As mentioned previously in this report, the City has chosen to designate major channels within the City as ESAs. Major channels within the City are typically concrete, and hold no significant environmental value, however. The City has chosen to designate these areas as ESAs as a proactive measure to protect downstream water quality. During inspections of businesses that drain to 303(d) listed receiving waters or other ESAs, the City will conduct more detailed investigations into whether the businesses are potential sources of the pollutants of concern or may otherwise negatively impact the ESA. If a business is believed to be a significant source of key pollutants and the standard BMPs listed above are not adequate, the City will require additional BMPs so that discharges of the key pollutants of concern will be reduced to the MEP.

### 5.2.4.5 Sites Selected for Inspection

In 2008, the City created a Jurisdictional Urban Runoff Management Program (JURMP). The City's inspection program "aims to reduce and prevent industrial and commercial pollution discharges from the MS4 to the MEP to protect local receiving water bodies and to comply with the Municipal Permit" (JURMP, City, 2008). The City created an inventory list of businesses for inspection and followed the inspection protocol described in the City's JURMP.

In 2009, the City developed a list of 51 industrial and 623 commercial facilities to inspect for compliance with federal, state, and local laws in accordance with the Municipal Permit. After inspections in 2009, the City's inventory has been revised and edited yearly, at a minimum, for new facilities or businesses that are no longer in existence. In 2011, the City conducted 126 industrial inspections and 60 commercial inspections to meet its permit required 25% inspection threshold from the total 713 stationary businesses. In total, 186 inventoried businesses were inspected. There were 4 businesses additionally inspected that were vacant, moved, refused, or duplicate businesses.

Based on experience, the inspection process for industrial and commercial facilities is often more efficient when appointments are not scheduled. This allows inspectors to inspect neighboring businesses rather than driving longer distances from business to business to meet scheduled appointments; it also eliminates time spent on the phone scheduling. In general, scheduling is conducted for industrial facilities that have or are required to have Industrial Permit coverage so

that the proper facility personnel can be present for the inspection and materials such as SWPPPs and monitoring plans are located and easily accessible for review when the inspector arrives.

### 5.2.4.6 Industrial Inspections and Implementation of BMPs

In total, 129 industrial facilities were inspected during 2011. Industrial businesses were defined by 40 CFR §122.26(b) (14). Attachment 1 of the Industrial Permit lists those facilities whose principal activity is included under the Industrial Permit. All industrial facilities were assigned a high threat to water quality, consistent with the City's JURMP. Sites marked for the City to follow up on the initial inspection, and sites with a high TTWQ, including all industrial sites, require annual inspections. A breakdown of TTWQ ranks for industrial facilities is shown in Table 6. BMP implementation at industrial facilities is summarized in Table 7

- Approximately 58% of the industrial facilities required a follow-up inspection.
- A total of 17 out of 129 industrial facilities had submitted a Notice of Intent (NOI) under the Industrial Permit, had implemented stormwater monitoring programs, and maintained a Stormwater Pollution Prevention Plan (SWPPP).
- Three businesses had a Notice of Termination (NOT).
- Five businesses obtained a Notice of Non-Applicability (NONA) and/or a No Exposure Certification (NEC).
- No IC/ID was observed.
- Fully implemented stormwater employee training was noted at 61 businesses.
- Out of the 1,517 applicable BMPs, 1,414 (93 percent) were fully or partially implemented.
- Only 7 percent of applicable BMPs were not implemented.

**Table 6: Industrial Facilities**

| Threat | Number of Industrial Facilities |
|---|---|
| High TTWQ | 24 |
| Medium TTWQ | 96 |
| Low TTWQ | 6 |
| No TTWQ Determined | 3 |

**Table 7: Industrial Facility BMP Implementation**

| BMP Group[(a)] | Number of BMPs in Group | Fully Implemented | Partially Implemented | Not Implemented | N/A |
|---|---|---|---|---|---|
| D.1 General | 7 | 482 | 71 | 11 | 257 |
| D.2 Landscaping | 5 | 161 | 7 | 0 | 421 |
| D.3 Materials and | 13 | 409 | 149 | 82 | 879 |

| BMP Group[(a)] | Number of BMPs in Group | Fully Implemented | Partially Implemented | Not Implemented | N/A |
|---|---|---|---|---|---|
| Wastes | | | | | |
| D.4 Equipment, Vehicles, and Outdoor Activities | 5 | 47 | 23 | 9 | 510 |
| D.5 Other | 5 | 62 | 3 | 1 | 515 |
| **TOTAL** | **35** | **1161** | **253** | **103** | **2582** |

(a) Individual BMPs in each BMP group are located in Section D of the City of El Cajon Commercial and Industrial Stormwater Compliance Inspection Form, (Please refer to Appendix A.5).

### 5.2.4.7 Commercial Inspections and Implementation of BMPs

In total, 61 commercial facilities were inspected during 2011. Commercial businesses were defined as those businesses not subject to the Industrial Permit, and that do not perform activities meeting the definition of industrial activity under 40 CFR §122.26(b)(14). Over 25 percent of sites inventoried were inspected annually. Commercial businesses requiring annual inspections were those with a high TTWQ and those that warranted a follow-up inspection. A breakdown of TTWQs for commercial facilities is presented in Table 8. BMP implementation at commercial facilities is summarized in Table 9.

- No illicit connections were observed. However, two potential illegal discharges were noted during inspections.
- Approximately 23 percent of the facilities with significant outdoor activity needed improved cover for outdoor storage, including trash.
- Approximately 25 percent of applicable businesses needed improved spill prevention and response materials, including spill kits; 11 percent needed secondary containment for liquid storage.
- Out of the 842 applicable BMPs, (88%) were fully or partially implemented.
- Only 12 percent of applicable BMPs were not implemented.

**Table 8: Commercial Facilities**

| Threat | Number of Commercial Facilities |
|---|---|
| High TTWQ | 27 |
| Medium TTWQ | 28 |
| Low TTWQ | 5 |
| No TTWQ Determine | 1 |

**Table 9: Commercial Facility BMPs Implementation**

| BMP Group[(a)] | Number of BMPs in Group | Fully Implemented | Partially Implemented | Not Implemented | N/A |
|---|---|---|---|---|---|
| D.1 General | 7 | 236 | 35 | 10 | 104 |
| D.2 Landscaping | 5 | 87 | 4 | 0 | 168 |
| D.3 Materials and Wastes | 13 | 200 | 74 | 74 | 377 |
| D.4 Equipment, Vehicles, and Outdoor Activities | 5 | 44 | 15 | 9 | 212 |
| D.5 Other | 5 | 39 | 10 | 5 | 226 |
| **TOTAL** | **33** | **606** | **138** | **98** | **1087** |

(a) Individual BMPs in each BMP group are located in Section D of the City of El Cajon Commercial and Industrial Stormwater Compliance Inspection Form, see Appendix A.5.

### 5.2.4.8 Compliance and Enforcement

The follow-up priority classification section on the inspection form was designed to classify the level of necessity to perform a follow-up inspection at the facility. "Priority 1" follow-ups are given to facilities for which an active illicit connection or illegal discharge was observed. In these cases City's storm water personnel immediately instructed discharger to stop the discharge and an administrative citation was issued. "Priority 2" follow-ups typically have serious BMP-related issues. "Priority 3" follow-ups are given to facilities for which relatively minor BMP-related issues were observed.

A total of 1 businesses were found to be "Priority 1". Follow up inspections were scheduled and, whenever possible, investigations were conducted immediately.

As specified in the City Ordinance, the City is able to use various warnings and actions to correct a facility/activity and enforce the JURMP. For PY4, the City further coordinated with industry to implement and enforce the requirements of the JURMP and City Municipal Code. As with the other Permit component, enforcement generally is initiated with a verbal warning and followed up by a written warning. Enforcement using Administrative Citations was incorporated in May 2003. Appendix A.5 lists criteria for issuing Citations, document entitled "Storm Water Administrative Citation Program Criteria" and Appendix B.3 shows the list of enforcement actions taken by the City in PY2010-11.

#### 5.2.4.9 Education

During inspections, business representatives were educated regarding storm water issues both through verbal interaction with the inspectors, and the distribution of printed storm water educational materials, when appropriate. In particular, the utilization of verbal interaction is extremely influential because it is tailored individually by the inspector to the specific issues and concerns of the facility and the facility representative. It prompts the facility representative to think about issues directly related to his or her daily actions as it applies to business activities. The inspector was able to provide information specific to the facility, which is beneficial to the facility representative due to the site-specific information. This information can help give the facility representative the proper tools to implement BMPs applicable to their business.

Printed educational materials were also distributed to businesses during inspections unless the facility representative declined to receive them. Posters specifically designed for automotive and restaurant activities were distributed as storm water educational materials. Also provided, when necessary, were NONA/NEC paperwork, NOI paperwork, and information of about the Industrial Permit draft. Each have a separate cover sheet with instructions on how to file, and contacts in case any questions arise. Samples of some of the educational materials distributed are included in Appendix A.5. In some cases, educational material was not applicable to the business activity and was therefore not provided.

### 5.2.5 Stationary Ind. & Commercial Sites/Sources Effectiveness Assessment

#### 5.2.5.1 Common BMP Implementation Deficiencies

Common issues were noted at a large number of businesses and are discussed below:

- Outside metal storage was an issue at both commercial and industrial facilities and required multiple recommendations to provide cover and secondary containment and/or to relocate metals.
- Hazardous waste drums, particularly oil drums, were also observed outdoors at multiple locations without secondary containment; some were missing lids and/or labels.
- Commercial businesses were commonly located on property owned and/or maintained by a third party. As such, many of the outdoor area inspections resulted in the business stating that their property management companies were responsible for issues such as landscaping, trash, and general cleanup.
- Grease handling procedures at restaurants were recurring issues. Specific problems included: proper storage, proper containment, cleanup of grease spills, and keeping absorbent available near grease storage.

- Though many facilities did possess absorbent of some kind, actual spill kits were not very common and absorbent was typically not kept in clearly labeled containers or located near potential stormwater pollutant sources.
- In general, industrial facilities covered as mandatory under the State General Industrial Permit were more aware of stormwater concerns and had better training made available to employees than commercial businesses. Commercial businesses and industrial businesses conditionally subject to the State General Industrial permit often did not have any formal stormwater training program for employees.

#### 5.2.5.2 SIC Code Changes and Updated Inventory

Based on the SIC code corresponding with the current principal activity of the business, some inspections resulted in business category reclassifications. Assessment of whether the SIC code was considered industrial was based on SIC code of the Industrial Permit. Attachment 1 of the Industrial Permit lists SIC codes that require mandatory coverage under the Industrial Permit and SIC codes that require coverage under the Industrial Permit "conditionally", depending on potential outdoor exposure to stormwater

The revised 2011 inspection list contains 715 facilities. Of the 715 businesses, 201 site visits were conducted. Out of 201 businesses, full inspections were conducted on 190 facilities. A list of businesses inspected during 2011 is contained in Attachment A.5. The inventory decreased from 739 facilities in 2010, mostly due to businesses closing down. The updated inventory list is located in Appendix A.5.

## 5.3 MOBILE SOURCES ELEMENT

### 5.3.1 Background

Illegal discharges tend to be the major area of concern with mobile businesses. Due to the nature of their activities, mobile businesses are regulated somewhat differently than other businesses. Mobile businesses can be difficult to identify because many do not have City business licenses. More than stationary businesses, mobile businesses are very dynamic with the start of new businesses and the closing of existing businesses on a relatively regular basis. For the reasons listed above and also simply because they are not consistently present at a fixed location, regular inspections of mobile businesses are not a feasible option at this time.

### 5.3.2 Source Characterization

The mobile businesses known to operate within the City's jurisdiction are noted on the City's commercial inventory. The following business types are addressed by the mobile sources element of the City's industrial and commercial program.

- Mobile automobile or other vehicle washing
- Pest control services
- Mobile carpet, drape or furniture cleaning
- Mobile construction trades
  - Painting and coating
  - Cement mixing or cutting
  - Masonry
  - Other contractors
- Landscaping
- Pool and fountain cleaning
- Power washing services

Because not all mobile businesses have obtained business licenses in the City or have a base of operations in the City, a continual process of refining and updating the City's inventory has been conducted. Sources for such inventory updates will include reported incidents, general observations by City staff, and available business licenses. The City participated in a regional effort to inventory and/or track mobile businesses. The Industrial/Commercial Regional Workgroup developed a regional database that included mobile businesses across Jurisdictions. The regional database in combination with the City's business license database provided the main source of information for prioritizing mobile businesses.

### 5.3.3 Best Management Practice Requirements

#### 5.3.3.1 Updated BMP Requirements

In addition to all BMPs required for stationary sources; listed in Section 5.2.4.1, 5.2.4.2, and 5.2.4.3 of this report; mobile business are also required to implement the following minimum BMPs developed by the Regional Industrial/Commercial Workgroup:

- Storm Water Training
- Contain and Clean Up Spills (Spill Kits)
- Properly Handle All Waste (Solid, Liquid and Hazardous)
- Protect Storm Water Conveyance System: (Streets, Gutters and Alleys)
- Provide Proper Handling and Containment Of Materials
- Provide Equipment Washout Area

The most important BMPs for most mobile businesses typically involve non-Storm water discharge control and spill prevention, control, and cleanup. New mobile businesses applying for a business license received information about the required BMPs listed above. A copy of the required BMP information given to new business license applicants can be found in Appendix 5.

#### 5.3.3.2 Additional Controls for Mobile Sources

Regardless of where the activity occurs, the City categorically prohibits illegal discharges from mobile businesses. Aside from washing, cleaning, or other activities that may cause illegal discharges, mobile businesses are not likely to conduct activities that produce significant pollutant discharges. If in the future the City finds that even in the absence of illegal discharges the activities of mobile businesses are contributing pollutants of concern to a CWA section 303(d) impaired water body segments or are negatively impacting ESAs, additional controls will be required for those activities. Further, if the City has reason to believe that mobile businesses are generating significant illegal discharges in a given area of the City that is tributary to a 303(d) listed water body (and the discharges contain pollutants causing the impairment) or is within, directly adjacent to, or directly discharges to a water body within an ESA, City staff may more regularly visit those areas and/or take other actions to address the illegal discharges.

### 5.3.4 Education and Outreach

The City of El Cajon provides information and outreach regarding storm water quality to mobile business owners and operators. A business license is not issued to the mobile businesses listed under Section 5.3.2 until the new business proponent has the opportunity to talk to Storm Water personnel about pollution prevention and BMP implementation. If applicable to the facility, mobile businesses are also provided with educational materials outlining pollution prevention methods and other BMPs related to their activities prior to issuance of a business license and during inspections. Inspectors also give recommendations to businesses, where appropriate. Because this specific element of the industrial and commercial program is fairly new it is anticipated that some mobile businesses it is anticipated that education will continue to be a significant portion of the program. The educational program is described in more detail in Section 8 of this report.

#### 5.3.4.1 Inter-Jurisdictional Cooperation

An inter-jurisdictional program for the regulation of mobile businesses was completed during Permit Year 2009-10. The City of El Cajon and the Port of San Diego were the Co-Chairs of the Regional Industrial/Commercial Workgroup. The workgroup took a leading role in the creation of a regional inventory of mobile businesses, standardization of BMP requirements across jurisdictions, and sharing of enforcement action information.

#### 5.3.4.2 Staff Training

Staff responsible for conducting storm water compliance inspections and enforcement of mobile sources is trained on inspection and enforcement procedures and BMP implementation as they relate to mobile businesses. City staff is also encouraged to be vigilant for illegal discharges from mobile businesses working within the City and to report businesses that are not in compliance to the storm water hotline.

#### 5.3.4.3 Inspections

Mobile sites/sources are inspected by the City on an as needed basis. The most common triggers for these inspections are receipts of incident reports and direct visual observations by City staff. The inspections generally follow the same procedure as stationary facilities, described in Section 7.2.4.4 of the updated JURMP, although the main focus of most mobile business inspections is on discharge control BMPs.

#### 5.3.4.4 Enforcement

Most violations associated with mobile businesses have been historically attributed to illegal discharges. The City's enforcement approach to such discharges will require the discharge to be stopped and cleanup of discharged materials when applicable and feasible. Education is also provided to operators who are not aware of the City's storm water requirements. Businesses that do not possess the materials necessary to implement the required BMPs are required to demonstrate to the City that they have obtained such materials and can properly use them before the City allows such businesses to resume operations in the City. Mobile businesses that do not have City business licenses are required to obtain one. A detailed list of all enforcement actions taken by the City is included at Appendix B.3 of this report.

## 5.4 IMPROVEMENTS AND REGULATORY COMMENTS

A Notice of Storm Water Inventory Short Comings was received from San Diego Coastkeeper. Whereas the notice commended the City for the detailed stationary business inventory table in the JURMP Annual Report for FY 2009-10, it did specify a need to add some clarity to the table. More specifically, the comment referred to the column entitled "Tributary to a 303(d) Listed" within the table. It was indicated that the column was unclear as to whether it intended to represent both (1) whether the site/source is tributary to a Clean Water Act section 303(d) water body segment and (2) whether the site/source generates pollutants for which the water body segment is impaired, or only the former.

The table was edited to include both pieces of information. The columns entitled "Potential Pollutants" show the pollutants associated with the facilities. An asterisk next to the pollutants also indicates the pollutants associated with 303(d) listed impaired water bodies. These minor edits address the issues pointed out in the San Diego Coastkeeper Notice of Storm Water Inventory Short Comings, by making it easier to determine sources that are both tributary to a 303(d) listed water and generate pollutants for which the water is impaired – exactly what pollutant(s) impair the receiving water. A copy of the updated stationary business inventory table is included in Appendix A.5.

# SECTION 6 RESIDENTIAL COMPONENT

6.5.2 Investigation and Enforcement 10

**6.6 NOTABLE CITY ACTIONS** **10**

**6.7 IMPROVEMENTS AND REGULATORY COMMENTS** **11**
6.7.1 Improvements 11
6.7.2 Regulatory Comments 11

# SECTION 6 RESIDENTIAL COMPONENT

## INTRODUCTION

Pollution prevention is the focus of the JURMP Residential Component to prevent pollutants from entering the storm drain system related to residential activities. Education is the best approach to implementing this component of the JURMP as the goal is to change behavior and perceptions. The City is successful in implementing the collection of household wastes and promoting used oil recycling. Each pound of household waste and used oil collected equates to one pound less of waste/pollutants that could be disposed improperly and enter the storm drain system.

## 6.1 PREVENTION OF POLLUTED RUNOFF

Preventing pollution is easier and less costly than treating wastes at the end of the pipe. The following pollution prevention BMP information is sent to residents via brochures in sewer billings, newsletters, and during face-to-face contact when a complaint or referral is investigated.

- Conduct automobile repair and maintenance under cover or with drip pans; recycle oil.
- Divert automobile wash liquids to landscaping.
- Store unused automobiles under cover; use absorbent pads or drip pans for leakage.
- Maintain garden and yard using natural remedies and drought-tolerant plants.
- Use less toxic products for home care/maintenance.
- Dechlorinate swimming pool water before releasing.
- Dispose of pet waste in the trash.
- Don’t use the street as your storage area for dirt, mulch, landscaping plants.
- The street is not a disposal area for concrete or paint washout, or hosing off driveway.

## 6.2 PRIORITY RESIDENTIAL SOURCES

Residential areas discharging directly to a major storm drain channel are the focus for pollution sources. Priority sources are directly related to 303(d) pollutants identified in Forrester Creek and the San Diego River. The following table connects sources with 303(d) pollutants. These same 303(d) pollutants are used in Section 11, Program Effectiveness Assessment to estimate the potential amounts of pollutant eliminated through prevention, intervention, and other BMP implementation.

**Table 1 – Prevention BMPs**

| Prevention BMP | Prevention Mechanism | Primary Pollutants Prevented | Prevention of 303(d) pollutant |
|---|---|---|---|
| Composting | Reduces the amount of waste in the trash | Organics | **Phosphorous** |
| Use of a Professional Car Wash | Eliminates dirty, soapy water from the storm drain | Metals<br>Detergents | **TDS**<br>**Phosphorous** |
| Organic gardening | Eliminates fertilizers and pesticides | Nutrients<br>Pesticides | **TDS** |
| Take a bag when walking the dog. | Eliminates dog waste from the Public Right of Way | Fecal Coliform<br>Enterococcus<br>Nitrates | **Fecal Coliform**<br>**TDS** |

## 6.3 BMP REQUIREMENTS

In addition to the pollution prevention BMPs, above, the following are encouraged in residential areas. Home improvement projects can cause side affects, like mud or concrete flowing into the street (see picture to the right). However, with an effective combination of BMPs applied to the maximum extent practicable, simple home projects can meet the City's BMP implementation requirements without much effort or expense.

Table 2 connects the use of BMPs with the prevention, reduction, or elimination of pollutants.

**Table 2 – BMP to Pollutants for Residential Areas**

| BMP | Application | Primary Pollutants | 303(d) Pollutants |
|---|---|---|---|
| Automobile Repair & Maintenance | Use Drip Pans<br>Recycle Oil | Oil & Grease | |
| Automobile Washing | Use Commercial Car Wash | Metals<br>Detergents | **TDS** |
| Automobile Parking | Use Drip Pans | Oil & Grease | |
| Garden and Yard Care | Compost or recycle waste | Organic Material | **TDS**<br>**Phosphorous** |
| Home Care and Maintenance | Use Household Hazardous Waste Programs | Metals<br>Toxic Substances | |
| Pet Waste Disposal | Take a bag when walking the dog | Fecal Coliform | **Fecal Coliform** |
| Private Lateral Maintenance* | Clean lateral every few years | Fecal Coliform<br>Enterococcus<br>Pathogens | **Fecal Coliform**<br>**TDS** |
| RV Parking & Maintenance | Use a legal dump station | Fecal Coliform<br>Enterococcus<br>Pathogens | **Fecal Coliform**<br>**TDS** |

Changes in behavior have been noticed over the years, but although the message has been out in the community for several years, it is still new to many citizens. The Clean Community; Healthy Watershed, and Healthy Garden; Healthy Home (Integrated Pest Management) concepts will continue to be continuing messages for subsequent permit years.

## 6.4 BMP IMPLEMENTATION

Commitment to BMP requirements is listed in the City's JURMP and meets the requirements of Permit Section 6.3, BMP Implementation. Implementation includes selection/application, dissemination of information, and evaluation of implementation at the facility.

The list of minimum BMPs for residential areas tracks along with pollution prevention concepts. Understanding through education and outreach is the basis for changing behavior in the residential community. By changing the way the residential community completes tasks around the home, benefits to water quality will be realized through wet weather monitoring. The common major routes for educating the citizens and disseminating information is through newsletters, sewer billing inserts, and City "drive-abouts" where information is delivered directly to target audiences.

Information on how to implement BMPs is provided to citizens through one-on-one visits, newsletters, sewer billing inserts and citizen complaints/referrals. Information that is distributed includes the following topics.

- Automotive Repair
- Car Washing
- How You Can Prevent Pollution from Entering the Storm Drain System
- Mobile Detailer BMPs
- PowerWashing
- Clean up After Your Pets
- Lawn and Garden Care
- Keeping Our Environment Clean!
- Over-Irrigation Can Cause Storm Water Pollution
- Washing Your Car
- What's the Problem with Pet Waste
- Keeping Our Yards and Our Storm Water Clean
- Trash and Street Sweeping Update
- Trash in Our Strom Drains
- Maintaining your Private Sewer Lateral
- Everything that goes into Our Storm Drains…Ends up in the Ocean
- Why It's Important to Keep Trash, Sediment and Debris Out of Storm Drains
- Pool Maintenance BMPs

- Creating Community by Keeping Our Storm Water Clean

Copies of brochures, newsletter articles, and flyers sent to El Cajon Citizens are included in Appendix A.6.

## Table 5 - Required BMPs for Residential Areas

| | | Automobile Repair Maintenance | Automobile Washing | Automobile Parking | Garden & Yard Care | Home Care & Maintenance | Pet Waste Disposal | Private Lateral Maintenance | RV Parking & Maintenance |
|---|---|---|---|---|---|---|---|---|---|
| RESIDENTIAL | Vehicles & Equipment | X | X | X | | | | | X |
| | Home and Garden | | | | X | X | X | X | |
| | Pets | | | | | | X | | |
| | Private Sewer Lateral | | | | | X | | X | |

Minimum required BMPs for the Residential Component are grouped into four (4) basic categories as shown in Table 5. It is only through consistent, simple messages, that citizens will start to implement the BMP identified for the activities around their homes.

An area where the Police Department continues to collaborate with Storm Water staff is RV Parking and Maintenance. Police Department staff assist Storm Water staff in locating areas where dumping is occurring. The resulting outreach effort should help East County residents to reduce the number of illegal dumping events within this region of the watershed.

As illustrated above, over-watering from many different homeowners' landscaped areas can have an impact on the landscaping and may result in a significant source of water in the street. What seems of little importance from one home combines with runoff from other homes forming small rivers that can move materials stored in the right-of-way or pollutants that are illegally discharged. Homeowners are encouraged to save water and money by adjusting sprinkler heads to reduce or eliminate overspray. When over-watering is discovered, an attempt is made to contact the responsible party. Door hangers are left with instructions when homeowners are not home. Staff schedule a return date to discuss the measures that can be taken by homeowners. When over-watering discharges decrease, there is a reduction of:

- the amount of water discharged to Forrester Creek
- the amount of pollutants transported to Forrester Creek during "No Rain" days

Improvement in decreasing over-watering will be measured by the amount of Forrester Creek flow leaving the City of El Cajon at the jurisdictional boundary to Santee. Flows measured during the dry weather program are an indication of daily flows. The PY2010-11 dry weather flow into Santee was measured at 83 gallons per minute, as measured at Dry Weather Station No. 5. Overall flows have been on the decrease in all permit years since PY2004-05, inclusive, and may indicate that outreach and education efforts that discourage over-irrigation are becoming effective. Additional flow measurements will be taken during the next annual cycle. The full Forrester Creek Study is contained in Appendix A.12.

### 6.4.1 Outreach to Residents

The City used various types of educational materials to distribute information and discuss the JURMP requirements with residents when responding to complaints or investigating a discharge. Brochures were provided to residents during face-to-face discussions concerning complaints and referrals. The City newsletter has included seven articles concerning routine activities where receiving waters may be impacted by pollutants. The newsletter is freely available for residents

and industrial/commercial business owners on a semi-annual basis. Two such printings were completed in PY4 and covered the following activities for residents:

- Residential Automotive Repair and Maintenance
- What You Can Do to Reduce Urban Runoff Pollution
- How Should I Wash My Car?
- Pollution Prevention Tips for Landscape & Gardening
- Sewer Spill Reference Guide
- Residential Repair, Repair and Remodeling – Part 1
- Residential Repair, Repair and Remodeling – Part 2

The City printed and distributed 38,000 copies, each, of the spring and fall newsletters with seven articles in total contained in both newsletters. As a result, residents are becoming more aware. An indication of this awareness is the increase in the number of complaints and referrals from the private sector. As the public and municipal staff gains more knowledge and awareness of urban runoff, additional increases in complaints and referrals are expected to continue to increase. Education of staff and residents is productive.

### 6.4.2 Recycling and Waste Collection Services

Keeping household wastes out of the storm drain system requires the implementation of a coordinated pickup program with a licensed facility to handle the wastes according to appropriate State and Local regulations. The City uses Waste Management to schedule routine and requested pickups for household wastes. Figures 1, 2, 3, and 4 show the total amount of household wastes, the type of wastes collected, recycled materials from curbside pickup (commercial and residential) and total amount of waste collected. There were 23 Household Hazardous Waste, Electronic Waste and Universal Waste Collection Events where a total of 1,718 participants dropped off over 290,107 pounds of materials. A total of 489,616 pounds of household hazardous waste was collected (Figure 1). Figure 2 shows the percentages of material types taken to the collection events. Waste Management collected a total of 74,078 tons of waste from residential, commercial and industrial areas (Figure 3). A total of 18,281 tons of materials were recycled from the curbside-recycling program, this program only includes residential areas.

The City of El Cajon works to promote and increase used oil collection through residential collections that include curbside pick-ups or encourages citizens to recycle used oil and filters. A grand total of 12,709 gallons of used oil and 1,783 used oil filters were collected from within the City. A total of 434 gallons of used oil and 277 used oil filters were collected from residential areas, while a total of 12,275 gallons of used oil and 1,506 used oil filters were collected from certified collection centers located within the City of El Cajon's jurisdiction.

**Figure 1 – Household Hazardous Waste Collection**

**Figure 2 Percentages of HHW Type**

**Figure 3**

Figure 3 shows the amounts, in tons, of waste collected for Commercial and Residential sites. Waste collected equates to pollutants not discharged to the storm drain system.

### 6.4.3 Opportunities for Community Involvement

The El Cajon Community Development Center (ECCDC) prints and circulates a newsletter to the downtown area businesses on a quarterly basis. Additionally, the ECCDC prints a Clean & Safe report that covers actions to keep the downtown area clean and safe. The downtown Clean Team works to keep the community clean and performs daily litter removal, maintenance, and landscaping activities. Saint Madelines School provides the student workers who detail the downtown street and sidewalk areas by collecting cigarette butts, trash, and debris. Spills are reported directly to ECCDC for immediate removal and disposal.

**Figure 4**

Recycling is a community effort. A total of 18,281 tons of recyclables (includes used oil, newspapers, glass, plastic, tin and aluminum) were collected through residential pickups or deliveries in 2010-11. Figure 4 indicates the amounts, in tons, of materials recycled through residential, commercial, and industrial recycling efforts for 2010-11. Amounts recycled are not placed in landfills or available for discharge to the storm drain system.

## 6.5 COMPLIANCE AND ENFORCEMENT

The City has a variety of enforcement actions upon discovering a residential action that may potentially affect the quality of receiving waters. Verbal warnings (with written documentation), written warnings, orders to abate and correct, and monetary fines are in the legal authority of the City. There are two routes of discovering illegal residential activities. One is through complaint/referral process. Complaints are received through direct contact with City staff, through the City Manager's office and through the City's Website (via e-mail). The other is during scheduled City monitoring and observations of other routine City department activities.

Depending on whether an actual discharge has occurred or there is a potential to discharge, a written warning or Administrative Citation is issued. Corrective actions are verified and the resident re-contacted for any further questions.

### 6.5.1 Complaints Received

Complaints are received through the City's or County's Hotline number or funneled through the City Manager's office. The City also receives complaints through the City's Storm Water Program website. Since the inception of the City's Enforcement Program, citizens take opportunities to inform municipal staff of their concerns during other routine activities. Investigations usually occur within 24 hours of complaint receipt with a follow-up phone call informing the complainant of the investigative results. Complaints were tracked using a simple table and software programs. A table in Appendix A.6 lists residential complaints tracked in PY4.

### 6.5.2 Investigation and Enforcement

Storm Water staff investigates each complaint. Contact with the potential discharger is focused on stopping the polluting activity and educating the citizen about our storm drain system and water quality.

**Table 6 – Enforcement Actions**

| BMP Violated | Written Warnings | Administrative Citations | Actions | Follow-up |
|---|---|---|---|---|
| Automobile Repair & Maintenance | 0 | 0 | Stop Activity | None |
| Automobile Washing | 0 | 0 | Stop Activity | None |
| Home Care and Maintenance | 0 | 1 | Stopped Activity | Completed |
| Private Lateral Maintenance | 1 | 0 | Stop Activity | Completed |
| RV Parking and Maintenance | 0 | 1 | Stop Activity | Completed |
| **TOTAL** | 1 | 2 | | |

Written warnings followed each verbal warning in the form of a letter requesting corrective action or enforcement by the Administrative Citation Form (Refer to Appendix A.5 for a Copy Enforcement Criteria and Citation Form). Letters are used only when additional information and explanations are needed to get compliance from the potential discharger. A list of the enforcement actions issued to residents is included in Attachment B.3.

## 6.6 NOTABLE CITY ACTIONS

**Apartment Complexes and Recent Condominium Conversions**

Newer residential communities formed by conversion of apartment dwellings into Common Interest Developments or Condominiums continues to offer a good opportunity for divulging information about the storm water program. Restarting a small-developed community is a perfect opportunity to introduce or reintroduce storm water protection activities at the development level. Despite a down turn in the number of condominium conversions, the following are required for these types of projects:

- A Storm Water Site Plan that includes a map of the current storm drain system and a list of the internal and external improvements proposed prior to sale. Control of materials, upgrades to the drainage system and treatment are discussed.
- A Storm Water Maintenance Plan for Condominiums
- A Private Sewer Lateral Report, and
- Water Quality additions to the Covenants, Conditions, and Restrictions

## 6.7 IMPROVEMENTS AND REGULATORY COMMENTS

Throughout the year, the City adjusts JURMP Components based on experience and the need to correlate JURMP activities with water quality. As the Storm Water Pollution Prevention Program continues the move into a BMP implementation program and the reduction of pollutants discharged into the storm drain system, existing residential neighborhoods become a pivotal group to assist in making the water quality improvements a reality.

### 6.7.1 Improvements

Improvements for the Residential Component is more challenging as citizens view the storm water regulations as an infringement on individual rights. Choosing the correct approach and picking an area that is more beneficial to water quality takes thought and planning. Based on previous experience, the proposed actions for PY5 include:

- Continue partnering with the El Cajon Community Development Corporation in reaching out to the community
- Continue to meet with new development Homeowner Associations to distribute storm water information

### 6.7.2 Regulatory Comments

The City did not receive regulatory comments for the Residential Section of the JURMP Annual Report for PY3.

# Place Holder

**(Section 7 to be Submitted December 15, 2011)**

## SECTION 8 EDUCATION COMPONENT

**8.1 EDUCATION AND OUTREACH 1**
8.1.1 Education and Outreach Events 2
8.1.2 Jurisdictional Accomplishments 2
8.1.3 City Staff Training 3
8.1.4 Special Community Presentations 3
8.1.5 Regional- and Watershed-Related Outreach 4
8.1.6 Educational Materials Jurisdictional Distribution 5

**8.2 LEADERSHIP ACTIVITIES AND PARTNERSHIPS 6**

**8.3 MEASURING CHANGES IN KNOWLEDGE AND BEHAVIOR 7**

**8.4 IMPROVEMENTS AND REGULATORY COMMENTS 7**
8.4.1 Improvements 7
8.4.2 Regulatory Comments 7

# SECTION 8 EDUCATION COMPONENT

## 8.1 EDUCATION AND OUTREACH

The goal of the education component is an informed and knowledgeable community. It is crucial to the success of a storm water management program for City staff and the community at large to have easy access to reliable and accurate storm water information. Without a shared, common knowledge base of local water quality and urban runoff information, it is difficult to obtain public support for local storm water quality programs. The storm water educational materials need to be detailed and comprehensive enough to support a shift in individual daily actions while allowing community groups to back specific water quality measures. As with all the other components of this storm water pollution prevention program, maintaining and restoring the chemical, physical and biological integrity of state waters is the ultimate outcome.

If reduction is the goal, then prevention is the theme for the Storm Water Pollution Prevention Program. The Education Component continues to emphasize the basic topics, such as:

- The difference between the sanitary sewer and the storm drain system; and
- The street and storm drainage system is not your garbage disposal system; and
- Making small changes individually, adds up to big changes in our rivers and at the beaches.

The other part of a successful storm water program is an involved and committed municipal staff that contacts the public about potentially damaging discharging activities. Storm Water staff diligently works to educate the citizens and businesses within the City jurisdiction on water quality and ways to prevent pollution from entering the storm drain system. The goals of the City's education and outreach program are to raise awareness of urban runoff and change the behavior of citizens and businesses. The progression of topics will lead to Watershed concepts as the basics in storm water are understood by the general public.

### 8.1.1 Education and Outreach Events

Educating staff and the public is the best way to effect change in people's behavior. It is clear that there is broad-based public support for a cleaner and healthier environment. When people can connect with and learn more about our storm water program, our program earns the respect our citizens and community leaders for protecting our water quality. An effective "learn and earn" outreach program should be both regional and jurisdictional, since a pooled effort regionally is able to educate on a more impressive scale. Additionally, since we all live in a watershed, storm water pollution and the protection of receiving waters defy jurisdictional boundaries. As the San Diego River Watershed Copermittees move toward a Watershed-based approach to storm water management, education and outreach efforts will follow watershed strategies on a regional basis. As shown above, the City of El Cajon developed a Storm Water "Watershed" Logo to promote pollution prevention and protection of water quality.

### 8.1.2 Jurisdictional Accomplishments

Outreach accomplishments during PY4 include the following list of education and outreach efforts.

- California State Retirees Group Meeting – Information was provided to a group of about 30 members about the El Cajon Storm Water Program and the importance of keeping our water ways clean and conserving water (reducing urban runoff).
- Cuyamaca College Waste Water Class – presentation was made to the class regarding storm water regulations and the storm water program for the City of El Cajon.
- Continue to work with the El Cajon Community Development Corporation (ECCDC) to close and protect dumpsters, keep trash areas clean, and encourage good housekeeping habits in the downtown area.
- Storm Water Education and Outreach Document Portfolios were prepared and issued to selected municipal staff with high probability of contact with citizens on storm water pollution prevention issues. This included staff tasked with commercial and industrial site inspections, construct site inspections, complaint investigations and SUSMP plan review. The use of the storm water information portfolio has allowed the storm water program to connect with citizens, staff and other interested parties in an effective and detailed manner.
- "Fire Safety Open House" This day-long, Saturday event (October 9, 2010) included booths, educational information and formal and informal demonstrations and hands-on explanations on various activities that help prevent storm water pollution. It is estimated that approximately 3,000 visitors attended this event.
- Johnson Elementary School Career Day – Presentation of Storm Water and Geographic Information System tools and storm water regulations to students interested in careers in environmental sciences.

- El Cajon Library Multicultural Fiesta – This event included a booth with Storm Water program information as well as some "give-aways". The event drew an approximate 2,000 participants.

### 8.1.3 City Staff Training

Municipal staff was given the basics in storm water training including:

- What is a Watershed and what Watershed do we live in.
- Why is keeping our water clean important.
- The different types of pollutants and where these pollutants originate.
- The difference between the storm drain system and the sanitary sewer system.
- What can be done at work and at home to eliminate polluted runoff during rain events and all yearlong.

Municipal crews are given door hangers to use during their daily routine activities in the City. An example of a door hanger is provided in Appendix A.6. The door hanger alerts the resident to the potential discharge that exists on or near their property. Possible solutions and phone numbers for reporting discharges are provided.

### 8.1.4 Special Community Presentations

EL CAJON FIRE DEPARTMENT FIRE AND SAFETY OPEN HOUSE

On October 11, 2010, the City participated in the El Cajon Fire Department "Fire and Safety Open House." This day-long, Saturday event included booths, educational information and formal and informal demonstrations and hands-on explanations on various activities that help prevent storm water pollution. It is estimated that approximately 3,000 visitors stopped by, many of them visiting the storm water booth as they passed through. A watershed model is used to demonstrate to children how rain water can pollute our water-ways.

CALIFORNIA STATE RETIREES GROUP

Water quality and water conservation information was given to about 30 members of the group. The presentation took place on August 25, 2010, and it regularly meets at the El Cajon Sizzler conference room.

CUYAMACA COLLEGE

The Storm Water Department gave a presentation at a Waste Water Science class at Cuyamaca College on October 28, 2010. The topic of the presentation had an emphasis on Federal, State and City of El Cajon Storm Water regulations. The class had approximately 40 students interested in the subject.

CAREER DAY AT JOHNSON ELEMENTARY SCHOOL

The Storm Water program provided residential BMP information and promotional items to elementary school students from Johnson Elementary School. The event took place on November 10, 2010 and was presented by City Storm Water/GIS staff. A total of approximately 150 students attended the Career Day presentation.

El CAJON LIBRARY MULTICULTURAL FIESTA

The Storm Water Program had a booth with information about the program and the watershed. While this event had an overall multicultural flavor, agencies were invited to attend and participate. The event took place at the El Cajon Library on April 2, 2011. Approximately 2,000 attendees participated in the event.

### 8.1.5 Regional- and Watershed-Related Outreach

The Residential Sources Workgroup focused its budget of $320,825 towards in-kind contribution to develop a Regional Residential Outreach Program that would address regional issues and would aid in a transition from a jurisdictional- to a watershed-related program approach. All Copermittees contribute funds towards the outreach workgroup to benefit a coordinated regional pollution prevention program. PY4 funds were used to develop and further implement a framework for the Regional Residential Outreach Program that would target audiences and provide information on barriers to, and benefits of, changes in behaviors. The City of El Cajon served on the committee during development of the RFP, and continued in PY4 as a member of the interagency Committee developing the Regional Residential Outreach Program.

The events coordinated by the Outreach Workgroup and paid for by all Copermittees.

### 8.1.6 Educational Materials Jurisdictional Distribution

The City developed brochures on the following subjects for distribution to the public:

- Residential Automotive Repair and Maintenance
- What You Can Do to Reduce Urban Runoff Pollution
- How Should I Wash My Car?
- Pollution Prevention Tips for Landscape & Gardening
- Sewer Spill Reference Guide
- Residential Repair, Repair and Remodeling – Part 1
- Residential Repair, Repair and Remodeling – Part 2

The City printed 38,000 copies of two semiannual newsletters containing a total of 7 articles and reaching an estimated 266,000 different readers. A summary of the topics covered in the 7 articles is included above and in Section 6, Residential Component, of this report. Storm water logos assist the City in getting the attention of citizens and businesses. Logos are a way to make a lasting impression with citizens and businesses. One storm water logo used by the City is shown above.

Through the course of PY4, a number of contacts were made to the public using brochures, fliers, mailers, radio and TV Ad's. Copies of brochures, fliers, and newsletter articles are contained in Appendix A.6.The following table indicates the types and quantity of outreach impressions.

**Table 5**

| Material Type | Number Distributed |
|---|---|
| Articles/Newsletters | 266,000 |
| Sewer Billing Inserts | 0 |
| Brochures | 330 |
| Over-the-Counter | 350 |
| **TOTAL** | **266,680** |

**Commercial**

Education of commercial facility owners and their employees occurs through the use of brochures oriented specifically to a type of activity. Written warnings are accompanied with a brochure on the activity as well as distribution of these brochures as outreach opportunities arise during business and construction site inspections, and complaint investigations. More one-on-one distributions were completed this year as the City expanded its role in inspections, complaint investigations and the daily routines of residential communities.

**Industrial**

Industrial facilities revise and refine their BMP requirements through the annual inspection process. The following are discussed and informational brochures are shared when necessary.

- Prevention of Non-Storm Water discharges
- Good Housekeeping Practices
- Vehicle and Equipment Washing, Repair, and Fueling
- Loading and Unloading of materials
- Solid and Hazardous Waste Management
- Spill Prevention and Response
- Building and grounds maintenance
- Parking Lot maintenance
- Storm drain system maintenance
- Private Sewer Lateral Maintenance

## 8.2 LEADERSHIP ACTIVITIES AND PARTNERSHIPS

The City's major roles for educating the community include:

- Provided direction and information to the local East County Construction Council on matters dealing with proper implementation of construction BMPs and LID.
- Continue in partnerships with the Cities of Santee, La Mesa, San Diego and County of San Diego in training staff on storm water management.
- Continued in a relationship with the El Cajon Community Development Corporation and their Community Ambassadors and Clean Team. The Community Ambassadors are employees that develop connections with businesses and the community that will promote a cleaner and safer city. The Clean Team are students of St. Madelines Sophie school and are happy to assist in various community tasks. The Clean Team picks up cigarette butts and other debris along the sidewalk and gutter that the City's street sweeper cannot collect.

- Served as the Co-Chair to the Regional Industrial/Commercial Workgroup.
- Collaborated with "I Love a Clean San Diego" to conduct storm drain stenciling, as needed.

## 8.3 MEASURING CHANGES IN KNOWLEDGE AND BEHAVIOR

A basic measurement of increased knowledge is a test of that knowledge. The City's test has been a steady flow of referrals and reports from municipal staff. The number of complaints and referrals from citizens and county hotline declined from last year. The Regional Outreach Program funded by this year's Copermittee Outreach budget will continue to develop a very detailed baseline of community awareness, and the barriers to, and the benefits of, changes in behavior.

## 8.4 IMPROVEMENTS AND REGULATORY COMMENTS

Changes to the City's Storm Water Program are initiated through gathered experience and regulatory comments. Improvements are commitments generated by the City to modify the activities in ways dictated by direct or indirect experience. Regulatory comments are requests or directives to address potential deficiencies in the JURMP.

### 8.4.1 Improvements

The following are proposed improvements for the next Permit Year (July 1, 2011 through June 30, 2012).

- Continue to coordinate and expand outreach and education efforts to local public schools.
- Coordinate outreach and public participation activities for Public Works Week.

### 8.4.2 Regulatory Comments

No regulatory comments have been received for the Education Component of the JURMP Annual Report for PY3.

# SECTION 9 Public Participation Component

**Introduction** **1**

**9.1 Regional Participation** **1**
9.1.1 Regional and Local Storm Water Hotlines 2

**9.2 Improvement and Regulatory Comments** **2**
9.2.1 Improvements 3
9.2.2 Regulatory Comments 3

# SECTION 9 PUBLIC PARTICIPATION

## INTRODUCTION

Public participation is an essential element of a successful Urban Runoff Management Program, but is more highly effective as a Watershed Component. Due to the nature of participation by organizations such as "I Love a Clean San Diego", watershed concepts are more easily introduced to participants from the entire watershed and not just a small segment of the population in one particular community. Wherever Copermittees' efforts can be combined to produce better results, it is a "win/win" situation for jurisdictions, the watershed and the communities they contain.

Educational efforts set the stage for getting the public involved with scheduled Storm Water Pollution Prevention events or interested in following the minimum required BMPs at home or business. Since prevention through familiarity and participation is the best solution to pollution, the public fulfills participation requirements by:

- Participating in storm drain stenciling,
- Reporting of discharge incidents using the City Manager's Office or the City and County hotline,
- Participating in events that collect or recycle hazardous waste and used oil , and
- Participating in local and regional cleanup events

## 9.1 REGIONAL PARTICIPATION

On a regional basis, the City of El Cajon is the lead for the San Diego River Watershed Workgroup and is a member of the Watershed Lead Committee group. The San Diego River Watershed workgroup has continued to work together, including stakeholders' input or participation when possible, taking advantage of relationships developed through the years since developing and completing the San Diego River Watershed Management Plan. The City of El Cajon chairs the San Diego River Watershed Copermittee meetings.

The City supported the "I Love a Clean San Diego" (ILACSD) Annual Creek to Bay Cleanup. Over 30 volunteers collected a total of 151 pounds of trash within the City. As in past years, the City of El Cajon also gave permission to ILACSD to stencil the message "No Dumping . . I Live Downstream" and a depiction of a dolphin or duck to the curb area adjacent to storm drain inlets within the City.

### 9.1.1 Regional and Local Storm Water Hotlines

The City and County have a Hotline that can be used by the public to report potential illicit discharges and connections. The Hotline phone number is provided in informational brochures to residents and businesses and is posted on the City Website. Public participation is an essential part of an illicit discharge elimination program. Many illicit discharges are one-time occurrences that may not be observed by City staff. Concerned citizens can help stop illicit discharges by reporting them to the City. The following provides the details of those Hotlines.

- ✓ **City of El Cajon Storm Water Hotline, (619) 441-1653**

The City Storm Water Hotline provides access Monday through Friday 8 a.m. – 5 p.m. and complainants are directed to the appropriate staff person. The City's hotline currently provides information in English and Spanish.

The City updates its Storm Water Web Page to contain the most recent brochures and reports. Documents are retrieved and opened using Abode Acrobat to open the posted PDF files. The Storm Water Web Page is "Quick Linked" from the City of El Cajon Home Page with links to a list of documents and other important websites.

- ✓ **County Storm Water Hotline, 1-888-846-0800**

The County storm water hotline is answered Monday through Friday, 8:00 a.m. – 5:00 p.m. and provides services in both English and Spanish and a voice mail message for 24-hour public access. Relevant complaints received through the County hotline are forwarded to the City Storm Water Protection Program.

## 9.2 IMPROVEMENT AND REGULATORY COMMENTS

Changes and improvements to the City's Storm Water Participation Program are initiated through gathered experience and regulatory comments. Improvements are commitments generated by the City to modify the participatory activities in ways dictated by direct or indirect experience. As the focus of the program shifts to multi-jurisdictional participation on a watershed level, changes and improvements to the storm water program will be necessary. Regulatory comments are requests or directives to address potential deficiencies in the JURMP.

### 9.2.1 Improvements

The following are proposed improvements for the next Permit Year.

- Continue collaboration with community volunteer groups.
- Continued participate in Watershed-wide efforts.
- Focus the City's efforts on programs and activities that will have an impact on the watershed, its health, the most recent pollutants of concern based on the 303(d) list and their sources
- Continue to participate in the El Cajon Fire Department Open House and other school activities to inform and engage children on water quality issues.

### 9.2.2 Regulatory Comments

No regulatory comments have been received for the Public Participation Component of the JURMP Annual Report for PY3.

# SECTION 10 FISCAL ANALYSIS

| | | |
|---|---|---|
| 10.1 | INTRODUCTION | 1 |
| 10.2 | GENERAL BUDGET INFORMATION | 1 |
| 10.3 | FISCAL ANALYSIS METHODS | 3 |
| 10.4 | FISCAL ANALYSIS RESULTS | 3 |
| 10.4.1 | EXPENDITURES | 3 |
| 10.4.2 | FUNDING SOURCES | 3 |

# SECTION 10 FISCAL ANALYSIS

## 10.1 INTRODUCTION

A fiscal analysis of the JURMP provides a vital assessment of resources for the current and upcoming Permit Years. This section of the report will incorporate guidance and standards developed collaboratively by the Copermittees and in accordance with the Municipal Permit. The City is reporting expenditures using summary tables developed by the Standardized Fiscal Analysis Method and Format adopted in February 2009 (summary tables and forms are included in Appendix A.10). The analysis attempts to identify adequate support and how resources are divided to support and fortify the JURMP, WURMP, and RURMP efforts.

In PY 2003-04, the City Storm Water staff developed a separate budget from other Public Works activities and sufficient to run the Storm Water Program. The Program continues to be adequately funded through the City's Sewer Fund. This funding source has been used since PY 2004-05 and will continue to be used for PY 2011-12.

## 10.2 GENERAL BUDGET INFORMATION

The following table shows actual expenditures from permit year 2003-04 through 2009-10 and the proposed 2010-11 budgets for the City's Urban Runoff Management Program.

| Item | 04-05 | 05-06 | 06-07 | 07-08 | 08-09 | 09-10 | Estimated Actual 10-11 | Proposed 11-12 |
|---|---|---|---|---|---|---|---|---|
| Salaries (including benefits) | 561,473 | 533,487 | 550,856 | 722,809 | 714,841 | 781,174 | 765,857 | 769,863 |
| | | | | | | | | |
| Materials, Services and Supplies | 222,836 | 183,639 | 254,876 | 397,292 | 423,543 | 421,181 | 363,908 | 697,910 |
| | | | | | | | | |
| Capital Outlay | 0 | 6,235 | 29,953 | 73,593 | | | 10,873 | 11,200 |
| | | | | | | | | |
| | | | | | | | | |
| **TOTAL** | **784,309** | **723,361** | **835,685** | **1,193,644** | **1,138,384** | **1,202,355** | **1,140,638** | **1,478,973** |

Budgets increased steadily from 2003-04 through 2006-07 under Municipal Permit Order 2001-001. The increase in PY 2007-08 was a result of allocating resources in anticipation of fulfilling requirements for Municipal Permit R9-2007-001. The budget to maintain the Storm Water Program in compliance with the Permit dropped slightly in PY 2008-09 but increased again in PY 2009-10. Based on estimates for PY 2010-11 and the proposed budget for PY 2011-12, the over –all budgets for the Storm Water Program continue to increase. A copy of the budget is located in Appendix A.10.

The City's NPDES Urban Runoff Management Program funding was sufficient to meet the JURMP requirements in PY 2010-11 and is projected to be sufficient to meet requirements in PY 2011-12. The City met its projected goal of continuously executing plans, procedures, and processes to implement JURMP requirements and assess the effectiveness of its programs.

Modifications to the program were made that resulted in an increase in expenditures in PY 2004-05 and a slight decrease in PY 2005-06. The budget for PY 2004-05 contained some capital expenditures that were started in PY 2002-03 and PY 2003-04 such as a Geographical Information System dataset for map generation and a trash debris fence to collect trash and debris in Forrester Creek before discharging to Santee. From PY 2005-06 through PY 2009-10 there has been a steady increase in the budget to support the Storm Water Program. Overall, a general increasing trend of funds has been allocated from PY 2002-03 through the proposed PY 2011-12 to sustain a viable storm water program.

## 10.3 FISCAL ANALYSIS METHODS

The Standardized Fiscal Analysis Methods and Format (Fiscal Analysis Methods) were collaboratively developed and adopted by the Copermittees in January 2009 in accordance with sections G, J. 1 .a(3)(k), and J. 1 .c(1 )(d) of NPDES Order No. R9-2007-0001. The Fiscal Analysis Methods document was submitted to the San Diego RWQCB by January 31, 2009, as Attachment 1 of the Regional Urban Runoff Management Plan (RURMP) Annual Report for 2008-2009.

## 10.4 FISCAL ANALYSIS RESULTS

### 10.4.1 EXPENDITURES

The budget for PY 2010-11 included a Storm Water Program Manager, 1 part-time senior engineering technician, 1 assistant engineer, 1 GIS technician, 1 compliance officer, and 1 part-time Engineering Intern. The personnel for PY2011-12 will remain unchanged with the same number and job classification as in the reporting year of this annual report. The City also has an open contract with two consultants to provide as-needed services to ensure the City meets its JURMP implementation requirements.

The City is using forms and tables developed by the new Fiscal Analysis Method for reporting (attached in Appendix A.10). It is important to note that while the Expenditure Summary table in Appendix A.10 shows jurisdictional expenditures per various permit components, it may not reflect all expenditures. Further modifications to the City's accounting and expenditure tracking will continue to be made in the future to better track expenditures for each jurisdictional component. Program components expenditures for development planning, construction, municipal, industrial/commercial, residential, and special investigations were difficult to dissect.

### 10.4.2 FUNDING SOURCES

In the long-term, funding for the Storm Water Program will continue to be even a bigger question with necessary increases required to maintain permit compliance. The City is constantly challenged with doing more with less after a continual decline in general fund budgets. For PY2010-11, the City completed all inspections, as well as other requirements of permit R9-2007-0001, with existing staff heavily complemented by consultants.

Working efficiently is the goal of the jurisdictional urban runoff management program. Completing onsite inspections, tracking enforcement actions, and complaint/referral information allows the City to reduce the amount of time and paper to complete significant portions of the Municipal, Industrial, Commercial, Construction, and Land Use Planning JURMP Components.

For WURMP activities, the City will continue to coordinate with the other San Diego River Watershed Copermittees to complete watershed water quality activities and education activities.

Working together eliminates duplicative efforts and enhances the effect across a wider range of people and geographical area. The City manages a contract with a consultant to assist with the Watershed program and a share cost agreement has been in effect for a few years.

No regulatory comments were received during PY2010-11 for the City's Fiscal Analysis.

## SECTION 11 PROGRAM ASSESSMENT

**11.1 INTRODUCTION 2**

**11.2 EFFECTIVENESS ASSESSMENT RESULTS 3**
11.2.1 Level 1 3
11.2.2 Level 2 and 3 3
11.2.3 Level 4 4

**11.3 ASSESSMENT OF PROGRAM MEASURES 4**
11.3.1 Direct Measures of Program Activities 4
a. Street Sweeping 5
b. MS4 Cleaning 5
c. Recycling of Household/Commercial Waste and Oil Recycling 5
d. Household Hazardous Waste Collection 5
11.3.2 Indirect Measures 6
a. Complaints and Referrals 6
b. Staff Training 6
c. Outreach 7
11.3.3 Program Activities and Water Quality 7

**11.4 LONG-TERM ASSESSMENT 7**

**11.5 PROGRAM ASSESSMENT SUMMARY 18**

**11.6 IMPROVEMENTS AND REGULATORY COMMENTS 19**

# SECTION 11 PROGRAM ASSESSMENT

## 11.1 INTRODUCTION

The City began using the standardized program effectiveness assessment soon after it was developed by the Copermittees during the previous permit cycle. The City also participated in regional efforts to develop a standardized assessment approach and associated metrics from summer 2007 through winter 2008. The original goal of that group was to produce assessment work products that all Copermittees could use in their JURMPs. Due to a variety of complications on a regional level, that process could not be completed prior to the submittal of the City's JURMP, so the City prepared its own effectiveness assessment approach and measures.

Since the submittal of the JURMP in March 2008, no significant progress has been made on regionally standardized approaches to program effectiveness assessment. It is likely that the Copermittees' Fiscal, Reporting, and Assessment Workgroup will revisit the issue of standardized assessment metrics and procedures in the near future. The City anticipates participating in the process of developing such regional standards and incorporating work products produced into its own local program effectiveness assessment system. Implementation of the City's JURMP is intended to reduce discharges of urban runoff related pollution to the MEP. The City regularly evaluates its program to make it as effective as possible. The overall structure of the City's storm water program is composed of three primary components:

- Program Planning
- Program Implementation
- Effectiveness Assessment

The process typically proceeds from planning to implementation to assessment, although in practice all three may be in progress at the same time. The initial step is program planning, which requires identifying potential pollutant sources, establishing BMP requirements, and establishing targeted outcomes and ways to measure those outcomes. Program implementation is assessed each year using the methods developed in the program planning stage and reported in JURMP annual reports. The conclusions from these assessments are used during the next round of program planning to incorporate improvements to the program and refine the assessment technique.

The City has identified a variety of metrics to assess progress toward targeted outcomes. At the end of each reporting year, the City uses selected metrics to assess the effectiveness of its program implementation. Example metrics were provided in Section 13 of the City's 2008 JURMP. The effectiveness assessment approach developed by the Copermittees during the last permit cycle includes six different levels of targeted outcomes. Each successive level represents a step up from more easily measured, activity-based outcomes to more difficult to measure, quality-based outcomes. The levels are listed below.

Level 1: Compliance with Activity-Based Permit Requirements
Level 2: Changes in Knowledge/Awareness
Level 3: Behavioral Change/BMP Implementation
Level 4: Load Reductions
Level 5: Changes in Discharge Quality
Level 6: Changes in Receiving Water Quality

## 11.2 EFFECTIVENESS ASSESSMENT RESULTS

The new Municipal Permit requires the City to assess the effectiveness of each significant activity for each program component, for each program component as a whole, and for the storm water program as a whole. Level 1 through Level 4 outcomes are discussed in the text below. At this time the City is not able to assess Level 5 or Level 6 outcomes for individual program activities or individual programs. As has been noted in the last released CASQA effectiveness assessment guidance, methods for integrated assessment—assessment that combines both monitoring data and programmatic data—are still under development at regional and statewide levels (CASQA, 2007).

### 11.2.1 Level 1

Level 1 is documenting activities. Sections 1 through 10 of this PY4 Annual Report list activities, storm water controls, and when possible the quantity of pollutants collected and diverted from entering the storm drain system, viewed as a reduction in pollution-containing materials potentially available for discharge into the storm drain system. Existing and New Development, Construction, and Illicit Discharge Illegal Connection are the areas where quantifiable amounts of pollutants are reported as collected and removed from entering the storm drain system. By completing collection activities, the City maintains compliance with the Municipal Permit requirements.

### 11.2.2 Level 2 and 3

Refer to tables 11-3 through 11-8 at the end of this section for discussions of Level 2 and Level 3 outcomes for significant activities within each program component. Note that only a Level 1 assessment applies to fiscal analysis, so no table for fiscal analysis is included.

### 11.2.3 Level 4

The primary goal of BMP implementation is to reduce the loading of pollutants to urban and storm water discharges. Pollutant load estimation is the first direct characterization of water quality through JURMP activities. Regionally, San Diego River Watershed receiving water quality results are from the major outfall to the Pacific Ocean. In the future, Watershed monitoring at the jurisdictional lines will at least assign responsibility of pollutant loads, but will not determine a reduction in pollutants. The best approach is to make sure wet weather and dry weather results do not exceed action levels.

The tables at the end of this section provide information for Level 4 assessments where feasible. Assessment of Level 4 outcomes is feasible for some programs that directly measure the amounts of pollutant removal, such as MS4 cleaning. For most other programs reliable load estimation methods have not yet been developed.

## 11.3 ASSESSMENT OF PROGRAM MEASURES

Basic assessment of program measures begins with City-based questions. First, starting with what is known, then shifting to what is wished to be learned, and finally what was learned. During the first step, the "what is known" are the measurements compiled from each of the JURMP components. Measurements such as the amount of material removed during street sweeping or cleaning of catch basins are direct measurements of pollution diverted from entering waterways. At some point it may become appropriate to compare measurements to previous years, average measurements, or assess trends to assist with potential pollutant loads removed from a particular origin. Dry weather monitoring results are direct measurements of pollutants in urban runoff, but only partially address measurements of receiving water quality.

Sources, selected BMPs, measurements, and other indicators, identified in the previous Sections of this Annual Report for each of the Existing and New Development Components, report completed activities and achieved goals as required by Order No. R9-2007-0001 and the City's updated JURMP. In summary, the City completed program implementation as designed in the JURMP and is incompliance with the activity-based permit requirements.

### 11.3.1 Direct Measures of Program Activities

For many years, the City has tracked efforts from various collection agencies with four types of direct measures, as follows:

- Street Sweeping,
- MS4 Cleaning/Maintenance,
- Oil Recycling, and
- Household Hazardous Waste Collection

In general, the City tracks these measures because they provide an important indication of the types and amounts of materials and wastes that are diverted from the MS4 through various means. Street Sweeping and MS4 Cleaning directly removes materials from the pathway of rainwater and urban runoff. Oil Recycling re-routes used oil from illegal disposal to refineries where it is ultimately reused. The Household Hazardous Waste program collects wastes that may otherwise be improperly disposed, potentially to the MS4.

### a. Street Sweeping

The Department of Public Works collected an estimated 3,746 cubic yards of debris during its street sweeping activities (17,019 miles of curbed streets). This year, the City's street sweeping efforts have been consistent with previous years. Were it not for these efforts, the debris collected would otherwise be swept away during rain events. Collection provides important long-term water quality benefits.

### b. MS4 Cleaning

In PY2010-11, City's storm drains were cleaned by the Department of Public Works resulting in the removal and proper disposal of 2,740 cubic yards of material from the storm drain system. As a whole, the City's effort remained the same as last year.

### c. Recycling of Household/Commercial Waste and Oil Recycling

Recycling in El Cajon has good participation, but could always do better when the numbers are compared for recycled materials (18,280 tons) and waste (74,078 tons). Trends in waste collection will continue to be tracked. The 18,281 tons of other recyclables included - amongst other items - newspapers, glass, plastic, tin, and aluminum.

Oil recycling is tracked by independent recyclers that are certified collection centers (e.g. Jiffy Lube) and Waste Management for curbside pickup of used oil. A grand total of 12,709 gallons of used oil and 1,783 used oil filters were collected from within the City. A total of 434 gallons of used oil and 277 used oil filters were collected from residential areas. While a total of 12,275 gallons of used oil and 1,506 used oil filters were collected from certified collection centers located within the City of El Cajon's jurisdiction.

### d. Household Hazardous Waste Collection

Waste Management of El Cajon collects the Household Hazard Waste (HHW) for the City's jurisdiction. In PY2010-11 an estimated 489,619 pounds of household hazardous waste were collected, compared to an estimated 364,171 pounds in PY2010-09, d; 344,146 pounds in PY2008-09, 268,323 pounds collected in PY2007-08; 236,890 pounds collected in PY2006-07; 198, 015 pounds in PY2005-06; and an estimated 277,000 pounds of household hazardous waste/recyclables were collected at 19 events in PY2004-05. As a whole, the City's effectiveness in collecting HHW from its residents has increased consistently and significantly over the years.

### 11.3.2 Indirect Measures

In most instances, changes to receiving water quality cannot be directly compared to collection activities. However, many indirect measures have value in tracking the effectiveness of specific program activities, and may have additional utility in assessing long-term water quality changes. Many of these measures are reported and discussed throughout this Annual Report. To track and evaluate the effectiveness of its program implementation over time, the City has compiled summary statistics for several of measures.

**Table 11.1**

| Indirect Measure | | 2010-2011 |
|---|---|---|
| **Complaints** | Total Number received | 77 |
| | Number of Referrals from Other Departments | 37 |
| | Number of Enforcement Actions | 17 |
| **Staff Training** | City Staff Trained (In Storm Water Management) | 9 |
| **Outreach** | Outreach events conducted | 3 |
| | Number of Presentations | 2 |
| | Audience @ presentations | 70 |

#### a. Complaints and Referrals

In this reporting period, the City received a lower number of total complaints than last year from other City departments, citizen calls, and county referrals. The City and County hotlines are described in Section 6 (Residential Component). As previously discussed, this trend underscores the effectiveness of the City's outreach and staff training efforts. As in previous years, it is believed that more of the City's citizens and staff are aware of storm water violations and understand what to do when water quality concerns were observed.

#### b. Staff Training

Levels of staff training during this reporting period were expanded to those of previous years. Although the City has made an important commitment to staff training under the previous and current Permit (see JURMP Section 8, Education), the consistency of these numbers also demonstrates the City's past commitment to training its staff. Training of staff with implementation responsibilities is not a new part of the City's storm water program. However, the scope and breadth of these and other programs has significantly increased.

**c. Outreach**

This year, the City conducted a number of one-on-one discussions at the Public Works front counter with building and planning applicants and with commercial businesses and industrial facilities during inspections and complaint follow-ups. Together, these increased face-to-face conversations demonstrate that the City is effectively implementing its outreach and education programs; details are provided in Section 8 (Education). The City also sent notifications to various types of mobile businesses for newly required BMPs.

### 11.3.3 Program Activities and Water Quality

Presenting a direct connection between pollutant load reduction and Storm Water Pollution Prevention Program activities continues to slowly move forward and is very much under development. Copermittees have created a Framework document containing the six (6) Levels of Assessment. The PY2002-03 Annual Report addressed Levels 1 through 4. However, forecasting only generates numbers that could not be supported by calculation or program actions. For PY2010-11, the City continued with the slightly modified approach used for PY2008-09, which brings the assessment much closer to connecting activities with water quality. Amounts of pollutant-containing materials prevented from entering the storm drain system provides solid numbers while adding percentages of facilities known (through inspection) to be implementing minimum required BMPs and reduces the estimation factor.

## 11.4 LONG-TERM ASSESSMENT

The Annual Assessment indicates the City is meeting the requirements specified in their JURMP and collecting data associated with those program activities. At some point, a connection between activity completed and pollutant load in receiving waters will become a reality.

A Long-Term Assessment must answer key questions to guide future activities and build into the current program, the additional reporting requirements in order to connect program activities with actual improvement in receiving water quality. The Long-Term Effectiveness Assessment (LTEA) is conducted once every five years (permit renewal cycle) as changes to permits may change approaches and programs. Copermittees are preparing to begin work on this permit cycle's LTEA.

**Table 11.2**

| Program Activity | Annual Questions | Permit Questions (Every 5th year) |
|---|---|---|
| *Water Quality Assessment* | What are the high priority quality problems and where do they occur?<br><br>What constituent(s) is(are) causing the problems? | What are the changes to discharge and receiving water quality in my Watershed? |
| *Program Planning* | What are the priority sources of | Are the current programs |

| Program Activity | Annual Questions | Permit Questions (Every 5th year) |
|---|---|---|
| | pollutants?<br>What BMPs are needed to control these pollutants?<br>What are the targeted outcomes for the BMP Implementation?<br>What are the projected Load Reductions from these implemented BMPs? | providing the information necessary to produce targeted outcomes? |
| *Program Assessment* | Were targeted outcomes achieved?<br>What BMPs should be changed or should other BMPs added?<br>Are costs associated with implementation feasible? | Is the cost worth the water quality changes? |
| *Integrated Assessment* | How well are the parts of the program working together?<br>What other links can be made? | What other relationships between activities and water quality are evident? |

Answers to the above questions come from further analysis of each existing component area. Tables of estimated pollutant loads removed are provided below. Areas where pollutant removal rates are high will be the areas to focus program efforts. Modifications to JURMP activities will be the result of this assessment.

Level 4 Pollutant Load Reductions are provided in the following tables for existing development. Estimates of average load reduction per event was the most difficult to find support evidence. Using the best knowledge available, the magnitude of total pollutants reduced is the most powerful in assessing the degree of success for the City's storm water program.

**LEVEL 4 Assessment**

Each of the following tables provides an estimate (supported with empirical data) for the amount of pollutant-containing materials prevented from entering the MS4 due to the activities of the Storm Water Pollution Prevention Program implemented in the City of El Cajon. As there is only one receiving water body in El Cajon, Forester Creek impairments were used as the constituents of concern when estimating possible amounts of pollutant-containing material prevented or a reduction in the amount of pollutant that could have discharged into Forester Creek. Only Existing Components were assessed through Level 4 as the most qualitative and quantitative information is available in these areas. The following paragraphs discuss assumptions incorporated into calculating the amounts provided as "Total" for each Existing Component.

The City of El Cajon installed a trash and debris fence in PY 2005-06 to capture trash from creek flows. Trash was added to the assessment due to the Forester Creek Improvement Project in Santee.

**General Assumptions**

There are a number of general assumptions within each table. Of most importance is the understanding that the amount (estimated or actual) removed or eliminated from discharging into the storm drain system is the amount of the material or liquid and does not equate to actual pollutant loads reduced. Secondly, the margin of error in these values is very high as most numbers were calculated using available information. Data quality is not necessarily a concern. This is an effort in determining where best to place education efforts and focus each program component.

**Municipal**

At 20 municipal maintained areas (parks, City Hall, recreation centers), staff cleaned area of pet waste, three times per year. Collection at each area was approximately one pound of pet waste. Pet waste does not equate to one pound of bacteria.

The City maintained 100% of laterals at approximately 24 buildings. No sewer overflows were experienced at City facilities. Pounds were estimated using 10 pounds (no factual basis other than one gallon of water equals 8 pounds) equaling one gallon of sewage. Private laterals not cleaned annually may experience stoppage depending on usage and care. Approximate gallons potentially dischargeable is 2 gallons times 10 equals 20 pounds time 24 buildings equals 480 pounds. The potential for error with this calculation is high.

Total dissolved solids from Municipal areas originate mainly from fertilizers applied by staff. There is an overall reduction in use of fertilizers, use of less hazardous applications and water conservation efforts that reduces overspray. All these activities reduce the amount of TDS available for discharge to the storm drain system.

Municipal activities do not use materials or generate waste that would increase pH and as such is listed as “not applicable”.

Trash reduction at City facilities is a consistent effort with approximately 80 to 90% of the 400 City employees ensuring trash is placed in appropriate containers. One pound of trash per year per person is estimated. This amount may be estimated too high.

One park within the City, Wells Park, has an area designated as a “Dog Park” where citizens can take their dogs to walk, bags to collect pet waste are provided for cleaning after their dogs. The Parks Department collected approximately 15,600 pounds of pet waste during PY2010-11.

The total calculated amounts of pollution prevented from entering the storm drain system are possibly estimated high and do not fully equate to improved water quality.

**Industrial**

There were 129 industrial facilities that were inspected that are conducting industrial activities within the City of El Cajon. It is estimated that 100% of these facilities are maintaining their private laterals and do not spill portable container fluids. This information was noted during industrial inspections. If each facility is preventing one overflow of 5 gallons times 10 pounds,

then 50 pounds times 129 facilities equals 6,450 pounds of bacteria- containing materials did not discharge to the storm drain system.

Total dissolved solids from Industrial areas originate mainly from fertilizers applied by contracted staff to landscaped areas (usually a very small area compared to the total industrial site). There is an overall reduction in use of fertilizers, use of less hazardous applications and water conservation effort that reduces overspray. All activities reduce the amount of TDS available for discharge to the storm drain system.

Based on inspections and enforcement of the industrial community, pH-affecting substances are reduced from entering the storm drain system through the implementation of BMPs as required by the General Industrial Permit. Amounts estimated have no factual basis.

Trash reduction at Industrial facilities is based on industrial inspections, although no factual amounts are readily available.

Total amounts do not equate to reduction in receiving water body loads, as no empirical data is available. However, amounts reduced appear reasonable, based on observations during inspections and the two enforcement actions taken at industrial facilities during this Permit Year.

**Commercial**

There were at least 61 commercial facilities conducting activities with the high potential to discharge bacteria-containing liquids, mainly eating and drinking establishments. Of those facilities, it is estimated that 50% of these facilities are maintaining their private laterals and do not spill portable container fluids. This information was noted during commercial inspections. If each facility is preventing one overflow of 2 gallons times 10 pounds, then 20 pounds times 30.5 facilities equals 610 pounds of bacteria- containing materials that did not discharge to the storm drain system. This may be estimated high.

Total dissolved solids from 61 commercial facilities originate mainly from fertilizers applied by contracted staff or lease company personnel to landscaped areas (usually a very small area compared to the total area of the commercial site). There is an overall reduction in use of fertilizers, use of less hazardous applications and water conservation efforts that reduce irrigation overspray. All these activities also reduce the amount of TDS available for discharge to the storm drain system. Commercial activities observed during inspections do not use materials or generate waste that would increase pH and as such is listed as “not applicable”.

Trash reduction at Commercial facilities is based on inspections, although no factual amounts are readily available.

Total amounts do not equate to reduction in receiving water body loads, as no empirical data is available. However, amounts reduced appear reasonable, based on observations during inspections.

**Residential**

Bacteria source reductions for dog owners, homeowners, and Recreational Vehicles (RVs) is purely speculation, although the numbers of potential targets is accurate, based on circulated printed educational materials and educational booths that the City has conducted for this reporting year. Enforcement actions, however, indicate few reported sewage overflows from residential areas. Amounts calculated are estimated too high and should be adjusted with more factual information in future Permit Years.

Total Dissolved Solid and Trash reductions are also speculation based on information materials circulated throughout the City in the Spring and Fall newsletters. Amounts estimated are reasonable. Based on City observations, only a few neighborhoods have trash problems. These areas will continue to be targeted in future Permit Years.

* = Total amounts calculated appear reasonable with the exception of bacterial-containing materials. Factual information is not readily available for this element and estimations are high.

**New Development**

Only trash and TDS were assessed for New Development as a small-scale post-construction BMP data assessment is not yet available. Speculations on the amount of trash are associated with post-construction BMPs provided, although no corroborating evidence could be found. Numbers calculated appear reasonable.

**Construction**

Most of the pollutant reductions at construction sites involve sediment. Based on the inspections completed, bacteria from Port-o-lets, pH from concrete washout, and trash rarely require a corrective action. Estimations of pollutant-containing material prevented are low and may be adjusted.

## Pollutant Reduction Estimation Worksheets for Forrester Creek 303(d) Listed Pollutants (PY2010-2011)

## 11.5 PROGRAM ASSESSMENT SUMMARY

Estimated Pollutant Load Tables indicate that Residential Areas continue to have the greatest potential for pollutant removal activities. Nearly three to seven times higher than the other areas, the residential community has the largest potential for reducing pollutants from entering the City's receiving waters.

Each component has been addressed as follows for strengths and improvements. Effective is viewed as meeting the Municipal Permit implementation and reporting requirements.

| Component | Effective | Strength | Improvement |
|---|---|---|---|
| Municipal | Yes | Education (Training) | Continue to coordinate with other watershed Cities, and whenever possible with stakeholders. |
| Industrial | Yes | Assessment of BMP Implementation | Continue to refine Inspection Form and make changes accordingly. |
| Commercial | Yes | Assessment of BMP Implementation | Continue to contact mobile businesses on the required BMPs that need to be implemented. |
| Residential | Yes* | Outreach and Education | Contact property owners directly by targeting specific problem areas. Conduct drive-abouts at problem Residential areas. |
| New and ReDevelopment | Yes | Process | Continue to implement Permit requirements under the updated regional model SUSMP and HMP. |
| Construction | Yes | Inspections | Continue to work with inactive sites to maintain BMPs in good condition when needed. |
| Illegal Discharge Detection and Elimination | Yes | Monitoring | Increase frequency of monitoring points. |
| Education | Yes | Team Efforts | Continue to target elementary and middle school children. |
| Public Participation | Yes | Team Efforts | Continue efforts to team with Region whenever possible. |

* Face-to-face contact is effective but slow moving.

## 11.6 IMPROVEMENTS AND REGULATORY COMMENTS

Improvements are discussed throughout the Program Assessment section and are summarized above. No regulatory comments were received during PY2009-10 for the City's Assessment and Jurisdictional URMP Effectiveness Component.

## SECTION 12 SPECIAL INVESTIGATIONS

12.1 FORRESTER CREEK IMPACT STUDY 1

# SECTION 12 SPECIAL INVESTIGATIONS

## 12.1 FORRESTER CREEK IMPACT STUDY

For the seventh year, the City conducted an upstream/downstream monitoring of dry weather constituents of concern in Forrester Creek. The monitoring was conducted on August 8, 2011 to assess the relative amount of pollutants discharged within the jurisdictional boundaries of El Cajon into Forrester Creek. The upstream location is at the County boundary, specifically at Greenfield Avenue and I-8 west onramp intersection, behind southeast corner of 1699 East Main Street. Flow at the upstream sample was approximately three (3) gallons per minute. During rain events, flow from Crest and other unincorporated County areas discharge directly into the City of El Cajon without treatment. To date, no analytical data have been collected for wet weather flows.

Table 1

| Site ID | Date | Flow (gpm) | Temp (°C) | pH | Turbidity (NTU) | Conductivity (mS/cm) | Nitrate (mg/L $NO_3$-N) |
|---|---|---|---|---|---|---|---|
| Upstream | 8/8/2011 | 3 | 24.7 | 7.56 | 2.31 | 1.69 | 8.49 |
| Downstream* | 8/8/2011 | 83 | 30.6 | 8.62 | 7.70 | 2.55 | 3.91 |

Table 2

| Site | Date | Total Hardness (mg/L$CaCO_3$) | Oil & Grease (mg/L) | Total Coliform (MPN/100 mL) | Fecal Coliform (MPN/100 mlL) | Enterococcus (MPN/100 mL) | Total Dissolved Solids (mg/L) | Total Organic Carbon (mg/L) |
|---|---|---|---|---|---|---|---|---|
| Upstream | 8/8/2011 | 343 | nd | 800 | 110 | 400 | 1,160 | nd |
| Downstream* | 8/8/2011 | 434 | nd | 500 | 20 | 400 | 1,720 | 2.2 |

nd = not detected

The following is a summary of the upstream/downstream results:

- Nitrates were detected at 8.49 mg/L upstream, and 3.91 mg/L downstream
- Orthophosphate upstream was 0.04 mg/L, and 0.02 mg/L downstream
- Detections of ammonia upstream was 0.19 mg/L, downstream was 0.27 mg/L
- Surfactants were detected at 0.25 mg/L upstream, and 0.25 mg/L downstream

**Notable Results and Reasoning**

Even though there was an increase in flow of 80 gallons per minute from upstream to downstream, the overall downstream flows have steadily decreased for the past five years. Concentrations of a couple of constituents have also decreased from upstream to downstream; this includes nitrate, orthophosphate, total coliform, and fecal coliform bacteria. Increase in the concentrations (from upstream to downstream) of pH, total hardness, turbidity, conductivity, ammonia, and dissolved oxygen.

The City does not have an explanation at this time for the increase in flows or the increase in dry weather flow contributions within City boundaries. The City will continue to conduct further dry weather investigations to develop enough data to establish baseline conditions (for current channel configurations) and to develop priorities for more detailed investigations for pollutant and dry weather flow sources. The City will also continue to conduct outreach to the community to reduce over-irrigation as an attempt to reduce dry weather flows. The 2011 City of El Cajon Forester Creek Impact Study contains more detailed information about the results of this investigation. A copy of the study is included in Appendix A.12 of this report.

# SECTION 13 NON-EMERGENCY FIRE FIGHTING FLOWS

INTRODUCTION 1

13.1 BEST MANAGEMENT PRACTICES 1

13.2 EDUCATIONAL METHODS 2

13.3 IMPROVEMENTS AND REGULATORY COMMENTS 2

# SECTION 13 NON-EMERGENCY FIRE FIGHTING

## Introduction

Emergency fire fighting flows (i.e., flows necessary for the protection of life or property) do not require BMPs and need not be prohibited. BMPs and educational methods are used to reduce the discharge of pollutants to the MEP.

## 13.1 BEST MANAGEMENT PRACTICES

The City has already developed and implemented a program to reduce pollutants from non-emergency fire fighting flows, in accordance with Section B.3. of the Permit. BMPs were implemented when conducting the following activities:

- Regular Maintenance of Fire and Emergency Vehicles and Equipment
- Training Exercises
- Facilities Maintenance
- Post-Emergency Rehabilitation of Response Equipment

These activities are conducted in a way to either minimize or eliminate the discharge of pollutants to the MS4. Detailed descriptions of BMPs are given for each activity below:

**Regular Maintenance of Fire and Emergency Vehicles and Equipment**

- Vehicles and equipment are cleaned where runoff is directed either to the sanitary sewer system or to a drain with an oil/water separator system.
- Vehicles and equipment are cleaned where runoff ponds and evaporates and/or where runoff filters through landscaped areas.
- Used-oil, hydraulic fluids, and antifreeze are stored in containers for recycling or disposed as hazardous waste.
- Spill kits are available to promptly cleanup and contain leaking or spilled vehicle fluids.
- Use of soaps, cleaners, and detergents are minimized, and general cleaning solutions are disposed of into the sanitary sewer system.
- Caustics, flammables, and solvents are contained and disposed of properly as hazardous waste.

**Training Exercises**

- Water used in training exercises is directed to landscaped areas whenever possible, and runoff from the training exercises is not allowed to discharge to the MS4.
- Live fire training activities are pre-planned to allow integration of barriers to off-site runoff that could contribute to non-storm water discharges or conducted at a designated training area that drains to the sanitary sewer via a multi-compartment separator.

**Facilities Maintenance**

- Impervious areas such as apparatus floors, maintenance bays, driveways, patios, and walkways are swept to remove debris. Debris is placed in the trash. Interior floors are

mopped as necessary, and the wastewater is discharged into the sanitary sewer system or onto landscaped areas.

- Landscaped areas are maintained as required to reduce introduction of leaves and other landscape waste into the MS4.
- Irrigation systems are monitored and maintained as required to reduce irrigation water from going off-site.
- Spills are cleaned up using spill kits provided at the work site, and disposal of spilled material are conducted in accordance with applicable regulations.
- Spills that require a cleanup beyond the ability of the on-site employees are reported to the City Department of Public Works for assistance with appropriate resources.
- Maintenance and repair of structures are conducted using methods that do not contribute pollutants to the MS4.
- General non-hazardous cleaning solutions are disposed of in a utility sink that drains into the sanitary sewer system.

**Post-Emergency Rehabilitation of Response Equipment**

Tools, fire hoses, ladders, and other equipment used at the scene of an emergency are restored to a response-ready state in a manner that does not delay the ability of the apparatus to be available for another emergency response. The use of water that could contribute to storm water discharges may be used unless another practical and immediately available method is identified.

## 13.2 EDUCATIONAL METHODS

The Storm Water Division provided informal training to Fire Department Personnel. In PY2010-11 the Storm Water group cooperated with the Fire Department on outreach materials conveying how best to conduct weed abatement prior to the fire season staying in compliance with storm water regulations.

## 13.3 IMPROVEMENTS AND REGULATORY COMMENTS

Improvements from PY3 experience include:

- Continue to coordinate with the Fire Department on outreach materials.
- Expanded maintenance Best Management Practices for fire fighting equipment and facilities.

Regulatory comments are not applicable to this portion of the JURMP update. Non-Emergency Fire Fighting is a new component of the annual update.

SECTION 14 JURMP REVISIONS

14.1 INTRODUCTION 1

# SECTION 14 JURMP REVISIONS

## 14.1 INTRODUCTION

No changes to the JURMP occurred during PY2010-11.

# Section 15 Conclusions and Recommendations

**Introduction** **1**

**15.1 Conclusions** **1**

Table 1 – Challenges and Associated Strategies/Actions 3

**15.2 Recommendations** **4**

# SECTION 15 CONCLUSIONS & RECOMMENDATIONS

## INTRODUCTION

To conclude PY4 and recommend changes for PY5, this Section focuses on the challenges overcome this last year that will help eliminate inaccuracy or uncertainty for subsequent permit years. To summarize, the City:

- Continued implementation of the BMP-based inspections by focusing efforts on ensuring full implementation of appropriate BMPs at all high priority commercial, industrial, construction and municipal facilities.
- Continue to incorporate and contact storm water pollution prevention requirements for mobile businesses using regional mobile business database.
- Expanded public education efforts by targeting elementary and junior high school student population by conducting presentations; and continued participation in the Fire Department/Safety Open House, as well as other events in which a pollution prevention booth was placed, and providing information to the mass public through the City newsletter.
- Continued efforts towards a Watershed-based program by conducting the seventh upstream/downstream water quality assessment of Forrester Creek.
- Refined the City's ability to track cumulative complaints, inspections, violations, and enforcement actions for accuracy and completeness.
- Opened contract for on-call analytical testing services to conduct follow-up responses to complaints, spills, and targeted investigations to identify potential pollutant source points.
- Maintains a contract with a consultant to assist with the review of storm water plans and requirements for proposed development and redevelopment projects.

## 15.1 CONCLUSIONS

A number of conclusions resulted from compiling the Annual Report information as follows:

The City continues to fulfill the requirements of Order No. R9-2007-001. The actions taken by the City to comply with these requirements are fully described in Sections 1 through 14 (particularly Section 11) of this Annual Report. The City will continue to meet the activity-based compliance requirements in future program years.

The City's focus on BMP implementation at high priority commercial and industrial facilities and at construction sites will reduce or prevent discharges of pollutants from those activities and sites. Once the City can reasonably assure that those priority activities are not discharging

pollutants, the City will be able to focus more effort on identifying and eliminating other (unknown, unidentified) sources of pollutants that continue to impact water quality.

The City's program must continue to move forward, from an emphasis on the activity-based compliance actions to water-quality-based activities that will help the City achieve the goal of reducing discharges of pollutants and restoring the quality of the receiving waters. These activities include collecting, evaluating and incorporating sufficient water quality data to set priorities, better identify problem areas, and to be able to demonstrate reductions in pollutants and improvements in water quality.

Effectively integrating jurisdictional into watershed programs will be a continued focus for the future. The Permit establishes important obligations at both jurisdictional and watershed levels. To accomplish this transition and integration, the City continues to meet with San Diego River Watershed Jurisdictions to provide some direction concerning urban runoff issues. Taking advantage of successes at other Cities strengthens individual and watershed programs.

The City must still address a number of unresolved data and information collection issues. Monitoring data are especially important to quantify pollutant loads within the jurisdiction of El Cajon. Additional dry weather monitoring stations may be helpful to better identify illegal discharge sources. The need for additional data and information must be carefully balanced with the costs of obtaining those items.

The solid base of protocols and procedures produced in previous permit years continue into the current reporting period with refinement supported by eight years of experience in program implementation. An unending challenge is changing the behavior of the approximately 99,000 residents and 2,000 businesses and their views of urban runoff pollution. The City is predominantly a community of rental units, which identifies the population as more transient than the typical single-family residential population. This outreach and education challenge will be changing as more rental complexes may convert into common living complexes with home ownership. The following table summaries the City's storm water management strategy based on the challenges presented during the current reporting period, 2010-11.

**Table 1 – Challenges and Associated Strategies/Actions**

| Challenges | Strategies / Actions |
|---|---|
| Implementing the 14 components simultaneously | 1. Prioritize implementation to maximize use of personnel, supplies, equipment, and budget.<br>2. Develop budget for PY5 to add jurisdictional and watershed outreach efforts to educate about potential TMDLs, public participation events, additional outreach materials, GIS data development, staff training, and treatment controls for trash and debris. |
| Adequate Staffing and Equipment | Train as many City staff in storm water pollution prevention and Best Management Practices. |
| Incorporate Storm Water Concepts and Requirements at the Planning Stage | Conduct training and work closely with Community Development staff to generate a Storm Water Information Packet to distribute to applicants. |
| Transition Jurisdictional Programs and activities into Watershed Activities. | 1. Meet with WURMP Copermittees for implementation.<br>2. Explore strategies to fund watershed activities that go beyond the jurisdictional boundaries and plan for future TMDLs. |
| Tackle Inland City Issues | 1. Develop City-specific education and outreach materials. |
| Maintain Adequate Monitoring tasks | 1. Review dry weather monitoring results.<br>2. Use GIS and the City's Business License database to focus on the most highly potentially pollution production areas.<br>3. Develop a basic wet weather-monitoring program that is comparable with other Copermittee programs. |

From July 1, 2003 through June 30, 2011, the City tackled a new set of challenges while maintaining the current level of services provided. In review, it was better to put resources towards implementing productive processes and procedures, rather than completing a task in the name of compliance. The City continues to brainstorm to reach higher standards in future

program years, while quantifying pollutant reductions from jurisdictional actions that may have a watershed impact.

## 15.2 RECOMMENDATIONS

Specific recommended improvements are listed at the end of each component. Below are some general improvements for the City's Urban Runoff Strategy.

- Increase emphasis on watershed training, San Diego River Watershed Copermittee cooperative efforts, and electronic tracking of program information,
- Continue to maintain adequately trained staff to implement JURMP activities,
- Focus on outreach and education activities for the most effective approach to managing storm water pollution.
- Create a comprehensive Geographical Information System for the Jurisdictional and Watershed Storm Water Program efforts.
- Coordinate through City departments a cohesive urban runoff management program,
- Continue to develop a comprehensive program to collect and organize information for the Annual Report,
- Complete development of a storm drain master plan map inventorying MS4 infrastructure.

Appendix A.2

RESOLUTION NO. 10–03

A RESOLUTION APPROVING GENERAL PLAN AMENDMENT 2002-04 TO ADD STORM WATER RUNOFF POLICIES AND OBJECTIVES TO GENERAL PLAN TEXT.

WHEREAS, the El Cajon City Council duly advertised and held a public hearing on January 14, 2003, to consider an item which had been set for General Plan consideration; and

WHEREAS, to facilitate understanding by the public, the City Council took tentative or preliminary votes on this item, which vote was not binding until the public hearing was completed; and

WHEREAS, the City Council duly considered all information presented, and listened to all persons who appeared before it to speak.

NOW, THEREFORE, BE IT RESOLVED that the El Cajon City Council hereby approves General Plan Amendment 2002-04 to add storm water policies to the General Plan text as indicated in Planning Commission Resolution No. 9734, on file in the office of the City Clerk, and made a part hereof by this reference.

PASSED AND ADOPTED by the City Council of the City of El Cajon, California at a Regular Joint City Council/Redevelopment Agency Meeting held this 14th day of January, 2003, by the following vote to wit:

AYES : Lewis, Kendrick, McClellan, Ramos, Santos
NOES : None
ABSENT : None
DISQUALIFY : None

MARK LEWIS
Mayor of the City of El Cajon

ATTEST:

MARILYNN LINN, CMC
City Clerk

I hereby certify that the above and foregoing is a full and true copy of Resolution No. 10-03 of the Resolutions of the City of El Cajon, California, as adopted by the City Council at the Regular Joint Meeting of the City Council/Redevelopment Agency on the 14th day of January, 2003.

for M Steele
Marilynn Linn, CMC, City Clerk

1/14/03 (103)

**STAFF REPORT AND RECOMMENDATION**
**PLANNING COMMISSION MEETING**
**DECEMBER 9, 2002 - 7:00 PM**

COUNCIL CHAMBER
200 E. MAIN STREET
EL CAJON, CA 92020

## AGENDA ITEM #3

**PUBLIC HEARING ON**
**GENERAL PLAN AMENDMENT 2002-04 – Planning Commission**

Request to add storm water policies to General Plan text.

******** ******** ******** ********

**STAFF RECOMMENDATION:** RECOMMEND APPROVAL

******** ******** ******** ********

## ENVIRONMENTAL IMPACT INFORMATION

The proposed project is exempt from environmental review in accordance with Section 15308 of CEQA Guidelines.

## DISCUSSION

As part of the local implementation of the federal Clean Water Act, the County of San Diego and its 18 cities have obtained a National Pollution Discharge Elimination System (NPDES) permit from the Regional Water Quality Control Board. The NPDES permit addresses the handling of storm water runoff by the 18 cities, their residents and businesses. Part of the NPDES permit includes a Jurisdictional Urban Runoff Management Program (JURMP) (Note: there are lots of acronyms used in the storm water runoff dictionary).

Although most of the City's storm water and drainage implementation is carried out by the Department of Public Works, there is a requirement in the NPDES and the JURMP that the General Plan include policies and principles which address water quality and storm water runoff. An attempt to add these policies and

principles to the General Plan last year was withdrawn when it was determined to be premature (GPA 2001-01).

Goal 8 of the El Cajon General Plan says, "The livability of El Cajon will be maintained and enhanced through respect for the environment." There are a number of policies under this goal which address other environmental issues and concerns and this is where the staff believes the policy and objectives (principles) for storm water runoff should be located within the City's general plan text.

## RECOMMENDATION

It is recommended that the Planning Commission recommend approval of General Plan Amendment 2002-04 to add storm water runoff policy and objectives to the text of the General Plan as follows and for the following reasons:

Add the following objective and policies to Goal 8.

"Objective 8-10. Achieve and maintain a level of water quality which protects affected watersheds by minimizing runoff which may cause erosion and pollution.

POLICIES

8-10.1. The City shall minimize the amount of impervious surfaces and directly connected impervious surfaces in areas of new development and redevelopment. Where feasible, the City will insure that new development or redevelopment slows runoff and maximizes on-site infiltration of runoff.

8-10.2. The City shall implement pollution prevention methods supplemented by pollutant source controls and treatment. The City will use small collection strategies located at, or as close as possible to, the source (i.e., the point where water initially meets the ground) to minimize the transport of urban runoff and pollutants offsite and into a municipal separate storm sewer system. (MS4)

8-10.3. The City shall preserve, and where possible, create or restore areas that provide important water quality benefits, such as riparian corridors, wetlands, and buffer zones. The City will encourage land acquisition of such areas.

8-10.4. The City shall limit disturbances of natural water bodies and natural drainage systems caused by development including roads, highways, and bridges.

8-10.5. Prior to making land use decisions, the City will utilize methods available to estimate increases in pollutant loads and flows resulting from projected future development. The City shall require incorporation of structural and non-

structural best management practices to mitigate the projected increases in pollutant loads and flows.

8-10.6. The City will avoid development of areas that are particularly susceptible to erosion and sediment loss; or establish development guidance that identifies these areas and protects them from erosion and sediment loss.

8-10.7. The City will reduce pollutants associated with vehicles and increasing traffic resulting from development. The City will coordinate local traffic management reduction efforts with the San Diego County Congestion Management Plan.

8-10.8. The City will implement the San Diego Association of Government's (SANDAG's) recommendations as found in the Water Quality Element of its Regional Growth Management Strategy.

8-10.9. Post-development runoff from a site shall not contain pollutant loads which cause or contribute to an exceedance of receiving water quality objectives or which have not been reduced to the maximum extent practicable."

**Reasons for Recommendation**

A. This amendment to the text of the City's general plan will add a policy and objectives addressing storm water runoff as required by the National Pollution Discharge Elimination System (NPDES) permit issued to the City.

B. This amendment will provide policy and objectives dealing with storm water runoff to guide decision-making in the city.

C. This amendment is consistent with the City's Jurisdictional Urban Runoff Management Program (JURMP).

Refer to staff for a resolution stating the decision of the Planning Commission.

JSG:co

# EL CAJON GENERAL PLAN 2000

Text and Map adopted by
City Council Resolution No. 10-91
on January 8, 1991

Text and Map amended by
City Council Resolution No. 31-98
on February 10, 1998

January, 2001

OBJECTIVE

8-10. Achieve and maintain a level of water quality which protects affected watersheds by minimizing runoff which may cause erosion and pollution.

POLICIES

8-10.1. The City shall minimize the amount of impervious surfaces and directly connected impervious surfaces in areas of new development and redevelopment. Where feasible, the City will insure that new development or redevelopment slows runoff and maximizes on-site infiltration of runoff.

8-10.2. The City shall implement pollution prevention methods supplemented by pollutant source controls and treatment. The City will use small collection strategies located at, or as close as possible to, the source (i.e., the point where water initially meets the ground) to minimize the transport of urban runoff and pollutants off site and into a municipal separate storm sewer system. (MS4)

8-10.3. The City shall preserve, and where possible, create or restore areas that provide important water quality benefits, such as riparian corridors, wetlands, and buffer zones. The City will encourage land acquisition of such areas.

8-10.4. The City shall limit disturbances of natural water bodies and natural drainage systems caused by development including roads, highways, and bridges.

8-10.5. Prior to making land use decisions, the City will utilize methods available to estimate increases in pollutant loads and flows resulting from projected future development. The City shall require incorporation of structural and non-structural best management practices to mitigate the projected increases in pollutant loads and flows.

8-10.6. The City will avoid development of areas that are particularly susceptible to erosion and

sediment loss; or establish development guidance that identifies these areas and protects them from erosion and sediment loss.

8-10.7. The City will reduce pollutants associated with vehicles and increasing traffic resulting from development. The City will coordinate local traffic management reduction efforts with the San Diego County Congestion Management Plan.

8-10.8. The City will implement the San Diego Association of Government's (SANDAG's) recommendations as found in the Water Quality Element of its Regional Growth Management Strategy.

8-10.9. Post-development runoff from a site shall not contain pollutant loads which cause or contribute to an exceedance of receiving water quality objectives or which have not been reduced to the maximum extent practicable.

GOAL 9

A strong, competitive region-wide commercial base will be created and retained.

OBJECTIVE

9-1. Parkway Plaza and its immediate vicinity will be maintained as the City's regional shopping center.

POLICIES

9-1.1. Parkway Plaza shall be expanded from its original size and the number of major tenants and stores shall be increased.

9-1.2. The City shall continue to improve traffic circulation in the vicinity of Parkway Plaza.

9-1.3. The City shall cooperate with Parkway Plaza in the provision of parking facilities and may develop special

ORDINANCE NO. 4939

AN ORDINANCE REPEALING CHAPTER 16.60
OF TITLE 16 OF THE EL CAJON MUNICIPAL CODE
AND ADDING A NEW CHAPTER 16.60 TO TITLE 16 OF THE
EL CAJON MUNICIPAL CODE REGARDING THE CITY OF
EL CAJON STANDARD URBAN STORM WATER MITIGATION PLAN.

WHEREAS, the City of El Cajon, pursuant to its Water Quality Permit issued on February 21, 2001, is required to adopt certain implementation steps as mandated by the Regional Water Quality Control Board (San Diego Region); and

WHEREAS, one of the implementation steps requires the adoption of an Urban Storm Water Mitigation Plan based upon a pre-approved Model adopted on June 10, 2002, by the Regional Water Quality Control Board (San Diego Region); and

WHEREAS, this Ordinance shall be the Urban Storm Water Mitigation Plan adopted pursuant to the mandate of the Regional Water Quality Control Board (San Diego Region); and

WHEREAS, this Ordinance shall allow for the adoption of resolutions and policies which shall implement the El Cajon Standard Urban Water Mitigation Plan not included in this Ordinance; and

WHEREAS, the adoption of this Ordinance, by the findings of the Regional Water Quality Control Board (San Diego Region), is exempt from the requirements of the California Environmental Quality Act; and

WHEREAS, the purpose of this Ordinance is to protect valuable water resources of the City of El Cajon and its surrounding environs from pollutants.

NOW, THEREFORE, BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF EL CAJON AS FOLLOWS:

Section 1: Chapter 16.60 of Title 16 of the El Cajon Municipal Code is hereby repealed.

Section 2: Chapter 16.60 is hereby added to Title 16 of the El Cajon Municipal Code to read as follows:

**16.60.010 Title.**

The ordinance codified in this chapter shall be known as the "Standard Urban Storm Water Mitigation Plan (SUSMP) ordinance of the City of El Cajon."

**16.60.020 Statutory Authority.**

A. The municipal storm water National Pollutant Discharge Elimination System (NPDES) permit (Order No. R9-2007-0001, as subsequently modified by renewal order, NPDES No. CAS0108758, hereinafter collectively referred to as "Municipal Permit") issued to San Diego County, San Diego County Regional Airport Authority, the Port of San Diego, and eighteen cities by the San Diego Regional Water Quality Control Board (Regional Board) on January 24, 2007, requires the development and implementation of a program addressing urban runoff pollution issues in development planning for public and private projects.

B. The requirement to implement a program for development planning is based on federal and state statutes including: Section 402 (p) of the Clean Water Act, Section 6217 of the Coastal Zone Act Reauthorization Amendments of 1990 ("CZARA"), and the California Water Code. The Clean Water Act amendments of 1987 established a framework for regulating urban runoff discharges from municipal, industrial, and construction activities under the NPDES program. The municipal permit requires the implementation of a Jurisdictional Urban Runoff Management Program (JURMP), which has been adopted by the City of El Cajon on February 12, 2002, as amended.

**16.60.030 Purpose.**

A. The primary objectives of this chapter are to:

1. Ensure that discharges from municipal urban runoff conveyance systems do not cause or contribute to a violation of water quality standards;

2. Effectively prohibit non-storm water discharges in urban runoff; and

3. Reduce the discharge of pollutants from urban runoff conveyance systems to the Maximum Extent Practicable (MEP statutory standard).

B. The regulations of this chapter were developed to address post-construction urban runoff pollution from new development and redevelopment applications that fall under "priority project" categories. The goal of this chapter is to develop and implement practicable policies to ensure, to the maximum extent practicable, that development does not increase pollutant loads from a project site and to consider urban runoff flow rates, velocities and durations. This goal may be achieved through site-specific controls and/or drainage area-based or shared structural treatment controls.

**16.60.040 Applicability of chapter.**

The regulations set forth in this chapter shall apply to the development plan approval process for discretionary development applications, and prior to issuing

development permits for ministerial projects. To allow flexibility in meeting the design standards set forth in this chapter, structural treatment control BMPs may be located on- or off-site, used singly or in combination, or shared by multiple developments, provided certain conditions are met. All new development and significant redevelopment projects that fall into one of the following "priority project" categories are subject to the requirements of this chapter, subject to the lawful prior approval provisions of the municipal permit. In the instance where a project feature, such as a parking lot, falls into a priority project category, the entire project footprint is subject to the requirements of this chapter. These categories are:

A. Residential development of ten (10) units or more;

B. Commercial development greater than one (1) acre;

C. Heavy industry/industrial development greater than one (1) acre;

D. Automotive repair shops;

E. Restaurants;

F. Hillside development greater than 5,000 square feet;

G. Projects located within or directly adjacent to or directly discharging to receiving waters within environmentally sensitive areas that create 2,500 square feet or more of impervious surface or increase the area of imperviousness to ten percent (10%) or more of its naturally occurring conditions, where "directly adjacent," is defined as situated within 200 feet of the environmentally sensitive area, and where "discharging directly to," is defined as outflow from a drainage conveyance system that is composed entirely of flows from the subject development or redevelopment site, and not commingled with flows from adjacent lands;

H. Parking lots with 5,000 square feet or more of impervious surface, or with more than fifteen (15) parking spaces and potentially exposed to urban runoff;

I. Streets, roads, highways, and freeways, which would create a new paved surface that is 5,000 square feet or more of impervious surface; and

J. Retail gasoline outlets of 5,000 square feet or more in size, or having a projected average daily traffic ("ADT") count of at least 100 vehicles per day regardless of size.

As part of the project review process and to comply with the regulations set in this chapter, the Public Works Department shall review development and redevelopment projects that create, add or replace 5,000 square feet or more of impervious surfaces. In addition to the priority categories identified in this chapter, priority projects shall also

include all other pollutant generating development projects that result in the disturbance of one acre or more of land.

**16.60.050 Limited exclusion.**

Trenching and resurfacing work associated with utility projects; resurfacing and reconfiguring surface parking lots and existing roadways; new sidewalk construction, pedestrian ramps, or bike lanes on existing roads; and routine replacement of damaged pavement, such as pothole repair, are not considered priority projects. Parking lots, buildings and other structures associated with utility projects are subject to the requirements of this chapter if one or more of the criteria for the above categories are met.

**16.60.060 Applicability of chapter 13.10.**

The provisions of Chapter 13.10 (Storm Water Management and Discharge Control), including the definitions and enforcement provisions, shall be applicable to this chapter as though fully set forth herein.

**16.60.070 Administration – limitations.**

Where requirements of this chapter conflict with established local codes, (e.g., specific language of signage used on storm drain stenciling), the city council may continue the local practice and modify this chapter to be consistent with the code, except that to the extent that the standards in this chapter are more stringent than those under local codes, such more stringent standards shall apply.

**16.60.080 Administration – provisions for SUSMP requirements.**

The requirements of this chapter shall be incorporated into the project design in accordance to that certain Countywide Model SUSMP, Standard Urban Stormwater Mitigation Plan Requirements for Development Applications, dated January 2, 2009, as may be amended from time to time (the "Countywide Model SUSMP"), and shown on the plans prior to approval of discretionary permits. For projects requiring only ministerial permits, the requirements of this chapter shall be incorporated into the project design and shown on the plans prior to the issuance of any ministerial permits. City departments carrying out public projects that are not required to obtain permits shall be responsible for ensuring the requirements of this chapter are incorporated into the project design and shown on the plans prior to bidding for construction contracts, or equivalent. For public projects, the requirements of this chapter must be incorporated into the project design and shown on the plans before allowing the project to commence.

**16.60.090 Administration – implementation.**

All priority projects shall implement one or a combination of storm water BMPs, including, (1) LID and site design BMPs, (2) source control BMPs and, (3) structural treatment BMPs after the pollutants and conditions of concern have been identified. Storm water BMPs shall be considered and implemented where expressly required by this chapter and if not so required where determined applicable and feasible by the Director of Public Works. The storm water BMPs shall adhere to the requirements of this chapter, and shall be correctly designed in accordance to the applicable Countywide Model SUSMP so as to remove pollutants to the maximum extent practicable. A flow chart summarizing the storm water BMP selection procedure is provided in Figure 1.

**16.60.100 Administration – site design storm water treatment credits.**

Project proponents may develop and submit for public review and comment and city council approval a regional model site design storm water treatment credits program that allows reductions in the volume or flow of storm water that must be captured or treated on a project in return for the inclusion of specified project design features in the project. The model site design storm water treatment credits program shall be deemed to be a part of this chapter following city council approval. Any such model program shall specify the conditions under which project proponents can be credited for the use of site design features and low impact development techniques that can reduce the volume of storm water runoff, preserve natural areas, and minimize the pollutant loads generated and potentially discharged from the site. Any site design storm water treatment credits program implemented shall be consistent and compliant with this chapter and approved by the city council.

*[Remainder of page intentionally left blank]*

**Figure 1. Storm Water BMP Selection Procedure Flow Chart**

**16.60.110 Identifying pollutants and conditions of concern.**

A. Priority project proponents shall use this guidance to identify pollutants and conditions of concern, for which they need to mitigate or protect against. Site design and source control BMPs are required based on pollutants commonly associated with the proposed project type (see Table 2, "Standard Storm Water BMP Selection Matrix"). Treatment Control BMPs are also required for the project's expected pollutants of concern (see Table 3).

B. For private priority projects, the information shall be provided with the project application prior to being deemed complete.

C. For public priority projects, the information shall be provided by the Director of Public Works prior to bidding for construction contracts.

**16.60.120 General categories of water pollution.**

A. Sediments – Sediments are soils or other surficial materials eroded and then transported or deposited by the action of wind, water, ice, or gravity. Sediments can increase turbidity, clog fish gills, reduce spawning habitat, lower young aquatic organisms' survival rates, smother bottom dwelling organisms, and suppress aquatic vegetation growth.

B. Nutrients – Nutrients are inorganic substances, such as nitrogen and phosphorus. They commonly exist in the form of mineral salts that are either dissolved or suspended in water. Primary sources of nutrients in urban runoff are fertilizers and eroded soils. Excessive discharge of nutrients to water bodies and streams can cause excessive aquatic algae and plant growth. Such excessive production, referred to as cultural eutrophication, may lead to excessive decay of organic matter in the water body, loss of oxygen in the water, release of toxins in sediment, and the eventual death of aquatic organisms.

C. Metals – Metals are raw material components in non-metal products such as fuels, adhesives, paints, and other coatings. Primary sources of metal pollution in storm water are typically commercially available metals and metal products. Metals of concern include cadmium, chromium, copper, lead, mercury, and zinc. Lead and chromium have been used as corrosion inhibitors in primer coatings and cooling tower systems. At low concentrations naturally occurring in soil, metals are not toxic. However, at higher concentrations, certain metals can be toxic to aquatic life. Humans can be impacted from contaminated groundwater resources, and bioaccumulation of metals in fish and shellfish. Environmental concerns, regarding the potential for release of metals to the environment, have already led to restricted metal usage in certain applications.

D. Organic Compounds – Organic compounds are carbon-based. Commercially available or naturally occurring organic compounds are found in

pesticides, solvents, and hydrocarbons. Organic compounds can, at certain concentrations, indirectly or directly constitute a hazard to life or health. When rinsing off objects, toxic levels of solvents and cleaning compounds can be discharged into storm drains. Dirt, grease, and grime retained in the cleaning fluid or rinse water may also absorb levels of organic compounds that are harmful or hazardous to aquatic life.

E. Trash & Debris – Trash (such as paper, plastic, polystyrene packing foam, and aluminum materials) and biodegradable organic matter (such as leaves, grass cuttings, and food waste) are general waste products on the landscape. The presence of trash & debris may have a significant impact on the recreational value of a water body and aquatic habitat. Excess organic matter can create a high biochemical oxygen demand in a stream and thereby lower its water quality. Also, in areas where stagnant water exists, the presence of excess organic matter can promote septic conditions resulting in the growth of undesirable organisms and the release of odorous and hazardous compounds such as hydrogen sulfides.

F. Oxygen-Demanding Substances – This category includes biodegradable organic material as well as chemicals that react with dissolved oxygen in water to form other compounds. Proteins, carbohydrates, and fats are examples of biodegradable organic compounds. Compounds such as ammonia and hydrogen sulfide are examples of oxygen-demanding compounds. The oxygen demand of a substance can lead to depletion of dissolved oxygen in a water body and possibly the development of septic conditions.

G. Oil and Grease – Oil and grease are characterized as high-molecular weight organic compounds. Primary sources of oil and grease are petroleum hydrocarbon products, motor products from leaking vehicles, esters, oils, fats, waxes, and high molecular-weight fatty acids. Introduction of these pollutants to the water bodies are very possible due to the wide uses and applications of some of these products in municipal, residential, commercial, industrial, and construction areas. Elevated oil and grease content can decrease the aesthetic value of the water body, as well as the water quality.

H. Bacteria and Viruses – Bacteria and viruses are ubiquitous microorganisms that thrive under certain environmental conditions. Their proliferation is typically caused by the transport of animal or human fecal wastes from the watershed. Water, containing excessive bacteria and viruses can alter the aquatic habitat and create a harmful environment for humans and aquatic life. Also, the decomposition of excess organic waste causes increased growth of undesirable organisms in the water.

I. Pesticides – Pesticides (including herbicides) are chemical compounds commonly used to control nuisance growth or prevalence of organisms. Excessive application of a pesticide may result in runoff containing toxic levels of its active component.

**16.60.130 Identifying pollutants from the project area.**

Using Table 1, pollutants shall be identified that are anticipated to be generated from the proposed priority project categories. Pollutants associated with any hazardous material sites that have been remediated or are not threatened by the proposed project are not considered a pollutant of concern.

Table 1. Anticipated and Potential Pollutants Generated by Land Use Type.

| | General Pollutant Categories | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| Priority Project Categories | Sediments | Nutrients | Heavy Metals | Organic Compounds | Trash & Debris | Oxygen Demanding Substances | Oil & Grease | Bacteria & Viruses | Pesticides |
| Detached Residential Development > 10 units | X | X | | | X | X | X | X | X |
| Attached Residential Development > 10 units | X | X | | | X | P(1) | P(2) | P | X |
| Commercial Development > 1 acre | P(1) | P(1) | X | P(2) | X | P(5) | X | P(3) | P(5) |
| Heavy Industry / Industrial Development > 1 acre | X | | X | X | X | X | X | | |
| Automotive Repair Shops | | | X | X(4)(5) | X | | X | | |
| Restaurants | | | | | X | X | X | X | P(1) |
| Hillside Development > 5,000 $ft^2$ | X | X | | | X | X | X | | X |
| Parking lots > 5,000 $ft^2$ or > 15 spaces | P(1) | P(1) | X | | X | P(1) | X | | P(1) |
| Retail Gasoline Outlets > 5,000 $ft^2$ or > 100 ADT | | | X | X | X | X | X | | |
| Streets, Highways & Freeways > 5,000 $ft^2$ | X | P(1) | X | X(4) | X | P(5) | X | X | P(1) |

X = anticipated
P = potential
(1) a potential pollutant if landscaping exists on site
(2) a potential pollutant if the project includes uncovered parking areas
(3) a potential pollutant if land use involves food or animal waste products
(4) including petroleum hydrocarbons
(5) including solvents

**16.60.140 Identifying pollutants of concern.**

A. Pollutants generated by the proposed priority project that exhibit one or more of the following characteristics are considered primary pollutants of concern:

1. Current loadings or historical deposits of the pollutant are impairing the beneficial uses of a receiving water;

2. Elevated levels of the pollutant are found in water or sediments of a receiving water and/or have the potential to be toxic to or bioaccumulate in organisms therein; and

3. Inputs of the pollutant are at a level high enough to be considered potentially toxic.

B. To identify primary pollutants of concern in receiving waters, each priority project shall, at a minimum, do the following:

1. For each of the proposed projects' discharge points, identify the receiving water(s) that each discharge point proposes to discharge to, including hydrologic unit basin number(s), as identified in the most recent version of the *Water Quality Control Plan for the San Diego Basin*, prepared by the San Diego Regional Water Quality Control Board;

2. Identify any receiving waters, into which the developed area would discharge to, listed on the most recent list of Clean Water Act Section 303(d) impaired water bodies. List any and all pollutants for which the receiving waters are impaired; and

3. Compare the list of pollutants for which the receiving waters are impaired with the pollutants anticipated to be generated by the project (as identified in Table 1). Any pollutants identified by Table 1 which are also causing impairment of receiving waters shall be considered primary pollutants of concern.

For projects where no primary pollutants of concern exist, those pollutants identified through the use of Table 1 shall be considered secondary pollutants of concern.

**16.60.150 Identifying conditions of concern.**

A. Common impacts to the hydrologic regime resulting from development typically include increased runoff volume and velocity; reduced infiltration; increased flow frequency, duration, and peaks; faster time to reach peak flow; and water quality degradation. These changes have the potential to permanently impact downstream channels and habitat integrity. A change to a priority project site's hydrologic regime would be considered a condition of concern if the change would impact downstream channels and habitat integrity. Because of these potential impacts, a director, or his or

her designee, may require that the following steps be followed for priority projects that, in their judgment, may impact the hydrologic regime:

1. Evaluate the project's conditions of concern in a drainage study report prepared by a registered civil engineer in the State of California, with experience in fluvial geomorphology and water resources management. The report shall consider the project area's location (from the larger watershed perspective), topography, soil and vegetation conditions, percent impervious area, natural and infrastructure drainage features, wet season groundwater depth, and any other relevant hydrologic and environmental factors to be protected specific to the project area's watershed;

2. As part of the drainage study, a qualified, licensed professional shall provide a report on proposed infiltration techniques (trenches, basins, dry wells, permeable pavements with underground reservoir for infiltration) regarding any potential adverse geotechnical concerns. Geotechnical conditions (such as slope stability, expansive soils, compressible soils, seepage, groundwater depth, and loss of foundation or pavement subgrade) should be addressed, and mitigation measures provided;

3. As part of the drainage study, the civil engineer shall conduct a field reconnaissance to observe and report on downstream conditions, including undercutting erosion, slope stability, vegetative stress (due to flooding, erosion, water quality degradation, or loss of water supplies) and the area's susceptibility to erosion or habitat alteration as a result of an altered flow regime;

4. The drainage study shall compute rainfall runoff characteristics from the project area including, at a minimum, peak flow rate, flow velocity, runoff volume, time of concentration, and retention volume. These characteristics shall be developed for the two-year and 10-year frequency, Type I storm, of six-hour or 24-hour duration (whichever is the closer approximation of the site's time of concentration), during critical hydrologic conditions for soil and vegetative cover[1]. The drainage study shall report the project's conditions of concern based on the hydrologic and downstream conditions discussed above. Where downstream conditions of concern have been identified, the drainage study shall establish that pre-project hydrologic conditions affecting downstream conditions of concern would be maintained by the proposed project, satisfactory to the Director of Public Works, by incorporating the site design, source control, and treatment control requirements identified in this chapter.

B. For priority development projects that disturb ("PDP") fifty (50) acres or more:

---

[1] Design storms can be found at http://www.wrcc.dri.edu/pcpnfreq.html. Applicants may calculate the storm events using local rain data. In addition, isopluvial maps contained in the County of San Diego Hydrology Manual may be used to extrapolate rainfall data to areas where insufficient data exists. If isopluvial maps are used interpolations shall be linear.

1. PDP post project runoff flow rates and durations shall not exceed pre-project runoff flow rates and durations (interim hydromodification criteria) where the increased discharge flow rates and durations will result in increased potential for erosion or other significant adverse impacts to beneficial uses, attributable to changes in flow rates and durations.

2. PDPs disturbing fifty (50) acres or more shall implement hydrologic controls to manage post-project runoff flow rates and durations as required by the interim hydromodification criteria.

**16.60.160 Progression of storm water BMPs.**

Site design BMPs reduce the need for source and/or treatment control BMPs, and source control BMPs may reduce the amount of treatment control BMPs needed. Throughout the following sections, all priority projects shall consider, and incorporate and implement storm water BMPs into the project design where expressly required by this chapter, and if not so required, where determined applicable and feasible by the Director of Public Works, in the following progression:

1. Site Design BMPs
2. Source Control BMPs
3. Treatment Control BMPs

**16.60.170 Requirements to implement storm water BMPs.**

Priority projects must implement LID site design BMPs and source control BMPs, and must also implement treatment control BMPs unless a waiver is granted based on the infeasibility of all treatment control BMPs. LID BMPs must meet the minimum requirements in section D.1.d.(4) of NPDES Permit No. CAS 0108758. BMPs must also achieve certain performance standards set out in section D.1.d.(5) and (6). Selection of BMPs from the menus included in this chapter, using the rules set out in this chapter, must fulfill these requirements. In addition, runoff treated by LID and site design or source control BMPs, such as rooftop runoff treated in landscaping, may be useful in reducing the quantity of runoff required to be treated in, "Treatment Control BMPs."

**16.60.180 Selection of storm water BMPs.**

Using the Treatment Control BMP Selection Matrix, each priority project shall select a structural treatment BMP by comparing the list of pollutants for which the downstream receiving waters are impaired (if any), with the pollutants anticipated to be generated by the project (as identified in Table 1). Any pollutants identified by Table 1 which are also causing a Clean Water Act section 303(d) impairment of the receiving waters of the project shall be considered primary pollutants of concern. Priority projects that are anticipated to generate a primary pollutant of concern shall meet all applicable requirements of sections 16.60.160 to 16.60.370, and shall select a single or

combination of storm water BMPs from Table 3 that maximizes pollutant removal for the particular primary pollutant(s) of concern.

Alternatively, a project proponent may elect to implement a combination of LID BMPs that either disperse and infiltrate, or direct to bioretention facilities, the flows from all impervious areas on-site. These BMPs are presumed to provide maximum extent practicable treatment for all pollutants of concern; therefore no further documentation of the treatment BMP selection process is required.

**16.60.190 Storm water BMPs for projects not generating pollutants.**

Priority projects that are not anticipated to generate a pollutant for which the receiving water is Clean Water Act Section 303(d) impaired shall meet applicable standard requirements of establishing storm water BMPs, and shall select a single or combination of storm water BMPs from Table 3 which are effective for pollutant removal of the identified secondary pollutants of concern, consistent with the "maximum extent practicable" standard as defined in the attachment entitled "Definitions" of the Municipal Permit.

**16.60.200 Storm water BMPs for projects generating primary and secondary pollutants.**

Where a site generates both primary and secondary pollutants of concern, primary pollutants of concern receive priority for BMP selection. For such sites, selected BMPs must only maximize pollutant removal for the primary pollutants of concern. Where a site generates only secondary pollutants of concern, selected BMPs shall target the secondary pollutant of concern determined to be most significant for the project. Selected BMPs must be effective for the widest range of pollutants of concern anticipated to be generated by a priority project (as identified in Table 1), consistent with the maximum extent practicable standard as defined in the attachment entitled "Definitions" of the Municipal Permit.

Treatment control BMPs with a high or medium pollutant removal efficiency for the project's most significant pollutant of concern shall be selected. Treatment control BMPs with a low removal efficiency ranking shall only be approved by the city when a feasibility analysis has been conducted, which exhibits that implementation of treatment control BMPs with a high or medium removal efficiency ranking are infeasible. Treatment control BMPs shall not be constructed within a receiving water.

**16.60.210 Alternative storm water BMPs.**

Alternative storm water BMPs not identified in Table 3 may be approved at the discretion of the Director of Public Works, provided the alternative BMP is as effective in removal of pollutants of concern as other feasible BMPs listed in Table 3.

**Table 2. Site Design and Source Control Storm Water BMP Selection Matrix.**

| *Priority Project Category* | *Site Design BMPs(1)* | *Source Control BMPs(2)* | *Requirements Applicable to Individual Priority Project Categories(3)* | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | | a. Private Roads | b. Residential Driveways & Guest Parking | c. Dock Areas | d. Maintenance Bays | e. Vehicle Wash Areas | f. Outdoor Processing Areas | g. Equipment Wash Areas | h. Parking Areas | i. Roadways | j. Fueling Areas | k. Hillside Landscaping |
| Detached Residential Development | R | R | R | R | | | | | | | | | R |
| Attached Residential Development | R | R | R | | | | | | | | | | |
| Commercial Development > 1 acre | R | R | | | R | R | R | R | | | | | |
| Heavy Industry / Industrial Development > 1 acre | R | R | | | R | R | R | R | R | | | R | |
| Automotive Repair Shop | R | R | | | R | R | R | | R | | | R | |
| Restaurants | R | R | | | R | | | | R | | | | |
| Hillside Development > 5,000 $ft^2$ | R | R | R | | | | | | | | | | R |
| Parking Lots > 5,000 $ft^2$ or > 15 spaces | R | R | | | | | | | | R(4) | | | |
| Retail Gas Outlet = to or > 5,000 $ft^2$ or > 100 ADT | R | R | | | | | R | | | | | R | |
| Streets, Highways & Freeways > 5,000 $ft^2$ | R | R | | | | | | | | | R | | |

R = Required; select BMPs as required from the applicable steps in Sections 16.60.130 & 16.60.140, or equivalent.
(1) Refer to Section 16.60.130.
(2) Refer to Section 16.60.140.
(3) Priority project categories must apply specific storm water BMP requirements, where applicable. Projects are subject to the requirements of all priority project categories that apply.
(4) Applies if the paved area totals > 5,000 square feet or with > 15 parking spaces and is potentially exposed to urban runoff.

**Table 3. Treatment Control BMP Selection Matrix.**

| Pollutants of Concern | Bioretention Facilities (LID) | Settling Basins (Dry Ponds) | Wet Ponds and Wetlands | Infiltration Facilities or Practices (LID) | Media Filters | High-rate biofilters | High-rate media filters | Trash Racks & Hydro -dynamic Devices |
|---|---|---|---|---|---|---|---|---|
| **Coarse Sediment and Trash** | High | High | High | High | High | High | High | High |
| **Pollutants that tend to associate with fine particles during treatment** | High | High | High | High | High | Medium | Medium | Low |
| **Pollutants that tend to be dissolved following treatment** | Medium | Low | Medium | High | Low | Low | Low | Low |

## Notes on Treatment Control BMP Categories

All rankings are relative. Ranking of all facilities assumes proper sizing, design, and periodic maintenance. Following are general descriptions of each category.

1. **Bioretention Facilities** (infiltration planters, flow-through planters, bioretention areas, and bioretention swales). Facilities are designed to capture runoff and infiltrate slowly through soil media, which also supports vegetation. Bioretention facilities, except for flow-through planters, effectively promote infiltration into native soils. In clay soils, facilities may capture excess treated runoff in an underdrain piped to the municipal storm drain system. Typical criteria: an infiltration surface area at least 4% of tributary impervious area, 6-inch average depth of top reservoir, 18-inch soil layer, 12-inch to 18-inch gravel subsurface storage layer.

2. **Settling Basins and Wetlands** (extended detention basins, "wet" basins, decorative or recreational lakes or water features also used for storm water treatment, constructed wetlands). Facilities are designed to capture a minimum water quality volume of 80% of total runoff and detain for a minimum of 48 hours. Some wetland designs have proven effective in removing nutrients, but performance varies.

3. **Infiltration Facilities or Practices** (infiltration basins, infiltration trenches, dry wells, dispersal of runoff to landscape, pervious pavements). These facilities and landscape designs capture, retain, and infiltrate a minimum of 80% of runoff into the ground. Infiltration facilities are generally only feasible in permeable (Hydrologic Soil Group A or B) soils. Volume and area of infiltration facilities depends on soil permeability and safety factor used. Typical criteria: Infiltration facilities should have pretreatment to remove silt to prolong life of the facility. A 10-foot vertical separation from average seasonal groundwater depth is required. Dispersal to landscape may be accomplished in any soil type and generally requires a maximum 2:1 ratio impervious:pervious and concave topography to ensure the first one (1) inch of rainfall is retained.

4. **Media Filters** (sand filters). Filters designed to treat runoff produced by a rainfall of 0.2 inches per hour (or $2 \times 85^{th}$ percentile hourly rainfall intensity) by slow infiltration through sand or other media. Typical criteria: Surface loading rate not to exceed 5 inches/hour. Entire surface of the sand must be accessible for maintenance.

5. **High Rate Biofilters** (tree wells, typically proprietary). Biofilters with specially designed media to rapidly filter runoff while removing some pollutants. Filterra® (proprietary version) recommends surface loading rates of up to 100 inches/hour.

6. **High-rate Media Filters** (typically proprietary). Vaults with replaceable cartridge filters filled with inorganic media.

7. **Drainage Inserts** have low effectiveness in removing pollutants that tend to associate with fine particles and have medium effectiveness in removing coarse sediment and trash. They are sometimes used to augment more effective treatment facilities and are sometimes used alone when more effective facilities have been deemed infeasible.

**Notes on Pollutants of Concern:**
In Table 4, Pollutants of Concern are grouped as gross pollutants (coarse sediment and trash), pollutants that tend to associate with fine particles, and pollutants that remain dissolved.

**Table 4**

| Pollutant | Coarse Sediment and Trash | Pollutants that tend to associate with fine particles during treatment | Pollutants that tend to be dissolved following treatment |
|---|---|---|---|
| Sediment | X | X | |
| Nutrients | | X | X |
| Heavy Metals | | X | |
| Organic Compounds | | X | |
| Trash & Debris | X | | |
| Oxygen Demanding | | X | |
| Bacteria | | X | |
| Oil & Grease | | X | |
| Pesticides | | X | |

## 16.60.220 Low Impact Development (LID) and Site Design BMP

A. Priority projects shall be designed so as to minimize directly connected impervious surfaces and to promote infiltration using LID techniques. Priority projects shall, to the maximum extent practicable, minimize the introduction of pollutants and conditions of concern that may result in significant impacts, generated from site runoff to the storm water conveyance system. Priority projects shall also control post-development peak storm water runoff discharge rates and velocities to maintain or reduce pre-development downstream erosion and to protect stream habitat. Priority projects can address these objectives through the creation of a hydrologically functional project design that attempts to mimic the natural hydrologic regime. Mimicking a site's natural hydrologic regime can be pursued by:

1. Reducing imperviousness, conserving natural resources and areas, maintaining and using natural drainage courses in the storm water conveyance system, and minimizing clearing and grading.

2. Providing runoff storage measures dispersed throughout a site's landscape with the use of bioretention facilities and detention, retention, and infiltration practices.

B. Site design BMPs shall offer an innovative approach to urban storm water management that does not rely on the conventional end-of-pipe or in-the-pipe structural methods but instead uniformly or strategically integrates storm water controls throughout the urban landscape. Examples of many of these methods may be found in the County of San Diego's LID Handbook, and its publications, *Start at the Source*, and *Low-Impact Development Design Strategies*, in the City of Portland, Oregon's *Stormwater Manual*, and in the Contra Costa (California) Clean Water Program's *Stormwater C.3 Guidebook*.

**16.60.230 Maintaining pre-development rainfall runoff characteristics.**

A. Priority projects shall control post-development peak storm water runoff discharge rates and velocities to maintain or reduce pre-development downstream erosion. In addition, projects should control runoff discharge volumes and durations to the maximum extent practicable using the site design, source control, and treatment control requirements.

B. Design Concept 1: Minimize Project's Impervious Footprint & Conserve Natural Areas. The following site design options shall be considered, and incorporated and implemented where determined applicable and feasible by the Director of Public Works, during the site planning and approval process, consistent with applicable General Plan policies and other development regulations.

1. Minimize and disconnect impervious surfaces. This can be achieved in various ways, including, but not limited to, increasing building density (number of stories above or below ground) and developing land use regulations seeking to limit impervious surfaces. Decreasing the project's footprint can substantially reduce the project's impacts to water quality and hydrologic conditions.

2. Conserve natural areas, soils, and vegetation where feasible. This can be achieved by concentrating or clustering development on the least environmentally sensitive portions of a site while leaving the remaining land in a natural, undisturbed condition. The following list provides a guideline for determining the least sensitive portions of the site, in order of increasing sensitivity. Jurisdictions should also refer to their Multiple Species Conservation Plans or other biological regulations, as appropriate.

a. Areas devoid of vegetation, including previously graded areas and agricultural fields.

b. Areas of non-native vegetation, disturbed habitats and eucalyptus woodlands.
c. Areas of chamise or mixed chaparral, and non-native grasslands.
d. Areas containing coastal scrub communities.
e. All other upland communities.
f. Occupied habitat of sensitive species and all wetlands.
g. All areas necessary to maintain the viability of wildlife corridors. Within each of the previous categories, areas containing hillsides should be considered more sensitive than the same category without hillsides.

3. Construct walkways, trails, patios, overflow parking lots and alleys and other low-traffic areas with permeable surfaces, such as pervious concrete, permeable asphalt, unit pavers, and granular materials.

4. Construct streets, sidewalks and parking lot aisles to the minimum widths necessary, provided that public safety and a walkable environment for pedestrians are not compromised.

5. Maximize canopy interception and water conservation by preserving existing native trees and shrubs, and planting additional native or drought tolerant trees and large shrubs.

6. Minimize the use of impervious surfaces, such as decorative concrete, in the landscape design.

7. Use natural drainage systems to the maximum extent practicable.

8. Other site design options that are comparable, and equally effective.

9. Minimize soil compaction.

C. Design Concept 2: Minimize Directly Connected Impervious Areas (DCIAs). Priority projects shall consider, and incorporate and implement the following design characteristics, where determined applicable and feasible by the Director of Public Works.

1. Where landscaping is proposed, drain rooftops into adjacent landscaping prior to discharging to the storm drain.

2. Where landscaping is proposed, drain impervious sidewalks, walkways, trails, and patios into adjacent landscaping.

3. Other design characteristics that are comparable and equally effective.

**16.60.240 Protection of slopes and channels.**

Project plans shall include storm water BMPs to decrease the potential for erosion of slopes and/or channels, consistent with local codes and ordinances and with the approval of all agencies with jurisdiction, e.g., the U.S. Army Corps of Engineers, the San Diego Regional Water Quality Control Board, and the California Department of Fish and Game. The following design principles shall be considered, and incorporated and implemented where determined applicable and feasible by the Director of Public Works:

A. Minimize disturbances to natural drainages.

B. Convey runoff safely from the tops of slopes.

C. Vegetate slopes with native or drought tolerant vegetation.

D. Control and treat flows in landscaping and/or other controls prior to reaching existing natural drainage systems.

E. Stabilize permanent channel crossings.

F. Install energy dissipaters, such as riprap, at the outlets of new storm drains, culverts, conduits, or channels that enter unlined channels in accordance with applicable specifications to minimize erosion. Energy dissipaters shall be installed in such a way as to minimize impacts to receiving waters.

G. Other design principles that are comparable and equally effective.

**16.60.250 Providing storm drain system stenciling and signage.**

Storm drain stencils are highly visible source control messages, typically placed directly adjacent to storm drain inlets. The stencils contain a brief statement that prohibits the dumping of improper materials into the urban runoff conveyance system. Graphical icons, either illustrating anti-dumping symbols or images of receiving water fauna, are effective supplements to the anti-dumping message. Priority projects shall include the following requirements in the project design:

A. Provide stenciling or labeling of all storm drain inlets and catch basins within the project area with prohibitive language (such as: "NO DUMPING – I LIVE IN <<name receiving water>>") and/or graphical icons to discourage illegal dumping.

B. Post signs and prohibitive language and/or graphical icons, which prohibit illegal dumping at public access points along channels and creeks within the project area.

C. Maintain legibility of stencils and signs.

**16.60.260 Designing outdoor material storage areas to reduce pollution introduction.**

Improper storage of materials outdoors may increase the potential for toxic compounds, oil and grease, heavy metals, nutrients, suspended solids, and other pollutants to enter the urban runoff conveyance system. Where the priority project plans include outdoor areas for storage of hazardous materials that may contribute pollutants to the urban runoff conveyance system, the following storm water BMPs are required:

A. Hazardous materials with the potential to contaminate urban runoff shall either be: (1) placed in an enclosure such as, but not limited to, a cabinet, shed, or similar structure that prevents contact with runoff or spillage to the storm water conveyance system; or (2) protected by secondary containment structures such as berms, dikes, or curbs.

B. The storage area shall be paved and sufficiently impervious to contain leaks and spills.

C. The storage area shall have a roof or awning to minimize direct precipitation within the secondary containment area.

**16.60.270 Designing trash storage areas to reduce pollution introduction.**

All trash container areas shall meet the following requirements (limited exclusion: detached residential homes):

A. Paved with an impervious surface, designed not to allow run-on from adjoining areas, screened or walled to prevent off-site transport of trash; and

B. Provide attached lids on all trash containers that exclude rain, and a permanent fire resistant roof or awning to minimize direct precipitation.

**16.60.280 Using efficient irrigation systems and landscape design.**

Priority projects shall design the timing and application methods of irrigation water to minimize the runoff of excess irrigation water into the storm water conveyance system. The irrigation system shall be in compliance with the requirements of all city ordinances regulating the efficient irrigation of landscaping. The following methods to reduce excessive irrigation runoff shall be considered,

and incorporated and implemented where determined applicable and feasible by the Public Works Department:

A. Employing rain shutoff devices to prevent irrigation after precipitation.

B. Designing irrigation systems to each landscape area's specific water requirements.

C. Using flow reducers or shutoff valves triggered by a pressure drop to control water loss in the event of broken sprinkler heads or lines.

D. Employing other comparable, equally effective, methods to reduce irrigation water runoff.

**16.60.300 Incorporate requirements applicable to individual priority project categories.**

Where identified in Table 2, the following requirements shall be incorporated into applicable priority projects during the storm water BMP selection and design process. Projects shall adhere to each of the individual priority project category requirements that apply to the project (e.g., a restaurant with more than 15 parking spaces would be required to incorporate the requirements for (g) Equipment Wash Areas <u>and</u> (h) Parking Areas into the project design).

A. Private Roads. The design of private roadway drainage shall use at least one of the following:

1. Rural swale system: street sheet flows to vegetated swale or gravel shoulder, curbs at street corners, culverts under driveways and street crossings;

2. Urban curb/swale system: street slopes to curb, periodic swale inlets drain to vegetated swale/biofilter;

3. Dual drainage system: First flush captured in street catch basins and discharged to adjacent vegetated swale or gravel shoulder, high flows connect directly to storm water conveyance system;

4. Other methods, which are comparable and equally effective within the project.

B. Residential Driveways and Guest Parking. The design of driveways and private residential parking areas shall use at least one of the following features:

1. Design driveways with shared access, flared (single lane at street) or wheelstrips (paving only under tires); or, drain into landscaping prior to discharging to the storm water conveyance system;

2. Uncovered temporary or guest parking on private residential lots may be: paved with a permeable surface; or, designed to drain into landscaping prior to discharging to the storm water conveyance system;

3. Other features which are comparable and equally effective.

C. Dock Areas. Loading/unloading dock areas shall include the following:

1. Cover loading dock areas, or design drainage to preclude urban run-on and runoff;

2. Direct connections to storm drains from depressed loading docks (truck wells) are prohibited;

3. Other features which are comparable and equally effective.

D. Maintenance Bays. Maintenance bays shall include the following:

1. Repair/maintenance bays shall be indoors; or, designed to preclude urban run-on and runoff; and

2. Design a repair/maintenance bay drainage system to capture all wash water, leaks and spills. Connect drains to a sump for collection and disposal. Direct connection of the repair/maintenance bays to the storm drain system is prohibited. If required by local jurisdiction, obtain an Industrial Waste Discharge Permit, or

3. Other features which are comparable and equally effective.

E. Vehicle Wash Areas. Priority projects that include areas for washing/steam cleaning of vehicles shall use the following:

1. Self-contained, and covered with a roof or overhang;

2. Equipped with a clarifier or other pretreatment facility;

3. Properly connected to a sanitary sewer; and

4. Other features which are comparable and equally effective.

F. Outdoor Processing Areas. Outdoor process equipment operations, such as rock grinding or crushing, painting or coating, grinding or sanding, degreasing or parts cleaning, landfills, waste piles, and wastewater and solid waste treatment and disposal, and other operations determined to be a potential threat to water quality by the Copermittee shall adhere to the following requirements:

1. Cover or enclose areas that would be the most significant source of pollutants; or, slope the area toward a dead-end sump; or, discharge to the sanitary sewer system following appropriate treatment in accordance with conditions established by the applicable sewer agency;

2. Grade or berm area to prevent run-on from surrounding areas;

3. Installation of storm drains in areas of equipment repair is prohibited;

4. Other features which are comparable or equally effective.

G. Equipment Wash Areas. Outdoor equipment/accessory washing and steam cleaning activities at priority projects shall use the following:

1. Be self-contained, and covered with a roof or overhang;

2. Have a grade or berm area to prevent run-on from surrounding areas;

3. Be equipped with a clarifier, grease trap or other pretreatment facility, as appropriate;

4. Properly connected to a sanitary sewer;

5. Installation of storm drains in wash areas is prohibited;

6. Other features which are comparable or equally effective.

H. Parking Areas. To minimize the offsite transport of pollutants from parking areas, the following design concepts shall be considered, and incorporated and implemented where determined applicable and feasible by the Director of Public Works:

1. Where landscaping is proposed in parking areas, incorporate landscape areas into the drainage design;

2. Overflow parking (parking stalls provided in excess of the city's minimum parking requirements) should be constructed with permeable paving;

3. Other design concepts, which are comparable and equally effective.

I. Roadways. Priority roadway projects shall select treatment control BMPs following the treatment control selection procedure identified in this chapter entitled, "Establishing Storm Water BMPs."

J. Fueling Area. Retail and non-retail fuel dispensing areas shall contain the following:

1. Overhanging roof structure or canopy. The cover's minimum dimensions must be equal to or greater than the area within the grade break. The cover must not drain onto the fuel dispensing area and the downspouts must be routed to prevent drainage across the fueling area. The fueling area shall drain to the project's treatment control BMPs prior to discharging to the storm water conveyance system;

2. Paved with Portland cement concrete (or equivalent smooth impervious surface). The use of asphalt concrete shall be prohibited;

3. Have an appropriate slope to prevent ponding, and must be separated from the rest of the site by a grade break that prevents run-on of urban runoff; and

4. At a minimum, the concrete fuel dispensing area must extend 6.5 feet (2.0 meters) from the corner of each fuel dispenser, or the length at which the hose and nozzle assembly may be operated plus one (1) foot (0.3 meter), whichever is less.

K. Hillside Landscaping. Hillside areas that are disturbed by project development shall be landscaped with deep-rooted, drought tolerant plant species selected for erosion control, satisfactory to the Director of Public Works.

**16.60.310 Treatment control BMP objectives.**

A. Minimizing a development's detrimental effects on water quality can be most effectively achieved through the use of a combination of site design, source and treatment control storm water BMPs. Where projects have been designed to minimize, to the maximum extent practicable, the introduction of anticipated pollutants of concern that may result in significant impacts to the receiving waters through the implementation of site design and source control storm water BMPs, the development would still have the potential for pollutants of concern to enter the storm water conveyance system. Therefore, priority projects shall be designed to remove pollutants of concern from the storm water conveyance system to the maximum extent practicable through the incorporation and implementation of treatment control BMPs.

B. In meeting the requirements in this section, priority projects shall implement a single or combination of storm water BMPs that will remove anticipated pollutants of concern, as identified by the procedure of this chapter, from site runoff to the maximum extent practicable. Treatment control BMPs with a high or medium pollutant removal efficiency for the project's most significant pollutant of concern shall be selected. Treatment control BMPs with a low removal efficiency ranking shall only be approved by the Director of Public Works when a feasibility analysis has been conducted, which exhibits that implementation of treatment control BMPs with a high or medium removal efficiency ranking are infeasible. Treatment control BMPs must be implemented unless a waiver is granted to the project by the Director of Public Works based on the infeasibility of any treatment control BMP.

**16.60.320 Design to treatment control BMP standards.**

All priority projects shall design, construct and implement structural treatment control BMPs that meet the design standards of this section and the applicable Countywide Model SUSMP, unless specifically exempted by the limited exclusions listed in 16.60.350. Structural treatment control BMPs required by this section shall be operational prior to the use of any dependent development, and shall be located and designed in accordance with the requirements of this chapter.

**16.60.330 Structural treatment control volume-based BMPs.**

Volume-based BMPs shall be designed to mitigate (infiltrate, filter, or treat) either:

A. Volume of runoff produced from a 24-hour 85$^{th}$ percentile storm event, as determined from isoplovial maps contained in the County of San Diego Hydrology Manual; or

B. Volume of runoff produced by the 85$^{th}$ percentile 24-hour runoff event, determined as the maximized capture urban runoff volume for the area, from the formula recommended in *Urban Runoff Quality Management, WEF Manual of Practice No. 23/ASCE Manual of Practice No. 87, (1998)*; or

C. The volume of annual runoff based on unit basin storage volume, to achieve ninety percent (90%) or more volume treatment by the method recommended in *California Stormwater Best Management Practices Handbook – Industrial/ Commercial, (1993)*; or

D. The volume of runoff, as determined from the local historical rainfall record, that achieves approximately the same reduction in pollutant loads and flows as achieved by mitigation of the 85$^{th}$ percentile 24-hour runoff event. Where this option is used, storm events shall be identified by their separation from one another by at least six hours of no rain.

**16.60.340 Structural treatment control flow-based BMPs.**

As an alternative to volume-based BMPs, structural treatment controls may be designed as flow-based BMPs. Flow-based BMPs shall be designed to mitigate (infiltrate, filter, or treat) either:

A. The maximum flow rate of runoff produced from a rainfall intensity of 0.2 inch of rainfall per hour for each hour of a storm event; or

B. The maximum flow rate of runoff produced by the 85$^{th}$ percentile hourly rainfall intensity, as determined from the local historical rainfall record, multiplied by a factor of two, for each hour of a storm event; or

C. The maximum flow rate of runoff, as determined from the local historical rainfall record, that achieves approximately the same reduction in pollutant loads and flows as achieved by mitigation of the 85$^{th}$ percentile hourly rainfall intensity multiplied by a factor of two, for each hour of a storm event.

**16.60.350 Limited exclusions.**

A. Proposed restaurants, where the land area for development or redevelopment is less than 5,000 square feet, are excluded from the numerical sizing criteria requirements listed in 16.60.320 through 16.60.340.

B. Where significant redevelopment results in an increase of less than fifty percent (50%) of the impervious surfaces of a previously existing development, and the existing development was not subject to SUSMP requirements, the numeric sizing criteria discussed in 16.60.330 and 16.60.340 apply only to the addition, and not to the entire development.

**16.60.360 Locating BMPs near pollutant sources.**

Structural treatment control storm water BMPs should be implemented close to pollutant sources to minimize costs and maximize pollutant removal prior to runoff entering receiving waters. Such BMPs may be located on- or off-site, used singly or in combination, or shared by multiple new developments, pursuant to the following requirements:

A. All structural treatment control BMPs shall be located so as to infiltrate, filter, and/or treat the required runoff volume or flow prior to its discharge to any receiving water body supporting beneficial uses;

B. Multiple post-construction structural treatment control BMPs for a single priority development project shall collectively be designed to comply with the design standards for structural treatment control BMPs;

C. Shared storm water BMPs shall be operational prior to the use of any dependent development or phase of development. The shared BMPs shall only be required to treat the dependent developments or phases of development that are in use;

D. Interim storm water BMPs that provide equivalent or greater treatment than is required by structural treatment control BMPs may be implemented by a dependent development until each shared BMP is operational. If interim BMPs are selected, the BMPs shall remain in use until permanent BMPs are operational.

**16.60.370 Restrictions on use of infiltration BMPs.**

At a minimum, use of structural treatment BMPs that are designed to primarily function as infiltration devices shall meet the following conditions[2]:

A. Urban runoff from commercial developments shall undergo pretreatment to remove both physical and chemical contaminants, such as sedimentation or filtration, prior to infiltration;

B. All dry weather flows shall be diverted from infiltration devices except for those non-storm water discharges authorized pursuant to 40 CFR 122.26(d)(2)(iv)(B)(1): diverted stream flows, rising ground waters, uncontaminated ground water infiltration [as defined at 40 CFR 35.2005(20)] to storm water conveyance systems, uncontaminated pumped ground water, foundation drains, springs, water from crawl space pumps, footing drains, air conditioning condensation, flow from riparian habitats and wetlands, water line flushing, landscape irrigation, discharges from potable water sources other than water main breaks, irrigation water, individual residential car washing, and dechlorinated swimming pool discharges;

C. Pollution prevention and source control BMPs shall be implemented at a level appropriate to protect groundwater quality at sites where infiltration structural treatment BMPs are to be used;

D. The vertical distance from the base of any infiltration structural treatment BMP to the seasonal high groundwater mark shall be at least 10 feet or as determined on an individual, site-specific basis by the Director of Public Works. Where groundwater does not support beneficial uses, this vertical distance criterion may be reduced, provided groundwater quality is maintained;

E. The soil through which infiltration is to occur shall have physical and chemical characteristics (such as appropriate cation exchange capacity, organic

[2] These conditions do not apply to structural treatment BMPs which allow incidental infiltration and are not designed to primarily function as infiltration devices (such as grassy swales, detention basins, vegetated buffer strips, constructed wetlands, etc.)

content, clay content, and infiltration rate) that are adequate for proper infiltration durations and treatment of urban runoff for the protection of groundwater beneficial uses;

F. Infiltration structural treatment BMPs shall not be used for areas of industrial or light industrial activity; areas subject to high vehicular traffic (25,000 or greater average daily traffic on main roadway or 15,000 or more average daily traffic on any intersecting roadway); automotive repair shops; car washes; fleet storage areas (bus, truck, etc.); nurseries; and other high threat to water quality land uses and activities as designated by the Director of Public Works;

G. The horizontal distance between the base of any infiltration structural BMP and any water supply wells shall be 100 feet or as determined on an individual, site-specific basis by the Director of Public Works.

**16.60.380 Maintenance mechanism to be in place before acceptance.**

Structural BMPs shall not be considered "effective," and shall not be accepted as meeting the MEP standard, unless a mechanism is in place that will ensure ongoing long-term maintenance of all structural BMPs. As part of project review, if a project proponent is required to include interim or permanent structural BMPs in project plans, and if the Director of Public Works does not provide a mechanism for BMP maintenance, the project proponent shall provide verification of maintenance requirements through such means as may be appropriate, at the discretion of the Director of Public Works, including, but not limited to covenants, legal agreements, maintenance agreements, and/or conditional use permits.

**16.60.390 Maintenance mechanisms.**

Public equity maintenance. The city council may approve a public or acceptable quasi-public entity (e.g., the County Flood Control District, or annex to an existing assessment district, an existing utility district, a state or federal resource agency, or a conservation conservancy) to assume responsibility for maintenance, repair and replacement of the BMP. Unless acceptable to the city council, public entity maintenance agreements shall ensure estimated costs are front-funded or reliably guaranteed (e.g., through a trust fund, cash deposit, assessment district fees, bond, letter of credit or similar means). In addition, the city council may seek protection from liability by appropriate releases and indemnities. The city council shall have the authority to approve storm water BMPs proposed for transfer to any other public entity within its jurisdiction before installation. The city council shall be involved in the negotiation of maintenance requirements with any other public entities accepting maintenance responsibilities within their respective jurisdictions, and in negotiations with the resource agencies responsible for issuing permits for the construction and/or maintenance of the facilities. The city council must be identified as a third party beneficiary empowered to enforce any such maintenance agreement within their respective jurisdictions.

A. Project proponent agreement to maintain storm water BMPs: The city council may enter into a contract with the project proponent obliging the project proponent to maintain, repair and replace the storm water BMPs as necessary into perpetuity. Security may be required.

B. Assessment districts: The city council may approve an Assessment District or other funding mechanism created by the project proponent to provide funds for storm water BMP maintenance, repair and replacement on an ongoing basis. Any agreement with such a District shall be subject to the Public Entity Maintenance Provisions above.

C. Lease provisions: In those cases where the city holds title to the land in question, and the land is being leased to another party for private or public use, the city council may assure storm water BMP maintenance, repair and replacement through conditions in the lease.

D. Conditional use permits: For discretionary projects only, the city council may assure maintenance of storm water BMPs through the inclusion of maintenance conditions in the conditional use permit. Security may be required.

E. Alternative mechanisms: The city council may accept alternative maintenance mechanisms if such mechanisms are as protective as those listed above.

**16.60.400 Verification mechanisms.**

For discretionary projects, the city approved method of storm water BMP maintenance shall be incorporated into the project's permit, and shall be consistent with permits issued by resource agencies, before city approval of discretionary permits. For projects requiring only ministerial permits, the approved method of storm water BMP maintenance shall be incorporated into the permit conditions before the issuance of any ministerial permits. In all instances, the project proponent shall provide proof of execution of an approved method of maintenance repair and replacement before the issuance of construction approvals. Public projects that are not required to obtain permits shall be responsible for ensuring that an approved method of storm water BMP maintenance repair and replacement is executed prior to the commencement of construction. For all properties, the verification mechanism will include the project proponent's signed statement, as part of the project application, accepting responsibility for all structural BMP maintenance, repair and replacement, until a city-approved entity agrees to assume responsibility for structural BMP maintenance, repair and replacement.

**16.60.410 Maintenance requirements.**

A. Operation & Maintenance (O&M) Plan: A copy of an O&M plan, prepared by the project proponent satisfactory to the Director of Public Works shall be attached to the approved maintenance agreement, which describes the designated responsible party to manage the storm water BMPs, employee's training program and duties, operating schedule, maintenance frequency, routine service schedule, specific maintenance activities, copies of resource agency permits, and any other necessary activities. At a minimum, maintenance agreements shall require the inspection and servicing of all structural BMPs on an annual basis. The project proponent maintenance entity shall complete and maintain O&M forms to document all maintenance requirements. Parties responsible for the O&M plan shall retain records for at least 5 years. These documents shall be made available to the city for inspection upon request at any time.

B. Access Easement/Agreement: As part of the maintenance mechanism selected above, it shall include a copy of an executed access easement that shall be binding on the land throughout the life of the project, until such time that the storm water BMP requiring access is replaced, satisfactory to the Director of Public Works.

**16.60.420 Waiver of structural treatment BMP requirements.**

The requirement of implementing structural treatment BMPs may be waived if infeasibility can be established. A waiver of infeasibility shall be granted only when all available structural treatment BMPs have been considered and rejected as infeasible.

Waivers may only be granted from structural treatment BMP and structural treatment BMP sizing requirements. Priority development projects, whether or not granted a waiver may not cause or contribute to an exceedance of water quality objectives. Pollutants in runoff from projects granted a waiver must still be reduced to the maximum extent practicable.

Section 3: This Ordinance is adopted pursuant to the authority granted to the City of El Cajon under San Diego Regional Water Quality Control Board Order No. R9 2007-0001. This Ordinance encompasses a state-mandated requirement thereunder.

Section 4: This ordinance shall be effective thirty (30) days following its passage and adoption.

PASSED AND ADOPTED by the City Council of the City of El Cajon, California at an Adjourned Regular Joint City Council/Redevelopment Agency Meeting held this 23rd day of February 2010, by the following vote to wit:

| | | |
|---|---|---|
| AYES | : | Lewis, Hanson-Cox, Kendrick, McClellan, Wells |
| NOES | : | None |
| ABSENT | : | None |
| DISQUALIFY | : | None |

MARK LEWIS
Mayor of the City of El Cajon

ATTEST:

KATHIE RUTLEDGE, CMC
City Clerk

I hereby certify that the above and foregoing is a full and true copy of Ordinance No. 4939 of the Ordinances of the City of El Cajon, California, as adopted by the City Council at the Adjourned Regular Joint Meeting of the City Council/Redevelopment Agency on the 23rd day of February 2010.

Kathie Rutledge
Kathie Rutledge, CMC, City Clerk

## PROJECT INTRODUCTION AND PROJECT BACKGROUND

The following shall be completed in its entirety prior to submittal. Refer to Chapter 4 for details on identifying constraints and opportunities for storm water control.

Project Name:

Project Location:

Project Description:

Existing Site Features and Conditions Including Topography:

Constraints and Opportunities for Storm Water Control:

## CHAPTER 1 – POLICIES AND PROCEDURES

This Storm Water Conceptual Plan (Conceptual Plan) shall be prepared following the completion of the "***Storm Water SUSMP Applicability Form for Development Projects***" that can be obtained from the Planning Department during the project development phase.

This Conceptual Plan shall be used in conjunction with the Countywide Model Standard Urban Stormwater Mitigation Plan (SUSMP), which can be obtained at http://www.projectcleanwater.org. The Model SUSMP has step-by-step instructions, which will guide you in preparing the Conceptual Plan. The Chapters used herein correspond to the Model SUSMP and contained herein are City of El Cajon's (City) specific project requirements.

If the project requires a Hydromodification Management Plan (HMP) as determined in the Model SUSMP Chapter 2, page 26, the Engineer shall refer the Draft Hydromodification Plan, which can be obtained at http://www.projectcleanwater.org.

## CONCEPTUAL PLAN PURPOSE

The purpose of this Conceptual Plan is to assist the Applicant in planning ahead for stormwater compliance. The most common (and costly) errors made by Applicants for development approvals with respect to stormwater quality compliance are:

1. Not planning for compliance early enough. The Applicant should think about strategies for stormwater quantity and quality compliance before completing a conceptual site design or sketching a layout of subdivision lots (Chapter 3).
2. Assuming proprietary stormwater treatment facilities will be adequate for compliance. Most are not adequate for anticipated pollutants (Chapter 2).
3. Not planning for periodic inspection and maintenance of treatment and flow-control facilities. Consider who will own and who will maintain the facilities in perpetuity and how they will obtain access, and identify which arrangements are acceptable to the City.
4. Not having the necessary experience or resources to prepare the calculations, reports, and implement innovative solutions to develop stormwater quality designs.

Managing runoff from a single development site may seem inconsequential, but by changing the way most sites are developed (or redeveloped), the City may be able to preserve and enhance existing stream ecosystems within our watershed.

## STORM WATER COMPLIANCE PROCESS

Typically, during the Planning Phase, the City of El Cajon determines if a development project is a **"Priority Development Project"** following the completion of the **"Storm Water SUSMP Applicability Form for Development Projects"**. A **"Storm Water Conceptual Plan"** is then developed and submitted for review and approval. Then, during final design (or preparation of construction plans), a Storm Water Mitigation Plan (SWMitP) is required in accordance with the Standard Urban Storm Water Mitigation Plan (SUSMP) ordinance of the City of El Cajon (Ord. 4908, Chapter 16.60) and San Diego

Regional Water Quality Control Board (RWQCB) Order No. R9-2007-0001, NPDES Permit No. CAS0108758.

This Conceptual Plan is intended to ensure that the site provides enough space for adequate sizing and placement of stormwater facilities. The Conceptual Plan is a living document subject to revisions as needed by the Engineer of Work and the City during the Planning Phase. During final design (or preparation of the construction plans), the Engineer is required to comply with the Storm Water requirements through the preparation and approval of a SWMitP.

The City's Conceptual Plan submittal requirements are described in Chapter 3. The Conceptual Plan shall be completed in its entirety prior to submittal to the City otherwise it will be returned without review. If you have any questions during the preparation of the Conceptual Plan contact the Storm Water Department at (619) 441-1653.

Attach a copy of the completed "***Storm Water SUSMP Applicability Form for Development Projects".***

## CHAPTER 2 – CONCEPTS AND CRITERIA

The City lies entirely within the San Diego River Watershed, Hydrologic Unit (HU) 907. The City recognizes the following drainage basins within the City, all of which eventually discharge into the San Diego River. The Engineer shall refer to the City of El Cajon Jurisdictional Urban Runoff Management Program (JURMP), which is available at http://www.ci.el-cajon.ca.us/dept/works/stormwater.html.

Check the corresponding sub-watershed(s) for the project

| ☐ Broadway Channel Basin | ☐ Washington Channel Basin | ☐ County Ditch Basin | ☐ Northern Forrester Creek Basin |
| ☐ Forrester Creek Basin | ☐ Fanita Basin | ☐ Fletcher Parkway Basin | ☐ Third Street Lateral |

The following are designated as impaired waters by the RWQCB and USEPA pursuant to the Clean Water Act Section 303(d): ***Forrester Creek and the San Diego River***. The City follows a conservative approach with regards to pollutants impairing water bodies.

**Water Quality (Treatment Requirements):** The City requires that all pollutants of concern or water quality effect as identified on the Clean Water Act (CWA) 303(d) list be applied for the entire length of the corresponding water body. Determine the Anticipated and Potential Pollutants of Concern per Table 2-1 attached in the next page and per the Model SUSMP, Chapter 2.

Circle each as applicable:

Table 2.1. Anticipated and Potential Pollutants Generated by Land Use Type.

| | General Pollutant Categories | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| Priority Project Categories | Sediments | Nutrients | Heavy Metals | Organic Compounds | Trash & Debris | Oxygen Demanding Substances | Oil & Grease | Bacteria & Viruses | Pesticides |
| Detached Residential Development > 10 Units | X | X | | | X | X | X | X | X |
| Attached Residential Development > 10 Units | X | X | | | X | P(1) | P(2) | P | X |
| Commercial Development > 1 acre | P(1) | P(1) | X | P(2) | X | P(5) | X | P(3) | P(5) |
| Heavy Industry /Industrial Development > 1 acre | X | | X | X | X | X | X | | |
| Automotive Repair Shops | | | X | X (4)(5) | X | | X | | |
| Restaurants | | | | | X | X | X | X | P(1) |
| Hillside Development > 5,000 $ft^2$ | X | X | | | X | X | X | | X |
| Parking Lots > 5,000 $ft^2$ or > 15 spaces | P(1) | P(1) | X | | X | P(1) | X | | P(1) |
| Retail Gasoline Outlets > 5,000$ft^2$ or > 100 ADT | | | X | X | X | X | X | | |
| Streets, Highways & Freeways > 5,000 $ft^2$ | X | P(1) | X | X(4) | X | P(5) | X | X | P(1) |

X = anticipated
P = potential

(1) A potential pollutant if landscaping exists on-site.
(2) A potential pollutant if the project includes uncovered parking areas.
(3) A potential pollutant if land use involves food or animal waste products.
(4) Including petroleum hydrocarbons.
(5) Including solvents.

Check each half of a box as applicable:

| Pollutants associated with 303(d) Listed ImpairedWaters To Which the Project Drains | Project Specific Anticipated and Potential Pollutants of Concern | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| | Sed | Nut | HM | Org | T&D | ODS | O&G | B&V | Pes |
| Sed | | | | | | | | | |
| Nut | | X | | | | | | | |
| HM | | | | | | | | | |
| Org | | | | | | | | | |
| T&D | | | | | | | | | |
| ODS | | | | | | X | | | |
| O&G | | | | | | | | | |
| B&V | | | | | | | | X | |
| Pes | | | | | | | | | |

*Sed = Sediment; Nut = Nutrients; HM = Heavy Metals; Org = Organics; T&D = Trash and Debris; ODS= Oxygen Demand Substances; O&G = Oils and Grease; B&V = Bacteria & Viruses; Pes = Pesticides;*

The City requires that the Pollutants of Concern be grouped to determine how easily various treatment processes remove them. Refer to Table 2-2 inserted below from the Model SUSMP, Chapter 2.

If a box above has two (2) checks, it is considered a Primary Pollutant; one (1) check is considered a Secondary Pollutant. Check each pollutant below according to either Primary or Secondary Pollutant.

TABLE 2-2. GROUPING OF POTENTIAL POLLUTANTS of Concern by fate during stormwater treatment

Check off the Pollutants in the table below accordingly:

| Primary | Secondary | Pollutant | Coarse Sediment and Trash | Pollutants that tend to associate with fine particles during treatment | Pollutants that tend to be dissolved following treatment |
|---|---|---|---|---|---|
| | | Sediment | X | X | |
| | | Nutrients | | X | X |
| | | Heavy Metals | | X | |
| | | Organic Compounds | | X | |
| | | Trash & Debris | X | | |
| | | Oxygen Demanding | | X | |
| | | Bacteria | | X | |
| | | Oil & Grease | | X | |
| | | Pesticides | | X | |

When selecting a treatment facility to remove a specific pollutant, the City requires that "Medium" or "High" Removal Efficiency BMPs treat all Primary Pollutants of concern as identified above. Refer to Table 2-3 inserted below from the Model SUSMP, Chapter 2, to determine an effective treatment facility.

Circle as applicable:

TABLE 2-3. GROUPS OF POLLUTANTS and relative effectiveness of treatment facilities

| **Pollutants of Concern** | Bioretention Facilities (LID) | Settling Basins (Dry Ponds) | Wet Ponds and Constructed Wetlands | Infiltration Facilities or Practices (LID) | Media Filters | Higher-rate biofilters* | Higher-rate media filters* | Trash Racks & Hydro -dynamic Devices (1) |
|---|---|---|---|---|---|---|---|---|
| **Coarse Sediment and Trash** | High | High | High | High | High | High | High | High |
| **Pollutants that tend to associate with fine particles during treatment** | High | High | High | High | High | Medium | Medium | Low |
| **Pollutants that tend to be dissolved following treatment** | Medium | Low | Medium | High | Low | Low | Low | Low |

*See page 23 of the Regional Model SUSMP for a discussion of selection of treatment facilities in special situations.

*Notes: (1) Trash Racks & Hydrodynamic Devices shall not be used alone.*
*(2) The City shall reserve the right to determine if the selected treatment facility is appropriate, which may lead to selecting a higher efficiency treatment facility that originally selected by the Engineer.*

The Engineer shall ensure that the area (i.e. parking lots, detached residential development, etc.) that requires the treatment actually drains to the selected treatment facility. This shall be clearly shown on the Conceptual Plan and delineated as such in the drainage report. If this is not clearly shown, the City reserves the right to reject the submittal.

**Water Quantity (Detention Requirements):** With the exception of projects that require a HMP, the City requires that the 2-year and the 10-year storm event be used for calculating peak flows and the 100-year storm event be used to demonstrate flooding impacts. The 2-year and the 10-year storm event shall be used to design stormwater detention facilities in accordance with the San Diego County Hydrology Manual, latest edition, Section 6. The 100-year shall be used to design a bypass system.

For guidance on preparing the Hydraulics and Hydrology Report (or Drainage Report), refer to the San Diego County Hydrology Manual, latest edition. The Engineer may consider using intensities from the latest edition of the City of El Cajon Improvement Standards, Figure 3.4-2 included in the next page for the

design of the drainage improvements (i.e. pipelines, catch basins, inlets, etc). Per the City's requirements, a Drainage Report is required and may be submitted separately or attached to the Conceptual Plan.

Fig. 3.4-2

AVERAGE INTENSITY-DURATION CURVES
El Cajon, California

## CHAPTER 3 – PREPARING YOUR PROJECT SUBMITTAL

The City requires that this entire packet be completed and submitted along with maps, calculations, details, and other information as requested herein. Attachments shall be listed in the Table of Contents.

**Storm Water Conceptual Plan:** The Plan shall be shown on a Standard D-size sheet and plotted using engineering scales only and not architectural scales. Preliminary size and location of proposed storm water BMPs must be shown on the Plan. This includes all LID, source control, and structural treatment BMPs. Detention facilities shall be shown, if required. It is important to show the intended location of the facilities even if the exact configuration and grading of the site may have minor modifications during final design. This will ensure that adequate provisions have been made to accommodate and locate the BMPs to achieve the required storm water management objectives.

The Engineer shall evaluate and determine the most appropriate BMPs or combination of BMPs to achieve applicable performance requirements. The selected BMPs need to achieve a “Medium” to “High” efficiency removal of the pollutants of concern for the proposed project. Once the most effective BMPs have been selected, the Plan can be developed and should include the following information:

1. Location of selected BMPs
2. Configuration of storm water conveyance system(s)
3. Proposed sizing (length, width and depth) of all BMPs
4. Location and dimensions of the Detention System, if required.
5. Proposed discharge structure details from the conveyance and storage systems, to the public storm drain system.

**Conceptual Plan Submittal Checklist:**

- ☐ Storm Water Conceptual Plan
- ☐ Storm Water Treatment Facilities Calculations
- ☐ Hydrologic and Hydraulic calculations, including sizing calculations for detention structures and other drainage facilities that will be used to manage storm water runoff
- ☐ A discussion describing the determination of potential and actual priority pollutants and pollutants of concern, receiving water quality and the consideration and selection of storm water BMPs, including LID, site design, source control and treatment control BMPs.

## CHAPTER 4 – LOW IMPACT DEVELOPMENT (LID) DESIGN GUIDE

If the Engineer is not familiar with LID or permanent BMPs design, the Engineer shall refer to Chapter 4 of the Countywide Model SUSMP. The City strongly recommends that the Engineer meet with the Storm Water Department prior to selecting stormwater treatment and flow-control facilities if they are not familiar with the design and functionality of LID or BMPs. The Engineer can set up a meeting by contacting the Storm Water Department at (619) 441-1653.

### Analyze Your Project for LID

The City strongly encourages the Applicant to consider the following opportunities for LID:

- ☐ Optimize the site plan by preserving natural drainage features and designing buildings and circulation to minimize the amount of roofs and paving.
- ☐ Conserve the natural areas such as existing trees, vegetation, and maximize sheet flow in order to mimic pre-development hydrologic cycle.
- ☐ Use pervious surfaces such as turf, gravel, or pervious pavement – or use surfaces that retain rainfall such as vegetated roofs shall be considered. All drainage from these surfaces is considered to be "self-retained" when designed properly. No further management of runoff is necessary. ***NOTE: Perform adequate geotechnical evaluations when using pervious pavements in Soil Type C and D.***
- ☐ Disperse runoff from impervious surfaces on to adjacent pervious surfaces (e.g. direct a roof downspout to disperse runoff onto a lawn, planter, or other pervious surface).

### Alternatives to Integrated LID Design

The City requires that the Engineer consult with the Storm Water Department prior to proceeding with alternatives.

## PROJECT INTRODUCTION AND PROJECT BACKGROUND

The following shall be completed in its entirety prior to submittal. Refer to Chapter 4 for details on identifying constraints and opportunities for storm water control.

Project Name:

Project Location:

Project Description:

Existing Site Features and Conditions Including Topography:

Constraints and Opportunities for Storm Water Control:

## CHAPTER 1 – POLICIES AND PROCEDURES

This Storm Water Mitigation Plan (SWMitP) shall be prepared in conjunction with the Countywide Model Standard Urban Stormwater Mitigation Plan (SUSMP), which can be obtained at http://www.projectcleanwater.org. The Model SUSMP has step-by-step instructions, which will guide you in preparing the SWMitP. The Chapters used herein correspond to the Model SUSMP and contained herein are City of El Cajon's (City) specific project requirements.

If the project requires a Hydromodification Management Plan (HMP) as determined in the Model SUSMP Chapter 2, page 26, the Engineer shall refer the Draft Hydromodification Plan, which can be obtained at http://www.projectcleanwater.org.

The SWMitP shall been prepared under the direction of a Civil Engineer registered in the state of California. The Registered Civil Engineer shall attests to the technical information contained herein and the engineering data upon which recommendations, conclusions, and decisions are based.

## CERTIFICATION

I, _____, certify that the selection, sizing, and preliminary design of stormwater treatment and other control measures in this SWMitP meet the requirements of the Regional Water Quality Control Board Order R9-2007-0001 and subsequent amendments.

Signature: _____ Date: _____

*AFFIX WET STAMP HERE ➔*

## SWMitP PURPOSE

The purpose of this SWMitP is to finalize the list of anticipated pollutants from the project, finalize proposed Low Impact Development (LID) principles, select final source control and treatment control Best Management Practices (BMPs), finalize sizing calculations for stormwater BMPs, and submit an appropriate maintenance plan. BMPs and LID features applied to all projects provide long-term solutions to water quality and help minimize downstream erosion. This SWMitP is intended to ensure the effectiveness of the selected LID's and BMPs proposed by checking that they have been sized properly, maintenance is feasible, and that the design is based on long-term fiscal planning. The SWMitP is a living document subject to revisions as needed by the Engineer of Work and the City.

## STORM WATER COMPLIANCE PROCESS

Typically, during the Planning Level or Programming Phase, the City of El Cajon determines if a development project is a **"Priority Development Project"** following the completion of the **"Storm Water SUSMP Intake Applicability Form for Development Projects"**. A **"Storm Water Conceptual Plan"** is then developed and submitted for review and approval. Then, during final design (or preparation of construction plans), a Storm Water Mitigation Plan (SWMitP) is required in accordance with the Standard Urban Storm Water Mitigation Plan (SUSMP) ordinance of the City of El Cajon (Ord. 4908, Chapter 16.60) and San Diego Regional Water Quality Control Board (RWQCB) Order No. R9-2007-0001, NPDES Permit No. CAS0108758.

The City's SWMitP submittal requirements are described in Chapter 3. The SWMitP shall be completed in it entirety prior to submittal to the City of El Cajon otherwise it will be returned without review. If you have any questions during the preparation of the SWMitP contact the Storm Water Department at (619) 441-1653.

Complete the following:

1. Is the project on previously undeveloped land (new development)?

   YES NO

2. Is the project adding or creating 5,000-sf, or more, of impervious surface (redevelopment)?

   YES NO

If you answered YES to either 1 or 2, complete Table 1-1, inserted below from the Model SUSMP, Chapter 1.

TABLE 1-1. Priority Development Projects.

**Is the project in any of these categories?**

| | | | |
|---|---|---|---|
| Yes ❑ | No ❑ | A | **Housing subdivisions of 10 or more dwelling units.** Examples: single-family homes, multi-family homes, condominiums, and apartments. |
| Yes ❑ | No ❑ | B | **Commercial—greater than one acre.** Any development other than heavy industry or residential. Examples: hospitals; laboratories and other medical facilities; educational institutions; recreational facilities; municipal facilities; commercial nurseries; multi-apartment buildings; car wash facilities; mini-malls and other business complexes; shopping malls; hotels; office buildings; public warehouses; automotive dealerships; airfields; and other light industrial facilities. |
| Yes ❑ | No ❑ | C | **Heavy industry—greater than one acre.** Examples: manufacturing plants, food processing plants, metal working facilities, printing plants, and fleet storage areas (bus, truck, etc.). |
| Yes ❑ | No ❑ | D | **Automotive repair shops.** A facility categorized in any one of Standard Industrial Classification (SIC) codes 5013, 5014, 5541, 7532-7534, or 7536-7539. |
| Yes ❑ | No ❑ | E | **Restaurants.** Any facility that sells prepared foods and drinks for consumption, including stationary lunch counters and refreshment stands selling prepared foods and drinks for immediate consumption (SIC code 5812), where the land area for development is greater than 5,000 square feet. Restaurants where land development is less than 5,000 square feet shall meet all SUSMP requirements except for structural treatment BMP and numeric sizing criteria requirements and hydromodification requirements. |
| Yes ❑ | No ❑ | F | **Hillside development greater than 5,000 square feet.** Any development that creates 5,000 square feet of impervious surface and is located in an area with known erosive soil conditions, where the development will grade on any natural slope that is twenty-five percent or greater. |
| Yes ❑ | No ❑ | G | **Environmentally Sensitive Areas (ESAs).** All development located within or directly adjacent to or discharging directly to an ESA (where discharges from the development or redevelopment will enter receiving waters within the ESA), which either creates 2,500 square feet of impervious surface on a proposed project site or increases the area of imperviousness of a proposed project site to 10% or more of its naturally occurring condition. "Directly adjacent" means situated within 200 feet of the ESA. "Discharging directly to" means outflow from a drainage conveyance system that is composed entirely of flows from the subject development or redevelopment site, and not commingled with flows from adjacent lands. |
| Yes ❑ | No ❑ | H | **Parking lots 5,000 square feet or more** or with 15 or more parking spaces and potentially exposed to urban runoff. |
| Yes ❑ | No ❑ | I | **Street, roads, highways, and freeways.** Any paved surface that is 5,000 square feet or greater used for the transportation of automobiles, trucks, motorcycles, and other vehicles. |
| Yes ❑ | No ❑ | J | **Retail Gasoline Outlets (RGOs)** that are: (a) 5,000 square feet or more or (b) a projected Average Daily Traffic (ADT) of 100 or more vehicles per day. |

If you answered YES to any of the Items in Table 1-1, the project is a "Priority Development Project". If the Engineer determines that the project is ***NOT*** a "Priority Development Project" call the Storm Water Department at (619) 441-1653 to confirm any SUSMP requirements for the project. If the Engineer determines that the project ***IS*** a "Priority Development Project" continue to the following Chapters.

1. Is the project a "Priority Development Project"? YES NO
2. If you answered yes, list all applicable categories per Table 1-1 → _____

To determine if the project is ***EXEMPT*** from preparing a Hydromodification Management Plan (HMP), refer to the Model SUSMP Chapter 1, Page 10-11. If the Engineer determines that a HMP is required, the City may consider granting an exemption. To make this determination, the Engineer may conduct an independent geomorphic study to determine the project's full hydromodification impact. The study must incorporate sediment transport modeling across the range of geomorphically-significant flows and demonstrate to the City's satisfaction that the project flows and sediment reductions will not detrimentally affect the receiving water to qualify for the exemption. If the project is ***NOT EXEMPT***, follow the instructions in the HMP, which can be obtained at http://www.projectcleanwater.org .

1. Does the project require a HMP? YES NO

## CHAPTER 2 – CONCEPTS AND CRITERIA

The City lies entirely within the San Diego River Watershed, Hydrologic Unit (HU) 907. The City recognizes the following drainage basins within the City, all of which eventually discharge into the San Diego River. The Engineer shall refer to the City of El Cajon Jurisdictional Urban Runoff Management Program (JURMP), which is available at http://www.ci.el-cajon.ca.us/dept/works/stormwater.html.

Check the corresponding watershed(s) for the project

| | | | |
|---|---|---|---|
| ☐ Broadway Channel Basin | ☐ Washington Channel Basin | ☐ County Ditch Basin | ☐ Northern Forrester Creek Basin |
| ☐ Forrester Creek Basin | ☐ Fanita Basin | ☐ Fletcher Parkway Basin | ☐ Third Street Lateral |

The following are designated as impaired waters by the RWQCB and USEPA pursuant to the Clean Water Act section 303(d): ***Forrester Creek and San Diego River***. The City follows a conservative approach with regards to pollutants impairing water bodies.

**Water Quality (Treatment Requirements):** The City Municipal Code requires that all pollutants of concern as identified on the CWA 303(d) list be applied for the entire length of the corresponding water body. Determine the Anticipated and Potential Pollutants of Concern from Table 2-1 in the following page per Chapter 2 of the Model SUSMP.

Circle each as applicable:

TABLE 2-1. ANTICIPATED AND POTENTIAL Pollutants Generated by Land Use Type.

| | General Pollutant Categories | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| Priority Project Categories | Sediment | Nutrients | Heavy Metals | Organic Compounds | Trash & Debris | Oxygen Demanding Substances | Oil & Grease | Bacteria & Viruses | Pesticides |
| Detached Residential Development | X | X | | | X | X | X | X | X |
| Attached Residential Development | X | X | | | X | P(1) | P(2) | P | X |
| Commercial Development >one acre | P(1) | P(1) | X | P(2) | X | P(5) | X | P(3) | P(5) |
| Heavy Industry | X | | X | X | X | X | X | | |
| Automotive Repair Shops | | | X | X(4)(5) | X | | X | | |
| Restaurants | | | | | X | X | X | X | P(1) |
| Hillside Development >5,000 ft2 | X | X | | | X | X | X | | X |
| Parking Lots | P(1) | P(1) | X | | X | P(1) | X | | P(1) |
| Retail Gasoline Outlets | | | X | X | X | X | X | | |
| Streets, Highways & Freeways | X | P(1) | X | X(4) | X | P(5) | X | X | P(1) |

X = anticipated
P = potential
(1) A potential pollutant if landscaping exists on-site.
(2) A potential pollutant if the project includes uncovered parking areas.
(3) A potential pollutant if land use involves food or animal waste products.
(4) Including petroleum hydrocarbons.
(5) Including solvents.

Check each half of a box as applicable:

| Pollutants associated with 303(d) Listed ImpairedWaters To Which the Project Drains | Project Specific Anticipated and Potential Pollutants of Concern: Sed | Nut | HM | Org | T&D | ODS | O&G | B&V | Pes |
|---|---|---|---|---|---|---|---|---|---|
| Sed | | | | | | | | | |
| Nut | | X | | | | | | | |
| HM | | | | | | | | | |
| Org | | | | | | | | | |
| T&D | | | | | | | | | |
| ODS | | | | | | X | | | |
| O&G | | | | | | | | | |
| B&V | | | | | | | | X | |
| Pes | | | | | | | | | |

*Sed = Sediment; Nut = Nutrients; HM = Heavy Metals; Org = Organics; T&D = Trash and Debris; ODS= Oxygen Demand Substances; O&G = Oils and Grease; B&V = Bacteria & Viruses; Pes = Pesticides; Oth = Other (i.e. Pharmaceuticals, etc.)*

If a box above has two (2) checks, it is considered a Primary Pollutant; one (1) check is considered a Secondary Pollutant. Check each pollutant below according to either Primary or Secondary Pollutant.

The City requires that the Pollutants of Concern be grouped to determine how easily various treatment processes remove them. Refer to Table 2-2 below, inserted from Chapter 2 of the Model SUSMP.

TABLE 2-2. GROUPING OF POTENTIAL POLLUTANTS of Concern by fate during stormwater treatment

Check off the Pollutants in the table below accordingly:

| Primary | Secondary | Pollutant | Coarse Sediment and Trash | Pollutants that tend to associate with fine particles during treatment | Pollutants that tend to be dissolved following treatment |
|---|---|---|---|---|---|
| | | Sediment | X | X | |
| | | Nutrients | | X | X |
| | | Heavy Metals | | X | |
| | | Organic Compounds | | X | |
| | | Trash & Debris | X | | |
| | | Oxygen Demanding | | X | |
| | | Bacteria | | X | |
| | | Oil & Grease | | X | |
| | | Pesticides | | X | |

When selecting a treatment facility to remove a specific pollutant, the City requires that "Medium" or "High" Removal Efficiency BMPs treat all Primary Pollutants of concern as identified above. Refer to Table 2-3 inserted below from the Model SUSMP, Chapter 2 to determine an effective treatment facility.

Circle as applicable:

TABLE 2-3. GROUPS OF POLLUTANTS and relative effectiveness of treatment facilities

| **Pollutants of Concern** | Bioretention Facilities (LID) | Settling Basins (Dry Ponds) | Wet Ponds and Constructed Wetlands | Infiltration Facilities or Practices (LID) | Media Filters | Higher-rate biofilters* | Higher-rate media filters* | Trash Racks & Hydro-dynamic Devices (1) |
|---|---|---|---|---|---|---|---|---|
| **Coarse Sediment and Trash** | High | High | High | High | High | High | High | High |
| **Pollutants that tend to associate with fine particles during treatment** | High | High | High | High | High | Medium | Medium | Low |
| **Pollutants that tend to be dissolved following treatment** | Medium | Low | Medium | High | Low | Low | Low | Low |

*See page 23 of the Regional Model SUSMP for a discussion of selection of treatment facilities in special situations.

*Notes: (1) Trash Racks & Hydrodynamic Devices shall not be used alone.*
*(2) The City shall reserve the right to determine if the selected treatment facility is appropriate, which may lead to selecting a higher efficiency treatment facility than originally selected by the Engineer.*

The Engineer shall ensure that the area (i.e. Parking Lots, etc.) that requires the treatment actually drain to the selected treatment facility. This shall be clearly shown on the construction plans and delineated as such in the drainage report. If this is not clearly shown, the City reserves the right to reject the submittal.

**Water Quantity (Detention Requirements):** The City requires that the 2-year and the 10-year storm event be used for calculating peak flows and the 100-year storm event be used to demonstrate flooding impacts. The 2-year and the 10-year storm event shall be used to design storm water detention facilities in accordance with the San Diego County Hydrology Manual, latest edition, Section 6. The 100-year shall be used to design a bypass system.

For guidance on preparing the Hydraulics and Hydrology Report (or Drainage Report), refer to the San Diego County Hydrology Manual, latest edition. The Engineer may consider using intensities from the latest edition of the City of El Cajon Improvement Standards, Figure 3.4-2 included below, for the design of the

drainage improvements (i.e. pipelines, catch basins, inlets, etc). Per the City's requirements, a Drainage Report is required and may be submitted separately or attached to the Conceptual Plan.

Fig. 3.4-2

AVERAGE INTENSITY-DURATION CURVES
El Cajon, California

## CHAPTER 3 – PREPARING YOUR PROJECT SUBMITTAL

The City requires that this entire packet be completed and submitted along with maps, calculations, proprietary products catalogue cut sheets, details, and other information as requested herein.

Complete and submit the "EXAMPLE PROJECT SUBMITTAL CHECKLIST" located in the Model SUSMP Chapter 3, Page 32. Attachments shall be listed in the Table of Contents.

**Report Exhibits:** In addition to the items requested in the "CHECKLIST", the City requires that the submittal shall include a location map of the project site, and inlets located a minimum of 200-feet beyond the project site. The maps shall be on a Standard D-size sheet and plotted using engineering scales only and not architectural scales.

**Report Narrative:** In addition to the items requested in the "CHECKLIST", the City requires a description of the existing topography, run-on and runoff issues, and unique conditions. Also, describe the details of the pre-construction condition and the post-construction condition.

Summarize the affects of the project on the pre-construction flows and specifically state if the flows were increased, decreased, fully mitigated, etc. and the impact the project may have on the downstream hydrology.

**Report Tables:** In addition to the items requested in the "CHECKLIST", the City requires completion of the tables included herein.

Refer to the Model SUSMP Chapter 4 for guidelines and available Low Impact Development (LID) treatment facilities. The City requires that the project consider at minimum the LID features listed below. Based on the project specifics, the City may require additional LID treatment facilities. The Engineer shall be responsible for selecting the most adequate treatment facility and for including the calculations necessary to justify the effectiveness of each facility. Follow the Model SUSMP Chapter 3, Step 3 to prepare your LID design.

Complete the following table:

| Low Impact Development (LID) | Applied | | | Narrative |
|---|---|---|---|---|
| | Yes | No | N/A | |
| Control Peak Runoff Rates | | | | |
| Minimize Disturbance to Natural Drainages and Waterways | | | | |

| Low Impact Development (LID) | Applied | | | Narrative |
|---|---|---|---|---|
| | Yes | No | N/A | |
| Conserve Natural Areas, Soils, and Existing Vegetation | | | | |
| Minimize and Disconnect Impervious Surfaces | | | | |
| Minimize Soil Compaction | | | | |
| Drain Runoff from Impervious Surfaces to Pervious Areas | | | | |
| Drain Rooftops to Landscaping | | | | |
| Maximize the Use of Pervious Pavement | | | | |
| [List any others] | | | | |

Refer to the Model SUSMP Chapter 3, Step 4 for guidance on specifying source control BMPs. The City requires that the project consider at minimum the source control measures listed below. Based on the project specifics, the City may required additional permanent source control measures. The Engineer shall be responsible for selecting the most adequate source control measures and for including the calculations necessary to justify the effectiveness of each BMP and ensuring all BMPs are shown on the construction plans.

Complete the following table:

| Potential Source of Runoff Pollutant | Permanent Source Control BMPs | Applied | | | Operational Source BMP Narrative |
|---|---|---|---|---|---|
| | | Yes | No | N/A | |
| | Include storm drain stenciling and signage | | | | |
| | Outdoor storage area shall be designed to contain pollutants | | | | |
| | Trash storage area shall be secured, have a grade break or berm, and have a roof covering (See City of El Cajon References; Attachment No. 2) | | | | |

| Potential Source of Runoff Pollutant | Permanent Source Control BMPs | Applied | | | Operational Source BMP Narrative |
|---|---|---|---|---|---|
| | | Yes | No | N/A | |
| | Use efficient irrigation systems and landscape design | | | | |
| | Hillside landscaping | | | | |

Refer to the Model SUSMP Chapter 2 for guidance on specifying treatment facilities. The Engineer shall be responsible for selecting the most adequate treatment facilities and for including the calculations necessary to justify the effectiveness of each facility and ensuring all facilities are shown on the construction plans. Note that the Engineer shall cross-reference Chapter 2 and ensure that the drainage area which was determined in Chapter 2 to contain potential pollutants of concern per Table 2-1 is indeed draining to the appropriate treatment facility. Sufficient grades shall be provided on the drainage plans to determine if the drainage area identified is actually draining to the proper treatment facility.

Complete the following table:

| Treatment Facilities | Applied | | | Narrative to describe the selected facilities, location, drainage plans where facility is shown |
|---|---|---|---|---|
| | Yes | No | N/A | |
| Bioretention Facilities (LID) | | | | |
| Settling Basins (Dry Ponds) | | | | |
| Wet Ponds and Constructed Wetlands | | | | |
| Infiltration Facilities or Practices (LID) | | | | |
| Media Filters | | | | |
| Higher-rate biofilters | | | | |
| Higher-rate media filters | | | | |
| Trash Racks & Hydrodynamic Devices | | | | |

Refer to the Model SUSMP Chapter 4, Table 4-1 for guidance on Integrated Management Practices (IMP). The Engineer shall be responsible for selecting the most adequate IMPs and for including the calculations necessary to justify the effectiveness of each IMP and ensuring all facilities are shown on the construction plans.

Complete the following table:

| **Runoff Management Facilities** | **Applied** | | | **Narrative to describe the selected facilities, location, construction drawing where facility is shown** |
|---|---|---|---|---|
| | Yes | No | N/A | |
| Vegetated Roof | | | | |
| Self-Retaining Areas | | | | |
| Pervious Pavement | | | | |
| Bioretention Facility | | | | |
| Flow-through Planter | | | | |
| Dry Well | | | | |
| Cistern with Bioretention | | | | |

Runoff management facilities shall be per the standards found in the California Stormwater Quality Association (CASQA) Handbook, State Department of Transportation (Caltrans) Stormwater Handbook, or other well-recognized and certifying entity. If the Engineer is proposing propriety BMPs, this will require a "Propriety Product Full Submittal" attachment, which shall contain the manufacturer's catalogue cut sheets, past project photos, calculations, etc. for such proprietary items. In addition, if the Engineer is recommending facilities where functionality may be questionable, such as pervious pavement or dry wells in Type C and/or D soil types, this will require a "Documentation to Demonstrate Past Project Success" attachment, which shall contain, a list of five (5) similar applications completed within the last five (5) years and including contact information for the Engineer of Record and property owner to demonstrate proper functionality.

**Report Calculations:** In addition to the items requested in the "CHECKLIST", the City requires that runoff coefficients reflect the true imperviousness of the project area and not the land use coefficients. Calculate Q's to the nearest 0.1

cfs. The report shall clearly describe the design parameters used in the calculations and how the parameters, design criteria, constants, and other values were selected, derived, or obtained. Calculations shall show complete formulas, constants, solutions and actual step-by-step calculations. Calculations shall be attached with the header on top stating either:

"TREATMENT CALCULATIONS: VOLUME-BASED
FACILITY [TYPE] FOR DMA [NUMBER]

Or,

"TREATMENT CALCULATIONS: FLOW-BASED
FACILITY [TYPE] FOR DMA [NUMBER]

Or,

"DETENTION CALCULATIONS: FLOW-CONTROL
FACILITY [TYPE] FOR DMA [NUMBER]

If the calculation worksheet is not clearly labeled, the City reserves the right to reject the submittal. Once calculations are completed, the Engineer shall summarize final values in the tables below.

**Water Quality (Treatment Facilities)**

There are two types of treatment facilities – volume-based and flow-based. The Engineer shall refer to page 26 of the Model SUSMP, Chapter 2. The correct method shall be applied to each type of treatment facility.

***Volume-based facilities*** are facilities whose functionality is based on treating a specific volume (V) of runoff produced by the 85$^{th}$ percentile 24-hour storm event as determined from the County of San Diego's 85$^{th}$ Percentile Precipitation Isopluvial Map. When designed properly, these facilities will infiltrate, filter, or treat the required ***volume*** of storm water within the required time period.

***Flow-based facilities*** are facilities whose functionality is based on treating a specific flow (Q) of runoff as determined by using the rational method. The Engineer shall refer to the "**Water Quantity**" paragraph located in Chapter 2 herein.

If the functionality of the facility selected depends on the total volume of water being treated, the Engineer shall complete the "V" column to demonstrate that the facility is adequate. If the functionality of the facility selected depends on the total flow of water being treated, the Engineer shall complete the "Q" column to demonstrate that the facility is adequate.

Treatment Calculation Summary:

| Node Number | Facility Type | $V_{Treatment}$ (cf) | $Q_{Treatment}$ (cfs) |
|---|---|---|---|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

**Water Quantity (Detention Facilities)**

Detention facilities are designed to control flow such that post-development flows do not exceed pre-development flows and thus minimize downstream erosion. The Engineer shall refer to page 26 of the Model SUSMP, Chapter 2 for calculation details. These types of facilities include various detention or flow-control facilities (i.e. self-retaining areas, pervious pavements, flow-through planters, bioretention, etc) that when designed properly will detain the required flow on-site.

Detention Calculations Summary:

| Project State | $Q_2$ (cfs) without BMPs | $Q_2$ (cfs) with BMPs | $Q_{10}$ (cfs) without BMPs | $Q_{10}$ (cfs) with BMPs | $Q_{100}$ (cfs) without BMPs | $Q_{100}$ (cfs) with BMPs |
|---|---|---|---|---|---|---|
| Pre-Development | | | | | | |
| Post-Development | | | | | | |

## CHAPTER 4 – LOW IMPACT DEVELOPMENT (LID) DESIGN GUIDE

If the Engineer is not familiar with LID or permanent BMPs design, the Engineer shall refer to the County of San Diego's LID Handbook available at http://www.sdcounty.ca.gov/dplu/procguid.html#hydro. The City strongly recommends that the Engineer meet with the Storm Water Department prior to selecting stormwater treatment and flow-control facilities if they are not familiar with the design and functionality of LIDs or BMPs. The Engineer can set up a meeting by contacting the Storm Water Department at (619) 441-1653.

### Analyze Your Project for LID

The City requires that the analysis performed documenting the site layout and site design decisions be included under Chapter 3, Preparing Your Project Submittal along with any calculations, tables, and narratives.

The City strongly encourages the Engineer to consider the following opportunities for LID:

- ☐ Optimize the site plan by preserving natural drainage features and designing buildings and circulation to minimize the amount of roofs and paving.
- ☐ Conserve the natural areas such as existing trees, vegetation, and maximize sheet flow in order to mimic pre-development hydrologic cycle.
- ☐ Use pervious surfaces such as turf, gravel, or pervious pavement – vegetated roofs shall be considered. All drainage from these surfaces is considered to be "self-retained" when designed properly. No further management of runoff is necessary. ***NOTE: Perform adequate geotechnical evaluations when using pervious pavements in Soil Type C and D.***
- ☐ Disperse runoff from impervious surfaces on to adjacent pervious surfaces (e.g. direct a roof downspout to disperse runoff onto a lawn, planter, or other pervious surface).

### Alternatives to Integrated LID Design

The City requires that the Engineer consult with the Storm Water Department prior to proceeding with alternatives.

## CHAPTER 5 – OPERATION AND MAINTENANCE OF STORMWATER FACILITIES

This chapter shall include two documents – Storm Water Maintenance Plan and Storm Water Maintenance Agreement. The City requires that the Engineer follow "CC&Rs and Storm Water Maintenance Plan", Attachment No. 3 as listed under the City of El Cajon

### Storm Water Maintenance Plan (Plan)

The Plan shall be prepared to adequately provide long-term treatment of all post-development BMPs on the project. This plan shall include permeable pavements. For more information refer to the six-stage process outlined in the Model SUSMP Chapter 5, Page 91

### Maintenance Agreement with Easement and Covenant (Agreement)

The Agreement shall be prepared in conjunction with the City's Planning Department and a draft may be attached herein until the Agreement is final.

The Agreement's shall include the following:

1. Commit the land containing the permanent BMPs to being used only for purposes of the BMPs (no alternations, reconstruction, etc)
2. Commit the landowner to maintain the facilities in accordance with the Plan (this obligation would be passed on to future purchasers or successors of the landowner, or operate indefinitely as a covenant)
3. Provide an easement giving the City the right to enter (and access adjacent properties as necessary) to maintain the BMPs to the satisfaction of the City

RE: Treatment Control BMP Maintenance Verification Form

Dear Property Owner(s):

According to City records, you are responsible for at least the **«Treatment_Control_BMPs_Applied»**, which «Letter_Language», located at «Street_Number» «Direction» «Street_Name» «Street_Surname». Annual verification of effective operation and maintenance for all Treatment Control BMPs located at «Street_Number» «Direction» «Street_Name» «Street_Surname» was a condition of the permit to develop the site. Treatment Control BMPs are required to be maintained by the appropriate party as stated in the site's Storm Water Mitigation Plan and/or Operation and Maintenance Agreement. You are required by City of El Cajon Municipal Code 16.60.400 to provide proof that the Treatment Control BMP is in place and functioning properly. You are also required to verify the maintenance of the Treatment Control BMPs onsite by mailing the completed form back to the City no later than **July 1, 2011**. Failure to do so may result in a citation, which could carry monetary penalties. Please update any incorrect information shown hereon.

The City is required to inspect certain sites with known Treatment Control BMPs annually as part of the maintenance verification process to comply with California Regional Water Quality Control Board, San Diego Region, Order No. R9-2007-0001. The inspections are scheduled to take place before July 1, 2010.

Please visit the City's website at http://www.ci.el-cajon.ca.us/dept/works/stormwater.html or contact the Public Works Department at 619-441-1653 for more information regarding the City's Storm Water Protection Program.

Please complete the table on the following page regarding the maintenance of all Treatment Control BMPs that you are responsible for at your site. Please be sure to list any BMPs present on your property that were not mentioned above to ensure that our records are complete. Once the form has been completed, a signed copy of the page must be submitted to the City of El Cajon Public Works Storm Water Department. An envelope has been included for your convenience. Thank you for your cooperation.

Sincerely,

_____

Jaime Campos
Storm Water Program Manager
Associate Civil Engineer
Jcampos@cityofelcajon.us

# ENVIRONMENTAL INFORMATION FORM

Part I - Initial Study
Negative Declaration $4,650.00 + $250.00 for each report
Mitigated Negative Declaration $4,650.00 + $250.00 for each report

**The purpose of this form is to inform the City of the basic components of the proposed project so that the City may review the project pursuant to City Policies, Ordinances, and Guidelines; the California Environmental Quality Act; and the City's Rules and Procedures to Implement CEQA. It is important that the information requested in this application be provided in full.**

**The Initial Study is a requirement of the California Environmental Quality Act (CEQA) Guidelines and is used to determine whether further review of environmental factors of the project will be necessary, and, if so, whether a Negative Declaration (ND), Mitigated Negative Declaration (MND), or Environmental Impact Report (EIR) will be the most appropriate document. Accuracy and completeness in the preparation of this study is essential. Incomplete materials will only result in a delay for the applicant, as the study will be rejected until properly completed.**

**INSTRUCTIONS: Please complete the following statement by filling in the designated blank spaces. Responses should be printed or typed so as to be legible. All appropriate spaces must be filled in and the required maps, photos, and plans submitted with this form. Additional information may be attached. The applicant should provide as much information as possible in this submittal to allow reviewers to have a thorough understanding of the project. Please submit this form and all support documents with the appropriate filing fee to the Community Development Department to begin the environmental review process. All maps/site plans shall be folded to 8½" by 11."**

A. General Information

1. Name, address, telephone number, fax number and email of person to be contacted concerning this project:

   - Name
   - Address
   - Phone
   - Fax
   - Email

2. Name, address of legal property owner as shown on tax statement:

   - Name
   - Address

3. Address of project and/or description of location:

4. Assessor's Parcel Number(s) of project site:

5. List each project application which accompanies this form:

6. Have any preliminary documents been prepared for this projects (e.g. soil report or traffic impact analysis)? If yes, please identify name and date prepared:

7. List and describe any other related permits and other public approvals required for this project, including those required by city, regional, state or federal agencies (i.e., Corps of Engineers, CalTrans, Air Pollution Control District or LAFCO):

8. Existing zoning of project site:

9. Existing General Plan Designation:

10. Fully describe the nature and purpose of the proposed project including the ultimate use of the property:

B. Project Description

1. Site size in acres or square footage:

2. Highest and lowest elevations on site (mean sea level):

3. Number of floors of proposed construction:

4. Number of proposed off-street parking spaces provided:

5. Anticipated project schedule (timeline):

6. Is this project dependent on an existing or future project? If yes, please explain:

7. Anticipated future phases:

8. If residential, include the number of units, unit sizes, range of sale prices or rents, and gross density (units) acre:

9. If commercial and/or office, indicate the types, square footage of each type (i.e., office, sales area, restaurant), whether neighborhood, city or regionally oriented, and total square footage of building area:

10. If industrial, indicate type, estimated employment per shift, loading facilities, square footage of office area and total square footage of building area:

11. If institutional, indicate the major function, estimated employment per shift, estimated occupancy, and total square footage of building:

C. Existing Conditions

1. Number and species of existing trees 6 inches or larger in diameter:

2. Number, size, and species of trees to be removed:

3. Describe any power lines, water, sewer or storm drain mains, pipelines or other transmission lines which are located on or adjacent to the property:

4. Name of creeks and natural or man-made drainage channels through or adjacent to the property:

5. Primary vehicular access to property comes from which street(s):

6. Are any easements known to traverse the site? If yes, explain the type and purpose:

7. Provide details on existing uses of the site. Are there existing structures on the site? If yes, describe use and whether they will be demolished or relocated; if residential, give the number of current occupants:

8. Indicate service provider for:

    a. Water

    b. Sewer

    c. Fire protection

    d. Police protection

9. Is any portion of the site within the 100-year/500-year floodplain?

10. Is the site within the Gillespie Field Airport Land Use plan?

11. If yes, do any airport restrictions affect the proposal? *(May have to consult with Gillespie Airport personnel)*

12. Is the site located within two miles of Gillespie Field general aviation airport?

13. Is the site located within close proximity (200 feet) of a freeway?

14. Is the site listed on California's Environmental Protection Agency Hazardous Site List?

D. Environmental Analysis

Are the following items applicable to the project or its effects? Discuss all items checked "yes" or "maybe" on next page or attach additional sheets as necessary.

| YES | MAYBE | NO | |
|---|---|---|---|
| ☐ | ☐ | ☐ | a. Change in existing features of any streams, lakes or hills, or substantial alteration of ground contours. |
| ☐ | ☐ | ☐ | b. Change in scenic views or vistas from existing residential areas or public lands or roads. |
| ☐ | ☐ | ☐ | c. Change in character of general area of project. |
| ☐ | ☐ | ☐ | d. Produce or involve large amounts of solid waste or litter. |
| ☐ | ☐ | ☐ | e. Disrupt or adversely affect an historic, cultural or archaeological site. |
| ☐ | ☐ | ☐ | f. Change in dust, ash, smoke, fumes or odors in vicinity. |
| ☐ | ☐ | ☐ | g. Change in stream, surface water, wetlands or ground water quality or quantity, or alteration of existing drainage patterns. |
| ☐ | ☐ | ☐ | h. Increase in impervious surfaces and associated increase runoff. |
| ☐ | ☐ | ☐ | i. Alteration in existing drainage patterns, runoff flow rates or volumes. |
| ☐ | ☐ | ☐ | j. Increased erosion. |
| ☐ | ☐ | ☐ | k. Use or disposal of heavy metals, pathogens, |

petroleum derivatives, synthetic organics, sediment, nutrients, or oxygen demanding substances.

☐ ☐ ☐ l. Potential to impact already sensitive conditions or environmentally sensitive areas.

☐ ☐ ☐ m. Substantial change in existing noise or vibration levels in the vicinity.

☐ ☐ ☐ n. Site on filled land or on slope of 10 percent or more.

☐ ☐ ☐ o. Use or disposal of potentially hazardous material such as toxic substances, flammables or explosives.

☐ ☐ ☐ p. Substantial change in demand for municipal services (police, fire, water, sewer, etc.).

☐ ☐ ☐ q. Substantial increase in fuel or energy consumption (electricity, oil, natural gas, etc.).

☐ ☐ ☐ r. Relationship to a larger project or series of projects.

☐ ☐ ☐ s. Potential impact to aquatic, wetland or riparian habitiat.

CERTIFICATION: I hereby certify that the statements furnished above and in the attached exhibits present the data and information required for this initial evaluation to the best of my ability, and that the facts, statements, and information presented are true and correct to the best of my knowledge and belief.

Date:_____ Signature:_____

Section 711.4 of the Fish and Game Code authorizes the County Clerk to collect a filing fee of up to $2,768.25 for the review of environmental documents by the State Department of Fish and Game. Should the State Department of Fish and Game decide to review the environmental documents associated with this project, the project applicant will become liable for paying this fee.

The applicant certifies by his/her signature below that he/she has been informed of this information and is aware that a fee may be required by the County Clerk with the filing of the environmental documents associated with his/her project.

Failure to pay the required fee in a timely manner may result in the delay in the start of the project.

Date:_____ Applicant's Signature:_____

_____

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED:

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

| | | |
|---|---|---|
| ☐ Aesthetics | ☐ Agriculture Resources | ☐ Air Quality |
| ☐ Biological Resources | ☐ Cultural Resources | ☐ Geology / Soils |
| ☐ Greenhouse Gas Emissions | ☐ Hazards & Hazardous Materials | ☐ Hydrology / Water Quality |
| ☐ Land Use / Planning | ☐ Mineral Resources | ☐ Noise |
| ☐ Population / Housing | ☐ Public Services | ☐ Recreation |
| ☐ Transportation / Traffic | ☐ Utilities / Service Systems | ☐ Mandatory Findings of Significance |

DETERMINATION (To be completed by the Lead Agency):

On the basis of this initial evaluation:

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☐ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

| | |
|---|---|
| Signature | Date |
| Printed Name | For |

EVALUATION OF ENVIRONMENTAL IMPACTS:

1) A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g. the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g. the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).

2) All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.

3) Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect is significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.

4) "Negative Declaration: Less Than Significant With Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less than Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level (mitigation measures from Section XVII, "Earlier Analyses," may be cross-referenced).

5) Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. Section 15063(c)(3)(D). In this case, a brief discussion should identify the following:

a) Earlier Analyses Used. Identify and state where they are available for review.

b) Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.

c) Mitigation Measures. For effects that are "Less than Significant with Mitigation Measures Incorporated," describe the mitigation measures, which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.

6) Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g. general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.

7) Supporting Information Sources. A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.

8) This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.

9) The explanation of each issue should identify:

a) the significance criteria or threshold, if any, used to evaluate each question; and

b) the mitigation measure identified, if any, to reduce the impact to less than significance.

SAMPLE QUESTION

| Issues: | Potentially Significant Impact | Less Than Significant With Mitigation Incorporated | Less Than Significant Impact | No Impact |
|---|---|---|---|---|
| I. AESTHETICS. Would the project: | | | | |
| a) Have a substantial adverse effect on a scenic vista? | ☐ | ☐ | ☐ | ☐ |
| b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway? | ☐ | ☐ | ☐ | ☐ |

| Issues: | | Potentially Significant Impact | Less Than Significant With Mitigation Incorporated | Less Than Significant Impact | No Impact |
|---|---|---|---|---|---|
| c) | Substantially degrade the existing visual character or quality of the site and its surroundings? | ☐ | ☐ | ☐ | ☐ |
| d) | Create a new source of substantial light or glare, which would adversely affect day or nighttime views in the area? | ☐ | ☐ | ☐ | ☐ |
| II. | AGRICULTURE AND FOREST RESOURCES. In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest protocols adopted by the California Air Resources Board. Would the project: | | | | |
| a) | Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use? | ☐ | ☐ | ☐ | ☐ |
| b) | Conflict with existing zoning for agricultural use, or a Williamson Act contract? | ☐ | ☐ | ☐ | ☐ |

| Issues: | | Potentially Significant Impact | Less Than Significant With Mitigation Incorporated | Less Than Significant Impact | No Impact |
|---|---|---|---|---|---|
| c) | Conflict with existing zoning for, or cause rezoning of, forestland (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))? | ☐ | ☐ | ☐ | ☐ |
| d) | Result in the loss of forestland or conversion of forestland to non-forest use? | ☐ | ☐ | ☐ | ☐ |
| e) | Involve other changes in the existing environment, which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forestland to non-forest use? | ☐ | ☐ | ☐ | ☐ |
| III. | AIR QUALITY. Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project: | | | | |
| a) | Conflict with or obstruct implementation of the applicable air quality plan? | ☐ | ☐ | ☐ | ☐ |
| b) | Violate any air quality standard or contribute substantially to an existing or projected air quality violation? | ☐ | ☐ | ☐ | ☐ |
| c) | Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)? | ☐ | ☐ | ☐ | ☐ |
| d) | Expose sensitive receptors to substantial pollutant concentrations? | ☐ | ☐ | ☐ | ☐ |

| Issues: | | Potentially Significant Impact | Less Than Significant With Mitigation Incorporated | Less Than Significant Impact | No Impact |
|---|---|---|---|---|---|
| e) | Create objectionable odors affecting a substantial number of people? | ☐ | ☐ | ☐ | ☐ |
| IV. | BIOLOGICAL RESOURCES. Would the project: | | | | |
| a) | Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service? | ☐ | ☐ | ☐ | ☐ |
| b) | Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service? | ☐ | ☐ | ☐ | ☐ |
| c) | Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means? | ☐ | ☐ | ☐ | ☐ |
| d) | Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites? | ☐ | ☐ | ☐ | ☐ |
| e) | Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance? | ☐ | ☐ | ☐ | ☐ |

| Issues: | | Potentially Significant Impact | Less Than Significant With Mitigation Incorporated | Less Than Significant Impact | No Impact |
|---|---|---|---|---|---|
| f) | Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan? | ☐ | ☐ | ☐ | ☐ |
| V. | CULTURAL RESOURCES. Would the project: | | | | |
| a) | Cause a substantial adverse change in the significance of a historical resource as defined in § 15064.5? | ☐ | ☐ | ☐ | ☐ |
| b) | Cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5? | ☐ | ☐ | ☐ | ☐ |
| c) | Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature? | ☐ | ☐ | ☐ | ☐ |
| d) | Disturb any human remains, including those interred outside of formal cemeteries? | ☐ | ☐ | ☐ | ☐ |
| VI. | GEOLOGY AND SOILS. Would the project: | | | | |
| a) | Expose people or structures to potential substantial adverse effects, including the risk of loss, injury or death involving: | ☐ | ☐ | ☐ | ☐ |
| i) | Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42. | ☐ | ☐ | ☐ | ☐ |
| ii) | Strong seismic ground shaking? | ☐ | ☐ | ☐ | ☐ |
| iii) | Seismic-related ground failure, including liquefaction? | ☐ | ☐ | ☐ | ☐ |

| Issues: | | Potentially Significant Impact | Less Than Significant With Mitigation Incorporated | Less Than Significant Impact | No Impact |
|---|---|---|---|---|---|
| iv) | Landslides? | ☐ | ☐ | ☐ | ☐ |
| b) | Result in substantial soil erosion or the loss of topsoil? | ☐ | ☐ | ☐ | ☐ |
| c) | Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse? | ☐ | ☐ | ☐ | ☐ |
| d) | Be located on expansive soil, as defined in Table 18 1 B of the Uniform Building Code (1994), creating substantial risks to life or property? | ☐ | ☐ | ☐ | ☐ |
| e) | Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater? | ☐ | ☐ | ☐ | ☐ |
| VII. | GREENHOUSE GAS EMISSIONS. Would the project: | | | | |
| a) | Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment? | ☐ | ☐ | ☐ | ☐ |
| b) | Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emission of greenhouse gases? | ☐ | ☐ | ☐ | ☐ |
| VIII. | HAZARDS AND HAZARDOUS MATERIALS. Would the project: | | | | |
| a) | Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials? | ☐ | ☐ | ☐ | ☐ |

| Issues: | | Potentially Significant Impact | Less Than Significant With Mitigation Incorporated | Less Than Significant Impact | No Impact |
|---|---|---|---|---|---|
| b) | Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment? | ☐ | ☐ | ☐ | ☐ |
| c) | Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school? | ☐ | ☐ | ☐ | ☐ |
| d) | Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code section 65962.5 and, as a result, would it create a significant hazard to the public or the environment? | ☐ | ☐ | ☐ | ☐ |
| e) | For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area? | ☐ | ☐ | ☐ | ☐ |
| f) | For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area? | ☐ | ☐ | ☐ | ☐ |
| g) | Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan? | ☐ | ☐ | ☐ | ☐ |
| h) | Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands? | ☐ | ☐ | ☐ | ☐ |

| Issues: | | Potentially Significant Impact | Less Than Significant With Mitigation Incorporated | Less Than Significant Impact | No Impact |
|---|---|---|---|---|---|
| IX. | HYDROLOGY AND WATER QUALITY. Would the project: | | | | |
| a) | Violate any water quality standards or waste discharge requirements? | ☐ | ☐ | ☐ | ☐ |
| b) | Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)? | ☐ | ☐ | ☐ | ☐ |
| c) | Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner, which would result in substantial erosion or siltation on- or off-site? | ☐ | ☐ | ☐ | ☐ |
| d) | Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner, which would result in flooding on- or off-site? | ☐ | ☐ | ☐ | ☐ |
| e) | Create or contribute runoff water, which would exceed the capacity of existing or planned storm water drainage systems or provide substantial additional sources of polluted runoff? | ☐ | ☐ | ☐ | ☐ |
| f) | Otherwise substantially degrade water quality? | ☐ | ☐ | ☐ | ☐ |

| Issues: | | Potentially Significant Impact | Less Than Significant With Mitigation Incorporated | Less Than Significant Impact | No Impact |
|---|---|---|---|---|---|
| g) | Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map? | ☐ | ☐ | ☐ | ☐ |
| h) | Place within a 100-year flood hazard area, structures that would impede or redirect flood flows? | ☐ | ☐ | ☐ | ☐ |
| i) | Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam? | ☐ | ☐ | ☐ | ☐ |
| j) | Expose people or structures to inundation by seiche, tsunami, or mudflow? | ☐ | ☐ | ☐ | ☐ |
| X. | LAND USE AND PLANNING. Would the project: | | | | |
| a) | Physically divide an established community? | ☐ | ☐ | ☐ | ☐ |
| b) | Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect? | ☐ | ☐ | ☐ | ☐ |
| c) | Conflict with any applicable habitat conservation plan or natural community conservation plan? | ☐ | ☐ | ☐ | ☐ |
| XI. | MINERAL RESOURCES. Would the project: | | | | |
| a) | Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state? | ☐ | ☐ | ☐ | ☐ |

| Issues: | | Potentially Significant Impact | Less Than Significant With Mitigation Incorporated | Less Than Significant Impact | No Impact |
|---|---|---|---|---|---|
| b) | Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan? | ☐ | ☐ | ☐ | ☐ |
| XII. | NOISE. Would the project result in: | | | | |
| a) | Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies? | ☐ | ☐ | ☐ | ☐ |
| b) | Exposure of persons to or generation of excessive ground-borne vibration or ground-borne noise levels? | ☐ | ☐ | ☐ | ☐ |
| c) | A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project? | ☐ | ☐ | ☐ | ☐ |
| d) | A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project? | ☐ | ☐ | ☐ | ☐ |
| e) | For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels? | ☐ | ☐ | ☐ | ☐ |
| f) | For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels? | ☐ | ☐ | ☐ | ☐ |

| Issues: | | Potentially Significant Impact | Less Than Significant With Mitigation Incorporated | Less Than Significant Impact | No Impact |
|---|---|---|---|---|---|
| XIII. | POPULATION AND HOUSING. Would the project: | | | | |
| a) | Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of road or other infrastructure)? | ☐ | ☐ | ☐ | ☐ |
| b) | Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere? | ☐ | ☐ | ☐ | ☐ |
| c) | Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere? | ☐ | ☐ | ☐ | ☐ |
| XIV. | PUBLIC SERVICES. Would the project: | | | | |
| a) | Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services: | ☐ | ☐ | ☐ | ☐ |
| | Fire protection? | ☐ | ☐ | ☐ | ☐ |
| | Police protection? | ☐ | ☐ | ☐ | ☐ |
| | Schools? | ☐ | ☐ | ☐ | ☐ |
| | Parks? | ☐ | ☐ | ☐ | ☐ |
| | Other public facilities? | ☐ | ☐ | ☐ | ☐ |

| Issues: | Potentially Significant Impact | Less Than Significant With Mitigation Incorporated | Less Than Significant Impact | No Impact |
|---|---|---|---|---|
| XV. RECREATION. Would the project: | | | | |
| a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated? | ☐ | ☐ | ☐ | ☐ |
| b) Does the project include recreational facilities or require the construction or expansion of recreational facilities, which have an adverse physical effect on the environment? | ☐ | ☐ | ☐ | ☐ |
| XVI. TRANSPORTATION / TRAFFIC. Would the project: | | | | |
| a) Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit? | ☐ | ☐ | ☐ | ☐ |
| b) Conflict with an applicable congestion management program, including, but not limited to, level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways? | ☐ | ☐ | ☐ | ☐ |
| c) Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks? | ☐ | ☐ | ☐ | ☐ |

| Issues: | | Potentially Significant Impact | Less Than Significant With Mitigation Incorporated | Less Than Significant Impact | No Impact |
|---|---|---|---|---|---|
| d) | Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)? | ☐ | ☐ | ☐ | ☐ |
| e) | Result in inadequate emergency access? | ☐ | ☐ | ☐ | ☐ |
| f) | Conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities? | ☐ | ☐ | ☐ | ☐ |
| XVII. | UTILITIES AND SERVICE SYSTEMS. Would the project: | | | | |
| a) | Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board? | ☐ | ☐ | ☐ | ☐ |
| b) | Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects? | ☐ | ☐ | ☐ | ☐ |
| c) | Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects? | ☐ | ☐ | ☐ | ☐ |

| Issues: | | Potentially Significant Impact | Less Than Significant With Mitigation Incorporated | Less Than Significant Impact | No Impact |
|---|---|---|---|---|---|
| d) | Have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed? In making this determination, the Authority shall consider whether the project is subject to the water supply assessment requirements of Water Code Section 10910, et. seq. (SB 610), and the requirements of Government Code Section 664737 (SB 221). | ☐ | ☐ | ☐ | ☐ |
| e) | Result in a determination by the wastewater treatment provider, which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments? | ☐ | ☐ | ☐ | ☐ |
| f) | Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs? | ☐ | ☐ | ☐ | ☐ |
| g) | Comply with federal, state, and local statutes and regulations related to solid waste? | ☐ | ☐ | ☐ | ☐ |
| XVIII. | MANDATORY FINDINGS OF SIGNIFICANCE | | | | |
| a) | Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory? | ☐ | ☐ | ☐ | ☐ |

| Issues: | | Potentially Significant Impact | Less Than Significant With Mitigation Incorporated | Less Than Significant Impact | No Impact |
|---|---|---|---|---|---|
| b) | Does the project have the potential to achieve short-term environmental goals to the disadvantage of long-term environmental goals? | ☐ | ☐ | ☐ | ☐ |
| c) | Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current project, and the effects of probable future projects.) | ☐ | ☐ | ☐ | ☐ |
| d) | Does the project have environmental effects, which will cause substantial adverse effects on human beings, either directly or indirectly? | ☐ | ☐ | ☐ | ☐ |

☐ Washington Channel ☐ Fletcher Parkway Lateral

## PROJECT INFORMATION

Project Name: _____ Public Private

Project Address: _____

Project APN: _____

Project Size: (acres) _____ Notice of Intent: Yes No

Completed a SWPPP: Yes No

## SUSMP CATEGORY

Check all SUSMP categories that apply to the project

☐ Residential Development ≥ 100 units
☐ Residential Development ≥ 10 units
☐ Commercial Development ≥ 1 acre
☐ Automotive Repair
☐ Restaurants
☐ Hillside Development ≥ 5,000 sq ft
☐ Parking Lots ≥ 5,000 sq ft or ≥ 15 spaces
☐ Streets, roads, highways, and freeways with ≥ 5,000 sq ft of new paved area
☐ Significant Redevelopment ≥ 5,000 sq ft of paved area on an already developed site
☐ Retail Gas Outlet

## IDENTIFY POLLUTANTS FROM THE PROJECT AREA

Check all that apply to the project

☐ Sediment (dirt; silt; clay)
☐ Nutrients (fertilizers, sewages)
☐ Metals (dirt, silt, clay, paints, liquid/solid chemicals)
☐ Organics (food, vegetation)
☐ Trash and Debris
☐ Oxygen Demand Substances (organic matter)
☐ Petroleum (oil, grease)
☐ Bacteria and Viruses (fecal coliform, pathogens)
☐ Pesticides/Herbicides
☐ Toxics (acids, corrosives, chemicals)

Project Name: _____

**IDENTIFY RECEIVING WATERS AND THE POLLUTANT SOURCES**

Does the project discharge directly to: ☐ San Diego River? or ☐ Forester Creek?

What are the primary sources contributing to SD River and Forester Creek impairments of:

TDS?_____ _____ _____

Fecal Coliform? _____ _____

pH?_____ _____

(SD River only) Oxygen Depleting Constituents? _____ _____

(SD River only) Chlorpyrifos and Diazinon? _____

(SD River only) Total and Dissolved Copper? _____

**IDENTIFY CONDITIONS OF CONCERN**

☐ Was a drainage study report prepared? Yes No

☐ Was a Storm Water Mitigation Plan prepared? Yes No

☐ Were the reports prepared by a registered Civil Engineer? Yes No Who?_____

☐ Are there field photographs? Yes No (Attached?)

☐ Are the following calculated according to actual % imperviousness for the 6-hour, 10-year and 100-year frequency storms?

- ☐ Peak flow rate (pre and post-construction)
- ☐ Flow velocity
- ☐ Runoff volume
- ☐ Time of concentration (minimum of 5 minutes as defined in the SD Hydrology Manual to calculate Intensity values)
- ☐ Retention volume

☐ Are conditions of concern adequately identified using:

| | | |
|---|---|---|
| Site Design? | Yes | No |
| Source Control? | Yes | No |
| Treatment Control? | Yes | No |

**ESTABLISH STORM WATER LOW-IMPACT DEVELOPMENT (LID) BMPS**

☐ ***Site Design BMPs***

SUSMP Projects **must** consider, incorporate, and implement where determined applicable and feasible by City storm water staff. (Check all that were considered, incorporated, or implemented):

- ☐ Maintain Pre-Development Rainfall Runoff Conditions
  - ☐ Minimize project's impervious footprint
  - ☐ Conserve natural areas
  - ☐ Construct low traffic areas (walkways, trails, patios, parking lots, alleys, etc) of permeable surfaces
  - ☐ Construct streets, sidewalks, and parking lot aisles to minimum widths
  - ☐ Maximize canopy interception by preserving existing trees and shrubs

Project Name: _____

- ☐ Preserve natural drainage systems
- ☐ Minimize Directly Connected Impervious Areas (DCIAs)
  - ☐ Drain rooftops into landscaping
  - ☐ Drain sidewalks, walkways, trails, and patios into landscaping
- ☐ Protect slopes and channels

Comments: _____

_____

☐ ***Source Control BMPs***

Does the project:

- ☐ Provide storm drain system stenciling and signage?
- ☐ Design outdoor material storage areas to reduce pollution introduction?
- ☐ Design trash storage areas to reduce pollution introduction (enclosed, covered, secured, and bermed)?
- ☐ Use efficient irrigations systems & landscape design (rain alert systems)?
- ☐ Incorporate requirements applicable to priority project categories such as:
  - ☐ Private Roads
  - ☐ Residential Driveways & Guest Parking
  - ☐ Dock Areas
  - ☐ Maintenance Bays
  - ☐ Vehicle Wash Areas
  - ☐ Outdoor Processing Areas
  - ☐ Equipment Wash Areas
  - ☐ Parking Areas
  - ☐ Roadways
  - ☐ Fueling Areas
  - ☐ Hillside Landscaping

☐ ***Treatment Control BMPs***

Check the treatment control(s) selected:

| | |
|---|---|
| ☐ Biofilters | ☐ Detention Basin |
| ☐ Infiltration basin/trench | ☐ Filtration System |
| ☐ Porous asphalt, concrete, other | ☐ Hydrodynamic Separation System |
| ☐ Filter Insert | ☐ Sod-inlet Pre-treatment |
| ☐ Grassy filter/swale | ☐ Vegetated swale |
| ☐ Proprietary Device | ☐ Other: _____ |

☐ Do treatment controls effectively address primary pollutants of concern? Yes No

If No, describe corrective action: _____

_____

**Verify the design of selected treatment controls:**

| | | |
|---|---|---|
| ☐ Was the control BMP designed for: | Volume | Flow |
| ☐ Was the BMP design process described: | Yes | No |
| ☐ Was the 85th percentile storm event used for design | Yes | No |

If no, what design criteria was used: _____

Project Name: _____

☐ Was the BMP designed properly? If not, describe corrective actions: _____

_____

☐ Is the BMP(s) located near pollutant sources? Yes No
☐ Are there restrictions on use of infiltration BMPs? Yes No

**Maintenance Requirements**

☐ Was an Operations & Maintenance section attached? Yes No N/A
☐ Was a BMP Facilities Agreement signed by the property owner and filed with the Grant Deed? Yes No N/A
☐ Was a BMP Maintenance Agreement signed with the City to maintain post-construction BMPs? Yes No N/A
☐ Does this project require annual inspections and/or maintenance of BMPs by the City? Yes No N/A
☐ Was an access/easement agreement included? Yes No N/A
☐ Is there an HOA or other Common Interest planned for the project? Yes No N/A
☐ Were CC&Rs presented for review and acceptable? Yes No N/A
☐ Was a Storm Water Conveyance Maintenance Plan generated/received? Yes No N/A

**Waiver of Structural Treatment BMP Requirements**

☐ Was a waiver of infeasibility granted?
☐ Was the RWQCB notified?

**Other Information**

_____

_____

_____

**Field Inspection**

During BMP installation:
☐ Were the source control BMPs properly constructed in the field? ☐ Yes ☐ No
☐ Were the treatment control BMPs properly constructed in the field? ☐ Yes ☐ No

After project completion:
☐ Are all site design BMPs still in place? ☐ Yes ☐ No
☐ Are all source control BMPs still in place? ☐ Yes ☐ No
☐ Are treatment control BMPs still in place? ☐ Yes ☐ No
☐ Are all BMPs being maintained? ☐ Yes ☐ No

Appendix A.3

# Storm Water Requirements for Construction Sites

The City's storm drain system is composed of the street, gutter, inlet, catch basin, ditches, streams, and concrete-lined channels.

1. Perimeter Controls (fiber roll; silt fence; gravel or sand bags) must be installed and kept in place throughout the project to prohibit the discharge of sediment and pollution from entering the storm drain system. If controls are moved to complete work, they must be replaced when work is completed or at end of day, whichever comes first.
2. Erosion Controls as required by an erosion and sediment control plan must be installed as designed.
3. Tracking of sediment and dirt must be cleaned up at the end of each working day.
4. Building Materials must be stored under cover at the end of each working day.
5. Spills must be reported to the site manager once they occur and cleaned up immediately. Spills that enter the City's storm drain system must be reported to the City Storm Water staff immediately.
6. Wash waters (including paint, dry wall mud, stucco, and other water-based materials) must be captured on site and contained, then disposed of in the appropriate place.
7. Port-o-lets must be secured and bermed.
8. Trash and debris shall be placed in appropriate containers during the workday with a final clean-up completed before leaving the site. If rain is predicted, wastes shall be covered.
9. Equipment shall be stored in a bermed area or with appropriate sized drip pans.
10. Equipment repair, servicing, or fueling must be completed undercover or within a bermed area for tasks completed within the workday. Spill kits must be within the bermed or repair areas.
11. Vehicle and equipment washing is prohibited.
12. The site will be secured at the end of each working day.
13. Report any destroyed controls to the site manager, immediately.

Under the City of El Cajon's Municipal Code §13.10.00, Storm Water Management and Discharge Control, it is illegal to discharge construction debris and materials, into the storm water conveyance system or any body of water.

Failure to prevent illegal discharges can result in fines of up to $10,000 a day per violation.

Under the law, contractors, the construction company, business owner, and property owner may receive a Citation for the same violation.

# EROSION AND SEDIMENT CONTROL NOTES
# FOR EROSION CONTROL PLANS
# (HIGH AND MEDIUM PRIORITY PROJECTS)

Add the following notes (both pages) to the Storm Water Erosion Control site plan and implement as a condition to the Erosion Control Plan:

1. In case emergency work is required, contact _____ at _____.
   (name) (telephone number)

2. Erosion control measures shown on plans shall not be moved or modified without the approval of the Public Works inspector.

3. The contractor shall maintain all erosion control devices in working order to the satisfaction of the City Engineer throughout the construction phase of the project and until permanent ground cover and landscaping is established.

4. The contractor shall install additional erosion control measures as may be required by the City Engineer due to completed grading operations or unforeseen circumstances which may arise.

5. The contractor shall be responsible for and shall take necessary precautions to prevent public trespass onto areas where impounded waters create a hazardous condition.

6. Graded areas around the project perimeter must drain away from the face of slope at the conclusion of each working day.

7. All gravel bags shall have ¾ inch minimum aggregate (No sandbags and no burlap type bags allowed).

8. Existing streets shall be kept free of dirt and debris, and shall be maintained in good condition. Dust shall be controlled so that it is not a nuisance. The contractor shall be responsible for the repair of any street or property damaged, public or private, as a result of the work.

9. The Plan shall provide that no sand, silt, or debris shall be allowed to enter the storm drain system including public streets.

10. The owner and/or the owner's contractor shall implement the Plan and take remedial and preventive action immediately when pollutant discharge occurs and/or the City Engineer or the Building Division directs.

11. The above shall apply starting the 1st day of grading and/or construction and shall remain in effect until all grading and/or construction work has been completed and 70% of the disturbed land has been stabilized by approved vegetation, mulch, gravel, etc.

**ALL EROSION AND SEDIMENT CONTROL SHALL BE IMPLEMENTED IN ACCORDANCE WITH THE CITY OF EL CAJON'S JURISDICTIONAL URBAN RUNOFF MANAGEMENT PROGRAM (JURMP) AND SHALL INCLUDE THE FOLLOWING:**

**Dry Season (May 1 through September 30)**

1. All exposed disturbed areas must have erosion prevention controls properly installed including building pads, unfinished roads and slopes. Slopes less than 33.3% or 1:3 (vertical vs. horizontal) may use properly designed and installed de-silting basins at all discharge points in lieu of this requirement.

2. Adequate perimeter protection BMPs must be installed and maintained.

3. Adequate sediment control BMPs must be installed and maintained.

4. Adequate BMPs designed to control off-site sediment tracking must be installed and maintained.

5. At a minimum, 125% of the materials needed to install standby BMPs necessary to completely protect exposed portions of the site from erosion and prevent sediment discharges must be stored on the site.

6. An approved "weather triggered" response plan is mandated for implementation in the event that a predicted storm event has at least a 50% chance of rain. The proponent must have the capacity to deploy the standby BMPs within 48 hours of the predicted storm event.

7. All slopes must be equipped with erosion prevention BMPs as soon as slopes are completed for any portion of the site.

8. Cleared or graded areas left exposed at any given time are limited to the amount of acreage that the project proponent can adequately protect prior to a predicted storm event.

**Wet Season (October 1 through April 30)**

In addition to the Dry Season Requirements:

1. Perimeter protection and sediment control BMPs must be upgraded if necessary to provide sufficient protection for storms.

2. Adequate erosion prevention BMPs must be installed and established for all completed slopes prior to October 1 and maintained throughout the wet season. If a BMP fails, it must be repaired, improved or replaced with an acceptable alternate as soon as it is safe to do so.

3. The amount of exposed soil allowed at one time shall not exceed standby erosion and sediment control BMP capacity.

4. An incomplete disturbed area that is not being actively graded must be fully protected from erosion if left for 10 days or more.

**(Do not place on the Construction Plans; circle YES or NO)**

Yes No 1. Does your project have 50 acres or more of disturbed soil?

Yes No 2. Will your project have at least one acre of disturbed soil and (1) be tributary to a water body 303(d) listed for sediment or (2) be located less than 200 feet from and ESA or directly discharging to an ESA?

Yes No 3. Will your project have at least one acre of disturbed soil but NOT (1) be tributary to a water body 303(d) listed for sediment and NOT (2) be located less than 200 feet from and ESA or directly discharging to an ESA?

Yes No 4. Does your project require a grading permit?

General Construction Permit:
If the answer to questions 1, 2, or 3 in Section 2 is "Yes", your project requires coverage under the General Construction Permit. A Notice of Intent (NOI) must be filed with the State Water Resources Control Board (SWRCB) and a Storm Water Pollution Prevention Plan (SWPPP) must be prepared for your project.

Yes No Is this project subject to the General Construction Permit?

Construction Activities Threat to Water Quality Prioritization:
If the answer to question 1 or 2 is YES, your project is **HIGH** priority.

If the answers to questions 1 and 2 are NO, but the answer to either question 3 or question 4 is YES, your project is **MEDIUM** priority.

If all answers are NO, your project is **LOW** priority.

**(Place this note on the Construction Plans and check the appropriate box)**

This project is ☐ HIGH ☐ MEDIUM ☐ LOW priority threat to water quality.

# Storm Water Notes for Erosion Control Plans (Low Priority Projects)

## General Storm Water Notes

1. All operations will comply with the City's Jurisdictional Urban Runoff Management Plan (JURMP).

2. The owner and the owner's contractor are responsible for pollution prevention practices to prevent the discharge of sediment and pollutants to the public storm drain system.

3. Owner and the owner's contractor are responsible for the prevention of erosion caused by clearing of vegetation, grading, demolition or construction.

4. Sediment, pollution and erosion control measures will be implemented starting the first day of clearing, grading or soil disturbance, or construction. These controls will remain in effect until all relevant operations have been completed and disturbed soils have either: 1) established vegetation, or 2) other permanent erosion control at 70% completion.

## Erosion And Sediment Control Notes

1. In case of emergency, contact: Name: _____, Phone: _____

2. The contractor will maintain all sediment and erosion control devices in good working order to the satisfaction of the city engineer throughout every phase of the project.

3. The contractor will install all erosion control measures additional to those specified by the approved Erosion Control Plan if required to do so by the city engineer.

4. The contractor and property owner will prevent public trespass onto areas where impounded waters create a hazardous condition.

5. Graded areas around the project perimeter will drain away from the face of slopes at the end of each working day.

6. All gravel bags shall have ¾ inch minimum aggregate (No sandbags and no burlap type bags allowed).

**(Do not place on the Construction Plans; circle YES or NO)**

Yes No 1. Does your project have 50 acres or more of disturbed soil?

Yes No 2. Will your project have at least one acre of disturbed soil and (1) be tributary to a water body 303(d) listed for sediment or (2) be located less than 200 feet from and ESA or directly discharging to an ESA?

Yes No 3. Will your project have at least one acre of disturbed soil but NOT (1) be tributary to a water body 303(d) listed for sediment and NOT (2) be located less than 200 feet from and ESA or directly discharging to an ESA?

Yes No 4. Does your project require a grading permit?

General Construction Permit:
If the answer to questions 1, 2, or 3 in Section 2 is "Yes", your project requires coverage under the General Construction Permit. A Notice of Intent (NOI) must be filed with the State Water Resources Control Board (SWRCB) and a Storm Water Pollution Prevention Plan (SWPPP) must be prepared for your project.

Yes No Is this project subject to the General Construction Permit?

Construction Activities Threat to Water Quality Prioritization:
If the answer to question 1 or 2 is YES, your project is **HIGH** priority.

If the answers to questions 1 and 2 are NO, but the answer to either question 3 or question 4 is YES, your project is **MEDIUM** priority.

If all answers are NO, your project is **LOW** priority.

**(Place this note on the Construction Plans and check the appropriate box)**

This project is ☐ HIGH ☐ MEDIUM ☐ LOW priority threat to water quality.

# Erosion Control Plan

## City of El Cajon

**GENERAL STORM WATER NOTES**

A. ALL OPERATION WILL COMPLY WITH THE CITY'S JURISDICTIONAL URBAN RUNOFF MANAGEMENT PLAN (JURMP).

B. THE OWNER AND THE OWNER'S CONTRACTOR ARE RESPONSIBLE FOR POLLUTION PREVENTION PRACTICES TO PREVENT THE DISCHARGE OF SEDIMENT AND POLLUTANTS TO THE PUBLIC STORM DRAIN SYSTEM.

C. OWNER AND THE OWNER'S CONTRACTOR ARE RESPONSIBLE FOR THE PREVENTION OF EROSION CAUSED BY CLEARING OF VEGETATION, GRADING, DEMOLITION OR CONSTRUCTION.

D. SEDIMENT, POLLUTION AND EROSION CONTROL MEASURES WILL BE IMPLEMENTED STARTING THE FIRST DAY OF CLEARING, GRADING OR SOIL DISTURBANCE, OR CONSTRUCTION. THESE CONTROLS WILL REMAIN IN EFFECT UNTIL ALL RELEVANT OPERATIONS HAVE BEEN COMPLETED AND DISTURBED SOILS HAVE EITHER: 1) ESTABLISHED VEGETATION, OR 2) OTHER PERMANENT EROSION CONTROL AT 70 % COMPLETION.

**EROSION AND SEDIMENT CONTROL NOTES**

1. IN CASE OF EMERGENCY, CONTACT: NAME:_____ PHONE:_____

2. THE CONTRACTOR WILL MAINTAIN ALL SEDIMENT AND EROSION CONTROL DEVICES IN GOOD WORKING ORDER TO THE SATISFACTION OF THE CITY ENGINEER THROUGHOUT EVERY PHASE OF THE PROJECT.

3. THE CONTRACTOR WILL INSTALL ALL EROSION CONTROL MEASURE ADDITIONAL TO THOSE SPECIFIED BY THE APPROVED EROSION CONTROL PLAN IF REQUIRED TO DO SO BY THE CITY ENGINEER.

4. THE CONTRACTOR AND PROPERTY OWNER WILL PREVENT PUBLIC TRESPASS ONTO AREAS WHERE IMPOUNDED WATERS CREATE A HAZARDOUS CONDITION.

5. GRADED AREAS AROUND THE PROJECT PERIMETER WILL DRAIN AWAY FROM THE FACE OF SLOPES AT THE END OF EACH WORKING DAY.

6. ALL GRAVEL BAGS SHALL HAVE ¾ INCH MINIMUM AGGREGATE (NO SANDBAGS AND NO BURLAP TYPE BAGS ALLOWED) .

# City of El Cajon
## Erosion and Sediment Control Plan Review Checklist

| Date Completed | Not Applicable | |
|---|---|---|
| | | **Vicinity Map** |
| _____ | _____ | Major roadways, geographic features or landmarks. |
| _____ | _____ | Site perimeter. |
| _____ | _____ | Geographic features. |
| _____ | _____ | General topography. |
| | | **Site Characteristics** |
| _____ | _____ | North arrow, scale, and site boundary. Indicate the name of adjacent streets or roadway. |
| _____ | _____ | Location of existing drainage ways, channels, swales, creeks, streams on or near the site. |
| _____ | _____ | Location of storm drain inlets, outlets, catch basins – proposed, existing, on-site, and within 100 feet of site. |
| _____ | _____ | Location of existing and proposed buildings and paved areas. |
| _____ | _____ | Show and label existing and proposed improvements (streets, sidewalks, curb/gutter, utilities, etc) |
| _____ | _____ | The limits of the proposed disturbed area on the lot. |
| _____ | _____ | Approximate gradient and direction of slopes before grading operations. |
| _____ | _____ | Approximate gradient and direction of slopes after final grading operations. |
| _____ | _____ | Disturbed area outlined and labeled. All sediment control devices must be shown within the disturbed limits. |
| _____ | _____ | Overland runoff (sheet flow) coming onto the site from adjacent areas. |
| _____ | _____ | Delineation of pre and post development drainage areas, number of acres, and the direction of flow for each drainage area before and after development must be shown. Use separate plan sheets for clarity. |
| | | **Erosion Control Practices** |
| _____ | _____ | Location of temporary soil piles |
| | | Note: soil storage pile should be placed behind a sediment fence, 10-foot (minimum) wide vegetative strip should be covered with a tarp, or placed more than 25 feet from any down slope road or drainage way. |
| _____ | _____ | Location of gravel access drive(s). |
| | | Note: Gravel drive should have 3 to 6 inch aggregate stone laid at least 10 feet wide and 12 inches thick. Drives should extend from the roadway 50 feet or to the house foundation (whichever is less). |
| _____ | _____ | Location of sediment controls (filter fabric fence, straw bale fence or 10-foot wide vegetative strips) that will prevent eroded soil from leaving the site. |
| _____ | _____ | Location of sediment barriers around on-site storm drain inlets. |

| Date Completed | Not Applicable | |
|---|---|---|
| _____ | _____ | Location of diversions.<br><br>Note: Concentrated flow (drainage ways, ditches, channels, brow ditches) shall be diverted (re-directed) around disturbed areas. Overland runoff (sheet flow) from adjacent areas greater than 10,000 sq. ft. shall also be diverted around disturbed areas. |
| _____ | _____ | Location of practices that will be applied to control erosion on steep slopes that have been disturbed at any time by clearing, grading, or landscaping - slopes more than five feet in height, more than two hundred fifty square feet in total area, and steeper than three to one (run-to-rise).<br><br>Note: Unstabilized drainage ways, ditches, channels, diversions, and inlets shall be protected from erosion through use of such practices as in-channel fabric or straw bale barriers, erosion control mats, staked sod, and rock riprap. When used, a given in-channel barrier should not receive drainage from more than two acres of unpaved area, or one acre of paved area. In-channel practices should not be installed in perennial streams (streams with year-round flow.) |
| _____ | _____ | Show Erosion Control Plan heading and standard notes. |
| _____ | _____ | Label all sediment control devices. |
| _____ | _____ | Show Standard details for sediment control devices. |
| _____ | _____ | No sediment control devices are to be located where water will damage building foundations. |
| _____ | _____ | Detail drawings and specifications for structural practices – any structural practices used must be illustrated with detailed drawings containing all dimensions and specifications. (i.e. de-silting basins) |
| _____ | _____ | Location of other planned practices not already noted. (Material Storage WM-1, Concrete Washout WM-8, Sanitary Waste WM-9, Solid Waste Storage WM-5) |
| _____ | _____ | Temporary stabilization of disturbed areas.<br><br>Note: disturbed areas and soil piles left inactive for more than 10 days be stabilized by seeding (between April 1st and September 1st ), or by other cover, such as tarping or mulching. |
| _____ | _____ | Permanent stabilization of site by re-vegetation or other means as soon as possible (lawn establishment).<br><br>Indicate re-vegetation method: Seed ___ Sod ___ Other_____<br>Expect date of permanent re-vegetation:<br>Re-vegetation responsibility of Builder ___ Owner/Buyer<br>Is temporary seeding or mulching planned if site not seeded by September 1st or sodded by October 1st ? Yes ___ No ___ |
| _____ | _____ | Use of downspouts and/or sump pump outlet extensions to direct runoff away from structures and onto sod or pavement until vegetation is stable. Downspouts shall be permanently to grass areas. |
| _____ | _____ | Proper disposal of building material waste so that pollutants and debris are not carried off-site by wind or water. |
| _____ | _____ | Maintenance of erosion control practices during construction:<br><br>Name:_____<br><br>Title:_____ Phone & Fax:_____ |

- Sediment will be removed from behind sediment fences and barriers before it reaches a depth that is equal to half the barrier's height.
- Breaks and gaps in sediment fences and barriers will be repaired immediately.
- All sediment that moves off-site due to construction activity will be cleaned up before the end of the same workday.
- All sediment that moves off-site due to storm events will be cleaned up before the end of the next workday.
- Gravel access drives will be maintained throughout construction.
- All installed erosion control practices will be maintained until the disturbed areas they protect are stabilized.

# Storm Water Quality Checklist
# For Municipal Facilities

Site Name:_____ Location:_____

Contact:_____

Date:_____ Type of Inspection: ☐ Routine Site Inspection

Weather Information: ☐ Prior to Forecast of Rain Event

Storm Start Date and Time:_____ Storm Duration:_____hours ☐ 24-hr Period During Extended Storm Event

Time Since Last Storm:_____hrs/days Rainfall:_____inches ☐ After Rain Event

Inspector Name and Title:_____

Inspector Signature:_____

| Pollution Prevention BMPs | N/A | Yes | No | Comments / Corrective Action |
|---|---|---|---|---|
| **Erosion and Sediment Control** | | | | |
| Is existing vegetation preserved? | | | | |
| Are seeding and planting of native plants and trees considered? | | | | |
| Are geotextiles and organic mats used for soil stabilization? | | | | |
| **Roadway and Bridge Maintenance** | | | | |
| Are streets swept and clean? | | | | |
| Is street sweeping frequency adequate for the area? | | | | |
| **Municipal Vehicle Maintenance Facilities** | | | | |
| Are vehicles/equipment parked/stored in designated areas? | | | | |
| Are vehicles and equipment regularly inspected for leaks and spills? | | | | |
| Are detected leaks/spills contained and repaired as soon as possible? | | | | |
| **Landscaping Maintenance** | | | | |
| Are safer, alternative products used or considered? | | | | |
| Is weather considered for landscaping activities? | | | | |
| Are certified professionals used to handle, apply, and distribute pesticides, herbicides, and fertilizers? | | | | |
| Is there an IPM used? | | | | |
| **Maintenance of MS4** | | | | |
| Is the mechanism for detecting and removing IC/ID situations implemented? | | | | |
| Is the MS4 inspected, maintained, and repaired? | | | | |
| Is a stenciling and sign program used to warn of effects of illegal dumping? | | | | |
| **Sewer Blockage Response** | | | | |
| Is there mechanism for identifying, containing, controlling, and repairing sewage leaks and spills? | | | | |
| Is hazardous waste disposed of properly? | | | | |
| **Waste Management** | | | | |
| Is there a waste reduction program in place? | | | | |
| Are wastes segregated for proper storage and disposal? | | | | |

| | | | | |
|---|---|---|---|---|
| **Other Practices and Procedures** | | | | |
| Are dewatering activities controlled and managed appropriately? | | | | |
| Is groundwater tested prior to disposal? | | | | |
| Is the public educated and encouraged to participate in appropriate stormwater activities? | | | | |
| **Maintenance BMPs** | **N/A** | **Yes** | **No** | **Comments / Corrective Action** |
| **Housekeeping** | | | | |
| Is the area clear of visible trash/debris and impervious surfaces free of sediment? | | | | |
| **Maintenance BMPs** | **N/A** | **Yes** | **No** | **Comments / Corrective Action** |
| Are points of ingress/egress to public and private roads free from sediment, debris and mud from tracking? | | | | |
| Are materials stored in their designated areas? | | | | |
| Are dry methods used to clean? | | | | |
| **Employee Training** | | | | |
| Have employees been trained in basic stormwater management and BMP implementation? | | | | |
| **Visual Inspections** | | | | |
| Are visual inspections of the site conducted and documented on a regular basis? | | | | |
| Are the discharge locations free of significant erosion or sediment transport? | | | | |
| **Improved Operation and Maintenance** | | | | |
| Are drainage control structures free of litter and debris? | | | | |
| **Waste Disposal and Recycling** | | | | |
| Are there designated areas for recycling of metal, tires, antifreeze, and used oil? | | | | |
| Are waste containers covered? | | | | |
| Are areas near or around waste containers free of leaks or spills? | | | | |
| Is timely service and removal provided to prevent waste containers and sanitary facilities from overflowing? | | | | |
| Are hazardous wastes stored and disposed appropriately? (in labeled, secondary containment; 55-gallon drums in a secured, designated area) | | | | |
| Is secondary containment free of spills and rainwater? | | | | |
| **Preventive Maintenance** | | | | |
| Are there procedures for replacing used or worn materials or equipment prior to failure? | | | | |
| **Record Keeping** | | | | |
| Is there onsite storage of documented inspections, BMP evaluations, and audits? | | | | |
| Is there onsite documentation of employee training? | | | | |
| Is there an onsite SWPPP or other Pollution Control Document? | | | | |
| Does the SWPPP adequately reflect the current site conditions and the construction operations? If not, explain required SWPPP revisions. | | | | |
| **Spill Prevention and Response** | | | | |
| Are there spill kits near outside stored materials, wastes, and recycling areas? | | | | |
| Are spill response procedures clearly posted? | | | | |
| Are employees trained in preventing spills? | | | | |

| | | | | |
|---|---|---|---|---|
| **Material Inventory Procedures** | | | | |
| Are inventories of 30 days materials onsite? | | | | |
| **Material Storage Practices** | | | | |
| Are outside stored materials stored off the ground and covered or in appropriate containers? (Flammables stored in a flammables cabinet; antifreeze in double-walled container or in secondary containment) | | | | |
| Visual evidence of spills, staining, or leaks from outside stored materials are not evident | | | | |
| **Storage Tanks** | | | | |
| Are outside above ground storage tanks double-walled or in secondary containment? | | | | |
| Visual evidence of leaks or spills in the area are not visible | | | | |
| **Outside Storage** | | | | |
| Are materials stored outside under cover or in containers? | | | | |
| **Maintenance BMPs** | **N/A** | **Yes** | **No** | **Comments / Corrective Action** |
| Are outside material storage areas free of visual evidence of spills or runoff? | | | | |
| **Loading and Unloading** | | | | |
| Are loading and unloading areas free of litter and visual evidence of spills? | | | | |
| **Sediment and Erosion Control** | | | | |
| If sandbags are used, are they placed appropriately for the conditions? | | | | |
| Are temporary soil stabilization measures installed and in working order? | | | | |
| Is dust control necessary and implemented? | | | | |
| Are soil stockpiles properly stored? | | | | |
| Is inlet protection available for all operational storm drain inlets? | | | | |
| **Vehicle and Equipment Maintenance** | | | | |
| Is there a covered or inside area designated for vehicle and equipment maintenance? | | | | |
| Are leaking vehicles stored inside or drip pans used for outside storage? | | | | |
| **Vehicle and Equipment Washing** | | | | |
| Is there a designated covered or inside area or commercial facility for washing vehicles and equipment? | | | | |
| **Park BMPs** | **N/A** | **Yes** | **No** | **Comments / Corrective Action** |
| Are grass clippings mulched or bagged for disposal? | | | | |
| Are vegetation trimmings gathered and disposed as solid waste or recycled as mulch? | | | | |
| Are sidewalks and parking lots cleaned using dry methods to collect and use as mulch or dispose as solid waste? | | | | |
| **Recreation BMPs** | **N/A** | **Yes** | **No** | **Comments / Corrective Action** |
| Is pool water tested or treated for chlorine before discharge? | | | | |
| Is pool filter backflush discharged to the sanitary sewer? | | | | |
| Are pool chemicals stored inside and in appropriate | | | | |

| | | | | |
|---|---|---|---|---|
| containers? | | | | |
| **Non-Stormwater BMPs** | **N/A** | **Yes** | **No** | **Comments / Corrective Action** |
| **Non-Storm Water Management** | | | | |
| Is the site free of evidence of illegal connections and illicit discharges? | | | | |
| Is the site free of evidence of unauthorized releases to storm drains? | | | | |
| If not, have the appropriate authorities been notified? | | | | |
| **Other** | | | | |
| No other potential storm water pollution issues or concerns exist. If no, explain below. | | | | |

City of El Cajon
STORMWATER
Pollution Prevention Program

# STORM WATER ADMINISTRATIVE CITATION PROGRAM CRITERIA

1. Issue a Warning (followed by a letter, when possible)
   a. Whenever a discharge of pollutants is imminent or the potential exists, but the discharge has not yet entered the storm drain conveyance system (street, gutter, catch basin, etc.)
   b. Whenever a BMP is not effective for the pollutant or discharge and other BMP alternatives are available.
   c. Whenever a discharge origin cannot be determined through factual, investigative, or empirical evidence. Provide a cleanup schedule to be used as future enforcement.
   d. Small residential projects of less than 500 square feet of disturbed soil.
   e. An approved erosion and control plan has been issued and BMPs are partially implemented.
   f. Whenever activities are conducted in the right-of-way and no BMPs are implemented.
   g. Whenever a discharge of fully recoverable pollutants are discharged into the City's storm drain system (street and gutter only).

2. Issue a Citation
   a. Whenever there is a sewage overflow. (e.g. blockage; clean-out cap was removed to allow sewage to discharge into the street and storm drain).
   b. Whenever there is a discharge of unrecoverable pollutants into the storm drain conveyance system (street, gutter, catch basin, etc.)
   c. A Warning was previously issued (verbal or written).
   d. Any direct discharge into Forester Creek specifically any material which contains a 303(d) listed pollutant adopted by the State of California.(pH, TDS, and fecal coliform).
   e. An approved erosion and control plan has been issued and no BMPs are implemented.
   f. An egregious act of discharge (e.g. illegal dumping)

3. Issue a Penal Code Violation (PC374.3, 374.4, 374.7)
   a. When a First Citation was previously issued and this is a repeat violation.
   b. When the discharge is executed in the presence of any City Staff or after being told to cease operations. (waste, sewage, and litter discharges)
   c. Any direct discharge into Forester Creek, specifically material containing pollutants for which a 303(d) listing has been adopted by the State of California.(pH, TDS, and fecal coliform).

4. Issue a Stop Work Order
   a. For construction sites that received a warning and a first violation for discharging pollutants due to ineffective or proposed, but not yet implemented BMPs.
   b. A discharge of pollutants into the storm drain system, in addition to a citation, that requires immediate corrective action or mitigation.

5. Refer to Regional Board
   a. Repeated violations by a private citizen, property owner, or business for discharges to the storm drain system.
   b. A refusal to mitigate, remediate, or clean a spill or discharge of pollutants that will enter or have entered City MS4.

|---|---|
| What is the approximate percentage of the site that drains to the treatment control BMPs? | ☐ N/A |
| Do major potential pollutant sources drain to treatment BMP(s)? | ☐ All ☐ Some ☐ None ☐ N/A |
| If any illicit connections and/or illegal discharges were identified have the appropriate authorities been notified? | ☐ Yes ☐ No ☐ N/A |
| If any illicit connections and/or illegal discharges were identified, were they eliminated during the site visit? | ☐ Yes ☐ No ☐ N/A |
| Were any non IC/ID related corrective actions implemented during the site visit? | ☐ Yes ☐ No ☐ N/A |
| Were any educational materials distributed? | NOI NONA/NEC IF IF-S SP SP-S IS IS-S AF AF-S DU DU-S MB |

## E. STATE GENERAL INDUSTRIAL PERMIT COMPLIANCE*

☐ Non-compliance with the State Industrial Storm Water General Permit noted.

☐ In the future, under a new Industrial Permit, which has not yet been adopted, this facility may be able to qualify for exemption from Permit coverage based on no outdoor exposure.

**SPECIFIC ACTION(S) REQUIRED TO CORRECT THE VIOLATION DESCRIBED ABOVE*:**

☐ File a Notice of Intent (NOI) with the State Water Resources Control Board (SWRCB) to obtain coverage under the Industrial Permit—see Attachment 3 of the Industrial Permit (www.waterboards.ca.gov/stormwtr/industrial.html).

☐ For "Conditional" facilities only: this site presently has outdoor exposure that requires filing for coverage under the Industrial Permit. If you implement all the recommended BMPs and eliminate outdoor exposure, you may be able to qualify for exemption from obtaining Industrial Permit coverage. Please contact the RWQCB for details.

☐ Develop and implement a Storm Water Pollution Prevention Plan (SWPPP)—see Section A of the Industrial Permit.

☐ Develop and implement a storm water monitoring program--see section B of the Industrial Permit for guidelines.

☐ Complete the provided Notice of Non-Applicability (NONA) and accompanying No Exposure Certification (NEC).

*Additional notes and/or actions required*:

## F. CORRECTIVE ACTION SUMMARY

☐ **Corrective Actions Required.** Please refer to sections D.1-D.6 and E of this form

☐ No Corrective Actions Required at this Time.

## G. RECOMMENDED CITY ACTIONS**

**Follow Up Inspection Priority:** ☐ **Priority 1** ☐ **Priority 2** ☐ **Priority 3**

**ASSESSMENT**

| | | | | | |
|---|---|---|---|---|---|
| Level of knowledge regarding stormwater issues: | ☐ 1 | ☐ 2 | ☐ 3 | ☐ 4 | ☐ 5 |
| Level of cleanliness, BMP implementation, orderliness of site: | ☐ 1 | ☐ 2 | ☐ 3 | ☐ 4 | ☐ 5 |

*Please note that the Regional Water Quality Control Board (RWQCB) is the final arbiter of Industrial Permit compliance; please contact the RWQCB at (858) 467-2952 for details of what is necessary to comply with the Industrial Permit.

**Recommended City actions listed at the time of inspection are subject to change based on later review by office staff.

# CITY OF EL CAJON

## SWPPP/BMP PLAN AND/OR STORM WATER MONITORING PLAN ATTACHMENT

Inspected by D-MAX Engineering, Inc.

**SWPPP REVIEW*** **Does facility maintain a SWPPP/BMP Plan:** ☐ Yes ☐ No ☐ Unknown ☐ Not Available

| SWPPP Component | Provided | | Comments |
|---|---|---|---|
| Site Map/Description | ☐ Yes | ☐ No | |
| Materials List | ☐ Yes | ☐ No | |
| Significant Spills/Leaks | ☐ Yes | ☐ No | |
| Pollution Prevention Team (Identification of current team members.) | ☐ Yes | ☐ No | |
| Industrial Activities | ☐ Yes | ☐ No | |
| Pollutant Sources/Risks | ☐ Yes | ☐ No | |
| Compliance Activity Schedule (Procedures to conduct annual site compliance evaluation.) | ☐ Yes | ☐ No | |
| Employee Training | ☐ Yes | ☐ No | |
| Accessible to staff | ☐ Yes | ☐ No | |
| Storm Water BMPs | ☐ Yes | ☐ No | |

*The SWPPP review portion of the inspection focuses mainly on proposed BMPs and monitoring practices. It is not intended to be a comprehensive assessment of compliance with all SWPPP-related requirements of the General Industrial Permit.

**STORM WATER MONITORING PROGRAM**

Does this facility have a storm water monitoring program? ☐ Yes ☐ No ☐ N/A

Was appropriate monitoring conducted during the most recent wet season? ☐ Yes ☐ No

If not, does the facility have documentation of no qualifying rain events? ☐ Yes ☐ No

If not, is the facility in a GMP and not scheduled for most recent year? ☐ Yes ☐ No

Do monitoring results show that existing BMPs are effective in removing pollutants? ☐ Yes ☐ No ☐ None Available

If not, were potential sources of the identified pollutants observed during the inspection? ☐ Yes ☐ No

If yes, list the potential sources and their associated pollutants: _____

**Exceedances Noted (list dates, locations, constituent(s) and numeric value(s)):**

## POLLUTANT DISCHARGE POTENTIAL ASSESSMENT

Site Name:_____

| Pollutant | PDP | Sources Needing More BMPs | | | | | | | Recommended BMPs (check if applicable) | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | Trash Area | Material Storage | Prkng Lot | Load/ Unload | Land-scape | Veh/Eqp Maint | Exposed Work Area | Emp. Training | House-keeping | Minor Struct. | Major Struct. |
| Sediments | | | | | | | | | | | | |
| Nutrients | | | | | | | | | | | | |
| Aluminum | | | | | | | | | | | | |
| Iron | | | | | | | | | | | | |
| Heavy Metals | | | | | | | | | | | | |
| Check if evidence indicates specific metals may have significant PDPs: ☐ Copper ☐ Cadmium ☐ Lead ☐ Zinc ☐ Mercury | | | | | | | | | | | | |
| Organic Compounds | | | | | | | | | | | | |
| Check if evidence indicates there may be historical soil contamination associated with any of the following: ☐ PCBs ☐ PAHs ☐ Chlordane ☐ DDT | | | | | | | | | | | | |
| Trash & Debris | | | | | | | | | | | | |
| Oxygen Demanding | | | | | | | | | | | | |
| Oil & Grease | | | | | | | | | | | | |
| Bacteria & Viruses | | | | | | | | | | | | |
| Pesticides | | | | | | | | | | | | |
| Check if evidence indicates the following are used on site: ☐ Diazinon ☐ Chlorpyrifos | | | | | | | | | | | | |
| Acid/Base (pH effects) | | | | | | | | | | | | |
| Others (list): | | | | | | | | | | | | |

"RW 303(d)" = Receiving water impairments, as listed in the most recent 303(d) list
"WS COC" = High priority watershed constituents of concern (COC), as listed in the most recent WURMP Annual Report
"PDP" = pollutant discharge potential.
"Emp. Training" = employee training activities focused on storm water pollution prevention
"Housekeeping" = standard good housekeeping BMPs, such as sweeping, regular trash pickup, etc.
"Minor Struct." = minor structural BMPs that do not require building permits, such as covering with tarps or building berms
"Major Struct." = major structural BMPs that require a building permit or are especially expensive, such as detention basins, oil/water separators, grease interceptors, overhead coverage for storage areas, etc.

Criteria

0 - no appreciable quantity observed on site
1 - very small potential for pollutant discharge; monitoring results* are well below the EPA benchmark
2 - Small potential for pollutant discharge; monitoring results* are close to the EPA benchmark but still below it
3 - Moderate potential for pollutant discharge; monitoring results* are at or slightly above the EPA benchmark
4 - Large potential for pollutant discharge; monitoring results* above the EPA benchmark but are within an order of magnitude
5 - Severe potential for pollutant discharge; monitoring results* exceed the EPA benchmark by an order of magnitude or more

# "No Exposure" Conditional Exemption For Industrial Facilities

The proposed USEPA rules will establish a conditional exemption called a "No Exposure Exemption" for owners and operators of industrial facilities who can show that industrial materials, material handling operations and industrial processes, are not exposed to stormwater. Essentially, this exemption replaces the previous exemption for "light industry" which was remanded to USEPA from federal court to further define and substantiate the justification for such an exemption. A written certification will be required to be submitted to the permitting authority every three years on a form supplied by the authority. This potential conditional exemption applies to all industrial categories regardless of type, except construction sites and sources individually designated. The conditions for qualifying for the No Exposure Exemption will include the following:

1. Notification to the permitting authority at the beginning of each permit term;
2. Must allow the permitting authority or municipality to inspect the facility and to make the results of inspection public;
3. Upon request, submit a copy of the certification to the municipality in which the facility is located; and
4. Sign and certify the certification.

The permitting authority will still retain the legal authority to require the owner or operator of an industrial facility to apply for an individual or general NPDES permit if it determines that the discharge is, or may reasonably be, causing or contributing to a violation of a water quality standard, or is or may be interfering with the attainment or maintenance of a water quality standard, including a designated use.
In connection with the No Exposure Exemption being considered, USEPA is seeking comments on the issue of how to define "no exposure." Several important issues are listed for further review (but are not part of this proposed rule), including:

1. How to account for stormwater runoff from parking lots, roof tops, lawns and other non-industrial areas of an industrial facility;
2. Whether the construction of impervious surfaces, such as roofs to achieve no exposure that significantly increase stormwater runoff volume should be regulated to prevent adverse impacts to the receiving water simply due to increased quantity of flow;
3. Whether air emissions from roof vents or stacks should be considered in the evaluation of no exposure; and
4. Whether tight non-leaking drums, barrels or dumpsters are sufficient to quality for the no exposure exemption, or should there be a "potential to leak" evaluation included.

# EL CAJON STORM WATER PROTECTION PROGRAM

## FLOOR MATS, GREASE, OUTDOOR CLEANING, AND DUMPSTERS

In California, the storm water and sanitary sewer systems are separate. **They are *NOT* connected**. The sanitary sewer takes wastes from sinks, showers, and toilets to a treatment plant. The storm drain system collects polluted urban runoff and discharges without treatment, to creeks and rivers leading to ocean bays causing beach closures.

En California, el sistema de drenaje pluvial y el alcantarillado sanitario de aguas negras son independientes. **Estos sistemas *NO* están conectados**. El sistema de alcantarillado sanitario de aguas negras aleja desperdicios de fregaderos, regaderas, y escusados a una planta de tratamiento. El sistema de drenaje pluvial atrapa aguas pluviales contaminada por urbanización y fluye sin tratamiento alguno directamente a nuestros ríos, arroyos, bahías y mar provocando el cierre de playas.

### CLEANING FLOOR MATS

Clean floor mats, filters and garbage cans in a mop sink, floor drain or proper outside area. **DO NOT** wash them in a parking lot, alley, sidewalk or street.

Limpie los tapetes de piso, los filtros y los botes de basura en un fregadero para trapeadores, desagüe de piso o en algún sitio apropiado afuera. **NO** los lave en los estacionamientos, callejones, veredas o en la calle.

### RECYCLE GREASE & OIL

Recycle Grease & Oil. **DO NOT** pour it into sinks, floor drains, or onto a parking lot or street.

Recicle grasa y aceite. **NO** los arroje en lavaderos o desagües de piso ni en estacionamientos o calles.

### DRY CLEANING METHOD

Use dry methods for spill cleanup (sweeping, cat litter, etc.) **DO NOT** hose down spills.

Use métodos secos para limpiar los derrames (escobas, aserrín, etc.). **NO** utilize mangueras para limpiar los derrames.

### KEEP DUMPSTER AREA CLEAN

Keep dumpster area clean and lid closed. **DO NOT** fill it with liquid waste or hose it out.

Mantega el área alrededor del basurero limpia y la tapa del basurero cerrada. **NO** lo llene con desperdicios líquidos ni utilice la manguera.

### WASHWATER DISPOSAL

Pour washwater into a janitorial or mop sink. **DO NOT** pour it out onto a parking lot, alley, sidewalk or street.

Arroje el agua empleada en la limpieza al fregadero para trapeadores. **NO** la arroje en los estacionamientos, callejones, veredas o en la calle.

**It is illegal to purposefully or accidentally discharge pollution (anything other than rain water) into the streets, gutters, creeks, rivers, and ocean. To do so is in violation of El Cajon's Municipal Code 13.10 and the Federal Clean Water Act. Monetary fines and criminal charges may be issued.**

**Es contra la ley descargar contaminantes intencionalmente o accidentalmente (excepto agua de lluvias) a las calles, orillas de calle, arroyos, ríos, y océano. La descarga de contaminantes al sistema de drenaje pluvial es una violación del Código Municipal de la Ciudad de El Cajon (13.10) y de leyes Federales del "Clean Water Act". Multas y otras acciones legales podrían ser generadas en su contra.**

ADOPT GOOD HOUSEKEEPING PRACTICES AND HELP KEEP OUR STREAMS, RIVERS, AND BEACHES CLEAN. FOR MORE INFORMATION, CALL (619) 441-1653.

ADOPTE PRACTICAS EFECTIVAS PARA EL MANEJO DE AGUAS PLUVIALES QUE REDUSCEN LA CONTAMINACIÓN Y AYUDE A MANTENER NUESTROS ARROYOS, RIOS, Y PLAYAS MÁS LIMPIOS. PARA MAYOR INFORMACIÓN LLAME AL (619) 441-1653.

# STORM WATER PROTECTION IS IN GOOD HANDS...YOURS!

Operate a clean, dry shop. Sweep, mop or vacuum instead of hosing down garage floors or outdoor work areas.

Opere un negocio seco y limpio. Barra, trapée, o limpie con aspiradora en vez de regar con manguera los pisos de los garajes o las áreas de trabajo exteriores.

Prevent spills and leaks. Develop spill prevention and response procedures. Use drip pans and ground cloths under vehicles. Drain and recycle fluids from wrecked or leaking vehicles as soon as possible.

Prevenga los derrames y las goteras. Desarolle un plan para prevenir y responder a estos derrames. Use recipientes recolectores y trapos debajo de los vehículos. Tire y recicle los fluidos de los vehículos chocados o de los que tengan goteras tan pronto que sea posible.

Prevent wash water from entering storm drains. Use a commercial car wash facility for cleaning vehicles. It is illegal to allow car wash runoff from commercial vehicles to enter the storm drain.

Prevenga que la agua sucia entre en las alcantarillas. Use un negocio comercial del lavado de auto. Es ilegal permitir que la agua usada del lavado de vehículos comerciales entre en las alcantarillas.

Protect outdoor work and storage areas. Cover equipment/ materials and work/ storage areas. Place bulk fluids in secondary containment.

Proteja las áreas de trabajo y almacenamiento exteriores. Cubra estas áreas y también los equipos y materiales. Ponga los fluidos de grandes cantidades en recipientes secundarios.

Clean parts in a self-contained sink/drum unit when working with solvents. Inspect parts-washing units daily for leaks and make necessary repairs immediately. Use aqueous cleaning solutions instead of solvents when possible. Recycle used solutions through a licensed hazardous waste hauler.

Limpie las piezas y los repuestos en una unidad de fregadero/ tambor cuando trabaje con solventes. Inspeccione las partes de la unidad de limpieza diariamente para detectar goteras y haga los arreglos necesarios inmediatamente. Use soluciones a base de agua en vez de los solventes cuando sea posible. Recicle las soluciones usadas por medio de una compañía con licencia para transportar deshechos peligrosos.

Dispose of waste properly. Recycle oil, oil filters and antifreeze. Never pour liquids down the gutter or storm drain.

Disponga de los deshechos correctamente. Recicle el aceite, los filtros de aceite y los anticongelantes. Nunca debe tirar líquidos en las alcantarillas o rejillas.

Storm water and the pollutants it carries flow directly into the nearest creek, river, lake or lagoon, eventually reaching the ocean. Do your part to help keep our waters clean for you, your family and our environment.

Las aguas pluviales llevan los contaminantes directamente a los arroyos, rios, lagos y lagunas, y finalmente se desembocan al océano. Haga su parte ayudando a mantener nuestras aguas para usted, su familia y el medio ambiente.

This poster is brought to you by the San Diego Regional Copermittees. To report complaints or for more information, call the Regional Stormwater Hotline at 1-888-846-0800.

Storm Water Pollution Prevention Program
THINK BLUE
You're the solution to storm drain pollution.
Protecting our beaches, bays, and waterways

project clean water

# GENERAL BEST MANAGEMENT PRACTICES FOR INDUSTRIAL AND COMMERCIAL FACILITIES

In accordance with Section D.3.b of the Municipal Permit, the City of El Cajon developed an inventory of general best management practices that may be selected where appropriate for implementation at all industrial facilities and high priority commercial facilities of the Jurisdictional URMP and revisions. General BMPs emphasize *non-structural* BMPs as an initial step toward low-cost, feasible implementation. In addition to general BMPs, high priority industrial and commercial facilities are also required to implement applicable activity-specific BMPs listed in the City's Updated JURMP document (Appendix C.3.2 and C.3.3). General BMPs are listed below in three tables:

TABLE OF CONTENTS PAGE

TABLE 1. GOOD HOUSEKEEPING BMPS ..... 1
TABLE 2. MATERIALS HANDLING BMPS ..... 3
TABLE 3. EQUIPMENT MAINTENANCE BMPS ..... 7

In addition to the information provided within this section, more specific BMP information can be obtained from the Caltrans Storm Water Quality Handbooks (2003) and the California Storm Water Best Management Practice Handbook for Industrial/Commercial Facilities (2003).

TABLE 1. GOOD HOUSEKEEPING BMPS

| BMP Name | Purpose | Description |
|---|---|---|
| **Routinely Report Any Observed Non-Storm Water Discharges** | Prevent improper handling and disposal of significant materials that may be spilled or deposited into the storm drain system | Develop adequate routine reporting procedures so personnel can identify an act of illegal dumping or suspicious non-storm water discharges; Post signs with information regarding appropriate reporting procedures |
| **Perform Regular Cleaning** | Eliminate the accumulation of pollutants (dirt, surplus materials, spilled or dropped substances, litter, and debris) that collect in areas that can discharge runoff to storm water. Such areas include maintenance shops, manufacturing facilities, metal fabrication shops, mechanic garages, loading docks, and storage areas | Maintain regular sweeping and cleaning schedules; Keep work areas dust free and orderly; Keep floors and ground surfaces dry using brooms, shovels, vacuum cleaners; Collect and dispose of garbage regularly |
| **Avoid Hosing Down the Site** | Eliminate contaminated runoff generated by "wet" cleaning or hosing down of outdoor paved areas such as work stations, loading/unloading sites, maintenance shops, storage areas, and any areas that may contribute pollutants to storm water | Dry methods of cleaning include sweeping, using damp rags or mops and vacuums; If hosing is necessary the downstream storm drain should be permanently or temporarily modified with a plug such as a rubber mat, filters, absorbent blankets or bermed with sandbags. |
| **Perform Regular Pavement Sweeping** | Prevent trash, litter, and particulate matter from accumulating on paved surfaces and reduce the potential for these materials to wash into storm drains during storm events | The frequency of regular dry sweeping should be scheduled according to the quantity, toxicity and usage of materials, proximity to source area, evidence of exposure to storm system, probability of exposure, and sensitivity of receiving water |
| **Place Trash Receptacles in Appropriate Locations** | Promote the proper placement, handling, and disposal of waste materials to reduce spillage and accumulation in outdoor areas that are exposed to storm water runoff | Place trash receptacles in accessible locations and in sufficient numbers; Train personnel as to the location of trash receptacles and waste handling areas |
| **Train Employees to Properly Dispose of Wastes** | Keep employees and personnel informed and aware of the most recent BMPs regarding waste management | New employees should be trained regarding proper waste handling such as warnings about pouring deposit wastes into the storm drain, reporting observed discharges, and recycling procedures; All employees should be trained annually |
| **Permanently Seal Floor Drains that Discharge to the Storm Drain System** | Eliminate connections that act as a pathway for spilled or leaked pollutant materials to enter the storm drain system | Interior floor drains should be permanently sealed (whenever safe for structural integrity) to prevent accidental illegal dumping of contaminants into the storm drain system |
| **Confirm that No Industrial Sinks are Connected to the Storm Drain** | Eliminate direct connections that can introduce pollutants to the storm drain system | Sinks in industrial areas should be connected to the sanitary sewer system or appropriate disposal locations; Review and inspect "As-built" piping diagrams and building or site plans to verify that sinks are not connected to any storm drain |
| **Store Waste and Recycling Materials in Proper Containers** | Protect waste and recycling materials from exposure to wind, weather elements and scavengers that can transport pollutants to storm water | Dry waste such as light scrap metal, floor sweepings, metal chips and paper that can be affected by wind should be kept in sealed containers; Keep dumpsters closed; Seal recycling drums; Label containers, keep them readily accessible and empty containers regularly |

| BMP Name | Purpose | Description |
|---|---|---|
| **Control Roof Downspout Discharge** | Where possible, divert runoff collected on roofs, canopies and other coverings from discharging into areas of potential pollutant use or storage | Downspouts should be directed to avoid critical areas such as fueling, fabrications, lead tool, and dye storage of hazardous waste storage areas |
| **Minimize Storm Water Run-On from Adjacent Facilities and Properties** | If possible, divert run-on generated by neighboring facilities or adjacent properties before it can enter the site grounds. This should be done in such a manner as to prevent flooding of adjacent property. | Berming, diversion ditches, and dikes can direct flow away from the site; Vegetated strips, grass swales, or infiltration basins and trenches can impede slow incoming flow |
| **Conduct Refresher Courses in Operating and Safety Procedures** | Reduce spills and accidents that may cause significant materials to contaminate the storm drain system | Personnel should be required to have training and refresher courses to learn new procedures and policies regarding equipment operation and review correct operating and safety procedures |
| **Designate Special Areas for Draining or Replacing Fluids** | Eliminate improper handling and disposal of waste and reduce accidental spillage of significant materials in an unprotected area | Motor oil, coolants, and other potential pollutant fluids should be drained and replaced at specific areas designated for this activity |
| **Drain All Fluids From Stored or Salvaged Vehicles and Equipment** | Eliminate the potential for spillage such as oil, antifreeze, and hydraulic fluid from vehicles and equipment under long-term storage | All oil and other fluids should be drained from vehicles being stored long-term or salvaged and the oil should be collected and recycled; Post signs on drained vehicles |
| **Completely Drain Oil Filters before Disposal** | Reduce potential for contamination of storm water due to spills and leaks from used oil filters | All filters should be completely drained into collection drums for recycling and disposal of used oil; Post signs stating requirements to completely drain filters before disposal |
| **Wash Equipment and Vehicles in Designated Areas** | Contain runoff that may carry detergents, oil, and/or grease from vehicle washing and eliminate potential for contact of polluted water with the storm drain system | Facilities should have designated, bermed wash areas that contain wash water and drain to the sanitary sewer, a sump, or to a filter |
| **Discharge Wash Water to a Sanitary Sewer** | Eliminate runoff generated by cleaning of vehicles, equipment, and floors from entering the storm drain | All washing should occur in designated contained areas and wash water should be discharged to a sanitary sewer, collected in dead-end sump tanks and transported to a treatment facility or filtered |
| **Reduce the Amount of Liquid Cleaning Agents Used** | Reduce potential for pollution from cleaning agents such as soaps and detergents used in any maintenance operations including vehicle, equipment, aircraft or ship cleaning, metal work, and painting practices | Use products other than liquid cleaning agents to the maximum extent practicable (MEP); Substitute cleaning methods such as wire brush scraping or using a bake oven |
| **Substitute Non-Toxic or Less-Toxic Cleaning Solvents** | Minimize exposure of organic solvents used for cleaning equipment and parts to storm water discharge | Substitute non-toxic or less-toxic cleaning agents; Use non-caustic detergents, water-based degreasers, non-chlorinated solvents and phosphate-free detergents; Manage cleaning materials properly |

TABLE 2. MATERIALS HANDLING BMPS

| BMP Name | Purpose | Description |
|---|---|---|
| **Use Solvents Efficiently** | Reduce potential for spills and leaks of cleaning solvents in repair and maintenance operations | Reuse solvents and use sparingly; Pre-soak parts in "dirty" solvent before placing in fresh solvent to reduce the volume of solvent used |
| **Use Outside Contractor for Handling Used Solvents and Other Significant Materials** | Prevent improper storage, handling, and disposal of solvents, oils, paint thinners, and other toxic chemicals to reduce potential for spills and contamination of storm water | Use private contractors such as Safety Kleen to handle the disposal and replenishing of toxic chemicals |
| **Protect Storage Containers from Being Damaged by Vehicles** | Prevent vehicle impact damage to storage containers such as ruptures and cracks that may lead to significant spills and leaks | Install bollards or traffic barriers, fences and curbs to protect containers stored in locations accessible to vehicles |
| **Centralize Liquid Solvent Cleaning to One Location** | Promote conservative use of liquid solvents in designated contained areas to reduce the potential for spills, illegal dumping, and improper use of the solvent | Promote cleaning of parts using "dry" methods; if liquid solvents are necessary, clean in central locations to reduce the number of personnel using solvents and promote proper use and disposal; ensure that cleaning locations are properly operated and maintained |
| **Properly Store Containers** | Prevent exposure of significant materials or potential pollutants stored in outdoor containers to storm water | Proper storage includes: provide 3 feet of aisle space to provide access for inspections, store drums and bags away from traffic routes, stack containers according to manufacturers instructions, store liquid containers in bermed area |
| **Use Overpack Containers or Containment Pallets to Store 55-Gallon Drums Outside of Storage Areas** | Contain and prevent chemical, oil, solvent, or liquid leaks from 55-gallon drums to prevent contamination of storm water | Overpack containers and spill prevention or containment pallets are secondary containers, generally constructed of plastic; Secondary containment should be adequate to hold the contents of the storage barrels should they break or leak |
| **Provide Roof to Cover Source Area** | Prevent contact of storm water rainfall with significant materials in critical areas | Construct a roof, canopy, or effective covering for critical areas such as fuel transfer, loading/unloading, mechanical shops, metal fabrication and hazardous material storage areas |
| **Pave Bermed Areas** | Prevent infiltration of spilled material into the soil and subsequent transmission to the storm drain system | Critical areas designated for material handling and storage, equipment repair, and maintenance operations should be paved with impervious material such as concrete, asphalt, clay or plastic and curbed by berms and dikes |
| **Repair Leaky Roofs** | Keep storm water from leaking into covered areas where hazardous substances, parts equipment, vehicles and materials are stored | Repair leaky roofs as required for each building, move stored equipment and materials to another covered area, train personnel to notify supervisors when leaks are observed |

| BMP Name | Purpose | Description |
|---|---|---|
| **Recycle** | Reduce the amount of hazardous and non-hazardous waste material such as solvents, oil, scrap metals, wash water and absorbent materials used at the site and prevent exposure of significant materials to storm water activity | Recycling collections should be conducted weekly and more frequent pickups may be established based on quantity, toxicity, probability of exposure of materials to storm water, length of storage time, evidence of exposure, and sensitivity of receiving waters |
| **Control Spills** | Reduce potential for spills and implement proper containment in the event of a spill or leak to prevent the contamination of storm water runoff | Material Safety Data Sheets (MSDS) should be followed for handling, storage and cleanup of significant materials; For small spills, use absorbents such as sand, straw, or sawdust; For larger spills, use spill kits, boom, and other response supplies |
| **Label all Drums, Cans, Containers, Tanks, and Valves** | Reduce the potential for misuse or spillage of stored materials; Ensure that appropriate procedures, equipment and storage containers are used to prevent spills and ensure that in the event of a spill the material is properly identified and the appropriate response is implemented | All containers should be labeled according to its contents (solvent, gasoline) hazardous substances should be labeled regarding the potential hazard (corrosive, radioactive, flammable, explosive, poisonous); Department of Transportation (DOT )labeling requires that labels be prominently displayed on transported hazardous and toxic materials |
| **Construct Berms or Dikes Around Critical Areas** | Provide secondary containment for critical areas such as material handling and storage, equipment repair and maintenance areas to divert spills and leaks away from the storm drain system | A raised berm or dike should be placed around all critical areas or source areas with a high potential for release of pollutants |
| **Use "Doghouse" Design for Outdoor Storage of Small Liquid Containers** | Reduce the potential for pollution from small containers of liquid materials (paints, solvents, antifreeze, and oil) stored outdoors | Store small containers, cans, and pails carrying toxic contents inside buildings or in a "doghouse"; A doghouse design consists of a two walled shed with a peaked roof to divert rainfall and flooring equipped with spill prevention pallets |
| **Do Not Store Used Parts or Containers Directly on the Ground** | Prevent potential contamination from used parts covered in oil and grease, leaks in 55-gallon drums and flammable storage lockers by limiting direct contact of these stored materials with ground surfaces | Store used parts, storage drums and flammable materials indoors; store small parts in sealed containers, place drums on pallets; Use waterproof tarpaulins to protect ground surface and to cover stored materials |
| **Store Batteries in a Secondary Container** | Prevent contamination such as battery acid and caustic material from batteries into runoff | Store lead-acid batteries and charging units on pallets, in a bermed area under a canopy or awning; Used and cracked batteries should be stored in sealed containers |
| **Keep Open Flames away from Flammable Material** | Prevent accidents and ensure safety of personnel and staff as well as prevent polluted or toxic ash, rubbish, and debris generated by accidents, explosions, fires, and other chemical reactions from entering the storm drain | Open flames and smoking are prohibited within 50 feet of flammable materials (including paints); Use spark-proof tools when closer than 50 feet and post warning signs in areas where flammable materials are stored |
| **Use Door Skirt or Seal** | Contain spills of toxic or potential pollutant materials during loading and unloading activities and prevent contact of leaking material with ground surface runoff | Retrofit doorways used for loading with rubber or plastic door skirts; The door skirt acts as a strip barrier that encloses and seals the open end of the trailer with the open door of the loading dock during loading and unloading operations |

| BMP Name | Purpose | Description |
|---|---|---|
| **Employ Proper Handling Procedures to Transport Materials and Waste** | Prevent damage such as fractures or ruptures (which can create leaks and spills) during transport of drums, containers and storage boxes carrying potential pollutants | Drums should be moved using a barrel cart or by placing the drum on a pallet and moving by forklift; A minimum of two persons should assist the forklift operator in transferring a drum to or from a pallet; Metallic strapping should be used to secure stacked drums |
| **Control Dust and Particulates** | Prevent pollution of storm water from indoor and outdoor industrial processes such as metal finishing, painting, sanding, grinding, sawing, milling, sandblasting, welding, and cement manufacturing that generate significant quantities of dust and particulates | Control the emission of dust particles generated by industrial processes by using filters, baghouses, electrostatic precipitators, cyclone concentrators, waterwalls, and other measures |
| **Store Liquids and Significant Materials within a Building or Covered Area** | Prevent leaks and spills of significant materials stored, handled, or transported outside, to minimize contamination of storm water | Store significant materials within an enclosed building or covered area on an impervious surface such as concrete to MEP; Direct contaminated runoff to a storm water treatment facility or containment; Clean spills and leaks |
| **Recycle Pressure Wash Solvents** | Eliminate discharge of waste water containing dirt, oils, grease, and paint from pressure wash systems to the storm drain | Pressure wash wastes should be recycled using a closed loop system or "zero-discharge system"; Train personnel on proper usage of pressure wash systems |
| **Provide Overfill Protection** | Prevent overflows that may occur during regular fueling operations or transfer of fuels and toxic liquids to vehicles, equipment, aircraft, and ships from exposure to storm water | Retrofit existing and new tanks with overfill prevention equipment such as automatic shut off valves, restricted flow devices, or alarms that indicate when the tank is almost full, and install secondary containment |
| **Monitor Major Fueling Operations** | Prevent accidental overflows containing fuels and toxic liquids during high-volume transfers (such as for fuel tankers) that may contaminate storm water | Implement a policy mandating second party monitoring of fuel operations; Monitor high-volume transfers; Train personnel for appropriate emergency spill response actions |
| **Provide Absorbent Booms in Unbermed Fueling Areas** | Contain accidental spills and leaks during fuel transfer operations and prevent contamination of runoff | Portable absorbent booms should be stored and readily available at fueling areas; These booms should be used to contain spills and leaks or spills |
| **Eliminate Topping Off Tanks** | Eliminate fuel spills from overfilling tanks and prevent contact of fuels with ground surface and storm runoff | Develop a policy to discourage "topping off" fuel tanks; Post warning signs stating explicit penalties |
| **Install Leak Detection System** | Detect leaks from underground storage tanks (USTs) that may leak fuel or toxic liquids and contaminate the soil or groundwater | Install leak detection systems such as automatic gauging, vapor monitoring, groundwater monitoring wells and interstitial monitoring; Keep a close inventory on all fuel transfers in and out |
| **Designate Areas for Fueling from Mobile Fuel Tankers** | Contain accidental spills and leaks from mobile fuel tankers (MFTs) to designated areas | Minimize the use of MFTs and perform fuel operations in designated areas particularly when a large number of vehicles are in use |
| **Restrict Access to Storage Tanks** | Prevent toxic discharges from storage tanks to the ground due to unauthorized handling and vandalism | Restrict access to tanks and valves to authorized personnel and properly trained employees; Supply a locked gate and fence the area around tanks |

| BMP Name | Purpose | Description |
|---|---|---|
| **Divert Drainage to a Low-Flow Sump** | Treat contaminated flows that drain directly into the storm drain system | Use structural controls such as a low-flow sump, oil/water separator, wet pond or infiltration basin so that spilled material is not discharged into the rest of the storm drain system |

TABLE 3. EQUIPMENT MAINTENANCE BMPS

| BMP Name | Purpose | Description |
|---|---|---|
| **Restrict Access to Area and Equipment** | Reduce pollutants in storm water runoff caused by the release of significant materials due to vandalism of vehicles and facility property, or unauthorized trespassing | Vehicle, equipment and storage areas should be fenced, gated and access restricted to authorized personnel; Fences and gates should be properly maintained and additional measures such as lighting of the area, security guards and alarms should be used appropriately |
| **Keep Equipment and Vehicles Clean** | Reduce oil and grease from leaky vehicles and equipment; These pollutants may accumulate on impervious runoff areas and can be washed into the storm drain | Regularly clean and maintain vehicles and equipment using dry methods; Centralize liquid solvent cleaning to one location and wash vehicles in designated areas |
| **Maintain Equipment in Good Condition** | Prevent spills and leaks due to corrosion, loose fittings, poor welding, and improper poorly fitted gaskets on vehicles and equipment | Equipment should be kept in good working condition and inspected regularly for fluid leaks; equipment that is leaking or in poor working condition should be repaired or replaced |
| **Implement Qualifying Tests for Equipment and Vehicle Operators** | Prevent accidents due to employee misuse or unfamiliarity with operating procedures that may result in leaks or spills that expose significant materials to storm water | Implement qualifying tests for personnel operating equipment or vehicles; Train personnel in safe operating procedures and basic maintenance and spill response procedures associated with particular equipment and vehicle operation |
| **Dispose of Obsolete Equipment, Inoperable Vehicles, and Surplus Materials** | Reduce the likelihood of storm water pollution due to oil and lubricant spills from leaky engine parts in obsolete equipment, inoperable vehicles and surplus materials stored on-site. | Perform proper off-site disposing and recycling of old parts, equipment, and surplus materials based on implementer's judgments of facility operations and conditions |
| **Check Vehicles and Equipment for Leaks** | Prevent contamination of storm water due to fluids from leaky engine parts on stored vehicles, aircraft or equipment | Stored or salvaged vehicles and equipment at the site must be inspected for oil and fluid leaks; Use drip pans to catch leaks and clean stains using "dry" methods |
| **Park Vehicles or Equipment Indoors or under a Roof** | Eliminate or reduce exposure of pollutants like oil and grease leaking from parked vehicles and equipment to storm water | Park and store vehicles and equipment indoors and under a roof, canopy, or other covering when available |
| **Park Vehicles on an Impervious Surface** | Prevent soil contamination and contamination of runoff; Prevent infiltration of spilled pollutants on ground surfaces into soil | Vehicles should be parked on an impervious surface such as concrete and asphalt that cannot be readily penetrated by rainfall |
| **Use Drip Pans under Leaking Equipment** | Contain fluids that may leak from equipment such as pumps, air conditioners, and boilers until equipment can be properly repaired or replaced | Drip pans should be placed under leaking equipment to collect any leaking fluid as a temporary BMP until the equipment is repaired or replaced |
| **Perform Equipment Maintenance at Designated Areas** | Contain oil, grease, engine coolant, and any pollutants generated by routine maintenance activities of small equipment such as sandblasters and sprayers and large equipment such as construction equipment, tanks, aircraft, and boats | Maintenance of equipment should only be performed in specific predetermined areas such as hangars, shops, garages, or dry docks; all employees and personnel should be trained and informed as to the location of these areas and appropriate BMPs to reduce and contain pollutants |

| BMP Name | Purpose | Description |
|---|---|---|
| **Designate Areas for Washing Non-Vehicular Air Filters and Other Greasy Equipment** | Contain oil and grease waste generated during cleaning and maintenance of mess hall cooking grills, air filters, and facilities where significant grease and soot can accumulate | Greasy equipment should be cleaned and maintained in designated areas where wash water and grease are contained and diverted to a sump or discharged to the sanitary sewer |
| **Conduct Maintenance within Building or Covered Area** | Prevent deposits and stains from oil, grease, or solvents spilled or leaked during maintenance activities from contacting storm water | Conduct maintenance of equipment and vehicles within an enclosed building or covered area such as hangars, garages, and shops; Clean all spills and leaks immediately using rags or dry absorbents |

Subject: Stormwater Pollution Prevention requirements for your mobile business

Dear Business Owner/Operator:

As part of local water quality regulations, municipalities in the San Diego region are required to work with businesses conducting mobile operations to prevent stormwater pollution. Best Management Practices, commonly referred to as "BMPs", are operational efforts consisting of housekeeping practices, spill control and prevention, and proper use and storage of materials that are designed to reduce the environmental impact from certain activities. Using BMPs will help prevent pollution from your business. Proper implementation and maintenance of BMPs are critical to their effectiveness.

You have been identified as a mobile businesses operating in the San Diego region. Your business is required to implement the following regional BMPs during your business operations to prevent pollution.

- **Storm Water Training**
- **Contain and Clean Up Spills (Spill Kits)**
- **Properly Handle All Waste (Solid, Liquid and Hazardous)**
- **Protect Storm Water Conveyance System: (Streets, Gutters and Alleys)**
- **Provide Proper Handling and Containment Of Materials**
- **Provide Equipment Washout Area**

The attached document provides details on how to properly implement each of the required BMPs. Additional details about BMPs for mobile businesses are available on the "Project Clean Water Toolbox" website at (http://www.projectcleanwater.org/bmp/). Please evaluate and revise your practices as necessary to ensure that you do your part in preventing stormwater pollution.

You are currently on record as doing business in the municipalities listed below. You may also want to verify that you meet their regulations, as the BMP requirements for each city may vary slightly. If you have any questions or concerns, please contact the staff of the jurisdiction where you are conducting business.

Respectfully,

# Required Minimum BMPs
# For
# Mobile Businesses

## 1) Storm Water Training:

Proper training is required to prevent the discharge of pollutants in to the storm water conveyance system. Train all workers to properly identify, transport and manage materials to prevent a discharge to the storm water conveyance system. Train all employees on discharge prohibitions, storm water best management practices (BMPs), pollution prevention and methods to control, contain and clean up spills.

## 2) Contain and Clean Up Spills (Spill Kits):

Keep written spill procedures and cleanup materials in each vehicle. Spill kits must be appropriate for materials used in the business activities. In the event of a spill immediately contain the spill on site. Use appropriate equipment and/or materials to clean up the spill. Immediately report any spill that cannot be completely contained to the jurisdiction where the spill occurred. Sweep up the material and dispose of it properly. If the spill is hazardous, contact the appropriate reporting agency and take appropriate clean up and disposal actions.

## 3) Properly Handle All Waste (Solid, Liquid and Hazardous):

Before starting a job consider the weather conditions and determine how to dispose of all waste. Properly remove all waste from the worksite or place in proper waste containers with lids. Never pour liquids into trashcans, dumpsters or storm drains. Liquid non-hazardous waste may be disposed to the sanitary sewer, if appropriate, or placed in sealed containers, removed from the worksite and disposed of properly. Inspect and label all hazardous waste containers prior to removal. For details on the management and disposal of specific chemical waste contact the County Hazardous Materials Division at (619) 338-2231.

## 4) Protect Storm Water Conveyance System: (Streets, Gutters and Alleys)

The storm water conveyance system is a direct connection to creeks, rivers, bays and the ocean. At the work site, locate the probable pollutant discharge points and install appropriate materials to contain the pollutants. Capture and remove pollutants from your activity as close to the work area as possible. Properly dispose of any collected liquid waste. Check with your local jurisdiction to determine if permits are required prior to disposing liquid wastes to the sanitary sewer system (mop sink, toilet, etc.) or whether they can be directed to landscaped areas that will not run off into the storm water conveyance system.

## 5) Provide Proper Handling and Containment Of Materials:

To prevent spills or discharges, all materials must be properly contained during use and transport. Provide secondary containment, to the maximum extent practicable, for all liquids in the event of spills, punctures or leaks during use and transport. Store materials and equipment securely in the vehicle to prevent loss. Provide leak proof lids for liquids and cover all materials and waste while not in use and during transport. Maintain a materials inventory and material safety data sheet (MSDS) if hazardous materials are being used or transported. Inspect and label all chemical containers.

## 6) Provide Equipment Washout Area:

Equipment washout areas should be located away from any storm drain inlets or open drainage facilities. The washout area can be a container, a berm or a liner to collect and contain liquids and prevent runoff. Remove washout out waste from the job site and dispose of properly.

- For additional details on mobile business best management practices consult:
  - Project Clean Water Tool Box at **www.projectcleanwater.org/bmp**
  - California Storm Water BMP Handbook at **www.cabmphandbooks.com**

These practices represent the minimum requirements. Contact the local jurisdiction where the job is located, as there may be more stringent requirements.

# Business License and the Storm Water Program

**Goal**: Use information collected and stored in the Business License database to support the Storm Water Program inspection and public outreach components and potentially increase revenues for the Business License Program.

**Process:**

1. The Storm Water group has access to the Business License database.

2. The Finance Department provides the Storm Water group with a weekly or bi-weekly list of new businesses added to the Business License database.

3. Storm Water staff checks the business type information, SIC code, number of employees, and APNs for accuracy and adds needed information to the Business License database.

4. Storm Water staff may conduct site visits to new businesses when unsure about information that was provided.

5. The Storm Water section updates business inventories by appending new businesses that may present a high threat to water quality.

6. Develop a Storm Water informational sheet for Business License applicants. The Business License staff would hand out the informational sheet at the time. (Supports Storm Water outreach component)

Appendix A.6

**Residential Automobile Repair and Maintenance**

Many people prefer to repair and maintain their vehicles at home. Those that do, need to ensure that these activities do not pollute our streams, rivers, bays and the ocean. Automobile maintenance and repair activities can introduce chemicals such as oil, grease, antifreeze, hydraulic and brake fluids, and metals to our surface and groundwater. A recent study estimated that the amount of oil running off our streets and driveways and ultimately flowing into the ocean is equal to an Exxon Valdez oil spill — 10.9 million gallons — every eight months (NRC, 2002).

Keep in mind that zoning laws require that cars parked at residential properties be operational at all times. So, pulling the engine or otherwise disabling the vehicle might result in a administrative violation or fine. Plan to take your vehicle to a professional facility for major repairs.

**Minimum Requirements**

The following best management practices (BMPs) or equivalent measures, methods, or practices are required if you engage in automobile repair and maintenance at your home.

- Collect all used oil, antifreeze, or other vehicle fluids in containers with tight fitting lids. Do not mix these fluids in the same container as this limits your ability to recycle the oil at your local auto parts store or service station.
- Never dispose of used oil, antifreeze, or other fluids into a storm drain, into a ditch, or onto the ground. Oil should be recycled at an auto parts store or service station. Other fluids can be disposed of at a household hazardous waste collection site.
- Never clean the engine or undercarriage of your vehicle at home. For this type of cleaning, take the vehicle to a commercial car wash facility.
- Use drip pans, tarps, or even cardboard and newspaper under the vehicle to capture leaks or spills that may occur during maintenance and repair activities. This ensures spilled fluids won't be washed to the storm drainage system the next time it rains.
- Clean up spills with rags or absorbent material, such as sand, dirt, or cat litter. Do not wash down or hose down these spills to the curbs, roadway, or storm drains. Sweep up absorbents and dispose of them in your garbage can.
- Store automotive parts, such as batteries, engines, transmissions, and other parts that may have oily or greasy residue on them, under cover and off the ground to minimize rainwater contact. Rainwater can wash pollutants off these parts and send pollutants to storm drainage systems and groundwater. Tarps are an inexpensive and easy solution to covering parts.

Contact the Storm Water Program at (619) 441-1653 for additional information.

## El Cajon Storm Water Protection Program

### What You Can Do To Reduce Urban Runoff Pollution

The key to preventing urban runoff from threatening local water quality is for each of us, as private citizens, to recognize the problem of urban runoff pollution and how our actions can have an impact. Here are some ways you can help reduce urban runoff pollution:

- Buy "environmentally safe" household cleaners
- Properly store all toxic materials
- Take all unwanted hazardous materials to local collection sites. Contact Waste Management at (619) 596-5100 to make an appointment
- Use kitty litter or other absorbent to remove spills from pavement, and then place the absorbent material in a sealed bag in the trash
- Use pesticides, herbicides and fertilizers sparingly and carefully
- Use a broom instead of a hose to clean up yard clippings, and
- Place the yard clippings in your green waste recycle bin for pickup or
- Start a compost bin in an area of your yard not draining to the storm drain
- Clean up pet and other animal wastes and properly dispose of them the trash
- Take used motor oil and antifreeze to a recycling center or hazardous waste collection center
- Reduce leakage of oil, antifreeze and other fluids from your car by regular inspection and maintenance

By changing the way we act as individuals, our combined impact on improving water quality can be tremendous.

For more information and tips on improving our water quality, call the City of El Cajon Storm Water Management Program at (619) 441-1653. And remember, **you are an important part of the pollution solution**. Hope to hear from you soon!

**How Should I Wash My Car?**

**The Challenges of Maintaining a Clean Environment**

In today's world, we face many changes especially concerning environmental protection. As never before, all of us are required, both in our personal surroundings and in our communities, to pay attention to how we care for the environment, as well as the legacy we leave behind for generations to follow. We are challenged to change the way we live for the sake of creating a sustainable world.

As our collective environmental concerns continue to develop we have focused on the ways we disposed of trash. Anti-litter ordinances lead the way to production of environmentally sensitive papers and plastics, which also has led to trash recycling bins and green waste bins.

It's now time to think about how we wash our cars and the impact home car washing has, as it depletes our water resources and pollutes our environment.

**Why Is Home Car Washing a Problem?**

Most car washing is being done at home with a hose and a bucket of soap in the driveway. A small percentage of residential car washers will use a hose with a trigger nozzle and wash their cars on more appropriate surfaces such as their lawn that will allow the water to seep into the soil, limiting the amount of water used and eliminating wastewater runoff into community wetlands, rivers, bays and the ocean.

However, the majority will wash their cars in their driveway with their garden hose using an average of 100 gallons or more of water. Studies indicate an average of 100 gallons of water flow thru a typical 5/8" garden hose every 10 minutes. The runoff water then becomes wastewater mixed with soaps, road acids, brake dust, and other harmful contaminants.

When wastewater is allowed to run freely down the driveway into the gutters, the water empties straight into the storm drain and straight into our community wetlands, rivers, bays and the ocean.

Many residents are completely unaware of where wastewater from their residential car wash goes. Why? Many probably think that the outside water goes where the inside water goes—to a treatment plant of some sort. When asked about storm drain at the end of the street, residents will often refer to it as the sewer. If they only knew and understood that the water that enters the storm drain flows into our waterways, most residents would willingly change by washing their cars on their lawns using a trigger nozzle, or choose to use a professional car wash in the same way they choose to use a professional oil change center.

Contact the Storm Water Program at (619) 441-1653 for additional information.

**Pollution Prevention Tips for Landscape & Gardening**

Clean beaches and healthy creeks, rivers, bays and ocean are important to our City's wellbeing. However, many common activities can lead to water pollution if you're not careful. Fertilizers, pesticides and other chemicals that are left on yards or driveways can be blown or washed into storm drains that flow to the ocean. Over-watering lawns can also send materials into storm drains. Unlike sanitary sewer flows from sinks and toilets, water in storm drains is not treated before entering our waterways.

You would never pour gardening products into the ocean, so don't let them enter the storm drains. Follow these easy tips to help prevent water pollution:

**General Landscaping Tips**

- Never allow gardening products or polluted water to enter the street, gutter or storm drain.
- Protect stockpiles and materials from wind and rain by storing them under tarps or secured plastic sheeting.
- Prevent erosion of slopes by planting fast-growing, dense ground covering plants. These will shield and bind the soil.
- Plant native vegetation to reduce the amount of water, fertilizers, and pesticide applied to the landscape.
- Never apply pesticides or fertilizers when rain is predicted within the next 48 hours.

**Garden & Lawn Maintenance**

- Do not overwater. Use irrigation practices such as drip irrigation, soaker hoses or micro spray systems. Periodically inspect and fix leaks and misdirected sprinklers.
- Do not rake or blow leaves, clippings or pruning waste into the street, gutter or storm drain. Instead, dispose of green waste by composting, hauling it to a permitted landfill, or recycling it through you're the green waste recycling program.
- Use slow-release fertilizers to minimize leaching, and use organic fertilizers.
- Read labels and use only as directed. Do not over-apply pesticides or fertilizers. Apply to spots as needed, rather than blanketing an entire area.
- Store pesticides, fertilizers and other chemicals in a dry covered area to prevent exposure that may result in the deterioration of containers and packaging.
- Rinse empty pesticide containers and re-use rinse water as you would use the
- product. Do not dump rinse water down storm drains. Dispose of empty containers in the trash.
- When available, use non-toxic alternatives to traditional pesticides, and use pesticides specifically designed to control the pest you are targeting
- If fertilizer is spilled, sweep up the spill before irrigating. If the spill is liquid, apply an absorbent material such as cat litter, and then sweep it up and dispose of it in the trash.

- Take unwanted pesticides to a Household Hazardous Waste Collection Center to be recycled. Locations are provided below.

Contact the Storm Water Program at (619) 441-1653 for additional information.

# Sewage Spill Reference Guide
## Your Responsibilities as a Private Property Owner

### How a Sewer System Works

A typical sanitary sewer system is constructed of a network of pipes, laterals and mains connecting to each building and transporting sewage to a wastewater treatment plant (see diagram to the right).

A property owner's sewer pipe is called a **sewer lateral** and connects to a larger city-maintained pipe called a sewer main typically located in the street.

As stated in the El Cajon Municipal Code, **sewer laterals are the responsibility of the property owner** and must be maintained by the property owner for the entire distance from the house to the sewer main.

### What is a Sewage Spill?

Sewage spills occur when the wastewater being transported via underground pipes overflows through a manhole, cleanout, or broken pipe. Sewage spills can cause health hazards, damage to homes and businesses, and threaten the environment, local waterways, and beaches.

### Common Causes of Sewage Spills

**Grease** builds up inside and eventually blocks sewer pipes. Grease gets into the sewer from food establishments, household drains, as well as from poorly maintained commercial grease traps and interceptors. Grease is a common cause of sewer pipe blockages, especially in commercial and industrial areas.

**Large objects such as paper towels, rags, disposable diapers or children's toys** can contribute to a blockage.

**Structural problems** caused by tree roots in the lines, broken or cracked pipes, missing or broken cleanout caps, or undersized sewers can cause blockages. Blockages by roots are a common cause of blockages in residential areas.

**Infiltration and inflow** impacts pipe capacity and is caused when groundwater or rainwater enters the sewer system through pipe defects and illegal connections.

**You Are Responsible for a Sewage Spill Caused by a Blockage or Break in Your Sewer Lines!**

Time is of the essence in dealing with sewage spills. You are required to **immediately:**

- ✓ **Control and minimize the spill.** Keep spills contained on private property and out of gutter, storm drains and public waterways by shutting off or not using the water.
- ✓ **Use sandbags, dirt or plastic sheeting** to prevent sewage from entering the storm drain system.
- ✓ **Clear the sewer blockage.** Always wear gloves and wash your hands. It is recommended that a plumbing professional be called for clearing blockages and making necessary repairs.
- ✓ **Notify the El Cajon Department of Public Works** by calling (619) 441-1653 during non-holiday business hours (8am to 5pm, M-F), or call the Police Department Communications Center 24-hour number at (619) 579-3311. City forces can help in containing and capturing the sewer spill, but we need your telephoned notification. The City of El Cajon is currently required by California State Law to report any and all known sewage spills to a State-wide reporting system, regardless of whether they occur on private or public lands.

**You May Be Liable**

Allowing sewage from your home, business or property to discharge to a gutter or storm drain may subject you to penalties and/or out-of-pocket costs to reimburse our city for clean-up efforts and enforcement actions.

**What To Look For**

Sewage spills can be a very noticeable gushing of water from a manhole or a slow water leak that may take time to be noticed. Investigate suspicious looking wet areas. Look for:

- ✓ Drain backups inside the building.
- ✓ Wet ground and water leaking around manhole lids on to your street.
- ✓ Leaking water from cleanouts or outside drains.
- ✓ Unusual strong offensive odors from wet areas near sidewalks, external walls, or landscaped areas.
- ✓ Slow draining or clogged sinks and toilets

**Be Cautious**

Keep people and pets away form the affected area. Untreated sewage has high levels of disease-causing viruses and bacteria.

**How You Can Prevent Sewage Spills Before They Happen**

- ✓ Never put grease down garbage disposals, drains or toilets.
- ✓ Perform periodic cleaning to eliminate grease, debris and roots in your house plumbing and sewer lateral.
- ✓ Repair any structural problems in your sewer system and eliminate any rainwater infiltration or inflow into your plumbing system.
- ✓ Do not dispose of paper towels, or other large objects in toilets.

# El Cajon Storm Water Protection Program
# Residential Repair, Restoration and Remodeling – Part 1

Residential repair, restoration and remodeling is a difficult and stressful time for home owners. In spite of these disruptions, you want to do your part in keeping your home, yard, neighborhood and community clean and healthy. Here are some ways that you can accomplish this while keeping our storm drains, creeks, rivers and beaches clean. These environmentally-friendly practices are called Best Management Practices, or BMPs. Please pass these tips along to anyone doing repair, restoration or remodeling at your home or property.

**Construction -** Sediment from excavation and other construction projects is the most common pollutant washed from work sites. Sediment entering the ocean through storm drains harms fish and other wildlife.

**General Practices**

- ALWAYS store both dry and wet materials under cover, protected from rainfall and runoff and away from storm drains or waterways.
- Keep all construction debris away from the street, gutter, and storm drain.
- Look for and clean up material that may have traveled away from your property after each days work.
- If you (or your contractor) keep a dumpster at your site, be sure it is securely covered with a lid or tarp when not in use.

**Erosion Control**

- Schedule grading and excavation projects during period when rain is not expected.
- Cover excavated material and stockpiles of asphalt, sand, etc., with plastic tarps.
- Prevent erosion by planting annual and perennial grasses. These will bind the soil, preventing erosion

**Lumber -** Cover chemically treated wood during rain events. This will prevent the chemicals from washing into storm drains.

**Concrete and Masonry Construction -** Fresh concrete and mortar application materials can wash or blow into the street, gutter, or storm drain, posing a hazard to fish, wildlife, and people. To avoid polluting:

- NEVER dispose of cement washout or concrete dust onto driveways, streets, gutters, or storm drains.
- NEVER wash excess material from bricklaying, patio, driveway or sidewalk construction into a street or storm drain. Sweep up and dispose of small amounts of excess dry concrete, grout, and mortar in the trash.

- Wash concrete or brick areas ONLY when the wash water can flow onto a dirt area without further runoff, or drain onto a surface which has been bermed so that the water and solids can be pumped off or vacuumed up for disposal.
- DON'T mix up more fresh concrete or mortar than you will need for a project.
- PROTECT dry materials from wind. Secure bags of concrete mix and mortar after they are open.
- Set up and operate small mixers on tarps or heavy plastic drop cloths.
- Protect applications of fresh concrete and mortar from rainfall until the material has dried

# El Cajon Storm Water Protection Program
# Residential Repair, Restoration and Remodeling – Part 2

**Indoor and Outdoor Painting -** All paints and solvents contain chemicals that are harmful to fish and wildlife. It is especially important to prevent these chemicals from entering storm drains.

- Keep all liquid paint products away from the street, gutter, and storm drains. Liquid residues from paints, thinners, solvents, glues, and cleaning fluids are hazardous wastes and should be disposed of properly. When thoroughly dry, used brushes, rags, drop cloths, and empty paints cans (lids off) may be disposed of as trash.
- Reuse paint thinner. Set used thinner aside in a closed jar to settle out paint particles. Then pour off clear liquid for future use.
- To dispose of the remaining paint sludge and any other household hazardous wastes that might result from your project, you can call Waste Management at (619) 596-5100 to make an appointment. For additional options in disposing of residential waste including renting of waste dumpsters call at 1(800) DUMPSTER or (619) 596-5100
- Never put flammable products such as oil-based paint or thinner down any drain or into the garbage!

**Paint Cleanup**

- NEVER clean brushes or rinse paint containers into a street, gutter, or storm drain.
- For oil-based paints, paint out brushes as much as possible. Clean with thinner, filter, and reuse the thinner.
- For water based paints, paint out brushes as much as possible, then rinse in sink.

**Paint Removal** – Paint removal and the compounds used in its removal are hazardous wastes. You can call (619) 596-5100 to schedule an appointment for disposal.

- Chemical paint stripping residue, including saturated rags, chips and dust from paints containing lead or tributyl tin, are considered hazardous waste. Please collect all hazardous materials for proper disposal.
- When stripping or cleaning building exteriors with high-pressure water, use sandbags or berms, or seal the storm drain with plugs or rubber mats.

Take it personally!
Storm Water Pollution Prevention Program

**Who Can You Contact? -** For more information or to report illegal dumping you can contact the El Cajon Storm Water Protection Program at (619) 441-1653 or at www.ci.el-cajon.ca.us. Remember that through your efforts you are the Pollution Solution.

# City of El Cajon
## Storm Water Residential Complaints

| | Date | Component | Business Name | Address Number | Street/Location | Complaint/ Observations | City Action | Valid Discharge | Enforcement Action | Was IC/ID Corrected |
|---|---|---|---|---|---|---|---|---|---|---|
| 1 | 07/06/10 | Residential | | 2790 | Anjuli | Complaint of dirt in the culvert at the rear of the property. | Inspected the site with zoning enforcement. Dirt at rear slope must be removed, encroachment permit required for front slope patio work. No threat to storm water MS4. | No | Verbal | N/A |
| 2 | 07/21/10 | Residential | | 998 | Finch St | Storm drain water accumulating in fornt of his house cousing algae to form. | Site inspection and record review found the discharge to be irrigation/ground water. | No | N/A | N/A |
| 3 | 7/62/10 | Residential | | 140 | Wells Ave | Large amount of dirt dumped in the driveway of this apartment complex. | Sthe property owner was contacted on site and advised to remove the dirt pile to another location on the property. | Yes | Verbal | N/A |
| 4 | 07/29/10 | Residential | | 712 | Pierce St | Large soil pile blocking the drainage easement. | Unable to view dirt pile. Property owner has building plan and will move the pile. | No | Verbal | N/A |
| 5 | 08/02/10 | Residential | | 1145 | Naranca Ave | Dog feces being thrown into the channel. | Made contact with the property owner. Inside small dog to elderly owners. Said it was likely neighbor at 1441. That owner was also contacted. | Yes | Verbal | N/A |
| 6 | 08/03/10 | Residential | | 1175 | Naranca Ave | Black water discharge from a motorhome in rear yard into the storm channel. | Notified zoning enforcement. The property owner and the occupant of the camper were contacted on site. A discharge pipe connected to the camper was directed through the rear fence into the channel. There was evidence of fecal matter and paper on the channel wall face. The pipe was removed immediately. | Yes | First | Yes |
| 7 | 08/05/10 | Residential | | 1443 | Egret | Referred a citizens concerning raw sewage from motorhome being dumped into the storm drain inlet. | The property ower was contacted on site and said the motorhome belongs to a guest. Three 5 gal paint cans wereplaced under it. | Yes | First | Yes |
| 8 | 08/11/10 | Residential | | 1692 | Primrose Ave | Delivered paper ads in driveway being kicked into the curb and drain. | Site inspection found no visible violations. | No | N/A | N/A |
| 9 | 08/18/10 | Residential | | 171 | Minnesota Ave | The owner has cemented in the drain/ sewer in front of his driveway. | Site inspection found that the resient poured concrete in the concrete swale at the driveway entrance to flatten it out for easier access. | No | N/A | N/A |
| 10 | 10/14/10 | Residential | | 540 | Ballard Ave | Dirt coming out of a drainage gutter at the left side of the complainants property. | Dirt was found coming out of an under curb drain after landscaping work. | No | N/A | N/A |
| 11 | 10/19/10 | Residential | | 1807 | Double D Dr | Discharge of sediment from trenching in driveway onto roadway. | Inspection found trenching from new water line in driveway with no BMPs in place during rain event. P/O out of town. Notice posted on door. Neighboring tenant noticed also. | Yes | Verbal | yes |
| 12 | 11/12/10 | Residential | | 1540 | Greenfield Dr | Property owner states that runoff from Clark St has been diverted onto his property by City work. Asphalt berm. | Met with property owner on site. No storm water issues exist. The berm was most likely placed by the complainant'sneighbor. | No | N/A | N/A |
| 13 | 11/30/10 | Residential | | 377 | Chambers Ave | Neighbor dumping trash/ paint on property and previously placed hose drain onto lot. | The property is undeveloped with minor ground cover. Dried paint waste was found in one spot st the rear fence. No liquid waste was found. No storm water violations were noted. | No | N/A | N/A |
| 14 | 12/07/10 | Residential | Mollison Arms Apartments | 254-280 | Mollison Ave N | Lateral overflow discharge to the street. It did not enter a storm drain. | Roto Responded and was present unpon storm water inspection. The PW crew responded and was able to reclaim the discharge. | Yes | Written | Yes |
| 15 | 12/17/10 | Residential | | 1400 | Finch St | Storm water received a complaint referral from the County Dept . of Agriculture regarding a compost pile located close to roadway and dwelling. | The property manager was contacted on site. The vegetation piles were from recent tree trimming. All piles have been removed. No storm water issues were noted. | No | N/A | N/A |

## Storm Water Residential Complaints

| | Date | Component | Business Name | Address Number | Street/Location | Complaint/ Observations | City Action | Valid Discharge | Enforcement Action | Was IC/ID Corrected |
|---|---|---|---|---|---|---|---|---|---|---|
| 16 | 12/13/10 | Residential | | 861 | Grossmont Ave | Discharge of concrete wash into the street and gutter. | Contacted the property owner. Drveway construction for new residence. Contractor not on site. Minor discharge noted. Onwer claimed BMPs were in place during pour. | Yes | Verbal | Yes |
| 17 | 12/21/10 | Residential | | 2428 | Charles Way | Grading, wood stacking, altering drainage | No storm water violations were noted during a site inspection. The natural drainage that runs behind the property does not apper to be compromised. | No | N/A | N/A |
| 18 | 12/21/10 | Residential | | 2125 | Dryden Rd | Altered grading to provide additional parking. | No storm water violations were noted during a site inspection with the complainant present. No grading was observed. The case was referred to zoning enforcement for the inoperative vehicles. | No | N/A | N/A |
| 19 | 12/22/10 | Residential | | 1163 | Nidrah St | Altered city drainage by relocating fence. | No storm water violations were noted during a site inspection. After consulting with the complainant it was determined that this is a civil matter. | No | N/A | N/A |
| 20 | 12/22/10 | Residential | | 217 | Orlando St | Sediment discharge through under curb drain during heavy rain. | Unable to locate the source of the sediment discharge. | Yes | N/A | Yes |
| 21 | 01/04/11 | Residential | | 776 | Pelican Way | Out door washing machine discharging water to the street. | During a site inspection it was determined that the discharge was from ground water. | No | N/A | N/A |
| 22 | 01/05/11 | Residential | | 427 | Coachwood | Slope erosion into the street, appears to be from downspout location. | No soil was found in street during a site inspection. The property owner was contacted on site. She said she is contacting a contractor to repair the slope and that the downspout did not contribute to the erosion. Ground squirrel holes. | No | N/A | N/A |
| 23 | 01/06/11 | Residential | | 1090 | Pine St | Large amount of dirt in street. Crew working with limited BMPs. | Soil was found to be from slope failure after recent storm. Gravel bags in curbline. Soil removed and pavement being swept. Not further action required. | N/A | N/A | Yes |
| 24 | 01/10/11 | Residential | | 979 | Eden Ln | The storm drain inlet outside her home is not working. | A site inspection found the drain in question to be an outlet. Water draining from the surrounding hills pools at this location. No storm water issues were noted. | No | N/A | N/A |
| 25 | 01/18/11 | Residential | | 1042 | Coleen Ct | Tenant reportedly washing unknow material with green tint down the driveway daily. | A site inspection found no evidence of a discharge. Through an interpreter it was determined that the water on the pavement was from lawn watering. Storm water educational were issued. | No | N/A | N/A |
| 26 | 01/26/11 | Residential | | 493 | Graves | Gray water draining from property, through a trench doug along the edge of the driveway, onto the street. | The tenant was contacted and advised to relocate the washing machine discharge pipe to the sanitary sewer. | Yes | Verbal | Yes |
| 27 | 01/31/11 | Residential | | 1034 | Anza St , S | Fuel discharge from weekend accident near storm draininlet. | A site inspection found that the fuel discharge had been cleaned. The complainant was notified. | No | N/A | N/A |
| 28 | 02/24/11 | Residential | | 814 | Lauree St | Discharge of white residue to the street. | The property is being rennovated. The property owner was contacted and advised to cease all discharges. The gutter was swept clean of sidement and residue. | Yes | Verbal | Yes |
| 29 | 03/03/11 | Residential | | 1716 | Woodburn Ave | Discharge of chlorinated pool water onto neighboring properties and the street. | There was no response at the door and no evidence of a current discharge. Unable to view the rear yard. Contact information was left at the door. The complainant was contacted on site and advised to contact the city for any future discharges. | No | N/A | N/A |
| 30 | 03/10/11 | Residential | | 926 | Finch St | Excess water in the street in front of residence; concerned about slope on Fletcher Pkwy. | During a site inspection it was determined that the discharge was from ground water. | No | N/A | N/A |
| 31 | 03/15/11 | Residential | | 1925 | Quidort Ct | Water constantly flowing in the curbline in front of the complainants residence. | During a site inspection it was determined that the discharge was from dechlorinated pool water discharge. | No | N/A | N/A |

# HELP!

Pollutants were found in your neighborhood storm drain.

Our field staff found the following pollutant(s)spilled or dumped into the storm drain system (curb, street, gutter) near your home:

- ❑ Over irrigation usage
- ❑ Motor Oil
- ❑ Antifreeze/Transmission Fluids
- ❑ Cooking grease
- ❑ Detergents
- ❑ Solvents/Degreaser
- ❑ Paint/paint products
- ❑ Home improvement waste
- ❑ Sewage
- ❑ Animal waste
- ❑ Yard waste (leaves, grass, etc.)
- ❑ Uncovered dirt and gravel pile(s).
- ❑ Construction debris
- ❑ Trash
- ❑ Other

## Be a Clean Water Leader

Storm water pollution is a problem that affects all of us. With a growing population of more than 95,000 residents and approximately 14 square miles of urbanized development, keeping our waters clean from pollutants has become increasingly difficult. With thousands of storm drain inlets, and nearly 100 miles of storm drain pipes and channels to clean and maintain, we need your help.

When it rains, water flows over across our yards and into our streets carrying pollutants into our storm drains. The problem is that storm drains are not connected to the wastewater sewer treatment plant. So, what's in the streets flows directly into our creeks, rivers and the ocean, without treatment.

Last year, too many of our beaches and bays were closed or posted as unsafe for swimming. As our City

## Be a Clean Water Leader

Storm water pollution is a problem that affects all of us. With a growing population of more than 95,000 residents and approximately 14 square miles of urbanized development, keeping our waters clean from pollutants has become increasingly difficult. With thousands of storm drain inlets, and nearly 100 miles of storm drain pipes and channels to clean and maintain, we need your help.

When it rains, water flows over across our yards and into our streets carrying pollutants into our storm drains. The problem is that storm drains are not connected to the wastewater sewer treatment plant. So, what's in the streets flows directly into our creeks, rivers and the ocean, without treatment.

Last year, too many of our beaches and bays were closed or posted as unsafe for swimming. As our City

Leaders have said, “this is more than an inconvenience; it is a civic embarrassment.” **Discharging pollutants to the City's storm drain system is in violation of Title 13.24 of the El Cajon Municipal Code and violations can result in substantial fines.**

But, as a City resident, you can make a difference. By becoming a Clean Water Leader, both on the job and in your community, you can help make our stream, rivers and beaches free of pollution. When you're at home, share your knowledge with neighbors and family. As you drive to work, be aware of any illegal discharges. And, if you do see an illegal discharge, report it. In the City of El Cajon you can **call the City of El Cajon at (619) 441-1653, or the 24-hour Storm Water Hotline at (888) 846-0800**.

Whether at home or at work, by adopting some simple Best Management Practices (BMPs), you can stop pollutants from being generated and entering our storm drain system.

- ✓ Use dry clean-up methods for spills and outdoor cleaning. Vacuum, sweep, and use rags or dry absorbants. Properly remove and dispose of this material when the spill is absorbed.
- ✓ Properly label, store and dispose of hazardous wastes. Rake, sweep up, and place all debris (dust, litter, sediment, etc.) from your yard or near your property into a trashcan.
- ✓ Use a mop only when water is needed.

As you perform your daily activities be proactive. Assess the activity from a storm water pollution point-of-view and ask yourself; “does this activity, directly or indirectly, generate pollution?” And, “how can I get the job done and prevent debris from entering into the storm drain collection system?”

**Definitions/Notes:**

1 Administration - General Planning; Community Planning; Policy Decisions to Implement Citywide Activities (ordinance, zoning,etc.); SUSMP; HMP; Staff Training (including conferences, seminars, etc.); Staff Education on new issues, policies and procedures; and, Component Performance Assessment

2 Inspection - Initial and Post-Construction Verification

3 Outreach - Reaching External Audiences

4 Extension of Staff, etc. (relevant only where contract activities are not otherwise captured)

5 Other - One time equipment/material/tool purchase

p p j p p p y

6 Development Planning (Engineering Concept Design, Final Design and Bid Package), Construction (SWPPP/NOI, Self-Inspection (contracted, staffed internally), temporary erosion controls)

7 ICID - Illicit Discharge Detection and Elimination

8 Education Component is captured in each of the previous components - internal educations is included in Administration/Assessment and external is included in the Outreach element.

9 Public Participation - Targets activities that promote the participation of the public in updating, development and implementation of the JURMP. Can be either captured in the Outreach elements of each component or tracked separately.

10 Include only activities not otherwise covered in 1 through 5 above.

11 Repeat outline as necessary to cover individual program elements

12 Include maintenance inspections for MS4 and roads; include compliance inspections for other facilities; if inspections and maintenance are inter-mingled, cover under BMPs only

**Re: 2011 Forester Creek Impact Study**
**City of El Cajon, California**

Dear Mr. Campos:

Enclosed please find our report for the City of El Cajon 2011 Forester Creek Impact Study. This project, conducted since 2004, is a study of the water quality in Forester Creek as it passes through El Cajon. The contents include field screening data, analytical laboratory test results, and analyses of the collected data. Copies of field data sheets and laboratory reports are attached.

It has been our pleasure working with the City of El Cajon on this project. Please feel free to contact us if you have any questions.

Sincerely,
D-MAX Engineering, Inc.

Arsalan Dadkhah, Ph.D., P.E.
Project Manager

# 2011 CITY OF EL CAJON
# FORESTER CREEK IMPACT STUDY

Forester Creek enters the City of El Cajon (City) from the east, running parallel to Interstate 8. After passing SR-67, the creek curves northward through the area around Gillespie Field before flowing into the City of Santee. Forester Creek eventually merges with the San Diego River just east of the junction of SR-52 and SR-125.

## Constituents of Concern

The 2008 Section 303(d) List, which was approved in November 2010, has identified Forester Creek as an impaired water body for the following constituents:

- Phosphorus
- Selenium
- pH
- Fecal coliforms
- Total dissolved solids (TDS)

Note that the fecal coliform and TDS impairments have been named for the lower 1 mile of Forester Creek, which is located outside of the City of El Cajon's jurisdiction.

The 2009-2010 San Diego River Watershed Urban Runoff Management Program (WURMP) Annual Report identifies the following high priority pollutants for the watershed, based on the 2008 WURMP Document:

- Bacterial indicators
- Phosphorus
- TDS, including chloride
- Low dissolved oxygen (DO)
- Turbidity

## Site Selection

This objective of the Forester Creek Impact Study is to assess changes in the water quality of the creek as it flows through the City of El Cajon. In order to evaluate these differences, a sample was collected from the creek near its entrance to the City from the east (upstream) and another sample was taken where the creek exits the City in the north (downstream).

The upstream sampling location has been moved twice since 2002 due to the variable nature of the flow coming into the City. When Forester Creek does not receive water from outside the city limits, the sampling location may be moved slightly downstream to the nearest location with flowing or ponded water.

The downstream sampling location is the same as Site 5 in the MS4 Outfall Monitoring Program and Dry Weather Monitoring Program. Data from the MS4 Outfall Monitoring visit in July 2011 has been included in the historical tables; however, only downstream data collected on the same date as the upstream sample in August 2011 is discussed in the text.

Figure 1 on the following page is a map of the sampling locations. Table 1 presents current site location information, and Table 2 lists yearly locations of the upstream sampling point.

**Figure 1: Site Locations**

## Methods

The same field and laboratory methods used during the City's Dry Weather Monitoring Program were used during the Forester Creek Impact Study. Samples were analyzed in the field for the following parameters:

- Temperature
- pH
- Turbidity
- Conductivity
- Surfactants
- Ammonia-nitrogen (ammonia-N)
- Nitrate-nitrogen (nitrate-N)
- Orthophosphate-phosphorus (orthophosphate-P)
- DO

Samples were collected and submitted to a laboratory certified by the California Department of Health Services for analysis of the following constituents:

- Oil and grease
- Total hardness
- Dissolved cadmium
- Dissolved copper
- Dissolved lead
- Dissolved zinc
- Diazinon
- Chlorpyrifos
- Total coliform bacteria
- Fecal coliform bacteria
- *Enterococcus* bacteria
- TDS
- Total organic carbon (TOC)

## Results and Analysis

To assess changes in water quality as the creek flows through the City, a comparison is made of constituent measurements at the upstream and downstream locations (Photos 1 and 2, respectively). However, a direct comparison of upstream and downstream constituent concentrations is not indicative of pollutant loads since flow is greater downstream.

Assessments of constituents analyzed during the 2011 Forester Creek Impact Study are as follows.

### *Flow*

Notable differences between the upstream and downstream flow rates include the following:

- The upstream site flowed at a rate of approximately 3 gpm, whereas the downstream site had a greater flow of 83 gpm.
- The greater flow downstream indicates that the majority of water in Forester Creek at the downstream site has been generated within City limits.
- The downstream flow is the lowest rate recorded in the history of the program.

### *Field Test Results*

Table 3 presents the field test results for each site. Notable differences between the locations include:

- The flow rate increased from 3 gpm upstream to 83 gpm downstream on the same day.
- Temperatures recorded as part of the 2011 study were 24.7°C upstream and 30.6°C downstream. The difference in temperature is primarily due to atmospheric conditions at the time of sampling.

**Photo 1:** Forester Creek Upstream Location

- Measurements of pH increased from 7.56 upstream to 8.62 downstream. The higher pH downstream is likely a result of increased photosynthesis at the downstream site, where the wide, shallow channel receives a significant amount of sunlight. A greater rate of photosynthesis decreases levels of carbon dioxide, thereby increasing the pH. As temperature increases, carbon dioxide is less soluble in water, which further increases pH.
- The concentration of surfactants was the same at both sites, measuring 0.25 mg/L.
- Measurements for turbidity, conductivity, ammonia-N, and DO were higher at the downstream site.
- Concentrations of nitrate-N and orthophosphate-P were greater upstream than downstream.

### *Laboratory Test Results*

Table 4 presents laboratory results for both sampling locations. Notable observations include:

- With the exception of bacterial indicators, concentrations of all detected laboratory constituents were higher at the downstream location. These include: total hardness, dissolved copper, dissolved zinc, TDS, and TOC.

- Counts of total coliform and fecal coliform bacteria were lower at the downstream location. *Enterococcus* counts were the same at both sites.

- Oil and grease, dissolved cadmium, dissolved lead, diazinon, and chlorpyrifos were not detected at either the upstream or downstream location.

**PHOTO 2:** Forester Creek Downstream Location

***Data Trends***

Tables 5 through 8 display historical data and trends for parameters analyzed at upstream and downstream locations. Data in these tables have been compared to the 2011 Dry Weather Monitoring Program action levels and Water Quality Objectives (WQO). The action levels were developed regionally by the Copermittee Dry Weather Monitoring Sub-Workgroup, and the WQO have been compiled from the Basin Plan and a guidance document prepared by the Copermittee Regional Monitoring Workgroup. Note that the data for measurements of ammonia-N, nitrate-N, surfactants, and orthophosphate-P were collected using field test kits, which have a much greater associated uncertainty than laboratory tests. These field test kits are useful in detecting major exceedances, but are inherently less precise than laboratory analytical tests. Figures 2 and 3 include graphs of historical data by constituent for both upstream and downstream locations. Where two sets of data exist for a given year, average values were plotted.

General findings include:

- Flow at the downstream location has been decreasing over time, with this year having the lowest flow measured in the history of the program. In the absence of increasing pollutant concentrations, lower flow means a smaller pollutant load leaving the City.

- Total coliform and TOC concentrations were the lowest measured in the history of this program at both the upstream and downstream sites.

- Concentrations of nitrate-N have generally been higher at the upstream site.

- Dissolved cadmium has not been detected at either location in the history of the program. Dissolved zinc, copper, and lead have been detected infrequently and in low concentrations, and more often at the downstream location.

- Measurements of DO, temperature, pH, conductivity, turbidity, ammonia-N, and TOC have typically been slightly higher downstream.

**Table 1**
**2011 Site Locations**

| Site | Location | Description | Primary Land Use | Secondary Land Use | Hydrologic Subarea | Latitude | Longitude |
|---|---|---|---|---|---|---|---|
| Upstream | Greenfield Avenue and I-8 west onramp intersection, behind southeast corner of Valero gas station at 1699 E. Main Street | Concrete Channel | Commercial | Residential | 907.13 | 32.81185 | -116.91795 |
| Downstream | Adjacent to the Weld Boulevard Trolley Station, southeast of the Marshall Avenue and Cuyamaca Street intersection | Concrete Channel | Commercial | Industrial | 907.13 | 32.82665 | -116.98226 |

**Table 2**
**Forester Creek Upstream Site Yearly Locations**

| Year | Upstream Sampling Location |
|---|---|
| 2006-2011 | Greenfield Avenue and I-8 west onramp intersection, behind southeast corner of Valero gas station at 1699 E. Main Street |
| 2005 | Fourth Street, north of Rancho Cajon Place, east side of the street |
| 2004 | Forester Creek at E. Main Street and Oakdale Avenue |

| % Exceedance *(DW)* | * | 0 | 0 | 0 | 0 | 0 | 0 | 13 | 0 | * |

**Notes:**
nd = not detected; na = not analyzed; BPJ = Best Professional Judgment; EPA = U.S. Environmental Protection Agency; DW = Dry Weather
Numbers in table have been rounded for presentation; unrounded values have been used in statistical calculations.
Half the value of the detection limit value was used in statistical calculations for the constituent that was not detected.
[1] The Criterion Maximum Concentration (salmonids absent), which varies based on pH, has been used because it applies to a one-hour maximum, and the ammonia level for this study was measured based on an instantaneous grab sample. See www.epa.gov/waterscience/criteria/ammonia.
[2] The Basin Plan WQO for total nitrogen WQO of1.0 mg/L has been used since nitrate-N is a component of total nitrogen.
[3] The Basin Plan WQO of 0.1 mg/L for total phosphorus has been applied since the Basin Plan does not provide a separate limit for orthophosphate-P.
* No established limit.
** There is no clear WQO in the Basin Plan, but a comparison is not necessary since TDS has been measured directly. See the laboratory data tables for TDS results.

## Table 6

## CASE NARRATIVE

| | |
|---|---|
| SAMPLE RECEIPT: | Samples were received intact, at 4 °C, and accompanied by chain of custody documentation. |
| PRESERVATION: | Samples requiring preservation were verified prior to sample preparation and analysis. |
| HOLDING TIMES: | All holding times were met, unless otherwise noted in the report with data qualifiers. |
| QA/QC CRITERIA: | All quality objective criteria were met, except as noted in the report with data qualifiers. |

*The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.*

# 5.
# OPERATIONS AND MAINTENANCE

The City shall properly manage, operate and maintain all parts of the sanitary sewer system owned or operated by the City and shall ensure that the system operators (including employees, contractors, or other agents) are adequately trained and possess adequate knowledge, skills and abilities.

The SSMP must include those elements listed below that are appropriate and applicable to the enrollee's system:

(A) Maintain an up-to-date map of the sanitary sewer system showing all gravity line segments and manholes, and applicable stormwater conveyance facilities,

(B) Describe routine preventive operation and maintenance activities by staff and contractors, including a system for scheduling regular maintenance and cleaning of the sanitary sewer system with more frequent cleaning and maintenance targeted at known problem areas. The Preventative Maintenance (PM) Program should have a system to document scheduled and conducted activities, such as work orders,

(C) Develop a rehab and replacement plan to identify and prioritize system deficiencies and implement short-term and long-term rehabilitation actions to address each deficiency. The program should include regular visual and TV inspections of manholes and sewer pipes, and a system for ranking the condition of sewer pipes and scheduling rehabilitation. Rehabilitation and replacement should focus on sewer pipes that are at risk of collapse or prone to more frequent blockages due to pipe defects. Finally, the rehabilitation and replacement plan should include a capital improvement plan that addresses proper management and protection of the infrastructure assets. The plan shall include a time schedule for implementing the short and long-term plans plus a schedule for developing the funds needed for the capital improvement plan;

(D) Provide training for staff on a regular basis in sanitary sewer system operations and maintenance, require contractors to be appropriately trained; and

(E) Provide equipment and replacement part inventories including identification of critical replacement parts.

## 5.1 Mapping

The requirement for this section is to maintain an up-to-date map of the collection system showing all gravity line segments and manholes, and storm water conveyance facilities.

### 5.1.1 Compliance Summary

As part of the City's Sewer System Master Plan Updated in 2008, the City's consultant prepared a new GIS atlas book of the City's collection system integrating basin, parcel and address layers. The new book is in distribution with a set protocol for noting inaccuracies and changes. Books will be collected once annually and updates will include any new or reconstructed facilities as well as corrections to older data. The protocol for book distribution and periodic collection along with standardized notations to be used by field and office personnel to note pending revisions to the GIS model, is:

1. How many sewer books to be distributed?

   A. Three City Hall copies: front counter, Private Development, extra copy

   B. Seven Maintenance/Operation copies: **DM, MS, AND 5** maintenance positions/vehicles

2. All books to be numbered and assigned a unique number to each user.

   It's most important to have an audit trail to demonstrate to the Regional Board that all people that meet and deal with the public and are involved in the SSOPP and SSORP have the most up-to-date information possible. This issue will be addressed in the next Storm Water Program audit.

3. No unauthorized reproductions. If someone needs a book, that person needs to order one from the GIS Administrator. All changes made to the master document are to be coordinated with the GIS Administrator.

4. All notations and corrections are to be noted in numbered books only. Maintenance crews will provide their comments to the maintenance supervisor who will keep a running record of field changes in his book. Senior Engineering Tech will make notations from processed as-builts on the master book and on the GIS sewer layer as CIP or private development projects are completed. Books will be collected, updated and redistributed periodically. New map books will be provided to all parties at the beginning of the system maintenance cycle or on an annual basis.

5. The GIS Administrator **(ET)** will keep a log of users and book numbers; establish frequency of updating, procedures for editing books, printing and redistributing sewer books.

6. Each book shall have a title page showing the book number and the date of publication. Inclusion of revised pages, per comment No. 6, will be hand-written on the title page of each book. **ET** will also develop a legend to illustrate how to record changes to the system or annotation.

7. Counter Book No. 1 will be the master copy to track comments and changes noted by counter personnel. **ET** will place the revised pages in Counter Book No. 1 so that it will be an up-to-date living document. Minor revisions may be distributed to Maintenance/Operations if significant projects are completed during

the system maintenance cycle or significant corrections are made. Minor revision pages will be stapled over the older pages in the sewer map books.

The City has no pump stations, force mains or valves to maintain so the collection system reflects gravity flow facilities only including 14 gravity siphons throughout the City. Future enhancements to the sewer atlas will be to integrate scans of as-built plans and CCTV inspection video as attributes to each pipeline segment. GIS users can assess as-built construction data and pipeline conditions on the fly. In 2009, the City will be completing a master plan for MS4 facilities including a new GIS based storm drain atlas book similar to the sewer atlas. Once this task is completed, the sewer atlas book will have a new layer reflecting location of all drainage structures. This will replace the paper map storm drain atlas book currently used by the City in conjunction with the new sewer atlas.

### 5.1.1 Compliance Documents

The documents supporting compliance with the requirements for mapping are as follows:

- The GIS based sewer atlas book is contained in Vol. 2, Appendix 5-1.
- The existing storm drain atlas book is in Vol. 2, Appendix 5-2.

### 5.1.2 Roles and Responsibilities

The roles and responsibilities of staff supporting compliance with the mapping requirement of the Operations and Maintenance Program are as follows:

Engineering and maintenance staffs are allowed to make notations in the various numbered atlas books distributed to personnel for that purpose. Notations are made according to the standards and procedures noted above and developed for that purpose.

The only individual allowed to make changes to the GIS database is the City's GIS Administrator, who will collect the books annually to record the noted changes received from staff. New books with revision dates will be re-distributed.

## 5.2 City of El Cajon Sewer Collection System

Preventive Maintenance Program (PMP)

### 5.2.1 Introduction

A City Maintenance Program consists of the O&M practices the City utilizes to maintain all of its facilities including routine line cleaning and inspection (CCTV and visual), and hot spot or trouble spot identification and maintenance. The maintenance program also describes how complaints, service calls and alarm conditions are responded to. Additionally, the maintenance program should have a means of scheduling and tracking

maintenance needs and activities as well as evaluating the effectiveness of the maintenance performed.

**Background**

This Preventive Maintenance Program (PMP) document is submitted as required by the Regional Water Quality Control Board's (RWQCB) Waste Discharge Requirements (WDR) Order R9-2006-0003, Page 11 of 20, Section (IV) Operation and Maintenance Program, Part (b).

The City of El Cajon Preventive Maintenance Program (PMP) covers the assets we manage in our sanitary sewer system and is one component of our overall Sewer System Management Plan (SSMP). The PMP is based on an approach that combines preventive, predictive and corrective maintenance strategies and established best management practices.

**Overview**

The City of El Cajon manages roughly 200 miles of gravity sewer system comprising of manhole structures and their connecting pipeline segments. As of January 2009, we operate and maintain 14 inverted sewer siphons as part of the overall pipeline system. Our Engineering Department is currently engaged in a sewer mapping project and the exact mileage numbers may change, as data is refined.

The City of El Cajon does not own or maintain any portion of the sewer laterals (upper or lower laterals) that drain each privately owned parcel or property up to the point of connection to the local sewer; therefore, they are not a part of this plan nor are they catalogued.

We use both staff and/or contractors to perform the planned maintenance tasks at scheduled frequencies as part of our Preventive, Predictive and Corrective Program. Frequencies are established based on experience and attribute information to minimize risk of blockages or equipment failures that could possibly lead to a sanitary sewer overflow (SSO).

### 5.2.2 Compliance Summary

**Preventive and Predictive Maintenance Program**

Maintenance classified as preventive is proactive and is defined by a programmed, systematic approach to maintenance activities. This type of maintenance results in improved system performance, except in the case where major chronic problems are the result of design and/or construction flaws that cannot be completely corrected by O&M activities. Proactive maintenance is performed on a periodic (preventive) basis or an as needed (predictive) basis. Preventive maintenance can be scheduled on the basis of specific criteria such as known problem areas (e.g., a siphon that often gets clogged, a low point that is often first to overflow in a storm event, or even an area prone to blockages), equipment operating time since the last maintenance was performed, or passage of a certain amount of time (calendar period).

## Preventive Maintenance (PM) Tasks

We have developed and continue to develop asset-specific maintenance tasks for the care of each asset throughout its life cycle.

Major PM task groupings are:

- Sewer inspection and condition assessment (performed concurrently with maintenance activities)
- Sewer cleaning, including flushing and rodding maintenance
- Siphon and trouble spot maintenance
- Problem manhole inspection and maintenance

## PM Frequencies

As described above, the frequencies for preventive maintenance tasks are assigned to each asset or group of assets, as follows:

**Table 5-1: – "Summary of Sewer Maintenance System Preventive Tasks"**

| Document Name | Maintenance Type | Length of Maintenance Cycle | Remarks |
|---|---|---|---|
| System Flushing and Routine Maintenance Task | Flushing | Goal to complete system cycle within 18 months | Not explicitly scheduled unless needed. Complete system cycle usually completed in 12 months |
| Siphons and Trouble Spots Task | Flushing, Descaling, Degreasing | 3-month cycle | Issued quarterly in February, May, August and November |
| Monthly Rodding Task | Rodding | 6- or 12-month cycle | Issued each month |
| Problem Manholes with Roots Task | Rodding and Debris Removal | 3-month cycle | Mostly problem manholes with roots. Issued quarterly in February, May, August and November |
| Delinquent Rodding List | Follow-up to Scheduled Rodding | N/A | Issued each month. Used to correct errors in performed maintenance and data entry. |

## System Flushing and Routine Maintenance Task

Prior to the acquisition of modern high pressure cleaning equipment in the late 1970's, much of the City's sewer system had never been inspected or cleaned and the City experienced numerous complaints along with over 100 stoppages per year. A stoppage is a clogged sewer line, which can cause backups and odors and can possibly result in flooded homes and other property damage. The current on-going City preventive maintenance program has reduced complaints and stoppage incidences to less than five per year on average.

The City sewer flushing crew (equipment operator and maintenance worker) services the sewer mains in an upstream-to-downstream, basin-by-basin sequence. A flushing log is updated daily allowing the CMMS to track which mains have been serviced and how many feet have been cleaned and flushed each day. Although the goal is to completely flush all targeted sewer mains every 18 months, one complete cycle of cleaning and flushing is typically completed within 12 months. Upon completion of the flushing and cleaning cycle a new cycle of flushing and cleaning is immediately initiated. Total servicing mileage for July 1, 2007 through June 30, 2008 was approximately 219 miles in a collection system totaling 195 miles in length.

## Sewer Root Removal Program

Another maintenance effort involves the removal of tree roots from sanitary sewers. Tree roots can be a real menace, damaging sewers and causing sewers to plug. Tree roots seek the moisture and nutrients offered by leaky pipe joints usually found in the older and sometimes cracked or broken sewer pipes. Current root removal methods are limited to mechanical rodding with several styles of rotating bits, which may prove ineffective in dense root areas. Our City is investigating the control of roots through the

application of mild herbicidal foam, applied from within the sanitary sewer, which kills the roots in a confined area, within and around, the sanitary sewer while not harming the tree. This herbicidal method is approved by the EPA as an acceptable root control best management practice, and does not interfere with the wastewater treatment processes.

The City maintains a list of problem sewer main segments with roots called the "Monthly Rodding Task" and services each segment on a three, six or twelve-month schedule. The City also maintains a list of "Problem Manholes With Roots" and services these manholes on a three-month schedule during February, May, August and November. The mechanical rodding crew consists of a truck-mounted continuous mechanical rodder, an equipment operator and a maintenance worker.

**Sewer Trouble Spot and Siphon Program**

As summarized in Section "PM Frequencies" above, the City maintains a list of sewer main segments with known flow problems, including City siphon segments, and cleans and flushes these segments on a three-month schedule. Our City is currently moving to install high and low-level flow alarms in our sanitary sewer siphons that will notify the City through text messaging and email in the event of a high or low-level flow event at one of the siphons.

**Predictive Maintenance Tasks**

Predictive Maintenance **(PD)** tasks (a subset of **PM**) are inspection and condition-assessment type tasks. These are performed to determine if the planned preventive maintenance task should be done as scheduled or rescheduled to a forward date if preventive maintenance, rehabilitation or replacement is not needed. Predictive Maintenance tasks are therefore performed based on asset condition and need rather than a strict time interval when maintenance may not be required. Predictive Maintenance tasks include but are not limited to the following:

- Closed Circuit TV (CCTV) video inspection of piping
- Visual inspection of the manhole structures and their flow channels
- Trending of flow monitoring data
- Inspection of inverted siphons during preventive maintenance
- Ground surface inspection of rights-of-way and easements over the gravity sewers.
- Odor and corrosion assessment and monitoring programs
- CCTV Sewer Inspections

One of the critical components of the predictive maintenance program involves internal inspection of sanitary sewers using a TV camera. A sealed TV camera is mounted on a device similar to a small-wheeled sled, which is guided through the sanitary sewer. As the T.V. camera is pulled through the sanitary sewer and viewed by inspection personnel above ground, sewer defects are recorded for future reference and repair. A

computerized ranking system analyzes the defects found in many individual sewer line segments and systematically prioritizes repairs for City sewer main repair crews.

Along with finding sewer system deficiencies and prioritizing maintenance activities, the T.V. crew is also responsible for inspecting all newly constructed sanitary sewers before they are put into service.

The Predictive Maintenance program will continue to develop as technology expands.

**Corrective Maintenance Tasks**

Corrective maintenance (CM) tasks are performed in response to a failure of an asset, component or part, or a critical utility outage. Low-risk items, such as light bulbs, pressure gauges, sensors, and small non-critical valves, are planned for run-to-failure, and as such, are not part of the PM Program. These items are replaced when they fail. When managed assets critical to the process fail they are scheduled for CM on an urgent or routine basis on a priority schedule. Some of these repairs may be capitalized as a follow-up activity depending on asset cost and life expectancy. These types of CM repairs include but are not limited to:

- Emergency cleaning to eliminate a pipe blockage
- Spot repair or replacement of a failed pipe
- Replacing a rattling or failed manhole cover
- Repairing damage caused by construction or failure of another utility (e.g., water or gas main breakage)
- Respond to, investigate and mitigate customer complaints and sewer overflows
- Repair of earthquake damage
- Repair after vandalism
- Staff documents CM tasks on paper at the time of the event. The event may be documented in the CMMS database, if appropriate.

CCTV or other failure analysis may also be done by staff as a CM task after a problem occurs in an effort to diagnose the cause of the problem and recommend changes, if indicated.

Findings may lead to a spot repair of the pipe, root cutting, re-cleaning for grease, or debris removal on a periodic preventive basis, or scheduling a manhole-to-manhole pipe replacement or rehabilitation in an urgent or lower priority planned manner. Major replacement or rehabilitation may be capitalized outside of the annual operating budget.

### 5.2.3 Compliance Documents

Hardcopy data files and paper records not recorded in our Computerized Maintenance Management System (CMMS) are available for review and audit. Standard Operating Procedures (SOPs) and Standard Maintenance Procedures (SMPs) ensure consistency. These are available for some maintenance tasks and are continuing to be developed for others. Mobile assets such as service trucks, generators, and other equipment are not covered by this PMP but are covered by plans developed by the maintenance program of our Public Works Department.

**Sewer Asset Inventory and Attribute Data**

Capital assets, minor components and their parts are catalogued in our paper records or the CMMS. Source or attribute data for each of these items is obtained from record drawings, sewer maps, plans and specifications and/or supplier data. Levels of care for each item are described in the tasks and frequencies information as catalogued in the CMMS or, in the interim, on lists, spreadsheets or annotated maps until the full CMMS implementation is completed.

Documents prepared through queries of the CMMS supporting the preventive maintenance servicing task of the sewer asset are summarized more completely in Table 1: "Summary of Sewer Maintenance System Preventive Tasks" in the Compliance Summary Section. A short summary of compliance documents is as follows:

- Sewer map layer in El Cajon Geographic Information System (GIS). The map contains special information that is used in developing maps used in operations & maintenance and spill response, Vol. 2, Appendix 5-1.

- El Cajon Sewer Maintenance System (CMMS), Vol. 2, Appendix 5-3. Used to track preventative maintenance and prepare work orders from monthly maintenance. It is anticipated that the CMMS will be integrated with the GIS in the near future. Monthly and quarterly work orders are prepared as follows:
- Flushing Report (monthly), 2008, Vol. 2, Appendix 5-4
- Mechanical rodding maintenance (monthly), 2008, Vol. 2, Appendix 5-5
- Delinquent mechanical rodding maintenance (monthly), Vol. 2, Appendix 5-6
- Siphon and Trouble Spot maintenance (quarterly), Vol. 2, Appendix 5-7
- Problem manhole maintenance (quarterly), Vol. 2, Appendix 5-8

### 5.2.4 Roles and Responsibilities

The staff positions and their responsibilities for the City's Preventive Maintenance Program are as follows:

**The Preventive Maintenance Program is staffed by the following positions**

- Deputy Director, **(DM)** (1)
- Public Works Supervisor **(MS)** (1)
- Equipment Operator, **(EO)** (2)
- Maintenance Worker, **(MW)** (2)
- Maintenance Crew Leader **(MCL)** (1)
- Associate Engineer **(AE)** (1)
- Senior Technician **(ET)** (1)
- Storm Water Code Enforcement Officer **(CEO)** (1)

Staff time budgeted for the Preventive Maintenance Program is summarized in the following table:

**Table 2 – Staffing Time for Various Sewer Preventive Maintenance Tasks**

| Task (Top/Right) -→ Position (Left/Down) | Sewer Flushing | Sewer Roding | Sewer CCTV | SSO Response | Program Support | Position Totals |
|---|---|---|---|---|---|---|
| Equipment Operator | 2.00 | 0.50 | 0.50 | 0.20 | | 3.20 |
| Maintenance Worker | 2.00 | 0.50 | 0.50 | 0.20 | | 3.20 |
| Maintenance Crew Leader | | | 0.50 | 0.50 | | 1.00 |
| Public Works Supervisor | 0.20 | 0.20 | 0.20 | 0.20 | 0.20 | 1.00 |
| Deputy Director | | | | | 0.25 | 0.25 |
| Associate Engineer | | | 0.15 | | 0.25 | 0.40 |
| Senior Technician | | | 0.10 | 0.25 | 0.50 | 0.85 |
| Storm Water Code Compliance | | | | 0.10 | | 0.10 |
| Task Totals | 4.20 | 1.20 | 1.95 | 1.45 | 1.20 | 10.00 |

The Equipment Operators and Maintenance Workers perform the day-to-day work summarized by tasks in Table 1: "Summary of Sewer Maintenance System Preventive Tasks" in the Compliance Summary Section.

**Monitoring, Measurement and Program Modifications**

Findings related to scheduled or non-scheduled tasks and work order tracking will continue to be evaluated by staff to improve reliability and system performance. In assessing the success of the PMP, changes in frequency or task activities, spare parts or recommended stock levels will be reviewed by the Maintenance Supervisor and

approved by the Deputy Director. Database changes and/or new instructions to contractors will follow.

Items recommended for rehabilitation or replacement through our Capital Improvement Program (CIP) will be sent by Deputy Director **(DM)** to the **AE** for funding and planning by the Division or forwarded to our Engineering Department for action in the agency wide CIP.

Our goal is to have a staff-driven process for improving our PMP. This process may be further explained and refined, as deemed necessary, in future revisions to our SSMP.

## 5.3 Rehabilitation and Replacement Plan

The Order requires the City to develop a rehabilitation and replacement plan to identify and prioritize system deficiencies and implement short-term and long-term rehabilitation actions to address each deficiency. The program should include regular visual and TV inspections of manholes and sewer pipes and a system for ranking the condition of sewer pipes and scheduling rehabilitation. The rehabilitation and replacement plan should include a capital improvement plan (CIP) that addresses proper management and protection of the infrastructure assets. The plan shall include a time schedule for implementing the short-term and long-term plans plus a schedule for developing the funds needed for the capital improvement plan

### 5.3.1 Compliance Summary

In 2008, the City embarked on a system-wide cleaning and CCTV inspection program to survey the entire system over a 5-year period. Phase 1-2008 was performed by an outside contractor, National Plant Services, and included 52,000 feet of pipeline, 18" through 42" diameter pipelines representing 10 miles and 84 manholes including the City's sewer interceptor and trunk system from Main Street to Mission Gorge Road.

This portion of the system was last cleaned 25 years ago and several problem pipe segments were identified for annual cleaning and inspection. Others were identified and earmarked for repairs and will be included in the next annual CIP for rehabilitation. Interestingly, the manholes were found to be in very good condition in spite of their age suggesting that the City does not have a manhole corrosion problem.

The inspection contractor utilized NASSCO's pipe condition assessment codes (PCAP) for condition assessment and provided the City a complete database for entry into the City's planned CMMS (DBA Master Series) computerized maintenance system. The completed work represented a move by the City to inspect and clean every pipe segment in the City by the end of the 2013 fiscal year and rank each pipe for rehabilitation by a priority assignment generated by the CMMS system. When completed the City will have cleaned and inspected over 200 miles of pipeline and 4,800 manholes.

Video of each segment inspected will be characterized for defects and ranked by priority and included in the rehabilitation portion of the CIP. The City plans to spend one-half

million dollars each year for the next ten (10) years to systematically rehab all at-risk pipe segments and manholes.

The City also plans to spend 1.4 million dollars over the next four years to inspect and code each pipe segment and manhole in the City (Phases 2 through 5) using the pipe condition assessment process to identify and prioritize the system for rehabilitation if needed.

In 2009, the City plans to purchase a computerized maintenance management system (CMMS) to management the CCTV inspection database containing pipe condition assessment codes for prioritizing pipe rehabilitation. Using the data gathered, the City will include on a priority basis a portion of the most compromised pipe segments for repair or rehab utilizing a $500,000 dollar annual allowance in the CIP. Over the next ten (10) years the City will inspect, clean, code and prioritize the entire system for rehab if needed.

Also in 2009, the City will pass a new ordinance requiring the periodic inspection and repair of all private laterals and private collection systems. Single-family residential properties will be exempted unless a spill occurs or evidence of a problem exists during the City's systematic inspection of the public portion of the system.

Funding for the inspection and rehab effort will come from allocated funds from the City's wastewater enterprise fund. Rates for the fund will be examined for adjustment in the future.

### 5.3.2 Compliance Documents

The documents supporting compliance with the rehabilitation and replacement plan requirements are as follows:

- Phase 1- 2007 CCTV Inspection Report, on file in the Office of Public Works
- Phase 2-2008 CCTV Inspection Report, on file in the Office of Public Works
- Asset Management System -Pipe Rehab and Maintenance Management System, Vol. 2, Appendix 5-3
- 5-Year CIP Pipe Rehab and Lining and Replacement Plan, Vol. 2, Appendix 5-9
- NASSCO's Pipe Condition Assessment Program (PCAP), Vol. 2, Appendix 5-10
- Engineering/Construction and Maintenance Staff Organization Chart, Vol. 2, Appendix 3-1

### 5.3.3 Roles and Responsibilities

The staffed positions and their roles and responsibilities in supporting compliance with the rehabilitation and replacement plan requirements are as follows:

**Deputy Director of Public Works (DE)** supervises the engineering staff responsible for planning and executing pipeline assessment and the 5-year CIP for rehabilitation and replacement (Design & Construction).

**Associate Engineer-Chairman and Project Manger (AE)** is responsible for organizing and managing the preparation of the Management Plan (SSMP), directing the pipeline condition assessment program, design and preparation of construction contract documents for both CCTV inspection, rehab and replacement, also new construction for both existing and future pipeline deficiencies.

**Deputy Director of Public Works (DM)** is responsible for directing and managing the maintenance staff in charge of routine, preventative maintenance, assessing the need for engineering solutions to solve maintenance issues and limited pipeline CCTV inspections.

**Maintenance Supervisor (MS)** is responsible for planning, scheduling CCTV assessments, maintaining equipment, training and supervising maintenance staff.

**Maintenance Crew Leader (MCL)** is responsible for operation of the City's CCTV van, cataloging video files, assessing pipe conditions and data basing Wincan PCAP codes.

## 5.4 Training Program

The City is required to provide training on a regular basis for staff in sanitary sewer system operations and maintenance and to require contractors to be appropriately trained.

### 5.4.1 Compliance Summary

The City of El Cajon has endorsed the certification program for collection system maintenance workers as prescribed by the California Water Environment Association. It is the goal of this plan that maintenance supervisors and maintenance workers will collectively be certified to their respective level of experience and education, Collection Systems Workers Grades 1, 2, 3 & 4 as prescribed by the California Water Environment Association (CWEA). The certification program assures that each worker has demonstrated the skill and knowledge necessary to work at the prescribe levels of competence.

Ethics in the workplace and in the daily work activities is an essential requirement of maintenance workers that maintain the City's collection system and are certified by the CWEA. Each worker and supervisor is expected to adhere to the Code of Ethics as set forth by the CWEA and provide assurance to the public that the health and welfare of the community is a primary concern of the maintenance staff.

All maintenance workers are required to receive training in the Traffic Control safety practices through the Southern California Chapter of the "American Public Works Association. The "WATCH Manual" (Work Area Traffic Control Handbook) is required reading for all maintenance workers in a work crew lead position. Each crew leader must demonstrate skills using the manuals guidelines for work area traffic control safety.

Each maintenance worker, regardless of rank, is required to take a course in confined space entry and pass certification for safe entries into confined areas that could contain hazardous air.

Maintenance workers that perform video inspection of pipelines must perform the pipeline condition assessment using standardized Pipeline Condition Assessment Codes (PACP) as trained and certified by the National Association of Sewer Serving Companies (NASSCO). NASSCO conducts periodic 2-day training courses for workers seeking certification in the pipeline condition assessment technology.

The City of El Cajon requires any contractor performing inspection or maintenance on the collection system to have its workers properly trained and certified in the area of application. All inspection work is performed using NASSCO PACP pipe assessment codes that are unitized with the City's computerized maintenance management system (CMMS).

All cleaning work performed by contractors using "Rodders" or "Vactors" are required to have individual personnel and supervisors trained and certified in collections system maintenance as prescribed by the CWEA and be trained in confined space entry.

### 5.4.2 Compliance Documents

The following documents demonstrate the type of training provided to staff and the training requirements required of contractors:

- Training records for each collections system maintenance worker employed by the City are collected and maintained at the field operations office for the Department of Public Works with duplicate files kept at the City's Department of Human Resources. Certification records are maintained respectively by CWEA and NASSCO and a master list of certified workers are listed on-line respectively at each organization's web site. Copies of certifications are filed in the Department of Human Resources.

- Contract administrators in the Department of Public Works prepare specifications and Special Provisions for each maintenance contract issued to perform work on the collections system. Standardized specifications relating to training requirements are contained in Volume 2, Appendix 5-115 Year CIP Pipe Rehab and Lining and Replacement Plan, Vol. 2, Appendix 5-9.

### 5.4.3 Roles and Responsibilities

The staffed positions and their roles and responsibilities in supporting compliance with the staff and contractor training requirements are as follows:

**The Deputy Director of Public Works-Maintenance (DM)**

Manages the maintenance activities for the Department of Public Works. The collection system maintenance team working under the direction of the Deputy Director is supervised by the Public Works Supervisor **(MS)** who manages the day-to-day activities of the maintenance crew, including schedule maintenance, overflow response, overflow cleanup and CCTV inspection of pipelines. The maintenance supervisor directs all training, including scheduling, oversight and maintenance of training records. A training log is maintained at the operations office. An annual training budget is prepared and

approved each year to satisfy the training requirements of the department. Training for maintenance workers and supervisors for Wastewater Collection Systems workers are planned to begin 2009 with the maintenance supervisors first. Training for pipe condition assessment is also planned for 2009. Training of all staff will be a function of the budget and may span several years.

**The Deputy Director of Public Works-Engineering (DE)**

Administers the engineering and construction department that includes the preparation of all contract documents for CCTV inspection activities, rehab and replacement of pipelines. On a project-by-project basis assigns a staff level Associate Engineer as project manager to prepare the contract documents which include standard special provisions setting forth the training qualifications for employees employed by the contractor. Each contractor performing maintenance or inspection for the City must provide training documentation to demonstrate competence for any employee working on the collections system prior to beginning work.

## 5.5 Equipment and Parts Inventories

Each City is required to provide equipment and replacement part inventories, including identification of critical replacement parts for the operation and maintenance of its sewer collection system.

### 5.5.1 Compliance Summary

The City in the past has maintained an inventory of equipment for asset management purposes and to plan for life cycling and replacement of equipment needed to maintain the sewer system. In 2008, the City started compiling an inventory of all spare parts including a list of critical parts needed for equipment to be utilized for emergency situations.

The compiled list will be used to input onto the new CMMS maintenance management system to be implemented in 2009. The list will become an integral part of the asset and maintenance management activities including an annual audit of parts and equipment used to facilitate the sewer maintenance program.

The City also has a mutual aide agreement with all other Cities in the Metro system including its immediate neighbors, Santee, La Mesa Padre Dam, and the City and County of San Diego. Among other sharing responsibilities and compensation schedules, the agreement provides for sharing of spare parts and equipment should individual inventories fall short.

### 5.5.2 Compliance Documents

The documents supporting compliance with the requirement to maintain an inventory of equipment and parts including identification of critical parts are as follows:

- Equipment and parts inventory (12-19-2008), Vol. 2, Appendix 5-12
- Sewer maintenance list of critical parts- 2008, Vol. 2, Appendix 5-13

### 5.5.3 Roles and Responsibilities

The staffed positions and their roles and responsibilities in supporting compliance with maintaining an inventory of equipment and parts including critical parts are as follows:

**The Deputy Director of Public Works-Maintenance (DM)**

Manages the maintenance activities for the Department of Public Works. The collection system maintenance team working under the direction of the Deputy Director is supervised by the Maintenance Supervisor **(MS)** who manages the day-to-day activities of the maintenance crew including schedule maintenance, overflow response, overflow cleanup and CCTV inspection of pipelines.

**Maintenance Supervisor (MS)**

Responsible for work orders for equipment maintenance, offering parts, providing tracking data to the Administrative Secretary or crew leader for entry into the asset management system.

**Administrative Secretary**

Responsible for data entry tracking equipment and parts numbers through an inventory control tool within the asset management system

Appendix D.2

Maintenance Summary for El Cajon Sewers - FM = Flush/Maintenance; JM = Rodding/Maintenance

Appendix D.3

## Summary of Features Included the City's Sewer Ordinance Update
## Effective July 23, 2009

1. 13.16.010: Requires all El Cajon inhabitants to be responsible for reporting sewer spills whether public or private and to take preventive measures to minimize or contain the spill until a professional plumber or City personnel respond to the reported incident. ***This provision makes it illegal to not report a spill in compliance with Regional Water Quality control Board Order No. R9-2007-0001.***

2. 13.16.012: Allows the Public Works Director under certain circumstances to waive any requirements or responsibilities set forth in the sewer ordinance.

3. 13.16.014: All building remodels that have an increase in plumbing fixture units or an increase of 400 or more square feet in floor area will be subject to a lateral video inspection and/or repair if needed. The following may be required based on results of the video inspection:

    a. Orders to repair if deemed necessary by the City with time limitations.
    b. If structural repairs are required it will be necessary to install a double cleanout plug at the property line.
    c. A grease/sand interceptor or trap will be required if the remodel is for a food serving establishment (FSE).

4. 13.16.014: Requires the public works director to keep records and issues permits for all private sewer or satellite collection system construction.

5. 13.16.015: Requires any work performed in these provisions to be performed by a licensed contractor.

6. 13.16.016: Requires any building failing a lateral inspection to affect repairs within 70 days (30+30+10) of notification.

7. 13.16.030: Provides for violations to be deemed a "Public Nuisance" and includes legal and monetary remedies to affect repairs if ordered by the Director of Public Works. See El Cajon Municipal Code Chapter 1.16 for remedies.

8. 13.20.010: Adds new definitions to terms used with changes to the ordinance.

    a. Building Sewer Inspections
    b. Cleanout Plugs and Double Cleanout Plugs
    c. Common Interest Developments
    d. Notice to Repair
    e. Fats, Oils and Grease (FOG)

9. 13.20.060: requires the installation of a double cleanout at the property line in building sewers for new and remodel building sewers or where notices of repair may be in effect.

10. Old Chapters 13.20.070 through 13.20.080 were removed and replaced with Chapter 13-38 that establishes new controls and limitations for the disposal of fats, oils and grease (FOG).

11. 13.24.040: Was modified to modernize the requirements for the type of connection to a lower sewer lateral using a mechanical joint with a clamp.

12. New chapter 13.37- Sewer and Lateral Inspections

    a. Requires maintenance and inspection of building sewers for all land uses when any of the following occurs.
        i. At any occurrence of an overflow
        ii. Evidence that the sewer lateral has not been properly maintained
        iii. Existence of a public health threat
        iv. Addition of new plumbing fixtures
        v. Addition of 400 or more square feet of floor area
    b. Exceptions to the above are allowed under certain circumstances and the Director of Public Works may waive certain requirements.
    c. Periodic inspection required for all common interest residential and all non-residential properties every 10 years.
    d. Defines lateral defects requiring repair.
    e. Permits access to private property for the purposes of inspecting building sewer.
    f. Establishes requirements and content of Inspection Reports
    g. Establishes authority to order repairs on private laterals and sets out the procedures for such an order.
    h. Provides for administrative guideline to be used for inspection and enforcement. Guidelines are in development and have not been adopted by the City Council.

13. New Chapter 13.38 “FOG” Ordinance includes the following provisions:

    a. Affects FSE’s only
    b. Defines certain terms used in the ordinance.
    c. Requires Grease/sand Interceptors for all new construction and for remodels. Allows grease traps under certain circumstances.
    d. Establishes triggers for installation of interceptors in existing facilities.
    e. Requires removal of garbage disposals for all existing establishments by January 2010. Prohibits garbage disposals in all new establishments.
    f. Establishes design requirements for interceptors.
    g. Establishes maintenance requirements and periodic inspection requirements.
    h. Sets forth enforcement and penalty guidelines
    i. Sets out guidelines for required Best Management Practices for handling FOG.

Appendix D.4

ORDINANCE NO. 4930

AN ORDINANCE REPEALING CHAPTERS 13.16, 13.20, 13.24, AND 13.28 OF THE EL CAJON MUNICIPAL CODE AND ADDING NEW CHAPTERS 13.16, 13.20, 13.24, 13.28, 13.37, AND 13.38 TO THE EL CAJON MUNICIPAL CODE RELATED TO SEWERS AND SEWAGE DISPOSAL.

THE CITY COUNCIL OF THE CITY OF EL CAJON DOES ORDAIN AS FOLLOWS:

Section 1. Chapter 13.16 of the El Cajon Municipal Code, is hereby repealed.

Section 2. A new Chapter 13.16 of the El Cajon Municipal Code is hereby added to read as follows:

## 13.16 SEWERS AND SEWAGE DISPOSAL – IN GENERAL

### 13.16.010 Compliance.

No person shall cause, suffer or permit the disposal of sewage, human excrement or other liquid wastes in any place or manner except through or by means of an approved plumbing and drainage system and an approved sewage disposal system installed and maintained in accordance with the provisions of the California Plumbing Code and Chapters 13.16 through 13.40.

No person shall allow sewage to escape or flow from a building, building drain, building sewer, soil line, or sewer lateral. An escape of sewage from a building, building drain, building sewer, soil line, or sewer lateral shall be considered a threat to the public health and welfare and shall be deemed a nuisance.

It shall be the responsibility of all residents, business owners, employees of local businesses, and citizens of El Cajon to notify the city of any discharge of unsanitary waste from a building sewer, lateral, cleanout plug or sewer main by stoppage or other means and take all measures to prevent further discharge, contain, or clean up such a discharge until a professional plumbing company or local authority has responded to the incident.

### 13.16.011 Delegations of power.

Whenever a power is granted to or imposed upon the director of public works under this title, such power may be exercised or the duty may be performed by a deputy or an authorized person unless expressly provided otherwise.

### 13.16.012 Restrictions on allowance of variances from title.

Whenever the director of public works is permitted by this title to grant an exception to any of the requirements of this title, such exceptions shall be granted by

(Continued on Page 2)

him, only if he finds that literal compliance is impossible or impractical because of peculiar conditions, in no way the fault of the person requesting such exceptions, and that the purpose of this title may be accomplished and public health and safety secured by alternative construction or procedure, in which case the director of public works may permit such alternative construction or procedure.

**13.16.013 Conformation of facilities to title – new facilities.**

All new public sewers, house connection sewers, and industrial liquid wastes pre-treatment plants shall conform to the requirements of this title unless specifically excepted.

**13.16.014 Conformance - remodeling.**

All remodeling of existing public sewers, building sewers, and industrial liquid wastes pre-treatment plants shall conform to the requirements of this title, unless specifically excepted. All new buildings or building remodels that include an increase of plumbing fixture units are subject to the provisions of this title.

**13.16.015 Records.**

The director of public works shall keep a permanent record of all permits issued and all plans requiring approval under the provisions of this title. The director of public works shall establish and maintain accurate records indicating all sewers constructed with public funds and accurate records of all main line sewers constructed hereafter with private funds, and the person or properties originally benefiting from and responsible for the financing of such sewers.

**13.16.016 Who may do work under title – work to be subject to inspection and approval.**

All work permitted under the provisions of this title shall be constructed by a licensed contractor and shall be subject to inspection by and shall meet the approval of the director of public works.

**13.16.017 Notice to remedy house connection sewer deficiency.**

In the event that a building sewer or lower lateral fails to pass inspection and is subsequently placed in service, the permittee shall be given notice in writing of such failure to pass inspection and shall within ten (10) days from the date of such notice make the construction conform to the requirements of this title.

**13.16.020 Certain sanitary facilities required for all buildings.**

Every building shall have sinks, water closets, and other sanitary fixtures and facilities.

(Continued on Page 3)

**13.16.030 Public nuisance.**

The violation of any provision of this chapter is deemed to be a public nuisance and may be abated in accordance with Chapter 1.16 of this code.

Section 3. Chapter 13.20 of the El Cajon Municipal Code is hereby repealed.

Section 4. A new Chapter 13.20 of the El Cajon Municipal Code is hereby added to read as follows:

**13.20 SEWERS AND SEWAGE DISPOSAL – PUBLIC SEWERS GENERALLY**

**13.20.010 Definitions.**

For purposes of Chapters 13.20 through 13.28, the following words and phrases have the meanings respectively ascribed to them by this section:

A. "B.O.D." This term, denoting biochemical oxygen demand, means the quantity of oxygen utilized in the biochemical oxidation of organic matter under standard laboratory procedure in five (5) days at twenty (20) degrees centigrade, expressed in parts per million by weight.

B. "Building drain" means that part of the lowest horizontal piping of a drainage system that receives the discharge from soil, waste and other drainage pipes inside the walls of the building and conveys it to the building sewer, beginning two (2) feet outside the inner face of the building wall.

C. "Building sewer" means the extension from the building drain, beginning two (2) feet from the outside of the building, to the public sewer or other place of disposal including the lower lateral.

D. "Cleanout" means a sewer line fitting placed on a sewer to facilitate inspection, cleaning or maintenance of the sewer.

E. "Combined sewer" means a sewer receiving both surface runoff and sewage.

F. "Double cleanout" means the horizontal piping or pipe fittings that facilitate(s) the proper cleaning, inspection and physical access to the building sewer or lower lateral in either direction, upstream or downstream from the same entry point.

G. "Garbage" means solid wastes from the preparation, cooking and dispensing of food, and from the handling, storage of food waste or the sale of produce.

(Continued on Page 4)

H. "Industrial wastes" means the liquid wastes from industrial processes, as distinct from sanitary sewage.

I. "Licensed contractor" means a contractor having a valid license issued pursuant to the California Business and Professions Code which license includes the activities listed on the permit applied for.

J. "Lot" means any piece or parcel of land bounded and defined or shown upon a plot or deed recorded in the Office of the County Recorder, as a separate or individual parcel, except that in any event any building or structure covers more than a lot, the word "lot" shall include all such pieces or parcels of land upon which such building or structure is wholly or partly located.

K. "Lower sewer lateral" means horizontal pipe and fittings forming a connection to the sewer main line for the purposes of connecting a building sewer. The lower lateral extends from the public sewer main to the edge of the public right-of-way and terminates at a double cleanout.

L. "Natural outlet" means any outlet into a watercourse, pond, ditch, lake or other body of surface water or groundwater.

M. "pH" means the logarithm of the reciprocal of the weight of hydrogen ions in grams per liter of solution.

N. "Properly shredded garbage" means the wastes from the preparation and/or cooking of food that has been shredded to such a degree that all particles will be carried freely under the flow conditions normally prevailing in public sewers, with no particle greater than one-half (½) inch in any dimension.

O. "Public sewer" means any main line sewer constructed in any street, highway, alley, place, or right-of-way dedicated for public use. Such term shall not include building drain, building sewer, or lower lateral.

P. "Director of public works" means any official agent, branch or function of the city responsible for the design, construction, maintenance and operation of sanitary sewers in the city. It shall include all officers, agents and employees engaged in sewer services.

Q. "Sanitary sewer" means a pipeline that carries wastewater and to which stormwaters, surface waters and groundwaters are not intentionally admitted.

R. "Sewage" means a combination of wastewater – carried waters from residences, business buildings, institutions and industrial establishments, together with such groundwaters, surface waters and stormwaters as may be present.

(Continued on Page 5)

S. "Sewage treatment plant" means any arrangement of devices and structures used for wastewater treatment.

T. "Sewer" or "Sewer line" means a pipe or conduit for carrying wastewater.

U. ""Sewerage works" means all facilities for collecting, pumping, treating and disposing of wastewater.

V. "Storm sewer or storm drain" means a pipeline that carries stormwaters and surface waters and drainage, but excludes wastewater and polluted industrial wastes.

W. "Suspended solids" means solids that either float on the surface or are in suspension in water, sewage or other liquids, and which are removable by laboratory filtering.

X. "Upper sewer lateral," also known as the "building sewer," means horizontal pipe and fittings forming a connection to the sewer main line for the purposes of connecting a building drain. The upper sewer lateral extends from the edge of public right-of-way and located by a double cleanout plug to the building drain.

Y. "Watercourse" means a channel in which a flow of water occurs, either continuously or intermittently.

Z. "Building sewer inspection" means an inspection of a building sewer lateral that consists of the retention of a pre-qualified contractor by the owner in order to visually examine and inspect a building sewer lateral in the manner deemed appropriate by the director of public works. Such an inspection shall, at a minimum, include the use of a closed-circuit television inspection device for the purposes of determining whether the building sewer lateral complies with the requirements of this chapter.

AA. "Commercial property" means any real property not used for residential purposes and not a common interest development.

BB. "Common interest development" means a development characterized by apartments, individual ownership of a condominium housing unit, or a residential parcel coupled with the shared ownership of (or right to use) common areas and facilities, including, but not limited to, condominium projects, community apartment projects, stock cooperatives and planned unit developments, which contains two (2) or more dwelling units and which has a building sewer lateral shared by two (2) more dwelling units.

(Continued on Page 6)

CC. "Notice to repair" means the notice and order issued by the director of public works to the owner advising that the owner appears to be in violation of the city of El Cajon Municipal Code with respect to the owner's building sewer lateral, or in violation of the code in the manner of the building sewer lateral's connection to the city sewer system, which notice and order directs the abatement of the identified apparent violation in a timely manner or, in the alternative, proof that the conditions identified in the notice and order do not exist.

DD. "Owner" means any person, partnership, association, corporation or fiduciary having legal title (or any partial interest) in any real property situated within the city.

**13.20.020 Deposit of matter that will clog or obstruct flow of sewage.**

No person shall place, throw or deposit or cause or permit to be placed, thrown or deposited in any public sewer, drain, catch basin, water closet, privy vault or cesspool, any dead animal, offal or garbage, fish, fruit or vegetable waste, pharmaceuticals, sand, liquid waste of any kind containing chemicals, greases, oil, tar or gasoline or any other objectionable materials or matter which will clog, obstruct, fill or prevent the effective use of or necessitate the frequent repair, clean out or flushing of such sewer, drain or catch basin.

**13.20.030 Review and approval by director of public works prior to discharge of certain wastes into public sewers – preliminary treatment facilities.**

The admission into the public sewers of any waters or waste having a five (5) day B.O.D. greater than five hundred (500) parts per million by weight, or containing more than five hundred (500) parts per million by weight of suspended solids, or containing any quantity of substances having the characteristics described in section 13.20.050, or having an average daily flow greater than two percent (2%) of the average daily sewage flow of the city, shall be subject to the review and approval of the director of public works. Where necessary, in the opinion of the director of public works, the owner shall provide, at his expense, such preliminary treatment as may be necessary to reduce the B.O.D. to five hundred (500) parts per million and the suspended solids to five hundred (500) parts per million by weight, or reduce objectionable characteristics or constituents to within the maximum limits provided for in section 13.20.050, or control the quantities and rates of discharge of such waters or wastes. Plans, specifications and any other pertinent information relating to proposed preliminary treatment facilities shall be submitted for the approval of the director of public works, and no construction until such approval is obtained in writing.

Where preliminary treatment facilities are provided for any waters or wastes, they shall be maintained continuously in satisfactory and effective operation by the owner at his expense.

(Continued on Page 7)

**13.20.040 Discharge of storm water or surface water.**

No person shall discharge or cause to be discharged any storm water, surface water, groundwater, roof runoff, subsurface drainage, cooling water or unpolluted industrial process waters into any sanitary sewer.

Storm water and all other unpolluted drainage shall be discharged to such sewers as are specifically designated as storm sewers or to a natural outlet approved by the director of public works. Industrial cooling water or unpolluted process waters may be discharged, upon approval of the director of public works, to a storm sewer, sanitary sewer or natural outlet.

**13.20.050 Discharge of certain wastes into public sewer prohibited.**

Except as otherwise provided in Chapters 13.20 through 13.28, no person shall discharge or cause to be discharged any of the following described waters or wastes to any public sewer:

A. Any liquid or vapor having a temperature higher than one hundred fifty degrees (150º) Fahrenheit;

B. Any water or waste, which may contain more than one hundred (100) parts per million, by weight, of fat, oil or grease;

C. Any gasoline, benzene, naphtha, fuel oil or other flammable or explosive liquid, solid or gas;

D. Any garbage of any kind that has not been property shredded;

E. Any ashes, cinders, sand, mud, straw, shavings, metal, glass, rags, feathers, tar, plastics, wood, paunch manure, or any other solid or viscous substance capable of causing obstruction to the flow in sewers or other interference with the proper operation of the sewage works;

F. Any waters or wastes having a pH lower than 5.0 or higher than 9.0, or having any other corrosive property capable of causing damage or hazard to structures, equipment and personnel of the sewage works;

G. Any waters or wastes containing a toxic or poisonous substance in sufficient quantity to injure or interfere with any sewage treatment process, constitute a hazard to humans or animals or create any hazard in the receiving waters of the sewage treatment plant;

(Continued on Page 8)

H. Any waters or wastes containing suspended solids of such character and quantity that unusual attention or expense is required to handle such materials at the sewage treatment plant; and

I. Any noxious or malodorous gas or substance capable of creating a public nuisance.

**13.20.060 Cleanout.**

Where a building sewer is constructed, modified, remodeled or replaced, and is connected or reconnected to the lower sewer lateral or double cleanout shall be installed at the outside edge of the public right-of-way to facilitate the proper cleaning and inspection of the pipeline in either direction, upstream or downstream.

The above requirements also apply to all building sewers subject to a notice to repair.

**13.20.070 Repealed.**

**13.20.080 Repealed.**

**13.20.090 Sewers carrying industrial wastes – construction and maintenance of manholes.**

When required by the director of public works, the owner of any property served by a building sewer carrying industrial wastes shall install a suitable control manhole in the building sewer to facilitate observation, sampling and measurement of the wastes. Such manhole, when required, shall be accessible and safely located, and shall be constructed in accordance with plans approved by the director of public works. The manhole shall be installed by the owner at his expense, and shall be maintained by him so as to be safe and accessible at all times.

**13.20.100 Analyses of wastes.**

All measurements, tests and analyses of the characteristics of waters and wastes to which reference is made in sections 13.20.030 and 13.20.050 shall be determined in accordance with "Standard Methods for the Examination of Water and Sewage," and shall be sampled at the control manhole provided for in Section 13.20.090, or upon suitable samples taken at such control manhole. In the event that no special manhole has been required, the control manhole shall be considered to be the nearest downstream manhole in the public sewer to the point at which the building sewer is connected.

**13.20.110 Repealed.**

(Continued on Page 9)

**13.20.115 Repealed.**

**13.20.120 Repealed.**

**13.20.130 Service to areas outside city – unauthorized use.**

The use of the sewage disposal system of the city by persons without the authorization of the city council for the disposition of sewage from any area not within the corporate limits of the city is prohibited.

**13.20.140 Applicability of chapter to agreements for treatment of industrial wastes.**

No statement contained in Chapters 13.20 through 13.28 shall be construed as preventing any special agreement or arrangement between the city and any industrial concern whereby an industrial waste of unusual strength or character may be affected by the city for treatment, subject to payment therefor by the industrial concern.

**13.20.150 Public sewer fees.**

Public sewer fees shall be established from time to time by resolution or ordinance of the city council.

Section 5. Chapter 13.24 of the El Cajon Municipal Code is hereby repealed.

Section 6. A new Chapter 13.24 of the El Cajon Municipal Code is hereby added to read as follows:

**13.24 SEWERS AND SEWAGE DISPOSAL – PUBLIC SEWER LATERALS**

**13.24.010 Soil line connection.**

Where the plumbing soil line or building sewer joins a lower sewer lateral, stub or wye, such joint shall be made with a mechanical joint or clamp with a double cleanout according to current industry standards, or any other method approved by the director of public works. Minimum ground cover at such joint or at the property line shall be forty-two (42) inches unless otherwise specified by the engineering department of the city. The city's wastewater department shall not be obliged to connect to a soil line that is installed at less than the required minimum depth.

(Continued on Page 10)

**13.24.020 Mains and laterals as part of same construction – installation requirements.**

Where laterals are being installed by a general contractor as an integral part of the construction of a complete system of sewer mains, laterals and services under supervision of an inspection by the director of public works or his agents, the provisions of this chapter shall apply.

**13.24.030 Connections to existing city sewer main.**

Wherever an existing sewer main is to serve several lots in a private contract for improvements in a subdivision, the specific job of boring into the main and affixing a hub shall be performed by the city's wastewater department. The contractor shall pay the city a cash fee according to the current schedule of fees established by resolution by the city council for each entry into the main in advance of performance of the work. The contractor shall excavate to the sewer main at the site of the proposed lateral, exposing the sewer main pipe for the prescribed work by the city sanitation department. When the work by the city sanitation department is complete, the contractor shall be responsible for any damage to the main as a result of excavation, and shall have the same responsibility for any lateral installed as prescribed above as he has for any lateral built entirely for himself.

Section 7. Chapter 13.28 of the El Cajon Municipal Code is hereby repealed.

Section 8. A new Chapter 13.28 of the El Cajon Municipal Code is hereby added to read as follows:

**13.28 SEWERS AND SEWAGE DISPOSAL – PUBLIC SEWER CONNECTIONS**

**13.28.010 Definitions.**

For the purposes of this chapter, the following words and phrases shall have the meanings respectively ascribed to them by this section:

A. "Apartment" means a room or suite of rooms in a building occupied or designed for occupation by one family for living or sleeping purposes.

B. "Auto court" means any area, place or tract of land where two or more single family dwellings, or a building containing two or more apartments designated, used or intended wholly or in part for the accommodation of automobile transients are located and offered for hire, rent or lease. The term shall also include any motel.

(Continued on Page 11)

C. "Building or house" means a tent, penthouse, restroom or single or multiple family dwelling. These terms include all architectural structures.

D. "Bungalow court" means a group of four or more separate buildings, nor more than one story in height, each being erected or located on a parcel of ground under a separate roof, as a family domicile or residence and facing a common court.

E. "Family" means a person living alone or a group of two or more persons occupying an apartment.

F. "Motel" means a building of not more than one story, containing six or more guest rooms or apartments or combination thereof, each of which has a separate individual entrance leading directly from the outside of the building and is designed, used or intended wholly or in part for the accommodation of automobile transients.

G. "Multiple dwelling" means a building used or designated to be used as a dwelling for three or more families living independently of each other.

H. "Trailer court or auto and trailer camp" means an area or tract of land where space is rented or held out for rent to owners or users of trailer coaches or tent campers, furnishing their own camping equipment, or where free camping is permitted owners or users of trailer coaches or tent camp equipment for the purpose of securing their trade.

**13.28.020 Unauthorized connections to public sewer prohibited.**

No person other than the city, its agents and employees, shall connect any pipe, drain or sewer with any public sewer, or open or penetrate any public sewer in the city, or injure, break or remove or open any portion of any manhole, flush tank, inspection pipe or any other part of or appurtenance to any public sewer. Except where otherwise specifically provided in Chapters 13.20 through 13.28, the city shall install all connections to any existing public sewers.

**13.28.030 Connection permits required.**

No person shall connect to the sewage disposal lines of the city or discharge sewage into the sewer lines of the city or sewage disposal plant of the city without first obtaining a connection permit from the city.

(Continued on Page 12)

**13.28.031 Connection to public sewer – required when sewer available.**

All plumbing that receives the waste discharge from any building, structure or place of business, shall be connected to a public sewer.

All plumbing receiving water discharge that is connected to a private disposal system shall be connected to a public sewer within one (1) year after a public sewer becomes available.

**13.28.032 When sewer not available.**

The connection to a public sewer required by section 13.28.032 may be dispensed with when no public sewer is available and when, in the opinion of the Health Officer of the County, a private sewage disposal system would be adequate and safe and would not constitute a menace to public health.

**13.28.033 When connection to approved private sewage disposal system required.**

All plumbing receiving waste discharge, which is not connected to a public sewer shall be connected to a private sewage disposal system approved by the director of public works and health officer of the county.

**13.28.034 Connections letting roof or surface water into sewers.**

No person shall make or maintain any connection by pipes or otherwise with any public sewer by which roof or surface water may run into any such sewer.

**13.28.035 Entering, disturbing or cleaning public sewers, structures or appurtenances.**

No person shall, without authorization from the director of public works, open, enter, disturb or clean any public sewer, structure or appurtenance thereto.

**13.28.036 Maintenance generally not to obstruct public sewer flow.**

No person shall do, or cause to be done, any maintenance that would damage or obstruct the flow of any public sewer.

(Continued on Page 13)

**13.28.037 Maintenance of private systems.**

It shall be the responsibility of each property owner whose property is connected to the city sewer system to maintain continuously and satisfactorily in operation at his own expense, any house connection sewer, building sewer, private sewage disposal system, or industrial liquid waste pre-treatment facility. Failure to maintain such a private sewer system shall be sufficient grounds for immediate revocation of private sewer operating permit or industrial liquid waste permit of the person so failing and disconnection of his premises from the public sewer. Such a private sewer system is subject to required repairs as set out in a notice to repair issued pursuant to Section 13.20.010(DD). Users of private sewer disposal systems shall keep all cleanout caps and other access ports in place and properly sealed.

**13.28.038 Septic tank or cesspool to be abandoned when main line connection obtained.**

When a house connection sewer is constructed connecting a main line sewer, a house sewer which previously drained to a septic tank or cesspool, the septic tank or cesspool shall be abandoned and no portion of the house sewer shall then pass through or connect to such septic tank or cesspool

**13.28.039 Procedure to effect abandonment of septic tank or cesspool.**

When any septic tank or cesspool is abandoned, the top of such septic tank or cesspool shall be removed and the tank or cesspool shall be drained and filled with fine earth or sand and compacted and any pipes connecting to such tank or cesspool shall be cut directly outside of the tank or cesspool and shall be plugged with concrete. The abandonment of the septic tank or cesspool shall be complete before the house connection constructed shall be considered to have completely passed inspection.

**13.28.040 Connection fees.**

Before a permit shall be granted to connect to the sewage disposal system of the city, a connection fee and an inspection fee shall be paid to the city. Such fees shall be set from time to time by ordinance or resolution of the city council. Inspection fees shall be paid pursuant to Section 8.36.070 of this code.

**13.28.080 Additional Connection Fee.**

In addition to all other fees required by this title, a fee of two hundred dollars per connection shall be paid to this city before a permit shall be granted to connect to any sewer main of this city where such sewer main was constructed by the city or state or a component of the federal government.

(Continued on Page 14)

In addition to all other fees required by this title, except the fees set forth in the above paragraph, an additional fee per connection shall be paid to the city before a permit shall be granted to connect to any sewer line of the city where such sewer main or line was constructed pursuant to an agreement with the city to serve property other than that for which permission to connect is sought. Such a fee shall be set forth in such agreement.

**13.28.090 Connections to mains constructed by Cajon Valley Union School District.**

In addition to all other fees required by this chapter, except the fee set forth in section 13.28.080, a fee of two hundred dollars shall be paid the city before a permit shall be granted to connect to the sewer main located in Second Street from Dawnridge to Pepper Drive, and in Pepper Drive from Second Street to Peerless Drive, such sewer main having been constructed by the Cajon Valley Union School District.

In addition to all other fees required by this chapter, except the fee set forth in section 13.28.080, a fee of two hundred dollars shall be paid to the city before a permit shall be granted to connect to the sewer main located in Anza Street from a manhole which lies five hundred sixty feet south of the centerline of Washington Avenue to a manhole approximately four hundred fifty feet south of the westerly prolongation of the north line of the Anza Street school site as set forth on Record of Survey No. 5028, such sewer main having been constructed by the Cajon Valley Union School District.

**13.28.100 Connections to Bradley-Johnson sewer.**

In addition to all other fees required by this chapter, except the fee set forth in section 13.28.080, a fee of five hundred dollars shall be paid to the city before a permit shall be granted to connect to the sewer lines located as follows:

A. The sewer line extending easterly from the sewer outfall line along the future Bradley Avenue and southerly along Johnson Avenue to Vernon Way;

B. The sewer line extended to provide future service to unincorporated areas of the city as of October 1, 1967, on Steele Avenue and Vernon Way within the North Johnson Avenue 1913 Act Improvement District boundaries.

**13.28.110 Connections to Pioneer Way-Cypress Lane sewer main.**

In addition to all other fees required by this chapter, except the fee set forth in section 13.28.080, a fee of eight hundred dollars shall be paid to the city before a permit shall be granted to connect to the sewer lines located as follows:

(Continued on Page 15)

The sewer line in Pioneer Way extending northerly from the existing city boundary a distance of four hundred nine feet to Cypress Lane, and westerly in Cypress Lane to Johnson Avenue.

Said sewer line was constructed in connection with the Pioneer Way 1913 Act Improvement District, and the above fee shall be charged for each lateral to serve parcels not assessed for sewer mains.

**13.28.120 Connections to Avocado South of Chase to DeWitt Court sewer main.**

In addition to all other fees required by this chapter, except the fee set forth in section 13.28.080, a fee of six hundred dollars shall be paid to the city before a permit shall be granted to connect to the sewer lines located as follows:

The sewer line extending southerly along Avocado from nine hundred fifty feet south of the centerline of Chase Avenue to DeWitt Court.

Said sewer line was constructed by the city in connection with the improvement of Avocado south of Chase to south of DeWitt Court.

**13.28.130 Connections to Fanita Drive sewer main.**

In addition to all other fees required by this chapter, except the fee set forth in section 13.28.080, a fee of two hundred dollars for each dwelling unit or its equivalent shall be paid to the city before a permit shall be granted to connect to the trunk line sewer in Fanita Drive to be constructed by the city, or to any other sewer line which in turn uses the capacity of the Fanita Drive trunk sewer.

**13.28.135 Connections to Bermuda Place sewer main.**

In addition to all other fees required by this division, except the fee set forth in section 13.28.080, a fee of one thousand nine hundred ninety three dollars and six cents shall be paid to the city before a permit shall be granted to connect Assessor's Parcel No. 507-250-17 to the sewer main located in Bermuda Place. Said sewer line was constructed by the city in connection with the Bermuda Lane, et al. 1911 Act Improvement District (Assessment § 75).

(Continued on Page 16)

**13.28.150 Connections to Melody Lane sewer main – Gull Place to Granite Hills Drive.**

In addition to all other fees required by this chapter, except the fee set forth is section 13.28.080, a fee of nine dollars and twenty-two cents per front foot shall be paid to the city before a permit shall be granted to connect to the sewer line located on the southerly side of Melody Lane from the easterly subdivision boundary of Rancho Milagros, easterly to Granite Hills Drive. Said sewer line was constructed by the developers of Rancho Milagros subdivision.

**13.28.155 Connections to Bradley Avenue sewer main – Johnson Avenue to Magnolia Avenue.**

In addition to all other fees required by this chapter, except the fee set forth in section 13.28.080, a fee of thirty-six dollars per front foot shall be paid to the city before a permit shall be granted to connect the sewer line located in Bradley Avenue from Johnson Avenue to Magnolia Avenue. Said sewer line was constructed in connection with the Bradley-Cypress 1911 Act Improvement District.

**13.28.160 Connections to Tilling Way sewer main.**

In addition to all other fees required by this chapter, except the fee set forth in section 13.28.080, a fee of three thousand seven hundred twenty-four dollars and fourteen cents shall be paid to the city before a permit shall be granted to connect Assessor's Parcel No. 492-580-17 to the sewer line located in Tilling Way; and a fee of one thousand nine hundred forty-two dollars and one cent shall be paid to the city before a permit shall be granted to connect Assessor's Parcel No. 492-580-18 to the sewer line located in Tilling Way. Said sewer line was constructed by the city in connection with the Tilling Way 1911 Act Improvement District.

**13.28.165 Connection to Chase Avenue sewer main.**

In addition to all other fees required by this chapter, a fee of one thousand four hundred twenty dollars shall be paid to the city before a permit shall be granted to connect to the fifty-eight foot sewer lateral on the south side of Chase Avenue, one hundred seventy feet east of Mollison Avenue. The sewer lateral was constructed by the city in connection with street improvements as shown on drawing No. 11606 on file in the engineering division

Section 9. A new Chapter 13.37 of the El Cajon Municipal Code is hereby added to read as follows:

(Continued on Page 17)

## 13.37 SEWERS AND SEWAGE DISPOSAL – INSPECTIONS

### 13.37.020 Maintenance of private building sewer.

A. Maintenance of building sewer. Each owner shall maintain his building sewer lateral(s) free of displaced joints, open joints, root intrusion, substantial deterioration of the line, cracks, leaks, inflow, or infiltration of extraneous water, root intrusion, grease and sediment deposits, or any other similar conditions, defects, or obstructions likely to cause leakage or increase the chance for blockage of the building sewer.

B. Maintenance of septic tank. Each owner shall maintain his septic tank free of deterioration, corrosion, damage, disposal failure or any other similar deficiencies or defects likely to increase failure of the septic tank.

C. General maintenance requirements. The maintenance obligation imposed by this section shall be in addition to and supplemental of the general private sewer system maintenance obligations imposed in this title.

### 13.37.030 Building sewer inspections – access to premises.

The director of public works, or the building official, (or any designated representative or either the director of public works or the building official) is hereby authorized to inspect any building sewer in use within the city and connected to the city sewer system for the following purposes:

A. To determine the size, depth, and location of any sewer connection.

B. To determine the end outlet of any sewer connection by depositing harmless testing materials in any plumbing fixture attached thereto and flushing the same, if necessary.

C. To determine, by measurements and samples, the quantity and nature of the sewage or wastewater being discharged into any sewer.

D. To determine the location of the roof, swimming pool, floor and surface drains, and whether or not they physically connect to a building sewer.

E. To evaluate and determine defects in a sewer lateral following an overflow incident.

Nothing herein shall be deemed to provide the director of public works, the building official or their respective designees with any right or authority to enter a building or other apparently private or interior area of a real property, except to the extent such entry is expressly authorized by state law.

(Continued on Page 18)

**13.37.040 Mandatory building sewer inspections.**

A. Health and safety basis for requiring a building sewer lateral inspection.

An owner shall have the building sewer of his real property video-inspected in accordance with the requirements of this chapter (as directed and within the time period indicated by the director of public works) upon the occurrence of any of the following events:

1. Overflow or malfunction. Whenever the director of public works has sufficient evidence (as determined by the director) that the building sewer has recently overflowed or has recently malfunctioned;

2. Building sewer failure or lack of maintenance. Whenever, based on sewer system testing conducted by the city (of either the building sewer lateral or the city's public sewer system), the director of public works finds that there is sufficient evidence to conclude that the building sewer lateral has failed, is likely to fail, or has not been properly maintained; and

3. Public health threat. Upon any other reasonable cause to believe that there is a threat to the public health, safety or welfare due to the condition of a building sewer lateral or any other conditions causing a nuisance.

B. Events requiring a building sewer lateral inspection serving residential properties.

An owner shall have the building sewer lateral of his residential property inspected in accordance with the requirements of this chapter upon the occurrence of any of the following events or any other events in paragraph (A) above:

1. Home additions or remodels. Prior to the issuance of a city building permit for a residential building addition, remodel, or new improvements on the real property in excess of four hundred (400) square feet of habitable space as that phrase is defined in the most recently adopted California Building Code.

2. New plumbing fixtures. Prior to the issuance of a city building permit for all new plumbing fixtures attached to the building sewer lateral upon the residential property. (For the purposes of this section, the phrase "new plumbing fixtures" shall refer only to an increase in the number of plumbing fixtures in use on the real property prior to the application for a building permit for the "new" plumbing fixtures.)

(Continued on Page 19)

C. Schedule for lateral inspections – non-residential, multi-family and common interest development real properties.

1. Non-residential properties. An owner or owners of non-residential property within the city shall have that property's building sewer lateral(s) inspected in accordance with the requirements of this chapter or on occurrence of any conditions in paragraphs (A) or (B) above, or once every ten (10) years beginning on the first date of notification following the adoption of the ordinance first enacting this chapter. Within each subsequent ten (10) year period of time, such lateral inspections shall be performed. (For the purposes of this section, a property that has a mixture of allowed residential and non-residential uses shall be considered a non-residential property with respect to its compliance with the sewer lateral inspection requirements of this section.)

2. Common interest development, condominium, or multi-family properties. The owner or owners of a common interest development, condominium, or multi-family property shall have that property's building sewer lateral(s) inspected in accordance with the requirement of this chapter or on occurrence of any conditions in paragraphs (A) or (B) above, or once every ten (10) years beginning on the first date of notification following the enactment of the ordinance first enacting this chapter. Within each ten (10) year period of time, such lateral inspections shall occur.

D. Exception to inspection for recent prior inspections and repairs.

The following are exceptions to the inspection requirements of subparagraphs (B) and (C) above:

1. Prior replacement of sewer lateral. An owner otherwise required to perform a building sewer lateral inspection under (B) or (C) hereof shall not be required to perform such an inspection if the owner (or the owner's predecessor-in-interest) has originally installed or has replaced his property's building sewer lateral within the ten (10) years prior to the date of the application for a building permit.

2. Prior inspection or repair of a building sewer lateral. An owner otherwise required to perform an inspection under (B) or (C) shall not be required to perform such an inspection if the owner has either completed a remedial inspection (conducted in accordance with the inspection requirements of this chapter) or completed a permitted repair of the building sewer lateral within the three (3) years prior to the date the inspection would have otherwise been required, or has a valid compliance certificate.

(Continued on Page 20)

**13.37.050 Requirements for a proper building sewer lateral inspection report.**

A. Inspection report standards.

The building sewer inspection reports required by this chapter shall be prepared in accordance with the following requirements and specifications:

1. The inspection report shall be prepared by a pre-qualified contractor or any other professional otherwise registered by the City of El Cajon;

2. The inspection report shall identify all of the following:

   a. Any of the following conditions: displaced joints, open joints, root intrusion, substantial deterioration of the line, sags or depressions, cracks, leaks, inflow or infiltration of extraneous water, root intrusion, grease and sediment deposits or other conditions likely to increase the chance for blockage of the building sewer.

   b. Whether any connection, by pipes or otherwise, allows rainwater or groundwater to enter the building sewer or public sewer;

   c. Whether the building sewer has an installed backwater device where any outlet or trap of the building sewer is below the level of the nearest manhole. If a backwater device is already installed, the report shall indicate whether the backwater device is functioning properly.

   d. Where the building sewer includes a septic tank, the report shall identify the extent to which the septic tank is deteriorated, corroded, damaged, whether the disposal field has failed or any other relevant deficiency.

3. The inspection report shall contain an express certification from the certified inspector that the property has been inspected for any outdoor drain connection to the city sewer system and that no such unpermitted connection is present. It shall also contain either a videotape or DVD of the video inspection of the building sewer lateral in a format acceptable to the city, as established by the city regulations, policies or procedures.

4. The inspection report shall be submitted to the city for review and analysis accompanied with a review fee in addition to any other fee required by this chapter.

(Continued on Page 21)

B. Compliance with regulations. The inspection report shall, in all other aspects, comply with the requirements and specifications described in the director of public works' specifications for a building sewer lateral inspection report as established by the regulations authorized under this title.

**13.37.060 Required building sewer lateral repairs.**

A. Notice to repair or replace.

Upon receipt of the building sewer inspection report pursuant to this chapter, the director of public works (or his designee) will determine whether it indicates any deficiencies in the operation of the building sewer lateral and, thereafter, shall provide the owner(s) with a notice to repair or replace as may be deemed appropriate by the director. The notice to repair or replace shall specifically identify the deficiencies to be corrected and shall establish a deadline within which the owner(s) shall complete the required corrective actions. The corrective action may include a requirement that the lateral be replaced altogether and also may include the installation of cleanout, grease removal devices, and backwater valves if those devices are otherwise required by this code or any uniform code adopted by the city.

B. Obligations of the owner.

The owner shall repair his building sewer lateral to the satisfaction of the director of public works, and, if a building permit is required for the repairs, the owner shall obtain a final permit inspection and approval of the city building official.

C. Repairs upon other properties not required.

If a building sewer lateral traverses private property, without easements, other than the owner's property, the owner shall only be responsible for the repairs to that portion of the building sewer lateral that are upon the owner's property and also to that portion of the building sewer within a public right-of-way.

**13.37.070 Common interest developments.**

The homeowners association of a common interest development shall, along with the owner, be jointly and severally liable for the duties and obligations imposed by this chapter in relation to any building sewer lateral located within a common area of the development. If no homeowners association exists, then the individual unit owners, both jointly and individually, shall be liable for the duties and obligations with respect to building sewer laterals established by this chapter.

(Continued on Page 22)

**13.37.080 Administrative guidelines for inspections.**

Within ninety (90) days of the adoption of the ordinance enacting this chapter, the director of public works shall prepare and promulgate the public administrative guidelines that shall, among other things, establish the following:

A. A certification program for pre-qualified contractors or other professionals who will be accepted by the city to perform inspections and the basis for obtaining and maintaining such a certification or for a decertification;

B. Develop a standard inspection report form and specification for building sewer inspection reports;

C. Establish a notice format and standard enforcement timelines for the notice to repair and for repair and inspection service of that notice in a manner consistent with the requirements of due process. Such administrative guidelines shall be approved by a resolution of the city council; and

D. Administrative procedures for accepting, tracking, and inspecting permits for building sewers, grease interceptors, and inspection of food serving establishments.

Section 10. A new Chapter 13.38 of the El Cajon Municipal Code is hereby added to read as follows:

**13.38 SEWERS AND SEWAGE DISPOSAL – FATS, OILS AND GREASE**

**13.38.010 Purpose and Intent.**

A. It is the purpose and intent of this chapter to establish regulations for the disposal of grease and other insoluble waste discharges from every food service establishment (an “FSE”) within the city.

B. The city council, in enacting the ordinance codified in this chapter, intends to provide for the maximum beneficial public use of the city's sewer system, to prevent blockages of that system and the accidental discharge of wastewater into the storm drain system or receiving waters of the state, to ensure the cost of maintaining the city's sewer system is equitably distributed among users, to clarify grease disposal requirements for existing food service establishments, and to promote public health and safety.

C. In the event of any conflict or inconsistency between the provisions of this chapter and the provisions of the most recently adopted California Plumbing Code, the provisions of this chapter shall govern.

(Continued on Page 23)

**13.38.020 Definitions.**

As used in this chapter, the following terms are defined:

A. "Administrative authority" shall mean the director of public works, the building official, or any other official(s) as designated by the city manager.

B. "Authorized inspector" shall mean an inspector so designated by the administrative authority.

C. "Director" shall mean the director of public works or other official as designated by the city manager.

D. "Food grinder" shall mean any device installed for the purpose of disposing food waste in the public sewer system.

E. "FSE" "Food service establishment" shall mean any food preparation establishment, restaurant, cafeteria, or any other establishment preparing food for consumption. Domestic homes are not considered food service establishments under this definition.

F. "Grease" shall mean grease, or fatty or oily substances and other insoluble waste that turns or may turn viscous or solidifies with a change in temperature or other conditions.

G. "Grease interceptor" shall mean an underground multi-compartment device installed outside a food service establishment of a size and design in compliance with the California Plumbing Code and approved by the city.

H. "Grease removal facility" shall mean any grease interceptor, trap, drain, screen, or similar device that is designed or installed to reduce the amount of grease entering the wastewater system.

**13.38.030 Grease/Sand interceptors.**

A. Grease/sand interceptors that are properly sized and constructed shall be required for all buildings that include an increase in plumbing fixture units, and prior to commencing business for all new food service establishments determined by the director to generate grease in quantities greater than that commonly found in domestic sewage. Where grease/sand interceptors are impossible or impractical to install, a grease trap shall be installed.

(Continued on Page 24)

B. Grease/sand interceptors are required for all existing establishments where one or more of the following conditions exist:

1. A notice to repair has been issued for repair of the building sewer.

2. The establishment is unable to pass annual inspection without repeated violations.

3. The establishment is unable to complete implementation of best management practices as noted in the annual inspection report.

4. The establishment has violated any waste disposal requirements contained in the Municipal Code and where evidence of substantial grease is observed downstream of the establishment.

**13.38.032 Grease storage facilities.**

A. All new construction or remodels subject to a new conditional use permit for an FSE shall be required to either store waste grease on the inside of the building or outside in a secured enclosure that is covered, locked, and inside a secondary containment area or device large enough to store the same volume as the primary container. All storage containers shall be designed to prevent tipping and to provide a secure closing lid that shall remain closed at all times that the container is not being accessed. All containers that are used to transfer waste grease shall have a secured lid that prevents accidental spills during transfer.

B. All existing FSEs are required to either store waste grease on the inside of the building or outside in an area secure from vehicular driveways and parking in storage containers that are designed to prevent tipping and to provide a secure closing lid that shall remain closed at all times that the container is not being accessed. All containers that are used to transfer waste grease shall have a secured lid that prevents accidental spills during transfer.

C. All FSEs shall maintain the storage area using good housekeeping techniques to prevent the accumulation of waste grease deposits on the outside of grease containers and shall have an approved emergency spill kit available in close proximity to the storage facilities.

(Continued on Page 25)

**13.38.040 Food grinders prohibited.**

A. Food grinders shall be removed from all existing food service establishments by January 1, 2010.

B. After August 1, 2009, food grinders shall be prohibited in all new food service establishments.

**13.38.050 Grease interceptor design and maintenance requirements.**

A. General provisions.

1. The installation of a proper interceptor shall be the responsibility of the user who applies for a permit connection and the user whose operations cause or contribute to the necessity for an interceptor.

2. Interceptors shall be installed, utilized, and properly maintained for continuous and efficient operation at all times and at the expense of the user.

3. Interceptors shall be inspected periodically to ensure compliance with these regulations.

4. The administration authority shall approve the type, capacity, and construction of all interceptors shared by multiple businesses can be utilized if specifically authorized by the director and upon evidence of legal operating and maintenance agreements between the involved property owners or users. Provisions shall provide for independent, unilateral operation by one or more parties of the agreement in the case where default by one party has occurred.

5. Interceptors no longer in use shall be abandoned in accordance with the California Plumbing Code.

B. Design.

1. Interceptors for food service establishments shall be sized and designed in compliance with the California Plumbing Code, unless otherwise specified herein.

(Continued on Page 26)

2. Other factors that may influence the design include, but shall not be limited to, the following:

    a. The type of facility (such as a restaurant, bakery, food processing factory, etc.);

    b. The volume of the user's business or operation (such as number of meals served, number of seats, hours of operation, etc.);

    c. The peak flow of processed wastewater discharged to the collection system;

    d. Size and nature of facilities (including kitchen facilities) based on size, type, number of fixtures, and type of processing or cooking equipment used;

    e. The type of service provided or operation undertaken (such as dine-in meal service versus carry-out meal service);

    f. The type of foods or other materials used in cooking, processing or manufacturing operations conducted within the facility;

    g. The overall potential for grease-laden discharges;

    h. The existence of devices, procedures or processes designed to minimize the amount of fats, oil or grease from entering the collection system;

    i. The location of the facility, if it is located in a known problem area; and

    j. Any prior problems with the facility, such as blockages, violations, etc.

3. All interceptors shall be certified by the International Association of Plumbing and Mechanical Officers, or another listing agency approved by the director, and be plumbed according to the California Plumbing Code.

4. All grease interceptors shall include an effluent sample box of a type and size approved by the administrative authority.

(Continued on Page 27)

5. Inspection by the administrative authority, or an authorized inspector, of installed interceptors and piping prior to backfilling is required. Piping shall meet the requirements of the California Plumbing Code.

6. Interceptors shall have a sanitary tee located inside the sample box on the discharge side of the sample box.

7. Interceptors shall have a cleanout installed after the sample box on the private lateral and at intervals required by the California Plumbing Code.

8. All manholes and sample boxes are to be installed a minimum of one-half inch above the finished grade with a concrete collar a minimum of eighteen (18) inches around the manhole and sample box lids.

C. Interceptor Maintenance.

1. Any user who is required by the director or the ordinance codified in this chapter to install or operate an interceptor shall be required to adequately maintain the interceptor at the user's expense, so that the interceptor is in proper working order at all times. Maintenance shall include the complete removal of all contents, including floating materials, wastewater, sludge and solids. Decanting or discharging of removed waste back into the interceptor from which the waste was removed or into any other interceptor, for the purpose of reducing the volume to be hauled is prohibited.

2. Grease interceptors shall be cleaned out completely by a permitted waste hauler as necessary to assure that the interceptor will operate as designed at all times or as otherwise specified by the administrative authority.

3. The use of additives, directly or indirectly to the plumbing or sewer system, to emulsify grease and/or oil is specifically prohibited.

4. The use of biological additives as a supplement to interceptor maintenance, including the addition of microorganisms, may be authorized by the director and approval shall be obtained in writing prior to the use of such activities.

(Continued on Page 28)

5. A maintenance log indicating each pumping of an interceptor for the previous twelve (12) months and any other pertinent information shall be maintained by each establishment. This log shall include, but not be limited to, date, time, amount pumped, hauler, and disposal site, and the log shall be kept in a conspicuous location for inspection by the administrative authority or an authorized inspector during normal business hours.

6. All users must sign a waste manifest form before having a waste load transported by a permitted hauler. The user shall also keep copies of the manifest form for a period of three (3) years, and make all manifest records available for inspection by the administrative authority during normal business hours.

7. All waste removed from an interceptor must be disposed at a facility permitted by the county of San Diego or applicable regulatory agencies to receive such waste. The pumpage shall not be returned to the public sewer system or manhole, any private wastewater system or storm drains.

8. All interceptors shall be located as to be readily and easily accessible for cleaning, inspection and removal of intercepted waste.

9. Any fixture connected to a grease interceptor shall have a non-removable, secured food strainer of such integrity to withstand daily operational usage.

D. Required connections to interceptors. All three-compartment sinks, scullery (preparation) sinks, floor drains, and mop sinks along a cook line, pre-wash sinks at dishwashing stations, and all other fixtures that contribute grease into the wastewater system shall be connected to an interceptor.

E. Prohibited connections or additives to interceptors.

1. Final rinse discharge from automatic dishwasher shall not be connected to the interceptor.

2. The use of any additive, such as enzymes, surfactants or chemicals shall not be connected to any type of interceptor. Chemical additives, such as chlorinated solvents, or any other additives that causes the emulsification of grease, are strictly prohibited from use in any type of interceptor.

(Continued on Page 29)

F. Plan review.

1. Applicants or users shall be required to submit copies of detailed facility proposed interceptors, pretreatment facilities, spill containment facilities, and operating procedures, to the community development department. Facility plans shall also include site plans, floor plans, mechanical and plumbing plans, and details to show all wastewater plumbing, spill containment, and appurtenances by size, location, and elevation. The review of the plans and procedures shall in no way relieve the user of the responsibility of modifying the facilities or discharge, and to meet the requirements of this chapter or any requirements of other regulatory agencies.

2. All submitted drawings shall be prepared by a licensed and registered professional engineer. Any false information or misleading calculations submitted shall be the responsibility of the user.

3. The design, location and procedures for operation and maintenance of a required interceptor shall be approved by the administrative authority. Such approval shall be obtained prior to the user's connection of the facility to the public wastewater system.

4. No food service establishment or other identified user shall be constructed except according to plans and specifications approved by the administrative authority.

5. Approved plans and specifications shall not be changed or altered without written approval by the administrative authority.

**13.38.060 Best management practices.**

Best management practices (each, a “BMP,” in any combination, “BMPs”) as listed below shall be utilized by the FSE and shall be subject to periodic verification and approval by the administrative authority. If at any time the FSE is found to be in noncompliance with this requirement with regard to all of the BMPs below, such noncompliance shall be deemed a violation.

A. Drain screens.

1. Drain screens shall be installed on all drainage pipes in food preparation areas for existing food service establishments by January 1, 2010.

(Continued on Page 30)

2. After August 1, 2009, drain screens shall be installed on all drainage pipes in food preparation areas for all new food service establishments deemed by the director to generate grease.

B. Waste cooking oil.

1. All waste cooking oil shall be collected and stored properly in recycling bins, barrels or drums.

2. Such recycling bins, barrels or drums shall be maintained appropriately to ensure they do not leak.

3. Licensed haulers or an approved recycling facility must be used to dispose of waste cooking oil. A log of such activities will be completed and maintained in plain visible site for inspection by the administrative authority. All manifests for disposal of waste products will be complete and inserted into the log.

C. Food waste. All food waste shall be placed in enclosed plastic bags and disposed of directly into the trash or garbage, and not in sinks.

D. Employee training.

1. Employees of the food service establishment shall be trained by March 1, 2009, and twice each calendar year thereafter, on the following subjects:

a. How to "dry wipe" pots, pans, dishware and work areas before washing to remove grease;

b. How to properly dispose of food waste and solids in enclosed plastic bags prior to disposal in trash bins or containers to prevent leaking and odors;

c. The location and use of absorption products to clean under fryer baskets and other locations where grease may be spilled or dripped, and how to use absorption products to clean if spills occur; and

d. How to properly dispose of grease or oils from cooking equipment into grease bins, barrels or drums without spilling.

(Continued on Page 31)

2. Training shall be documented and employee signatures retained indicating each employee's attendance and understanding of the practices.

3. Training records shall be available for review at any reasonable time by the authorized inspector.

E. Kitchen exhaust filters shall be cleaned as frequently as necessary to be maintained in good operating condition, but in no event less than one time per month.

F. All best management practices shall be posted conspicuously in the food preparation and dishwashing areas at all times.

**13.38.062 Right of inspection.**

Food service establishments shall be open and available for inspection by an authorized inspector at all times during normal business hours to ensure that the operation and maintenance of the food service establishment complies with the requirements of this chapter.

**13.38.070 Violations for penalties – enforcement.**

A. Violations of this chapter may result in fines and/or penalties.

B. Failure to comply with the provisions of this chapter may result in one or more of the following:

1. Notices of noncompliance may be issued with a specified period of correction;

2. Administrative citations may be issued for violations in the amounts and manner set forth in Chapter 1.14 of this code;

3. A criminal complaint may be filed in accordance with Chapter 1.24 of this code;

4. Sewer service may be determined a public nuisance as described in section 13.16.030, and disconnected from the City's sewerage works upon order of a court of competent jurisdiction.

(Continued on Page 32)

C. Appeals of fines, penalties or requirements to install grease interceptors.

1. Unless otherwise provided in this code, appeals of civil or administrative fines, penalties, or other corrective actions shall be submitted to the city manager within thirty (30) days after the food service establishment has been notified of the penalty and/or corrective actions. The decision of the city manager shall be in writing.

2. The decision of the city manager can be appealed to the city council by submitting a written request to the city clerk within fifteen (15) days of the issuance of the city manager's decision, and payment of the appropriate fee, as set by resolution of the city council.

3. Upon appeal, the appellant shall, upon written request to the city manager, be provided within fifteen (15) days of said request, at reasonable cost to the appellant, copies of all reports, data or other documentary evidence upon which the citation is based.

Section 11. This ordinance shall be published as required by law and shall take effect thirty days after adoption. The City Council finds that this activity is not a project and therefore is not subject to the California Environmental Quality Act pursuant to CEQA Guidelines Section 15060(c)(3).

PASSED AND ADOPTED by the City Council of the City of El Cajon, California at an Adjourned Regular Joint City Council/Redevelopment Agency Meeting held this 23rd day of June, 2009, by the following vote to wit:

| | | |
|---|---|---|
| AYES | : | Lewis, Hanson-Cox, Kendrick, McClellan, Wells |
| NOES | : | None |
| ABSENT | : | None |
| DISQUALIFY | : | None |

MARK LEWIS
Mayor of the City of El Cajon

ATTEST:

KATHIE RUTLEDGE, CMC
City Clerk

I hereby certify that the above and foregoing is a full and true copy of Ordinance No. 4930 of the Ordinances of the City of El Cajon, California, as adopted by the City Council at the Adjourned Regular Joint Meeting of the City Council/Redevelopment Agency on the 23rd day of June, 2009.

Kathie Rutledge, CMC, City Clerk

# EXECUTIVE SUMMARY

The City of El Cajon in the Context San Diego County and the San Diego River Watershed

The City of El Cajon (City), located in east San Diego County, is the eastern-most incorporated City within the San Diego River Watershed (Watershed). With 14.48 square miles and nearly 91,000 citizens, the City plans with other regional jurisdictions and acts locally to maintain the health of the San Diego River Watershed. A healthy watershed means thriving environmental communities and a state of well being among its constituency. Maintaining watershed health is achieved through compliance with Federal Clean Water Act requirements as stated in the San Diego County Municipal Storm Water Permit, Order No. R9-2007-0001, through water quality monitoring, biological assessments, and municipal vigilance to balance growing human demands with a healthy environment.

Permit Year 2011-2012 (PY 2011-12) marks Permit Year five (PY5) under the San Diego Region Order No. R9-2007-0001 (municipal permit), which renewed Order No. 2001-001. The renewed municipal permit was adopted in January 24, 2007. Efforts started with jurisdictional planning and implementation, proceeded to local program assessment and continues to evolve into multi-jurisdictional and watershed actions. As in previous years, the City continued its focus of assessing program component effectiveness from Best Management Practices (BMP) implementation and determining how preventive measures affect watershed health from a local perspective. Many of the program's components have developed into BMP programs, whereby inspections can determine effectiveness of pollution reduction measures.

This Annual Report presents the City's efforts during the 2011-12 reporting period. Covered in this Report is the move toward adaptive management of the updated Jurisdictional Urban Runoff Management Program (JURMP) implementation and integration of general watershed principles for the San Diego River Watershed into local planning. Both the San Diego River Watershed Urban Runoff Management Plan (WURMP) and the City's JURMP were updated and submitted to the San Diego Regional Water Quality Control Board (RWQCB) on January 24, 2008, as required by the new municipal permit and extension. It is the responsibility of the City to balance jurisdictional and watershed requirements and to maintain a healthy watershed within its jurisdiction.

Critical for the remaining permit cycle are Watershed adjustments to the City's Storm Water Pollution Prevention Program and deciding where best to place City efforts that will minimize or eliminate polluted runoff. Forrester Creek, the main tributary drainage channel in El Cajon, is a listed 303(d) waterbody with impairments for pH in the upper part (El Cajon and San Diego County) and for total dissolved solids (TDS) and fecal coliform in the lower portion within the City of Santee. El Cajon considers these impairments to be the center of the Clean Water Act

objective "to restore the Nations Waters" to a chemical balance able to support the State's Basin Plan designations for fishable and swimmable waters. A BMP to Pollutant Reduction Diagram was developed to connect BMPs to pollutants that are targeted for reduction as a result of their listing as 303(d) pollutants in Forrester Creek. This diagram and discussion is provided in the Introduction in Section 1.

On November 12, 2010, USEPA approved the 2008-10 Clean Water Act (CWA) Section 303(d) List that includes listings for the San Diego Region. The revised list includes phosphorus and selenium.

This JURMP Annual Report for PY5 consists of 15 Sections, and is organized as follows:

**Section 1 - Introduction**. Describes the purpose of this Annual Report, the overall vision of the City, goals and objectives of the Storm Water Pollution Prevention Program; the regional integration of Watershed Health; assessment of program effectiveness to guide future actions, and Forrester Creek-specific criterion that relate to San Diego River Watershed and River health.

**Section 2 - Development Planning Component.** Lists the planning actions and building permits reviewed and the role of storm water in re-defining new development designs and describe the ways of confirming that commitment to storm water becomes a design reality.

**Section 3 - Construction Component.** Summarizes reviews of Erosion Control Plans, inspection of high priority sites, interactions with other City departments, and conditions during rainfall events.

**Section 4 - Municipal Component.** Summarizes the activities for municipal facilities, the sanitary sewer program, capital improvement projects affecting storm water quality, and municipal staff training.

**Section 5 – Industrial and Commercial Component**

- **Industrial Component**. Summarizes the activities conducted to assess the effectiveness of implemented industrial BMPs and better define the pollutants affecting storm water quality.
- **Commercial Component.** Summarizes the inspections, enforcements, and educational efforts to assess the effectiveness of implemented BMPs and better define the pollutants affecting storm water quality by business type.

**Section 6 - Residential Component.** Summarizes the challenges with educating the public, interactions with citizens, educational efforts, and enforcement at the residential level.

**Section 7 - Illicit Discharge Detection and Elimination Component.** (This section will be part of a separate submittal due on December 15, 2012) Summarizes the City's dry weather program that identifies illegal dumping and illicit connections to the storm drain system. An upstream/downstream analytical assessment was completed during the dry weather season.

**Section 8 - Education Component.** Summarizes programs implemented by the City to educate municipal employees, developers, contractors, business owners, the general public, and other priority groups

**Section 9 - Public Participation Component.** Summarizes the outreach efforts coordinated on a regional level through the Outreach Workgroup.

**Section 10 - Fiscal Analysis Component.** Reviews and compares previous storm water expenditures while projecting future program funding requirements.

**Section 11 - Effectiveness Assessment Component.** Provides summary tables for the existing and development components indicating estimated and actual pollutant-containing material reductions at the source or from preventive measures.

**Section 12 – Special Investigations.** Summarizes any special investigations that may have been conducted during the current reporting period.

**Section 13 – Non-Emergency Fire Fighting.** Summarizes non-emergency fire-fighting activities/training conducted during the current reporting period.

**Section 14 – JURMP Revisions.** Summarizes any changes or revisions to the JURMP that may have occurred during the current reporting period.

**Section 15 - Conclusions and Recommendations**. Summarizes the conclusions stated from each component and makes overall program conclusions and provides recommendations for future permit years.

Appendices contain City-developed checklists, guidance documents, outreach materials, lists of priority sites or facilities, correspondence and presentations to City staff and the local community.

The City achieved a number of important accomplishments during this reporting period, both in its role as a Copermittee, and through participation in the implementation of general watershed principles. Across the City, businesses and citizens, together, function within the JURMP and watershed to assist in identifying storm water issues and help prevent pollution from being discharged.

City Action Highlights include:

- Continue with a strong enforcement program and implementation of City Ordinances 4686 (JURMP) and 4939 (updated Standard Urban Storm Water Management Program (SUSMP) requirements).
- Continued implementation of a City-Wide Integrated Pesticide Management Program.
- As a City with little open space and a propensity for redevelopment, the City pursues common sense approaches to go beyond Permit compliance and achieve defensible, cost-effective storm water management practices for businesses and citizens through the SUSMP conditioning process.
- The City continued its expanded scope of Dry Weather Monitoring Program. In doing so, it has made substantial strides in detecting and eliminating discharges and characterizing receiving waters and other conveyance discharges within its jurisdiction.
- Conducted upstream/downstream dry weather analysis in Forrester Creek to quantify the amounts of pollutants discharged within the City's jurisdiction.
- Inspected a total 208 Commercial and Industrial Facilities, 76 industrial and 132 commercial facilities. All facilities that posed a high threat to water quality (TTWQ)

were inspected. Commercial and industrial facilities were issued 7 warnings and 2 citations for various violations of the City's storm water ordinance.

- Conducted inspections at 4 high priority construction sites. The City conducted monthly inspections at all high priority construction sites during the dry season and at least biweekly inspections during the wet season. The inspections revealed several violations or compliance issues and the City issued 8 enforcement actions, 3 of which were monetary citations.
- The City issued a total of 15 warnings and 7 citations for various violations of the City's storm water ordinances.
- The City's inspection programs emphasized pollution prevention BMPs such as clean trash storage and disposal areas; power washing BMPs; and maintenance of sewer laterals in addition to minimum required BMPs.
- The City's comprehensive street sweeping program swept 17,677 miles of streets and collected 3,710 cubic yards of materials from City streets. Sediment and silt accounted for 1,421 cubic yards, organic material accounted for 1,507 cubic yards, and trash accounted for 782 cubic yards.
- Collected 1,788 cubic yards of materials from City inlets, culverts, concrete-lined channels, and catch basins.
- Actively participated in the Management Committee, Regional Program Planning Subcommittee, Outreach Workgroup, Regional Monitoring Workgroup, SUSMP/HMP Workgroup, Industrial/Commercial/Municipal Workgroups and the WURMP Leads Workgroup.
- Continued active participation with the San Diego River Watershed Workgroup.
- Continued efforts to reach out to community members on a wide range of urban runoff and storm water quality topics through approximately 190,700 copies of articles, brochures, and mailers.
- Conducted over-the-counter assistance and provided personalized residential BMP information to homeowners for small additions, remodels, pools and retaining wall projects.
- Continued the transition to report fiscal analysis based on the Standardized Fiscal Analysis Method and Format.

This reporting period is one of continued program assessment and focus of local actions to move toward a watershed protection program. This last year, the City continued to meet the new challenges of working within a watershed. The City continues in the role of the Lead Copermittee for the San Diego River Watershed. The City feels strongly that it has made significant strides looking within its jurisdictional boundaries as well as organizing inter-jurisdictional programs. Continuing improvement and refinement is the name of this storm water pollution prevention program as we continue to gather information and experience about how City activities in general affect the local receiving waters and the health of the San Diego River Watershed.

This Annual Report provides programmatic information and further steps in connecting activities to a significant movement for improving receiving water quality by the City of El Cajon. Over the last year, the City has continued its effort at linking municipal activities to receiving water quality. Additional connections to receiving water quality from the implementation of BMPs will follow as information is gathered and assessed using a Long-Term Assessment process.

A listing of storm water contact personnel is provided in Appendix C to help facilitate communication within the City and for the public and outside agencies to contact the appropriate City staff. A summary of the sanitary sewer maintenance and operations is also included in Appendix D.

# CERTIFICATION

"I Certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete.

I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

# SECTION 1 INTRODUCTION

## 1.1 INTRODUCTION

With each Permit Year (PY), the City of El Cajon reviews, assesses, and continues to progress towards a watershed approach to protect surface waters from urban runoff pollution. A continued emphasis towards identifying sources of pollutants and minimizing specific 303(d) impacts to Forrester Creek is the focus of this fifth year in the Permit Cycle (Order No. R9-2007-0001).

The typical steps for developing a pollution prevention and source control program are summarized below and discussed in more detail in Section 11, Effectiveness Assessment.

1. **Identify the issue.** Define each issue.
2. **Identify and assess sources.** Sources are identified by prioritizing based on location and type of business.
3. **Determine available control strategies**. To identify possible control strategies for each source.
4. **Evaluate control strategies**. To determine which control strategies are most likely to achieve measurable results.
5. **Establish a goal.** A goal may be set at any point during the development process. The goal is the desired outcome.
6. **Implement program.** Part of program implementation is selection of an effectiveness measurement tool to assess the program.
7. **Evaluate effectiveness.** Based on the effectiveness measurement, determine what has been learned.
8. **Modify program.** The results of the effectiveness measurement will help to determine the future direction for the program.

Described in this Fifth Permit Year (PY5) Annual Report is the implementation and collected information for each Permit component. Sections 2 through 11 highlight component accomplishments, activities, or areas of achievement for Development and Planning; Construction; Municipal; Industrial and Commercial Development; Residential Development; Education and Outreach; Illicit Discharge and Detection Elimination (submitted as a separate deliverable); Public Participation; Effectiveness Assessment; and Fiscal Analysis.

## 1.2 REGULATORY FRAMEWORK

Background

The City of El Cajon's (City) Jurisdictional Urban Runoff Management Plan (JURMP) was developed pursuant to Order No. 2001-001, National Pollutant Discharge Elimination System (NPDES) Permit No. CAS0108758, the area-wide municipal separate storm sewer system (MS4) permit. The MS4 permit was established pursuant to Section 402(p) of the Federal Clean Water Act, which requires all point source discharges of pollutants into waters of the United States, including discharges from municipal separate storm sewer systems, to be regulated by a NPDES permit. On January 24, 2007, the California Regional Water Quality Control Board, San Diego Region (SDRWQCB), adopted Order No. R9-2007-0001, NPDES Permit No. CAS0108758 (Permit), to the City and 20 other Copermittees, for discharges of urban runoff from MS4s into the receiving waters within the SDRWQCB's jurisdiction.

The City is a participant and partner in the San Diego River Watershed along with the Cities of La Mesa, San Diego, Santee, and the County of San Diego. A watershed approach to storm water pollution provides the wider view of runoff impacts and requires jurisdictional approaches to include neighboring jurisdictions in future planning and reporting efforts.

The PYs are summarized as follows:

- PY1 - July 1, 2007 through June 30, 2008, modified and enhanced the storm water program to comply with the new Municipal Permit, R9-2007-001. New comprehensive JURMP prepared to create a detail framework of the program under the new permit.
- PY2 – July 1, 2008 through June 30, 2009, reassessment of initial JURMP implementation with refinements and reimplementation, as necessary.
- PY3 – July 1, 2009 through June 30, 2010, as the City's programs continue to mature, the City focused on watershed issues, including pollution prevention and education and continued to refine and improve the City's programs.
- PY4 – July 1, 2010 through June 30, 2011, adopted final regional model SUSMP and reassessed initial JURMP implementation with refinements and reimplementation, as necessary.

Current and Future

- PY5 – July 1- 2011 through June 30, 2012, preparing for issuance of new permit with a stronger emphasis on watershed permit requirements.

### 1.2.1 Water Courses and Receiving Waters

The definition of the City's Storm Drain System is broad enough to include streets, gutters, inlets, catch basins, channels (lined and unlined), creeks, and streams. Our storm drain system starts at a facility's property line to the public right-of-way. By making such a distinction, it is clear to maintenance and storm water crews when it is the responsibility of the City to clean spills or illegal dumping of materials. If such a discharge occurs on private property and the discharge enters the City storm drain system, the property and business owner/manager or contractor is contacted and educated on storm water requirements for their type of business.

Property and business owners are charged for cost-recovery of City staff involvement and enforcement actions are levied.

The goal of PY5 and future program years will be a continuing focus on impairment of Forrester Creek with the ultimate goal of eliminating the impairment on Forrester Creek, and meeting the objective of the Clean Water Act to maintain and restore the chemical, physical, and biological integrity of the Nation's waters.

Table 2 lists the major storm water conveyance systems and describes the type of channel. Most conveyance systems are concrete-lined, making them easy to maintain, but present other types of challenges such as:

- Elevated pH (at times above 9)
- Shelter for homeless populations
- Trap for air blown trash and debris
- Easy target for illegal dumping

**Table 2 – Storm Water Conveyance Systems**

| Water Courses | Type of Channel |
|---|---|
| Forrester Creek | • Open, concrete-lined trapezoidal channel<br>• Underground culvert |
| Broadway Channel | • Open, concrete-lined channel<br>• Underground culvert |
| Washington Channel | • Open, concrete-lined channel<br>• Underground culvert |
| County Ditch | • Open, concrete-lined channel<br>• Underground culvert<br>• Open, natural-lined channel |
| Fanita Channel | • Underground culvert<br>• Open, concrete-lined channel |
| Third Street Lateral | • Open, concrete-lined channel<br>• Underground culvert |
| Fletcher Parkway/Chatham Channel | • Open, concrete-lined channel<br>• Underground culvert |

| Water Courses | Type of Channel |
|---|---|
| | • Open, natural-lined channel |

The picture to the left shows the City boundaries, Forrester Creek and the major channels within the City.

### 1.2.2 Approach and Changes to the Program

Approach

As the City becomes more experienced with its own programs and with what is working and what is not, the City modifies the implementation and management of its Storm Water Program. This adaptive management is a dynamic process of improving management activities incrementally, as decision makers learn from experience and better information and analytical tools become available. It involves checking progress made in achieving water quality goals, adjusting the management decisions accordingly, rechecking and readjusting – all the while incorporating new data and scientific knowledge. Beginning in early 2008 and continuing through PY5 (2011/2012), the City of El Cajon continues to develop a Storm Drain Master plan. Once complete, the Storm Drain Master Plan will provide the City with additional tools to assess and achieve water quality objectives. Adjustments to goals and objectives are expected to occur due to unforeseen circumstances and an unpredictable future.

One approach the City continues to implement (through education and training) is to change pollution prevention from the conventional recycle, reduce and reuse, to measures that target pollution prevention at the pollutant source. For Storm Water Pollution Prevention, consideration is given both to flow reduction measures and pollution source controls. Where water acts as the primary conveyor of pollution, pollution prevention measures can reduce

pollution impacts by preventing pollutants from entering the flow, or by controlling the flow. In the development of an effective pollution prevention or management strategy, it is critical to understand how water cycles through the air and soil to ensure that measures are selected and implemented in an appropriate manner.

Changes to the Storm Water Program

Program Year 5 (PY5), and continuing into the next permit cycle, will be a continuing period of transition from purely jurisdictional to a more watershed/jurisdictional approach. A few of the modifications include:

**The San Diego River Flows Across Padre Dam**

- Promoting a Clean Community, Healthy Watershed;
- Working more closely with San Diego River Watershed Copermittees to maintain watershed and river health in the San Diego River Watershed;
- Focusing on 303(d) pollutants to restore Forrester Creek water quality;
- Continuing to assess the potential for increased flow from New or Re-Development projects and reduce flow from the current flow of approximately 83 gallons per minute during the dry season (a drop of 11 gallons per minute compared to last year's dry weather flow rate).
- Collecting information on upstream and downstream conditions to better assess areas (zones) where pollution is more probable or prevalent;
- Review of the analytical methods and a comparison to what information is actually needed to determine pollutant loads.

The City of El Cajon's Storm Water Pollution Prevention Program looks to pollution solutions in the form of Best Management Practices, proven procedures, or other new technologies. Table 1 (next page) lists the water quality and quantity issues in El Cajon and the possible solutions provided by the JURMP components that comprise the Storm Water Pollution Prevention Program.

## Table 1 – Storm Water Pollution Prevention Program Components

| Water Quality or Quantity Issues | Pollution Solution |
|---|---|
| • Increased runoff (volume, frequency and duration) with impervious ground cover. | • Runoff control for flood and erosion protection (**New Development and Construction**)<br>• Measures to maintain existing discharge rates. (**New Development/Redevelopment**) |
| • Increased base flows in streams due to changes in land use. | • Provide measures to maintain infiltration **(New Development/Redevelopment)**<br>• Provide extended detention of runoff for low flows. (**New Development/Redevelopment**) |
| • Increased pollutant loadings with runoff. | • Provide measures to reduce pollutant sources, or remove pollutants, by settlement, absorption or filtration. (**Municipal, Industrial, Commercial, Residential Existing Development/Redevelopment**) |
| • Stream bed and bank changes due to erosion. | • Infiltration for control of runoff volume.(**New Development/Redevelopment**)<br>• Rate of runoff control for erosion protection in compliance with HMP requirements (**Construction/Redevelopment**) |

Stronger move toward prevention of polluted discharges – distinguishing pollutant reduction from Pollution Prevention (recycle, reduce, reuse) activities, while connecting BMPs with the pollutant being reduced. A BMP to Pollutant Reduction Diagram is provided below and is the mainstay for the Existing and Development (including Construction) Components. This part of the transition occurred after Copermittees submitted a Framework for BMP Implementation in October 2003.

Inspection data collected under the original system was translated into BMP implementation results. The BMP implementation results data can be used to help prioritize follow-up actions, including inspections and education efforts.

## BMP to Pollutant Reduction Diagram (See Following Page for Details)

**Pollutant to BMP Table**
BMPs target the reduction or elimination of a primary pollutant (sediment or fecal coliform) or pollutant group (oil & grease).

↓

**Facilities and BMP Table**
Individual Facilities are Required to Implement the Minimum BMPs

↓

**Summarize Facility Types with Pollutant Reduced Table**
Combines Table 1 and 2 to connect pollutant to (high priority) facility type, such as industrial, commercial/restaurants, municipal, residential area, or SUSMP/Parking Lot through the implementation of BMPs. Allows the calculation of percentages for implemented BMPs for high priority facilities.

↓

**Transition to Effectiveness Assessment**
Percentages between 80-100 overall implementation are used to calculate a quantity of pollutant(s) prevented from entering the storm drain system and thus reduction in pollutants ultimately discharged.
Reasonable Assumption: If inspection was impromptu, results observed on inspection day, in general, represent conditions at the facility for the entire year.
Calculations: Determine an *average* (typical for facility) discharge of the pollutant containing material.

The BMP to Pollutant Reduction Diagram demonstrates how BMPs are connected to pollutants that are connected to water quality. Our difficulty lies in quantifying those pollutant reductions with accurate and defensible results. In Section 11.0, estimates as well as empirical data are used to assess the effectiveness of the City's Storm Water Program by showing how much pollutant-containing materials were diverted toward a better disposal avenue.

## 1.3 COMMITMENT AND PARTICIPATION

The City of El Cajon is committed to promoting the concept and practice of preventing pollution at the source. Preventing pollution will prevent environmental problems. This saves the public and private sector from loss of resources and the costs to correct environmental damage. Urban runoff management requires the simultaneous pursuit of several objectives. The City is committed to:

- Enforcement of the Municipal Codes for Urban runoff (ECMC 13.10) and New or Land Development and Re-Development (ECMC 16.60).
- Prevention of pollutant discharges into Forrester Creek as part of the San Diego River Watershed.
- Protection of water quality, aquatic species, and watershed ecosystems.
- Promotion of environmental quality and social well-being.

### 1.3.1 Jurisdictional Implementation

Pollution Prevention continues to be the focus of the City's JURMP and Storm Water Pollution Prevention Program for businesses and citizens. Compiled information on amounts of pollutants prevented from entering the storm drain system has a direct correlation to any decrease in pollutant loads from entering receiving waters. Pollutant amounts removed from streets, roadways and the storm drain system, or that have been recycled, have a direct correlation to water quality.

Land use consists of residential, commercial, industrial, municipal, and educational with recreational facilities. The City is at a "built-out" stage where most construction is redevelopment. Successful implementation of the updated City's Standard Urban Storm Water Management Program (SUSMP) supports the reduction in flow from a pollution prevention perspective. Development and redevelopment proposals that trigger the SUSMP requirements must submit plans consistent with reducing flow and impervious areas and must consider storm

runoff treatment before the project will receive final City approval and proceeding to actual construction.

### 1.3.2 Watershed Teamwork

Beginning in the Permit Year of 2002/2003 and continuing through this current Permit Year (PY5, 2011/2012), the jurisdictions within the San Diego River Watershed have gathered to discuss and tackle issues specifically affecting water quality issues in the watershed. Some of the challenges that are currently present from a watershed perspective are the following:

- Total Maximum Daily Loads for bacteria
- Highly transient populations

### 1.3.3 Regional Teamwork

The City participated in regional efforts to promote storm water management practices and educate businesses and citizens to conduct business and daily lives with respect for water quality. When possible, the City attended or was an active participant in the following events.

- Management Committee Meetings
- Program Planning Subcommittee
- Education/Outreach Workgroup
- San Diego River Watershed Workgroup **
- Commercial/Industrial/Municipal Workgroup
- Regional Monitoring Workgroup
- Dry Weather Monitoring Workgroup

** - Chaired Workgroup

## 1.4 WATERSHED AND RIVER HEALTH

As stated in the Clean Water Act, the objective is to maintain and restore the chemical, physical, and biological integrity of the Nation's waters. To address this objective, watershed and river health for the San Diego River can be described in terms of unique biophysical, socio-cultural, and economic characteristics. Biophysiochemical components are a watershed's elements and functions (its chemical, physical, and biological processes), while socio-cultural and economic components are the values and benefits provided by a functioning healthy watershed. The water quality aspect and stream flow (as hydrological patterns) of the biophysiochemical component list and the recreational/esthetic values of the socio-cultural and economic components are the only subjects directly addressed in our City's permit under Order No. R9-2007-0001.

**Biophysiochemical:**

- Basin geomorphology
- Hydrological patterns (stream flow addressed in

Municipal Permit)
- Water quality (addressed in Municipal Permit)
- Biotic community and habitat

**Socio-Cultural and Economic:**
- Breakdown and recycling of pollutants
- Regulation of storm water discharges
- Groundwater and aquifer recharge
- Recreational and esthetic values (addressed in the Basin Plan, but included in Municipal Permit by reference)
- Habitat values (protected species, fisheries, etc.)

In general, the factors that determine ecosystem and watershed health are universal. A healthy watershed is one in which these components are maintained with thriving and balanced communities. An immutable characteristic of upper Forrester Creek is the concrete lining of this channel. In the 1960's, Forrester Creek was modified with a concrete channel in order to provide flood control for the expansion of the Interstate Highway easterly toward El Centro.

In a built-out urban area such as the City of El Cajon, defining and achieving creek, river and watershed health is complicated by a highly altered landscape (concrete channelization of Forrester Creek, highly urbanized, little open-space) and continued urban-infill and growth within and upstream of its jurisdiction. Nonetheless, the City has a vision and initially a broad goal for watershed and river health. The vision states the desired future for the city with respect to watersheds and waterways. The goal states that the City ultimately aims at maintaining watershed and river health for water quality and hydrological patterns, quantitatively and qualitatively.

Although it is unrealistic and infeasible to re-create the environmental conditions that existed before the City's development, it is prudent to consider predevelopment conditions when assessing the health of Forrester Creek and the San Diego River. Information about historical conditions is useful in understanding current watershed processes and functions that are essential to downstream watershed and river health. In fact, healthy downstream conditions may best be served by continual efforts by the City to reduce and eliminate pollutant discharges to Forrester Creek, to the maximum extent practicable.

## 1.5 WATERSHED PLANNING

The City recognizes the importance of watershed management as a guiding principle for its water quality management of the San Diego River Watershed. As required by Permit Section J, a Watershed Urban Runoff Management Plan (WURMP) was developed during PY2 and refined during subsequent permit years. As a member of the San Diego River Watershed, the City attended and participated in establishing the Watershed program for the San Diego River area. There is a learning curve to transitioning certain activities from a jurisdictional to a watershed approach.

The picture to the right shows El Cajon as part of the inland watershed area. To improve watershed management much has been planned and implemented during the past permit years. For this PY, a plan to address watershed management that include compliance with the bacteria TMDL is under development and it will be completed by next PY.

Water Quality and Stream Flow
Water quality has long since been the focus of many watershed programs. However, those programs and regulations have focused mostly on the chemical aspects of water quality, such as the concentrations of metals and organics, without considering how water quality is affected by the physical habitat in a stream or river. Water quality is greatly affected by the amount of large wood in the waterway, the river or stream's substrate (coarse gravel or fine sediment), the amount of native vegetation in floodplains and other aspects of physical habitat.

Physical habitat, in turn, is shaped in part by the larger forces of stream flow and hydrology. It has long been understood that the influence of stream flow, hydrology, physical habitat and water quality help determine which species are present within a watershed and the abundance, productivity and diversity of those species. For these reasons and others, the City defines its functional disposition in the watershed and river health as providing/conveying sustainable stream flow and hydrology and restoring and preserving water quality.

- **Stream Flow and Hydrology**: Maintain, or as necessary reduce, dry weather flow conditions using the Standard Urban Storm Water Management Plan to prevent an increase in runoff due to development and redevelopment projects, thereby protecting and improving watershed and stream health, channel function and public health and safety.
- **Water Quality:** Protect and improve surface water and groundwater quality and meet or surpass state and federal water quality standards and regulations.

Improving water quality within the City's jurisdiction will contribute to overall watershed health and will help keep the watershed as healthy as possible. John Muir said it best, "*When we try to pick out anything by itself, we find it hitched to everything else in the universe*".

## 1.6 GEOGRAPHICAL INFORMATION SYSTEM (GIS)

PY5 is the ninth year our City is using a Geographical Information System to present the location of El Cajon within the San Diego Watershed (See Figures following within this section). Base maps and information obtained from SanGIS provided the basic information to start layering jurisdictional and regional information. Deciding on the types of data and what needs to be shown are the biggest questions to answer.

In 2006-2007 the City created a new full-time GIS position to assist the Storm Water Program. The City is working on completing and implementing an Enterprise GIS. To achieve this goal the City is currently dedicating more resources to a growing GIS staff and a new server.

One of the main benefits of GIS is improved management of your organization and resources. A GIS can link data sets together by common location data, such as parcel numbers, which helps departments and agencies share their data. Storm Water staff identified the Business License database as information easily integrated into a GIS to show and list the parcels within 200 feet of the five (5) major El Cajon drainage channels. The saying, "better information leads to better decisions" is true for GIS. A GIS is not just an automated decision making system but a tool to query, analyze, and map data in support of the decision making process.

The GIS maps presented in this PY5 Annual Report are used as tools by storm water staff to aid in the making of decisions that will be crucial to the direction of the Storm Water Program. Three maps follow this page showing:

- San Diego County Regional Watersheds
- San Diego River Watershed with a focus on El Cajon
- City of El Cajon showing Residential (green), Commercial (red), Industrial (pink), and School Districts (blue).

The information can be presented succinctly and clearly in the form of a map and accompanying report, allowing decision makers to focus on the real issues rather than trying to understand the data.

## 1.7 SIGNIFICANT ACCOMPLISHMENTS

The following significant accomplishments were completed and helped to maintain Watershed and River Health. Elimination of pollution is mainly due to routine scheduled municipal maintenance activities, municipal and commercial education efforts, outreach to the public and daily contact with citizens. The following is a summary of the major investments in reducing pollutant loads to receiving waters.

- Continued to implement and refine the Enforcement program for City Ordinances 4907 (JURMP) and 4908 (Standard Urban Storm Water Management Program (SUSMP) requirements). Streamlined enforcement activities with the inspection database to better coordinate and design correction actions.
- Continued to improve an inspection program for construction, commercial and industrial facilities based on Best Management Practices (BMP) implementation. Tracking BMP implementation and ensuring that all minimum required BMPs are installed and maintained properly helps ensure that pollutants are not discharges from those facilities. (List is continued following the three pages of GIS Maps).

Regional Watershed Map

SD River Watershed Map

El Cajon GIS Map

- Inspected and provided educational materials to 208 industrial and commercial businesses for compliance with the City's Municipal Code and the State's General Permits for construction and industrial activities.
- The City's comprehensive street sweeping program swept 17,677 miles of improved streets and collected 3,710 cubic yards of materials from City streets. About 38% of the material collected this year was sediment and silt. Many areas were swept twice per week.
- Collection of over 1,788 cubic yards of materials from City inlets, culverts, concrete-lined channels, and catch basins;
- Reached out to community members on a wide range of urban runoff and storm water quality topics through approximately 266,000 copies of articles, brochures, mailers, and over-the-counter sources.

## 1.8 RWQCB Compliance Reviews and Inspections

During this reporting period, no formal comments were received from the RWQCB regarding the Annual Report for PY4 (2010-11).

## 1.9 Organization and Content of Annual Report

The Permit requires the submittal of an Annual Report to the SDRWQCB. This Annual Report covers the single permit year activities between July 1, 2011 and June 30, 2012. The Dry Weather Monitoring for 2012 (Section 7) will be submitted as a separate document on December 15, 2012.

The PY5 Annual Report presents and discusses implementation of the City's JURMP with a look at trends, BMP implementation, and overall JURMP effectiveness. Organization of the PY5 Annual Report is as follows:

- Executive Summary and Report Certification
- Section 1 - Introduction
- Section 2 - Development Planning Component
- Section 3 - Construction Component
- Section 4 - Municipal Component
- Section 5 - Industrial and Commercial Component
- Section 6 - Residential Component
- Section 7 - Illicit Discharge Detection and Elimination Component
- Section 8 - Education Component
- Section 9 - Public Participation Component
- Section 10 - Fiscal Analysis Component
- Section 11 - Effectiveness Assessment Component
- Section 12 - Special Investigations
- Section 13 - Non-Emergency Fire Fighting
- Section 14 - JURMP Revisions
- Section 15 - Conclusions and Recommendations

Charts, graphs, figures, and pictures are used to demonstrate the fulfillment of Permit and JURMP requirements or to highlight a special program accomplishment and event. Appendices provide additional information to validate activities or procedures.

Specific importance is placed on the assessment of JURMP implementation as this process is essential to determine if the City's program is reaching the Permit goal of improving receiving water quality. Some practices and structures (BMPs) listed in the JURMP to reduce or eliminate pollutants may prove to not be as effective as anticipated. An iterative process of BMP development, implementation, monitoring, and assessment focuses the JURMP such that JURMP programs are sufficiently comprehensive and effective to achieve Permit requirements and program objectives.

# SECTION 2 DEVELOPMENT PLANNING COMPONENT

**2.1 Introduction 2**

**2.2 Assessment Of General Plan 2**

**2.3 Modification Of Development 3**

2.3.1 Development Project Approval Process 3
2.3.2 Standard Urban Storm Water Mitigation Plan 4
2.3.3 Waiver Provisions 9

**2.4 Treatment Control Bmp Maintenance Inspections 10**

**2.5 Revised Environmental Review Process 11**

**2.6 Development Planning Outreach Efforts 11**

**2.7 Regulatory Comments 12**

# SECTION 2 DEVELOPMENT PLANNING COMPONENT

## 2.1 INTRODUCTION

Over the last few years the City of El Cajon (City) implemented procedures to minimize the short and long-term impact on receiving water quality from new development and redevelopment. Major steps were taken to accomplish this goal under Order No. 2001-001. The City completed the requirements of the plan which include the following four components:

1. Assessment of General Plan
2. Modification of Development (Project Approval Process)
3. Revision of Environmental Review Process
4. Conducted Education Efforts Focused on New Development and Redevelopment

During PY2011-12 the process continued to evolve to incorporate requirements under new Municipal Permit Order No. R9-2007-0001 and SUSMP requirements. The City adopted updated Ordinances in PY1 and again during PY4 to comply with new requirements.

## 2.2 ASSESSMENT OF GENERAL PLAN

The General Plan provides a jurisdictional framework for directing land use and development decisions within the City. Therefore, it is important that the General Plan include provisions to address water quality. The City incorporates elements into the General Plan that provide an adequate foundation for controlling land use and development in a manner consistent with water quality objectives required by the Municipal Permit Order No. 2007- 0001 (Permit).

On January 14, 2003, Resolution No. 10-03 was approved amending the General Plan and adding storm water runoff policies and objectives. The amendment is consistent with the City's Jurisdictional Urban Runoff Management Plan (JURMP) and provides policy and objectives dealing with storm water runoff to guide decision-making as mandated in the Permit. A copy of Resolution No. 10-30 is included in Appendix A.2. A copy of the General Plan is shown on the following page.

## 2.3 MODIFICATION OF DEVELOPMENT

### 2.3.1 Development Project Approval Process

Development becomes a project once the applicant completes planning action forms that describe the type of development proposed. The planning action is routed to many departments including Storm Water. Consolidated comments from Public Works are attached directly to the project as a list of conditions to the proposed planning action. Conditions are then reviewed and accepted by City Council making them enforceable. The City does not issue building permits until all requirements addressing water quality are fulfilled. Similarly, the City does not grant a final occupancy certificate until all storm water requirements are completed.

To protect our natural resource waterways, the City has continued ordinance development and implementation to address water quantity and quality. New and Redevelopment projects are reviewed for applicable BMPs to attain:

- Reduction in paved areas
- Maximize infiltration
- Detain or retain flows to reduce the speed at which water discharges to natural areas, and break Directly Connected Impervious Areas (DCIAs).
- Minimize potential pollutants from reaching the Municipal Separate Storm Sewer System (MS4) from grading and other construction activities by meeting the provision specified in Section D.2 of the Permit.
- Require Industrial applicants subject to California's statewide General NPDES Permit for Storm Water Discharges Associated with Industrial Activities to provide evidence of coverage under the General Industrial Permit.
- Require project proponents to provide proof ensuring ongoing long-term maintenance of structural Treatment Control BMPs.

### 2.3.2 Standard Urban Storm Water Mitigation Plan

The City participated with other Copermittees in revising and updating the BMP requirements that were listed in the Model Standard Urban Storm Water Mitigation Plan (SUSMP) that was submitted to the Regional Water Quality Control Board (RWQCB) in February 2002. Consequently, the City adopted Ordinance 4717 adopted on December 2002 to implement local SUSMP to reduce pollutants and runoff flows from all new development and significant redevelopment. The City revised the SUSMP ordinance in December 2007, which adopted Ordinance 4908, creating Municipal Code 16.60 for New and Re-Development pursuant to SUSMP requirements per Permit R9-2007-0001. The City, subsequently, adopted the final Countywide Model SUSMP in February 2010.

The City has incorporated the Hydromodification Management Plan (HMP) requirements into the City's Local SUSMP. The HMP was developed by a consultant, Brown & Caldwell, and regional workgroup and the draft HMP was submitted on January 24, 2009 with a revision submitted in May of 2009. After receiving comments from the RQWCB in June of 2009, the final HMP was prepared along an HMP Sizing Calculator. The final HMP was accepted by the RQWCB on July 14, 2010 and the HMP requirements were incorporated into the Local SUSMP in September of 2010 to meet the January 14, 2011 deadline. No priority projects in the City of El Cajon triggered interim HMP criteria, since proposed projects did not disturb more than fifty acres. All priority projects still under review have been and will continue to be assessed for HMP triggers. As of yet the City has not had to review calculations for HMP for any projects as all of the proposed projects have been deemed exempt from HMP sizing, having proposed to reduce the amount of impervious areas or at least to not exceed the amount of impervious area that was existing.

Last year the City also completed a comprehensive update of the El Cajon Sewer Ordinance to give the City legal authority to enforce the wastewater discharge requirements of Regional Water Quality control Board Order No. R9-2007-0005. For a complete summary of this Ordinance update, refer to Appendix D.3. For a complete copy of the new Sewer Ordinance, refer to Appendix D.4.

Projects triggering the New and Re-Development SUSMP requirements are:

- Housing projects with at least 10 units
- Commercial developments at least 1 acre in size
- Heavy Industry
- Automotive repair shops
- Restaurants
- Hillside developments that are 5,000 square feet or greater
- Developments within Environmental Sensitive Areas
- Parking lots 5,000 square feet or more or with 15 or more parking spaces potentially exposed to urban runoff
- Streets, roads, highways, and freeways with an area equal to or greater than 5,000 square feet
- Retail Gas Outlets

Projects trigger the SUSMP requirements during the initiation of a planning action or environmental investigation brought on by the California Environmental Quality Act (CEQA). The Storm Water section of Public Works reviewed a total of 53 planning actions, none of which were categorized as a new high priority SUSMP project (please refer to Appendix A.2 for a list). The City reviewed 5 SUSMP projects, some of which had been under review since last year and years prior (please refer to Appendix A.2 for a list). Planning Actions and New Development projects are tracked using a MS Excel spreadsheet.

An example Storm Water Mitigation Plan (SWMitP) that includes a list of SUSMP conditioning requirements are given to SUSMP priority projects at the earliest planning stage (please refer to Appendix A.2 for sample SWMitP). BMPs and the pollutants that are targeted for reduction or elimination to the maximum extent practicable (MEP) are listed in Table 1.

**Table 1 – BMP to Pollutants for New and Re-Development Projects**

| BMP | Primary Pollutants | 303(d) Pollutants |
|---|---|---|
| Site and Facility Design | Flow | |
| Site Design and Landscape Planning – SD-10 | Flow | |
| Efficient Irrigation – SD-12 | Nutrients | **TDS**<br>**Nutrients** |
| Storm Drain Signage – SD-13 | Trash<br>Oil & Grease<br>Toxics | |
| Pervious Pavements – SD-20 | Sediment<br>Oil & Grease | **TDS** |
| Trash Storage Areas – SD-32 | Trash<br>Bacteria | **Bacteria** |
| Vehicle Washing Areas – SD-33 | Metals<br>Detergent | **TDS** |
| Detention Basin - TC-22 | Trash<br>Sediment<br>Metals<br>Bacteria<br>Oil & Grease<br>Organics | **TDS**<br>**Bacteria**<br>**Nutrients**<br>**ODS (Oxygen Demanding Substance)** |
| Vegetated Swale – TC-30 | Sediment<br>Metals<br>Oil & Grease<br>Organics | **TDS**<br>**Nutrients**<br>**ODS** |
| Bioretention – TC-32 | Sediment<br>Oil & Grease<br>Nutrients<br>Trash<br>Metals<br>Bacteria<br>Organics | **TDS**<br>**Nutrients**<br>**Bacteria**<br>**ODS** |
| Media Filter – TC-40 | Sediment<br>Trash<br>Metals<br>Bacteria<br>Oil & Grease<br>Organics | **TDS**<br>**Bacteria**<br>**ODS** |
| Water Quality Inlet Filter – TC-50 | Oil & Grease<br>Trash | |
| Vortex Separator – MP-51 | Trash<br>Sediment | |
| Drain Inserts – MP-52 | Trash<br>Oil & Grease | |
| Underground Concrete Retention - Proprietary | Flow | |

SUSMP projects must identify pollutants of concern based on anticipated and potential pollutants generated from the proposed project and implement BMPs that target the reduction or elimination of the identified pollutants to the MEP. Anticipated and potential pollutants generated by land use type are shown in Table 2.

**Table 2 – Anticipated and Potential Pollutants Generated by Land Use Type**

| Priority Project Categories | Sediment | Nutrients | Heavy Metals | Organic Compounds | Trash & Debris | Oxygen Demanding Substances | Oil & Grease | Bacteria & Viruses | Pesticides |
|---|---|---|---|---|---|---|---|---|---|
| Detached Residential Development | X | X | | | X | X | X | X | X |
| Attached Residential Development | X | X | | | X | P(1) | P(2) | P | X |
| Commercial Development >one acre | P(1) | P(1) | X | P(2) | X | P(5) | X | P(3) | P(5) |
| Heavy Industry | X | | X | X | X | X | X | | |
| Automotive Repair Shops | | | X | X(4)(5) | X | | X | | |
| Restaurants | | | | | X | X | X | X | P(1) |
| Hillside Development >5,000 ft2 | X | X | | | X | X | X | | X |
| Parking Lots | P(1) | P(1) | X | | X | P(1) | X | | P(1) |
| Retail Gasoline Outlets | | | X | X | X | X | X | | |
| Streets, Highways & Freeways | X | P(1) | X | X(4) | X | P(5) | X | X | P(1) |

X = anticipated
P = potential
(1) A potential pollutant if landscaping exists on-site.
(2) A potential pollutant if the project includes uncovered parking areas.
(3) A potential pollutant if land use involves food or animal waste products.
(4) Including petroleum hydrocarbons.
(5) Including solvents.

Once potential pollutants of concern are identified for the proposed SUSMP project, BMPs must be selected from a list of required and project specific BMPs provided below in Table 3. All site design criteria are applied to every SUSMP project while source and treatment controls are dependent upon site location and type of pollutants.

**Table 3 – Site Specific BMPs**

| | New Development (Including Re-Development) | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| | Home Subdivisions ≥10 units | Heavy Industry ≥1 acre | Commercial Development ≥1 acre | Automotive Repair Shops | Restaurants | Hillside Development ≥ 5,000 sq ft | ESAs | Parking Lots ≥15spaces; ≥ 5,000 sq ft | Street, road, highways, and freeway ≥5,000 sq ft | Retail Gasoline Outlets |
| **General Site Design (Apply All)** | | | | | | | | | | |
| **Control Peak Runoff Rates** | X | X | X | X | X | X | X | X | X | X |
| **Minimize impervious Areas** | X | X | X | X | X | X | X | X | X | X |
| **Conserve Natural Areas** | X | X | X | X | X | X | X | X | X | X |
| **Protect/slopes/and channels** | X | X | X | X | X | X | X | X | X | X |
| **Minimize effective imperviousness** | X | X | X | X | X | X | X | X | X | X |
| **SOURCE CONTROLS (Apply all that are Applicable)** | | | | | | | | | | |
| **Storm Drain Message and Signage** | X | X | X | X | X | X | X | X | X | X |
| **Outdoor storage area design** | | X | X | X | X | | | | | X |
| **Trash Storage Area Design** | | X | X | X | X | | | | | X |

| **Detention/Infiltration Basin** | X | | X | X | X | X | | | X | |
| **Porous Pavement Detention** | X | | X | | X | X | | X | | |
| **Porous Landscape Detention** | X | X | X | | X | | | X | X | |
| **Infiltration Trench** | X | | X | | | | X | X | | |
| **Media Filter** | X | X | X | | | | X | X | | |
| **Proprietary Controls** | | | | | | X | | | | X |
| **Other** | | | | | | | | | | |

For PY2011-12, 2 SUSMP projects completed construction and included Treatment Control BMPs. Projects with SUSMP requirements that were completed and inspected for BMP implementation in 2011-12 are listed in Table 4. For the current inventory of all sites with Treatment Control BMPs and BMP implementation infeasibility analyses please refer to Appendix A.2.

**Table 4 – Application of SUSMP Structural BMPs for Completed Projects**

| SUSMP Project | Media Filter(s) | Inlet Filter(s) | Porous Pavement | Bioretention Basin(s) | Vegetated Swale(s) | BMP Facilities Maintenance Agreement |
|---|---|---|---|---|---|---|
| 100 Civic Center Way Public Safety Center | X | NA | NA | NA | X | NA |
| 500 N. Johnson Ave. Inland Kenworth | NA | X | NA | X | NA | X |

One of the constructed SUSMP projects mentioned above was the Inland Kenworth project. This large scale urban redevelopment project was a recently demolished commercial property, which was previously a multi-unit commercial complex that was nearly 100% impervious. The project met four SUSMP triggers: the project created more than 2,500 square feet of impervious area within an ESA; the parking areas proposed were greater than 5,000 square feet; and was a commercial project over one acre with an automotive service facility. This project was exempt from HMP requirements because the completed project had an overall net reduction in impervious area. The project site had one large building surrounded by driveway lanes with a large parking lot area to the south. The property was flanked by the County Ditch concrete channel along its entire western property boundary.

The structural BMPs that were implemented to treat the post construction storm water runoff from the building drive aisles and parking lot area through Low Impact Development (LID) practices were vegetated bioretention basins that surrounded the northern southern and eastern perimeters. The post construction storm water runoff from these areas was designed to flow down the embankment of each of the bioretention basins through a series of openings in the curb. The embankments below these curb-cuts were protected with rock riprap for energy dissipation.

All basins were designed with a 4” perforated underdrain pipe system that was attached to an overflow catch basin. These catch basins each contained a multi-stage inlet filter that included a treatment boom around the opening for filtering fine sediments and fossil fuels and a basket and mesh bag capture system for coarser sediments and debris, including trash. These catch basins were, in turn, connected to either the existing County Ditch channel or an existing lateral that ran across the property and ultimately connected to the County Ditch channel.

### 2.3.3 Waiver Provisions

In the event that a Priority Project is unable to meet the treatment control BMP sizing requirements outlined in the City’s SUSMP, the City has the authority to issue a wavier. In order to receive a waiver for treatment control BMP sizing requirements, the project must prove that

all available treatment control BMPs have been determined to be infeasible for the site. If a waiver of infeasibility is issued, the City will notify the RWQCB within five days of granting the wavier. The following information will be provided to the Regional Board:

- The name of the City employee granting the waiver
- The name of the developer receiving the waiver
- The location of the site
- The reason for granting the waiver
- A description of the BMPs required for the site

The City has never granted such a wavier to a Priority Project in the past and does not anticipate granting waivers in the future; however, if waivers are necessary, the City may choose to develop a waiver mitigation program. The waiver mitigation program would collect funds from projects that receive waivers and use the funds on programs to improve water quality in the projects' watershed.

**Table 5 – BMP Implementation Summary**

| BMP | Percent Implemented | Pollutant Prevented |
|---|---|---|
| Control Peak Runoff Rates | 100 | Flow |
| Minimize Impervious Areas | 100 | Flow |
| Conserve Natural Areas | 100 | Flow |
| **BMP** | **Percent Implemented** | **Pollutant Prevented** |
| Protect Slopes and Channels | 100 | Sediment |
| Minimize effective imperviousness | 100 | Flow |
| Storm Drain Message and Signage | 100 | Trash, Oil & Grease |
| Trash Storage Areas | 100 | Trash, Oil & Grease |
| Repair/Maintenance Bay Design | 100 | Oil & Grease |
| Proof of Maintenance | 100 | Trash, Oil & Grease |
| Inlet Filter(s) | 50 | Sediment, Trash, Oil & Grease |
| Grass Strip or Swale (Biofiltration) | 50 | Flow, Sediment, Oil & Grease, Trash |
| Detention Basin/Area | 100 | Flow, Sediment, Oil & Grease, Trash |
| Bioretention | 50 | Trash, Sediment, Oil & Grease |
| Infiltration Strip/Area | 0 | Flow, Sediment, Oil & Grease, Nutrients (**TDS**) |

**Note on Table 5:** Percentages of BMPs implemented, shown in Table 5, are based on the number of applicable sites. For example, if there were three Hillside Development projects and all three-implemented slope stabilization, that would be all of the applicable projects. A 100% implementation equates to those applicable sites and not to all sites.

## 2.4 TREATMENT CONTROL BMP MAINTENANCE INSPECTIONS

All treatment control BMPs installed at priority development projects are regularly inspected by the City to ensure treatment controls are operating effectively and are being properly maintained. Inspection frequencies are based on the project's assigned TTWQ priority as determined by the criteria outlined in the City's 2008 JURMP. Table 6 below presents treatment control BMP TTWQ priorities and their corresponding inspection frequencies.

**Table 6 – Treatment Control BMP Inspection Frequencies**

| Development Project with Treatment Control BMPs TTWQ | Inspection Frequency |
|---|---|
| High | Annually (prior to the start of the rainy season) |
| Medium | Every two years |
| Low | As needed |

The City requires annual verification of proper maintenance of all priority development treatment control BMPs by the party responsible for maintenance prior to the start of the rainy season. To ensure the continued maintenance of these BMPs, the City is continuing to inspect SUSMP projects for the duration of the use of said site. As required by the Municipal Permit, a minimum of 20% of the total number of projects with approved treatment controls and a maximum of twice the average number of projects with treatment control BMPs approved per year are inspected annually. Additionally, 50% of all medium priority sites with drainage inserts are inspected annually. Inspections include examination of all treatment control BMPs at the site to verify that each treatment control BMP is working, being maintained properly, and is in compliance with all applicable City ordinances and permits. Inspection findings are documented by the inspector using the City of El Cajon Treatment Control BMP Inspection form in Appendix A.2. In order to check the maintenance of a greater cross-section of sites, the City will continue to rotate the list of the medium and low TTWQ sites that are inspected each year. If any deficiencies in treatment control operation and maintenance are noted during the inspection, the responsible party is notified, and appropriate enforcement actions are taken to achieve compliance. The list of the sites inspected in PY2011-12 can be found in Appendix A.2. Inspection findings and follow-up actions for each development site with installed treatment controls are included in the City's treatment control BMP tracking database. A Treatment Control BMP Maintenance Verification Letter and Form was sent to all sites in the inventory. A template of the letter can be found in Appendix A.2.

## 2.5 REVISED ENVIRONMENTAL REVIEW PROCESS

The City of El Cajon revised CEQA forms and checklists to include questions related to water quality issues. The City reviews all projects for CEQA and there were 2 projects that needed to complete the revised forms for PY2011-12. These forms are attached in Appendix A.2.

## 2.6 DEVELOPMENT PLANNING OUTREACH EFFORTS

Education efforts for disseminating information to planners, developers, and contractors on the JURMP requirements for new and significant redevelopment is provided through one-on-one and

group discussions at the time of the various discretionary plan reviews and checks, during BMP development, and at time of obtaining the building permit. Topics include:

- Federal, state, local water quality laws and regulations
- Connection between land use decisions and water quality goals
- New and Redevelopment requirements
- Water quality impacts from development (urbanization)
- Methods for minimizing impacts of development on water quality.
- Implementation of SUSMP requirements

## 2.7 REGULATORY COMMENTS

As of the writing of this report, no regulatory comments have been received for JURMP Annual Report 2010-11.

# SECTION 3 CONSTRUCTION COMPONENT

| | | |

# SECTION 3 CONSTRUCTION COMPONENT

## 3.1 INTRODUCTION

Construction in the City of El Cajon is a constant activity. Whether it is a 500 square foot remodeling project or a multi-single family residential subdivision, a minimum list of construction BMPs must be in place prior to any earth disturbance or material storage. With a City built out to its current borders, the City experiences re-development activities more so than new development. However, clearing currently developed lands and re-development is at the heart of this community's construction and revitalization efforts.

Park Avenue Subdivision

## 3.2 PREVENTION OF POLLUTED RUNOFF

The City uses the CalTrans Construction Site BMP Manual together with the California Storm Water Quality Association Best Management Practices (BMPs) Handbook as guidance for the application of appropriate BMPs. An emphasis on pollution prevention is the easiest and most convenient set of BMPs to implement and achieve the elimination of polluted discharges. The following prevention practices are part of the minimum set of BMPs for construction sites.

- Prevent sediment and other polluted runoff – Design a sediment basin to trap runoff for zero discharge, specifically for larger construction sites with enough room for sizing adequate basins.
- Prevent bacteria discharges – Place portable sanitary facility in secondary containment and secure to the ground or stable structure. Prevents tipping and loss of bacteria (fecal coliform) containing material.
- Prevent alkaline (greater than 10.0 pH) runoff – Require properly designed and installed Concrete Washout areas and encourage concrete contractor to haul away concrete waste. Concrete waste disposal should be at an offsite location with adequate control measures.

The City works closely, often one-on-one, with developers at the counter and field discussing ways to prevent pollution from entering the storm drain. The pollution prevention practices are required for any applicant looking for a building permit.

Copies of construction handouts provided by the building department and additional information given to developers, contractors, and homeowners at the time of Erosion Control Plan submittal can be found in Appendix A.3.

## 3.3 UPDATES TO ORDINANCES

In accordance with Section D.2.a of the Permit, the City Municipal Code Title 13 Chapter 13.10 *Storm Water Management and Discharge Control* was updated in 2008 to comply with the new grading requirements. The City Municipal Code Title 13 Chapter 13.10, Section 13.10.140; and Chapter 15.64, *Grading*, work together in addressing land disturbance, demolition, and construction activities for the elimination of sediment and other pollutants from discharging into the City's storm drain system.

## 3.4 MODIFICATION OF CONSTRUCTION AND GRADING APPROVAL PROCESS

Shortly after the Chapter 13.10 was updated, the City assessed and modified the local construction permit and grading approval process to comply with Section D.2.a of the Permit. All construction projects are required to go through a storm water review process. Construction and grading projects are required to implement measures to ensure that pollutants from the construction site are reduced to the Maximum Extent Practicable (MEP) and will not cause or contribute to an exceedance of water quality objectives. The City does not allow clearing of vegetation matter or grading activities until all necessary environmental clearances, including water quality, are secured and a grading, drainage, and erosion/sediment control plan is prepared, reviewed and approved by the City. During the review process, the City ensures that all applicable grading and storm water ordinances are fully implemented as required per El Cajon City Code Title 13, Chapter 13.10, Section 13.10.140; grading ordinance Chapter 15.64 and Chapter 16.60. The City does not issue Building Permits until requirements addressing storm water and water quality have been fulfilled.

## 3.5 PRIORITY CONSTRUCTION SITES AND SOURCE IDENTIFICATION

Periodically the City reviews the list of high priority construction projects to update the list for close monitoring and inspection of construction activities and BMPs implementation for reducing or eliminating pollution from entering the City's storm drain system. High priority status is applied to projects that pose a potential threat to water quality or location. Priority is also given to SUSMP projects that are complete and need to have the storm water controls verified and the maintenance plans reviewed. Table 1 lists the selection of BMPs that must considered and the appropriate BMPs installed at all high priority projects. See Section 3.8 for any Enforcement Actions. In PY5 the City had no medium priority construction project and 4 active high priority construction projects, all of which were SUSMP projects. Also in PY5 the City approved 126 low priority projects for construction. A list of all active and inactive high priority construction sites is given in Appendix B.2.c. No project was required to have advanced treatment during construction as none were classified as an exceptional TTWQ.

## 3.6 BMP IMPLEMENTATION AND REQUIREMENTS

The City established minimum BMPs that must be implemented at all construction sites regardless of the water quality prioritization. The City developed a list of BMPs required at all construction sites. This list first appeared in the JURMP as Appendix C, but has recently been revised and updated to comply with Order R9-2007-0001. BMPs specifically prevent, remove, or eliminate a pollutants or group of pollutants from entering the storm drain system.

Table 1, below, lists the minimum required BMPs for construction sites, the primary pollutant eliminated and the potentially affected 303(d) pollutant. Eliminating pollutants meets the Clean Water Act and Permit objectives for maintaining the biological, physical, and chemical integrity of the State's waters, while a "no impact" condition meets the restoring requirement of the Clean Water Act objective.

A first step toward connecting construction activities to water quality is shown in the following table. The next step is to quantify how many sites are compliant with the minimum BMP requirements. Table 1 summarizes the minimum BMP requirements and the pollutants that each targets for prevention (including minimization of grading activities), removal or elimination. Table 2 lists the different types of construction projects and the minimum BMPs required for each category. Table 3 connects and quantifies the number sites compliant with the required BMPs. In Section 11, the Effectiveness Assessment of the Construction Component will draw on this connection between BMP implemented and pollutant to determine if the program activities adequately reflect a move toward improving water quality or have little effect on water quality.

**Table 1 – BMP to Pollutant**

| BMP | Application | Primary Pollutant Removed | 303(d) Pollutant Impact |
|---|---|---|---|
| Silt Fence (SC-1) | Perimeter Control to remove sediment and debris in runoff | Sediment | TDS |
| Desiltation Basin (SC-2) | Captures sediment runoff and eliminates sediment runoff | Sediment | TDS |
| Gravel Bag Barrier (SC-6) | Perimeter Control for pavement to pavement. Removes sediment runoff | Sediment | TDS |
| Fiber Roll (SC-5) or Coconut Fiber Blankets | Erosion Control for slopes to prevent sediment runoff | Sediment | TDS |
| Stabilized Construction Entrance (TC-1) | Tracking control for imperviousness to pavement to prevent sediment tracking into streets | Sediment | TDS |
| Street Sweeping (SC-7) | Tracking control for paved areas. Collects/removes sediment tracked onto pavement | Sediment | TDS Phosphorus |
| Material Storage (WM-1) | Material coverage and containment or pavement or impervious surfaces to | Stucco, Paints, | pH TDS |

| BMP | Application | Primary Pollutant Removed | 303(d) Pollutant Impact |
|---|---|---|---|
| | eliminate polluted runoff | Concrete | |
| Solid Waste (WM-5) | Trash/debris coverage and containment. Prevent trash runoff | Trash, debris* | Bacteria Phosphorus |
| Concrete Washout (WM-8) | Containment and disposal of concrete washout. Prevents concrete runoff | Concrete-laden Waters | pH TDS |
| Sanitary Waste (WM-9) | Containment of sanitary waste. Prevents bacteria runoff | Bacteria | Fecal Coliform |
| Vehicle/Equip Management (NS-8, NS-9, NS-10) | Containment of petroleum fluids. Prevents oil & grease runoff | Oil & Grease | TDS |

* Pollutant being monitored by East County Cities
"-" Designates "no impact" on levels of 303(d) pollutants; supports Clean Water Act objective to maintain or restore water quality

---

Implementation is measured through onsite inspections. Success of that implementation depends on stage of project at time of contact, materials presented, BMP selection, and developer motivation to comply with construction requirements. The City provides a Storm Water Guideline to developers for Construction Projects. This simple, easy to use guide lists the construction BMPs to use for construction activities that would occur outdoors and potentially affect storm water quality.

Associations, such as the Building Industry Association (BIA), have assisted in disseminating information to contractors and builders. Those construction personnel who do not belong to associations receive BMP information at the time of permit application or permit issuance. There is a noticeable difference between Storm Water savvy developers and those just starting their first storm water compliance experience. The City is working towards optimizing interactions at the Public Works counter. Landscaping as early as possible is emphasized regardless of season. This information is provided to contractors as permit issuance and during each scheduled inspection. BMPs must be appropriate for site-specific conditions. Installing BMPs for the sake of compliance is not complying with MEP.

There are four categories of construction projects:

1. Pools, retaining walls, remodels, and additions
2. Single Family Residences, Condo Conversions, and Subdivisions
3. Hillside Development
4. Commercial/Industrial

The minimum required BMPs per category of construction are shown in Table 2, on the next page. The next step is to complete the BMP cycle by verifying during inspections that any BMPs are:

a. Present as required – indicates changes in knowledge and awareness.
b. Implemented properly and functioning correctly – indicator of behavioral changes.

Printed materials are available at the Public Works Department making over-the-counter interactions into educational opportunities. A City BMP guide, edited summaries of application JURMP sections, and personalize service functions as the City's implementation tools. To prioritize effectiveness efforts, the City focuses on the prevention and elimination of the 303(d) pollutants to address the restoration requirement of the Clean Water Act and our Municipal Storm Water Permit. Overall Effectiveness of the Construction Component is provided in Section 11.

**Table 2 – Required BMPs for Construction Sites**

| Required Construction BMP | Construction Type | | | |
|---|---|---|---|---|
| | Pools, Retaining Walls, Remodels, Additions | SFR Subdivisions | Hillside Development | Commercial and Industrial |

**X** = Required; Implemented; and Verified

## 3.7 INSPECTION

The City inspects all high priority projects as needed during the dry season and at least monthly or bi-weekly during the wet season. Inspections are completed using the form provided in Appendix A.3 (entitled City of El Cajon Storm Water Quality Inspection for Construction Sites). In PY5, the City had high priority projects, of which 4 were fully or partly active construction sites during the permit year and 1 was inactive for the entire duration. There are also 4 SUSMP project construction sites that have been inactive since at least PY4 and prior to PY5 had achieved a minimum of 70% stabilized coverage. These projects have been deemed by the City as not just inactive, but temporarily abandoned and are inspected only as needed until the sites are disturbed in the future. SUSMP projects are considered high priority construction projects and are inspected on the same schedule. All projects are inspected prior to completion of the projects to verify proper and complete installation of storm water treatment controls and review any long-term maintenance plans. Two (2) SUSMP projects were completed during PY5 and 4 remained inactive.

Projects designated as medium priority are inspected monthly during the wet season and on an as-needed basis during the dry season, as well as in response to a complaint received from City staff or the general public. The City had no medium priority projects under construction during PY5. The City maintains a detailed record for high and medium priority projects. A spreadsheet showing the period of time, in weeks, that each construction site was active within the wet season and the number of inspections conducted during the wet season and the dry season is attached in Appendix B.2.c. It is important to note that inspections in the spreadsheet account only for the inspections conducted by the Public Works Department; inspections conducted by other departments, which have also been trained in proper BMP implementation (such as the Building Department), are not included in the table.

In accordance to the Municipal Permit and the City's JURMP document, the City inspects low priority construction projects on an as-needed basis. Building Department personnel constantly inspect all projects designated as low priority for their own Building Code requirements. For this reason, the Building Staff has been trained by the Storm Water Department to recognize when to contact Storm Water personnel due to improper construction BMPs. The City approved 126 low priority projects (consisting mostly of single family residential additions) for construction in PY5. During Permit Year 2010-11 the City had implemented a new system for tracking permit reviews. The City is working on incorporating a means of gathering more detailed information for low priority construction sites with this new system. Important information, including the period of time the site is active within the wet and dry seasons, may be extracted from the database that the program is based on.

It is important to note that only inspections that were documented are included in the spreadsheet mentioned above. Visual inspections, which did take place throughout the permit year, are not tracked.

Table 3, below, shows the minimum BMPs implemented at high priority constructions, verified through inspections. The results are generated from inspection reports. A "Yes" under corrective action indicates that specific conditions noted during the inspection warranted actions by the contractor, such as maintenance or BMP improvements. All boxes with "Yes" listed in the "Citation" column refer to deficiencies in the BMPs at one site on one occasion.

**Table 3 – BMP Deficiencies for High Priority Sites**

| BMP | Discharge during Rain | Corrective Action | Citation |
|---|---|---|---|
| Silt Fence | Yes | Yes | Yes |

Inspection of construction sites in PY5 verified that most construction sites implemented BMPs. All BMP deficiencies were resolved through discussions between City staff, project construction personnel, corrective actions, and through enforcement actions. If corrective actions were needed, the construction site either completed the corrective action at the time of inspection or a follow-up visit was scheduled to verify the completion of corrective actions. When corrective actions are not completed in a timely manner, enforcement actions are issued. In PY5 the City had 12 enforcement actions related to construction inspections and follow-ups, but only 4 of those were related to priority project sites. Enforcement actions are further discussed in Section 3.8 and a list of enforcement actions categorized by components (i.e. construction, commercial, industrial, etc.) is attached in Appendix B.3.

**Table 4 – Capital Improvement Project Assessment**

| 2011-2012 CIP Construction Site Inspections | | Enforcement Actions | |
|---|---|---|---|
| **Job Site** | **Minimum BMP's in place** | **Warning(s)** | **Administrative Citation(s)** |
| Overlay 2012 – Park Avenue and Vicinity | Y | N | N |
| Resurfacing 2011 – Rubberized Slurry | Y | N | N |
| Storm Drain Pipe Repair 2011 – East Main Street and Bermuda Lane | Y | N | N |
| Chaparral High School Storm Drain Replacement | Y | N | N |
| Heartland Fire Training Facility – Concrete Paving | Y | N | N |

Public Works inspectors inspect the CIP projects for Storm Water compliance on an as-needed basis. This may be as frequently as weekly, or even daily, but generally no less than twice per month (when the inspectors are on the job for non-storm water related inspections) while the project is active. No CIP project met SUSMP criteria and no project disturbed more than one acre at any given time.

## 3.8 ENFORCEMENT

In PY5 the City had 3 enforcement actions pertaining to inspection follow-ups or complaints received for construction activities, 1 of which resulted in a monetary administrative citation. This citation was delivered to the Ballantyne Glen SUSMP project. The entire site drains to a sedimentation basin that became overburdened and discharged overly sediment-laden runoff during a rain due to lack of proper BMPs on each of the graded pads upstream. The City conducted follow-up inspections for all enforcement actions, including the Ballantyne Glen project, to verify that proper and complete corrective actions were taken in a timely manner. Corrective actions are needed to fix or improve a BMP even though that BMP may be implemented as written.

Administrative Citations are issued for discharges to the City's storm drain system. Most construction sites implement the minimum BMPs and inspections verified that the BMPs were effective in reducing or eliminating discharges to the storm water conveyance system. A list of enforcement actions categorized by components (i.e. construction, commercial, industrial, etc) is attached in Appendix B.3.

Other non-compliance issues for construction, except as described above, were not experienced during PY5, although some deficiencies were noted during construction inspections. Deficiencies are resolved through discussions between City staff, project construction personnel, corrective actions and through citations. All violations and deficiencies were corrected in a timely manner.

None of the violations resulted in threats to the environment or human health and notification to the Regional Board was not required.

## 3.9 CONSTRUCTION OUTREACH AND EDUCATION

Education of construction contractors and developers is conducted primarily through the permitting and inspection processes. The City's building department has the first contact with contractors and developers when a building permit application is completed. The following steps are taken by Building Division and Public Works/Storm Water staff:

1. Building Permit Application.
2. A Storm Water "Hold" is placed on the property.
3. Developer or contractor is given a Storm Water handout.
4. Discuss with developer or contractor, in detail, minimum BMPs and implementation requirements.
5. Developer or contractor generates an Erosion Control Plan plus any additional storm water requirements as necessary.
6. Review Erosion Control Plan and any additional requirements, comment, direct developer or contractor to make changes prior to approval.
7. Inspect according to priority.
8. Address Corrective Actions.

In PY5, the City reviewed and commented on 3 SUSMP projects, 5 Storm Water Mitigation Plans, no condominium conversion projects and 126 Erosion Control Plans for small projects. The City inspects all completed SUSMP projects to confirm proper installation of storm water controls and review the long-term maintenance plans. Copies of the Construction handouts and an example Erosion Control Plan Checklist for additions and remodels (small projects) are included in Appendix A.3.

Compliance is assessed through inspections by storm water staff or a City contractor. Inspections are completed on a scheduled frequency depending on the season. As mentioned above, during the wet season high priority construction projects are inspected at least monthly or bi-weekly.

## 3.10 IMPROVEMENTS AND REGULATORY COMMENTS

Generating improvements increases program efficiencies by harvesting those BMPs that work and discarding those that do not.

**Improvements**

Improvements to the Construction Component include:

- Storm Water Code Enforcement Officer is now provided with a copy of each approved Erosion Control Plan in addition to the office copy in an effort to keep an inventory in the City vehicle so they can be at-hand in the field if there are any issues on a site.
- Continue to focus inspection efforts on BMP implementation to facilitate Effectiveness Assessment.
- Continue to use BMP Implementation Inspection Checklist to list minimum required BMPs for construction.
- Continue to inspect construction of SUSMP projects as High Priority construction.
- Continue to use silt fences and gravel bags as primary perimeter controls.

**Regulatory Comment**

As of the writing of this report, no regulatory comments have been received for JURMP Annual Report 2010-11.

# SECTION 4 MUNICIPAL COMPONENT

**4.5 Improvements and Regulatory Comments 23**

# SECTION 4 MUNICIPAL COMPONENT

## 4.1 INTRODUCTION TO MUNICIPAL FACILITY ACTIVITIES

As required by Section 4 of the Municipal Permit, existing municipal facilities must prevent or reduce pollutants in urban runoff by implementing a City-designed program to address specific outdoor activities that have the potential to impact water quality. Municipal facilities include streets, public parking lots, flood control devices, parks/recreation, administration and other public buildings, maintenance and storage areas, police, and fire/safety stations. Activities at any one of these facilities may have the potential for discharging pollutants as urban runoff or during a rain event. The Municipal Component of the JURMP defines a comprehensive program to reduce the potential for polluted discharges through:

- Pollution Prevention activities,
- Best Management Practice (BMP) implementation,
- Storm Water Inspections, and
- Recycling

**Homeless**

Of specific note are the Homeless that are not only a social problem, but become an uncontrollable water quality problem. Homeless encampments exist in storm water channels because of easy access and good outdoor weather conditions nearly year round. Although prevalent in the storm drain channels, the homeless are difficult to detect in the underground storm drain system comprised of reinforced concrete boxes and even more difficult to permanently remove. Detection is conducted through weekly/monthly inspections of popular entry places and complaints to the Storm Water Complaint Hotline. Removal is accomplished through police enforcement and the homeless have an option for other housing with the City's new interim housing project. The City cleans all of its channels at least twice annually and encampments are removed at that time, however, the encampments are often re-established once the channel maintenance in that area is finished.

The photograph above emphasizes the enormous amount of materials associated with homeless encampments in the storm drain channel. Other than the visible pollutants of trash and debris, there are also the less collectable, non-visible pollutants from human waste.

The list of major pollutants associated with the homeless living in these underground flood control devices are:

- trash, (a monitored pollutant for East County)
- debris, and
- fecal coliform (a listed 303(d) pollutant for Forester Creek).

Our dry weather-monitoring program is designed to capture information on the homeless and track elevated levels of fecal coliform. The City will continue its efforts to reduce or eliminate the impacts caused by the homeless encampments within storm drain channels.

As in past years, Storm Water staff and City Maintenance crews teamed with Community Police and Interim Housing (a joint venture between Hammon Properties and Shadow Mountain Church) to move inhabitants into temporary housing, followed by clean up of storm drain channels. For those homeless willing to improve their situation, the Interim Housing group provides a "Hand Up" rather than a hand out. Those who wish to continue living in the City's storm drain system are detained, but eventually find new living places on the street. A County-wide, long-term solution to the homeless is not yet definable for storm water.

### 4.1.1 Prevention of Polluted Runoff

Anytime pollution is prevented from entering the storm drain system, less pollution must be managed at end-of-pipe. The following prevention activities and corresponding BMPs are fully implemented at one or more of the many municipal facilities located within the City. As noted in Introductory Section, the focus of PY5 is continuing BMP implementation, such that prevention of polluted runoff is achieved to the Maximum Extent Practicable (MEP). The primary pollutants of concern for this prevention effort are the 303(d) impairments of Forester Creek that include pH, total dissolved solids (TDS) as nitrates; and fecal coliforms. The impairment associated with the City of El Cajon or the upper section of Forrester Creek are bacteria and pH. Our City is in the beginning phase of implementation of a bacteria TMDL study. Further discussion of pH origin and any corrective actions are presented at the end of this section. Trash and debris is a specific issue being addressed as part of a watershed effort with the City of Santee.

When pollution is prevented from entering the storm drain system, it is either collected or eliminated. Collection requires management of gathered wastes, while elimination is true

prevention, but much more difficult to accomplish. The following municipal activities encompass collection and elimination activities.

1. Erosion and sediment control prevents soils and sediments from washing away during rain events. BMPs implemented for City Improvement Projects to control erosion and sediment during project activities are as follows:

- Preservation of existing vegetation
- Scheduling of projects
- Seeding and planting of native plants and trees that are drought resistant and do not contribute to discharges of vegetative matter to the City's MS4.
- Establish plant ground cover before removing erosion or sediment controls.

2. Roadway and street maintenance activities preserve these facilities for a longer, useful existence. Many maintenance activities keep pollutants from entering the storm drain system. Listed below are the maintenance activities with the gross amounts of pollutants collected. Pollution removed equates to preventing polluted runoff that could be transported in urban runoff or storm water discharges.

- Street sweeping and cleaning - Swept 17,677 miles of curbed streets and removed 3,710 cubic yards of materials that were disposed as solid waste. There are a total of 337 curb-miles of streets and a total of 483 lane-miles within the City. As stated in greater detail in the JURMP, some areas are swept on a more frequent basis. By collecting 3,710 cubic yards of trash, debris, and sediment, these pollutants did not enter the storm drain system and did not further impair Forrester Creek.
- Collected 42 cubic yards from spills and other miscellaneous operations
- Completed 78 special sweeps at the request of citizens or City staff, collecting 26 cubic yards of material. This is a lower number of special sweeps, but less material was collected than during PY4 (i.e., 66 special sweeps and 35 cubic yards).

3. Municipal vehicle maintenance facilities provide a valuable service in keeping the City's vehicles in top running condition. Maintenance activities are conducted in a manner to keep pollutants from entering the storm drain system. Listed below are the activities and their designated areas.

- Conduct vehicle maintenance indoors or under canopies
- Area designated for washing vehicles is covered and wash water drains to an oil/water separator before discharging to the sanitary sewer
- Area designated for rinsing street sweepers directly discharges to the sanitary sewer
- Recycling motor fluids (oil and antifreeze), tires, batteries, and metal

4. Landscaping maintenance activities beautify our parks, recreation, and administration buildings. Pollution prevention maintenance activities include:

- Collection of grass clippings and discarded as solid waste

- Sweep or blow residual clippings onto turf areas
- Clean City-owned patio and plaza areas uses machinery that retains the cleaning liquids during the cleaning process
- Aerate soil frequently to encourage rain penetration and infiltration
- Maintain an Integrated Pesticide Management (IPM) program

5. Maintenance Procedures for MS4s includes inspecting and maintaining MS4 by cleaning, removing sediment, debris and vegetation; repairing or replacing damaged and failing structures; and stenciling/posting signs at storm water inlets and conveyance systems. Approximately 3,710 cubic yards were collected during PY5. Maintenance crews responded to 17 requests by city staff and citizens to maintain the storm drain system. A work survey request (WSR) is completed for each of the requests and filed at the Maintenance Yard on Vernon Way.

- Storm Drain Inlet/ Catch Basin cleaning
- Storm Drain system repair and maintenance

6. Building Maintenance activities at Municipal facilities prevent pollution by collecting debris, dirt, and organic materials before rain events transport this material to the storm drain system. Wash water is disposed into the sanitary sewer and dry methods are used to collect materials to dispose as solid waste. The following are completed on a weekly schedule:

- Sweep and clean parking lots
- Clean sidewalks
- Sweep and clean entry ways
- Control irrigation runoff and over-spray

7. A Sewer Maintenance program assists in preventing sanitary sewer spills and prevents sewage from entering the storm drain system using the following plans and BMPs:

- Identify and respond to overflow spills and leaks
- Contain and properly dispose of spilled sewage for public and private sewer overflows
- Repair damaged and leaking public sewer lines

- Identify potential problem areas, such as sewer lines in isolated, hard-to-access canyons, or sewer lines at end-of-life condition, for inclusion in annual Capital Improvement Projects
- TV inspection of sewer main lines
- Annual cleaning of main sewer lines
- Quarterly (3-month) cleaning of sewer siphons, trouble spots and problem manholes
- Quarterly (3-month) rodding and descaling of problem sewer lines
- Cleaning and inspection of trunk and outfall sewer mains as part of the preventive and predictive program.

During PY5, the City cleaned 218.96 miles of sanitary sewer main line, while experiencing four public sanitary sewer overflows. The City also responded to ten private lateral sewage spills. See the below sewer overflow summary table for more information on public and private sewer spills.

**Table 1 Summary Public and Private Sewer Overflows**

| Description | Number | Overflow Volume (Gallons) | Volume Recovered (Gallons) | Volume Not Recovered (Gallons) |
|---|---|---|---|---|
| Public Sewer Spills | 2 | 80 | 0 | 0 |
| Private Sewer Lateral Spills | 10 | 2,180 | 1,615 | 520 |

### 4.1.2 Roads, Streets, Highways, & Bridges

The following are major City accomplishments during PY5 for roads, streets, highways, and bridges:

- Used the recently installed permanent wash rack for street sweepers to allow more time for cleaning equipment.
- Followed a strict preventive maintenance schedule for the new Elgin Crosswind street sweepers.
- Swept Downtown District twice per week.
- Swept non-Downtown Business and Commercial areas once per week
- Swept Residential areas and medians twice per month

**Table 2 Summary of Street Sweeping Maintenance by Zone**

| Description | Silt | Organic | Trash | Total | Miles |
|---|---|---|---|---|---|
| | Yds. | | | | |
| Residential Streets | 765 | 867 | 469 | 2,101 | 9,992 |
| Residential Street Percentages | 36% | 41% | 22% | | |
| Commercial Industrial Streets | 656 | 640 | 313 | 1,609 | 7,685 |
| Commercial Industrial Percentages | 41% | 40% | 19% | | |
| Category Totals | 1,421 | 1,507 | 782 | 3,710 | 17,677 |
| Overall Category Percentages | 38% | 41% | 21% | | |
| Total Percentages (%) | 100% | 100% | 100% | 100% | 100% |

City Maintenance crews collected a total of 3,710 cubic yards of material from street sweeping. Table 2, and figures 1 and 2 show the distribution of material by type, cubic yard amounts, and percentages for materials. Total cubic yards of materials increased in PY5 as the City continues to increase the use of the Elgin Crosswind street sweepers. The volume of trash, silt and organic material decreased for residential areas, compared with PY5, but increased for commercial and industrial areas. Figure 2, below provides a summary chart for relative volumes and Figure 3 provides a comparison to amounts collected in previous years.

**Figure 1**

Comparing the percentages of materials collected in the streets with those from the channels, it is worth noting that about 212% more trash is collected in the street sweeping operations (3,710 cubic yards) than is recovered in channel cleaning operations (1,746 cubic yards). This difference may be due to the types of trash. The elimination of trash is best addressed at the source or generator. For the City of El Cajon, street trash is typically generated in highly commercialized areas that include restaurants, convenient stores, and department-like stores. Continuing as a major priority into the next Permit Year will be an ongoing effort to keep the downtown areas trash-free and street-clean. These prevention efforts are a partnering effort with the El Cajon Community Development Corporation (ECCDC) and businesses in the downtown area.

Currently, ECCDC hires the St. Madeleine Sophie's Center students to pick up trash and cigarette butts in the downtown area. During PY5, the ECCDC and storm water staff organized community functions to increase public awareness and improve downtown areas. "Lend a Hand" days were scheduled throughout PY5.

### 4.1.3 MS4 Maintenance

The City's Municipal Separate Storm Sewer System (MS4) is comprised of 53.0 miles of storm drains, inlets and catch basins, and 23.7 miles of open channels and culverts. The MS4 System functions to collect and convey surface runoff. Maintenance of this system is necessary for continuous transport of rainwater to prevent flooding and to drain urban flows away from populated areas and prevent flooding.

**Figure 4**

Work Service Requests (WSRs) document maintenance activities on the storm drain and open channel system. For PY5, 17 WSRs were completed for both emergency and non-emergency repairs/maintenance to the MS4. WSRs cover any type of needed maintenance and are available to all contacting our Municipal Maintenance Yard, located at 1050 Vernon Way, El Cajon.

The City's MS4 includes:

- Streets
- Gutters
- Storm Drain Inlets/ Catch Basins
- Underground pipes
- Culverts

- Rock-lined channels
- Concrete channels
- Unlined Creeks

City maintenance crews inspect all open channels once a month and perform a complete cleaning at least once each year. Storm drain inlets and pipes are inspected at least once each year and cleaned as necessary. Table 3 summarizes the number of miles of channels and culverts inspected, together with a separate summary for drain inlets and pipes. We are in the process of converting from a years-old paper map inventory of the MS4, to a GIS-centric inventory. The GIS conversion is in transitional state where we are endeavoring to make our summary of MS4 inspection and cleaning more complete. Although we are currently maintaining our storm drain and channel system as directed in the Municipal Storm Water Permit, it is anticipated that future annual reports will include additional detail in the MS4 maintenance summary as our maps become more complete. Implementation of the JURMP Municipal Component in PY5 resulted in:

- Trash/debris removal from storm drain conveyance system (defined above) completed annually as specified in the JURMP. Total removed is 1,746 cubic yards. For types of pollutants removed see Figure 4.
- Approximately 2,408 feet of storm drain was inspected with CCT camera and none exceeded 30% capacity.
- Maintained 90 storm drain inlet filters located in the public right of way.
- Met JURMP requirements by cleaning catch basins, culverts, and concrete channels once for PY5 in the major channels and once for the minor channels. The Conservation Corps completes the cleaning for Hunter's Run, the open channel at Avocado and Pauline, and Cypress Channel.
- Flow line vegetation maintenance completed one time during PY5 (tree maintenance along major channels and median maintenance).
- Cleaning of Homeless waste and trash completed four times during PY5.

**Table 3 Summary of MS4 Inspection and Cleaning Activities**

| Drainage Structure Type | Number Miles Inspected | Number Miles Cleaned | Number Miles > 30% Full |
|---|---|---|---|
| Open Drainage Channels | 283.92 | 17.50 | 0 |
| | | | |
| Drainage Structure Type | Number Inlets Inspected | Number Inlets Cleaned | Number Inlets > 30% Full |
| MS4 Inlets/Catch Basins | 1,377 | 1,377 | 0 |
| | | | |
| Drainage Structure Type | Number Miles Inspected | Number Miles Cleaned | Number Miles > 30% Full |
| MS4 Pipes and Culverts | 53.01 | 6.16 | 0 |

### 4.1.4 Sanitary Sewer System

Continuity and consistency describes the City annual cleaning and maintenance of the sanitary sewer system. Few blockage conditions occur or reoccur when crews adhere to the normal maintenance routine. The El Cajon sewage collection system, consisting of nearly 195 miles of municipally owned sewer mains, is a transportation-only utility with the sewage treated at the Metro Wastewater Treatment Plant in Point Loma, San Diego. El Cajon's outfall sewer main transports sewage from the City, Wintergardens Sewer District, and Padre Dam/Lakeside/Alpine Sewer District.

The City of El Cajon has an aggressive maintenance program to prevent sewer overflows. An important maintenance goal is to flush and maintain the entire system at least once every 18 months, which requires the flushing of 148 miles of sewer main each year. For PY5, maintenance crews cleaned 218.96 miles of sewer line in 12 months. Difficult areas, where solids and grease accumulate, or root intrusion is a problem, are on a more aggressive schedule of flushing and rodding every 3 months. A Summary of Sewer Operations and Maintenance Procedures is included as Appendix D.1. A complete summary of scheduled Municipal Sewer System Maintenance is included as Appendix D.2.

**New-Generation Sewer Vactor Truck**

An indispensable tool in preventing sewer blockages and overflows

As part of the aggressive preventive maintenance program, the City televises sewer mains when:

- A new sewer tap is installed
- New difficult areas are suspected
- Determining the type of maintenance or repair needed

Interior of Sewer Main Televising Van

There were two public sewer overflows from City-owned sewers totaling 80 gallons for PY5. The city recovered and returned to sewer 0 gallons for the two public overflows. Sewage overflows infiltrated into the bare ground. No sewage from public sewer overflows entered into the storm drain system or receiving waters. Sewer system activities and discharges are reported annually to the San Diego Regional Water Quality Control Board and the California Integrated Water Quality System (CIWQS), among others. In April of 2003, the City internally started tracking reported overflows from private sewer laterals, where homeowners or businesses require immediate system repair. Response to the private

sewer overflow includes reimbursing the City for any storm drain cleanup costs due to the overflow into the public right-of-way.

For PY5, 10 private sewer overflows were reported or detected by municipal staff. An approximate total of 2,180 gallons was estimated in overflow volume. In all, 1,615 gallons of sewage liquids were recovered and disposed of in the municipal sanitary sewer. No effluent from private overflows reached the storm drain or receiving waters. With private sewer spills, municipal crews may need to estimate how long the spill was active and document an estimated number of unrecoverable gallons.

### 4.1.5 Corporate Yard

The City of El Cajon has one Corporate Yard located at 1050 Vernon Way. Four separate Public Works Divisions are located at this facility, as follows:

- Public Works Maintenance Division - conducts and coordinates maintenance for streets, storm drains, drainage channels and public sewers;
- Facility Maintenance Division - conducts maintenance activities on City buildings and related facilities;
- Fleet Maintenance Division - maintains and services all City vehicles, and
- City Parks Division - conducts maintenance activities on City parks, ROW median areas, landscapes and urban forest.

It takes coordination and collaboration for these crews to work in the public interest maintaining and improving the health, safety, convenience and quality of life for the City's citizens and visitors.

The Maintenance Division of Public Works maintains the city's infrastructure. Fleet and Facilities Management is part of Administrative Services and maintains the City’s buildings, vehicles and equipment. The Parks Division of Public Works controls and maintains parks, recreational areas, and other City-owned landscaped areas.

An annual inspection of each area is completed and corrective actions discussed with Department Management. The Corporate Yard is facilitated by being under a single, unified management. An annual inspection of the Corporate Yard was completed during June of 2012.

**New Vacuum Technology in Street Sweeping**

Cleaning the Elgin Crosswind Sweeper in the City Wash-down Facility.

Improvements at the Corporate Yard include:

- Monthly visual inspections are conducted.
- Secondary containment is in place at all storage areas.
- Berms are in place around the wash and waste discharge areas.
- Employees are trained on storm water issues, dealing with the homeless, pesticide storage/application procedures training, and managing hazardous materials.
- Two separate Street Sweeper Wash-Down Areas are now in service.

The annual inspection of the Corporate Yard uncovered a few needed Corrective Actions as follows:

- Maintain recordkeeping for training and inspections as defined in the Corporate Yard SWPPP.
- Post and update procedures on use of Spill Kits.

The sample of the Checklist for Municipal Site Inspection is contained in Appendix A.4.

### 4.1.6 Municipal Airfield

Gillespie Field, located at 1720 Joe Crosson Drive, is the local airfield and governed by the San Diego County Airport Authority and the Federal Aviation Administration. The City of El Cajon inspects this facility for compliance with the Municipal Permit as well as the General Industrial Permit. Some of the new BMPs include:

Gillespie Field - A County Airport Facility

- Wash racks with discharges hooked to the sanitary sewer. Use of manually adjusted shut-off valves eliminating flows to the sanitary sewer during rain events.
- Spill kits are in place throughout the airport.

### 4.1.7 Parks and Recreation

The Parks Division maintains, improves, protects, and develops the City's parks, landscaped median islands, public building grounds, and the urban forest for the benefit and enjoyment of the community. Maintenance of these nearly 120 acres is overseen by a well-trained, full-time staff that performs any necessary maintenance on a daily basis. Attractive public open spaces and well-maintained parks help to make El Cajon a better place to live, and encourages civic pride. Staff continually strives to promote a Cleaner Community through maintaining a Healthy Watershed while providing the community the highest quality and level of service possible.

In PY5, Parks and Recreation obtained purchase contracts with a steam cleaning company requiring compliance with the City's Storm Water Pollution Prevention. All Park Program construction bid awards require Contractor to provide written plan indicating implementation of the City's Storm Water Pollution Prevention. Recently completed the Public Safety Center and Civic Center Plaza improvements. Both projects included pervious paving and vegetative swales to improve stormwater runoff quality.

Park and Recreation areas prevent pollutants from entering the storm drain system, by implementing BMPs such as:

- Providing Pet Waste Bags at Dog Park located at Wells Park and Hillside Park
- Doggies-pots are installed throughout Wells Dog Park. The Doggie-Pots are refuse containers for dog feces that have self-shutting lids to keep out rain and irrigation water. The Doggie-Pots also dispense small plastic bags to assist with collection. Over 15,000 pounds of pet waste was removed from Dog Park this PY5.
- Tree trimming operations generated 208 tons of greenwaste some of which was used in City Parks and City Open Space to suppress weeds and increase rainfall infiltration on soil slopes. Any remaining greenwaste not used by the City was delivered to Sycamore landfill for use by the County residents.
- Blowing organic cuttings and sediment onto grass and disposing collected wastes properly
- Use of mop and buckets to clean up after special City events (e.g., Cajon Classic Car Show and Concerts on the Green)
- Requiring Qualified Applicator Certificates and 20 hours of training for the safe and effective use of pesticides.
- Requiring Contractors that steam-clean or power-wash to capture, collect, and contain wash liquids, then dispose into the sanitary sewer.

- Parks Division continues to exercise Best Management Practices in all aspects of our operation.

## 4.2 MUNICIPAL BMPS

The City has developed a list of minimum BMPs for Municipal crews to use while maintaining the following categories of municipal-owned and managed facilities. Not counting streets, alleys, storm drain or sewer easements, there are 31 separate municipally maintained facilities within the City. Overall, the categories of Municipal facilities are as follows:

- Roads, Streets, Parking Facilities
- The Multiple Separate Storm Sewer System (MS4)
- Corporate Yard
- Municipal Buildings, Parks, Recreational Facilities, and Landscaping

Each minimum required BMP is connected in some way to a primary pollutant that is reduced or eliminated to the maximum extent practicable (MEP) when that BMP is implemented as written. Table 3 lists the Municipal BMPs that may be applied to municipal activities and areas, the primary pollutant(s) either reduced or eliminated and the 303(d) pollutant that may also be prevented. Not all BMPs listed in Table 4 are required for the 31 Municipally-operated areas.

Table 4 lists the four major municipal areas with their minimum required BMPs and whether they were implemented. An "X" for the BMP indicates the BMP is required.

Inspections complete the BMP cycle by:

- Confirming proper BMP Implementation (present as written in the California BMP Handbooks or by City of El Cajon Storm Water Staff)
- Verifying that the BMPs are maintained (during inspection) (See Table 4 in Section 4.2.1 for inspection results)

This Annual Report takes an important step in connecting activities, BMPs, and pollutant reduction to support the Assessment of JURMP Effectiveness contained in Section 11. The connection is shown by the following diagram.

**Table 4 Structural/Non-Structural BMPs related to pollutants for Municipal Activities**

| BMP | Application | Primary Pollutant Reduced or Eliminated | 303(d) Pollutant Reduced |
|---|---|---|---|
| Non-Storm Water Discharges - SC10 | Addresses any discharge that is not storm water related | Varies | pH; TDS; Fecal Coliform |
| Spill Prevention Control and Cleanup - SC11 | Addresses spills | Varies | pH; TDS; Fecal Coliform |

| BMP | Application | Primary Pollutant Reduced or Eliminated | 303(d) Pollutant Reduced |
|---|---|---|---|
| Vehicle or Equipment Cleaning, Fueling, or Repair - SC20; 21;22 | Controls motor fluids | Oil & Grease<br>Metals | - |
| Loading/Unloading - SC30 | Controls the loading and unloading of materials | Varies<br>Trash | - |
| Liquid Container Storage - SC31 | Controls discharges from outdoor liquid containers | Oil & Grease<br>pH | pH |
| Raw Material Storage - SC32 | Controls the outdoor storage of raw materials. | Metals | - |
| Waste Handling and Disposal - SC34 | Controls any discharges from the collection, storage, and disposal of waste materials. | Varies<br>Trash | - |
| Safe Alternative Products - SC34 | Encourages the use of less toxic materials | Pesticides<br>Fertilizers | - |
| Building and Grounds Maintenance - SC41 | Addresses General Housekeeping and preventative maintenance | Fertilizers<br>Trash/debris | TDS |
| Parking Lot and Storage Maintenance - SC43 | Addresses sweeping and general maintenance of parking lots | Trash/debris<br>Sediment | - |
| Drainage System Maintenance - SC44 | Requires routine cleaning of the storm drain system | Trash/debris<br>Sediment | - |
| Employee Training | Requires employees be trained in specific topics | Trash/debris | - |
| Storm Drain System Signage - SD13 | Requires signs at storm drains or receiving waters | Trash/debris<br>Fecal Coliform | Fecal Coliform |
| Private Sewer Lateral Maintenance | Requires routine maintenance of the sewer lateral | Fecal Coliform | Fecal Coliform<br>TDS |
| Over-watering of Landscape | Requires overspray and over watering to be eliminated | Nitrates | TDS |

"-" indicates no impact, positive or negative, to the Forrester Creek 303(d) pollutants of TDS, fecal Coliform, and pH.

### 4.2.1 Municipal Site BMP Implementation and Verification

As defined in the JURMP, five of the 31 Municipal-maintained areas are considered high priority due to their location, size, and/or potential to impact water quality. This includes the Civic Center-City Hall Plaza complex, Fire Station No. 9, Parks Storage Garage, Public Works Maintenance Division Office, and the Vehicle Maintenance Facility. These five are inspected annually. Annual inspections of high priority municipal areas are conducted to verify

implementation of minimum required BMPs. Table 5 lists the minimum required BMPs and Municipal Functions. An "X" under the minimum required BMP indicates the BMP is:

- A minimum requirement
- Implemented per written or required specification
- Verified during inspection

**Table 5: Required & Implemented BMPs for Municipally-Maintained Areas**

| MUNICIPALLY-MAINTAINED AREAS | Roads, Streets, Parking Facilities | MS4 | Corporate Yards | Municipal Buildings, Parks, Recreational Facilities and Landscaping |
|---|---|---|---|---|
| Non-Storm-Water Discharges - SC10 | X | X | X | X |
| Spill Prevention, Control & Cleanup - SC11 | X | X | X | X |
| Vehicle & Equipment Fueling - SC20 | | | | |
| Vehicle & Equipment Cleaning - SC21 | | | X | |
| Vehicle & Equipment Repair - SC22 | | | X | |
| Outdoor Loading & Unloading - SC30 | | | X | X |
| Outdoor Liquid Container Storage - SC31 | | | | X |
| Outdoor Equipment Maintenance - SC32 | X | | X | |
| Outdoor Storage of Raw Materials - SC33 | | | X | |
| Waste Handling & Disposal - SC34 | | X | X | X |
| Safer Alternative Products - SC35 | | | X | X |
| Contaminated or Eroded Areas - SC40 | | | X | X |
| Building & Grounds Maintenance - SC41 | | | X | X |

| MUNICIPALLY-MAINTAINED AREAS | Roads, Streets, Parking Facilities | MS4 | Corporate Yards | Municipal Buildings, Parks, Recreational Facilities and Landscaping |
|---|---|---|---|---|
| Building Repair & Construction - SC42 | | | | X |
| Parking/Storage Area Maintenance - SC43 | | | X | X |

| Over-water Activities - City of El Cajon | | | | X |

**X** = Minimum Requirements

### 4.2.2 Implementation Analysis and Further Assessment

Table 6 summarizes the implemented BMPs for the five high priority Municipal Facilities where formal inspection and BMP usage was verified. It is important to note that no illegal discharges or spills were reported for any of the 31 City-owned or maintained areas.

**Table 6 Percent BMP Implemented**

| BMP | Percent Implemented | Pollutant Prevented |
|---|---|---|
| Non-SW Discharge | 100 | Various: Fecal Coliform |
| Spill Prevention/Control/Cleanup | 100 | Various |
| V&E Cleaning | 100 | Metals |
| V&E Repair | 100 | Oil & Grease |
| Loading/unloading | 100 | Various |
| Liquid Container Storage | 100 | Oil & Grease |
| Raw Materials Storage | 100 | Pesticides |
| Equipment Operations | 100 | Oil & Grease |
| Waste Handling/Disposal | 100 | Bacteria |
| Safer/Alternative Products | 100 | Pesticides |
| Contaminated/Erodible Areas | 100 | Sediment |
| Building/Grounds Maintenance | 100 | Trash, Debris |
| Building Repair/Construction | 100 | Metals |
| Parking/Storage Maintenance | 100 | Oil & Grease, Trash, Debris |
| Drainage System Maintenance | 100 | Sediment, Trash, Debris |
| Employee Training | 100 | All |
| Public Participation and Education | 100 | Trash, Debris |
| Street Sweeping | 100 | Sediment, Trash, Debris |
| Sewer System Maintenance | 100 | Fecal Coliform |
| Vegetation Controls | 100 | Sediment |
| Preservation of Existing Vegetation | 100 | Sediment |
| Seeding and Planting | 100 | Sediment |
| Mulching | 100 | Sediment |
| Over-watering Activities | 97 | TDS (Nitrate) |

(Highlighted – 303(d) listed pollutants)

The City Hall complex has an ever-existing issue with irrigation over spray and broken sprinkler lines due to large public visitor population and the homeless. Problems are fixed immediately, although never totally eliminated.

The above information is used in Section 11 to support an Effectiveness Assessment of the Municipal Component and further define areas where improvements can be made.

## 4.3 PESTICIDE, HERBICIDE, AND FERTILIZER MANAGEMENT

### 4.3.1 Pesticide Regulatory Program – Integrated Pest Management

The City has adopted a Pesticide, Herbicide, and Fertilizer Management program as follows:

- Maintain a running inventory of pesticides, herbicides, and fertilizers,
- Implement a schedule for application of pesticides, herbicides, and fertilizers,
- Use an Integrated Pesticide Management (IPM) approach,
- Track use of pesticides, herbicides, and fertilizers,
- Train or license (Qualified Applicator Certificate) City personnel who apply pesticides, and
- Continuously train City personnel on BMPs.

The City maintains 120 acres, including landscaped medians, parkway trees, parks and public grounds and performs scheduled maintenance of all areas on a daily basis. Weed control is conducted along public streets and along storm water channels. Crews use concentrated pesticides and herbicides, both solid and liquid, as follows: Pre-emergent (Pre-E) at 2,254.5 pounds, 1.75 gallons; Post-Emergent at 1.8 grams., 76 gallons (including Roundup); Contact Chemicals at 0 lbs.; and Pool Chemicals (chlorine and muriatic acid) at 55 lbs., 5,314 gallons.

To maintain the City's Park and Recreation areas, 14,377 lbs. of fertilizer were used on turf and landscape during the active growing seasons (Spring, Summer and Fall). Fertilizer applications consisted of polymer coasted slow release fertilizer. No fertilizers are applied when a rain event is pending. All fertilizers are applied using professionally trained City personnel utilizing BMPs. Applications are documented with fertilizer use reports.

## 4.4 MUNICIPAL STAFF TRAINING, SPECIAL EVENTS AND NOTABLE ACTIONS

New hires for City municipal staff receive New Employee Orientation Training that includes a module on storm water quality issues and concerns. All Qualified Applicator Certificate (QAC) employees receive 20-hrs of classroom instruction training every two years for the safe and effective use of pesticides. All Pest Control Advisors (PCA) employees receive 40-hours of classroom instruction every two years for the safe and effective use of pesticides. The pesticide application training includes contaminated runoff prevention techniques and groundwater contamination prevention. In PY5 all Public Works, Parks Division and Facilities Maintenance personnel attended storm water training sessions conducted during September and October of 2011.

**Figure 6**

NATIONAL PUBLIC WORKS WEEK

Public Works Week emphasizes the importance of Street Maintenance, Sanitary Sewer and Storm Water system flushing, and other Emergency and Non-Emergency Services provided by Public Works Maintenance and Operations crews. Public Works Week highlights the equipment used to complete these tasks. In PY5, Public Works was celebrated during the week of May 24, 2012. The public, including students from nearby schools, were invited to view equipment and speak with Public Works crewmembers.

TRASH FENCE

The City of El Cajon is the first major jurisdiction within Forrester Creek watershed. Consequently, pollutants and trash that enter the storm drain system are carried downstream to the City of Santee where the Creek has not been improved. In response to the City of Santee's Forrester Creek Restoration Project, the City of El Cajon completed a bid and initial scouting for the placement of a trash and debris fence. The trash fence must be able to withstand forces from flows reaching 22 feet per second and hold heavier floating debris. Installation was accomplished in the fall of 2005 and the trash fence has been in service since. The picture to the right shows trash and debris captured by the fence during a rainfall event.

WEB PAGE

The City of El Cajon continuously add and update pertinent content to the Storm Water Web Page that is part of the El Cajon, Municipal Web Site. Reports, brochures, and guidance documents can be accessed from Portable Document Format files (PDF files) on the web site (http://www.ci.el-cajon.ca.us/dept/works/stormwater.html).

Forrester Creek Trash Fence

## 4.5 IMPROVEMENTS AND REGULATORY COMMENTS

The following are the major improvements completed for PY5.

- Continued implementation of the El Cajon Sewer Ordinance giving the City legal authority to enforce the wastewater discharge requirements of the ***San Diego Regional Water Quality Control Board Order No. R9-2007-0005.*** **For a complete summary of this Ordinance update, refer to Appendix D.3.** For a complete copy of the new Sewer Ordinance, refer to Appendix D.4.
- Continued the improvement and functionality of the trash and debris fence for Forrester Creek, located upstream from Gillespie Field.
- Reviewed Storm Water Program for Capital Improvement Projects.
- Continued implementation of GIS to assist with maintenance of storm drain systems and the sanitary sewer system.
- Continued implementation of program for monthly self-inspection of Municipal Facilities and Operations.
- Continued to conduct inspection and maintenance of existing Site Design, Source Control and Treatment Control BMPs maintenance.
- Continued to conduct routine inspection and maintenance of storm drain inlets, culverts, channels.
- Continued development of specific environmental indicators for accurate measurement of Urban Runoff Program effectiveness.
- Established defined measurements and actions to address watershed requirements and developed watershed management procedures.
- Developed comprehensive pamphlets for Industrial & Commercial facilities focusing on General Housekeeping, Restaurants focusing on Fats, Oil & Grease and Construction sites. The developed pamphlets were translated into both Spanish and Arabic.

No regulatory comments were received for the Municipal Component of the JURMP Annual Report 2010-2011.

# SECTION 5 INDUSTRIAL & COMMERCIAL COMPONENT

## 5.1 INTRODUCTION

*Industrial*

The Industrial Component continued on its track of evaluating the implementation of Best Management Practices (BMPs). The component was originally revised at the end of 2004, adjusting the program to a BMP implementation and verification task and continued with the revision of the JURMP in 2008. Industrial inspections are the focus of the City's Industrial Component with the goal to verify the presence, proper implementation, and maintenance of BMPs. During the inspections, the City also checks that facilities have filed a Notice of Intent and has a Storm Water Pollution Prevention Plan pursuant to the General Industrial Permit, and if required.

Proper implementation and maintenance of appropriate BMPs at industrial facilities will eliminate or reduce the discharge of pollutants from an Industrial site and prevent pollutants from entering the City's storm drain system. The City redesigned the inspection sheet to emphasize the use of BMPs for specific, potential pollutant producing activities. Industrial activities either have the potential to affect storm water runoff or have no direct or apparent affect. Industrial operations conducted in a manner that prevents the discharge of pollutants or pollutant contact with storm water should not have any impact on water quality. The City's focus is on identifying those industrial activities that have an actual or potential impact on water quality, requiring implementation of appropriate BMPs and periodic inspections of industrial facilities to verify compliance with City, state and federal water quality requirements.

Outdoor industrial activities have the greatest potential to impact receiving waters through outdoor storage, loading/unloading, fueling areas, vehicle/equipment maintenance, solid/hazardous waste storage, and parking lot runoff. A Storm Water Quality Inspection Form for Industrial-Commercial Facilities to document routine, follow-up, and compliance inspections is provided in Appendix A.5.

*Commercial*

Commercial facilities are those facilities that are designated by the City, or the County, as a commercial facility with activities that may potentially affect the quality of receiving waters. In previous years, the City identified commercial facilities within its jurisdictional boundaries, and has categorized different commercial types for education, inspection, and follow-up.

After the *Framework for BMP Implementation* was completed in October 2003, the Commercial Component was restructured into a BMP implementation program similar to other Existing Development (Municipal, Industrial, and Residential). Implementation, verified during onsite inspections, determines whether a BMP is either fully implemented or requires Corrective Action. A fully implemented BMP is counted towards preventing, eliminating, or reducing pollution discharged to the maximum extent practicable (MEP).

## 5.2 STATIONARY IND. & COMMERCIAL SALES/SOURCES/EQUIPMENT

### 5.2.1 Background

In 2002, the City developed a Jurisdictional Urban Runoff Management Program (JURMP) document as required by the San Diego Regional Water Quality Control Board (RWCQB) Order No. 2001-01. As part of this program, the City was required to conduct industrial and commercial storm water compliance inspections to assess the implementation of the minimum best management practices (BMPs) required in the industrial and commercial section of the JURMP. On January 24, 2007, the updated Municipal Permit, Order No. R9-2007-0001 was adopted. This new Municipal Permit required each Copermittee, including the City, to update its JURMP document. The industrial and commercial components were updated to comply with the new requirements.

The requirements of the new Municipal Permit went into effect in March 2008. The new Municipal Permit requires that all high Treat to Water Quality (TTWQ) sites be inspected after the year of implementation. The City of El Cajon chose to inspect all facilities in the commercial/industrial inventory designated as high TTWQ, as well as some medium and low TTWQ facilities. This helped the City meet the Municipal Permit requirement that 25 percent of the total number of facilities on the City's inventory be inspected after the first year of program implementation. The City inspected all industrial facilities that are covered or are known to require coverage under the General Industrial Permit (Industrial Permit). Additional details on how the City met the requirements listed above are included in Section 5.2.2 of this report.

A total of 208 industrial and commercial facilities received site visit inspections. A detailed list of the facilities selected for inspections can be found in Appendix B.2.b of this report. Based on site visits the industrial/commercial inventory was updated from 713 to 781 facilities. The updated inventory, entitled "City El Cajon Stationary Industrial and Commercial Facilities", is included in Appendix A.5 and is composed of facilities that pose a high, medium, and low TTWQ.

### 5.2.2 Source Characterization

The City's watershed-based inventory for industrial and commercial facilities was updated based on changes in business license information and the California Department of Water Resources list of Permittes covered under the General Industrial Permit. The City's Storm Water group has developed a procedure to assist in reviewing and updating the City storm water inventory based

on business license information (please refer to Appendix A.5 for document entitled "Business License and the Storm Water Program"). The inventory was further refined by field inspections conducted during previous permit years. The updated inventory consists of 781 industrial and commercial facilities that are designated into high, medium, and low TTWQ stationary sites. Of the 781 businesses, 208 were inspected. A list of the businesses inspected during the fiscal year is attached in Appendix A.5.

### 5.2.3 Best Management Practice Requirements

Pollution prevention for industrial and commercial facilities eliminates the management of pollution and ultimately leads to a cleaner, healthier watershed. Although Best Management Practices for Commercial Facilities are used as a primary mechanism for reducing commercial discharges of pollutants into regional MS4s, the educational effort to change the way businesses conduct business is the final objective. The City encourages industries to apply pollution prevention tactics, such as the BMPs listed in Table 1, below. Storm Water staff or city representatives disseminate this information during inspections, letters, and enforcement actions. The following pollution prevention methods shall be considered and implemented to the MEP where applicable:

- Reduce quantity of toxic materials used or substitute with less-toxic materials
- Use minimal cleaning water to decrease the generation of wastewater
- Display pollution prevention methods prominently to remind or instruct employees and customers
- Implement a spill response plan
- Segregate and recycle wastes
- Provide a schedule of preventive maintenance procedures
- Reduce waste through more efficient production processes
- Recycle wastes as part of the production process (most preferred), off site or on site (least preferred)
- Treat wastes on site to decrease volume and/or toxicity
- Dispose of wastes properly
- Continually train employees as needed

**Table 1 – Prevention BMPs**

| Prevention BMP | Prevention Mechanism | Primary Pollutant Prevented | Prevention of impact to 303(d) pollutant |
|---|---|---|---|
| Spill Prevention, response, control, and cleanup | Prevents spills, controls spills | Oil & Grease<br>pH | pH |
| Raw Material Storage | Prevents pollutants on outdoor material storage from discharging | Oil & Grease | _ |

| Prevention BMP | Prevention Mechanism | Primary Pollutant Prevented | Prevention of impact to 303(d) pollutant |
|---|---|---|---|
| Safer Alternative Products | Encourages use of less toxic materials | Pesticides<br>Fertilizers | TDS<br>Phosphates |
| Good housekeeping of outdoor activity areas | Prevents pollutants from entering the storm drain system. | Oil & Grease | TDS |
| Employee Training | Prevents discharges, spill response, over-watering | Oil & Grease<br>Pesticides<br>Fertilizers | pH<br>Fecal Coliform<br>TDS<br>Phosphates |
| Private Sewer Lateral Maintenance | Preventive maintenance of sewer lateral prevents sewage overflows | Fecal Coliform<br>Enterococcus<br>Nitrates | Fecal Coliform<br>TDS |

## 5.2.4 Program Implementation

### 5.2.4.1 Priority Industrial-Commercial Sources

*Industrial*
Each year, industrial sites are re-prioritized to get an accurate picture of the number and types of industrial sites within the City's jurisdiction. Prioritization involves two steps: initially classifying a facility as being a high TTWQ based on site information; and subsequently confirming or reclassifying it based on field observations and additional information. The former step has been accomplished administratively using the data provided in the inventory of industrial sites. The latter step was completed following inspection of each industrial facility.

Additionally, pollutants were listed with the activities associated with industrial outdoor activities to assist in the selection of the most appropriate BMPs. This initial connection of pollutants, BMPs, and activities will be used to correlate water quality with JURMP requirements in the Annual Report. Below, in Table 2, is the City's listing of activities with the potential pollutants.

**Table 2 – BMPs to Pollutants for Industrial Facilities**

| BMP | Application | Primary Pollutant Addressed | 303(d) Pollutant Impact |
|---|---|---|---|
| Non-Storm Water Discharges – SC10 | Addresses any discharge that is not storm water | Varies depending on discharge | - |
| Spill Prevention Control and Cleanup | Addresses spills | Varies depending on spill | - |

| BMP | Application | Primary Pollutant Addressed | 303(d) Pollutant Impact |
|---|---|---|---|
| – SC11 | | | |
| Vehicle or Equipment Cleaning, Fueling, or Repair – SC20; 21;22 | Controls motor fluids | (Petroleum) Oil & Grease<br>Metals | - |
| Loading/Unloading – SC30 | Controls the loading and unloading of materials | Varies depending on the materials<br>Trash | - |
| Liquid Container Storage – SC31 | Controls discharges associated with outdoor liquid containers | (Petroleum) Oil & Grease<br>pH | pH |
| Raw Material Storage – SC32 | Controls the outdoor storage of raw materials. | Metals | - |
| Waste Handling and Disposal – SC34 | Controls any discharges from the collection, storage, and disposal of waste materials. | Varies depending on the waste material<br>Trash | - |
| Safe Alternative Products – SC34 | Encourages the use of less toxic materials for cleaning, disinfecting, or other functions | Pesticides<br>Fertilizers | Phosphates |
| Building and Grounds Maintenance | Addresses General Housekeeping and preventative maintenance | Fertilizers<br>Trash/debris<br>Sediment | TDS<br>Phosphates |
| Parking Lot and Storage Maintenance – SC43 | | Trash/debris<br>Sediment | - |
| Drainage System Maintenance – SC44 | | Trash/debris<br>Sediment | - |
| Employee Training | | Trash/debris | - |
| Storm Drain System Signage | | Trash/debris<br>Fecal Coliform | Fecal Coliform |
| Private Sewer Lateral Maintenance | | Fecal Coliform<br>Debris | Fecal Coliform<br>TDS |
| Over-watering of Landscape | | Nitrates<br>Phosphates | TDS<br>Phosphates |

"-" indicates no impact positive or negative to the Forrester Creek 303(d) pollutants of TDS, fecal Coliform, and pH.

*Commercial*

A majority of the City's commercial sites can be categorized as shown in Table 3. Of specific concern are those businesses located near storm water channels. Activities from the commercial sites with the associated pollutants are shown in the following table.

**Table 3 – Commercial BMPs to Specific Business Produced Pollutants**

| **Business Type →**<br><br>**BMP ↓** | **Restaurants** | **Automotive Establishments** | **Retail Gasoline Outlets** | **Mobile Washing Businesses** |
|---|---|---|---|---|
| Non-Storm Water Discharges – SC10 | Organics<br>Trash | Oil & Grease<br>Metals | Oil & Grease<br>Metals | Oil & Grease, Metals |
| Spill Prevention Control and Cleanup – SC11 | Trash<br>Oil & Grease<br>Organics/Bacteria | Trash<br>Oil & Grease<br>Metals | Trash<br>Oil & Grease | TDS<br>Metals |

| Over-Watering | TDS | TDS | TDS | |

10702

### 5.2.4.2 Backgroud BMP Requirements and Implementation

*Industrial*

Commitment to BMP requirements is listed in the City's JURMP and meets the requirements of the Municipal Permit. Implementation includes selection/application, dissemination of information, and evaluation of implementation at the facility. An "X" indicates the BMP is: Required by the City of El Cajon as a minimum BMP – Level 1 by the Industrial facility – Level 2 (Provided BMP information). These two levels were completed in previous permit years.

The next steps include:

- Implementation as observed during the onsite inspection – Level 3 (Verified in previous permits years)
- Connection to a specific Primary pollutant and any 303(d) pollutants identified for Forrester Creek to support an Effectiveness Assessment – Level 4 (Verified in previous permits years)

In past years the City applied "A Framework for the Implementation of Best Management Practice (BMP) Programs at Commercial and Industrial Sites" to implement BMPs at industrial sites. BMP selection and application began at JURMP development with a minimum number of BMPs. These minimum requirements were used to develop the industrial/commercial inspection checklist.

**Table 5 – Required Industrial BMPs**

| Required Industrial BMPs | |
|---|---|
| Non-SW Discharges - SC10 | X |
| Spill Prevention/Control/Cleanup - SC11 | X |
| V&E Fueling - SC20 | X |
| V&E Cleaning - SC21 | X |
| V&E Rep - SC22 | X |
| Loading/Unloading - SC30 | X |
| Liquid Container Storage - SC31 | |
| Raw Materials Storage - SC32 | X |
| Equip Ops - SC33 | |
| Waste Handling/Disposal - SC34 | X |
| Safer/Alternative Prods - SC35 | |
| Contam/Erod Areas - SC40 | |
| Bldg/Grounds Maintenance - SC41 | X |
| Bldg Rep/Construction – SC42 | |
| Prkg/StorageMaint – SC43 | X |
| Drainage Sys Maint - SC44 | X |
| Employee Training - SWPPP | X |
| Storm Drain System Signage - Permit | |

| Required Industrial BMPs | |
|---|---|
| Private Sewer Lateral Maintenance - City of El Cajon | X |
| Over-water Landscape - City of El Cajon | X |

### 5.2.4.3 Updated BMP Requirements

Pollution prevention methods are cost-effective BMPs that eliminate or reduce the generation of pollutants at their sources. Industrial and commercial facilities produce a range of pollutants, both indoors and outdoors, that can threaten human and environmental health if washed into the storm drain system by way of urban runoff. Businesses can benefit from pollution prevention methods by reducing labor time associated with excess pollutant waste handling, thereby re-directing labor time more efficiently to production, as well as the accompanying costs of storage, disposal or treatment.

The following pollution prevention methods are considered and implemented to the MEP where applicable:

- Reduce quantity of toxic materials used or substitute less-toxic materials
- Use minimal cleaning water to decrease wastewater generation
- Display pollution prevention methods prominently to remind or instruct employees and customers
- Implement a spill response plan
- Segregate and recycle wastes
- Provide a schedule of preventive maintenance procedures
- Reduce waste through more efficient production processes
- Recycle wastes as part of the production process (most preferred), off site or on site (least preferred)
- Treat wastes on site to decrease volume and/or toxicity
- Dispose of wastes properly
- Continually train employees as needed

In addition to the methods listed above, the City of El Cajon also reserves the authority to require a Storm Water Pollution Prevention Plan (SWPPP) for any Industrial or Commercial facility within its jurisdiction that discharges significant pollutants into receiving water bodies. In addition to the pollution prevention BMPs described above, the City has also established minimum BMPs for all industrial and commercial sites. Businesses are required to use an effective combination of general BMPs and activity-specific BMPs. General BMPs, including structural and non-structural BMPs, are required of all facilities and are included in Appendix A.5 (General BMPs for Industrial/Commercial Facilities). Businesses are required to use an effective combination of general BMPs and activity-specific BMPs. General BMPs and Activity-Specific BMPs are required where applicable and are briefly listed below.

**General BMPs**

- Non-Structural BMPs

Non-Structural BMPs aim to prevent pollutants from coming into contact with storm water or authorized non-storm water discharges. Many of these methods already exist as part of the standard operating procedures for a site:

- Good housekeeping
- Preventive maintenance
- Material handling and storage of materials
- Employee training
- Solid waste (non-hazardous) handling and recycling
- Record keeping
- Self inspection/quality assurance
- Spill response

- Structural BMPs

  Structural BMPs consist of specialized equipment, structural components, or engineered technologies that can be used when non-structural BMPs are ineffective. Structural BMPs are site specific; therefore the facility operator needs to evaluate each proposed use. Proper installation and regular maintenance of structural BMPs are imperative to their effectiveness. Examples are as follows:

  - Overhead coverage of outdoor work areas or chemical storage.
  - Retention ponds, basins, or surface impoundments that confine storm water to the site.
  - Berms and concrete swales or channels that divert run-on and runoff away from pollutant sources.
  - Secondary containment structures.
  - Treatment controls, e.g., infiltration devices and oil/water separators, to reduce pollutants in storm water or authorized non-storm water discharges.

**Activity-Specific BMPs**

Appropriate BMPs will depend on the type of activities, pollutants, and potential source of pollutants. The BMP requirements for the following activities and areas are relatively common at industrial and commercial sites and required by the City.

- Hazardous materials storage (including tanks)
- Solid waste storage
- Loading/unloading
- Fueling
- Wastewater treatment
- Landscaping/ grounds keeping
- Vehicle maintenance
- Parking lots
- Process water pre-treatment
- Equipment storage
- Washing of Equipment/Vehicles
- Rooftops

### 5.2.4.4 Additional Controls for Industrial & Commercial Sites/Sources

Forrester Creek, which flows through the City, is 303(d) listed for fecal coliform, low dissolved oxygen, phosphorus, and TDS. The City has not identified any industrial or commercial facilities that are likely to be significant sources of fecal coliform or TDS. As a proactive measure, however, the City has assigned higher priorities to concrete and stone cutting businesses, as they may contribute to elevated TDS levels. Similarly, the City assigned higher priorities to animal-related businesses, which may be sources of fecal coliform if animal waste is not disposed of properly. The City also assigned higher priorities to commercial businesses associated with fertilizer use (i.e. nurseries, greenhouses, etc.) since low dissolved oxygen and elevated phosphorus levels are commonly associated to improper fertilizer use and/or storage.
As mentioned previously in this report, the City has chosen to designate major channels within the City as ESAs. Major channels within the City are typically concrete, and hold no significant environmental value, however. The City has chosen to designate these areas as ESAs as a proactive measure to protect downstream water quality. During inspections of businesses that drain to 303(d) listed receiving waters or other ESAs, the City will conduct more detailed investigations into whether the businesses are potential sources of the pollutants of concern or may otherwise negatively impact the ESA. If a business is believed to be a significant source of key pollutants and the standard BMPs listed above are not adequate, the City will require additional BMPs so that discharges of the key pollutants of concern will be reduced to the MEP.

### 5.2.4.5 Sites Selected for Inspection

In 2008, the City created a Jurisdictional Urban Runoff Management Program (JURMP). The City's inspection program "aims to reduce and prevent industrial and commercial pollution discharges from the MS4 to the MEP to protect local receiving water bodies and to comply with the Municipal Permit" (JURMP, City, 2008). The City created an inventory list of businesses for inspection and followed the inspection protocol described in the City's JURMP.

In 2009, the City developed a list of 51 industrial and 623 commercial facilities to inspect for compliance with federal, state, and local laws in accordance with the Municipal Permit. After inspections in 2009, the City's inventory has been revised and edited yearly, at a minimum, for new facilities or businesses that are no longer in existence. In 2012, the City conducted 69 industrial inspections and 129 commercial inspections adding to a total of 208 facilities and making up approximately 27% of the 781 stationary businesses inventory.

Based on experience, the inspection process for industrial and commercial facilities is often more efficient when appointments are not scheduled. This allows inspectors to inspect neighboring businesses rather than driving longer distances from business to business to meet scheduled appointments; it also eliminates time spent on the phone scheduling. In general, scheduling is conducted for industrial facilities that have, or are required to have, Industrial Permit coverage so that the proper facility personnel can be present for the inspection and materials such as SWPPPs and monitoring plans are easily accessible for review when the inspector arrives.

### 5.2.4.6 Industrial Inspections and Implementation of BMPs

In total, 69 industrial facilities were inspected during 2012. Industrial businesses were defined by 40 CFR §122.26(b) (14). Attachment 1 of the Industrial Permit lists those facilities whose principal activity is included under the Industrial Permit. All industrial facilities were assigned a high threat to water quality, consistent with the City's JURMP. Sites marked for the City to follow up on the initial inspection, and sites with a high TTWQ, including all industrial sites, require annual inspections. A breakdown of TTWQ ranks for industrial facilities is shown in Table 6. BMP implementation at industrial facilities is summarized in Table 7

- A total of 22 out of 76 industrial facilities had submitted a Notice of Intent (NOI) under the Industrial Permit, had implemented stormwater monitoring programs, and maintained a Stormwater Pollution Prevention Plan (SWPPP).
- No businesses had Notice of Terminations (NOTs).
- Eighteen businesses obtained a Notice of Non-Applicability (NONA) and/or a No Exposure Certification (NEC).
- No IC/ID was observed.
- Fully implemented storm water employee training was noted at 135 businesses.
- Out of the 1,073 applicable BMPs, 1,000 (93 percent) were fully or partially implemented.
- Only 7 percent of applicable BMPs were not implemented.

**Table 6: Industrial Facilities**

| Threat | Number of Industrial Facilities |
|---|---|
| High TTWQ | 23 |
| Medium TTWQ | 44 |
| Low TTWQ | 3 |
| No TTWQ Determined | 6 |

**Table 7: Industrial Facility BMP Implementation**

| BMP Group[(a)] | Number of BMPs in Group | Fully Implemented | Partially Implemented | Not Implemented | N/A |
|---|---|---|---|---|---|
| D.1 General | 7 | 324 | 31 | 5 | 172 |
| D.2 Landscaping | 5 | 124 | 3 | 2 | 251 |
| D.3 Materials and Wastes | 13 | 332 | 82 | 58 | 516 |
| D.4 Equipment, Vehicles, and Outdoor Activities | 5 | 46 | 8 | 7 | 319 |

| BMP Group[(a)] | Number of BMPs in Group | Fully Implemented | Partially Implemented | Not Implemented | N/A |
|---|---|---|---|---|---|
| D.5 Other | 5 | 48 | 2 | 1 | 329 |
| **TOTAL** | **35** | **874** | **126** | **73** | **1587** |

(a) Individual BMPs in each BMP group are located in Section D of the City of El Cajon Commercial and Industrial Stormwater Compliance Inspection Form, (Please refer to Appendix A.5).

### 5.2.4.7 Commercial Inspections and Implementation of BMPs

In total, 132 commercial facilities were inspected during 2012. Commercial businesses were defined as those businesses not subject to the Industrial Permit, and that do not perform activities meeting the definition of industrial activity under 40 CFR §122.26(b)(14). Over 25 percent of the facilities inventoried were inspected. Commercial businesses requiring annual inspections were those with a high TTWQ and those that warranted a follow-up inspection. A breakdown of TTWQs for commercial facilities is presented in Table 8. BMP implementation at commercial facilities is summarized in Table 9.

- No illicit connections were observed. However, five potential illegal discharges were noted during inspections.
- Approximately 7 percent of the facilities with significant outdoor activity needed improved trash storage areas.
- Approximately 5 percent of applicable businesses needed improved spill prevention and response materials, including spill kits; 2 percent needed secondary containment for liquid storage.
- Out of the 1769 applicable BMPs, (93%) were fully or partially implemented.
- Only 7 percent of applicable BMPs were not implemented.

**Table 8: Commercial Facilities**

| Threat | Number of Commercial Facilities |
|---|---|
| High TTWQ | 30 |
| Medium TTWQ | 40 |
| Low TTWQ | 17 |
| No TTWQ Determined | 45 |

**Table 9: Commercial Facility BMPs Implementation**

| BMP Group[(a)] | Number of BMPs in Group | Fully Implemented | Partially Implemented | Not Implemented | N/A |
|---|---|---|---|---|---|
| D.1 General | 7 | 464 | 34 | 20 | 274 |

| BMP Group[(a)] | Number of BMPs in Group | Fully Implemented | Partially Implemented | Not Implemented | N/A |
|---|---|---|---|---|---|
| D.2 Landscaping | 5 | 221 | 4 | 2 | 433 |
| D.3 Materials and Wastes | 13 | 585 | 75 | 83 | 973 |
| D.4 Equipment, Vehicles, and Outdoor Activities | 5 | 109 | 18 | 12 | 521 |
| D.5 Other | 5 | 125 | 7 | 10 | 518 |
| **TOTAL** | **35** | **1504** | **138** | **127** | **2719** |

(a) Individual BMPs in each BMP group are located in Section D of the City of El Cajon Commercial and Industrial Stormwater Compliance Inspection Form, see Appendix A.5.

### 5.2.4.8 Compliance and Enforcement

An immediate follow-up is given to facilities for which an active illicit connection or illegal discharge was observed. In these cases, City's storm water personnel promptly instructed the discharger to stop the discharge and an administrative citation was issued. Follow-ups are also conducted for facilities that have serious BMP-related issues.

A total of 7 facilities were found to need follow-up inspections. Follow up inspections were scheduled and, whenever possible, investigations were conducted immediately.

As specified in the City Ordinance, the City is able to use various warnings and actions to correct a facility/activity and enforce the JURMP. For PY5, the City coordinated with industry to implement and enforce the requirements of the JURMP and City Municipal Code. As with the other Permit component, enforcement generally is initiated with a verbal warning and followed up by a written warning. Enforcement using Administrative Citations was incorporated in May 2003. Appendix A.5 lists criteria for issuing Citations, document entitled "Storm Water Administrative Citation Program Criteria" and Appendix B.3 shows the list of enforcement actions taken by the City in PY2011-12.

### 5.2.4.9 Education

During inspections, business representatives were educated regarding storm water issues both through verbal interaction with the inspectors, and the distribution of printed storm water educational materials, when appropriate. In particular, the utilization of verbal interaction is extremely influential because it is tailored individually by the inspector to the specific issues and

concerns of the facility and the facility representative. It prompts the facility representative to think about issues directly related to his or her daily actions as it applies to business activities. The inspector was able to provide information specific to the facility, which is beneficial to the facility representative due to the site-specific information. This information can help give the facility representative the proper tools to implement BMPs applicable to their business.

Printed educational materials were also distributed to businesses during inspections unless the facility representative declined to receive them. Posters specifically designed for automotive and restaurant activities were distributed as storm water educational materials. Also provided, when necessary, were NONA/NEC paperwork, NOI paperwork, and information about the Industrial Permit draft. Each have a separate cover sheet with instructions on how to file, and contacts in case any questions arise. Samples of some of the educational materials distributed are included in Appendix A.5. In some cases, educational material was not applicable to the business activity and was, therefore, not provided.

### 5.2.5 Stationary Industrial & Commercial Sites/Sources Effectiveness Assessment

#### 5.2.5.1 Common BMP Implementation Deficiencies

Common issues were noted at a large number of businesses and are discussed below:

- Commercial businesses were commonly located on property owned and/or maintained by a third party. As such, many of the outdoor area inspections resulted in the business stating that their property management companies were responsible for issues such as landscaping, trash, and general cleanup.
- Outside metal storage was an issue at both commercial and industrial facilities and required multiple recommendations to provide cover and secondary containment and/or to relocate metals.
- Hazardous waste drums, particularly oil drums, were also observed outdoors at multiple locations without secondary containment; some were missing lids and/or labels.
- Grease handling procedures at restaurants were recurring issues. Specific problems included: proper storage, proper containment, cleanup of grease spills, and keeping absorbent available near grease storage.
- Though many facilities did possess absorbent of some kind, actual spill kits were not very common and absorbent was typically not kept in clearly labeled containers or located near potential stormwater pollutant sources.
- In general, industrial facilities covered as mandatory under the State General Industrial Permit were more aware of stormwater concerns and had better training made available to employees than commercial businesses. Commercial businesses

and industrial businesses conditionally subject to the State General Industrial permit often did not have any formal stormwater training program for employees.

#### 5.2.5.2 SIC Code Changes and Updated Inventory

Based on the SIC code corresponding with the current principal activity of the business, some inspections resulted in business category reclassifications. Assessment of whether the SIC code was considered industrial was based on SIC code of the Industrial Permit. Attachment 1 of the Industrial Permit lists SIC codes that require mandatory coverage under the Industrial Permit and SIC codes that require coverage under the Industrial Permit "conditionally", depending on potential outdoor exposure to stormwater.

The revised 2012 inspection list contains 781 facilities. Of the 781 businesses, 208 site visits were conducted for full inspections. A list of businesses inspected during 2012 is contained in Attachment A.5. The inventory increased from 713 facilities in 2011. The updated inventory list is located in Appendix A.5.

## 5.3 MOBILE SOURCES ELEMENT

### 5.3.1 Background

Illegal discharges tend to be the major area of concern with mobile businesses. Due to the nature of their activities, mobile businesses are regulated somewhat differently than other businesses. Mobile businesses can be difficult to identify because many do not have City business licenses. More than stationary businesses, mobile businesses are very dynamic with the start of new businesses and the closing of existing businesses on a relatively regular basis. For the reasons listed above and also simply because they are not consistently present at a fixed location, regular inspections of mobile businesses are not a feasible option at this time.

### 5.3.2 Source Characterization

The mobile businesses known to operate within the City's jurisdiction are noted on the City's commercial inventory. The following business types are addressed by the mobile sources element of the City's industrial and commercial program.

- Mobile automobile or other vehicle washing
- Pest control services
- Mobile carpet, drape or furniture cleaning
- Mobile construction trades
  - Painting and coating
  - Cement mixing or cutting
  - Masonry

  - Other contractors
- Landscaping
- Pool and fountain cleaning
- Power washing services

Because not all mobile businesses have obtained business licenses in the City or have a base of operations in the City, a continual process of refining and updating the City's inventory has been conducted. Sources for such inventory updates will include reported incidents, general observations by City staff, and available business licenses. The City participated in a regional effort to inventory and/or track mobile businesses. The Industrial/Commercial Regional Workgroup developed a regional database that included mobile businesses across Jurisdictions. The regional database in combination with the City's business license database provided the main source of information for prioritizing mobile businesses.

## 5.3.3 Best Management Practice Requirements

### 5.3.3.1 Updated BMP Requirements

In addition to all BMPs required for stationary sources; listed in Section 5.2.4.1, 5.2.4.2, and 5.2.4.3 of this report; mobile business are also required to implement the following minimum BMPs developed by the Regional Industrial/Commercial Workgroup:

- Storm Water Training
- Contain and Clean Up Spills (Spill Kits)
- Properly Handle All Waste (Solid, Liquid and Hazardous)
- Protect Storm Water Conveyance System: (Streets, Gutters and Alleys)
- Provide Proper Handling and Containment Of Materials
- Provide Equipment Washout Area

The most important BMPs for most mobile businesses typically involve non-Storm water discharge control and spill prevention, control, and cleanup. New mobile businesses applying for a business license received information about the required BMPs listed above. A copy of the required BMP information given to new business license applicants can be found in Appendix 5.

### 5.3.3.2 Additional Controls for Mobile Sources

Regardless of where the activity occurs, the City categorically prohibits illegal discharges from mobile businesses. Aside from washing, cleaning, or other activities that may cause illegal discharges, mobile businesses are not likely to conduct activities that produce significant pollutant discharges. If in the future the City finds that even in the absence of illegal discharges the activities of mobile businesses are contributing pollutants of concern to a CWA section 303(d) impaired water body segments or are negatively impacting ESAs, additional controls will be required for those activities. Further, if the City has reason to believe that mobile businesses

are generating significant illegal discharges in a given area of the City that is tributary to a 303(d) listed water body (and the discharges contain pollutants causing the impairment) or is within, directly adjacent to, or directly discharges to a water body within an ESA, City staff may more regularly visit those areas and/or take other actions to address the illegal discharges.

### 5.3.4 Education and Outreach

The City of El Cajon provides information and outreach regarding storm water quality to mobile business owners and operators. A business license is not issued to the mobile businesses listed under Section 5.3.2 until the new business proponent has the opportunity to talk to Storm Water personnel about pollution prevention and BMP implementation. If applicable to the facility, mobile businesses are also provided with educational materials outlining pollution prevention methods and other BMPs related to their activities prior to issuance of a business license and during inspections. Inspectors also give recommendations to businesses, where appropriate. Because this specific element of the industrial and commercial program is fairly new it is anticipated that some mobile businesses it is anticipated that education will continue to be a significant portion of the program. The educational program is described in more detail in Section 8 of this report.

#### 5.3.4.1 Inter-Jurisdictional Cooperation

An inter-jurisdictional program for the regulation of mobile businesses was completed during Permit Year 2009-10. The City of El Cajon and the Port of San Diego were the Co-Chairs of the Regional Industrial/Commercial Workgroup during that permit year. The workgroup took a leading role in the creation of a regional inventory of mobile businesses, standardization of BMP requirements across jurisdictions, and sharing of enforcement action information.

#### 5.3.4.2 Staff Training

Staff responsible for conducting storm water compliance inspections and enforcement of mobile sources is trained on inspection and enforcement procedures and BMP implementation as they relate to mobile businesses. City staff is also encouraged to be vigilant for illegal discharges from mobile businesses working within the City and to report businesses that are not in compliance to the storm water hotline.

#### 5.3.4.3 Inspections

Mobile sites/sources are inspected by the City on an as needed basis. The most common triggers for these inspections are receipts of incident reports and direct visual observations by City staff. The inspections generally follow the same procedure as stationary facilities, described in Section 7.2.4.4 of the updated JURMP, although the main focus of most mobile business inspections is on discharge control BMPs.

#### 5.3.4.4 Enforcement

Most violations associated with mobile businesses have been historically attributed to illegal discharges. The City's enforcement approach to such discharges will require the discharge to be stopped and cleanup of discharged materials when applicable and feasible. Education is also provided to operators who are not aware of the City's storm water requirements. Businesses that do not possess the materials necessary to implement the required BMPs are required to demonstrate to the City that they have obtained such materials and can properly use them before the City allows such businesses to resume operations in the City. Mobile businesses that do not have City business licenses are required to obtain one. A detailed list of all enforcement actions taken by the City is included at Appendix B.3 of this report.

## 5.4 IMPROVEMENTS AND REGULATORY COMMENTS

No comments were received for this section of the annual report for 2010-11. The City continued to track business facilities using a stationary business inventory table that was modified last permit year based on a notice received from San Diego Coastkeeper.

Whereas the notice commended the City for the detailed stationary business inventory table in the JURMP Annual Report for PY 3, it did specify a need to add some clarity to the table. More specifically, the comment referred to the column entitled "Tributary to a 303(d) Listed" within the table. It was indicated that the column was unclear as to whether it intended to represent both (1) whether the site/source is tributary to a Clean Water Act section 303(d) water body segment and (2) whether the site/source generates pollutants for which the water body segment is impaired, or only the former.

The stationary business inventory table was edited to include both pieces of information in the last annual report. The columns entitled "Potential Pollutants" show the pollutants associated with the facilities. An asterisk next to the pollutants also indicates the pollutants associated with 303(d) listed impaired water bodies. These minor edits address the issues pointed out in the San Diego Coastkeeper Notice of Storm Water Inventory Short Comings, by making it easier to determine sources that are both tributary to a 303(d) listed water and generate pollutants for which the water is impaired – exactly what pollutant(s) impair the receiving water. A copy of the updated stationary business inventory table is included in Appendix A.5.

# SECTION 6 RESIDENTIAL COMPONENT

**INTRODUCTION** **1**

6.1 PREVENTION OF POLLUTED RUNOFF 1

6.2 PRIORITY RESIDENTIAL SOURCES 1

6.3 BMP REQUIREMENTS 2

6.4 BMP IMPLEMENTATION 3
- 6.4.1 Outreach to Residents 5
- 6.4.2 Recycling and Waste Collection Services 6
- 6.4.3 Opportunities for Community Involvement 8

**6.5 COMPLIANCE AND ENFORCEMENT** **9**
- 6.5.1 Complaints Received 9
- 6.5.2 Investigation and Enforcement 9

**6.6 NOTABLE CITY ACTIONS** **10**

**6.7 IMPROVEMENTS AND REGULATORY COMMENTS** **10**
- 6.7.1 Improvements 11
- 6.7.2 Regulatory Comments 11

# SECTION 6 RESIDENTIAL COMPONENT

## INTRODUCTION

Pollution prevention is the focus of the JURMP Residential Component to prevent pollutants from entering the storm drain system related to residential activities. Education is the best approach to implementing this component of the JURMP as the goal is to change behavior and perceptions. The City is successful in implementing the collection of household wastes and promoting used oil recycling. Each pound of household waste and used oil collected equates to one pound less of waste/pollutants that could be disposed improperly and enter the storm drain system.

## 6.1 PREVENTION OF POLLUTED RUNOFF

Preventing pollution is easier and less costly than treating wastes at the end of the pipe. The following pollution prevention BMP information is sent to residents via brochures in sewer billings, newsletters, and during face-to-face contact when a complaint or referral is investigated.

- Implement good housekeeping BMPs.
- Conduct automobile repair and maintenance under cover or with drip pans; recycle oil.
- Divert automobile wash liquids to landscaping.
- Store unused automobiles under cover; use absorbent pads or drip pans for leakage.
- Maintain garden and yard using natural remedies and drought-tolerant plants.
- Use less toxic products for home care/maintenance.
- Dechlorinate swimming pool water before releasing.
- Dispose of pet waste in the trash.
- Don’t use the street as your storage area for dirt, mulch, landscaping plants.
- The street is not a disposal area for concrete or paint washout, or hosing off driveway.

## 6.2 PRIORITY RESIDENTIAL SOURCES

Residential areas discharging directly to a major storm drain channel are the focus for pollution sources. Priority sources are directly related to 303(d) pollutants identified in Forrester Creek and the San Diego River. The following table connects sources with 303(d) pollutants. These same 303(d) pollutants are used in Section 11, Program Effectiveness Assessment to estimate the potential amounts of pollutant eliminated through prevention, intervention, and other BMP implementation.

**Table 1 – Prevention BMPs**

| Prevention BMP | Prevention Mechanism | Primary Pollutants Prevented | Prevention of 303(d) pollutant |
|---|---|---|---|
| Composting | Reduces the amount of waste in the trash | Organics | **Phosphorous** |
| Use of a Professional Car Wash | Eliminates dirty, soapy water from the storm drain | Metals<br>Detergents | **TDS**<br>**Phosphorous** |
| Organic gardening | Eliminates fertilizers and pesticides | Nutrients<br>Pesticides | **TDS** |
| Take a bag when walking the dog. | Eliminates dog waste from the Public Right of Way | Fecal Coliform<br>Enterococcus<br>Nitrates | **Fecal Coliform**<br>**TDS** |

## 6.3 BMP REQUIREMENTS

In addition to the pollution prevention BMPs, above, the following are encouraged in residential areas. Home improvement projects can cause side effects, like mud or concrete flowing into the street (see picture to the right). However, with an effective combination of BMPs applied to the maximum extent practicable, simple home projects can meet the City's BMP implementation requirements without much effort or expense.

Table 2 connects the use of BMPs with the prevention, reduction, or elimination of pollutants.

**Table 2 – BMP to Pollutants for Residential Areas**

| BMP | Application | Primary Pollutants | 303(d) Pollutants |
|---|---|---|---|
| Automobile Repair & Maintenance | Use Drip Pans<br>Recycle Oil | Oil & Grease | |
| Automobile Washing | Use Commercial Car Wash | Metals<br>Detergents | **TDS** |
| Automobile Parking | Use Drip Pans | Oil & Grease | |
| Garden and Yard Care | Compost or recycle waste | Organic Material | **TDS**<br>**Phosphorous** |
| Home Care and Maintenance | Use Household Hazardous Waste Programs | Metals<br>Toxic Substances | |
| Pet Waste Disposal | Take a bag when walking the dog | Fecal Coliform | **Fecal Coliform** |
| Private Lateral Maintenance* | Clean lateral every few years | Fecal Coliform<br>Enterococcus<br>Pathogens | **Fecal Coliform**<br>**TDS** |
| RV Parking & Maintenance | Use a legal dump station | Fecal Coliform<br>Enterococcus<br>Pathogens | **Fecal Coliform**<br>**TDS** |

Changes in behavior have been noticed over the years, but although the message has been out in the community for several years, it is still new to many citizens. The Clean Community; Healthy Watershed, and Healthy Garden; Healthy Home (Integrated Pest Management) concepts will be continuing messages in subsequent permit years.

## 6.4 BMP IMPLEMENTATION

Commitment to BMP requirements is listed in the City's JURMP and meets the requirements of Permit Section 6.3, BMP Implementation. Implementation includes selection/application, dissemination of information, and evaluation of implementation at the facility.

The list of minimum BMPs for residential areas tracks along with pollution prevention concepts. Understanding through education and outreach is the basis for changing behavior in the residential community. By changing the way the residential community completes tasks around the home, benefits to water quality will be realized through wet weather monitoring. The common major routes for educating the citizens and disseminating information is through newsletters, sewer billing inserts, and City "drive-abouts" where information is delivered directly to target audiences.

Information on how to implement BMPs is provided to citizens through one-on-one visits, newsletters, sewer billing inserts and citizen complaints/referrals. Information that is distributed includes the following topics.

- Automotive Repair
- Car Washing
- How You Can Prevent Pollution from Entering the Storm Drain System
- Mobile Detailer BMPs
- PowerWashing
- Clean up After Your Pets
- Lawn and Garden Care
- Keeping Our Environment Clean!
- Over-Irrigation Can Cause Storm Water Pollution
- Washing Your Car
- What's the Problem with Pet Waste
- Keeping Our Yards and Our Storm Water Clean
- Trash and Street Sweeping Update
- Trash in Our Strom Drains
- Maintaining your Private Sewer Lateral
- Everything that goes into Our Storm Drains…Ends up in the Ocean
- Why It's Important to Keep Trash, Sediment and Debris Out of Storm Drains
- Pool Maintenance BMPs

- Creating Community by Keeping Our Storm Water Clean

Copies of brochures, newsletter articles, and flyers sent to El Cajon Citizens are included in Appendix A.6.

## Table 5 - Required BMPs for Residential Areas

| | | Automobile Repair Maintenance | Automobile Washing | Automobile Parking | Garden & Yard Care | Home Care & Maintenance | Pet Waste Disposal | Private Lateral Maintenance | RV Parking & Maintenance |
|---|---|---|---|---|---|---|---|---|---|
| RESIDENTIAL | Vehicles & Equipment | X | X | X | | | | | X |
| | Home and Garden | | | | X | X | X | X | |
| | Pets | | | | | | X | | |
| | Private Sewer Lateral | | | | | X | | X | |

Minimum required BMPs for the Residential Component are grouped into four (4) basic categories as shown in Table 5. It is only through consistent, simple messages, that citizens will start to implement the BMP identified for the activities around their homes.

An area where the Police Department continues to collaborate with Storm Water staff is RV Parking and Maintenance. Police Department staff assist Storm Water staff in locating areas where dumping is occurring. The resulting outreach effort should help East County residents to reduce the number of illegal dumping events within this region of the watershed.

As illustrated above, over-watering from many different homeowners' landscaped areas can have an impact on the landscaping and may result in a significant source of water in the street. What seems of little importance from one home combines with runoff from other homes forming small rivers that can move materials stored in the right-of-way or pollutants that are illegally discharged. Homeowners are encouraged to save water and money by adjusting sprinkler heads to reduce or eliminate overspray. When over-watering is discovered, an attempt is made to contact the responsible party. Door hangers are left with instructions when homeowners are not home. Staff schedule a return date to discuss the measures that can be taken by homeowners. When over-watering discharges decrease, there is a reduction of:

- the amount of water discharged to Forrester Creek
- the amount of pollutants transported to Forrester Creek during "No Rain" days

Improvement in decreasing over-watering will be measured by the amount of Forrester Creek flow leaving the City of El Cajon at the jurisdictional boundary to Santee. Flows measured during the dry weather program are an indication of daily flows. The PY2011-12 dry weather flow into Santee was measured at 45 gallons per minute, as measured at Dry Weather Station No. 5. Overall flows have been on the decrease in all permit years since PY2004-05, inclusive, and may indicate that outreach and education efforts that discourage over-irrigation, along with incentives from the various water purveyors, are becoming effective. Additional flow measurements will be taken during the next annual cycle. The full Forrester Creek Study is contained in Appendix A.12.

### 6.4.1 Outreach to Residents

The City used various types of educational materials to distribute information and discuss the JURMP requirements with residents when responding to complaints or investigating a discharge. Brochures were provided to residents during face-to-face discussions concerning complaints and referrals. The City newsletter has included seven articles concerning routine activities where

receiving waters may be impacted by pollutants. The newsletter is freely available for residents and industrial/commercial business owners on a semi-annual basis. Two such printings were completed in PY5 and covered the following activities for residents:

- Clean Up After Your Pets
- Don't Trash El Cajon
- Pool Maintenance BMPs
- Residential Automobile Repair and Maintenance
- Good Housekeeping
- Reduce Lawn Water

The City printed and distributed 38,000 copies, each, of the spring and fall newsletters with five articles in total contained in both newsletters. As a result, residents are becoming more aware of the storm water program. An indication of this awareness is the increase in the number of complaints and referrals from the private sector. As the public and municipal staff gains more knowledge and awareness of urban runoff, additional increases in complaints and referrals are expected to continue to increase. Education of staff and residents is productive.

### 6.4.2 Recycling and Waste Collection Services

Keeping household wastes out of the storm drain system requires the implementation of a coordinated pickup program with a licensed facility to handle the wastes according to appropriate State and Local regulations. The City uses Waste Management to schedule routine and requested pickups for household wastes. Figures 1, 2, 3, and 4 show the total amount of household wastes, the type of wastes collected, recycled materials from curbside pickup (commercial and residential) and total amount of waste collected. There were 23 Household Hazardous Waste, Electronic Waste and Universal Waste Collection Events where a total of 2,087 participants dropped off a total of 250,632 pounds of household hazardous waste (Figure 1). Figure 2 shows the percentages of material types taken to the collection events. Waste Management collected a total of 72,536 tons of waste from residential, commercial and industrial areas (Figure 3). A total of 16,181 tons of materials were recycled from the curbside-recycling program, this program only includes residential areas.

The City of El Cajon works to promote and increase used oil collection through residential collections that include curbside pick-ups or encourages citizens to recycle used oil and filters. A total of 150,801 gallons of used oil were collected from within the City. A total of 20,932 gallons of used oil were collected from residential areas, while a total of 129,869 gallons of used oil and 12 used oil filters were collected from 14 certified collection centers located within the City of El Cajon's jurisdiction.

**Figure 1 – Household Hazardous Waste Collection**

**Figure 2 Percentages of HHW Type**

**Figure 3**

Figure 3 shows the amounts, in tons, of waste collected for Commercial and Residential sites. Waste collected equates to pollutants not discharged to the storm drain system.

### 6.4.3 Opportunities for Community Involvement

The El Cajon Community Development Center (ECCDC) prints and circulates a newsletter to the downtown area businesses on a quarterly basis. Additionally, the ECCDC prints a Clean & Safe report that covers actions to keep the downtown area clean and safe. The downtown Clean Team works to keep the community clean and performs daily litter removal, maintenance, and landscaping activities. Saint Madeleine Sophie's Center provides student workers who detail the downtown street and sidewalk areas by collecting cigarette butts, trash, and debris. Spills are reported directly to ECCDC for immediate removal and disposal.

**Figure 4**

Recycling is a community effort. A total of 16,181 tons of recyclables (includes used oil, newspapers, glass, plastic, tin and aluminum) were collected through residential pickups or deliveries in 2011-12. Figure 4 indicates the amounts, in tons, of materials recycled through residential, commercial, and industrial recycling efforts for 2011-12. Amounts recycled are not placed in landfills or available for discharge to the storm drain system.

## 6.5 COMPLIANCE AND ENFORCEMENT

The City has a variety of enforcement actions upon discovering a residential action that may potentially affect the quality of receiving waters. Verbal warnings (with written documentation), written warnings, orders to abate and correct, and monetary fines are in the legal authority of the City. There are two routes of discovering illegal residential activities. One is through complaint/referral process. Complaints are received through direct contact with City staff, through the City Manager's office and through the City's Website (via e-mail). The other is during scheduled City monitoring and observations of other routine City department activities.

Depending on whether an actual discharge has occurred or there is a potential to discharge, a written warning or Administrative Citation is issued. Corrective actions are verified and the resident re-contacted for any further questions.

### 6.5.1 Complaints Received

Complaints are received through the City's or County's Hotline number or funneled through the City Manager's office. The City also receives complaints through the City's Storm Water Program website. Since the inception of the City's Enforcement Program, citizens take opportunities to inform municipal staff of their concerns during other routine activities. Investigations usually occur within 24 hours of complaint receipt with a follow-up phone call informing the complainant of the investigative results. Complaints were tracked using a simple table and software program. A table in Appendix A.6 lists residential complaints tracked in PY5.

### 6.5.2 Investigation and Enforcement

Storm Water staff investigates each complaint. Contact with the potential discharger is focused on stopping the polluting activity and educating the citizen about our storm drain system and water quality.

**Table 6 – Enforcement Actions**

| BMP Violated | Written Warnings | Administrative Citations | Actions | Follow-up |
|---|---|---|---|---|
| Automobile Repair & Maintenance | 1 | 0 | Stop Activity | None |
| Automobile Washing | 1 | 0 | Stop Activity | None |
| Home Care and Maintenance | 1 | 0 | Stopped Activity | Completed |
| Private Lateral Maintenance | 1 | 1 | Stop Activity | Completed |
| RV Parking and Maintenance | 0 | 0 | Stop Activity | Completed |
| **TOTAL** | 4 | 1 | | |

Written warnings followed each verbal warning in the form of a letter or notification requesting corrective action or enforcement by the Administrative Citation Form (Refer to Appendix A.5 for a Copy Enforcement Criteria and Citation Form). Letters are used only when additional information and explanations are needed to get compliance from the potential discharger. A list of the enforcement actions issued to residents is included in Attachment B.3.

## 6.6 Notable City Actions

**Apartment Complexes and Condominium Conversions**

Newer residential communities formed by conversion of apartment dwellings into Common Interest Developments or Condominiums continues to offer a good opportunity for divulging information about the storm water program. Restarting a small-developed community is a perfect opportunity to introduce or reintroduce storm water protection activities at the development level. Despite a down turn in the number of condominium conversions, the following are required for these types of projects:

- A Storm Water Site Plan that includes a map of the current storm drain system and a list of the internal and external improvements proposed prior to sale. Control of materials, upgrades to the drainage system and treatment are discussed.
- A Storm Water Maintenance Plan for Condominiums
- A Private Sewer Lateral Report, and
- Water Quality additions to the Covenants, Conditions, and Restrictions

## 6.7 Improvements and Regulatory Comments

Throughout the year, the City adjusts JURMP Components based on experience and the need to correlate JURMP activities with water quality. As the Storm Water Pollution Prevention Program continues the move into a BMP implementation program and the reduction of pollutants

discharged into the storm drain system, existing residential neighborhoods become a pivotal group to assist in making the water quality improvements a reality.

### 6.7.1 Improvements

Improvements for the Residential Component is more challenging as citizens view the storm water regulations as an infringement on individual rights. Choosing the correct approach and picking an area that is more beneficial to water quality takes thought and planning. Based on past experience, the proposed actions for PY5 include:

- Continue partnering with the El Cajon Community Development Corporation in reaching out to the community
- Continue to meet with new development Home Owner Associations to distribute storm water information
- Contact property management companies to in order to disseminate storm water information.

### 6.7.2 Regulatory Comments

The City did not receive regulatory comments for the Residential Section of the JURMP Annual Report for 2010-11.

# Place Holder

**(Section 7 to be Submitted December 15, 2012)**

## SECTION 8 EDUCATION COMPONENT

**8.1 EDUCATION AND OUTREACH 1**
8.1.1 Education and Outreach Events 2
8.1.2 Jurisdictional Accomplishments 2
8.1.3 City Staff Training 3
8.1.4 Special Community Presentations 3
8.1.5 Regional- and Watershed-Related Outreach 4
8.1.6 Educational Materials Jurisdictional Distribution 5

**8.2 LEADERSHIP ACTIVITIES AND PARTNERSHIPS 6**

**8.3 MEASURING CHANGES IN KNOWLEDGE AND BEHAVIOR 7**

**8.4 IMPROVEMENTS AND REGULATORY COMMENTS 7**
8.4.1 Improvements 7
8.4.2 Regulatory Comments 7

# SECTION 8 EDUCATION COMPONENT

## 8.1 EDUCATION AND OUTREACH

The goal of the education component is an informed and knowledgeable community. It is crucial to the success of a storm water management program for City staff and the community at large to have easy access to reliable and accurate storm water information. Without a shared, common knowledge base of local water quality and urban runoff information, it is difficult to obtain public support for local storm water quality programs. The storm water educational materials need to be detailed and comprehensive enough to support a shift in individual daily actions while allowing community groups to back specific water quality measures. As with all the other components of this storm water pollution prevention program, maintaining and restoring the chemical, physical and biological integrity of state waters is the ultimate outcome.

If reduction is the goal, then prevention is the theme for the Storm Water Pollution Prevention Program. The Education Component continues to emphasize the basic topics, such as:

- The difference between the sanitary sewer and the storm drain system; and
- The street and storm drainage system is not your garbage disposal system; and
- Making small changes individually, adds up to big changes in our rivers and at the beaches.

The other part of a successful storm water program is an involved and committed municipal staff that contacts the public about potentially damaging discharging activities. Storm Water staff diligently works to educate the citizens and businesses within the City jurisdiction on water quality and ways to prevent pollution from entering the storm drain system. The goals of the City's education and outreach program are to raise awareness of urban runoff and change the behavior of citizens and businesses. The progression of topics will lead to Watershed concepts as the basics in storm water are understood by the general public.

### 8.1.1 Education and Outreach Events

Educating staff and the public is the best way to effect change in people's behavior. It is clear that there is broad-based public support for a cleaner and healthier environment. When people can connect with and learn more about our storm water program, our program earns the respect our citizens and community leaders for protecting our water quality. An effective "learn and earn" outreach program should be both regional and jurisdictional, since a pooled effort regionally is able to educate on a more impressive scale. Additionally, since we all live in a watershed, storm water pollution and the protection of receiving waters defy jurisdictional boundaries. As the San Diego River Watershed Copermittees move toward a Watershed-based approach to storm water management, education and outreach efforts will follow watershed strategies on a regional basis. As shown above, the City of El Cajon developed a Storm Water "Watershed" Logo, as well as other logos, to promote pollution prevention and protection of water quality.

### 8.1.2 Jurisdictional Accomplishments

Outreach accomplishments during PY5 include the following list of education and outreach efforts.

- Continue to work with the El Cajon Community Development Corporation (ECCDC) to close and protect dumpsters, keep trash areas clean, and encourage good housekeeping habits in the downtown area.
- Storm Water Education and Outreach Document Portfolios were prepared and issued to selected municipal staff with high probability of contact with citizens on storm water pollution prevention issues. This included staff tasked with commercial and industrial site inspections, construct site inspections, complaint and investigations. The use of the storm water information portfolio has allowed the storm water program to connect with citizens, staff and other interested parties in an effective and detailed manner.
- "Fire Safety Open House" This day-long, Saturday event (October 4, 2011) included booths, educational information and formal and informal demonstrations and hands-on explanations on various activities that help prevent storm water pollution. It is estimated that approximately 5,000 visitors attended this event.
- "Sustain La Mesa" Environmental Festival – This event was held at Harry Griffen Park which serves the citizens of La Mesa and El Cajon. The event was held October 8, 2011 and was attended by an estimated 1,500 people.
- Johnson Elementary School Career Day – Presentation of Storm Water and Geographic Information System was presented to students interested in careers in environmental sciences.
- El Cajon Library Multicultural Fiesta – This event included a booth with Storm Water program information as well as some "give-a ways". The event drew an approximate 2,000 participants.

- El Cajon Car Show – The City was invited by the "I Love a Clean San Diego" organization to set up a display in a booth at the El Cajon Cruise on August 17, 2011. Information regarding auto repair and maintenance were distributed at the event.
- Think Blue Radio Spots – The City of El Cajon collaborated in the recording of two radio spots for the regional Think Blue Campaign.
- El Cajon Arbor Day – The Storm Water Department participated in Arbor Day.

### 8.1.3 City Staff Training

Municipal staff was given the basics in storm water training including:

- What is a Watershed and what Watershed do we live in.
- Why is keeping our water clean important.
- The different types of pollutants and where these pollutants originate.
- The difference between the storm drain system and the sanitary sewer system.
- What can be done at work and at home to eliminate polluted runoff during rain events and all yearlong.

Municipal crews are given door hangers to use during their daily routine activities in the City. An example of a door hanger is provided in Appendix A.6. The door hanger alerts the resident to the potential discharge that may exist on or near their property. Possible solutions and phone numbers for reporting discharges are provided.

### 8.1.4 Special Community Presentations

EL CAJON FIRE DEPARTMENT FIRE AND SAFETY OPEN HOUSE

On October 8, 2011, the City participated in the El Cajon Fire Department "Fire and Safety Open House." This day-long, Saturday event included booths, educational information and formal and informal demonstrations and hands-on explanations on various activities that help prevent storm water pollution. It is estimated that approximately 5,000 visitors attended the event; many of them visited the storm water booth as they passed through. A watershed model is used to demonstrate to children how rain water can pollute our water-ways.

CAREER DAY AT JOHNSON ELEMENTARY SCHOOL

The Storm Water program provided residential BMP information and promotional items to elementary school students from Johnson Elementary School. The event took place on November 10, 2011 and was presented by City Storm Water/GIS staff. A total of approximately 150 students attended the Career Day presentation.

El CAJON LIBRARY MULTICULTURAL FIESTA

The Storm Water Program had a booth with information about the program and the watershed. While this event had an overall multicultural flavor, agencies were invited to attend and participate. The event took place at the El Cajon Library on April 14, 2012. Approximately 2,000 attendees participated in the event.

SUSTAIN LA MESA

This event took place at Griffen Park which serves both communities of La Mesa and El Cajon. The event took place October 8, 2011 and the City of El Cajon Storm Water Pollution Prevention Program had a booth at the event. The booth had information about keeping storm drains in neighborhoods clean and properly disposing of hazardous materials. Information was also given about the watershed and how discharges reach the San Diego River and the Pacific Ocean.

EL CAJON CAR SHOW

Information was provided from a booth that was put together by the "I Love a Clean San Diego" organization at the El Cajon Cruise Car show August 17, 2011. The information included how to prevent pollutants related to activities from auto repair and maintenance.

ARBOR DAY

This event was organized by the City of El Cajon Parks Department April 26, 2012 to celebrate the City's reception of the Tree City USA award. The City Storm Water Pollution Prevention Program had a booth at this event and distributed general information about the program that included the management and proper use of fertilizers.

### 8.1.5 Regional and Watershed-Related Outreach

As in previous permit years the Residential Sources Workgroup focused its budget towards in-kind contribution to develop a Regional Education and Outreach Program that address regional issues and will aid in a transition from a jurisdictional to a watershed-related program approach. All Copermittees contribute funds towards the outreach workgroup to benefit a coordinated regional pollution prevention program. PY5 funds were used to further develop an approach that targets audiences and provides uniform information to the region. The City of El Cajon served on some of the committees and collaborated in the recording of two radio spots for the regional

Think Blue Campaign. The announcements were recorded January 2012 by City of El Cajon Staff and were aired shortly afterwards in a local radio station. The announcements touched on the topics of litter and improving regional water quality.

### 8.1.6 Educational Materials Jurisdictional Distribution

The City developed brochures on the following subjects for distribution to the public:

- Clean Up After Your Pets
- Don't Trash El Cajon
- Pool Maintenance BMPs
- Residential Automobile Repair and Maintenance
- Good Housekeeping
- Reduce Lawn Water

The City printed 38,000 copies of two semiannual newsletters containing a total of 5 articles and reaching an estimated 190,000 different readers. A summary of the topics covered in the 5 articles is included above and in Section 6, Residential Component, of this report. Storm water logos assist the City in getting the attention of citizens and businesses. Logos are a way to make a lasting impression with citizens and businesses. One storm water logo used by the City is shown above.

Through the course of PY5, a number of contacts were made to the public using brochures, fliers, mailers, radio and TV Ad's. Copies of brochures, fliers, and newsletter articles are contained in Appendix A.6.The following table indicates the types and quantity of outreach impressions.

**Table 5**

| Material Type | Number Distributed |
|---|---|
| Articles/Newsletters | 190,000 |
| Sewer Billing Inserts | 0 |
| Brochures | 400 |
| Over-the-Counter | 300 |
| **TOTAL** | **190,700** |

**Commercial**

Education of commercial facility owners and their employees occurs through the use of brochures oriented specifically to a type of activity. Written warnings are accompanied with a brochure on the activity as well as distribution of these brochures as outreach opportunities arise during business and construction site inspections, and complaint investigations. More one-on-one distributions were completed this year as the City expanded its role in inspections, complaint investigations and the daily routines of residential communities.

**Industrial**

Industrial facilities revise and refine their BMP requirements through the annual inspection process. The following are discussed and informational brochures are shared when necessary.

- Prevention of Non-Storm Water discharges
- Good Housekeeping Practices
- Vehicle and Equipment Washing, Repair, and Fueling
- Loading and Unloading of materials
- Solid and Hazardous Waste Management
- Spill Prevention and Response
- Building and grounds maintenance
- Parking Lot maintenance
- Storm drain system maintenance
- Private Sewer Lateral Maintenance

## 8.2 LEADERSHIP ACTIVITIES AND PARTNERSHIPS

The City's major roles for educating the community include:

- Continue in partnerships with the Cities of Santee, La Mesa, San Diego and County of San Diego in training staff on storm water management.
- Continued in a relationship with the El Cajon Community Development Corporation and their Community Ambassadors and Clean Team. The Community Ambassadors are employees that develop connections with businesses and the community that will promote a cleaner and safer city. The Clean Team are students of St. Madeleine Sophie's Center and are happy to assist in various community tasks. The Clean Team picks up cigarette butts and other debris along the sidewalk and gutter that the City's street sweeper cannot collect.

- Collaborated with "I Love a Clean San Diego" to conduct storm drain stenciling, on an as needed basis.

## 8.3 MEASURING CHANGES IN KNOWLEDGE AND BEHAVIOR

A basic measurement of increased knowledge is a test of that knowledge. The City's test has been a steady flow of referrals and reports from municipal staff. The number of complaints and referrals from citizens and county hotline declined from last year. The Regional Outreach Program funded by this year's Copermittee Outreach budget will continue to develop a very detailed baseline of community awareness, and the barriers to, and the benefits of, changes in behavior.

## 8.4 IMPROVEMENTS AND REGULATORY COMMENTS

Changes to the City's Storm Water Program are initiated through gathered experience and regulatory comments. Improvements are commitments generated by the City to modify the activities in ways dictated by direct or indirect experience. Regulatory comments are requests or directives to address potential deficiencies in the JURMP.

### 8.4.1 Improvements

The following are proposed improvements for the next Permit Year (July 1, 2012 through June 30, 2013).

- Continue to coordinate and expand outreach and education efforts to local public schools.
- Coordinate outreach and public participation activities for Public Works Week.

### 8.4.2 Regulatory Comments

No regulatory comments have been received for the Education Component of the JURMP Annual Report for 2010-11.

# SECTION 9 Public Participation Component

**Introduction** **1**

**9.1 Regional Participation** **1**
9.1.1 Regional and Local Storm Water Hotlines 2

**9.2 Improvement and Regulatory Comments** **2**
9.2.1 Improvements 3
9.2.2 Regulatory Comments 3

# SECTION 9 PUBLIC PARTICIPATION

## INTRODUCTION

Public participation is an essential element of a successful Urban Runoff Management Program, but is more highly effective as a Watershed Component. Due to the nature of participation by organizations such as "I Love a Clean San Diego", watershed concepts are more easily introduced to participants from the entire watershed and not just a small segment of the population in one particular community. Wherever Copermittees' efforts can be combined to produce better results, it is a "win/win" situation for jurisdictions, the watershed and the communities they contain.

Educational efforts set the stage for getting the public involved with scheduled Storm Water Pollution Prevention events or interested in following the minimum required BMPs at home or business. Since prevention through familiarity and participation is the best solution to pollution, the public fulfills participation requirements by:

- Participating in storm drain stenciling,
- Reporting of discharge incidents using the City Manager's Office or the City and County hotline,
- Participating in events that collect or recycle hazardous waste and used oil , and
- Participating in local and regional cleanup events

## 9.1 REGIONAL PARTICIPATION

On a regional basis, the City of El Cajon is the lead for the San Diego River Watershed Workgroup and is a member of the Watershed Lead Committee group. The San Diego River Watershed workgroup has continued to work together, including stakeholders' input or participation when possible, taking advantage of relationships developed through the years since developing and completing the San Diego River Watershed Management Plan. The City of El Cajon chairs the San Diego River Watershed Copermittee meetings.

The City supported the "I Love a Clean San Diego" (ILACSD) Annual Creek to Bay Cleanup. Over 54 volunteers collected a total of 183 pounds of trash and recyclable materials within the City. As in past years, the City of El Cajon also gave permission to ILACSD to stencil the message "No Dumping . . I Live Downstream" and a depiction of a dolphin or duck to the curb area adjacent to storm drain inlets within the City.

### 9.1.1 Regional and Local Storm Water Hotlines

The City and County have a Hotline that can be used by the public to report potential illicit discharges and connections. The Hotline phone number is provided in informational brochures to residents and businesses and is posted on the City Website. Public participation is an essential part of an illicit discharge elimination program. Many illicit discharges are one-time occurrences that may not be observed by City staff. Concerned citizens can help stop illicit discharges by reporting them to the City. The following provides the details of those Hotlines.

- ✓ **City of El Cajon Storm Water Hotline, (619) 441-1653**

The City Storm Water Hotline provides access Monday through Friday 7:30 a.m. – 5:30 p.m. and complainants are directed to the appropriate staff person. The City's hotline currently provides information in English and Spanish.

The City updates its Storm Water Web Page to contain the most recent brochures and reports. Documents are retrieved using Abode Acrobat to open the posted PDF files. The Storm Water Web Page is "Quick Linked" from the City of El Cajon Home Page with links to a list of documents and other important websites.

- ✓ **County Storm Water Hotline, 1-888-846-0800**

The County storm water hotline is answered Monday through Friday, 8:00 a.m. – 5:00 p.m. and provides services in both English and Spanish and a voice mail message for 24-hour public access. Relevant complaints received through the County hotline are forwarded to the City Storm Water Protection Program.

## 9.2 IMPROVEMENT AND REGULATORY COMMENTS

Changes and improvements to the City's Storm Water Participation Program are initiated through gathered experience and regulatory comments. Improvements are commitments generated by the City to modify the participatory activities in ways dictated by direct or indirect experience. As the focus of the program shifts to multi-jurisdictional participation on a watershed level, changes and improvements to the storm water program will be necessary. Regulatory comments are requests or directives to address potential deficiencies in the JURMP.

### 9.2.1 Improvements

The following are proposed improvements for the next Permit Year.

- Continue collaboration with community volunteer groups.
- Continued participation in Watershed-wide efforts.
- Focus the City's efforts on programs and activities that will have an impact on the watershed, its health, the most recent pollutants of concern based on the 303(d) list and their sources
- Continue to participate in the El Cajon Fire Department Open House and other school activities to inform and engage children on water quality issues.
- Start preparing the implementation of the bacteria TMDL requirements.

### 9.2.2 Regulatory Comments

No regulatory comments have been received for the Public Participation Component of the JURMP Annual Report for 2010-11.

# SECTION 10 FISCAL ANALYSIS

| | | |
|---|---|---|
| 10.1 | INTRODUCTION | 1 |
| 10.2 | GENERAL BUDGET INFORMATION | 1 |
| 10.3 | FISCAL ANALYSIS METHODS | 3 |
| 10.4 | FISCAL ANALYSIS RESULTS | 3 |
| 10.4.1 | EXPENDITURES | 3 |
| 10.4.2 | FUNDING SOURCES | 3 |

# SECTION 10 FISCAL ANALYSIS

## 10.1 INTRODUCTION

A fiscal analysis of the JURMP provides a vital assessment of resources for the current and upcoming Permit Years. This section of the report will incorporate guidance and standards developed collaboratively by the Copermittees and in accordance with the Municipal Permit. The City is reporting expenditures using summary tables developed by the Standardized Fiscal Analysis Method and Format adopted in February 2009 (summary tables and forms are included in Appendix A.10). The analysis attempts to identify adequate support and how resources are divided to support and fortify the JURMP, WURMP, and RURMP efforts.

In PY 2003-04, the City Storm Water staff developed a separate budget from other Public Works activities and sufficient to run the Storm Water Program. The Program continues to be adequately funded through the City's Sewer Fund. This funding source has been used since PY 2004-05 and will continue to be used for PY 2012-13.

## 10.2 GENERAL BUDGET INFORMATION

The following table shows actual expenditures from permit year 2003-04 through 2010-11, estimated actual budget for 2011-12, and the proposed 2012-13 budget for the City's Urban Runoff Management Program.

| Item | 05-06 | 06-07 | 07-08 | 08-09 | 09-10 | 10-11 | Estimated Actual 11-12 | Proposed 12-13 |
|---|---|---|---|---|---|---|---|---|
| Salaries (including benefits) | 533,487 | 550,856 | 722,809 | 714,841 | 781,174 | 765,041 | 766,054 | 744,864 |
| | | | | | | | | |
| Materials, Services and Supplies | 183,639 | 254,876 | 397,292 | 423,543 | 421,181 | 335,939 | 506,288 | 709,275 |
| | | | | | | | | |
| Capital Outlay | 6,235 | 29,953 | 73,593 | | | 10,873 | 10,460 | |
| | | | | | | | | |
| | | | | | | | | |
| **TOTAL** | **723,361** | **835,685** | **1,193,644** | **1,138,384** | **1,202,355** | **1,111,853** | **1,282,802** | **1,454,139** |

Budgets increased steadily from 2003-04 through 2006-07 under Municipal Permit Order 2001-001. The increase in PY 2007-08 was a result of allocating resources in anticipation of fulfilling requirements for Municipal Permit R9-2007-001. The budget to maintain the Storm Water Program in compliance with the Permit dropped slightly in PY 2008-09 but increased again in PY 2009-10. Based on estimates for PY 2011-12 and the proposed budget for PY 2012-13, the over –all budgets for the Storm Water Program will continue to increase, especially with the anticipation of the renewal of the Municipal Permit. A copy of the budget is located in Appendix A.10.

The City's NPDES Urban Runoff Management Program funding was sufficient to meet the JURMP requirements in PY 2011-12 and is projected to be sufficient to meet requirements in PY 2012-13. The City met its projected goal of continuously executing plans, procedures, and processes to implement JURMP requirements and assess the effectiveness of its programs.

Modifications to the program were made that resulted in an increase in expenditures in PY 2004-05 and a slight decrease in PY 2005-06. The budget for PY 2004-05 contained some capital expenditures that were started in PY 2002-03 and PY 2003-04 such as a Geographical Information System dataset for map generation and a trash debris fence to collect trash and debris in Forrester Creek before discharging to Santee. From PY 2005-06 through PY 2011-12 there has been a steady increase in the budget to support the Storm Water Program. Overall, a general increasing trend of funds has been allocated from PY 2002-03 through the proposed PY 2012-13 to sustain a viable storm water program.

## 10.3 FISCAL ANALYSIS METHODS

The Standardized Fiscal Analysis Methods and Format (Fiscal Analysis Methods) were collaboratively developed and adopted by the Copermittees in January 2009 in accordance with sections G, J. 1 .a(3)(k), and J. 1 .c(1 )(d) of NPDES Order No. R9-2007-0001. The Fiscal Analysis Methods document was submitted to the San Diego RWQCB by January 31, 2009, as Attachment 1 of the Regional Urban Runoff Management Plan (RURMP) Annual Report for 2008-2009.

## 10.4 FISCAL ANALYSIS RESULTS

### 10.4.1 EXPENDITURES

The budget for PY 2011-12 included a Storm Water Program Manager, 1 part-time senior engineering technician, 1 assistant engineer, 1 GIS technician, 1 compliance officer, and 2 part-time Engineering Intern. The personnel for PY2012-13 will remain unchanged with the same number and job classification as in the current reporting year. The City also has an open contract with two consultants to provide as-needed services to ensure the City meets its JURMP implementation requirements.

The City is using forms and tables developed by the new Fiscal Analysis Method for reporting (attached in Appendix A.10). It is important to note that while the Expenditure Summary table in Appendix A.10 shows jurisdictional expenditures for various permit components, it may not reflect all expenditures. Further modifications to the City's accounting and expenditure tracking will continue to be made in the future to better track expenditures for each jurisdictional component. Program components expenditures for development planning, construction, municipal, industrial/commercial, residential, and special investigations were difficult to dissect.

### 10.4.2 FUNDING SOURCES

In the long-term, funding for the Storm Water Program will continue to be even a bigger question with necessary increases required to maintain permit compliance related to permit renewals and up-coming new requirements. The City is constantly challenged with doing more with less after a continual decline in general fund budgets. For PY2011-12, the City completed all inspections, monitoring, and complaint investigations, as well as other requirements of permit R9-2007-0001, with existing staff complemented by consultants.

Working efficiently is the goal of the jurisdictional urban runoff management program. Completing onsite inspections, tracking enforcement actions, and complaint/referral information allows the City to reduce the amount of time and paper to complete significant portions of the Municipal, Industrial, Commercial, Construction, and Land Use Planning JURMP Components.

For WURMP activities, the City will continue to coordinate with the other San Diego River Watershed Copermittees to complete watershed water quality activities and education activities. Working together eliminates duplicative efforts and enhances the effect across a wider range of people and geographical area. The City manages a contract with a consultant to assist with the Watershed program and a share cost agreement has been in effect for a few years.

No regulatory comments were received for the Fiscal Analysis component of the JURMP Annual Report for 2010-11.

## SECTION 11 PROGRAM ASSESSMENT

**11.1 INTRODUCTION 2**

**11.2 EFFECTIVENESS ASSESSMENT RESULTS 3**
11.2.1 Level 1 3
11.2.2 Level 2 and 3 3
11.2.3 Level 4 4

b. Staff Training 6
c. Outreach 7
11.3.3 Program Activities and Water Quality 7

**11.4 LONG-TERM ASSESSMENT 7**

**11.5 PROGRAM ASSESSMENT SUMMARY 18**

**11.6 IMPROVEMENTS AND REGULATORY COMMENTS 19**

# SECTION 11 PROGRAM ASSESSMENT

## 11.1 INTRODUCTION

The City began using the standardized program effectiveness assessment soon after it was developed by the Copermittees during the previous permit cycle. The City also participated in regional efforts to develop a standardized assessment approach and associated metrics from summer 2007 through winter 2008. The original goal of that group was to produce assessment work products that all Copermittees could use in their JURMPs. Due to a variety of complications on a regional level, that process could not be completed prior to the submittal of the City's JURMP, so the City prepared its own effectiveness assessment approach and measures.

Since the submittal of the JURMP in March 2008, little significant progress has been made on regionally standardized approaches to program effectiveness assessment. It is likely that the Copermittees' Fiscal, Reporting, and Assessment Workgroup will revisit the issue of standardized assessment metrics and procedures in the near future. The City anticipates participating in the process of developing such regional standards and incorporating work products produced into its own local program effectiveness assessment system. Implementation of the City's JURMP is intended to reduce discharges of urban runoff related pollution to the MEP. The City regularly evaluates its program to make it as effective as possible. The overall structure of the City's storm water program is composed of three primary components:

- Program Planning
- Program Implementation
- Effectiveness Assessment

The process typically proceeds from planning to implementation to assessment, although in practice all three may be in progress at the same time. The initial step is program planning, which requires identifying potential pollutant sources, establishing BMP requirements, and establishing targeted outcomes and ways to measure those outcomes. Program implementation is assessed each year using the methods developed in the program planning stage and reported in JURMP annual reports. The conclusions from these assessments are used during the next round of program planning to incorporate improvements to the program and refine the assessment technique.

The City has identified a variety of metrics to assess progress toward targeted outcomes. At the end of each reporting year, the City uses selected metrics to assess the effectiveness of its program implementation. Example metrics were provided in Section 13 of the City's 2008 JURMP. The effectiveness assessment approach developed by the Copermittees during the last permit cycle includes six different levels of targeted outcomes. Each successive level represents a step up from more easily measured, activity-based outcomes to more difficult to measure, quality-based outcomes. The levels are listed below.

Level 1: Documenting Activities – Based Permit Requirements
Level 2: Raising Awareness/Knowledge
Level 3: Changing Behavior/BMP Implementation
Level 4: Reducing Load from Sources
Level 5: Improving Runoff Quality
Level 6: Protecting Receiving Water Quality

## 11.2 EFFECTIVENESS ASSESSMENT RESULTS

The new Municipal Permit requires the City to assess the effectiveness of each significant activity for each program component, for each program component as a whole, and for the storm water program as a whole. Level 1 through Level 4 outcomes are discussed in the text below. At this time the City is not able to assess Level 5 or Level 6 outcomes for individual program activities or individual programs. As has been noted in the last released CASQA effectiveness assessment guidance, methods for integrated assessment—assessment that combines both monitoring data and programmatic data—are still under development at regional and statewide levels (CASQA, 2007).

### 11.2.1 Level 1

Level 1 is documenting activities. Sections 1 through 10 of this PY5 Annual Report list activities, storm water controls, and when possible the quantity of pollutants collected and diverted from entering the storm drain system, viewed as a reduction in pollution-containing materials potentially available for discharge into the storm drain system. Existing and New Development, Construction, and Illicit Discharge Illegal Connection are the areas where quantifiable amounts of pollutants are reported as collected and removed from entering the storm drain system. By completing collection activities, the City maintains compliance with the Municipal Permit requirements.

### 11.2.2 Level 2 and 3

Refer to tables 11-3 through 11-8 at the end of this section for discussions of Level 2 and Level 3 outcomes for significant activities within each program component. Note that only a Level 1 assessment applies to fiscal analysis, so no table for fiscal analysis is included.

### 11.2.3 Level 4

The primary goal of BMP implementation is to reduce the loading of pollutants to urban and storm water discharges. Pollutant load estimation is the first direct characterization of water quality through JURMP activities. Regionally, San Diego River Watershed receiving water quality results are from the major outfall to the Pacific Ocean. In the future, Watershed monitoring at the jurisdictional lines will at least assign responsibility of pollutant loads, but will not determine a reduction in pollutants. The best approach is to make sure wet weather and dry weather results do not exceed action levels.

The tables at the end of this section provide information for Level 4 assessments where feasible. Assessment of Level 4 outcomes is feasible for some programs that directly measure the amounts of pollutant removal, such as MS4 cleaning. For most other programs reliable load estimation methods have not yet been developed.

## 11.3 ASSESSMENT OF PROGRAM MEASURES

Basic assessment of program measures begins with City-based questions. First, starting with what is known, then shifting to what is wished to be learned, and finally what was learned. During the first step, the "what is known" are the measurements compiled from each of the JURMP components. Measurements such as the amount of material removed during street sweeping or cleaning of catch basins are direct measurements of pollution diverted from entering waterways. At some point it may become appropriate to compare measurements to previous years, average measurements, or assess trends to assist with potential pollutant loads removed from a particular origin. Dry weather monitoring results are direct measurements of pollutants in urban runoff, but only partially address measurements of receiving water quality.

Sources, selected BMPs, measurements, and other indicators, identified in the previous Sections of this Annual Report for each of the Existing and New Development Components, report completed activities and achieved goals as required by Order No. R9-2007-0001 and the City's updated JURMP. In summary, the City completed program implementation as designed in the JURMP and is incompliance with the activity-based permit requirements.

### 11.3.1 Direct Measures of Program Activities

For many years, the City has tracked efforts from various collection agencies with four types of direct measures, as follows:

- Street Sweeping,
- MS4 Cleaning/Maintenance,
- Oil Recycling, and
- Household Hazardous Waste Collection

In general, the City tracks these measures because they provide an important indication of the types and amounts of materials and wastes that are diverted from the MS4 through various means. Street Sweeping and MS4 Cleaning directly removes materials from the pathway of rainwater and urban runoff. Oil Recycling re-routes used oil from illegal disposal to refineries where it is ultimately reused. The Household Hazardous Waste program collects wastes that may otherwise be improperly disposed, potentially to the MS4.

### a. Street Sweeping

The Department of Public Works collected an estimated 3,710 cubic yards of debris during its street sweeping activities (17,677 miles of curbed streets). This year, the City's street sweeping efforts have been consistent with previous years, with a slight increase in the number of miles swept. Were it not for these efforts, the debris collected would otherwise be swept away during rain events. Collection provides important long-term water quality benefits.

### b. MS4 Cleaning

In PY2011-12, City's storm drains were cleaned by the Department of Public Works resulting in the removal and proper disposal of 1,788 cubic yards of material from the storm drain system. As a whole, the City's effort remained the same as last year.

### c. Recycling of Household/Commercial Waste and Oil Recycling

Recycling in El Cajon has good participation, but could always do better when the numbers are compared for recycled materials (16,181 tons) and waste (72,536 tons). Trends in waste collection will continue to be tracked. The 16,181 tons of recyclables included - amongst other items - newspapers, glass, plastic, tin, and aluminum.

Oil recycling is tracked by independent recyclers that are certified collection centers (e.g. Jiffy Lube) and Waste Management for curbside pickup of used oil. A grand total of 150,801 gallons of used oil were collected from within the City. A total of 20,932 gallons of used oil were collected from residential areas. While a total of 129,869 gallons of used oil were collected from certified collection centers located within the City of El Cajon's jurisdiction.

### d. Household Hazardous Waste Collection

Waste Management of El Cajon collects the Household Hazard Waste (HHW) for the City's jurisdiction. An estimated 403,432 pounds of household hazardous waste was collected in permit year 2011-12. In permit year 2010-11 a total of 489,619 pounds were collected, compared to an estimated 364,171 pounds in PY2009-10, 344,146 pounds in PY2008-09, 268,323 pounds collected in PY2007-08; 236,890 pounds collected in PY2006-07; 198, 015 pounds in PY2005-06; and an estimated 277,000 pounds of household hazardous waste/recyclables were collected at 19 events in PY2004-05. As a whole, the City's effectiveness in collecting HHW from its residents has increased consistently and significantly over the years.

### 11.3.2 Indirect Measures

In most instances, changes to receiving water quality cannot be directly compared to collection activities. However, many indirect measures have value in tracking the effectiveness of specific program activities, and may have additional utility in assessing long-term water quality changes. Many of these measures are reported and discussed throughout this Annual Report. To track and evaluate the effectiveness of its program implementation over time, the City has compiled summary statistics for several measures.

**Table 11.1**

| Indirect Measure | | 2011-2012 |
|---|---|---|
| **Complaints** | Total Number received | 110 |
| | Number of Referrals from Other Departments | 39 |
| | Number of Enforcement Actions | 22 |
| **Staff Training** | City Staff Trained (In Storm Water Management) | 162 |
| **Outreach** | Outreach events conducted | 5 |
| | Number of Presentations | 1 |
| | Audience @ presentations | 120 |

#### a. Complaints and Referrals

In this reporting period, the City received a higher number of total complaints than last year from other City departments, citizen calls, and county referrals. The City and County hotlines are described in Section 6 (Residential Component). As previously discussed, this trend underscores the effectiveness of the City's outreach and staff training efforts. As in previous years, it is believed that more of the City's citizens and staff are aware of storm water violations and understand what to do when water quality concerns were observed.

#### b. Staff Training

Levels of staff training during this reporting period were expanded to those of previous years. Although the City has made an important commitment to staff training under the previous and current Permit (see JURMP Section 8, Education), the consistency of these numbers also demonstrates the City's past commitment to training its staff. Training of staff with implementation responsibilities is not a new part of the City's storm water program. However, the scope and breadth of these and other programs has significantly increased.

**c. Outreach**

This year, the City conducted a number of one-on-one discussions at the Public Works front counter with building and planning applicants and with commercial businesses and industrial facilities during inspections and complaint follow-ups. Together, these increased face-to-face conversations demonstrate that the City is effectively implementing its outreach and education programs; details are provided in Section 8 (Education). The City also sent notifications to various types of mobile businesses for newly required BMPs.

### 11.3.3 Program Activities and Water Quality

Presenting a direct connection between pollutant load reduction and Storm Water Pollution Prevention Program activities continues to slowly move forward and is very much under development. Copermittees have created a Framework document containing the six (6) Levels of Assessment. The PY2002-03 Annual Report addressed Levels 1 through 4. However, forecasting only generates numbers that could not be supported by calculation or program actions. For PY2011-12, the City continued with the slightly modified approach used for PY2008-09, which brings the assessment much closer to connecting activities with water quality. Amounts of pollutant-containing materials prevented from entering the storm drain system provides solid numbers while adding percentages of facilities known (through inspection) to be implementing minimum required BMPs and reduces the estimation factor.

## 11.4 LONG-TERM ASSESSMENT

The Annual Assessment indicates the City is meeting the requirements specified in their JURMP and collecting data associated with those program activities. At some point, a connection between activity completed and pollutant load in receiving waters will become a reality.

A Long-Term Assessment must answer key questions to guide future activities and build into the current program, the additional reporting requirements in order to connect program activities with actual improvement in receiving water quality. The Long-Term Effectiveness Assessment (LTEA) is conducted once every five years (permit renewal cycle) as changes to permits may change approaches and programs. Copermittees are preparing to begin work on this permit cycle's LTEA.

**Table 11.2**

| Program Activity | Annual Questions | Permit Questions (Every 5th year) |
|---|---|---|
| *Water Quality Assessment* | What are the high priority quality problems and where do they occur?<br><br>What constituent(s) is(are) causing the problems? | What are the changes to discharge and receiving water quality in my Watershed? |
| *Program Planning* | What are the priority sources of | Are the current programs |

| Program Activity | Annual Questions | Permit Questions (Every 5th year) |
|---|---|---|
| | pollutants?<br>What BMPs are needed to control these pollutants?<br>What are the targeted outcomes for the BMP Implementation?<br>What are the projected Load Reductions from these implemented BMPs? | providing the information necessary to produce targeted outcomes? |
| *Program Assessment* | Were targeted outcomes achieved?<br>What BMPs should be changed or should other BMPs added?<br>Are costs associated with implementation feasible? | Is the cost worth the water quality changes? |
| *Integrated Assessment* | How well are the parts of the program working together?<br>What other links can be made? | What other relationships between activities and water quality are evident? |

Answers to the above questions come from further analysis of each existing component area. Tables of estimated pollutant loads removed are provided below. Areas where pollutant removal rates are high will be the areas to focus program efforts. Modifications to JURMP activities will be the result of this assessment.

Level 4 Pollutant Load Reductions are provided in the following tables for existing development. Estimates of average load reduction per event was the most difficult to find support evidence. Using the best knowledge available, the magnitude of total pollutants reduced is the most powerful in assessing the degree of success for the City's storm water program.

**LEVEL 4 Assessment**

Each of the following tables provides an estimate (supported with empirical data) for the amount of pollutant-containing materials prevented from entering the MS4 due to the activities of the Storm Water Pollution Prevention Program implemented in the City of El Cajon. As there is only one receiving water body in El Cajon, Forester Creek impairments were used as the constituents of concern when estimating possible amounts of pollutant-containing material prevented or a reduction in the amount of pollutant that could have discharged into Forester Creek. Only Existing Components were assessed through Level 4 as the most qualitative and quantitative information is available in these areas. The following paragraphs discuss assumptions incorporated into calculating the amounts provided as "Total" for each Existing Component.

The City of El Cajon installed a trash and debris fence in PY 2005-06 to capture trash from creek flows. Trash was added to the assessment due to the Forester Creek Improvement Project in Santee.

**General Assumptions**

There are a number of general assumptions within each table. Of most importance is the understanding that the amount (estimated or actual) removed or eliminated from discharging into the storm drain system is the amount of the material or liquid and does not equate to actual pollutant loads reduced. Secondly, the margin of error in these values is very high as most numbers were calculated using available information. Data quality is not necessarily a concern. This is an effort in determining where best to place education efforts and focus each program component.

**Municipal**

At 28 municipal maintained areas (parks, City Hall, recreation centers), staff cleaned area of pet waste, three times per year. Collection at each area was approximately one pound of pet waste. Pet waste does not equate to one pound of bacteria.

The City maintained 100% of laterals at approximately 28 buildings/facilities. No sewer overflows were experienced at City facilities. Pounds were estimated using 10 pounds (no factual basis other than one gallon of water equals 8 pounds) equaling one gallon of sewage. Private laterals not cleaned annually may experience stoppage depending on usage and care. Approximate gallons potentially dischargeable is 2 gallons times 10 equals 20 pounds time 24 buildings equals 560 pounds. The potential for error with this calculation is high.

Total dissolved solids from Municipal areas originate mainly from fertilizers applied by staff. There is an overall reduction in use of fertilizers, use of less hazardous applications and water conservation efforts that reduces overspray. All these activities reduce the amount of TDS available for discharge to the storm drain system.

Municipal activities do not use materials or generate waste that would increase pH and as such is listed as “not applicable”.

Trash reduction at City facilities is a consistent effort with approximately 80 to 90% of the 400 City employees ensuring trash is placed in appropriate containers. One pound of trash per year per person is estimated. This amount may be estimated too high.

One park within the City, Wells Park, has an area designated as a “Dog Park” where citizens can take their dogs to walk, bags to collect pet waste are provided for cleaning after their dogs. The Parks Department collected over 15,000 pounds of pet waste during PY2011-12.

The total calculated amounts of pollution prevented from entering the storm drain system are possibly estimated high and do not fully equate to improved water quality.

**Industrial**

There were 76 industrial facilities that were inspected that are conducting industrial activities within the City of El Cajon. It is estimated that 100% of these facilities are maintaining their private laterals and do not spill portable container fluids. This information was noted during industrial inspections. If each facility is preventing one overflow of 5 gallons times 10 pounds,

then 50 pounds times 76 facilities equals 3,800 pounds of bacteria- containing materials did not discharge to the storm drain system.

Total dissolved solids from Industrial areas originate mainly from fertilizers applied by contracted staff to landscaped areas (usually a very small area compared to the total industrial site). There is an overall reduction in use of fertilizers, use of less hazardous applications and water conservation effort that reduces overspray. All activities reduce the amount of TDS available for discharge to the storm drain system.

Based on inspections and enforcement of the industrial community, pH-affecting substances are reduced from entering the storm drain system through the implementation of BMPs as required by the General Industrial Permit. Amounts estimated have no factual basis.

Trash reduction at Industrial facilities is based on industrial inspections, although no factual amounts are readily available.

Total amounts do not equate to reduction in receiving water body loads, as no empirical data is available. However, amounts reduced appear reasonable, based on observations during inspections and the two enforcement actions taken at industrial facilities during this Permit Year.

**Commercial**

There were at least 132 commercial facilities conducting activities with the high potential to discharge bacteria-containing liquids, mainly eating and drinking establishments. Of those facilities, it is estimated that 50% of these facilities are maintaining their private laterals and do not spill portable container fluids. This information was noted during commercial inspections. If each facility is preventing one overflow of 2 gallons times 10 pounds, then 20 pounds times 66 facilities equals 1,320 pounds of bacteria- containing materials that did not discharge to the storm drain system. This may be estimated high.

Total dissolved solids from 61 commercial facilities originate mainly from fertilizers applied by contracted staff or lease company personnel to landscaped areas (usually a very small area compared to the total area of the commercial site). There is an overall reduction in use of fertilizers, use of less hazardous applications and water conservation efforts that reduce irrigation overspray. All these activities also reduce the amount of TDS available for discharge to the storm drain system. Commercial activities observed during inspections do not use materials or generate waste that would increase pH and as such is listed as “not applicable”.

Trash reduction at Commercial facilities is based on inspections, although no factual amounts are readily available.

Total amounts do not equate to reduction in receiving water body loads, as no empirical data is available. However, amounts reduced appear reasonable, based on observations during inspections.

**Residential**

Bacteria source reductions for dog owners, homeowners, and Recreational Vehicles (RVs) is purely speculation, although the numbers of potential targets is accurate, based on circulated printed educational materials and educational booths that the City has conducted for this reporting year. Enforcement actions, however, indicate few reported sewage overflows from residential areas. Amounts calculated are estimated too high and should be adjusted with more factual information in future Permit Years.

Total Dissolved Solid and Trash reductions are also speculation based on information materials circulated throughout the City in the Spring and Fall newsletters. Amounts estimated are reasonable. Based on City observations, only a few neighborhoods have trash problems. These areas will continue to be targeted in future Permit Years.

* = Total amounts calculated appear reasonable with the exception of bacterial-containing materials. Factual information is not readily available for this element and estimations are high.

**New Development**

Only trash and TDS were assessed for New Development as a small-scale post-construction BMP data assessment is not yet available. Speculations on the amount of trash are associated with post-construction BMPs provided, although no corroborating evidence could be found. Numbers calculated appear reasonable.

**Construction**

Most of the pollutant reductions at construction sites involve sediment. Based on the inspections completed, bacteria from Port-o-lets, pH from concrete washout, and trash rarely require a corrective action. Estimations of pollutant-containing material prevented are low and may be adjusted.

## Pollutant Reduction Estimation Worksheets for Forrester Creek 303(d) Listed Pollutants (PY2011-2012)

## 11.5 PROGRAM ASSESSMENT SUMMARY

Estimated Pollutant Load Tables indicate that Residential Areas continue to have the greatest potential for pollutant removal activities. Nearly three to seven times higher than the other areas, the residential community has the largest potential for reducing pollutants from entering the City's receiving waters.

Each component has been addressed as follows for strengths and improvements. Effective is viewed as meeting the Municipal Permit implementation and reporting requirements.

| Component | Effective | Strength | Improvement |
|---|---|---|---|
| Municipal | Yes | Education (Training) | Continue to coordinate with other watershed Cities, and whenever possible with stakeholders. |
| Industrial | Yes | Assessment of BMP Implementation | Continue to refine Inspection Form and make changes accordingly. |
| Commercial | Yes | Assessment of BMP Implementation | Continue to contact mobile businesses on the required BMPs that need to be implemented. |
| Residential | Yes* | Outreach and Education | Contact property owners directly by targeting specific problem areas. Conduct drive-abouts at problem Residential areas. |
| New and Re-Development | Yes | Process | Continue to implement Permit requirements under the updated regional model SUSMP and HMP. |
| Construction | Yes | Inspections | Continue to work with inactive sites to maintain BMPs in good condition when needed. |
| Illegal Discharge Detection and Elimination | Yes | Monitoring | Increase frequency of monitoring points. |
| Education | Yes | Team Efforts | Continue to target elementary and middle school children. |
| Public Participation | Yes | Team Efforts | Continue efforts to team with Region whenever possible. |

* Face-to-face contact is effective but slow moving.

## 11.6 IMPROVEMENTS AND REGULATORY COMMENTS

Improvements are discussed throughout the Program Assessment section and are summarized above. The City will implement adaptive management strategy developed by the region to help with the assessment of the program. No regulatory comments were received for the Assessment and Jurisdictional URMP Effectiveness Component for 2010-11.

## SECTION 12 SPECIAL INVESTIGATIONS

12.1 FORRESTER CREEK IMPACT STUDY 1

# SECTION 12 SPECIAL INVESTIGATIONS

## 12.1 FORRESTER CREEK IMPACT STUDY

For the eighth year, the City conducted an upstream/downstream monitoring of dry weather constituents of concern in Forrester Creek. The water quality monitoring was conducted on July 10, 2012 to assess the relative amount of pollutants discharged within the jurisdictional boundaries of El Cajon into Forrester Creek.

The upstream location is at the upper County boundary, specifically at Greenfield Avenue and I-8 west onramp intersection, behind southeast corner of 1699 East Main Street. Flow at the upstream sample was approximately 2-gallons per minute. During rain events, flow from Crest and other unincorporated County areas discharge directly into the City of El Cajon without treatment.

The downstream location is adjacent to Weld Boulevard trolley station, southeast of Marshall Avenue and Cuyamaca Street intersection. Flow in the downstream was approximately 45-gallons per minute. The analytical results are very similar to values recorded in the previous years. To date, no analytical data have been collected for wet weather flows.

**Table 1 - Field Screening**

| Location | Flow | Temp | pH | Turbidity | Conductivity | Surfactants MBAS | Ammonia-N | Nitrate $NO_3$-N | Orthophosphate-P | Dissolved Oxygen |
|---|---|---|---|---|---|---|---|---|---|---|
| | GPM | °C | - | NTU | mS/cm | mg/L | | | | |
| Upstream | 2 | 27.6 | 7.6 | 2.18 | 1.74 | 0.13 | 0.33 | 7.10 | 0.04 | 5.81 |
| Downstream | 45 | 34.6 | 8.3 | 35.48 | 2.68 | 0.25 | 0.63 | 9.56 | 0.11 | 6.75 |
| Sample Date - 7/10/12 | | | | | | | | | | |

**Table 2 - Metals & Pesticides**

| Location | Oil & Grease | Total Hardness | Total Dissolved Solids | Total Organic Carbon | Cadmium | Copper | Lead | Zinc | Diazinon | Chlorpyrifos |
|---|---|---|---|---|---|---|---|---|---|---|
| | mg/L | | | | µg/L | | | | | |
| Upstream | ND | 552 | 1,170 | 8.6 | 0.2J | 4.0J | ND | 0.005 | ND | ND |
| Downstream | ND | 635 | 1,920 | 2.9 | ND | ND | ND | 5.0J | ND | ND |

**Sample Date - 7/10/12**

**ND = Not detected**

*J = Detected but below the reporting limit.*

**Table 3 - Bacteria**

| Location | Coliform | Fecal Coliform | Enterococcus |
|---|---|---|---|
| | MPN/100 mL | | |
| **Upstream** | **11,000** | **1,300** | **20** |
| **Downstream** | **8,000** | **2,300** | **220** |

**Table 4 - Water Quality Objectives**

| Analyte | Action Level | Source |
|---|---|---|
| pH | 6.5 - 9.0 Units | Basin Plan[1] |
| Turbidity | 20 NTU | Basin Plan[1] |
| Total Dissolved Solids (TDS) | 1,500 mg/L | Basin Plan[1] |
| Sulfate | 250 mg/L | Basin Plan[1] |
| Methylene Blue Activated Substances (MBAS) | 0.5 mg/L | Basin Plan[1] |
| Specific Conductance | 200 µmhos/cm | NPDES General Permit/EPA Benchmarks |
| Ammonia-A | 1.0 mg/L | WURMP[2] |
| Nitrate-N | 10 mg/L | Basin Plan[1] |

| Analyte | Action Level | Source |
|---|---|---|
| Orthophosphate-P | 2.0 mg/L | NPDES General Permit |
| Oil & Grease | 15 mg/L | NPDES General Permit. If petroleum sheen is observed in the sampling point, a sample should be collected from the water surface. Visual observations may justify immediate investigation and/or follow-up. |
| Diazinon | 0.5 µg/L | Response to Diazinon and Chlorpyrifos levels above 0.5 µg/L should focus on education and outreach to potential dischargers in the target drainage basin. Highly elevated levels should be investigated aggressively as with other potential IC/IDs. |
| Chlorpyrifos | 0.5 µg/L | |
| Cadmium | 4.3 µg/L | California Toxics Rule, Criterion Maximum Continuous Concentration. |
| Copper | 13 µg/L | |
| Lead | 65 µg/L | |
| Zinc | 120 µg/L | |
| Total Coliform bacteria | 130,000 MPN/100mL(W) | Bacteria levels in many storm drains are likely to exceed public health guidance criteria. |
| Fecal Coliform bacteria | 33 MPN/100mL(S)<br>13,000 MPN/100mL(W) | |
| Enterococcus bacteria | 126 MPN/100mL(S)<br>7,000 MPN/100mL(W) | |

[1] Water Quality Objectives in the Basin Plan shall not to be exceeded more than 10% of the time during any one year period.
[2] Watershed Urban Runoff Management Program
(S) - Steady state conditions
(W)- Action levels are based on upper 90% confidence level of Copermittees dry weather analytical monitoring data.

Discussion & summary of sampling results:

Forester creek flow has been steadily reducing over time. The upstream flow rate started at a peak of approximately 25 GPM and has since reduced down to approximately 2 GPM. The downstream flow rate started at approximately 170 GPM and has reduced down to approximately 45 GPM. The reduced flow may be contributed to educating the public about controlling over irrigation and controlling dry weather flows. In addition, the reduction can be contributed to increased costs for potable water and a need to conserve.

The inorganic constituents appear to be within range of the San Diego Regional Water Quality Control Board Basin Plan - Water Quality Objectives (WQO). The downstream turbidity result of 35.48mg/L exceeds the turbidity WQO by approximately 77.40%. This exceedance of the turbidity WQO can be contributed to the amount of summer time algal growth and transient activities within the creek. The total dissolved solids (TDS) increased between the upstream and downstream sampling points. The downstream TDS result of 1,920mg/L exceeds the TDS WQO by approximately 28%. This exceedance in the WQO can be contributed to natural springs or perched groundwater surfacing and flowing through the creek. The dissolved oxygen concentration increased between the upstream and downstream sampling points. The concentrations of Methylene Blue Activated Substances, Ammonia-Nitrogen, Nitrates and Ortho-phosphate were all within the WQOs.

The toxic constituents including dissolved metals and pesticides (Diazinon and Chlorpyrifos) did not exceed the WQOs. Mainly, the constituents were not detected within the water quality samples. Coliform bacteria, fecal bacteria and enterococcus bacteria all decreased in the downstream sampling results. The steady state coliform bacteria and enterococcus bacteria WQOs were not exceeded. Although the action level was not exceeded, the steady state fecal coliform bacteria WQO appears to be exceeded by 98.60%. This exceedance can be a result of transient activities within the creek. The City continues to survey the channel segments of Forester Creek and cleans the channels on a routinely basis.

The overall dry weather water quality discharging from within the City limits into Forester Creek appear to within WQOs. The amount of dry weather flows in Forester creek is decreasing over time. The City will continue to conduct dry weather investigations to develop data to establish baseline conditions (for current channel configurations) and to develop priorities for more detailed investigations to determine pollutant sources. The City will also continue to conduct public outreach to the community at large in order to help reduce runoff irrigation to help reduce and control dry weather flows into Forester creek.

The 2012 City of El Cajon Forester Creek Impact Study contains more detailed information about the results of this investigation. A copy of the study is included in Appendix A.12 of this report.

# SECTION 13 NON-EMERGENCY FIRE FIGHTING FLOWS

INTRODUCTION 1

13.1 BEST MANAGEMENT PRACTICES 1

13.2 EDUCATIONAL METHODS 2

13.3 IMPROVEMENTS AND REGULATORY COMMENTS 2

# SECTION 13 NON-EMERGENCY FIRE FIGHTING

## Introduction

Emergency fire fighting flows (i.e., flows necessary for the protection of life or property) do not require BMPs and need not be prohibited. BMPs and educational methods are used to reduce the discharge of pollutants to the MEP.

## 13.1 BEST MANAGEMENT PRACTICES

The City has already developed and implemented a program to reduce pollutants from non-emergency fire fighting flows, in accordance with Section B.3. of the Permit. BMPs were implemented when conducting the following activities:

- Regular Maintenance of Fire and Emergency Vehicles and Equipment
- Training Exercises
- Facilities Maintenance
- Post-Emergency Rehabilitation of Response Equipment

These activities are conducted in a way to either minimize or eliminate the discharge of pollutants to the MS4. Detailed descriptions of BMPs are given for each activity below:

**Regular Maintenance of Fire and Emergency Vehicles and Equipment**

- Vehicles and equipment are cleaned where runoff is directed either to the sanitary sewer system or to a drain with an oil/water separator system.
- Vehicles and equipment are cleaned where runoff ponds and evaporates and/or where runoff filters through landscaped areas.
- Used-oil, hydraulic fluids, and antifreeze are stored in containers for recycling or disposed as hazardous waste.
- Spill kits are available to promptly cleanup and contain leaking or spilled vehicle fluids.
- Use of soaps, cleaners, and detergents are minimized, and general cleaning solutions are disposed of into the sanitary sewer system.
- Caustics, flammables, and solvents are contained and disposed of properly as hazardous waste.

**Training Exercises**

- Water used in training exercises is directed to landscaped areas whenever possible, and runoff from the training exercises is not allowed to discharge to the MS4.
- Live fire training activities are pre-planned to allow integration of barriers to off-site runoff that could contribute to non-storm water discharges or conducted at a designated training area that drains to the sanitary sewer via a multi-compartment separator.

**Facilities Maintenance**

- Impervious areas such as apparatus floors, maintenance bays, driveways, patios, and walkways are swept to remove debris. Debris is placed in the trash. Interior floors are

mopped as necessary, and the wastewater is discharged into the sanitary sewer system or onto landscaped areas.

- Landscaped areas are maintained as required to reduce introduction of leaves and other landscape waste into the MS4.
- Irrigation systems are monitored and maintained as required to reduce irrigation water from going off-site.
- Spills are cleaned up using spill kits provided at the work site, and disposal of spilled material are conducted in accordance with applicable regulations.
- Spills that require a cleanup beyond the ability of the on-site employees are reported to the City Department of Public Works for assistance with appropriate resources.
- Maintenance and repair of structures are conducted using methods that do not contribute pollutants to the MS4.
- General non-hazardous cleaning solutions are disposed of in a utility sink that drains into the sanitary sewer system.

**Post-Emergency Rehabilitation of Response Equipment**

Tools, fire hoses, ladders, and other equipment used at the scene of an emergency are restored to a response-ready state in a manner that does not delay the ability of the apparatus to be available for another emergency response. The use of water that could contribute to storm water discharges may be used unless another practical and immediately available method is identified.

## 13.2 EDUCATIONAL METHODS

The Storm Water Division provided informal training to Fire Department Personnel. In past years the Storm Water group collaborated with the Fire Department on developing outreach materials with language conveying the message on how best to conduct weed abatement prior to the fire season while staying in compliance with storm water regulations. These materials have been used for a number of years.

## 13.3 IMPROVEMENTS AND REGULATORY COMMENTS

Improvements from 2010/11 experience include:

- Continue to coordinate with the Fire Department on outreach materials.
- Expanded maintenance Best Management Practices for fire fighting equipment and facilities.

Regulatory comments are not applicable to this portion of the JURMP update. Non-Emergency Fire Fighting is a new component of the annual update.

# SECTION 14 JURMP REVISIONS

14.1 INTRODUCTION 1

# SECTION 14 JURMP REVISIONS

## 14.1 INTRODUCTION

No changes to the JURMP occurred during PY2011-12.

# Section 15 Conclusions and Recommendations

**Introduction** **1**

**15.1 Conclusions** **1**

Table 1 – Challenges and Associated Strategies/Actions 3

**15.2 Recommendations** **4**

# SECTION 15 CONCLUSIONS & RECOMMENDATIONS

## INTRODUCTION

To conclude PY5 and recommend changes for the next permit year, this Section focuses on the challenges that were overcome this last year that will help eliminate inaccuracy or uncertainty for subsequent permit years. To summarize, the City:

- Continued implementation of the BMP-based inspections by focusing efforts on ensuring full implementation of appropriate BMPs at all high priority commercial, industrial, construction and municipal facilities.
- Continue to incorporate and contact storm water pollution prevention requirements for mobile businesses using regional mobile business database.
- Expanded public education efforts by targeting elementary and junior high school student population by conducting presentations; and continued participation in the Fire Department/Safety Open House, as well as other events in which a pollution prevention booth was placed, and providing information to the mass public through the City newsletter.
- Continued efforts towards a Watershed-based program by conducting the seventh upstream/downstream water quality assessment of Forrester Creek.
- Refined the City's ability to track cumulative complaints, inspections, violations, and enforcement actions for accuracy and completeness.
- Continued to have an opened contract for on-call analytical testing services to conduct follow-up responses to complaints, spills, and targeted investigations to identify potential pollutant source points.
- Maintains a contract with a consultant to assist with the review of storm water plans and requirements for proposed development and redevelopment projects.

## 15.1 CONCLUSIONS

A number of conclusions resulted from compiling the Annual Report information as follows:

The City continues to fulfill the requirements of Order No. R9-2007-001. The actions taken by the City to comply with these requirements are fully described in Sections 1 through 14 (particularly Section 11) of this Annual Report. The City will continue to meet the activity-based compliance requirements in future program years.

The City's focus on BMP implementation at high priority commercial and industrial facilities and at construction sites will reduce or prevent discharges of pollutants from those activities and sites. Once the City can reasonably assure that those priority activities are not discharging

pollutants, the City will be able to focus more effort on identifying and eliminating other sources of pollutants that continue to impact water quality.

The City's program must continue to move forward, from an emphasis on the activity-based compliance actions to water-quality-based activities that will help the City achieve the goal of reducing discharges of pollutants and restoring the quality of the receiving waters. These activities include collecting, evaluating and incorporating sufficient water quality data to set priorities, better identify problem areas, and to be able to demonstrate reductions in pollutants and improvements in water quality.

Effectively integrating jurisdictional into watershed programs will be a continued focus for the future. The Permit establishes important obligations at both jurisdictional and watershed levels. To accomplish this transition and integration, the City continues to meet with San Diego River Watershed Jurisdictions to provide some direction concerning urban runoff issues. Taking advantage of successes at other Cities strengthens individual and watershed programs.

The City must still address a number of unresolved data and information collection issues. Monitoring data are especially important to quantify pollutant loads within the jurisdiction of El Cajon. Additional dry weather monitoring stations may be helpful to better identify illegal discharge sources. The need for additional data and information must be carefully balanced with the costs of obtaining those items.

The solid base of protocols and procedures produced in previous permit years continue into the current reporting period with refinement supported by nine years of experience in program implementation. An unending challenge is changing the behavior of the approximately 99,000 residents and 2,000 businesses and their views of urban runoff pollution. The City is predominantly a community of rental units, which identifies the population as more transient than the typical single-family residential population. These outreach and education challenges have changed as more rental complexes converted into common living complexes with home ownership. The following table summaries the City's storm water management strategy based on the challenges presented during the current reporting period, 2011-12.

**Table 1 – Challenges and Associated Strategies/Actions**

| Challenges | Strategies / Actions |
|---|---|
| Implementing the 14 storm water components simultaneously | 1. Prioritize implementation to maximize use of personnel, supplies, equipment, and budget.<br>2. Develop budget for next fiscal year to add jurisdictional and watershed outreach efforts to educate about TMDLs, public participation events, additional outreach materials, GIS data development, staff training, and treatment controls for trash and debris. |
| Adequate Staffing and Equipment | Train as many City staff in storm water pollution prevention and Best Management Practices. |
| Incorporate Storm Water Concepts and Requirements at the Planning Stage | Conduct training and work closely with Community Development staff to generate a Storm Water Information Packet to distribute to applicants. |
| Transition Jurisdictional Programs and activities into Watershed Activities. | 1. Meet with WURMP Copermittees for collaboration and implementation of a watershed based approach.<br>2. Explore strategies to fund watershed activities that go beyond the jurisdictional boundaries and plan for future TMDLs. |
| Tackle Inland City Issues | 1. Develop City-specific education and outreach materials. |
| Maintain Adequate Monitoring tasks | 1. Review dry weather monitoring results.<br>2. Use GIS and the City's Business License database to focus on the most highly potentially pollution production areas.<br>3. Develop a basic wet weather-monitoring program that is comparable with other Copermittee programs and upcoming TMDLs. |

From July 1, 2003 through June 30, 2012, the City has tackled new set of challenges while maintaining the current level of services provided to citizens of El Cajon. In review, it was better to put resources towards implementing productive processes and procedures, rather than

completing a task in the name of compliance. The City continues to brainstorm to reach higher standards in future program years, while quantifying pollutant reductions from jurisdictional actions that may have a watershed impact.

## 15.2 RECOMMENDATIONS

Specific recommended improvements are listed at the end of each component. Below are some general improvements for the City's Urban Runoff Strategy.

- Start transitioning from a jurisdictional to a more watershed based program,
- Prepare to start with the implementation of the next permit cycle and the bacteria TMDL,
- Increase emphasis on watershed training, San Diego River Watershed Copermittee cooperative efforts, and electronic tracking of program information,
- Continue to maintain adequately trained staff to implement JURMP activities,
- Focus on outreach and education activities for the most effective approach to managing storm water pollution.
- Coordinate through City departments a cohesive urban runoff management program,
- Continue to develop a comprehensive program to collect and organize information for the Annual Report,
- Complete development of a storm drain master plan map inventorying MS4 infrastructure.

Appendix A.2

RESOLUTION NO. 10–03

A RESOLUTION APPROVING GENERAL PLAN AMENDMENT 2002-04 TO ADD STORM WATER RUNOFF POLICIES AND OBJECTIVES TO GENERAL PLAN TEXT.

WHEREAS, the El Cajon City Council duly advertised and held a public hearing on January 14, 2003, to consider an item which had been set for General Plan consideration; and

WHEREAS, to facilitate understanding by the public, the City Council took tentative or preliminary votes on this item, which vote was not binding until the public hearing was completed; and

WHEREAS, the City Council duly considered all information presented, and listened to all persons who appeared before it to speak.

NOW, THEREFORE, BE IT RESOLVED that the El Cajon City Council hereby approves General Plan Amendment 2002-04 to add storm water policies to the General Plan text as indicated in Planning Commission Resolution No. 9734, on file in the office of the City Clerk, and made a part hereof by this reference.

PASSED AND ADOPTED by the City Council of the City of El Cajon, California at a Regular Joint City Council/Redevelopment Agency Meeting held this 14th day of January, 2003, by the following vote to wit:

AYES : Lewis, Kendrick, McClellan, Ramos, Santos
NOES : None
ABSENT : None
DISQUALIFY : None

MARK LEWIS
Mayor of the City of El Cajon

ATTEST:

MARILYNN LINN, CMC
City Clerk

I hereby certify that the above and foregoing is a full and true copy of Resolution No. 10-03 of the Resolutions of the City of El Cajon, California, as adopted by the City Council at the Regular Joint Meeting of the City Council/Redevelopment Agency on the 14th day of January, 2003.

for M Steele
Marilynn Linn, CMC, City Clerk

1/14/03 (103)

**STAFF REPORT AND RECOMMENDATION**
**PLANNING COMMISSION MEETING**
**DECEMBER 9, 2002 - 7:00 PM**

COUNCIL CHAMBER
200 E. MAIN STREET
EL CAJON, CA 92020

## AGENDA ITEM #3

**PUBLIC HEARING ON**
**GENERAL PLAN AMENDMENT 2002-04 – Planning Commission**

Request to add storm water policies to General Plan text.

******** ******** ******** ********

**STAFF RECOMMENDATION:** RECOMMEND APPROVAL

******** ******** ******** ********

## ENVIRONMENTAL IMPACT INFORMATION

The proposed project is exempt from environmental review in accordance with Section 15308 of CEQA Guidelines.

## DISCUSSION

As part of the local implementation of the federal Clean Water Act, the County of San Diego and its 18 cities have obtained a National Pollution Discharge Elimination System (NPDES) permit from the Regional Water Quality Control Board. The NPDES permit addresses the handling of storm water runoff by the 18 cities, their residents and businesses. Part of the NPDES permit includes a Jurisdictional Urban Runoff Management Program (JURMP) (Note: there are lots of acronyms used in the storm water runoff dictionary).

Although most of the City's storm water and drainage implementation is carried out by the Department of Public Works, there is a requirement in the NPDES and the JURMP that the General Plan include policies and principles which address water quality and storm water runoff. An attempt to add these policies and

principles to the General Plan last year was withdrawn when it was determined to be premature (GPA 2001-01).

Goal 8 of the El Cajon General Plan says, "The livability of El Cajon will be maintained and enhanced through respect for the environment." There are a number of policies under this goal which address other environmental issues and concerns and this is where the staff believes the policy and objectives (principles) for storm water runoff should be located within the City's general plan text.

## RECOMMENDATION

It is recommended that the Planning Commission recommend approval of General Plan Amendment 2002-04 to add storm water runoff policy and objectives to the text of the General Plan as follows and for the following reasons:

Add the following objective and policies to Goal 8.

"Objective 8-10. Achieve and maintain a level of water quality which protects affected watersheds by minimizing runoff which may cause erosion and pollution.

POLICIES

8-10.1. The City shall minimize the amount of impervious surfaces and directly connected impervious surfaces in areas of new development and redevelopment. Where feasible, the City will insure that new development or redevelopment slows runoff and maximizes on-site infiltration of runoff.

8-10.2. The City shall implement pollution prevention methods supplemented by pollutant source controls and treatment. The City will use small collection strategies located at, or as close as possible to, the source (i.e., the point where water initially meets the ground) to minimize the transport of urban runoff and pollutants offsite and into a municipal separate storm sewer system. (MS4)

8-10.3. The City shall preserve, and where possible, create or restore areas that provide important water quality benefits, such as riparian corridors, wetlands, and buffer zones. The City will encourage land acquisition of such areas.

8-10.4. The City shall limit disturbances of natural water bodies and natural drainage systems caused by development including roads, highways, and bridges.

8-10.5. Prior to making land use decisions, the City will utilize methods available to estimate increases in pollutant loads and flows resulting from projected future development. The City shall require incorporation of structural and non-

structural best management practices to mitigate the projected increases in pollutant loads and flows.

8-10.6. The City will avoid development of areas that are particularly susceptible to erosion and sediment loss; or establish development guidance that identifies these areas and protects them from erosion and sediment loss.

8-10.7. The City will reduce pollutants associated with vehicles and increasing traffic resulting from development. The City will coordinate local traffic management reduction efforts with the San Diego County Congestion Management Plan.

8-10.8. The City will implement the San Diego Association of Government's (SANDAG's) recommendations as found in the Water Quality Element of its Regional Growth Management Strategy.

8-10.9. Post-development runoff from a site shall not contain pollutant loads which cause or contribute to an exceedance of receiving water quality objectives or which have not been reduced to the maximum extent practicable."

**Reasons for Recommendation**

A. This amendment to the text of the City's general plan will add a policy and objectives addressing storm water runoff as required by the National Pollution Discharge Elimination System (NPDES) permit issued to the City.

B. This amendment will provide policy and objectives dealing with storm water runoff to guide decision-making in the city.

C. This amendment is consistent with the City's Jurisdictional Urban Runoff Management Program (JURMP).

Refer to staff for a resolution stating the decision of the Planning Commission.

JSG:co

# EL CAJON GENERAL PLAN 2000

Text and Map adopted by
City Council Resolution No. 10-91
on January 8, 1991

Text and Map amended by
City Council Resolution No. 31-98
on February 10, 1998

January, 2001

OBJECTIVE

8-10. Achieve and maintain a level of water quality which protects affected watersheds by minimizing runoff which may cause erosion and pollution.

POLICIES

8-10.1. The City shall minimize the amount of impervious surfaces and directly connected impervious surfaces in areas of new development and redevelopment. Where feasible, the City will insure that new development or redevelopment slows runoff and maximizes on-site infiltration of runoff.

8-10.2. The City shall implement pollution prevention methods supplemented by pollutant source controls and treatment. The City will use small collection strategies located at, or as close as possible to, the source (i.e., the point where water initially meets the ground) to minimize the transport of urban runoff and pollutants off site and into a municipal separate storm sewer system. (MS4)

8-10.3. The City shall preserve, and where possible, create or restore areas that provide important water quality benefits, such as riparian corridors, wetlands, and buffer zones. The City will encourage land acquisition of such areas.

8-10.4. The City shall limit disturbances of natural water bodies and natural drainage systems caused by development including roads, highways, and bridges.

8-10.5. Prior to making land use decisions, the City will utilize methods available to estimate increases in pollutant loads and flows resulting from projected future development. The City shall require incorporation of structural and non-structural best management practices to mitigate the projected increases in pollutant loads and flows.

8-10.6. The City will avoid development of areas that are particularly susceptible to erosion and

sediment loss; or establish development guidance that identifies these areas and protects them from erosion and sediment loss.

8-10.7. The City will reduce pollutants associated with vehicles and increasing traffic resulting from development. The City will coordinate local traffic management reduction efforts with the San Diego County Congestion Management Plan.

8-10.8. The City will implement the San Diego Association of Government's (SANDAG's) recommendations as found in the Water Quality Element of its Regional Growth Management Strategy.

8-10.9. Post-development runoff from a site shall not contain pollutant loads which cause or contribute to an exceedance of receiving water quality objectives or which have not been reduced to the maximum extent practicable.

GOAL 9

A strong, competitive region-wide commercial base will be created and retained.

OBJECTIVE

9-1. Parkway Plaza and its immediate vicinity will be maintained as the City's regional shopping center.

POLICIES

9-1.1. Parkway Plaza shall be expanded from its original size and the number of major tenants and stores shall be increased.

9-1.2. The City shall continue to improve traffic circulation in the vicinity of Parkway Plaza.

9-1.3. The City shall cooperate with Parkway Plaza in the provision of parking facilities and may develop special

ORDINANCE NO. 4939

AN ORDINANCE REPEALING CHAPTER 16.60
OF TITLE 16 OF THE EL CAJON MUNICIPAL CODE
AND ADDING A NEW CHAPTER 16.60 TO TITLE 16 OF THE
EL CAJON MUNICIPAL CODE REGARDING THE CITY OF
EL CAJON STANDARD URBAN STORM WATER MITIGATION PLAN.

WHEREAS, the City of El Cajon, pursuant to its Water Quality Permit issued on February 21, 2001, is required to adopt certain implementation steps as mandated by the Regional Water Quality Control Board (San Diego Region); and

WHEREAS, one of the implementation steps requires the adoption of an Urban Storm Water Mitigation Plan based upon a pre-approved Model adopted on June 10, 2002, by the Regional Water Quality Control Board (San Diego Region); and

WHEREAS, this Ordinance shall be the Urban Storm Water Mitigation Plan adopted pursuant to the mandate of the Regional Water Quality Control Board (San Diego Region); and

WHEREAS, this Ordinance shall allow for the adoption of resolutions and policies which shall implement the El Cajon Standard Urban Water Mitigation Plan not included in this Ordinance; and

WHEREAS, the adoption of this Ordinance, by the findings of the Regional Water Quality Control Board (San Diego Region), is exempt from the requirements of the California Environmental Quality Act; and

WHEREAS, the purpose of this Ordinance is to protect valuable water resources of the City of El Cajon and its surrounding environs from pollutants.

NOW, THEREFORE, BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF EL CAJON AS FOLLOWS:

Section 1: Chapter 16.60 of Title 16 of the El Cajon Municipal Code is hereby repealed.

Section 2: Chapter 16.60 is hereby added to Title 16 of the El Cajon Municipal Code to read as follows:

**16.60.010 Title.**

The ordinance codified in this chapter shall be known as the "Standard Urban Storm Water Mitigation Plan (SUSMP) ordinance of the City of El Cajon."

**16.60.020 Statutory Authority.**

A. The municipal storm water National Pollutant Discharge Elimination System (NPDES) permit (Order No. R9-2007-0001, as subsequently modified by renewal order, NPDES No. CAS0108758, hereinafter collectively referred to as "Municipal Permit") issued to San Diego County, San Diego County Regional Airport Authority, the Port of San Diego, and eighteen cities by the San Diego Regional Water Quality Control Board (Regional Board) on January 24, 2007, requires the development and implementation of a program addressing urban runoff pollution issues in development planning for public and private projects.

B. The requirement to implement a program for development planning is based on federal and state statutes including: Section 402 (p) of the Clean Water Act, Section 6217 of the Coastal Zone Act Reauthorization Amendments of 1990 ("CZARA"), and the California Water Code. The Clean Water Act amendments of 1987 established a framework for regulating urban runoff discharges from municipal, industrial, and construction activities under the NPDES program. The municipal permit requires the implementation of a Jurisdictional Urban Runoff Management Program (JURMP), which has been adopted by the City of El Cajon on February 12, 2002, as amended.

**16.60.030 Purpose.**

A. The primary objectives of this chapter are to:

1. Ensure that discharges from municipal urban runoff conveyance systems do not cause or contribute to a violation of water quality standards;

2. Effectively prohibit non-storm water discharges in urban runoff; and

3. Reduce the discharge of pollutants from urban runoff conveyance systems to the Maximum Extent Practicable (MEP statutory standard).

B. The regulations of this chapter were developed to address post-construction urban runoff pollution from new development and redevelopment applications that fall under "priority project" categories. The goal of this chapter is to develop and implement practicable policies to ensure, to the maximum extent practicable, that development does not increase pollutant loads from a project site and to consider urban runoff flow rates, velocities and durations. This goal may be achieved through site-specific controls and/or drainage area-based or shared structural treatment controls.

**16.60.040 Applicability of chapter.**

The regulations set forth in this chapter shall apply to the development plan approval process for discretionary development applications, and prior to issuing

development permits for ministerial projects. To allow flexibility in meeting the design standards set forth in this chapter, structural treatment control BMPs may be located on- or off-site, used singly or in combination, or shared by multiple developments, provided certain conditions are met. All new development and significant redevelopment projects that fall into one of the following "priority project" categories are subject to the requirements of this chapter, subject to the lawful prior approval provisions of the municipal permit. In the instance where a project feature, such as a parking lot, falls into a priority project category, the entire project footprint is subject to the requirements of this chapter. These categories are:

A. Residential development of ten (10) units or more;

B. Commercial development greater than one (1) acre;

C. Heavy industry/industrial development greater than one (1) acre;

D. Automotive repair shops;

E. Restaurants;

F. Hillside development greater than 5,000 square feet;

G. Projects located within or directly adjacent to or directly discharging to receiving waters within environmentally sensitive areas that create 2,500 square feet or more of impervious surface or increase the area of imperviousness to ten percent (10%) or more of its naturally occurring conditions, where "directly adjacent," is defined as situated within 200 feet of the environmentally sensitive area, and where "discharging directly to," is defined as outflow from a drainage conveyance system that is composed entirely of flows from the subject development or redevelopment site, and not commingled with flows from adjacent lands;

H. Parking lots with 5,000 square feet or more of impervious surface, or with more than fifteen (15) parking spaces and potentially exposed to urban runoff;

I. Streets, roads, highways, and freeways, which would create a new paved surface that is 5,000 square feet or more of impervious surface; and

J. Retail gasoline outlets of 5,000 square feet or more in size, or having a projected average daily traffic ("ADT") count of at least 100 vehicles per day regardless of size.

As part of the project review process and to comply with the regulations set in this chapter, the Public Works Department shall review development and redevelopment projects that create, add or replace 5,000 square feet or more of impervious surfaces. In addition to the priority categories identified in this chapter, priority projects shall also

include all other pollutant generating development projects that result in the disturbance of one acre or more of land.

**16.60.050 Limited exclusion.**

Trenching and resurfacing work associated with utility projects; resurfacing and reconfiguring surface parking lots and existing roadways; new sidewalk construction, pedestrian ramps, or bike lanes on existing roads; and routine replacement of damaged pavement, such as pothole repair, are not considered priority projects. Parking lots, buildings and other structures associated with utility projects are subject to the requirements of this chapter if one or more of the criteria for the above categories are met.

**16.60.060 Applicability of chapter 13.10.**

The provisions of Chapter 13.10 (Storm Water Management and Discharge Control), including the definitions and enforcement provisions, shall be applicable to this chapter as though fully set forth herein.

**16.60.070 Administration – limitations.**

Where requirements of this chapter conflict with established local codes, (e.g., specific language of signage used on storm drain stenciling), the city council may continue the local practice and modify this chapter to be consistent with the code, except that to the extent that the standards in this chapter are more stringent than those under local codes, such more stringent standards shall apply.

**16.60.080 Administration – provisions for SUSMP requirements.**

The requirements of this chapter shall be incorporated into the project design in accordance to that certain Countywide Model SUSMP, Standard Urban Stormwater Mitigation Plan Requirements for Development Applications, dated January 2, 2009, as may be amended from time to time (the "Countywide Model SUSMP"), and shown on the plans prior to approval of discretionary permits. For projects requiring only ministerial permits, the requirements of this chapter shall be incorporated into the project design and shown on the plans prior to the issuance of any ministerial permits. City departments carrying out public projects that are not required to obtain permits shall be responsible for ensuring the requirements of this chapter are incorporated into the project design and shown on the plans prior to bidding for construction contracts, or equivalent. For public projects, the requirements of this chapter must be incorporated into the project design and shown on the plans before allowing the project to commence.

**16.60.090 Administration – implementation.**

All priority projects shall implement one or a combination of storm water BMPs, including, (1) LID and site design BMPs, (2) source control BMPs and, (3) structural treatment BMPs after the pollutants and conditions of concern have been identified. Storm water BMPs shall be considered and implemented where expressly required by this chapter and if not so required where determined applicable and feasible by the Director of Public Works. The storm water BMPs shall adhere to the requirements of this chapter, and shall be correctly designed in accordance to the applicable Countywide Model SUSMP so as to remove pollutants to the maximum extent practicable. A flow chart summarizing the storm water BMP selection procedure is provided in Figure 1.

**16.60.100 Administration – site design storm water treatment credits.**

Project proponents may develop and submit for public review and comment and city council approval a regional model site design storm water treatment credits program that allows reductions in the volume or flow of storm water that must be captured or treated on a project in return for the inclusion of specified project design features in the project. The model site design storm water treatment credits program shall be deemed to be a part of this chapter following city council approval. Any such model program shall specify the conditions under which project proponents can be credited for the use of site design features and low impact development techniques that can reduce the volume of storm water runoff, preserve natural areas, and minimize the pollutant loads generated and potentially discharged from the site. Any site design storm water treatment credits program implemented shall be consistent and compliant with this chapter and approved by the city council.

*[Remainder of page intentionally left blank]*

**Figure 1. Storm Water BMP Selection Procedure Flow Chart**

**16.60.110 Identifying pollutants and conditions of concern.**

A. Priority project proponents shall use this guidance to identify pollutants and conditions of concern, for which they need to mitigate or protect against. Site design and source control BMPs are required based on pollutants commonly associated with the proposed project type (see Table 2, "Standard Storm Water BMP Selection Matrix"). Treatment Control BMPs are also required for the project's expected pollutants of concern (see Table 3).

B. For private priority projects, the information shall be provided with the project application prior to being deemed complete.

C. For public priority projects, the information shall be provided by the Director of Public Works prior to bidding for construction contracts.

**16.60.120 General categories of water pollution.**

A. Sediments – Sediments are soils or other surficial materials eroded and then transported or deposited by the action of wind, water, ice, or gravity. Sediments can increase turbidity, clog fish gills, reduce spawning habitat, lower young aquatic organisms' survival rates, smother bottom dwelling organisms, and suppress aquatic vegetation growth.

B. Nutrients – Nutrients are inorganic substances, such as nitrogen and phosphorus. They commonly exist in the form of mineral salts that are either dissolved or suspended in water. Primary sources of nutrients in urban runoff are fertilizers and eroded soils. Excessive discharge of nutrients to water bodies and streams can cause excessive aquatic algae and plant growth. Such excessive production, referred to as cultural eutrophication, may lead to excessive decay of organic matter in the water body, loss of oxygen in the water, release of toxins in sediment, and the eventual death of aquatic organisms.

C. Metals – Metals are raw material components in non-metal products such as fuels, adhesives, paints, and other coatings. Primary sources of metal pollution in storm water are typically commercially available metals and metal products. Metals of concern include cadmium, chromium, copper, lead, mercury, and zinc. Lead and chromium have been used as corrosion inhibitors in primer coatings and cooling tower systems. At low concentrations naturally occurring in soil, metals are not toxic. However, at higher concentrations, certain metals can be toxic to aquatic life. Humans can be impacted from contaminated groundwater resources, and bioaccumulation of metals in fish and shellfish. Environmental concerns, regarding the potential for release of metals to the environment, have already led to restricted metal usage in certain applications.

D. Organic Compounds – Organic compounds are carbon-based. Commercially available or naturally occurring organic compounds are found in

pesticides, solvents, and hydrocarbons. Organic compounds can, at certain concentrations, indirectly or directly constitute a hazard to life or health. When rinsing off objects, toxic levels of solvents and cleaning compounds can be discharged into storm drains. Dirt, grease, and grime retained in the cleaning fluid or rinse water may also absorb levels of organic compounds that are harmful or hazardous to aquatic life.

E. Trash & Debris – Trash (such as paper, plastic, polystyrene packing foam, and aluminum materials) and biodegradable organic matter (such as leaves, grass cuttings, and food waste) are general waste products on the landscape. The presence of trash & debris may have a significant impact on the recreational value of a water body and aquatic habitat. Excess organic matter can create a high biochemical oxygen demand in a stream and thereby lower its water quality. Also, in areas where stagnant water exists, the presence of excess organic matter can promote septic conditions resulting in the growth of undesirable organisms and the release of odorous and hazardous compounds such as hydrogen sulfides.

F. Oxygen-Demanding Substances – This category includes biodegradable organic material as well as chemicals that react with dissolved oxygen in water to form other compounds. Proteins, carbohydrates, and fats are examples of biodegradable organic compounds. Compounds such as ammonia and hydrogen sulfide are examples of oxygen-demanding compounds. The oxygen demand of a substance can lead to depletion of dissolved oxygen in a water body and possibly the development of septic conditions.

G. Oil and Grease – Oil and grease are characterized as high-molecular weight organic compounds. Primary sources of oil and grease are petroleum hydrocarbon products, motor products from leaking vehicles, esters, oils, fats, waxes, and high molecular-weight fatty acids. Introduction of these pollutants to the water bodies are very possible due to the wide uses and applications of some of these products in municipal, residential, commercial, industrial, and construction areas. Elevated oil and grease content can decrease the aesthetic value of the water body, as well as the water quality.

H. Bacteria and Viruses – Bacteria and viruses are ubiquitous microorganisms that thrive under certain environmental conditions. Their proliferation is typically caused by the transport of animal or human fecal wastes from the watershed. Water, containing excessive bacteria and viruses can alter the aquatic habitat and create a harmful environment for humans and aquatic life. Also, the decomposition of excess organic waste causes increased growth of undesirable organisms in the water.

I. Pesticides – Pesticides (including herbicides) are chemical compounds commonly used to control nuisance growth or prevalence of organisms. Excessive application of a pesticide may result in runoff containing toxic levels of its active component.

**16.60.130 Identifying pollutants from the project area.**

Using Table 1, pollutants shall be identified that are anticipated to be generated from the proposed priority project categories. Pollutants associated with any hazardous material sites that have been remediated or are not threatened by the proposed project are not considered a pollutant of concern.

Table 1. Anticipated and Potential Pollutants Generated by Land Use Type.

| | General Pollutant Categories | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| Priority Project Categories | Sediments | Nutrients | Heavy Metals | Organic Compounds | Trash & Debris | Oxygen Demanding Substances | Oil & Grease | Bacteria & Viruses | Pesticides |
| Detached Residential Development > 10 units | X | X | | | X | X | X | X | X |
| Attached Residential Development > 10 units | X | X | | | X | P(1) | P(2) | P | X |
| Commercial Development > 1 acre | P(1) | P(1) | X | P(2) | X | P(5) | X | P(3) | P(5) |
| Heavy Industry / Industrial Development > 1 acre | X | | X | X | X | X | X | | |
| Automotive Repair Shops | | | X | X(4)(5) | X | | X | | |
| Restaurants | | | | | X | X | X | X | P(1) |
| Hillside Development > 5,000 $ft^2$ | X | X | | | X | X | X | | X |
| Parking lots > 5,000 $ft^2$ or > 15 spaces | P(1) | P(1) | X | | X | P(1) | X | | P(1) |
| Retail Gasoline Outlets > 5,000 $ft^2$ or > 100 ADT | | | X | X | X | X | X | | |
| Streets, Highways & Freeways > 5,000 $ft^2$ | X | P(1) | X | X(4) | X | P(5) | X | X | P(1) |

X = anticipated
P = potential
(1) a potential pollutant if landscaping exists on site
(2) a potential pollutant if the project includes uncovered parking areas
(3) a potential pollutant if land use involves food or animal waste products
(4) including petroleum hydrocarbons
(5) including solvents

**16.60.140 Identifying pollutants of concern.**

A. Pollutants generated by the proposed priority project that exhibit one or more of the following characteristics are considered primary pollutants of concern:

1. Current loadings or historical deposits of the pollutant are impairing the beneficial uses of a receiving water;

2. Elevated levels of the pollutant are found in water or sediments of a receiving water and/or have the potential to be toxic to or bioaccumulate in organisms therein; and

3. Inputs of the pollutant are at a level high enough to be considered potentially toxic.

B. To identify primary pollutants of concern in receiving waters, each priority project shall, at a minimum, do the following:

1. For each of the proposed projects' discharge points, identify the receiving water(s) that each discharge point proposes to discharge to, including hydrologic unit basin number(s), as identified in the most recent version of the *Water Quality Control Plan for the San Diego Basin*, prepared by the San Diego Regional Water Quality Control Board;

2. Identify any receiving waters, into which the developed area would discharge to, listed on the most recent list of Clean Water Act Section 303(d) impaired water bodies. List any and all pollutants for which the receiving waters are impaired; and

3. Compare the list of pollutants for which the receiving waters are impaired with the pollutants anticipated to be generated by the project (as identified in Table 1). Any pollutants identified by Table 1 which are also causing impairment of receiving waters shall be considered primary pollutants of concern.

For projects where no primary pollutants of concern exist, those pollutants identified through the use of Table 1 shall be considered secondary pollutants of concern.

**16.60.150 Identifying conditions of concern.**

A. Common impacts to the hydrologic regime resulting from development typically include increased runoff volume and velocity; reduced infiltration; increased flow frequency, duration, and peaks; faster time to reach peak flow; and water quality degradation. These changes have the potential to permanently impact downstream channels and habitat integrity. A change to a priority project site's hydrologic regime would be considered a condition of concern if the change would impact downstream channels and habitat integrity. Because of these potential impacts, a director, or his or

her designee, may require that the following steps be followed for priority projects that, in their judgment, may impact the hydrologic regime:

1. Evaluate the project's conditions of concern in a drainage study report prepared by a registered civil engineer in the State of California, with experience in fluvial geomorphology and water resources management. The report shall consider the project area's location (from the larger watershed perspective), topography, soil and vegetation conditions, percent impervious area, natural and infrastructure drainage features, wet season groundwater depth, and any other relevant hydrologic and environmental factors to be protected specific to the project area's watershed;

2. As part of the drainage study, a qualified, licensed professional shall provide a report on proposed infiltration techniques (trenches, basins, dry wells, permeable pavements with underground reservoir for infiltration) regarding any potential adverse geotechnical concerns. Geotechnical conditions (such as slope stability, expansive soils, compressible soils, seepage, groundwater depth, and loss of foundation or pavement subgrade) should be addressed, and mitigation measures provided;

3. As part of the drainage study, the civil engineer shall conduct a field reconnaissance to observe and report on downstream conditions, including undercutting erosion, slope stability, vegetative stress (due to flooding, erosion, water quality degradation, or loss of water supplies) and the area's susceptibility to erosion or habitat alteration as a result of an altered flow regime;

4. The drainage study shall compute rainfall runoff characteristics from the project area including, at a minimum, peak flow rate, flow velocity, runoff volume, time of concentration, and retention volume. These characteristics shall be developed for the two-year and 10-year frequency, Type I storm, of six-hour or 24-hour duration (whichever is the closer approximation of the site's time of concentration), during critical hydrologic conditions for soil and vegetative cover[1]. The drainage study shall report the project's conditions of concern based on the hydrologic and downstream conditions discussed above. Where downstream conditions of concern have been identified, the drainage study shall establish that pre-project hydrologic conditions affecting downstream conditions of concern would be maintained by the proposed project, satisfactory to the Director of Public Works, by incorporating the site design, source control, and treatment control requirements identified in this chapter.

B. For priority development projects that disturb ("PDP") fifty (50) acres or more:

---

[1] Design storms can be found at http://www.wrcc.dri.edu/pcpnfreq.html. Applicants may calculate the storm events using local rain data. In addition, isopluvial maps contained in the County of San Diego Hydrology Manual may be used to extrapolate rainfall data to areas where insufficient data exists. If isopluvial maps are used interpolations shall be linear.

1. PDP post project runoff flow rates and durations shall not exceed pre-project runoff flow rates and durations (interim hydromodification criteria) where the increased discharge flow rates and durations will result in increased potential for erosion or other significant adverse impacts to beneficial uses, attributable to changes in flow rates and durations.

2. PDPs disturbing fifty (50) acres or more shall implement hydrologic controls to manage post-project runoff flow rates and durations as required by the interim hydromodification criteria.

**16.60.160 Progression of storm water BMPs.**

Site design BMPs reduce the need for source and/or treatment control BMPs, and source control BMPs may reduce the amount of treatment control BMPs needed. Throughout the following sections, all priority projects shall consider, and incorporate and implement storm water BMPs into the project design where expressly required by this chapter, and if not so required, where determined applicable and feasible by the Director of Public Works, in the following progression:

1. Site Design BMPs
2. Source Control BMPs
3. Treatment Control BMPs

**16.60.170 Requirements to implement storm water BMPs.**

Priority projects must implement LID site design BMPs and source control BMPs, and must also implement treatment control BMPs unless a waiver is granted based on the infeasibility of all treatment control BMPs. LID BMPs must meet the minimum requirements in section D.1.d.(4) of NPDES Permit No. CAS 0108758. BMPs must also achieve certain performance standards set out in section D.1.d.(5) and (6). Selection of BMPs from the menus included in this chapter, using the rules set out in this chapter, must fulfill these requirements. In addition, runoff treated by LID and site design or source control BMPs, such as rooftop runoff treated in landscaping, may be useful in reducing the quantity of runoff required to be treated in, "Treatment Control BMPs."

**16.60.180 Selection of storm water BMPs.**

Using the Treatment Control BMP Selection Matrix, each priority project shall select a structural treatment BMP by comparing the list of pollutants for which the downstream receiving waters are impaired (if any), with the pollutants anticipated to be generated by the project (as identified in Table 1). Any pollutants identified by Table 1 which are also causing a Clean Water Act section 303(d) impairment of the receiving waters of the project shall be considered primary pollutants of concern. Priority projects that are anticipated to generate a primary pollutant of concern shall meet all applicable requirements of sections 16.60.160 to 16.60.370, and shall select a single or

combination of storm water BMPs from Table 3 that maximizes pollutant removal for the particular primary pollutant(s) of concern.

Alternatively, a project proponent may elect to implement a combination of LID BMPs that either disperse and infiltrate, or direct to bioretention facilities, the flows from all impervious areas on-site. These BMPs are presumed to provide maximum extent practicable treatment for all pollutants of concern; therefore no further documentation of the treatment BMP selection process is required.

**16.60.190 Storm water BMPs for projects not generating pollutants.**

Priority projects that are not anticipated to generate a pollutant for which the receiving water is Clean Water Act Section 303(d) impaired shall meet applicable standard requirements of establishing storm water BMPs, and shall select a single or combination of storm water BMPs from Table 3 which are effective for pollutant removal of the identified secondary pollutants of concern, consistent with the "maximum extent practicable" standard as defined in the attachment entitled "Definitions" of the Municipal Permit.

**16.60.200 Storm water BMPs for projects generating primary and secondary pollutants.**

Where a site generates both primary and secondary pollutants of concern, primary pollutants of concern receive priority for BMP selection. For such sites, selected BMPs must only maximize pollutant removal for the primary pollutants of concern. Where a site generates only secondary pollutants of concern, selected BMPs shall target the secondary pollutant of concern determined to be most significant for the project. Selected BMPs must be effective for the widest range of pollutants of concern anticipated to be generated by a priority project (as identified in Table 1), consistent with the maximum extent practicable standard as defined in the attachment entitled "Definitions" of the Municipal Permit.

Treatment control BMPs with a high or medium pollutant removal efficiency for the project's most significant pollutant of concern shall be selected. Treatment control BMPs with a low removal efficiency ranking shall only be approved by the city when a feasibility analysis has been conducted, which exhibits that implementation of treatment control BMPs with a high or medium removal efficiency ranking are infeasible. Treatment control BMPs shall not be constructed within a receiving water.

**16.60.210 Alternative storm water BMPs.**

Alternative storm water BMPs not identified in Table 3 may be approved at the discretion of the Director of Public Works, provided the alternative BMP is as effective in removal of pollutants of concern as other feasible BMPs listed in Table 3.

**Table 2. Site Design and Source Control Storm Water BMP Selection Matrix.**

| *Priority Project Category* | *Site Design BMPs(1)* | *Source Control BMPs(2)* | *Requirements Applicable to Individual Priority Project Categories(3)* | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | | a. Private Roads | b. Residential Driveways & Guest Parking | c. Dock Areas | d. Maintenance Bays | e. Vehicle Wash Areas | f. Outdoor Processing Areas | g. Equipment Wash Areas | h. Parking Areas | i. Roadways | j. Fueling Areas | k. Hillside Landscaping |
| Detached Residential Development | R | R | R | R | | | | | | | | | R |
| Attached Residential Development | R | R | R | | | | | | | | | | |
| Commercial Development > 1 acre | R | R | | | R | R | R | R | | | | | |
| Heavy Industry / Industrial Development > 1 acre | R | R | | | R | R | R | R | R | | | R | |
| Automotive Repair Shop | R | R | | | R | R | R | | R | | | R | |
| Restaurants | R | R | | | R | | | | R | | | | |
| Hillside Development > 5,000 $ft^2$ | R | R | R | | | | | | | | | | R |
| Parking Lots > 5,000 $ft^2$ or > 15 spaces | R | R | | | | | | | | R(4) | | | |
| Retail Gas Outlet = to or > 5,000 $ft^2$ or > 100 ADT | R | R | | | | | R | | | | | R | |
| Streets, Highways & Freeways > 5,000 $ft^2$ | R | R | | | | | | | | | R | | |

R = Required; select BMPs as required from the applicable steps in Sections 16.60.130 & 16.60.140, or equivalent.
(1) Refer to Section 16.60.130.
(2) Refer to Section 16.60.140.
(3) Priority project categories must apply specific storm water BMP requirements, where applicable. Projects are subject to the requirements of all priority project categories that apply.
(4) Applies if the paved area totals > 5,000 square feet or with > 15 parking spaces and is potentially exposed to urban runoff.

**Table 3. Treatment Control BMP Selection Matrix.**

| Pollutants of Concern | Bioretention Facilities (LID) | Settling Basins (Dry Ponds) | Wet Ponds and Wetlands | Infiltration Facilities or Practices (LID) | Media Filters | High-rate biofilters | High-rate media filters | Trash Racks & Hydro -dynamic Devices |
|---|---|---|---|---|---|---|---|---|
| **Coarse Sediment and Trash** | High | High | High | High | High | High | High | High |
| **Pollutants that tend to associate with fine particles during treatment** | High | High | High | High | High | Medium | Medium | Low |
| **Pollutants that tend to be dissolved following treatment** | Medium | Low | Medium | High | Low | Low | Low | Low |

## Notes on Treatment Control BMP Categories

All rankings are relative. Ranking of all facilities assumes proper sizing, design, and periodic maintenance. Following are general descriptions of each category.

1. **Bioretention Facilities** (infiltration planters, flow-through planters, bioretention areas, and bioretention swales). Facilities are designed to capture runoff and infiltrate slowly through soil media, which also supports vegetation. Bioretention facilities, except for flow-through planters, effectively promote infiltration into native soils. In clay soils, facilities may capture excess treated runoff in an underdrain piped to the municipal storm drain system. Typical criteria: an infiltration surface area at least 4% of tributary impervious area, 6-inch average depth of top reservoir, 18-inch soil layer, 12-inch to 18-inch gravel subsurface storage layer.

2. **Settling Basins and Wetlands** (extended detention basins, "wet" basins, decorative or recreational lakes or water features also used for storm water treatment, constructed wetlands). Facilities are designed to capture a minimum water quality volume of 80% of total runoff and detain for a minimum of 48 hours. Some wetland designs have proven effective in removing nutrients, but performance varies.

3. **Infiltration Facilities or Practices** (infiltration basins, infiltration trenches, dry wells, dispersal of runoff to landscape, pervious pavements). These facilities and landscape designs capture, retain, and infiltrate a minimum of 80% of runoff into the ground. Infiltration facilities are generally only feasible in permeable (Hydrologic Soil Group A or B) soils. Volume and area of infiltration facilities depends on soil permeability and safety factor used. Typical criteria: Infiltration facilities should have pretreatment to remove silt to prolong life of the facility. A 10-foot vertical separation from average seasonal groundwater depth is required. Dispersal to landscape may be accomplished in any soil type and generally requires a maximum 2:1 ratio impervious:pervious and concave topography to ensure the first one (1) inch of rainfall is retained.

4. **Media Filters** (sand filters). Filters designed to treat runoff produced by a rainfall of 0.2 inches per hour (or $2 \times 85^{th}$ percentile hourly rainfall intensity) by slow infiltration through sand or other media. Typical criteria: Surface loading rate not to exceed 5 inches/hour. Entire surface of the sand must be accessible for maintenance.

5. **High Rate Biofilters** (tree wells, typically proprietary). Biofilters with specially designed media to rapidly filter runoff while removing some pollutants. Filterra® (proprietary version) recommends surface loading rates of up to 100 inches/hour.

6. **High-rate Media Filters** (typically proprietary). Vaults with replaceable cartridge filters filled with inorganic media.

7. **Drainage Inserts** have low effectiveness in removing pollutants that tend to associate with fine particles and have medium effectiveness in removing coarse sediment and trash. They are sometimes used to augment more effective treatment facilities and are sometimes used alone when more effective facilities have been deemed infeasible.

**Notes on Pollutants of Concern:**
In Table 4, Pollutants of Concern are grouped as gross pollutants (coarse sediment and trash), pollutants that tend to associate with fine particles, and pollutants that remain dissolved.

**Table 4**

| Pollutant | Coarse Sediment and Trash | Pollutants that tend to associate with fine particles during treatment | Pollutants that tend to be dissolved following treatment |
|---|---|---|---|
| Sediment | X | X | |
| Nutrients | | X | X |
| Heavy Metals | | X | |
| Organic Compounds | | X | |
| Trash & Debris | X | | |
| Oxygen Demanding | | X | |
| Bacteria | | X | |
| Oil & Grease | | X | |
| Pesticides | | X | |

## 16.60.220 Low Impact Development (LID) and Site Design BMP

A. Priority projects shall be designed so as to minimize directly connected impervious surfaces and to promote infiltration using LID techniques. Priority projects shall, to the maximum extent practicable, minimize the introduction of pollutants and conditions of concern that may result in significant impacts, generated from site runoff to the storm water conveyance system. Priority projects shall also control post-development peak storm water runoff discharge rates and velocities to maintain or reduce pre-development downstream erosion and to protect stream habitat. Priority projects can address these objectives through the creation of a hydrologically functional project design that attempts to mimic the natural hydrologic regime. Mimicking a site's natural hydrologic regime can be pursued by:

1. Reducing imperviousness, conserving natural resources and areas, maintaining and using natural drainage courses in the storm water conveyance system, and minimizing clearing and grading.

2. Providing runoff storage measures dispersed throughout a site's landscape with the use of bioretention facilities and detention, retention, and infiltration practices.

B. Site design BMPs shall offer an innovative approach to urban storm water management that does not rely on the conventional end-of-pipe or in-the-pipe structural methods but instead uniformly or strategically integrates storm water controls throughout the urban landscape. Examples of many of these methods may be found in the County of San Diego's LID Handbook, and its publications, *Start at the Source*, and *Low-Impact Development Design Strategies*, in the City of Portland, Oregon's *Stormwater Manual*, and in the Contra Costa (California) Clean Water Program's *Stormwater C.3 Guidebook*.

**16.60.230 Maintaining pre-development rainfall runoff characteristics.**

A. Priority projects shall control post-development peak storm water runoff discharge rates and velocities to maintain or reduce pre-development downstream erosion. In addition, projects should control runoff discharge volumes and durations to the maximum extent practicable using the site design, source control, and treatment control requirements.

B. Design Concept 1: Minimize Project's Impervious Footprint & Conserve Natural Areas. The following site design options shall be considered, and incorporated and implemented where determined applicable and feasible by the Director of Public Works, during the site planning and approval process, consistent with applicable General Plan policies and other development regulations.

1. Minimize and disconnect impervious surfaces. This can be achieved in various ways, including, but not limited to, increasing building density (number of stories above or below ground) and developing land use regulations seeking to limit impervious surfaces. Decreasing the project's footprint can substantially reduce the project's impacts to water quality and hydrologic conditions.

2. Conserve natural areas, soils, and vegetation where feasible. This can be achieved by concentrating or clustering development on the least environmentally sensitive portions of a site while leaving the remaining land in a natural, undisturbed condition. The following list provides a guideline for determining the least sensitive portions of the site, in order of increasing sensitivity. Jurisdictions should also refer to their Multiple Species Conservation Plans or other biological regulations, as appropriate.

a. Areas devoid of vegetation, including previously graded areas and agricultural fields.

b. Areas of non-native vegetation, disturbed habitats and eucalyptus woodlands.
c. Areas of chamise or mixed chaparral, and non-native grasslands.
d. Areas containing coastal scrub communities.
e. All other upland communities.
f. Occupied habitat of sensitive species and all wetlands.
g. All areas necessary to maintain the viability of wildlife corridors. Within each of the previous categories, areas containing hillsides should be considered more sensitive than the same category without hillsides.

3. Construct walkways, trails, patios, overflow parking lots and alleys and other low-traffic areas with permeable surfaces, such as pervious concrete, permeable asphalt, unit pavers, and granular materials.

4. Construct streets, sidewalks and parking lot aisles to the minimum widths necessary, provided that public safety and a walkable environment for pedestrians are not compromised.

5. Maximize canopy interception and water conservation by preserving existing native trees and shrubs, and planting additional native or drought tolerant trees and large shrubs.

6. Minimize the use of impervious surfaces, such as decorative concrete, in the landscape design.

7. Use natural drainage systems to the maximum extent practicable.

8. Other site design options that are comparable, and equally effective.

9. Minimize soil compaction.

C. Design Concept 2: Minimize Directly Connected Impervious Areas (DCIAs). Priority projects shall consider, and incorporate and implement the following design characteristics, where determined applicable and feasible by the Director of Public Works.

1. Where landscaping is proposed, drain rooftops into adjacent landscaping prior to discharging to the storm drain.

2. Where landscaping is proposed, drain impervious sidewalks, walkways, trails, and patios into adjacent landscaping.

3. Other design characteristics that are comparable and equally effective.

**16.60.240 Protection of slopes and channels.**

Project plans shall include storm water BMPs to decrease the potential for erosion of slopes and/or channels, consistent with local codes and ordinances and with the approval of all agencies with jurisdiction, e.g., the U.S. Army Corps of Engineers, the San Diego Regional Water Quality Control Board, and the California Department of Fish and Game. The following design principles shall be considered, and incorporated and implemented where determined applicable and feasible by the Director of Public Works:

A. Minimize disturbances to natural drainages.

B. Convey runoff safely from the tops of slopes.

C. Vegetate slopes with native or drought tolerant vegetation.

D. Control and treat flows in landscaping and/or other controls prior to reaching existing natural drainage systems.

E. Stabilize permanent channel crossings.

F. Install energy dissipaters, such as riprap, at the outlets of new storm drains, culverts, conduits, or channels that enter unlined channels in accordance with applicable specifications to minimize erosion. Energy dissipaters shall be installed in such a way as to minimize impacts to receiving waters.

G. Other design principles that are comparable and equally effective.

**16.60.250 Providing storm drain system stenciling and signage.**

Storm drain stencils are highly visible source control messages, typically placed directly adjacent to storm drain inlets. The stencils contain a brief statement that prohibits the dumping of improper materials into the urban runoff conveyance system. Graphical icons, either illustrating anti-dumping symbols or images of receiving water fauna, are effective supplements to the anti-dumping message. Priority projects shall include the following requirements in the project design:

A. Provide stenciling or labeling of all storm drain inlets and catch basins within the project area with prohibitive language (such as: "NO DUMPING – I LIVE IN <<name receiving water>>") and/or graphical icons to discourage illegal dumping.

B. Post signs and prohibitive language and/or graphical icons, which prohibit illegal dumping at public access points along channels and creeks within the project area.

C. Maintain legibility of stencils and signs.

**16.60.260 Designing outdoor material storage areas to reduce pollution introduction.**

Improper storage of materials outdoors may increase the potential for toxic compounds, oil and grease, heavy metals, nutrients, suspended solids, and other pollutants to enter the urban runoff conveyance system. Where the priority project plans include outdoor areas for storage of hazardous materials that may contribute pollutants to the urban runoff conveyance system, the following storm water BMPs are required:

A. Hazardous materials with the potential to contaminate urban runoff shall either be: (1) placed in an enclosure such as, but not limited to, a cabinet, shed, or similar structure that prevents contact with runoff or spillage to the storm water conveyance system; or (2) protected by secondary containment structures such as berms, dikes, or curbs.

B. The storage area shall be paved and sufficiently impervious to contain leaks and spills.

C. The storage area shall have a roof or awning to minimize direct precipitation within the secondary containment area.

**16.60.270 Designing trash storage areas to reduce pollution introduction.**

All trash container areas shall meet the following requirements (limited exclusion: detached residential homes):

A. Paved with an impervious surface, designed not to allow run-on from adjoining areas, screened or walled to prevent off-site transport of trash; and

B. Provide attached lids on all trash containers that exclude rain, and a permanent fire resistant roof or awning to minimize direct precipitation.

**16.60.280 Using efficient irrigation systems and landscape design.**

Priority projects shall design the timing and application methods of irrigation water to minimize the runoff of excess irrigation water into the storm water conveyance system. The irrigation system shall be in compliance with the requirements of all city ordinances regulating the efficient irrigation of landscaping. The following methods to reduce excessive irrigation runoff shall be considered,

and incorporated and implemented where determined applicable and feasible by the Public Works Department:

A. Employing rain shutoff devices to prevent irrigation after precipitation.

B. Designing irrigation systems to each landscape area's specific water requirements.

C. Using flow reducers or shutoff valves triggered by a pressure drop to control water loss in the event of broken sprinkler heads or lines.

D. Employing other comparable, equally effective, methods to reduce irrigation water runoff.

**16.60.300 Incorporate requirements applicable to individual priority project categories.**

Where identified in Table 2, the following requirements shall be incorporated into applicable priority projects during the storm water BMP selection and design process. Projects shall adhere to each of the individual priority project category requirements that apply to the project (e.g., a restaurant with more than 15 parking spaces would be required to incorporate the requirements for (g) Equipment Wash Areas <u>and</u> (h) Parking Areas into the project design).

A. Private Roads. The design of private roadway drainage shall use at least one of the following:

1. Rural swale system: street sheet flows to vegetated swale or gravel shoulder, curbs at street corners, culverts under driveways and street crossings;

2. Urban curb/swale system: street slopes to curb, periodic swale inlets drain to vegetated swale/biofilter;

3. Dual drainage system: First flush captured in street catch basins and discharged to adjacent vegetated swale or gravel shoulder, high flows connect directly to storm water conveyance system;

4. Other methods, which are comparable and equally effective within the project.

B. Residential Driveways and Guest Parking. The design of driveways and private residential parking areas shall use at least one of the following features:

1. Design driveways with shared access, flared (single lane at street) or wheelstrips (paving only under tires); or, drain into landscaping prior to discharging to the storm water conveyance system;

2. Uncovered temporary or guest parking on private residential lots may be: paved with a permeable surface; or, designed to drain into landscaping prior to discharging to the storm water conveyance system;

3. Other features which are comparable and equally effective.

C. Dock Areas. Loading/unloading dock areas shall include the following:

1. Cover loading dock areas, or design drainage to preclude urban run-on and runoff;

2. Direct connections to storm drains from depressed loading docks (truck wells) are prohibited;

3. Other features which are comparable and equally effective.

D. Maintenance Bays. Maintenance bays shall include the following:

1. Repair/maintenance bays shall be indoors; or, designed to preclude urban run-on and runoff; and

2. Design a repair/maintenance bay drainage system to capture all wash water, leaks and spills. Connect drains to a sump for collection and disposal. Direct connection of the repair/maintenance bays to the storm drain system is prohibited. If required by local jurisdiction, obtain an Industrial Waste Discharge Permit, or

3. Other features which are comparable and equally effective.

E. Vehicle Wash Areas. Priority projects that include areas for washing/steam cleaning of vehicles shall use the following:

1. Self-contained, and covered with a roof or overhang;

2. Equipped with a clarifier or other pretreatment facility;

3. Properly connected to a sanitary sewer; and

4. Other features which are comparable and equally effective.

F. Outdoor Processing Areas. Outdoor process equipment operations, such as rock grinding or crushing, painting or coating, grinding or sanding, degreasing or parts cleaning, landfills, waste piles, and wastewater and solid waste treatment and disposal, and other operations determined to be a potential threat to water quality by the Copermittee shall adhere to the following requirements:

1. Cover or enclose areas that would be the most significant source of pollutants; or, slope the area toward a dead-end sump; or, discharge to the sanitary sewer system following appropriate treatment in accordance with conditions established by the applicable sewer agency;

2. Grade or berm area to prevent run-on from surrounding areas;

3. Installation of storm drains in areas of equipment repair is prohibited;

4. Other features which are comparable or equally effective.

G. Equipment Wash Areas. Outdoor equipment/accessory washing and steam cleaning activities at priority projects shall use the following:

1. Be self-contained, and covered with a roof or overhang;

2. Have a grade or berm area to prevent run-on from surrounding areas;

3. Be equipped with a clarifier, grease trap or other pretreatment facility, as appropriate;

4. Properly connected to a sanitary sewer;

5. Installation of storm drains in wash areas is prohibited;

6. Other features which are comparable or equally effective.

H. Parking Areas. To minimize the offsite transport of pollutants from parking areas, the following design concepts shall be considered, and incorporated and implemented where determined applicable and feasible by the Director of Public Works:

1. Where landscaping is proposed in parking areas, incorporate landscape areas into the drainage design;

2. Overflow parking (parking stalls provided in excess of the city's minimum parking requirements) should be constructed with permeable paving;

3. Other design concepts, which are comparable and equally effective.

I. Roadways. Priority roadway projects shall select treatment control BMPs following the treatment control selection procedure identified in this chapter entitled, "Establishing Storm Water BMPs."

J. Fueling Area. Retail and non-retail fuel dispensing areas shall contain the following:

1. Overhanging roof structure or canopy. The cover's minimum dimensions must be equal to or greater than the area within the grade break. The cover must not drain onto the fuel dispensing area and the downspouts must be routed to prevent drainage across the fueling area. The fueling area shall drain to the project's treatment control BMPs prior to discharging to the storm water conveyance system;

2. Paved with Portland cement concrete (or equivalent smooth impervious surface). The use of asphalt concrete shall be prohibited;

3. Have an appropriate slope to prevent ponding, and must be separated from the rest of the site by a grade break that prevents run-on of urban runoff; and

4. At a minimum, the concrete fuel dispensing area must extend 6.5 feet (2.0 meters) from the corner of each fuel dispenser, or the length at which the hose and nozzle assembly may be operated plus one (1) foot (0.3 meter), whichever is less.

K. Hillside Landscaping. Hillside areas that are disturbed by project development shall be landscaped with deep-rooted, drought tolerant plant species selected for erosion control, satisfactory to the Director of Public Works.

**16.60.310 Treatment control BMP objectives.**

A. Minimizing a development's detrimental effects on water quality can be most effectively achieved through the use of a combination of site design, source and treatment control storm water BMPs. Where projects have been designed to minimize, to the maximum extent practicable, the introduction of anticipated pollutants of concern that may result in significant impacts to the receiving waters through the implementation of site design and source control storm water BMPs, the development would still have the potential for pollutants of concern to enter the storm water conveyance system. Therefore, priority projects shall be designed to remove pollutants of concern from the storm water conveyance system to the maximum extent practicable through the incorporation and implementation of treatment control BMPs.

B. In meeting the requirements in this section, priority projects shall implement a single or combination of storm water BMPs that will remove anticipated pollutants of concern, as identified by the procedure of this chapter, from site runoff to the maximum extent practicable. Treatment control BMPs with a high or medium pollutant removal efficiency for the project's most significant pollutant of concern shall be selected. Treatment control BMPs with a low removal efficiency ranking shall only be approved by the Director of Public Works when a feasibility analysis has been conducted, which exhibits that implementation of treatment control BMPs with a high or medium removal efficiency ranking are infeasible. Treatment control BMPs must be implemented unless a waiver is granted to the project by the Director of Public Works based on the infeasibility of any treatment control BMP.

**16.60.320 Design to treatment control BMP standards.**

All priority projects shall design, construct and implement structural treatment control BMPs that meet the design standards of this section and the applicable Countywide Model SUSMP, unless specifically exempted by the limited exclusions listed in 16.60.350. Structural treatment control BMPs required by this section shall be operational prior to the use of any dependent development, and shall be located and designed in accordance with the requirements of this chapter.

**16.60.330 Structural treatment control volume-based BMPs.**

Volume-based BMPs shall be designed to mitigate (infiltrate, filter, or treat) either:

A. Volume of runoff produced from a 24-hour 85$^{th}$ percentile storm event, as determined from isoplovial maps contained in the County of San Diego Hydrology Manual; or

B. Volume of runoff produced by the 85$^{th}$ percentile 24-hour runoff event, determined as the maximized capture urban runoff volume for the area, from the formula recommended in *Urban Runoff Quality Management, WEF Manual of Practice No. 23/ASCE Manual of Practice No. 87, (1998)*; or

C. The volume of annual runoff based on unit basin storage volume, to achieve ninety percent (90%) or more volume treatment by the method recommended in *California Stormwater Best Management Practices Handbook – Industrial/ Commercial, (1993)*; or

D. The volume of runoff, as determined from the local historical rainfall record, that achieves approximately the same reduction in pollutant loads and flows as achieved by mitigation of the 85$^{th}$ percentile 24-hour runoff event. Where this option is used, storm events shall be identified by their separation from one another by at least six hours of no rain.

**16.60.340 Structural treatment control flow-based BMPs.**

As an alternative to volume-based BMPs, structural treatment controls may be designed as flow-based BMPs. Flow-based BMPs shall be designed to mitigate (infiltrate, filter, or treat) either:

A. The maximum flow rate of runoff produced from a rainfall intensity of 0.2 inch of rainfall per hour for each hour of a storm event; or

B. The maximum flow rate of runoff produced by the 85$^{th}$ percentile hourly rainfall intensity, as determined from the local historical rainfall record, multiplied by a factor of two, for each hour of a storm event; or

C. The maximum flow rate of runoff, as determined from the local historical rainfall record, that achieves approximately the same reduction in pollutant loads and flows as achieved by mitigation of the 85$^{th}$ percentile hourly rainfall intensity multiplied by a factor of two, for each hour of a storm event.

**16.60.350 Limited exclusions.**

A. Proposed restaurants, where the land area for development or redevelopment is less than 5,000 square feet, are excluded from the numerical sizing criteria requirements listed in 16.60.320 through 16.60.340.

B. Where significant redevelopment results in an increase of less than fifty percent (50%) of the impervious surfaces of a previously existing development, and the existing development was not subject to SUSMP requirements, the numeric sizing criteria discussed in 16.60.330 and 16.60.340 apply only to the addition, and not to the entire development.

**16.60.360 Locating BMPs near pollutant sources.**

Structural treatment control storm water BMPs should be implemented close to pollutant sources to minimize costs and maximize pollutant removal prior to runoff entering receiving waters. Such BMPs may be located on- or off-site, used singly or in combination, or shared by multiple new developments, pursuant to the following requirements:

A. All structural treatment control BMPs shall be located so as to infiltrate, filter, and/or treat the required runoff volume or flow prior to its discharge to any receiving water body supporting beneficial uses;

B. Multiple post-construction structural treatment control BMPs for a single priority development project shall collectively be designed to comply with the design standards for structural treatment control BMPs;

C. Shared storm water BMPs shall be operational prior to the use of any dependent development or phase of development. The shared BMPs shall only be required to treat the dependent developments or phases of development that are in use;

D. Interim storm water BMPs that provide equivalent or greater treatment than is required by structural treatment control BMPs may be implemented by a dependent development until each shared BMP is operational. If interim BMPs are selected, the BMPs shall remain in use until permanent BMPs are operational.

**16.60.370 Restrictions on use of infiltration BMPs.**

At a minimum, use of structural treatment BMPs that are designed to primarily function as infiltration devices shall meet the following conditions[2]:

A. Urban runoff from commercial developments shall undergo pretreatment to remove both physical and chemical contaminants, such as sedimentation or filtration, prior to infiltration;

B. All dry weather flows shall be diverted from infiltration devices except for those non-storm water discharges authorized pursuant to 40 CFR 122.26(d)(2)(iv)(B)(1): diverted stream flows, rising ground waters, uncontaminated ground water infiltration [as defined at 40 CFR 35.2005(20)] to storm water conveyance systems, uncontaminated pumped ground water, foundation drains, springs, water from crawl space pumps, footing drains, air conditioning condensation, flow from riparian habitats and wetlands, water line flushing, landscape irrigation, discharges from potable water sources other than water main breaks, irrigation water, individual residential car washing, and dechlorinated swimming pool discharges;

C. Pollution prevention and source control BMPs shall be implemented at a level appropriate to protect groundwater quality at sites where infiltration structural treatment BMPs are to be used;

D. The vertical distance from the base of any infiltration structural treatment BMP to the seasonal high groundwater mark shall be at least 10 feet or as determined on an individual, site-specific basis by the Director of Public Works. Where groundwater does not support beneficial uses, this vertical distance criterion may be reduced, provided groundwater quality is maintained;

E. The soil through which infiltration is to occur shall have physical and chemical characteristics (such as appropriate cation exchange capacity, organic

[2] These conditions do not apply to structural treatment BMPs which allow incidental infiltration and are not designed to primarily function as infiltration devices (such as grassy swales, detention basins, vegetated buffer strips, constructed wetlands, etc.)

content, clay content, and infiltration rate) that are adequate for proper infiltration durations and treatment of urban runoff for the protection of groundwater beneficial uses;

F. Infiltration structural treatment BMPs shall not be used for areas of industrial or light industrial activity; areas subject to high vehicular traffic (25,000 or greater average daily traffic on main roadway or 15,000 or more average daily traffic on any intersecting roadway); automotive repair shops; car washes; fleet storage areas (bus, truck, etc.); nurseries; and other high threat to water quality land uses and activities as designated by the Director of Public Works;

G. The horizontal distance between the base of any infiltration structural BMP and any water supply wells shall be 100 feet or as determined on an individual, site-specific basis by the Director of Public Works.

**16.60.380 Maintenance mechanism to be in place before acceptance.**

Structural BMPs shall not be considered "effective," and shall not be accepted as meeting the MEP standard, unless a mechanism is in place that will ensure ongoing long-term maintenance of all structural BMPs. As part of project review, if a project proponent is required to include interim or permanent structural BMPs in project plans, and if the Director of Public Works does not provide a mechanism for BMP maintenance, the project proponent shall provide verification of maintenance requirements through such means as may be appropriate, at the discretion of the Director of Public Works, including, but not limited to covenants, legal agreements, maintenance agreements, and/or conditional use permits.

**16.60.390 Maintenance mechanisms.**

Public equity maintenance. The city council may approve a public or acceptable quasi-public entity (e.g., the County Flood Control District, or annex to an existing assessment district, an existing utility district, a state or federal resource agency, or a conservation conservancy) to assume responsibility for maintenance, repair and replacement of the BMP. Unless acceptable to the city council, public entity maintenance agreements shall ensure estimated costs are front-funded or reliably guaranteed (e.g., through a trust fund, cash deposit, assessment district fees, bond, letter of credit or similar means). In addition, the city council may seek protection from liability by appropriate releases and indemnities. The city council shall have the authority to approve storm water BMPs proposed for transfer to any other public entity within its jurisdiction before installation. The city council shall be involved in the negotiation of maintenance requirements with any other public entities accepting maintenance responsibilities within their respective jurisdictions, and in negotiations with the resource agencies responsible for issuing permits for the construction and/or maintenance of the facilities. The city council must be identified as a third party beneficiary empowered to enforce any such maintenance agreement within their respective jurisdictions.

A. Project proponent agreement to maintain storm water BMPs: The city council may enter into a contract with the project proponent obliging the project proponent to maintain, repair and replace the storm water BMPs as necessary into perpetuity. Security may be required.

B. Assessment districts: The city council may approve an Assessment District or other funding mechanism created by the project proponent to provide funds for storm water BMP maintenance, repair and replacement on an ongoing basis. Any agreement with such a District shall be subject to the Public Entity Maintenance Provisions above.

C. Lease provisions: In those cases where the city holds title to the land in question, and the land is being leased to another party for private or public use, the city council may assure storm water BMP maintenance, repair and replacement through conditions in the lease.

D. Conditional use permits: For discretionary projects only, the city council may assure maintenance of storm water BMPs through the inclusion of maintenance conditions in the conditional use permit. Security may be required.

E. Alternative mechanisms: The city council may accept alternative maintenance mechanisms if such mechanisms are as protective as those listed above.

**16.60.400 Verification mechanisms.**

For discretionary projects, the city approved method of storm water BMP maintenance shall be incorporated into the project's permit, and shall be consistent with permits issued by resource agencies, before city approval of discretionary permits. For projects requiring only ministerial permits, the approved method of storm water BMP maintenance shall be incorporated into the permit conditions before the issuance of any ministerial permits. In all instances, the project proponent shall provide proof of execution of an approved method of maintenance repair and replacement before the issuance of construction approvals. Public projects that are not required to obtain permits shall be responsible for ensuring that an approved method of storm water BMP maintenance repair and replacement is executed prior to the commencement of construction. For all properties, the verification mechanism will include the project proponent's signed statement, as part of the project application, accepting responsibility for all structural BMP maintenance, repair and replacement, until a city-approved entity agrees to assume responsibility for structural BMP maintenance, repair and replacement.

**16.60.410 Maintenance requirements.**

A. Operation & Maintenance (O&M) Plan: A copy of an O&M plan, prepared by the project proponent satisfactory to the Director of Public Works shall be attached to the approved maintenance agreement, which describes the designated responsible party to manage the storm water BMPs, employee's training program and duties, operating schedule, maintenance frequency, routine service schedule, specific maintenance activities, copies of resource agency permits, and any other necessary activities. At a minimum, maintenance agreements shall require the inspection and servicing of all structural BMPs on an annual basis. The project proponent maintenance entity shall complete and maintain O&M forms to document all maintenance requirements. Parties responsible for the O&M plan shall retain records for at least 5 years. These documents shall be made available to the city for inspection upon request at any time.

B. Access Easement/Agreement: As part of the maintenance mechanism selected above, it shall include a copy of an executed access easement that shall be binding on the land throughout the life of the project, until such time that the storm water BMP requiring access is replaced, satisfactory to the Director of Public Works.

**16.60.420 Waiver of structural treatment BMP requirements.**

The requirement of implementing structural treatment BMPs may be waived if infeasibility can be established. A waiver of infeasibility shall be granted only when all available structural treatment BMPs have been considered and rejected as infeasible.

Waivers may only be granted from structural treatment BMP and structural treatment BMP sizing requirements. Priority development projects, whether or not granted a waiver may not cause or contribute to an exceedance of water quality objectives. Pollutants in runoff from projects granted a waiver must still be reduced to the maximum extent practicable.

Section 3: This Ordinance is adopted pursuant to the authority granted to the City of El Cajon under San Diego Regional Water Quality Control Board Order No. R9 2007-0001. This Ordinance encompasses a state-mandated requirement thereunder.

Section 4: This ordinance shall be effective thirty (30) days following its passage and adoption.

Ordinance No. 4939

PASSED AND ADOPTED by the City Council of the City of El Cajon, California at an Adjourned Regular Joint City Council/Redevelopment Agency Meeting held this 23rd day of February 2010, by the following vote to wit:

| | | |
|---|---|---|
| AYES | : | Lewis, Hanson-Cox, Kendrick, McClellan, Wells |
| NOES | : | None |
| ABSENT | : | None |
| DISQUALIFY | : | None |

MARK LEWIS
Mayor of the City of El Cajon

ATTEST:

KATHIE RUTLEDGE, CMC
City Clerk

I hereby certify that the above and foregoing is a full and true copy of Ordinance No. 4939 of the Ordinances of the City of El Cajon, California, as adopted by the City Council at the Adjourned Regular Joint Meeting of the City Council/Redevelopment Agency on the 23rd day of February 2010.

Kathie Rutledge
Kathie Rutledge, CMC, City Clerk

## PROJECT INTRODUCTION AND PROJECT BACKGROUND

The following shall be completed in its entirety prior to submittal. Refer to Chapter 4 for details on identifying constraints and opportunities for storm water control.

Project Name:

Project Location:

Project Description:

Existing Site Features and Conditions Including Topography:

Constraints and Opportunities for Storm Water Control:

## CHAPTER 1 – POLICIES AND PROCEDURES

This Storm Water Mitigation Plan (SWMitP) shall be prepared in conjunction with the Countywide Model Standard Urban Stormwater Mitigation Plan (SUSMP), which can be obtained at http://www.projectcleanwater.org. The Model SUSMP has step-by-step instructions, which will guide you in preparing the SWMitP. The Chapters used herein correspond to the Model SUSMP and contained herein are City of El Cajon's (City) specific project requirements.

If the project requires a Hydromodification Management Plan (HMP) as determined in the Model SUSMP, the Engineer shall refer the Hydromodification Plan, which can be obtained at http://www.projectcleanwater.org.

The SWMitP shall be prepared under the direction of a Civil Engineer registered in the state of California. The Registered Civil Engineer shall attests to the technical information contained herein and the engineering data upon which recommendations, conclusions, and decisions are based.

### CERTIFICATION

I, _____, certify that the selection, sizing, and preliminary design of stormwater treatment and other control measures in this SWMitP meet the requirements of the Regional Water Quality Control Board Order R9-2007-0001 and subsequent amendments.

Signature: _____ Date: _____

*AFFIX WET STAMP HERE ➔*

### SWMitP PURPOSE

The purpose of this SWMitP is to finalize the list of anticipated pollutants from the project, finalize proposed Low Impact Development (LID) principles; select final source control and treatment control Best Management Practices (BMPs), finalize sizing calculations for storm water BMPs, and submit an appropriate maintenance plan. BMPs and LID features applied to all projects provide long-term solutions to water quality and help minimize downstream erosion. This SWMitP is intended to ensure the effectiveness of the selected LID's and BMPs proposed by checking that they have been sized properly, maintenance is feasible, and that the design is based on long-term fiscal planning. The SWMitP is a living document subject to revisions as needed by the Engineer of Work and the City.

## STORM WATER COMPLIANCE PROCESS

Typically, during the Planning Level or Programming Phase, the City of El Cajon determines if a development project is a **"Priority Development Project"** following the completion of the **"Storm Water SUSMP Intake Applicability Form for Development Projects"**. A **"Storm Water Conceptual Plan"** is then developed and submitted for review and approval. Then, during final design (or preparation of construction plans), a Storm Water Mitigation Plan (SWMitP) is required in accordance with the Standard Urban Storm Water Mitigation Plan (SUSMP) ordinance of the City of El Cajon (Ord. 4908, Chapter 16.60) and San Diego Regional Water Quality Control Board (RWQCB) Order No. R9-2007-0001, NPDES Permit No. CAS0108758.

The City's SWMitP submittal requirements are described in Chapter 3. The SWMitP shall be completed in it entirety prior to submittal to the City of El Cajon otherwise it will be returned without review. If you have any questions during the preparation of the SWMitP contact the Storm Water Department at (619) 441-1653.

Complete the following:

1. Is the project on previously undeveloped land (new development)?

   YES NO

2. Is the project adding or creating 5,000-sf, or more, of impervious surface (redevelopment)?

   YES NO

If you answered YES to either 1 or 2, complete Table 1-1, inserted below from the Model SUSMP, Chapter 1.

TABLE 1-1. Priority Development Projects.

**Is the project in any of these categories?**

| | | | |
|---|---|---|---|
| Yes ❑ | No ❑ | **A** | **Housing subdivisions of 10 or more dwelling units.** Examples: single-family homes, multi-family homes, condominiums, and apartments. |
| Yes ❑ | No ❑ | **B** | **Commercial—greater than one acre.** Any development other than heavy industry or residential. Examples: hospitals; laboratories and other medical facilities; educational institutions; recreational facilities; municipal facilities; commercial nurseries; multi-apartment buildings; car wash facilities; mini-malls and other business complexes; shopping malls; hotels; office buildings; public warehouses; automotive dealerships; airfields; and other light industrial facilities. |
| Yes ❑ | No ❑ | **C** | **Heavy industry—greater than one acre.** Examples: manufacturing plants, food processing plants, metal working facilities, printing plants, and fleet storage areas (bus, truck, etc.). |
| Yes ❑ | No ❑ | **D** | **Automotive repair shops.** A facility categorized in any one of Standard Industrial Classification (SIC) codes 5013, 5014, 5541, 7532-7534, or 7536-7539. |
| Yes ❑ | No ❑ | **E** | **Restaurants.** Any facility that sells prepared foods and drinks for consumption, including stationary lunch counters and refreshment stands selling prepared foods and drinks for immediate consumption (SIC code 5812), where the land area for development is greater than 5,000 square feet. Restaurants where land development is less than 5,000 square feet shall meet all SUSMP requirements except for structural treatment BMP and numeric sizing criteria requirements and hydromodification requirements. |
| Yes ❑ | No ❑ | **F** | **Hillside development greater than 5,000 square feet.** Any development that creates 5,000 square feet of impervious surface and is located in an area with known erosive soil conditions, where the development will grade on any natural slope that is twenty-five percent or greater. |
| Yes ❑ | No ❑ | **G** | **Environmentally Sensitive Areas (ESAs).** All development located within or directly adjacent to or discharging directly to an ESA (where discharges from the development or redevelopment will enter receiving waters within the ESA), which either creates 2,500 square feet of impervious surface on a proposed project site or increases the area of imperviousness of a proposed project site to 10% or more of its naturally occurring condition. "Directly adjacent" means situated within 200 feet of the ESA. "Discharging directly to" means outflow from a drainage conveyance system that is composed entirely of flows from the subject development or redevelopment site, and not commingled with flows from adjacent lands. |
| Yes ❑ | No ❑ | **H** | **Parking lots 5,000 square feet or more** or with 15 or more parking spaces and potentially exposed to urban runoff. |
| Yes ❑ | No ❑ | **I** | **Street, roads, highways, and freeways.** Any paved surface that is 5,000 square feet or greater used for the transportation of automobiles, trucks, motorcycles, and other vehicles. |
| Yes ❑ | No ❑ | **J** | **Retail Gasoline Outlets (RGOs)** that are: (a) 5,000 square feet or more or (b) a projected Average Daily Traffic (ADT) of 100 or more vehicles per day. |

If you answered YES to any of the Items in Table 1-1, the project is a "Priority Development Project". If the Engineer determines that the project is ***NOT*** a "Priority Development Project" call the Storm Water Department at (619) 441-1653 to confirm any SUSMP requirements for the project. If the Engineer determines that the project ***IS*** a "Priority Development Project" continue to the following Chapters.

1. Is the project a "Priority Development Project"? YES NO
2. If you answered yes, list all applicable categories per Table 1-1 → _____

To determine if the project is ***EXEMPT*** from preparing a Hydromodification Management Plan (HMP), refer to the Model SUSMP Chapter 1. If the Engineer determines that a HMP is required, the City may consider granting an exemption. To make this determination, the Engineer may conduct an independent geomorphic study to determine the project's full hydromodification impact. The study must incorporate sediment transport modeling across the range of geomorphically-significant flows and demonstrate to the City's satisfaction that the project flows and sediment reductions will not detrimentally affect the receiving water to qualify for the exemption. If the project is ***NOT EXEMPT***, follow the instructions in the HMP, which can be obtained at http://www.projectcleanwater.org .

1. Does the project require a HMP? YES NO

## CHAPTER 2 – CONCEPTS AND CRITERIA

The City lies entirely within the San Diego River Watershed, Hydrologic Unit (HU) 907. The City recognizes the following drainage basins within the City, all of which eventually discharge into the San Diego River. The Engineer shall refer to the City of El Cajon Jurisdictional Urban Runoff Management Program (JURMP), which is available at http://www.ci.el-cajon.ca.us/dept/works/stormwater.html.

Check the corresponding watershed(s) for the project

| | | | |
|---|---|---|---|
| ☐ Broadway Channel Basin | ☐ Washington Channel Basin | ☐ County Ditch Basin | ☐ Northern Forrester Creek Basin |
| ☐ Forrester Creek Basin | ☐ Fanita Basin | ☐ Fletcher Parkway Basin | ☐ Third Street Lateral |

The following are designated as impaired waters by the RWQCB and USEPA pursuant to the Clean Water Act section 303(d): ***Forrester Creek and San Diego River***. The City follows a conservative approach with regards to pollutants impairing water bodies.

**Water Quality (Treatment Requirements):** The City Municipal Code requires that all pollutants of concern as identified on the CWA 303(d) list be applied for the entire length of the corresponding water body. Determine the Anticipated and Potential Pollutants of Concern from Table 2-1 in the following page per Chapter 2 of the Model SUSMP.

Circle each as applicable:

TABLE 2-1. ANTICIPATED AND POTENTIAL Pollutants Generated by Land Use Type.

| | General Pollutant Categories | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| Priority Project Categories | Sediment | Nutrients | Heavy Metals | Organic Compounds | Trash & Debris | Oxygen Demanding Substances | Oil & Grease | Bacteria & Viruses | Pesticides |
| Detached Residential Development | X | X | | | X | X | X | X | X |
| Attached Residential Development | X | X | | | X | P(1) | P(2) | P | X |
| Commercial Development >one acre | P(1) | P(1) | X | P(2) | X | P(5) | X | P(3) | P(5) |
| Heavy Industry | X | | X | X | X | X | X | | |
| Automotive Repair Shops | | | X | X(4)(5) | X | | X | | |
| Restaurants | | | | | X | X | X | X | P(1) |
| Hillside Development >5,000 ft2 | X | X | | | X | X | X | | X |
| Parking Lots | P(1) | P(1) | X | | X | P(1) | X | | P(1) |
| Retail Gasoline Outlets | | | X | X | X | X | X | | |
| Streets, Highways & Freeways | X | P(1) | X | X(4) | X | P(5) | X | X | P(1) |

X = anticipated
P = potential
(1) A potential pollutant if landscaping exists on-site.
(2) A potential pollutant if the project includes uncovered parking areas.
(3) A potential pollutant if land use involves food or animal waste products.
(4) Including petroleum hydrocarbons.
(5) Including solvents.

Check each half of a box as applicable:

| Pollutants associated with 303(d) Listed ImpairedWaters To Which the Project Drains | Project Specific Anticipated and Potential Pollutants of Concern | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| | Sed | Nut | HM | Org | T&D | ODS | O&G | B&V | Pes |
| Sed | | | | | | | | | |
| Nut | | X | | | | | | | |
| HM | | | | | | | | | |
| Org | | | | | | | | | |
| T&D | | | | | | | | | |
| ODS | | | | | | X | | | |
| O&G | | | | | | | | | |
| B&V | | | | | | | | X | |
| Pes | | | | | | | | | |

*Sed = Sediment; Nut = Nutrients; HM = Heavy Metals; Org = Organics; T&D = Trash and Debris; ODS= Oxygen Demand Substances; O&G = Oils and Grease; B&V = Bacteria & Viruses; Pes = Pesticides; Oth = Other (i.e. Pharmaceuticals, etc.)*

If a box above has two (2) checks, it is considered a Primary Pollutant; one (1) check is considered a Secondary Pollutant. Check each pollutant below according to either Primary or Secondary Pollutant.

The City requires that the Pollutants of Concern be grouped to determine how easily various treatment processes remove them. Refer to Table 2-2 below, inserted from Chapter 2 of the Model SUSMP.

TABLE 2-2. GROUPING OF POTENTIAL POLLUTANTS of Concern by fate during stormwater treatment

Check off the Pollutants in the table below accordingly:

| Primary | Secondary | Pollutant | Coarse Sediment and Trash | Pollutants that tend to associate with fine particles during treatment | Pollutants that tend to be dissolved following treatment |
|---|---|---|---|---|---|
| | | Sediment | X | X | |
| | | Nutrients | | X | X |
| | | Heavy Metals | | X | |
| | | Organic Compounds | | X | |
| | | Trash & Debris | X | | |
| | | Oxygen Demanding | | X | |
| | | Bacteria | | X | |
| | | Oil & Grease | | X | |
| | | Pesticides | | X | |

When selecting a treatment facility to remove a specific pollutant, the City requires that "Medium" or "High" Removal Efficiency BMPs treat all Primary Pollutants of concern as identified above. Refer to Table 2-3 inserted below from the Model SUSMP, Chapter 2 to determine an effective treatment facility.

Circle as applicable:

TABLE 2-3. GROUPS OF POLLUTANTS and relative effectiveness of treatment facilities

| **Pollutants of Concern** | Bioretention Facilities (LID) | Settling Basins (Dry Ponds) | Wet Ponds and Constructed Wetlands | Infiltration Facilities or Practices (LID) | Media Filters | Higher-rate biofilters* | Higher-rate media filters* | Trash Racks & Hydro -dynamic Devices (1) |
|---|---|---|---|---|---|---|---|---|
| **Coarse Sediment and Trash** | High | High | High | High | High | High | High | High |
| **Pollutants that tend to associate with fine particles during treatment** | High | High | High | High | High | Medium | Medium | Low |
| **Pollutants that tend to be dissolved following treatment** | Medium | Low | Medium | High | Low | Low | Low | Low |

*See page 23 of the Regional Model SUSMP for a discussion of selection of treatment facilities in special situations.

*Notes: (1) Trash Racks & Hydrodynamic Devices shall not be used alone.*
*(2) The City shall reserve the right to determine if the selected treatment facility is appropriate, which may lead to selecting a higher efficiency treatment facility than originally selected by the Engineer.*

The Engineer shall ensure that the area (i.e. Parking Lots, etc.) that requires the treatment actually drain to the selected treatment facility. This shall be clearly shown on the construction plans and delineated as such in the drainage report. If this is not clearly shown, the City reserves the right to reject the submittal.

**Water Quantity (Detention Requirements):** The City requires that the 2-year and the 10-year storm event be used for calculating peak flows and the 100-year storm event be used to demonstrate flooding impacts. The 2-year and the 10-year storm event shall be used to design storm water detention facilities in accordance with the San Diego County Hydrology Manual, latest edition, Section 6. The 100-year shall be used to design a bypass system.

For guidance on preparing the Hydraulics and Hydrology Report (or Drainage Report), refer to the San Diego County Hydrology Manual, latest edition. The Engineer may consider using intensities from the latest edition of the City of El Cajon Improvement Standards, Figure 3.4-2 included below, for the design of the

drainage improvements (i.e. pipelines, catch basins, inlets, etc). Per the City's requirements, a Drainage Report is required and may be submitted separately or attached to the Conceptual Plan.

Fig. 3.4-2

AVERAGE INTENSITY-DURATION CURVES
El Cajon, California

## CHAPTER 3 – PREPARING YOUR PROJECT SUBMITTAL

The City requires that this entire packet be completed and submitted along with maps, calculations, proprietary products catalogue cut sheets, details, and other information as requested herein.

Complete and submit the "EXAMPLE PROJECT SUBMITTAL CHECKLIST" located in the Model SUSMP Chapter 3, Page 46. Attachments shall be listed in the Table of Contents.

**Report Exhibits:** In addition to the items requested in the "CHECKLIST", the City requires that the submittal shall include a location map of the project site, and inlets located a minimum of 200-feet beyond the project site. The maps shall be on a Standard D-size sheet and plotted using engineering scales only and not architectural scales.

**Report Narrative:** In addition to the items requested in the "CHECKLIST", the City requires a description of the existing topography, run-on and runoff issues, and unique conditions. Also, describe the details of the pre-construction condition and the post-construction condition.

Summarize the affects of the project on the pre-construction flows and specifically state if the flows were increased, decreased, fully mitigated, etc. and the impact the project may have on the downstream hydrology.

**Report Tables:** In addition to the items requested in the "CHECKLIST", the City requires completion of the tables included herein.

Refer to the Model SUSMP Chapter 4 for guidelines and available Low Impact Development (LID) treatment facilities. The City requires that the project consider at minimum the LID features listed below. Based on the project specifics, the City may require additional LID treatment facilities. The Engineer shall be responsible for selecting the most adequate treatment facility and for including the calculations necessary to justify the effectiveness of each facility. Follow the Model SUSMP Chapter 3, Step 3 to prepare your LID design.

Complete the following table:

| Low Impact Development (LID) | Applied | | | Narrative |
|---|---|---|---|---|
| | Yes | No | N/A | |
| Control Peak Runoff Rates | | | | |
| Minimize Disturbance to Natural Drainages and Waterways | | | | |

| Low Impact Development (LID) | Applied | | | Narrative |
|---|---|---|---|---|
| | Yes | No | N/A | |
| Conserve Natural Areas, Soils, and Existing Vegetation | | | | |
| Minimize and Disconnect Impervious Surfaces | | | | |
| Minimize Soil Compaction | | | | |
| Drain Runoff from Impervious Surfaces to Pervious Areas | | | | |
| Drain Rooftops to Landscaping | | | | |
| Maximize the Use of Pervious Pavement | | | | |
| [List any others] | | | | |

Refer to the Model SUSMP Chapter 3, Step 4 for guidance on specifying source control BMPs. The City requires that the project consider at minimum the source control measures listed below. Based on the project specifics, the City may required additional permanent source control measures. The Engineer shall be responsible for selecting the most adequate source control measures and for including the calculations necessary to justify the effectiveness of each BMP and ensuring all BMPs are shown on the construction plans.

Complete the following table:

| Potential Source of Runoff Pollutant | Permanent Source Control BMPs | Applied | | | Operational Source BMP Narrative |
|---|---|---|---|---|---|
| | | Yes | No | N/A | |
| | Include storm drain stenciling and signage | | | | |
| | Outdoor storage area shall be designed to contain pollutants | | | | |
| | Trash storage area shall be secured, have a grade break or berm, and have a roof covering (See City of El Cajon References; Attachment No. 2) | | | | |

| Potential Source of Runoff Pollutant | Permanent Source Control BMPs | Applied | | | Operational Source BMP Narrative |
|---|---|---|---|---|---|
| | | Yes | No | N/A | |
| | Use efficient irrigation systems and landscape design | | | | |
| | Hillside landscaping | | | | |

Refer to the Model SUSMP Chapter 2 for guidance on specifying treatment facilities. The Engineer shall be responsible for selecting the most adequate treatment facilities and for including the calculations necessary to justify the effectiveness of each facility and ensuring all facilities are shown on the construction plans. Note that the Engineer shall cross-reference Chapter 2 and ensure that the drainage area which was determined in Chapter 2 to contain potential pollutants of concern per Table 2-1 is indeed draining to the appropriate treatment facility. Sufficient grades shall be provided on the drainage plans to determine if the drainage area identified is actually draining to the proper treatment facility.

Complete the following table:

| Treatment Facilities | Applied | | | Narrative to describe the selected facilities, location, drainage plans where facility is shown |
|---|---|---|---|---|
| | Yes | No | N/A | |
| Bioretention Facilities (LID) | | | | |
| Settling Basins (Dry Ponds) | | | | |
| Wet Ponds and Constructed Wetlands | | | | |
| Infiltration Facilities or Practices (LID) | | | | |
| Media Filters | | | | |
| Higher-rate biofilters | | | | |
| Higher-rate media filters | | | | |
| Trash Racks & Hydrodynamic Devices | | | | |

Refer to the Model SUSMP Chapter 4, Table 4-1 for guidance on Integrated Management Practices (IMP). The Engineer shall be responsible for selecting the most adequate IMPs and for including the calculations necessary to justify the effectiveness of each IMP and ensuring all facilities are shown on the construction plans.

Complete the following table:

| **Runoff Management Facilities** | **Applied** | | | **Narrative to describe the selected facilities, location, construction drawing where facility is shown** |
|---|---|---|---|---|
| | Yes | No | N/A | |
| Vegetated Roof | | | | |
| Self-Retaining Areas | | | | |
| Pervious Pavement | | | | |
| Bioretention Facility | | | | |
| Flow-through Planter | | | | |
| Dry Well | | | | |
| Cistern with Bioretention | | | | |

Runoff management facilities shall be per the standards found in the California Stormwater Quality Association (CASQA) Handbook, State Department of Transportation (Caltrans) Stormwater Handbook, or other well-recognized and certifying entity. If the Engineer is proposing propriety BMPs, this will require a "Propriety Product Full Submittal" attachment, which shall contain the manufacturer's catalogue cut sheets, past project photos, calculations, etc. for such proprietary items. In addition, if the Engineer is recommending facilities where functionality may be questionable, such as pervious pavement or dry wells in Type C and/or D soil types, this will require a "Documentation to Demonstrate Past Project Success" attachment, which shall contain, a list of five (5) similar applications completed within the last five (5) years and including contact information for the Engineer of Record and property owner to demonstrate proper functionality.

**Report Calculations:** In addition to the items requested in the "CHECKLIST", the City requires that runoff coefficients reflect the true imperviousness of the project area and not the land use coefficients. Calculate Q's to the nearest 0.1

cfs. The report shall clearly describe the design parameters used in the calculations and how the parameters, design criteria, constants, and other values were selected, derived, or obtained. Calculations shall show complete formulas, constants, solutions and actual step-by-step calculations. Calculations shall be attached with the header on top stating either:

"TREATMENT CALCULATIONS: VOLUME-BASED
FACILITY [TYPE] FOR DMA [NUMBER]

Or,

"TREATMENT CALCULATIONS: FLOW-BASED
FACILITY [TYPE] FOR DMA [NUMBER]

Or,

"DETENTION CALCULATIONS: FLOW-CONTROL
FACILITY [TYPE] FOR DMA [NUMBER]

If the calculation worksheet is not clearly labeled, the City reserves the right to reject the submittal. Once calculations are completed, the Engineer shall summarize final values in the tables below.

**Water Quality (Treatment Facilities)**

There are two types of treatment facilities – volume-based and flow-based. The Engineer shall refer to page 40 of the Model SUSMP, Chapter 2, for sizing requirements of storm water treatment facilities. The correct method shall be applied to each type of treatment facility.

***Volume-based facilities*** are facilities whose functionality is based on treating a specific volume (V) of runoff produced by the 85$^{th}$ percentile 24-hour storm event as determined from the County of San Diego's 85$^{th}$ Percentile Precipitation Isopluvial Map. When designed properly, these facilities will infiltrate, filter, or treat the required ***volume*** of storm water within the required time period.

***Flow-based facilities*** are facilities whose functionality is based on treating a specific flow (Q) of runoff as determined by using the rational method. The Engineer shall refer to the "**Water Quantity**" paragraph located in Chapter 2 herein.

If the functionality of the facility selected depends on the total volume of water being treated, the Engineer shall complete the "V" column to demonstrate that the facility is adequate. If the functionality of the facility selected depends on the total flow of water being treated, the Engineer shall complete the "Q" column to demonstrate that the facility is adequate.

Treatment Calculation Summary:

| Node Number | Facility Type | $V_{Treatment}$ (cf) | $Q_{Treatment}$ (cfs) |
|---|---|---|---|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

**Water Quantity (Detention Facilities)**

Detention facilities are designed to control flow such that post-development flows do not exceed pre-development flows and thus minimize downstream erosion. The Engineer shall refer to Model SUSMP, Chapter 2 for calculation details. These types of facilities include various detention or flow-control facilities (i.e. self-retaining areas, pervious pavements, flow-through planters, bioretention, etc) that when designed properly will detain the required flow on-site.

Detention Calculations Summary:

| Project State | $Q_2$ (cfs) without BMPs | $Q_2$ (cfs) with BMPs | $Q_{10}$ (cfs) without BMPs | $Q_{10}$ (cfs) with BMPs | $Q_{100}$ (cfs) without BMPs | $Q_{100}$ (cfs) with BMPs |
|---|---|---|---|---|---|---|
| Pre-Development | | | | | | |
| Post-Development | | | | | | |

## CHAPTER 4 – LOW IMPACT DEVELOPMENT (LID) DESIGN GUIDE

If the Engineer is not familiar with LID or permanent BMPs design, the Engineer shall refer to the County of San Diego's LID Handbook available at http://www.sdcounty.ca.gov/dplu/procguid.html#hydro. The City strongly recommends that the Engineer meet with the Storm Water Department prior to selecting storm water treatment and flow-control facilities if they are not familiar with the design and functionality of LIDs or BMPs. The Engineer can set up a meeting by contacting the Storm Water Department at (619) 441-1653.

### Analyze Your Project for LID

The City requires that the analysis performed documenting the site layout and site design decisions be included under Chapter 3, Preparing Your Project Submittal along with any calculations, tables, and narratives.

The City strongly encourages the Engineer to consider the following opportunities for LID:

- ☐ Optimize the site plan by preserving natural drainage features and designing buildings and circulation to minimize the amount of roofs and paving.
- ☐ Conserve the natural areas such as existing trees, vegetation, and maximize sheet flow in order to mimic pre-development hydrologic cycle.
- ☐ Use pervious surfaces such as turf, gravel, or pervious pavement – vegetated roofs shall be considered. All drainage from these surfaces is considered to be "self-retained" when designed properly. No further management of runoff is necessary. ***NOTE: Perform adequate geotechnical evaluations when using pervious pavements in Soil Type C and D.***
- ☐ Disperse runoff from impervious surfaces on to adjacent pervious surfaces (e.g. direct a roof downspout to disperse runoff onto a lawn, planter, or other pervious surface).

### Alternatives to Integrated LID Design

The City requires that the Engineer consult with the Storm Water Department prior to proceeding with alternatives.

## CHAPTER 5 – OPERATION AND MAINTENANCE OF STORMWATER FACILITIES

This chapter shall include two documents – Storm Water Maintenance Plan and Storm Water Maintenance Agreement. The City requires that the Engineer follow "CC&Rs and Storm Water Maintenance Plan", Attachment No. 3 as listed under the City of El Cajon

### Storm Water Maintenance Plan (Plan)

The Plan shall be prepared to adequately provide long-term treatment of all post-development BMPs on the project. This plan shall include permeable pavements. For more information refer to the six-stage process outlined in the Model SUSMP Chapter 5

### Maintenance Agreement with Easement and Covenant (Agreement)

The Agreement shall be prepared in conjunction with the City's Planning Department and a draft may be attached herein until the Agreement is final.

The Agreement's shall include the following:

1. Commit the land containing the permanent BMPs to being used only for purposes of the BMPs (no alternations, reconstruction, etc)
2. Commit the landowner to maintain the facilities in accordance with the Plan (this obligation would be passed on to future purchasers or successors of the landowner, or operate indefinitely as a covenant)
3. Provide an easement giving the City the right to enter (and access adjacent properties as necessary) to maintain the BMPs to the satisfaction of the City

## PROJECT INTRODUCTION AND PROJECT BACKGROUND

The following shall be completed in its entirety prior to submittal. Refer to Chapter 4 for details on identifying constraints and opportunities for storm water control.

Project Name:

Project Location:

Project Description:

Existing Site Features and Conditions Including Topography:

Constraints and Opportunities for Storm Water Control:

## CHAPTER 1 – POLICIES AND PROCEDURES

This Storm Water Conceptual Plan (Conceptual Plan) shall be prepared following the completion of the "***Storm Water SUSMP Applicability Form for Development Projects***" that can be obtained from the Planning Department during the project development phase.

This Conceptual Plan shall be used in conjunction with the Countywide Model Standard Urban Stormwater Mitigation Plan (SUSMP), which can be obtained at http://www.projectcleanwater.org. The Model SUSMP has step-by-step instructions, which will guide you in preparing the Conceptual Plan. The Chapters used herein correspond to the Model SUSMP and contained herein are City of El Cajon's (City) specific project requirements.

If the project requires a Hydromodification Management Plan (HMP) as determined in the Model SUSMP Chapter 2, page 26, the Engineer shall refer the Draft Hydromodification Plan, which can be obtained at http://www.projectcleanwater.org.

## CONCEPTUAL PLAN PURPOSE

The purpose of this Conceptual Plan is to assist the Applicant in planning ahead for stormwater compliance. The most common (and costly) errors made by Applicants for development approvals with respect to stormwater quality compliance are:

1. Not planning for compliance early enough. The Applicant should think about strategies for stormwater quantity and quality compliance before completing a conceptual site design or sketching a layout of subdivision lots (Chapter 3).
2. Assuming proprietary stormwater treatment facilities will be adequate for compliance. Most are not adequate for anticipated pollutants (Chapter 2).
3. Not planning for periodic inspection and maintenance of treatment and flow-control facilities. Consider who will own and who will maintain the facilities in perpetuity and how they will obtain access, and identify which arrangements are acceptable to the City.
4. Not having the necessary experience or resources to prepare the calculations, reports, and implement innovative solutions to develop stormwater quality designs.

Managing runoff from a single development site may seem inconsequential, but by changing the way most sites are developed (or redeveloped), the City may be able to preserve and enhance existing stream ecosystems within our watershed.

## STORM WATER COMPLIANCE PROCESS

Typically, during the Planning Phase, the City of El Cajon determines if a development project is a **"Priority Development Project"** following the completion of the **"Storm Water SUSMP Applicability Form for Development Projects"**. A **"Storm Water Conceptual Plan"** is then developed and submitted for review and approval. Then, during final design (or preparation of construction plans), a Storm Water Mitigation Plan (SWMitP) is required in accordance with the Standard Urban Storm Water Mitigation Plan (SUSMP) ordinance of the City of El Cajon (Ord. 4908, Chapter 16.60) and San Diego

Regional Water Quality Control Board (RWQCB) Order No. R9-2007-0001, NPDES Permit No. CAS0108758.

This Conceptual Plan is intended to ensure that the site provides enough space for adequate sizing and placement of stormwater facilities. The Conceptual Plan is a living document subject to revisions as needed by the Engineer of Work and the City during the Planning Phase. During final design (or preparation of the construction plans), the Engineer is required to comply with the Storm Water requirements through the preparation and approval of a SWMitP.

The City's Conceptual Plan submittal requirements are described in Chapter 3. The Conceptual Plan shall be completed in its entirety prior to submittal to the City otherwise it will be returned without review. If you have any questions during the preparation of the Conceptual Plan contact the Storm Water Department at (619) 441-1653.

Attach a copy of the completed "***Storm Water SUSMP Applicability Form for Development Projects".***

## CHAPTER 2 – CONCEPTS AND CRITERIA

The City lies entirely within the San Diego River Watershed, Hydrologic Unit (HU) 907. The City recognizes the following drainage basins within the City, all of which eventually discharge into the San Diego River. The Engineer shall refer to the City of El Cajon Jurisdictional Urban Runoff Management Program (JURMP), which is available at http://www.ci.el-cajon.ca.us/dept/works/stormwater.html.

Check the corresponding sub-watershed(s) for the project

| | | | |
|---|---|---|---|
| ☐ Broadway Channel Basin | ☐ Washington Channel Basin | ☐ County Ditch Basin | ☐ Northern Forrester Creek Basin |
| ☐ Forrester Creek Basin | ☐ Fanita Basin | ☐ Fletcher Parkway Basin | ☐ Third Street Lateral |

The following are designated as impaired waters by the RWQCB and USEPA pursuant to the Clean Water Act Section 303(d): ***Forrester Creek and the San Diego River***. The City follows a conservative approach with regards to pollutants impairing water bodies.

**Water Quality (Treatment Requirements):** The City requires that all pollutants of concern or water quality effect as identified on the Clean Water Act (CWA) 303(d) list be applied for the entire length of the corresponding water body. Determine the Anticipated and Potential Pollutants of Concern per Table 2-1 attached in the next page and per the Model SUSMP, Chapter 2.

Circle each as applicable:

Table 2.1. Anticipated and Potential Pollutants Generated by Land Use Type.

| | General Pollutant Categories | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| Priority Project Categories | Sediments | Nutrients | Heavy Metals | Organic Compounds | Trash & Debris | Oxygen Demanding Substances | Oil & Grease | Bacteria & Viruses | Pesticides |

| Pes | | | | | | | | | |

*Sed = Sediment; Nut = Nutrients; HM = Heavy Metals; Org = Organics; T&D = Trash and Debris; ODS= Oxygen Demand Substances; O&G = Oils and Grease; B&V = Bacteria & Viruses; Pes = Pesticides;*

The City requires that the Pollutants of Concern be grouped to determine how easily various treatment processes remove them. Refer to Table 2-2 inserted below from the Model SUSMP, Chapter 2.

If a box above has two (2) checks, it is considered a Primary Pollutant; one (1) check is considered a Secondary Pollutant. Check each pollutant below according to either Primary or Secondary Pollutant.

TABLE 2-2. GROUPING OF POTENTIAL POLLUTANTS of Concern by fate during stormwater treatment

Check off the Pollutants in the table below accordingly:

| Primary | Secondary | Pollutant | Coarse Sediment and Trash | Pollutants that tend to associate with fine particles during treatment | Pollutants that tend to be dissolved following treatment |
|---|---|---|---|---|---|
| | | Sediment | X | X | |
| | | Nutrients | | X | X |
| | | Heavy Metals | | X | |
| | | Organic Compounds | | X | |
| | | Trash & Debris | X | | |
| | | Oxygen Demanding | | X | |
| | | Bacteria | | X | |
| | | Oil & Grease | | X | |
| | | Pesticides | | X | |

When selecting a treatment facility to remove a specific pollutant, the City requires that "Medium" or "High" Removal Efficiency BMPs treat all Primary Pollutants of concern as identified above. Refer to Table 2-3 inserted below from the Model SUSMP, Chapter 2, to determine an effective treatment facility.

Circle as applicable:

TABLE 2-3. GROUPS OF POLLUTANTS and relative effectiveness of treatment facilities

| **Pollutants of Concern** | Bioretention Facilities (LID) | Settling Basins (Dry Ponds) | Wet Ponds and Constructed Wetlands | Infiltration Facilities or Practices (LID) | Media Filters | Higher-rate biofilters* | Higher-rate media filters* | Trash Racks & Hydro -dynamic Devices (1) |
|---|---|---|---|---|---|---|---|---|
| **Coarse Sediment and Trash** | High | High | High | High | High | High | High | High |
| **Pollutants that tend to associate with fine particles during treatment** | High | High | High | High | High | Medium | Medium | Low |
| **Pollutants that tend to be dissolved following treatment** | Medium | Low | Medium | High | Low | Low | Low | Low |

*See page 23 of the Regional Model SUSMP for a discussion of selection of treatment facilities in special situations.

*Notes: (1) Trash Racks & Hydrodynamic Devices shall not be used alone.*
*(2) The City shall reserve the right to determine if the selected treatment facility is appropriate, which may lead to selecting a higher efficiency treatment facility that originally selected by the Engineer.*

The Engineer shall ensure that the area (i.e. parking lots, detached residential development, etc.) that requires the treatment actually drains to the selected treatment facility. This shall be clearly shown on the Conceptual Plan and delineated as such in the drainage report. If this is not clearly shown, the City reserves the right to reject the submittal.

**Water Quantity (Detention Requirements):** With the exception of projects that require a HMP, the City requires that the 2-year and the 10-year storm event be used for calculating peak flows and the 100-year storm event be used to demonstrate flooding impacts. The 2-year and the 10-year storm event shall be used to design stormwater detention facilities in accordance with the San Diego County Hydrology Manual, latest edition, Section 6. The 100-year shall be used to design a bypass system.

For guidance on preparing the Hydraulics and Hydrology Report (or Drainage Report), refer to the San Diego County Hydrology Manual, latest edition. The Engineer may consider using intensities from the latest edition of the City of El Cajon Improvement Standards, Figure 3.4-2 included in the next page for the

design of the drainage improvements (i.e. pipelines, catch basins, inlets, etc). Per the City's requirements, a Drainage Report is required and may be submitted separately or attached to the Conceptual Plan.

Fig. 3.4-2

AVERAGE INTENSITY-DURATION CURVES
El Cajon, California

## CHAPTER 3 – PREPARING YOUR PROJECT SUBMITTAL

The City requires that this entire packet be completed and submitted along with maps, calculations, details, and other information as requested herein. Attachments shall be listed in the Table of Contents.

**Storm Water Conceptual Plan:** The Plan shall be shown on a Standard D-size sheet and plotted using engineering scales only and not architectural scales. Preliminary size and location of proposed storm water BMPs must be shown on the Plan. This includes all LID, source control, and structural treatment BMPs. Detention facilities shall be shown, if required. It is important to show the intended location of the facilities even if the exact configuration and grading of the site may have minor modifications during final design. This will ensure that adequate provisions have been made to accommodate and locate the BMPs to achieve the required storm water management objectives.

The Engineer shall evaluate and determine the most appropriate BMPs or combination of BMPs to achieve applicable performance requirements. The selected BMPs need to achieve a “Medium” to “High” efficiency removal of the pollutants of concern for the proposed project. Once the most effective BMPs have been selected, the Plan can be developed and should include the following information:

1. Location of selected BMPs
2. Configuration of storm water conveyance system(s)
3. Proposed sizing (length, width and depth) of all BMPs
4. Location and dimensions of the Detention System, if required.
5. Proposed discharge structure details from the conveyance and storage systems, to the public storm drain system.

**Conceptual Plan Submittal Checklist:**

- ☐ Storm Water Conceptual Plan
- ☐ Storm Water Treatment Facilities Calculations
- ☐ Hydrologic and Hydraulic calculations, including sizing calculations for detention structures and other drainage facilities that will be used to manage storm water runoff
- ☐ A discussion describing the determination of potential and actual priority pollutants and pollutants of concern, receiving water quality and the consideration and selection of storm water BMPs, including LID, site design, source control and treatment control BMPs.

## CHAPTER 4 – LOW IMPACT DEVELOPMENT (LID) DESIGN GUIDE

If the Engineer is not familiar with LID or permanent BMPs design, the Engineer shall refer to Chapter 4 of the Countywide Model SUSMP. The City strongly recommends that the Engineer meet with the Storm Water Department prior to selecting stormwater treatment and flow-control facilities if they are not familiar with the design and functionality of LID or BMPs. The Engineer can set up a meeting by contacting the Storm Water Department at (619) 441-1653.

### Analyze Your Project for LID

The City strongly encourages the Applicant to consider the following opportunities for LID:

- ☐ Optimize the site plan by preserving natural drainage features and designing buildings and circulation to minimize the amount of roofs and paving.
- ☐ Conserve the natural areas such as existing trees, vegetation, and maximize sheet flow in order to mimic pre-development hydrologic cycle.
- ☐ Use pervious surfaces such as turf, gravel, or pervious pavement – or use surfaces that retain rainfall such as vegetated roofs shall be considered. All drainage from these surfaces is considered to be "self-retained" when designed properly. No further management of runoff is necessary. ***NOTE: Perform adequate geotechnical evaluations when using pervious pavements in Soil Type C and D.***
- ☐ Disperse runoff from impervious surfaces on to adjacent pervious surfaces (e.g. direct a roof downspout to disperse runoff onto a lawn, planter, or other pervious surface).

### Alternatives to Integrated LID Design

The City requires that the Engineer consult with the Storm Water Department prior to proceeding with alternatives.

## PROJECT INTRODUCTION AND PROJECT BACKGROUND

The following shall be completed in its entirety prior to submittal. Refer to Chapter 4 for details on identifying constraints and opportunities for storm water control.

Project Name:

Project Location:

Project Description:

Existing Site Features and Conditions Including Topography:

Constraints and Opportunities for Storm Water Control:

## CHAPTER 1 – POLICIES AND PROCEDURES

This Storm Water Mitigation Plan (SWMitP) shall be prepared in conjunction with the Countywide Model Standard Urban Stormwater Mitigation Plan (SUSMP), which can be obtained at http://www.projectcleanwater.org. The Model SUSMP has step-by-step instructions, which will guide you in preparing the SWMitP. The Chapters used herein correspond to the Model SUSMP and contained herein are City of El Cajon's (City) specific project requirements.

If the project requires a Hydromodification Management Plan (HMP) as determined in the Model SUSMP, the Engineer shall refer the Hydromodification Plan, which can be obtained at http://www.projectcleanwater.org.

The SWMitP shall be prepared under the direction of a Civil Engineer registered in the state of California. The Registered Civil Engineer shall attests to the technical information contained herein and the engineering data upon which recommendations, conclusions, and decisions are based.

### CERTIFICATION

I, _____, certify that the selection, sizing, and preliminary design of stormwater treatment and other control measures in this SWMitP meet the requirements of the Regional Water Quality Control Board Order R9-2007-0001 and subsequent amendments.

Signature: _____ Date: _____

*AFFIX WET STAMP HERE ➔*

### SWMitP PURPOSE

The purpose of this SWMitP is to finalize the list of anticipated pollutants from the project, finalize proposed Low Impact Development (LID) principles; select final source control and treatment control Best Management Practices (BMPs), finalize sizing calculations for storm water BMPs, and submit an appropriate maintenance plan. BMPs and LID features applied to all projects provide long-term solutions to water quality and help minimize downstream erosion. This SWMitP is intended to ensure the effectiveness of the selected LID's and BMPs proposed by checking that they have been sized properly, maintenance is feasible, and that the design is based on long-term fiscal planning. The SWMitP is a living document subject to revisions as needed by the Engineer of Work and the City.

## STORM WATER COMPLIANCE PROCESS

Typically, during the Planning Level or Programming Phase, the City of El Cajon determines if a development project is a **"Priority Development Project"** following the completion of the **"Storm Water SUSMP Intake Applicability Form for Development Projects"**. A **"Storm Water Conceptual Plan"** is then developed and submitted for review and approval. Then, during final design (or preparation of construction plans), a Storm Water Mitigation Plan (SWMitP) is required in accordance with the Standard Urban Storm Water Mitigation Plan (SUSMP) ordinance of the City of El Cajon (Ord. 4908, Chapter 16.60) and San Diego Regional Water Quality Control Board (RWQCB) Order No. R9-2007-0001, NPDES Permit No. CAS0108758.

The City's SWMitP submittal requirements are described in Chapter 3. The SWMitP shall be completed in it entirety prior to submittal to the City of El Cajon otherwise it will be returned without review. If you have any questions during the preparation of the SWMitP contact the Storm Water Department at (619) 441-1653.

Complete the following:

1. Is the project on previously undeveloped land (new development)?

   YES NO

2. Is the project adding or creating 5,000-sf, or more, of impervious surface (redevelopment)?

   YES NO

If you answered YES to either 1 or 2, complete Table 1-1, inserted below from the Model SUSMP, Chapter 1.

TABLE 1-1. Priority Development Projects.

**Is the project in any of these categories?**

| | | | |
|---|---|---|---|
| Yes ❑ | No ❑ | **A** | **Housing subdivisions of 10 or more dwelling units.** Examples: single-family homes, multi-family homes, condominiums, and apartments. |
| Yes ❑ | No ❑ | **B** | **Commercial—greater than one acre.** Any development other than heavy industry or residential. Examples: hospitals; laboratories and other medical facilities; educational institutions; recreational facilities; municipal facilities; commercial nurseries; multi-apartment buildings; car wash facilities; mini-malls and other business complexes; shopping malls; hotels; office buildings; public warehouses; automotive dealerships; airfields; and other light industrial facilities. |
| Yes ❑ | No ❑ | **C** | **Heavy industry—greater than one acre.** Examples: manufacturing plants, food processing plants, metal working facilities, printing plants, and fleet storage areas (bus, truck, etc.). |
| Yes ❑ | No ❑ | **D** | **Automotive repair shops.** A facility categorized in any one of Standard Industrial Classification (SIC) codes 5013, 5014, 5541, 7532-7534, or 7536-7539. |
| Yes ❑ | No ❑ | **E** | **Restaurants.** Any facility that sells prepared foods and drinks for consumption, including stationary lunch counters and refreshment stands selling prepared foods and drinks for immediate consumption (SIC code 5812), where the land area for development is greater than 5,000 square feet. Restaurants where land development is less than 5,000 square feet shall meet all SUSMP requirements except for structural treatment BMP and numeric sizing criteria requirements and hydromodification requirements. |
| Yes ❑ | No ❑ | **F** | **Hillside development greater than 5,000 square feet.** Any development that creates 5,000 square feet of impervious surface and is located in an area with known erosive soil conditions, where the development will grade on any natural slope that is twenty-five percent or greater. |
| Yes ❑ | No ❑ | **G** | **Environmentally Sensitive Areas (ESAs).** All development located within or directly adjacent to or discharging directly to an ESA (where discharges from the development or redevelopment will enter receiving waters within the ESA), which either creates 2,500 square feet of impervious surface on a proposed project site or increases the area of imperviousness of a proposed project site to 10% or more of its naturally occurring condition. "Directly adjacent" means situated within 200 feet of the ESA. "Discharging directly to" means outflow from a drainage conveyance system that is composed entirely of flows from the subject development or redevelopment site, and not commingled with flows from adjacent lands. |
| Yes ❑ | No ❑ | **H** | **Parking lots 5,000 square feet or more** or with 15 or more parking spaces and potentially exposed to urban runoff. |
| Yes ❑ | No ❑ | **I** | **Street, roads, highways, and freeways.** Any paved surface that is 5,000 square feet or greater used for the transportation of automobiles, trucks, motorcycles, and other vehicles. |
| Yes ❑ | No ❑ | **J** | **Retail Gasoline Outlets (RGOs)** that are: (a) 5,000 square feet or more or (b) a projected Average Daily Traffic (ADT) of 100 or more vehicles per day. |

If you answered YES to any of the Items in Table 1-1, the project is a "Priority Development Project". If the Engineer determines that the project is ***NOT*** a "Priority Development Project" call the Storm Water Department at (619) 441-1653 to confirm any SUSMP requirements for the project. If the Engineer determines that the project ***IS*** a "Priority Development Project" continue to the following Chapters.

1. Is the project a "Priority Development Project"? YES NO
2. If you answered yes, list all applicable categories per Table 1-1 → _____

To determine if the project is ***EXEMPT*** from preparing a Hydromodification Management Plan (HMP), refer to the Model SUSMP Chapter 1. If the Engineer determines that a HMP is required, the City may consider granting an exemption. To make this determination, the Engineer may conduct an independent geomorphic study to determine the project's full hydromodification impact. The study must incorporate sediment transport modeling across the range of geomorphically-significant flows and demonstrate to the City's satisfaction that the project flows and sediment reductions will not detrimentally affect the receiving water to qualify for the exemption. If the project is ***NOT EXEMPT***, follow the instructions in the HMP, which can be obtained at http://www.projectcleanwater.org .

1. Does the project require a HMP? YES NO

## CHAPTER 2 – CONCEPTS AND CRITERIA

The City lies entirely within the San Diego River Watershed, Hydrologic Unit (HU) 907. The City recognizes the following drainage basins within the City, all of which eventually discharge into the San Diego River. The Engineer shall refer to the City of El Cajon Jurisdictional Urban Runoff Management Program (JURMP), which is available at http://www.ci.el-cajon.ca.us/dept/works/stormwater.html.

Check the corresponding watershed(s) for the project

| | | | |
|---|---|---|---|
| ☐ Broadway Channel Basin | ☐ Washington Channel Basin | ☐ County Ditch Basin | ☐ Northern Forrester Creek Basin |
| ☐ Forrester Creek Basin | ☐ Fanita Basin | ☐ Fletcher Parkway Basin | ☐ Third Street Lateral |

The following are designated as impaired waters by the RWQCB and USEPA pursuant to the Clean Water Act section 303(d): ***Forrester Creek and San Diego River***. The City follows a conservative approach with regards to pollutants impairing water bodies.

**Water Quality (Treatment Requirements):** The City Municipal Code requires that all pollutants of concern as identified on the CWA 303(d) list be applied for the entire length of the corresponding water body. Determine the Anticipated and Potential Pollutants of Concern from Table 2-1 in the following page per Chapter 2 of the Model SUSMP.

Circle each as applicable:

TABLE 2-1. ANTICIPATED AND POTENTIAL Pollutants Generated by Land Use Type.

| | General Pollutant Categories | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| Priority Project Categories | Sediment | Nutrients | Heavy Metals | Organic Compounds | Trash & Debris | Oxygen Demanding Substances | Oil & Grease | Bacteria & Viruses | Pesticides |
| Detached Residential Development | X | X | | | X | X | X | X | X |
| Attached Residential Development | X | X | | | X | P(1) | P(2) | P | X |
| Commercial Development >one acre | P(1) | P(1) | X | P(2) | X | P(5) | X | P(3) | P(5) |
| Heavy Industry | X | | X | X | X | X | X | | |
| Automotive Repair Shops | | | X | X(4)(5) | X | | X | | |
| Restaurants | | | | | X | X | X | X | P(1) |
| Hillside Development >5,000 ft2 | X | X | | | X | X | X | | X |
| Parking Lots | P(1) | P(1) | X | | X | P(1) | X | | P(1) |
| Retail Gasoline Outlets | | | X | X | X | X | X | | |
| Streets, Highways & Freeways | X | P(1) | X | X(4) | X | P(5) | X | X | P(1) |

X = anticipated
P = potential
(1) A potential pollutant if landscaping exists on-site.
(2) A potential pollutant if the project includes uncovered parking areas.
(3) A potential pollutant if land use involves food or animal waste products.
(4) Including petroleum hydrocarbons.
(5) Including solvents.

Check each half of a box as applicable:

| Pollutants associated with 303(d) Listed ImpairedWaters To Which the Project Drains | Project Specific Anticipated and Potential Pollutants of Concern: Sed | Nut | HM | Org | T&D | ODS | O&G | B&V | Pes |
|---|---|---|---|---|---|---|---|---|---|
| Sed | | | | | | | | | |
| Nut | | X | | | | | | | |
| HM | | | | | | | | | |
| Org | | | | | | | | | |
| T&D | | | | | | | | | |
| ODS | | | | | | X | | | |
| O&G | | | | | | | | | |
| B&V | | | | | | | | X | |
| Pes | | | | | | | | | |

*Sed = Sediment; Nut = Nutrients; HM = Heavy Metals; Org = Organics; T&D = Trash and Debris; ODS= Oxygen Demand Substances; O&G = Oils and Grease; B&V = Bacteria & Viruses; Pes = Pesticides; Oth = Other (i.e. Pharmaceuticals, etc.)*

If a box above has two (2) checks, it is considered a Primary Pollutant; one (1) check is considered a Secondary Pollutant. Check each pollutant below according to either Primary or Secondary Pollutant.

The City requires that the Pollutants of Concern be grouped to determine how easily various treatment processes remove them. Refer to Table 2-2 below, inserted from Chapter 2 of the Model SUSMP.

TABLE 2-2. GROUPING OF POTENTIAL POLLUTANTS of Concern by fate during stormwater treatment

Check off the Pollutants in the table below accordingly:

| Primary | Secondary | Pollutant | Coarse Sediment and Trash | Pollutants that tend to associate with fine particles during treatment | Pollutants that tend to be dissolved following treatment |
|---|---|---|---|---|---|
| | | Sediment | X | X | |
| | | Nutrients | | X | X |
| | | Heavy Metals | | X | |
| | | Organic Compounds | | X | |
| | | Trash & Debris | X | | |
| | | Oxygen Demanding | | X | |
| | | Bacteria | | X | |
| | | Oil & Grease | | X | |
| | | Pesticides | | X | |

When selecting a treatment facility to remove a specific pollutant, the City requires that "Medium" or "High" Removal Efficiency BMPs treat all Primary Pollutants of concern as identified above. Refer to Table 2-3 inserted below from the Model SUSMP, Chapter 2 to determine an effective treatment facility.

Circle as applicable:

TABLE 2-3. GROUPS OF POLLUTANTS and relative effectiveness of treatment facilities

| **Pollutants of Concern** | Bioretention Facilities (LID) | Settling Basins (Dry Ponds) | Wet Ponds and Constructed Wetlands | Infiltration Facilities or Practices (LID) | Media Filters | Higher-rate biofilters* | Higher-rate media filters* | Trash Racks & Hydro -dynamic Devices (1) |
|---|---|---|---|---|---|---|---|---|
| **Coarse Sediment and Trash** | High | High | High | High | High | High | High | High |
| **Pollutants that tend to associate with fine particles during treatment** | High | High | High | High | High | Medium | Medium | Low |
| **Pollutants that tend to be dissolved following treatment** | Medium | Low | Medium | High | Low | Low | Low | Low |

*See page 23 of the Regional Model SUSMP for a discussion of selection of treatment facilities in special situations.

*Notes: (1) Trash Racks & Hydrodynamic Devices shall not be used alone.*
*(2) The City shall reserve the right to determine if the selected treatment facility is appropriate, which may lead to selecting a higher efficiency treatment facility than originally selected by the Engineer.*

The Engineer shall ensure that the area (i.e. Parking Lots, etc.) that requires the treatment actually drain to the selected treatment facility. This shall be clearly shown on the construction plans and delineated as such in the drainage report. If this is not clearly shown, the City reserves the right to reject the submittal.

**Water Quantity (Detention Requirements):** The City requires that the 2-year and the 10-year storm event be used for calculating peak flows and the 100-year storm event be used to demonstrate flooding impacts. The 2-year and the 10-year storm event shall be used to design storm water detention facilities in accordance with the San Diego County Hydrology Manual, latest edition, Section 6. The 100-year shall be used to design a bypass system.

For guidance on preparing the Hydraulics and Hydrology Report (or Drainage Report), refer to the San Diego County Hydrology Manual, latest edition. The Engineer may consider using intensities from the latest edition of the City of El Cajon Improvement Standards, Figure 3.4-2 included below, for the design of the

drainage improvements (i.e. pipelines, catch basins, inlets, etc). Per the City's requirements, a Drainage Report is required and may be submitted separately or attached to the Conceptual Plan.

Fig. 3.4-2

AVERAGE INTENSITY-DURATION CURVES
El Cajon, California

## CHAPTER 3 – PREPARING YOUR PROJECT SUBMITTAL

The City requires that this entire packet be completed and submitted along with maps, calculations, proprietary products catalogue cut sheets, details, and other information as requested herein.

Complete and submit the "EXAMPLE PROJECT SUBMITTAL CHECKLIST" located in the Model SUSMP Chapter 3, Page 46. Attachments shall be listed in the Table of Contents.

**Report Exhibits:** In addition to the items requested in the "CHECKLIST", the City requires that the submittal shall include a location map of the project site, and inlets located a minimum of 200-feet beyond the project site. The maps shall be on a Standard D-size sheet and plotted using engineering scales only and not architectural scales.

**Report Narrative:** In addition to the items requested in the "CHECKLIST", the City requires a description of the existing topography, run-on and runoff issues, and unique conditions. Also, describe the details of the pre-construction condition and the post-construction condition.

Summarize the affects of the project on the pre-construction flows and specifically state if the flows were increased, decreased, fully mitigated, etc. and the impact the project may have on the downstream hydrology.

**Report Tables:** In addition to the items requested in the "CHECKLIST", the City requires completion of the tables included herein.

Refer to the Model SUSMP Chapter 4 for guidelines and available Low Impact Development (LID) treatment facilities. The City requires that the project consider at minimum the LID features listed below. Based on the project specifics, the City may require additional LID treatment facilities. The Engineer shall be responsible for selecting the most adequate treatment facility and for including the calculations necessary to justify the effectiveness of each facility. Follow the Model SUSMP Chapter 3, Step 3 to prepare your LID design.

Complete the following table:

| Low Impact Development (LID) | Applied | | | Narrative |
|---|---|---|---|---|
| | Yes | No | N/A | |
| Control Peak Runoff Rates | | | | |
| Minimize Disturbance to Natural Drainages and Waterways | | | | |

| Low Impact Development (LID) | Applied | | | Narrative |
|---|---|---|---|---|
| | Yes | No | N/A | |
| Conserve Natural Areas, Soils, and Existing Vegetation | | | | |
| Minimize and Disconnect Impervious Surfaces | | | | |
| Minimize Soil Compaction | | | | |
| Drain Runoff from Impervious Surfaces to Pervious Areas | | | | |
| Drain Rooftops to Landscaping | | | | |
| Maximize the Use of Pervious Pavement | | | | |
| [List any others] | | | | |

Refer to the Model SUSMP Chapter 3, Step 4 for guidance on specifying source control BMPs. The City requires that the project consider at minimum the source control measures listed below. Based on the project specifics, the City may required additional permanent source control measures. The Engineer shall be responsible for selecting the most adequate source control measures and for including the calculations necessary to justify the effectiveness of each BMP and ensuring all BMPs are shown on the construction plans.

Complete the following table:

| Potential Source of Runoff Pollutant | Permanent Source Control BMPs | Applied | | | Operational Source BMP Narrative |
|---|---|---|---|---|---|
| | | Yes | No | N/A | |
| | Include storm drain stenciling and signage | | | | |
| | Outdoor storage area shall be designed to contain pollutants | | | | |
| | Trash storage area shall be secured, have a grade break or berm, and have a roof covering (See City of El Cajon References; Attachment No. 2) | | | | |

| Potential Source of Runoff Pollutant | Permanent Source Control BMPs | Applied | | | Operational Source BMP Narrative |
|---|---|---|---|---|---|
| | | Yes | No | N/A | |
| | Use efficient irrigation systems and landscape design | | | | |
| | Hillside landscaping | | | | |

Refer to the Model SUSMP Chapter 2 for guidance on specifying treatment facilities. The Engineer shall be responsible for selecting the most adequate treatment facilities and for including the calculations necessary to justify the effectiveness of each facility and ensuring all facilities are shown on the construction plans. Note that the Engineer shall cross-reference Chapter 2 and ensure that the drainage area which was determined in Chapter 2 to contain potential pollutants of concern per Table 2-1 is indeed draining to the appropriate treatment facility. Sufficient grades shall be provided on the drainage plans to determine if the drainage area identified is actually draining to the proper treatment facility.

Complete the following table:

| Treatment Facilities | Applied | | | Narrative to describe the selected facilities, location, drainage plans where facility is shown |
|---|---|---|---|---|
| | Yes | No | N/A | |
| Bioretention Facilities (LID) | | | | |
| Settling Basins (Dry Ponds) | | | | |
| Wet Ponds and Constructed Wetlands | | | | |
| Infiltration Facilities or Practices (LID) | | | | |
| Media Filters | | | | |
| Higher-rate biofilters | | | | |
| Higher-rate media filters | | | | |
| Trash Racks & Hydrodynamic Devices | | | | |

Refer to the Model SUSMP Chapter 4, Table 4-1 for guidance on Integrated Management Practices (IMP). The Engineer shall be responsible for selecting the most adequate IMPs and for including the calculations necessary to justify the effectiveness of each IMP and ensuring all facilities are shown on the construction plans.

Complete the following table:

| **Runoff Management Facilities** | **Applied** | | | **Narrative to describe the selected facilities, location, construction drawing where facility is shown** |
|---|---|---|---|---|
| | Yes | No | N/A | |
| Vegetated Roof | | | | |
| Self-Retaining Areas | | | | |
| Pervious Pavement | | | | |
| Bioretention Facility | | | | |
| Flow-through Planter | | | | |
| Dry Well | | | | |
| Cistern with Bioretention | | | | |

Runoff management facilities shall be per the standards found in the California Stormwater Quality Association (CASQA) Handbook, State Department of Transportation (Caltrans) Stormwater Handbook, or other well-recognized and certifying entity. If the Engineer is proposing propriety BMPs, this will require a "Propriety Product Full Submittal" attachment, which shall contain the manufacturer's catalogue cut sheets, past project photos, calculations, etc. for such proprietary items. In addition, if the Engineer is recommending facilities where functionality may be questionable, such as pervious pavement or dry wells in Type C and/or D soil types, this will require a "Documentation to Demonstrate Past Project Success" attachment, which shall contain, a list of five (5) similar applications completed within the last five (5) years and including contact information for the Engineer of Record and property owner to demonstrate proper functionality.

**Report Calculations:** In addition to the items requested in the "CHECKLIST", the City requires that runoff coefficients reflect the true imperviousness of the project area and not the land use coefficients. Calculate Q's to the nearest 0.1

cfs. The report shall clearly describe the design parameters used in the calculations and how the parameters, design criteria, constants, and other values were selected, derived, or obtained. Calculations shall show complete formulas, constants, solutions and actual step-by-step calculations. Calculations shall be attached with the header on top stating either:

"TREATMENT CALCULATIONS: VOLUME-BASED
FACILITY [TYPE] FOR DMA [NUMBER]

Or,

"TREATMENT CALCULATIONS: FLOW-BASED
FACILITY [TYPE] FOR DMA [NUMBER]

Or,

"DETENTION CALCULATIONS: FLOW-CONTROL
FACILITY [TYPE] FOR DMA [NUMBER]

If the calculation worksheet is not clearly labeled, the City reserves the right to reject the submittal. Once calculations are completed, the Engineer shall summarize final values in the tables below.

**Water Quality (Treatment Facilities)**

There are two types of treatment facilities – volume-based and flow-based. The Engineer shall refer to page 40 of the Model SUSMP, Chapter 2, for sizing requirements of storm water treatment facilities. The correct method shall be applied to each type of treatment facility.

***Volume-based facilities*** are facilities whose functionality is based on treating a specific volume (V) of runoff produced by the 85$^{th}$ percentile 24-hour storm event as determined from the County of San Diego's 85$^{th}$ Percentile Precipitation Isopluvial Map. When designed properly, these facilities will infiltrate, filter, or treat the required ***volume*** of storm water within the required time period.

***Flow-based facilities*** are facilities whose functionality is based on treating a specific flow (Q) of runoff as determined by using the rational method. The Engineer shall refer to the "**Water Quantity**" paragraph located in Chapter 2 herein.

If the functionality of the facility selected depends on the total volume of water being treated, the Engineer shall complete the "V" column to demonstrate that the facility is adequate. If the functionality of the facility selected depends on the total flow of water being treated, the Engineer shall complete the "Q" column to demonstrate that the facility is adequate.

Treatment Calculation Summary:

| Node Number | Facility Type | $V_{Treatment}$ (cf) | $Q_{Treatment}$ (cfs) |
|---|---|---|---|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

**Water Quantity (Detention Facilities)**

Detention facilities are designed to control flow such that post-development flows do not exceed pre-development flows and thus minimize downstream erosion. The Engineer shall refer to Model SUSMP, Chapter 2 for calculation details. These types of facilities include various detention or flow-control facilities (i.e. self-retaining areas, pervious pavements, flow-through planters, bioretention, etc) that when designed properly will detain the required flow on-site.

Detention Calculations Summary:

| Project State | $Q_2$ (cfs) without BMPs | $Q_2$ (cfs) with BMPs | $Q_{10}$ (cfs) without BMPs | $Q_{10}$ (cfs) with BMPs | $Q_{100}$ (cfs) without BMPs | $Q_{100}$ (cfs) with BMPs |
|---|---|---|---|---|---|---|
| Pre-Development | | | | | | |
| Post-Development | | | | | | |

## CHAPTER 4 – LOW IMPACT DEVELOPMENT (LID) DESIGN GUIDE

If the Engineer is not familiar with LID or permanent BMPs design, the Engineer shall refer to the County of San Diego's LID Handbook available at http://www.sdcounty.ca.gov/dplu/procguid.html#hydro. The City strongly recommends that the Engineer meet with the Storm Water Department prior to selecting storm water treatment and flow-control facilities if they are not familiar with the design and functionality of LIDs or BMPs. The Engineer can set up a meeting by contacting the Storm Water Department at (619) 441-1653.

### Analyze Your Project for LID

The City requires that the analysis performed documenting the site layout and site design decisions be included under Chapter 3, Preparing Your Project Submittal along with any calculations, tables, and narratives.

The City strongly encourages the Engineer to consider the following opportunities for LID:

- ☐ Optimize the site plan by preserving natural drainage features and designing buildings and circulation to minimize the amount of roofs and paving.
- ☐ Conserve the natural areas such as existing trees, vegetation, and maximize sheet flow in order to mimic pre-development hydrologic cycle.
- ☐ Use pervious surfaces such as turf, gravel, or pervious pavement – vegetated roofs shall be considered. All drainage from these surfaces is considered to be "self-retained" when designed properly. No further management of runoff is necessary. ***NOTE: Perform adequate geotechnical evaluations when using pervious pavements in Soil Type C and D.***
- ☐ Disperse runoff from impervious surfaces on to adjacent pervious surfaces (e.g. direct a roof downspout to disperse runoff onto a lawn, planter, or other pervious surface).

### Alternatives to Integrated LID Design

The City requires that the Engineer consult with the Storm Water Department prior to proceeding with alternatives.

## CHAPTER 5 – OPERATION AND MAINTENANCE OF STORMWATER FACILITIES

This chapter shall include two documents – Storm Water Maintenance Plan and Storm Water Maintenance Agreement. The City requires that the Engineer follow "CC&Rs and Storm Water Maintenance Plan", Attachment No. 3 as listed under the City of El Cajon

### Storm Water Maintenance Plan (Plan)

The Plan shall be prepared to adequately provide long-term treatment of all post-development BMPs on the project. This plan shall include permeable pavements. For more information refer to the six-stage process outlined in the Model SUSMP Chapter 5

### Maintenance Agreement with Easement and Covenant (Agreement)

The Agreement shall be prepared in conjunction with the City's Planning Department and a draft may be attached herein until the Agreement is final.

The Agreement's shall include the following:

1. Commit the land containing the permanent BMPs to being used only for purposes of the BMPs (no alternations, reconstruction, etc)
2. Commit the landowner to maintain the facilities in accordance with the Plan (this obligation would be passed on to future purchasers or successors of the landowner, or operate indefinitely as a covenant)
3. Provide an easement giving the City the right to enter (and access adjacent properties as necessary) to maintain the BMPs to the satisfaction of the City

## NEW SUSMP PROJECTS FOR 2011-2012

RE: Treatment Control BMP Maintenance Verification Form

Dear Property Owner(s):

According to City records, you are responsible for at least the **«Treatment_Control_BMPs_Applied»**, which «Letter_Language», located at «Street_Number» «Direction» «Street_Name» «Street_Surname». Annual verification of effective operation and maintenance for all Treatment Control BMPs located at «Street_Number» «Direction» «Street_Name» «Street_Surname» was a condition of the permit to develop the site. Treatment Control BMPs are required to be maintained by the appropriate party as stated in the site's Storm Water Mitigation Plan and/or Operation and Maintenance Agreement. You are required by City of El Cajon Municipal Code 16.60.400 to provide proof that the Treatment Control BMP is in place and functioning properly. You are also required to verify the maintenance of the Treatment Control BMPs onsite by mailing the completed form back to the City no later than **July 1, 2011**. Failure to do so may result in a citation, which could carry monetary penalties. Please update any incorrect information shown hereon.

The City is required to inspect certain sites with known Treatment Control BMPs annually as part of the maintenance verification process to comply with California Regional Water Quality Control Board, San Diego Region, Order No. R9-2007-0001. The inspections are scheduled to take place before July 1, 2010.

Please visit the City's website at http://www.ci.el-cajon.ca.us/dept/works/stormwater.html or contact the Public Works Department at 619-441-1653 for more information regarding the City's Storm Water Protection Program.

Please complete the table on the following page regarding the maintenance of all Treatment Control BMPs that you are responsible for at your site. Please be sure to list any BMPs present on your property that were not mentioned above to ensure that our records are complete. Once the form has been completed, a signed copy of the page must be submitted to the City of El Cajon Public Works Storm Water Department. An envelope has been included for your convenience. Thank you for your cooperation.

Sincerely,

_____

Jaime Campos
Storm Water Program Manager
Associate Civil Engineer

# ENVIRONMENTAL INFORMATION FORM

Part I - Initial Study
Negative Declaration $4,650.00 + $250.00 for each report
Mitigated Negative Declaration $4,650.00 + $250.00 for each report

**The purpose of this form is to inform the City of the basic components of the proposed project so that the City may review the project pursuant to City Policies, Ordinances, and Guidelines; the California Environmental Quality Act; and the City's Rules and Procedures to Implement CEQA. It is important that the information requested in this application be provided in full.**

**The Initial Study is a requirement of the California Environmental Quality Act (CEQA) Guidelines and is used to determine whether further review of environmental factors of the project will be necessary, and, if so, whether a Negative Declaration (ND), Mitigated Negative Declaration (MND), or Environmental Impact Report (EIR) will be the most appropriate document. Accuracy and completeness in the preparation of this study is essential. Incomplete materials will only result in a delay for the applicant, as the study will be rejected until properly completed.**

**INSTRUCTIONS: Please complete the following statement by filling in the designated blank spaces. Responses should be printed or typed so as to be legible. All appropriate spaces must be filled in and the required maps, photos, and plans submitted with this form. Additional information may be attached. The applicant should provide as much information as possible in this submittal to allow reviewers to have a thorough understanding of the project. Please submit this form and all support documents with the appropriate filing fee to the Community Development Department to begin the environmental review process. All maps/site plans shall be folded to 8½" by 11."**

A. General Information

1. Name, address, telephone number, fax number and email of person to be contacted concerning this project:

   - Name
   - Address
   - Phone
   - Fax
   - Email

2. Name, address of legal property owner as shown on tax statement:

   - Name
   - Address

3. Address of project and/or description of location:

4. Assessor's Parcel Number(s) of project site:

5. List each project application which accompanies this form:

6. Have any preliminary documents been prepared for this projects (e.g. soil report or traffic impact analysis)? If yes, please identify name and date prepared:

7. List and describe any other related permits and other public approvals required for this project, including those required by city, regional, state or federal agencies (i.e., Corps of Engineers, CalTrans, Air Pollution Control District or LAFCO):

8. Existing zoning of project site:

9. Existing General Plan Designation:

10. Fully describe the nature and purpose of the proposed project including the ultimate use of the property:

B. Project Description

1. Site size in acres or square footage:

2. Highest and lowest elevations on site (mean sea level):

3. Number of floors of proposed construction:

4. Number of proposed off-street parking spaces provided:

5. Anticipated project schedule (timeline):

6. Is this project dependent on an existing or future project? If yes, please explain:

7. Anticipated future phases:

8. If residential, include the number of units, unit sizes, range of sale prices or rents, and gross density (units) acre:

9. If commercial and/or office, indicate the types, square footage of each type (i.e., office, sales area, restaurant), whether neighborhood, city or regionally oriented, and total square footage of building area:

10. If industrial, indicate type, estimated employment per shift, loading facilities, square footage of office area and total square footage of building area:

11. If institutional, indicate the major function, estimated employment per shift, estimated occupancy, and total square footage of building:

C. Existing Conditions

1. Number and species of existing trees 6 inches or larger in diameter:

2. Number, size, and species of trees to be removed:

3. Describe any power lines, water, sewer or storm drain mains, pipelines or other transmission lines which are located on or adjacent to the property:

4. Name of creeks and natural or man-made drainage channels through or adjacent to the property:

5. Primary vehicular access to property comes from which street(s):

6. Are any easements known to traverse the site? If yes, explain the type and purpose:

7. Provide details on existing uses of the site. Are there existing structures on the site? If yes, describe use and whether they will be demolished or relocated; if residential, give the number of current occupants:

8. Indicate service provider for:

    a. Water

    b. Sewer

    c. Fire protection

    d. Police protection

9. Is any portion of the site within the 100-year/500-year floodplain?

10. Is the site within the Gillespie Field Airport Land Use plan?

11. If yes, do any airport restrictions affect the proposal? *(May have to consult with Gillespie Airport personnel)*

12. Is the site located within two miles of Gillespie Field general aviation airport?

13. Is the site located within close proximity (200 feet) of a freeway?

14. Is the site listed on California's Environmental Protection Agency Hazardous Site List?

D. Environmental Analysis

Are the following items applicable to the project or its effects? Discuss all items checked "yes" or "maybe" on next page or attach additional sheets as necessary.

| YES | MAYBE | NO | |
|---|---|---|---|
| ☐ | ☐ | ☐ | a. Change in existing features of any streams, lakes or hills, or substantial alteration of ground contours. |
| ☐ | ☐ | ☐ | b. Change in scenic views or vistas from existing residential areas or public lands or roads. |
| ☐ | ☐ | ☐ | c. Change in character of general area of project. |
| ☐ | ☐ | ☐ | d. Produce or involve large amounts of solid waste or litter. |
| ☐ | ☐ | ☐ | e. Disrupt or adversely affect an historic, cultural or archaeological site. |
| ☐ | ☐ | ☐ | f. Change in dust, ash, smoke, fumes or odors in vicinity. |
| ☐ | ☐ | ☐ | g. Change in stream, surface water, wetlands or ground water quality or quantity, or alteration of existing drainage patterns. |
| ☐ | ☐ | ☐ | h. Increase in impervious surfaces and associated increase runoff. |
| ☐ | ☐ | ☐ | i. Alteration in existing drainage patterns, runoff flow rates or volumes. |
| ☐ | ☐ | ☐ | j. Increased erosion. |
| ☐ | ☐ | ☐ | k. Use or disposal of heavy metals, pathogens, |

petroleum derivatives, synthetic organics, sediment, nutrients, or oxygen demanding substances.

☐ ☐ ☐ l. Potential to impact already sensitive conditions or environmentally sensitive areas.

☐ ☐ ☐ m. Substantial change in existing noise or vibration levels in the vicinity.

☐ ☐ ☐ n. Site on filled land or on slope of 10 percent or more.

☐ ☐ ☐ o. Use or disposal of potentially hazardous material such as toxic substances, flammables or explosives.

☐ ☐ ☐ p. Substantial change in demand for municipal services (police, fire, water, sewer, etc.).

☐ ☐ ☐ q. Substantial increase in fuel or energy consumption (electricity, oil, natural gas, etc.).

☐ ☐ ☐ r. Relationship to a larger project or series of projects.

☐ ☐ ☐ s. Potential impact to aquatic, wetland or riparian habitiat.

CERTIFICATION: I hereby certify that the statements furnished above and in the attached exhibits present the data and information required for this initial evaluation to the best of my ability, and that the facts, statements, and information presented are true and correct to the best of my knowledge and belief.

Date:_____ Signature:_____

Section 711.4 of the Fish and Game Code authorizes the County Clerk to collect a filing fee of up to $2,768.25 for the review of environmental documents by the State Department of Fish and Game. Should the State Department of Fish and Game decide to review the environmental documents associated with this project, the project applicant will become liable for paying this fee.

The applicant certifies by his/her signature below that he/she has been informed of this information and is aware that a fee may be required by the County Clerk with the filing of the environmental documents associated with his/her project.

Failure to pay the required fee in a timely manner may result in the delay in the start of the project.

_____
_____
_____

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED:

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

| | | |
|---|---|---|
| ☐ Aesthetics | ☐ Agriculture Resources | ☐ Air Quality |
| ☐ Biological Resources | ☐ Cultural Resources | ☐ Geology / Soils |
| ☐ Greenhouse Gas Emissions | ☐ Hazards & Hazardous Materials | ☐ Hydrology / Water Quality |
| ☐ Land Use / Planning | ☐ Mineral Resources | ☐ Noise |
| ☐ Population / Housing | ☐ Public Services | ☐ Recreation |
| ☐ Transportation / Traffic | ☐ Utilities / Service Systems | ☐ Mandatory Findings of Significance |

DETERMINATION (To be completed by the Lead Agency):

On the basis of this initial evaluation:

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☐ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

| | |
|---|---|
| Signature | Date |
| Printed Name | For |

EVALUATION OF ENVIRONMENTAL IMPACTS:

1) A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g. the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g. the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).

2) All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.

3) Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect is significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.

4) "Negative Declaration: Less Than Significant With Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less than Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level (mitigation measures from Section XVII, "Earlier Analyses," may be cross-referenced).

5) Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. Section 15063(c)(3)(D). In this case, a brief discussion should identify the following:

a) Earlier Analyses Used. Identify and state where they are available for review.

b) Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.

c) Mitigation Measures. For effects that are "Less than Significant with Mitigation Measures Incorporated," describe the mitigation measures, which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.

6) Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g. general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.

7) Supporting Information Sources. A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.

8) This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.

9) The explanation of each issue should identify:

a) the significance criteria or threshold, if any, used to evaluate each question; and

b) the mitigation measure identified, if any, to reduce the impact to less than significance.

SAMPLE QUESTION

| Issues: | Potentially Significant Impact | Less Than Significant With Mitigation Incorporated | Less Than Significant Impact | No Impact |
|---|---|---|---|---|
| I. AESTHETICS. Would the project: | | | | |
| a) Have a substantial adverse effect on a scenic vista? | ☐ | ☐ | ☐ | ☐ |
| b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway? | ☐ | ☐ | ☐ | ☐ |

| Issues: | | Potentially Significant Impact | Less Than Significant With Mitigation Incorporated | Less Than Significant Impact | No Impact |
|---|---|---|---|---|---|
| c) | Substantially degrade the existing visual character or quality of the site and its surroundings? | ☐ | ☐ | ☐ | ☐ |
| d) | Create a new source of substantial light or glare, which would adversely affect day or nighttime views in the area? | ☐ | ☐ | ☐ | ☐ |
| II. | AGRICULTURE AND FOREST RESOURCES. In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest protocols adopted by the California Air Resources Board. Would the project: | | | | |
| a) | Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use? | ☐ | ☐ | ☐ | ☐ |
| b) | Conflict with existing zoning for agricultural use, or a Williamson Act contract? | ☐ | ☐ | ☐ | ☐ |

| Issues: | | Potentially Significant Impact | Less Than Significant With Mitigation Incorporated | Less Than Significant Impact | No Impact |
|---|---|---|---|---|---|
| c) | Conflict with existing zoning for, or cause rezoning of, forestland (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))? | ☐ | ☐ | ☐ | ☐ |
| d) | Result in the loss of forestland or conversion of forestland to non-forest use? | ☐ | ☐ | ☐ | ☐ |
| e) | Involve other changes in the existing environment, which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forestland to non-forest use? | ☐ | ☐ | ☐ | ☐ |
| III. | AIR QUALITY. Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project: | | | | |
| a) | Conflict with or obstruct implementation of the applicable air quality plan? | ☐ | ☐ | ☐ | ☐ |
| b) | Violate any air quality standard or contribute substantially to an existing or projected air quality violation? | ☐ | ☐ | ☐ | ☐ |
| c) | Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)? | ☐ | ☐ | ☐ | ☐ |
| d) | Expose sensitive receptors to substantial pollutant concentrations? | ☐ | ☐ | ☐ | ☐ |

| Issues: | | Potentially Significant Impact | Less Than Significant With Mitigation Incorporated | Less Than Significant Impact | No Impact |
|---|---|---|---|---|---|
| e) | Create objectionable odors affecting a substantial number of people? | ☐ | ☐ | ☐ | ☐ |
| IV. | BIOLOGICAL RESOURCES. Would the project: | | | | |
| a) | Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service? | ☐ | ☐ | ☐ | ☐ |
| b) | Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service? | ☐ | ☐ | ☐ | ☐ |
| c) | Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means? | ☐ | ☐ | ☐ | ☐ |
| d) | Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites? | ☐ | ☐ | ☐ | ☐ |
| e) | Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance? | ☐ | ☐ | ☐ | ☐ |

| Issues: | | Potentially Significant Impact | Less Than Significant With Mitigation Incorporated | Less Than Significant Impact | No Impact |
|---|---|---|---|---|---|
| f) | Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan? | ☐ | ☐ | ☐ | ☐ |
| V. | CULTURAL RESOURCES. Would the project: | | | | |
| a) | Cause a substantial adverse change in the significance of a historical resource as defined in § 15064.5? | ☐ | ☐ | ☐ | ☐ |
| b) | Cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5? | ☐ | ☐ | ☐ | ☐ |
| c) | Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature? | ☐ | ☐ | ☐ | ☐ |
| d) | Disturb any human remains, including those interred outside of formal cemeteries? | ☐ | ☐ | ☐ | ☐ |
| VI. | GEOLOGY AND SOILS. Would the project: | | | | |
| a) | Expose people or structures to potential substantial adverse effects, including the risk of loss, injury or death involving: | ☐ | ☐ | ☐ | ☐ |
| i) | Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42. | ☐ | ☐ | ☐ | ☐ |
| ii) | Strong seismic ground shaking? | ☐ | ☐ | ☐ | ☐ |
| iii) | Seismic-related ground failure, including liquefaction? | ☐ | ☐ | ☐ | ☐ |

| Issues: | | Potentially Significant Impact | Less Than Significant With Mitigation Incorporated | Less Than Significant Impact | No Impact |
|---|---|---|---|---|---|
| iv) | Landslides? | ☐ | ☐ | ☐ | ☐ |
| b) | Result in substantial soil erosion or the loss of topsoil? | ☐ | ☐ | ☐ | ☐ |
| c) | Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse? | ☐ | ☐ | ☐ | ☐ |
| d) | Be located on expansive soil, as defined in Table 18 1 B of the Uniform Building Code (1994), creating substantial risks to life or property? | ☐ | ☐ | ☐ | ☐ |
| e) | Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater? | ☐ | ☐ | ☐ | ☐ |
| VII. | GREENHOUSE GAS EMISSIONS. Would the project: | | | | |
| a) | Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment? | ☐ | ☐ | ☐ | ☐ |
| b) | Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emission of greenhouse gases? | ☐ | ☐ | ☐ | ☐ |
| VIII. | HAZARDS AND HAZARDOUS MATERIALS. Would the project: | | | | |
| a) | Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials? | ☐ | ☐ | ☐ | ☐ |

| Issues: | | Potentially Significant Impact | Less Than Significant With Mitigation Incorporated | Less Than Significant Impact | No Impact |
|---|---|---|---|---|---|
| b) | Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment? | ☐ | ☐ | ☐ | ☐ |
| c) | Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school? | ☐ | ☐ | ☐ | ☐ |
| d) | Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code section 65962.5 and, as a result, would it create a significant hazard to the public or the environment? | ☐ | ☐ | ☐ | ☐ |
| e) | For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area? | ☐ | ☐ | ☐ | ☐ |
| f) | For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area? | ☐ | ☐ | ☐ | ☐ |
| g) | Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan? | ☐ | ☐ | ☐ | ☐ |
| h) | Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands? | ☐ | ☐ | ☐ | ☐ |

| Issues: | | Potentially Significant Impact | Less Than Significant With Mitigation Incorporated | Less Than Significant Impact | No Impact |
|---|---|---|---|---|---|
| IX. | HYDROLOGY AND WATER QUALITY. Would the project: | | | | |
| a) | Violate any water quality standards or waste discharge requirements? | ☐ | ☐ | ☐ | ☐ |
| b) | Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)? | ☐ | ☐ | ☐ | ☐ |
| c) | Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner, which would result in substantial erosion or siltation on- or off-site? | ☐ | ☐ | ☐ | ☐ |
| d) | Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner, which would result in flooding on- or off-site? | ☐ | ☐ | ☐ | ☐ |
| e) | Create or contribute runoff water, which would exceed the capacity of existing or planned storm water drainage systems or provide substantial additional sources of polluted runoff? | ☐ | ☐ | ☐ | ☐ |
| f) | Otherwise substantially degrade water quality? | ☐ | ☐ | ☐ | ☐ |

| Issues: | | Potentially Significant Impact | Less Than Significant With Mitigation Incorporated | Less Than Significant Impact | No Impact |
|---|---|---|---|---|---|
| g) | Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map? | ☐ | ☐ | ☐ | ☐ |
| h) | Place within a 100-year flood hazard area, structures that would impede or redirect flood flows? | ☐ | ☐ | ☐ | ☐ |
| i) | Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam? | ☐ | ☐ | ☐ | ☐ |
| j) | Expose people or structures to inundation by seiche, tsunami, or mudflow? | ☐ | ☐ | ☐ | ☐ |
| X. | LAND USE AND PLANNING. Would the project: | | | | |
| a) | Physically divide an established community? | ☐ | ☐ | ☐ | ☐ |
| b) | Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect? | ☐ | ☐ | ☐ | ☐ |
| c) | Conflict with any applicable habitat conservation plan or natural community conservation plan? | ☐ | ☐ | ☐ | ☐ |
| XI. | MINERAL RESOURCES. Would the project: | | | | |
| a) | Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state? | ☐ | ☐ | ☐ | ☐ |

| Issues: | | Potentially Significant Impact | Less Than Significant With Mitigation Incorporated | Less Than Significant Impact | No Impact |
|---|---|---|---|---|---|
| b) | Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan? | ☐ | ☐ | ☐ | ☐ |
| XII. | NOISE. Would the project result in: | | | | |
| a) | Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies? | ☐ | ☐ | ☐ | ☐ |
| b) | Exposure of persons to or generation of excessive ground-borne vibration or ground-borne noise levels? | ☐ | ☐ | ☐ | ☐ |
| c) | A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project? | ☐ | ☐ | ☐ | ☐ |
| d) | A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project? | ☐ | ☐ | ☐ | ☐ |
| e) | For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels? | ☐ | ☐ | ☐ | ☐ |
| f) | For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels? | ☐ | ☐ | ☐ | ☐ |

| Issues: | | Potentially Significant Impact | Less Than Significant With Mitigation Incorporated | Less Than Significant Impact | No Impact |
|---|---|---|---|---|---|
| XIII. | POPULATION AND HOUSING. Would the project: | | | | |
| a) | Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of road or other infrastructure)? | ☐ | ☐ | ☐ | ☐ |
| b) | Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere? | ☐ | ☐ | ☐ | ☐ |
| c) | Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere? | ☐ | ☐ | ☐ | ☐ |
| XIV. | PUBLIC SERVICES. Would the project: | | | | |
| a) | Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services: | ☐ | ☐ | ☐ | ☐ |
| | Fire protection? | ☐ | ☐ | ☐ | ☐ |
| | Police protection? | ☐ | ☐ | ☐ | ☐ |
| | Schools? | ☐ | ☐ | ☐ | ☐ |
| | Parks? | ☐ | ☐ | ☐ | ☐ |
| | Other public facilities? | ☐ | ☐ | ☐ | ☐ |

| Issues: | Potentially Significant Impact | Less Than Significant With Mitigation Incorporated | Less Than Significant Impact | No Impact |
|---|---|---|---|---|
| XV. RECREATION. Would the project: | | | | |
| a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated? | ☐ | ☐ | ☐ | ☐ |
| b) Does the project include recreational facilities or require the construction or expansion of recreational facilities, which have an adverse physical effect on the environment? | ☐ | ☐ | ☐ | ☐ |
| XVI. TRANSPORTATION / TRAFFIC. Would the project: | | | | |
| a) Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit? | ☐ | ☐ | ☐ | ☐ |
| b) Conflict with an applicable congestion management program, including, but not limited to, level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways? | ☐ | ☐ | ☐ | ☐ |
| c) Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks? | ☐ | ☐ | ☐ | ☐ |

| Issues: | | Potentially Significant Impact | Less Than Significant With Mitigation Incorporated | Less Than Significant Impact | No Impact |
|---|---|---|---|---|---|
| d) | Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)? | ☐ | ☐ | ☐ | ☐ |
| e) | Result in inadequate emergency access? | ☐ | ☐ | ☐ | ☐ |
| f) | Conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities? | ☐ | ☐ | ☐ | ☐ |
| XVII. | UTILITIES AND SERVICE SYSTEMS. Would the project: | | | | |
| a) | Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board? | ☐ | ☐ | ☐ | ☐ |
| b) | Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects? | ☐ | ☐ | ☐ | ☐ |
| c) | Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects? | ☐ | ☐ | ☐ | ☐ |

| Issues: | | Potentially Significant Impact | Less Than Significant With Mitigation Incorporated | Less Than Significant Impact | No Impact |
|---|---|---|---|---|---|
| d) | Have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed? In making this determination, the Authority shall consider whether the project is subject to the water supply assessment requirements of Water Code Section 10910, et. seq. (SB 610), and the requirements of Government Code Section 664737 (SB 221). | ☐ | ☐ | ☐ | ☐ |
| e) | Result in a determination by the wastewater treatment provider, which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments? | ☐ | ☐ | ☐ | ☐ |
| f) | Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs? | ☐ | ☐ | ☐ | ☐ |
| g) | Comply with federal, state, and local statutes and regulations related to solid waste? | ☐ | ☐ | ☐ | ☐ |
| XVIII. | MANDATORY FINDINGS OF SIGNIFICANCE | | | | |
| a) | Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory? | ☐ | ☐ | ☐ | ☐ |

| Issues: | | Potentially Significant Impact | Less Than Significant With Mitigation Incorporated | Less Than Significant Impact | No Impact |
|---|---|---|---|---|---|
| b) | Does the project have the potential to achieve short-term environmental goals to the disadvantage of long-term environmental goals? | ☐ | ☐ | ☐ | ☐ |
| c) | Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current project, and the effects of probable future projects.) | ☐ | ☐ | ☐ | ☐ |
| d) | Does the project have environmental effects, which will cause substantial adverse effects on human beings, either directly or indirectly? | ☐ | ☐ | ☐ | ☐ |

Project Name: _____

# CITY OF EL CAJON SUSMP CHECKLIST

City of El Cajon
STORMWATER
Protection Program

MS4: ☐ Forrester Creek ☐ County Ditch Channel
☐ Broadway Channel ☐ Third Street Lateral
☐ Washington Channel ☐ Fletcher Parkway Lateral

## PROJECT INFORMATION

Project Name: _____ Public Private

Project Address: _____

Project APN: _____

Project Size: (acres) _____ Notice of Intent: Yes No

Completed a SWPPP: Yes No

## SUSMP CATEGORY

Check all SUSMP categories that apply to the project

☐ Residential Development ≥ 100 units
☐ Residential Development ≥ 10 units
☐ Commercial Development ≥ 1 acre
☐ Automotive Repair
☐ Restaurants
☐ Hillside Development ≥ 5,000 sq ft
☐ Parking Lots ≥ 5,000 sq ft or ≥ 15 spaces
☐ Streets, roads, highways, and freeways with ≥ 5,000 sq ft of new paved area
☐ Significant Redevelopment ≥ 5,000 sq ft of paved area on an already developed site
☐ Retail Gas Outlet

## IDENTIFY POLLUTANTS FROM THE PROJECT AREA

Check all that apply to the project

☐ Sediment (dirt; silt; clay)
☐ Nutrients (fertilizers, sewages)
☐ Metals (dirt, silt, clay, paints, liquid/solid chemicals)
☐ Organics (food, vegetation)
☐ Trash and Debris
☐ Oxygen Demand Substances (organic matter)
☐ Petroleum (oil, grease)
☐ Bacteria and Viruses (fecal coliform, pathogens)
☐ Pesticides/Herbicides
☐ Toxics (acids, corrosives, chemicals)

Project Name: _____

**IDENTIFY RECEIVING WATERS AND THE POLLUTANT SOURCES**

Does the project discharge directly to: ☐ San Diego River? or ☐ Forester Creek?

What are the primary sources contributing to SD River and Forester Creek impairments of:
TDS?_____ _____ _____

Fecal Coliform? _____ _____

pH?_____ _____

(SD River only) Oxygen Depleting Constituents? _____ _____

(SD River only) Chlorpyrifos and Diazinon? _____

(SD River only) Total and Dissolved Copper? _____

**IDENTIFY CONDITIONS OF CONCERN**

☐ Was a drainage study report prepared? Yes No
☐ Was a Storm Water Mitigation Plan prepared? Yes No
☐ Were the reports prepared by a registered Civil Engineer? Yes No Who?_____
☐ Are there field photographs? Yes No (Attached?)
☐ Are the following calculated according to actual % imperviousness for the 6-hour, 10-year and 100-year frequency storms?

- ☐ Peak flow rate (pre and post-construction)
- ☐ Flow velocity
- ☐ Runoff volume
- ☐ Time of concentration (minimum of 5 minutes as defined in the SD Hydrology Manual to calculate Intensity values)
- ☐ Retention volume

☐ Are conditions of concern adequately identified using:

| | | |
|---|---|---|
| Site Design? | Yes | No |
| Source Control? | Yes | No |
| Treatment Control? | Yes | No |

**ESTABLISH STORM WATER LOW-IMPACT DEVELOPMENT (LID) BMPS**

☐ ***Site Design BMPs***

SUSMP Projects **must** consider, incorporate, and implement where determined applicable and feasible by City storm water staff. (Check all that were considered, incorporated, or implemented):

- ☐ Maintain Pre-Development Rainfall Runoff Conditions
  - ☐ Minimize project's impervious footprint
  - ☐ Conserve natural areas
  - ☐ Construct low traffic areas (walkways, trails, patios, parking lots, alleys, etc) of permeable surfaces
  - ☐ Construct streets, sidewalks, and parking lot aisles to minimum widths
  - ☐ Maximize canopy interception by preserving existing trees and shrubs

Project Name: _____

- ☐ Preserve natural drainage systems
- ☐ Minimize Directly Connected Impervious Areas (DCIAs)
  - ☐ Drain rooftops into landscaping
  - ☐ Drain sidewalks, walkways, trails, and patios into landscaping
- ☐ Protect slopes and channels

Comments: _____

_____

☐ ***Source Control BMPs***

Does the project:

- ☐ Provide storm drain system stenciling and signage?
- ☐ Design outdoor material storage areas to reduce pollution introduction?
- ☐ Design trash storage areas to reduce pollution introduction (enclosed, covered, secured, and bermed)?
- ☐ Use efficient irrigations systems & landscape design (rain alert systems)?
- ☐ Incorporate requirements applicable to priority project categories such as:
  - ☐ Private Roads
  - ☐ Residential Driveways & Guest Parking
  - ☐ Dock Areas
  - ☐ Maintenance Bays
  - ☐ Vehicle Wash Areas
  - ☐ Outdoor Processing Areas
  - ☐ Equipment Wash Areas
  - ☐ Parking Areas
  - ☐ Roadways
  - ☐ Fueling Areas
  - ☐ Hillside Landscaping

☐ ***Treatment Control BMPs***

Check the treatment control(s) selected:

| | |
|---|---|
| ☐ Biofilters | ☐ Detention Basin |
| ☐ Infiltration basin/trench | ☐ Filtration System |
| ☐ Porous asphalt, concrete, other | ☐ Hydrodynamic Separation System |
| ☐ Filter Insert | ☐ Sod-inlet Pre-treatment |
| ☐ Grassy filter/swale | ☐ Vegetated swale |
| ☐ Proprietary Device | ☐ Other: _____ |

☐ Do treatment controls effectively address primary pollutants of concern? Yes No

If No, describe corrective action: _____

_____

**Verify the design of selected treatment controls:**

| | | |
|---|---|---|
| ☐ Was the control BMP designed for: | Volume | Flow |
| ☐ Was the BMP design process described: | Yes | No |
| ☐ Was the 85th percentile storm event used for design | Yes | No |

If no, what design criteria was used: _____

Project Name: _____

☐ Was the BMP designed properly? If not, describe corrective actions: _____

_____

☐ Is the BMP(s) located near pollutant sources? Yes No
☐ Are there restrictions on use of infiltration BMPs? Yes No

**Maintenance Requirements**

☐ Was an Operations & Maintenance section attached? Yes No N/A
☐ Was a BMP Facilities Agreement signed by the property owner and filed with the Grant Deed? Yes No N/A
☐ Was a BMP Maintenance Agreement signed with the City to maintain post-construction BMPs? Yes No N/A
☐ Does this project require annual inspections and/or maintenance of BMPs by the City? Yes No N/A
☐ Was an access/easement agreement included? Yes No N/A
☐ Is there an HOA or other Common Interest planned for the project? Yes No N/A
☐ Were CC&Rs presented for review and acceptable? Yes No N/A
☐ Was a Storm Water Conveyance Maintenance Plan generated/received? Yes No N/A

**Waiver of Structural Treatment BMP Requirements**

☐ Was a waiver of infeasibility granted?
☐ Was the RWQCB notified?

**Other Information**

_____

_____

_____

**Field Inspection**

During BMP installation:
☐ Were the source control BMPs properly constructed in the field? ☐ Yes ☐ No
☐ Were the treatment control BMPs properly constructed in the field? ☐ Yes ☐ No

After project completion:
☐ Are all site design BMPs still in place? ☐ Yes ☐ No
☐ Are all source control BMPs still in place? ☐ Yes ☐ No
☐ Are treatment control BMPs still in place? ☐ Yes ☐ No
☐ Are all BMPs being maintained? ☐ Yes ☐ No

Appendix A.3

# Storm Water Requirements for Construction Sites

The City's storm drain system is composed of the street, gutter, inlet, catch basin, ditches, streams, and concrete-lined channels.

1. Perimeter Controls (fiber roll; silt fence; gravel or sand bags) must be installed and kept in place throughout the project to prohibit the discharge of sediment and pollution from entering the storm drain system. If controls are moved to complete work, they must be replaced when work is completed or at end of day, whichever comes first.
2. Erosion Controls as required by an erosion and sediment control plan must be installed as designed.
3. Tracking of sediment and dirt must be cleaned up at the end of each working day.
4. Building Materials must be stored under cover at the end of each working day.
5. Spills must be reported to the site manager once they occur and cleaned up immediately. Spills that enter the City's storm drain system must be reported to the City Storm Water staff immediately.
6. Wash waters (including paint, dry wall mud, stucco, and other water-based materials) must be captured on site and contained, then disposed of in the appropriate place.
7. Port-o-lets must be secured and bermed.
8. Trash and debris shall be placed in appropriate containers during the workday with a final clean-up completed before leaving the site. If rain is predicted, wastes shall be covered.
9. Equipment shall be stored in a bermed area or with appropriate sized drip pans.
10. Equipment repair, servicing, or fueling must be completed undercover or within a bermed area for tasks completed within the workday. Spill kits must be within the bermed or repair areas.
11. Vehicle and equipment washing is prohibited.
12. The site will be secured at the end of each working day.
13. Report any destroyed controls to the site manager, immediately.

Under the City of El Cajon's Municipal Code §13.10.00, Storm Water Management and Discharge Control, it is illegal to discharge construction debris and materials, into the storm water conveyance system or any body of water.

Failure to prevent illegal discharges can result in fines of up to $10,000 a day per violation.

Under the law, contractors, the construction company, business owner, and property owner may receive a Citation for the same violation.

# EROSION AND SEDIMENT CONTROL NOTES
# FOR EROSION CONTROL PLANS
# (HIGH AND MEDIUM PRIORITY PROJECTS)

Add the following notes (both pages) to the Storm Water Erosion Control site plan and implement as a condition to the Erosion Control Plan:

1. In case emergency work is required, contact _____ at _____.
   (name) (telephone number)

2. Erosion control measures shown on plans shall not be moved or modified without the approval of the Public Works inspector.

3. The contractor shall maintain all erosion control devices in working order to the satisfaction of the City Engineer throughout the construction phase of the project and until permanent ground cover and landscaping is established.

4. The contractor shall install additional erosion control measures as may be required by the City Engineer due to completed grading operations or unforeseen circumstances which may arise.

5. The contractor shall be responsible for and shall take necessary precautions to prevent public trespass onto areas where impounded waters create a hazardous condition.

6. Graded areas around the project perimeter must drain away from the face of slope at the conclusion of each working day.

7. All gravel bags shall have ¾ inch minimum aggregate (No sandbags and no burlap type bags allowed).

8. Existing streets shall be kept free of dirt and debris, and shall be maintained in good condition. Dust shall be controlled so that it is not a nuisance. The contractor shall be responsible for the repair of any street or property damaged, public or private, as a result of the work.

9. The Plan shall provide that no sand, silt, or debris shall be allowed to enter the storm drain system including public streets.

10. The owner and/or the owner's contractor shall implement the Plan and take remedial and preventive action immediately when pollutant discharge occurs and/or the City Engineer or the Building Division directs.

11. The above shall apply starting the 1st day of grading and/or construction and shall remain in effect until all grading and/or construction work has been completed and 70% of the disturbed land has been stabilized by approved vegetation, mulch, gravel, etc.

**ALL EROSION AND SEDIMENT CONTROL SHALL BE IMPLEMENTED IN ACCORDANCE WITH THE CITY OF EL CAJON'S JURISDICTIONAL URBAN RUNOFF MANAGEMENT PROGRAM (JURMP) AND SHALL INCLUDE THE FOLLOWING:**

**Dry Season (May 1 through September 30)**

1. All exposed disturbed areas must have erosion prevention controls properly installed including building pads, unfinished roads and slopes. Slopes less than 33.3% or 1:3 (vertical vs. horizontal) may use properly designed and installed de-silting basins at all discharge points in lieu of this requirement.

2. Adequate perimeter protection BMPs must be installed and maintained.

3. Adequate sediment control BMPs must be installed and maintained.

4. Adequate BMPs designed to control off-site sediment tracking must be installed and maintained.

5. At a minimum, 125% of the materials needed to install standby BMPs necessary to completely protect exposed portions of the site from erosion and prevent sediment discharges must be stored on the site.

6. An approved "weather triggered" response plan is mandated for implementation in the event that a predicted storm event has at least a 50% chance of rain. The proponent must have the capacity to deploy the standby BMPs within 48 hours of the predicted storm event.

7. All slopes must be equipped with erosion prevention BMPs as soon as slopes are completed for any portion of the site.

8. Cleared or graded areas left exposed at any given time are limited to the amount of acreage that the project proponent can adequately protect prior to a predicted storm event.

**Wet Season (October 1 through April 30)**

In addition to the Dry Season Requirements:

1. Perimeter protection and sediment control BMPs must be upgraded if necessary to provide sufficient protection for storms.

2. Adequate erosion prevention BMPs must be installed and established for all completed slopes prior to October 1 and maintained throughout the wet season. If a BMP fails, it must be repaired, improved or replaced with an acceptable alternate as soon as it is safe to do so.

3. The amount of exposed soil allowed at one time shall not exceed standby erosion and sediment control BMP capacity.

4. An incomplete disturbed area that is not being actively graded must be fully protected from erosion if left for 10 days or more.

**(Do not place on the Construction Plans; circle YES or NO)**

Yes No 1. Does your project have 50 acres or more of disturbed soil?

Yes No 2. Will your project have at least one acre of disturbed soil <u>and</u> (1) be tributary to a water body 303(d) listed for sediment or (2) be located less than 200 feet from and ESA or directly discharging to an ESA?

Yes No 3. Will your project have at least one acre of disturbed soil <u>but NOT</u> (1) be tributary to a water body 303(d) listed for sediment <u>and NOT</u> (2) be located less than 200 feet from and ESA or directly discharging to an ESA?

Yes No 4. Does your project require a grading permit?

<u>General Construction Permit:</u>
If the answer to questions 1, 2, or 3 in Section 2 is "Yes", your project requires coverage under the General Construction Permit. A Notice of Intent (NOI) must be filed with the State Water Resources Control Board (SWRCB) and a Storm Water Pollution Prevention Plan (SWPPP) must be prepared for your project.

Yes No Is this project subject to the General Construction Permit?

<u>Construction Activities Threat to Water Quality Prioritization:</u>
If the answer to question 1 or 2 is YES, your project is **HIGH** priority.

If the answers to questions 1 and 2 are NO, but the answer to either question 3 or question 4 is YES, your project is **MEDIUM** priority.

If all answers are NO, your project is **LOW** priority.

**(Place this note on the Construction Plans and check the appropriate box)**

This project is ☐ HIGH ☐ MEDIUM ☐ LOW priority threat to water quality.

# Storm Water Notes for Erosion Control Plans (Low Priority Projects)

## General Storm Water Notes

1. All operations will comply with the City's Jurisdictional Urban Runoff Management Plan (JURMP).

2. The owner and the owner's contractor are responsible for pollution prevention practices to prevent the discharge of sediment and pollutants to the public storm drain system.

3. Owner and the owner's contractor are responsible for the prevention of erosion caused by clearing of vegetation, grading, demolition or construction.

4. Sediment, pollution and erosion control measures will be implemented starting the first day of clearing, grading or soil disturbance, or construction. These controls will remain in effect until all relevant operations have been completed and disturbed soils have either: 1) established vegetation, or 2) other permanent erosion control at 70% completion.

## Erosion And Sediment Control Notes

1. In case of emergency, contact: Name: _____, Phone: _____

2. The contractor will maintain all sediment and erosion control devices in good working order to the satisfaction of the city engineer throughout every phase of the project.

3. The contractor will install all erosion control measures additional to those specified by the approved Erosion Control Plan if required to do so by the city engineer.

4. The contractor and property owner will prevent public trespass onto areas where impounded waters create a hazardous condition.

5. Graded areas around the project perimeter will drain away from the face of slopes at the end of each working day.

6. All gravel bags shall have ¾ inch minimum aggregate (No sandbags and no burlap type bags allowed).

**(Do not place on the Construction Plans; circle YES or NO)**

Yes No 1. Does your project have 50 acres or more of disturbed soil?

Yes No 2. Will your project have at least one acre of disturbed soil and (1) be tributary to a water body 303(d) listed for sediment or (2) be located less than 200 feet from and ESA or directly discharging to an ESA?

Yes No 3. Will your project have at least one acre of disturbed soil but NOT (1) be tributary to a water body 303(d) listed for sediment and NOT (2) be located less than 200 feet from and ESA or directly discharging to an ESA?

Yes No 4. Does your project require a grading permit?

General Construction Permit:
If the answer to questions 1, 2, or 3 in Section 2 is "Yes", your project requires coverage under the General Construction Permit. A Notice of Intent (NOI) must be filed with the State Water Resources Control Board (SWRCB) and a Storm Water Pollution Prevention Plan (SWPPP) must be prepared for your project.

Yes No Is this project subject to the General Construction Permit?

Construction Activities Threat to Water Quality Prioritization:
If the answer to question 1 or 2 is YES, your project is **HIGH** priority.

If the answers to questions 1 and 2 are NO, but the answer to either question 3 or question 4 is YES, your project is **MEDIUM** priority.

If all answers are NO, your project is **LOW** priority.

**(Place this note on the Construction Plans and check the appropriate box)**

This project is ☐ HIGH ☐ MEDIUM ☐ LOW priority threat to water quality.

# Erosion Control Plan

## City of El Cajon

**GENERAL STORM WATER NOTES**

A. ALL OPERATION WILL COMPLY WITH THE CITY'S JURISDICTIONAL URBAN RUNOFF MANAGEMENT PLAN (JURMP).

B. THE OWNER AND THE OWNER'S CONTRACTOR ARE RESPONSIBLE FOR POLLUTION PREVENTION PRACTICES TO PREVENT THE DISCHARGE OF SEDIMENT AND POLLUTANTS TO THE PUBLIC STORM DRAIN SYSTEM.

C. OWNER AND THE OWNER'S CONTRACTOR ARE RESPONSIBLE FOR THE PREVENTION OF EROSION CAUSED BY CLEARING OF VEGETATION, GRADING, DEMOLITION OR CONSTRUCTION.

D. SEDIMENT, POLLUTION AND EROSION CONTROL MEASURES WILL BE IMPLEMENTED STARTING THE FIRST DAY OF CLEARING, GRADING OR SOIL DISTURBANCE, OR CONSTRUCTION. THESE CONTROLS WILL REMAIN IN EFFECT UNTIL ALL RELEVANT OPERATIONS HAVE BEEN COMPLETED AND DISTURBED SOILS HAVE EITHER: 1) ESTABLISHED VEGETATION, OR 2) OTHER PERMANENT EROSION CONTROL AT 70 % COMPLETION.

**EROSION AND SEDIMENT CONTROL NOTES**

1. IN CASE OF EMERGENCY, CONTACT: NAME:_____ PHONE:_____

2. THE CONTRACTOR WILL MAINTAIN ALL SEDIMENT AND EROSION CONTROL DEVICES IN GOOD WORKING ORDER TO THE SATISFACTION OF THE CITY ENGINEER THROUGHOUT EVERY PHASE OF THE PROJECT.

3. THE CONTRACTOR WILL INSTALL ALL EROSION CONTROL MEASURE ADDITIONAL TO THOSE SPECIFIED BY THE APPROVED EROSION CONTROL PLAN IF REQUIRED TO DO SO BY THE CITY ENGINEER.

4. THE CONTRACTOR AND PROPERTY OWNER WILL PREVENT PUBLIC TRESPASS ONTO AREAS WHERE IMPOUNDED WATERS CREATE A HAZARDOUS CONDITION.

5. GRADED AREAS AROUND THE PROJECT PERIMETER WILL DRAIN AWAY FROM THE FACE OF SLOPES AT THE END OF EACH WORKING DAY.

6. ALL GRAVEL BAGS SHALL HAVE ¾ INCH MINIMUM AGGREGATE (NO SANDBAGS AND NO BURLAP TYPE BAGS ALLOWED) .

# City of El Cajon
## Erosion and Sediment Control Plan Review Checklist

| Date Completed | Not Applicable | |
|---|---|---|
| | | **Vicinity Map** |
| _____ | _____ | Major roadways, geographic features or landmarks. |
| _____ | _____ | Site perimeter. |
| _____ | _____ | Geographic features. |
| _____ | _____ | General topography. |
| | | **Site Characteristics** |
| _____ | _____ | North arrow, scale, and site boundary. Indicate the name of adjacent streets or roadway. |
| _____ | _____ | Location of existing drainage ways, channels, swales, creeks, streams on or near the site. |
| _____ | _____ | Location of storm drain inlets, outlets, catch basins – proposed, existing, on-site, and within 100 feet of site. |
| _____ | _____ | Location of existing and proposed buildings and paved areas. |
| _____ | _____ | Show and label existing and proposed improvements (streets, sidewalks, curb/gutter, utilities, etc) |
| _____ | _____ | The limits of the proposed disturbed area on the lot. |
| _____ | _____ | Approximate gradient and direction of slopes before grading operations. |
| _____ | _____ | Approximate gradient and direction of slopes after final grading operations. |
| _____ | _____ | Disturbed area outlined and labeled. All sediment control devices must be shown within the disturbed limits. |
| _____ | _____ | Overland runoff (sheet flow) coming onto the site from adjacent areas. |
| _____ | _____ | Delineation of pre and post development drainage areas, number of acres, and the direction of flow for each drainage area before and after development must be shown. Use separate plan sheets for clarity. |
| | | **Erosion Control Practices** |
| _____ | _____ | Location of temporary soil piles |
| | | Note: soil storage pile should be placed behind a sediment fence, 10-foot (minimum) wide vegetative strip should be covered with a tarp, or placed more than 25 feet from any down slope road or drainage way. |
| _____ | _____ | Location of gravel access drive(s). |
| | | Note: Gravel drive should have 3 to 6 inch aggregate stone laid at least 10 feet wide and 12 inches thick. Drives should extend from the roadway 50 feet or to the house foundation (whichever is less). |
| _____ | _____ | Location of sediment controls (filter fabric fence, straw bale fence or 10-foot wide vegetative strips) that will prevent eroded soil from leaving the site. |
| _____ | _____ | Location of sediment barriers around on-site storm drain inlets. |

| Date Completed | Not Applicable | |
|---|---|---|
| _____ | _____ | Location of diversions.<br><br>Note: Concentrated flow (drainage ways, ditches, channels, brow ditches) shall be diverted (re-directed) around disturbed areas. Overland runoff (sheet flow) from adjacent areas greater than 10,000 sq. ft. shall also be diverted around disturbed areas. |
| _____ | _____ | Location of practices that will be applied to control erosion on steep slopes that have been disturbed at any time by clearing, grading, or landscaping - slopes more than five feet in height, more than two hundred fifty square feet in total area, and steeper than three to one (run-to-rise).<br><br>Note: Unstabilized drainage ways, ditches, channels, diversions, and inlets shall be protected from erosion through use of such practices as in-channel fabric or straw bale barriers, erosion control mats, staked sod, and rock riprap. When used, a given in-channel barrier should not receive drainage from more than two acres of unpaved area, or one acre of paved area. In-channel practices should not be installed in perennial streams (streams with year-round flow.) |
| _____ | _____ | Show Erosion Control Plan heading and standard notes. |
| _____ | _____ | Label all sediment control devices. |
| _____ | _____ | Show Standard details for sediment control devices. |
| _____ | _____ | No sediment control devices are to be located where water will damage building foundations. |
| _____ | _____ | Detail drawings and specifications for structural practices – any structural practices used must be illustrated with detailed drawings containing all dimensions and specifications. (i.e. de-silting basins) |
| _____ | _____ | Location of other planned practices not already noted. (Material Storage WM-1, Concrete Washout WM-8, Sanitary Waste WM-9, Solid Waste Storage WM-5) |
| _____ | _____ | Temporary stabilization of disturbed areas.<br><br>Note: disturbed areas and soil piles left inactive for more than 10 days be stabilized by seeding (between April 1st and September 1st ), or by other cover, such as tarping or mulching. |
| _____ | _____ | Permanent stabilization of site by re-vegetation or other means as soon as possible (lawn establishment).<br><br>Indicate re-vegetation method: Seed ___ Sod ___ Other_____<br>Expect date of permanent re-vegetation:<br>Re-vegetation responsibility of Builder ___ Owner/Buyer<br>Is temporary seeding or mulching planned if site not seeded by September 1st or sodded by October 1st ? Yes ___ No ___ |
| _____ | _____ | Use of downspouts and/or sump pump outlet extensions to direct runoff away from structures and onto sod or pavement until vegetation is stable. Downspouts shall be permanently to grass areas. |
| _____ | _____ | Proper disposal of building material waste so that pollutants and debris are not carried off-site by wind or water. |
| _____ | _____ | Maintenance of erosion control practices during construction:<br><br>Name:_____<br><br>Title:_____ Phone & Fax:_____ |

- Sediment will be removed from behind sediment fences and barriers before it reaches a depth that is equal to half the barrier's height.
- Breaks and gaps in sediment fences and barriers will be repaired immediately.
- All sediment that moves off-site due to construction activity will be cleaned up before the end of the same workday.
- All sediment that moves off-site due to storm events will be cleaned up before the end of the next workday.
- Gravel access drives will be maintained throughout construction.
- All installed erosion control practices will be maintained until the disturbed areas they protect are stabilized.

| Pollution Prevention BMPs | N/A | Yes | No | Comments / Corrective Action |
|---|---|---|---|---|
| **Erosion and Sediment Control** | | | | |
| Is existing vegetation preserved? | | | | |
| Are seeding and planting of native plants and trees considered? | | | | |
| Are geotextiles and organic mats used for soil stabilization? | | | | |
| **Roadway and Bridge Maintenance** | | | | |
| Are streets swept and clean? | | | | |
| Is street sweeping frequency adequate for the area? | | | | |
| **Municipal Vehicle Maintenance Facilities** | | | | |
| Are vehicles/equipment parked/stored in designated areas? | | | | |
| Are vehicles and equipment regularly inspected for leaks and spills? | | | | |
| Are detected leaks/spills contained and repaired as soon as possible? | | | | |
| **Landscaping Maintenance** | | | | |
| Are safer, alternative products used or considered? | | | | |
| Is weather considered for landscaping activities? | | | | |
| Are certified professionals used to handle, apply, and distribute pesticides, herbicides, and fertilizers? | | | | |
| Is there an IPM used? | | | | |
| **Maintenance of MS4** | | | | |
| Is the mechanism for detecting and removing IC/ID situations implemented? | | | | |
| Is the MS4 inspected, maintained, and repaired? | | | | |
| Is a stenciling and sign program used to warn of effects of illegal dumping? | | | | |
| **Sewer Blockage Response** | | | | |
| Is there mechanism for identifying, containing, controlling, and repairing sewage leaks and spills? | | | | |
| Is hazardous waste disposed of properly? | | | | |
| **Waste Management** | | | | |
| Is there a waste reduction program in place? | | | | |
| Are wastes segregated for proper storage and disposal? | | | | |

| | | | | |
|---|---|---|---|---|
| **Other Practices and Procedures** | | | | |
| Are dewatering activities controlled and managed appropriately? | | | | |
| Is groundwater tested prior to disposal? | | | | |
| Is the public educated and encouraged to participate in appropriate stormwater activities? | | | | |
| **Maintenance BMPs** | **N/A** | **Yes** | **No** | **Comments / Corrective Action** |
| **Housekeeping** | | | | |
| Is the area clear of visible trash/debris and impervious surfaces free of sediment? | | | | |
| **Maintenance BMPs** | **N/A** | **Yes** | **No** | **Comments / Corrective Action** |
| Are points of ingress/egress to public and private roads free from sediment, debris and mud from tracking? | | | | |
| Are materials stored in their designated areas? | | | | |
| Are dry methods used to clean? | | | | |
| **Employee Training** | | | | |
| Have employees been trained in basic stormwater management and BMP implementation? | | | | |
| **Visual Inspections** | | | | |
| Are visual inspections of the site conducted and documented on a regular basis? | | | | |
| Are the discharge locations free of significant erosion or sediment transport? | | | | |
| **Improved Operation and Maintenance** | | | | |
| Are drainage control structures free of litter and debris? | | | | |
| **Waste Disposal and Recycling** | | | | |
| Are there designated areas for recycling of metal, tires, antifreeze, and used oil? | | | | |
| Are waste containers covered? | | | | |
| Are areas near or around waste containers free of leaks or spills? | | | | |
| Is timely service and removal provided to prevent waste containers and sanitary facilities from overflowing? | | | | |
| Are hazardous wastes stored and disposed appropriately? (in labeled, secondary containment; 55-gallon drums in a secured, designated area) | | | | |
| Is secondary containment free of spills and rainwater? | | | | |
| **Preventive Maintenance** | | | | |
| Are there procedures for replacing used or worn materials or equipment prior to failure? | | | | |
| **Record Keeping** | | | | |
| Is there onsite storage of documented inspections, BMP evaluations, and audits? | | | | |
| Is there onsite documentation of employee training? | | | | |
| Is there an onsite SWPPP or other Pollution Control Document? | | | | |
| Does the SWPPP adequately reflect the current site conditions and the construction operations? If not, explain required SWPPP revisions. | | | | |
| **Spill Prevention and Response** | | | | |
| Are there spill kits near outside stored materials, wastes, and recycling areas? | | | | |
| Are spill response procedures clearly posted? | | | | |
| Are employees trained in preventing spills? | | | | |

| | | | | |
|---|---|---|---|---|
| **Material Inventory Procedures** | | | | |
| Are inventories of 30 days materials onsite? | | | | |
| **Material Storage Practices** | | | | |
| Are outside stored materials stored off the ground and covered or in appropriate containers? (Flammables stored in a flammables cabinet; antifreeze in double-walled container or in secondary containment) | | | | |
| Visual evidence of spills, staining, or leaks from outside stored materials are not evident | | | | |
| **Storage Tanks** | | | | |
| Are outside above ground storage tanks double-walled or in secondary containment? | | | | |
| Visual evidence of leaks or spills in the area are not visible | | | | |
| **Outside Storage** | | | | |
| Are materials stored outside under cover or in containers? | | | | |
| **Maintenance BMPs** | **N/A** | **Yes** | **No** | **Comments / Corrective Action** |
| Are outside material storage areas free of visual evidence of spills or runoff? | | | | |
| **Loading and Unloading** | | | | |
| Are loading and unloading areas free of litter and visual evidence of spills? | | | | |
| **Sediment and Erosion Control** | | | | |
| If sandbags are used, are they placed appropriately for the conditions? | | | | |
| Are temporary soil stabilization measures installed and in working order? | | | | |
| Is dust control necessary and implemented? | | | | |
| Are soil stockpiles properly stored? | | | | |
| Is inlet protection available for all operational storm drain inlets? | | | | |
| **Vehicle and Equipment Maintenance** | | | | |
| Is there a covered or inside area designated for vehicle and equipment maintenance? | | | | |
| Are leaking vehicles stored inside or drip pans used for outside storage? | | | | |
| **Vehicle and Equipment Washing** | | | | |
| Is there a designated covered or inside area or commercial facility for washing vehicles and equipment? | | | | |
| **Park BMPs** | **N/A** | **Yes** | **No** | **Comments / Corrective Action** |
| Are grass clippings mulched or bagged for disposal? | | | | |
| Are vegetation trimmings gathered and disposed as solid waste or recycled as mulch? | | | | |
| Are sidewalks and parking lots cleaned using dry methods to collect and use as mulch or dispose as solid waste? | | | | |
| **Recreation BMPs** | **N/A** | **Yes** | **No** | **Comments / Corrective Action** |
| Is pool water tested or treated for chlorine before discharge? | | | | |
| Is pool filter backflush discharged to the sanitary sewer? | | | | |
| Are pool chemicals stored inside and in appropriate | | | | |

| | | | | |
|---|---|---|---|---|
| containers? | | | | |
| **Non-Stormwater BMPs** | **N/A** | **Yes** | **No** | **Comments / Corrective Action** |
| **Non-Storm Water Management** | | | | |
| Is the site free of evidence of illegal connections and illicit discharges? | | | | |
| Is the site free of evidence of unauthorized releases to storm drains? | | | | |
| If not, have the appropriate authorities been notified? | | | | |
| **Other** | | | | |
| No other potential storm water pollution issues or concerns exist. If no, explain below. | | | | |

# STORM WATER ADMINISTRATIVE CITATION PROGRAM CRITERIA

1. Issue a Warning (followed by a letter, when possible)
   a. Whenever a discharge of pollutants is imminent or the potential exists, but the discharge has not yet entered the storm drain conveyance system (street, gutter, catch basin, etc.)
   b. Whenever a BMP is not effective for the pollutant or discharge and other BMP alternatives are available.
   c. Whenever a discharge origin cannot be determined through factual, investigative, or empirical evidence. Provide a cleanup schedule to be used as future enforcement.
   d. Small residential projects of less than 500 square feet of disturbed soil.
   e. An approved erosion and control plan has been issued and BMPs are partially implemented.
   f. Whenever activities are conducted in the right-of-way and no BMPs are implemented.
   g. Whenever a discharge of fully recoverable pollutants are discharged into the City's storm drain system (street and gutter only).

2. Issue a Citation
   a. Whenever there is a sewage overflow. (e.g. blockage; clean-out cap was removed to allow sewage to discharge into the street and storm drain).
   b. Whenever there is a discharge of unrecoverable pollutants into the storm drain conveyance system (street, gutter, catch basin, etc.)
   c. A Warning was previously issued (verbal or written).
   d. Any direct discharge into Forester Creek specifically any material which contains a 303(d) listed pollutant adopted by the State of California.(pH, TDS, and fecal coliform).
   e. An approved erosion and control plan has been issued and no BMPs are implemented.
   f. An egregious act of discharge (e.g. illegal dumping)

3. Issue a Penal Code Violation (PC374.3, 374.4, 374.7)
   a. When a First Citation was previously issued and this is a repeat violation.
   b. When the discharge is executed in the presence of any City Staff or after being told to cease operations. (waste, sewage, and litter discharges)
   c. Any direct discharge into Forester Creek, specifically material containing pollutants for which a 303(d) listing has been adopted by the State of California.(pH, TDS, and fecal coliform).

4. Issue a Stop Work Order
   a. For construction sites that received a warning and a first violation for discharging pollutants due to ineffective or proposed, but not yet implemented BMPs.
   b. A discharge of pollutants into the storm drain system, in addition to a citation, that requires immediate corrective action or mitigation.

5. Refer to Regional Board
   a. Repeated violations by a private citizen, property owner, or business for discharges to the storm drain system.
   b. A refusal to mitigate, remediate, or clean a spill or discharge of pollutants that will enter or have entered City MS4.

| BMPs | No Corrections Required | | Corrections Required | | Comments |
|---|---|---|---|---|---|
| | N/A | Fully Implemented | Partially Implemented | Not Implemented | |
| **D.1 General** | | | | | |
| Keep site free of litter, debris, and sediment using dry methods | | | | | |
| Keep parking lots, sidewalks, and streets free of sediment and debris using dry methods | | | | | |
| Keep outdoor areas free of spills and leaks | | | | | |
| Collect water from pressure washing or hosing and dispose of appropriately | | | | | ☐ Unknown<br>Performed by: |
| Direct roof downspouts away from areas of potential pollutants | | | | | |
| **D.2 Landscaping** | | | | | |
| Properly manage pesticides/fertilizer; use IPM when feasible | | | | | ☐ Unknown<br>Landscaping Co: |
| Employ adequate erosion prevention measures (vegetation or physical stabilization) | | | | | |
| Minimize over watering/over-irrigation | | | | | |
| Properly store stockpiles to prevent material transport | | | | | |
| Properly store and dispose of green waste | | | | | ☐ Unknown |
| **D.3 Materials and Wastes** | | | | | |
| Protect trash area from contact with storm water | | | | | |
| Keep trash area free of litter and debris, liquids, powders, sediment | | | | | |
| Adequately cover materials stored outside | | | | | |
| Prevent run-on from contacting materials stored outdoors | | | | | |
| Properly label outdoor storage containers | | | | | |
| Provide an accessible, functional spill response kit | | | | | |
| Equip liquid storage containers with secondary containment | | | | | |
| Keep secondary containment free of spills and rainwater | | | | | |
| Properly store and dispose of hazardous materials | | | | | |
| Keep loading and unloading areas, including drains, free of debris | | | | | |
| Dispose of water generated by processing activities appropriately | | | | | |
| Dispose of pool, spa, fountain, and filter backwash water properly | | | | | ☐ Unknown<br>Performed by: |
| Clean floor mats in locations that do not drain to storm drain system | | | | | |

| BMPs | No Corrections Required | | Corrections Required | | Comments |
|---|---|---|---|---|---|
| | N/A | Fully Implemented | Partially Implemented | Not Implemented | |
| **D.4 Equipment, Vehicles, and Outdoor Activities** | | | | | |
| Conduct outdoor activities within contained areas (garage, under canopy, work shop) | | | | | |
| Use drip pans to collect leaks/spills | | | | | |
| Drain fluids from all non-operational vehicles stored outdoors | | | | | |
| Provide materials (berm, mat, etc.) to protect storm drain inlets from spills and leaks | | | | | |
| Perform vehicle/equipment washing in a contained area where runoff does not enter the MS4 | | | | | |
| **D.5 Other** | | | | | |
| Manage animals and animal waste in a manner that prevents animal waste from being transported in runoff | | | | | |
| Keep grease bin and area surrounding grease bin free of grease stains/spills | | | | | |
| Keep storm drain inlets free of grease and other food debris | | | | | |
| Identify and eliminate illicit connections and illegal discharges | | | | | |
| Provide storm water training for appropriate employees | | | | | |

**D.6 ADDITIONAL REQUIRED ACTIONS**

☐ Based on inspection findings, it appears likely that significant levels of _____ would be present in storm water discharges from this site. Take action to reduce the levels of _____ to the maximum extent practicable. Treatment control BMPs are likely necessary.

Owner/operator has been notified of recommended corrective actions both verbally and by: ☐ Hand ☐ Mail ☐ Fax

Please refer to http://www.ci.el-cajon.ca.us/dept/works/stormwater.html for more information on BMP implementation options.

| D.7 Additional Questions | Comments/Results |
|---|---|
| Are there any potential air sources that could contribute to atmospheric deposition of pollutants? | ☐ Painting ☐ Sandblasting ☐ Fuel Distribution ☐ Dust dispersion or mineral processing ☐ Metal smelting ☐ Metal plating or anodizing ☐ Chemical production or mixing ☐ Large fuel burning device ☐ Incinerator |
| Does facility have a grease trap or grease interceptor? | ☐ No ☐ Grease Trap ☐ Grease Interceptor ☐ Unknown |
| Are there any treatment control BMPs on site? | ☐ Filter insert ☐ Hydrodynamic separator ☐ Debris screen ☐ Sewer diversion ☐ Vegetated swale ☐ Vegetated filter strip ☐ Biofiltration ☐ Detention/sedimentation basin ☐ Containment and evaporation or reuse ☐ Filtration |
| Are treatment control BMPs regularly maintained? | ☐ Yes ☐ No ☐ Unknown ☐ N/A |
| What is the approximate percentage of the site that drains to the treatment control BMPs? | ☐ N/A |

| | |
|---|---|
| Do major potential pollutant sources drain to treatment BMP(s)? | ☐ All ☐ Some ☐ None ☐ N/A |
| If any illicit connections and/or illegal discharges were identified have the appropriate authorities been notified? | ☐ Yes ☐ No ☐ N/A |
| If any illicit connections and/or illegal discharges were identified, were they eliminated during the site visit? | ☐ Yes ☐ No ☐ N/A |
| Were any non IC/ID related corrective actions implemented during the site visit? | ☐ Yes ☐ No ☐ N/A |
| Were any educational materials distributed? | ☐ NOI ☐ NONA/NEC ☐ Auto Poster ☐ Restaurant Poster |

## E. STATE GENERAL INDUSTRIAL PERMIT COMPLIANCE*

☐ Non-compliance with the State Industrial Storm Water General Permit noted.

☐ In the future, under a new Industrial Permit, which has not yet been adopted, this facility may be able to qualify for exemption from Permit coverage based on no outdoor exposure.

**SPECIFIC ACTION(S) REQUIRED TO CORRECT THE VIOLATION DESCRIBED ABOVE*:**

☐ File a Notice of Intent (NOI) with the State Water Resources Control Board (SWRCB) to obtain coverage under the Industrial Permit—see Attachment 3 of the Industrial Permit (www.waterboards.ca.gov/stormwtr/industrial.html).

☐ For "Conditional" facilities only: this site presently has outdoor exposure that requires filing for coverage under the Industrial Permit. If you implement all the recommended BMPs and eliminate outdoor exposure, you may be able to qualify for exemption from obtaining Industrial Permit coverage. Please contact the RWQCB for details.

☐ Develop and implement a Storm Water Pollution Prevention Plan (SWPPP)—see Section A of the Industrial Permit.

☐ Develop and implement a storm water monitoring program--see section B of the Industrial Permit for guidelines.

☐ Complete the provided Notice of Non-Applicability (NONA) and accompanying No Exposure Certification (NEC).

*Additional notes and/or actions required*:

## F. CORRECTIVE ACTION SUMMARY

☐ **Corrective Actions Required.** Please refer to sections D.1-D.6 and E of this form and, if applicable, the Food Establishment Storm Water BMP Assessment form (if applicable, it is attached).

☐ No Corrective Actions Required at this Time.

## G. RECOMMENDED CITY ACTIONS**

**Follow Up Inspection Priority:** ☐ **Priority 1** ☐ **Priority 2** ☐ **Priority 3**

**ASSESSMENT**

| | | | | | |
|---|---|---|---|---|---|
| Level of knowledge regarding stormwater issues: | ☐ 1 | ☐ 2 | ☐ 3 | ☐ 4 | ☐ 5 |
| Level of cleanliness, BMP implementation, orderliness of site: | ☐ 1 | ☐ 2 | ☐ 3 | ☐ 4 | ☐ 5 |

*Please note that the Regional Water Quality Control Board (RWQCB) is the final arbiter of Industrial Permit compliance; please contact the RWQCB at (858) 467-2952 for details of what is necessary to comply with the Industrial Permit.

**Recommended City actions listed at the time of inspection are subject to change based on later review by office staff.

# "No Exposure" Conditional Exemption For Industrial Facilities

The proposed USEPA rules will establish a conditional exemption called a "No Exposure Exemption" for owners and operators of industrial facilities who can show that industrial materials, material handling operations and industrial processes, are not exposed to stormwater. Essentially, this exemption replaces the previous exemption for "light industry" which was remanded to USEPA from federal court to further define and substantiate the justification for such an exemption. A written certification will be required to be submitted to the permitting authority every three years on a form supplied by the authority. This potential conditional exemption applies to all industrial categories regardless of type, except construction sites and sources individually designated. The conditions for qualifying for the No Exposure Exemption will include the following:

1. Notification to the permitting authority at the beginning of each permit term;
2. Must allow the permitting authority or municipality to inspect the facility and to make the results of inspection public;
3. Upon request, submit a copy of the certification to the municipality in which the facility is located; and
4. Sign and certify the certification.

The permitting authority will still retain the legal authority to require the owner or operator of an industrial facility to apply for an individual or general NPDES permit if it determines that the discharge is, or may reasonably be, causing or contributing to a violation of a water quality standard, or is or may be interfering with the attainment or maintenance of a water quality standard, including a designated use.
In connection with the No Exposure Exemption being considered, USEPA is seeking comments on the issue of how to define "no exposure." Several important issues are listed for further review (but are not part of this proposed rule), including:

1. How to account for stormwater runoff from parking lots, roof tops, lawns and other non-industrial areas of an industrial facility;
2. Whether the construction of impervious surfaces, such as roofs to achieve no exposure that significantly increase stormwater runoff volume should be regulated to prevent adverse impacts to the receiving water simply due to increased quantity of flow;
3. Whether air emissions from roof vents or stacks should be considered in the evaluation of no exposure; and
4. Whether tight non-leaking drums, barrels or dumpsters are sufficient to quality for the no exposure exemption, or should there be a "potential to leak" evaluation included.

# EL CAJON STORM WATER PROTECTION PROGRAM

## FLOOR MATS, GREASE, OUTDOOR CLEANING, AND DUMPSTERS

In California, the storm water and sanitary sewer systems are separate. **They are *NOT* connected**. The sanitary sewer takes wastes from sinks, showers, and toilets to a treatment plant. The storm drain system collects polluted urban runoff and discharges without treatment, to creeks and rivers leading to ocean bays causing beach closures.

En California, el sistema de drenaje pluvial y el alcantarillado sanitario de aguas negras son independientes. **Estos sistemas *NO* están conectados**. El sistema de alcantarillado sanitario de aguas negras aleja desperdicios de fregaderos, regaderas, y escusados a una planta de tratamiento. El sistema de drenaje pluvial atrapa aguas pluviales contaminada por urbanización y fluye sin tratamiento alguno directamente a nuestros ríos, arroyos, bahías y mar provocando el cierre de playas.

### CLEANING FLOOR MATS

Clean floor mats, filters and garbage cans in a mop sink, floor drain or proper outside area. **DO NOT** wash them in a parking lot, alley, sidewalk or street.

Limpie los tapetes de piso, los filtros y los botes de basura en un fregadero para trapeadores, desagüe de piso o en algún sitio apropiado afuera. **NO** los lave en los estacionamientos, callejones, veredas o en la calle.

### RECYCLE GREASE & OIL

Recycle Grease & Oil. **DO NOT** pour it into sinks, floor drains, or onto a parking lot or street.

Recicle grasa y aceite. **NO** los arroje en lavaderos o desagües de piso ni en estacionamientos o calles.

### DRY CLEANING METHOD

Use dry methods for spill cleanup (sweeping, cat litter, etc.) **DO NOT** hose down spills.

Use métodos secos para limpiar los derrames (escobas, aserrín, etc.). **NO** utilize mangueras para limpiar los derrames.

### KEEP DUMPSTER AREA CLEAN

Keep dumpster area clean and lid closed. **DO NOT** fill it with liquid waste or hose it out.

Mantega el área alrededor del basurero limpia y la tapa del basurero cerrada. **NO** lo llene con desperdicios líquidos ni utilice la manguera.

### WASHWATER DISPOSAL

Pour washwater into a janitorial or mop sink. **DO NOT** pour it out onto a parking lot, alley, sidewalk or street.

Arroje el agua empleada en la limpieza al fregadero para trapeadores. **NO** la arroje en los estacionamientos, callejones, veredas o en la calle.

**It is illegal to purposefully or accidentally discharge pollution (anything other than rain water) into the streets, gutters, creeks, rivers, and ocean. To do so is in violation of El Cajon's Municipal Code 13.10 and the Federal Clean Water Act. Monetary fines and criminal charges may be issued.**

**Es contra la ley descargar contaminantes intencionalmente o accidentalmente (excepto agua de lluvias) a las calles, orillas de calle, arroyos, ríos, y océano. La descarga de contaminantes al sistema de drenaje pluvial es una violación del Código Municipal de la Ciudad de El Cajon (13.10) y de leyes Federales del "Clean Water Act". Multas y otras acciones legales podrían ser generadas en su contra.**

ADOPT GOOD HOUSEKEEPING PRACTICES AND HELP KEEP OUR STREAMS, RIVERS, AND BEACHES CLEAN. FOR MORE INFORMATION, CALL **(619) 441-1653**.

ADOPTE PRACTICAS EFECTIVAS PARA EL MANEJO DE AGUAS PLUVIALES QUE REDUSCEN LA CONTAMINACIÓN Y AYUDE A MANTENER NUESTROS ARROYOS, RIOS, Y PLAYAS MÁS LIMPIOS. PARA MAYOR INFORMACIÓN LLAME AL **(619) 441-1653**.

# STORM WATER PROTECTION IS IN GOOD HANDS...YOURS!

Operate a clean, dry shop. Sweep, mop or vacuum instead of hosing down garage floors or outdoor work areas.

Opere un negocio seco y limpio. Barra, trapée, o limpie con aspiradora en vez de regar con manguera los pisos de los garajes o las áreas de trabajo exteriores.

Prevent spills and leaks. Develop spill prevention and response procedures. Use drip pans and ground cloths under vehicles. Drain and recycle fluids from wrecked or leaking vehicles as soon as possible.

Prevenga los derrames y las goteras. Desarolle un plan para prevenir y responder a estos derrames. Use recipientes recolectores y trapos debajo de los vehiculos. Tire y recicle los fluidos de los vehiculos chocados o de los que tengan goteras tan pronto que sea posible.

Prevent wash water from entering storm drains. Use a commercial car wash facility for cleaning vehicles. It is illegal to allow car wash runoff from commercial vehicles to enter the storm drain.

Prevenga que la agua sucia entre en las alcantarillas. Use un negocio comercial del lavado de auto. Es ilegal permitir que la agua usada del lavado de vehiculos comerciales entre en las alcantarillas.

Protect outdoor work and storage areas. Cover equipment/ materials and work/ storage areas. Place bulk fluids in secondary containment.

Proteja las áreas de trabajo y almacenamiento exteriores. Cubra estas áreas y también los equipos y materiales. Ponga los fluidos de grandes cantidades en recipientes secundarios.

Clean parts in a self-contained sink/drum unit when working with solvents. Inspect parts-washing units daily for leaks and make necessary repairs immediately. Use aqueous cleaning solutions instead of solvents when possible. Recycle used solutions through a licensed hazardous waste hauler.

Limpie las piezas y los repuestos en una unidad de fregadero/ tambor cuando trabaje con solventes. Inspeccione las partes de la unidad de limpieza diariamente para detectar goteras y haga los arreglos necesarios inmediatamente. Use soluciones a base de agua en vez de los solventes cuando sea posible. Recicle las soluciones usadas por medio de una compañia con licencia para transportar deshechos peligrosos.

Dispose of waste properly. Recycle oil, oil filters and antifreeze. Never pour liquids down the gutter or storm drain.

Disponga de los deshechos correctamente. Recicle el aceite, los filtros de aceite y los anticongelantes. Nunca debe tirar liquidos en las alcantarillas o rejillas.

Storm water and the pollutants it carries flow directly into the nearest creek, river, lake or lagoon, eventually reaching the ocean. Do your part to help keep our waters clean for you, your family and our environment.

Las aguas pluviales llevan los contaminantes directamente a los arroyos, rios, lagos y lagunas, y finalmente se desembocan al océano. Haga su parte ayudando a mantener nuestras aguas para usted, su familia y el medio ambiente.

This poster is brought to you by the San Diego Regional Copermittees. To report complaints or for more information, call the Regional Stormwater Hotline at 1-888-846-0800.

Storm Water Pollution Prevention Program
THINK BLUE
You're the solution to storm drain pollution.
Protecting our beaches, bays, and waterways

project clean water

# GENERAL BEST MANAGEMENT PRACTICES FOR INDUSTRIAL AND COMMERCIAL FACILITIES

In accordance with Section D.3.b of the Municipal Permit, the City of El Cajon developed an inventory of general best management practices that may be selected where appropriate for implementation at all industrial facilities and high priority commercial facilities of the Jurisdictional URMP and revisions. General BMPs emphasize *non-structural* BMPs as an initial step toward low-cost, feasible implementation. In addition to general BMPs, high priority industrial and commercial facilities are also required to implement applicable activity-specific BMPs listed in the City's Updated JURMP document (Appendix C.3.2 and C.3.3). General BMPs are listed below in three tables:

TABLE OF CONTENTS PAGE

TABLE 1. GOOD HOUSEKEEPING BMPS ..... 1
TABLE 2. MATERIALS HANDLING BMPS ..... 4
TABLE 3. EQUIPMENT MAINTENANCE BMPS ..... 8

In addition to the information provided within this section, more specific BMP information can be obtained from the Caltrans Storm Water Quality Handbooks (2003) and the California Storm Water Best Management Practice Handbook for Industrial/Commercial Facilities (2003).

## TABLE 1. GOOD HOUSEKEEPING BMPS

| BMP Name | Purpose | Description |
|---|---|---|
| **Routinely Report Any Observed Non-Storm Water Discharges** | Prevent improper handling and disposal of significant materials that may be spilled or deposited into the storm drain system | Develop adequate routine reporting procedures so personnel can identify an act of illegal dumping or suspicious non-storm water discharges; Post signs with information regarding appropriate reporting procedures |
| **Perform Regular Cleaning** | Eliminate the accumulation of pollutants (dirt, surplus materials, spilled or dropped substances, litter, and debris) that collect in areas that can discharge runoff to storm water. Such areas include maintenance shops, manufacturing facilities, metal fabrication shops, mechanic garages, loading docks, and storage areas | Maintain regular sweeping and cleaning schedules; Keep work areas dust free and orderly; Keep floors and ground surfaces dry using brooms, shovels, vacuum cleaners; Collect and dispose of garbage regularly |
| **Avoid Hosing Down the Site** | Eliminate contaminated runoff generated by "wet" cleaning or hosing down of outdoor paved areas such as work stations, loading/unloading sites, maintenance shops, storage areas, and any areas that may contribute pollutants to storm water | Dry methods of cleaning include sweeping, using damp rags or mops and vacuums; If hosing is necessary the downstream storm drain should be permanently or temporarily modified with a plug such as a rubber mat, filters, absorbent blankets or bermed with sandbags. |
| **Perform Regular Pavement Sweeping** | Prevent trash, litter, and particulate matter from accumulating on paved surfaces and reduce the potential for these materials to wash into storm drains during storm events | The frequency of regular dry sweeping should be scheduled according to the quantity, toxicity and usage of materials, proximity to source area, evidence of exposure to storm system, probability of exposure, and sensitivity of receiving water |
| **Place Trash Receptacles in Appropriate Locations** | Promote the proper placement, handling, and disposal of waste materials to reduce spillage and accumulation in outdoor areas that are exposed to storm water runoff | Place trash receptacles in accessible locations and in sufficient numbers; Train personnel as to the location of trash receptacles and waste handling areas |
| **Train Employees to Properly Dispose of Wastes** | Keep employees and personnel informed and aware of the most recent BMPs regarding waste management | New employees should be trained regarding proper waste handling such as warnings about pouring deposit wastes into the storm drain, reporting observed discharges, and recycling procedures; All employees should be trained annually |
| **Permanently Seal Floor Drains that Discharge to the Storm Drain System** | Eliminate connections that act as a pathway for spilled or leaked pollutant materials to enter the storm drain system | Interior floor drains should be permanently sealed (whenever safe for structural integrity) to prevent accidental illegal dumping of contaminants into the storm drain system |
| **Confirm that No Industrial Sinks are Connected to the Storm Drain** | Eliminate direct connections that can introduce pollutants to the storm drain system | Sinks in industrial areas should be connected to the sanitary sewer system or appropriate disposal locations; Review and inspect "As-built" piping diagrams and building or site plans to verify that sinks are not connected to any storm drain |

| BMP Name | Purpose | Description |
|---|---|---|
| **Store Waste and Recycling Materials in Proper Containers** | Protect waste and recycling materials from exposure to wind, weather elements and scavengers that can transport pollutants to storm water | Dry waste such as light scrap metal, floor sweepings, metal chips and paper that can be affected by wind should be kept in sealed containers; Keep dumpsters closed; Seal recycling drums; Label containers, keep them readily accessible and empty containers regularly |
| **Control Roof Downspout Discharge** | Where possible, divert runoff collected on roofs, canopies and other coverings from discharging into areas of potential pollutant use or storage | Downspouts should be directed to avoid critical areas such as fueling, fabrications, lead tool, and dye storage of hazardous waste storage areas |
| **Minimize Storm Water Run-On from Adjacent Facilities and Properties** | If possible, divert run-on generated by neighboring facilities or adjacent properties before it can enter the site grounds. This should be done in such a manner as to prevent flooding of adjacent property. | Berming, diversion ditches, and dikes can direct flow away from the site; Vegetated strips, grass swales, or infiltration basins and trenches can impede slow incoming flow |
| **Conduct Refresher Courses in Operating and Safety Procedures** | Reduce spills and accidents that may cause significant materials to contaminate the storm drain system | Personnel should be required to have training and refresher courses to learn new procedures and policies regarding equipment operation and review correct operating and safety procedures |
| **Designate Special Areas for Draining or Replacing Fluids** | Eliminate improper handling and disposal of waste and reduce accidental spillage of significant materials in an unprotected area | Motor oil, coolants, and other potential pollutant fluids should be drained and replaced at specific areas designated for this activity |
| **Drain All Fluids From Stored or Salvaged Vehicles and Equipment** | Eliminate the potential for spillage such as oil, antifreeze, and hydraulic fluid from vehicles and equipment under long-term storage | All oil and other fluids should be drained from vehicles being stored long-term or salvaged and the oil should be collected and recycled; Post signs on drained vehicles |
| **Completely Drain Oil Filters before Disposal** | Reduce potential for contamination of storm water due to spills and leaks from used oil filters | All filters should be completely drained into collection drums for recycling and disposal of used oil; Post signs stating requirements to completely drain filters before disposal |
| **Wash Equipment and Vehicles in Designated Areas** | Contain runoff that may carry detergents, oil, and/or grease from vehicle washing and eliminate potential for contact of polluted water with the storm drain system | Facilities should have designated, bermed wash areas that contain wash water and drain to the sanitary sewer, a sump, or to a filter |
| **Discharge Wash Water to a Sanitary Sewer** | Eliminate runoff generated by cleaning of vehicles, equipment, and floors from entering the storm drain | All washing should occur in designated contained areas and wash water should be discharged to a sanitary sewer, collected in dead-end sump tanks and transported to a treatment facility or filtered |
| **Reduce the Amount of Liquid Cleaning Agents Used** | Reduce potential for pollution from cleaning agents such as soaps and detergents used in any maintenance operations including vehicle, equipment, aircraft or ship cleaning, metal work, and painting practices | Use products other than liquid cleaning agents to the maximum extent practicable (MEP); Substitute cleaning methods such as wire brush scraping or using a bake oven |

| BMP Name | Purpose | Description |
|---|---|---|
| **Substitute Non-Toxic or Less-Toxic Cleaning Solvents** | Minimize exposure of organic solvents used for cleaning equipment and parts to storm water discharge | Substitute non-toxic or less-toxic cleaning agents; Use non-caustic detergents, water-based degreasers, non-chlorinated solvents and phosphate-free detergents; Manage cleaning materials properly |

TABLE 2. MATERIALS HANDLING BMPS

| BMP Name | Purpose | Description |
|---|---|---|
| **Use Solvents Efficiently** | Reduce potential for spills and leaks of cleaning solvents in repair and maintenance operations | Reuse solvents and use sparingly; Pre-soak parts in "dirty" solvent before placing in fresh solvent to reduce the volume of solvent used |
| **Use Outside Contractor for Handling Used Solvents and Other Significant Materials** | Prevent improper storage, handling, and disposal of solvents, oils, paint thinners, and other toxic chemicals to reduce potential for spills and contamination of storm water | Use private contractors such as Safety Kleen to handle the disposal and replenishing of toxic chemicals |
| **Protect Storage Containers from Being Damaged by Vehicles** | Prevent vehicle impact damage to storage containers such as ruptures and cracks that may lead to significant spills and leaks | Install bollards or traffic barriers, fences and curbs to protect containers stored in locations accessible to vehicles |
| **Centralize Liquid Solvent Cleaning to One Location** | Promote conservative use of liquid solvents in designated contained areas to reduce the potential for spills, illegal dumping, and improper use of the solvent | Promote cleaning of parts using "dry" methods; if liquid solvents are necessary, clean in central locations to reduce the number of personnel using solvents and promote proper use and disposal; ensure that cleaning locations are properly operated and maintained |
| **Properly Store Containers** | Prevent exposure of significant materials or potential pollutants stored in outdoor containers to storm water | Proper storage includes: provide 3 feet of aisle space to provide access for inspections, store drums and bags away from traffic routes, stack containers according to manufacturers instructions, store liquid containers in bermed area |
| **Use Overpack Containers or Containment Pallets to Store 55-Gallon Drums Outside of Storage Areas** | Contain and prevent chemical, oil, solvent, or liquid leaks from 55-gallon drums to prevent contamination of storm water | Overpack containers and spill prevention or containment pallets are secondary containers, generally constructed of plastic; Secondary containment should be adequate to hold the contents of the storage barrels should they break or leak |
| **Provide Roof to Cover Source Area** | Prevent contact of storm water rainfall with significant materials in critical areas | Construct a roof, canopy, or effective covering for critical areas such as fuel transfer, loading/unloading, mechanical shops, metal fabrication and hazardous material storage areas |
| **Pave Bermed Areas** | Prevent infiltration of spilled material into the soil and subsequent transmission to the storm drain system | Critical areas designated for material handling and storage, equipment repair, and maintenance operations should be paved with impervious material such as concrete, asphalt, clay or plastic and curbed by berms and dikes |
| **Repair Leaky Roofs** | Keep storm water from leaking into covered areas where hazardous substances, parts equipment, vehicles and materials are stored | Repair leaky roofs as required for each building, move stored equipment and materials to another covered area, train personnel to notify supervisors when leaks are observed |

| BMP Name | Purpose | Description |
|---|---|---|
| **Recycle** | Reduce the amount of hazardous and non-hazardous waste material such as solvents, oil, scrap metals, wash water and absorbent materials used at the site and prevent exposure of significant materials to storm water activity | Recycling collections should be conducted weekly and more frequent pickups may be established based on quantity, toxicity, probability of exposure of materials to storm water, length of storage time, evidence of exposure, and sensitivity of receiving waters |
| **Control Spills** | Reduce potential for spills and implement proper containment in the event of a spill or leak to prevent the contamination of storm water runoff | Material Safety Data Sheets (MSDS) should be followed for handling, storage and cleanup of significant materials; For small spills, use absorbents such as sand, straw, or sawdust; For larger spills, use spill kits, boom, and other response supplies |
| **Label all Drums, Cans, Containers, Tanks, and Valves** | Reduce the potential for misuse or spillage of stored materials; Ensure that appropriate procedures, equipment and storage containers are used to prevent spills and ensure that in the event of a spill the material is properly identified and the appropriate response is implemented | All containers should be labeled according to its contents (solvent, gasoline) hazardous substances should be labeled regarding the potential hazard (corrosive, radioactive, flammable, explosive, poisonous); Department of Transportation (DOT )labeling requires that labels be prominently displayed on transported hazardous and toxic materials |
| **Construct Berms or Dikes Around Critical Areas** | Provide secondary containment for critical areas such as material handling and storage, equipment repair and maintenance areas to divert spills and leaks away from the storm drain system | A raised berm or dike should be placed around all critical areas or source areas with a high potential for release of pollutants |
| **Use "Doghouse" Design for Outdoor Storage of Small Liquid Containers** | Reduce the potential for pollution from small containers of liquid materials (paints, solvents, antifreeze, and oil) stored outdoors | Store small containers, cans, and pails carrying toxic contents inside buildings or in a "doghouse"; A doghouse design consists of a two walled shed with a peaked roof to divert rainfall and flooring equipped with spill prevention pallets |
| **Do Not Store Used Parts or Containers Directly on the Ground** | Prevent potential contamination from used parts covered in oil and grease, leaks in 55-gallon drums and flammable storage lockers by limiting direct contact of these stored materials with ground surfaces | Store used parts, storage drums and flammable materials indoors; store small parts in sealed containers, place drums on pallets; Use waterproof tarpaulins to protect ground surface and to cover stored materials |
| **Store Batteries in a Secondary Container** | Prevent contamination such as battery acid and caustic material from batteries into runoff | Store lead-acid batteries and charging units on pallets, in a bermed area under a canopy or awning; Used and cracked batteries should be stored in sealed containers |
| **Keep Open Flames away from Flammable Material** | Prevent accidents and ensure safety of personnel and staff as well as prevent polluted or toxic ash, rubbish, and debris generated by accidents, explosions, fires, and other chemical reactions from entering the storm drain | Open flames and smoking are prohibited within 50 feet of flammable materials (including paints); Use spark-proof tools when closer than 50 feet and post warning signs in areas where flammable materials are stored |
| **Use Door Skirt or Seal** | Contain spills of toxic or potential pollutant materials during loading and unloading activities and prevent contact of leaking material with ground surface runoff | Retrofit doorways used for loading with rubber or plastic door skirts; The door skirt acts as a strip barrier that encloses and seals the open end of the trailer with the open door of the loading dock during loading and unloading operations |

| BMP Name | Purpose | Description |
|---|---|---|
| **Employ Proper Handling Procedures to Transport Materials and Waste** | Prevent damage such as fractures or ruptures (which can create leaks and spills) during transport of drums, containers and storage boxes carrying potential pollutants | Drums should be moved using a barrel cart or by placing the drum on a pallet and moving by forklift; A minimum of two persons should assist the forklift operator in transferring a drum to or from a pallet; Metallic strapping should be used to secure stacked drums |
| **Control Dust and Particulates** | Prevent pollution of storm water from indoor and outdoor industrial processes such as metal finishing, painting, sanding, grinding, sawing, milling, sandblasting, welding, and cement manufacturing that generate significant quantities of dust and particulates | Control the emission of dust particles generated by industrial processes by using filters, baghouses, electrostatic precipitators, cyclone concentrators, waterwalls, and other measures |
| **Store Liquids and Significant Materials within a Building or Covered Area** | Prevent leaks and spills of significant materials stored, handled, or transported outside, to minimize contamination of storm water | Store significant materials within an enclosed building or covered area on an impervious surface such as concrete to MEP; Direct contaminated runoff to a storm water treatment facility or containment; Clean spills and leaks |
| **Recycle Pressure Wash Solvents** | Eliminate discharge of waste water containing dirt, oils, grease, and paint from pressure wash systems to the storm drain | Pressure wash wastes should be recycled using a closed loop system or "zero-discharge system"; Train personnel on proper usage of pressure wash systems |
| **Provide Overfill Protection** | Prevent overflows that may occur during regular fueling operations or transfer of fuels and toxic liquids to vehicles, equipment, aircraft, and ships from exposure to storm water | Retrofit existing and new tanks with overfill prevention equipment such as automatic shut off valves, restricted flow devices, or alarms that indicate when the tank is almost full, and install secondary containment |
| **Monitor Major Fueling Operations** | Prevent accidental overflows containing fuels and toxic liquids during high-volume transfers (such as for fuel tankers) that may contaminate storm water | Implement a policy mandating second party monitoring of fuel operations; Monitor high-volume transfers; Train personnel for appropriate emergency spill response actions |
| **Provide Absorbent Booms in Unbermed Fueling Areas** | Contain accidental spills and leaks during fuel transfer operations and prevent contamination of runoff | Portable absorbent booms should be stored and readily available at fueling areas; These booms should be used to contain spills and leaks or spills |
| **Eliminate Topping Off Tanks** | Eliminate fuel spills from overfilling tanks and prevent contact of fuels with ground surface and storm runoff | Develop a policy to discourage "topping off" fuel tanks; Post warning signs stating explicit penalties |
| **Install Leak Detection System** | Detect leaks from underground storage tanks (USTs) that may leak fuel or toxic liquids and contaminate the soil or groundwater | Install leak detection systems such as automatic gauging, vapor monitoring, groundwater monitoring wells and interstitial monitoring; Keep a close inventory on all fuel transfers in and out |
| **Designate Areas for Fueling from Mobile Fuel Tankers** | Contain accidental spills and leaks from mobile fuel tankers (MFTs) to designated areas | Minimize the use of MFTs and perform fuel operations in designated areas particularly when a large number of vehicles are in use |
| **Restrict Access to Storage Tanks** | Prevent toxic discharges from storage tanks to the ground due to unauthorized handling and vandalism | Restrict access to tanks and valves to authorized personnel and properly trained employees; Supply a locked gate and fence the area around tanks |

| BMP Name | Purpose | Description |
|---|---|---|
| **Divert Drainage to a Low-Flow Sump** | Treat contaminated flows that drain directly into the storm drain system | Use structural controls such as a low-flow sump, oil/water separator, wet pond or infiltration basin so that spilled material is not discharged into the rest of the storm drain system |

TABLE 3. EQUIPMENT MAINTENANCE BMPS

| BMP Name | Purpose | Description |
|---|---|---|
| **Restrict Access to Area and Equipment** | Reduce pollutants in storm water runoff caused by the release of significant materials due to vandalism of vehicles and facility property, or unauthorized trespassing | Vehicle, equipment and storage areas should be fenced, gated and access restricted to authorized personnel; Fences and gates should be properly maintained and additional measures such as lighting of the area, security guards and alarms should be used appropriately |
| **Keep Equipment and Vehicles Clean** | Reduce oil and grease from leaky vehicles and equipment; These pollutants may accumulate on impervious runoff areas and can be washed into the storm drain | Regularly clean and maintain vehicles and equipment using dry methods; Centralize liquid solvent cleaning to one location and wash vehicles in designated areas |
| **Maintain Equipment in Good Condition** | Prevent spills and leaks due to corrosion, loose fittings, poor welding, and improper poorly fitted gaskets on vehicles and equipment | Equipment should be kept in good working condition and inspected regularly for fluid leaks; equipment that is leaking or in poor working condition should be repaired or replaced |
| **Implement Qualifying Tests for Equipment and Vehicle Operators** | Prevent accidents due to employee misuse or unfamiliarity with operating procedures that may result in leaks or spills that expose significant materials to storm water | Implement qualifying tests for personnel operating equipment or vehicles; Train personnel in safe operating procedures and basic maintenance and spill response procedures associated with particular equipment and vehicle operation |
| **Dispose of Obsolete Equipment, Inoperable Vehicles, and Surplus Materials** | Reduce the likelihood of storm water pollution due to oil and lubricant spills from leaky engine parts in obsolete equipment, inoperable vehicles and surplus materials stored on-site. | Perform proper off-site disposing and recycling of old parts, equipment, and surplus materials based on implementer's judgments of facility operations and conditions |
| **Check Vehicles and Equipment for Leaks** | Prevent contamination of storm water due to fluids from leaky engine parts on stored vehicles, aircraft or equipment | Stored or salvaged vehicles and equipment at the site must be inspected for oil and fluid leaks; Use drip pans to catch leaks and clean stains using "dry" methods |
| **Park Vehicles or Equipment Indoors or under a Roof** | Eliminate or reduce exposure of pollutants like oil and grease leaking from parked vehicles and equipment to storm water | Park and store vehicles and equipment indoors and under a roof, canopy, or other covering when available |
| **Park Vehicles on an Impervious Surface** | Prevent soil contamination and contamination of runoff; Prevent infiltration of spilled pollutants on ground surfaces into soil | Vehicles should be parked on an impervious surface such as concrete and asphalt that cannot be readily penetrated by rainfall |
| **Use Drip Pans under Leaking Equipment** | Contain fluids that may leak from equipment such as pumps, air conditioners, and boilers until equipment can be properly repaired or replaced | Drip pans should be placed under leaking equipment to collect any leaking fluid as a temporary BMP until the equipment is repaired or replaced |
| **Perform Equipment Maintenance at Designated Areas** | Contain oil, grease, engine coolant, and any pollutants generated by routine maintenance activities of small equipment such as sandblasters and sprayers and large equipment such as construction equipment, tanks, aircraft, and boats | Maintenance of equipment should only be performed in specific predetermined areas such as hangars, shops, garages, or dry docks; all employees and personnel should be trained and informed as to the location of these areas and appropriate BMPs to reduce and contain pollutants |

| BMP Name | Purpose | Description |
|---|---|---|
| **Designate Areas for Washing Non-Vehicular Air Filters and Other Greasy Equipment** | Contain oil and grease waste generated during cleaning and maintenance of mess hall cooking grills, air filters, and facilities where significant grease and soot can accumulate | Greasy equipment should be cleaned and maintained in designated areas where wash water and grease are contained and diverted to a sump or discharged to the sanitary sewer |
| **Conduct Maintenance within Building or Covered Area** | Prevent deposits and stains from oil, grease, or solvents spilled or leaked during maintenance activities from contacting storm water | Conduct maintenance of equipment and vehicles within an enclosed building or covered area such as hangars, garages, and shops; Clean all spills and leaks immediately using rags or dry absorbents |

Subject: Stormwater Pollution Prevention requirements for your mobile business

Dear Business Owner/Operator:

As part of local water quality regulations, municipalities in the San Diego region are required to work with businesses conducting mobile operations to prevent stormwater pollution. Best Management Practices, commonly referred to as "BMPs", are operational efforts consisting of housekeeping practices, spill control and prevention, and proper use and storage of materials that are designed to reduce the environmental impact from certain activities. Using BMPs will help prevent pollution from your business. Proper implementation and maintenance of BMPs are critical to their effectiveness.

You have been identified as a mobile businesses operating in the San Diego region. Your business is required to implement the following regional BMPs during your business operations to prevent pollution.

- **Storm Water Training**
- **Contain and Clean Up Spills (Spill Kits)**
- **Properly Handle All Waste (Solid, Liquid and Hazardous)**
- **Protect Storm Water Conveyance System: (Streets, Gutters and Alleys)**
- **Provide Proper Handling and Containment Of Materials**
- **Provide Equipment Washout Area**

The attached document provides details on how to properly implement each of the required BMPs. Additional details about BMPs for mobile businesses are available on the "Project Clean Water Toolbox" website at (http://www.projectcleanwater.org/bmp/). Please evaluate and revise your practices as necessary to ensure that you do your part in preventing stormwater pollution.

You are currently on record as doing business in the municipalities listed below. You may also want to verify that you meet their regulations, as the BMP requirements for each city may vary slightly. If you have any questions or concerns, please contact the staff of the jurisdiction where you are conducting business.

Respectfully,

# Required Minimum BMPs
# For
# Mobile Businesses

## 1) Storm Water Training:

Proper training is required to prevent the discharge of pollutants in to the storm water conveyance system. Train all workers to properly identify, transport and manage materials to prevent a discharge to the storm water conveyance system. Train all employees on discharge prohibitions, storm water best management practices (BMPs), pollution prevention and methods to control, contain and clean up spills.

## 2) Contain and Clean Up Spills (Spill Kits):

Keep written spill procedures and cleanup materials in each vehicle. Spill kits must be appropriate for materials used in the business activities. In the event of a spill immediately contain the spill on site. Use appropriate equipment and/or materials to clean up the spill. Immediately report any spill that cannot be completely contained to the jurisdiction where the spill occurred. Sweep up the material and dispose of it properly. If the spill is hazardous, contact the appropriate reporting agency and take appropriate clean up and disposal actions.

## 3) Properly Handle All Waste (Solid, Liquid and Hazardous):

Before starting a job consider the weather conditions and determine how to dispose of all waste. Properly remove all waste from the worksite or place in proper waste containers with lids. Never pour liquids into trashcans, dumpsters or storm drains. Liquid non-hazardous waste may be disposed to the sanitary sewer, if appropriate, or placed in sealed containers, removed from the worksite and disposed of properly. Inspect and label all hazardous waste containers prior to removal. For details on the management and disposal of specific chemical waste contact the County Hazardous Materials Division at (619) 338-2231.

## 4) Protect Storm Water Conveyance System: (Streets, Gutters and Alleys)

The storm water conveyance system is a direct connection to creeks, rivers, bays and the ocean. At the work site, locate the probable pollutant discharge points and install appropriate materials to contain the pollutants. Capture and remove pollutants from your activity as close to the work area as possible. Properly dispose of any collected liquid waste. Check with your local jurisdiction to determine if permits are required prior to disposing liquid wastes to the sanitary sewer system (mop sink, toilet, etc.) or whether they can be directed to landscaped areas that will not run off into the storm water conveyance system.

## 5) Provide Proper Handling and Containment Of Materials:

To prevent spills or discharges, all materials must be properly contained during use and transport. Provide secondary containment, to the maximum extent practicable, for all liquids in the event of spills, punctures or leaks during use and transport. Store materials and equipment securely in the vehicle to prevent loss. Provide leak proof lids for liquids and cover all materials and waste while not in use and during transport. Maintain a materials inventory and material safety data sheet (MSDS) if hazardous materials are being used or transported. Inspect and label all chemical containers.

## 6) Provide Equipment Washout Area:

Equipment washout areas should be located away from any storm drain inlets or open drainage facilities. The washout area can be a container, a berm or a liner to collect and contain liquids and prevent runoff. Remove washout out waste from the job site and dispose of properly.

- For additional details on mobile business best management practices consult:
  - Project Clean Water Tool Box at **www.projectcleanwater.org/bmp**
  - California Storm Water BMP Handbook at **www.cabmphandbooks.com**

These practices represent the minimum requirements. Contact the local jurisdiction where the job is located, as there may be more stringent requirements.

# Business License and the Storm Water Program

**Goal**: Use information collected and stored in the Business License database to support the Storm Water Program inspection and public outreach components and potentially increase revenues for the Business License Program.

**Process:**

1. The Storm Water group has access to the Business License database.

2. The Finance Department provides the Storm Water group with a weekly or bi-weekly list of new businesses added to the Business License database.

3. Storm Water staff checks the business type information, SIC code, number of employees, and APNs for accuracy and adds needed information to the Business License database.

4. Storm Water staff may conduct site visits to new businesses when unsure about information that was provided.

5. The Storm Water section updates business inventories by appending new businesses that may present a high threat to water quality.

6. Develop a Storm Water informational sheet for Business License applicants. The Business License staff would hand out the informational sheet at the time. (Supports Storm Water outreach component)

Appendix A.6

## El Cajon Storm Water Pollution Prevention Program

## Pet Care Tips That Help Keep Our Water Clean

We have all probably had some unpleasant personal experience with pet waste. It is not something we like to see, especially in a park where we want to walk or play. And we do not like to step in it, of course. But what we see is only one part of the problem. If not cleaned up and disposed of properly, the bacteria in pet waste gets washed into the streets, down storm drains, and into creeks, rivers and eventually the beaches.

**How Pet Waste Can Harm Us, If Not Handled Properly**

- Spreads diseases between pets.
- Infects children and adults with disease-causing bacteria and parasites.

**How You Can Make A Difference And Keep Our Water Clean!**

When walking with your pet, take a plastic bag or paper cup along and dispose of the waste properly by

- ✓ Putting pet waste in the household trash after securely wrapping it. (Never put pet waste in a landscape waste container or the compost bin), and
- ✓ Be aware of and follow the Storm Water Management Ordinance that governs pet waste cleanup. The Storm Water Management Ordinance states, *"Pet waste shall not be disposed to the storm water conveyance system or receiving waters."* Remember that, if not cleaned up and disposed of properly, pet waste will eventually find its way into the storm drain system.

**Do You Know How Many Dogs Live In El Cajon?**

- Around 10,000 registered dogs reside in the City of El Cajon.
- These dogs create approximately 5,000 pounds of pet waste per day!
- Pets, as well as humans, can catch diseases through coming into contact with infected pet waste.

The number of pets in El Cajon is much greater than the number of wild animals that once lived here. If we kept just a few pets their waste might not be much of a problem. But we keep a lot of dogs (and probably even more cats)

You wouldn't want to live in a city that lacked a public sewer system. With as many dogs living in the City of El Cajon, not cleaning up and properly disposing of pet waste can be a pollution problem. You can be an important part of the pollution solution.

For more information, contact the Storm Water Program at (619) 441-1653, or browse the web to http://www.ci.el-cajon.ca.us/dept/works/stormwater.html.

## Don’t Trash El Cajon!

Trash is a major component of pollution entering streams and rivers in our watershed. Every year thousands of pounds of trash and debris are removed from Forrester Creek and other drainages tributary to the San Diego River in the El Cajon area. Most trash enters our local creeks, and ultimately the San Diego River via the storm drain system. By taking a few simple steps, such as throwing all trash into the proper receptacles, or holding onto trash until a receptacle can be found, everyone can greatly reduce the amount of trash clogging our waterways.

Cigarette butts are the most littered item found in the United States and around the world, and El Cajon is no exception. Due to smoking bans inside public places in California and other states, over 99 percent of cigarettes are now smoked outside. A direct increase in the effects to the environment has been seen. Cigarette butts thrown onto streets, parking lots and sidewalks get washed into storm drains, which flow to creeks, rivers, and eventually to our beaches and ocean. Once submerged in water, toxic chemicals from cigarette smoke found in cigarette filters are released, threatening water quality and marine life. Cigarette butts thrown into the environment have also been linked to fires and are especially dangerous during dry weather.

The Surfrider Foundation, I Love a Clean San Diego, the American Heart Association, California Highway Patrol (CHP), and several other organizations have gotten together to crack down on cigarette butts in the environment. Through a program called 'Hold On To Your Butt' (see more details at http://sandiego.surfrider.org/campaigns/hold-on-to-your-butt), people can call 1-800-NOSMOKE and report drivers throwing cigarette butts out their vehicle windows. The CHP responds by sending a warning letter to the offender. With the help of concerned citizens and programs like these the amount of trash entering our watershed’s streams and rivers can be reduced.

For more information, contact the Storm Water Program at (619) 441-1653, or browse the web to http://www.ci.el-cajon.ca.us/dept/works/stormwater.html.

**How Should I Wash My Car?**

**The Challenges of Maintaining a Clean Environment**

In today's world, we face many changes especially concerning environmental protection. As never before, all of us are required, both in our personal surroundings and in our communities, to pay attention to how we care for the environment, as well as the legacy we leave behind for generations to follow. We are challenged to change the way we live for the sake of creating a sustainable world.

As our collective environmental concerns continue to develop we have focused on the ways we disposed of trash. Anti-litter ordinances lead the way to production of environmentally sensitive papers and plastics, which also has led to trash recycling bins and green waste bins.

It's now time to think about how we wash our cars and the impact home car washing has, as it depletes our water resources and pollutes our environment.

**Why Is Home Car Washing a Problem?**

Most car washing is being done at home with a hose and a bucket of soap in the driveway. A small percentage of residential car washers will use a hose with a trigger nozzle and wash their cars on more appropriate surfaces such as their lawn that will allow the water to seep into the soil, limiting the amount of water used and eliminating wastewater runoff into community wetlands, rivers, bays and the ocean.

However, the majority will wash their cars in their driveway with their garden hose using an average of 100 gallons or more of water. Studies indicate an average of 100 gallons of water flow thru a typical 5/8" garden hose every 10 minutes. The runoff water then becomes wastewater mixed with soaps, road acids, brake dust, and other harmful contaminants.

When wastewater is allowed to run freely down the driveway into the gutters, the water empties straight into the storm drain and straight into our community wetlands, rivers, bays and the ocean.

Many residents are completely unaware of where wastewater from their residential car wash goes. Why? Many probably think that the outside water goes where the inside water goes—to a treatment plant of some sort. When asked about storm drain at the end of the street, residents will often refer to it as the sewer. If they only knew and understood that the water that enters the storm drain flows into our waterways, most residents would willingly change by washing their cars on their lawns using a trigger nozzle, or choose to use a professional car wash in the same way they choose to use a professional oil change center.

Contact the Storm Water Program at (619) 441-1653 for additional information.

**City of El Cajon Storm Water Protection Program**

**Pool Maintenance and the Water Quality Act**

Maintenance of your pool is critical to the health of your swimmers, as well as important to keeping costs in line. However, many people don't fully understand the importance of proper maintenance to keeping our streams, rivers and beaches healthy and clean.

This article explains the regulatory issues pertaining to the discharge of pool water and the two methods by which it may be discharged. Many pools are plumbed to allow the discharge to go directly to the sanitary sewer.

Before you allow anything to go into the gutter or storm drain, stop to think. Storm drains run directly into channels and creeks, through wetlands and to the ocean.

**Acceptable and Preferred Method of Disposal**

When the discharge of pool water to the sanitary sewer is not feasible, federal law allows the release of dechlorinated swimming pool water. In the City of El Cajon, the guidelines for such a release require pool owners to ensure that all the following criteria are met:

- The residential chlorine does not exceed 0.1 mg/l (parts per million);
- The pH is between 6.5 and 8.5;
- The water is free of any unusual coloration;
- There is no discharge of filter media;
- There is no discharge of acid cleaning wastes; and
- Any pipe connection to the storm drain system has a valid permit with final approval from the City of El Cajon.

**How can I find out if I'm within the standards?**

Compliance with this guidance can be verified using a pool testing kit. Excess chlorine can be eliminated by not adding the chlorine tablets for a couple of days prior to discharge or by purchasing dechlorinating chemicals from a local pool supply company.

**Doing your part!**

By ensuring compliance with these criteria, you will make a significant contribution toward keeping pollutants out of our City storm drains and downstream creeks, streams and the ocean, and in so doing, you will help to protect plants and wildlife that are sensitive to pool chemicals.

**Residential Automobile Repair and Maintenance**

Many people prefer to repair and maintain their vehicles at home. Those that do, need to ensure that these activities do not pollute our streams, rivers, bays and the ocean. Automobile maintenance and repair activities can introduce chemicals such as oil, grease, antifreeze, hydraulic and brake fluids, and metals to our surface and groundwater. A recent study estimated that the amount of oil running off our streets and driveways and ultimately flowing into the ocean is equal to an Exxon Valdez oil spill — 10.9 million gallons — every eight months (NRC, 2002).

Keep in mind that zoning laws require that cars parked at residential properties be operational at all times. So, pulling the engine or otherwise disabling the vehicle might result in an administrative violation or fine. Plan to take your vehicle to a professional facility for major repairs.

**Minimum Requirements**

The following best management practices (BMPs) or equivalent measures, methods, or practices are required if you engage in automobile repair and maintenance at your home.

- Collect all used oil, antifreeze, or other vehicle fluids in containers with tight fitting lids. Do not mix these fluids in the same container as this limits your ability to recycle the oil at your local auto parts store or service station.
- Never dispose of used oil, antifreeze, or other fluids into a storm drain, into a ditch, or onto the ground. Oil should be recycled at an auto parts store or service station. Other fluids can be disposed of at a household hazardous waste collection site.
- Never clean the engine or undercarriage of your vehicle at home. For this type of cleaning, take the vehicle to a commercial car wash facility.
- Use drip pans, tarps, or even cardboard and newspaper under the vehicle to capture leaks or spills that may occur during maintenance and repair activities. This ensures spilled fluids won't be washed to the storm drainage system the next time it rains.
- Clean up spills with rags or absorbent material, such as sand, dirt, or cat litter. Do not wash down or hose down these spills to the curbs, roadway, or storm drains. Sweep up absorbents and dispose of them in your garbage can.
- Store automotive parts, such as batteries, engines, transmissions, and other parts that may have oily or greasy residue on them, under cover and off the ground to minimize rainwater contact. Rainwater can wash pollutants off these parts and send pollutants to storm drainage systems and groundwater. Tarps are an inexpensive and easy solution to covering parts.

For more information, contact the Storm Water Program at (619) 441-1653, or browse the web to http://www.ci.el-cajon.ca.us/dept/works/stormwater.html.

# Good Housekeeping

Solid waste is a major component of pollution entering streams and rivers in our watershed. Every year thousands of pounds of solid waste are removed from Forrester Creek and other drainages tributary to the San Diego River in the El Cajon area.

Everything in the watershed affects the water quality in the stream. Hazardous chemicals, automotive products, pesticides, herbicides, fertilizers, pet wastes, excessive soil erosion and air pollution can all contribute to water pollution. These pollutants do not have to be dumped directly into waterways to cause a problem. These pollutants can be washed from streets, lawns, roofs or outside storage areas by rainfall, eventually ending up in streams, rivers and the ocean.

The discharge of pollutants to storm water from waste handling and disposal can be prevented and reduced by storing and disposing waste generated on-site. Store trash, oil based products cleaning products, paints, and similar products in cabinets and containers with lids and covers. Indoor or outdoor surfaces shall be cleaned using dry methods (e.g., sweeper, broom) unless adequate precautions have been taken to prevent the entry of wash water into the storm drain system.

Residential Tips:

- Collect trash and properly dispose in covered solid waste container to prevent spillage.
- Use dry cleaning methods such as sweeping and absorbent materials when cleaning hard surface areas such as driveways and sidewalks.
- Properly collect and dispose of landscape clippings.
- Clean out rain gutters before the rainy season to help reduce the discharge of decomposing leaves.
- Recycle and/or dispose of old unused paints, chemical cleaning products, etc.

Business Tips:

- Collect trash and properly dispose in covered solid waste container to prevent spillage.
- Keep the trash enclosure area free of loose trash and debris.
- Use dry cleaning methods such as sweeping and absorbent materials when cleaning hard surface areas such as dumpster area, loading docks, food handling and driveways. If water must be used, dispose of rinse and wash water from cleaning into a sanitary sewer (if allowed by the local sewer authority). Do not discharge wash water to the street or storm drain system.

- Wash floor mats, grease filters, etc. into areas where waste water or rinse water will discharge to a floor sink or drain into the sanitary sewer.
- Properly store chemical products, paints, oil based products inside enclosure containers.
- Use drip pans or absorbent materials whenever there is a potential spill of liquids during transfer. Clean up any spilled materials immediately and properly dispose of these materials.

For more information, contact the Storm Water Protection Program at (619) 441-1653, or browse the web to http://www.cityofelcajon.us/dept/works/stormwater.html.

# Reduce Lawn Water!

On the average, each person uses approximately 80 gallons of water per day inside their home. An equivalent amount of water is used each day to maintain outdoor landscaping. Landscaped areas generally place the highest demand on water resources. Much of this water is needlessly wasted.

The amount of water required for maintaining landscaping depends on the types and locations of the plants (i.e., lawn, flowers, trees and shrubs). The length of time spent watering your landscaped areas should reflect your plant's needs.

Over watering your landscaped areas may result in excess irrigation water and pollutants being conveyed into the storm drain system. The excess irrigation water that flows off your property and over curbs and into gutters can pick up pollutants including sediment, fertilizers, pesticides, trash, and bacteria along the pathway. Irrigation runoff from landscaped areas has been found to contain high concentrations of these pollutants which can poison fish and contaminate the local waterways.

Sediment can harm aquatic life by clogging the gills of fish, block light transmission - lowering water temperatures, and inhibiting photosynthesis. Organics, such as grass clippings and decomposing leaves, can cause algal blooms and bacteria growth. Fertilizers contain nutrients such as phosphorus and nitrogen that fertilize aquatic algae blooms and promote bacterial growth which can degrade water quality.

Irrigation runoff from landscaped areas has been found to contain high concentrations of fertilizers and pesticides. When pesticides wash into local waterways they can poison fish and contaminate the water runoff. Runoff flows enter Forrester Creek and can impact other tributary drainages including the San Diego River and ultimately the beach.

Taking a few simple steps as identified below, we can greatly reduce our impact on Forester Creek and help save money.

## Simple Water Saving Tips

- Water your lawn regularly for short periods of time (10-15minutes).
- Water during late-night or early morning hours (8pm-6am).
- Avoid watering on windy days.
- Fertilize your lawn in the spring instead of the summer.
- Do not allow weeds to grow in your lawn because they rob your lawn of water.
- Adjust watering times and schedules to ensure that the appropriate amount of water is being utilized on landscaped areas.
- Maintain sprinkler heads and nozzles in good working condition.
- Set up your sprinklers so they do not spray the sidewalk or driveway.
- Mix mulch into the soil matrix to help retain moisture and help reduce the need for frequent watering.
- Use an automatic timer to program each water zone for only the amount of water needed.

For more information, contact the Storm Water Protection Program at (619) 441-1653, or browse the web to http://www.cityofelcajon.us/dept/works/stormwater.html.

# City of El Cajon
# Storm Water Residential Complaints

2011-2012

| | Date | Component | Business Name | Address Number | Street/Location | Complaint/ Observations | City Action | Valid Discharge | Enforcement Action | Was IC/ID Corrected |
|---|---|---|---|---|---|---|---|---|---|---|
| 1 | 07/18/11 | Residential | | 1890 | Calle del Conejo | Resident Draining green slime swimming poop water into the street. | The property was inspected and no discharge was noted. | No | N/A | N/A |
| 2 | 08/02/11 | Residential | | 1515 | Broadway | Large soil piles in driveway with no BMPs in place to prevent sediment discharge. | The contractor and gardener were contacted on site and advised to install BMPs for the soil piles. | No | Verbal | N/A |
| 3 | 08/05/11 | Residential | | 1571 | Greenfield Dr | Large dirt piles and exposed soil in the front yard with no BMPs in place. | A site inspection confirmed the complaint. The resident was unavailable so instructions were left for them to contact the City. | N/A | Verbal | N/A |
| 4 | 08/12/11 | Residential | | 444 | Ballantyne | Private lateral overflow in parking lot discharging to the street. | The PW street crew was present and applied absorbent to prevent the discharge from entering the storm drain. The Vactor truck was able to reclaim all of the discharge. | Yes | Verbal | Yes |
| 5 | 08/15/11 | Residential | | 1231 | Eastside Dr | Discharge of pool filter back flush into the street. | The property owner was contacted and advised to cease any further discharges of pool back flush water into the storm drain system. Storm water educational materials were issued. | Yes | Verbal | Yes |
| 6 | 08/31/11 | Residential | | 1942 | Belmore Ct | Large piles of soil in front yard with no BMPs in place, | Storm water educational materials were left at the door. | No | Verbal | N/A |
| 7 | 09/06/11 | Residential | | 1554 | Lexington | Unknown type pollutant being discharged to the street. | A site inspection found no evidence of a discharge. The building is undergoing rennovation. Storm water educational materials were issued. | No | N/A | N/A |
| 8 | 09/14/11 | Residential | | 432 | Hills Ln | Large soil pile dumped in the right of way with no BMPs in place. Also rear slope in rear yard being doug out for a retaining wall with no permits on file. | The contractor was contacted on site and advised to remove the soil pile and to clean the paved areas without using wate. He was also instructed to submit plans to the city for review. | Yes | Verbal | Yes |
| 9 | 09/22/11 | Residential | | 575 | Graves Ave | Private lateral overflow into the storm drain. | The manager was contacted on site. A plumbing service responded and affected the repairs. | Yes | Verbal | Yes |
| 10 | 09/26/11 | Residential | | 1286 | Bostonia St | Blowing leaves into the street without picking them up. | A large tree in the front yard is dropping leaves. Many found in curbline. No evidence of blowing into the street. Also found small soil pile in driveway. A door tag was left. | No | N/A | N/A |
| 11 | 09/27/11 | Residential | | 1163 | Marline Ave | Occupants are continually washing pollutants down the driveway. 10/14/11 a second compaint was received. The resident was contacted on site. | The front gate, across driveway was closed. There was no discharge noted during an inspection. Storm water educational materials were left on the gate. | No | N/A | N/A |
| 12 | 09/29/11 | Residential | | 289 | El Cajon Blvd | Tenants of building conducting a vehicle washing business in the parking lot behind the building | The residents were advised to cease all vehicle washing activity. | Yes | Verbal | Yes |
| 13 | 10/04/11 | Residential | | 2585 | Windmill View Rd | Landscaper uning a hose to wash off equipment in the street. | The contractor was contacted on site and advised to cease using water to clean or to do it in the landscape area. | Yes | Verbal | Yes |
| 14 | 10/17/11 | Residential | | 600 | Oakwood Way | Large brush pile dumped into the storm channel. | The property owner was contacted on site and advised to cease dumping brush into the channel. Storm water educational materials were issued. | Yes | Verbal | Yes |
| 15 | 10/20/11 | Residential | | 108 | Westwind Dr | Concrete residue being washed down the driveway and into the street. | The resident was contacted and advised to cease all discharges and to protect the material piles in the driveway. | Yes | Verbal | Yes |
| 16 | 10/27/11 | Residential | | 716 | Broadway | There is a large pile of soil in the drieway from trenching job. | The apartment manager was contacted on site and advised to remove the soil piles or protect them. | Yes | Verbal | Yes |

# City of El Cajon
## Storm Water Residential Complaints

| | Date | Component | Business Name | Address Number | Street/Location | Complaint/ Observations | City Action | Valid Discharge | Enforcement Action | Was IC/ID Corrected |
|---|---|---|---|---|---|---|---|---|---|---|
| 17 | 10/27/11 | Residential | | 549 | Graves Ave | The apartment manager rinsed sewage into the gutter from a sewer pipe burst in a garage. | The was no evidence of a discharge found during a site inspection; however the manager was contacted and advised to contact the city in the event of any future discharges. Reporting info was advised. | No | N/A | N/A |
| 18 | 10/31/11 | Residential | | 922 | Coleen Ct | Trash from neighboring property being thrown into concrete drainage ditch. | No trash was found in the concrete ditch that runs along the west side of the property and discharges to Broadway. No other storm water issues were noted. The complainant was contacted and advised of the Citys findings. | No | N/A | N/A |
| 19 | 10/31/11 | Residential | | 743 | Magnolia S | City public works duty crew members notified the storm water department of a sewage overflow into the street. The discharge entered the storm drain inlet at Washington. The property owner was also observed by city staff using a hose to wash debris into the gutter. | The property owner and manager were contacted on site and instructed to inspect the sewer system and to cease using water to clean any paved surfaces. Storm water educational materials were issued. | Yes | First | Yes |
| 20 | 11/01/11 | Residential | | 1026 | Dennistedt Ct | The resident has a vehicle that constantly drain fluid onto the street. | Storm water staff inspected the site and found evidence of recent fluid spill but no vehicle. An informal follow up will continue to locate the vehicle in question. | Yes | Verbal | Yes |
| 21 | 11/02/11 | Residential | | 662 | Tyrone St | A large amount of water is flowing in the drain box near the complainant's residence. No rain event in progress. | An investigation and inspection of the area found that pipes leading into the box are from Helix Water tanks located above the complainants property. | No | N/A | N/A |
| 22 | 11/03/11 | Residential | | 760 | Carlow Ct | Water from this neighboring property is ruining the asphalt in front of his residence. | A site inspection found that the water is from irrigation. No obvious storm water violations were noted. | No | N/A | N/A |
| 23 | 11/04/11 | Residential | | 1150 | Hardin Dr | Complaint of dog feces being dumped into drainage easement. And neighbors encroachement into the easement. | When contacted to view the easement, the complainant stated that the matter had been resolved and no further action from the city was necessary. | No | N/A | N/A |
| 24 | 11/07/11 | Residential | | 907 | Avocado Ave | Water pooling in the driveway from uphill sources and not from recent rains. | An inspection of the site found no storm water issues. This is a ground water problem possibly involving other properties. | No | N/A | N/A |
| 25 | 11/14/11 | Residential | | 990 | Aster Ave | City staff referred a complaint that oil was dumped into drain and discharged to the street and storm drain inlet over the weekend | Storm water inspected the site on 11-14-11 finding no evidence of oil dumping on the property. There is oil residue in the street and curbline near a curb drain. The property owner, contacted on site, stated that he did not pour oil into any drain and has no idea of how the oil gotinto the street. He was advised to improve his housekeeping for engine repair work done in the garage. No current discharge was noted. Storm water educational materials were issued. | Yes | Verbal | Yes |
| 26 | 11/14/11 | Residential | | 1456 | Wagner | Automotive fluids being washed down the driveway. | Storm water staff inspected the site finding no evidence of a discharge. Zoning enforcement will follow up for continued auto repair business at this residence. | No | Verbal | N/A |
| 27 | 11/16/11 | Residential | | 357 | Westwind Dr | Sediment and rock discharge to the street and storm drian inlet from unvegetated, unprotected front yard. | Storm water staff contacted the property owner who ws instructed to sweep all paved areas and install BMPs to prevent any further erosion and discharge. | Yes | Verbal | Yes |
| 28 | 11/21/11 | Residential | | 154 | Westwind Dr | A berm or barior was eliminated when the driveway was resurfaced and now storm water discharges to a neighboring property. | Following a site inspection by storm water staff it was determined that there are no storm water issues or violations noted. The driveway does not appear to have been resurfaced. | No | N/A | N/A |

# City of El Cajon
## Storm Water Residential Complaints

| | Date | Component | Business Name | Address Number | Street/Location | Complaint/ Observations | City Action | Valid Discharge | Enforcement Action | Was IC/ID Corrected |
|---|---|---|---|---|---|---|---|---|---|---|
| 29 | 11/28/11 | Residential | | 1341 | Dove St | PW crew member contacted the storm water dept. regarding a private lateral overflow in the front yard. | Storm water staff inspected the site and found the discharge from an open cleanout in the driveway. The discharge did not enter a storm drain inlet. Absorbent material was applied in the curbline. Storm water educational materials were issued. The property owner was instructed to clean the area and contact a plumbing service. | Yes | Verbal | Yes |
| 30 | 12/06/11 | Residential | | 1223 | Eastside Dr | Discharge of pool filter back flush into the street. | Storm water staff inspected the site finding diatomaceous earth residue in the curbline from a under curb discharge pipe. Storm water educational materials were left at the door. | Yes | Verbal | Yes |
| 31 | 12/08/11 | Residential | | 955 | Wilson Ave | Washing of commercial on residential property. | A site inspection of the property revealed no evidence of storm water violations. The complainant later reversed complaint. | No | N/A | N/A |
| 32 | 12/19/11 | Residential | | 889 | Brockton Ave | Front yard soil bare for relandscaping. No BMPs in place to prevent soil discharge. | Storm water staff contacted the landscape contractor and left storm water educational materials for the proerty owner. | No | Verbal | N/A |
| 33 | 12/22/11 | Residential | | 244 | Shady Ln | During heavy rains, flooding occurs in parking lot due to an elevation change on the neighboring property. | Pending review of public works staff. Most likely a private matter. | No | N/A | N/A |
| 34 | 01/03/12 | Residential | | 568 | El Cajon Blvd | A white Cadillac with a tan roof (lic# 852ZOZ ) is leaking oil into the storm drain. | Storm water staff was unable to locate the vehicle or noticable oil stains on the pavement in the area in question. | No | N/A | N/A |
| 35 | 01/09/12 | Residential | | 1707 | Gustavo Ave | Neighbor blocking the storm drain to prevent pet access causing flooding on complainant's property. | A site inpection of the site found a concrete channel between the properties has wire mesh and fencing over it at the discharge point. It is on private property. The matter was referred to the PW crew for any possible easements. | No | N/A | N/A |
| 36 | 01/10/12 | Residential | | 765 | Alveda Ave | Neighbor dug up yard yard with trenches and no protection. | An inspection of the site found that the front yard has been dug up and trenched with no BMPs in place to prevent sediment discharge. The resident was instructed to install silt fencing or fiber rolls. Storm water educational materials were issued. | | Verbal | N/A |
| 37 | 01/17/12 | Residential | | 636 | Medford | Raw sewage in rear yard from garage discharge pipe. | An inspection of the site revealed no evidence of a sewage discharge. Zoning enforcement was also notified of the possible occupied garage. | No | N/A | N/A |
| 38 | 01/18/12 | Residential | | 1720 | Horizon Heights Cir | Large piles of soil dumped in the driveway, grading without a permit. No BMPs installed for exposed soils. | The Site was inspected by storm water and zoning enforcement staff. There was a large pile of soil in the driveway with no BMPs and a large amount of various debris dumped on the rear slope. The propert owner was contacted and advised to install protection for the soil pile and cease any frther dumping. The matter was referred to the planned development staff for further action regarding illegal grading. | No | Verbal | N/A |
| 39 | 01/19/12 | Residential | | 863 | Mollison Ave S | Pipe in driveway discharging unknown liquid to the storm drain in the driveway. | Storm water staff conducted a site inspection and found what appears to be a ground water discharge pipe near the trash enclosure. There were no violations noted. | No | N/A | N/A |
| 40 | 01/19/12 | Residential | | 213 | El Cajon Blvd | The trailer park owner has failed to remove sewage under the trailer of the complainant. | When contacted by storm water staff, the complainant stated that the owner removed the sewage just after he filed the complaint. | No | N/A | N/A |

## Be a Clean Water Leader

Storm water pollution is a problem that affects all of us. With a growing population of more than 95,000 residents and approximately 14 square miles of urbanized development, keeping our waters clean from pollutants has become increasingly difficult. With thousands of storm drain inlets, and nearly 100 miles of storm drain pipes and channels to clean and maintain, we need your help.

When it rains, water flows over across our yards and into our streets carrying pollutants into our storm drains. The problem is that storm drains are not connected to the wastewater sewer treatment plant. So, what's in the streets flows directly into our creeks, rivers and the ocean, without treatment.

Last year, too many of our beaches and bays were closed or posted as unsafe for swimming. As our City

Leaders have said, “this is more than an inconvenience; it is a civic embarrassment.” **Discharging pollutants to the City's storm drain system is in violation of Title 13.24 of the El Cajon Municipal Code and violations can result in substantial fines.**

But, as a City resident, you can make a difference. By becoming a Clean Water Leader, both on the job and in your community, you can help make our stream, rivers and beaches free of pollution. When you're at home, share your knowledge with neighbors and family. As you drive to work, be aware of any illegal discharges. And, if you do see an illegal discharge, report it. In the City of El Cajon you can **call the City of El Cajon at (619) 441-1653, or the 24-hour Storm Water Hotline at (888) 846-0800**.

Whether at home or at work, by adopting some simple Best Management Practices (BMPs), you can stop pollutants from being generated and entering our storm drain system.

- ✓ Use dry clean-up methods for spills and outdoor cleaning. Vacuum, sweep, and use rags or dry absorbants. Properly remove and dispose of this material when the spill is absorbed.
- ✓ Properly label, store and dispose of hazardous wastes. Rake, sweep up, and place all debris (dust, litter, sediment, etc.) from your yard or near your property into a trashcan.
- ✓ Use a mop only when water is needed.

As you perform your daily activities be proactive. Assess the activity from a storm water pollution point-of-view and ask yourself; “does this activity, directly or indirectly, generate pollution?” And, “how can I get the job done and prevent debris from entering into the storm drain collection system?”

City of El Cajon

STORMWATER
Protection Program

Leaders have said, “this is more than an inconvenience; it is a civic embarrassment.” **Discharging pollutants to the City's storm drain system is in violation of Title 13.24 of the El Cajon Municipal Code and violations can result in substantial fines.**

But, as a City resident, you can make a difference. By becoming a Clean Water Leader, both on the job and in your community, you can help make our stream, rivers and beaches free of pollution. When you're at home, share your knowledge with neighbors and family. As you drive to work, be aware of any illegal discharges. And, if you do see an illegal discharge, report it. In the City of El Cajon you can **call the City of El Cajon at (619) 441-1653, or the 24-hour Storm Water Hotline at (888) 846-0800**.

Whether at home or at work, by adopting some simple Best Management Practices (BMPs), you can stop pollutants from being generated and entering our storm drain system.

- ✓ Use dry clean-up methods for spills and outdoor cleaning. Vacuum, sweep, and use rags or dry absorbants. Properly remove and dispose of this material when the spill is absorbed.
- ✓ Properly label, store and dispose of hazardous wastes. Rake, sweep up, and place all debris (dust, litter, sediment, etc.) from your yard or near your property into a trashcan.
- ✓ Use a mop only when water is needed.

As you perform your daily activities be proactive. Assess the activity from a storm water pollution point-of-view and ask yourself; “does this activity, directly or indirectly, generate pollution?” And, “how can I get the job done and prevent debris from entering into the storm drain collection system?”

| 14 | **REPORTING** | | x | | | |
| 15 | **MODIFICATION OF PROGRAMS** | | x | | | |

**Definitions/Notes:**

1 Administration - General Planning; Community Planning; Policy Decisions to Implement Citywide Activities (ordinance, zoning,etc.); SUSMP; HMP; Staff Training (including conferences, seminars, etc.); Staff Education on new issues, policies and procedures; and, Component Performance Assessment

2 Inspection - Initial and Post-Construction Verification

3 Outreach - Reaching External Audiences

4 Extension of Staff, etc. (relevant only where contract activities are not otherwise captured)

5 Other - One time equipment/material/tool purchase

p p j p p p y

6 Development Planning (Engineering Concept Design, Final Design and Bid Package), Construction (SWPPP/NOI, Self-Inspection (contracted, staffed internally), temporary erosion controls)

7 ICID - Illicit Discharge Detection and Elimination

8 Education Component is captured in each of the previous components - internal educations is included in Administration/Assessment and external is included in the Outreach element.

9 Public Participation - Targets activities that promote the participation of the public in updating, development and implementation of the JURMP. Can be either captured in the Outreach elements of each component or tracked separately.

10 Include only activities not otherwise covered in 1 through 5 above.

11 Repeat outline as necessary to cover individual program elements

12 Include maintenance inspections for MS4 and roads; include compliance inspections for other facilities; if inspections and maintenance are inter-mingled, cover under BMPs only

**Re: 2012 Forester Creek Impact Study**
**City of El Cajon, California**

Dear Mr. Campos:

Enclosed please find our report for the City of El Cajon 2012 Forester Creek Impact Study. This project, conducted since 2004, is a study of the water quality in Forester Creek as it passes through El Cajon. The contents include field screening data, analytical laboratory test results, and analyses of the collected data. Copies of field data sheets and laboratory reports are attached.

It has been our pleasure working with the City of El Cajon on this project. Please feel free to contact us if you have any questions.

Sincerely,
D-MAX Engineering, Inc.

John Quenzer, CPSWQ
Senior Scientist

# 2012 CITY OF EL CAJON
# FORESTER CREEK IMPACT STUDY

Forester Creek enters the City of El Cajon (City) from the east, running parallel to Interstate 8. After passing SR-67, the creek curves northward through the area around Gillespie Field before flowing into the City of Santee. Forester Creek eventually merges with the San Diego River just east of the junction of SR-52 and SR-125.

## Constituents of Concern

The 2010 Section 303(d) List has identified Forester Creek as an impaired water body for the following constituents:

- pH
- Fecal coliforms
- Selenium
- Total dissolved solids (TDS)

Note that the fecal coliform and TDS impairments have been named for the lower 1 mile of Forester Creek, which is located outside of the City of El Cajon's jurisdiction.

Forester Creek is also subject to a Total Maximum Daily Load (TMDL) for bacteria as part of the TMDL that covers the overall San Diego River Watershed. The responsible parties in the watershed, including the City of El Cajon, are developing a Comprehensive Load Reduction Plan (CLRP) and monitoring plan for the San Diego River TMDL. In addition to the constituents mentioned above, nutrients, particularly phosphorus, have been identified as pollutants of concern in the San Diego River Watershed.

## Site Selection

When originally initiated in 2004, this study aimed to evaluate water quality and flow rates at the upstream and downstream ends of Forester Creek within the City of El Cajon. The upstream site is located toward the east side of the City, while the downstream site is located at the northwest side of the City.

The upstream sampling location has been moved twice since 2002 due to the variable nature of the flow coming into the City. When Forester Creek does not receive water from outside the city limits, the sampling location may be moved slightly downstream to the nearest location with flowing or ponded water.

The downstream sampling location is the same as Site 5 in the MS4 Outfall Monitoring Program and Dry Weather Monitoring Program. Figure 1 on the following page is a map of the sampling locations, along with major Dry Weather Monitoring Program stations at the downstream ends of major sub-basins within the City. Table 1 presents current site location information, and Table 2 lists yearly locations of the upstream sampling point.

**Figure 1: Site Locations**

## Methods

The same field and laboratory methods used during the City's Dry Weather Monitoring Program were used during the Forester Creek Impact Study. Samples were analyzed in the field for the following parameters:

- Temperature
- pH
- Turbidity
- Conductivity
- Surfactants
- Ammonia-nitrogen (ammonia-N)
- Nitrate-nitrogen (nitrate-N)
- Orthophosphate-phosphorus (orthophosphate-P)
- DO

Samples were collected and submitted to a laboratory certified by the California Department of Health Services for analysis of the following constituents:

- Oil and grease
- Total hardness
- Dissolved cadmium
- Dissolved copper
- Dissolved lead
- Dissolved zinc
- Diazinon
- Chlorpyrifos
- Total coliform bacteria
- Fecal coliform bacteria
- *Enterococcus* bacteria
- TDS
- Total organic carbon (TOC)

## Results

The sites were sampled in July 2012; results of the field and laboratory testing are presented in Tables 3 and 4. Also note that the samples from the initial visit could not be analyzed for TDS, so a second visit about one week later was completed to collect additional samples for that analaysis. Flow rates and physical parameters were very similar between the two sets of visits.

Data from the present year and the historical data from previous years are presented in Tables 5 through 8. Results in 2012 were generally similar to values recorded in previous years.

## Discussion

### *Flow Rates*

A significant decrease in flow rate has been observed at both the upstream and downstream sites in recent years. The flow rate at the downstream site, 45 gallons per minute (gpm), was the lowest recorded in the history of the program. A similar decreasing trend has also been seen in the sites at the downstream ends of the major sub-basins within the City that are tested as part of the City's Dry Weather Monitoring Program. Figure 2 shows historical flow rates for the upstream and downstream sites as well as for sites 2 (Washington Channel basin), 17 (Broadway Channel basin), 41 (County Ditch basin), and 1 (Forester Creek basin, east of the junctions with the other three basins). Locations of all the stations can be found on the map included as Figure 1.

**Figure 2: Historical Flow Rates**

11020

As shown in Figure 2, across all years of the study, the flow rate at the upstream site has been much smaller than the flow rate at the downstream site.

***Key Constituents: Summary***

The constituents most frequently exceeding water quality standards are the same at both sites and generally are in line with the 303(d) listings for Forester Creek:

- Bacteria (total and fecal coliforms and enterococci)
- TDS
- Nutrients (especially nitrate-nitrogen)

Nitrate-nitrogen, total coliforms, fecal coliforms, and enterococci have exceeded their Basin Plan Water Quality Objectives (WQO) in over 90 percent of the samples at the downstream site, and TDS has exceeded the WQO in 75 percent of the samples at the dowstream site. Similar exceedance percentages have been observed at the upstream site for these constituents, with the exception of TDS, which has a lower exceedance rate at the upstream site.

Note that this study has not tested for total phosphorus; however, the City's MS4 outfall monitoring program does include this test. Four samples have been collected at the downstream site since 2009, with an average value of 0.12 mg/L. Three of the samples have been at or above the Basin Plan WQO of 0.1 mg/L, but, as demonstrated by the average value, the results have typically been very close to the WQO.

Conversely, pH has never exceeded the WQO in any of the samples at the upstream or downstream site over the life of this study. Selenium, which was recently added to the 303(d) list, has not been tested as part of this study.

### *Key Constituents: Concentrations and Loading Rates*

The flow rate at Forester Creek Upstream has consistently been much lower than the flow rate at the downstream site (Site 5), and pollutant concentrations have typically been similar at the two sites. During dry weather conditions, then, the majority of the flow observed at the downstream site is generated from the major sub-basins that lie largely within the City of El Cajon. Recognizing this, for 2012 a comparison among the downstream site and the sites associated with the City's major sub-basins, described earlier in this report, was made for several key constituents: nitrate-nitrogen, bacteria, and TDS. Data for those other sites was taken from the City's Dry Weather Monitoring Program reports. Both concentrations or counts and loading rates, calculated based on flow measurements and field and laboratory results, were assessed. Loading rates are based on instantaneous flow measurements and grab samples, so they should be assessed with caution. Because the flow rate from Broadway Channel to the Forester Creek channel is often very low, the Broadway Channel site (Site 17) was generally observed to have the lowest loading rates of all the major sub-basin sites assessed.

Nitrate-nitrogen loading rates have decreased substantially since the mid 2000s, mirroring the decrease in flow rates over the same period. In more recent years, nitrate-nitrogen concentrations have also been decreasing, with the exception of Site 1 (Forester Creek basin, east of junction of Washington Channel). Site 1 is downstream of the major MS4 line that includes Dry Weather Monitoring Program Sites 30 and 37, which historically have had high nitrate levels. Upstream investigation, including groundwater investigations, by D-MAX and the City have shown that seepage into the pipe from groundwater is the main source of nitrate-nitrogen in this area. Note that of the main sub-basins assessed, the area upstream of Site 1 also typically has contributed the highest nitrate-nitrogen loading rate downstream to Site 5.

Results for TDS show decreasing loading rates over the past several years. The decrease in TDS loading rate appears to be almost entirely due to decreased flow rates, as TDS levels have not significantly decreased in recent years, and have even increased somewhat at Site 41 (County Ditch Channel basin).

In contrast to nitrate and TDS, bacteria results are much more variable from year to year. No clear trend, increasing or decreasing, has been observed for total or fecal coliforms. Several spikes in loading rates have been observed over the years, often attributable more to much higher concentrations being measured than to increases in flow rates. Sites 2 (Washington Channel) and 41 (County Ditch Channel) have had more of these high concentrations than Sites 1 (Forester Creek Channel, east of junction with Washington Channel) and 17 (Broadway Channel). Overall, the results show that bacteria counts are highly variable, although for most sites the concentrations and loading rates recorded in 2012 are among the lower values in program history.

**Table 1**
**2012 Site Locations**

| Site | Location | Description | Primary Land Use | Secondary Land Use | Hydrologic Subarea | Latitude | Longitude |
|---|---|---|---|---|---|---|---|
| Upstream | Greenfield Avenue and I-8 west onramp intersection, behind southeast corner of Valero gas station at 1699 E. Main Street | Concrete Channel | Commercial | Residential | 907.13 | 32.81185 | -116.91795 |
| Downstream | Adjacent to the Weld Boulevard Trolley Station, southeast of the Marshall Avenue and Cuyamaca Street intersection | Concrete Channel | Commercial | Industrial | 907.13 | 32.82665 | -116.98226 |

**Table 2**
**Forester Creek Upstream Site Yearly Locations**

| Year | Upstream Sampling Location |
|---|---|
| 2006-Present | Greenfield Avenue and I-8 west onramp intersection, behind southeast corner of Valero gas station at 1699 E. Main Street |
| 2005 | Fourth Street, north of Rancho Cajon Place, east side of the street |
| 2004 | Forester Creek at E. Main Street and Oakdale Avenue |

**Notes:**
nd = not detected; na = not analyzed; BPJ = Best Professional Judgment; EPA = U.S. Environmental Protection Agency; DW = Dry Weather
Numbers in table have been rounded for presentation; unrounded values have been used in statistical calculations.
Half the value of the detection limit value was used in statistical calculations for the constituent that was not detected.
[1] The Criterion Maximum Concentration (salmonids absent), which varies based on pH, has been used because it applies to a one-hour maximum, and the ammonia level for this study was measured based on an instantaneous grab sample. See www.epa.gov/waterscience/criteria/ammonia.
[2] The Basin Plan WQO for total nitrogen WQO of1.0 mg/L has been used since nitrate-N is a component of total nitrogen.
[3] The Basin Plan WQO of 0.1 mg/L for total phosphorus has been applied since the Basin Plan does not provide a separate limit for orthophosphate-P.
* No established limit.
** There is no clear WQO in the Basin Plan, but a comparison is not necessary since TDS has been measured directly. See the laboratory data tables for TDS results.
