHALL DEFEND, INDEMNIFY AND HOLD THE OWNER AND CIVIL ENGINEER HARMLESS FROM ANY AND ALL LIABILITY, REAL OR ALLEGED, IN CONNECTION WITH THE PERFORMANCE OF WORK ON THIS PROJECT, EXCEPTION FOR LIABILITY RISING FROM THE SOLE NEGLIGENCE OF THE OWNER OR ENGINEER.

THE EXISTENCE AND APPROXIMATE LOCATIONS OF ANY UNDERGROUND UTILITIES OR STRUCTURES SHOWN ON THESE PLANS ARE OBTAINED BY A SEARCH OF THE AVAILABLE RECORDS. THE CIVIL ENGINEER ASSUMES NO LIABILITY AS TO THE EXACT LOCATION OF SAID LINES NOR FOR UTILITY OR IRRIGATION LINES WHOSE LOCATIONS ARE NOT SHOWN. THE CONTRACTOR SHALL BE RESPONSIBLE FOR NOTIFYING ALL UTILITY AND IRRIGATION COMPANIES PRIOR TO WORK OR EXCAVATION TO DETERMINE THE EXACT LOCATIONS OF ALL LINES AFFECTING THIS WORK, WHETHER OR NOT SHOWN HEREIN, AND FOR ANY DAMAGE OR PROTECTION TO THESE LINES.

GENERAL NOTES

1. THE CONTRACTOR SHALL CONSTRUCT THE FLOOD CONTROL IMPROVEMENTS SHOWN ON THE DRAWINGS IN CONFORMANCE WITH THE REQUIREMENTS OF THE RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT'S MEMORANDUM OF UNDERSTANDING STANDARD SPECIFICATIONS DATED SEPTEMBER 1984, AND DESIGN MANUAL STANDARD DRAWINGS DATED MAY 1971.
2. IF AN ENCROACHMENT PERMIT IS REQUIRED FROM RIVERSIDE COUNTY FLOOD CONTROL, THEN CONTACT ED LOTZ AT 909-955-1266. AFTER THE PERMIT IS ISSUED THE DISTRICT MUST BE NOTIFIED ONE WEEK PRIOR TO CONSTRUCTION.
3. CONSTRUCTION INSPECTION WILL BE PERFORMED BY RIVERSIDE COUNTY FLOOD CONTROL. CONTACT CLYDE JOHNSON AT 909-955-1288. THE DISTRICT MUST BE *NOTIFIED TWO WEEKS PRIOR TO CONSTRUCTION.*
4. ALL STATIONING REFERS TO CENTERLINE OF CONSTRUCTION UNLESS OTHERWISE NOTED.
5. STATIONING FOR LATERALS AND CONNECTOR PIPE REFER TO THE CENTERLINE-CENTERLINE INTERSECTION STATION.
6. FORTY-EIGHT HOURS BEFORE EXCAVATION, CALL UNDERGROUND SERVICE ALERT 1-800-227-2600.
7. ALL ELEVATIONS SHOWN ARE IN FEET AND DECIMALS THEREOF BASED ON U.S.C. & G.S. DATUM.
8. ALL CROSS SECTIONS ARE TAKEN LOOKING DOWNSTREAM.
9. ELEVATIONS OF UTILITIES ARE APPROXIMATE UNLESS OTHERWISE NOTED.
10. OPENINGS RESULTING FROM THE CUTTING OR PARTIAL REMOVAL OF EXISTING CULVERTS, PIPES OR SIMILAR STRUCTURES TO BE ABANDONED SHALL BE SEALED WITH 6" OF CLASS "B" CONCRETE.
11. PIPE CONNECTED TO THE MAINLINE PIPE SHALL CONFORM TO JUNCTION STRUCTURE NO. 4 (JS 229) UNLESS OTHERWISE NOTED.
12. BEDDING PIPE WITH LESS THAN TWO FEET OF COVER SHALL CONFORM TO LOS ANGELES COUNTY FLOOD CONTROL DISTRICT STANDARD DRAWINGS 2-D213.3 AND 2-D177 FOR CONCRETE BACKFILL IN TRENCHES. ALL OTHER PIPE SHALL CONFORM TO RCFC & WCD STD. DWG. M815.
13. "V" IS THE DEPTH OF INLET OF CATCH BASINS MEASURED FROM THE TOP OF CURB TO INVERT OF CONNECTOR PIPE.
14. CATCH BASINS SHALL BE LOCATED SO THAT LOCAL DEPRESSION SHALL BEGIN AT EXISTING CURB RETURN JOINT, UNLESS OTHERWISE SPECIFIED.
15. ALL CURBS, GUTTERS, SIDEWALKS, DRIVEWAYS AND OTHER EXISTING IMPROVEMENTS TO BE RECONSTRUCTED IN KIND AND AT THE SAME ELEVATION AND LOCATION AS THE EXISTING IMPROVEMENTS UNLESS OTHERWISE NOTED.

CAST-IN-PLACE REQUIREMENTS

1. CONCRETE MIXES SHALL NOT HAVE LESS THAN SIX (6) SACKS OF PORTLAND CEMENT/CU.YD.
2. CONCRETE MIX DESIGNS SHALL BE SUBMITTED BY CONTRACTOR FOR APPROVAL PRIOR TO START OF CONSTRUCTION.
3. IF AND WHEN FLOW VELOCITY EXCEEDS 10 F.P.S. A 140 SEGMENT OF THE C.I.P.P. INVERT SHALL BE THICKENED 2 INCHES IN WALL THICKNESS AS "SACRIFICIAL CONCRETE" TO RESIST ABRASION. COMPRESSIVE STRENGTH OF CONCRETE FOR DESIGN VELOCITIES=20 F.P.S. SHALL BE FC=4,000 P.S.I.
4. MAXIMUM PERMISSIBLE CONCRETE SLUMP SHALL BE 2-1/2".
5. CONTRACTOR SHALL ALLOW INSPECTOR INTO PIPE WHILE UNDER CONSTRUCTION & "ROD" FOR WALL THICKNESS AT A MIN. OF 25 C.Y. OF THE POUR.
6. AT THE END OF ALL POURS AND AT THE END OF EACH WORKING DAY THE CONTRACTOR SHALL INSTALL #4 DOWELS 24" LONG 12" INTO THE LAST POUR AT 12" CENTERS AROUND THE CIRCUMFERENCE OF CAST-IN-PLACE PIPE.
7. JUNCTION STRUCTURES SHOWN ON THE PLANS ARE FOR REINFORCED CONCRETE PIPE. THE FOLLOWING SUBSTITUTIONS SHALL BE MADE FOR JUNCTION STRUCTURES FOR USE WITH CAST-IN-PLACE PIPE:
   A. A JUNCTION STRUCTURE NO. 4 (J.S. 229) SHALL BE REPLACED WITH EITHER A JUNCTION STRUCTURE NO. 2 (J.S. 227) OR A TRANSITION STRUCTURE NO. 3 (T.S. 303).
   B. A JUNCTION STRUCTURE NO. 2 (J.S. 227) SHALL BE REPLACED WITH A TRANSITION STRUCTURE NO. 3 (T.S. 303).
8. STANDARD DRAWING NO. (J.S. 227) JUNCTION STRUCTURE NO. 2 WHEN USED WITH CAST-IN-PLACE PIPE SHALL BE MODIFIED TO INCLUDE CONCRETE BACKFILL 1 FOOT OVER THE CAST-IN-PLACE PIPE.

NOTE:
THE CONCRETE COVER ON THE INSIDE OF ALL REINFORCED CONCRETE PIPE MUST BE INCREASED TO PROVIDE A MINIMUM OF 1½" OVER THE REINFORCING STEEL WHEN THE DESIGN VELOCITIES EXCEED 20 fps. THE CONCRETE DESIGN STRENGTH IN THESE REACHES SHALL BE f_c = 5000 psi FOR VELOCITIES EXCEEDING 20 fps AND f_c = 6000 psi FOR VELOCITIES EXCEEDING 30 fps.

PRIVATE ENGINEER'S NOTE TO CONTRACTOR

ALL CONTRACTORS AND SUBCONTRACTORS PERFORMING WORK SHOWN ON OR RELATED TO THESE PLANS SHALL CONDUCT THEIR OPERATIONS SO THAT ALL EMPLOYEES ARE PROVIDED A SAFE PLACE TO WORK AND THE PUBLIC IS PROTECTED. ALL CONTRACTORS AND SUBCONTRACTORS SHALL COMPLY WITH THE OCCUPATIONAL SAFETY AND HEALTH REGULATION OF THE U.S. DEPARTMENT OF LABOR AND THE STATE OF CALIFORNIA DEPARTMENT OF INDUSTRIAL RELATIONS CONSTRUCTION SAFETY ORDERS. THE CIVIL ENGINEER SHALL NOT BE RESPONSIBLE IN ANY WAY FOR THE CONTRACTORS AND SUBCONTRACTORS COMPLIANCE WITH SAID REGULATIONS AND ORDERS.

CONTRACTOR FURTHER AGREES THAT HE SHALL ASSUME SOLE AND COMPLETE RESPONSIBILITY FOR JOB-SITE CONDITIONS DURING THE COURSE OF CONSTRUCTION OF THIS PROJECT. INCLUDING SAFETY OF ALL PERSONS AND PROPERTY. THAT THIS REQUIREMENT SHALL APPLY CONTINUOUSLY AND NOT BE LIMITED TO NORMAL WORKING HOURS, AND THAT THE CONTRACTOR SHALL DEFEND, INDEMNIFY AND HOLD THE OWNER AND CIVIL ENGINEER HARMLESS FROM ANY AND ALL LIABILITY, REAL OR ALLEGED, IN CONNECTION WITH THE PERFORMANCE OF WORK ON THIS PROJECT, EXCEPTION FOR LIABILITY RISING FROM THE SOLE NEGLIGENCE OF THE OWNER OR ENGINEER.

THE EXISTENCE AND APPROXIMATE LOCATIONS OF ANY UNDERGROUND UTILITIES OR STRUCTURES SHOWN ON THESE PLANS ARE OBTAINED BY A SEARCH OF THE AVAILABLE RECORDS. THE CIVIL ENGINEER ASSUMES NO LIABILITY AS TO THE EXACT LOCATION OF SAID LINES NOR FOR UTILITY OR IRRIGATION LINES WHOSE LOCATIONS ARE NOT SHOWN. THE CONTRACTOR SHALL BE RESPONSIBLE FOR NOTIFYING ALL UTILITY AND IRRIGATION COMPANIES PRIOR TO WORK OR EXCAVATION TO DETERMINE THE EXACT LOCATIONS OF ALL LINES AFFECTING THIS WORK, WHETHER OR NOT SHOWN HEREON. AND FOR ANY DAMAGE OR PROTECTION TO THESE LINES.

WORK TO BE DONE

THESE IMPROVEMENTS CONSIST OF THE FOLLOWING WORK TO BE DONE ACCORDING TO THESE PLANS, THE CURRENT RIVERSIDE COUNTY FLOOD CONTROL STANDARDS AND SPECIFICATION, AND THE LATEST EDITION OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORK CONSTURCTION ("GREEN BOOK").

NOTIFICATION

1. THE CONTRACTOR SHALL NOTIFY CITY OF TEMECULA DEPARTMENT OF PUBLIC WORKS, (909) 694-6411), AT LEAST 48 HOURS IN ADVANCE OF STARTING CONSTRUCTION.
2. THE CONTRACTOR SHALL NOTIFY MS HENRIETTE HOANG AT METROPOLITAN WATER DISTRICT'S OPERATIONS MAINTAINANCE BRANCH, AT (213) 217-7820 AT LEAST TWO WORKING DAYS (MON THRU THURS) PRIOR TO ANY WORK IN THE VACINITY OF THEIR FACILITIES.

SPECIAL PIPES

THE CONCRETE COVER ON THE INSIDE OF ALL REINFORCED CONCRETE PIPES MUST BE INCREASED TO PROVIDE A MINIMUM OF 1 1/2" OVER THE REINFORCING WHEN THE DESIGN VELOCITIES EXCEED 20 FEET PER SECOND. THE CONCRETE DESIGN STRENGTH IN THESE REACHES SHALL BE f'c=5,000 PSI FOR VELOCITIES EXCEEDING 20 FEET PER SECOND AND f'c=6,000 PSI FOR VELOCITIES EXCEEDING 30 FEET PER SECOND.

CAST-IN-PLACE REQUIREMENTS

1. CONCRETE MIXES SHALL NOT HAVE LESS THAN SIX (6) SACKS OF PORTLAND CEMENT/CU. YD.
2. CONCRETE MIX DESIGNS SHALL BE SUBMITTED BY CONTRACTOR FOR APPROVAL PRIOR TO START OF CONSTRUCTION.
3. IF AND WHEN FLOW VELOCITY EXCEEDS 10 F.P.S. A 140 SEGMENT OF THE C.I.P.P. INVERT SHALL BE THICKENED 2 INCHES IN WALL THICKNESS AS "SACRAFICIAL CONCRETE" TO RESIST ABRASION. COMPRESSIVE STRENGTH OF CONCRETE FOR DESIGN VELOCITIES + 20 F.P.S. SHALL BE FC=5,000 P.S.I.
4. MAXIMUM PERMISSIBLE CONCRETE SLUMP SHALL BE 2-1/2".
5. CONTRACTOR SHALL ALLOW INSPECTOR INTO PIPE WHILE UNDER CONSTRUCTION & "ROD" FOR WALL THICKNESS AT A MIN. OF 25 C.Y. OF THE POUR.
6. AT THE END OF ALL POURS AND AT THE END OF EACH WORKING DAY THE CONTRACTOR SHALL INSTALL #4 DOWELS 24" LONG 12" CIRCUMFERENCE OF CAST-IN-PLACE PIPE.

RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT

DE PORTOLA ROAD & CAMPANULA WAY STORM DRAIN IMPROVEMENT PLANS CITY OF TEMECULA

GENERAL NOTES

1. THE CONTRACTOR SHALL CONSTRUCT THE FLOOD CONTROL IMPROVEMENTS SHOWN ON THE DRAWINGS IN CONFORMANCE WITH THE REQUIREMENTS OF THE RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT'S SPECIFICATIONS DATED SEPTEMBER 1984, AND DESIGN MANUAL STANDARD DRAWINGS DATED MAY 1971.
2. AN ENCROACHMENT PERMIT IS REQUIRED FROM RIVERSIDE COUNTY FLOOD CONTROL. CONTACT ED LOTZ AT (909) 275-1266. AFTER THE PERMIT IS ISSUED THE DISTRICT MUST BE NOTIFIED ONE WEEK PRIOR TO CONSTRUCTION.
3. CONSTRUCTION INSPECTION WILL BE PERFORMED BY RIVERSIDE COUNTY FLOOD CONTROL. CONTACT CLYDE JOHNSON AT (909) 275-1288. THE DISTRICT MUST BE NOTIFIED TWENTY DAYS PRIOR TO CONSTRUCTION.
4. ALL STATIONS REFERS TO CENTERLINE OF CONSTRUCTION UNLESS OTHERWISE NOTED.
5. STATIONING FOR LATERALS AND CONNECTOR PIPE REFER TO THE CENTER LINE CENTERLINE INTERSECTION STATION.
6. FORTY-EIGHT HOURS BEFORE EXCAVATION, CALL UNDERGROUND SERVICE ALERT 1-800-422-4133
7. ALL ELEVATIONS SHOWN ARE IN FEET AND DECIMALS THEREOF BASED ON U.S.C. & G.S. DATUM.
8. ELEVATIONS OF UTILITIES ARE APPROXIMATE UNLESS OTHERWISE NOTED.
9. OPENINGS RESULTING FROM CUTTING OR PARTIAL REMOVAL OF EXISTING CULVERTS, PIPES OR SIMILAR STRUCTURES TO BE ABANDONED SHALL BE SEALED WITH 6" OF CLASS "B" CONCRETE.
10. BEDDING PIPE WITH LESS THAN TWO FEET OF COVER SHALL CONFORM TO LOS ANGELES COUNTY FLOOD CONTROL DISTRICT STANDARD DRAWINGS 2-D213.3. AND 3080-1 FOR CONCRETE BACKFILL IN TRENCHES. ALL OTHER PIPE SHALL CONFORM TO RCFC & WCD STD. DWG. M815.
11. ALL CROSS-SECTIONS ARE TAKEN LOOKING DOWNSTREAM.
12. ALL CURBS, GUTTERS, SIDEWALKS, DRIVEWAYS AND OTHER EXISTING IMPROVEMENTS TO BE RECONSTRUCTED IN KIND AND AT THE SAME ELEVATION AND LOCATION AS THE EXISTING IMPROVEMENTS UNLESS OTHERWISE NOTED.

CAST-IN-PLACE CONCRETE PIPE GENERAL NOTES

1. CAST IN PLACE CONCRETE PIPE MATERIALS AND INSTALLATION METHODS SHALL CONFORM TO THE RIVERSIDE COUNTY AND RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT CAST-IN-PLACE CONCRETE PIPE DESIGN STANDARDS FOR SUBDIVISION PROJECT IMPROVEMENTS PLANS FOR FACILITIES TO BE MAINTAINED BY COUNTY OR DISTRICT. THE ACI STANDARD 346-70, STANDARD SPECIFICATIONS OF THE STATE OF CALIFORNIA DEPARTMENT OF TRANSPORTATION AND RECOMMENDATION OF PACIFIC SOILS ENGINEERING GEOTECHNICAL REVIEW, WORK ORDER 400145 DATED MARCH 13, 1989.
2. CAST-IN-PLACE CONCRETE PIPE WHICH IS TO BE MAINTAINED BY THE COUNTY OR DISTRICT SHALL NOT BE PLACED EXCEPT IN THE PRESENCE OF THE AGENCY ENGINEER.
3. DEWATERING SHALL BE INCLUDED IN THE PLACE BID PER LINEAL FOOT FOR CAST-IN-PLACE CONCRETE PIPE. THE DEWATERING SYSTEM SHALL BE SUCH THAT FORM VERTICAL TRENCH WALLS WILL BE MAINTAINED THROUGH THE PIPE ZONE, AND THE TRENCH INVERT SHALL BE FORMED AND FREE OF RUNNING WATER. THIS DOES NOT PRECLUDE CONSTRUCTION OF A FRENCH DRAIN UNDER THE TRENCH INVERT, IF SUCH A FACILITY ADEQUATELY RELIEVED THE GROUND WATER TO PROVIDE A TRENCH AS PREVIOUSLY SPECIFIED.
4. ALL CIPP INSTALLATION SHALL BE DONE PER THE FOLLOWING RECOMMENDATIONS:
   - "CAST-IN-PLACE CONCRETE PIPELINE RECOMMENDATIONS" INFRASTRUCTURE AT CAMPANULA WAY & DE PORTOLA ROAD, PASEO DEL SOL MASTER PLANNED COMMUNITY, BY GEOTECHNICAL CONSULTING, DATED APRIL 7, 2000.
   - "DE PORTOLA ROAD & CAMPANULA WAY STORM DRAIN CAST-IN-PLACE CONCRETE PIPE STRUCTURAL ANALYSIS" BY TERRAIN ENGINEERING INC. DATED MARCH 20, 2000.
   - "HYDRAULICS ANALYSIS FOR STORM DRAIN, CIPP INFRASTRUCTURE IMPROVEMENTS, DE PORTOLA ROAD & CAMPANULA WAY" BY RBF & ASSOC. DATED MAY 22, 1000.

INDEX MAP
SCALE: 1" = 200'

VICINITY MAP
NOT TO SCALE

CAST-IN-PLACE REQUIREMENTS (CIP)

1. CONCRETE MIXES SHALL NOT HAVE LESS THAN (6) SACKS OF PORTLAND CEMENT/CU.YD.
2. CONCRETE MIX DESIGN SHALL BE SUBMITTED BY CONTRACTOR FOR APPROVAL PRIOR TO START OF CONSTRUCTION.
3. IF AVG WHEN FLOW VELOCITY EXCEEDS 10 F.P.S. & NO SEDIMENT OF C.I.P.P. INVERT SHALL BE THICKENED 2 INCHES IN WALL THICKNESS AS "SACRIFICIAL CONCRETE" TO RESIST ABRASION COMPRESSIVE STRENGTH OF CONCRETE FOR DESIGN VELOCITIES > 20 F.P.S. SHALL BE F'c=6000 P.S.I.
4. MAXIMUM PERMISSIBLE CONCRETE SLUMP SHALL BE 2-1/2".
5. CONTRACTOR SHALL ALLOW INSPECTOR INTO PIPE WHILE UNDER CONSTRUCTION 2'-0"D" FOR WALL THICKNESS AT MIN OF 2.5 C.Y. OF THE POUR.
6. AT THE END OF ALL POURS AND AT THE END OF EACH WORKING DAY THE CONTRACTOR SHALL INSTALL #4 DOWELS 24" LONG 12" INTO THE LAST POUR AT 12" CENTERS AROUND THE CIRCUMFERENCE OF CAST-IN-PLACE PIPE.
7. JUNCTION STRUCTURES SHOWN ON THE PLANS ARE FOR REINFORCED CONCRETE PIPE. THE FOLLOWING SUBSTITUTIONS SHALL BE MADE FOR JUNCTION STRUCTURES FOR USE WITH CAST-IN-PLACE PIPE:
   A. A JUNCTION STRUCTURE NO. 6 (J.S. 227) SHALL BE REPLACED WITH EITHER A JUNCTION STRUCTURE NO. 2 (J.S. 227) OR A TRANSITION STRUCTURE NO. 2 (T.S. 303)
   B. A JUNCTION STRUCTURE NO. 2 (J.S. 227) SHALL BE REPLACED WITH A TRANSITION STRUCTURE NO. 5 (T.S. 303)
8. STANDARD DRAWING NO. J.S. 227 JUNCTION STRUCTURE NO. 2 WHEN USED WITH CAST-IN-PLACE PIPE SHALL BE MODIFIED TO INCLUDE CONCRETE BACKFILL 1 FOOT OVER THE CAST-IN-PLACE PIPE.
9. THERE SHALL BE A MINIMUM OF 3 FEET OF COVER.

NOTICE TO THE CONTRACTOR

THE EXISTENCE AND LOCATION OF ANY UNDERGROUND UTILITY PIPES OR STRUCTURES SHOWN ON THESE PLANS ARE OBTAINED BY A SEARCH OF THE AVAILABLE RECORDS. APPROVAL OF THIS PLAN BY THE CITY OF TEMECULA, RIVERSIDE COUNTY FLOOD CONTROL DISTRICT, EASTERN MUNICIPAL WATER DISTRICT OR RANCHO CALIFORNIA WATER DISTRICT DOES NOT CONSTITUTE A REPRESENTATION AS TO THE ACCURACY OR COMPLETENESS OR THE EXISTENCE OR NON-EXISTENCE OF ANY UNDERGROUND UTILITY PIPE OR STRUCTURE WITHIN THE LIMITS OF THIS PROJECT. THE CONTRACTOR IS REQUIRED TO TAKE ALL DUE PRECAUTIONARY MEANS TO PROTECT THE UTILITY LINES NOT OF RECORD OR SHOWN ON THIS PLAN.

RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT

RCFC GENERAL NOTES:

1. THE CONTRACTOR SHALL CONSTRUCT THE FLOOD CONTROL IMPROVEMENTS SHOWN ON THE DRAWINGS IN CONFORMANCE WITH THE REQUIREMENTS OF THE RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT'S MEMORANDUM OF UNDERSTANDING STANDARD SPECIFICATIONS DATED SEPTEMBER 1984, AND DESIGN MANUAL STANDARD DRAWINGS DATED MAY 1971.
2. IF AN ENCROACHMENT PERMIT IS REQUIRED FROM RIVERSIDE COUNTY FLOOD CONTROL, THEN CONTACT ED LOTZ AT 909-955-1266. AFTER THE PERMIT IS ISSUED, THE DISTRICT MUST BE NOTIFIED ONE WEEK PRIOR TO CONSTRUCTION.
3. CONSTRUCTION INSPECTION WILL BE PERFORMED BY RIVERSIDE COUNTY FLOOD CONTROL. CONTACT *DALE ANDERSON* AT 909-955-1288. THE DISTRICT MUST BE NOTIFIED TWO WEEKS PRIOR TO CONSTRUCTION.
4. ALL STATIONING REFERS TO CENTERLINE OF CONSTRUCTION UNLESS OTHERWISE NOTED.
5. STATIONING FOR LATERALS AND CONNECTOR PIPE REFER TO THE CENTERLINE-CENTERLINE INTERSECTION STATION.
6. FORTY-EIGHT HOURS BEFORE EXCAVATION, CALL UNDERGROUND SERVICE ALERT 1-800-227-2600.
7. ALL ELEVATIONS SHOWN ARE IN FEET AND DECIMALS THEREOF BASED ON U.S.C. & G.S. DATUM.
8. ALL CROSS SECTIONS ARE TAKEN LOOKING DOWNSTREAM.
9. ELEVATIONS OF UTILITIES ARE APPROXIMATE UNLESS OTHERWISE NOTED.
10. OPENINGS RESULTING FROM THE CUTTING OR PARTIAL REMOVAL OF EXISTING CULVERTS, PIPES OR SIMILAR STRUCTURES TO BE ABANDONED SHALL BE SEALED WITH 6" OF CLASS "B" CONCRETE.
11. PIPE CONNECTED TO THE MAINLINE PIPE SHALL CONFORM TO JUNCTION STRUCTURE NO. 4 (JS 229) UNLESS OTHERWISE NOTED.
12. BEDDING PIPE WITH LESS THAN TWO FEET OF COVER SHALL CONFORM TO LOS ANGELES COUNTY FLOOD CONTROL DISTRICT STANDARD DRAWINGS 2-0213.3 AND 2-0177 FOR CONCRETE BACKFILL IN TRENCHES. ALL OTHER PIPE SHALL CONFORM TO RCFC & WCD STD. DWG. M815.
13. "V" IS THE DEPTH OF INLET OF CATCH BASINS MEASURED FROM THE TOP OF CURB TO INVERT OF CONNECTOR PIPE.
14. CATCH BASINS SHALL BE LOCATED SO THAT LOCAL DEPRESSION SHALL BEGIN AT EXISTING CURB RETURN JOINT, UNLESS OTHERWISE SPECIFIED.
15. ALL CURBS, GUTTERS, SIDEWALKS, DRIVEWAYS AND OTHER EXISTING IMPROVEMENTS TO BE RECONSTRUCTED IN KIND AND AT THE SAME ELEVATION AND LOCATION AS THE EXISTING IMPROVEMENTS UNLESS OTHERWISE NOTED.
16. THE CONCRETE COVER ON THE INSIDE OF ALL REINFORCED CONCRETE PIPE MUST BE INCREASED TO PROVIDE A MINIMUM OF 1½" OVER THE REINFORCING WHEN THE DESIGN VELOCITIES EXCEED 20 FEET PER SECOND. THE CONCRETE DESIGN STRENGTH IN THESE REACHES SHALL BE FC=5,000 PSI FOR VELOCITIES EXCEEDING 20 FEET PER SECOND AND FC=6,000 PSI FOR VELOCITES EXCEEDING 30 FEET PER SECOND.
17. A SOILS INVESTIGATION DATED SEPT. 6 2000 WO NO. 2405-A8-SC BY GEOSOILS, INC. SHALL BE INCLUDED AS A PART OF THESE PLANS. ALL WORK SHALL CONFORM TO RECOMMENDATIONS AS OUTLINED IN SAID REPORT. FOR GEOTECHNICAL RECOMMENDATIONS FOR CAST IN-PLACE PIPE (CIPP), SEE LETTER FROM PACIFIC SOILS ENGINEERING, INC. DATED MAY 15, 2001, W.O. NO. 400775

CAST-IN-PLACE NOTES

1. THE SUPPLYING BATCH PLANT MAY BE INSPECTED BY R.C.F.C. & W.C.D. INSPECTOR AT THE START OF CONSTRUCTION AND THEREAFTER TO OBSERVE PLANT OPERATIONS, BATCH WEIGHTS AND OTHER CONCRETE CONTROL MEASURES.
2. CONCRETE MIXES SHALL NOT HAVE LESS THAN SIX (6) SACKS OF PORTLAND CEMENT PER C.Y. - 4000 P.S.I. MINIMUM.
3. CONCRETE MIX DESIGNS SHALL BE SUBMITTED BY THE CONTRACTOR FOR APPROVAL PRIOR TO START OF CONSTRUCTION.
4. IF AND WHEN VELOCITY EXCEED 10 F.P.S., A 140(SEGMENT OF THE C.I.P.P. INVERT SHALL BE THICKENED 2 INCHES IN WALL THICKNESS AS "SACRIFICIAL CONCRETE" TO RESIST ABRASION. COMPRESSIVE STRENGTH OF CONCRETE AT 28 DAYS SHALL BE AT LEAST F'c=5,000 P.S.I. FOR DESIGN VELOCITIES GREATER THAN 20 F.P.S. C.I.P.P. SHALL NOT BE USED.
5. THE CONTRACTOR SHALL ALLOW THE DISTRICT INSPECTOR INTO PIPE WHILE UNDER CONSTRUCTION & ROD FOR ALL THICKNESS AT A MINIMUM.
6. AT THE END OF ALL POURS AND THE END OF EACH WORKING DAY, THE CONTRACTOR SHALL INSTALL #4 DOWELS 24" LONG 12" INTO THE LAST POUR AT 12" CENTERS AROUND THE CIRCUMFERENCE OF C.I.P.P.
7. A JUNCTION STRUCTURE NO. 2 (JS227) SHOWN ON THE PLANS ARE FOR REINFORCED CONCRETE PIPE, AND SHALL BE REPLACED WITH A TRANSITION STRUCTURE NO. 3 (TS303) FOR USE WITH C.I.P.P.

UNDERGROUND STRUCTURES

ALL UNDERGROUND UTILITIES OR STRUCTURES REPORTED BY THE OWNER OR OTHERS AND THOSE SHOWN ON THE RECORDS EXAMINED ARE INDICATED WITH THEIR APPROXIMATE LOCATION AND EXTENT. THE OWNER BY ACCEPTING THESE PLANS OR PROCEEDING WITH IMPROVEMENTS PURSUANT THERETO AGREES TO ASSUME LIABILITY AND TO HOLD UNDERSIGNED HARMLESS FOR ANY DAMAGES RESULTING FROM THE EXISTENCE OF UNDERGROUND UTILITIES OR STRUCTURES NOT REPORTED TO THE UNDERSIGNED; NOT INDICATED ON THE PUBLIC RECORDS EXAMINED; OR LOCATED AT VARIANCE WITH THAT REPORTED OR SHOWN ON RECORDS EXAMINED. THE CONTRACTOR IS REQUIRED TO TAKE DUE PRECAUTIONARY MEASURES TO PROTECT THE UTILITIES OR STRUCTURES SHOWN AND ANY OTHER UTILITIES OR STRUCTURES FOUND AT THE SITE. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO NOTIFY THE OWNERS OF THE UTILITIES OR STRUCTURES CONCERNED BEFORE STARTING WORK.

PRIVATE ENGINEER'S NOTE TO CONTRACTOR

ALL CONTRACTORS AND SUBCONTRACTORS PERFORMING WORK SHOWN ON OR RELATED TO THESE PLANS SHALL CONDUCT THEIR OPERATIONS SO THAT ALL EMPLOYEES ARE PROVIDED A SAFE PLACE TO WORK AND THE PUBLIC IS PROTECTED. ALL CONTRACTORS AND SUBCONTRACTORS SHALL COMPLY WITH THE OCCUPATIONAL SAFETY AND HEALTH REGULATION OF THE U.S. DEPARTMENT OF LABOR AND THE STATE OF CALIFORNIA DEPARTMENT OF INDUSTRIAL RELATIONS CONSTRUCTION SAFETY ORDERS. THE CIVIL ENGINEER SHALL NOT BE RESPONSIBLE IN ANY WAY FOR THE CONTRACTORS AND SUBCONTRACTORS COMPLIANCE WITH SAID REGULATIONS AND ORDERS.

CONTRACTOR FURTHER AGREES THAT HE SHALL ASSUME SOLE AND COMPLETE RESPONSIBILITY FOR JOB-SITE CONDITIONS DURING THE COURSE OF CONSTRUCTION OF THIS PROJECT, INCLUDING SAFETY OF ALL PERSONS AND PROPERTY, THAT THIS REQUIREMENT SHALL APPLY CONTINUOUSLY AND NOT BE LIMITED TO NORMAL WORKING HOURS, AND THAT THE CONTRACTOR SHALL DEFEND, INDEMNIFY AND HOLD THE OWNER AND CIVIL ENGINEER HARMLESS FROM ANY AND ALL LIABILITY, REAL OR ALLEGED, IN CONNECTION WITH THE PERFORMANCE OF WORK ON THIS PROJECT, EXCEPTION FOR LIABILITY RISING FROM THE SOLE NEGLIGENCE OF THE OWNER OR ENGINEER.

THE EXISTENCE AND APPROXIMATE LOCATIONS OF ANY UNDERGROUND UTILITIES OR STRUCTURES SHOWN ON THESE PLANS ARE OBTAINED BY A SEARCH OF THE AVAILABLE RECORDS. THE CIVIL ENGINEER ASSUMES NO LIABILITY AS TO THE EXACT LOCATION OF SAID LINES NOR FOR UTILITY OR IRRIGATION LINES WHOSE LOCATIONS ARE NOT SHOWN. THE CONTRACTOR SHALL BE RESPONSIBLE FOR NOTIFYING ALL UTILITY AND IRRIGATION COMPANIES PRIOR TO WORK OR EXCAVATION TO DETERMINE THE EXACT LOCATIONS OF ALL LINES AFFECTING THIS WORK, WHETHER OR NOT SHOWN HERON, AND FOR ANY DAMAGE OR PROTECTION TO THESE LINES.

RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT

RCFC GENERAL NOTES:

1. THE CONTRACTOR SHALL CONSTRUCT THE FLOOD CONTROL IMPROVEMENTS SHOWN ON THE DRAWINGS IN CONFORMANCE WITH THE REQUIREMENTS OF THE RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT'S MEMORANDUM OF UNDERSTANDING STANDARD SPECIFICATIONS DATED SEPTEMBER 1984, AND DESIGN MANUAL STANDARD DRAWINGS DATED MAY 1971.
2. IF AN ENCROACHMENT PERMIT IS REQUIRED FROM RIVERSIDE COUNTY FLOOD CONTROL, THEN CONTACT ED LOTZ AT 909-955-1266. AFTER THE PERMIT IS ISSUED THE DISTRICT MUST BE NOTIFIED ONE WEEK PRIOR TO CONSTRUCTION.
3. CONSTRUCTION INSPECTION WILL BE PERFORMED BY RIVERSIDE COUNTY FLOOD CONTROL. CONTACT CLYDE JOHNSON AT 909-955-1288. THE DISTRICT MUST BE NOTIFIED TWO WEEKS PRIOR TO CONSTRUCTION.
4. ALL STATIONING REFERS TO CENTERLINE OF CONSTRUCTION UNLESS OTHERWISE NOTED.
5. STATIONING FOR LATERALS AND CONNECTOR PIPE REFER TO THE CENTERLINE-CENTERLINE INTERSECTION STATION.
6. FORTY-EIGHT HOURS BEFORE EXCAVATION, CALL UNDERGROUND SERVICE ALERT 1-800-227-2600.
7. ALL ELEVATIONS SHOWN ARE IN FEET AND DECIMALS THEREOF BASED ON U.S.C. & G.S. DATUM.
8. ALL CROSS SECTIONS ARE TAKEN LOOKING DOWNSTREAM.
9. ELEVATIONS OF UTILITIES ARE APPROXIMATE UNLESS OTHERWISE NOTED.
10. OPENINGS RESULTING FROM THE CUTTING OR PARTIAL REMOVAL OF EXISTING CULVERTS, PIPES OR SIMILAR STRUCTURES TO BE ABANDONED SHALL BE SEALED WITH 6" OF CLASS "B" CONCRETE.
11. PIPE CONNECTED TO THE MAINLINE PIPE SHALL CONFORM TO JUNCTION STRUCTURE NO. 4 (JS 229) UNLESS OTHERWISE NOTED.
12. BEDDING PIPE WITH LESS THAN TWO FEET OF COVER SHALL CONFORM TO LOS ANGELES COUNTY FLOOD CONTROL DISTRICT STANDARD DRAWINGS 2-0213.3 AND 2-0177 FOR CONCRETE BACKFILL IN TRENCHES. ALL OTHER PIPE SHALL CONFORM TO RCFC & WCD STD. DWG. M815.
13. "V" IS THE DEPTH OF INLET OF CATCH BASINS MEASURED FROM THE TOP OF CURB TO INVERT OF CONNECTOR PIPE.
14. CATCH BASINS SHALL BE LOCATED SO THAT LOCAL DEPRESSION SHALL BEGIN AT EXISTING CURB RETURN JOINT, UNLESS OTHERWISE SPECIFIED.
15. ALL CURBS, GUTTERS, SIDEWALKS, DRIVEWAYS AND OTHER EXISTING IMPROVEMENTS TO BE RECONSTRUCTED IN KIND AND AT THE SAME ELEVATION AND LOCATION AS THE EXISTING IMPROVEMENTS UNLESS OTHERWISE NOTED.
16. THE CONCRETE COVER ON THE INSIDE OF ALL REINFORCED CONCRETE PIPE MUST BE INCREASED TO PROVIDE A MINIMUM OF 1½" OVER THE REINFORCING WHEN THE DESIGN VELOCITIES EXCEED 20 FEET PER SECOND. THE CONCRETE DESIGN STRENGTH IN THESE REACHES SHALL BE FC=5,000 PSI FOR VELOCITIES EXCEEDING 20 FEET PER SECOND AND FC=6,000 PSI FOR VELOCITES EXCEEDING 30 FEET PER SECOND.
17. A SOILS INVESTIGATION DATED SEPT. 6, 2000 W.O. NO. 2405-A8-SC BY GEOSOILS, INC. SHALL BE INCLUDED AS A PART OF THESE PLANS. ALL WORK SHALL CONFORM TO RECOMMENDATIONS AS OUTLINED IN SAID REPORT. FOR GEOTECHNICAL RECOMMENDATIONS FOR CAST IN-PLACE PIPE (CIPP), SEE LETTER FROM PACIFIC SOILS ENGINEERING, INC. DATED MAY 15, 2001. W.O. NO. 400775.

San Francisco, CA 94015-3901

Dear Messrs. Robertus and Oda:

Re: FY 2006-2007 Annual Reports
Order No. R9-2004-001
NPDES Permit No. CAS0108766

Please find attached copies of the FY 2006-2007 annual reports for the National Pollutant Discharge Elimination System (NPDES) Municipal Separate Storm Sewer System (MS4) program for the Santa Margarita Region of Riverside County. The following annual reports are submitted in accordance with Third-Term NPDES MS4 Permit (Board Order No. R9-2004-001, NPDES Permit No. CAS0108766) adopted by the San Diego Region Regional Water Quality Control Board (Regional Board) on July 14, 2004 for the Santa Margarita Watershed Region of Riverside County (Third-Term NPDES MS4 Permit):

- Riverside County Flood Control and Water Conservation District (District) Individual Storm Water Management Plan (Individual SWMP) Annual Report
- County of Riverside Individual SWMP Annual Report
- City of Murrieta Individual SWMP Annual Report
- City of Temecula Individual SWMP Annual Report
- Watershed SWMP Annual Report
- Monitoring Program Annual Report (as Appendix G of Watershed Annual Report)

The reports provide a comprehensive summary and analysis of the Third-Term NPDES MS4 Permit compliance activities during FY 2006-2007 by the District, County of Riverside, and Cities of Murrieta and Temecula (Permittees).

Re: FY 2006-2007 Annual Report
Order No. R9-2004-01
NPDES Permit No. CAS0108766

These annual reports specifically respond to the Third-Term NPDES MS4 Permit's reporting requirements. This report is the first to report on the new Third-Term NPDES MS4 Permit programs. The Individual SWMP Annual Reports summarize the Permittees individual compliance activities. The Watershed SWMP Annual Report summarizes the Permittees combined watershed based compliance activities. These watershed based activities include the Permittees continued commitment to protecting water quality through:

- Development of the Integrated Regional Water Management Plan in conjunction the Permittees, Rancho California Water District, Elsinore-Murrieta-Anza Resource Conservation District, Trout Unlimited, Riverside Lands Conservancy, San Diego State University/Santa Margarita Ecological Reserve, Southwestern Riverside County Multi-Species Reserve, U. S. Bureau of Reclamation, Eastern Municipal Water District, Western Municipal Water District, The Nature Conservancy, California Department of Fish and Game, U.S. Army Corps of Engineers and Regional Board. The intent of the IRWMP is to pave the way for greater watershed-wide coordination and management of water resources within the Santa Margarita watershed as a whole, as well as adjoining watershed and regional planning efforts;
- Initiation of Toxicity Reduction Evaluation (TRE) to address potential Pyrethroid Toxicity in Receiving Waters; and
- Jointly fund a low impact development (LID) Best Management Practices (BMP) testing and demonstration facility for southern California. The facility will be a retrofit of the District's compound in Riverside. Data collected from the facility will be used to update the BMP Design Manual, develop numeric criteria for hydromodification, and provide data for Statewide efforts to better define the effectiveness of LID BMPs. The facility will also serve as a regional demonstration facility for southern California MS4 Permittee groups.

The District is committed to continuing its ongoing efforts to work cooperatively with the Co-Permittees, Regional Board staff and other stakeholders in implementing an effective municipal stormwater program and fulfilling the requirements of the current Third-Term NPDES MS4 Permit. If you have any questions concerning this matter, please feel free to call me at 951.955.8411 or Jason Uhley at 951.955.1273.

Very truly yours,

S. E. Stump

Appendix G – Monitoring Annual Report

BOARD ORDER NO. R9-2004-001
CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
SAN DIEGO REGION

Fiscal Year 2006-2007 Watershed Annual Report

A. Executive Summary

The Watershed Annual Report documents regional Urban Runoff management programs and activities that were implemented to comply with the requirements of Provision K and the Monitoring and Reporting Program (MRP) of the Municipal Separate Storm Sewer System (MS4) Permit issued to the Riverside County Permittees by the San Diego Regional Water Quality Control Board (Regional Board) on July 14, 2004 (Board Order R9-2004-001). This is the third MS4 permit issued for the Santa Margarita Region (SMR) by the Regional Board and is referred to as the "Third-term SMR Permit". This Watershed Annual Report specifically addresses the reporting requirements identified in the Watershed Annual Report section of the MRP to the Third-term SMR Permit. It provides a description of the area-wide and watershed-based programs and activities that the Permittee implemented during the Fiscal Year 2006-2007 reporting period to comply with the Third-term SMR Permit and to reduce pollutants in Urban Runoff to the Maximum Extent Practicable (MEP).

The Third-term MS4 Permit required each Permittee to develop an Individual Storm Water Management Plan (SWMP) and for all the Permittees to jointly develop a Watershed SWMP. These compliance documents, and the programs they describe, were to be completed, submitted to the Regional Board and implemented by July 14, 2005. Annual Reports for each of these documents are required and are to be submitted to the Regional Board on October 31st of each calendar year. The reporting period is specified as the preceeding fiscal year. The Riverside County Flood Control and Water Conservation District (District) is specifically required to prepare an Individual SWMP Annual Report and to coordinate the preparation of the Watershed SWMP Annual Report with Riverside County and the Cities of Murrieta and Temecula (Permittees). As Principal Permittee, the District is also tasked with coordinating the submittal of the Individual SWMP Annual Reports for the other Permittees.

This Watershed Annual Report covers the period extending from July 1, 2006 through June 30, 2007. The FY 2005-2006 Annual Report reflects the first year that all programs have been implemented for a full year.

In general, this Watershed Annual Report provides specific detail regarding implementation of the regional programs described in the Riverside County Drainage Area Management Plan (DAMP). The DAMP serves the dual role of a model Individual SWMP and Watershed SWMP for the purposes of the Third-term MS4 Permit.

For purposes of this Watershed Annual Report, the terms "(Watershed SWMP)" and "Standard Urban Stormwater Management Plan (SUSMP)" referenced in the SMR Permit are referred to as the "DAMP" and "Water Quality Management Plan (WQMP)," respectively, to be consistent with terminology established and in use by the Permittees. Additional terms and acronyms used in this Watershed Annual Report are defined in the glossary included in the DAMP.

Figure A-1 shows the SMR, which is the area covered under the SMR Permit. A copy of the Third-term SMR Permit is included as Appendix C of the DAMP.

Figure A-1. Santa Margarita Region

6660000

B. Overview of Upper Santa Margarita River Watershed

B.1. Description of the SMR

The SMR (Figure A-1) is defined as the area delineated by the County boundary line on the south and the Regional Board boundary line on the north, east, and west. Further, the entire SMR lies within the Murrieta Creek and Temecula Creek watersheds. It is important to recognize that the Clean Water Act exempts agricultural activities from regulation under NPDES. Further, under federal and state law, Permittees do not have legal jurisdiction over stormwater discharges into their respective MS4 from:

- California and federal facilities,
- Utilities and special districts, and
- Native American tribal lands.

These areas are not included in the SMR. However, the Regional Board requires the Permittees to coordinate with these stakeholders to reduce discharges from their lands. In addition, other point and non-point source discharges otherwise permitted by or under the jurisdiction of the Regional Board may affect water quality in the Murrieta and Temecula Creek watersheds. Current land uses within the SMR are shown on a map contained in Appendix I (updated August 28, 2007).

The area of Riverside County under the jurisdiction of the Regional Board is approximately 548 square miles, which is less than 8 percent of the 7,300 square miles within Riverside County. Only 3 of the 24 municipalities within Riverside County are under the jurisdiction of the Regional Board.

B.2. Changes in Population

The California Department of Finance estimates that as of January 1, 2007, the total population of Riverside County was approximately 2,031,625. Of the 2.03 million people, approximately 248,885 persons (approximately 12 percent) reside within the portion of Riverside County under the jurisdiction of the Regional Board. Approximately 55,291 persons[1] reside in the unincorporated area while approximately 195,192 persons reside within the Cities of Murrieta and Temecula.

Since the adoption of the Third-term SMR Permit in 2004, population growth in Riverside County has been significantly higher than in neighboring counties and has also been greater than the average percent change in population in the entire State (3.8%).[2] Table B-1 shows the population data for years 1998-2007 and the percent change for the neighboring counties and for each of the Permittees for the years 2004 - 2007.

0001001

Although population growth in the SMR will continue to be greater than in surrounding counties, the percent increase will decline. Table B-2 shows population projections for neighboring counties and the Permittees in the year 2010.[3]

Table B-2. Projected Population for 2010

Area	2007	2010 (b)	% Change
Los Angeles County	10,331,939	10,514,663	1.8%
Orange County	3,098,121	3,227,836	4.2%
San Bernardino County	2,028,013	2,177,596	7.4%
San Diego County	3,098,269	3,199,706	3.3%
Riverside County	2,031,625	2,242,744	10.4%
Unincorporated Area	55,291 (a)	62,362	12.8%
Murrieta(c)	97,257	103,726(a)	6.7%
Temecula(c)	97,935	99,387(a)	1.5%

(a) Derived from the *Riverside County Progress Report 2007*, Riverside County Center for Demographic Research/TLMA.
(b) Derived from the *Riverside County Progress Report 2007*, Riverside County Center for Demographic Research/TLMA and P1 Population Projections, California Department of Finance May 28, 2004
(c) Estimated build-out for: Murrieta = 128,000 and Temecula = 125,000. These figures include annexation of parts of County.

B.3. Changes in Land Use

In 1956, only 0.3 percent of the SMR (less than two square miles) was urbanized.[4] Almost half a century later, even with a significant rate of growth in population relative to the State and neighboring counties, approximately 93 percent of the SMR remains in non-urban land uses (rural residential, agriculture, preserves and open space, state lands, federal lands, and tribal lands). Further, almost thirty percent (30%) of the SMR consists of federal, state, and tribal lands[5] that are not under the jurisdiction of the Permittees' MS4 programs. It is projected that the population of Riverside County will increase approximately ten percent (10%) by 2010 with significantly slower growth occurring in the south area of the County. Assuming that the urbanized area increases proportional to population, ninety-two percent (92%) of the SMR would remain in non-urban land uses in 2010.

Changes in land uses from 2006 to 2007 are shown in Table B-3. The land uses listed in the table are based on the Riverside County Assessor Parcel Data, Close of Roll 2006. Current land uses within the SMR are identified in the Santa Margarita Watershed MS4 Facilities Map in Appendix I.

4 State of California Department of Public Works, Division of Water Resources, Bulletin No. 57, Santa Margarita River Investigation, Volume I, June 1956.
5 Riverside County Assessor Parcel Data, Close of Roll 2004.

B.4. Conserved Lands

Much of the remaining non-urbanized lands will ultimately be incorporated into the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP). The MSHCP requires the ongoing conservation of 500,000 acres within the County, a large portion of which are in the SMR (at least 150,000 acres in total, or approximately 1/3 to 1/2 of the SMR). There are approximately 72,000 acres of existing public or quasi-public lands preserved in Riverside County within the Santa Margarita River watershed. Approximately 11,000 additional acres have been purchased since the adoption of the MSHCP. The Criteria Reserve Goals and Objectives will add approximately 70,500 additional acres of permanent habitat reserve lands that the RCA will purchase with mitigation fees generated by the MSHCP.

Table B-3. Change in Land Use – 2005 to 2006[a]

Land Use	2006 (Acres) Uninc[b]	2006 (Acres) Murrieta	2006 (Acres) Temecula	2006 (Acres) Total	2006 % of Total	2007 (Acres) Uninc[b]	2007 (Acres) Murrieta	2007 (Acres) Temecula	2007 (Acres) Total	2007 % of Total	Change 2006 to 2007 (Acres)	Change 2006 to 2007 %

C. A Description of Efforts to Coordinate with other Stakeholders in the Santa Margarita River Watershed, Including San Diego County and the US Marine Corps Base Camp Pendleton.

C.1. *Introduction*

The Permittees schedule at least one annual meeting with the San Diego County MS4 Permittees within the Santa Margarita River watershed, Camp Pendleton, U.S. Bureau of Reclamation (USBR), and others. The purpose of these meetings is to:

- Discuss land use planning;
- Discuss monitoring data and potential management measures to target Focus Area Constituents of Concern;
- Exchange ideas of how to address sources of Focus Area Constituents of Concern and evaluate effectiveness of actions;
- Collaborate with water districts in an effort to reduce irrigation water runoff; and
- Consider grant applications to coordinate and prioritize water quality projects that address Focus Area Constituents of Concern.

This meeting may occur from within the context of another workgroup, such as the Santa Margarita River Executive Management Team, or as separately called meetings, as appropriate.

The District, in consultation with the Permittees, participates in several cooperative activities through informal or formal regional stakeholder workgroups. Stakeholders often include other public and private entities within the Santa Margarita watershed. These efforts can broadly be categorized as management efforts to address stormwater quality issues within the Santa Margarita River watershed, or broader regions including the Santa Margarita River watershed. These efforts may be expanded, reduced or abandoned over time based on budget, changing regulations, program needs, program effectiveness consideration, or other factors.

Coordination between watershed stakeholders has continued to expand. There are now at least three separate watershed stakeholder groups meeting several times a year to discuss a) the lagoon Total Maximum Daily Load (TMDL); b) watershed based planning issues and a watershed model for the Santa Margarita River; and c) the Santa Margarita Watershed Nutrient Numeric Endpoint (NNE)/TMDL efforts. These efforts are inter-coordinated and have been administered, at stakeholder request, by the USBR on behalf of the comprising stakeholders. Due to their interconnectedness, the aforementioned efforts are coordinated by the Santa Margarita River Executive Management Team. In addition, the Permittees continue to coordinate with the Southern California Monitoring Coalition, a cooperative effort between Southern California Counties and Regional Water Quality Control Boards

geared towards improving the science of stormwater monitoring. Additional information on these efforts is provided below.

C.2. Santa Margarita River Executive Management Team (SMREMT)

During FY2006-2007, the District continued its participation in the SMREMT. Participants include the District, the U.S. Bureau of Reclamation (BuRec), Murrieta County Water District (now Western Municipal Water District), Eastern Municipal Water District, Fallbrook Public Utilities District, U.S. Marine Corps Camp Pendleton, County of San Diego, Mission Resource Conservation District (MRCD), Elsinore-Murrieta-Anza RCD, Regional Board, and San Diego State University. SMREMT has focused its efforts to identify and address the highest priority water quality concerns in the Santa Margarita watershed, including development of a watershed model to assist with land use planning and TMDL development, coordinating watershed monitoring, and developing formal agreements between interested stakeholders for the purposes of evaluating impairment listing and data gaps in the watershed. Both Urban Runoff and reclaimed water issues are being studied. Projects include the "Santa Margarita Watershed Supply Augmentation, Water Quality Protection, and Environmental Enhancement Program" (SMR Study).

The most recent task, Phase 3, was to develop a watershed model for the entire Santa Margarita River watershed that would incorporate surface water, groundwater, and lagoon modules.

Phase 3A, which was completed in December 2003, was the development of a preliminary model to address water quality issues in the Santa Margarita River watershed and evaluation of the effectiveness of the model for determining the assimilative capacity of the Santa Margarita River and its ability to resolve long-term issues of effluent discharge to the River. The Watershed Analysis Risk Management Framework (WARMF) computer model was selected as the basis for the Santa Margarita River watershed model.

The SMREMT has been working out the Phase 3B Scope of Work and funding arrangements. Tasks being considered under Phase 3B include:

- Determine how the Santa Margarita River watershed model could be refined to support stakeholder driven TMDL development;
- Develop a proposed work plan that could be used to seek future Basin Plan amendments, such as site-specific nutrient criteria;
- Document ground/surface water interactions below the Santa Margarita Gorge;
- Update the Santa Margarita River watershed model;
- Prepare documentation for the Santa Margarita River watershed model; and
- Model proposed management programs in the Santa Margarita River.

The model is based on WARMF. The current version of WARMF is compatible with the USEPA BASINS watershed model and has been released to the public domain through USEPA's Ecosystem Research Division's TMDL Modeling Toolbox.

The BuRec has approached Regional Board staff requesting that they consider third – Party TMDL development for nutrients and Total Dissolved Solids in the Santa Margarita River watershed. The Regional Board responded that they "do not plan to enter into an agreement with BuRec to institute a third party TMDL program." The SMREMT stakeholders are now reevaluating their objectives and priorities for the Santa Margarita River watershed.

Meeting dates with the SMREMT, or coordinated with the SMREMT to discuss watershed issues include: August 8, 2006, August 15, 2006, October 2006, November 15, 2006, January 16, 2007, January 17, 2007, February 2007, March 2007, May 2007, and June 12, 2007. Copies of meeting Agendas are contained in Appendix A, where available.

C.3. Southern California Stormwater Monitoring Coalition (SMC)

The District participates in the Stormwater Monitoring Coalition (SMC) on behalf of the Permittees. The SMC includes representatives from the Los Angeles, San Diego and Santa Ana Regional Boards and each of the Principal Permittees in Southern California (i.e., the counties of Los Angeles, Orange, San Bernardino, San Diego and Ventura), and other interested municipalities. The overall goal for the SMC is to establish a Southern California stormwater research and monitoring agenda that would focus on improving stormwater monitoring science, coordinate data collection efforts, and evaluating the effects of stormwater discharges to receiving waters specific to Southern California. Appendix A contains the SMC Annual Report, which highlights activities completed during the past fiscal year.

In addition to the completed projects identified in the SMC Annual Report, the SMC has pursued consolidated grants for phase 2 of the Peak Flow Study and a Study of the effectiveness of Low Impact Development BMPs in Southern California. Pending results of those grant applications in October, the SMC will re-evaluate next steps for these proposed projects. The proposed peak flow study would meet the intent of Requirement F.2.b)(9) of the Third-term MS4 Permit.

In addition, the SMC has completed, or is in the process of completing, most of the projects in its initial five-year research agenda and is now evaluating future projects for the next five-year period. This analysis is being coordinated with CASQA and the Regional Boards. Finally, the District is also coordinating with the Southern California Coastal Water Research Project (SCCWRP), who facilitates the SMC, to collect data on natural loadings of various pollutants from watersheds throughout Southern California.

Meetings attended were held on: September 11, 2006; December 5, 2006; March 6, 2007, and June 5, 2007. Copies of meeting agendas and of the SMC Annual Project Report are contained in Appendix A.

C.4. California Stormwater Quality Association (CASQA)

CASQA assists the State Water Resources Control Board (SWRCB) and MS4 Permittees throughout California in implementing the federal stormwater regulations. In fulfilling this purpose, CASQA recommends objectives and procedures for stormwater discharge control programs which:

- Are technically and economically feasible;
- Provide significant environmental benefits and protect water resources;
- Promote the advancement of stormwater management technology; and
- Effect compliance with state and federal laws, regulations and policies.

CASQA also holds workshops on important technical issues such as better understanding of monitoring programs and best management practices.

The Permittees have strongly supported CASQA's mission. The Permittees use CASQA's resources to improve compliance programs. Several Riverside County District NPDES staff and Board Members are Committee Chairs of CASQA. Specifically:

- Steve Stump, Board Member since 2004
- Jason Uhley, Legislative Chair since 2003
- Linda Garcia, Monitoring Co-Chair 2004 - 2007

C.5. Integrated Regional Water Management Workgroup (IRWM)

During FY2006-2007, participants in the IRWM included the Permittees, Rancho California Water District, Elsinore-Murrieta-Anza Resource Conservation District, Trout Unlimited, Riverside Lands Conservancy, San Diego State University/Santa Margarita Ecological Reserve, Southwestern Riverside County Multi-Species Reserve, BuRec, Eastern Municipal Water District, Western Municipal Water District, The Nature Conservancy, California Department of Fish and Game, U.S. Army Corps of Engineers (USACE), and Regional Board. Because the upper Santa Margarita watershed was not included in the San Diego Integrated Regional Water Management Plan (IRWMP), the IRWM focused its efforts on the development of an IRWMP for the upper portion of the watershed. The intent of the IRWMP is to pave the way for greater watershed-wide coordination and management of water resources within the Santa Margarita watershed as a whole, as well as adjoining watershed and regional planning efforts.

The regional objectives for the IRWMP include:

- Develop a more reliable and diverse portfolio of water supplies;
- Promote economic, social and environmental sustainability;
- Improve water quality;
- Restore, enhance and maintain habitats and open spaces;
- Promote sustainable floodplain management;
- Promote appropriate recreational opportunities;
- Promote appropriate land use planning;
- Increase stakeholder involvement and stewardship; and
- Maximize implementation of water resources projects.

The IRWMP will also initiate its implementation in a specific funding environment that includes existing state and federal grant opportunities, and local funding programs that will be developed as part of the regional effort. The IRWMP was finalized on July 31, 2007.

Meeting dates with the IRWM include: May 31, 2007, June 13, 2007, June 25, 2007, and July 13, 2007. Copies of meeting Agendas are contained in Appendix A.

D. An Assessment Of Water Quality In The Santa Margarita Region, This Assessment Shall Include Data From The Previous Monitoring Report.

This reporting requirement is addressed in the conclusion of the Monitoring Annual Report (Appendix G).

E. Identification of Water Quality Improvement or Degradation in the Santa Margarita Region

This reporting requirement is addressed in the conclusion of the Monitoring Annual Report (Appendix G).

F. A Prioritization of Water Quality Problems and Potential Sources in the Santa Margarita Region

This reporting requirement is addressed in the conclusion of the Monitoring Annual Report (Appendix G).

G. A Description of Watershed Specific Educational Activities Conducted During the Reporting Period

G.1 Introduction

This section provides an overview of watershed specific education activities conducted by the Permittees during the reporting period Appendix B contains images of most of the public education materials that are described in this section. Impressions, attendance, and other measures of effectiveness relative to these programs are included in Section J (Assessment of Overall Program Effectiveness) of this Watershed Annual Report.

G.1.1 Program Overview

The Permittees have established an ongoing watershed based public education and outreach program known as the "**Only Rain Down the Storm Drain"** pollution prevention program. The specific objectives of the public education program include:

- Fostering a broad public awareness of water pollution concerns;
- Increasing public acceptance of pollution prevention activities to curtail everyday human behaviors that contribute to water quality problems;
- Educating/informing the general public, regulators and key local government and state decision makers on Urban Runoff conditions in Riverside County; and
- Promoting stewardship of local water resources.

The "Only Rain Down the Storm Drain" program implements the public awareness objectives by focusing on three areas of pollutant reduction/prevention:

- Public Behavior;
- Proper Management of Pollutants; and
- Business Specific Education Outreach.

In addition, when attempting to make use of the finite resources available to the Public Education Program, the Permittees use these management goals to ensure that resources are used effectively:

- Focusing on pollutants of concern specific to each region within Riverside County;
- Coordinating public education efforts with adjacent stormwater management programs and other related education programs to share resources, coordinate outreach efforts, and avoid costly duplication of effort; and
- Adapt public education programs and objectives, based on effectiveness analysis, to address changing MS4 programs and objectives.
- Have at minimum, one outreach education partnership with the San Diego Regional Water Quality Board in the Santa Margarita Watershed.

G.1.2. Program Highlights

The public education program was significantly improved this year, Program highlights include:

- The public education program has developed surveys in both English and Spanish to be distributed to the public at community events. The purpose of these surveys is to evaluate the effectiveness of the public education program. The results of these surveys are contained in Appendix B. Two surveys were also developed for the K-3 and 4 - 6 grades education outreach programs. However, the Permittees are currently evaluating the feasibility of this survey effort due to the limited time provided by teachers in the classroom.
- The public education web page continues to be improved.
- The program continues to update brochures and develop outreach programs specific to the needs of the MS4.
- The Home Garden Care Guide was made to appeal to all levels of gardeners, but seems to be a favorite resource among the professional gardener. In order to draw the interest of a wider audience, staff is using materials from the University of Riverside, Riverside Corona RCD, Be Water Wise CD, San Jacinto Watershed Council Guide and the Western Municipal Water District's Guide to Landscape and Water Conservation.
- The "Only Rain Down the Storm Drain" Program is performing a complete enhancement analysis of our current Permittee training programs. The intent is for the Permittees to identify needed enhancements to our training programs within the next fiscal year and begin work on improving the programs. Since the Permittees initiated this effort, CASQA has formed its own Training Committee. The Permittees have opted to continue our enhancement analysis through the CASQA process in order to promote statewide consistency in training materials, methods, and testing. Updates of products from the CASQA Training Committees will be forthcoming in future annual reports.
- As part of the on-going effectiveness evaluation for the municipal training programs, testing has been incorporated into the training for evaluation of its efficiency. In addition, the overall training program was evaluated and is included in The Assessment and Enhancement Analysis of the NPDES Training Program, August 2006 in Appendix B.
- The County hosts a monthly New Employee Orientation to an average of forty new employees. The attendees receive "Only Rain Down the Storm Drain" materials and promotional items. The Toll Free 800 Number, to call to report illegal storm drain disposal, is incorporated into all materials.

G.2 Santa Margarita River Watershed Pollutants of Concern

Based on monitoring data collected to date, the current 303(d) list, and discussions among the Co-Permittees and stakeholders, the following preventative pollutants of

concern were established for the Santa Margarita River watershed. More discussion on the selection of preventative pollutants of concern can be found in the monitoring section of this report. After each identified pollutant, specific BMP outreach activities are identified to address the pollutant:

- Sedimentation associated with Urban Development and Land Uses
    - Specific section on construction, municipal, industrial/commercial and new development training focusing on the need to address sedimentation within the Santa Margarita River;
    - Distribution of dust pans at public education outreach events to promote dry cleaning of drive ways and impervious surfaces;
    - Stormwater and Construction BMP Poster;
    - School/Student program incorporates education on controlling soil erosion;
    - The "After the Storm" brochure; and
    - General Construction Activities brochure.

- Nutrients and pathogens associated with Urban Development and Land Uses
    - Specific section on construction, municipal, industrial/commercial and new development training focusing on the need to address increased nutrients within the watershed;
    - Pet Waste "What's the Scoop" brochure;
    - Home Garden Care workshops;
    - Partnership with SGA Advertising to place pet waste information in pet stores, veterinarian clinics, kennels and pet grooming facilities;
    - Coordination with Riverside County Animal Control Department to distribute "What's the Scoop" and "After the Storm" brochures to families adopting pets;
    - Coordinating with other non-profit animal care advocates;
    - The Agricultural Commissioner assists in educational activities on water conservation, fertilizer management and integrated pest management practices. In conjunction with County Waste Management's Composting Workshop, the "After the Storm" brochure and Household Hazardous Waste flyer is included in the adult informational packet;
    - "Keep Our Water Clean" video to cover proper use of fertilizers as well as excess runoff from sprinklers;
    - Annual National Pollution Prevention Week/Earth Day mailing inserts to inform residents about the problem of stormwater pollution and provide simple pollution prevention activities in gardening;
    - Adult presentations conducted by RCRCD discussing the effects of fertilizers and pesticides on local waterways;
    - The "After the Storm" brochure; and
    - Construction BMP Activities brochure and poster.

- Toxicity Related to Pyrethroid Pesticides

Public Education

- Introduction in FY2006-2007 of a new spray bottle for distribution to the public. The spray bottle includes non-toxic recipes that can be used to control common household pests.
- Distribution of "shelf talkers" in hardware stores describing alternatives to pesticides, proper pesticide use, and proper pesticide disposal. Materials are basically the same as those used in the Our World Our Watershed program.
- Active participation and distribution of outreach for HHW/ABOP facilities to provide free venues to dispose of excess pesticides.
- Distribution of USEPA's "After the Storm" and "Make your home the solution to stormwater pollution" which includes descriptions of BMPs to limit the discharge of pesticides from residential dwellings.
- Distribution of California EPA bookmarks which are brochures that include descriptions of BMPs to limit the discharge of pesticides from residential dwellings.
- Distribution of Water Conservation Guides for Residential areas developed by Southern California Water Agencies and Western Municipal Water District. These materials include discussions of proper pesticide use and alternatives.

Regulatory

- The District, on behalf of the Permittees, has provided input on draft comments by CASQA on the proposed Pyrethroid Working Group Proposal to Address Offsite Movement of Pyrethroids.
- The District, on behalf of the Permittees has specifically requested that CASQA include the Santa Margarita watershed as one of watersheds to be evaluated for offsite movement of Pyrethroids by the Pyrethroid Working Group.

In addition, the District has developed other outreach materials to focus on other pollutants and pollutant causing activities/businesses commonly associated with urban runoff. These additional outreach materials are described in subsections that follow. Section G.7. describes how outreach methods combine to focus on specific pollutants that may exist within the Santa Margarita River watershed. Impressions, attendance, and other measures of effectiveness relative to these programs are included in Section J (Assessment of Overall Program Effectiveness) of this Watershed Annual Report.

G.3 24-hour SMR-Wide Outreach Portals

The Permittees maintain three 24-hour/7 days per week watershed wide portals to receive and distribute information regarding the "Only Rain Down the Storm Drain" program. These portals include a website, 1-800 number, and an e-mail address.

Impressions, attendance, and other measures of effectiveness relative to these programs are included in Section J (Assessment of Overall Program Effectiveness) of this Watershed Annual Report.

G.3.1. Storm Water Protection Program Website

The District operates a website that provides information on how to report illegal dumping, clogged storm drains and lack of curb markers, as well as provide information on upcoming activities, opportunities for public participation in program development and general information about Urban Runoff pollution prevention techniques. The website is located at:

http://www.floodcontrol.co.riverside.ca.us/stormwater/

Some of the District's outreach materials have been scanned into an electronic .pdf format and are available for download. Online Order forms and phone numbers are also available to assist in obtaining information that might not be available online.

The website contains pages specific to the following target audiences:

- General public/residents
- Businesses
- Developers
- Contractors
- Schools and teachers
- Kids page

In addition the website contains links to:

- Assist viewers in locating their watershed
- An online media library
- Materials order form
- 1-800 information to report storm drain pollution
- View an online events calendar

The District tracks the number of hits to its public education website. The website was completely revamped during the previous reporting period and the web-page counter was replaced this reporting period. Results of the webpage counter report are included in Appendix B.

G.3.2. Storm Water toll free 1-800 Hotline

In October 1994 a Toll Free "800" telephone number for reporting suspected Urban Runoff pollution and obtaining pollution prevention information was established. This call line offers easy to understand instructions for connecting to County Environmental Health or Waste Management to obtain grasscycling, composting, or household hazardous waste collection dates and locations. The 24-hour Hotline also allows callers to report clogged catch basin inlets, illegal dumping and other illicit discharge violations. Callers to the hotline are given options in both English and Spanish to seek emergency services if a spill is of a suspicious origin or a safety issue. Finally, the hotline allows people to order public education materials and/or request stormwater presentations for schools or community groups. The Permittees advertise the hotline in all appropriate County telephone directories, public education outreach materials, and in other appropriate venues and locations.

The 1-800 line diverts callers to appropriate Permittee departments based on caller selections. Callers requesting information on pollution collection activities are diverted to either County Environmental Health or Waste Management depending on their specific selection. Callers reporting illicit discharges are directed to County Code Enforcement, who accepts the calls and then re-directs them to appropriate Permittee Code Enforcement Departments. Calls for public education materials or presentations are directed to the District's front desk, and then to the District's Public Education Staff. School presentation inquiries are directed to the MRCD office, which has been contracted to provide education to elementary school students in the SMR. The specific text to the hotline is included as Exhibit A.

The provider of the 1-800 line, Riverside County Communications, tracks the number of incoming calls to the line. This tracking mechanism was discontinued during the past reporting period but restored this reporting period, but still with some problems. The number of Toll Free calls reported tracked during this Fiscal Year were 1,648.

Exhibit A

ONLY RAIN DOWN THE STORM DRAIN POLLUTION PREVENTION PROGRAM TOLL FREE 1-800 LINE DIALOGUE

Thank you for calling the "Only Rain Down the Storm Drain" Pollution Prevention Program. To better serve the needs of our County communities, please listen carefully to the following options:

If this is an emergency, or you wish to report a significant release or threatened releases of hazardous material into the storm drain or elsewhere in the environment, please hang up and immediately Dial 911.

(Si esta llamada es una emergencia o decea reportar desechos de contaminantes peligrosos en las alcantarillas o en el medio ambiente, por favor cuelge y llame 911.)

For water service connection, disconnection, or any other water utility information, call your local water service provider.

To report illegal dumping at residential, commercial, industrial or construction sites, please call Environmental Health at 951.955.8982, or press #1 to be directly connected.

For information regarding Household Hazardous Waste Collection Events, please Press #2.

To report clogged storm drains, please call your local municipal public works department. To report faded or missing "Only Rain Down the Storm Drain" storm drain markers, please press #3.

For General or specific business pollution prevention information or to receive other pollution prevention information please press #3.

(Drop Off Dialogue)

Thank you for your interest in obtaining information on storm drain pollution protection. Basic, construction, industrial, commercial and children's stormwater protection outreach packets are available. For a quick response to your request, please slowly and clearly leave your name, address, city and zip code. Also state the type and quantity of the materials you are interested in receiving. Should you need additional assistance, provide your area code and phone number and someone will contact you as soon as possible.

To inquire about our free stormwater classroom presentations, workshops, youth group activities and other outreach programs, please press #4.

(Drop Off Dialogue)

The "Only Rain Down the Storm Drain" public education program offers classroom presentations, workshops, youth group activities, special event opportunities and other programs. For inquiries for the Temecula or Murrieta area, please press #1 (Drops to Mission Resource Conservation District)

For inquiries in all other Riverside County areas, press 2 (drops to Riverside/Corona Resource Conservation District).

For Grasscycling and composting information or workshops, please PRESS #5. (to 951.486.3200)

For additional assistance regarding our storm drain pollution prevention program during regular business office hours, Monday through Thursday from 7:30 am to 5:30 pm and on Friday from 7:30 am to 4:30 pm press #6.

G.3.3. E-mail

The Permittees also maintain an e-mail address that can be used to report illicit discharges or request stormwater related public information. The e-mail address is:

Flood.fcnpdes@co.riverside.ca.us

E-mails are received by the District's Public Information Specialist and are responded to in most cases within 2 business days when possible.

G.4. Program Coordination with other Stakeholders

The "Only Rain Down the Storm Drain" program has used partnerships to leverage available resources. The District utilizes opportunities to work with Co-permittees, local environmental groups, and other public, private and business organizations to maximize use of existing distribution outlets, events, programs and materials. Impressions, attendance, and other measures of effectiveness relative to these programs are included in Section J (Assessment of Overall Program Effectiveness) of this Watershed Annual Report.

To facilitate statewide awareness of stormwater public education, educate local and state decision makers, and assist in the development of more effective public education outreach programs, the District participates in the following public education committees:

- Public Information Public Participation Committee (PIPP) – A subcommittee of the California Storm Water Quality Association, and

- Western Regional Pollution Prevention Network (WRPPN)

To leverage education outreach resources and coordinate public education activities with other environmental programs, the Permittees closely coordinate and/or have existing partnerships with the following entities/organizations:

- Household Hazardous Waste Information Exchange (HHWIE); This is an eGroup that provides household hazardous waste affiliates the ability to better communicate, share ideas and the latest in legislative rulings.

- California Regional Environmental Education Community Network (CREEC)

A network whose mission is to develop a communication network that provides educators with access to high quality environmental education resources to enhance the environmental literacy of California students.

- Santa Margarita River Watershed Clean Up Group

In coordination with the Riverside County Community Improvement, Riverside County Park and Open Space District, Santa Margarita River Ecological Reserve, Santa Rosa Plateau State Ecological Reserve, the Nature Conservancy and the California Department Fish and Game, the California Coastal Commission's Coast Week Program supports and encourages volunteers, partners and groups to gather for a day to remove trash and debris from the Santa Margarita River watershed.

- In addition, the "Only Rain Down the Storm Drain" program also coordinates with the following Permittee departments to distribute appropriate stormwater education outreach materials:
- Front Counters
- Waste Management
- Public Health Department
- Agriculture Department
- Code Enforcement
- Animal Control
- Economic Development Agency
- County Assessor/Recorder's Office
- Bio-terrorism
- Fleet Services
- Human Resources
- Library System
- County Parks
- County Safety
- Transportation and Land Management. (TLMA)

In general, brochures and promotional items are provided to these departments for distribution in public lobbies, training sessions, through customer interactions and new employee orientations.

Finally, the Only Rain Down the Storm Drain Program also coordinates with the following state and/or local government or business entities to distribute public education information:

- Western Riverside Council of Governments
- South Coast Air Quality Management District
- Santa Rosa Plateau
- Bureau of Reclamation
- Metropolitan Water District
- Lake Elsinore/San Jacinto Watershed Authority
- Eastern Municipal Water District
- Rancho California Water District
- Valley Greeters
- Department of Water Resources Southern District
- Western Municipal Water District

- Business Industrial Association (BIA)
- Caltrans

G.5. Outreach Tools to Change Public Behavior

The "Only Rain Down the Storm Drain" program conducts a range of outreach activities to residents, students, community groups, new home owners, homeowner associations; informing them of how their "everyday activities" may contribute to the pollution of Receiving Waters, and encouraging them to adopt alternatives that will lessen or eliminate pollution-causing behaviors. Program efforts include providing information on pollution prevention techniques and informing residents about the proper disposal of household hazardous wastes, construction materials, used motor oil, pet waste and litter. Public education materials and media emphasize the theme that all citizens have a role to play in reducing and preventing the pollution of Receiving Waters. The goal is to present a clear and consistent message that explains the simple connections between people's everyday activities and their impacts upon Receiving Water quality.

As the public education and outreach program continues to be implemented and enhanced, the Permittees hope to broaden public awareness of Urban Runoff quality problems, promote proper disposal of household hazardous waste and motor oil, encourage illegal discharge reporting, foster good stewardship of Receiving Waters, and take personal responsibility for their actions in preventing pollution.

While public education outreach at events indicates that most people are willing to act in an environmentally responsible manner if given simple ways to change their behavior to avoid polluting our water bodies, some are unaware of the sources of pollution from everyday urban land use. The "Only Rain Down the Storm Drain" program using various media forms to educate the County's population about modified behaviors to prevent stormwater pollution by focusing on residents, general public, students, home gardeners, do-it-yourselfers, mobile businesses, etc. Impressions, attendance, and other measures of effectiveness relative to these programs are included in Section J (Assessment of Overall Program Effectiveness) of this Watershed Annual Report.

G.5.1. Direct Outreach methods

The "Only Rain Down the Storm Drain" program interfaces directly with the public through attendance at community events, school education programs, adult education programs and/or by providing classroom based training. Specific outreach activities, segregated by target audiences, are described below.

<u>General Community Outreach</u>

The "Only Rain Down the Storm Drain" program participates in various community events to ensure that our message is delivered to the largest

possible municipal audience. At these community events, surveys, to assess overall program effectiveness, have been used.

In addition, the "Only Rain Down the Storm Drain" program has partnered with County Environmental Health to ensure that storm drain pollution prevention material is available and distributed at all HHW and Antifreeze, Batteries, Oil and Paint (ABOP) Collection Centers and/or events throughout each of the regions within Riverside County. These events provide free disposal sites for receiving common pollutants that can impair Receiving Waters.

Elementary School Outreach

Elementary (K-6)

The MRCD continues to provide a variety of K-6 education programs for the "Only Rain Down the Storm Drain" program. The K-6 education program includes materials such as the Storm Water Pollution Prevention Patrol workbook, the Fancy Fin hands-on classroom presentation and accompanying coloring book, various word match and crossword activity sheets and videos. A second story line featuring Fancy Fin and her friend Phinnious J. Green (a Pacific Tree Frog) educates students about point and non-point pollution and their effects on the environment and other creatures in the watershed. School materials are offered to all public and private schools in the SMR, as well as to youth groups such as the boy and girl scouts and girls and boys clubs.

Secondary Schools

A video entitled "How to Conduct an Environmentally Friendly Car Wash and Make Money Too" was developed for the "Car Wash Challenge" program. An accompanying flyer is also used which informs students/groups of the potential stormwater problems generated from car wash runoff, and provides practical BMPs to minimize or eliminate contaminated runoff. The original focus of the program was high school clubs. However, after contacting several high schools, it was discovered that car washing fundraisers are relatively rare and revenue deficient in comparison with other high school fund raising activities. Nevertheless, church groups, Boy Scout troops and other organizations do conduct car wash fundraisers. Thus, the scope of the Car Wash Challenge program has been expanded to include these additional fundraising organizations.

Adult Outreach

Valley Greeters is a "Welcoming Wagon" business taking discount coupons, product samples and general vicinity information door to door to new residents and homeowners to the Temecula, Murrieta and Lake Elsinore area. For the past four years, Valley Greeters has included our MS4 materials

(After the Storm; What's the Scoop; Pool, Spa and Fountain Maintenance; and HHW Collection Schedule). This information is accompanied with a handy full size dustpan, shop cloth and vehicle air freshener. Each material and promotional is clearly imprinted with the 1-800 Toll Free number for reporting illegal discharges into the storm drain. Young family members receive a copy of Fancy Finn and a box of crayons for their learning enjoyment.

The "Only Rain Down the Storm Drain" program contracts with the MRCD for public outreach. Stormwater pollution prevention presentations are given to community groups who call and request such services.

Employee workshops are presented at major home improvement stores throughout Riverside County. The workshops include distribution of reading material regarding targeted BMPs to the public through established corporate partnerships (paint, hardware, home show coordinators, home improvement, garden centers, nurseries and pet stores). Employees are informed about stormwater impacts that could occur from the improper application of all types of home and garden hazardous chemicals. The employees are then able to provide information to customers on the proper use and disposal of products that are potential water pollutants. Attendees at the workshop receive "Only Rain Down the Storm Drain" promotional materials to help emphasize the stormwater pollution prevention message. Fixed advertising tools such as point of purchase displays, tear sheets and counter displays have been placed throughout to educate the public directly.

G.5.2 Brochures

Residential: After the Storm; Household Hazardous Waste Collection Schedule, Outdoor Activities; Swimming Pool, Jacuzzi and Fountain Maintenance; and What's the Scoop (Petwaste).

G.5.3 Outreach Materials

In addition to the brochures mentioned above, the program utilizes other effective outreach materials such as magnets, a billboard ad, videos, newspaper supplements, flyers, door knob hangers, calendars, promotional items, workbooks, curriculum, shop rags, shelf talkers, tear sheets, posters and print ads to cultivate interest in the program.

A door hanger is also being utilized to help address problem discharges that are commonly observed in residential settings. The door hanger notifies the recipient that a problem discharge was observed flowing in to the street and offering help by following recommended pollution prevention activities. The door hanger is provided to all cities and is used by various County departments and the NPDES staff when conducting field or site activities/inspections.

G.5.4 Mailing Inserts/Slugs

The "Only Rain Down the Storm Drain" program encouraged advertising the reporting of illegal disposal into storm drains via the use of mail slugs. Although this form of media was successful, County Mail discontinued its availability.

G.5.5 Media Outreach

The "Only Rain Down the Storm Drain" program continues to utilize various mass media to reach the public and promote the stormwater pollution prevention. Special newspaper inserts, flyers, and advertisements help increase public awareness of stormwater pollution and environmental protection.

Our Sixth Edition of a four-page insert called the National Pollution Prevention or P-2 (National Pollution Prevention Week recognization), was distributed Countywide through the PennySaver. The insert included topics on proper disposal of pet waste, pesticide alternatives, motor oil recycling, grass-cycling, pool and spa best management practices, storm drain marking program, stormwater school presentations, general storm drain pollution protection, business stormwater pollution information, HHW collection events, syringe disposal program, composting workshops and motor oil specific recycling locations. The insert is distributed to over 650,500 Riverside County homes generating an increase of calls on the 800 Toll Free Hotline and District IC/ID investigations.

Billboard availability in the Santa Margarita area is difficult to attain, since long term contracts are being secured by the area casino properties.

G.5.6. Cooperative Used Oil Program

The Western Riverside Council of Governments (WRCOG) is responsible for administering the Used Oil Block Cycle Grant on behalf of ten cities within WRCOG's boundaries. These cities include Banning, Beaumont, Canyon Lake, Lake Elsinore, Murrieta, Norco, Perris, Riverside, San Jacinto and Temecula.

The objective of the Used Oil Block Grant is to make it convenient for Do-It-Yourselfers (DIYers) to recycle their used oil and to make it easy for them to find a Certified Center accepting used oil. In order for these centers to be certified, they need to apply for certification with the California Integrated Waste Management Board (CIWMB). As a grant recipient, WRCOG contacts non-certified centers in the jurisdictions to interest them in becoming certified used motor oil collection center. The goal is to see a significant decrease in the amount of illegally dumped motor oil by adding more oil collection centers within close proximity to users.

Through the same grant funding source, WRCOG also provides used oil containers for distribution to DIYers who need proper containers for automotive fluids. Through WRCOG efforts, all certified centers in the County are in compliance to state and local mandates.

The Storm Drain Pollution Prevention Program assists WRCOG's efforts by making available our MS4 information and supporting promotional materials for distribution to their targeted groups.

At various venues, WRCOG staff obtain participant responses to a ten question survey. The survey examines the public's understanding on:

- used oil recycling,
- used oil drop-off locations, and
- curbside programs and other local recycling programs.

The program also maintains an English and Spanish 800 hotline that can be used to get answers to any recycling question a resident may have regarding, "where is the nearest Certified Center located?" and "where can I find a used oil container?" The phone number is printed on all distributed materials including the oil containers.

G.5.7 Cleanest County in the West Program

Through another grant funding source, WRCOG created the "Cleanest County in the West" program to address issues relating to litter and illegal dumping. The program was designed to assist jurisdictions in meeting the 50% diversion goals mandated by Assembly Bill 939. AB 939 was a state mandate signed in 1989 that required cities to reduce their waste by 50% by the year 2000.

At the end of the elementary school assemblies, WRCOG provides the school with two recycling containers for the collection of cans and bottles. During the 06/07 school year, over 18,000 students and 600 teachers have attended the assemblies. Each student receives an environmental activity book and an application to join the Riverside County Kids Recycle Club where they will receive a quarterly newspaper. This club has over 200 members.

Like the "Only Rain Down the Storm Drain" program that promotes litter reduction and recycling throughout the SMR, WRCOG also participates in events to promote litter reduction and beverage container recycling. These events provides an opportunity to assess how informed the local community is regarding recycling and to distribute brochures and informational flyers that will assist in locating the nearest recycling center. During these events, promotional items made from recycled content are also distributed to show how used items such as money can be recycled into new items such as a

pencil, a promotional product first used by the "Only Rain Down the Storm Drain" program. This particular promotional item especially increased the interest of the people visiting our booth and demonstrated how almost anything can be recycled and reused.

G.6. Outreach tools specific to Business

The "Only Rain Down the Storm Drain" program conducts a number of outreach activities to businesses informing them how their "everyday activities" may contribute to pollution of Receiving Waters, and encouraging the use of alternatives that will lessen or eliminate pollution. These activities include providing information on pollution prevention techniques and informing businesses about the proper disposal of wastes. Public education materials and media emphasize the theme that all businesses have a role to play in reducing and preventing water pollution. The goal is to present a clear and consistent message that explains the simple connections between a business' everyday activities and their impacts on water quality.

Originally, the business education program mainly consisted of the development and distribution of formal BMP guidance and outreach to business associations. The program has now expanded to include direct outreach to businesses through classroom formats and advertising in business trade papers and providing exhibits at various business specific symposiums.

Descriptions of the current business-specific outreach tools implemented by the Permittees are provided below. Impressions, attendance, and other measures of effectiveness relative to these programs are included in Section J (Assessment of Overall Program Effectiveness) of this Watershed Annual Report.

G.6.1. Direct Business Outreach Activities

The "Only Rain Down the Storm Drain" program partners with various entities to provide training and education. Currently, the District has contracted with AEI-CASC Engineering, a consultant who provides the Permittees internal education programs to train developers and consultants regarding the new WQMP/SUSMP requirements for Riverside County. The District has partnered with Riverside/Corona RCD, to develop a Water Quality Design class that focuses on sub-regional solutions and low impact development. This class was offered for the first time through UCR extension in October 2005. Additionally, the District presented the Water Quality Design class at the Construction Storm Water Compliance Workshop hosted by the Building Industry Association of Southern California (BIA/SC) on March 22, 2006. The workshop focused on state and municipal construction requirements for contractors, developers, and consultants.

Through the Compliance Assistance Program (CAP), a partnership with County Environmental Health, restaurants and businesses that handle hazardous wastes are reviewed for potential water pollution impacts from

their activities. Each business is provided with pollution prevention public education outreach information specific to their activities.

Workshops are presented at major home improvement stores throughout Riverside County. The workshops include a handout educating the store's employees about water quality impacts that could result from improper application of paint, pesticides or fertilizers. Attendees at the workshops also receive "Only Rain Down the Storm Drain" information and promotional items to help highlight the water protection message. Employees are then able to provide information to customers on the proper use and disposal of products that are potential water pollutants. Point of purchase displays, tearsheets and counter displays have been installed at strategic locations to educate the public directly.

Each new business trade in Riverside County that is listed in the Inland Business Press newspaper is provided with an "Only Rain Down the Storm Drain" Pollution Prevention packet.

G.6.2. Brochures

Commercial: After the Storm; Food Facilities; Outdoor Cleaning Activities and Non-Point Source Discharges; Automotive Maintenance & Car Care. Note: (Staff is revising the Outdoor Activity brochure to include broader examples of urban pollution causing activities such as power washers and mobile vehicle maintenance operators).

Industrial: After the Storm; Outdoor Cleaning Activities and Non-Point Source Discharges; and Your Facility May Need a Storm Water Permit.

Construction: After the Storm; Outdoor Cleaning Activities and Non-Point Source Discharges; General Construction & Site Supervision.

G.6.3. Posters

BMP posters for automotive, food service establishments (available in Spanish) and construction employees are available. The posters address activities associated with the automotive repair industry and the food/restaurant industry that may pose a threat to water quality. There are also two new posters for the Fueling Stations and Service Bay Service centers. All the posters recommend stormwater BMPs and are designed to serve as informative and attractive visual reminders for employees.

G.6.4. Media Outreach

In March of 2007 a full-page ad was placed in the Inland Business Press newspaper to draw the attention of Inland Empire businesses whose urban runoff activities might be threatening local water quality. The ad also provided links to the District's and CASQA's website for more detailed BMP information.

G.6.5. Supplemental Environmental Projects (SEP)

There were no SEP related projects during 2006-2007.

G.7. Outreach tools specific to Pollutants

The "Only Rain Down the Storm Drain" program conducts a range of outreach activities focusing on reducing the discharge of water pollutants. These outreach activities address residential, business, municipal, state, and federal sources of pollutants. Education materials explain how "everyday activities" can be potential sources of water pollutants, and encourage adoption of alternative approaches that will reduce or eliminate water pollution. Program efforts include providing information on pollution prevention techniques and proper disposal of pollutants. Public education materials and media emphasize the theme that all citizens/businesses have a role to play in reducing and preventing water pollution. The goal is to present a clear and consistent message that explains the connections between a business' everyday activities and their impacts upon water quality.

Each subsection that follows identifies how the outreach materials previously described address specific potential pollutant sources in the SMR. Impressions, attendance, and other measures of effectiveness relative to these programs are included in Section J (Assessment of Overall Program Effectiveness) of this Watershed Annual Report.

G.7.1 Use of pesticides, fertilizers, and herbicides.

A. The Riverside County Agricultural Commissioner's Pesticide Applicator's License renewal information package includes materials on the proper use of pesticides and offers information on training workshops. The license renewal process requires continuing education of applicants and detailed record keeping of pesticide applications. Permittee employees that are responsible for the application of pesticides are encouraged to obtain and maintain credentials as Certified Applicators and/or licensed Pest Control Advisors.

B. The "Home Garden Care Guide" is being revised to attract the interest of the general public and amateur gardener. The guide will also be updated to include Integrated Pest Management and plant selection and materials from the State Water Resource Control Board, Central Contra Costa IPM Outreach Program, University of California and The Orange County Storm Water Program. All the materials selected offer alternatives to using pesticides, herbicides and fertilizers.

C. The "Keep Our Water Clean" video covers proper use of pesticides, fertilizers and herbicides as well as excess runoff from sprinklers.

D. A multi-agency effort, the National Pollution Prevention Week two-page booklet informs residents about urban runoff and water quality protection, household hazardous waste disposal collection events, recycling and composting.

E. The "Only Rain Down the Storm Drain" adult presentations conducted by MRCD discuss the effects of pesticides and fertilizers on local waterways. The materials distributed following the presentation promote alternatives to pesticide use in the yard and garden.

F. The 2006 Environmental Calendar includes a wide array of water quality protection information. It is designed to attract adult audiences by listing BMPs, scheduled special events, household hazardous waste collection sites, used oil collection sites, composting workshops, citywide clean ups, and each of the watersheds along with geographical information. Throughout the calendar the main message is "Only Rain Down the Storm Drain" and the hotline number to call for additional home garden care information.

G. Employee workshops are presented to staff from major home improvement stores throughout Riverside County. This information is then distributed to the public via the shelf talkers accessible to the public or when an employee is addressed with a question. The workshops include information on BMPs for pesticide and fertilizer application, use, and storage to prevent water pollution.

G.7.2 Educate/inform on the negative impacts from littering and improper waste disposal.

A. The brochure "*Household Hazardous Waste - A Guide For Proper Disposal Of HHW And The Use Of Environmentally Friendly Products*" informs residents of the effects of improper disposal of household hazardous waste (HHW) and offers recipes for less toxic alternatives to commonly used household products. This brochure is currently in revision for updating contacts, phone numbers and website links.

B. Through classroom activity books, work sheets, coloring books and presentations, students are taught to put trash in its proper place, to never throw hazardous products in the trash, and to dispose of HHW at an HHW collection event.

C. All "Only Rain Down the Storm Drain" brochures and promotional items support and encourage residents to report illegal dumping to the "Only Rain Down the Storm Drain" toll-free phone number. The design of the dual picture frame magnet was changed to ensure a more practical and informative promotional that would be utilized.

D. The MRCD adult presentation discusses the various pollutants of concern that contribute to water pollution – including trash and debris – and reminds the public to always pick up waste and dispose of it properly.

E. A door hanger is available informing residents about the effects of improper waste disposal and encourages them to participate in simple pollution prevention activities.

F. Car litter bags.

G. Portable ashtrays.

G.7.3 Educate/inform on impacts from dumping pollutants into MS4s.

A. The *"Storm Water Pollution - What You Should Know"* brochure informs residents of the negative environmental impacts caused by pollutants allowed to enter MS4s.

B. The *"Keep Our Water Clean"* video and public service announcements (PSAs) inform residents about the problem of water pollution and describe pollution prevention activities.

C. The school program stresses the message of never dumping anything into a storm drain. Both the Santa Ana Classroom activity book and the "Fancy Fin" presentation specifically address this issue.

D. MRCD makes efforts to organize volunteer groups for catch basin marking events throughout the Santa Margarita Region. The durable and colorful storm drain inlet marker reminds residents to NEVER POUR ANYTHING DOWN A STORM DRAIN.

E. The *"Only Rain in the Drain"* song, produced by the "Only Rain Down the Storm Drain" program for the elementary school education program, also addresses the improper dumping issue.

F. The MRCD adult presentation addresses the issue of improper disposal of pollutants into storm drains and advises residents that storm drains connect directly – without treatment – to local waterways.

G. The "2006 Environmental Calendar" contains informative articles to remind users to keep all wastes out of the storm drain system, and more specifically to remember the "Only Rain Down the Storm Drain" slogan.

H. The door hanger informs residents about the environmental effects of disposal of pollutants into storm drains, encourages them to

follow simple pollution prevention activities and curtails illegal dumping behavior.

I. Employee workshops are presented at major home improvement stores throughout Riverside County, so that employees can properly share with the public the safe disposal of hazardous waste when an employee is asked. The workshops mention that paints or paint-related products should never be disposed of in a storm drain or gutter. Tear sheet displays are also placed near the check-out registers that list the HHW collection schedule.

G.7.4 Educate on impacts from gasoline, fuel oil, and oil and grease.

A. The "*Automotive Maintenance & Car Care*" BMP brochure identifies recommended BMPs that address the problem of gasoline, oil and grease entering into storm drains.

B. Nearly all "Only Rain Down the Storm Drain" brochures, utility inserts, advertisements, the school program, and video PSAs provide information on the water quality impacts from improper disposal and spills from gasoline, oil and chemicals in a general context.

C. The "Keep Our Water Clean" video specifically covers the topic of grease and oil from vehicles.

D. The "Only Rain Down the Storm Drain" program works cooperatively with the Permittees' motor oil recycling programs to distribute information on the "why" and "how to" of used motor oil disposal. The motor oil recycling programs actively distribute the "Only Rain Down the Storm Drain" materials in conjunction with their outreach efforts since both programs are working toward the same goal of environmental protection through pollution prevention.

E. The new "*What you should know for . . . Outdoor Cleaning Activities*" brochure informs customers that vehicle fluids pose a threat to local waterways and groundwater resources and provides BMPs to keep these pollutants out of the storm drains. This brochure is being revised to include power washing activities and additional MS4 Permit requirements.

F. The *"Environmental Calendar"* provided a full page section on recycling motor oil. The calendar included information on the environmental problems spilled motor oil can cause. The State's 1-800-CLEANUP toll free number is provided to locate the nearest motor oil collection center in Riverside County. The calendar also lists the State's Clean Up Website at www.1800cleanup.org.

G. The Environmental Health HHW collection schedule is provided with stormwater related materials and promotional items. The

schedule covers the times, dates and locations of both temporary and permanent facilities from September through June. Their website is: www.rivcoeh.org.

G.7.5 Educate/inform on impacts from airborne particles.

A. The County of Riverside Employee Rideshare, which encourages employees to carpool, vanpool, use transit, cycle or walk to work, has a high employee participation rate. Also, the County actively supports the use of zero/low emission vehicles. The County's Fleet Services includes a variety of alternative vehicles including CNG, propane, electric and methanol powered vehicles.

B. Several County facilities are installing alternative fuel fueling stations to expand the use of alternative fuel vehicles. This is a direct result of the County Board Policy to use alternative fuel vehicles as the "first choice" when purchasing or leasing vehicles.

C. The County of Riverside is an active member of the Clean Cities Coalition and provides financial support for various clean air efforts/activities throughout the County.

D. The County also partners with the South Coast Air Quality Management District and their highly successful Lawn Mower Exchange Program.

G.7.6 Educate on the need to keep stormwater from contacting potential contaminants.

A. The "After the Storm" brochures inform residents about keeping stormwater from contacting potential contaminants and explains pollution prevention activities. It also advises residents to keep common water pollutants from entering our storm drains.

B. The *Automotive Maintenance & Car Care*, *The Food Service Industry,* and the *General Construction & Site Supervision* BMP brochures advise facility and site operators to properly manage sources of water pollutants and prevent polluted stormwater from entering storm drains. The brochures also inform owner/operators that local ordinances strictly prohibit the discharge of pollutants to the MS4 or local waterways without a permit. Each of these brochures has a companion poster.

G.7.7 Educate on the clean-up and proper disposal of pet waste.

A. The "What's the Scoop" and Storm Water Pollution…What You Should Know" brochures address the need to pick up animal waste and to dispose of it properly.

B. The school activity book and the "Fancy Fin" presentation discuss the proper disposal of pet waste.

C. The "Keep Our Water Clean" video also addresses the topic of proper disposal of pet waste and the impacts to our waterways.

D. The "Only Rain Down the Storm Drain" adult stormwater presentation discusses the hazards and the proper disposal of pet waste and includes a project slideshow showing the potential impacts of improper disposal. The slide shows – from a distance – small yellow flags marking pet waste deposits in what is obviously a very popular dog walking area.

E. The Pollution Prevention Week is recognized in a flyer type informational and is released every September. Along with other useful BMP's, the flyer has an article that specifically addresses pet waste under the article "*What's The Scoop . . . Tips For A Healthy Pet And A Healthier Environment*".

F. The Earth Day flyers distributed every April contains an article on the health hazards of pet droppings.

G. The *"2006 Environmental Calendar"* reminds us to always "pick up animal waste". The accompanying message informs residents of the effects of pet waste on local waterways.

H. The District does not allow the disposal of pet waste or other trash within its MS4 facilities. Signs have been installed at access gates to discourage illegal dumping and encourage reporting thereof.

G.7.8 Develop programs for landowners on erosion and sediment control practices.

A. The " *After the Storm*" brochure and the school program address the topic of controlling soil erosion.

B. The "*After the Storm*" brochure identifies erosion and sediment as a stormwater pollutant.

C. The "Only Rain Down the Storm Drain" program continues to work cooperatively with MRCD to offer workshops on the topic and has conducted additional workshops for the needs of the stormwater program.

D. The "Only Rain Down the Storm Drain" program adult stormwater presentation was modified to specifically address soil erosion as it relates to the Santa Margarita Region and what homeowners and businesses can do to minimize soil erosion.

G.7.9 Cover contaminants and prevent runoff through polluted areas.

A. The urban stormwater runoff brochures for the restaurant, automotive and construction industry include specific BMPs to cover outside work areas; keep dumpster lids closed; prevent run-on through work and material storage areas; cover exposed stockpiles; avoid wash down of paved surfaces that drain to storm drains; and many other BMPs that help prevent pollutants from entering the storm drains.

B. The industrial/commercial training workshop titled, "NPDES Industrial/Commercial Facilities Inspection Training" includes specific segments on the covering of outside materials to prevent contaminated runoff. The target audience for this workshop is Permittee staff responsible for conducting NPDES Urban Runoff inspections of industrial/commercial facilities.

G.7.10 Educate municipalities/agencies on the need for vehicle inspections.

A. As part of the Permittee employee-training program, departments with vehicle management responsibilities have been instructed to inform employees about the need for vehicle inspections and have been provided with a complete training package to help in this area. Included in the training information are brochures and posters that Fleet Services personnel have distributed at garage/work sites. Also, air fresheners clearly imprinted with the "Only Rain Down the Storm Drain" logo are provided to County Fleet Services Department for use in all County vehicle cars.

B. Permittee departments are also encouraged to use alternative fuel vehicles that not only help reduce vehicle emissions but also, in some cases (*e.g.*, electric vehicles), eliminate the use of motor oil and antifreeze. The County highly encourages its departments to convert to these types of vehicles whenever possible.

C. The Permittee employee training workshops cover such topics as inspecting vehicles and equipment for fluid leakage.

H. A Description of all Area-Wide and Watershed-Based Activities Conducted During the Reporting Period.

H.1. Introduction

This section provides a summary of area-wide and watershed-based activities that were conducted during the reporting period, but not described elsewhere in this report. Due to the small percentage of urbanization and small population within the SMR, the Permittees leverage resources by implementing several regional programs. These programs are both cost effective and protective of water quality.

H.2. Permittee Management Activities

H.2.1. Management Steering Committee (MSC) Meetings

The Permittees established the MSC to address Urban Runoff management policies for the Santa Ana Region (SAR) and SMR and to review and approve revisions to the DAMP and the SAR and SMR Implementation Agreements. In addition, the MSC facilitates coordination with related water quality management programs and monitoring and establishes positions relative to legislative and regulatory initiatives. The MSC consists of city managers or equivalent representatives from each of the Co-Permittees and an executive-level representative from the County. The General Manager-Chief Engineer of the District participates on the MSC as Chair. The District provides staff support to the MSC. The MSC meets quarterly or as determined by the Chair. MSC meeting agendas and minutes are included in Appendix A.

H.2.2. Summary of Technical Advisory Committee (TAC) Meetings

A TAC has been established consisting of representatives formally appointed by the city manager or equivalent of each Permittee. The purpose of the TAC is to coordinate the implementation of the DAMP and overall MS4 Permit compliance program. The TAC members also provide technical assistance and support to facilitate coordination with related water quality management programs and monitoring and to respond to legislative and regulatory initiatives. The District chairs and provides staff support to the TAC. TAC meeting agendas and minutes are included in Appendix A.

H.2.3. Summary of Permit Development Meetings

Work Groups are established by the TAC to oversee the development and implementation of the DAMP program components, as necessary. The Work Groups include Permittee representatives and may also include industry representatives, representatives of environmental special interest groups, and other stakeholders as appropriate. Work Groups have been established to guide the following program components:

- Program Implementation / Public Education
- New Development/Redevelopment

- Construction
- Industrial and Commercial Facility Compliance
- Monitoring
- Effectiveness Analysis

On October 5, 2006, SMR and SAR Co-Permittees facilitated a meeting to continue discussion of WQMP implementation issues and experiences. Attendees included representatives from Permittee planning and engineering departments. The Permittees developed a Frequently Asked Questions (FAQ) committee to facilitate consistent implementation of the WQMP. The FAQ was completed on October 10, 2006 and is included in Appendix A. The WQMP meeting is anticipated to be held as needed, but at least once a year.

Because of the small number of Permittees subject to the Third-term SMR Permit, multiple work group topics are often covered in a single meeting. Meeting dates to discuss these topics during the reporting period included: August 10, 2006 and October 26, 2006. Available Work Group meeting agendas and notes are included in Appendix A. Please note that agendas and meeting notes are not commonly prepared for these meetings.

H.2.4. Summary of Santa Margarita River Watershed Meetings

The SMR Permittees schedule at least one annual meeting with the San Diego County MS4 Permittees within the Santa Margarita River watershed, Camp Pendleton, and others to discuss land use planning, discuss monitoring data and potential management measures to target Focus Area Constituents of Concern, exchange ideas of how to address sources of Focus Area Constituents of Concern and evaluate effectiveness of actions, collaborate with water districts in an effort to reduce irrigation water runoff and consider grant applications to coordinate and prioritize water quality projects that address Focus Area Constituents of Concern. The past fiscal year several meetings have been coordinated through the SMREMT.

The Permittees partner with the Bureau of Land Management and other stakeholders in the Santa Margarita watershed to develop water quality models of the Santa Margarita River watershed to help assess pollutant problems and sources.

Additional coordination meetings have also occurred through other workgroups, such as coordination meetings for the Lagoon TMDL effort, or as a separately called meetings, as appropriate.

Meeting dates of this group, or activities coordinated with this group during the reporting period occurred on: August 8, 2006, August 15, 2006, October 2006, November 15, 2006, January 16, 2007, January 17, 2007, February

2007, March 2007, May 2007, and June 12, 2007. Meeting agendas and notes, as available, are included in Appendix A. Please note that meeting notes and agendas are not regularly prepared for many of these meetings.

H.2.5. Public Involvement

All major permit compliance programs were developed during the FY 2004 - 2005 period, therefore, there were no significant revisions to the DAMP or SMR programs warranting public involvement. However, the Permittees hold the following open meetings to facilitate public involvement.

H.2.5.1. Open Meetings

TAC meetings are scheduled monthly and are open to the public. The TAC meetings are described in Section H.2.2.

The Bureau of Reclamation, on behalf of the SMREMT has held several publicly noticed meetings to discuss SMR watershed issues and priorities for watershed efforts.

Further, stakeholders provided for public notices, open meetings, and a public comment period during the development of the IRWMP.

H.3. Budget

Expenditures identified below reflect costs incurred by the District for implementing its own NPDES program and to implement the regional watershed programs. The District does not track its direct implementation costs separately. Nor does it track costs separately for many permit provisions. Costs are not directly tracked for the asterisked Program Elements identified below.

Future compliance costs could increase significantly to address TMDL monitoring requirements in future fiscal years.

Program Element	Fiscal Year 2006-2007		Fiscal Year 2007-2008	
	Capital Expenditures	O&M/Admin Expenditure	Capital Expenditures	O&M/Admin Expenditure
Program Management	N/A	$300,964	N/A	$439,800
Annual Fee for MS4 NPDES Permit	N/A	0	N/A	$4,000
Implementation Agreement Shared Cost	N/A	N/A	N/A	N/A
Construction Inspections*	N/A	~$10,000	N/A	~$10,000
Development Planning*	N/A	N/A	N/A	N/A
Industrial and Commercial Inspections	N/A	N/A	N/A	N/A
Illicit Connections & Illegal Discharges Program	N/A	N/A	N/A	N/A
Municipal Facilities and Activities	N/A	N/A	N/A	N/A
Public Education & Outreach	N/A	$63,547	N/A	$71,840
Monitoring Program	N/A	$78,251	N/A	$148,720
Other	N/A	$0	N/A	$0
Contributions to Other Programs	N/A	$121,725	N/A	$108,500
Total	**N/A**	**$574,487**	**N/A**	**$782,860**

A description of the sources of funds that were utilized during the previous fiscal year and the sources of funds proposed to meet the necessary expenditures for the subsequent year, including legal restrictions on the use of such funds are as follows:

Source of Funds	Capital Expenditures	Percent of Total Program Funding	Restrictions on Use (if applicable)
Santa Margarita Watershed Benefit Assessment Fund	$384,000	56%	District NPDES compliance costs, excess funds used to fund regional NPDES activities.
Santa Margarita Watershed Permittee Implementation Agreement	$284,932	41%	Regional NPDES Compliance Programs.
Zone 7 Ad-Valorem Tax Revenue	~$10,000	1.5%	Costs associated with District's compliance with Municipal Construction component of Board Order R9-2004-001.
Developer Development Review/Plan Check Fees	Unknown	Unknown	Costs associated with review of proposed developments in the unincorporated County for compliance with the Development Planning provisions of Board Order R9-2004-001.
Spending Against Reserves	$0	0%	District NPDES Compliance Costs
Miscellaneous Revenue	~$10,000	1.5%	Interest, Other Misc.
TOTAL	**$688,932**	**100%**	

Additional Comments/Information:

The Permittees are working with other stakeholder groups to leverage funds for regional planning objectives including:

Stormwater Monitoring Coalition – The SMR Permittees are partnering with other participants in the Southern California Coastal Watershed Research Project, Southern California Counties and stakeholders to fund monitoring projects to address high priority water quality issues including development of an appropriate bioassessment metric, determining natural background concentrations of several key pollutants in Southern California watersheds, developing numeric criteria for addressing hydrologic conditions of concern, and funding a lab intercalibration study.

Santa Margarita Executive Management Team – Partnering with the Bureau of Land Management and other Santa Margarita watershed stakeholders to develop water quality models of the Santa Margarita Watershed to help assess pollutant problems and sources within the Santa Margarita Watershed.

Mission Resource Conservation District – Partnering with stakeholders in the SMR through the MRCD to implement watershed education, monitoring, and clean up programs.

Santa Ana Watershed Project Authority – Jointly fund a low impact development (LID) BMP testing and demonstration facility for southern California. The facility will be a retrofit of the District's compound in Riverside. Data collected from the facility will be used to update the BMP Design Manual, develop numeric criteria for hydromodification, and provide data for statewide efforts to better define the effectiveness of LID BMPs. The facility will also serve as a regional demonstration facility for southern California MS4 Permittee groups. Additional information regarding this project is available in the Special Project's section of the Monitoring and Reporting Annual Report (Section G).

Southern California Coastal Watershed Research Project – Jointly fund a southern California wide study of hydromodification of southern California streams and assess possible mitigation measures. Additional information regarding this project is available in the Special Project's section of the Monitoring and Reporting Annual Report (Section G).

H.4. Municipal

Under the prior SMR Permit, the Permittees developed a Municipal Facilities Strategy to identify BMPs for activities conducted at municipal facilities. The municipal facilities of concern identified by the Permittees included maintenance yards, vehicle and equipment maintenance areas, waste transfer stations, corporation and storage yards, and parks and recreational facilities. In addition, the Permittees identified BMPs for street sweeping, catch basin cleaning, landscape and swimming pool maintenance activities, MS4 maintenance activities, and the application of pesticides. The Municipal facilities strategy was incorporated into Chapter 5 of the DAMP as part of the permit update process. The following table updates the Public Agency Facilities Matrix contained within the DAMP.

H.5. Update Public Agencies Facilities Matrix

Table H-3 lists the types and numbers of municipal facilities operated by the Permittees.

Table H-3. Public Agency Facilities Matrix

Permittee	Corporate Yards	Parks & Recreation Facilities	Warehouses	Fire Stations	Police Stations	Hazardous Materials Storage	Animal Shelters	Swimming Pools	Water Treatment Facilities
District [a]	--	--	--	--	--	--	--	--	--
County	3	3	--	10	--	1	--	--	--
Murrieta	1	47 [d]	--	4	1	--	--	1	--
Temecula	1	36	--	4 [b]	2 [c]	--	--	2	--

[a] The District have no municipal facilities, other than MS4, in the Santa Margarita Region.

[b] Although within city limits, two of these stations are operated by the City of Temecula, and two are operated by Riverside County Fire Department.

[c] Although within city limits, these stations are operated by the Riverside County Sheriff's Department.

[d] There are forty-four (44) parks and three (3) recreational facilities within City of Murrieta limits.

H.5.1. Updated Drainage Maps

The updated drainage map is included in Appendix I of this report and Appendix D of the DAMP. The drainage map is in GIS format and identifies all receiving waters, all CWA section 303(d) impaired receiving waters, existing and planned land uses, MS4s, major highways, jurisdictional boundaries, and industrial and commercial facilities, municipal sites, and residential areas.

H.6. Industrial/Commercial

The industrial and commercial program includes the implementation of the Compliance Assistance Program (CAP), which makes use of existing County Department of Environmental Health site inspections. As the responsible Certified Unified Program Agency (CUPA) in Riverside County, the County Department of Environmental Health is responsible for regularly inspecting all sites within the County that handle hazardous waste. The County Department of Environmental Health also inspects all food service restaurants (approximately 237 facilities) within the SMR at least annually.

Revisions to the inspection program requirements contained within the Third-term SMR Permit expanded the scope of the overall commercial/industrial inspection program beyond the ability of the CAP to address. Each municipal Permittee now implements a supplemental inspection program for facilities not covered by the CAP. In addition, the Third-term SMR Permit required inventories/databases of facilities, prioritization of industrial and commercial sources relative to the potential to impact water quality, and specified inspection frequencies based upon facility priority.

The revised industrial and commercial sources program continues to have both regional and local jurisdiction components. Although the overall industrial/commercial inspection program has grown beyond the CAP, the CAP still addresses most of the facilities identified in the Third-term SMR Permit. With its low overhead cost, it remains a cost effective approach to mitigating the impacts of industrial and commercial facilities on the MS4 and Receiving Waters.

H.6.1. CAP Summary Report

Under the CAP, County Department of Environmental Health inspectors added a stormwater compliance survey to their regular inspection process. Completed surveys are forwarded to the appropriate Permittees for their records, review and further action, if necessary. The CAP industrial and commercial program has been an effective element of the DAMP. Individual inspection results are contained in each of the Permittee's Annual Reports. Section J includes a summary table identifying the total number of facilities inspected under the CAP.

H.7. Illicit Connections/Illegal Discharge (IC/ID) Activities

H.7.1. Hazmat Response Teams

The HazMat Emergency Response Team is a partnership program with combined efforts from the Riverside County Fire Department and the Hazardous Material Branch of Environmental Health. The HazMat Response Team is staffed daily by firefighters/HazMat specialists at two separate locations. Hazmat 34 is stationed at the Winchester Fire Station and Hazmat 81 is stationed at the Palm Desert Fire Station. The Hazmat Team oversees the NPDES program for the County Fire Department's fire stations and facilities and provides training to the employees of the Fire Department. (See Appendix C, for detailed information regarding HazMat Team Activities.).

H.7.2. Complaint Call Summary Logs

As described in Section G.3.2, an "800" telephone number has been established to report activities suspected of polluting Urban Runoff. The total number of calls received on the 800 Line is summarized in Section J.1. Please note that hang-ups or disconnects are not included.

H.7.3. Watershed Clean-Up Event Summary

Permittee staff participated with other public agencies and community organizations in the annual Santa Margarita Watershed Cleanup Day to remove trash and debris from the area watercourses. Following the cleanup activities, the "Only Rain in the Storm Drain" program conducted outreach to the volunteers at the post-event barbecue. Specific quantities are identified in Section J.1.

H.7.4. Household Hazardous Waste/Antifreeze, Battery, Oil and Latex Paint (HHW/ABOP)

One of the principal components of the Permittees' source control efforts are the HHW and ABOP collection programs conducted by the County's Environmental Health Department. The goal of these programs is to provide convenient alternatives to illegally disposing of wastes into the MS4. Specific quantities are identified in Section J.1.

H.7.5. Integrated Pesticide Management

The Permittees encourage the use of integrated pesticide management measures through coordination with the County Agriculture Commission.

H.8. Training Summaries

This section describes the Permittee training programs jointly funded by the Permittees. Tables of attendance are provided in Section J.1 of this report. Training was provided by AEI-CASC and Brown and Caldwell, with an overall training program evaluation performed by Camp, Dresser and McKee (CDM). The training

programs were revised to include modules specifically addressing Constituents of Concern which includes preventative BMPs for nutrients, bacteria and sediment due to 303(d) listed pollutants in the SAR and SMR. Appropriate BMPs were identified and discussed for each training area.

H.8.1. Construction

In compliance with R9-2004-001, nine (9) Construction training seminars were held on the following dates: October 2, 2006, October 10, 2006, October 12, 2006, October 16, 2006, October 17, 2006, October 18, 2006, April 24, 2007, April 30, 2007, and May 3, 2007. The overall training attendance sheet and training flyer are included in Appendix D.

H.8.2. Industrial/Commercial

In compliance with the SMR Permit, five (5) Industrial/Commercial training seminars were held on the following dates: October 3, 2006, October 19, 2006, October 23, 2006, April 18, 2007, and April 30, 2007. The overall training attendance sheet and training flyer are included in Appendix D.

H.8.3. New Development

In compliance with the SMR Permit, four (4) New Development training seminars were held on the following dates: October 3, 2006, October 23, 2006, April 16, 2007, and April 25, 2007. The overall training attendance sheet and training flyer are included in Appendix D.

H.8.4. Municipal

In compliance with the SMR Permit, six (6) Permittee training seminars were held on the following dates: October 2, 2006, October 16, 2006, October 17, 2006, October 18, 2006, April 16, 2007, and May 1, 2007. The overall training attendance sheet and training flyer are included in Appendix D.

I. Recommended Activities to be Conducted Jointly by the Permittees to Address the Identified Water Quality Problems.

The Permittees have evaluated the effectiveness of the revised programs and are proposing the following modifications to Permit Compliance Progams and/or studies to address identified water quality problems.

The Permittees have determined that Monitoring and Reporting Program for the 2004 SMR MS4 Permit does not appropriately apply the TRIAD method as specified in the 2004 Model Monitoring Program Guidance developed by the Stormwater Monitoring Committee. Specifically:

1) The TRIAD approach (combined analysis of bioassessment, chemistry and toxicity data) as described in the SMC guidance was intended to assess the status of habitat conditions during dry weather flow conditions only as bioassessment data is only valid during static dry weather conditions. However, the SMR Permit Monitoring and Reporting Program inappropriately requires that the TRIAD approach be applied by using data from both dry and wet weather sampling periods.

2) The SMR Permit Monitoring and Reporting Program does not currently require the collection of dry weather toxicity data, making appropriate evaluation of the TRIAD during dry weather impossible.

The Permittees are concerned that the misapplication of the method may result in mis-allocation of finite Permittee resources to extensive source assessments for pollutants that may not actually be impairing the watershed.

According to the 2004 Model Monitoring Program Guidance, the TRIAD analysis was only intended to be applied to dry weather data. Wet weather should only be analyzed for negative habitat impacts based on chemistry and toxicity data (Model Monitoring Program, Stormwater Monitoring Coalition, 2004, pg. 5-37). The Model Monitoring Program notes that it is inappropriate to use the TRIAD for wet weather as the dry weather bioassessment results are not applicable to wet weather conditions (Model Monitoring Program, Stormwater Monitoring Coalition, 2004, pg. 5-39). The misapplication of the TRIAD approach is likely because the NPDES MS4 Permit was adopted prior to the final release of the Model Monitoring Program. The NPDES MS4 Permit Monitoring and Reporting Program was based on an early draft of this document.

The Permittees are committed to adding dry weather toxicity testing to the TRIAD stations for Fiscal Year 2007-2008 so that the TRIAD approach may be properly applied to dry weather conditions. Wet weather chemistry and toxicity data will also continue to be independently analyzed. Initial changes to the Monitoring and Reporting Program Annual Report were initiated this year to facility addition of the data to next year's Monitoring and Reporting Program Annual Report.

Initiation of Toxicity Reduction Evaluation (TRE) to address potential Pyrethroid Toxicity in Receiving Waters

Toxicity monitoring at Temecula Creek and Murrieta Creek was initiated in 2004 using Ceriodaphnia, Selenastrum, and Hyalella. During the 2004-05 and 2005-06 reporting periods, toxicity to Hyalella was observed in 1 of 3 and 3 of 4 stormwater collections respectively, for both Temecula and Murrieta Creeks. During the 2006-07 reporting period, 1 of 1 stormwater collections resulted in toxicity to Hyalella. Toxicity was not observed to either Ceriodaphnia or Selenastrum in any of the eight samples collected over the last 3 annual reporting cycles. Dry weather samples have not been tested for toxicity to date. Toxicity testing during the 2005-06 season categorized the toxicity in both creeks as persistent.

The Monitoring and Reporting Program No. R9-2004-001 (MRP), Section II.A. I. 4, states,

> *When results from the chemistry, toxicity, and bioassessment monitoring*indicate urban runoff-induced degradation, Permittees shall evaluate the extent and causes of urban runoff pollution in receiving waters and prioritize management actions to eliminate or reduce sources. Toxicity Identification Evaluations shall be used to determine the cause of the toxicity, and Toxicity Reduction Evaluations shall be used to identify sources and implement management actions to reduce pollutants in urban runoff causing toxicity.*

A Toxicity Identification Evaluation (TIE) was completed on July 7, 2007 on the data collected during the 2006-2007 reporting period in accordance with Table 2 in the MRP, and identified pyrethroids as a potential source of toxicity and biological degradation of both Murrieta and Temecula Creeks. Bioassessments at both of these creeks have indicated *Fair* to *Poor* benthic communities and physical habitats ranging from *Suboptimal* to *Marginal*. Pyrethroid pesticides are not currently measured in either creek. During the four toxic wet weather collection events between 2005 and 2007, measured analytes do not appear to exhibit a relationship with toxicity.

Due to limited rainfall during the 2006-2007 reporting period, only a single storm event, and thus, a single TIE was able to be conducted. A single TIE assessment of pyrethroids as the source of toxicity is not sufficient to verify the persistence of pyrethroids as the sole source of toxicity. Further, additional data collection is necessary to characterize likely sources of pyrethroid toxicity.

Further, methods to measure pyrethroid toxicity have proven challenging because method development requires the ability to measure low concentrations of the toxicant, which remains a challenge for pyrethroids; Phase II TIE methods are not yet available. However, TIE methods for pyrethroids are progressing well and moving toward standardization (Pesticides in Urban Surface Water Annual Review of New Scientific Findings 2007, San Francisco Estuary Project, June 2007, pg. 7).

After receiving the TIE results on July 7, 2007, the District initiated work on developing a TRE. The District is currently preparing a scope of work to conduct a TRE to identify the source of the pyrethroid toxicity consistent with the requirements of the permit. However, in anticipation of the necessary requirements to further characterize sources for the TRE, additional dry weather toxicity data collection and direct pyrethroid sampling of dry weather flows (and follow up TIEs if necessary) have already been initiated. A first set of samples

was collected on October 16, 2007. This study is being designed to answer the following management questions:

1) Is the pyrethroid toxicity persistent in the receiving waters?

2) Does the toxicity occur during dry weather?

3) Are there any obvious sources of illicit discharges of pyrethroids that can be abated by the Permittees?

4) What are the likely sources of pyrethroid toxicity in the Santa Margarita Watershed?

5) What potential management measures are available to mitigate the impacts of pyrethroid pesticide application?

It is anticipated that the draft scope of work will be finalized by the end of October. Implementation of the workplan will be initiated in early 2008. Verification that pyrethroids are the persistent cause of toxicity.

Additional Special Studies conducted by and/or on behalf of the Permittees. The Special Studies section of the Monitoring and Reporting Program (Appendix G, Section 7).

J. An Assessment of Overall Program Effectiveness Based on Measurable Goals Established in the DAMP.

The Third-term SMR Permit requires the Permittees to develop a short and long term strategy for addressing the effectiveness of the Watershed SWMP. This strategy is described in Appendix S of the DAMP. The Watershed SWMP Annual Report FY 2005-2006 was the first year that the newly required Third-term MS4 Permit programs was fully implemented and the effectiveness evaluations required. This Annual Report is a continuation of the program implementation and effectiveness evaluation process.

The strategy for assessment requires the initial establishment of a set of baseline conditions. These baseline conditions can be used to establish measurable goals based on measurable metrics. Thereafter effectiveness can be evaluated by comparisons of successive years of indicator information against the baseline data and measurable goals. Where the period of evaluation is characterized by the implementation of new program requirements, determinations of program effectiveness will initially be limited to confirmation of program implementation and collection of measurable metrics until baseline conditions can be properly established. Further, it must be recognized that direct measures of long-term program effectiveness may not be available within the timeframe of the Third Term Permits. This lack of direct measure confirmation arises because:

- Baseline water quality conditions are not readily established;
- Stormwater and dry weather discharge data is inherently variable;
- Water quality changes in response to program implementation are likely to be very slow; and
- It is difficult to establish a link between receiving water condition and program activities at the watershed scale when programs are being implemented incrementally with the development/redevelopment cycle.

While program effectiveness assessment is a key step in the iterative process of program implementation, it should be realized that effectiveness assessment itself is a part of the management process that is also evolving. Assessing program effectiveness is recognized as a challenge for program managers across California, and the Riverside County Stormwater Program is supporting the effort of the CASQA to develop guidance in this area at a statewide level.

J.1 Short Term Measures of Effectiveness

The short-term strategy for assessing the effectiveness of the Watershed SWMP requires the development of measurable goals and measures of effectiveness for programs proposed to mitigate the impacts of Focus Area Constituents of Concern. The measures of effectiveness track the year-to-year implementation of the regional programs. The measures of effectiveness also are used as part of the Long-Term Strategy to measure the effectiveness of the Watershed SWMP as described in Provision K.2.m of the Watershed SWMP. Measurable Goals and Measures of Effectiveness for the existing and proposed regional programs are presented below.

- Encourage Watershed Based Planning Effort

SUMMARY EFFECTIVENESS ANALYSIS:

One of the most significant events of the reporting period was the development and implementation of the IRWMP. The IRWMP was adopted on July 31, 2007. IRWMPs are the current gold standard of watershed based planning. The IRWMP was initiated by Rancho California Water District, the County of Riverside and the District. The IRWM stakeholders included Elsinore-Anza-Murrieta Resource Conservation District, the Regional Board, the U.S. Army Corps of Engineers, California Department of Fish and Game, the Cities of Temecula and Murrieta, the BuRec, and several other community organizations. The plan describes the stakeholders goals for the watershed and identifies projects necessary to achieve those goals. Focus was placed on projects that integrated multiple watershed benefits. Based on the IRWMP, several stakeholders submitted an application for Prop 84 IRWM Implementation Grant projects, including the District, who requested the funds to complete the Murrieta Creek Flood Control, Environmental Restoration and Recreation Project. A copy of the IRWM is included on CD in Appendix A.

The Permittees continue to lead efforts to mitigate the impact of new development on water quality in the SMR. The MSCHP effort continues to purchase habitat and streambank properties through grants and other funding mechanisms and ensure that new developments appropriately protect natural resources. Approximately 872 acres were conserved this last calendar year. The Permittees are also pursuing a Special Area Management Plan, in conjunction with the Regional Board and the USACE for the purposes of identifying and protecting, at a watershed level, high priority Waters of the U.S. In addition, the Permittees are working with the other stakeholders in the watershed to aggressively address the 303(d) listed impairments in the Santa Margarita watershed, through efforts coordinated by the Bureau of Reclamation. The Bureau, with the support of the Permittees, has developed a watershed model and approached the Regional Board regarding developing a third-party TMDL for the nutrient impairments in the Santa Margarita watershed. Finally, the District continues to develop an enhanced BMP guidance manual, focused on low impact development, landscape based BMPs, capable of addressing the water quality impairments affecting the Santa Margarita watershed. A first draft of this manual is expected in FY2007-08. In addition, the Permittees are coordinating with SCCWRP to develop a regional southern California approach to addressing hydromodification. The Permittees believe that the combined efforts not only meet but exceed the minimum requirements established by the Watershed SWMP and the measurable goals established for addressing the highest priority Water Quality Problems in the Santa Margarita watershed. Specific measurable metrics are as follows:

- Annual Summary Reports of benefits of MSHCP Implementation

Acreages Acquired per Year	Approximate Acres
2003	3,193.4
2004	9.7
2005	355.4
2006	6,701.2
2007	871.9
Total	**11,131.6**

Note: In the previous FY 2006-2007 Watershed Annual Report, the above MSCHP acreages were reported on a fiscal year basis. Since acreage information is collected and reported on a calendar basis, this and future annual reports will be reported on a calendar year basis to ensure accuracy and consistency.

- Annual Summary Report of SAMP Development

The USACE, in conjunction with the Permittees, is developing a Special Area Management Plan (SAMP) for both the San Jacinto and upper Santa Margarita watersheds. This comprehensive watershed based planning effort will identify, prioritize and protect the highest priority Waters of the U.S., while considering the broader needs of growth and transportation improvements. It will be used to assist federal, state and local agencies with their decision making and permitting authority to protect, restore and enhance aquatic resources, while accommodating various types of development activities and infrastructure projects. The upper Santa Margarita and San Jacinto watersheds include such resources as woodlands, wetlands, freshwater marshes, vernal pools, streams, lakes and rivers that will be evaluated and protected under the project. The final product of the SAMP will be the establishment of an abbreviated or expedited regulatory permitting process by the USACE under Section 404 of the Clean Water Act. Additionally, the California Department of Fish and Game is preparing a Master Streambed Alteration Agreement in conjunction with the SAMP to provide an expedited permitting process under the State's Section 1600 of the Fish and Game Code.
