Executive Summary

This document is the Phase II report for the Santa Margarita Region (SMR) Pyrethroid Source Identification Toxicity Reduction Evaluation (TRE) conducted by the SMR Permittees to identify the source(s) of toxicity in the SMR and develop a plan to reduce the toxicity. This report documents the Permittees' ongoing and proposed efforts to identify and reduce sources of pyrethroid pesticide toxicity associated with urban runoff.

Data gathered under this TRE was compared to data from neighboring counties. Based on available data, problems with pyrethroid-induced toxicity in urban runoff are common among municipalities in Southern California, and methods for addressing the problems are comparable.

A literature review was conducted to determine appropriate source control and treatment control BMPs for reducing the concentration and load of pyrethroids in storm water runoff. The literature source, the estimated potential for reducing pyrethroid-induced toxicity, and possible concerns about implementing the BMP are summarized.

Based on the results of the literature review, BMPs are evaluated for applicability and potential effectiveness in the SMR watershed. Many of the most effective and appropriate BMPs are currently being implemented by the Permittees.

A search for pending legislation did not identify any pending legislation pertaining to pyrethroid pesticides.

The most effective strategy to prevent water quality impacts from legal pesticide uses was identified as state or federal regulatory change involving effective labeling and use restrictions. The Permittees propose a five year plan to continue, review, and enhance current activities to reduce pyrethroid-induced toxicity.

1.0 Introduction

This document is the Phase II report for the Santa Margarita Region (SMR) Pyrethroid Source Identification Toxicity Reduction Evaluation (TRE) conducted by the County of Riverside, the City of Murrieta, the City of Temecula, and the Riverside County Flood Control and Water Conservation District (District, collectively Permittees). The Phase I Status Report (RCFCWCD, 2008) contains the work plan for Phase II and an outline of the topics in this report, as well as additional background information. This Phase II report is divided into six sections.

Section 1 describes the purpose of the TRE and provides an overview of the approach taken by the Permittees. Section 1 also contains a discussion of the regulatory framework of the TRE, a brief project background, a description of the Santa Margarita watershed, pyrethroid pesticide background and usage, and management questions and objectives.

Section 2 describes available pyrethroid and toxicity data from other counties in Southern California, and compares the data to data from Riverside County. The data and comparisons are included to demonstrate that the problems and solutions relating to pyrethroid pesticides facing the Permittees are similar to those of neighboring counties in the region.

Section 3 presents the results of the literature review conducted for this study of pesticide reduction Best Management Practices (BMPs).

Section 4 discusses potential pesticide reduction BMPs, the status of the Permittees implementation of the BMPs, and, when applicable, examples of the implementation of the BMPs in other municipalities. Section 4 also contains a table summarizing the potential BMPs, their advantages and disadvantages, and relative cost.

Section 5 discusses pending legislation relating to pyrethroid pesticides.

Section 6 presents the five-year course of action the Permittees propose to follow to reduce pyrethroid-induced toxicity in the SMR.

1.1 Purpose and Overview of Approach

The purpose of the TRE is to identify the source(s) of toxicity in the SMR and develop a plan to reduce the toxicity. The results of Phase I of the TRE are contained in the TRE Status Report (Riverside, 2008). This Phase II report for the TRE study documents the Permittees' ongoing and proposed efforts to identify and reduce sources of pyrethroid pesticide toxicity associated with urban runoff. The goal of Phase II is to establish a course of action and develop modifications to the Permittee's Storm Water Management Plans (SWMPs) to more effectively control the sources of toxicity that were identified in Phase I of the TRE. The Permittees will incorporate the course of action and SWMP modifications into the Report of Waste Discharge (ROWD) that will be submitted to the RWQCB in January 2009.

Phase II activities included:

- A comparison of toxicity and chemistry results to data from adjacent Phase I municipal separate storm sewer system (MS4) permit areas, including San Diego County and Orange County.
- A literature review of current studies and a survey of pesticide reduction BMPs.
- A search for pending legislation regarding pyrethroid pesticides.
- Development of a proposed course of action for the Permittees.

A literature review was conducted of BMP information available from the Urban Pesticide Pollution Prevention (UP3) Project and other pesticide management programs and documents. Information on relevant BMPs was compiled and evaluated to identify potential BMPs that are available to mitigate urban sources of pyrethroids. Existing Permittee programs, such as outreach, regulation, and BMP implementation, were then evaluated for improvement opportunities.

The proposed course of action was determined with consideration of the adequacy of data collection (sufficient precipitation and runoff to collect adequate data) and pending

regulatory actions by California Department of Pesticide Regulation (DPR), and the United States Environmental Protection Agency (EPA).

Land uses in Riverside County are comparable to those in neighboring Orange County and San Diego County, and pyrethroid pesticide-induced toxicity has been observed in those counties. The Permittees are committed to identifying and addressing water quality issues with methods consistent with those used by other stakeholders in Southern California. To this end, data gathered under this TRE was compared to data from neighboring counties, and current pesticide reduction programs used by municipalities throughout California were reviewed.

Source control and treatment control BMPs were researched and evaluated for potential effectiveness in reducing pyrethroid pesticide-induced toxicity in the Santa Margarita watershed. Many of the most effective BMPs are currently implemented by the Permittees, and several have been implemented within the previous Permit term (2004-2008). A proposed five-year course of action for the Permittees was developed by combining the results of the research with the existing programs.

1.2 Regulatory Framework

At the federal level, the authority to regulate pesticide manufacture and use is assigned to the United States Environmental Protection Agency (EPA) under the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA). In California, pesticide use is regulated at the state level by the DPR. In the SMR, the Permittees are required under the Clean Water Act to control discharges of pollutants, including pesticides that produce water toxicity, to and from their MS4 under the National Pollutant Discharge Elimination System (NPDES).

This TRE was performed as required by Monitoring and Reporting Program (MRP) R9-2004-001.

The MRP, Section II. A. I. 4, states:

> *"When results from the chemistry, toxicity, and bioassessment monitoring…indicate urban runoff-induced degradation, Permittees shall evaluate the extent and causes of urban runoff pollution in receiving waters and prioritize management actions to eliminate or reduce sources. Toxicity Identification Evaluations (TIEs) shall be used to determine the cause of the toxicity, and Toxicity Reduction Evaluations (TREs) shall be used to identify sources and implement management actions to reduce pollutants in urban runoff causing toxicity."*

As local regulation of pesticide use is generally preempted by federal and state law, the Permitttees' authorities are limited to addressing illegal disposal of pesticides, promoting public education, setting the example for minimum pesticide use, and coordinating with the federal and state agencies to facilitate regulatory changes at the state and federal level.

1.3 Project Background

Phase I of the TRE consisted of the toxicity monitoring begun in 2004 and the Toxicity Identification Evaluations (TIE) was initiated in the spring of 2007. The Phase I Status Report (RCFCWCD, 2008) provides a full project background. Toxicity monitoring at Temecula Creek and Murrieta Creek was initiated in 2004 using EPA protocol with the following indicator species: *Ceriodaphnia dubia*, *Selenastrum capricornutum*, and *Hyalella azteca*. Toxicity testing during the 2004-2008 reporting period indicated persistent wet weather toxicity to *Hyalella* in both Temecula Creek and Murrieta Creek. Toxicity was not observed to either *Ceriodaphnia* or *Selenastrum* in any of the samples collected over the four annual reporting periods beginning in the fall of 2004.

Toxicity Identification Evaluations (TIEs) were conducted on the wet weather samples collected from Temecula Creek and Murrieta Creek beginning in April 2007, in accordance with Table 2 of the MRP. The TIEs indicated that pyrethroids were the primary source of toxicity and biological degradation in both Murrieta Creek and Temecula Creek.

As a result of the toxicity and TIEs, storm water monitoring for pyrethroids was initiated in 2007-2008. Results indicate that the pyrethroids permethrin and/or bifenthrin are present in wet weather water samples taken at Murrieta Creek and Temecula Creek.

To further assess the impacts of pyrethroid pesticides the Permittees instituted Dry Weather Toxicity Testing and direct measurement of pyrethroid pesticide concentrations in dry weather water samples during the 2007-2008 reporting period. Toxicity and pyrethroid pesticides were not detected in dry weather water samples at either Murrieta Creek or Temecula Creek.

Phase I of the TRE concluded with the Phase I Status Report. The Phase I Status Report included studies to better characterize patterns and sources of toxicity and to evaluate the hypothesis that the *Hyalella* toxicity is due to pyrethroids.

Bifenthrin and permethrin appear to be the primary toxic elements in Temecula Creek and Murrieta Creek. While bifenthrin and permethrin were applied to both agricultural and non-agricultural land uses, the major sources of pyrethroid toxicity in the SMR are non-agricultural activities. Permethrin was applied more than any other pyrethroid pesticide in the urban landscape. Bifenthrin and permethrin application rates were one and three orders of magnitude higher for structural control applications than agricultural applications in Riverside County. Structural control appears to represent 93% of the total pyrethroids use for Riverside County.

The Status Report outlined the plan for Phase II of the TRE, and this report presents the results of Phase II.

1.4 Watershed Description

The SMR encompasses approximately 750 square miles in southwestern Riverside and northern San Diego Counties (see Figure 1-1). The upper (northeast) portion of the SMR is in Riverside County with the remainder in San Diego County. The SMR is subdivided into the Temecula Creek and Murrieta Creek sub-watersheds and has an arid Mediterranean climate. Creeks in the SMR are ephemeral. Flow in Temecula Creek and in Murrieta Creek results almost exclusively from groundwater during the dry season. It is rare to find flow during dry weather at the tributary stations, and usually this flow infiltrates before reaching Temecula Creek or Murrieta Creek (2006-2007 Monitoring Annual Report). While the ephemeral streams in the SMR are technically receiving waters, the term "Receiving Waters" as used in this TRE Status Report refers exclusively to Murrieta Creek and Temecula Creek.

The Santa Margarita River is formed by the confluence of Murrieta Creek and Temecula Creek. The confluence is located in Riverside County, approximately five miles northeast of San Diego County. The Santa Margarita River flows from Riverside County into San Diego County through the community of Fallbrook and Marine Corps Base Camp Pendleton. The lower estuary and river are protected by Camp Pendleton and are much less developed than surrounding areas in Southern California. The Santa Margarita River is able to support a relative abundance of wildlife and habitats in part because of its undeveloped state.

Figure 1-1

Riverside County Santa Margarita Watershed

As presented in Table 1-1, the total population in the SMR of Riverside County is significantly less than adjacent watersheds covered under similar Phase I MS4 NPDES permits.

Table 1-1

San Diego Region Populations

Jurisdiction	Population
Orange County	3,002,048
San Diego County	2,941,454
SMR/Riverside County	250,483
Unincorporated	55,291
Murrieta	97,257
Temecula	97,935

1.5 Pyrethroid Pesticide Background and Usage

A statewide compilation of the presence and effects of pyrethroid pesticides in urban surface waters, prepared in July 2008 and presented at the 2008 California Association of Stormwater Quality Agencies (CASQA) Conference, outlined the rise in pyrethroid use and its increased presence in urban waterways (Ruby, 2008). A comprehensive survey of pesticide use in Sacramento, San Diego, and Orange Counties also concluded that, as the older pesticides chlorpyrifos and diazinon have been phased out, pyrethroid pesticides have seen increased usage (Wilen, 2005). The Urban Pesticide Pollution Prevention (UP3) Project confirms that pyrethroids are the cause of toxicity in numerous California waterways, particularly in urban waterways. The UP3 Project (www.up3project.org) publishes an annual review of new scientific findings on pesticides in urban surface water (TDC, 2007). Since 2005, the reviews have consistently indicated that pyrethroid use continues to increase and that pyrethroids are found to be the cause of toxicity in urban waterways. The pyrethroid use information is confirmed by data published by the DPR.

Pyrethrins are natural insecticides that are derived from an extract of chrysanthemum flowers. Pyrethroids are synthetic versions of pyrethrins. These chemicals act on the nervous system of insects. Commercial pyrethroid pesticides often contain a synergist that works by restricting the enzymes insects use to detoxify pyrethroids. While pyrethroids have been shown to be one of the least poisonous insecticides to mammals, the effects depend on the level of exposure, the health of the animal, and the environmental circumstances.

Pyrethroids applied in urban areas enter the storm drainage system of the MS4 by surface runoff and are transported directly to receiving waters. Other potential urban sources are runoff from irrigation with reclaimed water, application overspray, and atmospheric deposition. Pyrethroids transported via the MS4, from whatever source, are considered to be non-point discharges. Agriculture, nursery, and urban/suburban uses are the main categories of sources of pyrethroids in the receiving waters of the SMR.

Outdoor structural pest control is the predominant urban use of pyrethroids in most watersheds. However, in the SMR, the acreage dedicated to agricultural land use exceeds the urban land use area by approximately 2:1. Pyrethroid insecticides are applied to a variety of crops in the SMR and California throughout the year. According to the DPR, pyrethroids are commonly used on fruit and nut trees, row crops, and in nurseries. Six of the primary pyrethroids used in California agriculture, in order of decreasing amount applied in 2003, are permethrin, esfenvalerate, lambda-cyhalothrin, cyfluthrin, bifenthrin, and cypermethrin. Therefore, agricultural sources of pyrethroids were considered.

TIE methods for pyrethroids are still being developed. Effective methods require the ability to measure low concentrations of pyrethroids, and this remains a challenge. Fortunately, the development of TIE methods for pyrethroids is progressing and moving towards standardization (San Francisco Estuary Project, 2007). TIEs are planned for storm water samples collected during 2008-2009 when toxicity is evident.

1.6 Management Questions and Objectives

This TRE is designed to confirm the toxic element observed in the samples collected in the Santa Margarita Region, identify likely sources of the toxic element, and propose mitigation measures for those sources. TIEs identified pyrethroids pesticides as the likely toxic element. As the MRP specifies that a TRE must be conducted following toxicant identification through a TIE, Phase I of the TRE focused on the pyrethroids identified as the source of toxicity in the 2007 TIEs. To support this TRE, the Permittees commissioned additional wet and dry weather toxicity testing, water column pyrethroid testing, additional TIEs to verify the persistence of pyrethroids as the toxicant. Based on the resulting information, the TRE evaluates the specific sources of toxicity and likely mitigation.

This TRE study assumes that pyrethroid sources and resultant toxicity patterns in the SMR are similar to those in neighboring counties, in particular San Diego and Orange Counties. Under this assumption, the Permittees hypothesized that pyrethroids would be detected in samples at most if not all monitoring locations, that the samples would exhibit toxicity to *Hyalella*, and that TIEs would indicate pyrethroids as the cause of the toxicity. Unlike other regions, dry weather toxicity is not expected in the SMR, as dry weather flows are supported primarily by groundwater.

Based on this assumption, this TRE was designed to provide information to help answer the following five management questions related to the toxicity:

1) Is the pyrethroid toxicity persistent in Temecula Creek and Murrieta Creek?
2) Does the toxicity occur during dry weather?
3) Are there any obvious sources of illicit discharge of pyrethroids that can be abated?
4) What are the likely sources of pyrethroid toxicity in the SMR?
5) What potential management measures are available to the Permittees to mitigate the impacts of pyrethroid pesticide application?

Answers to the first four questions are detailed in the Phase I Status Report. Briefly, toxicity is persistent in the creeks during wet weather, but is not evident in dry weather samples. No

obvious sources of illicit discharge were found. The likely primary source of pyrethroids is structural control performed by pest control operators (PCOs). The final question is addressed during Phase II and is the focus of this report.

2.0 Data Comparison

An assumption of this TRE study is that pyrethroid sources and resultant toxicity patterns in the SMR are analogous to those in similar counties, in particular neighboring San Diego and Orange Counties. To verify this assumption, it was necessary to compare data collected in SMR to data collected in other locations. As part of the 2008 CASQA pyrethroids data compilation, monitoring results were summarized from studies that investigated the presence and effects of pyrethroid pesticides in urban areas of California (Ruby, 2008). The CASQA summary listed the frequency of detection of various pyrethroid pesticides and results of toxicity testing for different indicator species. Results from various northern and Southern California locations were detailed, including results of water column studies from Orange, San Diego and Sacramento Counties.

Pyrethroids, as a class of chemicals, have an affinity for particles and they are considered to be relatively hydrophobic; they are therefore commonly found in sediments of waterways downstream of their application sites. The initial toxicity studies leading to the identification of pyrethroids as pervasive environmental contaminants in California were performed on sediment samples by Don Weston and his colleagues at the University of California, Berkeley (Weston et al., 2005; Amweg et al., 2006). Recently, improvements in analytical methods for pyrethroids in water, and modification of toxicity studies to more effectively test for pyrethroid-based toxicity in water, have lead to increasing evidence of the presence of pyrethroids in water column samples, and toxic effects in the water matrix (see citations for Orange and San Diego County in Ruby, 2008).

Extensive work has been performed on the environmental presence and effects of pyrethroids in urban areas of the neighboring Orange and San Diego counties; however, much of this work has been performed on sediment samples. Although the sediment monitoring results do not correspond directly with the SMR water column test results, sediments are considered to be effective integrators of contaminants from the contributing storm water flows. The deposited sediments are produced as particles settle out from the passing water over some

period of time, and tend to accumulate until they are washed away by higher-velocity flows. Summaries of the relevant sediment study results are therefore included in the discussion that follows.

In Orange County, an ongoing study being performed by UC Davis, in conjunction with UC Riverside and the Orange County UC Cooperative Extension, has consistently found bifenthrin and permethrin in water column runoff samples from residential areas (Haver et al., 2007; Oki, personal communication). In samples from four residential sites they have detected bifenthrin in 100% of samples, with the number of samples varying from 48 to 57 per site (Oki, personal communication). In sediment samples collected in recent years from the Santa Ana Region of Orange County, bifenthrin is commonly detected (32 of 56 samples) and permethrin less frequently so (4 of 56 samples), with sediment toxicity to *Hyalella* common (39 of 54 samples tested were moderately or highly toxic; see summary in Ruby, 2008).

In a 2005 study of six Orange County residential storm drainages and seven tributary streams draining commercial/residential land uses, bifenthrin was detected in 95% of dry weather samples and 100% of wet weather samples (Budd et al., 2007). Because treatment of nursery products is mandatory to control Red Imported Fire Ants, an older DPR study, conducted in 1999-2002, found occasional detects of bifenthrin in urban runoff samples, along with frequent detects in nursery runoff from several Orange County sites.

In San Diego County, under NPDES Permit monitoring conducted since 2004, pyrethroids have been commonly detected in water samples from several receiving waters, and toxicity to *Hyalella* has been increasingly observed in water samples (see summary in Ruby, 2008). Bifenthrin was detected in 12 of 15 samples collected from 2005-2006 and 2006-2007; detection frequency was 100% in samples from Chollas Creek, Agua Hedionda, and Tecolote Creek. Toxicity to *Hyalella* was observed in 22 of 57 samples tested over the three year period, 2004-2007. In a TIE study performed on Chollas Creek samples during 2005-2006,

67% of samples were acutely toxic to *Hyalella*, and the toxicity was found to be likely due to pyrethroids.

In a 2004-2005 study performed by UC Davis and others, sediments from Switzer Creek at its outlet to San Diego Harbor were found to be highly toxic; bifenthrin and permethrin were detected at high concentrations, and a sediment TIE identified pyrethroids as the likely cause of the observed toxicity (Anderson et al., in press). As part of a statewide survey of urban waterways, sediments were tested from several receiving waters in San Diego County. All were found to be highly toxic to *Hyalella* (Holmes et al., in press).

To further compare the pyrethroid sources and toxicity patterns in the SMR to other counties, the CASQA data summary was analyzed to select the studies which reported results for the same constituents and effects identified in the SMR, specifically permethrin, bifenthrin, and toxicity to *Hyalella.* The total number of detections for the different monitoring locations was divided by the total number of samples taken at the sites to calculate the percentage of samples with detectable concentrations of pyrethroids. This normalized metric allowed for comparison of the various datasets.

While permethrin is among the more commonly-used pyrethroids, it is much less toxic to aquatic life than bifenthrin (TDC, 2007). For the purposes of this assessment, bifenthrin detection frequency and frequency of toxic effects were used as the metrics for comparison.

Comparative results for bifenthrin are summarized in Figure 2-1. Data were available for two creeks in Sacramento County and three locations in San Diego County, in addition to the data collected for SMR. Two samples were taken at the Sacramento County sampling locations. For San Diego County, each creek was sampled three times except for Chollas Creek, which was sampled six times. The SMR was sampled a total of eight times. In most cases, bifenthrin was detected in over 80% of samples. Only at Elk Grove Creek in Sacramento County was bifenthrin detected at a notably lower percentage.

Figure 2-1

Percentage of Samples with Bifenthrin Detections

Toxicity to *Hyalella* was documented in water samples from San Diego County, along with the SMR. Toxicity testing was performed on samples from seven San Diego County water bodies. The sample sets ranged from three to nine toxicity tests (Aqua Hedionda, San Dieguito River, Tijuana River, and Chollas Creek). In the SMR, a total of eight toxicity tests were performed on samples from Murrieta Creek and Temecula Creek. The results for frequency of acute toxicity from the SMR were within the range of the results for similar sites in San Diego County (see Figure 2-2).

After comparing the results from different locations, the assumption that pyrethroid sources and resultant toxicity patterns in the SMR are similar to those in similar counties appears to be valid.

Figure 2-2

Percentage of Samples with Acute Toxicity to *Hyalella*

3.0 Literature Review

A literature review was conducted during December, 2008 to determine appropriate BMPs for reducing the concentration and load of pyrethroids in storm water runoff. An initial search was made of the Urban Pollution Prevention Program (UP3) website (www.up3program.org) for potential examples of BMP strategies implemented specifically for pyrethroids. The United States Environmental Protection Agency website and the CASQA website were also reviewed for pyrethroid specific BMPs. Widespread use of pyrethroids is relatively recent, and there has been little direct evaluation of BMPs for pyrethroids. Further research was conducted on general storm water BMPs, and their potential for pyrethroid reduction was evaluated based on the design of the BMP and the chemical behavior of pyrethroids.

To identify pending legislation that may be related to pyrethroid pesticides, web searches were conducted on the websites for DPR, the California legislature, the EPA, and the Library of Congress. However, no pending legislation was identified as relevant to pyrethroid pesticides.

Table 3-1 below presents the findings of the literature review. BMPs are categorized as either source control or treatment control, and within each category they are sorted by type. The literature source, a summary of the BMP, the estimated potential for reducing pyrethroid-induced toxicity, and possible concerns about implementing the BMP are provided. See Section 4 for further information about each type of BMP.

Table 3-1
Literature Review Matrix

Type of BMP	Literature Source	Summary	Ability to Reduce Toxicity Caused by Pyrethroids	Storm Water Concerns
Source Control				
Regulatory	Pesticides of Interest for Urban Surface Water Quality. Urban Pesticides Use Trends Annual Report. July 2008.	Suggests regulatory changes as a result of increased toxicity due to pyrethroid use	Potentially High	Supplementary to other BMPs, Will take years to show results
Regulatory	Improving Urban Pesticide Regulatory Activities to Protect Water Quality – Annual Update 2007. November 2007.	Discusses recent state and federal regulatory pesticide activities on an annual basis	Potentially High	Supplementary to other BMPs, Will take years to show results
Regulatory	California Department of Pesticide Regulation. http://www.cdpr.ca.gov/docs/registration/reevaluation/chemicals/pyrethroids.htm. 2007.	The reevaluation of the widespread presence of synthetic pyrethroid residues in the sediment of both agricultural and urban dominated California waterways at levels toxic to Hyalella azteca (H. azteca).	Potentially High	Supplementary to other BMPs, Will take years to show results
Integrated Pest Management (IPM)	Building Maintenance - Structural Integrated Pest Management. June 2008.	Promotes reduction in pesticide use through use of municipality IPM and hiring of PCO's trained in IPM	Potentially High	Does not eliminate all uses of pyrethroids
IPM	California Stormwater BMP Handbook. January 2003.	Promotes prevention of pesticide use through use hiring of PCOs that use IPM as an alternative	Potentially High	Does not eliminate all uses of pyrethroids
IPM	City of Santa Monica Toxics Use Reduction Program Integrated Pest Management. June 1997.	Overview of IPM program initiated by the City of Santa Monica	Potentially High	Does not eliminate all uses of pyrethroids
IPM	National Management Measures to Control Nonpoint Source Pollution from Urban Areas. November 2005.	EPA document discussing management practices to help reduce pesticide use	Potentially High	Does not eliminate all uses of pyrethroids
IPM	National Pollutant Discharge Elimination System (NPDES) Phase II BMP & Measureable Goal Examples. February 2008.	Provides examples and goals of good housekeeping BMPs	Potentially High	Does not eliminate all uses of pyrethroids
IPM	The Monterey Bay Green Gardener Program "sample curriculum". www.green-gardener.org/about. Accessed December 2008.	Informs the public and landscapers about the green gardener program and how to get involved	Potentially High	Does not eliminate all uses of pyrethroids

Pervious Pavement	Low Impact Development Handbook: Stormwater Management Strategies. December 2007.	Discusses LID strategies for assistance in storm water management	Potentially High	May contaminate groundwater

4.0 BMP Analysis

Based on the literature review and the findings of Phase I of the TRE, BMPs were evaluated for their applicability to the SMR. Because the toxicity appears to be principally a wet weather phenomenon, and because the Permittees' jurisdiction includes the urbanized area of the watershed, the analysis focused on BMPs designed to reduce the amount of storm water pollution caused by urban runoff.

The potentially applicable BMPs are divided into Source Control and Treatment Control BMPs and are discussed in detail below. Through the Permittee's proactive efforts to protect the quality of the receiving waters and their beneficial uses, many programs addressing these broad categories are either already in place or are actively being developed. The implementation status for each specific BMP is discussed. Examples of BMP implementation by other municipalities in the region are included as a tool for evaluating the consistency of the Permittees' program with other programs in the region.

4.1 Source Control BMPs

Source control BMPs are designed to curtail pollution at the source before it has the opportunity to enter the storm drain system and pollute waterways. They are generally the preferred type of BMP because reduction of pollution occurs at the source, before runoff has become contaminated (CASQA, 2003). The types of broad categories of source control BMPs that identified as most appropriate for the Santa Margarita watershed are: pursuing regulatory change, implementing IPM strategies including LID, and public outreach and education.

4.1.1 Regulatory Action

Status: Currently being implemented by the Permittees.

Pesticide manufacturers are required to receive approval by USEPA and California DPR for specific pesticide uses, and both agencies can impose use restrictions to prevent unwanted impacts on the environment and public health. At the federal level, a fundamental regulatory disconnect exists between pesticide approval (registration) under FIFRA and water pollution control programs under the Clean Water Act. This has resulted in a repeating pattern, in which a) pesticides are approved for use without sufficient consideration of potential environmental effects, b) water quality and other ecological impacts accrue, c) use restrictions are applied to the offending products (sometimes involving widespread bans on use), and d) new pesticides are approved for use, with subsequent environmental impacts.

In 1962 Rachel Carson published *Silent Spring*, documenting the widespread ecological consequences of pesticide applications. The federal government responded by banning the use of DDT and other organochlorine pesticides, based on extensive evidence of environmental impacts through the process of bioaccumulation. The ban has lead to dramatic recoveries in affected populations of bald eagles and other species; however, the legacy of these long-lasting pesticides near-shore dumping areas in Los Angeles County and elsewhere remains (IWS, 2007).

Eventually the organochlorine pesticides were replaced principally by organophosphate pesticides, especially in urban uses. In the mid-1990s municipal storm water monitoring programs began to document that commonly-used organophosphate pesticides, especially diazinon and chlorpyrifos, were present at toxic levels and causing toxicity to aquatic organisms, principally the common water flea, *Ceriodaphnia*. Although not bioaccumulative, diazinon and chlorpyrifos were discovered to cause widespread toxicity in urban runoff and local receiving waters (TDC, 2001). USEPA subsequently banned most urban uses of diazinon and chlorpyrifos, although EPA's main motivation involved human health effects

on the pesticide applicators, and water quality was not an important factor in those decisions. Again, the ban was also immediately effective, reflected in reduced concentrations of diazinon and chlorpyrifos in urban water samples, and fewer occurrences of organophosphate-based water column toxicity (c.f., references in Ruby, 2008 for San Diego County Municipal Copermittees Annual Urban Runoff Monitoring Reports). But pesticide manufacturers simply replaced the OP pesticides in their products with other active ingredients, principally pyrethroids. Shortly thereafter, researchers and municipal storm water programs began documenting toxic effects from the new pyrethroid products. The pyrethroid impacts were first documented in sediments, and the affected test organism shifted from *Ceriodaphnia* to the sediment-dwelling *Hyalella*.

In the cases of both organochlorine (DDT) and organophosphate (diazinon, chlorpyrifos) pesticides, federal limitations or bans on uses were effective in ameliorating the associated environmental impacts. In both cases, however, new pesticide products were approved for use that then caused related but different impacts to the environment. Therefore it is clear that the most effective strategy for preventing environmental impacts from pesticide use involves implementing an effective process of pesticide approval and registration that comprehensively accounts for and mitigates against such impacts.

For more than ten years CASQA and various other California state and local agencies have promoted better regulation of pesticides at the federal level, encouraging use restrictions as the most effective means of source control. California water quality agencies have sent comment letters to USEPA and DPR on guidance pertaining to the application of pesticides to surface waters and on recommended environmental hazard statements for residential outdoor pesticides (TDC, 2007). These efforts are beginning to show some modest signs of success. In a recent letter to stakeholders, EPA outlined an approach to provide better cooperation between the Office of Pesticide Programs (OPP) and the Office of Water (OW), to allow for “environmentally protective and scientifically defensible effects assessment judgments about contaminants that are or may be found in ambient water”. The Riverside County Permittees plan to continue their support of these efforts through ongoing

participation in the CASQA Pesticides Subcommittee, the Urban Pesticide Pollution Prevention (UP3) Project, and the Urban Pesticide Committee. The Permittees also plan to request that the RWQCB become involved in advocating for more effective pesticide regulation at the state and federal levels.

The Permittees are members of a CASQA subcommittee that addresses pesticide uses impacting stormwater discharges. Effort focuses on providing input to the USEPA and the California Department of Pesticide Regulation (DPR) to improve pesticides regulations so that they more fully protect water quality and are better aligned with the Clean Water Act and California Water Code. (RCFCWCD, 2008). CASQA has also been active in supporting DPR's ongoing reevaluation of allowable pyrethroid pesticide uses (TDC, 2007).

Increasingly, the regulatory response to the water quality impacts resulting from *legal uses of approved pesticides* has been for regional water boards to impose limitations on the allowable loadings of pesticides to impaired waters through the TMDL process. Local agencies have little or no jurisdiction over sales or use of these pesticide products, and therefore do not have the full authority needed to perform loading reductions in resulting TMDLs. An effective regulatory solution must occur at the state and federal levels, to regulate allowable pesticide uses to effectively prevent such water quality impacts.

Current legislation requires users of certain pesticides to be trained, often certified, in the use of those pesticides and to report the amounts applied (State of California, 2008). A similar regulatory approach could be used to promote pesticide alternatives, such as for PCOs to train and certify their technicians in the use of IPM methods (Quarles, 2002). The Permittees are considering supporting regulatory action by the state to include IPM training for PCOs in the requirements for certification and training on the use of pesticides.

Environmentally sensitive and flexible zoning ordinances may be adopted to facilitate the use of LID principles, thereby encouraging private developers to use LID principles (Prince Georges County, 1999). Additional land use restrictions or alternatives to present zoning

laws may help reduce urban storm water runoff, potentially reducing pyrethroid loadings in receiving waters. The Permittees plan to continue promoting LID implementation through interagency communications and cooperation.

4.1.2 Integrated Pest Management

Status: Currently being implemented by the Permittees.

IPM is "a decision-making process for managing pests that uses monitoring to determine pest injury levels, and combines biological, cultural, mechanical, physical, and chemical tools and other management practices to control pests in a safe, cost effective, and environmentally sound manner that contributes to the protection of public health" (Carlsen, 2008). IPM can further be described as an approach to solving pest problems by using information about the pest and landscape to eradicate the pest's habitat in a manner that poses the least risk to humans (Ecology Action, 2007). IPM has many different aspects that help to reduce pests and in turn cause a reduction in pesticide use, including green gardening and structurally integrated pest management (SIPM). BMPs that are typically used as part of an IPM strategy are described in the following sub-sections.

4.1.2.1 Green Gardening

Status: Not currently being implemented by the Permittees, program under consideration and will be enacted in the near future.

The Green Gardener program, implemented through landscapers, promotes environmentally responsible landscaping to reduce the use and need for pesticides. In general, education of gardening and landscape maintenance staff is beneficial for pest reduction as part of an IPM program. It provides alternative methods to landscapers, such as reducing outdoor sources of ants by elimination of their food and water sources through management of honeydew producing insects and plants associated with them (UC Davis, 2007). The Green Gardener

program encourages businesses to participate in environmentally sound landscape maintenance. Healthy landscapes are more resistant to pests (Ecology Action, 2007). Pests that do not have a suitable habitat will leave to find a more hospitable environment. When the pests leave, then there is a lessened need for pesticide applications and lower risk of pyrethroids entering storm water.

The County of Santa Barbara implemented a Green Gardener Program, in which landscapers are encouraged to take a class at the local city college, covering subjects such as IPM strategies and environmentally beneficial landscaping to obtain a "Green Gardener" card. They are then placed on the Green Gardener list, which is then promoted to the public by the County (County of Santa Barbara, 2008). The program benefits both parties; gardeners receive education and advertising at a nominal cost, and the County receives the benefit of more environmentally-friendly landscaping and a reduction in the use of pesticides. Municipalities may promote this type of program by contracting with landscaping companies that have their employees trained in green gardening practices.

Encouraged by the success of the Santa Barbara Green Gardener Program, the Monterey Bay area instituted a similar program. "The goal of the program was to educate and certify local gardeners in resource efficient and pollution prevention landscape management practices" (Ecology Action, 2007). With the support of the State of California Water Resources Control Board, more municipalities are likely to follow (Ecology Action, 2007).

4.1.2.2 Pest Control Contracting

Status: Currently partially implemented by the Permittees.

Many municipalities contract pesticide applications to professional PCOs. Contracting only with PCOs that have IPM training and certification can help realize IPM models and goals. The recently completed EcoWise Certified IPM Contracting Tool Kit (www.EcoWiseCertified.org), provides resources for municipal agencies to use in developing such a program. The EcoWise IPM Tool Kit includes:

- Elements to consider when developing an IPM policy
- Roles and responsibilities of the agency or business in an IPM program
- How to hire and work with a professional IPM service provider

The Took Kit also includes the EcoWise IPM Process along with a number of other helpful resources and sample documents.

Because PCOs are responsible for the majority of pesticides applied in urban areas, distribution of information regarding less-toxic alternatives, lower-use application techniques, and proper disposal, practices to professional applicators is an essential component of the Permitee's pesticide control effort. The Permittees currently distribute information to PCOs through the Public Outreach and Education Program (see Section 4.1.3).

The City of Palo Alto's Regional Water Quality Control Plant includes IPM requirements in their contracts with PCOs (City of Palo Alto, 2008). The City of Santa Monica, as a part of their SIPM program, specified IPM requirements in their PCO contracts (Raphael, 1997). Use of PCOs with IPM training and certification by municipalities encourages local PCOs to invest in IPM training and certification, which in turn, allows their expertise in IPM to expand beyond just the municipality itself (Quarles, 2002). Education of PCOs, hiring only PCOs that have IPM training, and contracting specifically for IPM by local agencies may

create more public awareness and reduce the use of pyrethroids in the Santa Margarita watershed.

4.1.2.3 Structurally Integrated Pest Management Program

Status: Currently being implemented by the Permittees, with additional programs under consideration.

SIPM is a program that controls the access of pests to buildings and the potential food sources within them by protecting the structure itself from pests, with minimal use of pesticides. The Permittees intend to lead by example, sharing success through public outreach programs and encouraging individuals and businesses to do the same. SIPM is a long term solution offering positive potential impacts on budget, reduction of pests and, reduction of pyrethroid pesticide use. Note that SIPM should not be confused with category of pesticide use referred to as structural pest control. SIPM is a BMP designed to reduce the use of pesticides in a structural pest control program.

The City of Santa Monica implemented an SIPM program and experienced a reduction in pests and in the use of pesticides. In addition, Santa Monica reduced pest management costs by 30% (State of California, 2008). California law requires a SIPM strategy for all state-owned buildings and schools (State of California, 2008). The three main aspects of a SIPM strategy are facility design and LID, monitoring, and facility maintenance.

<u>Facility Design</u>

Status: Currently being implemented by the Permittees.

Facility design can play a large role in the exclusion of potential pests. "A facility's planning, design, and construction provides an opportunity to incorporate features that help to exclude pests, minimize pest habitat, and promote proper sanitation" (NIH, 1999). It can also reduce

storm water runoff (NAHB, 2008). Exclusion of pests helps reduce pest infestations and in turn the need for pyrethroid pesticide use. For example, ensuring that the design holds plants and mulch several inches away from the foundation of a building may assist the reduction of ant populations immediately adjacent to the building (UC Davis, 2007). A reduction in storm water runoff may also reduce the amount of pyrethroids that enter receiving waters. Facility designs can incorporate aspects of LID, as discussed below. New development and redevelopment may incorporate designs that aid in the exclusion of pests and the reduction of urban runoff, which may contribute to a reduction of pollutant loads, including pyrethroids.

Pest Monitoring

Status: Currently in not use by the Permittees, program under consideration.

Monitoring structures and adjacent areas may help prevent pest infestations and quickly identify potential problems. Traps, visual inspections, and staff interviews assist in the identification of areas and conditions that may foster pest activity (NIH, 1999). Monitoring for ants, for example, may consist of simple inspections of facilities such as looking under sinks and along pipes and electrical wires (UC Davis, 2007). The City of Santa Monica, as a part of their SIPM, provided training to all general staff, purchasing, carpenters and custodial staff. Specific presentations were given to groups, such as the custodial staff, who learned about products used in control of ant and cockroach populations and general sanitation. The staff is trained in the identification of potential pest infestations and habitat conditions that may foster pest activity (Raphael, 1997). Early identification of pest infestations can increase the effectiveness of specific treatments and reduce the overall need for pesticide use.

Sanitation and Facility Maintenance

Status: Currently not being implemented by the Permittees, program under consideration.

Proper sanitation includes reducing clutter and pest habitat and incorporating proper facility and waste management practices. Records of maintenance and housekeeping conditions may help track pest problems and assist in the determination of whether corrective action is needed or has been taken in a timely manner (NIH, 1999). Sanitation and facility maintenance involves the housekeeping staff, the building maintenance staff, and the landscaping staff.

Improper storage of waste may affect urban runoff, and it may create a hospitable environment for pests, particularly ants. Initial, low-cost steps that municipalities may take to improve waste handling are: controlling litter, keeping waste collection areas clean, and insuring proper disposal of pyrethroid pesticide products, if used, and educating employees and the public. Simple solutions such as rinsing out soda bottles and emptying trash daily prove effective to reduce insect infestations, particularly ants (UC Davis, 2007). An important component of an SIPM monitoring program is regular inspections of solid waste containers for structural damage or leaks (CASQA, 2004).

Educating custodial staff, such as was done in the City of Santa Monica, can reduce the amount of improperly disposed pesticides (Raphael, 1997). Designating staff members to perform a daily checklist of areas around the structure to ensure cleanliness and proper storage of waste can assist the efforts to reduce potential pest infestations and leakage of hazardous waste (CASQA, 2004).

Building maintenance staff also benefit from education and acceptance of responsibility for pest management. Maintenance crews can contribute to an SIPM strategy by securing the structure, such as caulking holes and cracks, assisting in the removal of clutter, and installing

door sweeps (State of California, 2008). Caulking holes in structures can prove effective in keeping ants out of facilities (UC Davis, 2007). Upkeep on building maintenance helps reduce potential pest habitat, and thus may reduce the need for application of pyrethroid pesticides.

Reduction of pest habitat around structures may reduce pest populations in and around structures. Marin County, as part of its integrated pest management program, has reduced rat habitat around the local Civic Center and in turn has seen suppression of the rat population (Carlsen, 2008). Programs similarly tailored to ants may result in a positive effect of pest reduction within the SMR. For example, banding tree trunks with tanglefoot or similar sticky substances can keep ants away from trees (UC Davis, 2007). Education and training may be provided to Permittee landscaping crews to assist in proper vegetation removal and, when necessary, pesticide use. Landscaping crews may be informed that pyrethroid pesticides or any less toxic pesticides are to be used only when a pest problem arises to an intolerable level, that they are not administered when a wet weather event is expected and only when low wind speeds are present (CASQA, 2004). Education of landscaping crews to remove pest habitat may reduce the need for pyrethroid use thus reducing the potential risk of pyrethroids entering storm water runoff.

Also, utilizing low water using vegetation and alternative landscaping techniques such as xeriscaping or naturescaping are efforts that landscape crews can take to reduce pyrethroids in urban runoff. Landscaping crews may also help preserve the water efficiency of the landscape through properly timed fertilizing, weeding, pruning, and pest control. For example, proper collection and disposal of yard clippings can prevent loose vegetation that has possibly been treated with pyrethroid pesticides from entering waterways or storm water drainage systems such as MS4s (CASQA, 2004). Reduction in pest habitat and proper landscaping maintenance may help reduce pest problems, and thus the need for pyrethroid pesticides.

4.1.3 Public Outreach and Education

Status: Currently being implemented by the Permittees.

Public Outreach and Education programs inform the public about storm water issues, proper use and disposal of publically available chemicals, and alternatives to pyrethroid pesticides. Reaching out to the public and providing information about the dangers of pyrethroids pesticides encourages citizens to make educated decisions about pesticide use. It also may accelerate state and federal regulatory changes regarding pyrethroid use through public promotion of such changes. According to the EPA, public education and awareness can be a "key component" in any BMP program for storm water management (EPA, 2008).

The District has enacted a public outreach program to help reduce the potential for pyrethroid pesticides to contaminate receiving waters. This program has initiated: distribution of educational materials to hardware store employees, active participation and distribution of outreach for HHW/ABOP facilities to provide for free venues to dispose of excess pesticides, and distribution of EPA and CalEPA materials to the public. The District also promotes the use of less toxic pesticides, provides education on storm water issues in public schools, and has enacted a multimedia campaign to control urban sources of pyrethroid pesticides (RCFCWCD, 2005).

<u>Education and Outreach to Businesses</u>

Status: Currently being implemented by the Permittees.

Distribution of information regarding pesticides to businesses, particularly hardware stores, is crucial for reducing pyrethroid use and misuse at its source. Education on pyrethroid runoff to local hardware stores may assist local hardware store employees to educate their customers on alternative methods of pest control. An Orange County survey from 2001 found that 55% of pest control products were purchased at hardware stores (Wilen, 2001). In

2006, Riverside County had 177,562 pounds of reported non-agricultural usage of pyrethroid pesticides (RCFCWCD, 2008). Reduction in usage may lead to a reduction of pyrethroids in urban storm water runoff. Educating hardware store employees about urban water quality impacts of pyrethroid pesticides may help reduce the usage and thus the toxicity of runoff in the Santa Margarita Watershed resulting from pyrethroid use, as employees have the ability to recommend alternative methods of pest management to their customers.

Education of nursery employees about pyrethroid management and IPM techniques may also yield significant source control benefits. In general, nursery employees tend to be more knowledgeable about pesticides than employees at hardware stores (Wilen, 2001). Nurseries that use and sell pyrethroids offer the highest return on outreach resources, while those nurseries that have chosen alternate pest management methods serve as examples of IPM in practice. In a recent Riverside County survey, one nursery stated that they do not use pesticides and if their nursery does experience a pest infestation, it is treated naturally (RCFCWCD, 2008). Such nurseries are likely to encourage their clients and customers to use the same methods. Education and outreach can lead to cooperation and sharing of successful and unsuccessful methods of IPM and ultimately reduce pyrethroid pesticide use and toxicity of storm water runoff.

Businesses not in the industry of pesticide sales may also benefit from outreach. The District directs outreach efforts to all businesses; those in the business of selling or using pesticides, and those that are not. The District has coordinated with the County's Business License Department to include an educational insert of the "Only Rain Down the Storm Drain" program to new business license applicants and annual renewal reminders (CRWQCBSD, 2008). Informing companies on proper disposal of hazardous materials such as pesticides is crucial to prevent pyrethroid containers from being improperly disposed of, leaking, and then contributing to storm water pollution.

Several Southern California cities conduct general business outreach as well. Cities such as Carson, Gardena, Inglewood, and Lomita distribute informational pamphlets on storm water

pollution relating to landscaping and gardening practices to general businesses (DCWMAC, 2007). Such information informs businesses of alternate methods of pest control beyond pesticide use and imparts knowledge about storm water quality issues. Thus, dissemination of educational materials to local businesses is intended to help reduce pyrethroid runoff by ensuring proper disposal of pesticides and encouraging alternate methods of pest control.

Educational and Outreach to the General Public

Status: Currently being implemented by the Permittees.

The District distributes educational materials within the Santa Margarita Region such as EPA sponsored pamphlets in order to promote reduced use of pyrethroid pesticides and educate the public about alternate practices of pest management. The public purchases retail pesticides and uses them, presumably, according to the manufacturer's instructions and in compliance with regulations listed on the packaging, including proper disposal of empty containers in the municipal waste stream. However, even when used properly, retail pesticides have the potential to contaminate urban runoff, and homeowners may be unaware of the downstream consequences of pesticide use. Depending on the landscaping practices in a neighborhood, promoting alternative pest management strategies and educating the public on storm water quality and pesticide use may be the most beneficial way to reduce the source of pyrethroids in urban runoff (Wilen, 2005).

The District distributes educational materials within other public outreach programs and maintains pest management information on the internet. The District also distributes brochures to educate the public on lawn and garden maintenance, fertilization, and pesticide and household chemical use (RCFCWCD, 2005). These educational materials provide public education on alternative pest control methods, limiting individual use of pyrethroids, and proper disposal of pesticide containers.

Many municipalities perform storm water outreach at festivals and public events by participating in the events and by distributing brochures. The Cities of Lawndale and Torrance plan and attend public festivals and rent booth space to educate the public about storm water quality and the use of pyrethroids (DCWMAC, 2007). Cities including Carson, Gardena, Inglewood, and Lomita distribute informational pamphlets on storm water pollution relating to household activities and landscaping and gardening practices to the general public (DCWMAC, 2007). The District participates in events such as the Children's Groundwater Festival, the Southern California Fair, the Community Water Festival, and the Santa Margarita Watershed Clean Up (RCFCWCD, 2005). The Permittees, as well as other municipalities within California, participate in public events and distribute informative materials as a portion of their current public outreach programs.

Education on proper disposal of pesticides

Status: Currently being implemented by the Permittees.

Improper disposal of pesticides is a potential contributor to storm water contamination. Empty containers be disposed of in the municipal waste stream are not likely to contribute to storm water pollution, however, unused pesticides may enter the MS4 by leaking in transit. In Orange County in 2001, 54.5% of people surveyed claimed to have disposed of unwanted pesticides in the municipal waste stream, and 78.6% did not know the location of a household waste disposal site (Wilen, 2001). The District has created a partnership with Riverside County Waste Management to provide educational programs and materials on proper disposal of unwanted waste, including pesticide containers (RCFCWCD, 2005).

Multimedia Outreach

Status: *Currently being implemented by the Permittees.*

The EPA suggests using multiple media sources to promote and educate on storm water impacts, particularly through public service messages (EPA, 2007). Mass media has proven to be a key source of pollution prevention information for the general public (LADPW, 2002). The District currently participates in a multimedia advertising campaign including: maintaining a website that provides information, distributing mailing inserts regarding water quality issues through various county entities, and billboard advertising campaigns. Many other municipalities, such as the Cities of Palo Alto and Lawndale, also use the world wide web to provide information to the public (City of Palo Alto, 2008) (DCWMAC, 2007).

Public School Programs

Status: *Currently being implemented by the Permittees.*

A storm water education program for public schools is a concept supported by the EPA (EPA, 2007). The County of Los Angeles has incorporated public school educational programs into its outreach program (LADPW, 2002). The District focuses storm water education efforts on elementary school students (RCFCWCD, 2005). For example, sixth-grade students at Warm Springs Middle School were given an interactive presentation regarding storm water pollution with an enviroscape model that excited and engaged the students; a presentation that has been given over 150 times during the 2003-2004 school year (Jamescourie, 2004). Educational programs in public schools are intended to produce long-term benefits to storm water runoff quality.

Education on Lower Risk Alternative Pesticides

Status: Currently being implemented by the Permittees.

Part of Public outreach includes suggesting less toxic alternatives to pyrethroid pesticides, such as those listed on the Our Water Our World website (www.ourwaterourworld.org). Lower risk pesticides have reduced impacts on human health, lessened toxicity to non-target organisms, decreased potential for water contamination, and lower pest resistance potential (Matteson et al., 2007). The District distributes materials associated with the "Our Water Our World" organization (RCFCWCD, 2008).

However, some of the lower risk pesticides are toxic to beneficial arthropods and still have the potential to pollute surface and ground water (Matteson et al., 2007). Pyrethroids were developed as a less toxic alternative from organophosphate pesticides (Quarles, 2002). In the Santa Margarita Watershed, there was a decrease in water toxicity to *Ceriodaphnia* and an increase in toxicity to *Hyalella* as organophosphate pesticides such as chlorpyrifos and diazinon and were replaced by pyrethroids (RCFCWCD, 2008). The effects on storm water runoff of lower risk pesticides must be carefully evaluated before they are promoted as effective solutions to urban storm water runoff pollution.

4.1.4 Low Impact Development (LID)

Status: Currently being implemented by the Permittees.

LID involves environmentally-friendly building and development designs that mitigate impacts to land and water. LID functions by managing storm water at its source, incorporating a variety of runoff control techniques, using natural features as design features, and protecting natural resources (NAHB, 2008). Municipalities that promote LID have the potential to reduce municipal infrastructure and maintenance costs while balancing growth needs with environmental protection (NAHB, 2008). LID practices include "small scale,

decentralized treatment practices" that include conservation of open space, a reduction of impervious surfaces, and the incorporation of water controls (NAHB, 2008). Reduction of urban runoff volumes may reduce the loadings of pyrethroids to receiving waters in urban areas.

In 2007, EPA implemented a retrofit of the agency headquarters in Washington, D.C., incorporating LID designs to assist with storm water retention (EPA, 2007). Retention of storm water on the land helps prevent pollutants from entering streams and rivers (EPA, 2007). One of the main goals of the EPA LID retrofit was to demonstrate several LID techniques and encourage government agencies and developers to use them (EPA, 2007). LID may be used in conjunction with IPM programs, which would reduce the amount of pesticides used and minimize the urban storm water runoff of pyrethroids. The County of San Diego's most recent MS4 permit requires implementation of LID techniques (County of San Diego, 2007); this appears likely to continue as a trend with other permits in the region as they are renewed. The incorporation of LID principles into development regulations in the Santa Margarita watershed provides a potential solution to runoff of pyrethroids into receiving waters.

4.2 Treatment Control BMPs

Treatment Control BMPs are typically structural devices engineered with the intent to remove pollutants from storm water. Treatment BMPs require construction and long term maintenance, but can be extremely effective (CASQA, 2003). Although treatment BMP's have not been thoroughly investigated specifically for reduction of pyrethroids, some methods may be useful. Pyrethroids bind tightly to soil particles so there is a high probability that pyrethroids would be removed with suspended solids when they pass through treatment BMPs. In addition, pyrethroids degrade over time; permethrin, for example, has a half life in soil of about 30 days and about 10 days on certain plant life. Because pyrethroids have low mobility in soil, infiltration-based treatment BMPs have a low probability of contributing to groundwater contamination (NPTN, 1997).

From the list of available treatment BMP's identified in Table 3-1, the types of treatment BMPs feasible for pyrethroid treatment in the Santa Margarita Watershed, considering the climate, local vegetation, and soil types present are: pervious pavement, media filters, extended detention basins, infiltration basins, and infiltration trenches.

These BMPs and their potential to remove pyrethroids from storm water runoff are described below.

4.2.1 Pervious Pavement

Status: Currently being implemented by Permittees under LID program.

Pervious or porous pavement is "a system comprising a load-bearing, durable surface together with an underlying layered structure that temporarily stores water prior to infiltration or drainage to a controlled outlet" (CASQA, 2003). Pervious surfaces include grass, gravel, and porous concrete and asphalt (CASQA, 2003). The multi layer system assists in preventing pyrethroid pollution by providing a stable structure for pyrethroids to bind to and degrade, thus helping to prevent their transport in to receiving waters. Silts that are deposited within the pavement may need infrequent controlled waste disposal (CASQA, 2003).

The advantage of porous pavement is that urban runoff is reduced while treatment is provided and it is an effective drainage solution in confined urban areas. However, porous pavement is not a viable option on high traffic or high speed roads due to safety issues. There is a small chance that it may contaminate groundwater. It is fairly easy to replace, should there be a clog or damaged area, as small areas can individually be paved (CASQA, 2003). The use of pervious pavement appears to be a growing trend.

4.2.2 Media Filter

Status: Currently being implemented by Permittees via sand filters.

Storm water media filters are usually two-chambered including a pretreatment settling basin and a filter bed filled with sand or other absorptive filtering media. As storm water flows into the first chamber, large particles settle out, and then finer particles and other pollutants are removed as storm water flows through the filtering media in the second chamber. Media filters are highly effective at removing sediment from storm water flows (CASQA, 2003). They are appropriate in low flow areas, particularly with sandy soil. Washington D.C. and Austin, TX have both successfully implemented media filters to treat storm water (VCSQMP, 2002). They "are well suited to Southern California because they do not require vegetation and require less space than other treatment control measures with similar removal efficiencies when a partial treatment sedimentation basin is used" (VCSQMP, 2002).

However, media filters clog easily when exposed to high sediment loads and may decrease in effectiveness after being in use for a few years (CASQA, 2003). A media filter is not appropriate for areas with erosive soil upstream from the treatment filter (VCSQMP, 2002). The lack of abundant native vegetation in the Santa Margarita watershed contributes to a high potential for erosion, so media filters may not be effective in the long term due to clogging. When clogging does occur, media filters may become a nuisance due to mosquito or midge breeding in pooled waters (CASQA, 2003).

4.2.3 Extended Detention Basin

Status: Currently not being implemented by the Permittees for pyrethroid reduction.

An extended detention basin (EDB) is a permanent basin "formed by excavation and/or construction of embankments to temporarily detain the Stormwater Quality Design Volume

(SQDV) of storm water runoff to allow sedimentation of particulates to occur before the runoff is discharged"(VCSQMP, 2002). EDBs are constructed with an outlet at the bottom that allows for a slow, time-controlled release. The ultimate goal of EDBs is to level off peak storm water runoff rates (VCSQMP, 2002). Santa Clara Valley and the City of Palo Alto have noted that their detention basins have helped with the reduction of pollutants (EOA, 2004) (City of Palo Alto, 2008). Pyrethroids could be removed in the basin through settling of particulates.

Extended detention basins can serve multiple purposes as they provide for significant trash removal as well (CASQA, 2003). Maintenance is needed to ensure that the pond fully drains after large wet weather events, to avoid creation of standing pools causing mosquito or other vector habitats (CASQA, 2003). Extended detention basins are most effective when used in conjunction with other control measures, and are only moderately successful at removal of sediment. EDBs require relatively large amounts of land and therefore may not be feasible in urban areas of the Santa Margarita watershed (VCSQMP, 2002). There are no available examples of test results from municipalities using an extended detention basin for reduction of pyrethroid pesticides.

4.2.4 Infiltration Basin

Status: Currently not being implemented by the Permittees for pyrethroid reduction.

An infiltration basin is a shallow impoundment that is designed to infiltrate storm water and utilize the natural ability of soil to remove pollutants in storm water runoff (CASQA, 2003). Infiltration basins store runoff until it eventually enters the soil and infiltrates into the water table (CASQA, 2003). The soil present in the Santa Margarita Region is extremely pervious and may work well with an infiltration basin treatment structure.

Since pyrethroids adsorb onto soil, pyrethroids are likely to be removed from the storm water into the soil. However, there is a slight possibility that they may be resuspended into the

groundwater. Monitoring of pilot sites would be required to determine if there is transport of pyrethroids to the water table.

As with detention basins, maintenance is needed to ensure that the basin fully drains after large wet weather events to avoid creation of standing pools causing mosquito or other vector habitats. Infiltration basins may fail if the storm water volume is greater than the design volume (VCSQMP, 2002). Since infiltration basins require a large amount of open space, installation in urban areas is problematic. There are no available examples of test results from municipalities using infiltration basins for reduction of pyrethroid pesticides.

4.2.5 Infiltration Trench

Status: Currently not being implemented by the Permittees for pyrethroid reduction.

An infiltration trench is a long and narrow ditch that collects storm water runoff by storing it in the voids in a rock bed and allowing it to infiltrate to the soil matrix (CASQA, 2003). Infiltration trenches are extremely effective at removing fine sediment particles and associated pollutants (CASQA, 2003). Naturally pervious soils are required (VCSQMP, 2002). The Santa Margarita watershed has naturally pervious soils, which would allow for the removal of pyrethroids from the water and into the sandy soil.

Infiltration trenches are typically used in conjunction with grass lined channels or grass filter areas located upstream for maximum removal of sediment and larger particles (VCSQMP, 2002). Due to the arid environment in the Santa Margarita Region, grass lined channels, or even vegetated strips, would require irrigation to maintain the vegetation. If the infiltration trench clogs, it can become a source for mosquito breeding. There are no available examples of test results from municipalities using infiltration trenches for reduction of pyrethroid pesticides.

4.3 BMP Evaluation

A summary of the relative advantages, disadvantages and costs of the various BMPs identified in Sections 4.1 and 4.2 above is presented in Table 6.1 below. The table includes advantages, disadvantages, and the relative cost of implementing the BMPs.

Table 6.1
BMP Comparison Table

BMP Technology	Advantages	Disadvantages	Relative Cost*
Source Control			
Regulatory Change	Reduces the availability of pyrethroids on the market	May take years to achieve full effect	$
Integrated Pest Management	Engages businesses and the public in environmentally sound gardening practices	Need to ensure that employees are following protocols	$
	Has been implemented in various locations throughout CA and the US	Could have some resistance from employees who are use to standard practices	
	SIPM can be put in place directly by the Permittees	Some may find the organic methods of gardening to be too time consuming	
	SIPM can be incorporated directly into current maintenance activities		
	Includes LID aspects		
Public Outreach and Education	EPA states that Public Outreach is key for any BMP program	Cannot control the direct actions of public but only educate	$
	Copermittees have already implemented a public outreach program	Hard to measure the direct impact of pollutant reduction	
	Employees of business have direct impact on the buying choices of the general public		
	Programs have been implemented by many municipalities		

Table 6.1 (continued)
BMP Comparison Table

BMP Technology	Advantages	Disadvantages	Relative Cost*
Treatment Control			
Porous Pavement	Reduces runoff volume while reducing pollutant load as well	Requires ongoing minimal maintenance	$ to $$ depending on size
	Can be easily replaced depending on the size and location of design	No known measured reduction of pyrethroids.	
Media Filter	Do not require vegetation	No known measured reduction of pyrethroids.	$$$
	Highly effective in removal of sediments	Clogging is an issue because of the erosion potential in the watershed.	
	Requires less space than other treatment controls for sediment removal		
Extended Detention Basin	Known for significant trash	Large footprint Moderately successful at removing sediment	$$$
	Standard BMP with many years of maintenance and operational information available	Create an area with vector breeding potential	
		No known measured reduction of pyrethroids.	
Infiltration Basin and Trench	Uses natural ability of soil to remove pollutants.	Unknown if pyrethroids would be transported to the groundwater table.	$ to $$$
	Local soils would allow infiltration	Would require a pilot study to determine transport.	
		No known measured reduction of pyrethroids.	
		Clogging of outlet structure	
		Accumulation of metals in soil	

*Relative Cost: $ = $0 to $50,000, $$ = $50,001 to $100,000, $$$>100,000

5.0 Pending Legislation

There is no relevant pending state legislation relating to pyrethroid pesticides from the California Department of Pesticide Regulation or, in general, the State of California as of December, 2008 (State of California, 2008) (CDPR, 2008). In August 2006, the DPR put rules in place to control insecticide sprays during the dormant season. During winter, pesticides are applied to dormant tree and vine crops to kill overwintering pests and diseases. The new rules restrict the use of most dormant insecticides when residuals can run off into water (DPR 2007-08 Progress Report). However, there are no additional updates relating to pending pyrethroid legislation at this time.

There is no relevant pending federal legislation relating to pyrethroid pesticides from the United States Congress as of December, 2008 (Library of Congress, 2008). Although the EPA is working on proposed mitigation labeling for non-agricultural pyrethroids, there is no indication as to when this legislation may be enacted (TDC, 2007).

6.0 Proposed Course of Action

The Permittees intend to use a phased approach to address the identified sources of pyrethroid pesticides causing toxicity in surface waters of the SMR watershed. As described in Section 4, various source control BMPs and treatment control BMPs are available to address these sources. However, the use of pyrethroid pesticides can not be directly regulated by local governments. The most effective control strategy involves effective labeling and use restrictions via state or federal regulatory action, to prevent water quality impacts from legal pesticide uses. The proposed course of action involves an adaptive management approach with the following broad elements:

- Pursue state and federal regulatory change through CASQA
- Implement a set of source controls targeted specifically at urban pesticide use,
- Through the annual reporting process, monitor the implementation of those controls, assess effectiveness, and identify sources or areas where additional effort is needed,
- Evaluate whether additional controls, including treatment controls, may be needed to further reduce pyrethroid pollution,
- Implement additional controls as needed,
- Continue to monitor implementation, as well as conditions within the target receiving waters, assess effectiveness, and re-evaluate control program

The Permittees will continue to support CASQA and/or other agencies pursuing regulatory change in labeling or use limitations for pyrethroid pesticides. This support will include participation in the CASQA Pesticides Subcommittee and the Urban Pesticide Committee, and supporting the implementation of the Urban Pesticide Pollution Prevention (UP3) Project. Permittee staff will continue to provide staff time and resources necessary for the CASQA Pesticides Subcommittee to complete its negotiations with the California Department of Pesticide Regulation and USEPA regarding labeling and use limitations for pyrethroids.

Source control is generally a more cost-effective approach to pollution abatement than treatment control, as source controls do not involve the costly capital investments of treatment controls. As discussed previously, CASQA, EPA, and other agencies and experts

recommend a source control program as an essential component of a successful pollution reduction strategy.

The basis of source control involves preventing the entrance of the subject pollutant into the discharge stream. For pyrethroid pesticides, this means preventing the pesticide from entering the municipal storm drain system through urban runoff. This can take place by intervention at the various steps in the pest control process:

- Point of sale: reducing the purchase of pyrethroid products through education of PCOs and the public in consequences of pesticide use and alternative means of pest control, including integrated pest management (IPM)
- Application: reducing use of pyrethroids on site through education of PCOs and the public into the importance of proper application methods and the potential consequences of pesticide use, as well as pest control alternatives (IPM techniques)
- Off-site Transport: reducing movement of pyrethroids into municipal storm drain system via use of Green Gardener approaches, IPM, and LID building techniques to reduce irrigation water use, retain storm water runoff on-site, and provide on-site mitigation for runoff pollutants (via grassy swales, infiltration, etc.)

A five-year pyrethroid pollutant reduction program is proposed by the Permittees.

<u>Year 1</u>

- Continue to support state and federal efforts to improve pyrethroid pesticide regulation
- Continue to publicize/promote the services of IPM-certified PCOs, to encourage businesses and homeowners to choose their services
- Continue to implement local agency contracting rules to require contracting of IPM-certified PCOs for municipal pest control (through EcoWise Certified IPM Contracting Tool Kit, e.g.)
- Continue point-of-sale education effort providing instruction in pesticide alternatives and proper use/application (using materials available through Our Water Our World, UP3 Project, CASQA members, e.g.)
- Continue efforts to develop and implement LID guidance for planning and development

Year 2

- Coordinate with the University of California (UC) Extension Master Gardener Program to extend its services to the Temecula/Murrieta area to further promote and support the use of IPM by local residents
- Re-evaluate, enhance as needed, and continue measures implemented in Year 1

Year 3

- Conduct programmatic assessment as part of third-year annual report, evaluate successes and areas where additional efforts are needed and adjust program accordingly
- Re-evaluate, enhance as needed, and continue measures implemented in Years 1 and 2

Year 4

- Evaluate effectiveness of BMPs using water quality monitoring data as part of fourth year annual report
- Re-evaluate, enhance as needed, and continue implementation of revised program as defined in Year 3

Year 5

- Conduct programmatic assessment, evaluate successes and areas where additional efforts are needed as part of ROWD process
- Identify additional program elements, including source and/or treatment controls, as needed to effect required pollutant reductions; revise program accordingly
- Re-evaluate, enhance as needed, and continue implementation of revised program as defined in Year 3

Many of the source control materials and programs needed are readily available through existing programs such as EcoWise Certified, Green Gardener, Our Water Our World, the UP3 Project, and the Western IPM Center. The following websites provide further information on these and other programs:

City of San Francisco: http://www.sfenvironment.org/our_programs/topics.html?ti=1
DPR: http://www.cdpr.ca.gov/docs/registration/reevaluation/chemicals/pyrethroids.htm

As a practical measure, it will be necessary to evaluate individual Permittee capabilities and resources, and develop a specific work plan for implementation of the pyrethroid pollutant reduction program.

It is also essential to develop and implement the pyrethroid pollutant reduction program in coordination with other regulatory requirements, especially other pollutant reduction programs mandated under the storm water NPDES Permit and/or load allocations required by TMDLs within the SMR watershed.

Construction Component Effectiveness Assessments

Goals

I Ensure that all Construction Sites have applicable permits from the Permittee.

II Increase the percentage of Construction Sites that are in compliance with Permittee building and grading permits

III Place additional focus on Construction Sites during Wet Season

IV Ensure that construction inspection staff are properly trained and informed of the issues related to stormwater quality

Goal Addressed	Measureable Metrics Collected / Compiled Annually	Highest Potential CASQA Effectiveness Level	Effectiveness Assessment Timeframe	Outcome required to support Effectiveness Level	Can a Reasonable Municipal Action Level be developed?
I	% of active construction sites that are discovered without building/grading permits	2	Permit Term	Decreasing Trend or minimal %	Y
II	% of active High/Medium priority sites subjected to enforcement beyond verbal/written warnings	3	Permit Term	Decreasing Trend or minimal %	N
II, III	% of active High/Medium priority sites subjected to enforcement beyond verbal/written warnings **during wet season**	3	Permit Term	Decreasing Trend or minimal %	N
II	% of enforcement actions that reached each level of enforcement	3	Permit Term	Trend toward lower levels	N
III	% of active permitted construction sites provided wet weather reminders	2	Annually	N/A	Y
IV	% of construction inspectors receiving annual training	1	Annually	N/A	Y

Development Planning Component Effectiveness Assessments

Goals

I Develop Design Guidance for Low Impact Development (LID) BMPs

III Encourage the use of LID-Based Treatment Control BMPs

IV Ensure that appropriate planning staff are trained in WQMP requirements

Goal Addressed	Measureable Metrics Collected / Compiled Annually	Highest Potential CASQA Effectiveness Level	Effectiveness Assessment Timeframe	Outcome required to support Effectiveness Level	Can a Reasonable Municipal Action Level be developed?
I	Status of SMC LID BMP Design Manual	1	Within Permit Term	Completion	Y
II	% of WQMP projects that met the exemption requirements for inspection and maintenance reporting by implementing only LID-Based Treatment Control BMPs	3	Permit Term	Increasing Trend	N
III	% of applicable planning staff that attended WQMP training.	1	Annually	N/A	Y

Permittee Facilities and Activities Program Effectiveness Assessments

Goals

I Ensure that Permittee Facilities have adequate BMPs implemented and that they are properly maintained
II Ensure that Channels and Inlets are kept free from trash and debris
III Encourage the use of Integrated Pest Management (IPM) on Permittee Facilities
IV Maintain an updated GIS map of the MS4 system
V Ensure the Permittee facility operators and maintenance workers are properly trained in issues related to water quality.

Goal Addressed	Measureable Metrics Collected / Compiled Annually	Highest Potential CASQA Effectiveness Level	Effectiveness Assessment Timeframe	Outcome required to support Effectiveness Level	Can a Reasonable Municipal Action Level be developed?
I	% of facilities with appropriate BMPs identified	1	Annually	N/A	Y
I	% of Facilities provided reminders of appropriate BMPs	2	Annually	N/A	Y
I	% of annual facility inspections finding deficiencies in BMP implementation that require follow-up actions	3	Permit Term	Decreasing Trend or minimal %	Y
I	Average % of deficiencies identified in the previous year's inspections that were addressed.	3	Permit Term	Increasing Trend or high %	Y
II	Estimated Tons of Waste removed from Streets	4	Annually	N/A	N
II	Estimated Tons of Waste removed from Inlets	4	Annually	N/A	N
II	Estimated Tons of Waste removed from Open Channels	5	Annually	N/A	N
III	% of Pest Control Contracts that include language promoting or requiring IPM	1	Annually	N/A	N
IV	% of new Permittee-maintained MS4 facilities added to GIS Map	1	Annually	N/A	Y
V	% of Permittee Facility and MS4 operators and maintenance staff that attended training.	1	Annually	N/A	Y

Industrial-Commercial Facilities Program Effectiveness Assessments

Goals

I Maintain an updated and prioritized list of Industrial and Commercial Facilities

II Ensure the each Industrial and Commercial Facility has implemented BMPs that are appropriate for the activities and features at that facility

III Ensure that implemented BMPs are properly maintained to ensure their effective operation

IV Implement enforcement measures as necessary to reduce the occurance and recurrance of violations

V Ensure that inspectors are appropriately trained to identify problem areas and BMPs maintenance issues.

Goal Addressed	Measureable Metrics Collected / Compiled Annually	Highest Potential CASQA Effectiveness Level	Timeframe to Determine Effectiveness	Outcome required to support Effectiveness Level	Can a Reasonable Municipal Action Level be developed?
I	% of new facilities added to database and prioritized	1	Annually	N/A	Y
II	% of inspected facilities with adequate Minimum BMPs in place at time of inspection	3	Permit Term	Increasing Trend or High %	N
III	% of inspected WQMP facilities subject to Post Construction Treatment Control BMP Inspection, with adequately maintained Treatment Control BMP	3	Permit Term	Increasing Trend or High %	N
IV	% of inspected High/Medium priority facilities that were subjected to enforcement beyond verbal/written warnings	3	Permit Term	Decreasing Trend or Low %	N
IV	% of enforced sites that are repeat offenders	3	Permit Term	Decreasing Trend or Low %	N
IV	% / Number of enforcement actions that reached each level of enforcement	3	Permit Term	Trend toward lower enforcement	N
V	Percent of applicable inspectors that attended training	1	Annually	N/A	Y

Residential Program Effectiveness Assessments

Goals

I Raise awareness among residents of activities that may be contributing to stormwater pollution
II Increase public awareness of BMPs for residential activities
III Increase public participation in hazardous material collection events
IV Increase public involvement in keeping the watershed clean
V Encourage the use of Alternative Pest Control Methods

Goal Addressed	Measureable Metrics Collected / Compiled Annually	Highest Potential CASQA Effectiveness Level	Timeframe to Determine Effectiveness	Outcome required to support Effectiveness Level	Can a Reasonable Municipal Action Level be developed?
I	Number of outreach events to Schools	1	Annually	N/A	N
II	Number and type of educational materials distributed that target residential activities	1	Annually	N/A	Y
I, II	Results of Public Ed Surveys	2	Permit Term	Increasing or high level of Knowledge	Y
III	Gallons of Used Oil Collected through Used Oil Block Cycle Grant	4	Annually	N/A	Y
III	Total Pounds collected at HHW/ABOP events	4	Annually	N/A	Y
III	Total Number of participants at HHW/ABOP events	3	Annually	Increasing Trend	Y
IV	Pounds of trash removed through Watershed Cleanup Events	4	Annually (as events occur)	NA	N
V	Number of Home Improvement stores provided outreach and customer educational information for pesticide use	2	Annually	Increasing Trend	Y

Detection and Elimination of Illicit Discharges and Connections Effectiveness Assessments

I Revise and enhance IC/ID Monitoring Program
II Reduce the occurance of Illicit Connections and Discharges
III Increase public reporting of improper disposal into MS4
IV Ensure the IC/ID reports are reviewed and responded to in a timely manner
V Ensure the confirmed IC/ID events are eliminated as quickly as possible
VI Ensure the IC/ID response staff are trained to identify potential sources of Illicit Discharges and recommend BMPs to prevent such discharges

Goal Addressed	Measureable Metrics Collected / Compiled Annually	Highest Potential CASQA Effectiveness Level	Timeframe to Determine Effectiveness	Outcome required to support Effectiveness Level	Can a Reasonable Municipal Action Level be developed?
I	Revise IC/ID Monitoring Program to screen random MS4 outfalls	1	N/A	N/A	N
II	% of IC/ID Monitoring events with sampleable flow	1	Permit Term	N/A	N
II	% of IC/ID Monitoring events that exceeded criteria and required follow-up	5	Permit Term	Decreasing Trend or low %	N
III	Number of IC/ID reports received	2	Annually	Increasing Trend	N
IV	% of IC/ID reports responded to within 1 business day of receipt	1	Annually	N/A	Y
V	% of confirmed and source-identified IC/ID incidents that required enforcement beyond verbal or written wardnings to eliminate	3	Permit Term	Decreasing Trend or minimal %	N
V	% of each type / level of enforcement	3	Permit Term	Trend toward lower levels	N
VI	% of IC/ID response staff receiving training	1	Annually	N/A	Y

Riverside County Flood Control and Water Conservation District

Riverside County – Santa Margarita Region Pyrethroid Source Identification Toxicity Reduction Evaluation

Final Phase II Report
January 2009

MACTEC
9177 Sky Park Court
San Diego, California 92123
858-278-3600 FAX 858-278-5300

Executive Summary

This document is the Phase II report for the Santa Margarita Region (SMR) Pyrethroid Source Identification Toxicity Reduction Evaluation (TRE) conducted by the SMR Permittees to identify the source(s) of toxicity in the SMR and develop a plan to reduce the toxicity. This report documents the Permittees' ongoing and proposed efforts to identify and reduce sources of pyrethroid pesticide toxicity associated with urban runoff.

Data gathered under this TRE was compared to data from neighboring counties. Based on available data, problems with pyrethroid-induced toxicity in urban runoff are common among municipalities in Southern California, and methods for addressing the problems are comparable.

A literature review was conducted to determine appropriate source control and treatment control BMPs for reducing the concentration and load of pyrethroids in storm water runoff. The literature source, the estimated potential for reducing pyrethroid-induced toxicity, and possible concerns about implementing the BMP are summarized.

Based on the results of the literature review, BMPs are evaluated for applicability and potential effectiveness in the SMR watershed. Many of the most effective and appropriate BMPs are currently being implemented by the Permittees.

A search for pending legislation did not identify any pending legislation pertaining to pyrethroid pesticides.

The most effective strategy to prevent water quality impacts from legal pesticide uses was identified as state or federal regulatory change involving effective labeling and use restrictions. The Permittees propose a five year plan to continue, review, and enhance current activities to reduce pyrethroid-induced toxicity.

1.0 Introduction

This document is the Phase II report for the Santa Margarita Region (SMR) Pyrethroid Source Identification Toxicity Reduction Evaluation (TRE) conducted by the County of Riverside, the City of Murrieta, the City of Temecula, and the Riverside County Flood Control and Water Conservation District (District, collectively Permittees). The Phase I Status Report (RCFCWCD, 2008) contains the work plan for Phase II and an outline of the topics in this report, as well as additional background information. This Phase II report is divided into six sections.

Section 1 describes the purpose of the TRE and provides an overview of the approach taken by the Permittees. Section 1 also contains a discussion of the regulatory framework of the TRE, a brief project background, a description of the Santa Margarita watershed, pyrethroid pesticide background and usage, and management questions and objectives.

Section 2 describes available pyrethroid and toxicity data from other counties in Southern California, and compares the data to data from Riverside County. The data and comparisons are included to demonstrate that the problems and solutions relating to pyrethroid pesticides facing the Permittees are similar to those of neighboring counties in the region.

Section 3 presents the results of the literature review conducted for this study of pesticide reduction Best Management Practices (BMPs).

Section 4 discusses potential pesticide reduction BMPs, the status of the Permittees implementation of the BMPs, and, when applicable, examples of the implementation of the BMPs in other municipalities. Section 4 also contains a table summarizing the potential BMPs, their advantages and disadvantages, and relative cost.

Section 5 discusses pending legislation relating to pyrethroid pesticides.

Section 6 presents the five-year course of action the Permittees propose to follow to reduce pyrethroid-induced toxicity in the SMR.

1.1 Purpose and Overview of Approach

The purpose of the TRE is to identify the source(s) of toxicity in the SMR and develop a plan to reduce the toxicity. The results of Phase I of the TRE are contained in the TRE Status Report (Riverside, 2008). This Phase II report for the TRE study documents the Permittees' ongoing and proposed efforts to identify and reduce sources of pyrethroid pesticide toxicity associated with urban runoff. The goal of Phase II is to establish a course of action and develop modifications to the Permittee's Storm Water Management Plans (SWMPs) to more effectively control the sources of toxicity that were identified in Phase I of the TRE. The Permittees will incorporate the course of action and SWMP modifications into the Report of Waste Discharge (ROWD) that will be submitted to the RWQCB in January 2009.

Phase II activities included:

- A comparison of toxicity and chemistry results to data from adjacent Phase I municipal separate storm sewer system (MS4) permit areas, including San Diego County and Orange County.
- A literature review of current studies and a survey of pesticide reduction BMPs.
- A search for pending legislation regarding pyrethroid pesticides.
- Development of a proposed course of action for the Permittees.

A literature review was conducted of BMP information available from the Urban Pesticide Pollution Prevention (UP3) Project and other pesticide management programs and documents. Information on relevant BMPs was compiled and evaluated to identify potential BMPs that are available to mitigate urban sources of pyrethroids. Existing Permittee programs, such as outreach, regulation, and BMP implementation, were then evaluated for improvement opportunities.

The proposed course of action was determined with consideration of the adequacy of data collection (sufficient precipitation and runoff to collect adequate data) and pending

regulatory actions by California Department of Pesticide Regulation (DPR), and the United States Environmental Protection Agency (EPA).

Land uses in Riverside County are comparable to those in neighboring Orange County and San Diego County, and pyrethroid pesticide-induced toxicity has been observed in those counties. The Permittees are committed to identifying and addressing water quality issues with methods consistent with those used by other stakeholders in Southern California. To this end, data gathered under this TRE was compared to data from neighboring counties, and current pesticide reduction programs used by municipalities throughout California were reviewed.

Source control and treatment control BMPs were researched and evaluated for potential effectiveness in reducing pyrethroid pesticide-induced toxicity in the Santa Margarita watershed. Many of the most effective BMPs are currently implemented by the Permittees, and several have been implemented within the previous Permit term (2004-2008). A proposed five-year course of action for the Permittees was developed by combining the results of the research with the existing programs.

1.2 Regulatory Framework

At the federal level, the authority to regulate pesticide manufacture and use is assigned to the United States Environmental Protection Agency (EPA) under the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA). In California, pesticide use is regulated at the state level by the DPR. In the SMR, the Permittees are required under the Clean Water Act to control discharges of pollutants, including pesticides that produce water toxicity, to and from their MS4 under the National Pollutant Discharge Elimination System (NPDES).

This TRE was performed as required by Monitoring and Reporting Program (MRP) R9-2004-001.

The MRP, Section II. A. I. 4, states:

> *"When results from the chemistry, toxicity, and bioassessment monitoring…indicate urban runoff-induced degradation, Permittees shall evaluate the extent and causes of urban runoff pollution in receiving waters and prioritize management actions to eliminate or reduce sources. Toxicity Identification Evaluations (TIEs) shall be used to determine the cause of the toxicity, and Toxicity Reduction Evaluations (TREs) shall be used to identify sources and implement management actions to reduce pollutants in urban runoff causing toxicity."*

As local regulation of pesticide use is generally preempted by federal and state law, the Permitttees' authorities are limited to addressing illegal disposal of pesticides, promoting public education, setting the example for minimum pesticide use, and coordinating with the federal and state agencies to facilitate regulatory changes at the state and federal level.

1.3 Project Background

Phase I of the TRE consisted of the toxicity monitoring begun in 2004 and the Toxicity Identification Evaluations (TIE) was initiated in the spring of 2007. The Phase I Status Report (RCFCWCD, 2008) provides a full project background. Toxicity monitoring at Temecula Creek and Murrieta Creek was initiated in 2004 using EPA protocol with the following indicator species: *Ceriodaphnia dubia*, *Selenastrum capricornutum*, and *Hyalella azteca*. Toxicity testing during the 2004-2008 reporting period indicated persistent wet weather toxicity to *Hyalella* in both Temecula Creek and Murrieta Creek. Toxicity was not observed to either *Ceriodaphnia* or *Selenastrum* in any of the samples collected over the four annual reporting periods beginning in the fall of 2004.

Toxicity Identification Evaluations (TIEs) were conducted on the wet weather samples collected from Temecula Creek and Murrieta Creek beginning in April 2007, in accordance with Table 2 of the MRP. The TIEs indicated that pyrethroids were the primary source of toxicity and biological degradation in both Murrieta Creek and Temecula Creek.

As a result of the toxicity and TIEs, storm water monitoring for pyrethroids was initiated in 2007-2008. Results indicate that the pyrethroids permethrin and/or bifenthrin are present in wet weather water samples taken at Murrieta Creek and Temecula Creek.

To further assess the impacts of pyrethroid pesticides the Permittees instituted Dry Weather Toxicity Testing and direct measurement of pyrethroid pesticide concentrations in dry weather water samples during the 2007-2008 reporting period. Toxicity and pyrethroid pesticides were not detected in dry weather water samples at either Murrieta Creek or Temecula Creek.

Phase I of the TRE concluded with the Phase I Status Report. The Phase I Status Report included studies to better characterize patterns and sources of toxicity and to evaluate the hypothesis that the *Hyalella* toxicity is due to pyrethroids.

Bifenthrin and permethrin appear to be the primary toxic elements in Temecula Creek and Murrieta Creek. While bifenthrin and permethrin were applied to both agricultural and non-agricultural land uses, the major sources of pyrethroid toxicity in the SMR are non-agricultural activities. Permethrin was applied more than any other pyrethroid pesticide in the urban landscape. Bifenthrin and permethrin application rates were one and three orders of magnitude higher for structural control applications than agricultural applications in Riverside County. Structural control appears to represent 93% of the total pyrethroids use for Riverside County.

The Status Report outlined the plan for Phase II of the TRE, and this report presents the results of Phase II.

1.4 Watershed Description

The SMR encompasses approximately 750 square miles in southwestern Riverside and northern San Diego Counties (see Figure 1-1). The upper (northeast) portion of the SMR is in Riverside County with the remainder in San Diego County. The SMR is subdivided into the Temecula Creek and Murrieta Creek sub-watersheds and has an arid Mediterranean climate. Creeks in the SMR are ephemeral. Flow in Temecula Creek and in Murrieta Creek results almost exclusively from groundwater during the dry season. It is rare to find flow during dry weather at the tributary stations, and usually this flow infiltrates before reaching Temecula Creek or Murrieta Creek (2006-2007 Monitoring Annual Report). While the ephemeral streams in the SMR are technically receiving waters, the term "Receiving Waters" as used in this TRE Status Report refers exclusively to Murrieta Creek and Temecula Creek.

The Santa Margarita River is formed by the confluence of Murrieta Creek and Temecula Creek. The confluence is located in Riverside County, approximately five miles northeast of San Diego County. The Santa Margarita River flows from Riverside County into San Diego County through the community of Fallbrook and Marine Corps Base Camp Pendleton. The lower estuary and river are protected by Camp Pendleton and are much less developed than surrounding areas in Southern California. The Santa Margarita River is able to support a relative abundance of wildlife and habitats in part because of its undeveloped state.

Figure 1-1

Riverside County Santa Margarita Watershed

As presented in Table 1-1, the total population in the SMR of Riverside County is significantly less than adjacent watersheds covered under similar Phase I MS4 NPDES permits.

Table 1-1

San Diego Region Populations

Jurisdiction	Population
Orange County	3,002,048
San Diego County	2,941,454
SMR/Riverside County	250,483
Unincorporated	55,291
Murrieta	97,257
Temecula	97,935

1.5 Pyrethroid Pesticide Background and Usage

A statewide compilation of the presence and effects of pyrethroid pesticides in urban surface waters, prepared in July 2008 and presented at the 2008 California Association of Stormwater Quality Agencies (CASQA) Conference, outlined the rise in pyrethroid use and its increased presence in urban waterways (Ruby, 2008). A comprehensive survey of pesticide use in Sacramento, San Diego, and Orange Counties also concluded that, as the older pesticides chlorpyrifos and diazinon have been phased out, pyrethroid pesticides have seen increased usage (Wilen, 2005). The Urban Pesticide Pollution Prevention (UP3) Project confirms that pyrethroids are the cause of toxicity in numerous California waterways, particularly in urban waterways. The UP3 Project (www.up3project.org) publishes an annual review of new scientific findings on pesticides in urban surface water (TDC, 2007). Since 2005, the reviews have consistently indicated that pyrethroid use continues to increase and that pyrethroids are found to be the cause of toxicity in urban waterways. The pyrethroid use information is confirmed by data published by the DPR.

Pyrethrins are natural insecticides that are derived from an extract of chrysanthemum flowers. Pyrethroids are synthetic versions of pyrethrins. These chemicals act on the nervous system of insects. Commercial pyrethroid pesticides often contain a synergist that works by restricting the enzymes insects use to detoxify pyrethroids. While pyrethroids have been shown to be one of the least poisonous insecticides to mammals, the effects depend on the level of exposure, the health of the animal, and the environmental circumstances.

Pyrethroids applied in urban areas enter the storm drainage system of the MS4 by surface runoff and are transported directly to receiving waters. Other potential urban sources are runoff from irrigation with reclaimed water, application overspray, and atmospheric deposition. Pyrethroids transported via the MS4, from whatever source, are considered to be non-point discharges. Agriculture, nursery, and urban/suburban uses are the main categories of sources of pyrethroids in the receiving waters of the SMR.

Outdoor structural pest control is the predominant urban use of pyrethroids in most watersheds. However, in the SMR, the acreage dedicated to agricultural land use exceeds the urban land use area by approximately 2:1. Pyrethroid insecticides are applied to a variety of crops in the SMR and California throughout the year. According to the DPR, pyrethroids are commonly used on fruit and nut trees, row crops, and in nurseries. Six of the primary pyrethroids used in California agriculture, in order of decreasing amount applied in 2003, are permethrin, esfenvalerate, lambda-cyhalothrin, cyfluthrin, bifenthrin, and cypermethrin. Therefore, agricultural sources of pyrethroids were considered.

TIE methods for pyrethroids are still being developed. Effective methods require the ability to measure low concentrations of pyrethroids, and this remains a challenge. Fortunately, the development of TIE methods for pyrethroids is progressing and moving towards standardization (San Francisco Estuary Project, 2007). TIEs are planned for storm water samples collected during 2008-2009 when toxicity is evident.

1.6 Management Questions and Objectives

This TRE is designed to confirm the toxic element observed in the samples collected in the Santa Margarita Region, identify likely sources of the toxic element, and propose mitigation measures for those sources. TIEs identified pyrethroids pesticides as the likely toxic element. As the MRP specifies that a TRE must be conducted following toxicant identification through a TIE, Phase I of the TRE focused on the pyrethroids identified as the source of toxicity in the 2007 TIEs. To support this TRE, the Permittees commissioned additional wet and dry weather toxicity testing, water column pyrethroid testing, additional TIEs to verify the persistence of pyrethroids as the toxicant. Based on the resulting information, the TRE evaluates the specific sources of toxicity and likely mitigation.

This TRE study assumes that pyrethroid sources and resultant toxicity patterns in the SMR are similar to those in neighboring counties, in particular San Diego and Orange Counties. Under this assumption, the Permittees hypothesized that pyrethroids would be detected in samples at most if not all monitoring locations, that the samples would exhibit toxicity to *Hyalella*, and that TIEs would indicate pyrethroids as the cause of the toxicity. Unlike other regions, dry weather toxicity is not expected in the SMR, as dry weather flows are supported primarily by groundwater.

Based on this assumption, this TRE was designed to provide information to help answer the following five management questions related to the toxicity:

1) Is the pyrethroid toxicity persistent in Temecula Creek and Murrieta Creek?
2) Does the toxicity occur during dry weather?
3) Are there any obvious sources of illicit discharge of pyrethroids that can be abated?
4) What are the likely sources of pyrethroid toxicity in the SMR?
5) What potential management measures are available to the Permittees to mitigate the impacts of pyrethroid pesticide application?

Answers to the first four questions are detailed in the Phase I Status Report. Briefly, toxicity is persistent in the creeks during wet weather, but is not evident in dry weather samples. No

obvious sources of illicit discharge were found. The likely primary source of pyrethroids is structural control performed by pest control operators (PCOs). The final question is addressed during Phase II and is the focus of this report.

2.0 Data Comparison

An assumption of this TRE study is that pyrethroid sources and resultant toxicity patterns in the SMR are analogous to those in similar counties, in particular neighboring San Diego and Orange Counties. To verify this assumption, it was necessary to compare data collected in SMR to data collected in other locations. As part of the 2008 CASQA pyrethroids data compilation, monitoring results were summarized from studies that investigated the presence and effects of pyrethroid pesticides in urban areas of California (Ruby, 2008). The CASQA summary listed the frequency of detection of various pyrethroid pesticides and results of toxicity testing for different indicator species. Results from various northern and Southern California locations were detailed, including results of water column studies from Orange, San Diego and Sacramento Counties.

Pyrethroids, as a class of chemicals, have an affinity for particles and they are considered to be relatively hydrophobic; they are therefore commonly found in sediments of waterways downstream of their application sites. The initial toxicity studies leading to the identification of pyrethroids as pervasive environmental contaminants in California were performed on sediment samples by Don Weston and his colleagues at the University of California, Berkeley (Weston et al., 2005; Amweg et al., 2006). Recently, improvements in analytical methods for pyrethroids in water, and modification of toxicity studies to more effectively test for pyrethroid-based toxicity in water, have lead to increasing evidence of the presence of pyrethroids in water column samples, and toxic effects in the water matrix (see citations for Orange and San Diego County in Ruby, 2008).

Extensive work has been performed on the environmental presence and effects of pyrethroids in urban areas of the neighboring Orange and San Diego counties; however, much of this work has been performed on sediment samples. Although the sediment monitoring results do not correspond directly with the SMR water column test results, sediments are considered to be effective integrators of contaminants from the contributing storm water flows. The deposited sediments are produced as particles settle out from the passing water over some

period of time, and tend to accumulate until they are washed away by higher-velocity flows. Summaries of the relevant sediment study results are therefore included in the discussion that follows.

In Orange County, an ongoing study being performed by UC Davis, in conjunction with UC Riverside and the Orange County UC Cooperative Extension, has consistently found bifenthrin and permethrin in water column runoff samples from residential areas (Haver et al., 2007; Oki, personal communication). In samples from four residential sites they have detected bifenthrin in 100% of samples, with the number of samples varying from 48 to 57 per site (Oki, personal communication). In sediment samples collected in recent years from the Santa Ana Region of Orange County, bifenthrin is commonly detected (32 of 56 samples) and permethrin less frequently so (4 of 56 samples), with sediment toxicity to *Hyalella* common (39 of 54 samples tested were moderately or highly toxic; see summary in Ruby, 2008).

In a 2005 study of six Orange County residential storm drainages and seven tributary streams draining commercial/residential land uses, bifenthrin was detected in 95% of dry weather samples and 100% of wet weather samples (Budd et al., 2007). Because treatment of nursery products is mandatory to control Red Imported Fire Ants, an older DPR study, conducted in 1999-2002, found occasional detects of bifenthrin in urban runoff samples, along with frequent detects in nursery runoff from several Orange County sites.

In San Diego County, under NPDES Permit monitoring conducted since 2004, pyrethroids have been commonly detected in water samples from several receiving waters, and toxicity to *Hyalella* has been increasingly observed in water samples (see summary in Ruby, 2008). Bifenthrin was detected in 12 of 15 samples collected from 2005-2006 and 2006-2007; detection frequency was 100% in samples from Chollas Creek, Agua Hedionda, and Tecolote Creek. Toxicity to *Hyalella* was observed in 22 of 57 samples tested over the three year period, 2004-2007. In a TIE study performed on Chollas Creek samples during 2005-2006,

67% of samples were acutely toxic to *Hyalella*, and the toxicity was found to be likely due to pyrethroids.

In a 2004-2005 study performed by UC Davis and others, sediments from Switzer Creek at its outlet to San Diego Harbor were found to be highly toxic; bifenthrin and permethrin were detected at high concentrations, and a sediment TIE identified pyrethroids as the likely cause of the observed toxicity (Anderson et al., in press). As part of a statewide survey of urban waterways, sediments were tested from several receiving waters in San Diego County. All were found to be highly toxic to *Hyalella* (Holmes et al., in press).

To further compare the pyrethroid sources and toxicity patterns in the SMR to other counties, the CASQA data summary was analyzed to select the studies which reported results for the same constituents and effects identified in the SMR, specifically permethrin, bifenthrin, and toxicity to *Hyalella.* The total number of detections for the different monitoring locations was divided by the total number of samples taken at the sites to calculate the percentage of samples with detectable concentrations of pyrethroids. This normalized metric allowed for comparison of the various datasets.

While permethrin is among the more commonly-used pyrethroids, it is much less toxic to aquatic life than bifenthrin (TDC, 2007). For the purposes of this assessment, bifenthrin detection frequency and frequency of toxic effects were used as the metrics for comparison.

Comparative results for bifenthrin are summarized in Figure 2-1. Data were available for two creeks in Sacramento County and three locations in San Diego County, in addition to the data collected for SMR. Two samples were taken at the Sacramento County sampling locations. For San Diego County, each creek was sampled three times except for Chollas Creek, which was sampled six times. The SMR was sampled a total of eight times. In most cases, bifenthrin was detected in over 80% of samples. Only at Elk Grove Creek in Sacramento County was bifenthrin detected at a notably lower percentage.

Figure 2-1

Percentage of Samples with Bifenthrin Detections

Toxicity to *Hyalella* was documented in water samples from San Diego County, along with the SMR. Toxicity testing was performed on samples from seven San Diego County water bodies. The sample sets ranged from three to nine toxicity tests (Aqua Hedionda, San Dieguito River, Tijuana River, and Chollas Creek). In the SMR, a total of eight toxicity tests were performed on samples from Murrieta Creek and Temecula Creek. The results for frequency of acute toxicity from the SMR were within the range of the results for similar sites in San Diego County (see Figure 2-2).

After comparing the results from different locations, the assumption that pyrethroid sources and resultant toxicity patterns in the SMR are similar to those in similar counties appears to be valid.

Figure 2-2

Percentage of Samples with Acute Toxicity to *Hyalella*

3.0 Literature Review

A literature review was conducted during December, 2008 to determine appropriate BMPs for reducing the concentration and load of pyrethroids in storm water runoff. An initial search was made of the Urban Pollution Prevention Program (UP3) website (www.up3program.org) for potential examples of BMP strategies implemented specifically for pyrethroids. The United States Environmental Protection Agency website and the CASQA website were also reviewed for pyrethroid specific BMPs. Widespread use of pyrethroids is relatively recent, and there has been little direct evaluation of BMPs for pyrethroids. Further research was conducted on general storm water BMPs, and their potential for pyrethroid reduction was evaluated based on the design of the BMP and the chemical behavior of pyrethroids.

To identify pending legislation that may be related to pyrethroid pesticides, web searches were conducted on the websites for DPR, the California legislature, the EPA, and the Library of Congress. However, no pending legislation was identified as relevant to pyrethroid pesticides.

Table 3-1 below presents the findings of the literature review. BMPs are categorized as either source control or treatment control, and within each category they are sorted by type. The literature source, a summary of the BMP, the estimated potential for reducing pyrethroid-induced toxicity, and possible concerns about implementing the BMP are provided. See Section 4 for further information about each type of BMP.

Table 3-1
Literature Review Matrix

Type of BMP	Literature Source	Summary	Ability to Reduce Toxicity Caused by Pyrethroids	Storm Water Concerns
Source Control				
Regulatory	Pesticides of Interest for Urban Surface Water Quality. Urban Pesticides Use Trends Annual Report. July 2008.	Suggests regulatory changes as a result of increased toxicity due to pyrethroid use	Potentially High	Supplementary to other BMPs, Will take years to show results
Regulatory	Improving Urban Pesticide Regulatory Activities to Protect Water Quality – Annual Update 2007. November 2007.	Discusses recent state and federal regulatory pesticide activities on an annual basis	Potentially High	Supplementary to other BMPs, Will take years to show results
Regulatory	California Department of Pesticide Regulation. http://www.cdpr.ca.gov/docs/registration/reevaluation/chemicals/pyrethroids.htm. 2007.	The reevaluation of the widespread presence of synthetic pyrethroid residues in the sediment of both agricultural and urban dominated California waterways at levels toxic to Hyalella azteca (H. azteca).	Potentially High	Supplementary to other BMPs, Will take years to show results
Integrated Pest Management (IPM)	Building Maintenance - Structural Integrated Pest Management. June 2008.	Promotes reduction in pesticide use through use of municipality IPM and hiring of PCO's trained in IPM	Potentially High	Does not eliminate all uses of pyrethroids
IPM	California Stormwater BMP Handbook. January 2003.	Promotes prevention of pesticide use through use hiring of PCOs that use IPM as an alternative	Potentially High	Does not eliminate all uses of pyrethroids
IPM	City of Santa Monica Toxics Use Reduction Program Integrated Pest Management. June 1997.	Overview of IPM program initiated by the City of Santa Monica	Potentially High	Does not eliminate all uses of pyrethroids
IPM	National Management Measures to Control Nonpoint Source Pollution from Urban Areas. November 2005.	EPA document discussing management practices to help reduce pesticide use	Potentially High	Does not eliminate all uses of pyrethroids
IPM	National Pollutant Discharge Elimination System (NPDES) Phase II BMP & Measureable Goal Examples. February 2008.	Provides examples and goals of good housekeeping BMPs	Potentially High	Does not eliminate all uses of pyrethroids
IPM	The Monterey Bay Green Gardener Program "sample curriculum". www.green-gardener.org/about. Accessed December 2008.	Informs the public and landscapers about the green gardener program and how to get involved	Potentially High	Does not eliminate all uses of pyrethroids

Pervious Pavement	Low Impact Development Handbook: Stormwater Management Strategies. December 2007.	Discusses LID strategies for assistance in storm water management	Potentially High	May contaminate groundwater

4.0 BMP Analysis

Based on the literature review and the findings of Phase I of the TRE, BMPs were evaluated for their applicability to the SMR. Because the toxicity appears to be principally a wet weather phenomenon, and because the Permittees' jurisdiction includes the urbanized area of the watershed, the analysis focused on BMPs designed to reduce the amount of storm water pollution caused by urban runoff.

The potentially applicable BMPs are divided into Source Control and Treatment Control BMPs and are discussed in detail below. Through the Permittee's proactive efforts to protect the quality of the receiving waters and their beneficial uses, many programs addressing these broad categories are either already in place or are actively being developed. The implementation status for each specific BMP is discussed. Examples of BMP implementation by other municipalities in the region are included as a tool for evaluating the consistency of the Permittees' program with other programs in the region.

4.1 Source Control BMPs

Source control BMPs are designed to curtail pollution at the source before it has the opportunity to enter the storm drain system and pollute waterways. They are generally the preferred type of BMP because reduction of pollution occurs at the source, before runoff has become contaminated (CASQA, 2003). The types of broad categories of source control BMPs that identified as most appropriate for the Santa Margarita watershed are: pursuing regulatory change, implementing IPM strategies including LID, and public outreach and education.

4.1.1 Regulatory Action

Status: Currently being implemented by the Permittees.

Pesticide manufacturers are required to receive approval by USEPA and California DPR for specific pesticide uses, and both agencies can impose use restrictions to prevent unwanted impacts on the environment and public health. At the federal level, a fundamental regulatory disconnect exists between pesticide approval (registration) under FIFRA and water pollution control programs under the Clean Water Act. This has resulted in a repeating pattern, in which a) pesticides are approved for use without sufficient consideration of potential environmental effects, b) water quality and other ecological impacts accrue, c) use restrictions are applied to the offending products (sometimes involving widespread bans on use), and d) new pesticides are approved for use, with subsequent environmental impacts.

In 1962 Rachel Carson published *Silent Spring*, documenting the widespread ecological consequences of pesticide applications. The federal government responded by banning the use of DDT and other organochlorine pesticides, based on extensive evidence of environmental impacts through the process of bioaccumulation. The ban has lead to dramatic recoveries in affected populations of bald eagles and other species; however, the legacy of these long-lasting pesticides near-shore dumping areas in Los Angeles County and elsewhere remains (IWS, 2007).

Eventually the organochlorine pesticides were replaced principally by organophosphate pesticides, especially in urban uses. In the mid-1990s municipal storm water monitoring programs began to document that commonly-used organophosphate pesticides, especially diazinon and chlorpyrifos, were present at toxic levels and causing toxicity to aquatic organisms, principally the common water flea, *Ceriodaphnia*. Although not bioaccumulative, diazinon and chlorpyrifos were discovered to cause widespread toxicity in urban runoff and local receiving waters (TDC, 2001). USEPA subsequently banned most urban uses of diazinon and chlorpyrifos, although EPA's main motivation involved human health effects

on the pesticide applicators, and water quality was not an important factor in those decisions. Again, the ban was also immediately effective, reflected in reduced concentrations of diazinon and chlorpyrifos in urban water samples, and fewer occurrences of organophosphate-based water column toxicity (c.f., references in Ruby, 2008 for San Diego County Municipal Copermittees Annual Urban Runoff Monitoring Reports). But pesticide manufacturers simply replaced the OP pesticides in their products with other active ingredients, principally pyrethroids. Shortly thereafter, researchers and municipal storm water programs began documenting toxic effects from the new pyrethroid products. The pyrethroid impacts were first documented in sediments, and the affected test organism shifted from *Ceriodaphnia* to the sediment-dwelling *Hyalella*.

In the cases of both organochlorine (DDT) and organophosphate (diazinon, chlorpyrifos) pesticides, federal limitations or bans on uses were effective in ameliorating the associated environmental impacts. In both cases, however, new pesticide products were approved for use that then caused related but different impacts to the environment. Therefore it is clear that the most effective strategy for preventing environmental impacts from pesticide use involves implementing an effective process of pesticide approval and registration that comprehensively accounts for and mitigates against such impacts.

For more than ten years CASQA and various other California state and local agencies have promoted better regulation of pesticides at the federal level, encouraging use restrictions as the most effective means of source control. California water quality agencies have sent comment letters to USEPA and DPR on guidance pertaining to the application of pesticides to surface waters and on recommended environmental hazard statements for residential outdoor pesticides (TDC, 2007). These efforts are beginning to show some modest signs of success. In a recent letter to stakeholders, EPA outlined an approach to provide better cooperation between the Office of Pesticide Programs (OPP) and the Office of Water (OW), to allow for “environmentally protective and scientifically defensible effects assessment judgments about contaminants that are or may be found in ambient water”. The Riverside County Permittees plan to continue their support of these efforts through ongoing

participation in the CASQA Pesticides Subcommittee, the Urban Pesticide Pollution Prevention (UP3) Project, and the Urban Pesticide Committee. The Permittees also plan to request that the RWQCB become involved in advocating for more effective pesticide regulation at the state and federal levels.

The Permittees are members of a CASQA subcommittee that addresses pesticide uses impacting stormwater discharges. Effort focuses on providing input to the USEPA and the California Department of Pesticide Regulation (DPR) to improve pesticides regulations so that they more fully protect water quality and are better aligned with the Clean Water Act and California Water Code. (RCFCWCD, 2008). CASQA has also been active in supporting DPR's ongoing reevaluation of allowable pyrethroid pesticide uses (TDC, 2007).

Increasingly, the regulatory response to the water quality impacts resulting from *legal uses of approved pesticides* has been for regional water boards to impose limitations on the allowable loadings of pesticides to impaired waters through the TMDL process. Local agencies have little or no jurisdiction over sales or use of these pesticide products, and therefore do not have the full authority needed to perform loading reductions in resulting TMDLs. An effective regulatory solution must occur at the state and federal levels, to regulate allowable pesticide uses to effectively prevent such water quality impacts.

Current legislation requires users of certain pesticides to be trained, often certified, in the use of those pesticides and to report the amounts applied (State of California, 2008). A similar regulatory approach could be used to promote pesticide alternatives, such as for PCOs to train and certify their technicians in the use of IPM methods (Quarles, 2002). The Permittees are considering supporting regulatory action by the state to include IPM training for PCOs in the requirements for certification and training on the use of pesticides.

Environmentally sensitive and flexible zoning ordinances may be adopted to facilitate the use of LID principles, thereby encouraging private developers to use LID principles (Prince Georges County, 1999). Additional land use restrictions or alternatives to present zoning

laws may help reduce urban storm water runoff, potentially reducing pyrethroid loadings in receiving waters. The Permittees plan to continue promoting LID implementation through interagency communications and cooperation.

4.1.2 Integrated Pest Management

Status: Currently being implemented by the Permittees.

IPM is "a decision-making process for managing pests that uses monitoring to determine pest injury levels, and combines biological, cultural, mechanical, physical, and chemical tools and other management practices to control pests in a safe, cost effective, and environmentally sound manner that contributes to the protection of public health" (Carlsen, 2008). IPM can further be described as an approach to solving pest problems by using information about the pest and landscape to eradicate the pest's habitat in a manner that poses the least risk to humans (Ecology Action, 2007). IPM has many different aspects that help to reduce pests and in turn cause a reduction in pesticide use, including green gardening and structurally integrated pest management (SIPM). BMPs that are typically used as part of an IPM strategy are described in the following sub-sections.

4.1.2.1 Green Gardening

Status: Not currently being implemented by the Permittees, program under consideration and will be enacted in the near future.

The Green Gardener program, implemented through landscapers, promotes environmentally responsible landscaping to reduce the use and need for pesticides. In general, education of gardening and landscape maintenance staff is beneficial for pest reduction as part of an IPM program. It provides alternative methods to landscapers, such as reducing outdoor sources of ants by elimination of their food and water sources through management of honeydew producing insects and plants associated with them (UC Davis, 2007). The Green Gardener

program encourages businesses to participate in environmentally sound landscape maintenance. Healthy landscapes are more resistant to pests (Ecology Action, 2007). Pests that do not have a suitable habitat will leave to find a more hospitable environment. When the pests leave, then there is a lessened need for pesticide applications and lower risk of pyrethroids entering storm water.

The County of Santa Barbara implemented a Green Gardener Program, in which landscapers are encouraged to take a class at the local city college, covering subjects such as IPM strategies and environmentally beneficial landscaping to obtain a "Green Gardener" card. They are then placed on the Green Gardener list, which is then promoted to the public by the County (County of Santa Barbara, 2008). The program benefits both parties; gardeners receive education and advertising at a nominal cost, and the County receives the benefit of more environmentally-friendly landscaping and a reduction in the use of pesticides. Municipalities may promote this type of program by contracting with landscaping companies that have their employees trained in green gardening practices.

Encouraged by the success of the Santa Barbara Green Gardener Program, the Monterey Bay area instituted a similar program. "The goal of the program was to educate and certify local gardeners in resource efficient and pollution prevention landscape management practices" (Ecology Action, 2007). With the support of the State of California Water Resources Control Board, more municipalities are likely to follow (Ecology Action, 2007).

4.1.2.2 Pest Control Contracting

Status: Currently partially implemented by the Permittees.

Many municipalities contract pesticide applications to professional PCOs. Contracting only with PCOs that have IPM training and certification can help realize IPM models and goals. The recently completed EcoWise Certified IPM Contracting Tool Kit (www.EcoWiseCertified.org), provides resources for municipal agencies to use in developing such a program. The EcoWise IPM Tool Kit includes:

- Elements to consider when developing an IPM policy
- Roles and responsibilities of the agency or business in an IPM program
- How to hire and work with a professional IPM service provider

The Took Kit also includes the EcoWise IPM Process along with a number of other helpful resources and sample documents.

Because PCOs are responsible for the majority of pesticides applied in urban areas, distribution of information regarding less-toxic alternatives, lower-use application techniques, and proper disposal, practices to professional applicators is an essential component of the Permitee's pesticide control effort. The Permittees currently distribute information to PCOs through the Public Outreach and Education Program (see Section 4.1.3).

The City of Palo Alto's Regional Water Quality Control Plant includes IPM requirements in their contracts with PCOs (City of Palo Alto, 2008). The City of Santa Monica, as a part of their SIPM program, specified IPM requirements in their PCO contracts (Raphael, 1997). Use of PCOs with IPM training and certification by municipalities encourages local PCOs to invest in IPM training and certification, which in turn, allows their expertise in IPM to expand beyond just the municipality itself (Quarles, 2002). Education of PCOs, hiring only PCOs that have IPM training, and contracting specifically for IPM by local agencies may

create more public awareness and reduce the use of pyrethroids in the Santa Margarita watershed.

4.1.2.3 Structurally Integrated Pest Management Program

Status: Currently being implemented by the Permittees, with additional programs under consideration.

SIPM is a program that controls the access of pests to buildings and the potential food sources within them by protecting the structure itself from pests, with minimal use of pesticides. The Permittees intend to lead by example, sharing success through public outreach programs and encouraging individuals and businesses to do the same. SIPM is a long term solution offering positive potential impacts on budget, reduction of pests and, reduction of pyrethroid pesticide use. Note that SIPM should not be confused with category of pesticide use referred to as structural pest control. SIPM is a BMP designed to reduce the use of pesticides in a structural pest control program.

The City of Santa Monica implemented an SIPM program and experienced a reduction in pests and in the use of pesticides. In addition, Santa Monica reduced pest management costs by 30% (State of California, 2008). California law requires a SIPM strategy for all state-owned buildings and schools (State of California, 2008). The three main aspects of a SIPM strategy are facility design and LID, monitoring, and facility maintenance.

<u>Facility Design</u>

Status: Currently being implemented by the Permittees.

Facility design can play a large role in the exclusion of potential pests. "A facility's planning, design, and construction provides an opportunity to incorporate features that help to exclude pests, minimize pest habitat, and promote proper sanitation" (NIH, 1999). It can also reduce

storm water runoff (NAHB, 2008). Exclusion of pests helps reduce pest infestations and in turn the need for pyrethroid pesticide use. For example, ensuring that the design holds plants and mulch several inches away from the foundation of a building may assist the reduction of ant populations immediately adjacent to the building (UC Davis, 2007). A reduction in storm water runoff may also reduce the amount of pyrethroids that enter receiving waters. Facility designs can incorporate aspects of LID, as discussed below. New development and redevelopment may incorporate designs that aid in the exclusion of pests and the reduction of urban runoff, which may contribute to a reduction of pollutant loads, including pyrethroids.

Pest Monitoring

Status: Currently in not use by the Permittees, program under consideration.

Monitoring structures and adjacent areas may help prevent pest infestations and quickly identify potential problems. Traps, visual inspections, and staff interviews assist in the identification of areas and conditions that may foster pest activity (NIH, 1999). Monitoring for ants, for example, may consist of simple inspections of facilities such as looking under sinks and along pipes and electrical wires (UC Davis, 2007). The City of Santa Monica, as a part of their SIPM, provided training to all general staff, purchasing, carpenters and custodial staff. Specific presentations were given to groups, such as the custodial staff, who learned about products used in control of ant and cockroach populations and general sanitation. The staff is trained in the identification of potential pest infestations and habitat conditions that may foster pest activity (Raphael, 1997). Early identification of pest infestations can increase the effectiveness of specific treatments and reduce the overall need for pesticide use.

Sanitation and Facility Maintenance

Status: Currently not being implemented by the Permittees, program under consideration.

Proper sanitation includes reducing clutter and pest habitat and incorporating proper facility and waste management practices. Records of maintenance and housekeeping conditions may help track pest problems and assist in the determination of whether corrective action is needed or has been taken in a timely manner (NIH, 1999). Sanitation and facility maintenance involves the housekeeping staff, the building maintenance staff, and the landscaping staff.

Improper storage of waste may affect urban runoff, and it may create a hospitable environment for pests, particularly ants. Initial, low-cost steps that municipalities may take to improve waste handling are: controlling litter, keeping waste collection areas clean, and insuring proper disposal of pyrethroid pesticide products, if used, and educating employees and the public. Simple solutions such as rinsing out soda bottles and emptying trash daily prove effective to reduce insect infestations, particularly ants (UC Davis, 2007). An important component of an SIPM monitoring program is regular inspections of solid waste containers for structural damage or leaks (CASQA, 2004).

Educating custodial staff, such as was done in the City of Santa Monica, can reduce the amount of improperly disposed pesticides (Raphael, 1997). Designating staff members to perform a daily checklist of areas around the structure to ensure cleanliness and proper storage of waste can assist the efforts to reduce potential pest infestations and leakage of hazardous waste (CASQA, 2004).

Building maintenance staff also benefit from education and acceptance of responsibility for pest management. Maintenance crews can contribute to an SIPM strategy by securing the structure, such as caulking holes and cracks, assisting in the removal of clutter, and installing

door sweeps (State of California, 2008). Caulking holes in structures can prove effective in keeping ants out of facilities (UC Davis, 2007). Upkeep on building maintenance helps reduce potential pest habitat, and thus may reduce the need for application of pyrethroid pesticides.

Reduction of pest habitat around structures may reduce pest populations in and around structures. Marin County, as part of its integrated pest management program, has reduced rat habitat around the local Civic Center and in turn has seen suppression of the rat population (Carlsen, 2008). Programs similarly tailored to ants may result in a positive effect of pest reduction within the SMR. For example, banding tree trunks with tanglefoot or similar sticky substances can keep ants away from trees (UC Davis, 2007). Education and training may be provided to Permittee landscaping crews to assist in proper vegetation removal and, when necessary, pesticide use. Landscaping crews may be informed that pyrethroid pesticides or any less toxic pesticides are to be used only when a pest problem arises to an intolerable level, that they are not administered when a wet weather event is expected and only when low wind speeds are present (CASQA, 2004). Education of landscaping crews to remove pest habitat may reduce the need for pyrethroid use thus reducing the potential risk of pyrethroids entering storm water runoff.

Also, utilizing low water using vegetation and alternative landscaping techniques such as xeriscaping or naturescaping are efforts that landscape crews can take to reduce pyrethroids in urban runoff. Landscaping crews may also help preserve the water efficiency of the landscape through properly timed fertilizing, weeding, pruning, and pest control. For example, proper collection and disposal of yard clippings can prevent loose vegetation that has possibly been treated with pyrethroid pesticides from entering waterways or storm water drainage systems such as MS4s (CASQA, 2004). Reduction in pest habitat and proper landscaping maintenance may help reduce pest problems, and thus the need for pyrethroid pesticides.

4.1.3 Public Outreach and Education

Status: Currently being implemented by the Permittees.

Public Outreach and Education programs inform the public about storm water issues, proper use and disposal of publically available chemicals, and alternatives to pyrethroid pesticides. Reaching out to the public and providing information about the dangers of pyrethroids pesticides encourages citizens to make educated decisions about pesticide use. It also may accelerate state and federal regulatory changes regarding pyrethroid use through public promotion of such changes. According to the EPA, public education and awareness can be a "key component" in any BMP program for storm water management (EPA, 2008).

The District has enacted a public outreach program to help reduce the potential for pyrethroid pesticides to contaminate receiving waters. This program has initiated: distribution of educational materials to hardware store employees, active participation and distribution of outreach for HHW/ABOP facilities to provide for free venues to dispose of excess pesticides, and distribution of EPA and CalEPA materials to the public. The District also promotes the use of less toxic pesticides, provides education on storm water issues in public schools, and has enacted a multimedia campaign to control urban sources of pyrethroid pesticides (RCFCWCD, 2005).

<u>Education and Outreach to Businesses</u>

Status: Currently being implemented by the Permittees.

Distribution of information regarding pesticides to businesses, particularly hardware stores, is crucial for reducing pyrethroid use and misuse at its source. Education on pyrethroid runoff to local hardware stores may assist local hardware store employees to educate their customers on alternative methods of pest control. An Orange County survey from 2001 found that 55% of pest control products were purchased at hardware stores (Wilen, 2001). In

2006, Riverside County had 177,562 pounds of reported non-agricultural usage of pyrethroid pesticides (RCFCWCD, 2008). Reduction in usage may lead to a reduction of pyrethroids in urban storm water runoff. Educating hardware store employees about urban water quality impacts of pyrethroid pesticides may help reduce the usage and thus the toxicity of runoff in the Santa Margarita Watershed resulting from pyrethroid use, as employees have the ability to recommend alternative methods of pest management to their customers.

Education of nursery employees about pyrethroid management and IPM techniques may also yield significant source control benefits. In general, nursery employees tend to be more knowledgeable about pesticides than employees at hardware stores (Wilen, 2001). Nurseries that use and sell pyrethroids offer the highest return on outreach resources, while those nurseries that have chosen alternate pest management methods serve as examples of IPM in practice. In a recent Riverside County survey, one nursery stated that they do not use pesticides and if their nursery does experience a pest infestation, it is treated naturally (RCFCWCD, 2008). Such nurseries are likely to encourage their clients and customers to use the same methods. Education and outreach can lead to cooperation and sharing of successful and unsuccessful methods of IPM and ultimately reduce pyrethroid pesticide use and toxicity of storm water runoff.

Businesses not in the industry of pesticide sales may also benefit from outreach. The District directs outreach efforts to all businesses; those in the business of selling or using pesticides, and those that are not. The District has coordinated with the County's Business License Department to include an educational insert of the "Only Rain Down the Storm Drain" program to new business license applicants and annual renewal reminders (CRWQCBSD, 2008). Informing companies on proper disposal of hazardous materials such as pesticides is crucial to prevent pyrethroid containers from being improperly disposed of, leaking, and then contributing to storm water pollution.

Several Southern California cities conduct general business outreach as well. Cities such as Carson, Gardena, Inglewood, and Lomita distribute informational pamphlets on storm water

pollution relating to landscaping and gardening practices to general businesses (DCWMAC, 2007). Such information informs businesses of alternate methods of pest control beyond pesticide use and imparts knowledge about storm water quality issues. Thus, dissemination of educational materials to local businesses is intended to help reduce pyrethroid runoff by ensuring proper disposal of pesticides and encouraging alternate methods of pest control.

Educational and Outreach to the General Public

Status: Currently being implemented by the Permittees.

The District distributes educational materials within the Santa Margarita Region such as EPA sponsored pamphlets in order to promote reduced use of pyrethroid pesticides and educate the public about alternate practices of pest management. The public purchases retail pesticides and uses them, presumably, according to the manufacturer's instructions and in compliance with regulations listed on the packaging, including proper disposal of empty containers in the municipal waste stream. However, even when used properly, retail pesticides have the potential to contaminate urban runoff, and homeowners may be unaware of the downstream consequences of pesticide use. Depending on the landscaping practices in a neighborhood, promoting alternative pest management strategies and educating the public on storm water quality and pesticide use may be the most beneficial way to reduce the source of pyrethroids in urban runoff (Wilen, 2005).

The District distributes educational materials within other public outreach programs and maintains pest management information on the internet. The District also distributes brochures to educate the public on lawn and garden maintenance, fertilization, and pesticide and household chemical use (RCFCWCD, 2005). These educational materials provide public education on alternative pest control methods, limiting individual use of pyrethroids, and proper disposal of pesticide containers.

Many municipalities perform storm water outreach at festivals and public events by participating in the events and by distributing brochures. The Cities of Lawndale and Torrance plan and attend public festivals and rent booth space to educate the public about storm water quality and the use of pyrethroids (DCWMAC, 2007). Cities including Carson, Gardena, Inglewood, and Lomita distribute informational pamphlets on storm water pollution relating to household activities and landscaping and gardening practices to the general public (DCWMAC, 2007). The District participates in events such as the Children's Groundwater Festival, the Southern California Fair, the Community Water Festival, and the Santa Margarita Watershed Clean Up (RCFCWCD, 2005). The Permittees, as well as other municipalities within California, participate in public events and distribute informative materials as a portion of their current public outreach programs.

Education on proper disposal of pesticides

Status: Currently being implemented by the Permittees.

Improper disposal of pesticides is a potential contributor to storm water contamination. Empty containers be disposed of in the municipal waste stream are not likely to contribute to storm water pollution, however, unused pesticides may enter the MS4 by leaking in transit. In Orange County in 2001, 54.5% of people surveyed claimed to have disposed of unwanted pesticides in the municipal waste stream, and 78.6% did not know the location of a household waste disposal site (Wilen, 2001). The District has created a partnership with Riverside County Waste Management to provide educational programs and materials on proper disposal of unwanted waste, including pesticide containers (RCFCWCD, 2005).

Multimedia Outreach

Status: Currently being implemented by the Permittees.

The EPA suggests using multiple media sources to promote and educate on storm water impacts, particularly through public service messages (EPA, 2007). Mass media has proven to be a key source of pollution prevention information for the general public (LADPW, 2002). The District currently participates in a multimedia advertising campaign including: maintaining a website that provides information, distributing mailing inserts regarding water quality issues through various county entities, and billboard advertising campaigns. Many other municipalities, such as the Cities of Palo Alto and Lawndale, also use the world wide web to provide information to the public (City of Palo Alto, 2008) (DCWMAC, 2007).

Public School Programs

Status: Currently being implemented by the Permittees.

A storm water education program for public schools is a concept supported by the EPA (EPA, 2007). The County of Los Angeles has incorporated public school educational programs into its outreach program (LADPW, 2002). The District focuses storm water education efforts on elementary school students (RCFCWCD, 2005). For example, sixth-grade students at Warm Springs Middle School were given an interactive presentation regarding storm water pollution with an enviroscape model that excited and engaged the students; a presentation that has been given over 150 times during the 2003-2004 school year (Jamescourie, 2004). Educational programs in public schools are intended to produce long-term benefits to storm water runoff quality.

Education on Lower Risk Alternative Pesticides

Status: Currently being implemented by the Permittees.

Part of Public outreach includes suggesting less toxic alternatives to pyrethroid pesticides, such as those listed on the Our Water Our World website (www.ourwaterourworld.org). Lower risk pesticides have reduced impacts on human health, lessened toxicity to non-target organisms, decreased potential for water contamination, and lower pest resistance potential (Matteson et al., 2007). The District distributes materials associated with the "Our Water Our World" organization (RCFCWCD, 2008).

However, some of the lower risk pesticides are toxic to beneficial arthropods and still have the potential to pollute surface and ground water (Matteson et al., 2007). Pyrethroids were developed as a less toxic alternative from organophosphate pesticides (Quarles, 2002). In the Santa Margarita Watershed, there was a decrease in water toxicity to *Ceriodaphnia* and an increase in toxicity to *Hyalella* as organophosphate pesticides such as chlorpyrifos and diazinon and were replaced by pyrethroids (RCFCWCD, 2008). The effects on storm water runoff of lower risk pesticides must be carefully evaluated before they are promoted as effective solutions to urban storm water runoff pollution.

4.1.4 Low Impact Development (LID)

Status: Currently being implemented by the Permittees.

LID involves environmentally-friendly building and development designs that mitigate impacts to land and water. LID functions by managing storm water at its source, incorporating a variety of runoff control techniques, using natural features as design features, and protecting natural resources (NAHB, 2008). Municipalities that promote LID have the potential to reduce municipal infrastructure and maintenance costs while balancing growth needs with environmental protection (NAHB, 2008). LID practices include "small scale,

decentralized treatment practices" that include conservation of open space, a reduction of impervious surfaces, and the incorporation of water controls (NAHB, 2008). Reduction of urban runoff volumes may reduce the loadings of pyrethroids to receiving waters in urban areas.

In 2007, EPA implemented a retrofit of the agency headquarters in Washington, D.C., incorporating LID designs to assist with storm water retention (EPA, 2007). Retention of storm water on the land helps prevent pollutants from entering streams and rivers (EPA, 2007). One of the main goals of the EPA LID retrofit was to demonstrate several LID techniques and encourage government agencies and developers to use them (EPA, 2007). LID may be used in conjunction with IPM programs, which would reduce the amount of pesticides used and minimize the urban storm water runoff of pyrethroids. The County of San Diego's most recent MS4 permit requires implementation of LID techniques (County of San Diego, 2007); this appears likely to continue as a trend with other permits in the region as they are renewed. The incorporation of LID principles into development regulations in the Santa Margarita watershed provides a potential solution to runoff of pyrethroids into receiving waters.

4.2 Treatment Control BMPs

Treatment Control BMPs are typically structural devices engineered with the intent to remove pollutants from storm water. Treatment BMPs require construction and long term maintenance, but can be extremely effective (CASQA, 2003). Although treatment BMP's have not been thoroughly investigated specifically for reduction of pyrethroids, some methods may be useful. Pyrethroids bind tightly to soil particles so there is a high probability that pyrethroids would be removed with suspended solids when they pass through treatment BMPs. In addition, pyrethroids degrade over time; permethrin, for example, has a half life in soil of about 30 days and about 10 days on certain plant life. Because pyrethroids have low mobility in soil, infiltration-based treatment BMPs have a low probability of contributing to groundwater contamination (NPTN, 1997).

From the list of available treatment BMP's identified in Table 3-1, the types of treatment BMPs feasible for pyrethroid treatment in the Santa Margarita Watershed, considering the climate, local vegetation, and soil types present are: pervious pavement, media filters, extended detention basins, infiltration basins, and infiltration trenches.

These BMPs and their potential to remove pyrethroids from storm water runoff are described below.

4.2.1 Pervious Pavement

Status: Currently being implemented by Permittees under LID program.

Pervious or porous pavement is "a system comprising a load-bearing, durable surface together with an underlying layered structure that temporarily stores water prior to infiltration or drainage to a controlled outlet" (CASQA, 2003). Pervious surfaces include grass, gravel, and porous concrete and asphalt (CASQA, 2003). The multi layer system assists in preventing pyrethroid pollution by providing a stable structure for pyrethroids to bind to and degrade, thus helping to prevent their transport in to receiving waters. Silts that are deposited within the pavement may need infrequent controlled waste disposal (CASQA, 2003).

The advantage of porous pavement is that urban runoff is reduced while treatment is provided and it is an effective drainage solution in confined urban areas. However, porous pavement is not a viable option on high traffic or high speed roads due to safety issues. There is a small chance that it may contaminate groundwater. It is fairly easy to replace, should there be a clog or damaged area, as small areas can individually be paved (CASQA, 2003). The use of pervious pavement appears to be a growing trend.

4.2.2 Media Filter

Status: Currently being implemented by Permittees via sand filters.

Storm water media filters are usually two-chambered including a pretreatment settling basin and a filter bed filled with sand or other absorptive filtering media. As storm water flows into the first chamber, large particles settle out, and then finer particles and other pollutants are removed as storm water flows through the filtering media in the second chamber. Media filters are highly effective at removing sediment from storm water flows (CASQA, 2003). They are appropriate in low flow areas, particularly with sandy soil. Washington D.C. and Austin, TX have both successfully implemented media filters to treat storm water (VCSQMP, 2002). They "are well suited to Southern California because they do not require vegetation and require less space than other treatment control measures with similar removal efficiencies when a partial treatment sedimentation basin is used" (VCSQMP, 2002).

However, media filters clog easily when exposed to high sediment loads and may decrease in effectiveness after being in use for a few years (CASQA, 2003). A media filter is not appropriate for areas with erosive soil upstream from the treatment filter (VCSQMP, 2002). The lack of abundant native vegetation in the Santa Margarita watershed contributes to a high potential for erosion, so media filters may not be effective in the long term due to clogging. When clogging does occur, media filters may become a nuisance due to mosquito or midge breeding in pooled waters (CASQA, 2003).

4.2.3 Extended Detention Basin

Status: Currently not being implemented by the Permittees for pyrethroid reduction.

An extended detention basin (EDB) is a permanent basin "formed by excavation and/or construction of embankments to temporarily detain the Stormwater Quality Design Volume

(SQDV) of storm water runoff to allow sedimentation of particulates to occur before the runoff is discharged"(VCSQMP, 2002). EDBs are constructed with an outlet at the bottom that allows for a slow, time-controlled release. The ultimate goal of EDBs is to level off peak storm water runoff rates (VCSQMP, 2002). Santa Clara Valley and the City of Palo Alto have noted that their detention basins have helped with the reduction of pollutants (EOA, 2004) (City of Palo Alto, 2008). Pyrethroids could be removed in the basin through settling of particulates.

Extended detention basins can serve multiple purposes as they provide for significant trash removal as well (CASQA, 2003). Maintenance is needed to ensure that the pond fully drains after large wet weather events, to avoid creation of standing pools causing mosquito or other vector habitats (CASQA, 2003). Extended detention basins are most effective when used in conjunction with other control measures, and are only moderately successful at removal of sediment. EDBs require relatively large amounts of land and therefore may not be feasible in urban areas of the Santa Margarita watershed (VCSQMP, 2002). There are no available examples of test results from municipalities using an extended detention basin for reduction of pyrethroid pesticides.

4.2.4 Infiltration Basin

Status: Currently not being implemented by the Permittees for pyrethroid reduction.

An infiltration basin is a shallow impoundment that is designed to infiltrate storm water and utilize the natural ability of soil to remove pollutants in storm water runoff (CASQA, 2003). Infiltration basins store runoff until it eventually enters the soil and infiltrates into the water table (CASQA, 2003). The soil present in the Santa Margarita Region is extremely pervious and may work well with an infiltration basin treatment structure.

Since pyrethroids adsorb onto soil, pyrethroids are likely to be removed from the storm water into the soil. However, there is a slight possibility that they may be resuspended into the

groundwater. Monitoring of pilot sites would be required to determine if there is transport of pyrethroids to the water table.

As with detention basins, maintenance is needed to ensure that the basin fully drains after large wet weather events to avoid creation of standing pools causing mosquito or other vector habitats. Infiltration basins may fail if the storm water volume is greater than the design volume (VCSQMP, 2002). Since infiltration basins require a large amount of open space, installation in urban areas is problematic. There are no available examples of test results from municipalities using infiltration basins for reduction of pyrethroid pesticides.

4.2.5 Infiltration Trench

Status: Currently not being implemented by the Permittees for pyrethroid reduction.

An infiltration trench is a long and narrow ditch that collects storm water runoff by storing it in the voids in a rock bed and allowing it to infiltrate to the soil matrix (CASQA, 2003). Infiltration trenches are extremely effective at removing fine sediment particles and associated pollutants (CASQA, 2003). Naturally pervious soils are required (VCSQMP, 2002). The Santa Margarita watershed has naturally pervious soils, which would allow for the removal of pyrethroids from the water and into the sandy soil.

Infiltration trenches are typically used in conjunction with grass lined channels or grass filter areas located upstream for maximum removal of sediment and larger particles (VCSQMP, 2002). Due to the arid environment in the Santa Margarita Region, grass lined channels, or even vegetated strips, would require irrigation to maintain the vegetation. If the infiltration trench clogs, it can become a source for mosquito breeding. There are no available examples of test results from municipalities using infiltration trenches for reduction of pyrethroid pesticides.

4.3 BMP Evaluation

A summary of the relative advantages, disadvantages and costs of the various BMPs identified in Sections 4.1 and 4.2 above is presented in Table 6.1 below. The table includes advantages, disadvantages, and the relative cost of implementing the BMPs.

Table 6.1
BMP Comparison Table

BMP Technology	Advantages	Disadvantages	Relative Cost*
Source Control			
Regulatory Change	Reduces the availability of pyrethroids on the market	May take years to achieve full effect	$
Integrated Pest Management	Engages businesses and the public in environmentally sound gardening practices	Need to ensure that employees are following protocols	$
	Has been implemented in various locations throughout CA and the US	Could have some resistance from employees who are use to standard practices	
	SIPM can be put in place directly by the Permittees	Some may find the organic methods of gardening to be too time consuming	
	SIPM can be incorporated directly into current maintenance activities		
	Includes LID aspects		
Public Outreach and Education	EPA states that Public Outreach is key for any BMP program	Cannot control the direct actions of public but only educate	$
	Copermittees have already implemented a public outreach program	Hard to measure the direct impact of pollutant reduction	
	Employees of business have direct impact on the buying choices of the general public		
	Programs have been implemented by many municipalities		

Table 6.1 (continued)
BMP Comparison Table

BMP Technology	Advantages	Disadvantages	Relative Cost*
Treatment Control			
Porous Pavement	Reduces runoff volume while reducing pollutant load as well	Requires ongoing minimal maintenance	$ to $$ depending on size
	Can be easily replaced depending on the size and location of design	No known measured reduction of pyrethroids.	
Media Filter	Do not require vegetation	No known measured reduction of pyrethroids.	$$$
	Highly effective in removal of sediments	Clogging is an issue because of the erosion potential in the watershed.	
	Requires less space than other treatment controls for sediment removal		
Extended Detention Basin	Known for significant trash	Large footprint Moderately successful at removing sediment	$$$
	Standard BMP with many years of maintenance and operational information available	Create an area with vector breeding potential	
		No known measured reduction of pyrethroids.	
Infiltration Basin and Trench	Uses natural ability of soil to remove pollutants.	Unknown if pyrethroids would be transported to the groundwater table.	$ to $$$
	Local soils would allow infiltration	Would require a pilot study to determine transport.	
		No known measured reduction of pyrethroids.	
		Clogging of outlet structure	
		Accumulation of metals in soil	

*Relative Cost: $ = $0 to $50,000, $$ = $50,001 to $100,000, $$$>100,000

5.0 Pending Legislation

There is no relevant pending state legislation relating to pyrethroid pesticides from the California Department of Pesticide Regulation or, in general, the State of California as of December, 2008 (State of California, 2008) (CDPR, 2008). In August 2006, the DPR put rules in place to control insecticide sprays during the dormant season. During winter, pesticides are applied to dormant tree and vine crops to kill overwintering pests and diseases. The new rules restrict the use of most dormant insecticides when residuals can run off into water (DPR 2007-08 Progress Report). However, there are no additional updates relating to pending pyrethroid legislation at this time.

There is no relevant pending federal legislation relating to pyrethroid pesticides from the United States Congress as of December, 2008 (Library of Congress, 2008). Although the EPA is working on proposed mitigation labeling for non-agricultural pyrethroids, there is no indication as to when this legislation may be enacted (TDC, 2007).

6.0 Proposed Course of Action

The Permittees intend to use a phased approach to address the identified sources of pyrethroid pesticides causing toxicity in surface waters of the SMR watershed. As described in Section 4, various source control BMPs and treatment control BMPs are available to address these sources. However, the use of pyrethroid pesticides can not be directly regulated by local governments. The most effective control strategy involves effective labeling and use restrictions via state or federal regulatory action, to prevent water quality impacts from legal pesticide uses. The proposed course of action involves an adaptive management approach with the following broad elements:

- Pursue state and federal regulatory change through CASQA
- Implement a set of source controls targeted specifically at urban pesticide use,
- Through the annual reporting process, monitor the implementation of those controls, assess effectiveness, and identify sources or areas where additional effort is needed,
- Evaluate whether additional controls, including treatment controls, may be needed to further reduce pyrethroid pollution,
- Implement additional controls as needed,
- Continue to monitor implementation, as well as conditions within the target receiving waters, assess effectiveness, and re-evaluate control program

The Permittees will continue to support CASQA and/or other agencies pursuing regulatory change in labeling or use limitations for pyrethroid pesticides. This support will include participation in the CASQA Pesticides Subcommittee and the Urban Pesticide Committee, and supporting the implementation of the Urban Pesticide Pollution Prevention (UP3) Project. Permittee staff will continue to provide staff time and resources necessary for the CASQA Pesticides Subcommittee to complete its negotiations with the California Department of Pesticide Regulation and USEPA regarding labeling and use limitations for pyrethroids.

Source control is generally a more cost-effective approach to pollution abatement than treatment control, as source controls do not involve the costly capital investments of treatment controls. As discussed previously, CASQA, EPA, and other agencies and experts

recommend a source control program as an essential component of a successful pollution reduction strategy.

The basis of source control involves preventing the entrance of the subject pollutant into the discharge stream. For pyrethroid pesticides, this means preventing the pesticide from entering the municipal storm drain system through urban runoff. This can take place by intervention at the various steps in the pest control process:

- Point of sale: reducing the purchase of pyrethroid products through education of PCOs and the public in consequences of pesticide use and alternative means of pest control, including integrated pest management (IPM)
- Application: reducing use of pyrethroids on site through education of PCOs and the public into the importance of proper application methods and the potential consequences of pesticide use, as well as pest control alternatives (IPM techniques)
- Off-site Transport: reducing movement of pyrethroids into municipal storm drain system via use of Green Gardener approaches, IPM, and LID building techniques to reduce irrigation water use, retain storm water runoff on-site, and provide on-site mitigation for runoff pollutants (via grassy swales, infiltration, etc.)

A five-year pyrethroid pollutant reduction program is proposed by the Permittees.

<u>Year 1</u>

- Continue to support state and federal efforts to improve pyrethroid pesticide regulation
- Continue to publicize/promote the services of IPM-certified PCOs, to encourage businesses and homeowners to choose their services
- Continue to implement local agency contracting rules to require contracting of IPM-certified PCOs for municipal pest control (through EcoWise Certified IPM Contracting Tool Kit, e.g.)
- Continue point-of-sale education effort providing instruction in pesticide alternatives and proper use/application (using materials available through Our Water Our World, UP3 Project, CASQA members, e.g.)
- Continue efforts to develop and implement LID guidance for planning and development

Year 2

- Coordinate with the University of California (UC) Extension Master Gardener Program to extend its services to the Temecula/Murrieta area to further promote and support the use of IPM by local residents
- Re-evaluate, enhance as needed, and continue measures implemented in Year 1

Year 3

- Conduct programmatic assessment as part of third-year annual report, evaluate successes and areas where additional efforts are needed and adjust program accordingly
- Re-evaluate, enhance as needed, and continue measures implemented in Years 1 and 2

Year 4

- Evaluate effectiveness of BMPs using water quality monitoring data as part of fourth year annual report
- Re-evaluate, enhance as needed, and continue implementation of revised program as defined in Year 3

Year 5

- Conduct programmatic assessment, evaluate successes and areas where additional efforts are needed as part of ROWD process
- Identify additional program elements, including source and/or treatment controls, as needed to effect required pollutant reductions; revise program accordingly
- Re-evaluate, enhance as needed, and continue implementation of revised program as defined in Year 3

Many of the source control materials and programs needed are readily available through existing programs such as EcoWise Certified, Green Gardener, Our Water Our World, the UP3 Project, and the Western IPM Center. The following websites provide further information on these and other programs:

City of San Francisco: http://www.sfenvironment.org/our_programs/topics.html?ti=1
DPR: http://www.cdpr.ca.gov/docs/registration/reevaluation/chemicals/pyrethroids.htm

As a practical measure, it will be necessary to evaluate individual Permittee capabilities and resources, and develop a specific work plan for implementation of the pyrethroid pollutant reduction program.

It is also essential to develop and implement the pyrethroid pollutant reduction program in coordination with other regulatory requirements, especially other pollutant reduction programs mandated under the storm water NPDES Permit and/or load allocations required by TMDLs within the SMR watershed.

Dear Messrs. Robertus and Oda:

Re: FY 2008-2009 Annual Reports
Order No. R9-2004-001
NPDES Permit No. CAS0108766

Please find attached copies of the FY 2008-2009 annual reports for the National Pollutant Discharge Elimination System (NPDES) Municipal Separate Storm Sewer System (MS4) program for the Santa Margarita Region of Riverside County. The following annual reports are submitted in accordance with Third-Term NPDES MS4 Permit (Board Order No. R9-2004-001, NPDES Permit No. CAS0108766) adopted by the San Diego Region Regional Water Quality Control Board (Regional Board) on July 14, 2004 for the Santa Margarita Watershed Region of Riverside County (Third-Term NPDES MS4 Permit):

- Riverside County Flood Control and Water Conservation District (District) Individual Storm Water Management Plan (Individual SWMP) Annual Report
- County of Riverside Individual SWMP Annual Report
- City of Murrieta Individual SWMP Annual Report
- City of Temecula Individual SWMP Annual Report
- Watershed SWMP Annual Report
- Monitoring Program Annual Report (as Appendix G of Watershed SWMP Annual Report)

The reports provide a comprehensive summary and analysis of the Third-Term NPDES MS4 Permit compliance activities during FY 2008-2009 by the District, County of Riverside, and Cities of Murrieta and Temecula (Permittees).

The Individual SWMP Annual Reports summarize the Permittees' individual compliance activities. The Watershed SWMP Annual Report summarizes the Permittees' combined watershed based compliance activities.

The District is committed to continuing its ongoing efforts to work cooperatively with the Co-Permittees, Regional Board staff and other stakeholders in implementing an effective municipal stormwater program and fulfilling the requirements of the current Third-Term NPDES MS4 Permit. If you have any questions concerning this matter, please feel free to call me at 951.955.8411 or Jason Uhley at 951.955.1273.

Very truly yours,

Mark H. Wills

BOARD ORDER NO. R9-2004-001
CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
SAN DIEGO REGION

I. EXECUTIVE SUMMARY

This Annual Progress Report describes the current status of the storm water management program for the City of Murrieta (City) for the Santa Margarita River Watershed. The reporting period is for fiscal year 2008 / 2009 beginning July 1, 2008 and ending June 30, 2009. Each section addresses individual programs that were implemented to comply with the requirements of the municipal separate storm sewer system permit (MS4 Permit) issued to the Santa Margarita Watershed Permittees by the San Diego Regional Water Quality Control board on July 14, 2004. The Permittees, at the time the MS4 Permit was issued, consisted of the City of Murrieta, City of Temecula, County of Riverside, and Riverside County Flood Control and Water Conservation District. Since then, the areas of Menifee and Wildomar have incorporated.

1. DEVELOPMENT PLANNING
(SECTION F of ORDER NO. R9-2004-001)

1) **Description of any amendments to the General Plan or the development project approval process:** None

2) **Number of grading permits issued:** 20

3) **Number of developments conditioned to meet SUSMP requirements:** Thirteen

4) **Attach one example of a development project that was conditioned to meet SUSMP requirements and a description of the required BMPs:** See **Attachment 'A'**

5) **Description of any updates to the environmental review process:** None

6) **Description and number of training efforts conducted during the reporting period (for staff, developers, contractors, etc.), including the number of staff trained.**

   a) **Training:**

Training	Training Description	Training Dates	Number of Attendees
New Development	Riv. Co. NPDES for Damp Implementation	11/3/08	1
New Development	Riv. Co. NPDES for Damp Implementation	5/4/09	3
		Total	**4**

   b) **Summarize the educational and outreach activities the Development Planning Component has conducted over the past year:** Provide WQMP check list to Applicants and require it to be completed for every project. City website has NPDES section.

1. DEVELOPMENT PLANNING
(SECTION F of ORDER NO. R9-2004-001), CONT.

b) **Summarize the educational and outreach activities the Development Planning Component has conducted over the past year:** Provide WQMP check list to Applicants and require it to be completed for every project. City website has NPDES section.

7) **An assessment of program effectiveness based on the measurable goals established in the Permittee's Individual SWMP:** The effectiveness is good. All projects are conditioned with WQMP's if one is required according to the MS4 permit requirements.

8) **Additional Comments/Information:**

Describe the major accomplishments of the Development Planning Component over the past year. (General Plan or ordinance revisions, procedure/approval process changes, SUSMP guidance material): there are no major accomplishments to make note of this year. There were no changes to the General Plan and the Environmental Review Process is the same.

Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Development Planning Component: We updated the WQMP checklist and will post the new General Construction Permit and new MS4 permit on the City website.

ATTACHMENT A

PLANNING DIRECTOR'S HEARING
RESOLUTION NO. DH-2009-_15_

A RESOLUTION OF THE PLANNING DIRECTOR OF THE CITY OF MURRIETA APPROVING DEVELOPMENT PLAN (CASE # DPO-008-2726), AN APPLICATION BY JIM ALLEN FOR THE DEVELOPMENT OF A 7,437 SQUARE FOOT RETAIL BUILDING IN THE EXISTING MARGARITA VILLE COMMERCIAL CENTER LOCATED AT 39550 MURRIETA HOT SPRINGS RD.

The Planning Director of the City of Murrieta hereby resolves as follows:

WHEREAS, on October 17, 2008 an application was filed by Jim Allen of Allen Associates proposing a development of a 7,437 square foot building on a site area of 55,054 square feet. The building consists of a 5,745 square foot credit union and an attached 1,692 square foot retail lease area. A development plan permit is required by Section 16.56.020.

WHEREAS, a public hearing was duly noticed for the Director's Hearing meeting of June 4, 2009, by mailing a notice to property owners within a 500 foot radius of the site on May 22, 2009, publishing the notice in The Californian newspaper on May 24, 2009, and posting the site on May 22, 2009.

WHEREAS, the project, as proposed, has been determined to be in compliance with Mitigated Negative Declaration for Development Plan DP0-004-059, Tentative Parcel Map 32921, and Variance VAR-004-061, which was adopted on October 13th 2004 as it adequately addressed any potential environmental impacts of the proposed project and pursuant to Section 15162 (Subsequent EIRs and Negative Declarations) of the Guideline for Implementation of the California Environmental Quality Act (CEQA), California Code of Regulations (CCR) Title 14, no further environmental review is required for the project.

NOW, therefore, the Planning Director of the City of Murrieta resolves as follows:

SECTION 1. In accordance with Section 16.56.040 of the Murrieta Municipal Code, based upon the staff reports, public testimony and record herein, the Planning Director makes the following findings regarding Development Plan Permit 008-2726:

1. The proposed use is allowed within the subject zoning district and complies with all applicable provisions of this development code;

FACTS: The proposed commercial development is consistent with the Land Use zone designation of Community Commercial. Retail Commercial, Financial Institutions, Fast Food, and Restaurant uses are permitted in the underlying zoning district. The site complies with the Community Commercial zone and applicable Development Code requirements.

2. The proposed use would be consistent with the objectives, policies, general land uses, and programs of the general plan and any applicable specific plan;

   FACTS: The proposed development is consistent with General Plan policies and objectives of the Community Commercial land use designation. The use is consistent with the Community Commercial General Plan Land Use Designation, which allows various commercial uses, financial, office and restaurant activities.

3. The approval of the development plan for the proposed use is in compliance with the requirements of the California Environmental Quality Act (CEQA) and there will be no potentially significant negative impacts upon environmental quality and natural resources that could not be properly mitigated and monitored;

   FACTS: The property as proposed has been determined to be in compliance with Mitigated Negative Declaration for Development Plan DP0-004-059, Tentative Parcel Map 32921, and Variance VAR-004-061, which was adopted on October 13th 2004 as it adequately addressed any potential environmental impacts of the proposed project and pursuant to Section 15162 (Subsequent EIRs and Negative Declarations) of the Guideline for Implementation of the California Environmental Quality Act (CEQA), California Code of Regulations (CCR) Title 14, no further environmental review is required for the project.

4. The location, size, design, and operating characteristics of the proposed use would be compatible with existing land uses within the general area in which the proposed use is to be located.

   FACTS: The site is physically suitable for development and is compatible with the surrounding properties. The proposed building complies with the City's architectural standards for commercial development, Section 16.44.110 of the Murrieta Development Code. The southeast corner of Murrieta Hot Springs Road and Margarita Road is also zoned Community Commercial and is fully developed. Uses such as retail commercial, financial, offices, restaurants, fast food restaurants, and fueling facilities are within the vicinity of the subject site. The proposed development is compatible with the surrounding residential land uses based on the requirement for screening walls and landscaped buffers along the adjacent property lines of the site and the single family homes to the south and west.

5. There subject site is physically suitable for the type and density/intensity of the use being proposed.

   FACTS: The site is physically suitable for development and is compatible with the surrounding properties. The proposed facility is adjacent to other commercial uses, which are zoned Community Commercial and Single Family 2. The General Plan and Development Code require buffering for the adjacent residential uses. There are existing screening walls and landscaped buffers for the adjacent residential uses that are a part of the site design.

6. There are adequate provisions for public access, water, sanitation, and public utilities and services to ensure that the proposed use would not be detrimental to the public convenience, health safety, or general welfare.

   FACTS: The project proposes uses consistent with the surrounding area, General Plan and zoning. The Eastern Municipal Water District will provide sewer and water; electricity by Southern California Edison Company; and gas by the Gas Company. These facilities are available through connections from existing Murrieta Hot Springs Road and Margarita Road.

SECTION 2. Pursuant to the above findings, the Planning Director of the City of Murrieta hereby accepts the environmental determination and adopts a Resolution approving Development Plan Permit DP0-008-2726 based on the Findings and subject to the following conditions contained in the attached Exhibit A incorporated herein by this reference.

PASSED, APPROVED AND ADOPTED THIS 4th DAY OF JUNE, 2009

Mary E. Lanier, Community Development Director

ATTEST:

Cynthia S. Kinser, City Planner

I, Cynthia S. Kinser, City Planner, City of Murrieta, California do hereby certify under penalty of perjury that the foregoing Resolution was duly adopted at a Director's Hearing on the 4th day of June, 2009.

FINAL CONDITIONS OF APPROVAL
DEVELOPMENT PLAN 008-2726
NORTH ISLAND CREDIT UNION
JUNE 4, 2009

PLANNING DEPARTMENT:

1. The permittee/owner shall defend (with attorneys approved by the City), indemnify and hold harmless the City of Murrieta, its agents, officers, and employees from any claims, damages, action, or proceeding against the City or its agents, officers, or employees to attack, set aside, void, or annul an approval of the City, its advisory agencies, appeal boards, or legislative body concerning this approval Development Plan 008-2726. The City will promptly notify the permittee of any such claim, action, or proceeding against the City and will cooperate fully in the defense.

2. Any fees due the City of Murrieta for processing this project shall be paid to the City within thirty (30) calendar days of final action by the approval authority. Failure to pay such outstanding fees within the time specified shall invalidate any approval or conditional approval granted. No permits, site work, or other actions authorized by this action shall be processed by the City, nor permitted, authorized or commenced until all outstanding fees are paid to the City.

3. The project approval is for a Development Plan consisting of a single story 7,437 square foot single story building. This development consists of a 5,745 square foot credit union and an attached 1,692 retail lease area. All construction shall be in substantial conformance with approved plans, elevations, material and color board (s) with the approval date of June 4, 2009. Any proposed change substantially different than the approved plan shall require an amendment to this approval in accordance with the Development Code.

4. The project shall be developed in conformance with all approved exhibits stamped and dated June 4, 2009. Subsequent modifications of this approval, which do not intensify the use, including but not limited to reorientation of structures, alteration of parking and circulation design, minor changes to the Conditions of Approval, interpretations of the Conditions of Approval relative to intent, necessity of, and timing, may be approved by the Planning Director, unless the Director requires a Substantial Conformance or Revised Permit application in accordance with the Development Code. Materials and colors used in the construction of the building(s) shall be consistent with those approved with this application and which are consistent with the rest of the commercial center.

5. Pursuant to Section 711.4 of the State of California Fish and Game Code, the applicant is required to pay a $64.00 County of Riverside handling fee. Said fees shall be paid to the Clerk/Recorder of the County of Riverside at the time the Notice of Determination/Exemption is filed pursuant to Section 21152 of the Public Resources Code. If this fee is not paid, the approval of this project shall not be operative, vested, or final. In order to comply with State mandated time lines for filing of a Notice of Determination, the above fee must be delivered to the Planning Department within **two (2)** working days after the date of final approval.

6. Building colors and materials shall be in substantial conformance with those shown on APPROVED PLANS June 4, 2009.

7. The development of these premises shall comply with the standards of the City's Development Code and all other applicable State and Federal codes.

8. This permit shall conform to the development standards of the Community Commercial (CC) zone.

9. Prior to the execution of any purchase contract or tenant lease agreements, a detailed statement disclosing to perspective buyer/tenant(s) the amount of parking provided for each unit, and that the City's parking requirements could significantly restrict a proposed use. Additionally, the disclosure shall advise buyers/tenants to confirm with the City the parking requirements for the any proposed use. Any use requiring additional parking above that provided or otherwise made available shall not be permitted.

10. The applicant shall pay all applicable impact and/or mitigation fees or provide proof that all required fees have been paid in accordance with City policies and ordinances in effect at the time of permit issuance.

11. The project site shall be the point-of-sale for the purpose of collecting any sales tax on goods that are sold, delivered or rented by any business on the site.

12. Parking for this project was determined primarily on the basis of Development Code Section 16.34 and requires 37 parking stalls based on retail services. The average retail use calls for 1 space for each 200 square feet of gross floor area. Per the approved shopping center site plan, 50 spaces are being provided.

13. No signs are approved as part of this project approval. Prior to the installation of any on-site advertising or directional signs, the applicant shall review and adhere to the existing center's comprehensive sign plan. A sign permit application shall be submitted to and approved by the Planning Department pursuant to the requirements of Section 16.38 of the City's Development Code.

14. No outdoor advertising display, sign or billboard (not including on-site advertising or directional signs) shall be constructed or maintained within the property subject to this approval.

15. Roof gutters and downspouts are not permitted on the exterior of the building unless satisfactorily integrated into the architecture as determined by the Planning Department prior to building permit issuance.

16. All trash bins shall be stored in approved enclosures and screened in compliance with Sections 16.18.120 and 16.18.150 of the Murrieta Development Code. The location of the enclosures must be shown on the precise grade plan.

17. Trellis for trash enclosures must meet the following design guidelines: 6"X6" post, 6"X6" beam, 4"X4" or 4"X6" rafter at 12" on center, 18" cantilever end cuts or chamfer.

18. Construction of this project may be done in one (1) phase as shown on APPROVED PLANS. Any additional phases, or modifications to the approved phasing, may be permitted provided a plan for each phase of development is submitted to and approved by the Planning Department.

19. No tenant improvement permit, or any other building permit, shall be granted for any second story, second floor, mezzanine, or interior balcony unless a Development plan, conditional use permit, substantial conformance or a revised permit is approved by the Planning Department in order to assure adequate parking remains within the property. Only a one-story building was approved as part of this permit and reviewed for parking standards.

20. All plant materials within landscaped areas shall be maintained in a viable growth condition throughout the life of this permit.

21. In the event the use hereby permitted under this permit, a) is found to be in violation of the terms and conditions of this permit, b) is found to have been obtained by fraud or perjured testimony, or c) is found to be detrimental to the public health, safety or general welfare, or is a public nuisance, this permit shall be subject to the revocation procedures in Section 16.82 of the Development Code.

22. Outside storage is not approved/permitted as part of this project.

23. The applicant shall obtain approval of all necessary plans for the construction of structures on the subject property in accordance with the Murrieta Development Code. Such plans include, but are not limited to floor plans and elevations, grading plans, landscaping plans.

24. Mechanical or other utility equipment shall be screened whether it is located on the roof, side of the building or on the ground. The method of screening shall be architecturally integrated in terms of materials, color and form. Roof top equipment should be integrated into the design of the building. An interior room, with direct access, shall be provided for the placement of main utility switch gear distribution and roof access ladders.

    a. Any mechanical equipment and vents (ground or rooftop) shall be screened from view from any public right of ways, landscaping area, open space and parking area. Line of sight details shall be included in the plans for building permit issuance and stamped by a licensed architect. In addition, details including the height of the roof-top equipment and height of the parapet must be a detail within the plans for building permit issuance. Also, during the Planning Department review of the building plans, the design of a proposed screening method shall be included within the building plans in the event the roof top equipment is visible.

b. If any time during the building inspection process, any roof-top equipment is found to exceed the height provided in the details of the approved plans for building permit issuance, the applicant must submit proposed method for screening of the equipment. Approval of such screening method is at the discretion of the Planning Department.

c. Planning Department Approval and Building Permit Issuance must be obtained prior to any installation of the proposed screening method.

25. The life of Development Plan No. 008-2726 shall be used within two (2) years of approval date; otherwise, it shall become null and void and of no effect whatsoever, pursuant to Development Code Section, 16.56.060 B

Prior to grading permit issuance:

26. If during construction/grading cultural or paleontological resources are encountered, work shall be halted or diverted in the immediate area until a qualified archaeologist or paleontological is retained to evaluate the finds and make recommendations for mitigation to the Planning Department. Work shall not resume in the area until the mitigation required by the Planning Department has been implemented.

    If any human remains are encountered during ground-disturbing activities, all such activities in the vicinity of the discovery shall be terminated immediately and notification shall be provided to the County Coroner's office, the Pechanga Band of Luiseno Indians shall be contacted to arrange for the management of the remains. Work shall not resume in the vicinity of the discovery until authorized by the Planning Department.

    A report documenting the monitoring activities shall be submitted to the City of Murrieta within 60 days of the completion of the grading activities. This report shall document the type of cultural resources recovered and the disposition of these resources. The artifacts shall be deposited into an accredited institution that is authorized to accept these types of cultural resources.

27. Prior to issuance of grading permits, the Planning Department shall determine if the deposit based fees for the project are in a negative balance. If so, any outstanding fees shall be paid by the applicant/developer.

28. Prior to the issuance of grading permits, the project applicant shall comply with the provisions of any existing City ordinance that has been established as a mitigation measure for the Stephens' Kangaroo Rat. These ordinances may include fee schedules, mechanisms for protecting habitat, or a combination thereof.

Prior to building permit issuance:

29. Elevations and floor plans of all buildings and structures submitted for building plan check approval shall be in substantial conformance with the elevations and floor plans shown on approved plans dated June 4, 2009.

30. All of the conditions of approval shall be inserted into the building plans.

31. Any exterior lighting within parking lot areas shall not exceed 0.3 foot candles illumination at adjacent residential properties. All lighting fixtures where applicable shall include cut-off fixtures, and shall be designed to project in a downward manner to minimize glare to surrounding properties.

32. All parking lot lights and other outdoor lighting shall be shown on electrical plans submitted to the Department of Building and Safety for plan check approval and shall comply with the requirements of Development Code Section 16.18.100 (Lighting) and thru 16.18.110 Mt. Palomar Lighting Standards.

    a. Any outside lighting shall be hooded and directed so as not to shine directly upon adjoining property or public rights-of-way.

33. The applicant shall pay all applicable fees, mitigation fees or provide proof that all required fees have been paid in accordance with City policies and ordinances in effect at the time of permit issuance.

Prior to building final inspection:

34. All parking requirements shall be completed in conformance with the approved plans, unless otherwise approved by the Planning Department. All parking shall be designed and improved pursuant to Section 16.34 of the Murrieta Development Code.

35. Loading spaces(s) shall be provided in accordance with Section 16.34.100 of the Development Code, as shown on the approved plans dated June 4, 2009. The loading space shall be surfaced with six (6) inches of concrete over a suitable base and shall not be less than 15 feet wide by 25 feet long, with 14 feet vertical clearance.

36. The required number of bicycle rack spaces for this project is 2 (two) spaces which shall be provided in convenient locations to facilitate bicycle access to the project area in accordance with section 16.34.090 of the Development Code. The bicycle racks shall be shown on project landscaping and improvement plans submitted for Planning Department approval, and shall be installed in accordance with those plans, prior to occupancy.

37. All required landscape planting and irrigation shall have been installed in accordance with City's Landscape Architect.

38. All existing outdoor advertising displays, signs or billboards shall be removed.

LANDSCAPING:

Prior to the issuance of building permits:

39. Three copies of construction landscaping plans shall be submitted to the Planning Department and approved. A licensed Landscape Architect shall prepare the plans.

40. The above-described plans shall be in substantial conformance with the plans as approved by the City Landscape Architect, City Administrative Staff, Planning Commission and/or City Council. Notes, details, and specifications shall be included.

41. All landscape and irrigation plans shall be consistent with Title 16.27 (Water Efficient Landscape) and 16.28 (Landscape Standards) of the Murrieta Municipal Code.

42. All parking lot planting areas, curbing, irrigation, and bumper overhang shall be consistent with Title 16.34.070-H. of the Murrieta Municipal Code. Landscaping equal to the amount of parking stall overhang shall be provided in addition to the required five-foot (minimum) planting area or paving required for parking stall overhang in parking stalls that are less than 18 feet long.

43. Planting areas adjacent to streets shall contain at least 12 feet of landscaping between the right-of-way and curb within private property.

44. Landscape plans shall be drawn at a scale of 20 feet equal to 1 foot or larger. The City Landscape Architect will not accept plans drawn in 30 feet scale or smaller without prior approval.

45. No light fixture, flagpole, electric transformer, fire detector check or fire hydrant shall be designed for any location in a planting area, which would make it necessary to eliminate a tree. All overhead light fixtures and utilities shall be identified on the grading and site plan prior to approval of the grading and site plans

46. Plant materials shall be installed from container sizes consistent with Murrieta Municipal Code, 16.28.080, Table 3-5, Minimum Required Mix of Plant Materials.

47. All ground covers shall be installed from living plant materials. Spacing shall be such that 100% coverage is achieved within 2 years of the installation. No gravel or bark areas are allowed. No large expanses of ground cover on slopes shall be designed without approved masses of shrubs within the ground cover areas.

48. All planter areas shall be a minimum of 5 feet wide excluding curbs and required concrete strip adjacent to parking spaces (12" wide by 4" deep doweled into the 6" wide curb or 12" wide by 12" deep integrally poured curb) and excluding walkways, walls, wall footings and overhead obstructions.

49. All trash enclosures shall be covered with architectural treatment to blend with the buildings as approved by the Planning Department. All three sides of trash enclosure

walls shall have a minimum 5 foot wide planting area (excluding curbing, walkway strip, and wall footing encroachment). Flowering vines shall be trained on to the walls. Trees, shrubs and ground covers shall be included.

50. Planting areas adjacent to streets shall have trees provided at the rate of one for each 30 lineal feet of landscaped area.

51. Mature specimen trees in 36-inch or 48-inch boxes or palms with a minimum of 15 feet of brown trunk shall be supplied in sufficient quantity to provide variety and emphasis at main focal areas.

52. Above ground utility locations shall be approved with prior permission of the Planning Department. Building backflow prevention units, fire detector checks and electric transformers shall be located in shrub areas outside of the City right-of-way and screened with shrubs. All double detector check and backflow assemblies shall be located in shrub beds clearly identified on the grading or site plan prior to approval of the site plan. The detector check /backflow devices shall be painted a neutral/earth-tone color and any pipes extending above ground shall be finished and painted to match the device. The detector check and post indicator shall be set back at least 10 feet away from the driveway or sidewalk in a shrub area. Transformers shall be screened with 5 feet of landscaping outside the required setback (18 inches on sides and 8 feet at the front doors).

53. No required canopy shade tree planting area or shrub planting bed shall be narrower than 5 feet wide.

54. Canopy shade trees shall be located directly adjacent to public parking spaces in continuous planting areas at no farther than 25 to 30 feet on center (depending on the canopy spread of the species) to provide the required percentage of parking spaces shaded at 15 years growth. Trees located within the parking lot and in front of buildings with adjacent parking spaces, shall be located no farther than 36 feet on center within curbed planter areas containing a minimum of 25 square feet of planted area. Palms shall not be considered a shade tree.

55. Landscaping shall encompass the site area, as identified on the site plan.

56. No building roof drain shall daylight into a planter area or splash block. Roof drains located at planter areas shall be adapted to convey excess water through the planter via drain pipes, which daylight through the curb into the adjacent gutter or approved bio-swale.

57. Landscaping shall be incorporated and planned as an integral part of the overall project design around the buildings. Landscaping should not interfere with pedestrian or handicap accessibility. Pedestrian and handicap accessibility shall be designed not to interfere with landscaping required around the building.

58. All trees shall be double staked with rubber type ties nailed to the lodge pole stakes in at least two vertical locations.

59. All irrigation in shrub areas shall be designed and installed using drip irrigation. A weather-based irrigation controller shall be installed that measures evapo-transpiration. A rain shut off device shall be installed connected with the irrigation controller.

60. Plant materials within shrub areas shall be drought-tolerant, water-efficient and hydro-zoned. The plant species shall tie in with the existing theme of the overall shopping center.

61. All fertilizers and soil amendments used during planting preparation and installation shall be derived from organic based materials as a best management practice for storm water source control.

62. All private landscaping and landscaping maintained by the City of Murrieta shall be clearly designated on the precise grading and landscape plans.

63. A minimum 12-foot wide landscape area shall be provided along Margarita Road between the right of way and the paving.

64. The project driveway entry point shall be designed with enhanced landscaping in a minimum of 40 feet long (setback from the right of way) by 7 feet wide strip on both sides of the driveway aisle or a 7 foot wide center median. If sidewalks are proposed, the landscaping may be reduced to 4 feet wide adjacent to the sidewalk.

Prior to Construction:

65. The City Landscape Architect shall meet with the job site superintendent and the landscape contractor for a pre-job meeting. A copy of the soil fertility recommendations shall be presented prior to the meeting. No landscaping or site work in public right-of-ways shall occur prior to the meeting.

Prior to the issuance of occupancy permits:

66. Performance securities, in the amount determined by the City to guarantee the adequate maintenance of the landscaping materials and irrigation system in accordance with the approved plans for a period of one (1) year from the date of final clearance of the installed landscaping by the City, shall be posted with the Planning Department. Acceptable forms of security shall be limited to cash deposit, cash bonds, or irrevocable letters of credit. The performance securities shall be released one (1) year after final clearance of the installed landscaping by the City, upon written request by the owner, if the landscaping has been adequately maintained. A deposit to cover re-inspection of the landscape, at the current City rate shall be posted with the Planning Department prior to re-inspection for maintenance bond release.

67. All required landscaping and irrigation systems shall be installed in a condition acceptable to the City. The owner's Landscape Architect shall provide inspection of the landscaping. The owner's Landscape Architect shall provide the City with a Certificate of Compliance stating that the landscaping was installed per the approved plans. The City will review the Certificate of Compliance and conduct inspections to ensure that the landscape installation is in compliance with the approved landscape plans.

ENGINEERING DEPARTMENT:

General Requirements

68. It is understood that the development plan correctly shows all existing easements, traveled ways, and drainage courses, and that the omission may require the map or plans associated with this application to be resubmitted for further consideration.

69. A precise grading permit shall be obtained from the Department of Public Works prior to commencement of any construction outside of the City-maintained road right-of-way.

70. An Encroachment Permit shall be obtained from the Department of Public Works prior to commencement of any construction within an existing or proposed City right-of-way or easement.

71. Coordinate with adjacent property owners affected by grading, street, utility and drainage improvements necessary for the onsite, frontage and offsite improvements. Be solely responsible for acquisition of any necessary easements and agreements prior to grading permit or improvement approval whichever comes first. If necessary, the agreements shall address maintenance, erosion control, and be notarized in a format acceptable to the City Engineer.

72. All improvement plans, grading plans, landscape and irrigation plans shall be coordinated for consistency with adjacent projects and existing improvements contiguous to the site and shall be submitted on standard 24" x 36" City-formatted mylars.

73. All designs shall conform to the City of Murrieta Municipal Code, Development Code, Standard Drawings, and Circulation Element unless otherwise approved by the City Engineer.

74. Prior to approval of any grading plan, improvement plan, or final map; submit clearances from all applicable agencies, and pay all outstanding plan check and processing fees.

PRIOR TO ISSUANCE OF ANY GRADING PERMIT, UNLESS OTHER TIMING IS INDICATED, THE APPLICANT SHALL COMPLETE THE FOLLOWING OR HAVE PLANS SUBMITTED AND APPROVED, IMPROVEMENT AGREEMENTS EXECUTED AND Securities Posted:

75. Pay to the City all County of Riverside Development Impact Fees applicable at time of grading permit issuance or as otherwise approved by ordinance. In the event these fees have been previously paid, the Developer shall provide proof of payment. Said fees are not limited to the following:

- Riverside County Area Drainage Fee
- Kangaroo Rat Fee
- MSHCP Fee

76. Obtain written clearance, as deemed necessary by the Public Works Department, from the following agencies:
    a. San Diego Regional Water Quality Control Board
    b. Department of Fish & Game
    c. U. S. Army Corps of Engineers
    d. Planning Department
    e. Engineering Department
    f. Community Services Department
    g. Sewer and Water District(s)
    h. The Gas Company
    i. Southern California Edison Company
    j. Phone and CATV

77. A Precise Grading Plan shall be prepared by a registered Civil Engineer in accordance with City standards and approved by the Department of Public Works prior to commencement of any grading. The plan shall incorporate adequate erosion control measures to protect the site and adjoining properties from damage due to erosion. The plan shall also show drainage, striping and signage improvements.

78. A comprehensive Geologic and Geotechnical Report shall be prepared by a registered Civil or Soils Engineer and submitted to the Engineering Department with the initial grading plan check. The report shall address in situ soils conditions, identify any geotechnical hazards for the site, provide recommendations for the construction of engineered structures, preliminary pavement sections, slope stability, identify and located faults, and confirm the buildings have sufficient setback from the fault but not be limited to just these items. All recommended measures identified in the report shall be incorporated into the project design. The report may be subject to a third-party review at the discretion of the City Engineer.

79. A haul permit is required prior to hauling dirt or construction debris onto or off the site. Submit a proposed haul route plan and comply with all conditions and requirements the City Engineer may impose to the hauling operation.

80. Grades of Entrances, Parking Spaces and Driveways shall conform to Development Code 16.34.070 that allows a maximum grade of seven percent measured in any direction for parking lots and fifteen percent for entrance driveways.

NOI, SWPPP, WQMP

81. Prior to issuance of a grading permit or other construction activities, the Developer shall provide the following to City staff:

    a. A copy of the Notice of Intent (NOI) and waste Discharge Identification (WDID) number from the State Water Resources Control Board.

    b. An adequate Storm Water Pollution Plan (SWPPP) shall be available to State and City Inspectors at the job site prior to commencing construction. The developer shall be responsible for implementation, monitoring, operation and maintenance of the SWPPP until all improvements have been accepted by the City or construction is complete, whichever is later. A Notice of Termination (NOT) can then be filed with the State Water Resources Control Board.

    c. A final project-specific Water Quality Management Plan (WQMP) shall be submitted to the City for approval with the grading plan check application and approved by the Engineering Department prior to issuance of a grading permit. It shall incorporate, but not be limited to, the following: site design BMP's, applicable source control BMP's, treatment control BMP's, long term operation and maintenance requirements, inspection and maintenance checklist; maintenance agreement, covenant agreement, or funding mechanism for long-term maintenance and operation. The post-construction best management practices (BMPs) outlined in the approved final project-specific WQMP shall be incorporated in the grading plan.

82. A copy of the WQMP shall be kept onsite at all times. The Developer shall make the occupants, tenants, staff, employees, and contractors aware of this document and educate them on the items pertinent to them.

83. All grading activities shall minimize dust through compliance with AQMD Rule 403 which requires watering during earth moving operations.

84. Post security and enter into an agreement guaranteeing the grading and erosion control improvements in conformance with applicable City Standards and subject to approval by the Department of Public Works.

Drainage

85. Provide a hydrologic and hydraulic study prepared by a registered Civil Engineer which identifies storm water runoff quantities from the site and upstream of the site. The study shall show all existing or proposed offsite public or private drainage facilities intended to discharge this runoff. The study shall include a capacity analysis verifying the adequacy of the facilities. Runoff from the development or partial phase of development of the property shall not exceed the existing natural discharge quantities with respect to the following criteria:

A. Detention shall not be required for developments of less than one acre if the development uses volume based water quality measures.

B. For projects less than 10 acres, including those less than one acre NOT using volume based water quality measures shall analyze and mitigate the difference in developed and undeveloped runoff for a 10-year storm. A simplified hydrograph method shall be used that simulates the hydrograph with a triangle. The Rational method flow rate shall be the top value of the triangle and the base width shall be two times the time of concentration (Tc). The difference in area between the developed condition triangle and the existing condition triangle represents the required storage volume. Both triangles shall use time of concentration from the developed condition. Based upon the storage volume head, the outlet structure shall have an outlet flow no larger than the existing flow rate.

C. Projects that are 10 acres or greater shall analyze for the 1,3,6 and 24-hour duration for the 2,5 and 10-year frequency storms.

The design of detention basins shall provide for the detention of nuisance flow. Development shall detain the year and duration incremental storm runoff developed and or increased by means of on-site detention. Detention techniques shall include, but not be limited to: Parking lot detention or on-site detention basin or other methods approved by the City Engineer. Detention shall not be required in the event facilities downstream from the point of discharge are shown to be designed for and have been constructed to convey the 100 year storm event. Evidence of a maintenance mechanism shall be provided for the basins. If project discharges/connects to an off-site detention basin, provide permission to drain/connect correspondence from the owner of basin or system. Off-site detention basins require a Declaration of Dedication. All detention measures shall have positive drainage with 48hr max draw-down time. Standing water is not permitted. (The Applicant's civil engineer must substantiate their claim that the hydrology report prepared when Margarita Ville developed sufficiently mitigated increased runoff by ponding water 0.5' at each catch basin.)

86. Design and install a catch basin, with appropriate water quality insert, at the northwest corner of the drive through isle to intercept and treat runoff. A gutter shall be extended from the east side of the east drive isle to said catch basin to intercept and convey first flush runoff.

87. Street storm flows shall not exceed top of curb for the 10-year storm event and must be contained within the street right-of-way for the 100-year storm event.

88. Accept and properly dispose of all offsite drainage flowing onto or through the site.

Street Improvements

89. Vehicular sight distance and installation of pedestrian and traffic control facilities shall be provided at all street intersections and entrances in accordance with City Standard No. 214.

Sewer and Water

90. Verify capacity of proposed sewer and water systems and provide approval by the governing Sewer and Water District that the proposed sewer and water system is compliant with the District's master plan.

91. Design and guarantee the construction of all sewer and water improvements necessary to serve this project.

Mapping

92. All easements and/or right-of-way dedications shall be offered for dedication to the public or other appropriate agency and shall continue in force until the City accepts or abandons such offers. All dedications shall be free from all encumbrances as approved by the Department of Public Works.

93. If not already done, relinquish and waive abutter's right of access to Margarita Road excepting the entrance as shown on the approved development plan.

94. Any delinquent property taxes shall be paid.

95. All existing street and property monuments within or abutting this project site shall be preserved. If monuments are damaged or destroyed, the Developer shall retain a qualified licensed land surveyor or civil engineer to reset those monuments per City Standards and file the necessary information with the County Recorder's office as required by California Business and Professions Code Section 8771.

Utilities

96. All existing and proposed utility systems including gas, electric (33kv and under), telephone, water, sewer, and cable TV shall be installed underground, with easements provided as required, and designed and constructed in accordance with City Codes and the utility provider.

97. Telephone, cable TV, high speed internet and/or security systems shall be pre-wired in the building.

98. Notify the cable TV franchises of the intent to develop. Install conduit to cable TV requirements at time of street improvements.

Prior to the issuance of building permits

99. All easements, agreements of improvements, offsite construction, and dedication for required rights-of-way shall be approved by the Engineering Department.

100. The building pad shall be certified by a registered Civil Engineer for location and elevation, and the Soils Engineer shall issue a Final Soils Report addressing compaction and site conditions.

101. Final grading of the subject property shall be in accordance with the California Building Code, the approved Precise Grading Plan, the conditions of the grading permit, City Grading Manual and accepted grading construction practices.

102. Pay to the City the applicable Development Impact Fees as required by, and in accordance with City Ordinance 196-98.

103. Pay to the City the Western Riverside County Transportation Uniform Mitigation Fee (TUMF) based on the applicable rates at time of permit.

Prior to the issuance of a certificate of occupancy

104. All improvements, required by the Public Works Department, *including the raised median on Murrieta Hot Springs Road (added by the Engineering Manager on June 4, 2009)* shall be constructed and completed per the approved plans and City standards to the satisfaction of the City Engineer.

105. All sewer and water improvements shall be constructed and completed in accordance with the Sewer and Water District standards.

106. Demonstrate that all structural BMP's described in the final project-specific WQMP have been constructed and installed in conformance with the approved plans and specifications and the Developer is prepared to implement all non-structural BMP's described in the approved final project-specific WQMP.

107. A copy of the as-built project specific WQMP (approved final WQMP updated to include any changes made during construction) and recorded WQMP maintenance agreement shall be provided to the City and occupants. This information is required prior to releasing the grading and erosion control bonds.

108. Provide one set of Mylars and electronic copy of "As-Built" drawings of the Precise Grading Plan, improvement plans, hydrology and final maps (if applicable).

109. Obtain written clearance, as deemed necessary by the Public Works Department, from the following agencies:

    a. Planning Department
    b. Engineering Department
    c. Building Department
    d. Fire Department
    e. Community Services Department
    f. Sewer and Water District
    g. Utility Companies

BUILDING DEPARTMENT:

General:

110. All structures shall comply with the current California Building Codes (CBC), and related Codes and Ordinances of the City of Murrieta. Three (3) sets of plans shall be submitted for a building permit, and shall include building data, building use/occupancy, construction type, allowable area increases and actual building square foot area, building setbacks, related building means of egress and ensuing egress discharge to the public right-of-way.

111. Required CBC, site facility accessibility components and details, unload areas, striping and HC parking symbol, accessible exterior routes of travel, as defined in the current California Building Code (CBC); routes of travel, transition components etc., shall be provided between all commercial buildings, and each building to its own accessible trash enclosure and at least one exterior route shall be from the project site, to the public right-of-way, which shall be shown on an architectural site plan, and shall correlate with the civil designed precise grade plan. All design and details shall comply with California State guidelines as outlined in Title 24 California Building Code. The property owner shall be responsible for Federal ADA compliance.

112. Plans submitted during the permitting process, including but not limited to, site plan, precise grade plans and building architectural features, shall not vary substantially, from plans previously reviewed and Approved by the Planning, Engineering or other City Departments, without prior authorization form the Planning Manager, Public Works Director and/or Building and Safety Manager.

113. All exterior lighting shall be shown on building permit plans and shall comply with the City of Murrieta's MMC Sec.16.18.110, Mt. Palomar Lighting Pollution Control Standards.

Building Permit Application:

114. Plans submitted for building construction shall contain a full size copy of the Final Approved set of city department's Conditions of Approval.

115. Two sets of signed soil reports shall be submitted and correlate with building foundation design by reference. The report shall be from an individual licensed by the state to prepare such report, including compaction test results and verification of satisfactory placement, of any fill material used to support the foundation of any building or structure, in accordance with accepted engineering practice or, as recommended in any engineering geology preliminary report for any engineered grading design.

116. Separate permits shall be obtained from the City of Murrieta Building & Safety Department, for individual structures e.g., monument signs, building wall signs, masonry

walls, retaining walls, temporary power etc. Temporary power and temporary wiring shall comply with the current California Electrical Code.

Prior To Building Final:

120. Final permit approvals shall be obtained, and any outstanding fees shall be paid to all City Departments/Divisions which may include Fire, Planning, Engineering, Building & Safety, and the City Landscape Architect, prior to a tenant occupancy of a building permitted as a "shell only" building, a building shell "Notice of Inspection Completion", and the issuance of a Certificate of Occupancy from the City of Murrieta Building & Safety Division.

POLICE DEPARTMENT:

General:

121. The applicant shall be responsible for maintaining free of litter the area adjacent to the premises over which he has control.

122. Graffiti shall be removed from the exterior walls and windows of the premises within 24 hours of discovery at the expense of the owner or property manager.

123. There shall be no special promotional events held on the property which would adversely affect the approved parking requirements or public safety, unless a written request for such is received and approved by the City of Murrieta Planning Department and the Police Department at least thirty (30) days in advance.

124. The parking lot of the premises shall be equipped with lighting of sufficient power to illuminate and make easily discernible the appearance and conduct of all persons on or about the parking lot and conforms to Mt. Palomar lighting standards.

125. Roof Address Numbering: The number/letter of each independently addressed building on the property shall be marked with a reflectorized material (vinyl or paint), or in a color that contrasts the color of the roofing material. The lettering must be at least 24 inches in height so that the address can be viewed from the sky and is on the flat portion of the roof of the building and does not negatively impact the aesthetics of the project. The lettering must be positioned so that the address faces the direction of the corresponding street for which the address is assigned.

Prior to Building Plan Final:

126. Video Surveillance System plans must be submitted to the Police Chief or his designee for approval of the site security plan. The security plan shall include the technological capabilities of the surveillance system and a project map indicating the intended placement of surveillance cameras for the project and how video records are to be maintained and how they can be accessed by law enforcement.

Surveillance:

127. Prior to occupancy, the applicant must install a video surveillance system capable of day and night viewing which encompasses all interior customer areas and all building entrances. The exterior surveillance system must capture all vehicles, front and rear vehicle license plates and vehicle occupants within the Automated Teller Machines (ATM) areas, drive-thru teller area, the parking lot and both vehicle entrances/exits to the site to the satisfaction of the Chief of Police or his designee.

    The minimum standards for the system must be a digital system with the capability to view in color and in a low-lux environment. Video surveillance records must be maintained by the management for at least sixty (60) days and made available to any law enforcement agency for viewing and/or copying within one (1) business day.

128. A direct alarm dedicated hard phone line (automated voice dialer) device must be installed with connectivity to the police department in the event of silent robbery alarm (or similar emergency) for the purposes of allowing the police department to listen to live audio within the location.

FIRE DEPARTMENT:

Building Plan Submittal

129. City of Murrieta Ordinance No. 546 establishes the installation of a fire protection sprinkler system in all buildings with fire flows calculated with a base of 1500 GPM or greater. The sprinkler system post indicator valve and fire department connection shall be located to the front of the project and no further than 40 feet from a super fire hydrant and on the same geographical side of any drive aisles. These appliances shall be located at a minimum of 25 feet from any building. A statement that the building(s) will be automatically fire sprinklered must appear on the title page of the building plans.

130. Comply with all conditions for explosion venting and dust collecting addressed in the 2007 California Building Code Section # 307.1 If applicable.

131. Plans must illustrate designated location of fire lanes. Contact Fire Prevention for recommended designations.

132. Fire sprinkler system shell conform to NFPA 13, 13R, 13D If applicable.

133. Minimum fire sprinkler density of .33 GPM/ 2500 SF is required even if high piled stock is planned.

134. If project is planned for Business condominium or changes to business condominium project addition conditions will apply.

135. Applicant must comply with conditions addressed in the California Administrative Code Titles 19 & 24.

136. Occupancy separation may be required as per the California Building Code, Section 302.

137. All buildings within the City of Murrieta shall have fire retardant roofing with a Class "B" minimum rating. The developer must submit documented fire rated listings, supplied by the manufacturer, to the Fire Marshal if he/she chooses to use wood shingles.

Prior To Building Plan Release

138. A looped combination of an on-site/off-site fire protection water systems is required with (6" x 4" x 2-1/2" x 2-1/2") super fire hydrants. This system shall be designed and installed with no hydrant closer than 25 feet or no further than 165 feet from any portion of exterior walls as measured along vehicular travelways.

139. Fire Prevention has established a required minimum fire flow for protection of the above referenced project. Using UFC Table III-A for determining fire flows, 2850 GPM for a 4-hour duration at 20-PSI residual operating pressure must be available before any combustible material is placed on the job site. This fireflow is all inclusive of fire sprinkler system and inside / outside hose demand (Estimate only further clarification of square footages needed.)

140. Fire Flow Requirements have been based on CFC guidelines for the determination of fire flow requirements. Factors considered were Type V construction.

141. Permittee/Developer shall furnish one copy of the water system plans to the Fire Department for review. Plans shall conform to fire hydrant types, location and spacing, and, the system shall meet the fire flow requirements. Plans shall be signed/approved by the water company having jurisdiction and a registered engineer must provide the following certification statement.

> "I hereby state that the design of the water system within this project is in accordance with the requirements prescribed by the Murrieta Fire Department as to hydrant type and spacing, and will provide fire flow of 2850 GPM if sufficient water is available at the point of connection."

142. City of Murrieta Fire Department requires all commercial buildings to provide flush mount Knox Box Access Systems and must be no higher than 6' off the finished ground to the right of front and rear doors as being faced. Must also be shown on architectural plans. Applications are provided by our Planning/Prevention Bureau.

General Conditions

143. All standards, regulations and policies established for public safety and the protection of property established in City of Murrieta Development Code must be in compliance with the approval of all local authorities.

Access Requirements

144. The Permittee/Developer shall agree to make application and agreements with the Murrieta Fire Department, to install a strobe light monitor receiver with Knox key switch backup, on all electrically controlled gates for vehicular access, prior to occupancy of any structure within this project.

145. Access will be a minimum of 28 feet wide to accommodate fire apparatus.

146. Access will have a minimum of 13 foot 6 inches vertical clearance to accommodate fire apparatus.

147. Any dead end in excess of 150' requires an approved turnaround. Contact Fire Department for details.

148. All road surface improvements shall be in place with all weather surfacing, acceptable to fire staff, prior to construction of any buildings within this project.

Prior to Occupancy

149. Install a supervised sprinkler water flow detection alarm system as per National Fire Protection Association (NFPA) pamphlet No. 71. Notification of alarm to be provided for all tenant spaces. These plans must be designed by a certified fire alarm specialist and submitted for Fire Prevention approval prior to installation.

150. Fire sprinklers may need to be relocated to provide adequate coverage when improvements are installed. Engineered drawings must be submitted to the Fire Department for approval prior to any system modification.

151. Portable Multi-purpose fire extinguishers with a minimum rating of 2A-10BC must be installed so that the top of the fire extinguisher is not more than 5' ft above and not less than 3'ft from the bottom of the extinguisher to the floor. (2007 CFC 906.9) Contact a certified extinguisher company for proper placement of equipment.

152. Federal law under SARA Title III (Right To Know Act) requires that facilities with hazardous materials must provide Material Safety Data Sheets to the local Fire Department, the local Emergency Planning Committee and the State Emergency Response Commission.

153. All buildings will comply with NFPA 704 placard requirements when applicable. Contact Fire Department for information.

154. Address directory shall be provided next to all major entranceways to this project. Al l buildings shall be clearly identified with designators 12" high with 1" strokes mounted on contrasting backgrounds. These designators shall be placed on all 4 sides of each building and show address locations and elevations on architectural plan.

155. All interior decorative materials must be flame resistive. Prior to release of occupancy, the Permittee must submit manufactures State Fire Marshal's listings of all materials being used. Cloth and other flammables must display a label of the State Fire Marshal's seal of approval

156. Prior to release of above referenced project, the Permittee is responsible to provide all fire protection measures and information required by Fire Prevention. If any of these conditions are not met before, during or after completion of the proposed buildings, the Permittee understands that he is in violation of City of Murrieta Developer Code and/or the California Fire Code, and Fire Prevention has the authority to disrupt or permanently stop the construction of the project.

157. A check or money order in the amount of (contact Fire Department for exact amount) shall be made payable to CITY OF MURRIETA FIRE DEPARTMENT for building plan review. Project number submitted by City of Murrieta Planning Department must be referenced in order to credit the appropriate project. Refer to Plan Check Fee/Mitigation Sheet attached to Building Plan Review letter.

158. Murrieta City Resolution requires that fire impact mitigation fees totaling (see planning department) per square foot, as part of the Development Impact Fee, must be paid prior to release of building permit. Contact Planning Department for exact amount.

159. Prior to any building release, the permittee / developer shall submit approved water plans and pay all required fire fee's.

END OF CONDITIONS

2. CONSTRUCTION
(SECTION G of ORDER NO. R9-2004-001)

1) **Number of inspections conducted:** 20

2) **Number and type of enforcement actions related to construction sites:**

Enforcement and Compliance Responses	Private Projects	Public Projects
Non-monetary Penalties (1st & 2nd Written Warnings)	0	0
Stop Work Authority	0	0
Fines	0	0
Financial Security (Fines Assessed)	0	0
Permit/Certificate of Occupancy Denial	0	0
Referral to SDRWQCB Cory to provide	0	0
Total	**0**	**0**

3) **Description of modifications made to the construction and grading approval process:** There were no changes to the Grading Ordinance, Grading Manual and Standard Notes (grading, erosion, sediment control).

4) **Description and number of training efforts conducted during the reporting.**

a) **Training:**

Training	Training Description	Training Dates	Number of Attendees
Construction	Riv. Co. NPDES Construction Training	5/27/08	1
		Total	**1**

2. CONSTRUCTION
(SECTION G of ORDER NO. R9-2004-001), CONT.

b) **Summarize any additional education and outreach activities conducted for project applicants, contractors, developers, property owners, and/or responsible parties in support of the Construction Component:** The City of Murrieta began hand-delivering the annual "Fist Notice to all Project Developments" to site owners, project managers and field superintendents, on August 29, 2008 notifying them of the annual requirement for implementation of wet-weather BMP's by October 1st to April 30th. Year round implementation and maintenance of the erosion and sediment control at the construction sites was also emphasized in this letter. A "Second Notice to All Project Developments" emphasizing the requirement and implementation of wet-weather BMP's was distributed on September 22, 2008. See copies in **Attachment 'B'**

5) **An assessment of program effectiveness based on the measurable goals established in the Permittee's Individual SWMP:** The Construction program appears to be effective. Of the 20 sites inspected none of were issued a citation.

6) **Additional Comments/Information:**

Describe the major accomplishments of the Constrution Component over the past year: the construction activity has dropped dramatically during this severe economic down turn. Grading permits dropped 42% compared to last year. As a result, there are no major accomplishments to report outside of no citations being issued.

Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Construction Component: Have inspectors review the new General Construction Permit that goes into effect July 1, 2010.

2. CONSTRUCTION
(SECTION G. of ORDER NO. R9-2004-001)

ATTACHMENT B

CITY OF MURRIETA

FIRST NOTICE TO ALL PROJECT DEVELOPMENTS

August 29, 2008

SUBJECT: National Pollution Discharge Elimination System (NPDES) Requirements for Construction Sites

TO: Site Owners, Project Managers and Field Superintendents

City of Murrieta has NPDES Permits with the San Diego and Santa Ana Regional Water Quality Control Boards for discharge of urban runoff into the municipal separate storm sewer system (MS4). For all projects one acre or greater, you must file a Notice of Intent (NOI) with the State Board and a copy shall be posted at a designated location onsite along with the Waste Discharge Identification (WDID) number. A site-specific Storm Water Pollution Prevention Plan (SWPPP) must be implemented and maintained throughout the duration of the project.

Under the NPDES program, you are responsible for implementing **year-round pollution prevention measures** or best management practices (BMPs) at your site and prevent illegal discharges from leaving the project boundaries and / or entering the City's storm drain system. Additional "wet-season" control measures must be implemented between October 1st and April 30th to ensure that pollutants in storm water runoff are mitigated.

Project sites will be inspected during the month of September 2008 by City NPDES inspectors to ensure adequate preparation of erosion and sediment control measures for the wet season are in place.

At a minimum, the following requirements must be implemented throughout the duration of your project:

- All onsite and offsite flow-lines, storm drain inlets, and streets affected by your site shall be free and clear of sediment, construction materials, construction waste and miscellaneous debris;
- Construction waste and miscellaneous debris shall be placed in enclosed bins and be covered with a lid or plastic tarp prior to a forecasted rain event. No wire mesh debris receptacles will be permitted;
- Erosion and sediment controls (BMPs) shall be implemented and maintained throughout the duration of the project;

1 Town Square, 24601 Jefferson Avenue • Murrieta, California 92562
phone: 951.304.CITY (2489) • fax: 951.698.4509 • web: murrieta.org

Minimum requirements (continued):

- Additional erosion and sediment control materials (BMPs) shall be stockpiled at various locations throughout the site prior to a 40% forecasted rain event for immediate implementation. Stockpile locations shall be identified in the site-specific SWPPP;
- Wash-out stations shall be provided for concrete, paints, stucco, etc. and shall be lined with plastic and located away from streets and storm drains. These locations shall be identified on the site-specific SWPPP;
- Rock and shaker plates shall be installed at all construction exits **per modified detail TC-1 (attached);**
- All portable mixers shall have plastic under-liners. Gravel bags shall also be placed on the downhill side of the liner to contain any discharges;
- A street sweeper shall be present during all hauling and trenching operations to minimize sediment track-out onto paved streets;
- Street sweeping shall be performed on all paved streets within the site and outside of all construction exits on a regular basis as identified in the site-specific SWPPP;
- Water shall be pumped out from retention basins / desilting basins with appropriate dewatering measures within 72-hours of collection; and
- To ensure adherence to erosion and sediment control plans and standard notes, all site personnel including contractors and trade-partners shall adhere to your site-specific SWPPP.

City inspectors will conduct NPDES inspections at your site to ensure that an effective combination of erosion and sediment control measures, including pollution prevention measures, have been implemented and are maintained. Additional control measures may be required by the City inspectors as the site conditions change.

Failure to implement minimum requirements by **October 1, 2008** will result in issuance of a stop-work notice. If non-compliance continues, enforcement actions will be pursued, including citations and case referrals to the respective Regional Water Quality Control Boards.

Please feel free to contact me at (951) 461-6075 should there be any questions regarding compliance with the NPDES requirements.

Sincerely,

Ken L. Burris
Public Works Inspection Superintendent

CITY OF MURRIETA

SECOND NOTICE TO ALL PROJECT DEVELOPMENTS

September 22, 2008

SUBJECT: National Pollution Discharge Elimination System (NPDES) Requirements for Construction Sites

TO: Site Owners, Project Managers and Field Superintendents

City of Murrieta has NPDES Permits with the San Diego and Santa Ana Regional Water Quality Control Boards for discharge of urban runoff into the municipal separate storm sewer system (MS4). For all projects one acre or greater, you must file a Notice of Intent (NOI) with the State Board and a copy shall be posted at a designated location onsite along with the Waste Discharge Identification (WDID) number. A site-specific Storm Water Pollution Prevention Plan (SWPPP) must be implemented and maintained throughout the duration of the project.

Under the NPDES program, you are responsible for implementing **year-round pollution prevention measures** or best management practices (BMPs) at your site and prevent illegal discharges from leaving the project boundaries and / or entering the City's storm drain system. Additional "wet-season" control measures must be implemented between October 1st and April 30th to ensure that pollutants in storm water runoff are mitigated.

Project sites will be inspected during the month of September 2008 by City NPDES inspectors to ensure adequate preparation of erosion and sediment control measures for the wet season are in place.

At a minimum, the following requirements must be implemented throughout the duration of your project:

- All onsite and offsite flow-lines, storm drain inlets, and streets affected by your site shall be free and clear of sediment, construction materials, construction waste and miscellaneous debris;
- Construction waste and miscellaneous debris shall be placed in enclosed bins and be covered with a lid or plastic tarp prior to a forecasted rain event. No wire mesh debris receptacles will be permitted;
- Erosion and sediment controls (BMPs) shall be implemented and maintained throughout the duration of the project;

1 Town Square, 24601 Jefferson Avenue • Murrieta, California 92562
phone: 951.304.CITY (2489) • fax: 951.698.4509 • web: murrieta.org

Minimum requirements (continued):

- Additional erosion and sediment control materials (BMPs) shall be stockpiled at various locations throughout the site prior to a 40% forecasted rain event for immediate implementation. Stockpile locations shall be identified in the site-specific SWPPP;
- Wash-out stations shall be provided for concrete, paints, stucco, etc. and shall be lined with plastic and located away from streets and storm drains. These locations shall be identified on the site-specific SWPPP;
- Rock and shaker plates shall be installed at all construction exits **per modified detail TC-1 (attached);**
- All portable mixers shall have plastic under-liners. Gravel bags shall also be placed on the downhill side of the liner to contain any discharges;
- A street sweeper shall be present during all hauling and trenching operations to minimize sediment track-out onto paved streets;
- Street sweeping shall be performed on all paved streets within the site and outside of all construction exits on a regular basis as identified in the site-specific SWPPP;
- Water shall be pumped out from retention basins / desilting basins with appropriate dewatering measures within 72-hours of collection; and
- To ensure adherence to erosion and sediment control plans and standard notes, all site personnel including contractors and trade-partners shall adhere to your site-specific SWPPP.

City inspectors will conduct NPDES inspections at your site to ensure that an effective combination of erosion and sediment control measures, including pollution prevention measures, have been implemented and are maintained. Additional control measures may be required by the City inspectors as the site conditions change.

Failure to implement minimum requirements by **October 1, 2008** will result in issuance of a stop-work notice. If non-compliance continues, enforcement actions will be pursued, including citations and case referrals to the respective Regional Water Quality Control Boards.

Please feel free to contact me at (951) 461-6028 should there be any questions regarding compliance with the NPDES requirements.

Sincerely,

Ken L. Burris
Public Works Inspection Superintendent

3. MUNICIPAL
(SECTION H.1 of ORDER NO. R9-2004-001)

1) **Number of inspections conducted at existing municipal facilities:** The municipal facilities are maintained on a daily basis. General housekeeping guidelines are used like covering construction material. Each facility is subject to an annual inspection.

2) **Number and type of enforcement actions related to municipal sites:**

Enforcement and Compliance Responses	Number
Education and Information	0
Verbal warning	0
Written warning	0
Other:	0
Total	**0**

3) **Number of catch basins and inlets that were inspected and the number that were cleaned:**

	Number Inspected	Number Cleaned
Catch Basins and Inlets	1428	559

3. MUNICIPAL
(SECTION H.1 of ORDER NO. R9-2004-001), CONT.

4) **Assessment of the amount and type of debris removed from catch basins, streets, and open channels, including an identification of problem areas that generate the most pollutants:**

Facility	Type of Debris	Amount (tons)	Problem Areas that Generate Most Pollutants
Catch basins	Vegetative Litter	8.59	
	Anthropogenic Litter	3.43	
	Sediment	22.32	
	Other man-made debris		
Total		**34.34**	**tons (wet weight)**
Streets	Vegetative Litter	475	
	Anthropogenic Litter	190	
	Sediment	1,235	
	Other man-made debris		
Total		**1900**	**tons (wet weight)**
Open Channels	Vegetative Litter	38	
	Anthropogenic Litter	30	
	Sediment	10	
	Other man-made debris		
Total		**78**	**tons (wet weight)**

3. MUNICIPAL
(SECTION H.1 of ORDER NO. R9-2004-001), CONT.

5) **Assessment of effectiveness of BMPs that have been implemented for municipal facilities and activities:**

BMP Code	Description	Used	Notes
SC-10	Non-Stormwater Discharges	☒ Yes ☐ No	Vehicles are cleaned at local car wash
SC-11	Spill Prevention, Control and Clean-up	☒ Yes ☐ No	Swift response and clean up of spills
SC-20	Vehicle and Equipment Fueling	☒ Yes ☐ No	Fueling stations have a barrier to contain spills
SC-21	Vehicle and Equipment Cleaning	☒ Yes ☐ No	Vehicle cleaning done at local car wash
SC-22	Vehicle and Equipment Repair	☒ Yes ☐ No	Repairs are done offsite and under contract
SC-30	Outdoor Loading/Unloading of Materials	☐ Yes ☒ No	
SC-31	Outdoor Liquid Container Storage	☒ Yes ☐ No	Secondary containment
SC-32	Outdoor Equipment Maintenance	☐ Yes ☒ No	
SC-33	Outdoor Storage of Raw Materials	☒ Yes ☐ No	Are covered
SC-34	Waste Handling and Disposal	☒ Yes ☐ No	
SC-35	Safe Alternative Products	☐ Yes ☒ No	Use biodegradable clearing solutions
SC-40	Contaminated or Erodible Areas	☐ Yes ☒ No	
SC-41	Building and Grounds Maintenance	☒ Yes ☐ No	
SC-42	Building Repair and Construction	☒ Yes ☐ No	
SC-43	Parking/Storage Area Maintenance	☒ Yes ☐ No	
SC-44	Drainage System Maintenance	☒ Yes ☐ No	Filters, cleaning, & annual inspection
SC-60	Housekeeping Practices	☒ Yes ☐ No	
SC-61	Safe Alternative Products	☒ Yes ☐ No	Use bio-degradable cleaning solutions
SC-70	Road and Street Maintenance	☒ Yes ☐ No	Street sweeping and prompt pothole patching
SC-71	Plaza and Sidewalk Cleaning	☐ Yes ☒ No	
SC-72	Fountain and Pool Maintenance	☒ Yes ☐ No	
SC-73	Landscape Maintenance	☒ Yes ☐ No	Use organic fertilizers
SC-74	Drainage System Maintenance	☒ Yes ☐ No	Catch basins are labeled and numbered
SC-75	Waste Handling and Disposal	☒ Yes ☐ No	
SC-76	Water and Sewer Utility Maintenance	☐ Yes ☒ No	

Assessment of the effectiveness of BMPs that have been implemented for municipal facilities and activities.

They appear to be effective to the maximum extent practical.

0003305

3. MUNICIPAL
(SECTION H.1 of ORDER NO. R9-2004-001), CONT.

6) **Description and number of training efforts conducted over the last year (for municipal facility operators and/or inspectors).**

a) **Training:**

Training	Training Description	Training Dates	Number of Attendees
Municipal	Riv. Co. NPDES Municipal Training at City Hall	11/6/08	28
Municipal	Riv. Co. NPDES Municipal Training at Flood Control	5/5/09	4
		Total	**28**

b) **Summarize the internal and external education and outreach activities the Municipal Component has conducted over the past year:** discuss at Tailgate Safety Meetings that construction material must be covered.

7) **An assessment of program effectiveness based on the measurable goals established in the Permittee's Individual SWMP:** good housekeeping practices appear to be effective.

8) **Additional Comments/Information:**

9) **Describe the major accomplishments of the Municipal Component over the past year:** with the recent purchase of a vacuum trailer, cleaning of storm drains is now quicker and easier. The number of drains cleaned has risen significantly over last year.

Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Municipal Component: create a written procedure to monitor the municipal facilities

Other comments

4. INDUSTRIAL/COMMERCIAL
(SECTION H.2 of ORDER NO. R9-2004-001), CONT.

1) **Number of inspections conducted:** City of Murrieta utilized the Compliance Assistance Program (CAP), which generates NPDES survey reports from inspections completed by the County of Riverside Hazardous Materials Department (HMMD) for businesses storing or handling hazardous materials and also from the County of Riverside Department of Environmental Health (DEH) for inspections of food establishments.

Category	Number of Inspections
Industrial Facilities	**73**
High Priority Facilities	
Medium Priority Facilities	
Low Priority Facilities	73
Commercial Facilities (Food)	**74**

HAZARDOUS WASTE/ HAZARDOUS MATERIALS FACILITY STORM WATER COMPLIANCE SURVEY FORM

FACILITY DBA: Caliber Collision Centers	TELEPHONE: (951) 677-3533	DATE: 4/29/09
ADDRESS: 41416 Pear St	CITY, ZIP: Murrieta 92562	
MAILING ADDRESS (if different from site address)	MAILING CITY, ZIP	
CONTACT: Larry Turner	FACILITY#: PR0031558	SIC CODE: 7532

Compliance Areas	YES	NO	N/A
***OUTSIDE AREAS (Free of staining & debris; provides good housekeeping; maintained in a manner to prevent runoff.)**		**Requires follow up**	
1. CHEMICAL STORAGE * The outside storage area is kept to minimize the possibility of a release. Chemicals / materials are protected from precipitation / storm water runoff and the containers show no signs of leaking.	✓		
2. DUMPSTER * No liquids are leaking from dumpster; surrounding area is free of trash.	✓		
3. ABOVEGROUND TANKS * No ground staining, no spillage observed and no discharge to storm drain. Tanks are maintained to minimize the possibility of a release (secondary containment).	✓		
4. ONSITE STORM DRAIN* Protected from accidental discharge other than water.			✓
5. POWER WASH OR STEAM CLEAN* (discharge to sewer) Drains to oil/water separator connected to a sanitary sewer and not a septic system. Steam cleaning not discharged to parking lot, storm drain or soil.			✓
6. PARKING LOT / DRIVE WAY* Free of excess trash, chemical staining or liquids other than water.	✓		
7. OTHER* Non-storm water discharge (i.e. non-hazardous process discharge).	✓		
8. MOP WATER TO SANITARY SEWER VIA CLARIFIER. Mop water is not dumped to the soil, parking lot, gutter, or other areas susceptible to storm water drainage.			✓
9. STORM WATER EDUCATIONAL BROCHURES GIVEN TO FACILITY OR POSTERS DISPLAYED FOR EMPLOYEES. If no, what informational material should be sent to the facility?			✓
10. IF A SWPPP IS REQUIRED, WAS IT AVAILABLE FOR REVEIW? See storm water handout for industrial facilities.			✓

OVERALL EVALUATION/ COMMENTS: Facility hand washes & details cars and wash water drains off property. Operator stated method approved by city with proper water soluble soaps - no silicon based products.

HAZARDOUS WASTE/ HAZARDOUS MATERIALS FACILITY STORM WATER COMPLIANCE SURVEY FORM

FACILITY DBA: CALIFORNIA OAKS GOLF COURSE	TELEPHONE	DATE: 7-9-08
ADDRESS: 40603 COLONY DR	CITY, ZIP: MURRIETA 92562	
MAILING ADDRESS (if different from site address)	MAILING CITY, ZIP	
CONTACT: TIM HUANG	FACILITY#: PR0021197	SIC CODE: 7999

Compliance Areas	YES	NO	N/A
***OUTSIDE AREAS (Free of staining & debris; provides good housekeeping; maintained in a manner to prevent runoff.)**		**Requires follow up**	
1. CHEMICAL STORAGE * The outside storage area is kept to minimize the possibility of a release. Chemicals / materials are protected from precipitation / storm water runoff and the containers show no signs of leaking.	✓		
2. DUMPSTER * No liquids are leaking from dumpster; surrounding area is free of trash.	✓		
3. ABOVEGROUND TANKS * No ground staining, no spillage observed and no discharge to storm drain. Tanks are maintained to minimize the possibility of a release (secondary containment).	✓		
4. ONSITE STORM DRAIN* Protected from accidental discharge other than water.			✓
5. POWER WASH OR STEAM CLEAN* (discharge to sewer) Drains to oil/water separator connected to a sanitary sewer and not a septic system. Steam cleaning not discharged to parking lot, storm drain or soil.			✓
6. PARKING LOT / DRIVE WAY* Free of excess trash, chemical staining or liquids other than water.	✓		✓
7. OTHER* Non-storm water discharge (i.e. non-hazardous process discharge).			✓
8. MOP WATER TO SANITARY SEWER VIA CLARIFIER. Mop water is not dumped to the soil, parking lot, gutter, or other areas susceptible to storm water drainage.	✓		
9. STORM WATER EDUCATIONAL BROCHURES GIVEN TO FACILITY OR POSTERS DISPLAYED FOR EMPLOYEES. If no, what informational material should be sent to the facility?	✓		
10. IF A SWPPP IS REQUIRED, WAS IT AVAILABLE FOR REVEIW? See storm water handout for industrial facilities.			✓

OVERALL EVALUATION/ COMMENTS: NO VIOLATIONS AT THIS TIME

Storm Water Clean Water PROTECTION PROGRAM

mw 9/01

4. INDUSTRIAL/COMMERCIAL
(SECTION H.2 of ORDER NO. R9-2004-001), CONT.

Description and number of training efforts conducted over the last year (for industrial/commercial facility operators and/or inspectors). Attendance of Riverside County Flood Control NPDES training for activities related to DAMP implementation

3)

a. **Training:**

Training	Training Description	Training Dates	Number of Attendees
Industrial / Commercial	Riv. Co. NPDES Industrial / Commercial	5/26/09	1
		Total	**1**

4) **An assessment of program effectiveness based on the measurable goals established in the Permittee's Individual SWMP:** the City relies on the CAP, HMMD, and DEH inspection programs. The City performed follow up inspections at the facilities that were marked as "No" on the Compliance Survey sheet to ensure the items were corrected. No penalties or fines were necessary.

5) **Additional Comments/Information:**

Describe the major accomplishments of the Industrial Component over the past year: The Industrial Component appears to be in compliance.

Describe the major accomplishments of the Commercial Component over the past year: The Commercial Component appears to be in compliance.

Summarize the internal and external education and outreach activities the Industrial Component has conducted over the past year: the City relies on the CAP, HMMD, and DEH programs. The City also has brochures at the front counter and links on their website.

Summarize the internal and external education and outreach activities the Commercial Component has conducted over the past year: the City relies on the CAP, HMMD, and DEH programs. The City also has brochures at the front counter and links on their website.

4. INDUSTRIAL/COMMERCIAL
(SECTION H.2 of ORDER NO. R9-2004-001), CONT.

Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Industrial Component: continue training and propose additional inspection program.

Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Commerical Component: continue training and propose additional inspection program.

Other comments

5. RESIDENTIAL
(SECTION H.3 of ORDER NO. R9-2004-001)

1) **A description of residential areas that were focused on during the past year:** existing single family residences are the primary focus of Code Enforcement. The City currently performs inspections as they pass through the different areas as part of their daily trips to other sites and responds to phone calls as they are received. All new residential projects, before being accepted for maintenance by the City, are required to submit a video tape inspection of the storm drain and drainage system, ensuring no illicit connections or points of discharge. This process is a good precautionary step for the City involving new residential developments.

2) **Number and type of enforcement actions taken:**

Enforcement and Compliance Responses	Public Projects
Education and information	0
Verbal Warning	0
Written Warning	0
Notice of Non-Compliance	0
Administrative Compliance Order	0
Misdemeanor	0
Infraction (NPDES violations)	0
Citation	0
Referral to SDRWQCB	0
Total	**0**

3) **An assessment of program effectiveness based on the measurable goals established in the Permittee's Individual SWMP:** good

4) **Additional Comments/Information:**

Describe the major accomplishments of the Residential Component over the past year: While on patrol, pro-active response to person illegally discharging, dumping, littering into the residential storm drains, is routinely addressed while on duty.

Summarize the internal and external education and outreach activities the Residential Component has conducted over the past year: the City had two community clean up events that removed approximately 17.6 tons of waste as follows: 0.7 tons Green waste, 1.2 tons E-waste, 1.4 tons of Tires, 9.4 tons of Trash, and 4.9 tons of Metal. The City also participated in the United Way "Day of Caring" to remove landscape debris at one senior citizen's property.

RESIDENTIAL
(SECTION H.3), CONT.

Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Residential Component: coordinate efforts with Construction department.

Other comments

6. EDUCATION
(SECTION I of ORDER NO. R9-2004-001)

1) **Description of education efforts conducted by the Permittee (not collectively with other Permittees) during the previous year:**

Audience	Measures
Permittee Departments and Personnel	Number of Permittee employees trained for: • Construction Inspection: 1 • Industrial/Commercial Inspection: 1 • Municipal Facilities and Activities: 32 • Development Planning / WQMP: 4
Construction Site Owners and Developers	Outreach events conducted: distribute first notice in August 2008 and second notice September 2008
Industrial/Commercial Owners and Operators	Industrial/Commercial outreach events conducted: None
Residential Community, General Public, Other Public Agencies and Students	Number of Media Impressions in: • Newspaper: None • Mailings: None • Radio/TV: None • Billboards: None • Other: Website • Materials: Pamphlets at main entrance area Number of classroom presentations: 63 (739 students) Public Education events conducted: Community Cleanup, United Way Day of Caring, Santa Margarita River Watershed Clean-up.

2) **Assessment of overall program effectiveness based on the measurable goals established in the Permittee's Individual SWMP:** The City continued to provide training to municipal staff in specific categories (i.e. new development, construction, municipal activities and industrial / commercial) through the implementation agreement with Riverside County Flood Control & Water Conservation District.

3) **Additional Comments/Information:**

Describe the major accomplishments of the Education Component over the past year:
None to report

6. EDUCATION
(SECTION I of ORDER NO. R9-2004-001)

Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Education Component: propose adding educational information on the City's Public Access Television Channel.

Other comments

7. ILLICIT DISCHARGE DETECTION AND ELIMINATION
(SECTION J of ORDER NO. R9-2004-001)

1) **Number of illicit discharges, connections and spills reported and/or identified during the reporting period:** Code Enforcement reported 31 NPDES related calls-for-service during the reporting period. The distinguishing between the different types of violations (illicit discharges, illicit connections, and spills) was not tracked. However, the typical phone call is a resident complaining about their neighbor dumping something in the street like when they construct a pool. The Code Enforcement officer does address the concern either by follow-up telephone call or a site visit. Illicit activity was down from last year and Code Enforcement did not issue any fines.

   a) **Illicit Discharges (ID): 31**
   b) **Illicit Connections (IC): 0**
   c) **Spills (S): 0**

2) **Number of illicit discharges or connections investigated during the reporting period and the outcome of the investigations:** Code Enforcement reported 31 NPDES related calls-for-service during the reporting period. The outcome of investigations is mixed in with over 5,000 other calls Code Enforcement acted on. The Code Enforcement officer does address the concern either by follow-up telephone call or a site visit.

Type	Category	Substance	Outcome of Investigation
ID	Residential	Oil/Grease	
ID	Residential	Oil/Grease	
ID	Residential	Oil/Grease	
ID	Residential	Oil/Grease	
ID	Residential	Oil/Grease	
ID	Residential	Oil/Grease	

3) **Number and types of enforcement actions taken for illicit discharges or connections during the reporting period:**

Enforcement and Compliance Responses	Private Facilities	Public Facilities
Non-monetary penalties	0	0
Stop work authority	0	0
Fines	0	0
Financial Security (amount of Fines assessed)	0	0
Permit/Business License Denial	0	0
Total	**0**	**0**

7. ILLICIT DISCHARGE DETECTION AND ELIMINATION
(SECTION J of ORDER NO. R9-2004-001), CONT.

4) **Number of times your agency's hotline was called during the reporting period, as compared to previous reporting periods.**

	Number of Calls	
	2007-08	**2008-09**
Water Pollution Hotline	46	31

5) **Number and location of dry weather monitoring sites that were monitored during the reporting period:** there were five sites monitored twice during the reporting period. Once in the fall and once in the spring. The fall monitoring was done in November which was late however, we felt this was okay because there was little or no rain yet. Also, we felt it was monitor late then to not monitor at all. The spring monitoring was done in May. If any test sites had enough flow, field tests were performed. Qualifying samples were tested at a lab and the results were negative. As a result, further upstream investigation was not warranted.

Number of Site(s): Five

Location(s): Catt Road at Clinton Keith, Warms Springs Creek @ MHS Road, Los Alamos Road West of Kasota, Line 'F' west of Jefferson Avenue, Murrieta Creek upstream of Kalmia and confluence of Line 'F'.

7. ILLICIT DISCHARGE DETECTION AND ELIMINATION
(SECTION J of ORDER NO. R9-2004-001), CONT.

Summary of Illicit Discharge Monitoring Program results, including: 1) All inspection, field screening, and analytical monitoring results; 2) All follow-up and elimination activities; and 3) Any proposed changes to station locations and/or sampling frequencies: See **Attachment 'D'** for field data

7. ILLICIT DISCHARGE DETECTION AND ELIMINATION
(SECTION J of ORDER NO. R9-2004-001), CONT.

6) **An assessment of overall program effectiveness based on the measurable goals established in the Permittee's Individual SWMP:** The program appears to be effective. Dry weather testing did not locate and illicit discharges or concerns for illegal connections. The few water samples tested did not cause any concerns for further investigations.

7) **Additional Comments/Information:**

Describe the major accomplishments of the Illicit Discharge Detection and Elimination Component over the past year: None to report

Summarize the internal and external education and outreach activities the Illicit Discharge Detection and Elimination Component has conducted over the past year: None to report

Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Illicit Discharge Detection and Elimination Component: No new activities or improvements will be implemented because the program appears to be effective. Water test samples collected and tested by Riverside County Flood Control indicates that there are no additional persistent exceedances that need to be addressed.

Other comments

8. PUBLIC PARTICIPATION

1) **A description of efforts to include the public urban runoff management programs during the reporting period (i.e., river clean-ups, volunteer monitoring, Permittee council meetings related to the SWMP, etc.):** The City is an active participant in the annual Santa Margarita River watershed clean up. With the help of over 600 volunteers approximately 25 tons of waste was removed. **Attachment 'E'** has a flyer of last year's event and newspaper article from the Press Enterprise. The City also intends to participate in the United Ways "Day of Caring" community event in next year's reporting period. This involves helping some less than fortunate individuals by removing trash and debris from their property.

2) **Additional Comments/Information:**

Assessment of overall program effectivenss based on the measurable goals established in the Permittee's Individual SWMP: it is difficult to gauge if the Public is aware of the goals because the public does not provide feedback. However, staff does inform those asking what is required to open a business or develop a site that they have to satisfy WQMP requirements.

Describe the major accomplishments of the Public Participation Component over the past year: None

Summarize the internal and external education and outreach activities the Public Participation Component has conducted over the past year: community clean up events, water quality brochures at the public counter, and City website with links to other information websites.

Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Public Participation Component: None to report

SANTA MARGARITA RIVER

WATERSHED CLEAN UP

November 1, 2008, 8am-12pm

The 26.2 mile watershed of the Santa Margarita River provides habitat for plants and animals in San Diego and Riverside Counties. Since 1995, volunteers have prevented over 1400 tons of trash from polluting our creeks and entering the Pacific Ocean.

8:00 am Report to one of the staging areas below to pick up
your free Clean Up T-shirt, garbage bags,
and directions to your clean up area.

12:00 pm Free barbecue for volunteers
at Perrit Park in Lakeland Village

Murrieta Staging Areas:

Santa Rosa Plateau Ecological Reserve, 39400 Clinton Keith Road
Murrieta Police Station, 24701 Jefferson Avenue

For more information, contact Carole Bell at (951) 677-6951x223 or cbell@tnc.org
Community Service Hours are available

Sponsored by: Supervisor Bob Buster, CR&R, WM and EMARCD

THE PRESS-ENTERPRISE 11/2/08 LOCAL ■ INLAND EMPIRE

I SAW Pop up tent & trailer in Police Dept parking lot on SATURDAY.

Volunteers take out the trash

ANNUAL EVENT: The group of 125 cleans up areas around Murrieta and removes 25 tons of debris.

BY JERRY SOIFER
SPECIAL TO THE PRESS-ENTERPRISE

JERRY SOIFER/SPECIAL TO THE PRESS-ENTERPRISE

Joe Bobak, of Murrieta, pushes trash up a hillside Saturday in DeLuz Canyon in a cleanup effort that attracted 125 volunteers.

MURRIETA — Joe Bobak, a transplant from Chicago to Murrieta, searched the Web site of his new hometown for a place he could take his daughter trick-or-treating on Halloween.

Instead, he found an announcement of the cleanup of the watershed of the Santa Margarita River west of Murrieta. Bobak and his wife, Lauren, were two of 125 people who attempted to purge trash and all forms of pollution Saturday from the Santa Rosa Plateau Reserve, the Lakeland Village area, Lake Elsinore and the environs of Murrieta.

The group picked up about 25 tons of waste such as a hot tub, enough discarded parts to build an auto and the skeletal remains of animals, including what may have been a horse.

Carole Anne Bell, manager of the reserve who started the event in 1994, said, "The (De Luz) Canyon looks free of trash as of this moment. What makes this a success is all these people joining together."

People came from as far as Norco, Woodcrest and Bonsall in San Diego County. "This is the good half of humanity," Bryce Miller, of Bonsall, said of his colleagues working in DeLuz Canyon.

"That's the bad half," Miller said, pointing at the rubble they had pushed up the side of a hill.

Bobak said he joined the cleanup effort to get out of the house and to exercise.

Riverside County code workers hooked up a chain to the hot tub to haul it up from the side of the canyon before it was loaded on a truck. "Once we got it attached (to the chain), it wasn't too hard," said Mike Slaick, county flood control operator.

The Bobaks, Miller and Murrieta residents Zach and Beth Principe needed mountaineering skills to inch their way down the side of the canyon to retrieve trash. Zach Principe found a wallet filled with credit cards.

Beth found a pillow that she flung like a Frisbee. They found a child's bicycle with its training wheels, and legal documents that might have been divorce papers.

Kim Hull, 16, a Murrieta Valley High School junior, found desks, plastic piping and lockers while working off Jackson Avenue in Murrieta. "We filled a whole Dumpster," Kim said. "I was sweating. It wasn't that hot."

Vance Usui, a teacher at Norco High School, brought five students to give them "a first-hand look at what we do to the environment and to also get some community service hours."

Bell said the cleanup was scheduled in mid-fall to avoid the heat. Large satellite dishes were a common find at previous cleanups because smaller ones were coming into vogue, Bell said.

At noon, the volunteers joined county workers and Cal Fire firefighters for a picnic at Perret Park in Lakeland Village. Cal Fire Capt. John Crater said, "This is an example of leadership in the community and getting to know their neighbors. The more of these events they have, the closer the community becomes."

Samantha Dempster, of Woodcrest, collects shirts with the cleanup insignia the way runners amass shirts from races. She wore the shirt from the 2004 cleanup Saturday.

Erin Snyder, of Riverside, worked at her third cleanup in the space of a month.

"This is such a pretty county site," said Snyder who was wearing a shirt from the 2006 cleanup. "It's a great excuse to get out here."

9. FISCAL ANALYSIS COMPONENT

Fiscal Analysis Component - each Permittee shall include an annual fiscal analysis, for each fiscal year covered by Order No. R9-2004-001, in its Individual Annual Report. This analysis shall evaluate the expenditures (such as capital, operation and maintenance, education, and administrative expenditures) necessary to accomplish the activities of the Permittee's Individual SWMP. The analysis shall include the following:

1) **A report of the previous reporting period's budget and a budget for the upcoming reporting period. To the extent possible, the budgets should be broken down by the following programs:**

Program Element	Fiscal Year 2008-2009		Fiscal Year 2009-2010	
	Capital Expenditures	O&M/Admin Expenditure	Capital Expenditures	O&M/Admin Expenditure
Program Management				
Annual Fee for MS4 NPDES Permit				
Implementation Agreement Shared Cost				
Construction Inspections	(See	Attachment	'F')	
Development Planning				
Industrial and Commercial Inspections				
Illicit Connections & Illegal Discharges Program				
Municipal Facilities and Activities

10. NON-STORM WATER DISCHARGES

Permittees shall report on any discharge category listed in Requirement B.2 of Order No. R9-2004-001 that was identified as a source of pollutants during the reporting period. For each identified category, the Permittee shall report whether it elected to prohibit the discharge or to require BMPs to reduce pollutants in the discharge to the MEP. If the discharge is not prohibited, the BMPs that will be implemented, or required to be implemented, shall be described in each Permittee's Individual SWMP Annual Report. Last year's responses are noted in red

Category	Prohibited	BMP to be Implemented
Diverted stream flows	☐ Yes ☒ No	Not Applicable
Rising ground waters	☐ Yes ☒ No	Not Applicable

11. RECEIVING WATER LIMITATIONS

This section includes the report required pursuant to Requirement C.2.a. of Order No. R9-2004-001, if applicable.

Requirement C.2.a. states:

"Upon a determination by either a Permittee or the SDRWQCB that MS4 discharges are causing or contributing to an exceedance of an applicable water quality standard, the Permittee shall promptly notify and thereafter submit a report to the SDRWQCB that describes BMPs that are currently being implemented and additional BMPs that will be implemented to prevent or reduce any pollutants that are causing or contributing to the exceedance of water quality standards. The report may be incorporated in the SWMP Annual Report unless the SDRWQCB directs an earlier submittal. The report shall include an implementation schedule. The SDRWQCB may require modifications to the report;"

This section does not apply to this reporting period as there have been no indications of exceedances to applicable water quality standards established in this area.

12. ADDITIONAL URBAN RUNOFF DATA

This section is a summary of all urban runoff related data not included in the annual monitoring report (e.g., special investigations).

Additional data was not generated during this reporting period by the City of Murrieta

13. PROPOSED REVISIONS

This section includes proposed revisions to the Individual SWMP, including areas in need of improvement based on the assessment of effectiveness of each program component.

The City of Murrieta's stormwater ordinance and SWMP could be revised to reflect the new MS4 permit (4th Term) depending on when the new permit is adopted and goes into effect.

Dear Messrs. Robertus and Oda:

Re: FY 2008-2009 Annual Reports
Order No. R9-2004-001
NPDES Permit No. CAS0108766

Please find attached copies of the FY 2008-2009 annual reports for the National Pollutant Discharge Elimination System (NPDES) Municipal Separate Storm Sewer System (MS4) program for the Santa Margarita Region of Riverside County. The following annual reports are submitted in accordance with Third-Term NPDES MS4 Permit (Board Order No. R9-2004-001, NPDES Permit No. CAS0108766) adopted by the San Diego Region Regional Water Quality Control Board (Regional Board) on July 14, 2004 for the Santa Margarita Watershed Region of Riverside County (Third-Term NPDES MS4 Permit):

- Riverside County Flood Control and Water Conservation District (District) Individual Storm Water Management Plan (Individual SWMP) Annual Report
- County of Riverside Individual SWMP Annual Report
- City of Murrieta Individual SWMP Annual Report
- City of Temecula Individual SWMP Annual Report
- Watershed SWMP Annual Report
- Monitoring Program Annual Report (as Appendix G of Watershed SWMP Annual Report)

The reports provide a comprehensive summary and analysis of the Third-Term NPDES MS4 Permit compliance activities during FY 2008-2009 by the District, County of Riverside, and Cities of Murrieta and Temecula (Permittees).

The Individual SWMP Annual Reports summarize the Permittees' individual compliance activities. The Watershed SWMP Annual Report summarizes the Permittees' combined watershed based compliance activities.

The District is committed to continuing its ongoing efforts to work cooperatively with the Co-Permittees, Regional Board staff and other stakeholders in implementing an effective municipal stormwater program and fulfilling the requirements of the current Third-Term NPDES MS4 Permit. If you have any questions concerning this matter, please feel free to call me at 951.955.8411 or Jason Uhley at 951.955.1273.

Very truly yours,

Mark H. Wills

1.0 EXECUTIVE SUMMARY

This annual report represents the City of Temecula's (City) current status of the stormwater management program. This report covers the reporting period between July 1, 2008 and June 30, 2009. Each section addresses individual program components that were implemented in order to comply with the requirements of the National Pollution Discharge Elimination System (NPDES) Municipal Separate Storm-Sewer System (MS4) Permit (Permit) issued to the Santa Margarita River (SMR) watershed permittees of Riverside County.

The Permit was issued on July 14, 2004 by the San Diego Regional Water Quality Control Board (Board). Throughout this Permit term, the City collected a considerable amount of data representing measurable metrics for the purpose of establishing baseline values that will be used as the basis for the long-term effectiveness assessment. Data presented in each section of this report demonstrates the City's significant investment, positive accomplishments, and commitment in allocating finite resources to the program.

In addition to these metrics, the City believes that other indicators provide strong evidence of positive results. For example, field observations show that the City's persistent emphasis on education and enforcement are the most contributing factors in promoting and increasing compliance. At active construction sites, superintendents are now enhancing their compliance efforts in order to avoid fines, and have a broader understanding of the NPDES requirements as a result of all of the City's outreach efforts. City inspectors have also become proficient at addressing BMP implementation issues due to all of the training provided throughout the year.

In addition, in-house support increased significantly. The program now has full support throughout other City departments, which in turn translates into better cooperation and increased coordination among departments. The Engineering, Planning, Community Services, and Fire departments now work closely together to ensure that WQMP requirements are addressed early-on during a project's pre-submittal stage to avoid design conflicts during the application and plancheck processes. The result has been improved submittals of LID-based site plans from the development community. In essence, the NPDES program is now a City-wide program.

The City is also partnering with local water districts to address excess irrigation runoff from residential areas, and with the principle permittee to enhance the regional monitoring efforts. As such, the City is focusing on a purpose-driven strategy in order to allocate our limited resources in areas requiring the most attention.

In addition to the above accomplishments, the following items represent the significant changes, highlights, and observations noted during the current reporting period.

- There was a significant decline in the number of grading permits that were issued.
- The number of Water Quality Management Plans conditioned remained low.
- There was a significant increase in the number of inactive projects. As a result, the number of construction inspections decreased.
- Citations issued by the City also decreased.
- The number of City staff attending formal classroom training remained high.

2.0 INTRODUCTION

The information contained herein represents the fifth annual progress report under Order No. R9-2004-001 and is presented in the same format as that outlined in Section III of the Monitoring and Reporting Program (MRP) of the City's Permit. Each section addresses individual components of the Permit and summarizes the progress accomplished during the reporting period. These sections include the City's Development Planning process, Construction program, Municipal program, Industrial and Commercial program, Residential program, Education program, and Illicit Discharge Detection and Elimination Program (IC/ID), respectively.

This Annual Report specifically responds to the Permit's reporting requirements and identifies the program's progress and effectiveness. This reporting period constitutes the fourth year that the new Permit programs are fully implemented and effectiveness data is collected to establish baseline conditions. The Permit also requires the Permittees to develop a long term strategy for addressing the effectiveness of each jurisdiction's Storm Water Management Plan (SWMP). The SWMP represents each jurisdiction's set of written policies and procedures for each component outlined in the Permit. To that end, the Permittees have developed a long term strategy to evaluate the effectiveness of the SWMPs.

The long term strategy for the program effectiveness assessment (PEA) will be conducted at two levels described below. It should be noted that a PEA requires the initial establishment of a set of baseline conditions using measurable metrics. These baseline conditions can then be used to establish measurable goals based on the measured metrics. Thereafter, effectiveness can be evaluated by comparisons of successive years of measurable metrics against the baseline data and measurable goals.

At the first level, or Annual Assessment Level, the PEA will focus on an annual assessment of program implementation and Permit compliance. These assessments will be addressed by completing the Annual Reporting Forms, which will confirm program implementation, Permit compliance, and collection of measurable metrics. These assessments are included at the end of each Annual Report section. Inferences about the success of each program component will predominantly be drawn from both direct and indirect measures for each component.

At the second level, or Long Term Level, the Permittees will collectively evaluate the measurable metrics to assess potential changes in knowledge and behavior, load reductions and improvements in Receiving Water Quality. A long-term assessment was conducted as part of the Report of Waste Discharge (ROWD). The results of this long-term assessment will be evaluations of the need to make significant programmatic revisions to the Permit compliance programs, as necessary, to protect Beneficial Uses of Receiving Waters. This level will place more emphasis on using direct measures of progress (monitoring data, long term trend analysis) and will support the review and any revisions to the Drainage Area Management Plan (DAMP) and Individual SWMPs using information from the measurable metrics that have been collected.

Where the period of evaluation is characterized by the implementation of new program requirements, determinations of program effectiveness will initially be limited to confirmation of program implementation and collection of measurable metrics until baseline conditions can be properly established. Further, it must be recognized that direct measures related to long term program effectiveness may not be available within the timeframe of the Third Term Permit. This arises because:

- Baseline water quality conditions are not readily established;
- Water quality changes in response to program implementation are likely to be very slow; and
- Establishing a link between receiving water condition and program activities is difficult at the watershed scale when programs are being implemented incrementally with the development/redevelopment cycle.

While program effectiveness assessment is a key step in the iterative process of program implementation, it should be realized that effectiveness assessment itself is a part of the management process that is also evolving. Assessing program effectiveness is recognized as a challenge for program managers across California, and the City of Temecula is supporting the effort of the California Stormwater Quality Association (CASQA) to develop guidance in this area at a statewide level.

3.0 DEVELOPMENT PLANNING PROGRAM

1) Description of any amendments to the General Plan or the development project approval process:

Although there were no modifications to the General Plan, the development approval process improved. Of significance, the Engineering, Planning, Community Services, and Fire departments now work closely together to ensure that WQMP requirements are addressed early-on during a project's pre-submittal stage to avoid design conflicts during the application and plancheck processes. The result has been improved submittals of LID-based site plans.

2) Number of grading permits issued:

TABLE 3-1

Fiscal Year	Permits Issued
2008 – 2009	15
2007 – 2008	28
2006 – 2007	38
2005 – 2006	62
2004 – 2005	76

Attachment A includes the list of grading permits issued during this reporting period.

3) Number of developments conditioned to meet WQMP requirements:

TABLE 3-2

Fiscal Year	Projects Requiring a WQMP (1)	Projects Conditioned for a WQMP (2)	Finalized WQMPs (4)
2008-2009	13	6	16
2007-2008	15	5	17
2006-2007	25	14	15
2005-2006	31	31	5
2004-2005	Not Applicable	30 (3)	Not Applicable

(1) These values show all proposed projects requiring WQMPs at the application stage.
(2) The difference between "Projects Requiring a WQMP' and 'Projects Conditioned for a WQMP' is that many projects became inactive prior to reaching the conditioning stage or were delayed into the next reporting period.
(3) The City required treatment BMPs on these projects prior to the start of the WQMP Program.
(4) Most of these projects were conditioned during previous reporting periods.

Attachment A includes a monthly tally of finalized WQMPs accepted, to-date, by the City. This tally provides a detailed breakdown by land-use category (residential, business, and municipal) of the number of WQMPs that have been accepted for private and public projects.

4) Attach one example of a development project that was conditioned to meet WQMP requirements and a description of the required BMPs:

Attachment A includes an approved COA for a new development that was conditioned with the WQMP requirement. The project consists of a new self-storage site with nine self-storage

buildings and 42 covered RV spaces. The WQMP requirement is referenced in line-item 95 of the COAs under 'General Requirements' of the 'Public Works Departments' section. The treatment control BMP consists of a centralized gravel-filled infiltration basin topped with porous concrete that encompasses all of the 42 RV spaces. The first flush volume of runoff from the entire site will collect and infiltrate at this location. Subsequent overflow is directed into a nearby inlet that contains a filter to prevent trash and debris from exiting the site.

5) Description of any updates to the environmental review process:

There have been no updates to the City's CEQA process during this reporting period.

6) Description and number of municipal employee training efforts conducted during the reporting period:

a) WQMP Training:

TABLE 3-3

Training Dates	Training Description (1)	Number of Staff Attended
6/9/09	Annual WQMP Refresher	11
5/4/09	Annual WQMP Refresher	6
4/22/08	LID Workshop	3
3/27/08	LID Workshop	1
12/5/07	Annual WQMP Refresher	19
11/28/07	Annual WQMP Refresher	1
9/10/07	CASQA Conference	2
6/27/07	LID Workshop	1
9/25/06	CASQA Conference	1
6/21/06	Annual WQMP Refresher	26
10/3/05	CASQA Conference	2
5/4/05	Annual WQMP Refresher	19
12/15/04	Annual WQMP Refresher	1
12/10/04	Annual WQMP Refresher	3

(1) – 'Annual Refresher' refers to the sessions conducted by the Principle Permittee.

A copy of the City's NPDES Training Log is included in Attachment A.

b) Summarize any additional education and outreach activities conducted for project applicants, contractors, developers, property owners, and/or other responsible parties in support of the Development Planning Component:

All of the City's WQMP requirements are posted and readily accessible on the City's web site. This website includes downloadable information including the County-wide WQMP design handbook, project-specific WQMP template, City-specific inserts, receiving waters map, three separate checklists, brochures, list of BMP maintenance contractors, and links to CASQA's BMP handbooks.

7) An assessment of program effectiveness based on the measurable goals established in the SWMP:

The information provided in tables 3-1, 3-2, and 3-3 represents measurable data that the City collected in order to begin establishing baseline values that are being applied as the basis for a long-term effectiveness assessment as required by the MS4 Permit.

The City witnessed another significant decline in the number of grading permits for the fourth consecutive year. Due to the current economic climate, the number of issued grading permits dropped by 46% from the past reporting period. Overall, since the beginning of this permit term, the issuance of grading permits has dropped from 76 to 15; in other words, an 80% drop between 2005 and 2009.

The City successfully continued capturing all projects meeting the WQMP requirements. In addition, the City established stricter requirements by applying a 5,000 square foot minimum threshold across-the-board and strictly enforcing the 2,500 square foot threshold if the project is in an Environmentally Sensitive Area. As a result, since the beginning of the current Permit term, the City has captured 84 development projects meeting the stricter criteria. To date, the City has accepted 53 finalized WQMPs.

The City's success with this permit requirement is due to several factors, including the participation of various departments and divisions with the WQMP process, a high staff attendance at numerous workshops, conferences, seminars, and annual refresher courses, and stricter thresholds than that outlined in the MS4 permit. These factors have ensured that the City properly identified all projects requiring WQMPs and ensured that these projects correctly addressed their treatment needs.

4.0 CONSTRUCTION PROGRAM

1) Number of inspections conducted:

TABLE 4-1

Fiscal Year	Private	Public	Total Inspections Conducted
2008 – 2009	2196	523	2,719
2007 – 2008	2949	145	3,097
2006 – 2007	*	*	2,976
2005 – 2006	*	*	2,154
2004 – 2005	*	*	1,647

* Previous tallys did not differentiate between private versus public projects.

Attachment B includes the tally of Total NPDES Construction Inspections conducted during this reporting period. This list is based on the City's monthly NPDES Inspection Frequency Sheets, of which the August 2008 set is provided as an example in Attachment B. These sheets provide a project-by-project break-down of the number of inspections conducted during the month, the project's priority category (high, medium, low), and enforcement actions. In addition, the NPDES Inspection Frequency Sheets for October 2009 are provided to show that the number of active projects throughout the City have decreased significantly. These sheets also show that a significant number of projects have been abandoned and are now inactive.

2) Number and type of enforcement actions related to construction sites:

TABLE 4-2

	Private Projects				Public Projects			
Enforcement Action	05-06	06-07	07-08	08-09	05-06	06-07	07-08	08-09
Verbal Warning	268	633	630	404	16	43	55	154
Written Warning	414	116	132	99	18	7	3	10
Fines	66	22	71	56	1	2	1	3
Stop Work Authority	0	(1)	(1)	(1)	0	(1)	(1)	(1)
Permit Revocation/Certificate of Occupancy Denial	0	(1)	(1)	(1)	0	(1)	(1)	(1)
Referral to SDRWQCB	0	(1)	(1)	(1)	0	(1)	(1)	(1)

(1) These measures were not required.

3) Description of modifications made to the construction and grading approval process:

During this reporting period, enhancements to this component included the following:

1) Finalized updates to the City's Grading Ordinance and Grading Manual. These updates include revisions to the NPDES Chapter and reflect successful and reasonable field practices observed since the previous round of revisions.

2) Finalized updates to the City's Standard Erosion and Sediment Control Notes. These updates reflect successful and reasonable field practices observed since the previous round of revisions.

3) Wet-weather inspections at City-owned vacant properties. Although the MS4 Permit does not specify inspection obligations at sites that do not require grading, building, or State permits, or are vacant or do not have any ongoing or immediately proposed construction activities, the City implemented this enhancement to further ensure adequate protection of our local waterways. The task primarily consisted of identifying all city-owned vacant properties within and immediately surrounding the City limits, determining which properties required erosion and sediment controls, installing BMPs where deemed necessary, and establishing an inspection frequency schedule as that outlined in the MS4 permit. Currently, BMPs have been implemented at properties that could potentially release sediment during heavy storms.

4) Wet-weather inspections at City-owned construction projects. The City placed an added emphasis on ensuring adequate protection at City-owned active construction projects. This emphasis included increased inspections, increased enforcement actions against non-compliant contractors, and increasing the amount of BMPs throughout these projects.

5) Updates to the NPDES Inspection Frequency sheets. These updates included consolidating all active municipal construction projects into a single section of the frequency sheets to ensure adequate inspection coverage of these projects.

6) Adopting the CASQA BMP Handbook. The City adopted the CASQA BMP Handbook for Construction Activities as the uniform set of standards for construction BMPs. This handbook is now available and readily accessible on the City's website.

4) Description and number of municipal employee training efforts conducted during the reporting period.

a) Construction Training

TABLE 4-3

Training Dates	Training Description (1)	Number of Staff Attended
9/30/08	Annual ESC Refresher	9
9/29/08	Annual ESC Refresher	8

8/26/08	Inland Erosion Annual SWPPP Seminar	9
3/18/08	International Erosion Control Association Seminar	2
2/29/08	BIA SWPPP Workshop	1
1/17/08	Annual ESC Refresher	13
8/22/07	Inland Erosion's Annual SWPPP Seminar	20
10/18/06	Annual ESC Refresher	29
9/28/05	Annual ESC Refresher	3
8/29/05	Inland Erosion's Annual SWPPP Seminar	15
5/3/05	Annual ESC Refresher	7
3/2/05	Annual ESC Refresher	2
8/18/04	Inland Erosion's Annual SWPPP Seminar	30

(1) – 'Annual Refresher' refers to the sessions conducted by the Principle Permittee.

A copy of the City's NPDES Training Log is included in Attachment A.

b) Summarize any additional education and outreach activities conducted for project applicants, contractors, developers, property owners, and/or other responsible parties in support of the Construction Component:

1) As of August 25, 2008, the City began hand-delivering the annual NPDES notification letter to all active construction sites listed on the City's NPDES Inspection Frequency Sheets for August 2008. These included both private and public projects. The City also began forwarding a copy of the letter to owners of inactive and abandoned sites. This letter is a formal notification to all responsible parties to: 1) implement pollution prevention measures year-round, 2) install additional wet-weather BMPs by October 1st, 3) adhere to the State General Construction Permit, if applicable, and 4) protect inactive and abandoned projects. At a minimum, approximately 60 letters were hand-delivered. This number is down by 33% from the last reporting period due to the significant decrease in active projects and an increasing amount of inactive and abandoned sites. A copy

of the August 2008 NPDES Inspection Frequency Sheets as well as a copy of the letter are included in Attachment B.

2) The City also distributed Inland Erosion's flyer for their Annual Erosion Compliance Seminar on August 26, 2008.

5) An assessment of program effectiveness based on the measurable goals established in the SWMP:

The information provided in tables 4-1, 4-2, and 4-3 represents measurable data that the City collected in order to begin establishing baseline values that are being applied as the basis for a long-term effectiveness assessment as required by the MS4 Permit.

Overall, due to the significant decrease in active projects, the total number of inspections decreased by approximately 12% from the previous reporting period. As the number of private-development inspections dropped by 25%, they increased by 261% for public projects as part of the City's commitment to ensure adequate protection at City-owned active construction sites. As a result, the issuance of citations to private developments decreased by 21% while increasing from 1 citation to 3 citations for public projects. In general, tables 4-1 and 4-2 show that, over the last five years, fluctuations in the number of inspections correlate with fluctuations in the number of citations issued.

The City also continued to make every attempt to contact owners of inactive projects to repair, replace, and/or enhance the BMPs at their sites. Many owners walked away from their projects, which in turn began delaying crucial compliance efforts. It should be noted that the City also identified vacant parcels that were not construction projects. Although these vacant parcels fall outside of the Permit's construction component, the City actively pursued the responsible parties in efforts to minimize potential discharges.

All in all, field observations indicated that the development community, in general, has become more knowledgeable with the NPDES requirements throughout this Permit term.

5.0 MUNICIPAL PROGRAM

1) Number of inspections conducted at existing Municipal facilities:

The City conducts inspections at all of its facilities. Inspection frequencies vary between the different types of facilities. A detailed listing of these facilities is presented in Appendix B of the SWMP. For example, the corporate yard, fire stations, City Hall, and other buildings are maintained daily; parks and landscaped areas are maintained weekly; catchbasins and open channels are inspected twice annually; and streets, curbs, and gutters are addressed weekly through the city-wide street sweeping program.

2) Number and type of enforcement actions related to municipal construction sites:

TABLE 5-1

	Active Construction Projects			
Enforcement Action	05-06	06-07	07-08	08-09
Verbal Warning	16	43	55	154
Written Warning	18	7	3	10
Fines	1	2	1	3
Stop Work Authority	0	(1)	(1)	(1)
Permit Revocation/Certificate of Occupancy Denial	0	(1)	(1)	(1)
Referral to SDRWQCB	0	(1)	(1)	(1)

(1) These measures were not required.

3) Number of catch basins that were inspected and the number that were cleaned:

TABLE 5-2

	Total on GIS Map (1)	**Total in the City (2)**	**City-Maintained Catchbasins**	**Minimum Number Inspected (3)**	**Number Cleaned**
2008-2009	1,975	1,901	1,650	3,300	4,103 (5)
2007-2008	1,975	1,901	1,600	3,200	1,828
2006-2007	1,964	(4)	1,600	3,200	1,974
2005-2006	(4)	(4)	(4)	3,928	2,946

(1) Consists of all catch basins located within the City limits and in future surrounding annexation areas.
(2) Consists of all catch basins (city, County, Caltrans, HOA, private) located within the City limits only.
(3) All catch basins are visually inspected at least twice per fiscal year.
(4) Not Available.
(5) This number represents multiple visits to areas requiring frequent cleanings.

All of the 1,650 city-maintained catchbasins currently documented on the City's GIS map were visited, at a minimum, twice during the reporting period. Many catchbasins required cleaning during both, or more, visits, while others were cleaned and only required visual inspections. The City maintains a monthly catch basin maintenance log that lists dates, locations, and number of catch basins maintained. Maintenance activities include visual inspections, cleaning, and stencil replacement. Stencils are placed at the top of each catchbasin opening and state "Only Rain In The Drain". An example of the monthly log is included in Attachment C.

4) Assessment of the amount and type of debris removed from catch basins, streets, and open channels, including identification of areas that generate the most pollutants:

TABLE 5-3

Facility	Type of Debris	Approx. %	Problem Areas that Generate Most Pollutants
Catch basins (1)	Anthropogenic Litter Green Waste Sediment	35 60 5	Residential and Commercial Total Removed: 180 CY
Street Sweeping (2)(3)	Litter and Sediment	100	Total Removed: 1,196.7 Tons
Open Channels (1)	Anthropogenic Litter Green Waste Sediment	7 3 90	Natural channels Total Removed: 4,000 CY

(1) – These figures are provided by the Maintenance Division of the PW Department.
(2) – This figure is provided by Temecula Community Services Department's "City of Temecula Tonnage Report".
(3) – Street sweeping areas consist of all paved city-maintained streets. Currently, street sweeping is conducted on 299 miles of paved streets.

5) Assessment of effectiveness of BMPs implemented for municipal facilities and activities:

TABLE 5-4

BMP Code	Description	Used	Notes
SC-10	Non-Stormwater Discharges	☒ Yes ☐ No	
SC-11	Spill Prevention, Control and Clean-up	☒ Yes ☐ No	
SC-20	Vehicle and Equipment Fueling	☐ Yes ☒ N/A	Fueling is conducted offsite
SC-21	Vehicle and Equipment Cleaning	☒ Yes ☐ No

6) Description and number of municipal employee training efforts conducted during the reporting period.

a) Municipal Training:

TABLE 5-5

Training Dates	Training Description	Number of Staff Attended
11/06/08	Annual Refresher	28
01/17/08	Annual Refresher	29
10/18/06	Annual Refresher	7

04/27/06	Annual Refresher	20
09/26/05	Annual Refresher	4
05/03/05	Annual Refresher	16
10/21/04	Annual Refresher	8

A copy of the City's tracking log for staff training is included in Attachment A.

b) Summarize any additional education and outreach activities conducted for municipal staff in support of the Municipal Component:

The City's field crews receive informal field training throughout the year, on an as-needed basis, as they encounter conditions requiring BMPs.

7) An assessment of program effectiveness based on the measurable goals established in the SWMP:

The information provided in tables 5-1 thru 5-5 represents measurable data that the City collected in order to begin establishing baseline values that are being applied as the basis for a long-term effectiveness assessment as required by the MS4 Permit.

Education was once again the key element to this component. The City continues to maintain a successful track record with this component by providing as much education as possible to every field crew member, and then empowering each crew with the responsibility of designing and carrying out their own BMP implementation-and-inspection program. This approach has allowed them to claim ownership over their BMP practices, and increased their level of awareness and expertise.

6.0 INDUSTRIAL/COMMERCIAL PROGRAM

1) Number of inspections conducted:

TABLE 6-1

	Category			
	High Priority	Medium Priority	Low Priority	Total Inspections
2008-2009	14 (1)	--	--	14
2007-2008	73	141	147	361
2006-2007	252	61	96	409
2005-2006	266	52	1	319

1) This value represents the remaining number of field-verified high-priority facilities following reassessments, reclassifications, and removing businesses that had closed.

Throughout this reporting period, the City focused on completing all of its annual high-priority facility inspections. Many of these facilities were found to be in compliance or significantly had downsized their staff and operations. As such, these facilities were reassessed and reclassified as medium priority during each inspection. Inspections also revealed that a significant number of previous high-priority facilities had moved without notifying the City or were no longer in business. The combination of reclassifications and closures has caused the number of high-priority facilities to drop by 81% from the past reporting period.

Each facility was provided educational materials (brochures), a completed written inspection report, a brief explanation of the State and City requirements, and suggestions for BMP implementation. The inspection reports serve to document the current conditions at each facility, including any deficiencies observed and areas for improvement. An example of a completed inspection form is included in Attachment D. Follow-up visits were also conducted at specific sites to ensure that these were actively pursuing total compliance. The City's current prioritized inventory of industrial and commercial facilities and the current inspection forms are located in Appendix D of the SWMP.

2) Number and type of enforcement actions taken:

TABLE 6-2

Enforcement Action	05-06	06-07	07-08	08-09
Education and Information (1)	305	380	325	14
Verbal Warning (1)	305	380	325	14
Written Warning (1)	305	380	325	14
Fines	8	1	(2)	2 (3)
Business License Denial	(2)	(2)	(2)	(2)
Referral to SDRWQCB	(2)	(2)	(2)	(2)

1) Education and warnings are all addressed through the NPDES Inspection reports. As such, the values for education and warnings will be the same as the number of inspection reports.
2) These measures were not required.
3) Tallied from the NPDES citation log.

4) An assessment of program effectiveness based on the measurable goals established in the SWMP:

The information provided in tables 6-1 and 6-2 represents measurable data that the City collected in order to begin establishing baseline values that are being applied as the basis for a long-term effectiveness assessment as required by the MS4 Permit.

Overall, the number of high-priority facilities dropped by approximately 95% since the City first implemented this inspection program. Throughout each reporting period, the City educated and guided businesses through the compliance process, and, as a result, has been able to reassess and reprioritize the majority of businesses that were originally listed as a high priority. In addition, the current number of high-priority businesses were in compliance during this last round of inspections. As such, enforcement actions were not required.

The collective inspection efforts between the City's business inspection program and the County's Department of Environmental Health (Haz Mat and Food Services groups) have encouraged business owners to prevent illegal discharges from occurring at their sites. As a result, these repeated inspections have caused the business community, in general, to become aware of the City's NPDES requirements.

7.0 RESIDENTIAL PROGRAM

1) A description of residential areas that were focused on during the past year:

Throughout this reporting period, the City focused on minimizing illegal discharges from high-priority residential activities throughout existing residential communities. According to the MS4 permit, these activities include automobile repair, maintenance, washing and parking on City streets; home and garden care; disposal of household waste, pet waste, and green waste; and any other activities (ie. sediment discharges) that could contribute significant pollutant loads to the MS4.

NPDES staff addressed all concerns and complaints associated with discharges from these types of activities. Each concern or complaint was submitted to the City and logged as a Service Order Request (SOR). Each SOR was then addressed within 24 hours. The initial SOR visits are documented on the City's NPDES SOR tracking log. Not all incidences required follow-up visits. Follow-up visits were conducted on an as-needed basis within 72 hours. These follow-ups were also documented on the City's tracking log.

SORs were received from throughout the City and did not provide any indication of any specific 'hot spots' requiring additional or special attention. The City's existing residential efforts are presented in Section 9.0 of the SWMP under Residential Sources.

2) Number and type of enforcement actions taken:

TABLE 7-1

Enforcement Action	06-07	07-08	08-09
Education and Information	(1)	(1)	(1)
Verbal Warning	(1)	(1)	(1)
Written Warning (2)	0	12	0
Fines (3)	5	4	7

(1) Brochures and verbal warnings are provided on an as-needed basis and not tracked or tallied.
(2) Written Warnings are issued when responsible parties can not be contacted.
(3) Tallied from the NPDES Citation Log.

3) An assessment of program effectiveness based on the measurable goals established in the SWMP:

The information provided in tables 7-1 and 7-2 represents measurable data that the City collected in order to begin establishing baseline values that are being applied as the basis for a long-term effectiveness assessment as required by the MS4 Permit.

TABLE 7-2

	Residential SORs Received	Trash/Recyclables/Green Waste (Tons)
2008-2009	39	48,263
2007-2008	72	52,277
2006-2007	41	53,692
2005-2006	24	54,429
2004-2005	Not documented	Not documented

As table 7-2 shows, reports of illegal discharges from residential sources dropped significantly this reporting period. Due to the current state of the economy, the construction sector suffered a tremendous slow-down. As a result, City inspectors, code enforcement officers, and maintenance crews were able to apply their resources to residential areas. Due to their current level of training, each team was also able to successfully identify and stop illegal discharges on-the-spot.

4) Additional Comments/Information:

Another key factor in reducing illegal discharges throughout the residential sector was educating the public through outreach materials and events. The following are a few examples of the City's efforts:

1) Newsletter, Magazines, Flyers. The City's "Inside Temecula" newsletter, "Guide to Leisure Living Activities" guide, "CityWide Clean-up" flyers, and Household Hazardous Waste Collection" flyers were distributed to all City residents during the reporting period. Information pertaining to stormwater, recycling, hazardous waste disposal, community clean-up events, greenwaste management, landscape maintenance, and street sweeping were provided. Excerpts from the newsletter, guides, and flyers are included in Attachment E.

2) City-Sponsored Clean-Up Events. The City sponsored two community clean-up events on November 15, 2008 and on April 11, 2009.

3) County-Sponsored Household Hazardous Waste Collection Events. City-Hall served as the location for two clean-up events on September 13, 2008 and on January 31, 2009.

8.0 EDUCATION PROGRAM

1) Description of education efforts conducted by the Permittee (not collectively with other Permittees) during the previous year:

TABLE 8-1

Audience	Measures
Permittee Departments and Personnel	Number of Permittee employees trained for: • Construction Inspection: * • Industrial/Commercial Inspection: * • Municipal Facilities and Activities: * • Development Planning: * NOTE (*) - City staff are provided with informal in-house training on an individual and as-needed basis. These one-on-one opportunities are not formally documented. Formal classroom workshops are conducted and documented thru the regional education program administered by the Principle Permitee and paid for by all permittees.
Construction Site Owners and Developers	Outreach: 1) Distributed the City's annual NPDES notification letter to all active projects. 2) Distributed BIA's annual workshop flyer to all active projects. 3) Distributed Inland Erosion's annual workshop flyer to all active projects.
Industrial/ Commercial Owners and Operators	Outreach: 1) Provided educational brochures and written inspection notices to businesses on the high-priority list.
Residential Community, General Public, Other Public Agencies and Students	Number of Media Impressions: • Newspaper: Refer to Watershed Report • Mailings: All outreach material was hand-delivered. • Radio/TV: Refer to Watershed Report • Web Site: In place. • Billboards: Refer to Watershed Report • Brochures: Distributed on an as-needed basis and not tracked or tallied. ♦ Calendars: 600 calendars were distributed this reporting period (300 at City Hall, 200 at Temecula's Public Library, and 100 to the Temecula Sister City Association). Classroom Presentations: As part of the Permittee's regional educational program, 88 presentations were conducted at 10

	schools throughout the Temecula Valley Unified School District by the Mission Resource Conservation District on behalf of the City of Temecula. Public Education Events: 1) Earth Day, April 22, 2009, at River Springs Charter School 2) City-sponsored "City-Wide Cleanup'. 3) County-sponsored 'Household Hazardous Waste Collection'. 4) Earth Day at the Promenade Mall. 5) Temecula Wine and Balloon Festival.

2) Assessment of overall program effectiveness based on the measurable goals established in the SWMP:

The information provided in tables 8-1 and 8-2 (below) represents measurable data that the City collected in order to begin establishing baseline values that that are being applied as the basis for a long-term effectiveness assessment as required by the MS4 Permit.

TABLE 8-2

Total Staff Trained (Workshops specifically conducted by the Principle Permittee)				
	New Development	Construction	Municipal	Commercial/ Industrial
2008-2009	17	17	28	1
2007-2008	20	33	29	1
2006-2007	(1)	29	7	(2)
2005-2006	26	18	24	(2)
2004-2005	23	39	24	1

(1) – Although staff attended training within the calendar year, it did not correspond with the reporting period.
(2) - The City contracted with AEI-CASC to conduct all business inspections. As such, municipal staff did not receive annual training for this component.

Table 8-2 shows that City staff have been receiving formal training on an annual basis. Overall, the City continued maintaining a high level of attendance among each training category. Various divisions are represented in each of these training categories; Land Development, Capital Improvement, Public Works Maintenance, NPDES, Community Services, Code Enforcement, and Planning. Throughout this permit term, the City has become increasingly aware of the NPDES requirements. This awareness has translated into increased efforts to achieve compliance as compared to previous permit terms. As such, the City will continue its current efforts into the subsequent reporting period.

9.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION PROGRAM

1) Number of times City Hall was notified (calls, e-mail, walk-ins) during the reporting period, as compared to previous reporting periods.

TABLE 9-1

	NPDES Service Orders Requests
2008-2009	56
2007-2008	106
2006-2007	41
2005-2006	24
2004-2005	74

2) Number of illicit discharges, connections and spills reported and/or identified during the reporting period:

TABLE 9-2 (1)

	Illicit Discharges	Illicit Connections	Sewage Spills
2008-2009	31	0	0
2007-2008	60	1	0
2006-2007	22	0	2
2005-2006	24	0	0
2004-2005	74	0	2

(1) Based on Service Order Requests (SORs)

3) Number of illicit discharges or connections investigated during the reporting period and the outcome of the investigations:

All SORs were addressed. Many of the alleged discharges were not evident at the time of the initial visit, or had already been mitigated by the time City staff arrived on site. Many of the SORs were disputes between neighbors, while a significant number were called-in as small leaks from parked vehicles. Citations were issued against blatant discharges of paints, oils, cements, and pet waste.

4) Number and types of enforcement actions taken for active illicit discharges or connections during the reporting period:

TABLE 9-3

Enforcement and Compliance Responses	**Private Facilities**				**Public Facilities**			
	05-06	06-07	07-08	08-09	05-06	06-07	07-08	08-09
Non-monetary penalties	19	16	54	47	0 (1)	0 (1)	0 (1)	0 (1)
Fines (residential & business)	5	6	6	9 (2)	0 (1)	0 (1)	0 (1)	0 (1)

(1) There were no SORs associated with public facilities this reporting period.
(2) Tallied from the NPDES Citation Log.

5) Number and location of dry weather monitoring sites that were monitored during the reporting period:

It is important to note that since the beginning of the current permit term, and in concurrence with Regional Board staff in 2004, the City of Temecula has been consistently monitoring 4 fixed locations. Although current Board staff have indicated a desire to shift direction with this component near the end of this permit term, the SMR permittees have agreed to continue with the existing direction established in 2004 in order to maintain the original goal of establishing baseline values that can be applied as the basis for a long-term effectiveness assessment as required by the MS4 Permit. The City is currently in the process of identifying additional monitoring locations, or alternate stations, that will represent the upper portions of the City's drainage systems in order to enhance this component.

These sites consist of the following core locations:

1. Empire Creek at the Del Rio bridge.
2. Pechanga Parkway stormdrain channel upgradient to the confluence into Temecula Creek.
3. Pechanga Creek at the Rainbow Canyon bridge.
4. Temecula Creek slightly upgradient to the confluence Murrieta Creek.

In addition, the Riverside County Flood Control District selected four separate sites throughout the City that are also monitored in like manner. Their sites consist of the following locations:

1. Long Canyon Wash at the Commerce Center Drive bridge.
2. Murrieta Creek at the USGS station at the end of Pujol street.
3. Redhawk Parkway stormdrain channel near the confluence with Temecula Creek.
4. Santa Gertrudis Creek at the Jefferson Avenue bridge.

All of the City's monitoring locations were selected based on the following criteria:

- *Accessibility*. Per the Monitoring and Reporting Program, Part II.B.1.a, all of the stations are open channels, are readily accessible points to City staff, and are located downstream of potential illicit discharges.

- *Assessment of Illegal Discharges*. Since each station is located within a watercourse, these points represent confluences for storm drain lines, catch basins, improved channels, natural tributary drainage courses, and outfalls. As such, each location is a critical point in the drainage course of each sub-watershed within the City in which illegal discharges can readily be detected at a single location.

- *Integration with Principle Permittee's stations*. The City coordinated with the Principle Permitee to provide coverage necessary to adequately represent the entire MS4 as per the MRP, section II.B.1.a, throughout the City. As such, the City and Principle Permittee collectively monitor a total of eight stations throughout the City.

- *Establishing Numeric Criteria.* These stations were selected based on conditions at each site that would ensure consistency at each station each year. This approach was intended to establish baseline values that could be used in determining meaningful numeric criteria rather than collecting random data from random samples at random locations that have little to no connectivity.

The results of the City's monitoring activities that were conducted during this reporting period are presented in Attachment F.

6) Summary of Illicit Discharge Monitoring Program results, including: 1) All inspection, field screening, and analytical monitoring results; 2) All follow-up and elimination activities; and 3) Any proposed changes to station locations and/or sampling frequencies:

TABLE 9-4

Date (1)	Location	Monitoring Results	Follow-up and Elimination Activities	Proposed Changes
September 18, 2008	Core Locations	No indications of illicit discharges	None	No Changes Comment(s):
August 27, 2008	Core Locations	No indications of illicit discharges	None	No Changes Comment(s):

(1) - Section II.B.1.a of the MRP requires two (at a minimum) sampling events between May 1 and September 30.

7) Assessment of the overall program effectiveness based on the measurable goals established in the SWMP:

All of the City's dry-weather monitoring locations were inspected and all SORs were investigated. The City did not encounter any evidence of illicit connections or discharges into or at any of the monitoring locations. All of the SORs resulted in either verbal, written, or monetary enforcement actions. While the overall number of SORs decreased by 47% from the previous reporting period, and the number of reported illegal discharges dropped by 48%, the number of citations increased by 50%. Although these numbers may reflect the City's successful efforts in addressing this component, the data does not provide a clear correlation between enforcement and water quality.

10.0 PUBLIC PARTICIPATION

1) A description of efforts to include the public in urban runoff management programs during the reporting period.

The City conducted various outreach efforts to the public this reporting period. The most visible programs consisted of the community clean-up activities on September 13, 2008, November 15, 2008, January 31, 2009, April 11, 2009, and May 9, 2009, and Earth Day on April 22, 2009. The less visible programs included personal contact with the public regarding pollution prevention during routine inspections and responses to Service Order Requests.

11.0 ASSESSMENT OF OVERALL SWMP EFFECTIVENESS

The SWMP continued to be implemented in its entirety throughout this reporting period. Each section provides sufficient detail to successfully implement each of the components of the permit.

12.0 FISCAL ANALYSIS

1) A summary of the city's reporting period expenditures and estimated budgets for the upcoming reporting period.

TABLE 12-1

Program Element	Fiscal Year 2007-2008		Fiscal Year 2008-2009		Fiscal Year 2009-2010 (Estimated)	
	Capital Expenditures	O&M/Admin Expenditure	Capital Expenditures	O&M/Admin Expenditure	Capital Expenditures	O&M/Admin Expenditure

13.0 NON-STORM WATER DISCHARGES

Permittees shall report on any discharge category listed in Requirement B.2 of Order No. R9-2004-001 that was identified as a source of pollutants during the reporting period. For each identified category, the Permittee shall report whether it elected to prohibit the discharge or to require BMPs to reduce pollutants in the discharge to the MEP. If the discharge is not prohibited, the BMPs that will be implemented, or required to be implemented, shall be described in each SWMP Annual Report.

Category	Prohibited	BMP to be Implemented
Diverted stream flows	☐ Yes ☒ No	Not Applicable
Rising ground waters	☐ Yes ☒ No	Not Applicable
Uncontaminated ground water infiltration [as defined at 40 CFR 35.2005(20)] to MS4s	☐ Yes ☒ No	Not Applicable
Uncontaminated pumped ground water	☐ Yes ☒ No	Not Applicable
Foundation drains	☐ Yes ☒ No	Not Applicable
Springs	☐ Yes ☒ No	Not Applicable
Water from crawl space pumps (Identified as a source of pollutants when commingled with construction-related sediment).	☐ Yes ☒ No	Filtered through gravel-bag chevrons prior to entering a CB
Footing drains	☐ Yes ☒ No	Not Applicable
Air conditioning condensation	☐ Yes ☒ No	Not Applicable
Flows from riparian habitats and wetlands	☐ Yes ☒ No	Not Applicable
Water line flushing. (Identified as a source of pollution when commingled with construction-related sediment).	☐ Yes ☒ No	Filtered through gravel-bag chevrons prior to entering a CB
Landscape irrigation	☐ Yes ☒ No	Not Applicable
Discharges from potable water sources not subject to NPDES Permit No. CAG679001, other than water main breaks. (Identified as a source of pollutants when commingled with construction-related sediment).	☐ Yes ☒ No	Filtered through gravel-bag chevrons prior to entering a CB
Irrigation water	☐ Yes ☒ No	Not Applicable
Lawn watering	☐ Yes ☒ No	Not Applicable
Individual residential car washing	☐ Yes ☒ No	Not Applicable
Non-emergency fire fighting flows	☐ Yes ☒ No	Not Applicable
Dechlorinated swimming pool discharges	☐ Yes ☒ No	Not Applicable

14.0 RECEIVING WATER LIMITATIONS

This section includes the report required pursuant to Requirement C.2.a. of Order No. R9-2004-001, if applicable. Requirement C.2.a. states:

"Upon a determination by either a Permittee or the SDRWQCB that MS4 discharges are causing or contributing to an exceedance of an applicable water quality standard, the Permittee shall promptly notify and thereafter submit a report to the SDRWQCB that describes BMPs that are currently being implemented and additional BMPs that will be implemented to prevent or reduce any pollutants that are causing or contributing to the exceedance of water quality standards. The report may be incorporated in the SWMP Annual Report unless the SDRWQCB directs an earlier submittal. The report shall include an implementation schedule. The SDRWQCB may require modifications to the report."

The City is not aware of any exceedances to any water quality standards in this area during the reporting period. Please refer to the watershed annual report for a detailed review of the monitoring data collected throughout the Santa Margarita River in Riverside County.

15.0 SUMMARY OF ADDITIONAL URBAN RUNOFF DATA

This section is a summary of all urban runoff related data not included in the annual monitoring report (e.g., special investigations).

The City of Temecula did not conduct any special investigations during this reporting period.

16.0 PROPOSED REVISIONS TO THE SWMP

This section includes proposed revisions to the Individual SWMP, including areas in need of improvement based on the assessment of effectiveness of each program component.

There were no significant programmatic changes to the City's SWMP during this reporting period. Attachment G includes a list of revisions that have been incorporated into the SWMP since July 1, 2005.

ACCEPTANCE OF CONDITIONS OF APPROVAL

I, Kenneth High, understand that Planning Application No. PA06-0389 has been approved with Conditions of Approval which are set forth in Exhibit A. I have read the Conditions of Approval contained in PC Resolution No. and understand them. Through signing this ACCEPTANCE OF CONDITIONS OF APPROVAL, I agree and commit to the City of Temecula that I will implement and abide by the Conditions of Approval, including any indemnification requirements imposed by those conditions.

CITY OF TEMECULA

FINAL CONDITIONS OF APPROVAL

Planning Application No.: PA06-0389

Project Description: A Conditional Use Permit and a Development Plan to construct a 26,418 square foot self-storage facility with nine storage buildings and 42 covered RV parking spaces located at 41705 Overland Drive

Assessor's Parcel No.: 921-480-044 and 921-480-045

MSHCP Category: Commercial

DIF Category: Service Commercial

TUMF Category: Service

Approval Date: June 4, 2008

Expiration Date: June 4, 2010

PLANNING DEPARTMENT

Within 48 Hours of the Approval of This Project

1. The applicant/developer shall deliver to the Planning Department a cashier's check or money order made payable to the County Clerk in the amount of Sixty-Four Dollars ($64.00) for the County administrative fee, to enable the City to file the Notice of Exemption as provided under Public Resources Code Section 21152 and California Code of Regulations Section 15062. If within said 48-hour period the applicant/developer has not delivered to the Planning Department the check as required above, the approval for the project granted shall be void by reason of failure of condition (Fish and Game Code Section 711.4(c)).

2. The applicant shall review and sign the Acceptance of Conditions of Approval document that will be provided by the Planning Department staff and return the document with an original signature to the Planning Department.

General Requirements

3. The applicant and owner of the real property subject to this condition shall hereby agree to indemnify, protect, hold harmless, and defend the City with Legal Counsel of the City's own selection from any and all claims, actions, awards, judgments, or proceedings against the City to attack, set aside, annul, or seek monetary damages resulting, directly or indirectly, from any action in furtherance of and the approval of the City, or any agency or instrumentality thereof, advisory agency, appeal board or legislative body including actions approved by the voters of the City, concerning the Planning Application. The City shall be deemed for purposes of this condition, to include any agency or instrumentality thereof, or

any of its elected or appointed officials, officers, employees, consultants, contractors, legal counsel, and agents. City shall promptly notify both the applicant and landowner of any claim, action, or proceeding to which this condition is applicable and shall further cooperate fully in the defense of the action. The City reserves the right to take any and all action the City deems to be in the best interest of the City and its citizens in regards to such defense.

4. The permittee shall obtain City approval for any modifications or revisions to the approval of this project.

5. This approval shall be used within two years of the approval date; otherwise, it shall become null and void. By use is meant the beginning of substantial construction contemplated by this approval within the two year period, which is thereafter diligently pursued to completion, or the beginning of substantial utilization contemplated by this approval.

6. The Director of Planning may, upon an application being filed within 30 days prior to expiration, and for good cause, grant a time extension of up to 3 one-year extensions of time, one year at a time.

7. A separate building permit shall be required for all signage.

8. The development of the premises shall substantially conform to the approved site plan and elevations contained on file with the Planning Department.

9. Landscaping installed for the project shall be continuously maintained to the reasonable satisfaction of the Planning Director. If it is determined that the landscaping is not being maintained, the Planning Director shall have the authority to require the property owner to bring the landscaping into conformance with the approved landscape plan. The continued maintenance of all landscaped areas shall be the responsibility of the developer or any successors in interest.

10. The applicant shall paint a three-foot by three-foot section of the building for Planning Department inspection, prior to commencing painting of the building.

11. The applicant shall submit to the Planning Department for permanent filing two 8" X 10" glossy photographic color prints of the approved Color and Materials Board and the colored architectural elevations. All labels on the Color and Materials Board and Elevations shall be readable on the photographic prints.

12. The Conditions of Approval specified in this resolution, to the extent specific items, materials, equipment, techniques, finishes or similar matters are specified, shall be deemed satisfied by staff's prior approval of the use or utilization of an item, material, equipment, finish or technique that City staff determines to be the substantial equivalent of that required by the Conditions of Approval. Staff may elect to reject the request to substitute, in which case the real party in interest may appeal, after payment of the regular cost of an appeal, the decision to the Planning Commission for its decision.

MATERIAL	COLOR
Stucco Exterior	Frazee 7761W, Nutmeg Dust
Concrete Tile Roof	US Tile, S-tile, Tuscany
Accent Stucco	Frazee 8244D, Copper Springs
Tower Element Stucco	Frazee 7753M, Harvest Tan
Wrought Iron Trellis	Frazee 8244D, Copper Springs
Metal Seam Roof	McElroy Metals, Rustic Red
Gutters and Downspouts	Frazee 7761W, Nutmeg Dust
Metal Canopy	Baja Storage, Exposed Metal Beams and Posts
Gates and Fencing	Enviro Finish ESS LT Green
Roll-up Doors	Roll Rite, Denali Green

13. Trash enclosures shall be provided to house all trash receptacles utilized on the site. These shall be clearly labeled on site plan.

14. Parking for the project shall be shared across the site, including parking spaces in all lots that are a part of the project. If the project involves multiple lots, the applicant shall submit to the Planning Department a copy of a recorded Reciprocal Use Agreement, which provides for cross-lot access and parking across all lots.

15. If construction is phased, a construction staging area plan or phasing plan for construction equipment and trash shall be approved the Director of Planning.

16. Regular hours of operation shall be between 7 a.m. and 9 p.m., seven days each week.

17. The applicant shall comply with their Statement of Operations dated December 19, 2006, on file with the Planning Department, unless superseded by these Conditions of Approval.

18. This Conditional Use Permit may be revoked pursuant to Section 17.03.080 of the City's Development Code.

19. The City, its Planning Director, Planning Commission, and City Council retain and reserve the right and jurisdiction to review and modify this Conditional Use Permit (including the Conditions of Approval) based on changed circumstances. Changed circumstances include, but are not limited to, the modification of business, a change in scope, emphasis, size of nature of the business, and the expansion, alteration, reconfiguration or change of use. The reservation of right to review any Conditional Use Permit granted or approved or conditionally approved hereunder by the City, its Planning Director, Planning Commission and City Council is in addition to, and not in-lieu of, the right of the City, its Planning Director, Planning Commission, and City Council to review, revoke or modify any Conditional Use Permit approved or conditionally approved hereunder for any violations of the conditions imposed on such Conditional Use Permit or for the maintenance of any nuisance condition or other code violation thereon.

Prior to Issuance of Grading Permit(s)

20. Provide the Planning Department with a copy of the underground water plans and electrical plans for verification of proper placement of transformer(s) and double detector check prior to final agreement with the utility companies.

21. Double detector check valves shall be either installed underground or internal to the project

site at locations not visible from the public right-of-way, subject to review and approval by the Director of Planning.

22. A Parcel Merger must be filed and approved to the satisfaction of the Director of the Department of Public Works.

23. The following shall be included in the Notes Section of the Grading Plan: "If at any time during excavation/construction of the site, archaeological/cultural resources, or any artifacts or other objects which reasonably appears to be evidence of cultural or archaeological resource are discovered, the property owner shall immediately advise the City of such and the City shall cause all further excavation or other disturbance of the affected area to immediately cease. The Director of Planning at his/her sole discretion may require the property owner to deposit a sum of money it deems reasonably necessary to allow the City to consult and/or authorize an independent, fully qualified specialist to inspect the site at no cost to the City, in order to assess the significance of the find. Upon determining that the discovery is not an archaeological/cultural resource, the Director of Planning shall notify the property owner of such determination and shall authorize the resumption of work. Upon determining that the discovery is an archaeological/cultural resource, the Director of Planning shall notify the property owner that no further excavation or development may take place until a mitigation plan or other corrective measures have been approved by the Director of Planning."

24. A copy of the Rough Grading Plans shall be submitted and approved by the Planning Department.

Prior to Issuance of Building Permit(s)

25. The applicant shall submit a photometric plan, including the parking lot to the Planning Department, which meets the requirements of the Development Code and the Palomar Lighting Ordinance. The parking lot light standards shall be placed in such a way as to not adversely impact the growth potential of the parking lot trees.

26. All downspouts shall be internalized with the exception of interior facing wall surfaces where buildings are not visible from public view. All exterior downspouts shall be painted the same color as the exterior of the building.

27. Three copies of Construction Landscaping and Irrigation Plans shall be reviewed and approved by the Planning Department. These plans shall conform to the approved conceptual landscape plan, or as amended by these conditions. The location, number, genus, species, and container size of the plants shall be shown. The plans shall be consistent with the Water Efficient Ordinance. The plans shall be accompanied by the following items:

    a. Appropriate filing fee (per the City of Temecula Fee Schedule at time of submittal).

    b. Provide a minimum five foot wide planter to be installed at the perimeter of all parking areas. Curbs, walkways, etc. are not to infringe on this area.

    c. A note on the plans stating that "Two landscape inspections are required: One inspection is required for irrigation lines and a separate inspection is required for final planting inspection."

d. A note on the plans stating that "The contractor shall provide two copies of an agronomic soils report at the first irrigation inspection."

e. One copy of the approved Grading Plan.

f. Water usage calculations per Chapter 17.32 of the Development Code (Water Efficient Ordinance).

g. Total cost estimate of plantings and irrigation (in accordance with approved plan).

h. The locations of all existing trees that will be saved consistent with the tentative map.

i. A landscape maintenance program shall be submitted for approval, which details the proper maintenance of all proposed plant materials to assure proper growth and landscape development for the long-term esthetics of the property. The approved maintenance program shall be provided to the landscape maintenance contractor who shall be responsible to carry out the detailed program.

j. Specifications shall indicate that a minimum of two landscape site inspections will be required. One inspection to verify that the irrigation mainline is capable of being pressurized to 150 psi for a minimum period of two hours without loss of pressure. The second inspection will verify that all irrigation systems have head-to-head coverage, and to verify that all plantings have been installed consistent with the approved construction landscape plans. The applicant/owner shall contact the Planning Department to schedule inspections.

28. The east wall shall be moved five feet to the west to accommodate five feet of perimeter landscaping.

29. All plantings located on the interior side of the east wall shall be moved to the exterior of the east wall to provide for perimeter screening.

30. All off-site plantings shall be removed from the landscaping plan.

31. Roof-mounted mechanical equipment shall not be permitted within the subdivision; however, solar equipment or any other energy saving devices shall be permitted with Director of Planning approval.

32. All utilities shall be screened from public view. Landscape construction drawings shall show and label all utilities and provide appropriate screening. Provide a three foot clear zone around fire check detectors as required by the Fire Department before starting the screen. Group utilities together in order to reduce intrusion. Screening of utilities is not to look like an after-thought. Plan planting beds and design around utilities. Locate all light poles on plans and insure that there are no conflicts with trees.

33. Building Construction Plans shall include exterior details including but not limited to wall finishes, building materials and colors, and trash enclosures to match the style of the building subject to the approval of the Planning Director.

34. All block walls along the perimeter of the site shall have an exterior stucco finish to match the buildings.

35. The two perimeter walls along the north entrance of the site shall have a cornice detail similar to the trim on buildings A and B.

36. The building construction plans shall include trash enclosure details. Trash enclosures shall consist of masonry walls with an exterior stucco finish to match buildings, metal or wood doors, a trellis structure over the top of the enclosure, and a concrete floor and a concrete stress pad to reduce pavement damage from disposal trucks.

37. Building plans shall indicate that all roof hatches shall be painted "International Orange."

38. The construction plans shall indicate the application of painted rooftop addressing plotted on a nine-inch grid pattern with 45-inch tall numerals spaced nine inches apart. The numerals shall be painted with a standard nine-inch paint roller using fluorescent yellow paint applied over a contrasting background. The address shall be oriented to the street and placed as closely as possible to the edge of the building closest to the street.

Prior to Release of Power, Building Occupancy or Any Use Allowed by This Permit

39. An applicant shall submit a letter of substantial conformance, subject to field verification by the Planning Director or his/her designee. Said letter of substantial conformance shall be prepared by the project designer and shall indicate that all plant materials and irrigation system components have been installed in accordance with the approved final landscape and irrigation plans. If a certificate of use and occupancy is not required for the project, such letter of substantial conformance shall be submitted prior to scheduling for the final inspection.

40. The applicant shall be required to screen all loading areas and roof mounted mechanical equipment from view of the adjacent residences and public right-of-ways. If upon final inspection it is determined that any mechanical equipment, roof equipment or backs of building parapet walls are visible from any portion of the public right-of-way adjacent to the project site, the developer shall provide screening by constructing a sloping tile covered mansard roof element or other screening reviewed and approved by the Director of Planning.

41. All required landscape planting and irrigation shall have been installed consistent with the approved construction plans and shall be in a condition acceptable to the Director of Planning. The plants shall be healthy and free of weeds, disease, or pests. The irrigation system shall be properly constructed and in good working order.

42. Each parking space reserved for the handicapped shall be identified by a permanently affixed reflectorized sign constructed of porcelain on steel, beaded text or equal, displaying the International Symbol of Accessibility. The sign shall not be smaller than 70 square inches in area and shall be centered at the interior end of the parking space at a minimum height of 80 inches from the bottom of the sign to the parking space finished grade, or centered at a minimum height of 36 inches from the parking space finished grade, ground, or sidewalk. A sign shall also be posted in a conspicuous place, at each entrance to the off-street parking facility, not less than 17 inches by 22 inches, clearly and conspicuously stating the following:

> "Unauthorized vehicles parked in designated accessible spaces not displaying distinguishing placards or license plates issued for persons with disabilities may be towed away at owner's expense. Towed vehicles may be reclaimed by telephoning (951) 696-3000."

43. In addition to the above requirements, the surface of each parking place shall have a

surface identification sign duplicating the Symbol of Accessibility in blue paint of at least three square feet in size.

44. All site improvements including but not limited to parking areas and striping shall be installed.

45. All of the foregoing conditions shall be complied with prior to occupancy or any use allowed by this permit.

OUTSIDE AGENCIES

46. The applicant shall comply with the recommendations set forth in the County of Riverside Department of Environmental Health's transmittal dated January 8, 2007, a copy of which is attached.

47. The applicant shall comply with the recommendations set forth in the Rancho California Water District's transmittal dated January 29, 2007, a copy of which is attached.

BUILDING AND SAFETY DEPARTMENT

General Requirements

48. All design components shall comply with applicable provisions of the 2007 edition of the California Building, Plumbing and Mechanical Codes; 2007 California Electrical Code; California Administrative Code, Title 24 Energy Code, California Title 24 Disabled Access Regulations, and the Temecula Municipal Code.

49. The City of Temecula adopted an ordinance on March 31, 2003 to collect fees for a Riverside County area wide Transportation Uniform Mitigation Fee (TUMF). This project is subject to payment of these fees at the time of building permit issuance. The fees shall be subject to the provisions of Ordinance 03-01 and the fee schedule in effect at the time of building permit issuance.

50. Submit at time of plan review, a complete exterior site lighting plans showing compliance with Ordinance No. 655 for the regulation of light pollution. All streetlights and other outdoor lighting shall be shown on electrical plans submitted to the Department of Building and Safety. Any outside lighting shall be hooded and directed so as not to shine directly upon adjoining property or public rights-of-way.

51. A receipt or clearance letter from the Temecula Valley School District shall be submitted to the Building and Safety Department to ensure the payment or exemption from School Mitigation Fees.

52. Obtain all building plans and permit approvals prior to commencement of any construction work.

53. Show all building setbacks.

54. Developments with multi-tenant buildings or shell buildings shall provide a house electrical meter to provide power for the operation of exterior lighting, irrigation pedestals and fire alarm systems for each building on the site. Developments with single user buildings shall clearly show on the plans how the operation of exterior lighting and fire alarm systems when

a house meter is not specifically proposed.

55. Provide an approved automatic fire sprinkler system.

56. All building and facilities must comply with applicable disabled access regulations. Provide all details on plans.

57. Provide disabled access from the public way to the main entrance of the building.

58. Provide van accessible parking located as close as possible to the main entry.

59. Commercial and Industrial project trash enclosures, patio covers, light standards, and any block walls will require separate approvals and permits.

60. Signage shall be posted conspicuously at the entrance to the project that indicates the hours of construction, shown below, as allowed by the City of Temecula Ordinance No. 94-21, specifically Section G (1) of Riverside County Ordinance No. 457.73, for any site within one-quarter mile of an occupied residence. The permitted hours of construction are Monday through Friday from 6:30 a.m. to 6:30 p.m., and Saturday from 7:00 a.m. to 6:30 p.m. No work is permitted on Sundays or Government Holidays.

61. Obtain street addressing for all proposed buildings prior to submittal for plan review.

Prior to Issuance of Building Permit

62. Restroom fixtures, number and type, to be in accordance with the provisions of the 2007 edition of the California Plumbing Code.

63. Provide electrical plan including load calculations and panel schedule, plumbing schematic and mechanical plan applicable to scope of work for plan review.

64. Truss calculations that are stamped by the engineer of record and the truss manufacturer engineer are required for plan review submittal.

65. Provide precise grading plan at plan check submittal to check accessibility for persons with disabilities.

66. Provide appropriate stamp of a registered professional with original signature on plans prior to permit issuance.

Prior to Release of Power, Building Occupancy or Any Use Allowed by This Permit

67. A pre-construction meeting is required with the building inspector prior to the start of the building construction.

COMMUNITY SERVICES DEPARTMENT

General Requirements

68. The trash enclosures shall be large enough to accommodate a recycling bin, as well as, regular solid waste containers.

69. The Applicant shall comply with the Public Art Ordinance.

Prior to Issuance of Building Permit(s)

70. The developer shall contact the City's franchised solid waste hauler for disposal of construction debris. Only the City's franchisee may haul construction debris.

FIRE PREVENTION

General Requirements

71. Final fire and life safety conditions will be addressed when building plans are reviewed by the Fire Prevention Bureau. These conditions will be based on occupancy, use, the California Building Code (CBC), California Fire Code (CFC), and related codes which are in force at the time of building plan submittal.

72. The Fire Prevention Bureau is required to set a minimum fire flow for the remodel or construction of all commercial buildings per CFC Appendix III.A, Table A-III-A-1. The developer shall provide for this project, a water system capable of delivering 4,000 GPM at 20 PSI residual operating pressure for a 4 hour duration (CFC 903.2, Appendix III-A).

73. The Fire Prevention Bureau is required to set minimum fire hydrant distances per CFC Appendix III-B, Table A-III-B-1. A combination of on-site and off-site (6" x 4" x 2-2 1/2" outlets) shall be located on Fire Department access roads and adjacent public streets. Hydrants shall be spaced at 350 feet apart, at each intersection and shall be located no more than 210 feet from any point on the street or Fire Department access road(s) frontage to a hydrant. The required fire flow shall be available from any adjacent hydrant(s) in the system (CFC 903.2, 903.4.2, and Appendix III-B).

74. If construction is phased, each phase shall provide approved access and fire protection prior to any building construction (CFC 8704.2 and 902.2.2).

Prior to Issuance of Grading Permits

75. As required by the California Fire Code, when any portion of the facility is in excess of 150 feet from a water supply on a public street, as measured by an approved route around the exterior of the facility, on-site fire hydrants and mains capable of supplying the required fire flow shall be provided. For this project on site fire hydrants are required (CFC 903.2).

76. Prior to building construction, all locations where structures are to be built shall have approved temporary Fire Department vehicle access roads for use until permanent roads are installed. Temporary Fire Department access roads shall be an all weather surface for 80,000 lbs. GVW. (CFC 8704.2 and 902.2.2.2)

77. Fire Department vehicle access roads shall have an unobstructed width of not less than 24 feet and an unobstructed vertical clearance of not less than 13 feet 6 inches (CFC 902.2.2.1).

78. The gradient for a fire apparatus access roads shall not exceed 15 percent (CFC 902.2.2.6 Ord. 99-14).

79. Prior to building construction, dead end road ways and streets in excess of 150 feet which have not been completed shall have a turnaround capable of accommodating fire apparatus (CFC 902.2.2.4).

Prior to Issuance of Building Permit(s)

80. Prior to issuance of building permits, the developer shall furnish three copies of the water system plans directly to the Fire Prevention Bureau for approval prior to installation. Plans shall be signed by a registered civil engineer; contain a Fire Prevention Bureau approval signature block; and conform to hydrant type, location, spacing and minimum fire flow standards. After the plans are signed by the local water company, the originals shall be presented to the Fire Prevention Bureau for signatures. The required water system including fire hydrants shall be installed and accepted by the appropriate water agency prior to any combustible building materials being placed on an individual lot (CFC 8704.3, 901.2.2.2 and National Fire Protection Association 24 1-4.1).

81. Prior to building permit, all locations where structures are to be built shall have approved Fire Department vehicle access roads to within 150 feet to any portion of the facility or any portion of an exterior wall of the building(s). Fire Department access roads shall be an all weather surface designed for 80,000 lbs. GVW with a minimum AC thickness of .25 feet (CFC sec 902)

82. Fire sprinkler plans shall be submitted to the Fire Prevention Bureau for approval. Three sets of sprinkler plans must be submitted by the installing contractor to the Fire Prevention Bureau.

83. Fire alarm plans shall be submitted to the Fire Prevention Bureau for approval. Three sets of alarm plans must be submitted by the installing contractor to the Fire Prevention Bureau.

Prior to Release of Power, Building Occupancy or Any Use Allowed by This Permit

84. "Blue Reflective Markers" shall be installed to identify fire hydrant locations (CFC 901.4.3).

85. Approved numbers or addresses shall be provided on all new and existing buildings in such a position as to be plainly visible and legible from the street or road fronting the property. Numbers shall be of a contrasting color to their background. Commercial, multi-family residential and industrial buildings shall have a minimum 12-inch numbers with suite numbers a minimum of six inches in size. All suites shall gave a minimum of six-inch high letters and/or numbers on both the front and rear doors. Single family residences and multi-family residential units shall have four-inch letters and /or numbers, as approved by the Fire Prevention Bureau (CFC 901.4.4).

86. Prior to issuance of Certificate of Occupancy or building final, based on square footage and type of construction, occupancy or use, the developer shall install a fire sprinkler system (CFC Article 10, CBC Chapter 9).

87. Prior to issuance of Certificate of Occupancy or building final, based on a requirement for monitoring the sprinkler system, occupancy or use, the developer shall install an fire alarm system monitored by an approved Underwriters Laboratory listed central station. Plans shall be submitted to the Fire Prevention Bureau for approval prior to installation (CFC Article 10).

88. A "Knox-Box" shall be provided. The Knox-Box shall be installed a minimum of six feet in

height and be located to the right side of the main entrance door (CFC 902.4).

89. All manual and electronic gates on required Fire Department access roads or gates obstructing Fire Department building access shall be provided with the Knox Rapid entry system for emergency access by fire fighting personnel (CFC 902.4).

90. Prior to final inspection of any building, the applicant shall prepare and submit to the Fire Department for approval, a site plan designating Fire Lanes with appropriate lane painting and or signs.

PUBLIC WORKS DEPARTMENT

General Requirements

91. A Grading Permit for precise grading, including all on-site flat work and improvements, shall be obtained from the Department of Public Works prior to commencement of any construction outside of the City-maintained street right-of way.

92. An Encroachment Permit shall be obtained from the Department of Public Works prior to commencement of any construction within an existing or proposed City right-of-way.

93. All grading plans shall be coordinated for consistency with adjacent projects and existing improvements contiguous to the site and shall be submitted on standard 24" x 36" City of Temecula mylars.

94. The project shall include construction-phase pollution prevention controls and permanent post-construction water quality protection measures into the design of the project to prevent non-permitted runoff from discharging offsite or entering any storm drain system or receiving water.

95. A Water Quality Management Plan (WQMP) must be accepted by the City prior to the initial grading plan check. The WQMP will be prepared by a registered civil engineer and include site design BMPs (Best Management Practices), source controls, and treatment mechanisms.

Prior to Issuance of Grading Permit(s)

96. A copy of the grading, improvement plans, along with supporting hydrologic and hydraulic calculations shall be submitted to the Riverside County Flood Control and Water Conservation District for approval prior to the issuance of any permit.

97. A permit from Riverside County Flood Control and Water Conservation District is required for work within their right-of-way.

98. A grading plan shall be prepared by a registered civil engineer and shall be reviewed and approved by the Department of Public Works. The grading plan shall include all necessary erosion control measures needed to adequately protect adjacent public and private property.

99. The developer shall post security and enter into an agreement guaranteeing the grading and erosion control improvements in conformance with applicable City Standards and subject to approval by the Department of Public Works.

100. A Soils Report shall be prepared by a registered soil or civil engineer and submitted to the Department of Public Works with the initial grading plan check. The report shall address all soils conditions of the site, and provide recommendations for the construction of engineered structures and pavement sections.

101. A Geological Report shall be prepared by a qualified engineer or geologist and submitted to the Department of Public Works with the initial grading plan check. The report shall address special study zones and the geological conditions of the site, and shall provide recommendations to mitigate the impact of ground shaking and liquefaction.

102. The developer shall have a Drainage Study prepared by a registered civil engineer in accordance with City Standards identifying storm water runoff expected from this site and upstream of this site. The study shall identify all existing or proposed public or private drainage facilities intended to discharge this runoff. The study shall also analyze and identify impacts to downstream properties and provide specific recommendations to protect the properties and mitigate any impacts. Any upgrading or upsizing of downstream facilities, including acquisition of drainage or access easements necessary to make required improvements, shall be provided by the Developer.

103. Construction-phase pollution prevention controls shall be consistent with the City's Grading, Erosion and Sediment Control Ordinance and associated technical manual, and the City's standard notes for Erosion and Sediment Control.

104. The project shall demonstrate coverage under the State NPDES General Permit for Construction Activities by providing a copy of the Waste Discharge Identification number (WDID) issued by the State Water Resources Control Board (SWRCB). A Stormwater Pollution Prevention Plan (SWPPP) shall be available at the site throughout the duration of construction activities.

105. As deemed necessary by the Director of the Department of Public Works, the Developer shall receive written clearance from the San Diego Regional Water Quality Control Board, Riverside County Flood Control and Water Conservation District, Planning Department, or other affected agencies.

106. The developer shall comply with all constraints which may be shown upon an Environmental Constraint Sheet (ECS) recorded with any underlying maps related to the subject property.

107. The applicant shall comply with the provisions of Chapter 8.24 of the Temecula Municipal Code (Habitat Conservation) by paying the appropriate fee set forth in that Ordinance or by providing documented evidence that the fees have already been paid.

108. A flood mitigation charge shall be paid. The Area Drainage Plan fee is payable to the Riverside County Flood Control and Water Conservation District by either cashier's check or money order, prior to issuance of permits, based on the prevailing area drainage plan fee. If the full Area Drainage Plan fee or mitigation charge has already been credited to this property, no new charge needs to be paid.

Prior to Issuance of Building Permit(s)

109. Precise grading plans shall conform to applicable City of Temecula Standards subject to approval by the Director of the Department of Public Works. The following design criteria shall be observed:

a. Flowline grades shall be 0.5% minimum over P.C.C. and 1.00% minimum over A.C. paving.

b. Driveways shall conform to the applicable City of Temecula Standard No. 207A.

c. All street and driveway centerline intersections shall be at 90 degrees.

d. Landscaping shall be limited in the corner cut-off area of all intersections and adjacent to driveways to provide for minimum sight distance and visibility.

110. The Developer shall construct the following public improvements in conformance with applicable City Standards and subject to approval by the Director of the Department of Public Works.

a. Street improvements, which may include, but not limited to: pavement, curb and gutter and drive approaches other traffic control devices as appropriate

b. Storm drain facilities

c. Sewer and domestic water systems

d. Under grounding of proposed and existing utility distribution lines less than 34 KV.

111. The building pad shall be certified to have been substantially constructed in accordance with the approved Precise Grading Plan by a registered civil engineer, and the soils engineer shall issue a Final Soil Report addressing compaction and site conditions.

112. The developer shall pay to the City the Public Facilities Development Impact Fee as required by, and in accordance with, Chapter 15.06 of the Temecula Municipal Code and all Resolutions implementing Chapter 15.06.

113. The developer shall pay to the City the Western Riverside County Transportation Uniform Mitigation Fee (TUMF) Program as required by, and in accordance with, Chapter 15.08 of the Temecula Municipal Code and all Resolutions implementing Chapter 15.08.

Prior to Release of Power, Building Occupancy or Any Use Allowed by This Permit

114. The project shall demonstrate that the pollution prevention BMPs outlined in the WQMP have been constructed and installed in conformance with approved plans and are ready for immediate implementation.

115. As deemed necessary by the Department of Public Works, the Developer shall receive written clearance from Rancho California Water District, Eastern Municipal Water District, or other affected agencies

116. All public improvements, including traffic signals, shall be constructed and completed per the approved plans and City standards to the satisfaction of the Department of Public Works.

117. The existing improvements shall be reviewed. Any appurtenance damaged or broken shall be repaired or removed and replaced to the satisfaction of the Department of Public Works.

August 25, 2008

To: Property Owners, Developers, Project Managers, Field Superintendents, and Contractors.

RE: Requirements for Construction Projects.

The City of Temecula is requiring **Year-Round pollution prevention measures,** also known as Best Management Practices (BMPs), at every active and inactive construction project throughout the City. In addition, **Wet-Weather BMPs (erosion controls) must also be implemented between October 1st and April 30th.** Illegal discharges shall be prevented from occurring throughout your project and from entering or leaving any storm drain system.

Compliance with the State General Construction Permit is also required if your project disturbs, exposes, clears, grades, or stockpiles one acre or more of soil. If applicable, a Notice of Intent (NOI) must be filed with the State, proof of a Waste Discharge Identification (WDID) Number must be provided to the City, and a Storm Water Pollution Prevention Plan (SWPPP) must be onsite. The SWPPP must be implemented throughout the duration of the project, readily available to City and State inspectors, and updated as conditions change.

At a minimum, the following requirements must be implemented:

- **NEW** The City shall be notified if your project becomes wholly or partially inactive. A project, or portions within, becomes inactive when construction activities cease for seven (7) consecutive calendar days. Inactivity requires: 1) the submittal of a BMP implementation plan to the City demonstrating current conditions and compliance throughout the expected period of inactivity, and 2) establishment of 100% vegetative coverage as the primary erosion control on all inactive areas of the project.**
- All stormwater conveyance systems (streets, inlets, outlets, flow-lines [v-ditches, brow ditches, terrace drains, ribbon gutters, curb gutters]), checkdams, chevrons, silt fences, temporary desilting basins, etc. shall be free of sediment, construction materials, waste, miscellaneous debris, and deteriorated BMPs;

- Waste and debris shall be placed in enclosed trash bins. These bins shall be covered with a lid or plastic tarp prior to any forecasted rain;
- Prior to any forecasted rain, additional BMPs shall be stockpiled at various locations throughout the site for immediate implementation;
- Wash-out stations shall be provided for concrete, paints, stucco, etc. and shall be lined with plastic and located away from streets, sidewalk right-of-ways, and drainage inlets;
- Portable toilets shall be placed away from streets, sidewalks, flowlines, and drainage inlets;
- A combination of rock and shaker plates shall be installed at all construction access locations. Interior access points (driveways, staging areas, etc.) shall also have rock accesses;
- All completed slopes and inactive pads shall have BMPs;
- All portable mixers shall have plastic liners underneath with gravel bags placed on the down-hill side of the liners to contain discharges;
- Street sweeping shall be performed on all paved streets and at all construction exits on a regular basis. A street sweeper shall also operate during hauling operations and on all haul route streets. Vacuum sweepers shall be used when street sweeping become ineffective;
- Water shall be filtered and drained from basins within 72-hours of collection;
- ESC plans and Standard Notes must be adhered to at all times;
- Project developer is responsible for all discharges from all site personnel, including subcontractors and landscapers.

City inspectors will conduct Wet-Weather inspections beginning **October 1st** at each site. Failure to implement wet-weather BMPs in addition to year-round BMPs will result in citations, Stop Work notices, suspension of business licenses, withholding of occupancies, and case referrals to the San Diego Regional Water Quality Control Board. If existing BMPs are inadequate, additional ones will be required by City inspectors.

Please call us at (951) 694-6411 if you have any questions regarding this information.

Sincerely,

Aldo Licitra

Name of Inspector:	ALDO LICITRA		
Type of Inspection:	[X] Routine	[ ] Follow-up	[ ] Complaint Investigation
Date:	6/30/09		
Time:	3:23		
Received By:	Elvin M.		

A. CONTACT INFORMATION

Facility Name: TEMECULA RECYCLING — Category: [ ] Industrial [X] Commercial

Street Address: 27635 DIAZ RD — Contact Number:

Contact Person: Elvin M. - ELVEN MOSH — Mailing Address (if different):

B. FACILITY / SITE INFORMATION:

Description of Site Activities: COLLECTION ~~RECYCLING~~ FACILITY - CANS / BOTTLES / PAPER / SMALL MISCELLANEOUS

SIC / NAIC Code (circle one): 5093 — Revised SIC/NAIC Code:

Priority Classification: [X] High [ ] Medium [ ] Low

Revised Priority Classification: [X] High [ ] Medium [ ] Low

Does facility have a current business license? [X] Yes [ ] No # 030996 Exp. 1/31/10

Is facility subject to a State General Industrial Permit? [ ] Yes [X] No WDID #:

Does facility have a 'No Exposure Certification' (NEC)? [ ] Yes [ ] No [ ] N/A

Does facility maintain a SWPPP or equivalent plan? [ ] Yes [ ] No [ ] N/A

Are all BMPs implemented? [ ] Yes [ ] No [ ] N/A

Does facility maintain a Stormwater Monitoring Plan? [ ] Yes [ ] No [ ] N/A

Were storm water samples collected last rain season? [ ] Yes [ ] No [ ] N/A

Were sample results within effluent guidelines? [ ] Yes [ ] No [ ] N/A

List the surface flow paths from facility to Murrieta Creek: FLOWS ARE DIRECTED TO A NATURAL DRAINAGE CHANNEL ADJACENT TO FACILITY.

C. BEST MANAGEMENT PRACTICES (BMP) ASSESSMENT:

		N/A	Yes	No	Comments
C.1	**General Areas**				
a.	Is the site free of evidence of unauthorized releases?			✓	PREVIOUS STAINING
b.	Is the site free of evidence of illicit connections?		✓		
c.	Are onsite inlets and flowlines free of dirt, litter, stains, other material?			✓	SEDIMENT, GRAVEL, SMALL DEBRIS
d.	Are onsite inlets and flowlines protected from unauthorized releases?			✓	STRAIGHT PATH INTO DRAINAGE CHANNEL
e.	Is washwater from all cleaning activities disposed properly? Where to?	✓			NO HOSING
f.	Are biodegradable soaps used? Specify activity.	✓			
g.	Is roof water drained to parking lot / landscaping?		✓		
C.2	**Landscaped Areas**				
a.	Are adequate erosion prevention measures employed? (vegetation or physical stabilization)		✓		GRASS LANDSCAPE
b.	Are irrigation systems programmed to minimize over-watering and runoff?		✓

C. BEST MANAGEMENT PRACTICES (BMP) ASSESSMENT (Contd.):

		N/A	Yes	No	Comments
c.	Are inlets or flowlines free of landscape waste (tree or shrub trimmings, grass clippings, etc)?		✓		
d.	Is landscape material (fertilizers, pesticides, etc) stored onsite/protected against runoff?	✓			
C.3	**Materials and Wastes Areas**				
a.	Are all materials and activities protected from exposure to stormwater?			✓	PLASTIC DRUMS ARE ONLY MATERIALS
b.	Are adequate trash containers provided? (covered, no leaks)		✓		
	Are these areas free of litter and stains?		✓		
c.	Are adequate recycling containers provided? (covered, no leaks)		✓		
	Are these areas free of litter and stains?		✓		
d.	Is service provided to prevent trash and recycling containers from overflowing?		✓		
e.	Are adequate material storage areas provided (covered, secondary containment, limited access, properly labeled, free of stains)?		✓		ALL BARRELS ARE MOVED INSIDE INSIDE DAILY.
f.	Is there an accessible spill response kit?			✓	
g.	Are reporting procedures readily available in the event of a release?		✓		
h.	Are aboveground storage tanks (greater than 250 gallons) equipped with secondary containment?	✓			
	If yes, is the secondary containment monitored for spills & leaks? How often?	✓			
i.	Are loading and unloading areas free of litter and stains?			✓	LITTER
j.	Are inlets, if any, protected/connected to santitary sewer?	✓			
k.	Is run-on diverted from entering into these areas?	✓			
C.4	**Equipment and Vehicle Areas**				
a.	Are common parking areas and driveways free of litter, stains, non-stormwater liquids?			✓	LITTER
b.	Are vehicles and equipment stored indoors or under canopies?		✓		
c.	Are vehicles and equipment maintained or repaired indoors?	✓			
	If not, where?	✓			
d.	Is runoff contained or treated at maintenance areas?	✓			
e.	Is runoff contained or treated at fueling areas?	✓			
f.	Is runoff contained or treated at wash areas?	✓			
g.	Is run-on diverted from entering into these areas?	✓			
C.5	**Other**				
a.	Is employee training provided / Information posted?			✓	
b.	Specify the number of accidental releases within the past 12 months.	----	----	----	
c.	Does the facility have pollution prevention policies/procedures/plan?			✓	
d.	Have all concerns been addressed?		✓		If no, describe on Page 3.

Bulky Item Pick- Ups / Street Sweeping in Temecula

Bulky Item Pick Ups

Temecula Residents are allowed two FREE bulky item pick ups per year. Contact CR&R at (800) 755-8112 to check for limitations and schedule a pick up.

Street Sweeping

Did you know that all residential streets are swept weekly? Your street is swept the day after your trash and recycling is picked up. If your trash is serviced on Friday, your street is swept on the following Monday.

Please refrain from parking in the street on street sweeping day. Keeping the streets clear of vehicles allows for better sweeping services. Observing this simple request helps keep all of Temecula's neighborhoods looking their best.

Get Composting!!

Got food Scaps?
Got Yard Clippings?
Then Get Composting!

Why Should You Compost?

Organic materials take up a lot of space in landfills. As organics decompose, methane gas is produced which can pollute our ground water and air.

What Happens During the Composting Process?

In composting, organic materials are mixed together in a pile or bin, where literally billions of tiny microbes digest the material and turn it into rich, dark, nutrient-rich compost. Think of your compost pile as a tiny zoo.

What is the Benefit of the Compost?

Using compost in your yard can reduce the need to water, fertilize and use pesticides. Compost has also been shown to prevent erosion on embankments.

How can You Learn More About Composting?

Attend a Riverside County Waste Management Department FREE workshop.

When: July 25th or October 31st
Where: Grace Mellman Community Library; 41000 County Center Drive, Temecula

Hunts. Events are for children ages 1-11 with prize drawings for teens and adults. Egg hunts begin at 10:00 am sharp at the following locations:

Ronald Reagan Sports Park ~ Temeku Hills Park

Earth Day 2009 Celebrations

To inspire awareness of and appreciation for the Earth's environment, this April cities across California will host a variety of festivals and celebrations to highlight Earth Day. San Diego, Santa Barbara, Ventura and Lake Arrowhead are just a few of the communities which will recognize Earth Day 2009 with large scale celebrations. The City of Temecula will host an Arbor Day Celebration on April 25th, from 10:00 am to 1:00 pm at the Community Recreation Center. The event is free!

Spring Outdoors

Spring in Temecula is the perfect time of year to spend your day outdoors. Blue skies, green hills, and the spring flowers blooming is the perfect recipe for outdoor fun.
- Take Fido to the dog park
- Pack a picnic and take the family to one of Temecula's 38 parks for a great day of outdoor fun, flying kites, playing frisbee, and more.

Each year about 260 children under the age of 5 years old drown in swimming pools. In addition, the suction from drains in swimming pools and spas, under certain conditions, can entrap swimmers underwater. To help protect your family, be sure to take the following steps:

Use Layers of Protection

To prevent swimming pool drowning, layers of protection are essential. Place barriers completely around the pool, closely supervise young children and be prepared in case of an emergency.

In addition:

- If a child is missing, always look first in the pool. Seconds Count!
- Knowing how to swim doesn't make a child drown-proof. Never use flotation devices as a substitute for supervision.
- Keep rescue equipment and a phone next to the pool.
- Learn cardiopulmonary resuscitation (CPR).
- If your house forms one side of the barrier for the pool, doors leading from the house to the pool should be protected with alarms that sound when the doors are unexpectedly opened. Also, use a power safety cover, a motor-powered barrier placed over the water area, to prevent access by young children.
- For above-ground pools, steps and ladders to the pool should be secured or removed when the pool is not in use.
- Install physical barriers around the pool to limit access.
- Fences and walls should be at least 4-feet high and installed completely around the pool.
- Gates should be self-closing and self-latching. The latch should be out of reach of small children.

Pool and Spa Entrapment Dangers

Never use a pool or spa with a missing drain cover. Be sure a newer safer drain cover is in place. New covers are usually dome-shaped, not flat.

Consider installing a Safety Vacuum Release System, a device that automatically shuts off the pump when blockage is detected.

Have a professional regularly inspect your pool or spa for entrapment or entanglement hazards.

Plainly mark the location of the electrical cut-off switch for the pool or spa pump.

If someone is entrapped against a drain, cut off the pump immediately. Instead of pulling the person away from the pump, pry a hand between the drain and the person's body to break the seal.

For more information, please visit www.rvcfire.org/opencms/yoursafety/drowning_is_preventable.html

Crush – Don't Flush!

Most of us have old vitamins, unwanted over-the-counter medications or expired prescription drugs in our homes.

Everyday in California, unwanted or expired medicine is disposed of down the toilet. While this was once recommended practice to protect children and pets from accidental poisonings, studies show that pharmaceuticals can pass through wastewater treatment facilities into creeks, rivers, bays and oceans. When disposing of pharmaceuticals, make sure you remove the label with your personal information from the package, mix them with cat litter or coffee grounds and place in the trash. Below are a few guidelines for disposing of unwanted medication.

- Liquids - Empty onto absorbent paper towels or rags and dispose of with regular trash.
- Pills - Crush pills and dispose of powdered medication with regular trash.
- Propellant Inhaler – Empty container by expelling all propellant. Dispose empty cylinder into the trash.
- Sharps/Needles – Place and secure sharps in an approved container. Approved containers are available at Riverside County Household Hazardous Waste Collection Events. For temporary storage and eventual disposal place sharps in a hard sided PLASTIC container like a bleach or laundry detergent bottle with a secure lid, making sure to:
- Secure the lid.
- Tape the container closed.
- Label the container 'SHARPS/NEEDLES".
- Take Back Programs - Ask your Pharmacy and Health Care Provider if they offer "Take Back" programs for sharps or medications to their patients.

For more information call Riverside County Waste Management at (800) 304-2226 or (951) 486-3200 or check their website at www.rivcowm.org.

Recycling and Trash Services

Recycling

The City of Temecula strongly encourages all residents and businesses to recycle. Residents can call CR&R to request an extra recycling container at no charge. Discounted rates are provided for businesses that request a "recycled materials only" bin. For more information, contact CR&R at (800) 755-8112.

Household Batteries

Did you know that you can no longer throw your batteries into your trash bin? Household batteries are now banned from the landfill and have been labeled as "Universal Waste" which is subject to disposal restrictions.

What can you do with your batteries?

The City of Temecula has provided 6 permanent opportunities to properly dispose of your batteries at the following locations:

1. City Hall (CH), 43200 Business Park Drive
2. Temecula Community Center (TCC), 28816 Pujol Street
3. Mary Phillips Senior Center (MPSC), 41845 6th Street
4. Community Recreation Center (CRC), 30875 Rancho Vista Road
5. Temecula Public Library (TPL), 30600 Pauba Road
6. Grace Mellman Library (GML), 41000 County Center Drive

Household Hazardous Waste (HHW)

Riverside County also offers weekly antifreeze, vehicle and household batteries, oil (and filters), and paint (latex only) collections:

WHEN: Every NON-holiday Saturday (Subject to closure during inclement weather)

TIME: 9:00am until 2:00pm

WHERE: 25315 Jefferson Avenue, Murrieta

Maximum chemical load: 5 gallons or 50 lbs. (per trip). Some restrictions apply; contact Riverside County Waste Management at (951) 486-3200 for additional information.

Bulky Item Pick-Up

Reminder! City of Temecula residents are allowed two FREE bulky item pick-ups, including e-waste, annually. Call CR&R at (800) 755-8112 to arrange for a bulky item pick-up.

Street Sweeping

Please be a good neighbor and remember not to park on residential streets on trash pick-up day and street sweeping day. Residential streets are swept the day after trash pick-up day. Keeping vehicles off the streets on these days allows efficient trash collection and street sweeping. Observing this simple request helps keep all of Temecula's neighborhoods looking their best!

City Wide Clean-Up & Oil Collection

CR&R Inc. and the City of Temecula will be co-sponsoring the bi-annual Community Clean-Up Day and Citywide Clean-up and Oil Collection tentatively scheduled for one Saturday in the spring & fall. All City residents may dispose of e-waste, used motor oil, antifreeze, auto batteries, and green waste, as well as bulky items. This service is free to Temecula residents. (ID is required). The event will be held at Chaparral High School between 8am and 2pm. For more information, please contact Community Services at 694-6480.

Holiday Schedule Trash Pick-Up

Holidays are: New Year's Day, Memorial Day, 4th of July, Labor Day, Thanksgiving and Christmas. Following a holiday, your trash collection will be delayed one day. If your normal trash day is Friday, your trash will be collected on Saturday. Holidays will also affect the street sweeping schedule. If the holiday occurs on Saturday or Sunday, your collection & street sweeping services may not change.

Park Rangers and Park Rules

General Information: The City of Temecula currently has two Park Rangers monitoring its many park sites and facilities throughout the City. Since incorporation, the City's park system has experienced extraordinary growth and the number of citizens and their guests using the park system continues to increase. Therefore, as a community outreach and customer service program, the Park Rangers continue to support the Community Services Department by directly assisting citizens in understanding and maintaining the safety rules and regulations established within the park system.

All Neighborhood parks not listed below close at dusk.
All Special Use Parks listed below close and lights out by 10:00pm.

Harveston Community Park
Harveston Lake Park
Margarita Community Park
Paloma Del Sol Park
Patricia H. Birdsall Sports Park
Ronald Reagan Sports Park
Temecula Skate Park

Park Rules:

- Use caution and drive slowly while driving in all parking areas.
- Loitering in City Parks is not permitted.
- Help keep our parks clean. Please do not litter.
- Appropriate use of handicapped parking stalls will be monitored.
- Fire Lanes must remain open at all times.
- Dogs must be on a leash at all times.
- Please clean up after your dogs.
- Consumption of alcohol in the park system is prohibited.
- Flying balloons, planes, rockets and fireworks are not permitted.
- Party jumps must be pre-approved. Call 694-6410 for information.
- Selling merchandise or providing services in City park sites or recreational facilities without approval is prohibited.
- Overnight parking is prohibited at all park sites and facilities.
- For safety purposes, the use of private boats, powered model boats or watercraft of any kind is prohibited at the Temecula Duck Pond and Harveston Lake Park.

Multi-Use Trails and Bikeways

To report hazards on the trails or bike lanes please contact Public Works at 694-6411. **For comments or suggestions** that will help the City provide a better trail and/or bikeway system, or to receive "Your Guide to Temecula Trails & Bikeways," contact Community Services at 694-6480, or visit the city's website at: www.cityoftemecula.org.

CSD Maintenance Division

The Maintenance Services Division is committed to ensuring an aesthetically pleasing and healthy City by providing safe, clean public areas. The Maintenance Services Program provides effective landscape and facility maintenance services to parks, slopes, medians, recreation facilities, and City Administration Offices. TCSD Maintenance Division also oversees the repair and maintenance of arterial and neighborhood streetlights. If you have a streetlight out in your neighborhood, you may call the Community Services Department at 694-6480, or use our web page at www.cityoftemecula.org

We're Here for You!

Recycling and Trash Services

Household Batteries

Did you know that you can no longer throw your batteries into your trash bin? As of February 6, 2006, household batteries, such as ones in your children's toys, CD players and flash lights are now banned from the landfill. Household batteries have been labeled as "Universal Waste" which is subject to disposal restrictions.

What can you do with your batteries?

The City of Temecula has provided 6 permanent opportunities to properly dispose of your batteries at the following locations:

1. Lobby at City Hall located at 43200 Business Park Drive
2. Temecula Community Center (TCC) at 28816 Pujol Street
3. Mary Phillips Senior Center (MPSC) at 41845 6th Street
4. Community Recreation Center (CRC) 30875 Rancho Vista Road
5. Temecula Public Library located at 30600 Pauba Road
6. Grace Mellman Library located at 4100 County Center Drive

Household Hazardous Waste (HHW)

Riverside County also offers weekly anitifreeze, vehicle and household batteries, oil (and filters), and paint (latex only) collections:

WHEN: Every NON-holiday Saturday (Subject to closure during inclement weather)
TIME: 9:00am until 2:00pm
WHERE: 25315 Jefferson Avenue in Murrieta (North of Murrieta Hot Springs)
Maximum chemical load: 5 gallons or 50 lbs. (per trip). Some restrictions apply; contact Riverside County Waste Management at (951) 486-3200 for additional information.

Recycling

The City of Temecula strongly encourages all residents and businesses to recycle. Residents can call CR&R to request an extra recycling container at no charge. Discounted rates are provided for businesses that request a "recycled materials only" bin. For more information, contact CR&R at (800) 755-8112.

Bulky Item Pick-Up

Reminder! City of Temecula residents are allowed two FREE bulky item pick-ups, including e-waste annually. Please call CR&R at (800) 755-8112 and make arrangements in advance for the pick-up of these items.

Street Sweeping

Please be a good neighbor and remember not to park on residential streets on trash pick-up day and street sweeping day. Residential streets are swept the day after trash pick-up day. Keeping vehicles off the streets on these days allows efficient trash collection and street sweeping. Observing this simple request helps keep all of Temecula's neighborhoods looking their best!

City Wide Clean Up

(Citywide Clean-up and Oil Collection)

CR&R Inc. and the City of Temecula will be co-sponsoring the bi-annual Community Clean Up Day and Citywide Clean-up and Oil Collection tentatively scheduled for one Saturday in the Spring & Fall. All City residents may dispose of e-waste, used motor oil, antifreeze, batteries, green waste as well as bulky items. This service is free to Temecula residents. (ID is required) The event will be held at Chaparral High School parking lot between 8am and 2pm. For more information, please contact Janet Kitchel or Barbara Smith in Community Services at 694-6480.

Holiday Schedule Trash Pick-Up

Holidays are: New Year's Day, Memorial Day, 4th of July, Labor Day, Thanksgiving and Christmas. Following a holiday, your trash collection will be delayed one day. If your normal trash day is Friday, your trash will be collected on Saturday. Holidays will also affect the street sweeping schedule. If the holiday occurs on Saturday or Sunday, your collection & street sweeping services may not change.

- Help keep our parks clean, please do not litter.
- Appropriate use of handicapped parking stalls will be monitored.
- Fire Lanes must remain open at all times.
- Dogs must be on a leash at all times.
- Please clean-up after your dogs.
- Consumption of alcohol in the park system is prohibited.
- Flying balloon, planes, rockets and fireworks are not permitted.
- Party jumps must be pre-approved. Call 694-6410 for information.
- Selling merchandise or providing services in City park sites or recreational facilities without approval is prohibited.
- Overnight parking is prohibited at all park sites and facilities.
- For safety purposes body contact and the use of private boats, powered model boats or watercraft of any kind is prohibited at the Temecula Duck Pond and Harveston Lake Park.

Multi-Use Trails and Bikeways

To report hazards on the trails or bike lanes please contact Public Works at 694-6411. **For comments or suggestions** that will help the City provide a better trail and/or bikeway system please contact Barbara Smith in Community Services at 694-6480. Both Public Works and Community Services can be contacted via the city's website at: www.cityoftemecula.org.

CSD Maintenance Division

The Maintenance Services Division is committed to ensuring an aesthetically pleasing and healthy City by providing safe, clean public areas. The Maintenance Services Program provides effective landscape and facility maintenance services to parks, slopes, medians, recreation facilities, and City Administration Offices. TCSD Maintenance Division also oversees the repair and maintenance of arterial and neighborhood streetlights. If you have a streetlight out in your neighborhood, you may call the Community Services Department at 694-6480, or use our web page at www.cityoftemecula.org

CITY OF TEMECULA
Community Services Department

City of Temecula Community Services Department and CR&R, Incorporated Presents

City Wide Clean-Up
for
TEMECULA RESIDENTS ONLY

Saturday
APRIL 11, 2009
8:00 AM to 2:00 PM

CR&R
RECYCLING AND REFUSE SERVICE

Location
Chaparral High School
27215 Nicolas Road
Temecula

Directions: From I15, travel East on Winchester Rd., approximately 1.6 miles, to Nicolas Road

The City of Temecula and CR&R are sponsoring a program to help you dispose of household waste and large miscellaneous debris that can't be placed in your trash bins.

Proof of residency such as a California Driver's License, California ID Card, recent utility bill, or property tax statement is required.

HOW THE PROGRAM WORKS:

WE WILL ACCEPT

- Anti-Freeze
- Auto Batteries (2 per resident, per visit)
- All Household Electronic Devices
- Green Waste
- Large Bulky Items
- Motor Oil
- Small (Empty) Gas Operated Equipment

PLEASE DO NOT BRING

- Household Batteries
- Chemicals/Solvents/Gasoline
- Empty Drums
- Fluorescent Light Tubes
- Any Type of Paint
- Pesticides
- Thermostats
- Tires
- Other Hazardous Waste
- Sharps

For information contact the City of Temecula Community Services Department at (951) 308-6393 or CR&R at (800) 755-8112

From: Gail Zigler

Sent: Wednesday, May 06, 2009 3:52 PM

To: All City Employees; All Council Members; Commissioner Edwards; Commissioner Fox; Commissioner Hogan; Commissioner McCracken; Commissioner Meyler

Subject: Household Hazardous Waste Collection at City Hall

What: Household Hazardous Waste Collection (HHW)
When: Saturday, May 9, 2009
Time: 9 am to 2 pm.
Cost: FREE to Riverside County Residents

Limitations:
Residential HHW only; business waste will not be accepted.
Quantity limits to 5 gallons or 50 lbs per trip – you can make multiple trips.

Items Accepted:
Household cleaners and chemicals
Yard fertilizers and insecticides
Vehicle antifreeze, brake fluids, fuel, batteries, motor oil
All types of paints, sharps (needles), e-waste, propane tanks, fluorescent tubes.

IMPORTANT: This is not a bulky item or green waste collection event.

Household Hazardous Waste Collection Event

Saturday
January 31, 2009
9:00 am – 2:00 pm

This event is for Riverside County residents only and event will close during inclement weather or other hazardous conditions.

Free of charge to all Riverside County RESIDENTS

Location of Event: Temecula City Hall - Parking Lot
43200 Business Park Drive, Temecula, CA 92589

Acceptable Chemical Materials
limit of up to 5 gallons or 50 pounds per trip:

- Batteries (vehicle and household)
- Household chemicals (bleach, ammonia, pesticides, motor oil, etc.)
- Miscellaneous waste (propane tanks, pool chemicals, etc.)
- Paints, solvents, thinners, photo chemicals and non-empty aerosol cans
- Fluorescent lamps, thermostats, mercury-containing objects

And

- E-waste (computers, monitors, televisions, etc.)
- Sharps (sharps containers will be provided at no charge while supplies last)

Did you know?

- Absolutely No Bulky Items Or Yard Waste
- This event is for Residential Use Only; business waste not accepted
- Container volume must not exceed 5 gallons
- Containers will not be returned

For more information, please contact Riverside County at
(951) 486-3200, (800) 304-2226 or go to www.rivcowm.org.

Household Hazardous Waste Collection Event

WHEN: **Saturday, September 13, 2008**

TIME: **9:00 am – 2:00 pm**

WHERE: **Temecula City Hall - Parking Lot**
43200 Business Park Drive

Free of charge to all Riverside County Residents

REVISIONS TO THE SWMP

- SWMP Revisions List

Revisions to the SWMP since July 1, 2005

Table of Contents.

January 2006

- Modified format of Appendices.
- Attachments were grouped into single appendices corresponding to their respective sections.

Section 1.0 Executive Summary

Section 2.0 Introduction to the City of Temecula Stormwater Management Plan

July 2009

- Updated stormdrain information.

Section 3.0 Program Management

Section 4.0 Elimination of Illicit Connections and Illegal Discharges

Section 5.0 Municipal Facilities and Activities

January 2006

- Per RB meeting (Aug 31, 2005), included min. BMP source controls rather than generating P3s for each facility.
- Revised the inventory of City facilities to exclude non-jurisdictional facilities (i.e. police stations).

Section 6.0 Development Planning

July 2008

- Revised Initial applicability Checklist to emphasize 'Land Area for Development' in various categories as per the Permit text.

August 2008

- Designated CASQA's New Development Handbook as the City's set of standards for new development BMPs.

Section 7.0 Private Development Construction Activity

January 2006

- Per RB comment letter (Sep 28, 2005), included annual tally of inspections for every project.

August 2008

- Designated CASQA's Construction Handbook as the City's set of standards for construction BMPs.

Section 8.0 Industrial and Commercial Sources

Section 9.0 Residential Sources

Section 10.0 Public Education and Outreach

Section 11.0 Monitoring Program

January 2006

- Included the City's dry-weather monitoring log.

April 2006

- Revised the locations for the Pechanga Creek and Temecula Creek monitoring stations. The new locations are at the Rainbow Creek bridge and on Temecula creek, near the confluence with the Santa Margarita River.

Section 12.0 Program Reporting, Evaluation, and Revision

Appendix A Program Management

Appendix B Municipal Facilities and Activities

January 2006

- Included city-facility source control table.

January 2008

- Updated the municipal facilities list.

July 2009

- Updated the municipal facilities list.

Appendix C Private Development Construction Activity

January 2006

- Included annual tally of construction inspections, latest E&S notes, latest monthly construction inspection frequency sheet.
- Included latest version of City's ESC standard notes.

January 2008

- Updated the inspection frequency list.

August 2008

- Updated Annual Letter to Developer.

October 2008

- Included latest version of City's ESC standard notes.

July 2009

- Updated the annual tally of construction inspections.
- Included latest inspection frequency sheets

Appendix D Industrial and Commercial Sources

February 2006

- Updated the business inspection form to include complaint calls.

January 2008

- Updated the business list.

January 2009

- Updated the business list.

April 2009

- Updated business inspection checklist.

Appendix E Monitoring Program

January 2006

- Included dry-weather inspection log.

January 2008

- Removed secondary sampling locations from the dry weather monitoring log.

August 2008

- Updated dry-weather inspection log.

Sent UPS Next Day Air

Mr. Terry Oda, Chief
CWA Standards and Permits
United States Environmental Protection Agency
Region IX (WTR-5)
75 Hawthorne Street
San Francisco, CA 94015-3901

Dear Messrs. Robertus and Oda:

Re: FY 2008-2009 Annual Reports
Order No. R9-2004-001
NPDES Permit No. CAS0108766

Please find attached copies of the FY 2008-2009 annual reports for the National Pollutant Discharge Elimination System (NPDES) Municipal Separate Storm Sewer System (MS4) program for the Santa Margarita Region of Riverside County. The following annual reports are submitted in accordance with Third-Term NPDES MS4 Permit (Board Order No. R9-2004-001, NPDES Permit No. CAS0108766) adopted by the San Diego Region Regional Water Quality Control Board (Regional Board) on July 14, 2004 for the Santa Margarita Watershed Region of Riverside County (Third-Term NPDES MS4 Permit):

- Riverside County Flood Control and Water Conservation District (District) Individual Storm Water Management Plan (Individual SWMP) Annual Report
- County of Riverside Individual SWMP Annual Report
- City of Murrieta Individual SWMP Annual Report
- City of Temecula Individual SWMP Annual Report
- Watershed SWMP Annual Report
- Monitoring Program Annual Report (as Appendix G of Watershed SWMP Annual Report)

The reports provide a comprehensive summary and analysis of the Third-Term NPDES MS4 Permit compliance activities during FY 2008-2009 by the District, County of Riverside, and Cities of Murrieta and Temecula (Permittees).

The Individual SWMP Annual Reports summarize the Permittees' individual compliance activities. The Watershed SWMP Annual Report summarizes the Permittees' combined watershed based compliance activities.

The District is committed to continuing its ongoing efforts to work cooperatively with the Co-Permittees, Regional Board staff and other stakeholders in implementing an effective municipal stormwater program and fulfilling the requirements of the current Third-Term NPDES MS4 Permit. If you have any questions concerning this matter, please feel free to call me at 951.955.8411 or Jason Uhley at 951.955.1273.

Very truly yours,

Mark H. Wills

BOARD ORDER NO. R9-2004-001
CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
SAN DIEGO REGION

Executive Summary

The County of Riverside (County), the Riverside County Flood Control and Water Conservation District (District), Coachella Valley Water District (CVWD) and the twenty-six cities of Riverside County including Banning, Beaumont, Blythe, Calimesa, Canyon Lake, Cathedral City, Coachella, Corona, Desert Hot Springs, Hemet, Indian Wells, Indio, La Quinta, Lake Elsinore, Menifee, Moreno Valley, Murrieta, Norco, Palm Desert, Palm Springs, Perris ,Rancho Mirage, Riverside, San Jacinto, Temecula and Wildomar (Cities) are regulated pursuant to the Federal Clean Water Act and the California Water Code through the following National Pollution Discharge Elimination System (NPDES) and Municipal Separate Storm Sewer System (MS4) permits:

- Whitewater River Basin, NPDES Permit No. CAS6177002 and California Regional Water Quality Control Board, Colorado River Region, Board Order R7-2008-001
- Santa Ana River Watershed, NPDES Permit No. CAS601833 and California Regional Water Quality Control Board, Santa Ana River Region, Board Order R8-2002-0011 (pending renewal)
- Santa Margarita River Watershed, NPDES Permit No. CAS0108766 and California Regional Water Quality Control Board, San Diego Region, Board Order R9-2004-001 (pending renewal)

The District serves as the principle permittee within the three watersheds described above, with the unincorporated County areas, Cities (depending on geography) and CVWD (Whitewater River Basin only) designated as the co-permittees. Collectively the permittees are required as part of the NPDES and MS4 permit process to adopt, develop and implement adaptable stormwater management programs to protect surface water quality and to report annually on their progress with respect to specific compliance activities.

Demographics

Population

The County was incorporated in 1893 out of parts of San Diego and San Bernardino Counties in Southern California. It is bordered by San Bernardino County (North), La Paz County, Arizona (East), Orange County (West) and Imperial and San Diego Counties (South). As of Jan 2009 the California Department of Finance estimates the population of Riverside County at 2,107,653 making it the fourth largest County of the fifty-eight counties in the State. This accounts for an increase of 29,052 residents since 2008. The County provides governmental services to 5.5% of the State's population.

City/County Population Estimates with Annual Percent Change
January 1, 2008 and 2009
(California Department of Finance, 2008/2009 Population Estimates)

State/County/City	Total Population 1/1/2008	Total Population 1/1/2009	Percent Change
California	37,883,992	38,292,687	1.1

Wildomar	0	31,321	0.0
Unincorporated County	553,461	459,188	-17.0

Land Area

As well as having the fourth largest population the County of Riverside has the forth largest land mass in the State encompassing 7295.6 square miles. The region is made up of 90 percent arid and semi arid desert rural lands with 10 percent comprising urban and suburban inland valleys and mountains. Less than 25 percent of the population lives in the rural portions of the County in comparison to 75 percent living in the western urban/suburban interface.

Land Use

Historically the primary land use for the region has been farming. The Coachella Valley is known for having one of the longest growing seasons in the world. Agricultural products cultivated in the Coachella Valley include fruits and vegetables. Because of the mild winter climate the Coachella Valley is in a state of transition with the demand for affordable housing and mild winters. The Coachella Valley is the annual winter destination for "snow-birds" (retired individuals who temporarily migrate to the desert to escape the harsh winters in the Midwest and Northeast.

The Central portion of Riverside County has been historically known as the "Agri-Empire" where potatoes and other vegetable crops were grown. It is also home to numerous dairy farms. The Temecula Valley has had a long tradition in citrus and avocados. However, most recently it has become known for its vineyards that produce world renowned wines.

In Western Riverside County expansive citrus groves once flourished and in 1895, due to the amazingly sweet naval orange crop, Riverside was the richest city per capita in the nation and referred to as the "Orange Empire". Almost one hundred years later only a few groves remain.

The urban/suburban interface of Western Riverside County has been transformed into a warehousing and transportation hub intersected by rail and interstate transportation corridors and linking the ports of San Diego, Long Beach and Los Angeles to heartland USA and destinations east.

Salton Sea

The Salton Sea is the largest lake in California. It is jointly contained in Riverside and Imperial Counties. The 320 square mile inland sea was formed in 1905 when an irrigation canal that brought water from the Colorado River to the valley was breached and overwhelmed by high water levels caused from heavy rains in the upper Colorado River watershed. For almost two years the entire flow of the Colorado River dumped into the "Salton Sink" filling it with water. Today's Salton Sea is slowly evaporating which is causing environmental and ecological concerns. The Salton Sea provides an

ecosystem for hundreds of species birds and other wildlife and is a crucial link to the Pacific Flyway and an integral part of the Colorado River delta.

Western Riverside County Multiple Species Habitat Conservation Plan

The Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) was adopted June 2003, and is a comprehensive multi-jurisdictional Habitat Conservation Plan (HCP) that focuses on conservation of species and their associated habitats in Western Riverside County. This plan was the first of several efforts in Southern California with the overall goal of maintaining biological and ecological diversity within a rapidly growing and urbanizing region. The MSHCP allows Riverside County and its cities to control local land use decisions and maintain a strong economic climate in the region while addressing the requirements of the state and federal endangered species acts. The HCP is one of the largest plans ever attempted in the nation and covers multiple species and habitats within a diverse landscaped that includes urban cents to undeveloped foothills and forests, all under multiple jurisdictions. It extends across many bioregion including the Santa Ana mountains, Riverside lowlands, San Jacinto foothills, San Jacinto mountains, Agua Tibia mountains, San Bernardino mountains and desert transition areas. The HCP provides for coordinated conservation areas that preserve biological diversity and maintain the regions quality of life.

The Western Riverside County MSHCP serves as a HCP pursuant to Section 10(a)(1)(b) of the federal Endangered Species Act of 1973 (FESA) and the Natural Communities Conservation Plan Act of 2001 (NCCP). The MSHCP authorizes participating jurisdictions "Take" of plant and wildlife species identified within the planning area. The United States Fish and Wildlife Service (USFWS) and the California Department of Fish and Game (CDFG) have the authority to regulate the Take of threatened, endangered, and rare species. In coordination with local land use authority these wildlife agencies review public and private development to ensure that Take is managed and coordinated in accordance with the MSHCP area.

Coachella Valley Multiple Species Habitat Conservation Plan

The diverse desert landscape of the Coachella Valley provides habitat for dozens of plan and animal species, some found nowhere else in the world. Until the recent economic decline the Coachella Valley was one of the fastest growing regions in the State. The Coachella Valley Multiple Species Habitat Conservation Plan (CVMSHCP) provides a regional vision for balanced growth to meet the requirements of federal and state endangered species laws, while promoting enhanced opportunities for recreation, tourism and job growth. The CVMSHCP aims to conserve over 240,00 acres of open space and protect twenty-seven plant and animal species. The CVMSHCP not only safeguards the desert's natural heritage for future generations, it allows for timely construction of roads and other infrastructure that is vital to improving quality of life in the Coachella Valley.

The Coachella Valley Association of Governments (CVAG) serves as the lead agency for regional plan review and final consideration for new development as it relates to CVMSHCP. Participants include Riverside County, Cathedral City, Coachella, Desert Ht Springs, Indian Wells, Indio, La Quinta, Palm Desert, Palm Springs, Rancho Mirage, as well as the Coachella Valley Water District and the Imperial Irrigation District. The benefits of the CVMSHCP include:

- Preservation of Coachella Valley's native desert wildlife;
- Creates a system of open space, trails and reserves;
- Safeguards significant habitat linkages and wildlife corridors that enable animals to move safely and unobstructed from one habitat to another;
- Assures critical transportation corridors including freeways, currently planned road projects and interchanges can be constructed without delays resulting from endangered species conflicts;
- Offers certainty for new development and the business community making the Coachella Valley a more attractive place for businesses to relocate or expand;
- Ensures the continuation of the Fringe-Toed Lizard permit and provides long term conservation for this endangered species;
- Approximately 60,000 acres (twenty-five percent of the land) has already been acquired for the CVMSHCP.

Figure 1-2: Plan Area

The combined efforts of the Western Riverside County MSHCP and the CVMSHCP will effectively preserve one third of the total land area within Riverside County which equates to 2,360 square miles of pristine meadows, forests and desert lands.

Weather, Precipitation and Drought

Riverside County continues to suffer moderate to severe drought conditions in all three watersheds. In fact those who ascribed to the global warming theory contend that the Southwestern United States is in the midst of a 10 year drought with no indication of it subsiding. The 2008-2009 storm seasons for most parts of western Riverside County was 65% of normal at 6.67 inches of rainfall. Palm Springs and the Coachella Valley experienced 97% of normal and recorded 5.07 inches of rainfall.

March-October 2008 was the driest such 8-month period on record for California and Nevada. As October came to a close, the California Department of Water Resources (www.water.ca.gov/drought) called the drought of the past two years, "the most significant water crisis in California's history." The drought was also arguably the biggest factor in the wildfires that made this year's "the worst fire season in California's history," according to Governor Schwarzenegger and CalFire. Water supply problems in the months ahead were expected. As noted by the North County Times, the amount of water being stored in California reservoirs was at its lowest point in 14 years, underscoring the severity of a worsening drought that could prompt providers to order rationing in San Diego and Riverside counties as early as January 2009. According to news reports (San Francisco Chronicle), California announced that it planned to cut water deliveries to their second-lowest level ever in 2009, raising the prospect of rationing for cities and less planting by farmers. The Department of Water Resources projected that it would deliver just 15 percent of the amount that local water agencies throughout California request every year. The reservoirs that are most crucial to the state's water delivery system were at their lowest levels since 1977, after two years of dry weather and court-ordered restrictions on water pumping out of the Sacramento-San Joaquin Delta.

Economic Condition and Outlook

The economic condition and outlook for Riverside County is sobering at best. Unemployment for July 2009 is approaching 15%. Foreclosures, realignment of property taxes, non-existent new development, a faltering State budget and a sluggish economy have caused declines in all areas of local government.

ANNUAL LABOR FORCE AND EMPLOYMENT AVERAGES
County of Riverside

Civilian Year	Labor Force	Employment	Unemployment Number	Unemployment Percent
1992	576,400	507,600	68,800	11.9

Data suggest that property tax revenue through FY 2011/2012 will not meet the current growth projections (represented by the dashed line in the graph below) used to estimate revenue as part of the county's long-range budget plan. The bold line represents a negative assessed value growth for FY2009/2010.

Local economist have stated that Riverside-San Bernardino region is poised to remain for the next year among the nation's weakest local economies, with unemployment soaring to as high as 16 percent and home values dipping to 65 percent below their 2006 peaks. Economists also concede that the real estate implosion in Southwest Riverside County was almost certainly a factor in the 11 percent decline in local retail sales in 2008 compared with 2007.

They predicted a recovery may begin to form in 2010. All agreed that real estate development should and probably will remain important for the region, and that its eventual recovery will probably play a role in a broader economic recovery. Ditto for the distribution and warehousing industries, which funnel imported goods from the Los Angeles, San Diego, and Long Beach port complex, the nation's largest. The downside is that wages are middling in those industries, and lower among the strip malls that dot the region, according to state figures.

Foreclosures

A report released by RealtyTrac in April of 2009 announced that the Riverside County region had the fourth highest foreclosure rate in the nation. Lenders sent default notices to 16,906 homeowners in Riverside County in the first quarter of 2009 a 12% increase from the same period in 2008. Other reports have warned that adjustable-rate loans taken out in the last three years will begin to reset next year through 2012, likely resulting in a second wave of foreclosures. As of August 2009 Riverside County has the second highest foreclosure rate in the State. Currently, 1 in 74 households in Riverside County are going into default.

Riverside County Budget Crisis for 2009-2010

Calling the budget process for 2009-2010 a challenge is an understatement. An overnight reduction of $130 million for general fund purposes (from a base of $750 million in FY 2008/2009) makes for difficult choices and requires a restructuring of government over the next several years. The State of California in an attempt to balance their own budget has taken steps to cut allocations in several program areas and raid local Prop 42 revenue. These additional losses in funds (approximately $45 million) will reduce the services that the County currently provides. Any unfunded mandates passed down to the local level will be vigorously challenged as resources are not available for frivolous program enhancements that are not proven to protect water quality or the environment.

County Governmental Structure

Board of Supervisors

The Riverside County Board of Supervisors is the governing body of the County, certain special districts, and the housing authority. The Board enacts ordinances, and resolutions, adopts the annual budget , approves contracts, appropriates funds, determines land use zoning for the unincorporated area of the county. In addition, the Board appoints certain County officers and members of various boards and

commissions. There are five supervisorial districts based upon an equal distribution of population.

- The First District includes portions of Riverside and Lake Elsinore and the City of Wildomar;
- The Second District includes portions of Riverside, and the cities of Corona and Norco;
- The Third District includes the Cities of Canyon Lake, Hemet, Murrieta, San Jacinto, Temecula and portions of Menifee and Lake Elsinore;
- The Fourth District includes the cities Blythe, Cathedral City, Coachella, Indian Wells , Indio, La Quinta, Rancho Mirages and a portion of Palm Springs
- The Fifth District includes the cities of Banning Beaumont Calimesa, Desert Hot Springs, Moreno Valle and portions of Palm Springs and Menifee.

Executive Office

The County Executive Officer and his staff provide for management and administrative oversight for County activities including long range planning, budget, internal and inter-governmental affairs. The Executive Office coordinates all National Pollution Discharge Elimination System (NPDES) and Municipal Separate Storm Sewer System (MS4) activities with County departments to ensure consistency and regulatory compliance with all applicable laws and regulations.

Capital Improvement Projects

To ensure that all municipal construction projects have adequate funding and that all environmental requirements including CEQA, NPDES/stormwater and air quality criteria is considered the County Executive Office formed the Capital Improvement Project Oversite and Review Committee. The makeup of the committee includes representatives from the Executive Office with finance, NPDES and construction expertise, Director of Economic Development Agency and management staff, County Information Technology staff. All proposed projects must have adequate funding, be reviewed for various project requirements and approved prior to commencement of work.

Economic Development Agency

The Riverside County Economic Development Agency (EDA) includes various divisions made up of Community Development (Aviation, County Service Areas, and Housing) Economic Development and Redevelopment, Work Force Development, Life Style & Leisure (County Fair and National Date Festival) and Facilities Management including Capital Improvement Projects (CIP). The inclusion of Facilities Management Department within the Economic Development Agency was due to the fact that CIPs are managed from the conceptual idea, environmental study, project design, construction, and then maintained by Facilities Management. Economic and Redevelopment projects go through the same process as CIP. To save costs the building and construction functionality of EDA and Facilities Management was merged.

Leadership in Energy and Environmental Design (LEED™) Certification

The LEED™ "green building rating is a nationally accepted benchmark for the design, construction and operation of green buildings. LEED™ gives building owners and operators the tools they need to have and immediate and measurable impact on their buildings' performance in five key areas:

- Sustainable site development
- Water conservation
- Energy efficiency
- Materials selection, and
- Indoor air quality
-

The County of Riverside EDA is on the cutting edge as it has incorporated LEED™ criteria into CIP.

County Service Area 152 (CSA 152)

The Economic Development Agency assumed control of County Service Area's (CSAs) in July of 2002.CSAs are an alternative method of providing governmental services by the County within unincorporated areas to provide extended services such as sheriff protection, fire protection, local park maintenance services, water and sewer services, ambulance services, streetlight energy services, landscape services and street sweeping.

CSA 152 was designated as the mechanism to provide limited maintenance for MS4 and NPDES issues within the service area.

Transportation Land Management Agency

The Riverside County Transportation Land Management Agency (TLMA) is made up of the following departments: Transportation, Building & Safety, Code Enforcement, Planning, Environmental Programs, Administrative Services which includes Geographic Information System (GIS) and database management.

New Development construction has come to a complete standstill as builders and developers reacted to an unexpected severe drop-off in buying. The spiraling decline in permit activity has caused the county to take steps to reduce the number of inspectors and engineers that perform plan review and field work. This exodus of qualified staff through early retirement and layoffs has cause a loss of institutional knowledge and experience.

- ***Building and Safety Department-*** To augment the Compliance Assistance Program (CAP) program the County took steps in December of 2007 to establish a business registration and licensing ordinance. Ordinance 857, Section 13 provides for water quality inspections and enforcement of the MS4 permit requirements. Over 10,000 establishments have been registered within the unincorporated portion of the County. For those businesses that meet the criteria for a water quality inspection an additional inspection fee is charged. The CAP will continue to be utilized by the cities until such time the water quality inspections program is integrated through an MOU or each city independently establishes their own water quality inspection program. This is a revenue neutral program and the fee only and covers the cost of registration and the time required to perform the water quality inspections. Building and Safety is also responsible for inspections of new residential and commercial development for sediment and erosion control measures. Referrals are made to the Regional Board for observed non-compliance issues associated with the Statewide General Construction Permit.
- ***Code Enforcement Department-*** The Code Enforcement Department is the investigatory unit that does follow-up investigations on land use complaints. This includes illegal connections and illicit discharges (IC/ID) investigations. The Code Enforcement Department has taken a more proactive approach to community policing and outreach by implementing a community improvement planning process in the economically underserved communities throughout the County. The community improvement plan is used to address conditions that otherwise lead to blighted conditions. "The Posting" a monthly newsletter provides success stories throughout the area.
- ***Planning Department-*** The Planning Department is the entry portal for private residential and commercial development review for the unincorporated county areas. A checklist is utilized to ensure that projects conform to the MS4 permit requirements. Projects that meet specified criteria are subject to the submission of a Water Quality Management Plan (WQMP) which is synonymous with the Standard Urban Stormwater Mitigation Plan (SUSMP). The WQMP is reviewed by the Riverside County Flood Control and Water Conservation District for substantial conformity. The WQMP is required to address post construction best management practices (BMPs), long term maintenance and monitoring.
- ***Environmental Programs Department-*** The Environmental Programs Department (EPD) is responsible for overseeing program implementation of the regional habitat conservation plans including the Expedited Review Process (ERP) for the Western Riverside County MSHCP.

- ***ERP-*** Property owners who intend to construct a single family residence on an existing legal parcel will be required to go through the ERP if their property is located within a criteria cell as identified in the MSHCP. The ERP will determine the appropriate location of a building footprint and access roads. Habitat assessments for plants and /or animal species may also be required. The ERP does not prevent construction, but the result of the ERP may require that structures and access road be located on the least sensitive portion of the property.

- ***Administrative Services (GIS and data management)-*** The Administrative Services Department provides support to the other departments within the TLMA structure including GIS and data management functions.
- ***Transportation Department-*** The County Transportation Department provides design specifications, construction and monitoring and maintenance of publicly owned roads, right of way and some MS4 facilities. One of the tools utilized by the Transportation Department to ensure compliance of the MS4 facilities is through the formation of Landscape and Lighting Maintenance Districts (LLMDs). Each LLMD is responsible for ensuring that MS4 facilities and structural BMPs in their right of way are routinely cleaned and maintained. The LLMD also provides for street sweeping in some areas. Another function of the Transportation Department is the mapping of MS4 facilities that are owned and operated by the department. GIS mapping is a fluid process and continues to grow as new areas in the county are developed.

Community Health Agency

The Community Health Agency is the umbrella agency for the Department of Environmental Health. The Department of Environmental Health (DEH) provides support to the MS4 program through the CAP for those cities that do not have an industrial solid/liquid waste inspection program. A survey form is used by DEH staff to supplement the inspection efforts of businesses that handle hazardous materials, generate hazardous waste, store fuel in underground storage tanks and retail food establishments. The surveys are then provided to the cities to follow-up on any MS4 compliance issues. The DEH also responds to hazardous materials emergency spills and large sewage discharges (greater than 1000 gallons) that have the potential of entering the MS4. The DEH also performs complaint investigations for some IC/ID. The DEH also is part of the District Attorney's Environmental Crimes Task Force where some misdemeanor and felony environmental crimes investigations are handled.

DEH acts as the Local Enforcement Agency (LEA) for solid waste issues. As part of the franchise trash haulers agreement some jurisdictions in the unincorporated portions of the county require mandatory trash pickup and street sweeping.

On-Site Wastewater Disposal System (OSWDS) or septic system construction is managed through plan check activities. OSWDS moratoriums and prohibitions in coordination with the Santa Ana RWQCB have been instituted in various locations within the watershed.

Special Districts

Regional Parks and Open Space District

The Riverside County Regional Park and Open-Space District was created by the electorate in November 1990 by a 64% vote and formed on January 29, 1991. The District is an independent agency governed by the Board of Supervisors, which sits as the District Board of Directors. The Park District presently employs approximately 100 staff who bring to their jobs a high degree of dedication to the public and a wide variety of skills and abilities.

At the present time, the district manages and operates more than 44,000 acres which includes forty parks, reserves, historic or archaeological sites and ninety miles of regional trails. The staff includes professionals in the fields of accounting and finance, biology, building and grounds maintenance, carpentry and construction, ecology, as well as environmental restoration.

Additional fields include historic preservation, interpretation, landscape architecture, museum and curatorial management, park planning, personnel administration, recreation, security, trails planning and construction, weddings and special events, wildlife habitat management, and a host of other disciplines.

Waste Resources Management Department

The mission of the Riverside County Waste Management Department is to provide for the protection of the general public health and welfare by efficient management of Riverside County's solid waste system through:

- provision of facilities and programs which meet or exceed all applicable local, State, Federal and land use regulations;
- utilization of up-to-date technological improvements;
- development and maintenance of a system that is balanced economically, socially and politically; and,
- economically feasible recovery of waste materials.

The Waste Management Department currently operates 6 landfills; an additional privately owned and operated landfill is located in Western Riverside County. In addition to the landfills there are 8 privately owned and operated transfer stations.

Recycling and Specialty Programs

Household Hazardous Waste (HHW)-Residential Program

The County of Riverside established the Household Hazardous Waste Program in October 1988 with the formation of a mobile community HHW collection program. This HHW program has evolved and is comprised of a combination of three permanent HHW collection centers, two Antifreeze, Battery, Oil and Paint (latex only) ABOP collection centers and temporary collection events at 16 locations throughout the County.

Conditionally Exempt Small Quantity Generator (CESQG) -Business Program

As an enhancement to the HHW program and to encourage small businesses to properly handle their hazardous waste the County provides the CESQG program as an affordable and legal solution for the proper disposal of hazardous waste. The program is on an appointment only basis and a hazardous waste disposal contractor comes to the business to ensure proper labeling and documentation is provided.

Universal and e-Waste

Universal Wastes are hazardous wastes that are generated by several sectors of society, rather than a single industry or type of business. Universal Wastes contain harmful chemicals, which, if put in the trash may harm people or the environment. E-waste include:

- ***Common Batteries*** - AA, AAA, C & D Cell and button batteries (e.g. hearing aid and watch batteries). Automotive type batteries are not Universal Waste. When they become waste, they are regulated under a different law.
- ***Fluorescent Tubes, Bulbs and Other Mercury Containing Lamps*** - Fluorescent light tubes and bulbs, Hi Intensity discharge (HID), metal halide, sodium and neon bulbs.
- ***Electronic Devices*** - Televisions, computer monitors computers, printers, VCR's, cell phones, telephones, radios, and microwave ovens.
- ***Mercury-Containing Devices*** - Thermostats, switches, thermometers, dental amalgam, pressure and vacuum gauges, novelty items, counterweights and dampers, and medical devices known as dilators.
- ***Non-Empty Aerosol Cans that Contain Hazardous Materials***. (Labeled Toxic, Flammable, or Corrosive)

Riverside County's Backyard Composting Program:

This program has been developed to aid the residents of Riverside County in composting their organic material, so that we can all recycle more and discard less.

Composting harnesses the natural process of decomposition by turning organic matter (such as fruit and vegetable wastes, grass clippings, leaves, and some animal manure's) into a useful product for your landscape or garden. Composting can also improve hard, depleted soils, so that flowers, vegetables, and fruit trees can thrive in a nutrient-rich environment. Composting also improves the soil by boosting its fertility, its moisture-holding capabilities, and its texture.

Composted material is actually rather expensive to buy. But anyone with a little extra room in a garden, a little extra time, and a good source of compostable materials can produce good, high quality compost in as little as 4 weeks - absolutely free! By composting, you return the earth's nutrients back to the soil, where your plants absorb them, thereby becoming healthier. Healthy plants are far more resistant to diseases and pests. Instead of throwing away your organic waste, compost them! You will cut down your trash collection service, and you will be prolonging the life of Riverside County's rapidly depleting landfill space!

Sharps

Hypodermic needles, lances, and other sharp material associated with medical treatment can be collected in sharps containers and brought to the HHW collection centers for proper disposal. Sharps containers can be obtained from your HHW collection center or local pharmacy.

Construction Activities

The Waste Management Department's construction and industrial activities include maintenance of county operated landfills and stabilization of closed landfills. This includes the requirement to prevent and mitigate stormwater or other discharges including sediment, solid waste and liquids from entering an MS4 system.

Flood Control and Water Conservation District (District)

The Control and Water Conservation District (District) operates and maintains major flood control facilities such as dams, flood basins, levees, open channels and major underground storm drains. In most cases, the District does not maintain storm drain inlets or pipes less than 36 inches in diameter. These smaller facilities are typically maintained by City or County Transportation Department crews. The engineering design of all projects constructed by the District is performed under the direct supervision of, one of the District's two design teams. They are responsible for coordinating all activities involved in moving projects forward from the conceptual planning phase to the actual start of construction

The construction section administers all District construction contracts and inspects the construction of all flood control projects to be accepted for operation and maintenance by the District.

In addition, as part of the plan review process for private development and CIPs within the county, the District's planning section review and make recommendations on WQMP submittals.

Local Ordinances

The County of Riverside has enacted the following ordinances to address stormwater issues and related activities. The text for each of the ordinances can be found at http://www.clerkoftheboard.co.riverside.ca.us/ords.htm

ORDINANCE 348
Land Use Ordinance of Riverside County
Amended through Ordinance No. 348.4574

ORDINANCE 427
Regulating Land Application of Manure
Amended through Ordinance No. 427.3

ORDINANCE 492
Regulating Food Establishments and Food Facilities
Amended through 492.9 and Incorporating by Reference Ordinance 725

ORDINANCE 541
Related to the Removal of Rubbish
Amended through Ordinance 541.5

ORDINANCE 615
Relating to Establishments where Hazardous Waste is Generated, Stored, Handled, Disposed, Treated or Recycled
Amended through Ordinance 615.3

ORDINANCE 617
Regulating Underground Storage Tank Systems containing Hazardous Substances
Amended through Ordinance 617.4

ORDINANCE 650
Regulating the Discharge of Sewage in the Unincorporated Areas of Riverside County
Amended through Ordinance 650.5 and Incorporating Ordinance No. 725

ORDINANCE 657
Regulating the Collection, Transfer, and Removal of Solid Waste
Amended through 657.6

ORDINANCE 689
Prohibiting the Unlawful Dumping of Trash
Amended through 689.1

ORDINANCE 725
Establishing Procedures and Penalties for Violations of Riverside County Ordinances and Providing for Reasonable Costs Related to Enforcement
Amended through 725.12 and Incorporating by Reference Ordinance 640.

ORDINANCE 745
Providing for the Comprehensive Collection and Disposal of Solid Waste in Specified Unincorporated Areas of Riverside County
Amended through Ordinance 745.2

ORDINANCE 754
Establishing Stormwater/Urban Runoff Management and Controls
Amended through Ordinance 754.2

ORDINANCE 772
Declaring as a Fire Hazard Abandoned or Neglected Orchards, Groves or Vineyards, and Ancillary weeds and Debris and Providing for their Abatement

ORDINANCE 812
Prohibiting the Land Application of Class B Sewage and Sludge
Amended through Ordinance 812.1 and Incorporating by Reference Ordinance 725

ORDINANCE 830
Regulating the Land Application of Class A Sewage Sludge For Agricultural Activities
Amended through Ordinance 830.1 and Incorporating by Reference Ordinance 725.

ORDINANCE 843
Regulating the Discharge of Waste into the Public Sewer System for the Highgrove Community

ORDINANCE 856
Establishing a Septic Tank Prohibition for Specified Areas of Quail Valley
Requiring the Connection of Existing Septic systems to Sewer

ORDINANCE 857
Regarding the Establishment of a Business Registration and Licensing Program

ORDINANCE 859
Establishing Water-efficient Landscape Requirements
Amended through Ordinance 859.1

ORDINANCE 871
Prohibiting the Installation of Specified Septic Systems in Cherry Valley

ORGANIZATIONAL CHART

1. DEVELOPMENT PLANNING
(SECTION F of ORDER NO. R9-2004-001)

1) **Description of any amendments to the General Plan or the development project approval process:** None

1) **Number of grading permits issued:** 388 within the Santa Margarita Watershed

2) **Number of developments conditioned to meet SUSMP(WQMP) requirements:** See Flood Control Report for projects conditioned and reviewed for SUSMP (WQMP) by the District. Three municipal CIPs were conditions with SUSUMP/WQMP requirements

3) **Attach one example of a development project that was conditioned to meet SUSMP (WQMP) requirements and a description of the required BMPs:** See Flood Control District Report

4) **Description of any updates to the environmental review process:** None, the 2003 General Plan is still in effect.

5) **Description and number of training efforts conducted during the reporting period (for staff, developers, contractors, etc.), including the number of staff trained.**

a) **Training:**

Training	Training Description	Training Dates	Number of Attendees
WQMP	WQMP Training	11/3/08	19
	WQMP Training	5/4/09	11
	WQMP Training	6/8/09	2
		Total	**0**

b) **Summarize the educational and outreach activities the Development Planning Component has conducted over the past year:** [i.e., focused brochures, posters - see Education form (Section I)] Educational Outreach is provided through Riverside County FC&WCD. Kiosks are setup at all TLMA in-take counters where NPDES stormwater information is available. Each Development Project conditioned for approval is required to obtain copies of public education materials, sign an affidavit stating that they will provide stormwater related materials to all property owners. In addition the County and RCFC&WCD keep the general public and the development community informed of all training and educational opportunities through the District website and informational bulletins.

1. DEVELOPMENT PLANNING
(SECTION F of ORDER NO. R9-2004-001)

6) **An assessment of program effectiveness based on the measurable goals established in the Permittee's Individual SWMP:**

   a. Training continues to be a priority with changing technology and increased emphasis on hydromodification and low impact development (LID) as they relate to SUSMP (WQMP) requirements.

   b. Projects that meet the regulatory threshold are conditioned for SUSMP/WQMP

7) **Additional Comments/Information:**

Describe the major accomplishments of the Development Planning Component over the past year. (General Plan or ordinance revisions, procedure/approval process changes, SUSMP guidance material): The Economy has continued to stall, which has effectively curtailed most development over the last 18 months as can be seen by the significant drop off in the number of grading permits issued. Availability of diminishing water resources caused by drought conditions will continue to have an impact on future development for the region. For those projects that have moved through the development process and into the construction phase, emphasis has been on incorporated drought tolerant landscape and water efficient micro-irrigation techniques including the use of smart irrigation controllers. Where recycled water is available infrastructure is being added to accommodate common area landscape.

Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Development Planning Component:

Post construction BMPs installed by developer continue to be inspected by Building and Safety –Environmental Compliance Inspection staff to ensure that they are working as designed and are providing adequate protection of the MS4.

Planned Projects for FY 2009/2010

Facilities Management

1. Southwest Law and Justice Center (Parking Lot Expansion)

WDID #: 9-33C352808

Processing Date: 7/31/2008

WQMP completed: Yes

Project Manager: Nahid Selbe

Comments: Project funded, design phase completed and moving forward to bid award.

Date Project Completed: unknown, to be determined

1. DEVELOPMENT PLANNING
(SECTION F of ORDER NO. R9-2004-001)

2. Glen Oaks Fire Station (On Hold) (Facilities Management)

WDID #:

Processing Date:

WQMP completed: Yes

Project Manager: Dane Winkelman

Comments: Land acquisition completed-, project put on hold pending funding

Date Project Completed: unknown, funding not obtained

3. Lake Riverside Fire Station (On Hold)

WDID #: Pending

Processing Date: Pending

WQMP Completed: No

Project Manager: Real Estate – Burt Presnell

Comments: Land acquisition not yet completed. Further geotechnical study underway.

Date Project Completed: unknown, pending further study

2. CONSTRUCTION
(SECTION G of ORDER NO. R9-2004-001)

1) **Number of inspections conducted:** 508

2) **Number and type of enforcement actions related to construction sites:**

Enforcement and Compliance Responses	Private Projects	Public Projects
Non-monetary Penalties	0	0
Stop Work Authority	28	0
Fines	0	0
Financial Security	0	0
Permit/Certificate of Occupancy Denial	0	0
Referral to SDRWQCB	49	0
Total	**77**	**0**

3) **Description of modifications made to the construction and grading approval process:** The Building and Safety Department construction and grading approval process has not been significantly modified since our last annual report was filed. Standard NPDES Construction Notes are still required to be included on the County approved grading plans for projects with more than one acre of disturbance. Projects with less than one acre of disturbance are still required to install erosion and sediment controls, but not to the same extent as those projects involving more than one acre. The Department still ensures that proof of the filing of a NOI is provided when necessary and that the site WDID is noted.

4) **Description and number of training efforts conducted during the reporting.**

a) **Training:**

Training	Training Description	Training Dates	Number of Attendees
Grading 101 and BMPS	Grading- BMP- 101 class	3/18/09	10
Construction NPDES	Classroom Training	9/4/08	8
Construction NPDES	Classroom Training	10/9/08	8
In Field NPDES training	(one on one) NPDES Field training	10/9/08	8
BIA Construction NPDES	Board Chambers Class Training	1/15/09	30
Flood Control Provided Construction Training	Classroom Training	9/29/08 9/30/08 5/27/09	33 59 24
		Total	**180**

2. CONSTRUCTION
(SECTION G of ORDER NO. R9-2004-001)

b) **Summarize any additional education and outreach activities conducted for project applicants, contractors, developers, property owners, and/or responsible parties in support of the Construction Component:**

Building and Safety: During NPDES construction inspections, staff spent a substantial amount of time meeting with developers, owners. Etc., discussing the educational material that is available for the development of the site specific SWPPPs ad the installation and continued maintenance of site erosion and sediment control measures. In addition our inspection staff spent and additional six, nine hour days training one on one on construction aspects and NPDES related materials with our consultant. Educational materials such as brochures and posters are freely distributed for use and reference by to interested parties to assist with compliance of NPDES rules and regulations. Pre-storm season site inspections are conducted on all single family residential, commercial and tract construction sites in September of each year. In addition the Building and Safety Department spends time with small builders and owner-builders to insure that they understand what BMPs are and give them ample opportunity to meet compliance requirements. This storm season was third year in a row where pre-season storm inspections were conducted. 1176 conducted in 2008. In August 2008 County staff assisted in leading over 200 developers in the area with NPDES training at the Pechanga Indian Resort.

Transportation: The Transportation Department encourages and supports all appropriate staff to attend NPDES Training. In addition to NPDES Construction training, five (5) employees attended training in NPDES Municipal, NPDES Water Quality Management Plan and NPDES Vegetation Management.

EDA/Facilities Management: All construction management staff has received NPDES training in construction management to ensure that municipal construction projects are in compliance with NPDES rules and regulations.

Regional Parks and Open Space District: Planning staff responsible for oversight of municipal construction activities have received the required NPDES training.

5) **An assessment of program effectiveness based on the measurable goals established in the Permittee's Individual SWMP:**

Building and Safety Department: 508construction related NPDES inspections were completed on 157 project sites within the upper portion of the Santa Margarita Watershed. The table below provides the distribution of sites greater than 1 acre that were inspected during the 2008-2009 Storm Season.

Project Type	# of Projects
Single Family Residential > 1 acre	123
Commercial	8
Tracts	27

2. CONSTRUCTION
(SECTION G of ORDER NO. R9-2004-001)

Transportation Department: two (2) construction projects were completed in the Santa Margarita region.

Project Description	Status	Priority	# of Inspections	NOI Submitted	NOT Submitted
Scott Rd Widening	Completed	Medium	11	Oct 2008	Sep 2009
*Winchester Rd (SR79-Thompson Rd to Whisper Rd)	Completed	Low	2	Feb 2008	Aug 2008

* Note: The Winchester Road Project (State Route 79) was under the jurisdiction of the Caltrans NPDES Permit.

The NPDES Construction Inspection Program requires that High priority projects be inspected once every two weeks. Medium priority projects are required to be inspected once each month, and Low priority projects are required to be inspected once during the wet season (October 1st thought May 31st).

6) **Additional Comments/Information:**

- A Decision was made by the Building and Safety Department to utilize County staff to conduct NPDES construction inspection instead of consultant services. Currently there are four fulltime Environmental Compliance Inspectors, two Senior Environmental Compliance Inspectors and one Principle Environmental Compliance Inspector.
- For the 2009-2010 storm season all construction sites will be required to have a storm season meeting prior to grading activities commencing.
- The Transportation Department utilized consultant services, URS Corporation, to conduct NPDES Construction and Municipal Inspections for FY 08/09.

Other Comments

For FY 09/10, URS will continue to assist the Transportation Department with Construction and Municipal Inspections for public road construction activities.

3. MUNICIPAL
(SECTION H.1 of ORDER NO. R9-2004-001)

1) **Number of inspections conducted at existing municipal facilities:** There are currently no EDA-Facilities Management /county owned facilities within the Santa Margarita Watershed that have post construction BMPs as required by a WQMP. Current county owned municipal construction was completed prior to the WQMP requirement. Future projects will require WQMPs and inspection schedules for post construction BMPs. The Department of Environmental Health conducted CAP hazardous materials and UST inspections of county facilities including fleet services and transportation maintenance countywide. Also, Transportation conducts facility inspection though a consultant at all road maintenance yards throughout the County.

2) **Number and type of enforcement actions related to municipal sites:**

Enforcement and Compliance Responses	Number
Education and Information	
Verbal warning	
Written warning	
Other:	
Total	**0**

3) **Number of catch basins and inlets that were inspected and the number that were cleaned:**

Transportation Department	Number Inspected	Number Cleaned
Catch Basins and Inlets	149	149

3. MUNICIPAL
(SECTION H.1 of ORDER NO. R9-2004-001), CONT.

4) **Assessment of the amount and type of debris removed from catch basins, streets, and open channels, including an identification of problem areas that generate the most pollutants:**

Facility	Type of Debris	Amount (tons)	Problem Areas that Generate Most Pollutants
Catch Basin Cleaning Program	Vegetative Litter	5.42	
	Anthropogenic Litter	7.95	
	Sediment	10.62	
	Other man-made debris		
Total		**23.99**	**tons (wet weight)**
Street Sweeping Program	Vegetative Litter	179.02	
	Anthropogenic Litter	59.67	
	Sediment	954.82	
	Other man-made debris		
Total		**1,193.51**	**tons (wet weight)**
Roadside Litter Removal Program	Vegetative Litter		
	Anthropogenic Litter	11.15	
	Sediment		
	Other man-made debris		
Total		**11.15**	**tons (wet weight)**
Code Enforcement Clean Up Program	Vegetative Litter	469.19	
Total		**469.19**	**tons (wet weight)**
	TOTAL	**1696.84**	**tons (wet weight)**

00003656

3. MUNICIPAL
(SECTION H.1 of ORDER NO. R9-2004-001), CONT.

5) **Assessment of effectiveness of BMPs that have been implemented for municipal facilities and activities:**

BMP Code	Description	Used	Notes
SC-10	Non-Stormwater Discharges	☐ Yes ☐ No	N/A
SC-11	Spill Prevention, Control and Clean-up	☒ Yes ☐ No	Transportation, Fleet Services, Waste Mgmt

SC-76	Water and Sewer Utility Maintenance	☐ Yes ☐ No	N/A

Assessment of the effectiveness of BMPs that have been implemented for municipal facilities and activities.

Applicable departments have facility pollution prevention plans that include BMPs that are managed by each site.

00003657

3. MUNICIPAL
(SECTION H.1 of ORDER NO. R9-2004-001), CONT.

6) **Description and number of training efforts conducted over the last year (for municipal facility operators and/or inspectors).**

a) **Training:**

Training	Training Description	Training Dates	Number of Attendees
Municipal	Municipal Training	11/6/08	10
	Municipal Training	11/18/08	4
	Municipal Training	5/5/09	9
	Municipal Training	5/26/09	14
		Total	**37**

b) **Summarize the internal and external education and outreach activities the Municipal Component has conducted over the past year:** Staff attended the municipal training provided by Flood Control.

7) **An assessment of program effectiveness based on the measurable goals established in the Permittee's Individual SWMP:**

Storm drain inspections and cleaning were conducted during the dry season for FY 08/09 in Santa Margarita Region as required by the MS4 Permit.

The Catch Basin Cleaning & Inspection Crew documented all inspections and cleanings. The Catch Basin Cleaning & Inspection Crew removed approximately 23.99 tons of litter of which 7.95 tons were anthropogenic littler, 5.42 tons were vegetative litter and 10.62 were sediment littler. Dump tickets were collected to verify projected weight of debris removed from storm drains.

In addition, each district Road Maintenance Supervisor and Assistant Supervisor visually inspects pipes and various storm drains such as catch basins, inlets, outlets, culverts, swales and channels frequently. Special attention is paid to the storm drains located within traditional or known problem areas.

8) **Additional Comments/Information:**

Describe the major accomplishments of the Municipal Component over the past year:
The Transportation Department hired a consultant to update the Stormwater Prevention Pollution Plans for all municipal facilities in the Department. Best Management Practices (BMPs) were implemented.

3. MUNICIPAL
(SECTION H.1 of ORDER NO. R9-2004-001), CONT.

Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Municipal Component:

Yearly assessments will continue to be conducted by the Transportation staff and the consultant (URS) for our Municipal Sites. Additionally, staff will continue to update the database that was developed to capture data for catch basin inspections and cleaning.

Transportation Department: Continue education and training for all appropriate staff to insure that appropriate BMPs are used at all municipal facilities.

EDA/Facilities: Continue education and training for all appropriate staff to insure that appropriate BMPs are used at all municipal facilities.

Parks and Open Space District: Continue education and training for all appropriate staff to insure that appropriate BMPs are used at all municipal facilities.

Other comments

4. INDUSTRIAL/COMMERCIAL
(SECTION H.2 of ORDER NO. R9-2004-001), CONT.

1) **Number of inspections conducted:**

Category	Number of Inspections By Building & Safety	Number of CAP Inspections By Environmental Health*
Industrial Facilities	**28**	**77**
High Priority Facilities	14	18
Medium Priority Facilities	9	55
Low Priority Facilities	5	4
Commercial Facilities	**577**	**328**
High Priority Facilities	91	55
Medium Priority Facilities	181	58
Low Priority Facilities	305	216
Total	**605**	**406**

*This is a transition year. In future years CAP inspections by Environmental Health will only be done in the cities that lack an inspection programs.

2) **Number and type of enforcement actions taken:**

Enforcement and Compliance Responses	Industrial	Commercial
Non-Monetary Penalties	8	11
Fines		
Bonding Requirements		
Permit Denial		
Referral to SDRWQCB	0	3
Total	**0**	**3**

4. INDUSTRIAL/COMMERCIAL
(SECTION H.2 of ORDER NO. R9-2004-001), CONT.

3) **Description and number of training efforts conducted over the last year (for industrial/commercial facility operators and/or inspectors).**

a. **Training:**

Training	Training Description	Training Dates	Number of Attendees
Special/Detailed Training-Building + Safety Staff	Inspection training specifically for Industrial/ Commercial NPDES Inspections	8/7/08	8
Special/Detailed Training-Building + Safety Staff	Inspection training specifically for Industrial/ Commercial NPDES Inspections	8/13/08	8
Special/Detailed Training-Building + Safety Staff	Inspection training specifically for Industrial/ Commercial NPDES Inspections	8/20/09	8
EPA Teleconference	NPDES Industrial Permit	11/5/09	2
CASQA Conference	Stormwater Related Issues Presnetation on Commercial NPDES Inspections	9/22/09	1
Environmental Health CAP Training (DES & HAZMAT)	Annual Refresher Training	6/2/09	72
		Total	**97**

4) **An assessment of program effectiveness based on the measurable goals established in the Permittee's Individual SWMP:** The County of Riverside Industrial/Commercial NPDES Inspection Program is approximately one year old. We have completed 605 NPDES Industrial and Commercial inspections.. At every inspection education and outreach is performed with educational information left for businesses. The CAP program is in transition, the county area is inspected by Building and & Safety Environmental Compliance Inspectors. The cities still rely on the CAP program provided by Environmental Health to meet their compliance inspection requirement if they don't already have a stand-alone program in place.

5) **Additional Comments/Information:**

Describe the major accomplishments of the Industrial Component over the past year: The major accomplishment for the combined Industrial/Commercial Component this past year

4. INDUSTRIAL/COMMERCIAL
(SECTION H.2 of ORDER NO. R9-2004-001), CONT.

was the continued registration of approximately 12,000 businesses located in the unincorporated area of Riverside County. Environmental Health Department conducted Industrial/Commercial NPDES inspections in incorporated areas, and Building and Safety conducted 605 inspections in un-incorporated areas.

Summarize the internal and external education and outreach activities the Industrial Component has conducted over the past year: The combined Industrial/Commercial internal, external educational and outreach activities centered around the training and readying of Environmental Compliance staff for beginning the Industrial/Commercial NPDES Inspections. Environmental Complianc inspectors have undergone over 40 hours of hands on and in class room training on NPDES Industrial and Commercial requirments, and how to's for performing these inspections.

Summarize the internal and external education and outreach activities the Commercial Component has conducted over the past year: We plan on continuing with initial site inspections until all businesses have been evaluated.

Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Industrial Component: Due to the fiscal crisis and reduction in workforce it will be a struggle to maintain the level of service provided in the previous years.

Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Commerical Component: The transition from a survey program that was based upon the Department of Environmental Health inspection to a more comprehensive and focused NPDES/stormwater specific inspection program by the Department of Building and Safety should increase awareness of the program to the regulated businesses throughout the unincorporated portions of the county.

Other comments

5. RESIDENTIAL
(SECTION H.3 of ORDER NO. R9-2004-001)

1) **A description of residential areas that were focused on during the past year:**

Flood Control District: The flood Control District provides various opportunities for public education throughout the year as well as follow-ups on complaints that are located within their right of way. See Flood Control and Water Conservation District Report

Code Enforcement: Community Improvement Programs, Community Cleanup activities, Code complaint investigations and enforcement actions,

Waste Management Department: Household hazardous waste community collection program for disposal of household generated hazardous waste such as paint, pesticides, batteries, solvents, universal waste, used oil, coolant, and other hazardous materials.

2) **Number and type of enforcement actions taken:**

Enforcement and Compliance Responses	Public Projects
Education and information	See Flood Control Report
Verbal Warning	
Written Warning	
Notice of Non-Compliance (illegal grading activities)	327
Administrative Compliance Order	
Misdemeanor	
Infraction	
Citation	
Referral to SDRWQCB	
Total	**0**

3) **An assessment of program effectiveness based on the measurable goals established in the Permittee's Individual SWMP:** The Countywide Household Hazardous Waste Collection Program has achieve significant success in diverting hazardous materials from being illegally dumped and ending up in the local landfills and providing easy access to the public with three regional HHW collection centers and opportunities at selected locations for mobile collection events in rural communities. This program has significantly reduced the amount of illegal dumping of household hazardous waste.

RESIDENTIAL
(SECTION H.3), CONT.

The Code Enforcement Department continues to be successful with their community policing program and use of the community improvement planning efforts. These programs help reduce illegal disposal and blight, and provide the public a sense of community and an opportunity to get involved. Significant volumes of trash and debris have been collected through the efforts of community cleanup days. See totals in Section 3.

4) **Additional Comments/Information:**

Describe the major accomplishments of the Residential Component over the past year:
Although outside of the Santa Margarita Watershed, a new full service HHW facility was constructed in the City of Palm Springs. Residents from throughout the county have access to all County Waste Management HHW sites.

Summarize the internal and external education and outreach activities the Residential Component has conducted over the past year: See Flood Control District Report for community educational activities.

Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Residential Component: Continue community oriented code enforcement activities that focus on reducing blight and illegal dumping on vacant land. See newsletter in attachments section

Educational information and written notice of violation and other enforcement tools will be utilized to insure residents are in compliance with stormwater and landscape ordinances.

Other comments None.

6. EDUCATION
(SECTION I of ORDER NO. R9-2004-001)

1) **Description of education efforts conducted by the Permittee (not collectively with other Permittees) during the previous year:**

Audience	Measures
Permittee Departments and Personnel	Number of Permittee employees trained for: ***See Flood Control Report for additional detail.*** • Construction Inspection: 64 • Industrial/Commercial Inspection: 605 • Municipal Facilities and Activities: 0 • Development Planning: 0
Construction Site Owners and Developers	Outreach events conducted: ***See Flood Control Report***
Industrial/Commercial Owners and Operators	Industrial/Commercial outreach events conducted: ***See Flood Control Report***
Residential Community, General Public, Other Public Agencies and Students	Number of Media Impressions in: ***See Flood Control Report*** • Newspaper: • Mailings: • Radio/TV: • Billboards: • Other: • Materials: Number of classroom presentations: Public Education events conducted:

2) **Assessment of overall program effectiveness based on the measurable goals established in the Permittee's Individual SWMP:** ***See Flood Control Report for details***

3) **Additional Comments/Information:**

Describe the major accomplishments of the Education Component over the past year:
See Flood Control Report

6. EDUCATION
(SECTION I of ORDER NO. R9-2004-001)

Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Education Component: County departments' partner with the Riverside County Flood Control and Water Conservation District on all educational opportunities and share cost and time at community events with their "Only Rain in the Drain" campaign.

Other comments

7. ILLICIT DISCHARGE DETECTION AND ELIMINATION
(SECTION J of ORDER NO. R9-2004-001)

1) **Number of illicit discharges, connections and spills reported and/or identified during the reporting period:**

   a) **Illicit Discharges (ID):** 33 illegal dumping which involved hazardous materials, tires, green waste, construction debris and household waste.
   b) **Illicit Connections (IC):** 18 pool discharges and filter cleaning directed toward storm drain.
   c) **Spills (S):**

As IC\IDs are identified follow-up investigations are initiated and as appropriate progressive enforcement action is taken to ensure abatement of conditions. In difficult cases and need for additional regulatory authority RWQCB staff and other regulatory agencies are notified for assistance.

2) **Number of illicit discharges or connections investigated during the reporting period and the outcome of the investigations:** See 1above .

Type	Category	Substance	Outcome of Investigation
ID	Residential	Oil/Grease	
ID	Residential	Oil/Grease	
ID	Residential	Oil/Grease	
ID	Residential	Oil/Grease	
ID	Residential	Oil/Grease	
ID	Residential	Oil/Grease	

3) **Number and types of enforcement actions taken for illicit discharges or connections during the reporting period:**

Enforcement and Compliance Responses	Private Facilities	Public Facilities
Non-monetary penalties (cleanup and abatement)	51	
Stop work authority (illegal grading)	327	
Fines

9. FISCAL ANALYSIS COMPONENT

Fiscal Analysis Component - each Permittee shall include an annual fiscal analysis, for each fiscal year covered by Order No. R9-2004-001, in its Individual Annual Report. This analysis shall evaluate the expenditures (such as capital, operation and maintenance, education, and administrative expenditures) necessary to accomplish the activities of the Permittee's Individual SWMP. The analysis shall include the following:

1) **A report of the previous reporting period's budget and a budget for the upcoming reporting period. To the extent possible, the budgets should be broken down by the following programs:**

Program Element	Fiscal Year 2007-2008		Fiscal Year 2008-2009	
	Capital Expenditures	O&M/Admin Expenditure	Capital Expenditures	O&M/Admin Expenditure
Program Management		853,000		785,000
Annual Fee for MS4 NPDES Permit		40,00		40,000
Implementation Agreement Shared Cost		190,000		150,000
Construction Inspections		485,000		485,000
Development Planning		30,000		30,000
Industrial and Commercial Inspections		175,000		175,000
Illicit Connections & Illegal Discharges Program		1,610,000		1,625,000

The annual budget for 07/08 reflected an 8% reduction in general fund dollars. The annual County Budget for 09/10 will reflect a 10% cut across all general fund departments with an

9. FISCAL ANALYSIS COMPONENT

(CONT.)

additional 7-10% reduction proposed for FY10/11. This will put the general funding available to NPDES/Stormwater activities back to FY 04/05 levels. With the inclusion of 26 mandatory furlough days, layoffs, and early retirement; less general fund dollars, time and staff will be available to accomplish the same workload. * Direct cost only, this does not include ancillary costs in combination with related program activities, which is estimated at between $17-$18 million. The estimated immediate loss in revenue due to property tax reassessments and State of California take backs for FY09/10 is $150 million.

2) **A description of the source(s) of funds that were utilized during the previous fiscal year and the source(s) of funds proposed to meet the necessary expenditures for the subsequent year, including legal restrictions on the use of such funds.**

Source of Funds	Capital Expenditures	Percent of Program Funding	Restrictions on Use (if applicable)
General fund (TLMA, EDA, Facilities Management, Environmental Health, Executive Office (EO), Parks District)		33% (supplemented by EO General Fund budget) 67% from Departmental General Fund budgets)	NPDES fund designations within budget units. Catch basin cleanouts, MS4 mapping, roadside litter removal, IC/ID inspections
GAS Tax, FEMA		<1%	Storm related damage to MS4 within Transportation Dept jurisdictional control
Assessments		100%	Street sweeping
Contract obligations (Waste Hauler Street Sweeping)		100%	Street sweeping
Business Licensing/Industrial Commercial NPDES inspection (fee neutrality)		50% 50% general fund support	Industrial/Commercial NPDES inspections (inspection fee-hourly rate) regulated business community only
Developer Fees (developer cost) * 50% reduction for FY 09/10		100%	Project Specific inspections for erosion and sediment control
WQMP Review (developer cost)		100%	Project Specific

9. FISCAL ANALYSIS COMPONENT

(CONT.)

3) Additional Comments/Information:

Overall, the direct and indirect cost for program implementation of NPDES related activities are in the range of $17,000,000-18,000,000 countywide. Program costs continue to increase while revenues and taxes are decreasing. Each watershed requires additional quantification of activities, tracking and need for funding with no additional projected income foreseen. In this period of economic recession, general fund dollars are diminishing with a projected 20% decrease anticipated in the County's general fund for the next 3 years. It is imperative that the County continues to closely monitor and contain program costs and work with the three Regional Boards to ensure economic considerations are taken into account when planning any new program requirements.

10. NON-STORM WATER DISCHARGES

Permittees shall report on any discharge category listed in Requirement B.2 of Order No. R9-2004-001 that was identified as a source of pollutants during the reporting period. For each identified category, the Permittee shall report whether it elected to prohibit the discharge or to require BMPs to reduce pollutants in the discharge to the MEP. If the discharge is not prohibited, the BMPs that will be implemented, or required to be implemented, shall be described in each Permittee's Individual SWMP Annual Report.

Category	Prohibited	BMP to be Implemented
Diverted stream flows	☐ Yes ☐ No	Not Applicable
Rising ground waters	☐ Yes ☐ No	Not Applicable
Uncontaminated ground water infiltration [as defined at 40 CFR 35.2005(20)] to MS4s	☐ Yes ☐ No	Not Applicable
Uncontaminated pumped ground water	☐ Yes ☐ No	Not Applicable
Foundation drains	☐ Yes ☐ No	Not Applicable
Springs	☐ Yes ☐ No	Not Applicable
Water from crawl space pumps	☐ Yes ☐ No	Not Applicable
Footing drains	☐ Yes ☐ No	Not Applicable
Air conditioning condensation	☐ Yes ☐ No	Not Applicable
Flows from riparian habitats and wetlands	☐ Yes ☐ No	Not Applicable
Water line flushing	☐ Yes ☐ No	Not Applicable
Landscape irrigation	☒ Yes ☐ No	Ordinance 859.1
Discharges from potable water sources not subject to NPDES Permit No. CAG679001, other than water main breaks	☐ Yes ☐ No	Not Applicable
Irrigation water	☐ Yes ☐ No	Not Applicable
Lawn watering	☒ Yes ☐ No	Ordinance 859.1
Individual residential car washing	☐ Yes ☐ No	Not Applicable
Non-emergency fire fighting flows	☐ Yes ☐ No	Not Applicable
Dechlorinated swimming pool discharges	☐ Yes ☐ No	Educational materials, progressive enforcement for illegal discharges of pool water (chlorinated or algae laden)

1) **Additional Comments/Information:** Landscape Ordinance 859.1 in effect as of 4/25/20

0003675

11. RECEIVING WATER LIMITATIONS

This section includes the report required pursuant to Requirement C.2.a. of Order No. R9-2004-001, if applicable.

Requirement C.2.a. states:

"Upon a determination by either a Permittee or the SDRWQCB that MS4 discharges are causing or contributing to an exceedance of an applicable water quality standard, the Permittee shall promptly notify and thereafter submit a report to the SDRWQCB that describes BMPs that are currently being implemented and additional BMPs that will be implemented to prevent or reduce any pollutants that are causing or contributing to the exceedance of water quality standards. The report may be incorporated in the SWMP Annual Report unless the SDRWQCB directs an earlier submittal. The report shall include an implementation schedule. The SDRWQCB may require modifications to the report;"

See Flood control and Water Conservation Report.

The County relies on the Flood Control and Water Conservation District to conduct water quality monitoring. The District advises the permittees of any pollutants of concern that have been identified and corrective actions are taken through a cost share agreement. This process is evolving and requires additional work. Flood Control staff have transitioned out of the program and new staff are being trained. In addition, a sub contractor is being brought on to perform a revised monitoring program that will enhance monitoring and enforcement for IC/ID which ultimately will be more protective of water quality.

12. ADDITIONAL URBAN RUNOFF DATA

This section is a summary of all urban runoff related data not included in the annual monitoring report (e.g., special investigations).

See Flood Control Report for monitoring and data analysis.

13. PROPOSED REVISIONS

This section includes proposed revisions to the Individual SWMP, including areas in need of improvement based on the assessment of effectiveness of each program component.

1) The cities of Wildomar and Menifee will be reporting their respective jurisdictional areas in future reports. The City of Menifee has approximately 60,000 residents that live in a 50 square miles area of which less than 5% is in the Santa Margarita watershed. The City of Wildomar has approximately 23,000 residents in a 24 square mile area with approximately 60 % in the Santa Margarita watershed. All MS4 infrastructure managed by the TLMA in these two jurisdictions has been transferred. All plan check and new development review is the responsibility of the cities.

2) GIS mapping continues to evolve as data sets become more refined. Improved mapping and data management capabilities will increase effectiveness for BMP cataloging and long term operation & maintenance.

3) Consistency of MS4 permits between Regional Boards (Santa Ana, San Diego and Colorado) that take into consideration inland valley arid and semi-arid conditions of the region (not coastal issues) would be less confusing and provide for programmatic uniformity and help with the County's attempt to comply with the ever increasing regulatory burden.

4) Due to budget issues cost containment must be taken into consideration for continued program implementation. The voting public will not tolerate increases in fees and/or taxes to support increased non-science based program initiatives.

BACKGROUND

The Transportation Department's NPDES activities for Fiscal Year (FY) 08/09 included the Roadside Litter Removal Program, Catch Basin Inspection & Cleaning Program, Code Enforcement Clean up Program, and the enhancement to the integrated approach in the continued development of the MS4 map.

The Roadside Litter Removal Program has a crew of seven (7) employees that provides roadside clean up efforts. The funding for this Program is provided by each of the five Supervisorial Districts within the County. The crew collects roadside litter from ten (10) linear miles of designated roadways in each of the five Supervisorial Districts. Ten (10) linear miles are cleaned on a rotating basis, allowing for problems areas to be re-addressed every ten (10) weeks. Cumulatively, this program cleans approximately 60 linear miles quarterly. This effort has proven successful in reducing the amount of debris and anthropogenic litter entering the storm drains, nearby streams and waterbodies within the different watersheds. Roughly, 33.75 road miles were cleaned in the Santa Margarita watershed, and approximately 11.15 tons of anthropogenic litter was removed under this program for FY 08/09.

The Catch Basin Inspection & Cleaning Program has a crew of five (5) employees. The funding for this Program is provided by the County Executive Office. This Program performs inspection and maintenance on all storm drainage facilities maintained by the County of Riverside. The crew inspects and maintains catch basins, inlets, outlets, culverts, channels, swales and detention/retention basins to ensure maximum storm water diversion from rights-of-way, while simultaneously maintaining the National Pollutant Discharge Elimination System standards. For FY 08/09, approximately 7.95 tons of anthropogenic litter, 5.42 tons of vegetative litter, and 10.62 tons of sediment litter were removed from the Santa Margarita watershed under this Program.

The Code Enforcement Clean up Program has three crews totaling seventeen (17) employee positions. The funding for this Program is provided by Code Enforcement Department. The crew carries out wide-ranging clean ups. The Santa Margarita watershed falls within Supervisorial District 1 and 3. For FY 08/09, the approximate tonnage of litter removed from each Supervisorial District is summarized in the following table:

Supervisorial District	Tons of Litter Removed
District 1	230.17
District 3	239.02
Total	**469.19**

ROAD REPAIR AND STREET SWEEPING

For FY 08/09, the Transportation Department received a total of 1292 complaint calls countywide for general road repair and maintenance, of which a total of 106 complaints were within the Santa Margarita Region involving the following issues:

Type of Complaint	Number of Complaints
a. Flooding-road shoulder, ditch damage	0
b. Ditches gutter, culvert drains, clean out	3
c. Drainage low spots, ponding floods	1
d. Mud gravel, dirt, rock, snow, swept/cleared	6
e. Trash, debris, object removed or cleared	10
f. Trees, palm fronds and branches	11
g. Weed, grass, brushes and tumbleweeds	8
h. Graffiti	0
i. Potholes or large holes	14
j. Improvements, grading paving & resurfacing	52
k. Road sidewalk, curb gutter damage & repair	1
Total	**106**

Currently, all streets in County Service Area (CSA) 152 are swept. New development projects within the County (with curb and gutter) are required to annex into CSA 152 in order to receive street sweeping services. These services are contracted out and roadways are swept at least once a month, and in some cases more frequently. Whenever possible, the Department has increased the frequency of street sweeping to twice a month. During FY 08/09, a total of 14,376 curb miles were swept. In comparison to last fiscal year, FY 07/08, a total of 13,398 curb miles were swept, which represents a 7.30% increase.

The amount of debris removed from street sweeping activities decreased this year. For last FY 07/08, approximately 1,548 tons of debris were removed from streets, in comparison to this FY 08/09, approximately 1,193 tons of debris were removed. It represents 22.93% decrease in amount of debris removed. In general, for FY08/09 less anthropogenic, vegetative and sediment littler were removed from street sweeping activities.

FISCAL EXPENDITURES FOR FY 08/09

Expenditures for NPDES activities include Municipal Inspections, MS4 Mapping, Catch Basin Inspection, Monitoring & Cleaning Program and Code Enforcement Clean Up Program & Roadside Litter Removal Program. Future costs are expected to increase as the program expands. The following table summarizes the NPDES program expenditures funded by the County General Funds and other related activities and fund sources:

Program/Activity	Funding Source	FY 08/09 Expenditures
Overlay, Sealing	Gas Tax	$3,482,891
Storm Damage	Gas Tax, FEMA	$11,044
Municipal Inspections	General Funds	$13,652
MS4 Mapping	General Funds	$347,729
Catch Basin Inspection, Monitoring & Cleaning Program	General Funds	$430,513
Street Sweeping CSA 152	County Assessment Area 152	$556,448
Street Sweeping (Non-CSA 152)	Waste Haulers (ISS Sweeping)	$161,790
	Environmental Health (Burrtec Waste Industries, Inc.)	$71,376
Code Enforcement Clean Up Program & Roadside Litter Removal Program	Code Enforcement, General Funds	$1,625,000

TRAINING

The Transportation Department is very supportive of NPDES training. A total of sixty-eight (68) Transportation staff attended NPDES training offered by Flood Control during FY 08/09. In addition, one (1) employee attended the California Stormwater Quality Association (CASQA) Annual Conference.

ILLICIT CONNECTION/ILLEGAL DISCHARGE (IC/ID)

The Riverside County Transportation Department, as part of its normal duties, conducts routine maintenance of the storm drain facilities. The Highway Operations Division provides the County with coverage concerning illegal connections or illegal discharges within the storm drain systems such as inlets, outlets, culverts, swales and channels which ultimately make their way to facilities owned by Riverside County Flood Control District. The Transportation Department District Road Maintenance Supervisors and Assistant Supervisors visually inspect the storm drain infrastructure on a regular basis as part of their daily routine. They look for evidence of illegal discharge or illicit

connections. They pay close attention to facilities located within areas of concern, or areas that historically have had issues. This could involve areas where illegal dumping has occurred or other maintenance issues need to be addressed, which would require additional follow-up. These issues could necessitate additional assistance from the County illegal dumping cleanup programs and/or Code Enforcement investigation.

The Transportation Department Permit Engineer also sends a letter to property owners that encroach upon County right-of-way with illegal connections or other obstructions, and if needed is reported to Code Enforcement. The Permit Engineer is responsible for reviewing encroachment applications along County road right-of-way. If the illegal connection is not remedied in a timely manner, it is removed by the County and billed to the owner of the property.

In summary, for FY 08/09, Code Enforcement supervised the following three (3) types of illicit discharges, connections and spills:

a. There were 327 cases of illegal grading or grading without permit in which 88 are currently opened and 239 are closed. They were discharge of soil and sediments.

b. There were 33 cases of illegal dumping in which 5 are currently opened and 28 are closed. They were a variety of materials from hazmat, tires, green waste, construction debris, and household waste.

c. There were 18 NPDES investigations in which 4 are currently opened and 14 are closed. The NPDES violations were for illegal pool water discharges and the cleaning of pool filters into gutters.

MAINTENANCE STORMWATER POLLUTION PREVENTION BULLETIN

Issue 2 - August 2009

Handling and Storage of Liquid Wastes

Improper storage and handling of liquid wastes can allow oils and greases, heavy metals, nutrients, toxic substances and other pollutants to enter stormwater runoff. Help prevent the discharge of pollutants by:

» Reducing and tracking waste generation, storage and disposal;

» Properly handling and storing wastes; and

» Preventing run-on to and runoff from storage areas.

By implementing the following Best Management Practices (BMPs), you can help prevent pollution.

Managing Waste Generation

» Reduce waste generated by minimizing the amount of material stored onsite; using the most efficient method and equipment for the job; and considering the use of the most non-toxic material.

» Establish a material tracking system to increase awareness about materials usage and waste generation.

» Recycle materials whenever possible.

General Liquid Storage Practices

» Prevent waste materials from directly contacting stormwater. Cover storage areas with a permanent roof and always cover containers with secured, spill-proof lids.

» Place storage containers on secondary containment pallets.

» Prevent stormwater run-on from entering the waste storage area by enclosing the area or building a berm around it.

» Use drip pans or absorbent materials whenever oil or grease containers are emptied.

» Check storage containers weekly for leaks and spills and to ensure that lids are properly secured.

» Inspect, repair, and replace faulty pumps, valves, lines, seals, or hoses regularly to minimize the potential of releases and spills.

» Replace any containers that are leaking, corroded, or otherwise deteriorating.

» Sweep and clean the storage area regularly. Do not hose down the area.

» Dispose of rinse and wash water from cleaning waste containers into a sanitary sewer if allowed by the local sewer authority.

» Take special care when loading and unloading liquid wastes to minimize drips and spills.

» Do not mix wastes! Mixing wastes may cause chemical reactions, make recycling impossible, and complicate disposal.

Good Housekeeping

» Use all of a product before disposing of the container.

» Keep the waste storage area clean at all times by sweeping and cleaning up spills immediately.

» Stencil storm drains on the facility's property with a prohibitive message regarding waste disposal (e.g. "Only Rain Down the Storm Drain").

Liquid Hazardous Wastes

» Examples of liquid hazardous wastes include wastes generated from the use of petroleum products, wood preservatives, concrete curing compounds, asphalt products, pesticides, paints, and solvents.

» Hazardous wastes must be stored in sealed containers constructed of a suitable material in compliance with fire and hazardous waste codes and labeled with the waste being stored and the date of accumulation.

» Store hazardous waste only in the designated on-site hazardous waste storage area.

» Place all hazardous waste containers in secondary containment.

» Provide sufficient separation between stored containers to allow for spill cleanup and emergency response access.

» The hazardous waste storage area should be roofed and curbed or diked to provide a spill containment volume equal to 10% of the combined volume of all containers or 110% of the capacity of the largest container, whichever is greater.

» The hazardous waste storage area should be impervious to the stored substances (if spilled) for a minimum contact time of 72 hours.

» The hazardous waste storage area should be maintained free of accumulated rainwater and spills. In the event of spills or leaks, accumulated rainwater and spilled substances should be placed into drums and handled as a hazardous waste unless laboratory analytical testing determines it to be non-hazardous.

» Ensure that hazardous waste is collected, removed, and disposed by licensed and permitted hazardous waste transporters and disposal facilities utilizing properly completed Uniform Hazardous Waste Manifests.

If you have any doubt about proper handling and storage of a waste ask your District Supervisor.

Remember, pollution prevention begins with you.

MAINTENANCE STORMWATER POLLUTION PREVENTION BULLETIN

Issue 3 - September 2009

Handling and Storage of Solid Wastes

Properly implemented solid waste management practices help prevent and reduce stormwater pollutants such as sediment, paper, plastics, green waste, oils and greases, and metals such as lead, copper, zinc, etc. Solid waste management practices include:

» Providing designated waste storage areas and containers

» Properly maintaining designated waste storage areas and containers; and

» Arranging for regular disposal

Posting of waste disposal guidance charts in multiple locations may be helpful. Such a chart lists a waste's hazardous nature (toxic, corrosive, ignitable, reactive), prohibitions on its disposal, and the recommended disposal method (recycle, sanitary sewer, landfill, etc.).

Implement the following Best Management Practices (BMPs) to help prevent the release of pollutants to stormwater.

General BMPs for Solid Waste Storage

» Provide adequate solid waste containers for waste generated.

» Arrange for regular waste collection; increase waste collection frequency or number of dumpsters, if necessary.

» Locate solid waste storage areas at least 50 feet from storm drains and watercourses and away from areas prone to flooding or ponding.

» Cover solid waste containers, dumpsters and trash receptacles at all times to prevent wind-blown debris.

» Regularly inspect solid waste containers for damage to prevent waste from escaping through holes or cracks in the container.

» All waste piles should be covered (e.g., tarp)

» Prevent stormwater run-on from contacting stored solid waste by installing and maintaining berms, dikes or other diversion structures or by elevating the waste off the ground.

» Ensure that only appropriate solid wastes are added to a solid waste container—hazardous wastes must not be placed in regular trash dumpster.

» Inspect and sweep/clean the solid waste storage area regularly, but do not hose down the area to a storm drain.

» Do not hose out dumpsters or other waste containers; leave dumpster cleaning to the trash hauling contractor.

Green Waste BMPs

» Do not dispose collected green waste into waterways or storm-water drainage systems.

» Securely cover green waste not stored in watertight dumpsters with tarps to protect against wind and rain.

» Salvage or recycle useful vegetation debris. For example, cut trees and shrubs can be converted into wood chips and used as mulch.

Controlling Litter

» Post "No Littering" signs and enforce compliance.

» Provide sufficient covered litter receptacles in appropriate locations.

» Empty litter receptacles frequently to prevent overflow and windblown litter.

Solid Hazardous Wastes

» Examples of solid hazardous wastes include soil, absorbents, and rags containing petroleum-based substances (oil, diesel, gasoline etc.); fluorescent light bulbs; lithium or lead-containing batteries; cathode ray tubes found in televisions and computer monitors; and mercury-containing devices such as thermostats, thermometers, electric switches, and relays.

» Do not mix wastes! Segregate solid hazardous waste from solid non-hazardous waste.

» Ensure that adequate solid hazardous waste storage is available,conveniently located, and away from storm drains, watercourses, and moving vehicles.

» Store solid hazardous waste only in a designated solid hazardous waste storage area. Do not allow potentially hazardous wastes to accumulate directly on the ground.

» Solid hazardous wastes must be stored in sealed containers constructed of a suitable material in compliance with fire and hazardous waste codes and labeled with the waste being stored and the date of accumulation.

» Ensure that solid hazardous waste is collected, removed, and disposed by licensed and permitted hazardous waste transporters and disposal facilities utilizing properly completed Uniform Hazardous Waste Manifests.

If you have any doubt about proper handling and storage of a waste ask your District Supervisor.

Remember, pollution prevention begins with you!

MAINTENANCE
STORM WATER POLLUTION PREVENTION BULLETIN

Issue 1 - July 2009

Spill Prevention, Control and Cleanup

Spills and leaks are one of the largest contributors of stormwater pollutants. Help prevent the discharge of pollutants to drainage systems and surface waters by reducing the chance for spills, stopping the source of spills, containing and cleaning up spills, and properly disposing of spilled materials. By implementing the following Best Management Practices (BMPs), you can help prevent the discharge of pollutants into the environment.

Spill Prevention and Control

» Keep storage areas clean, well organized, and equipped with ample cleanup supplies.

» Sweep storage areas monthly if it is paved - do not hose down the area to a storm drain.

» Check tanks daily for leaks and spills.

» Store and contain liquid materials in such a way that the contents of a ruptured tank or container will not discharge, flow, or be washed into the storm drainage system, surface waters, or groundwater.

» Place drip pans or absorbent materials beneath all mounted taps, and at all potential drip and spill locations during filling of and dispensing from tanks. Properly dispose of all collected liquids and soiled absorbent materials immediately. Do not leave full drip pans or other open containers lying around.

» Oil filters disposed in trashcans or dumpsters can leak oil and pollute stormwater. Place oil filters in a funnel over a waste oil-recycling drum to drain excess oil before disposal or recycling.

» Store cracked batteries in a covered, non-leaking secondary container. If a battery is dropped, treat it as if it is cracked and place in a containment area until certain it is not leaking.

» Regularly inspect onsite vehicles and equipment for leaks and repair them immediately.

» Repair or replace perimeter controls, containment structures, covers, and liners as needed to maintain their proper function.

Cleanup

Minor Spills

Minor spills typically involve small quantities of oil, gas, paint, etc. which can be controlled by the first responder at the discovery of the spill. If you are the first to detect the spill:

» Contain the spread of the spill.

» Clean the contaminated area by using absorbent materials rather than hosing it down or burying the spill.

» Promptly and properly dispose of contaminated materials.

Semi-Significant Spills

Semi-significant spills can be controlled by the first responder with the assistance of other personnel and may require all other activities to be temporarily discontinued. To control and clean up this type of spill:

» Contain the spread of the spill.

» Notify your supervisor.

» If the spill occurs on a paved surface, immediately contain it by encircling it with absorbent materials. Use "dry" methods such as absorbent materials, cat litter and/or rags for clean up.

» If the spill occurs in an unpaved area, immediately contain it by constructing an earthen dike. Dig up and properly dispose of the contaminated soil.

» If the spill occurs during a rain event, contain and block storm drains (if any) and then cover the spill with a tarp or other material to prevent runoff contamination.

Significant/Hazardous Spills

For significant or hazardous spills that cannot be controlled by properly trained personnel in

the immediate vicinity, take the following steps:

» Notify the local emergency response (911) and your District Road Maintenance Supervisor.

» If necessary, the District Road Maintenance Supervisor will notify the County Fire Department and/or the County Department of Environmental Health (HazMat).

» Notification must be made by telephone immediately (within 24 hours of discovery) and followed up with a written report.

» The services of a spills contractor or a Haz-Mat team should be obtained immediately. Road maintenance staff should not attempt to clean up the spill until appropriate and qualified personnel have arrived on site.

» Other agencies may also need to be notified. Speak to your District Road Maintenance Supervisor for guidance.

Remember, pollution prevention begins with you.

BUILDING & SAFETY DEPARTMENT

BUSINESS REGISTRATION AND LICENSING PROGRAM

In November 2006, the Riverside County Board of Supervisors approved Ordinance No. 857 creating a Business Registration and Licensing Program. The ordinance requires that businesses within the unincorporated area of Riverside County obtain a business license. The ordinance includes information regarding the contents of the application form, license issuance protocol, description of license fee, license inspections, water quality inspections and enforcement, and business license enforcement procedures.

The ordinance requires all businesses to register; however, some businesses are exempt from paying fees. Fee exemptions will be granted for various agricultural activities, certain residential businesses, places of worship, specific non-profit, and any business exempt by virtue of constitutional law.

Business license fees will not exceed the reasonable cost of providing an inventory of county businesses and the required registration information. No business license fee charged under the provisions of this ordinance shall be construed as a business license tax.

A business registration form designed to ascertain pertinent information regarding the businesses will be mailed to every known business within unincorporated area of Riverside County. In addition, businesses have the ability to access the County of Riverside's website for an on-line registration and payment system. For more information regarding business registration requirements, please contact the Business Registration and License Program Office at 951-955-1400. or on the website: www.rctlma.org.buslic

FEE EXEMPTIONS

Pursuant to Ordinance No. 857, some businesses are exempt from paying fees; however, they must register within 60 days of being notified by the County in order to maintain their exempt status. Exemptions apply to the following:

Residential Facility: Apartments, rooming houses, residential care homes, and family day care homes.

Church, Temple or Places of Worship: Churches, temples or other places of worship, for worship, religious education, or the social affairs of the religious group. **NOTE:** This exemption shall not apply to other activities, including, but not limited to, day schools, social service programs or Church-owned or operated business enterprises.

Home Occupations: Home occupations that are not subject to compliance with water quality restrictions. If your business affects water quality, it will not be exempt from the registration fee.

Agriculture: Agricultural pursuits consisting of the growing of crops, raising of livestock, and dairying, the purchase and storage of substances, materials, supplies, animal feeds and produce, and the marketing of farm products. **NOTE:** A business license shall be required in connection with any of the following: 1) retail nurseries, 2) retail greenhouses; and 3) wholesaling, processing, storage or manufacturing use which involves the collection of products of multiple farms or ranches .

Federal or State Law: Any businesses that are legally recognized as exempt by the U. S. Constitution or applicable statutes, or by the State of California.

Non-Profit Organizations: Any non-profit organizations that are legally recognized as tax exempt pursuant to the provisions of 26 U.S.C. Section 501 (c)(3).

RIVERSIDE COUNTY BUSINESS REGISTRATION AND LICENSING PROGRAM

Frequently Asked Questions?

WHAT IS THE PURPOSE OF THE BUSINESS REGISTRATION AND LICENSING PROGRAM?

This program provides a comprehensive inventory of businesses in unincorporated area of Riverside County, enhances public safety and helps achieve compliance with federal, state and local water quality regulations.

HOW DOES THE BUSINESS REGISTRATION PROGRAM BENEFIT BUSINESS OWNERS AND THE GENERAL PUBLIC?

There are a two major benefits to the business community and general public from the business registration program:

Public Safety

The program gives county law enforcement and fire personnel a better understanding of the business community and its processes and alerts them to potential hazards, making them more effective responding to protect residents and property. .

Water Quality

The business registration program requires that specific business types be identified, prioritized and inspected for storm water management requirements. It will ensure that those businesses have implemented best management practices to prevent illicit discharges into the storm water system that could ultimately harm water quality.

HOW MUCH WILL THE BUSINESS LICENSE COST?

License fees charged pursuant to this ordinance are as follows:

License fee (first year):	**$45**
Annual renewal fee:	**$30**
Change of name/ location:	**$30**
Duplicate license:	**$30**

WHO IS REQUIRED TO HAVE A LICENSE?

Every person conducting business as defined in Riverside County Ordinance 857 in unincorporated areas of Riverside County must obtain a business license. A separate license must be obtained for each physical location. Any person who does not obtain the required license is subject to the procedures and penalties set forth in the ordinance.

WHAT IF I OPERATE A MOBILE BUSINESS?

A business license is required for the following mobile businesses: mobile automobile or other motor vehicle washing; pest control services; mobile carpet; drape or furniture cleaning; concrete mixing or cutting; masonry; painting and coating; landscaping; pool and fountain cleaning; and portable toilet servicing.

WHAT IF MY BUSINESS ALSO CONDUCTS BUSINESS IN ANOTHER CITY OR COUNTY?

You might need a separate business license to conduct business in any city or county. Most California cities and counties have a business license ordinance. Each jurisdiction, however, has it's own filing fee and requirements. Check with the appropriate jurisdiction for its' fees.

HOW LONG IS THIS LICENSE GOOD FOR?

Your license is current for one calendar year from the effective date of license issuance. Renewal fees are due 30 days prior to the expiration date on the license.

DO STATE LICENSED CONTRACTORS NEED A BUSINESS LICENSE?

Any person licensed as a contractor by the State Contractors Board must obtain a business license if they are physically located within the unincorporated areas of the County.

DO I NEED A LICENSE IF I WORK OUT OF MY HOME?

Yes, home-based businesses also require registration. Most home occupations are exempt from paying registration fees. The fee exemption shall not apply to those home occupations that are subject to comply with water quality requirements. Please refer to the brochure's fee exemption section or go to our website at: www.rctlma.org/buslic.

IF I AM A NONPROFIT BUSINESS, DO I HAVE TO REGISTER?

You are required to register, but are exempt from paying fees if your organization is legally recognized as tax exempt pursuant to the provisions of Internal Revenue Code Section 501 (C) (3) and your exemption is filed within 60 days of notification of the County's registration requirement.

DO I NEED A LICENSE FOR GROWING OR PRODUCING AGRICULTURAL PRODUCTS?

Yes, all agricultural businesses must register; however, some agricultural activities may be exempt from fees. Refer to the fee exemption section on this brochure or go to www.rctlma.org/buslic.

WHAT IS THE APPLICATION PROCEDURE?

The process to obtain a business license takes only a few minutes and may be completed by mail or on the web based registration system. Using the internet, go to the county business registration website at: www.rctlma.org/buslic where you will find online instructions, a registration application and convenient payment system.

IF I AM EXEMPT FROM FEES, DO I STILL HAVE TO REGISTER?

Yes. Business that are exempt from paying fees still must register within 60 days of notification.

The Code Enforcement Department would like to thank the Board of Supervisors whose forward thinking has given us the support we need to make such a positive impact for the residents and businesses of Riverside County.

0003/79

January 2009

To the Residents of Riverside County:

This past year has been filled with challenging opportunities. After accepting the position of Code Enforcement Director in September, I quickly developed an understanding of why this department has long been recognized for its problem-solving skills. In the last two years, Code Enforcement has been re-engineered to become the flagship code enforcement agency statewide. Our vision is to develop, establish, and maintain "sustainable healthy neighborhoods." By partnering with our neighborhood communities, and engaging them in developing and using their own assets and skills, we not only get to the bottom of their fundamental code issues, but the potential for long-term sustainability is greatly enhanced. As the Director, I am committed to providing training and resources necessary to give our officers and staff all the tools and skills they will need to be effective in their chosen professions. I look forward to the challenges that lie ahead of us in the coming years as we continue moving forward to make a positive difference in the communities we serve.

John Boyd

COUNTY OF RIVERSIDE
CODE ENFORCEMENT
TRANSPORTATION & LAND MANAGEMENT AGENCY

0003734

Highlights of 2008

- The Foreclosure Task Force, consisting of over 12 members from our department, was created to tackle code issues associated with the growing trend of abandoned and distressed homes. **This represents over 10% of our field staff dedicated to this issue in the last quarter of 2008.**

- **8,840 property inspections** have been conducted of the 12,663 homes in some stage of foreclosure targeted by the task force, which also identified **795 additional code violations** being addressed by our department.

- **34,750** copies of The Posting, our monthly Code Enforcement newsletter, were distributed in 2008.

- Generated **$2.8 million** in revenue and additional funding from land use/parking enforcement, vehicle abatement, grants, and other sources.

- Over **26,847** hits were registered on the Code Enforcement website at **http://www.rctlma.org/ce**.

The Board of Supervisors passed Ordinances 880 & 881, effective May 13, 2008, which affects residential properties in the unincorporated areas of Riverside County. These properties, left unmaintained, have led to a decline in property value, pose a danger to children as attractive nuisances, provide opportunities for secretive criminal conduct including gang and drug related crimes, squatters, and real estate fraud. On June 27, 2008, previous Code Enforcement Director Jay E. Orr made the decision to host a forum for members of the financial and real estate communities so that they could come together and engage in open dialogue about these ordinances and the concerns of the county. The purpose of the meeting was to provide information about the registration and enforcement requirements of the ordinances. The forum also provided an opportunity for the public to ask questions and provide input on implementation concerns. Nearly 100 representatives from leading financial, real estate, and title companies participated in this meeting. Code Enforcement Director John Boyd opened the forum with introductions of the management team, followed by a presentation by Code Enforcement outlining a realistic perspective of the problem. Lisa Traczyk, Deputy County Counsel, walked the audience through the key components of the ordinances. Questions and comments from the participants lasted almost an hour, and several commented on their appreciation for the event.

000373

Highlights of 2008 Continued...

- The **Thousand Palms** Code Enforcement office was opened in April of 2008, and the **Home Gardens** Code Enforcement office was opened in June of 2008.

- **10,941 new Code Enforcement cases** were investigated in **2008**. This is in addition to the 8,840 property inspections that have been conducted by the Foreclosure Task Force.

- **26,686 inspections** were conducted by Code Enforcement staff in 2008.

- **1,699 administrative citations** and **8,289 parking citations** were issued in 2008.

- **150 public hearings** regarding administrative abatements were held by the Board of Supervisors in 2008.

- The Code Enforcement Department sponsored over **1,135 media spots,** educating the public concerning a variety of code enforcement issues.

The Department continues to grow as offices were opened in Thousand Palms and Home Gardens. This demonstrates that Riverside County Code Enforcement grows side-by-side with the community. It also shows that officers and staff are working hard to form alliances with the communities, working together to improve the quality of life in Riverside County.

The beginning of the second quarter of 2008 marked a new phase for Riverside County Code Enforcement. This phase began with a radio campaign to introduce the Department and the various ways we can be of assistance to the community. These commercial spots gave examples of numerous violations and invited the community to call in and get informed on how to come into compliance. During the month of May, Code Enforcement officers made history, as they became guests of the 30-minute local show "Despierta Nuestro Valle" ("Wake Up Our Valley") on the Univision channel in the desert communities of District 4. They touched upon the history of Code Enforcement, types of violations, how to comply, and where the Department is going.

Highlights of 2008

- We held **34 community cleanup events** in 2008.
- These cleanup events collected over **1,106 tons of trash** and serviced well over **2,000 participants**.
- The Trash Task Force collected over **2,383 tons of trash** from our roadsides in 2008.
- Our **compliance rate for accumulated rubbish cases** has increased from 68% in 2007 to **77% in 2008**. Because the process for these cases has been streamlined, we are operating more efficiently; we experienced a **50% increase in opened cases** and a **70% increase in closed cases** for accumulated rubbish in 2008.
- In conjunction with our Community Impact Plans, we held over **10 community resource fairs** and **15 code enforcement workshops** to better inform the community members on ways they can "violation proof" their properties.

The Riverside County Board of Supervisors recently amended the ordinance (Ord. 541.5) that regulates the removal of rubbish, including green waste. This ordinance was amended to protect the health and welfare of residents from possible fire hazards and other safety concerns by expediting the process in which trash can be removed from vacant parcels.

Although Notices of Violation are still required, the time frames have been significantly reduced to gain compliance. This ordinance will allow county officials the ability to move quickly in abating these violations.

This improved process has increased the number of accumulated rubbish cases the Code Enforcement Department opened in 2008 to 2,198, which is 737 more than in 2007.

The fact that we can move expeditiously on this issue has led to increased compliance. We have been able to resolve 1,696 of accumulated rubbish cases in 2008, which is an increase of 703 cases over 2007.

0003737

Highlights of 2008 Continued...

- **622 criminal citations** were issued for **illegal vending (51% increase over 2007)** and **228 criminal citations** were issued for **illegal dumping** in 2008.

- We implemented the "Safe Parks Now" program, which has identified and **inspected 349 units in 25 illegal or non-permitted mobile home parks,** addressing dangerous health and safety conditions affecting the residents of these parks.

- We continue to provide Code Enforcement services to the newly incorporated cities of Wildomar and Menifee.

- **$242,783** in grant funds were utilized by our Community Improvement Program to help owners clean and improve their properties, thereby enhancing their community.

- We cleaned up the largest trash pile in the history of the County. See page 9 for more information.

- We hosted our First Annual Neighborhood Conference. See page 11 for more information.

- We received the Challenge Award from the California Association of Counties (CSAC) for our Community Impact Plans. See page 13 for more information.

In the recent months, Code Enforcement officers have been working with mobile home park owners and residents in addressing immediate health and safety concerns. During this time, the Department launched the "Safe Parks Now" program to address quality of life issues within mobile home parks in the Coachella Valley. In order to address the health and safety issues found within these parks, a task force was formed between state and county agencies, including Code Enforcement, Housing & Community Development, Catholic Charities, Economic Development Agency, Housing Authority, and the California Rural Legal Assistance.

To date, this group of park inspectors has conducted inspections of 25 illegal and unpermitted mobile home parks. The outcome of the inspections has been very positive since the team identified and addressed numerous life-threatening conditions, such as exposed, energized wires and uncovered cesspools. The diligent efforts of the task force has resulted in the elimination of various types of health and safety hazards. These actions mean that the residents, including many children, are no longer being subjected to ongoing health risks. During the inspections, property owners are also being educated concerning their options and presented with programs available from county agencies that may assist them in bringing their properties into compliance.

Code Enforcement and the California Integrated Waste Management Board Team Up to Clean One of the Largest Trash Heaps in County History

Code Enforcement routinely investigates illegal and unpermitted businesses and complaints regarding accumulated rubbish. However, this investigation, spearheaded by Senior Officer George Gianos, very rapidly escalated into an abatement action that far exceeded the scope of any trash cleanup undertaken by the Department. Senior Officer Gianos described his first encounter with this enormous trash heap this way: "We investigated the matter and discovered stockpiles of bundled trash covering an area of about seven acres. **Some of the bundles were stockpiled over 20 feet high!** The bundles consisted of household trash, soft goods, and plastics. The site contained no active fire prevention apparatus or measures for rodent control." The property owner, doing business as Mission Fiber, was immediately notified of the violations by Senior Officer Gianos, who also brought County Counsel into the mix to begin processing a court case for injunctive relief. Pam Walls, Assistant County Counsel, delivered a powerfully persuasive argument in favor of shutting the business down and cleaning the site immediately. Due to the overwhelming evidence of potential harm to the public, a judge agreed with Ms. Walls and ordered Mission Fiber to cease operation and remove the offending rubbish from the property. Senior Officer Gianos then began the arduous task of enforcing the court order and ensuring the cleanup of the property. "Unfortunately, the business owner was reluctant to comply," said Senior Officer Gianos. "The business owner's idea of compliance was to remove the rubbish at a slow pace, spanning several months to two other counties." Several attempts by the owners to remove the rubbish failed and were met with stiff legal opposition from other counties. It was beginning to look like Code Enforcement was going to have to move forward in contracting for the abatement of this monumental nuisance. A preliminary job walk was conducted, which established the amount of trash to be removed at about 12,000 tons, making this the largest trash removal project ever undertaken by county Code Enforcement.

000379

Senior Officer George Gianos receives a special proclamation from the Board of Supervisors, recognizing his resourcefulness in making this cleanup a success.

Bids came in ranging from several hundred thousand to over a million dollars to abate this mountain of trash. Knowing that the exorbitant amount of this abatement project could seriously jeopardize the future of Code Enforcement's abatement program, Senior Officer Gianos began looking for alternative funding sources. He knew that the Department had worked with the California Integrated Waste Management Board (CIWMB) on other enforcement programs in the past and were currently partnering with the CIWMB on the Waste Tire Enforcement Grant Program. Senior Officer Gianos felt this would be the perfect agency to pitch this cleanup project to. "I forwarded my case report, photos, and a cover letter requesting help to the CIWMB," said Senior Officer Gianos. "They promptly responded by sending their investigators and a state approved contractor to the site. We all walked the site, and I pointed out the hazardous conditions to the state officials. I was very pleased when I received word that the CIWMB had decided that the site fit the criteria for a state assisted cleanup. My case report was forwarded to the CIWMB review committee in Sacramento. **After testifying in front of the committee, our request was approved, and an award of $950,000 was budgeted toward the abatement.**" The state wasted no time in mobilizing equipment at the dump site. For about 12 days during the month of November, over 20 truckers hauled over 500 loads of rubbish to a landfill in Arizona. A CIWMB representative remained on site until the project was completed. Thanks to the innovative thinking by Senior Officer George Gianos, and the much appreciated assistance from the CIWMB, **this property is now in compliance, and the potential health and safety threat to the nearby city of Blythe has been avoided.**

0003740

Riverside County Code Enforcement Department's First Annual Neighborhood Conference is a Huge Success

Keynote speaker Richard Campanaro's presentation on the "Broken Windows Theory" received rave reviews.

Our neighborhoods start with our families. As such, all were welcome at the Neighborhood Conference.

What the Community is Saying...

"...helped to educate me on the simplicity of empowering residents to effect change.

Excellent presentation with lots of ideas to share with my community.

Very well organized; please come back next year. I will tell my neighbors to come.

Code Enforcement did a great job... lots of good information."

- **S**ense of Appropriate Urgency
- **T**eamwork and Collaboration

COUNTY OF RIVERSIDE CODE ENFORCEMENT

Partnering with Communities for Sustainable Neighborhoods

On Saturday, October 25, 2008, Riverside County Code Enforcement hosted its First Annual Neighborhood Conference at the beautiful UC Riverside Palm Desert campus. "Community Partnerships for Sustainable Neighborhoods" was the theme of the conference. The Following workshops were held for community members: Asset Based Community Development, Foreclosures, Making Meetings Work, Lush and Efficient Landscaping, Living with Diversity in Your Community, and 12 Steps of Emergency Preparedness.

Numerous public and private organizations provided information to the participants throughout the day. Richard Campanaro, the keynote speaker for the conference, presented the "Broken Windows Theory" as well as strategies for transforming your life and your community. When surveyed, the majority of the participants stated that this presentation was powerful and the highlight of the conference.

In addition to our innovative community impact plans, this conference is another method for our department to establish and maintain a beneficial relationship with the communities in which we serve. We will continue to work with these community stakeholders to educate and empower residents to improve the quality of life in their neighborhoods and to establish sustainable and healthy communities, while making the best use of all our resources.

Due to the success of this first Neighborhood Conference, plans are already underway for next year's event, which will include more information and strategies to assist residents and further our efforts in providing our valuable services throughout the unincorporated communities of Riverside County.

Our Second Annual Neighborhood Conference is being planned for Fall of 2009

COMMUNITY IMPACT PLANS

Winner of the Prestigious California State Association of Counties 2008 Challenge Award

changing COMMUNITIES

making an IMPACT

producing RESULTS

A comprehensive five point strategy...

Ongoing Assessment

Utilizing assessments, surveys, and input from stakeholders we will develop a plan to address the true needs of the community.

Community Involvement

Build relationships of trust and understanding with community stakeholders to maximize resources and benefit the community.

Education/Outreach

Education of our mission, purpose, methods, and outreach of community services offered to ensure that we are all working together and using all available resources.

Cleanup

Utilize existing cleanup programs and special projects to make an impact in the community.

Enforcement

Conduct a phased enforcement program customized to the unique needs and resources included within the Community Impact Plan.

0003743

Revolutionizing Code Enforcement

The concept of our community impact plans is revolutionizing how Code Enforcement interacts with the communities we serve. Using the best concepts from community policing and other community improvement programs, we are developing comprehensive five-point community impact plans.

We are no longer waiting for issues to become problems and complaints to be filed. We are taking a more proactive approach by maximizing our resources to prevent problems and to address them before they become major issues.

This process all started when the Department tackled the unique challenges of the community of Mecca. Code Enforcement took a fresh look at how we could partner with the community and identified numerous ways we could assist the community in improving their quality of life. Partnering with local churches, we started a progressive outreach campaign. A total of 920 people attended one of our five community meetings. Following a targeted enforcement period, dramatic changes were seen in Mecca. We experienced an unprecedented rate of voluntary compliance from property owners desiring to make improvements without the need for enforcement action.

Utilizing the successful model we developed in Mecca, our department has expanded this program to communities throughout the county. Our goal is to have a community impact plan directing our activities in each community we serve.

Eager to share this effective program with other jurisdictions, we submitted our community impact plan process to the California State Association of Counties, and we were awarded one of ten Challenge Awards for this fresh and innovative approach to addressing issues affecting the health and well-being of the communities we serve.

Susana Orozco, John Boyd, Paul McIntosh and Jay Orr at the presentation of one of ten 2008 CSAC Challenge Awards recognized statewide by the California State Association of Counties.

0003744

Administrative Services

Meeting long-term needs...

The Administrative Services Unit is tasked with providing the Department with a variety of support related services. Some of which include the following:

- Initial and recurrent training
- Create, review, and update policies and procedures
- Administer the State Waste Tire Enforcement Grant
- Special projects
- Review cases for cost recovery
- Administer the Abandoned Residential Property Registration Program
- Purchasing support
- Publications
- Providing administrative support to the Director
- Administer the Abandoned Vehicle Abatement (AVA) Service Authority
- Prepare for and represent the Department at weekly public nuisance abatement and statement of expense hearings before the Board of Supervisors

Training Update

During the past year, Code Enforcement staff attended a wide variety of training classes geared to improving their overall job knowledge and officer safety. This, in turn, has improved our capacity to provide exceptional service to the public. **For the year 2008, the training program coordinated over 290 training classes and 7,100 hours of training to department staff, a 50% increase over 2007.**

0003745

Abandoned Vehicle Abatement Service Authority

The Riverside County Abandoned Vehicle Abatement (AVA) Service Authority was established to receive monies from the state, which are derived from a one dollar service fee per vehicle registered in this county pursuant to the California Vehicle Code. The AVA Service Authority's administrator, under the guidance of the Board approved Abandoned Vehicle Abatement Plan, disburses these funds to its member jurisdictions based on area and population data as well as vehicle abatement activity. Funds are used to reimburse member cities and the county for the abatement of abandoned, wrecked, dismantled, or inoperable vehicles from private and public property.

Since its inception in 1993, the Riverside County Abandoned Vehicle Abatement Service Authority has disbursed $14,335,725 to reimburse cities and the unincorporated Riverside County for the removal of 117,363 junk vehicles. In this same period, the unincorporated county has received $4,713,529, or 33% of the total allocation of AVA funding and has effected the removal of 30,971 junk vehicles, or 26% of all vehicles abated countywide.

Recent changes in legislation under Senate Bill 106 provides for the extension of the service fee in increments of up to ten years. The current sunset date of the Authority is 2014.

Waste Tire Enforcement Grant

The Waste Tire Enforcement Grant is a state program designed to track the movement of used and waste tires throughout the State of California. The key component of the program is on-site inspections. More than two hundred inspections of waste tire generators, haulers, and end-use facilities were conducted in 2008. These inspections are critical in ensuring that used and waste tires are properly accounted for as required by the California Integrated Waste Management Board (CIWMB). To date, over 50 Notices of Violation have been issued and more than 20 locations have come into compliance with state requirements. Five violators that failed to comply were referred to the State for further enforcement action.

In addition to enforcement, education plays a vital part in the program. Several training sessions benefited the tire haulers in Riverside County, who were trained on the proper way of documenting and manifesting waste tires.

Community Improvement

Caring for the community...

The Community Improvement Program is a community based outreach effort intended to help residents enhance their neighborhoods and come into compliance with the laws we enforce.

It is the goal of the Community Improvement Program to provide visual improvement throughout Riverside County while instilling community pride.

Community Improvement Programs:

- Beautification Program (CDBG Grant)
- Clean Money (Giving Youth Groups Fundraising opportunities by cleaning the community)
- Voluntary Compliance Programs (CDBG Grant)
- Monthly publishing of "The Posting"
- Media Campaign
- Code Enforcement Web Site
- Neighborhood Conference
- Code Enforcement Resource Fairs
- Community Cleanup Events
- Code Enforcement Workshops
- Trash Task Force
- Thermal United Kids Program (CDBG Grant)

Your donations have helped make a difference!

We would like to thank all of the businesses, organizations, and individuals who have donated so much of their time and resources in making our events so successful and allowing us to empower residents in improving their communities.

000374

Code Enforcement Assisting the Community in Cleaning Up

This year, Riverside County Code Enforcement applied for and received funds to help homeowners living in the communities of Ripley, Mesa Verde, Thermal, Oasis, Mecca, Good Hope, Home Gardens, Bell Town, Rubidoux, and Mead Valley. These funds were awarded to the Code Enforcement Department through the Federal Community Development Block Grant (CDBG) program. The department administers these funds through the Voluntary Public Nuisance Abatement Program (VPNAP).

This vital program allows Code Enforcement to provide assistance to struggling property owners for the removal of substandard structures, weeds/vegetation, trash, excessive outside storage, inoperable vehicles, as well as unoccupied mobile homes. In certain communities such as Mecca, Home Gardens, and Rubidoux, residents may be eligible for property beautification assistance. This program allows the department to select qualified applicants, who will receive services from an authorized contractor for fencing installation and repairs, residential landscaping, and residential exterior painting – all free of charge to the resident.

To be eligible, the applicant must reside within one of the above-mentioned communities and be in need of financial assistance to clean up their property. Funds may be used to correct code violations if applicable, and assistance through the VPNAP is a one-time grant, which is funded on a first come, first served basis.

County Celebrates 10,000 Tons of Roadside Trash Removed

In March, the Riverside County Board of Supervisors recognized County departments and private industries for their hard work and efforts in the removal of over 10,000 tons of trash in Riverside County in 2007. This is equivalent to over five miles of dumpsters. That amount would line the highway from downtown Riverside to San Bernardino County.

T.O.M. and Fifth District Legislative Assistant Jaime Hurtado

Riverside County Code Enforcement started the cleanup campaign in 2006. It is a collaborative effort between County departments and private agencies. At the March 25, 2008 Board meeting, Supervisors Marion Ashley and John Tavaglione and previous Code Enforcement Director Jay Orr presented the Recognition Awards to department heads and independent business owners. Certificates of appreciation were also given to 227 staff members from those agencies.

Thank you to the trashcan mascot, who made a surprise appearance, as pictured above with Fifth District Legislative Assistant Jaime Hurtado. In 2008, the Trash Task Force collected over 2,383 tons of material from our roadsides.

Neighborhood Enforcement Teams (NET)

The Neighborhood Enforcement Teams (NET) utilize a planned comprehensive approach to resolving issues within the communities we serve. NET focuses on "traditional" code enforcement issues including:

- Accumulated Rubbish
- Inoperable or Abandoned Vehicles
- Excessive Animals
- Prohibited Fencing Materials
- Substandard/Hazardous Structures
- Uncovered Excavations and Unsecured Pools
- Substandard Mobile Home and/or Recreational Vehicles
- Occupied Recreational Vehicles/Travel Trailers
- Unpermitted Second Dwellings
- Illegal Mobile Home Parks
- Zoning Violations
- Junkyards (Excessive Outside Storage)
- Land Use Violations
- Unpermitted Occupancy
- Grading without Permits
- Construction without Permits
- Mobile Home Install without Permits
- Parking Violations
- NPDES-Storm Water Management
- Abandoned and Distressed Properties
- Noise Complaints
- Unpermitted Businesses

Our Goal Is Compliance...

*This number does not include the 8,840 property inspections conducted by the Foreclosure Task Force.

In 2008, 10,941 new Code Enforcement cases were opened based on complaints or officer observed violations.

At any given time, we have over 8,000 cases under investigation.

This year we resolved 9,934 cases through investigation, compliance, or abatement.

First District

Proudly serving the communities of:

- Lake Elsinore
- Alberhill
- Gavilan Hills
- Horsethief Canyon
- La Sierra
- Lakeland Village
- Mead Valley
- Lake Mathews
- Temescal Valley
- Woodcrest
- Glen Ivy
- Glen Valley
- Sedco Hills
- Wildomar

Giving our best to make a difference...

1,672 new cases were opened in 2008.

This is what the community is saying...

"I really appreciate the Block Grant funding to help clean up my property, and you have been awesome to work with. Thank you so much for everything!

-Keri Mittan – Mead Valley Resident

I just wanted to THANK YOU again for all your help. It would have taken me months to do what you guys did in a couple days. I owe each of you big time."

-Brian Shomo, RCHCA

Lake Elsinore/Mead Valley Office

Distinguished Accomplishments...

Safer Neighborhoods

Lake Elsinore staff inspected an alleged illegal business that had multiple code enforcement violations and posed a potential fire hazard. Staff found an area of the property next to a grassy hillside used to store 5,000 wood pallets, as well as a large shed with multiple electrical cords. Upon completion of the inspection, the business owner received a notice of the violation and a stop work order, which remained in effect until the proper permits could be obtained. Within 35 days, all 5,000 pallets had been removed and the large shed taken down. The property had been cleaned of all material related to the business and no further actions were needed. Code Enforcement's quick and decisive action eliminated violations that could have led to a devastating fire.

Preserving Residential Tranquility

Staff investigated a cabinet manufacturing shop located on Santa Rosa Mine Road in Perris. Officers discovered an illegally operating cabinet shop with multiple workers and a large permitted covered horse arena that stored all the materials. A citation was issued at the time of the inspection. At the 30-day follow-up inspection, the violation remained. Code Enforcement sent the case to County Counsel for a civil injunction to shut down the illegal land use. A hearing at Riverside Superior Court resulted in an agreement with the property owners to stop the illegal activity and bring the property into compliance. Subsequently, Code Enforcement staff conducted a follow-up site inspection and observed the business was no longer in operation and the property was clean and clear of all materials, bringing peace to the residential community.

Second District

Proudly serving the communities of:

- Belltown
- Coronita
- Crestmore
- Eastvale
- El Cerrito
- Glen Avon
- Home Gardens
- Indian Hills
- Jurupa Valley
- Mira Loma
- Pedley
- Rubidoux
- Sunnyslope

Working the issues that matter...

This is what the community is saying...

"**This is exactly what the community needed. What a good thing.**

-Leticia Carmona, El Cerrito Resident

Just want you to know I think you are doing a heck of a good job.

-Linda Prokus, Indian Hills Resident

Thank you, thank you, thank you! You are doing a great job.

-Ed Cleveland, Glen Avon Resident"

Jurupa Valley/Home Gardens Office

Solving Problems...

Permanent Compliance

For some time, staff has investigated a property on Felspar Avenue for junk, illegally occupied recreational vehicles, and substandard structures that fostered other illegal activity in the area. The property changed ownership this year through a trustee sales and the new owner quickly discovered the deteriorating conditions. He contacted his local Code Enforcement office and asked for help. Seeing a great opportunity, the Jurupa office partnered with the Riverside County Sheriff's Department to utilize this property as a temporary training facility to increase law enforcement presence in the neighborhood, thus reducing crime. Then Code Enforcement worked with the Riverside County Economic Development Agency to obtain a demolition grant to clean the entire property, bringing closure to a stubborn problem.

Productive Commercial Enforcement

Officers investigated a 28th Street property for an unpermitted concrete business, which included the storage of concrete mixing trucks. The illegal business was creating a public nuisance, as many neighbors complained about excessive noise and dust. To exacerbate an already volatile situation, the property had been illegally graded in such a manner causing drainage and runoff to adversely impact neighboring properties. Soon into the investigation, when it became apparent that the business owner was not going to comply with the officer's directive to cease the business activity, the Department filed a civil injunction in Riverside Superior Court. During the court proceedings, the judge found in favor of the County and ordered the business to vacate the property. As a result, concrete trucks no longer travel through this residential area, that has since returned to a normal, quiet neighborhood.

Third District

Proudly serving the communities of:

- Aguanga
- Anza
- Cottonwood Canyon
- French Valley
- Garner Valley
- Green Acres
- Homeland
- Idyllwild
- Lake Riverside
- Lake Skinner
- Menifee
- Mountain Center
- Murrieta Hot Springs
- Pine Cove
- Pine Meadow

- Poppet Flats
- Quail Valley
- Rancho California
- Soboba Hot Springs
- Sun City
- Vail Lake
- Valle Vista
- Winchester

Putting the community first...

2,534 new cases were opened in 2008.

This is what the community is saying...

"We appreciate your hard work and dedication to us. Your hard work has brought many visible changes to our community, as well as our way of life.

-Earl McGee, Executive Director Quail Valley Crime Watch

This is the best I have seen Idyllwild look in a long time. Code Enforcement over the past year has made a difference. I truly mean it!"

-Jerry Holldber, General Manager of the Pine Cove Water District

Murrieta/South County Office

Getting the Job Done...

Improving Living Conditions

During the summer of 2008, Murrieta staff focused enforcement efforts on a mobile home park in Quail Valley that had become a source of problems for the community and a safe haven for criminal activity. The mobile home park had several code violations, including substandard and unpermitted mobile homes, non-operational vehicles, accumulated rubbish, and other conditions that violated its permit to operate. Since normal enforcement activity was not inducing compliance, staff pursued a revocation of the Conditional Use Permit. As time drew closer for the revocation hearing, the property owner began to rapidly comply with our corrective actions. The park is no longer a safe haven for criminal activity, demonstrating that addressing these code issues can have a beneficial impact on the quality of life.

Partnerships Are Making a Difference

The apartments on Marine Drive in Hemet have had a long-standing problem with trash and illegal dumping from its residents. Under new management, occupants had been directed to clean their properties and remove excessive storage in order to remain a resident of this neighborhood. Instead of complying with management's directives, many residents moved out and left behind garbage, furniture, and rubbish. Code Enforcement Department staff, in partnership with the Sheriff's Hemet Station, conducted a cleanup on June 11, 2008. The Sheriff's Department and Code Enforcement worked throughout the day, loading and unloading truckloads of furniture and garbage into trash bins provided by the local trash hauler. This cleanup demonstrated that county staff cares about the communities in which they serve.

Fourth District

Proudly serving the communities of:

- Bermuda Dunes
- Ciriaco Summit
- Desert Center
- Eagle Mountain
- Indio Hills
- Mecca
- Mesa Verde
- North Shore
- Oasis
- Ripley
- Sky Valley
- Thermal
- Thousand Palms
- Valerie Jean
- Vista Santa Rosa

Building partnerships for success...

1,810 new cases were opened in 2008.

This is what the community is saying...

"**My family really appreciates what Code has done for Mecca.** – *Mecca Resident*

We greatly appreciate what you do for us in helping us clean up our community. Thanks! – *Julie Casserly, Sky Valley Community Council*

We are so excited that we are finally having a cleanup. We have needed a cleanup for over five years. Thank you very much.

– *Rigoberto Perez, Ripley Community Council*"

Thousand Palms/East County Office

Making a Difference...

Tackling Chronic Problems

The Thousand Palms office received numerous complaints about the condition of several properties located on East Vernon Avenue in Blythe. These properties have had intermittent code violations over the years. Upon inspection, officers found dilapidated residences containing rubbish, abandoned vehicles, and three substandard cottages. They also discovered a fire damaged duplex that was being used by transients who were conducting criminal activity. Working with the property owners, rehabilitation permits were issued for the substandard dwellings, and all the rubbish was removed. A number of vehicles were also removed through the Department's "Junk Your Clunker" program. One property owner was reluctant to comply, and a seizure warrant was obtained. In the end, all of the properties were cleaned up, making a significant visual difference in the community.

Restoring Our Natural Habitats

Staff discovered several vacant properties on Wallace Road in Thermal that contained a massive accumulation of illegally dumped rubbish and debris, including over 100 waste tires. The dumping was so expansive that a satellite GPS system was utilized to determine the approximate location and quantity of trash. Over 120,000 square feet of trash was observed, and in some areas, the rubbish piles exceeded five feet in height! Through the diligent efforts of Code Enforcement staff, one owner came forward and voluntarily cleaned his property. The remaining trash and debris was removed by a contractor hired by the County. Scorching summer heat and an active beehive did not deter the Department from completing the task of removing the remaining rubbish piles. Eventually, all of the parcels were completely cleaned, eliminating an extremely blighted condition and restoring a portion of our beautiful desert habitat to its original pristine condition.

Fifth District

Proudly serving the communities of:

- Cabazon
- Cherry Valley
- Desert Hot Springs
- Eden Hot Springs
- Garnet
- Gilman Hot Springs
- Good Hope
- Highgrove
- Juniper Flats
- Lakeview
- Meadowbrook
- North Palm Springs
- Nuevo

- Reche Canyon
- Romoland
- Twin Pines
- Whitewater
- Windy Point

Providing excellence in customer service...

2,201 new cases were opened in 2008.

This is what the community is saying...

"Your department and Supervisor Marion Ashley's office have done great things for our small communities of Nuevo, Lakeview, and Juniper Flats". Thank you Code Enforcement! *- Mr. John Linch*

I appreciate the cleanup and increasing higher standards. *-Henry Mussenden*

It's time people clean up the trash; we cannot even ride our horses without risk. Thank you Department of Code Enforcement. *-Jim & Kim Kresin*"

Moreno Valley/Banning Office

Significant Achievements...

Persistence is Rewarded with Compliance

Officers inspected a property on Prospect Avenue in Highgrove for multiple code violations. The property, located on a heavily traveled street, contained six substandard structures with defects ranging from general dilapidation and hazardous electrical wiring to open and attractive nuisance. Several discussions with the property owner about abating the substandard structures did not produce the desired result. Officers persisted in their efforts to rid the neighborhood of this eyesore and prepared the case for an administrative abatement hearing before the Board of Supervisors. Once the owner was convinced that Code Enforcement was not backing down, they proceeded to completely demolish all six structures and remove all of the construction debris and trash. This case of voluntary compliance not only abated dangerous housing conditions, it also serves as a reminder to other property owners of the importance of keeping their residences up to code.

Contracting with Desert Hot Springs

With the support of Supervisor Ashley, staff from Code Enforcement were contracted in 2008 to work closely with the City of Desert Hot Springs to help address issues identified within the city. Officer James Pike worked primarily on violations involving businesses and health and safety issues. Working to gain compliance, staff educated the residents and businesses and worked with them to improve the safety and quality of life in the city. A total of 24 citations were issued to non-compliant property owners. In addition to these routine issues, the Department also addressed other problems, including the illegal dumping of medical waste, unsafe living conditions of homeless camps, and dilapidated structures. All of the objectives set forth for this contact were met, and the County is proud we were able to assist the City of Desert Hot Springs in improving the quality of life for their residents.

Special Enforcement Teams (SET)

Making things happen...

It is the goal of the Special Enforcement Team (SET) to provide support to the district offices in resolving specific issues identified and affecting the communities.

SET activities have increased dramatically during its expansion beginning in 2007 resulting in 2008 being the first year this program was fully staffed and operational.

SET working closely with the Sheriff's Department and the District Attorney's Office, investigate and submit for prosecution of criminal activity in the following areas:

- Illegal Dumping
- Illegal Vending
- Unpermitted Swap Meets/Fiestas
- Excessive Noise/Off-Highway Vehicle Enforcement

0003761

Roadside and Illegal Vending

In response to very loud and consistent public outcry, the Special Enforcement Team coordinated enforcement efforts through a coalition of federal, state, and local enforcement agencies including Riverside County District Attorney's office, Riverside County Environmental Health (Illegal Food Program), Riverside County Sheriff's Department, and Riverside County Animal Control, as well as agents from the California Franchise Tax Board, California Department of Food & Agriculture (Milk and Dairy), Brand Inspector and representatives from the Recording Industry & Artist Association (RIAA) and luxury item industry (counterfeit clothing, jewelry, and other accessory clothing items).

The goal was to pursue vertical prosecution through comprehensive enforcement programs, addressing violations ranging from illegal home kitchens/restaurants, illegal fiestas, roadside taco stands, and roadside food vendors. These illegal activities pose a threat to public health by operating unpermitted facilities and include the "underground economy" aspect of each of these crimes. *(Continued in next column.)*

Through various direct and undercover enforcement actions, the coalition experienced unprecedented success as measured by a decrease in the number of calls for service and a noticeable reduction in the number of unpermitted vendors.

Carver Tract Project

In February of 2008, in an effort to curtail individuals drinking liquor and using illegal drugs behind the Coachella Valley Rescue Mission located in Indio, Code Enforcement SET officers and deputies formulated a plan to clean up the area by removing trash and old furniture from behind the mission. Code Enforcement established an account with Waste Management and rented a flatbed truck to remove the trash. Deputies provided security and contacted persons loitering at the location. A number of individuals contacted were found to be in violation of Health and Safety codes, Penal codes, county ordinances, and were either arrested or issued citations.

During the enforcement action, SET officers issued citations for various violations. Both agencies continue to host cleanup operations, removing trash and old furniture left in the area.

Nuevo Community Clean-up & Tire Collection Event

Community residents lined up as early as 6:30 a.m. to unload household trash that had been illegally dumped along Ramona Expressway and in the open fields of the Juniper Flats, Nuevo and Lakeview communities. Code Enforcement staff were eager to assist residents in the removal of unwanted tires and waste. Not only were these residents provided with an opportunity to dispose of their waste but thanks to Community Improvement Specialist, Sue Rush, local residents were educated on new County ordinances, Household Hazardous Waste & Tire collection events and property maintenance. Code Enforcement Officer Jennifer Morris assisted with traffic control and bin monitoring to ensure that hazardous waste was not disposed of at this event. Waste Management Inc. donated and delivered 19 bins for this event. Clean ups such as these, provide an opportunity for residents to come into compliance.

Chaka Osborne-5

There were 311 tires removed from all three communities combined!

"Your Department and Supervisor Marion Ashley's office has done great things for our small communities of Nuevo, Lakeview, and Juniper Flats". Thank you Code Enforcement!- Mr. John Linch

CIS Grace Escobar counts tires & inspects vehicles for hazardous waste.

19 bins; 55.20 tons of waste removed from Nuevo, Lakeview and Juniper Flats.

From Trash to Gardens

In Code Enforcement, we strive to achieve voluntary compliance. In working with Community Improvement Programs and Impact Plans, we offer all available resources to help bring property owners into compliance. In most cases we are able to bring everything to a happy ending. For example, on the morning of May 6, using Dakeno Demolitions, we were able to bring the property seen in these photos into compliance.

BEFORE

Even though the property owner was hesitant at first about the abatement, in the end, the property owner admitted that this was the best thing they could have done. In fact, upon a follow-up visit, we found the property owner planting a garden and enjoying the clean space.

Watch Where You Park

Riverside County Ordinance 413, which regulates parking, was enacted in order to "further community preservation and protection of the health, safety, and welfare of its citizens, property values, and aesthetic qualities." With this ordinance, Riverside County Code Enforcement is regulating and enforcing street parking restrictions and prohibitions for certain vehicles within the unincorporated areas of the county. Code Enforcement officers enforce a variety of parking regulations including the parking of commercial vehicles in residential districts.

Ordinance 413 generally prohibits the parking of any commercial vehicle in excess of 10,000 pounds of gross vehicle weight on a residential street. Certain exceptions to this regulation apply, such as commercial vehicles engaged in the pick up or delivery of goods, wares, or merchandise.

The parking of commercial trailers or semi-trailers on residential streets is prohibited regardless of weight. Code Enforcement Supervisor Mickey Parmele commented, "This is a problem because of the very large number of commercial truckers we have. Lots of them get in late and just take their trucks home." Consequently, most commercial drivers find out about this regulation the hard way. The penalties for this violation are high and you can receive additional citations every 24-hour period (see chart below). Commercial vehicles should be parked in commercially zoned areas or in a lawfully permitted vehicle storage yard. Signs are strategically posted at the entry points into the county and along major streets and thoroughfares alerting drivers to the commercial vehicle parking restrictions in residential areas. So why not save yourself time and money and just "Park it right and forget the cite!"

Director John Boyd

Mission Statement: "To enhance public safety and the quality of life in partnership with communities through fair enforcement of laws and codes."

Message From Our New Director

Last month we celebrated the promotion of our former Director, Jay Orr, to his new post as Assistant County Executive Officer under County Executive Officer Bill Luna. In the last two years Code Enforcement has been reengineered to become the flagship Code Enforcement agency statewide. As the new Director, I am now responsible to carry on the programs established under Jay and will strive to continue to make this department one recognized for its problem-solving skills.

I worked in developing the Community Oriented Policing model used by the Riverside Sheriff's Department, so I understand the importance of identifying and analyzing community problems and engaging the community in developing solutions. Our vision is to develop, establish, and maintain "sustainable healthy neighborhoods." By engaging the community in enhancing and using their own assets and skills, the potential for long-term sustainability is great.

As the Director, I am committed to providing training and resources necessary to give the officers and staff all the tools and skills they will need to be effective in their chosen professions. I look forward to the challenges that lie ahead of us as we continue moving forward to make a positive difference in the communities we serve.

Code Enforcement to Host FREE Conference

On the 25th of October, a groundbreaking event will take place that you absolutely do not want to miss. On that day, at the beautiful Palm Desert campus of the University of California, the Code Enforcement Department will be hosting the first ever Riverside County Neighborhood Conference.

This half day gathering will be filled with exciting workshops and speakers who will prove to be not only informative, but challenging and engaging as well. Please view the last page for Workshop titles and other vital information.

This is a great opportunity for you, as a community leader or supporter, to receive creative ideas that you can take back and invest in your neighborhood. Networking and the sharing of ideas with other community members will be encouraged throughout the day. All participants will come together in the afternoon to hear nationally recognized keynote speaker Richard Campanero, who will be delivering a motivationally thought-provoking presentation on the "Broken Window Theory."

For the little ones who attend, there will be separate activities geared specifically for children ages 6-12. A free continental breakfast and delicious box lunch will be provided to all participants. To round out the conference, several vendors will be on hand all day to talk to you about the services and products they offer, designed to help in the growth of sustainable neighborhoods.

Van pools are being coordinated to assist those coming to the conference from distant communities. For those driving to the event, you will be pleased to know that parking is abundant and FREE, thanks to the hospitality of our friends at the Palm Desert UCR campus.

We look forward to seeing you at the conference, as we continue to make positive strides toward forming "Community Partnerships for Sustainable Neighborhoods."

Code Enforcement and the State Team Up to Clean One of the Largest Trash Heaps in County History *District 4*

Code Enforcement routinely investigates illegal and unpermitted businesses and complaints regarding accumulated rubbish; however, this investigation, spearheaded by Senior Officer George Gianos, very rapidly escalated into an abatement action that far exceeded the scope of any trash cleanup undertaken by the Department.

Officer Gianos described his first encounter with this enormous trash heap this way: "We investigated the matter and discovered stockpiles of bundled trash covering an area of about seven acres. Some of the bundles were stockpiled over 20 feet high! The trash bundles consisted of household trash, soft goods, and plastics. The site contained no active fire prevention apparatus or measures for rodent control." The property owner, doing business as Mission Fiber, was immediately notified of the violations by Officer Gianos, who also brought County Counsel into the mix to begin processing a court case for injunctive relief. Assistant County Counsel Pam Walls delivered a powerfully persuasive argument in favor of shutting the business down and cleaning the site immediately.

Due to the overwhelming evidence of potential harm to the public, the judge agreed with Ms. Walls and ordered Mission Fiber to cease operation and remove the offending rubbish from the property. Officer Gianos then began the arduous task of enforcing the court order and ensuring the cleanup of the property. "Unfortunately, the business owner was reluctant to comply," said Officer Gianos. The business owner's idea of compliance was to remove the rubbish at a slow pace to two other counties, spanning several months.

Bee Careful *District 1*

Code Enforcement officers are trained to constantly keep their eyes open and their ears tuned in to what is going on around them, because they never know what they may encounter while conducting a routine property investigation. Officer Brett Farlow was conducting an inspection in the unincorporated area of Murrieta when he encountered a swarm of Africanized bees that had taken up residency in a boat stored on the property. "Even though I responded immediately to the impending threat, the bees keyed in on our movement from over 50 yards away and attacked the property owner and myself, stinging us repeatedly," stated Officer Farlow. With prior Animal Services training, Officer Farlow knew the best strategy was to run away from the hive. "We ran over a quarter of a mile before the bees gave up chase," Officer Farlow recounted. Furthermore, Cal Fire was called and responded to the scene due to the extreme behavior exhibited by the bees. Cal Fire donned protective gear with bee screens and displaced the hive with foam. While on site, paramedics provided first aid to Officer Farlow and the property owner. Other than a real painful experience, neither sting victim sustained any serious injuries that required further medical assistance.

Cal Fire displaced a hive of Africanized Bees with foam

WHAT TO DO IF YOU ARE STUNG:

- Pull or scrape stings from skin as soon as possible. Most venom is released within one minute.
- Wash stung areas with soap and water like any other wound to prevent infection.
- Apply ice to relieve pain and swelling.
- Seek medical attention if breathing is difficult, if stung many times, or if allergic to bee stings.

Revolutionizing Code Enforcement

In the face of increased foreclosed and abandoned homes, blight and the subsequent health and safety issues have become more prevalent and an adversary for Code Enforcement. Violations such as abandoned vehicles, trash and debris, dilapidated buildings, dry vegetation on vacant properties, and illegal signs bring blight to unincorporated communities. To manage the influx of issues facing the County of Riverside our department developed the model for Community Impact Plans, a five-point strategy that uses the best concepts from Community Policing and Improvement Programs. The concept of our Community Impact Plans is revolutionizing how Code Enforcement interacts with the communities we serve.

The Community Impact Plans encompass the characteristics of each community and take into account the history, demographics, zoning, and media outlets to ensure community involvement and a sense of pride for the residents as their wants and needs are considered. The plans consist of assessment and research, community involvement, education and outreach, clean-ups and pro-active enforcement.

Utilizing the successful model we developed in one of our communities, our department has expanded this program to communities throughout the county. We are taking a more proactive approach by maximizing our resources to prevent problems and to address them before they become major issues. Our goal is to have a community impact plan directing our activities in each community.

Eager to share this effective program with other jurisdictions, we submitted our community impact plan process to the California State Association of Counties, and we were awarded one of ten Challenge Awards for this fresh and innovative approach to addressing issues affecting the health and well-being of the communities we serve. Feedback from residents is positive, common code violations have been significantly reduced, and internal management of the department has improved. In addition, the Code Enforcement Department is perceived as playing an active role in solving neighborhood problems.

Earlier this year, the Special Enforcement Team (SET) received a telephone call from a District Five constituent regarding a single wide mobile home that had been dumped on the side of Cherry Valley Boulevard, east of the I-10 freeway. SET officers responded and contacted the property owner where the unit was located. During their investigation, officers determined that the property owner was not responsible nor had they agreed to the dumping of the mobile home on their property. SET officers then contacted several neighbors around the dump location in an effort to generate any investigative leads. Unfortunately, no leads developed and the property owner was in no financial position to remove the unit. This ugly pink mobile home was not going anywhere, anytime soon. Or so the officers thought.

SET contacted Community Improvement, inquiring about resources that could be offered to the victim. Community Improvement identified that the location was not in a CDBG area and therefore not eligible for grant funds. Susan Rush, from the Community Improvement team, made one phone call and Riverside County's own Transportation Department (once again) came to the rescue. With their big tractors, they hauled away the junked out mobile home. Special thanks to everyone involved for your team effort and persistence in getting this mobile removed!

"Patience and perseverance have a magical effect before which difficulties disappear and obstacles vanish."

Indio Hills Receives a Much Needed Facelift *District 4*

You could see it all from Dillon Road. The entire property was visible from the major roadway through the area, and the citizens of Indio Hills had a constant reminder that their area had problems. Since there was no perimeter fencing, the neighborhood was able to see over twenty (20) inoperable, dismantled vehicles, including trucks, a sweeper, motor homes, and boats. The owner, who had been renting the house to relatives, had recently moved back to the property.

Code Enforcement Officer Jacqueline Fogh began a vehicle abatement case to cause the owner to take the necessary action to remove, repair, or properly store the inoperable vehicles on the property. Soon after notifying the owner of a county code ordinance violation, the property owner either removed or garaged the offending vehicles; but the property owner did not stop there. The excess outside storage was also removed, and all the operable vehicles were arranged neatly on the property.

The area now looks so much better thanks to the owner who took responsibility for the property – with a friendly reminder from the Code Enforcement Department.

Over 20 inoperable vehicles were scattered around the property

The vehicles were either removed or stored properly

Good Neighbor Tip:
Park your car(s) in designated areas on the street or in your driveway or garage.

Elderly Resident Removed from Unsanitary Conditions by Caring Family *District 5*

Code Enforcement officers are subjected to all sorts of code violations on a daily basis. Oftentimes, property owners and family members become emotional as the officers attempt to communicate the hazards and safety concerns they witness on a property. Code Enforcement Officers Anthony Green, James Pike, and Lanee Padilla were contacted by Animal Services to assist with a multi-agency cleanup of a property in Cabazon.

During the initial inspection of the property, it was discovered that the elderly resident was living in very unsanitary conditions. In addition to the intrinsic conditions associated with the keeping of over 20 cats and dogs, several electrical hazards were also documented on the property.

A high level of courtesy, compassion, and customer service was exercised by the Code Enforcement Department, Animal Services, and the Sheriff's Department in order to avoid any additional stress being placed on the property owner or her family members. During the inspection, the owner was voluntarily removed from the residence by relatives and taken to an assisted care facility.

Although these types of cases can be emotionally draining, the gratitude expressed by the family members and neighbors make it all worthwhile.

Fire Damage Leads to Voluntary Compliance *District 2*

The Riverside County Code Enforcement Department received a report from the California Department of Forestry regarding a structure fire on Grant Street in the community of Home Gardens. Senior Officer Marcella Villanueva and Officer Diana Parra inspected the location.

Officers Villanueva and Parra found the structure had sustained major fire damage. While inspecting the property, the officers also discovered that the structure's garage had been illegally converted into living space and contained a large L-shaped unpermitted addition. The garage and addition had been divided into three separate units, and it was unknown if the utilities to the unpermitted units were correctly installed, which could have proved hazardous to the previous occupants. The main structure was deemed substandard and a notice was posted. A Notice of Violation was issued for the unpermitted additions and garage conversion.

Officer Parra contacted the individual representing the property owner and gave the representative direction on how to come into compliance. The property owner decided to remove the structure from the property and obtained a demolition permit. Code Enforcement maintained contact with the representative and demolition contractor, and within weeks, the structure was removed from the property. Currently there are plans for a new single family residence to be built at this location.

WASTE MANAGEMENT DEPARTMENT-
HOUSEHOLD HAZARDOUS WASTE

PRESS RELEASE

RIVERSIDE COUNTY
WASTE MANAGEMENT DEPARTMENT

Diane Christensen
Program Administrator
(951) 486-3282

September 28, 2009

Riverside County Regional Permanent Household Hazardous Waste Collection Facility Opens in Palm Springs

A new hazardous waste facility will open July 11 in Palm Springs. The facility will replace the previous facility on Alejo Road, which closed permanently June 27.

The new facility on 1100 Vella Road, across from Demuth Park, will accept drop-offs starting 7 a.m. This new site will be open to the public on Saturdays from 7 a.m. to noon through September. Operational hours from October through May are from 9 a.m. to 2 p.m. The hazardous waste facility will close on holidays or due to inclement weather.

Most residential hazardous waste will be accepted at the new location, including electronic waste. Hazardous waste collection is a free service provided to Riverside County residents. State law requires the safe disposal of used motor oil, flammable liquids, paint, antifreeze, household and automotive batteries, pesticides, cleaning products, fluorescent lamps and properly packaged and labeled sharps such as needles syringes or lancets. Televisions, computers, VCRs and telephones are also accepted. Flammable liquids are accepted, but containers, such as gasoline cans, will not be returned.

The new facility is a partnership between the county Waste Management Department and the City of Palm Springs. While the facility is available for the safe disposal of hazardous waste, residents are encouraged to use up their hazardous products whenever possible to help keep down the costs of the free service.

Residents are limited to transporting no more than five gallons or 50 pounds of hazardous waste per trip, but multiple trips are allowed. The facility will not accept appliances, explosives, radioactive waste, ammunition, asbestos, compressed gas cylinders over 40 pounds, and infectious or medical waste other than sharps. Waste is not accepted from business or non-profits.

For more information or questions, call (951) 486-3200 or (800) 304-2226

Household Hazardous Waste Collection Program
July thru December 2008
What is Household Hazardous Waste?
All The Items Listed Below And More!

Household Hazardous Waste Collection Sites will take ALL Household Hazardous Waste

Before transporting waste to the collection event or facility, please use this checklist to make sure you have done the following:

- ☐ Have I used up every product to the fullest extent possible?
- ☐ Have I offered good, usable products I can't use to my neighbor, family or friends?
- ☐ Have I kept the amount of chemical waste to less than 5 gallons or 50 pounds for transportation? (State Law maximum transportation limitation.)
- ☐ Are any of the containers leaking? (If they are, place them in a container or material that will not allow the leak to spread and place securely in the vehicle for safe transport.)
- ☐ Is the waste in its original container or is it properly labeled as to the contents? (The contents of the container must be the same as stated on the label. If not, cover up the label and write the name of its content.)
- ☐ Are the items placed in a sturdy container, such as cardboard or wooden box, for transporting? (Wrap glass bottles in newspaper to prevent breakage.) Containers with flammable liquid will not be returned.
- ☐ Is the box placed in the trunk of your car or in the bed of your pickup truck and secured to prevent movement? (Keep items away from passengers.)

Follow directions once you reach the event site. You will be asked to turn off your motor and stay in your vehicle. The site staff will unload the material from your vehicle.

THIS EVENT IS FOR RESIDENTIAL USE ONLY. PHOTO DOCUMENTATION WILL BE MADE OF EXCESSIVE OR SUSPECTED NON-RESIDENTIAL LOADS COMING TO EVENT.

The following waste CANNOT be accepted at ANY Riverside County HHW collection facility:
Ammunition, Appliances, Asbestos or other Remediation Waste, Compressed Gas Cylinders greater than 40 pounds Explosives, Infectious or Medical Waste other than Home-Generated Sharps, Radioactive Waste, Non-Residentially Generated Waste, Waste Generated Outside of Riverside County.

If you have any of the above wastes please call (951) 486-3200 for assistance.

Proper Disposal of Medication and Sharps

Most medications are not considered hazardous waste and can be disposed of in regular trash.
Remove personal information from containers before disposal.

Liquid.....Empty liquid medication onto absorbent paper towels or rags and throw IN TRASH.

Pill.....Crush pills, mix with coffee grounds or kitty litter, and dispose of mixture IN TRASH.

Inhaler.....Empty container, expel propellant, and toss empty cylinder IN TRASH.

Sharps/Needles.....Must be placed in a secure approved sharps container and brought to a Household Hazardous Waste collection for disposal. FREE Approved containers are available while supply lasts. If a container is not available, put sharps in rigid plastic jug (bleach bottle), tighten lid, secure with tape, and place label "SHARPS/NEEDLES".
ALWAYS BRING SHARPS TO HHW PERMANENT FACILITY OR TEMPORARY EVENT.

Small Business Hazardous & Universal Waste

Conditional Exempt Small Quantity Generator (CESQG) **1-800-952-5566**

What is a CESQG? Businesses that generate up to 27 gallons or 220 lbs. of hazardous waste, or 2.2 lbs of extremely hazardous waste per month are called CESQG's. These businesses are required to use a licensed hazardous waste hauler to manifest and transport their waste. The most common CESQG's are painters, print shops, auto shops, builders, churches, schools, non-profit groups and property managers.

What is the CESQG Program? This Program is a hazardous waste pick-up disposal service for eligible businesses/non-profit organizations in the County of Riverside. This Program provides small quantity generators with a legal and affordable way to dispose of their waste with all legal documentation provided as part of the service.

How do I get service? To arrange an appointment for the **CESQG** Program, call **1-800-952-5566.**
A disposal fee will be charged based on the type and amount of waste picked-up.

Storm Water Pollution Prevention - ONLY RAIN DOWN THE STORM DRAIN

What is the #1 reason water bodies such as creeks, rivers, and lakes get dirty? It's from pollutants that flow into storm drains then make their way to your favorite water recreational facility. The storm drain system is designed to prevent flooding and is not connected to a treatment facility.

Call **1-800-506-2555** to report storm drain disposal or obtain more information.
You can also email us at **flood.fcndes@co.riverside.ca.us** or visit **www.floodcontrol.co.riverside.ca.us**

Jun - Sept: 7:00 AM to 12:00 PM

Proper Disposal of Medication and Sharps

- Most medications are not considered hazardous waste and can be disposed of in regular trash.
- No Drugs Down the Drain. Do not flush unused medications down the toilet.
- Remove personal information from containers before disposal.
- Sharps and needles should be taken to a household hazardous waste facility or event.

LIQUID & PILLS Empty medication into coffee grounds or kitty litter and dispose with regular TRASH.

INHALER Empty container by expelling propellant and dispose of cylinder in regular TRASH.

SHARPS/ NEEDLES **Always bring Sharps to a HHW Facility or Temporary Collection** Sharps must be placed and secured in an approved sharps disposal container and brought to a Household Hazardous Waste collection for disposal. FREE Approved containers are available at HHW events - while supply lasts.

Make your own container from a non-food rigid plastic sealable jug. For instructions and FREE Biohazard Labels: 951-486-3200 or http://www.rivcowm.org/hhw/medications.html
Contact your Local City Hall for additional Sharps collection programs.

For more information:
(951) 486-3200 or http://www.rivcowm.org/hhw/medications.html

What Is Household Hazardous Waste?

Many products used in our home contain hazardous materials. Your home and garage may seem safe, but look again. To know whether or not a product is hazardous, check the label. **Unwanted products labeled Corrosive, Flammable, or Toxic warn of potential hazards** if the chemical product is misused, spilled or disposed of improperly. Typical products found throughout the house that may be hazardous are as follows:

Last year, more than 21,000 residents have properly disposed of over 1,965,000 pounds of Household Hazardous Waste. Thank you for participating in this valuable Riverside County Program.

BATHROOM

- Chlorine Bleach
- Deodorizer/ Air Freshener
- Disinfectant
- Nail Polish Remover
- Shoe Dye
- Mercury Thermometer
- Toilet, Tub & Tile Cleaner

GARDENING

- Fertilizer
- Fungicide
- Insecticides
- Pesticides
- Moss Killer
- Slug And Snail Poison
- Weed Killer/Herbicides

KITCHEN

- Microwave Oven
- Aerosol Cans
- Aluminum Cleaner
- Ammonia
- Drain Opener
- Floor Care Products
- Furniture Polish
- Oven Cleaner
- Rodent Poison

GARAGE

- Antifreeze
- Auto Batteries
- Transmission & Brake Fluid
- Carburetor Cleaner
- Chrome Polish
- Gas, Diesel Fuel
- Engine Degreaser
- Motor Oil
- Oil Filters

WORKSHOP

- Fiberglass & Epoxy Resins
- Glue
- Gun Cleaner
- Paint Latex/Oil Based
- Paint Stripper
- Paint Thinner/ Turpentine
- Photo Chemicals
- Varnish
- Wood Preservative
- Caulking
- Fluorescent Lamps

MISCELLANEOUS

- Artists' Paints
- Flea Powder
- All Batteries
- Kerosene/Lamp Oil
- Lighter Fluid
- Moth Balls/ Flakes
- Pool/Spa Chemicals
- Rug Cleaner
- Spot Remover w/Solvent
- Cell Phones
- TV's
- Computers
- Mercury Devices
- Consumer Electronics
- Sharps-Needles
- BBQ Propane Tanks

UNIVERSAL WASTES (a category of Household Hazardous Waste)

- Aerosol Cans (non-empty label toxic or flammable)
- Batteries (AA, AAA, C & D cell) all single use.
- Cell phone
- Computer
- Computer Monitor (up to 3)
- Dental amalgam
- Fluorescent Bulbs
- Fluorescent Tubes
- Microwave oven
- Printer
- Radio
- Telephone
- Thermometer
- Thermostat
- TV's and VCR's (up to 3)

RESTRICTIONS:

- County of Riverside residents only
- No explosives/ammunition
- No radioactive materials
- No tires
- No business or non-profit organization waste
- No appliances
- No medical waste
- No 30 or 55-gallon drums

CAUTION:

- You may bring up to **5 gallons** or **50 lbs.** of a chemical hazardous waste maximum per car/per trip.
- Container shall be marked and secured to prevent leaks. Do not mix waste products.
- Containers holding gasoline will not be returned.

HOUSEHOLD HAZARDOUS WASTE 24 Hour HOTLINE 1-800-304-2226
Current Schedule or Subscribe for automatic updates:
http://www.rivcowm.org/hhw/hhw_schedule.html
Riverside County Waste Management Department (951) 486-3200

This insert has been funded through a cooperative effort from Riverside County Waste Management Department, the cities and County of Riverside Storm Water/Clean Water Protection Program, the California Department of Conservation, and the California Integrated Waste Management Board. Zero Waste - You Make It Happen!

05231008M915.2

Household Hazardous Waste

or HHW, are unwanted materials that are flammable, reactive, poisonous, or corrosive. These items are banned from the landfill and must be disposed of at an HHW Collection Facility or event.

Common Acceptable Items include:

- Batteries
- Fluorescent Bulbs
- Electronic Devices
- Mercury-Containing Devices
- Sharps
- Paints and Thinners
- Cleaners
- Solvents
- Pesticides
- Yard Chemicals
- Automotive Fluids
- Small & BBQ Propane Tanks
- Swimming Pool Chemicals
- Hobby Chemicals

Items which CANNOT be accepted include:

- Ammunition
- Asbestos or Remediation Waste
- Compressed Gas Cylinders Greater Than 40 Pounds
- Explosives
- Infectious or Medical Waste, except Sharps
- Radioactive Waste
- Business Waste
- Waste Generated Outside of Riverside County.

Material must be secured from tipping, abeled and sealed during transport. State aw limits the amount of waste to 5 gallons or 50 pounds per visit.

The Riverside County Waste Management Department Mission Statement

To provide for the protection of the general public health and welfare by efficient management of Riverside County's solid waste system through:

- Provision of facilities and programs which meet or exceed all applicable local, State, Federal and land use regulations;
- Utilization of up-to-date technological improvements;
- Development and maintenance of a system that is balanced economically, socially and politically; and
- Economically feasible recovery of waste materials.

For more program information, visit www.rivcowm.org or call 1-800-304-2226

Recycle Park at Lamb Canyon Landfill

Recycle Park is designed to divert usable and recyclable materials from the waste stream, while also providing a location for disposing of Household Hazardous Waste and other items banned from the landfill. Though it is currently in the construction phase, once completed, it will feature:

Household Hazardous Waste Collection:
providing a new permanent facility for the area.

Consumer Electronics Drop-Off:
of unwanted televisions, computer, and other electronic devices.

Tire Drop Off:
from cars, passenger trucks, and RVs

Appliance Recycling:
for major appliances, including items with Freon.

Reuse Exchange Store:
where visitors can purchase used items.

Trash Disposal Pad:
which is an area where visitors can safely unload unusable refuse away from heavy equipment.

UNIVERSAL WASTE
MAIL-BACK RECYCLING SERVICES

Onyx Environmental Services
https://www.onyxes.com/OnyxPak/index.jsp

Proper recycling is easy with OnyxPak. When you have lamps, ballasts, batteries, mercury devices or computer monitors to dispose of simply order an OnyxPak. OnyxPak makes it easy to recycle small quantities and to comply with today's changing regulations. Our prepaid packaging allows you to conveniently manage lighting and electronic waste. One price includes everything you need - packaging, freight, insurance, liability protection and certificates of recycling.
We stock a variety of fiber drums, boxes and pails that will meet your needs. Simply fill, seal and return via the prepaid shipping label. Your boxes, drums or pails will be delivered to one of four fully permitted Onyx facilities, where your waste will be recycled to the highest standards in the industry. That's compliance with confidence!

Benefits of OnyxPak

Low cost compliance. Price includes packaging, return shipping and recycling.

Minimize the need to sort, count and store lighting and electronic waste.

Easy process for recycling your lamps and ballasts. Simply go to our ordering page or call toll-free (800) 556-5267.

Access to recycling expertise. Customer service representatives are standing by, ready to assist you.

Receive confirmation that your lighting and electronic waste was recycled. Onyx will send you a certificate of recycling.

For larger or bulk quantities, we offer competitive pricing, containers and documentation for sorting, storing and shipping your lighting and electronic wastes. When it comes time to recycle, we'll even arrange for transportation.
Contact us today to request a bulk quote.

EPA

WHY RECYCLE

- Mercury is a toxic metal that is hazardous to both the environment and human health.
- An ounce of mercury contaminates a lake for centuries.
- 100 fluorescent lamps contain approximately 4 grams of mercury.
- Ballasts contain polychlorinated biphenyls (PCB's) which is a hazardous waste.
- Batteries contain heavy metals and corrosive components.
- Computer monitors contain toxic lead in the glass and circuits.

UNIVERSAL WASTE RULE (UWR)

The EPA issued the UWR in 1995 to reduce the amount of hazardous waste items entering municipal solid waste. It encourages recycling and proper disposal of certain wastes. Regulatory and administrative burdens for managing wastes were also streamlined. Numerous states have moved forward with the inclusion of electronic scrap (e-scrap) into the UWR. In addition, numerous states have banned monitors from landfills.

AERC PRE-PAID RETURN PROGRAM

AERC offers a comprehensive recycling service for commercial, institutional, municipal, and governmental waste generators.

1. Order Your Recycle Kit Order your kit by going to the RecycleKits website or by calling your AERC representative. You will need to know what quantities of the specific material you will be recycling. Prepayment includes recycling fees, container and FedEx freight. Certificates of Recycling and Process available upon request. AERC offers a comprehensive recycling service for commercial, institutional, municipal, and government waste generators.

2. Shipping Guidelines Put the material you're recycling into the designed container and follow the packaging instructions. Complete the enclosed labels and affix the prepaid shipping labels to the container.

FedEx Ground will not accept any package with the a PPRP label that has been changed, altered or tampered with in any way.

Give this package to the FedEx Ground driver during a routine delivery. Do not call FedEx Ground for a pickup if you are already set up for daily pick-ups. If you are not set-up for daily pick-ups you will need to call FedEx Ground as (888)777-6040 to schedule a pick-up.

3. AERC Recycles Your Waste AERC recycles your waste at one of its four fully permitted facilities. After your waste has been processed, a Certificate of Recycling or Process can be provided upon request.

ADVANTAGES OF AERC'S PPRP PROGRAM

- One price includes everything you need.
- Convenience for small quantity generators with storage limitations.
- Reduces the chances of facility contamination by minimizing volumes of waste on-site.
- Allows each facility to purchase recycling services based on its individual

Riverside County landfills will accept residential TV, monitors, CRT's, and other consumer electronic devices for recycling. Residents may bring in up to 2 CRT type devices per trip. A minimum fee of $8.00 will be charged for loads up to 800 lbs. or $31.91 per ton prorated for heavier loads (new fees effective 7/1/06). Electronic waste from businesses is not accepted at the landfills at this time. Please contact the handlers on the following list.

Current Research and Education using Multi-disciplinary Approaches to Solving Complex Issues, 2007-08 update

Environmental Horticulture Effort Saves Billions of Gallons of Water in Desert

Using temporary weather stations, Advisor Mike Henry and CE Specialist, Rick Snyder teamed with the Coachella Valley Water District in an eight year study to determine local reference evapotranspiration (ETo) in urban sites in the Coachella Valley, California. Findings showed potential water savings of 2.5 billion gallons annually.

Temporary weather station with temperature, humidity, radiation and wind speed sensors provided data that could be used to calculate ETo which was then compared with the ETo for the Valley from the State CIMIS station in Indio, CA (# 200)).

Agricultural Economics: New Crop Studies Show Opportunity for Sustainability and Viability of Agriculture in Southern California

Current cost studies analysed by Eta Takele show the benefits and challenges of producing and investing in crops such as Dates, Mandarins and Blueberries.

The Coachella Valley, the Date Production Area in the US

Rapid population growth and the high cost of production resulting from resource diversion of water and land from agriculture to urban development has led many growers to consider high value, small scale production in southern California. For detail information of the studies, please go to the following websites and access the publications.

Subtropical Horticulture Program

Citrus leafminer (CLM) continues to be an insect pest on all varieties of citrus trees in Riverside County. A variety of natural predators appear to be gradually controlling the CLM populations. Allowing biological control to take effect is highly recommended at this time. Working in conjunction with UCR Entomology, Dr. Peggy Mauk and SRA Tom Shea are supplying CLM infested leaves from field work and more predators are being successfully reared for release. For mature trees and any citrus tree over four years old, no pesticide application is suggested. See UC ANR publication – Pest Notes #74137, August 2007, for more CLM information – available online.

The serpentine (snake –like) mines of citrus leafminer on a citrus leaf.

Vegetable Crops

Vegetable crops advisor, Jose Aguiar in 2006 took a sabbatical leave in Sinaloa, Mexico to study bell pepper production. He found various technologies that can be applicable in the Coachella Valley including green house, Maya Sombra and open field production. Along with UC specialists and advisors, Jose is now evaluating the benefits of these techniques.

Bell peppers being grown in shade house in the Oasis area of the Coachella Valley.

State Water Quality Grant Uses BMP's To Improve San Jacinto Watershed

Best Management practices for Citrus, Grain, Vegetable crops and urban turfgrass are being developed and extended to farmers and residential clientele in the watershed to improve the water quality of Canyon Lake and Lake Elsinore in western Riverside County. Mike Henry, Darren Haver, Eta Takele, Nyles Peterson and CE Specialist, Milt McGiffen work with Dr. Laoshang Wu, CE Water Specialist (P.I.) and the State Water Quality Control Board on this project.

Project researchers install field instrumentation to measure runoff from potato field in Riverside County.

Nutrition, Family and Consumer Sciences

Advisor Chutima Ganthavorn and EFNEP/FSNEP program staff, Fatima Afana, Gustavo Rimada, Liz Armijo, Myriam Acevedo and Sharon Southworth, teamed with local agency partners and schools to make a change in food behaviors of parents and children from low-income families. During FY 2006-2007 Riverside County EFNEP helped 576 low income families and 1,142 youth to improve their nutrition, physical activity and health, while Riverside County FSNEP helped 313 food stamp families and 1,702 youth to improve their knowledge in money management and nutrition.

Promoting MyPyramid and physical activity in youth from grandparents raising grandchildren families

Master Gardener Program Teams With FSNEP & 4-H on TWIGS Project

In Riverside County, Master Gardeners, FSNEP and 4-H are teaming up to support school gardens. Elementary school youth learn about gardening and nutrition from the TWIGS (Team with Intergenerational Support) curriculum. Master Gardeners and 4-H program rep, Jeanne Lothridge, are helping with direct teaching, gardening and making supplemental posters for TWIGS.

Master Gardener, Pauline Pedigo introducing her pet desert turtle during a break from TWIGS lesson at school garden in Riverside, CA.

Viticulture Program

The viticulture program addresses critical needs and issues that affect wine grape and table grape production in Riverside, San Bernardino and San Diego counties. Advisor Carmen Gispert is currently working on new table grape selections and the efficacy of novel insecticide materials for the control of vine mealybug.

Vine mealybug on grapes in the Temecula Valley of Riverside County.

A collaborative effort among the University of California, the California Department of Food and Agriculture has successfully maintained low populations of the glassy-winged sharpshooter in the Coachella and Temecula Valleys, reducing the potential of the spread of Pierce's disease, a lethal malady on grapes.

Poultry Science

Advisor Doug Kuney currently serves on County Poultry Committees. The committee's mission is to help resolve and prevent nuisance related complaints from neighboring communities near poultry farms. Doug assists the committee by providing information about management practices that have been proven to mitigate nuisance related complaints. In addition, he works with the poultry industry to adopt those management practices.

Smart tips for homeowners about the proper use, storage and disposal of outdoor consumer pesticide products, including insecticides. If you use these products, please apply them responsibly to protect our water and environment.

URBAN PYRETHROID

Pyrethroids (pronounced *"pī-rē-throids"*) are ingredients found in many commonly used consumer home and garden insecticides for treating a wide variety of pests, including problems with mosquitoes, caterpillars, ants, spiders, garden worms, wasps, cockroaches, aphids and other insect infestations.

The Urban Pyrethroid Stewardship is a pesticide industry alliance that is promoting *"Apply Responsibly"*— a campaign to inform Californians in urban areas about environmentally responsible ways to handle, store and dispose of a wide range of home and garden pesticide products, including insecticides containing pyrethroids in order to help protect California's waters.

If you use insecticides in your garden or outside your house, please remember to apply them responsibly to protect our water and environment. *"Apply Responsibly"* also provides resources for consumers who may want to consider limiting pesticide use through integrated pest management and prevention efforts.

Protecting Our Water

Water is an essential natural resource that every Californian should help safeguard.

Many urban creeks in California receive water from residential areas. Chemicals used around the home, including home and garden pesticides, can move from where they are applied and run off through the storm drain system into these creeks.

By following a few simple rules for handling and disposal of chemicals, you can play an important role in helping prevent this type of runoff and in preserving California's water quality and environment.

Tips for the Lawn & Garden

Gardeners who choose to use pesticides to control insects in their yards should adhere to the following guidelines:

- Always read the entire label first and follow the directions
- Reduce pest infestations by eliminating what often attracts them or creates ideal breeding conditions – standing water, pet droppings, tree prunings or fallen fruit
- Remove thatch buildup in lawns to ensure water soaks deeply into the lawn and prevents runoff
- Mix and use only the amount you need
- Avoid applying a spray or dust on a windy day
- Rinse all pesticide application equipment only over the treated area
- Always use dry sawdust or kitty litter to soak up a liquid spill and then sweep it into a plastic garbage bag for disposal; don't use water to rinse or clean up a liquid spill
- Sweep or blow granules that fall on porches, driveways and sidewalks back onto the treated area
- When watering treated areas, don't overwater and don't allow water runoff into gutters, in-lawn drains or storm drains

Tips for Around the House

Homeowners who apply pesticides around the outside of their homes should follow a number of important guidelines:

- Always read the entire label first and follow the directions
- Limit the likelihood of pest infestations near the house by keeping wood piles, groundcover and shrubs away from the outside surfaces of your house
- Avoid applying a spray or dust on a windy day
- Only apply pesticides to the target problem areas
- If a product is labeled for "spot" and "cracks and crevices" you should only treat those areas
- Don't treat entire driveways, patios, sidewalks or similar outdoor surfaces
- Always use dry sawdust or kitty litter to soak up a liquid spill and then sweep it into a plastic garbage bag for disposal; don't use water to rinse or clean up a liquid spill
- If you hire a professional pest control company, be sure the operator is licensed and certified according to state law and local ordinances. Have a conversation with them to understand what, if any, pesticides they will apply around your home. Tell them about any do-it-yourself products that you may be using as sometimes they can interfere with products the professional may use. Finally, be sure to ask about steps that you can take to help keep pests from entering your home such as sealing cracks and crevices or fixing leaks

Storage & Disposal

- Dispose of unused pesticides according to the instructions on the product label
- Never pour any leftover pesticides down the sink, toilet, sewer or storm drain
- Don't stockpile pesticides. Buy only enough for one season
- If you only need to treat a small area, consider ready-to-use pesticides rather than products you have to mix yourself
- Always store pesticides in their original containers
- Ensure containers are securely closed
- Store in a safe place away from children
- Do not reuse an empty pesticide container
- Remember that an empty pesticide container contains residue and should also be handled carefully and according to the label

LANDSCAPE ORDIANCE 859.2

0003815

202

ORIG APPROVED COUNTY COUNSEL
Y. KARIN L. WATTS-BAZAN 8/18/09
DATE

SUBMITTAL TO THE BOARD OF SUPERVISORS
COUNTY OF RIVERSIDE, STATE OF CALIFORNIA

FROM: TLMA - Planning

SUBMITTAL DATE:
September 3, 2009

SUBJECT: Amendment to Ordinance No. 859 The Water Efficient Landscape Requirements

RECOMMENDED MOTION: That the Board of Supervisors introduce Ordinance No. 859.2 on September 15, 2009 and adopt Ordinance No. 859.2 on September 29, 2009.

BACKGROUND: Court rulings on endangered species, a growing crisis involving a long-term pumping solution for the Bay Delta, and drought conditions continue to impact the way the State of California uses water. On December 19, 2006 the County adopted Ordinance No. 859 which established water-efficient landscape requirements for all discretionary permits and/or approvals.

On September 28, 2006, the State adopted AB1881 which revised the Water Conservation in Landscaping Act. AB1881 gave local land use jurisdictions until January 1, 2010 to adopt an ordinance "as effective" as the State's Model Ordinance or the State's Model Ordinance would prevail. On February 8, 2008, the California Department of Water Resources (DWR) promulgated the first of several model water efficient landscape ordinances that began to define the State requirements for water efficient landscaping.

During the Spring of 2009, the Riverside County Water Task Force developed and subsequently released a Local Model Landscape Water Use Efficiency Ordinance (Local Model Ordinance). This ordinance was modeled after the County's Ordinance No. 859 and incorporated the required elements of the State's Model Ordinance. The Local Model Ordinance was tailored to meet the unique relationships and needs of the Riverside County region.

On June 8, 2009, the WRCOG Executive Committee endorsed the Local Model Ordinance and encouraged its member jurisdictions to adopt it or utilize it in creating their respective local ordinances. Staff has incorporated the Local Model Ordinance into Ordinance No. 859.2 (Attachment A) and its accompanying provisions of resolution (Attachment B).

Key, new features of Ordinance No. 859.2 include:

1. Its applicability to landscapes equal to or greater than 2,500 square feet which require a discretionary permit or approval
2. A reduction in maximum water demand from 80% to 70% of the referenced evapotranspiration rate
3. Greater specificity concerning the design requirements of landscape plans
4. An expanded landscape documentation package including a:
    a. soils management plan, and a
    b. grading plan
5. A requirement that surface area of water features be incorporated into the water budget calculations
6. Added emphasis on recycled water
7. Special provisions for cemeteries, areas irrigated with recycled water, parks, sports fields, and other high traffic turf areas

Key features of Resolution 2009-289 include:

1. Reliance on local water purveyors, as the direct and immediate supplier of water, to enforce landscape water use efficiency standards with respect to existing customers
2. A request to local water purveyors to identify programs that enhance and encourage landscape water use efficiency (e.g. tiered water rate structure, allocation-based conservation water pricing structure, etc.)

On September 29, 2009, staff will bring the aforementioned ordinance and resolution to the Board for approval along with a revised Board Policy H-25 that addresses the County's Water Efficient Landscape Policy for County Facilities.

ATTACHMENT A

ORDINANCE NO. 859.2

AN ORDINANCE OF THE COUNTY OF RIVERSIDE

AMENDING ORDINANCE NO. 859 THE WATER EFFICIENT

LANDSCAPE REQUIREMENTS

The Board of Supervisors of the County of Riverside ordains as follows:

Section 1. Ordinance No. 859 is hereby amended in its entirety to read as follows:

Section 1. **SHORT TITLE**. This Ordinance shall be known as the Water Efficient Landscape Requirements Ordinance.

Section 2. **INTENT**. It is the intent of the Board of Supervisors in adopting this Ordinance to:

A. Establish provisions for water management practices and water waste prevention;

B. Establish a structure for planning, designing, installing, maintaining, and managing water efficient landscapes in new and rehabilitated projects;

C. To reduce the water demands from landscapes without a decline in landscape quality or quantity;

D. To retain flexibility and encourage creativity through appropriate design;

E. To assure the attainment of water efficient landscape goals by requiring that landscapes not exceed a maximum water demand of seventy percent (70%) of its reference evapotranspiration (ETo) or any lower percentage as may be required by state legislation, whichever is stricter;

F. To eliminate water waste from overspray and/or runoff;

G. To achieve water conservation by raising the public awareness of the need to conserve water through education and motivation to embrace an effective water demand management program; and

H. To implement the requirements of the California Water Conservation in Landscaping Act 2006 and the California Code of Regulations Title 23, Division 2, Chapter 2.7.

Section 3. **DEFINITIONS.** The terms used in this Ordinance shall have the meaning set forth below:

a. "backfilling means to refill an excavation, usually with excavated material.

b. "backflow prevention device" means a safety device used to prevent pollution or contamination of the water supply due to the reverse flow of water from the irrigation system.

c. "check valve" or "anti-drain valve" means a valve located under a sprinkler head or other location in the irrigation system to hold water in the system to prevent drainage from the sprinkler heads when the system is off.

d. "established landscape" means the point at which plants in the landscape have developed a significant root growth into the site. Typically, most plants are established after one or two years of growth.

e. "estimated annual water use" or "EAWU" means estimated total water use per year as calculated by the formula contained in Section 5.B.12.n.

f. "hydrozone" means a portion of the landscaped area having plants with similar water needs. A hydrozone may be irrigated or non-irrigated.

g. "invasive species" are non-indigenous species (e.g. plants or animals) that adversely affect the habitats they invade economically, environmentally, or ecologically. Lists of invasive species are included within the Western

Riverside County Multiple Species Habitat Conservation Plan and the Coachella Valley Multiple Species Habitat Conservation Plan. Said lists are hereby incorporated by reference.

h. "landscape architect" means a person who holds a license to practice landscape architecture in the State of California.

i. "landscaped area" or "LA" means all of the planting areas, turf areas, and water features in a landscape design plan subject to the Maximum Applied Water Allowance (MAWA) calculation. The landscape area does not include footprints of buildings, or structures, sidewalks, driveways, parking lots, decks, patios, gravel or stone walks, other pervious or impervious hardscapes, and other non-irrigated areas designated for non-development (e.g., open space and existing native vegetation).

j. "local water purveyor" means any entity, including a public agency or private water company that provides retail water service to customers in the unincorporated area of Riverside County.

k. "low volume irrigation" means the application of irrigation water at low pressure through a system of tubing or lateral lines and low volume emitters such as drip, to apply small volumes of water slowly at or near the root zone of plants.

l. "Maximum Applied Water Allowance" or "MAWA" means the upper limit of annual applied water allowed for the established landscaped area.

m. "overhead sprinkler irrigation systems" means systems that deliver water through the air (e.g. pop ups, impulse sprinklers, spray heads and rotors, etc.).

n. "reference evapotranspiration" or "ETo" means a standard measurement of environmental parameters which affect the water use of plants. ETo is given in inches per day, month, or year. Reference evapotranspiration is used as the basis of determining the Maximum Applied Water Allowances

so that regional differences in climate can be accommodated. Reference evapotranspiration numbers shall be taken from the most current EvapoTranspiration Zones Map developed by the California Department of Water Resources. For geographic areas not covered by the EvapoTranspiration Zones Map, data from nearby areas shall be used.

o. "rehabilitated landscapes" means any re-landscaping of a project that requires a discretionary permit.

p. "special landscape area" means an area of the landscape dedicated to edible plants, areas irrigated with recycled water, and publicly accessible areas dedicated to active play such as parks, sports fields, golf courses, where turf provides a playing field or where turf is needed for high traffic activities.

q. "temporarily irrigated" means irrigation for the purposes of establishing plants, or irrigation which will not continue after plant establishment. Temporary irrigation is for a period of six months or less.

r. "water-intensive landscaping" means a landscape with a WUCOLS plant factor of 0.7 or greater.

s. "WUCOLS" means the publication entitled "Water Use Classification of Landscape Species" by the University of California Cooperative Extension (1999 or most current version).

<u>Section 4.</u> APPLICABILITY.

A. The water-efficient landscape requirements contained in this Ordinance shall be applicable to all new and rehabilitated landscapes associated with residential uses (including single family and multi-family units/projects) with a total landscape area equal to or greater than 2,500 square feet which require a discretionary permit and/or approval and all new and rehabilitated landscapes

associated with commercial or industrial uses which require a discretionary permit and/or approval.

B. In the event Covenants, Conditions and Restrictions are required for any permit subject to this Ordinance, a condition shall be incorporated into any project approval prohibiting the use of water-intensive landscaping and requiring the use of low water use landscaping pursuant to the provisions of this Ordinance in connection with common area/open space landscaping. Additionally, such a condition shall also require the Covenants, Conditions and Restrictions to incorporate provisions concerning landscape irrigation system management and maintenance. This Ordinance shall not be construed as requiring landscaping of common areas or open space that is intended to remain natural. Covenants, Conditions and Restrictions shall not prohibit use of low-water use plants or the replacement of turf with less water intensive plant species.

C. Recognizing the special landscape needs of cemeteries, new and rehabilitated landscapes within a cemetery are subject only to the provisions set forth in Sections 6.A.and 6.B. of this Ordinance.

D. The following uses and/or projects are exempt from the provisions of this Ordinance:

1. Registered local, state or federal historical sites;
2. Ecological restoration projects that do not require a permanent irrigation system and have an establishment period of less than 5 years;
3. Mined land reclamation projects that do not require a permanent irrigation system; and
4. Botanical gardens and arboretums open to the public.

Section 5. **LANDSCAPE DOCUMENTATION REQUIREMENTS.** An applicant proposing any new or rehabilitated landscape for a project subject to the requirements of Section 4 of this Ordinance shall prepare and submit to the Planning Director documentation including the following: 1. project information; 2. a planting plan; 3. an irrigation design plan; 4. a soil management plan; and 5. a grading design plan. The "Riverside County Guide to California Friendly Landscaping" (Landscaping Guide) as may be periodically amended by the Planning Director is hereby incorporated by reference to assist in designing, constructing and maintaining a water efficient landscape and efficient irrigation system.

It is recommended that an applicant proposing any new or rehabilitated landscape that is designated for recycled water use consult with the appropriate local water purveyor early in the development review process to ensure that future recycled water facilities meet the projected demand and that the aforementioned plans when submitted comply with the applicable standards, approvals and implementation requirements of this Ordinance, the local water purveyor and any applicable maintenance entity.

Water systems for common open space areas shall use non-potable water if approved facilities are made available by the local water purveyor. Provisions for a non-potable water system shall be provided within the irrigation design plan. Water systems designed to utilize non-potable water shall be designed to meet all applicable standards of the applicable Regional Water Quality Control Board and the Riverside County Health Department.

A. **PROJECT INFORMATION.**

1. date;
2. name of applicant and contact information;
3. name of project owner and contact information;
4. project address including parcel and lot numbers;
5. total landscape area in square feet;
6. project type (e.g. new or rehabilitated, and residential, commercial, or industrial);

7. water supply (e.g. potable, well, recycled; use of recycled water is encouraged);

8. applicant's signature and date with statement, "I agree to comply with the requirements of Ordinance No. 859 and submit a complete Landscape Documentation Package."

B. **PLANTING PLAN REQUIREMENTS.**

1. Plant types shall be grouped together in regards to their water, soil, sun and shade requirements and in relationship to the buildings. Plants with different water needs shall be irrigated separately. Plants with the following classifications shall be grouped accordingly: high and moderate, moderate and low, low and very low. Deviation from these groupings shall be not be permitted.

2. Trees for shade shall be provided for residential, commercial and industrial buildings, parking lots and open space areas. These trees can be deciduous or evergreen and are to be incorporated to provide natural cooling opportunities for the purpose of energy and water conservation.

3. Plants shall be placed in a manner considerate of solar orientation to maximize summer shade and winter solar gain.

4. Plant selection for projects in high fire hazard areas shall address fire safety and prevention. A defensible space or zone around a building or structure is required pursuant to Public Resources Code Section 4291 and Ordinance No. 695. Fire-prone plant materials and highly flammable mulches shall be avoided.

5. Invasive species of plants shall be avoided especially near parks, buffers, greenbelts, water bodies, conservation areas/reserves and other open space areas because of their potential to cause harm to environmentally sensitive areas.

6. All exposed surfaces of non-turf areas within the developed landscape area shall be mulched with a minimum three inch (3") layer of material, except in areas with groundcover planted from flats where mulch depth shall be one and one half inches (1 ½").
7. Stabilizing mulching products shall be used on slopes.
8. Turf areas shall be used in response to functional needs and in compliance with the water budget.
9. Decorative water features shall use re-circulating water systems.
10. Where available, recycled water shall be used as the source for irrigation and decorative water features.
11. Planting plans shall identify and site the following:
    a. new and existing trees, shrubs, ground covers, and turf areas within the proposed landscaped area;
    b. a planting legend indicating all plant species by botanical name and common name, spacing, and quantities of each type of plant by container size;
    c. designation of hydrozones;
    d. area, in square feet, devoted to landscaping and a breakdown of the total area by landscape hydrozones;
    e. property lines, streets, and street names;
    f. building locations, driveways, sidewalks, retaining walls, and other hardscape features;
    g. appropriate scale and north arrow;
    h. any special landscape areas;
    i. type of mulch and application depth;
    j. type and surface area of water features;
    k. type and installation details of any applicable stormwater best management practices;

l. planting specifications and details, including the recommendations from the soils analysis, if applicable;

m. maximum Applied Water Allowance (MAWA):

i. Planting plans shall be prepared using the following Water Budget Formula:

MAWA (in gallons) = (ETo)(0.62)[0.7 x LA+0.3 x SLA]

where

ETo is reference evapotranspiration

SLA is the amount of special landscape area in square feet

LA is total landscape area (including the SLA) in square feet; and

ii. For the purposes of determining the MAWA, average irrigation efficiency is assumed to be 0.71. Irrigation systems shall be designed, maintained, and managed to meet or exceed an average irrigation efficiency of 0.71.

n. Estimated Annual Water Use (EAWU):

i. EAWU for a given hydrozone is calculated as follows:

EAWU (in gallons) = (ETo)(0.62)[((PF x HA)/IE) + SLA]

where

ETo is reference evapotranspiration

PF is Plant Factor

HA is hydrozone area in square feet

IE is irrigation efficiency (minimum 0.71)

SLA is the amount of special landscape area in square feet;

ii. Landscaping plans shall provide EAWU (in the same units as the MAWA) for each valve circuit in the irrigation hydrozone. The sum of all EAWU calculations shall not exceed the MAWA for the project;

iii. The plant factor used shall be from WUCOLS. The plant factor for low water use plants range from 0 to 0.3, for moderate water use plants range from 0.4 to 0.6, and for high water use plants range from 0.7 to 1.0.

iv. The plant factor calculation is based on the proportions of the respective plant water uses and their plant factor, or the factor of the higher water using plant used.

v. The surface area of a water feature shall be included in the high water use hydrozone area of the water budget calculation and temporarily irrigated areas in the low water use hydrozone.

12. Planting plans and Irrigation plans (Section 5.C.) shall be drawn at the same size and scale.

13. The Planting plan shall be prepared by a Landscape Architect licensed by the State of California.

C. **IRRIGATION DESIGN PLAN REQUIREMENTS.**

1. Irrigation systems shall be designed, maintained, and managed to meet or exceed an average irrigation efficiency of 0.71.
2. All irrigation systems shall be designed to prevent runoff, over-spray, lowhead drainage and other similar conditions where water flows off-site on to adjacent property, non-irrigated areas, walk, roadways, or structures. Irrigation systems shall be designed, constructed, managed, and maintained to achieve as high an overall efficiency as possible. The irrigation system shall be designed to ensure that the dynamic pressure at each emission device is within the manufacturer's recommended pressure range for optimal performance.
3. Landscaped areas shall be provided with a smart irrigation controller which automatically adjusts the frequency and/or duration of irrigation events in response to changing weather conditions unless the use of the property would otherwise prohibit use of a timer. The planting areas shall be grouped in relation to moisture control zones based on similarity of water requirements (i.e., turf separate from shrub and groundcover, full sun exposure areas separate from shade areas, top of slope separate from toe of slope). Additional water conservation technology may be require, where necessary, at the discretion of the Planning Director.
4. Water systems for common open space areas shall use non-potable water, if approved facilities are made available by the water purveyor. Provisions for the conversion to a non-potable water system shall be provided within the landscape plan. Water systems designed to utilize non-potable water shall be designed to meet all

applicable standards of the California Regional Water Quality Control Board and the Riverside County Health Department.

5. Separate valves shall be provided for separate water use planting areas, so that plants with similar water needs are irrigated by the same irrigation valve. All installations shall rely on highly efficient state of the art irrigation systems to eliminate runoff and maximize irrigation efficiency as required by the Landscaping Guide.

6. Static water pressure, dynamic or operating pressure and flow reading of the water supply shall be measured. These pressure and flow measurements shall be conducted at the design stage. If the measurements are not available at the design stage, the measurements shall be conducted at the installation.

7. The capacity of the irrigation system shall not exceed:

   a. the capacity required for peak water demand based on water budget calculations;

   b. meter capacity; or

   c. backflow preventer type and device capacity.

8. Sprinkler heads and other emission devices shall have matched precipitation rates, unless otherwise directed by the manufacturer.

9. In mulched planting areas, the use of low volume irrigation is required to maximize water infiltration into the root zone.

10. Non-turf areas on slopes greater than 25% shall be irrigated with drip irrigation or other low volume irrigation technology.

11. Long-narrow, or irregularly shaped areas including turf less than eight (8) feet in width in any direction shall be irrigated with subsurface irrigation or low-volume irrigation technology.

12. Overhead irrigation shall not be permitted within 24 inches of any non-permeable surface. There are no restrictions on the irrigation system type if the landscape area is adjacent to permeable surfacing and no overspray and runoff occurs.

13. Overhead irrigation shall be limited to the hours of 8 p.m. to 9 a.m.

14. All irrigation systems shall be equipped with the following:

    a. A smart irrigation controller as defined in Section 5.C.4. of this Ordinance;

    b. A rain sensing device to prevent irrigation during rainy weather;

    c. Anti-drain check valves installed at strategic points to minimize or prevent low-head drainage;

    d. A manual shut-off valve shall be required as close as possible to the point of connection of the water supply, to minimize water loss in case of an emergency or routine repair;

    e. A pressure regulator when the static water pressure is above or below the recommended operating pressure of the irrigation system;

    f. Backflow prevention devices; and

    g. Riser protection components for all risers in high traffic areas.

15. Dedicated landscape meters shall be required for all projects greater than 2,500 square feet except single-family residences.

16. Irrigation design plans shall identity and site the following:

    a. Hydrozones:

        i. Each hydrozone shall be designated by number, letter or other designation.

in gallons per month and gallons per year, for the established landscape; and

l. Irrigation design plans shall contain the following statement, "I agree to comply with the criteria of Ordinance No. 859 and to apply the criteria for the efficient use of water in the irrigation design plan."

17. For each valve, two irrigation schedules shall be prepared, one for the initial establishment period of six months and one for the established landscape, which incorporate the specific water needs of the plants and turf throughout the calendar year.

18. Irrigation design plans and planting plans (Section 5.B.) shall be drawn at the same size and scale.

D. **SOIL MANAGEMENT PLAN REQUIREMENTS.**

1. After mass grading, the project applicant shall:

a. perform a preliminary site inspection;

b. determine the appropriate level of soil sampling and sampling method needed to obtain representative soil sample(s);

c. conduct a soil probe test to determine if the soil in the landscape area has sufficient depth to support the intended plants; and

d. obtain appropriate soil sample(s).

2. The project applicant shall submit soil sample(s) to a laboratory for analysis and recommendation. The soil analysis may include:

a. soil texture;

b. infiltration rate determined by laboratory test or soil texture infiltration rate tables;

c. pH;

d. total soluble salts;

e. sodium; and

f. recommendations.

3. The project applicant shall prepare documentation describing the following:

a. soil type;

b. identification of limiting soil characteristics;

c. identification of planned soil management actions to remediate limiting soil characteristics; and

d. submit the soil analysis report and documentation verifying implementation of soil analysis report recommendations to the County pursuant to the requirements of Section 7.C.

E. **GRADING DESIGN PLAN REQUIREMENTS.**

1. The landscape documentation submitted shall also include rough/precise grade elevations prepared for the project by a licensed civil engineer.

Section 6. **LANDSCAPE IRRIGATION AND MAINTENANCE.** This section shall apply to all projects subject to the provisions of this Ordinance as set forth in Section 4.

A. Two irrigation schedules shall be prepared, one for the initial establishment period of six months and one for the established landscape, which incorporate the specific water needs of the plants and turf throughout the calendar year. The irrigation schedule shall take into account the particular characteristics of the soil; shall be continuously available on site to those responsible for the landscape maintenance; and shall contain specifics as to optimum run time and frequency of watering, and irrigation hours per day. The schedule currently in effect shall be posted at the controller.

B. A regular maintenance schedule and Certificate of Completion shall be submitted to the Planning Director, property owner, and water purveyor. A regular maintenance schedule shall include, but not be limited to, routine inspection, adjustments, and repair of the irrigation system and its components; aerating and dethatching turf areas; replenishing mulch; fertilizing; pruning; weeding in all landscape areas and removing any obstruction to irrigation devices. Repair of all irrigation equipment shall be done with the originally installed components or equivalent.

C. All model homes that are landscaped shall use signs and written information to demonstrate the principles of water efficient landscapes described in this Ordinance.

D. Information shall be provided to owners of new, single family residential homes regarding the design, installation, management, and maintenance of water efficient landscapes.

Section 7. COMPLIANCE/PLAN SUBMITTAL PROCESS. Prior to issuance of a building permit for the project, the project applicant shall:

A. Submit all landscape documents for review and approval by the Planning Director. The planting plan, irrigation design plan, and soils management plan shall be reviewed by an independent licensed landscape architect to ensure that all components of the plans adhere to the requirements of this Ordinance. The licensed landscape architect shall sign the plans verifying that the plans comply with this Ordinance. Any plans submitted without the signature of a licensed landscape architect shall not be accepted for review.

B. Prior to issuance of a certificate of occupancy or final inspection for the project, a regular maintenance schedule and a Certificate of Completion shall be submitted to the Planning Director certifying that

the landscaping has been completed in accordance with the approved planting, irrigation design, soil management, and grading design plans for the project. The Certificate of Completion shall be signed by a licensed landscape architect and shall indicate:

1. Date;
2. Project information:
   a. Project name;
   b. Project applicant name, telephone and mailing address;
   c. Project address and location; and
   d. Property owner name and mailing address;
3. Prior to backfilling, evidence that the party responsible for irrigation installation conducted a preliminary field inspection of the irrigation system (evidence of field inspection shall be attached);
4. The landscaping has been installed in conformance with the approved planting and irrigation design plans;
5. Irrigation audit report performed by a certified irrigation auditor after project installation (audit report shall be attached);
6. The smart irrigation controller has been set according to the irrigation schedule;
7. The irrigation system has been adjusted to maximize irrigation efficiency and eliminate overspray and runoff; and
8. A copy of the approved landscape documentation (Section 5), the irrigation schedule (Section 6.A.) and the maintenance schedule (Section 6.B.) has been given to the property owner and local water purveyor.
9. Verification that the maintenance schedule has been provided to the Planning Director.

C. At a minimum, all landscape irrigation audits shall comply with the "Irrigation Association Certified Landscape Irrigation Auditor Training Manual" (2004 or most current) and shall be conducted by a certified landscape irrigation auditor.

D. The Planning Director or his/her designee shall have the right to enter upon the project site at any time before, during and after installation of the landscaping, to conduct inspections for the purpose of enforcing this Ordinance.

Section 2. The provisions of this Ordinance shall not take effect until thirty (30) days after its adoption.

BOARD OF SUPERVISORS OF THE COUNTY
OF RIVERSIDE, STATE OF CALIFORNIA

Board of Supervisors **Attachment B** **County of Riverside**

RESOLUTION NO. 2009-289
COORDINATION WITH WATER PURVEYORS CONCERNING LANDSCAPE WATER EFFICIENCY PROGRAMS

WHEREAS, the State of California has enacted the Water Conservation in Landscaping Act (Landscaping Act);

WHEREAS, Assembly Bill 1881 amends said Landscaping Act to require the Department of Water Resources to update the State's model water efficient landscape ordinance in accordance with certain specified requirements;

WHEREAS, the Department of Water Resources has updated the State's model efficient landscape ordinance;

WHEREAS, said Landscaping Act mandates local agencies to, no later than January 1, 2010, adopt the State's model ordinance or a water efficient landscape ordinance that is at least as effective in conserving water as the updated model ordinance;

WHEREAS, the Board of Supervisors on September 29, 2009 adopted a comprehensive amendment to Ordinance No. 859 (Riverside County's ordinance establishing water efficient landscape requirements) in order to comply with Assembly Bill 1881;

WHEREAS, the State's model water efficient landscape ordinance includes provisions regarding the efficiency and analysis of landscape irrigation water use and it is the purpose of this Resolution to provide an equivalent mechanism;

WHEREAS, Ordinance No. 859, in combination with the requirements of Board Policy H-25 and the provisions of this Resolution, is at least as effective in conserving water as the State's updated model ordinance.

FORM APPROVED COUNTY COUNSEL
KARIN WATTS-BAZAZ 8/27/09
DATE

BE IT RESOLVED, DETERMINED, AND ORDERED by the Board of Supervisors of the County of Riverside, State of California, in regular session assembled on September 29, 2009, as follows:

1. The County of Riverside shall rely on local water purveyors, as the direct and immediate supplier of water, to enforce landscape water use efficiency standards with respect to existing customers.
2. The Board of Supervisors hereby requests local water purveyors to identify programs that enhance and encourage landscape water use efficiency such as:
   a. a tiered water rate structure, or
   b. an allocation-based conservation water pricing structure, or
   c. a rate structure at least as effective as the aforementioned options, or
   d. establishment of a program to administer/perform irrigation audits and/or irrigation surveys to insure the landscape areas of its customers meet the maximum applied water allowance, or
   e. the imposition of penalties, including fines for water waste.

The Board of Supervisors hereby directs the Planning Director, or his designee, to transmit a copy of this Resolution to all water purveyors providing service to customers with the unincorporated area of Riverside County

MEETINGS

(Examples)

RIVERSIDE COUNTY STORMWATER MANAGEMENT PROGRAM
MANAGEMENT STEERING COMMITTEE
SANTA ANA/SANTA MARGARITA REGIONS

MEETING MINUTES
for
May 21, 2009

Attendees:

Jason Uhley	RCFC&WCD
Linda Garcia	RCFC&WCD
Alex Gann	Riverside County Executive Office
Joe Aklufi	City of Beaumont
Kishen Prathivadi	City of Beaumont
Randy Anstine	City of Calimesa
Habib Motlagh	City of Canyon Lake
Rudy Fandel	City of Corona
Tom Koper	City of Corona
Bill Woolsey	City of Murrieta
Andy Okoro	City of Norco
Habib Motlagh	City of Perris/Canyon Lake
Barry McClellan	City of San Jacinto
Ron Grider	City of Wildomar

1. ***Welcome and Self Introductions – Jason Uhley, RCFC&WCD***

Jason Uhley welcomed everyone to the meeting and initiated self introductions of attendees. Jason noted that this meeting was the 4th and final meeting of the fiscal year.

2. ***Review May 21, 2009 Agenda and Approval of April 16, 2009 Meeting Minutes – Jason Uhley, RCFC&WCD***

Handouts Provided

- Agenda for May 21, 2009
- Minutes for April 16, 2009
- General Construction Permit Update (From Best, Best and Krieger and CASQA)

Jason added Riverside County Issued a draft ACL to agenda item 3.

Minutes were approved.

3. ***Santa Ana/Santa Margarita Program Status - Jason Uhley, RCFC&WCD***

- **General Construction Permit** – (Last page of agenda handout). Existing Permit has been in effect since 1999. There is a revised draft out for review. The State Board would like to have the Permit adopted by October 2009. Jason explained that the new Permit has erroneous provisions in that there is a lot more monitoring required. It will require staffs who conduct inspections for public works projects or preparing stormwater pollution prevention plans for public works projects to go through a formal training program and obtain certification. The Stormwater Pollution Prevention Plan will be a much more dynamic document that will need to

be continuously updated, in which there are associated costs. There are also additional BMP requirements; because this is a draft Permit, things can change. More importantly, Jason added that there is no grandfathering clause for projects that will be in construction at the time the Permit is adopted, which means that Permittees may want to include in any specifications for any projects they expect to be active across the period of the Permit renewal, language that will require contractors to comply with the new draft Permit. It was asked if this applied to all agencies. Jason explained that the General Construction Permit applies to any construction project that disturbs more than 1 acre and applies to all agencies. Updates and additional information will be provided to the NPDES TAC representatives. Please see handout provided at meeting for more detailed General Construction Permit information.

As of the May 21st MSC Meeting, the draft Santa Ana NPDES MS4 Permit had not yet been released.

- **Permit Renewal Status**
  1. **North Orange County MS4 Permit** – There is an adoption hearing scheduled for May 22, 2009. The one item left for discussion on the North Orange County Permit deals with what types of BMPs will be required for new developments whether they are public or private. The issue is whether or not the Permit will mandate that all new projects infiltrate or reuse stormwater on site. Currently there is no requirement to infiltrate. The Counties of Orange, San Bernardino and Riverside, along with the BIA are expected to attend the adoption hearing and will be recommending that filtration BMPs be identified as part of the allowable BMPs to be used as part of a development project. It is likely that what is adopted for Orange County will be modeled for the Riverside County MS4 Permit in the Santa Ana Region.

  2. **South Orange County MS4 Permit** – This Permit is issued by the San Diego Regional Board. It is expected that this Permit will be the template for the Santa Margarita Region MS4 Permit for Riverside County. A meeting is set for May 26, 2009 with Board staff to discuss the LID provisions. As this Permit forms, updates will be provided. The most important issue with this Permit is that it would require a prohibition of excess irrigation runoff. San Diego County is working diligently to get the language of the Permit revised.

  3. **Riverside County Issued a draft ACL** – Last week the County of Riverside received a draft Administrative Civil Liability (ACL) fine from the San Diego Regional Board for 1.2 million dollars. The fine alleged that the County did not have a public works WQMP process. Jason discussed details of the two projects (1 in Santa Ana watershed and 1 which went across the watershed boundary) in which the draft ACL evolved. This raises the point for those Cities that are across that boundary, in that they need to be very careful in making sure that they know where their projects are relative to their Permit areas.

4. ***TMDL Development – Jason Uhley, RCFC&WCD***

- **Lake Elsinore and Canyon Lake Nutrient TMDL** – Jason advised City Managers and representatives to make sure that their staff is attending the meetings for the TMDLs. The next meeting is set for August 3rd at 2 p.m. There was discussion on issues with Lake Elsinore. Jason stated that Permittees have been out of compliance in regards to the measures of the target parameters. The Task Force will need to reevaluate how success at the lake is being determined. This will be a very expensive long term effort and will take a couple of years to get around to.

- **Middle Santa Ana River Watershed Bacteria Indicator TMDL** - No updates.

- **Santa Ana Region Draft 303 (d) List** – No updates.

5. ***New Agenda Items/Schedule Next MSC Meetings - Jason Uhley, RCFC&WCD***

- **Schedule Next MSC Meeting** – The next meeting was set for October 15th. Subsequently, the draft Riverside County MS4 Permit was released and the meeting was rescheduled to August 20th.

NEXT MEETING IS SET FOR
August 20, 2009
AT
RIVESIDE COUNTY EXECUTIVE OFFICE, FIFTH FLOOR, ROOM C
4080 Lemon Street, Riverside, CA 92501

Visit the StormWater/Clean Water Protection Program website at:
http://rcflood.org/NPDES/
The site contains a variety of useful stormwater program information including links to other stormwater management programs and related web sites.

Water Quality Management Committee

Meeting Agenda
July 21, 2008
10:00-11:00
Riverside County Executive Office-Conference Room A

1. **Self Introductions**

2. **Notice of Violation-Santa Ana Audit of 2006**
   a. **Next steps**
      - **FPPPs for Parks District**

3. **Notice of Violation-San Diego Audit of 2007 & follow-up 2008**
   a. **Next steps**
      - **EDA and FM**

4. **Department updates and discussion points**
   a. ***Environmental Health***
   b. ***Building and Safety***
   c. ***Transportation Department***
   d. ***Planning Department***
   e. ***Code Enforcement***
   f. ***Facilities Management***
   g. ***EDA/RDA***
   h. ***Parks and Open Space District***

5. **Flood Control and Water Conservation District Updates**

6. **Training**

7. **IRWM Progress (Prop 50, Prop 84, Prop 1E)**
   a. Anza-$50,000 Capacity Building Grant

8. **IC/ ID complaints**

9. **Non-agenda items and round table discussion.**

10. **Next meeting date <u>September 15, 2008</u>**

Water Quality Management Committee

Meeting Agenda
April 20, 2009
10:00-11:00
Riverside County Executive Office-Conference Room A

1. **Self Introductions**

2. **Department updates and discussion points**
   - ***a. Environmental Health Jeff Lojeski***
   - ***b. Building and Safety-Chandra Santiago***
   - ***c. Transportation Department-Glen Higa***
   - ***d. Planning Department-Kristi Lovelady***
   - ***e. Code Enforcement-Hector Viray***
   - ***f. Facilities Management-Claudia Steiding***
   - ***g. EDA/RDA-Lance Nolan***
   - ***h. Parks and Open Space District-Marc Brewer***

3. **Flood Control and Water Conservation District Updates-Jason Uhley**
   - a. Monthly Report
     - ROWD-Santa Margarita River MS4 Permit
     - Permit negotiations Santa Ana River MS4 Permit
     - c. SWMP / WQMP-Whitewater River MS4 Permit
     - Ventura County and Orange County Santa Ana MS4Permit and ramifications to Riverside County
       - CASQA Newsletter
   - b. TMDLs

4. **Training**
   Spring Training through Flood Control now available

5. **IC/ ID complaints**
   - a. Grey Squirrel (Rancho Glen Oaks)-Status Report from Code Enforcement

6. **Non-agenda items and round table discussion.**

7. **Next meeting dates <u>May 18, 2009.</u>**

Riverside County Flood Control & Water Cons
NPDES Stormwater Quality Tra

Home Courses Locations Presentations Need Help? Register

Storm Water Quality Training

Annual training is required by our National Pollutant Discharge Elimination System (NPDES) Permits to ensure that water quality is protected. Not attending training may result in non-compliance for your municipality and possible fines for your programs. Click on the "Need He link if you have questions on which class if any is right for you."

Riverside County's Flood Control & Water Conservation District provides the following **NO FEE TRAINING**:

- Construction Training
- Industrial/Commercial Training
- WQMP Training
- Municipal Training

This website is designed to provide multiple ways of determining which class is right for you. Each path will take you to the same webpage that will allow you to register for yourself and/or for multiple people.

Login:
For those who've already registered.

Email:

Password:

Submit

Note: All of the login accounts are res every training period. Please register fc training season to login.

Please note that we are going **GREEN**! Unlike the previous trainings, NPDES training classe now be virtually ***paperless***. All presentation materials and handouts will be posted on this we Copies of the presentation materials will ***not*** be available at the training. Attendees are encou to print in advance any presentation materials they want to have in class. All presentation ma will be posted on-line at this site after the training for attendees to reference or download.

Please let us know in advance if you need public education materials. Click here to view our form.

© 2007 - Riverside County Flood Control, All Ri

CASQA California Stormwater Quality Association™
Dedicated to the Advancement of Stormwater Quality Management, Science and Regulation

Week of April 13, 2009

In this Update:

1. May 15 CASQA General Membership meeting and webcast focus is stormwater harvesting and reuse
2. 5th Annual CASQA Conference – Exhibitor space and General registration now available
3. Upcoming CASQA Committee / Subcommittee meetings / conference calls
4. Position openings / Opportunities
5. City of Stockton survey of Phase I Stormwater Rates

1. **May 15 CASQA General Membership meeting / webcast to focus on stormwater harvesting and reuse** – The 2nd quarterly meeting / webcast of the year will focus on a very timely issue and one that affects water supply and stormwater quality agencies. We have put together an agenda covering stormwater permit issues, California's water balance and water supply, examples of regional agencies' efforts to harvest precipitation, a discussion of regulatory barriers and solutions to using stormwater, and case studies showcasing the use of different source water, treatment systems, and re-uses. Click **here** for the agenda. Click **here** to register to attend the meeting or watch the webcast.
   - Friday, May 15 (3rd Friday) – General Membership meeting and webcast (2nd quarterly) at the Waterfront Hotel in Jack London Square, Oakland.

2. **5th Annual CASQA Conference–Exhibitor space and General registration now available**– The 2009 CASQA Stormwater Conference will be held November 2-4, 2009 at sunny Mission Bay in San Diego! The theme for this year's Conference is: "Stormwater Management: Challenges and Solutions." The CASQA 2009 Conference will again offer a full program of training workshops, presentations, and exhibits for holders of municipal, industrial, and construction NPDES stormwater permits. Click **here** for registration and other information.

   The 2009 CASQA Conference is the premier event for addressing municipal, industrial, and construction stormwater issues. CASQA prides itself on offering its members timely information on critical stormwater issues from the most influential and experienced leaders in the field. CASQA's work products, including past Conferences, the Program Effectiveness Assessment manual, and our various Stormwater BMP Handbooks have received national recognition. CASQA's committee members have been influential in promulgation of state and federal regulations, statewide NPDES Permits, and formulating strategies to assist local governments, businesses, and contractors in addressing many critical policy issues vexing the state. The 2009 Conference will present our latest updates and the latest information regarding critical stormwater issues including:

   - Regulations, Permits, and Policies
   - Sustainable Development
   - True Source Control
   - Stormwater Treatment
   - Pollutants of Concern
   - Modifying Public Behavior
   - Program Assessment
   - Scientific Advances

If you only attend one stormwater conference this year, this is the one!

The 2009 Conference will be held at the Hilton San Diego Resort & Spa located at 1775 East Mission Bay Drive, San Diego, CA 92109. Click here for map and transportation information. The conference hotel is located just six miles from the San Diego International Airport and right on San Diego's famous Mission Bay. The Hilton San Diego Resort & Spa is centrally located near the world famous San Diego Zoo, Balboa Park, Historic Old Town, and the Gaslamp Quarter, host to world class shopping and fine dining.

3. **Upcoming CASQA Committee / Subcommittee meetings / conference calls**
   - Tuesday, April 14: 3:30 – Policy & Permitting Subcommittee call (Richard Boon)
   - Wednesday, April 15; 2:30 – Phase II Subcommittee call (Kelye McKinney)
   - Thursday, April 16; 8:30 – Watershed Management & Impaired Waterbodies Subcommittee call (Rich Watson)

   - Tuesday, April 21; 8:00 – Membership Committee call (Scott Taylor)

4. **Position openings / Opportunities**
   - City of Santa Rosa; 2 Associate Civil Engineer positions (see attached)

5. **City of Stockton survey of Phase I Stormwater Rates**
   The City of Stockton implemented its current Stormwater Rate (service fee) in 1991 and has not had an increase since the Rate was established. In order to prepare for a Rate study, the City is conducting a survey of Phase I communities around California and is asking for information from communities that have Stormwater Rates in place. The following information is being requested:

   Name of community
   Population
   Current Stormwater Rate
   Year Rate was last increased
   CPI or annual increase
   Was there a Prop 218 vote? If so, was it successful?

   Please send the information to: Courtney D. Vasquez, Stormwater Program Manager, City of Stockton Municipal Utilities Department
   Courtney.vasquez@ci.stockton.ca.us

Review of Draft South Orange County MS4 Permit

Key Management Issues

April 16, 2009

StormWater

Background

South Orange County MS4 Permit:

- February 2008 adoption hearing–
  - USEPA Region IX staff did not endorse adoption
  - RWQCB staff directed to revise
  - No consultation with OC Permittees
- Model for Santa Margarita Region MS4 Permit

StormWater

Non-Stormwater Runoff

- Dry weather discharges:
  - Are not "storm water"
  - Maximum Extent Practicable (MEP) standard not applicable
- Mandates prohibition of non-stormwater discharges:
  - Landscape irrigation
  - Irrigation water
  - Lawn watering
- Establishes numeric effluent limits for non-stormwater based on:
  - Basin Plan Objectives
  - California Toxics Rule
  - USEPA criteria

StormWater

MS4 Stormwater Discharges

- Establishes Municipal Action Levels (MALs)
  - Numerical discharge limits
  - Based on nationwide MS4 monitoring
- Exceedance of MALs presumes failure to comply with MEP (i.e., violation)
- No exceedance of MALs does not presume MEP is met

StormWater

MS4 Stormwater Discharges
(continued)

- MS4 facilities will be subject to hydromodification requirements
- MS4 discharges must comply at all times irrespective of source and manner of discharge
- Asserts that trash is a serious threat to beneficial uses

StormWater

Permittee Compliance Programs

- Mandates Treatment Control BMP databases
- Annually
  - Inspect 100% of Permittee and "high priority" privately-owned Treatment Control BMPs
  - Verify that @ least 90% of WQMPs are implemented
  - Inspect and remove accumulated waste from all MS4 facilities
  - Develop and update Watershed Water Quality Work Plan

StormWater

Permittee Programs
(continued)

- Develop and implement Hydromodification Management Plan
- Expand HOA oversight and enforcement programs
- Must develop long-term funding/business plan for compliance program

StormWater

New Development Requirements

- Redefines Priority Development Project to include commercial and industrial projects >1 acre (versus 100,000 sq ft impervious)

StormWater

New Development
(continued)

WQMPs for Priority Development Projects

- Specific Low Impact Development BMPs must be incorporated
- Irrigation runoff must be eliminated
- Landscaping with native or low water species required
- Effective Impervious Area (EIA) limited to 5% of project area pending development of Permittee programs

StormWater cleanWater

New Development
(continued)

WQMPs for Priority Development Projects

- Comply with Permittee-developed hydromodification requirements
- Reviews of WQMPs must include assessment of:
  - Techniques to infiltrate, filter, store, evaporate, or detain runoff
  - Potential collection of storm water for reuse onsite or offsite
  - Alternatives to conventional stormwater conveyance and management

StormWater cleanWater

Existing Development

Mandates retrofit of existing development with Source Control and Treatment Control BMPs including LID in accordance with Standard Stormwater Mitigation Plan* (SSMP) requirements

**Not Standard Urban Stormwater Mitigation Plan (SUSMP). The word "urban" has been struck throughout the Tentative Draft.*

StormWater cleanWater

Construction

Ordinances must include the following sanctions for non-compliance:

- Non-monetary penalties
- Fines
- Bonding requirements
- Permit/occupancy denials

StormWater cleanWater

Monitoring & Special Studies

- Each CoPermittee required to conduct non-storm numeric effluent monitoring
- Urban stream toxicity study
- Trash and litter impairment investigation
- Inventory and evaluate MS4 facilities as pollutant source
  - Identify source controls
  - Evaluate feasibility of retrofit

StormWater

MS4 Permit Adoption Process

- Draft Orange County MS4 Permit released March 13 and workshop held April 3
- Deadline for written comments April 24
- MS4 adoption hearing scheduled for June 10

StormWater

Summary

- Asserts Permit not an "Unfunded State Mandate"
- Standards of compliance based on numeric standards
- Expansion of New Development requirements
- Requirements for retrofit
- Expansion of monitoring/special studies

  If applied in SMR, would result in significant increase in compliance costs

StormWater

Please plan to join us for a one day conference

Storm Water Issues: Changes, Challenges, and Solutions

Plus Other Construction Water Handling Solutions

Hall & Foreman, Inc.
Engineering • Planning • Surveying

Friday, May 15, 2009

9:00 am to 3:00 pm

Rain for Rent
6400 Fischer Road
Riverside, CA

- Panel discussions

Public Sector Panelists

Chandra Santiago, Riverside County Environmental Compliance Division
Michael Roth, Santa Ana Regional Water Quality Board
Dan Ilkay, San Bernardino County Stormwater Program

Private Sector Panelist

Allison Mackenzie, E.S. Babcock & Sons Inc
Joe Zucker, Hall & Foreman Inc
Joel Woolf, Rain for Rent
Clayton Miller, BIA of Southern California

- Vendor displays

Construction water-related products and solutions

Individual Attendee Fee- $10.00 (includes lunch)

Send checks payable to Rain for Rent, to:
Chris Armstrong
Rain for Rent
3404 State Road
Bakersfield, CA 93308

For reservations or more info contact Chris at 661.387.6144

`CIP TEAM AGENDA
Executive Office, Conference Room D
October 27, 2008 3:30 pm
(BOS Date 11/04/08)

1. Call to Order

2. Forms 11

103 FM (Sheriff) – Progress Report Regarding the Hub Jail Facility Construction Project

104 FM – Hemet Family Care Center (architectural and engineering services agreement)- ***Project will generate over 5000 sq ft of impervious surface and therefore a WQMP to address hydromodification and LID requirements shall be implemented. SWPPP during construction will necessitate BMPs to MEP standard. Post construction BMPs will be sized in accordance with the WQMP. Post construction BMPs shall have an O & M plan in place at time of building acceptance.***

123 FM – Desert Hot Springs Family Care Center (Schematic Design) ***Project will generate over 5000 sq ft of impervious surface and therefore a WQMP to address hydromodification and LID requirements shall be implemented. SWPPP during construction will necessitate BMPs to MEP standard. Post construction BMPs will be sized in accordance with the WQMP. Post construction BMPs shall have an O & M plan in place at time of building acceptance.***

134c EDA – Consent to the Purchase of Real Property by the RDA known as APNs: 727-161-018, 019, 020, 021, 024 and 727-165-040, Desert Communities Project Area, 4th District

139FM – Blythe Fleet Services Fueling Station and Car Wash (Schematic Design) ***Project will generate over 5000 sq ft of impervious surface and therefore a WQMP to address hydromodification and LID requirements shall be implemented. SWPPP during construction will necessitate BMPs to MEP standard. Post construction BMPs will be sized in accordance with the WQMP. Post construction BMPs shall have an O & M plan in place at time of building acceptance.***

Because this project will have above ground fuel storage tanks (ASTs) a Spill Prevention and Countermeasures Control Plan (SPCC) will be required. This plan must be approved by the Riverside County Department of Environmental Health prior to the operation of the AST.

CIP TEAM AGENDA
Executive Office, Conference Room D
November 10, 2008 3:30 pm
(BOS Date 11/18/08)

1. Call to Order

2. Forms 11

   205 FM (Probation) – Lease Agreement – Probation Department, Moreno Valley

   215 FIRE – Approve the Agreement for Consultant Services for the Riverside County Fire Department Strategic Plan

   224 FM (CHA) – Blythe Animal Shelter (Schematic Design)

   230 FM (RCRMC) – Riverside County Regional Medical Center Spine Clinic Remodel (Advertise for Bids)

   265 FM – County Administrative Center 7th Floor Renovation (Architectural Agreement)

   266 FM – Job Order Contract #002 – Approve Contract and Total Funding

   267 FM – North Shore Yacht Club Rehabilitation (Architectural Agreement)

3. Items for Discussion

Dear Messrs. Robertus and Oda:

Re: FY 2008-2009 Annual Reports
Order No. R9-2004-001
NPDES Permit No. CAS0108766

Please find attached copies of the FY 2008-2009 annual reports for the National Pollutant Discharge Elimination System (NPDES) Municipal Separate Storm Sewer System (MS4) program for the Santa Margarita Region of Riverside County. The following annual reports are submitted in accordance with Third-Term NPDES MS4 Permit (Board Order No. R9-2004-001, NPDES Permit No. CAS0108766) adopted by the San Diego Region Regional Water Quality Control Board (Regional Board) on July 14, 2004 for the Santa Margarita Watershed Region of Riverside County (Third-Term NPDES MS4 Permit):

- Riverside County Flood Control and Water Conservation District (District) Individual Storm Water Management Plan (Individual SWMP) Annual Report
- County of Riverside Individual SWMP Annual Report
- City of Murrieta Individual SWMP Annual Report
- City of Temecula Individual SWMP Annual Report
- Watershed SWMP Annual Report
- Monitoring Program Annual Report (as Appendix G of Watershed SWMP Annual Report)

The reports provide a comprehensive summary and analysis of the Third-Term NPDES MS4 Permit compliance activities during FY 2008-2009 by the District, County of Riverside, and Cities of Murrieta and Temecula (Permittees).

The Individual SWMP Annual Reports summarize the Permittees' individual compliance activities. The Watershed SWMP Annual Report summarizes the Permittees' combined watershed based compliance activities.

The District is committed to continuing its ongoing efforts to work cooperatively with the Co-Permittees, Regional Board staff and other stakeholders in implementing an effective municipal stormwater program and fulfilling the requirements of the current Third-Term NPDES MS4 Permit. If you have any questions concerning this matter, please feel free to call me at 951.955.8411 or Jason Uhley at 951.955.1273.

Very truly yours,

Mark H. Wills

MARK H. WILLS

CERTIFICATION

FY 2008-2009 District Annual Report

For the

Santa Margarita Watershed

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Signed: Mark H. Wills Date: 10/29/09

Mark H. Wills
Chief of Regulatory Division
Riverside County Flood Control
and Water Conservation District

EXECUTIVE SUMMARY

This Individual SWMP Annual Report (Annual Report) documents the specific urban runoff management programs and activities implemented by the Riverside County Flood Control and Water Conservation District (District) to comply with the requirements of the third-term Municipal Separate Storm Sewer System (MS4) Permit issued to the District by the San Diego Regional Water Quality Control Board (Regional Board) on July 14, 2004 (Board Order R9-2004-001).

This Permit regulates storm water discharges from permittee-owned MS4's within the Santa Margarita Watershed Region of Riverside County (SMR).The following Municipal governments are Co-Permittees on this permit:

- The District (serving as principal permittee)
- The County of Riverside
- The City of Murrieta
- The City of Temecula

Additionally, as part of the 2009 Report of Waste Discharge (ROWD) the newly incorporated cities of Menifee and Wildomar submitted their notice of intent to participate in the upcoming 4th Term MS4 Permit.

The goals of this permit are to protect and enhance the quality of surface waters within the watershed to protect their beneficial uses as described in the Basin Plan. As stated above, this report documents the specific activities of the District to reach or maintain water quality objectives within the SMR.

The Third-Term MS4 Permit required each Permittee to develop an Individual Storm Water Management Plan (SWMP) and for all the Permittees to jointly develop a Watershed Storm Water Management Plan. As Principal Permittee, the District was to coordinate the development of the compliance programs. Annual Reports for each of these compliance programs are required and are to be submitted to the Regional Board on October 31st of each calendar year. The reporting period is specified as the preceeding fiscal year. The District specifically prepares this Individual Annual Report and the Watershed Annual Report. In addition, as Principal Permittee, the District is tasked with coordinating the submittal of the Individual SWMP Annual Reports for the other Co-Permittees.

This Annual Report covers the period extending from July 1, 2008 through June 30, 2009 and specifically responds to reporting requirements specified in Provision III.A.1 of the Monitoring and Reporting Program of the Permit. This includes identifying program progress and effectiveness evaluations.

The District was created by an act of the state legislature and is charged with providing flood protection within the limits of its service area. The District constructs, owns and maintains an expansive network of MS4 throughout the western portion of Riverside County including in the Santa Margarita Watershed; however its legislative charter does not provide any authority (police power) to regulate land-use for areas tributary to these MS4 systems. As such, the District's activities continue to be limited to MS4 Maintenance Activities, Public Outreach, Training, Water Quality Monitoring and IC/ID activities. The District relies on the combined Legal Authority with the Co-Permittees for all enforcement activities outside of District Right-of-Way.

EXECUTIVE SUMMARY

Program Implementation Highlights

The District continues to evaluate and optimize its programs based on the observations of District staff, RWQCB audits and other sources of input. Highlights for the current reporting period are as follows:

- The District coordinated and implemented the regional programs described in the DAMP and reported upon in the Watershed Annual Report.
- Coordinated and prepared the 2009 Report of Waste Discharge (ROWD). In this report the Permittees performed a comprehensive review and analysis of the effectiveness of their programs, and determined that their overall programs have been successful in protecting water quality, especially in light of the substantial (almost 300%) growth that has occurred within the region since 1990.
  Nevertheless, as part of their proactive and iterative management of their programs, the Permittees made various recommendations in the ROWD for specific new or modified regional and individual programs and activities that will further enhance their ability to effectively address the identified water quality problems. The recommended activities described in the ROWD that are applicable to the Districts individual compliance activities are referenced in the appropriate sections of this report.

- Continued Improvement of the Development Planning Program
  - Planning the formation of a Community Facilities District (CFD) through which the District will be tracking and maintaining post-construction BMPs of residential developments in the unincorporated county.
  - The District is working on an overhaul of the existing BMP Design Manual to include expanded treatment control BMP design guidance with additional focus placed on low impact development concepts.
  - Coordinating with the SMC and CASQA on the Regional LID BMP manual.
  - The District is finishing the design phase of a proposed reconstruction of its headquarters complex as a Low Impact Development Testing and Demonstration Facility. This facility will have both regional and statewide benefits as it will help to increase municipal, developer and public awareness of LID technology and also collect data necessary to assess the effectiveness of various LID techniques.
  - The District is now reviewing Water Quality Management Plans (WQMPs) prepared by the County of Riverside Economic Development Agency and the County Facilities Management Department in an effort to ensure consistency between public works projects and private development projects within unincorporated County areas.
  - Continued cooperation with the Southern California Coastal Waters Research Project (SCCWRP) and the SMC to develop appropriate hydromodification guidance for southern California.
  - Developing a streamlined WQMP template to ensure that District projects that trigger Priority Development Project requirements are identified and include appropriate BMPs.
- Continued improvement of municipal maintenance programs
  - Refined and formalized existing procedures for reporting and addressing hazardous materials spills.

EXECUTIVE SUMMARY

- Continued improvement of the IC/ID programs
    - Proposed in the ROWD to revise the Permittees IC/ID programs to enhance their ability to detect and eliminate illicit discharges.
    - Developed a database to track third-party discharges.

These and other compliance activities are addressed in the main body of this report.

Program Effectiveness

The Third-Term MS4 Permit required the Permittees to develop a long-term strategy to evaluate the effectiveness of the SWMPs and in the 4th year annual report and in the subsequent ROWD, the Permittees performed a comprehensive assessment of the effectiveness of their overall programs based on the strategy established. It was found that in light of the almost 300% growth that has occurred in the region since 1990, the Permittees programs have been effective at protecting water quality.

While program effectiveness assessment is a key step in the iterative process of program implementation, it should be realized that effectiveness assessment itself is a part of the management process that is also evolving. Assessing program effectiveness is recognized as a challenge for program managers across California, and the District, together with the Permittees, supported the efforts of CASQA to develop guidance in this area at a statewide level. As such, the ROWD also includes recommendations for revised reporting formats and proposes a new method for effectiveness assessments based upon the CASQA methodology, which will provide a better and more transparent view into the Permittees compliance activities in the fourth term MS4 Permit.

For purposes of this Annual Report, the terms "Watershed Stormwater Management Plan (Watershed SWMP)" and "Standard Urban Stormwater Management Plan (SUSMP)" referenced in the Permit are referred to as the "DAMP" and "Water Quality Management Plan (WQMP)" respectively, to be consistent with terminology previously established and in use by the Permittees. Additional terms and acronyms used in this Annual Report are defined in the glossary included in the DAMP.

1. DEVELOPMENT PLANNING
(SECTION F of ORDER R9-2004-001)

1. Description of any Amendments to the General Plan or the Development Project Approval Process:

The District's enabling act does not provide any authority (police power) to regulate land-use; therefore, the District does not maintain a General Plan or otherwise control the overall development project approval process within its service area. Discretionary land use decisions for projects within the area served by the District are made by the appropriate municipality or agency with jurisdiction over that project. However, at the County of Riverside's request, the District has agreed to review proposed developments in the unincorporated County area for water quality and flood control related impacts and recommend appropriate conditions of approval to the County.

In support of this role, the District spent the last fiscal year working on the following tasks:

- Subsequent to the Regional Board's Audit of the County's implementation of Permit Provision F – Development Planning, the District agreed to, and now reviews WQMPs for Capital Improvement Projects (CIP's) proposed by County Economic Development Agency (EDA) and the Facilities Management Department (FMD). This helps to ensure the County's compliance with their individual SWMP and the DAMP and to ensure that BMPs for Development Projects sponsored by these departments are appropriate and address and meet MEP for the project's pollutants of concern. It should be noted that the District has no discretionary or permit authority over the County of Riverside in the review of these cases, and as such only provides WQMP recommendations to these departments.

- The District has hired a consultant to develop a plan for the formation of a Community Facilities District (CFD) to ensure that maintenance of the post-construction BMPs would be fully funded. Through the funding generated by this CFD, the District will be tracking and maintaining post-construction BMPs of residential developments in the unincorporated county.

- District staff is continuing to work on an overhaul of the existing BMP Design Manual included as Appendix C of the WQMP. The updated manual will include expanded treatment control BMP design guidance with additional focus placed on LID concepts such as landscape-based BMPs, and BMPs that maximize the opportunity for infiltration. Additionally, the enhanced guidance is being peer reviewed by various departments within the district to ensure: constructability, maintainability, pollutant removal efficacy and consistency in implementation; and to include appropriate limitations/considerations such as infiltration and groundwater protection, and to identify ongoing maintenance requirements.

- The District is completing the design of a $2.65 Million project that will significantly retrofit the District's headquarters in Riverside to establish a regional example of green development concepts and a LID BMP Testing and Evaluation facility. The upgraded facility will be used as a regional "green" training center for municipal employees, developers, engineers, and contractors throughout the Inland Empire and Orange County and will implement a variety of LID Integrated Management Practices (IMPs) that will be used to test and demonstrate the effectiveness of these practices in contributing to storm water capture and management, treating pollutants of concern associated with urban runoff, mitigating the impacts of hydromodification from urban development, and identifying optimum IMP design criteria

1. DEVELOPMENT PLANNING
(SECTION F of ORDER R9-2004-001)
CONTINUED

and standards for LID IMPs in Riverside County. Data collected by this project will be provided to the regional SMC LID Project and will be available to benefit all SMC members. As this project will have statewide and regional benefits, additional information can be found in the Watershed Annual Report. The project will be implemented in three distinct phases:

1. Remodeling of the District's front parking area to facilitate enhanced traffic control and incorporation of porous pavements, disconnection of impervious area, and drought tolerant landscaping;
2. The new landscaping plan will be designed in accordance with the newly adopted County Ordinance No. 859 and will include specific California native plants that grow well in arid climates and require minimal watering once established. All landscaped areas will be irrigated using 'smart controllers' which automatically adjust watering schedule in response to changing weather conditions; and
3. Remodeling of the District's rear parking areas and drainage system to incorporate various examples of low impact development concepts including porous pavements, planter boxes, and water quality swales. These low impact development features will also be designed to incorporate testing facilities that will allow the District to evaluate the long term water quality benefits and maintenance costs as well as the effectiveness of design parameters for these features. The data will be published as part of a broader southern California study of low impact development technologies.

As Principal Permittee, the District is also participating in and/or coordinating several additional projects and studies as part of the Permittees' regionally implemented programs. These additional efforts are fully reported upon in the Watershed Annual Report and are summarized below.

- The District is participating in a study coordinated by the Southern California Monitoring Coalition (SMC) to develop a regional LID BMP design manual.
- The District continues to participate in the SMC's efforts to develop numeric guidance for addressing Hydrologic Conditions of Concern, including their Hydromodification study and LID Projects. These efforts are further described in the Watershed Annual Report in Appendix G, Section G.7

2. Number of Grading Permits Issued:

Not applicable. The District does not issue grading permits.

1. DEVELOPMENT PLANNING
(SECTION F of ORDER R9-2004-001)
CONTINUED

3. Number of Developments Conditioned to meet WQMP Requirements:

The District utilizes a case tracking program (District Land Management Tracking) that tracks project status and produces reports identifying the number of developments conditioned with WQMPs. The following numbers reflect projects reviewed that are recorded as being in the Santa Margarita Watershed.

160 Land Use/Development proposals were reviewed by the District for water quality and flood control related impacts.

59 Land Use/Development proposals met the minimum requirements for Priority Development Projects and were required to prepare a preliminary project specific WQMP,

37 of the Priority Development Project proposals submitted an acceptable preliminary WQMP and were issued 'recommended' Conditions of Approval. The District does not have land use authority, thus these 'recommended' conditions are forwarded to the County who subsequently establishes the conditions of approval for the project.

A summary log of projects that the District reviewed is contained in Attachment A. Entries marked "approved" are those for which Conditions of Approval were recommended to the County.

4. Attach One Example of a Development Project that was Conditioned to Meet WQMP Requirements and a Description of the required BMPs:

See Attachment B.

5. Description of any Updates to the Environmental Review Process:

The District's environmental review process is described in Section 6.3 of the District's Individual SWMP. During this reporting period, no revisions were needed nor made to this process.

1. DEVELOPMENT PLANNING
(SECTION F of ORDER R9-2004-001)
CONTINUED

6. Description and Number of Training Efforts Conducted during the Reporting Period (for staff, developers, contractors, etc.), including the Number of Staff Trained.

Training	Training Description	Training Dates	Number of District Attendees
WQMP	New Development	11/3/08	18
WQMP	New Development	5/4/09	16
WQMP	New Development	6/9/09	4
		Total	**38**

a. Training:

See Attachment C

b. Summarize the Educational and Outreach Activities the Development Planning Component has conducted over the Past Year.

Priority development projects conditioned by the County are required to obtain copies of appropriate public education and outreach materials from the District's NPDES Public Information Officer or from our website. They are also required to submit an affidavit stating that they will distribute the public education materials to new property owners. This affidavit is recorded in the development's individual file. Additionally, the District has implemented a tracking mechanism to facilitate the accurate reporting of the number of affidavits received each fiscal year.

A total of **four** (4) Public Education Affidavits were received during the reporting period.

Additional public education and outreach activities undertaken by the District are considered part of the Regional Public Education Program described in the Watershed Annual Report.

7. An Assessment of Program Effectiveness Based on the Measurable Goals Established in the Permittee's Individual SWMP:

As mentioned above, the District has no authority to regulate land-use and provides development review services on the County's behalf. Thus, the District has no direct measurable goals for its individual Development Planning Component. As indicated in the District's Individual SWMP, we collect the metrics described in this report and forward them to the County for analysis as part of the County's Individual SWMP Annual Report.

1. DEVELOPMENT PLANNING
(SECTION F of ORDER R9-2004-001)
CONTINUED

Nevertheless, as Principal Permittee the District is participating in and/or coordinating various regional studies and projects that will enhance the Permittees abilities to address pollution from development projects. These efforts are summarized in the response to question 1 above.

8. Additional Comments/Information:

Describe the Major Accomplishments of the Development Planning Component over the Past Year. (General Plan or ordinance revisions, procedure/approval process changes, SUSMP guidance material):

Major accomplishments of the program are described in responses to questions 1, 3 and 6 of this reporting form.

9. Summarize New Activities or Improvements to be implemented Next Year as a result of your Self Assessment of the Development Planning Component:

Within the next fiscal year, the District plans to continue the ongoing development and implementation of the activities described in the response to question 1 in this section.

Additionally, as outlined in section 7.2.2 of the 2009 ROWD the District and the Permittees have identified and described several proposed enhancements / revisions to their Development Planning Programs that they propose to implement pending the fourth-term permit renewal. These included:

- Revising the BMP Handbook to better incorporate LID concepts and to describe how LID can offset Treatment Control requirements and Hydromodification impacts.
- Review (and update as appropriate) of numeric guidance for hydromodification based on outcome of SCCWRP hydromodification study.
- Clarifying BMP effectiveness at removing sediment-bound pesticides such as pyrethroid pesticides
- A program to inspect and verify the maintenance of Post Construction BMPs.

2. CONSTRUCTION
(SECTION G)

NOTE: THIS SECTION IS APPLICABLE TO DISTRICT ADMINISTERED AND ENCROACHMENT PROJECTS ONLY.

1) Number of Inspections Conducted:

District Administered Construction Projects

There were **zero (0)** District administered construction projects within the Permit area within the reporting period.

Encroachment Permits Issued:

There were **six (6)** encroachment permits issued by the District within the Permit area. Of the 6 encroachment permits issued, **four (4)** had construction related activities within the District right-of-way.

During the active construction period of these encroachment projects, the District inspects the site as required based on the scope of the work being done. In general, most District encroachment projects last for a month or less and do not involve significant construction activity. Occasionally, more extensive projects may encroach on the District property for a longer period. A copy of the encroachment permit log, with projects located in the Permit area highlighted in green, is included in Attachment D.

For both construction and encroachment projects, site inspections include verifying that adequate minimum BMPs are in place to comply with Order R9-2004-001 and the General Construction Permit. Inspection reports are not produced during a site visit unless there is a problem which needs to be addressed, at which time a notification is given. There were no significant construction related problems during the reporting period.

2) Number and Type of Enforcement Actions Related to Construction Sites:

Enforcement and Compliance Responses	Private Projects	Public Projects
Non-monetary Penalties	0	0
Stop Work Authority	0	0
Fines	0	0
Financial Security	0	0
Permit/Certificate of Occupancy Denial	0	0
Referral to SDRWQCB	0	0
Total	**0**	**0**

3) Description of Modifications made to the Construction and Grading Approval Process:

No revisions were needed nor made.

2. CONSTRUCTION
(SECTION G)
CONTINUED

NOTE: THIS SECTION IS APPLICABLE TO DISTRICT ADMINISTERED AND ENCROACHMENT PROJECTS ONLY.

4) Description and Number of Training Efforts Conducted during the Reporting Period.

a. Training: (See Attachment C.)

Training	Training Description	Training Dates	Number of District Attendees
Construction	NPDES Training for Construction Inspectors	9/29/08	1
Construction	NPDES Training for Construction Inspectors	9/30/08	8
Construction	NPDES Training for Construction Inspectors	5/27/09	0
Construction	SWPPP Training	9/17/08	1
		Total	**10**

b. Summarize any Additional Education and Outreach Activities Conducted for Project Applicants, Contractors, Developers, Property Owners, and/or other Responsible Parties in Support of the Construction Component:

The District is only directly responsible for administering District Public Works projects; it does not have authority over private development activities. For all District construction projects, the District reviews and approves its contractors' SWPPP's prior to construction. As stated in the currently effective General Construction Permit (Order No. 99-08 DWQ), individuals responsible for SWPPP preparation, implementation, and permit compliance shall be appropriately trained both formally and informally. During the SWPPP review process, the District requires that its contractors meet the requirements of the General Construction Permit and requires that training certifications are provided. Additionally, as part of the preconstruction meeting for all District projects, the contractor must attend a NPDES Contractor's Training Presentation given by District staff. In addition, the District's specifications require compliance with the Permit and the General Construction Permit, including appropriate minimum erosion and sediment control BMPs on District Capital Improvement Projects.

Additional contractor education and outreach is implemented through the Regional Public Education Program described in the Watershed SWMP.

5) An Assessment of Program Effectiveness based on the Measurable Goals Established in the Permittee's Individual SWMP:

As indicated in the District's Individual SWMP, the District does not have authority to regulate land-use or construction activities outside of their right-of-way; therefore it does not issue grading permits or otherwise regulate private construction activities. This, the District's construction program is limited to District projects or those portions of Third-Party

2. CONSTRUCTION
(SECTION G)
CONTINUED

NOTE: THIS SECTION IS APPLICABLE TO DISTRICT ADMINISTERED AND ENCROACHMENT PROJECTS ONLY.

Construction Projects that encroach upon District rights-of-way. The District's Individual SWMP, therefore, did not establish specific measurable goals because of the District's limited role in construction activities and limited number of District projects in the Permit area.

Additionally, through a review of our NPDES Training Materials, District NPDES Staff are recommending that District Construction Inspectors attend additional training specific to the Construction General Permit in the future. This is because District construction inspectors only work on District public works projects that must be in compliance with the Construction General Permit. The District will evaluate potential providers of this training and propose implementation following the roll-out of the new Construction General Permit.

The District's construction program has been found to be effective because its inspectors received appropriate training and encroachment permit projects were inspected consistent with permit requirements.

6) Additional Comments/Information:

Attachment D includes the following items:

- Copy of the District's encroachment permit log.
- Standard encroachment permit application and requirements,
- Standard specifications related to water quality for District-administered construction projects.

3. MUNICIPAL
(SECTION H.1 of ORDER R9-2004-001)

1) Number of Inspections Conducted at Existing Municipal Facilities:

Not Applicable – there are no District municipal facilities within the Permit area. However, the District does annually inspect its MS4 consistent with the requirements of the current Permit.

2) Number and Type of Enforcement Actions Related to Municipal Sites:

Enforcement and Compliance Responses	Number
Education and Information	N/A
Verbal Warning	N/A
Written Warning	N/A
Other	
Total	**N/A**

3) Number of Catch Basins and Inlets that were Inspected and the Number that were Cleaned:

	Number Inspected	Number Cleaned
Catch Basins and Inlets	N/A	N/A

NOTE: The District does not operate nor maintain catch basins and inlets within the permit area aside from those that are within District Rights-of-Way. Usually any inlets that are within District R/W are immediately adjacent to a channel, and are maintained as part of routine maintenance of the channels; as such they are not tracked separately. A significant majority of catch basins and inlets are maintained by the municipalities or in rare instances, may be maintained by property owners associations (POAs) or homeowners associations (HOAs).

3. MUNICIPAL
(SECTION H.1 of ORDER R9-2004-001)
CONTINUED

4) Assessment of the Amount and Type of Debris Removed from Catch Basins, Streets and Open Channels, including an Identification of Problem Areas that Generate the most Pollutants: (See Attachment E.)

Facility	Type of Debris	Approx. Weight	Problem Areas that Generate Most Pollutants
Catch basins	Vegetative Litter Anthropogenic Litter Sediment Other man-made debris		N/A
Total		**N/A**	**tons (wet weight)**
Streets	Vegetative Litter Anthropogenic Litter Sediment Other man-made debris		N/A
Total		**N/A**	**tons (wet weight)**
Open Channels	Vegetative Litter Anthropogenic Litter Sediment Other man-made debris	106 4.7 8,913*	N/A
Total		**9,024**	**tons (wet weight)**
Facility Total		**9,024**	**tons (wet weight)**

* 5,079 cy of sediment were removed, tonnage calculated based on an assumed density of 130 lbs/cf.

3. MUNICIPAL
(SECTION H.1 of ORDER R9-2004-001)
CONTINUED

5) Assessment of effectiveness of BMPs that have been implemented for municipal facilities and activities:

Assessment of the effectiveness of BMPs that have been implemented for municipal facilities and activities:

THE DISTRICT DOES NOT OPERATE MUNICIPAL FACILITIES OTHER THAN MS4 IN THE SANTA MARGARITA REGION, THEREFORE THESE RESPONSES ARE LIMITED TO ADDRESSING THE DISTRICT IMPLEMENTATION OF BMP's RELATING AND APPLICABLE TO MS4 MAINTENANCE.

3. MUNICIPAL
(SECTION H.1 of ORDER R9-2004-001)

6) Description and Number of Training Efforts Conducted over the last year (for Municipal Facility Operators and/or Inspectors).

a. Training:

Note – Because District staff do maintain MS4 in the Santa Margarita Region, District maintenance staff receive municipal NPDES training per the requirement of the NPDES permit. Attendance logs are contained in Attachment C to this report.

Training	Training Description	Training Dates	District Attend-ees
Municipal Training	Municipal Site Inspection	11/4/08	2
Municipal Training	Municipal Site Inspection	11/6/08	0
Municipal Training	Municipal Site Inspection	11/18/09	0
Municipal Training	Municipal Site Inspection	5/5/09 (2 sessions)	57
Municipal Training	Municipal Site Inspection	5/26/09	5
Municipal Training	In-house training for PPE	4/30/09	63
Herbicide Safety Training (Helena Chemical Company)	BMP implementation during herbicide applications	6/24/09	26
Municipal Training	Hazardous Material Spill Notification and Cleanup	1/22/09	55
Municipal Training	Hazardous Material Spill Notification and Cleanup	6/25/09	59
Aquatic Weed School 2008 UC Davis, CA	Learn about identification, biology, ecology, control and regulations for management of aquatic weeds	9/16, 9/17 2008	4
Annual Fall Product Seminar 2008 (Helena Chemical Company)	BMP implementation during herbicide applications	11/6/08	31
		Total	**302**

b. Summarize the Internal and External Education and Outreach Activities the Municipal Component has Conducted over the past year:

In compliance with Order No. R9-2004-001, the District maintains the District's corporate yard Pollution Prevention Plan (PPP), which also address field MS4 maintenance in the Santa Margarita Watershed. The PPP provides the pollution prevention strategy to address

facilities and associated activities that may cause stormwater pollution without proper controls.

Staff also reviews the standard operating procedures for herbicide/pesticide management (product label instructions and Material Safety Data Sheets) that are part of the existing education requirements for applicators. Examples of standard procedures that constitute BMPs include schedules for applications considering weather and nesting seasons, and proper storage and disposal of unused product.

Site and activity assessments are performed annually prior to the storm season including the District's headquarters (not subject to the SMR Permit) and the MS4 within the Permit area. The District does not own nor maintain any facilities in the SMR other than the MS4.

Additionally, District Maintenance staff have attended annual training events conducted by our contracted herbicide provider (Helena Chemical Company). These venues focus on BMP implementation for specific herbicides used by the District. The BMPs and related topics included:

- Anticipated Glyphosate concentration ranges in water samples given average AquaMaster application rates and following label instruction.
- Calculation for determining estimated surfactant concentrations.
- Application techniques for effective results when applying AquaMaster.
- California laboratories that can analyze for Glyphosate, should the need arise.

7) An Assessment of Program Effectiveness Based on the Measurable Goals Established in the Permittee's Individual SWMP:

The following metrics are required to be tracked and reported on by Section 5.6 of the District's Individual SWMP:

- Amount and Types of Debris Removed from Open Channels

  Other than MS4, there are no District municipal facilities within the Santa Margarita Watershed. Therefore, the District's municipal program is limited to MS4 maintenance. The type and total amount of debris removed for each fiscal year is as follows:

Fiscal Year	Vegetative Litter	Anthropogenic Litter	Sediment	Total Amount of Debris Removed (tons)

3. MUNICIPAL
(SECTION H.1 of ORDER R9-2004-001)
CONTINUED

FY 2004-2005	55.9	0	5,763.4	5,819.3
FY 2005-2006	16.0	8.1	7,532.5	7,556.6
FY 2006-2007	10.4	4.7	2,113.0	2,128.1
FY 2007-2008	45.5	5.2	10,798.5	10,849
FY 2008-2009	106	4.7	8,913	9,023.7

As the District does not own any municipal facilities within the watershed, their Municipal program is limited to MS4 Maintenance. As shown in the table above, their maintenance activities have removed over 9,000 tons of waste, sediment and debris from their system of open channels during the reporting period, demonstrating the effectiveness of their program.

- Description of Training Efforts

  See Section 3.6) above

Other Measures of Effectiveness

- The District developed a procedure (SOM-28) to better address hazardous material clean-up and reporting related to illegal dumping and/or District operational activities. District Maintenance Supervisors are now required to complete BMP plans for major maintenance activities in open channels. These BMP plans identify the BMPs that are to be deployed as part of the maintenance activity.

8) Additional Comments/Information:

The District's municipal program in the Permit area is limited to MS4 maintenance. The District reviewed its program to ensure it is continuing to meet or exceed the minimum requirements of Board Order R9-2004-001.

Within FY 2008-2009, the District did not construct any additional MS4 within the SMR. However, the District accepted maintenance responsibilities for several flood control facilities constructed by Developers. Maps showing the location of these new facilities are included in Attachment G of this report. An updated map of all District and City maintained facilities is included in Appendix F of the Watershed Annual Report.

Summarize New Activities or Improvements to be implemented next year as a result of your Self Assessment of the Municipal Component:

As mentioned above, the District reviews its corporate yard Pollution Prevention Plan (PPP) at least annually to determine if any revision is necessary to reflect changes in the facility or changes in the activities conducted.

Additionally, in section 7.4.2 of the 2009 ROWD, the District committed to incorporate standard IPM language into their municipal pesticide contracts as part of their compliance

3. MUNICIPAL
(SECTION H.1 of ORDER R9-2004-001)
CONTINUED

efforts within the 4th Term MS4 Permit. The District is proactively addressing this issue and within the next reporting period will initiate a review of any pest management contracts at the District's Corporate Yard in Riverside to look for opportunities to incorporate IPM.

4. INDUSTRIAL/COMMERCIAL
(SECTION H.2 of ORDER R9-2004-001)

The District's enabling act does not provide land-use powers and therefore, individually it has no jurisdiction over industrial or commercial facilities. Through Combined Legal Authority established through an implementation agreement, the District relies on the Co-Permittees for regulation and enforcement related to Industrial and Commercial businesses and activities.

1) Description and Number of Training Efforts conducted over the last year (for Industrial/Commercial Facility Operators and/or Inspectors).

a. Training:

Although the District does not have authority to inspect or regulate industrial/commercial land-uses, District staff that respond to IC/ID complaints or notifications receive training to ensure that they are familiar with appropriate BMPs applicable to the various potential sources of discharges including Industrial/Commercial Operations and Facilities and Construction Sites. This training helps staff effectively respond to IC/ID events and, through discussions with offending parties, recommend BMPs to curtail illicit discharges to the MS4.

Training	Training Description	Training Dates	Number of Attendees
Industrial/Commercial Training	Industrial/Commercial Facility Inspection	11/4/08	1
Industrial/Commercial Training	Industrial/Commercial Facility Inspection	11/8/08	0
Industrial/Commercial Training	Industrial/Commercial Facility Inspection	5/26/09	0
		Total	1*

***** District Staff that respond to IC/ID complaints or notifications attend inspection training annually, either for Commercial-Industrial sources or for Construction sources.

5. RESIDENTIAL
(SECTION H.3 of ORDER R9-2004-001)

The District's enabling act does not provide land-use powers or authority and therefore individually it has no jurisdiction over residential activities. Through Combined Legal Authority established through an implementation agreement, the District relies on the Co-Permittees for regulation and enforcement related to residential activities.

6. EDUCATION
(SECTION I of ORDER R9-2004-001)

1) Description of Education Efforts conducted by the Permittee (not collectively with other Permittees) during the previous year:

The District and the Co-Permittees jointly fund a watershed-wide Public Education program administered by the District and fully reported upon in Section F of the Watershed Annual Report. Since the District does not have any land use authority, it generally does not conduct Educational activities outside of the collective educational efforts for the SMR permittees.

Sections 1 through 4 of this report include an accounting of training that District employees have received training within this reporting period. The training sessions listed in those sections includes Municipal staff training that was conducted by the District on behalf of the Co-Permittees as part of the watershed-wide education program, and training attended that was conducted by others, as available.

The education and outreach programs described below were implemented as part of the Watershed SWMP requirements. Additional details regarding these programs are available in the Watershed Annual Report.

Education and Outreach efforts were conducted toward the following audiences:

Audience	Measures Impressions are County-wide unless otherwise noted
Permittee Departments and Personnel	Number of District employees trained for: • Construction Inspection: 9 • Industrial/Commercial Inspection: 1 • Municipal Facilities and Activities: 302 • Development Planning: 40
Development Community	Applicable Outreach material was provided to Permittee staff at the following NPDES Trainings for distribution to the development community: Construction Site Inspection Training: August. 29 - 30, 2008 (4 sessions), May 27, 2009 (2 sessions) Water Quality Management Plan Training: Nov. 3, 2008 (2 sessions); May 4, 2009 (2 sessions); June 9, 2009
Industrial/Commercial Owners and Operators	Industrial/Commercial outreach conducted: SGA provided workshops at **4** Home Improvement

6. EDUCATION
(SECTION I of ORDER R9-2004-001)
CONTINUED

	Stores Riverside County Business License Program inserts were issued to all new license applicants and renewals. Inserts distributed: 7,500 (approx)
Residential Community, General Public, Other Public Agencies and Students	Number of Media Impressions in: • Newspaper/City/County publications 1,320,000 • 800 Line Calls: 1,169 • Website: 3,096 • Radio/TV: Not determined • Billboards: 3,373,530 • Other: 200 • Materials Distributed: 211,564 Number of students: 3,463 Public Education events conducted within the Watershed: 2 • Community Water Festival • Temecula Kids Day

6. EDUCATION
(SECTION I of ORDER R9-2004-001)
CONTINUED

2) Assessment of Overall Program Effectiveness Based on the Measurable Goals Established in the Permittee's Individual SWMP:

Measurable goals for the public education program are defined in Section 10 of the District's Individual SWMP.

As described in the DAMP, the Permittees have decided to pool their efforts into a single county-wide public education program implemented by the District. Since the District's individual jurisdiction covers the entire Santa Margarita Region, the District does not differentiate between education outreach efforts undertaken individually or as part of the county-wide efforts. Therefore, as stated in Section 10 of the District's Individual SWMP, a description and evaluation of the public education program implemented in the Permit area is contained in Sections F and H of the Watershed Annual Report.

Additional Measures of Effectiveness

Additionally, long-term effectiveness assessments of the Permittee Training and Public Education programs are described in Sections 6.2.3 and 6.3.3 of the ROWD, respectively.

Beyond the standard NPDES staff training that the District provides, District NPDES employees are constantly updating their knowledge on various topics relevant to their compliance programs. In this manner, this year District NPDES staff attended CASQA's Annual Conference in Oakland. This conference included technical discussions on many aspects of MS4 Permit Compliance including:

- Low Impact Development
- Water Quality BMP's
- Hydromodification
- Green Building
- Monitoring
- Program Effectiveness Assessment
- Pesticides, and
- Many others

3) Additional Comments/Information:

As described above, the District reports all of its implemented education related activities, and an assessment of the public education program in the Watershed Annual Report.

Describe the major accomplishments of the Education Component over the past year.

See Section F of the FY08-09 Watershed Annual Report.

Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Education Component:

All recommended new activities or improvements to the Permittee Training and Public Education programs are described in the Watershed Annual Report.

7. ILLICIT DISCHARGE DETECTION AND ELIMINATION
(SECTION J of ORDER R9-2004-001)

1) Number of Illicit Discharges, Connections and Spills Reported and/or Identified during the Reporting Period:

The District recorded **a total of 45** IC/ID/S reports during FY08-09.

- **Illicit Discharges (ID):** 4
- **Illicit Connections (IC):** 0
- **Spills (S):** 41

a. **Illicit Discharges (ID):** The ID numbers above reflect the number of reports received that constitute the willful and/or negligent but intentional release of prohibited discharges. ID reports received by the District are included in Attachment F. In addition, Appendix C of the Watershed Annual Report contains a Fire Department HazMat Response Team Report of other IC/ID/S responses acted upon directly by them.

b. **Illicit Connections (IC):** In 1990, the District performed a detailed reconnaissance of its MS4 to identify potential illicit connections. A very small number of connections were identified. Since then, the District maintenance and construction inspectors have been trained to look for and report any illicit connections. In addition, the District requires entities wishing to drain non-stormwater discharges to its facilities to complete a Third-Party Non-Stormwater Discharge Application to ensure the discharge complies with the requirements of R9-2004-001.

c. **Spills (S):** The Spill numbers above reflect the number of reports received that consisted of accidental release of hazardous and/or prohibited discharges. Typically the District is notified of spills through receipt of a copy of the California Emergency Management Agency (Cal EMA) report, and in most cases the spill has already been appropriately responded to when the District receives the report. The District does however, review all spill reports and follow-up on those deemed a threat to water quality. Spill reports received by the District are included in Attachment F. In addition, Appendix C of the Watershed Annual Report contains a report of spill responses by the Riverside County Fire Department HazMat Response Team. The District contributes significant funding to the Hazmat team to ensure that they are cognizant of stormwater issues and incorporate appropriate BMPs as part of their hazardous materials response activities.

7. ILLICIT DISCHARGE DETECTION AND ELIMINATION
(SECTION J of ORDER R9-2004-001)
CONTINUED

2) Number of Illicit Discharges or Connections Investigated during the Reporting Period and the Outcome of the Investigations:

All reports received are reviewed/ investigated to ensure that they are responded to appropriately and to check for proximity and impact to District Facilities. In many cases such as spills, the District receives reports after the incident has already been appropriately responded to and no further action by the District is necessary.

Number of IC/ID/S reports reviewed/investigated by District: 45
Number of IC/ID/S incidents having potential to impact District facilities: 15**
Number of IC/ID/S incidents directly impacting District facilities: 11*

** "Potential to impact District Facilities" was classified as spills/discharges that were not contained nor cleaned up and were near a District Facility, or were cleaned up but were immediately adjacent to a District Facility.

* "Directly impacting District Facilities" is classified as spills/discharges that are known to have entered a District Facility.

Results of investigations can be found in the IC/ID/S Reports included in Attachment F

3) Number and Types of Enforcement Actions Taken for Illicit Discharges or Connections during the Reporting Period:

See Summary Report in Attachment F.

Because the District's enabling act does not provide authority to regulate land-use and activities, the District relies on combined legal authority with the Co-Permittees to control industrial, commercial or development activities within their jurisdiction. Any enforcement actions resulting from an IC/ID reported to the District would be taken by the respective Co-Permittee with jurisdiction. The District does maintain the ability to regulate third-party activities within its rights-of-way through encroachment permits, construction contracts and other legal agreements.

4) Number of Times your Agency's Hotline was called during the Reporting Period, as Compared to Previous Reporting Periods.

The table below identifies the number of calls that were tracked by our 1-800 hotline. Do to a technical error, the calls identified below for FY 2004-2005 only reflect the calls that were diverted to the District's front counter. The District has restored this service with the County Information Technology Department who hosts the hotline. These calls may have been for IC/ID, education outreach or other purposes.

7. ILLICIT DISCHARGE DETECTION AND ELIMINATION
(SECTION J of ORDER R9-2004-001)
CONTINUED

	Number of Calls				
	2004-05	**2005-06**	**2006-07**	**2007-08**	**2008-09**
Water Pollution Hotline	100	2015	1648	1317	1,169

5) Number and Location of Dry Weather Monitoring Sites that were Monitored during the Reporting Period:

The District maintains four IC/ID dry weather monitoring stations. These stations are identified below:

Number of Site(s): 4

Location(s): Santa Gertrudis Channel, Warm Springs Creek, Long Canyon Channel, Redhawk Channel

The exact location of these stations can be found in Attachment D to the Santa Margarita Region Monitoring Annual Report (Appendix G of this Report).

6) Summary of Illicit Discharge Monitoring Program results, including: 1) All inspection, field screening and analytical monitoring results 2) All follow-up and elimination activities and 3) Any proposed changes to station locations and/or sampling frequencies:

The District conducts IC/ID dry weather monitoring at the four tributary stations described above. As a result, monitoring occurs more frequently than the minimum of two times required under the MRP.

Inspection, Field Screening and Analytical Monitoring Results

All field screening and analytical monitoring results can be found in the Watershed Annual Report, Appendix G (Monitoring Annual Report) Tables G-14 and G-42 for all four tributary stations: Long Canyon Channel, Santa Gertrudis Channel, Redhawk Channel and Warm Springs Creek.

The District has developed numeric field screening criteria to determine whether a follow-up laboratory sample should be collected as summarized below:

- Specific conductance more than 25% higher than BPO
- Total dissolved solids more than 25% higher than BPO
- Turbidity more than 25% higher than long-term average (Avg. = 71.3 NTU)
- pH below 6 or above 9.5

7. ILLICIT DISCHARGE DETECTION AND ELIMINATION
(SECTION J of ORDER R9-2004-001)
CONTINUED

- Dissolved oxygen below 4 mg/L
- Unusually low or high water temperature
- Sensory observations in the area of the discharge that indicates the presence of pollutants (e.g., staining, water sheen, water color and/or odor, algae, foaming)

Below is a summary of the results of the IC/ID investigations conducted by the District.

IC/ID Investigations Conducted by the District

IC/ID Station Name	Date	TDS (mg/L)	Sp. Cond. (µmhos/cm)	Turbidity (NTU)	pH	T (°C)	DO (mg/L)
Redhawk Channel	11/18/08*	**900**	1215	68.7	9.11	17.8	12.74
	06/17/09*	-	1870	7.1	**10.41**	29.74	9.05
Long Canyon Channel	11/18/08	600	1155	29.7	7.48	15.3	17.8
	06/17/09	Insufficient volume for field measurements					
Santa Gertrudis Chnl. near Murrieta	11/18/08	Insufficient volume for field measurements					
	06/17/09	Insufficient volume for field measurements					
Warm Springs Creek near Murrieta	11/18/08	Dry					
	06/17/09	Dry					

* Samples taken for Analytical Testing
** **Bold** values exceeded field screening criteria

Follow-up and Elimination Activities

Generally, during IC/ID field visits, visual observations and field screening did not indicate the presence of illicit connections or illegal discharges. The two exceptions within the reporting period are summarized as follows:

11/18/08: Field TDS exceeded at 900 mg/l. There was adequate flow to collect samples for laboratory analysis and samples were collected. Lab turbidity (1.8 NTU) was below BPO; however, lab TDS slightly exceeded 125% BPO. Redhawk is in a predominately-residential area and rules out discharges from industries that would most likely produce elevated TDS flows. Nutrient levels are normal for the watershed and MBAS results are below BPO. No obvious sources of the exceedance were determined based on the field visit or follow up chemical analysis.

06/17/09: Field Parameters indicated an elevated field pH, exceeding IC/ID criteria. There was adequate flow to collect samples for laboratory analysis and samples were collected. No obvious illegal discharges were detected during the field visits or from lab results.

7. ILLICIT DISCHARGE DETECTION AND ELIMINATION
(SECTION J of ORDER R9-2004-001)
CONTINUED

Proposed changes to station locations and/or sampling frequencies

No changes are proposed to the station locations and/or sampling frequencies at this time; however, the District has committed to revising the entire IC/ID program as described in the 2009 ROWD.

7) An Assessment of Overall Program Effectiveness Based on the Measurable Goals Established in the Permittee's Individual SWMP:

The measurable goals are defined in Section 4.4 of the District's Individual SWMP and have been reported upon in response to questions 1 through 5 of this section. Within the framework of the existing IC/ID program, the Overall IC/ID program has been found to be effective based on the responses to these questions.

In response to the Los Angeles RWQCB and the Ventura County MS4 Permit, CASQA prepared a letter identify proposed measures and goals to evaluate the effectiveness of the IC/ID Program. The measures are as follows:

- Percent (%) of IC/IDs responded to within 24 hours of receiving notice; and
- Percent (%) of Illegal Connections eliminated or permitted once detected.

The goal identified for each measure was 80%. Based on our FY 2008-2009 IC/ID information, 100% of IC/ID reports were responded to within 24 hours of receiving notice and zero (0) Illicit Connections were detected.

8) Additional Comments/Information:

Describe the major accomplishments of the Illicit Discharge Detection and Elimination Component over the past year:

Based on experiences implementing the current IC/ID monitoring program, the 2009 ROWD included recommendations for a revised IC/ID program as part of the 4th term permit that will allow the Permittees to better detect and eliminate IC/IDs. The recommended revisions are designed to:

- Distribute the monitoring sites throughout the Santa Margarita Region to detect Illicit Discharges closer to their source before they become excessively diluted.
- Increase efficiency and consistency in sampling resulting in enhanced data quality.
- Enhance response time to identify IC/IDs

The District has also established an electronic third-party discharge electronic reporting form and database that will allow us to quickly research known third-party discharges to our system as part of complaint call responses. Additional enhancements to this system will include creation of a GIS layer.

7. ILLICIT DISCHARGE DETECTION AND ELIMINATION
(SECTION J of ORDER R9-2004-001)
CONTINUED

Summarize the internal and external education and outreach activities the Illicit Discharge Detection and Elimination Component has conducted over the past year:

- During field investigations of complaint calls, field staff disseminates public education and outreach information to violators and adjacent residents/businesses. Other IC/ID education addressed through the public education program is described in the Watershed Annual Report.

Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Illicit Discharge Detection and Elimination Component:

- The District will continue to implement the existing program pending any changes in the upcoming fourth-term MS4 Permit.

Other Comments:

N/A

8. PUBLIC PARTICIPATION

1) A Description of Efforts to Include the Public in Urban Runoff Management Programs during the Reporting Period (i.e., river clean-ups, volunteer monitoring, Permittee council meetings related to the SWMP, etc.):

Public involvement programs for this reporting period are described in the Watershed Annual Report and have included:

a) Technical Advisory Committee meetings held on a monthly basis.

b) Participation in SMR Executive Management Team.

c) The Santa Margarita Watershed Cleanup described in section G.7.3 of the Watershed Annual Report included over 120 public volunteers and removed 12 tons of waste from the Santa Margarita Watershed.

d) Through the regionally implemented programs supported in part by the District, fifty-four (54) Household Hazardous Waste collection events have been held, involving the public in ensuring that wastes are disposed of properly. During this reporting period there were 3,300 participants in the collection events.

2) Additional Comments/Information:

N/A

9. FISCAL ANALYSIS COMPONENT

Fiscal Analysis Component - each Permittee shall include an annual fiscal analysis, for each fiscal year covered by Order No. R9-2004-001, in its Individual Annual Report. This analysis shall evaluate the expenditures (such as capital, operation and maintenance, education, and administrative expenditures) necessary to accomplish the activities of the Permittee's Individual SWMP. The analysis shall include the following:

1) **A Report of the Previous Reporting Period's Budget and a Budget for the Upcoming Reporting Period. To the Extent Possible, the Budgets should be Broken Down by the following Programs:**

   Expenditures identified below reflect costs incurred by the District for implementing its own NPDES Program **and** for implementing the Regional Watershed Program. The District does not track its direct implementation costs separately nor does it track costs separately for many permit provisions.

Program Element	Fiscal Year 2008-2009		Fiscal Year 2009-2010	
	Capital Expenditures	**O&M/ Admin Expenditure**	**Capital Budget**	**O&M/ Admin Budget**
Program Management [(a)]	N/A	$393,606	N/A	$582,590
Development Planning [(b)]	N/A	N/A	N/A	N/A
Construction Inspections [(c)]	N/A	$0	N/A	$149,040
Industrial and Commercial Inspections (CAP Program) [(d)]	N/A	$25,000	N/A	$19,830
Illicit Connections & Illegal Discharges Program (HAZMAT, HHW/ABOP Collections) [(d)]	N/A	$66,500	N/A	$66,500
Municipal Facilities and Activities	N/A	$1,069,539	N/A	$1,356,100
Training, Public Education & Outreach [(e)]	N/A	$69,000	N/A	$74,910
Monitoring Program [(e)]	N/A	$307,158	N/A	$200,200
Other	N/A	$0	N/A	$0
Total	**N/A**	**$1,930,803**	**N/A**	**$2,449,170**

(a) Program Management includes all costs not directly tracked below, and includes staffing, administration & overhead, and consultant services.

(b) The District does not have any individual costs associated with this program element, however a brief description follows that identifies manpower requirements for the District's assistance to the County of Riverside in reviewing development proposals.

(c) Costs are not directly tracked for this Program Element, however a brief description follows that identifies manpower requirements for this element.

(d) The District does not have any individual costs associated with this program element. Costs shown are for the indicated regionally implemented program.

(e) Costs for this element are not tracked separately from the District-Implemented Regional Programs and as such, shown costs are inclusive of costs incurred for implementing the regional element.

9. FISCAL ANALYSIS COMPONENT
CONTINUED

Construction Inspection – The District's Construction Inspectors are trained to address construction related NPDES issues associated with District administered construction projects (storm drains, channels, levees, basins, etc.) and ensure the proper construction of District maintained MS4 that are being constructed as part of private development projects. They perform these inspections as part of their normal duties. The District's NPDES Section staff also has an individual assigned to review SWPPPs associated with District administered construction projects. The NPDES staff person also provides a training presentation on NPDES related construction issues at construction project pre-construction meetings for the benefit of the contractor. Costs for Construction Inspection obligations for the Santa Margarita Watershed are recovered from the District's ad-valorum tax revenues collected within the Santa Margarita Region of the County.

Development Planning – At the request of the County, the District's Development Review staff are reviewing proposed development projects in the unincorporated Riverside County area for compliance with the DAMP and the County's individual SWMP, recommending conditions of approval relative to water quality/NPDES and reviewing preliminary Project-Specific WQMPs and associated plans within the unincorporated County. Costs incurred by the District's Development Review and Plan Check staff for Development Planning permit obligations are directly recovered via development review and plan check fees charged to the development proponent.

9. FISCAL ANALYSIS COMPONENT
CONTINUED

2) A Description of the Source(s) of Funds that were Utilized during the Previous Fiscal Year and the Source(s) of Funds Proposed to Meet the Necessary Expenditures for the Subsequent Year, including Legal Restrictions on the use of such Funds.

Source of Funds[a]	FY 2008-2009 Revenues	Percent of Total Program Funding	Restrictions on Use (if applicable)
Santa Margarita Watershed Benefit Assessment Fund	$444,830	22.9%	District NPDES compliance costs, excess funds used to fund regional NPDES activities.
Santa Margarita Watershed Permittee Implementation Agreement	$422,323	21.7%	Regional NPDES Compliance Programs.
Zone 7 Ad-Valorem Tax Allocation	$1,069,539	54.9%	Costs associated with District's compliance with Municipal Construction component of Board Order R9-2004-001.
Developer Development Review/Plan Check Fees	Unknown [b]	Unknown	Costs associated with review of proposed developments in the unincorporated County
Spending Against Reserves	$0	0%	District NPDES Compliance Costs
Miscellaneous Revenue	~$10,000	0.5%	Interest, Other Misc.
TOTAL	**1,946,692**	**100%**	

(a) evenue sources do not change from year to year.

(b) The District does not have any individual costs associated with the review of development projects. Costs incurred through plan review assistance to County are directly recovered from the project proponent and are not separately tracked.

3) Additional Comments/Information:

The District is working to leverage funds for regional planning objectives including:

Santa Ana Watershed Project Authority – Jointly fund a LID BMP testing and demonstration facility. This effort is described in the Watershed Annual Report, in Appendix G, Section G-7.

Joint Permittee Efforts - Additional efforts to leverage funds are jointly being made with the SMR permittees. These efforts are described in Section G.11 of the Watershed Annual Report.

10. NON-STORM WATER DISCHARGES

Permittees shall report on any discharge category listed in Requirement B.2 of Order No. R9-2004-001 that was identified as a source of pollutants during the reporting period. For each identified category, the Permittee shall report whether it elected to prohibit the discharge or to require BMPs to reduce pollutants in the discharge to the MEP. If the discharge is not prohibited, the BMPs that will be implemented, or required to be implemented, shall be described in each Permittee's Individual SWMP Annual Report.

Category	Prohibited	BMP to be Implemented
Diverted stream flows	☐ Yes ☒ No	Not Applicable, no applications
Rising ground waters	☐ Yes ☒ No	Not Applicable, no applications
Uncontaminated ground water infiltration [as defined at 40CFR35.2005(20)] to MS4s	☐ Yes ☒ No	Not Applicable, no applications
Uncontaminated pumped ground water	☐ Yes ☒ No	Not Applicable, no applications
Foundation drains	☐ Yes ☒ No	Not Applicable, no applications
Springs	☐ Yes ☒ No	Not Applicable, no applications
Water from crawl space pumps	☐ Yes ☒ No	Not Applicable, no applications
Footing drains	☐ Yes ☒ No	Not Applicable, no applications
Air conditioning condensation	☐ Yes ☒ No	Not Applicable, no applications
Flows from riparian habitats and wetlands	☐ Yes ☒ No	Not Applicable, no applications
Water line flushing	☐ Yes ☒ No	Not Applicable, no applications
Landscape irrigation	☐ Yes ☒ No	Not Applicable, no applications
Discharges from potable water sources not subject to NPDES Permit No. CAG679001, other than water main breaks	☐ Yes ☒ No	Not Applicable, no applications
Irrigation water	☐ Yes ☒ No	Not Applicable, no applications
Lawn watering	☐ Yes ☒ No	Not Applicable, no applications
Individual residential car washing	☐ Yes ☒ No	Not Applicable, no applications
Non-emergency fire fighting flows	☐ Yes ☒ No	Not Applicable, no applications
Dechlorinated swimming pool discharges	☐ Yes ☒ No	Not Applicable, no applications

10. NON-STORM WATER DISCHARGES
CONTINUED

Additional Comments/Information:

The District requires a Third-Party Non-Stormwater Discharge Application to be completed for any encroachment involving a non-stormwater discharge into District facilities. The application requires the applicant to characterize the discharge, including a chemical analysis of the flow when possible. Where the discharges would contain contaminants exceeding receiving water standards, BMPs are required or the specific discharge would be prohibited. No evidence has been identified to date that would indicate that a specific class, or classes, of allowable non-stormwater discharges are persistent sources of pollution per Requirement B.2.

11. RECEIVING WATER LIMITATIONS

This section includes the report required pursuant to Requirement C.2.a. of Order No. R9-2004-001, if applicable.

Requirement C.2.a. states:

"Upon a determination by either a Permittee or the SDRWQCB that MS4 discharges are causing or contributing to an exceedance of an applicable water quality standard, the Permittee shall promptly notify and thereafter submit a report to the SDRWQCB that describes BMPs that are currently being implemented and additional BMPs that will be implemented to prevent or reduce any pollutants that are causing or contributing to the exceedance of water quality standards. The report may be incorporated in the SWMP Annual Report unless the SDRWQCB directs an earlier submittal. The report shall include an implementation schedule. The SDRWQCB may require modifications to the report."

Each reporting period, the District collects and reviews monitoring data as part of Appendix G of the Watershed Annual Report. Based on the results of this monitoring data, pollutants of concern are identified and prioritized. Programs necessary to control these pollutants of concern are also identified in Appendix G and incorporated into the Permittees compliance programs.

12. ADDITIONAL URBAN RUNOFF DATA

This Section is a Summary of all Urban Runoff Related Data not included in the Annual Monitoring Report (e.g., special investigations).

The District did not collect any supplemental data that is not otherwise reported in the Monitoring Report (Appendix G of the Watershed Report).

13. PROPOSED REVISIONS TO THE INDIVIDUAL SWMP

This Section Includes Proposed Revisions to the Individual SWMP, Including Areas in Need of Improvement Based on the Assessment of Effectiveness of Each Program Component.

The District, together with the Permittees has developed a comprehensive set of recommended revisions their compliance programs that was included in their 2009 ROWD. Using these recommendations as a framework, the District plans to work with the Regionional Board in the development of their fourth-term MS4 permit to ensure they continue to reduce pollutant discharges to the receiving waters to the MEP. Upon adoption of the fourth-term MS4 Permit, the District commits to update their Individual SWMPs in accordance with the requirements and schedules therein.

The preceeding sections of this annual report identify other recommended activities to address water quality within the SMR that will be continued or initiated within the next reporting period. These recommended activities, while demonstrating the District's iterative management of its programs, are within the existing framework of, and do not necessitate any revisions to the Individual SWMP. As such, no further revisions to the Individual SWMP are proposed at this time.

OWNER'S CERTIFICATION

This project-specific Water Quality Management Plan (WQMP) has been prepared for:

Joseph Turley

by **Hunsaker & Associates Irvine, Inc.** for the project known as **Tentative Tract 35161** at **36050 Pourroy Road (Southeast of Thompson Road and Pourroy Road).**

This WQMP is intended to comply with the requirements of the **County of Riverside** for **Tentative Tract Map No. 35161**, which includes the requirement for the preparation and implementation of a project-specific WQMP.

The undersigned, while owning the property/project described in the preceding paragraph, shall be responsible for the implementation of this WQMP and will ensure that this WQMP is amended as appropriate to reflect up-to-date conditions on the site. This WQMP will be reviewed with the facility operator, facility supervisors, employees, tenants, maintenance and service contractors, or any other party (or parties) having responsibility for implementing portions of this WQMP. At least one copy of this WQMP will be maintained at the project site or project office in perpetuity.

The undersigned is authorized to certify and to approve implementation of this WQMP. The undersigned is aware that implementation of this WQMP is enforceable under The County of Riverside Water Quality Ordinance (Municipal Code Section 13.12; Ord. 754.1).

If the undersigned transfers its interest in the subject property/project, its successor in interest the undersigned shall notify the successor in interest of its responsibility to implement this WQMP.

"I, the undersigned, certify under penalty of law that the provisions of this WQMP have been reviewed and accepted and that the WQMP will be transferred to future successors in interest."

I. Project Description

Project Owner: Joseph Turley
309 West Columbine Street
Santa Ana, CA 92707
(714) 241-1771
Contact: Martin Turley

WQMP Preparer: Hunsaker and Associates Irvine, Inc.
3 Hughes
Irvine, CA 92618
Telephone: (949) 583-1010
Preparer: Tommy I. Hsu, CPESC, CPSWQ

Project Site Address: 36050 Pourroy Road, located Southeast of Thompson Road and Pourroy Road.

Planning Area/ Community Name/ Development Name: Planning Area No. 34, Winchester 1800, Specific Plan No. 286
Tentative Tract No. 35161

APN Number(s): 964-010-001

Thomas Bros. Map: Page 899; Grid E-7 – Riverside County (2005 Edition)

Project Watershed: Santa Margarita River Watershed

Sub-watershed: Murrieta Creek Watershed

Project Site Size: 19.4 Acres

Standard Industrial Classification (SIC) Code: Not applicable. Proposed project is a residential development.

Formation of Home Owners' Association (HOA)/Property Owners' Association (POA):

Y ☒ N ☐

An HOA will be established for the proposed development. The HOA shall be responsible for parkway landscaping located adjacent to Galleano Avenue, the proposed storm water treatment BMP's, as well as the storm water detention basin. All improvements outside of the private lots and not within the jurisdiction of the HOA shall be considered public improvements, to be owned and maintained by the County of Riverside. The developer shall act as the responsible party for French Valley until the County of Riverside accepts responsibility for the project's public common areas. **The contact person for Joseph Turley is Mr. Martin Turley.**

Additional Permits/Approvals required for the Project:

AGENCY	Permit required (yes or no)
State Department of Fish and Game, 1601 Streambed Alteration Agreement	Y ☐ N ☒
State Water Resources Control Board, Clean Water Act (CWA) Section 401 Water Quality Certification	Y ☐ N ☒
US Army Corps of Engineers, CWA section 404 permit	Y ☐ N ☒
US Fish and Wildlife, Endangered Species Act section 7 biological opinion	Y ☐ N ☒
Other *(please list in the space below as required):* County of Riverside Grading/Building Permit	Y ☒ N ☐

Joseph Turley proposes the development of Tentative Tract 35161 as "French Valley" (the "Project"). The project is located at the southeast corner of the Thompson Road and Pourroy Road intersection, in an unincorporated area of Riverside County, California. The project site is to the north by Thompson Road, with single-family homes and rural developments beyond; to the east by open space and rural development; to the south by Galleano Avenue and rural developments beyond; and to the west by Pourroy Road and single-single family homes beyond. Entrance to the site shall be obtained from Thompson Road to the north and Galleano Avenue to the south (See exhibits in Appendix B).

The project site consists of approximately 19.4 acres of undeveloped land that historically has been used for some agricultural crops, but for the most part, the land has been tilled and undeveloped. The proposed project will consist of 51 single-family detached residences with a minimum lot size of 7,200 square feet and average lot size of 9,998 square feet, streets curb, gutter and, infrastructure improvements, including wet and dry utilities and storm drains, pedestrian walkways, treatment BMP's and a storm water detention basin. The approximate land use summary is subject to change and is as follows:

Land Use Summary

Lots	Land Use	Acreage
1-51	Residential Lots	11.7
A	Sand Filter Water Quality Basin	1.6
B	Landscape Development Zone Per Winchester 1800 Specific Plan No. 286	0.5
--	Roads	5.6
Total	--	19.4

Paved areas for the site include project streets, curbs, sidewalks and gutters, and homeowner driveways and patios located within individual lots. Pervious areas for the site include Lot A (storm water detention basin) and Lot B (Landscape Development Zone) and other miscellaneous landscape areas, which include private parkway landscaping and private homeowner lawns and gardens. These areas shall include native/drought tolerant plant species. All private landscaping shall be maintained by the homeowner and the HOA, as appropriate. Landscaping located in the public areas will be owned and maintained by the County of Riverside through Community Service Area (CSA) or Valley Wide Recreation and Park District.

Parking for the site includes covered garage spaces and driveways for residents and guests, as well as on-street public parking. Total parking spaces shall be consistent with the County of Riverside's parking regulations, standards and requirements.

Outdoor activities for the project include commuting, walking, jogging, playing, gardening and other common residential activities.

No community pools, recreation areas, parks, tot lots or car wash areas have been proposed for the project. Additionally, since the project is residential, no material delivery and storage areas or loading docks have been proposed. However, each homeowner's drive way is available for applicable individual deliveries and each homeowner's garage will serve as an applicable storage area for miscellaneous household items.

Normal single family home homeowner use related trash can be anticipated, from curb side, to be produced daily by each home's intended daily use. Such trash will be disposed of by each homeowner and removed by the local private waste management company on a weekly basis for proper disposal to a central trash disposal facility offsite. All trash containers shall be stored within the individual owner's private areas, to be protected from rain, storm water run-on and wind.

Appendix B of this project-specific WQMP includes a Vicinity Map and a Site Plan for the project. The site plan included as part of Appendix B depicts the following project features:

- Location of all structural BMPs, including Treatment Control BMPs;
- Landscaped areas;
- Paved areas and intended uses (i.e., parking, outdoor work area, outdoor material storage area, sidewalks, patios, tennis courts, etc.);
- Number and type of structures and intended uses (i.e., buildings, tenant spaces, dwelling units, community facilities such as pools, recreation facilities, tot lots, etc.);
- Infrastructure (i.e., streets, storm drains, etc.) that will revert to public agency ownership and operation;
- Location of existing and proposed public and private storm drain facilities (i.e., storm drains, channels, basins, etc.), including catch basins and other inlets/outlet structures;
- Location(s) of Receiving Waters and points where onsite flows exit the property/project site;
- Proposed drainage areas boundaries, including tributary offsite areas, for each location where flows exits the property/project site;
- Pre- and post-project topography.

II. Site Characterization

Land Use Designation or Zoning: The project is located within "French Valley" and the Winchester 1800 Area Plan. Existing land use designation and zoning by the County of Riverside is Medium Density Residential (MDR) and Specific Plan Zone (Winchester 1800 Plan No. 286 – Planning Area 34).

Current Property Use: The site is currently vacant, tilled and unimproved. Onsite structures were removed in June 2007. Based on historical aerial photographs reviewed during preparation of the project's Phase I report, some row crops were present on the site prior to 1979, but for the most part the land has been tilled and unimproved, with some residential structures.

Proposed Project Use: Proposed use as detached single family residential is consistent with existing zoning for MDR.

Availability of Soils Report: Y ☒ N ☐

Geotechnical Review of Tentative Tract 35161, French Valley Area, County of Riverside, California. Prepared by Pacific Soils Engineering, Inc. October 26, 2007.

The site ranges in elevation from approximately 1,400 feet above mean sea level (msl) in the northeastern area to 1,371 feet msl in the west. The general grade is to the south-southwest.

Topographically, the site is situated in the Perris Block of the Peninsular Ranges Province. The site is underlain by middle to early Pleistocene fluvial sediments that were deposited on a broad canyon floor. The sediments consist of moderate to well indurated reddish-brown sand with varying amounts of gravel, silt and clay. Based on the USGS Soil Survey, the site consists primarily of Monserate sandy loam, then Vallecitos loam and Escondido fine sandy loam. Site soils are shown as "C" on the Hydrologic Soils Group Map, Plate C-1.53, in the Riverside County Flood Control Hydrology Manual. Group C soils are characterized as having slow infiltration rates when thoroughly wetted and consisting chiefly of silty-loam soils with a layer that impedes downward movement of water, or soils with moderately fine to fine texture. These soils have slow rate of water transmission.

The site resides within the Temecula Valley groundwater basin and contains five (5) abandoned groundwater wells in the central portion of the site prior to the start of the project's development and construction. Depth to groundwater in these wells was reported to be approximately 45 feet below ground surface during the wells' time of use (approximately 1968).

Phase 1 Site Assessment: Y ☒ N ☐

Appendix H contains a copy of the project's Phase I study: "Phase I Environmental Assessment of the Property Currently Referred to as Tentative Tract No. 36161, 36050 Pourroy Road, Riverside County, California". Carlin Environmental Consulting. October 11, 2007.

Receiving Waters for Urban Runoff from Site:

Receiving Waters	303(d) List Impairments	Designated Beneficial Uses	Proximity to RARE Beneficial Use
Benton Creek Channel - French Valley Hydrologic Unit 2.33	None	MUN, AGR, IND, PROC, REC1, REC2, WARM, WILD	No RARE designation
Warm Springs Creek San Diego Basin Plan Hydrologic Unit 2.33	None	MUN, AGR, IND, PROC, REC1, REC2, WARM, WILD	No RARE designation
Murrieta Creek Hydrologic Unit Basin Number 2.52	Iron (Source unknown); Manganese (Source Unknown); Nitrogen (Source Unknown), Phosphorus (Source Unknown); TMDL for Phosphorous	MUN, AGR, IND, PROC, REC1 (potential), REC2, WARM, WILD	No RARE designation
Upper Santa Margarita River San Diego Basin Plan Hydrologic Unit 2.22	Phosphorus (Urban Runoff, Storm Sewers, Unknown nonpoint source, Unknown point source); TMDL for Phosphorous	MUN, AGR,IND, PROC, REC1, REC2, WARM, WILD, RARE	Approximately 13.2 miles from site to RARE designation (Santa Margarita River)
Santa Margarita Lagoon San Diego Basin Plan Hydrologic Unit 2.11	Eutrophic (Nutrients) (Nonpoint/point source); TMDL for Eutrophic (Nutrients)	REC1, REC2, EST, WILD, RARE, MAR, MIGR, SPWN	Approximately 41.7 miles to RARE designation (Santa Margarita Lagoon)

The project site resides within the jurisdiction of the San Diego Regional Water Quality Control Board (Region 8) and the Murrieta Creek portion of the Santa Margarita River Watershed.

There are no known existing water quality problems associated with the site. The site does not contain any areas of biological significance (ASBS) or environmentally sensitive areas (ESA's) as defined by the San Diego RWQCB. Runoff from the site is conveyed in a southwesterly direction to an existing storm towards Pourroy Road. Runoff is then conveyed approximately 0.1 miles south along Pourroy Road via existing storm drain improvements to the Benton Creek Channel, then westerly approximately 3.0 miles to the confluence with Warm Springs Creek, prior to discharging to Murrieta Creek, located downstream approximately 5.5 miles to the southwest. Any runoff that does not infiltrate or evaporate is then conveyed to the confluence with the Upper Santa Margarita River, located approximately 4.6 miles to the south.

Murrieta Creek is currently on the State's 303(d) List of Water Quality Limited Segments as impaired for Iron, Manganese, Nitrogen, and Phosphorous; and has a Total Maximum Daily Load (TMDL) established for Phosphorous (USEPA). The Upper Santa Margarita River is 303(d) listed for Phosphorus and has a TMDL for Phosphorous. The Santa Margarita Lagoon is 303(d) listed for Eutrophic condition and has a TMDL for any discharges contributing to Eutrophic conditions.

III. Pollutants of Concern

First flush and low flows from the project site will be treated via Filterra® bioretention filtration units prior to discharging to the proposed storm drain system.

Potential Pollutants Generated by Land Use Type:

(from Exhibit B of the Riverside County Water Quality Management Plan)

Type of Development (Land Use)	Sediment/ Turbidity	Nutrients	Organic Compounds	Trash & Debris	Oxygen Demanding Substances	Bacteria & Viruses	Oil & Grease	Pesticides	Metals
Detached Residential Development	**P**	**P**	**N**	**P**	**P**	**P**	**P**	**P**	**N**
Attached Residential Development	P	P	N	P	P(1)	P	P(2)	P	N
Commercial Industrial Development	P(1)	P(1)	P(5)	P	P(1)	P(3)	P	P(1)	P
Automotive Repair Shops	N	N	P(4,5)	P	N	N	P	N	P
Restaurants	N	N	N	P	P	P	P	N	N
Hillside Development	P	P	N	P	P	P	P	P	N
Parking Lots	P	P	P(4)	P	P(1)	P(6)	P	P(1)	P
Streets, Highways & Freeways	P	P(1)	P(4)	P(1)	P(1)	P(6)	P	P(1)	P

Abbreviations:
P=Potential N=Not Expected

Notes:
(1) A potential pollutant if landscaping or open area exists on the Project site.
(2) A potential pollutant if the project includes uncovered parking areas.
(3) A potential pollutant if land use involves animal waste.
(4) Specifically, petroleum hydrocarbons.
(5) Specifically, solvents.
(6) Bacterial indicators are routinely detected in pavement runoff.

The potential stormwater and urban runoff pollutants anticipated to be associated with this project are sediment/turbidity, nutrients, organic compounds (hydrocarbons), trash and debris, oil and grease, pesticides and metals. **Legacy pollutants** may have existed on site due to previous agricultural use but have been diluted by the site's inactivity to concentrations that are only remotely detectable. According to the Phase I report, there is minimal potential for residual pollutants from the site's past agricultural usage. Based on current receiving water impairments (303d List) and allowable discharge requirements (USEPA TMDL List), the project's **pollutants of concern** are Phosphorous and Nutrients (includes phosphorous and nitrogen).

IV. Hydrologic Conditions of Concern

Impacts to the hydrologic regime resulting from the Project may include increased runoff volume and velocity; reduced infiltration; increased flow frequency, duration, and peaks; faster time to reach peak flow; and water quality degradation. Under certain circumstances, changes could also result in the reduction in the amount of available sediment for transport; storm flows could fill this sediment-carrying capacity by eroding the downstream channel. These changes have the potential to permanently impact downstream channels and habitat integrity. A change to the hydrologic regime of a Project's site would be considered a hydrologic condition of concern if the change would have a significant impact on downstream natural channels and habitat integrity, alone or as part of a cumulative impact from development in the watershed.

This project-specific WQMP must address the issue of hydrologic conditions of concern unless one of the following conditions is met:

- **Condition A:** Runoff from the Project is discharged directly to a publicly-owned, operated and maintained MS4; the discharge is in full compliance with Co-Permittee requirements for connections and discharges to the MS4 (including both quality and quantity requirements); the discharge would not significantly impact stream habitat in proximate Receiving Waters; and the discharge is authorized by the Co-Permittee.
- **Condition B:** The project disturbs less than 1 acre. The disturbed area calculation should include all disturbances associated with larger plans of development.
- **Condition C:** The project's runoff flow rate, volume, velocity and duration for the post-development condition do not exceed the pre-development condition for the 2-year, 24-hour and 10-year 24-hour rainfall events. This condition can be achieved by minimizing impervious area on a site and incorporating other site-design concepts that mimic pre-development conditions. This condition must be substantiated by hydrologic modeling methods acceptable to the Co-Permittee.

This Project meets the following condition: Condition "A"

- **Condition C:** The project's runoff flow rate, volume, velocity and duration for the post-development condition do not exceed the pre-development condition for the 2-year, 24-hour and 10-year 24-hour rainfall events. This condition can be achieved by minimizing impervious area on a site and incorporating other site-design concepts that mimic pre-development conditions. This condition must be substantiated by hydrologic modeling methods acceptable to the Co-Permittee.

Pre-Development Hydrology

In the existing condition, there are two main drainage areas that convey flow to existing Benton Creek Channel located to the south of proposed project. Drainage Area "A" is conveyed to the northwestern portion of the project boundaries where runoff enters an existing catch basin located on the northern side of Thompson Road and an inlet on the eastern side of Pourroy Road just south of the street intersection. Runoff is conveyed to Benton Creek Channel via existing storm drain per Tract 29875, -1, -2 & -3 (by others). Drainage Area "A" consists of approximately 8.0 acres and produces a total 100-year storm flow rate of 18.5 cfs (15.2 cfs + 3.3 cfs). Drainage Area "B" has runoff that discharges to three distinct locations bounded by ridges in project site topography and ultimately arrives at the Benton Creek Channel.

Drainage Area "B" consists of approximately 11.3 acres and produces a total 100-year storm flow rate of 24.6 cfs (0.8c fs + 11.5 cfs + 12.3 cfs). Flow rates are added together for unit hydrograph analyses because they confluence to the south at the existing Benton Creek Channel.

Post-Development Hydrology

There is one drainage area that will be routed through a detention basin located in the southern part of the project along Galleano Road. A riser will be installed to tie into existing 60" RCP Line "F" storm drain during final design. Current design and hydraulic analysis of this storm drain yields a hydraulic grade line that is half full and preliminary calculations show that this pipe can handle proposed flows from the onsite detention basin. Though existing conditions have multiple drainage areas, flows were combined and outlet though basin riser to avoid surface flows from current outlet locations. Existing velocities will be maintained as outlet will be routed through riser and not through surface runoff over Galleano Road. Proposed Drainage Area "A" consists of approximately 19.3 acres and produces a total 100-year storm flow rate of 50.0 cfs (42.5 cfs + 7.5 cfs).

Storm runoff produced on site will be mitigated through the project site via surface flow and treated for water quality through proposed sand filter water quality detention basin prior to discharging to an existing storm drain system.

The project site generates a larger flow rate than existing conditions and will therefore be mitigated via a proposed onsite sand filter water quality detention basin that will be designed in more detail during final engineering. The detention system is designed to mitigate the difference in volume between the proposed and existing 10-year, 24 hour storm event. This volume was determined by creating unit hydrographs with the 10-yr storm condition (See Section 4 of the project's hydrology study) and determined to be 0.6 acre-feet. A basin volume of 2.1 acre-feet has been provided for detention purposes.

	2 year - 24 hour		10 year - 24 hour	
	Precondition	**Post-condition**	**Precondition**	**Post-condition**
Discharge (cfs)	0.5	2.5	2.6	4.4
Velocity (fps)	0.3	3.0	0.5	3.5
Volume (cubic feet)	0.3	1.5	1.4	2.0
Duration (minutes)	9.8	7.9	9.8	8.3

The hydrology for the proposed condition, including drainage areas and storm drain facilities, is provided in Appendix C of this WQMP.

V. Best Management Practices

V.1. Site Design BMPs

The following Site Design concepts have been incorporated into the proposed project:

1) Minimize Urban Runoff
2) Minimize Impervious Footprint
3) Conserve Natural Areas
4) Minimize Directly Connected Impervious Areas (DCIAs)

A brief discussion of each BMPs not employed is provided in the section following Table 1, which shows site design BMPs that have been included in this project. A brief description of the employed Site Design BMPs follows Table 1.

Table 1. Site Design BMPs

Design Concept	Technique	Specific BMP	Included		
			Yes	No	N/A
Site Design Concept 1	*Minimize Urban Runoff*	Maximize the permeable area (See Section 4.5.1 of the WQMP).	☒	☐	☐
		Incorporate landscaped buffer areas between sidewalks and streets	☒	☐	☐
		Maximize canopy interception and water conservation by preserving existing native trees and shrubs, and planting additional native or drought tolerant trees and large shrubs	☐	☒[1]	☐
		Use natural drainage systems	☐	☒[2]	☐
		Where soils conditions are suitable, use perforated pipe or gravel filtration pits for low flow infiltration.	☐	☒[3,4]	☐
		Construct onsite ponding areas or retention facilities to increase opportunities for infiltration consistent with vector control objectives	☒	☐	☐

Table 1. Site Design BMPs (continued)

Design Concept	Technique	Specific BMP	Included		
			Yes	No	N/A
		Other comparable and equally effective site design concepts as approved by the Co-Permittee (Note: Additional narrative required to describe BMP and how it addresses Site Design concept).	☐	☒[5]	☐
Site Design Concept 2	*Minimize Impervious Footprint*	Maximize the permeable area (See Section 4.5.1 of the WQMP)	☒	☐	☐
		Construct walkways, trails, patios, overflow parking lots, alleys, driveways, low-traffic streets and other low-traffic areas with open-jointed paving materials or permeable surfaces, such as pervious concrete, porous asphalt, unit pavers, and granular materials	☐	☒[3,4]	☐
		Construct streets, sidewalks and parking lot aisles to the minimum widths necessary, provided that public safety and a walk able environment for pedestrians are not compromised.	☒	☐	☐
		Reduce widths of street where off-street parking is available.	☐	☐	☒[6]
		Minimize the use of impervious surfaces, such as decorative concrete, in the landscape design.	☒	☐	☐
		Other comparable and equally effective site design concepts as approved by the Co-Permittee (Note: Additional narrative required describing BMP and how it addresses Site Design concept).	☐	☒[5]	☐
Site Design Concept 3	*Conserve Natural Areas*	Conserve natural areas (See WQMP Section 4.5.1).	☐	☒[1]	☐
		Maximize canopy interception and water conservation by preserving existing native trees and shrubs, and planting additional native or drought tolerant trees and large shrubs.	☐	☒[1]	☐
		Use natural drainage systems.	☐	☒[2]	☐
		Other comparable and equally effective site design concepts as approved by the Co-Permittee (Note: Additional narrative required describing BMP and how it addresses Site Design concept).	☒[7]	☐	☐

Table 1. Site Design BMPs (continued)

Design Concept	Technique	Specific BMP	Included		
			Yes	No	N/A
Site Design Concept 4	*Minimize Directly Connected Impervious Areas (DCIAs)*	Residential and commercial sites must be designed to contain and infiltrate roof runoff, or direct roof runoff to vegetative swales or buffer areas, where feasible.	☒	☐	☐
		Where landscaping is proposed, drain impervious sidewalks, walkways, trails, and patios into adjacent landscaping.	☒	☐	☐
		Increase the use of vegetated drainage swales in lieu of underground piping or imperviously lined swales.	☐	☒[3,4]	☐
		Rural swale system: street sheet flows to vegetated swale or gravel shoulder, curbs at street corners, culverts under driveways and street crossings.	☐	☒[3,4]	☐
		Urban curb/swale system: streets slopes to curb; periodic swale inlets drain to vegetated swale/biofilter.	☐	☒[3,4]	☐
		Dual drainage system: First flush captured in street catch basins and discharged to adjacent vegetated swale or gravel shoulder, high flows connect directly to MS4s.	☐	☒[3,4]	☐
		Design driveways with shared access, flared (single lane at street) or wheel strips (paving only under tires); or, drain into landscaping prior to discharging to the MS4	☐	☒[8]	☐
		Uncovered temporary or guest parking on private residential lots may be paved with a permeable surface, or designed to drain into landscaping prior to discharging to the MS4.	☐	☐	☒[9]
		Where landscaping is proposed in parking areas, incorporate landscape areas into the drainage design.	☐	☐	☒[10]
		Overflow parking (parking stalls provided in excess of the Co-Permittee's minimum parking requirements) may be constructed with permeable paving.	☐	☐	☒[11]
		Other comparable and equally effective design concepts as approved by the Co-Permittee (Note: Additional narrative required describing BMP and how it addresses Site Design concept).	☐	☒[5]	☐

Justification for BMP Not Employed and Non-applicable Site Design BMPs:

1. There are no existing trees or vegetation to preserve. Site is in a disturbed tilled condition. Site will be re-vegetated with native and/or non-invasive plants and trees to help reduce runoff velocity and volume and to provide plant cover.

2. No natural drainage systems currently exist onsite. Proposed condition would use storm drain system for conveyance.

3. Pervious pavement, perforated pipes, gravel filtration pits and drainage swales were considered for use to reduce the quantity and velocity of runoff from the residential portions of the site but not proposed due to the potential for saturation of adjacent soil and foundations from prolong exposure to nuisance flows and the site's soil condition (Group C soils). The employment of sand filter water quality detention basin will be used to treat runoff and reduce runoff volume and velocity.

4. The proposed project will incorporate the use of an Austin Sand filter water quality media filter detention basin to minimize the amount and velocity of water discharged from the site during storm events. The basin will be effective in retaining the increased runoff volume as a result of project development. First flush and low flow runoff will be treated by this sand filter water quality detention basin prior to discharging into an existing, downstream and offsite drain system.

5. The project does not proposed any site design alternatives other than what has been selected in Table 1.

6. This design BMP is not applicable. There is no off-street parking proposed.

7. The project proposes to plant drought native and/or drought tolerant trees, shrubs and other vegetation to provide canopy cover and increase pervious area. See Item 3 in the following section.

8. Runoff from driveways will be conveyed as gutter flow to proposed Filterra units for filtration.

9. This design BMP is not applicable. There are no designated temporary or guest parking areas proposed within private lots.

10. This design BMP is not applicable. There are no landscape areas proposed in parking areas.

11. This design BMP is not applicable. The proposed project does not provide overflow parking.

Project Site Design BMPs:

1. **Minimize Urban Runoff** – The project has been designed to maximize the available permeable area to minimize urban runoff by limiting housing density and providing landscaped buffer areas between sidewalks and project streets. The project also proposes the use of a storm water detention basin to mitigate runoff flow and velocity during storm events. All landscape areas will preferably consist of native or drought tolerant species such as Schinus Molle (California pepper tree), Quercus Virginiana (Southern Live Oak), Platanus Racemosa (California Sycamore), etc.

   The development's storm drain system will mimic the site's existing drainage patterns, which flows from west to east. Where feasible, storm water will discharge over landscaped areas prior to entering project gutters. Runoff will then be conveyed as gutter flow to proposed Filterra units for treatment prior to discharging to the storm drain system. The units will be effective in treating potential pollutants in first flush and low flow runoff.

2. **Minimize Impervious Footprint** – The project has been designed to maximize the available permeable area based on the proposed tract design by proposing multi-level dwellings with large private landscape areas within individual lots. Streets are proposed to be constructed to the minimum width allowed. Use of decorative impervious surfaces will be limited in the project's landscaping.

3. **Conserve Natural Area** – Since very little canopy exists on the site, the few native and non-native disturbed vegetation will not be preserved. All new landscape areas will preferably consist of native or drought tolerant species such as Schinus Molle (California pepper tree), Quercus Virginiana (Southern Live Oak), Platanus Racemosa (California Sycamore), etc.

4. **Minimize Directly Connected Impervious Areas (DCIAs)** – The project proposed large residential lots and landscaping adjacent to paved areas (such as sidewalks) to minimize the amount directly connected impervious areas. Roof runoff form portions of the site will be conveyed through landscaping wherever feasible, prior to discharging to projects.

V.2. Source Control BMPs

All source control BMPs listed for specific land use/type of project in the following Countywide Water Quality Management Plan tables have been discussed and considered for utilization to the extent that they are appropriate for the site and project. For a BMP listed in the table following not used for the project, this section of the WQMP has explained why this source control BMP is not appropriate for the project.

The following tables show source control BMPs (routine non-structural and routine structural) included in this project and those that were not included.

Table 2. Source Control BMPs

BMP Name	Check One		If not applicable, state brief reason
	Included	Not Applicable	
Non-Structural Source Control BMPs			
Education for Property Owners, Operators, Tenants, Occupants, or Employees	☒	☐

V.2.1 Non-Structural Source Control BMPs

Education for Property Owners, Operators, Tenants, Occupants, or Employees

Joseph Turley will insure that all lot owners/homeowners be given a copy of the latest environmental awareness education materials provided by the County of Riverside. The developer shall provide materials that inform home buyers of the impacts of dumping oil, paints, solvents or other potentially harmful chemicals into the storm drain; the proper use and management of fertilizers, pesticides and herbicides in home landscaping and gardening practices; the impacts of littering and improper watering. Environmental awareness education materials, including, but not limited to those included in Appendix D of this WQMP, shall be provided by the developer prior to the close of escrow. Responsibility of this BMP shall be that of the owner's after the close of escrow.

Activity Restrictions

Within the CC&R's to be prepared, language shall be included to identify surface water quality protection required of the HOA. Surface water quality activities shall also be conducted in conformance with the Water Quality Management Plan as it relates to the handling and disposal of contaminants.

Irrigation System and Landscape Maintenance

Management programs will be designed and established by the County of Riverside, which will own and maintain the public common areas located around the perimeter of the site, through the CSA or VWRPD. These programs will include how to mitigate the potential dangers of fertilizer and pesticide usage. Ongoing maintenance will be consistent with Riverside County Water Conservation Resolution, the State of California Model Water-Efficient Landscape Ordinance and the County of Riverside Water Conservation Ordinance. Fertilizer and Pesticide usage shall be consistent with County Management Guidelines for use of Fertilizers and Pesticides.

The HOA shall be responsible for the detention basin as well as the landscaping located on the northern and southern sides of Galleano Avenue.

Landscape maintenance shall include all maintenance and replacement of dead vegetation, erosion rills, proper disposal of green wastes, etc. Irrigation systems shall be tested regularly to ensure that all systems are functioning optimally.

Common Area Litter Control

Each homeowner will be required to provide trash pick-up within private lot areas and landscape areas. Daily inspection will be made of common area trash receptacles to make sure lids are closed and pick-up of any excess trash on the ground has occurred. The HOA shall be responsible for the areas within its jurisdiction. Pursuant to Table 4 located at the end of Section VI, responsibility shall include the emptying of trash receptacles, noting of disposal violations by homeowners, and reporting such violations to the HOA and County for investigation.

Street Sweeping Public Streets and Parking Lots

Post construction, the County of Riverside shall have all public streets and vacuum swept on a monthly basis, at minimum. This procedure shall be intensified around October 1st of each year prior to the beginning of the rainy season.

Drainage Facility Inspection and Maintenance

Post construction, any onsite catch basins and storm drains less than 36" will be owned, maintained and cleaned by the County of Riverside (Riverside County Transportation Department). Any facilities 36" and larger shall be owned and maintained by the Riverside County Flood Control and Water Conservation District (RCFC&WCD). These activities will be done on a regular basis, and prior to the storm season, no later than October 1st of each year. Maintenance schedule for drain inspection and maintenance can be found in Table 4 at the end of Section VI. Appendix D includes copies of the educational materials that will be used in implementing this project-specific WQMP.

The HOA shall be responsible for maintenance of all proposed Filterra units as well as the storm water detention basin.

V.2.2 Structural Source Control BMPs

Storm Drain System Stenciling and Signage (CASQA SD-13)

As a part of the final civil engineering drawings, it will be required by Joseph Turley to stencil on all of the project's catch basins, where applicable in paved areas, the words, "Only Rain...Down the Storm Drain." This will be done in a location that can be clearly seen by all and will be routinely inspected and re-stenciled, as required, until RCTD accepts maintenance responsibility for the catch basins. Thereafter, RCTD shall routinely inspect and re-stencil the catch basins, as necessary (See Table 2).

Landscape and Irrigation System Design (CASQA SD-10 & SD-12)

As a part of the design of all common area landscape irrigation, implementation of the County of Riverside Water Conservation Ordinance including, but not limited to, such provisions as water sensors, programmable irrigation times (for short cycles), rain shutoff devices, flow reducers or shut off valves, etc., will be used.

As a part of the design of all common area landscape areas, similar planting material with similar water requirements will be used in order to reduce excess irrigation runoff and promote surface filtration. Such landscape areas will be maintained by the County through the CSA or VWRPD, the home owner and the HOA, as appropriate (See Table 4 located at the end of Section VI).

Prior to the responsible party's takeover of maintenance responsibilities, the developer shall be responsible for installation and maintenance of these common areas.

V.3. Treatment Control BMPs

This project is designated as a Priority Project. Therefore, treatment control BMPs are required to remove pollutants typically associated with urban runoff. The following table shows treatment BMPs that are included in this project. A brief description of each BMP also follows:

Table 3: Treatment Control BMP Selection Matrix

Pollutant of Concern	Treatment Control BMP Categories[9]

0003979

Abbreviations:

L: Low removal efficiency H/M: High or medium removal efficiency U: Unknown removal efficiency

Notes:

(1) Periodic performance assessment and updating of the guidance provided by this table may be necessary.

(2) Includes grass swales, grass strips, wetland vegetation swales, and bioretention.

(3) Includes extended/dry detention basins with grass lining and extended/dry detention basins with impervious lining. Effectiveness based upon minimum 36-48-hour drawdown time.

(4) Includes infiltration basins, infiltration trenches, and porous pavements.

(5) Includes permanent pool wet ponds and constructed wetlands.

(6) Includes sand filters and media filters.

(7) Also known as hydrodynamic devices, baffle boxes, swirl concentrators, or cyclone separators.

(8) Includes proprietary stormwater treatment devices as listed in the CASQA Stormwater Best Management Practices Handbooks, other stormwater treatment BMPs not specifically listed in this WQMP, or newly developed/emerging stormwater treatment technologies.

(9) Project proponents should base BMP designs on the Riverside County Stormwater Quality Best Management Practice Design Handbook. However, project proponents may also wish to reference the California Stormwater BMP Handbook – New Development and Redevelopment (www.cabmphandbooks.com). The Handbook contains additional information on BMP operation and maintenance.

(10) Note: Projects that will utilize infiltration-based Treatment Control BMPs (e.g., Infiltration Basins, Infiltration Trenches, Porous Pavement) must include a copy of the property/project soils report as Appendix E to the project-specific WQMP. The selection of a Treatment Control BMP (or BMPs) for the project must specifically consider the effectiveness of the Treatment Control BMP for pollutants identified as causing an impairment of Receiving Waters to which the project will discharge Urban Runoff.

(11) Per CASQA Manual (January 2003; Errata May 2006), extended detention basins have medium removal efficiency for bacteria and organics.

(12) Per CASQA Manual (January 2003) TC-32 Bioretention Fact Sheet and Filterra®.

Media Filter (CASQA TC-40) Austin Sand Filter Water Quality Detention Basin

The majority of first flush and low flow runoff from the site will be conveyed to an Austin Sand Filter Detention Basin for treatment prior to entering the project's discharge storm drain system. The Austin Sand Filter media unit will be effective in removing expected pollutants from project runoff through the filtering characteristics of the unit's sand media that captures, removes, degrades and cleans pollutants through a filtering process. The locations of the unit is as shown in the WQMP Site Plan.

Maintenance of the proposed Austin Sand Filter unit includes yearly removal of accumulated trash, litter, sediment and other debris as well as the removal/replacement of the 3" top layer. Maintenance of the proposed Austin Sand Filter shall be the responsibility of the HOA, post construction.

Supporting engineering calculations for Q_{BMP} of the Austin Sand Filter media unit, as well as the Treatment Control BMP design details are included in Appendix F. Maintenance procedures and inspection frequencies are provided in Table 4 located in Section VI.

Drain Inserts (CASQA MP-52)

A minimal amount of project first flush and low flow runoff is conveyed as sheet flow from both a minimal portion of the east side of Pourroy Road and a small portion of the south side of Thompson Road to a catch basin with a Kristar Fossil Filter Flogard Plus Drain Insert Filter for treatment. This catch basin is located on the south side of Thompson Road near the Thompson Road/Pourroy Road intersection. See the WQMP site plan in Appendix B for reference.

Maintenance of the one proposed Flogard Plus Drain Insert Filter by Kristar shall be the responsibility of the County of Riverside, post construction. Supporting engineering calculations for Q_{BMP} of the Flogard Plus Drain Insert by Kristar as well as the Treatment Control BMP design details are included in Appendix F. Maintenance procedures and inspection frequencies are provided in Table 4 of Section VI.

V.4. Equivalent Treatment Control Alternatives

Not applicable. All project runoff shall be treated onsite prior to discharging to the storm drain system.

V.5. Regionally-Based Treatment Control BMPs

Not applicable. All project runoff shall be treated onsite prior to discharge. The project does not discharge to any regionally based treatment control BMPs.

VI. Operation and Maintenance Responsibility for Treatment Control BMPs

Prior to transfer of site ownership and maintenance responsibilities to the HOA, the homeowner and the County of Riverside, as appropriate, Joseph Turley shall be responsible for installing, inspecting, and maintaining all improvements onsite. **The contact person for Joseph Turley is Mr. Martin Turley.** Mr. Turley shall be responsible for the management of the project site plus implementation and maintenance of the BMPs required by this WQMP until such time these responsibilities have been transferred over to the HOA, the homeowner and the County of Riverside, as appropriate.

Maintenance and inspection activities for the identified BMPs will be performed as indicated on the enclosed BMP Maintenance Responsibility/Frequency Matrix (See Table 4). **The homeowner shall be responsible for all maintenance and inspection responsibilities for private landscaped areas, driveways, and maintaining all applicable project related improvements within the private lots, as well as the parkway landscaping located in front of each homeowner's lot.**

The HOA shall be responsible for all maintenance and inspection responsibilities for both the Austin Sand Filter storm water media filter detention basin and parkway landscaping located along Galleano Avenue.

The County of Riverside shall be responsible for maintaining the proposed landscaping areas located along Thompson Road and Pourroy Road, as well as the proposed catch basins, curb, sidewalk, gutter and street improvements.

TABLE NO. 4

NON-STRUCTURAL BMP MAINTENANCE RESPONSIBILITY/FREQUENCY MATRIX

BMP	RESPONSIBILITY	BMP START DATE	FREQUENCY
Education for Property Owners, Operators, Tenants, Occupants, or Employees	Joseph Turley	At close of escrow/ transfer of site responsibilities to the homeowner.	Information to be provided to homeowner at close of escrow. Thereafter the homeowner shall be responsible for providing information to future buyer.
Activity Restrictions	HOA through CC&R's and County of Riverside through municipal code	At transfer of site responsibilities to the HOA and the County.	Continuous.
Irrigation System and Landscape Maintenance	HOA, Homeowner and County of Riverside, as appropriate	At transfer of site responsibilities to the HOA, homeowner and County.	Monthly during regular maintenance, manage landscaping in accordance with the County of Riverside Water Conservation Ordinance and with the State of California Department of Pesticides management guidelines for use of fertilizers and pesticides.
Common Area Litter Control	HOA, Homeowner and County of Riverside, as appropriate	At transfer of site responsibilities to HOA, homeowner and the County of Riverside.	Weekly inspection of trash receptacles to ensure that lids are closed and pick up any excess trash on the ground, noting trash disposal violations by homeowners and reporting the violations to the county for investigation.
Street Sweeping Public Streets and Parking Lots	County of Riverside through CSA or VWRPD, as appropriate	At transfer of site responsibilities to the County of Riverside.	Streets shall be swept on a monthly basis, at minimum. Sweeping may intensify during non-rainy days after October 1st (Rainy season).

TABLE NO. 4

NON-STRUCTURAL BMP MAINTENANCE RESPONSIBILITY/FREQUENCY MATRIX

BMP	RESPONSIBILITY	BMP START DATE	FREQUENCY
Drainage Facility Inspection and Maintenance and the one Drain Insert Filter, Flogard Plus by Kristar (MP-52) Located on the South Side of Thompson Road Near the Thompson Road/Pourroy Road Intersection	County of Riverside (RCFC&WCD and RCTD, as appropriate)	At transfer of site responsibilities to the County of Riverside.	Once per quarter to clean debris and silt in bottom of catch basins as needed. Intensified around October 1st of each year, prior to "first flush" storm. Remove and replace drain insert, when needed.

0003984

TABLE NO. 4

STRUCTURAL BMP MAINTENANCE RESPONSIBILITY/FREQUENCY MATRIX

BMP	RESPONSIBILITY	BMP START DATE	FREQUENCY
Storm Drain System Stenciling and Signage (SD-13)	RCTD	At transfer of site responsibilities to RCTD.	Once every 6 months, inspect for re-stenciling needs and re-stencil as necessary.
Landscape and Irrigation System Design (SD-10 & SD-12)	HOA, Homeowner and the County of Riverside through CSA or VWRPD, as appropriate	At transfer of site responsibilities to HOA, homeowner and County of Riverside.	Once a week, in conjunction with maintenance activities. Verify that runoff minimizing landscape design continues to function by checking that water sensors are functioning properly, that irrigation heads are adjusted properly to eliminate overspray to hardscape areas, and to verify that irrigation timing and cycle lengths are adjusted in accordance with water demands, given time of year, weather and day or night time temperatures.

00003985

TABLE NO. 4

TREATMENT BMP MAINTENANCE RESPONSIBILITY/FREQUENCY MATRIX

BMP	RESPONSIBILITY	BMP START DATE	FREQUENCY
Storm Water Austin Sand Filter Media Detention Basin (TC-40)	HOA	At transfer of site responsibilities to the HOA.	Monthly inspections for vegetation establishment and remove as necessary. Semi-annual grooming and vegetation removal. Semi-annual inspections for overall basin function and efficiency. Regrade media basin every 10 years or as needed based on 10% accumulation requirement. Semi-annual inspections for beginning/end of wet season for standing water, slope stability, sediment, trash/debris, presence of burrows. Trim vegetation at beginning and end of wet season and inspect monthly to prevent unwanted vegetation establishment. Remove accumulated sediment and re-grade every 10 years or when accumulated volume exceeds 10% of basin volume. Inspect yearly for accumulated sediment volume. Once per year, remove and replace the top 3" media layer. Clean unit of trash/debris as necessary during routine landscaping maintenance.

00003986

VII. Funding

The homeowner shall be responsible for funding the maintenance of all areas within individual lots as well as the parkway landscaping located in front of the private lots.

The HOA shall be the long term funding mechanism for all BMP inspection and maintenance activities as it pertains to both the proposed Austin Sand Filter media, storm water detention basin and parkway landscaping located along Galleano Avenue; and ensuring that all BMPs are functioning efficiently and optimally.

The County of Riverside shall be responsible for funding the maintenance of all improvements located outside the individual homeowner and HOA jurisdiction, including project streets (including Thompson Road and Pourroy Road), designated landscape areas, curb, sidewalk, gutter and storm drain improvements. The funding sources for the County of Riverside shall be provided once delegation of site responsibilities is complete.

EDUCATIONAL MATERIALS

10 Ways to Save Water Outdoors

bewaterwise.com

TIP #1 The average homeowner uses twice the amount of water needed to keep plants healthy. Use the watering calculator and index at **bewaterwise.com** to know exactly how much water your plants need.

TIP #2 Check your sprinkler system for leaks, overspray and broken sprinkler heads. Update with drip or other more water-efficient sprinklers where appropriate.

TIP #3 This fall, plant a portion of your garden with beautiful native and California Friendly plants. Browse the plant database at **bewaterwise.com** to find just the right look for your outdoor spaces.

TIP #4 Reduce the amount of water-thirsty grass. Keep only what you need and replace the rest with less-thirsty plants or permeable paving.

TIP #5 For the grass you keep, set your lawnmower blade higher.

TIP #6 Adjust your sprinkler timer downward in September. Plants need less water when days are shorter.

TIP #7 Use a broom instead of the hose for cleaning sidewalks and patios.

TIP #8 Mulch! A layer of bark, gravel, compost, sawdust or low-growing groundcover evens out soil temperature and allows better water retention.

TIP #9 Check the list of invasive plants that hurt our environment at **caleppc.org** and remove any from your garden.

TIP #10 Share these tips with your gardener, neighbors and friends. Water conservation should be a part of every Southern Californian's lifestyle, but that doesn't mean we can't have lush and beautiful outdoor spaces.

bewaterwise.com

After the Storm

What is stormwater runoff?

Stormwater runoff occurs when precipitation from rain or snowmelt flows over the ground. Impervious surfaces like driveways, sidewalks, and streets prevent stormwater from naturally soaking into the ground.

Why is stormwater runoff a problem?

Stormwater can pick up debris, chemicals, dirt, and other pollutants and flow into a storm sewer system or directly to a lake, stream, river, wetland, or coastal water. Anything that enters a storm sewer system is discharged untreated into the waterbodies we use for swimming, fishing, and providing drinking water.

The effects of pollution

Polluted stormwater runoff can have many adverse effects on plants, fish, animals, and people.

- Sediment can cloud the water and make it difficult or impossible for aquatic plants to grow. Sediment also can destroy aquatic habitats.
- Excess nutrients can cause algae blooms. When algae die, they sink to the bottom and decompose in a process that removes oxygen from the water. Fish and other aquatic organisms can't exist in water with low dissolved oxygen levels.
- Bacteria and other pathogens can wash into swimming areas and create health hazards, often making beach closures necessary.
- Debris—plastic bags, six-pack rings, bottles, and cigarette butts—washed into waterbodies can choke, suffocate, or disable aquatic life like ducks, fish, turtles, and birds.
- Household hazardous wastes like insecticides, pesticides, paint, solvents, used motor oil, and other auto fluids can poison aquatic life. Land animals and people can become sick or die from eating diseased fish and shellfish or ingesting polluted water.

- Polluted stormwater often affects drinking water sources. This, in turn, can affect human health and increase drinking water treatment costs.

Stormwater Pollution Solutions

Residential

Recycle or properly dispose of household products that contain chemicals, such as insecticides, pesticides, paint, solvents, and used motor oil and other auto fluids. Don't pour them onto the ground or into storm drains.

Lawn care

Excess fertilizers and pesticides applied to lawns and gardens wash off and pollute streams. In addition, yard clippings and leaves can wash into storm drains and contribute nutrients and organic matter to streams.

- Don't overwater your lawn. Consider using a soaker hose instead of a sprinkler.
- Use pesticides and fertilizers sparingly. When use is necessary, use these chemicals in the recommended amounts. Use organic mulch or safer pest control methods whenever possible.
- Compost or mulch yard waste. Don't leave it in the street or sweep it into storm drains or streams.
- Cover piles of dirt or mulch being used in landscaping projects.

Auto care

Washing your car and degreasing auto parts at home can send detergents and other contaminants through the storm sewer system. Dumping automotive fluids into storm drains has the same result as dumping the materials directly into a waterbody.

- Use a commercial car wash that treats or recycles its wastewater, or wash your car on your yard so the water infiltrates into the ground.
- Repair leaks and dispose of used auto fluids and batteries at designated drop-off or recycling locations.

Septic systems

Leaking and poorly maintained septic systems release nutrients and pathogens (bacteria and viruses) that can be picked up by stormwater and discharged into nearby waterbodies. Pathogens can cause public health problems and environmental concerns.

- Inspect your system every 3 years and pump your tank as necessary (every 3 to 5 years).
- Don't dispose of household hazardous waste in sinks or toilets.

Pet waste

Pet waste can be a major source of bacteria and excess nutrients in local waters.

- When walking your pet, remember to pick up the waste and dispose of it properly. Flushing pet waste is the best disposal method. Leaving pet waste on the ground increases public health risks by allowing harmful bacteria and nutrients to wash into the storm drain and eventually into local waterbodies.

Education is essential to changing people's behavior. Signs and markers near storm drains warn residents that pollutants entering the drains will be carried untreated into a local waterbody.

Residential landscaping

Permeable Pavement—Traditional concrete and asphalt don't allow water to soak into the ground. Instead these surfaces rely on storm drains to divert unwanted water. Permeable pavement systems allow rain and snowmelt to soak through decreasing stormwater runoff.

Rain Barrels—You can collect rainwater from rooftops in mosquito-proof containers. The water can be used later on lawn or garden areas.

Rain Gardens and Grassy Swales—Specially designed areas planted with native plants can provide natural places for rainwater to collect and soak into the ground. Rain from rooftop areas or paved areas can be diverted into these areas rather than into storm drains.

Vegetated Filter Strips—Filter strips are areas of native grass or plants created along roadways or streams. They trap the pollutants stormwater picks up as it flows across driveways and streets.

Commercial

Dirt, oil, and debris that collect in parking lots and paved areas can be washed into the storm sewer system and eventually enter local waterbodies.

- Sweep up litter and debris from sidewalks, driveways and parking lots, especially around storm drains.
- Cover grease storage and dumpsters and keep them clean to avoid leaks.
- Report any chemical spill to the local hazardous waste cleanup team. They'll know the best way to keep spills from harming the environment.

Construction

Erosion controls that aren't maintained can cause excessive amounts of sediment and debris to be carried into the stormwater system. Construction vehicles can leak fuel, oil, and other harmful fluids that can be picked up by stormwater and deposited into local waterbodies.

- Divert stormwater away from disturbed or exposed areas of the construction site.
- Install silt fences, vehicle mud removal areas, vegetative cover, and other sediment and erosion controls and properly maintain them, especially after rainstorms.
- Prevent soil erosion by minimizing disturbed areas during construction projects, and seed and mulch bare areas as soon as possible.

Agriculture

Lack of vegetation on streambanks can lead to erosion. Overgrazed pastures can also contribute excessive amounts of sediment to local waterbodies. Excess fertilizers and pesticides can poison aquatic animals and lead to destructive algae blooms. Livestock in streams can contaminate waterways with bacteria, making them unsafe for human contact.

- Keep livestock away from streambanks and provide them a water source away from waterbodies.
- Store and apply manure away from waterbodies and in accordance with a nutrient management plan.
- Vegetate riparian areas along waterways.
- Rotate animal grazing to prevent soil erosion in fields.
- Apply fertilizers and pesticides according to label instructions to save money and minimize pollution.

Forestry

Improperly managed logging operations can result in erosion and sedimentation.

- Conduct preharvest planning to prevent erosion and lower costs.
- Use logging methods and equipment that minimize soil disturbance.
- Plan and design skid trails, yard areas, and truck access roads to minimize stream crossings and avoid disturbing the forest floor.
- Construct stream crossings so that they minimize erosion and physical changes to streams.
- Expedite revegetation of cleared areas.

Automotive Facilities

Uncovered fueling stations allow spills to be washed into storm drains. Cars waiting to be repaired can leak fuel, oil, and other harmful fluids that can be picked up by stormwater.

- Clean up spills immediately and properly dispose of cleanup materials.
- Provide cover over fueling stations and design or retrofit facilities for spill containment.
- Properly maintain fleet vehicles to prevent oil, gas, and other discharges from being washed into local waterbodies.
- Install and maintain oil/water separators.

Adopt a pet from your local animal shelter or adoption centers at pet stores. A variety of animals, from purebred tomixe d breed are waiting for loving arms and good homes. Consider volunteering at your local animal shelters. Volunteers, donations, food, newspapers, old towels and linens are needed to help the animals.

What's the Scoop?

TIPS FOR A HEALTHY PET AND A HEALTHIER ENVIRONMENT

CREATE A HEALTHY ENVIRONMENT in and around your home by following these simple pet practices. Your pet, family and neighbors will appreciate their clean comfortable surroundings.

HOUSEHOLD PETS

We all love our pets, but pet waste is a subject everyone likes to avoid. Pet waste left on trails, sidewalks, streets, and grassy areas is immediately flushed into the nearest waterway when it rains. Even if you can't see water near you, the rain or waste water WASHES all that PET WASTE and BACTERIA INTO THE STORMDRAIN, where it travels to your neighborhood creek or lake untreated. These animal droppings also contain nutrients that can promote the growth of algae, if they enter our streams and lakes. The risk of STORMWATER CONTAMINATION INCREASES, if pet wastes is allowed to accumulate in animal pen areas or left on sidewalks, streets, or driveways where runoff can carry them to storm sewers.

Some of the DISEASES THAT CAN SPREAD from pet waste are:
Campylobacteriosis — a bacterial infection that causes diarrhea in humans.
Salmonellosis — the most common bacterial infection transmitted to humans from animals.
Toxocarisis — roundworms transmitted from animals to humans.

Flies and other pest insects can also increase when pet waste is disposed of improperly, becoming a nuisance and adding yet another vector for disease transmission.

WHAT CAN YOU DO?

- SCOOP up pet waste and flush it down the toilet.
- NEVER DUMP pet waste into a storm drain or catch basin.
- USE the complimentary BAGS or mutt mitts offered in dispensers at local parks.
- CARRY EXTRA BAGS when walking your dog and make them available to other pet owners who are without.
- TEACH CHILDREN how to properly clean up after a pet.
- TELL FRIENDS AND NEIGHBORS about the ill effects of animal waste on the environment. Encourage them to clean up after pets.

Did You Know ...
that Californians illegally dump about 80 million gallons of motor oil each year?

0004001

Many communities have "Scoop the Poop" laws that govern pet waste cleanup. Some of these laws specifically require anyone who walks an animal off of their property to carry a bag, shovel, or scooper. Any waste left by the animal must be cleaned up immediately. CALL YOUR LOCAL CODE ENFORCEMENT OFFICER to find out more about pet waste regulations.

Pets are only one of the many fixtures of suburban America that add to water pollution. Lawn fertilizers, rinse water from driveways and motor oil commonly end up in streams and lakes. **CALL 1-800-506-2555 FOR HOUSEHOLD HAZARDOUS WASTE COLLECTION LOCATION AND DATES.** Maintain your automobile to avoid leaks. Dispose of used vehicle fluids properly. Your pets can be poisoned if they ingest gas, oil or antifreeze that drips onto the pavement or is stored in open containers.

NEVER HOSE VEHICLE FLUIDS into the street or gutter. USE ABSORBENT MATERIALS such as cat litter to clean-up spills. SWEEP UP used absorbent materials and place in the trash.

HORSES AND LIVESTOCK

Fortunate enough to own a horse or livestock? You, too, can play a part in protecting and cleaning up our water resources. The following are a few simple Best Management Practices (BMPs) specifically designed for horse owners and landowners with horses.

- STORE your manure properly. Do not store unprotected piles of manure in places where runoff may enter streams, or flood waters may wash the manure away. Place a cover or tarp over the pile to keep rainwater out.
- CHECK with your local conservation district to design manure storage facilities to protect water quality. These structures usually consist of a concrete pad to protect ground water and a short wall on one or two sides to make manure handling easier.
- TRY composting - A vegetative cover placed around buildings or on steeper slopes can help minimize erosion and absorb nutrients while improving the appearance of your property. In addition, avoid costlier erosion controls, vegetative covers will provide animals with better traction during wet or icy conditions.

- KEEP animals out of steams - Designed stream crossings provide a safe, easy way for horses and livestock to ford streams. Fencing encourages the use of the crossing instead of the streambed to navigate streams. This will allow vegetation to stabilize stream banks and reduce sediment pollution.
- MOW pastures to proper height, six inches is typically recommended.
- Material STORAGE SAFETY TIPS - Many of the chemicals found in barns require careful handling and proper disposal. When using these chemicals, be certain to follow these common sense guidelines:
  - Buy only what you need.
  - Treat spills of hoof oils like fuel spill. Use kitty litter to soak up the oil and dispose in a tightly sealed plastic bag.
  - Store pesticides in a locked, dry, well-ventilated area.
  - Protect stored fertilizer and pesticides from rain and surface water.

Call 1-800-506-2555 to locate your local conservation district to find out what to do with your current backyard manure pile, how to re-establish a healthy pasture, what to do about weeds, and what grasses grow best in your soils.

Thank you for doing your part to protect your watershed, the environment, and the equestrian way of life in your community!

StormWater CleanWater PROTECTION PROGRAM

Riverside County gratefully acknowledges the Bay Area Stormwater Management Agencies Association and the Cleaning Equipment Trade Association for information provided in this brochure

StormWater Pollution

What you should know for...

GUIDELINES for disposal of washwater from:

- Sidewalk, plaza or parking lot cleaning
- Vehicle washing or detailing
- Building exterior cleaning
- Waterproofing
- Equipment cleaning or degreasing

Do you know ... where the water should go?

Riverside County has two drainage systems - sanitary sewers and storm drains. The storm drain system is designed to prevent flooding by carrying excess rainwater away from streets ... it's not designed to be a waste disposal system. Since the storm drain system does not provide for water treatment, it often serves the unintended function of transporting pollutants directly to our waterways.

Unlike sanitary sewers, storm drains are not connected to a treatment plant - they flow directly to our local streams, rivers and lakes.

Non-stormwater discharges such as washwater generated from outdoor cleaning projects often transport harmful pollutants into storm drains and our local waterways. Polluted runoff contaminates local waterways and poses a threat to groundwater resources

Soaps, degreasers, automotive fluids, litter and a host of other materials washed off buildings, sidewalks, plazas, parking areas, vehicles, and equipment can all pollute our waterways

The Cities and County of Riverside StormWater/CleanWater Protection Program

Since preventing pollution is much easier, and less costly than cleaning up "after the fact," the Cities and County of Riverside StormWater/CleanWater Protection Program informs residents and businesses of pollution prevention activities such as those described in this pamphlet.

The Cities and County of Riverside have adopted ordinances for stormwater management and discharge control. In accordance with state and federal law, these local stormwater ordinances **prohibit** the discharge of wastes into the storm drain system or local surface waters. This includes non-stormwater discharges containing oil, grease, detergents, degreasers, trash, or other waste materials.

PLEASE NOTE: The discharge of pollutants into the street, gutters, storm drain system, or waterways - without a Regional Water Quality Control Board permit or waiver - is *strictly prohibited* by local ordinance and state and federal law.

0004008

Help Protect Our Waterways!

Use These Guidelines for Outdoor Cleaning Activities and Washwater Disposal

DO . . . Dispose of **small amounts** of **washwater from cleaning building exteriors, sidewalks, or plazas** onto landscaped or unpaved surfaces provided you have the owner's permission and the discharge will not cause flooding or nuisance problems, or flow into a storm drain.

DO NOT . . . Discharge **large amounts** of these types of washwater onto landscaped areas or soil where water may run to a street or storm drain. Wastewater from exterior cleaning may be pumped to a sewer line with specific permission from the local sewering agency.

DO . . . Check with your local sewering agency's policies and requirements concerning waste water disposal. **Water from many outdoor cleaning activities** may be acceptable for disposal to the sewer system. See the list on the back of this flyer for phone numbers of the sewering agencies in your area.

DO NOT . . . Pour **hazardous wastes** or toxic materials into the storm drain or sewer system . . . properly dispose of it instead. When in doubt, contact the local sewering agency! The agency will tell you what types of liquid wastes can be accepted.

DO . . . Understand that **water (without soap) used to remove dust from clean vehicles** may be discharged to a street or storm drain. **Washwater from sidewalk, plaza, and building surface cleaning** may go into a street or storm drain if ALL of the following conditions are met:

1. The surface being washed is free of residual oil stains, debris and similar pollutants by using dry cleanup methods (sweeping, and cleaning any oil or chemical spills with rags or other absorbent materials before using water).
2. Washing is done with water only - no soap or other cleaning materials.
3. You have not used the water to remove paint from surfaces during cleaning.

DO NOT . . . Dispose of water containing **soap or any other type of cleaning agent** into a storm drain or water body. This is a direct violation of state and/or local regulations. Because **wastewater from cleaning parking areas or roadways** normally contains metallic brake pad dust, oil and other automotive fluids, it should never be discharged to a street, gutter, or storm drain.

DO . . . Understand that mobile auto detailers should divert washwater to landscaped or dirt areas. Note: Be aware that soapy washwater may adversely affect landscaping; consult with the property owner. Residual washwater may remain on paved surfaces to evaporate; sweep up any remaining residue. If there is sufficient water volume to reach the storm drain, collect the runoff and obtain permission to pump it into the sanitary sewer. Follow local sewering agency's requirements for disposal.

DO NOT . . . Dispose of left over cleaning agents into the gutter, storm drain or sanitary sewer.

Regarding Cleaning Agents:

If you must use soap, use biodegradable/phosphate free cleaners. Avoid use of petroleum based cleaning products. Although the use of nontoxic cleaning products is strongly encouraged, do understand that these products can still degrade water quality and, therefore, the discharge of these products into

the street, gutters, storm drain system, or waterways is prohibited by local ordinances and the State Water Code.

Note: When cleaning surfaces with a high pressure washer or steam cleaning methods, additional precautions should be taken to prevent the discharge of pollutants into the storm drain system. These two methods of surface cleaning, as compared to the use of a low pressure hose, can remove additional materials that can contaminate local waterways.

Other Tips to Help Protect Our Water . . .

Screening Wash Water

A thorough dry cleanup before washing (without soap) surfaces such as building exteriors and decks without loose paint, sidewalks, or plaza areas, *should be sufficient to protect storm drains.* **However** if any debris (solids) could enter storm drains or remain in the gutter or street after cleaning, washwater should first pass through a "20 mesh" or finer screen to catch the solid material, which should then be disposed of in the trash.

Drain Inlet Protection/ Containing & Collecting Wash Water

- Sand bags can be used to create a barrier around storm drain inlets.
- Plugs or rubber mats can be used to temporarily seal storm drain openings.
- You can also use vacuum booms, containment pads, or temporary berms to keep wash water away from the street, gutter, or storm drain.

Equipment and Supplies

Special materials such as absorbents, storm drain plugs and seals, small sump pumps, and vacuum booms are available from many vendors. For more information check catalogs such as New Pig (800-468-4647), Lab Safety Supply (800-356-0783), C&H (800-558-9966), and W.W. Grainger (800-994-9174); or call the Cleaning Equipment Trade Association (800-441-0111) or the Power Washers of North America (800-393-PWNA).

StormWater Pollution

What you should know for...

Swimming Pool, Jacuzzi and Fountain Maintenance

Do you know . . . where the water actually goes?

Storm Drains are not connected to sanitary sewer systems and treatment plants!

The primary purpose of storm drains is to carry rain water away from developed areas to prevent flooding. Untreated storm water and the pollutants it carries flow directly into rivers, lakes, and streams. Wastewater from residential swimming pools, jacuzzis, fishponds, and fountains often contain chemicals used for sanitizing or cleansing purposes. Toxic chemicals (such as chlorine or copper-based algaecides) can damage the environment when wastewater is allowed to flow into our local rivers, lakes, and streams by way of the storm drain system. Each of us can do our part to help clean our water, and that adds up to a pollution solution.

The Cities and County of Riverside have adopted ordinances for storm drain pollution management to maintain discharge control and prevent illegal storm drain discharge. In accordance with state and federal law, these local storm water ordinances prohibit the discharge of pollutants into the storm drain system or local surface waters. The Only Rain in the Storm Drain Pollution Program informs residents and businesses of storm drain pollution prevention activities such as those described in this brochure.

PLEASE NOTE: The discharge of pollutants into the street, gutters, storm drain system, or waterways – without a Regional Water Quality Control board permit or waiver – is strictly prohibited by local ordinances and state and federal law.

0004010

Do Your Part to Protect Our Waterways!

Use These Guidelines For Proper Draining of Your Swimming Pool, Jacuzzi and Fountain Water

Discharge Regulations

Requirements for pool draining may differ from city to city. Check with your water agency to see if disposal to the sanitary sewer line is allowed for pool discharges (see reverse side for Riverside County water purveyors).

If sewer discharge is allowed, a hose can be run from your swimming pool pump to the washing machine drain or a sink or bathtub. If sewer discharge is not allowed, or if your house is served by a septic tank, review the options presented below.

Refinishing Pool Surfaces

If you are resurfacing your pool, or resurfacing the pool patio area, be sure to hose down mixers, tools and trailers in a dirt area where rinse water won't flow into the street, gutter or storm drain. Local storm water ordinances strictly prohibit the discharge of pollutants into the storm drain system.

Residues from acid washing and similar activities require special handling. Never discharge low or high pH wastewater into the street, gutter or storm drain.

Discharge Options

If your local sewer agency will not accept pool water into their system, or if you are on a septic tank system, follow these guidelines:

1. Reduce or eliminate solids (e.g., debris, leaves or dirt) in the pool water.
2. Allow the chemicals in the pool water to dissipate. This could take up to seven (7) days depending on the time of year. Create a co-op; let your neighbor share your pool while theirs is being prepared for draining, then use their pool while yours is being drained. Chlorinated water should not be discharged into the storm drain or surface waters. This includes large pools such as community swimming pools or spas.
3. When the pool water is free of all chemicals (verify by a home pool water test kit) drain pool water to landscaped areas, lawns, yards, or any areas that will absorb the water.
4. You may have to drain the pool water over a period of a few days to allow the landscape areas to absorb most of the water.
5. Control the flow of the draining pool water to prevent soil erosion. Do not allow sediment to enter the street, gutter or storm drain.
6. Avoid discharging pool water into the street and storm drain system. Water runoff that enters the street can pick up motor oil, pet waste, trash and other pollutants, eventually carrying them into the storm drain system and local surface waters.

Cleaning Filters

Discharge of pool filter rinse water and backflush to a stream, ditch, or storm drain is prohibited. Backflush from pool filters must be discharged to the sanitary sewer, on-site septic tank and drainfield system (if properly designed and adequately sized), or a seepage pit. Alternatively, pool filter rinse water and backwash may be diverted to dirt or landscaped areas. Filter media and other solids should be picked up and disposed of in the trash.

Algaecides

Avoid using copper-based algaecides unless absolutely necessary. Control algae with chlorine, organic polymers or other alternatives to copper-based pool chemicals. Copper is a heavy metal that can be toxic to aquatic life.

Chemical Storage and Handling

- Use only the amount indicated on product labels.
- Store chlorine and other chemicals in a covered area to prevent runoff. Keep out of reach of children and pets.
- Chlorine kits, available at retail swimming pool equipment and supply stores, should be used to monitor the chlorine and pH levels.
- Chlorine and other pool chemicals should never be allowed to flow into the gutter or the storm drain system.

Proper Disposal of Pool Chemicals

If you need to dispose of unwanted pool chemicals, first try giving them to a neighbor with a pool. If that doesn't work, bring unwanted pool chemicals to a Household Hazardous Waste (HHW) Collection Event. There's no cost for bringing HHW items to collection events - it's FREE! Call 1-800-506-2555 for a schedule of HHW events in your community.

NEVER put unused chemicals into the trash, onto the ground or down a storm drain.

0004011

Stormwater Pollution Found in Your Area!

This is not a citation.

This is to inform you that our staff found the following pollutants in the storm sewer system in your area. This storm sewer system leads directly to

_____.

- ❑ Motor oil
- ❑ Oil filters
- ❑ Antifreeze/ transmission fluid
- ❑ Paint
- ❑ Solvent/degreaser
- ❑ Cooking grease
- ❑ Detergent
- ❑ Home improvement waste (concrete, mortar)
- ❑ Pet waste
- ❑ Yard waste (leaves, grass, mulch)
- ❑ Excessive dirt and gravel
- ❑ Trash
- ❑ Construction debris
- ❑ Pesticides and fertilizers
- ❑ Other

_____

For more information or to report an illegal discharge of pollutants, please call:

WHEN IT RAINS
IT DRAINS

EPA
United States
Environmental Protection
Agency

www.epa.gov/npdes/stormwater

EPA 833-F-03-002
April 2003

Stormwater runoff is precipitation from rain or snowmelt that flows over the ground. As it flows, it can pick up debris, chemicals, dirt, and other pollutants and deposit them into a storm sewer system or waterbody

Anything that enters a storm sewer system is dischargeduntreatedinto the waterbodies we use for swimming, fishing, and providing drinking water

Remember:
Only Rain Down the Drain

To keep the stormwater leaving your home or workplace clean, follow these simple guidelines:

- Use pesticides and fertilizers sparingly
- Repair auto leaks.
- Dispose of household hazardous waste, used auto fluids (antifreeze, oil, etc.), and batteries at designated collection or recycling locations.
- Clean up after your pet.
- Use a commercial car wash or wash your car on a lawn or other unpaved surface.
- Sweep up yard debris rather than hosing down areas. Compost or recycle yard waste when possible.
- Clean paint brushes in a sink, not outdoors. Properly dispose of excess paints through a household hazardous waste collection program.
- Sweep up and properly dispose of construction debris like concrete and mortar

TREATMENT CONTROL BMP SIZING CALCULATIONS AND DESIGN DETAILS

Volume Based BMPs

General

The largest concentrations of pollutants are found in runoff from small volume storms and from the first flush of larger storms. Therefore, volume based BMPs should be sized to capture and treat the initial and more frequent runoff surges that convey the greatest concentration of pollutants. To maximize treatment and avoid health hazards, volume-based BMPs must retain and release the runoff between a 24 and 72 hour period. This handbook typically recommends a draw down time of 48 hours, as recommended by the California BMP Handbook. The drawdown time refers to the minimum amount of time the design volume must be retained.

In order to meet RWQCB requirements, the method for determining the design volume is based on capturing 85 percent of the total annual runoff. These 85 percent capture values were determined throughout Riverside County using rain gages with the greatest periods of record. Key model assumptions are based on studies used in the *Urban Runoff Quality Management, WEF Manual of Practice No. 23/ASCE Manual of Practice No. 87, (1998)* and *the California Best Management Practice Handbook*. This handbook gives a simple procedure for determining the design volume of a BMP based on the location of the project.

BMP Design Volume Calculations

Following is a step-by-step procedure for determining design volume for BMPs using Worksheet 1. Examples of the following procedure can be found in Appendix B.

1. Create Unit Storage Volume Graph:
   a) Locate the project site on the Slope of the Design Volume Curve contained in Appendix A.
   b) Read the slope value at this location. This value is the Unit Storage Volume for a runoff coefficient of 1.0.
   c) Plot this value as a point (corresponding to a coefficient of 1.0) on the Unit Storage Volume Graph shown on Figure 2.
   d) Draw a straight line from this point to the origin, to create the graph.

2. Determine the runoff coefficient (C) from Figure 1 or the following relationship:

$$C = .858i^3 - .78i^2 + .774i + .04$$

where i = impervious percentage

3. Using the runoff coefficient found in step 2, determine 85th percentile unit storage volume (V_u) using Figure 2 (created in step 1).

4. Determine the design storage volume (V_{BMP}). This is the volume to be used in the design of selected BMPs presented in this handbook.

Figure 1. Impervious – Coefficient Curve (WEF/ASCE Method[1])

[1] Imperviousness is the decimal fraction of the total catchment covered by the sum of roads, parking lots, sidewalks, rooftops, and other impermeable surfaces of an urban landscape.

Sand Filters

General

Sand Filters capture and treat the design runoff in a two-part system, first a settling basin, then a filter bed. The settling basin collects large sediment and prevents these particles from clogging the filter bed. The sand bed then strains the water, removing soluble and particulate pollutants. The treated water is conveyed through pipes back into a stream or channel. Sand Filters are especially useful where water quality concerns might preclude the use of infiltration BMPs.

There are many variations of sand filter designs, and it is up to the designer to determine the most effective sand filter to use in each case. Two of the most common sand filters, the Austin sand filter and the Delaware sand filter, have been conditioned in this manual. Although the Austin filter was not included in the Attachment, it was added to this manual because it can treat a very large tributary area and because it is well suited to southern California. Other sand filter designs may be used if it is shown that they are more appropriate.

Austin Sand Filter

The Austin Sand Filter, as developed by the city of Austin, Texas, is an aboveground sand filter that does not include a permanent wet pool. The filter inlet captures the design volume, while directing larger flows past. The first chamber of the filter is the sedimentation basin, which holds the entire design volume (this handbook conditions a full sedimentation design). The design volume drains into the second chamber, which is the filtration basin, over a period of 48 hours. This allows large particles to settle in the sedimentation basin and protects the filter bed from clogging. The sand and gravel filter bed removes soluble and particulate pollutants, and the treated water is returned to a storm drain. In order to drain by gravity, an Austin sand filter must be located in an area where the topography has sufficient vertical drops. These filters can be used to treat runoff from areas up to 100 acres large.

Austin Sand Filter Basin Design Criteria:

Design Parameter	Unit	Design Criteria
Design Volume	ft^3	V_{BMP}
Maximum tributary area	acre	100[1]
Minimum sedimentation basin depth	ft	3 [1]
Minimum sedimentation basin area (A_s)	ft^2	V_{BMP} / 10 ft [1]
Length to Width ratio (L:W)	-	2 to 1 or greater[1]
Draw-down time	hrs	48 [3]
Freeboard	ft	1.0 ft above maximum water surface elevation [1]
Minimum sedimentation basin volume	ft^3	V_{BMP} + freeboard volume [1]
Maximum inlet velocity	fps	3.0 [1]
Minimum particle size removed	micron	20 (specific gravity =2.65) [1]
Minimum gravel depth over sand filter	inches	2 [1]
Maximum water depth over filter, 2h	ft	Between 2 and 10 feet [3]
Minimum sand depth, d_s	inches	18 [1]
Minimum filtration rate of filter, k	ft/d	3.5 [1]
Slope of sand filter surface	%	0 [1]
Minimum gravel cover over underdrain	inches	2 [1]
Sand size, diameter	inches	0.02 – 0.04 [1]
Underdrain gravel diameter size	inches	0.5 – 2.0 [1]
Minimum inside diameter underdrain	inches	6 [1]
Underdrain pipe type	-	PVC schedule 40 (or thicker) [1]
Minimum slope of underdrain	%	1.0 [1]
Minimum underdrain perforation diameter	inches	0.375 [1]
Minimum perforations per row	-	6 [1]
Minimum space between perforation rows	inches	6 [1]
Minimum gravel bed depth, d_g	inches	16 [1]

Austin Sand Filter Design Procedure

Part I – Sedimentation Basin Design

1. Design Storage Volume
   Use Worksheet 1- Design Procedure Form for Design Storage Volume, V_{BMP}.

2. Maximum Water Depth
   Determine maximum allowable depth of water (2h) in the sedimentation basin considering elevation differences between inlet and outlet inverts of the sedimentation basin and filter surface. (This sets the height or elevation of the inlet invert for bypass pipes and orifices).

3. Sedimentation Basin Design
   The sedimentation basin design should maximize the distance from the inlet to the outlet while avoiding short circuiting (flow reaching the outlet structure before it passes through the sedimentation basin volume) and dead storage areas (areas in the basin that are bypassed by the main flow). The basin shape should include a gradual expansion from the inlet and a gradual contraction toward the outlet. The length to width ratio should be a minimum of 2:1. Internal baffling with berms may be necessary to achieve this ratio.
   a. Find the sedimentation basin area, A_s
      $A_s = V_{BMP} / (2h)$
   b. Determine the basin length and width
      Width = $A_s / (3)$
      Length = (2) x (width)

4. Energy Dissipation Structure
   Basin inlet and outlet points should include an energy dissipation structure and/or erosion protection. An energy dissipation structure is required when inlet velocities exceed 3 feet per second.

5. Sedimentation Inlet
   The inlet structure design must isolate the water quality volume and convey flows greater than the V_{BMP} past the basin. The water quality volume should be discharged uniformly and at low velocities into the sedimentation basin.

6. Sedimentation Outlet
   The outlet structure conveys the water quality volume from the sedimentation basin to the filtration basin. The outlet structure shall be designed to outlet the design volume (ponded to a height of 2h) into the filter basin over a drawdown period of 48 hours.

7. Trash Rack/Gravel Pack
   A trash rack or gravel pack around perforated risers shall be provided to protect outlet orifices from clogging.

8. Sediment Trap (optional)
   Placing a sediment trap in the basin can improve long-term removal efficiency and reduce maintenance requirements.

Part II – Filter Basin Design

9. Filter Basin Surface Area
   The required filter basin surface area (A_f) can be calculated using the following simplified equation from the CA BMP Handbook:

   $$A_f = V_{BMP} / 18$$

10. Filter Basin Volume
    The storage capacity of the filtration basin, above the surface of the filter media, should be greater than or equal to 20 percent of the V_{BMP}. This capacity is necessary in order to account for backwater effects resulting from partially clogged filter media. If the filter basin volume is less than the required volume, redesign with an increased filter depth or increase the filter area.

11. Filter Basin Inlet Structure
    The inlet structure should spread the flow uniformly across the surface of the media filter. Flow spreaders, weirs or multiple orifice openings are recommended.

12. Filter Bed
    The sand bed may be a choice of one of the two configurations given below. Note: Sand bed depths are final, consolidated depths. Consolidated effects must be taken into account.

    1) Sand Bed with Gravel Layer (Figure 9A)
       The sand layer is a minimum depth of 18 inches consisting of 0.02-0.04 inch diameter sand. Under the sand is a layer of 0.5 to 2.0 inch diameter gravel which provides a minimum of two inches of cover over the top of the underdrain lateral pipes. No gravel is required under the lateral pipes. A layer of geotextile fabric meeting the following specifications must separate the sand and gravel and must be wrapped around the lateral pipes:

Table 4. Geotextile Fabric Specifications

Property	Test Method	Unit	Specification
Material			Nonwoven geotextile fabric
Unit Weight		Oz/yd^2	8 (minimum)

Filtration Rate		In/sec	0.08 (minimum)
Puncture Strength	ASTM D-751 (modified)	Lb.	125 (minimum)
Mullen Burst Strength	ASTM D-751	PSI	400 (minimum)
Tensile Strength	ASTM-D-1682	Lb.	300 (minimum)
Equiv. Opening Size	US Standard Sieve	No.	80 (minimum)

Drainage matting meeting the following specifications should be placed under the laterals to provide for adequate vertical and horizontal hydraulic conductivity to the laterals:

Table 5. Drainage Matting Specifications

Property	Test Method	Unit	Specification
Material			Nonwoven geotextile fabric
Unit Weight		Oz/yd^2	20
Flow Rate (fabric)		GPM/ft^2	180 (minimum)
Permeability	ASTM D-2434	Cm/sec	12.4×10^{-2}
Grab strength (fabric)	ASTM D-1682	Lb.	Dry Lg. 90 Dry Wd. 70 Wet Lg. 95 Wet Wd. 70
Puncture Strength (fabric)	COE CW-02215	Lb.	42 (minimum)
Mullen burst strength	ASTM D-1117	Psi	140 (minimum)
Equiv. opening size	US Standard Sieve	No.	100 (70 – 120)
Flow rate (drainage core)	Drexel Univ. Test Method	GPM/ft. width	14

In areas with high sediment load (total suspended solids concentration ? 200 mg/L), the two-inch layer of stone on top of the sand filter should be underlain with Enkadrain 9120 filter fabric or equivalent with the following specifications:

Table 6. Filter Fabric Specifications

Property	Test Method	Unit	Specification
Material			Nonwoven geotextile fabric
Unit Weight	ASTM D-1777	Oz/yd^2	4.3 (minimum)
Flow Rate	Failing Head Test	GPM/ft^2	120 (minimum)
Puncture Strength	ASTM-D751 (modified)	Lb.	60 (minimum)
Thickness		inches	0.8 (minimum)

2) Sand Bed with Trench Design (Figure 9B)
The top layer shall be 12-18 inches of 0.02-0.04 inch diameter sand. Laterals shall be placed in trenches with a covering of 0.5 to 2.0-inch gravel and geotextile fabric. The laterals shall be underlain by a layer of drainage matting. The geotextile fabric is needed to prevent the filter media from infiltrating into the lateral piping. The drainage matting is needed to provide for adequate vertical and horizontal hydraulic conductivity to the laterals. The geotextile fabric and drainage matting specifications are listed above in Tables 1 and 2 respectively. A minimum 2" layer of stone will be place on top of the sand bed underlain with filter fabric (Table 4) in drainage areas with high sediment loads (TSS ? 200 mg/L).

13. Underdrain Piping
The underdrain piping consists of the main collector pipe(s) and perforated lateral branch pipes. The piping should be reinforced to withstand the weight of the overburden. Internal diameters of lateral branch pipes should be six inches or greater and perforations should be 3/8 inch. Each row of perforations should contain at least six holes and the maximum spacing between rows of perforations should not exceed six inches. All piping is to be schedule 40 polyvinyl chloride or greater strength. The minimum grade of piping shall be 1 percent slope (slopes down to 0.5% are acceptable with prior approval). Access for cleaning all underdrain piping is needed.

Note: No draw-down time is to be associated with sand filtration basins, only with sedimentation basins. Thus, it is not necessary to have a specifically designed orifice for the filtration outlet structure.

14. Filter Basin Liner
If an impermeable liner is required to protect ground water quality it shall meet the specifications for clay liner given in the following table (table 4). The clay liner should have a minimum thickness of 12 inches. If an impermeable liner is not required then a geotextile fabric liner shall be installed that meets the specifications listed in table 1 unless the pond has been excavated to bedrock. If a geomembrane is used it should have a minimum thickness of 30 mils and be ultraviolet resistant.

Table 7. Clay Liner Specifications

Property	Test Method	Unit	Specification
Permeability	ASTM D-2434	cm/sec	$1x10^{-6}$
Plasticity Index of Clay	ASTM D-423 & D-424	%	Not less than 15
Liquid Limit of Clay	ASTM D-2216	%	Not less than 30
Clay Particles Passing	ASTM-D422	%	Not less than 30
Clay Compaction	ASTM-D2216	%	95% of Std. Proctor Density

Design Procedure Form for Austin Sand Filter

Designer: TANG LEE
Company: HUNSAKER & ASSOCIATES
Date: 6/1/09
Project: FRENCH VALLEY - POURROY TRACT 35761
Location:

1. Determine Design Storage Volume (Use Worksheet 1) a. Total Tributary Area (maximum 100) b. Design Storage Volume, V_{BMP}	A_{total} = 16.9 acres V_{BMP} = 25,152 ft^3
2. Maximum Water Height in Sedimentation Basin* a. Invert elevation at connection to storm drain system. b. Sand Filter invert elevation (consider min. grade (1%) from storm drain). Point A, Figure 9. c. Estimate filter depth or use min. (3'). d. Top elevation of filter bed. Point B, Figure 9. e. Surface elevation at BMP inlet. Point C, Figure 9. f. Determine max. allowable height (2h) of water in the sedimentation basin using the elevation difference between points C and B. (min. 2', max. 10') ALREADY PROVIDE 2h = [(C-B) – 1' Freeboard] 2' FREE BOARD	Elev. Storm Drain = 1361 ft Elev. Pt A = 1362.5 ft Filter Depth = 3.75 ft Elev. Pt B = 1366.25 ft Elev. Pt C = 1373 ft 2h = 6.75 ft
3. Size Sedimentation Basin a. Find Sedimentation Basin Area, A_s $A_s = V_{BMP} / (2h)$ b. Determine basin length and width, using a length to width ratio ? 2:1 width = A_s / 3 length = 2 x width	A_s = 3,730 ft^2 width = 25 ft length = 150 ft >MIN.
4. Size Filter Basin a. Determine Filter Basin Area, A_f $A_f = V_{BMP} / 18$	A_f = 1,400 ft^2

b. Determine Filter Basin Volume $V_f = A_f$ x filter depth (part 2c) c. Determine Required Volume, V_r $V_r = 0.2 \times V_{BMP}$ d. Check if V_r ? V_f? If no, redesign with an increased filter depth or increase filter area.	V_f = 5,250 ft^3 V_r = 5,030 ft^3 Check V_r ? V_f $V_f \geq V_r$ ok

Notes:
SEDIMENTATION BASIN SIZED AT APPROXIMATE
150x25 → 3,750 sq. ft ≥ 3,730 sq. ft [ok]

INFILTRATION BASIN SIZED AT
130'x25' → 3,250 sq. ft ≥ 1,400 sq. ft [ok]

- SOFT-LINED BASIN WITH VERTICAL WALL
SEPARATING INFILTRATION & SEDIMENTATION BASIN

* Based on these elevations, is there a sufficient elevation drop to allow gravity flow from the outlet of the control measure to the storm drain system? If no, investigate alternative on-site locations for treatment control, consider another treatment control measure more suitable for site conditions, or contact the District to discuss on-site pumping requirements.

Media Filter

TC-40

Design Considerations

- Aesthetics
- Hydraulic Head

Description

Stormwater media filters are usually two-chambered including a pretreatment settling basin and a filter bed filled with sand or other absorptive filtering media. As stormwater flows into the first chamber, large particles settle out, and then finer particles and other pollutants are removed as stormwater flows through the filtering media in the second chamber. There are a number of design variations including the Austin sand filter, Delaware sand filter, and multi-chambered treatment train (MCTT).

▲ Medium

California Experience

Caltrans constructed and monitored five Austin sand filters, two MCTTs, and one Delaware design in southern California. Pollutant removal was very similar for each of the designs; however operational and maintenance aspects were quite different. The Delaware filter and MCTT maintain permanent pools and consequently mosquito management was a critical issue, while the Austin style which is designed to empty completely between storms was less affected. Removal of the top few inches of sand was required at 3 of the Austin filters and the Delaware filter during the third year of operation; consequently, sizing of the filter bed is a critical design factor for establishing maintenance frequency.

Advantages

- Relatively high pollutant removal, especially for sediment and associated pollutants.
- Widespread application with sufficient capture volume can provide significant control of channel erosion and enlargement caused by changes to flow frequency relationships resulting from the increase of impervious cover in a watershed.

Limitations

CASQA
California Stormwater Quality Association

- More expensive to construct than many other BMPs.
- May require more maintenance that some other BMPs depending upon the sizing of the filter bed.
- Generally require more hydraulic head to operate properly (minimum 4 feet).
- High solids loads will cause the filter to clog.
- Work best for relatively small, impervious watersheds.
- Filters in residential areas can present aesthetic and safety problems if constructed with vertical concrete walls.
- Certain designs (e.g., MCTT and Delaware filter) maintain permanent sources of standing water where mosquito and midge breeding is likely to occur.

Design and Sizing Guidelines

- Capture volume determined by local requirements or sized to treat 85% of the annual runoff volume.
- Filter bed sized to discharge the capture volume over a period of 48 hours.
- Filter bed 18 inches thick above underdrain system.
- Include energy dissipation in the inlet design to reduce resuspension of accumulated sediment.
- A maintenance ramp should be included in the design to facilitate access to the sedimentation and filter basins for maintenance activities (particularly for the Austin design).
- Designs that utilize covered sedimentation and filtration basins should be accessible to vector control personnel via access doors to facilitate vector surveillance and controlling the basins if needed.

Construction/Inspection Considerations

- Tributary area should be completely stabilized before media is installed to prevent premature clogging.

Performance

The pollutant removal performance of media filters and other stormwater BMPs is generally characterized by the percent reduction in the influent load. This method implies a relationship between influent and effluent concentrations. For instance, it would be expected that a device that is reported to achieve a 75% reduction would have an effluent concentration equal to 25% of the influent concentrations. Recent work in California (Caltrans, 2002) on various sand filter designs indicates that this model for characterizing performance is inadequate. Figure 4 presents a graph relating influent and effluent TSS concentrations for the Austin full sedimentation design.

Figure 4
Comparison of Influent and Effluent Concentrations for TSS

It is clearly evident that the effluent concentration is relative constant and independent of influent concentration. Consequently, the performance is more accurately characterized by the effluent concentration, which is about 7.5 mg/L. Constant effluent concentrations also are observed for all other particle related constituents such as particulate metals (total - dissolved) and particulate phosphorus.

The small uncertainty in the estimate of the mean effluent concentration highlights the very consistent effluent quality for TSS produced by sand filters. In addition, it demonstrates that a calculated percent reduction for TSS and other constituents with similar behavior for Austin sand filters is a secondary characteristic of the device and depends primarily on the specific influent concentrations observed. The distinction between a constant effluent quality and a percent reduction is extremely important to recognize if the results are to be used to estimate effluent quality from sand filters installed at other sites with different influent concentrations or for estimating compliance with water quality standards for storms with high concentrations of particulate constituents.

If the conventionally derived removal efficiency (90%) were used to estimate the TSS concentrations in the treated runoff from storms with high influent concentrations, the estimated effluent concentration would be too high. For instance, the storm with the highest observed influent concentration (420 mg/L) would be expected to have a concentration in the treated runoff of 42 mg/L, rather than the 10 mg/L that was measured. In fact, the TSS effluent concentrations for all events with influent concentrations greater than 200 mg/L were 10 mg/L or less.

The stable effluent concentration of a sand filter under very different influent TSS concentrations implies something about the properties of the influent particle size distribution. If one assumes that

only the smallest size fraction can pass through the filter, then the similarity in effluent concentrations suggests that there is little difference in the total mass of the smallest sized particles even when the total TSS concentration varies greatly. Further, the difference in TSS concentration must then be caused by changes in the relative amount of the larger size fractions. Further research is necessary to determine the range of particle size that is effectively removed in the filter and the portion of the size fraction of suspended solids that it represents in urban stormwater.

Sand filters are effective stormwater management practices for pollutant removal. Conventional removal rates for all sand filters and organic filters are presented in Table 1. With the exception of nitrates, which are always exported from filtering systems because of the conversion of ammonia and organic nitrogen to nitrate, they perform relatively well at removing pollutants.

Table 1 Sand filter removal efficiencies (percent)

	Sand Filter (Glick et al, 1998)	Compost Filter System		Multi-Chamber Treatment Train		
		Stewart, 1992	Leif, 1999	Pitt et al., 1997	Pitt, 1996	Greb et al., 1998
TSS	89	95	85	85	83	98
TP	59	41	4	80	-	84
TN	17	-	-	-	-	-
Nitrate	-76	-34	-95	-	14	-
Metals	72-86	61-88	44-75	65-90	91-100	83-89
Bacteria	65	-	-	-	-	-

From the few studies available, it is difficult to determine if organic filters necessarily have higher removal efficiencies than sand filters. The MCTT may have high pollutant removal for some constituents, although an evaluation of these devices by the California Department of Transportation indicated no significant difference for most conventional pollutants.

In addition to the relatively high pollutant removal in media filters, these devices, when sized to capture the channel forming storm volume, are highly effective at attenuating peak flow rates and reducing channel erosion.

Siting Criteria

In general, sand filters are preferred over infiltration practices, such as infiltration trenches, when contamination of groundwater with conventional pollutants is of concern. This usually occurs in areas where underlying soils alone cannot treat runoff adequately - or ground water tables are high. In most cases, sand filters can be constructed with impermeable basin or chamber bottoms, which help to collect, treat, and release runoff to a storm drainage system or directly to surface water with no contact between contaminated runoff and groundwater. In regions where evaporation exceeds rainfall and a wet pond would be unlikely to maintain the required permanent pool, a sand filtration system can be used.

The selection of a sand filter design depends largely on the drainage area's characteristics. For example, the Washington, D.C. and Delaware sand filter systems are well suited for highly impervious areas where land available for structural controls is limited, since both are installed underground. They have been used to treat runoff from parking lots, driveways, loading docks, service stations, garages, airport runways/taxiways, and storage yards. The Austin sand filtration system is more suited for large drainage areas that have both impervious and pervious surfaces. This system is located at grade and is used to treat runoff from any urban land use.

It is challenging to use most sand filters in very flat terrain because they require a significant amount of hydraulic head (about 4 feet), to allow flow through the system. One exception is the perimeter sand filter, which can be applied with as little as 2 feet of head.

Sand filters are best applied on relatively small sites (up to 25 acres for surface sand filters and closer to 2 acres for perimeter or underground filters). Filters have been used on larger drainage areas, of up to 100 acres, but these systems can clog when they treat larger drainage areas unless adequate measures are provided to prevent clogging, such as a larger sedimentation chamber or more intensive regular maintenance.

When sand filters are designed as a stand-alone practice, they can be used on almost any soil because they can be designed so that stormwater never infiltrates into the soil or interacts with the ground water. Alternatively, sand filters can be designed as pretreatment for an infiltration practice, where soils do play a role.

Additional Design Guidelines

Pretreatment is a critical component of any stormwater management practice. In sand filters, pretreatment is achieved in the sedimentation chamber that precedes the filter bed. In this chamber, the coarsest particles settle out and thus do not reach the filter bed. Pretreatment reduces the maintenance burden of sand filters by reducing the potential for these sediments to clog the filter. When pretreatment is not provided designers should increase the size of the filter area to reduce the clogging potential. In sand filters, designers should select a medium sand as the filtering medium. A fine aggregate (ASTM C-33) that is intended for use in concrete is commonly specified.

Many guidelines recommend sizing the filter bed using Darcy's Law, which relates the velocity of fluids to the hydraulic head and the coefficient of permeability of a medium. The resulting equation, as derived by the city of Austin, Texas, (1996), is

$$Af = WQV\ d/[k\ t\ (h+d)]$$

Where:

Af = area of the filter bed (ft^2);

d = depth of the filter bed (ft; usually about 1.5 feet, depending on the design);

k = coefficient of permeability of the filtering medium (ft/day);

t = time for the water quality volume to filter through the system (days; usually assumed to be 1.67 days); and

h = average water height above the sand bed (ft; assumed to be one-half of the maximum head).

Typical values for k, as assembled by CWP (1996), are shown in Table 2.

Table 2 Coefficient of permeability values for stormwater filtering practices (CWP, 1996)

Filter Medium	Coefficient of Permeability (ft/day)
Sand	3.5
Peat/Sand	2.75
Compost	8.7

The permeability of sand shown in Table 2 is extremely conservative, but is widely used since it is incorporated in the design guidelines of the City of Austin. When the sand is initially installed, the permeability is so high (over 100 ft/d) that generally only a portion of the filter area is required to infiltrate the entire volume, especially in a "full sedimentation" Austin design where the capture volume is released to the filter basin over 24 hours.

The preceding methodology results in a filter bed area that is oversized when new and the entire water quality volume is filtered in less than a day with no significant height of water on top of the sand bed. Consequently, the following simple rule of thumb is adequate for sizing the filter area. If the filter is preceded by a sedimentation basin that releases the water quality volume (WQV) to the filter over 24 hours, then

$$Af = WQV/18$$

If no pretreatment is provided then the filter area is calculated more conservatively as:

$$Af = WQV/10$$

Typically, filtering practices are designed as "off-line" systems, meaning that during larger storms all runoff greater than the water quality volume is bypassed untreated using a flow splitter, which is a structure that directs larger flows to the storm drain system or to a stabilized channel. One exception is the perimeter filter; in this design, all flows enter the system, but larger flows overflow to an outlet chamber and are not treated by the practice.

The Austin design variations are preferred where there is sufficient space, because they lack a permanent pool, which eliminates vector concerns. Design details of this variation are summarized below.

Summary of Design Recommendations

(1) Capture Volume - The facility should be sized to capture the required water quality volume, preferably in a separate pretreatment sedimentation basin.

(2) Basin Geometry – The water depth in the sedimentation basin when full should be at least 2 feet and no greater than 10 feet. A fixed vertical sediment depth marker should be installed in the sedimentation basin to indicate when 20% of the basin volume has been lost because of sediment accumulation. When a pretreatment sedimentation basin is provided the minimum average surface area for the sand filter (Af) is calculated from the following equation:

$$Af = WQV/18$$

If no pretreatment is provided then the filter area is calculated as:

$$Af = WQV/10$$

(3) Sand and Gravel Configuration - The sand filter is constructed with 18 inches of sand overlying 6 inches of gravel. The sand and gravel media are separated by permeable geotextile fabric and the gravel layer is situated on geotextile fabric. Four-inch perforated PVC pipe is used to drain captured flows from the gravel layer. A minimum of 2 inches of gravel must cover the top surface of the PVC pipe. Figure 5 presents a schematic representation of a standard sand bed profile.

(4) Sand Properties – The sand grain size distribution should be comparable to that of "washed concrete sand," as specified for fine aggregate in ASTM C-33.

(5) Underdrain Pipe Configuration – In an Austin filter, the underdrain piping should consist of a main collector pipe and two or more lateral branch pipes, each with a minimum diameter of 4 inches. The pipes should have a minimum slope of 1% (1/8 inch per foot) and the laterals should be spaced at intervals of no more than 10 feet. There should be no fewer than two lateral branch pipes. Each individual underdrain pipe should have a cleanout access location. All piping is to be Schedule 40 PVC. The maximum spacing between rows of perforations should not exceed 6 inches.

(6) Flow Splitter - The inflow structure to the sedimentation chamber should incorporate a flow-splitting device capable of isolating the capture volume and bypassing the 25-year peak flow around the facility with the sedimentation/filtration pond full.

Figure 5
Schematic of Sand Bed Profile

(7) Basin Inlet – Energy dissipation is required at the sedimentation basin inlet so that flows entering the basin should be distributed uniformly and at low velocity in order to prevent resuspension and encourage quiescent conditions necessary for deposition of solids.

(8) Sedimentation Pond Outlet Structure - The outflow structure from the sedimentation chamber should be (1) an earthen berm; (2) a concrete wall; or (3) a rock gabion. Gabion outflow structures should extend across the full width of the facility such that no short-circuiting of flows can occur. The gabion rock should be 4 inches in diameter. The

receiving end of the sand filter should be protected (splash pad, riprap, etc.) such that erosion of the sand media does not occur. When a riser pipe is used to connect the sedimentation and filtration basins (example in Figure 6), a valve should be included to isolate the sedimentation basin in case of a hazardous material spill in the watershed. The control for the valve must be accessible at all times, including when the basin is full. The riser pipe should have a minimum diameter of 6 inches with four 1-inch perforations per row. The vertical spacing between rows should be 4 inches (on centers).

(9) Sand Filter Discharge – If a gabion structure is used to separate the sedimentation and filtration basins, a valve must installed so that discharge from the BMP can be stopped in case runoff from a spill of hazardous material enters the sand filter. The control for the valve must be accessible at all times, including when the basin is full.

Maintenance

Even though sand filters are generally thought of as one of the higher maintenance BMPs, in a recent California study an average of only about 49 hours a year were required for field activities. This was less maintenance than was required by extended detention basins serving comparable sized catchments. Most maintenance consists of routine removal of trash and debris, especially in Austin sand filters where the outlet riser from the sedimentation basin can become clogged.

Most data (i.e. Clark, 2001) indicate that hydraulic failure from clogging of the sand media occurs before pollutant breakthrough. Typically, only the very top of the sand becomes clogged while the rest remains in relative pristine condition as shown in Figure 7. The rate of clogging has been related to the TSS loading on the filter bed (Urbonas, 1999); however, the data are quite variable. Empirical observation of sites treating urban and highway runoff indicates that clogging of the filter occurs after 2 – 10 years of service. Presumably, this is related to differences in the type and amount of sediment in the catchment areas of the various installations. Once clogging occurs the top 2 – 3 inches of filter media is removed, which restores much, but not all, of the lost permeability. This removal of the surface layer can occur several times before the entire filter bed must be replaced. The cost of the removal of the surface layer is not prohibitive, generally ranging between $2,000 (EPA Fact Sheet) and $4,000 (Caltrans, 2002) depending on the size of the filter.

Media filters can become a nuisance due to mosquito and midge breeding in certain designs or if not regularly maintained. "Wet" designs (e.g., MCTT and Delaware filter) are more conducive to vectors than others (e.g., Austin filters) because they maintain permanent sources of standing water where breeding is likely to occur. Caltrans successfully excluded mosquitoes and midges from accessing the permanent water in the sedimentation basin of MCTT installations through use of a tight-fitting aluminum cover to seal vectors out. However, typical wet designs may require routine inspections and treatments by local mosquito and vector control agencies to suppress mosquito production. Vector habitats may also be created in "dry" designs when media filters clog, and/or when features such as level spreaders that hold water over 72 hours are included in the installation. Dry designs such as Austin filters should dewater completely (recommended 72 hour residence time or less) to prevent creating mosquito and other vector habitats. Maintenance efforts to prevent vector breeding in dry designs will need to focus on basic housekeeping practices such as removal of debris accumulations and vegetation management (in filter media) to prevent clogs and/or pools of standing water.

Figure 6
Detail of Sedimentation Riser Pipe

Figure 7
Formation of Clogging Crust on Filter Bed

Recommended maintenance activities and frequencies include:

- Inspections semi-annually for standing water, sediment, trash and debris, and to identify potential problems.
- Remove accumulated trash and debris in the sedimentation basin, from the riser pipe, and the filter bed during routine inspections.
- Inspect the facility once during the wet season after a large rain event to determine whether the facility is draining completely within 72 hr.
- Remove top 50 mm (2 in.) of sand and dispose of sediment if facility drain time exceeds 72 hr. Restore media depth to 450 mm (18 in.) when overall media depth drops to 300 mm (12 in.).
- Remove accumulated sediment in the sedimentation basin every 10 yr or when the sediment occupies 10 percent of the basin volume, whichever is less.

Cost

Construction Cost

There are few consistent published data on the cost of sand filters, largely because, with the exception of Austin, Texas, Alexandria, Virginia, and Washington, D.C., they have not been widely used. Furthermore, filters have such varied designs that it is difficult to assign a cost to filters in general. A study by Brown and Schueler (1997) was unable to find a statistically valid relationship between the volume of water treated in a filter and the cost of the practice. The EPA filter fact sheet indicates a cost for an Austin sand filter at $18,500 (1997 dollars) for a 0.4 hectare- (1 acre-)

drainage area. However, the same design implemented at a 1.1 ha site by the California Department of Transportation, cost $240,000. Consequently, there is a tremendous uncertainty about what the average construction cost might be.

It is important to note that, although underground and perimeter sand filters can be more expensive than surface sand filters, they consume no surface space, making them a relatively cost-effective practice in ultra-urban areas where land is at a premium.

Given the number of facilities installed in the areas that promote their use it should be possible to develop fairly accurate construction cost numbers through a more comprehensive survey of municipalities and developers that have implemented these filters.

Maintenance Cost

Annual costs for maintaining sand filter systems average about 5 percent of the initial construction cost (Schueler, 1992). Media is replaced as needed, with the frequency correlated with the solids loading on the filter bed. Currently the sand is being replaced in the D.C. filter systems about every 2 years, while an Austin design might last 3-10 years depending on the watershed characteristics. The cost to replace the gravel layer, filter fabric and top portion of the sand for D.C. sand filters is approximately $1,700 (1997 dollars).

Caltrans estimated future maintenance costs for the Austin design, assuming a device sized to treat runoff from approximately 4 acres. These estimates are presented in Table 3 and assume a fully burdened hourly rate of $44 for labor. This estimate is somewhat uncertain, since complete replacement of the filter bed was not required during the period that maintenance costs were recorded.

Table 3 Expected Annual Maintenance Costs for an Austin Sand Filter

Activity	Labor Hours	Equipment and Materials ($)	Cost
Inspections	4	0	176
Maintenance	36	125	1,706
Vector Control	0	0	0
Administration	3	0	132
Direct Costs	-	888	888
Total	43	$1,013	**$2,902**

Schematic of the "Full Sedimentation" Austin Sand Filter

Schematic of a Delaware Sand Filter (Young et al., 1996)

Schematic of a MCTT (Robertson et al., 1995)

Drain Inserts

MP-52

Description

Drain inserts are manufactured filters or fabric placed in a drop inlet to remove sediment and debris. There are a multitude of inserts of various shapes and configurations, typically falling into one of three different groups: socks, boxes, and trays. The sock consists of a fabric, usually constructed of polypropylene. The fabric may be attached to a frame or the grate of the inlet holds the sock. Socks are meant for vertical (drop) inlets. Boxes are constructed of plastic or wire mesh. Typically a polypropylene "bag" is placed in the wire mesh box. The bag takes the form of the box. Most box products are one box; that is, the setting area and filtration through media occur in the same box. Some products consist of one or more trays or mesh grates. The trays may hold different types of media. Filtration media vary by manufacturer. Types include polypropylene, porous polymer, treated cellulose, and activated carbon.

California Experience

The number of installations is unknown but likely exceeds a thousand. Some users have reported that these systems require considerable maintenance to prevent plugging and bypass.

Advantages

- Does not require additional space as inserts as the drain inlets are already a component of the standard drainage systems.
- Easy access for inspection and maintenance.
- As there is no standing water, there is little concern for mosquito breeding.
- A relatively inexpensive retrofit option.

Limitations

Performance is likely significantly less than treatment systems that are located at the end of the drainage system such as ponds and vaults. Usually not suitable for large areas or areas with trash or leaves than can plug the insert.

Design and Sizing Guidelines

Refer to manufacturer's guidelines. Drain inserts come any many configurations but can be placed into three general groups: socks, boxes, and trays. The sock consists of a fabric, usually constructed of polypropylene. The fabric may be attached to a frame or the grate of the inlet holds the sock. Socks are meant for vertical (drop) inlets. Boxes are constructed of plastic or wire mesh. Typically a polypropylene "bag" is placed in the wire mesh box. The bag takes the form of the box. Most box products are

Woodward Clyde, June 11, 1996, Parking Lot Monitoring Report, Santa Clara Valley Nonpoint Source Pollution Control Program.

one box; that is, the setting area and filtration through media occurs in the same box. One manufacturer has a double-box. Stormwater enters the first box where setting occurs. The stormwater flows into the second box where the filter media is located. Some products consist of one or more trays or mesh grates. The trays can hold different types of media. Filtration media vary with the manufacturer: types include polypropylene, porous polymer, treated cellulose, and activated carbon.

Construction/Inspection Considerations

Be certain that installation is done in a manner that makes certain that the stormwater enters the unit and does not leak around the perimeter. Leakage between the frame of the insert and the frame of the drain inlet can easily occur with vertical (drop) inlets.

Performance

Few products have performance data collected under field conditions.

Siting Criteria

It is recommended that inserts be used only for retrofit situations or as pretreatment where other treatment BMPs presented in this section area used.

Additional Design Guidelines

Follow guidelines provided by individual manufacturers.

Maintenance

Likely require frequent maintenance, on the order of several times per year.

Cost

- The initial cost of individual inserts ranges from less than $100 to about $2,000. The cost of using multiple units in curb inlet drains varies with the size of the inlet.
- The low cost of inserts may tend to favor the use of these systems over other, more effective treatment BMPs. However, the low cost of each unit may be offset by the number of units that are required, more frequent maintenance, and the shorter structural life (and therefore replacement).

KRISTAR

FloGard®+PLUS

Catch Basin Insert Filter

FloGard®+PLUS Catch Basin Insert Filter

GENERAL FILTER CONFIGURATION

FloGard®+PLUS catch basin insert filter shall provide solids filtration through a filter screen or filter liner, and hydrocarbon capture shall be effected using a non-leaching absorbent material contained in a pouch or similar removable restraint. Hydrocarbon absorbent shall not be placed at an exposed location at the entry to the filter that would allow blinding by debris and sediment without provision for self-cleaning in operation.

Filter shall conform to the dimensions of the inlet in which it is applied, allow removal and replacement of all internal components, and allow complete inspection and cleaning in the field.

FLOW CAPACITY

Filter shall provide two internal high-flow bypass locations that in total exceed the inlet peak flow capacity. Filter shall provide filtered flow capacity in excess of the required "first flush" treatment flow. Unit shall not impede flow into or through the catch basin when properly sized and installed.

MATERIALS

Filter support frame shall be constructed of type 304 stainless steel. Filter screen, when used in place of filter liner, shall be type 304 or 316 stainless steel, with an apparent opening size of not less than 4 U.S. mesh. Filter liner, when used in place of filter screen, shall be woven polypropylene geotextile fabric liner with an apparent opening size (AOS) of not less than 40 U.S. mesh as determined by ASTM D 4751. Filter liner shall include a support basket of polypropylene geogrid with stainless steel cable reinforcement.

Filter frame shall be rated at a minimum 25-year service life. All other materials, with the exception of the hydrocarbon absorbent, shall have a rated service life in excess of 2 years.

FloGard®+PLUS TEST RESULTS SUMMARY

Testing Agency	% TSS Removal	% Oil and Grease Removal	% PAH Removal
UCLA	80	70 to 80	
U of Auckland Tonking & Taylor Ltd. (for city of Auckland)	78 to 95		
U of Hawaii (for city of Honolulu)	80		20 to 40

FEATURES

- Easy to install, inspect and maintain
- Can be retrofitted to existing drain catch basins – or used in new projects
- Economical and efficient
- Catches pollutants where they are easiest to catch (at the inlet)
- No standing water – minimizes vector, bacteria and odor problems
- Can be incorporated as part of a "Treatment Train"

BENEFITS

- Lower installation, inspection and maintenance costs
- Versatile installation applications
- Higher return on investment
- Allows for installation on small and confined sites
- Minimizes vector, bacteria and odor problems
- Allows user to target specific pollutants

Innovative stormwater management products

FloGard® +PLUS

Catch Basin Insert Filter

INSTALLATION AND MAINTENANCE

Filter shall be installed and maintained in accordance with manufacturer's general instructions and recommendations.

PERFORMANCE

Filter shall provide 80% removal of total suspended solids (TSS) from treated flow with a particle size distribution consistent with typical urban street deposited sediments. Filter shall capture at least 70% of oil and grease and 40% of total phosphorus (TP) associated with organic debris from treated flow. Unit shall provide for isolation of trapped pollutants, including debris, sediments, and floatable trash and hydrocarbons, from bypass flow such that re-suspension and loss of pollutants is minimized during peak flow events.

NOTES:

1. FloGard® filter body is prefabricated from polypropylene woven monofilament geotextile.
2. All metal components shall be constructed from stainless steel Type 304.
3. Refer to Specifier Chart for catch basin and filter sizing.
4. Filter inserts are supplied with optional "clip-in" filter pouches utilizing fossil rock™ filter medium for the collection and retention of petroleum hydrocarbons (oils & greases).
5. FloGard® filter inserts and fossil rock™ filter medium pouches must be maintained in accordance with manufacturer recommendations.
6. Catch basin depth must not allow filter body to to obstruct outlet pipe . See sheet 2 of 2.

11- STATEMENT OF QUALIFICATIONS
12- EDR REPORT

usage, past or present, of potentially hazardous materials for a Phase I - Environmental Site Assessment. Within this resulting assessment report, CEC identifies observed and/or documented recognized environmental conditions, if any exist, that may have significantly impacted the site.

2.2 Methodology

This environmental investigation and the resulting report were prepared generally utilizing the procedures presented in ASTM E 1527-05, Standard Practice for Environmental Site Assessments, Phase I Environmental Site Assessment Process. Site and vicinity inspections, owner and tenant interviews, and document research were performed generally according to ASTM guidelines.

2.3 Limitations and Exceptions

This environmental investigation was conducted using a degree of care and skill normally exercised, under similar circumstances, by reputable soil engineers, geologists, and environmental scientists practicing in this and similar localities. Opinions presented herein apply to site conditions existing at the time of our study and cannot necessarily be taken to apply to site conditions or changes that we are not aware of or have not had the opportunity to evaluate. The conclusions presented in this report are based on interviews conducted of the current owner and contractors that have recently worked on the site, documentation reviewed in the archives of the County of Riverside, aerial photograph reviews and topographic maps reviews. CEC will comment that the only definitive land use documentation reviewed is for the past twenty-nine years. The only information available for land use prior to 1978 is from aerial photography. Data gaps within the aerial photograph records exist, with the largest being fifteen years. Additionally, the initial development of the site occurred prior to 1938, the oldest aerial photograph reviewed. Topographic maps dating back to 1901 appear to show that at least one structure and a road was present at that time. Due to the rural setting of the site and the apparent use of the site as a ranch, it is CEC's opinion that it is unlikely that possible activities conducted at the subject site severely impacted the environmental integrity of the subject site.

chain-link fence borders the site along the northern, southern and western boundaries. According to Ms. Karina Faherty of Hunsaker & Associates, Irvine, Inc. (H&A) buildings that were associated with a former residence at the site were demolished and the debris removed in June 2007.

On September 12, 2007 CEC personnel inspected the subject site and vicinity. CEC personnel walked the entire site and inspected the soils and features of interest. Very little nuisance trash, consisting mainly of beverage containers and empty oil containers, was noted in the western portion of the property. The soils at the site appeared to have been recently disked. The only compacted soils note at the site were those in the area immediately north of the southern boundary and those of the unimproved road that traverses the western and central portions of the site in an east-west trend. The only vegetation noted at the site consisted of several watermelon plants and other weeds in the east-central portion of the site and shrubs along the southern and western boundaries of the site. No soil staining was noted at the site, though personnel did note that non-native soils (light gray in color) were present in the northwestern portion of the site. It was reported by H&A that stockpiles of illegally dumped soil and concrete were present in this area prior to demolition activities that occurred in June 2007. H&A reported that the concrete debris in the piles was removed from the site during demolition activities and that the soil from the stockpiles was disked into the soils at the site. The inspection of the site suggests that the stockpiled soils were disked in place and were not dispersed throughout the site. CEC will discuss these deposits in later sections of this report.

A round stormwater structure was present along the western boundary of the subject site. The condition of the structure suggests that it was recently installed. Five utility panels/vaults were present in the northwestern corner at the time of the site inspection. Additional aboveground and underground utilities were present along the unimproved east-west road that traverses through the site. A pole-mounted electrical transformer was present on one of the poles near the center of the property. No evidence of leaks or stains was noted on the transformer, pole or soil around the pole.

The site is situated in the Perris Block of the Peninsular Ranges Province. The majority of the site is underlain by middle to early Pleistocene fluvial sediments that were deposited on a broad canyon floor. The sediments consist of moderate to well indurated reddish-brown sand with varying amounts of gravel, silt and clay. Non-native soils, gravelly sand, were present in the northwestern portion of the site at the time of the site inspection.

The site lies within the Temecula Valley groundwater basin. Five groundwater wells have been mapped in the central portion of the site. A list of these wells is presented as an appendix to this report. These wells appear to have been constructed between the late 1950s and early 1960s. Depth to groundwater in these wells was reported as shallow as forty-five feet below ground surface (bgs) in 1968. No visual evidence of these wells was noted during the site inspection conducted by CEC. Groundwater flow is expected to be southerly.

Tectonically, the site is not on or adjacent to an earthquake fault considered active by the United States Geological Survey (USGS). A review of the California Division of Mines and Geology 1997 edition of the publication "Fault-Rupture Hazard Zones in California" showed that the site is not within an Alquist-Priolo Special Study Zone. Special Study Zones associated with the Elsinore Fault Zone are located approximately six miles southwest of the site. An extension of the Glen Ivy fault is located approximately three miles southwest of the site. The San Jacinto Fault Zone is located approximately fourteen miles northeast of the subject site. Faults that make up the Elsinore Fault Zone and the San Jacinto Fault Zones have the potential of producing high ground accelerations during an earthquake.

4.0 RECORDS REVIEW

4.1 Federal and State Environmental Records

A search of Federal and State of California environmental database records regarding the site and vicinity was supplied by Environmental Data Resources, Inc. (EDR) on

Material Licensing Tracking System, Facility Index System, RCRA Administrative Action Tracking System, Integrated Compliance Information System Incident and Accident Database, or Emissions Inventory Data.

The subject site is not listed on any of the databases normally researched during a Phase I investigation.

Two sites within one-quarter mile of the subject site are listed on the California Water Resources Control Board's Waste Discharge System. The sites on this list are presented below.

- AD 9 Water Distribution Pipeline – Thompson Road/Maddaleana Road – Located approximately 1,300 feet east of the subject site. The facility does not fall into the category of municipal, domestic, industrial, agricultural or solid waste. The site is listed as active. It is listed as a minor threat to water quality.
- Sheffield French Valley Det Facil – Pourroy Road by Thompson/Benton Road – Located southwest of the subject site. The facility does not fall into the category of municipal, industrial, agricultural or solid waste. The site is listed as active. The facility has no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

One site within one-quarter mile of the subject site is listed on the Haznet database. This database contains information gathered by the Department of Toxic Control Substances from waste manifests. The site follows.

- Promotive Inc. – 32150 Thompson Road. Located directly north of the subject site. This site is listed for the offsite disposal of 0.2 ton of waste oil/mixed oil and 0.22 ton of oil/water separation sludge at a recycling facility.

- Planning Case CFG00855 – 10/11/94 – Applicant listed as Coscan Stewart Partnership – Historical Fish and Game fees.
- Planning Case PAR00983 – 12/14/06 – Applicant listed as Hunsaker & Associates – Approved division of 24 acres into 75 single family residential lots.

On September 18, 2007 CEC requested any available records from the County of Riverside Community Health Agency – Department of Environmental Health. This agency is responsible for permitting and inspecting sites that utilize, store, produce, or treat hazardous materials and sites with underground or aboveground storage tanks. On October 2, 2007, this agency responded via letter (appended to this report) that no records exist for the subject site address.

4.3 Environmental Lien Search

An Environmental Lien Search report for the property was provided by EDR on October 8, 2007. No environmental liens or activity use limitations were reported for Assessor's Parcel Number 964-010-001.

The following legal description of the site was provided in the Quitclaim Deed appended to the Environmental Lien Search report.

North half of the Northwest Quarter of Section 4, Township 7 South, Range 2 West, San Bernardino Base and Meridian.

Excepting Therefrom that portion described as follows;

Parcels 2 and 3 as shown on Parcel Map No. 6643 recorded May 19, 1976, in Book 24, Page 59 of Parcel Maps, Records of Riverside County, California. APN 958-020-001.

The following legal description of the site was provided by H&A.

Parcel 1 and Lot C in the Unincorporated territory of the County of Riverside, State of California, as shown on Parcel Map No. 6643, filed in Book 24, Page 59 of Parcel Maps, Record of said County. APN: 964-010-001 (Old APN 958-020-001)

1967

Approximately ten buildings of various sizes are present in the central portion of the site. A hummocky area, triangular in shape, is present southeast of the buildings. Smaller structures are present to the east. A darker portion of land is present near the northwestern corner. The southern portion of the site appears to be tilled. The properties in all direction are undeveloped and tilled.

1953

The property appears as it did in the 1967 photograph with the exception that the dark area in the northwest is not present and the triangular area to the southeast of the buildings blends in with the rest of the site. The southern portion of the site is tilled. The property to the north of the subject site is tilled.

1938

The site is somewhat washed out. Rows of circular white structures (possibly crops) are present in the western portion of the site. The rest of the site appears as it did in the 1953 photograph. The properties in the vicinity are the same as they appeared in the 1953 photograph.

No evidence of oil fields in the area is apparent from the aerial photographs. H&A provided CEC with an aerial photograph that is also available on the GoogleEarth website. This photograph showed several rows of what were reported to be stockpiles of illegally dumped soil and concrete. H&A reported that the concrete debris was disposed of offsite and that the remaining soil piles were disked into the native soils. CEC's reconnaissance of the site revealed that the disked soils are still present in the northwestern portion of the site.

4.5 Historical Maps

CEC requested historical maps, including Sanborn fire insurance maps, covering the site, from EDR, Inc. to determine if any additional areas of potential environmental concern were noted on these maps. EDR determined that no Sanborn maps for the site were available. Several historical topographic maps provided by EDR were also reviewed. The following observations were made in the topographic maps reviewed.

- No air emission permits exist for the subject site.

Ms. Karina Faherty of H&A was also interviewed several times throughout the project regarding the former structures at the site. Ms. Faherty reported that the former buildings at the site were demolished in June 2007 by Vizion's West, Inc. The demolition company removed non-friable asbestos-containing materials from the structures and had the wastes disposed offsite on March 27, 2007. The waste manifest for the asbestos waste and a Completion Letter are appended to this report. Ms. Faherty also reported that Vizion's West, Inc. was also tasked with the removal of the concrete stockpiles in the northwestern portion of the site. Teresa Zitzun of Vizion's West, Inc. was interviewed via telephone on October 10, 2007 regarding the removal of these wastes. Ms. Zitzun reported that the materials that were removed from the site only contained concrete debris and that no soil or material samples were collected for analysis prior to disposal. Ms. Zitzun also reported that to the best of her knowledge no hazardous materials were noted in the stockpiled materials.

5.0 POTENTIAL SOURCES OF HAZARDOUS SUBSTANCES

5.1 Underground Storage Tanks

No superficial indications of underground storage tanks were observed on the site during our site inspection or during the documentary investigation. A review of historical aerial photographs revealed that the site was developed as a ranch since at least the late 1930s. Due to this relatively long period of development and the lack of development in the area through most of the history of the subject site's development, it is possible that underground storage tanks may have been present at the site prior to the time when such structures were regulated. CEC recommends that if such a structure, or remnant thereof, is encountered during future redevelopment activities, it will be necessary to contact the County of Riverside Department of Environmental Health to properly permit the removal of the structure. Soil samples may need to be collected during the removal of any such structures.

5.5 Stained Soil or Pavement

No pavement is present at the subject site. CEC personnel walked the entire site and found no areas of stained soil. CEC did note that different soil types are present in the northwestern portion of the site. These soils are believed to be the stockpiled soils that were disked into the native soils in June 2007.

5.6 Solid Waste

No industrial activities were reported for the subject site by persons interviewed and the review of historical aerial photographs does not lead CEC to believe that industrial activities were conducted at the site prior to 1978. The disposal method for solid waste generated at the subject site during the use of the site as a ranch is unknown. CEC cannot discount the possibility that such waste was disposed in pits at the site or burned at the site during the early part of the twentieth century. If buried waste or buried burn pits are encountered during redevelopment activities, CEC recommends that the removal of the waste and the evaluation of the surrounding soils be documented by an environmental professional.

CEC will also comment that piles of dry horse manure were present in the central and eastern portions of the property at the time of the site inspection. CEC recommends that these wastes be properly removed from the subject site prior to redevelopment of the site, as burial of such waste has the potential of generating methane gas. If buried manure is encountered during redevelopment activities, CEC recommends that the manure and manure impacted soils be properly removed from the subject site.

5.7 Waste Water

No evidence exists that indicates that significant volumes of waste water have been generated on the site.

The study found detectable concentrations of one or all of the DDT family of compounds in each of the 99 soil samples tested from the state's agricultural areas. The report concludes that these compounds are residues from the legal applications of the chemicals between approximately mid-1940's and 1974. Recent discussions with the California Environmental Protection Agency (Cal-EPA) have revealed that concentration of DDT and its residual compounds that are in the range of these found in the Food and Agriculture study are not actionable by the agency. Thus, if shallow soil samples were collected at the site and analyzed, DDT and its residual compounds could possibly be found in concentrations comparable to those reported in the 1985 study. However, it is unlikely that significant volumes of DDT compounds have been applied to the site since the late-1950's. In any event, it is unlikely that a government regulatory agency would require remediation activities.

5.11 Radon

Based on our previous experience with projects at localities with similar conditions, it is CEC's opinion that the site and immediate vicinity are situated within a Radon Zone with a level rated at 2, which indicates that the predicted average indoor screening level of radon is most likely to be between 2pCi/L and 4 pCi/L. The EPA action level for radon retesting and subsequent possible remediation is 4 pCi/L, thus, no remedial action is likely to be necessary.

5.12 PCB's

A detailed PCB survey was not a part of the scope of this assessment. CEC will comment that a pole-mounted electrical transformer was present in the central portion of the subject site. No staining was noted on the transformer, pole or the soils surrounding the pole.

5.13 Asbestos

A detailed asbestos survey was not a part of the scope of this assessment but CEC will comment that non-friable asbestos-containing materials were removed from the former structures at the subject site prior to the demolition of said structures. The asbestos waste

recommends that the removal of the waste and the evaluation of the surrounding soils be documented by an environmental professional.

5.18 Oil Wells

Based on a review of a current California Division of Oil, Gas, and Geothermal Resources (DOG) oil well location map W 1-7, no oil wells have existed on the subject site. The closest oil well to the subject site is located approximately five miles southwest of the subject site. This well does not appear to pose a threat to the environmental integrity of the subject site.

6.0 CONCLUSIONS AND RECOMMENDATION

Carlin Environmental Consulting, Inc. conducted a site inspection, a historical document research, governmental regulatory agency database reviews and owner and contractor interviews. During the investigation CEC identified three recognized environmental conditions (REC) that could complicate redevelopment of the subject site for residential purposes. The RECs and additional recommendations are presented below.

The first REC is the number of piles of mulched plant materials, mainly palm trees and other tree materials that were present in the central, western and south-central portions of the site. CEC recommends that these materials be removed from the subject site prior to grading activities, as the burial of such materials may generate methane gas that could affect future development efforts at the site.

The second REC is the number of piles of dry horse manure that were present in the central and eastern portions of the property at the time of the site inspection. CEC recommends that these wastes be properly removed from the subject site prior to grading activities at the site, as burial of such waste has the potential of generating methane gas. If buried manure is encountered during grading activities, CEC recommends that the manure and manure impacted soils be properly removed from the subject site.

Due to the relatively long period of development and the lack of development in the area through most of the history of the subject site's development, it is possible that underground storage tanks may have been present at the site prior to the time when such structures were regulated. CEC recommends that if such a structure, or remnant thereof, is encountered during future grading activities, it will be necessary to contact the County of Riverside Department of Environmental Health to properly permit the removal of the structure. Soil samples may need to be collected during the removal of any such structures.

CEC will comment that due to the development of the site prior to 1938 and the rural location of the site at that time it is likely that either a septic system or outhouses were once used at the site. If evidence of such structures is encountered during grading of the site, CEC recommends that the soils in the area be evaluated for proper offsite disposal and to ensure that no contamination that may affect future residents of the site is present.

No evidence of aboveground storage tanks or drum was observed on the site during the site inspection. CEC will comment that due to the former use of the site as homestead/ranch in a rural area it is possible that such structures were once utilized at the site. If such structures are encountered during grading activities, the removal and disposal of these structures should be documented by an environmental professional and the surrounding soil should be evaluated for the potential of contamination.

RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT

ENCROACHMENT PERMIT INFORMATION SHEET

Applicants: Please note that the following information and documents **MUST** be submitted with your application in order for the Riverside County Flood Control and Water Conservation District (District) to begin processing your request for an encroachment permit. Failure to submit all documentation as described below will delay the processing of your application:

1. Completed Check List (attached) with all applicable items addressed.

2. Completed and signed Application Form (attached).

3. Two sets of approved and signed plans for the proposed work.

4. One copy of the District as-built drawing(s) clearly showing the proposed work to be done under the requested encroachment permit. As-built drawings can be purchased from the District's Reproduction Section (951.955.1221).

5. A check or money order written for the appropriate fee amount to be deposited. (Please refer to the attached Encroachment Permit Fee Deposit Requirement Sheet.) Fees will be placed in an individual account and all District costs will be tracked as work is performed. If the balance in the account drops under 25% of the original deposit and the General Manager-Chief Engineer determines that the remaining amount is insufficient to complete the processing of the application (including environmental review, inspection and finalization of the project), the applicant will be required to submit an additional deposit prior to continuing to work on the application or proceeding with any further work on the project. Further inspections will not be scheduled until the additional deposit is submitted. Once a project is completed and accepted by the District, all unused funds will be refunded to the applicant within 60 days. All applicants, including public entities, must submit the required fee.

6. A copy of the approved and filed California Environmental Quality Act (CEQA) document (e.g., Notice of Exemption, Negative Declaration, Mitigated Negative Declaration/Initial Study, Environmental Impact Report and Statement of Overriding Consideration) as prepared by the Lead Agency for the proposed project shall be submitted to the District. The CEQA document is usually available from the City or County Planning Department that originally approved the proposed project. The District, as a CEQA Responsible Agency, must prepare the appropriate CEQA document for the proposed project prior to issuance of the requested encroachment permit.

7. Proof of prior compliance with the approved Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) must be submitted to the District for proposed projects with the boundaries of the MSHCP. For projects previously approved by the County or Cities, this proof may consist of written documentation from the applicable jurisdiction confirming compliance with the MSHCP. Documentation concerning payment of the MSHCP Mitigation Fee alone is not sufficient. The District must receive written documentation specifically confirming compliance with Sections 6.1.2, 6.1.3, 6.1.4 and 6.3 of the MSHCP as well as the Criteria if the project is located within the Criteria Area/Cell. Encroachment Permits associated with a project not previously reviewed by the County or a City for MSHCP compliance or Encroachment Permits not associated with any project that are located within the boundaries of the MSHCP will need to be reviewed for compliance with the requirements of the MSHCP by the District prior to issuance of the requested Encroachment Permit. The issuance of an Encroachment Permit by the District is a discretionary action subject to compliance with the MSHCP.

8. NPDES REQUIREMENTS: Encroachment permit applications associated with new or redevelopment projects proposing to discharge stormwater or non-stormwater into District facilities must identify the structural and non-structural best management practices (BMPs) to mitigate water quality impacts from the proposed project.

    a. ENCROACHMENT PERMITS WITHIN THE SANTA ANA OR SANTA MARGARITA WATERSHEDS: Projects within the Santa Margarita and Santa Ana watershed regions of Riverside County must meet the requirements of Section 6 of the Riverside County Drainage Area Management Plan (DAMP) for the Santa Margarita and Santa Ana watershed regions of Riverside County (SA/SM DAMP). Encroachment permit applications for projects that meet the definition of new development or significant redevelopment per Section 6 of the SA/SM DAMP may demonstrate compliance by providing proof of completion of a project-specific Water Quality Management Plan (WQMP). Projects that do not meet the definition of new development or significant redevelopment per Section 6 of the SA/SM DAMP must demonstrate compliance with the structural and non-structural BMPs requirements specified for other development projects per the requirements of Section 6.4.4 of the SA/SM DAMP. Submittal of plans identifying the locations of post-construction BMPs can be used to demonstrate compliance with this requirement.

    b. Projects within the Whitewater Region of Riverside County must demonstrate compliance with Supplement A to the Riverside County DAMP for the Whitewater Region (WW DAMP). This may be accomplished by submitting plans demonstrating the location of approved post-construction BMPs, or by submitting conditions of approval requiring compliance with Supplement A.

    c. Encroachment permit applicants not associated with new or redevelopment projects who discharge stormwater or non-stormwater to District facilities must identify the necessary structural and non-structural BMPs to mitigate water quality impacts from the proposed project. The applicant must complete the Application for Third-Party Discharge to the District Facilities. The application form is available on-line at www.floodcontrol.co.riverside.ca.us/waterqualitynpdes.asp. It may be advisable to contact the NPDES representative listed on the form to determine what, if any, water quality sampling data may be needed to process the application.

9. STORM DRAIN CONNECTIONS, BRIDGES AND CULVERT CROSSINGS: Hydrology and hydraulic calculations prepared and signed by a Registered Civil Engineer must be submitted with all applications for storm drain connections, bridges and culvert crossings. The maximum confluence angle at the junction of a lateral storm drain and mainline channel shall be 45 degrees. A hydraulic junction analysis must be done if the lateral flowrate is greater than 25% of the mainline flowrate. The hydraulic grade line, flow rate, and velocity shall be shown on the storm drain profile drawing. Only reinforced concrete pipe (RCP minimum 1500D) will be approved within District right of way.

10. EXCESS MATERIAL REMOVAL: Excess material removal shall be approved by the District's Chief of Operations and Maintenance, prior to submitting the encroachment permit application. An inspection fee for a minimum of $0.35 per cubic yard will take effect when the permit is issued and is payable to the District monthly or as specified in the encroachment permit.

    a. Applicants requesting encroachment permits for the removal of excess material from District facilities must also submit a Storm Water Pollution Prevention Plan (SWPPP) per the requirements of the appropriate Regional Water Control Board. A copy of the SWPPP shall be provided and approved by the District prior to receiving the requested encroachment permit. A SWPPP template and guidance on the preparation of a SWPPP can be downloaded from the California Association of Stormwater Quality Agencies (CASQA) website at http://www.cabmphandbooks.com/Construction.asp.

b. Applicants requesting encroachment permits for the removal of excess material from District facilities must also submit a fugitive dust control plan (DCP) per the requirements of the Air Quality Management District or local ordinances, as required. A copy of the DCP shall be provided and approved by the District prior to receiving the requested encroachment permit. DCP Handbooks for the Coachella Valley region can be downloaded from the Coachella Valley Association of Governments at http://www.cvag.org/depts/hcr.htm.

11. The applicant shall accept full responsibility for obtaining and complying with all applicable provisions of the appropriate regulatory permits. If the requested encroachment permit is for facilities that will be ultimately maintained by the District, the regulatory permits shall address both the construction and maintenance activities of these facilities in compliance with all applicable Federal, State and local regulations. These regulatory permits include, but are not limited to: a Section 404 Permit issued by the U.S. Army Corps of Engineers in compliance with Section 404 of the Clean Water Act, a California State Department of Fish and Game Streambed Alteration Agreement in compliance with the Fish and Game Code Sections 1600 et seq., and a 401 Water Quality Certification or a Report of Waste Discharge Requirements in compliance with Section 401 of the Clean Water Act or State Porter-Cologne Water Quality Act, respectively, from the appropriate Regional Water Quality Control Board. A general permit for discharges shall be obtained from the State Water Resources Control Board or Regional Water Quality Control Board as applicable for discharges of storm water associated with construction activity. The applicant shall also be responsible for complying with all mitigation measures as required under CEQA and all Federal, State, and local environmental rules and regulations. A copy of the above mentioned permits shall be submitted to the District for review and approval for all facilities that will ultimately be maintained by the District prior to District issuance of the requested encroachment permit. For projects that will not be maintained by the District a copy of the above mentioned permits shall be submitted to the District for the encroachment permit file. Mitigation measures may not be placed within District rights of way without prior approval from the General Manager–Chief Engineer.

12. ADDITIONAL DEPOSIT - If the District determines that survey monuments are located in the area of work, an additional deposit will be required to cover the cost of replacing any survey monuments that may be disturbed. District survey crews will replace monuments. A map will be provided to the applicant showing locations of survey monuments involved.

Requirements Due Prior to the Issuance of the Encroachment Permit

Prior to the issuance of the encroachment permit, the applicant or the contractor performing the work shall furnish a certificate of insurance specifying comprehensive liability limits of $2,000,000 per occurrence and $2,000,000 general aggregate. The applicant, the District, the County of Riverside, and any municipal corporation within which the work is to be performed, shall each be named as an additional insured. Alternatively, comprehensive liability limits shall be $1,000,000 per occurrence, with $2,000,000 general aggregate and a minimum of $2,000,000 excess liability. This insurance shall remain in effect for the duration of the work. Please reference the encroachment permit number (shown on your receipt for the initial deposit) on the certificate of insurance.

Additional Information

1. Please contact the District's Permit Engineer at 951.955.1266 if you have any questions or need any additional information.

2. Processing time for a typical encroachment permit (if all required information is submitted with the initial application) is approximately 30 working days.

RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT

ENCROACHMENT PERMIT CHECK LIST

Applicant Name: _____

Address: _____

_____

Contact Number: _____

1. _____ Completed and signed Application Form

2. _____ Check or Money Order written for the appropriate deposit

3. _____ Signed and approved plans for the proposed work (2 Sets)

4. _____ District as-built drawing(s) clearly marked to show the proposed work

5. _____ Copy of the Lead Agency's approved and filed CEQA documents

6. _____ Proof of compliance with the Western Riverside MSHCP (if proposed work is within the MSHCP boundary)

7. _____ Proof of NPDES Compliance

8. _____Hydrology and Hydraulic Calculations (if for a storm drain connection, bridge or culvert crossing)

Regulatory Permits (if appropriate)

8. _____Streambed Alteration Agreement from the California Department of Fish and Game

9. _____Section 404 Authorization from the U.S. Army Corps of Engineers

10. _____Section 401 Water Quality Certification from the appropriate Regional Water Quality Control Board

Encroachment Permits for the Removal of Excess Material

11. _____ Dust Control Plan

12. _____ Stormwater Pollution Prevention Plan

RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT

ENCROACHMENT PERMIT FEE DEPOSIT REQUIREMENTS
Effective December 23, 2004

Note: Per Ordinance No. 19 the Filing Fee for each encroachment permit shall be $500, with the exception of a permit for access to adjacent properties which shall be $250. This fee is non-refundable and will be deducted from the initial deposit.

STORM DRAIN CONNECTIONS

(a) 0" to 60" diameter

Initial Deposit (including non-refundable Filing Fee)..... $2,000.00

(b) Over 60" will be considered as major construction.
(See below)

ACCESS TO ADJACENT PROPERTY VIA DISTRICT FACILITY WITH TEMPORARY FENCE REMOVAL

(a) Initial Deposit (including non-refundable Filing Fee)..... $750.00

UTILITY CROSSINGS

(a) Underground Initial Deposit (including non-refundable Filing Fee) $2,000.00

(b) Aerial Initial Deposit (including non-refundable Filing Fee)..... $2,000.00

PARALLEL UTILITIES

(a) Underground Initial Deposit (including non-refundable Filing Fee) $2,000.00

(b) Aerial Filing Fee (including non-refundable Filing Fee) $2,000.00

MAJOR CONSTRUCTION

(a) Initial Deposit (including non-refundable Filing Fee)..... $3,000.00

EXCESS MATERIAL REMOVAL

(a) Initial Deposit (including non-refundable Filing Fee)..... $2,000.00
Inspection Fee - Per Cubic Yard Removed $0.35 (Minimum)

MISCELLANEOUS ENCROACHMENT (Any situation not covered above)

(a) Miscellaneous Filing Fee (including non-refundable Filing Fee) $2,000.00

NOTE: NO WORK SHALL COMMENCE WITHIN DISTIRCT RIGHT OF WAY PRIOR TO OBTAINING AN ENCROACHMENT PERMIT. IN SUCH EVENT, THE APPLICANT/OWNER MAY BE REQUIRED TO REMOVE ALL WORK WITHIN DISTRICT RIGHT OF WAY AND RESTORE THE SITE TO PRE-PROJECT CONDITION AT THE APPLICANT/OWNER'S EXPENSE. IF AT THE DESCRETION OF THE GENERAL MANAGER – CHIEF ENGINEER, AN ENCROACHMENT PERMIT IS SUBSEQUENTLY ISSUED THE APPLICANT/OWNER WILL BE REQUIRED TO PAY A $1000 PENALTY FEE (NON-REFUNDABLE) IN ADDITION TO ALL OTHER DEPOSITS WHICH WILL BE REQUIRED AS STIPULATED HEREIN.

RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT

APPLICATION FOR ENCROACHMENT PERMIT

TO: Riverside County Flood Control
and Water Conservation District
Encroachment Permit Section
1995 Market Street
Riverside, California 92501

Date: _____

The undersigned hereby applies for an encroachment permit to perform the following work within Riverside County Flood Control and Water Conservation District (District) right of way:
Please describe the work proposed to be done within District right of way. (Use extra sheets if necessary.)

_____
_____
_____
_____

Location of proposed work (Specify City, Township, Range, Section):_____
_____

Name and Project Number of District Facility impacted by the proposed work:_____
_____

Estimated duration of construction for proposed project:_____working days.

Applicant agrees to do the work in accordance with all pertinent District rules and regulations and that the proposed work as shown on the attached drawings will be subject to inspection and approval. (Refer to the Encroachment Permit Information Sheet for details on the complete submittal required.)

Applicant acknowledges and understands that construction within District rights of way will, in all likelihood, not be permitted from October 31st through March 31st due to seasonal constraints. Further, Applicant acknowledges that weather and/or flow conditions may necessitate the District, at its sole discretion, to delay or suspend Applicant's work at any time of the year in the interest of public health and safety. Moreover, Applicant appreciates the significance of these seasonal constraints, and understands and agrees to adjust all scheduling accordingly.

Agency Requiring Work (if different than Applicant)	Applicant:

SECTION 6 - SPECIAL REQUIREMENTS

6.1 National Pollutant Discharge Elimination System (NPDES) –

Determine which watershed then: choose 1, 2 or 3 for construction site ≥1 acres; choose 4, 5 or 6 for construction site <1 acres.

1. Whitewater River Watershed

The Contractor shall comply with the requirements of Board Order No. R7-2008-0001 (NPDES No. CAS617002), NPDES Area-Wide Municipal Storm Water Permit, hereafter referred to in this Section as the "Permit", issued by the California Regional Water Quality Control Board (CRWQCB) – Colorado River Basin Region. This Permit regulates both stormwater and non-stormwater discharges associated with Contractor's construction activities. The Contractor shall prepare and implement a Stormwater Pollution Prevention Plan (SWPPP) in accordance with Section 29 "Stormwater and Non-Stormwater Pollution Control" of the Detailed Specifications.

The Contractor's attention is directed to: 1) Section 29.2 "General Requirements" which allows the Engineer to withhold progress payments if the Contractor fails to fully implement Section 29 "Stormwater and Non-Stormwater Pollution Control" or is deemed to be in non-compliance with the provisions of the Permit; 2) Section 29.3 "Stormwater Pollution Prevention Plan Preparation and Approval" which requires that a SWPPP be prepared and approved prior to the Pre-Construction meeting; and 3) Section 29.7 "SWPPP Implementation" which allows the Engineer to suspend construction operations if the Contractor fails to implement the approved SWPPP and any amendments thereto.

2. Santa Ana Watershed

The Contractor shall comply with the requirements of Board Order No. R8-2002-0011 (NPDES No. CAS618033), NPDES Area-Wide Municipal Stormwater Permit, hereafter referred to in this Section as the "Permit", issued by the California Regional Water Quality Control Board (CRWQCB) – Santa Ana Region. This Permit regulates both stormwater and non-stormwater discharges associated with Contractor's construction activities. The Contractor shall prepare and implement a Stormwater Pollution Prevention Plan (SWPPP) in accordance with Section 29 "Stormwater and Non-Stormwater Pollution Control" of the Detailed Specifications.

The Contractor's attention is directed to: 1) Section 29.2 "General Requirements" which allows the Engineer to withhold progress payments if the Contractor fails to fully implement Section 29 "Stormwater and Non-Stormwater Pollution Control" or is deemed to be in non-compliance with provisions of the Permit; 2) Section 29.3 "Stormwater Pollution Prevention Plan Preparation and Approval" which requires that a SWPPP be prepared and approved prior to the Pre-Construction meeting; and 3) Section 29.7 "SWPPP Implementation" which allows the Engineer to suspend construction operations if the Contractor fails to implement the approved SWPPP and any amendments thereto.

3. Santa Margarita Watershed

The Contractor shall comply with the requirements of Board Order No. R9-2004-001 (NPDES No. CAS0108766), NPDES Municipal Separate Storm Sewer Systems (MS4s), hereafter referred to in this Section as the "Permit", issued by the California Regional Water Quality Control Board (CRWQCB) – San Diego Region and the requirements of Section 5.2 of the District's Santa Margarita Region Storm Water Management Plan, referred to as "District SWMP". The Permit and District SWMP regulates both stormwater and non-stormwater discharges associated with Contractor's construction activities. The Contractor shall prepare and implement a Stormwater Pollution Prevention Plan (SWPPP) in accordance with Section 29 "Stormwater and Non-Stormwater Pollution Control" of the Detailed Specifications.

The Contractor's attention is directed to: 1) Section 29.2 "General Requirements" which allows the Engineer to withhold progress payments if the Contractor fails to fully implement Section 29 "Stormwater and Non-Stormwater Pollution Control" or is deemed to be in non-compliance with provisions of the General Permit; 2) Section 29.3 "Stormwater Pollution Prevention Plan Preparation and Approval" which requires that a SWPPP be prepared and approved prior to the Pre-Construction meeting; and 3) Section 29.7 "SWPPP Implementation" which allows the Engineer to suspend construction operations if the Contractor fails to implement the approved SWPPP and any amendments thereto.

****** Choose 4, 5 or 6 for construction site < 1 acre ******

4. Whitewater River Watershed

The Contractor shall comply with the requirements of Board Order No. R7-2008-0001 (NPDES No. CAS617002), NPDES Area-Wide Municipal Storm Water Permit, hereafter referred to in this Section as the "Permit", issued by the California Regional Water Quality Control Board (CRWQCB) – Colorado River Basin Region. This Permit regulates stormwater discharges associated with construction activities performed under the direction of a municipal stormwater permittee. The Contractor shall prepare and implement a Pollution Prevention Plan (PPP) in accordance with Section 29 "Stormwater and Non-Stormwater Pollution Control" of the Detailed Specifications.

The Contractor's attention is directed to: 1) Section 29.2 "General Requirements" which allows the Engineer to withhold progress payments if the Contractor fails to fully implement Section 29 "Stormwater and Non-Stormwater Pollution Control" or is deemed to be in non-compliance with provisions of the Permit; 2) Section 29.3 "Pollution Prevention Plan Preparation and Approval" which requires that a PPP be prepared and approved prior to the Pre-Construction meeting; and 3) Section 29.5 "Pollution Prevention Plan Implementation" which allows the Engineer to suspend construction operations if the Contractor fails to implement the approved PPP and any amendments thereto.

Throughout the term of this contract, the total soil-disturbed area of the project site shall be no more than 1 acre.

5. Santa Ana Watershed

The Contractor shall comply with the requirements of Board Order No. R8-2002-0011 (NPDES No. CAS618033), NPDES Area-Wide Municipal Stormwater Permit, hereafter referred to in this Section as the "Permit", issued by the California Regional Water Quality Control Board (CRWQCB) – Santa Ana Region. This Permit regulates stormwater discharges associated with construction activities performed under the direction of a municipal stormwater permittee. The Contractor shall prepare and implement a Pollution Prevention Plan (PPP) in accordance with Section 29 "Stormwater and Non-Stormwater Pollution Control" of the Detailed Specifications.

The Contractor's attention is directed to: 1) Section 29.2 "General Requirements" which allows the Engineer to withhold progress payments if the Contractor fails to fully implement Section 29 "Stormwater and Non-Stormwater Pollution Control" or is deemed to be in non-compliance with provisions of the Permit; 2) Section 29.3 "Pollution Prevention Plan Preparation and Approval" which requires that a PPP be prepared and approved prior to the Pre-Construction meeting; and 3) Section 29.5 "Pollution Prevention Plan Implementation" which allows the Engineer to suspend construction operations if the Contractor fails to implement the approved PPP and any amendments thereto.

Throughout the term of this contract, the total soil-disturbed area of the project site shall be no more than 1 acre.

6. Santa Margarita Watershed

The Contractor shall comply with the requirements of Board Order No. R9-2004-001 (NPDES Permit No. CAS0108766) NPDES Municipal Separate Storm Sewer System Permit (MS4s), hereafter referred to in this Section as the "Permit", issued by the California Regional Water Quality Control Board (CRWQCB) – San Diego Region. This Permit regulates stormwater discharges associated with construction activities performed under the direction of a municipal stormwater permittee. The Contractor shall prepare and implement a Pollution Prevention Plan (PPP) in accordance with Section 29 "Stormwater and Non-Stormwater Pollution Control" of the Detailed Specifications.

The Contractor's attention is directed to: 1) Section 29.2 "General Requirements" which allows the Engineer to withhold progress payments if the Contractor fails to fully implement Section 29 "Stormwater and Non-Stormwater Pollution Control" or is deemed to be in non-compliance with provisions of the Permit; 2) Section 29.3 "Pollution Prevention Plan Preparation and Approval" which requires that a PPP be prepared and approved prior to the Pre-Construction meeting; and 3) Section 29.5 "Pollution Prevention Plan Implementation" which allows the Engineer to suspend construction operations if the Contractor fails to implement the approved PPP and any amendments thereto.

Throughout the term of this contract, the total soil-disturbed area of the project site shall be no more than 1 acre.

SECTION 29 – STORMWATER AND NON-STORMWATER POLLUTION CONTROL

For construction site **≥ 1** acre, choose 1, 2 or 3 (SWPPP) **with** Appendix; - **OR** -

For construction site **< 1** acre, choose 4 (PPP) – **no** Appendix.

1. Santa Ana Watershed

29.1 Description – The contract item Stormwater and Non-Stormwater Pollution Control shall include preparing, obtaining approval of, amending and implementing the Stormwater Pollution Prevention Plan (SWPPP) as required by the State Water Resources Control Board (SWRCB) and the California Regional Water Quality Control Board (CRWQCB) - Santa Ana Region.

The SWPPP shall identify site specific Best Management Practices (BMPs) to be implemented during and after construction to minimize the potential pollution of stormwater runoff and receiving waters. The identified BMPs shall be practices designed to minimize or eliminate the discharge of pollutants from the construction site and Contractor's construction activities, including, but not limited to:

1. Good housekeeping practices for solid and sanitary/septic waste management, vehicle and equipment cleaning/maintenance, and material handling and storage.

2. Construction procedures such as stabilized construction access points, scheduling/phasing to minimize areas of soil disturbance, soil stabilization and erosion/sediment control.

The SWPPP shall also stipulate an ongoing program for monitoring and maintenance of all BMPs.

29.2 General Requirements – All activities performed by the Contractor for this project shall conform to the requirements of the State-wide National Pollutant Discharge Elimination System (NPDES) General Permit (Permit No. CAS000002) for Stormwater Discharges Associated with Construction and Land Disturbance Activities, hereafter referred to as the "General Permit", issued by the SWRCB. This General Permit regulates both stormwater and non-stormwater discharges associated with Contractor's construction activities. A copy of this General Permit is included as Appendix "D" of these Specifications.

In the event the District incurs any Administrative Civil Liability or Mandatory Minimum (fine) imposed by the CRWQCB - Santa Ana Region, as a result of Contractor's failure to fully implement the provisions of this section and permit requirements, "Stormwater and Non-Stormwater Pollution Control", the Engineer may, in the exercise of his sole judgment and discretion, withhold from payments otherwise due Contractor a sufficient amount to cover the Civil Liability. Liability may be in an amount up to $32,500 per day per deemed occurrence.

Also insert *** portion found after 3. verbiage.

2. Santa Margarita Watershed

29.1 Description – The contract item Stormwater and Non-Stormwater Pollution Control shall include preparing, obtaining approval of, amending and implementing the Stormwater Pollution Prevention Plan (SWPPP) as required by the State Water Resources Control Board (SWRCB),

the California Regional Water Quality Control Board (CRWQCB) - San Diego Region and by the District's Santa Margarita Region Stormwater Management Plan (District SWMP).

The SWPPP shall identify site specific Best Management Practices (BMPs) to be implemented during and after construction to minimize the potential pollution of stormwater runoff and receiving waters. The identified BMPs shall be practices designed to minimize or eliminate the discharge of pollutants from the construction site and Contractor's construction activities, including, but not limited to:

1. Good housekeeping practices for solid and sanitary/septic waste management, vehicle and equipment cleaning/maintenance, and material handling and storage.

2. Construction procedures such as stabilized construction access points, scheduling/phasing to minimize areas of soil disturbance, soil stabilization and erosion/sediment control.

3. Incorporating the minimum BMPs identified in Section 5.2 of the District's SWMP.

The SWPPP shall also stipulate an ongoing program for monitoring and maintenance of all BMPs.

29.2 General Requirements – All activities performed by the Contractor for this project shall conform to the requirements of the State-wide National Pollutant Discharge Elimination System (NPDES) General Permit (Permit No. CAS000002) for Stormwater Discharges of Associated with Construction and Land Disturbance Activities, hereafter referred to as the "General Permit", issued by the SWRCB. This General Permit regulates both stormwater and non-stormwater discharges associated with Contractor's construction activities. A copy of this General Permit is included as Appendix "D" of these Specifications.

In the event the District incurs any Administrative Civil Liability or Mandatory Minimum (fine) imposed by the CRWQCB – San Diego Region, as a result of Contractor's failure to fully implement the provisions of this section and permit requirements, "Stormwater and Non-Stormwater Pollution Control", the Engineer may, in the exercise of his sole judgment and discretion, withhold from payments otherwise due Contractor a sufficient amount to cover the Civil Liability. Liability may be in an amount up to $32,500 per day per deemed occurrence.

Also insert *** text portion found after 3. verbiage.

3. Whitewater River Watershed

29.1 Description – The contract item Storm Water and Non-Storm Water Pollution Control shall include preparing, obtaining approval of, amending and implementing the Storm Water Pollution Prevention Plan (SWPPP) as required by the State Water Resources Control Board

(SWRCB) and the California Regional Water Quality Control Board (CRWQCB) - Colorado River Basin Region.

The SWPPP shall identify site specific Best Management Practices (BMPs) to be implemented during and after construction to minimize the potential pollution of stormwater runoff and receiving waters. The identified BMPs shall be practices designed to minimize or eliminate the discharge of pollutants from the construction site and Contractor's construction activities, including, but not limited to:

1. Good housekeeping practices for solid and sanitary/septic waste management, vehicle and equipment cleaning/maintenance, and material handling and storage.

2. Construction procedures such as stabilized construction access points, scheduling/phasing to minimize areas of soil disturbance, soil stabilization and erosion/sediment control.

3. Measures to control debris disposal, releases of sediment laden liquids, spills, leakage, and dumping, and to prevent illicit connections during construction must be addressed through structural as well as non-structural BMPs.

4. Staff must be trained in stormwater management.

The SWPPP shall also stipulate an ongoing program for monitoring and maintenance of all BMPs.

29.2 General Requirements – All activities performed by the Contractor for this project shall conform to the requirements of the State-wide National Pollutant Discharge Elimination System (NPDES) General Permit (Permit No. CAS000002) for Discharges of Stormwater Runoff Associated with Construction Activity, hereafter referred to as the "General Permit", issued by the SWRCB. This General Permit regulates both stormwater and non-stormwater discharges associated with Contractor's construction activities. A copy of this General Permit is included as Appendix "D" of these Specifications.

The project must comply with State Water Resources Control Board (SWRCB) Order No. 99-08-DWQ (Permit No. CAS000002) Waste Discharge Requirements for Discharges of Storm Water Runoff Associated with Construction Activity through June 30, 2010. Beginning July 1, 2010, the project must comply with Order No. 2009-0009-DWQ which was adopted on September 2, 2009.

Please note that Permit Registration Documents (PRDs) required by the new Order will need to be submitted well in advance of the July 1, 2010 Permit implementation date. The District will coordinate the submittal of the PRDs with the Contractor as the date approaches if necessary.

Another requirement of this new General Permit is the Training Qualifications and Certification Requirements found in Section VII of the Order. SWPPPs will need to be written, amended and

certified by a Qualified SWPPP Developer (QSD) and all BMPs required by the Permit are to be implemented by a Qualified SWPPP Practitioner (QSP). The Contractor should familiarize itself, and comply with the new Permit Training Qualifications and Certification Requirements prior to the July 1, 2010 implementation date.

In the event the District incurs any Administrative Civil Liability or Mandatory Minimum Penalty (fine) imposed by the CRWQCB – Colorado River Basin Region, as a result of Contractor's failure to fully implement the provisions of this section and permit requirements, "Stormwater and Non-Stormwater Pollution Control", the Engineer may, in the exercise of his sole judgment and discretion, withhold from payments otherwise due Contractor a sufficient amount to cover the Civil Liability. Liability may be in an amount up to $32,500 per day per deemed occurrence.

Also insert *** text portion found after 3. verbiage.

***** After 29.2 insert the following (same for all watersheds)**

Stormwater and Non-Stormwater Pollution Control work shall conform to the requirements in the latest version of the California Stormwater Quality Association (CASQA) Handbook, entitled **"California Stormwater BMP Handbook – Construction"**. A copy of the "California Stormwater BMP Handbook – Construction", hereafter referred to as the "CASQA Handbook", may be obtained from CASQA, Post Office Box 2105, Menlo Park, California 94026-2105. Telephone: 650.366.1042. Copies of the handbook can also be downloaded from the CASQA Internet site at http://www.cabmphandbooks.com/construction.asp. In addition, a copy of the CASQA Handbook is available for review at the District's office.

The Contractor shall be responsible for all costs and for any liability imposed by law as a result of the Contractor's failure to comply with the requirements set forth in this section, "Stormwater and Non-Stormwater Pollution Control", including but not limited to, compliance with the applicable provisions of the CASQA Handbook, General Permit, Federal, State and local regulations. For the purpose of this paragraph, costs and liabilities include, but are not limited to, fines, penalties and damages whether assessed against the District or the Contractor, including those levied under the Federal Clean Water Act and the State Porter-Cologne Water Quality Act.

The Contractor shall become fully informed of and comply with the applicable provisions of the CASQA Handbook, General Permit, Federal, State and local regulations that govern the Contractor's activities and operation pertaining to both stormwater and non-stormwater discharges from both the project site and areas of disturbance outside the project limits during construction. The Contractor shall, at all times, keep copies of the General Permit, approved SWPPP and all amendments at the project site. The SWPPP shall be made available upon request of a representative of the SWRCB, CRWQCB, United States Environmental Protection Agency (USEPA) or local stormwater management agency. Requests by the public shall be directed to the Engineer.

The Contractor is solely and exclusively responsible for any arrangements made between the Contractor and other property owners or entities that results in disturbance of areas or construction activities being conducted outside limits of the designated rights-of-way and temporary construction easements as shown on the project drawings.

The Contractor shall, at reasonable times, allow authorized agents of the CRWQCB, SWRCB, USEPA or local stormwater management agency, upon the presentation of credentials and other documents as may be required by law, to:

1. Enter upon the construction site and the Contractor's facilities pertinent to the work;
2. Have access to and copy any records required to be kept as specified in the General Permit;
3. Inspect the construction site, including any offsite staging areas or material storage areas, and related soil stabilization practices and sediment control BMPs; and
4. Sample or monitor for the purpose of ensuring compliance with the General Permit.

The Contractor shall notify the Engineer immediately upon request from regulatory agencies to enter, inspect, sample, monitor or otherwise access the project site or the Contractor's records.

29.3 Stormwater Pollution Prevention Plan Preparation and Approval - The Contractor shall prepare and obtain approval of the SWPPP as part of the Stormwater and Non-Stormwater Pollution Control work for this contract. The SWPPP shall include an appropriate sampling and analysis plan (SAP) as required by Section B, "Monitoring Program and Reporting Requirements", of the General Permit. A guidance document titled "Construction Storm Water Sampling and Analysis Guidance Document" is available from the California Stormwater Quality Association internet site at http://www.cabmphandbooks.com/Construction.asp. The Contractor shall prepare and implement the SWPPP in accordance with the CASQA Handbook and SAP, the General Permit and these Detailed Specifications.

In case of conflict between the CASQA Handbook and these Detailed Specifications, the Detailed Specifications shall govern; in case of conflict between these Detailed Specifications and the General Permit, the latter shall govern.

Within five (5) working days after the award of the contract, the Contractor shall submit two (2) copies of the SWPPP to the Engineer for review and approval. The Contractor shall allow ten (10) working days for the Engineer to review the SWPPP. If revisions are required as determined by the Engineer, the Contractor shall revise and resubmit the SWPPP within three (3) working days of receipt of the Engineer's comments and shall allow ten (10) working days for the Engineer to review the revisions. The Contractor shall submit four (4) copies of the approved SWPPP to the Engineer prior to the pre-construction meeting. **The Contractor must have an approved SWPPP prior to the pre-construction meeting**.

The objectives of the SWPPP shall be to identify all pollution sources associated with Contractor's construction activities that may adversely affect the quality of stormwater discharges; to identify all non-stormwater discharges; to identify, construct, implement and maintain water pollution control best management practices, hereafter referred to as "BMPs", to reduce to the maximum extent practicable pollutants in both stormwater discharges and authorized non-stormwater discharges from the construction site during construction and to develop a maintenance schedule for BMPs after construction is completed under this contract.

The SWPPP shall incorporate BMPs in each of the following categories:

1. Soil stabilization practices;
2. Sediment control practices;
3. Sediment tracking control practices;
4. Wind erosion control practices; and
5. Non-stormwater management, and waste management and disposal control practices.

Specific objectives and minimum requirements for each category of BMPs are described in the CASQA Handbook. The Contractor shall consider the objectives and minimum requirements presented in the CASQA Handbook for each of the above categories. When minimum requirements are listed for any category, the Contractor shall incorporate one or more of the listed minimum BMPs required into the SWPPP and implement on the project to meet the pollution control objectives for the category. In addition, the Contractor shall consider other BMPs presented in the CASQA Handbook to supplement the minimum BMPs required when necessary to meet the objectives of the SWPPP and maintain compliance with the General Permit. The Contractor shall document the selection process in accordance with the procedure specified in the CASQA Handbook.

The Contractor should not assume that the minimum BMPs required for each category presented in the CASQA Handbook are adequate to meet the pollution control objectives. The Contractor may use other effective BMPs, as approved by the Engineer, in addition to the minimum as required in the CASQA Handbook to achieve the pollution control objectives.

The SWPPP shall include the following items as described in the CASQA Handbook, SAP and General Permit:

1. Title Page;
2. Certification and Approval;
3. Table of Contents;
4. Description of Site;
5. Source Identification;
6. Stormwater and Non-Stormwater Pollution Control Drawings;
7. Erosion Control;
8. Stabilization;
9. Sediment Control;

10. Non-Stormwater Management;
11. Waste Management and Disposal;
12. Implementation of any approved local plans;
13 Development and Implementation of Monitoring Program
14. Maintenance, Inspection and Repair Program;
15. Training;
16. List of Contractors and Subcontractors;
17. Sampling and Analysis Plan;
18. Post-Construction Stormwater Management and Control Requirements;
19. Current Inventory of BMP related materials;
20. Mobilization Plan for BMP deployment;
21. A copy of the Notice Of Intent (NOI) form submitted by the District for this project;
22. A copy of the Waste Discharge Identification (WDID) number or proof of mailing of the NOI (provided by the District);
23. A copy of the General Permit;
24. A copy of other applicable Plans/Permits, if any;
25. Construction Site Inspection Checklist;
26. Pre/Post Storm Inspection Checklist;
27. Inspection Log;
28. A copy of the Amendments, if any;
29. Amendment Certification and Approval, if any;
30. Amendment Log;
31. Annual Compliance Certification;
32. BMPs Consideration Checklist; and
33. SWPPP Checklist.

To ensure that the preparation, implementation, and oversight of the SWPPP is sufficient for effective pollution prevention, individuals responsible for creating, revising, overseeing, and implementing the SWPPP should participate in applicable training programs and document such training in the SWPPP. A copy of the SWPPP should be located at the construction site.

The following notes (or notes of substantially similar intent) that address pollution prevention to the Maximum Extent Practicable during the construction phase of a project on a year-round basis needs to be placed on the Stormwater and Non-Stormwater Pollution Control Drawings:

- Erosion control BMPs shall be implemented and maintained to minimize and/or prevent the entrainment of soil in runoff from disturbed soil areas on construction sites.
- Sediment control BMPs shall be implemented and maintained to prevent and/or minimize the transport of soil from the construction site.
- Stockpiles of soil shall be properly contained to eliminate or reduce sediment transport from the site to streets, drainage facilities or adjacent properties via runoff, vehicle tracking or wind.

- Appropriate BMPs for construction-related materials, wastes, spills or residues shall be implemented to eliminate or reduce transport from the site to streets, drainage facilities or adjoining properties by wind or runoff.
- Runoff from equipment and vehicle washing shall be contained at construction sites and must not be discharged to receiving waters or the local storm drain system. Washwaters or rinsate from ready mix, concrete, or cement vehicles must be handled appropriately and may not be discharged to receiving waters or the any storm drain system.
- All construction contractor and subcontractor personnel are to be made aware of the required best management practices and good housekeeping measures for the project site and any associated construction staging areas.
- At the end of each day of construction activity all construction debris and waste materials shall be collected and properly disposed in trash or recycle bins.
- Construction sites shall be maintained in such a condition that a storm does not carry wastes or pollutants off the site. Discharges other than stormwater (non-stormwater discharges) are prohibited, except as authorized by an individual NPDES permit or the State-wide General Permit for Storm Water Discharges Associated with Construction Activity. Potential pollutants include but are not limited to: solid or liquid chemical spills; wastes from paints, stains, sealants, solvents, detergents, glues, lime, pesticides, herbicides, fertilizers, wood preservatives and asbestos fibers; paint flakes or stucco fragments; fuels, oils, lubricants and hydraulic, radiator or battery fluids; concrete and related cutting or curing residues; floatable wastes; wastes from engine/equipment steam cleaning or chemical degreasing; wastes from street cleaning; and super-chlorinated potable water from line flushing and testing. During construction, disposal of such materials should occur in a specified and controlled temporary area onsite physically separated from potential stormwater runoff, with ultimate disposal in accordance with local, State and Federal requirements.
- Discharging contaminated groundwater produced by dewatering groundwater that has infiltrated into the construction site is prohibited. Discharging of contaminated soils via surface erosion is also prohibited.
- The Contractor is required to notify and obtain approval from the District 10 days prior to any non-stormwater discharge or dewatering associated with Contractor's construction activities.
- Construction sites shall be managed to minimize the exposure time of disturbed soil areas through phasing and scheduling of grading to the extent feasible and the use of temporary and permanent soil stabilization.
- BMPs shall be maintained at all times. In addition, BMPs shall be inspected prior to predicted storm events and following storm events.

29.4 Stormwater Pollution Prevention Plan Amendments - The Contractor shall prepare amendments to the SWPPP, both graphically and in narrative form, whenever there is a change in Contractor's construction activities or operations which may result in the discharge of pollutants to surface waters, groundwaters, municipal storm drain systems, or as deemed necessary by the Engineer. The Contractor shall also amend the SWPPP if it is in violation of any condition of the General Permit, or has not effectively achieved the objective of reducing

pollutants in stormwater discharges. Amendments shall show additional BMPs, revised Contractor's construction activities or operations, including those in areas not shown in the initially approved SWPPP, which are required on the project to effectively control water pollution.

Amendments to the SWPPP shall be submitted for review and approval by the Engineer in the same manner specified for the initial approval of the SWPPP. The Contractor shall date and attach all approved amendments to the SWPPP. Upon approval of the amendment, the Contractor shall implement the additional BMPs, revised construction activities or operations.

29.5 Annual Compliance Certification – The Contractor shall certify annually that construction activities are in compliance with the requirements of the General Permit and the approved SWPPP. The certification must be completed by July 1st of each year.

29.6 Non-Compliance Reporting - If the project is in non-compliance at any time, the Contractor shall make a written report to the Engineer within two (2) calendar days of identification of non-compliance activities.

29.7 SWPPP Implementation - Upon approval of the SWPPP, the Contractor shall be responsible throughout the duration of the project for placing, installing, constructing, inspecting and maintaining the BMPs as well as conducting the sampling and analysis plan as included in the SWPPP and any amendments thereto, and for removing and disposing of temporary BMPs. Unless otherwise directed by the Engineer or specified in these Detailed Specifications, the Contractor's responsibility for SWPPP implementation shall continue throughout any temporary suspension of work ordered in accordance with Section 6.05, "TEMPORARY SUSPENSION OF THE WORK", of the General Provisions. Requirements for installation, construction, inspection, maintenance, removal and disposal of BMPs are specified in the Caltrans Handbooks and these Detailed Specifications.

The Engineer may order the suspension of construction operations if the Contractor fails to comply with the requirements of this section, "Stormwater and Non-Stormwater Pollution Control", as determined by the Engineer.

The Contractor will not be compensated for sampling and analysis work because of the Contractor's failure to properly implement, inspect, maintain and repair BMPs in the approved SWPPP and any amendments thereto, or for failing to store construction materials or wastes in watertight containers.

(a) **Santa Margarita Watershed** Stormwater Pollution Control - **The Contractor shall implement soil stabilization practices and sediment control BMPs, including minimum requirements as presented in the Caltrans Handbooks, on all disturbed areas of the project site during the rainy season, defined as between October 1st and April 30th.**

(a) **Whitewater Watershed** Stormwater Pollution Control - **The Contractor shall implement soil stabilization practices and sediment control BMPs, including**

minimum requirements as presented in the Caltrans Handbooks, on all disturbed areas of the project site during the rainy season, although undefined shall be August 1- October 1 and November 1-May 1, which is consistent with Caltrans definition of rainy season for the eastern desert region.

(a) **Santa Ana Watershed** Stormwater Pollution Control - **The Contractor shall implement soil stabilization practices and sediment control BMPs, including minimum requirements as presented in the Caltrans Handbooks, on all disturbed areas of the project site during the rainy season, defined as between October 1st and May 31st.**

Implementation of soil stabilization practices and sediment control BMPs for soil-disturbed areas, including but not limited to, rough graded access roads, slopes, channel inverts, operational inlets and outlets of the project shall be completed no later than ten (10) calendar days prior to the start of the rainy season or upon start of applicable Contractor's construction activities for projects which begin either during or within ten (10) calendar days of the rainy season.

The Engineer may require the Contractor, on a case-by-case basis, to reduce the active, soil-disturbed area limit of the project. The Contractor shall demonstrate the ability and preparedness to fully deploy soil stabilization practices and sediment control BMPs to protect soil-disturbed areas of the project site by maintaining an adequate quantity of soil stabilization and sediment control materials onsite to protect exposed, soil-disturbed areas and a detailed plan for the mobilization of sufficient labor and equipment to fully deploy the required BMPs prior to the onset of precipitation and for the duration of the project.

Throughout the rainy season, soil-disturbed areas of the project site shall be considered to be nonactive whenever soil disturbing activities are expected to be discontinued for a period of fifteen (15) calendar days or more. Areas that will become nonactive either during the rainy season or within ten (10) calendar days thereof shall be fully protected with soil stabilization practices such as covering with mulch, temporary seeding, fiber rolls, blankets, etc., within ten (10) calendar days of the discontinuance of soil disturbing activities or prior to the onset of precipitation, whichever is first to occur. Areas that will become nonactive either during the rainy season or within ten (10) calendar days thereof shall be fully protected with sediment control BMPs within ten (10) calendar days of the discontinuance of soil disturbing activities or prior to the onset of precipitation, whichever is first to occur.

Throughout the rainy season, active soil-disturbed areas of the project site shall be fully protected at the end of each day with soil stabilization practices and sediment control BMPs. The Contractor shall monitor the weather forecast on a daily basis. The National Weather Service forecast shall be used, or an alternative weather forecast proposed by the Contractor may be used if approved by the

Engineer. If precipitation is predicted prior to the end of the following workday, construction scheduling shall be modified, as required, and the Contractor shall deploy functioning BMPs prior to the onset of the precipitation.

(b) Non-Stormwater Pollution Control - **The Contractor shall implement, year-round and throughout the duration of the project, BMPs included in the SWPPP for sediment tracking, wind erosion, non-stormwater management, and waste management and disposal.**

(c) Inspections and Reporting - The Contractor shall regularly inspect the construction site for BMPs identified in the SWPPP to ensure the proper implementation and functioning of BMPs. The Contractor shall identify corrective actions and time frames to address any damaged BMPs or reinitiate any BMPs that have been discontinued.

At a minimum, the Contractor shall inspect the construction site as follows:

1. Prior to a forecast storm;
2. After any precipitation which causes runoff capable of carrying sediment from the construction site;
3. At 24 hour intervals during extended precipitation events; and
4. At a regular interval of once every 2 weeks.

The construction site inspection checklist provided in the Caltrans Handbooks shall be used to ensure that the necessary BMPs are being properly implemented and are functioning adequately. The Contractor shall submit one copy of each site inspection record to the Engineer.

(d) Maintenance - The Contractor shall maintain construction site BMPs identified in the SWPPP to ensure the proper implementation and functioning of BMPs. If the Contractor or the Engineer identifies a deficiency in the deployment or functioning of an identified BMP, the deficiency shall be corrected by the Contractor immediately, or by a later date and time if requested by the Contractor and approved by the Engineer in writing, but not later than the onset of subsequent precipitation events. The correction of deficiencies shall be at no additional cost to the District.

(e) Training – The Contractor shall describe the types of training that the Contractor's BMP inspection, maintenance and repair personnel have received or will receive that is directly related to stormwater pollution prevention.

29.8 Payment - The contract lump sum price paid for the Stormwater and Non-Stormwater Pollution Control work shall include full compensation for furnishing all labor, materials, tools, equipment and incidentals for doing all the work involved in developing, preparing, obtaining approval of, revising and amending the SWPPP, and installing, constructing, maintaining, removing and disposing of BMPs as shown in the SWPPP, as specified in the Caltrans

Handbooks and Sample Contractor's Water Quality SAPs, General Permit and these Detailed Specifications, and as directed by the Engineer.

Payment will be made on a basis of the percentage of work completed on the entire project.

ΞΞΞEnd of insert

4. For construction site < 1 acre (PPP) NO Appendix

29.1 Description - The contract item Stormwater and Non-Stormwater Pollution Control shall include preparing, obtaining approval of, amending and implementing Contractor's Pollution Prevention Plan (PPP). The PPP shall identify site specific Best Management Practices (BMPs) to be implemented during and after construction to minimize the potential pollution of stormwater runoff and receiving waters. The identified BMPs shall be practices designed to minimize or eliminate the discharge of pollutants from the construction site and Contractor's construction activities, including, but not limited to:

1. Good housekeeping practices for solid and sanitary/septic waste management, vehicle and equipment cleaning/maintenance, and material handling and storage.

2. Construction procedures such as stabilized construction access points, scheduling/phasing to minimize areas of soil disturbance, soil stabilization and erosion/sediment control.

The PPP shall also stipulate an ongoing program for monitoring and maintenance of all BMPs.

29.2 General Requirements – Stormwater and Non-Stormwater Pollution Control work shall conform to the requirements in the latest version of Caltrans Storm Water Quality Handbooks, entitled **"Construction Site Best Management Practices (BMPs) Manual" and "Storm Water Pollution Prevention Plan (SWPPP) and Water Pollution Control Program (WPCP) Preparation Manual"**. Copies of the "Construction Site BMPs Manual" and "SWPPP and WPCP Preparation Manual", hereafter referred to collectively as the "Caltrans Handbooks", may be obtained from the California Department of Transportation Publication Distribution Unit, 1900 Royal Oaks Drive, Sacramento, California, 95815-3800. Telephone: (916) 445-3520. Copies of the Caltrans Handbooks can also be downloaded from the Caltrans internet site at http://www.dot.ca.gov/hq/construc/stormwater/manuals.htm. In addition, copies of the Caltrans Handbooks are available for review at the District's office.

In the event the District incurs any Administrative Civil Liability or Mandatory Minimum Penalty (fine) imposed by the California Regional Water Quality Control Board, as a result of Contractor's failure to fully implement the provisions of this section and permit requirements, "Stormwater and Non-Stormwater Pollution Control", the Engineer may, in the exercise of his sole judgment and discretion, withhold from payments otherwise

due Contractor a sufficient amount to cover the Civil Liability. Liability may be in an amount up to $32,500 per day per deemed occurrence.

The Contractor shall be responsible for all costs and for any liability imposed by law as a result of the Contractor's failure to comply with the requirements set forth in this section, "Stormwater and Non-Stormwater Pollution Control", including but not limited to, compliance with the applicable provisions of the Caltrans Handbooks, Federal, State, and local regulations. For the purpose of this paragraph, costs and liabilities include, but are not limited to, fines, penalties and damages whether assessed against the District or the Contractor, including those levied under the Federal Clean Water Act and the State Porter-Cologne Water Quality Act.

The Contractor shall become fully informed of and comply with the applicable provisions of the Caltrans Handbooks, Federal, State and local regulations that govern the Contractor's activities and operation pertaining to both stormwater and non-stormwater discharges from both the project site and areas of disturbance outside the project limits during construction. The Contractor shall, at all times, keep copies of the approved PPP and all amendments at the project site. The PPP shall be made available upon request of a representative of the SWRCB, CRWQCB, United States Environmental Protection Agency (USEPA) or local stormwater management agency. Requests by the public shall be directed to the Engineer.

The Contractor is solely and exclusively responsible for any arrangements made between the Contractor and other property owners or entities that results in disturbance of areas or construction activities being conducted outside limits of the designated rights-of-way and temporary construction easements as shown on the project drawings.

29.3 Pollution Prevention Plan Preparation and Approval - The Contractor shall prepare and obtain approval of the PPP as part of the Stormwater and Non-Stormwater Pollution Control work for this contract. The Contractor shall prepare the PPP in accordance with Section 3, "Preparing a Water Pollution Control Program (WPCP)", of the Caltrans Storm Water Quality Handbooks, entitled "**Storm Water Pollution Prevention Plan (SWPPP) and Water Pollution Control Program (WPCP) Preparation Manual**" and these Detailed Specifications.

In case of conflict between the Caltrans Handbooks and these Detailed Specifications, the Detailed Specifications shall govern.

Within five (5) working days after the award of the contract, the Contractor shall submit two (2) copies of the PPP to the Engineer for review and approval. The Contractor shall allow ten (10) working days for the Engineer to review the PPP. If revisions are required as determined by the Engineer, the Contractor shall revise and resubmit the PPP within three (3) working days of receipt of the Engineer's comments and shall allow ten (10) working days for the Engineer to review the revisions. The Contractor shall submit four (4) copies of the approved PPP to the Engineer prior to the pre-construction meeting. **The Contractor must have an approved PPP prior to the pre-construction meeting**.

The objectives of the PPP shall be to identify all pollution sources associated with Contractor's construction activities that may adversely affect the quality of stormwater discharges and receiving waters; to identify all non-stormwater discharges; to identify, construct, implement and maintain water pollution control best management practices, hereafter referred to as "BMPs", to reduce to the maximum extent practicable pollutants in both stormwater and authorized non-stormwater discharges from the construction site during construction and to develop a maintenance schedule for BMPs after construction is completed under this contract.

The PPP shall incorporate BMPs in each of the following categories:

1. Soil stabilization practices;
2. Sediment control practices;
3. Sediment tracking control practices;
4. Wind erosion control practices; and
5. Non-stormwater management, and waste management and disposal control practices.

Specific objectives and minimum requirements for each category of BMPs are contained in the Caltrans Handbooks. The Contractor shall consider the objectives and minimum requirements presented in the Caltrans Handbooks for each of the above categories. When minimum requirements are listed for any category, the Contractor shall incorporate one or more of the listed minimum BMPs required into the PPP and implement on the project to meet the pollution control objectives for the category. In addition, the Contractor shall consider other BMPs presented in the Caltrans Handbooks to supplement the minimum BMPs required when necessary to meet the objectives of the PPP. The Contractor shall document the selection process in accordance with the procedure specified in the Caltrans Handbooks.

The Contractor shall not assume that the minimum BMPs required for each category presented in the Caltrans Handbooks are adequate to meet the pollution control objectives. The Contractor may use other effective BMPs, as approved by the Engineer, in addition to the minimum BMPs required in the Caltrans Handbooks to achieve the pollution control objectives.

The PPP shall include all of the following items in the order given below:

1. Title Page;
2. Table of Contents;
3. Project Description and Contractor's Certification;
4. Project Information;
5. Pollution Sources and BMPs;
6. Water Pollution Control Drawings;
7. A copy of the Amendments, if any;
8. Amendment Log;
9. Maintenance, Inspection, and Repair Program;
10. Inspection Log;
11. Construction Site Inspection Checklist;
12. Current Inventory of BMP related materials; and

13. Mobilization Plan for BMP deployment.

The following notes (or notes of substantially similar intent) that address pollution prevention to the Maximum Extent Practicable during the construction phase of a project on a year-round basis needs to be placed on the Stormwater and Non-Stormwater Pollution Control Drawings:

- Erosion control BMPs shall be implemented and maintained to minimize and/or prevent the entrainment of soil in runoff from disturbed soil areas on construction sites.
- Sediment control BMPs shall be implemented and maintained to prevent and/or minimize the transport of soil from the construction site.
- Stockpiles of soil shall be properly contained to eliminate or reduce sediment transport from the site to streets, drainage facilities or adjacent properties via runoff, vehicle tracking or wind.
- Appropriate BMPs for construction-related materials, wastes, spills or residues shall be implemented to eliminate or reduce transport from the site to streets, drainage facilities or adjoining properties by wind or runoff.
- Runoff from equipment and vehicle washing shall be contained at construction sites and must not be discharged to receiving waters or the local storm drain system. Washwaters or rinsate from ready mix, concrete, or cement vehicles must be handled appropriately and may not be discharged to receiving waters or the any storm drain system.
- All construction contractor and subcontractor personnel are to be made aware of the required best management practices and good housekeeping measures for the project site and any associated construction staging areas.
- At the end of each day of construction activity all construction debris and waste materials shall be collected and properly disposed in trash or recycle bins.
- Construction sites shall be maintained in such a condition that a storm does not carry wastes or pollutants off the site. Discharges other than stormwater (non-stormwater discharges) are prohibited, except as authorized by an individual NPDES permit, the State-wide General Permit for Storm Water Discharges Associated with Construction Activity. Potential pollutants include but are not limited to: solid or liquid chemical spills; wastes from paints, stains, sealants, solvents, detergents, glues, lime, pesticides, herbicides, fertilizers, wood preservatives and asbestos fibers; paint flakes or stucco fragments; fuels, oils, lubricants and hydraulic, radiator or battery fluids; concrete and related cutting or curing residues; floatable wastes; wastes from engine/equipment steam cleaning or chemical degreasing; wastes from street cleaning; and super-chlorinated potable water from line flushing and testing. During construction, disposal of such materials should occur in a specified and controlled temporary area onsite physically separated from potential stormwater runoff, with ultimate disposal in accordance with local, State and Federal requirements.
- Discharging contaminated groundwater produced by dewatering groundwater that has infiltrated into the construction site is prohibited. Discharging of contaminated soils via surface erosion is also prohibited.

- The Contractor is required to notify and obtain approval from the District 10 days prior to any non-stormwater discharge or dewatering associated with Contractor's construction activities.
- Construction sites shall be managed to minimize the exposure time of disturbed soil areas through phasing and scheduling of grading to the extent feasible and the use of temporary and permanent soil stabilization.
- BMPs shall be maintained at all times. In addition, BMPs shall be inspected prior to predicted storm events and following storm events.

29.4 Pollution Prevention Plan Amendments - The Contractor shall prepare amendments to the PPP, both graphically and in narrative form, whenever there is a change in Contractor's construction activities or operations which may result in the discharge of pollutants to surface waters, groundwaters, municipal storm drain systems or when deemed necessary by the Engineer. The Contractor shall also amend the PPP if it is not effectively achieving the objectives of reducing pollutants in stormwater discharges. Amendments shall show additional BMPs or revisions to Contractor's construction activities or operations (including any construction activities in areas not included in the initially approved PPP) which are required on the project to effectively control water pollution.

Amendments to the PPP shall be submitted for review and approval by the Engineer in the same manner specified for the initial approval of the PPP. The Contractor shall date and attach all approved amendments to the PPP. Upon approval of the amendment, the Contractor shall implement the additional BMPs, revised construction activities or operations as described therein.

29.5 Pollution Prevention Plan Implementation - Upon approval of the PPP, the Contractor shall be responsible throughout the duration of the project for installing, constructing, inspecting and maintaining the BMPs included in the PPP and any amendments thereto and for removing and disposing of temporary BMPs. Unless otherwise directed by the Engineer or specified in these Detailed Specifications, the Contractor's responsibility for PPP implementation and maintenance shall continue throughout any temporary suspension of work ordered in accordance with Section 6.05, TEMPORARY SUSPENSION OF THE WORK, of the General Provisions. Requirements for installation, construction, inspection, maintenance, removal and disposal of BMPs are specified in the Caltrans Handbooks and these Detailed Specifications. The Contractor shall implement the PPP in accordance with the Caltrans Handbooks and these Detailed Specifications.

The Engineer may order the suspension of construction operations if the Contractor fails to comply with the requirements of this section, "Stormwater and Non-Stormwater Pollution Control", as determined by the Engineer.

(a) Stormwater Pollution Control - **The Contractor shall implement soil stabilization practices and sediment control BMPs, including minimum requirements as presented in the Caltrans Handbooks, on all disturbed areas of the project site throughout the rainy season, defined as between August 1 -**

October 1 and November 1 - May 1, which is consistent with Caltrans definition of rainy season for the eastern desert region.

Implementation of soil stabilization practices and sediment control BMPs for soil-disturbed areas, including but not limited to, rough graded access roads, slopes, channel inverts, operational inlets and outlets of the project site shall be completed no later than ten (10) calendar days prior to the start of the winter season or upon start of applicable Contractor's construction activities for projects which begin either during or within ten (10) calendar days of the winter season.

Throughout the term of this contract, the total soil-disturbed area of the project site shall be less than one (1) acre. The Contractor shall demonstrate the ability and preparedness to fully deploy soil stabilization practices and sediment control BMPs to protect soil-disturbed areas of the project site by maintaining an adequate quantity of soil stabilization and sediment control materials onsite to protect exposed, soil-disturbed areas and a detailed plan for the mobilization of sufficient labor and equipment to fully deploy the required BMPs prior to the onset of precipitation and for the duration of the project.

Throughout the winter season, active soil-disturbed areas of the project site shall be fully protected at the end of each day with soil stabilization practices and sediment control BMPs. The Contractor shall monitor the weather forecast on a daily basis. The National Weather Service forecast shall be used or an alternative weather forecast proposed by the Contractor may be used if approved by the Engineer. If precipitation is predicted prior to the end of the following workday, construction scheduling shall be modified, as required, and the Contractor shall deploy functioning control measures prior to the onset of the precipitation.

Throughout the winter season, soil-disturbed areas of the project site shall be considered to be non-active whenever soil disturbing activities are expected to be discontinued for a period of fifteen (15) calendar days or more. Areas that will become non-active either during the winter season or within ten (10) calendar days thereof shall be fully protected with soil stabilization practices such as covering with mulch, temporary seeding, fiber rolls, blankets, etc. within ten (10) calendar days of the discontinuance of soil disturbing activities or prior to the onset of precipitation, whichever is first to occur. Areas that will become non-active either during the winter season or within ten (10) calendar days thereof shall be fully protected with sediment control BMPs within ten (10) calendar days of the discontinuance of soil disturbing activities or prior to the onset of precipitation, whichever is first to occur.

(b) Non-Stormwater Pollution Control - **The Contractor shall implement, year-round and throughout the duration of the project, BMPs included in the PPP for sediment tracking, wind erosion, non-stormwater management, and waste management and disposal.**

(c) Inspections and Reporting - The Contractor shall regularly inspect the construction site for BMPs identified in the PPP to ensure the proper implementation and functioning of BMPs. The Contractor shall identify corrective actions and time frames to address any deficient BMPs or reinitiate any BMPs that have been discontinued.

At a minimum, the Contractor shall inspect the construction site as follows:

1. Prior to a forecast storm;
2. After any precipitation which causes runoff capable of carrying sediment from the construction site;
3. At 24 hour intervals during extended precipitation events; and
4. At a regular interval of once every 2 weeks.

The construction site inspection checklist provided in the Caltrans Handbooks shall be used to ensure that the necessary BMPs are being properly implemented and are functioning adequately. The Contractor shall submit one copy of each site inspection record to the Engineer.

(d) Maintenance – The Contractor shall maintain construction site BMPs identified in the PPP to ensure the proper implementation and functioning of BMPs. If the Contractor or the Engineer identifies a deficiency in the deployment or functioning of an identified BMP, the deficiency shall be corrected by the Contractor immediately, or by a later date and time if requested by the Contractor and approved by the Engineer in writing, but not later than the onset of subsequent precipitation events. The correction of deficiencies shall be at no additional cost to the District.

(e) Training – The Contractor shall describe the types of training that the Contractor's BMP inspection, maintenance and repair personnel have received or will receive that is directly related to stormwater pollution prevention.

29.6 Payment - The contract lump sum price paid for contract item Stormwater and Non Stormwater Pollution Control shall include full compensation for all direct and indirect costs incurred under this section.

Payment will be made on a basis of the percentage of work completed on the entire project.

IC/ID REPORTS

Riverside County Flood Control and Water Conservation District

NPDES Complaint No. 1976

Type	Illicit Discharge
Received Date	4/30/2009
APN	906-070-074
First Name	Mark
Last Name	Mandel
Complainant Address	
Complainant City	Murrieta
Complainant Zip Code	92562
Phone	951 722-8906
Received By	David Ortega
Complaint Adderess	41891 Kalmia Street, Suite A
Complaint City	Murrieta
Complaint Zip Code	92562
Location	Creative Hydroseed

Complaint Grass seed has been dumped in a 'washout' area on the complaint address; the residual hydroseed has migrated on to the access road of the Riverside County Flood Control (RCFC) District facility: "Murrieta Creek Master Drainage Plan - Line F".

Findings 4/30/09: David Ortega, of the NPDES Section at the RCFC, (951) 955-4390, received a call today from Mark Mandel, Riverside County Code Enforcement, about this complaint.

Action 5/1/09: Mr. Ortega went to the site today and took a few photos of the hydroseed that has been dumped on the ground of the business located at the complaint address. Mr. Ortega also noticed that some of the hydroseed from this 'washout' area had migrated onto the access road of the RCFC District facility. Mr. Ortega went to the office of the complaint address and spoke with Jana Rush. She escorted Mr. Ortega to the fenced in 'washout' area to take a better look at the hydroseed that was dumped. Mr. Ortega took a few more photos and then told Ms. Rush that he would find out how severe this matter is. Later that day, Mr. Ortega briefed J. Uhley, of the NPDES Section at the RCFC about this incident. Mr. Uhley stated to Mr. Ortega that hydroseed is a big factor of nutrient loads in that watershed. 5/4/09: Mr. Ortega spoke briefly with Cheryl Roberts of Creative Hydroseed today about the 'washout' area at her business. Mr. Ortega stated that he will have to get with the City of Murrieta's Code Enforcement to find out how they would like to proceed with this matter. Ms. Roberts did say that "she is willing to cooperate with getting things cleaned up and getting a better 'washout' area engineered and in place as soon as possible". 5/20/09: Mark Mandel of County of Code Enforcement called Mr. Ortega today to inform him that Jason Jones, Murrieta Code Enforcement, (951) 461-6331, will be handling this matter. Mr. Mandel sent an email to Mr. Ortega about this and also stating that the business owner will be taking steps to reduce the risk of hydroseed run-off into the RCFC District's facility as well as off of the business property. These steps include: 1. Installing a curb in the rear of the property where they conduct the washouts of their hydroseeding business at the end of each day. 2. Installing an NPDES compliant concrete washout box for the hydroseeding residue. 3. Hiring an engineer to design a permanent concrete vault or pit with pumps to capture the hyroseeding residue and recycle it on the property. 6/17/09: Mr. Ortega and P. Nanney of the NPDES Section met briefly today with the owners of Creative Hydroseed to view the improved BMP's to the hydroseed washout area. Mr. Ortega gave the owners a few pamphlets about the County's Stormwater/Cleanwater program. Mr. Ortega also took a few photos of the installed BMP on site.

Complaint Zip Code 92591

Location Santa Gertrudis Creek Channel, just east of Winchester Road

Complaint A 100 gallon, metal tank, has been dumped in the Santa Gertrudis Creek Channel (a Riverside County Flood Control District facility), just east of Winchester Road. Not certain if there is any type of product in the tank that could be hazardous.

Findings 3/16/09: Avelino Valencia, of the Operations & Maintenance Section at the Riverside County Flood Control (RCFC) District, called David Ortega, in the NPDES Section at the RCFC, about this complaint. Mr. Valencia stated to Mr. Ortega that a guy from one of the field crews called this in today. Mr. Valencia told Mr. Ortega, at first, that the tank is located "downstream" of Winchester Road. And that the tank is in the creek bottom. 3/18/09: David Ortega spoke to Richard Garza today about this matter. Mr. Garza stated that he and others from one of the O & M field crews located this tank "about two months ago". Mr. Garza continued to say that "he notified Mark Luna about this who said that he would report it to others in the office". When the field crew members discovered this in the channel, they were hoping to mow the vegetation around it. They moved this tank slightly and noticed that some product was leaking from the bottom of the tank onto the soil. They quickly uprighted the tank and mowed around it. Mr. Valencia also stated that they (O & M) were hoping to remove it from the channel and bring the tank back here to the District because they "assumed" that there was "motor oil" in the tank because of the product that they saw leaking from it.

Action 3/16/09: Mr. Ortega called Kelly Winters, of Riverside County Haz.-Mat., (951) 453-5804, about this complaint. Mr. Winters stated that before he left for the day that he would go to this area to locate the tank and find out the status of it then he would call back to Mr. Ortega. Later in this day, Mr. Winters called back to Mr. Ortega and stated that he looked in Santa Gertrudis Creek Channel from Winchester Road to Margarita Road and could not locate the tank. Mr. Ortega told Mr. Winters that he will call him back tomorrow morning about this matter. 3/17/09, 1510 hours: Mr. Ortega arrived at the site and eventually located the tank in the Santa Gertrudis Creek Channel; upstream of Winchester Road near N. General Kearny Road. Mr. Ortega took a few photos while on site today. He noticed an information plate on the tank that stated it was a tank made "for butane gases only". Mr. Ortega called Mr. Winters back today to set up a time for tomorrow (3/18/09) to meet on site: 0830 hours. 3/18/09, 0830 hours: Mr. Ortega met with Mr. Winters and Jim Sappington of County Haz.-Mat. and with a crew from the Riverside County Fire Department, Emergency Response Unit. Mr. Winters used a "drum thief" to get some product out of the tank to perform a hazard categorization (haz.-cat.). The haz.-cat. of the product was a pH 7, combustible hydrocarbon. After the haz.-cat., Mr. Ortega was given permission by Mr. Winters to call a contractor to remove the tank and product from the site. Eventually, Filter Recycling came to the site today and removed 65 gallons of product from the tank. They also poured a bag of dry sorbent into the tank to inert any residue. They removed the tank off of the site today as well. Mr. Ortega took photos of the work performed by Filter Recycling today. The product went off site on Uniform Hazardous Waste Manifest# 003807833 JJK as 'Waste, Flammable Liquids, N.O.S. 3, UN1993' The tank went off site on Uniform Hazardous Waste Manifest# 004852776 JJK as 'on-RCRA Hazardous Waste Solid'.

Complaint Mobile detail businesses are operating in Temecula, Murrieta, Wildomar, and Lake Elsinore area. The following tip is from the US EPA National Tips Database: "recently, I noticed quite a bit of activity involving 'mobile detail' businesses that are engaged in the business of car washing, steam cleaning, waxing, polishing, etc. I believe the Clean Water Act clearly states that home owners are exempt washing their personal vehicle. However, when one engages as a business (for profit) it is considered industrial waste water. Therefore, what is occurring is industrial waste water being dumped intentionally in the drain systems. Who should supervise this? You tell me, you are the 'expert' folks. Who is responsible? Cities like Temecula, Murrieta, and Lake Elsinore who have granted these businesses licenses to operate.

Findings 12/23/08: David Ortega, of the NPDES Section of the Riverside County Flood Control (RCFC), called and spoke to Eileen Boken at the US EPA today about this matter. She stated that if I need more information about this complaint, that I should call Mr. Harry Paez, of Wildomar, at (951) 678-1682. He is the one who provided the complaint onto the US EPA National Tips Database.

Action 12/23/09: Mr. Ortega called and spoke to Mr. Paez today about this complaint. Mr. Paez was very concerned that this type of business practice, from 'mobile detailers' continue on a daily basis in the cities mentioned in his complaint. Mr. Ortega asked Mr. Paez if there is a specific name and/or phone number to any of these type of mobile detailers that are possibly in violation. Mr. Paez stated that he did not have any specific names of businesses, nor any specific dates of possible violations, nor any specific addresses that this has occurred. Mr. Paez stated that "Riverside County should have their employees drive around these cities to monitor this type of activity". Mr. Ortega stated to Mr. Paez that if and when he witnesses an active discharge happening, then he can call Mr. Ortega at his cell phone# (951) 961-9574, and either he will mobilize to the site and/or someone from County Code Enforcement will drive to the site. Mr. Ortega also stated to Mr. Paez that there is not much that can be done now for some incident that occurred sometime ago with no names of businesses, no phone numbers to the businesses, and no photos showing the possible infractions.

Location	Murrieta Valley I-215 Retention Basin

Complaint Illegal dumping of mattresses, palm fronds and trash in the Riverside County Flood Control (RCFC) District facility: "Murrieta Valley I-215 Retention Basin".

Findings 10/30/08, 1642 hours: Officer Jason Jones, City of Murrieta Code Enforcement, (951) 461-6331, called and left a voice mail message for David Ortega in the NPDES Section of the RCFC concerning the nature of the complaint. 10/31/08, 0715 hours: David Ortega of the RCFC forwarded the voice mail message to Mark Biloki of the RCFC; at his direct line. Mr. Ortega also forwarded the voice mail message to Jason Uhley of the RCFC. Mr. Ortega also called Mr. Jones and left him a voice mail message to give him the cell phone for Mark Biloki, (951) 288-5254, and to suggest that Mr. Jones call Mr. Biloki concerning this matter. Mr. Jones stated in his voice mail message that "he is hoping someone from the RCFC District will be coming out either today or tomorrow (11/1/08) to clean up the items from the I-215 basin so that he can close out his report".

Action 11/3/08: Mark Biloki of the RCFC, Operations & Maintenance Section, sent an email today to David Ortega at the RCFC stating that the illegally dumped materials were cleaned up on Saturday, 11/1/08.

Complaint Adderess	25070 Hayes Ave.
Complaint City	Murrieta
Complaint Zip Code	92562
Location	Murrieta Creek ~200yd south of Ivy on West Side

Complaint 10/17/2008 - Tiffany Zimmer from City of Murrieta Code Enforcement called to ask if we owned a portion of Murrieta Creek between Hayes Ave and Newday. Stated that a person was caught dumping green waste in Murrieta Creek there. I told her that I would look into it and call back.

Findings 10/17/2008 - Found that the property is not owned by the District. It is under the jurisdiction of CDFG and District must obtain permits for maintenance in this area. Spoke with Murrieta Police Officer Bennett who stated that they caught the person in the act dumping Palm Fronds within the creek bed. The property owner (who employed the person caught dumping) came to the scene and told the officer that he owns the land. Officer Bennett told the person to stop the dumping and made them remove the debris. Murrieta Police issued incident number 082910103 regarding this matter.

Action Officer Bennett asked me when he should report such dumping. I informed Officer Bennett that any dumping within a waterway regardless of ownership is illegal and should be reported.

Complaint 9,000 gallons of raw sewage was released due to a lift station failure that caused the manhole to back up and spill out. River flows south from Riverside County into San Diego County.

Findings 6/25/09: EMWD called the California Emergency Management Agency (CEMA) to report this release. The CEMA issued a Hazardous Materials Spill Report, Control# 09-4582, concerning this incident. The CEMA report states that it is unknown if any drinking water was impacted from this release. The CEMA report also states that water was involved in the Santa Margarita River. The CEMA report states that the sewage was contained but was considered unrecoverable. The Riverside County Environmental Health Department and the San Diego RWQCB were notified about this incident. There are no Riverside County Flood Control District facilities in the area of the complaint address that could have been impacted from this release. NOTE: The complaint APN listed in this report is a reference APN only.

Action 6/25/09, 0805 hours: The CEMA received a situation update concerning this incident. RP provided an update to the quantity released, which is 4,000 gallons.

Location	

Complaint 8 ounces of chlorine was released. Caller advised that an employee was performing a hook up for the trailer to the chlorine system. A leaking valve caused the release of chlorine gas and the employee inhaled it. The employee was taken to the hospital to be treated.

Findings 2/5/09: MWD called the California Emergency Management Agency (CEMA) to report this release. The CEMA issued a Hazardous Materials Spill Report, Control# 09-1059, concerning this incident. The CEMA report states that no water was involved. The CEMA report also states that the substance was contained and cleaned up by the reporting party (MWD). The Riverside County Environmental Health Department was notified about this incident. There are no Riverside County Flood Control District facilities in the area of the complaint address that could have been impacted from this release.

Complaint 15,750 gallons of sewage was released from a manhole due to a lift station failure. The release was unrecoverable.

Findings 1/17/09: EMWD called the California Emergency Management Agency (CEMA) to report this release. The CEMA issued a Hazardous Materials Spill Report, Control# 09-0403, concerning this incident. The CEMA report states that no drinking water was impacted from this release, however water was involved in the Santa Margarita River. The CEMA report also states that the sewage was contained and cleaned up by the reporting party (EMWD). The Riverside County Environmental Health Department was notified about this incident. The nearest Riverside County Flood Control District facility is located about .5 mile north of the complaint APN: "Murrieta Creek Channel". NOTE: The complaint APN listed in this report is a reference APN only.

Action 1/17/09, 1517 hours: A situation update came in to the CEMA concerning this incident. Riverside County advised the SDO that a block was placed in between where the spill occurred and the intake for the drinking water source, so no sewage will go into the drinking water.

Complaint 1,000 gallons of sewage leaked out of seepage pits and flowed into a storm drain on Anza Road. On site maintenance advises there are 4 seepage pits with a valve that directs the flow. The valve was turned in such a way as to direct entire flow to one pit. Once valve was adjust all was fine. It is believed to be under 1,000 gallons, but RP will check with staff that was on scene and advise.

Findings 12/4/08: The Riverside County Health Department called the Governor's Office of Emergency Services (OES) to report this release. The OES issued a Hazardous Materials Spill Report, Control# 08-8658, concerning this incident. The OES report states that this is a "historical report"; meaning that this release occurred on 11/29/08. Water was involved in a storm drain to an unknown location. It is unknown if drinking water was impacted. The OES report also states that the sewage was contained and cleaned up by the responsible party. The Riverside County Environmental Health Department were notified about this incident. The nearest Riverside County Flood Control District facility is located about 1.9 miles to the west, southwest of the complaint location: "Temecula VLY Butterfield Stage Road". NOTE: The complaint APN listed in this report is a reference APN only.

Action 12/4/08, 0811 hours: A situation update came into the OES concerning this incident. The Riverside County Environmental Health Department states that personnel on scene advise amount released is unknown, however release did occur over a period of a few days to a week. The Riverside County Environmental Health Department also state that the on-site maintenance person was Alejandro Pizana.

Complaint 5 gallons of a mixture of motor oil, transmission oil, and Gasoline was released due to a solo accident that resulted in the vehicle going over the side of the road and into a creek (Murrieta Creek).

Findings 9/1/08, 1150 hours: County Haz.-Mat. called the Governor's Office of Emergency Services (OES) to report this release. The OES issued a Hazardous Materials Spill Report, Control# 08-6384, concerning this incident. The OES report states that no drinking water was impacted from this release however, water was involved in Murrieta Creek. The OES report also states that the vehicle has been extracted but substance has been released to the creek bed. Absorbent pads have been placed to contain substance and Flood Control will be contacted regarding determining who will clean up. Police Dept., Cal Fire, and Temecula Public Works were on scene concerning this incident. The Riverside County Environmental Health Department was notified about this release.

Action 9/2/08: David Ortega spoke briefly to Christine Parsons today about this incident that occurred yesterday on Labor Day. Ms. Parsons said that she was on call this past weekend and left voice messages to Mark Biloki and Steve Thomas of the Riverside County Flood Control (RCFC) with no response from either since yesterday about this release into Murrieta Creek. Ms. Parsons referred Mr. Ortega to call Jim Sappington of County Haz.-Mat., (951) 377-8407, today about this incident. Mr. Ortega left a voice message for Aldo Licitra to call him back today. Mr. Ortega spoke briefly with Mr. Sappington today about this release near Murrieta Creek. Mr. Sappington stated that Cal Fire had set out some absorbent pads on the spilled material. Mr. Sappington also said that he traded voice messages today with Mr. Licitra of the City of Temecula about the impacted area. Mr. Sappington said that Mr. Licitra will have a City of Temecula crew pick up the pads tomorrow (9/3/08). 9/5/08: David Ortega, (951) 955-4390), of the RCFC District spoke briefly to Aldo Licitra, City of Temecula, about this incident. Mr. Licitra emailed an update about this release to Ben Neill of the RWQCB, to Mike Shetler at the Riverside County Executive Office, to J. Uhley, C. Padres and to David Ortega at the RCFC and to others. The email stated that, "Once the City (Temecula) was notified, immediate actions were implemented. Although Murrieta Creek does not fall under the City's maintenance jurisdiction, assistance was provided to the Haz Mat team to ensure their safety during their operations. The accident occurred on a low-flow crossing at Via Montezuma. The area affected by the accident was limited to a small section of shallow ponded water immediately adjacent to the crossing and did not move beyond the crossing. The vehicle was immediately removed from the crossing and an array of absorbent pads were placed by both the Hazmat team and the City maintenance crew on areas where sheen was observed. The City (Temecula) subsequently removed these pads once the sheen was absorbed. No further impacts were observed at the location of the incident. The City re-opened the low-flow access immediately afterward. The City appreciates the collective efforts between Haz Mat, Flood Control, and the County in resolving this issue".

Received By	David Ortega
Complaint Adderess	34970 Via Sereno
Complaint City	Riverside County
Complaint Zip Code	92562
Location	

Complaint 20 gallons of unknown PCB mineral oil was released when a car hit a pad-mounted transformer.

Findings 7/22/08: SCE called the Governor's Office of Emergency Services (OES) to report this release. The OES issued a Hazardous Materials Spill Report, Control# 08-5354, concerning this incident. The OES report states that no water was involved from this release. The OES report also states that the substance was contained and cleaned up by a contractor. The Riverside County SO and the Riverside County Environmental Health Department were notified about this incident. There are no Riverside County Flood Control District facilities in the area of the complaint address that could have been impacted from this release.

Action

Riverside County Flood Control and Water Conservation District

NPDES Complaint No. 1526

Type	Spill
Received Date	7/7/2008
APN	572-050-002
First Name	NRC
Last Name	
Complainant Address	
Complainant City	Anza
Complainant Zip Code	92539
Phone	
Received By	David Ortega
Complaint Adderess	
Complaint City	Anza
Complaint Zip Code	92539
Location	Off Highway 371 next to the Anza Recycling Yard

Complaint As stated per the NRC Report# 876516, a caller reported that oil spilled from several 55 gallon drums onto the ground and was covered up with gravel by the company.

Findings 7/7/08: NRC called the Governor's Office of Emergency Services (OES) to report this spill. The OES issued a Hazardous Materials Spill Report, Control# 08-4967, concerning this incident. The OES report states that no water and no drinking water was involved and/or impacted from this spill. The OES report also states that it is unknown if the spill oil was contained and/or cleaned up. The Riverside County Environmental Health Department was notified about this incident. There are no Riverside County Flood Control District facilities in the area of the complaint location that could have been impacted from this spill. NOTE: The complaint APN listed in this report is a reference APN only.

RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT

CAST-IN-PLACE PIPE RECOMMENDATION

1. CONCRETE MIXES SHALL NOT HAVE LESS THAN SIX (6) SACKS OF PORTLAND CEMENT/CU. YD.
2. CONCRETE MIX DESIGNS SHALL BE SUBMITTED BY CONTRACTOR FOR APPROVAL PRIOR TO START OF CONSTRUCTION.
3. IF CAST-IN-PLACE PIPE IS USED FOR DESIGN VELOCITIES GREATER THAN 20 FPS AND LESS THAN 30 FPS, THE INVERT THICKNESS SHALL BE INCREASED 2" OVER THE LOWER 120 DEGREES OF THE PIPE. FOR VELOCITIES GREATER THAN 30 FPS, A 4" THICKENED INVERT SHALL BE CONSTRUCTED. THE CONCRETE DESIGN STRENGTH IN THESE REACHES SHALL BE FC GREATER THAN OR EQUAL TO 4,000 PSI.
4. MAXIMUM PERMISSIBLE CONCRETE SLUMP SHALL BE 2-1/2", 1-1/2" MIN. TO 2-1/2" MAX.
5. CONTRACTOR SHALL ALLOW INSPECTOR INTO PIPE WHILE UNDER CONSTRUCTION & "ROD" FOR WALL THICKNESS AT A MIN. OF 25 C.Y. OF THE POUR.
6. AT THE END OF ALL POURS AND AT THE END OF EACH WORKING DAY, THE CONTRACTOR SHALL INSTALL #4 DOWELS 24" LONG, 12" INTO THE LAST POUR AT 12" CENTERS AROUND THE CIRCUMFERENCE OF CAST-IN-PLACE PIPE.
7. REFER TO ADDENDUM TO GEOTECHNICAL INVESTIGATION BY CONVERSE CONSULTANTS INLAND EMPIRE DATED MAY 16, 1996 REF. GEOTECHNICAL RECOMMENDATIONS FOR CAST-IN-PLACE CONCRETE PIPE.
8. JUNCTION STRUCTURES SHOWN ON THE PLANS ARE FOR REINFORCED CONCRETE PIPE. THE FOLLOWING SUBSTITUTIONS SHALL BE MADE FOR JUNCTIONS STRUCTURES FOR USE WITH CAST-IN-PLACE PIPE:
   A. A JUNCTION STRUCTURE NO. 4 (JS 229) SHALL BE REPLACED WITH EITHER A JUNCTION STRUCTURE NO. 2 (JS 227) OR A TRANSITION STRUCTURE NO 3 (TS 303).
   B. A JUNCTION STRUCTURE NO. 2 (JS 227) SHALL BE REPLACED WITH A TRANSITION STRUCTURE NO. 3 (TS 303).
9. STANDARD DRAWING NO. JS 227, JUNCTION STRUCTURE NO. 2 WHEN USED WITH CAST-IN-PLACE PIPE SHALL BE MODIFIED TO INCLUDE CONCRETE BACKFILL 1 FOOT OVER THE CAST-IN-PLACE PIPE.

CAST-IN-PLACE PIPE RECOMMENDATION

1. CONCRETE MIXES SHALL NOT HAVE LESS THAN SIX (6) SACKS OF PORTLAND CEMENT/CU YD.
2. CONCRETE MIX DESIGNS SHALL BE SUBMITTED BY CONTRACTOR FOR APPROVAL PRIOR TO START OF CONSTRUCTION.
3. IF CAST-IN-PLACE PIPE IS USED FOR DESIGN VELOCITIES GREATER THAN 20 FPS AND LESS THAN 30 FPS, THE INVERT THICKNESS SHALL BE INCREASED 2" OVER THE LOWER 120 DEGREES OF THE PIPE. FOR VELOCITIES GREATER THAN 30 FPS, A 4" THICKENED INVERT SHALL BE CONSTRUCTED. THE CONCRETE DESIGN STRENGTH IN THESE REACHES SHALL BE F'C GREATER THAN OR EQUAL TO 4,000 PSI.
4. MAXIMUM PERMISSIBLE CONCRETE SLUMP SHALL BE 2-1/2", 1-1/2" MIN. TO 2-1/2" MAX.
5. CONTRACTOR SHALL ALLOW INSPECTOR INTO PIPE WHILE UNDER CONSTRUCTION & "FOOT" FOR WALL THICKNESS AT A MIN. OF 25 C.Y. OF THE POUR.
6. AT THE END OF ALL POURS AND AT THE END OF EACH WORKING DAY THE CONTRACTOR SHALL INSTALL #4 DOWELS 24" LONG 12" INTO THE LAST POUR AT 12" CENTERS AROUND THE CIRCUMFERENCE OF REINFORCED CONCRETE PIPE.
7. REFER TO ADDENDUM TO GEOTECHNICAL INVESTIGATION BY CONVERSE CONSULTANTS INLAND EMPIRE DATED MAY 16, 1996 REF. GEOTECHNICAL RECOMMENDATIONS FOR CAST-IN-PLACE CONCRETE PIPE.
8. JUNCTION STRUCTURES SHOWN ON THE PLANS ARE FOR REINFORCED CONCRETE PIPE. THE FOLLOWING SUBSTITUTIONS SHALL BE MADE FOR JUNCTIONS STRUCTURES FOR USE WITH CAST-IN-PLACE PIPE:
   - A. A JUNCTION STRUCTURE NO. 4 (JS 229) SHALL BE REPLACED WITH EITHER A JUNCTION STRUCTURE NO. 2 (JS 227) OR A TRANSITION STRUCTURE NO 3 (TS 303).
   - B. A JUNCTION STRUCTURE NO. 2 (JS 227) SHALL BE REPLACED WITH A TRANSITION STRUCTURE NO. 3 (TS 303).
9. STANDARD DRAWING NO. JS 227, JUNCTION STRUCTURE NO. 2 WHEN USED WITH CAST-IN-PLACE PIPE SHALL BE MODIFIED TO INCLUDE CONCRETE BACKFILL 1 FOOT OVER THE CAST-IN-PLACE PIPE.

CITY OF TEMECULA GENERAL NOTES

1. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE CLEARING OF THE PROPOSED WORK AREA, AND RELOCATION COSTS OF ALL EXISTING UTILITIES. PERMITTEE MUST INFORM THE CITY OF CONSTRUCTION SCHEDULE AT LEAST 48 HOURS PRIOR TO BEGINNING OF CONSTRUCTION.
   PHONE: (909) 694-6411
2. ALL CITY INSPECTED WORK SHALL CONFORM TO THE REQUIREMENTS OF THE CITY OF TEMECULA PUBLIC WORKS DEPARTMENT IMPROVEMENT STANDARDS AND THE LATEST EDITION OF STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION (GREEN BOOK).
3. IT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR TO NOTIFY THE ENGINEER TO INSTALL STREET CENTERLINE MONUMENTS AS REQUIRED BY THE CITY OF TEMECULA STANDARDS.
4. IT SHALL BE THE RESPONSIBILITY OF THE DEVELOPER OR CONTRACTOR TO APPLY TO THE CITY OF TEMECULA DEPARTMENT OF PUBLIC WORKS FOR AN ENCROACHMENT PERMIT FOR ALL WORK ON EXISTING CITY MAINTAINED ROADS, AND FOR UTILITY WORK WITHIN OFFERS OF DEDICATION FOR PUBLIC USE.
5. ALL UNDERGROUND FACILITIES, WITH LATERALS, SHALL BE IN PLACE PRIOR TO PAVING THE STREET SECTION INCLUDING, BUT NOT LIMITED TO, THE FOLLOWING: SEWER, WATER, ELECTRIC, GAS, DRAINAGE.
6. ASPHALTIC EMULSION (FOG SEAL) SHALL BE APPLIED NOT LESS THAN FOURTEEN (14) DAYS FOLLOWING PLACEMENT OF THE ASPHALT SURFACING AND SHALL BE APPLIED AT A RATE OF 0.05 GALLON PER SQUARE YARD. ASPHALTIC EMULSION SHALL CONFORM TO SECTION 37, 39 AND 94 OF THE STATE STANDARD SPECIFICATIONS.

RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT

0004237

WARM SPRING VALLEY-EUCLID LOOP STORM DRAIN IMPROVEMENT PLAN

GENERAL NOTES

1. THE CONTRACTOR SHALL CONSTRUCT THE FLOOD CONTROL IMPROVEMENTS SHOWN ON THE DRAWINGS IN CONFORMANCE WITH THE REQUIREMENTS OF THE RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT'S MEMORANDUM OF UNDERSTANDING STANDARD SPECIFICATIONS, DATED SEPTEMBER 1984, AND DESIGN MANUAL STANDARD DRAWINGS, RECENT EDITION.
2. AN ENCROACHMENT PERMIT IS REQUIRED FROM RIVERSIDE COUNT FLOOD CONTROL. CONTACT ED LOTZ AT (909) 955-1266. AFTER THE PERMIT IS ISSUED THE DISTRICT MUST BE NOTIFIED ONE WEEK PRIOR TO CONSTRUCTION.
3. CONSTRUCTION INSPECTION WILL BE PERFORMED BY RIVERSIDE COUNTY FLOOD CONTROL. CONTACT DALE ANDERSON AT (909) 955-1200. THE DISTRICT MUST BE NOTIFIED 20 DAYS PRIOR TO CONSTRUCTION.
4. ALL STATIONING REFERS TO THE CENTERLINE OF CONSTRUCTION UNLESS OTHERWISE NOTED.
5. STATIONING FOR LATERALS AND CONNECTOR PIPE REFER TO THE CENTERLINE-CENTERLINE INTERSECTION STATION.
6. FORTY-EIGHT HOURS BEFORE EXCAVATION, CALL UNDERGROUND SERVICE ALERT 1-800-227-2600.
7. ALL ELEVATIONS SHOWN ARE IN FEET AND DECIMALS THEREOF BASED ON U.S.C. & G.S. DATUM.
8. ALL CROSS SECTIONS ARE TAKEN LOOKING DOWNSTREAM.
9. ELEVATIONS AND LOCATIONS OF UTILITIES SHOWN ARE APPROXIMATE UNLESS OTHERWISE NOTED.
10. OPENINGS RESULTING FROM THE CUTTING OR PARTIAL REMOVAL OF EXISTING CULVERTS, PIPES OR SIMILAR STRUCTURES TO BE ABANDONED SHALL BE SEALED WITH 6 INCHES OF CLASS "B" CONCRETE.
11. PIPE CONNECTED TO THE MAINLINE PIPE SHALL CONFORM TO JUNCTION STRUCTURE NO. 4 (JS 225) UNLESS OTHERWISE NOTED.
12. BEDDING PIPE SHALL CONFORM TO RCFC&WCD STD. M815, EXCEPT FOR COVER < 2 FEET. FOR COVER < 2 FEET, CONCRETE SLURRY (2000 PSI - 2 SACK) SHALL BE USED. THE ENTIRE TRENCH SHALL BE SLURRY EXTENDING 4 INCHES MINIMUM AND 12 INCHES MAXIMUM ABOVE THE TOP OF THE PIPE.
13. ⊖ INDICATES SOIL BORING LOCATIONS BASED ON THE SOIL REPORT DATED 9/16/2002. LOCATIONS SHOWN ARE APPROXIMATE.
14. "V" IS THE DEPTH OF INLET AND CATCH BASINS MEASURED FROM THE TOP OF CURB TO INVERT OF CONNECTOR PIPE.
15. ALL CURBS, GUTTERS, SIDEWALKS, DRIVEWAYS AND OTHER EXISTING IMPROVEMENTS TO BE RECONSTRUCTED IN KIND AND AT THE SAME ELEVATION AND LOCATION AS THE EXISTING IMPROVEMENTS UNLESS OTHERWISE NOTED.
16. STANDARD DRAWINGS CALLED FOR ON THE PLAN AND PROFILE SHALL CONFORM TO DISTRICT STANDARD DRAWINGS UNLESS NOTED OTHERWISE.
17. DURING ROUGH GRADING OPERATIONS AND PRIOR TO CONSTRUCTION OF PERMANENT DRAINAGE STRUCTURES, TEMPORARY DRAINAGE CONTROL SHALL BE PROVIDED TO PREVENT PONDING WATER AND DAMAGE TO ADJACENT PROPERTIES.
18. HYDRAULIC GRADE LINES SHOWN IN PROFILES ARE FOR 100 YEAR FREQUENCY FLOWS, UNLESS OTHERWISE NOTED.
19. THE CONTRACTOR SHALL COMPLY WITH THE STATE AND LOCAL SAFETY CODES DURING THE PROGRESS OF WORK.
20. THE DEVELOPER SHALL MAINTAIN ADJACENT STREETS IN A NEAT, SAFE, CLEAN AND SANITARY CONDITION AT ALL TIMES AND TO THE SATISFACTION OF THE COUNTY'S OR DISTRICT'S INSPECTOR. THE ADJACENT STREETS SHALL BE KEPT CLEAN OF DEBRIS, WITH DUST AND OTHER NUISANCE BEING CONTROLLED AT ALL TIMES.
21. METHOD OF STREET CLEANING SHALL BE BY DRY SWEEPING OF ALL PAVED AREAS.
22. THE CONTRACTOR AGREES THAT HE SHALL ASSUME SOLE AND COMPLETE RESPONSIBILITY FOR THE JOB SITE CONDITIONS DURING THE COURSE OF CONSTRUCTION OF THIS PROJECT, INCLUDING SAFETY OF ALL PERSONS AND PROPERTY, THAT THIS REQUIREMENT SHALL APPLY CONTINUOUSLY AND NOT BE LIMITED TO NORMAL WORKING HOURS; AND THAT THE CONTRACTOR SHALL DEFEND, INDEMNIFY AND HOLD THE OWNER, R.C.F.C.&.D., COUNTY ROAD DEPARTMENT, AND THE DEVELOPER'S ENGINEER HARMLESS FROM ANY AND ALL LIABILITY, REAL OR ALLEGED, IN CONNECTION WITH THE PERFORMANCE OF WORK ON THIS PROJECT, EXCEPTING FOR LIABILITY ARISING FROM THE SOLE NEGLIGENCE OF THE OWNERS OR THE DEVELOPERS ENGINEER.
23. ADJUST ALL STORM DRAIN AND SEWER MANHOLES, AND WATER VALVES TO GRADE.
24. ALL PIPE LENGTHS ARE HORIZONTAL PROJECTIONS (NOT TRUE LENGTHS OF PIPE) AND ARE THE BASIS OF THE ESTIMATES OF QUANTITIES. THE CONTRACTOR SHALL DETERMINE THE TRUE QUANTITY OF PIPE REQUIRED FOR THIS PROJECT PRIOR TO PLACING THE ORDER.
25. ALL ELEVATIONS SHOWN ARE TO THE INVERT OF PIPE, EXCEPT WHERE OTHERWISE NOTED.
26. AT THE DISCRETION OF THE ENGINEER, THE CONTRACTOR MAY BE REQUIRED TO VERIFY BY POTHOLING THE LOCATION OF POTENTIALLY AFFECTED UTILITIES.

GENERAL NOTES (CONTINUED)

27. CONTRACTOR SHALL DISPOSE OF ALL EXCESS EXCAVATED MATERIAL AT MANDATORY DISPOSAL SITE. MUST BE NOTIFIED ONE WEEK PRIOR TO CONSTRUCTION.
28. ALL BACKFILL AND BEDDING AROUND STRUCTURES AND PIPES SHALL BE COMPACTED TO NOT LESS THAN 90 PERCENT RELATIVE COMPACTION EXCEPT WHERE SUCH MATERIAL IS PLACED UNDER EXISTING PAVED ROADWAYS, THE TOP 3 FEET, MEASURED FROM THE FINISHED PAVING, SHALL BE COMPACTED TO 95 PERCENT RELATIVE COMPACTION.
29. THE CONTRACTOR IS REQUIRED TO CONTACT ALL UTILITY AGENCIES REGARDING TEMPORARY SUPPORT AND SHORING REQUIREMENTS FOR THE VARIOUS UTILITY LINES SHOWN ON THESE PLANS.

RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT

PM 29594 MS 3741

0004239

GENERAL NOTES (RCFC & WCD)

1. THE CONTRACTOR SHALL CONSTRUCT THE FLOOD CONTROL IMPROVEMENTS SHOWN ON THE DRAWINGS IN CONFORMANCE WITH THE REQUIREMENTS OF THE RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT'S M.O.U. STANDARD SPECIFICATIONS DATED SEPTEMBER 1984, AND DESIGN MANUAL STANDARD DRAWINGS DATED MAY 1971.
2. IF AN ENCROACHMENT PERMIT IS REQUIRED FROM RIVERSIDE COUNTY FLOOD CONTROL, CONTACT ED LOTZ AT 909/955-1266. AFTER THE PERMIT IS ISSUED THE DISTRICT MUST BE NOTIFIED ONE WEEK PRIOR TO CONSTRUCTION.
3. CONSTRUCTION INSPECTION WILL BE PERFORMED BY RIVERSIDE COUNTY FLOOD CONTROL. CONTACT DALE ANDERSON AT 909/955-1288. THE DISTRICT MUST BE NOTIFIED TWO WEEKS PRIOR TO CONSTRUCTION.
4. ALL STATIONING REFERS TO CENTERLINE OF CONSTRUCTION UNLESS OTHERWISE NOTED.
5. STATIONING FOR LATERALS AND CONNECTOR PIPE REFER TO THE CENTERLINE INTERSECTION STATIONS.
6. AT LEAST FORTY-EIGHT (48) HOURS BEFORE EXCAVATION, CONTRACTOR SHALL CALL UNDERGROUND SERVICE ALERT AT 1-800-227-2600.
7. ALL ELEVATIONS SHOWN ARE IN FEET AND DECIMALS THEREOF BASED ON U.S.C. & G.S. DATUM.
8. ALL CROSS SECTIONS ARE TAKEN LOOKING DOWNSTREAM.
9. ELEVATIONS OF UTILITIES ARE APPROXIMATE UNLESS OTHERWISE NOTED.
10. OPENINGS RESULTING FROM THE CUTTING OR PARTIAL REMOVAL OF EXISTING CULVERTS, PIPES OR SIMILAR STRUCTURES TO BE ABANDONED SHALL BE SEALED WITH 6" OF CLASS "B" CONCRETE.
11. PIPE CONNECTED TO THE MAINLINE PIPE SHALL CONFORM TO JUNCTION STRUCTURE NO. 4 (JS 229) UNLESS OTHERWISE NOTED.
12. BEDDING PIPE WITH LESS THAN TWO FEET OF COVER SHALL CONFORM TO LOS ANGELES COUNTY FLOOD CONTROL DISTRICT STANDARD DRAWINGS 2-0213.3 AND 2-0177 FOR CONCRETE BACKFILL IN TRENCHES. ALL OTHER PIPE SHALL CONFORM TO RCFC&WCD STD. DWG. W815.
13. "V" IS THE DEPTH OF INLET OF CATCH BASINS MEASURED FROM THE TOP OF CURB TO INVERT OF CONNECTOR PIPE.
14. CATCH BASINS SHALL BE LOCATED SO THAT LOCAL DEPRESSION SHALL BEGIN AT EXISTING CURB RETURN JOINT, UNLESS OTHERWISE SPECIFIED.
15. ALL CURBS, GUTTERS, SIDEWALKS, DRIVEWAYS AND OTHER EXISTING IMPROVEMENTS TO BE RECONSTRUCTED IN KIND AND AT THE SAME ELEVATION AND LOCATION AS THE EXISTING IMPROVEMENTS UNLESS OTHERWISE NOTED.
16. LOCATIONS OF PUBLIC UTILITIES SHOWN HAVE BEEN DETERMINED FROM AVAILABLE INFORMATION. HOWEVER, IT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR TO DETERMINE THE TRUE LOCATION OF ANY EXISTING UTILITIES AND TO EXERCISE PROPER PRECAUTIONS TO AVOID INJURY AND DAMAGE THERETO.
17. A SOILS INVESTIGATION BY LEIGHTON AND ASSOCIATES, INC., PROJECT NO. 11980108-001, SHALL BE INCLUDED AS A PART OF THESE PLANS. ALL WORK SHALL CONFORM TO RECOMMENDATIONS AS OUTLINED IN SAID REPORT.
18. THE CONCRETE COVER ON THE INSIDE OF ALL REINFORCED CONCRETE PIPES MUST BE INCREASED TO PROVIDE A MINIMUM OF 1 1/2" OVER THE REINFORCING WHEN THE DESIGN VELOCITIES EXCEED 20 FEET PER SECOND. THE CONCRETE DESIGN STRENGTH IN THESE REACHES SHALL BE f'=4000 PSI FOR VELOCITIES EXCEEDING 20 FEET PER SECOND.

GENERAL NOTES (COUNTY TRANSPORTATION)

1. IT SHALL BE THE RESPONSIBILITY OF THE DEVELOPER / OWNER OR CONTRACTOR TO APPLY TO THE RIVERSIDE COUNTY TRANSPORTATION DEPARTMENT, PERMIT SECTION, FOR AN ENCROACHMENT PERMIT FOR ALL WORK PERFORMED WITHIN PUBLIC RIGHT-OF-WAY, DEDICATED AND ACCEPTED FOR PUBLIC USE; AND TO BE RESPONSIBLE FOR SATISFACTORY COMPLIANCE FOR ALL CURRENT ENVIRONMENTAL REGULATIONS DURING THE LIFE OF CONSTRUCTION ACTIVITIES FOR THIS PROJECT. ADDITIONAL STUDIES AND / OR PERMITS MAY BE REQUIRED. PHONE: 909/955-6885 FOR PARCEL MAPS & TRACT MAPS
2. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE CLEARING OF THE PROPOSED WORK AREA, AND RELOCATION COSTS OF ALL EXISTING UTILITIES. PERMITTEE MUST INFORM COUNTY OF CONSTRUCTION SCHEDULE AT LEAST 48 HOURS PRIOR TO TO BEGINNING OF CONSTRUCTION.
3. ALL WORK SHALL CONFORM TO THE REQUIREMENTS OF THE RIVERSIDE COUNTY TRANSPORTATION DEPARTMENT IMPROVEMENT STANDARDS AND SPECIFICATIONS, LATEST EDITION, COUNTY ORDINANCE NO. 461 AND SUBSEQUENT AMENDMENTS.
4. ALL UNDERGROUND FACILITIES, WITH LATERALS, SHALL BE IN PLACE PRIOR TO PAVING THE STREET, INCLUDING, BUT NOT LIMITED TO, THE FOLLOWING: SEWER, WATER, ELECTRIC, GAS, AND STORM DRAIN.

UNDERGROUND STRUCTURES

ALL UNDERGROUND UTILITIES OR STRUCTURES REPORTED BY THE OWNER OR OTHERS AND THOSE SHOWN ON THE RECORD EXAMINED ARE INDICATED WITH THEIR APPROXIMATE LOCATION AND EXTENT. THE OWNER BY ACCEPTING THESE PLANS OR PROCEEDING WITH IMPROVEMENTS PURSUANT THERETO AGREES TO ASSUME LIABILITY AND TO HOLD UNDERSIGNED HARMLESS FOR ANY DAMAGES RESULTING FROM THE EXISTENCE OF UNDERGROUND UTILITIES OR STRUCTURES NOT REPORTED TO THE UNDERSIGNED; NOT INDICATED ON THE PUBLIC RECORDS EXAMINED; LOCATED AT VARIANCE WITH THAT REPORTED OR SHOWN ON RECORDS EXAMINED. THE CONTRACTOR IS REQUIRED TO TAKE DUE PRECAUTIONARY MEASURES TO PROTECT THE UTILITIES OR STRUCTURES SHOWN AND ANY OTHER UTILITIES OR STRUCTURES FOUND AT THE SITE. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO NOTIFY THE OWNERS OF THE UTILITIES OR STRUCTURES CONCERNED BEFORE STARTING WORK.

UNAUTHORIZED CHANGES & USES

CAUTION: THE ENGINEER PREPARING THESE PLANS WILL NOT BE RESPONSIBLE FOR, OR LIABLE FOR, UNAUTHORIZED CHANGES TO OR USES OF THESE PLANS. ALL CHANGES TO THE PLANS MUST BE IN WRITING AND MUST BE APPROVED BY THE PREPARER OF THESE PLANS.

MAINTENANCE RESPONSIBILITY

THE FOLLOWING ITEMS ARE TO BE INSPECTED AND MAINTAINED BY RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT:

WILLOWS AVE. LATERAL FROM STA. 10+79.20 TO STA. 25+18.61 AS SHOWN ON SHEETS 2 & 3.

ALL MANHOLES AND OTHER STRUCTURES REQUIRED TO COMPLETE THE CONSTRUCTION OF THE ABOVE MENTIONED MAINLINE PIPE EXCEPTING CATCH BASINS AND CONNECTOR PIPE.

NOTES:

1. "FLO-GARD" FILTER BODY SHALL BE MANUFACTURED FROM PETROLEUM RESISTANT FIBERGLASS WHICH MEETS OR EXCEEDS PS 15-69.
2. ALL METAL COMPONENTS SHALL BE STAINLESS STEEL (TYPE 304).
3. REMOVABLE FILTER BASKET SHALL BE CONSTRUCTED FROM DURABLE POLYPROPYLENE WOVEN MONOFILAMENT GEOTEXTILE.
4. "FLO-GARD" FILTER BODY SHALL BE SECURED TO CATCH BASIN WALL WITH EXPANSION ANCHOR BOLTS AND WASHER. (SEE DETAIL)
5. "FLO-GARD" INSERTS ARE AVAILABLE IN 24" OR 30" LENGTH SECTIONS AND MAY BE INSTALLED IN VARIOUS COMBINATIONS (END-TO-END) TO FIT MOST CATCH BASIN WIDTHS.
6. FILTER BASKET MAY BE REMOVED THROUGH CURB OPENING FOR EASE OF MAINTENANCE.
7. FILTER MEDIUM SHALL BE "FLO-GARD" IN DISPOSABLE POUCHES, INSTALLED AND MAINTAINED IN ACCORDANCE WITH MANUFACTURER RECOMMENDATIONS.

GENERAL NOTES:

1. THE CONTRACTOR SHALL CONSTRUCT THE FLOOD CONTROL IMPROVEMENTS SHOWN ON THE DRAWINGS IN CONFORMANCE WITH THE REQUIREMENTS OF THE RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT'S SPECIAL PROVISIONS AND DETAILED SPECIFICATIONS DATED SEPTEMBER 1984, AND DESIGN MANUAL STANDARD DRAWINGS DATED MAY 1971.
2. AN ENCROACHMENT PERMIT IS REQUIRED FROM RIVERSIDE COUNTY FLOOD CONTROL. CONTACT ED LOTZ AT 909/955-1266. AFTER THE PERMIT IS ISSUED THE DISTRICT MUST BE NOTIFIED ONE WEEK PRIOR TO CONSTRUCTION.
3. CONSTRUCTION INSPECTION WILL BE PERFORMED BY RIVERSIDE COUNTY FLOOD CONTROL. CONTACT DALE ANDERSON AT 909/955-1299. THE DISTRICT MUST BE NOTIFIED ONE WEEK PRIOR TO CONSTRUCTION.
4. ALL STATIONING REFERS TO CENTERLINE OF CONSTRUCTION UNLESS OTHERWISE NOTED.
5. STATIONING FOR LATERALS AND CONNECTOR PIPE REFER TO THE CENTERLINE- CENTERLINE INTERSECTION STATION.
6. FORTY-EIGHT HOURS BEFORE EXCAVATION, CALL UNDERGROUND SERVICE ALERT 1-800-422-4133.
7. ALL ELEVATIONS SHOWN ARE IN FEET AND DECIMALS THEREOF BASED ON U.S.C. & G.S. DATUM.
8. ALL CROSS SECTIONS ARE TAKEN LOOKING DOWNSTREAM.
9. ELEVATIONS OF UTILITIES ARE APPROXIMATE UNLESS OTHERWISE NOTED.
10. OPENINGS RESULTING FROM THE CUTTING OR PARTIAL REMOVAL OF EXISTING CULVERTS, PIPES OR SIMILAR STRUCTURES TO BE ABANDONED SHALL BE SEALED WITH 6" OF CLASS "B" CONCRETE.
11. PIPE CONNECTED TO THE MAINLINE PIPE SHALL CONFORM TO JUNCTION STRUCTURE NO. 4 (JS 229) UNLESS OTHERWISE NOTED.
12. BEDDING PIPE WITH LESS THAN TWO FEET OF COVER SHALL CONFORM TO LOS ANGELES COUNTY FLOOD CONTROL DISTRICT STANDARD DRAWINGS 2-D213.3 AND 2-D177 FOR CONCRETE BACKFILL IN TRENCHES. ALL OTHER PIPE SHALL CONFORM TO RCFC&WCD STD. DWG. M815.
13. B## INDICATES SOIL BORING LOCATIONS BASED ON THE SOILS REPORT DATED MAY 24, 1989 LOCATIONS SHOWN ARE APPROXIMATE.
14. "V" IS THE DEPTH OF INLET OF CATCH BASINS MEASURED FROM THE TOP OF CURB TO INVERT OF CONNECTOR PIPE.
15. CATCH BASINS SHALL BE LOCATED SO THAT LOCAL DEPRESSION SHALL BEGIN AT EXISTING CURB RETURN JOINT, UNLESS OTHERWISE SPECIFIED.
16. ALL CURBS, GUTTERS, SIDEWALKS, DRIVEWAYS AND OTHER EXISTING ELEVATION AND LOCATION AS THE EXISTING IMPROVEMENTS UNLESS OTHERWISE NOTED.

NOTE:

THE FOLLOWING ITEMS ARE TO BE INSPECTED AND MAINTAINED BY RIVERSIDE COUNTY FLOOD CONTROL & WATER CONSERVATION DISTRICT:

I. (CALLE LAS MARIPOSAS) ROYAL CREST PLACE

48" RCP FROM STA. 12 + 47.93 TO STA. 18 + 94.09 (LINE "H") AS SHOWN ON SHEET 3.

II. BUTTERFIELD STAGE ROAD

48" RCP FROM STA. 8 + 71.95 TO STA. 12 + 47.93 9 (LINE "H") AS SHOWN ON SHEET 2.

42 " RCP TEMPORARY LINE "H-1" AS SHOWN ON SHEET 2.

ALL MANHOLES AND OTHER STRUCTURES REQUIRED TO COMPLETE THE CONSTRUCTION OF THE ABOVE MAINLINE.

THE FOLLOWING ITEMS ARE TO BE INSPECTED AND MAINTAINED BY RIVERSIDE COUNTY ROAD DEPARTMENT:

I. (CALLE LAS MARIPOSAS) ROYAL CREST PLACE

36" RCP FROM STA. 18 + 94.09 TO STA. 19 + 56.57 (LINE "H") AS SHOWN ON SHEET 3.

36" RCP FROM STA. 19 + 05.24 TO STA. 21 + 73.15 (LINE "H-4") AS SHOWN ON SHEET 3 & 4;

24" RCP FROM STA. 21 + 73.15 TO STA. 28 + 09.53 (LINE "H-4") AS SHOWN ON SHEET 4;

CONNECTOR PIPES LINE "H-2", "H-3", "H-5", "H-6" & "H-7" AS SHOWN ON SHEETS 3, 4, 5 & 6

II. BUTTERFIELD STAGE ROAD

24" RCP LINE "J" AS SHOWN ON SHEET 2;

18" RCP LINE "I" AS SHOWN ON SHEET 2.

ELEVATION: 1120.588 DATE: 4-7-81
RIVERSIDE COUNTY DESIGNATION: T-4-81 STAMPED ON 2-1/2" BRASS DISK IN CONCRETE CYLINDER. 8 MILES SOUTHEAST ON HIGHWAY 79 FROM THE INTERSECTION OF MAIN AND FRONT STREETS IN TEMECULA, 41' NORTH OF HIGHWAY 79, 4' WEST OF POWER POLE #1623426E ON EDGE OF CULTIVATED FIELD. SET FIBERGLASS WITNESS POST 1 FOOT NORTH OF MONUMENT.

NOTICE

THE CONTRACTOR SHALL NOTIFY THE COUNTY (OR DISTRICT, AS APPROPRIATE) IN WRITING A MINIMUM OF TWO WEEKS BEFORE BEGINNING CONSTRUCTION, AND SHALL NOT BEGIN CONSTRUCTION BEFORE OBTAINING AUTHORIZATION TO PROCEED.

UNDERGROUND STRUCTURES

ALL UNDERGROUND UTILITIES OR STRUCTURES REPORTED BY THE OWNER OR OTHERS AND THOSE SHOWN ON THE RECORDS EXAMINED ARE INDICATED WITH THEIR APPROXIMATE LOCATION AND EXTENT. THE OWNER BY ACCEPTING THESE PLANS OR PROCEEDING WITH IMPROVEMENTS PURSUANT THERETO AGREES TO ASSUME LIABILITY AND TO HOLD UNDERSIGNED HARMLESS FOR ANY DAMAGES RESULTING FROM THE EXISTENCE OF UNDERGROUND UTILITIES OR STRUCTURES NOT REPORTED TO THE UNDERSIGNED; NOT INDICATED ON THE PUBLIC RECORDS EXAMINED; LOCATED AT VARIANCE WITH THAT REPORTED OR SHOWN ON RECORDS EXAMINED. THE CONTRACTOR IS REQUIRED TO TAKE DUE PRECAUTIONARY MEASURES TO PROTECT THE UTILITIES OR STRUCTURES SHOWN AND ANY OTHER UTILITIES OR STRUCTURES FOUND AT THE SITE. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO NOTIFY THE OWNERS OF THE UTILITIES OR STRUCTURES CONCERNED BEFORE STARTING WORK.

UNAUTHORIZED CHANGES & USES

CAUTION: THE ENGINEER PREPARING THESE PLANS WILL NOT BE RESPONSIBLE FOR, OR LIABLE FOR, UNAUTHORIZED CHANGES TO OR USES OF THESE PLANS. ALL CHANGES TO THE PLANS MUST BE IN WRITING AND MUST BE APPROVED BY THE PREPARER OF THESE PLANS.

RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT

GENERAL NOTES

1. CONSTRUCTION INSPECTION WILL BE PERFORMED BY RIVERSIDE COUNTY FLOOD CONTROL. CONTACT DALE ANDERSON AT 909-955-1288. THE DISTRICT MUST BE NOTIFIED 20 DAYS PRIOR TO CONSTRUCTION.
2. THE CONTRACTOR SHALL CONSTRUCT THE FLOOD CONTROL IMPROVEMENTS SHOWN ON THE DRAWINGS IN CONFORMANCE WITH THE REQUIREMENTS OF THE RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT'S M.O.U. STANDARD SPECIFICATIONS DATED SEPTEMBER 1984, AND DESIGN MANUAL STANDARD DRAWINGS DATED APRIL 2004.
3. AN ENCROACHMENT PERMIT IS REQUIRED FROM RIVERSIDE COUNTY FLOOD CONTROL. CONTACT ED LOTZ AT 909/955-1266. AFTER THE PERMIT IS ISSUED THE DISTRICT MUST BE NOTIFIED ONE WEEK PRIOR TO CONSTRUCTION.
4. CONSTRUCTION INSPECTION WILL BE PERFORMED BY RIVERSIDE COUNTY FLOOD CONTROL. CONTACT DALE ANDERSON AT 909/955-1288. THE DISTRICT MUST BE NOTIFIED TWENTY DAYS (20) PRIOR TO CONSTRUCTION.
5. ALL STATIONING REFERS TO CENTERLINE OF CONSTRUCTION UNLESS OTHERWISE NOTED.
6. STATIONING FOR LATERALS AND CONNECTOR PIPE REFER TO THE CENTERLINE INTERSECTION STATIONS.
7. FORTY-EIGHT HOURS BEFORE EXCAVATION, CALL UNDERGROUND SERVICE ALERT 1-800-227-2600.
8. ALL ELEVATIONS SHOWN ARE IN FEET AND DECIMALS THEREOF BASED ON U.S.C. & G.S DATUM.
9. ALL CROSS SECTIONS ARE TAKEN LOOKING DOWNSTREAM.
10. ELEVATIONS OF UTILITIES ARE APPROXIMATE UNLESS OTHERWISE NOTED.
11. OPENINGS RESULTING FROM THE CUTTING OR PARTIAL REMOVAL OF EXISTING CULVERTS, PIPES OR SIMILAR STRUCTURES TO BE ABANDONED SHALL BE SEALED WITH 6" OF CLASS "B" CONCRETE.
12. PIPE CONNECTED TO THE MAINLINE PIPE SHALL CONFORM TO JUNCTION STRUCTURE NO. 4 (JS 229) UNLESS OTHERWISE NOTED.
13. PIPE BEDDING SHALL CONFORM TO RCFC&WCD STD. DWG. NO. MB15 EXCEPT FOR COVER <2 FEET. FOR COVER <2 FEET, CONCRETE SLURRY (2000 PSI - 2 SACK) SHALL BE USED. THE ENTIRE TRENCH SHALL BE SLURRY EXTENDING 4 INCHES MINIMUM AND 12 INCHES MAXIMUM ABOVE THE TOP OF PIPE.
14. "V" IS THE DEPTH OF CATCH BASINS MEASURED FROM THE TOP OF CURB TO INVERT OF CONNECTOR PIPE.
15. ALL CURBS, GUTTERS, SIDEWALKS, DRIVEWAYS AND OTHER EXISTING IMPROVEMENTS TO BE RECONSTRUCTED IN KIND AND AT THE SAME ELEVATION AND LOCATION AS THE EXISTING IMPROVEMENTS UNLESS OTHERWISE NOTED.
16. STANDARD DRAWINGS CALLED FOR ON THE PLAN AND PROFILE SHALL CONFORM TO DISTRICT STANDARD DRAWINGS UNLESS NOTED OTHERWISE.
17. THE CONTRACTOR IS REQUIRED TO CALL ALL UTILITY AGENCIES REGARDING TEMPORARY SHORING AND SUPPORT REQUIREMENTS FOR THE VARIOUS UTILITY LINES SHOWN ON THESE PLANS.
18. DURING ROUGH GRADING OPERATIONS AND PRIOR TO CONSTRUCTION OF PERMANENT DRAINAGE STRUCTURES, TEMPORARY DRAINAGE CONTROL SHOULD BE PROVIDED TO PREVENT PONDING WATER AND DAMAGE TO ADJACENT PROPERTIES.
19. APPROVAL OF THESE PLANS BY THE RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT DOES NOT RELIEVE THE DEVELOPER'S ENGINEER OF RESPONSIBILITY FOR THE ENGINEERING DESIGN. IF FIELD CHANGES ARE REQUIRED, IT WILL BE THE RESPONSIBILITY OF THE DESIGN ENGINEER TO MAKE THE NECESSARY CORRECTIONS.
20. THE CONTRACTOR OR DEVELOPER SHALL SECURE ALL REQUIRED ENCROACHMENT AND/OR STATE AND FEDERAL REGULATORY PERMITS PRIOR TO THE COMMENCEMENT OF ANY WORK.
21. PIPE BEDDING SHALL CONFORM TO R.C.F.C.W.C.D. STANDARD DRAWING No. M-815 EXCEPT FOR COVER LESS THAN TWO FEET. FOR COVER LESS THAN TWO FEET, CONCRETE SLURRY (2000 psi-2 SACK MIX) BACKFILL SHALL BE USED. THE ENTIRE TRENCH SHALL BE SLURRY BACKFILLED EXTENDING 4" MINIMUM AND 12" MAXIMUM ABOVE THE TOP OF PIPE.

RIVERSIDE COUNTY FLOOD CONTROL & WATER CONSERVATION DISTRICT

STORM DRAIN IMPROVEMENT PLANS FOR SILVERHAWK III

TRACT NO. 29570-1

GENERAL NOTES

1. THE CONTRACTOR SHALL CONSTRUCT THE FLOOD CONTROL IMPROVEMENTS SHOWN ON THE DRAWINGS IN CONFORMANCE WITH THE REQUIREMENTS OF THE RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT'S MEMORANDUM OF UNDERSTANDING STANDARD SPECIFICATIONS DATED SEPTEMBER 1984, AND DESIGN MANUAL STANDARD DRAWINGS DATED MAY 1971.

2. IF AN ENCROACHMENT PERMIT IS REQUIRED FROM RIVERSIDE COUNTY FLOOD CONTROL, THEN CONTACT ED LOTZ AT 909-955-1277. AFTER THE PERMIT IS ISSUED THE DISTRICT MUST BE NOTIFIED ONE WEEK PRIOR TO CONSTRUCTION.

3. CONSTRUCTION INSPECTION WILL BE PERFORMED BY RIVERSIDE COUNTY FLOOD CONTROL. CONTACT DALE ANDERSON AT 909-955-1288. THE DISTRICT MUST BE NOTIFIED TWO WEEKS PRIOR TO CONSTRUCTION.

4. ALL STATIONING REFERS TO CENTERLINE OF CONSTRUCTION UNLESS OTHERWISE NOTED.

5. STATIONING FOR LATERALS AND CONNECTOR PIPE REFER TO THE CENTERLINE-CENTERLINE INTERSECTION STATION.

6. FORTY-EIGHT HOURS BEFORE EXCAVATION, CALL UNDERGROUND SERVICE ALERT 1-800-227-2600.

7. ALL ELEVATIONS SHOWN ARE IN FEET AND DECIMALS THEREOF BASED ON U.S.C. & G.S. DATUM.

8. ALL CROSS SECTIONS ARE TAKEN LOOKING DOWNSTREAM.

9. ELEVATIONS OF UTILITIES ARE APPROXIMATE UNLESS OTHERWISE NOTED.

10. OPENINGS RESULTING FROM THE CUTTING OR PARTIAL REMOVAL OF EXISTING CULVERTS, PIPES OR SIMILAR STRUCTURES TO BE ABANDONED SHALL BE SEALED WITH 6" OF CLASS "B" CONCRETE.

11. PIPE CONNECTED TO THE MAINLINE PIPE SHALL CONFORM TO JUNCTION STRUCTURE NO. 4 (JS 229) UNLESS OTHERWISE NOTED.

12. BEDDING PIPE SHALL CONFORM TO RCFC&WCD STD. M815, EXCEPT FOR COVER < 2 FEET. FOR COVER < 2 FEET, CONCRETE SLURRY (2000 PSI - 2 SACK) SHALL BE USED. THE ENTIRE TRENCH SHALL BE SLURRY EXTENDING 4 INCHES MINIMUM AND 12 INCHES MAXIMUM ABOVE THE TOP OF THE PIPE.

13. "H" IS THE DEPTH OF INLET OF CATCH BASINS MEASURED FROM THE NORMAL FLOWLINE TO INVERT OF CONNECTOR PIPE.

14. CATCH BASINS SHALL BE LOCATED SO THAT LOCAL DEPRESSION SHALL BEGIN AT EXISTING CURB RETURN JOINT, UNLESS OTHERWISE SPECIFIED.

15. ALL CURBS, GUTTERS, SIDEWALKS, DRIVEWAYS AND OTHER EXISTING IMPROVEMENTS TO BE REMOVED IN KIND AND AT THE SAME ELEVATION AND LOCATION AS THE EXISTING IMPROVEMENTS UNLESS OTHERWISE NOTED.

16. THE CONCRETE COVER ON THE INSIDE OF ALL REINFORCED CONCRETE PIPES MUST BE INCREASED TO PROVIDE A MINIMUM OF 1-1/2" OVER THE REINFORCING WHEN THE DESIGN VELOCITIES EXCEED 20 FEET PER SECOND. THE CONCRETE DESIGN STRENGTH IN THESE REACHES SHALL BE f'c=5,000 PSI FOR VELOCITIES EXCEEDING 20 FEET PER SECOND, AND f'c=6,000 PSI FOR VELOCITIES EXCEEDING 30 FEET PER SECOND.

17. BH-1 INDICATES SOIL BORING LOCATIONS BASED ON THE SOILS REPORT DATED NOVEMBER 14, 2000, BY LEIGHTON & ASSOCIATES; LOCATIONS SHOWN ARE APPROXIMATE.

Underground Service Alert

Call: TOLL FREE

TWO WORKING DAYS BEFORE YOU DIG

"CAUTION": Remember that the USA Center notifies only those utilities belonging to the center. There could be other utilities present at the work site. The center will inform you of whom they will notify.

NOTE:

WORK CONTAINED WITHIN THESE PLANS SHALL NOT COMMENCE UNTIL AN ENCROACHMENT PERMIT AND/OR A GRADING PERMIT HAS BEEN ISSUED.

The private engineer signing these plans is responsible for ensuring the accuracy and acceptability of the design herein. In the event of discrepancies arising after county approval or during construction, the private engineer shall be responsible for determining an acceptable solution or revising the plans for approval by

REGISTERED PROFESSIONAL ENGINEER PAUL R. NUCCITELLI NO. 58020 EXP. 6/30/06 CIVIL STATE OF CALIFORNIA

NOTICE TO CONTRACTOR:

CONTRACTOR AGREES THAT HE SHALL ASSUME SOLE AND COMPLETE RESPONSIBILITY FOR JOB SITE CONDITIONS DURING THE COURSE OF CONSTRUCTION OF THIS PROJECT, INCLUDING SAFETY OF ALL PERSONS AND PROPERTY; THAT THIS REQUIREMENT SHALL APPLY CONTINUOUSLY AND NOT BE LIMITED TO NORMAL WORKING HOURS; AND THAT THE CONTRACTOR SHALL DEFEND, INDEMNIFY AND HOLD THE OWNER AND THE ENGINEER HARMLESS FROM ANY AND ALL LIABILITY, REAL OR ALLEGED, IN CONNECTION WITH THE PERFORMANCE OF WORK ON THIS PROJECT, EXCEPTING FOR LIABILITY ARISING FROM THE SOLE NEGLIGENCE OF THE OWNER OR THE ENGINEER.

THE EXISTENCE AND LOCATION OF ANY UNDERGROUND UTILITIES OR STRUCTURES SHOWN ON THESE PLANS ARE OBTAINED BY A SEARCH OF AVAILABLE RECORDS. TO THE BEST OF OUR KNOWLEDGE, THERE ARE NO EXISTING UTILITIES EXCEPT THOSE SHOWN ON THESE PLANS. THE CONTRACTOR IS REQUIRED TO TAKE ALL PRECAUTIONARY MEASURES TO PROTECT THE UTILITIES SHOWN, AND, ANY OTHER LINES OR STRUCTURES NOT SHOWN ON THESE PLANS AND IS RESPONSIBLE FOR THE PROTECTION OF OR ANY DAMAGE TO THESE LINES OR STRUCTURES.

ALL RETAINING WALLS SHOWN ON THESE PLANS ARE SHOWN FOR REFERENCE ONLY AND ARE TO BE CONSTRUCTED PER SEPARATE PERMIT.

CONTRACTOR SHALL VERIFY ALL CONDITIONS AND DIMENSIONS AND SHALL REPORT ALL DISCREPANCIES TO THE ENGINEER PRIOR TO COMMENCEMENT OF WORK.

INDEX

	SHEET NO.:
TITLE SHEET	1
INDEX MAP & CONSTRUCTION NOTES	2
PLAN & PROFILE	3–9

GENERAL NOTES

1. THE CONTRACTOR SHALL CONSTRUCT THE FLOOD CONTROL IMPROVEMENTS SHOWN ON THE DRAWINGS IN CONFORMANCE WITH THE REQUIREMENTS OF THE RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT'S M.O.U. STANDARD SPECIFICATIONS DATED SEPTEMBER 1984, AND DESIGN MANUAL STANDARD DRAWINGS DATED APRIL 2004.
2. AN ENCROACHMENT PERMIT IS REQUIRED FROM RIVERSIDE COUNTY FLOOD CONTROL. CONTACT ED LOTZ AT 951/955-1266. AFTER THE PERMIT IS ISSUED THE DISTRICT MUST BE NOTIFIED ONE WEEK PRIOR TO CONSTRUCTION.
3. CONSTRUCTION INSPECTION WILL BE PERFORMED BY RIVERSIDE COUNTY FLOOD CONTROL. CONTACT DALE ANDERSON AT 951/955-1288. THE DISTRICT MUST BE NOTIFIED TWENTY DAYS (20) PRIOR TO CONSTRUCTION.
4. ALL STATIONING REFERS TO CENTERLINE OF CONSTRUCTION UNLESS OTHERWISE NOTED.
5. STATIONING FOR LATERALS AND CONNECTOR PIPE REFER TO THE CENTERLINE INTERSECTION STATIONS.
6. FORTY-EIGHT HOURS BEFORE EXCAVATION, CALL UNDERGROUND SERVICE ALERT 1-800-227-2600.
7. ALL ELEVATIONS SHOWN ARE IN FEET AND DECIMALS THEREOF BASED ON U.S.C. & G.S DATUM.
8. ALL CROSS SECTIONS ARE TAKEN LOOKING DOWNSTREAM.
9. ELEVATIONS OF UTILITIES ARE APPROXIMATE UNLESS OTHERWISE NOTED.
10. OPENINGS RESULTING FROM THE CUTTING OR PARTIAL REMOVAL OF EXISTING CULVERTS, PIPES OR SIMILAR STRUCTURES TO BE ABANDONED SHALL BE SEALED WITH 6" OF CLASS "B" CONCRETE.
11. PIPE CONNECTED TO THE MAINLINE PIPE SHALL CONFORM TO JUNCTION STRUCTURE NO. 4 (JS 229) UNLESS OTHERWISE NOTED.
12. PIPE BEDDING SHALL CONFORM TO RCFC&WCD STD. DWG. NO. M815 EXCEPT FOR COVER <2 FEET. FOR COVER <2 FEET, CONCRETE SLURRY (2000 PSI – 2 SACK) SHALL BE USED. THE ENTIRE TRENCH SHALL BE SLURRY EXTENDING 4 INCHES MINIMUM AND 12 INCHES MAXIMUM ABOVE THE TOP OF PIPE.
13. BH-1 INDICATES SOIL BORING LOCATIONS BASED ON THE SOILS REPORT DATED (N/A) LOCATIONS SHOWN ARE APPROXIMATE.
14. "V" IS THE DEPTH OF CATCH BASINS MEASURED FROM THE TOP OF CURB TO INVERT OF CONNECTOR PIPE.
15. CATCH BASINS SHALL BE LOCATED SO THAT LOCAL DEPRESSION SHALL BEGIN AT EXISTING CURB RETURN JOINT, UNLESS SPECIFIED.
16. ALL CURBS, GUTTERS, SIDEWALKS, DRIVEWAYS AND OTHER EXISTING IMPROVEMENTS TO BE RECONSTRUCTED IN KIND AND AT THE SAME ELEVATION AND LOCATION AS THE EXISTING IMPROVEMENTS UNLESS OTHERWISE NOTED.
17. STANDARD DRAWINGS CALLED FOR ON THE PLAN AND PROFILE SHALL CONFORM TO DISTRICT STANDARD DRAWINGS UNLESS NOTED OTHERWISE.
18. THE CONTRACTOR IS REQUIRED TO CALL ALL UTILITY AGENCIES REGARDING TEMPORARY SHORING AND SUPPORT REQUIREMENTS FOR THE VARIOUS UTILITY LINES SHOWN ON THESE PLANS.
19. DURING ROUGH GRADING OPERATIONS AND PRIOR TO CONSTRUCTION OF PERMANENT DRAINAGE STRUCTURES, TEMPORARY DRAINAGE CONTROL SHOULD BE PROVIDED TO PREVENT PONDING WATER AND DAMAGE TO ADJACENT PROPERTIES.
20. APPROVAL OF THESE PLANS BY THE RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT DOES NOT RELIEVE THE DEVELOPER'S ENGINEER OF RESPONSIBILITY FOR THE ENGINEERING DESIGN. IF FIELD CHANGES ARE REQUIRED, IT WILL BE THE RESPONSIBILITY OF THE DESIGN ENGINEER TO MAKE THE NECESSARY CORRECTIONS.
21. THE CONTRACTOR OR DEVELOPER SHALL SECURE ALL REQUIRED ENCROACHMENT AND/OR STATE AND FEDERAL REGULATORY PERMITS PRIOR TO THE COMMENCEMENT OF ANY WORK.

Warren D. Williams
General Manager, Chief Engineer
Riverside County Flood Control and Water Conservation District
1995 Market Street
Riverside, CA 92501

Dear Mr. Williams:

SUBJECT: Review of Report of Waste Discharge for the Riverside County Municipal Storm Water Permit Reissuance, Tentative Order No. R9-2010-0016, NPDES No. CAS0108740

The California Regional Water Quality Control Board, San Diego Region (Regional Board), has reviewed the Report of Waste Discharge (ROWD) submitted by the Riverside County Flood Control and Water Conservation District on behalf of the County of Riverside, and the Cities of Menifee, Murrieta, Temecula, and Wildomar. The ROWD and recent annual reports provide an overview of current programs found to be effective and proposed improvements to the storm water management programs. With the annual reports, the ROWD satisfies reapplication requirements found in federal regulations and the United States Environmental Protection Agency's *Interpretative Policy Memorandum on Reapplication Requirements for Municipal Separate Storm Sewer Systems.*

The Regional Board will rely on the information contained in the ROWD and annual reports in order to draft a tentative Order for the reissuance of the NPDES permit, Order No. R9-2004-0001 (Permit). The Copermittees may be asked to provide supplemental and clarifying information to assist the reissuance process. A public comment period will follow the release of the tentative Order and is expected to last no less than 45 days. A public workshop is tentatively scheduled for the Regional Board's regular meeting held on April 14, 2010. The tentative Order will then be revised, if necessary, and scheduled for adoption consideration at a future meeting.

In the interim, the Regional Board wishes to start meeting with the Copermittees to discuss programmatic elements of the reissued permit and suggests meeting regularly following the Copermittees' monthly Technical Advisory Committee meetings. To expedite discussions, we are providing the following comments on the ROWD:

1. The Regional Board is sensitive to the current economic difficulties encountered by local and State government agencies and will take into consideration the economic information provided in the ROWD for permit development.

2. The ROWD reports "no statistically significant trends" in water quality monitoring data and the ROWD attributes this to the effectiveness of the Copermittees' programs. The Regional Board does not conclude that an absence of a statistically significant trend is solely attributed to the effectiveness of the Copermittees' programs. Rather, the lack of a statistically significant trend could also be attributed to a lack of data; historic difficulties with monitoring at triad stations and difficulties with monitoring for the illicit discharge detection and elimination program. Recent monitoring data submitted to the Regional Board suggests continuing exceedances of Basin Plan water quality objectives and an increased number of water bodies in the Santa Margarita watershed that are listed as impaired in the December 2009, Clean Water Act 305(b) and 303(d) Integrated Report for the San Diego Region.

3. The Regional Board is encouraged by the Copermittees' recognition of the need for measureable performance criteria including action levels. The ultimate objective of effectiveness assessment is measuring outcome level 5 – "Improving Runoff Quality" and measuring outcome level 6 – "Protecting Receiving Water Quality". We will continue to review the Copermittees' proposed revisions to enhance program effectiveness assessment during the permit reissuance process.

4. The Regional Board agrees with the Copermittees' recommendation to revise the annual reporting requirements. The format and layout for annual reporting can be improved to increase clarity and readability.

5. The ROWD proposes elimination of the watershed storm water management program (SWMP) in deference to the countywide drainage area management plan (DAMP). The model DAMP does not fulfill USEPA's goal of "coordination with adjacent MS4s on monitoring or other efforts; and using a watershed approach to storm water management" as found in the *Interpretative Policy Memorandum on Reapplication Requirements for Municipal Separate Storm Sewer Systems.* The DAMP's effectiveness in providing guidance is ultimately left up to the Copermittees as Permit compliance is the responsibility of the individual jurisdictions. In addition, the watershed SWMP implements USEPA's "Watershed-Based National Pollutant Discharge Elimination System (NPDES) Permitting Policy Statement" from January of 2003. Nevertheless, the Regional Board understands that improvements can be made in the implementation and

exercise of the watershed SWMP and is open to discussing improvements to the watershed SWMP.

6. The ROWD proposes several changes to the monitoring program. The Regional Board agrees that improvements to the Copermittees' monitoring program should be made to comply with federal regulations and the goals of the monitoring program. As such, we will carefully consider the Copermittees' proposed changes to the monitoring program.

7. The ROWD proposes clarification in criteria for mobilization of monitoring events. The Permit does not specify the mobilization criteria. Such changes are more appropriate in the Consolidated Monitoring Program that can be updated by the Copermittees. In addition, auto samplers can help alleviate some of the difficulties that the Copermittees have encountered with monitoring.

8. The ROWD proposes a reduction in the number of dry and wet weather monitoring events due in part to the Copermittees' difficulties with collecting samples. The ROWD does not discuss the efficacy and benefits of the monitoring frequencies for water quality data analysis. The Regional Board recognizes the benefits of increased monitoring and believes any difficulties could be resolved through improved management of the monitoring program.

9. The Regional Board is encouraged by the Copermittees' recognition in the ROWD of Low Impact Development (LID) as a best management practice (BMP). Recently adopted MS4 permits in Southern California incorporate measureable performance criteria for LID implementation. Similar requirements are appropriate in Riverside County and will be discussed in future meetings with the Regional Board.

10. The ROWD states that the Copermittees would like to review the exclusion of roads as priority development projects due to "potential avenues for unavoidable non-compliance". The ROWD does not describe in detail unavoidable instances of non-compliance. To date, evidence indicates that roads are pollutant generating projects that need storm water treatment. The Regional Board are open to discussing other measures to improve Copermittees' storm water programs with oversight of public works projects.

11. The ROWD proposes a tiered program of inspection and verification of post construction treatment control BMPs to ensure ongoing effectiveness. The Regional Board will continue to review the Copermittee's proposed program during the permit reissuance process and discussions with the Copermittees.

12. The ROWD does not propose any changes to the construction oversight program. Current technology and practices in managing storm water runoff from construction sites may not be reflected in the current Permit. BMPs such as phased grading and active treatment systems have proven to be effective in addressing storm water pollutants from construction sites. As such, the Regional Board anticipates discussing these issues further with the Copermittees through the permit reissuance process.

13. The ROWD proposes improvements to the illicit discharge detection and elimination (IDDE) program. The Copermittees' recognition of the need for improvements to the IDDE program is admirable and the Regional Board looks forward to discussing this in more detail with the Copermittees during the permit reissuance process. The Regional Board encourages the Copermittees to examine guidance from USEPA and the Center for Watershed Protection for program development and technical assessments.

14. The ROWD does not address the potential for non-storm water over irrigation discharges as contributing to exceedances of surface water quality objectives. Over watering of lawns has been increasingly identified throughout southern California as a source and conveyance of pollutants to surface waters. In addition to conservation measures to address wasteful water use, the Copermittees' efforts to comply with AB 1881 can have water quality benefits that should be examined.

15. The ROWD does not address the potential for retrofitting existing developments. The National Research Council's report, "Urban Stormwater Management in the United States" identifies that to meet watershed objectives, retrofitting will be necessary in a substantial amount of existing development. Retrofitting existing development through small, distributed practices (i.e. LID) was found to be more cost-effective than large, centralized approaches to retrofitting.

If you have any questions or need further clarification, please contact Ben Neill at (858) 467-2983 or bneill@waterboards.ca.gov.

Respectfully,

CHIARA CLEMENTE
Senior Environmental Scientist

San Diego Region Riverside County MS4 Permit Renewal

Joint Meeting – San Diego Water Board and MS4s

March 22, 2010, 1:30 – 3:30

Attendees: See attached sign-up sheet.

Draft Meeting Notes

1. Opening comments.
    a. Jason Uhley on behalf of the MS4s.
        i. Purpose of the meeting is to set up a framework for a process to develop new permit for the SMR watershed.
        ii. The intent of establishing a process for the renewal is to have a similar result (efficient adoption process) as the other permits recently renewed in Riverside County by Region 8 (Santa Ana Water Board) and Region 7 (Colorado River Water Board).
        iii. To facilitate a productive permit renewal process that is protective of water quality and addresses local considerations, we need to define the issues in the watershed.
    b. Jimmy Smith on behalf of the San Diego Water Board
        i. The State of California established semi-autonomous Water Boards to address local considerations in the best interest of protecting water quality for the public.
        ii. The Water Board is sensitive to the Copermittees' concerns regarding consistent NPDES permits and believes the first step is having a consistent MS4 permit throughout the San Diego Water Board's jurisdiction.
2. Permittee Watershed Perspective
    a. Jason Uhley on behalf of the MS4s.
        i. Provided some background information on the watershed within Riverside County (see PowerPoint presentation slides 1-37). Some highlights included:
            1. Permittee Structure is the Riverside Flood Control and Water Conservation District as Principal Permittee, with the County of Riverside and the Cities of Menifee, Murrieta, Temecula, Wildomar as Co-Permittees. Wildomar and Menifee are newly incorporated for the next permit cycle.
            2. DAMP is the Copermittees' guiding document for complying with the San Diego and Santa Ana Water Boards' MS4 permits within Riverside County.

3. SMR watershed within Riverside County is primarily rural (defined as a 1 acre lots or greater) and will stay that way (growth potential waning) barring a change in existing policies, ordinances and laws.
4. County has moved forward with incorporating LID concepts into the land development process by developing their own Design Manual that includes design specifications and standard drawings for several landscape-based BMPs. Manual is due to be completed in July, however, development projects have been incorporating preliminary landscaped-based BMP design concepts since the WQMP's implementation.
5. The District has also contributed to the development of the Stormwater Montioring Coalition LID Manual.
6. The County is implementing the BMPs identified in the Riverside Design Manual at the District offices in Riverside to identify the water quality and volume reduction benefits, as well as maintenance needs, of the BMPs. The Permittees are interested in making adjustments to the LID provisions in the San Diego Water Board's Riverside MS4 Permit to ensure that the program builds on existing Permittee efforts.
7. Hydromodification is controlled to large part by the existing dams that control runoff from 2/3 of the watershed and the confined limits of the urban area. Build out in the watershed will have little hydromodification affect due to these factors. The Permittees would like to discuss how to develop hydromodification requirements that are appropriate to the needs of the region and respectful of Permittee resources.
8. The District has initiated a pyrethoid management program including proactive efforts to change state and federal pesticide management regulations and outreach to local residents.
9. Economic situation is deteriorating through at least the next two fiscal years with necessary adjustments being made to public agency funds.

ii. The guiding principles for the MS4 efforts with permit negotiations include:

1. Consistency with Riverside County MS4 permit issued by the Santa Ana Water Board (Santa Ana Permit) to allow for administrative efficiencies and reduce confusion for dually-regulated Permittees staff, residents and businesses.
2. Cost neutral with current permit and consistent with the Permittee resources.
3. Ability to prioritize issues to direct resources to programs that provide the greatest water quality benefit.
4. Reduce administrative burden in reporting.

iii. Conclusions

1. The Permittees are committed to an effective program

2. The Permittees are committed to work with the Water Board Staff on this permit.
3. The Permittees and Water Board have mutual goals.

3. San Diego Water Board Perspective
   a. David Gibson provided initial comments. Highlighting the following
      i. Asked about the Riverside County Board of Supervisors' resolution requesting that Riverside County be included on an Assembly Bill to be removed from the San Diego Water Board's jurisdiction. Inquired whether the Riverside County staff were the source of the resolution. Mike Shetler of Riverside County responded by saying the Assembly Bill was brought to the County Supervisor's attention.
      ii. WB will take a close look at the issues brought up in today's presentation.
      iii. WB will look for opportunities to crossover with the Santa Ana permit.
      iv. WB is committed to open dialogue to produce a permit that is:
         1. Socially and environmentally responsible
         2. Affordable
         3. Improves water quality
      v. WB interested in allowing Menifee to be wholly regulated by the Santa Ana Water Board and Murrieta to be wholly regulated by the San Diego Water Board.
      vi. Need to focus on the efforts that make the most sense and provide flexibility in the permit.
      vii. Issues that cannot be resolved may need to be brought to the Water Board for policy directions.
   b. Ben Neill provided follow up comments
      i. Must keep in mind the goals of the Clean Water Act to protect beneficial uses and meet water quality standards.
      ii. Will need to identify measurable criteria (action levels, capture 85th percentile of storm event, hydromod, and any TMDL's) in the MS4 permit.
      iii. Increase focus on pollutants of concern that are causing impairment.
      iv. Protection of water supply
      v. An additional shift in focus of recent permits has been on LID and hydromodification and the measureable criteria.
      vi. Permit needs to have provisions to protect environmentally sensitive areas.
      vii. Sees common elements between Orange County Permit and Riverside County Permit.
      viii. Will look for more focused monitoring with special interest in IC/ID, bioassessmsnt and ubiquitous trash.
   c. David Gibson provided additional comments:
      i. LID BMPs, if appropriate, are excellent for protecting water quality
      ii. WB would like to have mutual gains for the permit

iii. WB not committed to having Permit put on the Consent Calendar as a goal for the renewal process, but supportive of discussions
iv. Need a process to show that the WB and the Permittees are working together
v. Is mindful of the economic restraints presented and there is a lot of room to provide flexibility in the permit.

d. Jason responded to the comments provided by David and Ben
    i. There are many benefits to having regionally coordinated programs so looking at SAR programs for the SMR permit
    ii. Permittees and the RB can work together to define a process.
    iii. Direct communication with staff will allow a permit to grow from these conversations.
    iv. Looking to have a "true" cost-neutral permit and prioritize spending where a difference can be made due to limited resources
e. Michael Shetler with Riverside County inquired if the permit could be back loaded with requirements to allow for the economic situation to improve. David Gibson noted he was willing to consider that approach and noted that he and Jason had discussed growth based targets as one way to address the issue.

4. MS4 Permit Renewal Process
    a. Jason recommended moving on to identifying a process for the permit renewal.
    b. David Gibson identified that it was important for a commitment that agreements in the discussions are memorialized in writing.
    c. Ben noted that the Water Board and MS4s are public agencies and that private conversations subverted the process in adopting the Ventura Permit. Mack Walker provided clarification, from his perspective, on what occurred in Ventura, and did not believe that it would be an issue in this process..
    d. Jason posed the question as to where we should start from with regards to Permit language. Suggested using the current Riverside permit and modify it based on the ROWD. The Permittees are committed to providing the time and resources to convene with the WB to resolve permit issues during the permit development process.
