WQMP Subdivision Statistics

Riverside County WQMP Checklist

Checklist for Identifying Projects Requiring a Project-Specific WQMP within Santa Ana and Santa Margarita Regions

Section I: Project Details

Project Number:	Project Size in Acres:
Project Name:	% of Impervious Surface Prior to Construction:
Project Location or APN:	% of Impervious Surface After Project Completion:
Project Description:	Est. Construction Start Date:
	Est. Construction Completion:
	Project Runoff Discharges into: (Provide name of waterbody)
Watershed location: ☐ Santa Ana ☐ Santa Margarita	

Pollutants of Concern (Check all that apply)

- ☐ Sediment / Turbity
- ☐ Nutrients
- ☐ Organic Compounds
- ☐ Trash & Debris
- ☐ Oxygen Demanding Substance
- ☐ Bacteria & Viruses
- ☐ Oil & Grease
- ☐ Pesticides (Non Soil Bond)
- ☐ Metals
- ☐ Other (describe):_____

Proposed Treatment BMPs (Check all that apply)

- ☐ Bio-swale
- ☐ Detention Basin
- ☐ Retention Basin
- ☐ Sand filter or Filtration
- ☐ Water Quality Inlets
- ☐ *Proprietary Devices (describe) _____
- ☐ Wet Ponds or Wetlands

*Proprietary devices are generally not approved for county maintained facilities

Section II: General Criteria

Proposed Project Consists of or Includes:	YES	NO
1. Significant Redevelopment: The addition, creation or replacement of at least 5,000 sq ft or more of impervious surface on an existing developed site or new site.		
2. Residential development of 10 or more dwelling units.		
3. Commercial or Industrial development greater than 100,000 sq ft.		
4. Automotive repair shops.		
5. Restaurants where the project site is 5,000 square feet or more.		
6. Parking lots of 5,000 sq ft or more.		

Section III: Santa Ana Region Specific Criteria

Proposed Project Consists of or Includes:	YES	NO
7. Developments creating 2,500 sq ft or more of impervious surface. Adjacent to (within 200 ft) or discharging directly into areas designated in the Basin Plan as waters supporting habitats necessary for the survival and successful maintenance of plant or animal species designated under state or federal law are rare, threatened, or endangered species (denoted in the Basin Plan as the "RARE" beneficial use) or waterbodies listed on the CWA Section 303(d) list of Impaired Waterbodies. "Discharging directly to" means Urban Runoff from subject Development or Redevelopment site flows directly into aforementioned waterbodies. Urban Runoff is considered a direct discharge unless it first flows through a) a municipal separate storm sewer system (MS4) that has been formally accepted by and is under control and operation of a municipal entity; b) a separate conveyance system where there is co-mingling of flows with off-site sources; or c) a tributary or segment of a water body that is not designated with "RARE" beneficial uses nor listed on the 303(d) list before reaching the water body or segment designated as RARE or 303(d).		
8. Hillside development that creates 10,000 sq ft or more of impervious surface(s), including developments in areas with known erosive soil conditions or where natural slope is 25% or more.		

Section IV: Santa Margarita Region Specific Criteria

Proposed Project Consists of or Includes:	YES	NO
9. Environmental Sensitive Areas (ESAs). All development located within or directly adjacent to or discharging directly to an ESA (where discharges from the development or redevelopment will enter receiving waters within the ESA), which either creates 2,500 sq ft of impervious surface on a proposed project site or increases the area of imperviousness of a proposed project site to 10% or more of its naturally occurring condition. "Directly adjacent" means situated within 200 ft of the ESA. "Discharging directly to" means outflow from a drainage conveyance system that is composed entirely of flows from subject development or redevelopment site, and not commingled with flows from adjacent lands.		
10. Hillside development that creates 5,000 sq ft.		
11. Streets, roads, highways, and freeways. Includes any paved surface that is 5,000 sq ft or greater used for the transportation of automobiles, trucks, motorcycles, and other vehicles.		
12. Retail Gasoline Outlets (RGOs). Includes RGOs that meet the following criteria: (a) 5,000 sq ft or more, or (b) a projected Average Daily Traffic (ADT) or 100 or more vehicles.		

DETERMINATION: Circle appropriate determination.

Any questions answered "Yes" → Project Requires a project-specific WQMP.
All questions are answered "No" → Project requires incorporation of Site Design BMPs and Source Control BMPs imposed project development.

Water Quality Management Plan(WQMP) or Standard Urban Stormwater Mitigation Plan (SUSMP) Requirements

Three watersheds with distinct differences in permitting requirements:

- **Santa Margarita Watershed-Regulated by the San Diego Regional Water Quality Control Board**- John Robertus-Executive Officer/Michael McCann Asst. EO
  - Most stringent of the three Regional Boards
  - 4th year of 5 year permit
  - Next permit negotiations 2009-2010
  - Stepping up enforcement on municipalities
  - Inspection audit by joint US EPA contractor and Regional Board staff

- **Santa Ana River Watershed-Regulated by the Santa Ana Regional Water Quality Control Board**-Gerald Thibeault- Executive Officer/Kurt Berchtold Asst. EO
  - San Jacinto sub-watershed-most stringent requirements within the Santa Ana Region
  - New permit adoption-pending (year 6 of 5 year permit) will mirror more closely to Ventura Co. or Orange Co. Permit
  - Stepping up enforcement on municipalities

- **Whitewater River Watershed-Regulated by the Colorado River Basin Regional Water Quality Control Board**-Robert Perdue-Executive Officer/ Jose Angel Asst. EO.
  - Currently Supplement A is in effect
  - New permit adoption- May 2008
  - WQMP requirements will be new to this region and will mirror Santa Ana watershed requirements with slight modifications for unique characteristics of the watershed.
  - Stepping up enforcement on municipalities, added 3 enforcement staff.

WQMP or SUSMP is required to manage stormwater and urban flows after construction and describes the site design, source control and treatment control best management practices (BMPs) that will be implemented and maintained throughout the life of the project to prevent and minimize water pollution that can be cause by stormwater or urban runoff. Must occur during the architectural design phase to be effective.

Stormwater Pollution Prevention Plan (SWPPP)- Required of all construction projects during the construction phase to have BMPs in place to prevent stormwater or waste water generated during construction from entering a receiving water. Includes sediment and erosion control.

Low Impact Development (LID) architectural and landscape techniques that are used to minimize impervious surfaces on completed projects. Utilizes engineered sizing criteria for source and treatment control BMPs.

Leadership in Energy and Environmental Design (LEED) Certified
LEED certification provides independent, third-party verification that a building project meets the highest green building and performance measures. All certified projects receive a LEED plaque, which is the nationally recognized symbol demonstrating that a building is environmentally responsible, profitable and a healthy place to live and work. Even Though a project is LEED certified does not necessarily mean that the project has met WQMP requirements and sizing criteria.

Administrative Civil Liability (ACL) $10,000 per day per violation and Where there is a discharge, any portion of which is not susceptible to cleanup or is not cleaned up, and the volume discharged but not cleaned up exceeds 1,000 gallons, an additional liability not to exceed ten dollars ($10) times the number of gallons by which the volume discharged but not cleaned up exceeds 1,000 gallons.

Q.6--My project is in the Santa Margarita Region[1], does it require a Project-Specific WQMP?

Mark **yes** in the checklist if projects is a new development that meets the project categories or locations in question,
or
Mark **yes** in the checklist if your redevelopment* projects creates, adds or replaces** at least 5,000 square feet of impervious surfaces on an already developed site for the project categories or locations in question

If any question is answered "Yes," your project requires a Project-Specific WQMP.
If all questions are answered "No," your project does **NOT** require a Project-Specific WQMP.

Does your proposed project include:	**Yes**	**No**
1. Housing subdivisions of 10 or more dwelling units. This category includes single-family homes, multi-family homes, condominiums, and apartments.		
2. Commercial developments greater than 100,000 square feet. This category is defined as any development on private land that is not for heavy industrial or residential uses where the land area for development is greater than 100,000 square feet. The category includes, but is not limited to: hospitals; laboratories and other medical facilities; educational institutions; recreational facilities; municipal facilities; commercial nurseries; multi-apartment buildings; car wash facilities; mini-malls and other business complexes; shopping malls; hotels; office buildings; public warehouses; automotive dealerships; airfields; and other light industrial facilities		
3. Automotive repair shops (SIC codes[2] 5013, 5014, 5541, 7532-7534, or 7536-7539.)		
4. Restaurants (SIC code 5812), where the land area for development is greater than 5,000 square feet. Restaurants where land development is less than 5,000 square feet shall meet all SUSMP requirements except for structural treatment BMP and WQMP volume sizing and flow rate requirements		
5. Hillside developments that creates 10,000 square feet or more of impervious area including developments in areas with known erosive soil conditions or where natural slope is 25 % or more		
6. Parking Lots 5,000 square feet or more of impervious area		
7. Retail gasoline outlets of 5,000 square feet or more with projected average daily traffic of 100 or more vehicles per day.		
8. Street, roads, highways, and freeways, which include any paved surface that is 5,000 square feet or greater used for the transportation of automobiles, trucks, motorcycles, and other vehicles.		
9. Environmentally Sensitive Areas (ESAs). All development located within or directly adjacent to or discharging directly to an ESA (where discharges from the development or redevelopment will enter receiving waters within the ESA), which either creates 2,500 square feet of impervious surface on a proposed project site or increases the area of imperviousness of a proposed project site to 10% or more of its naturally occurring condition. "Directly adjacent" means situated within 200 feet of the ESA. "Discharging directly to" means outflow from a drainage conveyance system that is composed entirely of flows from the subject development or redevelopment site, and not commingled with flows from adjacent lands.		

* Significant Redevelopment includes, but is not limited to:

- the expansion of a building footprint or addition or replacement of a structure;
- structural development including an increase in gross floor area and/or exterior construction or remodeling;
- replacement of impervious surface that is not part of a routine maintenance activity;
- land disturbing activities related with structural or impervious surfaces.
- Where Significant Redevelopment results in an increase of less than 50 percent of the existing impervious surfaces of an existing developed site, and the existing developed site received its discretionary land use approvals prior to the adoption of the WQMP (7/13/05 in Santa Margarita Region), the WQMP would apply only to the addition, and not the existing development.

** Replacement not part of routine maintenance activity is considered a significant development.

[1] Projects in the Santa Ana Watershed have different requirements see question 7. Projects in the Whitewater Watershed are not subjected to WQMP requirements, but instead use Supplement A to the 1993 Drainage Area Management Plan (DAMP).

[2] Information regarding SIC codes can be found at http://www.osha.gov/pls/imis/sicsearch.html

Return to top

Q.7-- My project is in the Santa Ana Region[1], does it require a Project-Specific WQMP?

If any question is answered "Yes," your project requires a Project-Specific WQMP. If all questions are answered "No," your project is does **NOT** require a Project-Specific WQMP.		
Does your proposed project include:	**Yes**	**No**
1. All **Significant Redevelopment projects;** defined as the addition or creation of 5,000 or more square feet of impervious surface on an existing developed site. This includes, but is not limited to: • construction of additional buildings and/or structures, • extension of the existing footprint of a building, • construction of impervious or compacted soil parking lots. • Where Significant Redevelopment results in an increase of less than fifty percent of the existing impervious surfaces of an existing developed site, and the existing developed site received its discretionary land use approvals prior to the adoption of the WQMP (12/31/2004 in Santa Ana Region; 7/13/05 in Santa Margarita Region), the WQMP would apply only to the addition, and not the existing development. Significant Redevelopment does not include routine maintenance activities that are conducted to maintain original line and grade, hydraulic capacity, the original purpose of the constructed facility or emergency actions required to protect public health and safety;		
2. Residential development of 10 units or more, including Single Family and Multi-Family Dwelling Units, Condominiums, or Apartments		
3. Industrial and commercial development where the land area represented by the proposed map or permit is 100,000 square feet, or more, including, but not limited to, non-residential developments such as hospitals, educational institutions, recreational facilities, mini-malls, hotels, office buildings, warehouses, light industrial, and heavy industrial facilities;		
4. Automotive repair shops (with standard industrial classification ("SIC") codes[2] 5013, 7532, 7533, 7534, 7537, 7538, and 7539).		
5. Restaurants (SIC Code 5812) where the project site is 5,000 square feet, or more.		
6. Hillside developments that creates 10,000 square feet or more of impervious area including developments in areas with known erosive soil conditions or where natural slope is 25 % or more		
7. Parking lots of 5,000 square feet or more of impervious surface exposed to storm water. Parking lot is defined as a site or facility for the temporary storage of motor vehicles.		
8. Developments creating 2,500 square feet, or more, of impervious surface that is adjacent to (within 200 feet) or discharging directly into areas designated in the Basin Plan as waters supporting habitats necessary for the survival and successful maintenance of plant or animal species designated under state or federal law as rare, threatened, or endangered species (defined in the Basin Plan as "RARE") or waterbodies listed on the CWA Section 303(d) list of Impaired Waterbodies within the Permit Area.		

[1] For projects in the Santa Ana Watershed; additional requirement exist for the San Diego (a.k.a. Santa Margarita) watershed, see question 6. Projects in the Colorado River (a.k.a. Whitewater River) Watershed are not subjected to WQMP requirements, but instead use Supplement A to the 1993 Drainage Area Management Plan (DAMP).

[2] Information regarding SIC codes can be found at http://www.osha.gov/pls/imis/sicsearch.html

WQMP REQUIREMENT	Submittal Requirement	
	Preliminary	Final
Title Page		
The Title Page includes the following:		
Name of project	X	X
Tract, Parcel, or Use number	X	X
Design Review Number (PAxx-xxxx) – Must use the same number for P-WQMP and F-WQMP.	X	X
Owner/Developer name	X	X
Owner/Developer address, telephone & FAX number	X	X
Consulting/Engineering firm that prepared WQMP. RCE must sign and seal the document (CA B&P Code)	X	X
Consulting/Engineering firm address, telephone & FAX number	X	X
Name and title of preparer	X	X
Date WQMP was prepared/revised	X	X
Signed / Sealed by Engineer. RCE must sign and seal the document (CA B&P Code)	X	X
Owner's Certification		
A signed and notarized certification statement, in which the project owner acknowledges and accepts the provisions of the WQMP The owner's signature must be notarized (Include the notary's acknowledgement in document behind the Owner's Certification page).	X	X
Table of Contents		
Include a Table of Contents, including a list of all figures and appendices	X	X
Section I, Project Description		
Provide the project description completely and accurately describing where facilities will be located, what activities will be conducted and where, what kinds of materials and products will be used and/or stored, how and where materials will be delivered, and what kinds of wastes will be generated.	X	X
Identify the project owner and WQMP preparer	X	X
Identify project location including:		
• Site address;	X	X
• Planning area/community name;	X	X
• APN number(s);	X	X
• Thomas Bros. map pages and corresponding grid(s) and year of Map;	X	X
• Project watershed and sub-watershed.	X	X
Provide project size to the nearest 1/10 acre	X	X
Provide Standard Industrial Classification (SIC) Code which best describes the facilities operations. Refer to the SIC web for additional help. http://www.osha.gov/pls/imis/sicsearch.html	X	X
Indicate whether a Home Owner's Association or Property Owner's Association will be formed	X	X
Identify additional permits/approvals required for the project including: • State Department of Fish and Game, 1601 Streambed Alteration Agreement; • State Water Resources Control Board, Clean Water Act (CWA) section 401 Water Quality Certification; • US Army Corps of Engineers, CWA section 404 permit; • US Fish and Wildlife, Endangered Species Act section 7 biological opinion; • City permits (i.e.: Grading and Building) • SWRCB General Construction Permit	X	X
See Appendix A for Conditions of Approval.		

WQMP REQUIREMENT	Submittal Requirement	
	Preliminary	Final
See Appendix B for Site specifics. – Vicinity Map, Receiving Waters Exhibit, & Site Plan		
See Appendix G for mechanisms to ensure operations and maintenance of BMPs.		
Section II, Site Characterization		
Identify land use designation or zoning.	X	X
Identify current property use	X	X
Identify proposed property use.	X	X
Identify the availability of a soils report (Note: A soils report is required if infiltration BMPs are utilized.)	X – only if infiltration	X – only if infiltration
Identify the availability of a Phase 1 Site Assessment (Note: If prepared, a remediation summary and use restrictions must be attached in Appendix H.)		X
Receiving waters have been identified including:		
• 303(d) list impairments; (see www.waterboards.ca.gov/tmdl/docs/2002reg8303dlist.pdf), and TMDL adopted impairments. Contact City or refer to the City's web site for additional Guidelines and assistance with completion of table.	X	X
• Designated beneficial uses; (see Table 3-1 of WQMP for Santa Ana River Basin at www.waterboards.ca.gov/santaana/pdf/R8BPlan.pdf)	X	X
• Proximity to RARE beneficial use	X	X
Section III. Pollutants of Concern		
Note: Information required under "a." and "b." of Section III in the template can be found in the table required under "Site Characterization". Repeating the information for this section is not needed, however the analysis that uses the information is required within this section.		
Identify / list expected and potential pollutants associated with Urban Runoff from the proposed project and compare them with pollutants identified as causing an impairment of Receiving Waters, if any.	X	X
Identify / list the Pollutant(s) of Concern (POC) associated with project.	X	X
Discuss the presence / absence of legacy pesticides, nutrients, or hazardous substances in the site's soils as a result of past uses	X	X
Section IV. Hydrologic Conditions of Concern		
Indicate whether Condition A, B or C exempts the project specific WQMP from addressing the issue of Hydrologic Conditions of Concern, or indicate which method is used to mitigate HCOCs.	X	X
Substantiate selected Condition or Methodology.		X
Section V. Best Management Practices		
V1. Site Design BMPs		
Table 1. Site Design BMPs, is complete	X	X
Provide narrative describing site design concepts incorporated into the project plans.	X	X
If a particular Site Design BMP concept is found to be not applicable, provides a brief explanation as to why the concept cannot be implemented	X	X
Provides narrative describing how each individual BMP will be implemented and maintained including inspection and maintenance frequency, inspection criteria and the responsible entity or party.		X
Site Design BMPs will be shown on the WQMP Site Plan included in Appendix B.		
V2. Source Control BMPs		

WQMP REQUIREMENT	Submittal Requirement	
	Preliminary	Final
Table 2. Source Control BMPs, is complete.	X	X
Completion of the source control table is required in the P-WQMP Narrative description is required in the F-WQMP. Provide narrative describing how each individual BMP will be implemented and maintained including inspection and maintenance frequency, inspection criteria and the responsible entity or party.	X	X
V3. Treatment Control BMPs		
Table 3. Treatment Control BMPs is complete. Provide narrative description of BMP being proposed	X	X
"For identified pollutants of concern [Section II] that are **causing an impairment in receiving waters,**" has the applicant proposed one or more Treatment Control BMPs of medium or high effectiveness?	X	X
Provide detailed descriptions on the location, implementation (including sizing criteria), installation, and long-term O&M of planned Treatment Control BMPs.		X
Provide a copy of the property/project soils report if infiltration-based Treatment Control BMPs are utilized.		X
Treatment Control BMPs will be shown on the WQMP Site Plan included in Appendix B.		
Supporting Calculations for Treatment Control BMPs are included in Appendix F.	X	X
V4. Equivalent Treatment Control Alternatives		
Provide narrative describing equivalent treatment control alternatives or states "not applicable"	X	X
V5. Regionally-Based Treatment Control BMPs		
Provide narrative describing regionally-based treatment control BMPs or states "not applicable".	X	X
Section VI. Operation and Maintenance (O&M) Responsibility for Treatment Control BMPs – In the P-WQMP, A statement from the Preparer that identifies a commitment to provide detail in the F-WQMP (e.g. "O&M detail to be provided in the F-WQMP") is required.		
Identify each BMP that requires O&M.		X
Provide a thorough description of O&M activities, the O&M process, and the handling and placement of any wastes.		X
Provide BMP start-up dates.		X
Provide a schedule of the frequency of O&M for each BMP.		X
Identify the parties responsible for O&M and provides a written agreement with the entities responsible for O&M. (i.e.: Covenant and Agreement, HOA, POA, CC&Rs, formation of assessment or maintenance district, etc.) Copies of these supporting documents will be included in Appendix G.		X
Identify self-inspection and record-keeping requirements for BMPs including responsible parties.		X
Provide thorough description of water quality monitoring including constituents and frequency, if applicable.		X
Section VII. Funding – In the P-WQMP, A statement from the Preparer that identifies a commitment to provide detail in the F-WQMP (e.g. "Funding detail to be provide in the F-WQMP") is required.		

WQMP REQUIREMENT	Submittal Requirement	
	Preliminary	Final
Identify the funding source(s) for the operation and maintenance of each Treatment Control BMP. Where a public agency is identified as the funding source and responsible party for Treatment Control BMPs, a copy of the written agreement stating the public agency's acceptance of these responsibilities will be provided in Appendix G.		X
Appendix A (Section I)		
Include a complete copy of the final Conditions of Approval.		X
Appendix B (Sections I and V)		
Include a Vicinity Map identifying the project site and surrounding planning areas in sufficient detail to allow plotting on base mapping. (a separate 8 1/2 x 11 page is preferred)	X	X
Include a Site Plan depicting the following project features: Plan must be full size, (D or E size sheet)		
Locate and identify of all site design BMPs.	X	X
Locate and identify of all source control BMPs.		X
Locate and identify of all Treatment Control BMPs.	X	X
Landscaped areas.	X	X
Paved areas and intended uses.	X	X
Number and type of structures and intended uses. (i.e.: buildings, tenant spaces, dwelling units, community facilities such as pools, recreations facilities, tot lots, etc.)	X	X
Infrastructure (i.e.: streets, storm drains, etc.)that will revert to public agency ownership and operation.		X
Identify existing and proposed public and private storm drainage facilities including catch basins and other inlet/outlet structures. (Existing and proposed drainage facilities should be clearly differentiated.)	X	X
Provide Receiving Waters Exhibit, which Identifies project flows from the Project site to the Pacific Ocean.	X	X
Location of points where onsite (or tributary offsite) flows exit the property/project site.	X	X
Proposed drainage areas boundaries, including tributary offsite areas, for each location where flows exits the property/project site. (Each tributary area should be clearly denoted.)	X	X
Pre- and post-project topography	X	X
See Appendix G for mechanisms to ensure operations and maintenance of BMPs.		
Appendix C (Section IV)		
Include supporting detail (i.e., engineering studies, calculations, and reports) related to Hydrologic Conditions of Concern, if applicable. This detail must relate to the HCOC Condition or Methodology selected. (e.g., Condition A substantiation detail required will most likely differ from Condition C substantiation requirements.)		X
Appendix D (Section V)		
Include copies of the educational materials that will be used in implementing the project-specific WQMP		X

WQMP REQUIREMENT	Submi[redacted] Prelimin[redacted]
Appendix E (Sections II and V)	
Include the required Soils Report and Percolation / Infiltration testing report, with borings if infiltration BMPs are proposed. Note: The City recommends the use of the ASTM Double-Ring Infiltrometer test method. At least 2 Borings per treatment control BMP location is required in the P-WQMP At least 5 Borings per treatment control BMP location is required in the F-WQMP. The Borings must be at least 10 ft below the BMP bottom. Percolation / infiltration test results must be used when sizing treatment control BMP.	X
Appendix F (Section V)	
Include supporting engineering calculations for Treatment Control BMP sizing and Treatment Control BMP design details Indicate "Preliminary" in the P-WQMP Use of Riverside County Worksheets is required.	X
Appendix G (Sections I and VI)	
Include copies of the CC&Rs, Covenant and Agreements, and/or other mechanisms used to ensure the ongoing operation, maintenance, funding, transfer and implementation of the project-specific WQMP requirements.	
Appendix H (Section II)	
Include a Phase 1 Environmental Site Assessment - Summary of Site Remediation Conducted and Use Restrictions, if applicable.	

INSTRUCTIONS

Section I
This checklist should be used for projects located in Santa Ana or Santa Margarita regions. Provide details about the project to further analyze project for water quality purposes.

Project Number: Please provide the project number for your project.

Project Name: Please provide the name of your project.

Project Location or APN: Please provide an address, APN or any other information that helps locate the project.

Project Description: Provide a brief description of the project scope and include purpose/usage of the project. For example, "construction of 2 large buildings for office space usage that will accommodate approximately 400 employees."

Watershed Location: Please mark the box next to the watershed the project is located in.
Project Size in Acres: Please provide in acres the total project size.

% of Impervious Surface Prior to Construction: Please provide an approximation of existing conditions of the site where project will be constructed. Provide an approximation of how much of the project site is impervious. For example, if the site prior to construction has a concrete slab that makes up 30% of the total project size, then 30% is the answer for this question.

% of Impervious Surface After Project Completion: Please provide an approximation of the total impervious surface after project completion. For example, if after the project is completed the entire project site will be impervious due to the construction of buildings, parking lots, and concrete sidewalks, the answer to this question would 100%.

Est. Construction Start Date: Provide the date construction is estimated to begin.

Est. Construction Completion: Provide the date construction is estimated to end.

Project Runoff Discharges Into: Provide the name of the receiving water body that will be impacted by the project's runoff, also includes nuisance flows.

Pollutants of Concern: All projects will generate pollutants. Please check all pollutants that will be generated from the use of the project after project completion.

Proposed Treatment BMPs: During the initial planning of the project, treatment Best Management Practices (BMPs) need to be identified as early as possible to ensure that the project incorporates these concepts. Please check all the proposed BMPs to be used for the project.

Section II: General Criteria Specific questions will be asked to assist the Environmental Compliance Unit in determining if a Water Quality Management Plan is required for the project. Please answer all the questions.

Definitions

1. **Significant Redevelopment:** Significant Redevelopment: This includes, but is not limited to, construction of additional buildings and/or structures, extension of the existing footprint of a building, construction of impervious or compacted soil parking lots. Does not include routine maintenance activities that are conducted to maintain original line and grade, hydraulic capacity, the original purpose of the constructed facility or emergency actions required to protect public health and safety. [Note: Where redevelopment results in an increase of less than 50% of the impervious surfaces of a previously existing development, and the existing development was not subject to WQMP requirements, the requirement for treatment control BMPs [MS4 Permit requirement F.2.b(3)] applies only to the addition, and not the entire development.]

2. **Residential development of 10 or more dwelling units.** Including single family and multi-family dwelling units, condominiums, or apartments.

3. **Commercial or Industrial development greater than 100,000 sq ft.:** Defined as any development 100,000 square feet or more including, but not limited to: hospitals; laboratories and other medical facilities; educational institutions; recreational facilities; municipal facilities; commercial nurseries; multi-apartment buildings; car wash facilities, mini-malls and other business complexes; shopping malls; hotels; office buildings; public warehouses, automotive dealerships; airfields; and other light industrial facilities. Santa Ana also includes light industrial and heavy industrial facilities. Land area is based on acreage disturbed.

4. **Automotive Repair Shops**:
   Includes facilities characterized by any one of the following Standard Industrial Classification (SIC) codes for:
   Santa Ana 5013, 7532, 7533, 7534, 7537, 7538 and 7539;
   and
   Santa Margarita 5013, 5014, 7532-34, 7536-39.

   Descriptions of SIC codes can be found at http://www.osha.gov/pls/imis/sicsearch.html.

5. **Restaurants:** Santa Ana defines restaurants as SIC code 5812.

   Santa Margarita further defines restaurants as a facility that sells prepared foods and drinks for consumption, including stationary lunch counters and refreshment stands selling prepared foods and drinks for immediate consumption (SIC code 5812), where the land area for development is greater than 5,000 sq ft. Restaurants where land development is less than 5,000 sq ft shall meet all WQMP requirements except for treatment control BMPs [MS4 Permit requirement F.2.b(3)] and peak flow management [MS4 Permit requirement F.2.b(2)(a)].

6. **Parking Lots**: Exposed to Urban Runoff, where "parking lot" is defined as a site or facility for the temporary parking or storage of motor vehicles.

SECTION III: Santa Ana Region Specific Criteria

Complete this section only if the project is in the Santa Ana watershed region.

7. **Developments creating 2,500 sq ft or more of impervious surface**. The Basin Plan for the Santa Ana River Basin, which has beneficial uses for Receiving Waters listed in Chapter 3, can be viewed or downloaded from www.swrcb.ca.gov/rwqcb8/pdf/R8BPlan.pdf . The Basin Plan for the Santa

Ana River Basin, which has beneficial uses for Receiving Waters listed in Chapter 3, can be viewed or downloaded from www.swrcb.ca.gov.rwqcb8/pdf/R8BPlan.pdf. The most recent CWA Section 303(d) list can be found at www.swrcb.ca.gov/tmdl/303d_lists.html.

8. **Hillside development that creates 10,000 sq ft** or more of impervious surface(s) including developments in areas with known erosive soil conditioners or where natural slope is 25% or more.

SECTION IV: Santa Margarita Region Specific Criteria

Complete this section only if the project is in the Santa Margarita watershed region.

9. **Environmental Sensitive Areas (ESAs).** Areas in which plant or animal life or their habitats are either rare or especially valuable because of their special nature or role in an ecosystem and which would easily be disturbed or degraded by human activities and developments. ESAs subject to urban runoff requirements include, but are not limited to: all CWA Section 303(d) impaired water bodies; areas designated as Areas of Special Biological Significance by the Basin Plan; water bodies designated with a RARE beneficial use in the Basin Plan; areas within the Western Riverside County Multi-Species Habitat Conservation Plan area that contain rare or especially valuable plant or animal life or their habitat; and any other equivalent environmentally sensitive areas that the Permittees have identified. The Basin Plan for the San Diego Basin (beneficial uses listed in Chapter 2) can be viewed or download from www.swrcb.ca.gov.rwqcb9/programs/basinplan.html. The most recent CWA Section 303(d) list can be found at www.swrcb.ca.gov/tmdl/303d_lists.html.

10. **Hillside development that creates 5,000 sq ft.** Any development that creates greater than 5,000 square feet of impervious surface which is located in an area with known erosive soil conditions, where the development will include grading on any natural slope that is 25% or greater.

11. **Streets, roads, highways, and freeways**. Includes any paved surface that is 5,000 square feet or greater used for the transportation of automobiles, trucks, motorcycles, and other vehicles.

12. **Retail Gasoline Outlets (RGOs).**

Transportation Department Summary

SANTA MARGARITA ATTACHMENT A

BACKGROUND

The Transportation Department's NPDES activities for Fiscal Year (FY) 07/08 included the Roadside Litter Removal Program, Catch Basin Inspection & Cleaning Program, Code Enforcement Clean up Program, and the enhancement to the integrated approach in the continued development of the MS4 map.

The Roadside Litter Removal Program has a crew of seven (7) employees that provides roadside clean up efforts. The funding for this Program is provided by each of the five Supervisorial Districts within the County. The crew collects roadside litter from ten (10) linear miles of designated roadways in each of the five Supervisorial Districts. Ten (10) linear miles are cleaned on a rotating basis, allowing for problems areas to be re-addressed every ten (10) weeks. Cumulatively, this program cleans approximately 60 linear miles quarterly. This effort has proven successful in reducing the amount of debris and anthropogenic litter entering the catch basins, nearby streams and waterbodies within the different watersheds. Roughly, 17.85 road miles were cleaned in the Santa Margarita watershed, and approximately 7.34 tons of anthropogenic litter was removed under this program for FY 07/08.

The Catch Basin Inspection & Cleaning Program has a crew of four (4) employees and one (1) vacant position that will be filled in the future. The funding for this Program is provided by the County Executive Office. This Program performs inspection and maintenance on storm drainage facilities. The crew inspects and maintains catch basins, inlets, outlets, culverts, channels, swales, detention basins and other drainage infrastructures to ensure maximum storm water diversion from rights-of-way, while simultaneously maintaining the National Pollutant Discharge Elimination System standards. For FY 07/08, approximately 5.06 tons of anthropogenic litter, 3.74 tons of vegetative litter, and 11.90 tons of sediment litter were removed from the Santa Margarita watershed under this Program.

The Code Enforcement Clean up Program has three crew totaling seventeen (17) employee positions. The funding for this Program is provided by Code Enforcement Department. The crew carries out wide-ranging clean ups. The Santa Margarita watershed falls within Supervisorial District 1 and 3. For FY 07/08, the approximate tonnage of litter removed from each Supervisorial District is summarized in the following table:

Supervisorial District	Tons of Litter Removed
District 1	285.04
District 3	355.48
Total	**640.52**

ROAD REPAIR AND STREET SWEEPING

For FY 07/08, the Transportation Department received a total of 1701 complaint calls countywide for general road repair and maintenance, of which a total of 212 complaints were within the Santa Margarita Region involving the following issues:

Type of Complaint	Number of Complaints
a. Flooding-road shoulder, ditch damage	31
b. Ditches gutter, culvert drains, clean out	8
c. Drainage low spots, ponding floods	3
d. Mud gravel, dirt, rock, snow, swept/cleared	16
e. Trash, debris, object removed or cleared	15
f. Trees, palm fronds and branches	14
g. Weed, grass, brushes and tumbleweeds	9
h. Graffiti	2
i. Potholes or large holes	40
j. Improvements, grading paving & resurfacing	73
k. Road sidewalk, curb gutter damage & repair	1
Total	**212**

Currently, all streets in County Service Area (CSA) 152 are swept. New development projects within the County (with curb and gutter) are required to annex into CSA 152 in order to receive street sweeping services. These services are contracted out and roadways are swept at least once a month, and in some cases more frequently. Whenever possible, the Department has increased the frequency of street sweeping to twice a month. During FY 07/08, a total of 13,398 curb miles were swept. In comparison to last fiscal year, FY 06/07, a total of 12,664 curb miles were swept, which represents a 5.80% increase.

The amount of debris removed from street sweeping activities decreased this year. For FY 06/07, approximately 1,753 tons of debris were removed from streets, in comparison to this FY 07/08, approximately 1,548 tons of debris were removed. It represents 11.67% decrease in amount of debris removed. In general, for FY07/08 less anthropogenic, vegetative and sediment littler were removed from street sweeping activities.

FISCAL EXPENDITURES FOR FY 07/08

Total FY 07/08 expenditures for NPDES activities which includes MS4 Mapping, Catch Basin Inspection & Cleaning Program and Code Enforcement Clean Up Program & Roadside Litter Removal Program were $2,645,102. Future costs are expected to increase as the program expands. The following table summarizes the NPDES program expenditures funded by the County General Funds and other related activities and fund sources:

Program/Activity	Funding Source	FY 07/08 Expenditures
Overlay, Sealing	Gas Tax	$3,503,962
Storm Damage	Gas Tax, FEMA	$18,051
Municipal Inspections	General Funds	$2,420
Street Sweeping CSA 152	County Assessment Area 152	$681,753
Street Sweeping (Non-CSA 152)	Waste Haulers (ISS Sweeping)	$141,204
	Environmental Health (Burrtec Waste Industries, Inc.)	$71,376
MS4 Mapping	General Funds	$241,910
Catch Basin Inspection & Cleaning Program – Santa Margarita	General Funds	$296,942
Code Enforcement Clean Up Program & Roadside Litter Removal Program	Code Enforcement, General Funds	$2,106,250

TRAINING

The Transportation Department is very supportive of NPDES training. A total of eighty-three (83) Transportation staff attended NPDES training offered by Flood Control, AEI-CASC Consulting and Elena Chemical Company during FY 07/08. Furthermore, two (2) employees attended the California Stormwater Quality Association (CASQA) annual conference; two (2) employees attended the Urban Water Institute annual conference, and one (1) employee attended a Stormwater Regulation and Management class at University California, Riverside.

ILLICIT CONNECTION/ILLEGAL DISCHARGE (IC/ID)

The Riverside County Transportation Department, as part of its normal duties, conducts routine maintenance of the storm drain facilities. The Highway Operations Division provides the County with coverage concerning illegal connections or illegal discharges within the storm drain systems such as inlets, outlets, culverts, swales and channels which ultimately make their way to facilities owned by Riverside County Flood Control

District. The Transportation Department District Road Maintenance Supervisors and Assistant Supervisors visually inspect the storm drain infrastructure on a regular basis as part of their daily routine. They look for evidence of illegal discharge or illicit connections. They pay close attention to facilities located within areas of concern, or areas that historically have had issues. This could involve areas where illegal dumping has occurred or other maintenance issues need to be addressed, which would require additional follow-up. These issues could necessitate additional assistance from the County illegal dumping cleanup programs and/or Code Enforcement investigation.

The Transportation Department Permit Engineer also sends a letter to property owners that encroach upon County right-of-way with illegal connections or other obstructions, and if needed is reported to Code Enforcement. The Permit Engineer is responsible for reviewing encroachment applications along County road right-of-way. If the illegal connection is not remedied in a timely manner, it is removed by the County and billed to the owner of the property.

In summary, for FY 07/08, Code Enforcement supervised the following three (3) types of illicit discharges, connections and spills:

a. There were 894 cases of illegal grading or grading without permit in which 618 are currently opened and 276 are closed. They were discharge of soil and sediments.

b. There were 321 cases of illegal dumping in which 249 are currently opened and 72 are closed. They were a variety of materials from hazmat, tires, green waste, construction debris, and household waste.

c. There were 43 NPDES investigations in which 28 are currently opened and 15 are closed. The NPDES violations were for illegal pool water discharges and the cleaning of pool filters into gutters.

SANTA MARGARITA ATTACHMENT A

BACKGROUND

The Transportation Department's NPDES activities for Fiscal Year (FY) 07/08 included the Roadside Litter Removal Program, Catch Basin Inspection & Cleaning Program, Code Enforcement Clean up Program, and the enhancement to the integrated approach in the continued development of the MS4 map.

The Roadside Litter Removal Program has a crew of seven (7) employees that provides roadside clean up efforts. The funding for this Program is provided by each of the five Supervisorial Districts within the County. The crew collects roadside litter from ten (10) linear miles of designated roadways in each of the five Supervisorial Districts. Ten (10) linear miles are cleaned on a rotating basis, allowing for problems areas to be re-addressed every ten (10) weeks. Cumulatively, this program cleans approximately 60 linear miles quarterly. This effort has proven successful in reducing the amount of debris and anthropogenic litter entering the catch basins, nearby streams and waterbodies within the different watersheds. Roughly, 17.85 road miles were cleaned in the Santa Margarita watershed, and approximately 7.34 tons of anthropogenic litter was removed under this program for FY 07/08.

The Catch Basin Inspection & Cleaning Program has a crew of four (4) employees and one (1) vacant position that will be filled in the future. The funding for this Program is provided by the County Executive Office. This Program performs inspection and maintenance on storm drainage facilities. The crew inspects and maintains catch basins, inlets, outlets, culverts, channels, swales, detention basins and other drainage infrastructures to ensure maximum storm water diversion from rights-of-way, while simultaneously maintaining the National Pollutant Discharge Elimination System standards. For FY 07/08, approximately 5.06 tons of anthropogenic litter, 3.74 tons of vegetative litter, and 11.90 tons of sediment litter were removed from the Santa Margarita watershed under this Program.

The Code Enforcement Clean up Program has three crew totaling seventeen (17) employee positions. The funding for this Program is provided by Code Enforcement Department. The crew carries out wide-ranging clean ups. The Santa Margarita watershed falls within Supervisorial District 1 and 3. For FY 07/08, the approximate tonnage of litter removed from each Supervisorial District is summarized in the following table:

Supervisorial District	Tons of Litter Removed
District 1	285.04
District 3	355.48
Total	**640.52**

ROAD REPAIR AND STREET SWEEPING

* Samples taken for analytical testing.

Benton Creek, sampling date 8/28/07 – Field turbidity exceeded 125% BPO (1.25*20 NTU). Field observations at the site revealed ponded water with amphibious life. Picture taken during site visit reveals plant life at channel bottom. Plant and amphibious life at site may have contributed to high turbidity reading. All other field parameters do not indicate an illicit connection or illegal discharge.

Tucaloca Creek, sampling date 5/29/08 – samples were taken for chemical analysis as there was adequate flow at site for sample collection. Field turbidity meter was not working; however, lab results were below the BPO of 20 NTU. Field observations include heavy vegetation and sediment in the channel bottom (photo).

Murrieta Creek @ Clinton Keith Rd, sampling date 8/28/07 – Field turbidity exceeded 125% BPO (1.25*20 NTU). Field observations include pond scum on water surface and ponded conditions. Water was murky and had a greenish tint (photo). As there was no flow and the ponded water infiltrated 100 feet upstream of Clinton Keith, observed conditions would have contributed to the high field turbidity reading.

Redhawk Channel, sampling date 8/28/07 – Field turbidity exceeded 125% BPO (1.25*20NTU) and TDS exceeded 125% BPO (1.25*750NTU). There was adequate flow to collect samples for laboratory analysis. Flow was clear with a slight yellow tint and very little floatables or settleables (photo). Lab turbidity (4.8 NTU) was below BPO; however, lab TDS slightly exceeded 125% BPO. Lab pH neutral. Redhawk is in a predominately-residential area and rules out discharges from industries that would most likely produce elevated turbidity and TDS flows. Nutrient levels are normal for the watershed and MBAS results are below BPO.

Redhawk Channel, sampling data 5/29/08 – Elevated field pH, exceeding pH criteria (9.5). There was adequate flow to collect samples for laboratory analysis. Lab pH measurement did not exceed criteria. Flow had a light green to yellow tint, clear in clarity with very little floatables and settleables (photo).

Long Canyon Channel, sampling data 8/28/07 – Field turbidity > 125% BPO (1.25*20 NTU). Site had ponded conditions; no flow – inadequate for sampling. Photo taken at site visit shows heavy vegetation and sediment at bottom of channel. These factors may contribute to the elevated field turbidity.

Code Enforcement Program Newsletter

Riverside County Code Enforcement

July 2007

Volume 1, Issue 7

The Posting

A TLMA Code Enforcement Monthly Newsletter

Mission Statement

"To enhance public safety and improve the quality of life in Riverside County, through proactive and timely code enforcement actions."

Director Jay E. Orr

Mr. Orr Returns to Sacramento

On Tuesday, June 26th, AB 679 passed through the Senate Public Safety Committee and is now on its way to the Senate floor. Jay Orr attended the committee hearing and provided compelling testimony which contributed to it successfully passing out of the Public Safety committee. This bill will add a civil fine of $100.00 to an illegal dumping infraction conviction and a $200.00 civil fine to a misdemeanor conviction for the same offense. A special thanks is due to Assemblyman John Benoit for his diligent work on this important piece of legislation. ***Jim Monroe***

District 3 Code Enforcement Partners with Animal Control

Code Enforcement officers from District 3 have fostered a strong working relationship with Animal Control. In early June, Animal Control had assisted Code Enforcement in impounding a female dog and her three puppies. The dogs were discovered by Senior Officer Mary Overholt and Officer Brian Noone under a fire damaged mobile home they were inspecting in Valle Vista.

On another occasion, Animal Control impounded 4 dogs in Hemet as Code Enforcement officers were responding to a complaint of an abandoned and vacant residence. The house was being vandalized and was a public safety concern in the neighborhood. The dogs were impeding the Code Officers from conducting their investigation; therefore, Animal Control impounded the dogs.

On June 22, 2007, it was Code Enforcement's turn to return the favor. Senior Officer Mary Overholt and Officer Alejandro Rodriguez-Barrios assisted Animal Control as they served a Warrant in the Sage area. Over 150 animals, mostly dogs, were seized by Animal Control from a local resident. The animals were kept in filthy and inhumane conditions on the property. They also found 10 dead animals in a freezer. The officers found several violations such as a substandard mobile home and recreational vehicle, an unpermitted second dwelling, excessive outside storage, and an illegal kennel.

Hector Viray & Mary Overholt

A Four Hour Success in District 5

Community service offers a natural bond and strong community connection among Cabazon residents. Over 75 volunteers signed up to participate in the Spring 2007 Cabazon Community Cleanup/Tire Collection Event on Saturday, June 2, 2007. The event was held at James Venable Community Center from 8am-12noon and in just as few as 4 hours, 84 community residents arrived and disposed of 28 tons of trash and 240 tires. The Community Cleanup/Tire Collection Event was a success!

Community resident Ernie Irby said, "This is great for our community, we would like to thank all those who were involved in the coordination of this event. I am ecstatic about the number of residents that utilized the event and did not participate in any illegal dumping".

The County of Riverside Board of Supervisors, along with Western Riverside Council of Governments hosted a roadside litter pickup in conjunction with this event and provided food and drinks for all volunteers. Special thanks to CR&R Waste & Recycling Services, County of Riverside Waste Management Department and Economic Development Agency, Family Services Association, Banning Unified School District, Moreno Valley C.A.R.E. Team, Cabazon SET Free Group, Cabazon Fire Station 24, and community resident Dave Newton for all their hard work and support. At the end of such a hard and dirty task, all volunteers felt good. They knew that they'd made a difference and made a place they love a little bit better. A great time was enjoyed by all. ***Chaka Osborne***

Many Thanks

Code Enforcement is often a thankless job but here are a few welcome notes of appreciation:

•May 17th letter from a couple in 5th District. "I want you to know how pleased I was with the service and attitude of Anthony Green, Code Enforcement Officer, when he gave us a Notice of Violation. He was very clear...[and] provided helpful information and support throughout the process. As I look "forward" to paying my county taxes in the future, I will remember the service and consideration given by your department."

•June 24th message from a resident in Sky Country (2nd District). He called to say he was very happy with Code Enforcement's work on his case. Travis Engelking was the investigating officer.

•June 27 phone call from a Sun City resident (3rd District). A very ecstatic resident called to say thank you for the elevated and responsive enforcement efforts along Newport Road. Technicians Anita Bustillos and Ariana Meza are assigned to parking enforcement in that area.

Excellent job all! ***Brian Black***

Vending Sweep in District 2

As a result of several public complaints of illegal vending in and around public schools in the communities of El Cerrito and Eastvale, an enforcement operation was quickly planned. The June 15th operation targeted ice cream trucks and push cart vendors selling illegal fireworks and other potentially dangerous items. The following agencies assisted in addressing these complaints: Code Enforcement SET team and Jurupa officers, Dept. of Environmental Health, and Riverside County Sheriff's Department. The team was ordered to patrol the areas and make enforcement contacts with vendors. The vendors were cited, and/or warned, and under the authority of RCO 853 items were seized and destroyed. The operation resulted in 10 contacts, 6 citations, 4 verbal warnings to vendors exceeding the scope of their permits, and over 500 lbs. of illegal vending merchandise was seized by Code and EH. In the future officers will continue the illegal vending enforcement as needed. Ongoing assessment and surveillance will continue.

Special thanks to Ed and Tita for working and developing the new Property Impound Receipt form.

Mickey Parmele

More Illegal Vending in District 2

On June 22 and 23 the Sheriff's Department's Jurupa Valley Station, lead by Sergeant Steve Brown, initiated an Illegal Food Vendor Sweep in the communities of Rubidoux, Sunnyslope, Pedley, Glen Avon, Mira Loma, and Eastvale. Joining the Sheriff in this sweep were Officers Game, Torres, Gregorio, and Pineda from Code Enforcement's Special Enforcement Team and Officer Baumgartner from District 2 Code Enforcement Office and Riverside County Environmental Health. The purpose of the sweep was to address the ongoing problem of roadside vending and illegal roadside kitchens that present immediate health and safety issues in the community.

Using the new Vending Ordinance, recently enacted by the County Board of Supervisors, the Task Force began contacting vendor's set up throughout the targeted communities. During this operation Code Enforcement and Environmental Health issued 53 citations for violations of numerous County Ordinances. The sweep seized 1,435 pounds of illegal food which was destroyed. Vending equipment valued at $12,000.00 was impounded. $2,337.00 in U.S. currency was seized as evidence as a direct result of illegal food sales.

The Sheriff's Department, Code Enforcement, and Environmental Health are planning future operations throughout the county in the coming months. The purpose of these sweeps is to provide for a safe and healthy community and to pursue those who continue to violate the public health standards and place our citizens at risk. ***SET***

Un-permitted Business in District 4

Mission Fiber is a company that had started a business for storing recycling waste material without the proper permits. The company moved onto seven acres where there is a substandard structure, occupied RV, and approximately two hundred thousand square feet of loose and bundled material piled fourteen feet in height. Code staff has had meetings with the company representatives and they are working with Code Enforcement to come into compliance.

This business is one block outside of the city limits of Blythe. Due to the amount of material this could be a very dangerous fire hazard. There is no water on site and the closest fire hydrant is a quarter of a mile away. If this material catches on fire it would be a catastrophe for the city of Blythe as the wind direction blows towards the city.

Mission Fiber has been issued four notice of violations and directed to remove all the material, obtain the proper permits and a CUP for their operation. At this time Mission fiber has moved in two 10,000 gallon water tanks for fire and dust control.

Mission Fiber has removed about ten percent of the material. We are looking for the property to be cleaned by the end of October. Code Enforcement makes a trip once a week to see how much progress is being made and if they are still hand raking the property to remove all of the loose material. This material is being shipped to Long Beach and loaded up on a ship and sent to China. ***Allan Haeberle***

Harvest Valley Cleanup in District 5

Community volunteers teamed up with 5th District Code staff and the Community Improvement Team to assist over 150 residents with the disposal of trash at the Harvest Valley Community Cleanup on Saturday, August 11, 2007. Not only did the Community Cleanup collect over 41.44 tons of trash, the Harvest Valley Community stepped up to the challenge of finding a sponsor for the recycling of tires. Thanks to their effort and the generosity of Edison Mission Group and Waste Management of the Inland Empire, the cleanup also yielded an impressive 11.35 tons of tires. Code Enforcement's Special Enforcement Team was also present and issued a citation to an illegal vendor. This is a shining example of how Code Enforcement's many facets come together with communities and private business to make a difference! Great job to all! ***Community Improvement***

11.35 tons of tires

Trash & Trailers in District 5

A game of hide the trailer! Code Enforcement Officer Jacob Dietrich worked with a reporting party regarding a squatter who took up camp in Meadowbrook. They were occupying a travel trailer on an unimproved lot over 35 acres in size. Officer Dietrich left a Notice of Violation on the trailer and at the first follow-up found that the trailer was gone. A few days later the reporting party called Officer Dietrich and let him know that the trailer was moved to another portion of the same lot. Officer Dietrich returned to the property and found where the trailer was moved to. He made contact with the occupant, issued an Administrative Citation and let them know that they needed to leave the area. With due diligence, the trailer was finally removed from the lot!

Code Enforcement Officer Rich Arriola worked diligently on an Accumulated Rubbish case in Good Hope. The tenants worked hard and cleaned the property that was full of rubbish and storage items in 60 days. Officer Arriola was able to close his case with full compliance! ***T. Towner***

Accumulated Rubbish in Good Hope

The trailer was finally removed

Imminent Threat in District 2

On August 17, 2007, two substandard structures were demolished by the property owner after a field Notice of Violation was posted stating property / structures were deemed a threat to public safety.

District 2 Code Enforcement Supervisor, Mickey Parmele, requested that his officers conduct a field training exercise to enhance their knowledge on procedures to effectively abate a threat to public safety. Officers and Field Training Officers (FTO) set out to investigate the rapidly deteriorating conditions of two properties located on Bellegrave, cross of Wineville, in Mira Loma and to take initial steps, to verify the "Priority One" status of both substandard structures.

Both properties showed ongoing signs of illegal dumping, trespassing, graffiti, and eroding structures without secured fencing. Each property posed a potential danger due to being open and accessible to the general public. The properties posed a threat of falling into 4' wide and 10' deep holes in the floors, walls and roofs collapsing, and other hazardous conditions to public health and safety.

We were able to contact the property owner, due to a phone number found in the LMS permits system.

An immediate meeting was scheduled with the owner of both properties to discuss the importance of the "Priority One" situation and the procedures of the Notice Of Summary Abatement Of Public Nuisance. The document was hand delivered by Senior Officer J.Palmer and Officer T.Engelking. Understanding the severity of the imminent danger, the owner fenced both properties and demolished both structures immediately. ***Mickey Parmele***

Dangerous Condition Removed in District 2

Newport Road in District 3

Responding to complaints made by Supervisor Jeff Stone's office from his constituents, Special Enforcement Team and Neighborhood Enforcement Team members saturated the area of Newport Road in the community of Menifee. All in efforts to address several private commercial trucks parked along Newport Rd. advertising work for hire.

Officers arrived at the location and witnessed several commercial trucks parked along the road. Private pickup trucks were seen abruptly turning onto the shoulder to contact the truck drivers in what appeared to be shopping for services. The private trucks would then reenter the roadway in the same abrupt fashion, in total disregard for eastbound traffic on Newport Rd. These advertising trucks created a public nuisance, as well as an unsafe hazard for drivers traveling. In addition, to these commercial trucks, there were several other free standing temporary signs advertising various commercial services.

Supervisor M. Acueto, Senior Officer S. Bennallack, Senior Officer M. Sanders, Officer L. Nichols, Officer S. Stoll, Officer E. Delgado, Officer Ron Welch, Officer E. Torres, Technician Anita Bustillos, and Technician Ariana Meza took aggressive Enforcement action throughout the week of 09/10/07 citing all of the violators with both infraction and administrative notices of violations.

Enforcement investigative efforts identified truck drivers who admitted using their trucks as an advertising billboard in violation of RCC 17.254.030, as well as un-permitted temporary signs on Newport Road between Lindenberger Street and Goetz Road.

The operation concluded with 6 criminal citations, 67 Notice of Violations for a total of 108 signs that were posted illegally. As of this printing there is total compliance at this location.

Manny Acueto

Great Work in District 4

Our desert staff is doing great work out in Thousand Palms. Officer Lorena Diaz investigated a case on Ramon Road in Thousand Palms for accumulated rubbish and a homeless encampment on a vacant lot. The lot had been trashed with over 1000 square feet of waste material and several transients had built a tarp and plywood shelter to live in. Through active communication with the Sheriff's Department and the property owner, the entire property was cleaned up and the transients have moved on. The case was open for exactly two months from beginning to end. The property owner then wrote a letter to the County thanking Officer Lorena Diaz for her professionalism and assistance in the matter.

Brian Black

County Agencies and property owners work together for compliance

Letter from DPSS

The Posting is a great community tool! Being with another county agency I like being kept up to date on what is happening in the district that I work in. It gives me pride to see such good things happening and the hard work being done by a fellow county agency. Since I work so often and closely with Code, it is fun to see articles written by my co-workers and "friends". As a constituent, it is great to see where my tax dollars are going, the cleanup that is happening in my neighborhood, and the incredible pictures showing what can be done to make our neighborhoods a better place! Thank you for keeping me "posted"!

District 5

The 'Ole' Watering Hole has been demolished! A nearby neighbor, let Code Enforcement Officer Tom McMullen in on a little bit of history regarding a graffiti-ridden, substandard structure, on Highway 74, in the Good Hope area. The building was known to be the local hot spot in the 70's & 80's where the locals came together for fun and dancing. The building had become an eyesore and public nuisance that could be seen as you drove down Highway 74. In September, the property owners took responsibility and had the structure demolished and the lot cleaned.

Newly promoted Code Enforcement Officer Lanee Padilla and Code Enforcement Officer Charlene Smith, responded to a complaint received regarding a "messy" property on Flynn St. in the Highgrove area. The officers were able to make contact with the property owner and explained the violation and compliance measures required. Property owner cooperated and complied in two weeks! ***T. Towner***

This building on Highway 74 has been removed

Marine Drive in District 3

In collaboration with Hemet Sheriff's Department, the Code Enforcement's Community Improvement Program coordinated a cleanup of Marine Drive. This small cul-de-sac of apartment complexes was surrounded with unusable appliances, old furniture, broken toys, trash and rubbish.

Even with the threat of rain, all agencies were ready. Corporal Edwards and his deputies went door-to-door in the early morning reminding tenants of the cleanup. Code Enforcement Officer Brian Noone was invaluable by encouraging the tenants to keep coming back, and had a positive attitude the entire day. Code Enforcement Technician Dawn Burnett showed up early, set up, and spent a large part of the day raking and picking up weeds. Graffiti on the surrounding walls and signs was removed by Graffiti Busters during the cleanup.

A special thanks to retired volunteers Gerald Dayton and Edde Ashley. Without the help of our community volunteers our cleanups would not be as successful as they are.

The tenants were very happy for the cleanup. Overall it was a very successful day, disposing of 9.58 tons.

Becky Mitchell

Corporal Edwards and Deputy Jerry Barba cleaning up Marine Dr.

SET

Officers with Riverside County Code Enforcement's Special Enforcement Team, along with Deputies from the Lake Elsinore Sheriff's Station Community Action Team, conducted a high visibility enforcement operation targeting habitual properties and those properties identified by the community and enforcement personnel (Top Right), which could evolve into blighted parcels.

Enforcement actions led to numerous notices and infraction citations being issued for violations ranging from excessive outside storage and accumulated rubbish to inoperative vehicles, construction without permits, and occupied recreational vehicles. Compliance for these violations will be verified in 30 days. One vehicle was removed during the operation, identified as abandoned on private property. One non-permitted "End Use Waste Tire Facility" was identified and enforcement action was initiated. Compliance for this Waste Tire Facility will be verified in 30 days. Two illegal dumping cases were investigated, one resulting in a four count misdemeanor case for dumping demolition rubble, and the second involved the dumping of hazardous substances. This investigation is continuing. ***Marr Christian***

Excessive trash & debris

District 3

A long standing case is in the process of being resolved with the help of County Counsel, TLMA Purchasing, and Fleet Services. Lisa Traczyk, County Counsel, successfully negotiated a settlement agreement with the tenants and property owners of a thirty-two acre parcel that was in multiple violations of County of Riverside ordinances (left). The tenants vacated the property after months of posturing and exercising their due process through the judicial system. The property owners agreed to pay for a supervised abatement conducted by the County of Riverside Code Enforcement Department. Heavy equipment, high sided transport trucks, and numerous employees started the cleanup on this project that is estimated to take four weeks. What was once a tilapia farm operated by Coca-Cola (legal use) is now piles of rubbish being hauled away. Approximately 1,219,680 square feet of rubbish and outside storage will be abated. It is one of the largest abatements in recent history. Thank you Annette Paturzo, Agency Program Supervisor, and Walter Mack, Procurement Contract Specialist, for your diligence in assisting with all of the behind the scenes paperwork and contracts. ***Mike Sanders***

Approx. 1,219,680 square feet of rubbish

Mead Valley - District 3

On September 22, Code Enforcement participated along with over 50 other agencies at the Annual Mead Valley Health & Safety Fair. Despite the rain, hundreds of Mead Valley residents came out to the Mead Valley Community Center and received free health and dental screenings on site. Animal Control's mobile clinic was offering pet adoptions and discount spay/neuter vouchers to residents. Supervisor Bob Buster thanked Code Enforcement for all of their hard work and outreach efforts in Mead Valley and the rest of District 1. Code Enforcement's Neighborhood Enforcement and Community Improvement Teams discussed community concerns and provided resource information to residents. The team used the opportunity to educate the public on the health and safety risks common code violations pose to families and communities. Overall, the event was successful and enjoyed by all who attended. ***Angel Olivo***

From right to left are, Angela Boone-Porcher, Jose Cruz, Terrence Wiggins, Angel Olivo, of Code Enforcement and Patricia Buckey, EDA, 1st District Supervisor Bob Buster, and Alice Goshen, EDA.

Updates for Code

We welcome Senior Officers Hector Viray, Mary Overholt, and Cynthia Black to our Administration team. Senior Officer Viray will be working on our policies and procedures and the development of a set of general orders as well as other special projects as assigned. Senior Officer Overholt will be working on special project assignments supporting the Field Operations Division. Senior Officer Black will be leading our litigation support unit. She will be coordinating all civil litigations, abatements and warrants with County Counsel and will be working on other administrative projects as assigned.

We are pleased to announce the promotion of the following personnel to the rank of Senior Code Enforcement Officer:

Wayne O'Gara who will assume a leadership role in the District 3 South County office.

Marcella Villanueva who will assume a leadership role in the District 2 Jurupa office.

In addition, we have hired the following personnel as Senior Code Enforcement Officers:

Greg Flannery will be assuming an acting supervisory role in our District 1 office in Lake Elsinore. Greg is a proven leader having built the Code Enforcement program from the ground up at the city of Hemet. Greg also has over 14 years experience with the city of Montclair as a Deputy Fire Marshall and Police Officer.

Kenneth King will be assuming a leadership role in our District 4 East team in the Indio office. Senior Officer King brings with him over 7 years of proven leadership ability with the Town of Apple Valley and the County of San Bernardino. He is also a Reserve Deputy Sheriff with the County of San Bernardino.

Lionel Martinez has accepted a leadership position with our District 4 West team in the Indio office. Senior Officer Martinez has over 10 years of Code Enforcement Officer experience with the cities of Hemet and Lake Elsinore. Lionel has extensive experience in the building codes and has achieved a Level II Reserve Deputy status with the Riverside County Sheriff's Department.

The following Code Enforcement Officer appointments have been added to our work force. This will bring our total Officer/Senior roster to 84 personnel.

Ryan Dolan - Assigned to our Special Enforcement Team. Ryan comes to us from the Riverside County Waste Management Department where he worked as a load checker and hazardous waste investigator.

Rusty Hannah - Assigned to our Indio Neighborhood Enforcement Team. Rusty comes to us from the County Building and Safety Department and brings extensive knowledge of the Building Codes.

Brenda Hannah - Assigned to our Indio Neighborhood Enforcement Team. Brenda comes to us from the County Building and Safety Department and has experience in Building and Grading Inspections. She is also well versed in the Planning Department Land Use processes.

Adam Hermanson - Assigned to the Special Enforcement Team in the desert. Adam has over 7 years experience with the County Sheriff and is currently enrolled in a college degree program with a major in Criminal Justice.

Jon Kirchoff - Assigned to our Neighborhood Enforcement Team in District 1, Lake Elsinore office. Jon has over 7 years experience in law enforcement and is currently working on a Bachelor's degree in Criminal Justice.

Nina Morales - Assigned to our Neighborhood Enforcement Team in Indio. Nina was recently promoted from a Code Enforcement Technician. Nina holds a Reserve Officer Level I certificate and is currently enrolled in an Administration of Justice degree program.

Jennifer Morris - Assigned to our Neighborhood Enforcement Team in District 5. Jennifer comes to us by way of the Waste Management department. She brings with her a broad knowledge of hazardous materials handling and investigation.

Karen Nguyen - Assigned to the Special Enforcement Team. Karen has over 4 years experience as a Code Enforcement Officer for the cities of Westminister and Anaheim. She possesses a Bachelor's degree in Criminal Justice from Cal State Fullerton and is fluent in Vietnamese.

Lanee Padilla - Assigned to our Neighborhood Enforcement Team in the fifth district. Lanee has recently promoted from the position of Code Enforcement Technician. Lanee has a background with the Animal Services Department and holds an AA degree in Administration of Justice.

Samantha Phillips - Assigned to our Special Enforcement Team. Samantha comes to us from the Animal Services Department. She also has gained experience in parking enforcement from the city of Corona.

Michael Romero - Assigned to the Neighborhood Enforcement Team in District 2. Michael was recently promoted from the position of Code Enforcement Technician in which he held for about 1 year. Michael has prior experience working with the Animal Services Department.

Roy Ryder - Assigned to the Neighborhood Enforcement Team in the 4th District. Roy has over 3 years experience as a Deputy Sheriff and possesses a Bachelor's degree in Psychology.

Gladys Sanchez - Assigned to our Neighborhood Enforcement Team in Jurupa. Gladys has over 7 years experience with the Sheriff's department and can read and speak Spanish fluently.

Britt Starkweather - Assigned to our Neighborhood Enforcement Team in the 5th District. Britt brings over 8 years of Code Enforcement experience with him from the cities of San Bernardino and Rialto.

Jane Tate - Assigned to the Neighborhood Enforcement Team in our District 1 office in Mead Valley. Jane came from the Building and Safety Department where she worked as a building/ Valley. Jane came from the Building and Safety Department where she worked as a Building/ Grading Inspector for the last 4 years.

Nicole Wapner - Assigned to the Neighborhood Enforcement Team in District 2. Nicole has over 9 years experience in the Animal Control field where she recently held the position as Senior Animal Control Officer.

Ron Welch - Assigned to the Neighborhood Enforcement Team in the 3rd District. Ron comes to us from the Building and Safety Department. Ron possesses a certification as a building inspector and plans examiner and has over 17 years working in the Building industry.

AB 679 the bill which will add a fine to an illegal dumping conviction is waiting to be signed into law by Governor Schwarzenegger.

Current Office Space Projects - District 4 - 1000 Palms - We have acquired about 6500 square feet of office space in 1000 Palms where we plan to relocate our Indio staff. The space will accommodate both of our District 4 neighborhood enforcement teams as well as a contingent of special enforcement team members.

District 5 - Moreno Valley - We are in negotiations to acquire about 3000 square feet of office space in the Festival Shopping Center in Moreno Valley. This space is in close proximity to our current office. The new space will accommodate our district 5 neighborhood enforcement team. We are also attempting to acquire an additional 1500 square feet of office space adjacent to our existing facility to accommodate future growth in our department.

District 2 - Rubidoux Fleet Services - We have acquired about 500 square feet of office space in the new Fleet Services building to temporarily house a group of our Special enforcement team members.

Abatement in District 5

The community of Good Hope has been distraught over a property located on the corner of Mountain & Palm due to it's unsightly accumulation of rubbish, debris, inoperable vehicles, occupied trailers, vagrants, and substandard sheds. Code Enforcement notified the property owner of the problems, and the owner assured us that he would take responsibility to have the property cleaned. Attempts to accomplish the clean-up were made, but never finished. Code Enforcement Officer Tom McMullen followed due process and took the case to the Board of Supervisors to request approval for abatement. Approval was granted and early this month Code Enforcement was able to hire a Contractor and the clean-up was completed.

Thanks and praise were received from the Good Hope residents for a job well done! ***T. Towner***

This property in Good Hope is no longer a problem.

Contract Services in District 5

The County of Riverside Code Enforcement Department is providing contract code enforcement services to the City of Desert Hot Springs (DHS). An agreement between the City and the County came into effect on September 18, 2007. Code Enforcement staff met with City staff and developed the scope of duties for the contracted services. On October 24, 2007, Code Enforcement Officer Danny Pike started the services and conducted initial inspections in the commercial district of the City of DHS. The inspections consisted of a check of the landscaping, signage, trash enclosures, verifying current business licensing, and overall appearance of the business. The following day Officer Pike assisted in removing a homeless camp in the business district that became troublesome to the local businesses and residents with the criminal activity, trash, and debris. We are developing a successful partnership to supplement the City's efforts to make it a safer community.

T. Towner

The County and City working together!

Summary Abatement in District 2

I responded to a complaint for a reported substandard structure on a vacant lot in El Cerrito on Carmelita Ave. Upon my arrival, I found a residence and garage with multiple steel I-beams going through them resting on stacked 4x4 pieces of wood approximately 5 ft. off the ground! The residence and garage was moved from its original foundation onto this vacant parcel. The garage appeared to have been once attached to the residence and was torn off during the move. The property was unfenced and accessible to anyone who wished to explore the area. I also encountered an occupied RV on the property sitting 30 feet away from the residence. The RV had electrical and water hookups from a neighboring house.

The residence and the garage were both posted as substandard. Supervisor Mickey Parmele immediately called Deputy Counsel Bruce Fordon when he saw the pictures taken of the conditions. All persons involved agreed that a Summary Abatement to fence in the substandard structures was needed as quickly as possible. Sr. Officer Palmer and I gathered all the documents and exhausted all means, including driving to the property owners home in District 1, to make contact. Contact was made through acquisition of a telephone number however, the property owner did not have the means to correct the violation immediately.

With the help of Sup. Parmele and Sr. Officer Palmer, I met a fencing contractor at the property who secured the substandard structures with a gated 6 ft. high fence. The occupied RV was removed the same day. The abatement process has begun to remove the structures completely.

Jonathan Lance

Summary abatement was necessary on this substandard structure

New Staff to Expand Plans

This month marked the graduation of close to 25 staff members from our enhanced Basic Code Enforcement Academy. The new officers are now involved in their field training programs. The addition of new staff to our offices will greatly enhance our ability to respond faster to all our customers and keep cases on track for faster compliance. These new staff members will also play an important part in the year to come as we expand our comprehensive Community Improvement Plans to more and more communities. Our program in the 4th District community of Mecca has been very successful thus far. Its success has led to the recent development and implementation of a plan for the Quail Valley community in District 3. In the very near future we will begin work on plans for Home Gardens in District 2 and Mead Valley in District 1. We are finding success with these programs through working together with all of our stakeholders and the community. ***Brian Black***

Inspection Warrant in District 2

On October 18, Jurupa Code Enforcement served an Inspection Warrant on a repeat violator on Bellegrave Ave. in the Glen Avon area.

Twelve Code Officers were joined by 10 Sheriff Deputies, four R.A.I.D. (Riverside Auto-Theft Interdiction Detail) investigators, four Animal Control Officers, and one investigator from the U.S. Dept. of Agriculture. Three properties covering almost four acres were inspected.

We identified and inventoried a total of 222 inoperative vehicles, eight substandard structures, three unpermitted structures, one substandard double-wide mobile home, prohibited fencing, and approximately 50,000 square feet of outside storage. Officers completed the inventory, taking photographs, and posting notices in about four hours.

The property owners were not home, but Sr. Officer Jim Palmer was contacted by the family attorney. He said he knew most of the cars on the property were junk and should be cleared off the property. He said the property owner was willing to comply, and they "just needed a little time." The inspection was concluded without injury or incident.

Jim Palmer

About 50,000 square feet of outside storage

222 inoperative vehicles

Big Cleanup Day in District 1 Yields over 80 Tons!

Over a year ago, District 1 officers told me that the Wildomar and Lakeland Village areas could use a community cleanup and tire collection event. On October 20, that cleanup and tire collection event finally happened! The cleanup yielded an impressive 42.85 tons of trash and metals and 10.71 tons of tires. In addition, approximately 210 e-waste items (computers and televisions) were accepted. Despite the large turnout of over 220 residents, the 308 loads were accepted in a timely and organized manner. Kudos to Ed Campos and CR&R Waste and Recycling Services for their generosity, hard work, and dedication to community spirit.

That same day, Riverside County Code Enforcement joined Riverside County Flood Control, Riverside County Waste Management, and CR&R Waste and Recycling Services for the annual Santa Margarita Watershed Cleanup. The event had over 100 community volunteers arrive bright, early, and eager to help clean up areas of the Santa Rosa Plateau being littered and dumped upon. I went along with one of these groups to an area off of Corona Cala Camino in Murrieta, which has one of the most beautiful views in our County. Some say you can see to the Pacific Ocean on a clear day. As beautiful as this place was, it was littered with cigarette butts, fast food wrappers, and other trash. The group made speedy work of getting it all picked up. All together these agency partners and volunteers collected over 27.68 tons of trash, tires, and appliances. After the cleanup, Code Enforcement's own Mark Slocum and Brett Farlow fired up the barbecue grills and made hamburgers and hot dogs for the hungry and well-deserving crews. Great job to all who played a part in this wonderful and worthwhile event! See you next year!

Angel Olivo

Supervisor Mark Slocum on the grill!

Lakeland Village Middle School hosted a successful cleanup

National Red Ribbon Week in District 2

National Red Ribbon Week is a national campaign of anti-drug education and drug abuse awareness. This week, celebrated October 23-31, encourages individuals, families, and communities to take a stand against abuse of alcohol, tobacco, and illegal drug use. The campaign also educates communities on the positive alternative lifestyle choices available to youth and adults.

The Department of Code Enforcement and Troth Street Elementary School partnered together to make a difference in District 2 at the Information Fair and Library Open House Event. Upon invitation by Librarian Doris Sanchez, our Department provided educational materials on the importance of clean communities. We also offered available resources and showed support for healthy, drug-free lifestyles. The planning and working together is as important as Red Ribbon week itself because it creates a sense of community and shared values. The event was a great success and the families in attendance were very grateful for our Department's presence. Thanks to all who participated!

Chaka Osborne

Banner at Troth Elementary

Relay for Life Wrap Up

On June 23rd and 24th 2007, the American Cancer Society held their 2nd Annual Rubidoux Relay for Life Event, to remember those that have passed away from cancer and to honor and encourage those who have either overcome or are currently suffering from some type of cancer.

With the help of Kirstin Lockmiller, daughter of the late Supervising Code Enforcement Officer David C. Christenson, and her husband Steve, our team raised a top fundraising amount of $3,375.75 in Dave's memory. This year's event brought in a net profit of $20,372.77 that will go towards research for finding a cure and for special programs.

Planning has already begun for next year's Relay, which will be held on May 3rd and 4th, 2008. If you are interested in becoming involved, please contact Margie Scott at (951) 453-2118.

Quail Valley Improvement Plan Kick-Off

In the month of November, Code Enforcement kicked off its Quail Valley Improvement Plan. On November 3rd, we hosted a Community Improvement Fair. It was a fun-filled day with over 500 in attendance. The Economic Development Agency (MARS) provided air jumpers and activities to keep children busy while parents went booth-to-booth collecting information for home and community improvement. Code Enforcement's Community Improvement Program team was available to provide informational brochures and pamphlets and to help serve popcorn, hot dogs, nachos, and drinks to the community. Senior Officer Wayne O'Gara, Officer Jason Heagstedt, and Technician Anita Bustillos were also there to answer questions.

Outside agencies joined in on this event as well. Those agencies who attended were: Riverside Sheriff's Department's ROVE (Recreation Off-Road Vehicle Enforcement) Team, EDA - Housing Development, EDA - MARS – Community Services Division, Riverside County Fire Department (Quail Valley Station), and Environmental Health.

Two weekends later, on November 17th, we had a community cleanup. Prior to the event, officers went door-to-door to residents who could be in violation of excessive rubbish and notified them of the event. The event flyer was also mailed to all residents. The event was more successful than expected. There were 30-50 cars in line at all times from 7:00 a.m.–12:00 p.m. Waste Management worked diligently all day to roll over the bins as fast as they could. Even with the constant turn over, there was not enough room for all of the trash that was being brought in. Supervisor Jeff Stone did not want anyone turned away so we unloaded all of the loads of trash in a huge pile in the parking lot. Waste Management worked overtime to bring us additional bins so we could clean up the pile before the end of the day.

Thank you to all of the Quail Valley resident volunteers, Youth Authority, and to the high school volunteers. A special thanks to Ted Metzker, Dave Hyatt, and Wes Purvis, who not only provided their tractors for the cleanup, but also helped in the planning and worked the event. They also stayed well beyond the closing time to clean up what was left behind. There was over 94 tons of garbage collected that morning.

These events have proven to be successful. We have had voluntary compliance in code issues, have more community members at meetings, and had over 15 new volunteers sign up for the Quail Valley Crime Watch Program. ***Becky Mitchell***

The Community Improvement Fair offered information, food, and fun for the entire community.

Bins were filled and replaced many times at the Quail Valley Cleanup.

Neighborhood Watch Picnic in District 5

Over 200 residents of Cabazon, Whitewater, and Windy Point assembled at the James Venable Community Center for the Annual I-10 Corridor Neighborhood Watch Community Picnic on Saturday, November 17, 2007.

With the continued support of Riverside County Fifth District Supervisor Marion Ashley, attendees enjoyed free food, refreshments, and activities such as a raffle of donated prizes, face painting, balloon hats, basket weaving, and a bouncer for the kids. Several booths were set up with representatives from the Board of Supervisors 5th District, CHP, Code Enforcement, CARE Team, Riverside County Sheriff, local churches, and Family Service Association.

David Newton, President of the I-10 Corridor Neighborhood Watch, expressed, "We are very proud of the working relationship we enjoy with Code Enforcement" and "The I-10 Corridor Neighborhood Watch looks forward to the coming year, and to the continued working relationship we enjoy with each Riverside County government agency that has partnered with us in our efforts to reduce crime and improve the quality of life in our three small communities."

Tracey Towner & Laura Gilbert

Officers James Pike and Anthony Green greeted residents

The children gathered around to listen at Highgrove Elementary

Gang Awareness & Career Day in District 5

Code Enforcement was invited to initially give a presentation to 2nd and 3rd grade classrooms for "Gang Awareness & Career Day" at Highgrove Elementary School. At the last minute, the elementary school requested a full display, which included cars, uniformed officers, and a presentation. The event was very gratifying as our presentation put a smile on the kids faces as they proudly wore their Junior Code Enforcement Officer sticker badges.

I would like to thank Laura Gilbert, who provided handouts, and Stacy Baumgartner for bringing a Code Enforcement unit with all the bells and whistles. I would like to give a special "thank you" to Marr Christian for assisting in coordinating the last minute request for a Code Enforcement patrol unit.

Manuel Acueto

Voluntary Compliance in District 2

I am sure a lot of you cruising down Bellegrave Avenue had seen this dilapidated building on the corner of Martin and thought to yourselves, "Wow, this could be potentially dangerous" – especially for the students from the high school across the street. The property owner has since voluntarily demolished the sub-standard structure.

In September, the Jurupa Office received a complaint on a run down building in Mira Loma. Officer B. Pollard contacted the property owner, made an inspection appointment, and found the building to be sub-standard. A month later on the follow-up inspection the sub-standard building was still in violation. Officer Pollard informed the property owner that we will prepare the case for abatement. In the beginning of November 2007, on another follow-up inspection, the sub-standard building had been demolished. The empty lot is now very thankful for the "facelift".

Mickey Parmele

Success in Mecca

Results from Code Enforcement's efforts in Mecca are becoming very noticeable. We are at the height of our education/outreach program conducting two community meetings and two community education workshops in the month of November. Staff and the community are seeing the difference!

As such, below is a summary of key areas from our recent reassessment windshield survey to check on our progress. The numbers were compared with the first survey with very exciting results.

Decrease of:
24% Accumulated Rubbish
30% Inoperative Vehicle
59% Substandard Structure
78% Excessive Animals

In addition to the reduction in violations within the community, we have seen a shift in how Code Enforcement is perceived. Through our most recent meetings and events the community has developed a good understanding about our efforts and what we are working to accomplish. As such, we have been invited to participate in the Mecca Holiday Parade alongside the Fire Department. Working proactively to build relationships within the community, we have shown how effective our efforts can be and the amazing impact we can have on a community.

We would like to take a moment and say thank you to all our partners that have made our efforts such a success. In addition to Supervisor's Wilson's Office and the other government agencies, these partners include, but are not limited to: Our Lady of Guadalupe Catholic Church, The Apostolic Church, Mecca Elementary School, United Farm Workers, Mecca Citizen-Manual, Desert Mirage, Chandi AM/PM, and many others.

We look forward to our continued progress and successfully working with these great partners to make a difference in Mecca.
Kenneth King

The streets and homes in Mecca are becoming clean and clear

Accumulated Rubbish Leads to Fire in District 3

Green waste chips being used for hill erosion control ignited from spontaneous combustion and burst into flames at the start of last month's windy fire week. The property owner had allowed his buddy to dump this commercial green waste on the property for the last five years. Fire crews from CAL FIRE, an attack helicopter, and water tenders, from as far away as the City of Corona, were needed to supply water to this fire. The fire scorched palm trees, melted insulation on electrical lines, and the smoke could be seen for miles. Fire crews were on scene for two full days to ensure the fire was extinguished and would not ignite again with the high winds and dry conditions. ***W. O'Gara***

It took fire crews two full days to extinguish this fire

Did You Know?

- The Code Enforcement Department has responsibility in the enforcement of over 20 different County Ordinances.
- 8,069 inoperable vehicles were removed from properties throughout Riverside County. 1,111 of those vehicles were removed from unincorporated communities!
- In order to retain an inoperable vehicle on your property, you must store it inside of a completely enclosed and permitted building such as a garage.
- Code Enforcement has been contracted by the State's Integrated Solid Waste Management Board to conduct inspections at over 500 waste tire facilities throughout Riverside County.

A Community Comes Together to Help

In District 4 we had a great example of the community coming together in response to a Code Enforcement case.

Within 14 days of our first notice of violation, the property owner was able to use volunteers from the community to remove the accumulated rubbish and fire debris from her yard. Two years ago this detached structure burnt down, unfortunately the property owner had no money or insurance. Her kids had to play in the front yard near the street due to the nails, sharp edges, and soot from the fire debris. After my first visit to the property the owner started a great chain of events. As members of the community heard of her need for help, they stepped up and offered their time and services. The property owner received assistance from approximately 20 people and donations from the following organizations: Indio Boy's and Girl's Club (volunteers), Indio Apostolic Church (volunteers), S & S Concrete (clean up supplies), Manuel Razo Construction (crew), & Burrtec Waste Disposal (large dumpster).

It took 2 hours to clean up this property. The owner said she received a great Christmas present now that her kids could play in the backyard since it is safe again. She thanked Riverside County Code Enforcement for our kindness. But the community deserves the praise!

Rusty Hannah

Neighbors help property owner clean yard

Stolen Trailer Recovered in District 2

In late October, Technician Carol Lucero began citing a commercial trailer for a commercial vehicle parking violation. After several subsequent citations for the same violation, Technician Lucero became suspicious. She contacted the Riverside Sheriff's Department, and together they discovered the trailer had been stolen in early October.

The owner of the trailer was contacted, and he came to claim the trailer. The owner received an early Christmas gift when he found all of the merchandise still in the trailer. The value of the merchandise was estimated at about $160,000.

The five parking citations will be dismissed.

Jim Palmer

Trailer and merchandise recovered

County Departments Working Together

It was almost 4:00 o'clock and the day was just winding down when Code Enforcement District 2 office received a call from their own Special Enforcement Team (S.E.T.). SET called to request assistance on a bust for an illegal rodeo and fiesta currently underway in an unincorporated area of Riverside County. The District 2 office immediately jumped into gear to coordinate efforts with S.E.T., Riverside County Sheriff (RSO), and Environmental Health. Following a briefing from each department and their roles in the operation, the teams arrived at the location of Dodd and Limonite.

Upon arriving at the rodeo/fiesta, Code Enforcement estimated the gathering of at least 750 to 1,000 participants. With traffic posing the initial problem, Officers D. Payne, M. Romero, and W. Jose took quick initiative and began directing traffic to a safe flow. Following S.E.T. and R.S.O., Code Enforcement Officers M. Villanueva, J. Palmer, D. Parra, and T. Engelking split into pairs and proceeded onto the property to conduct their investigation with officer safety in mind.

Upon investigation, a number of violations were discovered including: construction without permit (stalls and patio covers), excessive animals (over one hundred cattle and horses), excessive outside storage, and unpermitted land use for the rodeo/fiesta. Environmental Health seized 350 pounds of food and food related containers. In coordination with the Sheriff's Department, S.E.T. directed the evacuation of all rodeo patrons in a calm and orderly fashion.

With the cooperation of the property owner, the rodeo/fiesta was shut-down in just over 3 hours. This is just another example of a well-organized and quick response by multiple Riverside County departments serving the health and safety of the public. ***Mickey Parmele***

Rodeo/fiesta event with between 750-1000 people

Departments working together

Teamwork in District 3

On December 10, 2007, one of the largest cases that I know of was closed due to compliance. Many of you know of the case as Cross Roads. The case involved a property located on the south west corner of East Benton Rd. and Sage Rd. There were a total of 36 occupied and substandard recreational vehicles, 15 substandard, unpermitted structures, and 14 substandard mobile homes. Approximately 180 people occupied the various structures on the property. In addition to these violations, there were various land use violations to include a rehabilitation center and an automotive paint shop, just to name a few. Due to the fact that many of the recreational vehicles, mobile homes, and structures were grafted together, it took a team of nine officers about six hours to go through the entire property and properly identify all of the individual structures and the hundreds of hazardous defects.

It took teamwork to win this battle. Not just teamwork from the officers and staff directly involved in the investigation but throughout the entire Code Enforcement organization, County Counsel, and Supervisor Stone's office, and many of the social services organizations within the county. Even though the people living there were displaced from this location, all of them were provided help with placement and counseling.

For me, the case was not just about the large amount of code violations on the property, it was about being a conduit of change, to show that we were no longer the same old code enforcement agency that was afraid to tackle the difficult cases. It was about many people throughout the county coming together as a team and solving a problem. And most importantly, it was about making a difference in my community and helping the 180 people who were being taken advantage of by the individual who was supposedly providing rehab services to them. I'm certain that as time passes and the case is sent to be archived, I will never forget the 2-week-old child that was being raised in a 100 square foot substandard motor home with no toilet, air conditioning or heat, and crawling with ants. ***Mark Slocum***

This entire community of substandard structures was removed

Chronic Litter

The Code Enforcement Department was contacted regarding the chronic litter along the fence line of the Blythe Municipal Airport. The site was inspected and the litter appeared to be from nearby businesses. This area is open and generally has a strong gusting winds traveling across the airport runways and open terrain. Unfortunately, this causes litter to travel into areas where aircraft are accessing and leaving the airport. This poses a safety issue and a FAA violation. The business owners were contacted. The situation explained. The cooperation was outstanding. Case closed. ***G.Gianos***

What is a Code Enforcement Officer?

What is a Code Enforcement Officer? There are many answers to that question. In some circumstances, people who have concerns in their neighborhood often find a minor violation to report to Code Enforcement and expect us to solve the entire problem.

One example is the case of sex offender group homes. People are not happy with the current state law that allows for these homes in their neighborhoods. They will call Code Enforcement to report violations that might exist on the property, in the hopes that this will make the entire problem disappear.

In these types of cases and others, people expect Code Enforcement to act in the capacity of Parole Officer, Mediator, Building Inspector, and Police Officer. They believe that we will resolve issues in their community by means of addressing code enforcement violations alone. In some cases, we are able to make the desired impact as a result of our enforcement. In others, we bring the property into compliance, but the underlying issue or concern still remains.

So what role does Code Enforcement fill in the community? Although we are not any of the occupations above, my answer has always been that Code Enforcement is in the "Life Safety" business. Whether it is to ensure the proper operating conditions of commercial activities so that they do not have a negative or hazardous effect on the community, or simply working an accumulated rubbish or vehicle abatement case. All of these have safety consequences.

A reminder of how Code Enforcement affects life safety issues was a recent incident in Long Beach where three children died in a fire of an unpermitted residence in a detached garage. Although the Fire Department was quick to respond, all three girls died, in part, due to the lack of egress because the fire blocked the only exit.

In addition to issues with the lack of egress, we often deal with the increased fuel loads and hazards associated with accumulated rubbish and inoperable vehicles. As seen in these before and after pictures of a recent case, District 4 staff worked in North Shore, you can appreciate the hazards this would have caused a fire or ambulance crew responding to this address in an emergency.

In addition to the blight and public nuisance conditions these materials create, they also pose serious life safety risks. Inoperative vehicles can make it difficult for firefighters to approach a structure; accumulated rubbish can increase the fuel load, heat and rate of the spread of a fire. Also, material such as waste tires, car batteries, paint, and oil, all of which emit toxic fumes during a fire, may increase the obstacles emergency responders face.

So what is a Code Enforcement Officer? We will always wear many hats, but without a doubt one of the most important ones is acting in our life safety role.

Kenneth King

Before

After

Quail Valley is Cleaning Up

Team 3 N.E.T. Officers are working full force in the Quail Valley project. Since the Neighborhood Clean-up in November, officers have been addressing all the issues in Quail Valley. They have been making contact with property owners as well as tenants and educating them on the importance of keeping their property clean. One property which was of concern, was a large 3 acre lot that was accessible for dumpers and transients. There was 9,825 square feet of items ranging from spas, household trash, furniture, tires, green waste, and trailers. In several conversations with the property owner we let her know our concern and the importance of making it difficult for people to enter the property. Then she took the necessary steps to have the property cleaned and blocked the entrance. Thanks to all the officers, and a big thanks to the property owner for a job well done.

Roy Ryder

Quail Valley property cleared of violations

Officer Introduced in Highgrove

Officer Lanee Padilla

On January 22, 2008, Code Enforcement Officer Lanee Padilla was introduced at the Highgrove Community Service Authority (CSA) 126 meeting as the officer servicing the communities of Highgrove, San Timoteo Canyon, and Reche Canyon.

Senior Code Enforcement Officer Mike Bowles presented a report of code activity and introduced information regarding the development of a Community Impact Plan for the Highgrove area that would promote education, outreach, enforcement, and partnership with the community and Code Enforcement.

Michael Bowles II

Trash Abatement Ordinance Changes

Ordinance number 541.5 was enacted by the Board on June 12, 2007, to address the problem of accumulated rubbish on private property throughout the county's unincorporated communities. Once the rubbish is identified by a Code Enforcement Officer, a notice is mailed to the property owner and posted on the property providing the owner a 30 day window of opportunity to remove the rubbish from their property or request a hearing before the Board of Supervisors. Should the owner fail to remove the rubbish or request a hearing within the prescribed time frame, Code Enforcement can, without further notice, contract with a rubbish removal vendor for the removal of the trash. Once the trash is removed, the owner will receive a bill for the trash removal which will include Code Enforcement administrative costs (time to investigate and process the case file). If the bill is not paid within the given time, the County will record a Notice of Abatement Lien against the property and submit the costs to the Auditor-Controller's office for inclusion as a special tax assessment against the property.

In the last year, the County removed more than 10,000 tons of trash from public and private property at an expense of over $1,358,473. In a continued effort to cut down on the incidents of illegal dumping, Code Enforcement operates a pro-active enforcement program including manned and unmanned surveillance operations. Last year, our Special Enforcement Team issued 110 infractions, 104 misdemeanors, and assisted in the issuance of 6 felony citations. To date, our conviction rate holds steady at 98%.

The Board of Supervisors, in enacting Ordinance 541.5, found that the unregulated and improper allowance of rubbish or other material that is dangerous or injurious to a neighboring property or to the health or welfare of residents in the vicinity of any real property throughout the unincorporated territory of the County of Riverside poses a danger. This is not only because it is unsightly and negatively impacts property values, but also because it provides areas for occupation by vermin or wild animals, is a fire hazard, and is potentially toxic to persons, and the environment. Therefore, the accumulation of rubbish is deemed a Public Nuisance and poses a hazard to the safety of land owners, residents, users of public highways, and to the general public.

Together with cooperative property owners taking a more aggressive approach of monitoring the condition of their property, along with Code Enforcement's dumping surveillance program, we can make a difference in our communities and take a giant bite out of illegal dumping!

Mission: St. Anthony's Mobile Home Park

Due to recent complaints on a wide variety of issues, Code Enforcement and Environmental Health staff met on February 9, 2008, to conduct an evaluation of the St. Anthony's Mobile Home Park in Mecca. The goal of this project was to evaluate the current status and condition of the mobile home park. Then it would be decided if any future action would be taken regarding these complaints.

Using the successful model from our Mecca Community Impact Plan, we were able to identify and work with Community Partners and Stakeholders. Senior Officer Hector Herrera made contact with El Poder Popular and residents the day before our evaluation. Over 60 residents showed up to a quick meeting where Hector explained what we would be doing the next day and our intentions to work with them in developing strategies for dealing with the issues they face. After completing our initial evaluation, we have found the core issues are: access to the park, trash removal, water quality, and hazards.

Community Improvement put together a clean up day and a resource fair that following weekend. We had to act fast to help these residents. It was a huge success; everyone came out and participated. Burrtec provided over 8 - 40 ft. roll off bins for the disposal of trash, bulky items, and e-waste. As a result, we were able to remove over 22 tons of trash. Environmental Health gave out information on water safety and the hazards of illegal vending. Animal Services gave out information on pet spay and neuter programs and their hotline. EDA provided information and applications for the mobile home replacement program and mobile home loan/grant program.

All departments and sponsors worked as a team to gain the trust of the people, as well as to encourage residents to keep their living area safe and clean. All residents of St. Anthony's Mobile Home Park appreciated our services and help! We are aware that this is only scratching the surface of the issues affecting mobile home and RV parks in the county, but we are dedicated to continue this mission countywide.

Sub-Standard Tree House?

On February 6, 2008, Officer Jamison Cole responded to a residence in the Lake Elsinore area to investigate an alleged violation of Substandard Structures.

What Officer Cole found was a couple of travel trailers parked on the property as well as a large storage container and an additional amount of personal items being stored outside of the container. The travel trailers were not being occupied as there was no evidence (utility hookups, personal items, food, or bedding) present. She advised the property owner that the additional personal items outside the container were in excess of the allowable amount of 200 square feet and needed to be reduced.

As she walked with the property owner around the yard, Officer Cole noticed a tree house that appeared to be very dilapidated and in need of some serious TLC. She asked the property owner if it was being used at all, and she was told that the property owner's small children were actively using it. She continued to tell Officer Cole that she had concerns for her children's safety but was unable to keep them out of the tree house. She said that her husband was going to fix it but had not had the time with the wet weather and his long work hours. She asked if Officer Cole had any suggestions and Jamison said, "I think I might be able to help."

Officer Cole took photos of the tree house (less than 120 square feet) and posted a Notice of Violation for a substandard structure, placed a DO NOT ENTER sign, and then wrapped it in yellow caution tape. This going the extra mile to prevent injury to the children was exactly what was needed to help Mom keep the youngsters out of the tree house. They wouldn't listen to Mom or Dad, but they would listen to the Code Enforcement Officer.

Within a couple of days the property owners were able to remove the dangerous tree house and prevent any injuries to the kids. Mom and Dad did have to promise to replace it later this summer, but the concern for the children's safety was eliminated due to the "Thinking Outside of the Box" attitude of Code Enforcement Jamison Cole!

This tree house was marked off limits to the children

My Community, My Customers, My Job

On a February evening, I was on patrol in my area prior to attending a crime watch meeting. I came around a dark corner on Canyon Drive and encountered six loose cattle roaming the streets. The cattle were heading toward Goetz Road; a street without lights and packed with vehicles on their way home. I called for assistance from a Crime Watch member to assist in diverting the cattle away from Goetz. I then notified CHP and Animal Services. The cattle continued to head toward Goetz Rd. Finally, a vehicle pulled alongside of me and claimed to be the owner of the loose cattle. I found out where the cattle came from and, with the assistance of the Quail Valley Crime Watch, was able to get the cattle back into the property safely. It pays to have members of the community as contacts in simple incidents that could have a tragic outcome.

Another good example of Code Enforcement's close involvement in Quail Valley was when I received a call on my cell phone. The call came from a community member concerning possible illegal dumping. I started the investigation within a hour of the phone call. Nothing pointed me to the suspect other than a community member who noticed an individual loading a trailer the night before. Upon my finding, I notified members of the SET Team and before the day ended a confession was made by the suspect. I called my community member and thanked them for the assistance. Without these relationships in my community a lot of incidents would be unresolved.

Jason Heagstedt
District 3

Mobile Home Disappears

A complaint was received regarding an abandoned mobile home on the corner of State Highway 79 and California Ave. in the unincorporated area of Beaumont. Officer Jennifer Morris and Sr. Officer Regina Keyes responded to the location and found that the mobile home was on the road right-of-way area. They proceeded to post the mobile home substandard, and Officer Morris contacted CalTrans and other agencies to have the mobile home removed from the area. When conducting a follow-up investigation in the area, Officer Morris was pleased to find that mobile home had vanished from the roadside. Another public nuisance gone!

Looking Back and Looking Forward

April will see the widespread distribution of our first Code Enforcement Department Annual Report. This report documents the tremendous growth of our first year as a Department. It also highlights some of our strengths and readily provides the basis for our claim that we are the premier code enforcement agency on the west coast.

We are moving forward. We are identifying issues and stepping up to respond to the needs of the community. We are expanding our Community Impact Plans to more communities, we are working on a foreclosure and transitional housing program, and continually improving our processes to increase our efficiency and effectiveness.

One of the new programs recently introduced in District 1 was our Service FIRST Program. This is modeled after a successful example from a neighboring jurisdiction, and has been modified specifically for our mission in Code Enforcement. Service FIRST is just that. We understand that providing good service drives all our efforts. FIRST is an acronym for Focused on Compliance, Investigate and Document, Responsive to the Community, Sense of Appropriate Urgency, and Teamwork and Collaboration. In the Service FIRST logo, we have three rings encircling these concepts which represent the Neighborhood Enforcement Teams, Special Enforcement Teams, and Community Improvement all working closely together with one goal.

The measure of the impact of our efforts is difficult to calculate. I feel a shift where people are starting to recognize the value of the service we provide. People don't have to call 9-1-1 everyday, but almost everyone drives by that junk car, trash on the side of the road, or illegal business every single day.

Another measure of the impact is the fact that this newsletter is distributed to well over 2,500 people each month and growing. Now with our new website at www.rctlma.org/ce/, which now has this newsletter online, we will be able to carry our message to even more people who need this information about our services. This webpage also has information on how to file a complaint, contact us, and other brochures and information.

We have had a terrific start to this year, and I look forward to continuing this great work of Code Enforcement with the wonderful people of Riverside County and the fine professionals in this Department.

Kenneth King
District 2

Rubbish Removed

In just 65 days Code Enforcement Officer Jennifer Morris was able to get voluntary compliance from the property owner who had over 10,839 square feet of accumulated rubbish. Officer Morris initially met with the property owner, explained the violation, abatement process, and the cost at the end of the case. The property owner assured Officer Morris that the property would be cleaned up. Upon her follow up inspection she met with the property owner and observed that all the accumulated rubbish had been removed. The property owner stated that he had taken everything to the landfill or scrap yard. Thanks to the property owner for all their hard work.

Regina Keyes
District 5

Did You Know?

- Code Enforcement processed more than 10,600 complaints this year.
- Code Enforcement staff attended more than 300 community meetings this year.
- The amount of outside storage of materials is dependent upon the size and zoning designation of your property. Contact your local Code Enforcement office to find out how much outside storage you can legally have on your property.
- Vending merchandise including perishable and non-perishable items from the street or within 40 feet of a street in the unincorporated Riverside County is a violation and the merchandise is subject to seizure. Contact your local Code Enforcement office for more information regarding the street vending laws in the county.

Homeland, Romoland, Green Acres Cleanup

In March, Code Enforcement held a community cleanup for the Homeland, Romoland, and Green Acres communities. The goal of the community cleanup was to provide the residents the opportunity to enhance the appearance of the community and get involved. The event was held at the Romoland Elementary School. The Romoland Unified School District continues to support and play a vital role in improving the quality of life for their students, parents, and the surrounding communities.

The Harvest Valley Community Council has been a continuous sponsor of this event each year. The Council has done a tremendous job in providing numerous volunteers, refreshments, getting the word out to the community, collecting tires throughout the community, assisting seniors and the disabled, keeping Highway 74 free and clear of debris, and making sure that the overall event becomes a success. Many thanks to the Harvest Valley Community Council, local businesses, community leaders, and volunteers. A total of 216 vehicles were served for a total of 98.81 tons of trash and tires collected.

Chaka Osborne (5)

Many hands make light work

What the Community is Saying...

"I appreciate the cleanup & increasing higher standards" **-Henry Mussenden**

"Very helpful, we appreciate it! An opportunity to get rid of some tires." **-Mike Allison**

"It's time people cleanup the trash; we cannot even ride our horses without risk. Thank you Department of Code Enforcement" **-Jim & Kim Kresin**

"My family and I have lived here for six years and we spend a lot of our weekends picking up trash around the Juniper Flats area in Homeland. This is really cool that your Department is doing this." **-Micah Moore**

A Special Thank You To:

County of Riverside Supervisor Marion Ashley's Office & Staff • County Waste Management Department – Lambs Canyon Landfill • Waste Management, Inc. - Julie Reyes & all drivers • WRCOG for providing cleanup supplies • TMG Communications • Hamshaw Farms • ACE/AHERN • Homeland Donut • Volunteers Kathy Woods, Alec Glaha, Garrick Stein, Lee Tankesley, G. Hoffarth, Mary Plum, Phil Michelsen, Bob Dulce, Ieene Harris, Margarete Hinckley, Bannie Hoffarth, and Yvonne Mendoza

Amendment Expedites Abatement

The Riverside County Board of Supervisors recently amended the ordinance (Ord. 541.5) that regulates the removal of rubbish including green waste. This ordinance was amended to protect the health and welfare of residents from possible fire hazards, by expediting the process in which flammable material can be removed from vacant parcels.

Rubbish is defined as, but is not limited to, any items consisting of trash, litter, garbage, waste, junk, debris, discarded items, refuse, construction, landscape or demolition materials, cans, bottles, barrels, bricks, boxes, crates, cartons, containers, packaging, wood, plastics, metal, visqueen, paper, cardboard, appliances, vehicle parts, tires, discarded mattresses, equipment, furniture, carcass of a dead animal, ordinary household garbage, discards, green waste, or other dangerous, nauseous or offensive material of any kind.

Although Notices of Violation are still necessary and required, the time frames have been significantly reduced to gain compliance. This ordinance will allow County officials the ability to move quickly and abate these violations.

Two communities that will be positively affected by this change are Pine Cove and Idyllwild. These mountain communities have recent drought conditions that have resulted in tight water conservation and a high fire concern.

The Code Enforcement Department for the Idyllwild / Pine Cove areas can be reached by telephone at 951-791-3600 or fax to 951-791-3606. Complaints can also be filed through the Internet or general information can be found at www.rctlma.org.

Weekend Enforcement

In mid March, Officers in the 3rd District started working weekends. We have focused our enforcement activity in the Wine Country and the Aguanga area and have expanded beyond the normal weekend parking enforcement. We are handling regular casework along with high visibility patrol. It's amazing how many people are surprised and glad to see us in their neighborhoods during the weekends. "Glad to see you and you are welcome to come on my property any time," said Dorian Linkogle from the Briar Rose Winery.

It has become apparent that many violators were taking advantage of the lack of weekend coverage. To date, we have observed several businesses operating outside their conditions of approval and conducting business in an unsafe manner. In one situation, I observed several patrons of a winery scramble to their vehicles, which were parked in a fire lane, as I drove onto the property. We have also become a force multiplier for the Special Enforcement Team in that my officers have observed everything from illegal dumping to illegal vending.

Mark Slocum (3)

Compliance in 3 Hours

On an April afternoon, Supervisor Ken King and I arrived at a property in Rubidoux. There was over 800 cubic feet of accumulated rubbish sitting outside the front gate. We made contact with the tenant and we were able to get voluntary compliance in three hours. The house was in foreclosure and the tenants needed to vacate the house by the next week.

We were able to offer the tenant an application for the CDBG funds and supply them with a roll off dumpster. Angelica Olivo, Community Improvement Specialist, arrived and assisted the tenants with completing an application. Supervisor Joe Quinones from Burrtec was driving by the property at the time and arranged for a dumpster to be delivered within 20 minutes.

Neighbors and friends came out to help the tenant load all the trash into the dumpsters. The removal of approximately 3.5 tons of trash that consisted of furniture, crates, car seats, household trash, and other miscellaneous items was removed in three hours.

Although it does not always happen, it was nice to see everyone come together and make a positive impact in the community in such a short time.

Gladys Sanchez (2)

About 3.5 tons removed

The Double Deuce

Acting upon a complaint, Code Enforcement Tech Trish Silva, contacted the Riverside County Natural Resources Manager Brian Shomo, about a reported abandoned vehicle that was seen in a very remote area within District 1.

Due to the extremely remote area, Code Tech Silva felt that it would be best to do some research regarding the potential of the area being in a sensitive ecological cell location before she just tromped all over the area with a tow truck to remove the old car. After nearly a 1 hour 4X4 trek into the back woods, the vehicle was located and identified as an abandoned, burned out, rusted piece of junk. There was no means of identification anywhere on the hunk of metal that was once a car. Trish took photos and left the location to contact Statewide Towing.

Based upon the location of the abandoned vehicle, it was determined that an Army 6X6 Truck (a real all wheel drive ride) would be the only way to reach and remove the clunker. After receiving approval for the use of the special Army Truck, called a Double Deuce, Code Tech Silva, recruited Code Enforcement Officer III Sara Cervantes to assist in leading the assault on the rusted hull they sought on their mission.

The Double Deuce followed the Code Enforcement vehicle up into the remote location, with all wheels screaming and the black diesel smoke marking the route. Some wildlife and poisonous snakes were encountered on the way, with no resulting casualties reported. Once they arrived at the location of the abandoned vehicle, the Double Deuce hooked up to the shell, and with a blast of the air horn and a shout from the driver "Let's Roll", off they went for their last leg of the journey.

The Officers were focused and Statewide Towing was determined to yank that junk off the mountain. Though it was a bit out of the ordinary, and took a little more planning than usual, the problem was solved. MISSION ACCOMPLISHED!

Greg Flannery (1)

This rusted vehicle was removed by the Double Deuce

Thank You 10,000+ Tons

In March, Riverside County Board of Supervisors recognized County Departments and Private Industries for their hard work and efforts in the removal of over 10,000 tons of trash in Riverside County in 2007. This is equivalent to over 5 miles of dumpsters. That amount would line the highway from downtown Riverside to San Bernardino County.

Riverside County Code Enforcement started the cleanup campaign in 2006. It is a collaborative effort between County departments and private agencies.

At the March 25th Board Meeting, Master of Ceremonies, Supervisor Marion Ashley, Supervisor John Tavaglione, and Code Enforcement Director Jay Orr presented the Recognition Awards to Department Heads and Independent Business Owners. Certificates of Appreciation were also given to 227 staff members from those agencies.

Congratulations and thank you to everyone who participated in making 2007 a very successful year! Thank you also to T.O.M., the trashcan mascot, who made a surprise appearance.

Becky Mitchell

Jaime Hurtado, Legislative Assistant to Supervisor Marion Ashley, with T.O.M., the trashcan mascot

Riverside County Code Enforcement

June 2008
Volume 2, Issue 6

Director Jay E. Orr

A New Phase for Code Enforcement

The beginning of the second quarter of 2008 marked a new phase for Riverside County Code Enforcement. This phase began with a radio campaign to introduce the department and the various ways we can be of assistance to the community. These commercial spots give examples of numerous violations and invite the community to call in and get informed on how they can be in compliance. Currently, the campaign airs in English on KFRG 95.1 FM and on KOLA 99.9 FM, and in Spanish on KRQB "Que Buena" 96.1 FM and on KAEH "La Maquina Musical" 100.9 FM.

During the month of May, Code Enforcement officers made history, as they became guests of the 30-minute local show "Despierta Nuestro Valle" ("Wake Up Our Valley") on the Univision channel in the desert communities of District 4. Code Enforcement representatives were officers Lucero Iniguez and Adam Hermanson. They did a wonderful job in highlighting the organization. They touched upon the history of Code Enforcement, types of violations, how to comply, and, of course, where the Department is going.

Officers Iniguez & Hermanson are guests on Univision program

The Department continues its growth under the leadership of our Director Jay E. Orr, as two offices were opened in Thousand Palms (District 4) and Home Gardens (District 2). This demonstrates that Riverside County Code Enforcement grows side-by-side with the community. It also shows that officers and staff are working hard to form an alliance with the community to improve the quality of life together in Riverside County.

Did You Know?

- Generally speaking, most residentially zoned properties require the front 20 feet, the side five feet, and the rear 10 feet of your property to be free and clear of all building obstructions. Exemptions do apply to this rule.
- You can install a chain-link or wood fence that is no higher than six feet without a building permit.
- You need to obtain a building permit before you re-roof your house.
- You are limited to the amount of outside storage of materials you can store in your backyard. Depending on the zoning and size of your property, you may be able to store from 0 to 200 square feet (with a maximum height of three feet) of materials.

James Monroe (Admin.)

District 4 Supervisor Roy Wilson offers opening remarks

Guests and officers gather for refreshments

Director Jay E. Orr with Code Enforcement staff on opening day

Guests are led on a tour of the office by Beatriz Sanchez, Community Improvement Specialist for District 4

Special Thanks:

4th District Supervisor Roy Wilson, The Board of Supervisors and Staff, The Executive Office, TLMA, Facilities Management, Economic Development Agency, Sheriff's Department, Fire Department, Community Councils for Thousand Palms, Sky Valley, Desert Edge, Indio Hills, Bermuda Dunes, Vista Santa Rosa, Thermal, Mecca, Oasis, North Shore, Ripley, Mesa Verde, Community Leaders, and Special Guests.

Voluntary Compliance

A complaint was received regarding excessive outside storage. The property contained a travel trailer with an attached awning. The travel trailer was possibly occupied at one time by the evidence of a picnic table with benches under a dilapidated patio-type cover, a fire pit made with blocks and rocks, a half-filled water container, and fire wood under the tongue of the trailer.

There were also other miscellaneous items around and beneath the trailer. The door was secured by a blue string wrapped around the door knob to the bottom of the door. In addition, through the window on the door of the trailer, a large bag of charcoal was visible, and an upper cabinet door was open with condiments inside.

Appropriate notices were posted on the trailer and mailed to the property owner. A phone call was received from the property owner in response to the notices. The property owner stated the trailer was used for weekend get-a-ways. After educating the owner of the importance of voluntary compliance, he assured me he would have the property cleaned. When the follow-up was conducted, it was observed that the travel trailer had been removed, along with the accumulated rubbish. The property owner was thanked for his cooperation.

Providing property owners with the information needed to comply helps Code Enforcement achieve voluntary compliance. And that is always a good thing!

Jeannie Chamberlain (3)

This trailer was being used for weekend get-a-ways

Abated

This property is a vacant lot located in the Wagon Wheel area of Good Hope. It is a deep lot measuring several acres wide. A large amount of accumulated rubbish, sheds, and a sub-standard structure have existed on the property for quite some time.

In March, Code Enforcement and their contract services abated the violations on the lot by executing a pre-existing Findings of Fact. This is one more success in the Good Hope area. ***Tom McMullen (5)***

Vacant lot cleared

Dumping Suspect or Car Thief?

While Code Enforcement Officer Angela Frazier was on weekend patrol in Wine Country, she observed a white pickup truck driving erratically in the Santa Gertrudis Creek area. Believing she had spotted an illegal dumper, Officer Frazier called for back-up and officers Heagstedt, Forrey, and Sr. Officer O'Gara responded to assist.

When Code Enforcement officers arrived, the vehicle was located in the water under the trees in the Santa Gertrudis Creek. Officers were staged to the north, south, east and west of the suspect vehicle. Riverside Sheriff's Department (RSD) dispatch was called to determine if they had any interest in the vehicle. Dispatch called back within moments to confirm the location and to advise that they had deputies en route, along with RSD helicopter STAR 90 for air cover.

Officer Frazier returned to the intersection of Anza and Vino Roads to lead the RSD ground units to the scene. While Code Enforcement officers waited for their arrival, the suspect was observed opening and closing the vehicle doors several times and, at one point, was seen changing his clothes inside the vehicle.

As RSD ground and air support arrived, the suspect was observed exiting the vehicle and running eastbound into the creek and trees. Star 90 was able to direct the ground units to the location of the fleeing suspect. Code Enforcement officers maintained their positions while deputies and K9 searched the creek and woods for the suspect. When the suspect could not be located, deputies advised Code Enforcement that the vehicle was stolen and thanked Officer Frazier for her discovery and prompt response.

Deputies remained at the scene in hopes that the suspect would "break from cover," and they would be able to take him into custody. A check of the case status Monday morning revealed that the suspect was still at large.
Wayne O'Gara (3)

Structure Removed

Code Enforcement observed a substandard structure in Thermal. Upon further research, it was discovered the property had been sold to a new owner. The new owner was notified and within two months he had completely cleaned and cleared the property of the substandard structure. The case was closed for voluntary compliance.

Rusty Hannah (4)

Owner removed old structure

Please use your waste hauler for regular trash service

Room Addition Gone

A complaint opened the door for District 1 Code officer's to make contact with a property owner that had put up an illegal structure. Without the required building permits, you never know if a building is going to be strong enough to handle a windy day in Mead Valley. Officer Jon Kirchoff responded to the location and made contact with the property owner. He advised the owner that a building permit was needed for the additional structure. Officer Kirchoff issued him a Notice of Violation. The property owner questioned the officer and, after some persuasive dialogue, he agreed to remove the illegal building. Officer Kirchoff did a re-inspection a few days later and found the problem was resolved.

Greg Flannery (1)

Illegal structure

Desert Hot Springs Cleanup

Many residents walk their trash over

Trash and debris, electronics, green waste, and various other household items were removed from private properties, roadways, illegal dump sites, dirt roads, and other parts of the community.

Total:
4 bins = 11 tons
48 vehicles served

"What a great service you guys are providing to our small desert community. Thank you."
Bruce Schwartz, Resident

Chaka Osborne (5)

During the Quail Valley Cleanup 194 vehicles were served within 4 hours. Twenty-six "roll-offs" were filled totaling 55.4 tons of trash.

Quail Valley Cleanup

What the Community is Saying...

"This cleanup has been improved over past cleanups. It's nice to be able to drop off more than one load and not have to wait for hours." **-Resident**

"Thank you very much... I love you guys." **-Donna (elderly resident)**

"We just moved in and are trying to get our yard cleared out. This has been very helpful."
-Veronica Jimenez

"After two cleanups in the last year, we have finally finished cleaning up our place. Thank you."

Home Gardens Improvement Fair & Grand Opening Celebration

The Improvement Fair on May 31st was the first event of its kind in Home Gardens. Code Enforcement was hoping to create an opportunity to share with residents what we do and the upcoming events and programs that can assist them with voluntary compliance. Community Improvement Specialists sought local merchant and corporate support to make this event possible. Home Gardens and corporate merchants demonstrated their commitment to their communities. Items donated included use of the venue, hot dogs, Pepsi, ice, raffle prizes, and a jumper. Code Enforcement Officers went door to door inviting the community to the event. They received overwhelming support and words of praise from the community, who was excited that we would soon be opening the doors of our Home Gardens Code Enforcement office.

Code Enforcement Director Jay Orr with Father Guadalupe Ruiz and Madre Estrella of Our Lady of Tepeyac Church

Children join in the fun!

Officers educate the public

At the Code Enforcement registration booth, Home Gardens' residents could learn about Code Enforcement, Riverside County Codes & Ordinances, and pickup flyers on upcoming events and programs like the Home Gardens Cleanup, Household Hazardous Waste Collection, Voluntary Inspection Program and the Home Gardens Voluntary Abatement Program. Over 30 Residents signed up to be on a waiting list for the free program and over 160 families signed in and entered the free raffle for prizes donated from local Home Gardens merchants.

Angel Olivo, CIS (2)

Addressing Neighborhood Concerns

With the growing rate of abandoned and foreclosed homes on the rise in Riverside County, communities are seeing their fair share of these properties.

Recently, Officers were alerted to an abandoned residence in Sun City, a 55 and Older Community. They found household belongings stacked near the front door, and a damaged, partially opened garage door. Concerned residents stated people were leaving the house early in the morning on foot, and returning late at night, often in a taxi cab.

Supervisor Mark Slocum along with Senior Officers Wayne O'Gara and Lionel Martinez, as well as Officers Jason Heagstedt and Roy Ryder, visited the location. Upon their arrival, they were greeted by many neighbors in the community, who voiced their concerns and questions about the abandoned residence.

Supervisor Slocum and Senior O'Gara took the time to address their concerns. Meanwhile, other officers placed the household items in the garage and secured the abandoned residence to detour unwanted guests from visiting the site.

Though this is only a small step, we were able to reassure the neighbors that we care and are looking out for their safety and the best interest of their community.

Let's commend these District 3 officers for thinking outside the box and for caring about this neighborhood and its residents.

Roy Ryder (1)

A big improvement in Sun City!

County Abatement Completed!

This property on Lopez is a vacant lot that exists in the Wagon Wheel area of Good Hope. It is a deep lot that is several acres large.

This property is victim to a large amount of accumulated rubbish, sheds, and a sub-standard structure.

The property itself is not occupied but serves as one more example of blight in the community. In March, Code Enforcement, with their contract services, abated the violations on the lot.

Tom McMullen (5)

One more success in the Good Hope area!

DID YOU KNOW?

- Inoperable or non-running vehicles must be stored inside of a completely enclosed building such as a garage.
- The number of farm animals such as horses, cows, sheep, or goats that you can keep on your property depends on the zoning and the size of your property.
- You must obtain approval from the Planning Department before you begin any business or commercial use on your property.
- You cannot lawfully install a mobile home that is over 10 years in age.

James Monroe, Administration

1000 Palms Community Cleanup

The Thousand Palms Cleanup was a huge success. More than 70 curbside pickups yielded nearly 23 tons of trash. In addition, over 45 Residents came out to drop off their bulky items which yielded 17 tons of trash. We had 13 volunteers, thanks to Karen of the community council, who organized to get us volunteers to clean the main corridor of Thousand Palms (Ramon Rd. between Varner Rd. and Monterey). The volunteers came from the Faith Community Church located here in Thousand Palms.

The community really came together. We had the contributions of the local businesses. Costco donated all the supplies for the bar-b-q, condiments, and water. Sam's Club donated the meats and buns for the hamburgers and hot dogs. Casa De Pasta donated 1 free dinner for two. Carl's Jr. donated 16 free famous star hamburger certificates, Del Taco donated 57 Free Kid's Meal certificates, Domino's Pizza donated five large 2-topping pizza certificates, and Taqueria San Miguel donated three $15.00 Gift Certificates and that's not all. Classic Party Rentals donated tables and chairs, a 15 x 15 canopy, and even came out to install it. Rodarte Ice Distribution donated ice for all the coolers and beverages.

One resident stopped to see if we could help her. She had bought new appliances and wanted to get rid of her old ones but didn't know how to unhook them. When she first came to me, I said, "Let's see what we can do." I asked Burrtec supervisor Roy Villareal and he said, "No problem. We will have two men in a pick up follow you and we'll take care of it." She was so grateful. Just another way on how these clean-ups benefit the community. Cleaner yards, cleaner streets, and happier residents.

Betty Sanchez, CIS (4)

Mead Valley Community Cleanup

Volunteers help the community unload their vehicles

It was Community Clean-up Day again in Mead Valley! Residents attended and showed all their community pride by assisting with the removal of debris from private property and community property. This event was all about creating and maintaining a safe environment for children, families, and businesses. As always, Tomas Rivera Middle School and the Val Verde Unified School District continued to show its support by allowing the use of its facility and the assistance of its awesome staff.

Trash and debris, electronics, greenwaste, and various other household items removed from private properties, roadways, illegal dumping locations, dirt roads, and other parts of the community totaled:

25 Bins = 45.95 tons
23 Dump Passes = 20.92 tons
171 Vehicles = 66.87 Tons

One resident said, "I learned that I have "bulky item pick-ups" through my hauler, free of charge! So not only did I get to dump for free, I learned something new! Thanks!"

Angela Boone-Porcher, CIS (1)

Good Hope residents bring old mattresses and other items to discard

Good Hope & Meadowbrook

Due to mandatory trash services, increased educational workshops, and frequent community cleanup events, our Department has seen a decrease in the amount of household trash being brought in to the community cleanups in this area. The community has been actively involved and wants to live in a nice and clean community. Special thanks to residents in both communities and to all community leaders!

Both locations combined:

139 vehicles = 41.54 tons
50% decrease from last year!

Chaka Osborne, CIS (5)

Hector Ruiz, with Riverside County EDA Graffiti Busters, paints over unsightly graffiti on campus

Burrtec was ready for every load

Jurupa Valley Cleanup

After months of planning, the Jurupa Valley Cleanup took place at beautiful Patriot High School. Despite the heat, the Jurupa Cleanup drew over 230 loads of trash from residents from all over Jurupa Valley.

Burrtec Waste Industries turned out in force and was prepared to handle the largest of loads from its customers. All tires and e-waste accepted at the cleanup will ultimately be recycled and diverted from our landfills.

Staff from Environmental Health, Economic Development Agency, Code Enforcement, 2nd District BOS staff and Supervisor John Tavaglione were all present and helped to make the Jurupa Valley cleanup a success.

DIRECTOR

Scope of Problem

History: Mecca has been and continues to be a vibrant housing community for farm workers migrating through the Coachella Valley. Population dynamics for the Mecca community tend to correlate to the ebb and flow of the agricultural seasons. During the latter part of 1999, a "house-in-place policy" was instituted based in part on the sensitivity to the housing needs of this migrant population. For the past 8 years, in strict accordance to policy, Code Enforcement has been only reactive to the various code violations existing in Mecca based on a "danger to life and limb" and "health and safety" priorities. To date, the lack of "pro-active" enforcement has created a very challenging and complicated code issue, which we are now prepared to deal with in a thoughtful and systematic approach.

During the past 8 years, Riverside Code Enforcement has been reacting to complaints and has responded to issues including:

- Illegal vending
- Illegal Dumping
- Construction without permit
- Active installation of RV's and un-permitted mobile homes.
- Dangerous collapsing structures
- Open excavation and unfenced pools
- Excessive animals
- Dangerous exposed electrical
- Junk Vehicles

Objective: The Indio Code Enforcement Office has completed a Windshield Survey of approximately 968 properties. The results demonstrate the following statistics, which reflect the severity of the growing code violations in the community of Mecca:

				Total	618
Accumulated Rubbish / Excessive Outside Storage	22	0	18	79	**119**
Unpermitted Land Use – 2nd Unit	2	0	58	52	**112**
Occupied RV	0	0	0	25	**25**
Inoperative Vehicles	21	1	21	34	**77**
Construction Without Permits	58	2	12	114	**186**
Substandard Structure	3	0	11	15	**29**
Illegal Dumping	2	0	3	1	**6**
Grading/Stockpiling	0	0	0	3	**3**
Excessive Animals	4	0	0	5	**9**
Unpermitted Fencing Material	10	0	0	26	**36**
Missing Address	9	0	0	3	**12**
Contractor's Storage Yard	0	0	0	2	**2**
Shipping Containers	0	0	0	1	**1**
Illegal Business	0	0	0	3	**1**
Total	**131**	**3**	**123**	**363**	**618**

DIRECTOR

It is the goal of the Code Enforcement Department to provide a visual improvement in this community while instilling community pride. The Code Enforcement Department will initiate a Spanish Media Campaign that will run concurrently with a multi-phase improvement program combining public education, resources, community partnerships, and enforcement. Based on the history of Code Enforcement's involvement and number of possible code violations in Mecca, an attainable success average rate of **30%** annually has been established. This attainable goal is based on the average compliance achieved on similar types of code violations countywide**.Furthermore, our department is committed to prepare a quarterly report that will be submitted to BOS, Project Partners, and members of the Housing Review Committee.

** Percentage is based upon the average compliance rates of similar violations.

Spanish Media Campaign:

The Spanish Media Campaign will initiate immediately and run concurrently throughout the implementation this plan. Due to the population fluctuations in this community, a seasonal long-term approach to cover all the major topics listed below will be put into action, therefore, reaffirming the same issues and topics in a cyclical form continuously.

"No Rock Left Unturned" Cleanup policy

Code staff will proactively implement this plan in Mecca, and as graffiti or illegal dumping is observed, not only will our department enforce these activities, but will also refer for immediate cleanup. Code staff will report Roadside Dumping and Graffiti to Southern Coachella Valley Services District for immediate cleanup. In addition, our department will follow up to ensure that these activities are abated. This approach will ensure that the community is kept clean and local Mecca residents build little toleration for these unsightly activities.

Improvement Project Plan:

Area I, consist of 80% farmland and is the fourth of the newest residential developments in Mecca. During our windshield survey, the department concludes that there are several signs of possible gang activity in this area. Gang activity is apparent through prominent gang-affiliated graffiti, posted gang signs on properties, and the highly visible public activity during the day. As one of the newest developments in this community, the code violations are not as severe as those found in other sections of this community, but the "Mecca Trend" is beginning to evolve, thus a proactive approach must be taken to address the code violations before they become worse. Through a partnership with the Riverside County Sheriff's Department, Code Enforcement will initiate proactive enforcement activities in the parameters of Improvement Project area 1 to address all health and safety code violations, specifically Building without permits and Excessive Outside-Storage. In addition, our efforts will expand to address the illegal dumping occurring in and around all of the farmlands within this section, including all roads that surround the entire community of Mecca.

Code/ Community Issue	Approach	Tools	Partners	Code Staff
Building without permits	· Notices to all violators · Administrative Citations for those who do not comply	• Notice of Violations/Immediate Action for new unpermitted construction • Administrative Citations	• Riverside County Sheriff's Department • Building and Safety	• Dave Lawless • Marr Christian
Trash, Debris and Excessive Outside Storage	• Notices to all violators • Administrative Citations for those who do not comply	• Notice of Violations/Immediate Action for new unpermitted construction • Administrative Citations	• Southern Coachella Valley Services District • Riverside County Sheriff's Department	• Dave Lawless • Marr Christian
Illegal Dumping	• Misdemeanor Infractions for all violators • Refer for Cleanup	• Reporting Hotline Magnets for public	• Riverside County Sheriff's Department • Riverside County Fire Department	• Dave Lawless • Marr Christian
Graffiti	• Refer for Cleanup	• Hotline Phone Number	• Riverside County Sheriff's Department	• Dave Lawless • Marr Christian

PHASE II: Project Area II

All properties within the boundaries of **West**-66th Ave, **East**- 65th Ave, **North**-Emilia Way, **South**-Lincoln St.
Total number of properties: 275
0.50% of all Mecca Code Violations exist in this area

Improvement Project Plan:

Area II, consist of the second and third newest developments in Mecca, one that is still in the construction stages. These new developments are under the management of the Coachella Valley Housing Coalition (CVHC), which is stringent in its living standards for applicant homeowners. This has allowed for the community pride that is prominent in these developments, with minimal, if any existing code violations. In order to maintain these living conditions, CVHC has requested that one of our Code Staff members provide the program applicants and current homeowners a "*How to keep your property Code-free and Safe*" workshop. These maintenance workshops will be available in both English and Spanish and will be provided by a Community Improvement Specialist. The remainder of the area is comprised of Low-Income Apartments adjacent to Ave 66 and the second elementary school in the area. In addition to providing the maintenance workshops, illegal dumping education will be offered to applicants, homeowners, and/or tenants, by collaborating with CVHC and the management group of the Low-Income Apartments.

Code/ Community Issue	Approach	Tools	Partners	Code Staff
Illegal Dumping	·Educate applicants, homeowners, and/or tenants on the consequences of illegal dumping as well as how to report it, if they witness it.	• Reporting Hotline Magnets • Radio/TV • Educational Flyers (English/Spanish) • October '07 Community Cleanup Flyer	• Coachella Valley Housing Coalition • Low Income Apartment Complexes Management Company • Johnson Elementary	• Hector Herrera • Susana Orozco
Code Enforcement Maintenance Workshops	·Offered to applicants, homeowners, and/or tenants of the housing developments and complexes.	• PowerPoint, equipment, and handouts.	• Coachella Valley Housing Coalition • Low Income Apartment Complexes Management Company • Johnson elementary	• Hector Herrera • Susana Orozco
Graffiti	• Refer for Cleanup	• Hotline Phone Number	• Riverside County Sheriff's Department	• Dave Lawless • Marr Christian

PHASE III: Project Area III

All properties within the boundaries of **West-**2nd St.& 7th, **East-** 65th Ave, **North-**Calle Sor Juana & Date Palm St., **South**-Emilia Way.

Total number of properties: 203

19.80% of all Mecca Code Violations exist in this area

Improvement Project Plan:

Area III, consist of primarily residential properties and exudes a higher level of community pride then other areas in this project. This project area contains the Farm Worker Housing, managed by The Riverside County Economic Development Agency (EDA) and the only Catholic Church in this community. Due to the apparent level of community pride, an educational and resource approach will be taken initially. Although this area seems to have a higher level of pride, possible code violations exist to include vacant lots (posing a fire threat and prone to illegal dumping); outside storage; inoperable vehicles; and illegal dumping. Roaming animals are also present in this area and may pose a health concern to the residents of Mecca. Several partners will play a key role in the public education component and its success. These partners include EDA, members of the Housing Review Committee, local Catholic Church, Habitat for Humanity, Fire Department, Mecca Family Resource Center, Mecca Community Council, Office on Aging, and Mecca CBOs as well as local residents and businesses. Our primary objective is voluntary compliance through public education and the availability of resources. If this objective is not successfully met, our department will expand our initial approach to a "House-in-place-Policy*" style of enforcement. Lastly, by collaborating with EDA, our department will offer Illegal Dumping education to farm worker tenants that reside in the farm worker housing complexes in this area.

Code/ Community Issue	Approach	Tools	Partners	Code Staff
Vacant Lots with overgrown weeds	Identify Property owners and notify them through the Fire Department	• Notice • List of property owners for mailing notices	• Riverside County Fire Department	• Dave Lawless • Hector Herrera • Susana Orozco
Excessive Outside Storage	• Door-to-door canvassing to offer education and resources • Community Cleanup October '07 • TOM Site Information • Recycling Programs	• Flyers for Cleanup '07 & TOM site schedule • Recycling guides • Informational handout on consequences of not voluntarily complying • Citations • Abatement	• SCVSD • EDA • Environmental Health • Waste Management Department • Burrtec • Community Council • All partners listed on Media Campaign List	• Dave Lawless • Hector Herrera • Lucero Iniguez • Susana Orozco
Inoperable Vehicles	• Door-to-door canvassing to offer "Junk your Clunker" program • Flyers and posters place in local	• Flyers • Release Forms • Posters • Abatement	• Local Businesses • Local elementary schools • All partners listed on Media Campaign List	• Dave Lawless • Hector Herrera • Lucero Iniguez • Susana Orozco

PHASE IV: Project Area IV

All properties within the boundaries of **West-**2nd St., **East-** 65th Ave & 7th St., **North-**4th St. & Lincoln St., **South**-Brown St. & Date Palm St.

Total number of properties: 256

58.60% of all Mecca Code Violations exist in this area

Improvement Project Plan:

Area IV, also known, as the "Mecca Triangle" will require comprehensive collaborative effort. This area is the hub of the community where several local residents congregate at all hours of the day. Due to its highly active nature, this area is home to several community issues ranging from criminal to third-world country living conditions. The following contain some of these identified issues and our department's approach as well as the key partners who will assist in helping bring these issues to a manageable level and help make this community a safe and livable place.

Code/ Community Issue(s)	Approach	Tools	Partners	Code Staff
Illegal Vending, gambling, public urination and intoxication	Full Enforcement	· Warnings · Citations · Arrests	• Riverside County Sheriff's Department • Environmental Health	• Dave Lawless • Marr Christian • Hector Herrera

Household Hazardous Waste Collection Program
July - December 2007

What is Household Hazardous Waste?

All The Items Listed Below And More!

Household Hazardous Waste Collection Sites will take ALL Household Hazardous Waste

Before transporting waste to the collection event or facility, please use this checklist to make sure you have done the following:

- ☐ **Have I used up every product to the fullest extent possible?**
- ☐ **Have I offered good, usable products I can't use to my neighbor, family or friends?**
- ☐ **Does the amount of waste I want to transport exceed 5 gallons or 50 pounds of chemical waste? (State Law Required transportation limitation.)**
- ☐ **Are any of the containers leaking? (If they are, place them in a container or material that will not allow the leak to spread and place securely in the vehicle for safe transport.)**
- ☐ **Is the waste in its original container or is it properly labeled as to the contents? (The contents of the container must be the same as stated on the label. If not, cover up the label and write the name of its content.)**
- ☐ **Are the items placed in a sturdy container, such as cardboard or wooden box, for transporting? (Wrap glass bottles in newspaper to prevent breakage.)**
- ☐ **Is the box placed in the trunk of your car or in the bed of your pickup truck and secured to prevent movement? (Keep items away from passengers.)**

Follow directions once you reach the event site. You will be asked to turn off your motor and stay in your vehicle. The site staff will unload the material from your vehicle.

THIS EVENT IS FOR RESIDENTIAL USE ONLY. PHOTO DOCUMENTATION WILL BE MADE OF EXCESSIVE OR SUSPECTED NON-RESIDENTIAL LOADS COMING TO EVENT.

The following waste CANNOT be accepted at ANY Riverside County HHW collection facility:
Ammunition, Asbestos or other Remediation Waste, Compressed Gas Cylinders Greater than 40 pounds
Explosives, Infectious or Medical Waste other than Home-Generated Sharps, Radioactive Waste,
Non-Residentially Generated Waste, Waste Generated Outside of Riverside County.

If you have any of the above wastes please call (951) 486-3200 for assistance.

Acceptable Materials

BATHROOM
*Chlorine bleach
*Nail polish remover
* Deodorizer/Air freshener
*Shoe Dye
*Disinfectant
*Toilet, Tub & Tile cleaner
*Mercury Devices

KITCHEN
*Aerosol cans
*Floor care products
*Aluminum cleaner
*Furniture polish

Proper Disposal of Medication and Sharps

Most medications are not considered hazardous waste and can be disposed of in regular trash. Remove personal information from containers.

Liquid Empty liquid medication onto absorbent paper towels or rags and throw in trash.

Pill Crush pills, mix with coffee grounds or kitty litter, and dispose of mixture in

Inhaler Empty container, expel propellant, and toss empty cylinder in trash.

Sharps/ Needles Must be placed in a secure approved sharps container and brought to a Household Hazardous Waste collection for disposal. FREE Approved containers are available while supply lasts. If a container is not available, put sharps in rigid plastic jug (bleach bottle), tighten lid, secure with tape, and place label "SHARPS/NEEDLES". **ALWAYS BRING SHARPS TO HHW EVENT.**

Small Business Waste

Conditional Exempt Small Quantity Generator (CESQG) 1-800-952-5566

What is a CESQG? Businesses that generate up to 27 gallons or 220 lbs. of hazardous waste, or 2.2 lbs of extremely hazardous waste per month are called CESQG's. These businesses are required to use a licensed hazardous waste hauler to manifest and transport their waste. The most common CESQG's are painters, print shops, auto shops, builders, churches, schools, non-profit groups and property managers.

What is the CESQG Program? This Program is a hazardous waste pick-up disposal service for eligible businesses/non-profit organizations in the County of Riverside. This Program provides small quantity generators with a legal and affordable way to dispose of their waste with all legal documentation provided as part of the service.

How do I get service? To arrange an appointment for the **CESQG** Program, call 1 (800) 952-5566. A disposal fee will be charged based on the type and amount of waste.

Storm Water

ONLY RAIN DOWN THE STORM DRAIN

What is the #1 reason water bodies such as creeks, rivers, and lakes get dirty? It's from pollutants that flow into storm drains then make their way to your favorite water recreational facility. The storm drain system is designed to prevent flooding and is not connected to a treatment facility.

Call **1-800-506-2555** to report storm drain disposal or obtain more information.
You can also email us at **flood.fcndes@co.riverside.ca.us** or visit **www.floodcontrol.co.riverside.ca.us**

CIP TEAM AGENDA
Executive Office, Conference Room D
May 11, 2008 3:30 p.m.
(BOS Date 5/20/08)

1. Call to Order

2. Forms 11

306 Housing Authority – Replacement of Heat and Air Conditioning at the Midway Capri Apartments in the City of Perris

308 FM – Mid-County Hub Jail Facility and Sheriff Related Capital Improvement Projects – Approval of Sole Source Award

324 FM – First Amendment to Lease – Code Enforcement, Thousand Palms

329 FM – Policy for Use of the Conference Center Facilities Located within the Monroe Conference Center and Proposal of Facility Rental Rates – Board Policy H-28

330 E0 – National Pollution Discharge Elimination System (NPDES) Municipal Separate Storm Sewer System (MS4) Program, Memorandum of Agreement for the Santa Margarita Watershed pursuant to Investigative Order R9-2006-0076 issued by the San Diego Regional Water Quality Control Board.

336 FM – Larry D. Smith Correctional Facility Expansion No. 3 Utility Service Infrastructure – Approve Plans and Specifications

357 RDA – Approval of Architectural Agreement for the proposed Cabazon Civic Center

357C EDA – Findings for the proposed Cabazon Civic Center

3. Items for Discussion

4. Open Agenda

5. Next Meeting Date

CIP TEAM AGENDA
Executive Office, Conference Room D
February 19, 2008 9:00 a.m.

1. Call to Order

2. Forms 11

952 RDA – Adoption of RDA Resolution No. 2008-009, Notice of Intent to Purchase Real Property within the Home Gardens Sub Area, APNs 135-022-003, 135-022-028, and 135-022-030, 2nd District

910 FM – Architectural Services Agreement-Riverside County Regional Medical Center Emergency Treatment Services Facility Expansion

921 FM – Perris Fueling Facility and Car Wash

929 EO/Fire – Reprogramming of Development Impact Fee (DIF) Allocation for the Glen Oaks Fire Station and revisions to the DIF Public Facilities Needs list

948 RDA – Approval of Plans and Specifications for Thousand Palms Fire Station and Training Center

967 EO – National Pollution Discharge Elimination System (NPDES) Municipal Separate Stormwater Sewer System (MS4) Permit Implementation Agreement for the Whitewater Watershed-Colorado River Basin Region

968 RDA – Home Gardens Library Expansion Project

981 FM – Architectural Services Agreement – Indio District Attorney and Public Defender Renovation Project

983 EO – Adoption of Resolution No. 2008-080, a Revision to Resolution No. 2005-144, Establishing Administrative Procedures Concerning the Implementation of the Development Impact Fee Program under Ordinance No. 659

984 FM – Resolution No. 2008-032, Authorization to Purchase Real Property in the Unincorporated Eastvale Area of Western Riverside County

100 FM – Larry D. Smith Correctional Facility Expansion No. 3

101 FM – Resolution No. 2008-111, a Resolution of Necessity Regarding Facilities for a new Public Law Library and County Office Space related to the Administrative of Justice

MEETING AGENDA

(Lunch Served)

11:30 a.m. * – 12:30 p.m. February 21, 2008

Room C/D

Riverside County Administrative Office, Fourth Floor

4080 Lemon Street, Riverside, CA 92501

* meeting to begin at 11:30 a.m. or immediately following the WRCOG TAC meeting should i

1. Welcome and Self Introduction – Dusty Williams, RCFC& WCD
2. Review February 21, 2008 Agenda and Approval of October 18, 2007 Meetin
3. Dusty Williams, RCFC& WCD
   - Santa Ana/Santa Margarita Program Status - Jason Uhley, RCFC& WCD
   - Legislative Update
   - Permit Renewal Update
   - Audits/NOVs
4. Presentation: Review of current programs and what to expect moving forward – Jason Uhley, RCFC& WCD
5. TMDL Development - Jason Uhley, RCFC& WCD
   - Lake Elsinore and Canyon Lake Nutrient TMDL
   - Middle Santa Ana River Watershed Bacteria Indicator TMDL
   - Canyon Lake Bacteria Indicator TMDL
6. New Agenda Items/Schedule Next MSC Meetings - Jason Uhley, RCFC& WCD
   - April 17th*, August 21st*, Oct 16th*

*Tentative meeting dates pending WRCOG 2008 schedule

RIVERSIDE COUNTY STORMWATER MANAGEMENT PROGRAM
MANAGEMENT STEERING COMMITTEE
SANTA ANA/SANTA MARGARITA REGIONS

MEETING MINUTES
for
October 18, 2007

I. ***Attendees:***

Benjie Cho	RCFC&WCD
Steve Stump	RCFC&WCD
Charlene Warren	RCFC & WCD
Mike Shetler	Riverside County Executive Office
Joe Aklufi	City of Beaumont
Lori Moss	City of Canyon Lake
Cordell Chavez	City of Corona
Duane Baker	City of ~~Corona~~ Hemet
Kent Wegelin	City of Moreno Valley
Jeff Allred	City of Norco
Tom Boyd	City of Riverside
Barry McClellan	City of San Jacinto

II. ***Welcome and Self Introductions – Steve Stump***
Steve Stump welcomed everyone to the meeting and initiated self introductions of attendees.

III. ***Review October 18, 2007 Agenda and Approval of September 20, 2007 Meeting Minutes – Steve Stump***
There were no changes to the agenda. Meeting minutes were approved.

Handouts Provided:

- Agenda for October 18, 2007
- Minutes for September 20, 2007
- Letter to Santa Ana Regional Board – Re: Support for Low Impact Design (LID) Testing and Demonstration Facility dated October 10, 2007
- Santa Ana Regional Board – Notice of California Environmental Quality Act (CEQA) Scoping Meeting dated August 27, 2007

IV. ***Santa Ana/Santa Margarita Program Status – Benjie Cho***

- **District LID testing project has been approved** – Benjie Cho informed attendees that a $475,000 grant was received from SAWPA's Proposition 13 Allocation for LID testing project. The District will be retrofitting its compound to incorporate the LID demonstration and testing facility. A brief discussion ensued among the group regarding LID testing. For more information regarding the LID demonstration and testing facility, please refer to the handout provided at the meeting (Letter to Regional Board Re: Support for Low Impact Design Testing and Demonstration Facility).

- ***Permit Renewal Update*** – Benjie reported that the draft permit is due to be released by the Santa Ana Regional Board in approximately 4 weeks. Steve asked attendees if they would like a presentation of what's contained in the draft Permit. The group was very interested in both a review of existing programs as well as a summary of new permit requirements. Discussion ensued briefly between Tom Boyd, Benjie, and Steve regarding Permit issues

Santa Ana/Santa Margarita Region MS4 Permits

Jason E. Uhley, P.E.
Riverside County Flood Control & Water Conservation District

Presentation Outline

- MS4 101
- Santa Ana/Santa Margarita Watershed Overview
- MS4 Compliance Structure
- Individual Program Components
  1. Current
  2. Likely Future
- TMDLs, Grants, and other related issues

Glossary of Acronyms

- BMP – Best Management Practice
- CASQA – California Stormwater Quality Association
- CWA – Clean Water Act
- CWC – California Water Code
- DAMP – Drainage Area Management Plan
- IC/ID – Illegal Discharge/Illicit Connection
- LIP – Local Implementation Plan
- MS4 – Municipal Separate Storm Sewer System
- NPDES - National Pollutant Discharge Elimination System

Glossary of Acronyms

- RWQCB – Regional Water Quality Control Board
- SAR – Santa Ana Region
- SMR – Santa Margarita Region
- SWMP – Storm Water Management Plan
- SWPPP – Storm Water Pollution Prevention Plan
- TMDL – Total Maximum Daily Load
- WDID – Waste Discharge Identification Number
- WQMP – Water Quality Management Plan

Introduction to NPDES MS4 Permits

- Required by Federal Clean Water Act
- Issued by RWQCB on behalf of USEPA
- Five-year term
- Designed to regulate discharges of Urban Runoff from MS4s to Waters of U.S.
  1. Manage non-stormwater discharges from urban areas
  2. Mitigate impacts of Urban Stormwater Runoff on Waters of the U.S.
- Violations can be assessed at $25,000 per day

Introduction to NPDES MS4 Permits

Typical Permit Compliance Programs Address:

- Legal Authority
- Elimination of Illegal Connections/Discharges
- Construction Inspection
- Business Inspection
- Municipal Facility and Activity BMPs
- New Development BMPs
- Public Education and Outreach
- Watershed Monitoring/Annual Reporting

Introduction to NPDES MS4 Permits

Issued within RWQCB jurisdiction on Countywide Basis

- Santa Ana Region – Santa Ana RWQCB
- Santa Margarita Region – San Diego RWQCB
- Whitewater River Region – Colorado RWQCB

General Watershed Information

	Santa Margarita	Santa Ana
Total Area	740 sq. mi.	2,800 sq. mi.
Riv. Co. Area	540 sq. mi.	1,400 sq. mi.
Riv. Co. Population	260,000	1,240,000
Murrieta Population	95,500	1,500
Watershed-Wide Non-Urban Land Use	93%	86%
Hydrologic Modification	Yes	Yes
Impairments	Nutrients, Metals, Turbidity	Nutrients, Turbidity, Pathogens

Status of NPDES MS4 Permits

	Santa Margarita MS4	Santa Ana MS4
Term	Third-Term	Third-Term
Permit Adopted	July 14, 2004	October 25, 2002
Annual Reports Due	October 31	November 30
Permit Expiration	July 14, 2009	October 25, 2007
Initiate ROWD	July 2008	October 2006
ROWD due	Jan 2009	April 17, 2007
Likely Permit Draft	Fall 2009	February/March 2008

Typical Permittee Structure

Principal Permittee coordinates development and implementation of Regional Compliance Programs and acts as primary point of contact with Regional Board

Co-Permittees develop and implement local programs, provide information to District for regional programs and reports, and contribute towards regional program implementation

Duties

	Principal Permittee	Co-Permittee
Program Development	Coordinate & Facilitate Regional Approach to LIP	Provide Input/Support, Develop LIP
Watershed SWMP/DAMP	Maintain, Implement and Report	Implement, and Provide Requested Information/Input
Individual SWMP	Answer Questions	Maintain, Implement and Report
Industrial Inspections	Compliance Assistance Program (CAP)	Follow Up Inspections, address Facilities beyond CAP
Public Education	Develop Materials, Implement Student Outreach, Media Outreach, Training	Address local education and outreach, ensure staff are trained
IC/ID	Maintain 1-800 #, HAZMAT Response, HHW/ABOP	Address Complaints, IC/ID Monitoring.
Monitoring	Implement Watershed Monitoring	Provide Support When Requested
Federal/State/Local Issues	Monitor Issues, Report	Input/Recommendations

RWQCB Compliance Philosophy

San Diego RWQCB mandates compliance documentation and reporting at each level of implementation:

- Watershed SWMP – Watershed Wide or Jointly Funded Activities
- Individual SWMP – Individual Permittee Activities

Santa Ana RWQCB preferred consolidated compliance documentation and reporting:

- DAMP – Documents all activities programmatically

NOTE: Santa Ana RWQCB being driven to San Diego Approach by TMDLs

SMR Permit Compliance Documentation and Reporting

SMR Watershed SWMP documents watershed-wide/regional program implementation.

Individual SWMPs provide local compliance program documentation.

Looming Issues

Short Term

- SD RWQCB Audit Results
- SMR Pesticides TRE
- SMR ROWD

Long Term (new MS4 permits)

- Addition of Urban Retrofit requirements to SMR Watershed SWMP
- Effectiveness Analysis
- Post Construction BMP Tracking and Inspection
- Hydromodification/LID BMPs
- Expanding Monitoring Programs
- TMDLs
  - Urban Retrofit
  - In-Lake Remediation for DLLE

What we need

Build better relationship with the Board

Need Riverside County representatives on the RWQCB

Strong support from cities on MS4 Permit subcommittees and related Task Forces

Things for the Cities to Watch

- Abandoned Private Construction sites
- Keep finger on public works projects and municipal facilities
- Documentation, documentation, documentation

Specific Permit Programs

Legal Authority	Santa Margarita	Santa Ana
Prohibit IC/ID Through Ordinance	Y	Y
Enforce Ordinances	Y	Y
Ordinances Specific to Pollutants of Concern	N	Y*
Document Enforcement	Y	Y
Legal Certification	Y	Y
Cooperative Agreement	Y	Y

* SAR wants specific sources abatable via ordinances based on local conditions

Specific Permit Programs

Illicit Discharges	Santa Margarita	Santa Ana
SAR Coordination	Y	Y
Complaint Tracking Protocols	Y	Y
Informal Dry Weather Monitoring Sites	Y	N
SAR Regional Board Notification of Hazardous/Human Health IC/ID	Y	Y
Incorporate De-Minimis Discharge Permit Requirements	N	Y
Proactive Municipal IC/ID Focus	N	N
County Pre HAZMAT Partnership*	N	N
Dumping	Y	Y

* Regional Program sponsored by District to facilitate rapid response to hazardous materials spills to MS4

Specific Permit Programs

Permittee Facilities	Santa Margarita	Santa Ana
Minimum BMP Requirements	Y	Y
Facility On-Site PPP	Y	Y
Annual PPP Inspections	Y	Y
Annual MS4 Facility Map Updates*	Y	Y
Incorporate Construction Permit	N	Y
Reporting	Y	Y

* SMR requires MS4 Map to define sub-watersheds for each system

Specific Permit Programs

Development Planning	Santa Margarita	Santa Ana
Review/Update CEQA Process	Y	Y
Municipal 404/401 determination as part of WQMP Review	Y	N
Review/Update General Plan	Y	Y
Minimum BMP Control Requirements for New Development	Y	Y

Specific Permit Programs

Development Planning	Santa Margarita	Santa Ana
Minimum BMP Requirements for all developments	Y	Y
WQMP/SUSMP	Y*	Y
Guaranteed Maintenance Mech.	Y	Y
BMP Tracking*	N	N
BMP Inspections	N	N
Reporting	Y	Y

* SMR requires WQMP for Roads, SAR wants to add Streets and Roads

Specific Permit Programs

Development Planning	Santa Margarita	Santa Ana
Grandfather provision for conditioned developments prior to WQMP/SUSMP regs?	N*	Y
LID Requirement	N	N
Hydromodification **	N	N
BMP Design Manual	N	N

*SMR requires WQMP for projects that as of July 14, 2005 have not pulled grading permits.
** Required to have Numeric Criteria as part of ROWD

Specific Permit Programs

Construction Inspection	Santa Margarita	Santa Ana
Minimum BMPs	Y*	Y
Enforceable Ordinance	Y	Y
Phased Municipal SWPPPs**	N	N
Specific Enforcement Tools	Y	N***
Inspections	Y	Y
Reporting	Y	Y

* SMR requirements are more prescriptive.
** Both Boards want municipal equivalents to a SWPPP with more proactive BMP requirements
*** SAR Wants more proactive use of bonds and stop work orders

Specific Permit Programs

Industrial/Comm. Insp.	Santa Margarita	Santa Ana
Require Compliance Assistance Program	N	Y
Inspect Mobile Facilities	N	Y
Inspections Beyond CAP and Mobile Facilities	Y	N*
Database of Facilities	Y	Y
Minimum BMPs	Y	Y
Enforcement	Y	Y
Reporting	Y	Y

*Cities with POTW are required to incorporate stormwater inspection into POTW Pretreatment Inspection Program.

Specific Permit Programs

Public Education	Santa Margarita	Santa Ana
Municipal Planning, Inspection, Maintenance Worker and Engineering Staff Training?	Y	Y
Media Outreach (TV, Radio Billboard)	N	Y
Mix BMP Residential Outreach	Y	N
Adult Outreach	Y	Y
Student Outreach	Y	Y
Web/Phone Resources	Y	Y
Pollutant/Waterbody Specific Outreach	Y	Y
Local Outreach Requirements*	Y	Y
Reporting	Y	Y

*Most Public Education Programs implemented by RCFC on behalf of Permittees

Specific Permit Programs

Monitoring/Reporting	Santa Margarita	Santa Ana
Watershed Wet/Dry Chemical Monitoring	Y	Y
Bioassessment	Y	N
Toxicity Monitoring	Y	N*
Composite Sampling	Y	N
Regional Monitoring / Special Studies	Y**	Y
BMP Effectiveness Analysis	Y	Y
Reporting	Y	Y

* Some Toxicity Monitoring Required
** Develop criteria for hydromodification

Specific Permit Programs

Program Mgmt /Other	Santa Margarita	Santa Ana
City Manager MSC	N	Y
Intercounty Coordination Meetings	Y	N
Fiscal Reporting*	Y	Y
Individual SWMPs	Y	N
TMDL	N	N
Audits	Y	Y
Reporting	Y	Y

*SD RWQCB likely to require metrics for fiscal analysis

TMDLs and BPA Amendments

- Santa Ana RWQCB TMDLs
  - Lake Elsinore/Canyon Lake Nutrient TMDL
  - Canyon Lake Pathogen TMDL (Pending)
- San Diego RWQCB TMDLs
  - Santa Margarita Lagoon Nutrient TMDL
- Other RWQCB Projects of Note
  - SA RWQCB SWQTF REC 1 Standards Review
  - SD RWQCB REC 1 Standards Review

Program Implementation

Intergovernmental Coordination

Statewide - CASQA

- Board Member – Steve Stump
- Legislative Committee Chair – Jason Uhley

Regional

VII. ***TMDL Progress Report – Arlene Chun***

A. **Middle Santa Ana River Bacteria Indicator TMDL Update**

- **Next Meeting - Thursday, January 24, 2008 – 1:30 p.m. to 4:00 p.m.**
  Arlene reported on the following items related to the Middle Santa Ana River Bacteria Indicator TMDL:
  - Urban Source Evaluatio Plan available
  - Plan due to be implemented in 2009
  - Plan needs to be reviewed by Permittees
  - Task Force Agreement signed by Regional Board on November 30th

B. **Lake Elsinore/Canyon Lake TMDL**

- **Next Meeting – Tuesday, January 29, 2008 from 1:30 p.m. to 4:00 p.m.**
  Arlene announced that the next Lake Elsinore/Canyon Lake TMDL meeting was scheduled for January 29th.

C. **San Diego Lagoons TMDL/Investigation Order**

- **Lagoons TMDL NNE Study Bureau Workgroup**
  Tina Tuason noted that there was a short conference call among the Bureau of Reclamation, Camp Pendleton, Riverside County, CDM and the cities of Murrieta and Temecula. Tina noted that the third 13267 Order addendum from the Regional Board was issued. Revised estimates for sampling and inlet surveys are estimated to cost $10,500. Funds must be received prior to the purchase request being made and funding must be received by January 21st. The MOA will be signed by the participating agencies around January 15, 2008. The monitoring teams are waiting to mobilize during the on-set of at least 1/2" of rain. The inlet sampling locations have been identified in compliance with the order. The ocean inlet sampling point will be as close as safely possible to where the lagoon dumps into the ocean. Based on a conversation with the RWQCB, data is not required in January and will be submitted to the Regional Board on April 1, 2008. A conference call is scheduled for February 19th.

VIII. ***Santa Ana/Santa Margarita Region Programs – Arlene Chun***

A. **Stormwater Quality Standards Task Force Update**
Next Meeting: Thursday January 24, 2008 from 9:30 a.m. to 1:30 p.m.
Arlene reported that the topic of the November 15, 2007 Stormwater Quality Standards Task Force meeting was the Basin Plan Amendment. The Plan is tentatively scheduled to go before the Board November 2008.

IX. ***Open Discussion***

A. ***Santa Ana RWQCB*** – Mike Roth noted that the Regional Board is looking to conduct a presentation during a future TAC meeting regarding post construction BMPs.

B. ***San Diego RWQCB –***

C. ***U.S. EPA – Region IX –***

D. ***Round Table –***

Water Quality NEWSFLASH

DEDICATED TO THE ADVANCEMENT OF STORMWATER QUALITY MANAGEMENT, SCIENCE AND REGULATION

December 31, 2007 *Number 2007-09*

Municipal Regional Stormwater NPDES Permit (MRP) - *Proposed Order to address Bay Area stormwater* – This proposed permit (tentative order) combines the previous six Phase I municipal separate storm sewer system (MS4) permits into a single regional permit covering 77 municipalities in five Bay Area counties. Beginning in 2005, Regional Water Board staff worked with the Bay Area Stormwater Management Agencies Association (BASMAA) through a steering committee and also through various work groups on individual MRP components. The Board issued a preliminary draft MRP in November 2006 and an administrative draft in May 2007.

The proposed permit contains the usual receiving water limitations: "The discharge shall not cause or contribute to a violation of any applicable water quality standard for receiving waters." As in other MS4 permits, permittees would achieve compliance by implementing specified best management practices rather than focusing on water quality at the point of discharge. Persistent exceedances of water quality standards would be addressed by notifying the Board and improving or adding BMPs. This process would be required once during the permit cycle and is generally called the "iterative approach."

Proposed required BMPs include the "C.3" requirements: numeric treatment sizing standards for new development and redevelopment (5,000 or 10,000 sq ft thresholds for specified categories); mandatory integration of Low Impact Development (LID) principles into project design; and, hydro-modification controls (more advanced than elsewhere in state), which differ by county. Section C.3 also includes a proposed requirement specifying that runoff from new projects discharging to 303(d) listed waterbodies not exceed predevelopment levels for listed pollutants. This may be difficult to implement: the Bay is listed for dioxin – a ubiquitous constituent in stormwater.

The proposed permit also requires significantly more water quality monitoring compared to the most current Bay Area permits and specific control actions to address the new mercury TMDL and the proposed PCBs TMDL. The proposed permit is very prescriptive, even specifying the number of community involvement and public outreach events. Record-keeping requirements are substantial. For example, the permittees would need to report annually on types of sweepers used, swept curb miles, volume or weight of materials removed, sweeper operator training, etc.

Another innovation is the emphasis on trash control – an increasingly concern of Bay Area environmental NGOs. The proposed permit identifies high, medium, and low priority streets and specifies the frequency of street sweeping for each. Most residential streets are likely to be low priority and would need to be swept at least twice before the onset of the rainy season. New sweeping equipment would need to meet technical specifications.

Comments are due by February 29, 2008. The first hearing will be held March 11. The permit will likely be further revised prior to the adoption hearing to be held later in the spring.

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

Water Quality NEWSFLASH

DEDICATED TO THE ADVANCEMENT OF STORMWATER QUALITY MANAGEMENT, SCIENCE AND REGULATION

January 28, 2008 *Number 2008-02*

CASQA Meeting – *Federal and State Regulatory updates* – The January 11 meeting included presentations on water quality issues from the USEPA and the State Water Resources Control Board. Alexis Strauss, Director of USEPA's Water Division described key issues of concern to the agency. The first is timely renewal of the State's stormwater permits. Currently half of the 28 major stormwater permits are expired. The second issue is ensuring that stormwater permits address the TMDLs being prepared by the Regional Water Boards. USEPA sees TMDLs as a key catalyst for water quality improvement. Ms. Strauss referred to USEPA's November 22, 2002, memo on implementing TMDLs in stormwater permits. In this memo, USEPA "recommends that for NPDES-regulated municipal and small construction storm water discharges effluent limits should be expressed as best management practices (BMPs) or other similar requirements, rather than as numeric effluent limits."

The third issue is measuring and enhancing stormwater program effectiveness. Ms. Strauss also thanked CASQA for preparing the *Municipal Stormwater Program Effectiveness Assessment Guidance* document. She also referred to a National Academy of Sciences project – "Reducing Stormwater Discharge Contributions to Water Pollution." A key goal of the project is to clarify the mechanisms by which pollutants in stormwater discharges affect ambient water quality. The project will define the elements of a *protocol* to link pollutants in stormwater discharges to ambient water quality criteria. The NAS project committee met in December in Irvine with participation by CASQA and other interested parties.

Another USEPA issue is enforcement; USEPA's enforcement priorities for the coming year are sand & gravel operations, ports, and implementing a new MS4 inspection protocol. A new USEPA priority initiated in 2007 is green infrastructure. (A later NewsFlash issue will address this issue in more depth including requirements for *maximum extent technically feasible* (METF) hydraulic controls.)

Jonathan Bishop, Chief Deputy Director of the State Water Board, described the Board's goals for the coming year. These include updating the Strategic Plan (workshop Feb. 6). In the proposed plan, stormwater is targeted for augmenting water supplies through groundwater recharge, particularly using low-impact development (LID) approaches. The draft proposes "including incentives for stormwater permits that encourage cities and counties to implement LID/Smart growth." Consistency between the Regional Water Boards in their regulation of stormwater is also a goal of the plan. As part of this consistency effort, the State Water Board plans to develop a statewide stormwater permit for large municipalities by December 2009.

Mr. Bishop indicated that the long-awaited statewide Construction General Permit is currently targeted for February or March. It will include numeric limits for only pH and sediment. Other Board goals for this year include increasing the efficiency of the TMDL development process and issuing a general exception to the Ocean Plan's ban on stormwater discharges into Areas of Special Biological Significance (ASBS).

Water Quality NewsFlash is a bi-weekly update of stormwater and related news for CASQA members, co-sponsored by Caltrans Stormwater Program as a public education and outreach partnership. *Verify information before taking action on these bulletins.* Contact CASQA at info@casqa.org or (650) 366-1042 with questions. Water Quality Management Committee

Meeting Agenda
March 17, 2008
10:00-12:00
Riverside County Executive Office-Conference Room A

1. **Self Introductions**

2. **New San Diego Regional Board Contact** –Benjamin Neill 858.467.2983
   WRC Engineer C, Northern Watershed Unit, bneill@waterboards.ca.gov

3. **Department updates and discussion points**
   - ***a. Environmental Health***
     - Septic Systems
     - Survey Program
   - ***b. Building and Safety***
     - Business Registration
     - Grading inspections/BMPs
     - Proposed Industrial/Commercial Inspection Program
   - ***c. Transportation Department***
     - CIP Municipal Projects
     - Quarterly Status Report
   - ***d. Facilities Management***
     - CIP/ Municipal Projects
   - ***e. EDA/RDA***
     - CIP Municipal Projects

4. **Flood Control and Water Conservation District Updates**
   a. MS4 permit status -Whitewater, Santa Ana, Santa Margarita
      - US EPA comments to OC MS4 permit (San Diego RWQCB)
   b. TMDLs- Middle Santa Ana River, Lake Elsinore/Canyon Lake
   c. 13267 order-Santa Margarita Lagoon
   d. Coachella Valley Stormwater Channel

5. **RFQ for consultant/engineering services** (WQMPs, water quality monitoring, public education, and general regulatory assistance)

6. **IRWM Progress (Prop 50, Prop 84, Prop 1E)**
   a. SAWPA
   b. Rancho Water District
   c. Mission Springs Water District-DAC

7. **IC/ ID complaints**

8. **Non-agenda items and round table discussion.**

9. **Next meeting date <u>April 21, 2008</u>**

Mar 17, 2008

2007-08 NPDES Pre-Storm Season Meeting

October 16, 2007

MEETING AGENDA

1. Welcome to all the first time attendees and to those who joined us during our previous pre-storm season meeting. This is our third annual pre-storm season meeting. We thank you for taking time out of your busy schedule to join us!
2. Self introductions and the jurisdiction or company you are affiliated with.
3. Our meeting structure today will be very informal. Please feel free to share your thoughts.
4. Logistics of this meeting room. Parking validation is available before you leave.
5. Plan on wrapping up our meeting up by 12:00 PM or sooner.
6. Opening comments and summary of "The 2006-07 Storm Season for the County of Riverside"- Roger Miller and Steve Dondalski.
7. Comments concerning "The NPDES Consultant's Point Of View For The 2006-07 Storm Season"- Mike Malone (Geopacifica).
8. Comments regarding the County Industrial/Commercial NPDES Inspection Program and our new Business Registration Program- Ed Nicholls. Additional, supporting comments by Chandra Santiago (AEI-CASC Engineering).
9. Open discussion featuring all attendees.
10. Meeting summary.
11. Riverside County Flood Control is once again offering no-cost NPDES Training covering the following subject matter: Construction Inspection, Industrial/Commercial Facility Training and Water Quality Management Plan Training. Training sessions will be held at the Flood Control District in Riverside, in Temecula or in Palm Springs. The training sessions are being offered the first weeks of October. If you are interested please let me know and I will be happy to provide registration information and exact dates and locations. Seating is usually limited so the sooner you register the better.
12. Meet the same time next year for our next Pre-Season NPDES Meeting?

2006-07 Storm Season De-Briefing Meeting Notes

1. This storm season (2006-07) the County issued 2-3 Com-Tr Stop Work Orders. However we did issue a bushel-basket full of Stop Work Orders to single family (SFR) developers. We found that when we really 'sat' on the SFR developers and threatened to issue a SWO in two weeks, the SFR developer typically came around and made the corrections that were required for compliance.
   - We have once again found that SFR developers still lack the knowledge regarding NPDES. This is not only true for the "mom and pop builder", but for the engineers as well who support these folks during their construction activity. Obviously the engineer should be the expert the developer can rely on for assistance in this regard. Too many times the County finds that this is not the case. In too many instances a site SWPPP has not been developed. And even if the SWPPP was developed, it may not have been implemented in the field for the protection of the development.
   - There still appears to be a huge disconnect with the SFR developers at the time of slope planting and irrigation installation. The cost of maintaining slope planting is beginning to take a toll. It is felt that the current economic situation may be the biggest culprit in this regard. Another thought is the water availability situation. This is really becoming a matter of great concern. If a "good" rainy season does not materialize this storm season, we are in for some tough times ahead and the homeowner may not have any control of being able to irrigate or not. This may be an issue that is driven by water availability. We are going to have to be sensitive to this issue and work with SFR homeowners.

2. The County would like to challenge the RWQCBs to visit every project issued a WDID at least once each storm season. The local jurisdiction is continuously in the field each storm season we keep "calling wolf" and "the wolf" never shows up. Developers are starting to think our cautions are simply idle threats and will never be backed up with an actual field visit by the RWQCB. Since the RWQCBs more than likely do not have the resources necessary to visit every site, please consider visiting at least one site per developer each storm season.
   - If the RWQCBs cannot visit all construction sites, you can still assist us by making the commitment to visit one selected construction site per developer this storm season. This action on the part of the RWQCBs would assist us by showing first-hand the commitment the Boards have to NPDES compliance on the part of all developers throughout the County area. County staff will support the RWQCBs by providing the physical location of any construction site that is difficult to locate. We always remain interested in being available for a co-NPDES field inspection with any Regional Board that has a desire to do so. The coordination on any activity of this sort or it the location of a site is hard to find please contact Roger Miller of this Office at (951) 955- 0886.

3. The County Storm Season August Start-up Time is still considered to be an excellent tool in our NPDES arsenal. The early start-up time provides us the opportunity to visit our jobsites and advise the developer of the up-coming storm season. We conduct a normal site NPDES Verification and even issue the site our developer "dreaded" estimate of the percentage of compliance.
   - Riverside County NPDES site verifications began August 20, 2007. We hope to be able to visit all of our current construction sites including SFR, Com and Tr sites prior to the beginning of the official storm season October 1, 2007.

DISTRICT ENVIRONMENTAL SERVICES DIVISION

SEPTIC TANK FAILURE DURING EXCESSIVE RAINS/FLOOD CONDITIONS

When rainwater or drainage water ponds over leach fields or flooding saturates the ground in leach line/seepage pit areas, this maximum saturation causes the septic system waste plumbing to become sluggish or to back up or cease to operate when commodes/toilets are flushed and waste fixtures are utilized. If the septic system was properly operating prior to flooding/ground saturation household waste water should not overflow onto the surface of the ground.

When backup within the residence occurs or in the event of overflow onto the surface of the ground the following must be accomplished until the area flooding or ground saturation dissipates:

- If system backup is slow or sluggish but still operating: minimize the amount of liquids and solids usage.
- Backup or visible overflow onto ground surface: stop all water usage. When flooding/ground water saturation diminishes the septic system should again operate normally.

WHEN BACKUP OCCURS:

- If the septic tank is above the ground saturation or flooding area, the septic tank can be pumped by a permitted liquid waste hauler/pumper (see telephone directory yellow pages). The septic tank can be utilized as a holding tank and will accept household waste water and not overflow into leach lines until full. Most septic tanks are 1,000 gals or larger - minimum individual waste water production per person per day i.e. showers, dish washing, laundry, etc. average 50 gals minimum to 100 gals per 24 hour period.
    - The total period to fill the septic tank (now a holding tank) can be calculated i.e. for example 4 persons X 50 gals equals 200 gals/day. It would then take approximately 5 days to fill the tank completely before another pumping.
- If the septic tank system is completely inundated by flood/saturation such that no waste water will be accepted the following is suggested:
    - In this case pumping the tank (as indicated above) will not be effective as it will fill as fast as it is pumped.
    - Procure and use a portable chemical toilet: Small units found in camping/RV/hardware outlets. Larger ones such as those seen at temporary events and construction sites may be utilized. Consult the yellow pages in local telephone directories.
    - Utilize the functional facilities of a motor home/camping trailer or those of a neighboring home.
- Overflowing or the dumping of raw sewage is to be avoided. When it occurs on the scene in an isolated homeowner environment, treat it as follows:
    - Cover/saturate the affected area with one of the following chemicals, (easily procured at local retail outlets) hypochlorite (plain chlorinated lime), calcium hypochlorite or plain household bleach. Where solids are visible a layer of soil must be placed as cover after the distribution of the above chemicals.
- Your septic system if properly working prior to the flooding, ponding, ground saturation should operate normally after the ground saturation subsides to below the leach field area. This may take time in some areas.

ACSCE REPORT SUMMARY FORM

Airport Name & WDID #: FRENCH VALLEY

Inspectors: DAVE ENGLISH

Date: 5-15-08

Are all the Storm Water Visual Observation Forms for the wet season months complete?
Yes ☒ No ☐
If No, complete observations.

Were any pollutants observed in the storm water discharges? Yes ☐ No ☒
If Yes, list corrective action taken: _____

Are all the Non-Storm Water Visual Observations complete? Yes ☒ No ☐
If No, complete observations.

Were any unauthorized non-storm water discharges observed? Yes ☐ No ☒
If Yes, list source of discharge and corrective action taken: _____

Were all possible authorized storm water discharges observed? Yes ☒ No ☐
If No, explain: _____

Were all Site BMPs in place and determined to be adequate? Yes ☒ No ☐
If No, List corrective action taken: _____

Does the above information or the results of the ACSCE inspections warrant changes to the Airport SWPPP? Yes ☐ No ☒
If Yes, Summarize SWPPP changes to be made: _____

If the SWPPP is to be revised, please list revision schedule: _____

Based on the above information and the results of the ACSCE are there any incidents of Airport non-compliance? Yes ☐ No ☒

If Yes, List corrective action taken: _____

Summarize any Airport corrective action taken based on the ACSCE results: _____

FORM 2 - RECORD OF WET SEASON MONITORING

(Complete this form once per month between October 1 and May 30)

Step 1: Airport: FRENCH VALLEY 9335006139
Inspector's Name: DAVE ENGLISH
Signature: [signature]
Title: MAINT SUPV.
Date: 11-3-07

Step 2: This Form is proof that you complied with monthly wet weather inspection requirements for the following month (circle one):

(October) November December January February March April May.

Step 3: Did a "qualifying storm event" occur during the month (circle one)? Yes (No)
[*A "qualifying storm event" is a rain (or snow) event that occurs during daylight facility operating hours and is preceded by at least three working days without a storm water discharge.*]

Step 4a: **If you answered "No" to Step 3,** initial here indicating that no observable qualifying storm event occurred: DRE

or

Step 4b(1): **If you answered "Yes" to Step 3,** complete the following Inspection Chart or complete Step 4b(2) below:

Outfall Number	Date/ Time:	**Floating or Suspended Material?** Yes _____ No _____	**Turbidity or Discoloration?** Yes _____ No _____
		If yes, describe:	If yes, describe:
		Odors? Yes _____ No _____	**Oil and Grease Sheen Present?** Yes _____ No _____
		If yes, describe:	If yes, describe:

Outfall Number	Date/ Time:	**Floating or Suspended Material?** Yes _____ No _____	**Turbidity or Discoloration?** Yes _____ No _____
		If yes, describe:	If yes, describe:
		Odors? Yes _____ No _____	**Oil and Grease Sheen Present?** Yes _____ No _____
		If yes, describe:	If yes, describe:

Step 4b(2): If you failed to observe the qualifying storm event (and cannot complete the Inspection Chart), explain why:

_____

_____

FORM 2 - RECORD OF WET SEASON MONITORING

(Complete this form once per month between October 1 and May 30)

Step 1: Airport: FRENCH VALLEY 9335006139
Inspector's Name: DAVE ENGLISH
Signature: Dave English
Title: Maint. Supv.
Date: 11-24-07

Step 2: This Form is proof that you complied with monthly wet weather inspection requirements for the following month (circle one):

October (November) December January February March April May.

Step 3: Did a "qualifying storm event" occur during the month (circle one)? Yes (No)
[*A "qualifying storm event" is a rain (or snow) event that occurs during daylight facility operating hours and is preceded by at least three working days without a storm water discharge.*]

Step 4a: **If you answered "No" to Step 3,** initial here indicating that no observable qualifying storm event occurred: DRE

or

Step 4b(1): **If you answered "Yes" to Step 3,** complete the following Inspection Chart or complete Step 4b(2) below:

Outfall Number	Date/ Time:	**Floating or Suspended Material?** Yes _____ No _____	**Turbidity or Discoloration?** Yes _____ No _____
		If yes, describe:	If yes, describe:
		Odors? Yes _____ No _____	**Oil and Grease Sheen Present?** Yes _____ No _____
		If yes, describe:	If yes, describe:

Airport California Monitoring Group

FORM 1 - RECORD OF NON-STORM WATER DISCHARGE MONITORING

THIS FORM SHOULD BE FILLED OUT AT LEAST ONCE FOR EACH QUARTERLY MONITORING PERIOD OF EACH YEAR. INSPECTIONS SHOULD BE SEPARATED BY AT LEAST 6 WEEKS AND NO MORE THAN 18 WEEKS.

Step 1: Complete the following:

Airport Name: FRENCH VALLEY 9335006139

Inspector Name: DAVE ENGLISH

Signature: Dave English Date: 9-3-07

Quarterly Monitoring Period (circle one):

(1) July-September **(2) October-December** **(3) January-March** **(4) April-June**

Step 2: How many outfalls are located at the airport? 5

Step 3: Please inspect each outfall. Did you observe any discharges or recent evidence of a discharge at any outfall? Yes ____ No X

Step 4: For any outfalls with discharges or evidence, provide the following information about the outfall:

Outfall No.	Date/ Time:	Evidence of recent discharge:	Source of actual discharge:
		Action taken/comments:	Characteristics: ___ odor ___ turbidity ___ clear ___ floating material ___ oil sheen Action Taken/comments:

Outfall No.	Date/ Time:	Evidence of recent discharge:	Source of actual discharge:
		Action taken/comments:	Characteristics: ___ odor ___ turbidity ___ clear ___ floating material ___ oil sheen Action Taken/comments:

Riverside area Watershed Cleanup needs volunteers

10:00 PM PDT on Thursday, September 25, 2008

By JENNIFER WHITAKER
The Press-Enterprise

Keep Riverside Clean and Beautiful is looking for volunteers for the Inner-coastal and Watershed Cleanup Day set for Oct. 4 at the Riverside County Flood Control District. Hundreds of volunteers are expected to help pick up trash and paint out graffiti along the Santa Ana River.

Volunteers will receive community service hours, T-shirts and a barbecue lunch provided by the Arlington Rotary.

"Our mission here is to promote volunteerism through beautifying the city," said Connie Librenjak, Executive Director of Keep Riverside Clean and Beautiful. "It's not just about the service hours or the free T-shirts and lunch, but it's about building a sense of community pride."

The event is part of a 12th annual Southern California watershed clean up held this month and next by Trails4All that stretches from San Clemente to Anaheim and Irvine. Riverside has been participating for five years.

Librenjak said she expects about 300 volunteers from high school and college students to church groups and families.

"We love volunteers of all ages, and we appreciate everybody that comes out," she said.

Cleaning Up Others Trash

07:12 AM PDT on Monday, September 29, 2008

BOB PRATTE

A dark hulk loomed on Bautista Canyon Road as I pedaled my bicycle Thursday at daybreak in the Valle Vista citrus groves east of Hemet.

When I rolled up, I was surprised to see a massive pile of garbage that must have been dumped in the dark, right on the asphalt. The giant pile of leaves, old hunks of plywood, five-gallon buckets of paint, a wheelbarrow, battered chairs and lots of assorted household junk covered one lane of the two-lane road.

It was the worst instance of roadside dumping I've seen. It also provided the opportunity for a surprising good deed.

Like others cruising through the beautiful citrus groves of Valle Vista, I grumble when I see old washing machines and discarded couches.

Illegal dumping creates lots of work. When making trash-hauling agreements in unincorporated Riverside County, garbage companies are required to clean up illegal dumping along county-maintained roads. Cities have their own procedures.

Reports of illegal dumping within 20 feet of county-maintained roads can be made by calling the Department of Environmental Health at 951-955-8982.

County wins state award for water conservation

Riverside County's efforts to address the region's water shortage were recognized today by the state American Planning Association at its conference in Hollywood. The county's new water conservation landscaping ordinance received the organization's award for Outstanding Best Practices.

With an eye toward conservation and spurred by a looming state crisis, Riverside County developed a plan to reduce water consumption by 20 percent while preserving the natural desert landscape.

"We've come up with a model that reduces water use without sacrificing landscape aesthetics," said Supervisor Marion Ashley, who has served as a board member for local water agencies and has been recognized for his leadership in water conservation.

"We are proud of this recognition and hope that it encourages others throughout the state to address this issue."

Landscaping can account for more than 60 percent of a household's water consumption. New housing tracts and commercial developments now have to use drought-tolerant plants, water-efficient irrigation systems, and landscape smaller areas. These measures are expected to reduce landscaping water use by 20 percent.

The Board of Supervisors implemented the ordinance in April, long before a county-imposed 2010 deadline to implement water-use guidelines. The ordinance is supplemented by a landscaping guide that details for developers the new irrigation requirements and allowed plants.

Homeowners interested in using water-efficient landscaping guidelines or who would like more information on water-wise rebates, should visit www.bewaterwise.com.

THE SAN JACINTO RIVER WATERSHED COUNCIL

Prop 50- Integrated, Regional Watershed Management Plan (IRWMP) for the San Jacinto Watershed

Riverside County Planning Commission
April 30, 2008

4/29/2008 1

Introduction

- The San Jacinto River Watershed Council is a non-profit organization
- The SJRWC began in 2001 through the efforts of the EMARCD and SJBRCD
- Incorporated and 501 (c) 3 established in 2003
- Grassroots, broad-based stakeholder involvement

4/29/2008 2

Our Current Board

- **Phil Williams**, President, Water Agency/EVMWD
- **Bruce Scott**, Treasurer, Landowner/Farmer
- **Steve Stump**, Secretary, County/RCFC&WCD
- **Mark Norton**, Federal/State/Regional/SAWPA
- **Brad Scott**, Dairy/Owner
- **Terry Wold**, Environmental/Community/Sierra Club
- **Harold Arres**, Tribal/Soboba Band of Luiseno Indians
- **Open**, At-Large
- **Renee Latu**, At-Large/SAWA

4/29/2008 3

Prop 50 Planning Grant

- Region defined: The San Jacinto Watershed-780 square miles
- Lead entity: The San Jacinto River Watershed Council
- Teaming partner: Riverside County Flood Control & Water Conservation District
- Expands SAWPA's IWMP
- Specific focused component for SJ Watershed
- 47.9% of SJ Watershed living in disadvantaged communities(2000 Census data)

4/29/2008 4

Project Components

- San Jacinto Integrated, Regional Watershed Management Plan
  (Prop 50, Chapter 8 Planning Grant)
- Specific studies in the plan:
  - Septic System Management Plan
  - San Jacinto River- Gap Feasibility Study
  - Watershed/Waterbody Monitoring-Canyon Lake
  - Sediment Nutrient Flux and Oxygen Demand Study for Canyon Lake with In-lake Alternatives

4/29/2008 5

Key Stakeholder Participation

- **RCFC&WCD**
  -Managed technical components of the Gap Feasibility Study, Septic Management Plan
- **WORKGROUPS**
  -IRWMP
  -Gap Feasibility
  -Septic Management Plan
  -Watershed Monitoring & Sediment Study with In-lake Alternatives (LESJWA TAC & Task Force/TMDL components)
  -More than 80 Individual Watershed stakeholders participated

4/29/2008 6

The San Jacinto Watershed Component of
the Santa Ana Integrated Watershed Plan

Key Stakeholder Participation

- WRIME Groundwater component

  Our original grant did not have funding to address groundwater in the detail we would have liked. The Hemet/San Jacinto Management Plan participants developed this component. They are: Eastern Municipal Water District, Lake Hemet Municipal Water District, the City of Hemet and the City of San Jacinto.

- SAWPA

  Mark Norton was of great value throughout the process and in particular with the strategy development component. Jeff Beehler assisted in coordinating the gap key players.

4/29/2008 7

The Plan

- Identified 10 Resource Management Strategies and Associated Sub-objectives
  - Improve surface and groundwater quality
  - Ensure the long-term viability of water supplies
  - Provide adequate stormwater and flood control
  - Protect, enhance, and create habitat for wildlife
  - Manage land use to protect natural resources and watershed character
  - Promote water recycling
  - Expand water conservation programs
  - Enhance opportunities for parks, recreation and open space
  - Weigh environmental justice concerns in watershed decision-making
  - Explore opportunities to address climate change issues with watershed projects

4/29/2008 8

5 Main Watershed Priorities

- Multiple benefit projects
- Environmental justice concerns/disadvantaged communities
- Projects to lower TMDL load allocations
- Prevent nonpoint source pollution from failing septic systems
- Assist agriculture and dairy in implementing BMPs to reduce nutrients in surface water and to meet salt offset requirements for groundwater.

4/29/2008 9

110 Projects

Planning	33
Regulatory Compliance	31
Improvement	76

4/29/2008 10

Resource Management Strategy

10 RESOURCE MANAGEMENT STRATEGIES	# OF PROJECTS
Water Quality	87
Water Supply	48
Stormwater and Flood Control	42
Habitat	48
Land use	3
Water recycling	23
Water conservation	14
Parks, Recreation and open space	37
Environmental justice	90
Climate change	19

*note that most projects meet more than one RMS

4/29/2008 11

Final Product

- IRWMP for the San Jacinto Watershed
- Grant completion 4/2/08
- 110 projects identified totaling over $1.3 billion
- Monthly meetings over past 2.5 years to coordinate the plan effort
- 4 specific analyses completed assisting stakeholders and meeting compliance requirements. Baseline data on gap area collected.

4/29/2008 12

The San Jacinto Watershed Component of the Santa Ana Integrated Watershed Plan

The Final Product-continued

- Specific Analyses
  - Canyon Lake Monitoring
    *This met a TMDL Watershed compliance requirement-Benefit to all stakeholders
  - Sediment Study with In-lake Alternative Recommendations
    *This met a TMDL Watershed compliance requirement-Benefit to all stakeholders
    Additional funding ($18,000) provided to develop model to provide level of confidence to RWQCB for recommended alternatives.

4/29/2008 13

The Final Product-continued

- Specific Analyses
- San Jacinto River Gap Feasibility Study
  - Hydrology and Habitat linkage components
  - *Obtained additional grant funding $80,000 to do additional work through USBR for Sediment Transport Analysis. Final report in March 2008.
- Septic System Management Plan
  Scope changed due to pending AB885 Guidelines. Cities will have to still do additional tasks to meet TMDL requirement.
  - Identifies septics and problem areas in the entire watershed based upon proximity to waterbodies.

4/29/2008 14

The San Jacinto River Watershed Council
P.O. Box 1378
San Jacinto, CA 92581-1378

Dear Friend of the San Jacinto Watershed,

This "Guidebook for Living in the San Jacinto Watershed," our free gift to you, is full of useful tips, suggestions and resources to make it easy for you to both save money and do your part for a healthier environment.

- Small changes in our daily lives can make a big difference in protecting our natural resources.
- Conserving water is far less expensive than importing it-or building costly desalination plants.
- Reducing our use of pollutants means cleaner waterbodies.
- Preserving natural open space in our watershed saves vanishing wildlife and allows more rainfall to soak into the ground for future water needs.
- You can make a difference! Volunteer! Get involved! Let elected officials and candidates know that you care about the environment.

The San Jacinto River Watershed Council is a locally based non-profit organization that addresses water issues in the San Jacinto Watershed and is supported by donations from interested and concerned stakeholders like you. The Council is an open forum of the entire watershed and strives to represent all stakeholders. It can be characterized as broad-based in its representation and holistic in its approach to issues of watershed management and planning. We strive to facilitate stakeholder cooperation in order to identify the watershed's most pressing problems and forge solutions that integrate efforts aimed toward water supply, flood control, groundwater management, open space preservation, habitat protection, and pollution prevention with an overall goal to provide protection, restoration and enhancement of watershed related resources. Some of our current activities include:

- Development of a San Jacinto Integrated Regional Watershed Plan
- Stakeholder outreach-including such efforts as this FREE publication!
- Assistance in the implementation of the Lake Elsinore/Canyon Lake TMDL which will improve water quality
- Applying for grants available only to non-profit organizations that will help address water resource and water quality problems
- Coordination and integration of other regional studies and plans
- Development of work groups to address critical watershed issues such as: the "gap" issue on the San Jacinto River, the need for sewers in the Quail Valley area, and TMDLs.
- Assistance in developing strategies to control nutrients & pathogens negatively impacting water bodies

This guide is yours to enjoy FREE of charge. But if you would like, please send a donation in any amount to help us continue our program to secure a sustainable water supply, preserve and enhance open space and improve the environment right here where you live.

Sincerely,

The San Jacinto River Watershed Council
Board of Directors

Guidebook for Living in the
San Jacinto Watershed

SJRWC

San Jacinto River Watershed Council
P.O. Box 1378
San Jacinto, CA 92581-1378

Guidebook for Living in the
San Jacinto Watershed

A Guide for Residents of the
San Jacinto Watershed and Surrounding Communities

00002281

The San Jacinto River Watershed Council recognizes the following organizations and agencies as partners in creating *The Guidebook for Living in the San Jacinto Watershed, A Guide for Residents of the San Jacinto Watershed and Surrounding Communities*. From providing funding to lending technical expertise, these organizations have contributed to preserving the natural resources of the San Jacinto Watershed:

Bureau of Reclamation, California Environmental Protection Agency Environmental Justice Small Grants Program • City of Lake Elsinore • Eastern Municipal Water District • Elsinore Valley Municipal Water District • Lake Elsinore and San Jacinto Watersheds Authority • Lewis Planned Communities and the Garrett Group • Milk Producers Environmental Fund • Riverside County Farm Bureau • Riverside County Flood Control and Water Conservation District, Santa Ana Watershed Association, Santa Ana Watershed Project Authority • Soboba Band of Luiseño Indians and Western Municipal Water District.

The San Jacinto Guidebook is based upon the Arroyo Seco "Living Lightly in Our Watersheds: A Guide for Residents of Arroyo Seco and surrounding communities." The Arroyo Seco book was based upon earlier concepts from the Topanga Watershed Committee and the Malibu Creek Advisory Council. We wish to thank the Topanga Watershed Committee, the Malibu Creek Watershed Advisory Council, and the Arroyo Seco Watershed Committee.

Adaptation of text reprinted from the "Living Lightly In Our Watersheds Guide" with permission from the Arroyo Seco Watershed Committee.

This book is also available in Spanish. Please contact the San Jacinto River Watershed Council for additional information.

Prepared by:
The San Jacinto River Watershed Council

Welcome to

The Guidebook for Living in the San Jacinto Watershed

Dear Friends,

There's a spot along the Ernie Maxwell Scenic Hiking Trail, just east of Idyllwild, where much of the San Jacinto River Watershed may be taken in at a single glance. Here in the shadow of Tahquitz Peak, the mountains, ridges and hilltops that form the upper boundaries of our watershed surround you. Lake Hemet and Garner Valley lie just south. Below the Lake lies the canyon of the south fork of the San Jacinto River winding northwest toward the Soboba Indian Reservation, the Badlands and that ephemeral jewel, Mystic Lake. Along the trace of the Canyon and just west of Mystic Lake are the dairy lands and the San Jacinto Wildlife Area, one of the best indicators of the health of our watershed. Further west and just beyond our view lie Canyon Lake and Lake Elsinore, where much of how we all live is reflected in the quality of those aquatic environments.

These stops along the energy highway that comprise our watershed are but a glimpse of the real complexity that underlies the environment in which we all live and work. It's the droplets of water, particles of soil, molecules of oxygen, photons of sunlight, bacteria, insects, flowering plants, birds, mountain lions and all of us – all are related, connected by lifelines and knotted together in a network. We now better understand that when we work together locally for environmental quality, the integrity of the network can be maintained and we can achieve stability, the most fundamental property of a functioning watershed and sustainable communities.

And we have come together: citizens, local, state and federal agencies as members of the non-profit San Jacinto River Watershed Council to coordinate efforts and share resources to develop and implement watershed management strategies that will make western Riverside County a great place to live and work.

This booklet, Guidebook for Living in the San Jacinto Watershed, was developed to inform you of the work of all of our members, what you can do to help reduce pollution and conserve resources, and how you can become involved in and support the work of the Council.

Enjoy!!

Jim Gilmore, President
San Jacinto River Watershed Council

Dear Friends of the San Jacinto River:

Among the many reasons to reside in or visit Riverside County is the high quality of life available to an active population. Within that portion of just the San Jacinto River Watershed, the variety of activities offered takes a lifetime to enjoy fully. You can hike high in the cool mountains. You can water-ski, fish or sail on several lakes. You can tour public gardens or grow your own flower and herb gardens year-round. You can be as active or passive as you prefer.

The San Jacinto River Watershed has it all. The best way to enjoy your lifestyle is to "live lightly" in our communities. That's what this guidebook offers you—opportunities for enjoyment and the obligation to be part of the conservation ethic that reduces pollution, keeps our air and water clean, and endorses our priority to maintain bountiful green space. We can all do our parts to ensure that the watershed will be a valued destination for new generations.

Many individuals from private, governmental and volunteer organizations contributed their expertise to this guidebook. We know you'll find this guidebook helpful in understanding the San Jacinto River Watershed and appreciating what it has to offer.

Sincerely,

Bob Buster, Chairman
Supervisor, First District

Jeff Stone
Supervisor, Third District

Marion Ashley

Imagine THE SAN JACINTO WATERSHED

as a clean and protected environment that is the source of community pride. Parks, bicycle trails, places to walk under a green canopy of trees, clean air, water and wildlife habitat are all a part of what the future holds for the watershed.

With your support, the vision is becoming a reality.

What is a Watershed?

A watershed is an area of land from which all rainfall drains to a common point. All land is part of a watershed. As rainwater and melting snow run downhill, they carry sediment and other materials into our streams, lakes and groundwater.

The San Jacinto Watershed upstream of Canyon Lake covers 718 square miles in the western half of Riverside County. There are two main watercourses in the watershed, San Jacinto River and Salt Creek.

The San Jacinto drains the western slopes of the San Jacinto Mountains and flows through the communities of San Jacinto and Perris before entering Canyon Lake. Salt Creek is tributary to the San Jacinto River and flows into Canyon Lake from the east. Discharges from the Canyon Lake Dam flow southwest in the San Jacinto River to Lake Elsinore and, then flows northwest in Temescal Wash to the Santa Ana River, which flows to the Pacific Ocean.

FOUR WATERSHED

The earth's surface rocks as well as minerals, species and life, allowing moisture, minerals, and organic material to be used and released by all life in developing our cities and communities, we have changed the underlying conditions of the land on which they are built. Where once water, air and nutrients could enter the soil and circulate freely, we now have increasingly larger areas of hard surfaces that rapidly concentrate rain and pollutants. We have also introduced plants and animals into areas where they were not previously found. This dramatically changing the make-up of our regional biological communities. Learning to work with the natural cycles that have sustained the earth will help ensure that good, clean air, and water, and beautiful, green, open space will be available to future generations.

To keep every cog and wheel is the first requirement of a good watch.

— Alan Perlis

0002285

A Watershed Approach

People working together to protect public health and the environment - community by community, watershed by watershed.

Carol M. Browner, Administrator
U.S. Environmental Protection Agency
June 1996

Rainfall travels from the mountains to the ocean. Water, air, plants and animals move freely across political boundaries. Strategies for improving water quality and availability, increasing flood protection, protecting our lakes and preserving open space for recreation and wildlife are more effective when pursued collectively over a whole watershed. Agencies, organizations, politicians, and individuals should cross over city lines, joining together with neighbors in their watersheds to work toward these important goals. This watershed-based approach not only promises better and more cost-effective results, it also serves to unite neighborhoods, further enriching our lives.

To this end, The San Jacinto River Watershed Council has produced this environmental guide, *"Guidebook for Living in the San Jacinto Watershed,"* for communities in and around the San Jacinto watershed.

The San Jacinto Watershed

The San Jacinto Watershed is a 780 square mile watershed with diverse and unique geographical, cultural, and ecological significance. Let's take a journey (see map page vi) to better understand how water flows through our watershed.

At the top of our watershed, in the San Jacinto Mountain communities of Idyllwild, Pine Cove Fern Valley and Garner Valley, rain and snow fall on steep, rocky slopes. Water and sediments wash from the slopes, and move down the mountain and canyons into the headwaters of the San Jacinto River. Lake Hemet, on the South Fork of the river, captures significant quantities of mountain runoff. In wetter years, Lake Hemet overflows, drastically increasing the flow in the river as it exits the mountains into the San Jacinto Valley near the community of Valle Vista.

The 8,828-foot Tahquitz Peak, a granite dome in the San Jacinto Wilderness is a favorite with climbers.

East of the city of San Jacinto, in the rolling foothills of the San Jacinto Mountains, is the 7,000 acre Soboba Indian Reservation, home of the Soboba Band of Luiseño Indians. The reservation extends into the broad level floodplain at the southeast edge of the San Jacinto Valley. Two other mountain streams, Indian Creek and Poppet Creek, flow through the reservation. Water is and always has been a cornerstone of the Soboba band.

Soboba Pow wow

The San Jacinto Valley holds a rich and diverse agricultural history. On the south end of the valley are several thousand acres of citrus orchards located in the foothills near Bautista Creek. On the northern half of the San Jacinto Valley the San Jacinto River flows through a large dairy and agricultural community. In the early 1900's, farmers co-opted in building a leveed diversion channel to keep the river from flooding into a large depression at the north edge of the valley known as Mystic Lake. During heavy storm events the levees are overwhelmed, and the river breaks out to flow into Mystic Lake.

Agriculture in the San Jacinto Valley

Today, Mystic Lake is part of the 19,100 acre San Jacinto Wildlife Area owned by the California

0002286

Department of Fish and Game. This conservation area is comprised of the 9,100 acre Potrero Unit, on the Potrero Creek Drainage east of Lamb Canyon Road, and the 10,000 acre Davis Road Unit, which surrounds Mystic Lake in the northern San Jacinto Valley. When Mystic Lake fills and overflows just east of Lake Perris, water flows into the lower reach of the San Jacinto River, which cuts southwesterly across the Perris Valley. Urban runoff from Moreno Valley, Perris, and the communities of Lakeview, Nuevo, Romoland adds to the flow of the water in the river as it makes its way westward toward Canyon Lake.

Salt Creek, a major San Jacinto River tributary, collects runoff from the southern portion of our watershed which includes Hemet, San Jacinto, and the Winchester, Menifee Valley, and Sun City communities. These flows are conveyed to the east bay of Canyon Lake. Runoff from communities near Quail Valley also flows into Canyon Lake.

Canyon Lake, surrounded by a private gated community, flows over its dam during moderate and wet storm seasons. Spillway flows then traverses a short reach of the San Jacinto River within Railroad Canyon until they reach the river's final destination - Lake Elsinore. Lake Elsinore, with the spectacular Cleveland National Forest as a mountain backdrop, is the largest natural freshwater lake in Southern California.

On average, every 7 to 14 years, large storm events occur on our watershed. Spectacular views of the river result, but also flooding. Sediment and pollution, if not controlled, move down its course, seriously impacting the health of the downstream lakes. It is with this in mind that we remind everyone to treat this naturally fragile watershed system with care and respect as you enjoy its miles of ever changing beauty.

Duck pond on the San Jacinto Wildlife area.

Railroad Canyon Lake Dam, built in 1928, created Canyon Lake, a water supply reservoir.

Lake Elsinore with the Cleveland National Forest as a mountain backdrop.

Parks and Public Space

The quality of life for the residents who call the San Jacinto watershed their home relies upon the presence of beautiful, peaceful parks, and abundant open space.

WHAT YOU CAN DO

to keep our parks safe and beautiful:

- Keep your dogs on a leash and clean up after them.
- Do not feed the wildlife. Human food is not healthy for birds, squirrels, and other animals.
- Take only pictures, leave only footprints.
- No fires in undesignated areas. Follow all other local rules and regulations.
- If you live near an open, green space, park or hillside, keep your cat indoors. Chances are they will live longer and the birds, bugs and lizards will thank you!

Slow down and take some time to get to know and enjoy the treasures of our region. See the fold-out map, page vii.

Fishing at Lake Perris.

Lake Perris State Recreation Area and the San Jacinto Wildlife area are two wildlife treasures in the upper watershed full of outdoor activities for you and your family.

0002287

Environmental Challenges

Stormwater Pollution

Trash, bacteria, pesticides, fertilizers and oil wash into streets and storm drains and contaminate our streams, groundwater, and lakes. Fertilizers and other non-natural sources of nutrients such as grass clippings stimulate the growth of plants, disrupt local water- and land-based communities of plants, and cause severe impairment of our lakes. Each person, simply by changing a few every-day habits, can effect positive change across the watershed.

WHAT YOU CAN DO

to reduce stormwater pollution:

- Pick up trash and litter around your yard and home.
- Sweep rather than hose down driveways.
- Reduce use of toxic chemicals in and around your home and use only as directed on the label.
- Dispose of unwanted household hazardous wastes, antifreeze, batteries, oil and paint at official collection stations. Call (800) 506-2555.
- Clean up pet waste.
- Wash your car at a car wash to keep detergents out of the streets.
- Report illegal dumping and stormwater pollution to (800) 506-2555.

Why clean up after your pet?

Pet waste that is left exposed to the elements eventually washes into the storm drains, channels and creeks and down to the lakes .

Pet waste degrades the environment and water quality by:

- Increasing nitrogen and phosphorus in the water, resulting in excessive algae growth.
- Increasing the amount of bacteria and viruses in the water.
- Making neighborhoods and parks less healthy and enjoyable for all users.

PLEASE CLEAN UP AFTER YOUR PET!

Invasive Plants

Ever since Spanish colonial times, mankind has brought foreign plants, "exotics," to the New World, sometimes by accident, but more usually as fodder or ornament. In our watershed, many drought-tolerant ornamentals are well-behaved, but some escape our yards and create problems. Once growing in the wild, all of them, however attractive, such as Scotch broom in the mountains and fountain grass on the roadside, crowd out native plants to which our native birds and insects are adapted.

A very invasive plant. Arundo Donax

Other plants not only out-compete the natives, but do further damage. Invasive annual grasses grow quickly and dry to tinder, making meadows and scrubland more prone to fire. Eucalyptus grow fast, are brittle, extremely flammable and prone to disease, as are oleanders. Castor-oil plant is poisonous, and tocolote has many irritating burrs.

Tamarisk

Possibly the worst invasives in the watershed are the giant reed, Arundo, and the Tamarisk tree. These water-thirsty foreigners deplete the water table and form monoculture stands where no bird sings. There is a current effort underway – at a cost of millions of dollars – to eradicate Arundo from the Santa Ana and San Jacinto watersheds.

WHAT YOU CAN DO

to control invasive plants:

- Get to know the plants that are problematic in your area and avoid using them.
- Use native plants from our local area. (See page 15 for species.)
- When you see problem exotics for sale in the nurseries, tell them why you want natives instead.

DID YOU KNOW

The National Parks Conservation Association considers the invasion of national parks by non-native species among the most significant causes of biodiversity loss in parks.

0002288

GREEN LIVING

In southern California's gentle weather we are able to live and enjoy much of our lives outdoors. Many of our homes are designed to take full advantage of this gift, with living areas brought outside into the garden and the outdoors carefully framed for viewing from indoors. In the San Jacinto watershed, we share a rich cultural diversity and various lifestyles—mountain communities, rural agriculture influences, and growing urban communities. What a perfect setting in which to consider how the environment is affected daily by the choices we make in building and maintaining our homes, gardens, and style of living.

"Start by doing what's necessary, then do what's possible and suddenly you are doing the impossible."

St. Francis of Assisi

0002289

Water Conservation

An effective way to minimize environmental damage and promote a safe and reliable water supply is through conservation. This is particularly important since over half of our drinking water is brought in from distant places such as northern California and the Colorado River. Water conservation efforts add up, reducing our need to import water and increasing the availability and quality of local water resources. Water-conserving appliances and plumbing fixtures save water *and* money.

WHAT YOU CAN DO

to conserve household water:

- Replace high volume flush toilets. *Savings:* up to 8,500 gallons per year for the average single-family household.
- Use a low-flow showerhead. *Savings:* more than 14,600 gallons a year per household.
- When it's time for a new washing machine or dishwasher, buy a water-saving model. Water-wise machines use 1/3 less water and half the energy, and require less detergent and washing additives.
- Fix all leaky faucets and plumbing joints.
- Run your dishwasher and clothes washer only when fully loaded.

Outdoor Water Conservation

Our yearly rainfall averages from fifteen to twenty inches but can be as little as eight inches. Most rain falls between October and March with long, hot, dry summers. This amount and seasonal cycle of moisture simply cannot sustain most traditional landscapes and lawns. According to the Western Municipal Water District, more than 60% of residential water use is for outdoor landscaping and pools in the inland region.

CONTACT

ASK YOUR CITY OR WATER PROVIDER FOR ADDITIONAL CONSERVATION TIPS AND REBATES

- Eastern Municipal Water District, www.emwd.org
- Elsinore Valley Municipal Water District www.evmwd.com
- Idyllwild Water District www.idyllwildwater.org
- Lake Hemet Municipal Water District, www.lhmwd.org
- Nuevo Water Company 951.928.1832
- Western Municipal Water District, www.wmwd.org www.bewaterwise.com

WHAT YOU CAN DO

to conserve landscape water:

- Consider using a weather-based irrigation controller that irrigates according to historic or real-time weather patterns in your neighborhood.
- During the winter, turn your controller off and water only when winter rains are infrequent.
- During the hotter and drier seasons, water less frequently and more deeply to encourage stronger, healthier plants.
- Check for broken and misaligned sprinkler heads often. This problem causes excessive runoff and landscape failures.
- Lawns are very thirsty. Use them for functional areas only.
- Consider using native plants best adapted to the southern California climate. (see page 15).
- Use drip and low-volume irrigation for garden beds and pots. Group plants with similar water needs.
- Sweep paths and driveways rather than using a hose.
- Place mulch and clippings from your own garden around your plants and trees to reduce evaporation and keep the roots cooler.
- Do not cut your lawn too low – taller grass reduces evaporation.
- Water your yard at cooler and less windy times of the day to reduce water loss through evaporation. Early morning is best.

Use drip irrigation.

The beautiful green lawn in front of EVMWD's office is artificial turf. No water required! A great way to conserve water.

0002290

Landscaping

Another important way to help the environment and save water is by creating a 'California-friendly' yard. There are many drought-tolerant plants that will help with the latter, but amongst these, California natives from local stock have several advantages.

WHAT YOU CAN DO

- Good habitat for native birds, butterflies and other animals – food, water, shelter and nest materials – is best provided by species that have evolved together. Welcome a wide variety of local wildlife by using native plants.
- Carefully chosen native plants require little or no supplemental water once established. They can co-exist with local pests, so that they seldom need chemical treatments or fertilizer, both of which can pollute. Chemical compounds can endanger your family's health, as well as killing beneficial insects and birds, and cause stormwater pollution.
- Native plants require only an occasional clean-up pruning to thrive.
- Gardening with natives may help support declining local communities if the plants selected are grown from local parent stock – the specialist nurseries mentioned on page 13 can help you with your selection. California has more rare and threatened species than any other state except Hawaii.

Why Use Natives?

Our sense of belonging increases with an appreciation for the remarkable adjustments the native plants and animals have made to the home we share. The colors of the mountains, slopes and valley – the deep green of the forests, the grey-greens of the sages and the grey-brown of the rocks – all contribute to a special sense of place.

Tortoiseshell Butterfly on Sunflower.

Bee Pollinating Plants.

Toyon

Compared to natives, exotic plants (from outside our region) have not evolved with our native birds, butterflies and insects. As a result, they can be devastated by pests or disease or, conversely, spread out of control and reduce native diversity. They do not provide the natural food sources that the native plants do for our local insects, and, if these decline, we lose the building blocks of the local food web, causing in turn the decline of the many local birds which depend on them.

Other Things You Can Do:

- Use permeable surfaces for walkways, patios and driveways that let water soak into the ground; this replenishes the water table and reduce runoff.
- Reduce green waste by choosing plants that will not grow larger than the amount of space you have for them.
- Use clippings from your own garden as use a mulch or in your own compost pile.

0002291

Trees and Urban Forestry

Why are our cities so hot? The average temperatures in cities can be between 2 and 10 degrees hotter than the surrounding countryside. This phenomenon is called the urban heat island effect and is due to the replacement of plants with asphalt, concrete, and building surfaces that absorb and store heat. Planting trees is an effective way to help beautify and cool our cities and homes, reducing our dependence on fossil fuels.

Trees improve air quality by collecting and filtering dust and other pollution particles, absorbing carbon dioxide, and releasing oxygen. They improve water quality and reduce flooding by intercepting rainfall and increasing its absorption into the ground.

WHAT YOU CAN DO

to have healthy trees

- Plan ahead carefully when planting trees, considering the mature size of the tree.
- Allow leaf litter to accumulate and even add more mulch to the surrounding soil, but do not let it pile up against the trunk, which can lead to disease.
- Loosen ties and stakes as soon as you plant, and remove them as soon as possible.
- Protect the trunk from damage, such as from a weed trimmer.
- Never cut main branches or the central stem back to stubs. This practice, though common in our area, severely stresses and can injure a tree.

Trees improve the health of our watershed. Trees increase groundwater infiltration, filter particulates from the air, shade our homes and provide many other benefits.

California Native Plants for Your Home Garden:

COMMON NAME	SCIENTIFIC NAME
Trees	
Western Redbud	*Cercis occidentalis*
Western Sycamore	*Platanus racemosa*
Coast Live Oak	*Quercus agrifolia*
Elderberry	*Sambucus mexicana*
California Bay	*Umbellularia californica*
Mesa Oak	*Quercus engelmannii*
Shrubs	
Chamise	*Artemisia californica*
Manzanita	*Arctostaphylos species eg. glauca*
California Lilac	*Ceanothus species eg. crassifolius*
California Sunflowers	*Encelia californica or E. farinosa*
Fremontia, Flannel Bush	*Fremontodendron californica*
Toyon	*Heteromeles arbutifolia*
Holly-leafed Cherry	*Prunus ilicifolia*
Coffeeberry	*Rhamnus californica*
Lemonadeberry	*Rhus integrifolia*
Sugar Bush	*Rhus ovata*
Perennials and Groundcovers	
Manzanita (low)	*Arctostaphylos eg. uva-ursi*
California Lilac (low)	*Ceanothus eg. 'Emerald Carpet'*
California Fuchsia	*Epilobium canum or Zauschneria californica*
Wild Buckwheat	*Eriogonum fasciculatum*
Coral Bells	*Heuchera species*
Douglas Iris	*Iris douglasiana*
Sticky Monkeyflower	*Mimulus aurantiacus*
Deer Grass	*Muhlenbergia rigens*
Showy Penstemon	*Penstemon spectabilis*
California Sages	*Salvia apiana or S. mellifera*
Wild Grape	*Vitis californica*
Annuals	
California Poppy	*Eschscholzia californica*
Arroyo Lupine	*Lupinus succulentus*
Desert Bells	*Phacelia minor*
Chia	*Salvia columbariae*

Note: *Most of these thrive in Inland Empire sun and with little supplemental water, though many will look better in summer with monthly irrigation in the early morning. Take care, however, some nursery-bred varieties of these species may need regular garden water.*

0002292

WHAT YOU CAN DO

to help when you must drive:

- Make your next vehicle cleaner-fueled and more efficient. Electric, natural gas, and hybrid-electric vehicles pollute less and reduce our dependence on oil.
- Combine multiple errands into a single trip.
- Maintain your vehicle, especially tire pressure. Excessive exhaust is harmful to you and the people around you.
- When getting gas, do not top off your tank and wait before removing the nozzle. Fuel spillage adds to air pollution.
- Park in the shade of a building or tree to reduce the evaporation of gasoline from your car.
- Use your ashtray if you are a smoker. Cigarette butts take up to five years to break down in the ocean and can kill fish, birds, seals, and other marine life.

Green Electricity

Green electricity is derived from clean, renewable energy sources such as solar, wind, biomass, and geothermal. Most electricity in the United States comes from coal, oil, nuclear, large hydroelectric, and natural gas plants. The burning of non-renewable fossil fuels contributes to air quality problems and global warming.

WHAT YOU CAN DO

- Use less energy.
- Wear a sweater when it's cool.
- Contact your utility company to learn about your green energy options.
- Let your representatives know that renewable energy sources should be a priority.

EDUCATE YOURSELF:

- Go Green Power www.gogreenpower.org
- Global green USA www.globalgreen.org
- GreenE, www.greene.org
- California Energy Commission www.energy.ca.gov
- US Department of Energy www.eere.energy.gov

Buying Green

The best way to reduce our impact on the environment is to limit our use of resources. It is helpful to purchase products whose production and use have a reduced impact on the environment. Small changes by many people can make a big difference!

WHAT YOU CAN DO

Purchase products that:

- Use minimal packaging.
- Contain recycled material.
- Contain raw materials derived from renewable sources.
- Can be reused or recycled.
- Are produced locally.
- Do not use products that require special disposal.

SAFE ALTERNATIVES TO COMMON HOUSEHOLD CLEANERS

Try:	Instead of:
• borax and water or baking soda	chlorine bleach
• ½ c. vinegar + 1 qt. water	glass cleaner
• ½ lemon dipped in borax or baking soda	abrasive cleanser
• 1 part lemon juice + 2 parts vegetable oil	furniture polish
• toothpaste or baking soda polish	silver polish

Buy local products.

Using recycled water.

Buy local produce.

0002293

Green Housing Construction

When building or modifying a home keep sound environmental practices in mind. Green construction improves energy efficiency, resource conservation, indoor air quality, and protects the health of your family. In addition to helping the environment, a "green" house can save you money and provide you with a healthier, quieter, and more comfortable home.

Generally, building greener involves one or more of the following:

- Planning to preserve the natural environment
- Site development which reduces erosion, minimizes paved surfaces, and protects vegetation
- Water conservation indoors and outdoors
- Energy efficiency
- Using recyclable materials and air conditioning costs.

Permeable Surfaces

Permeable surfaces such as decomposed (crushed) granite, broken concrete, gravel, mulch and grass or other plants allow water to pass through and soak into the soil beneath, as opposed to running off your yard and contributing to stormwater pollution and flooding.

WHAT YOU CAN DO:

- Use bricks, stones, broken concrete, crushed granite or gravel for driveways, paths, and patios.
- Use a contractor who knows and follows regulations concerning construction runoff. Even a small remodel can contribute a large amount of gravel, dirt, and hazardous materials to the storm drain system.
- Investigate the installation of a 'gray water' system–to collect your household's washing water for re-use in the landscape or for flushing toilets–with your local building department officials to determine if they allow residential use of reclaimed water.

WHAT YOU CAN DO:

to increase sustainability in your home:

- Add insulation to your home.
- Use innovative, engineered wood products.
- Use recycled-content building materials whenever possible and ask your contractor to recycle their demolition waste.
- Use adhesives, paints, and cleaners with low volatile organic compounds (VOC) to reduce indoor air pollution.
- Use light colored roofing to reduce home heat absorption, or consider new "green roofs."
- Use double-glazed windows to save on heating and air conditioning costs.
- When building a house use the sun. Orient your house and plan your landscaping to take advantage of winter sun and summer shade.
- Use ceiling fans, whole house fans, and attic ventilation to affordably keep your home comfortable.

Light–Tiled roof

Whole–House fan

Choose a smart sprinkler controller for your home

- A smart sprinkler controller automatically adjusts irrigation schedules in response to changing weather conditions.
- They are also called "weather–based irrigation controllers."
- Smart controllers are a new technology & can be difficult to find.

0002294

Trash and Recycling

Reduce, Reuse, Recycle

As populations grow, cities face increasing problems with waste disposal. Finding ways to dispose of our waste becomes increasingly difficult and expensive. Trash that washes into storm drains is a leading contributor to unhealthy water in our streams, rivers and lakes.

DID YOU KNOW:

- Nearly half of the world's annual commercial wood harvest is used to produce paper.
- Recycling aluminum saves 95% of the energy required to produce it from virgin materials.
- Over 30% of California's solid waste consists of organic materials. Most of this ends up in a landfill, even though it could be composted.
- Materials in landfills can take hundreds of years to degrade.
- Although plastic carries a recycling symbol, very little of it is actually recycled. Discarded plastic washes into the ocean and chokes and kills marine animals including turtles, sea horses, fish, seals, and birds.

Household Hazardous Waste includes metals, chemicals, batteries, and electronics, such as computers and stereos, that can be used or stored in your kitchen, workshop, garage, garden, or bathroom. It is illegal to dispose of household hazardous waste anywhere but at authorized Household Hazardous Waste and/or Antifreeze, Batteries, Oil and Paint (HHW/ABOP) collecton centers. The County of Riverside and local cities sponsor several free collection events throughout the year in the San Jacinto watershed. You can learn more about HHW/ABOP, disposal, and free collection events as www.rivcoeh.org or by calling (800) 506-2555.

Recycle, Recycle,Recycle.

Be creative – reuse or recycle products. This old tree became a work of art.

WHAT YOU CAN DO

to help reduce waste and consume less:

- Use canvas bags or re-use plastic bags when shopping.
- Purchase products with minimal packaging material.
- Buy products that use recycled materials.
- Use both sides of paper. Make your own notepads by saving one-sided scrap paper or mail, cutting in half and securing with a re-usable clip.
- Avoid using plastic unless it is something, like a sturdy cup or bag, that you can re-use.
- Recycle.
- Give away or garage sale useful unwanted items.
- Dispose of hazardous household waste properly (call 800-506-2555 for HHW/ABOP disposal days). Remember that this includes paint, many common cleansers, car fluids, and electronic equipment.
- Use tap water or wash, refill, and reuse water bottles.
- Join a neighborhood clean-up.
- PUT IT IN THE CAN! Pick up a little litter wherever you are, whether in the city or on the trail.

to help reduce green waste:

- Leave grass clippings on your lawn, sometimes called "grasscycling". They provide important nutrients and reduce water loss.
- Choose plants that will be the desired size at maturity to minimize pruning.
- Compost garden and household fruit and vegetable waste.
- Chip clippings, prunings, and raked leaves. They all make great mulch.

GET INVOLVED

The following is a list of some of the local environmental organizations and exciting things that are happening in and around the San Jacinto watershed. As a volunteer, you can take direct action to preserve the quality of life for our communities and the natural beauty and benefits of our watershed. Stay aware of what is being planned for the future of your own neighborhood and express your opinions.

"Never doubt that a small group of thoughtful, committed individuals can change the world. Indeed it's the only thing that ever has."

— Margaret Mead

What's Happening in and Around Your Watershed

There are many exciting things happening in and around your watershed. Here are several important developments and projects.

The San Jacinto River Watershed Council

The San Jacinto Watershed Council, a 501 (c) 3 non-profit, grass roots organization, is an open forum of the entire watershed, upper and lower, and strives to represent all stakeholders. The Council Board consists of water agency, County, federal/regional, tribal, dairy, agriculture, environmental and 2 at-large representatives. The Council may be characterized as broad-based in its representation and holistic in its approach to issues of watershed management and planning. Current activities include:

- Prop 50, Chapter 8 Planning Grant for the Development of an Integrated Regional Watershed Management Plan for the San Jacinto Watershed (funded by the State of California, Department of Water Resources)
- Assistance with TMDL Implementation (page 28)
- Education and Outreach…this Guidebook!
- Applying for grants that will help address water resource and water quality problems
- Coordination and integration of other regional studies and plans, and their impacts on the watershed.
- Development of work groups to address critical issues
- Assist development of strategies to control nutrients and pathogens negatively impacting water bodies.

For more information visit our website at www.sawpa.org/sjrwc/, or contact Pat Boldt, SJRWC Executive Director at Mpboldt@aol.com.

Prop 50 Planning Grants.

The San Jacinto "GAP" area.

0002297

What is a TMDL?

In our watershed, there are two impaired lakes that do not meet expected water quality standards. Under the Clean Water Act, the Santa Ana Regional Water Quality Control Board (RWQCB) has identified Canyon Lake and Lake Elsinore as needing water quality improvement. Excessive nutrients and pathogens are the primary problems affecting the lakes.

To control the level of nutrient and pathogens entering the lakes, RWQCB has established a new water quality regulation called a Total Maximum Daily Load (TMDL). The TMDL provides an assessment and planning framework for identifying nutrient and pathogen sources, achieving load reductions, and taking actions that are needed to attain the water quality standards. The TMDL also sets target dates for when the water quality standards must be met and an implementation plan to attain it. By compliance to these water quality standards, aquatic life, drinking water and other beneficial uses at the lakes will be protected.

A stakeholder TMDL Task Force has been formed to address the TMDL's affecting our watershed. Specific tasks have been identified to start the process of improving water quality in these two lakes and work is underway. However, the solution will ultimately be dependent on controlling watershed residents contributions of nutrients and pathogens to the lakes.

If you would like additional information regarding the TMDL, please visit www.mywatersheds.com.

Stocking fish in Lake Elsinore.

Lake Elsinore

Canyon Lake

The goal of the TMDL is to restore benefical uses to Canyon Lake and Lake Elsinore.

The Multi-Species Habitat Conservation Plan

When Western Riverside County revised its General Plan, the Multi-Species Habitat Conservation Plan (MSHCP) was an important part. Finalized in June 2004, it aims to address the dissatisfaction that all sectors of our County felt with the long and complicated process developers had had to go through to get clearance to build, and the haphazard way species were protected.

Certain areas are considered important to keep as open space, besides those lands already in public hands. This conserves the habitats for some of our most beautiful and threatened species of wild life and to provide linkages among the conserved areas.

The San Jacinto River is a vital corridor in this Habitat Conservation Plan. Starting in the San Jacinto mountain range, it passes through the Mystic Lake wetlands, then agricultural flood plain, which has been for centuries home to native creatures and the hawks and owls that prey on them. The river flows to the base of the Cleveland range and then, into Lake Elsinore, which is gradually being restored as home for native fish and recreation for humans.

As development continues in our watershed, we must ensure that enough of the "criteria areas" of the MSHCP are conserved, to ensure that our river continues to meander in winter across the valley, nourishing rare plants that are found nowhere else, providing a haven for large and small wildlife, and replenishing our underground water.

0002298

Lake Elsinore And San Jacinto Watersheds Authority

LESJWA improves and maintains the waters within Lake Elsinore, Canyon Lake, and the San Jacinto River Watershed.

LESJWA's membership includes representatives from five member agencies in the area (listed below) working together to improve water quality at Lake Elsinore and Canyon Lake.

- Santa Ana Watershed Project Authority
- City of Lake Elsinore
- City of Canyon Lake
- Elsinore Valley Municipal Water District
- County of Riverside

A few of LESJWA's projects are as follows:

LAKE ELSINORE

- **Supplemental Lake Water** – Improvements made to existing lake supply wells and recycled water treatment will provide supplemental water that will replenish low lake water levels, when necessary.
- **Lake Mixing System** – Large amounts of algae in Lake Elsinore decrease healthy oxygen levels, in turn killing fish and damaging recreational opportunities. Lake mixing helps evenly distribute oxygen throughout the lake to keep it vibrant and healthy.
- **Aeration System** – This subsurface aeration system bubbles air into the water column from pipes on the bottom of the lake to increase lake oxygen levels, which helps lower the amount of algae throughout the lake.
- **Carp Removal** – Carp is a bottom dwelling fish that stirs up silt and unwanted nutrients from lake floors that contribute to the growth of alga blooms which can be harmful to water quality. The removal of carp is vital to the overall health of a lake.

CANYON LAKE

- **Dredging System** – Dredging removes sediment levels from the lake bottom with the use of a self-propelled platform whose suction vacuum sweeps the bottom of the lake floor which improves water quality and water supply.

For additional information visit www.mywatersheds.com

LESJWA's mascot Bessie the Bass explains what a watershed is at the Temecula Water Festival.

Dredging machine at Canyon Lake

Island Wells water flow at Lake Elsinore.

Ten Fun Ways to Enjoy your Watershed

1. **Take a Hike**...a jaunt, a trek, a strut...just get out and see, hear and smell the world in your back yard.
2. **Stop and Smell the Roses**...the mountains, the hills, the valley, Lupine, Poppies, and Sage.
3. **Spend Some Quality Time with your Pet**...leash your dog or cat (bring a bag for pet wastes). Ride a horse or a mule! Check out the trails together.
4. **Play in the Garden**...add native plants to your garden—Manzanita, California lilac, Toyon, and Sage. Use biological controls instead of pesticides, Conserve water.
5. **Get Down and Dirty**...volunteer with other organizations. Help plant trees, restore habitat, and clean-up your watershed.
6. **Tap into Watershed Consciousness**... the big picture! Remember your street and storm drains lead to the ocean.
7. **Sing, Shout, Get the Word Out!**...let friends, family and officials know how you feel about preserving and restoring the San Jacinto.
8. **Explore your Watershed**...discover the San Jacinto watershed, all 780 miles of diverse plantlife, animals, its human communities, and wonderful cultural gems.
9. **Plan a Bright Future**...participate in San Jacinto watershed planning efforts. Bring a friend. Log onto www.sawpa.org/sjrwc/
10. **You Can Make A Difference!**...embrace our natural resources. Protect habitat and enjoy your watershed.

RESOURCES IN YOUR COMMUNITY

We have found this guidebook educational, informative and full of simple actions that you can take to help protect our water supply and preserve our open spaces for your enjoyment and the enjoyment of future generations. We print together the following resources and contacts to help you become more involved in your communities and in the health of your watershed. Remember that your government representatives at all levels—from local to the national—work for you and want to know what you think—express your opinion!

"Power is the ability with leaders and citizens in the exercise and protection of the common welfare, which is the end of all civil society."

— Joseph Warren

About

The San Jacinto River Watershed Council

The San Jacinto River Watershed Council (SJRWC) is a nonprofit organization dedicated to providing educational, scientific, and technical assistance that will help sustain, restore, and enhance the natural resources of the San Jacinto River basin while promoting long-term social and economic vitality to the region. Water is a critical natural resource for our future and for all future generations.

The San Jacinto River Watershed Council is proud to provide this Guidebook for your use. It would not have been possible except for the financial generosity of the following sponsors:

Bureau of Reclamation (BR)
Cal EPA Environmental Justice Small Grants Program
City of Lake Elsinore
Eastern Municipal Water District (EMWD)
Elsinore Valley Municipal Water District (EVMWD)
Lake Elsinore and San Jacinto Watersheds Authority (LESJWA)

BOARD ORDER NO. R9-2004-001
CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
SAN DIEGO REGION

EXECUTIVE SUMMARY

This Individual SWMP Annual Report (Annual Report) documents specific urban runoff management programs and activities implemented by the Riverside County Flood Control and Water Conservation District (District) to comply with the requirements of the third-term Municipal Separate Storm Sewer System (MS4) Permit issued to the District by the San Diego Regional Water Quality Control Board (Regional Board) on July 14, 2004 (Board Order R9-2004-001).

This Permit regulates all storm water discharges from MS4's within the Santa Margarita Watershed Region of Riverside County (SMR), thus all of the Municipal governments that own or operate MS4 within the SMR are Co-Permittees on this permit, including:

- The District (serving as principal permittee)
- The County of Riverside
- The City of Murrieta
- The City of Temecula

The goals of this permit are to protect and enhance the quality of surface waters within the watershed to protect their beneficial uses as described in the Basin Plan. As stated above, this report documents the specific activities of the District to reach or maintain water quality objectives within the SMR. It should be noted though that the individual activities of one permittee are not sufficient to have a lasting effect on the regional waters within the watershed, but the joint efforts of all the stakeholders that have authority over the use of the land within the watershed.

To this end, the Third-Term MS4 Permit required each Permittee to develop an Individual Storm Water Management Plan (SWMP) and for all the Permittees to jointly develop a Watershed Storm Water Management Plan. As Principal Permittee, the District was to coordinate the development of the compliance programs. Annual Reports for each of these compliance programs are required and are to be submitted to the Regional Board on October 31st of each calendar year. The reporting period is specified as the preceeding fiscal year. The District specifically prepares this Individual Annual Report and the Watershed Annual Report. In addition, as Principal Permittee, the District is tasked with coordinating the submittal of the Individual SWMP Annual Reports for the other Co-Permittees.

This Annual Report covers the period extending from July 1, 2007 through June 30, 2008. This report specifically responds to reporting requirements specified in Provision III.A.1 of the Monitoring and Reporting Program of the Permit. This includes identifying program progress and effectiveness evaluations.

The District was creeated through a special act of the state legislature and is charged with providing flood protection for the county. Through this goal, the District Constructs, owns and maintains an expansive network of MS4 throughout the County of Riverside including those in the Santa Margarita Watershed, but its enabling act does not provide land-use powers. As such, the District's activities during continue to be limited to MS4 Maintenance Activities, Public Outreach, Training, Water Quality Monitoring and IC/ID activities. The District relies on Combined Legal Authority with the Co-Permittees for all enforcement activities outside of District Right-of-Way. The District however, continues to evaluate and optimize its programs based on the observations of District staff, RWQCB audits and other sources of input. These enhancements include:

EXECUTIVE SUMMARY

Program Enhancements

- Continued Improvement of the Development Planning Program
  - Commitment to initiate development of a GIS system to track post-construction BMPs associated with new developments.
  - Continued work towards the development of a public maintenance and tracking mechanism for post-construction BMPs, including coordination of the District's proposed Low Impact Development (LID) Manual with the efforts currently underway by the California Association of Stormwater Quality Agencies (CASQA) and the Stormwater Monitoring Coalition (SMC).
  - Initiation of an LID BMP testing and demonstration facility to increase municipal, developer and public awareness of low impact development techniques and also collect data necessary to characterize the hydrologic and water quality benefits of those techniques.
  - The District agreed to review Water Quality Management Plans (WQMPs) prepared by the County of Riverside Economic Development Agency and the County Facilities Management Department in an effort to ensure consistency between public works projects and private development projects in the unincorporated County.
  - Continued cooperation with the Southern California Coastal Waters Research Project (SCCWRP) and the SMC to develop appropriate hydromodification guidance for southern California.
  - Development of new guidance to District Design Staff regarding necessary water quality documentation required to support CEQA documents.
- Continued improvement of municipal maintenance programs
  - Initiated development of a new procedure for reporting and addressing hazardous materials spills
  - New procedure to improve BMP implementation associated with major maintenance activities
  - Proposal to incorporate IPM guidance into District contracts for pest management at the District's Corporate Yard in Riverside.
- Continued improvement of the IC/ID programs
  - Continued work on a method to track third-party discharges

These and other compliance activities are addressed in the main body of this report. In addition, the data presented in this report, which aggregates data from the last four years of program implementation, will serve as the basis for the Report of Waste Discharge to be submitted in January 2009.

EXECUTIVE SUMMARY

Program Effectiveness Assessments (PEAs)

The Permit requires the Permittees to develop a long-term strategy to evaluate the effectiveness of the SWMPs. It should be noted that a PEA requires the establishment of a set of baseline conditions using measurable metrics. These baseline conditions can then be used to establish measurable goals based on the selected metrics. Thereafter, effectiveness can be evaluated by comparisons of successive years of measurable metrics against the baseline data and measurable goals.

Where the period of evaluation is characterized by the implementation of new or revised program elements, determinations of program effectiveness will initially be limited to confirmation of program implementation and collection of measurable metrics until baseline conditions can be established. Further, it must be recognized that direct measures of long-term program effectiveness may not be available within the timeframe of the Third-Term Permit. This lack of direct measure confirmation arises because:

- Baseline water quality conditions are not readily established due to the inherent variability of natural systems and stormwater quality;
- Water quality changes in response to program implementation are likely to be very slow;
- Establishing a link between receiving water conditions and program activities is difficult at the watershed scale when programs are being implemented incrementally with the development/redevelopment cycle; and
- .

While program effectiveness assessment is a key step in the iterative process of program implementation, it should be realized that effectiveness assessment itself is a part of the management process that is also evolving. Assessing program effectiveness is recognized as a challenge for program managers across California, and the District continues to support the effort of the California Stormwater Quality Association (CASQA) to develop guidance in this area at a statewide level.

The long-term strategy for assessing program effectiveness will be conducted at two levels.

- Level 1 – Annual Assessments
- Level 2 – Long Term Assessments

At the Annual Assessment Level, the PEA will focus on an annual assessment of program implementation and Permit compliance. These assessments will be addressed by completing the Annual Reporting Forms, which will confirm program implementation, Permit compliance and collection of measurable metrics. Assessments will be included at the end of each Annual Report section as required by the reporting requirements of the Third-Term MS4 Permit. Inferences about the compliance of each program [development, construction, Illicit Connection/Illicit Discharge (IC/ID), etc.] will be drawn from both direct and indirect measures of progress for each program.

At the Long-Term Level, the Permittees will collectively evaluate the measurable metrics, Receiving Water monitoring Data, and IC/ID monitoring data to assess changes in knowledge and behavior, load reductions and improvements in Receiving Water Quality. This analysis will be conducted as

EXECUTIVE SUMMARY

part of the Report of Waste Discharge (ROWD). The results of this assessment will evaluate the need to make significant programmatic revisions to the Permit compliance programs to protect Beneficial Uses of Receiving Waters. This analysis will place more emphasis on using direct measures of progress (monitoring data, long term trend analysis) and will support the review and any revisions to the Riverside County Drainage Area Management Plan (DAMP) and Individual SWMPs using information from the Water Quality Monitoring Program, IC/ID Monitoring Program and measurable metrics that have been collected.

The PEAs included in this report are Level 1 assessments.

For purposes of this Annual Report, the terms "Watershed Stormwater Management Plan (Watershed SWMP)" and "Standard Urban Stormwater Management Plan (SUSMP)" referenced in the cPermit are referred to as the "DAMP" and "Water Quality Management Plan (WQMP)" respectively, to be consistent with terminology previously established and in use by the Permittees. Additional terms and acronyms used in this Annual Report are defined in the glossary included in the DAMP.

1. DEVELOPMENT PLANNING
(SECTION F of ORDER R9-2004-001)

1) Description of any Amendments to the General Plan or the Development Project Approval Process:

The District's enabling act does not provide land-use powers. . It, therefore, does not maintain a General Plan or have direct control over the overall development project approval process. However, at the County of Riverside's request, the District has agreed to review proposed developments in the unincorporated County area for water quality and flood control related impacts and recommend appropriate conditions of approval to the County.

In this role, the District spent the last fiscal year working on the following tasks:

a. Subsequent to the Audits of the County's implementation of Provision F – Development Planning of the Permit, the District has agreed to review WQMPs for Capital Improvement Projects (CIP's) proposed by County Economic Development Agency (EDA) and the Facilities Management Department (FM). This will help to ensure the County's compliance with WQMP requirements and ensure that BMPs for Development Projects sponsored by these departments are appropriately and address and meet MEP for pollutants of concern.

b. District and County staff are working on the development of expanded treatment control BMP design guidance with focus placed on low impact development concepts such as landscape based BMPs. In addition, staff are working on the development of a public funding mechanism to ensure that maintenance of the post-construction BMPs would be fully funded and to identify the County departments or other entity that will be responsible for tracking and maintaining post-construction BMPs.

c. In support of the District's proposed LID BMP Design Manual, the District has initiated a LID BMP Testing and Evaluation Facility. The proposed facility will be constructed via a retrofit of the District's compound in Riverside. The project proposes to construct, test and evaluate a variety of integrated management practices (IMPs) that serve as hydraulic and hydrologic controls consistent with the low impact development (LID) planning and design approach. The project proposes the following Integrated Management Practices (IMPs):

- The replacement of 55,800 sf of existing asphalt pavement & base with new porous asphalt pavement and new porous concrete pavement and sub drain systems.
- The construction of 3 flow-through planter systems.
- The replacement of 165' of storm drain pipe with a vegetated infiltration swale.
- The replacement of 2,800 sf landscaped area with a vegetated infiltration swale.
- The deepening of an existing infiltration basin to facilitate monitoring data collection.

1. DEVELOPMENT PLANNING
(SECTION F of ORDER R9-2004-001)
CONTINUED

In addition, the project proposes the following monitoring and testing components:

- The construction of 7 monitoring vaults with flow metering, discharge pumps and electronic control and recording equipment.
- The evaluation of a standard suite of pollutants for selected runoff events including specific pollutants of concern in the Santa Ana Watershed such as nutrients and pathogens.
- The assessment of each IMP's ability to mitigate increased runoff volumes associated with development.
- The assessment of life-cycle costs of the IMPs
- The assessment of necessary modifications to design standards to improve IMP effectiveness or ease of maintenance

The proposed project will implement a variety of LID Integrated Management Practices (IMPs) that will be used to test and demonstrate the effectiveness of these practices in contributing to storm water capture and management, treating pollutants of concern associated with urban runoff, mitigating the impacts of hydromodification from urban development, and identifying optimum IMP design criteria and standards for LID IMPs in Riverside County. Data collected by this project will be provided to the regional SMC LID Project and will be available to benefit all SMC members.

d. In conformance with Permite requirement F.2.b)9. of the Permit, the District continues to participate in the Stormwater Monitoring Coalition's efforts to develop numeric guidance for addressing Hydrologic Conditions of Concern, including their Hydromodification study and their LID Projects, in conformance with Permit requirement F.2.b)9. of Board Order R9-2004-001. These efforts are further described in the Watershed Annual Report in Appendix G, Section G.7

2) Number of Grading Permits Issued:

Not applicable. The District does not issue grading permits.

1. DEVELOPMENT PLANNING
(SECTION F of ORDER R9-2004-001) CONTINUED

3) Number of Developments Conditioned to meet WQMP Requirements:

The District utilizes a case tracking program (District Land Management Tracking) that tracks project status and produces reports identifying the number of developments conditioned with WQMPs. The following numbers reflect projects reviewed that are recorded as being in the Santa Margarita Watershed. — only FM and EDA depts?

282 Land Use/Development proposals were reviewed by the District for water quality and flood control related impacts.

146 Land Use/Development proposals meet the minimum requirements and were required to prepare a preliminary project specific WQMP,

48 of the Land Use/Development proposals that were required to prepare a preliminary project-specific WQMP were issued 'recommended' Conditions of Approval. The District does not have land use authority, thus these 'recommended' conditions are forwarded to the County who subsequently establishes the conditions of approval for the project.

A summary log of Projects that the District reviewed is contained in Attachment A. Entries marked "approved" are those for which Conditions of Approval were recommended to the County.

4) Attach One Example of a Development Project that was Conditioned to Meet WQMP Requirements and a Description of the required BMPs:

See Attachment B.

5) Description of any Updates to the Environmental Review Process:

In the beginning of the fiscal year, the District reviewed its internal CEQA process and developed a new internal memorandum describing a series of questions that the Design Engineers must answer to assist with preparing CEQA documentation for District projects. The memo incorporated questions relative to NPDES requirements to ensure that District projects were considering appropriate WQMP and Development Planning requirements early in the design process.

A copy of this memo is included in Attachment G.

1. DEVELOPMENT PLANNING
(SECTION F of ORDER R9-2004-001)
CONTINUED

6) **Description and Number of Training Efforts Conducted during the Reporting Period (for staff, developers, contractors, etc.), including the Number of Staff Trained.**

a. **Training:** See Attachment C

Training	Training Description	Training Dates	Number of District Attendees
WQMP	New Development	11/28/07	14
WQMP	New Development	11/29/07	15
WQMP	New Development	12/5/07	1
WQMP	New Development	4/16/08	9
APWA - Hydromod	Hydromodification Management and Continuous Simulation Hydrologic Modeling for Plan Reviewers	4/9/08	5
		Total	**44**

b. **Summarize the Educational and Outreach Activities the Development Planning Component has conducted over the Past Year.**

Priority development projects conditioned by the County are required to obtain copies of appropriate public education and outreach materials from the District's NPDES Public Information Officer or from our website. They are also required to submit an affidavit stating that they will distribute the public education materials to new property owners. This affidavit is recorded in the development's individual file. Additionally, the District has implemented a tracking mechanism to facilitate the accurate reporting of the number of affidavits received each fiscal year.

23 Public Education Affidavits were received during the reporting period.

Additional public education and outreach activities undertaken by the District are considered part of the Regional Public Education Program described in the Watershed Annual Report.

7) **An Assessment of Program Effectiveness Based on the Measurable Goals Established in the Permittee's Individual SWMP:**

As mentioned above, because the District has no land use authority and provides services on the County's behalf, the District has no direct measurable goals for the Development Planning Component. As indicated in the District's Individual SWMP, we collect the metrics described in this report and forward them to the County for analysis as part of the County's Individual SWMP Annual Report.

1. DEVELOPMENT PLANNING
(SECTION F of ORDER R9-2004-001)
CONTINUED

The District has identified the following program areas where, in conjunction with the County, we are evaluating potential ways to improve the effectiveness of post-construction BMP selection and maintenance for the County's Development Planning Program:

a. A long-term public maintenance mechanism for post-construction BMPs within the unincorporated County.

b. Additional post-construction BMP guidance to ensure the effectiveness and efficiency of post-construction BMPs.

This evaluation is on-going. Currently, the District has proposed to spend approximately $1.3 million on BMP testing for the purposes of optimizing the design and verifying the effectiveness of various BMPs. Further details are provided in the Monitoring Annual Report (Appendix G, Section G-7.1 of the Watershed Annual Report)

The District's Development Review operation was also audited by PG Environmental as part of a broader audit of the County's Development Planning Program. Although the District development review process was found adequate, the issue of post-construction BMP tracking and inspection was raised by Regional Board and PG Environmental staff. To support the development of such a program, District staff has committed to working with County staff to develop a GIS-based tracking mechanism for post-construction BMPs. Work on this mechanism will begin in Fiscal Year 2008-2009.

8) Additional Comments/Information:

Describe the Major Accomplishments of the Development Planning Component over the Past Year. (General Plan or ordinance revisions, procedure/approval process changes, SUSMP guidance material):

Major accomplishments of the program are described in responses to questions 1, 3 and 6 of this reporting form.

9) Summarize New Activities or Improvements to be implemented Next Year as a result of your Self Assessment of the Development Planning Component:

The District plans to continue the ongoing development and implementation of the activities described in the responses to question 1 and 7 in this section.

2. CONSTRUCTION
(SECTION G)

NOTE: THIS SECTION IS APPLICABLE TO DISTRICT ADMINISTERED AND ENCROACHMENT PROJECTS ONLY.

1) Number of Inspections Conducted:

District Administered Construction Projects

There were **zero (0)** District administered construction projects within the Permit area within the reporting period.

Encroachment Permits Issued:

There were **ten (10)** encroachment permits issued by the District within the Permit area. Of the 10 encroachment permits issued, **seven (7)** had construction related activities within the District right-of-way.

During the active construction period of these encroachment projects, the District inspects the site as required based on the scope of the work being done. In general, most District encroachment projects last for a month or less and do not involve significant construction activity. Occasionally, more extensive projects, may encroach on the District property for a longer period. A copy of the encroachment permit log, with projects located in the Permit area highlighted in green, is included in Attachment D.

For both construction and encroachment projects, site inspections include verifying that adequate minimum BMPs are in place to comply with Order R9-2004-001 and the General Construction Permit. Inspection reports are not produced during a site visit unless there is a problem which needs to be addressed, at which time a notification is given. There were no significant construction related problems during the reporting period.

2) Number and Type of Enforcement Actions Related to Construction Sites:

Enforcement and Compliance Responses	Private Projects	Public Projects
Non-monetary Penalties	0	0
Stop Work Authority	0	0
Fines	0	0
Financial Security	0	0
Permit/Certificate of Occupancy Denial	0	0
Referral to SDRWQCB	0	0
Total	**0**	**0**

3) Description of Modifications made to the Construction and Grading Approval Process:

No revisions were needed nor made.

2. CONSTRUCTION
(SECTION G)
CONTINUED

NOTE: THIS SECTION IS APPLICABLE TO DISTRICT ADMINISTERED AND ENCROACHMENT PROJECTS ONLY.

4) Description and Number of Training Efforts Conducted during the Reporting Period.

a. Training: (See Attachment C.)

Training	Training Description	Training Dates	Number of District Attendees
Construction	NPDES Training for Construction Inspectors	9/24/07	5
Construction	NPDES Training for Construction Inspectors	9/25/07	5
		Total	**10**

b. Summarize any Additional Education and Outreach Activities Conducted for Project Applicants, Contractors, Developers, Property Owners, and/or other Responsible Parties in Support of the Construction Component:

The District is only directly responsible for administering District Public Works projects; it does not have authority over private development activities. For all District construction projects, the District reviews and approves contractor submitted SWPPP's prior to construction. As stated in the General Construction Permit (Order No. 99-08 DWQ), individuals responsible for SWPPP preparation, implementation, and permit compliance shall be appropriately trained both formally and informally. During the SWPPP review process, the District requires that contractors meet the requirements of the General Construction Permit and requires that training certifications are provided. Additionally, as part of the preconstruction meeting for all District projects, the contractor must attend a NPDES Contractor's Training Presentation given by District staff. In addition, the District's specifications require compliance with the Permit and the General Construction Permit, including appropriate minimum erosion and sediment control BMPs on District Capital Improvement Projects.

Additional contractor education and outreach is implemented through the Regional Public Education Program described in the Watershed SWMP.

10) An Assessment of Program Effectiveness based on the Measurable Goals Established in the Permittee's Individual SWMP:

As indicated in the District's Individual SWMP, the District does not have land-use or police powers, and as such cannot issue grading permits or regulate private construction activities. Therefore, the District's construction program is limited to District projects or those portions of Third-Party Construction Projects that encroach upon District rights-of-way. The District's Individual SWMP, therefore, did not establish specific measurable goals because of the District's limited role in construction activities and limited number of District projects in the Permit area.

2. CONSTRUCTION
(SECTION G)
CONTINUED

NOTE: THIS SECTION IS APPLICABLE TO DISTRICT ADMINISTERED AND ENCROACHMENT PROJECTS ONLY.

Additionally, through a review of our NPDES Training Materials, District NPDES Staff are recommending that District Construction Inspectors attend additional training specific to the Construction General Permit in the future. This is because our inspectors only work on District public works projects that must be in compliance with the Construction General Permit. The District will evaluate potential providers of this training in Fiscal Year 2008-2009 and propose implementation in 2009-2010 (or in conjunction with the roll-out of the new Construction General Permit).

The District's construction program has been found to be effective because our inspectors received training and our construction projects were inspected consistent with permit requirements.

11) Additional Comments/Information:

Attachment D includes the following items:

- Standard specifications related to water quality that are used for District-administered construction projects.
- Standard encroachment permit application and requirements,
- Copies of the District's encroachment permit log.

3. MUNICIPAL
(SECTION H.1 of ORDER R9-2004-001)

1) Number of Inspections Conducted at Existing Municipal Facilities:

Not Applicable – there are no District municipal facilities within the Permit area. However, the District does annually inspect its MS4 consistent with the requirements of the current Permit.

2) Number and Type of Enforcement Actions Related to Municipal Sites:

Enforcement and Compliance Responses	Number
Education and Information	N/A
Verbal Warning	N/A
Written Warning	N/A
Other	
Total	**N/A**

3) Number of Catch Basins and Inlets that were Inspected and the Number that were Cleaned:

	Number Inspected	Number Cleaned
Catch Basins and Inlets	N/A	N/A

NOTE: The District does not operate nor maintain catch basins and inlets within the permit area aside from those that are within District Rights-of-Way. Usually any inlets that are within District R/W are immediately adjacent to a channel, and are maintained as part of routine maintenance of the channels; as such they are not tracked separately. A significant majority of catch basins and inlets are maintained by the municipalities or in rare instances, may be maintained by property owners associations (POAS) or homeowners associations (HOAs).

3. MUNICIPAL
(SECTION H.1 of ORDER R9-2004-001)
CONTINUED

4) **Assessment of the Amount and Type of Debris Removed from Catch Basins, Streets and Open Channels, including an Identification of Problem Areas that Generate the most Pollutants:** (See Attachment E.)

Facility	Type of Debris	Approx. Weight	Problem Areas that Generate Most Pollutants
Catch basins	Vegetative Litter Anthropogenic Litter Sediment Other man-made debris		N/A
Total		**N/A**	**tons (wet weight)**
Streets	Vegetative Litter Anthropogenic Litter Sediment Other man-made debris		N/A
Total		**N/A**	**tons (wet weight)**
Open Channels	Vegetative Litter Anthropogenic Litter Sediment Other man-made debris	45.5 5.2 10,798.5*	N/A
Total		**10,849**	**tons (wet weight)**
Facility Total		**10,849**	**tons (wet weight)**

* 6,153 cy of sediment were removed, tonnage calculated based on an assumed density of 130 lbs/cf.

Assessment of the effectiveness of BMPs that have been implemented for municipal facilities and activities:

THE DISTRICT DOES NOT OPERATE MUNICIPAL FACILITIES OTHER THAN MS4 IN THE SANTA MARGARITA REGION, THEREFORE THESE RESPONSES ARE LIMITED TO ADDRESSING THE DISTRICT IMPLEMENTATION OF BMP's RELATING AND APPLICABLE TO MS4 MAINTENANCE.

0002323

3. MUNICIPAL
(SECTION H.1 of ORDER R9-2004-001)

6) Description and Number of Training Efforts Conducted over the last year (for Municipal Facility Operators and/or Inspectors).

a. Training:

Note – Because District staff do maintain MS4 in the Santa Margarita Region, District maintenance staff receive municipal NPDES training per the requirement of the NPDES permit. Attendance logs for these trainings are contained in Appendix E of the Watershed Annual Report.

Training	Training Description	Training Dates	Number of District Attendees
Municipal Training	Municipal Site Inspection	11/27/07	6
Municipal Training	Municipal Site Inspection	4/15/08	3
Municipal Training	In-house training for PPE	6/10/08	56
Worker Safety Training (Helena Chemical Company)	BMP implementation during herbicide applications	5/22/08	11
Municipal Training	Hazardous Material Spill Notification and Cleanup	1/8/08	13
Municipal Training	Hazardous Material Spill Notification and Cleanup	1/9/08	9
Pesticide Applicators Seminar, Monterey, CA	SCWSS Annual Conference Southern California Weed Science Society	1/28, 1/29, 1/30, 2008	4
Municipal Training	Hazardous Material Spill Notification and Cleanup	1/17/08	51
		Total	**145**

b. Summarize the Internal and External Education and Outreach Activities the Municipal Component has Conducted over the past year:

In compliance with Order No. R9-2004-001, the District maintains the District's corporate yard Pollution Prevention Plan (PPP), which also address field MS4 maintenance in the Santa Margarita Watershed. The PPP provides the pollution prevention strategy to address facilities and associated activities that may cause stormwater pollution without proper controls.

Staff also review the standard operating procedures for herbicide/pesticide management (product label instructions and Material Safety Data Sheets) that are part of the existing education requirements for applicators. Examples of standard procedures that constitute

3. MUNICIPAL
(SECTION H.1 of ORDER R9-2004-001)
CONTINUED

BMPs include schedules for applications considering weather and nesting seasons, and proper storage and disposal of unused product.

Site and activity assessments are performed annually prior to the storm season including the District's Corporate Yard (not subject to the SMR Permit) and the MS4 within the Permit area. The District does not own nor maintain any facilities in the SMR other than the MS4. The District's Corporate Yard is located in the Santa Ana watershed..

Additionally, District Maintenance staff have attended annual training events conducted by our contracted herbicide provider (Helena Chemical Company). These venues focus on BMP implementation for specific herbicides used by the District. The BMPs and related topics included:

- Anticipated Glyphosate concentration ranges in water samples given average AquaMaster application rates and following label instruction.
- Calculation for determining estimated surfactant concentrations.
- Application techniques for effective results when applying AquaMaster.
- California laboratories that can analyze for Glyphosate, should the need arise.

7) An Assessment of Program Effectiveness Based on the Measurable Goals Established in the Permittee's Individual SWMP:

The following metrics are required to be tracked and reported on by Section 5.6 of the District's Individual SWMP:

- Amount and Types of Debris Removed from Open Channels

  Outside of the MS4, there are no District municipal facilities within the Santa Margarita Watershed. Therefore, the District's municipal program is limited to MS4 maintenance. The type and total amount of debris removed for each fiscal year is as follows:

Fiscal Year	Vegetative Litter	Anthropogenic Litter	Sediment	Total Amount of Debris Removed (tons)
FY 2004-2005	55.9	0	5,763.4	5,819.3
FY 2005-2006	16.0	8.1	7,532.5	7,556.6
FY 2006-2007	10.4	4.7	2,113.0	2,128.1
FY 2007-2008	45.5	5.2	10,798.5	10,849

3. MUNICIPAL
(SECTION H.1 of ORDER R9-2004-001)
CONTINUED

The amount of sediment removed in FY 2006-2007 was lower than other years at 2,113 tons. This is likely due to the relatively dry wet season in FY 2006-2007, which results in a decrease in sediment transport, and thus sediment removal compared to other years.

- Description of Training Efforts

  See Section 3.6) above

Other Measures of Effectiveness

- Although outside of the District's measurable goals, the District did discover the need to develop a procedure to better address hazardous material clean-up and reporting related to illegal dumping and/or District operational activities. Development of a revised procedure was initiated this reporting period and the procedure is expected to be approved in the upcoming fiscal year.
- District Maintenance Supervisors are now required to complete BMP plans for major maintenance activities. These BMP plans identify the BMPs that are to be deployed as part of the maintenance activity.

8) **Additional Comments/Information:**

The District's municipal program in the Permit area is limited to MS4 maintenance. The District reviewed its program to ensure it is continuing to meet or exceed the minimum requirements of Board Order R9-2004-001.

Within FY 2007-2008, the District did not construct any additional MS4 within the SMR. However, the District accepted maintenance responsibilities for several flood control facilities constructed by Developers. Maps showing the location of these new facilities are included in Attachment H of this report. An updated map of all District and City maintained facilities is included in Appendix F of the Watershed Annual Report.

Summarize New Activities or Improvements to be implemented next year as a result of your Self Assessment of the Municipal Component:

As mentioned above, the District reviews its corporate yard Pollution Prevention Plan (PPP) at least annually to determine if any revision is necessary to reflect changes in the facility or changes in the activities conducted. No new activities or improvements are deemed necessary as a result of this assessment beyond changes discussed in Section 7 above.

The District is also going to review its pesticide application contracts (for the Municipal Facility in the Santa Ana Region) to ensure that the contracts require consideration and application (as appropriate) of IPM pest control methods. The contracting language will be based on guidance provided in the Eco-Wise IPM Contracting Toolkit available at:

http://www.ecowisecertified.org/toolkit/

4. INDUSTRIAL/COMMERCIAL
(SECTION H.2) CON'T

The District's enabling act does not provide land-use powers and therefore, individually it has no jurisdiction over industrial or commercial facilities. Through Combined Legal Authority established through an implementation agreement, the District relies on the Co-Permittees for regulation and enforcement related to Industrial and Commercial businesses and activities.

1) Description and Number of Training Efforts conducted over the last year (for Industrial/Commercial Facility Operators and/or Inspectors).

a. Training:

Although the District does not have authority to inspect or regulate industrial/commercial land-uses, District staff that respond to IC/ID complaints or notifications receive training to ensure that they are familiar with appropriate BMPs applicable to the various potential sources of discharges including Industrial/Commercial Operations and Facilities and Construction Sites. This training helps staff effectively respond to IC/ID events and, through discussions with offending parties, recommend BMPs to curtail illicit discharges to the MS4.

Training	Training Description	Training Dates	Number of Attendees
Industrial/Commercial Training	Industrial/Commercial Facility Inspection	11/27/07	N/A*
Industrial/Commercial Training	Industrial/Commercial Facility Inspection	4/15/08	N/A*
		Total	N/A

* District Staff that respond to IC/ID complaints or notifications attend inspection training annually, either for Commercial-Industrial sources or for Construction sources. This year, District IC/ID response staff attended the NPDES Construction Site Inspection training described in ***Section 2. Construction*** of this report.

5. RESIDENTIAL
(SECTION H.3 of ORDER R9-2004-001)

The District's enabling act does not provide land-use powers or authority and therefore individually it has no jurisdiction over residential activities. Through Combined Legal Authority established through an implementation agreement, the District relies on the Co-Permittees for regulation and enforcement related to residential activities.

6. EDUCATION
(SECTION I of ORDER R9-2004-001)

1) Description of Education Efforts conducted by the Permittee (not collectively with other Permittees) during the previous year:

The District and the Co-Permittees jointly fund a watershed-wide Public Education program administered by the District. Since the District does not have any land use authority, it generally does not conduct Educational activities outside of the collective educational efforts for the SMR permittees.

Sections 1 through 4 of this report include an accounting of training that District employees have received training within this reporting period. The training sessions listed in these sections includes Municipal staff training that was conducted by the District on behalf of the Co-Permittees as part of the watershed-wide education program, and training attended that was conducted by others, as available.

District employees responsible for the implementation of the NPDES compliance programs also attended the following Training:

Training	Training by	Date
Program Effectiveness Assessment	CASQA	May 27, 2008

The education and outreach programs described below were implemented as part of the Watershed SWMP requirements. Additional details regarding these programs are available in the Watershed Annual Report.

Education and Outreach efforts were conducted toward the following audiences:

Audience	Measures Impressions are County-wide unless otherwise noted
Permittee Departments and Personnel	Number of District employees trained for: • Construction Inspection: 10 • Industrial/Commercial Inspection: N/A • Municipal Facilities and Activities: 9 • Development Planning: 39
Development Community	Outreach was conducted at the following NPDES Construction Trainings: Sep. 24 & 25, 2007, Nov. 19 & 20, 2007 and Jan. 17, 2008

6. EDUCATION
(SECTION I of ORDER R9-2004-001)
CONTINUED

Industrial/Commercial Owners and Operators	Industrial/Commercial outreach conducted: SGA Home Improvement Stores 8 stores visited and training provided to 12 employees Riverside County Business License Program was instituted on July, 07. A storm water pollution prevention insert was developed and issued to all new license applicants and renewals. Date: 07/07 Inserts distributed: 7,503
Residential Community, General Public, Other Public Agencies and Students	Number of Media Impressions in: • Newspaper/City/County publications 1,300,000 • 800 Line Calls: 1,317 • Website: 3,387 (Does not include County Page) • Radio/TV: 0 • Billboards: 0 • Other: 200 • Materials: 240,000 Number of students: 5,100 Public Education events conducted: 2 # Attendees: 600 Temecula Museum/Flower Show

6. EDUCATION
(SECTION I of ORDER R9-2004-001)
CONTINUED

2) Assessment of Overall Program Effectiveness Based on the Measurable Goals Established in the Permittee's Individual SWMP:

Measurable goals for the public education program are defined in Section 10 of the District's Individual SWMP.

As described in the DAMP, the Permittees have decided to pool their efforts into a single county-wide public education program implemented by the District. Since the District's individual jurisdiction covers the entire Santa Margarita Region, the District does not differentiate between education outreach efforts undertaken individually or as part of the county-wide efforts. Therefore, as stated in Section 10 of the District's Individual SWMP, a description and evaluation of the entire public education program implemented in the Permit area is contained in Sections G and J of the Watershed Annual Report.

Additional Measures of Effectiveness

Beyond the standard NPDES staff training that the District provides, District NPDES employees are constantly updating their knowledge on various topics relevant to their compliance programs. In this manner, this year District NPDES staff attended CASQA's Program Effectiveness Training. This training will help the District develop appropriate measureable goals in the assessment of their individual compliance programs and of the watershed based activities.

3) Additional Comments/Information:

As described above, the District reports all of its implemented education related activities, and an assessment of the public education program in the Watershed Annual Report.

Describe the major accomplishments of the Education Component over the past year.

See Watershed Annual Report.

Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Education Component:

See Watershed Annual Report.

7. ILLICIT DISCHARGE DETECTION AND ELIMINATION
(SECTION J of ORDER R9-2004-001)

1) **Number of Illicit Discharges, Connections and Spills Reported and/or Identified during the Reporting Period:**

The District recorded 70 IC/ID/S reports during FY07-08.

- **Illicit Discharges (ID):** 8
- **Illicit Connections (IC):** 0
- **Spills (S):** 62

a. **Illicit Discharges (ID):** The ID numbers above reflect the number of reports received that constitute the willfull and/or negligent but intentional release of prohibited discharges. ID reports received by the District are included in Attachment F. In addition, Appendix C of the Watershed Annual Report contains a Fire Department HazMat Response Team Report of other IC/ID/S responses acted upon directly by them.

b. **Illicit Connections (IC):** In 1990, the District performed a detailed reconnaissance of its MS4 to identify potential illicit connections. A very small number of connections were identified. Since then, the District maintenance and construction inspectors have been trained to look for and report any illicit connections. In addition, the District requires entities wishing to drain non-stormwater discharges to its facilities to complete a Third-Party Non-Stormwater Discharge Application to ensure the discharge complies with the requirements of R9-2004-001.

c. **Spills (S):** The Spill numbers above reflect the number of reports received that consisted of accidental release of hazardous and/or prohibited discharges. Typically the District is notified of spills through receipt of a copy of the State OES report, and in most cases the spill has already been appropriately responded to when the District receives the report. The District does however, review all spill reports and follow-up on those deemed a threat to water quality. Spill reports received by the District are included in Attachment F. In addition, Appendix C of the Watershed SWMP contains a report of spill responses by the Riverside County Fire Department HazMat Response Team. The District contributes significant funding to the Hazmat team to ensure that they are cognizant of stormwater issues and incorporate appropriate BMPs as part of their hazardous materials response activities.

7. ILLICIT DISCHARGE DETECTION AND ELIMINATION
(SECTION J of ORDER R9-2004-001)
CONTINUED

2) Number of Illicit Discharges or Connections Investigated during the Reporting Period and the Outcome of the Investigations:

All reports received are reviewed/investigated to ensure that they are responded to appropriately and to check for proximity and impact to District Facilities. In many cases such as spills, the District receives reports after the incident has already been appropriately responded to and no further action by the District is necessary. Results of investigations can be found in the IC/ID/S Reports included in Attachment F.

Number of IC/ID/S incidents reviewed/investigated by District: 70
Number of IC/ID/S incidents having potential to impact District facilities: 14**
Number of IC/ID/S incidents directly impacting District facilities: 6*

** "Potential to impact District Facilities" was classified as spills/discharges that were <u>not</u> contained nor cleaned up <u>and</u> were near a District Facility, or were cleaned up but were immediately adjacent to a District Facility.

* "Directly impacting District Facilities" is classified as spills/discharges that are known to have entered a District Facility.

3) Number and Types of Enforcement Actions Taken for Illicit Discharges or Connections during the Reporting Period:

See Summary Report in Attachment F.

Because the District's enabling act does not provide land-use powers, the District relies on combined legal authority with the Co-Permittees to control industrial, commercial or development activities within its jurisdiction. Any enforcement actions resulting from an IC/ID reported to the District would be taken by the respective Co-Permittee with jurisdiction. The District does maintain the ability to regulate third-party activities within its rights-of-way through encroachment permits, construction contracts and other legal agreements.

4) Number of Times your Agency's Hotline was called during the Reporting Period, as Compared to Previous Reporting Periods.

The table below identifies the number of calls that were tracked by our 1-800 hotline. Do to a technical error, the call counters were not used during the FY 2004-2005 reporting period. The calls identified below for FY 2004-2005 only reflect the calls that were diverted to the District's front counter. The District has restored this service with the County Information Technology Department who hosts the hotline. These calls may have been for IC/ID, education outreach or other purposes.

7. ILLICIT DISCHARGE DETECTION AND ELIMINATION
(SECTION J of ORDER R9-2004-001)
CONTINUED

	Number of Calls			
	2004-05	2005-06	2006-07	2007-08
Water Pollution Hotline	100	2015	1648	1317

5) **Number and Location of Dry Weather Monitoring Sites that were Monitored during the Reporting Period:**

The District maintains four IC/ID dry weather monitoring stations. These stations are identified below:

Number of Site(s): 4

Location(s): Santa Gertrudis Channel, Warm Springs Creek, Long Canyon Creek, Redhawk Channel

The exact location of these stations can be found in Section G-3.0 of the Santa Margarita Region Monitoring Annual Report (Appendix G of the Watershed Annual Report).

6) **Summary of Illicit Discharge Monitoring Program results, including: 1) All inspection, field screening and analytical monitoring results 2) All follow-up and elimination activities and 3) Any proposed changes to station locations and/or sampling frequencies:**

The District conducts IC/ID dry weather monitoring at the four tributary stations. As a result, monitoring occurs more frequently than the minimum of two times required under the MRP.

Inspection, Field Screening and Analytical Monitoring Results

All field screening and analytical monitoring results can be found in the Watershed Annual Report, Appendix G (Monitoring Annual Report) Tables G-14 and G-36 for all four tributary stations: Long Canyon Creek, Santa Gertrudis Channel, Redhawk Channel and Warm Springs Creek.

The District has developed numeric field screening criteria to determine whether a follow-up laboratory sample should be collected as summarized below:

- Specific conductance more than 25% higher than BPO
- Total dissolved solids more than 25% higher than BPO
- Turbidity more than 25% higher than long-term average (Avg. = 71.3 NTU)
- pH below 6 or above 9.5
- Dissolved oxygen below 4 mg/L

7. ILLICIT DISCHARGE DETECTION AND ELIMINATION
(SECTION J of ORDER R9-2004-001)
CONTINUED

- Unusually low or high water temperature
- Sensory observations in the area of the discharge that indicates the presence of pollutants (e.g., staining, water sheen, water color and/or odor, algae, foaming)

Below is a summary of the results of the IC/ID investigations conducted by the District.

IC/ID Investigations Conducted by the District

IC/ID Station Name	Date	TDS (mg/L)	Sp. Cond. (µmhos/cm)	Turbidity (NTU)	pH	T (°C)	DO (mg/L)
Redhawk Channel	8/28/07*	**1100**	1700	72.9	9.2	33.1	14.51
	5/29/08*	900	1300	-	**10.3**	26.8	11.23
Long Canyon Channel	8/28/2007	900	1300	57.4	8.3	24.9	15.13
	5/29/2008	700	1000	9.8	8.6	20.4	16.34
Santa Gertrudis Chnl. near Murrieta	8/28/2007	Too shallow to accurately measure field measurements.					
	5/29/2008	Too shallow to accurately measure field measurements.					
Warm Springs Creek near Murrieta	8/28/2007	DRY. No field measurements.					
	5/29/2008	Too shallow to accurately measure field measurements.					

* Samples taken for Analytical Testing
** **Bold** values exceeded field screening criteria

Follow-up and Elimination Activities

Generally, during IC/ID field visits, visual observations and field screening did not indicate the presence of illicit connections or illegal discharges. The two exceptions within the reporting period are summarized on the following page:

7. ILLICIT DISCHARGE DETECTION AND ELIMINATION
(SECTION J of ORDER R9-2004-001)
CONTINUED

Redhawk Channel, sampling date 8/28/07 –

Field TDS exceeded 1100 mg/l. There was adequate flow to collect samples for laboratory analysis and samples were collected. Flow was clear with a slight yellow tint and very little floatables or settleables (photo). Lab turbidity (4.8 NTU) was below BPO; however, lab TDS slightly exceeded 125% BPO. Lab pH was neutral. Redhawk is in a predominately-residential area and rules out discharges from industries that would most likely produce elevated TDS flows. Nutrient levels are normal for the watershed and MBAS results are below BPO. No obvious sources of the exceedance were determined based on the field visit or follow up chemical analysis.

7. ILLICIT DISCHARGE DETECTION AND ELIMINATION
(SECTION J of ORDER R9-2004-001)
CONTINUED

Redhawk Channel, sampling data 5/29/08 –

Field Parameters indicated an elevated field pH, exceeding pH criteria (9.5). There was adequate flow to collect samples for laboratory analysis and samples were collected. Lab pH measurement did not exceed criteria therefore no follow-up action was necessary. Flow had a light green to yellow tint, clear in clarity with very little floatables and settleables (photo). No obvious illegal discharges were detected during the field visits.

7. ILLICIT DISCHARGE DETECTION AND ELIMINATION
(SECTION J of ORDER R9-2004-001)
CONTINUED

Proposed changes to station locations and/or sampling frequencies

No changes are proposed to the station locations and/or sampling frequencies at this time. However, the District has committed to reviewing the entire IC/ID program with the RWQCB staff prior to submittal of the ROWD.

7) An Assessment of Overall Program Effectiveness Based on the Measurable Goals Established in the Permittee's Individual SWMP:

The measurable goals are defined in Section 4.4 of the District's Individual SWMP and have been reported upon in response to questions 1 through 5 of this section. The Overall effectiveness of the IC/ID program has been found to be effective based on the responses to these questions,

Based on an analysis of the accumulation of four years of IC/ID data, specific measurable targets will be established in the ROWD as appropriate and possible.

In response to the Los Angeles RWQCB and the Ventura County MS4 Permit, CASQA prepared a letter identify proposed measures and goals to evaluate the effectiveness of the IC/ID Program. The measures are as follows:

- Percent (%) of IC/IDs responded to within 24 hours of receiving notice; and
- Percent (%) of Illegal Connections eliminated or permitted once detected.

The goal identified for each measure was 80%. Based on our FY 2007-2008 IC/ID information, 99% of IC/ID incidents were responded to within 24 hours of receiving notice and zero (0) Illicit Connections were detected. Only one (1) of the seventy (70) reports was not responded to within 24 hours (Complaint No. 1061) which was a report of a previously occurring, permitted non-stormwater discharge of de-chlorinated swimming pool water.

8) Additional Comments/Information:

Describe the major accomplishments of the Illicit Discharge Detection and Elimination Component over the past year:

The District continues to improve its IC/ID program through refinements in its ability to track complaints, enhance its ability to gather important complaint related information through custom GIS graphic user interfaces (developed in late 2005) and efforts to enhance our coordination with other municipal agencies with authority to respond to complaints.

Summarize the internal and external education and outreach activities the Illicit Discharge Detection and Elimination Component has conducted over the past year:

During field investigations of complaint calls, field staff disseminates public education and outreach information to violators and adjacent residents/businesses. Other IC/ID education addressed through the public education program is described in the Watershed SWMP.

7. ILLICIT DISCHARGE DETECTION AND ELIMINATION
(SECTION J of ORDER R9-2004-001)
CONTINUED

Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Illicit Discharge Detection and Elimination Component:

The District will continue to implement the program based on the recent improvements. Additional recommendations may be proposed for next year.

The District is also proposing to establish an electronic third-party discharge electronic reporting form and GIS layer that would allow us to quickly research known third-party discharges to our system as part of complaint call responses. Work on the system was initiated and may take 1-2 years to complete.

Other Comments:

N/A

8. PUBLIC PARTICIPATION

1) **A Description of Efforts to Include the Public Urban Runoff Management Programs during the Reporting Period (i.e., river clean-ups, volunteer monitoring, Permittee council meetings related to the SWMP, etc.):**

   Public involvement programs for this reporting period included:

   a) Technical Advisory Committee meetings held on a monthly basis and are open to the public.

   b) Participation in SMR Executive Management Team and Water Quality Monitoring Committee meetings.

2) **Additional Comments/Information:**

   N/A

9. FISCAL ANALYSIS COMPONENT

Fiscal Analysis Component - each Permittee shall include an annual fiscal analysis, for each fiscal year covered by Order No. R9-2004-001, in its Individual Annual Report. This analysis shall evaluate the expenditures (such as capital, operation and maintenance, education, and administrative expenditures) necessary to accomplish the activities of the Permittee's Individual SWMP. The analysis shall include the following:

1) **A Report of the Previous Reporting Period's Budget and a Budget for the Upcoming Reporting Period. To the Extent Possible, the Budgets should be Broken Down by the following Programs:**

   Expenditures identified below reflect costs incurred by the District for implementing its own NPDES Program and for implementing the Regional Watershed Program. The District does not track its direct implementation costs separately nor does it track costs separately for many permit provisions.

Program Element	Fiscal Year 2007-2008		Fiscal Year 2008-2009	
	Capital Expenditures	O&M/Admin Expenditure	Capital Expenditures	O&M/Admin Expenditure
Program Management	N/A	$362,539	N/A	$534,020
Annual Fee for MS4 NPDES Permit	N/A	0	N/A	$4,000
Implementation Agreement Shared Cost	N/A	N/A	N/A	N/A
Construction Inspections*	N/A	~$10,000	N/A	~$10,000
Development Planning*	N/A	N/A	N/A	N/A
Industrial and Commercial Inspections	N/A	N/A	N/A	N/A
Illicit Connections & Illegal Discharges Program	N/A	N/A	N/A	N/A
Municipal Facilities and Activities	N/A	N/A	N/A	N/A
Public Education & Outreach	N/A	$51,204	N/A	$66,030
Monitoring Program	N/A	$146,722	N/A	$152,600
Other	N/A	$0	N/A	$0
Contributions to Other Programs	N/A	$91,228	N/A	$96,330
Total	**N/A**	**$661,693**	**N/A**	**$862,890**

* Costs are not directly tracked for these Program Elements, however a brief description follows that identifies manpower requirements for those specific Program Elements

Construction Inspection – The District's Construction Inspectors are trained to address construction related NPDES issues associated with District administered construction projects

9. FISCAL ANALYSIS COMPONENT
CONTINUED

(storm drains, channels, levees, basins, etc.). They perform these inspections as part of their normal duties. The District's NPDES Section staff also has an individual assigned to review SWPPPs associated with District administered construction projects. The NPDES staff person also provides a training presentation on NPDES related construction issues at construction project pre-construction meetings for the benefit of the contractor. Costs for Construction Inspection permit obligations for the Santa Margarita Watershed are recovered from the District's ad-valorum tax revenues collected within the Santa Margarita Region of the County.

Development Planning – The District's Development Review staff are responsible for reviewing proposed development projects in the unincorporated Riverside County area for compliance with the SWMP, recommending conditions of approval relative to water quality/NPDES and reviewing preliminary Project-Specific WQMPs and associated plans within the unincorporated County. Costs incurred by the District's Development Review and Plan Check staff for Development Planning permit obligations are recovered via development review and plan check fees charged to the development proponent.

2) A Description of the Source(s) of Funds that were Utilized during the Previous Fiscal Year and the Source(s) of Funds Proposed to Meet the Necessary Expenditures for the Subsequent Year, including Legal Restrictions on the use of such Funds.

Source of Funds	Capital Expenditures	Percent of Total Program Funding	Restrictions on Use (if applicable)
Santa Margarita Watershed Benefit Assessment Fund	$410,267	51.5%	District NPDES compliance costs, excess funds used to fund regional NPDES activities.
Santa Margarita Watershed Permittee Implementation Agreement	$365,787.59	46%	Regional NPDES Compliance Programs.
Zone 7 Ad-Valorem Tax Revenue	~$10,000	1.25%	Costs associated with District's compliance with Municipal Construction component of Board Order R9-2004-001.
Developer Development Review/Plan Check Fees	Unknown	Unknown	Costs associated with review of proposed developments in the unincorporated County for compliance with the Development Planning provisions of Board Order R9-2004-001.
Spending Against Reserves	$0	0%	District NPDES Compliance Costs
Miscellaneous Revenue	~$10,000	1.25%	Interest, Other Misc.
TOTAL	**$796,094.59**	**100%**	

9. FISCAL ANALYSIS COMPONENT
CONTINUED

3) Additional Comments/Information:

The District is working with other stakeholder groups to leverage funds for regional planning objectives including:

Santa Ana Watershed Project Authority – Jointly fund a LID BMP testing and demonstration facility. This effort is described in Appendix G, Section G-7.1 of the Monitoring Annual Report.

Joint Permittee Efforts - Additional efforts to leverage funds are jointly being made with the SMR permittees. These efforts are described in Section H.11 of the Watershed Annual Report.

10. NON-STORM WATER DISCHARGES

Permittees shall report on any discharge category listed in Requirement B.2 of Order No. R9-2004-001 that was identified as a source of pollutants during the reporting period. For each identified category, the Permittee shall report whether it elected to prohibit the discharge or to require BMPs to reduce pollutants in the discharge to the MEP. If the discharge is not prohibited, the BMPs that will be implemented, or required to be implemented, shall be described in each Permittee's Individual SWMP Annual Report.

Category	Prohibited	BMP to be Implemented
Diverted stream flows	☐ Yes ☒ No	Not Applicable, no applications
Rising ground waters	☐ Yes ☒ No	Not Applicable, no applications
Uncontaminated ground water infiltration [as defined at 40CFR35.2005(20)] to MS4s	☐ Yes ☒ No	Not Applicable, no applications
Uncontaminated pumped ground water	☐ Yes ☒ No	Not Applicable, no applications
Foundation drains	☐ Yes ☒ No	Not Applicable, no applications
Springs	☐ Yes ☒ No	Not Applicable, no applications
Water from crawl space pumps	☐ Yes ☒ No	Not Applicable, no applications
Footing drains	☐ Yes ☒ No	Not Applicable, no applications
Air conditioning condensation	☐ Yes ☒ No	Not Applicable, no applications
Flows from riparian habitats and wetlands	☐ Yes ☒ No	Not Applicable, no applications
Water line flushing	☐ Yes ☒ No	Not Applicable, no applications
Landscape irrigation	☐ Yes ☒ No	Not Applicable, no applications
Discharges from potable water sources not subject to NPDES Permit No. CAG679001, other than water main breaks	☐ Yes ☒ No	Not Applicable, no applications
Irrigation water	☐ Yes ☒ No	Not Applicable, no applications
Lawn watering	☐ Yes ☒ No	Not Applicable, no applications
Individual residential car washing	☐ Yes ☒ No	Not Applicable, no applications
Non-emergency fire fighting flows	☐ Yes ☒ No	Not Applicable, no applications
Dechlorinated swimming pool discharges	☐ Yes ☒ No	Not Applicable, no applications

10. NON-STORM WATER DISCHARGES
CONTINUED

Additional Comments/Information:

The District requires a Third-Party Non-Stormwater Discharge Application to be completed for any encroachment involving a non-stormwater discharge into District facilities. The application requires the applicant to characterize the discharge, including a chemical analysis of the flow when possible. Where the discharges would contain contaminants exceeding receiving water standards, BMPs are required or the specific discharge would be prohibited. No evidence has been identified to date that would indicate that a specific class, or classes, of allowable non-stormwater discharges are persistent sources of pollution per Requirement B.2.

11. RECEIVING WATER LIMITATIONS

This section includes the report required pursuant to Requirement C.2.a. of Order No. R9-2004-001, if applicable.

Requirement C.2.a. states:

"Upon a determination by either a Permittee or the SDRWQCB that MS4 discharges are causing or contributing to an exceedance of an applicable water quality standard, the Permittee shall promptly notify and thereafter submit a report to the SDRWQCB that describes BMPs that are currently being implemented and additional BMPs that will be implemented to prevent or reduce any pollutants that are causing or contributing to the exceedance of water quality standards. The report may be incorporated in the SWMP Annual Report unless the SDRWQCB directs an earlier submittal. The report shall include an implementation schedule. The SDRWQCB may require modifications to the report."

Each reporting period, the District collects and reviews monitoring data as part of Appendix G of the Monitoring Annual Report. Based on the results of this monitoring data, pollutants of concern are identified and prioritized. Programs necessary to control these pollutants of concern are also identified in Appendix G and incorporated into the Permittees compliance programs.

12. ADDITIONAL URBAN RUNOFF DATA

This Section is a Summary of all Urban Runoff Related Data not included in the Annual Monitoring Report (e.g., special investigations).

The District did not collect any supplemental data that is not reported in the Annual Monitoring Report.

13. PROPOSED REVISIONS

This Section Includes Proposed Revisions to the Individual SWMP, Including Areas in Need of Improvement Based on the Assessment of Effectiveness of Each Program Component.

The District is currently reviewing the Individual SWMP for any needed updates to ensure that it remains a current and effective document.

Additional proposed revisions to the Individual SWMP are based on the effectiveness analyses for each of the components of this report and are summarized as follows:

13.1 Development Planning

Although the District does not individually have land use authority to regulate development, the District reviews New Development and Significant Redevelopment projects at the request of the County. The District continues to assist the County in the following efforts to improve the effectiveness of post-construction BMP selection and maintenance for its Development Planning Program:

- Create a long-term public maintenance mechanism for post-construction BMPs within the unincorporated County.
- Create a GIS-based tracking mechanism for post-construction BMPs within the unincorporated County. Work on this mechanism will begin in Fiscal Year 2008-2009.
- Develop additional post-construction BMP guidance to ensure the effectiveness and efficiency of post-construction BMPs.

The results of these efforts may require revisions to Section 6 of the District's Individual SWMP to reflect its updated role in this process.

13.2 Construction

The District will evaluate potential providers for training District Construction Inspectors for compliance with the General Construction Permit. This evaluation will happen in Fiscal Year 2008-2009 with anticipated implementation in 2009-2010 (or in conjunction with the roll-out of the new Construction General Permit). Once this additional training is developed, Section 10.0 of the Individual SWMP will be updated accordingly.

13.3 Municipal

- The District is working to develop a procedure to better address hazardous material clean-up and reporting related to illegal dumping and District operational activities. Development of a revised procedure was initiated this reporting period and the procedure is expected to be approved in the upcoming fiscal year. Section 4.2 of the Individual SWMP will be updated to reflect this change once the procedure has been finalized.
- District Maintenance Supervisors are now required to incorporate BMPs into major maintenance activities. These BMP plans identify the BMPs that are to be deployed as part of the maintenance action. Section 5.3 of the Individual SWMP will be updated to reflect this change.

13. PROPOSED REVISIONS

- The District is also going to review its pesticide application contracts (for its Municipal Facility in the Santa Ana Region) to ensure that the contracts require consideration and application (as appropriate) of IPM pest control methods. Once complete, Section 5.3 of the Individual SWMP will be updated as appropriate.

13.4 Education

The District will be providing additional training on the Construction General Permit for District Construction Inspectors as described in the section 13.2 above.

13.5 Illicit Connections / Illicit Discharges

The District is working to establish an electronic third-party discharge electronic reporting form and GIS layer that would allow staff to quickly research known third-party discharges to our system as part of complaint call responses. Work on the system was intiated and may take 1-2 years to complete. Once complete, this system will be documented in Section 4.1 of the Individual SWMP.

OWNER'S CERTIFICATION

This project-specific Water Quality Management Plan (WQMP) has been prepared for:

Mission Hills Wildomar, LP

by GMX Construction Inc. for the project known as **Mission Hills** at **the southeast corner of Mission Trail and Como Street in the community of Wildomar, Riverside County.**

This WQMP is intended to comply with the requirements of Riverside County for **MISSION HILLS**, which includes the requirement for the preparation and implementation of a project-specific WQMP.

The undersigned, while owning the property/project described in the preceding paragraph, shall be responsible for the implementation of this WQMP and will ensure that this WQMP is amended as appropriate to reflect up-to-date conditions on the site. This WQMP will be reviewed with the facility operator, facility supervisors, employees, tenants, maintenance and service contractors, or any other party (or parties) having responsibility for implementing portions of this WQMP. At least one copy of this WQMP will be maintained at the project site or project office in perpetuity.

The undersigned is authorized to certify and to approve implementation of this WQMP. The undersigned is aware that implementation of this WQMP is enforceable under Riverside County Water Quality Ordinance.

If the undersigned transfers its interest in the subject property/project, its successor in interest the undersigned shall notify the successor in interest of its responsibility to implement this WQMP.

"I, the undersigned, certify under penalty of law that the provisions of this WQMP have been reviewed and accepted and that the WQMP will be transferred to future successors in interest."

H. PHASE 1 ENVIRONMENTAL SITE ASSESSMENT – SUMMARY OF SITE REMEDIATION CONDUCTED AND USE RESTRICTIONS

I. Project Description

Mission Hills Wildomar is a 25-lot subdivision located at the southeastern corner of Mission Trail and Como Street in Wildomar. The area is south of Lake Elsinore and west of the I-15 freeway. Tentative Tract #31993 and Zone Change #6902 are approved for 25 single-family homes and one detention basin. Lot sizes vary from 15,000 SF to 21,000 SF. Suggested house sizes are about 3,000 SF. Currently the property is undeveloped land. There are existing tracts to the north east of the property. There are commercial buildings to the west and single-family houses to the south.

Gross area of the property is 13 acres. Net area of development is 12 acres.

Location of facilities:

Utilities are available on Mission Trail and on Como Street. Storm water on Como and Cashew streets are collected into existing catch basins on Cashew Street and are discharged into a culvert, which crosses Mission Trail. Surface runoff at Mission Trail and Como streets flow north and are intercepted by a curb inlet on Mission Trail which discharges into the same culvert.

Activities and location of activities:

The site will be grubbed, cleared and graded to create 25 building pads followed by installation of underground utilities and curbs and gutters. Erosion control plan has been submitted and approved. Access to the site shall be through existing and paved Como Street, no access will be allowed on Mission Trail. Temporary utilities will be provided from Como Street. There will be a temporary chain link fence surrounding the project site.

Materials Storage and Delivery Areas:

Material storage will be located on the east side of the project along Como Street. Entrance to the site will be through stabilized rock base aggregate to minimize tracking of mud unto paved street. Streets will be swept frequently and prior to rain to abate discharge of any sediment.

Wastes generated by project activities:

Wastes generated by the project during construction will include wood, dried and wet concrete, packaging material and other left over construction debris. A temporary concrete washout will be located near the storage area for concrete trucks to rinse residual concrete wastes. Any maintenance of vehicles or machinery will take place next to the storage area whereby the ground will be covered with a heavy gauge tarpaulin liner and the area will be bermed to control any discharge of pollutants into the storm drains. Overall waste will be minimized and will be properly handled to prevent any accidental discharge or disposal into storm drain or water courses.

Appendix A of this project-specific WQMP includes a complete copy of the final Conditions of Approval.

Appendix B of this project-specific WQMP shall include:

1. A Vicinity Map identifying the project site and surrounding planning areas in sufficient detail to allow the project site to be plotted on Co-Permittee base mapping; and
2. A Site Plan for the project. The Site Plan included as part of Appendix B depicts the following project features:

Location and identification of all structural BMPs, including Treatment Control BMPs.

Landscaped areas.

Paved areas and intended uses (i.e., parking, outdoor work area, outdoor material storage area, sidewalks, patios, tennis courts, etc.).

Number and type of structures and intended uses (i.e., buildings, tenant spaces, dwelling units, community facilities such as pools, recreation facilities, tot lots, etc.).

Infrastructure (i.e., streets, storm drains, etc.) that will revert to public agency ownership and operation.

Location of existing and proposed public and private storm drainage facilities (i.e., storm drains, channels, basins, etc.), including catch basins and other inlets/outlet structures. Existing and proposed drainage facilities should be clearly differentiated.

Location(s) of Receiving Waters to which the project directly or indirectly discharges.

Location of points where onsite (or tributary offsite) flows exit the property/project site.

Proposed drainage areas boundaries, including tributary offsite areas, for each location where flows exits the property/project site. Each tributary area should be clearly denoted.

Pre- and post-project topography.

Appendix G of this project-specific WQMP shall include copies of CC&Rs, Covenant and Agreements, and/or other mechanisms used to ensure the ongoing operation, maintenance, funding, transfer and implementation of the project-specific WQMP requirements.

II. Site Characterization

Land Use Designation or Zoning: Low Density Residential

Current Property Use: Undeveloped – Vacant Land

Proposed Property Use: Residential Tract

Availability of Soils Report: Y ☒ N ☐ *Note: A soils report is required if infiltration BMPs are utilized. Attach report in Appendix E.*

Phase 1 Site Assessment: Y ☐ N ☒ *Note: If prepared, attached remediation summary and use restrictions in Appendix H.*

Receiving Waters for Urban Runoff from Site

Receiving Waters	303(d) List Impairments	Designated Beneficial Uses	Proximity to RARE Beneficial Use
Lake Elsinore HU#802.31	Nutrients, Organics, Low Dissolved Oxygen, Sedimentation/Siltation, Unknown Toxicity	MUN, Rec 1, Rec 2, Warm, Wild	None

III. Pollutants of Concern

Potential pollutants associated with Urban Runoff from the proposed project must be identified. Exhibit B of the WQMP provides brief descriptions of typical pollutants associated with Urban Runoff and a table that associates typical potential pollutants with types of development (land use). It should be noted that at the Co-Permittees discretion, the Co-Permittees may also accept updated studies from the California Association of Stormwater Quality Agencies (CASQA), USEPA, SWRCB and/or other commonly accepted agencies/associations acceptable to the Co-Permittee for determination of Pollutants of Concern associated with given land use. Additionally, in identifying Pollutants of Concern, the presence of legacy pesticides, nutrients, or hazardous substances in the site's soils as a result of past uses and their potential for exposure to Urban Runoff must be addressed in project-specific WQMPs. The Co-Permittee may also require specific pollutants commonly associated with urban runoff to be addressed based on known problems in the watershed. The list of potential Urban Runoff pollutants identified for the project must be compared with the pollutants identified as causing an impairment of Receiving Waters, if any. To identify pollutants impairing proximate Receiving Waters, each project proponent preparing a project-specific WQMP shall, at a minimum, do the following:

1. For each of the proposed project discharge points, identify the proximate Receiving Water for each discharge point, using hydrologic unit basin numbers as identified in the most recent version of the Water Quality Control Plan for the Santa Ana River Basin or the San Diego Region.

   Lake Elsinore, Hydrologic Unit Basin Number 802.31

2. Identify each proximate identified above that is listed on the most recent list of Clean Water Act Section 303(d) list of impaired water bodies, which can be found at website www.swrcb.ca.gov/tmdl/303d_lists.html. List all pollutants for which the proximate Receiving Waters are impaired.

   Nutrients, Organics, Low Dissolved Oxygen, Sedimentation/Siltation, Unknown Toxicity

3. Compare the list of pollutants for which the proximate Receiving Waters are impaired with the pollutants expected to be generated by the project.

   Nutrients may be produced through fertilization when landscaping is installed. Pathogens could be present on site during construction due to on site port-o-potties or feral animals present before construction. Hydrocarbons from paved areas may be washed out in post development condition.

Urban Runoff Pollutants:

Pathogens – Pathogens (bacteria and viruses) are ubiquitous microorganisms that thrive under certain environmental conditions. Their proliferation is typically caused by the transport of animal or human fecal wastes from the watershed. Water, containing excessive bacteria and viruses can alter the aquatic habitat and create a harmful environment for human and aquatic life. Also, the decomposition of excess organic waste causes increased growth of undesirable organisms in the water.

Metals - The primary source of metal pollution in Urban Runoff is typically commercially available metals and metal products. Metals of concern include cadmium, chromium, copper, lead, mercury, and zinc. Lead and chromium have been used as corrosion inhibitors in primer coatings and cooling tower systems. Metals are also raw material components in non-metal products such as fuels, adhesives, paints, and other coatings. At low concentrations naturally occurring soil, metals may not be toxic. However, at higher concentrations, certain metals can be toxic to aquatic life. Humans can be impacted from contaminated groundwater resources, and bioaccumulation of metals in fish and shellfish. Environmental concerns, regarding the potential for release of metals to the environment, have already led to restricted metal usage in certain applications.

Nutrients - Nutrients are inorganic substances, such as nitrogen and phosphorus. They commonly exist in the form of mineral salts that are either dissolved or suspended in water. Primary sources of nutrients in Urban Runoff are fertilizers and eroded soils. Excessive discharge of nutrients to water bodies and streams can cause excessive aquatic algae and plant growth. Such excessive production, referred to as cultural eutrophication, may lead to excessive decay of organic matter in the water body, loss of oxygen in the water, release of toxins in sediment, and the eventual death of aquatic organisms.

Pesticides - Pesticides (including herbicides) are chemical compounds commonly used to control nuisance growth or prevalence of organisms. Excessive or improper application of a pesticide may result in runoff containing toxic levels of its active ingredient.

Organic Compounds – Organic compounds are carbon-based. Commercially available or naturally occurring organic compounds are found in pesticides, solvents, and hydrocarbons. Organic compounds can, at certain concentrations, indirectly or directly constitute a hazard to life or health. When rinsing off objects, toxic levels of solvents and cleaning compounds can be discharged to the MS4. Dirt, grease, and grime retained in the cleaning fluid or rinse water may also absorb levels of organic compounds that are harmful or hazardous to aquatic life.

Sediments - Sediments are soils or other surficial materials eroded and then transported or deposited by the action of wind, water, ice, or gravity. Sediments can increase turbidity, clog fish gills, reduce spawning habitat, lower young aquatic organisms survival rates, smoother bottom dwelling organisms, and suppress aquatic vegetation growth.

Trash and Debris – Trash (such as paper, plastic, polystyrene packing foam, and aluminum materials) and biodegradable organic matter (such as leaves, grass cuttings, and food waste) are general waste products on the landscape. The presence of trash and debris may have a significant impact on the recreational value of a water body and aquatic habitat. Excess organic matter can create a high biochemical oxygen demand in a stream and thereby lower its water quality. In addition, in areas where stagnant water exists, the presence of excess organic matter can promote septic conditions resulting in the growth of undesirable organisms and the release of odorous and hazardous compounds such as hydrogen sulfide.

Oxygen-Demanding Substances – This category includes biodegradable organic material as well as chemicals that react with dissolved oxygen in water to form other compounds. Proteins, carbohydrates, and fats are examples of biodegradable organic compounds. Compounds such as ammonia and hydrogen sulfide are examples of oxygen-demanding compounds. The oxygen demand of a substance can lead to depletion of dissolved oxygen in a water body and possibly the development of septic conditions.

Oil and Grease – Oil and grease are characterized as high-molecular weight organic compounds. Primary Sources of oil and grease are petroleum hydrocarbon products, motor products from leaking vehicles, esters, oils, fats, waxes, and high molecular-weight fatty acids. Introduction of the pollutants to the water bodies are very possible due to the wide uses and applications of some of these products in municipal, residential, commercial, industrial, and construction areas. Elevated oil and grease content can decrease the aesthetic value of the water body, as well as the water quality.

IV. Hydrologic Conditions of Concern

Impacts to the hydrologic regime resulting from the Project may include increased runoff volume and velocity; reduced infiltration; increased flow frequency, duration, and peaks; faster time to reach peak flow; and water quality degradation. Under certain circumstances, changes could also result in the reduction in the amount of available sediment for transport; storm flows could fill this sediment-carrying capacity by eroding the downstream channel. These changes have the potential to permanently impact downstream channels and habitat integrity. A change to the hydrologic regime of a Project's site would be considered a hydrologic condition of concern if the change would have a significant impact on downstream erosion compared to the pre-development condition or have significant impacts on stream habitat, alone or as part of a cumulative impact from development in the watershed.

This project-specific WQMP must address the issue of Hydrologic Conditions of Concern unless one of the following conditions are met:

Condition A: Runoff from the Project is discharged directly to a publicly-owned, operated and maintained MS4; the discharge is in full compliance with Co-Permittee requirements for connections and discharges to the MS4 (including both quality and quantity requirements); the discharge would not significantly impact stream habitat in proximate Receiving Waters; and the discharge is authorized by the Co-Permittee.

Condition B: The project disturbs less than 1 acre. The disturbed area calculation should include all disturbances associated with larger plans of development.

Condition C: The project's runoff flow rate, volume, velocity and duration for the post development condition do not exceed the predevelopment condition for the 2 year, 24 hour and 10 year 24 hour rainfall events. This condition can be achieved by minimizing impervious area on a site and incorporating other site design concepts that mimic predevelopment conditions. This condition must be substantiated by hydrologic modeling methods acceptable to the Co-Permittee.

This Project meets the following condition: CONDITION A & C OF THE RIVERSIDE COUNTY WQMP FOR ADDITIONAL REQUIREMENTS.

Supporting engineering studies, calculations, and reports are included in Appendix C.

	2 year – 24 hour		10 year – 24 hour	
	Precondition	**Post-condition**	**Precondition**	**Post-condition**
Discharge (cfs)	0.45	3.15	5.87	7.74
Velocity (fps)	0.034	0.241	0.448	0.590
Volume (cubic feet)	12839	67082	78284	165964
Duration (minutes)	5	5	5	5

V. Best Management Practices

V.1 SITE DESIGN BMPS

Project proponents shall implement Site Design concepts that achieve each of the following:

1) Minimize Urban Runoff
2) Minimize Impervious Footprint
3) Conserve Natural Areas
4) Minimize Directly Connected Impervious Areas (DCIAs)

The project proponent should identify the specific BMPs implemented to achieve each Site Design concept and provide a brief explanation for those Site Design concepts considered not applicable.

A Detention Basin is provided which will retain Q10 and will let Q100 pass. The Basin will be landscaped with native vegetation the upkeep and maintenance of the Basin will be the responsibility of the Home Owners Association, which is formed for this purpose. During dry periods the Basin can be used for recreational purposes.

Table 1. Site Design BMPs

Design Concept	Technique	Specific BMP	Included		
			Yes	No	N/A
Site Design Concept 1	*Minimize Urban Runoff*	Maximize the permeable area (See Section 4.5.1 of the WQMP).	☐	☒	☐
		Incorporate landscaped buffer areas between sidewalks and streets.	☒	☐	☐
		Maximize canopy interception and water conservation by preserving existing native trees and shrubs, and planting additional native or drought tolerant trees and large shrubs.	☒	☐	☐
		Use natural drainage systems.	☒	☐	☐
		Where soils conditions are suitable, use perforated pipe or gravel filtration pits for low flow infiltration.	☐	☒	☐
		Construct onsite ponding areas or retention facilities to increase opportunities for infiltration consistent with vector control objectives.	☒	☐	☐
		Other comparable and equally effective site design concepts as approved by the Co-Permittee (Note: Additional narrative required to describe BMP and how it addresses Site Design concept).	☐	☒	☐

Table 1. Site Design BMPs (Cont.)

Design Concept	Technique	Specific BMP	Included: Yes	Included: No	Included: N/A
Site Design Concept 2	*Minimize Impervious Footprint*	Maximize the permeable area (See Section 4.5.1 of the WQMP).	☒	☐	☐
		Construct walkways, trails, patios, overflow parking lots, alleys, driveways, low-traffic streets and other low -traffic areas with open-jointed paving materials or permeable surfaces, such as pervious concrete, porous asphalt, unit pavers, and granular materials.	☒	☐	☐
		Construct streets, sidewalks and parking lot aisles to the minimum widths necessary, provided that public safety and a walk able environment for pedestrians are not compromised.	☒	☐	☐
		Reduce widths of street where off-street parking is available.	☒	☐	☐
		Minimize the use of impervious surfaces, such as decorative concrete, in the landscape design.	☒	☐	☐
Site Design Concept 3	*Conserve Natural Areas*	Other comparable and equally effective site design concepts as approved by the Co-Permittee (Note: Additional narrative required describing BMP and how it addresses Site Design concept).	☐	☒	☐
		Conserve natural areas (See WQMP Section 4.5.1).	☐	☒	☐
		Maximize canopy interception and water conservation by preserving existing native trees and shrubs, and planting additional native or drought tolerant trees and large shrubs.	☒	☐	☐
		Use natural drainage systems.	☒	☐	☐
		Other comparable and equally effective site design concepts as approved by the Co-Permittee (Note: Additional narrative required describing BMP and how it addresses Site Design concept).	☐	☒	☐

Table 1. Site Design BMPs (Cont.)

Design Concept	Technique	Specific BMP	Included: Yes	Included: No	Included: N/A
Site Design Concept 4	*Minimize Directly Connected Impervious Areas (DCIAs)*	Residential and commercial sites must be designed to contain and infiltrate roof runoff, or direct roof runoff to vegetative swales or buffer areas, where feasible.	☒	☐	☐
		Where landscaping is proposed, drain impervious sidewalks, walkways, trails, and patios into adjacent landscaping.	☒	☐	☐
		Increase the use of vegetated drainage swales in lieu of underground piping or imperviously lined swales.	☒	☐	☐
		Rural swale system: street sheet flows to vegetated swale or gravel shoulder, curbs at street corners, culverts under driveways and street crossings.	☐	☒	☐
		Urban curb/swale system: street slopes to curb; periodic swale inlets drain to vegetated swale/biofilter.	☐	☒	☐
		Dual drainage system: First flush captured in street catch basins and discharged to adjacent vegetated swale or gravel shoulder, high flows connect directly to MS4s.	☐	☒	☐
		Design driveways with shared access, flared (single lane at street) or wheel strips (paving only under tires); or, drain into landscaping prior to discharging to the MS4.	☐	☒	☐
		Uncovered temporary or guest parking on private residential lots may be paved with a permeable surface, or designed to drain into landscaping prior to discharging to the MS4.	☐	☐	☒
		Where landscaping is proposed in parking areas, incorporate landscape areas into the drainage design.	☒	☐	☐
		Overflow parking (parking stalls provided in excess of the Co-Permittee's minimum parking requirements) may be constructed with permeable paving.	☐	☐	☒
		Other comparable and equally effective design concepts as approved by the Co-Permittee (Note: Additional narrative required describing BMP and how it addresses Site Design concept).	☐	☒	☐

Non-applicable Site Design BMPs:

NO GUEST PARKING IS PROVIDED ON INDIVIDUAL LOT.

THERE IS NO OVERFLOWING PARKING.

Project Site Design BMPs:

The Tract is a 25-lot subdivision with almost ½ acre lots. Impervious coverage of each lot may vary from 25 to 30 percent. Open spaces will be landscaped with native shrubs, grass and trees. During construction erosion control will be instituted to plant graded slopes. SWPPP has been prepared and submitted earlier.

Storm water from Berry Circle will be discharged into the detention basin, which will allow sediments and pollutants to settle into the vegetation at basin bottom before the water is discharged into public storm drain. Q10 will be held by the detention basin and will be routed out gradually. Some of the water will be filtered into the ground. Q100 will pass through spillway and through faux wrought iron gate.

Precise grading plans for each lot will direct downspouts and surface run off into landscape areas before discharging them into street gutters. Sidewalks are going to be drained into parkways before discharging into the gutter. Offsite runoffs are going to be collected through v-ditch at the property line and will be discharged into the gutter through grated curb outlet. Gutter flow on Como Street fronting the Tract will be directed into the detention basin before being discharged into public storm drain.

V.2 SOURCE CONTROL BMPS

Table 2. Source Control BMPs

BMP Name	Check One		If not applicable, state brief reason
	Included	Not Applicable	
Non-Structural Source Control BMPs			
Education for Property Owners, Operators, Tenants, Occupants, or Employees	☒	☐	
Activity Restrictions	☒	☐	
Irrigation System and Landscape Maintenance	☒	☐	
Common Area Litter Control	☒	☐	
Street Sweeping Private Streets and Parking Lots	☐	☒	No private streets
Drainage Facility Inspection and Maintenance	☒	☐	
Structural Source Control BMPs			
MS4 Stenciling and Signage	☐	☐	This project will not connect to the MS4.
Landscape and Irrigation System Design	☒	☐	
Protect Slopes and Channels	☒	☐	
Provide Community Car Wash Racks	☐	☒	Residential tract
Properly Design:	☐	☐	
Fueling Areas	☐	☒	No fueling on the tract
Air/Water Supply Area Drainage	☒	☐	
Trash Storage Areas	☒	☐	
Loading Docks	☐	☒	Residential tract
Maintenance Bays	☐	☒	Residential tract
Vehicle and Equipment Wash Areas	☐	☒	Residential tract
Outdoor Material Storage Areas	☐	☒	Residential tract
Outdoor Work Areas or Processing Areas	☐	☒	Residential tract
Provide Wash Water Controls for Food Preparation Areas	☒	☐	

Instructions: *Provide narrative below describing how each* ***included*** *BMP will be implemented, the implementation frequency, inspection and maintenance frequency, inspection criteria, and the entity or party responsible for implementation, maintenance, and/or inspection. The location of each structural BMP must also be shown on the WQMP Site Plan included in Appendix B.*

Non-Structural Source Control BMPs:

Education for Property Owners, Operators, and Employees – Stormwater Pollution Prevention Education will be provided upon purchase of any lot or house in Mission Hills development. Mission Hills Wildomar HOA will be responsible for implementation of the education program.

Activity Restrictions – Activities that could be deleterious to water quality will not be allowed on site. The site will be inspected and maintained weekly. Mission Hills Wildomar HOA will be responsible for implementation of weekly inspections.

Irrigation System and Landscape Maintenance – Automatic timers will be used, where practical, to minimize runoff. The site will be watered at an application rate that does not exceed the infiltration rate of the soil. Sprinkler heads are located to water the landscaping and not concrete or pavement to avoid unnecessary runoff. Watering time will be adjusted seasonally to match plant needs, i.e., more in summer and less in winter. Drip irrigation systems will be used for shrubs and trees when possible. The Design of the irrigation system will apply water uniformly. Drought resistant landscaping will be used where possible. Mission Hills Wildomar, LP will install appropriate irrigation materials to comply with the practices listed above. Mission Hills Wildomar HOA will be responsible for the operation and maintenance of the irrigation system. The system will be inspected every week to verify there are no leaks and that the system is working to its optimal capacity.

Homeowner Trash and Common Area Litter Control – Each individual homeowner will store its trash, recyclables and vegetation in containers provided by trash service provider. Common Area Litter will be collected and stored in containers and placed at the driveway of the detention/recreation area to be picked up the trash haulers. All other waste generated during construction will be collected and stored in metal dumpsters and disposed of in compliance with Federal, State of California, and local laws, regulations, and ordinances. Trash will be disposed of weekly. Mission Hills Wildomar HOA will be responsible for implementation of weekly trash removal and inspection of trash storage areas to prevent it from coming into contact with storm water flows.

Structural Source Control BMPs:

Landscape and Irrigation System Design – Automatic timers will be used, where practical, to minimize runoff. The site will be watered at an application rate that does not exceed the infiltration rate of the soil. Sprinkler heads are located to water the landscaping and not concrete or pavement to avoid unnecessary run-off. Watering time will be adjusted seasonally to match plant needs, i.e., more in summer and less in winter. Drip irrigation systems will be used for shrubs and trees when possible. The Design of the irrigation system will apply water uniformly. Drought resistant landscaping will be used where possible. In common areas Mission Hills Wildomar, LP will install appropriate irrigation materials to comply with the practices listed above. Mission Hills Wildomar HOA will be responsible for the operation and maintenance of the irrigation system in these areas. The system will be inspected weekly to verify there are no leaks and that the system is working to its optimal capacity. Each homeowner will be responsible for the maintenance and upkeep of its irrigation system and shall comply with control BMPs.

Properly Design Trash Storage Areas – All trash container areas at Mission Hills will be paved with an impervious surface, disallow run-on from adjoining areas, divert drainage from adjoining roofs and pavements around the trash areas and contained to prevent off-site transport of trash. Trash dumpsters (containers) will be leak proof and have attached covers or lids. The trash storage areas will be inspected monthly to verify there are no leaks and that all potential pollutants are contained. Each homeowner shall be responsible for its own trash storage area.

Structural Source Control BMPs, NOT being used:

MS4 stenciling and Signage

Protect Slopes and Channels

Provide Community Car Wash Racks

Loading Docks

Maintenance Bays

Vehicle and Equipment Wash Areas

Outdoor material storage areas & Outdoor work areas

Appendix D includes copies of the educational materials that will be used in implementing this project-specific WQMP.

V.3 TREATMENT CONTROL BMPS

The following identified pollutants of concern are not listed in the Treatment Control BMP Selection matrix, will be addressed by Treatment Control BMPs as follow:

Organic Compounds – The proposed BMPs designed for this project have unknown removal efficiency for Organic Compounds. Organic pollutants can only be removed with High Efficiency treatment and costly filtration system. The proposed detention basin will filter some of these pollutants but it would be impossible and cost prohibitive to remove them all in a sever run off event especially hydrocarbons which will float over the surface of water. To minimize organic compound concerns in the run off to the extent feasible, every effort will be made to limit the use of pesticides, solvents and hydrocarbons on the tract.

Trash & Debris – Before the runoff is discharged to receiving waters trash and debris will be capture in the detention basin by trash racks. Each individual homeowner will be instructed by HOA to collect their trash and garbage from their lots so that they will not end up in the runoff.

Bacteria/Virus – The detention basin is designed to hold water for 48-72 hours depending on the storm event during which time water will infiltrate into the ground. This period is not sufficiently long period for bacteria or virus to develop in the stagnant water.

Pesticides – Both of the BMPs designed for this project have unknown removal efficiency for Pesticides. Lake Elsinore is not impaired by this pollutant. The use of pesticides on landscape areas on this tract will be minimal. Most landscaping will take into consideration native plant species and all efforts will be made to choose pesticides if ever used to be biodegradable and non-damaging to the environment.

Supporting engineering calculations for QBMP and/or VBMP, and Treatment Control BMP design details are included in Appendix F.

A copy of the property/project soils report is included in Appendix E.

0002379

Abbreviations:

L: Low removal efficiency H/M: High or medium removal efficiency U: Unknown removal efficiency

Notes:

(1) Periodic performance assessment and updating of the guidance provided by this table may be necessary.

(2) Includes grass swales, grass strips, wetland vegetation swales, and bioretention.

(3) Includes extended/dry detention basins with grass lining and extended/dry detention basins with impervious lining. Effectiveness based upon minimum 36-48-hour drawdown time.

(4) Includes infiltration basins, infiltration trenches, and porous pavements.

(5) Includes permanent pool wet ponds and constructed wetlands.

(6) Includes sand filters and media filters.

(7) Also known as hydrodynamic devices, baffle boxes, swirl concentrators, or cyclone separators.

(8) Includes proprietary stormwater treatment devices as listed in the CASQA Stormwater Best Management Practices Handbooks, other stormwater treatment BMPs not specifically listed in this WQMP, or newly developed/emerging stormwater treatment technologies.

(9) Project proponents should base BMP designs on the Riverside County Stormwater Quality Best Management Practice Design Handbook. However, project proponents may also wish to reference the California Stormwater BMP Handbook – New Development and Redevelopment (www.cabmphandbooks.com). The Handbook contains additional information on BMP operation and maintenance.

(10) Note: Projects that will utilize infiltration-based Treatment Control BMPs (e.g., Infiltration Basins, Infiltration Trenches, Porous Pavement) must include a copy of the property/project soils report as Appendix E to the project-specific WQMP. The selection of a Treatment Control BMP (or BMPs) for the project must specifically consider the effectiveness of the Treatment Control BMP for pollutants identified as causing an impairment of Receiving Waters to which the project will discharge Urban Runoff.

V.4 EQUIVALENT TREATMENT CONTROL ALTERNATIVES

Not Applicable. Off site treatment of pollutants is not necessary due to the proposed on site bio-retention and filtration.

V.5 REGIONALLY-BASED TREATMENT CONTROL BMPS

Not Applicable. Off site treatment of pollutants is not necessary due to the proposed on site bio-retention and filtration.

VI. Operation and Maintenance Responsibility for Treatment Control BMPs

Operation and maintenance (O&M) requirements for all structural Source Control and Treatment Control BMPs shall be identified in the project-specific WQMP. The project-specific WQMP shall address the following:

- Identification of each BMP that requires O&M:

◆ Landscaping

◆ Education

◆ Street Sweeping

◆ Infiltration Trenches

◆ Filter Strips

◆ Seepage Pits (Dry Wells)

- Thorough description of O&M activities, the O&M process, and the handling and placement of any wastes:

◆ Landscaping – Must be maintained regularly (twice a month at minimum) through cutting, removal of debris and regular watering to keep vegetation flourishing and therefore effective as BMP.

◆ Education – Education on how to prevent the pollution of Storm Water must be provided to each homeowner at the time they purchase a house in the tract.

◆ Street Sweeping – Since streets are dedicated public streets sweeping will be the responsibility of the service district.

◆ Detention Basin – Detention basin will be maintained clean and landscaped with native drought resistant vegetation. All trash and debris must be collected periodically and spillway must be inspected before the start of the rainy season. After each storm event HOA must inspect and check the level of water and the integrity of the surrounding dirt embankment.

◆ Curb Inlets and Catch Basins – All curb inlets and catch basins must be maintained clean and free of vegetation and debris. HOA will be responsible to maintain these structures.

◆ Storm Drain Pipe – Storm Drain Pipe from Berry Circle Cul-de-sac to the detention basin must be maintained clean of all vegetation and debris. It has to be inspected and cleaned before the start of rainy season.

◆ Sump Condition Overflow – There is a sump condition at the end of Berry Circle Cul-de-sac at the driveway entrance leading to detention basin. In case the curb inlet is clogged the runoff water will rise and overflow the sidewalk at this location and will flow into the detention basin through a 4' wide concrete swale built for this purpose in the middle of driveway.

◆ V-Ditch on Tract Boundaries – V-ditch along tract boundaries are built to discharge offsite water onto paved streets. These ditches should be maintained by HOA and should be kept clean of vegetation, debris, rocks, trash, etc.

- BMP start-up dates:

◆ Landscaping – Upon completion of the project's construction

◆ Education – Upon homeowner's purchase of a house.

◆ Street Sweeping – Sweeping of the surrounding streets will be ongoing at the onset of construction project as necessary to keep streets clear of dirt and trash.

◆ Detention Basin and other BMPs - upon completion of construction.

- Schedule of the frequency of O&M for each BMP:

◆ Landscaping – Twice a month, at a minimum.

◆ Education –Upon purchase of property.

◆ Street Sweeping – Twice a month during construction.

◆ Detention Basin – Will receive inspection and maintenance, as needed, after each storm event.

◆ Other BMPs – Inspection, clean up and maintenance before the start of rainy season.

- Identification of the parties (name, address, and telephone number) responsible for O&M, including a written agreement with the entities responsible for O&M. This agreement can take the form of a Covenant and Agreement recorded by the Project Proponent with the County Recorder, HOA or POA CC&Rs, formation of a maintenance district or assessment district or other instrument sufficient to guarantee perpetual O&M. The preparer of this project-specific WQMP should carefully review Section 4.6 of the WQMP prior to completing this section of the project-specific WQMP.

◆ The Mission Hills Wildomar HOA will be responsible for the Operation and maintenance of the above listed BMPs.

- Self-inspections and record-keeping requirements for BMPs (review local specific requirements regarding self-inspections and/or annual reporting), including identification of responsible parties for inspection and record- keeping.

◆ The Mission Hills Wildomar HOA will be responsible for the inspection and record keeping requirements of the above listed BMPs.

- Thorough descriptions of water quality monitoring, if required by the Co-Permittee.

◆ The Mission Hills Wildomar, LP or its contractor or successor or assignee will be responsible for any water quality monitoring necessary, including the collection of samples and monitoring during construction and for one-year post construction.

VII. Funding

A funding source or sources for the O&M of each Treatment Control BMP identified in the project-specific WQMP must be identified. By certifying the project-specific WQMP, the Project applicant is certifying that the funding responsibilities have been addressed and will be transferred to future owners. One example of how to adhere to the requirement to transfer O&M responsibilities is to record the project-specific WQMP against the title to the property.

Mission Hills Wildomar HOA will fund all necessary maintenance.

TRACT MAP Tract #: TR31993 Parcel: 368-030-056

APPROVED
APR 04 2006
BY BOARD OF SUPERVISORS

10. GENERAL CONDITIONS

EVERY DEPARTMENT

10. EVERY. 1 MAP - DEFINITIONS INEFFECT

The words identified in the following list that appear in all capitals in the attached conditions of Tentative Tract Map No. 31993 shall be henceforth defined as follows:

TENTATIVE MAP = Tentative Tract Map No. 31993, Amended No. 4, dated August 8, 2005.

FINAL MAP = Final Map or Parcel Map for the TENTATIVE MAP whether recorded in whole or in phases.

10. EVERY. 2 MAP - PROJECT DESCRIPTION INEFFECT

The land division hereby permitted is to subdivide 13.15 acres into 25 single-family residential lots, and one lot to be used as a detention basin. The lots shall have a minimum lot size of 18,000 gross square feet (15,000 net sq. ft.)

10. EVERY. 3 MAP - HOLD HARMLESS INEFFECT

The land divider or any successor-in-interest shall defend, indemnify, and hold harmless the County of Riverside COUNTY), its agents, officers, or employees from any claim, action, or proceeding against the COUNTY, its agents, officers, or employees to attack, set aside, void, or annul an approval of the COUNTY, its advisory agencies, appeal boards, or legislative body concerning the TENTATIVE MAP, which action is brought within the time period provided for in California Government Code, Section 66499.37. The COUNTY will promptly notify the land divider of any such claim, action, or proceeding against the COUNTY and will cooperate fully in the defense. If the COUNTY fails to promptly notify the land divider of any such claim, action, or proceeding or fails to cooperate fully in the defense, the land divider shall not, thereafter, be responsible to defend, indemnify, or hold harmless the COUNTY.

10. EVERY. 4 MAP - 90 DAYS TO PROTEST INEFFECT

The land divider has 90 days from the date of approval of these conditions to protest, in accordance with the procedures set forth in Government Code Section 66020, the imposition of any and all fees, dedications, reservations and/or other exactions imposed on this project as a result

10. GENERAL CONDITIONS

10. EVERY. 4 MAP - 90 DAYS TO PROTEST (cont.) INEFFECT

of the approval or conditional approval of this project.

BS GRADE DEPARTMENT

10.BS GRADE. 1 MAP-GIN INTRODUCTION INEFFECT

Improvement such as grading, filling, over excavation and recompaction, and base or paving which require a grading permit are subject to the included Building and Safety Grading Division conditions of approval.

10.BS GRADE. 2 MAP-G1.2 OBEY ALL GDG REGS INEFFECT

All grading shall conform to the Uniform Building Code, Ordinance 457, and all other relevant laws, rules and regulations governing grading in Riverside County and prior to commencing any grading which includes 50 or more cubic yards, the applicant shall obtain a grading permit from the Building & Safety Department.

10.BS GRADE. 3 MAP-G1.3 DISTURBS NEED G/PMT INEFFECT

Ordinance 457 requires a grading permit prior to clearing , grubbing or any top soil disturbances related to construction grading.

10.BS GRADE. 4 MAP-G1.6 DUST CONTROL INEFFECT

All necessary measures to control dust shall be implemented by the developer during grading.

10.BS GRADE. 5 MAP-G2.5 2:1 MAX SLOPE RATIO INEFFECT

Grade slopes shall be limited to a maximum steepness ratio of 2:1 (horizontal to vertical) unless otherwise approved.

10.BS GRADE. 6 MAP-G2.8MINIMUM DRNAGE GRAD INEFFECT

Minimum drainage grade shall be 1% except on portland cement concrete where 0.35% shall be the minimum.

10.BS GRADE. 7 MAP-G2.9DRNAGE & TERRACING INEFFECT

Provide drainage facilities and terracing in conformance with the Uniform Building Code's chapter on "Excavation and

10. GENERAL CONDITIONS

10.BS GRADE. 7 MAP-G2.9DRNAGE & TERRACING (cont.) INEFFECT

Grading."

10.BS GRADE. 8 MAP-G2.10 SLOPE SETBACKS INEFFECT

Observe slope setbacks from buildings and property lines per the Uniform Building Code - as amended by Ordinance 457.

FIRE DEPARTMENT

10.FIRE. 1 MAP-#50-BLUE DOT REFLECTORS INEFFECT

Blue retroreflective pavement markers shall be mounted on private streets, public streets and driveways to indicate location of fire hydrants. Prior to installation, placement of markers must be approved by the Riverside County Fire Department.

10.FIRE. 2 MAP-#16-HYDRANT/SPACING INEFFECT

Schedule A fire protection approved standard fire hydrants, (6"x4"x2 1/2") located one at each street intersection and spaced no more than 330 feet apart in any direction, with no portion of any lot frontage more than 165 feet from a hydrant. Minimum fire flow shall be 1000 GPM for 2 hour duration at 20 PSI. Shall include perimeter streets at each intersection and spaced 660 feet apart.

FLOOD RI DEPARTMENT

10.FLOOD RI. 1 MAP FLOOD HAZARD REPORT INEFFECT

Tract Map 31993 is a proposal to subdivide 13.15 acres into residential lots and a detention basin in the Sedco area. The site is located on the east corner of Mission Trail and Como Street.

The site lies along the base of a hill with only a small local area along the east tributary to the site. The majority of the site drains northerly towards Como Street. A small portion of the site drains to Mission Trail.

The development of this site would increase peak flow rates and volume of runoff on downstream property owner(s). There is no downstream infrastructure to convey flows from this site safely to Lake Elsinore. The District has

10. GENERAL CONDITIONS

10.FLOOD RI. 1 MAP FLOOD HAZARD REPORT (cont.) INEFFECT

received complaints from downstream property owners due to the lack of drainage infrastructure. Mitigation shall be required to offset the impacts of increased peak flows along with the increase in volume caused by this development. A detention basin is shown on the exhibit. The District has received preliminary calculations for the increased runoff basin dated 8/3/04 and a Percolation Testing report received on October 7, 2004. The information provided appears to adequately address peak flow and increased volume mitigation. An infiltration basin combined with an increased runoff basin is proposed. Percolation tests were conducted on the project site to insure adequate basin drainage.

The proposed basin shall be designed to perform increased runoff mitigation according to the criteria specified in 10. FLOOD RI. 13 and as an infiltration basin designed to the criteria in the Riverside County Stormwater Quality Best Management Practice Design Handbook. The routing calculations for the increased runoff analysis shall address the impact of the dual mitigation function of the basin.

10.FLOOD RI. 2 MAP INFILTERATION BASIN INEFFECT

Unles regional downstream Flood Control facilities are constructed, this tract shall contsruct an "infiltration basin" per the District criteria as found in the Riverside County Stormwater Quality Best Management Practice Design Handbook.

10.FLOOD RI. 3 MAP 10 YR CURB - 100 YR ROW INEFFECT

The 10 year storm flow shall be contained within the curb and the 100 year storm flow shall be contained within the street right of way. When either of these criteria is exceeded, additional drainage facilities shall be installed. The property shall be graded to drain to the adjacent street or an adequate outlet.

10.FLOOD RI. 4 MAP 100 YR SUMP OUTLET INEFFECT

Drainage facilities outletting sump conditions shall be designed to convey the tributary 100 year storm flows. Additional emergency escape shall also be provided.

10. GENERAL CONDITIONS

10.FLOOD RI. 5 MAP PERP DRAINAGE PATTERNS INEFFECT

The property's street and lot grading shall be designed in a manner that perpetuates the existing natural drainage patterns with respect to tributary drainage areas, outlet points and outlet conditions. Otherwise a drainage easement shall be obtained from the affected property owners for the release of concentrated or diverted storm flows. A copy of the recorded drainage easement shall be submitted to the District for review.

10.FLOOD RI. 12 MAP INCREASED RUNOFF INEFFECT

The development of this site will adversely impact downstream property owners by increasing the rate and volume of flood flows. To mitigate this impact, the developer has proposed a detention basin. Although final design of the basin will not be required until the improvement plan stage of this development, the applicant's engineer has submitted a preliminary hydrology and hydraulics study that indicates that the general size, shape, and location of the proposed basin is sufficient to mitigate the impacts of the development.

10.FLOOD RI. 13 MAP INCREASED RUNOFF CRITERIA INEFFECT

The development of this site would increase peak flow rates on downstream properties. Mitigation shall be required to offset such impacts. An increased runoff basin shall be shown on the exhibit and calculations supporting the size of the basin shall be submitted to the District for review. The entire area of proposed development will be routed through a detention facility(s) to mitigate increased runoff.

A complete drainage study including, but not limited to, hydrologic and hydraulic calculations for the proposed detention basin shall be submitted to the District for review and approval.

Storms to be studied will include the 1-hour, 3-hour, 6-hour and 24-hour duration events for the 2-year, 5-year and 10-year return frequencies. Detention basin(s) and outlet(s) sizing will ensure that none of these storm events has a higher peak discharge in the post-development condition than in the pre-development condition. For the 2-year and 5-year events the loss rate will be determined using an AMC I condition. For the 10-year event AMC II

10. GENERAL CONDITIONS

.10.FLOOD RI. 13 MAP INCREASED RUNOFF CRITERIA (cont.) INEFFEC

will be used. Constant loss rates shall be used for the 1-hour, 3-hour and 6-hour events. A variable loss rate shall be used for the 24-hour events.

Low Loss rates will be determined using the following:
1. Undeveloped Condition --> LOW LOSS = 90%
2. Developed Condition --> LOW LOSS = .9 -(.8x%IMPERVIOUS)
3. Basin Site --> LOW LOSS = 10%

Where possible and feasible the on-site flows should be mitigated before combining with off-site flows to minimize the size of the detention facility required. If it is necessary to combine off-site and on-site flows into a detention facility two separate conditions should be evaluated for each duration/return period/before-after development combination studied; the first for the total tributary area (off-site plus on-site), and the second for the area to be developed alone (on-site). It must be clearly demonstrated that there is no increase in peak flow rates under either condition (total tributary area or on-site alone), for each of the return period/duration combinations required to be evaluated. A single plot showing the pre-developed, post-developed and routed hydrographs for each storm considered, shall be included with the submittal of the hydrology study.

No outlet pipe(s) will be less than 18" in diameter. Where necessary an orifice plate may be used to restrict outflow rates. Appropriate trash racks shall be provided for all outlets less than 48" in diameter.

The basin(s) and outlet structure(s) must be capable of passing the 100-year storm without damage to the facility. Embankment shall be avoided in all cases unless site constraints or topography make embankment unavoidable in the judgment of the General Manager-Chief Engineer.

Mitigation basins should be designed for joint use and be incorporated into open space or park areas. Sideslopes should be no steeper than 4:1 and depths should be minimized where public access is uncontrolled.

A viable maintenance mechanism, acceptable to both the County and the District, should be provided for detention facilities. Generally, this would mean a CSA, landscape district, parks agency or commercial property owners

10. GENERAL CONDITIONS

10.FLOOD RI. 13 MAP INCREASED RUNOFF CRITERIA (cont.) (cont.) INEFFECT

association. Residential homeowners associations are discouraged.

10.FLOOD RI. 15 MAP INTERCEPTOR DRAIN CRITERIA INEFFECT

The criteria for maintenance access of terrace/interceptor is as follows: flows between 1-5 cfs shall have a 5-foot wide access road, flows between 6-10 cfs shall be a minimum 6-foot rectangular channel. Terrace/interceptor drains are unacceptable for flows greater than 10 cfs. Flows greater than 10 cfs shall be brought to the street.

10.FLOOD RI. 16 MAP BMP - ENERGY DISSIPATOR INEFFECT

Energy Dissipators, such as rip-rap, shall be installed at the outlet of a storm drain system that discharges runoff flows into a natural channel or an unmaintained facility. The dissipators shall be designed to minimize the amount of erosion downstream of the storm drain outlet.

10.FLOOD RI. 17 MAP BMP - TRASH RACKS INEFFECT

Trash Racks shall be installed at all inlet structures that collect runoff from open areas with potential for large, floatable debris.

PLANNING DEPARTMENT

10.PLANNING. 1 MAP - MAP ACT COMPLIANCE INEFFECT

This land division shall comply with the State of California Subdivision Map Act and to all requirements of County Ordinance No. 460, Schedule A, unless modified by the conditions listed herein.

10.PLANNING. 2 MAP - FEES FOR REVIEW INEFFECT

Any subsequent review/approvals required by the conditions of approval, including but not limited to grading or building plan review or review of any mitigation monitoring requirement, shall be reviewed on an hourly basis, or other appropriate fee, as listed in County Ordinance No. 671. Each submittal shall be accompanied with a letter clearly indicating which condition or conditions the submittal is intended to comply with.

10. GENERAL CONDITIONS

10.PLANNING. 4 MAP - LANDSCAPE MAINTENANCE INEFFECT

The land divider, or any successor-in-interest to the land divider, shall be responsible for maintenance and upkeep of all slopes, landscaped areas and irrigation systems within the land division until such time as those operations are the responsibility of the individual home owners, a homeowners association, or any other successor-in-interest.

10.PLANNING. 7 MAP - NO OFFSITE SIGNAGE INEFFECT

There shall be no offsite signage associated with this land division, except as otherwise provided by Ordinance No. 679.3 (Kiosk Program).

10.PLANNING. 8 MAP - OFFSITE SIGNS ORD 679.4 INEFFECT

No offsite subdivision signs advertising this land ivision/development are permitted, other than those allowed under Ordinance No. 679.4. Violation of this condition of approval may result in no further permits of any type being issued for this subdivision until the unpermitted signage is removed.

10.PLANNING. 9 MAP - RES. DESIGN STANDARDS INEFFECT

The design standards for the subject parcels are as follows:

a. Lots created by this map shall conform to the design standards of the R-1 zone.
b. The front yard setback is 20 feet.
c. Side yards on interior and through lots shall be not less than ten percent of the width of the lot, but not less than three feet in width in any event, and need not exceed a width of five feet. Side yards on corner and reversed corner lots shall be not less than ten feet from the existing street line or from any future street line as shown on any specific plan of highways, whichever is nearer the proposed structure, upon which the main building sides, except that where the lot is less than 50 feet wide the yard need not exceed 20 percent of the width of the lot.
d. The rear yard setback is 20 feet.
e. The minimum width of each lot is 65 feet.
f. The maximum height of any building is three stories or 40 feet.
g. The minimum parcel size is 18,000 gross square feet

10. GENERAL CONDITIONS

10.PLANNING. 9 MAP - RES. DESIGN STANDARDS (cont.) INEFFECT

(15,000 net sq. ft.).

h. No more than 50% of the lot shall be covered by structure.

k. Residential driveway approaches shall be a minimum of 12 feet and a maximum of 30 feet in width, and 20 feet of full height curb is required between driveways within any one property frontage, in accordance with Ord. No. 461, Standard No. 207.

EXCEPT AS ALLOWED BY ORDINANCE NO. 348, THERE SHALL BE NO ENCROACHMENT INTO THE SETBACK.

10.PLANNING. 10 MAP - NPDES COMPLIANCE (1) INEFFECT

Since the project will disturb one (1) acre or more, the land divider/permit holder shall comply with all of the applicable requirements of the National Pollution Discharge Elimination System (NPDES) and shall conform to NPDES Best Management Practices for Stormwater Pollution Prevention Plans during the life of this permit.

10.PLANNING. 13 MAP - ORD NO. 659 (DIF) INEFFECT

Prior to the issuance of either a certificate of occupancy or prior to building permit final inspection, the applicant shall comply with the provisions of Riverside County Ordinance No. 659, which requires the payment of the appropriate fee set forth in the Ordinance. Riverside County Ordinance No. 659 has been established to set forth policies, regulations and fees related to the funding and construction of facilities necessary to address the direct and cummulative environmental effects generated by new development projects described and defined in this Ordinance, and it establishes the authorized uses of the fees collected. The fee shall be paid for each residential unit to be constructed within this land division.

In the event Riverside County Ordinance No. 659 is recinded, this condition will no longer be applicable. However, should Riverside County Ordinance No. 659 be rescinded and superseded by a subsequent mitigation fee ordinance, payment of the appropriate fee set forth in that ordinance shall be required.

10. GENERAL CONDITIONS

10.PLANNING. 14 MAP - ORD 810 OPN SPACE FEE INEFFECT

Prior to the issuance of either a certificate of occupancy or prior to building permit final inspection, the applicant shall comply with the provisions of Riverside County Ordinance No. 810, which requires payment of the appropriate fee set forth in the Ordinance. Riverside County Ordinance No. 810 has been established to set forth policies, regulations and fees related to the funding and acquisition of open space and habitat necessary to address the direct and cumulative environmental effects generated by new development projects described and defined in this Ordinance.

The fee shall be paid for each residential unit to be constructed within this land division.

In the event Riverside County Ordinance No. 810 is rescinded, this condition will no longer be applicable. However, should Riverside County Ordinance No. 810 be rescinded and superseded by a subsequent mitigation fee ordinance, payment of the appropriate fee set forth in that ordinance shall be required.

10.PLANNING. 15 MAP - REQUIRED MINOR PLANS INEFFECT

For each of the below listed items, a minor plot plan application shall be submitted and approved by the County Planning Department pursuant to Section 18.30.a. (1) of County Ordinance No. 348 (Plot Plans not subject to the California Environmental Quality Act and not subject to review by any governmental agency other than the Planning Department) along with the current fee.

1. Final Site Development Plan for each phase of development.

2. Model Home Complex Plan shall be filed and approved for each phase if models change between phases. A final site of development plot plan must be approved prior to approval, or concurrent with a Model Home Complex Plan.

3. Landscaping Plan for typical front yard/slopes/open space. These three plans may be applied for separately for the whole tract or for phases.

4. Landscaping plans totally in the road right-of-Way shall be submitted to the Transportation Department only.

10. GENERAL CONDITIONS

10.PLANNING. 15 MAP - REQUIRED MINOR PLANS (cont.) INEFFECT

5. Each phase shall have a separate wall and fencing plan.

NOTE: The requirements of the above plot plans may be accomplished as one, or, any combination of multiple plot plans required by these conditions of approval. However, each requirement shall be cleared individually with the applicable plot plan condition of approval in the "PRIOR TO BUILDING PERMIT" (80 series) conditions.

10.PLANNING. 16 MAP - GEO NO. 1185 INEFFECT

County Geologic Report (GEO) No. 1185 was prepared for this project (TR31993 by RMA Group, and is entitled "Geologic Fault Investigation of Proposed Residential Property, Southeast Corner of Mission Trail and Como Street, Wildomar, CA", and dated October 15, 2003.

GEO No. 1185 concluded:

1.No faults related to the Wildomar fault zone pass through the site. The potential for future displacement within the site appears unlikely.

2.The potential for liquefaction at the site is considered to be nil.

3.The potential for seismically induced settlement or lurching is low.

4.The potential for seismically induced landslides appears unlikely.

GEO No. 1185 recommended:

1.No fault setback zone required for site.

2.Geologic mapping should be performed during the course of grading in order to verify the findings of GEO No. 1185.

GEO No. 1185 satisfies the requirement for a geologic report and fault study for CEQA/Planning purposes. Final Planning Department approval of GEO NO 1185 is hereby granted for planning purposes. Engineering and other

10. GENERAL CONDITIONS

10.PLANNING. 16 MAP - GEO NO. 1185 (cont.) INEFFEC

Uniform Building Code parameters will be reviewed and additional comments and/or conditions may be imposed by the Building and Safety Department upon application for grading and/or building permits.

10.PLANNING. 17 MAP - DESIGN GUIDELINES INEFFEC

The project shall conform toCountywide Design Standards and Guidelines adopted January 13, 2004.

10.PLANNING. 18 MAP - SUBMIT BUILDING PLANS INEFFEC

The developer shall cause building plans to be submitted to the TLMA- Land Use Setion for review by the Department of Building and Safety - Plan Check Division. Said plans shall be in conformance with the approved TENTATIVE MAP.

10.PLANNING. 21 MAP - NO OFF-ROAD USES ALLOWED INEFFEC

Trail bikes, dune buggies, off-road vehicles and other similar powered apparatus shall not be operated for purposes such as, but not limited to, hill climbing, trail riding, scrambling, racing and riding exhibitions.

10.PLANNING. 22 MAP - WASTE MANAGEMENT INEFFECT

The project proponent shall use the following measures to help reduce the project's potential solid waste impacts and to help in the County's efforts to comply with State Law in diverting solid waste from landfill disposal:

1. Green waste generated by the project should be kept separate from other waste types and either composted onsite or directed to local wood grinding and/or composting operations.

2. The use of mulch and/or compost in the development and maintenance of landscape areas is recommended.

3. Construction and demolition waste should be reduced and/or diverted from landfill disposal by the use of onsite grinders or by directing the materials to recycling facilities.

10. GENERAL CONDITIONS

10.PLANNING. 23 PPA - COMPLY WITH ORD. 655 INEFFECT

All lighting shall comply with any applicable provisions of Riverside County Ordinance No. 655.

10.PLANNING. 24 MAP - TRAIL MAINTENANCE INEFFECT

The land divider, or the land divider's successor-in-interest, shall be responsible for the maintenance of any trail easement required under these conditions until such time as the maintenance is taken over by an appropriate maintenance district.

TRANS DEPARTMENT

10.TRANS. 1 MAP - DRAINAGE 1 INEFFECT

The land divider shall protect downstream properties from damages caused by alteration of the drainage patterns, i.e., concentration or diversion of flow. Protection shall be provided by constructing adequate drainage facilities including enlarging existing facilities and/or by securing a drainage easement. All drainage easements shall be shown on the final map and noted as follows: "Drainage Easement - no building, obstructions, or encroachments by landfills are allowed". The protection shall be as approved by the Transportation Department.

10.TRANS. 2 MAP - DRAINAGE 2 INEFFECT

The land divider shall accept and properly dispose of all off-site drainage flowing onto or through the site. In the event the Transportation Department permits the use of streets for drainage purposes, the provisions of Article XI of Ordinance No. 460 will apply. Should the quantities exceed the street capacity or the use of streets be prohibited for drainage purposes, the subdivider shall provide adequate drainage facilities and/or appropriate easements as approved by the Transportation Department.

10.TRANS. 6 MAP - TS/EXEMPT INEFFECT

The Transportation Department has not required a traffic study for the subject project. It has been determined that the project is exempt from traffic study requirements.

10. GENERAL CONDITIONS

10.TRANS. 7 MAP - STD INTRO 3(ORD 460/461) INEFFECT

With respect to the conditions of approval for the referenced tentative exhibit, the land divider shall provide all street improvements, street improvement plans and/or road dedications set forth herein in accordance with Ordinance 460 and Riverside County Road Improvement Standards (Ordinance 461). It is understood that the tentative map correctly shows acceptable centerline elevations, all existing easements, traveled ways, and drainage courses with appropriate Q's, and that their omission or unacceptablility may require the map to be resubmitted for further consideration. These Ordinances and all conditions of approval are essential parts and a requirement occurring in ONE is as binding as though occurring in all. All questions regarding the true meaning of the conditions shall be referred to the Transportation Department.

10.TRANS. 9 MAP - OFF-SITE PHASE INEFFECT

Should the applicant choose to phase any portion of this project, said applicant shall provide off-site access roads to County maintained roads as approved by the Transportation Department.

20. PRIOR TO A CERTAIN DATE

PLANNING DEPARTMENT

20.PLANNING. 2 MAP - EXPIRATION DATE INEFFECT

The conditionally approved TENTATIVE MAP shall expire three years after the County of Riverside Board of Supervisors original approval date, unless extended as provided by County Ordinance No. 460. Action on a minor change and/or revised map request shall not extend the time limits of the originally approved TENTATIVE MAP. A Land Management System (LMS) hold shall be placed on the TENTATIVE MAP, and a LMS hold shall be placed on any subsequent minor change or revised map, which shall be set to take effect on the expiration date. The LMS hold effective date shall be extended in accordance with any permitted extensions of time. The LMS hold shall be downgraded to a LMS notice upon recordation of the the first phase of the TENTATIVE MAP. The LMS hold or notice shall remain in effect until the recordation of the final phase of the TENTATIVE MAP. If the TENTATIVE MAP expires before the recordation of the

20. PRIOR TO A CERTAIN DATE

20.PLANNING. 2 MAP - EXPIRATION DATE (cont.) INEFFECT

final phase the LMS hold or notice shall remain in effect and no further FINAL MAP recordation shall be permitted.

50. PRIOR TO MAP RECORDATION

E HEALTH DEPARTMENT

50.E HEALTH. 1 MAP - WATER PLAN INEFFECT

A water system shall have plans and specifications approved by the water company and the Department of Environmental Health.

50.E HEALTH. 2 MAP - MONEY INEFFECT

Financial arrangements (securities posted) must be made for the water improvement plans and be approved by County Counsel.

50.E HEALTH. 3 MAP - SEWER PLAN - COUNTY INEFFECT

A sewer system shall have mylar plans and specifications as approved by the District, the County Survey Department and the Department of Environmental Health.

50.E HEALTH. 4 MAP - ANNEX FINALIZED INEFFECT

Annexation proceedings must be finalized with the applicable purveyor for sanitation service.

FIRE DEPARTMENT

50.FIRE. 1 MAP-#43-ECS-ROOFING MATERIAL INEFFECT

Ecs map must be stamped by the Riverside County Surveyor with the following note: All buildings shall be constructed with class "B" material as per the California Building Code.

50.FIRE. 2 MAP-#46-WATER PLANS INEFFECT

The applicant or developer shall furnish one copy of the water system plans to the Fire Department for review. Plans shall be signed by a registered civil engineer, containing a Fire Department approval signature block, and shall conform to hydrant type, location, spacing and

50. PRIOR TO MAP RECORDATION

50.FIRE. 2 MAP-#46-WATER PLANS (cont.) INEFFECT

minimum fire flow. Once plans are signed by the local water company, the originals shall be presented to the Fire Department for signature.

50.FIRE. 3 MAP-#53-ECS-WTR PRIOR/COMBUS INEFFECT

Ecs map must be stamped by the Riverside County Surveyor with the following note: The required water system, including fire hydrants, shall be installed and accepted by the appropriate water agency prior to any combustible building material placed on an individual lot.

FLOOD RI DEPARTMENT

50.FLOOD RI. 2 MAP SUBMIT PLANS INEFFECT

A copy of the improvement plans, grading plans, final map, environmental constraint sheet, BMP improvement plans, and any other necessary documentation along with supporting hydrologic and hydraulic calculations shall be submitted to the District for review. All submittals shall be date stamped by the engineer and include a completed Flood Control Deposit Based Fee Worksheet and the appropriate plan check fee deposit.

50.FLOOD RI. 3 MAP ONSITE EASE ON FINAL MAP INEFFECT

Onsite drainage facilities located outside of road right of way shall be contained within drainage easements shown on the final map. A note shall be added to the final map stating, "Drainage easements shall be kept free of buildings and obstructions".

50.FLOOD RI. 4 MAP OFFSITE EASE OR REDESIGN INEFFECT

Offsite drainage facilities shall be located within dedicated drainage easements obtained from the affected property owners). Document(s) shall be recorded and a copy submitted to the District prior to recordation of the final map. If the developer cannot obtain such rights, the map should be redesigned to eliminate the need for the easement.

50. PRIOR TO MAP RECORDATION

50.FLOOD RI. 5 MAP WRITTEN PERM FOR GRADING INEFFECT

Written permission shall be obtained from the affected property owners allowing the proposed grading and/or facilities to be installed outside of the tract boundaries. A copy of the written authorization shall be submitted to the District for review and approval.

50.FLOOD RI. 9 MAP BMP - MAINT & INSPECT INEFFECT

Unless an alternate viable maintenance entity is established, the CC&R's for the development's Homeowners Association (HOA) shall contain provisions for all structural BMPs to be inspected, and if required, cleaned no later than October 15 each year. The CC&R's shall identify the entity that will inspect and maintain all structural BMP's within the project boundaries. A copy of the CC&R's shall be submitted to the District for review and approval.

PLANNING DEPARTMENT

50.PLANNING. 1 MAP - PREPARE A FINAL MAP INEFFECT

After the approval of the TENTATIVE MAP and prior to the expiration of said map, the land divider shall cause the real property included within the TENTATIVE MAP, or any part thereof, to be surveyed and a FINAL MAP thereof prepared in accordance with the current County Transportation Department - Survey Division requirements, the conditionally approved TENTATIVE MAP, and in accordance with Article IX of County Ordinance No. 460.

50.PLANNING. 2 MAP - FINAL MAP PREPARER INEFFECT

The FINAL MAP shall be prepared by a licensed land surveyor or registered civil engineer.

50.PLANNING. 3 MAP - SURVEYOR CHECK LIST INEFFECT

The County Transportation Department - Survey Division shall review any FINAL MAP and ensure compliance with the following:

A. All lots on the FINAL MAP shall be in substantial conformance with the approved TENTATIVE MAP relative to size and configuration.

50. PRIOR TO MAP RECORDATION

50.PLANNING. 3 MAP - SURVEYOR CHECK LIST (cont.) INEFFECT

B. All lots on the FINAL MAP shall have a minimum lot size of 18,000 gross square feet (15,000 net sq. ft.).

C. All lot sizes and dimensions on the FINAL MAP shall be in conformance with the development standards of the R-1 zone, and with the Riverside County Integrated Project (RCIP).

D. All lots on the FINAL MAP shall comply with the length to width ratios, as established by Section 3.8.C. of County Ordinance No. 460.

E. All knuckle or cul-de-sac lots shall have a minimum of 40 feet of frontage measured at the front lot line.

F. A 10' community trail easement shall be located on the south side of Como Street (north of lots 1 - 4) starting at the southeast corner of the Cashew Street and Como Street intersection heading easterly towards the project's site easterly boundary.

The easement shall be located out of the Right-of-Way.

50.PLANNING. 4 MAP - REQUIRED APPLICATIONS INEFFECT

No FINAL MAP shall record until Change of Zone No. 06902 has been approved and adopted by the Board of Supervisors and has been made effective. This land division shall conform with the development standards of the designation and/or zone ultimately applied to the property.

50.PLANNING. 8 MAP - QUIMBY FEES (1) INEFFECT

The land divider shall submit to the County Planning Department - Development Review Division a duly and completely executed agreement with the County Service Area No. 152 which demonstrates to the satisfaction of the County that the land divider has provided for the payment of parks and recreation fees and/or dedication of land for the TENTATIVE MAP in accordance with Section 10.35 of County Ordinance No. 460.

50.PLANNING. 12 MAP - ECS SHALL BE PREPARED INEFFECT

The land divider shall prepare an Environmental Constraints Sheet (ECS) in accordance with Section 2.2. E. & F. of

50. PRIOR TO MAP RECORDATION

50.PLANNING. 12 MAP - ECS SHALL BE PREPARED (cont.) INEFFECT

County Ordinance No. 460, which shall be submitted as part of the plan check review of the FINAL MAP.

50.PLANNING. 13 MAP - ECS AFFECTED LOTS INEFFECT

The following note shall be placed on the FINAL MAP: "Environmental Constraint Sheet affecting this map is on file in the County of Riverside Transportation Department - Survey Division, in E.C.S. Book ___, Page ___.

50.PLANNING. 20 MAP - ECS NOTE MT PALOMAR LIGH INEFFECT

The following Environmental Constraints Note shall be placed on the ECS:

"This property is subject to lighting restrictions as required by County Ordinance No. 655, which are intended to reduce the effects of night lighting on the Mount Palomar Observatory. All proposed outdoor lighting systems shall be in conformance with County Ordinance No. 655."

50.PLANNING. 28 MAP - COMPLY WITH ORD 457 INEFFECT

The land divider shall provide proof to The Land Management Agency - Land Use Section that all structures for human occupancy presently existing and proposed for retention comply with Ordinance Nos. 457 and 348.

50.PLANNING. 30 MAP - FEE BALANCE INEFFECT

Prior to recordation, the Planning Department shall determine if the deposit based fees for the TENTATIVE MAP are in a negative balance. If so, any unpaid fees shall be paid by the land divider and/or the land divider's successor-in-interest.

50.PLANNING. 33 MAP - CC&R RES POA COM. AREA INEFFECT

The land divider shall (a) notify the Planning Department that the following documents shall be shortly, or have been, submitted to the Office of the County Counsel for the review and approval of that office, and (b) the land divider shall submit to the Office of the County Counsel the following documents:

1. A cover letter identifying the project for which

50. PRIOR TO MAP RECORDATION

50.PLANNING. 33 MAP - CC&R RES POA COM. AREA (cont.) INEFFEC

approval is sought referencing the Planning Department case number(s) (a copy of this cover letter may be sent to the Planning Department to serve as notification) and identifying one individual to represent the land divider if there are any questions concerning the review of the submitted documents; and

2. One (1) copy AND one (1) original, wet signed, notarized and ready for recordation declaration of covenants, conditions, and restrictions; attached to these documents there shall be included a legal description of the property included within the covenants, conditions and restrictions and a scaled map or diagram of such boundaries, both signed and stamped by a California registered civil engineer or licensed land surveyor; and

3. A sample document conveying title to the purchaser of an individual lot or unit which provides that the declaration of covenants, conditions, and restrictions is incorporated therein by reference; and,

4. A deposit equaling three (3) hours of the current hourly fee for the Review of Covenants, Conditions and Restrictions established pursuant to County Ordinance No. 671 at the time the above referenced documents are submitted to the Office of the County Counsel for review and approval.

The declaration of covenants, conditions and restrictions submitted for review shall a) provide for a minimum term of 60 years, b) provide for the establishment of a property owner's association comprised of the owners of each individual lot or unit as tenants in common, c) provide for the ownership of the common area by either the property owner's association or the owners of each individual lot or unit as tenants in common, and d) contain the following provisions verbatim:

"Notwithstanding any provision in this Declaration to the contrary, the following provisions shall apply:

The property owners' association established herein shall manage and continuously maintain the 'common area', more particularly described as the detention basin shown on the tentative map, and shall not sell or transfer the 'common area' or any part thereof, absent the prior written

50. PRIOR TO MAP RECORDATION

50.PLANNING. 33 MAP - CC&R RES POA COM. AREA (cont.) (cont.) INEFFECT

consent of the Planning Department of the County of Riverside or the County's successor-in-interest.

The property owners' association shall have the right to assess the owners of each individual lot or unit for the reasonable cost of maintaining such 'common area', and shall have the right to lien the property of any such owner who defaults in the payment of a maintenance assessment. An assessment lien, once created, shall be prior to all other liens recorded subsequent to the notice of assessment or other document creating the assessment lien.

This Declaration shall not be terminated, 'substantially' amended, or property deannexed therefrom absent the prior written consent of the Planning Director of the County of Riverside or the County's successor-in-interest. A proposed amendment shall be considered 'substantial' if it affects the extent, usage, or maintenance of the 'common area' established pursuant to the Declaration.

In the event of any conflict between this Declaration and the Articles of Incorporation, the Bylaws, or the property owners' association Rules and Regulations, if any, this Declaration shall control."

Once approved, the copy and the original declaration of covenants, conditions and restrictions shall be forwarded by the Office of the County Counsel to the Planning Department. The Planning Department will retain the one copy for the case file, and forward the wet signed and notarized original declaration of covenents, conditions and restrictions to the County Transportation Department - Survey Division - for safe keeping until the final map is ready for recordation. The County Transportation Department - Survey Division - shall record the original declaration of covenants, conditions and restrictions in conjunction with the recordation of the final map.

TRANS DEPARTMENT

50.TRANS. 1 MAP - R & B B D INEFFECT

Prior to the recordation of the final map, or any phase thereof, the project proponent shall pay fees in accordance

50. PRIOR TO MAP RECORDATION

50.TRANS. 1 MAP - R & B B D (cont.) INEFFECT

with Zone A of the Southwest Road and Bridge Benefit District.

50.TRANS. 2 MAP - DEDICATIONS INEFFECT

All internal streets shall be improved within the dedicated right-of-way in accordance with draft County Standard No. 105, Section B. (36'/56')

50.TRANS. 3 MAP - EXISTING MAINTAINED INEFFECT

Mission Trail is a paved County maintained road and shall be improved with concrete curb-and-gutter located 43 feet from centerline and match up asphalt concrete paving; reconstruction; or resurfacing of existing paving as determined by the Transportation Department within a 64 foot half-width dedicated right-of-way in accordance with draft County Standard No. 92 (1 of 2) (43'/64')

50.TRANS. 4 MAP - IMP PLANS INEFFECT

Improvement plans for the required improvements must be prepared and shall be based upon a design profile extending a minimum of 300 feet beyond the project boundaries at a grade and alignment as approved by the Riverside County Transportation Department. Completion of road improvements does not imply acceptance for maintenance by County.

50.TRANS. 5 MAP - PART-WIDTH INEFFECT

Como Street is a paved County maintained road and shall be improved with 32 feet of asphalt concrete pavement within a 45' part-width dedicated right-of-way in accordance with County Standard No. 104, Section A. (20'/30')

50.TRANS. 6 MAP - OFF-SITE INFO INEFFECT

The off-site rights-of-way required for said access road(s) shall be accepted to vest title in the name of the public if not already accepted.

50.TRANS. 9 MAP - EASEMENT INEFFECT

Any easement not owned by a public utility, public entity or subsidiary, not relocated or eliminated prior to final map approval, shall be delineated on the final map in

50. PRIOR TO MAP RECORDATION

50.TRANS. 9 MAP - EASEMENT (cont.) INEFFECT

addition to having the name of the easement holder, and the nature of their interests, shown on the map.

50.TRANS. 10 MAP - ACCESS RESTRICTION INEFFECT

Lot access shall be restricted on Mission Trail and so noted on the final map.

50.TRANS. 11 MAP - STRIPING PLAN INEFFECT

A signing and striping plan is required for this project. The applicant shall be responsible for any additional paving and/or striping removal caused by the striping plan. Traffic signing and striping shall be performed by County forces with all incurred costs borne by the applicant, unless otherwise approved by the County Traffic Engineer.

50.TRANS. 12 MAP - STREET NAME SIGN INEFFECT

The land divider shall install street name sign(s) in accordance with County Standard No. 816 as directed by the Transportation Department.

50.TRANS. 15 MAP - LANDSCAPING INEFFECT

The project proponent shall comply in accordance with landscaping requirements within public road rights-of-way, in accordance with Ordinance 461. Landscaping shall be installed within Mission Trail. Landscaping plans shall be submitted on standard County Plan sheet format (24" X 36"). Landscaping plans shall be submitted with the street improvement plans. If landscaping maintenance to be annexed to County Service Area, or Landscaping and Lighting Maintenance District, landscaping plans shall depict ONLY such landscaping, irrigation and related facilities as are to be placed within the public road rights-of-way.

50.TRANS. 16 MAP - ASSESSMENT DIST INEFFECT

Should this project lie within any assessment/benefit district, the applicant shall, prior to recordation, make application for and pay for their reapportionment of the assessments or pay the unit fees in the benefit district.

50. PRIOR TO MAP RECORDATION

50.TRANS. 18 MAP - SOILS 2 INEFFEC

The developer/owner shall submit a preliminary soils and pavement investigation report addressing the construction requirements within the road right-of-way.

50.TRANS. 19 MAP - INTERSECTION/50' TANGENT INEFFEC

All centerline intersections shall be at 90 degrees, plus or minus 5 degrees, with a minimum 50' tangent, measured from flowline/curbface or as approved by the Transportation Planning and Development Review Division Engineer.

50.TRANS. 23 MAP - STREET SWEEPING INEFFEC

The project proponent shall contact the County Service Area (CSA) Project Manager to file an application for annexation or inclusion into CSA for street sweeping; or enter into a similar mechanism as approved by the Transportation Department.

50.TRANS. 24 MAP - STREETLIGHT PLAN INEFFEC

A separate street light plan is required for this project. Street lighting shall be designed in accordance with County Ordinance 460 and Streetlight Specification Chart found in Specification Section 22 of Ordinance 461. For projects within SCE boundaries use County of Riverside Ordinance 461, Standard No's 1000 or 1001. For projects within Imperial Irrigation District (IID) use IID's pole standard.

50.TRANS. 25 MAP - STREET LIGHTS-CSA/L&LMD INEFFEC

The project proponent shall contact the County Service Area (CSA) Project Manager who determines whether the development is within an existing CSA or will require annexation into the CSA.

If the project is outside boundaries of a CSA, the project proponent shall contact the Transportation Department L&LMD 89-1-C Administrator and submit the following:

1. Completed Transportation Department application

2. Appropriate fees for annexation.

3. (2)Sets of street lighting plans approved by Transportation Department.

50. PRIOR TO MAP RECORDATION

50.TRANS. 25 MAP - STREET LIGHTS-CSA/L&LMD (cont.) INEFFECT

4. "Streetlight Authorization" form from SCE, IID or other electric provider.

50.TRANS. 27 MAP - LANDSCAPING APP. ANNEX INEFFECT

Landscaping within public road rights-of-way shall comply with Transportation Department standards and require approval by the Transportation Department. Assurance of continuing maintenance is required by filing an application for annexation into a County Service Area, Landscaping and Lighting Maintenance District NO. 89-1-Consolidated and/or Assessment District.

50.TRANS. 28 MAP - CLIN.K I-15 POLICY AREA INEFFECT

Prior to the recordation of the final map, or any phase thereof, the project proponent shall pay the Road & Bridge Benefit District and the Transportation Uniform Mitigation (TUMF) fees in accordance with the fee schedule in effect at the time of recordation, pursuant to the Board Policy dated May 25, 2004, Agenda Item 3.45 and Ordinance No. 824.

50.TRANS. 29 MAP - UTILITY PLAN INEFFECT

Electrical power, telephone, communication, street lighting, and cable television lines shall be designed to be placed underground in accordance with ordinance 460 and 461, or as approved by the Transportation Department. The applicant is responsible for coordinating the work with the serving utility company. This also applies to existing overhead lines which are 33.6 kilovolts or below along the project frontage and between the nearest poles offsite in each direction of the project site. A disposition note describing the above shall be reflected on design improvement plans whenever those plans are required. A written proof for initiating the design and/or application of the relocation issued by the utility company shall be submitted to the Transportation Department for verification purposes.

60. PRIOR TO GRADING PRMT ISSUANCE

BS GRADE DEPARTMENT

60.BS GRADE. 1 MAP-G2.1 GRADING BONDS INEFFECT

Grading in excess of 199 cubic yards will require performance security to be posted with the Building and Safety Department. Single Family Dwelling units graded one lot per permit and proposing to grade less than 5,000 cubic yards are exempt.

60.BS GRADE. 2 MAP-G2.3SLOPE EROS CL PLAN INEFFECT

Erosion control- landscape plans, required for manufactured slopes greater than 3 feet in vertical height, are to be signed by a registered landscape architect and bonded per the requirements of Ordinance 457, see form 284-47.

60.BS GRADE. 3 MAP-G2.4GEOTECH/SOILS RPTS INEFFECT

Geotechnical soils reports, required in order to obtain a grading permit, shall be submitted to the Building and Safety Department's Grading Division for review and approval prior to issuance of a grading permit.

All grading shall be in conformance with the recommendations of the geotechnical/soils reports as approved by Riverside County.*

*The geotechnical/soils, compaction and inspection reports will be reviewed in accordance with the RIVERSIDE COUNTY GEOTECHNICAL GUIDELINES FOR REVIEW OF GEOTECHNICAL AND GEOLOGIC REPORTS.

60.BS GRADE. 4 MAP-G2.7DRNAGE DESIGN Q100 INEFFECT

All drainage facilities shall be designed in accordance with Riverside County Flood Control & Water Conservation District's letter regarding this application or, if not specifically addressed in their letter, to accommodate 100 year storm flows.

Additionally, the Building and Safety Department's conditional approval of this application includes an expectation that the conceptual grading plan reviewed and approved for it complies or can comply with any WQMP (Water Quality Management Plan) required by Riverside County Flood Control and Water Conservation District.

60. PRIOR TO GRADING PRMT ISSUANCE

60.BS GRADE. 7 MAP-G2.14OFFSITE GDG ONUS INEFFECT

Prior to the issuance of a grading permit, it shall be the sole responsibility of the owner/applicant to obtain any and all proposed or required easements and/or permissions necessary to perform the grading herein proposed.

60.BS GRADE. 12 MAP-G1.4 NPDES/SWPPP INEFFECT

Prior to issuance of any grading or construction permits - whichever comes first - the applicant shall provide the Building and Safety Department evidence of compliance with the following: "Effective March 10, 2003 owner operators of grading or construction projects are required to comply with the N.P.D.E.S. (National Pollutant Discharge Elimination System) requirement to obtain a construction permit from the State Water Resource Control Board (SWRCB). The permit requirement applies to grading and construction sites of "ONE" acre or larger. The owner operator can comply by submitting a "Notice of Intent" (NOI), develop and implement a STORM WATER POLLUTION PREVENTION PLAN (SWPPP) and a monitoring program and reporting plan for the construction site. For additional information and to obtain a copy of the NPDES State Construction Permit contact the SWRCB at (916) 657-1146.

Additionally, at the time the county adopts, as part of any ordinance, regulations specific to the N.P.D.E.S., this project (or subdivision) shall comply with them.

60.BS GRADE. 13 MAP IMPORT/EXPORT INEFFECT

In instances where a grading plan involves import or export, prior to obtaining a grading permit, the applicant shall have obtained approval for the import/export location from the Building and Safety department. If an Environmental Assessment, prior to issuing a grading permit, did not previously approve either location, a Grading Environmental Assessment shall be submitted to the Planning Director for review and comment and to the Building and Safety Department Director for approval. Additionally, if the movement of import/export occurs using county roads, review and approval of the haul routes by the Transportation Department will be required.

60. PRIOR TO GRADING PRMT ISSUANCE

EPD DEPARTMENT

60.EPD. 1 EPD - 30 DAY BURROWING OWL SUR INEFFEC

Pursuant to Objective 6 of the Species Account for the Burrowing Owl included in the Western Riverside County Multiple Species Habitat Conservation Plan, within 30 days prior to the issuance of a grading permit, a pre-construction presence/absence survey for the burrowing owl shall be conducted by a qualified biologist and the results of this presence/absence survey shall be provided in writing to the County Biologist. If it is determined that the project site is occupied by the Burrowing Owl, take of "active" nests shall be avoided. However, when the Burrowing Owl is present, active relocation outside of the nesting season (March 1 through August 15) by a qualified biologist shall be required. The County Biologist shall be consulted to determine appropriate translocation sites. Occupation of this species on the project site may result in the need to revise grading plans so that take of "active" nests is avoided or alternatively, a grading permit may be issued once the species has been actively relocated.

60.EPD. 2 EPD - GNATCATCHER NESTING SURV INEFFEC

Pursuant to Condition No. 5.b. of Federal Fish and Wildlife Permit TE-088609-0 issued in connection with the Western Riverside County Multiple Species Habitat Conservation Plan, no grading permit may be issued between March 1 and August 15 of any given year unless the applicant for said grading permit provides written documentation to the County Biologist indicating that a focused survey of the project site has been conducted by a permitted biologist and confirms that habitat occupied by the California Gnatcatcher does not exist on said site.

FLOOD RI DEPARTMENT

60.FLOOD RI. 2 MAP SUBMIT PLANS INEFFEC

A copy of the improvement plans, grading plans, BMP improvement plans and any other necessary documentation along with supporting hydrologic and hydraulic calculations shall be submitted to the District for review. The plans must receive District approval prior to the issuance of grading permits. All submittals shall be date stamped by

60. PRIOR TO GRADING PRMT ISSUANCE

60.FLOOD RI. 2 MAP SUBMIT PLANS (cont.) INEFFEC

the engineer and include a completed Flood Control Deposit Based Fee Worksheet and the appropriate plan check fee deposit.

60.FLOOD RI. 3 MAP EROS CNTRL AFTER RGH GRAD INEFFEC

Temporary erosion control measures shall be implemented immediately following rough grading to prevent deposition of debris onto downstream properties or drainage facilities. Plans showing these measures shall be submitted to the District for review.

60.FLOOD RI. 4 MAP OFFSITE EASE OR REDESIGN INEFFEC

Offsite drainage facilities shall be located within dedicated drainage easements obtained from the affected property owners). Document(s) shall be recorded and a copy submitted to the District prior to recordation of the final map. If the developer cannot obtain such rights, the map should be redesigned to eliminate the need for the easement.

60.FLOOD RI. 6 MAP PHASING INEFFEC

If the tract is built in phases, each phase shall be protected from the 1 in 100 year tributary storm flows.

60.FLOOD RI. 8 MAP BMP - FILTRATION INEFFEC

Impervious areas shall be graded or constructed to drain to a filtration BMP or equally effective alternative.This tract has proposed to construct an "Infiltration Basin" per District criteria as found in the Riverside County Stormwater Quality Best Management Hanbook.

PLANNING DEPARTMENT

60.PLANNING. 2 MAP - FEE BALANCE INEFFEC

Prior to issuance of grading permits, the Planning Department shall determine if the deposit based fees are in a negative balance. If so, any outstanding fees shall be paid by the applicant/developer.

60. PRIOR TO GRADING PRMT ISSUANCE

60.PLANNING. 3 MAP - GRADING PLAN REVIEW INEFFECT

The land divider/permit holder shall cause a plan check application for a grading plan to be submitted to the County T.L.M.A - Land Use Division for review by the County Department of Building and Safety - Grading Division. Said grading plan shall be in conformance with the approved tentative map, in ompliance with County Ordinance No. 457, and the conditions of approval for the tentative map.

60.PLANNING. 22 MAP - IF HUMAN REMAINS FOUND INEFFECT

If human remains are encountered, State Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the County Coroner has made a determination of origin and disposition pursuant to Public Resources Code Section 5097.98. The County Coroner shall be notified of the find immediately. If the remains are determined to be prehistoric, the coroner shall notify the Native American Heritage Commission, which will determine and notify the appropriate NATIVE AMERICAN TRIBE who is the most likely descendent. The descendent shall inspect the site of the discovery and make a recommendation as to the appropriate mitigation. After the recommendation has bee made, the property owner, a Native American Tribe representative, and a County representative shall meet to determine the appropriate mitigation measures and corrective actions to be implemented.

60.PLANNING. 23 MAP - REQUIRED APPLICATIONS INEFFECT

No grading permits shall be issued until Change of Zone No. 06902 has been approvd and adopted by the Board of Supervisors and has been made effective.

60.PLANNING. 24 MAP - PLANNING DEPT REVIEW INEFFECT

As part of the plan check review of the proposed grading plan for the subject property, the Department of Building and Safety - Grading Division shall submit a copy of the proposed grading plan, along with the applicable Log/Permit Numbers for reference, to the County Planning Department to be reviewed for compliance with the approved tentative map.

80. PRIOR TO BLDG PRMT ISSUANCE

BS GRADE DEPARTMENT

80.BS GRADE. 1 MAP-G3.1NO B/PMT W/O G/PMT INEFFECT

Prior to issuance of any building permit, the property owner shall obtain a grading permit and/or approval to construct from the Grading Divisin of the Building and Safety Department.

FIRE DEPARTMENT

80.FIRE. 1 MAP-#50C-TRACT WATER VERIFICA INEFFECT

The required water system, including all fire hydrant(s), shall be installed and accepted by the appropriate water agency and the Riverside County Fire Department prior to any combustible building material placed on an individual lot. Contact the Riverside County Fire Department to inspect the required fire flow, street signs, all weather surface, and all access and/or secondary. Approved water plans must be a the job site.

FLOOD RI DEPARTMENT

80.FLOOD RI. 2 MAP SUBMIT PLANS INEFFECT

A copy of the improvement plans, grading plans,BMP improvement plans and any other necessary documentation along with supporting hydrologic and hydraulic calculations shall be submitted to the District for review. The plans must receive District approval prior to the issuance of building permits. All submittals shall be date stamped by the engineer and include a completed Flood Control Deposit Based Fee Worksheet and the appropriate plan check fee deposit.

PLANNING DEPARTMENT

80.PLANNING. 1 MAP - ROOF MOUNTED EQUIPMENT INEFFECT

Roof-mounted mechanical equipment shall not be permitted within the subdivision, however, solar equipment or any other energy saving devices shall be permitted with County Planning Department approval.

80. PRIOR TO BLDG PRMT ISSUANCE

80.PLANNING. 2 MAP - FRONT YARD LANDSCAPING INEFFECT

All front yards shall be provided with landscaping and automatic irrigation, as defined by County Ordinance No. 348.

80.PLANNING. 3 MAP - UNDERGROUND UTILITIES INEFFECT

All utility extensions within a lot shall be placed underground.

80.PLANNING. 9 MAP - CONFORM FINAL SITE PLAN INEFFECT

Final clearance shall be obtained from the County Planning Department - Development Review Division stipulating that the building plans submitted conform to the approved Final Plan of Development.

80.PLANNING. 14 MAP - SCHOOL MITIGATION INEFFECT

Impacts to the Lake Elsinore Unified School District shall be mitigated in accordance with California State law.

80.PLANNING. 16 MAP - FEE BALANCE INEFFECT

Prior to issuance of building permits, the Planning Department shall determine if the deposit based fees are in a negative balance. If so, any outstanding fees shall be paid by the applicant/developer.

80.PLANNING. 19 MAP - FNL SITE DEV PLOT PLAN NOTAPPLY

A plot plan application shall be submitted to the County Planning Department pursuant to Section 18.30.a.(1) of County Ordinance No. 348 (Plot Plans not subject to the California Environmental Quality Act and not subject to review by any governmental agency other than the Planning Department), along with the current fee.

Subdivision development shall conform to the approved plot plan and shall conform to the Countywide Design Guidelines.

The plot plan shall be approved by the Planning Director prior to issuance of building permits for lots included within that plot plan.

The plot plan shall contain the following elements:

80. PRIOR TO BLDG PRMT ISSUANCE

80.PLANNING. 19 MAP - FNL SITE DEV PLOT PLAN (cont.) NOTAPPL

1. A final site plan (40' scale precise grading plan) showing all lots, building footprints, setbacks, mechanical equipment and model assignments on individual lots.

2. Each model floor plan and elevations (all sides).

3. Six (6) sets of photographic or color laser prints (8" x 10") of the sample board and colored elevations shall be submitted for permanent filing and agency distribution after the Planning Department has reviewed and approved the sample board and colored elevations in accordance with the approved Design Manual and other applicable standards. All writing must be legible. Six (6) matrix sheets showing structure colors and texture schemes shall be submitted.

NOTE: The requirements of this plot plan may be incorporated with any minor plot plan required by this subdivision's conditions of approval. However, this FINAL SITE DEVELOPENT plot plan conditon of approval shall be cleared individually.

80.PLANNING. 20 MAP - LANDSCAPE PLOT PLAN INEFFEC

The land divider/permit holder shall file seven (7) sets of a Landscaping and Irrigation Plan to the County Planning Department for review and approval. Said plan shall be submitted to the Department in the form of a plot plan application pursuant to County Ordinance No. 348, Section 18.30.a.(1) (Plot Plans not subject to the California Environmental Quality Act and not subject to review by any governmental agency other than the Planning Department), along with the current fee. The plan shall be in compliance with Section 18.12, Sections 19.300 through 19.304., and the TENTATIVE MAP conditions of approval.

When the proposal is located within the [Valley-Wide Recreation and Park District][Jurupa Conmmunity Services District] or a [County Service Area (CSA)], prior to landscape plan submittal to the Planning Department, the developer/permittee shall show evidence to the Planning Department that the CSA No. 152 has approved said plans.

The plan shall show all common open space areas. The plan

80. PRIOR TO BLDG PRMT ISSUANCE

80.PLANNING. 20 MAP - LANDSCAPE PLOT PLAN (cont.) INEFFECT

shall address all areas and conditions of the tract requiring landscaping and irrigation to be installed including, but not limited to, (slope planting, common area and/or park landscaping, and individual front yard landscaping). Emphasis shall be placed on using plant species that are drought tolerant and low water using. The plans shall provide for the following:

1. Permanent automatic irrigation systems shall be installed on all landscaped areas requiring irrigation. Low water use systems are encouraged.

2. All utility service areas and enclosures shall be screened from view with landscaping and decorative barriers or baffle treatments, as approved by the Planning Department. Utilities shall be placed underground.

3. Any required landscape screening shall be designed to be opaque up to a minimum height of six (6) feet at maturity.

4. Parkways and landscaped building setbacks shall be landscaped to provide visual screening or a transition into the primary use area of the site. Landscape elements shall include earth berming, ground cover, shrubs, and specimen trees in conjunction with meandering sidewalks, benches, and other pedestrian amenities where appropriate as approved by the Planning Department.

5. Landscaping plans shall incorporate the use of specimen accent trees at key visual focal points within the project.

6. Landscaping plans shall incorporate native and drought tolerant plants where appropriate.

7. All specimen trees and significant rock outcroppings on the subject property intended for retention shall be shown on the project's grading plans. Replacement trees for those to be removed shall also be shown.

8. All trees shall be minimum double-staked. Weaker and/or slow-growing trees shall be steel-staked.

9. Multi-programmable irrigation controllers which have enough programs to break up all irrigation stations into hydro zones shall be used. If practical and feasible, rain

80. PRIOR TO BLDG PRMT ISSUANCE

80.PLANNING. 20 MAP - LANDSCAPE PLOT PLAN (cont.) (cont.) INEFFECT

shutoff devices shall be employed to prevent irrigation after significant precipitation. Irrigation systems shall be designed so areas which have different water use requirements are not mixed on the same station (hydro zones). Assistance in implementing a schedule based on plant water needs is available from CIMIS or Mobile Lab. The use of drip irrigation should be considered for all planter areas that have a shrub density that will cause excessive spray interference of an overhead irrigation system. Use flow reducers to mitigate broken heads next to sidewalks, streets, and driveways. (BMP S2)

10. Plants with similar water requirements shall be grouped together in order to reduce excessive irrigation runoff and promote surface filtration, where possible. (BMP S3)

NOTES:

The Landscape plot plan my include the requirements of any other minor plot plan required by the subdivision conditions of approval. However, minor plot plan conditions of approval shall be cleared individually.

Landscaping plans for areas that are totally within the road right-of-way shall be submitted to the Transportation Department ONLY.

80.PLANNING. 23 MAP - MODEL HOME COMPLEX INEFFECT

A plot plan application shall be submitted to the County Planning Department pursuant to Section 18.30.a.(1) of County Ordinance No. 348 (Plot Plans not subject to the California Environmental Quality Act and not subject to review by any governmental agency other than the Planning Department), along with the current fee.

The Model Home Complex plot plan shall contain the following elements:

1. An engineer's scaled plan showing the model home lots, lot numbers, tract number, and north arrow.

2. Show front, side and rear yard setbacks.

80. PRIOR TO BLDG PRMT ISSUANCE

80.PLANNING. 23 MAP - MODEL HOME COMPLEX (cont.) INEFFECT

3. Provide two dementioned off street parking spaces per model and one parking space for office use. The plan must have one accessible parking space.

4. Show detailed fencing plan including height and location.

5. Show typical model tour sign locations and elevation.

6. Six (6) sets of photographic or color laser prints (8" X 10") of the sample board and colored elevations shall be submitted for permaanent filing and agency distribution after the Plannning Department has reviewed and approved the sample board and colored elevations in accordance with the approved Design Manual and other applicable standards. All writing must be legible. Six (6) matrix sheets showing structure colors and texture schemes shall be submitted.

7. Provide a Model Home Complex landscape and irrigation plan.

NOTES:

The Model Home Complex plot plan shall not be approved without Final Site Development Plan approval, or concurrent approval of both. See the Planning Department Model Home Complex application for detailed requirements.

The requirements of this plot plan may be incorporated with any minor plot plan required by the subdivision's conditions of approval. However, this MODEL HOME COMPLEX condition of approval shall be cleared individually.

80.PLANNING. 24 MAP - BUILDING SEPARATION 2 INEFFECT

Building separation between all buildings shall not be less than ten (10) feet. Additional encroachments are only allowed as permitted by County Ordinance No. 348.

80. PRIOR TO BLDG PRMT ISSUANCE

80.PLANNING. 25 MAP - WALLS/FENCING PLANS INEFFECT

The land divider/permit holder shall file seven (7) sets of a Wall/Fencing Plan to the County Planning Department for review and approval. Said plan shall be submitted to the Department in the form of a plot plan application pursuant to County Ordinance No. 348, Section 18.30.a.(1) (Plot Plans not subject to the California Environmental Quality Act and not subject to review by any governmental agency other than the Planning Department), along with the current fee. The plan shall be in compliance with Section 18.12, and the TENTATIVE MAP conditions of approval.

A. The plan shall show all project fencing including, but not limited to, perimeter fencing, side and rear yard fencing, and open space or park fencing. A typical frontal view of all fences shall be shown on the fencing plan.

B. All utility service areas and enclosures shall be screened from view with landscaping or decorative barriers or baffle treatments, as approved by the Planning Department.

C. All wood fencing shall be treated with heavy oil stain to match the natural shade to prevent bleaching from irrigation spray.

D. Front yard return walls shall be constructed of masonry (slump stone or material of similar appearance, maintenance, and structural durability) and shall be a minimum of five feet in height.

E. Side yard gates are required on one side of front yard, and shall be constructed of wrought iron, wood, vinyl or tubular steel. Chain link fencing is not permitted. All construction should be of good quality and sufficient durability with an approved stain or sealant to minimize water staining. (Applicants shall provide specifications that shall be approved by the Planning Department)

F. Except for the desert areas, all lots having rear and/or side yards facing local streets or otherwise open to public view shall have fences or walls constructed of masonry block.

G. Corner lots shall be constructed with wrap-around decorative block wall returns.

80. PRIOR TO BLDG PRMT ISSUANCE

80.PLANNING. 25 MAP - WALLS/FENCING PLANS (cont.) INEFFECT

J. Wrought iron or tubular steel fence sections may be included within tracts where view opportunities and/or terrain warrant its use. Where privacy views is not an issue, tubular steel or wrought iron sections should be constructed in perimeter walls in order to take advantage of casual view opportunities. Another option for permiter fencing is the use of a PVC three rail split rail fence.

K. A six foot (6') decorative block wall shall be constructed along the western and northern property line of Lot 16, the western, southern, and a portion of the northern property line of Lot 17, and along the western property line of Lot 25. The wall along the northern property line of Lot 16 and the southern property line of Lot 17 shall only be for a length from the west end of the property line to location of the return walls for the future homes of Lots 16 and 17. The access gate to the detention basin shall be constructed of wrought iron or tubular steel and located at the return walls for Lots 16 and 17.

L. A six foot (6') block wall shall be constructed along the south property lines of Lots 9-16, and the eastern property lines of Lots 4-5, and 9.

M. A six foot (6') high wrought iron or tubular steel fence shall be constructed on the western property line of the detention basin along Mission Trail and on the northern property line along Como Street

80.PLANNING. 26 MAP - REQUIRED COMMUNITY TRAIL INEFFECT

The Final Site Plan of development shall include the proposed improvements for the 10' community trail that shall be located on the south side of Como Street (north of lots 1 - 4) starting at the southeast corner of the Cashew Street and Como Street intersection heading easterly towards the project's site easterly boundary.

The trail shall be located out of the Right-of-Way.

The material use for the trail shall be decomposed granite or better.

80. PRIOR TO BLDG PRMT ISSUANCE

TRANS DEPARTMENT

80.TRANS. 1 MAP - GARAGE DOORS INEFFECT

Garage door setbacks for all residential zones shall be 24 feet for a conventional door or 20 feet for a roll-up door, measured from the back of the sidewalk to the face of garage door or the face of the curb if no sidewalk is required, or 20 feet from the street right-of-way, whichever setback is greater.

90. PRIOR TO BLDG FINAL INSPECTION

BS GRADE DEPARTMENT

90.BS GRADE. 1 MAP-G4.1E-CL 4:1 OR STEEPER INEFFECT

Plant and irrigate all manufactured slopes steeper than a 4:1 (horizontal to vertical) ratio and 3 feet or greater in vertical height with grass or ground cover; slopes 15 feet or greater in vertical height shall be planted with additional shrubs or trees as approved by the Building & Safety Department's Erosion Control Specialist.

90.BS GRADE. 2 MAP-G4.2 1/2"/FT/3FT MIN INEFFECT

Finish grade shall be sloped to provide proper drainage away from all exterior foundation walls. The slope shall be not less than one-half inch per foot for a distance of not less than 3 feet from any point of exterior foundation. Drainage swales shall not be less than 1 1/2 inches deeper than the adjacent finish grade at the foundation.

FLOOD RI DEPARTMENT

90.FLOOD RI. 2 MAP BMP - EDUCATION INEFFECT

The developer shall distribute environmental awareness education materials on general good housekeeping practices that contribute to protection of stormwater quality to all initial residents. The developer may obtain NPDES Public Educational Program materials from the District's NPDES Section by either the District's website www.floodcontrol.co.riverside.ca.us, e-mail fcnpdes@co.riverside.ca.us, or the toll free number 1-800-506-2555. Please provide Project number, number of units and location of development. Note that there is a five-day minimum processing period requested for all

90. PRIOR TO BLDG FINAL INSPECTION

90.FLOOD RI. 2 MAP BMP - EDUCATION (cont.) INEFFECT

orders.

The developer must provide to the District's PLAN CHECK Department a notarized affidavit stating that the distribution of educational materials to the tenants is assured prior to the issuance of occupancy permits.

PLANNING DEPARTMENT

90.PLANNING. 1 MAP - BLOCK WALL ANTIGRAFFITI INEFFECT

An anti-graffiti coating shall be provided on all block walls, and written verification from the developer shall be provided to both the TLMA - Land Use Division, and the Development Review Division.

90.PLANNING. 5 MAP - LANDSCAPING COMPLIANCE INEFFECT

The land divider/permit holder's landscape architect or other state licensed party responsible for preparing the landscape and irrigation plans shall provide a Compliance Letter to the County Planning Department and the County Department of Building and Safety stating that the landscape and irrigation system has been installed in compliance with the approved landscaping and irrigation plans. The Compliance letter shall be submitted at least three (3) working days prior to final inspection of the structure or issuance of occupancy permit, whichever comes first.

90.PLANNING. 6 MAP - QUIMBY FEES (2) INEFFECT

The land divider/permit holder shall present certification to the Riverside County Planning Department that payment of parks and recreation fees and/or dedication of land for park use in accordance with Section 10.35 of County Ordinance No. 460 has taken place. Said certification shall be obtained from the County of Riverside Executive Office for CSA No. 152.

90.PLANNING. 7 MAP - CONCRETE DRIVEWAYS INEFFECT

The land divider/permit holder shall cause all driveways to be constructed of cement concrete.

90. PRIOR TO BLDG FINAL INSPECTION

90.PLANNING. 8 MAP - FENCING COMPLIANCE INEFFECT

Fencing shall be provided throughout the subdivision in accordance with the approved final site development plans.

90.PLANNING. 9 MAP - ROLL-UP GARAGE DOORS INEFFECT

All residences shall have automatic roll-up garage doors.

90.PLANNING. 10 MAP - REQUIRED COMMUNITY TRAIL INEFFECT

A 10' community trail shall be constructed and fully operational. The community trail shall be located on the south side of Como Street (north of lots 1 - 4) starting at the southeast corner of the Cashew Street and Como Street intersection heading easterly towards the project's site easterly boundary.

The trail shall be located out of the Right-of-Way.

The material use for the trail shall be decomposed granite or better.

TRANS DEPARTMENT

90.TRANS. 1 MAP - 80% COMPLETION INEFFECT

Occupancy releases will not be issued to Building and Safety for any lot exceeding 80% of the total recorded residential lots within any map or phase of map prior to completion of the following improvements:

a) Primary and Alternate (secondary) access roads shall be completed and paved to finish grade according to the limits indicated in the improvement plans and as noted elsewhere in these conditions.

b) Interior roads shall be completed and paved to finish grade according to the limits indicated in the improvement plans and as noted elsewhere in these conditions. All curbs, gutters, sidewalks and driveway approaches shall be installed.

c) Storm drains and flood control facilities shall be completed according to the improvement plans and as noted elsewhere in these conditions. Written confirmation of acceptance for use by the Flood

90. PRIOR TO BLDG FINAL INSPECTION

90.TRANS. 1 MAP - 80% COMPLETION (cont.) INEFFEC

Control District, if applicable, is required.

d) Water system, including fire hydrants, shall be installed and operational, according to the improvement plans and as noted elsewhere in these conditions. All water valves shall be raised to pavement finished grade. Written confirmation of acceptance from water purveyor is required.

e) Sewer system shall be installed and operational, according to the improvement plans and as noted elsewhere in these conditions. All sewer manholes shall be raised to pavement finished grade. Written confirmation of acceptance from sewer purveyor is required.

f) Landscaping and irrigation, water and electrical systems shall be installed and operational in accordance with County Ordinance 461.

90.TRANS. 2 MAP - STREET LIGHTS INSTALL INEFFEC

Install streetlights along the streets associated with development in accordance with the approved street lighting plan and standards of County Ordinance 460 and 461. For projects within Imperial Irrigation District (IID) use (IID's) pole standard.

Street light annexation into L&LMD or similar mechanism as approved by the Transportation Department shall be completed.

It shall be the responsibility of the Developer to ensure that streetlights are energized along the streets of those lots where the Developer is seeking Building Final Inspection (Occupancy).

90.TRANS. 4 MAP - STREET SWEEPING INEFFEC

Street sweeping annexation or inclusion into CSA or similar mechanism as approved by the Transportation Department shall be completed.

90. PRIOR TO BLDG FINAL INSPECTION

90.TRANS. 5 MAP - UTILITY INSTALL INEFFECT

Electrical power, telephone, communication, street lighting, and cable television lines shall be placed underground in accordance with ordinance 460 and 461, or as approved by the Transportation Department. This also applies to existing overhead lines which are 33.6 kilovolts or below along the project frontage and between the nearest poles offsite in each direction of the project site.

A certificate should be obtained from the pertinent utility company and submitted to the Department of Transportation as proof of completion.

PINKS

SUBMITTAL TO THE BOARD OF SUPERVISORS
COUNTY OF RIVERSIDE, STATE OF CALIFORNIA

FROM: TLMA - Planning Department

SUBMITTAL DATE: February 28, 2006

SUBJECT: CHANGE OF ZONE NO. 6902 / TENTATIVE TRACT MAP NO. 31993 – EA39325 – Applicant: GMX Construction, Inc. – Engineer / Representative: GMX Construction, Inc. - First Supervisorial District – Rancho California Zoning Area - Elsinore Area Plan: Community Development: Medium Density Residential (CD-MDR) (2 - 5 Dwelling Units Per Acre) and Medium High Density Residential (CD-MHDR) (5 - 8 Dweilling Units Per Acre) – Location: Southeasterly corner of Mission Trail and Como Street – 13.5 Gross Acres - Zoning: Rural Residential (R-R) - **REQUEST:** The change of zone proposes a change from Rural Residential (R-R) to One Family Dwellings (R-1). The tentative tract map proposes a schedule A subdivision to subdivide 3 lots totaling 13.15 acres into 25 single family residential lots with a minimum lot size of 15,000 net square feet, and one lot to be used as a detention basin.

BACKGROUND: The applicant originally requested to change the project's site zoning classification from Rural Residential (R-R) to One Family Dwellings with a minimum lot size of 18,000 gross acres (R-1-18,000); however, the Planning Commission recommended that for clarification purposes, the project's site zoning designation shall be changed to One Family Dwellings with a minimum lot size of 15,000 net acres (R-1-15,000). The exhibits for the change of zone note such recommendation.

RECOMMENDED MOTION:

The Planning Department recommended Approval; and,
THE PLANNING COMMISSION, UNANIMOUSLY RECOMMENDS:

ADOPTION of the **MITIGATED NEGATIVE DECLARATION** for **ENVIRONMENTAL ASSESSMENT NO. 39325** based on the findings incorporated in the initial study and the conclusion that the project will not have a significant effect on the environment and,

Watershed Map for Riverside County

A watershed is an area that, because of topographic slope, contributes water to a specified surface water drainage system, such as a stream or river. Riverside County encompasses portions of three major watersheds: the Santa Ana, the Santa Margarita and the Whitewater. Using the map below you can click on any of the watershed areas to learn more about each watershed area. For additional information try the EPA - WATERS EnviroMapper.

Subject: Geotechnical Investigation
Proposed Residential Site
Southeast corner of Mission Trail and Como Street
Wildomar, CA

Gentlemen:

In accordance with your request, a geotechnical investigation has been completed for the above-referenced site. The report addresses both engineering geologic and geotechnical conditions. The results of the investigation are presented in the accompanying report that includes a description of site conditions, results of our field exploration and laboratory testing, conclusions and recommendations.

We appreciate this opportunity to be of continued service to you. If you have any questions regarding this report, please do not hesitate to contact us at your convenience.

Respectfully submitted,

RMA Group

Appendix C	General Earthwork and Grading Specifications	C1
Appendix D	References	D1

Geology fault data base for southern California. This analysis indicates a mean peak horizontal ground acceleration of 0.65g for a 10% probability of occurrence in 50 years.

2.07.4 Seismic Coefficients and Near Source Factors

The 1997 Uniform Building Code presents seismic data in terms of seismic zones, factors, sources and coefficients, and soil profiles. Utilizing information generated by this investigation and data from the California Division of Mines and Geology (Petersen, Et. al., 1998), the following parameters may be used to determine 1997 UBC seismic coefficients (Ca and Cv) and near-source factors (Na and Nv):

Uniform Building Code Seismic Parameters

Closest Distance to Known Seismic Source:	0.5 km
Seismic Source and Type:	Elsinore fault, Type B
Seismic Zone:	4
Seismic Zone Factor:	0.4
Soil Profile:	S_D

2.08 Flooding Potential

According to the Federal Emergency Management Agency, the site does not lie within the boundaries of a 100 year flood zone. Control of surface runoff originating from within and outside of the site should, of course, be included in design of the project.

3.00 Conclusions and Recommendations

3.01 General Conclusion

Based on specific data and information contained in this report, our understanding of the project and our general experience in engineering geology and geotechnical engineering, it is our professional judgment that the proposed development is geologically and geotechnically feasible. This is provided that the recommendations presented below are fully implemented during design, grading and construction.

3.02 General Earthwork and Grading

Onsite earth materials encountered in this investigation are suitable for placement as fill from a geotechnical perspective. All grading should be performed in accordance with the General Earthwork and Grading Specifications outlined in Appendix C, unless specifically revised or amended below. Recommendations contained in Appendix C are general specifications for typical grading projects and may not be entirely applicable to this project. Earthwork should also be in accordance with all applicable local, state or federal agency requirements.

3.03 Earthwork Shrinkage, Bulking & Subsidence

Shrinkage is the decrease in volume of soil upon removal and recompaction expressed as a percentage of the original in-place volume. Bulking is an increase in volume determined in the same manner. Subsidence occurs as natural ground is densified to receive fill. These factors account for changes in earth volumes that will occur during grading. Our estimates are as follows:

Geologic Unit	Shrinkage Factor	Subsidence
Older Valley Fill (Qov)	2% - 5%	—
Colluvium	10% - 15%	0.10 – 0.15 ft
Pauba Formation (Qps)	3% - 5% (Bulking)	nil

The degree to which fill soils are compacted and variations in the insitu density of existing soils and bedrock will influence earth volume changes. Consequently, some adjustments in grades near the completion of grading could be required to balance the earthwork.

3.04 Removals and Overexcavation

Vegetation, trash and debris should be cleared from the grading area and hauled from the site. Prior to placement of compacted fills, compressible soils will need to be removed to competent natural ground. Within areas to support structures or receive fill, it is estimated the upper 2 to 5 feet, but up to 7 feet locally, of surficial soils (colluvium) will require removal and replacement with compacted fill materials.

In addition to the above requirements, overexcavation will also need to meet the following criteria for the building pad and pavement areas:

- All footing areas, both continuous and spread, shall be undercut, moistened, and compacted as necessary to produce soils compacted to a minimum of 90% relative compaction to a depth equal to the width of the footing below the bottom of the footing or to a depth of 3 feet below the bottom of the footing, whichever is less. Footing areas shall be defined as the area extending from the edge of the footing for a distance of 5 feet.
- All floor slabs and paved areas shall be underlain by a minimum of 1 foot of soil compacted to a minimum of 90% relative compaction.

The exposed soils beneath all overexcavations should be scarified an additional 6 inches, moisture conditioned and compacted to a minimum of 90% relative compaction.

The above recommendations are based on the assumption that soils encountered during field exploration are representative of soils throughout the site. However, there can be unforeseen and unanticipated variations in soils between points of subsurface exploration. Hence, overexcavation

depths must be verified, and adjusted if necessary, at the time of grading. The overexcavated materials may be moisture conditioned and re-compacted as structural fill.

3.05 Rippability and Rock Disposal

Our exploratory trenches were advanced without any major difficulties and no oversize materials were encountered in our subsurface investigation. Accordingly we expect that all earth materials will be rippable with conventional heavy duty grading equipment and oversized materials are not expected.

3.06 Subdrains

Ground water and surface water were not encountered during the course of our investigation and the proposed grading will not fill any large canyons. Consequently, installation of canyon subdrains is not expected to be necessary.

Backdrains or weep holes are recommended for all retaining walls.

3.07 Natural Slopes

Since no landslides are known to be present within the site, natural slopes that will remain adjacent to graded areas within the site are expected to be grossly stable.

3.08 Cut Slopes

Cut slopes excavated in formational materials exposing favorable geologic structure are anticipated to be grossly stable at inclinations of 2:1 (horizontal to vertical) or flatter.

Geologic mapping of cut slopes and backcuts during grading will be necessary to verify the anticipated geologic conditions. Revision of the above recommendations could be necessary if different conditions are exposed during grading.

3.09 Fill Slopes

Fill slopes constructed to the anticipated proposed maximum height of about 20 feet and at an inclinations of 2:1 (horizontal to vertical) are expected to be grossly and surficially stable. This is provided that the slopes are properly keyed, benched and compacted, as indicated in Appendix C.

3.10 Faulting

No faults are known to pass through the property and surface fault rupture within the site is considered unlikely. A geologic fault investigation of the property was conducted concurrent with this investigation. That report, Reference 11, should be reviewed for additional information pertaining to faulting at the site and in the vicinity of the site

3.11 Seismic Design Parameters

The potential damaging effects of regional earthquake activity should be considered in the design of structures. As a minimum, seismic design should be in accordance with the 1997 Uniform Building Code (UBC) and the recommendations of the Structural Engineers Association. The structural engineer and architect should consider the seismic data presented in this report, building types, occupancy category, importance and other appropriate factors when selecting seismic design parameters.

3.12 Secondary Earthquake Hazards

Considering the seismic and geologic conditions as currently known, the potential for secondary seismic hazards at the site is considered to be low. Liquefaction is considered unlikely due to the grain size and density of natural soils, anticipated compaction of the surficial soils and depth to ground water. The potential for seismically induced settlement is low due to the density of the underlying earth materials and anticipated compaction of near surface soils. Seismically induced landsliding is not expected, provided the site is properly graded and developed. Tsunamis and seiches do not pose hazards due to the inland location of the site and lack of nearby bodies of standing water.

3.13 Foundations

Spread footings or continuous wall footings are recommended to support the proposed residences. Continuous footings are recommended for retaining walls, if proposed.

If the recommendations in the section on grading are followed and footings are established in firm native soils or compacted fill materials, footings may be designed using the following allowable soil bearing values:

- Continuous Footings:

  Footings having a minimum width of 12" and a minimum depth of 18" below the lowest adjacent grade – 2,000 pounds per square foot. This value may be increased by 20% for each additional foot of width and/or depth to a maximum value of 4,000 pounds per square foot.

- Spread Footings:

Soil Bearing Values

Footing Loads	Size Depth	Allowable Bearing Pressures
60 kips	24 inches	3,000 psf

- Retaining Wall Footings:

  Footings for retaining walls should be founded a minimum depth of 12 inches and have a minimum width of 12 inches. Footings may be designed using the allowable bearing capacity and lateral resistance values recommended for building footings. However, when calculating passive resistance, the upper 6 inches of the footings should be ignored in areas where the footings will not be covered with concrete flatwork. Reinforcement should be provided for structural considerations as determined by the structural engineer.

The above bearing values represent an allowable net increase in soil pressure over existing soil pressure and may be increased by one-third for short term wind or seismic loads. Maximum expected settlement of footings designed with the recommended allowable soil bearing values is expected to be on the order of 1 inch with differential settlements on the order of ½ inch.

Soils and bedrock materials at the site are granular, non-plastic and non-expansive in nature. Therefore, reinforcement of footings for expansive soil is not required. However, in view of the seismic setting (UBC Seismic Zone 4), nominal reinforcement consisting of one #4 bar placed within 3 inches of the top of footings and another placed within 3 inches of the bottom of footings is recommended. The structural engineer may require heavier reinforcement.

Due to the preliminary nature of the expansion tests performed for this study, we recommend additional testing be performed near the completion of rough grading to verify the test results and recommended foundation design criteria.

3.14 Foundation Setbacks from Slopes

Setbacks for footings adjacent to slopes should conform to the requirements of the Uniform Building Code. Specifically, footings should maintain a horizontal distance or setback between any adjacent slope face and the bottom outer edge of the footing.

For slopes descending away from the foundation the horizontal distance may be calculated by using h/3, where h is the height of the slope. The horizontal setback should not be less than 5 feet, nor need not be greater than 40 feet (per code). Where structures encroach within the zone of h/3 from the top of the slope the setback may be maintained by deepening the foundations. Flatwork and utilities within the zone of h/3 from the top of slope may be subject to lateral distortion caused by gradual down slope creep. Walls, fences and landscaping improvements constructed at the top of descending slopes should be designed with consideration of the potential for gradual down slope creep.

For ascending slopes the horizontal setback required may be calculated by using h/2 where h is the height of the slope. The horizontal setback need not be greater than 15 feet (per code).

3.15 Slabs on Grade

We recommend the use of reinforced slabs on grade for residential structures. These floor slabs should have a minimum thickness of 4 inches and should be divided into squares or rectangles using weakened plane joints (contraction joints), each with maximum dimensions not exceeding 15 feet. Contraction joints should be made in accordance with American Concrete Institute (ACI) guidelines. Reinforcement consisting of #3 bars, 18 inches on center, each direction, should be provided at mid-height of the slab.

A base course capillary break is not required for slabs on grade at the subject site. However, a soil moisture vapor barrier is recommended beneath all floor slabs with moisture sensitive floor coverings. The soil moisture vapor barrier should consist of a minimum of 4 inches of sand and a 10-mil visqueen liner. The liner should be placed with 2 inches of sand below and 2 inches of sand above the liner. The liner should be carefully fitted around service openings and should be properly lapped and sealed with a minimum 6-inch overlap at joints in accordance with the American Concrete Institute's (ACI) guidelines.

3.16 Miscellaneous Concrete Flatwork

Miscellaneous flatwork, driveways, and walkways may be designed with a minimum thickness of 4.0 inches. Miscellaneous flatwork and driveways, should be reinforced with #3 bars, 18 inches on center, each direction at the mid-height of the slab. Control joints should be constructed to create squares or rectangles with a maximum spacing of 15 feet on large slab areas.

Walkways should be separated from foundations with a thick expansion joint filler and reinforced with a minimum of 6x6- 10/10 welded wire mesh placed at mid height in the slab. Control joints should be constructed into walkways at a maximum of 5 feet spacing.

The sub grade soils beneath all miscellaneous concrete flatwork, driveways, and walkways should be compacted to a minimum of 90% relative compaction for a minimum depth of 12 inches. The geotechnical engineer should monitor the compaction of the sub grade soils and perform testing to verify that proper compaction has been obtained.

3.17 Footing Excavation and Slab Preparations

All footing excavations should be observed by the geotechnical consultant to verify that they have been excavated into competent soils. The foundation excavations should be observed prior to the placement of forms, reinforcement steel, or concrete. These excavations should be evenly trimmed and level. Prior to concrete placement, any loose or soft soils should be removed. Excavated soils should not be placed on slab or footing areas unless properly compacted.

Prior to the placement of the moisture barrier and sand, the sub grade soils underlying the slab should be observed by the geotechnical consultant to verify that all under slab utility trenches have been

properly backfilled and compacted, that no loose or soft soils are present, and that the slab sub grade has been properly compacted to a minimum of 90% relative compaction within the upper 12 inches.

3.18 Lateral Loads

Lateral loads may be resisted by soil friction and the passive resistance of the soil. The following parameters are recommended.

- Passive Earth Pressure - equivalent fluid weight of 450 pcf.
- Coefficient of Friction (Soil to footing) – 0.40

Retaining structures should be designed to resist the following lateral active earth pressures:

Surface Slope of Retained Material Horiz. to Vert.	Equivalent Fluid Weight (pcf)
Level	31
5 to 1	32
4 to 1	33
3 to 1	34
2 to 1	40

These active earth pressures are only applicable if the retained earth is allowed to strain sufficiently to achieve the active state. The required horizontal strain to achieve the active state is approximately 0.0025H. Retaining structures should be designed to resist an at rest lateral earth pressure if this horizontal strain can not be achieved.

- At rest lateral earth pressure - 51 pcf

The horizontal compression required to achieve the full passive earth pressure is approximately 4 times the horizontal strain required to reach the active state. The horizontal compression required to reach 1/2 the maximum passive pressure is approximately equal to the horizontal strain required to achieve the active state. The previously recommended passive pressure should be reduced accordingly if the required horizontal compression to achieve full passive pressures can not be achieved.

If any super-imposed loads are anticipated, this office should be notified so that appropriate recommendations for earth pressures may be provided.

3.19 Drainage and Moisture Proofing

Retaining structures should be drained to prevent the accumulation of subsurface water behind the walls. Back drains should be installed behind all retaining walls exceeding 3.0 feet in height. A typical detail for retaining wall back drains is presented in appendix C. All back drains should be outlet to suitable drainage devices.

Moisture proofing should be provided on all stem walls and retaining walls utilized to support structures. Special attention should be given to the design of surface drainage and moisture proofing in areas of depressed floors where the finished floor elevation within the structure lies below the finished pad elevation outside the structure. In these areas consideration should be given to increasing the minimum slope of the surface drainage to a minimum of 5% sloping away from the residence for a minimum distance of 5.0 feet. Moisture proofing should also be provided on all site retaining walls exceeding 3.0 feet in height.

3.20 Cement Type and Corrosion Potential

Soluble sulfate tests indicate that concrete at the subject site will have a negligible exposure to water soluble sulfate in the soil. Our recommendations for concrete exposed to sulfate-containing soils are presented below.

RECOMMENDATIONS FOR CONCRETE EXPOSED TO SULFATE CONTAINING SOILS

Sulfate exposure	Water soluble sulfate(SO_4) in soil (% by wgt)	Sulfate (SO_4) in water (ppm)	Cement type	Normal weight aggregate concrete: Maximum water-cement ratio by weight	Lightweight aggregate concrete: Minimum compressive strength (psi)
Negligible	0.00 - 0.10	0-150	–	–	–
Moderate	0.10 - 0.20	150-1,500	II, IP(MS), IS(MS)	0.50	4,000
Severe	0.20 - 2.00	1,500-10,000	V	0.45	4,500
Very Severe	Over 2.00	Over 10,000	V plus pozzolan	0.45	4,500

The soils were also tested for soils reactivity (pH) and resistivity (ohms). The test results indicate that the soils have a soil reactivity ranging from 7.19 to 8.05 and a resistivity ranging from 2,300 to 4,300 ohms. A neutral or non-corrosive soil has a value ranging from 5.5 to 8.4. Generally, soils that could be considered corrosive to metal have resistivities less than 3000 ohms. Those soils with values less than 1000 ohms can be considered extremely corrosive.

Based on our test results, it is our opinion that the underlying soils at the site have a low to moderate corrosion potential. Protection of buried metal pipes with sand bedding and protective coating may be used to reduce corrosion potential.

3.21 Temporary Slopes

Excavation of utility trenches will require either temporary sloped excavations or shoring. Temporary excavations in existing alluvial soils may be safely made at an inclination of 1:1 (horizontal to vertical) or flatter. If vertical sidewalls are required in excavations greater than 5 feet in depth, the use of cantilevered or braced shoring is recommended. Excavations less than 5 feet in depth may be constructed with vertical sidewalls without shoring or shielding. Our recommendations for lateral earth pressures to be used in the design of cantilevered and/or braced shoring are presented below. These values incorporate a uniform lateral pressure of 72 psf to provide for the normal construction loads imposed by vehicles, equipment, materials, and workmen on the surface adjacent to the trench excavation. However, if vehicles, equipment, materials, etc. are kept a minimum distance equal to the height of the excavation away from the edge of the excavation, this surcharge load need not be applied.

SHORING DESIGN: LATERAL SHORING PRESSURES

Design of the shield struts should be based on a value of 0.65 times the indicated pressure, Pa, for the approximate trench depth. The wales and sheeting can be designed for a value of 2/3 the design strut value.

GMX, Inc.
Proposed Residential Site
Wildomar, CA
November 10, 2003

HEIGHT OF SHIELD, H_{sh} = DEPTH OF TRENCH, D_t, MINUS DEPTH OF SLOPE, H_1

TYPICAL SHORING DETAIL

Placement of the shield may be made after the excavation is completed or driven down as the material is excavated from inside of the shield. If placed after the excavation, some overexcavation may be required to allow for the shield width and advancement of the shield. The shield may be placed at either the top or the bottom of the pipe zone. Due to the anticipated thinness of the shield walls, removal of the shield after construction should have negligible effects on the load factor of pipes. Shields may be successively placed with conventional trenching equipment.

Vehicles, equipment, materials, etc. should be set back away from the edge of temporary excavations a minimum distance of 15 feet from the top edge of the excavation. Surface waters should be diverted away from temporary excavations and prevented from draining over the top of the excavation and down the slope face. During periods of heavy rain, the slope face should be protected with sandbags to prevent drainage over the edge of the slope, and a visqueen liner placed on the slope face to prevent erosion of the slope face.

Periodic observations of the excavations should be made by the geotechnical consultant to verify that the soil conditions have not varied from those anticipated and to monitor the overall condition of the temporary excavations over time. If at any time during construction conditions are encountered which differ from those anticipated, the geotechnical consultant should be contacted and allowed to analyze the field conditions prior to commencing work within the excavation.

Cal/OSHA construction safety orders should be observed during all underground work.

3.22 Utility Trench Backfill

The on-site soils are expected to be suitable as trench backfill provided they are screened of organic matter and cobbles over 4 inches in diameter. Trench backfill should be densified to at least 90% relative compaction (ASTM D1557) by mechanical methods.

All utility trench backfill within street right of way, utility easements, under or adjacent to sidewalks, driveways, or building pads should be observed and tested by the geotechnical consultant to verify proper compaction. Trenches excavated adjacent to foundations should not extend within the footing influence zone defined as the area within a line projected at a 1:1 (horizontal to vertical) drawn from the bottom edge of the footing. Trenches crossing perpendicular to foundations should be excavated and backfilled prior to the construction of the foundations. The excavations should be backfilled in the presence of the geotechnical engineer and tested to verify adequate compaction beneath the proposed footing.

Cal/OSHA construction safety orders should be observed during all underground work.

3.23 Pavement Sections

Sand equivalent and R-value tests were performed on anticipated subgrade soils at the site in order to provide information on their soil properties for design of pavement structural sections.

Structural sections were designed using the procedures outlined in "Design Procedures for Flexible Pavements", State of California Planning Manual - Part 7. This procedure uses the principle that the pavement structural section must be of adequate thickness to distribute the load from the design traffic index (TI) to the subgrade soils in such a manner that the stresses from the applied loads do not exceed the strength of the soil (R-value).

Development of the design traffic indexes on the basis of a traffic study is beyond the scope of this report; however, our experience indicates that traffic indexes of 5.0 is typical for residential streets and 6.0 for collector streets. We have provided alternate structural sections for each traffic index. Selection of the final pavement structural section should be based on economic considerations which are beyond the scope of this investigation. Our recommended structural sections are as follows:

- Residential Streets (TI=5.0, R-Value=17)
  4.0 inches of asphaltic concrete over
  6.0 inches of crushed aggregate base
  or
  7.0 inches of asphaltic concrete over
  12.0 inches of compacted native soils

- Collector Streets (TI=6.0, R-Value=17)
  5.0 inches of asphaltic concrete over
  7.0 inches of crushed aggregate base
  or
  9.0 inches of asphaltic concrete over
  12.0 inches of compacted native soils

Prior to paving, the upper 12 inches of subgrade soils should be scarified, adjusted to within 2% of optimum moisture and compacted to a minimum of 90% relative compaction if an aggregate base course is used or to 95% relative compaction if asphalt is placed directly on native soils. All aggregate base courses should be compacted to a minimum of 95% relative compaction. The laboratory standard used to establish the maximum density and optimum moisture shall be ASTM D1557.

The materials and methods used during construction should conform to the latest edition of the Standard Specifications for Public Works Construction (SSPWC). The aggregate base course should conform to the SSPWC Section 200-2.2 for Crushed Aggregate Base.

The asphalt surface course should conform to the SSPWC Section 203-6. If the asphaltic-concrete section is placed in two lifts, the cold joint between lifts should not be designed at the center of the asphaltic-concrete section.

3.24 Plan Review

Once formal grading and foundation plans are prepared for the subject property, this office should review the plans from a geotechnical viewpoint, comment on changes from the plan used during preparation of this report and revise the recommendations of this report where necessary.

3.25 Geotechnical Observation and Testing During Rough Grading

The geotechnical engineer should be contacted to provide observation and testing during the following stages of rough grading:

- During the clearing and grubbing of the site.
- During the demolition of any existing structures, buried utilities or other existing improvements.
- During excavation and over excavation of compressible soils.
- During all phases of rough grading, including over excavation, precompaction, benching, filling operations, and cut slope excavation.
- When any unusual conditions are encountered during grading.

A final geotechnical report summarizing conditions encountered during rough grading should be submitted upon completion of the rough grading operations.

3.26 Post-Grading Geotechnical Observation and Testing

After the completion of rough grading the geotechnical engineer should be contacted to provide additional observation and testing during the following construction activities:

- During all trenching and backfilling operations of buried improvements and utilities within the street right of way, utility easements, and lots to verify proper backfill and compaction of the utility trenches.
- After excavation and prior to placement of reinforcing steel or concrete within footing trenches to verify that footings are properly founded in competent materials.
- During fine or precise grading involving the placement of any fills underlying driveways, sidewalks, walkways, or other miscellaneous concrete flatwork to verify proper placement, mixing and compaction of fills.
- When any unusual conditions are encountered during construction.

4.00 CLOSURE

The findings, conclusions and recommendations in this report were prepared in accordance with generally accepted engineering and geologic principles and practices. No other warranty, either express or implied, is made. This report has been prepared for GMX Construction, Inc. to be used solely for design purposes. Anyone using this report for any other purpose must draw their own conclusions regarding required construction procedures and subsurface conditions.

The geotechnical and geologic consultant should be retained during the earthwork and foundation phases of construction to monitor compliance with the design concepts and recommendations, and to provide additional recommendations as needed. Should subsurface conditions be encountered during construction that are different from those described in this report, this office should be notified immediately so that our recommendations may be re-evaluated.

Geotechnical Consulting

October 4, 2004 Project No. I04596-10

Mr. Gary Missirian
GMX CONSTRUCTION, INC.
15335 Morrison Street, Suite 305
Sherman Oaks, California 91403

Subject: ***Geotechnical Recommendations for Construction of the Proposed Detention Basin, Assessors Parcel Numbers 368-030-056, 055, and 007, Mission Trail and Como Street in the Wildomar Area of Riverside County, California***

References: *LGC Inland, Inc., 2004, Percolation Testing for the Proposed Detention Basin, Assessors Parcel Numbers 368-030-056, 055, and 007, Mission Trail and Como Street in the Wildomar Area of Riverside County, California, Project No. I04596-10, dated September 21.*

Pursuant to your request, LGC Inland, Inc. (LGC) is providing additional recommendations for a higher design percolation rate. As discussed in the referenced report, the in-situ soils are highly variable. If during construction the clayey soils can be overexcavated and replaced with granular soils, then the design rate can be reduced by half. If the percolation rate for Test No. PP-3 is ignored, then the design average rate reduces to 70 minutes per inch (mpi).

We recommend that during rough grading that our field geologist evaluate the in-situ soils having the grading contractor remove any clayey soils and replace them with granular soils. Upon completion of rough grading, additional percolation testing can be performed in order to verify the higher design rate.

An alternate design can consist of construction of 3 to 5 feet diameter dry wells in addition to the detention basin. These dry wells would extend 20 to 40 feet below grade. The dry wells can help to further drain the surface water from the detention basin. With dry wells in addition to the detention basin, water can infiltrate into the soils both into the surface strata and deep strata.

In order to be able to design the dry wells, seepage design consisting of drilling borings to 50 feet, soil sampling and testing, and in-situ testing should be performed. The purpose of these recommendations can assist the designer from having to design a larger detention basin. Construction of a larger detention basin can be avoided with selective grading or dry wells or both.

The opportunity to be of service is appreciated. Should you have any questions regarding the content of this letter, or should you require additional information, please do not hesitate to contact this office at your earliest convenience.

SUBSURFACE EXPLORATION AND PERCOLATION TESTING

Subsurface Exploration

Subsurface exploration of the subject site consisted of one (1) deep exploratory test pit, and was conducted on September 10, 2004. The purpose of excavating the deep exploratory test pit included checking for groundwater and evidence of impermeable soil layers. Earth materials encountered within the deep exploratory test pit were classified and logged in general accordance with the visual manual procedures of the Unified Soil Classification System. The approximate location of the deep exploratory test pit is shown on the attached Percolation Test Pit Location Map, Plate 1. A log of the soils encountered within the deep exploratory test pit is presented in Appendix A.

Percolation Testing

On September 10, 2004, four (4) percolation tests were initiated to determined the percolation rate of the proposed detention basin at the subject site. The test method employed was the continuous pre-soak test procedure. The percolation tests were performed in conformance with the guidelines presented in both the referenced booklet and referenced continuous pre-soak test procedure by the RCEHSD.

The percolation tests were conducted in 7- to 8-inch diameter test holes hand excavated at the bottom of 4± to 8±-foot deep backhoe test pits. The percolation pit locations are shown on the attached Percolation Test Pit Location Map, Plate 1. Logs of the soils encountered within the percolation test pits are recorded on the Percolation Test Pit logs (PP-1 through PP-4) and are presented within Appendix A. The percolation test pits and the deep exploratory test pit were located by site topography on the site plan and existing streets. Prior to initiating the percolation tests, each test hole was first cleared of loose soils and 2 inches of ¾-inch gravel was then placed in the bottoms of the test holes. Per the RCEHSD procedures for continuous pre-soak testing, a 5-gallon water bottle filled with clear water was then inverted over each test hole.

Following the pre-soak, if all 5 gallons percolated with the tester present, the test was conducted on the same day. Otherwise, the test was conducted the day after the pre-soak was initiated, but no more than 26 hours after initiating pre-soak. Test holes with water remaining in the 5-gallon bottle after an overnight pre-soak were determined to have rates greater than 60 Minutes Per Inch (MPI), and tests on those test holes were concluded at that time. Otherwise, after presoak the test was conducted by adjusting the water level to 6 inches over the gravel prior to each of four (4) consecutive readings, or a minimum of 2 hours at time intervals that provide not less than 1-inch or more than 3 inches drop in water level. The drop in water level was measured from a fixed initial reference point for each reading. Measurements were made with a precision of ⅛-inch and after each measurement the water level was refilled to the original level within the test hole. Percolation test data recorded in the field are presented in Appendix B, and a summary of the percolation rates for the subject lots is presented on the following page.

PERCOLATION TEST RESULTS

EST # / LOT #	*EX. TEST PIT DEPTH (IN)*	*TEST HOLE DEPTH (FT)*	*PERCOLATION RATE (MPI)*	*SOIL DESCRIPTION*
PP-1	15	4	126	Clayey SAND (SC)
PP-2	15	7	21	Clayey Sandstone
PP-3	15	6	266	Clayey Sandstone
PP-4	15	8	78½	Clayey Sandstone

FINDINGS

Earth Materials

Earth materials encountered at the subject site include Pauba Formation bedrock overlain with a dark brown and medium dense clayey sand (Older Valley Fill), and a 6-inch to 1-foot thick layer of dark brown and medium dense clayey sand (artificial fill) as observed in Percolation Pit 1 and 2. In Percolation Pit 3 and 4, the Pauba Formation bedrock was overlain with 1-foot or less of strong brown loose sand (slopewash). The soils were observed to be dry to slightly moist and loose to dense in condition.

Groundwater

No groundwater was observed within the deep exploratory pit excavated at the subject site. Furthermore, there was no evidence of soil mottling or calcium carbonate concentration observed within the deep exploratory test pit that would have been indicative of a historically high groundwater level.

Percolation Test Results

The measured percolation test rates ranged from 21 to 266 MPI.

CONCLUSIONS AND RECOMMENDATIONS

General

Based on the data presented in this report and using the recommendations set forth, it is the judgment of **LGC** that there is sufficient area at the subject site to support the detention basin.

Detention Basin Design Recommendations

It is recommended that the proposed detention basin use a design percolation rate of 125 MPI. This rate represents the average of the 4 field tests. The soils encountered and the results of our field test are highly variable. During construction of the proposed detention basin, a field geologist or engineer from our office should evaluate the

exposed soils in order to evaluate if any clayey impermeable soils should be removed or be made less dense or less impermeable. The variable soil conditions can be better evaluated when the entire detention basin has been excavated. It can be determined at that time if a large area of the detention basin has impermeable soil conditions or if more permeable soils exist within the detention basin.

INVESTIGATION LIMITATIONS

This report is based upon information provided by the client and on the proposed project and geotechnical data as described herein. The materials encountered on the project site and described in other literature are believed representative of the project area and the conclusions and recommendations contained in this report are presented on that basis. However, soil materials can vary in characteristics between points of exploration, both laterally and vertically, and those variations could affect the conclusions and recommendations contained herein. As such, observation and testing by a geotechnical consultant during the construction phases of the project are essential to confirming the basis of this report. To provide the greatest degree of continuity between the design and construction phases, consideration should be given to retaining LGC for construction services.

This report has been prepared consistent with that level of care being provided by other professionals providing similar services at the same locale and time period. The contents of this report are professional opinions and as such, are not to be considered a guarantee or warranty.

This report should be reviewed and updated after a period of 1-year or if the project concept changes from that described herein. This report has not been prepared for use by parties or projects other than those named or described herein. This report may not contain sufficient information for other parties or other purposes.

The opportunity to be of service is appreciated. Should you have any questions regarding the content of this report, or should you require additional information, please do not hesitate to contact this office at your earliest convenience.

ATTACHMENT D

ENCROACHMENT / CONSTRUCTION REQUIREMENTS AND ENCROACHMENT LOGS

STANDARD SPECIFICATIONS FOR DISTRICT ADMINISTERED CONSTRUCTION PROJECTS

SECTION 6 - SPECIAL REQUIREMENTS

6.1 National Pollutant Discharge Elimination System (NPDES) –

Determine which watershed then: choose 1, 2 or 3 for construction site ≥1 acres; choose 4, 5 or 6 for construction site <1 acres.

1. Whitewater River Watershed

The Contractor shall comply with the requirements of Board Order No. 01-077 (NPDES No. CAS617002), NPDES Area-Wide Municipal Storm Water Permit, hereafter referred to in this Section as the "Permit", issued by the California Regional Water Quality Control Board (CRWQCB) – Colorado River Basin Region. This Permit regulates both stormwater and non-stormwater discharges associated with Contractor's construction activities. The Contractor shall prepare and implement a Storm Water Pollution Prevention Plan (SWPPP) in accordance with Section 29 "Stormwater and Non-Stormwater Pollution Control" of the Detailed Specifications.

The Contractor's attention is directed to: 1) Section 29.2 "General Requirements" which allows the Engineer to withhold progress payments if the Contractor fails to fully implement Section 29 "Stormwater and Non-Stormwater Pollution Control" or is deemed to be in non-compliance with the provisions of the Permit; 2) Section 29.3 "Stormwater Pollution Prevention Plan Preparation and Approval" which requires that a SWPPP be prepared and approved prior to the Pre-Construction meeting; and 3) Section 29.7 "SWPPP Implementation" which allows the Engineer to suspend construction operations if the Contractor fails to implement the approved SWPPP and any amendments thereto.

2. Santa Ana Watershed

The Contractor shall comply with the requirements of Board Order No. R8-2002-0011 (NPDES No. CAS618033), NPDES Area-Wide Municipal Stormwater Permit, hereafter referred to in this Section as the "Permit", issued by the California Regional Water Quality Control Board (CRWQCB) – Santa Ana Region. This Permit regulates both stormwater and non-stormwater discharges associated with Contractor's construction activities. The Contractor shall prepare and implement a Stormwater Pollution Prevention Plan (SWPPP) in accordance with Section 29 "Stormwater and Non-Stormwater Pollution Control" of the Detailed Specifications.

The Contractor's attention is directed to: 1) Section 29.2 "General Requirements" which allows the Engineer to withhold progress payments if the Contractor fails to fully implement Section 29 "Stormwater and Non-Stormwater Pollution Control" or is deemed to be in non-compliance with provisions of the Permit; 2) Section 29.3 "Stormwater Pollution Prevention Plan Preparation and Approval" which requires that a SWPPP be prepared and approved prior to the Pre-Construction meeting; and 3) Section 29.7 "SWPPP Implementation" which allows the Engineer to suspend construction operations if the Contractor fails to implement the approved SWPPP and any amendments thereto.

3. Santa Margarita Watershed

The Contractor shall comply with the requirements of Board Order No. R9-2004-001 (NPDES No. CAS0108766), NPDES Municipal Separate Storm Sewer Systems (MS4s),

hereafter referred to in this Section as the "Permit", issued by the California Regional Water Quality Control Board (CRWQCB) – San Diego Region and the requirements of Section 5.2 of the District's Santa Margarita Region Storm Water Management Plan, referred to as "District SWMP". The Permit and District SWMP regulates both stormwater and non-stormwater discharges associated with Contractor's construction activities. The Contractor shall prepare and implement a Stormwater Pollution Prevention Plan (SWPPP) in accordance with Section 29 "Stormwater and Non-Stormwater Pollution Control" of the Detailed Specifications.

The Contractor's attention is directed to: 1) Section 29.2 "General Requirements" which allows the Engineer to withhold progress payments if the Contractor fails to fully implement Section 29 "Stormwater and Non-Stormwater Pollution Control" or is deemed to be in non-compliance with provisions of the General Permit; 2) Section 29.3 "Stormwater Pollution Prevention Plan Preparation and Approval" which requires that a SWPPP be prepared and approved prior to the Pre-Construction meeting; and 3) Section 29.7 "SWPPP Implementation" which allows the Engineer to suspend construction operations if the Contractor fails to implement the approved SWPPP and any amendments thereto.

****** Choose 4, 5 or 6 for construction site < 1 acre ******

4. Whitewater River Watershed

The Contractor shall comply with the requirements of Board Order No. 01-077 (NPDES No. CAS617002), NPDES Area-Wide Municipal Storm Water Permit, hereafter referred to in this Section as the "Permit", issued by the California Regional Water Quality Control Board (CRWQCB) – Colorado River Basin Region. This Permit regulates stormwater discharges associated with construction activities performed under the direction of a municipal stormwater permittee. The Contractor shall prepare and implement a Pollution Prevention Plan (PPP) in accordance with Section 29 "Stormwater and Non-Stormwater Pollution Control" of the Detailed Specifications.

The Contractor's attention is directed to: 1) Section 29.2 "General Requirements" which allows the Engineer to withhold progress payments if the Contractor fails to fully implement Section 29 "Stormwater and Non-Stormwater Pollution Control" or is deemed to be in non-compliance with provisions of the Permit; 2) Section 29.3 "Pollution Prevention Plan Preparation and Approval" which requires that a PPP be prepared and approved prior to the Pre-Construction meeting; and 3) Section 29.5 "Pollution Prevention Plan Implementation" which allows the Engineer to suspend construction operations if the Contractor fails to implement the approved PPP and any amendments thereto.

Throughout the term of this contract, the total soil-disturbed area of the project site shall be no more than 1 acre.

5. Santa Ana Watershed

The Contractor shall comply with the requirements of Board Order No. R8-2002-0011 (NPDES No. CAS618033), NPDES Area-Wide Municipal Stormwater Permit, hereafter referred to in this Section as the "Permit", issued by the California Regional Water Quality Control Board (CRWQCB) – Santa Ana Region. This Permit regulates stormwater discharges associated with construction activities performed under the direction of a municipal stormwater permittee. The

Contractor shall prepare and implement a Pollution Prevention Plan (PPP) in accordance with Section 29 "Stormwater and Non-Stormwater Pollution Control" of the Detailed Specifications.

The Contractor's attention is directed to: 1) Section 29.2 "General Requirements" which allows the Engineer to withhold progress payments if the Contractor fails to fully implement Section 29 "Stormwater and Non-Stormwater Pollution Control" or is deemed to be in non-compliance with provisions of the Permit; 2) Section 29.3 "Pollution Prevention Plan Preparation and Approval" which requires that a PPP be prepared and approved prior to the Pre-Construction meeting; and 3) Section 29.5 "Pollution Prevention Plan Implementation" which allows the Engineer to suspend construction operations if the Contractor fails to implement the approved PPP and any amendments thereto.

Throughout the term of this contract, the total soil-disturbed area of the project site shall be no more than 1 acre.

6. Santa Margarita Watershed

The Contractor shall comply with the requirements of Board Order No. R9-2004-001 (NPDES Permit No. CAS0108766) NPDES Municipal Separate Storm Sewer System Permit (MS4s), hereafter referred to in this Section as the "Permit", issued by the California Regional Water Quality Control Board (CRWQCB) – San Diego Region. This Permit regulates stormwater discharges associated with construction activities performed under the direction of a municipal stormwater permittee. The Contractor shall prepare and implement a Pollution Prevention Plan (PPP) in accordance with Section 29 "Stormwater and Non-Stormwater Pollution Control" of the Detailed Specifications.

The Contractor's attention is directed to: 1) Section 29.2 "General Requirements" which allows the Engineer to withhold progress payments if the Contractor fails to fully implement Section 29 "Stormwater and Non-Stormwater Pollution Control" or is deemed to be in non-compliance with provisions of the Permit; 2) Section 29.3 "Pollution Prevention Plan Preparation and Approval" which requires that a PPP be prepared and approved prior to the Pre-Construction meeting; and 3) Section 29.5 "Pollution Prevention Plan Implementation" which allows the Engineer to suspend construction operations if the Contractor fails to implement the approved PPP and any amendments thereto.

Throughout the term of this contract, the total soil-disturbed area of the project site shall be no more than 1 acre.

SECTION 29 – STORMWATER AND NON-STORMWATER POLLUTION CONTROL

For construction site ≥ **1** acre, choose 1, 2 or 3 (SWPPP) **with** Appendix; - **OR** -
For construction site < **1** acre, choose 4 (PPP) – **no** Appendix.

1. Santa Ana Watershed

29.1 Description – The contract item Stormwater and Non-Stormwater Pollution Control shall include preparing, obtaining approval of, amending and implementing the Stormwater Pollution Prevention Plan (SWPPP) as required by the State Water Resources Control Board (SWRCB) and the California Regional Water Quality Control Board (CRWQCB)-Santa Ana Region.

The SWPPP shall identify site specific Best Management Practices (BMPs) to be implemented during and after construction to minimize the potential pollution of stormwater runoff and receiving waters. The identified BMPs shall be practices designed to minimize or eliminate the discharge of pollutants from the construction site and Contractor's construction activities, including, but not limited to:

1. Good housekeeping practices for solid and sanitary/septic waste management, vehicle and equipment cleaning/maintenance, and material handling and storage.

2. Construction procedures such as stabilized construction access points, scheduling/phasing to minimize areas of soil disturbance, soil stabilization and erosion/sediment control.

The SWPPP shall also stipulate an ongoing program for monitoring and maintenance of all BMPs.

29.2 General Requirements – All activities performed by the Contractor for this project shall conform to the requirements of the State-wide National Pollutant Discharge Elimination System (NPDES) General Permit (Permit No. CAS000002) for Discharges of Stormwater Runoff Associated with Construction Activity, hereafter referred to as the "General Permit", issued by the SWRCB. This General Permit regulates both stormwater and non-stormwater discharges associated with Contractor's construction activities. A copy of this General Permit is included as Appendix "D" of these Specifications.

In the event the District incurs any Administrative Civil Liability (fine) imposed by the CRWQCB - Santa Ana Region, as a result of Contractor's failure to fully implement the provisions of this section, "Stormwater and Non-Stormwater Pollution Control", the Engineer may, in the exercise of his sole judgment and discretion, withhold from payments otherwise due Contractor a sufficient amount to cover the Civil Liability. Liability may be in an amount up to $27,500 per day per deemed occurrence.

Also insert *** portion found after 3. verbiage.

2. Santa Margarita Watershed

29.1 Description – The contract item Stormwater and Non-Stormwater Pollution Control shall include preparing, obtaining approval of, amending and implementing the Stormwater Pollution Prevention Plan (SWPPP) as required by the State Water Resources Control Board (SWRCB), the California Regional Water Quality Control Board (CRWQCB)-San Diego Region and by the District's Santa Margarita Region Stormwater Management Plan (District SWMP).

The SWPPP shall identify site specific Best Management Practices (BMPs) to be implemented during and after construction to minimize the potential pollution of stormwater runoff and receiving waters. The identified BMPs shall be practices designed to minimize or eliminate the discharge of pollutants from the construction site and Contractor's construction activities, including, but not limited to:

1. Good housekeeping practices for solid and sanitary/septic waste management, vehicle and equipment cleaning/maintenance, and material handling and storage.

2. Construction procedures such as stabilized construction access points, scheduling/phasing to minimize areas of soil disturbance, soil stabilization and erosion/sediment control.

3. Incorporating the minimum BMPs identified in Section 5.2 of the District's SWMP.

The SWPPP shall also stipulate an ongoing program for monitoring and maintenance of all BMPs.

29.2 General Requirements – All activities performed by the Contractor for this project shall conform to the requirements of the State-wide National Pollutant Discharge Elimination System (NPDES) General Permit (Permit No. CAS000002) for Discharges of Stormwater Runoff Associated with Construction Activity, hereafter referred to as the "General Permit", issued by the SWRCB. This General Permit regulates both stormwater and non-stormwater discharges associated with Contractor's construction activities. A copy of this General Permit is included as Appendix "D" of these Specifications.

In the event the District incurs any Administrative Civil Liability (fine) imposed by the CRWQCB – San Diego Region, as a result of Contractor's failure to fully implement the provisions of this section, "Stormwater and Non-Stormwater Pollution Control", the Engineer may, in the exercise of his sole judgment and discretion, withhold from payments otherwise due Contractor a sufficient amount to cover the Civil Liability. Liability may be in an amount up to $27,500 per day per deemed occurrence.

Also insert *** text portion found after 3. verbiage.

3. Whitewater River Watershed

29.1 Description – The contract item Storm Water and Non-Storm Water Pollution Control shall include preparing, obtaining approval of, amending and implementing the Storm Water Pollution Prevention Plan (SWPPP) as required by the State Water Resources Control Board (SWRCB) and the California Regional Water Quality Control Board (CRWQCB)-Colorado River Basin Region.

The SWPPP shall identify site specific Best Management Practices (BMPs) to be implemented during and after construction to minimize the potential pollution of stormwater runoff and receiving waters. The identified BMPs shall be practices designed to minimize or eliminate the discharge of pollutants from the construction site and Contractor's construction activities, including, but not limited to:

1. Good housekeeping practices for solid and sanitary/septic waste management, vehicle and equipment cleaning/maintenance, and material handling and storage.

2. Construction procedures such as stabilized construction access points, scheduling/phasing to minimize areas of soil disturbance, soil stabilization and erosion/sediment control.

The SWPPP shall also stipulate an ongoing program for monitoring and maintenance of all BMPs.

29.2 General Requirements – All activities performed by the Contractor for this project shall conform to the requirements of the State-wide National Pollutant Discharge Elimination System (NPDES) General Permit (Permit No. CAS000002) for Discharges of Stormwater Runoff Associated with Construction Activity, hereafter referred to as the "General Permit", issued by the SWRCB. This General Permit regulates both stormwater and non-stormwater discharges associated with Contractor's construction activities. A copy of this General Permit is included as Appendix "D" of these Specifications.

In the event the District incurs any Administrative Civil Liability (fine) imposed by the CRWQCB – Colorado River Basin Region, as a result of Contractor's failure to fully implement the provisions of this section, "Stormwater and Non-Stormwater Pollution Control", the Engineer may, in the exercise of his sole judgment and discretion, withhold from payments otherwise due Contractor a sufficient amount to cover the Civil Liability. Liability may be in an amount up to $27,500 per day per deemed occurrence.

Also insert *** text portion found after 3. verbiage.

***** After 29.2 insert the following (same for all watersheds)**

Stormwater and Non-Stormwater Pollution Control work shall conform to the requirements in the latest version of the California Stormwater Quality Association (CASQA) Handbook, entitled **"California Stormwater BMP Handbook – Construction"**. A copy of the "California Stormwater BMP Handbook – Construction", hereafter referred to as the "CASQA Handbook", may be obtained from CASQA, Post Office Box 2105, Menlo Park, California 94026-2105. Telephone: 650.366.1042. Copies of the handbook can also be downloaded from the CASQA Internet site at http://www.cabmphandbooks.com/construction.asp. In addition, a copy of the CASQA Handbook is available for review at the District's office.

The Contractor shall be responsible for all costs and for any liability imposed by law as a result of the Contractor's failure to comply with the requirements set forth in this section, "Stormwater and Non-Stormwater Pollution Control", including but not limited to, compliance with the applicable provisions of the CASQA Handbook, General Permit, Federal, State and local regulations. For the purpose of this paragraph, costs and liabilities include, but are not limited to, fines, penalties and damages whether assessed against the District or the Contractor, including those levied under the Federal Clean Water Act and the State Porter-Cologne Water Quality Act.

The Contractor shall become fully informed of and comply with the applicable provisions of the CASQA Handbook, General Permit, Federal, State and local regulations that govern the Contractor's activities and operation pertaining to both stormwater and non-stormwater discharges from both the project site and areas of disturbance outside the project limits during

construction. The Contractor shall, at all times, keep copies of the General Permit, approved SWPPP and all amendments at the project site. The SWPPP shall be made available upon request of a representative of the SWRCB, CRWQCB, United States Environmental Protection Agency (USEPA) or local stormwater management agency. Requests by the public shall be directed to the Engineer.

The Contractor is solely and exclusively responsible for any arrangements made between the Contractor and other property owners or entities that results in disturbance of areas or construction activities being conducted outside limits of the designated rights-of-way and temporary construction easements as shown on the project drawings.

The Contractor shall, at reasonable times, allow authorized agents of the CRWQCB, SWRCB, USEPA or local stormwater management agency, upon the presentation of credentials and other documents as may be required by law, to:

1. Enter upon the construction site and the Contractor's facilities pertinent to the work;
2. Have access to and copy any records required to be kept as specified in the General Permit;
3. Inspect the construction site, including any offsite staging areas or material storage areas, and related soil stabilization practices and sediment control BMPs; and
4. Sample or monitor for the purpose of ensuring compliance with the General Permit.

The Contractor shall notify the Engineer immediately upon request from regulatory agencies to enter, inspect, sample, monitor or otherwise access the project site or the Contractor's records.

29.3 Stormwater Pollution Prevention Plan Preparation and Approval - The Contractor shall prepare and obtain approval of the SWPPP as part of the Stormwater and Non-Stormwater Pollution Control work for this contract. The SWPPP shall include an appropriate sampling and analysis plan (SAP) as required by Section B, "Monitoring Program and Reporting Requirements", of the General Permit. A guidance document titled "Construction Storm Water Sampling and Analysis Guidance Document" is available from the California Stormwater Quality Association internet site at http://www.cabmphandbooks.com/Construction.asp. The Contractor shall prepare and implement the SWPPP in accordance with the CASQA Handbook and SAP, the General Permit and these Detailed Specifications.

In case of conflict between the CASQA Handbook and these Detailed Specifications, the Detailed Specifications shall govern; in case of conflict between these Detailed Specifications and the General Permit, the latter shall govern.

Within five (5) working days after the award of the contract, the Contractor shall submit two (2) copies of the SWPPP to the Engineer for review and approval. The Contractor shall allow ten (10) working days for the Engineer to review the SWPPP. If revisions are required as

determined by the Engineer, the Contractor shall revise and resubmit the SWPPP within three (3) working days of receipt of the Engineer's comments and shall allow ten (10) working days for the Engineer to review the revisions. The Contractor shall submit four (4) copies of the approved SWPPP to the Engineer prior to the pre-construction meeting. **The Contractor must have an approved SWPPP prior to the pre-construction meeting**.

The objectives of the SWPPP shall be to identify all pollution sources associated with Contractor's construction activities that may adversely affect the quality of stormwater discharges; to identify all non-stormwater discharges; to identify, construct, implement and maintain water pollution control best management practices, hereafter referred to as "BMPs", to reduce to the maximum extent practicable pollutants in both stormwater discharges and authorized non-stormwater discharges from the construction site during construction and to develop a maintenance schedule for BMPs after construction is completed under this contract.

The SWPPP shall incorporate BMPs in each of the following categories:

1. Soil stabilization practices;
2. Sediment control practices;
3. Sediment tracking control practices;
4. Wind erosion control practices; and
5. Non-stormwater management, and waste management and disposal control practices.

Specific objectives and minimum requirements for each category of BMPs are described in the CASQA Handbook. The Contractor shall consider the objectives and minimum requirements presented in the CASQA Handbook for each of the above categories. When minimum requirements are listed for any category, the Contractor shall incorporate one or more of the listed minimum BMPs required into the SWPPP and implement on the project to meet the pollution control objectives for the category. In addition, the Contractor shall consider other BMPs presented in the CASQA Handbook to supplement the minimum BMPs required when necessary to meet the objectives of the SWPPP and maintain compliance with the General Permit. The Contractor shall document the selection process in accordance with the procedure specified in the CASQA Handbook.

The Contractor should not assume that the minimum BMPs required for each category presented in the CASQA Handbook are adequate to meet the pollution control objectives. The Contractor may use other effective BMPs, as approved by the Engineer, in addition to the minimum as required in the CASQA Handbook to achieve the pollution control objectives.

The SWPPP shall include the following items as described in the CASQA Handbook, SAP and General Permit:

1. Title Page;
2. Certification and Approval;
3. Table of Contents;
4. Source Identification;
5. Stormwater and Non-Stormwater Pollution Control Drawings;
6. Erosion Control;

7. Stabilization;
8. Sediment Control;
9. Non-Stormwater Management;
10. Waste Management and Disposal;
11. Maintenance, Inspection and Repair Program;
12. Training;
13. List of Contractors and Subcontractors;
14. Sampling and Analysis Plan;
15. Post-Construction Stormwater Management;
16. Current Inventory of BMP related materials;
17. Mobilization Plan for BMP deployment;
18. A copy of the Notice Of Intent (NOI) form submitted by the District for this project;
19. A copy of the Waste Discharge Identification (WDID) number or proof of mailing of the NOI (provided by the District);
20. A copy of the General Permit;
21. A copy of other applicable Plans/Permits, if any;
22. Construction Site Inspection Checklist;
23. Pre/Post Storm Inspection Checklist;
24. Inspection Log;
25. A copy of the Amendments, if any;
26. Amendment Certification and Approval, if any;
27. Amendment Log;
28. Annual Compliance Certification;
29. BMPs Consideration Checklist; and
30. SWPPP Checklist.

The following notes (or notes of substantially similar intent) that address pollution prevention to the Maximum Extent Practicable during the construction phase of a project on a year-round basis needs to be placed on the Stormwater and Non-Stormwater Pollution Control Drawings:

- Erosion control BMPs shall be implemented and maintained to minimize and/or prevent the entrainment of soil in runoff from disturbed soil areas on construction sites.
- Sediment control BMPs shall be implemented and maintained to prevent and/or minimize the transport of soil from the construction site.
- Stockpiles of soil shall be properly contained to eliminate or reduce sediment transport from the site to streets, drainage facilities or adjacent properties via runoff, vehicle tracking or wind.
- Appropriate BMPs for construction-related materials, wastes, spills or residues shall be implemented to eliminate or reduce transport from the site to streets, drainage facilities or adjoining properties by wind or runoff.
- Runoff from equipment and vehicle washing shall be contained at construction sites and must not be discharged to receiving waters or the local storm drain system.

- All construction contractor and subcontractor personnel are to be made aware of the required best management practices and good housekeeping measures for the project site and any associated construction staging areas.
- At the end of each day of construction activity all construction debris and waste materials shall be collected and properly disposed in trash or recycle bins.
- Construction sites shall be maintained in such a condition that a storm does not carry wastes or pollutants off the site. Discharges other than stormwater (non-stormwater discharges) are prohibited, except as authorized by an individual NPDES permit or the State-wide General Permit for Storm Water Discharges Associated with Construction Activity. Potential pollutants include but are not limited to: solid or liquid chemical spills; wastes from paints, stains, sealants, solvents, detergents, glues, lime, pesticides, herbicides, fertilizers, wood preservatives and asbestos fibers; paint flakes or stucco fragments; fuels, oils, lubricants and hydraulic, radiator or battery fluids; concrete and related cutting or curing residues; floatable wastes; wastes from engine/equipment steam cleaning or chemical degreasing; wastes from street cleaning; and super-chlorinated potable water from line flushing and testing. During construction, disposal of such materials should occur in a specified and controlled temporary area onsite physically separated from potential stormwater runoff, with ultimate disposal in accordance with local, State and Federal requirements.
- Discharging contaminated groundwater produced by dewatering groundwater that has infiltrated into the construction site is prohibited. Discharging of contaminated soils via surface erosion is also prohibited.
- The Contractor is required to notify and obtain approval from the District 10 days prior to any non-stormwater discharge or dewatering associated with Contractor's construction activities.
- Construction sites shall be managed to minimize the exposure time of disturbed soil areas through phasing and scheduling of grading to the extent feasible and the use of temporary and permanent soil stabilization.
- BMPs shall be maintained at all times. In addition, BMPs shall be inspected prior to predicted storm events and following storm events.

29.4 Stormwater Pollution Prevention Plan Amendments - The Contractor shall prepare amendments to the SWPPP, both graphically and in narrative form, whenever there is a change in Contractor's construction activities or operations which may result in the discharge of pollutants to surface waters, groundwaters, municipal storm drain systems, or as deemed necessary by the Engineer. The Contractor shall also amend the SWPPP if it is in violation of any condition of the General Permit, or has not effectively achieved the objective of reducing pollutants in stormwater discharges. Amendments shall show additional BMPs, revised Contractor's construction activities or operations, including those in areas not shown in the initially approved SWPPP, which are required on the project to effectively control water pollution.

Amendments to the SWPPP shall be submitted for review and approval by the Engineer in the same manner specified for the initial approval of the SWPPP. The Contractor shall date and attach all approved amendments to the SWPPP. Upon approval of the amendment, the Contractor shall implement the additional BMPs, revised construction activities or operations.

29.5 Annual Compliance Certification – The Contractor shall certify annually that construction activities are in compliance with the requirements of the General Permit and the approved SWPPP. The certification must be completed by July 1st of each year.

29.6 Non-Compliance Reporting - If the project is in non-compliance at any time, the Contractor shall make a written report to the Engineer within two (2) calendar days of identification of non-compliance activities.

29.7 SWPPP Implementation - Upon approval of the SWPPP, the Contractor shall be responsible throughout the duration of the project for placing, installing, constructing, inspecting and maintaining the BMPs as well as conducting the sampling and analysis plan as included in the SWPPP and any amendments thereto, and for removing and disposing of temporary BMPs. Unless otherwise directed by the Engineer or specified in these Detailed Specifications, the Contractor's responsibility for SWPPP implementation shall continue throughout any temporary suspension of work ordered in accordance with Section 6.05, "TEMPORARY SUSPENSION OF THE WORK", of the General Provisions. Requirements for installation, construction, inspection, maintenance, removal and disposal of BMPs are specified in the Caltrans Handbooks and these Detailed Specifications.

The Engineer may order the suspension of construction operations if the Contractor fails to comply with the requirements of this section, "Stormwater and Non-Stormwater Pollution Control", as determined by the Engineer.

The Contractor will not be compensated for sampling and analysis work because of the Contractor's failure to properly implement, inspect, maintain and repair BMPs in the approved SWPPP and any amendments thereto, or for failing to store construction materials or wastes in watertight containers.

(a) Stormwater Pollution Control - **The Contractor shall implement soil stabilization practices and sediment control BMPs, including minimum requirements as presented in the Caltrans Handbooks, on all disturbed areas of the project site during the rainy season, defined as between October 1st and April 30th. (in the Santa Ana Margarita)**

(a) Stormwater Pollution Control - **The Contractor shall implement soil stabilization practices and sediment control BMPs, including minimum requirements as presented in the Caltrans Handbooks, on all disturbed areas of the project site during the rainy season, although undefined shall be October 15th to April 15th, for purposes of these Detailed Specifications. (in the Whitewater Watershed)**

(a) Stormwater Pollution Control - **The Contractor shall implement soil stabilization practices and sediment control BMPs, including minimum requirements as presented in the Caltrans Handbooks, on all disturbed areas of the project site during the rainy season, defined as between October 1st and May 31st. (in the Santa Ana Watershed)**

Implementation of soil stabilization practices and sediment control BMPs for soil-disturbed areas, including but not limited to, rough graded access roads, slopes, channel inverts, operational inlets and outlets of the project shall be completed no later than ten (10) calendar days prior to the start of the winter season or upon start of applicable Contractor's construction activities for projects which begin either during or within ten (10) calendar days of the rainy season.

The Engineer may require the Contractor, on a case-by-case basis, to reduce the active, soil-disturbed area limit of the project. The Contractor shall demonstrate the ability and preparedness to fully deploy soil stabilization practices and sediment control BMPs to protect soil-disturbed areas of the project site by maintaining an adequate quantity of soil stabilization and sediment control materials onsite to protect exposed, soil-disturbed areas and a detailed plan for the mobilization of sufficient labor and equipment to fully deploy the required BMPs prior to the onset of precipitation and for the duration of the project.

Throughout the rainy season, soil-disturbed areas of the project site shall be considered to be nonactive whenever soil disturbing activities are expected to be discontinued for a period of fifteen (15) calendar days or more. Areas that will become nonactive either during the rainy season or within ten (10) calendar days thereof shall be fully protected with soil stabilization practices such as covering with mulch, temporary seeding, fiber rolls, blankets, etc., within ten (10) calendar days of the discontinuance of soil disturbing activities or prior to the onset of precipitation, whichever is first to occur. Areas that will become nonactive either during the rainy season or within ten (10) calendar days thereof shall be fully protected with sediment control BMPs within ten (10) calendar days of the discontinuance of soil disturbing activities or prior to the onset of precipitation, whichever is first to occur.

Throughout the rainy season, active soil-disturbed areas of the project site shall be fully protected at the end of each day with soil stabilization practices and sediment control BMPs. The Contractor shall monitor the weather forecast on a daily basis. The National Weather Service forecast shall be used, or an alternative weather forecast proposed by the Contractor may be used if approved by the Engineer. If precipitation is predicted prior to the end of the following workday, construction scheduling shall be modified, as required, and the Contractor shall deploy functioning BMPs prior to the onset of the precipitation.

(b) Non-Stormwater Pollution Control - **The Contractor shall implement, year-round and throughout the duration of the project, BMPs included in the SWPPP for sediment tracking, wind erosion, non-stormwater management, and waste management and disposal.**

(c) Inspections and Reporting - The Contractor shall regularly inspect the construction site for BMPs identified in the SWPPP to ensure the proper implementation and functioning of BMPs. The Contractor shall identify corrective actions and time frames to address any damaged BMPs or reinitiate any BMPs that have been discontinued.

At a minimum, the Contractor shall inspect the construction site as follows:

1. Prior to a forecast storm;
2. After any precipitation which causes runoff capable of carrying sediment from the construction site;
3. At 24 hour intervals during extended precipitation events; and
4. At a regular interval of once every 2 weeks.

The construction site inspection checklist provided in the Caltrans Handbooks shall be used to ensure that the necessary BMPs are being properly implemented and are functioning adequately. The Contractor shall submit one copy of each site inspection record to the Engineer.

(d) Maintenance - The Contractor shall maintain construction site BMPs identified in the SWPPP to ensure the proper implementation and functioning of BMPs. If the Contractor or the Engineer identifies a deficiency in the deployment or functioning of an identified BMP, the deficiency shall be corrected by the Contractor immediately, or by a later date and time if requested by the Contractor and approved by the Engineer in writing, but not later than the onset of subsequent precipitation events. The correction of deficiencies shall be at no additional cost to the District.

(e) Training – The Contractor shall describe the types of training that the Contractor's BMP inspection, maintenance and repair personnel have received or will receive that is directly related to stormwater pollution prevention.

29.8 Payment - The contract lump sum price paid for the Stormwater and Non-Stormwater Pollution Control work shall include full compensation for furnishing all labor, materials, tools, equipment and incidentals for doing all the work involved in developing, preparing, obtaining approval of, revising and amending the SWPPP, and installing, constructing, maintaining, removing and disposing of BMPs as shown in the SWPPP, as specified in the Caltrans Handbooks and Sample Contractor's Water Quality SAPs, General Permit and these Detailed Specifications, and as directed by the Engineer.

Payment will be made on a basis of the percentage of work completed on the entire project.

ΞΞΞEnd of insert

4. For construction site < 1 acre (PPP) NO Appendix

29.1 Description - The contract item Stormwater and Non-Stormwater Pollution Control shall include preparing, obtaining approval of, amending and implementing Contractor's Pollution Prevention Plan (PPP). The PPP shall identify site specific Best Management Practices (BMPs) to be implemented during and after construction to minimize the potential pollution of stormwater runoff and receiving waters. The identified BMPs shall be practices designed to

minimize or eliminate the discharge of pollutants from the construction site and Contractor's construction activities, including, but not limited to:

1. Good housekeeping practices for solid and sanitary/septic waste management, vehicle and equipment cleaning/maintenance, and material handling and storage.

2. Construction procedures such as stabilized construction access points, scheduling/phasing to minimize areas of soil disturbance, soil stabilization and erosion/sediment control.

The PPP shall also stipulate an ongoing program for monitoring and maintenance of all BMPs.

29.2 General Requirements – Stormwater and Non-Stormwater Pollution Control work shall conform to the requirements in the latest version of Caltrans Storm Water Quality Handbooks, entitled **"Construction Site Best Management Practices (BMPs) Manual" and "Storm Water Pollution Prevention Plan (SWPPP) and Water Pollution Control Program (WPCP) Preparation Manual"**. Copies of the "Construction Site BMPs Manual" and "SWPPP and WPCP Preparation Manual", hereafter referred to collectively as the "Caltrans Handbooks", may be obtained from the California Department of Transportation Publication Distribution Unit, 1900 Royal Oaks Drive, Sacramento, California, 95815-3800. Telephone: (916) 445-3520. Copies of the Caltrans Handbooks can also be downloaded from the Caltrans internet site at http://www.dot.ca.gov/hq/construc/stormwater/stormwater1.htm. In addition, copies of the Caltrans Handbooks are available for review at the District's office.

In the event the District incurs any Administrative Civil Liability (fine) imposed by the California Regional Water Quality Control Board, as a result of Contractor's failure to fully implement the provisions of this section, "Stormwater and Non-Stormwater Pollution Control", the Engineer may, in the exercise of his sole judgment and discretion, withhold from payments otherwise due Contractor a sufficient amount to cover the Civil Liability. Liability may be in an amount up to $27,500 per day per deemed occurrence.

The Contractor shall be responsible for all costs and for any liability imposed by law as a result of the Contractor's failure to comply with the requirements set forth in this section, "Stormwater and Non-Stormwater Pollution Control", including but not limited to, compliance with the applicable provisions of the Caltrans Handbooks, Federal, State, and local regulations. For the purpose of this paragraph, costs and liabilities include, but are not limited to, fines, penalties and damages whether assessed against the District or the Contractor, including those levied under the Federal Clean Water Act and the State Porter-Cologne Water Quality Act.

The Contractor shall become fully informed of and comply with the applicable provisions of the Caltrans Handbooks, Federal, State and local regulations that govern the Contractor's activities and operation pertaining to both stormwater and non-stormwater discharges from both the project site and areas of disturbance outside the project limits during construction. The Contractor shall, at all times, keep copies of the approved PPP and all amendments at the project site. The PPP shall be made available upon request of a representative of the SWRCB, CRWQCB, United States Environmental Protection Agency (USEPA) or local stormwater management agency. Requests by the public shall be directed to the Engineer.

The Contractor is solely and exclusively responsible for any arrangements made between the Contractor and other property owners or entities that results in disturbance of areas or construction activities being conducted outside limits of the designated rights-of-way and temporary construction easements as shown on the project drawings.

29.3 Pollution Prevention Plan Preparation and Approval - The Contractor shall prepare and obtain approval of the PPP as part of the Stormwater and Non-Stormwater Pollution Control work for this contract. The Contractor shall prepare the PPP in accordance with Section 3, "Preparing a Water Pollution Control Program (WPCP)", of the Caltrans Storm Water Quality Handbooks, entitled "**Storm Water Pollution Prevention Plan (SWPPP) and Water Pollution Control Program (WPCP) Preparation Manual**" and these Detailed Specifications.

In case of conflict between the Caltrans Handbooks and these Detailed Specifications, the Detailed Specifications shall govern.

Within five (5) working days after the award of the contract, the Contractor shall submit two (2) copies of the PPP to the Engineer for review and approval. The Contractor shall allow ten (10) working days for the Engineer to review the PPP. If revisions are required as determined by the Engineer, the Contractor shall revise and resubmit the PPP within three (3) working days of receipt of the Engineer's comments and shall allow ten (10) working days for the Engineer to review the revisions. The Contractor shall submit four (4) copies of the approved PPP to the Engineer prior to the pre-construction meeting. **The Contractor must have an approved PPP prior to the pre-construction meeting.**

The objectives of the PPP shall be to identify all pollution sources associated with Contractor's construction activities that may adversely affect the quality of stormwater discharges and receiving waters; to identify all non-stormwater discharges; to identify, construct, implement and maintain water pollution control best management practices, hereafter referred to as "BMPs", to reduce to the maximum extent practicable pollutants in both stormwater and authorized non-stormwater discharges from the construction site during construction and to develop a maintenance schedule for BMPs after construction is completed under this contract.

The PPP shall incorporate BMPs in each of the following categories:

1. Soil stabilization practices;
2. Sediment control practices;
3. Sediment tracking control practices;
4. Wind erosion control practices; and
5. Non-stormwater management, and waste management and disposal control practices.

Specific objectives and minimum requirements for each category of BMPs are contained in the Caltrans Handbooks. The Contractor shall consider the objectives and minimum requirements presented in the Caltrans Handbooks for each of the above categories. When minimum requirements are listed for any category, the Contractor shall incorporate one or more of the listed minimum BMPs required into the PPP and implement on the project to meet the pollution control objectives for the category. In addition, the Contractor shall consider other

BMPs presented in the Caltrans Handbooks to supplement the minimum BMPs required when necessary to meet the objectives of the PPP. The Contractor shall document the selection process in accordance with the procedure specified in the Caltrans Handbooks.

The Contractor shall not assume that the minimum BMPs required for each category presented in the Caltrans Handbooks are adequate to meet the pollution control objectives. The Contractor may use other effective BMPs, as approved by the Engineer, in addition to the minimum BMPs required in the Caltrans Handbooks to achieve the pollution control objectives.

The PPP shall include all of the following items in the order given below:

1. Title Page;
2. Table of Contents;
3. Project Description and Contractor's Certification;
4. Project Information;
5. Pollution Sources and BMPs;
6. Water Pollution Control Drawings;
7. A copy of the Amendments, if any;
8. Amendment Log;
9. Maintenance, Inspection, and Repair Program;
10. Inspection Log;
11. Construction Site Inspection Checklist;
12. Current Inventory of BMP related materials; and
13. Mobilization Plan for BMP deployment.

The following notes (or notes of substantially similar intent) that address pollution prevention to the Maximum Extent Practicable during the construction phase of a project on a year-round basis needs to be placed on the Stormwater and Non-Stormwater Pollution Control Drawings:

- Erosion control BMPs shall be implemented and maintained to minimize and/or prevent the entrainment of soil in runoff from disturbed soil areas on construction sites.
- Sediment control BMPs shall be implemented and maintained to prevent and/or minimize the transport of soil from the construction site.
- Stockpiles of soil shall be properly contained to eliminate or reduce sediment transport from the site to streets, drainage facilities or adjacent properties via runoff, vehicle tracking or wind.
- Appropriate BMPs for construction-related materials, wastes, spills or residues shall be implemented to eliminate or reduce transport from the site to streets, drainage facilities or adjoining properties by wind or runoff.
- Runoff from equipment and vehicle washing shall be contained at construction sites and must not be discharged to receiving waters or the local storm drain system.
- All construction contractor and subcontractor personnel are to be made aware of the required best management practices and good housekeeping measures for the project site and any associated construction staging areas.

- At the end of each day of construction activity all construction debris and waste materials shall be collected and properly disposed in trash or recycle bins.
- Construction sites shall be maintained in such a condition that a storm does not carry wastes or pollutants off the site. Discharges other than stormwater (non-stormwater discharges) are prohibited, except as authorized by an individual NPDES permit, the State-wide General Permit for Storm Water Discharges Associated with Construction Activity. Potential pollutants include but are not limited to: solid or liquid chemical spills; wastes from paints, stains, sealants, solvents, detergents, glues, lime, pesticides, herbicides, fertilizers, wood preservatives and asbestos fibers; paint flakes or stucco fragments; fuels, oils, lubricants and hydraulic, radiator or battery fluids; concrete and related cutting or curing residues; floatable wastes; wastes from engine/equipment steam cleaning or chemical degreasing; wastes from street cleaning; and super-chlorinated potable water from line flushing and testing. During construction, disposal of such materials should occur in a specified and controlled temporary area onsite physically separated from potential stormwater runoff, with ultimate disposal in accordance with local, State and Federal requirements.
- Discharging contaminated groundwater produced by dewatering groundwater that has infiltrated into the construction site is prohibited. Discharging of contaminated soils via surface erosion is also prohibited.
- The Contractor is required to notify and obtain approval from the District 10 days prior to any non-stormwater discharge or dewatering associated with Contractor's construction activities.
- Construction sites shall be managed to minimize the exposure time of disturbed soil areas through phasing and scheduling of grading to the extent feasible and the use of temporary and permanent soil stabilization.
- BMPs shall be maintained at all times. In addition, BMPs shall be inspected prior to predicted storm events and following storm events.

29.4 Pollution Prevention Plan Amendments - The Contractor shall prepare amendments to the PPP, both graphically and in narrative form, whenever there is a change in Contractor's construction activities or operations which may result in the discharge of pollutants to surface waters, groundwaters, municipal storm drain systems or when deemed necessary by the Engineer. The Contractor shall also amend the PPP if it is not effectively achieving the objectives of reducing pollutants in stormwater discharges. Amendments shall show additional BMPs or revisions to Contractor's construction activities or operations (including any construction activities in areas not included in the initially approved PPP) which are required on the project to effectively control water pollution.

Amendments to the PPP shall be submitted for review and approval by the Engineer in the same manner specified for the initial approval of the PPP. The Contractor shall date and attach all approved amendments to the PPP. Upon approval of the amendment, the Contractor shall implement the additional BMPs, revised construction activities or operations as described therein.

29.5 Pollution Prevention Plan Implementation - Upon approval of the PPP, the Contractor shall be responsible throughout the duration of the project for installing, constructing, inspecting

and maintaining the BMPs included in the PPP and any amendments thereto and for removing and disposing of temporary BMPs. Unless otherwise directed by the Engineer or specified in these Detailed Specifications, the Contractor's responsibility for PPP implementation and maintenance shall continue throughout any temporary suspension of work ordered in accordance with Section 6.05, TEMPORARY SUSPENSION OF THE WORK, of the General Provisions. Requirements for installation, construction, inspection, maintenance, removal and disposal of BMPs are specified in the Caltrans Handbooks and these Detailed Specifications. The Contractor shall implement the PPP in accordance with the Caltrans Handbooks and these Detailed Specifications.

The Engineer may order the suspension of construction operations if the Contractor fails to comply with the requirements of this section, "Stormwater and Non-Stormwater Pollution Control", as determined by the Engineer.

(a) Stormwater Pollution Control - **The Contractor shall implement soil stabilization practices and sediment control BMPs, including minimum requirements as presented in the Caltrans Handbooks, on all disturbed areas of the project site throughout the winter season, defined as between October 15th and April 15th.**

Implementation of soil stabilization practices and sediment control BMPs for soil-disturbed areas, including but not limited to, rough graded access roads, slopes, channel inverts, operational inlets and outlets of the project site shall be completed no later than ten (10) calendar days prior to the start of the winter season or upon start of applicable Contractor's construction activities for projects which begin either during or within ten (10) calendar days of the winter season.

Throughout the term of this contract, the total soil-disturbed area of the project site shall be less than one (1) acre. The Contractor shall demonstrate the ability and preparedness to fully deploy soil stabilization practices and sediment control BMPs to protect soil-disturbed areas of the project site by maintaining an adequate quantity of soil stabilization and sediment control materials onsite to protect exposed, soil-disturbed areas and a detailed plan for the mobilization of sufficient labor and equipment to fully deploy the required BMPs prior to the onset of precipitation and for the duration of the project.

Throughout the winter season, active soil-disturbed areas of the project site shall be fully protected at the end of each day with soil stabilization practices and sediment control BMPs. The Contractor shall monitor the weather forecast on a daily basis. The National Weather Service forecast shall be used or an alternative weather forecast proposed by the Contractor may be used if approved by the Engineer. If precipitation is predicted prior to the end of the following workday, construction scheduling shall be modified, as required, and the Contractor shall deploy functioning control measures prior to the onset of the precipitation.

Throughout the winter season, soil-disturbed areas of the project site shall be considered to be non-active whenever soil disturbing activities are expected to be discontinued for a period of fifteen (15) calendar days or more. Areas that will

become non-active either during the winter season or within ten (10) calendar days thereof shall be fully protected with soil stabilization practices such as covering with mulch, temporary seeding, fiber rolls, blankets, etc. within ten (10) calendar days of the discontinuance of soil disturbing activities or prior to the onset of precipitation, whichever is first to occur. Areas that will become non-active either during the winter season or within ten (10) calendar days thereof shall be fully protected with sediment control BMPs within ten (10) calendar days of the discontinuance of soil disturbing activities or prior to the onset of precipitation, whichever is first to occur.

(b) Non-Stormwater Pollution Control - **The Contractor shall implement, year-round and throughout the duration of the project, BMPs included in the PPP for sediment tracking, wind erosion, non-stormwater management, and waste management and disposal.**

(c) Inspections and Reporting - The Contractor shall regularly inspect the construction site for BMPs identified in the PPP to ensure the proper implementation and functioning of BMPs. The Contractor shall identify corrective actions and time frames to address any deficient BMPs or reinitiate any BMPs that have been discontinued.

At a minimum, the Contractor shall inspect the construction site as follows:

1. Prior to a forecast storm;
2. After any precipitation which causes runoff capable of carrying sediment from the construction site;
3. At 24 hour intervals during extended precipitation events; and
4. At a regular interval of once every 2 weeks.

The construction site inspection checklist provided in the Caltrans Handbooks shall be used to ensure that the necessary BMPs are being properly implemented and are functioning adequately. The Contractor shall submit one copy of each site inspection record to the Engineer.

(d) Maintenance – The Contractor shall maintain construction site BMPs identified in the PPP to ensure the proper implementation and functioning of BMPs. If the Contractor or the Engineer identifies a deficiency in the deployment or functioning of an identified BMP, the deficiency shall be corrected by the Contractor immediately, or by a later date and time if requested by the Contractor and approved by the Engineer in writing, but not later than the onset of subsequent precipitation events. The correction of deficiencies shall be at no additional cost to the District.

(e) Training – The Contractor shall describe the types of training that the Contractor's BMP inspection, maintenance and repair personnel have received or will receive that is directly related to stormwater pollution prevention.

29.6 Payment - The contract lump sum price paid for contract item Stormwater and Non Stormwater Pollution Control shall include full compensation for all direct and indirect costs incurred under this section.

Payment will be made on a basis of the percentage of work completed on the entire project.

ENCROACHMENT PERMIT APPLICATION

51355.1
REV. 01/29/07

RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT

ENCROACHMENT PERMIT INFORMATION SHEET

Applicants: Please note that the following information and documents **MUST** be submitted with your application in order for the Riverside County Flood Control and Water Conservation District (District) to begin processing your request for an encroachment permit. Failure to submit all documentation as described below will delay the processing of your application:

1. Completed Check List (attached) with all applicable items addressed.

2. Completed and signed Application Form (attached).

3. Two sets of approved and signed plans for the proposed work.

4. One copy of the District as-built drawing(s) clearly showing the proposed work to be done under the requested encroachment permit. As-built drawings can be purchased from the District's Reproduction Section (951.955.1221).

5. A check or money order written for the appropriate fee amount to be deposited. (Please refer to the attached Encroachment Permit Fee Deposit Requirement Sheet.) Fees will be placed in an individual account and all District costs will be tracked as work is performed. If the balance in the account drops under 25% of the original deposit and the General Manager-Chief Engineer determines that the remaining amount is insufficient to complete the processing of the application (including environmental review, inspection and finalization of the project), the applicant will be required to submit an additional deposit prior to continuing to work on the application or proceeding with any further work on the project. Further inspections will not be scheduled until the additional deposit is submitted. Once a project is completed and accepted by the District, all unused funds will be refunded to the applicant within 60 days. All applicants, including public entities, must submit the required fee.

6. A copy of the approved and filed California Environmental Quality Act (CEQA) document (e.g., Notice of Exemption, Negative Declaration, Mitigated Negative Declaration/Initial Study, Environmental Impact Report and Statement of Overriding Consideration) as prepared by the Lead Agency for the proposed project shall be submitted to the District. The CEQA document is usually available from the City or County Planning Department that originally approved the proposed project. The District, as a CEQA Responsible Agency, must prepare the appropriate CEQA document for the proposed project prior to issuance of the requested encroachment permit.

7. Proof of prior compliance with the approved Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) must be submitted to the District for proposed projects with the boundaries of the MSHCP. For projects previously approved by the County or Cities, this proof may consist of written documentation from the applicable jurisdiction confirming compliance with the MSHCP. Documentation concerning payment of the MSHCP Mitigation Fee alone is not sufficient. The District must receive written documentation specifically confirming compliance with Sections 6.1.2, 6.1.3, 6.1.4 and 6.3 of the MSHCP as well as the Criteria if the project is located within the Criteria Area/Cell. Encroachment Permits associated with a project not previously reviewed by the County or a City for MSHCP compliance or Encroachment Permits not associated with any project that are located within the boundaries of the MSHCP will need to be reviewed for compliance with the requirements of the MSHCP by the District prior to issuance of the requested Encroachment Permit. The issuance of an Encroachment Permit by the District is a discretionary action subject to compliance with the MSHCP.

8. NPDES REQUIREMENTS: Encroachment permit applications associated with new or redevelopment projects proposing to discharge stormwater or non-stormwater into District facilities must identify the structural and non-structural best management practices (BMPs) to mitigate water quality impacts from the proposed project.

    a. ENCROACHMENT PERMITS WITHIN THE SANTA ANA OR SANTA MARGARITA WATERSHEDS: Projects within the Santa Margarita and Santa Ana watershed regions of Riverside County must meet the requirements of Section 6 of the Riverside County Drainage Area Management Plan (DAMP) for the Santa Margarita and Santa Ana watershed regions of Riverside County (SA/SM DAMP). Encroachment permit applications for projects that meet the definition of new development or significant redevelopment per Section 6 of the SA/SM DAMP may demonstrate compliance by providing proof of completion of a project-specific Water Quality Management Plan (WQMP). Projects that do not meet the definition of new development or significant redevelopment per Section 6 of the SA/SM DAMP must demonstrate compliance with the structural and non-structural BMPs requirements specified for other development projects per the requirements of Section 6.4.4 of the SA/SM DAMP. Submittal of plans identifying the locations of post-construction BMPs can be used to demonstrate compliance with this requirement.

    b. Projects within the Whitewater Region of Riverside County must demonstrate compliance with Supplement A to the Riverside County DAMP for the Whitewater Region (WW DAMP). This may be accomplished by submitting plans demonstrating the location of approved post-construction BMPs, or by submitting conditions of approval requiring compliance with Supplement A.

    c. Encroachment permit applicants not associated with new or redevelopment projects who discharge stormwater or non-stormwater to District facilities must identify the necessary structural and non-structural BMPs to mitigate water quality impacts from the proposed project. The applicant must complete the Application for Third-Party Discharge to the District Facilities. The application form is available on-line at www.floodcontrol.co.riverside.ca.us/waterqualitynpdes.asp. It may be advisable to contact the NPDES representative listed on the form to determine what, if any, water quality sampling data may be needed to process the application.

9. STORM DRAIN CONNECTIONS, BRIDGES AND CULVERT CROSSINGS: Hydrology and hydraulic calculations prepared and signed by a Registered Civil Engineer must be submitted with all applications for storm drain connections, bridges and culvert crossings. The maximum confluence angle at the junction of a lateral storm drain and mainline channel shall be 45 degrees. A hydraulic junction analysis must be done if the lateral flowrate is greater than 25% of the mainline flowrate. The hydraulic grade line, flow rate, and velocity shall be shown on the storm drain profile drawing. Only reinforced concrete pipe (RCP minimum 1500D) will be approved within District right of way.

10. EXCESS MATERIAL REMOVAL: Excess material removal shall be approved by the District's Chief of Operations and Maintenance, prior to submitting the encroachment permit application. An inspection fee for a minimum of $0.35 per cubic yard will take effect when the permit is issued and is payable to the District monthly or as specified in the encroachment permit.

    a. Applicants requesting encroachment permits for the removal of excess material from District facilities must also submit a Storm Water Pollution Prevention Plan (SWPPP) per the requirements of the appropriate Regional Water Control Board. A copy of the SWPPP shall be provided and approved by the District prior to receiving the requested encroachment permit. A SWPPP template and guidance on the preparation of a SWPPP can be downloaded from the California Association of Stormwater Quality Agencies (CASQA) website at http://www.cabmphandbooks.com/Construction.asp.

b. Applicants requesting encroachment permits for the removal of excess material from District facilities must also submit a fugitive dust control plan (DCP) per the requirements of the Air Quality Management District or local ordinances, as required. A copy of the DCP shall be provided and approved by the District prior to receiving the requested encroachment permit. DCP Handbooks for the Coachella Valley region can be downloaded from the Coachella Valley Association of Governments at http://www.cvag.org/depts/hcr.htm.

11. The applicant shall accept full responsibility for obtaining and complying with all applicable provisions of the appropriate regulatory permits. If the requested encroachment permit is for facilities that will be ultimately maintained by the District, the regulatory permits shall address both the construction and maintenance activities of these facilities in compliance with all applicable Federal, State and local regulations. These regulatory permits include, but are not limited to: a Section 404 Permit issued by the U.S. Army Corps of Engineers in compliance with Section 404 of the Clean Water Act, a California State Department of Fish and Game Streambed Alteration Agreement in compliance with the Fish and Game Code Sections 1600 et seq., and a 401 Water Quality Certification or a Report of Waste Discharge Requirements in compliance with Section 401 of the Clean Water Act or State Porter-Cologne Water Quality Act, respectively, from the appropriate Regional Water Quality Control Board. A general permit for discharges shall be obtained from the State Water Resources Control Board or Regional Water Quality Control Board as applicable for discharges of storm water associated with construction activity. The applicant shall also be responsible for complying with all mitigation measures as required under CEQA and all Federal, State, and local environmental rules and regulations. A copy of the above mentioned permits shall be submitted to the District for review and approval for all facilities that will ultimately be maintained by the District prior to District issuance of the requested encroachment permit. For projects that will not be maintained by the District a copy of the above mentioned permits shall be submitted to the District for the encroachment permit file. Mitigation measures may not be placed within District rights of way without prior approval from the General Manager–Chief Engineer.

12. ADDITIONAL DEPOSIT - If the District determines that survey monuments are located in the area of work, an additional deposit will be required to cover the cost of replacing any survey monuments that may be disturbed. District survey crews will replace monuments. A map will be provided to the applicant showing locations of survey monuments involved.

Requirements Due Prior to the Issuance of the Encroachment Permit

Prior to the issuance of the encroachment permit, the applicant or the contractor performing the work shall furnish a certificate of insurance specifying comprehensive liability limits of $2,000,000 per occurrence and $2,000,000 general aggregate. The applicant, the District, the County of Riverside, and any municipal corporation within which the work is to be performed, shall each be named as an additional insured. Alternatively, comprehensive liability limits shall be $1,000,000 per occurrence, with $2,000,000 general aggregate and a minimum of $2,000,000 excess liability. This insurance shall remain in effect for the duration of the work. Please reference the encroachment permit number (shown on your receipt for the initial deposit) on the certificate of insurance.

Additional Information

1. Please contact the District's Permit Engineer at 951.955.1266 if you have any questions or need any additional information.

2. Processing time for a typical encroachment permit (if all required information is submitted with the initial application) is approximately 30 working days.

RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT

ENCROACHMENT PERMIT CHECK LIST

Applicant Name: _____

Address: _____

_____

Contact Number: _____

1. _____ Completed and signed Application Form
2. _____ Check or Money Order written for the appropriate deposit
3. _____ Signed and approved plans for the proposed work (2 Sets)
4. _____ District as-built drawing(s) clearly marked to show the proposed work
5. _____ Copy of the Lead Agency's approved and filed CEQA documents
6. _____ Proof of compliance with the Western Riverside MSHCP (if proposed work is within the MSHCP boundary)
7. _____ Proof of NPDES Compliance
8. _____ Hydrology and Hydraulic Calculations (if for a storm drain connection, bridge or culvert crossing)

Regulatory Permits (if appropriate)

8. _____ Streambed Alteration Agreement from the California Department of Fish and Game
9. _____ Section 404 Authorization from the U.S. Army Corps of Engineers
10. _____ Section 401 Water Quality Certification from the appropriate Regional Water Quality Control Board

Encroachment Permits for the Removal of Excess Material

11. _____ Dust Control Plan
12. _____ Stormwater Pollution Prevention Plan

REV. 01/29/07

RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT

ENCROACHMENT PERMIT FEE DEPOSIT REQUIREMENTS
Effective December 23, 2004

Note: Per Ordinance No. 19 the Filing Fee for each encroachment permit shall be $500, with the exception of a permit for access to adjacent properties which shall be $250. This fee is non-refundable and will be deducted from the initial deposit.

STORM DRAIN CONNECTIONS

(a) 0" to 60" diameter

Initial Deposit (including non-refundable Filing Fee)..... $2,000.00

(b) Over 60" will be considered as major construction.
(See below)

ACCESS TO ADJACENT PROPERTY VIA DISTRICT FACILITY WITH TEMPORARY FENCE REMOVAL

(a) Initial Deposit (including non-refundable Filing Fee)..... $750.00

UTILITY CROSSINGS

(a) Underground Initial Deposit (including non-refundable Filing Fee) $2,000.00

(b) Aerial Initial Deposit (including non-refundable Filing Fee)..... $2,000.00

PARALLEL UTILITIES

(a) Underground Initial Deposit (including non-refundable Filing Fee) $2,000.00

(b) Aerial Filing Fee (including non-refundable Filing Fee) $2,000.00

MAJOR CONSTRUCTION

(a) Initial Deposit (including non-refundable Filing Fee)..... $3,000.00

EXCESS MATERIAL REMOVAL

(a) Initial Deposit (including non-refundable Filing Fee)..... $2,000.00
Inspection Fee - Per Cubic Yard Removed $0.35 (Minimum)

MISCELLANEOUS ENCROACHMENT (Any situation not covered above)

(a) Miscellaneous Filing Fee (including non-refundable Filing Fee) $2,000.00

NOTE: NO WORK SHALL COMMENCE WITHIN DISTIRCT RIGHT OF WAY PRIOR TO OBTAINING AN ENCROACHMENT PERMIT. IN SUCH EVENT, THE APPLICANT/OWNER MAY BE REQUIRED TO REMOVE ALL WORK WITHIN DISTRICT RIGHT OF WAY AND RESTORE THE SITE TO PRE-PROJECT CONDITION AT THE APPLICANT/OWNER'S EXPENSE. IF AT THE DESCRETION OF THE GENERAL MANAGER – CHIEF ENGINEER, AN ENCROACHMENT PERMIT IS SUBSEQUENTLY ISSUED THE APPLICANT/OWNER WILL BE REQUIRED TO PAY A $1000 PENALTY FEE (NON-REFUNDABLE) IN ADDITION TO ALL OTHER DEPOSITS WHICH WILL BE REQUIRED AS STIPULATED HEREIN.

REV. 01/29/07

RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT

APPLICATION FOR ENCROACHMENT PERMIT

TO: Riverside County Flood Control
and Water Conservation District
Encroachment Permit Section
1995 Market Street
Riverside, California 92501

Date: _____

The undersigned hereby applies for an encroachment permit to perform the following work within Riverside County Flood Control and Water Conservation District (District) right of way:
Please describe the work proposed to be done within District right of way. (Use extra sheets if necessary.)

_____
_____
_____
_____

Location of proposed work (Specify City, Township, Range, Section):_____
_____

Name and Project Number of District Facility impacted by the proposed work:_____
_____

Estimated duration of construction for proposed project:_____working days.

Applicant agrees to do the work in accordance with all pertinent District rules and regulations and that the proposed work as shown on the attached drawings will be subject to inspection and approval. (Refer to the Encroachment Permit Information Sheet for details on the complete submittal required.)

Applicant acknowledges and understands that construction within District rights of way will, in all likelihood, not be permitted from October 31st through March 31st due to seasonal constraints. Further, Applicant acknowledges that weather and/or flow conditions may necessitate the District, at its sole discretion, to delay or suspend Applicant's work at any time of the year in the interest of public health and safety. Moreover, Applicant appreciates the significance of these seasonal constraints, and understands and agrees to adjust all scheduling accordingly.

Received By David Ortega

Complaint Adderess 27532 Commerce Center Drive

Complaint City Temecula

Complaint Zip Code 92590

Location

Complaint A gentleman was hosing off a coolant unit from this business and the rinseate ran down the parking lot, flowed into the street gutter and went into a storm drain that dumped the water into Long Canyon Wash just upstream of Commerce Center Drive.

Findings 8/28/07: David Ortega, NPDES Section, Riverside County Flood Control (RCFC) District, was performing routine "dry weather" monitoring at Long Canyon Wash when he noticed that water was flowing from this business into Long Canyon Wash just upstream from the monitoring location. Before Mr. Ortega took any field water quality parameters from Long Canyon Wash, he went to the business and spoke to a gentleman who was washing down a coolant unit from an open warehouse door and onto the property's side parking lot. Mr. Ortega noted to the gentleman about the County's Stormwater/Cleanwater program and stated that only rain and irrigation water belongs in the storm drains. The gentleman replied that the coolant being washed down "has only water being washed down". Mr. Ortega noted to the man that his rinseate might wash down metals from this unit into the storm drain because of the visible corrosion on the unit. Mr. Ortega also let the man know that he will be referring this matter to Aldo Licitra from the City of Temecula, an RCFC co-permittee, for a possible further investigation on this matter.

Action 8/28/07: Mr. Ortega took a few photos of the coolant unit being washed down and of the path of rinseate flowing down the property's parking lot, into the street gutter and into a storm drain that is directly above Long Canyon Wash. Mr. Ortega also called Aldo Licitra from the City of Temecula to inform him of this matter. NOTE: Long Canyon Wash at Commerce Center Drive is not an RCFC District maintained facility. Mr. Licitra visited the complaint address later the same day. He noted that this business is not on the City of Temecula's inspection list since it is a children's gymnastics studio. Mr. Licitra spoke to the facility custodian today who had created the discharge and informed him of the violation. He had washed down a portable water-cooled fan used to blow air into the facility. Mr. Licitra provided the custodian some onsite education and gave him a verbal warning to cease any further discharges onto the pavement. The custodian stated that the fan is not washed frequently. Mr. Licitra directed the custodian to perform this type of cleaning activity over his existing landscaping or gravel areas that were on the site in order to infiltrate the wash water. Mr. Licitra did not see any further discharges during a subsequent follow-up drive-by a few days later.

Location

Complaint Complainant is reporting dumping of possible chemicals in to the street gutter by her next door neighbor.

Findings 4/30/08: David Ortega of the NPDES Section at the Riverside County Flood Control (RCFC) District received this complaint call today from Melanie Hastings (complainant). Ms. Hastings stated that her next door neighbor (complaint address) has a dog grooming business that she operates out of her garage. Ms. Hastings said that at various times of the day, she notices a liquid discharge in the street gutter and "it smells really bad, like raw sewage". This discharge is going into a storm drain down the street. Mr. Ortega asked Ms. Hastings is there an active liquid discharge going on right now at the time of her call. Ms. Hastings replied negative.

Action 4/30/08: Mr. Ortega asked Ms. Hastings to call him on his cell phone number, (951) 961-9574, if and when there is an active discharge going on so that either he can get someone from the City of Temecula to come out there to investigate or that he will try to stop by to investigate this complaint himself. 5/1/08: Mr. Ortega spoke to Aldo Licitra of the City of Temecula about this complaint. Mr. Ortega emailed a copy of this complaint call report to Mr. Licitra.

Complaint Caller is reporting an unknown sheen of a white substance from an unknown source. Caller states that this whitish substance has been flowing down the whole street and around the corner. Caller believes that this substance may be from someone in the neighborhood who may have been painting but he is not sure. Caller is not sure if the material has reached a storm drain or waterway.

Findings 5/12/08: NRC called the Governor's Office of Emergency Services (OES) to report this release. The OES issued a Hazardous Materials Spill Report, Control# 08-3448, concerning this incident. NRC Report# 870675. The OES report states that it is unknown if water and/or drinking water was involved and/or impacted from this release. NRC and the Riverside County Environmental Health Department were notified about this incident. There are two (2) Riverside County Flood Control District facilities that are located about .3 mile away from the complaint address: "Warm Springs Line C Sugarberry" and "Warm Springs VY Torrey Pines Storm Drain".

Action

Riverside for pH analysis. 1600 hours: Mr. Winters arrived at Babcock Labs and checked the samples into the lab. Mr. Winters notified David Ortega of the incident. Case forwarded to the Riverside County D.A.'s Office (Ted Ryan) for follow up. Mr. Winters has a few photos of his sample locations, map of the scene and Babcock Lab results of the samples that were submitted. Sample KW042808-901 pH analysis result is 12.4, Sample KW042808-02 pH analysis result is 11.2, Sample KW042808-03 pH analysis result is 11.3 5/22/08: David Ortega spoke to Samantha Phillips, County Code Enforcement Officer, about this incident. She noted to Mr. Ortega that there was no NOV and/or citation issued to the responsible party (California Pools and Spa) for this incident. She did state because this case was sent to the County D.A.'s Office as a criminal case. Mr. Ortega completed this complaint call report today and fowarded it to J. Uhley and A. Chun at the RCFC District and to Mike Shetler at the Riverside County Executive Office as an "FYI".

Location	

Complaint Vandalism has caused a sewage leak that has been flowing for the past 60 minutes at approx. 25 gallons per minute.

Findings 3/19/08: EMWD called the Governor's Office of Emergency Services (OES) to report this sewage leak. The OES issued a Hazardous Materials Spill Report, Control# 08-2188, concerning this incident. The OES report states that the reporting party (EMWD) is considered a third party to this leak and they are unsure what product is from. The sewage has spilled into a park. The OES report also states that it is unknown if water was involved from this incident and it is possible that a storm drain has been impacted from this leak. No drinking water has been impacted from this incident. The San Diego RWQCB and the Riverside County Environmental Health Department were notified about this incident. The nearest Riverside County Flood Control District facility is located about .1 mile to the northwest of the complaint address: "Temecula VY Via Del Coronado Storm Drain". NOTE: The complaint APN listed in this report is a reference APN only.

The OES report states that no water and no drinking water was involved and/or impacted from this release. The OES report also states that the sewage was contained and cleaned up by the reporting party (EMWD). The Riverside County Environmental Health Department was notified about this incident. The nearest Riverside County Flood Control District facility is located about .6 mile to the east of the complaint location: "Murrieta Creek MDP Line A Empire Creek". NOTE: The complaint APN listed in this report is a reference APN only.

Action 12/5/07: David Ortega of the NPDES Section at the Riverside County Flood Control District (RCFC) received an initial notification about this incident today via email from Charles Strey, Senior Public Health Engineer, Riverside County Environmental Health Department. His email stated that a 10 inch force main was inadvertently ruptured by a contractor doing work at Business Park and Rancho Way in the City of Temecula. The spill occurred between 2:30 pm and 3:30 pm on 12/4/07. 50,000 gallons was released, with most of it being retained by quickly constructed earthen dams in the storm drains. None of the sewage reached the creeks or streams. The hardscape areas have been disinfected with sodium hypochlorite, and taping and signage are in place. 12/6/07: Mr. Ortega received a copy of the Sewage Release/Spill Notification via email from Mr. Strey today. Incident# SA-07-13. This report states that the discharge has been stopped and is upstream from known recreation areas, which are not posted by the Riverside County Environmental Health Department. The area of the discharge has been inspected by the Riverside County Environmental Health Department to evaluate contamination. The areas of contamination have been cleaned and disinfected. Most of the spill was recovered and taken to the plant.

Complaint 5 gallons of mineral oil was released due to an equipment failure. PCB will be analyzed.

Findings 11/30/07: SCE called the Governor's Office of Emergency Services (OES) to report this release. The OES issued a Hazardous Materials Spill Report, Control# 07-7404, concerning this incident. The OES report states that no water and no drinking water was involved and/or impacted from this release. The OES report also states that the mineral oil was contained and cleaned up by a contractor. The Riverside County Environmental Health Department was notified about this incident. The nearest Riverside County Flood Control District facility is located about 3 miles to the northwest of the complaint location: "Wilson Creek Sage Road Bridge".

Complaint 11/27/07 at 1115 hours, a pipeline company installing fiber optics damaged an 8 inch natural gas pipeline. An unknown amount of natural gas was released.

Findings 11/27/07: So. Cal. Gas called the Governor's Office of Emergency Services (OES) to report this release. The OES issued a Hazardous Materials Spill Report, Control# 07-7322, concerning this incident. The OES report states that no water and no drinking water was involved and/or impacted from this release. The OES report also states that the natural gas was contained and cleaned up by the reporting party (So. Cal. Gas). The Fire Department and the Police Department were on scene concerning this incident. The Riverside County Environmental Health Department was notified about this release. The nearest Riverside County Flood Control District facility is located about .3 mile to the northeast of the complaint location: "Warm Springs VY French Valley channel Stage 2". A. EXECUTIVE SUMMARY

The Watershed Annual Report documents regional Urban Runoff management programs and activities that were implemented to comply with the requirements of Provision K and the Monitoring and Reporting Program (MRP) of the Municipal Separate Storm Sewer System (MS4) Permit issued to the Riverside County Permittees by the San Diego Regional Water Quality Control Board (Regional Board) on July 14, 2004 (Board Order R9-2004-001). This is the third MS4 permit issued for the Santa Margarita Region (SMR) by the Regional Board and is referred to as the "Third-term SMR Permit". This Watershed Annual Report specifically addresses the reporting requirements identified in the Watershed Annual Report section of the MRP to the Third-term SMR Permit. It provides a description of the area-wide and watershed-based programs and activities that the Permittee implemented during the Fiscal Year 2007-2008 reporting period to comply with the Third-term SMR Permit and to reduce pollutants in Urban Runoff to the Maximum Extent Practicable (MEP).

The Third-term MS4 Permit required each Permittee to develop an Individual Storm Water Management Plan (SWMP) and for all the Permittees to jointly develop a Watershed SWMP. These compliance documents, and the programs they describe, were to be completed, submitted to the Regional Board and implemented by July 14, 2005. Annual Reports for each of these documents are required and are to be submitted to the Regional Board on October 31st of each calendar year. The reporting period is specified as the preceding fiscal year. The Riverside County Flood Control and Water Conservation District (District) is specifically required to prepare an Individual SWMP Annual Report and to coordinate the preparation of the Watershed SWMP Annual Report with Riverside County and the Cities of Murrieta and Temecula (Permittees). As Principal Permittee, the District is also tasked with coordinating the submittal of the Individual SWMP Annual Reports for the other Permittees.

This Watershed Annual Report covers the period extending from July 1, 2007 through June 30, 2008.

In general, this Watershed Annual Report provides specific detail regarding implementation of the regional programs described in the Riverside County Drainage Area Management Plan (DAMP). The DAMP serves the dual role of a model Individual SWMP and Watershed SWMP for the purposes of the Third-term MS4 Permit.

On September 8, 2008, the Permittees arranged a meeting with Regional Board Staff to discuss and arrange a mutually acceptable approach to this fourth year annual report and the upcoming permit reapplication through the Report of Waste Discharge (ROWD) which is due on January 15, 2009. As a result of this meeting, a summary was created listing items that would be included in the fourth year annual report (this report) and other items that would be included in the ROWD.

The following is a listing of the items that the Permittees agreed to in this meeting. For those items which are required to be included in the fourth year annual report, references to the locations within this report where the items can be found are provided.

	Issue to be addressed in 4th year annual report	Report Section(s)
1	Include trend Analysis of Monitoring data, including historical data	Appendix G, Section G8.1
2	Include identification of issues that need to be addressed based on monitoring data analyses.	Appendix G, Sections G-8.3 and G-8.4
3	Recommend Initial revisions to monitoring program	Section **I.2.2**, and Appendix G, Section G-8.3
4	Address the requirements in F.2.b.9 of the Permit (Downstream Erosion)	Section H.10, and Appendix G, Section G-7.1

	Issue to be addressed in the ROWD
1	Enhanced MS4 Map
2	Provide programmatic recommendations for issues raised, but not specifically addressed in the fourth year annual report.
3	Include the Names and addresses of the Permittees that operate MS4's, including Wildomar and, if appropriate, Menifee.
4	Names and titles of primary administrative and technical contacts for the Permittees

For purposes of this Watershed Annual Report, the terms "(Watershed SWMP)" and "Standard Urban Stormwater Management Plan (SUSMP)" referenced in the SMR Permit are referred to as the "DAMP" and "Water Quality Management Plan (WQMP)," respectively, to be consistent with terminology established and in use by the Permittees. Additional terms and acronyms used in this Watershed Annual Report are defined in the glossary included in the DAMP.

Figure B-1 shows the SMR, which is the area covered under the SMR Permit. A copy of the Third-term SMR Permit is included as Appendix C of the DAMP.

B. OVERVIEW OF THE UPPER SANTA MARGARITA WATERSHED

B.1. OVERVIEW OF THE SMR

The SMR_is defined as the area delineated by the Riverside-San Diego County boundary line on the south and the Regional Board boundary line on the north, east, and west as shown in Figure B-1. It includes portions of unincorporated County of Riverside and the Cities of Murrieta and Temecula. The newly incorporated cities of Menifee and Wildomar are also shown in Figure B-1 for reference, however, these cities incorporated after the reporting period. Further, the entire SMR lies within the Murrieta Creek and Temecula Creek sub-watersheds.

It is important to recognize that the Clean Water Act exempts agricultural activities from regulation under NPDES. Further, under federal and state law, Permittees do not have legal jurisdiction over stormwater discharges into their respective MS4 from:

- State and Federal facilities,
- Utilities and special districts, and
- Native American tribal lands.

These areas are not included in the SMR. However, the Regional Board requires the Permittees to coordinate with these stakeholders to reduce discharges from their lands. In addition, other point and non-point source discharges otherwise permitted by or under the jurisdiction of the Regional Board may affect water quality in the Murrieta and Temecula Creek watersheds. Current land uses within the SMR are shown on the Watershed Facilities Map in Appendix F.

The area of Riverside County under the jurisdiction of the Regional Board is approximately 548 square miles, which is less than 8 percent of the 7,300 square miles within Riverside County. Not counting the two newly incorporated cities, only 3 of the 24 existing municipalities within Riverside County are under the jurisdiction of the Regional Board.

B.2. CHANGES IN POPULATION

The California Department of Finance estimates that as of January 1, 2008, the total population of the whole of Riverside County was approximately 2,088,322. Of the 2.08 million people, approximately 258,235 persons (approximately 12 percent) reside within the portion of Riverside County under the jurisdiction of the Regional Board. Approximately 57,005 persons[1] reside in the unincorporated area while approximately 201,230 persons reside within the Cities of Murrieta and Temecula[2]

Throughout the Third-term of the SMR Permit (2004-2008), population growth in Riverside County has been significantly higher than in neighboring counties and has also been greater than the average percent change in population in the entire State (4.9%).[2]

Table B-1 shows the population data for years 2004-2008 and the percent change for the neighboring counties and for each of the Permittees between years 2004 and 2008.

Figure B-1: 2008 Population

Figure B-2: Population Trends

1 Estimated from 2007 (*Riverside County Progress Report 2007*, Riverside County Center for Demographic Research/TLMA) adding 3.1% growth rate for unincorporated County. (California Department of Finance, May 2008.)

2 California Department of Finance, May 2008.

Table B-1 Population Trends	Year					% Change
	1/1/2004	1/1/2005	1/1/2006	1/1/2007	1/1/2008	2004 - 2008
State	36,271,091	36,728,196	37,195,240	37,662,518	38,049,462	4.90%
Los Angeles County	10,107,451	10,166,417	10,257,994	10,331,939	10,363,850	2.54%
Orange County	3,022,613	3,047,054	3,071,924	3,098,121	3,121,151	3.26%
San Bernardino County	1,897,950	1,950,806	1,993,983	2,028,013	2,055,766	8.32%
San Diego County	3,013,014	3,039,277	3,064,113	3,098,269	3,146,274	4.42%
Riverside County	1,807,858	1,888,311	1,966,607	2,031,625	2,088,322	15.51%

(b)ND = No data

(c)Riverside County Progress Report 2007, Riverside County Center for Demographic Research/TLMA.

(d)Derived from the Riverside County Progress Report 2007, Riverside County Center for Demographic Research/TLMA.

Although population growth in the SMR will continue to be greater than in surrounding counties, the percent increase will decline. Table B-2 shows population projections for the year 2010.[3]

3 Southern California Association of Governments, May 2003, and San Diego Association of Governments, May 2003.

Table B-2: Projected Population for 2010

Area	2008	2010 (b)	% Change
Los Angeles County	10,363,850	10,514,663	1.5%
Orange County	3,121,151	3,227,836	3.4%
San Bernardino County	2,055,766	2,177,596	5.9%
San Diego County	3,146,274	3,199,706	1.7%
Riverside County	2,088,322	2,242,744	7.4%
Unincorporated Area	57,005 (a)	62,362	9.4%
Murrieta(c)	100,173	103,726(a)	3.5%
Temecula(c)	101,057	99,387(a)	-1.7%

(a) Derived from the Riverside County Progress Report 2007, Riverside County Center for Demographic Research/TLMA.

(b) Derived from the Riverside County Progress Report 2007, Riverside County Center for Demographic Research/TLMA and P1 Population Projections, California Department of Finance May 28, 2004

(c) Estimated build-out for: Murrieta = 128,000 and Temecula = 125,000. These figures include annexation of parts of County.

B.3. CHANGES IN LAND USE

In 1956, only 0.3 percent of the SMR (less than two square miles) was urbanized.[4] Over half a century later, even with a significant rate of growth in population relative to the State and neighboring counties, approximately 93 percent of the SMR remains in non-urban land uses (rural residential, agriculture, preserves and open space, state lands, federal lands, and tribal lands). Further, almost thirty percent (30%) of the SMR consists of federal, state, and tribal lands[5] that are not under the jurisdiction of the Permittees' MS4 programs. It is projected that the population of Riverside County will increase approximately ten percent (10%) by 2010 with significantly slower growth occurring in the south area of the County. Assuming that the urbanized area increases proportional to population, ninety-two percent (92%) of the SMR would remain in non-urban land uses in 2010.

Changes in land uses from 2007 to 2008 are shown in Table B-3. The land uses listed in the table are based on the Riverside County Assessor Parcel Data, Close of Roll 2006.

It should be noted that the land uses below represent zoned land uses, and changes in zoning designations can cause odd fluctuations in year-to-year date. However, the 2008 numbers do contain discrepencies that will be further evaluated and if, necessary, corrected in the ROWD.

4 State of California Department of Public Works, Division of Water Resources, Bulletin No. 57, Santa Margarita River Investigation, Volume I, June 1956.

5 Riverside County Assessor Parcel Data, Close of Roll 2004.

B.4. CONSERVED LANDS

Much of the remaining non-urbanized lands will ultimately be incorporated into the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP). The MSHCP will result in an conserved area in excess of 500,000 acres and focuses on Conservation of 146 species. The MSHCP Conservation Area includes approximately 347,000 acres on existing Public/Quasi-Public Lands and approximately 153,000 acres of Additional Reserve Land. A large portion of the conserved lands are are in the SMR (at least 145,000 acres). There are around 72,318 acres of existing public or quasi-public lands preserved within the Santa Margarita River watershed area located in Riverside County.

Figure B-2 contains a map of the currently conserved lands within the Santa Margarita Watershed.

Additional information regarding the MSHCP can be found in Section H.3.4, and the current status of the MSHCP can be found in Section J.1.1.a) of this report.

C. A DESCRIPTION OF EFFORTS TO COORDINATE WITH OTHER STAKEHOLDERS IN THE SANTA MARGARITA RIVER WATERSHED, INCLUDING SAN DIEGO COUNTY AND THE US MARINE CORPS BASE CAMP PENDLETON.

C.1. INTRODUCTION

The Permittees schedule at least one annual meeting with the San Diego County MS4 Permittees within the Santa Margarita River watershed, Camp Pendleton, U.S. Bureau of Reclamation (Bureau), and others. The purpose of these meetings is to:

- Discuss land use planning;
- Discuss monitoring data and potential management measures to target Focus Area Constituents of Concern;
- Exchange ideas of how to address sources of Focus Area Constituents of Concern and evaluate effectiveness of actions;
- Collaborate with water districts in an effort to reduce irrigation water runoff; and
- Consider grant applications to coordinate and prioritize water quality projects that address Focus Area Constituents of Concern.

These meetings may occur from within the context of another workgroup, such as the Santa Margarita River Executive Management Team, or as separately called meetings, as appropriate.

The District, in consultation with the Permittees, participates in several cooperative activities through formal or informal regional stakeholder workgroups. Stakeholders often include other public and private entities within the Santa Margarita watershed. These efforts can broadly be categorized as management efforts to address stormwater quality issues specific the Santa Margarita River watershed, or broader issues that also pertain to the Santa Margarita River watershed. These efforts may be expanded, reduced or abandoned over time based on budget, changing regulations, program needs, program effectiveness consideration, or other factors.

Coordination between watershed stakeholders has continued to expand. There are now several separate watershed stakeholder groups meeting several times a year to discuss:

- The Lagoon Total Maximum Daily Load (TMDL);
- Watershed based planning issues and a watershed model for the Santa Margarita River;
- Implementation of the Integrated Regional Watershed Management Plan for the Upper Santa Margarita Watershed, and its coordination with the adjacent San Diego and Orange Couny Integrated Regional Watershed Management Plans
- Formation of a Watershed Council
- Coordination of regional monitoring programs within the Santa Margarita Watershed

Several of these efforts are inter-coordinated and have been administered, at stakeholder request, by the Bureau. The Bureau administered efforts are coordinated by the Santa Margarita River Executive Management Team (SMREMT). The IRWM and Watershed Council efforts are conducted outside the management of the Bureau and the SMREMT. In addition, the Permittees continue to coordinate with the Southern California Monitoring Coalition, a cooperative effort between Southern California Counties and Regional Water Quality Control Boards geared towards improving the science of storm water monitoring. Additional information on these efforts is provided below.

C.2. SANTA MARGARITA RIVER EXECUTIVE MANAGEMENT TEAM (SMREMT)

During FY2007-2008, the District continued its participation in the SMREMT. Participants include:

- District,
- U.S. Bureau of Reclamation (Bureau)
- Murrieta County Water District (now Western Municipal Water District)
- Eastern Municipal Water District
- Fallbrook Public Utilities District,
- U.S. Marine Corps Camp Pendleton
- County of San Diego
- Mission Resource Conservation District (MRCD)
- Elsinore-Murrieta-Anza RCD,
- Regional Board
- San Diego State University.

The SMREMT's goal is to identify and address the highest priority water quality concerns in the Santa Margarita watershed, including development of a watershed model to assist with land use planning and TMDL development, coordinating watershed monitoring, and developing formal agreements between interested stakeholders for the purposes of evaluating impairment listing and data gaps in the watershed. Both Urban Runoff and reclaimed water issues are being studied.

Projects include the "Santa Margarita Watershed Supply Augmentation, Water Quality Protection, and Environmental Enhancement Program" (**SMR Study**) which is described in Section H.3.2.

Six (6) meetings were held for the SMREMT within the reporting period.

Copies of meeting Agendas for the SMREMT (where available) are contained in Appendix A.

C.3. LAGOON TMDL WORKGROUP

On July 19, 2006 the Regional Board issued an investigative order (Order R9-2006-0076) to the various stakeholders in the Santa Margarita River Watershed to gather Monitoring data for the development of a Nutrient TMDL for the Santa Margarita Lagoon.

In compliance with this Order, the Permittees have been working with the Regional Board and the other stakeholders in funding and overseeing the development of a comprehensive program to collect data and model the various inputs to the lagoon to be used to develop this TMDL.

Fourteen (14) meetings were held for the Lagoon TMDL Workgroup within the reporting period.

Copies of meeting Agendas for the Lagoon TMDL Workgroup (where available) are contained in Appendix A.

C.4. SANTA MARGARITA WATERSHED WATER QUALITY MONITORING GROUP (WQMG)

The WQMG was established to coordinate the monitoring efforts of various stakeholders in the Santa Margarita Watershed. Many of these stakeholders are also involved in the a broader monitoring coordination effort for of the greater Southern California region through the SMC (described in section C.5. This group generally meets about twice a year or as needed to discuss monitoring issues specific to the Santa Margarita Watershed.

Parties involved in this group are:

- District
- Bureau of Reclamation
- San Diego County,
- Caltrans,
- Camp Pendleton,
- City of Temecula,
- City of Murrieta,
- Eastern Municipal Water District,
- Rancho California Water District,
- Fallbrook Public Utilities District

Four (4) meetings were held for the WQMG within the reporting period.

Copies of meeting Agendas for the WQMG (where available) are contained in Appendix A.

C.5. SOUTHERN CALIFORNIA STORMWATER MONITORING COALITION (SMC)

The SMC was formed in 2001 by cooperative agreement of the Phase I municipal stormwater NPDES lead permittees, the NPDES regulatory agencies in southern California and the Southern California Coastal Water Research Project. The overall goal for the SMC is to establish a Southern California stormwater research and monitoring agenda that would focus on improving stormwater monitoring science, coordinate data collection efforts, and evaluating the effects of stormwater discharges to receiving waters specific to Southern California.

The District participates in the Stormwater Monitoring Coalition (SMC) on behalf of the SMR Permittees. The SMC includes representatives from:

- SWQCB
- Los Angeles RWQCB,
- San Diego RWQCB,
- Santa Ana RWQCB,
- District,
- Los Angeles County,
- Orange County,
- San Bernardino County,
- San Diego County,
- Ventura County,
- Caltrans
- City of Los Angeles.
- Southern California Coastal Waters Research Project (SCCWRP)

The District is currently working with the SMC on several studies including:

- A Hydromodification Study (see Section H.4.1).
- A Low Impact Development Study. (see Section H.4.2).
- Laboratory Intercalibration Study
- LID BMP Study
- Regional Bioassessment Monitoring Program
- Standardization of Toxicity Testing Methods

These studies are further described in Section H of this report. Additionally, the District is also coordinating with the Southern California Coastal Water Research Project (SCCWRP), who facilitates the SMC, to collect data on natural loadings of various pollutants from watersheds throughout Southern California.

Twelve (12) SMC Meetings were held within the Reporting Period.

Copies of meeting agendas (where available) are contained in Appendix A.

The SMC Annual Report is included in Appendix D.

C.6. CALIFORNIA STORMWATER QUALITY ASSOCIATION (CASQA)

CASQA assists the State Water Resources Control Board (SWRCB) and MS4 Permittees throughout California in implementing the federal storm water regulations. In fulfilling this purpose, CASQA recommends objectives and procedures for storm water discharge control programs which:

- Are technically and economically feasible;
- Provide significant environmental benefits and protect water resources;
- Promote the advancement of storm water management technology; and
- Effect compliance with state and federal laws, regulations and policies.

CASQA also holds workshops on and develops methods and materials for important technical issues such as:

- Low Impact Development
- Water Quality BMP's
- Hydromodification
- Green Building
- Monitoring
- Program Effectiveness Assessment
- Pesticides
- Many Others

The Permittees attended CASQA's Annual Conference in Costa Mesa, September 10-12, 2007, where many of these issues were discussed.

The Permittees have strongly supported CASQA's mission and use CASQA's resources to improve compliance programs. Several Riverside County District NPDES staff are actively in various ongoing CASQA programs including:

- Steve Stump, Board Member 2004 - 2008
- Jason Uhley,
  - Legislative Chair
  - Pesticides Committee
- Arlene Chun,
  - Monitoring Committee
  - Pesticides Committee

In addition to attending the CASQA Annual Conference, the District on behalf of the Permittees, attended:

- **Twelve (12)** additional CASQA meetings.

Copies of agendas for these CASQA meetings (where available) are contained in Appendix A.

The CASQA Annual Report is included in Appendix D.

D. AN ASSESSMENT OF WATER QUALITY IN THE SANTA MARGARITA REGION, THIS ASSESSMENT SHALL INCLUDE DATA FROM THE PREVIOUS MONITORING REPORT.

This reporting requirement is addressed in the conclusion of the Monitoring Annual Report (Appendix G).

E. IDENTIFICATION OF WATER QUALITY IMPROVEMENT OR DEGRADATION IN THE SANTA MARGARITA REGION

This reporting requirement is addressed in the conclusion of the Monitoring Annual Report (Appendix G-6.4).

F. A PRIORITIZATION OF WATER QUALITY PROBLEMS AND POTENTIAL SOURCES IN THE SANTA MARGARITA REGION

This reporting requirement is addressed in the conclusion of the Monitoring Annual Report (Appendix G Section G-6.4.1)

G. A DESCRIPTION OF WATERSHED SPECIFIC EDUCATIONAL ACTIVITIES CONDUCTED DURING THE REPORTING PERIOD

G.1. INTRODUCTION

This section provides an overview of watershed specific public education activities **conducted by the Permittees**. Public education materials distributed during this reporting period have been included in Appendix B and are described in this section.

In addition to the Public Education program described in this section, the District, on behalf of the Permittees organizes and coordinates a Training program for municipal employees and inspectors. This training program is described in Section H.8.2 of this report.

G.1.1. Program Overview

The Riverside County NPDES Permittees have established an ongoing watershed based public education and outreach program known as the **Only Rain Down the Storm Drain** pollution prevention program. The specific objectives of the public education program include:

- Fostering a broad public awareness of water pollution concerns;
- Increasing public acceptance of pollution prevention activities to curtail everyday human behaviors that contribute to water quality problems;
- Educating/informing the general public, regulators and key local government and state decision makers on Urban Runoff conditions in Riverside County;
- Promoting stewardship of local water resources.

The Only Rain Down the Storm Drain program implements the public awareness objectives by focusing on three areas of pollutant reduction/prevention:

- Public Behavior;
- Proper Management of Pollutants; and
- Business Specific Education Outreach.

In addition, when attempting to make use of the finite resources available to the Public Education Program, the Permittees use these management goals to ensure that resources are used effectively:

- Focusing on pollutants of concern specific to each watershed region;
- Coordinating public education efforts with adjacent storm water management programs and other related education programs to share resources, coordinate outreach efforts, and avoid costly duplication of effort;
- Adapt public education programs and objectives, based on effectiveness analysis, to address changing MS4 programs and goals, and
- Establish an outreach educational partnership with the staff at the San Diego Regional Water Quality Control Board on at least one event in the Santa Margarita Watershed.

G.1.2. Program Highlights

The public education program was significantly improved this year. Program highlights include:

- Our partnership with the County's Business License Department established last year continues to be successful with providing direct outreach to business owners about behaviors that contribute to water quality problems. Direct outreach is made in the form of an insert that is issued to new business license applicants, and inserted into annual renewal reminders. The insert includes information on the "Only Rain Down the Storm Drain" program and the Toll Free 800 number portal used for reporting illegal storm drain disposal. **This year's effort resulted in 7,503 business transactions.**
- The public education program has updated its survey format and continues its use at various community events. The survey is then tallied to help determine and measure the public's awareness on urban runoff pollution origins.
- The public education web page continues to be revised and improved to incorporate all known urban pollutants, causes and prevention.
- There is also an on-line survey for those who connect to the District's website. A relatively new feature of the program, initial results will be made available in the 08/09 Report.
- The program continues to update its brochures and develop outreach programs specific to the needs of the watersheds within Riverside County. Revisions this year include link updates, and updates to existing brochures and development of new brochures for outdoor activities, landscaping, equestrian, pet waste, septic system management, and car care.
- New HHW-ABOP public service announcement (PSA), as well as rebranding of San Diego County's "Rubber Ducky" & "StormWater Pollution" PSA's.
- Purchase of a new trailer specifically for hauling public education materials to outreach events. The trailer is wrapped with the "Only Rain down the Storm Drain" message and other graphics related to stormwater quality. It is also used as part of the booth at outreach events.
- Initiation of billboard advertising specifically within the Santa Margarita Watershed.
- Development of a new 'Lenticular' magnet that promotes control of fertilizer, pesticides, oil & grease, pet waster and household chemicals.
- Good storm water stewardship practices are promoted at every New Employee County Orientation with each employee receiving clean water information and promotionals supporting the "Only Rain Down the Storm Drain" message. For the 07/08 Year, **a total of 50 County employees** were taught about the **Only Rain Down the Storm Drain** Pollution Prevention Program.

G.2. SANTA MARGARITA POLLUTANTS OF CONCERN

Based on a review of monitoring data collected to date, the current 303(d) List and discussions among the Co-Permittees, the following pollutants of concern are being targeted for this watershed. More discussion on the identification of pollutants of concern can be found in Monitoring Annual Report (Appendix G). Specific outreach activities are identified to address each identified pollutant of concern are as follows:

*G.2.1. **Pesticides** Associated with Urban Pest Control*

- Distribution to the Permittees of guidance published by Eco-Wise to develop standard language to include IPM in municipal pest management contracts.
- The Agricultural Commissioner assists in the distribution of educational material as part of the Pesticide Applicator's License Renewal information package and offers information on training workshops.
- Coordinate with nurseries to distribute material containing messages about the use of pesticides through the Southern California Heritage Gardening guide and spray bottles with printed non-toxic garden and household recipes.
- 'Home Garden Workshops' are conducted at nurseries and garden shows to inform residents on less-toxic alternatives for the garden.
- 'Keep Our Water Clean' film
- The 'Only Rain Down the Storm Drain' presentations conducted by Mission Resource Conservation District discusses the effects of pesticides and fertilizers on local waterways.

In Development

- New Landscape Management brochure
- Municipal and Industrial/Commercial training components focusing on the appropriate use, application, and timing of application of pesticides, and encouraging the use of IPM as a substitute.

G.2.2. Nutrients associated with Urban Development and Land Uses

- The Agricultural Commissioner and UC Riverside Cooperative Extension both assist in the distribution of our materials. In addition, local nurseries distribute our materials, along with the County's FREE Compost Workshop announcement flyer and "How To" Composting book;
- "Keep Our Water Clean" video to cover proper use of fertilizers as well as excess runoff from sprinklers;
- A section of the County's Household Hazardous Waste flyer is dedicated to informing residents about the problem of storm water pollution and provide simple pollution prevention activities;
- The "After the Storm" brochure;
- Storm Water Pollution and the Solutions
- Construction BMP Activities brochure and poster.
- The 'Only Rain Down the Storm Drain' presentations conducted by Mission Resource Conservation District discusses the effects of pesticides and fertilizers on local waterways.

<u>In Development</u>

- New Pet Waste brochure that focuses on pet waste, horse and livestock handling.
- New Landscape Management brochure
- New Equestrian Care brochure
- New Septic System Management brochure

G.2.3. Pathogens associated with Urban Activities

- Construction, municipal, industrial/commercial and new development training focusing on the need to address pathogen sources within the watershed;
- Partnership with SGA Advertising to place pet waste information in pet stores, veterinarian clinics, kennels and pet grooming facilities;
- Coordination with Riverside County Animal Control Department to distribute "What's the Scoop" and "After the Storm" brochures to families adopting pets at shelters;

<u>In Development</u>

- New Equestrian Care brochure
- New Pet Waste brochure that focuses on pet waste, horse and livestock handling.
- New Septic System Management brochure

G.2.4. ***Sedimentation*** *associated with Urban Development and Land Uses*

- Construction, municipal, industrial/commercial and new development training focusing on the need to address sedimentation within the watershed (see also Section H.8.2);
- County Building Inspectors handout both the construction brochure and related poster during site visits.
- Independent storm water education contractors are provided with our construction focused materials for their regularly scheduled Riverside County trainings.
- Informational displays are set up at home improvement store locations for the purpose of educating the Do-It-Yourselfer and the professional home improvement contractor.
- Distribution of dust pans to promote dry cleaning of drive ways and impervious surfaces;
- Construction BMP Poster;
- Adult storm water education presentations include instruction on controlling soil erosion;
- The "After the Storm" brochure;
- General Construction Activities brochure.
- In Development
- New Landscape Management brochure

G.2.5. ***Metals*** *associated with automotive sources*

The primary metallic pollutants within the region are copper from brake pad wear and lead from lost wheel weights. The Permittees are currently coordinating through CASQA (described in Section I.1.5) to educate and promote statewide and national change to these problems that are caused by the societal use of a currently accepted technology.

In addition, the District has developed other outreach materials to focus on other pollutants and pollutant causing activities/businesses commonly associated with urban runoff. These additional outreach materials are described in subsections that follow. Section G.7 specifically describes how outreach methods combine to focus on specific pollutants that may exist within the watershed.

G.3. 24-HOUR WATERSHED-WIDE OUTREACH PORTALS

The Permittees maintain three 24-hour watershed wide portals to receive and distribute information regarding the Only Rain Down the Storm Drain program. These portals include a website, a 1-800 number, an e-mail address and links from the County's main page and other websites to the RCFCD main page for reporting illegal storm drain disposal and obtaining printed materials.

G.3.1. Storm Water Protection Program Website

The District operates a website that provides information on how to report illegal dumping, clogged storm drains and lack of curb markers, as well as provide information opportunities for public participation in program development and general information about Urban Runoff pollution prevention techniques. The website is located at: www.rcflood.org and during the **07/08 Fiscal Year there were 3,387 hits reported.**

There is a link on the County's Main Page advocating reporting illegal storm drain disposal by clicking on the familiar "Only Rain Down the Storm Drain" logo. In an attempt to identify the viewers tracking information to this page, County Information Technology reported that the software had expired and that it was too expensive to replace.

Most of the District's outreach materials have been scanned into an electronic .pdf format and are available for download. Online Order forms and phone numbers are also available to assist itnernet customers in obtaining brochures posters and promotionals that are not currently available online.

The website contains pages specific to the following target audiences:

- General Public/Residents
- Businesses
- Developers
- Contractors
- Schools and Teachers
- Kid's Page

In addition, the website contains links to:

- Assist viewers in locating their watershed
- An online media library
- Material order forms
- 1-800 Toll Free Line to report storm drain pollution
- On line survey

G.3.2. Storm Water Toll Free 1-800 Hotline

On October, 1994, a Toll Free "800" telephone number for reporting suspected Urban Runoff pollution and obtaining pollution prevention information was established. This call line offers easy to understand instructions for connecting to County Environmental Health or Waste Management to obtain grasscycling, composting, or household hazardous waste collection workshop dates and locations. The 24-hour hotline also allows callers to report clogged catch basin inlets, illegal dumping and other illicit discharge violations. Finally, the hotline allows people to order public education materials and/or request storm water presentations for schools or community groups. The Toll Free Hotline number is widely publicized in all public education outreach materials, County telephone directories, and in other appropriate venues and locations.

The 1-800 line transfers callers to appropriate Permittee departments based on caller selections. Callers requesting information on pollution collection activities are transferred to either County Environmental Health or Waste Management depending on their specific selection. Callers reporting illicit discharges are directed to County Code Enforcement, who accepts the calls and then re-directs them to appropriate Permittee Code Enforcement Departments. Calls for public education materials or presentations are routed to the District's front desk, and then to the District's Public Education Staff. The specific text to the hotline is included in this report.

The provider of the Toll Free Hotline, Riverside County Information Technology, tracks the number of incoming calls. The number of Toll Free calls tracked from **June, 07 through May, 08 were 1,317.** The number of residential inquiries originating from the **Santa Margarita Region were 69**. County Communications promises to continue improving and working on its tracking program.

Exhibit A on the next page shows the script implemented for the 1-800 hotline.

Exhibit A

ONLY RAIN DOWN THE STORM DRAIN POLLUTION PREVENTION PROGRAM

TOLL FREE 800 LINE DIALOGUE

Thank you for calling the Only Rain Down the Storm Drain Pollution Prevention Program. To better serve the needs of our County communities, please listen carefully to the following options:

If this is an emergency, or you wish to report a significant release or threatened releases of hazardous material into the storm drain or elsewhere in the environment, please hang up and immediately Dial 911.

For water service connection, disconnection, or any other water utility information, call your local water service provider.

- To report illegal dumping at residential, commercial, industrial or construction sites, please call County Code Enforcement at 951.791-3601, or Press #1 to be directly connected.
- For information regarding Household Hazardous Waste Collection Events, please Press #2.
- To report clogged storm drains, faded or missing storm drain markers, Press #3 (District lobby line)
- For Storm Water Pollution Prevention information and outreach materials, Press #3 (District main line)

(Drop Off Dialogue)

Thank you for your interest in obtaining information on storm drain pollution protection. Basic, construction, industrial, commercial and children's storm water protection outreach packets are available. For a quick response to your request, please slowly and clearly leave your name, address, city and zip code. Also state the type and quantity of the materials you are interested in receiving. Should you need additional assistance, provide your area code and phone number and someone will contact you as soon as possible.

- To inquire about our FREE storm water classroom presentations, workshops, environmental youth group activities and other outreach programs, please press #4.

(Drop Off Dialogue)

The Only Rain Down the Storm Drain public education program offers classroom presentations, workshops, youth group activities, special event opportunities and other programs. For inquiries for the Temecula or Murrieta area, please press #1 (Rings Mission Resource Conservation District 1-760-728-1332)

For inquiries in all other Riverside County areas, Press #2 (Drops to Riverside Resource Conservation District at 951 683-7691)

- For grasscycling and composting information or workshops, please Press #5 (Drops to 951 486-3200) District).
- For additional assistance regarding our storm drain pollution prevention program during regular business office hours, Monday through Thursday from 7:30 am to 5:30 pm and on Friday from 7:30 am to 4:30 pm press #6.

G.3.3. E-mail

The Permittees also maintain an e-mail address that can be used to report illicit discharges or request storm water related public information. The email address is: fcnpdes@rcflood.org

In most cases, public information request e-mails received at this address are responded to within 2 business days. During **Fiscal Year 07/08 the number of e-mails received at the FCNPDES portal was 331 e-mails.**

G.4. COORDINATION WITH OTHER STAKEHOLDERS

The Only Rain Down the Storm Drain Program has used collaborates extensively to leverage available resources. Partnerships have been established with local environmental groups, business organizations, cities, public and private entities. These partnerships help maximize the use of existing distribution outlets, events, programs and materials. Impressions, attendance, and other measures of effectiveness relative to these programs are included in the Measurable Goals portion of this Watershed Annual Report.

To facilitate statewide awareness of storm water public education, educate local and state decision makers, and assist in the development of more effective public education outreach programs, the District participates in the following public education committees:

- Public Information Public Participation Committee (PIPP) – A subcommittee of the California Storm water Quality Association, and
- Western Regional Pollution Prevention Network (WRPPN)

To leverage education outreach resources and coordinate public education activities with other environmental programs, the Permittees closely coordinate and/or have existing partnerships with the following entities/organizations:

- Household Hazardous Waste Information Exchange (HHWIE) copy included;
- Mission Resource Conservation District (MRCD);
- Partnership to provide student education outreach in the Santa Ana and Santa Margarita Watersheds
- Partnership to provide adult education outreach activities in the Santa Ana and Santa Margarita Watersheds
- Partnership to provide support services for public education outreach activities at community events
- California Regional Environmental Education Community Network (CREEC);
- Water Education and Conservation Council (WEAC)
- Public Affairs Network (PAN)
- Riverside County Youth Partnership for Safe Communities
- Santa Margarita River Watershed Management Project, and
- Western Riverside Council of Governments

G. A DESCRIPTION OF WATERSHED SPECIFIC EDUCATIONAL ACTIVITIES (cont'd).

In addition, the Only Rain Down the Storm Drain program also coordinates with the following City/County departments to distribute appropriate storm water education outreach materials:

- City/County/District Front Counters
- County Assessor and Recorder
- County Waste Management
- County Environmental Health Department
- Household Hazardous Waste
- County Agriculture Department
- County Code Enforcement
- County Animal Control
- County Economic Development Agency
- County Fleet Services
- County Housing
- County Human Resources
- County & City Library Systems
- County Safety
- County Parks
- Transportation and Land Management
- County Business License
- City of Temecula Library
- City of Murrieta Library

In general, brochures and promotional items are provided to make the storm water pollution prevention materials visible and accessible to the public at all times in lobbies, training sessions, through customer interactions and new employee orientations.

Finally, the Only Drain Down the Storm Drain program also coordinates with the following state and/or local government or business entities to distribute public education information:

- Western Riverside Council of Governments
- South Coast Air Quality Management District
- Santa Rosa Plateau
- State Bureau of Reclamation
- Metropolitan Water District
- Lake Elsinore/San Jacinto Watershed Authority
- Rancho California Water District
- Valley Greeters
- Department of Water Resources Southern District
- Western Municipal Water District
- City of Riverside Public Utilities
- Eastern Municipal Water District
- Water Education Center (WEC)
- Habitat for Humanity
- SAWPA

G.5. OUTREACH TOOLS TO CHANGE PUBLIC BEHAVIOR

The Only Rain Down the Storm Drain Program conducts a wide range of outreach activities to residents, students, community groups, new home owners, public employees, businesses, and homeowner associations; informing them of how their "everyday activities" may contribute to the pollution of Receiving Waters, and encouraging them to adopt alternatives that will lessen or eliminate pollution-causing behaviors. Program efforts include providing information on pollution prevention techniques and informing residents about the proper disposal of household hazardous wastes, used motor oil, pesticides, pet waste and litter. Public education materials and media emphasizes that all citizens have a role in reducing and preventing the polluting of Receiving Waters. The goal is to present a clear and consistent message that explains the simple connections between people's everyday activities and their impacts upon Receiving Water quality.

As the public education and outreach program continues to be implemented and enhanced, the Permittees hope to broaden public awareness of Urban Runoff quality problems, promote proper disposal of household hazardous waste and motor oil, encourage illegal discharge reporting, foster good stewardship of Receiving Waters, and take personal responsibility for their actions in preventing pollution.

While public education outreach at events indicates that most people are willing to act in an environmentally responsible manner when given simple ways to change their behavior to avoid polluting our water bodies; most are unaware of the sources of pollution from everyday urban land use. The "Only Rain Down the Storm Drain" pollution prevention program using various media forms of media, educates the County's population about modified behaviors to prevent storm water pollution by focusing on residents, general public, students, and home gardeners.

G.5.1. Direct Outreach methods

The Only Rain Down the Storm Drain program interfaces directly with the public via program staff, or through contracts and partnerships at community events, home improvement stores, school education programs, adult education programs and/or by providing classroom based training. *Specific outreach activities, segregated by target audiences, are described below.*

G.5.1.a) General Community Outreach

The Only Rain Down the Storm Drain program participates in various community events to ensure that our message is delivered to the largest possible municipal audience. These community events, also provide an opportunity to survey attendees for and assess their public knowledge of storm water pollution prevention.

In addition, the Only Rain Down the Storm Drain program has partnered with *County Waste Management* to ensure that a minimum number

of Household Hazardous Waste and Antifreeze, Batteries, Oil and Paint Collection Centers and/or Events are held within each of Riverside County's principal watersheds (Santa Margarita, Santa Ana, and Whitewater). These events provide free disposal sites for common pollutants that can impair Receiving Waters.

The program's urban runoff materials and promotionals are also distributed through Community Clean up partnerships with *Riverside County Code Enforcement Administration,* whose undertaking is to achieve voluntary compliance in all phases of community revitalization. Staff works closely with the Community Improvement Specialists, ensuring that residential storm water pollution prevention material packets are on hand for distribution on inspection visits, complaint investigations and at neighborhood or community presentations.

Spill or disposal complaints received either through the Toll Free 800 Line or by electronic mail in the **Santa Margarita area were sixty-nine (69).**

When a complaint warranting an investigation is recieved, the information is entered into a database and then followed up with an NPDES staffinspection. Following the investigation, the inspector then canvasses the area with storm drain pollution prevention brochures, household hazardous waste collection schedule, door hangers and pens.

Finally, the Permittees participated in the annual Santa Margarita Watershed Cleanup Day, with City, County and District staff participating to remove trash and debris from the area watercourses. Following the cleanup activities, the Only Rain Down the Storm Drain Program either conducted outreach or provided informationals and promotionals to the volunteers at the post-event barbecue.

G.5.1.b) School Outreach

Elementary (K-6)

The Mission Resource Conservation District (MRCD) continues to provide a variety of K-6 education programs for the Only Rain Down the Storm Drain Program. The K-6 education program includes materials such as the Water Pollution Prevention Patrol workbook, the Fancy Fin hands-on classroom presentation and accompanying coloring book, various word match and crossword activity sheets and videos. A second story line featuring Fancy Fin and her friend Phinnious J. Green (a Pacific Tree Frog) educate students about point and non-point pollution and their effects on the environment and other creatures in the watershed. School materials are offered to all public and private schools in the Murrieta, Temecula and Wildomar areas, as well as to youth groups such as the Boy and Girl Scouts, Boys and Girls Clubs and Community Recreation Facilities.

Secondary Schools

A video entitled "How to Conduct an Environmentally Friendly Car Wash and Make Money Too" was developed for the "Car Wash Challenge" program. An accompanying flyer is also used which informs students/groups of the potential storm water problems generated from car wash runoff, and provides practical BMPs to minimize or eliminate contaminated runoff. The preparation and planning for a Car Wash Challenge presents too many challenges and therefore retail sales are typically more attractive option for secondary school fundraising.

Nevertheless, church groups, scout troops and other organizations do conduct car wash fundraisers. Thus, the scope of the Car Wash Challenge program has been expanded to include these additional fundraising organizations.

G.5.1.c) Adult Outreach

Valley Greeters is a "Meet and Greet" organization that takes various local business coupons, product samples and general vicinity information to new residents to the Temecula and Murrieta areas. Valley Greeters goes door to door welcoming new residents with local business coupons and a greeting packet containing information on urban runoff problems/solutions and accompanying promotionals. The packet includes residential specific information (After the Storm; What's the Scoop; and HHW Schedule). All of the Only Rain Down the Storm Drain materials are imprinted with the 800 Toll Free # to call to report illegal disposal or to obtain additional information. The young children to the area receive a Fancy Finn coloring book and box of crayons.

Due to the construction recession, Valley Greeters recently closed its doors, but should the economic climate improve, it may resume business.

Adult presentations are given through Community Outreach efforts by County Community Code Enforcement Officers. The Community Officers are provided materials about storm water impacts that could occur from improper application of paint, pesticides or fertilizers to share with their established community partnerships.

The Only Rain Down the Storm Drain program contracts with Mission Resource Conservation District and Riverside/Corona Resource Conservation District to provide urban runoff educational presentations to community groups who call and request such services.

The program's "Home Garden Care Guide" – provided the inspiration for the development of a series of "Home Garden Workshops". The Riverside-Corona ResourcesConservation District (RCRCD) has developed a home garden workshop that encourages the use of alternatives to chemical fertilizers and pesticides in the garden through techniques such as

companion planting, incorporating plans that attract beneficial insects, composting, and mulching. These workshops are put on at various community events and at the request of local nurseries, home owners associations, or other entities. Since requests for Homeowner Garden Workshops have been minimal, considerations are being made to provide the presentations at the major home improvement stores, large venues such as, fairs, home and garden conventions, and special events.

Steve Groner Associates has been retained to prepare and present workshops at major home improvement stores (HIS) throughout Riverside County. These workshops include a handout that educates the store's employees about storm water impacts that could occur from improper application of paint, pesticides or fertilizers. Attendees at the workshop also receive Only Rain Down the Storm Drain information and promotionals to help re-enforce storm water protection message. The employees are then able to share with customers the proper use and disposal of products that are potential storm drain pollutants. Point of purchase displays, tearsheets and counter displays have been installed at strategic locations to educate the public directly.

G.5.2. Brochures

G.5.2.a) Residential Outreach Materials:

After the Storm; Household Hazardous Waste Collection Schedule, Outdoor Activities; Swimming Pool, Jacuzzi and Fountain Maintenance; and What's the Scoop (Dogs, Cats and Equestrian Animal Waste).

G.5.2.b) Other Outreach Materials

In addition to the brochures mentioned above, the program utilizes other effective outreach materials such as, magnets, billboard ads, newspaper supplements, trade programs, flyers, door knob hangers, calendars, promotional items, workbooks, curriculum, shop rags, shelf talkers, tear sheets, posters and print ads to foster interest in the program.

A door hanger is also being utilized to help address problem discharges that are commonly observed in residential settings. The door hanger notifies the recipient that a problem discharge was observed and asks help from recipients to prevent problem discharge by following recommended pollution prevention activities. The door hanger is provided to all cities and is used by various County departments and the NPDES staff, when conducting field or site activities/inspections.

G.5.3. Mailing Inserts

"The Only Rain Down the Storm Drain" Pollution Prevention Program encourages advertising the County's Household Hazardous Waste Collection

events via the use of mail inserts. The inserts are included in various utility bills and special notices.

G.5.4. Media Outreach

The Only Rain Down the Storm Drain program continues to utilize various mass media to reach the public and promote the storm water program. Special newspaper inserts, fliers, and advertisements help increase public awareness of storm water pollution and environmental protection.

- A colorful billboard graphic with a simple storm drain message was designed and posted as close to the Santa Margarita Watershed area as possible. Billboard availability in the Santa Margarita region is limited due to the long term billboard advertising contracts secured by the many area casino properties.
- A relatively new addition to the Public Outreach Program is the hauling trailer, with surrounding graphics. The graphic is a brightly colored text and pictorial clearing stating the "Only Rain Down the Storm Drain" message. This and functions as a moving billboard as it carries materials to special events and large venues throughout Riverside County.
- The E-Z up shelter is imprinted with the Only Rain Down the Storm Drain message

G.5.5. Cooperative Used Oil Program

The Western Riverside Council of Governments (WRCOG) is responsible for administering the Used Oil Block Cycle Grant for ten cities within WRCOG's boundaries. These cities include: Banning, Beaumont, Canyon Lake, Lake Elsinore, Murrieta, Norco, Perris, Riverside, San Jacinto and Temecula. The target audience is the Do It Yourselfers (DIYers).

One of WRCOG's goals is to make it convenient for DIYers to recycle their used oil and to make it easy for them to find a Certified Center accepting used oil. In order for these centers to be certified, they need to apply for certification with the California Integrated Waste Management Board (CIWMB). WRCOG contacts the Non-Certified Centers in the jurisdictions to explain the program and hopefully interest them in becoming certified, the potential for decreasing the amount of illegally dumped motor oil increases with the addition of new Certified Centers within driving distance of the DIYer.

WRCOG also provides used oil containers on a need basis to the Certified Centers for distribution among DIYers at no cost, ensuring that the used oil a customer brings in is in a secure container avoiding spilling and a hazardous situation. **During this fiscal year, 144 motor oil drain containers were distributed and 148,606 gallons of motor oil collected.**

WRCOG also conducts site visits at all certified centers in jurisdictions to ensure center compliance to state and local mandates. This one on one interaction

provides the attention needed to answer questions the centers have. Materials are periodically provided to the centers such as: brochures, magnets, and state regulatory information. **Used oil filters collected during this period, 5,990.**

WRCOG's program also includes public education. This includes hosting booths at large venue events, conducting surveys to see how informed the local community is regarding used oil recycling, distributing brochures in both English and Spanish with information regarding used oil drop-off locations, curbside programs and other local recycling programs. The program also maintains an English and Spanish 800 hotline that can be used to get answers to any recycling question a resident may have regarding, "where the nearest Certified Center is located?" and "where can I find a used oil container?". The phone number is printed on all distributed materials including the oil containers. As mentioned, WRCOG provides brochures into Spanish, as Riverside County has a large Spanish-speaking population that needs to be outreached. By educating this group with the right information concerning used oil recycling, WRCOG hopes an increase in used oil recycling will occur throughout our jurisdictions.

WRCOG provides equal services to all jurisdictions regardless of their grant contribution. The goal is the same with all the jurisdictions, an increase in used oil recycling. WRCOG offers these services to make it more convenient for the DIYers to recycle and result in the increase of recycled used oil.

G.5.6. Western Riverside County Clean Cities Program

WRCOG also participates in large venue events to promote the use of alternative vehicle fuels. Car Care for Clean Air whose objective is to increase public awareness regarding the benefits of proper vehicle maintenance and repair. These events give staff an opportunity to assess how informed the local community is regarding recycling and also allows us to distribute brochures and informational flyers that will assist people in finding the nearest recycling center.

In addition, the County has partnered with WRCOG at these outreach efforts with either materials or a staff member.

G.6. OUTREACH TOOLS TO A BUSINESS SPECIFIC AUDIENCE

The Only Rain Down the Storm Drain program conducts a wide range of outreach activities to businesses; informing them of how their "everyday activities" may contribute to the pollution of Receiving Waters, and encouraging them to adopt alternatives that will lessen or eliminate polluting-causing activities. Program efforts include providing information on pollution prevention techniques and informing businesses about the proper disposal of wastes. Public education materials and media emphasize the theme that all businesses have a role to play in reducing and preventing the polluting of Receiving Waters. The goal is to present a clear and consistent message that explains the simple connections between a business' everyday activities and their impacts upon Receiving Water quality.

Originally, the business outreach program mainly consisted of the development and distribution of formal BMP guidance and to business associations thorough the Business Press, a trade publication. The program has now expanded to include direct outreach to businesses through Riverside County's Business Licensing Program. Discussion of the current Business Specific Outreach tools implemented by the Permittees is discussed below.

G.6.1. Direct Business Outreach Activities

Through the Compliance Assistance Program (CAP), a partnership with County Environmental Health, restaurants and businesses that handle hazardous wastes are inspected for potential storm water impacts from their activities. Each business is provided with educational information specific to their typical business activities.

Within the 07/08 Fiscal Year, the Board of Supervisors passed legislation to require all businesses in Riverside County to obtain a business license. Billing inserts were developed for the County's Transportation and Land Management's, Business License Division and are included in all license renewal notices. New businesses receive their storm water education that is affixed to their application.

The first year of the business license program distributed *979* storm water pollution prevention informationals. The *07/08 Year* resulted in *7,503* urban runoff awareness inserts were issued.

Steve Groner Associates has been retained to prepare and present workshops at major home improvement stores throughout Riverside County. The workshops include a handout educating store employees about storm water impacts that could occur from improper application of paint, pesticides or fertilizers. Attendees at the workshop also receive Only Rain Down the Storm Drain information and promotionals to help re-enforce the urban runoff message. Employees are then able to share with customers the proper use and disposal of products that can contaminate receiving waters. Point of purchase displays, tearsheets and counter displays have been installed at planned locations to provide a brief education to the public directly. SGA's full report can be found at the end of this section.

G.6.2. Brochures

G.6.2.a) Commercial:

After the Storm; Food Facilities; Outdoor Cleaning Activities and Non-Point Source Discharges; Automotive Maintenance & Car Care and Storm Water Pollution and the Solutions. Note: (Future program material revisions include the Outdoor Activity brochure to include broader examples of urban pollution causing activities such as, power washers and mobile vehicle maintenance operators).

G.6.2.b) Industrial:

After the Storm; Outdoor Cleaning Activities and Non-Point Source Discharges; Storm Water Pollution and the Solutions; and Your Facility May Need a Storm Water Permit (this brochure is also scheduled for an update in the 08/09 Year).

G.6.2.c) Construction:

After the Storm; Storm Water Pollution and the Solutions; Outdoor Cleaning Activities and Non-Point Source Discharges; General Construction & Site Supervision

G.6.3. Posters

Best Management Practices (BMP) posters for automotive, food service establishments (available in Spanish) and construction employees are available. The posters address activities associated with the automotive repair industry, and the food/restaurant industry that may pose a threat to water quality. The well written and illustrated posters list recommended storm water recommend storm water BMPs and are designed to serve as reminders for the employees.

G.6.4. Media Outreach

There were no additional Business Media Outreach chosen because of the opportunity to directly reach Riverside County business owners through the County's Business Licensing Program. The results of the outreach effort still attract the attention of general types of business activities that threaten water quality and recommend the County Flood Control's and CASQA website for BMPs that can be implemented to reduce the impact on the environment.

G.6.5. Supplemental Environmental Projects

In an effort to change the behaviors of large storm drain pollution prevention offenders in the County, Environmental Health established a Supplemental Environmental Project (SEP). Once the violator is found guilty of the charges, stiff monetary penalties are then placed. These monetary revenues are then placed in a SEP account that would later be used to develop new programs or enhance existing ones. The following are samples of such outreach efforts from these funds:

- Conoco Phillips SEP resulted in the development of two posters for Fueling Stations and Service Bay Servicing
- Downs Energy SEP resulted in the development of a billboard ad.

To date, there have been no other SEP revenues assigned for this purpose.

G.7. OUTREACH TOOLS SPECIFIC TO POLLUTANTS

The Only Rain Down the Storm Drain program conducts a wide range of outreach activities focusing on reduction of certain pollutants in the Receiving Waters. These outreach activities focus on sources of those pollutants whether it is residential, business, municipal or some other state or federal source. Education materials explain how "everyday activities" of potential sources may contribute to the pollution of Receiving Waters, and encourage the sources to adopt alternative approaches to pollutant management that will lessen or eliminate pollution causing activities. Program efforts include providing information on pollution prevention techniques and informing sources about the proper disposal of pollutants. Public education materials and media emphasize the theme that all citizens/businesses have a role to play in reducing and preventing the polluting of Receiving Waters. The goal is to present a clear and consistent message that explains the simple connections between a business' everyday activities and their impacts upon Receiving Water quality.

Each subsection that follows identifies how existing outreach materials previously described address specific potential pollutant sources in the watershed.

G.7.1. Use of pesticides, fertilizers, and herbicides.

- The Riverside County Agricultural Commissioner's Pesticide Applicator's License renewal information package includes materials on the proper use of pesticides and offers information on training workshops. The license renewal process requires continuing education of applicants and detailed record keeping of pesticide applications. Municipal employees that are responsible for the application of pesticides are encouraged to obtain and maintain credentials as Certified Applicators and/or licensed Pest Control Advisors.
- The available information on the use of pesticides, fertilizers and herbicides has been expanded to include Home Composting Made Easy booklet;

Southern California Heritage Gardening Guide (DVD); spray bottles with non-toxic garden and household recipes. In addition, local nurseries assist in the distribution of this material along with information on the County's FREE Compost Workshops.

- The "Home Garden Workshops" conducted at nurseries and garden shows inform residents on less-toxic alternatives for the garden.
- The "Keep Our Water Clean" film covers proper use of pesticides, fertilizers and herbicides, as well as, excess runoff from sprinklers.
- The ONLY RAIN DOWN THE STORM DRAIN Annual National Pollution Prevention Week insert informs County residents about the problems of storm water pollution and provides clear and simple pollution prevention activities in the garden.
- The ONLY RAIN DOWN THE STORM DRAIN presentations conducted by MRCD discusses the effects of pesticides and fertilizers on local waterways.
- The 2008 Environmental Calendar included a wide array of storm water protection information. It was designed to attract the adult audience by listing best management practices, scheduled special events, household hazardous waste collection sites, used oil collection sites, home garden workshops, citywide clean ups, and each of the watersheds along with geographical information. Steve Groner Associates has been retained to prepare and present employee workshops at major home improvement stores throughout Riverside County. This information is then passed on to the consumer. The workshops include information on BMPs the public should be aware of for pesticide and fertilizer application, use, and storage.

G.7.2. Educate/inform on impacts from littering and improper waste disposal.

- The brochure "*Household Hazardous Waste - A Guide For Proper Disposal Of HHW And The Use Of Environmentally Friendly Products*" informs residents of the effects of improper disposal of HHW and offers recipes for less toxic alternatives to commonly used household products. *This brochure has been tabled* and replaced with a spray bottle promotional imprinted with non-hazardous recipes and accompanied with the After the Storm brochure.
- Through classroom activity books, work sheets, coloring books and presentations, children are taught to put trash in its proper place, to never throw hazardous products in the trash, and to dispose of HHW at an HHW collection event.
- All ONLY RAIN DOWN THE STORM DRAIN brochures and the dual picture frame magnet encourage residents to report illegal dumping to the ONLY RAIN DOWN THE STORM DRAIN toll-free phone number. The magnet design will be changed to a more colorful and original design that will be discussed in the 08/09 Fiscal Year Annual Report in more detail.

- The MRCD adult presentation discuss the various pollutants of concern that contribute to storm water pollution – including trash and debris – residents are reminded to always pick-up waste and dispose of it properly. Requests for adult presentations are few, but groups may be satisfied through outreach events held and attended in the area.
- The door hanger "A Storm Drain Dumping Violation has been found in YOUR neighborhood" informs residents about the effects of improper waste disposal and encourages them to participate in simple, pollution prevention activities.

G.7.3. Educate/inform on impacts from dumping pollutants into storm drainage systems.

- The *"The After the Storm"* brochures informs residents of the negative environmental impacts caused by pollutants allowed to enter storm drains.
- The *"Keep Our Water Clean"* DVD and PSAs inform residents about the problem of storm water pollution and describes pollution prevention activities.
- The school program stresses the message of never dumping anything into a storm drain. Both the Santa Margarita Classroom activity book and the "Fancy Fin" presentation specifically address this issue.
- MRCD works with organized volunteer groups for catch basin marking events throughout the Murrieta and Temecula Valleys. The durable, noticeable storm drain marker reminds residents to NEVER POUR ANYTHING DOWN A STORM DRAIN.
- The *"Only Rain in the Drain"* song, produced by the ONLY RAIN DOWN THE STORM DRAIN program for the elementary school education program, also addresses the improper dumping issue.
- The MRCD adult presentation addresses the issue of improperly dumping pollutants into the storm drain and advises residents that storm drains connect directly – without treatment – to local waterways.
- The "2008 Environmental Calendar" containing various informative editorial reminding users to keep all wastes out of the storm drain system, more specifically, to remember the ONLY RAIN DOWN THE STORM DRAIN slogan.
- The door hanger *"A Storm Drain Dumping Violation has been found in YOUR neighborhood"* informs residents about the effects of dumping pollutants into the storm drains, encourages them to follow simple pollution prevention activities and curtails illegal dumping behavior.
- Steve Groner Associates has been retained to prepare and present employee workshops at major home improvement stores throughout Riverside County, so that employees can properly communicate this message to their customers. The workshops also discuss that paints or paint-related products should never be disposed of in a storm drain or gutter.

G.7.4. Educate on impacts from gasoline, fuel oil, and oil and grease.

- The "*Automotive Maintenance & Car Care*" BMP brochure specifically identifies recommended BMPs that address the problem of gasoline, oil and grease entering into storm drains.
- Nearly all *ONLY RAIN DOWN THE STORM DRAIN* brochures, utility inserts, advertisements, the school program, and audio and video PSAs provide information on the water quality impacts from improper disposal and spills from gasoline, oil and chemicals in a general context.
- The "Keep Our Water Clean" DVD specifically covers the topic of grease and oil from vehicles.
- The ONLY RAIN DOWN THE STORM DRAIN works cooperatively with the Permittees' motor oil recycling programs to distribute information on the "why" and "how to" of used motor oil disposal. The motor oil recycling programs actively distribute the ONLY RAIN DOWN THE STORM DRAIN materials in conjunction with their outreach efforts since both programs are working toward the same goal of environmental protection through pollution prevention.
- The new and improved "*What you should know for . . . Outdoor Cleaning Activities*" brochure informs customers that vehicle fluids pose a threat to local waterways and groundwater resources and provides BMPs to keep these pollutants out of the storm drains.
- The 2008 *"Environmental Calendar"* provided a full page section on recycling motor oil. The calendar included information on the environmental problems spilled motor oil can cause. The State's 1-800-CLEANUP toll free number is provided to locate the nearest motor oil collection center in Riverside County, the calendar also lists the State's Clean Up Website at www.1800cleanup.org.
- Environmental Health Household Hazardous Waste Collection Schedule is provided with all of our storm water related materials and promotionals. The schedule covers the times, dates and locations of both temporary and permanent facilities from September through to June.

G.7.5. Educate/inform on impacts from airborne particles.

- The County of Riverside has an active Employee Rideshare Program, which encourages employees to carpool, vanpool, use transit, cycle or walk to work. Also, the County actively supports the use of zero/low emission vehicles. The County's Fleet Services includes a variety of alternative vehicles including CNG, propane, electric and methanol powered vehicles.
- Various County facilities are installing alternative fuel fueling stations to expand the use of alternative energy vehicles. This is a direct result of the County Board Policy to use alternative fuel vehicles as the "first choice" when purchasing or leasing vehicles.

- The County of Riverside is an active member of the Clean Cities Coalition and provides financial support for various clean air efforts/activities throughout the County.

G.7.6. Educate on the need to keep storm water from contacting potential contaminants.

- The "Storm Water Pollution....What you Should Know" brochures informs residents about keeping storm water from contacting potential contaminants and explains various pollution prevention activities. It also advises residents to keep common storm water pollutants from entering our storm drains.
- The *Automotive Maintenance & Car Care, The Food Service Industry,* and the *General Construction & Site Supervision* BMP brochures all advise facility and site operators to properly manage pollutant sources and prevent polluted storm water from entering storm drains. The brochures also inform owner/operators that local ordinances strictly prohibit the discharge of pollutants to the storm drain system or local waterways without a permit.

G.7.7. Educate on the clean-up and proper disposal of pet waste.

- The "What's the Scoop" and "After the Storm" brochures addresses the need to pick-up animal waste and to dispose of it properly.
- The school activity book and the "Fancy Fin" presentation discuss the proper disposal of pet waste.
- The "Keep Our Water Clean" DVD also addresses the topic of the proper disposal of pet waste and the impacts to our waterways.
- The ONLY RAIN DOWN THE STORM DRAIN adult storm water presentation discusses proper disposal of pet waste and actually includes a DVD showing how bad this problem can be. The slide shows – from a distance – small yellow flags marking pet waste deposits in what is obviously a very popular dog walking area.
- The Pollution Prevention Week is recognized in a flyer type informational and is released every September. Along with other useful BMP's, the flyer does have an article that specifically addresses pet waste under the article "*What's The Scoop . . . Tips For A Healthy Pet And A Healthier Environment*".
- The Earth Day flyers released every April, contains an article on the hazards of pet droppings.
- The *"2008 Environmental Calendar"* reminds us to always "pick up animal waste". The accompanying message informs residents of the effects of pet waste on local waterways.
- The District does not allow the disposal of pet waste or other trash within its facilities. Signage has been installed at access gates to discourage illegal dumping and encourage reporting thereof. At the start of the program, the District purchased "Dogipots," (containers that hold pet waste bags), and

had them installed in County Parks. Upkeep and additional purchases of Dogipots are the responsibility of each County Park staff. The District has also purchased pet leash tags with the storm water hotline number repeating the "Only Rain Down the Storm Drain" message.

G.7.8. Develop programs for landowners on erosion and sediment control practices.

- The "*After the Storm*" brochure and the school program addresses the topic of controlling soil erosion.
- The "*After the Storm*" brochure identifies erosion and sediment loads as a storm water pollutant.
- The ONLY RAIN DOWN THE STORM DRAIN continues to work cooperatively with both MRCD and RCRCD to offer various workshops on the topic and has conducted additional workshops for the needs of the storm water program. These workshops have been offered to both Permittee staff and the general public.
- The ONLY RAIN DOWN THE STORM DRAIN storm water presentation was modified to specifically address soil erosion as it relates to the Santa Margarita Watershed and what homeowners and businesses can do to minimize soil erosion.

G.7.9. Cover contaminants and prevent runoff through polluted areas.

- The BMP brochures for the outdoor, restaurant, automotive and construction industry all include specific BMPs to cover outside work areas; keep dumpster lids closed; prevent run-off at work and material storage areas; cover exposed stockpiles; avoid wash down of paved surfaces that drain to storm drains; and many other BMPs that help prevent pollutants from entering the storm drains.
- The industrial/commercial training workshop included specific segments on covering outside materials to prevent contaminated runoff. The target group for this workshop is staff that is responsible for conducting NPDES Urban Runoff inspections of industrial/commercial facilities.

G.7.10. Educate municipalities/agencies on the need for vehicle inspections.

- As part of the municipal employee-training program, various departments have been instructed to inform employees about the need for vehicle inspections and have been provided with a complete training package to help in this area. Included in the training information are brochures, posters and vehicle air fresheners that Fleet Services personnel have distributed at their garage/work sites.
- Departments and agencies are also encouraged to use alternative fuel vehicles that not only help reduce vehicle emissions but also, in some cases (*e.g.*, electric vehicles), eliminate the use of motor oil and antifreeze. The County

highly encourages its Departments to convert to these types of vehicles, whenever possible.

- The municipal employee training workshops are conducted by AEI-CASC and cover such topics as inspecting vehicles and equipment for fluid leakages.

G.8. PUBLIC EDUCATION MATERIAL

Examples of various the Public Education material the permittees distribute is included in Appendix B of this report.

H. A DESCRIPTION OF ALL AREA-WIDE AND WATERSHED-BASED ACTIVITIES CONDUCTED DURING THE REPORTING PERIOD.

H.1. INTRODUCTION

This section provides a summary of area-wide and watershed-based activities that were conducted during the reporting period, but not specifically described elsewhere in this report. Due to the small percentage of urbanization and small population within the SMR, the Permittees leverage resources by implementing several regional programs which makes these programs both cost effective and protective of water quality. Many of these programs are conducted through the coordination efforts described in Section C of this report.

H.2. PROGRAM MANAGEMENT ACTIVITIES

The Permittees meet regularly to discuss the implementation of the MS4 compliance programs, to disseminate information regarding the current status of the various watershed-wide activities, and to discuss regional, state, and national issues related to stormwater quality. These discussions occur through various formal and informal means including the following established meetings:

H.2.1. Management Steering Committee (MSC) Meetings

The Permittees established the MSC to address Urban Runoff management policies for the Santa Ana Region (SAR) and SMR and to review and approve revisions to the DAMP and the SAR and SMR Implementation Agreements. In addition, the MSC facilitates coordination with related water quality management programs and monitoring and establishes positions relative to legislative and regulatory initiatives. The MSC consists of city managers or equivalent representatives from each of the Co-Permittees and an executive-level representative from the County. The General Manager-Chief Engineer of the District participates on the MSC as Chair. The District provides staff support to the MSC. The MSC meets quarterly or as determined by the Chair. MSC meeting agendas and minutes are included in Appendix A.

H.2.2. Summary of Technical Advisory Committee (TAC) Meetings

A TAC has been established consisting of representatives formally appointed by the city manager or equivalent of each Permittee. The purpose of the TAC is to coordinate the implementation of the DAMP and overall MS4 Permit compliance program. The TAC members also provide technical assistance and support to facilitate coordination with related water quality management programs and monitoring and to respond to legislative and regulatory initiatives. The District chairs and provides staff support to the TAC. TAC meeting agendas and minutes are included in Appendix A.

H.2.3. Other Program Management Activities

In addition to the above meetings to coordinate the ongoing development of the compliance programs, the District attended a CASQA Program Effectiveness Assessment training on May 27, 2008 on behalf of the Permittees. This training is a result of an effort by CASQA to establish a more uniform way to assess the effectiveness of compliance programs, where direct links to water quality benefits cannot be easily established. The permittees will consider CASQA's recommended approach to effectiveness assessment as part of any program changes that are recommended in the ROWD.

H.3. WATERSHED PLANNING ACTIVITIES

The permittees have been active are active in pursuing watershed-based planning efforts including the following studies.

H.3.1. Integrated Regional Watershed Management Plan (IRWMP)

An IRWMP has been developed for the Upper Santa Margarita Watershed through the coordinated efforts of agencies described in Section C.7 of this report.

The IRWMP established nine (9) planning objectives:

- Develop a more reliable and diverse portfolio of water supplies;
- Promote economic, social and environmental sustainability;
- Improve water quality;
- Restore, enhance and maintain habitats and open spaces;
- Promote sustainable floodplain management;
- Promote appropriate recreational opportunities;
- Promote appropriate land use planning;
- Increase stakeholder involvement and stewardship; and
- Maximize implementation of water resources projects.

These planning objectives were then used to evaluate various projects for inclusion for funding. Projects were then selected that support various listed planning objectives.

Status of IRWMP

The IRWMP was finalized on July 31, 2007 and is currently being implemented. Several meetings were held over the course of this reporting period to work with DWR to integrate the San Diego, Orange County and Upper Santa Margarita Watershed IRWM plans. Coordination efforts are ongoing.

H.3.2. Santa Margarita Watershed Study (SMR Study)

The SMR Study, also known as the *'Santa Margarita Watershed Water Supply Augmentation, Water Quality Protection, and Environmental Enhancement Project'* is a project coordinated through the Santa Margarita River Executive Management Team (SMREMT, Section C.2).

One of the main products that will result from the SMR study will be the creation of a watershed model that can be used to facilitate

- Coordinated Land Use Planning,
- TMDL Development,
- BMP Implementation,
- Review of Basin Plan Standards.
- Development of a more reliable and diverse portfolio of water supplies, and
- Increase stakeholder involvement and stewardship.

The status of the SMR Study is included in Section J.1.1.b) of this report.

H.3.3. Special Area Management Plan (SAMP)

The Corps of Engineers, in conjunction with the Permitees, is developing a Special Area Management Plan (SAMP) for both the San Jacinto and Upper Santa Margarita Watersheds. This comprehensive watershed based planning effort will identify, prioritize and protect the highest priority *Waters of the U.S.,* while considering the broader needs of growth and transportation improvements. It will be used to assist Federal, State and local agencies with their regulatory permit decision making processes to protect, restore and enhance aquatic resources, while accommodating various types of development activities and infrastructure projects. The Upper Santa Margarita and San Jacinto watersheds include such resources as woodlands, wetlands, freshwater marshes, vernal pools, streams, lakes and rivers that will be evaluated and protected under the project. The final product of the SAMP will be the establishment of an abbreviated or expedited regulatory permitting process by the Corps under Section 404 of the Clean Water Act. Additionally, the California Department of Fish and Game is preparing a Master Streambed Alteration Agreement in conjunction with the SAMP to provide an expedited permitting process under the State's Section 1600 of the Fish and Game Code.

The $4.5 million in appropriations received since FY 2001 has allowed the Corps to complete a 'Landscape Level Aquatic Resource Delineation' and 'Functional Assessment' to determine the value of waters and wetlands within these watersheds.

The status of the SAMP effort is included in Section J.1.1.b) of this report.

H.3.4. Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP)

The MSHCP is a joint effort of the Santa Margarita Region Permittees, and others stakeholders, to develop a comprehensive land use plan to ultimately conserve the environmental resources and habitat of approximately half of the Santa Margarita Region. Much of the remaining non-urbanized lands will ultimately be incorporated into the MSHCP reserves which requires conservation of 500,000 acres within the County, a large portion of which are in the SMR (at least 150,000 acres in total, or approximately 1/2 of the SMR).

A summary of the status of this effort is described in Section J.1.1.a)

The annual report for the MSHCP is included in Appendix D.

H.4. DEVELOPMENT PLANNING ACTIVITIES

The Permittees are supporting and developing a number of methodologies to advance their capabilities to avert stormwater pollution through creation and implementation of various development planning practices. The findings of these studies will provide the basis for future amendments to the Watershed and Individual SWMPs.

H.4.1. Hydromodification Study

The permittees have implemented numeric criteria to control runoff from new developments and are participating in a regional hydromodification study to increase understanding of hydromodification problems and provide a basis for developing revised criteria if needed.

These activities are described in the Special Studies section of the Monitoring Annual Report (Appendix G, Section G-7.1).

H.4.2. Low Impact Development (LID) Study

The permittees are participating in a study coordinated by the Southern California Monitoring Coalition (SMC, Section C.5) to develop a LID BMP design manual.

This study is described in the Special Studies section of the Monitoring Annual Report (Appendix G, Section G-7.1).

H.4.3. Low Impact Development Testing and Demonstration Facility

In the interest of fostering an increased knowledge and understanding of the implementation, effectiveness and maintenance of various types of LID BMP's, the District will be reconstructing much of the grounds surrounding the District's headquarters to incorporate a Low Impact Development Testing and Demonstration Facility. This project and its benefits are further described in the Monitoring Annual Report (Appendix G, Section G-7.1).

H.4.4. LID BMP Design Manual

The District is currently coordinating with the SMC LID BMP grant project referenced in Section H.4.2 to develop a LID Supplement for the current BMP Design Manual contained in the WQMP. This project and its benefits are further described in the Monitoring Annual Report (Appendix G, Section G-7.1).

H.5. MUNICIPAL ACTIVITIES

Under the prior SMR Permit, the Permittees developed a Municipal Facilities Strategy to identify BMPs for various activities that are typically conducted at municipal facilities. The municipal facilities of concern identified by the Permittees included maintenance yards, vehicle and equipment maintenance areas, waste transfer stations, corporation and storage yards, and parks and recreational facilities. In addition, the Permittees identified BMPs for street sweeping, catch basin cleaning, landscape and swimming pool maintenance activities, MS4 maintenance activities, and the application of pesticides. The Municipal facilities strategy was incorporated into Chapter 5 of the DAMP as part of the permit update process. The following table updates the Public Agency Facilities Matrix contained within the DAMP.

H.5.1. Updated Public Agencies Facilities Matrix

Table H-3 lists the types and numbers of municipal facilities operated by the Permittees.

Table H-3. Public Agency Facilities Matrix

Permittee	Corporate Yards	Parks & Recreation Facilities	Warehouses	Fire Stations	Police Stations	Hazardous Materials Storage	Animal Shelters	Swimming Pools	Water Treatment Facilities
District [a]	--	--	--	--	--	--	--	--	--
County	3	3	--	11	--	1	--	--	--
Murrieta	1	47 [d]	--	4	1	--	--	1	--
Temecula	1	36	--	4 [b]	2 [c]	--	--	2	--

(a) The District has no municipal facilities, other than MS4, in the Santa Margarita Region.

(b) Although within city limits, two of these stations are operated by the City of Temecula, and two are operated by Riverside County Fire Department.

(c) Although within city limits, these stations are operated by the Riverside County Sheriff's Department.

(d) There are forty-four (44) parks and three (3) recreational facilities within City of Murrieta limits.

H.5.2. Updated Drainage Maps

An updated MS4 map is included in Appendix F of this report and Appendix D of the DAMP. A GIS database is also maintained by the District which identifies all receiving waters, all CWA section 303(d) impaired receiving waters, existing and planned land uses, MS4s, major highways, and jurisdictional boundaries. The map incuded in this year's report has been enhanced to better incorporate presentation of the entire drainage system including natural or unmaintained drainages, thus allowing viewers to trace watercourses from their point of initiation all the way to receiving waters. Several other modifications have also been incorporated to improve utility, as requested by RWQCB staff at the September 8, 2008 meeting. Work to improve the maps is ongoing.

H.5.3. Integrated Pesticide Management

The Permittees encourage the use of integrated pesticide management measures and are actively participating in a variety of efforts to more effectively control pesticide useage to protect receiving waters. These efforts are summarized below and many are further described in an attachment to the Monitoring Annual Report. (Included in Appendix G of this report).

- Participation in CASQA's Pesticide SubCommittee
- Working with the guidance published by Eco-Wise to develop standard language to include IPM in municipal pest management contracts.
- Development of Educational Materials that include messages about the proper use of pesticides and encouraging IPM.
- Coordinating with Department of Pesticide Regulation (DPR) to include the Santa Margarita Watershed in an upcoming Pyrethroid Pesticide evaluation.
- Provide input and comments to DPR regarding proposed Pesticide Working Group Studies.
- Peer review of the *'2008 Summary of Pesticide Use Report'* prepared by the UP3 project.
- Presented on urban pesticide issues at the September 2008 Western Regional Urban Pest Ant Workgrouip at UC Riverside.
- Coordinating meetings with the U.C. Extension and the Riverside County Agricultural Commission to help coordinate activities related to pesticide management.

H.6. INDUSTRIAL / COMMERCIAL ACTIVITIES

The industrial and commercial program includes the implementation of the Compliance Assistance Program (CAP), which makes use of existing County Department of Environmental Health site inspections. As the responsible Certified Unified Program Agency (CUPA) in Riverside County, the County Department of Environmental Health is responsible for regularly inspecting all sites within the County that handle hazardous waste. The County Department of Environmental Health also inspects all food service restaurants within the SMR at least annually.

Revisions to the inspection program requirements contained within the Third-term SMR Permit expanded the scope of the overall commercial/industrial inspection program beyond the ability of the CAP to address. Each municipal Permittee now implements a supplemental inspection program for facilities not covered by the CAP. In addition, the Third-term SMR Permit required inventories/databases of facilities, prioritization of industrial and commercial sources relative to the potential to impact water quality, and specified inspection frequencies based upon facility priority.

The revised industrial and commercial sources program continues to have both regional and local jurisdiction components. Although the overall industrial/commercial inspection program has grown beyond the CAP, the CAP still addresses most of the facilities identified in the Third-term SMR Permit. With its low overhead cost, it remains a cost effective approach to mitigating the impacts of industrial and commercial facilities on the MS4 and Receiving Waters.

H.6.1. CAP Summary Report

Under the CAP, County Department of Environmental Health inspectors added a stormwater compliance survey to their regular inspection process. Completed surveys are forwarded to the appropriate Permittees for their records, review and further action, if necessary. The CAP industrial and commercial program has been an effective element of the DAMP. Individual inspection results are contained in each of the Permittee's Annual Reports. Appendix C contains a report of the facilities inspected under the CAP program.

H.7. ILLICIT CONNECTION / ILLICIT DISCHARGE (IC/ID) ACTIVITIES

Each permittee implements their own IC/ID monitoring program. In addition to and complementing these programs, the following watershed based activities are conducted.

H.7.1. Hazmat Response Teams

The HazMat Emergency Response Team is a partnership program with combined efforts from the Riverside County Fire Department and the Hazardous Material Branch of Environmental Health. The HazMat Response Team is staffed daily by firefighters/HazMat specialists at two separate locations. Hazmat 34 is stationed at the Winchester Fire Station and Hazmat 81 is stationed at the Palm Desert Fire Station. The Hazmat Team oversees the NPDES program for the County Fire Department's fire stations and facilities and provides training to the employees of the Fire Department. (See Appendix C, for detailed information regarding HazMat Team Activities.).

H.7.2. Complaint Call Summary Logs

In addition to each permittee's individual programs to handle complaint calls and IC/ID reports, the District receives reports on and ensures proper response to Illicit Connections, Illicit Discharges and Spills throughout the county.

Following is a summary of the total number and nature of complaints fielded by the District within the reporting period.

- Illicit Discharges (ID): 8
- Illicit Connections (IC): 0
- Spills (S): 62
- **Total: 70**

A key component of this public reporting program is the "800" number maintained by the District on behalf of the permittees. As described in Section G.3.2, this "800" telephone number has been established to report activities suspected of causing pollution. The total number of calls received on the 800 Line during the reporting period was 1,317. Please note that hang-ups or disconnects are not included in the total.

Additional Details are provided in the effectiveness assessments summarized in Section J.1.3.d).

H.7.3. Watershed Clean-Up Event Summary

There was no Watershed Clean Up during the 2007/08 Fiscal Year,. Participating members of the watershed clean-up committee determined that resouces were better spent working on adjacent portions of the Santa Ana watershed this year. To encourage the public to keep their communities clean, the

District always participates in watershed clean-up events by providing manpower, clean up equipment and storm water related promotional items and brochures.

H.7.4. Household Hazardous Waste/Antifreeze, Battery, Oil and Latex Paint (HHW/ABOP)

One of the principal components of the Permittees' source control efforts are the HHW and ABOP collection programs conducted by the County's Environmental Health Department. The goal of these programs is to provide convenient alternatives to illegally disposing of wastes into the MS4. Specific quantitiesof materials collected during the reporting period are identified in Section J.1.3.f).

H.8. TRAINING & EDUCATIONAL ACTIVITIES

H.8.1. Public Education

On behalf of the Permittees, the District conducts a watershed wide Public Education Program. This program is fully described in Section G of this report.

H.8.2. NPDES Training

The Permittees jointly fund a training and education program targeted at Municipal staff. This training program is designed to train Municipal employees on the proper use and implementation of BMP's appropriate for their field of work. There are four distinct training courses currently offered. These courses and their targeted audiences are described below:

- Construction Training
  Targeting Staff that conducts:
  - Construction Site Inspections / Enforcement
  - Public Works Construction Activities
  - Grading/Building Permit Review Staff
  - Any staff reviewing or preparing construction project SWPPP's

- Industrial – Commercial Training
  Targeting health, building and code enforcement staff that conducts:
  - Industrial/Commercial Site Inspections / Enforcement for Water Quality Ordinances.
- Municipal Training
  Targeting Municipal Maintenance Workers in:
  - Building Services
  - Parks Department
  - Fleet Services
  - Warehouse/Receiving Personnel
  - Building and Grounds Maintenance

- WQMP Training
  - Planning Staff
  - Engineering Staff
  - Plan Review and Plan Check Staff
  - Grading/Building Permit Review Staff
  - Post Construction BMP Inspectors

Tables of attendance to these trainings are provided in Section J.1.3.e) of this report. AEI-CASC and Brown and Caldwell are contracted by the District to present the training.

H.8.2.a) Construction

Eight (8) Construction training seminars were held on the following dates: September 24, 2007, September 25, 2007, Novermber 19, 2007, November 20, 2007, January 17, 2008, April 16, 2008, April 17, 2008, and April 22, 2008. Copies of the training attendance sheet are included in Appendix E.

H.8.2.b) Industrial/Commercial

Two (2) Industrial/Commercial training seminars were held on the following dates: November 27, 2007, and April 15, 2008. Copies of the training attendance sheet are included in Appendix E.

H.8.2.c) New Development

Five (5) New Development training seminars were held on the following dates: November 28, 2007, November 29, 2007, December 5, 2007, April 16, 2008, and April 22, 2008. Copies of the training attendance sheet are included in Appendix E.

H.8.2.d) Municipal

Four (4) Municipal training seminars were held on the following dates: November 27, 2007, Novermber 28, 2007, January 17, 2008, and April 15, 2008. Copies of the training attendance sheet are included in Appendix E.

H.9. PUBLIC INVOLVEMENT

All major permit compliance programs were developed during the FY 2004 -2005 period, therefore, there were no significant revisions to the DAMP or SMR programs warranting public involvement. However, the Permittees hold the following open meetings to facilitate public involvement.

H.9.1. Open Meetings

TAC meetings are scheduled monthly and are open to the public. The TAC meetings are described in Section H.2.2.

The Bureau of Reclamation, on behalf of the SMREMT has held several publicly noticed meetings to discuss SMR watershed issues and priorities for watershed efforts.

Further, stakeholders provided for public notices, open meetings, and a public comment period during the development of the IRWMP.

H.10. MONITORING ACTIVITIES

On behalf of the Permittees, the District implements a watershed based monitoring program which is fully reported upon in Appendix G of this report.

This program includes direct sampling and analysis for wet and dry weather flows. The program also supports numerous regional special studies that the Permittees participate in to address various water quality problems. These special studies include:

- Hydromodification Guidance
- Toxicity Reduction Evaluation (TRE) for pyrethroid pesticides in the SMR
- Lagoon Investigation Order No. R9-2006-0076
- Development of Local Pesticide Regulatory Activities
- Laboratory Inter-calibration
- Standardization of Toxicity Testing Methods
- Index of Biological Integrity for Low Gradient Streams
- Regional Watershed Monitoring Program

H.11. BUDGET

Expenditures identified below reflect costs incurred by the District for implementing its own NPDES program and to implement the regional watershed programs. The District does not track its direct implementation costs separately. Nor does it track costs separately for many permit provisions. Costs are not directly tracked for the asterisked Program Elements identified below.

Future compliance costs could increase significantly to address TMDL monitoring requirements in future fiscal years.

Program Element	Fiscal Year 2007-2008		Fiscal Year 2008-2009	
	Capital Expenditures	O&M/ Admin Expenditure	Capital Expenditures	O&M/ Admin Expenditure
Program Management	N/A	$362,539	N/A	$534,020
Annual Fee for MS4 NPDES Permit	N/A	0	N/A	$4,000
Implementation Agreement Shared Cost	N/A	N/A	N/A	N/A
Construction Inspections*	N/A	~$10,000	N/A	~$10,000
Development Planning*	N/A	N/A	N/A	N/A
Industrial and Commercial Inspections	N/A	N/A	N/A	N/A
Illicit Connections & Illegal Discharges Program	N/A	N/A	N/A	N/A
Municipal Facilities and Activities	N/A	N/A	N/A	N/A
Public Education & Outreach	N/A	$51,204	N/A	$66,030
Monitoring Program	N/A	$146,722	N/A	$152,600
Other	N/A	$0	N/A	$0
Contributions to Other Programs	N/A	$91,228	N/A	$96,330
Total	**N/A**	**$661,693**	**N/A**	**$862,890**

* Costs are not directly tracked for these Program Elements, however a brief description follows that identifies manpower requirements for those specific Program Elements

H. A DESCRIPTION OF ALL AREA-WIDE AND WATERSHED-BASED ACTIVITIES (cont'd).

A description of the sources of funds that were utilized during the previous fiscal year and the sources of funds proposed to meet the necessary expenditures for the subsequent year, including legal restrictions on the use of such funds are as follows:

Source of Funds	Capital Expenditures	Percent of Total Program Funding	Restrictions on Use (if applicable)
Santa Margarita Watershed Benefit Assessment Fund	$410,267	51.5%	District NPDES compliance costs, excess funds used to fund regional NPDES activities.
Santa Margarita Watershed Permittee Implementation Agreement	$365,787.59	46%	Regional NPDES Compliance Programs.
Zone 7 Ad-Valorem Tax Revenue	~$10,000	1.25%	Costs associated with District's compliance with Municipal Construction component of Board Order R9-2004-001.
Developer Development Review/Plan Check Fees	Unknown	Unknown	Costs associated with review of proposed developments in the unincorporated County for compliance with the Development Planning provisions of Board Order R9-2004-001.
Spending Against Reserves	$0	0%	District NPDES Compliance Costs
Miscellaneous Revenue	~$10,000	1.25%	Interest, Other Misc.
TOTAL	**$796,094.59**	**100%**	

Additional Comments/Information:

The Permittees are working with other stakeholder groups to leverage funds for regional planning objectives including:

Prop 13/40/50 Grant Funds – Working cooperatively with San Diego County, Bureau of Reclamation and other stakeholders to implement a Watershed Management Plan for the Santa Margarita River Watershed. (See Section C.7)

Stormwater Monitoring Coalition – The SMR Permittees are partnering with other participants in the SMC to fund monitoring projects to address high priority water quality issues as described in Section C.5.

Santa Margarita Executive Management Team – Partnering with the Bureau of Reclamation and other Santa Margarita watershed stakeholders to develop water quality models of the Santa Margarita Watershed to help assess pollutant problems and sources within the Santa Margarita Watershed. (See Section C.2)

Mission Resource Conservation District – Partnering with stakeholders in the SMR through the MRCD to implement watershed education, monitoring, and clean up programs.

Santa Ana Watershed Project Authority – Jointly fund a low impact development (LID) BMP testing and demonstration facility for southern California. The facility will be a retrofit of the District's compound in Riverside. Data collected from the facility will be used to update the BMP Design Manual, develop numeric criteria for hydromodification, and provide data for statewide efforts to better define the effectiveness of LID BMPs. The facility will also serve as a regional demonstration facility for southern California MS4 permittees. Additional information regarding this project is available in the Special Project's section of the Monitoring and Reporting Annual Report (Section G-7.1).

Southern California Coastal Watershed Research Project – Jointly fund a regional study the impacts of hydromodification on southern California streams and assess possible mitigation measures. Additional information regarding this project is available in the Special Project's section of the Monitoring and Reporting Annual Report (Section G-7.1).

I. RECOMMENDED ACTIVITIES TO BE CONDUCTED JOINTLY BY THE PERMITTEES TO ADDRESS THE IDENTIFIED WATER QUALITY PROBLEMS

The Permittees have evaluated the effectiveness of the programs and are proposing modifications to Permit Compliance Programs and/or additional studies identified in Appendix G-7.1 and G-8.3 to address the following constituents which have been identified for a focused effort by the Permittees. The constituents below are discussed further in Appendix G (Section G-6.4 and the TRE Status Report) The Permittees regularly make adjustments to their compliance program on an on-going basis as water quality problems are identified or as implementation issues warrant. As such many of the recommended activities have already been initiated during the course of the reporting year.

I.1. POLLUTANT TARGETED ACTIVITIES

This section describes activities that the Permittees plan to implement that are targeted to a particular Water Quality Problem.

I.1.1. Pesticides

I.1.1.a) Complete Toxicity Reduction Evaluation (TRE)

As a result of a Phase I Toxicity Identification Evaluation (TIE), the Permittees are currently working on a TRE to confirm the toxic element observed in the samples collected in the spring and fall of 2007, identify likely sources of the toxic element and propose mitigation measures for those sources. The completed TIEs and the current TRE are described in an attachment to Appendix G.

The final findings of the TRE are expected to be reported in the ROWD. The findings will include any additional BMPs that the Permittees need to implement to control urban sources of pyrethroids.

I.1.1.b) Participate in CASQA Pesticides Subcommittee

The Permittees continued participation in the Pesticides Subcommittee of CASQA provides a forum for the collection and dissemination of information regarding pesticide impacts, a uniform voice for commenting on state and federal regulations and legislation, a forum to identify and resolve monitoring issues, and a forum to comprehensively identify and/or develop methods of reducing the impact pesticides have on our environment.

I.1.1.c) Add Pesticides Component to Training

The District, on behalf of the co-Permittees is currently working with AEI-CASC to develop additional components for the Municipal, Commercial-Industrial and WQMP trainings that address the proper use and application timing for pesticides and encourages the use of IPM.

I.1.1.d) Continue Existing Outreach and Education

The permittees have existing public education and outreach materials that address Pesticides. These are described in Section G.2.1.

I.1.1.e) Develop Additional Educational Materials

The District is updating and modifying its Public Education program on an on-going basis in response to the continuing evolution of the program. As part of this process, the District is currently developing additional materials to further inform the public on the use of integrated pesticide management (IPM) instead of traditional chemical solutions. Specific outreach tools such as the development of a new landscape maintenance brochure (which discusses IPM) are discussed in Section G.2.1.

I.1.1.f) Develop Standard Language for Municipal Pest Management Contracts

The District distributed information developed by Eco-Wise to the Permittees. The information discussed how to amend standard contract language to require the use of IPM where appropriate at municipal facilities (as most municipalities contract out pest control).

I.1.2. Nutrients

I.1.2.a) Continue Education Programs

The permittees have existing programs that address Nutrients. These are described in Section G.2.2 and througout the DAMP.

I.1.2.b) Additional Outreach and Education

The Permittees have initiated or will initiate the development of several new outreach tools to improve management of urban sources of nutrients. These improvements include the development of brochures addressing landscape management, pet waste, equestrian management and septic system management as identified in Section G.2.2.

I.1.3. Pathogens

I.1.3.a) Continue Education Programs

The permittees have existing programs that address Pathogens. These are described in Section G.2.2 and throughout the DAMP.

I.1.3.b) Continue Development of Brochures Addressing Animal Waste

As identified in Section G.2.3, the Permittees are adding to and updating various brochures to include more information on managing septic systems, pet waste and an additional focus on proper equestrian trail use and horse ownership.

I.1.4. Sedimentation

Sedimentation (erosion) is a naturally occuring process that can be exacerbated by construction activities, and the increases in runoff peak, volume and frequency that are commonly associated with impervious cover in urban development. The Permittees have implemented controls into the review and approval process for construction projects and priority projects to address these issues and are involved in numerous additional studies to further ensure that regional waters are not negatively impacted by changes in sediment transport.

I.1.4.a) Continue Education Programs

The permittees have existing programs that address Sedimentation. These are described in Section G.2.4, and throughout the DAMP.

I.1.4.b) Continue the Special Studies described in Section H.4

Section H.4 of this report and Section G-7.1 of the Monitoring Annual Report, which is included as Appendix G of this report, describe numerous additional studies that the Permittees are implementing that will address the issue of sedimentation.

I.1.4.c) Continue to implement the current criteria

Section G-7.1 of the Monitoring Annual Report also describes the current criteria the Permittees implement to control changes in sediment transport.

I.1.5. Metals

The primary urban source of copper and lead in the regions waters are from brake pad wear and lost automotive wheel weights, respectively. The Permittees are currently, and propose to continue coordinating through CASQA to reduce metallic pollutant loads in regional waters by promoting statewide and national change to these national problems that are caused by societal use of currently accepted technologies. To date, several automotive manufacturers have committed to evaluating reformulated break pads and converting from lead to steel tire weights. Additional work needs to be done, however, as there are still several third-party manufacturers who are not participating in the process and who are distributing problematic components to automotive shops and automotive enthusiasts throughout the country.

I.1.5.a) Brake Pad Partnership

The Permittees recommend continued participation through CASQA in Sustainable Conservation's efforts to bring together government regulators, brake pad manufacturers, storm water management agencies and environmentalists to research the impacts of brake wear debris on water quality. Through this effort, the brake pad manufacturers have agreed to bring new products to market within five years if brake pad wear is determined to have significant potential to impair water quality.

I.2. OTHER RECOMMENDED ACTIVITIES

This section describes activities the Permittees' plan to implement activities that address water quality issues as a whole. They do not target any particular pollutant, but will help to either improve the Permittees program to reduce pollutant transport or their ability to monitor and track trends in pollutant loads in regional waters.

I.2.1. Enhanced MS4 Mapping

The District, on behalf of the Permittees, has initiated a revision to the mapping of the MS4 system to ensure that natural watercourses, along with District maintained, and City maintained MS4 facilities are included. The purpose of the revisions is to ensure that one can follow the flow of water from a given tributary to the Santa Margarita River. The Permittees are also working on incorporating drainage boundary information, as appropriate, into the MS4 maps.

I.2.2. Changes to the Monitoring Program

Through the implementation of the monitoring program, and as a result of the Regional Board's Audit of the Monitoring program, the Permittees have identified several improvements that need to be made. These improvements will allow the Permittees to better monitor for and identify pollutants in receiving waters and ensure that the compliance programs are appropriately addressing pollutants of concern.

The Monitoring Annual Report (Section G-8.3 of Appendix G) describes the additional recommended revisions to the Monitoring Program. These recommended revisions are outlined below.

- Re-Evaluate IC/ID Program
- Revise Dry Weather Monitoring Program
- Clarify Mobilization Criteria
- Locate Representative Reference Location
- Improve Reporting
- Clarify Analyte List
- Clarify Triad Method and Follow-up Actions
- Install Permanent Monitoring Equipment at Triad Stations
- Recognize limitations to bacteria sample collection
- Adjust number of wet weather sampling events required.

I.2.3. Web Site Upgrade

Through the Permittee's ongoing efforts to internally assess the efficiency and efficacy of their MS4 compliance programs, it was determined that an overhaul of the District's web site was needed. The District's site contains the public education web site and a technical resource site with the various compliance documents for the program. It was found that information available through the site was often difficult to find and was not user friendly and sometimes was out of date. The Permittees are now reviewing this site to identify and implement needed changes. Changes identified to date include:

- A redesigned main portal that guides the visitor to the appropriate pages for their location of interest within the county.
- A completely redesigned technical information site that will be easier to use and find information
- A review and update of all materials available on the website.
- Dedication of a single staff person to ensure that the correct and up-to-date information is available on the website on an ongoing basis.
- Online posting of annual reports for each of the Permittees.

I.2.4. Changes to the Public Education Program

To ensure that the public education program is continuing to be effective several new and/or revised materials are proposed to be completed and are described in Section **Error! Reference source not found.** of this report.

I.2.5. Changes to the NPDES Training program

The permittees are currently looking into several changes to improve the effectiveness of the NPDES Training program described in Section H.8.2 of this report. Program changes being considered are:

- Abbreviated review courses for municipal staff that have previously attended training on that topic. These abbreviated courses would focus on reviewing the appropriate BMP's for that process, and any new developments or changes in the standards of practice for addressing water quality issues in that field.
- Revisions and formalization to the Training Pre/Post quizzes given to the attendees. This effort should lead to a measure of effectiveness for the training program that would correspond to a Level 2 Outcome according to the CASQA Municipal Stormwater Program Effectiveness Assessment Guide.

J. AN ASSESSMENT OF OVERALL PROGRAM EFFECTIVENESS BASED ON MEASURABLE GOALS ESTABLISHED IN THE DAMP.

The Third-term SMR Permit requires the Permittees to develop both a short-term and a long term strategy for addressing the effectiveness of the Watershed SWMP. This strategy is described in Appendix S of the DAMP. The Watershed SWMP Annual Report FY 2005-2006 was the first year that the newly required Third-term MS4 Permit programs was fully implemented and the effectiveness evaluations required. This Annual Report is a continuation of the program implementation and effectiveness evaluation process.

The strategy for assessment requires the establishment of a set of initial baseline conditions. These baseline conditions can be used to establish measurable goals based on measurable metrics. Thereafter effectiveness can be evaluated by comparisons of successive years of indicator information against the baseline data and measurable goals. Where the period of evaluation is characterized by the implementation of new program elements, determinations of program effectiveness will initially be limited to confirmation of program implementation and collection of measurable metrics until baseline conditions can be properly established. Further, it must be recognized that direct measures of long-term program effectiveness may not be available within the timeframe of the Third Term Permits. This lack of direct measure confirmation arises because:

- Baseline water quality conditions are not readily established;
- Stormwater and dry weather discharge data is inherently variable;
- Water quality changes in response to program implementation are likely to be very slow; and
- It is difficult to establish a link between receiving water condition and program activities at the watershed scale when programs are being implemented incrementally with the development/redevelopment cycle.

While program effectiveness assessment is a key step in the iterative process of program implementation, it should be realized that effectiveness assessment itself is a part of the management process that is also evolving. Assessing program effectiveness is recognized as a challenge for program managers across California, and the Riverside County Stormwater Program is supporting the efforts of CASQA to develop guidance in this area at a statewide level.

To assist with developing and implementing an effective program that will contribute to reduced pollution of our waterways, the District NPDES staff attended CASQA's Program Effectiveness Training. This training will help the District develop appropriate measureable goals in the assessment of their individual compliance programs and of the watershed based activities.

J.1. SHORT TERM MEASURES OF EFFECTIVENESS

The short-term strategy for assessing the effectiveness of the DAMP (Watershed SWMP) requires the development of measurable goals and measures of effectiveness for programs proposed to mitigate the impacts of Focus Area Constituents of Concern. The measures of effectiveness track the year-to-year implementation of the regional programs. The measures of effectiveness also are used as part of the Long-Term Strategy to measure the effectiveness of the Watershed SWMP as described in Provision K.2.m of the Watershed SWMP. Measurable Goals and Measures of Effectiveness for the existing and proposed regional programs are presented below.

J.1.1. Encourage Watershed Based Planning Efforts

SUMMARY EFFECTIVENESS ANALYSIS:

One of the most significant events of the reporting period was the development and implementation of the IRWMP. The IRWMP was adopted on July 31, 2007. Currently, IRWMPs are the gold standard of watershed based planning. The IRWMP was initiated by Rancho California Water District, the County of Riverside and the District. The IRWM stakeholders included Elsinore-Anza-Murrieta Resource Conservation District, the Regional Board, the U.S. Army Corps of Engineers, California Department of Fish and Game, the Cities of Temecula and Murrieta, the Bureau, and several other community organizations. The plan describes the stakeholders goals for the watershed and identifies projects necessary to achieve those goals. Focus was placed on projects that integrated multiple watershed benefits. Based on the IRWMP, several stakeholders submitted an application for Prop 50 IRWM Implementation Grant projects, including the District, who requested the funds to complete the Murrieta Creek Flood Control, Environmental Restoration and Recreation Project. A copy of the IRWM was included in the 2006-2007 Watershed Annual Report.

The Permittees continue to lead efforts to mitigate the impact of new development on water quality in the SMR. The MSCHP effort continues to purchase critical habitat and streambank properties through grants and other funding mechanisms and ensure that new developments appropriately protect natural resources. Approximately 3,902 acres were conserved this last calendar year. The Permittees are also pursuing a Special Area Management Plan, in conjunction with the Regional Board and the USACE for the purposes of identifying and protecting, at a watershed level, high priority Waters of the U.S. In addition, the Permittees are working with the other stakeholders in the watershed to aggressively address the 303(d) listed impairments in the Santa Margarita watershed, through efforts coordinated by the Bureau of Reclamation. The Bureau, with the support of the Permittees, is developing a watershed model and approached the Regional Board regarding developing a third-party TMDL for the nutrient impairments in the Santa Margarita watershed. Finally, the District

continues to develop an enhanced BMP guidance manual, focused on low impact development, landscape based BMPs, capable of addressing the water quality impairments affecting the Santa Margarita watershed. A first draft of this manual is expected in FY2009-10. This project has been delayed to allow the coordinated SMC LID Manual (of which the District is a funding member) to be completed for the permittees to build upon. District staff are directly involved in the development of this statewide guidance and as such is listed in Section H.4.2 and further described in the Special Studies Section of the Monitoring Annual Report (Appendix G, Section G-7.1). In addition, the Permittees are coordinating with SCCWRP to develop a regional southern California approach to addressing hydromodification. The Permittees believe that the combined efforts not only meet but exceed the minimum requirements established by the Watershed SWMP and the measurable goals established for addressing the highest priority Water Quality Problems in the Santa Margarita watershed.

Specific measurable metrics are as follows:

J.1.1.a) Annual Summary Reports of benefits of MSHCP Implementation

There are approximately 72,318 acres of existing public or quasi-public lands that are to be preserved in Riverside County within the Santa Margarita River watershed. Approximately 15,000 additional acres have been purchased since the adoption of the MSHCP. The Criteria Reserve Goals and Objectives will add approximately 70,500 additional acres of permanent habitat reserve lands that the RCA will purchase with mitigation fees generated by the MSHCP.

Yearly reports from Western Riverside County Resource Conservation Authority

Acreages Acquired per Year	Approximate Acres
2003	3,193.4
2004	9.7
2005	355.4
2006	6,701.2
2007	871.9
2008	3,902
Total	**15,033.6**

Note: Prior to the FY 2005-2006 Watershed Annual Report, the above MSCHP acreages were reported on a fiscal year basis. Since acreage information is collected and reported on a calendar basis, areages for subsequent annual reports will continue to be reported on a calendar year basis to ensure accuracy and consistency.

The number of acres acquired per year is dependant upon many factors that are largely dependant upon the economy during that year. As the table above demonstrates, this value can vary significantly from year to year, and merely provides evidence of the Permittees' continued efforts to encourage Watershed based planning and conservation within the watershed.

The MSHCP is described in Section H.3.4 of this report.

J.1.1.b) Annual Summary Report of SAMP Development

During the past two fiscal years the Corps did not receive any funding for the SAMP and all efforts were put on hold. The Corps has received funding this year and the project is once again moving forward. Additionally, the District has teamed up with the Riverside County Transportation and Land Management Agency, The Riverside County Resource Conservation Authority and The Riverside County Transportation Commission to assist the Corps with the final stages of the SAMP which include the completion of the draft EIR/EIS, the development of the expedited permits and the development of the conservation/mitigation areas. The goal is to have the SAMP completed by late 2009.

The SAMP is described in Section H.3.3 of this report.

J.1.1.c) Summary Report of Watershed Stakeholder meetings and agendas.

The Permittees hold or attend several meetings with the various watershed stakeholders. These meetings are described in Section C of this report and agendas for these meetings (as available) are provided in Appendix A.

J.1.1.d) Summary Report on the Status of IRWMP

IRWMP was finalized on July 31, 2007 and is currently being implemented. A grant application was submitted in early August. However, the application was denied by DWR. The IRWM oversight committee is now meeting with its counterparts in San Diego County and Orange County to discuss how to allocate remaining Proposition 84 IRWM funds. The IRWM stakeholder group will reconvene in late 2008 to initiate the process of identifying and accepting new projects for consideration as part of upcoming Proposition 84 grant cycles.

The IRWMP is described in Section H.3.1 of this Report.

J.1.1.e) Summary Report on the Status of the SMR Study

A draft Plan of Study for Phase 4 of the SMR Study has been prepared. The purpose of Phase 4 will be to develop a monitoring program that addresses sustainable water supplies for all aspects of the watershed. This program will coordinate with existing studies, synthesize past and current watershed research, assess data gaps, and develop a watershed water quality monitoring study.

The completed portions of the SMR study include:

Phase 1: Developed a Framework Monitoring Plan (FMP)

Phase 2: Resolved data issues identified in the FMP and refined watershed goals

Phase 3a: Developed a preliminary model addressing water quality issues and evaluated effectiveness of the tool.

Phase 3b: Included tasks to address future TMDLs in the Santa Margarita River Watershed and determine how the model could be refined to support stakeholder driven TMDLs. Various improvements were made to the model as a result of Phase 3a..

The Bureau has continued to schedule ongoing meetings with stakeholders and RWQCB staff to promote the implementation of the SMR Study.

The SMR Study is further described in Section H.3.2 of this report.

J.1.1.f) Summary Report of status of WQMP BMP Guidance

District and County staff are working on the development of expanded low impact development BMP manual for inclusion in the current WQMP BMP Design Manual. The LID manual is intended to support implementation of both low impact development and hydromodification mitigation concepts. In addition, an FAQ, Watershed Impairment Map, and updated template were created for the development and engineering communities. The District has also initiated a retrofit of our Riverside compound to conduct LID BMP testing and demonstration. Construction is scheduled to begin in Summer 2009. See Appendix G - Section G-7.1, Special Studies for more information.

Additionally, the Permittees are continuing to work with the SMC and others to develop enhanced and regionally consistent hydromodification guidance. See Appendix G - Section G-7.1, Special Studies for more information.

J.1.2. Continue to support development of regional science and other studies to further understand and mitigate water quality impairments

SUMMARY OF EFFECTIVENESS ANALYSIS:

The Permittees continue to participate in the development of science necessary to better manage the NPDES MS4 Stormwater Programs. The Permittees are members of the Southern California Monitoring Coalition and participate with SCCWRP on independent regional projects when appropriate (such as a regional study of natural loadings from undisturbed watersheds). The Permittees are also working with local watershed stakeholders to develop models of the watershed to assess sources of pollution and test the effectiveness of proposed BMPs.

Specific studies such as the lab intercalibration studies and Bioassessment Protocol studies currently being conducted by the SMC have directly addressed our goal of standardizing monitoring and sampling analysis protocols. The water quality model being developed in conjunction with the Bureau is expected to provide a useful tool for assessing BMP effectiveness.

J.1.2.a) Annual Status Reports of ongoing studies

The Permittees are active in the studies mentioned above and many additional studies. These studies support the development of regional science that will help the Permittees to be better equipped to mitigate any water quality impairments. Appendix G - Section G-7.1, Special Studies, contains a summary of the current status of all special monitoring studies the Permittees are participating in.

J.1.3. Public Education and Outreach

EFFECTIVENESS ASSESSMENT. The metrics being collected for the Public education program are presented below. Due to the need to establish a baseline condition, a detailed effectiveness analysis of this component is not provided. It is expected that within the ROWD, the Permittees will be able to recommend measurable goals. However, the Permittees would note that overall website hits have been steadily increasing over the fiscal year and that based on public education surveys it initially appears that knowledge regarding our program is increasing. Any identifiable trends in public awareness will be included in the ROWD. In addition, the collection of survey data preliminarily indicates significant knowledge of stormwater related issues among the general public. More detailed analysis will be

provided in future annual reports as trends can be extrapolated. Please note that the Permittees implement a consistent public education program across the County, with specific modifications to focus on watershed issues as necessary. To this end, many of the metrics provided below are Countywide as it is consistent with the implementation of the Public Education Program. It is also infeasible to collect many of these metrics at a finer resolution. SMR specific metrics are provided where appropriate.

J.1.3.a) Track materials distributed

This section includes an accounting of the attendance to outreach events and the number of materials distributed. Many of these metrics are not conducive to trend analysis as variables such as events change from year to year. The Public Education program is continually looking for better and more effective opportinities to present the message of 'Only Rain in the Storm Drain'.

J.1.3.d) The Number of Urban Runoff Complaints received through hotlines

It should be noted that complaints received by the District came through phone lines, e-mail requests, and/or mail. The specific method of "entry" of the complaints directed to the District are currently not tracked.

Total Number of Complaints / Reports Received:

During this reporting period, 70 Urban Runoff complaint reports were received by the District which is 11 more than the fifty nine (59) in the previous reporting period.

Of the 70 reports received by the District, 62 (89%) were Spill reports that were received via copy of an State OES report. 5 of the Spill reports involved sewage discharges. The remaining 8 were reported as potential illicit discharges which consited of a variety of activities including improper washing of equipment, concrete and paint wash water, and pool draining.

Copies of these reports are provided in Appendix C.

Additional information regarding these reports can be found in the District's Individual Annual Report..

Total Number of Calls to '800' Hotline	Number of Calls			
	2004-05	2005-06	2006-07	2007-08
Water Pollution Hotline	100	2015	1648	1317

Note: These numbers are for the entire County of Riverside. The number of residential inquiries from the **Santa Margarita area was 69.**

J.1.3.e) The Number of Permittee staff receiving Riverside County NPDES training for activities related to DAMP implementation

The training sessions accounted for in these tables are described in Section H.8.2 of this report.

APPENDIX A

MEETING AGENDAS AND NOTES

MSC MEETINGS

RIVERSIDE COUNTY STORMWATER MANAGEMENT PROGRAM
MANAGEMENT STEERING COMMITTEE
SANTA ANA & SANTA MARGARITA REGIONS

MEETING AGENDA

(Lunch Served)
11:30 a.m.* – 12:30 p.m. September 20, 2007
Room C/D
Riverside County Administrative Office, Fourth Floor
4080 Lemon Street, Riverside, CA 92501

* meeting to begin at 11:30 a.m. or immediately following the WRCOG TAC meeting should it end later than 11:30

1. Welcome and Self Introduction – Dusty Williams, RCFC&WCD

2. Review September 20, 2007 Agenda and Approval of May 17, 2007 Meeting Minutes - Dusty Williams, RCFC&WCD

3. Santa Ana/Santa Margarita Program Status - Jason Uhley
   - Legislative Update - Senate Constitutional Amendment 12 (SCA 12)
   - CASQA Conference Update
   - Draft General Construction Permit
   - Permit Renewal Update
   - Audits/NOVs

4. TMDL Development - Jason Uhley
   - Lake Elsinore and Canyon Lake Nutrient TMDL
   - Middle Santa Ana River Watershed Bacteria Indicator TMDL
   - Canyon Lake Bacteria Indicator TMDL

5. New Agenda Items/Schedule Next MSC Meetings
   - October 18th, February 21st* and April 17th*

*Tentative meeting dates pending WRCOG 2008 schedule

P8/115178

RIVERSIDE COUNTY STORMWATER MANAGEMENT PROGRAM
MANAGEMENT STEERING COMMITTEE
SANTA ANA/SANTA MARGARITA REGIONS

MEETING MINUTES
for
September 20, 2007

I. ***Attendees:***

Benjie Cho	RCFC&WCD
Steve Stump	RCFC&WCD
Jason Uhley	RCFC & WCD
Charlene Warren	RCFC & WCD
Alex Gann	Riverside County Executive Office
Mike Shetler	Riverside County Executive Office
Joe Aklufi	City of Beaumont
David Lane	City of Calimesa
Bob Bohan	City of Canyon Lake
Cordell Chavez	City of Corona
Kent Wegelin	City of Moreno Valley
Jeff Allred	City of Norco
Tom Boyd	City of Riverside

II. ***Welcome and Self Introductions – Steve Stump***

Steve Stump welcomed everyone to the meeting and initiated self introductions of attendees.

III. ***Review September 20, 2007 Agenda and Approval of May 17, 2007 Meeting Minutes – Steve Stump***

There were no changes to the agenda. Meeting minutes were approved.

Handouts Provided:

- Agenda for September 20, 2007
- Minutes for May 17, 2007
- Legislative Updates
- Meeting Attendance Sheet

IV. ***Santa Ana/Santa Margarita Program Status – Steve Stump***

- ***Legislative Update*** – Steve provided an update on the following legislative bills:
    - **SB1001** - This bill reduces the number of the Regional Water Quality Control Board members from nine to seven and eliminates the appointment categories. It also allows the State Board to revoke a Regional Board's authority if the State Board concludes that the Regional Board is deficient and does not take appropriate corrective action.
    - **SCA 12** – This bill moves to exempt stormwater and urban runoff fees from Prop 218 (formerly, ACA 10 of previous Legislative Session) to allow municipalities to charge a service fee for stormwater compliance activities.
    - **AB938** – This bill would authorize a county or a city to convene one or more watershed water quality committees, made up of at least one member from various

interests, to develop and facilitate cooperation in achieving local water quality solutions.

- **AB739** – This bill will provide a framework for assessing the success of municipal stormwater management programs. It will also require the State Board and the Department of Water Resources to develop grant criteria for their respective grants, Proposition 84 and 1E, to identify areas to coordinate their grant programs for maximum benefits.

Please see legislative handout included in the meeting agenda packet for more detailed information.

CASQA Conference Update – Benjie Cho provided a brief update on the CASQA Conference held September 10th-12th in Costa Mesa, CA. Benjie noted that there was a continued emphasis on the need of Low Impact Design (LID) and the restructuring of monitoring efforts to make the monitoring data more useful.

Draft General Construction Permit – Benjie reported that the State has been committed to a release of the Permit late October 2007. He explained that this Permit will be a significant expansion of the current Construction Permit, but the Permittees will evaluate the next iteration of the Permit to ensure that the requirements are productive. This Permit will have impacts on not only private construction activities, but municipal construction activities as well.

Permit Renewal Update – Benjie informed attendees that there had been no recent news from the Santa Ana Regional Board regarding the renewal of the Permit.

Audits/NOVs – Benjie gave a brief update on Santa Ana Regional Board Audits and Notice of Violations (NOVs), noting that there had been no recent news from the Regional Board. Benjie noted that NOVs can lead to an Administrative Civil Liability (ACL) if the Regional Board was not satisfied by the municipality's response. Benjie advised the City Managers and city representatives to contact the Regional Board about the status of an NOV, should their city receive one, and proactively work with staff to address any concerns. A lengthy discussion on NOV and ACL processes ensued among the group. Steve provided Regional Board contact information to City Managers and city representatives.

Mike Shetler gave a brief update on the Audit meeting held with the San Diego Regional Board September 20, 2007. He reported that the audits were based on EPAs new audit guidance tool. Benjie committed to provide copies of EPAs guidance to the Cities to help the Cities understand what EPA and the Regional Board's are looking for in a municipal stormwater program.

V. ***TMDL Development – Benjie Cho***

Lake Elsinore/Canyon Lake Nutrient TMDL – Benjie reported that final Implementation Plans have been submitted to the Regional Board and asked that City Managers speak with their NPDES city representatives regarding financial ramifications of these plans.

Middle Santa Ana River Watershed Bacteria Indicator TMDL - Benjie reported that the Middle Santa Ana River Watershed Bacteria Indicator TMDL has been approved by EPA. This TMDL affects the cities of Riverside, Corona, Norco and the County of Riverside.

Canyon Lake Bacteria Indicator TMDL – Benjie advised the group that there is a CEQA Scoping meeting scheduled for October 22, 2007 at EWMD from 2:00 p.m.-5:00 p.m. Benjie further discussed that the stakeholders are anticipating basin plan amendments that would effectively remove the impairment under most circumstances. General discussion ensued about the TMDL process.

VIII. ***New Agenda Items/Schedule Next Meeting***

There were no new agenda items requested for the next meeting.

NEXT MEETING IS SET FOR:
THURSDAY, October 18, 2007 - *11:30 A.M. (Tentative)*
AT
RIVERSIDE COUNTY EXECUTIVE OFFICE, FOURTH FLOOR
4080 Lemon Street, Riverside, CA 92501

Visit the StormWater/Clean Water Protection Program website at:
http://www.co.riverside.ca.us/depts/flood/YouCanHelp.asp.
The Site contains a variety of useful stormwater program information including links to other stormwater management programs and related web sites.

MEETING AGENDA

(Lunch Served)
11:30 a.m.* – 12:30 p.m. October 18, 2007
Room C/D
Riverside County Administrative Office, Fourth Floor
4080 Lemon Street, Riverside, CA 92501

* meeting to begin at 11:30 a.m. or immediately following the WRCOG TAC meeting should it end later than 11:30

1. Welcome and Self Introduction – Steve Stump, RCFC & WCD

2. Review October 18, 2007 Agenda and Approval of September 20, 2007 Meeting Minutes – Steve Stump, RCFC & WCD

3. Santa Ana/Santa Margarita Program Status - Jason Uhley, RCFC & WCD
   - District LID testing project has been approved
   - Permit Renewal Update
   - Audits / Notice Of Violations (NOVs) /Administrative Civil Liabilities (ACLs)

4. TMDL Development - Jason Uhley, RCFC & WCD
   - Lake Elsinore and Canyon Lake Nutrient TMDL
   - Middle Santa Ana River Watershed Bacteria Indicator TMDL
     - Consistent Bacteria spikes with human markers in Box Spring Watershed
   - Canyon Lake Bacteria Indicator TMDL
     - EMWD on Monday October 22, 2007 from 2 to 5 P.M.

5. New Agenda Items/Schedule Next MSC Meetings - Jason Uhley, RCFC & WCD
   - February 21st* and April 17th*

*Tentative meeting dates pending WRCOG 2008 schedule

RIVERSIDE COUNTY STORMWATER MANAGEMENT PROGRAM
MANAGEMENT STEERING COMMITTEE
SANTA ANA/SANTA MARGARITA REGIONS

MEETING MINUTES
for
October 18, 2007

I. ***Attendees:***

Benjie Cho	RCFC&WCD
Steve Stump	RCFC&WCD
Charlene Warren	RCFC & WCD
Mike Shetler	Riverside County Executive Office
Joe Aklufi	City of Beaumont
Lori Moss	City of Canyon Lake
Cordell Chavez	City of Corona
Duane Baker	City of Corona
Kent Wegelin	City of Moreno Valley
Jeff Allred	City of Norco
Tom Boyd	City of Riverside
Barry McClellan	City of San Jacinto

II. ***Welcome and Self Introductions – Steve Stump***

Steve Stump welcomed everyone to the meeting and initiated self introductions of attendees.

III. ***Review October 18, 2007 Agenda and Approval of September 20, 2007 Meeting Minutes – Steve Stump***

There were no changes to the agenda. Meeting minutes were approved.

Handouts Provided:

- Agenda for October 18, 2007
- Minutes for September 20, 2007
- Letter to Santa Ana Regional Board – Re: Support for Low Impact Design (LID) Testing and Demonstration Facility dated October 10, 2007
- Santa Ana Regional Board – Notice of California Environmental Quality Act (CEQA) Scoping Meeting dated August 27, 2007

IV. ***Santa Ana/Santa Margarita Program Status – Benjie Cho***

- **District LID testing project has been approved** – Benjie Cho informed attendees that a $475,000 grant was received from SAWPA's Proposition 13 Allocation for LID testing project. The District will be retrofitting its compound to incorporate the LID demonstration and testing facility. A brief discussion ensued among the group regarding LID testing. For more information regarding the LID demonstration and testing facility, please refer to the handout provided at the meeting (Letter to Regional Board Re: Support for Low Impact Design Testing and Demonstration Facility).

- ***Permit Renewal Update*** – Benjie reported that the draft permit is due to be released by the Santa Ana Regional Board in approximately 4 weeks. Steve asked attendees if they would like a presentation of what's contained in the draft Permit. The group was very interested in both a review of existing programs as well as a summary of new permit requirements. Discussion ensued briefly between Tom Boyd, Benjie, and Steve regarding Permit issues

(hydromodification, construction permits, MS4s, and post construction BMPs). District staff will coordinate the presentation to be conducted at a future MSC meeting.

- ***Audits/Notice of Violations (NOVs)/Administrative Civil Liabilities (ACLs)*** – Benjie recommended that city representatives stay on top of all NOVs, ACLs and audits that they may receive. Jeff Allred discussed the city of Norco's NOV. Steve provided Michael Adackapara, of the Santa Ana Regional Board, telephone number (951.782.3238), should the cities need to contact him regarding issues relating to NOVs and ACLs. Other items of discussion included:

    - NOV/ACL response letters to the Regional Board
    - Negotiating fines assessed by the Regional Board
    - Supplemental Environmental Project (SEP), which, in the settlement of environmental enforcement cases, is a way to require defendants/respondents to achieve and maintain compliance with environmental laws and regulations and where appropriate, pay a penalty and/or given an additional environmental project for their violations.
    - Request for penalties to be used by the Regional Board for projects specifically in the violating city

V. ***TMDL Development – Benjie Cho***

- **Lake Elsinore/Canyon Lake Nutrient TMDL** – Benjie reported that the Implementation Plan for the Lake Elsinore TDML is moving forward and the monitoring plan for Canyon Lake has been released.

- **Middle Santa Ana River Watershed Bacteria Indicator TMDL**
    - **Consistent Bacteria spikes with human markers in Box Spring Watershed** – Benjie noted that there have been consistent exceedances of human markers in the Box Spring Watershed. Steve and several City Managers discussed areas in which water samples are being taken and issues related to sampling such as infiltration and elevated levels of bacteria.
- **Canyon Lake bacteria Indicator TMDL**
    - **EMWD on Monday October 22, 2007 from 2 – 5 p.m.** – Benjie announced that the CEQA Scoping meeting will be held on October 22nd at EMWD.

VIII. ***New Agenda Items/Schedule Next Meeting***

It was requested that the Santa Ana Permit be added as an agenda item for the next MSC meeting.

NEXT MEETING IS SET FOR:
THURSDAY, February 21, 2008 - *11:30 A.M. (Tentative)*
AT
RIVERSIDE COUNTY EXECUTIVE OFFICE, FOURTH FLOOR
4080 Lemon Street, Riverside, CA 92501

   - April 17th*, August 21st*, Oct 16th*

*Tentative meeting dates pending WRCOG 2008 schedule

P8/117

RIVERSIDE COUNTY STORMWATER MANAGEMENT PROGRAM
MANAGEMENT STEERING COMMITTEE
SANTA ANA/SANTA MARGARITA REGIONS

MEETING MINUTES
for
February 21, 2008

I. ***Attendees:***

Dusty Williams	RCFC-WCD
Mark Wills	RCFC-WCD
Jason Uhley	RCFC-WCD
David Garcia	RCFC-WCD
Charlene Warren	RCFC-WCD
Joe Aklufi	City of Beaumont
Bob Bohan	City of Canyon Lake
Beth Groves	City of Corona
Cordell Chavez	City of Corona
Duane Baker	City of Hemet
Kent Wegelin	City of Moreno Valley
Jeff Allred	City of Norco
Tom Boyd	City of Riverside
Mike Shetler	Co. of Riverside

II. ***Welcome and Self Introductions – Dusty Williams***

Dusty Williams introduced Mark Wills as the new Chief of Regulatory and gave a brief summary of his background and familiarity with NPDES. Dusty also introduced David Garcia as the new contact person, taking Benjie Cho's position.

III. ***Review February 21, 2008 Agenda and Approval of October 18, 2007 Meeting Minutes – Dusty Williams***

One correction, Duane Baker is from City of Hemet. Meeting minutes were approved.

Handouts Provided:

- Agenda for February 21, 2008
- Minutes for October 18, 2007

IV. ***Santa Ana/Santa Margarita Projram Status – Jason Uhley, RCFC&WCD***

- **Box Spring Channel-** David Garcia gave a presentation on Box Springs Channel. The presentation started with a brief history and purpose of the Bacterial Indicator Urban Source Evaluation Plan and then specifically mentioned Box Spring Channel. The Box Springs Channel sample site has had a consistent human bacterial indicator. The presentation

explained that the Flood Control District and the City of Riverside are taking steps to identify specific activities, operations and processes that may be contributing to the bacterial indicator. The IC/ID work is ongoing and no conclusions have been made. David described pictures of several sites they have looked at both during and after rain events. He pointed out several tributary areas with different flows, possible homeless activities or possible sewer/septic leaks. Additional samples have been taken upstream of the original sample site to try and pinpoint possible sources. We are waiting for results, which will dictate additional actions.

Jason Uhley apologized for arriving late. He closed by stating that the presentation David gave was an example of the new obligations that will fall on the Permittees as part of the TMDLs that have been adopted. The Permittee staff are in the process of finalizing the USEP to identify storm drains contributing human pathogens to the Santa Ana River. The USEP also must identify mitigation strategies for identified sources. Phase One of the USEP was paid for with grants obtained from SAWPA on behalf of the Co-Permittees and by a match from the District. Due to the Middle Santa Ana River Bacteria TMDL USEP requirements, Regional Board staff will expect additional monitoring, follow up action and BMPs employed. These significant additional obligations will fall to individual Permittees to implement.

- **Permit Renewal Update** – Jason noted that the draft Orange County NPDES MS4 Permit issued by the San Diego RWQCB for the southern portion of their County was recently opposed by USEPA. The USEPA asked that the proposed permit be more consistent with another draft NPDES MS4 Permit issued by the Los Angeles RWQCB for Ventura County. The draft Ventura County Permit is highly controversial. This situation may put pressure on Santa Ana Regional Water Board to come up with a permit similar to Ventura County. The draft Santa Ana MS4 Permit for Riverside County is expected sometime this summer.

  Jason noted that the draft Permit will probably contain new requirements for the regulation of new developments, construction and business inspections, public education, monitoring and reporting.

  The Santa Ana permit expired October 2007 but stays in effect until the new permit is adopted.

  Jason noted that the Santa Margarita NPDES MS4 Permit expires next July and the Permittees must submit a permit application, known as a Report of Waste Discharge (ROWD) in December.

- **MSC Presentation** - Jason gave the MSC a presentation on the requirements of the MS4 Permits and issues of concern for the City Managers. The first part of the presentation summarized the history of the MS4 Permits and the typical program elements. Jason identified the following specific items as areas for the City Managers to focus on with their staff:

  1. *Abandoned Construction Sites* - With the development downturn, construction sites may be abandoned by developers. If these sites are not properly stabilized, the Regional Boards may come after the Permittees for potential violations of the MS4 Permit. Jason noted, however, that Permittees have limited enforcement powers ($500/violation) and that calling bonds can be a long and tedious process that leaves sites exposed. Jason recommended that the Permittees make reasonable efforts to work with developers and bank-owners. If a particular developer/bank is not cooperating, Jason recommended that the Permittee staff contact the Regional Board. The Regional Board can enforce at $15,000/day per violation. Jason also recommended that the Permittees be able to adequately document their efforts before contacting the Regional Boards.
  2. *Program Documentation* - The Regional Board grades your annual reports. That is typically their only interaction with your programs. If you don't report something, it didn't happen. It is important that the City Managers make sure that appropriate records of Permit compliance programs are kept. In addition, the Permittee City Managers should review their annual reports to make sure that all efforts to improve water quality are properly documented. Programs related to MSHCP implementation, community events, landscaping ordinances and outreach, and other ancillary programs should be documented in the cover letters transmitting the report, or as part of the appropriate reporting section. With the Permit renewal pending, it's important that we be able to document and demonstrate the full extent of our clean water programs.
  3. *Municipal Facilities and Public Works Projects* - The Achilles heel of most MS4 Programs are Permittees Public Works projects and existing municipal facilities. It is imperative that you direct staff to comply with new development WQMP requirements for Public Works projects and ensure that each municipal facility has, implements, and updates Facility Pollution Prevention Plans. Your NPDES staff should be aware of these obligations, but they may need your assistance in implementing the requirements.
  4. *Funding TMDL Obligations.* The TMDLs issued by the RWQCB will place additional obligations on individual Permittees. These obligations may include additional BMPs such as modifications to ordinances to address sources of bacteria or nutrients, requirements to participate in regional task forces, or requirements to fund regional

BMPs. Failure to comply with these obligations will lead to immediate enforcement by the Regional Board as the TMDLs are high priority issues to them. Individual TMDL obligations will not be addressed by the District on behalf of the Permittees.

5. *Regional Board Appointments* - Jason noted that Riverside County has very poor representation in the Regional Board makeup. Most of the Governor's appointees to the Boards have been from adjacent counties. Jason recommended that City Managers work with their elected officials to identify candidates who may be appropriate for the Board positions. Jason noted that there were 2 positions for members of the public, one for City Council members and one for a County Supervisor. The positions intended for elected officials can be filled by anyone if no appropriate candidates are available.

Discussion ensued, including discussion of possible requirements under future NPDES MS4 Permits. There were also questions regarding the frequency and purpose of the meetings. There was a recommendation that the next permit allow for a reduced meeting frequency when appropriate.

Dusty closed the meeting

V. Schedule Next Meeting

NEXT MEETING IS SET FOR
THURSDAY, April 17, 2008 – 11:30 A.M.
AT
RIVERSIDE COUNTY EXECUTIVE OFFICE, FOURTH FLOOR
4080 Lemon Street, Riverside, CA 92501

RIVERSIDE COUNTY STORMWATER MANAGEMENT PROGRAM
MANAGEMENT STEERING COMMITTEE
SANTA ANA/SANTA MARGARITA REGIONS

MEETING MINUTES
for
April 17, 2008

I. ***Attendees:***

Jason Uhley	RCFC&WCD
Albert Martinez	RCFC&WCD
Joe Aklufi	City of Beaumont
Dave Lane	City of Calimesa
Lori Moss	City of Canyon Lake
Cordell Chavez	City of Corona
Duane Baker	City of Hemet
Kent Wegelin	City of Moreno Valley
Bill Thompson	City of Norco
Tom Boyd	City of Riverside
Barry McClellan	City of San Jacinto
Mike Shetler	County of Riverside

I. ***Welcome and Self Introductions – Jason Uhley***

Jason introduced Albert Martinez as the new contact taking David Garcia's position as the Santa Ana NPDES MS4 Permit Coordinator. David was promoted and now oversees the District's Floodplain Management Section.

II. ***Review April 17, 2008 Agenda and Approval of February 21, 2008 Meeting Minutes – Jason Uhley***

Review minutes of February 21, 2008. Jason noted that he summarized the five main points of his presentation in the MSC Meeting minutes.

Handouts Provided

- Agenda for April 17, 2008
- Minutes for February 21, 2008
- CRWQCB Member Qualification Requirements
- CASQA Newsflash on New Draft of Construction General Permit

III. ***Santa Ana/Santa Margarita Program Status- Jason Uhley, RCFC&WCD***

Legislative Update – ACA 13, a proposed constitutional amendment that would extend voter approval exemptions currently applicable to water, sewer and trash utilities under Prop 218 to storm water programs has made it through the Senate, but it is doubtful it will find support in the Assembly because of the budget climate.

Permit Renewal Update – Permits are stalled because the USEPA stepped into the San Diego Regional Board's proposed adoption and said there was too much disparity between the various NPDES MS4 permit programs. USEPA wanted to see more standardization. As a result, all NPDES MS4 Permits are stalled awaiting a meeting between USEPA and the RWQCB Executive Officers. It is unlikely that the Santa Ana NPDES MS4 Permit will be renewed this year. Consistency issues are also being raised by various entities as part of hearings by the Little Hoover Commission regarding the effectiveness and efficiency of the Regional Boards and State Board.

Audits/NOVs - The City of Lake Elsinore received a Notice of Violation (NOV) as a result of their audit. They have a month to prepare their response. The City of Beaumont also received an NOV on a public works project due to lack of BMPs and not submitting a Notice of Intent (NOI) to the RWQCB. They have until April 25th to submit a revised storm water pollution prevention plan and NOI. A discussion ensued regarding Regional Board and Permittee inspections of the construction sites and the penalties associated with NOVs. Several cities and the County of Riverside are awaiting reports on the results of their audits.

IV. ***Board Appointments*** - A handout regarding the qualification requirements for Regional Board member appointments was provided. The handout also included background information on current Board members. Jason noted that it is important to identify potential Regional Board candidates who have good understanding of municipal government and water quality issues. The Regional Board positions are tied to specific qualifications such as municipal government, county government, water supply or fish and wildlife. Appointments are typically made to fill these specific seats, but the Governor and Senate aren't strictly held to those requirements. There was a brief discussion on the positions available and opening up in the future and what type of decisions these appointees make.

V. ***TMDL Development – Jason Uhley, RCFC&WCD***

- Lake Elsinore and Canyon Lake TMDL - Jason noted that the final budget for the Lake Elsinore and Canyon Lake TMDL would be proposed at the next Task Force Meeting.
- Middle Santa Ana River TMDL - There is an amendment to the existing Task Force Agreement to add the agricultural stakeholders to the Task Force. This amendment will make sure that they are paying for their portion of the TMDL obligation. There are two stakeholders that need to be added to the Task Force from Los Angeles County, Claremont and Pomona. They have resisted participation because they are not regulated by the Santa Ana RWQCB, however the Santa Ana RWQCB is now coordinating with the Los Angeles RWQCB to address this issue.
- Canyon Lake Bacteria Indicator TMDL - The Regional Board wants to remove this bacteria indicator listing from the 303(d) List based on

preliminary data they have collected in the Lake. However, they believe they need additional data to make sure this is the appropriate action. The Board has asked the Lake Elsinore and Canyon Lake TMDL Task Force to pay for this additional monitoring. Details regarding the monitoring plan still need to be worked out. The request will be reconsidered at the next Lake Elsinore and Canyon Lake TMDL Task Force. There was further discussion regarding the monitoring and additional funds.

Jason closed meeting.

VI. Schedule Next Meeting

NEXT MEETING IS SET FOR
AUGUST 21, 2008
AT
RIVESIDE COUNTY EXECUTIVE OFFICE, FOURTH FLOOR
4080 Lemon Street, Riverside, CA 92501

II. *Introductions*

Jason Uhley welcomed everyone to the April 24, 2008 NPDES Santa Ana/Santa Margarita Technical Advisory Committee Meeting and initiated the self introductions of attendees. James Grimm mentioned he would like to be added to the sign-in sheet and meeting notice list.

III. *Agenda Changes*

Added Agenda Item XI CrystalStream Technologies Presentation.

IV. *Review of Minutes: February 28, 2008*

Jessica Chin asked if meeting minutes could be amended to include proper list of attendees.

Handouts and Materials Provided:

- April 24, 2008 Agenda, February 28, 2008 Minutes, and Roster
- Public Information/Education Report
- CrystalStream Technologies brochures

V. *Announcements*

A. ***MSC Meeting Update*** – This item was not discussed.

B. ***Training Update*** – Training ended on April 22nd. Overall the training went well with good attendance in each training class. The PowerPoint training material is available on-line through the same registration site. The training material will be available for reference. Fall 2008 training should be scheduled around October with training notices sent in September. Sign-in sheets verifying attendance will be e-mailed once they have all been scanned.

C. ***Permit Renewal Update*** – Jason provided an update and gave background information on the efforts of the MS4 Permit Renewal. He then discussed three high priority issues/concerns posed by EPA that include the requirement for incorporation of low impact development criteria into the MS4 Permits, how hydromodication is addressed in the MS4 Permits, and how TMDLs are incorporated into the MS4 Permits. Keith Elliott reported that the Santa Ana Draft Permit is expected to be released by the end of 2008.

D. ***Santa Ana Annual Report*** – The Santa Ana and Santa Margarita Annual Reports will soon be available online. Permittees were sent electronic copies of the compiled reports, asking that they review the report by March 7, 2008 to ensure they are correct before being posted on the District's website.

E. ***LID Seminar*** - In leiu of the March 27, 2008 TAC Meeting, Permittees attended an LID Seminar in Moreno Valley. The seminar was conducted by Larry Coffman of the LID Center in Maryland. Thanks went out to the City of Moreno Valley, ASCE, and Filterra for hosting the seminar.

F. ***Hoover Commission*** – Jason reported that due to all the issues surrounding the State Board, Regional Boards, and Regulatory framework, the Govenor has asked that the Hoover Commission look at the efficiency and effectiveness of the Regional Boards in terms of water quality and water supply. There were 2 workshops scheduled. The 1st workshop focused on comments from State and Federal agencies. The 2nd workshop, being held April 24th, will allow for various stakeholders to speak before the Hoover Commission regarding the State and Regional Boards. A couple of concerns raised before the Commission were funding and the Santa Ana Watershed's task force based regulation development.

Riverside County Flood Control and Water Conservation District
1995 Market Street • Riverside, CA 92501 • (951) 955-1200 • FAX (951) 788-9965

G. ***CASQA Call for Papers – Annual Conference – Deadline May 23, 2008*** – Jason announced that CASQA will be holding a conference in Oakland, CA September 22-24, 2008. He recommended that Permittees consider giving presentations on their NPDES Programs at the conference. The next general CASQA meeting is scheduled for May 9, 2008 in Ontario, CA.

VI. *Public Education Program – Florence Mowrer*

Florence Mowrer provided Permittees a brief update on the efforts of the Public Education Department. The following items were discussed.

- Saftey Kit promotionals
- Air Show being held at the March Air Force Base May 3-4, 2008
- Earth Day flyer (collaboration with Waste Management)
- Pollution Prevention Week flyer to be released in September
- Facility Signs are being offered to Permittees

For more detailed information, please refer to the Public Information Report provided at the meeting.

VII. *TMDL Progress Report – Jason Uhley*

A. Middle Santa Ana River Bacteria Indicator TMDL Update

- Next Meeting - Thursday, April 17, 2008 – 1:30 p.m. to 4:00 p.m.
  Jason reported that there was an attempt to install a bacterial catch basin insert in the City of Canyon Lake. Due to the conditions of the site, the BMP failed. The vendor who supplied the catch basin insert has offered to install at their expense, the same BMP at another location. Permittees interested in having installation done at one of their locations should speak with Jason.

B. Lake Elsinore/Canyon Lake TMDL Update

- Next Meeting – Tuesday, April 29, 2008, 1:00 p.m.
  Jason recommended that Permittees attend this meeting, noting that it is expected that the budget will be finalized at the meeting and there may be some additional discussion regarding the request of the Task Force conducting additional monitoring of Canyon Lake to help support the d-listing process. Keith Elliott inquired as to whether monitoring will be funded in the current budget. Jason informed him that the monitoring phase will be initiated in the 2010-2011 fiscal year.

C. San Diego Lagoons TMDL/Investigation Order Update

- Next meeting – USBR, Wednesday, April 16, 2008 - 1:30 p.m. to 3:30 p.m.
  An automatic field sensor failed during the course of the reporting period. Therefore, the focus of the meeting will be on developing procedures for reporting erroneous data that does not comply with QA/QC procedures.

VIII. *Santa Ana/Santa Margarita Region Programs – Jason Uhley*

A. Stormwater Quality Standards Task Force Update

- Next Meeting: Thursday, June 5, 2008 from 9:30 a.m. to 1:30 p.m.
  Jason informed Permittees that it was important that Task Force members attend this meeting. Comments provided by EPA will be submitted to and reviewed by the Task Force.

Riverside County Flood Control and Water Conservation District
1995 Market Street • Riverside, CA 92501 • (951) 955-1200 • FAX (951) 788-9965

B. **General Construction Permit – June 4, 2008 Hearing** – The Draft Construction Permit has been released for review and is due to be adopted June 4, 2008. Jason asked that Permittees take a close look at the document. There are several issues in the Permit that could affect municipal projects, the requirement to development storm specific storm pollution plans, and monitoring numeric targets. Once the Permit is adopted, training may be necessary to ensure that appropriate City and County staff are trained and aware of the Permit requirements. On behalf of Permittees, Tina will be submitting comments on the Draft Permit to the State Board.

On May 7, 2008 there will be a General Construction Permit Meeting at 10:00 a.m. at the Metropolitan Water District in Los Angeles, CA. Tina is scheduled to attend the meeting.

IX. ***Open Discussion***

A. ***Santa Ana RWQCB – No discussion***

B. ***San Diego RWQCB*** – Ben Neill announced that there will be a Non-Point Source Conference in San Diego May 5-7. Ben then informed attendees that there was a directive from his Board to be more consistent with the other Regional Boards in terms of the Permits. San Diego Regional Board staff, Regions 4 and 8, as well as EPA have been meeting in an effort to reach thier consistency goals. Ben added that he has received calls regarding who is authorized to develop SWPPPs under the requirements of the new Permit. The development of SWPPPs are not limited to registered professional engineers only. There are other licensed professionals who can develop SWPPPs.

C. ***U.S. EPA – Region IX – Not present***

D. ***Round Table*** – Jason announced that David Garcia was promoted and Albert Martinez has replaced him as the Santa Ana Permit Manager.

X. ***CrystalStream Technologies Presentation – Brent Helm***

Brent Helm of CrystalStream Technologies gave a presentation on services offered by his company.

XI. ***New Agenda Items / Schedule Next Meeting***

If there are any questions or items for the next meeting agenda, please contact the Flood Control District's NPDES Section at 951.955.4375. Suggestions are always welcome.

Please visit the "Only Rain Down the Storm Drain" Public Education Program website at: http://www.floodcontrol.co.riverside.ca.us. The site contains a variety of useful stormwater program information including links to other stormwater management programs and related websites.

II. *Introductions*

Benjie Cho welcomed everyone to the August 23, 2007 NPDES Santa Ana/Santa Margarita Technical Committee Meeting and initiated the self introductions of attendees.

III. *Agenda Changes*

Item H (ASCE Dinner Series) was added under agenda item V (Announcements).

IV. *Review of Minutes: May 24, 2007*

There were no changes to meeting minutes. Minutes were approved.

Handouts and Materials Provided:

- August 23, 2007 Agenda, July 26, 2007 Minutes, Roster
- CASQA Fact Sheet – Senate Constitutional Amendment 12 (SCA 12) 2007, Author: Senator Tom Torlakson (D), 7th Senate District

V. *Announcements*

A. ***CASQA Conference*** - Benjie announced that there would be a CASQA conference September 10th-12th in Costa Mesa. Attendees were advised to contact Bill Busath (City of Sacramento) by August 23, 2007 for hotel government rates. Tina Tuason added that CASQA was in need of moderators for the conference and briefly discussed what the duty of a moderator would consist of. Attendees were advised to visit the CASQA website at http://www.casqa.org/ or contact Kevin McGuillicutty at KMc@roscoemoss.com/323.263.4111 for more information.

B. ***Projected Rain Season*** - Tina noted that through a review of the projected rain season, it is expected that the season will be drier than usual.

C. ***Training*** – Benjie announced that the District would be holding its Annual NPDES Training sometime after October. He added that an effort will be made to offer training in the Murrieta and Desert areas. Registration information will be sent to Permittees via email. (Later in the meeting Benjie discussed that the District would either provide Construction training for Santa Ana Permittees prior to the rainy season or ask for a variance from the Regional Board from that permit requirement).

D. ***Hydromodification and LID Update*** – Benjie provided an update on hydromodification and LID, noting that the Stormwater Monitoring Coalition (SMC) obtained grant dollars to develop a LID manual for the Southern California Counties. Matt Yeager of San Bernardino County will be leading this effort. Benjie then added that on August 29th there would be an LID training session at the Inland Empire Utilities Agency.

E. ***Audit Update*** – Keith Elliott and Maria Macario reported that the audits for the cities of Lake Elsinore and Riverside County will be released after a review from management. San Jacinto and Hemet audits will be released a few weeks after Lake Elsinore and the County. The City of Beaumont is also under review.

F. ***Senate Constitutional Amendment 12 (SCA 12)*** – This amendment will provide extra funding for stormwater programs by allowing municipalities to charge a service fee for stormwater much like water, refuse and sewer fees.

Arlene Chun reported that there was a need for 3 republican Senators in which, a sample resolution template was emailed to Permittees several weeks ago in an effort to solicit the need to their city representatives. Arlene added that the legislative schedule is available on line.

G. ***MSC Meeting*** – Benjie informed the group that the August 16, 2007 MSC meeting was cancelled. The next MSC meeting is scheduled for September 20th.

H. ***ASCE*** – Arlene announced that ASCE Stormwater Committee will begin to host dinner sessions at the San Bernardino Hilton at 6:00 p.m. on September 19, 2007 to discuss NPDES stormwater issues. Cathy Jochai with Caltrans is the scheduled speaker for the September 19th session. Flyers about the dinner sessions were emailed to Permittees. Interested persons can register through PayPal. Please contact Arlene for more information.

VI. ***Public Education Program – Florence Mowrer***

Florence Mowrer reported on the efforts of the District's public education department. Items of discussion included:

- 3 advertising billboards posted in the Pedley, Beaumont and Mira Loma areas
- Ordering of additional Child I.D. Kits
- New and improved plastic distibution bags
- Mood pencils (available at meeting for Permittee taking)
- 2008 Calendar
- Santa Ana Cleanup – October 29th
- Public Ed's new trailer that will aid in the transporting of public education promotionals/materials. The trailer also displays the District's public ed logo and 800 number and will be used as an exhibit to promote public education awareness.

VII. ***TMDL Progress Report – Benjie Cho***

A. **Middle Santa Ana River Bacteria Indicator TMDL Update**

- **Next Meeting: Thursday, September 6, 2007 – 1:30 p.m. to 4:00 p.m.**
  Benjie confirmed the next Middle Santa Ana River Bacteria Indicator TMDL meeting date, adding that would be in attendance.

B. **Lake Elsinore/Canyon Lake TMDL**

- **Next Meeting: TBA at August 21, 2007 – 1:30 p.m. meeting**
  The Lake Elsinore In-Lake Nutrient Reduction Plan and Monitoring Reports were submitted to the Regional Board in draft form. Comments on the reports are due to the Regional Board August by 24th. TMDL issues were briefly discussed.
- **San Jacinto Septic System Management Plan** – This item was not discussed.

C. **San Diego Lagoons TMDL/Investigation Order** – Arlene informed the group that there was a draft released of the Quality Assurance Project Plan and comments are due to Matt Brookshire by August 24th. She added that there is also a final draft of

the Memoranda of Agreement circulating and the Investigative Order kicks off with Monitoring October 1st.

Tina informed attendees that Arlene is now the District's NPDES contact person regarding monitoring.

D. **TMDL NNE Study Bureau Workgroup** – Tina explained what the TMDL NNE Study was. She added that the Bureau of Reclamation is working with the San Diego Region on a third-party TMDL in the Santa Margarita Region. Traditionally, orders are written by the RWQCB. In a third-party order, the Permittees propose the order and the RWQCB comments on that order. Compliance of the order is carried out as normal.

Dell Ross provided an update on the actions of the August 21st NNE meeting with the Santa Margarita Regional Board.

VIII. ***Santa Ana/Santa Margarita Region Programs – Benjie Cho***

A. **Stormwater Quality Standards Task Force Update**

- **Next Meeting: Thursday September 6, 2007 from 9:30 a.m. to 1:30 p.m.** – Benjie informed the group that the next SWQTF meeting was scheduled for September 6th.

B. **Annual Reports ~ Santa Margarita** – Tina reported that a meeting was held prior to the August 23rd TAC meeting to discuss the 2006-2007 Santa Margarita Annual Report. Annual Reporting Forms are due to Tina by September 14th.

Brandi Outwin informed the cities of Murrieta and Temecula that she was in need of the latest version of Individual SWMPs to ensure that she is reviewing the most updated document. She asked that they submitt the documents via CD.

Benjie added that he will be sending out the Annual Reporting Forms for the Santa Ana Region the week of August 27th.

IX. ***Report of Waste Discharge/Permit Renewal – Benjie Cho***

Benjie inquired as to the status of the Permit. Keith informed him that the Permit was still being worked on to fit into a constantly changing state template and incorporating the TMDL language into the Permit. In addition, the Regional Board's SWAMP group is looking at the monitoring portions of the permit.

X. ***Open Discussion***

A. ***Santa Ana RWQCB*** – Keith asked that the District forward the Regional Board a letter requesting a variance from the Permit requirements since training is scheduled after October 1st. Michael Roth discussed with the group his public education concerns with the City of Riverside.

B. ***San Diego RWQCB*** – There were no comments from the San Diego Regional Board.

C. ***U.S. EPA – Region IX*** – There was no U.S. EPA representative present.

D. ***Round Table*** –There were no further comments from attendees.

XI. *New Agenda Items / Schedule Next Meeting*

The next NPDES TAC meeting is scheduled for September 27, 2007. If there are any questions or items for the next meeting agenda, please contact the Flood Control District's NPDES Section at 951.955.4375. Suggestions are always welcome.

Please visit the StormWater/CleanWater Protection Program website at: http://www.floodcontrol.co.riverside.ca.us. The site contains a variety of useful stormwater program information including links to other stormwater management programs and related websites.

II. *Introductions*

Arlene Chun welcomed everyone to the December 20, 2007 NPDES Santa Ana/Santa Margarita Technical Advisory Committee Meeting and initiated the self introductions of attendees. Tina Tuason introduced David Garcia as the new Permit Manager for the Santa Ana Region.

III. *Agenda Changes*

Arlene added items ***D*** and ***E*** to agenda item ***V - Announcements***.

IV. *Review of Minutes: November 15 , 2007*

There were no changes to meeting minutes. Minutes were approved.

Handouts and Materials Provided:

- December 20, 2007 Agenda, November 15, 2007 Minutes, and Roster
- CASQA News Flash 2007-07
- Fall 2007 Appointments to the Regional Water Quality Control Boards

V. *Announcements*

A. ***Annual Reports*** – Arlene announced that the Santa Ana Annual Report was submitted on November 30, 2007. Digital copies of the report were made available to Permittees during the meeting.

B. ***Training Update*** – Arlene announced that the Construction training was held in September and November at the District. Farida Naceem informed attendees that there would be Construction training from 9:00 a.m.-12:00 p.m. and Municipal training 1:00 p.m.-4:00 p.m. in the Council Chambers of Murrieta City Hall on January 17th. Tina advised attendees that the training classes were full and would work to accommodate those needing training.

C. ***Permit Renewal Update*** – Keith Elliott reported that the Permit is still being reviewed and hopes that it will be availabe to Permittees late January/early February.

D. ***Regional Board Assignments*** – Arlene provided attendees a brief update on Fall 2007 appointments to the Regional Water Quality Control Boards. There were 2 new appointments to Regions 8 and 9 and 3 new appointments to Region 7.

E. ***CASQA*** - Arlene announced that CASQA will be holding their Annual State Conference, January 11, 2008 in San Diego.

VI. *Public Education Program – Arlene Chun*

Arlene reported that the 2008 calendars had arrived as well as the Public Education Department's new trailer. Calendars were made available during the meeting. For public education materials please contact Florence Mowrer or Penny Skog.

Riverside County Flood Control and Water Conservation District
1995 Market Street • Riverside, CA 92501 • (951) 955-1200 • FAX (951) 788-9965

VII. *TMDL Progress Report – Arlene Chun*

A. Middle Santa Ana River Bacteria Indicator TMDL Update

- **Next Meeting - Thursday, January 24, 2008 – 1:30 p.m. to 4:00 p.m.**
  Arlene reported on the following items related to the Middle Santa Ana River Bacteria Indicator TMDL:
  - Urban Source Evaluatio Plan available
  - Plan due to be implemented in 2009
  - Plan needs to be reviewed by Permittees
  - Task Force Agreement signed by Regional Board on November 30th

B. Lake Elsinore/Canyon Lake TMDL

- **Next Meeting – Tuesday, January 29, 2008 from 1:30 p.m. to 4:00 p.m.**
  Arlene announced that the next Lake Elsinore/Canyon Lake TMDL meeting was scheduled for January 29th.

C. San Diego Lagoons TMDL/Investigation Order

- **Lagoons TMDL NNE Study Bureau Workgroup**
  Tina Tuason noted that there was a short conference call among the Bureau of Reclamation, Camp Pendleton, Riverside County, CDM and the cities of Murrieta and Temecula. Tina noted that the third 13267 Order addendum from the Regional Board was issued. Revised estimates for sampling and inlet surveys are estimated to cost $10,500. Funds must be received prior to the purchase request being made and funding must be received by January 21st. The MOA will be signed by the participating agencies around January 15, 2008. The monitoring teams are waiting to mobilize during the on-set of at least 1/2" of rain. The inlet sampling locations have been identified in compliance with the order. The ocean inlet sampling point will be as close as safely possible to where the lagoon dumps into the ocean. Based on a conversation with the RWQCB, data is not required in January and will be submitted to the Regional Board on April 1, 2008. A conference call is scheduled for February 19th.

VIII. *Santa Ana/Santa Margarita Region Programs – Arlene Chun*

A. Stormwater Quality Standards Task Force Update

Next Meeting: Thursday January 24, 2008 from 9:30 a.m. to 1:30 p.m.

Arlene reported that the topic of the November 15, 2007 Stormwater Quality Standards Task Force meeting was the Basin Plan Amendment. The Plan is tentatively scheduled to go before the Board November 2008.

IX. *Open Discussion*

A. ***Santa Ana RWQCB*** – Mike Roth noted that the Regional Board is looking to conduct a presentation during a future TAC meeting regarding post construction BMPs.

B. ***San Diego RWQCB – Not present.***

C. ***U.S. EPA – Region IX – Not present.***

D. ***Round Table – No discussion.***

II. Introductions
Mark Wills is the new Chief of Regulatory Division and can be reached at 951.955.8411.

III. Agenda Changes
No changes

IV. Review of Minutes: January 31, 2008

V. Announcements
- The cities need to work with the regional boards to address abandoned construction sites.
- If the cities are implementing programs for water quality that exceed permit requirements, make sure to document that in your annual report.

A. Training update
MS4 training will be April 15th thru April 17th in Riverside. There will be two training seminars here at Flood both on WQMP. Additional training sessions in Coachella Valley will be held April 22nd and will consist of one construction and one WQMP seminar, the WQMP will be more of an introduction and managers will be invited. Tina will add NPDES training information to our web page and registration will be available online. Further, the next TAC meeting will be held at the LID conference in Moreno Valley containing the training packet.

B. Permit Renewal Update
The draft Orange County permit issued by the San Diego RWQCB was considered in February. Revisions to their tentative order included requirements for FETD (Facilities that Extract, Treat and Discharge). They also talked about hydro modification, spill response, watershed, management facility, runoff, fiscal analysis and reporting modifications. The overall concern for the permittees was with FETD's. There were also concerns with unfunded mandates, LID, business plan and Hydro modification. Orange County wanted to simplify reporting and extend program development timeframes. Staff recommended the Board accept and adopt the permit as it stood. The Board did not adopt the tentative order. EPA opposed the Permit as too different from the draft Los Angeles County Permit. The board did not adopt the Permit and directed staff to address outstanding EPA issues. The permit can be brought back anywhere from summer to early fall.
Keith questioned USEPA's concern? Tina noted that they said the permit was not stringent enough and wasn't as prescriptive as the San Diego County permit. USEPA was concerned with the measurable goals, specific requirements for LID and new development with greater than 5% effective impermeable surfaces which must include consideration of hydrologic conditions of concern. There wasn't a means to track the WQMP BMP's to assure they are maintained post to construction. A meeting with the Southern California Regional Board executive officers is tentatively scheduled for mid April to discuss issues that EPA had and to develop a consistent approach within all the regional boards.

C. Santa Ana Annual Reports/Santa Margarita
CD's containing the Cities' annual reports are in electronic form. The electronic versions will be posted on the web. If there is more information that needs to be placed in the electronic reports to be posted on our website please respond to us with changes by Friday, March 7 and that information will be updated in our system. The information you provide will help make our annual report consistent and complete.

D. LID Seminar
Filterra, the City of Moreno Valley and individuals with the ASCE storm water committee are putting together an LID Seminar on March 27 from 10:00 to 2:00, lunch is provided. Arlene has asked that they allow government employees to attend for free and they have agreed. Jason Uhley has sent the okay to hold this meeting in lieu of next month's TAC

Meeting. Larry Coffman is considered the father of LID and works with Neil Weinstein and the LID center in Maryland. He will be the dynamic speaker for this event.

E. ASCE Stormwater Committee
ASCE San Bernardino/Riverside County section has set up a stormwater committee and Arlene has e-mailed the Santa Ana committee to see if you wish to be on a contact list for future dinner meetings, seminar, tours or workshops that are in the works. Please release your contact information to them and you will be added to the list. A handout was passed around regarding Flood Control's next dinner presentation that will be celebrating 70 years of service and be held in Ontario. The deadline is March 5 to sign up. All future presentations are set permanently up until the month of June.

F. CASQA
The CASQA general meeting on March 14 will be in San Francisco. Flood Control will have a video conferencing hosted here in Room 1 for those who will not attend the meeting in San Francisco.

V. Public Education Program

A. There will be a Riverside flower show April 19th and 20th where, in addition to our standard table, we will be posting an article in their flyer. Our outdoor, pets and pool Brochures are being updating. There are more calendars available. There will be a lighted billboard on Warwick Road in Corona that will be coming out. Flood Control has received a new trailer that is wrapped with our very own billboard "Only Rain Down the Storm Drain" and our 1.800 number on all four sides.

VI. TMDL Progress Reports

A. Middle Santa Ana River Bacteria Indicator TMDL Update
There hasn't been a meeting since the last TAC meeting. USAP is currently being reviewed. The Box Springs Channel is one of our sample sites that Flood Control has been looking at. Flood Control went out and took extra samples along with the City of Riverside to see if nutrients, detergents or bacteria have come out of the channel. The results have arrived but Jason has them and is attending another meeting.

B. Lake Elsinore/Canyon Lake TMDL Update
The next meeting is to be determined. The update is to the meeting notes which are on the meeting minutes of the last TAC meeting.

C. San Diego Lagoons TMDL/Investigation Order Update
There is a conference call scheduled for March 25 at 3:00 on water reuse. One of the topics will include discussion of the application of numeric nutrient endpoints to the Santa Margarita Watershed.

VII. Santa Ana/Santa Margarita Region Programs

A Stormwater Quality Standards Task Force Update

The meeting is going on February 28 at SAWPA. The next meeting will address the EPA comments on the draft basin plan amendment.

VIII. Open Discussion

A. Santa Ana RWQCB says the draft permits will be coming out late summer or early fall. The Construction permits should be out as a draft for public review any day now. No word on the industrial permit as of yet.

B. U.S. EPA has no representation

C. Round table has no further discussions

IX. New Agenda Items

No new items.

II. *Introductions*

Jason Uhley welcomed everyone to the January 31, 2008 NPDES Santa Ana/Santa Margarita Technical Advisory Committee Meeting and initiated the self introductions of attendees.

III. *Agenda Changes*

A Regional Board Presentation was added as agenda item VIII. Items D (Audits) and E (District Staff Changes) were added under agenda item IV (Announcements).

IV. *Review of Minutes: December 20 , 2007*

There were no changes to meeting minutes. Minutes were approved.

Handouts and Materials Provided:

- January 31, 2008 Agenda, December 20, 2007 Minutes, and Roster
- Public Information/Education Report
- HHW Schedule January thru June 2008
- What to do with Household Hazardous Waste in Riverside County Brochure

V. *Announcements*

A. ***Annual Reports*** – Jason announced that though the Santa Ana Annual Report was submitted to the Regional Board on time, there were some files that did not make it into the hard copy of the report. An electronic copy, including all files of the Annual Report will be sent to the Regional Board, as well as a letter informing them of the issue. Tina Tuason announced that the Santa Ana and Santa Margarita Annual Reports are in the process of being made available on the District's website. Keith Elliott asked that Tina be sure that the documents posted to the internet are searchable (Optical Character Recognition). Jason noted that District staff would make sure that the main bodies of the reports were searchable, but that there were many attachments and tables that were provided in hard copy. Those attachments and tables would likely not be searchable, but they would at least be easily located in the electronic copies.

B. ***Training Update*** – Tina reported that notice will go out March 2008 for the April 2008 training classes. Classes will be in the Coachella, Murrieta, and Riverside areas. Jason added that due to production/cost related issues, training materials will be available on-line, in which training attendees can print their copies from there. Jason asked Permittees their thoughts regarding this recommended change. Permittees in attendance had no objection.

C. ***Permit Renewal Update*** – Jason addressed Regional Board staff in attendance as to the status of the Permit adoption date. Mike Roth reported that Regional Board staff is working to incorporate the TMDLs into the Permit requirements and there was no set date as to when the Permit will be adopted.

D. ***Audits*** – Jason reported that Tetra Tech conducted an audit on the District, Riverside County, and the cities of Murrieta and Temecula on behalf of the San Diego Regional Board. Jason added that the Board primarily reviewed the New Development, Monitoring, and IC/ID programs.

E. ***District Staff Changes*** – Jason announced that Steve Stump will no longer be Chief of Regulatory and has been assigned as Chief of Operation's and Maintenance. Mark Wills, a prior District NPDES Senior Engineer has been named the new Chief of Regulatory.

Riverside County Flood Control and Water Conservation District
1995 Market Street • Riverside, CA 92501 • (951) 955-1200 • FAX (951) 788-9965

VI. *Public Education Program – Florence Mowrer*

Florence Mowrer provided Permittees an update on the efforts of the Public Education Department. The following items were addressed:

- District's IT Department working to make public education information more readily available on the web
- Public Education Department trailer in process of being wrapped with "Only Rain Down the Storm Drain " graphics
- HHW Schedule available (schedules provided at meeting)
- 2008 calendar inventory is low
- For the 2009 calendar production, Flo is soliciting photos of different areas in the cities from Permittees
- Water Education Center has become a partner of the Public Education Department
- Development of the construction brochure has been placed on hold
- Brochures addressing swimming pool issues are available

VII. *TMDL Progress Report – Jason Uhley*

A. Middle Santa Ana River Bacteria Indicator TMDL Update

- **Next Meeting - Thursday, February 28, 2008 – 1:30 p.m. to 4:00 p.m.**

  Jason gave an update on the following items relating to the Middle Santa Ana River Bacteria Indicator TMDL:

  - District staff in middle of implementing compliance monitoring and Urban Source Evaluation Plan, which Jason explained to Permittees
  - Results showing only 1 site (Box Springs channel) of testing positive for human contamination

  David Garcia gave a brief presentation regarding an IC/ID investigation of the Box Springs Channel Watershed. David noted that although the investigation was ongoing, no obvious human sources of fecal contamination were discovered.

B. Lake Elsinore/Canyon Lake TMDL

- **January 29, 2008 LE/CL TMDL Meeting**
- **Next Meeting – To Be Determined**
  - Next meeting in April 2008
  - 20 Stakeholders identified and entered into an Implementation Agreement to share costs of TMDL development
  - AG and Dairy Farmers share approximately 40% of costs but have not been identified, therefore monies from these stakeholders have not been received
  - Regional Board to be notified of cost issues in an effort to modify Implementation Agreement schedule
  - Study to be conducted to determine delisting of Canyon Lake TMDL for pathogens
  - Pros and cons of mobilizing for storms

Riverside County Flood Control and Water Conservation District
1995 Market Street • Riverside, CA 92501 • (951) 955-1200 • FAX (951) 788-9965

C. **San Diego Lagoons TMDL/Investigation Order**

- **January 29, 2008 Monitoring Group Meeting**
  The San Diego Regional Board presented the model that will be used to develop the Lagoon TMDLs. The Stakeholders' Advisory Group (SAG) representatives were confirmed and will convene at future dates to coordinate with the Regional Board in development of the TMDLs. Riverside County will be represented by Arlene Chun.
- **Next meeting – To Be Determined**
  Though the meeting date was not announced during the meeting, subsequently Arlene reported that the next meeting is scheduled for Tuesday, March 18, 2008 at 10 a.m. - 12:00 p.m. at the Bureau of Reclamation, Temecula.

D. ***Lagoons TMDL NNE Study Bureau Workgroup*** - MOA is in the process of being approved by respective Councils/Boards. Next meeting is February 19, 2008, 10 a.m. - 12:00 p.m. at the Bureau of Reclamation, Temecula.

VIII. ***Santa Ana/Santa Margarita Region Programs – Jason Uhley***

A. **Stormwater Quality Standards Task Force Update**

- **Next Meeting: Thursday February 28, 2008 from 9:30 a.m. to 1:30 p.m.**
  - Basin Plan Amendment being compiled
  - Water Quality standards being changed on Temescal Canyon Wash

IX. ***Open Discussion***

A. ***Santa Ana RWQCB – No discussion***
B. ***San Diego RWQCB – Not present***
C. ***U.S. EPA – Region IX – Not present***
D. ***Round Table – No discussion***

X. ***Regional Board Presentation – Chuck Griffin***

Chuck Griffin conducted a presentation on the continuing dumping of landowners of waste materials, such as concrete, into creeks of both San Bernardino County and Riverside County (Lytle Creek, San Timoteo Creek, Temescal Canyon).

XI. ***New Agenda Items / Schedule Next Meeting***

If there are any questions or items for the next meeting agenda, please contact the Flood Control District's NPDES Section at 951.955.4375. Suggestions are always welcome.

Please visit the "Only Rain Down the Storm Drain" Public Education Program website at: http://www.floodcontrol.co.riverside.ca.us. The site contains a variety of useful stormwater program information including links to other stormwater management programs and related websites.

II. *Introductions*

Jason Uhley welcomed everyone to the July 26, 2007 NPDES Santa Ana/Santa Margarita Techincal Committee Meeting and initiated the self introductions of attendees.

III. *Agenda Changes*

Item E (Conferences) was added under agenda item V (Announcements).

IV. *Review of Minutes: May 24, 2007*

There were no changes to meeting minutes. Minutes were approved.

Handouts and Materials Provided:

- July 26, 2007 Agenda, May 24, 2007 Minutes, Roster

V. *Announcements*

A. ***May 17th MSC Meeting Update*** - Benjie informed the group that during the May 17th MSC Meeting City Managers were updated on the status of the TMDLs.

B. ***IRWM Update*** - Jason provided an update on the efforts of the 4 IRWM plans that the Department of Water Resources has been working to award grant proposals.

1. San Jacinto IRWM – This IRWM has been in progress for sometime. Work will soon begin to build the outline and text of the document.
2. Santa Margarita IRWM – Over the course of the past 4 months Stakeholders led by Rancho California Water District have been working on the Upper Santa Margarita Watershed IRWM. Several projects in the IRWM will be available for Prop 50 funds and the remainder will be eligible for future Prop 84 planning and implementation dollars in the near future. Brandi Outwin inquired about whether or not the Lower Santa Margarita River Watershed will be included in the Upper Santa Margarita IRWM. Jason responded that several attempts have been made, however at this time the 2 indivdual plans (the Upper and Lower Santa Margarita River) will remain seperate.
3. Coachella Valley IRWM – Development of an IRWM for the Whitewater Watershed is currently being discussed among interested parties.
4. SAWPA Santa Ana IRWM – District staff and the cities of Riverside and Corona have been attending Watershed Pillar meetings to help define strategies, goals and objectives for the watershed.

C. ***Hydromodification and LID Update*** – Jason reported that San Diego County is working on their Hydromodification and LID Plan (a meeting is scheduled for July 26th). District staff has been coordinating with San Diego County on these efforts. Jason added that Dan Cloak who wrote the Contra Costa Low Impact Design manual is scheduled to conduct a presentation August 2nd at 11:00 a.m. at the District on the Contra Costa experiences with developing a LID and hydromodification plan. Jason added the District is working to install various types of Low Impact Development BMPs through out the District compound. Funding details still need to be worked out. The purpose would be to develop BMP monitoring and testing data. Brandi offered San Diego Regional Board's assistance with these efforts.

D. ***Audit Update*** – Mike Roth reported that the Regional Board is working to have the audit reports complete by September 7th.

E. ***Conferences*** – Jason provided Permittees a summary of his attendance at the monitoring conference in San Diego and the TMDL conference in Washington he attended. Jason noted that the monitoring conference in Sacramento covered the use of various hydrologic models to address TMDL modeling. One of the key points of the conference was appropriate use of the models. It was noted that there is significant error associated with many of the models due to lack of data, erroneous data, modeling assumptions, user error and many other factors. Many presenters recommended that the models may be more appropriately used to evaluate relative change caused by implementation of management measures.

Jason also noted that he attended a TMDL conference in Seattle, Washington. The conference focused on implementation of Use Attainability Analysis and Adaptive Implementation in the TMDL process. Jason noted that US EPA strongly supported the use of both in the development of TMDLs and said EPA recommended that state regulators take a common sense approach for implementation. In addition, Jason noted that the other focus of the conference seemed to be efforts to implement nutrient and pathogen TMDLs. The Santa Ana RWQCB MSAR TMDL and SWQTF efforts appear to be on the cutting edge of efforts nationwide based on the presentations. Jason also noted that there were at least two other lakes, including Clear Lake and another lake in Oregon that appeared to have similar issues to Lake Elsinore.

Discussion ensued among the group regarding issues surrounding TMDLs.

VI. ***Public Education Program – Tina Tuason***

There was no public education report for the month of July. Tina Tuason announced that the public education backpacks used by the District's Public Education department has had a positive impact on the counties of Orange and Los Angeles, who too have begun to use the backpacks as public education awareness promotionals.

VII. ***TMDL Progress Report – Jason Uhley***

A. **Middle Santa Ana River Bacteria Indicator TMDL April 19th Update**

Future Meetings ~ August 23, 2007, 1:30 p.m. to 4:00 p.m. - Jason announced that the next TMDL meeting for the Middle Santa Ana River Bacteria Indicator TMDL is scheduled for August 23rd. He added that the monitoring plan is near completion.

- **Tour of Santa Ana Monitoring Stations April 11th Update** – There was no discussion on this item.

B. **Lake Elsinore/Canyon Lake TMDL**

- **Future Meetings ~ August 8, 2007, 1:30 p.m. - 4:00 p.m. -** Jason announced that the next TMDL meeting for the Lake Elsinore/Canyon Lake TMDL is scheduled for August 8th. He then discussed the two plans that Permittees are to develop for the TMDL, the Lake Elsinore Nutrient Management Plan and the Canyon Lake In Lake Monitoring Program.

*****Please note that the August 8rd meeting has been rescheduled from August 8th to August 21st. Meeting time remains set as 1:30 p.m. to 4:30 p.m. at EVMWD.*

- **San Jacinto Septic System Management Plan** – There was no discussion on this item.

C. **San Diego Lagoons TMDL/Investigation Order**

- **Lagoons TMDL NNE Study Bureau Workgroup** – Linda Garcia updated attendees on the San Diego Lagoon TMDL noting that the draft agreement had been released for review and the next step is to get the agreement signed. Further discussion ensued on the following items:

  - The Numeric Nutrient Endpoints (NNE) study prepared by Tetra Tech has been finalized and will be ready in the month of August.
  - A Stakeholder field visit to the Santa Margarita lagoon to evaluate sampling locations which is scheduled for July 30th.
  - San Diego Regional Board is working on a Basin Plan Amendment to address natural background sources of bacteria in an effort to exempt them from being regulated. In turn, a stakeholder committee has been formed by the San Diego Regional Board consisting of representatives from each of the major watersheds. Jason has been appointed the representative for the Santa Margarita Watershed.
  - Regional Board has asked for technical comments on the Basin Plan Amendment by August 9th, which Jason will be evaluating and providing those comments.

VIII. ***Santa Ana/Santa Margarita Region Programs – Benjie Cho***

A. **Stormwater Quality Standards Task Force Update**

- **Future Meetings – August 23, 2007 from 9:30 a.m. to 1:30 p.m.** – Draft of Basin Plan Amendment language to be sent to EPA for approval sent to stakeholders.

*******Please note that the August 23rd meeting has been rescheduled from August 23rd to September 6th. Meeting time remains set as 9:30 a.m. to 1:30 p.m. at SAWPA.***

B. **Orange County Stormwater Permit Update** – A revised copy of the Permit was released in early July. Brandi stated that the Permit is scheduled to go before the Board for approval in September and there had been no comments on the Permit from Permittees to date.

Keith Elliott added that it is anticipated that the the Santa Ana Regional Board's Orange County MS4 Permit will be released in 2007 and adopted in 2008. A draft of the Permit should be available by early October 2007.

IX. ***Report of Waste Discharge/Permit Renewal Workgroup – Benjie Cho***

This item was discussed as part of the Orange County Stormwater Permit Update.

X. ***Open Discussion***

A. ***Santa Ana RWQCB*** – There were no comments from the Santa Ana Regional Board.

B. ***San Diego RWQCB*** – There were no comments from the San Diego Regional Board.

C. ***U.S. EPA – Region IX*** – There was no U.S. EPA representative present.

D. ***Round Table*** – Aldo Licitra announced that there would be a CASQA conference September 10th - 12th in Costa Mesa. Jason recommended that Permittees try attending the conference in efforts to stay up to speed on regulatory programs.

XI. ***New Agenda Items / Schedule Next Meeting***

The next NPDES TAC meeting is scheduled for August 23, 2007. If there are any questions or items for the next meeting agenda, please contact the Flood Control District's NPDES Section at 951.955.4375. Suggestions are always welcome.

Please visit the StormWater/CleanWater Protection Program website at: http://www.floodcontrol.co.riverside.ca.us. The site contains a variety of useful stormwater program information including links to other stormwater management programs and related websites.

Meeting Minutes
for
May 22, 2008

I. ***Attendees:***

Albert Martinez	Riverside County Flood Control District
Tina Tuason	Riverside County Flood Control District
Jason Uhley	Riverside County Flood Control District
Doug Thompson	Riverside County Flood Control District
Charlene Warren	Riverside County Flood Control District
Mike Shetler	Riverside County Executive Office
Steve Horn	Riverside County Facilities Management
Claudia Steiding	Riverside County Facilities Management
Adriana Soares	Riverside County Transportation
Keith Elliott	CRWQCB – Santa Ana Region
Ann Iaali	CRWQCB – Santa Ana Region
Maria Macario	CRWQCB – Santa Ana Region
Mike Roth	CRWQCB – Santa Ana Region
Bob French	City of Calimesa
Mike McCabe	City of Calimesa
James Grimm	City of Canyon Lake
Michele Hindersinn	City of Corona
Jeff Potts	City of Corona
Linda Nixon	City of Hemet
Kent Wegelin	City of Moreno Valley
Jessica Chin	City of Riverside
Tim King	City of Riverside
Al Pielin	City of Riverside
Mark Baker	CONTECH Stormwater
Bob Collacott	URS Corporation

II. *Introductions*

Jason Uhley welcomed everyone to the May 22, 2008 NPDES Santa Ana/Santa Margarita Technical Advisory Committee Meeting and initiated the self introductions of attendees. Tina Tuason asked that Permittees review the roster and sign in sheets to make sure the correct information is listed for their cities. NPDES city/county contact information and updates should be forwarded to Charlene Warren at CharleneWarren@rcflood.org.

III. *Agenda Changes*

Items E and F were added under Agenda Item V - Announcements.

IV. *Review of Minutes: April 24, 2008*

Doug Thompson was listed under Agenda Item I – Attendees as a representative of the District. Correction: He is a representative of County Environmental Health.
Agenda Item VIII B - Notes that the General Construction Permit is due to be adopted June 4, 2008. Correction: June 4th is not the adoption date of the Permit but rather a hearing date.

Handouts and Materials Provided:

- May 22, 2008 Agenda, April 24, 2008 Minutes, and Roster
- CASQA NewsFlash #s 2008-07 ~ 2008-10
- Clean Water Summit Partners – No Drugs Down the Drain! Campaign (May 2008)

V. *Announcements*

A. ***Whitewater Permit*** – The Colorado Region MS4 Permit was adopted May 21, 2008.

B. ***Permit Renewal Update*** – Keith Elliott reported that there was no set date as to when the Permit will be adopted but it will be closer to the end of 2008.

C. ***Notice of Violation*** – The County of Riverside received an NOV from the Santa Ana Regional Board. The District, County and cities of Murrieta and Temecula also received an NOV from the San Diego Regional Board regarding the Monitoring Program. City, County and District staff are working to respond to the NOVs.

D. ***CASQA Call for Papers – Annual Conference – Deadline May 23, 2008*** – Jason announced that the deadline to submit Call for Papers to CASQA for the annual conference is tomorrow (May 23rd). The District will be supporting two presentations at the Conference. The first regards the Middle Santa Ana River Bacteria Monitorning Program and the other regards the Pesticides Monitoring and Toxicity Testing ongoing in the Santa Margarita Watershed. He recommended that Permittees consider giving presentations on their NPDES Programs at the conference.

E. ***District Staffing Issues*** - Tina will be rotating from the NPDES Section to the Development Review Section July 3rd. Claudio Padres will be taking over as the new Santa Margarita Region Permit Manager.

F. ***Rain Predicted this Weekend*** – Jason announced that rain was predicted for the weekend and advised Permittees to talk to their construction inspectors to make sure they are watching any construction sites that may be active at the time.

VI. *Public Education Program – Jason Uhley*

Jason provided a brief update on the efforts of the Public Education Program. Discussion included:

Riverside County Flood Control and Water Conservation District
1995 Market Street • Riverside, CA 92501 • (951) 955-1200 • FAX (951) 788-9965

- Air Show at March Air Force Base – District staff was in attendance distributing public education information and received a substantial number of survey forms from the public.

- Several New Brochures to Focus on Outreach – Horse, garden, pet waste management and outdoor activities brochures to be developed/updated. Brochures are hoped to be available by the end of the fiscal year.

VII. *TMDL Progress Report – Jason Uhley*

A. Middle Santa Ana River Bacteria Indicator TMDL Update

- Next Meeting - Thursday, June 5, 2008 – 1:30 p.m. to 4:00 p.m.
  Jason reported that Stephan Wuertz will be giving a presentation and summary on his analysis of the bacteriodes data that has been collected by the TMDL Task Force for the Middle Santa Ana River TMDL. He will also be providing an analysis of the data. Dr. Stanley Grant will also be giving a presentation on his study of the outfall of the RP1 treatment plant in Riverside.

  Jason also discussed the human bacteriodes that had been detected in the Box Springs Channel. It was determined that a sewer cross connection on Riverside Community College property may be the source of the bacteriodes. The District, Riverside Community College and the City of Riverside are working together to abandon the cross connection and eliminate the contamination in the channel.

B. Lake Elsinore/Canyon Lake TMDL Update

- Next Meeting – Tuesday, June 24, 2008, 1:00 p.m.
  The Request for Qualifications (RFQ) is out for watershed monitoring. The District has received and is evaluating three proposals from interested parties. Keith Elliott stated that he was under the impression that monitoring would begin in 2010, when additional stations would need to be monitored. Jason informed him that Permittees felt that it would be more appropriate to have a consultant begin working on the existing monitoring program in an effort to get them familiar with the monitoring sites and procedures as well as the fact that staffing changes and losses have overwhelmed the District's NPDES Section in their monitoring efforts.

C. San Diego Lagoons TMDL/Investigation Order Update

- Next Meeting – USBR, Wednesday, June 18, 2008 - 1:30 p.m. to 3:30 p.m.
  There was a failure with one of the continuous monitoring sondes used by SDSU, resulting in data that was not able to be used. The Lagoon Task Force is now developing procedures to quality control data to make sure erroneous data is not submitted to the Regional Board.

VIII. *Santa Ana/Santa Margarita Region Programs – Jason Uhley*

A. Stormwater Quality Standards Task Force Update

- Next Meeting: Thursday, June 5, 2008 from 9:30 a.m. to 1:30 p.m.
  Permittees were informed that this will be a important meeting to attend in as the future of the Task Force may be determined. District staff will be in attendance of the meeting.

Riverside County Flood Control and Water Conservation District
1995 Market Street • Riverside, CA 92501 • (951) 955-1200 • FAX (951) 788-9965

B. **General Construction Permit – June 4, 2008 Hearing –** The Draft Construction Permit is out for review and a hearing is scheduled for June 4th. Tina will be working closely with Barbara Klos of URS to submit comments on the Draft Permit to the State Board. There last workshop for the Permit was held May 21st in Sacramento. A draft of the comment letter will be forwarded to Permittiees prior to its submittal. Permittees were asked to provide their thoughts on the comment letter.

IX. ***Open Discussion***

A. ***Santa Ana RWQCB*** – Maria reported that the online copy of the Regional Board Basin Plan had been updated on their website.

B. ***San Diego RWQCB – Not present***

C. ***U.S. EPA – Region IX – Not present***

D. ***Round Table*** – No discussion.

X. ***New Agenda Items / Schedule Next Meeting***

There were no agenda item requests from the group.

If there are any questions or items for the next meeting agenda, please contact the Flood Control District's NPDES Section at 951.955.4375. Suggestions are always welcome.

Please visit the "Only Rain Down the Storm Drain" Public Education Program website at: http://www.floodcontrol.co.riverside.ca.us. The site contains a variety of useful stormwater program information including links to other stormwater management programs and related websites.

II. *Introductions*

Jason Uhley welcomed everyone to the November 15, 2007 NPDES Santa Ana/Santa Margarita Technical Advisory Committee Meeting and initiated the self introductions of attendees.

III. *Agenda Changes*

There were no changes to the agenda.

IV. *Review of Minutes: October 25, 2007*

There were no changes to meeting minutes. Minutes were approved.

Handouts and Materials Provided:

- November 15, 2007 Agenda, October 27, 2007 Minutes, and Roster
- CASQA News Flash 2007-05
- CASQA Update, November 12, 2007
- CASQA Meeting Notice & Agenda, November 16, 2007
- Hydromodification and SUSMP Public Workshop
- RCFC&WCD Associate Engineer Air/Water Quality Control job recruitment flyer

V. *Announcements*

A. ***Annual Reports*** – Jason provided a brief update on the status of the Annual Report, noting that the report was coming along fine. He briefly discussed MS4 mapping and the Annual Report tables. An Annual Report status sheet will be emailed to Permittees.

B. ***Training Update*** – Tina informed attendees that the November 19th Industrial Commercial training class at CVWD had been canceled due to low enrollment and an additional WQMP training class was opened for November 29th at the District. Tina added that classes were filling up quickly and advised Permittees to get their employees signed up as soon as possible. Training attendance rosters will be emailed to Permittees prior to training.

C. ***Permit Renewal Update*** - Maria Macario stated that she was uncertain as to the exact date of when the draft Permit would be released.

VI. *Public Education Program – Florence Mowrer*

Tina reported that the 2008 calendars were expected to arrive any day and can be requested via email. Please contact Florence Mowrer or Penny Skog for public education materials.

VII. *TMDL Progress Report – Benjie Cho*

A. **Middle Santa Ana River Bacteria Indicator TMDL Update**

- **Next Meeting - Thursday, November 29, 2007 – 1:30 p.m. to 4:00 p.m.**
  Jason announced that the next meeting would be held November 29th. He added that SAWPA had released a Urban Source Evaluation Plan for review. Santa Ana Permittees were asked to review the document to assure they are comfortable with specifically, Section 4 of the document.

Riverside County Flood Control and Water Conservation District
1995 Market Street • Riverside, CA 92501 • (951) 955-1200 • FAX (951) 788-9965

B. **Lake Elsinore/Canyon Lake TMDL**

- **Next Meeting – Tuesday, November 27, 2007 from 1:30 p.m. to 4:00 p.m.**
  Jason announced that the next meeting for the Lake Elsinore/Canyon Lake TMDL was scheduled for November 27th. The highest priority item for the Task Force at this time is the Canyon Lake Bacteria TMDL. The Regional Board has asked the Task Force to fund a monitoring program to monitor bacteria concentration in Canyon Lake. A follow up meeting will be scheduled with the Regional Board to discuss what the monitoring program should reflect. Jason also discussed the possibility of delisting Canyon Lake.

C. **San Diego Lagoons TMDL/Investigation Order**

- **Lagoons TMDL NNE Study Bureau Workgroup**
  The County of Riverisde and cities of Temecula and Murrieta has released the final agreement and is awaiting approval of the agreement by your respective governing bodies. Jason added that the Bureau of Reclamation on behalf of the Rancho California Water District and Camp Pendleton is conducting a study of the lower part of the Santa Margarita River.

VIII. ***Santa Ana/Santa Margarita Region Programs – Benjie Cho***

A. **Stormwater Quality Standards Task Force Update**
Next Meeting: Thursday November 29, 2007 from 9:30 a.m. to 1:30 p.m.
Jason announced that the next meeting was scheduled for November 29th. Jason noted that the topic of discussion will be the draft report prepared for EPA identifying the direction the Task Force is headed in terms of the Basin Plan Amendment. Work is still being conducted on the Temescal Creek Use Attainability Analysis.

IX. ***Open Discussion***

A. ***Santa Ana RWQCB –***

B. ***San Diego RWQCB –***

C. ***U.S. EPA – Region IX –***

D. ***Round Table*** – Jason informed attendees that Benjie Cho's last day with the District would be December 5, 2007. Jason also informed attendees that he, himself will be out of the office for approximately 3 weeks on paternity leave.

XI. ***New Agenda Items / Schedule Next Meeting***

If there are any questions or items for the next meeting agenda, please contact the Flood Control District's NPDES Section at 951.955.4375. Suggestions are always welcome.

Please visit the "Only Rain Down the Storm Drain" Public Education Program website at: http://www.floodcontrol.co.riverside.ca.us. The site contains a variety of useful stormwater program information including links to other stormwater management programs and related websites.

II. *Introductions*

Jason Uhley welcomed everyone to the October 25, 2007 NPDES Santa Ana/Santa Margarita Technical Advisory Committee Meeting and initiated the self introductions of attendees.

III. *Agenda Changes*

Item F - Recruitment/Changes was added under agenda item V – Announcements.

IV. *Review of Minutes: September 27, 2007*

There were no changes to meeting minutes. Minutes were approved.

Handouts and Materials Provided:

- October 25, 2007 Agenda, September 27, 2007 Minutes, and Roster
- HHW Schedule and ABOP Centers flyers

V. *Announcements*

A. ***Annual Reports*** –Tina Tuason announced that the Santa Margarita Annual Report is due to the San Diego Regional Board October 31, 2007. She added that she had received the cities submittals and any MS4 mapping information not already submitted should be forwarded to Bill Rhoades of the District ASAP. Also, the District's report was approximately 90%-95% complete. Tina mentioned that the individual annual reports require wet signatures by Friday, October 26, 2007. The Annual Report will be submitted to SDRWQCB and EPA.

Benjie announced that the Santa Ana Annual Report is due to the Santa Ana Regional Board November 30, 2007.

B. ***Training Update*** – Tina announced that Fall training information was sent to Permittees via email October 25, 2007. Training locations are in Coachella, Murrieta, and Riverside. There will be no Construction training held in the Riverside area.

Tina reported that the District had received good comments about AEI-CASCs training classes from participants. AEI-CASC has been retained to conduct all training classes for the District.

Jason added that this would be the first set of training classes for the fiscal year. He then dicussed Permit requirements in regards to training and advised Permittees to get their new employees scheduled for training.

C. ***October 18, 2007 MSC Meeting Update*** - Benjie provided a summary of the following topics discussed at the October 18, 2007 MSC Meeting:

- District's LID Project
- Monitoring results from the Santa Ana TMDL
- Audits/NOVs/ACLs
- The City Managers requested a presentation on the Renewal General Construction Permit and and the Santa Ana Municipal NPDES Permit

D. ***Legislative Update*** – Jason provided an update on the following legislative bills:

- SB1001 – This bill reduces the number of Regional Water Quality Control Board members from nine to seven and eliminates the appointment categories. It also allows the State Board to revoke a Regional Board's authority if the State Board concludes that the Regional Board is deficient and does not take appropriate corrective action.

  AB739 – This bill will provide the framework for assessing the success of municipal stormwater programs. It will also require the State Board and the Department of Water Resources to develop grant criteria for their respective grants, Proposition 84 and 1E, to identify areas to coordinate their grant programs for maximum benefits. For more information please go to http://www.leginfo.ca.gov/bilinfo.html.

E. ***Permit Renewal Update*** - Permittees and Regional Board staff discussed the following regarding the Permit Renewal:

- Orange County audits being reviewed
- NOV issued to the City of Beaumont
- Riverside County, Lake Elsinore, and San Bernardino County audits being focused on the Santa Ana Regional Board
- The release order of the draft Permits will be Orange, then San Bernardino, and finally Riverside County.

F. ***Recruitment/Changes*** – The following announcements were made regarding District recruitments and NPDES representative changes:

- District has advertised to recruit for a chemical/water quality specialist position
- Benjie will be leaving the District to work for the County Transportation Department. His last day will be December 5, 2007.
- Michael Rawson (District's Assistant Chief Engineer) will be retiring on December 5, 2007
- Brandi Outwin will be leaving the San Diego Regional Board and will be working for the Santa Ana Regional Board. Jimmy Smith will be the San Diego Regional Board contact for NPDES related issues. Tina thanked Brandi for her participation in the TAC meetings

VI. ***Public Education Program – Florence Mowrer***

Tina provided the following update on the efforts of the District's Public Education Department.

- Pet IDs similar to the Child IDs promotionals provided by the public education department are available to Permittees.
- "Only Rain Down the Storm Drain" stickers are available.
- Public Education Events – Animal Friends of the Valley Spooktacular Pet Parade October 27th in Temecula and Tire Collection Event October 27th in Mead Valley (public ed. materials were provided to these agencies for distribution).

- The 2008 calendars are in production.

VII. *TMDL Progress Report – Benjie Cho*

A. Middle Santa Ana River Bacteria Indicator TMDL Update

- **Next Meeting - Thursday, November 29, 2007 – 1:30 p.m. to 4:00 p.m.**
  Jason reported that monitoring for the Middle Santa Ana River Bacteria Indicator TMDL has been in place for approximately 3 months and monitoring data is being collected for the TMDL. Jason discussed exceedances in the Box Springs watershed, and the need for a source evaluation. The next meeting is scheduled for November 29th.

B. Lake Elsinore/Canyon Lake TMDL

- **Next Meeting – Tuesday, October 30, 2007 from 1:30 p.m. to 4:00 p.m.**
  Jason announced that the next meeting for the Lake Elsinore/Canyon Lake TMDL was scheduled for October 30th.

Canyon Lake Pathogen TMDL – Jason informed attendees that this TMDL is currently in the implementation mode and briefly discussed the following items:

- CEQA Scoping meeting October 22nd
- Regional Board's decision not to move forward with TMDL
- E. coli data shows the lake is in compliance
- Monitoring data will continue to be collected (to be discussed at next meeting)

C. San Diego Lagoons TMDL/Investigation Order

- **Lagoons TMDL NNE Study Bureau Workgroup**
  Jason updated attendees on the following items relating to the San Diego Lagoons TMDL/Investigation Order:

  - Third Adendum to the TMDL issued by the Regional Board about two weeks ago which added survey work to be done at the mouth of the lagoon
  - Cost estimates/Cost Share Agreement in final draft form
  - Meeting with San Diego Regional Board 2 weeks ago regarding the Santa Margarita River TMDL (to start in about 2 years, not a high priority for Regional Board)
  - Study draft provided by Bureau of Reclamation
  - NNE based on determination

VIII. *Santa Ana/Santa Margarita Region Programs – Benjie Cho*

A. Stormwater Quality Standards Task Force Update

Next Meeting: Thursday November 29, 2007 from 9:30 a.m. to 1:30 p.m. – Benjie announced that the next meeting date for the Stormwater Quality Standards Task Force is scheduled for November 29th. The following items were discussed:

- Changes to REC 1 standards that would eliminate the need for dry weather Canyon Lake TMDL
- A strawman Basin Plan Amendment is available

- First draft of technical support document released for Temescal

IX. ***Open Discussion***

A. ***Santa Ana RWQCB*** – Michael Roth announced that on October 30th, several members of the Regional Board will be going on a field trip in Huntington Garden to learn about how cactus can help in landscaping for water conservation in which he extended an invitation to Permittees. Meeting at RCRCD November 13th from 8-noon regarding plant selection for water conservation, eroision control, and low impact development.

B. ***San Diego RWQCB*** – Brandi informed attendees that Tetratech now goes by PG Environmental. She added that the Regional Board is waiting for audit evaluation reports from PG Environmental.

Brandi encouraged Permittees to follow up on Permit fire requirements due to the recent fires throughout the area to make sure they are in compliance with the Permit.

C. ***U.S. EPA – Region IX*** – There was no U.S. EPA representative present.

D. ***Round Table*** – Jason informed attendees that CASQA has been working with the California Department of Pesticide Regulation for changing labeling requirements for a number of pesticides.

XI. ***New Agenda Items / Schedule Next Meeting***

Due to the Thanksgiving holiday the next NPDES TAC meeting is scheduled for November 15, 2007. If there are any questions or items for the next meeting agenda, please contact the Flood Control District's NPDES Section at 951.955.4375. Suggestions are always welcome.

Please visit the "Only Rain Down the Storm Drain" Public Education Program website at: http://www.floodcontrol.co.riverside.ca.us. The site contains a variety of useful stormwater program information including links to other stormwater management programs and related websites.

NEXT MEETING IS SET FOR:

THURSDAY November 15, 2007 10:00 A.M.
AT
RIVERSIDE COUNTY FLOOD CONTROL DISTRICT
1995 Market Street
Riverside, CA 92501

P8/116945

NPDES
SANTA ANA / SANTA MARGARITA
TECHNICAL COMMITTEE
Meeting Minutes
for
September 27, 2007

I. Attendees:

Benjie Cho	Riverside County Flood Control District
Florence Mowrer	Riverside County Flood Control District
Penny Nanney	Riverside County Flood Control District
Tina Tuason	Riverside County Flood Control District
Jason Uhley	Riverside County Flood Control District
Charlene Warren	Riverside County Flood Control District
Mike Shetler	Riverside County Flood Control District
Glenn Higa	Riverside County Transportation
Adrianna Soares	Riverside County Transportation
Mike Roth	CRWQCB – Santa Ana Region
Maria Macario	CRWQCB – Santa Ana Region
Brandi Outwin	CRWQCB – San Diego Region
John Wilder	City of Beaumont
Bob French	City of Calimesa
Mike McCabe	City of Calimesa
Bob Bohan	City of Canyon Lake
Michele Hindersinn	City of Corona
Jeff Potts	City of Corona
Linda Nixon	City of Hemet
Phoung Hunter	City of Moreno Valley
Kent Wegelin	City of Moreno Valley
Farida Naceem	City of Murrieta
Lori Askew	City of Norco
Jessie Powell	City of Perris
Dion Castrol	City of Riverside
Jessica Chin	City of Riverside
Mike Yasmer	City of Riverside
Mike Emberton	City of San Jacinto
Aldo Licitra	City of Temecula
Jamie Aderhold	J2A Environmental
Bob Collacott	URS Consulting
Frank Tolerico	CONTECH Stormwater Solutions

II. *Introductions*

Jason Uhley welcomed everyone to the September 27, 2007 NPDES Santa Ana/Santa Margarita Technical Committee Meeting and initiated the self introductions of attendees.

III. *Agenda Changes*

There were no changes to the agenda.

IV. *Review of Minutes: August 23, 2007*

There were no changes to meeting minutes. Minutes were approved.

Handouts and Materials Provided:

- September 27, 2007 Agenda, August 23, 2007 Minutes, Roster

V. *Announcements*

A. ***Annual Reports*** – Benjie Cho announced that the Santa Ana Annual Report is due November 30, 2007. Annual reporting forms were emailed to Permittees are due back to Benjie by October 8th.

B. ***Training*** – Benjie reported that to meet Permit requirements, Construction training was provided on September 24th and 25th. He added that there would be additional training scheduled by Tina Tuason in the upcoming weeks. Attendance sign-in sheets will be provided to Permittees. Attendees engaged in a brief discussion regarding training.

C. ***MSC Meeting Update - September 20, 2007*** ~ Benjie provided a brief summary of the September 20, 2007 MSC meeting. Items of discussion at the MSC meeting included:

- Legislative Bills
- Audits/NOVs/ACLs
- Draft Construction Permit

Jason added that City Managers were put on notice that Santa Ana Permit was currently pending.

D. ***Legislative Update*** – Jason provided an update on the following legislative bills:

- Senate Constitutional Amendment (SCA) 12 – This bill moves to exempt stormwater and urban runoff fees from Prop 218 (formerly, ACA 10 of previous Legislative Session) to allow municipalities to charge a service fee for stormwater compliance activities. No action has been taken on this bill.
- SB1001 Establishes Regional Boards of 5 members with minimum 10 years experience in improving water quality. Members must have experience/degree in biological science, public sector finance, urban planning, public health, and environmental justice.
- AB739 would require the State Water Resources Control Board (SWRCB) to develop a comprehensive framework for evaluating the effectiveness of municipal stormwater management programs by promoting the use of quantifiable measures. It would also require the SWRCB and Regional Water Quality Control Boards (RWQCB) to include requirements for evaluating and

reporting on stormwater management program effectiveness in municipal stormwater permits issued under the federal Clean Water Act and the state's Porter-Cologne Water Quality Control Act; and

Establish criteria by which the State Water Resources Control Board (SWRCB) and the Department of Water Resources (DWR) award grants for stormwater management projects funded by Proposition 1-E flood bonds and Prop 84 resources bonds approved by voters at the November 2006 election.

For more information please go to http://www.leginfo.ca.gov/bilinfo.html.

E. ***Contech Maintenanace Demonstration October 2, 2007 8:30 a.m. at Orange Crest Promenade*** – Jason announced Contech's Maintenance Demonstration October 2, 2007 at the Orange Crest Promenade. Information regarding the demonstration was previously emailed to Permittees.

F. ***Contect Post TAC Meeting Presentation – October 25, 2007 (following SA/SM TAC Meeting)*** – Jason announced that Contect will be conducting a presentation October 25, 2007 immediately following the TAC meeting. Lunch to be provided.

G. ***CASQA Conference*** – Jason reported on the CASQA conference held from September 10th – 12th. Topics of the conference were:

- Low Impact Design (LID)
- General Construction Permit
- Hydromodification
- Program Implementation
- BMPs in watersheds
- TMDLs

Jason added that an effort is being made to hold a future CASQA conference in the Desert area.

VI. *Public Education Program – Florence Mowrer*

Florence Mowrer reported on the efforts of the District's public education department. She noted that she was currently working on the annual reports. Items of discussion included:

- Conservation District efforts to work with teachers to conduct presentation and increase presentation numbers
- Revamp of outreach education program to California teaching standards
- Efforts to pass message of stormwater pollution prevention
- Billboard in Lake Elsinore to go up October 1, 2007
- Curb markers available

Flo further expressed the need to educate the public on stormwater pollution prevention. She added that on October 3rd and 4th Riverside Convention Center will be having Step 8 conference in which the District's public education department will participating in to distribute public education materials/promotionals and promote public awareness. An

invitation was extended to Permittees to visit events that the public education department participates in.

VII. *TMDL Progress Report – Benjie Cho*

A. Middle Santa Ana River Bacteria Indicator TMDL Update

- **Next Meeting - Thursday, October 11, 2007 – 1:30 p.m. to 4:00 p.m.**
  Jason stated that EPA has approved the TMDL. He stated that Permittees have entered into an Implementation Agreement to implement the TMDL. Pat Boldt has organized a coalition of Agricultural operators to join Permittees in the Implementation Agreement. Jason added that an amendment will be made to the Implementation Agreement to include Agricultural operators within the next several months. Jason recommended that cities who are affected by the Middle Santa Ana River TMDL attend the October 11th meeting.

B. Lake Elsinore/Canyon Lake TMDL

- **September 25, 2007 – 1:30 p.m. Meeting Update (Next Meeting TBA)**
- **Canyon Lake CEWA Scoping Meeting – October 22, 2007 from 2:00 p.m. to 5:00 p.m. at EMWD**

Jason informed attendees that this TMDL is currently in the implementation mode. He added that Tim Moore presented his draft Lake Elsinore Nutrient Sediment Reduction Plan at the last TMDL - TAC meeting. Though this is a plan representing one task, it includes a schedule to completely modify all other tasks that are identified in the TMDL. Jason recommended that Permittees review the plan and provide comments by Friday, September 28th. Other items of discussion included:

- TMDL requirements
- Development of a pollutant trading plan
- Sediment reduction for Canyon Lake
- Design issues with the aeration system
- The plan proposes new biological monitoring requirements
- Costs associated with TMDL
- New bacteria TMDL proposed for Canyon Lake

C. San Diego Lagoons TMDL/Investigation Order

- **Lagoons TMDL NNE Study Bureau Workgroup**

There is a requirement for stakeholders in the the Santa Margarita Watershed to monitor the Santa Margarita Lagoon to collect data necessary to develop a TMDL. Jason noted that initiation of water quality monitoring is soon to begin.

There is also a Santa Margarita River Nutrient TMDL that has been proposed. There is a Regional Board meeting scheduled for October 4th to discuss this TMDL.

Tina Tuason reported that the contract has been awarded and monitoring is due to begin in the Santa Margarita region October 1st. The next meeting is scheduled for November 13th at 10:00 a.m. at the Bureau of Reclamation in Temecula.

D. **TMDL NNE Study Bureau Workgroup** – There was no discussion on this item.

VIII. ***Santa Ana/Santa Margarita Region Programs – Benjie Cho***

A. **Stormwater Quality Standards Task Force Update**

- **Next Meeting: Thursday October 11, 2007 from 9:00 a.m. to 1:30 p.m.** – Benjie informed the group that the next SWQTF meeting was scheduled for October 11th. He then discussed REC 1 and REC 2 uses, proposed basin plan amendment change from fecal coliform to e. coli and draft language.

Jason informed the group that the District is working to facilitate a LID testing and monitoring site on District grounds. The focus on the design and contruction will be to facilitate the collection of monitoring and testing data.

Annual Reports ~ Santa Margarita – There was a pre-meeting prior to the NPDES September 27th TAC meeting to discuss the Santa Margarita Annual Report.

IX. ***Report of Waste Discharge/Permit Renewal – Benjie Cho***

There was no discussion on this item.

X. ***Open Discussion***

A. ***Santa Ana RWQCB*** – Maria Macario reported that review of the audits were still being conducted.

B. ***San Diego RWQCB*** – Brandi Outwin reported on the recent audits of Murrieta, Temecula, County and the District conducted by the San Diego Regional Board. She noted that the San Diego Regional Board only provided the Permittees one week's notice of the audit. In addition, Brandi mentioned that Tetratech is promoting techniques for short-notice inspections and this may become the norm moving forward and future notice may be same day.

C. ***U.S. EPA – Region IX*** – There was no U.S. EPA representative present.

D. ***Round Table*** –There were no further comments from attendees.

XI. ***New Agenda Items / Schedule Next Meeting***

The next NPDES TAC meeting is scheduled for September 27, 2007. If there are any questions or items for the next meeting agenda, please contact the Flood Control District's NPDES Section at 951.955.4375. Suggestions are always welcome.

Please visit the StormWater/CleanWater Protection Program website at: http://www.floodcontrol.co.riverside.ca.us. The site contains a variety of useful stormwater program information including links to other stormwater management programs and related websites.

WQMG MEETINGS

Santa Margarita River Watershed
Water Quality Monitoring Group

Subj: Notes from Meeting at Executive Management Team on March 19. 2008

Meeting Purpose: To share water quality-related information and discuss the group's Strategic Plan

Attendees:
USBR – Greg Krzys
Pechanga – Helen Rain Waqui
Stetson Engineers – Scott Thomas - consultant
Camp Pendleton – Brian Shin
Camp Pendleton – Larry Carlson -consultant-OWR
RCFC&WCD – Arlene Chun
San Diego County – Joanna Wisniewska, Jaime Jensen
EMA RCD – Pam Nelson, Bob Wheeler, Vicki Long
Mission RCD – Judy Mitchell, Beth Principe
Watermaster – Chuck Binder
UCSD – John Helley
WMWD – Fahkri Manghi
League of Women Voters – Charlotte Fox

1. Greg Krzys led introductions and reviewed the agenda.

2. Greg provided an update on the Lagoon TMDL monitoring activities. Monitoring started October 1. Index period sampling took place in early February. There was a meeting of the Lagoon TMDL Group with RWQCB staff two weeks ago to discuss project status. One concern is that the group may need to perform a costly bathymetric survey of the lagoon inlet.

3. Scott Thomas provided an update on the Mainstem Monitoring program. The first 2 quarterly sampling events took place during November and February. The index period sampling for nutrients took place during late January and early February, in coordination with the Lagoon monitoring. A handout was provided to the group listing the key watershed management questions that guide the monitoring program. The WQ database is nearing completion, and the first semi-annual report is due in April.

4. Joanna Wisniewska provided a presentation on the TMDL monitoring on rainbow Creek. The program has been ongoing since 2004, sampling 13 stations. The county is determining concentrations of constituents as well as loading. Preliminary results show elevated phosphorus levels near agricultural operations. Larry Carlson stated that high nitrate levels in groundwater may drive surface water nitrogen levels for many years regardless of TMDL-mandated actions taken to reduce anthropogenic

Santa Margarita River Watershed
Water Quality Monitoring Group

contributions. However, Joanna did state that the stream appears to be phosphorus-limited, rather than N-limited.

5. Joanna also provided a presentation on a periphyton study in Rainbow Creek. The study sampled benthic algae, floating macroalgae, and water quality at 10 sites during four quarterly events spanning 2005-2006, including a reference site on Stone Creek. Multiple regression analyses were somewhat inconclusive, and it appears that more data are needed. Findings show that total phosphorus levels correlate with algae, however total nitrogen vary inversely with algae, which is unexpected.

6. Pam Nelson discussed the grant application submitted to CALFED and the Department of Conservation to fund a Watershed Coordinator, whose job it would be to form a Watershed Council and to update and implement the existing Watershed Management Plan. The applicants should know during April if grant funding has been approved. Scott mentioned that the watershed Coordinator would likely be heavily involved in obtaining grant funding and conducting outreach.

7. Scott reviewed the potential reference streams chosen during the January meeting. These include the following:

   - Upper Watershed
     - Cahuilla Creek above Reservation (Tributary to Temecula Creek)
     - Wilson Creek (Reed Valley) (Tributary to Vail Lake/Temecula Creek)
     - Cottonwood Creek (upper) (Tributary to Temecula Creek)
     - **Chihuahua Creek above ranches (Tributary to Temecula Creek)**
     - **Arroyo Seco (Aqua Tibia Wilderness. Tributary to Temecula Creek)**
   - Middle Watershed
     - **Cole Creek (Santa Rosa Plateau. Tributary to Murrieta Creek)**
     - **Slaughterhouse Creek (Santa Rosa Plateau. Tributary to Murrieta Creek)**
     - Pechanga Creek above Reservation (Tributary to Temecula Creek)
     - Tucalota Creek east of RV park (Tributary to Lake Skinner/Murrieta Cr.)
   - Lower Watershed
     - **Adobe Creek (Santa Rose Plateau. Tributary to Sandia Creek))**
     - **Roblar Creek (Tributary to Deluz Creek)**
     - **Stone Creek (Tributary to SMR Mainstem)**

   Pam Nelson discussed her preliminary investigation of Upper Watershed sites. Several locations on Chihuahua Creek show promise. Cottonwood Creek access appears limited by private property. Arroyo Seco appears very promising. Arlene Chun stated that the MS4 program samples Cole, Adobe, and Slaughterhouse Creeks already. The mainstem monitoring project is currently sampling on Roblar Creek, with some basic data collected on Stone Creek. It appears at this point that the most promising subset of reference creeks are those highlighted in BOLD in the list above. More work will be done to refine the list.

Santa Margarita River Watershed
Water Quality Monitoring Group

8. Scott reviewed the group's Strategic Plan goals and objectives. Having completed the plan, the group now must decide which actions to take to realize the goals. The group does not have a budget at this time and most members are limited in the amount of time they can spend working to carry out the plan. The following goals (including some of the objectives nested within them) appear feasible at this point without an infusion of funding:

   - Goal #3 – Assist EMT in answering the watershed management questions.
   - Goal #4 – Provide technical water quality advice, education, and outreach to watershed stakeholders.

   UCSD and some other members are ready to assist in using science to answer some of the management questions and raise our level of understanding of the watershed. Many of the member agencies are sharing data for inclusion in the WQ database. There was discussion regarding Objective 4.D - Designate a subcommittee to monitor watershed land use planning and notify Group of potential water quality issues. The RCDs have volunteered to take on this task. Objective 4.A. regarding an Lessons Learned program may not require very much funding and may add great value, providing a consolidation of our growing knowledge of water quality and related issues in the waterhsed.

9. Greg and Scott discussed the upper watershed tour scheduled for May 17th. The tour will focus on areas above Vail Lake that were not covered very well during the last tour in 2005. The preliminary itinerary includes the following sites:

   - Vail Lake
   - Arroyo Seco
   - Temecula Creek
   - Chihuahua Creeek
   - Sunrise Summit and Shadow Mountain Vineyard (lunch)
   - Cottonwood Creek
   - Terwilliger Valley
   - Cahuilla Creek
   - Wilson Creek
   - Tucolota Creek

10. Greg announced that the Prop 84 funding may infuse $93 million for SOCAL, however none of that is currently earmarked for SMR projects.

11. Action Items:

    a. Next meeting is in conjunction with watershed tour on May 17th.
    b. Scott Thomas to plan logistics for the tour.

Santa Margarita River Watershed
Water Quality Monitoring Group

c. Scott Thomas and Pam Nelson to investigate/ground truth potential sampling sites on reference streams.
d. MRCD and EMA-RCD to monitor watershed land use planning and notify Group of potential water quality issues associated with proposed plans and projects.

Santa Margarita River Watershed
Water Quality Monitoring Group

Meeting Agenda
10:00 a.m. – 12:00 p.m.
January 15, 2008
U.S. Bureau of Reclamation

1. Welcome, Introductions and Review Agenda - USBR

2. Discuss Monitoring Programs
   a. Lagoon - USBR
   b. Mainstem - Stetson

3. Provide Update on SMR WQ Database - Stetson

4. Discuss Impacts of Recent Storms - Stetson

5. Discuss Regulatory Issues – SD RWQCB

6. Provide IRWMP Updates
   a. Rancho California – USBR/EMA RCD
   b. SD County – Mission RCD

7. Update on Watershed Coordinator Grant – EMA RCD/Stetson

8. Continuing Discussion of Strategic Plan (Mission, Vision, Goals) – Stetson
   a. Discuss Role of WQMG Relative to Executive Management Team
   b. Review Mission & Choose Among 3 Competing Visions

9. Review Set of Proposed Reference Water Bodies in Watershed - Stetson
   a. Upper Watershed
   b. Middle Watershed
   c. Lower Watershed

10. Discuss Plan for Upper Watershed Tour – Stetson

11. Discuss Potential Locations for Weather Stations in Middle and Upper Watershed - UCSD

12. Next Steps - USBR
    a. Identify Subject Matter for Future Meetings
       - Review Mainstem Monitoring Semi-annual Report
       - Continuing Review of Strategic Plan – Goals
       - Review results of Conceptual Modeling
    b. Set Date for Next Meeting - March 18th

Santa Margarita River Watershed
Water Quality Monitoring Group

Meeting Agenda
9:30 – 12:00 p.m. September 18, 2007
U.S. Bureau of Reclamation
27708 Jefferson Road, Suite 202
Temecula, CA 92591

Meeting Purpose:

1. Update on water quality program and project developments in the watershed
2. Where do we go from here?

Agenda:

1. Welcome, Introductions and Agenda Review (5 min)

2. Prior meeting Re-Cap: Model Development (5 min)

3. Proposition 84: update (10 min)

4. Update on watershed projects (10 min)
   Projects:
   - Lagoon TMDL
   - Main Stem Water Quality Data Collection (Camp Pendleton-Reclamation)
   - Watershed Council (EMA-RCD)
   - Watershed Restoration (EMA-RCD)

5. Mini Presentations (20 min)
   - Periphyton Bioassessment
   - Nutrient Numeric Endpoint Case Study

6. Break (10 min)

7. Where do we go from here? (80 min)
   - Review & comment on Mission, Vision & Goals
   - What are the short term priorities & issues (next 6 months)?
   - What are the long term priorities & issues?
   - What are the data needs for short & long-term monitoring?
   - What are the current data gaps?
   - Sampling Needs: who, what, where & when?
   - Develop a list or library of past watershed studies/monitoring projects

8. Next Steps (10 min)
   - Identify subject matter for next meeting
   - Review FY 2008 meeting schedule

- Update group on activities of last year

Deleted: To determine how the process the U.S. Bureau of Reclamation has led to address watershed water management issues over the past five years can be expanded to include additional stakeholders focusing on scientifically based TMDL development in the Santa Margarita River Watershed.¶

Comment [JST3]: We may want to have maps and posters mounted on the side walls to aid discussion.

We should provide water and soft drinks for break.

SOUTHERN CALIFORNIA STORMWATER MONITORING COALITION (SMC)

Minutes of the
Stormwater Monitoring Coalition of Southern California

September 18, 2007
At the Riverside County Flood Control District

Attendees:	
Jaime Avila	State Water Resources Control Board
Donna Chen	City of Los Angeles
Arlene Chun	Riverside County Flood Control District
Chris Crompton	County of Orange Resources and Development Management Dept.
Karl Dreher	Caltrans
Ken Schiff	Southern California Coastal Water Research Project
Jimmy Smith	San Diego Regional Water Control Board
Maged Soliman	Los Angeles County Dept of Public Works
Xavier Swamikannu	Los Angeles Regional Water Quality Control Board
David Thomas	Ventura County Watershed Protection Division
Jason Uhley	Riverside County Flood Control District
Naresh Varma	San Bernardino County Flood Control District
Joann Weber	San Diego County Dept. Environmental Health
Matt Yeager	San Bernardino County Flood Control District

Chris Crompton began the meeting at 10:15 AM with roundtable introductions. The objectives of the day included: 1) introductions; 2) status of the SMC website; 3) SMC Annual Report; 4) agreements; 5) ongoing project updates; 6) next step on implementation of the regional bioassessment monitoring program; 7) future project discussion; 8) committee member items; and 9) next meeting date.

Chris addressed the second agenda item on the SMC website. Orange County had volunteered to host the web site and has purchased the domain name *SoCalSMC.org* and *SoCalSMC.com* for the next 10 years. Staff turnover at Orange County had slowed the web site development a little bit. However, the web page was intended to be simple so web design and implementation should be done within about 1 month. Jason offered to have his graphic artist review and clean up whatever ideas are preferred. The action item for this topic was:

- Send your ideas on logos to Chris and he will distribute to the group by Oct 5th

Ken presented the third agenda item on the 2006-2007 Annual Report that was distributed the week prior to the meeting. Small edits were recommended, but overall the report was well received. This report can be used by those agencies that wish to include it in their annual reports of waste discharge. The action item from this topic was:

- Ken will make the edits and distribute to the group

Chris addressed the third item on agreements. There were four agreements discussed. The first agreement was the Master Agreement. Only three agencies had not signed the agreement as of this date, but all were in process and signatures were expected within one month. Once this agreement is final, then the other agreements can move forward for

Stormwater Monitoring Coalition Steering Committee
Meeting Agenda
June 16, 2008
10:00 a.m. – 12:30 p.m. (Pacific Time)
at
Riverside County Flood Control and Water Conservation District
1995 Market Street, Riverside, CA 92501
http://maps.yahoo.com/maps_result?addr=1995+Market+Street%2C&csz=Riverside%2CCA+92501&country=us&new=1&name=&qty=
Conference Call In: (913) 227-1219, Code 425157

1. Introductions, meetings and announcements

2. Agreements – Chris Crompton
   a. Renewal of SMC Master Agreement D06-049
   b. Status of review of Low Impact Development (LID) Agreement D06-051
   c. Status of SMC Research Agenda Agreement D07-025
   d. Toxicity amendment to laboratory intercalibration study
   e. Implementation of regional bioassessment program

3. Ongoing project updates (as necessary)
   a. LID project status – Matt Yeager (SB County Flood)
   b. Hydromodification project status – Ken Schiff for Eric Stein (SCCWRP)
   c. Post-fire monitoring – Ken Schiff for Eric Stein
   d. Other projects

4. Future projects
   a. Follow-up discussion on proposed projects for 2008
      i. BMP effectiveness testing
      ii. Trash and debris monitoring approaches and protocols
      iii. New intercalibration constituents
      iv. Stormwater data compilation study
   b. SMC members are invited to present future projects for consideration

5. Committee member items

6. Next Meeting

Stormwater Monitoring Coalition Steering Committee
Meeting Agenda
September 18, 2007
10:00 a.m. – 2:00 p.m. (Pacific Time)
at
Riverside County Flood Control and Water Conservation District
1995 Market Street, Riverside, CA 92501
http://maps.yahoo.com/maps_result?addr=1995+Market+Street%2C&csz=Riverside%2CCA+92501&country=us&new=1&name=&qty=
Conference Call In: (To be provided)

1. Introductions

2. Status of SocalSMC website – Chris Crompton (Orange County)

3. SMC Annual Report – Ken Schiff (SCCWRP)

4. Agreements – Chris Crompton
   a. Renewal of SMC Master Agreement D06-049 and addition of new parties
   b. Review/approval of EPA ORD Memorandum of Understanding
   c. Status of review of Low Impact Development (LID) Agreement D06-051
   d. Status of SMC Research Agenda Agreement D07-025
   e. Toxicity amendment to laboratory intercalibration study

5. Ongoing project updates (as necessary)
   a. LID project status – Matt Yeager (SB County Flood)
   b. Laboratory intercalibration project – Ken Schiff
   c. Hydromodification project status – Eric Stein (SCCWRP)
   d. Pilot project on electronic data reporting – Ken Schiff
   e. SMC participation in development of procedures and guidance for stormwater toxicity in the Los Angeles Region – Ken Schiff (SCCWRP) and Xavier Swamikannu (Los Angeles Regional Board)
   f. Other projects

6. Next step on implementation of regional bioassessment program – Ken Schiff
   Note – This will be a time certain item at 1:00 p.m.

7. Future project discussion
   SMC members are invited to present future projects for consideration as SMC projects

8. Committee member items

9. Next Meeting

Minutes of the
Stormwater Monitoring Coalition of Southern California

March 11, 2008
At the Riverside County Flood Control District

Attendees:	
Arne Anselm	Ventura County Watershed Protection Div
Michael Borst	US EPA ORD
Arlene Chun	Riverside County Flood Control District
Chris Crompton	County of Orange Resources and Development Management Dept.
Karl Dreher	Caltrans
Bruce Fujimoto	State Water Resources Control Board
Emilie Reyes	State Water Resources Control Board
Ken Schiff	Southern California Coastal Water Research Project
Jimmy Smith	San Diego Regional Water Control Board
Eric Stein	Southern California Coastal Water Research Project
Martha Sutula	Southern California Coastal Water Research Project
Maged Soliman	Los Angeles County Dept of Public Works
Xavier Swamikannu	Los Angeles Regional Water Quality Control Board
Jason Uhley	Riverside County Flood Control District
Naresh Varma	San Bernardino County Flood Control District
Jo Ann Weber	San Diego County Dept. Environmental Health
Frank Wu	Los Angeles County Dept of Public Works
Matt Yeager	San Bernardino County Flood Control District
Charlie Yu	City of Los Angeles

---

1. Introductions, meetings and announcements

   Chris Crompton began the meeting at 10:00 AM with roundtable introductions. The objectives of the day included: 1) introductions; 2) update of the SMC website; 3) agreements; 4) ongoing project updates; 5) future projects; 6) committee member items; 7) next meeting date.

2. Update of SocalSMC website and logo

   Chris addressed the first agenda item on the SMC website. He demonstrated an example web site designed by his staff. The Executive Committee liked the design. A request was made to add an additional link for proposals.

   The action item for this topic was:

   - **Chris will work on making the web site live**

3. Agreements

Chris addressed the second item on agreements. There were six agreements discussed:

a. Renewal of SMC Master Agreement D06-049

The first agreement was the Master Agreement. Only one agency had not signed the agreement as of this date, but it was to be on the April Board agenda for signature.

b. Status of review of Low Impact Development (LID) Agreement D06-051

The third agreement was the Low Impact Development (LID) study. The third and final draft had been mailed out and no members found exceptions; the agreement now only waits on the Master Agreement before going out for signature.

c. Status of SMC Research Agenda Agreement D07-025

The final draft had been mailed out and no members found exceptions; the agreement now only waits on the Master Agreement before going out for signature.

d. Toxicity amendment to laboratory intercalibration study

No progress had been made on this agreement since the last meeting.

e. Implementation of regional bioassessment program

The Steering Committee had finalized the Scope of Work. Chris is working on the draft agreement now.

The action item from this topic was:

- **Chris will mail out the first draft of the Bioassessment agreement for comments and commitments**

4. Ongoing project updates

a. Electronic data reporting project deliverables

b. LID project status

The update on Low Impact Development (LID) was given by Matt Yeager. The goal of this multi-year project is to evaluate the effectiveness of various LID technologies. It is funded by a SWRCB Prop 50 grant and has several external partners including the LID Center, CASQA, and the Santa Clara Stormwater Program.

Since the last SMC meeting, Matt had added a geological engineer to the technical advisory committee (TAC), which was a discipline he needed. He is preparing a monitoring and quality assurance plan now. The last LID training was in San Diego

February 25-27. Matt is also ramping up the monitoring portion of the project. His intent is to start with a focus on changes in flows and hydromodification.

Matt also reported that he is working on coordination aspects of the project. There are several other entities involved in this topic including WALUP, the SMC hydromodification study, the Ventura County LGC, San Diego/UC Cooperative Extension, Alluvial Fan Task Force, and the Landscape Alliance.

Ken brought up the fact that the Ocean Protection Council is holding a public workshop on LID at SCCWRP on March 26. The Steering Committee agreed that Matt should present the SMC project.

The action item from this topic was:

- **Ken will try to get Matt on the Workshop agenda**

c. Hydromodification project status

The project update was given by Eric. The hydromodification study is funded by a SWRCB Prop 50 Grant with and is being conducted by SCCWRP and Colorado State University. There are over two dozen sites distributed from Ventura to San Bernardino to San Diego that have been sampled. The initial project deliverable, a literature survey, had been drafted and was in review by the TAC. This document forms the foundation for the remaining portions of the project. The next deliverable is a workplan for mapping at risk stream reaches to the effects of hydromodification, which is expected by summer.

d. Update on the bacterial reference watershed project

The update was also given by Eric. The project had been completed, the results have been presented to the project TAC, and the final technical has been posted on the SCCWRP web site.

The action items from this topic were:

- **Eric should give a presentation at the next SMC Steering Committee meeting**
- **The report should also be placed on the SMC web site**

5. Potential future projects

Four potential projects were discussed:

a. The first potential future project was on trash and debris was given by Arne. His project description included five elements including: a literature review, methods evaluation, beneficial use impacts, source identification methodology, and BMP evaluation. All of these elements resonated with the Steering Committee. It was thought additional resources could be garnered by a partnership with solid waste management.

The action item from this topic was:

- **Arne was to approach the solid waste management agency about interest in a collaboration or funding**

b. The second future project was on BMP effectiveness. Karl Dreher presented his existing BMP effectiveness studies at Caltrans. These included three types of linear infiltration devices and examined size, cost, and efficiency in load reduction. Mike Borst also presented the work he has been doing at EPA. EPA has been focusing on LID elements such as green walls/roofs and porous pavement as part of their Green infrastructure research program. Like Caltrans, their monitoring has focused largely on load reduction.

The action items for this topic were:

- **Matt, Jason, and Mike are to connect on BMP effectiveness monitoring on the green BMPs being installed at RFCD**
- **Matt is to work with Karl to ensure monitoring comparability between the SMC LID project and Caltrans BMP effectiveness project**

c. The third potential future project was for development of a region fire response monitoring program, presented by Eric Stein. The goal of this project was to develop a coordinated regional monitoring program for assessing the effects of post-fire runoff on constituent loading and stream water quality. SCCWRP has already written a project proposal to the County of San Diego for potential FEMA funding. Additional collaborators were mentioned including the USGS and USDA.

The action item for this topic was:

- **Wait for outcome of proposal**

d. The Fourth potential future project is a stormwater data compilation study presented by Eric. Data compilation was a project in the SMC research agenda. Several preliminary steps had already been taken including development of standardizing data transfer formats and data exchange protocols. This project represents the next step in the process, which is compiling the agency monitoring data to estimate cumulative runoff inputs and assess differences in space (i.e., compare watersheds) or time (i.e., compare different types of storms). This project would be completed funded by SCCWRP and the only member agency contributions would be minimal staff time to interact with SCCWRP. SCCWRP would start compiling data on nutrients linking wet weather inputs measured by the SMC member agencies with the Bight'08 regional monitoring program. This would eventually expand into other constituents in future years.

The action item from this topic was:

- **Eric to prepare a short written description of the project for distribution to the SMC**

The next meeting was scheduled for June 16th, 10:00 AM to 12:30 PM, at Riverside County Flood Control District. The meeting adjourned at 12:30 PM.

IRWM MEETINGS

San Diego IRWM Funding Area Planning Coordination Group

Discussion Meeting Notes
June 9, 2008
Rancho California Water District

Attendees:

Cathy Pieroni, City of San Diego
Marilyn Thoms, County of Orange
Jason Uhley, Riverside County Flood
Alyson Watson, RMC Water San Diego
Anna Aljabiry, DWR
Perry Louck, Rancho California WD
Mary Anne Skorpanich, County of Orange
Mark Stadler, San Diego County WA
Norm Shopay, DWR
Daniel Cozad, IPM Inc.

Opening and Introductions

Perry Louck, RCWD started out the meeting with introductions but most folks know each other well by this point.

DRAFT

Regional (Funding Area) Progress and Successes Update

Upper Santa Margarita Watershed will be holding stakeholder meetings soon and expanding the IRWM efforts to address Prop 84 issues beginning in July. Increasing water rights issues are occurring in the upper portion of the Santa Margarita with the DAC Community with actions by the Pechanga and Cahuilla/Ramona Bands.

South Orange County has completed the first invoice to the state on Round 1 of Prop 50 IRWM and are working with integrating other efforts into the IRWM including Aliso Creek. They are also beginning some countywide DAC work with the cities and environmental justice community.

San Diego was awarded funding in Round 2 of Prop 50 IRWM. The Water Authority is the lead agency; each of the three RWMG members will administer several of the projects that have been funded. Some projects will have revised budgets. DWR has requested that $6.4 million be shifted within the Prop. 50, Chapter 8 budget. If this shift occurs, San Diego will receive $25 million in IRWM funding; otherwise, it will receive $20.7 million. The Regional Advisory Committee meets June 11, 2008 and future meetings will invite the funding area planning entities.

The RWMG agencies are amending their agreement MOU and their support contract with RMC Water to extend both to 2011. They are looking at expanding and reworking governance, perhaps using the CUWCC model related to dues and participation. They may add at-large RAC members, including the other San Diego funding area members.

DWR Presentation and Discussion Regional Acceptance Program
DWR is working to put a guidance document together for Regional Acceptance Criteria. The want to focus on the planning efforts and getting the regions coordinated more than funding allocation. Discussion ensued on several issues related to basis for communities of interest and planning areas by hydrological and other criteria.

While they work on the guidelines they asked the group to send a letter to Anna if we wanted to participate with them as a pilot area. The group agreed this would be an excellent region to test in a pilot because the group is working well together and there is adequate diversity to support fertile testing of plan integration and development.

IPM will provide a draft letter (attached) for all to review.

The process will likely include submitting a draft for region description, a preliminary meeting and discussion with DWR and a final document and public comment period prior to approval. All were encouraged to look beyond prop 84 funding as they review the region and several mentioned they were. OC has a local tax increment for IRWM projects and transportation impacts.

DWR indicated there could be integration with the Planning Grant process. DWR will want to know how much money is needed for planning for the region and how much for implementation projects.

DRAFT

Guidelines will not be completed before late summer so there is likely time to get acceptance before applying for implementation funding. Other basins that are coordinated include Mojave/Antelope and funding is likely faster when the coordination is robust. Issues to be discussed are how all the areas benefit and where the benefits of the projects fall. The San Diego IRWM has very broad partners on the Colorado and state project systems.

DWR began discussion about where the different groups and regions fit and worked now. Who benefits where – US/Mexico – local or regional project – North South – Cities on east of mountains. Etc. DWR wants to see both who can plan together and what the point or benefit of that planning? DWR would appreciate having the entire funding area plan together if it made sense. They suggested looking at the projects to focus on those that have regional benefit.

Interregional Cooperation and Allocation
The group discussed their progress on planning and funding issues.

a. Reviewing both population and land area and funding comparisons
   - Funding area next steps were discussed and <are we missing some words here?>
   - Planning for Disadvantaged Communities
   - Land vs population and agriculture?
   - Consider a phased approach Now-Then-Later

b. Cross boundary project coordination is a commitment
c. DWR recommended a pot for projects that benefit the entire region. We should consider whether this is appropriate for our funding area. Orange County does this for Arundo removal and water conservation.
d. Regional acceptance submittals should include the planning framework – how will it all come together
e. Consider how separate planning efforts will integrate
f. Do not forget Mexico San Diego planning for IBWC
g. Integration benefits – make it simple and use the Education opportunity – application

Further discussion of the spatial and population allocation formulas ensued and San Diego provided a map and allocation from the area of land (attached). Population from the January 2007 data should be provided for evaluation prior to July 1 for processing by all.

Cathy reminded the group that the RWQCB meeting is scheduled for June 25. The meeting starts at 9:00 a.m. and the IRWM efforts are Agenda Item #9. The link to the agenda is shown below:

http://www.swrcb.ca.gov/sandiego/board_info/agendas/2008/jun_25/jun_25.shtml

The presentation time is only 20 minutes. All areas are invited and may bring highlights information to share.

DRAFT

Next Meeting
The next meeting is scheduled for July 14th 2008 at Rancho, if teleconference facilities cannot be accomplished.

San Diego IRWM Funding Area Planning Coordination Group

Discussion Meeting Notes
February 4, 2008
Rancho California Water District

Attendees:

Cathy Pieroni, City of San Diego
Perry Louck, Rancho California WD
Jeffery Passek, City of San Diego
Jason Uhley, Riverside County Flood
Tom Rosales South OC Water Authority
Daniel Cozad, IPM Inc.
Karl Seckel, Municipal WD of OC
Marilyn Thoms, County of Orange
Mike Shetler, County of Riverside
Jon Van Rhyn, County of San Diego
Mark Stadler San Diego County WA

Opening and Introductions

Daniel introduced Perry Louck and Perry welcomed the group to Rancho California Water District and each attendee introduced themselves and their role in the IRWM process.

Goals and Ground Rules

A brief description of goals included:

- Move forward quickly and allow funding of projects with Prop 84 funds
- Avoid DWR having to decide or compete between the three areas and their projects
- Coordinate and work together to identify projects that could be of value across plans, work to identify funding for highly ranked projects
- The Group recognizes that the San Diego Subregion as defined in proposition 84 was intended to include the entire Santa Margarita and San Juan Watersheds. As such the Group wishes to allocate the $91 million for projects in a equitable manner.
- Reach consensus on a plan and agreement to present to DWR

The following ground rules were discussed and agreed:

- All representatives attending are representatives of larger groups and boards, all decisions are made in these larger groups or governing boards
- These decisions and agreements are intended for Prop 84 funding.
- The three groups represent the authorized and all known Regional Water Management groups intending to apply for Proposition 84 funding in the San Diego Funding Area, notwithstanding coastal groups that may apply for separate funds, if available.

Overview of IRWM Areas, Efforts and Status
An overview of efforts in the three IRWM planning regions in the San Diego funding region was discussed. Individual regions are at similar levels of planning with all having an approved plan and working on updating their plan. All planning regions have governance for the Regional Water Management Group and Stakeholder Committees.

All groups have applied for at least one round of funding; Orange County has applied for Round 1 and Round 2.

South OC has a contract with the State Board and is invoicing Round 1 Prop 50 funds. In OC their IRWM is coordinated with Measure M transportation and resources funding. OC has three Water Management Groups that work in the different regions of the County.

Rancho and Riverside prepared a plan quickly to get underway. The speed worked because Rancho had recent planning for water, Riverside had recent storm water and habitat plans. The plan was approved in June and Rancho applied for Round 2 funding.

San Diego has 300 projects in their list all projects are prioritized. The top tier projects were ranked and 21were submitted in accordance with Proposition 50 guidelines for Round 2 funding. The remaining lower priority projects may be eligible for future funding as opportunities arise; these projects will be ranked based on funding requirements of those programs. The RWMG funds the efforts now with advanced governance and funding coming in the future. A 27 member advisory committee provides review and recommendation.

Understanding the Regions and Boundaries
Each region talked about the differences and similarities of the regions and connections between the regions. Boundaries are significant; Mexico Border projects cannot be funded. Santa Margarita watershed drains into SD and OC watersheds from Riverside. USMC Camp Pendleton is in the San Diego Plan. This is water served to San Diego and a desalination site in SD plan that could serve other areas too.

Upper and Lower Santa Margarita are connected but litigation and other watershed management issues are significant impediments to planning together. Coordination and cooperation among the two are significantly easier to move forward in the short term. Counties of Riverside and San Diego have similar issues with the San Diego Regional Water Quality Control Board due to MS4 permits, South OC as well. South OC could be part of Santa Ana or standalone as well as part of San Diego.

Funding Areas Cooperation and Fund Allocation
The group discussed the need for continued coordination and cooperation in the funding region in addition to the obvious opportunity to work out allocation.

Analysis of Proposition 84 Funding Allocation Based on Population

Regional Board Region No.	Regional Board Region Name	Hydrologic Region Name	Population [1]	Total Prop. 84 Allocation [2]	Total Prop. 84 Allocation Minus $25 Million per Region [3]	% of Total Population	% of Prop. 84 Funds	Difference Between Pop. % and Allocation %	Per Capita Prop. 84 Funding Allocation
1	North Coast	North Coast	644,000	$37,000,000	$12,000,000	1.88%	1.78%	-0.10%	$19
2	SF Bay	SF Bay	6,106,000	$138,000,000	$113,000,000	17.84%	16.74%	-1.10%	$19
3	Central Coast	Central Coast	1,459,200	$52,000,000	$27,000,000	4.26%	4.00%	-0.26%	$19
4	LA	South Coast	10,162,302	$215,000,000	$190,000,000	29.68%	28.15%	-1.54%	$19
8	Santa Ana		4,774,716	$114,000,000	$89,000,000	13.95%	13.19%	-0.76%	$19
9	San Diego		3,488,892	$91,000,000	$66,000,000	10.19%	9.78%	-0.41 %	$19
5	Central Valley	Sacramento River	2,593,000	$190,000,000	$165,000,000	18.03%	24.44%	6.41%	$27
		San Joaquin River	1,700,000						
		Tulare Lake	1,880,000						
6	Lahontan	North Lahontan	99,000	$27,000,000	$2,000,000	2.40%	0.30%	-2.10%	$2
		South Lahontan	721,490						
7	Colorado River Basin	Colorado River	606,000	$36,000,000	$11,000,000	1.77%	1.63%	-0.14%	$181
			34,234,600	$900,000,000	$675,000,000	100.00%	100.00%	0.00%	

1 Sources: *CA Water Plan Update 2005* used for regions 1,2, 3, 5, 6, 7. GIS data used to determine South Coast population breakdown between regions 4,8,9 : (*CA Water Plan* total pop. = 18,223,000 vs. GIS = 18,425,910).

2 Prop. 84 total is $1 billion ($900 million allocated + $100 million unallocated).

3 Each region was first given $25 million, remaining money ($675 million) was then allocated based on population.

Prop. 84 Region 9 Allocation Based on Population [4]

	Population in Reg. 9	% of Reg. 9 Pop.	Prop 84 Allocation
San Diego County	2,757,512	79.04%	$71,923,577
South Orange County	536,916	15.39%	$14,004,262
Riverside County	194,464	5.57%	$5,072,162
Totals	3,488,892	100.00%	$91,000,000

4 Population information for Region 9 based on GIS data.

San Diego IRWM Funding Region Coordination Meeting

February 4, 2008 – 1:30 -3:30 PM

Hosted By
Rancho California Water District
42135 Winchester Road, Temecula, CA 92590
MAP

Agenda

A. **Welcome and Introductions** (Perry Louck, RCWD and Mike Shetler, Co of Riverside

B. **Goals and Ground Rules**

C. **Overview of IRWM Areas, Efforts and Status (see map)**
   1. Upper Santa Margarita Watershed
   2. South Orange County
   3. San Diego

D. **Interregional Cooperation**
   1. Understanding the Regions
   2. Cross Border Projects
   3. Funding Area Cooperation

E. **Next Meeting**
   Schedule Next Meeting – Potential Meeting Date Monday, March 3??

CASQA MEETINGS

CASQA Pesticides Subcommittee

DRAFT Agenda
Nov. 1, 2007
10:00 a.m. - Noon

1. Review/amend agenda (Dave, 5 mins.)

2. Announcements and updates (All, 5 mins) --Any announcements from participants --quick updates on committee related topics (as needed, may include DPR Urban Pest Management Workgroup, Structural Pest Control Board, Ecowise,
etc.)
--DPR urban monitoring plan
--Org. chart - how CASQA fits into the "pesticides world"

3. Pyrethroids Reevaluation (Kelly, 30 mins)
Goal: To receive an update on general activities including DPR's thoughts after receiving CASQA's letter. To determine how to handle the sediment toxicity testing proposal currently available for review (comments due 12/7).
--Reevaluation update (Kelly)
--Discuss PWG Sediment toxicity proposal (Kelly, all)
--Context
--Scientific issues
--Policy issues
--Should CASQA prepare comments? (and if so, logistics)

4. Pesticides TMDLs list (Dave R., 10 mins)
Goal: To review and finalize our list of California pesticide TMDLs (We are assembling this list for our own purposes, and for the CASQA Watershed subcommittee, which is trying to track all TMDLs)

5. Anticipated regulatory activities in 2008 (Kelly, Dave, 30 mins)
Goal: To obtain information about anticipated EPA and DPR activities and to determine priorities for 2008.
--DPR Pyrethroids reevaluation next steps (Kelly, Dave) --EPA re-registration and registration review schedule (spreadsheet) (Kelly)
--EPA urban model development (Kelly)
--TMDLs - should we be following them? - would we comment on any?
--303(d) list update - should we follow - would we comment?

6. Budget (Dave, 20 mins)
Goal: To determine subcommittee's recommendations for our budget in 2008 (Budget decisions we make are recommendations to the EPC, which balances the many demands on CASQA's limited funds)

7. Next meeting (Dave, 5 mins)
--Set date & time for next subcommittee teleconference --Make list of items for discussion --Items for next time (not included due to length of agenda):
--subcommittee roster update
--Next steps on sharing PCO contracting resources with CASQA members

Our next teleconference meeting will be:

Thursday November 29th at 3:30 p.m.

Please mark this time on your calendars. Call-in information will be distributed with an agenda prior to the meeting.

Major topics include:
--Review of a draft CASQA letter to DPR on the pyrethroid manufacturer's proposal to eliminate some sediment toxicity testing (notably the chronic toxicity testing) and modify other testing that DPR is requiring --the latest on DPR's and manufacturer's next steps on the reevaluation, and --planning our next steps to press for timely and effective actions by DPR and the manufacturers to end the pyrethroid-related toxicity in urban creeks.

Kelly Moran
TDC Environmental

P.S. If possible, I urge members to call into (or attend in person) the Urban Pesticides Committee meeting on Tuesday at 10 a.m. The DPR update on the reevaluation should be quite interesting (it is at 10:15); it would be helpful for members to ask questions about the next steps, including *when* actions will occur. Also, if you're interested in better understanding how pesticides move through urban environments, I'll be going through the graphics that we included in our letter to DPR starting at 1:15 (comments welcome!). If you can't find the info in your email box, you can get the agenda and call-in information on the
web: http://www.up3project.org/documents/upc agenda 11-13-07.pdf

CASQA Pesticides Subcommittee

DRAFT Agenda
Tuesday April 1st 1:30 p.m.

1. Review/amend agenda (Dave, 5 mins.)

2. Announcements and updates (All, 10 mins) --Any announcements from participants

3. Review draft letter to DPR on pyrethroid wash-off studies proposed by PWG (Kelly and all) --pyrethroid manufacturers have proposed two studies: one to measure pyrethroid wash-off from grass and a second to measure wash-off from impervious surface --discuss relationship to other work on this topic --discuss relationship to overall approach to pyrethroid reevaluation --draft letter will be forwarded to subcommittee soon

4. Update on pyrethroids data compilation (Armand, 5-10 mins.)

5. Next meeting (Dave, 5 mins)
--Set date & time for next subcommittee teleconference --Make list of items for discussion (these may include pyrethroid reevaluation, possible responses from DPR to out letters, next steps on meeting with pyrethroids manufacturers, supplemental funding for subcommittee activities)

CASQA Pesticides SubCommittee

Meeting Notes
May 2, 2008

On the call: Kelly Moran, Jason Uhley, Jim Scanlin, Armand Ruby, Jamison Crosby, Dave Renfrew, Brad Eggleston

1. Review/amend agenda
   - No changes

2. Announcements and updates
   - Announcements
     - Letters to EPA on pyrethroids tetramethrin (submitted) and sumethrin (in review by Board/EPC)
     - EPA cypermethrin decision – similar to permethrin, reflects CASQA's comments.
     - Call with EPA on swimming pools – more accomplished than anticipated. EPA is working on methods to model pool discharges, which would allow them to identify (and hopefully mitigate) water quality problems from swimming pool biocides.
       - **Action item**: Kelly will circulate a nifty sheet prepared by Linda Garcia that explains the simple calculation to estimate creek concentrations of pesticides when pools are discharged.
     - Dave's upcoming meetings with EPA – Dave Tamayo will be in Washington DC in late May for the U.S. EPA advisory committee called the "Pesticide Program Dialog Committee." He plans several other meetings with EPA pesticides staff to share information about pesticides in urban runoff.
     - Presentation to National Structural IPM/water quality group – Dave and Kelly presented an overview of the pyrethroids water quality issue, the connection to structural pest control, and how IPM can be an important part to solving this problem to a national workgroup via teleconference.
     - Next week's CASQA meeting in Ontario – The pesticide subcommittee's work will be featured at the meeting

3. Pesticide monitoring data compilation (Armand, 20 mins.)
   - Armand is researching and tracking down all pyrethroids monitoring data in California urban areas and urban-impacted streams.
   - He is preparing a summary of data, spreadsheet with annotated references, and a list of references.
   - Armand will circulate his work product for review on or before May 15th.

4. DPR's Urban monitoring Plan (Armand and all, 5 mins.)

- DPR provided responses to CASQA's comments. These responses were not all we had hoped—but nonetheless we should be pleased that DPR provided us with an opportunity for review (which is very unusual for DPR).
- Dry season monitoring is starting. No agencies have been contacted in regard to partnering in the sampling for either wet weather or dry weather.
- DPR issued a request for bids for doing the wet weather monitoring in San Diego. The document and the responses to bidders' questions have some information about their plan (i.e., sampling locations, sampling methods) that was not in the final monitoring plan.
    - **Action item**: Armand will circulate the request for bids and the response to bidder questions to the subcommittee.
- Members expressed concern about the lack of a plan for communication with DPR as the monitoring proceeds. It was agreed that the subcommittee should invite DPR to provide an update at the July subcommittee meeting. Possible questions were discussed, including:
    - What specific sampling locations have been selected?
    - When will sediment samples be collected? What is collection technique?
    - Have they prepared a SAP/QAPP or equivalent?
    - Do they wish to partner with municipalities to collect samples?

5. Next Steps on Pyrethroids Reevaluation (Kelly and all 15 mins)
    - PWG and DPR contacts – Dave contacted John Sanders (DPR) and Kelly contacted Jim Wells (PWG) to request a first meeting be set up. Both responded positively.
    - State Water Board supported our letter, including the meeting request.
    - Agenda topics for meeting with PWG – Dave sent an email with a list of suggested topics (based in part on our letter and in part on PWG's letter to us). This list included a review of the conceptual model for pyrethroids in urban runoff, discussion of urban runoff modeling example(s), presentation by PWG of their overall plan for the urban runoff part of the reevaluation, and sharing of relevant scientific information (i.e., our most recent monitoring data, their recent reports to DPR).
    - Identify our participants in meeting with PWG – Dave R., Armand, and Jamison all volunteered to participate. Jim indicated that Arleen Feng should also be able to participate. Kelly & Dave T. will also participate.
    - Due to persistent ringing on the telephone line, the subcommittee postponed discussion of additional details of preliminary meeting planning.

6. CASQA Conference (Dave, Jason, 10 mins.)
    - Discuss possibility of doing a session at the conference –this was postponed to email and to the next call due to the noise on the teleconference line.
    - Possible topics might include:
        1) status of pesticides regulation/management (overview)
        2) DPR activities
        3) Local studies

4) BMP programs
   - **Action item**: Kelly will initiate an email dialog on topics/speakers.

7. Supplemental funding for subcommittee activities (Dave, 5 mins)
   - Dave is drafting a fundraising letter. He will be discussing this with the Board and the EPC.
   - It would be very helpful for someone to volunteer to take meeting notes.
     - **Action Item:** Please consider whether you would be willing to volunteer to do the notes for subcommittee meetings.

8. Next meeting
   - **Monday May 19, 1:30 p.m. (via teleconference)**
   - Items for discussion:
     - Plan for participation in CASQA conference (abstracts due Friday May 23)
     - Review and discuss draft pyrethroid monitoring data compilation
     - DPR Pyrethroid Reevaluation—continue planning for a meeting with PWG to share information about modeling, monitoring, and our regulatory context
     - Discuss efforts to obtain supplemental funding
     - Inviting DPR to provide an update on its urban monitoring project on the July call.

CASQA Stormwater Program
Effectiveness Assessment Training
Spring 2008
Agenda

Introductions	CASQA Board Member/ Executive Director	9:00 a.m.
Overview and Objectives of Workshop	Karen Ashby	9:15 a.m.
Principals of Effectiveness Measurement	Chris Sommers	9:30 a.m.
Break		9:45 a.m.
Exercise #1 – Impact or Implementation	Karen Ashby	9:50 a.m.
Break		10:40 a.m.
Exercise #2 - Using Effectiveness Measurement Tools	Karen Ashby	10:45 a.m.
Lunch		12:00 noon
Exercise #3 – Interpreting Results	Chris Sommers	1:00 p.m.
Break		2:00 p.m.
Exercise #4 – Water Quality Assessments	Chris Sommers	2:05 p.m.
Survey		2:50 p.m.
Break		2:55p.m.
Workshop Wrap-up ❑ Summary ❑ Survey Results ❑ Q&A	Chris Sommers / Karen Ashby	3:05 p.m.
Adjourn		3:30 p.m.

CASQA Pesticides SubCommittee

Meeting Notes
January 8, 2008

On the call: Dave Tamayo, Kelly Moran, Jason Uhley, Armand Ruby, Ron Manwill, Brandt Jorgensen, Arleen Feng, Dave Renfrew

1. Review/amend agenda
   - No changes

2. Announcements and updates
   - Announcements
     - PWG requested meeting with Kelly and Arleen to discuss water quality agency comments, primarily CASQA recommendation to develop urban runoff models

3. DPR's urban monitoring plan
   - Goal: To agree on revisions to a draft letter that will help DPR create a strong, cost-effective monitoring program.
     - A draft letter and DPR's draft monitoring plan were circulated prior to the meeting.
     - The subcommittee discussed the major issues that members had identified in their review, including:
       - Key management question
       - Background/introduction length & content
       - Dry weather discharges
       - Sampling at storm drains
       - Partnerships with urban runoff programs for sample collection
       - Grab samples
       - Including herbicides
   - **Action Item:** Armand Ruby will be revising the draft letter based on the discussion during today's call. He intends to circulate it to the EPC & Board by the morning of January 14th, and will coordinate with Geoff to finalize the letter for delivery to DPR early in the week of the 22nd. He will use his notes from today's discussion to revise the letter.

4. Next meeting
   - **<u>Thursday February 21st, 10:30 a.m. (via teleconference)</u>**
   - Items for discussion:
     - DPR Pyrethroid Reevaluation: PWG meeting; DPR response to our letter on the PWG runoff proposal (if received)
     - Next steps on DPR urban monitoring plan
     - Supplemental funding for subcommittee activities

CASQA Pesticides SubCommittee

Meeting Notes
April 1, 2008

On the call: Dave Tamayo, Kelly Moran, Jason Uhley, Arlene Chun, Armand Ruby, Ron Manwill, Jamison Crosby, Brandt Jorgenson, Dave Renfrew

1. Review/amend agenda
   - No changes

2. Announcements and updates
   - Announcements
     - A call with U.S. EPA on swimming pool discharges is tomorrow. CASQA representatives are participating in order to educate EPA about the fact that pools are discharged to storm drains and to encourage them to identify impacts and mitigation measures for pool biocides.
     - Dave Tamayo was appointed to the national U.S. EPA Office of Pesticide Programs advisory committee called the Pesticide Program Dialog Committee. This is the only external stakeholder advisory committee to the Office of Pesticides.

3. Review draft letter on PWG's washoff proposals
   - Pyrethroid manufacturers have proposed two studies: one to measure pyrethroid wash-off from grass and a second to measure wash-off from impervious surfaces. A draft letter to DPR commenting on both proposals was circulated prior to the meeting.
   - The Subcommittee discussed the letter and gave directions for revisions, which are reflected in the letter.

4. Update on pyrethroids data compilation
   - Armand will circulate the draft compilation in advance of our next teleconference meeting.

5. Next meeting
   - **Friday May 2, 10:00 a.m. (via teleconference)**
   - Items for discussion:
     - DPR Pyrethroid Reevaluation—update and planning for a meeting with PWG to share information about modeling, monitoring, and our regulatory context
     - Discuss efforts to obtain supplemental funding
     - Review and discuss draft pyrethroid monitoring data compilation

CASQA Pesticides SubCommittee

Meeting Notes
May 2, 2008

On the call: Kelly Moran, Jason Uhley, Jim Scanlin, Armand Ruby, Jamison Crosby, Dave Renfrew, Brad Eggleston

1. Review/amend agenda
   - No changes

2. Announcements and updates
   - Announcements
     - Letters to EPA on pyrethroids tetramethrin (submitted) and sumethrin (in review by Board/EPC)
     - EPA cypermethrin decision – similar to permethrin, reflects CASQA's comments.
     - Call with EPA on swimming pools – more accomplished than anticipated. EPA is working on methods to model pool discharges, which would allow them to identify (and hopefully mitigate) water quality problems from swimming pool biocides.
       - **Action item**: Kelly will circulate a nifty sheet prepared by Linda Garcia that explains the simple calculation to estimate creek concentrations of pesticides when pools are discharged.
     - Dave's upcoming meetings with EPA – Dave Tamayo will be in Washington DC in late May for the U.S. EPA advisory committee called the "Pesticide Program Dialog Committee." He plans several other meetings with EPA pesticides staff to share information about pesticides in urban runoff.
     - Presentation to National Structural IPM/water quality group – Dave and Kelly presented an overview of the pyrethroids water quality issue, the connection to structural pest control, and how IPM can be an important part to solving this problem to a national workgroup via teleconference.
     - Next week's CASQA meeting in Ontario – The pesticide subcommittee's work will be featured at the meeting

3. Pesticide monitoring data compilation (Armand, 20 mins.)
   - Armand is researching and tracking down all pyrethroids monitoring data in California urban areas and urban-impacted streams.
   - He is preparing a summary of data, spreadsheet with annotated references, and a list of references.
   - Armand will circulate his work product for review on or before May 15th.

4. DPR's Urban monitoring Plan (Armand and all, 5 mins.)

- DPR provided responses to CASQA's comments. These responses were not all we had hoped—but nonetheless we should be pleased that DPR provided us with an opportunity for review (which is very unusual for DPR).
- Dry season monitoring is starting. No agencies have been contacted in regard to partnering in the sampling for either wet weather or dry weather.
- DPR issued a request for bids for doing the wet weather monitoring in San Diego. The document and the responses to bidders' questions have some information about their plan (i.e., sampling locations, sampling methods) that was not in the final monitoring plan.
    - **Action item**: Armand will circulate the request for bids and the response to bidder questions to the subcommittee.
- Members expressed concern about the lack of a plan for communication with DPR as the monitoring proceeds. It was agreed that the subcommittee should invite DPR to provide an update at the July subcommittee meeting. Possible questions were discussed, including:
    - What specific sampling locations have been selected?
    - When will sediment samples be collected? What is collection technique?
    - Have they prepared a SAP/QAPP or equivalent?
    - Do they wish to partner with municipalities to collect samples?

5. Next Steps on Pyrethroids Reevaluation (Kelly and all 15 mins)
    - PWG and DPR contacts – Dave contacted John Sanders (DPR) and Kelly contacted Jim Wells (PWG) to request a first meeting be set up. Both responded positively.
    - State Water Board supported our letter, including the meeting request.
    - Agenda topics for meeting with PWG – Dave sent an email with a list of suggested topics (based in part on our letter and in part on PWG's letter to us). This list included a review of the conceptual model for pyrethroids in urban runoff, discussion of urban runoff modeling example(s), presentation by PWG of their overall plan for the urban runoff part of the reevaluation, and sharing of relevant scientific information (i.e., our most recent monitoring data, their recent reports to DPR).
    - Identify our participants in meeting with PWG – Dave R., Armand, and Jamison all volunteered to participate. Jim indicated that Arleen Feng should also be able to participate. Kelly & Dave T. will also participate.
    - Due to persistent ringing on the telephone line, the subcommittee postponed discussion of additional details of preliminary meeting planning.

6. CASQA Conference (Dave, Jason, 10 mins.)
    - Discuss possibility of doing a session at the conference –this was postponed to email and to the next call due to the noise on the teleconference line.
    - Possible topics might include:
        1) status of pesticides regulation/management (overview)
        2) DPR activities
        3) Local studies

4) BMP programs
   - **Action item**: Kelly will initiate an email dialog on topics/speakers.

7. Supplemental funding for subcommittee activities (Dave, 5 mins)
   - Dave is drafting a fundraising letter. He will be discussing this with the Board and the EPC.
   - It would be very helpful for someone to volunteer to take meeting notes.
     - **Action Item:** Please consider whether you would be willing to volunteer to do the notes for subcommittee meetings.

8. Next meeting
   - **Monday May 19, 1:30 p.m. (via teleconference)**
   - Items for discussion:
     - Plan for participation in CASQA conference (abstracts due Friday May 23)
     - Review and discuss draft pyrethroid monitoring data compilation
     - DPR Pyrethroid Reevaluation—continue planning for a meeting with PWG to share information about modeling, monitoring, and our regulatory context
     - Discuss efforts to obtain supplemental funding
     - Inviting DPR to provide an update on its urban monitoring project on the July call.

CASQA Pesticides SubCommittee

Meeting Notes
May 19, 2008

On the call: Kelly Moran, Dave Tamayo, Jason Uhley, Jim Scanlin, Armand Ruby, Jamison Crosby, Brad Eggleston

1. Review/amend agenda
   - No changes

2. Announcements and updates
   - Announcements
     - Letter to EPA on pyrethroid sumethrin submitted. Do members want copies? Agreed that circulation to subcommittee not needed—finding final letters on CASQA web site is fine.
     - Dave is participating in meetings with U.S. EPA Office of Pesticides this week
     - Pentachlorophenol—Penta is a wood preservative used almost exclusively in utility poles. EPA "revised" risk assessment is being circulated for comments & risk mitigation. Dioxins contamination in penta is a concern. EPA did not assess urban runoff. Possible conference call with EPA staff to discuss.
     - Two response letters were received from DPR—one on sediment toxicity testing, one on urban runoff. Kelly is evaluating them. We will schedule discussion for our next meeting.
     - County of Riverside received a Notice of Violation (NOV) for not completing a toxicity identification evaluation (TIE) and developing a Toxicity Reduction Evaluation (TRE) in what the San Diego Water Board believes to be a timely manner. The toxicity was found to be pyrethroid-related toxicity. Riverside County's understanding of the definition of the words regarding timely action in their permit was different than the understanding of the Water Board.
       - **Action item**: Jason will circulate the applicable portions of their permit and the NOV to the subcommittee.

3. Pesticide monitoring data compilation
   - Armand researched pyrethroids monitoring data in California urban areas and urban-impacted streams. He prepared a summary of data, spreadsheet with annotated references, and a list of references.
   - Armand reviewed and the subcommittee discussed Armand's draft documents. Comments will be reflected in Armand's revised documents.
   - The subcommittee discussed possible risks of sharing the data compilation. Since all studies are public, risks seem limited and benefits seem high. Subcommittee should recommend public distribution of this information by CASQA.

SAN DIEGO
HYDROMOD MEETINGS

INTERIM HYDROMODIFICATION CRITERIA WILL BE IN EFFECT IN SAN DIEGO COUNTY STARTING MARCH 24, 2008

APWA
www.apwa.net

THE SAN DIEGO AND IMPERIAL COUNTIES CHAPTER OF THE
AMERICAN PUBLIC WORKS ASSOCIATION (APWA)

ANNOUNCE A SEMINAR DISCUSSING

HYDROMODIFICATION MANAGEMENT AND CONTINUOUS SIMULATION HYDROLOGIC MODELING FOR PLAN REVIEWERS

Hydromodification refers to the change in the natural watershed hydrologic processes and runoff characteristics (i.e., interception, infiltration, overland flow, interflow and groundwater flow) caused by urbanization or other land use changes that result in increased stream flows and sediment transport.

Pursuant to the San Diego Regional Water Quality Control Board "Municipal Permit" Order No. R9-2007-0001 adopted on January 24, 2007, the Municipal Storm Water Copermittees are required to prepare a Hydromodification Management Plan (HMP) and incorporate its requirements into their Standard Urban Storm Water Mitigation Plans (SUSMPs).

Interim Hydromodification Criteria will be in effect in San Diego County starting March 24, 2008!

The seminar will discuss available **hydrologic modeling software** that may be used to perform the **continuous simulation hydrologic computer modeling** required for hydromodification management planning and design in San Diego County:

HEC-HMS: The widely used and accepted United States Army Corps of Engineers model HEC-HMS (Hydrologic Engineering Center – Hydrologic Modeling System) has two different ways of performing continuous simulations. Mr. Marty Teal of WEST Consultants, Inc. will present a brief overview of hydrologic modeling using HEC-HMS, a description of the capabilities and limitations of the program, and discussion of the two ways to perform continuous simulations. Modeling of Low Impact Development (LID) and hydromodification management facilities will also be addressed. Particular attention will be given to review of HEC-HMS submissions and items that merit the greatest scrutiny by reviewers.

HSPF: HSPF (Hydrological Simulation Program – Fortran) is a continuous simulation hydrology program developed for the United States Environmental Protection Agency. Mr. Doug Beyerlein and Mr. Joe Brascher of Clear Creek Solutions, Inc. will present a brief introduction to continuous simulation hydrologic modeling using HSPF, HSPF UCI and WDM files, and HSPF PERLND, IMPLND, and FTABLE components. The presentation will demonstrate how to use HSPF to represent and size different types of hydromodification management facility designs. The presentation will show plan reviewers how to check to see if a HSPF run is reasonable, and will also show how they can use the HSPF-based San Diego Hydrology Model (SDHM) to make that review easy.

The presentations will be geared toward plan review.

Seminar Endorsed by:

The County of San Diego

Wednesday
April 9, 2008

Metropolitan Operations Center II (MOC II)
9192 Topaz Way
San Diego, CA 92123

8:00 a.m. to 4:30 p.m.

Registration: **Starts at 7:15 a.m.**

Cost: **$150/each includes morning refreshments and box lunch - NO REFUNDS**

Contact Info: **Dennis Bowling or Katie Clevenger at (619) 291-0707 (Rick Engineering Company)**

TO REGISTER

Seating is limited, please register before **March 31, 2008.**

To ensure your reservation, **mail this form in with non-refundable check payable to APWA,**
c/o Katie Clevenger, 5620 Friars Road, San Diego, CA 92110.

Hydromodification Management Plan Technical Advisory Committee

Meeting Minutes

Wednesday, February 20, 2007
1:00 – 4:00 p.m.
City of San Diego
Metro Biosolids Conference Room
San Diego, CA

ATTENDEES:

Allen	Vaikko	Contech Stormwater Solutions
Agahi	Sara	County of San Diego
Batta	James	City of San Diego
Beighly	Ed	San Diego State University
Borak	Livia	San Diego Coastkeeper
Bowling	Dennis	APWA (San Diego and Imperial Counties) – Rick Engineering
Chang	Howard	Chang Consultants
Chavez	Servero	BDS Engineering
Cloak	Dan	Dan Cloak Environmental Consulting
Collison	Andy	PWA
Dadkhah	Arsalan	City of National City
Edwards	George	Orange County Stormwater Program
Flake	Michael	Brown & Caldwell
Franz	Karen	SD Coastkeeper
Garcia	David	Riverside County Flood Control TWCD
Gardiner	Nancy	Brown & Caldwell
Haghgoo	Sassan	City of San Marcos
Hawk	Rob	City of San Diego
Justus	Jeff	ASLA, Schmidt Design Group, Inc.
Kunichige	Ross	BDS Engineering
Maher	Masih	City of Encinitas
Molloy	Scott	BIA
Moore	Matt	URS for Port of San Diego
Mosolgo	Eric	RBF/BIA
Nabong	Jim	City of San Diego
Najera	Crystal	City of Encinitas
Nakagaiva	Jim	City of Imperial Beach
Ogawa	Mikhail	Representing City of San Marcos
Ratta	Jamal	City of San Diego
Reichard	Eric	US Geological Survey
Sattler	Erik	Spear & Associates/ North County Civil Engineers & Land Surveyors
St.Clair	Ken	City of San Marcos
Tam Sing	Garret	State of California, Dept. of Water Resources
Teal	Marty	WEST Consultants
Walker	Tory	NCCE&LSA – Tory Walker Engineering, Inc.

I. Introductions and Rules (Mikhail Ogawa, Representing City of San Marcos)

Mikhail Ogawa has agreed to assume the role of Coordinator for the HMP Technical Advisory Committee. He opened the meeting, and then all TAC members and representatives of the Co-permittees and general public introduced themselves.

II. Purpose of TAC (Dennis Bowling, Rick Engineering)

Dennis Bowling has offered to serve as the Facilitator of the TAC meetings. He introduced himself, then outlined the purpose and "ground rules" for the TAC. The purpose of the TAC is to bring together a group of professionals that can assist the Project Team with Hydromodification Management Plan (HMP) development. The HMP must incorporate a set of tools that will work on all projects, large and small. The ground rules include (1) Ensuring that all TAC participants have a voice; (2) All TAC participants will have the opportunity to "hold the floor" to make points; (3) TAC participants should limits their comments to 5 minutes; (4) Once all of the TAC members have been given the opportunity to speak, the audience will have a few minutes to discuss the topic at hand; and (5) The objective will be to reach consensus on each issue, including voting if necessary. Sara Agahi added that this group is technical only, and will not be making any policy decision (the Co-permittee HMP Workgroup will be responsible for making policy).

Sara explained that the Regional Board municipal storm water permit that was adopted in January 2007 requires the development of the HMP and set an early deadline for an Interim HMP that applies to projects disturbing ≥50 acres. The Co-permittees received a 2-month extension for developing the Interim HMP, to March 25, 2008, due to the 2007 firestorms. The Co-permittees must develop and submit a complete Draft HMP by January 24, 2009. They will then have 6 months following receipt of comments from the Regional Board to modify ordinances and implement the HMP.

III. Hydromodification Management Plan Consultant Team Presentation (Dan Cloak and Andy Collison)

Nancy Gardiner introduced the Consultant Project Team, which includes Brown and Caldwell as the prime, Philip Williams & Associates (for geomorphology), and Dan Cloak (for programmatic development and LID support). This is the same team that developed the HMP for Contra Costa County, which was approved by the San Francisco Bay Regional Board.

Dan Cloak then presented a PowerPoint presentation describing the team's approach to developing the HMP and Model SUSMP update.

Dan described the history of Low Impact Development (LID) in California. He noted that LID is really not a new concept, as it was used in the well-known Village Homes development project in Davis in 1978. In 1994, the Bay Area Stormwater Management Agencies Association (BASMAA) sponsored *Start at the Source*, a document describing the application of LID principles. Throughout the 1990s, more attention bean to be focused on flow control and ways of designing impervious surfaces to control runoff.

In the early years, NPDES storm water permits focused on the characterization of urban runoff and reduction of pollutant loads. BMPs focused more on "end of the pipe treatment" with the philosophy of "do what you can, where you can." After the publication of *Start at the Source*, and Tom Scheueler's 1994 landmark article "Importance of Imperviousness," more people became aware of the impact of increased runoff frequency on small streams. More people realized that you need peak flow control over a range of storm sizes, thus indicating the need to do continuous hydrologic simulation modeling. In Prince George's County, MD, LID developed as an alternative to treatment

detention basins. The idea was to preserve site hydrology and natural functions. LID was also referred to as "site design," "bioretention facilities," and "rain gardens." In Portland, OR, a new manual was developed that included standard designs and a formula for sizing LID facilities. The *Bellflower* decision refined the MEP standard. Finally, the San Francisco Regional Board added hydrograph modification management requirements in its permits.

To address the HMP requirements, Contra Costa County considered LID as a means to achieve compliance with both NPDES treatment and flow control requirements. The Contra Costa approach also focuses public resources on helping small developments, infill projects, and redevelopment projects comply with NPDES requirements. As a result, the Contra Costa HMP facilitates the use of LID, such as the incorporation of bioretention areas into residential subdivisions. This can even be achieved in hillside areas with historical landslide areas by lining the bioretention areas to prevent deep infiltration.

The ultimate goal in developing an HMP is to create an implementable development review process. Integration of LID principles would ideally be discussed at the pre-application meeting, where issues such as design, layout, and long-term O&M responsibility would be discussed and resolved. The concept would be to create a regulatory compliance approach that includes ordinances that provide Countywide consistency, empowers municipal reviewers, and provides a mechanism for updates. It should provide options and flexibility, as well as design criteria and specifications.

Dan showed some examples, including basic designs for a swale, planter box, and dry well (where soils permit). He then described the process for sizing treatment controls. Specifically, the concept is to delineate drainage areas within the site, then make assumptions for sizing (e.g., assume rainfall rate is 0.2 inches per hour and planting medium infiltration rate of 5 inches per hour, then calculate the required BMP sizing as 0.2 in./5 in. = .04, or 4 percent of the site area. Dan noted that most LID controls are designed such that they provide several inches of reservoir storage.

Dan then described how LID can also provide flow control. He described a process he applied in Contra Costa County whereby 300 years of rainfall record were simulated over a hypothetical 1-acre site. The pre-project condition was analyzed and compared to the 100 percent impervious condition. These scenarios were analyzed for different soil types (A, B, C, and D). The LID controls were added to the model to evaluate their effects. This analysis showed that it is possible to shift curves down by applying LID controls.

In terms of the applicability of this concept in San Diego, Dan noted that we need to translate stream flow objectives into criteria for individual development sites and create easy-to-implement criteria for smaller developments and redevelopment sites. Reasonably-sized LID facilities provide the option to apply site-specific hydrologic analysis.

Next, Andy Collison of PWA presented an overview of "HMP Basics." The overall concept is to manage increases in the frequency and duration of runoff in order to prevent channel degradation. The permit specifically requires the use of continuous simulation modeling because it is a more geomorphologically appropriate method to evaluate the impacts of flow - for any given recurrence interval, peak flow and flow duration tend to increase with development.

Channel morphology changes in response to changes in flows and sediment load. However, the majority of erosion occurs over a specific range of flows rather than all flow conditions. You must assess all flows in order to define the range of conditions that causes the most erosion. The issue of defining the limits of flow conditions that must be managed is a controversial one, and different

stakeholders will likely have differing opinions about what the "correct" limits are – thus, need input from the TAC on this.

The analysis involves looking at the frequency of flows, as compared to the amount of suspended solids. It has been found that most geomorphic "work" (changes in channel conditions) occurs around the Q2 event. Therefore, flow controls should target that range of flows that do the most work. The RWQCB Order requires that the HMP must define a range of flows to be controlled. This can be accomplished through curve matching over a range of conditions. However, this involves quite a lot of modeling. Alternatively, using LID doesn't require modeling (the San Francisco Board accepted this premise, it is not certain that the San Diego Board will concur).

Different regulatory approaches toward HMP in California have resulted in different approaches to defining thresholds, and the lower value has tended to be more difficult to establish. For example, Santa Clara and Contra Costa set a lower threshold of 0.1Q2, while Los Angeles set an interim lower threshold of Q2.

- Question (Masih Maher): Is there a manual that describes the methodology for doing this?
    - Response (Dennis Bowling): There will be an APWA workshop for plan checkers on April 9th to address this topic.

- Question (Sassan Haghgoo): As far as the model is concerned, what is the definition of a "stream?"
    - Response (Andy Collison): This is a question for the Regional Board. Sara added that a USGS blue line stream would seem to qualify, but that we do need input from the Regional Board.

- Comment (Masih Maher): In some situations, a stream may have a very large watershed draining into it.

- Question (Tory Walker): Is consultant team planning to tie into long-term San Diego histogram data like in the Bay Area?
    - Response (Andy Collison): Yes. However, flow conditions in San Diego may be different than in the Bay Area, so we may want to focus more on the Q5, as studies indicate that more geomorphic work occurs here during less frequent flows. Ultimately for the Interim HMP, we came with interim standard range of 0.2Q5 – Q10.

- Question (Eric Mosolgo): Do you have an estimate of the percentage of work that is done over that range?
    - Response (Andy Collison): Not yet, but we will eventually.

- Question (Tory Walker): When are you going to know more about the 2 watersheds on which you based the Interim HMP (such as the amount of development going on there)?
    - Response (Andy Collison): There will be more data gathering through the early stages of this project.

- Comment (Howard Chang): I would like to hear about how you will address the linkage with sediment supply (which is connected with soil loss in the watershed). Even if you control flow, you will have downstream erosion. This has been shown in Calleguas Creek and on studies in Orange County where there was major stream destabilization, period. Anytime you

cut off the sediment load you will get downstream erosion. The "tolerance" of the system depends on the percentage of urbanization.

- Response (Andy Collison): Acknowledged that Dr. Chang has a point. This point has generally not been addressed in other HMPs, but it is a valid issue. The San Diego project will attempt to address the sediment issue.

Andy reiterated the point that LID will be taken into account in the HMP, so developers would receive credit. There will also be exemptions for conditions such as drainage into hardened channels, storm drains discharging directly into the Bay, and channels in watersheds that are >70 percent impervious.

Question for the TAC (Andy Collison): The consultant team would like input from the TAC about local streams that have good pre- and post-development channel morphologies. Alternatively, we could use a theoretical approach in which we build multiple synthetic watersheds and multiple receiving water channels and run them through HSPF models. Then we could add hypothetical developments and test the response under various flow control thresholds. We could also discharge that runoff through sediment transport models.

- Comment (Howard Chang): You would need to quantify sediment production and sediment supply in the watershed.
  - Response (Andy Collison): Agreed that this is scientifically true, as PWA is doing some work in LA County and has found that half the problem (with downstream erosion) is due to a reduction in sediment load and the other half is due to increase in flow. Tory Walker suggested looking into some of the work underway in South Orange County and Newport Beach.

- Question (Marty Teal): "real watersheds" are site-specific. How confident are you that the synthetic model will be representative?
  - Response (Andy Collison): The idea is to capture typical conditions. Also, the models can simulate a range of conditions. How it would work is as follows. We will create a synthetic watershed in HSPF and model a range of flows. Then model a range of representative receiving waters using a sediment transport model (HEC-RAS 4.0 or USDA-Concepts). We would then take the continuous output from HSPF and apply to channels to see if erosion occurs, then correlate flow controls. It is possible we could end up with more than one set of thresholds for different conditions.

IV. Questions for the TAC/RWQCB

Andy posed two questions for the TAC to consider, as follows:

- How much receiving channel erosion is tolerable?
- How should we treat aggrading channels?

Tolerable Erosion

As a starting point for "tolerable erosion," we could look at a histogram of "geomorphologic work" and control the peak, +/- 1 Standard Deviation. This question has been addressed in other HMPs by conducting a stochastic analysis to determine the probability of channel enlargement.

- Comment (Howard Chang): You could look at some of the channel stabilization studies in Sorrento Creek. Some work has also been done in Lake Forest (Orange County), which has turned out to be very expensive.

- Question (Vaikko Allen): It is true that we don't have to consider antecedent conditions, right?
  - Response (Andy Collison): That is correct.

- Question (Vikko Allen): What about using other criteria, such as Index of Biological Integrity (IBI) as a way to evaluate impacts?
  - Response (Dennis Bowling): We need to be very careful about what limits we specify, as they are very difficult to change once numbers are out there. Dan Cloak also noted that we will also have to work with the RWQCB, which was quite an involved process in the Bay Area. Tory Walker added that the San Diego RWQCB is quite different from the Bay Area RWQCB and often sets requirements that are difficult to meet.

- Comment (Masih Maher): In Escondido Creek, there is invasive arrundo which slows down the runoff and causes flooding. However, if you remove all of the arrundo, you will cause erosion – Escondido Creek is aggrading.

- Comment (Vaikko Allen): We may want to consider using a cost-benefit approach – for example, if you control 90 percent of the erosion, it will cost $X; if you control 80 percent of the erosion, it will cost $Y.

- Comment (Jim Nakagaiva): The Tijuana River watershed drains into Imperial Beach. How can you control a river that drains a watershed that is mostly in Mexico?

<u>Aggrading Channels</u>
Dan Cloak pointed out that in Contra Costa County; it was negotiated that if a channel is hardened, tidal, or aggrading, then the developer can get an exemption. Some of the Bay Area cities had maps showing where these areas are located. However, aggrading streams are not always mapable. Andy Collison added that the requirements will have much greater impacts in small watersheds (e.g., 1-3 mi^2) and less impact in larger watersheds.

- Comment (Tory Walker): Under the new permit requirements, both municipalities and developers are significantly burdened. We are also in a recession, and fees are high. Dennis Bowling added that a "one size fits all" approach may not work.

- Question (Sara Agahi): There is a provision in the permit that the Co-permittees must address cumulative impacts in the watershed. Was this addressed in Contra Costa County?
  - Response (Dan Cloak): No, this issue was not addressed. The sediment cut-off issue was not addressed either. Dennis Bowling cautioned that we should not go beyond what the permit requires.

- Question (Vaikko Allen): How would you address cumulative impact?
  - Response (Andy Collison): You would need to consider thresholds in the context of the development taking place in the watershed, and this may change through time.

- Question (Sara Agahi): In the San Francisco Bay area, there was not coordination with flood control – and I think there should be here in San Diego. How best can we connect flood control and water quality?
  - Response (Andy Collison): The sediment issue could provide a nexus. Dan added that we might be able to include multi-objective projects. Eric Mosolgo said that he

has experience working on some of these projects, and added that you can tell where streams are aggrading based on where there is vegetative growth. And Collison pointed out that obviously, flood control and water quality control target different sized storm events. Finally, Tory Walker cautioned that we should be careful in setting the upper limit of flow control, as the RWQCB may want to increase it.

V. Co-permittee Deliverables (Sara Agahi)

Sara briefly reiterated the schedule for submittal of the deliverables to the RWQCB.

VI. Set Next Meeting Date (Sara Agahi)

The group discussed the fact that the next meeting will depend on the needs established through the overall project schedule and would be determined at a later date.

VII. Adjourn

The 2008 Calendar offered pictorials of recreational and scenic areas in Riverside County. Each graphic provides a brief description and location of the area, along with Best Management Practice tips. The 20,000 calendars printed were distributed through the County and City Library Systems.

Our 10 x 10 EZ Up is imprinted with the Only Rain Down the Storm Drain logo and is taken to all of our outside event commitments. The logo is easily recognizable and the 800 Toll Free number to call for reporting the illegal disposal into the storm drain is also clearly visible.

SURVEY FOR MEASURING AWARENESS AND EFFECTIVENESS

DO YOU KNOW HOW TO PROTECT OUR STREAMS, RIVERS and LAKES?

City_____ Zip Code_____ Age_____ Sex ☐ F ☐ M Date: _____

1) Water that leaves your lawn from **Irrigation (water sprinklers), Car washing** and **Rain** flows down streets and/or storm drains and then directly to...

☐ Sewage Treatment Plants ☐ Streams, rivers & lakes

2) Which of the following can LEGALLY be disposed into the storm drain? (*Circle all that apply*)

- **Useable Household Chemicals**
- **Yard waste/clippings/leaves**
- **Paint**
- **Cigarette butts**
- **Empty Household Chemicals containers**
- **Pet Waste**
- **Motor Oil / antifreeze**
- **None of these**

3) Do you feel you are well informed and aware of illegal dumping into the storm drain and its impact in your community or streams, rivers and lakes?

☐ Yes ☐ No

HOW DID YOU DO?

1) Water that leaves your lawn from irrigation, washing your car, or rainwater runoff can pickup motor oil and grease from vehicles, excess fertilizer from your lawn, bacteria from pet waste, and excess pesticides from your yard. These pollutants can be carried down streets and storm drains directly to our streams, lakes, and rivers without treatment! That is why we must take care to properly dispose of waste, maintain our vehicles, and use fertilizers, pesticides and other chemicals only as specified on their labels.

2) It is illegal to dispose of any chemical, constituent or waste into a storm drain! Report illegal disposal of chemicals, constituents, or waste to storm drains at **1(800) 506-2555.** You may properly dispose of many of the wastes listed above by doing the following things:

- **Usable and empty household chemicals, paint, motor oil** – Properly dispose these at Household Hazardous Waste and/or Antifreeze, Batteries, Oil and Paint disposal facilities and events. Call **1 (800) 506-2555** for information on disposal locations and special drop off events near you.
- **Pet waste** – Carefully pick up and dispose in the nearest trash receptacle.
- **Grass, clippings, leaves and yard waste** – Collect and dispose in green waste bins or composting areas that are designed to prevent the compost from mixing with excess irrigation water and/or rainwater runoff.

3) Would you like to learn more about protecting our streams, rivers and lakes or wish to report on a illegal storm drain disposal in your area or request a classroom or group demonstration.....

Visit www.floodcontrol.co.riverside.ca.us/stormwater or call **1 (800) 506-2555.**

Remember...Only Rain Down the Storm Drain!

This is the newest version of an older and lengthier survey used to poll attendees at events for measuring storm water pollution prevention awareness and effectiveness. The General Public is more receptive to completing this survey because, it's brief, to the point and informative. Once the survey has been filled out, the responder is given the perforated portion below to review his/her answers and the top portion is entered into a data base for review and assessment. Below are the data results from the March Air Show who reside in the Santa Margarita Watershed area.

The demographic age and gender breakdown from completed and submitted surveys.

1.0 Summary

This report addresses the Riverside County Fire Department's Hazardous Materials Response Team activities for the period of July 1, 2007 to June 30, 2008. The report details program development, public outreach efforts, municipal staff training, runoff prevention measures, and call summary. Hazardous Material Response Team activities included in this report were actual hazardous material releases that potentially threatened the watersheds of the Santa Ana, Santa Margarita, and Whitewater Rivers overseen by the Riverside County Flood Control and Water Conservation District.

2.0 Introduction to the Hazardous Materials Response Team

The 2007/2008 Annual Report on Hazardous Materials Emergency Response Team Activities summarizes responses to environmental emergencies for the purpose of controlling the release of toxic materials and minimizing the impact on public safety and the environment. The Riverside County Fire Department Hazardous Materials Response Team, established in 1986, continues with its mission of providing service within Riverside County through a partnership program that combines the efforts from Cal Fire/Riverside County Fire Department and the Hazardous Material Branch of Riverside County Environmental Health.

The Hazardous Materials Response Team responds to environmental emergencies within the County of Riverside and proves mutual aid to Imperial County. An additional responsibility of the HMRT is oversight and coordination of the NPDES Storm Water Discharge Permit for Riverside County Fire Department facilities. The HMRT oversees maintenance and implementation of the Storm Water Pollution Prevention Program (SWPPP) for county fire stations and facilities which includes the implementation of Best Management Practices (BMPs) municipal employee training and Riverside County Fire Fighting Agencies BMPs.

Riverside County Fire Department is one of the largest fire departments within California in both geographic coverage and firefighting personnel, providing emergency service to Riverside County and the cities of Banning, Beaumont, Calimesa, Coachella, Desert Hot Springs, Indian Wells, Indio, La Quinta, Moreno Valley, Palm Desert, Perris, Rancho Mirage, San Jacinto, and Temecula. The Riverside County Fire Department operates 96 fire stations with over 1200 employees.

3.0 Program Management and Development

With the continued development and population growth of Riverside County, total numbers of emergency incidents are increasing. Riverside County Fire Department is committed to meeting the demand for public service and has developed plans and contingencies for continued expansion through placement of new facilities and additional personnel. With the increase in the total number of emergency incidents, there is a related increase in Hazardous Materials related incidents. The Hazardous Material Response Team is meeting this increase in service with the following program developments:

- FY 2001/2002, this year saw the development of two dedicated Hazardous Materials Response Teams, consisting of five Firefighter/Hazardous Material Technicians per team. Team One is located in Winchester, CA and Team Two is located in Palm Desert, CA.

- FY 2002/2003, the purchase of three new hazardous materials response vehicles, consisting of two support trucks, and a tractor-trailer main unit. The main unit was assigned to Hazmat Team 1 and one support truck is assigned to each team. There have been additional purchases of equipment and monitors to ensure a full compliment of tools for both teams.

- FY 2003/2004, two Mass Decontamination Response Trailers, capable of treating 200 patients per hour, were purchased with grant money and placed in-service for both teams. A change in the designators for the Hazardous Materials Response Teams was made; "Hazmat 1" and "Hazmat 2" became "Hazmat 34" and "Hazmat 81", to reflect the geographic locations of the Hazmat Response teams, improving communications and organization.

- FY 2004/2005, participating fire departments within Riverside County developed Best Management Practices (BMPs) that are intended to be used by fire fighting agencies for urban runoff management. These BMPs are a requirement of the Riverside County Municipal Stormwater permit (section XI.B) adopted by the Santa Ana Regional Water Quality Control Board (SARWQCB). Due to an operational need the two response teams were combined into one team and separated into three locations.

- FY 2005/2006, the Hazardous Materials Response Team was reorganized into two distinct teams, Hazmat 34 at Winchester Fire Station 34 and Hazmat 81 at North Bermuda Dunes Fire Station 81. Daily on duty staff is 10 Hazardous Materials Specialists providing service to the county.

- FY 2006/2007, approximately $25000.00 was expended on Vetter air bags to replace older complements and add to the capabilities of Hazmat 81. Vetter air bags are a significant tool that can be used to occlude accidental discharges from impacting the storm water system. Further developments, the installation of MDTs (mobile data terminals) in all front line fire equipment, and Riverside County environmental health officer vehicles. This allows for improvements in locating and responding to incidents, orthographic mapping of incidents and integrating technology which the ability to access the Health Department's Business Response Plans. A $400,000 purchase has been approved to replace the main Hazmat Response Team vehicle at Station 81 and it is scheduled to be placed in service in FY 2007/2008.

- FY 2007/2008, with the growing needs of Hazardous Materials Response, the Hazardous Materials Response Team was granted additional staffing at each station. Winchester Fire Station 34 and Bermuda Dunes Fire Station 81 each have a Paramedic Engine with Hazmat trained people on them. This increased the daily staffing to 16 Hazardous Materials Technicians and Specialist to provide service to the county.

4.0 Public Education

The Hazardous Materials Response Team is available for public education, and dedicates time to provide information and education regarding environmental safety and Storm Water Pollution Prevention. Both teams have participated in public relation and education events during FY 2007/2008 on an average of 1- 2 per month. Hazmat Response Team personnel are made available to provide information and education through direct public contact, and materials. These events have included:

- The Riverside County Fair held annually at Indio, CA.

- Educational presentations at public schools, grades K through 12.

- Safety fairs held at the cities of La Quinta, Hemet, Perris, Moreno Valley, and Temecula.

- Public events within Riverside County.

Public information and education is provided through materials that the Hazardous Materials Response Team hands out during the various events that are attended during the year and information that team members provide during equipment displays.

- "Household Hazardous Waste Collection Site Schedule" (schedule) Riverside County Environmental Health.
- "Household Hazardous Waste" (pamphlet), Stormwater Cleanwater Protection Program.
- "Stormwater Pollution, What You Should Know" (pamphlet) Stormwater Cleanwater Protection Program.
- "Stormwater Pollution, Outdoor Cleaning Activities" (pamphlet) Stormwater Cleanwater Protection Program.
- "Storm Drains Flow directly to our Waterways" (poster) Stormwater Cleanwater Protection Program.

5.0 Municipal Employee Training

Successful Storm Water Pollution Prevention is dependent upon a standard operation policy and effective education of department employees. Team members from the Hazardous Material Response Team are available to train and educate the approximately 1200 Riverside County Fire Department personnel on the Storm Water Pollution Prevention Program and the National Pollution Discharge Elimination System. In previous years, the training was conducted at individual fire stations, or during employee orientation at Clark Training Center.

To comply with NPDES permit requirements for municipal employee training, and to ensure a consistent training program, Riverside County Fire Department produced a video training program that is distributed to all 95 fire department facilities to compliment the SWPPP manuals that are available for reference at the facilities. Employees are encouraged to view the program on an annual basis. The training covers BMPs, (best management practices) that apply to municipal facilities.

Fire Station/Municipal Facility Activities

- Dispensing of Fuel.
- Vehicle and equipment parking and storage.
- Vehicle and equipment maintenance.

Location	

Complaint A gentleman was hosing off a coolant unit from this business and the rinseate ran down the parking lot, flowed into the street gutter and went into a storm drain that dumped the water into Long Canyon Wash just upstream of Commerce Center Drive.

Findings 8/28/07: David Ortega, NPDES Section, Riverside County Flood Control (RCFC) District, was performing routine "dry weather" monitoring at Long Canyon Wash when he noticed that water was flowing from this business into Long Canyon Wash just upstream from the monitoring location. Before Mr. Ortega took any field water quality parameters from Long Canyon Wash, he went to the business and spoke to a gentleman who was washing down a coolant unit from an open warehouse door and onto the property's side parking lot. Mr. Ortega noted to the gentleman about the County's Stormwater/Cleanwater program and stated that only rain and irrigation water belongs in the storm drains. The gentleman replied that the coolant being washed down "has only water being washed down". Mr. Ortega noted to the man that his rinseate might wash down metals from this unit into the storm drain because of the visible corrosion on the unit. Mr. Ortega also let the man know that he will be referring this matter to Aldo Licitra from the City of Temecula, an RCFC co-permittee, for a possible further investigation on this matter.

Action 8/28/07: Mr. Ortega took a few photos of the coolant unit being washed down and of the path of rinseate flowing down the property's parking lot, into the street gutter and into a storm drain that is directly above Long Canyon Wash. Mr. Ortega also called Aldo Licitra from the City of Temecula to inform him of this matter. NOTE: Long Canyon Wash at Commerce Center Drive is not an RCFC District maintained facility. Mr. Licitra visited the complaint address later the same day. He noted that this business is not on the City of Temecula's inspection list since it is a children's gymnastics studio. Mr. Licitra spoke to the facility custodian today who had created the discharge and informed him of the violation. He had washed down a portable water-cooled fan used to blow air into the facility. Mr. Licitra provided the custodian some onsite education and gave him a verbal warning to cease any further discharges onto the pavement. The custodian stated that the fan is not washed frequently. Mr. Licitra directed the custodian to perform this type of cleaning activity over his existing landscaping or gravel areas that were on the site in order to infiltrate the wash water. Mr. Licitra did not see any further discharges during a subsequent follow-up drive-by a few days later.

Complaint Complainant is reporting dumping of possible chemicals in to the street gutter by her next door neighbor.

Findings 4/30/08: David Ortega of the NPDES Section at the Riverside County Flood Control (RCFC) District received this complaint call today from Melanie Hastings (complainant). Ms. Hastings stated that her next door neighbor (complaint address) has a dog grooming business that she operates out of her garage. Ms. Hastings said that at various times of the day, she notices a liquid discharge in the street gutter and "it smells really bad, like raw sewage". This discharge is going into a storm drain down the street. Mr. Ortega asked Ms. Hastings is there an active liquid discharge going on right now at the time of her call. Ms. Hastings replied negative.

Action 4/30/08: Mr. Ortega asked Ms. Hastings to call him on his cell phone number, (951) 961-9574, if and when there is an active discharge going on so that either he can get someone from the City of Temecula to come out there to investigate or that he will try to stop by to investigate this complaint himself. 5/1/08: Mr. Ortega spoke to Aldo Licitra of the City of Temecula about this complaint. Mr. Ortega emailed a copy of this complaint call report to Mr. Licitra.

Complaint Caller is reporting an unknown sheen of a white substance from an unknown source. Caller states that this whitish substance has been flowing down the whole street and around the corner. Caller believes that this substance may be from someone in the neighborhood who may have been painting but he is not sure. Caller is not sure if the material has reached a storm drain or waterway.

Findings 5/12/08: NRC called the Governor's Office of Emergency Services (OES) to report this release. The OES issued a Hazardous Materials Spill Report, Control# 08-3448, concerning this incident. NRC Report# 870675. The OES report states that it is unknown if water and/or drinking water was involved and/or impacted from this release. NRC and the Riverside County Environmental Health Department were notified about this incident. There are two (2) Riverside County Flood Control District facilities that are located about .3 mile away from the complaint address: "Warm Springs Line C Sugarberry" and "Warm Springs VY Torrey Pines Storm Drain".

Action

Riverside for pH analysis. 1600 hours: Mr. Winters arrived at Babcock Labs and checked the samples into the lab. Mr. Winters notified David Ortega of the incident. Case forwarded to the Riverside County D.A.'s Office (Ted Ryan) for follow up. Mr. Winters has a few photos of his sample locations, map of the scene and Babcock Lab results of the samples that were submitted. Sample KW042808-901 pH analysis result is 12.4, Sample KW042808-02 pH analysis result is 11.2, Sample KW042808-03 pH analysis result is 11.3 5/22/08: David Ortega spoke to Samantha Phillips, County Code Enforcement Officer, about this incident. She noted to Mr. Ortega that there was no NOV and/or citation issued to the responsible party (California Pools and Spa) for this incident. She did state because this case was sent to the County D.A.'s Office as a criminal case. Mr. Ortega completed this complaint call report today and fowarded it to J. Uhley and A. Chun at the RCFC District and to Mike Shetler at the Riverside County Executive Office as an "FYI".

Complaint Vandalism has caused a sewage leak that has been flowing for the past 60 minutes at approx. 25 gallons per minute.

Findings 3/19/08: EMWD called the Governor's Office of Emergency Services (OES) to report this sewage leak. The OES issued a Hazardous Materials Spill Report, Control# 08-2188, concerning this incident. The OES report states that the reporting party (EMWD) is considered a third party to this leak and they are unsure what product is from. The sewage has spilled into a park. The OES report also states that it is unknown if water was involved from this incident and it is possible that a storm drain has been impacted from this leak. No drinking water has been impacted from this incident. The San Diego RWQCB and the Riverside County Environmental Health Department were notified about this incident. The nearest Riverside County Flood Control District facility is located about .1 mile to the northwest of the complaint address: "Temecula VY Via Del Coronado Storm Drain". NOTE: The complaint APN listed in this report is a reference APN only.

Complaint 75,000 gallons of tertiary effluent (recycled water) was released when a fitting on a utility water line failed.

Findings 9/29/07: EMWD called the Governor's Office of Emergency Services (OES) to report this release. The OES issued a Hazardous Materials Spill Report, Control# 07-5945, concerning this incident. The OES report states that no drinking water was impacted from this release. It is unknown if any water was involved from this incident. The nearest Riverside County Flood Control (RCFC) District facility is located about .8 mile to the northeast of the complaint address: "Murrieta Creek at Winchester Road."

Action 10/1/07: David Ortega of the NPDES Section of the RCFC received a Sewage Release/Spill Notification via email today from Charles Strey, Senior Public Health Engineer, Riverside County Health Services Agency, Dept. of Environmental Health. Incident No. SA-07-10 states that the discharge has been stopped and is upstream from known recreation areas, which are not posted by the County's Department of Environmental Health. The area of the discharge will not be inspected by the County's Department of Environmental Health to evaluate contamination. Areas of contamination do not require cleaning (tertiary treated water).

Complaint A blockage caused an unknown clear liquid from a sewer line.

Findings 9/10/07: EMWD called the Governor's Office of Emergency Services (OES) to report this release. The OES issued a Hazardous Materials Spill Report, Control# 07-5483, concerning this incident. The OES report states that no drinking water was impacted from this release, however, a small unknown creek (possibly Benton Creek) was involved from this incident. The OES report also states that the sewage was contained and cleaned up by the reporting party (EMWD). The Riverside County Environmental Health Department was notified about this release. The nearest Riverside County Flood Control District facility is about .6 mile to the south of the complaint location: "Warm Springs Hunter Road Storm Drain Stage 4".

Action 9/10/07: The OES received a situation update concerning this release. Per Al Javier of the EMWD, the release was not from an active line. Release was from a line under construction. Substance released was de-watering ground water, not sewage.

Stormwater Quality Management Products

CASQA Municipal Stormwater Program Effectiveness Assessment Guidance

The CASQA Municipal Stormwater Program Effectiveness Assessment Guidance document *(fig. 1)* assists stormwater program managers in designing and conducting program effectiveness assessments using a range of assessment methods.

A benefit of stormwater quality management products is they help protect, create or restore wildlife habitats, such as in the Willow Springs Detention Pond in Folsom (pictured), where many varieties waterfowl can be seen. Shown below are two products, the Municipal Stormwater Program Effectiveness guidance document and the Basin Sizer computer program.

Figure 1

Figure 2

PHOTO BY CARMEL BROWN

The guidance also describes how to use these methods based on program-specific goals and desired outcomes. The guidance reflects the current state of knowledge regarding municipal stormwater program effectiveness assessment planning, methods, measures, and analyses.

Basin Sizer Program

Basin Sizer *(fig. 2)* is a computer program that automates computation of water quality volumes (WQV) and water quality flows (WQF) for the design of treatment controls in California. The Basin Sizer is based on procedures described in the CASQA BMP Handbook.

CASQA Stormwater Monitoring and Research Priorities - 2007

Taking the useful information generated in the 2006 project, CASQA reformatted the work product into an organized, updateable technical reference that will serve as a useful resource for MS4 NPDES permittees in California. Additionally the tool identifies studies and projects for potential funding and support based on the expressed needs of the CASQA membership.

Expanded Members Only Content at CASQA's Website

CASQA expanded the Members Only section of its website to provide more information on stormwater issues directly to CASQA members. The section contains valuable information and serves as a place to share ideas, discuss options, and find other members. In the Members Only section you will find: a Members Forum, a bulletin board style area that allows members to participate in open discussion; a Resource area, where you can find recent and archived CASQA documents in an easy-to-sort format; and a Member Services section where you can edit your profile, and find a members directory.

Water Quality NewsFlash

The popular Water Quality NewsFlash is now published under CASQA sponsorship. Previously a Caltrans publication intended for its staff, NewFlash provides a bi-weekly summary of current water quality issues of interest to stormwater practitioners.

CASQA Comment Letters

Tracking and reviewing proposed regulatory and legislative initiatives remains a significant focus of CASQA efforts. Subcommittees analyze these initiatives and provide summaries to members and submit formal comments to regulatory agencies. In 2007, CASQA submitted comment letters on the construction general permit, the water quality enforcement policy, pesticide regulatory decisions, Ocean Plan, and local permits with potential precedent setting issues. All the comment letters are available in the Members Only section of the website.

Financial Summary

The California Stormwater Quality Association was incorporated as a non-profit organization in the State of California on July 26, 2002 to assist entities that are charged with stormwater quality management responsibilities for the development and implementation of stormwater quality goals and programs within the state of California. Operations commenced January 1, 2003.

CASQA is organized and operated exclusively for charitable and educational purposes within the meaning of Section 501(c)(3) of the Internal Revenue Code. CASQA follows Financial Accounting Standards Board Statement (SEAS) No. 117, Financial Statements of Not-for-Profit Organizations, for presentation of its financial statements.

The financial summary below for the year ended December 31, 2005 is drawn from the REPORT ON AUDIT OF FINANCIAL STATEMENTS for the year ended December 31, 2005 and 2004 (Burr, Pilger & Mayer, LLP).

CASQA is organized and operated exclusively for charitable and educational purposes.

CALIFORNIA STORMWATER QUALITY ASSOCIATION™

SMC ANNUAL REPORT

ANNUAL REPORT 2007-2008

Stormwater Monitoring Coalition Of Southern California

September 2, 2008

INTRODUCTION

As a result of the increasing regulatory focus and the lack of scientific knowledge base, both stormwater regulators and municipal stormwater management agencies throughout southern California have developed a collaborative working relationship. The goal of this relationship is to develop the technical information necessary to better understand stormwater mechanisms and impacts, and then develop the tools that will effectively and efficiently improve stormwater decision-making. As individuals and agency representatives, there was early recognition that these issues are oftentimes not localized, but typically cross watershed and jurisdictional boundaries. This relationship culminated in a formal letter of agreement, signed in 2000, by all of the Phase I municipal stormwater NPDES lead permittees and the NPDES regulatory agencies in southern California to create the Stormwater Monitoring Coalition (SMC) (Table 1).

Table 1. List of member agencies in the Stormwater Monitoring Coalition.

California Regional Water Quality Control Board, Los Angeles Region
California Regional Water Quality Control Board, San Diego Region
California Regional Water Quality Control Board, Santa Ana Region
California Department of Transportation, Caltrans
City of Long Beach
City of Los Angeles, Watershed Protection Division
County of Orange, Public Facilities and Resources Dept.
County of San Diego Stormwater Management Program
Los Angeles County Department of Public Works
Riverside County Flood Control and Water Conservation District
San Bernardino County Flood Control District
Southern California Coastal Water Research Project
State Water Resources Control Board
US Environmental Protection Agency, Office of Research and Development
Ventura County Watershed Protection District

The first project supported by the SMC was to develop a five-year Research Agenda. The research agenda, published in 2001, consisted of 15 unique projects that the SMC ranked, prioritized, and then funded on a voluntary basis. The SMC has made tremendous progress implementing the Research Agenda. Ten of the 15 projects have been started and virtually all have been completed.

The value of the SMC to its member agencies is at least four-fold. The first is the ability to share costs for implementing projects. Cost reductions for SMC member agencies can be significant since collaborative projects can reduce costs by more than 90% relative to footing the bill alone. In addition, the majority of projects have nonmember agency cost-matching. Just for the projects described in this report, there has been nearly one million dollars in grant awards, cost-match, or in-kind services. The second value to member agencies is the ability to stretch their agency's skill base. Stormwater management requires a wide variety of knowledge including regulatory policy, engineering, hydrology, biology, chemistry, toxicity, and microbiology, to name a few. Many member

agencies have limited staff and, by working together, garner the additional skills that are not sustainable within each agency. A third asset of membership is the ability to communicate. Discussions among member agencies provide context and a richness of ideas for application to local issues back home. Similarly, discussion between regulatory and regulated agencies in an informal setting leads to more effective implementation of management activities. Finally, projects conducted under the SMC umbrella have nearly always resulted in some management action. Often, it is difficult for a single agency to affect the current course of regulatory management. Because SMC projects are initiated and vetted through all of the regulated and regulatory management agencies, the results are adopted quickly into the management framework including alterations to NPDES permits.

The SMC has been expanding its role beyond just technical projects by emphasizing outreach and communication. This has occurred through three main venues. The first venue is the establishment of an SMC web site [add URL here]. The goal of this web site is to showcase the SMC, but to also provide an outlet for each of the products developed by the agency. The second venue is through the development of project specific Technical Advisory Committees (TACs). The TACs are valuable for involving outside experts, but also for including technical staff of the individual agencies. The third venue for outreach is through training and workshops. These have initiated as a result of project specific needs such as LID technology for City Planners or the Hydromodification Workshop associated with CASQA Annual Meetings.

What perhaps is most telling about the value of the SMC is the renewal of the original letter of agreement during the 2007-08 fiscal year. This recommitment for another five years demonstrates the positive nature of the organization and its ability to provide a service that crosses regulatory-regulated boundaries. Moreover, the organization's appeal has been recognized by others and has resulted in four new member agencies; the California Department of Transportation (Caltrans), the City of Los Angeles, the State Water Resources Control Board, and the US Environmental Protection Agency (Table 1). The SMC welcomes these new members and looks forward to working together.

PROJECT ACCOMPLISHMENTS

Building A Regionally Consistent and Integrated Freshwater Stream Bioassessment Monitoring Program

Status: 100% complete
Project budget: $280,000

Assessment of freshwater biological communities represents a potentially powerful tool for evaluating the effects of discharges in southern California creeks and streams. Bioassessments integrate the effects of multiple stressors, including chemical pollutants and physical alterations in receiving waters. The value of biological assessments is that they are closer to many of the defined beneficial uses of receiving waters (i.e. aquatic life, warm water habitat, cold water habitat) than chemically-derived water quality objectives.

The goal of this study is to build a regionally consistent bioassessment monitoring program. This project will be completed in three phases including: 1) building a monitoring infrastructure; 2) calibrating and validating a regional assessment tool; and 3) designing an integrated, coordinated regional monitoring program. The first phase focuses on creating a monitoring infrastructure so that multiple agencies are properly trained, data are collected in comparable manners, and data can be efficiently shared. The second phase focuses on developing an assessment tool that is robust enough to be used by all agencies across the region. This will enable a consistent approach for evaluating the status of freshwater biological communities and provide the answers regarding community impacts to managers in meaningful and understandable terms. The third phase focuses on creating a study design that most efficiently answers specific questions of interest at large regional scales. Addressing some questions at regional scales can provide cost efficiency for addressing reference condition, cumulative impacts, and when nested within a local sampling design, provides unparalleled information for providing context to local monitoring data.

Our main collaborator on this project is the California Department of Fish and Game (CDF&G). The project is 50% funded by the SWRCB, whose main desire is to ensure integration with the Surface Water Ambient Monitoring Program (SWAMP). This will provide further value to SMC member agencies. To help accomplish this project, an SMC Technical Subcommittee was formed.

All three phases have been implemented by the SMC. The first goal towards monitoring infrastructure is complete. SMC member agencies have used training, workshops, field audits, enhanced laboratory quality assurance activities, and written or collated information management and field protocol documents. Of particular note, SMC member agencies have helped to create a network of laboratory taxonomists called the Southwestern Association of Freshwater Invertebrate Taxonomists that will be important in standardizing and ensuring the quality of laboratory identifications. The second task to evaluate an assessment tool is complete. The southern California index of biological integrity (SC IBI) was tested in 15 low gradient streams of varying levels of impact. It was clear from this study that the IBI is not the best assessment tool for describing impact in these habitats. The low gradient project was so successful that the Working Group helped SCCWRP and CDFG to prepare a State Consolidated Grant proposal to test the SC IBI in another important habitat; non-perennial streams. Finally, the Working Group has designed an integrated, collaborative Regional Watershed Monitoring program. The goal of the Regional Watershed Monitoring program is to increase the effectiveness of existing NPDES monitoring programs by integrating among permittees and SWAMP to achieve a large-scale assessment of watershed condition. The cost of implementing this program would be negligible because the Working Group identified significant redundancies and inefficiencies in existing monitoring programs that could be reprogrammed towards a regional design. Finally, the Working Group has found additional partners to help contribute to the regional monitoring program including the Wetland Recovery Project (WRP), other RWQCBs, and other NPDES permittees.

Working Group consisting mostly of laboratory managers has been formed to assist in the study.

The SMC has successfully finished the first task of the study. The intercalibration of TSS, nutrients, and trace metals was based on customized certified reference materials just for our project and runoff samples from different land use types. Gratifyingly, most of the laboratories that participated previously successfully completed the second iteration. An objective laboratory scoring system, which consists of letter scores for each laboratory, has been developed and was used for the contract language in task 3.

Pending formal agreement signatures, the working group is prepared to implement further constituents and the addition of toxicity testing to the intercalibration.

Bacterial Reference Watershed Study
Status: 100% complete
Project budget: $165,000 + in-kind services

High fecal indicator bacteria levels are one of the most common surface water impairments in southern California. Frequent exceedences of bacterial water quality standards have resulted in development of Total Maximum Daily Loads (TMDL) as a regulatory mechanism to address bacterial contamination in several southern California watersheds.

Current water quality standards for freshwater use fecal coliforms or E. coli as an indicator of fecal contamination because their presence is well correlated with the many waterborne disease-causing organisms or pathogens. However, fecal coliforms and E. coli are naturally present in the intestines of warm-blooded. Consequently, fecal contamination of surface waters can result from numerous sources of fecal pollution, including human sewage, manure from livestock operations, indigenous wildlife and urban runoff. In undeveloped areas wildlife, such as small and large mammals and birds, has the potential to be a significant source of fecal bacteria to surface waters.

In recognition of the potential for natural sources to affect bacteria levels in surface waters, several TMDLs either allow or require development of numeric targets that account for natural bacteria levels. For example, the Malibu Creek Bacteria TMDL requires responsible jurisdictions to monitor unimpaired streams in the local watershed during dry weather, dry winter weather, and wet weather for at least one full year in order to develop a representative numeric target for allowable bacteria exceedence days. Several similar studies are currently being considered or proposed in Ventura, Los Angeles, Orange, and San Diego counties; however, there is currently no coordination between these proposed studies.

The objective of this project is to assess natural bacteria levels in numerous streams throughout southern California in order to provide a regional characterization of background bacteria concentrations. Bacterial indicators were measured from

unimpaired streams in 12 southern California watersheds weekly for one full year. These data were used to investigate background levels, frequency of exceedences of relevant water quality standards, and spatial and temporal patterns.

This project is a partnership of numerous SMC agencies who are participating via in-kind contributions. Three regional water quality control boards, six storm water agencies, and several cities cooperated on field data collection and laboratory analysis. Following laboratory and field intercalibration, samples were collected weekly between May 2006 and May 2007. Overall, the 30-day geometric mean exceedences of freshwater standards were 2% for *E. coli* and 14% for *enterococci*. There were clear seasonal patterns with exceedences being most common during July and August. The project report ftp://ftp.sccwrp.org/pub/download/PDFs/542_FIB_ReferenceBacti.pdf was completed in January 2008.

Hydromodification Study
Status: 35% complete
Project budget: $1,137,440 ($1,137,440 State Prop 50 Grant)

The process of urbanization has the potential to affect stream courses by altering watershed hydrology. Development and redevelopment can increase the amount of impervious surfaces on formerly undeveloped landscapes. This reduces the capacity of remaining pervious surfaces to capture and infiltrate rainfall and, as a result, a larger percentage of rainfall becomes runoff during any given storm. In addition, runoff reaches the stream channel much more efficiently, so peak discharge rates post-development are higher compared to predevelopment for an equivalent rainfall event. This process has been termed hydromodification.

Hydromodification can result in adverse effects to stream habitat, surface water quality, and water supply. The stream erosion that results from the increased peak flow can threaten infrastructure, homes, and businesses. Intermittent and ephemeral streams that possess riparian and wetland habitat are at particular risk from effects of hydromodification. Streams in semi-arid regions are especially vulnerable to urbanization due to a prevalence of sand bed channels, lack of vegetative reinforcement, and relatively large net changes in water and sediment supply associated with stormwater runoff. Recent studies by the SMC have indicated that intermittent and ephemeral streams in southern California degrade at lower levels of watershed urbanization than streams in the eastern US.

In response to the effects of hydromodification, state and local agencies are developing standards and management approaches to control and/or mitigate the effects of hydromodification on natural and semi-natural stream courses. Successful implementation of these regulatory programs requires development of tools to better assess hydromodification effects and develop appropriate mitigation and management strategies.

RIVERSIDE COUNTY FLOOD CONTROL
AND WATER CONSERVATION DISTRICT

January 15, 2009

Mr. John Robertus, Executive Officer
California Regional Water Quality
Control Board – San Diego Region
9174 Sky Park Court, Suite 100
San Diego, California 92123

Dear Mr. Robertus:

Re: Report of Waste Discharge for the Santa Margarita River Region of Riverside County Order No. R9-2004-001, NPDES No. CAS0108766

This letter and the enclosures comprise the Report of Waste Discharge (ROWD) for the area-wide municipal separate storm sewer system (MS4) National Pollutant Discharge Elimination System (NPDES) Permit No. CAS0108766, San Diego Regional Water Quality Control Board Order No. R9-2004-001. This ROWD is an application for renewal of the area-wide MS4 NPDES Permit for Riverside County Flood Control and Water Conservation District (RCFC&WCD), the County of Riverside (County), and the incorporated cities of Riverside County within the upper Santa Margarita River watershed (Menifee, Murrieta, Temecula, and Wildomar) collectively referred to herein as "Permittees."

Order No R9-2004-001 does not specify the requirements of the ROWD. However, the attached ROWD includes the following information:

- Applicant information, including Permittee contacts, legal authorities, description of the Permit Area, and funding sources;
- Overview of the upper Santa Margarita River watershed, including population, land use, Receiving Waters, and the MS4;
- Changes in land use and/or population over the 2004 MS4 Permit term and projections for changes over the next MS4 Permit term;
- Highlights of the Permittee compliance programs over the 2004 MS4 Permit term;
- Evaluations of the Permittees existing compliance programs based on water quality data collected to date; and

- Activities the Permittees propose to undertake during the next MS4 Permit term, including implementation of Low Impact Development (LID) requirements and compliance assessments and targets.

In addition, the ROWD includes an assessment of the economic conditions and the projected impact of these conditions on sources of compliance program funding. Based on this assessment, it appears that the major challenge facing the Permittees over the next MS4 Permit term will be maintaining existing compliance programs. In 2004 both the Permittees and the San Diego Regional Water Quality Control Board (Regional Board) staff invested significant time and resources in the development of the current MS4 NPDES Permit (hereinafter referred to as the 2004 MS4 Permit) which define the current compliance program. The Permittees believe, with exceptions outlined in the ROWD, that the existing Permit is protective of water quality and should be reissued as is.

Permittee representatives met with Regional Board staff on September 8, 2008 to obtain guidance for preparation of the ROWD. In that meeting, Regional Board staff provided their expectations regarding the ROWD. Based on the Permittee internal discussions and discussions with Regional Board staff, the Permittees propose to maintain the provisions of the 2004 MS4 Permit and DAMP with limited modifications to reflect:

- Updated references to related orders by the San Diego Regional Board and State Water Resources Control Board (State Board);
- Identification of impairments to Receiving Waters in the Santa Margarita Region;
- Evolution of compliance programs;
- Further standardization and definition of terms;
- Deletion of requirements in the 2004 MS4 Permit that described the development of compliance program elements which were incorporated into the 2005 DAMP;
- Implementation of LID/Hydromodification requirements for New Development projects;
- Implementation of compliance assessments and action levels;
- Necessary modifications to the Watershed SWMP and Individual SWMPs for the 2004 - 2009 MS4 Permit term; and
- Regional Board staff comments made during the term of the 2004 MS4 Permit, including comments received during the September 8th ROWD coordination meeting.

Especially given the existing and projected economic conditions, the Permittees goal is to work with the Regional Board staff to further refine the provisions of the 2004 MS4 Permit to enhance the effectiveness of existing compliance programs within available funding. In addition, the Permittees will work with the Regional Board staff to ensure that the requirements and expectations of the fourth term MS4 NPDES Permit are clear and unambiguous and that the focus is on addressing identified water quality problems in the Receiving Waters

We look forward to working with the Regional Board staff in the renewal of the area-wide MS4 NPDES Permit. If you have any questions, please call Jason Uhley at 951.955.1273 or Claudio Padres at 951.955.8602.

Very truly yours,

WARREN D. WILLIAMS
General Manager-Chief Engineer

1.0 Executive Summary

On July 14, 2004 the San Diego Regional Water Quality Control Board (Regional Board) adopted Order No. R9-2004-001, an area-wide National Pollutant Discharge Elimination System (NPDES) Municipal Separate Storm Sewer System (MS4) permit (2004 MS4 Permit); this permit expires on July 14, 2009. A Report of Waste Discharge (ROWD) for renewal of the 2004 MS4 Permit must be submitted no later than 180 days in advance of the expiration date (i.e., by January 15, 2009).

This ROWD is an application for renewal of the 2004 MS4 Permit (NPDES No. CAS0108766) for the MS4 owned and operated by the Riverside County Flood Control and Water Conservation District (District), the County of Riverside (County), and the incorporated cities of Riverside County within the upper Santa Margarita River watershed (collectively, the Permittees). The newly incorporated cities of Menifee and Wildomar are included in this application as a Notice of Intent to participate in the updated MS4 Permit.

The content of this document is structured to identify:

- Information about the applicants (Section 3.0),
- Information on the area to be covered under the MS4 Permit (Section 4.0),
- An overall evaluation of the Permittees' existing programs based on water quality trends (Section 5.0),
- Accomplishments and recommendations for the Permittees' regionally implemented programs (Section 6.0) and
- Accomplishments and recommendations for the programs implemented as part of the Individual Stormwater Management Plans (SWMPs) (Section 7.0).

The Riverside County Drainage Area Management Plan (DAMP) documents the model implementation plan from which each of the existing Permittees has developed their respective Individual SWMP to implement the DAMP. In addition a Watershed SWMP has been developed to describe the programs that will be implemented regionally. The Annual Reports submitted to date describe the implementation of these SWMPs and document how they have evolved over time.

This ROWD builds on these Annual Reports by highlighting the major accomplishments of these programs, evaluating the long-term effectiveness of the programs and recommending revisions to the programs to enhance the efficiency and effectiveness of the programs to manage Urban Runoff to protect Receiving Water quality. To promote clarity of intent, terms defined in the 2004 MS4 Permit are capitalized in this ROWD.

Due to the impacts of the current economic recession on Permittee budgets and the effectiveness of existing Urban Runoff management programs, the Permittees' primary focus during the next MS4 Permit term will be on maintaining existing compliance programs in the face of significant cuts in basic municipal programs and services. Riverside County is one of the areas most affected by the mortgage crisis and the Santa Margarita Region is one of the most impacted areas of Riverside County. This crisis is having significant impacts on Permittee resources and projections for a deepening recession promises to exacerbate these impacts. Further, monitoring data indicates that the existing compliance programs have been effective in maintaining water quality. This ROWD focuses on maintaining the fundamental

structure and content of the Riverside County DAMP and the Individual SWMPs. However, the Permittees have identified several enhancements and/or alterations to their programs that can be implemented to continue to increase the effectiveness of these programs, without increasing costs.

1.1 Highlights of Program Implementation

Sections 6 and 7 of this ROWD describe the numerous accomplishments of the Permittees programs during the 2004 MS4 Permit term. Some highlights of the major accomplishments for the Permittees include:

- Development and implementation of a Water Quality Management Plan (WQMP) that addresses post-construction Urban Runoff management for New and Significant Re-Development.
- Development and implementation of the Watershed SWMP and the Permittee's Individual SWMPs.
- Development of handbook to standardize post-construction Best Management Practice (BMP) selection and design in Riverside County. Ongoing updates to the handbook include a plan to incorporate and promote low impact development design concepts.
- Development and enhancements to the design template for developing project-specific WQMPs
- Development of a Frequently Asked Question (FAQ) document to assist developers and plan review staff in understanding WQMP requirements and expectations.
- Development of coordinated BMP manual for firefighting agencies.
- Development, implementation and maintenance of Permittee databases to track construction sites 1-acre or larger. In addition, the Permittees have standardized a construction reporting spreadsheet used for Annual Reports, updated inspection forms, and enhanced the construction outreach program.
- Creation of Permittee databases to track industrial and commercial facilities.
- Creation and maintenance of the Storm Water Protection website that offers educational resources and free brochures targeting residents, businesses, developers, contractors, and elementary school children.
- Partnership with the Mission Resource Conservation District to provide an educational outreach programs targeting both schools and adults.
- Continued participation in the Consolidated Program for Water Quality Monitoring (Consolidated Monitoring Program) that includes collection of water quality samples at MS4 outfalls and Receiving Waters.
- Participation in regional and statewide monitoring efforts such as the Southern California Monitoring Committee (SMC), Southern California Coastal Water Commission and National Water Resources Institute.
- Participation in the California Stormwater Quality Association (CASQA), including the leadership roles of Officer, Director, and Legislative Chair.
- Development of the Upper Santa Margarita Region Integrated Regional Watershed Management Plan

- Continued partnership and coordination with the Bureau of Reclamation on a watershed plan and water quality model for the Santa Margarita watershed
- Continued participation in the Santa Margarita Lagoon nutrient Total Maximum Daily Load (TMDL) development process
- Participated in a stakeholder workgroup process led by Regional Board staff to revise REC 1 Basin Plan requirements for TMDLs

1.2 Summary Evaluation of Program Implementation

The trend analysis presented in Section G-8.2 of the FY 2007/2008 Watershed Annual Report and reviewed in Section 5.3 of this ROWD indicates that after almost 14 years of active Permittee involvement in MS4 Permit related Urban Runoff management programs, the significant increase in population (over 300 percent) and associated rapid urbanization that the area has experienced has not resulted in any statistically significant increases in Pollutant concentrations in Receiving Waters in the Santa Margarita Region. This indicates that the Permittees MS4 programs are and have been protective of Receiving Water quality. Pyrethroid pesticides, the one Pollutant that does appear to be linked to urbanization, has been addressed through a Toxicity Reduction Evaluation process, outreach programs, and Permittee participation to address pyrethroid pesticides and other pesticide sources at the state and federal level.

To enhance the effectiveness of the MS4 Permit compliance programs, the Permittees have agreed to implement compliance program revisions as described in sections 6 and 7 of this ROWD.

1.3 Summary of Major Recommendations for Program Revision

As described in section 3.4 of this ROWD, the Permittees are facing unprecedented fiscal impacts resulting from the national and state economic crises. The impacts on the Permittees are especially severe due to the disproportionate impact of home foreclosures in the Santa Margarita Region coupled with plummeting sales tax revenue. Unfortunately, it is anticipated that the economic conditions will persist for a significant portion of the term of the next MS4 Permit. During this period, the Permittee's MS4 compliance programs will increasingly compete with more fundamental public services for finite and dwindling resources. The challenge and priority for the Permittees will be to maintain the existing compliance programs in the face of cuts in basic programs and services.

Nevertheless, and although the various programs implemented as part of the Watershed SWMP and the Riverside County DAMP have been determined to be effective overall, Sections 6 and 7 of this ROWD identify certain areas wherein the Permittees are proposing changes to improve the effectiveness, efficiency, and transparency of these programs.

The program revisions recommended in this ROWD reconfigure existing programs in a manner that will increase the Permittees' overall ability to protect Urban Runoff quality, while limiting additional costs that would make these revisions cost-prohibitive in light of the current and foreseeable economy. Some of the major recommendations include:

Enhance Program Effectiveness Assessments and Incorporate Action Levels (Section 6.1.2.1)

The Permittees have carefully evaluated their MS4 Permit compliance programs and annual reporting forms. Based on this review the Permittees determined that:

- The overarching goal of the program is to ensure that Urban Runoff does not cause or contribute to non-attainment of Beneficial Uses in the upper Santa Margarita River watershed;
- Permittee compliance programs are process based and, consistent with the Maximum Extent Practical (MEP) approach, are incrementally adjusted as part of the annual reports and comprehensively reevaluated and if necessary, revamped as part of each ROWD;
- Monitoring data should be used to drive long term program assessments and assess goal attainment as part of the ROWD; and
- Process based Municipal Action Levels (MALs) should be used to evaluate annual program implementation to ensure that programs are implemented to the MEP and identify the needs for incremental adjustments.

The Permittees have proposed revised Effectiveness Assessment metrics and MALs for use in Permittee Annual Reports consistent with the aforementioned findings and as described further in Section 6.1.2.1. The MALs are intended to function as triggers, or minimum bars that if breached, would require the Permittees to evaluate the appropriate program elements to determine if adjustments are necessary to attain the MEP standard. The Permittee proposal will not only add transparency to the Permittees compliance programs but assist Permittees in evaluating and adjusting their Permit compliance programs to assist in attaining Water Quality Standards. Further, the proposed effectiveness assessment metrics can be implemented without significantly increasing the Permittees' program costs.

Revisions to the IC/ID Program (Section 7.8.2)

During the 2007/2008 MS4 Program audits conducted by PG Environmental and Regional Board staff, several questions were raised regarding the Permittees existing Illicit Connection/Illegal Discharge(IC/ID) field monitoring programs. The Permittees have evaluated the Regional Board and PG Environmental staff's comments and proposed a revised IC/ID Program based on the following:

- Random selection of MS4 outfalls throughout the Santa Margarita Region;
- Rotating MS4 outfall sites annually to maximize coverage of the MS4;
- Partnering one District staff person with one city/county code enforcement officer for data collection to ensure consistency in sampling procedure/collection and quick response to detected IC/ID events.

Implementation of a Post-Construction Treatment Control BMP Inspection Program (Section 7.2.2.6)

Consistent with Regional Board staff's request to consider development of a post-construction Treatment Control BMP inspection program, the Permittees have developed a proposal that they plan to implement when economic conditions allow. This proposal would enhance the existing business and Permittee facility inspection programs described in the Riverside County DAMP by incorporating inspections and maintenance verification of Treatment Control BMPs. Treatment Control BMPs constructed as part of residential developments, or other developments not captured by the Permittees' existing business inspections would be addressed through an annual self-certification program.

Revisions to the Dry Weather Monitoring Program (Section 6.4.4.1)

The Permittees have committed to participating in the Regional Watershed Monitoring Program developed in conjunction with the Southern California Coastal Water Research Project (SCCWRP). Six annual monitoring events were scheduled for the upper Santa Margarita River watershed. Consistent with the agreement reached by SCCWRP, Permittee, and Regional Board staff, three of these sites would be collected by the Permittees and three through the Surface Water Ambient Monitoring Program (SWAMP). The costs for implementing the three sites to be implemented by the Permittees would be offset by reducing the Permittees existing dry weather triad monitoring events (three stations) from twice a year to annually.

Development of a LID Manual (Section 7.2.2.1)

The Permittees have committed to develop a Low Impact Development (LID) Implementation Manual based on the LID Manual currently being developed by the SMC and CASQA.

Hydromodification Management Plan (Section 7.2.2.2)

The Permittees have committed to develop a revised hydromodification management plan based on the findings of the final SCCWRP Hydromodification Management report currently under development.

Participate in a Watershed Based TMDL for the Santa Margarita Lagoon (Section 6.4.4.7)

The Permittees understand that, due to economic conditions, State funding for the Santa Margarita Lagoon watershed-based TMDL has been withdrawn. As described in Section 3.4, economic conditions are also impacting the Permittees' funding sources and the Permittees are struggling to maintain sufficient resources to fund their existing compliance programs. Therefore, the Permittees cannot currently support committing additional funds toward a third party TMDL effort. The Permittees are, however, agreeable to discussing with the Regional Board a elimination or reduction of various required compliance activities that are not measurably enhancing the their ability to attain Water Quality Standards, which in turn could allow the Permittees to redirect some of their existing resources into the third party TMDL effort. Some program elements that could be considered for discussion are described in Section 6.4.4.7.

Pyrethroid Pesticide BMP Implementation

The Permittees have committed to implementing several BMPs to address possible urban sources of pyrethroid pesticides. In addition the Permittees have committed to working through CASQA to facilitate regulatory change in pyrethroid pesticide use to curtail potential causes of receiving water impairment.

Adjustments to the Monitoring Program

The Permittees have proposed additional revisions to the monitoring program to streamline implementation and increase its utility.

2.0 Introduction

The Regional Board adopted Order No. R9-2004-001 (NPDES No. CAS0108766), an area-wide NPDES MS4 permit (2004 MS4 Permit) on July 14, 2004. This ROWD is a required component for renewal of the 2004 MS4 Permit. The 2004 MS4 Permit authorizes discharges of Urban Runoff from the MS4 owned and operated by the Permittees.

Capitalized terms used in this ROWD are defined in the glossary of the Riverside County DAMP. The Riverside County DAMP serves as the model compliance document used by the Permittees to develop the Watershed and Individual SWMPs. To save costs and increase the effectiveness of the MS4 Permit compliance programs, the Permittees will maintain the Riverside County DAMP as the primary document that describes Permittee compliance programs. The Permittees individual and regional compliance programs are then described in more detail in the Individual and Watershed SWMPs.

This ROWD has been written and formatted to address the requirements outlined in United States Environmental Protection Agency (USEPA) *Interpretative Policy Memorandum on Reapplication Requirements for Municipal Separate Storm Sewer Systems* contained in the Federal Register, Volume 61, page 41698 (61 FR 41698), and to include commitments made in the various compliance documents, annual reports and in meetings with the Regional Board.

Additionally, as discussed in the meeting with Regional Board staff on September 9, 2008 and as supported by the above mentioned USEPA guidance, this ROWD relies on the fourth year Annual Reports to document the programs implemented by the Permittees. The fourth year Annual Report also includes a comprehensive evaluation of Permittee monitoring data to date and includes preliminary recommendations for Permittee compliance programs based on that data. As part of the ROWD process, the Permittees have reassessed their existing programs that are described in the Annual Reports, the monitoring conclusions and program recommendations contained in the fourth year Annual Reports, and in this ROWD, are making additional recommendations for revisions to improve the efficiency and effectiveness of these programs at improving and protecting the quality of our Receiving Waters.

The following sections of the ROWD are summarized as follows:

Section 3.0 - Information about the Permittees, their legal authority to implement the existing and proposed programs, the Permit Area, and the Permittee's funding sources and economic outlook relative to continued funding of the MS4 Permit compliance programs.

Section 4.0 – Information about the upper Santa Margarita River watershed, including physiography and geology, hydrology, climate, population, land use, surface water bodies and their Beneficial Uses and Impairments, and the MS4. This information provides context for the MS4 Permit compliance program in the Santa Margarita Region.

Section 5.0 – An overall evaluation of the Permittees existing programs based on water quality data collected to date and proposed compliance program modifications.

Section 6.0 – Evaluation of regional compliance programs, including a summary of accomplishments and proposed program revisions.

Section 7.0 – Evaluation of compliance programs individually implemented by the Permittees, including a summary of accomplishments and proposed program revisions.

3.0 Applicant Information

3.1 Permittee Contact Information

Table 1 provides the contact information for each of the Permittees in the Santa Margarita Region.

3.2 Statement of Legal Authority

The Co-Permittees have adopted ordinances regarding the management of Urban Runoff. The ordinances provide the Permittees with the legal authority to implement the requirements of the 2004 MS4 Permit and 40 CFR Section 122.26(d)(2)(i)(A-F). The Permittees also provided certification of adequate legal authority to comply with the 2004 MS4 Permit and to implement the Riverside County DAMP to the

[1] As the Cities of Menifee and Wildomar are recently incorporated, the County of Riverside is currently handling their stormwater and MS4 permitting issues. Once these cities are fully established and staffed, updated contact information will be provided to the Board. The cities will assume responsibility for their programs on October 1, 2009.

Regional Board. However, it is noted that the newly incorporated cities of Menifee and Wildomar will submit their certifications following adoption of the updated MS4 Permit.

However, there are limitations to the authority the Permittees have for enforcement actions. The Permittees do not have legal authority over discharges into their respective MS4 facilities that originate from agricultural activities, state and federal facilities, utilities and special districts, Native American tribal lands, wastewater management agencies and other point and non-point source discharges otherwise permitted by, or under the jurisdiction of, the Regional Board or USEPA. Examples of non-point sources of Pollutants not under the control of the Permittees include materials from operation of internal combustion engines, atmospheric deposition, brake pad wear, tire wear, residues from lawful application of pesticides, nutrient runoff from agricultural activities, and leaching of naturally occurring minerals from local geography.

Also, the Permittees do not have the authority to enforce the provisions of California's General Permit for Storm Water Discharges Associated with Industrial Activities (General Permit-Industrial) or California's General Permit for Storm Water Discharges Associated with Construction Activity (General Permit-Construction). The State Water Resources Control Board (State Board) issues these NPDES permits, and neither the State Board nor the Regional Board has the authority under the Clean Water Act to delegate responsibility for administering these NPDES permit programs to the Permittees. However, the Permittees' local storm water and erosion control ordinances may address items similar to those identified in these statewide NPDES permits.

3.3 Permit Area

The Permit Area is defined as the urbanized area serviced by the Permittee's MS4 facilities. The Permit Area is located within the area delineated by the County boundary line on the south and the limits of the jurisdiction of the San Diego Regional Board on the north, east, and west. It is important to recognize that the Clean Water Act exempts agricultural activities from regulation under NPDES and the Permittees do not have legal jurisdiction over storm water discharges into their MS4 facilities from:

- California and federal facilities,
- Areas under the jurisdiction of San Diego County,
- Utilities and special districts, and
- Native American tribal lands.

These areas are not included in the Permit Area. In addition, other point and non-point source discharges otherwise permitted by or under the jurisdiction of the Regional Board or USEPA may affect water quality in the Murrieta and Temecula Creek watersheds.

The area of Riverside County under the jurisdiction of the Regional Board is less than 8 percent of the 7,300 square miles within Riverside County. Of the 27 municipalities within the whole of Riverside County, only five include areas under the jurisdiction of the Regional Board.

3.4 Funding Sources and Economic Projections

3.4.1 Funding Sources

The costs incurred by the Permittees in implementing the SWMPs fall into two broad categories:

- **Shared Costs**. These are costs that fund activities performed mostly by the District under the Implementation Agreements. These activities include coordinating the overall storm water program, coordinating other interagency cooperative efforts such as the Compliance Assistance Program (CAP), participating in CASQA activities, representing Permittees at meetings of the Regional Board or State Board and other public forums; preparing and submitting compliance reports and other reports required under the MS4 Permit, conducting Urban Runoff monitoring and public education outreach programs, responding to Water Code Section 13267 requests, providing other program documentation, and coordinating consultant studies, Permittee meetings, and training seminars.
- **Individual Permittee Costs for Individual SWMP Implementation**. These are costs incurred by each Permittee for implementing within its jurisdiction the BMPs (drainage facility inspections for illicit connections, drainage facility maintenance, drain inlet/catch basin stenciling, emergency spill response, street sweeping, litter control, public education, construction activity inspection, development of implementation plans, etc.) comprising the Individual SWMPs.

Historically, the Permittees have employed several funding methods to finance their MS4 Permit compliance activities. Unfortunately, the mortgage crisis, collapse of the housing market, and the economic recession has resulted in the cessation of virtually all development activity and has significantly reduced property and sales tax revenue. Property tax revenues have been reduced by the high level of foreclosure activity, reduced property values and a significant decline in assessed valuations. Property tax revenues have been further reduced by homeowner requests for reassessments to reflect the reduced property values. The impact of these economic conditions on the Permittees in the Santa Margarita Region has been particularly severe. As a result, the aggregate funding available to the Permittees has been severely reduced, and it is anticipated that this condition will continue well into and possibly throughout the next Permit term. The funding methods historically used and the effects of the economic situation on the availability of funds through these sources are summarized as follows:

- **Santa Margarita Watershed Benefit Assessment Area**. In 1991, the District established the Santa Margarita Watershed Benefit Assessment Area to fund its MS4 Permit compliance activities. Currently, the Benefit Assessment revenues fund the District's share of the area-wide MS4 Permit program activities and the District's individual compliance activities as a Permittee. Under the Benefit Assessment each parcel is taxed based on the impervious area of each parcel at a set rate established by District Ordinance 14. This rate has not been increased since 1991 due to Proposition 218. In 2007/08 the Santa Margarita Benefit Assessment generated approximately $410,000 dollars in revenue.

  Outlook: The District expects at best to maintain, if not see temporary reductions in Benefit Assessment revenues due to the significant number of homes that are not paying property tax due to foreclosure. Pursuant to Article 13.D of the California Constitution, an increase in the established Benefit Assessment rate to compensate for these reductions requires approval of 2/3

of the voters or 50 percent of the property owners and is highly unlikely given the current economic climate. Revenues will not increase until the development industry recovers.

- **General Fund /Other Revenues**. The County and the cities utilize general fund revenue to finance most of their MS4 Permit compliance activities. General fund revenue is generated by property tax, sales tax, and auto license taxes.

  Outlook: The Permittees expect a continued reduction in th**e funds** available through General Fund / Other Revenues through at least FY 2009 /2010. Although optimistic that conditions will begin to stabilize toward the end of 2009, the Permittees cannot speculate as to when revenues will recover to previous levels.

- **Fees**. Several Permittees charge fees for services such as inspections, plan check, and other recoverable costs related to compliance with the 2004 MS4 Permit. These fees cover both the direct and indirect costs associated with conducting these inspections/reviews including associated compliance tracking and reporting.

  Outlook: It is notable that, with the virtual collapse of the development industry in the Santa Margarita Region, the fees received by the Permittees have been significantly reduced. With this reduced level of fee-based income, maintenance of the existing inspection and plan review programs will place an increased burden on overall funding of the compliance programs. The Permittees do not expect revenues from fees to recover until the development industry recovers. Even with recovery of the development industry, it is anticipated that over the long-term, revenues from fees will be reduced for the City of Temecula and the County due to the reduced area remaining for development within their jurisdictions.

- **Grants.** The Permittees have actively pursued and, as available, used Grants to fund compliance programs.

  Outlook: In December the state's budget crisis resulted in a directive to state agencies from the Department of Finance to halt projects that rely on bond funds, including those funded by Prop 40, Prop 50, or Prop 84. The State of California is the primary source of grant funding for water quality projects. Future availability of funds to resume grant-funded projects is uncertain.

It is clear that the current economic climate and that of the foreseeable future is creating a significant burden upon the Permittees that will make the continuance of all existing MS4 Permit compliance programs increasingly difficult. New funding sources or alternative combinations of funding sources will likely be required to ensure continued funding of even the current MS4 Permit compliance programs.

3.4.2 Economic Projections

According to Chicago Title, Southwest Riverside County has experienced a very significant increase in supply of single-family residential units on the market. As a result, housing price indicators are very negative. In the majority of the Southwest Riverside submarket, the pending price is less than the closing price indicating general price weakness. The October, 2008 count of bank owned (REO) properties for Riverside County as a whole was 12,078. The number of home in foreclosure was 23,480. The presence of high levels of REO properties will continue to negatively affect home prices. In addition, the level of foreclosures is increasing.

With regard to other sectors of the economy, Riverside County has taken a serious turn for the worst in 2008, with projections indicating that the severe downturn will continue through 2009 at the very least.

The economic difficulties being faced in the Southwest Riverside submarket is the result of the dramatic downturn in the housing market in this area, the national financial turmoil, the worldwide credit crisis, and the increasing consumer debt crisis. According to Beacon Economics, a respected economics consulting firm in Los Angeles, Inland Southern California is clearly at the epicenter of this economic turmoil, with extremely high rates of unemployment at present. Unemployment rates in Inland Southern California are expected to reach 12.4 percent before this deep recession is over. Housing prices are expected to continue their precipitous decline from their peak levels in the two Inland Southern California counties through at least 2011. According to Dataquick, median home prices in Riverside County peaked at $415,000 in January 2007. At the end of this cycle, the median home price in Riverside County is expected to be $198,000. Figure 1 depicts the median housing price in Riverside County over the period 1990 to August 2008.

Figure 1. Riverside County Median Housing Price (1990 – August 2008)

Source: Riverside County Center for Demographic Research. 2008. Riverside County Progress Report, pg 14.

Local Government sales tax revenues remained fairly stagnant through 2006 and began to decline in early 2007, according to Beacon. By the second quarter of 2008, taxable sales in Riverside County declined by 7.7 percent. The decline is expected to continue with taxable sales possibly bottoming out by 2010. Recovery of these reduced revenue streams will likely not occur within the next permit term.

As a direct outcome of the current economy and the economic outlook into the next MS4 Permit term, the number of New Developments proposals has plummeted and any significant rebound is not forecast. New and redevelopment projects will likely remain minimal. As shown in Figure 2, the number of housing units being added each year has dropped below the levels seen at any point in time during the 2004 MS4 Permit. These numbers will likely continue to decrease for a significant portion of the new MS4 Permit term.

Figure 2. Riverside County Housing Units Added (1990 – 2008)

Source: Riverside County Center for Demographic Research. 2008. Riverside County Progress Report, pg 12.

These economic issues and projections directly affect and limit both:

1. The need for including enhanced new and re-development requirements in the new MS4 Permit, and
2. The Permittees ability to fund, and even seek new funding sources for additional MS4 Permit requirements for new and re-development projects.

Therefore, as described in Section 7.2, the Permittees are not recommending and cannot financially support any significant increases to their Development Planning activities. Permittee specific projections are as follows:

3.4.2.1 County of Riverside

The County is operating with a structural deficit of $12 million and plans a 25 percent budget reduction from FY 2008/2009 through FY 2011/2012. The County's current budget of $4.7 billion represents a 5 percent reduction from the previous year and next year's budget is expected to be cut by 10 percent. These cuts are directly associated with the overall decline in property values and the high number of foreclosures. There are concerns about having to use discretionary funds to meet State mental health and social service mandates. In addition, the County is dependent on funds from federal and state sources. If during this time of economic crisis federal and state funding sources are reduced or eliminated, any unfunded State and Federal programs will be terminated. Only core County programs will continue.

The primary source of general fund revenue is from property taxes and sales tax. With the unprecedented number of foreclosures, reduced property values, and declining sales tax revenue, general fund revenue is in a downward spiral. Another source of funding is through the Solid Waste Tipping Fees paid at the County landfills. Volume is down 15 percent since 2006 with anticipated downward trend to 40 percent reduction in solid waste through 2014. Programs that are partially funded through tipping fee allotments will be impacted. Due to the declining economy the recycling market has collapsed. Virtually no recyclable materials are being shipped for reprocessing. This loss of revenue and increased disposal costs is further impacting the general fund.

Cuts of 25 percent for all Net County Cost general fund programs will translate into reduction of County services and elimination of unfunded state and federal programs. Only core value programs will be provided (including public safety and fee programs)

The County has instituted a hiring freeze and required each department to create a report outlining the projected effects of the budget cuts. The County currently employs over 20,000 people, and layoffs are expected to result from the findings of these departmental reports. It is anticipated that this will impact program delivery for stormwater related activities. No County department will be able to sustain current staffing levels as they try to meet the 25 percent budget reduction strategy.[2] [3]

3.4.2.2 City of Menifee

The newly incorporated City of Menifee FY 2008/2009 initial budget was estimated from their comprehensive fiscal analysis that was submitted to the Local Agency Formation Commission during the incorporation process. Because of the economic uncertainty, and the fact that the City is only now beginning to staff positions, it is unknown what the immediate impact of the fiscal crisis will be. The County is responsible for assisting the City in meeting its MS4 Permit compliance requirements during the first year of incorporation which expires October 1, 2009. Currently, the level of property tax revenue that will be available to the City is uncertain. Funding for MS4 Permit compliance requirements was not explicitly budgeted. A financial hardship currently exists because of the costs associated with incorporation.

3.4.2.3 City of Murrieta

The City of Murrieta's FY 2008/2009 budget did not increase compared to FY 2007/2008. Adjustments were made to reflect less revenue and to absorb any operating costs. However, budget cuts are anticipated for FY 2009/2010 because the immediate economic outlook is not good. There have been approximately 2,000 home foreclosures within the City. Sales tax revenue is estimated to drop 12.5 percent, property tax revenue will drop, and the State took approximately $525,000 out of redevelopment funds. Murrieta did not receive any vehicle licensing fees from the State and it appears likely that the State will take more revenue from the Cities to solve its budget problems. New NPDES requirements that increase compliance costs will create a financial hardship for the City.

3.4.2.4 City of Temecula

Various ongoing tax and investment revenues adopted in the City of Temecula's FY 2008-09 general fund revenues are projected to decrease from FY 2007-08. Sales and use tax revenues are expected to decrease in FY 2008-09 compared to FY 2007-08. This decrease is primarily the result of the decline in general consumer goods, electronic retail, and auto sales. Property tax revenue is also expected to decrease due to decreases in supplemental tax receipts attributed to the impact of the housing crisis. Investment interest revenue is also anticipated to decrease due to a decline in interest rates.

As a result of the 2008/2009 State budget, Temecula's redevelopment agency will have to shift existing funds from property taxes to the State's Education Revenue Augmentation Fund coffer for schools and

[2] "The Realities of Recession in California: A Statewide Report by U.S. Senator Barbara Boxer, December, 2008, p. 18.

[3] Riverside County Executive Office, January, 2008.

colleges. As such, the amount due from the Temecula Redevelopment Agency is expected to be $898,685. As the State of California continues to address its budget deficit, the City of Temecula faces the possibility of additional revenue shifts to State coffers, further losing future revenue streams and threatening existing service levels.

In addition, a Press-Enterprise article dated December 9, 2008, reported that "Between 25 and 30 part-time Temecula employees will be without work in the new year as City officials deal with a lack of revenue and less work to go around." Furthermore, "the city is not immune to the economic slowdown, which has forced its neighbors to lay off workers and slash spending to counter drops in sales tax receipts and building permit fees. In May, the City's Finance Director reported that revenues were down $3 million compared to two years ago."

With these current and projected reductions in revenue and staff, additional requirements in the MS4 Permit or upcoming TMDL-related requirements, without any corresponding cost-equivalent offsets, will exceed the City's ability to effectively implement these new requirements and will begin to compromise the City's existing efforts to manage the existing MS4 Permit requirements.

3.4.2.5 City of Wildomar

The newly incorporated City of Wildomar FY 2008/2009 initial budget was estimated from their comprehensive fiscal analysis that was submitted to the Local Agency Formation Commission during the incorporation process. Because of the economic uncertainty, and the fact that the City is only now beginning to staff positions, it is unknown what the immediate impact of the fiscal crisis will be. The County is responsible for assisting the City in meeting its MS4 Permit compliance requirements the first year of incorporation that expires July 1, 2009. Currently, the level of property tax revenue that will be available to the City is uncertain. Funding for MS4 Permit compliance requirements was not explicitly budgeted. A financial hardship currently exists because of the costs associated with incorporation.

4.0 Overview of the Upper Santa Margarita River Watershed

4.1 Physiography and Geology

The upper Santa Margarita River watershed is defined as that portion of the Santa Margarita River watershed above the confluence of Murrieta and Temecula Creeks and includes the City of Temecula and portions of the Cities of Menifee, Murrieta, Wildomar, unincorporated County areas, portions of the Cleveland and San Bernardino National Forests, the Cahuilla, Ramona, Pauma, and Pechanga Indian Reservations and properties under the jurisdiction of Caltrans and a variety of special districts. The watershed is bounded by several mountain ranges, including the Santa Ana and Santa Margarita mountains to the North and the Palomar Mountains to the South. The upper Santa Margarita watershed includes areas in Riverside and San Diego Counties and encompasses approximately 588 square miles.

The upper Santa Margarita watershed includes two major sub-basins, drained by Temecula and Murrieta Creeks. Temecula Creek has a drainage area of 366 square miles, with steep rugged topography in the Palomar and Thomas Mountain areas and rolling hills below. The upper 316 square miles of this basin is controlled by Vail Lake (completed in 1949). Murrieta Creek has a drainage area of 222 square miles, with over 50 square miles controlled by Skinner Reservoir (completed in 1974). Although the watershed area is somewhat smaller and less rugged than the Temecula Basin, flood flows have the potential to create greater damage as they flow through the Cities of Temecula and Murrieta.

Temecula and Murrieta Creeks join along the Elsinore fault zone at the head of Temecula Canyon to form the Santa Margarita River. The Temecula Canyon is approximately five miles long, and is a steep, narrow, and rocky canyon. The San Diego-Riverside county line crosses through the Temecula Canyon. From here, the river traverses 27 miles to the Pacific Ocean.[4]

4.1.1 Watershed Characteristics

Over 50 percent of the Santa Margarita watershed has been controlled by the construction of Vail Dam in 1949 and Skinner Reservoir in 1974, which created a significant storage capacity in the upper watershed.[5] [6] 52 percent of the upper Santa Margarita River watershed is controlled by the dams. Due to this storage capacity, peak flow rates during major flow events for both existing and future land use conditions will be lower than under natural conditions.[7] [8]

[4] Santa Margarita Watershed Study: Hydrologic and Watershed Processes, Phillips, Williams and Associates, Ltd., October 26, 1998, page 1.

[5] Santa Margarita Watershed Study: Hydrologic and Watershed Processes, Phillips, Williams and Associates, Ltd., October 26, 1998, page 14.

[6] Philip Williams & Associates, Santa Margarita Watershed Study: Hydrology and Watershed Processes, October 26, 1998, p. 14.

[7] Philip Williams & Associates, Santa Margarita Watershed Study: Hydrology and Watershed Processes, October 26, 1998, p. 20.

[8] Santa Margarita Watershed Study: Hydrologic and Watershed Processes, Phillips, Williams and Associates, Ltd., October 26, 1998, page 20.

4.1.2 Stream Flow Characteristics

Murrieta and Temecula Creeks are perennial interrupted streams, i.e., they include reaches in which the flow is continuous and others where flow is ephemeral. The areas of perennial flow are located in mountain area tributaries outside of the urbanized areas serviced by the MS4s. The perennial flows disappear by seepage into the sands and gravels and resurface upstream of the confluence of Murrieta and Temecula Creeks. The creeks in the urbanized areas of the watershed, located primarily in the valley, are ephemeral and flows are only observed during and immediately after significant storm events. During major storms, after initial wetting, periods of intense rainfall result in rapid increases in stream flow in steep foothill and mountain areas.[9] "Runoff in streams in the watershed is derived primarily from rainfall, and as a result, stream flows exhibit monthly and seasonal variations similar to those shown by the precipitation records. Absence of snow pack in the tributary watershed results in a rapid decrease in flow of streams at the conclusion of the winter precipitation season. Following severe storms, discharge in the larger streams often increases in a few hours time from practically no flow to a rate of thousands of cubic feet per second. Stream flows vary greatly from month to month and from season to season."[10]

Rising groundwater is currently observed in Murrieta Creek below its confluence with the Santa Gertrudis Channel. This is consistent with the observations with the rising groundwater conditions observed by the State of California in 1956.[11] Rising groundwater is also observed in Temecula Creek approximately one quarter mile upstream of the Interstate 15 bridge. In 1956, the State of California observed more extensive rising groundwater conditions occurring as far upstream as the Highway 79 bridge. Based on the virtual absence of non-storm water flows and the rising groundwater conditions in lower Murrieta and Temecula Creeks observed prior to development of the watershed, there is no evidence that the rising groundwater is due to Urban Runoff nor that Urban Runoff has affected the quality of rising groundwater. However, use and disposal of reclaimed water and agricultural and landscape irrigation in the watershed may affect groundwater quality. Until October 2002, the Rancho California Water District augmented the flow of the Santa Margarita River with reclaimed water at a point about five miles upstream from the Temecula gauging station. Since that time, the Rancho California Water District has diverted reclaimed water to the Santa Ana watershed and instead discharged imported water at a location downstream of the confluence of Murrieta and Temecula Creeks in order to meet water supply obligations to Camp Pendleton.

For the average annual event, it is estimated that approximately 89 percent of the volume of runoff in the Santa Margarita Region is due to non-urban land uses not regulated under the federal storm water program. For the 100-year 24-hour event, 93 percent of the volume of runoff will be due to non-urban land uses. These estimates are based on the assumption that precipitation is constant across the watershed. However, precipitation (and resultant runoff volumes) in the non-urbanized upland areas is as much as four times greater than that from the urbanized valley areas.[12]

[12] State of California Department of Public Works, Division of Water Resources, Bulletin No. 57, Santa Margarita River Investigation, Volume I, June 1956, p. 11

4.2 Climate

"The climate of the Santa Margarita River watershed is typically Mediterranean, being characterized by warm dry summers and cool rainy winters. About 75 percent of the precipitation occurs during the four-month period from December through March. Mean annual depth of precipitation ranges from less than 10 inches near Vail Reservoir to over 40 inches west of Palomar Observatory, varying with elevation and topographic influences."[13] Precipitation increases with increases in elevation to the summit of the Coastal range. Shading effects of the Coastal range lead to a marked decrease of precipitation throughout the lower portions of the Inland area. Precipitation increases again farther away from the Coastal range in the northeastern area of the Inland area.[14] The significant and varied orographic features also make rainfall prediction particularly challenging in the urbanized portion of the watershed.

4.3 Population and Land Use

4.3.1 Population

The California Department of Finance estimates that as of January 1, 2008, the total population of Riverside County was about 2,088,322. Of the 2.1 million people, approximately 272,621 persons (or 13 percent) reside within the portion of Riverside County under the jurisdiction of the San Diego Regional Board. As shown in Figure 3, approximately 51,314 persons[15] reside in the unincorporated area while approximately 221,307 persons reside within the cities of Menifee, Murrieta, Temecula and Wildomar.

Figure 3. Santa Margarita Region Population by Permittee (2008)

[13] State of California Department of Public Works, Division of Water Resources, Bulletin No. 57, Santa Margarita River Investigation, Volume I, June 1956, p. 11.

[14] State of California Department of Public Works, Division of Water Resources, Bulletin No. 57, Santa Margarita River Investigation, Volume I, June 1956, p. 38.

[15] Population estimate for the portion of unincorporated Riverside County within the Santa Margarita River watershed developed by the County TLMA GIS Demographics Unit based on the 2000 Census.

Although the second term and 2004 MS4 Permits covered a period of time that saw a significant amount of growth, due to the current and foreseeable economic conditions described in Section 3.4.2 of this report and decreasing areas available for development, growth during the next MS4 Permit term will be quite limited. In fact, the projected growth rate through 2015 will be significantly less than has been seen since the early 1990s. Figure 4 shows the combined populations of the Cities of Murrieta and Temecula since 1997 and projected through 2015. Similar trends are expected for the unincorporated areas and the portions of the cities of Wildomar and Menifee within the watershed.

Figure 4. Cities of Murrieta and Temecula Combined Population (1997 – 2015)

Source: Riverside County Center for Demographic Research. 2008. Riverside County Progress Report, pgs 92 & 124.

Figure 4 clearly demonstrates the dramatic reduction in growth that is expected for the term of the next MS4 Permit when compared to previous permit terms.[16] Establishing trend lines for the population in these cities further demonstrates that the growth rate (population added per year) will be lower than the previous growth rate by approximately 86 percent.

[16] 2008 Riverside County Progress Report

Table 2 shows population projections for the all of the Permittees into the year 2015.

Table 2. Population of Santa Margarita Region Co-Permittees

Co-Permittee	Year			Change (2009 to 2015)
	Estimate 2008 (a)	Estimate 2009 (b)	Projected 2015 (b)	
City of Menifee	906[c]	927[c]	5,232[c]	464%
City of Murrieta	100,173	102,277	109,715	7.3%
City of Temecula	101,057	101,356[d]	103,150	1.8%
City of Wildomar	19,171[c]	19,589[c]	20,127[c]	2.7%
Unincorporated County of Riverside	51,314[c]	52,436[c]	53,793[c]	2.6%
Total	272,621	276,585	292,017	5.6%

Notes:

(a) Unless otherwise noted, populations were obtained from the State of California, Department of Finance, E-4 Population Estimates for Cities, Counties and the State, May 2008.

(b) Unless otherwise noted, projected populations were obtained from Riverside County Center for Demographic Research. Riverside County Progress Report, 2008

(c) Data provided by County of Riverside, Executive Office.

(d) Data provided by City of Temecula.

Since the District is not a general purpose government, it is not included in this listing. Although the current population of the City of Menifee in the Permit Area is small, it is anticipated that the population will increase as it annexes unincorporated areas. Similarly, it is anticipated that the cities of Murrieta and Temecula will gain population as they annex unincorporated areas. It is not anticipated that Wildomar will see significant population increases as it is bounded on all sides by other cities and lands reserved under the MSHCP.

4.3.2 Land Use

Land uses in Riverside County within the Santa Margarita Region include open space, residential, commercial, light industrial, heavy industrial, and agriculture. The agricultural land uses include row crops, nurseries, citrus groves and vineyards, dairies, ranches, poultry and hog farms, and other agricultural related uses with one single-family residence allowed per 10 acres (County of Riverside General Plan, Land Use Element 2003). The conversion of agricultural lands and open space to other "developed" land uses has been ongoing and will continue, although at a much lower rate than previously experienced. Land uses in the Santa Margarita Region are shown in Table 3. These land uses are based on the County of Riverside Assessor Parcel Data, current as of February 2006. It should be noted that the land uses below represent ***zoned*** land uses rather than ***actual*** land uses. This overstates the actual area of urban land use in the Santa Margarita Region. Also, changes in zoning designations can cause odd fluctuations in year-to-year date.

A map of the zoned land uses is provided in Appendix A.

In 1956, only 0.3 percent of the Santa Margarita River watershed (less than two square miles) was urbanized.[17] Although there has been a significant rate of growth in population relative to the State and

[17] State of California Department of Public Works, Division of Water Resources, Bulletin No. 57, Santa Margarita River Investigation, Volume I, June 1956.

neighboring counties, half a century later, approximately 88 percent of the Santa Margarita River watershed remains as non-urban land uses (rural residential, agriculture, preserves and open space, state lands, federal lands, and tribal lands). Further, almost one-third of the upper Santa Margarita River watershed consists of federal, state, and tribal lands that are not under the jurisdiction of the Permittees' MS4 programs. It is projected that the population of Riverside County will increase approximately 5.6 percent by 2015. If the urbanized area increases proportional to population, 87 percent of the upper Santa Margarita River watershed would remain in non-urban land uses in 2015.

Table 3. 2009 Santa Margarita Region Land Uses

Urban Land Use	Acreage[(a)]	% of Land Use Subtotal	% of Total Land Use
Commercial	8,339	20.0%	2.5%
Industrial	963	2.3%	0.3%
Urban Residential (< 1 acre)	12,656	30.4%	3.7%
Parks & Recreation Facilities	4,291	10.3%	1.3%
Streets & Roads	15,439	37.0%	4.6%
Subtotal – Urban Land Use	41,688		12.3%
Non Urban Land Uses			
Preserves & Open Space	54,141	18.2%	16.0%
Rural Residential (> 1 acre)	106,773	35.9%	31.5%
Agriculture	36,389	12.2%	10.7%
Federal/State/Tribal Lands/Non-County Jurisdiction	100,076	33.7%	29.5%
Subtotal Non Urban Land Use	297,379		87.7%
Total Urban & Non Urban Land Use	339,067		100%

(a) As reported in the FY 2007/2008 Watershed Annual Report.

4.3.3 Conserved Lands

The Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) was adopted in June of 2003. It is a comprehensive, multi-jurisdictional Habitat Conservation Plan focusing on conservation of species and their associated habitats in western Riverside County. The MSHCP is one of several large, multi-jurisdictional habitat planning efforts in southern California with the overall goal of maintaining biological and ecological diversity within a rapidly urbanizing region. The MSHCP will allow Riverside County and its cities to better control local land-use decisions and maintain a strong economic climate in the region while addressing the requirements of the state and federal Endangered Species Acts. Further, as floodplains and streams tend to support critical habitat, the MSHCP will preserve many of the remaining natural streams and establish significant buffer areas between those systems and urban land uses.

Much of the remaining non-urbanized lands in the Santa Margarita Region will ultimately be incorporated into the MSHCP. The MSHCP will result in a conserved area in excess of 500,000 acres and focuses on conservation of 146 species. The MSHCP Conservation Area includes approximately 347,000 acres on

existing Public/Quasi-Public Lands and approximately 153,000 acres of Additional Reserve Land. A large portion of the conserved lands are in the upper Santa Margarita watershed (at least 145,000 acres). There are approximately 72,318 acres of existing public or quasi-public lands preserved within the upper Santa Margarita River watershed area located in Riverside County.

4.3.4 Anticipated Development 2009-2015

Proposed development during the next MS4 Permit term is an important indicator of potential new Urban Runoff sources. To the extent possible, the Permittees have identified significant New Development projects that, if constructed, will result in the conversion of primarily undeveloped land to developed land. This section describes the expected development within Permittee cities. Consistent with the current and forecasted economic conditions and population estimates, and as supported by the population information and forecasts presented in Section 4.3.1, the Permittees anticipate that the term of the upcoming MS4 Permit will be a time of little development. Following are summaries of anticipated development during the upcoming MS4 Permit.

4.3.4.1 County of Riverside

Projected trends for the County of Riverside's land use can be referenced in the Riverside County General Plan. Maps depicting the areas of future development and type of land use can be found in the General Plan maps that are accessible at http://www.rctlma.org/generalplan/area_maps.html.

- With the incorporation of the cities of Wildomar and Menifee the remaining unincorporated County area to be built out in the Santa Margarita Region during the upcoming MS4 Permit term is going to be considerably smaller.
- It is anticipated that, over the next five years, additional annexations will occur in each of the four city areas (Temecula, Murrieta, Wildomar and Menifee) that will further reduce the unincorporated County area in the Santa Margarita Region.
- The unincorporated County area in the upper Santa Margarita River watershed (east of Temecula, Menifee and Murrieta) will remain in rural, open space and additional MSHCP land uses. In addition, due to drought conditions and depletion of aquifers the prospects of New Development is unlikely. Water districts in the region cannot offer "will serve" letters to provide for water resources they do not have. Infrastructure for water supply and municipal water treatment, MS4 and flood control facilities are virtually non-existent in this area.
- Due to downturn in economy, Development Impact Fees (DIF) and Transportation Uniform Mitigation Fees (TUMF) are and will continue to be significantly under funded. This reduction in transportation funding will result in fewer road and infrastructure projects during the term of the upcoming MS4 Permit. The Transportation Department has projected limited projects for the Santa Margarita Region. The Clinton Keith Road widening project is still in the planning stages. Due to budgetary constraints, unless projects are fully funded through County finance mechanisms (TUMF, DIF, state and federal pass through from bonds and grants) most projects will be put on hold through 2012.

4.3.4.2 City of Menifee

Projected development trends for the City of Menifee are unknown, sphere of influence and annexation opportunities will allow for limited growth once the economic uncertainty of the region is resolved.

4.3.4.3 City of Murrieta

The area north of Clinton Keith Road along the east side of the I-215 freeway should see some construction towards the end of the next MS4 Permit term. Grading for the construction of a hospital has started along the freeway and it is anticipated that supporting development will follow once the hospital is open. Overall the Planning Department is receiving few applications for New Development projects. For example, a Planning Commission meeting scheduled for January 2009 has been cancelled because there are no New Development items to discuss. In light of the current and foreseeable economic conditions, the City does not anticipate any substantial New Development activity for the next few years, with limited growth possibly resuming toward the end of the next MS4 Permit term.

4.3.4.4 City of Temecula

The City of Temecula is currently experiencing a significant leveling trend in development. Throughout 2008, fewer applications were being processed than in previous years. As such, Temecula does not anticipate processing any substantial number of New Development applications within the next MS4 Permit term. It is anticipated that applications from hereon will be limited to smaller in-fill and redevelopment projects. In addition, proposed annexation areas will be limited to areas that will be set aside mostly for conservation. As Temecula is on the verge of build-out, approximately 1 percent of developable land remains available throughout the City for New Development.

4.3.4.5 City of Wildomar

Projected trends for the City of Wildomar are unknown, sphere of influence opportunities will allow for limited growth once the economic uncertainty of the region is resolved.

4.4 Surface Water Bodies, Beneficial Uses, and Impairments

Approximately eight percent of Riverside County drains into surface water bodies within the jurisdiction of the Regional Board. Those surface water bodies (or portions thereof) are listed in Sections 4.4.1 and 4.4.2.

Rivers and Streams

- Santa Margarita River (Hydrologic Unit Basin Number 2.22)
  - Murrieta Creek
    - Slaughterhouse Canyon
  - Cole Canyon
    - Warm Springs Creek
      - Diamond Valley Reservoir
  - Santa Gertrudis Creek
    - Tucalota Creek
    - Lake Skinner
  - Temecula Creek (Hydrologic Unit Basin Number 2.92)
    - Iron Spring Canyon
  - Temecula Creek (Hydrologic Unit Basin Number 2.84)
    - Tule Creek
      - Million Dollar Canyon
    - Cottonwood Creek
  - Vail Lake
    - Wilson Creek
      - Cahuilla Creek (Hydrologic Unit Basin Number 2.73)
        - Hamilton Creek
      - Cahuilla Creek (Hydrologic Unit Basin Number 2.71)
        - Elder Creek
    - Arroyo Seco Creek
    - Kolb Creek
  - Temecula Creek (Hydrologic Unit Basin Number 2.52)
    - Pechanga Creek
- Santa Margarita River (Hydrologic Unit Basin Number 2.21)
  - DeLuz Creek

4.4.1 Beneficial Uses

The upper Santa Margarita River watershed supports a variety of ecosystems and provides many Beneficial Uses (Table 4)[18]. The ultimate goal of the Riverside County DAMP and the Watershed and Individual SWMPs is to manage Urban Runoff in a manner protective of the Beneficial Uses of these Receiving Waters.

Table 4. Beneficial Uses of Receiving Waters
Upper Santa Margarita River Watershed

Beneficial Use	Murrieta Creek	Cole Canyon	Warm Springs Creek	Santa Gertrudis Creek	Long Valley	Temecula Creek	Santa Margarita River
Municipal and Domestic Supply	X	X	X	X	X	X	X
Agricultural Supply	X	X	X	X	X	X	X
Industrial Service Supply	X	X	X	X	X	X	X
Industrial Process Supply	X	X	X	X	X	X	
Ground Water Recharge	X					X	
Contact Water Recreation				X	X	X	X
Non-contact Water Recreation	X	X	X	X	X	X	X
Warm Freshwater Habitat	X	X	X	X	X	X	X
Cold Freshwater Habitat							X
Wildlife Habitat	X	X	X	X	X	X	X
Rare, Threatened or Endangered Species							X

4.4.2 Current Water Quality Concerns and Issues

Urban Runoff discharged to MS4s in Riverside County ultimately flows to various surface water bodies (inland streams, lakes, and reservoirs) and typically carries Pollutants that originate from numerous dispersed and uncontrolled sources. Examples of Pollutants that may be present in Urban Runoff are fertilizer, heavy metals, nutrients, petroleum products, sediment, bacteria, chemicals, and litter.

Because the upper Santa Margarita River watershed is large and has many land uses, the water quality concerns in sub-watersheds vary. However, each land use can potentially contribute Pollutants to nearby streams, rivers, and lakes. The infrastructure that supports people's activities (e.g., roads, parks, MS4, and wastewater collection and treatment facilities) may contribute to water quality concerns if not properly managed. Other sources of stormwater runoff, including agricultural areas, are exempt from the requirements of the NPDES permitting program established under the Clean Water Act. In addition, some Pollutants, such as total suspended solids, may be found at elevated levels in runoff from non-urban land uses. Further, certain activities that generate Pollutants present in Urban Runoff are beyond the ability of the Permittees to eliminate. Examples of these include operation of internal combustion engines, atmospheric deposition, brake pad wear, tire wear, residues from lawful application of pesticides, nutrient runoff from agricultural activities, and leaching of naturally occurring minerals from local geography.

[18] www.waterboards.ca.gov/rwqcb9/programs/

As required by Section 303(d) of the Clean Water Act, the State Board maintains a list all waters in the State that do not meet the Water Quality Standards established in the Basin Plans prepared by the Regional Boards for protection of Beneficial Uses. This list, referred to as the "303(d) List," details the Pollutant or stressor on each named water body, the potential source of Pollution, estimated affected area, as well as a priority for development of the associated TMDL. A TMDL is a plan that identifies how much Pollutant load a specific Impaired Waterbody can sustain without impacts to its Beneficial Uses. In addition to identifying the maximum Pollutant load, a TMDL is used to develop implementation plans to meet Water Quality Standards for a designated water body. Table 5 summarizes the 2006 303(d) List of Impaired Waterbodies within the upper Santa Margarita River watershed, as well as the year in which a TMDL is proposed for approval. No TMDLs have been established for Receiving Waters in the upper Santa Margarita River watershed.

Table 5. 2006 303(d) Listings for the Santa Margarita Region

Water Body	Pollutant	Potential Sources	Area Affected	Proposed TMDL Completion
Santa Margarita River (Upper)	Phosphorus	Urban runoff/storm sewers Unknown nonpoint source Unknown point source	18 miles	2019
Murrieta Creek	Iron Manganese Nitrogen Phosphorous	Source unknown Source unknown Source unknown Urban runoff/storm sewers Unknown nonpoint source Unknown point source	12 miles 12 miles 12 miles 12 miles	2019 2019 2019 2019
Temecula Creek	Nitrogen Phosphorus Total dissolved solids	Source unknown Source unknown	44 miles 44 miles	2019 2019

Table G-35 of Appendix G to the Annual Report 2007-2008 additionally identifies pyrethroid pesticides (bifenthrin and permethrin), bacteria (E. coli and fecal coliform), lead, and sediment (turbidity) as Pollutants of Concern in the upper Santa Margarita River watershed that warrant focused attention by Permittee implementation programs. These constituents have been detected intermittently or persistently at Triad and Tributary monitoring stations.

4.5 Municipal Separate Storm Sewer System

A map depicting the MS4 facilities owned and operated by the Permittees is provided in Appendix B.

5.0 Program Evaluation Based on Water Quality Trends

The overall effectiveness of the Permittees programs is assessed based on the analysis of water quality data obtained as part of the Consolidated Monitoring Program. Approximately 14 years of data have been collected through this program and have been cumulatively analyzed in the fourth-year monitoring Annual Report.

5.1 Inherent Limitations to Analyzing Water Quality Data

There are inherent limitations to analyzing water quality data from storm water. Storm water runoff is very different from mechanical wastewater or water treatment processes that usually incorporate water quality monitoring. Discharges from mechanical processes such as treated wastewater effluent and industrial discharges usually:

- Come from a single or a few readily identifiable sources;
- Are generally consistent in flow rate and chemical character from day to day; and
- Can be easily instrumented.

Conversely, Urban Runoff non-point source flows, such as those collected and analyzed as part of the MS4 Permit monitoring programs usually:

- Come from multitudes of unidentifiable or hidden sources, many of which are non-Urban in nature:
  - State, federal or tribal lands
  - Natural leaching of soils
  - Wildlife
  - Aerial deposition
  - Wildfires
- Vary widely in flow rate in response to precipitation events
- Vary widely in chemical character at any given moment due to:
  - Unidentified episodic issues related to natural phenomena
  - Magnitude of rainfall and extent of contributing area
  - Potential one-time illicit discharges that were not identified at the time of sampling
  - Unforeseen or unidentified consequences of changes in numerous land use policies (fire management, development, etc)
- Are subject to significant natural random variation; and
- Cannot be easily instrumented due to the wide variation in depth and velocity and associated impacts of natural or unnatural aggradation and degredation of natural stream beds.

Because ephemeral storm water flows are, by their very nature, particularly random in character, it may take many years before monitoring data trends can be detected or to determine the effectiveness of an

Urban Runoff control measure. Power analyses were conducted for fecal coliform, metals, and nutrients at the stations monitored in the Santa Ana Region during the 2005/06 reporting period. Power analysis is used to determine how many years of monitoring would be required to detect a given trend in the data. This tool was developed by the SCCWRP. Based on the results, for biennial monitoring, and having an 80 percent chance of detecting a change in concentration, it would take about 5-10 years of data collection to detect a change of 50 percent in concentration, 10-15 years of data to detect a 25 percent change, and 15-30+ years of data to detect a 10 percent change. It is expected that results would be similar for other parameters measured in the monitoring program in the Santa Margarita Region.

5.2 Focus Area Constituents of Concern

During the 2004 MS4 Permit term, monitoring data indicated that one or more receiving water samples have been found to contain the following constituents at levels that exceeded Basin Plan Objectives (BPO). As such they have been identified as constituents of concern.

- Nutrients (Ammonia as N, Phosphorus
- Pyrethroid Pesticides (Permethrin, Bifenthrin)
- Pathogen Indicators (E.coli, Fecal Coliform)
- Lead
- Turbidity (lab)

5.3 Analysis of Water Quality Trends

As discussed in the 2008 Santa Margarita Region Annual Monitoring Report, the results of the trend analysis and regression calculations indicate that there are no statistically significant trends in the water quality monitoring data. The lack of trends in the data presented in the Annual Monitoring Report contrasts with the rapid population growth over the same time frame. As discussed in the Annual Monitoring Report, population growth from 1990 to 2008 was approximately 300 percent for the Santa Margarita Region. This significant growth in population and resulting urban land use area contrasts sharply with the lack of statistically significant increases in concentrations of constituents of concern that would otherwise be expected in stormwater runoff from urbanized areas.

These results demonstrate and can be attributed to the effectiveness of the Permittees' programs at addressing the Focus Area Constituents of Concern, which are targeted and designed to prevent the discharge of these constituents into the Receiving Waters.

5.3.1 Recommended Compliance Program Modifications to Address Focus Area Constituents of Concern

Based on the analysis described above and in Appendix G of the 2008 Watershed Annual Report, no significant program modifications are necessary to continue to protect and improve the quality of the Receiving Waters.

Although the Permittees programs have been shown to be protective of Receiving Water quality, through continual evaluation of the programs being implemented and on-going water quality monitoring, additional measures are being proposed as part of this ROWD to address changing conditions and ensure

the ongoing effectiveness of the programs. Recommended changes to ensure the ongoing effectiveness of the Permittees programs are described in Sections 6 and 7 of this report.

6.0 Evaluation and Recommendations for Regionally Implemented Programs

6.1 Program Management

The District is the Principal Permittee for each of the three MS4 permits issued by the three Regional Boards that have jurisdiction in Riverside County. As Principal Permittee, the District performs management functions including coordination with the Regional Boards, preparation of compliance documents and Annual Reports, participation in studies and external cooperative efforts and dissemination of information to the Permittees. The Permittees implement some compliance programs that are common to all of the Permittees and which are implemented on a Countywide or regional basis to increase cost effectiveness and efficiency. Typically, the District also manages Countywide and regional programs.

6.1.1 Program Management Accomplishments and Programmatic Improvements

During the term of the 2004 MS4 Permit the following accomplishments were achieved.

- Updated the Implementation Agreement that sets forth the responsibilities of the Principal Permittee and the Co-Permittees.
- Revised the Riverside County DAMP to reflect requirements in the 2004 MS4 Permit, which served as a model document for the Permittees Watershed and Individual SWMPs.
- Developed Santa Margarita Region Watershed SWMP
- Participated in the Santa Margarita River Executive Management Team (SMREMT) to identify and address the highest priority water quality concerns in the Santa Margarita watershed, including development of a watershed model to assist with land use planning and TMDL development, coordinating watershed monitoring, and developing formal agreements between interested stakeholders for the purposes of evaluating impairment listing and data gaps in the watershed.
- Continued progress with the SMREMT on a uniform watershed plan and model for the Santa Margarita Watershed through the Santa Margarita Watershed Supply Augmentation, Water Quality Protection, and Environmental Enhancement Program.
- Participated in the Santa Margarita Lagoon TMDL workgroup in funding and overseeing the development of a comprehensive program to collect data and model the various inputs to the lagoon to be used to develop a TMDL to address nutrients.
- Participated in the Santa Margarita Watershed Water Quality Monitoring Group to coordinate the monitoring efforts of various stakeholders in the Santa Margarita watershed.
- Participated in the SMC to improve stormwater monitoring science, coordinate data collection efforts, and evaluate the effects of stormwater discharges to receiving waters specific to Southern California.
- Participated actively in various efforts of CASQA.

- Participated in the completion of an Integrated Regional Water Management Plan for the upper Santa Margarita Watershed to help pave the way for greater watershed-wide coordination and management of water resources within the upper watershed as a whole, as well as adjoining watershed and regional planning efforts.
- Participated in the development and implementation of the MSHCP for Western Riverside County which contains a comprehensive land use plan that ultimately conserves the environmental resources and habitat of approximately half of the Santa Margarita Region.
- Participated in the development of a Special Area Management Plan (SAMP) to further manage receiving waters at a watershed scale for the upper Santa Margarita Watershed by identifying, prioritizing and protecting the highest priority Waters of the U.S., while considering the broader needs of growth and transportation improvements.
- Developed and updated methods to track program effectiveness such as resident surveys, tracking hotline inquiries, and web counters.
- Enhanced Public Education program through development of new outreach materials and programs.

6.1.2 Proposed Revisions to Regional Program Management

6.1.2.1 Enhanced Program Effectiveness Assessments and Municipal Action Levels

To ensure that the Permittee's programs continue to be effective at managing the effects of Urban Runoff on Receiving Water quality, the Permittees will revise the Program Effectiveness Assessments for both the Individual SWMP and the Watershed SWMP as part of their implementation of the new MS4 Permit. An assessment strategy based on the CASQA Municipal Stormwater Program Effectiveness Assessment Guidance has been established including the establishment of:

- Measurable goals for each component,
- Measurable metrics to assess progress toward those goals,
- CASQA Effectiveness Levels for each metric; to indicate the level at which each metric can demonstrate the effectiveness of the Permittee's programs at addressing each goal.
- Timeframes in which the Permittees expect to be able to assess effectiveness using each metric.
- Municipal Action Levels (MALs) for appropriate metrics to ensure a minimum level of program implementation and identify shortcomings that could affect the Permittee's progress toward the established goals. The MALs would not be permit compliance measures, but triggers for further Permittee evaluation of the affected compliance program.

If a MAL for a metric is exceeded, the Permittees will review implementation of that program component to identify the cause of the exceedance and identify needed adjustments to avoid future exceedances. The findings of these reviews and any recommended adjustments to the Permittees programs will be reported in the corresponding section of the Annual Report submitted the following year. Further research is particularly needed to establish appropriate Municipal Action Levels for the various program areas.

After a review of the stormwater program, the Permittees have established an initial Assessment Methodology for each component including preliminary goals, measurable metrics, effectiveness levels,

timeframes and MALs for each. These initial assessment methodologies are included in tabular format in Appendix C. Although the Permittees believe the basic proposal is viable, The Permittees will review and finalize these Assessment Methodologies and associated metrics within one year following adoption of the new MS4 Permit as additional data and analysis is necessary to support specific action levels.

6.1.2.2 Revised Reporting Format

The Permittees recommend substantial revisions to the MS4 Permit requirements for the layout of the Annual Report. The Permit requires substantial duplication of reporting, which either increases the volume of the Annual Report, or requires substantial cross-referencing. In either case, it is confusing to write, and most likely, confusing to read. The Permittees recommend a meeting with Regional Board staff in the development of the new MS4 Permit to discuss methods to streamline and clarify reporting requirements.

6.1.2.3 Maintain Enhanced Watershed / MS4 Map

The Permittees are in the process of collecting data to support an enhanced MS4 facilities map. Updates completed to date are provided in the map in Appendix B. This enhanced map demonstrates initial efforts to identify the locations of:

- Receiving Waters
- MS4 facilities
- Areas of historical perennial flows
- Known blow off locations
- Wastewater storage ponds
- Sub-drainage areas
- Known non-Permittee facilities
- 36-inch diameter and larger outfalls

This map will be used to help in the tracking of IC/ID events and issues and continued updates will be submitted with the Annual Reports. The Permittees will continue to enhance this map over the next MS4 Permit term. As described in the Annual Report, the District is in the process of upgrading their web page that offers public access the District's various NPDES activities. Along with these web site upgrades, additional layers will be added to the Web-based GIS map.

6.1.2.4 Elimination of the Watershed SWMP as a separate compliance document from the Riverside County DAMP

The Santa Margarita Region is comprised of only a single watershed. Further, the Permittees' regional compliance programs are described in the Riverside County DAMP. Maintenance of a separate and duplicative Watershed SWMP is confusing, cumbersome, and does not contribute to protection of Receiving Water quality. The Permittees request that the next MS4 Permit be drafted in a fashion that allows the Permittees to maintain the Riverside County DAMP as the primary document describing regional compliance programs for western Riverside County including the Santa Margarita Region. Any

necessary changes for requirements included in the new MS4 Permit will be updated /added to the Riverside County DAMP.

6.2 Permittee Training Programs

6.2.1 Summary

The Permittees jointly fund comprehensive training and education programs for Permittee staff. These training programs are designed to train Permittee employees on the proper use and implementation of BMPs appropriate for their field of work. There are four distinct training courses currently offered including Construction Inspection, Municipal Maintenance, Industrial-Commercial Facility Inspection, and New Development Planning.

6.2.2 NPDES Training Program Accomplishments and Programmatic Improvements

- Evaluated and tested various knowledge retention methods.
- Performed Training Enhancement Analysis study (2005-2006)
- Created an on-line training registration web page where attendees can also obtain training materials.
- Annually updated training materials to address Pollutants of Concern (2005-2007)
- Added component to training to address proper use, application and timing of application of Pesticides (2007-2008)
- Began developing a formalized testing and effectiveness analysis approach (2008)

Highlights
Municipal Training: **14** Training Sessions; **900** Attendees
Construction Training: **22** Training Sessions; **626** Attendees
Industrial-Commercial Training: **11** Training Sessions; 426 Attendees
New Development Training: **13** Training Sessions; **345** Attendees

6.2.3 Long-Term Effectiveness Assessment

Throughout the term of the 2004 MS4 Permit the Permittees have evaluated and implemented various quizzes as part of the NPDES training courses. These efforts were intended to assess the retention of knowledge of the attendees and, as described in Provision K.2.m of the Watershed SWMP, serve as a component of the assessment of the long term effectiveness of the Watershed SWMP.

The quizzes used to assess employees' retention of knowledge have evolved over time as the Permittees found what worked and what did not. Quiz questions that were found to be confusing or misleading were refined or eliminated. Thus, a question-by-question analysis of the results is not possible. Instead, results from a number of the training courses with reasonably comparable quizzes were aggregated and an average score (percent correct) was established for each of these training sessions. The results of this analysis are presented in Figure 5.

Figure 5. Training Pre-Test and Post-Test Analysis

Although the required random-sample nature of this analysis is not conducive to the analysis of trends across time, two findings become evident from this analysis:

1. Permittee inspection, maintenance and planning staff generally have a high level of understanding of issues related to stormwater Pollution in their field of work.
2. Average scores on quizzes administered after the training sessions were always higher than scores on quizzes administered before the training session.

Finding 1 above can be attributed to the Permittee's proactive efforts to ensure that their employees are aware of the issues in their field of work that could contribute to stormwater Pollution. This includes annual attendance at the NPDES training courses, and on-the-job training, reminders and meetings. This fact alone is a strong indicator of the effectiveness of the Permittees training programs.

Finding 2 above demonstrates that after attending the NPDES training courses, the attendees have a higher level of understanding of the issues in their field of work related to stormwater Pollution. This indicates that the training materials, delivery and content were effective.

Based on these analyses, general feedback from the training programs, and the overall effectiveness of the Permittees' programs (as described in Section 5.3 herein) the Permittees believe their training programs to be effective. Nevertheless, the following revisions to the training programs have been identified and are proposed for implementation with the new permit to ensure ongoing effectiveness.

6.2.4 Proposed Revisions

6.2.4.1 Continued focus on Focus Area Pollutants of Concern

The Permittees commit to continue to revise the Permittee training programs to focus on Pollutants of Concern.

6.2.4.2 Standardized Effectiveness Quizzes

Over the course of the 2004 MS4 Permit, the Permittees have evaluated various methods of assessing the retention of knowledge and are now recommending a standardized approach to assessing the effectiveness of the training program.

The Permittees plan to create standardized quizzes to assess the retention of knowledge and increased understanding as a result of the Permittees' training sessions. This includes establishing core messages that the Permittees want to impart upon the attendees and, creating clear and understandable quiz questions for each core message.

This approach will help the Permittees identify if any core training messages are not being retained by attendees and to subsequently modify the training. The Permittees also hope that this approach will yield results that will, over time, demonstrate that the knowledge among Permittee staff of issues related to storm water Pollution is increasing, thus clearly demonstrating that the NPDES Training program is effective.

As a necessary part of this effort, a database to track responses will also be created.

6.2.4.3 Attendance Tracking Mechanism

At each training session a sign-in sheet is provided to track attendance to the session. Included in the sign-in sheet is an indication of the Permittee that each attendee is representing. After each training session, these sign-in sheets are scanned to PDF files and sent to each Permittee for their records. This approach requires that each Permittee manually review the sign-in sheets to determine who and how many of their staff attended the training.

The District, on behalf of the Permittees, is currently investigating various form scanning and recognition software packages to determine the feasibility of creating a sign-in sheet that, when scanned, will automatically transfer the attendance list into a database. This would facilitate tracking of staff attendance by each Permittee. At this time the District has not determined if a feasible and cost efficient program is available that will accomplish their needs.

6.3 Public Education

6.3.1 Summary

To leverage finite resources, the Permittees jointly fund a public education program. The District implements this program to disseminate information about Urban Runoff issues and to provide education on how activities may impact Receiving Waters.

The Permittees have established an ongoing watershed-based public education and outreach program known as the **Only Rain Down the Storm Drain** Pollution Prevention Program. The specific objectives of this program include:

- Fostering a broad public awareness of water Pollution concerns;
- Increasing public acceptance of Pollution Prevention activities to curtail everyday human behaviors that contribute to water quality problems;
- Educating/informing the general public, regulators and key local government and state decision makers on Urban Runoff conditions in Riverside County; and
- Promoting stewardship of local water resources.

The **Only Rain Down the Storm Drain** Program implements the public awareness objectives by focusing on three areas of Pollutant reduction/prevention:

- Public behavior;
- Proper management of Pollutants; and
- Business specific education outreach.

In addition, when attempting to make use of the finite resources available to the Public Education Program, the Permittees use these management goals to ensure that resources are used effectively:

- Focusing on Pollutants of Concern specific to each watershed region;
- Coordinating public education efforts with adjacent storm water management programs and other related education programs to share resources, coordinate outreach efforts, and avoid duplication of effort; and
- Adapt public education programs and objectives, based on effectiveness analysis, to address changing MS4 program requirements and objectives.

6.3.2 Public Education Program Accomplishments and Programmatic Improvements

The Public Education Program has developed and distributed the following educational materials during the 2004 MS4 Permit term:

- *After the Storm* – a citizen's guide to understanding MS4 Pollution in your neighborhood or when performing daily activities.
- *Automotive Maintenance & Car Care* – guidelines for keeping your auto shop or retail fuel facility in environmental shape.

- *Outdoor Cleaning Activities* – guideline for outdoor cleaning activities and wastewater disposal.
- *Pools, Spas and Fountains* –Environmental maintenance suggestions for pool, spa, and fountain owners.
- *What's the Scoop* – tips for a healthy pet and a healthier environment.
- *Household Hazardous Waste* – A schedule of collection locations for proper disposal of HHW.
- *Stormwater Pollution Found in Your Neighborhood* – door hanger.
- *Equestrian Management* – Recommendations for BMPs related to equestrian activities.
- *Spray Bottles* – Including directions to make environmental friendly recipes for pest control and household cleaning

The Permittees also initiated development of the following outreach materials

- *Landscaping and Gardening Brochure* – Initiated development a new brochure to address outdoor residential landscaping and gardening activities.
- *Septic System Management Brochure* – initiated development of a brochure to assist with septic system management.

In addition to the information provided on the Storm Water Protection website, the Public Education and Outreach Program has:

- Updated the Public Education and Outreach Program web page.
- Tested and/or implemented several new Public Education and Outreach Program effectiveness tracking mechanisms including call tracking, web counters, testing, and bilingual surveys.
- Enhanced the toll free storm water Pollution reporting hot line to include public education information and support for the public and other interested stakeholders.
- Obtained a trailer with "**Only Rain Down the Storm Drain**" graphics specifically designed for transporting materials to outreach events. It is also used as part of the booth at outreach events.
- Initiated billboard advertising within the Santa Margarita Region.
- Worked with the Mission Resource Conservation District to implement presentations to elementary and middle schools and staff to raise public awareness of Urban Runoff management issues and source control methods and to encourage volunteers, partners, and groups to gather annually for a trash and debris clean-up day in the Santa Margarita Region.
- Developed special newspaper and billing inserts, fliers and advertisements to raise public awareness of Urban Runoff management issues and source control methods. A radio advertising campaign was also developed and implemented for a time.
- Developed and presented workshops regarding household hazardous waste use and proper disposal at major home improvement stores throughout Riverside County.
- Placed advertisements in the Penny Saver and Bargain Bulletin to raise public awareness of Urban Runoff management.

- In cooperation with certain County Service Areas or other programs, pet waste signs with bag dispensers have been installed at various parks to help encourage the proper disposal of animal waste.
- Cooperated with the Western Riverside Council of Government in the Used Oil Block Cycle Grant that decreases the amount of illegally dumped motor oil by promoting the addition of new Certified Oil Collection Centers.
- Established a partnership with County Environmental Health whereby businesses cited by Environmental Health for violations of ordinances related to stormwater issues may be allowed to implement a Supplemental Environmental Project in conjunction with the **Only Rain Down the Storm Drain** program.

6.3.3 Long-Term Effectiveness Assessment

Effectiveness metrics of the Public Education and Outreach Program during the 2004 MS4 Permit term are presented in Section J.1.3 of the FY 2007/2008 Watershed Annual Report. The data indicates that overall impressions have continually exceeded the number of residents in the watershed, HHW/ABOP pounds of waste collected and pounds of waste collected per person have steadily increased over the term of the 2004 MS4 Permit.

In 2005, the **Only Rain Down the Storm Drain** program developed and implemented a survey to be distributed at Public Outreach events to assess the public's level of knowledge related to stormwater Pollution. This original "long" survey contained 13 questions in both English and Spanish as shown in Figure 6.

This survey was used for fiscal years 2005-06 and 2006-07. Through this period of implementation it was found that the survey took too much time to complete and reduced the level of response from event attendees. Therefore, the survey was subsequently revised to a shorter version with revised questions for the 2007-08 fiscal year. The revised "Short" survey that is currently used is shown in Figure 7.

Figure 6. Original "Long" Survey Utilized at Public Outreach Events

Zip Code_____ **Age**_____ **Sex F**__ **M**__ **Date:**_____

THINK YOU KNOW ABOUT STORM DRAIN POLLUTION PREVENTION?

1. Where do you think **storm drain** contents go or flow to? __Treatment Plant __Streams, rivers & lakes

2. Where do you think **sewer pipes** contents go or flow to? __Treatment Plant __Streams, rivers & lakes

3. Are storm drains and sewers part of the same or separate systems? __Same __Separate __Don't know

4. Have you ever been to a Household Hazardous Waste **(HHW)** Collection Event? __Yes __No

5. Did you know that **A.B.O.P.** Antifreeze, Batteries, Oil, and Latex Paint locations and mobile **HHW** Collection Events provide safe havens for the disposal of pollutants? __Yes __No

6. If you have a lawn or garden, where do you (or your gardener) dispose of the green waste (grass, clippings or other)? **(Check all that apply)**

   ☐Trash/garbage ☐Compost/Mulch pile ☐Take to compost facility
   ☐Leave on lawn ☐Removed by gardener ☐Other:_____

7. Where is the best location to wash your vehicles?
   (Check only one)

   ☐Pavement (driveway, street) ☐Dirt Area
   ☐Lawn or Grass ☐Other_____

8. Do you change the motor oil in your vehicle yourself? __Yes __No

   If **Yes**, where do you dispose of it? **(Check all that apply)**

   __in the garbage __at a curbside collection program
   __down the storm drain __collection center (Jiffy Lube, Kragen, etc.)
   __pour it on the ground __Other_____

9. If you have a pet, how often do you pick up after your pet?
   9. a) in your yard? **9. b)** when you walk the pet?

   ☐Always ☐Sometimes ☐Never ☐Always ☐Sometimes ☐Never

10. Do you think, anything ,other than rainwater, that flows into the storm drains (i.e., trash, chemicals, pet waste, etc.) considered a pollutant? __Yes __No

11. Have you seen or heard the slogans "Only Rain Down the Drain" or "Only Rain Down the Storm Drain"?
    __Yes __No If yes, where? __Radio __Newspaper __ Flier __Billboard __Street Fair, Festival, etc.

12. Are there State laws and local ordinances which STRICTLY PROHIBIT the dumping of pollutants **(EVERYTHING, EXCEPT RAIN WATER)** into the storm drain systems or waterways? ___Yes ___No

13. After this booth visit, have you increased your understanding of storm drain pollution prevention? __Yes __No

Thank you for your time and input… Remember, YOU can do your part by calling our Toll Free Line (1-800-506-2555) to report illegal storm drain pollutant disposal anywhere in Riverside County, or to get more information about storm drain pollution protection to help promote "ONLY RAIN DOWN THE STORM DRAIN".

Figure 7. Revised "Short" Survey Utilized at Public Outreach Events

DO YOU KNOW HOW TO PROTECT OUR STREAMS, RIVERS and LAKES?

City_____ **Zip Code**_____ **Age**_____ **Sex** □ **F** □ **M** **Date:** _____

1) Water that leaves your lawn from **Irrigation (water sprinklers), Car washing** and **Rain** flows down streets and/or storm drains and then directly to…

☐ Sewage Treatment Plants ☐ Streams, rivers & lakes

2) Which of the following can LEGALLY be disposed into the storm drain? (*Circle all that apply*)

- **Useable Household Chemicals**
- **Yard waste/clippings/leaves**
- **Paint**
- **Cigarette butts**
- **Empty Household Chemicals containers**
- **Pet Waste**
- **Motor Oil / antifreeze**
- **None of these**

3) Do you feel you are well informed and aware of illegal dumping into the storm drain and its impact in your community or streams, rivers and lakes?

☐ **Yes** ☐ **No**

HOW DID YOU DO?

1) Water that leaves your lawn from irrigation, washing your car, or rainwater runoff can pickup motor oil and grease from vehicles, excess fertilizer from your lawn, bacteria from pet waste, and excess pesticides from your yard. These pollutants can be carried down streets and storm drains directly to our streams, lakes, and rivers without treatment! That is why we must take care to properly dispose of waste, maintain our vehicles, and use fertilizers, pesticides and other chemicals only as specified on their labels.

2) It is illegal to dispose of any chemical, constituent or waste into a storm drain! Report illegal disposal of chemicals, constituents, or waste to storm drains at **1(800) 506-2555.** You may properly dispose of many of the wastes listed above by doing the following things:

- **Usable and empty household chemicals, paint, motor oil** – Properly dispose these at Household Hazardous Waste and/or Antifreeze, Batteries, Oil and Paint disposal facilities and events. Call **1 (800) 506-2555** for information on disposal locations and special drop off events near you.
- **Pet waste** – Carefully pick up and dispose in the nearest trash receptacle.
- **Grass, clippings, leaves and yard waste** – Collect and dispose in green waste bins or composting areas that are designed to prevent the compost from mixing with excess irrigation water and/or rainwater runoff.

3) Would you like to learn more about protecting our streams, rivers and lakes or wish to report on a illegal storm drain disposal in your area or request a classroom or group demonstration……

Visit www.rcflood.org or call **1 (800) 506-2555.**

Remember…Only Rain Down the Storm Drain!

Results have been tabulated for all of the "Long" surveys received and they have been analyzed to determine trends in public awareness. The "Short" survey has been used at two events to date, one of which was quite recent and its results have not yet been tabulated. Using the "Long" survey results, nine questions were used to assess any trends in public awareness. The remaining questions were determined to be either confusing or not applicable to the intent of the assessment. The results of this assessment of survey results are shown in Figure 8.

Figure 8. Assessment of Survey Results (2005-06 vs. 2006-07)

The results shown in the chart in Figure 8 are percent of survey takers that responded as described below:

- Assessment 1: Percent of respondents that understood that storm drains do not go to treatment plants.
- Assessment 2: Percent of respondents that understood that sewer lines go to treatment plants.
- Assessment 3: Percent of respondents that understood that sanitary sewers and storm drains are separate systems.
- Assessment 4: Percent of respondents that had attended a Household Hazardous Waste collection event.
- Assessment 5: Percent of respondents that understood that the best place to wash a car is on the lawn or grass.
- Assessment 6: Percent of respondents that change their own oil that reported that they properly dispose of it.
- Assessment 7: Percent of respondents that have heard of the "Only Rain Down the Storm Drain" program.
- Assessment 8: Percent of respondents that dumping of anything except storm water is a violation of laws and ordinances.
- Assessment 9: Percent of respondents that felt that visiting the Outreach Booth at the event increased their understanding of storm drain Pollution Prevention.

Although implementation of the "Long" survey was limited before it was modified to its current form, the results available do indicate an increase in understanding of these basic principles and can be attributed to the effectiveness of the Permittee's Public Education program. As additional survey results are collected and tabulated, further analysis will be performed to ensure the ongoing effectiveness of the program.

6.3.4 Proposed Revisions

To better address residential sources of pesticides, the Permittees are proposing to coordinate with the University of California Extension Program to enhance the implementation of the U.C. Extension's Master Gardener program in the Santa Margarita Region. Along with information regarding use of drought tolerant landscaping techniques and appropriate methods of fertilizer and irrigation application, the U.C. Master Gardeners also provide residents with information on integrated pest management techniques that minimize pesticide application. The Permittees are proposing to establish an agreement with the U.C. Extension's Master Gardener program in fiscal year 2010-2011 to support master gardener hotline staffing, local presentation and other outreach by the U.C. Master Gardeners.

In addition, through the Permittee's ongoing efforts to internally assess the efficiency and efficacy of their MS4 compliance programs, it was determined that an overhaul of the District's web site was needed. The District's web site contains the public education web site and a technical resource site with the various compliance documents for the program. It was found that information available through the site was often difficult to find and was not user friendly and sometimes was out of date. The Permittees are now reviewing this site to identify and implement needed changes

6.4 Receiving Water Monitoring Program

6.4.1 Summary

A Summary of the Monitoring Program is contained in Appendix G of the Watershed Monitoring Report.

6.4.2 Monitoring Program Accomplishments and Programmatic Improvements

The Monitoring Program accomplished the following goals during the term of the 2004 MS4 Permit:

- Subcontracted monitoring data collection and analysis to MACTEC, Inc. to enhance data collection and reporting capabilities.
- Developed and implemented a Triad Monitoring Program (bioassessment, Toxicity and chemical monitoring) consistent with the goals of the SMC Model Monitoring Program
- Developed watershed boundaries and land use information for all monitoring stations
- Updated the format and technical content of the monitoring Annual Report
- Added fire map information to assist with assessing potential Pollutant sources
- Enhanced monitoring data databases to be compatible with SCCWRP/SMC standard reporting protocols.
- Enhanced monitoring methods to incorporate use of automatic sampling equipment where appropriate

- Conducted several Toxicity Identification Evaluations that led to the identification of pyrethroid pesticides as a cause of wet weather Toxicity in Murrieta and Temecula Creeks and a Toxicity Reduction Evaluation that identified additional BMPs necessary to control sources of pyrethroid pesticides.
- Coordination with the CASQA Pesticide Committee on comments and presentations to California Department of Pesticide Regulation, UC Riverside and others regarding the impacts of pyrethroid pesticides and the need to change regulatory requirements regarding the use of pyrethroid pesticides.
- Participation in or coordination of several BMP studies, including coordination of new development BMP treatment studies (as required by conditions of approval) and the District's LID BMP Demonstration and Testing Facility.
- Continued to update and enhance the Consolidated Monitoring Program to incorporate new monitoring collection methods and data analysis protocols.

6.4.2.1 Participation in Regional Monitoring Efforts

- Participation in the monitoring programs to support development of the Santa Margarita Lagoon TMDL.
- Continued participation in regional and statewide Monitoring and Science efforts such as the Southern California Monitoring Committee to develop:
  - Lab inter-calibration of chemical, bioassessment and Toxicity testing methods
  - Testing methods for bioassessment and Toxicity in Southern California streams
  - Bacterial Reference Watershed Study
  - A storm water research needs report for southern California
- Partnered with SCCWRP on developing hydromodification guidance for Southern California including participation in a series of hydromodification workshops for a CASQA conference.
- Coordination with SCCWRP on the development of the Regional Watershed Monitoring Program for Southern California.

6.4.3 Effectiveness Assessment

The Watershed Monitoring Program was evaluated as part of the Regional Board audits in 2007-2008. As a result of those audits several enhancements were made to the monitoring program, including update of constituent lists, subcontracting of data collection to a monitoring consultant with automatic sampling capabilities, and updates to the Consolidated Monitoring Program and Monitoring Annual Report formats. The Permittees believe that as a result of these changes, the overall monitoring program is effective. However, the revisions presented in section 6.4.4 are recommended to increase monitoring data utility or overall program effectiveness.

6.4.4 Proposed Revisions to Monitoring Program

In updating the Monitoring and Reporting Program, the Permittees request that Regional Board staff meet with them to discuss the following proposed modifications to the monitoring program:

6.4.4.1 Revise Dry Weather Monitoring Program

As noted in Section G.7 (Special Studies) of Appendix G of the FY 2007-2008 Watershed Monitoring Annual Report, the Permittees participated in a SMC Study to develop a regional approach to watershed assessment. The Permittees, in conjunction with Regional Board staff, committed to participating in the resulting watershed monitoring program. The Permittees agreed to monitor three rotating dry weather stations identified for the Santa Margarita Region. Additionally, three stations are to be collected by Regional Board (or SCCWRP staff) using SWAMP funds, and the remaining three will be located in the Santa Ana Watershed region of Riverside County. In exchange for the commitment to participate in the program, the Regional Board staff agreed to reduce the current dry weather monitoring requirements in the new MS4 Permit from two (2) events annually to (1) event annually for each Triad monitoring stations. This would effectively eliminate three existing dry weather samples. The Permittees recommend a meeting with Regional Board staff to discuss these options prior to the release of the draft Permit.

6.4.4.2 Clarify Analyte List

As described in Section G-8.1.5 of the 2008 Monitoring Report (Appendix G of the FY 2007/2008 Watershed Annual Report), 168 analytes have never been detected in samples collected under the current program. The Permittees request that requirements to analyze for these constituents be eliminated unless or until a reason to believe they may be present in stormwater arises.

Basin Plan Objectives are expressed in terms of total metals, while California Toxics Rule (CTR) criteria are expressed in terms of dissolved metals. Although the Permittees do not support comparison of stormwater data to CTR values, the Permit requires it. The Permittees recommend deletion of this requirement. However, if this language is to remain, in order to properly compare results for metals to both sets of objectives, both total and dissolved fractions will be analyzed by the laboratory for the following metals: arsenic, cadmium, chromium (III), chromium (VI), copper, lead, mercury, nickel, selenium, silver, and zinc.

6.4.4.3 Clarify Mobilization Criteria

The District is proposing the following amendment to the monitoring mobilization criteria based on experience and the difficulties faced collecting the first storm and the analysis of the USEPA criteria specific to the Temecula National Weather Service weather station (Consolidated Monitoring Program, Section 4.C.2):

> "Note: If the QPF indicates that more than 0.3-inch is predicted for any 6-hour period, mobilization for sampling will occur."

The District's experience over the past three years indicates that intensities greater than 0.3" in six hours are likely to produce runoff and would warrant mobilization, even on a dry watershed. Further, these mobilization criteria are consistent with EPA-833-B-92-001 guidance regarding minimum depths/durations for storm sampling.

The Permittees recommend that the Regional Board amend the MS4 Permit to reflect these Mobilization Criteria. Due to issues with stream gauges operated by the United States Geological Survey (USGS), the Permittees have concluded that preparing post-storm forensics based on USGS data is not of significant value. A simple test of comparing Quantitative Precipitation Forecast (QPF) reports with actual rainfall and the mobilization criteria should be sufficient to determine compliance with the MS4 Permit.

Mobilization criteria should also reflect practical limitations to storm water monitoring by excluding national holiday periods (Thanksgiving, Christmas, and New Year's Day in particular) and quantifying the probability and the lead time between the forecast and actual rainfall that must be met in order to mobilize.

6.4.4.4 Reduce Wet Weather Events

As was noted in the audits, the Permittees have experienced consistent difficulty collecting three storm events in the upper Santa Margarita River watershed. The Permittees also noted that the San Diego County MS4 Permit only requires the collection of samples from two wet weather events. The Permittees request that the monitoring program for Riverside County be revised to require collection of two storm events. This would not only reduce opportunities for unavoidable non-compliance, it would also be a prudent cost saving measure that would not alter the overall effectiveness of the Permittees monitoring programs.

6.4.4.5 Clarify Triad Method and Follow-up Actions

The MS4 Permit included an early draft of the Triad method envisioned by the Model Monitoring Program (MMP) developed by the SMC. The result was a misapplication of the final Triad approach envisioned by the MMP. Toxicity is currently required to be sampled for at the Triad stations during wet weather events, but not during dry weather when the bioassessments occur. According to the SMC MMP, the three components of the Triad approach (chemistry, Toxicity, and bioassessment) should be conducted at the same time. Bioassessments cannot be conducted during wet weather due to safety concerns and the planning necessary. For this reason the MMP recommends the full triad for dry weather and only chemistry and Toxicity for wet weather.

In an effort to be proactive and supportive of good science, the Permittees have taken the following actions to ensure proper application of the Triad approach:

- Beginning with the 2007-2008 season, Toxicity sampling will be conducted during dry weather, at the same time as the bioassessments and dry weather chemistry sampling events are conducted. Thus, the full Triad approach will be conducted during dry weather. Wet weather monitoring will focus on Toxicity and chemistry. This action will modify the current program to be consistent with the MMP approach.
- The 2006-2007 Annual Report established the framework for proper application of the Triad method (full triad for dry weather, chemistry and Toxicity only for wet weather) by adding new tables (G-21 through G-27), in anticipation of properly applying the Triad method in the 2007-2008 Annual Report.

The Permittees further recommend clarifying the definitions of "persistent", "consistent", and "magnitude" as used in the MS4 Permit to be consistent with the intent of the MMP. In addition, the MS4 Permit inappropriately limits Triad analysis by defining a "fair" Index of Biological Integrity scores as automatically indicative of benthic alteration. This limitation needs to be corrected to prevent Permittee

resources from being inappropriately diverted to expensive source assessment studies. The MMP (and the SMC) envision that watersheds will be prioritized for follow up action based on their relative quality to one another. The envisioned analysis would compare watersheds from throughout southern California. The Permittees support this coordinated and comprehensive approach to addressing water quality.

6.4.4.6 Recognize Limitations of Laboratory Analysis of Bacteria

Babcock Labs prefers to accept bacteria samples between the hours of 7:00 a.m. and 4:00 p.m. during normal business days, and 9:00 a.m. and 12:00 p.m. on weekends. Although Babcock will accept bacteria samples outside those hours, acceptance is contingent upon payment of substantial overtime rates to ensure laboratory staff availability to receive and analyze the samples.

The timing of bacteria sample collection, particularly within the context of automatic sampling, will require consideration of the sample's four-hour holding time and available laboratory receiving hours. The Permittees request that the Permit be modified to only require collection of bacteria samples such that they can be delivered during the regular working hours of the lab to avoid excessive laboratory costs.

6.4.4.7 Participate in a Watershed Based TMDL for the Santa Margarita Lagoon

The Permittees understand that, due to economic conditions, State funding for the Santa Margarita Lagoon Watershed-Based TMDL has been withdrawn. As described in section 3.4, these economic conditions are also impacting the Permittee's funding sources and they are struggling to maintain resources to fund existing compliance programs. The Permittees currently cannot support additional expenditures associated with assisting in funding a watershed-based TMDL effort. However, the Permittees are agreeable to discussing a re-prioritization of compliance activities in order to reallocate existing Permittee resources for this purpose. For example, where current MS4 Permit compliance programs elements are not measurably enhancing attainment of Water Quality Standards, the Permittees would consider reduction or elimination of those requirements to support reallocation of the associated funding to the development of the watershed based TMDL. Program elements that may be considered for discussion include:

- Toxicity/Pyrethroid Monitoring – Under the Federal Insecticide, Fungicide and Rodenticide Act (FIFRA) local regulation of pesticides, including pyrethroid pesticides is pre-empted. The Permittees are expending significant resources at the State and Federal level to facilitate regulatory changes in the allowable uses of pyrethroid pesticides, which have been implicated in causing toxicity in receiving waters throughout California. The Permittees have also recognized pyrethroid pesticides as a Pollutant of Concern for the upper Santa Margarita River watershed. The Permittees believe that public education and outreach regarding use and more stringent regulation/management of pesticides, including pyrethroid pesticides, represents the most effective means of controlling pesticides in Urban Runoff. However, continued Toxicity tests, Toxicity Identification Evaluations, and direct monitoring for pyrethroid pesticides are not likely to enhance the Permittee's ability to reduce/eliminate pyrethroid pesticides in Receiving Waters. Greater Receiving Water quality benefits may be realized by reallocating the resources currently allocated to these activities to the development of the watershed-based TMDL.

- Reduction in General Monitoring Requirements – The Permittees continue to expend significant resources on Receiving Water and outfall monitoring and the benefits of these monitoring activities are limited. Further, these costs have more than doubled over the term of the 2004 MS4

Permit due to audit findings recommending the implementation of automatic sampling equipment. Revised MS4 Permit requirements that provide for a simplified monitoring program may allow cost savings to be reallocated from data collection and processing to development of the watershed-based TMDL.

- Watershed/Individual Annual Reporting – The current Annual Reporting requirements are time, labor and cost-intensive exercises. Revised MS4 Permit requirements that provide for a simplified Annual Report requirements would not necessarily produce substantial cost savings (because is the reports are typically produced in-house); however, they would free up staff resources to assist with TMDL development.
- IC/ID Monitoring – Although the Permittees support regular visual inspection of MS4 facilities to identify IC/IDs, field measurements and sampling has not proven to be effective for this purpose. Although sampling of identified IC/IDs for later enforcement purposes may be appropriate, IC/IDs that have been identified and eliminated in the Santa Margarita Region typically result from visual observations and subsequent follow-up efforts by Permittee staff, not field measurements and water quality samples. Revised MS4 Permit requirements that provide for visual inspections of MS4 facilities to identify IC/IDs may yield cost savings that could be reallocated to development of the watershed-based TMDL.

There may be additional opportunities for modification of MS4 Permit requirements to focus the expenditure of Permittee funds on those activities that are most effective at protecting Receiving Water quality. Although the resources available for Permittee compliance activities are finite, the Permittees are supportive of modifications to the MS4 Permit that, while working within available funding limitations, enhance their ability to protect and enhance the quality of Receiving Waters.

7.0 Evaluation and Recommendations for Individual SWMP Programs

The Riverside County DAMP is a programmatic document developed by the Permittees in the Santa Ana and Santa Margarita Regions. It outlines the major programs and policies that the Permittees individually and/or collectively implement to manage Urban Runoff for the protection of Receiving Waters in Western Riverside County, including the Santa Margarita Region. The Riverside County DAMP provides a model for the development of a Permittees' Individual SWMPs in the Santa Margarita Region.

The Permittees continue to support a uniform approach to the implementation of MS4 Permit compliance programs in order to facilitate increased transparency and understanding for residents, regulated entities, and Permittee staff. For this reason, the discussions below focus on programmatic changes to the compliance programs that are necessary to maintain the effectiveness of the model compliance programs described in the Riverside County DAMP. Upon adoption of the new MS4 Permit, the Riverside County DAMP and Individual SWMPs will be revised accordingly.

7.1 Program Management

There are typically multiple Permittee departments that are responsible for implementing the elements of the Individual SWMPs. Each Permittee has designated an NPDES Coordinator who coordinates the overall Permittee compliance programs, collects and analyzes compliance program data, develops and maintains the Individual SWMPs, compiles and submits necessary reports, coordinates with other Permittees, stakeholders and Regional Board staff, and conducts other necessary duties as assigned.

To facilitate inter-Permittee coordination and funding of regional compliance activities such as the Public Education and Monitoring programs, the Permittees have entered into an Implementation Agreement that defines the roles and responsibilities of each Permittee and assigns cost shares for regional programs defined in the agreement. The Implementation Agreement also requires each Permittee to designate an NPDES Coordinator who is also responsible for representing the Permittee's interest at Permittee coordination meetings such as the monthly Santa Ana/Santa Margarita Technical Advisory Committee.

The Permittees in the Santa Margarita and Santa Ana Regions participate in a Management Steering Committee made up of the City Managers, County Executive Officer, and the District's Chief Engineer; or their assigned alternate. Participation in the Management Steering Committee is not mandatory; however, it provides a management-level forum to address Urban Runoff management policies for the Permit Area and coordination of the review, and necessary revisions to the Riverside County DAMP and Implementation Agreement. In addition, the Management Steering Committee promotes a higher level of awareness of the MS4 Permit compliance program by each Permittee's senior management staff.

7.1.1 Accomplishments and Programmatic Improvements

Collectively, the Permittees Program Management activities have achieved:

- Development of the Riverside County DAMP, WQMP and Individual SWMPs following adoption of the 2004 MS4 Permit.
- Revised the Implementation Agreement to account for necessary program enhancements resulting from the new MS4 Permit.

- Established and held monthly meetings of a Technical Advisory Committee comprising of each Permittee's NPDES coordinator, to discuss and coordinate response to issues that arise through the ongoing implementation of the Riverside County DAMP-based programs.
- Voluntarily participate in a Management Steering Committee comprised of Permittee upper management (City Manager or equivalent) to provide a forum to discuss major policy issues related to MS4 Permit compliance program implementation. This also helps the major decision makers within each organization to stay abreast of the status of the implementation of the Riverside County DAMP and aware of upcoming issues and approaches taken by other Permittees.
- Enhanced enforcement and compliance elements of the Riverside County DAMP.
- Developed the Integrated Regional Watershed Management Plan (IRWMP) for the Upper Santa Margarita Watershed.
- Continued progress with the Bureau of Reclamation, San Diego County and other stakeholders on a uniform watershed plan and model for the Santa Margarita River watershed.

7.1.2 Recommended Revisions and Enhancements to Program Management Efforts

7.1.2.1 Assessment Metrics and Municipal Action Levels

To ensure that the Permittee's programs continue to be effective at managing the impact of Urban Runoff on Receiving Water quality, the Permittees will revise the Program Effectiveness Assessments for both the Individual SWMP and the Watershed SWMP following adoption of the new MS4 Permit. These planned changes are further described in Section 6.1.2.1 of this ROWD. The Permittees also recommend streamlining of the reporting forms to focus on the revised Program Effectiveness Assessments.

7.1.2.2 Revised Reporting Format

As a result of continued program effectiveness assessment, following adoption of the new MS4 Permit, the Permittees will update annual reporting forms to incorporate specific reporting requirements for the effectiveness assessment metrics and to remove inappropriate, outdated, or ineffective reporting requirements.

7.2 Development Planning

This program element links each Permittee's General Plan, environmental review process, and development approval and permitting processes to the later phases of detailed design, construction and operation. The development approval and permitting processes carries forth project-specific requirements in the form of conditions of approval, project plans, and design specifications that support tracking, inspection, and enforcement actions.

7.2.1 Development Planning Program Element Accomplishments and Programmatic Improvements

During the term of the 2004 MS4 Permit, the development planning program accomplishments and programmatic improvements included:

- Developed the WQMP to address post construction stormwater runoff quality for New and Significant Re-Development Projects.
- Development of a FAQ for WQMP projects to assist with implementing the WQMP program.
- Developed and subsequently enhanced a BMP design guidance manual to standardize the construction of post construction BMPs.
- Participation in the SMC efforts to develop a LID manual.
- Participation in SCCWRP's hydromodification studies to develop scientifically based hydromodification design guidance for Southern California.
- Enhanced online watershed maps to assist developers and the public with identifying areas tributary to Impaired Waterbodies.
- Adopted and implemented a MSHCP to ensure the regional-scale protection of habitat and natural resources in the approval process for New Developments.

7.2.2 Proposed Revisions to the Development Planning Program Element

7.2.2.1 Low Impact Development

The Permittees will revise the Riverside County Storm Water Quality Best Management Practice Design Handbook to (1) better incorporate LID design concepts, and (2) incorporate guidance to describe how developments can offset Treatment Control and hydromodification impacts with LID concepts including infiltration, evapo-transpiration, reuse, and onsite stormwater management. These revisions will follow the completion of the SMC LID BMP Manual and SCCWRPs Hydromodification Study. See the FY 2007-2008 Watershed Annual Report, Appendix G, Section G.7.2 for additional detail.

7.2.2.2 Hydromodification

As committed to in the 2004 WQMP (now Appendix O to the Riverside County DAMP), the Permittees have developed numeric guidance for hydromodification and are now working with SCCWRP to develop enhanced hydromodification guidance for Southern California. The Permittees will use the completed guidance to update the WQMP, BMP Design Handbook and other guidance as necessary to effectively mitigate hydromodification impacts. See the FY 2007-2008 Watershed Annual Report, Appendix G, Section G.7.2 for additional detail.

7.2.2.3 BMP Design Criteria

The Permittees will revise the Riverside County Storm Water Quality Best Management Practice Design Handbook to incorporate additional design guidance to clarify those Treatment Control BMPs that are effective at removing sediment-bound pesticides such as pyrethroid pesticides (consistent with the recommendations of the Toxicity Reduction Evaluation contained in Appendix D.

7.2.2.4 TMDLs

The Permittees will revise the DAMP to identify and include BMPs that are necessary to mitigate the impacts of Urban Runoff on Impaired Waterbodies.

7.2.2.5 Roads

The Permittees believe that standard WQMP requirements for public works road projects create potential avenues for unavoidable non-compliance. The Permittees would like to review this priority development category with Regional Board Staff to develop a better system to manage public works road projects.

7.2.2.6 Inspect and Verify Maintenance of Post Construction Treatment Control BMPs to Ensure Ongoing Effectiveness

As economic conditions allow, the Permittees propose to implement the following approach to inspect and/or verify maintenance of Treatment Control BMPs implemented on Priority Development Projects to ensure their ongoing effectiveness. The development of the program described below will require the Permittee resources that are unavailable in the current economic climate, particularly considering that it would likely require the Permittees to abandon the CAP in lieu of a local Permittee inspection program. The resources that will be required to ramp up new inspection programs are unavailable and may not become available during the term of the new MS4 Permit; however when the economy recovers sufficiently the Permittees propose to implement the program described below.

Integrated Management Practice (IMP) Exemption:

For the purposes of this program, IMPs include BMPs that are landscape based or otherwise serve an additional purpose other than Treatment Control. IMPs will be exempted from Inspection and Maintenance Tracking / Certification requirements if solely through the regular maintenance of the feature's secondary (non-treatment) functions and with Permittee concurrence, it can reasonably be expected that the treatment efficacy of the IMP will be ensured in perpetuity. An example that may satisfy this exemption would be a grassy swale that is mowed as part of regular landscape maintenance, whereas a BMP with a media filter which requires periodic resetting or replacement to maintain treatment effectiveness would not be exempted.

Priority Development projects will be exempted from all Treatment Control BMP Inspection and Maintenance Tracking / Certification requirements if they completely meet their Treatment Control requirements by implementing only IMPs that meet these criteria.

Priority Industrial and Commercial

The following requirements will apply to new priority Commercial and Industrial developments subject to the Permit's Commercial and Industrial business inspection requirements.

- Inspection

  Sites will be inspected per the Individual SWMPs current inspection frequency requirements that are based on the potential of the site to contribute to water quality impairments. At these inspections, in addition to the normal inspection requirements, all Treatment Control BMPs at the site will be inspected. In other words, all Treatment Control BMPs at high-priority facilities will be inspected annually; Treatment Control BMPs at medium-priority facilities will inspected biennially and Treatment Control BMPs at low-priority facilities will be inspected once during the term of the MS4 Permit. Improperly maintained BMPs may subject the maintenance entity to license suspension or administrative citations.

- Proof of Maintenance

  Maintenance records demonstrating compliance with the O&M procedures in the WQMP must be available for review at the time of the inspection. Failure to demonstrate that the BMPs have been maintained appropriately may result in license suspension or other enforcement actions.

Other Priority Developments

The following requirements will apply to new priority residential developments and businesses not otherwise subject to the Permit's Commercial and Industrial business inspection requirements.

- Proof of Maintenance and Self Certification

  The maintenance entity identified in the WQMP will be required to submit maintenance records including a signed certification to the Co-Permittee. The frequency of these submittals will be based on the relative maintenance requirements of the Treatment Control BMPs implemented on that site. BMPs will be categorized into groups as having High, Medium or Low maintenance requirements. If a WQMP project utilizes high-maintenance Treatment Control BMPs it will be categorized as a High-priority residential development, etc. High-Priority residential developments will be required to submit records annually, Medium – biennially, and Low – once every five years. Failure to report will result in administrative citations against the maintenance entity.

Permittee Projects and Permittee Maintained Treatment Control BMPs

This requirement will be included as part of the existing Permittee facility inspection program and inspected per the frequency requirements specified in the Riverside County DAMP.

7.3 Private Development Construction Activities

The Permittees have reviewed their ordinances to ensure that they are adequate to control discharges to the MS4 from construction sites to the MEP. For construction projects that will disturb one acre or more, the Permittees require proof of compliance with the General Permit-Construction prior to issuance of building/grading permits (a copy of the Notice of Intent filed with the State Board). Each of the Co-Permittees provides training for their construction inspectors regarding the proper installation and

maintenance of erosion and sediment control BMPs. Education and outreach to the building industry (developers, construction contractors, engineering firms, etc.) regarding managing discharges from construction sites is also incorporated into the "**Only Rain Down the Storm Drain** Pollution Prevention Program," the Permittees' area-wide public education and outreach program.

7.3.1 Private Development Construction Activities Program Element Accomplishments and Programmatic Improvements

- The Permittees annually distribute construction activities posters to construction sites as part of construction outreach program.
- A standardized construction activity reporting spreadsheet was developed for the Annual Reports.
- The construction inspection forms were updated.
- The Co-Permittees developed and maintained inventory databases of construction sites 1-acre or larger for which they have issued a building or grading permit.
- Prioritized inspections to help target construction activities that present the highest risk to water quality.

Highlights
Conducted over **17,000** construction site inspections
Initiated over **3,800** enforcement actions to gain compliance
626 attendees to NPDES Construction training

7.3.2 Proposed Revisions to the Private Development Construction Activities Program Element

The Permittees are not proposing revisions to their existing construction inspection programs at this time. As previously described, the Permittees expect that development activity will be greatly reduced during the term of the new MS4 Permit. Regional Board staff has however raised the issue of abandoned construction sites. Regulation of abandoned construction sites has proven challenging due to bankruptcy of project proponents, non-responsiveness or inability to locate underlying investment banks that actually own the developments, and the practical limitations encountered by the Permittees in calling bonds. As the Regional Board has enforcement capabilities that often surpass those of the Permittees, to ensure that this issue is effectively addressed the Permittees ask for the close cooperation and support of the Regional Board. Nonetheless, the Permittees are committed to continuing the use of their IC/ID programs, code enforcement tools, and other ordinance authorities to control, to the extent allowable under law, abandoned parcels that are not properly stabilized.

7.4 Existing Development – Permittee Facilities and Activities

The Municipal Facilities Strategy which has been consolidated into Section 5 of the Riverside County DAMP provides guidance for identifying potential storm water Pollutant sources and for selecting appropriate BMPs for implementation at identified facilities of concern owned and operated by the Permittees. The Permittees are implementing the provisions of the Municipal Facilities Strategy within their respective jurisdictions via processes described in their Individual SWMPs. To assist the Permittees in implementing this program, training focused on storm water regulatory requirements and BMPs related

to Permittee maintenance facilities and roadway maintenance activities were conducted twice annually during the 2004 MS4 Permit term.

7.4.1 Permittee Facilities and Activities Program Element Accomplishments and Programmatic Improvements

- The District coordinated preparation of GIS-based maps for Permittee MS4 facilities. The MS4 maps are updated annually with new information provided by the Permittees as part of the Annual Reporting process.
- Development of a GIS Browser that allows interested parties to view MS4 Facilities from the District's website.
- Updated Model Facilities Pollution Prevention Plan for Permittee facilities not requiring coverage under the Industrial General Permit.

Highlights
900 attendees to Municipal NPDES training

7.4.2 Proposed Revisions to Permittee Facilities and Activities Program Element

7.4.2.1 FPPP Guidance

The Permittees commit to developing a revised WQMP template for Permittee projects that better facilitates translation of WQMP BMP requirements into Facility Pollution Prevention Plans, where appropriate.

7.4.2.2 Integrated Pest Management

The Permittees commit to including Ecowise's standardized language for contracted pesticide management services in Permittee pesticide management contracts.

7.5 Commercial and Industrial Sources

The Principal Permittee and the County have implemented the CAP through which the County Department of Environmental Health makes use of existing inspection programs to address storm water compliance survey/inspections of restaurants and facilities that must secure a hazardous materials permit for either storing, handling or generating hazardous materials. As the responsible Certified Unified Program Agency in Riverside County, the County Department of Environmental Health is responsible for regularly inspecting all sites within the County that handle hazardous waste. The CAP is implemented in those cities and unincorporated areas that do not maintain an individual industrial/commercial inspection program through other mechanisms such as POTW waste pre-treatment programs or business license inspection programs.

Revisions to the inspection program requirements contained within the 2004 MS4 Permit expanded the scope of the overall commercial/industrial inspection program beyond the ability of the CAP to address. Each Co-Permittee now implements a supplemental inspection program for facilities not covered by the CAP. In addition, the 2004 MS4 Permit required inventories/databases of facilities, prioritization of

industrial and commercial sources relative to the potential to impact water quality, and specified inspection frequencies based upon facility priority.

The revised industrial and commercial sources program continues to have both regional and local jurisdiction components. Although the overall industrial/commercial inspection program has grown beyond the CAP, the CAP still addresses most of the facilities identified in the 2004 MS4 Permit. With its low overhead cost, it remains a cost effective approach to mitigating the impacts of industrial and commercial facilities on the MS4 and Receiving Waters.

7.5.1 Commercial and Industrial Program Element Accomplishments and Programmatic Improvements

- Reviewed and updated several educational brochures for distribution to inspected facilities.
- Developed outreach posters for gas and automotive service stations.
- Developed standardized inspection reporting forms for Annual Reports.
- Updated food service surveys.
- Extended the agreement with the County's Department of Environmental Health executed in 1999 for the area-wide CAP for the inspection of commercial and industrial facilities through June 30, 2009.
- Created Permittee databases for the inspected commercial and industrial facilities.
- Revised the Riverside County DAMP to reflect development of the industrial and commercial facility database that contains the following information: facility name, address, city, zip code, and Standard Industrial Classification (SIC) codes.
- Provided public education information regarding NPDES storm water permits to any new businesses listed in the Press Enterprise.

Highlights
3,974 inspections of Industrial and Commercial facilities
Over **1000** enforcement actions taken
426 attendees to Municipal NPDES training

7.5.2 Proposed Revisions to Commercial and Industrial Sources Program Element

The expected future expansion of the Commercial and Industrial Inspection Program to address Treatment Control BMPs as described in Section 7.2.2.6 would likely result in an expansion of the CAP that is beyond the ability of Environmental Health staff to accommodate and still achieve their own mandated inspection requirements. The Permittees are therefore proposing to amend the Riverside County DAMP and Individual SWMPs to recognize not only the CAP inspection program but also Permittee specific alternative programs that may develop during the term of the next MS4 Permit.

7.6 Residential Sources

The residential program focuses on educating residents about activities that can potentially contribute to beneficial use impairment. The residential program outreach is focused on Pollutants of Concern. The residential program is primarily implemented through the Regional Public Education Program; however, each Permittee typically conducts additional outreach. In those cases where residential Illegal Discharges are identified, appropriate code enforcement actions are also taken.

7.6.1 Accomplishments and Programmatic Improvements

The residential program achieved the following accomplishments during the term of the 2004 MS4 Permit:

- Developed several new outreach brochures and tools to promote changes in knowledge and behavior regarding activities that potentially generated Pollutants of Concern including landscape and gardening brochure, spray bottles with non-toxic pest control or cleaner recipes, septic system management brochure, updated outdoor activities brochure, and pet waste brochure.
- Implemented billboard advertising promoting "**Only Rain Down the Storm Drain**" message
- Purchased a new trailer to transport public education materials. The trailer is wrapped in graphics supporting the "**Only Rain Down the Storm Drain**" message.
- Point of Sale Outreach Programs to customers of hardware stores regarding paint, pesticides and fertilizers.
- Partnership with Valley Greeters to deliver "**Only Rain Down the Storm Drain**" information to new residents in the Santa Margarita Region.
- Promotion and participation in the annual Santa Margarita Watershed Clean Up Day.
- Continued supplemental support of the HHW/ABOP waste collection programs
- Continued update and revision of the public education information page
- Continued implementation and enhancement of school outreach programs conducted by Mission Resource Conservation District
- Reproduction and distribution of the After the Storm poster

7.6.2 Recommended Revisions

Although the Permittees continue to annually assess and modify outreach materials and programs, the Permittees are not recommending any substantive revisions to this program element at this time.

7.7 Public Education and Outreach

Although the bulk of public education and outreach activities are conducted by the District on behalf of the Permittees, the Permittees also conduct outreach activities. These activities include providing informational pamphlets at counters, conducting presentations for local businesses or developers, maintaining a stormwater page or appropriate stormwater links on their individual websites, conducting employee training programs, and attending various public events.

7.7.1 Public Education and Outreach Program Element Accomplishments and Programmatic Improvements

The Public Education and Outreach Program Element had the following accomplishments and improvements over the term of the 2004 Permit (not including those identified in Section 7.6.1):

- Use of a CEQA-style public participation process to develop the Riverside County DAMP, SWMPs, and WQMP
- Duplication and use of the USEPA construction site poster to educate construction site operators
- Distribution of stormwater outreach information to various businesses and construction sites through code enforcement, and building and grading inspectors
- Development and distribution of a automotive shop BMP poster
- Advertisements in the Business Press
- Update of the outdoor activities brochure for mobile operators

7.7.2 Recommended Changes

Although the Permittees continue to annually assess and modify outreach materials and programs, the Permittees are not recommending any substantive revisions to this program element at this time.

7.8 Elimination of Illicit Connections and Illegal Discharges

The Riverside County DAMP describes the discharge limitations and prohibitions applicable to the Permittee's MS4 (Section 4.1), procedures to be implemented when persistent exceedances of Water Quality Standards are identified (Section 4.2), responding to and reporting Illegal Discharges (Section 4.4), enforcement measures for IC/IDs (Section 4.5), measures to control litter (Section 4.6), measures to manage sanitary wastes (Section 4.7), and programs to promote collection and proper disposal of hazardous waste (Section 4.8).

7.8.1 IC/ID Program Element Accomplishments and Programmatic Improvements

- Developed Sanitary Sewer Overflow Procedures in coordination with the sanitary sewer operators in the Santa Ana and Santa Margarita Regions and implemented annual updates to Sanitary Sewer Overflow Procedures to ensure proper contact information for outside agencies.
- Established an electronic tracking system for NPDES complaints received through the toll free "Report Storm Water Pollution" hotline, OES or otherwise reported to the District.
- Enhanced public outreach regarding illegal dumping including brochures for: Outdoor Activities, Fountains & Swimming Pools, and Pet Waste, establishment of a Santa Margarita watershed Clean-Up Day and coordination with the County of Riverside Trash Task Force.

- Initiated a cooperative program with the County Environmental Health Department to promote Environmental Enhancement Projects in lieu of fines for environmental crime cases. This initiative resulted in a billboard advertising campaign and BMP posters addressing appropriate BMPs for gas stations and garages.
- Established IC/ID Monitoring Program

Highlights
1,263 potential IC/ID reports received and responded to
Over **5,500** calls received on stormwater pollution hotlines
94 IC/ID Monitoring events
5 monitoring events where field screening exceeding criteria

7.8.2 Proposed Revisions to IC/ID Program Element

The Permittees re-evaluated their existing IC/ID monitoring programs as part of this ROWD. The Permittees believe that the overall monitoring program is effective. However, the Permittees plan to revise their approach to the implementation of the Illicit Discharge monitoring program to increase monitoring data utility or overall program effectiveness.

7.8.2.1 Revise IC/ID Monitoring Program

The Permittees plan to revise their approach to the implementation of the IC/ID monitoring program. The goals of the recommended revisions are to:

- Relocate the IC/ID monitoring sites at MS4 outfalls.
- Distribute the monitoring sites throughout the Santa Margarita Region to detect Illicit Discharges closer to their source before they become excessively diluted.
- Increase efficiency and consistency in sampling resulting in enhanced data quality.
- Enhance response time to identify IC/IDs.

A model Illicit Discharge monitoring plan that accomplishes these goals is described below; a final plan will be incorporated into updated compliance documents with the new MS4 Permit.

7.8.2.2 Model Illicit Discharge Monitoring Plan

The Municipal Permittees will identify MS4 outfalls that could be used for monitoring sites based on maps of the MS4 facilities. This list of preliminary sites will be then field checked to determine the accessibility of the sites and feasibility for inclusion in the IC/ID monitoring program. Inaccessible sites or sites determined to be otherwise infeasible will be removed from the list.

Each Municipal Permittee except Menifee will then divide the list of the viable sites within their jurisdiction into groups of four. As Menifee only has one MS4, it will only monitor that one site. Each group of four sites will be monitored for a period of one year, twice during the dry season. Once all sites have been monitored for a year, sites will be repeated.

A monitoring team will be formed including one District and one Municipal Permittee staff member. The District staff will perform all monitoring/screening activities. The Municipal Permittee staff will be available to assist and will be responsible for initiating any necessary follow-up actions. This approach will provide consistency in screening and monitoring data collection and will allow the Municipal Permittee with jurisdiction over the tributary land use to be immediately aware of exceedances and initiate appropriate follow-up actions.

1.0 Executive Summary

On July 14, 2004 the San Diego Regional Water Quality Control Board (Regional Board) adopted Order No. R9-2004-001, an area-wide National Pollutant Discharge Elimination System (NPDES) Municipal Separate Storm Sewer System (MS4) permit (2004 MS4 Permit); this permit expires on July 14, 2009. A Report of Waste Discharge (ROWD) for renewal of the 2004 MS4 Permit must be submitted no later than 180 days in advance of the expiration date (i.e., by January 15, 2009).

This ROWD is an application for renewal of the 2004 MS4 Permit (NPDES No. CAS0108766) for the MS4 owned and operated by the Riverside County Flood Control and Water Conservation District (District), the County of Riverside (County), and the incorporated cities of Riverside County within the upper Santa Margarita River watershed (collectively, the Permittees). The newly incorporated cities of Menifee and Wildomar are included in this application as a Notice of Intent to participate in the updated MS4 Permit.

The content of this document is structured to identify:

- Information about the applicants (Section 3.0),
- Information on the area to be covered under the MS4 Permit (Section 4.0),
- An overall evaluation of the Permittees' existing programs based on water quality trends (Section 5.0),
- Accomplishments and recommendations for the Permittees' regionally implemented programs (Section 6.0) and
- Accomplishments and recommendations for the programs implemented as part of the Individual Stormwater Management Plans (SWMPs) (Section 7.0).

The Riverside County Drainage Area Management Plan (DAMP) documents the model implementation plan from which each of the existing Permittees has developed their respective Individual SWMP to implement the DAMP. In addition a Watershed SWMP has been developed to describe the programs that will be implemented regionally. The Annual Reports submitted to date describe the implementation of these SWMPs and document how they have evolved over time.

This ROWD builds on these Annual Reports by highlighting the major accomplishments of these programs, evaluating the long-term effectiveness of the programs and recommending revisions to the programs to enhance the efficiency and effectiveness of the programs to manage Urban Runoff to protect Receiving Water quality. To promote clarity of intent, terms defined in the 2004 MS4 Permit are capitalized in this ROWD.

Due to the impacts of the current economic recession on Permittee budgets and the effectiveness of existing Urban Runoff management programs, the Permittees' primary focus during the next MS4 Permit term will be on maintaining existing compliance programs in the face of significant cuts in basic municipal programs and services. Riverside County is one of the areas most affected by the mortgage crisis and the Santa Margarita Region is one of the most impacted areas of Riverside County. This crisis is having significant impacts on Permittee resources and projections for a deepening recession promises to exacerbate these impacts. Further, monitoring data indicates that the existing compliance programs have been effective in maintaining water quality. This ROWD focuses on maintaining the fundamental

structure and content of the Riverside County DAMP and the Individual SWMPs. However, the Permittees have identified several enhancements and/or alterations to their programs that can be implemented to continue to increase the effectiveness of these programs, without increasing costs.

1.1 Highlights of Program Implementation

Sections 6 and 7 of this ROWD describe the numerous accomplishments of the Permittees programs during the 2004 MS4 Permit term. Some highlights of the major accomplishments for the Permittees include:

- Development and implementation of a Water Quality Management Plan (WQMP) that addresses post-construction Urban Runoff management for New and Significant Re-Development.
- Development and implementation of the Watershed SWMP and the Permittee's Individual SWMPs.
- Development of handbook to standardize post-construction Best Management Practice (BMP) selection and design in Riverside County. Ongoing updates to the handbook include a plan to incorporate and promote low impact development design concepts.
- Development and enhancements to the design template for developing project-specific WQMPs
- Development of a Frequently Asked Question (FAQ) document to assist developers and plan review staff in understanding WQMP requirements and expectations.
- Development of coordinated BMP manual for firefighting agencies.
- Development, implementation and maintenance of Permittee databases to track construction sites 1-acre or larger. In addition, the Permittees have standardized a construction reporting spreadsheet used for Annual Reports, updated inspection forms, and enhanced the construction outreach program.
- Creation of Permittee databases to track industrial and commercial facilities.
- Creation and maintenance of the Storm Water Protection website that offers educational resources and free brochures targeting residents, businesses, developers, contractors, and elementary school children.
- Partnership with the Mission Resource Conservation District to provide an educational outreach programs targeting both schools and adults.
- Continued participation in the Consolidated Program for Water Quality Monitoring (Consolidated Monitoring Program) that includes collection of water quality samples at MS4 outfalls and Receiving Waters.
- Participation in regional and statewide monitoring efforts such as the Southern California Monitoring Committee (SMC), Southern California Coastal Water Commission and National Water Resources Institute.
- Participation in the California Stormwater Quality Association (CASQA), including the leadership roles of Officer, Director, and Legislative Chair.
- Development of the Upper Santa Margarita Region Integrated Regional Watershed Management Plan

- Continued partnership and coordination with the Bureau of Reclamation on a watershed plan and water quality model for the Santa Margarita watershed
- Continued participation in the Santa Margarita Lagoon nutrient Total Maximum Daily Load (TMDL) development process
- Participated in a stakeholder workgroup process led by Regional Board staff to revise REC 1 Basin Plan requirements for TMDLs

1.2 Summary Evaluation of Program Implementation

The trend analysis presented in Section G-8.2 of the FY 2007/2008 Watershed Annual Report and reviewed in Section 5.3 of this ROWD indicates that after almost 14 years of active Permittee involvement in MS4 Permit related Urban Runoff management programs, the significant increase in population (over 300 percent) and associated rapid urbanization that the area has experienced has not resulted in any statistically significant increases in Pollutant concentrations in Receiving Waters in the Santa Margarita Region. This indicates that the Permittees MS4 programs are and have been protective of Receiving Water quality. Pyrethroid pesticides, the one Pollutant that does appear to be linked to urbanization, has been addressed through a Toxicity Reduction Evaluation process, outreach programs, and Permittee participation to address pyrethroid pesticides and other pesticide sources at the state and federal level.

To enhance the effectiveness of the MS4 Permit compliance programs, the Permittees have agreed to implement compliance program revisions as described in sections 6 and 7 of this ROWD.

1.3 Summary of Major Recommendations for Program Revision

As described in section 3.4 of this ROWD, the Permittees are facing unprecedented fiscal impacts resulting from the national and state economic crises. The impacts on the Permittees are especially severe due to the disproportionate impact of home foreclosures in the Santa Margarita Region coupled with plummeting sales tax revenue. Unfortunately, it is anticipated that the economic conditions will persist for a significant portion of the term of the next MS4 Permit. During this period, the Permittee's MS4 compliance programs will increasingly compete with more fundamental public services for finite and dwindling resources. The challenge and priority for the Permittees will be to maintain the existing compliance programs in the face of cuts in basic programs and services.

Nevertheless, and although the various programs implemented as part of the Watershed SWMP and the Riverside County DAMP have been determined to be effective overall, Sections 6 and 7 of this ROWD identify certain areas wherein the Permittees are proposing changes to improve the effectiveness, efficiency, and transparency of these programs.

The program revisions recommended in this ROWD reconfigure existing programs in a manner that will increase the Permittees' overall ability to protect Urban Runoff quality, while limiting additional costs that would make these revisions cost-prohibitive in light of the current and foreseeable economy. Some of the major recommendations include:

Enhance Program Effectiveness Assessments and Incorporate Action Levels (Section 6.1.2.1)

The Permittees have carefully evaluated their MS4 Permit compliance programs and annual reporting forms. Based on this review the Permittees determined that:

- The overarching goal of the program is to ensure that Urban Runoff does not cause or contribute to non-attainment of Beneficial Uses in the upper Santa Margarita River watershed;
- Permittee compliance programs are process based and, consistent with the Maximum Extent Practical (MEP) approach, are incrementally adjusted as part of the annual reports and comprehensively reevaluated and if necessary, revamped as part of each ROWD;
- Monitoring data should be used to drive long term program assessments and assess goal attainment as part of the ROWD; and
- Process based Municipal Action Levels (MALs) should be used to evaluate annual program implementation to ensure that programs are implemented to the MEP and identify the needs for incremental adjustments.

The Permittees have proposed revised Effectiveness Assessment metrics and MALs for use in Permittee Annual Reports consistent with the aforementioned findings and as described further in Section 6.1.2.1. The MALs are intended to function as triggers, or minimum bars that if breached, would require the Permittees to evaluate the appropriate program elements to determine if adjustments are necessary to attain the MEP standard. The Permittee proposal will not only add transparency to the Permittees compliance programs but assist Permittees in evaluating and adjusting their Permit compliance programs to assist in attaining Water Quality Standards. Further, the proposed effectiveness assessment metrics can be implemented without significantly increasing the Permittees' program costs.

Revisions to the IC/ID Program (Section 7.8.2)

During the 2007/2008 MS4 Program audits conducted by PG Environmental and Regional Board staff, several questions were raised regarding the Permittees existing Illicit Connection/Illegal Discharge(IC/ID) field monitoring programs. The Permittees have evaluated the Regional Board and PG Environmental staff's comments and proposed a revised IC/ID Program based on the following:

- Random selection of MS4 outfalls throughout the Santa Margarita Region;
- Rotating MS4 outfall sites annually to maximize coverage of the MS4;
- Partnering one District staff person with one city/county code enforcement officer for data collection to ensure consistency in sampling procedure/collection and quick response to detected IC/ID events.

Implementation of a Post-Construction Treatment Control BMP Inspection Program (Section 7.2.2.6)

Consistent with Regional Board staff's request to consider development of a post-construction Treatment Control BMP inspection program, the Permittees have developed a proposal that they plan to implement when economic conditions allow. This proposal would enhance the existing business and Permittee facility inspection programs described in the Riverside County DAMP by incorporating inspections and maintenance verification of Treatment Control BMPs. Treatment Control BMPs constructed as part of residential developments, or other developments not captured by the Permittees' existing business inspections would be addressed through an annual self-certification program.

Revisions to the Dry Weather Monitoring Program (Section 6.4.4.1)

The Permittees have committed to participating in the Regional Watershed Monitoring Program developed in conjunction with the Southern California Coastal Water Research Project (SCCWRP). Six annual monitoring events were scheduled for the upper Santa Margarita River watershed. Consistent with the agreement reached by SCCWRP, Permittee, and Regional Board staff, three of these sites would be collected by the Permittees and three through the Surface Water Ambient Monitoring Program (SWAMP). The costs for implementing the three sites to be implemented by the Permittees would be offset by reducing the Permittees existing dry weather triad monitoring events (three stations) from twice a year to annually.

Development of a LID Manual (Section 7.2.2.1)

The Permittees have committed to develop a Low Impact Development (LID) Implementation Manual based on the LID Manual currently being developed by the SMC and CASQA.

Hydromodification Management Plan (Section 7.2.2.2)

The Permittees have committed to develop a revised hydromodification management plan based on the findings of the final SCCWRP Hydromodification Management report currently under development.

Participate in a Watershed Based TMDL for the Santa Margarita Lagoon (Section 6.4.4.7)

The Permittees understand that, due to economic conditions, State funding for the Santa Margarita Lagoon watershed-based TMDL has been withdrawn. As described in Section 3.4, economic conditions are also impacting the Permittees' funding sources and the Permittees are struggling to maintain sufficient resources to fund their existing compliance programs. Therefore, the Permittees cannot currently support committing additional funds toward a third party TMDL effort. The Permittees are, however, agreeable to discussing with the Regional Board a elimination or reduction of various required compliance activities that are not measurably enhancing the their ability to attain Water Quality Standards, which in turn could allow the Permittees to redirect some of their existing resources into the third party TMDL effort. Some program elements that could be considered for discussion are described in Section 6.4.4.7.

Pyrethroid Pesticide BMP Implementation

The Permittees have committed to implementing several BMPs to address possible urban sources of pyrethroid pesticides. In addition the Permittees have committed to working through CASQA to facilitate regulatory change in pyrethroid pesticide use to curtail potential causes of receiving water impairment.

Adjustments to the Monitoring Program

The Permittees have proposed additional revisions to the monitoring program to streamline implementation and increase its utility.

2.0 Introduction

The Regional Board adopted Order No. R9-2004-001 (NPDES No. CAS0108766), an area-wide NPDES MS4 permit (2004 MS4 Permit) on July 14, 2004. This ROWD is a required component for renewal of the 2004 MS4 Permit. The 2004 MS4 Permit authorizes discharges of Urban Runoff from the MS4 owned and operated by the Permittees.

Capitalized terms used in this ROWD are defined in the glossary of the Riverside County DAMP. The Riverside County DAMP serves as the model compliance document used by the Permittees to develop the Watershed and Individual SWMPs. To save costs and increase the effectiveness of the MS4 Permit compliance programs, the Permittees will maintain the Riverside County DAMP as the primary document that describes Permittee compliance programs. The Permittees individual and regional compliance programs are then described in more detail in the Individual and Watershed SWMPs.

This ROWD has been written and formatted to address the requirements outlined in United States Environmental Protection Agency (USEPA) *Interpretative Policy Memorandum on Reapplication Requirements for Municipal Separate Storm Sewer Systems* contained in the Federal Register, Volume 61, page 41698 (61 FR 41698), and to include commitments made in the various compliance documents, annual reports and in meetings with the Regional Board.

Additionally, as discussed in the meeting with Regional Board staff on September 9, 2008 and as supported by the above mentioned USEPA guidance, this ROWD relies on the fourth year Annual Reports to document the programs implemented by the Permittees. The fourth year Annual Report also includes a comprehensive evaluation of Permittee monitoring data to date and includes preliminary recommendations for Permittee compliance programs based on that data. As part of the ROWD process, the Permittees have reassessed their existing programs that are described in the Annual Reports, the monitoring conclusions and program recommendations contained in the fourth year Annual Reports, and in this ROWD, are making additional recommendations for revisions to improve the efficiency and effectiveness of these programs at improving and protecting the quality of our Receiving Waters.

The following sections of the ROWD are summarized as follows:

Section 3.0 - Information about the Permittees, their legal authority to implement the existing and proposed programs, the Permit Area, and the Permittee's funding sources and economic outlook relative to continued funding of the MS4 Permit compliance programs.

Section 4.0 – Information about the upper Santa Margarita River watershed, including physiography and geology, hydrology, climate, population, land use, surface water bodies and their Beneficial Uses and Impairments, and the MS4. This information provides context for the MS4 Permit compliance program in the Santa Margarita Region.

Section 5.0 – An overall evaluation of the Permittees existing programs based on water quality data collected to date and proposed compliance program modifications.

Section 6.0 – Evaluation of regional compliance programs, including a summary of accomplishments and proposed program revisions.

Section 7.0 – Evaluation of compliance programs individually implemented by the Permittees, including a summary of accomplishments and proposed program revisions.

3.0 Applicant Information

3.1 Permittee Contact Information

Table 1 provides the contact information for each of the Permittees in the Santa Margarita Region.

Table 1. Permittee Contact Information

3.2 Statement of Legal Authority

The Co-Permittees have adopted ordinances regarding the management of Urban Runoff. The ordinances provide the Permittees with the legal authority to implement the requirements of the 2004 MS4 Permit and 40 CFR Section 122.26(d)(2)(i)(A-F). The Permittees also provided certification of adequate legal authority to comply with the 2004 MS4 Permit and to implement the Riverside County DAMP to the

[1] As the Cities of Menifee and Wildomar are recently incorporated, the County of Riverside is currently handling their stormwater and MS4 permitting issues. Once these cities are fully established and staffed, updated contact information will be provided to the Board. The cities will assume responsibility for their programs on October 1, 2009.

Regional Board. However, it is noted that the newly incorporated cities of Menifee and Wildomar will submit their certifications following adoption of the updated MS4 Permit.

However, there are limitations to the authority the Permittees have for enforcement actions. The Permittees do not have legal authority over discharges into their respective MS4 facilities that originate from agricultural activities, state and federal facilities, utilities and special districts, Native American tribal lands, wastewater management agencies and other point and non-point source discharges otherwise permitted by, or under the jurisdiction of, the Regional Board or USEPA. Examples of non-point sources of Pollutants not under the control of the Permittees include materials from operation of internal combustion engines, atmospheric deposition, brake pad wear, tire wear, residues from lawful application of pesticides, nutrient runoff from agricultural activities, and leaching of naturally occurring minerals from local geography.

Also, the Permittees do not have the authority to enforce the provisions of California's General Permit for Storm Water Discharges Associated with Industrial Activities (General Permit-Industrial) or California's General Permit for Storm Water Discharges Associated with Construction Activity (General Permit-Construction). The State Water Resources Control Board (State Board) issues these NPDES permits, and neither the State Board nor the Regional Board has the authority under the Clean Water Act to delegate responsibility for administering these NPDES permit programs to the Permittees. However, the Permittees' local storm water and erosion control ordinances may address items similar to those identified in these statewide NPDES permits.

3.3 Permit Area

The Permit Area is defined as the urbanized area serviced by the Permittee's MS4 facilities. The Permit Area is located within the area delineated by the County boundary line on the south and the limits of the jurisdiction of the San Diego Regional Board on the north, east, and west. It is important to recognize that the Clean Water Act exempts agricultural activities from regulation under NPDES and the Permittees do not have legal jurisdiction over storm water discharges into their MS4 facilities from:

- California and federal facilities,
- Areas under the jurisdiction of San Diego County,
- Utilities and special districts, and
- Native American tribal lands.

These areas are not included in the Permit Area. In addition, other point and non-point source discharges otherwise permitted by or under the jurisdiction of the Regional Board or USEPA may affect water quality in the Murrieta and Temecula Creek watersheds.

The area of Riverside County under the jurisdiction of the Regional Board is less than 8 percent of the 7,300 square miles within Riverside County. Of the 27 municipalities within the whole of Riverside County, only five include areas under the jurisdiction of the Regional Board.

3.4 Funding Sources and Economic Projections

3.4.1 Funding Sources

The costs incurred by the Permittees in implementing the SWMPs fall into two broad categories:

- **Shared Costs**. These are costs that fund activities performed mostly by the District under the Implementation Agreements. These activities include coordinating the overall storm water program, coordinating other interagency cooperative efforts such as the Compliance Assistance Program (CAP), participating in CASQA activities, representing Permittees at meetings of the Regional Board or State Board and other public forums; preparing and submitting compliance reports and other reports required under the MS4 Permit, conducting Urban Runoff monitoring and public education outreach programs, responding to Water Code Section 13267 requests, providing other program documentation, and coordinating consultant studies, Permittee meetings, and training seminars.
- **Individual Permittee Costs for Individual SWMP Implementation**. These are costs incurred by each Permittee for implementing within its jurisdiction the BMPs (drainage facility inspections for illicit connections, drainage facility maintenance, drain inlet/catch basin stenciling, emergency spill response, street sweeping, litter control, public education, construction activity inspection, development of implementation plans, etc.) comprising the Individual SWMPs.

Historically, the Permittees have employed several funding methods to finance their MS4 Permit compliance activities. Unfortunately, the mortgage crisis, collapse of the housing market, and the economic recession has resulted in the cessation of virtually all development activity and has significantly reduced property and sales tax revenue. Property tax revenues have been reduced by the high level of foreclosure activity, reduced property values and a significant decline in assessed valuations. Property tax revenues have been further reduced by homeowner requests for reassessments to reflect the reduced property values. The impact of these economic conditions on the Permittees in the Santa Margarita Region has been particularly severe. As a result, the aggregate funding available to the Permittees has been severely reduced, and it is anticipated that this condition will continue well into and possibly throughout the next Permit term. The funding methods historically used and the effects of the economic situation on the availability of funds through these sources are summarized as follows:

- **Santa Margarita Watershed Benefit Assessment Area**. In 1991, the District established the Santa Margarita Watershed Benefit Assessment Area to fund its MS4 Permit compliance activities. Currently, the Benefit Assessment revenues fund the District's share of the area-wide MS4 Permit program activities and the District's individual compliance activities as a Permittee. Under the Benefit Assessment each parcel is taxed based on the impervious area of each parcel at a set rate established by District Ordinance 14. This rate has not been increased since 1991 due to Proposition 218. In 2007/08 the Santa Margarita Benefit Assessment generated approximately $410,000 dollars in revenue.

  Outlook: The District expects at best to maintain, if not see temporary reductions in Benefit Assessment revenues due to the significant number of homes that are not paying property tax due to foreclosure. Pursuant to Article 13.D of the California Constitution, an increase in the established Benefit Assessment rate to compensate for these reductions requires approval of 2/3

of the voters or 50 percent of the property owners and is highly unlikely given the current economic climate. Revenues will not increase until the development industry recovers.

- **General Fund /Other Revenues**. The County and the cities utilize general fund revenue to finance most of their MS4 Permit compliance activities. General fund revenue is generated by property tax, sales tax, and auto license taxes.

  Outlook: The Permittees expect a continued reduction in th**e funds** available through General Fund / Other Revenues through at least FY 2009 /2010. Although optimistic that conditions will begin to stabilize toward the end of 2009, the Permittees cannot speculate as to when revenues will recover to previous levels.

- **Fees**. Several Permittees charge fees for services such as inspections, plan check, and other recoverable costs related to compliance with the 2004 MS4 Permit. These fees cover both the direct and indirect costs associated with conducting these inspections/reviews including associated compliance tracking and reporting.

  Outlook: It is notable that, with the virtual collapse of the development industry in the Santa Margarita Region, the fees received by the Permittees have been significantly reduced. With this reduced level of fee-based income, maintenance of the existing inspection and plan review programs will place an increased burden on overall funding of the compliance programs. The Permittees do not expect revenues from fees to recover until the development industry recovers. Even with recovery of the development industry, it is anticipated that over the long-term, revenues from fees will be reduced for the City of Temecula and the County due to the reduced area remaining for development within their jurisdictions.

- **Grants.** The Permittees have actively pursued and, as available, used Grants to fund compliance programs.

  Outlook: In December the state's budget crisis resulted in a directive to state agencies from the Department of Finance to halt projects that rely on bond funds, including those funded by Prop 40, Prop 50, or Prop 84. The State of California is the primary source of grant funding for water quality projects. Future availability of funds to resume grant-funded projects is uncertain.

It is clear that the current economic climate and that of the foreseeable future is creating a significant burden upon the Permittees that will make the continuance of all existing MS4 Permit compliance programs increasingly difficult. New funding sources or alternative combinations of funding sources will likely be required to ensure continued funding of even the current MS4 Permit compliance programs.

3.4.2 Economic Projections

According to Chicago Title, Southwest Riverside County has experienced a very significant increase in supply of single-family residential units on the market. As a result, housing price indicators are very negative. In the majority of the Southwest Riverside submarket, the pending price is less than the closing price indicating general price weakness. The October, 2008 count of bank owned (REO) properties for Riverside County as a whole was 12,078. The number of home in foreclosure was 23,480. The presence of high levels of REO properties will continue to negatively affect home prices. In addition, the level of foreclosures is increasing.

With regard to other sectors of the economy, Riverside County has taken a serious turn for the worst in 2008, with projections indicating that the severe downturn will continue through 2009 at the very least.

The economic difficulties being faced in the Southwest Riverside submarket is the result of the dramatic downturn in the housing market in this area, the national financial turmoil, the worldwide credit crisis, and the increasing consumer debt crisis. According to Beacon Economics, a respected economics consulting firm in Los Angeles, Inland Southern California is clearly at the epicenter of this economic turmoil, with extremely high rates of unemployment at present. Unemployment rates in Inland Southern California are expected to reach 12.4 percent before this deep recession is over. Housing prices are expected to continue their precipitous decline from their peak levels in the two Inland Southern California counties through at least 2011. According to Dataquick, median home prices in Riverside County peaked at $415,000 in January 2007. At the end of this cycle, the median home price in Riverside County is expected to be $198,000. Figure 1 depicts the median housing price in Riverside County over the period 1990 to August 2008.

Figure 1. Riverside County Median Housing Price (1990 – August 2008)

Source: Riverside County Center for Demographic Research. 2008. Riverside County Progress Report, pg 14.

Local Government sales tax revenues remained fairly stagnant through 2006 and began to decline in early 2007, according to Beacon. By the second quarter of 2008, taxable sales in Riverside County declined by 7.7 percent. The decline is expected to continue with taxable sales possibly bottoming out by 2010. Recovery of these reduced revenue streams will likely not occur within the next permit term.

As a direct outcome of the current economy and the economic outlook into the next MS4 Permit term, the number of New Developments proposals has plummeted and any significant rebound is not forecast. New and redevelopment projects will likely remain minimal. As shown in Figure 2, the number of housing units being added each year has dropped below the levels seen at any point in time during the 2004 MS4 Permit. These numbers will likely continue to decrease for a significant portion of the new MS4 Permit term.

Figure 2. Riverside County Housing Units Added (1990 – 2008)

Source: Riverside County Center for Demographic Research. 2008. Riverside County Progress Report, pg 12.

These economic issues and projections directly affect and limit both:

1. The need for including enhanced new and re-development requirements in the new MS4 Permit, and
2. The Permittees ability to fund, and even seek new funding sources for additional MS4 Permit requirements for new and re-development projects.

Therefore, as described in Section 7.2, the Permittees are not recommending and cannot financially support any significant increases to their Development Planning activities. Permittee specific projections are as follows:

3.4.2.1 County of Riverside

The County is operating with a structural deficit of $12 million and plans a 25 percent budget reduction from FY 2008/2009 through FY 2011/2012. The County's current budget of $4.7 billion represents a 5 percent reduction from the previous year and next year's budget is expected to be cut by 10 percent. These cuts are directly associated with the overall decline in property values and the high number of foreclosures. There are concerns about having to use discretionary funds to meet State mental health and social service mandates. In addition, the County is dependent on funds from federal and state sources. If during this time of economic crisis federal and state funding sources are reduced or eliminated, any unfunded State and Federal programs will be terminated. Only core County programs will continue.

The primary source of general fund revenue is from property taxes and sales tax. With the unprecedented number of foreclosures, reduced property values, and declining sales tax revenue, general fund revenue is in a downward spiral. Another source of funding is through the Solid Waste Tipping Fees paid at the County landfills. Volume is down 15 percent since 2006 with anticipated downward trend to 40 percent reduction in solid waste through 2014. Programs that are partially funded through tipping fee allotments will be impacted. Due to the declining economy the recycling market has collapsed. Virtually no recyclable materials are being shipped for reprocessing. This loss of revenue and increased disposal costs is further impacting the general fund.

Cuts of 25 percent for all Net County Cost general fund programs will translate into reduction of County services and elimination of unfunded state and federal programs. Only core value programs will be provided (including public safety and fee programs)

The County has instituted a hiring freeze and required each department to create a report outlining the projected effects of the budget cuts. The County currently employs over 20,000 people, and layoffs are expected to result from the findings of these departmental reports. It is anticipated that this will impact program delivery for stormwater related activities. No County department will be able to sustain current staffing levels as they try to meet the 25 percent budget reduction strategy.[2] [3]

3.4.2.2 City of Menifee

The newly incorporated City of Menifee FY 2008/2009 initial budget was estimated from their comprehensive fiscal analysis that was submitted to the Local Agency Formation Commission during the incorporation process. Because of the economic uncertainty, and the fact that the City is only now beginning to staff positions, it is unknown what the immediate impact of the fiscal crisis will be. The County is responsible for assisting the City in meeting its MS4 Permit compliance requirements during the first year of incorporation which expires October 1, 2009. Currently, the level of property tax revenue that will be available to the City is uncertain. Funding for MS4 Permit compliance requirements was not explicitly budgeted. A financial hardship currently exists because of the costs associated with incorporation.

3.4.2.3 City of Murrieta

The City of Murrieta's FY 2008/2009 budget did not increase compared to FY 2007/2008. Adjustments were made to reflect less revenue and to absorb any operating costs. However, budget cuts are anticipated for FY 2009/2010 because the immediate economic outlook is not good. There have been approximately 2,000 home foreclosures within the City. Sales tax revenue is estimated to drop 12.5 percent, property tax revenue will drop, and the State took approximately $525,000 out of redevelopment funds. Murrieta did not receive any vehicle licensing fees from the State and it appears likely that the State will take more revenue from the Cities to solve its budget problems. New NPDES requirements that increase compliance costs will create a financial hardship for the City.

3.4.2.4 City of Temecula

Various ongoing tax and investment revenues adopted in the City of Temecula's FY 2008-09 general fund revenues are projected to decrease from FY 2007-08. Sales and use tax revenues are expected to decrease in FY 2008-09 compared to FY 2007-08. This decrease is primarily the result of the decline in general consumer goods, electronic retail, and auto sales. Property tax revenue is also expected to decrease due to decreases in supplemental tax receipts attributed to the impact of the housing crisis. Investment interest revenue is also anticipated to decrease due to a decline in interest rates.

As a result of the 2008/2009 State budget, Temecula's redevelopment agency will have to shift existing funds from property taxes to the State's Education Revenue Augmentation Fund coffer for schools and

[2] "The Realities of Recession in California: A Statewide Report by U.S. Senator Barbara Boxer, December, 2008, p. 18.

[3] Riverside County Executive Office, January, 2008.

colleges. As such, the amount due from the Temecula Redevelopment Agency is expected to be $898,685. As the State of California continues to address its budget deficit, the City of Temecula faces the possibility of additional revenue shifts to State coffers, further losing future revenue streams and threatening existing service levels.

In addition, a Press-Enterprise article dated December 9, 2008, reported that "Between 25 and 30 part-time Temecula employees will be without work in the new year as City officials deal with a lack of revenue and less work to go around." Furthermore, "the city is not immune to the economic slowdown, which has forced its neighbors to lay off workers and slash spending to counter drops in sales tax receipts and building permit fees. In May, the City's Finance Director reported that revenues were down $3 million compared to two years ago."

With these current and projected reductions in revenue and staff, additional requirements in the MS4 Permit or upcoming TMDL-related requirements, without any corresponding cost-equivalent offsets, will exceed the City's ability to effectively implement these new requirements and will begin to compromise the City's existing efforts to manage the existing MS4 Permit requirements.

3.4.2.5 City of Wildomar

The newly incorporated City of Wildomar FY 2008/2009 initial budget was estimated from their comprehensive fiscal analysis that was submitted to the Local Agency Formation Commission during the incorporation process. Because of the economic uncertainty, and the fact that the City is only now beginning to staff positions, it is unknown what the immediate impact of the fiscal crisis will be. The County is responsible for assisting the City in meeting its MS4 Permit compliance requirements the first year of incorporation that expires July 1, 2009. Currently, the level of property tax revenue that will be available to the City is uncertain. Funding for MS4 Permit compliance requirements was not explicitly budgeted. A financial hardship currently exists because of the costs associated with incorporation.

4.0 Overview of the Upper Santa Margarita River Watershed

4.1 Physiography and Geology

The upper Santa Margarita River watershed is defined as that portion of the Santa Margarita River watershed above the confluence of Murrieta and Temecula Creeks and includes the City of Temecula and portions of the Cities of Menifee, Murrieta, Wildomar, unincorporated County areas, portions of the Cleveland and San Bernardino National Forests, the Cahuilla, Ramona, Pauma, and Pechanga Indian Reservations and properties under the jurisdiction of Caltrans and a variety of special districts. The watershed is bounded by several mountain ranges, including the Santa Ana and Santa Margarita mountains to the North and the Palomar Mountains to the South. The upper Santa Margarita watershed includes areas in Riverside and San Diego Counties and encompasses approximately 588 square miles.

The upper Santa Margarita watershed includes two major sub-basins, drained by Temecula and Murrieta Creeks. Temecula Creek has a drainage area of 366 square miles, with steep rugged topography in the Palomar and Thomas Mountain areas and rolling hills below. The upper 316 square miles of this basin is controlled by Vail Lake (completed in 1949). Murrieta Creek has a drainage area of 222 square miles, with over 50 square miles controlled by Skinner Reservoir (completed in 1974). Although the watershed area is somewhat smaller and less rugged than the Temecula Basin, flood flows have the potential to create greater damage as they flow through the Cities of Temecula and Murrieta.

Temecula and Murrieta Creeks join along the Elsinore fault zone at the head of Temecula Canyon to form the Santa Margarita River. The Temecula Canyon is approximately five miles long, and is a steep, narrow, and rocky canyon. The San Diego-Riverside county line crosses through the Temecula Canyon. From here, the river traverses 27 miles to the Pacific Ocean.[4]

4.1.1 Watershed Characteristics

Over 50 percent of the Santa Margarita watershed has been controlled by the construction of Vail Dam in 1949 and Skinner Reservoir in 1974, which created a significant storage capacity in the upper watershed.[5] [6] 52 percent of the upper Santa Margarita River watershed is controlled by the dams. Due to this storage capacity, peak flow rates during major flow events for both existing and future land use conditions will be lower than under natural conditions.[7] [8]

[8] Santa Margarita Watershed Study: Hydrologic and Watershed Processes, Phillips, Williams and Associates, Ltd., October 26, 1998, page 20.

4.1.2 Stream Flow Characteristics

Murrieta and Temecula Creeks are perennial interrupted streams, i.e., they include reaches in which the flow is continuous and others where flow is ephemeral. The areas of perennial flow are located in mountain area tributaries outside of the urbanized areas serviced by the MS4s. The perennial flows disappear by seepage into the sands and gravels and resurface upstream of the confluence of Murrieta and Temecula Creeks. The creeks in the urbanized areas of the watershed, located primarily in the valley, are ephemeral and flows are only observed during and immediately after significant storm events. During major storms, after initial wetting, periods of intense rainfall result in rapid increases in stream flow in steep foothill and mountain areas.[9] "Runoff in streams in the watershed is derived primarily from rainfall, and as a result, stream flows exhibit monthly and seasonal variations similar to those shown by the precipitation records. Absence of snow pack in the tributary watershed results in a rapid decrease in flow of streams at the conclusion of the winter precipitation season. Following severe storms, discharge in the larger streams often increases in a few hours time from practically no flow to a rate of thousands of cubic feet per second. Stream flows vary greatly from month to month and from season to season."[10]

Rising groundwater is currently observed in Murrieta Creek below its confluence with the Santa Gertrudis Channel. This is consistent with the observations with the rising groundwater conditions observed by the State of California in 1956.[11] Rising groundwater is also observed in Temecula Creek approximately one quarter mile upstream of the Interstate 15 bridge. In 1956, the State of California observed more extensive rising groundwater conditions occurring as far upstream as the Highway 79 bridge. Based on the virtual absence of non-storm water flows and the rising groundwater conditions in lower Murrieta and Temecula Creeks observed prior to development of the watershed, there is no evidence that the rising groundwater is due to Urban Runoff nor that Urban Runoff has affected the quality of rising groundwater. However, use and disposal of reclaimed water and agricultural and landscape irrigation in the watershed may affect groundwater quality. Until October 2002, the Rancho California Water District augmented the flow of the Santa Margarita River with reclaimed water at a point about five miles upstream from the Temecula gauging station. Since that time, the Rancho California Water District has diverted reclaimed water to the Santa Ana watershed and instead discharged imported water at a location downstream of the confluence of Murrieta and Temecula Creeks in order to meet water supply obligations to Camp Pendleton.

For the average annual event, it is estimated that approximately 89 percent of the volume of runoff in the Santa Margarita Region is due to non-urban land uses not regulated under the federal storm water program. For the 100-year 24-hour event, 93 percent of the volume of runoff will be due to non-urban land uses. These estimates are based on the assumption that precipitation is constant across the watershed. However, precipitation (and resultant runoff volumes) in the non-urbanized upland areas is as much as four times greater than that from the urbanized valley areas.[12]

[11] State of California Department of Public Works Division of Water Resources, Bulletin No. 57, "Santa Margarita River Investigation," Volume I, June 1956, p. 48.

[12] State of California Department of Public Works, Division of Water Resources, Bulletin No. 57, Santa Margarita River Investigation, Volume I, June 1956, p. 11

4.2 Climate

"The climate of the Santa Margarita River watershed is typically Mediterranean, being characterized by warm dry summers and cool rainy winters. About 75 percent of the precipitation occurs during the four-month period from December through March. Mean annual depth of precipitation ranges from less than 10 inches near Vail Reservoir to over 40 inches west of Palomar Observatory, varying with elevation and topographic influences."[13] Precipitation increases with increases in elevation to the summit of the Coastal range. Shading effects of the Coastal range lead to a marked decrease of precipitation throughout the lower portions of the Inland area. Precipitation increases again farther away from the Coastal range in the northeastern area of the Inland area.[14] The significant and varied orographic features also make rainfall prediction particularly challenging in the urbanized portion of the watershed.

4.3 Population and Land Use

4.3.1 Population

The California Department of Finance estimates that as of January 1, 2008, the total population of Riverside County was about 2,088,322. Of the 2.1 million people, approximately 272,621 persons (or 13 percent) reside within the portion of Riverside County under the jurisdiction of the San Diego Regional Board. As shown in Figure 3, approximately 51,314 persons[15] reside in the unincorporated area while approximately 221,307 persons reside within the cities of Menifee, Murrieta, Temecula and Wildomar.

Figure 3. Santa Margarita Region Population by Permittee (2008)

[13] State of California Department of Public Works, Division of Water Resources, Bulletin No. 57, Santa Margarita River Investigation, Volume I, June 1956, p. 11.

[14] State of California Department of Public Works, Division of Water Resources, Bulletin No. 57, Santa Margarita River Investigation, Volume I, June 1956, p. 38.

[15] Population estimate for the portion of unincorporated Riverside County within the Santa Margarita River watershed developed by the County TLMA GIS Demographics Unit based on the 2000 Census.

Although the second term and 2004 MS4 Permits covered a period of time that saw a significant amount of growth, due to the current and foreseeable economic conditions described in Section 3.4.2 of this report and decreasing areas available for development, growth during the next MS4 Permit term will be quite limited. In fact, the projected growth rate through 2015 will be significantly less than has been seen since the early 1990s. Figure 4 shows the combined populations of the Cities of Murrieta and Temecula since 1997 and projected through 2015. Similar trends are expected for the unincorporated areas and the portions of the cities of Wildomar and Menifee within the watershed.

Figure 4. Cities of Murrieta and Temecula Combined Population (1997 – 2015)

Source: Riverside County Center for Demographic Research. 2008. Riverside County Progress Report, pgs 92 & 124.

Figure 4 clearly demonstrates the dramatic reduction in growth that is expected for the term of the next MS4 Permit when compared to previous permit terms.[16] Establishing trend lines for the population in these cities further demonstrates that the growth rate (population added per year) will be lower than the previous growth rate by approximately 86 percent.

[16] 2008 Riverside County Progress Report

Table 2 shows population projections for the all of the Permittees into the year 2015.

Table 2. Population of Santa Margarita Region Co-Permittees

Co-Permittee	Year			Change (2009 to 2015)
	Estimate 2008 (a)	Estimate 2009 (b)	Projected 2015 (b)	
City of Menifee	906[c]	927[c]	5,232[c]	464%
City of Murrieta	100,173	102,277	109,715	7.3%
City of Temecula	101,057	101,356[d]	103,150	1.8%
City of Wildomar	19,171[c]	19,589[c]	20,127[c]	2.7%
Unincorporated County of Riverside	51,314[c]	52,436[c]	53,793[c]	2.6%
Total	272,621	276,585	292,017	5.6%

Notes:

(a) Unless otherwise noted, populations were obtained from the State of California, Department of Finance, E-4 Population Estimates for Cities, Counties and the State, May 2008.

(b) Unless otherwise noted, projected populations were obtained from Riverside County Center for Demographic Research. Riverside County Progress Report, 2008

(c) Data provided by County of Riverside, Executive Office.

(d) Data provided by City of Temecula.

Since the District is not a general purpose government, it is not included in this listing. Although the current population of the City of Menifee in the Permit Area is small, it is anticipated that the population will increase as it annexes unincorporated areas. Similarly, it is anticipated that the cities of Murrieta and Temecula will gain population as they annex unincorporated areas. It is not anticipated that Wildomar will see significant population increases as it is bounded on all sides by other cities and lands reserved under the MSHCP.

4.3.2 Land Use

Land uses in Riverside County within the Santa Margarita Region include open space, residential, commercial, light industrial, heavy industrial, and agriculture. The agricultural land uses include row crops, nurseries, citrus groves and vineyards, dairies, ranches, poultry and hog farms, and other agricultural related uses with one single-family residence allowed per 10 acres (County of Riverside General Plan, Land Use Element 2003). The conversion of agricultural lands and open space to other "developed" land uses has been ongoing and will continue, although at a much lower rate than previously experienced. Land uses in the Santa Margarita Region are shown in Table 3. These land uses are based on the County of Riverside Assessor Parcel Data, current as of February 2006. It should be noted that the land uses below represent ***zoned*** land uses rather than ***actual*** land uses. This overstates the actual area of urban land use in the Santa Margarita Region. Also, changes in zoning designations can cause odd fluctuations in year-to-year date.

A map of the zoned land uses is provided in Appendix A.

In 1956, only 0.3 percent of the Santa Margarita River watershed (less than two square miles) was urbanized.[17] Although there has been a significant rate of growth in population relative to the State and

[17] State of California Department of Public Works, Division of Water Resources, Bulletin No. 57, Santa Margarita River Investigation, Volume I, June 1956.

neighboring counties, half a century later, approximately 88 percent of the Santa Margarita River watershed remains as non-urban land uses (rural residential, agriculture, preserves and open space, state lands, federal lands, and tribal lands). Further, almost one-third of the upper Santa Margarita River watershed consists of federal, state, and tribal lands that are not under the jurisdiction of the Permittees' MS4 programs. It is projected that the population of Riverside County will increase approximately 5.6 percent by 2015. If the urbanized area increases proportional to population, 87 percent of the upper Santa Margarita River watershed would remain in non-urban land uses in 2015.

Table 3. 2009 Santa Margarita Region Land Uses

Urban Land Use	Acreage[(a)]	% of Land Use Subtotal	% of Total Land Use
Commercial	8,339	20.0%	2.5%
Industrial	963	2.3%	0.3%
Urban Residential (< 1 acre)	12,656	30.4%	3.7%
Parks & Recreation Facilities	4,291	10.3%	1.3%
Streets & Roads	15,439	37.0%	4.6%
Subtotal – Urban Land Use	41,688		12.3%
Non Urban Land Uses			
Preserves & Open Space	54,141	18.2%	16.0%
Rural Residential (> 1 acre)	106,773	35.9%	31.5%
Agriculture	36,389	12.2%	10.7%
Federal/State/Tribal Lands/Non-County Jurisdiction	100,076	33.7%	29.5%
Subtotal Non Urban Land Use	297,379		87.7%
Total Urban & Non Urban Land Use	339,067		100%

(a) As reported in the FY 2007/2008 Watershed Annual Report.

4.3.3 Conserved Lands

The Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) was adopted in June of 2003. It is a comprehensive, multi-jurisdictional Habitat Conservation Plan focusing on conservation of species and their associated habitats in western Riverside County. The MSHCP is one of several large, multi-jurisdictional habitat planning efforts in southern California with the overall goal of maintaining biological and ecological diversity within a rapidly urbanizing region. The MSHCP will allow Riverside County and its cities to better control local land-use decisions and maintain a strong economic climate in the region while addressing the requirements of the state and federal Endangered Species Acts. Further, as floodplains and streams tend to support critical habitat, the MSHCP will preserve many of the remaining natural streams and establish significant buffer areas between those systems and urban land uses.

Much of the remaining non-urbanized lands in the Santa Margarita Region will ultimately be incorporated into the MSHCP. The MSHCP will result in a conserved area in excess of 500,000 acres and focuses on conservation of 146 species. The MSHCP Conservation Area includes approximately 347,000 acres on

existing Public/Quasi-Public Lands and approximately 153,000 acres of Additional Reserve Land. A large portion of the conserved lands are in the upper Santa Margarita watershed (at least 145,000 acres). There are approximately 72,318 acres of existing public or quasi-public lands preserved within the upper Santa Margarita River watershed area located in Riverside County.

4.3.4 Anticipated Development 2009-2015

Proposed development during the next MS4 Permit term is an important indicator of potential new Urban Runoff sources. To the extent possible, the Permittees have identified significant New Development projects that, if constructed, will result in the conversion of primarily undeveloped land to developed land. This section describes the expected development within Permittee cities. Consistent with the current and forecasted economic conditions and population estimates, and as supported by the population information and forecasts presented in Section 4.3.1, the Permittees anticipate that the term of the upcoming MS4 Permit will be a time of little development. Following are summaries of anticipated development during the upcoming MS4 Permit.

4.3.4.1 County of Riverside

Projected trends for the County of Riverside's land use can be referenced in the Riverside County General Plan. Maps depicting the areas of future development and type of land use can be found in the General Plan maps that are accessible at http://www.rctlma.org/generalplan/area_maps.html.

- With the incorporation of the cities of Wildomar and Menifee the remaining unincorporated County area to be built out in the Santa Margarita Region during the upcoming MS4 Permit term is going to be considerably smaller.
- It is anticipated that, over the next five years, additional annexations will occur in each of the four city areas (Temecula, Murrieta, Wildomar and Menifee) that will further reduce the unincorporated County area in the Santa Margarita Region.
- The unincorporated County area in the upper Santa Margarita River watershed (east of Temecula, Menifee and Murrieta) will remain in rural, open space and additional MSHCP land uses. In addition, due to drought conditions and depletion of aquifers the prospects of New Development is unlikely. Water districts in the region cannot offer "will serve" letters to provide for water resources they do not have. Infrastructure for water supply and municipal water treatment, MS4 and flood control facilities are virtually non-existent in this area.
- Due to downturn in economy, Development Impact Fees (DIF) and Transportation Uniform Mitigation Fees (TUMF) are and will continue to be significantly under funded. This reduction in transportation funding will result in fewer road and infrastructure projects during the term of the upcoming MS4 Permit. The Transportation Department has projected limited projects for the Santa Margarita Region. The Clinton Keith Road widening project is still in the planning stages. Due to budgetary constraints, unless projects are fully funded through County finance mechanisms (TUMF, DIF, state and federal pass through from bonds and grants) most projects will be put on hold through 2012.

4.3.4.2 City of Menifee

Projected development trends for the City of Menifee are unknown, sphere of influence and annexation opportunities will allow for limited growth once the economic uncertainty of the region is resolved.

4.3.4.3 City of Murrieta

The area north of Clinton Keith Road along the east side of the I-215 freeway should see some construction towards the end of the next MS4 Permit term. Grading for the construction of a hospital has started along the freeway and it is anticipated that supporting development will follow once the hospital is open. Overall the Planning Department is receiving few applications for New Development projects. For example, a Planning Commission meeting scheduled for January 2009 has been cancelled because there are no New Development items to discuss. In light of the current and foreseeable economic conditions, the City does not anticipate any substantial New Development activity for the next few years, with limited growth possibly resuming toward the end of the next MS4 Permit term.

4.3.4.4 City of Temecula

The City of Temecula is currently experiencing a significant leveling trend in development. Throughout 2008, fewer applications were being processed than in previous years. As such, Temecula does not anticipate processing any substantial number of New Development applications within the next MS4 Permit term. It is anticipated that applications from hereon will be limited to smaller in-fill and redevelopment projects. In addition, proposed annexation areas will be limited to areas that will be set aside mostly for conservation. As Temecula is on the verge of build-out, approximately 1 percent of developable land remains available throughout the City for New Development.

4.3.4.5 City of Wildomar

Projected trends for the City of Wildomar are unknown, sphere of influence opportunities will allow for limited growth once the economic uncertainty of the region is resolved.

4.4 Surface Water Bodies, Beneficial Uses, and Impairments

Approximately eight percent of Riverside County drains into surface water bodies within the jurisdiction of the Regional Board. Those surface water bodies (or portions thereof) are listed in Sections 4.4.1 and 4.4.2.

Rivers and Streams

- Santa Margarita River (Hydrologic Unit Basin Number 2.22)
  - Murrieta Creek
    - Slaughterhouse Canyon
  - Cole Canyon
    - Warm Springs Creek
      - Diamond Valley Reservoir
  - Santa Gertrudis Creek
    - Tucalota Creek
    - Lake Skinner
  - Temecula Creek (Hydrologic Unit Basin Number 2.92)
    - Iron Spring Canyon
  - Temecula Creek (Hydrologic Unit Basin Number 2.84)
    - Tule Creek
      - Million Dollar Canyon
    - Cottonwood Creek
  - Vail Lake
    - Wilson Creek
      - Cahuilla Creek (Hydrologic Unit Basin Number 2.73)
        - Hamilton Creek
      - Cahuilla Creek (Hydrologic Unit Basin Number 2.71)
        - Elder Creek
    - Arroyo Seco Creek
    - Kolb Creek
  - Temecula Creek (Hydrologic Unit Basin Number 2.52)
    - Pechanga Creek
- Santa Margarita River (Hydrologic Unit Basin Number 2.21)
  - DeLuz Creek

4.4.1 Beneficial Uses

The upper Santa Margarita River watershed supports a variety of ecosystems and provides many Beneficial Uses (Table 4)[18]. The ultimate goal of the Riverside County DAMP and the Watershed and Individual SWMPs is to manage Urban Runoff in a manner protective of the Beneficial Uses of these Receiving Waters.

Table 4. Beneficial Uses of Receiving Waters
Upper Santa Margarita River Watershed

Beneficial Use	Murrieta Creek	Cole Canyon	Warm Springs Creek	Santa Gertrudis Creek	Long Valley	Temecula Creek	Santa Margarita River
Municipal and Domestic Supply	X	X	X	X	X	X	X
Agricultural Supply	X	X	X	X	X	X	X
Industrial Service Supply	X	X	X	X	X	X	X
Industrial Process Supply	X	X	X	X	X	X	
Ground Water Recharge	X					X	
Contact Water Recreation				X	X	X	X
Non-contact Water Recreation	X	X	X	X	X	X	X
Warm Freshwater Habitat	X	X	X	X	X	X	X
Cold Freshwater Habitat							X
Wildlife Habitat	X	X	X	X	X	X	X
Rare, Threatened or Endangered Species							X

4.4.2 Current Water Quality Concerns and Issues

Urban Runoff discharged to MS4s in Riverside County ultimately flows to various surface water bodies (inland streams, lakes, and reservoirs) and typically carries Pollutants that originate from numerous dispersed and uncontrolled sources. Examples of Pollutants that may be present in Urban Runoff are fertilizer, heavy metals, nutrients, petroleum products, sediment, bacteria, chemicals, and litter.

Because the upper Santa Margarita River watershed is large and has many land uses, the water quality concerns in sub-watersheds vary. However, each land use can potentially contribute Pollutants to nearby streams, rivers, and lakes. The infrastructure that supports people's activities (e.g., roads, parks, MS4, and wastewater collection and treatment facilities) may contribute to water quality concerns if not properly managed. Other sources of stormwater runoff, including agricultural areas, are exempt from the requirements of the NPDES permitting program established under the Clean Water Act. In addition, some Pollutants, such as total suspended solids, may be found at elevated levels in runoff from non-urban land uses. Further, certain activities that generate Pollutants present in Urban Runoff are beyond the ability of the Permittees to eliminate. Examples of these include operation of internal combustion engines, atmospheric deposition, brake pad wear, tire wear, residues from lawful application of pesticides, nutrient runoff from agricultural activities, and leaching of naturally occurring minerals from local geography.

[18] www.waterboards.ca.gov/rwqcb9/programs/

As required by Section 303(d) of the Clean Water Act, the State Board maintains a list all waters in the State that do not meet the Water Quality Standards established in the Basin Plans prepared by the Regional Boards for protection of Beneficial Uses. This list, referred to as the "303(d) List," details the Pollutant or stressor on each named water body, the potential source of Pollution, estimated affected area, as well as a priority for development of the associated TMDL. A TMDL is a plan that identifies how much Pollutant load a specific Impaired Waterbody can sustain without impacts to its Beneficial Uses. In addition to identifying the maximum Pollutant load, a TMDL is used to develop implementation plans to meet Water Quality Standards for a designated water body. Table 5 summarizes the 2006 303(d) List of Impaired Waterbodies within the upper Santa Margarita River watershed, as well as the year in which a TMDL is proposed for approval. No TMDLs have been established for Receiving Waters in the upper Santa Margarita River watershed.

Table 5. 2006 303(d) Listings for the Santa Margarita Region

Water Body	Pollutant	Potential Sources	Area Affected	Proposed TMDL Completion
Santa Margarita River (Upper)	Phosphorus	Urban runoff/storm sewers Unknown nonpoint source Unknown point source	18 miles	2019
Murrieta Creek	Iron Manganese Nitrogen Phosphorous	Source unknown Source unknown Source unknown Urban runoff/storm sewers Unknown nonpoint source Unknown point source	12 miles 12 miles 12 miles 12 miles	2019 2019 2019 2019
Temecula Creek	Nitrogen Phosphorus Total dissolved solids	Source unknown Source unknown	44 miles 44 miles	2019 2019

Table G-35 of Appendix G to the Annual Report 2007-2008 additionally identifies pyrethroid pesticides (bifenthrin and permethrin), bacteria (E. coli and fecal coliform), lead, and sediment (turbidity) as Pollutants of Concern in the upper Santa Margarita River watershed that warrant focused attention by Permittee implementation programs. These constituents have been detected intermittently or persistently at Triad and Tributary monitoring stations.

4.5 Municipal Separate Storm Sewer System

A map depicting the MS4 facilities owned and operated by the Permittees is provided in Appendix B.

5.0 Program Evaluation Based on Water Quality Trends

The overall effectiveness of the Permittees programs is assessed based on the analysis of water quality data obtained as part of the Consolidated Monitoring Program. Approximately 14 years of data have been collected through this program and have been cumulatively analyzed in the fourth-year monitoring Annual Report.

5.1 Inherent Limitations to Analyzing Water Quality Data

There are inherent limitations to analyzing water quality data from storm water. Storm water runoff is very different from mechanical wastewater or water treatment processes that usually incorporate water quality monitoring. Discharges from mechanical processes such as treated wastewater effluent and industrial discharges usually:

- Come from a single or a few readily identifiable sources;
- Are generally consistent in flow rate and chemical character from day to day; and
- Can be easily instrumented.

Conversely, Urban Runoff non-point source flows, such as those collected and analyzed as part of the MS4 Permit monitoring programs usually:

- Come from multitudes of unidentifiable or hidden sources, many of which are non-Urban in nature:
  - State, federal or tribal lands
  - Natural leaching of soils
  - Wildlife
  - Aerial deposition
  - Wildfires
- Vary widely in flow rate in response to precipitation events
- Vary widely in chemical character at any given moment due to:
  - Unidentified episodic issues related to natural phenomena
  - Magnitude of rainfall and extent of contributing area
  - Potential one-time illicit discharges that were not identified at the time of sampling
  - Unforeseen or unidentified consequences of changes in numerous land use policies (fire management, development, etc)
- Are subject to significant natural random variation; and
- Cannot be easily instrumented due to the wide variation in depth and velocity and associated impacts of natural or unnatural aggradation and degredation of natural stream beds.

Because ephemeral storm water flows are, by their very nature, particularly random in character, it may take many years before monitoring data trends can be detected or to determine the effectiveness of an

Urban Runoff control measure. Power analyses were conducted for fecal coliform, metals, and nutrients at the stations monitored in the Santa Ana Region during the 2005/06 reporting period. Power analysis is used to determine how many years of monitoring would be required to detect a given trend in the data. This tool was developed by the SCCWRP. Based on the results, for biennial monitoring, and having an 80 percent chance of detecting a change in concentration, it would take about 5-10 years of data collection to detect a change of 50 percent in concentration, 10-15 years of data to detect a 25 percent change, and 15-30+ years of data to detect a 10 percent change. It is expected that results would be similar for other parameters measured in the monitoring program in the Santa Margarita Region.

5.2 Focus Area Constituents of Concern

During the 2004 MS4 Permit term, monitoring data indicated that one or more receiving water samples have been found to contain the following constituents at levels that exceeded Basin Plan Objectives (BPO). As such they have been identified as constituents of concern.

- Nutrients (Ammonia as N, Phosphorus
- Pyrethroid Pesticides (Permethrin, Bifenthrin)
- Pathogen Indicators (E.coli, Fecal Coliform)
- Lead
- Turbidity (lab)

5.3 Analysis of Water Quality Trends

As discussed in the 2008 Santa Margarita Region Annual Monitoring Report, the results of the trend analysis and regression calculations indicate that there are no statistically significant trends in the water quality monitoring data. The lack of trends in the data presented in the Annual Monitoring Report contrasts with the rapid population growth over the same time frame. As discussed in the Annual Monitoring Report, population growth from 1990 to 2008 was approximately 300 percent for the Santa Margarita Region. This significant growth in population and resulting urban land use area contrasts sharply with the lack of statistically significant increases in concentrations of constituents of concern that would otherwise be expected in stormwater runoff from urbanized areas.

These results demonstrate and can be attributed to the effectiveness of the Permittees' programs at addressing the Focus Area Constituents of Concern, which are targeted and designed to prevent the discharge of these constituents into the Receiving Waters.

5.3.1 Recommended Compliance Program Modifications to Address Focus Area Constituents of Concern

Based on the analysis described above and in Appendix G of the 2008 Watershed Annual Report, no significant program modifications are necessary to continue to protect and improve the quality of the Receiving Waters.

Although the Permittees programs have been shown to be protective of Receiving Water quality, through continual evaluation of the programs being implemented and on-going water quality monitoring, additional measures are being proposed as part of this ROWD to address changing conditions and ensure

the ongoing effectiveness of the programs. Recommended changes to ensure the ongoing effectiveness of the Permittees programs are described in Sections 6 and 7 of this report.

6.0 Evaluation and Recommendations for Regionally Implemented Programs

6.1 Program Management

The District is the Principal Permittee for each of the three MS4 permits issued by the three Regional Boards that have jurisdiction in Riverside County. As Principal Permittee, the District performs management functions including coordination with the Regional Boards, preparation of compliance documents and Annual Reports, participation in studies and external cooperative efforts and dissemination of information to the Permittees. The Permittees implement some compliance programs that are common to all of the Permittees and which are implemented on a Countywide or regional basis to increase cost effectiveness and efficiency. Typically, the District also manages Countywide and regional programs.

6.1.1 Program Management Accomplishments and Programmatic Improvements

During the term of the 2004 MS4 Permit the following accomplishments were achieved.

- Updated the Implementation Agreement that sets forth the responsibilities of the Principal Permittee and the Co-Permittees.
- Revised the Riverside County DAMP to reflect requirements in the 2004 MS4 Permit, which served as a model document for the Permittees Watershed and Individual SWMPs.
- Developed Santa Margarita Region Watershed SWMP
- Participated in the Santa Margarita River Executive Management Team (SMREMT) to identify and address the highest priority water quality concerns in the Santa Margarita watershed, including development of a watershed model to assist with land use planning and TMDL development, coordinating watershed monitoring, and developing formal agreements between interested stakeholders for the purposes of evaluating impairment listing and data gaps in the watershed.
- Continued progress with the SMREMT on a uniform watershed plan and model for the Santa Margarita Watershed through the Santa Margarita Watershed Supply Augmentation, Water Quality Protection, and Environmental Enhancement Program.
- Participated in the Santa Margarita Lagoon TMDL workgroup in funding and overseeing the development of a comprehensive program to collect data and model the various inputs to the lagoon to be used to develop a TMDL to address nutrients.
- Participated in the Santa Margarita Watershed Water Quality Monitoring Group to coordinate the monitoring efforts of various stakeholders in the Santa Margarita watershed.
- Participated in the SMC to improve stormwater monitoring science, coordinate data collection efforts, and evaluate the effects of stormwater discharges to receiving waters specific to Southern California.
- Participated actively in various efforts of CASQA.

- Participated in the completion of an Integrated Regional Water Management Plan for the upper Santa Margarita Watershed to help pave the way for greater watershed-wide coordination and management of water resources within the upper watershed as a whole, as well as adjoining watershed and regional planning efforts.
- Participated in the development and implementation of the MSHCP for Western Riverside County which contains a comprehensive land use plan that ultimately conserves the environmental resources and habitat of approximately half of the Santa Margarita Region.
- Participated in the development of a Special Area Management Plan (SAMP) to further manage receiving waters at a watershed scale for the upper Santa Margarita Watershed by identifying, prioritizing and protecting the highest priority Waters of the U.S., while considering the broader needs of growth and transportation improvements.
- Developed and updated methods to track program effectiveness such as resident surveys, tracking hotline inquiries, and web counters.
- Enhanced Public Education program through development of new outreach materials and programs.

6.1.2 Proposed Revisions to Regional Program Management

6.1.2.1 Enhanced Program Effectiveness Assessments and Municipal Action Levels

To ensure that the Permittee's programs continue to be effective at managing the effects of Urban Runoff on Receiving Water quality, the Permittees will revise the Program Effectiveness Assessments for both the Individual SWMP and the Watershed SWMP as part of their implementation of the new MS4 Permit. An assessment strategy based on the CASQA Municipal Stormwater Program Effectiveness Assessment Guidance has been established including the establishment of:

- Measurable goals for each component,
- Measurable metrics to assess progress toward those goals,
- CASQA Effectiveness Levels for each metric; to indicate the level at which each metric can demonstrate the effectiveness of the Permittee's programs at addressing each goal.
- Timeframes in which the Permittees expect to be able to assess effectiveness using each metric.
- Municipal Action Levels (MALs) for appropriate metrics to ensure a minimum level of program implementation and identify shortcomings that could affect the Permittee's progress toward the established goals. The MALs would not be permit compliance measures, but triggers for further Permittee evaluation of the affected compliance program.

If a MAL for a metric is exceeded, the Permittees will review implementation of that program component to identify the cause of the exceedance and identify needed adjustments to avoid future exceedances. The findings of these reviews and any recommended adjustments to the Permittees programs will be reported in the corresponding section of the Annual Report submitted the following year. Further research is particularly needed to establish appropriate Municipal Action Levels for the various program areas.

After a review of the stormwater program, the Permittees have established an initial Assessment Methodology for each component including preliminary goals, measurable metrics, effectiveness levels,

timeframes and MALs for each. These initial assessment methodologies are included in tabular format in Appendix C. Although the Permittees believe the basic proposal is viable, The Permittees will review and finalize these Assessment Methodologies and associated metrics within one year following adoption of the new MS4 Permit as additional data and analysis is necessary to support specific action levels.

6.1.2.2 Revised Reporting Format

The Permittees recommend substantial revisions to the MS4 Permit requirements for the layout of the Annual Report. The Permit requires substantial duplication of reporting, which either increases the volume of the Annual Report, or requires substantial cross-referencing. In either case, it is confusing to write, and most likely, confusing to read. The Permittees recommend a meeting with Regional Board staff in the development of the new MS4 Permit to discuss methods to streamline and clarify reporting requirements.

6.1.2.3 Maintain Enhanced Watershed / MS4 Map

The Permittees are in the process of collecting data to support an enhanced MS4 facilities map. Updates completed to date are provided in the map in Appendix B. This enhanced map demonstrates initial efforts to identify the locations of:

- Receiving Waters
- MS4 facilities
- Areas of historical perennial flows
- Known blow off locations
- Wastewater storage ponds
- Sub-drainage areas
- Known non-Permittee facilities
- 36-inch diameter and larger outfalls

This map will be used to help in the tracking of IC/ID events and issues and continued updates will be submitted with the Annual Reports. The Permittees will continue to enhance this map over the next MS4 Permit term. As described in the Annual Report, the District is in the process of upgrading their web page that offers public access the District's various NPDES activities. Along with these web site upgrades, additional layers will be added to the Web-based GIS map.

6.1.2.4 Elimination of the Watershed SWMP as a separate compliance document from the Riverside County DAMP

The Santa Margarita Region is comprised of only a single watershed. Further, the Permittees' regional compliance programs are described in the Riverside County DAMP. Maintenance of a separate and duplicative Watershed SWMP is confusing, cumbersome, and does not contribute to protection of Receiving Water quality. The Permittees request that the next MS4 Permit be drafted in a fashion that allows the Permittees to maintain the Riverside County DAMP as the primary document describing regional compliance programs for western Riverside County including the Santa Margarita Region. Any

necessary changes for requirements included in the new MS4 Permit will be updated /added to the Riverside County DAMP.

6.2 Permittee Training Programs

6.2.1 Summary

The Permittees jointly fund comprehensive training and education programs for Permittee staff. These training programs are designed to train Permittee employees on the proper use and implementation of BMPs appropriate for their field of work. There are four distinct training courses currently offered including Construction Inspection, Municipal Maintenance, Industrial-Commercial Facility Inspection, and New Development Planning.

6.2.2 NPDES Training Program Accomplishments and Programmatic Improvements

- Evaluated and tested various knowledge retention methods.
- Performed Training Enhancement Analysis study (2005-2006)
- Created an on-line training registration web page where attendees can also obtain training materials.
- Annually updated training materials to address Pollutants of Concern (2005-2007)
- Added component to training to address proper use, application and timing of application of Pesticides (2007-2008)
- Began developing a formalized testing and effectiveness analysis approach (2008)

Highlights
Municipal Training: **14** Training Sessions; **900** Attendees
Construction Training: **22** Training Sessions; **626** Attendees
Industrial-Commercial Training: **11** Training Sessions; 426 Attendees
New Development Training: **13** Training Sessions; **345** Attendees

6.2.3 Long-Term Effectiveness Assessment

Throughout the term of the 2004 MS4 Permit the Permittees have evaluated and implemented various quizzes as part of the NPDES training courses. These efforts were intended to assess the retention of knowledge of the attendees and, as described in Provision K.2.m of the Watershed SWMP, serve as a component of the assessment of the long term effectiveness of the Watershed SWMP.

The quizzes used to assess employees' retention of knowledge have evolved over time as the Permittees found what worked and what did not. Quiz questions that were found to be confusing or misleading were refined or eliminated. Thus, a question-by-question analysis of the results is not possible. Instead, results from a number of the training courses with reasonably comparable quizzes were aggregated and an average score (percent correct) was established for each of these training sessions. The results of this analysis are presented in Figure 5.

Figure 5. Training Pre-Test and Post-Test Analysis

Although the required random-sample nature of this analysis is not conducive to the analysis of trends across time, two findings become evident from this analysis:

1. Permittee inspection, maintenance and planning staff generally have a high level of understanding of issues related to stormwater Pollution in their field of work.
2. Average scores on quizzes administered after the training sessions were always higher than scores on quizzes administered before the training session.

Finding 1 above can be attributed to the Permittee's proactive efforts to ensure that their employees are aware of the issues in their field of work that could contribute to stormwater Pollution. This includes annual attendance at the NPDES training courses, and on-the-job training, reminders and meetings. This fact alone is a strong indicator of the effectiveness of the Permittees training programs.

Finding 2 above demonstrates that after attending the NPDES training courses, the attendees have a higher level of understanding of the issues in their field of work related to stormwater Pollution. This indicates that the training materials, delivery and content were effective.

Based on these analyses, general feedback from the training programs, and the overall effectiveness of the Permittees' programs (as described in Section 5.3 herein) the Permittees believe their training programs to be effective. Nevertheless, the following revisions to the training programs have been identified and are proposed for implementation with the new permit to ensure ongoing effectiveness.

6.2.4 Proposed Revisions

6.2.4.1 Continued focus on Focus Area Pollutants of Concern

The Permittees commit to continue to revise the Permittee training programs to focus on Pollutants of Concern.

6.2.4.2 Standardized Effectiveness Quizzes

Over the course of the 2004 MS4 Permit, the Permittees have evaluated various methods of assessing the retention of knowledge and are now recommending a standardized approach to assessing the effectiveness of the training program.

The Permittees plan to create standardized quizzes to assess the retention of knowledge and increased understanding as a result of the Permittees' training sessions. This includes establishing core messages that the Permittees want to impart upon the attendees and, creating clear and understandable quiz questions for each core message.

This approach will help the Permittees identify if any core training messages are not being retained by attendees and to subsequently modify the training. The Permittees also hope that this approach will yield results that will, over time, demonstrate that the knowledge among Permittee staff of issues related to storm water Pollution is increasing, thus clearly demonstrating that the NPDES Training program is effective.

As a necessary part of this effort, a database to track responses will also be created.

6.2.4.3 Attendance Tracking Mechanism

At each training session a sign-in sheet is provided to track attendance to the session. Included in the sign-in sheet is an indication of the Permittee that each attendee is representing. After each training session, these sign-in sheets are scanned to PDF files and sent to each Permittee for their records. This approach requires that each Permittee manually review the sign-in sheets to determine who and how many of their staff attended the training.

The District, on behalf of the Permittees, is currently investigating various form scanning and recognition software packages to determine the feasibility of creating a sign-in sheet that, when scanned, will automatically transfer the attendance list into a database. This would facilitate tracking of staff attendance by each Permittee. At this time the District has not determined if a feasible and cost efficient program is available that will accomplish their needs.

6.3 Public Education

6.3.1 Summary

To leverage finite resources, the Permittees jointly fund a public education program. The District implements this program to disseminate information about Urban Runoff issues and to provide education on how activities may impact Receiving Waters.

The Permittees have established an ongoing watershed-based public education and outreach program known as the **Only Rain Down the Storm Drain** Pollution Prevention Program. The specific objectives of this program include:

- Fostering a broad public awareness of water Pollution concerns;
- Increasing public acceptance of Pollution Prevention activities to curtail everyday human behaviors that contribute to water quality problems;
- Educating/informing the general public, regulators and key local government and state decision makers on Urban Runoff conditions in Riverside County; and
- Promoting stewardship of local water resources.

The **Only Rain Down the Storm Drain** Program implements the public awareness objectives by focusing on three areas of Pollutant reduction/prevention:

- Public behavior;
- Proper management of Pollutants; and
- Business specific education outreach.

In addition, when attempting to make use of the finite resources available to the Public Education Program, the Permittees use these management goals to ensure that resources are used effectively:

- Focusing on Pollutants of Concern specific to each watershed region;
- Coordinating public education efforts with adjacent storm water management programs and other related education programs to share resources, coordinate outreach efforts, and avoid duplication of effort; and
- Adapt public education programs and objectives, based on effectiveness analysis, to address changing MS4 program requirements and objectives.

6.3.2 Public Education Program Accomplishments and Programmatic Improvements

The Public Education Program has developed and distributed the following educational materials during the 2004 MS4 Permit term:

- *After the Storm* – a citizen's guide to understanding MS4 Pollution in your neighborhood or when performing daily activities.
- *Automotive Maintenance & Car Care* – guidelines for keeping your auto shop or retail fuel facility in environmental shape.

- *Outdoor Cleaning Activities* – guideline for outdoor cleaning activities and wastewater disposal.
- *Pools, Spas and Fountains* –Environmental maintenance suggestions for pool, spa, and fountain owners.
- *What's the Scoop* – tips for a healthy pet and a healthier environment.
- *Household Hazardous Waste* – A schedule of collection locations for proper disposal of HHW.
- *Stormwater Pollution Found in Your Neighborhood* – door hanger.
- *Equestrian Management* – Recommendations for BMPs related to equestrian activities.
- *Spray Bottles* – Including directions to make environmental friendly recipes for pest control and household cleaning

The Permittees also initiated development of the following outreach materials

- *Landscaping and Gardening Brochure* – Initiated development a new brochure to address outdoor residential landscaping and gardening activities.
- *Septic System Management Brochure* – initiated development of a brochure to assist with septic system management.

In addition to the information provided on the Storm Water Protection website, the Public Education and Outreach Program has:

- Updated the Public Education and Outreach Program web page.
- Tested and/or implemented several new Public Education and Outreach Program effectiveness tracking mechanisms including call tracking, web counters, testing, and bilingual surveys.
- Enhanced the toll free storm water Pollution reporting hot line to include public education information and support for the public and other interested stakeholders.
- Obtained a trailer with "**Only Rain Down the Storm Drain**" graphics specifically designed for transporting materials to outreach events. It is also used as part of the booth at outreach events.
- Initiated billboard advertising within the Santa Margarita Region.
- Worked with the Mission Resource Conservation District to implement presentations to elementary and middle schools and staff to raise public awareness of Urban Runoff management issues and source control methods and to encourage volunteers, partners, and groups to gather annually for a trash and debris clean-up day in the Santa Margarita Region.
- Developed special newspaper and billing inserts, fliers and advertisements to raise public awareness of Urban Runoff management issues and source control methods. A radio advertising campaign was also developed and implemented for a time.
- Developed and presented workshops regarding household hazardous waste use and proper disposal at major home improvement stores throughout Riverside County.
- Placed advertisements in the Penny Saver and Bargain Bulletin to raise public awareness of Urban Runoff management.

- In cooperation with certain County Service Areas or other programs, pet waste signs with bag dispensers have been installed at various parks to help encourage the proper disposal of animal waste.
- Cooperated with the Western Riverside Council of Government in the Used Oil Block Cycle Grant that decreases the amount of illegally dumped motor oil by promoting the addition of new Certified Oil Collection Centers.
- Established a partnership with County Environmental Health whereby businesses cited by Environmental Health for violations of ordinances related to stormwater issues may be allowed to implement a Supplemental Environmental Project in conjunction with the **Only Rain Down the Storm Drain** program.

6.3.3 Long-Term Effectiveness Assessment

Effectiveness metrics of the Public Education and Outreach Program during the 2004 MS4 Permit term are presented in Section J.1.3 of the FY 2007/2008 Watershed Annual Report. The data indicates that overall impressions have continually exceeded the number of residents in the watershed, HHW/ABOP pounds of waste collected and pounds of waste collected per person have steadily increased over the term of the 2004 MS4 Permit.

In 2005, the **Only Rain Down the Storm Drain** program developed and implemented a survey to be distributed at Public Outreach events to assess the public's level of knowledge related to stormwater Pollution. This original "long" survey contained 13 questions in both English and Spanish as shown in Figure 6.

This survey was used for fiscal years 2005-06 and 2006-07. Through this period of implementation it was found that the survey took too much time to complete and reduced the level of response from event attendees. Therefore, the survey was subsequently revised to a shorter version with revised questions for the 2007-08 fiscal year. The revised "Short" survey that is currently used is shown in Figure 7.

Figure 6. Original "Long" Survey Utilized at Public Outreach Events

Zip Code_____ **Age**_____ **Sex F**__ **M**__ **Date:**_____

THINK YOU KNOW ABOUT STORM DRAIN POLLUTION PREVENTION?

1. Where do you think **storm drain** contents go or flow to? __Treatment Plant __Streams, rivers & lakes

2. Where do you think **sewer pipes** contents go or flow to? __Treatment Plant __Streams, rivers & lakes

3. Are storm drains and sewers part of the same or separate systems? __Same __Separate __Don't know

4. Have you ever been to a Household Hazardous Waste **(HHW)** Collection Event? __Yes __No

5. Did you know that **A.B.O.P.** Antifreeze, Batteries, Oil, and Latex Paint locations and mobile **HHW** Collection Events provide safe havens for the disposal of pollutants? __Yes __No

6. If you have a lawn or garden, where do you (or your gardener) dispose of the green waste (grass, clippings or other)? **(Check all that apply)**

   ☐Trash/garbage ☐Compost/Mulch pile ☐Take to compost facility
   ☐Leave on lawn ☐Removed by gardener ☐Other:_____

7. Where is the best location to wash your vehicles?
   (Check only one)

   ☐Pavement (driveway, street) ☐Dirt Area
   ☐Lawn or Grass ☐Other_____

8. Do you change the motor oil in your vehicle yourself? __Yes __No

   If **Yes**, where do you dispose of it? **(Check all that apply)**

   __in the garbage __at a curbside collection program
   __down the storm drain __collection center (Jiffy Lube, Kragen, etc.)
   __pour it on the ground __Other_____

9. If you have a pet, how often do you pick up after your pet?
   9. a) in your yard? **9. b)** when you walk the pet?

   ☐Always ☐Sometimes ☐Never ☐Always ☐Sometimes ☐Never

10. Do you think, anything ,other than rainwater, that flows into the storm drains (i.e., trash, chemicals, pet waste, etc.) considered a pollutant? __Yes __No

11. Have you seen or heard the slogans "Only Rain Down the Drain" or "Only Rain Down the Storm Drain"?
    __Yes __No If yes, where? __Radio __Newspaper __ Flier __Billboard __Street Fair, Festival, etc.

12. Are there State laws and local ordinances which STRICTLY PROHIBIT the dumping of pollutants **(EVERYTHING, EXCEPT RAIN WATER)** into the storm drain systems or waterways? ___Yes ___No

13. After this booth visit, have you increased your understanding of storm drain pollution prevention? __Yes __No

Thank you for your time and input… Remember, YOU can do your part by calling our Toll Free Line (1-800-506-2555) to report illegal storm drain pollutant disposal anywhere in Riverside County, or to get more information about storm drain pollution protection to help promote "ONLY RAIN DOWN THE STORM DRAIN".

Figure 7. Revised "Short" Survey Utilized at Public Outreach Events

DO YOU KNOW HOW TO PROTECT OUR STREAMS, RIVERS and LAKES?

City_____ **Zip Code**_____ **Age**_____ **Sex** □ **F** □ **M** **Date:** _____

1) Water that leaves your lawn from **Irrigation (water sprinklers), Car washing** and **Rain** flows down streets and/or storm drains and then directly to…

☐ Sewage Treatment Plants ☐ Streams, rivers & lakes

2) Which of the following can LEGALLY be disposed into the storm drain? (*Circle all that apply*)

- **Useable Household Chemicals**
- **Yard waste/clippings/leaves**
- **Paint**
- **Cigarette butts**
- **Empty Household Chemicals containers**
- **Pet Waste**
- **Motor Oil / antifreeze**
- **None of these**

3) Do you feel you are well informed and aware of illegal dumping into the storm drain and its impact in your community or streams, rivers and lakes?

☐ **Yes** ☐ **No**

HOW DID YOU DO?

1) Water that leaves your lawn from irrigation, washing your car, or rainwater runoff can pickup motor oil and grease from vehicles, excess fertilizer from your lawn, bacteria from pet waste, and excess pesticides from your yard. These pollutants can be carried down streets and storm drains directly to our streams, lakes, and rivers without treatment! That is why we must take care to properly dispose of waste, maintain our vehicles, and use fertilizers, pesticides and other chemicals only as specified on their labels.

2) It is illegal to dispose of any chemical, constituent or waste into a storm drain! Report illegal disposal of chemicals, constituents, or waste to storm drains at **1(800) 506-2555.** You may properly dispose of many of the wastes listed above by doing the following things:

- **Usable and empty household chemicals, paint, motor oil** – Properly dispose these at Household Hazardous Waste and/or Antifreeze, Batteries, Oil and Paint disposal facilities and events. Call **1 (800) 506-2555** for information on disposal locations and special drop off events near you.
- **Pet waste** – Carefully pick up and dispose in the nearest trash receptacle.
- **Grass, clippings, leaves and yard waste** – Collect and dispose in green waste bins or composting areas that are designed to prevent the compost from mixing with excess irrigation water and/or rainwater runoff.

3) Would you like to learn more about protecting our streams, rivers and lakes or wish to report on a illegal storm drain disposal in your area or request a classroom or group demonstration……

Visit www.rcflood.org or call **1 (800) 506-2555.**

Remember…Only Rain Down the Storm Drain!

Results have been tabulated for all of the "Long" surveys received and they have been analyzed to determine trends in public awareness. The "Short" survey has been used at two events to date, one of which was quite recent and its results have not yet been tabulated. Using the "Long" survey results, nine questions were used to assess any trends in public awareness. The remaining questions were determined to be either confusing or not applicable to the intent of the assessment. The results of this assessment of survey results are shown in Figure 8.

Figure 8. Assessment of Survey Results (2005-06 vs. 2006-07)

The results shown in the chart in Figure 8 are percent of survey takers that responded as described below:

- Assessment 1: Percent of respondents that understood that storm drains do not go to treatment plants.
- Assessment 2: Percent of respondents that understood that sewer lines go to treatment plants.
- Assessment 3: Percent of respondents that understood that sanitary sewers and storm drains are separate systems.
- Assessment 4: Percent of respondents that had attended a Household Hazardous Waste collection event.
- Assessment 5: Percent of respondents that understood that the best place to wash a car is on the lawn or grass.
- Assessment 6: Percent of respondents that change their own oil that reported that they properly dispose of it.
- Assessment 7: Percent of respondents that have heard of the "Only Rain Down the Storm Drain" program.
- Assessment 8: Percent of respondents that dumping of anything except storm water is a violation of laws and ordinances.
- Assessment 9: Percent of respondents that felt that visiting the Outreach Booth at the event increased their understanding of storm drain Pollution Prevention.

Although implementation of the "Long" survey was limited before it was modified to its current form, the results available do indicate an increase in understanding of these basic principles and can be attributed to the effectiveness of the Permittee's Public Education program. As additional survey results are collected and tabulated, further analysis will be performed to ensure the ongoing effectiveness of the program.

6.3.4 Proposed Revisions

To better address residential sources of pesticides, the Permittees are proposing to coordinate with the University of California Extension Program to enhance the implementation of the U.C. Extension's Master Gardener program in the Santa Margarita Region. Along with information regarding use of drought tolerant landscaping techniques and appropriate methods of fertilizer and irrigation application, the U.C. Master Gardeners also provide residents with information on integrated pest management techniques that minimize pesticide application. The Permittees are proposing to establish an agreement with the U.C. Extension's Master Gardener program in fiscal year 2010-2011 to support master gardener hotline staffing, local presentation and other outreach by the U.C. Master Gardeners.

In addition, through the Permittee's ongoing efforts to internally assess the efficiency and efficacy of their MS4 compliance programs, it was determined that an overhaul of the District's web site was needed. The District's web site contains the public education web site and a technical resource site with the various compliance documents for the program. It was found that information available through the site was often difficult to find and was not user friendly and sometimes was out of date. The Permittees are now reviewing this site to identify and implement needed changes

6.4 Receiving Water Monitoring Program

6.4.1 Summary

A Summary of the Monitoring Program is contained in Appendix G of the Watershed Monitoring Report.

6.4.2 Monitoring Program Accomplishments and Programmatic Improvements

The Monitoring Program accomplished the following goals during the term of the 2004 MS4 Permit:

- Subcontracted monitoring data collection and analysis to MACTEC, Inc. to enhance data collection and reporting capabilities.
- Developed and implemented a Triad Monitoring Program (bioassessment, Toxicity and chemical monitoring) consistent with the goals of the SMC Model Monitoring Program
- Developed watershed boundaries and land use information for all monitoring stations
- Updated the format and technical content of the monitoring Annual Report
- Added fire map information to assist with assessing potential Pollutant sources
- Enhanced monitoring data databases to be compatible with SCCWRP/SMC standard reporting protocols.
- Enhanced monitoring methods to incorporate use of automatic sampling equipment where appropriate

- Conducted several Toxicity Identification Evaluations that led to the identification of pyrethroid pesticides as a cause of wet weather Toxicity in Murrieta and Temecula Creeks and a Toxicity Reduction Evaluation that identified additional BMPs necessary to control sources of pyrethroid pesticides.
- Coordination with the CASQA Pesticide Committee on comments and presentations to California Department of Pesticide Regulation, UC Riverside and others regarding the impacts of pyrethroid pesticides and the need to change regulatory requirements regarding the use of pyrethroid pesticides.
- Participation in or coordination of several BMP studies, including coordination of new development BMP treatment studies (as required by conditions of approval) and the District's LID BMP Demonstration and Testing Facility.
- Continued to update and enhance the Consolidated Monitoring Program to incorporate new monitoring collection methods and data analysis protocols.

6.4.2.1 Participation in Regional Monitoring Efforts

- Participation in the monitoring programs to support development of the Santa Margarita Lagoon TMDL.
- Continued participation in regional and statewide Monitoring and Science efforts such as the Southern California Monitoring Committee to develop:
  - Lab inter-calibration of chemical, bioassessment and Toxicity testing methods
  - Testing methods for bioassessment and Toxicity in Southern California streams
  - Bacterial Reference Watershed Study
  - A storm water research needs report for southern California
- Partnered with SCCWRP on developing hydromodification guidance for Southern California including participation in a series of hydromodification workshops for a CASQA conference.
- Coordination with SCCWRP on the development of the Regional Watershed Monitoring Program for Southern California.

6.4.3 Effectiveness Assessment

The Watershed Monitoring Program was evaluated as part of the Regional Board audits in 2007-2008. As a result of those audits several enhancements were made to the monitoring program, including update of constituent lists, subcontracting of data collection to a monitoring consultant with automatic sampling capabilities, and updates to the Consolidated Monitoring Program and Monitoring Annual Report formats. The Permittees believe that as a result of these changes, the overall monitoring program is effective. However, the revisions presented in section 6.4.4 are recommended to increase monitoring data utility or overall program effectiveness.

6.4.4 Proposed Revisions to Monitoring Program

In updating the Monitoring and Reporting Program, the Permittees request that Regional Board staff meet with them to discuss the following proposed modifications to the monitoring program:

6.4.4.1 Revise Dry Weather Monitoring Program

As noted in Section G.7 (Special Studies) of Appendix G of the FY 2007-2008 Watershed Monitoring Annual Report, the Permittees participated in a SMC Study to develop a regional approach to watershed assessment. The Permittees, in conjunction with Regional Board staff, committed to participating in the resulting watershed monitoring program. The Permittees agreed to monitor three rotating dry weather stations identified for the Santa Margarita Region. Additionally, three stations are to be collected by Regional Board (or SCCWRP staff) using SWAMP funds, and the remaining three will be located in the Santa Ana Watershed region of Riverside County. In exchange for the commitment to participate in the program, the Regional Board staff agreed to reduce the current dry weather monitoring requirements in the new MS4 Permit from two (2) events annually to (1) event annually for each Triad monitoring stations. This would effectively eliminate three existing dry weather samples. The Permittees recommend a meeting with Regional Board staff to discuss these options prior to the release of the draft Permit.

6.4.4.2 Clarify Analyte List

As described in Section G-8.1.5 of the 2008 Monitoring Report (Appendix G of the FY 2007/2008 Watershed Annual Report), 168 analytes have never been detected in samples collected under the current program. The Permittees request that requirements to analyze for these constituents be eliminated unless or until a reason to believe they may be present in stormwater arises.

Basin Plan Objectives are expressed in terms of total metals, while California Toxics Rule (CTR) criteria are expressed in terms of dissolved metals. Although the Permittees do not support comparison of stormwater data to CTR values, the Permit requires it. The Permittees recommend deletion of this requirement. However, if this language is to remain, in order to properly compare results for metals to both sets of objectives, both total and dissolved fractions will be analyzed by the laboratory for the following metals: arsenic, cadmium, chromium (III), chromium (VI), copper, lead, mercury, nickel, selenium, silver, and zinc.

6.4.4.3 Clarify Mobilization Criteria

The District is proposing the following amendment to the monitoring mobilization criteria based on experience and the difficulties faced collecting the first storm and the analysis of the USEPA criteria specific to the Temecula National Weather Service weather station (Consolidated Monitoring Program, Section 4.C.2):

> "Note: If the QPF indicates that more than 0.3-inch is predicted for any 6-hour period, mobilization for sampling will occur."

The District's experience over the past three years indicates that intensities greater than 0.3" in six hours are likely to produce runoff and would warrant mobilization, even on a dry watershed. Further, these mobilization criteria are consistent with EPA-833-B-92-001 guidance regarding minimum depths/durations for storm sampling.

The Permittees recommend that the Regional Board amend the MS4 Permit to reflect these Mobilization Criteria. Due to issues with stream gauges operated by the United States Geological Survey (USGS), the Permittees have concluded that preparing post-storm forensics based on USGS data is not of significant value. A simple test of comparing Quantitative Precipitation Forecast (QPF) reports with actual rainfall and the mobilization criteria should be sufficient to determine compliance with the MS4 Permit.

Mobilization criteria should also reflect practical limitations to storm water monitoring by excluding national holiday periods (Thanksgiving, Christmas, and New Year's Day in particular) and quantifying the probability and the lead time between the forecast and actual rainfall that must be met in order to mobilize.

6.4.4.4 Reduce Wet Weather Events

As was noted in the audits, the Permittees have experienced consistent difficulty collecting three storm events in the upper Santa Margarita River watershed. The Permittees also noted that the San Diego County MS4 Permit only requires the collection of samples from two wet weather events. The Permittees request that the monitoring program for Riverside County be revised to require collection of two storm events. This would not only reduce opportunities for unavoidable non-compliance, it would also be a prudent cost saving measure that would not alter the overall effectiveness of the Permittees monitoring programs.

6.4.4.5 Clarify Triad Method and Follow-up Actions

The MS4 Permit included an early draft of the Triad method envisioned by the Model Monitoring Program (MMP) developed by the SMC. The result was a misapplication of the final Triad approach envisioned by the MMP. Toxicity is currently required to be sampled for at the Triad stations during wet weather events, but not during dry weather when the bioassessments occur. According to the SMC MMP, the three components of the Triad approach (chemistry, Toxicity, and bioassessment) should be conducted at the same time. Bioassessments cannot be conducted during wet weather due to safety concerns and the planning necessary. For this reason the MMP recommends the full triad for dry weather and only chemistry and Toxicity for wet weather.

In an effort to be proactive and supportive of good science, the Permittees have taken the following actions to ensure proper application of the Triad approach:

- Beginning with the 2007-2008 season, Toxicity sampling will be conducted during dry weather, at the same time as the bioassessments and dry weather chemistry sampling events are conducted. Thus, the full Triad approach will be conducted during dry weather. Wet weather monitoring will focus on Toxicity and chemistry. This action will modify the current program to be consistent with the MMP approach.
- The 2006-2007 Annual Report established the framework for proper application of the Triad method (full triad for dry weather, chemistry and Toxicity only for wet weather) by adding new tables (G-21 through G-27), in anticipation of properly applying the Triad method in the 2007-2008 Annual Report.

The Permittees further recommend clarifying the definitions of "persistent", "consistent", and "magnitude" as used in the MS4 Permit to be consistent with the intent of the MMP. In addition, the MS4 Permit inappropriately limits Triad analysis by defining a "fair" Index of Biological Integrity scores as automatically indicative of benthic alteration. This limitation needs to be corrected to prevent Permittee

resources from being inappropriately diverted to expensive source assessment studies. The MMP (and the SMC) envision that watersheds will be prioritized for follow up action based on their relative quality to one another. The envisioned analysis would compare watersheds from throughout southern California. The Permittees support this coordinated and comprehensive approach to addressing water quality.

6.4.4.6 Recognize Limitations of Laboratory Analysis of Bacteria

Babcock Labs prefers to accept bacteria samples between the hours of 7:00 a.m. and 4:00 p.m. during normal business days, and 9:00 a.m. and 12:00 p.m. on weekends. Although Babcock will accept bacteria samples outside those hours, acceptance is contingent upon payment of substantial overtime rates to ensure laboratory staff availability to receive and analyze the samples.

The timing of bacteria sample collection, particularly within the context of automatic sampling, will require consideration of the sample's four-hour holding time and available laboratory receiving hours. The Permittees request that the Permit be modified to only require collection of bacteria samples such that they can be delivered during the regular working hours of the lab to avoid excessive laboratory costs.

6.4.4.7 Participate in a Watershed Based TMDL for the Santa Margarita Lagoon

The Permittees understand that, due to economic conditions, State funding for the Santa Margarita Lagoon Watershed-Based TMDL has been withdrawn. As described in section 3.4, these economic conditions are also impacting the Permittee's funding sources and they are struggling to maintain resources to fund existing compliance programs. The Permittees currently cannot support additional expenditures associated with assisting in funding a watershed-based TMDL effort. However, the Permittees are agreeable to discussing a re-prioritization of compliance activities in order to reallocate existing Permittee resources for this purpose. For example, where current MS4 Permit compliance programs elements are not measurably enhancing attainment of Water Quality Standards, the Permittees would consider reduction or elimination of those requirements to support reallocation of the associated funding to the development of the watershed based TMDL. Program elements that may be considered for discussion include:

- Toxicity/Pyrethroid Monitoring – Under the Federal Insecticide, Fungicide and Rodenticide Act (FIFRA) local regulation of pesticides, including pyrethroid pesticides is pre-empted. The Permittees are expending significant resources at the State and Federal level to facilitate regulatory changes in the allowable uses of pyrethroid pesticides, which have been implicated in causing toxicity in receiving waters throughout California. The Permittees have also recognized pyrethroid pesticides as a Pollutant of Concern for the upper Santa Margarita River watershed. The Permittees believe that public education and outreach regarding use and more stringent regulation/management of pesticides, including pyrethroid pesticides, represents the most effective means of controlling pesticides in Urban Runoff. However, continued Toxicity tests, Toxicity Identification Evaluations, and direct monitoring for pyrethroid pesticides are not likely to enhance the Permittee's ability to reduce/eliminate pyrethroid pesticides in Receiving Waters. Greater Receiving Water quality benefits may be realized by reallocating the resources currently allocated to these activities to the development of the watershed-based TMDL.

- Reduction in General Monitoring Requirements – The Permittees continue to expend significant resources on Receiving Water and outfall monitoring and the benefits of these monitoring activities are limited. Further, these costs have more than doubled over the term of the 2004 MS4

Permit due to audit findings recommending the implementation of automatic sampling equipment. Revised MS4 Permit requirements that provide for a simplified monitoring program may allow cost savings to be reallocated from data collection and processing to development of the watershed-based TMDL.

- Watershed/Individual Annual Reporting – The current Annual Reporting requirements are time, labor and cost-intensive exercises. Revised MS4 Permit requirements that provide for a simplified Annual Report requirements would not necessarily produce substantial cost savings (because is the reports are typically produced in-house); however, they would free up staff resources to assist with TMDL development.
- IC/ID Monitoring – Although the Permittees support regular visual inspection of MS4 facilities to identify IC/IDs, field measurements and sampling has not proven to be effective for this purpose. Although sampling of identified IC/IDs for later enforcement purposes may be appropriate, IC/IDs that have been identified and eliminated in the Santa Margarita Region typically result from visual observations and subsequent follow-up efforts by Permittee staff, not field measurements and water quality samples. Revised MS4 Permit requirements that provide for visual inspections of MS4 facilities to identify IC/IDs may yield cost savings that could be reallocated to development of the watershed-based TMDL.

There may be additional opportunities for modification of MS4 Permit requirements to focus the expenditure of Permittee funds on those activities that are most effective at protecting Receiving Water quality. Although the resources available for Permittee compliance activities are finite, the Permittees are supportive of modifications to the MS4 Permit that, while working within available funding limitations, enhance their ability to protect and enhance the quality of Receiving Waters.

7.0 Evaluation and Recommendations for Individual SWMP Programs

The Riverside County DAMP is a programmatic document developed by the Permittees in the Santa Ana and Santa Margarita Regions. It outlines the major programs and policies that the Permittees individually and/or collectively implement to manage Urban Runoff for the protection of Receiving Waters in Western Riverside County, including the Santa Margarita Region. The Riverside County DAMP provides a model for the development of a Permittees' Individual SWMPs in the Santa Margarita Region.

The Permittees continue to support a uniform approach to the implementation of MS4 Permit compliance programs in order to facilitate increased transparency and understanding for residents, regulated entities, and Permittee staff. For this reason, the discussions below focus on programmatic changes to the compliance programs that are necessary to maintain the effectiveness of the model compliance programs described in the Riverside County DAMP. Upon adoption of the new MS4 Permit, the Riverside County DAMP and Individual SWMPs will be revised accordingly.

7.1 Program Management

There are typically multiple Permittee departments that are responsible for implementing the elements of the Individual SWMPs. Each Permittee has designated an NPDES Coordinator who coordinates the overall Permittee compliance programs, collects and analyzes compliance program data, develops and maintains the Individual SWMPs, compiles and submits necessary reports, coordinates with other Permittees, stakeholders and Regional Board staff, and conducts other necessary duties as assigned.

To facilitate inter-Permittee coordination and funding of regional compliance activities such as the Public Education and Monitoring programs, the Permittees have entered into an Implementation Agreement that defines the roles and responsibilities of each Permittee and assigns cost shares for regional programs defined in the agreement. The Implementation Agreement also requires each Permittee to designate an NPDES Coordinator who is also responsible for representing the Permittee's interest at Permittee coordination meetings such as the monthly Santa Ana/Santa Margarita Technical Advisory Committee.

The Permittees in the Santa Margarita and Santa Ana Regions participate in a Management Steering Committee made up of the City Managers, County Executive Officer, and the District's Chief Engineer; or their assigned alternate. Participation in the Management Steering Committee is not mandatory; however, it provides a management-level forum to address Urban Runoff management policies for the Permit Area and coordination of the review, and necessary revisions to the Riverside County DAMP and Implementation Agreement. In addition, the Management Steering Committee promotes a higher level of awareness of the MS4 Permit compliance program by each Permittee's senior management staff.

7.1.1 Accomplishments and Programmatic Improvements

Collectively, the Permittees Program Management activities have achieved:

- Development of the Riverside County DAMP, WQMP and Individual SWMPs following adoption of the 2004 MS4 Permit.
- Revised the Implementation Agreement to account for necessary program enhancements resulting from the new MS4 Permit.

- Established and held monthly meetings of a Technical Advisory Committee comprising of each Permittee's NPDES coordinator, to discuss and coordinate response to issues that arise through the ongoing implementation of the Riverside County DAMP-based programs.
- Voluntarily participate in a Management Steering Committee comprised of Permittee upper management (City Manager or equivalent) to provide a forum to discuss major policy issues related to MS4 Permit compliance program implementation. This also helps the major decision makers within each organization to stay abreast of the status of the implementation of the Riverside County DAMP and aware of upcoming issues and approaches taken by other Permittees.
- Enhanced enforcement and compliance elements of the Riverside County DAMP.
- Developed the Integrated Regional Watershed Management Plan (IRWMP) for the Upper Santa Margarita Watershed.
- Continued progress with the Bureau of Reclamation, San Diego County and other stakeholders on a uniform watershed plan and model for the Santa Margarita River watershed.

7.1.2 Recommended Revisions and Enhancements to Program Management Efforts

7.1.2.1 Assessment Metrics and Municipal Action Levels

To ensure that the Permittee's programs continue to be effective at managing the impact of Urban Runoff on Receiving Water quality, the Permittees will revise the Program Effectiveness Assessments for both the Individual SWMP and the Watershed SWMP following adoption of the new MS4 Permit. These planned changes are further described in Section 6.1.2.1 of this ROWD. The Permittees also recommend streamlining of the reporting forms to focus on the revised Program Effectiveness Assessments.

7.1.2.2 Revised Reporting Format

As a result of continued program effectiveness assessment, following adoption of the new MS4 Permit, the Permittees will update annual reporting forms to incorporate specific reporting requirements for the effectiveness assessment metrics and to remove inappropriate, outdated, or ineffective reporting requirements.

7.2 Development Planning

This program element links each Permittee's General Plan, environmental review process, and development approval and permitting processes to the later phases of detailed design, construction and operation. The development approval and permitting processes carries forth project-specific requirements in the form of conditions of approval, project plans, and design specifications that support tracking, inspection, and enforcement actions.

7.2.1 Development Planning Program Element Accomplishments and Programmatic Improvements

During the term of the 2004 MS4 Permit, the development planning program accomplishments and programmatic improvements included:

- Developed the WQMP to address post construction stormwater runoff quality for New and Significant Re-Development Projects.
- Development of a FAQ for WQMP projects to assist with implementing the WQMP program.
- Developed and subsequently enhanced a BMP design guidance manual to standardize the construction of post construction BMPs.
- Participation in the SMC efforts to develop a LID manual.
- Participation in SCCWRP's hydromodification studies to develop scientifically based hydromodification design guidance for Southern California.
- Enhanced online watershed maps to assist developers and the public with identifying areas tributary to Impaired Waterbodies.
- Adopted and implemented a MSHCP to ensure the regional-scale protection of habitat and natural resources in the approval process for New Developments.

7.2.2 Proposed Revisions to the Development Planning Program Element

7.2.2.1 Low Impact Development

The Permittees will revise the Riverside County Storm Water Quality Best Management Practice Design Handbook to (1) better incorporate LID design concepts, and (2) incorporate guidance to describe how developments can offset Treatment Control and hydromodification impacts with LID concepts including infiltration, evapo-transpiration, reuse, and onsite stormwater management. These revisions will follow the completion of the SMC LID BMP Manual and SCCWRPs Hydromodification Study. See the FY 2007-2008 Watershed Annual Report, Appendix G, Section G.7.2 for additional detail.

7.2.2.2 Hydromodification

As committed to in the 2004 WQMP (now Appendix O to the Riverside County DAMP), the Permittees have developed numeric guidance for hydromodification and are now working with SCCWRP to develop enhanced hydromodification guidance for Southern California. The Permittees will use the completed guidance to update the WQMP, BMP Design Handbook and other guidance as necessary to effectively mitigate hydromodification impacts. See the FY 2007-2008 Watershed Annual Report, Appendix G, Section G.7.2 for additional detail.

7.2.2.3 BMP Design Criteria

The Permittees will revise the Riverside County Storm Water Quality Best Management Practice Design Handbook to incorporate additional design guidance to clarify those Treatment Control BMPs that are effective at removing sediment-bound pesticides such as pyrethroid pesticides (consistent with the recommendations of the Toxicity Reduction Evaluation contained in Appendix D.

7.2.2.4 TMDLs

The Permittees will revise the DAMP to identify and include BMPs that are necessary to mitigate the impacts of Urban Runoff on Impaired Waterbodies.

7.2.2.5 Roads

The Permittees believe that standard WQMP requirements for public works road projects create potential avenues for unavoidable non-compliance. The Permittees would like to review this priority development category with Regional Board Staff to develop a better system to manage public works road projects.

7.2.2.6 Inspect and Verify Maintenance of Post Construction Treatment Control BMPs to Ensure Ongoing Effectiveness

As economic conditions allow, the Permittees propose to implement the following approach to inspect and/or verify maintenance of Treatment Control BMPs implemented on Priority Development Projects to ensure their ongoing effectiveness. The development of the program described below will require the Permittee resources that are unavailable in the current economic climate, particularly considering that it would likely require the Permittees to abandon the CAP in lieu of a local Permittee inspection program. The resources that will be required to ramp up new inspection programs are unavailable and may not become available during the term of the new MS4 Permit; however when the economy recovers sufficiently the Permittees propose to implement the program described below.

Integrated Management Practice (IMP) Exemption:

For the purposes of this program, IMPs include BMPs that are landscape based or otherwise serve an additional purpose other than Treatment Control. IMPs will be exempted from Inspection and Maintenance Tracking / Certification requirements if solely through the regular maintenance of the feature's secondary (non-treatment) functions and with Permittee concurrence, it can reasonably be expected that the treatment efficacy of the IMP will be ensured in perpetuity. An example that may satisfy this exemption would be a grassy swale that is mowed as part of regular landscape maintenance, whereas a BMP with a media filter which requires periodic resetting or replacement to maintain treatment effectiveness would not be exempted.

Priority Development projects will be exempted from all Treatment Control BMP Inspection and Maintenance Tracking / Certification requirements if they completely meet their Treatment Control requirements by implementing only IMPs that meet these criteria.

Priority Industrial and Commercial

The following requirements will apply to new priority Commercial and Industrial developments subject to the Permit's Commercial and Industrial business inspection requirements.

- Inspection

  Sites will be inspected per the Individual SWMPs current inspection frequency requirements that are based on the potential of the site to contribute to water quality impairments. At these inspections, in addition to the normal inspection requirements, all Treatment Control BMPs at the site will be inspected. In other words, all Treatment Control BMPs at high-priority facilities will be inspected annually; Treatment Control BMPs at medium-priority facilities will inspected biennially and Treatment Control BMPs at low-priority facilities will be inspected once during the term of the MS4 Permit. Improperly maintained BMPs may subject the maintenance entity to license suspension or administrative citations.

- Proof of Maintenance

  Maintenance records demonstrating compliance with the O&M procedures in the WQMP must be available for review at the time of the inspection. Failure to demonstrate that the BMPs have been maintained appropriately may result in license suspension or other enforcement actions.

Other Priority Developments

The following requirements will apply to new priority residential developments and businesses not otherwise subject to the Permit's Commercial and Industrial business inspection requirements.

- Proof of Maintenance and Self Certification

  The maintenance entity identified in the WQMP will be required to submit maintenance records including a signed certification to the Co-Permittee. The frequency of these submittals will be based on the relative maintenance requirements of the Treatment Control BMPs implemented on that site. BMPs will be categorized into groups as having High, Medium or Low maintenance requirements. If a WQMP project utilizes high-maintenance Treatment Control BMPs it will be categorized as a High-priority residential development, etc. High-Priority residential developments will be required to submit records annually, Medium – biennially, and Low – once every five years. Failure to report will result in administrative citations against the maintenance entity.

Permittee Projects and Permittee Maintained Treatment Control BMPs

This requirement will be included as part of the existing Permittee facility inspection program and inspected per the frequency requirements specified in the Riverside County DAMP.

7.3 Private Development Construction Activities

The Permittees have reviewed their ordinances to ensure that they are adequate to control discharges to the MS4 from construction sites to the MEP. For construction projects that will disturb one acre or more, the Permittees require proof of compliance with the General Permit-Construction prior to issuance of building/grading permits (a copy of the Notice of Intent filed with the State Board). Each of the Co-Permittees provides training for their construction inspectors regarding the proper installation and

maintenance of erosion and sediment control BMPs. Education and outreach to the building industry (developers, construction contractors, engineering firms, etc.) regarding managing discharges from construction sites is also incorporated into the "**Only Rain Down the Storm Drain** Pollution Prevention Program," the Permittees' area-wide public education and outreach program.

7.3.1 Private Development Construction Activities Program Element Accomplishments and Programmatic Improvements

- The Permittees annually distribute construction activities posters to construction sites as part of construction outreach program.
- A standardized construction activity reporting spreadsheet was developed for the Annual Reports.
- The construction inspection forms were updated.
- The Co-Permittees developed and maintained inventory databases of construction sites 1-acre or larger for which they have issued a building or grading permit.
- Prioritized inspections to help target construction activities that present the highest risk to water quality.

Highlights
Conducted over **17,000** construction site inspections
Initiated over **3,800** enforcement actions to gain compliance
626 attendees to NPDES Construction training

7.3.2 Proposed Revisions to the Private Development Construction Activities Program Element

The Permittees are not proposing revisions to their existing construction inspection programs at this time. As previously described, the Permittees expect that development activity will be greatly reduced during the term of the new MS4 Permit. Regional Board staff has however raised the issue of abandoned construction sites. Regulation of abandoned construction sites has proven challenging due to bankruptcy of project proponents, non-responsiveness or inability to locate underlying investment banks that actually own the developments, and the practical limitations encountered by the Permittees in calling bonds. As the Regional Board has enforcement capabilities that often surpass those of the Permittees, to ensure that this issue is effectively addressed the Permittees ask for the close cooperation and support of the Regional Board. Nonetheless, the Permittees are committed to continuing the use of their IC/ID programs, code enforcement tools, and other ordinance authorities to control, to the extent allowable under law, abandoned parcels that are not properly stabilized.

7.4 Existing Development – Permittee Facilities and Activities

The Municipal Facilities Strategy which has been consolidated into Section 5 of the Riverside County DAMP provides guidance for identifying potential storm water Pollutant sources and for selecting appropriate BMPs for implementation at identified facilities of concern owned and operated by the Permittees. The Permittees are implementing the provisions of the Municipal Facilities Strategy within their respective jurisdictions via processes described in their Individual SWMPs. To assist the Permittees in implementing this program, training focused on storm water regulatory requirements and BMPs related

to Permittee maintenance facilities and roadway maintenance activities were conducted twice annually during the 2004 MS4 Permit term.

7.4.1 Permittee Facilities and Activities Program Element Accomplishments and Programmatic Improvements

- The District coordinated preparation of GIS-based maps for Permittee MS4 facilities. The MS4 maps are updated annually with new information provided by the Permittees as part of the Annual Reporting process.
- Development of a GIS Browser that allows interested parties to view MS4 Facilities from the District's website.
- Updated Model Facilities Pollution Prevention Plan for Permittee facilities not requiring coverage under the Industrial General Permit.

Highlights
900 attendees to Municipal NPDES training

7.4.2 Proposed Revisions to Permittee Facilities and Activities Program Element

7.4.2.1 FPPP Guidance

The Permittees commit to developing a revised WQMP template for Permittee projects that better facilitates translation of WQMP BMP requirements into Facility Pollution Prevention Plans, where appropriate.

7.4.2.2 Integrated Pest Management

The Permittees commit to including Ecowise's standardized language for contracted pesticide management services in Permittee pesticide management contracts.

7.5 Commercial and Industrial Sources

The Principal Permittee and the County have implemented the CAP through which the County Department of Environmental Health makes use of existing inspection programs to address storm water compliance survey/inspections of restaurants and facilities that must secure a hazardous materials permit for either storing, handling or generating hazardous materials. As the responsible Certified Unified Program Agency in Riverside County, the County Department of Environmental Health is responsible for regularly inspecting all sites within the County that handle hazardous waste. The CAP is implemented in those cities and unincorporated areas that do not maintain an individual industrial/commercial inspection program through other mechanisms such as POTW waste pre-treatment programs or business license inspection programs.

Revisions to the inspection program requirements contained within the 2004 MS4 Permit expanded the scope of the overall commercial/industrial inspection program beyond the ability of the CAP to address. Each Co-Permittee now implements a supplemental inspection program for facilities not covered by the CAP. In addition, the 2004 MS4 Permit required inventories/databases of facilities, prioritization of

industrial and commercial sources relative to the potential to impact water quality, and specified inspection frequencies based upon facility priority.

The revised industrial and commercial sources program continues to have both regional and local jurisdiction components. Although the overall industrial/commercial inspection program has grown beyond the CAP, the CAP still addresses most of the facilities identified in the 2004 MS4 Permit. With its low overhead cost, it remains a cost effective approach to mitigating the impacts of industrial and commercial facilities on the MS4 and Receiving Waters.

7.5.1 Commercial and Industrial Program Element Accomplishments and Programmatic Improvements

- Reviewed and updated several educational brochures for distribution to inspected facilities.
- Developed outreach posters for gas and automotive service stations.
- Developed standardized inspection reporting forms for Annual Reports.
- Updated food service surveys.
- Extended the agreement with the County's Department of Environmental Health executed in 1999 for the area-wide CAP for the inspection of commercial and industrial facilities through June 30, 2009.
- Created Permittee databases for the inspected commercial and industrial facilities.
- Revised the Riverside County DAMP to reflect development of the industrial and commercial facility database that contains the following information: facility name, address, city, zip code, and Standard Industrial Classification (SIC) codes.
- Provided public education information regarding NPDES storm water permits to any new businesses listed in the Press Enterprise.

Highlights
3,974 inspections of Industrial and Commercial facilities
Over **1000** enforcement actions taken
426 attendees to Municipal NPDES training

7.5.2 Proposed Revisions to Commercial and Industrial Sources Program Element

The expected future expansion of the Commercial and Industrial Inspection Program to address Treatment Control BMPs as described in Section 7.2.2.6 would likely result in an expansion of the CAP that is beyond the ability of Environmental Health staff to accommodate and still achieve their own mandated inspection requirements. The Permittees are therefore proposing to amend the Riverside County DAMP and Individual SWMPs to recognize not only the CAP inspection program but also Permittee specific alternative programs that may develop during the term of the next MS4 Permit.

7.6 Residential Sources

The residential program focuses on educating residents about activities that can potentially contribute to beneficial use impairment. The residential program outreach is focused on Pollutants of Concern. The residential program is primarily implemented through the Regional Public Education Program; however, each Permittee typically conducts additional outreach. In those cases where residential Illegal Discharges are identified, appropriate code enforcement actions are also taken.

7.6.1 Accomplishments and Programmatic Improvements

The residential program achieved the following accomplishments during the term of the 2004 MS4 Permit:

- Developed several new outreach brochures and tools to promote changes in knowledge and behavior regarding activities that potentially generated Pollutants of Concern including landscape and gardening brochure, spray bottles with non-toxic pest control or cleaner recipes, septic system management brochure, updated outdoor activities brochure, and pet waste brochure.
- Implemented billboard advertising promoting "**Only Rain Down the Storm Drain**" message
- Purchased a new trailer to transport public education materials. The trailer is wrapped in graphics supporting the "**Only Rain Down the Storm Drain**" message.
- Point of Sale Outreach Programs to customers of hardware stores regarding paint, pesticides and fertilizers.
- Partnership with Valley Greeters to deliver "**Only Rain Down the Storm Drain**" information to new residents in the Santa Margarita Region.
- Promotion and participation in the annual Santa Margarita Watershed Clean Up Day.
- Continued supplemental support of the HHW/ABOP waste collection programs
- Continued update and revision of the public education information page
- Continued implementation and enhancement of school outreach programs conducted by Mission Resource Conservation District
- Reproduction and distribution of the After the Storm poster

7.6.2 Recommended Revisions

Although the Permittees continue to annually assess and modify outreach materials and programs, the Permittees are not recommending any substantive revisions to this program element at this time.

7.7 Public Education and Outreach

Although the bulk of public education and outreach activities are conducted by the District on behalf of the Permittees, the Permittees also conduct outreach activities. These activities include providing informational pamphlets at counters, conducting presentations for local businesses or developers, maintaining a stormwater page or appropriate stormwater links on their individual websites, conducting employee training programs, and attending various public events.

7.7.1 Public Education and Outreach Program Element Accomplishments and Programmatic Improvements

The Public Education and Outreach Program Element had the following accomplishments and improvements over the term of the 2004 Permit (not including those identified in Section 7.6.1):

- Use of a CEQA-style public participation process to develop the Riverside County DAMP, SWMPs, and WQMP
- Duplication and use of the USEPA construction site poster to educate construction site operators
- Distribution of stormwater outreach information to various businesses and construction sites through code enforcement, and building and grading inspectors
- Development and distribution of a automotive shop BMP poster
- Advertisements in the Business Press
- Update of the outdoor activities brochure for mobile operators

7.7.2 Recommended Changes

Although the Permittees continue to annually assess and modify outreach materials and programs, the Permittees are not recommending any substantive revisions to this program element at this time.

7.8 Elimination of Illicit Connections and Illegal Discharges

The Riverside County DAMP describes the discharge limitations and prohibitions applicable to the Permittee's MS4 (Section 4.1), procedures to be implemented when persistent exceedances of Water Quality Standards are identified (Section 4.2), responding to and reporting Illegal Discharges (Section 4.4), enforcement measures for IC/IDs (Section 4.5), measures to control litter (Section 4.6), measures to manage sanitary wastes (Section 4.7), and programs to promote collection and proper disposal of hazardous waste (Section 4.8).

7.8.1 IC/ID Program Element Accomplishments and Programmatic Improvements

- Developed Sanitary Sewer Overflow Procedures in coordination with the sanitary sewer operators in the Santa Ana and Santa Margarita Regions and implemented annual updates to Sanitary Sewer Overflow Procedures to ensure proper contact information for outside agencies.
- Established an electronic tracking system for NPDES complaints received through the toll free "Report Storm Water Pollution" hotline, OES or otherwise reported to the District.
- Enhanced public outreach regarding illegal dumping including brochures for: Outdoor Activities, Fountains & Swimming Pools, and Pet Waste, establishment of a Santa Margarita watershed Clean-Up Day and coordination with the County of Riverside Trash Task Force.

- Initiated a cooperative program with the County Environmental Health Department to promote Environmental Enhancement Projects in lieu of fines for environmental crime cases. This initiative resulted in a billboard advertising campaign and BMP posters addressing appropriate BMPs for gas stations and garages.
- Established IC/ID Monitoring Program

Highlights
1,263 potential IC/ID reports received and responded to
Over **5,500** calls received on stormwater pollution hotlines
94 IC/ID Monitoring events
5 monitoring events where field screening exceeding criteria

7.8.2 Proposed Revisions to IC/ID Program Element

The Permittees re-evaluated their existing IC/ID monitoring programs as part of this ROWD. The Permittees believe that the overall monitoring program is effective. However, the Permittees plan to revise their approach to the implementation of the Illicit Discharge monitoring program to increase monitoring data utility or overall program effectiveness.

7.8.2.1 Revise IC/ID Monitoring Program

The Permittees plan to revise their approach to the implementation of the IC/ID monitoring program. The goals of the recommended revisions are to:

- Relocate the IC/ID monitoring sites at MS4 outfalls.
- Distribute the monitoring sites throughout the Santa Margarita Region to detect Illicit Discharges closer to their source before they become excessively diluted.
- Increase efficiency and consistency in sampling resulting in enhanced data quality.
- Enhance response time to identify IC/IDs.

A model Illicit Discharge monitoring plan that accomplishes these goals is described below; a final plan will be incorporated into updated compliance documents with the new MS4 Permit.

7.8.2.2 Model Illicit Discharge Monitoring Plan

The Municipal Permittees will identify MS4 outfalls that could be used for monitoring sites based on maps of the MS4 facilities. This list of preliminary sites will be then field checked to determine the accessibility of the sites and feasibility for inclusion in the IC/ID monitoring program. Inaccessible sites or sites determined to be otherwise infeasible will be removed from the list.

Each Municipal Permittee except Menifee will then divide the list of the viable sites within their jurisdiction into groups of four. As Menifee only has one MS4, it will only monitor that one site. Each group of four sites will be monitored for a period of one year, twice during the dry season. Once all sites have been monitored for a year, sites will be repeated.

A monitoring team will be formed including one District and one Municipal Permittee staff member. The District staff will perform all monitoring/screening activities. The Municipal Permittee staff will be available to assist and will be responsible for initiating any necessary follow-up actions. This approach will provide consistency in screening and monitoring data collection and will allow the Municipal Permittee with jurisdiction over the tributary land use to be immediately aware of exceedances and initiate appropriate follow-up actions.

Appendix C
Initial Assessment Methodologies based on CASQA approach

Construction Component Effectiveness Assessments

Goals

I Ensure that all Construction Sites have applicable permits from the Permittee.

II Increase the percentage of Construction Sites that are in compliance with Permittee building and grading permits

III Place additional focus on Construction Sites during Wet Season

IV Ensure that construction inspection staff are properly trained and informed of the issues related to stormwater quality

Goal Addressed	Measureable Metrics Collected / Compiled Annually	Highest Potential CASQA Effectiveness Level	Effectiveness Assessment Timeframe	Outcome required to support Effectiveness Level	Can a Reasonable Municipal Action Level be developed?
I	% of active construction sites that are discovered without building/grading permits	2	Permit Term	Decreasing Trend or minimal %	Y
II	% of active High/Medium priority sites subjected to enforcement beyond verbal/written warnings	3	Permit Term	Decreasing Trend or minimal %	N
II, III	% of active High/Medium priority sites subjected to enforcement beyond verbal/written warnings **during wet season**	3	Permit Term	Decreasing Trend or minimal %	N
II	% of enforcement actions that reached each level of enforcement	3	Permit Term	Trend toward lower levels	N
III	% of active permitted construction sites provided wet weather reminders	2	Annually	N/A	Y
IV	% of construction inspectors receiving annual training	1	Annually	N/A	Y

Development Planning Component Effectiveness Assessments

Goals

I Develop Design Guidance for Low Impact Development (LID) BMPs

III Encourage the use of LID-Based Treatment Control BMPs

IV Ensure that appropriate planning staff are trained in WQMP requirements

Goal Addressed	Measureable Metrics Collected / Compiled Annually	Highest Potential CASQA Effectiveness Level	Effectiveness Assessment Timeframe	Outcome required to support Effectiveness Level	Can a Reasonable Municipal Action Level be developed?
I	Status of SMC LID BMP Design Manual	1	Within Permit Term	Completion	Y
II	% of WQMP projects that met the exemption requirements for inspection and maintenance reporting by implementing only LID-Based Treatment Control BMPs	3	Permit Term	Increasing Trend	N
III	% of applicable planning staff that attended WQMP training.	1	Annually	N/A	Y

Permittee Facilities and Activities Program Effectiveness Assessments

Goals

I	Ensure that Permittee Facilities have adequate BMPs implemented and that they are properly maintained
II	Ensure that Channels and Inlets are kept free from trash and debris
III	Encourage the use of Integrated Pest Management (IPM) on Permittee Facilities
IV	Maintain an updated GIS map of the MS4 system
V	Ensure the Permittee facility operators and maintenance workers are properly trained in issues related to water quality.

Goal Addressed	Measureable Metrics Collected / Compiled Annually	Highest Potential CASQA Effectiveness Level	Effectiveness Assessment Timeframe	Outcome required to support Effectiveness Level	Can a Reasonable Municipal Action Level be developed?
I	% of facilities with appropriate BMPs identified	1	Annually	N/A	Y
I	% of Facilities provided reminders of appropriate BMPs	2	Annually	N/A	Y
I	% of annual facility inspections finding deficiencies in BMP implementation that require follow-up actions	3	Permit Term	Decreasing Trend or minimal %	Y
I	Average % of deficiencies identified in the previous year's inspections that were addressed.	3	Permit Term	Increasing Trend or high %	Y
II	Estimated Tons of Waste removed from Streets	4	Annually	N/A	N
II	Estimated Tons of Waste removed from Inlets	4	Annually	N/A	N
II	Estimated Tons of Waste removed from Open Channels	5	Annually	N/A	N
III	% of Pest Control Contracts that include language promoting or requiring IPM	1	Annually	N/A	N
IV	% of new Permittee-maintained MS4 facilities added to GIS Map	1	Annually	N/A	Y
V	% of Permittee Facility and MS4 operators and maintenance staff that attended training.	1	Annually	N/A	Y

Industrial-Commercial Facilities Program Effectiveness Assessments

Goals

I Maintain an updated and prioritized list of Industrial and Commercial Facilities

II Ensure the each Industrial and Commercial Facility has implemented BMPs that are appropriate for the activities and features at that facility

III Ensure that implemented BMPs are properly maintained to ensure their effective operation

IV Implement enforcement measures as necessary to reduce the occurance and recurrance of violations

V Ensure that inspectors are appropriately trained to identify problem areas and BMPs maintenance issues.

Goal Addressed	Measureable Metrics Collected / Compiled Annually	Highest Potential CASQA Effectiveness Level	Timeframe to Determine Effectiveness	Outcome required to support Effectiveness Level	Can a Reasonable Municipal Action Level be developed?
I	% of new facilities added to database and prioritized	1	Annually	N/A	Y
II	% of inspected facilities with adequate Minimum BMPs in place at time of inspection	3	Permit Term	Increasing Trend or High %	N
III	% of inspected WQMP facilities subject to Post Construction Treatment Control BMP Inspection, with adequately maintained Treatment Control BMP	3	Permit Term	Increasing Trend or High %	N
IV	% of inspected High/Medium priority facilities that were subjected to enforcement beyond verbal/written warnings	3	Permit Term	Decreasing Trend or Low %	N
IV	% of enforced sites that are repeat offenders	3	Permit Term	Decreasing Trend or Low %	N
IV	% / Number of enforcement actions that reached each level of enforcement	3	Permit Term	Trend toward lower enforcement	N
V	Percent of applicable inspectors that attended training	1	Annually	N/A	Y

Residential Program Effectiveness Assessments

Goals

I Raise awareness among residents of activities that may be contributing to stormwater pollution
II Increase public awareness of BMPs for residential activities
III Increase public participation in hazardous material collection events
IV Increase public involvement in keeping the watershed clean
V Encourage the use of Alternative Pest Control Methods

Goal Addressed	Measureable Metrics Collected / Compiled Annually	Highest Potential CASQA Effectiveness Level	Timeframe to Determine Effectiveness	Outcome required to support Effectiveness Level	Can a Reasonable Municipal Action Level be developed?
I	Number of outreach events to Schools	1	Annually	N/A	N
II	Number and type of educational materials distributed that target residential activities	1	Annually	N/A	Y
I, II	Results of Public Ed Surveys	2	Permit Term	Increasing or high level of Knowledge	Y
