EXECUTIVE SUMMARY

This report was prepared in response to the requirements of municipal National Pollutant Discharge Elimination System (NPDES) Stormwater Permit Nos. CAS618030 and CAS0108740, issued to the County of Orange, the Orange County Flood Control District and the 31 incorporated cities of Orange County by the Santa Ana and San Diego Regional Water Quality Control Boards. These permits require that, in accordance with Title 23, Chapter 3, subchapter 9, of the California Code of Regulations, the Permittees submit a Report of Waste Discharge (ROWD) 180 days prior to permit expiration. This Report of Waste Discharge has been prepared by the County of Orange in cooperation with the cities in Orange County. The report constitutes a review of all NPDES Stormwater Program activities for the Second Term Permit period (March 1996 - June 2000) and a proposed plan for the Third Term Permit. It is comprised of four volumes. ?

Volume One is the program summary and includes discussions on the Detection and Elimination of Illegal Discharges and Illicit Connections (Section 2.0), the Status of BMP Implementation (Section 3.0), the Program Effectiveness (Section 5.0), a Fiscal Analysis (Section 6.0).

Volume Two provides the proposed plan for the next permit. In order to effectively address the revisions to the NPDES Stormwater Program from the First and Second Term permits and to incorporate the programs developed since 1993, the April 1993 version of the Drainage Area Management Plan (DAMP) was updated. The September 2000 version of the DAMP proposes a wide range of continuing and enhanced Best Management Practices (BMPs), which will be implemented over the upcoming 2001 – 2006 permit period.

1.0 INTRODUCTION

1.1 2000 Report Of Waste Discharge

This report was prepared in response to the requirements of municipal NPDES Stormwater Permit Nos. CAS618030 and CAS0108740 (subsequently referred to as the Second Term Permits), issued to the County of Orange (subsequently referred to as the Principal Permittee), the Orange County Flood Control District and the 31 incorporated cities of Orange County (subsequently collectively referred to as the Permittees) by the Santa Ana and San Diego Regional Water Quality Control Boards (subsequently collectively referred to as the Regional Boards and individually as the Santa Ana Board and the San Diego Board), respectively.

These permits require that, in accordance with Title 23, Chapter 3, subchapter 9, of the California Code of Regulations, the Permittees submit a Report of Waste Discharge (ROWD) 180 days prior to permit expiration. The permits collectively require the report to, at a minimum, include the following (the items are listed in the order of their appearance in the permits with the corresponding location of each item in the report noted in parentheses):

- Any revisions to the Drainage Area Management Plan (DAMP) including, but not limited to, all the activities the permittees propose to undertake during the next permit term, goals and objectives of such activities, an evaluation of the need for additional source control and/or structural BMPs, any proposed pilot studies, etc.; (Section 7.0 and Volume 2);

- Changes in land use and/or population including map updates (Section 3.0);

- Any significant changes to the storm drain systems, outfalls, detention or retention basins or dams, and other controls including map updates of the storm drain systems (Section 3.0); and

- Any new or revised program elements and compliance schedule(s) necessary to comply with Receiving Water Limitations Section of this order (Volume 2 DAMP Sections 3.0, 11.0 and 12.0).

In addition, the Report of Waste discharge also includes:

- A summary of the procedures implemented to detect illegal discharges and illicit disposal practices (Section 2.0);

- A summary of enforcement procedures and actions taken to require stormwater discharges to comply with the approved stormwater management programs (Section 2.0);

- A summary of the public agency activity BMPs implemented (Section 3.0);

- A summary of the results of the monitoring program (Section 4.0);
- A summary of the program effectiveness (Section 5.0); and
- A fiscal analysis (Section 6.0).

In order to effectively address the revisions to the Orange County Municipal NPDES Stormwater Program (subsequently referred to as the NPDES Stormwater Program) from the First Term Permit period and provide the proposed plan for the Third Term Permit period, the Permittees updated the April 1993 version of the DAMP (subsequently referred to as 1993 DAMP) and are submitting it concurrently with the ROWD as the proposed plan for the Third Term Permit period (see Section 7.0 and Volume 2).

The Report of Waste Discharge: Proposed Plan Draft Drainage Area Management Plan (subsequently referred to as the DAMP) addresses the requirements of the Second Term Permits, incorporates the programs developed since 1993 and proposes a wide range of continuing and enhanced Best Management Practices (BMPs) to be implemented during the Third Term Permit period. Any references to the DAMP throughout this report shall refer to the 2000 DAMP included as Volume 2 of this report unless otherwise noted

1.2 NPDES Permit Requirements

The Second Term Permits, issued by the Santa Ana Regional Board in March 1996 and by the San Diego Regional Board in August 1996, require the Permittees to:

1. Prohibit illicit/illegal discharges from entering into the municipal stormwater conveyance systems and require controls to reduce the discharge of pollutants to the maximum extent practicable;

2. Develop and implement Best Management Practices (BMPs) to control/reduce the discharge of pollutants to waters of the United States to the maximum extent practicable (MEP), and

1.3 Program Objectives (DAMP Section 1.0)

The specific water pollutant control program elements of the NPDES Stormwater Program are documented in the 1993 DAMP, which has served as the Permittees' primary policy and implementation document regarding compliance with the NPDES Stormwater. The 1993 DAMP was originally completed through a process that involved public and private sector representation and was formally approved in June of 1994 by the Santa Ana Regional Board and in 1996 by the San Diego Board. As stated in Section 1.1, the 1993 DAMP has been revised and is being submitted concurrently with the ROWD as Volume 2.

The DAMP will serve to:

1. Provide the framework for the program management activities and plan development;

2. Provide the legal authority for prohibiting unpermitted discharges to the storm drain system and for requiring BMPs in new development and significant redevelopment;

3. Improve existing city and county pollution prevention and removal BMPs to further reduce the amount of pollutants entering the storm drain system;

4. Educate the public about the issue of stormwater and non-stormwater pollution and obtain their support in implementing pollution prevention BMPs;

5. Ensure that all new development and significant redevelopment incorporates appropriate post construction nonstructural and structural BMPs and evaluate "special" structural BMPs to address specific water quality problems as identified through the water quality planning process;

6. Ensure that construction sites implement pollutant control practices that address control of construction related pollutants including erosion and sediment control and on-site hazardous materials and waste management;

7. Identify industrial stormwater dischargers in Orange County and notify them of State Industrial stormwater permit requirements;

8. Detect and eliminate unpermitted discharges and illegal connections to the storm drain system;

9. Conduct a stormwater monitoring program to identify areas with water quality problems, to assist in the prioritization of watersheds for analysis and planning, and to assist in the prioritization of pollutants to facilitate the development of specific controls to address these problems; and

10. Address the special focus within the Newport Bay/San Diego Creek watershed due to its impaired status and the resulting development of TMDLs for sediment, nutrients, bacteria and toxics.

lack a clear commitment to dual regulation.

1.4 Program Management (DAMP Section 2.0)

The NPDES Stormwater Program is a cooperative effort between the 33 current Permittees (35 with the recently incorporated cities of Laguna Woods and Rancho Santa Margarita). A formal agreement (the Implementation Agreement) underpins Permittee cooperation and recognizes the additional role of the County of Orange as the Principal Permittee. The Implementation Agreement, originally entered into in December of 1990, was amended in October of 1993 to include two additional Permittees (Laguna Hills and Lake Forest) and formally established the Technical Advisory Committee (TAC) (**DAMP Appendix C and D**). The Implementation Agreement establishes the responsibilities of each party and a funding mechanism for the shared costs of the NPDES Stormwater Program and recognizes the oversight function of the TAC.

The County of Orange, as Principal Permittee, is responsibile for coordinating compliance with permit terms and conditions and overall program management. The Permittee Committee provides the overall program guidance with designated representatives from each Permittee. The advisory group for program development and implementation is the NPDES Technical Advisory Committee (TAC), comprised of a City Engineer, or selected representative, from each of five County Supervisorial Districts and a representative from the Principal Permittee.

2.0 DETECTION/ELIMINATION OF ILLEGAL DISCHARGES AND ILLICIT CONNECTIONS

2.1 Introduction

This section includes a discussion of the specific requirements for legal authority to control pollutant contributions to the storm drain system, the use of this authority to eliminate illegal discharges, the ability to abate discharges that have occurred or are occurring and efforts to identify and eliminate illicit connections to the storm drain system through routine facility inspections.

2.2 Legal Authority (DAMP Section 4.0)

The Second Term Permits required that the Permittees establish "adequate legal authority" to implement the necessary DAMP programs by July 31, 1997. This included adequate authority to regulate the discharge of pollutants to municipal separate storm drain systems in Orange County and to implement pollution control programs.

Although adequate legal authority existed for most potential pollutant discharges at the inception of the stormwater program, in 1993 the permittees determined that a Model Water Quality Ordinance should be prepared to provide a more uniform Countywide approach and to provide a legal underpinning to the entire NPDES Stormwater Program.

A consultant law firm was retained for this purpose, and the Ordinance and accompanying Enforcement Consistency Guide (**DAMP Appendix E1 and E2**) were prepared under the aegis of the TAC and with input from representative City and County Attorneys, Sanitation Districts of Orange County, the Orange County Building Industry Association (BIA), the Food Sanitation Advisory Council, Western States Petroleum Association (WSPA) and the Permittees.

All of the Permittees adopted the Water Quality Ordinance and corresponding Enforcement Consistency Guide and provided certifications regarding this to the Regional Boards the 1997-98 Annual Status Report. In addition, each Permittee has designated the Authorized Inspector(s) responsible for enforcing the Ordinance and provides updates to this list annually. The Authorized Inspector is the person designated to investigate compliance with, detect violations of and/or take actions pursuant to the Ordinance.

The detection, elimination and enforcement activities undertaken by the Permittees are described below in Sections 2.3 and 2.4. In addition to prohibiting illicit connections and illegal discharges, the Water Quality Ordinance also provides for requiring BMPs in new development and significant redevelopment (see Section 3.4).

2.3 Detection of Illegal Discharges (DAMP Section 10.0)

An illegal discharge is any discharge to a municipal separate storm sewer that is not composed entirely of stormwater and that is not covered by an NPDES permit or identified in the NPDES Stormwater permit as an allowed discharge. An illegal discharge refers to the disposal of non-stormwater materials such as paint or waste oil into the storm drain or the discharge of waste streams containing pollutants to the storm drain. The elimination of these discharges to the storm drain system requires the sequential detection, investigation, and enforcement using supporting statutory authority

The Permittees have a number of programs that have facilitated the detection of sources of non-stormwater discharges. These programs include industrial facility inspection (Section 2.3.1), drainage facility inspection (Section 2.3.2), water quality monitoring (see Section 4.0), and the wide distribution of public education materials that provide phone numbers and encourage the reporting of spills (Section 3.3).

2.3.1 Industrial Facility Inspection

Should we call these agencies and ask them what they know?

A number of public agencies routinely conduct inspections of industrial facilities in Orange County. These agencies and their areas of responsibility include the following:

- The Orange County Health Care Agency regulates the storage and disposal of hazardous wastes. Approximately 6,339 businesses are inspected annually to ensure proper waste management.

- The Fire Departments in Orange County regulate the storage of hazardous materials through disclosure ordinances such as OCC Sec 4-3-200-300 and Article 80 of the Fire Code. This regulation involves inspection at approximately 7,000 business.

- Agricultural chemicals, notably pesticides, are regulated by the Agriculture Commissioner through the State Agriculture Code (CCR Title 3, Sec. 6000 et seq.). The Commissioner's office performs facility inspections at about 200 facilities/year out of a total of approximately 700 facilities that use/store pesticides. The Commissioners office also initiates enforcement action for non-compliance.

- Discharges to the sanitary sewers are regulated by the County Sanitation Districts of Orange County, and the Aliso Water Management Agency/South East Regional Reclamation Authority who routinely conduct pre-treatment facility inspections.

Routine coordination with staff of these inspection programs occurs through Principal Permittee participation with the Orange County Hazardous Materials Strike Force and the Stormwater Awareness training developed and presented by the Principal Permittee. These coordination efforts ensure that the staff of these inspection programs are cognizant of stormwater issues and regularly notify the Principal Permittee of situations that may present a source of water pollution.

2.3.2 Drainage Facility Inspection

Through routine maintenance activities within the municipal storm drain system, Permittee field personnel continue to report suspected problems and/or discharges to the system (Section 3.2.3).

2.3.3 Countywide Reconnaissance

During the First Term Permit and part of the Second Term Permit the Permittees conducted field screening/reconnaissance every year which included conducting a site investigation and chemical analyses once during dry weather and once during storm events. While the primary objective of this component of the water quality monitoring program was to detect gross contamination from illegal discharges through field analyses minimal incidences were detected.

monitoring has the greater purpose of determining the status of H_2O quality - not just detecting "gross contamination"

New monitoring program objectives set in the Second Term Permit prompted a re-evaluation of the monitoring program starting in 1997. In May 1999, a final report outlining a new monitoring program that addressed the requirements of this permit was submitted to the Regional Boards (**DAMP Appendix K**) and the program was implemented.

The reconnaissance and source identification section of the new water quality monitoring program addresses the need to determine if an identified water quality problem is the result of an illicit connection or illegal discharge through a series of source identification studies. If problems are found they are referred to the Permittees' Authorized Inspectors.

2.3.4 Incident Reporting

The public reporting of spills is facilitated by a listing of:

- Permittee business telephone numbers in materials produced and distributed by the NPDES Stormwater Program's public education activities (brochures and magnets).
- The 24 hour water pollution problem reporting hotline and corresponding e-mail address in materials produced and distributed by the NPDES Stormwater Program's public education activities
- The Principal Permittee's water pollution telephone number in the Orange County "white page" telephone directories

2.4 Elimination Of Illegal Discharges (DAMP Section 10.0 and Appendix E1/E2)

2.4.1 Investigations

Investigations of water pollution incidents are routinely undertaken by Permittee Authorized Inspector staff and various fire and police departments (Section 3.2.8). Although investigations may be unilateral efforts, more serious incidents are typically coordinated with federal, state, and local agencies through the Orange County Hazardous Materials Strike Force. The Strike Force is headed by the Orange County District Attorney's Office and includes representatives of a wide variety of local, regional, and state agencies.

In addition, the Permittees also coordinate with Regional Board staff on an ongoing basis with a particular focus on facilities regulated by an NPDES permit.

Although figures are not available regarding the number of water pollution investigations conducted during the 1996-2000 reporting period, commencing with the 1999/00 reporting period, the Permittees began to collectively provide a summary of the types and total numbers of water pollution incidents that have been reported within their jurisdiction. A summary of these investigations can be found in **Table 2.1.**

During the 1999/00 reporting period, the Permittees reported a total of 819 water pollution incidents. This total consisted of 281 Notifications, 269 Complaints and 167 Response Requests and 102 referrals to other agencies. **Figure 2.1** illustrates the sources of water pollution incident reports received by the Principal Permittee with the cities and the public constituting over 60% of the sources and **Figure 2.2** illustrates the types of materials involved **(Table 2.2).**

The Principal Permittee investigations constituted approximately half (409) of the total. The number of incidents addressed by the Principal Permittee illustrates its effective countywide role as the local agency with primary responsibility for surface water pollution investigations.

For comparison, from July 1, 1996 - June 30, 2000 a total of 1,508 water pollution incident reports were received by the Principal Permittee. Beginning in FY 1996/97 to FY 1999/00, the Principal Permittee received 390, 374, 337 and 407 contacts regarding water pollution problems.

There was an increase in the incident reporting from 808 in the four year period 1990-1994 (202/year) to 1872 in the five year period 1995-2000 (375/year). **Figures 2.3 and 2.4** illustrate the types of materials that were reported in the 808 water pollution incidents reported during 1990-1994. Similarly, **Figures 2.5 and 2.6** illustrate the types of materials that were reported in the 1872 water pollution incidents during 1995-2000. The types of materials involved the most in the incidents for both the First and Second Permit Terms were miscellaneous waste and petroleum products (1990-1994 67%, 1995-2000 66%).

2.4.2 Enforcement

Enforcement activities are undertaken according to the Water Quality Ordinance and accompanying Enforcement Consistency Guide (DAMP Section 4.0 and **Appendix E2**). Water pollution cases may be handled administratively or in more serious instances, have been prepared for prosecution by the Orange County District Attorney who may prosecute under the applicable sections of the Water Quality Ordinance, State Fish and Game Code, State Water Code, Uniform Fire Code, and Penal Code that address pollutant discharges.

The Permittees have formerly designated the staff responsible for carrying out the enforcement services according to the Enforcement Consistency Guide and update these designations every year in the Annual Status Report (Section 3.0). The Permittees will continue to have responsibility for water pollution enforcement within their jurisdiction unless that authority has been designated to the Orange County Flood Control District.

During the 1997/98 and 1998/99 reporting periods, the Principal Permittee provided Water Quality Ordinance Enforcement Consistency Guide training to approximately 40 Permittees and support staff. This training was designed to assist with the establishment or implementation of the Water Quality Ordinance enforcement program.

Commencing with the 1999/00 reporting period, the Permittees began to provide a summary of the enforcement actions that have been taken against offenders within their jurisdiction. This information includes the types and total numbers of the various enforcement actions that have been taken against the violators, the number of repeat violators and the incremental enforcement actions taken against them, and additional information regarding any prosecutions that are either currently underway of that have been settled.

As provided for in the Enforcement Consistency Guide, when selecting enforcement options, it is important that the Permittees ensure that violations of a similar nature are subjected to similar types of enforcement remedies. Nonetheless, a more severe enforcement option may be selected when a violator has either a history of noncompliance or has failed to take good faith actions to eliminate continuing violations or meet a previously imposed compliance schedule.

The Permittees have five types of remedies including educational letters, Notices of Noncompliance, Administrative Compliance Orders, Cease and Desist Orders and commencement of other civil or criminal enforcement action. The Enforcement Consistency Guide provides a framework to the Permittees for selecting the type of enforcement that should be pursued. Some of the factors that influence this decision include the duration and significance of the violation of threat, the cooperativeness and willingness of the responsible party to remedy the conditions, whether the incident is isolated or re-occurring and whether the violation or threat will affect or harm human health or the environment.

Why isn't everyone doing enforcement?

The Permittees reported a total of 367 enforcement actions during the 1999/00 reporting period (**Table 2.3**). Of these, 216 were educational letters, 62 Citations, 30 Cease and Desist Orders, and 25 Notices of Noncompliance. **Table 2.4** provides a summarization of the incremental enforcement actions taken by twelve Permittees with respect to repeat violators as well as any ongoing prosecutions. A total of eleven prosecutions were reported. Of these, two resulted in guilty pleas and subsequent fines, while the others are still pending.

2.5 Detection/Elimination of Illicit Connections

An illicit connection to the storm drain system is an undocumented and/or unpermitted physical connection from a facility to the storm drain system. The First Term Permit required the Permittees to undertake programs to identify and eliminate illicit connections to the storm drain system. In response, the Permittees developed a facility inspection and documentation program to identify such connections (**DAMP Appendix J**).

The Second Term Permit required the Permittees to certify the completion of the reconnaissance of the storm drain system by February 28, 1997, and, in instances where illicit connections are detected, a schedule be provided for their elimination. The Reconnaissance Survey Report of February, 1997, reported finding two illicit connections countywide and inspection of drainage facilities is now conducted as part of routine maintenance.

Any illicit connection identified during routine inspections is investigated by the affected Permittee. Appropriate actions are then taken to approve undocumented connections by permit procedure and/or pursue removal of those connections that are determined to be illicit connections and not permissible.

From 1996 to 2000, the Permittees reported a total of 178 illicit connections to the storm drain system. Of these, at least 56 received permits and 46 were either plugged or removed; the remainder are still pending. **(Table 2.5).** Pool drains constituted the majority of these connections.

3.0 STATUS OF BMP IMPLEMENTATION

3.1 Introduction

This Section details the Permittees' programs to implement Best Management Practices (BMPs) as part of routine public agency activities (DAMP Section 5.0), in the construction and post construction phases of new development (DAMP Section 7.0 and 8.0) and the participation with several water quality planning initiatives.

The Second Term Permits added an additional requirement for BMP implementation related to the operation of municipal facilities through an environmental performance evaluation and reporting program. This program is now in its third year of implementation and is discussed in Section 3.2.6.

3.2 Public Agency Activities (DAMP Section 5.0)

All of the Permittees routinely conduct preventive maintenance activities that are widely recognized as effective BMPs for pollutant control. These activities include litter control, solid waste collection/recycling, drainage facility maintenance, catch basin stenciling, street sweeping, hazardous materials management/environmental performance reporting, household hazardous waste collection, emergency spill response and fertilizer and pesticide management.

The DAMP requires evaluation of these activities and, where appropriate, improvements or new practices to further reduce the amount of pollutants discharged into the storm drain system. An important component of this evaluation process is the documentation and collection of data related to these selected activities. The data presented in the subsequent sections has been compiled for the period of July 1, 1995 to June 30, 2000 and compares the status of the program from the 1994 Report of Waste Discharge (ROWD) submittal to the 2000 ROWD submittal.

3.2.1 Litter Control

Litter control is an important element in the diversion of trash and other materials from the storm drain system. Although most Permittees historically viewed litter control as a public service program (i.e., preventing visual blight, etc.), rather than as a pollution control problem, they now consider it equally important as a visual indicator of water quality.

In 1994, eighteen Permittees had specific municipal litter control ordinances and fifteen planned to utilize the new sections in the Model Water Quality Ordinance to achieve effective litter control authority. All Permittees now have the legal authority to control littering in public areas either through the Water Quality Ordinance or existing municipal code sections.

Other DAMP-recognized elements of litter control include provision of trash receptacles and special clean-up events **(Table 3.1)**. During the 1999/00 reporting period, twenty-seven Permittees reported that trash receptacles are maintained in public areas. Other initiatives included the allocation of staff to litter and debris control, arrangements to facilitate the disposal of large waste items by residents, and organized community/neighborhood clean-ups.

Garden Grove, for example, coordinated volunteer groups to clean litter twice monthly. Another example was the organization of Neighborhood Enhancement Programs by the City of Orange, wherein each year specifically targeted community areas clean-up litter. Several other cities reported organizing, or participating in, initiatives related to litter control such as "Beach Clean-Up Day", "Volunteer Connection Day", "Earth Day Clean-Up," "Coastal Clean-Up Day," and "Pride Days."

Every year the California Coastal Commission sponsors a Coastal Cleanup Day to help cleanup the trash and debris that accumulates along the coastline, fouling the beaches and tidal zone **(Table 3.2)**. During the first cleanup day in Orange County in 1996, 4,649 volunteers collected 38,906 pounds of trash and 3,914 pounds of recyclables (9.2 pounds/person). In 1999, 4,382 volunteers joined in and collected 65,900 pounds of trash and 8,841 pounds of recyclables (17 pounds/person).

The top five items collected during the 1999 event were 14,587 cigarette butts; 9,650 foamed plastic pieces; 5,621 plastic food bags/wrappers; 5,288 paper pieces and 4,630 plastic pieces; which corresponded closely with the results from the debris characterization study conducted within the Newport Watershed (Section 3.9.1).

3.2.2 Solid Waste Collection/Recycling

The Permittees have solid waste collection programs for public, residential, commercial and industrial areas. The Permittees recognize that the public must be encouraged to properly dispose of their trash and educated that the storm drain is not a waste receptacle. The Permittees conduct public education outreach through a variety of methods including community newsletters, radio and television public service announcements, brochures and utility bill inserts.

In 1994, the Permittees reported recycling information that they were separately required to collate under the requirements of AB 939 In the 1993/94 reporting period, seventeen Permittees reported data regarding the breakdown of constituent materials for recycling, as required under AB 939. These Permittees diverted 177,000 tons from the waste stream, marking an increase of 67,000 tons from the prior year. Since the AB 939 reporting requirements have changed, the Permittees no longer provide this information.

In the 1999/00 reporting period, twenty-nine of the Permittees reported the collection of 3.4 million tons of solid waste **(Table 3.3)**. In addition, the Permittees reported on the types of solid waste and recycling education materials made available to the public and the frequency with which they were distributed or broadcast **(Table 3.4)**.

Twenty-three Permittees indicated that they distributed community newsletters, while 16 jurisdictions reported the distribution of utility bill inserts containing information regarding recycling and/or proper waste disposal at least annually. Certain educational efforts have increased since 1994. For example, in 1999/2000 ten Permittees reported that they broadcast public service announcements via radio and/or television; this compares to only five Permittees in 1994. Moreover, Cypress, Mission Viejo, Placentia, and San Clemente all reported the inclusion of information about recycling and waste disposal on their city web sites.

Another example is Tustin which reported the continuance of an ad hoc committee, "Tustin Pride", that organizes events such as their Christmas Tree recycling program. Anaheim reported contracting with a private communications firm for public relations services to promote "Recycle Anaheim."

Examples of recycling public education materials are included in **Appendix 3.1.** Reflected in the program materials is that fact that many jurisdictions have combined the recycling, litter control and hazardous materials disposal messages.

3.2.3 Drainage Facility Maintenance

Maintenance

During the First and Second Term Permit periods, the Permittees developed and implemented drainage facility inspection and maintenance procedures and created inspection logsheets in order to document the total volume of material removed from their facilities and the percentages of each type of material. Through their routine inspections, the Permittees also notify the appropriate Authorized Inspectors of any evidence of chemical contamination or suspected illegal discharges.

The Permittees inspect the drainage system within their jurisdictions on a regular basis and clean out accumulated debris on an as-needed basis. Removal of accumulated debris and sediment is carried out either manually or by mechanical methods using flushing in emergency situations only.

In 1993/94 seventeen Permittees reported removing more than 7,500 cubic yards of debris from the drainage system. This debris was cleared from 114 miles of channel and pipe and 13,650 storm drains and catch basins.

Comparatively, in the 1999/00 reporting period, twenty-eight Permittees reported the removal of 15,381 cubic yards and 23,907 tons of material from 218.8 miles of storm drains and 21,284 drain inlets. Thus, over the last permit term the efforts to clean out the drainage facilities and the quantity of material removed have doubled.

Debris characterization varied significantly between jurisdictions but averaged 43% soil, 38% vegetation, 9% paper, 4% plastic, and 5% **(Table 3.5)**. These figures do not vary greatly from those tabulated in 1993/94

Drainage Facility Changes

The NPDES permit requires that the Permittees provide information regarding any significant changes to the storm drain systems, outfalls, detention or retention basins, dams or other controls, including map updates of the storm drain system. During 1990 – 1995, the Permittees reported approximately 270 changes to their municipal storm drain systems.

Comparatively, during 1996-2000, twenty-five Permittees reported a total of 220 changes to their municipal storm drain systems (**Table 3.6**). In addition, Brea reported nine changes occurring between 1990 and 1994 and Huntington Beach and Westminster each reported a change occurring in 1994.

The Permittees also reported that they provide the Principal Permittee with drainage facility map updates on a continual basis. These maps can be made available to the Regional Boards upon request.

Low Flow Diversions

The Permittees have implemented a limited number of drainage system diversions to the sanitary sewer system at several coastal locations. Diversion projects take low flow flood control channel water and divert them to sanitary sewer or ocean outfall to avoid direct discharge to recreational and other use areas.

Talbert/Lower Santa Ana River Watershed

Elevated bacteria indicator levels in the surfzone off Huntington State Beach in 1999 were attributed, in part, to the storm drain system of the Talbert/Lower Santa Ana River Watershed (see Section 3.8.2). As part of an early action plan, all storm drain and pump station discharges in this watershed have been temporarily diverted during the summer months.

As an added measure to prevent bacteria in the Santa Ana River from impacting Huntington State Beach, low flow runoff from the lower Santa Ana River Watershed is being diverted to the sanitary sewer at four locations. These locations are: the Santa Ana River just upstream of Talbert; the Greenville Banning Channel upstream of Hamilton; and two Huntington Beach pump stations at Hamilton and Meredith.

Aliso Creek Watershed

The lower mile of Aliso Creek has been listed as impaired for the presence of elevated levels of fecal coliform (see also Section 3.8.3). Pursuant to a 205(j) grant the Principal Permittee initiated a water quality planning study. One of the results of the study was the identification of elevated fecal coliform levels at a number of points along Aliso Creek and in its tributaries. One storm drain (identified as J03P02) exhibiting elevated fecal coliform levels was issued a Clean Up Abatement Order by the San Diego Board. As an early action, the flows from J03P02 have been temporarily diverted during the summer months to the sanitary sewer by the City of Laguna Niguel.

As a further watershed step, the Principal Permittee and the Aliso Water Management Agency installed, operated and maintained a diversion project to remove summer flows in Aliso Creek from an area immediately upstream of Aliso Beach. This diversion project utilizes a summer-season-only sand berm to allow pumping of creek water to an adjacent ocean outfall line.

Laguna Beach Coastal Storm Drains

The city of Laguna Beach installed their first diversion in 1987. Since that time they have installed five additional diversions and plan to install fourteen more by the year 2007. Currently the diversions cover 960 urban acres, 38% of the 2,500 total urban acres in Laguna Beach. By the year 2007 the diversions will cover 2,130 (85%) of the 2,500 total urban acres in Laguna Beach.

3.2.4 Catch Basin Stenciling

The goal of the stenciling program is to label and subsequently maintain labels on stormdrain catch basins throughout Orange County. Initially the label was comprised of "No Dumping - Drains To Ocean" written in 3" black letters on either the top of the curb or the curb face adjacent to the inlet.

This format was later revised to 3" blue letters on a white background. Each Permittee, however, may implement its own version of the catchbasin stenciling program including variations on the phrase or the method of labeling such as the use of hot/tape decals or thermoplastic plaques.

In the 1993/94 reporting period, the Permittees reported stenciling approximately 21,250 catch basins (63%) and twenty Permittees reported completing stenciling all of their catch basins in their jurisdiction.

In the 1999/00 reporting period the Permittees reported that over 33, 300 catch basins (98%) of the total inventory of over 34,000 drain inlets have been stenciled at least once. The number of Permittees who have stenciled 100% of their catch basins at least once has increased from twenty to twenty-five. Seventeen Permittees reported re-stenciling over 11,600 catch basins (over one third) during 1999/2000 **(Table 3.7)**.

Most Permittees use the recommended stencil: "No Dumping - Drains To Ocean". There are, however, a few variations. Newport Beach uses "Drains to Ocean" or "Drains to Bay" depending on the storm drain's receiving water, Irvine uses "No Dumping Waste – Drains To Ocean", and Laguna Beach designed its own logo to accompany the phrase: "Keep It Clean – Drains To Ocean". Seal Beach and Placentia both use "No Dumping", with Placentia including the corresponding municipal code (P.M.C. Section 16.08.040).

All but four of the Permittees used spray paint to stencil their inlets, with nine using either blue or black paint on a white background instead of only black with no background color. Alternative application methods included hot tape/decals (Irvine, Orange), thermo-plastic (Brea), and adhesive plaques (Laguna Beach and Orange).

Several Permittees, including Brea, Buena Park, La Habra, and Orange reported positive public reaction to the stenciling programs. Still others noted an apparent decrease in the amount of litter in the catch basins since the initiation of stenciling programs.

The use of volunteer resources was reported by a number of Permittees; in 1999/00 over 4,700 catch basins were stenciled by volunteer groups. Fullerton, San Clemente, and Lake Forest all utilized Boy/Eagle Scouts, while Costa Mesa, Irvine, La Habra, and San Clemente reported stenciling assistance from the Orange County Conservation Corps.

3.2.5 Street Sweeping

All Permittees maintain street sweeping programs in residential, commercial and/or industrial areas. In 1993 the Permittees compiled information regarding their existing street sweeping schedules and practices and subsequently changed elements of their programs such as the types of sweepers purchased, the frequency of sweeping, and the use of parking restrictions in order for the street sweeping program to aid in water quality improvements.

During the Second Term Permit period, the Principal Permittee recommended that the Permittees apply a standard of pollutant control removal effectiveness in the purchase of new street sweeper equipment. This recommendation was based upon a preponderance of research literature suggesting that regenerative air sweepers are superior in performance to vacuum and mechanical brush. The research is not, however, unequivocal.

In the 1999/00 reporting period, twenty-six Permittees reported using a fleet of street sweepers consisting of at least 36 mechanical broom, 66 vacuum and 7 regenerative air sweepers. It is expected that, over the next permit period, these numbers will continue to change as Permittees replace aging equipment. The Permittees also reported removing at least 410,483 tons and 111,301 cubic yards of material with the sweepers.

Monthly sweeping of residential, commercial, and industrial public street areas was the minimum reported sweeping frequency with the Principal Permittee frequency commencing in the 2000/01 reporting period. Approximately half of the Permittees reported conducting weekly sweeping in industrial and commercial areas, with sixteen conducting weekly sweeping in residential areas. Six Permittees reported a sweeping frequency of twice weekly or greater for at least one of the three designated areas. Laguna Beach, Newport Beach, and Santa Ana all reported daily sweeping in some commercial areas **(Table 3.8)**.

Twenty-two Permittees reported the use of parking restrictions to improve street sweeping effectiveness, two more than in 1996. All reporting Permittees noted visual inspection of streets to verify street sweeper effectiveness, with nineteen Permittees indicating that their street sweeping equipment is monitored at least weekly for adherence to manufacturer's specifications for optimal performance. In addition, several Permittees noted that they actively encourage citizen comment on their street sweeping programs and will repeat the sweeping of an area when a complaint is received.

3.2.6 Hazardous Materials Management/Environmental Performance Reporting

Prior to 1997, the Permittees annually reviewed their hazardous materials management practices. Specific information was submitted in the annual reports regarding product substitution, structural modifications to storage areas, elimination of hazardous waste streams, installation of a clarifier for site drainage, the use of off-site facilities for vehicle cleaning, employee training, and site audits.

As a result, in 1993/94 eight Permittees reported making physical improvements to their hazardous materials storage facilities and five Permittees reported that they no longer manage hazardous materials. The improvements included major structural changes in the waste storage facilities and the replacement of hazardous materials with non-hazardous substitutes.

The Second Term Permit required the Permittees to prepare an Environmental Performance Reporting Program and include in subsequent Annual Reports a discussion of the actions taken by the Permittees to eliminate pollutant discharges at public agency facilities. This program was implemented in 1997 and was applied to municipal facilities whose operations include hazardous materials storage, waste storage, and/or vehicle and equipment maintenance.

Permittee facility operators were required to:

1. Determine which operations are the most significant contributors to stormwater pollution; and then to
2. Identify significant issues at each facility and develop and implement action plans to control the discharge of pollutants.

The program is iterative, involving an annual evaluation of municipal facility environmental performance and the implementation of corrective actions until all identified significant issues are addressed. The action plans that have been developed by the Permittees to address the significant issues have demonstrated a commitment by the Permittees to implement both structural and non-structural controls. **Table 3.9** summarizes the number of significant issues and action plans that have been identified and corrected over the past four years in addition to those made in the old program.

Since the inception of the program the Permittees have been committed to reducing the pollutants from their fixed facilities. This is evidenced by the 94 municipal facilities and 244 significant issues identified during the first year of the program decreasing to 17 facilities and 47 significant issues by the end of the 1999/00 reporting period.

The initial compilation of the significant issues and action plans identified at each facility were provided in the 1996/97 report. In that initial report Dana Point, Laguna Hills, Laguna Niguel, Lake Forest, Mission Viejo, San Clemente and San Juan Capistrano reported no significant issues for any of their facilities, primarily due to the fact that they are either smaller jurisdictions or they contract out the majority of their municipal activities. In 1996/97 the Permittees identified 94 facilities with approximately 244 significant issues.

In 1997/98 the Permittees completed 158 (65%) of the 244 significant issues action plans identified in the 1996/97 report. Ten new significant issues were identified during this reporting period bringing the total number of outstanding issues to 96. At the end of 1997/98 the number of facilities with significant issues had decreased to 58, and thirteen Permittees (compared to seven at the end of the previous year) were able to report no significant issues at any of their facilities.

In 1998/99 the Permittees completed 25 (26%) of the 96 remaining significant issues action plans identified in the 1997/98 report. Three new significant issues were identified during this reporting period bringing the total number of outstanding issues to 74 from 51 facilities.

In 1999/2000 24 Permittee facilities completed 29 (39%) of the 74 remaining significant issues action plans identified in the 1998/99 report. Two new significant issues were identified during this reporting period bringing the total number of outstanding issues to 47 from 17 facilities. At the end of 1999/2000, sixteen Permittees were able to report the completion of all outstanding significant issues.

Some examples of action plans completed during the last reporting period include the City of Anaheim which relocated vehicle washing areas at ten of its Fire Stations, and the City of Garden Grove which reported hazardous material storage training for employees at eight of its facilities. Of the 29 action plans completed during 1999/00, eight (28%) involved the implementation of structural controls such as the construction of berms to contain runoff, while 24 action plans (72%) required the implementation of non-structural controls, for example, employee training or the relocation of wash areas **(Table 3.10).** Of the 47 uncompleted action plans, the majority (83%) require the implementation of structural controls. For example, the city of Cypress is in the process of constructing berms and installing a storage area roof at its Corporation Yard facility, while La Habra is re-budgeting for the installation of a clarifier at its Public Works Yard. New end dates have been provided for instances in which the implementation of the control will extend beyond the previous end date provided.

The completed Significant Issues Action Plans forms are included in **Appendix 3.2.**

3.2.7 Household Hazardous Waste Collection

Collection Centers

Orange County has an effective household hazardous waste collection program administered by the Integrated Waste Management Department (IWMD). The program comprises four sites (Anaheim, Huntington Beach, San Juan Capistrano, and Irvine) that operate 5 days per week for a total of 259 days per center (excluding partial or full day closures due to rainy weather).

From 1993 - 2000, the Permittees reported that through their trash collection services and various public education initiatives residents are directed to use these IWMD facilities for disposal of their household hazardous waste.

Table 3.11 includes the quantities of the various types of household hazardous waste dropped off by County residents at the four IWMD collection centers during 1993/94 and 1999/2000. A total of 2,896,967 pounds of household hazardous waste was collected in 1999/2000 (compared to 2,689,560 pounds in 1998/99). The amount of waste dropped off at these four sites has increased since 1994 when approximately 2,449,902 pounds of waste was collected.

Household Hazardous Waste Events

In 1993/94 four Permittees reported conducting at least one special event in their jurisdiction to pickup household hazardous waste and/or educate the public regarding proper disposal.

In 1999/00, seven Permittees reported separate household hazardous waste collection efforts which brought in an additional 190,905 pounds of waste. This figure excludes materials collected by Laguna Beach since totals for its new door-to-door collection program are unavailable. These efforts included three waste oil collection initiatives (Costa Mesa, Garden Grove, and Orange) and four programs involving household hazardous waste collection days (Laguna Beach, Lake Forest, Mission Viejo, and Placentia) **(Table 3.12 & 3.13).**

Oil Recycling

All Permittees and the County's Health Care Agency currently implement used oil recycling programs. These programs involve comprehensive public outreach including television and newspaper advertising, displays at community events, and the distribution, at no cost to residents, of used oil containers. In addition, some Permittees also conduct household hazardous round-ups or drop off events for their residents.

The public outreach efforts associated with the used oil recycling programs are comprehensive as is reflected in the public education materials that have been developed and distributed **(Appendix 3.1).** Several Permittees also reported advertising the locations of used oil collection centers as well as participating in various used oil recycling programs and/or grants.

In 1999-00, the Permittees updated and distributed the used oil collection brochures for North, Central and South Orange County. The brochure provides information regarding locations within each city that will accept water motor oil and information regarding the proper disposal of oil filters.

In 1996-97, the County, in conjunction with the cities of Brea, Dana Point, Laguna Beach, Laguna Niguel, San Clemente, San Juan Capistrano, Villa Park and Yorba Linda applied for and received a three-year Used Oil Recycling Grant to help encourage recycling or appropriate disposal of used oil. The County also received a two-year Used Oil Recycling opportunity grant for Dana Point Harbor. Additionally, in 1999/00 20 Permittees reported that they received a Used Oil Recycling grant (compared to 17 in 1998/99).

3.2.8 Emergency Spill Response

The Orange County Hazardous Materials Area Plan or a city equivalent has been adopted by most of the Permittees. This Plan is a set of planned responses to hazardous materials emergencies, addressing chain-of-command, public agency participation and allocation of authority.

The Permittees have all enacted the authority to control releases to the storm drain system through a common Water Quality Ordinance. The Permittees have formerly designated the Authorized Inspectors according to the Enforcement Consistency Guide **(Table 3.14 – 3.16).** The Permittees will continue to have responsibility for water pollution enforcement within their jurisdiction unless that authority has been designated to the Orange County Flood Control District (see also Section 2.3 and 2.4).

3.2.9 Fertilizer and Pesticide Management

Careful fertilizer application and management is the most effective means of controlling nutrient loss from landscaped areas. Similarly, careful pesticide management addresses both acute toxicity and chronic exposure concerns associated with all insecticides, rodenticides and herbicides.

During the First Term Permit period, a model plan, entitled "Management Guidelines for Use of Fertilizers and Pesticides," **(DAMP Appendix F)** was developed to provide guidelines for application methods for fertilizers and pesticides, surface runoff minimization, accident mitigation and Integrated Pest Management. This model was subsequently implemented by the Permittees.

Table 3.23 summarizes the total acreage and quantity of fertilizers and pesticides applied by the Permittees within their jurisdiction. It also summarizes the number of Permittees applying integrated pest management techniques and the corresponding reduction in the amount of pesticides applied.

Fertilizer Management

In 1999/00, at least 1,883,905 pounds of fertilizers were applied to a reported total of 5,637 acres of public land in Orange County compared to 5,900 acres in 1993/94 **(Table 3.17)**. **Table 3.18** provides information on the number and types of fertilizers used by the Permittees in 1999/00; however, numbers on the different forms of fertilizer applied are currently not available.

Nineteen Permittees (compared to twenty one in 1993/94) reported consulting a qualified fertilizer specialist within the past year regarding application rates, application timing, storage and/or handling of fertilizers, while fourteen Permittees (compared to fifteen in 1993/94) reported that, during 1999/00, soil testing was conducted to determine compatibility with the fertilizers being used.

Seventeen Permittees (compared to ten in 1993/94) reported using organic or slow release fertilizers to a greater extent than the year before. No spills of fertilizers were reported.

Pesticide Management

The Permittees reported individually applying 306 pesticides, 45 of which were Category I or restricted, to 12,110 acres of public land in 1999/00. Similar figures were reported in 1998/99 when Permittees reported applying 325 pesticides, 48 of which were Category I or restricted, to a reported 12,310 acres of public land **(Tables 3.19 & 3.20).** It should be noted that the total number of pesticides reported here do not represent the number of distinct pesticides used by the Permittees; rather, they are simple aggregations that do not account for the possibility that two or more Permittees may use the same pesticide. At least 32,223 pounds and 10,600 gallons of pesticides were applied by Permittees in the last year. These figures, however, represent low-range estimates since not all Permittees reported their figures in total pounds or gallons while some failed to report quantities altogether.

In 1999/00 six permittees (compared to one in 1993/94) reported that soil testing was conducted at some point during the past two years for compatibility with the pesticides being used **(Table 3.21)**.

Nineteen Permittees (compared to seventeen in 1993/94) reported requiring that all pest control personnel (applicators) obtain a Qualified Applicators License (QAL) from the State. It should be noted that at the minimum, all Permittees require either a QAL or equivalent County training for pesticide applicator personnel.

Twenty-seven Permittees (compared to 28 in 1993/94) reported conducting inspections of the pesticide application equipment and contract or in-house pest control crews during the last year. These inspections were typically conducted on a routine basis.

Twenty-eight Permittees reported having the appropriate measures implemented for the application, storage, disposal and/or transportation of pesticides. Although no spills of pesticides were reported, 26 Permittees reported implementing an accident mitigation plan in case of a spill.

Integrated Pest Management (IPM)

Twenty-three (compared to twenty in 1993/94) Permittees reported implementing IPM techniques as recommended in the Management Guidelines for Fertilizer and Pesticides **(Table 3.22 & 3.23).**

Specific alternatives to the use of chemical pesticides included mechanical or manual weeding (16 Permittees), mulching (eight Permittees), water management/drip irrigation (one Permittee), the use of disease resistant plants (one Permittee), the use of biological controls (nine Permittees) and basic agronomic practices. Overall, nine Permittees reported a 5-50% decrease in the use of pesticides after implementing IPM techniques.

Costa Mesa, Seal Beach, Laguna Hills, and Anaheim reported the largest decreases in pesticide usage (50%, 20%, 12%, and 12%, respectively). Examples of IPM techniques included the utilization of predatory wasps for controlling giant whiteflies (Costa Mesa and Santa Ana), water pressure for controlling aphids and whiteflies (Santa Ana), and the use of parraffinitic oil to control whiteflies (Tustin). Seal Beach, Anaheim, and Laguna Hills achieved their reductions through mechanical controls and mulching.

3.3 Public Information (DAMP Section 6.0)

The primary goal of the public education program is to inform the community about the origins and causes of stormwater pollution and to constructively involve the public, municipalities, businesses, industries and the development community in the NPDES Stormwater Program's objective of controlling pollutants at their source (ie: pollution prevention). Achievement of this goal involves the development of materials to explain the nature of urban stormwater pollution and its effect on water quality and to identify and promote behavioral changes that will contribute to controlling pollutants at the source. The educational materials developed and distributed by the Permittees are included in **Appendix 3.2**.

3.3.1 Countywide Efforts

During the First and Second Term Permit periods the Principal Permittee, took the lead in developing a regional awareness program and provided the Permittees with copies of educational materials for distribution to the public. The public education program consisted of public, business and household hazardous waste elements. The Permittees were encouraged, but not required, to enhance the information provided with educational efforts more specific to local issues of importance related to water quality.

During the initial permit period 1990 - 1995, the following educational elements were completed:

- Participation in the 1994 Orange County Annual Survey co-directed by Mark Baldassare and Cheryl Katz of the University of California, Irvine (Section 5.2.1);

- Publication of four editions and 17,000 copies of the *Floodline* newsletter that featured articles on stormwater issues. *Floodline is* distributed to residents and businesses in Orange County;

- Distribution of a Flood Awareness Guide by direct mail with a back page on stormwater pollution prevention to over 700,000 homes;

- Distribution of more than 20,000 copies of "The Ocean Begins at Your Front Door" brochure and over 6,000 copies of the recycling brochure, "Preventing Sea Sickness", to libraries, cities and community groups;

- Providing stormwater pollution prevention PSA's for broadcast on local cable television and public television (KOCE) and movie theaters, and produced a 30-minute educational video, titled "The Ocean Begins at Our Front Door";

- Staffing of booths at the Orange County Fair, the Earth Day Fair, and the Beach Clean Up Days;

- Coordination of clean-up events under the auspices of the California Coastal Commission's Annual Coastal Clean Up Program;

- Presentations on the stormwater mandate and the Orange County Stormwater Program at workshops and seminars, including, Business Environmental Assistance Center (BEAC), Orange County Water Task Force, Public Utilities Liaison Committee, Association of Environmental Professionals, HazMat West Conference and Exposition, Council of Car Care Centers, Southern California Professional Detailers Association. In addition staff organized, in conjunction with the Building Industry Association and the Consulting Engineers and Land Surveyors of California, a workshop on the DAMP as it pertains to new development; and

- Participation in Statewide "Pollution Prevention Week(s)" in 1993 and 1994. In 1993, this effort was augmented by organization of a workshop, titled "Turning the Tide on Trash: A Watershed/Marine Action Plan Workshop," aimed at highlighting both the widespread occurrence of trash and debris in coastal and watershed receiving waters and successful trash and debris control strategies.

During the Second Term Permit period, specific public educational efforts included the creation and distribution of additional public educational materials and BMP guidelines for those potentially polluting activities not otherwise regulated, establishing and advertising a 24 hour water pollution problem reporting hotline, participating in community outreach events, participating in joint outreach programs, workshops and seminars. The specific efforts are listed below:

- Distributing copies of the color brochure "The Ocean Begins at Your Front Door": Commencing in July 1999 the County began track the distributed public education materials. From July 1999 through June 2000 10,968 copies of this brochure had been distributed;

- Creating and distributing a new brochure in 1998-99, "Do You Know Where the Water In Your Storm Drain Goes?" From July 1999 through June 2000, 10,299 of these brochures had been distributed;

- Updating and distributing North, Central and South Orange County Waste Oil Collection Center brochures in 1998-99 (Section 3.2.7);

- Procedures began to be developed for certain potentially polluting activities not otherwise regulated (**Appendix 3.3**). Efforts included:
  - Creating and distributing Auto Service Center Pressure Washing guidelines to approximately 200 large automotive service centers in 1997-98;
  - Creating and distributing Pool Maintenance Discharges guidelines in 1998-99;
  - Updating and distributing the Mobile Detailing Brochure in 1999-00;
  - Distributing Auto Service Center Pressure Washing Guidelines to approximately 2,000 small to medium automotive service centers in 1999-00; and
  - Creating and distributing Restaurant Cleaning Operations guidelines in 1999-00.

- Providing a Principal Permittee 24-hr telephone line for inquiries about stormwater and public education material;

- In an effort to encourage the public to report illegal dumping, creating and distributing magnets and bookmarks that utilize graphics from the "Do You Know Where the Water In Your Storm Drain Goes?" brochure to the general public, interested groups, the County's libraries and the Permittees. From July 1999 through June 2000, 2,792 of these magnets, as well as 1,128 bookmarks were distributed;

- Distributing appropriate educational materials with enforcement letters sent out as a result of a water pollution complaint.

- Providing the video, "The Ocean Begins At Your Front Door" for broadcast by Huntington Beach Television;

- Participating in public information activities including community outreach events such as the Orange County Fair, the Children's Drinking Water Festival, National Pollution Prevention Week, Beach and Watershed Cleanup Days;

- In 2000-01 the Principal Permittee, County of Orange/HCA, County of Orange/IWMD and Orange County Sanitation participated in a coordinated "Environmental Partners" public education effort aimed at educating the public about the proper disposal of wastes. This effort merged several similar messages about proper waste disposal;

- Principal Permittee staff participated as presenters at workshops and seminars addressing stormwater management issues;

- The initiation of a volunteer monitoring program (Section 3.3.2);

- Principal Permittee staff participated in the State Stormwater Quality Task Force: Public Information and Participation Committee (PIPP). The exchange of material has served to augment current information currently provided to new development and industries including participation in the 1-800-CLEANUP phone line and web site;

- Participation in the LA Times in Education Program in 1999-00. This environmental study unit, which was distributed to approximately 180 schools, included newspaper-based lessons, classroom explorations and the opportunity for students and their families to participate in a survey to help Orange County understand how pesticides move through our watersheds;

- Participation in the Upper Newport Bay Cleanup Day;

- Participation in the American Oceans Campaign stormwater resources web page at www.americanoceans.org/runoff/epa.htm; and

- Participation in two water quality/urban runoff issues workshops for both North and South Orange County and Watershed 101 presentations.

In late 1999, the Permittees developed a comprehensive long-term NPDES public and business education strategy (subsequently referred to as the Public Education Program) in order to effectively educate the public and targeted business groups about the effects of stormwater pollution and encourage their participation in the protection of surface waters (DAMP Section 6.0 and **Appendix L**). The Public Education Program includes a comprehensive planning approach and "tool box" of implementable educational elements based upon the desired direction of the program.

Other County agencies also provide information to the public that aids in controlling stormwater pollution. The County of Orange/HCA manages the county's used oil program that encourages the recycling of used motor oil and filters. The program assists the NPDES Stormwater Program by eliminating the number of incidents of people dumping used oil down the storm drain system. The County of Orange/IWMD manages the household hazardous waste program. The agency utilizes a variety of educational materials to recommend alternatives to hazardous products as well as proper disposal of household hazardous waste.

3.3.2 Local Efforts

In 1999/00 all Permittees (compared to twenty six in 1993/94) made the countywide educational materials available to their residents at public facilities such as city halls, libraries, fire stations, etc.

In addition many Permittees developed and distributed their own materials to the general public. In 1999/00, twenty five Permittees (compared to eighteen in 1993/94) reported enhancing local materials and/or conducting their own initiatives. For example, Laguna Hills reported the development and distribution of public education literature expanding upon the County's "The Ocean Begins at Your Front Door" brochure, while Santa Ana produced waste disposal and recycling information in English, Spanish, and Vietnamese. Five Permittees reported that they display information regarding storm drains, water quality, and/or recycling on their city websites.

The education materials separately prepared by the Permittees are summarized in **Table 3.24**. Examples of these materials are included in **Appendix 3.2**.

3.3.3 Volunteer Monitoring

During the Second Term Permit period, the Principal Permittee continued its previously initiated volunteer monitoring program. Several students/interns, one under the direction of Dr. Prem Saint of the California State University at Fullerton, were instrumental in:

1) gathering and analyzing trash/debris and sedimentation data;
2) collection of trash/debris samples for analyses;
3) maintenance of the field equipment and scientific instruments they used; and
4) preparation of statistical reporting spreadsheets;

The focus in the last several years was on quantifying and characterizing the types of trash/debris that were collected a debris boom during storm flows. The debris boom is located in the Santa Ana Delhi Channel just prior to where it discharges into the Newport Bay (Section 3.9.1).

Several students under the direction of Dr. Stanley Grant, with the University of California Irvine, conducted a monitoring program in the Talbert Channel and produced a report. The Principal Permittee assisted this effort.

3.4 New Development (DAMP Section 7.0)

3.4.1 Requirements

In 1993, the New Development/Construction Task Force comprising representatives from the Principal Permittee, Building Industry Association (BIA), Association of General Contractors (AGC) and Civil Engineers & Land Surveyors of California (CELSOC), completed a report that provides the basis for requiring the incorporation of structural and non-structural Best Management Practices (BMPs) into new development and significant redevelopment. The report, entitled "Best Management Practices For New Development Including Nonresidential Construction Projects (1-5 acres)" (**DAMP Section 7.0 and Appendix G**), involved additional contributions on specific BMPs from the Western States Petroleum Association (WSPA), Food Sanitation Advisory Council (FSAC), and Orange County's sanitary districts.

In 1997 the Permittees certified that they were implementing **Appendix G**. Since that time, the Permittees and development industry have gained considerable experience in implementing hundreds of Water Quality Management Plans (WQMPs) countywide. Tables 1 and 2 of **Appendix G** provide an outline of standard practice site specific structural and non-structural BMPs for special developments such as residential, industrial, retail/office centers, restaurants, warehouses/grocery, fuel dispensing areas and vehicle repair/maintenance facilities.

3.4.2 Educational Outreach On New Development Requirements

The Principal Permittee provided training to other Permittee planning staffs to facilitate uniform countywide implementation of the requirements of **Appendix G**. In December 1993, the report was the subject of a workshop for Permittee planning staff held at Santiago Oaks Regional Park. This training has since been complimented by individual presentations, conducted by Principal Permittee staff, to Permittee development processing staff.

In April 1994, in cooperation with CELSOC and the BIA, the report was the subject of a second workshop at the Irvine Hyatt Regency Hotel. Targeted at the development community, the second workshop attracted over 100 attendees.

In November 1998 an Urban Stormwater Runoff Water Quality Management Short Course was held. This course provided an introduction to the technical base of information that is being used to regulate urban area and highway stormwater runoff under the Best Management Practices ratcheting-down process. Twenty one Permittee representatives and support staff attended.

The Permittees continue to provide educational brochures and **Appendix G** with its attachments to acquaint developers and contractors with the NPDES program. In addition, several Permittees reported working closely with developers and contractors in an effort to educate them about stormwater BMPs and various other water quality/runoff issues. For instance, San Juan Capistrano provided samples of BMPs for new developments to all developers and their engineers upon the initial submission of applications, while the city of Tustin sent training opportunity notices to developers and provided them a model set of plans to illustrate the BMPs required.

Additionally, the city of Irvine hosted numerous workshops addressing the topic of watershed BMPs. Topics included: "Water Quality Ordinance and Enforcement Consistency," "Construction Site Planning and Management," and "New Developments."

In limited instances, Principal Permittee staff also provided third party review of Water Quality Management Plans. Permittees receiving this assistance from 1995-2000 include Buena Park, Dana Point, Fullerton, Garden Grove, Irvine, La Habra, Los Alamitos, Stanton and Westminster.

3.4.3 Implementation

At the end of 1999/00 the Permittees reported that, since the implementation of the program in 1997, a total of 1094 WQMPs had been approved, covering 10,627 acres which represents approximately 2.5% of the area within Orange County subject to the NDPES Stormwater Permit. This is consistent with the incremental implementation of BMPs over the life of development envisaged by the Clean Water Act. Catch basin stenciling was the most frequent structural control implemented (4743) followed by common area runoff minimizing landscape design (934) and common area efficient irrigation (926) **(Table 3.25)**.

BMP maintenance (903), common area landscape management (853), and common area litter control (832) were the three most frequently implemented non-structural controls **(Table 3.26)**.

The report also recognizes that "Special" structural BMPs, specifically, engineered facilities designed to address specific pollutant problems, may be required through a new development runoff management plan, CEQA process, or similar water quality planning process. An example of a "special" structural BMP that has been implemented includes the water quality detention/infiltration basins for the Las Flores Planned Community.

In addition, since the implementation of **Appendix G**, Principal Permittee staff have reviewed Non-County and County lead projects for water quality issues.

3.5 Construction (DAMP Section 8.0)

Permittee initiatives relating to the control of sediment and related pollutants are based upon established programs that involve implementation of both source control and treatment control measures at construction sites and within certain portions of the San Diego Creek watershed (DAMP Section 8.0).

The problem of construction site erosion and sediment loss has long been recognized by the Permittees. Consequently Permittee grading ordinances and codes, the Green Book, and Public Works construction specifications already contain requirements for construction practices for erosion control.

The First Term Permits required changes in grading practices to recognize sediment balance concepts, control of regulated materials used on the job site, and control of sediments polluted by contaminants. The control of stormwater pollution associated with construction is handled through the existing grading, building permit, and public works contracting process.

During the First Term Permit period the Best Management Practices For Public Works Construction report was developed and incorporated as part of the DAMP (**Appendix H**). This Appendix applies to Permittee public works construction projects and requires that such activities will implement non-structural and structural BMPs to control contaminated stormwater run-off.

At a minimum BMP selection for public works projects shall be consistent with the Construction Permit and Green Book standards for site maintenance and environmental protection. In 1997 the Permittees certified to the Regional Boards that the **Appendix H** guidelines or their equivalent were being implemented.

In 1999/00 the Permittees were actively involved with and/or attended two Construction Site Planning workshops sponsored by both Regional Boards. The focus of the workshop was planning and implementation of appropriate erosion and sediment controls.

In addition, in 1998/99 several Permittees and support staff attended a two hour workshop on storm water pollution prevention that was sponsored by Cal Trans. The focus of the workshop was on the proper implementation and maintenance for erosion and sediment controls during the construction phase.

Beyond Orange County, during the 1990-95 and again during the 1996-01 permit period, the NPDES Stormwater Program contributed both staff time and monies to the working groups that successfully developed the Statewide General Construction and Industrial Discharge Permits under the NPDES program, as well as the creation and revision of the Municipal, Construction, and Industrial BMP Manual/Handbooks which lead to a number of American Public Works workshops.

3.6 Industrial Discharger Identification (DAMP Section 9.0)

In 1992 a central database was developed which consolidated the 40 CFR 122.26 (a) (4) notifications, current NPDES permit holders and industries whose Standard Industrial Classification (SIC) codes were identified by the State Water Resources Control Board as requiring coverage under the Industrial Permit. The database provided the basis for a single notification to all the identified industrial facilities informing the facilities' staff of the existence of the NPDES stormwater program and possible industrial permit application requirements.

This early program commitment was completed in 1992 by the Principal Permittee with the distribution of educational flyers to more than 10,000 potentially affected industrial businesses in Orange County. More than 7,000 flyers were also sent to construction-related businesses in Orange County to notify them of the obligations under the General Construction Permit **(DAMP Appendix I)**.

Subsequently, in 1997-98 and in 1999-00 the Principal Permittee distributed additional guidance for the cleaning of automotive service centers to over 2,100 businesses, which included some industrial facilities subject to the Industrial Permit (Section 3.3).

In 1999/00 the Permittees were surveyed regarding their ability to identify new businesses by Standard Industrial Classification (SIC) codes in order to be able to identify those businesses that are subject to the Industrial Activities Storm Water General Permit.

As a result of the survey, fifteen Permittees indicated that they currently had a business licensing or similar mechanism in place that would facilitate this type of notification. The remaining Permittees are continuing to determine the ways in which they will be able to notify businesses within jurisdiction. This will be a focus in the next permit term.

3.6.1 Management of Significant Industrial Discharges

The Permittees already identify large industrial facilities where hazardous/toxic substances are stored, used, manufactured or disposed of, as well as local landfills, hazardous waste disposal, treatment, and recovery facilities, and any known spills, leaks or other problems in their municipal area. A number of municipalities that perform general annual fire code inspections coincidentally examine site pollution issues.

Managing the significant industrial discharges includes both a training program provided by Principal Permittee staff and coordination with various public agency organizations to encourage participation in implementing the stormwater program (Section 2.3.1).

3.7 Coordination With Other Agencies

Successful implementation of the NPDES Stormwater Program requires cooperation and coordination with other public agencies or organizations within and adjacent to Orange County that have programs or activities that have an impact on stormwater quality.

During the Second Term Permit period, a significant example of such an approach was the joint participation with Riverside, Orange and San Bernardino Counties in the Bight 98' regional monitoring program, which was coordinated by SCCWRP. This represented a collective opportunity for the three Counties to cooperatively participate in an integrated watershed monitoring program and meet a common permit objective (DAMP Section 11.3.4).

This coordination on monitoring has further developed into a region-wide monitoring and research cooperative program with the neighboring counties, SCCWRP and the three Regional Boards and will be implemented during the Third Term Permit period (DAMP Section 11.3.4).

The Principal Permittee has also been actively involved with Cal Trans and has been attending their quarterly NPDES meetings. This joint participation has allowed for the sharing of information and resources and has provided for a greater understanding of the respective programs and challenges.

The Permittees also anticipate that there may be additional opportunities for cooperative efforts with other stormwater dischargers that may be permitted separately under Phase II of the federal stormwater regulations. These dischargers include federal and state lands, including, but not limited to, military bases, national forest, hospitals, colleges and universities, and highways; utilities and special districts; Native American tribal lands; non-urbanized areas; and agricultural lands.

3.8 Water Quality Planning Initiatives

During the Second Term Permit period, the Permittees initiated several water quality planning efforts. These priority water quality planning initiatives are intended to identify and better understand site-specific urban water quality problems in Newport Bay (nutrients), Aliso Creek (bacteria) and Talbert/Lower Santa Ana River (bacteria).

3.8.1 Newport Bay/San Diego Creek Watershed (DAMP Section 11.4.1, **Appendix N**)

Newport Bay and certain sections of San Diego Creek have been listed as impaired for the presence of excess levels of fecal coliform, sediment and nutrients as well as toxicity to organisms.

The development of Total Maximum Daily Loads (TMDLs) allocations pursuant to Section 303(d) of the Clean Water Act has imposed additional requirements on the Newport Permittees (the County, Orange County Flood Control District and the cities of Costa Mesa, Irvine, Lake Forest, Laguna Hills, Laguna Woods, Newport Beach, Orange, Santa Ana and Tustin) which include significant additional requirements on these Permittees for monitoring and program development. These issues are addressed in their entirety in DAMP Section 12.

3.8.2 Talbert/Lower Santa Ana River Watershed (DAMP Section 11.4.2)

Elevated bacteria indicator levels in the surfzone off Huntington State Beach in 1999 were attributed, in part, to the storm drain system of the Talbert/Lower Santa Ana River Watershed. In response to a Section 13267 letter from the Regional Board, the Talbert/Lower Santa Ana River Watershed Permittees (the County, Orange County Flood Control District, and the cities of Costa Mesa, Fountain Valley, Huntington Beach, Newport Beach and Santa Ana) committed to conducting monitoring investigations and research studies in conjunction with the University of California Irvine and the National Water Research Institute. These studies have been initiated by these Permittees and subsequently expanded to include watershed-scale monitoring and investigations, including extensive dispersion monitoring in the surfzone.

The studies are anticipated to be completed during the renewal process for the Third Term Permit and surfzone fecal coliform impacts attributable to urban sources will be addressed through a revision of current BMPs pursuant to the water quality planning process. As part of an early action plan, all storm drain and pump station discharges in this watershed have been temporarily diverted during the summer months.

3.8.3 Aliso Creek Watershed (DAMP Section 11.4.3)

The lower mile of Aliso Creek has been listed as impaired for the presence of elevated levels of fecal coliform. Pursuant to a 205(j) grant the County initiated a water quality planning study to compliment ongoing watershed restoration efforts being conducted by the Corps of Engineers in conjunction with watershed cities and special districts.

One of the results of the study was the identification of elevated fecal coliform levels at many points along Aliso Creek and in its tributaries. One storm drain (identified as J03P02) exhibited higher fecal coliform levels than the rest and was issued a Clean Up Abatement Order by the Regional Board pursuant to violations of the NPDES Stormwater Permit. The Order, as one action, assigns additional monitoring requirements to the J03P02 Permittees (the County, Orange County Flood Control District, and City of Laguna Niguel).

The Corps of Engineers Feasibility studies and the 205(j) water quality planning study are anticipated to be completed during the renewal process for the Third Term Permit and will provide the first comprehensive restoration plan for an entire watershed in Orange County with subsequent project implementation over a multi-year period. As an early action, the flows from Lower Aliso Creek and J03P02 have been temporarily diverted during the summer months to the sanitary sewer.

3.9 Methodology For Examining BMP Retrofit Opportunities (DAMP Section 3.0)

The NPDES Stormwater program elements fall into two general categories: prevention of pollutant introduction into the drainage system and removal of pollutants from the drainage system.

The removal-oriented programs identified in the DAMP include:

- Structural BMPs identified through the water quality planning process; and
- Site specific special BMPs for new developments necessary pursuant to DAMP Section 7.0 and Appendix G.

Water quality problems are identified through the monitoring program and other water quality assessments. Watersheds determined to require additional BMPs are surveyed for potential retrofitting and considered using the principles of MEP. Existing flood control, retarding, sediment control, water conservation, recreation, habitat, and greenbelt facilities are evaluated in terms of their potential for modification to provide water quality benefits. Where retrofitting opportunities are not found, new structural BMPs will be considered, using the principles of MEP.

In the 1994 Report of Waste Discharge, the Permittees committed to develop a methodology to evaluate opportunities to incorporate stormwater quality features into existing flood control structures in each Orange County watershed.

In 1997-98, the feasibility of incorporating these types of retrofits to optimize beneficial use attainment began to mainly be addressed in the context of the long-term water quality planning initiatives being conducted within Orange County a number of which are in cooperation with the Army Corps of Engineers (Section 3.8).

The feasibility for establishing various types of improvements such as separate high and low flow channels, re-establishing pool/riffle sequences or enhancing the shading within the watersheds continue to be examined.

3.9.1 Trash and Debris Booms

In an effort to reduce the amount of debris entering the County's coastal waters, trash and debris booms have been installed in several flood control channels to remove floatable material. To date, the booms have proven effective in reducing the amount of floatable material entering the County's channels especially during the first rains of the storm season when accumulated debris finds its way into the ocean's waters.

Huntington Watershed

Four debris booms have been deployed in the Huntington watershed. The booms are located at: 1) tide gates of East Garden Grove-Wintersburg Channel, 2) upstream of Edinger in the Bolsa Chica Channel and 3) at the confluence of Westminster and Bolsa Chica Channel.

Talbert/Lower Santa Ana River Watershed

To reduce floatable debris, a debris boom was installed upstream of Hamilton in the Greenville Banning Channel/Lower Santa Ana River.

Newport Watershed

In 1999, the Principal Permittee received a Clean Water Act 319(h) grant to implement additional trash and vegetative debris booms in the watershed and focus on enhanced source control measures. The additional debris booms were installed in El Modena-Irvine and Peters Canyon Channel. One of the grant tasks also required the characterization of debris collected by the trash and debris booms and the comparison of the results with similar data obtained from the existing debris boom located on the Santa Ana-Delhi channel.

During the 1998-1999 and 1999-2000 storm seasons, a debris characterization study was initiated to collect trash and debris samples from the containment boom in the Santa Ana Delhi channel. Samples were collected from a total of seven storm events. Although an attempt was made to collect data from the newly installed containment systems in Peters Canyon Wash and El Modena-Irvine channels, due to the infrequency of storms during the recent storm season and upstream construction activities in the Peters Canyon channel, no data could be obtained from these channels. Data from these containment systems will be collected in the 2000-2001 storm season.

The results of the debris characterization study at the Santa Ana Delhi channel indicated that the percent composition of the trash and debris are similar for each of the storms. The study showed that the adjusted (excluding the weight of water and sediment) composition percentage of organic and plastic categories averaged 47% and 34%, respectively. The remaining five categories averaged less than 20%. These results provide the basis for targeting source control measures for trash and debris reduction in the Santa Ana-Delhi watershed on organics and plastics.

3.9.2 Additional Retrofit Projects

An additional operational retrofits that have been implemented within the Newport Watershed are the installation of separate high and low flow channels on portions of Bonita Creek by the San Joaquin Hills Transportation Corridor Agency.

Within the San Gabriel River watershed the addition of pump stations to the standard detention basin outlet structures leading to the San Gabriel River to allow for easier retrieval of floatables are in the design stage.

In addition, some of the low flow diversions discussed in Section 3.2.3 may become an engineered facility during the third term permit period.

3.10 Land Use and Population Changes

Orange County's population has increased by approximately 5.1% (from 2,641,355 to 2,775,675) in the last five years **(Table 3.27)**. This increase has occurred fairly uniformly across Permittees, with all but four Permittees experiencing a population increase of between one and ten percent. Exceptions included Irvine and San Juan Capistrano, which each experienced population growth of 10.2% over the last five years, as well as the County of Orange and Los Alamitos, which each experienced negative population growth rates of -10.2% and –3.0%, respectively, the former due to recent incorporations.

As a result, Permittees reported only modest changes in land usage from 1996 to 2000 **(Table 3.28)**. Of the sixteen Permittees submitting land use distribution figures for both 1996 and 2000, only Irvine and San Juan Capistrano reported any substantial change. Irvine reported a decrease in residential land use from 38.5% of its total to 33.1%, and increases in the amount of both industrial (13.9% to 15.5%) and open space (36.8% to 38.8%) land uses.

In San Juan Capistrano, residential land uses increased as a percentage of the total from 26% to 29%, as did open space (33% to 38%). The amount of vacant and undeveloped land in San Juan Capistrano decreased from 24% of the total in 1995 to 14% in 2000.

Seven Permittees, Cypress, Fullerton, Garden Grove, Huntington Beach, Orange, San Juan Capistrano and Westminster, reported that they would be able to provide a 1996 land use map with corresponding percentages in hard copy format. Six Permittees, Cypress, Fullerton, Garden Grove, Huntington Beach, San Clemente and San Juan Capistrano, reported that they would be able to provide a 2000 land use map with corresponding percentages.

TABLES

Table 3.1 1999/00 Elements of Litter Control

Permittee	Litter Ordinance	Clean-Up Programs	Special or Bulky Item Pickup	Trash Receptacles	Other
Anaheim	X	X	X	X	Roll off boxes for trash collection in target neighborhoods
Brea	X			X	City of Brea Beautification Day
Buena Park	X	X	X	X	City holds "Spring Clean-Up" and "Fall Clean-Up"
Costa Mesa	X	X	X	X	Court referrals and community service programs used for debris cleanup; City hosted a clean-up event for the Fillmore/Coolidge neighborhood.
Cypress	X		X	X	None
Dana Point		X	X	X	Twice weekly litter pick up; City sponsored weekend litter cleanup in conjunction with Lantern Village Association and Solag Inc.
Fountain Valley	No Report				
Fullerton			X		Maintenance crews remove litter and debris in high accumulation public areas; Each residential customer allowed an unlimited number of trash receptacles.
Garden Grove	X	X	X	X	City hosts Volunteer Connection/Earth Day event; Used Tire Round-Up Event; City coordinates volunteer groups to clean City parks & other public right-of-ways twice monthly.
Huntington Beach	X		X	X	None
Irvine	X	X	X	X	Trash receptacles at bus stops and pedestrian walkways and expansion of residential recycling program.
La Habra	X	X	X	X	City-wide cleanup day events held three times. Also provided dumpsters at no cost for "Pride Day" cleanups.
La Palma	X			X	City targets one area a year to clean and beautify during Volunteer Connection Day
Laguna Beach	X	X	X	X	Beach Cleanup Day; Vacuuming of sidewalks with "Clean Machine" in business districts; Weekly sand sifting and litter control on beaches, Urban Runoff Diversion Program to divert nuisance flow to City sewer system.
Laguna Hills	X		X	X	Daily litter pickup in parks.
Laguna Niguel	X	X		X	"Doggie Clean-up Bags", Volunteer Connection Day beautifies the Community Park in the Botanical Preserve
Lake Forest		X	X		Sponsored 2 Neighborhood Pride Clean-up Days
Los Alamitos		X	X	X	None
Mission Viejo	X	X	X	X	City sponsored "Tierra Nativa", an annual event celebrating Earth Day, National Trails Day, Arbor Day & Volunteer Connection Day.
Newport Beach	X	X	X	X	Community Cleanup events, Clean Harbor Day, Clean Estuary Day. City operates a Harbor Debris Boat to clean up the harbor area. Periodic events at request of homeowners associations.
Orange	X	X	X	X	Special recycling days and Neighborhood Enhancement Programs wherein specifically targeted areas clean up litter
Placentia	X	X	X	X	X
San Clemente	X	X	X	X	Neighborhood Pride Clean Up Day, Public recycling bin for cardboard & other recyclables
San Juan Capistrano	X		X	X	None
Santa Ana	X	X	X	X	Housing Department conducts neighborhood clean-ups throughout the year
Seal Beach	X		X	X	Bi-annual City Clean Up Week
Stanton			X		None
Tustin	X		X	X	Lanscaping contractors required to include litter pick-up in their activities
Villa Park	No Report				
Westminster	X		X	X	Christmas Tree Recycling Program
Yorba Linda	X	X	X	X	Holiday Collection Days
County of Orange	X	X	X	X	Collection bins for special events, America Recycles Day, Earth Day

Table 3.7 1999/00 Drain Inlet Stenciling

Permittee	Total Number of Catch Basins	% of Basins Stenciled at Least Once	# Of Basins Re-Stenciled 1999-2000	Phrase Used	Type of Application Used			Volunteer/Other Organizations	# of Basins Re-Stenciled During 1999-2000	Comments
					Spray Paint	Heat	Adhesives			
Anaheim	3500	100	1110	No Dumping - Drains To Ocean	X (blue,black,red)					
Brea	800	100	5	No Dumping - Drains To Ocean		X				Positive public reaction to stenciling
Buena Park	791	100	0	No Dumping - Drains To Ocean	X (blue on white)					Positive public reaction to stenciling; City has budgeted funds to purchase acrylic catch basin markers for the next fiscal year.
Costa Mesa	1300	100	1300	No Dumping - Drains to Ocean	X (blue on white)			Orange County Conservation Corps	1300	Stenciling information article in the Winter, 2000 Community Newsletter
Cypress	487	100	0	No Dumping - Drains To Ocean	X					Promotion of stenciling program in the City newsletter; Majority of re-stenciling performed by Boy Scouts.
Dana Point	395	100	0	No Dumping - Drains To Ocean	X (black)					15 new catch basins currently under construction. City provided stencils for use in private communities.
Fountain Valley	No Report									
Fullerton	1684	100	600	No Dumping - Drains To Ocean	X			Boy Scouts of America - Eagle Scout Project	600	
Garden Grove	775	100	775	No Dumping - Drains To Ocean	X (blue)			City Maintenance Personnel	24	
Huntington Beach	1680	100	1680	No Dumping - Drains To Ocean	X					
Irvine	4600	100	500	No Dumping Waste - Drains To Ocean	X	X		Orange County Conservation Corps	500	
La Habra	552	100	552	No Dumping - Drains To Ocean	X (blue on white)			Orange County Conservation Corps	552	Positive public reaction to stenciling
La Palma	180	87	0	No Dumping - Drains To Ocean	X					
Laguna Beach	445	56	195	Keep It Clean - Drains To Ocean			X (Blue)			No illegally dumped material discovered since installation of new vinyl medallion "stencils"
Laguna Hills	340	100	0	No Dumping - Drains To Ocean	X (black on white)					
Laguna Niguel	1035	90	50	No Dumping - Drains To Ocean	X (blue)					
Lake Forest	438	100	50	No Dumping - Drains To Ocean	X			Eagle Scout Candidate	50	
Los Alamitos	80	100	0	No Dumping - Drains To Ocean	X (blue on white)					
Mission Viejo	1850	100	0	No Dumping - Drains To Ocean	X (blue)					
Newport Beach	2298	100	892	No Dumping - Drains To Ocean No Dumping Drains To Bay	X (black)					
Orange	3100	100	0	No Dumping - Drains To Ocean		X	X			Positive public reaction to stenciling, vandalism almost nil
Placentia	240	100	0	No Dumping - P.M.C. Section 16.08.040	X					
San Clemente	1705	100	1974	No Dumping - Drains To Ocean	X (black)			Orange County Conservation Corps & Boy Scouts	OCCC - 1380; Boy Scouts - 316	269 catch basins stenciled twice during this reporting period
San Juan Capistrano	782	80	0	No Dumping - Drains To Ocean	X					
Santa Ana	1230	100	100	No Dumping - Drains To Ocean	X (blue on white)					
Seal Beach	197	100	0	No Dumping	X (black)					
Stanton	0	100	0	No Dumping - Drains To Ocean	X (black on white)					
Tustin	660	94	450	No Dumping - Drains To Ocean	X (blue on white)					Road median catch basins are not required to be stenciled
Villa Park	No Report									
Westminster	744	100	744	No Dumping - Drains To Ocean	X (blue)					
Yorba Lin[illegible]	1080	65	700	No Dumping - Drains To Ocean	[illegible]ck)					
County of [illegible]	1237	100	0	No Dumping - Drains To Ocean	X [illegible] white)

Table 3.10 Environmental Pe1999/00 Performa. .eport Significant Issues Action Plan Updates

Location	Significant Issue	Type Of Control	ACTION 1	ACTION 2	START DATE	END DATE	Action Plan Complete & Revised End Date	Any Additional Significant Issues
City of Anaheim								
Streets & Sanitation #28	Material Storage - Asphalt/Dirt	Structural	Construct metal roofing to cover bunkers (Action plan changed from: Install clarifier)	Install drain inlet filters (Action plan changed from: Construct berm)	11/24/97	12/31/99	No - 6/30/01	No
	General Stormwater Runoff	Structural	Install and service 4 stormwater inlet filters (Action plan changed from: Install clarifier)		11/24/97	6/30/99	No - 6/30/01	
Dad Miller Golf Course	Material Storage	Non-structural	Purchase tarps		11/15/97	On going	Yes	No
Anaheim Hills Yard	Material Storage	Non-structural	Purchase tarps		11/15/97	On going	Yes	No
Fire Station One	Vehicle Washing	Non-structural	Relocate wash area		3/1/98	3/1/99	Yes	No
Fire Station Two	Vehicle Washing	Non-structural	Relocate wash area		3/1/98	3/1/99	Yes	No
Fire Station Four	Vehicle Washing	Non-structural	Relocate wash area		3/1/98	3/1/99	Yes	No
Fire Station Five	Vehicle Washing	Non-structural	Relocate wash area		3/1/98	3/1/99	Yes	No
Fire Station Six	Vehicle Washing	Non-structural	Relocate wash area		3/1/98	3/1/99	Yes	No
Fire Station Seven	Vehicle Washing	Non-structural	Relocate wash area		3/1/98	3/1/99	Yes	No
Fire Station Eight	Vehicle Washing	Non-structural	Relocate wash area		3/1/98	3/1/99	Yes	No
Fire Station Nine	Vehicle Washing	Non-structural	Relocate wash area		3/1/98	3/1/99	Yes	No
Fire Station Ten	Vehicle Washing	Non-structural	Relocate wash area		3/1/98	3/1/99	Yes	No
Convention Center	Material Storage - Chemical Coolant	Structural	Install containment system		2/1/98	7/31/98	Yes	No
City of Brea								
Service Center	Vehicle/Equipment Wash Water	Structural	Construct new wash facility with water recycling		5/1/97	3/1/99	Yes - Completed prior to last reporting period	No
	Steam Cleaning	Structural	Provide new location (move to newly constructed facility)		5/1/97	3/1/99	Yes - Completed prior to last reporting period	
	Sweeper Transfer Area	Structural	Capture and treat runoff from dump pile		5/1/97	3/1/99	Yes - Completed prior to last reporting period	
City of Buena Park								
Vehicle Maintenance Yard	Fuel Spills - Small and Large	Structural	Construct Berm		11/1/97	Ongoing	No - Specs under review	No
City of Costa Mesa								
New Corporation Yard	Sweeper Transfer Area	Structural	Develop industrial waste system		12/1/00	2/1/00	No - Budget 12/15/00	No
Old Corporation Yard	Large & Small Spills	Structural	Construct roof for paint cleaning area & fence		9/1/00	10/1/00	No - Budget 10/00	No
City of Cypress								
Corporation Yard	Waste Storage - Paint	Structural	Provide covered storage area		11/1/00	1/1/01	No - 1/1/01	Yes
	Fluid Transfer Area	Structural	Construct berm around perimeter		11/1/00	1/1/01	No - 1/1/01	
	Fluid Transfer Area	Non-structural	Utilize effective housekeeping techniques		2/1/98	2/1/99	Yes	
	Spills - Small	Non-structural	Relocate landscape equipment to cover		2/1/98	8/1/99	No - 8/1/00	
	Material Storage	Structural	Install roof over storage area	Temporarily cover bins	9/1/98	10/1/98	No - 1/1/01	
	Vehicle/Equipment Wash Water	Non-structural	Inspect wash rack drainage system regularly		1/1/98	2/1/99	Yes	
	Fluid Storage	Structural	Install berm around fluid drums in garage		9/1/00	9/30/00	New	
	Vehicle Maintenance	Non-structural	Increase frequency of vehicle maintenance		9/1/00	Ongoing	New	
City of Dana Point - No Significant Issues								

Table 3.10 Environmental Pe1999/00 Performance Report Significant Issues Action Plan Updates

Location	Significant Issue	Type Of Control	ACTION 1	ACTION 2	START DATE	END DATE	Action Plan Complete & Revised End Date	Any Additional Significant Issues
City of Fountain Valley								
Fire Station #2	Material Storage - Fuel Tanks	Structural	Install clarifier and roof cover		10/1/98	10/1/99	No - Facility Moving 12/99	No
City Yard	Material Storage - Lube Oil Drums	Structural	Install clarifier and roof cover		4/1/98	10/1/98	No - Facility Moving 12/99	No
	Vehicle/Equipment Wash Water	Structural	Install clarifier and roof cover		4/1/97	10/1/98	No - Facility Moving 12/99	
	Sweeper Transfer Area	Structural	Install clarifier and roof cover		4/1/98	10/1/98	No - Facility Moving 12/99

City Hall	Materials Storage	Structural	Replace generator		TBD	12/22/99	No - 2005	No
Police & Fire Station	Hazardous Materials Storage	Non-structural	Training of personnel		12/1/98	4/1/00	Yes	No
Willowick Golf Course	Waste Storage	Structural	Build berm	Train personnel	11/1/98	12/1/98	Yes - Incorrectly identified as a municipal facility	No
	Vehicle & Equipment Washing	Structural	Install a clarifier		12/1/98	6/1/99		
City of Huntington Beach								
Park Maintenance Facility	Material Storage/Trash Bin	Structural	Construct berm		11/15/97	On going	No - In Design	No
	Fuel Spills - Large	Structural	Construct roof		11/15/97	On going	No - Under Construction	
Joint Powers Train Center	Trash Bin	Structural	Construct roof		12/1/98	Ongoing	No	No
	Trash Bin	Non-structural	Provide spill clean up materials		11/15/97	On going	No	
Civic Center	Fuel Spills	Structural	Replace fuel system		11/15/97	12/1/98	Yes - Completed prior to last reporting period	No
	Trash Bin - Police Parking Lot	Structural	Construct roof and berm		N/A	Pending Funding	No - In progress	
	Trash Bin - City Hall	Structural	Construct roof and berm		N/A		Yes - Completed prior to last reporting period	
	Vehicle/Equipment Wash Water	Structural	Construct vehicle washing bay		N/A	Pending Funding	No - In Progress	
19001 Huntington Street	Fluoride Bulk Storage	Structural	Construct Roof For Area		1/1/98	12/1/1998 (Pending funding)	No - In Design	No
	Fuel Spill - Small	Structural	Replace fuel system		11/15/97	4/1/99	Yes - Completed prior to last reporting period	
	Material Storage	Structural	Relocate and construct covered storage area		1/1/00	12/1/01 (Funding needed)	No - 12/1/01	
Beach Maintenance Yard	Material Storage - Oil	Structural	Construct berm		10/1/98	10/1/99	Yes	No

Table 3.10 Environmental Pe1999/00 Performa. .eport Significant Issues Action Plan Updates

Location	Significant Issue	Type Of Control	ACTION 1	ACTION 2	START DATE	END DATE	Action Plan Complete & Revised End Date	Any Additional Significant Issues
City of Huntington Beach (continued)								
Beach Maintenance Yard	Fuel Spills	Structural	Construct berm		10/1/98	10/1/99	Yes	No
	Underground Storage Tank	Structural	Remove underground storage tanks		12/1/98	12/1/99	Yes	
Gothard Fire Station	Underground Storage Tank	Structural	Remove & replace underground storage tank		N/A	4/4/99	Yes - Completed prior to last reporting period	No
Warner Fire Station	Underground Storage Tank	Structural	Remove & replace underground storage tank		N/A	4/1/99	Yes - Completed prior to last reporting period	No
Corporate Yard	Fuel Spills	Structural	Construct berm		12/1/98	1/1/99	Yes - Completed prior to last reporting period	No
City of Irvine - No Significant Issues								
City of La Habra								
Public Works Yard	Vehicle/Equipment Wash Water	Structural	Install clarifier		7/1/01	6/30/02 (Pending funding)	No - Rebudget for clarifier 7/1/01	No
	Trash Bin	Structural	Construct a containment berm		7/1/01	6/30/02 (Pending funding)	No - Design containment cover 7/1/00	
	Material Storage - Chemicals	Structural	Construct new chemical shed		7/1/98	1999	Yes	
City of La Palma								
Walker Well & Pump Stn	Material Storage - Chlorine/Aquameg	Structural	Construct a containment berm		11/15/97	7/1/98	Yes - no sig issues chemicals housed in a pump station	No
City Yard & Pump Stn	Material Storage - Building Materials	Structural	Construct a containment area	Construct a berm - water division	11/15/97	7/1/98	Yes - no sig issues chemicals housed in a pump station	No
City of Laguna Beach								
Nursery	Material Storage - Chemicals		Identify improvements needed		1/1/99	8/30/99	No - 10/00	No
Fire Station	Vehicle/Equipment Wash Water		Identify improvements needed		1/1/99	1/1/00	No - 10/00	
Corporate Yard	Vehicle/Equipment Wash Water		Identify improvements needed		1/1/99	1/1/00	No - 10/00	
Dumpster Facility	Waste Storage	Non-structural	Cover during wet weather		12/1/98	On going	Yes - Completed prior to last reporting period	
City of Laguna Hills - No Significant Issues								
City of Laguna Niguel - No Significant Issues								
City of Lake Forest - No Significant Issues								
City of Los Alamitos - No Significant Issues								
City of Mission Viejo - No Significant Issues								
City of Newport Beach - No Significant Issues								
City of Orange - No Significant Issues								
City of Placentia - No Significant Issues								
City of San Clemente - No Significant Issues								
City of San Juan Capistrano - No Significant Issues								
City of Santa Ana								
Corporation Yard	Material Storage - (Out Door) Chemicals	Structural	Construct a roof & containment berm	Train employees	1/5/98	7/1/98	Yes - Training/ No - Berm Completion Date = 10/00	No
	Leakage from fluid transfer area	Structural	Move drums to covered area & add containment berms	Train employees	1/1/00	7/1/00	Yes - Training/ No - Berm Completion Date = 10/00	
City of Seal Beach								
Beverly Manor	Liquefied Petroleum Gas	Structural	Construct a containment berm		11/15/97	7/1/98	No - 7/1/00 Budget Item	No

Table 3.10 Environmental Pe1999/00 Performance Report Significant Issues Action Plan Updates

Location	Significant Issue	Type Of Control	ACTION 1	ACTION 2	START DATE	END DATE	Action Plan Complete & Revised End Date	Any Additional Significant Issues
City of Seal Beach (continued)								
Beverly Manor	Material Storage - Oil	Structural	Construct a containment berm & roof	Install an oil/water separator			No - 7/1/00 Budget Item	No
Bolsa Chica	Material Storage	Structural	Construct a containment berm & roof	Install an oil/water separator	11/15/97	7/1/00	No	No
Public Works Yard	Fuel Island	Structural	Remove underground storage tank and relocate		11/15/97	7/1/98	No - UST to be removed 1/99	No
City of Stanton								
10652 Bell Street	Material Storage	Non-structural	Increase inspections of storage area	Train employees	11/15/97	On going	No - In Progress	No
City of Tustin								
Corporate Yard	Sweeper Transfer Area	Structural	Temporarily use sandbags as berms	Design/install canopy; Obtain wastewater discharge permit for wash rack discharge to sanitary sewer	N/A	N/A	Yes (Action 1)/ No (Action 2)	No
City of Villa Park								
17855 Santiago Boulevard	Vehicle/Equipment Maintenance	Structural	Construct a containment berm, remove pump	Reduce size of on-site storage containers	1/1/98	1/1/05	No - Still need berm	No
	Fluid Transfer Areas	Structural	Remove gasoline pump, install clarifier	Construct a containment berm, effluent to sewer	1/1/99	1/1/02	No - Pump and Tank Removed	
	Waste Storage	Structural	Construct a containment berm & roof		1/1/99	1/1/02	No 1/1/02	
18021 Lincoln Street	Waste Storage	Structural	Cover waste bins		1/1/00	12/1/00	No - 12/1/00	No
City of Westminster								
Corporation Yard	Paint Drying Area	Structural	Construct a canopy	Remove drying area	1/1/98	5/1/98	Yes - Completed prior to last reporting period	No
City of Yorba Linda								
City Yard	Fuel Spills - Small & Large	Structural	Construct a containment berm		11/15/97	On going	No	
	Fuel Spills - Small & Large	Non-structural	Purchase spill clean up materials	Train employees, inspect daily, sweep	10/3/97	On going	No	
County of Orange								
Laguna Niguel Park	Materials Storage - Paint	Structural	Reconstruct a portion of the containment berm	Construct berm	1/1/98	6/30/98	Yes - Completed prior to last reporting period	No
Irvine Regional Park	Materials Storage - 55 gal. drums	Non-structural	Remove and dispose of		1/1/98	12/30/98	Yes - Completed prior to last reporting period	No
Central Utility Facility	Materials Storage - Chemicals	Structural	Construct new berm		2/15/98	10/30/98	Yes - Completed prior to last reporting period	No
Health Care Complex	Waste Storage - Biohazards	Non-structural	Train employees	Put up signs	2/1/98	6/30/98	Yes - Completed prior to last reporting period	No
Katella Yard	Fuel Spills - Small	Non-structural	Place pan underneath vehicles	Conduct degreasing on wash pad	12/1/98	On going	Yes - Completed prior to last reporting period	No
	Vehicle & Equipment Washing	Non-structural	Train employees		12/1/98	On going	Yes - Completed prior to last reporting period	
	Waste Storage	Non-structural	Train employees	Conduct inspections	12/1/98	On going	Yes - Completed prior to last reporting period	
Sheriff-Coroner Civic Center	Vehicle Washing	Structural	Discontinue runoff		7/1/98	12/30/99	Yes	No

1999 - 2000	5,637	1,883,905	12,310	306	45	32,223	10,600	23	9

*Since not all Permittees reported quantities in pounds and/or gallons, while others reported application rates instead of totals, these figures should be interpreted as low-range estimates.
N/A indicates data not previously requested in Annual Status Reports

Table 3.24 1999/00 Permittee Stormwater Quality Public and Business Education Efforts

Permittee	Describe Steps Taken By The City To Further Stormwater Quality Public Education	Describe Steps Taken By The City To Conduct Special Education Initiatives For Developers and Contractors
Anaheim	Attended NPDES erosion control seminar in Irvine; Developed and distributed numerous water pollution brochures and newsletters. Sewer/stormdrain information on City website.	———
Brea	County water pollution brochures are distributed at the public counter and at the Community Center.	———
Buena Park	City refers residents to used oil collection sites.	City informs developers of NPDES requirements as part of the conditions of development
Costa Mesa	———	———
Cypress	Staffed a Public Works Department and Oil Recycling Booth at the Cypress Community Festival; Developed brochures pertaining to good housekeeping techniques; Distributed County brochures and attended an erosion control BMP workshop in Irvine. Aired water quality and used oil public service announcements.	———
Dana Point	Earth Day Festival sponsored by Solag, Inc. & associated cities; Display booth at Festival of Whales; Distributed urban runoff brochures; Staff attended Erosion and Sediment Control Training and participated in Trails 4 All Annual Watershed Clean-up and Exposition	Erosion control notes on all grading plans; Pre-grading meeting where urban runoff was discussed
Fountain Valley	No Report	No Report
Fullerton	Website and weekly advertisements in the newspaper about used oil collection. Participated in Used Oil Public Education Booth at the Orange County Fair.	———
Garden Grove	America Recycles Day; Earth Day; Fire Services Day; Garden Grove Pride; Public Works Educational Display; Staff attended Erosion & Sediment Control Workshops; Distributed pamphlets describing stormdrain protection measures at City Hall and the Municipal Service Center; Public Service Announcements focusing on stormwater quality aired on local Cable TV.	Co-hosted a Trash Reduction & Stormwater Workshop; City promoted the New General Construction Stormwater Permit: Permit Overview & Compliance Strategies Workshop offered by the APWA
Huntington Beach	Public Works "Open House" included a stormwater program; Distributed County water pollution brochures	Distributed "blueprint" for a clean ocean with every encroachment/grading permit. City produced several half hour programs on Cable TV discussing urban runoff issues.
Irvine	City distributed brochures at the City's Public Works Open House, Irvine Harvest Festival, Children's Water Festival and through the City Hall lobby public information rack. Public service announcements on cable TV promoting proper solid waste and used oil disposal.	Hosted workshops on watershed BMPs, "Water Quality Ordinance & Enforcement Consistency", "Construction Site Planning & Mgmt.", and "New Development"
La Habra	Stormwater brochures handed out concurrent with sandbag distribution & at "I Love La Habra" Fair; Composting workshop at Fullerton Arboretum	———
La Palma	———	———
Laguna Beach	Posted Ocean Water Quality Advisory Committee meeting agendas on City's web page; Distributed water quality literature at City's Vision Fair; City Engineer gave presentation to Grand Jury; Developed a brochure expanding on County's "Ocean Begins at Your Front Door" brochure	———
Laguna Hills	Distributed public education brochures and attended NPDES, Aliso Creek, and San Juan Creek meetings; City website with link to O.C. Integrated Waste Management Department	———
Laguna Niguel	Letters regarding the J03P02 watershed and associated problems were sent to 1400 residents - "Report Cards" will update residents on progress in the future; Distributed County water pollution brochures; City held workshop for South County City Managers regarding the Clean Water Act and its effect on cities.	City informs developers of requirements during pre-grading meetings prior the start of construction activities. City requires developers to prepare Water Quality Management Plans as a condition of project approval.
Lake Forest	———	City sponsored a barbeque luncheon to which developers and contractors were invited to learn more about the permitting process and the need to comply with all stormwater quality requirements.
Los Alamitos	———	———
Mission Viejo	City distrubuted several recyclying and pollution prevention brochures; Ran an article regarding stormwater pollution in a local newsletter; Promoted and advertised a Household Hazardous Waste Round-up on Cable TV and on the City website	City routinely meets one-on-one with developers to educate them on the importance of stormwater pollution prevention. City provides assistance to developers in preparing erosion control plans, preparing WQMPs, and incorporating public education documents.
Newport Beach	Distributed several brochures to the public	———

Table 3.24 1999/00 Permittee Stormwater Quality Public and Business Education Efforts

Permittee	Describe Steps Taken By The City To Further Stormwater Quality Public Education	Describe Steps Taken By The City To Conduct Special Education Initiatives For Developers and Contractors
Orange	Worked with local groups (e.g. Girl Scouts) to promote recycling and water quality, including providing teaching materials; Staff attended County PFRD training classes; Earth Day; Neighborhood Enhancement Program; and Street Fair with booth on reclycling and water quality; Coordinated with local courts to use juvenile offenders to perform community cleanups	Major projects included special plan review meetings with developers to ensure that they meet all NPDES regulations; Similar activities are being undertaken with CalTrans for the I-5 Modernization and the proposed Centerline Rail Project; City BMP materials are also made available to developers as appropriate.
Placentia	Earth Week Run: promotes oil recycling and household hazardous waste programs; Maintenance personnel view new videos on stormwater BMPs; City newsletter and website provide information to the public.	Send training opportunity notices to developers and provide developers a model set of plans to illustrate required BMPs
San Clemente	———	———
San Juan Capistrano	———	Samples of BMPs for new developments are distributed to all developers and/or their engineers when the application is initially submitted.
Santa Ana	Produced waste disposal and recycling information in English, Spanish and Vietnamese; Recycling presentations at 5 area elementary schools centered around CYCLER - Waste Management's Environmental Robot.	———
Seal Beach	At the issuance of permits, staff informs applicant of proper construction practices.	———
Stanton	———	———
Tustin	Stormwater brochures and "The Tustin Recycle News" available to residents; Catch basin stenciling program educates the public on the relationship between stormdrain flows and the ocean	Provided literature to contractors and developers; Notes on construction plans include stormwater pollution prevention requirements; Building Division conducted an onsite workshop.
Villa Park	No Report	No Report
Westminster	Staff attended RWQCB, APWA, and City of Irvine (erosion control) seminars.	———
Yorba Linda	Flyers distributed at Fiesta Days City Booth and available to residents; Public announcements on Cable TV; Recycling Program information with City trash bills.	———
County of Orange	Stormwater brochures available to residents	———

4.0 WATER QUALITY MONITORING SUMMARY AND ANALYSES

4.1 Introduction

The data presented in this section are the result of the water quality monitoring conducted from July 1994 to June 30, 1999. Much of the data collected during the 1999-2000 season had not been fully processed by the date of this report. A more detailed analysis of this season will be found in the Annual Status Report on November 15, 2000. More detailed information specific to data from prior years can be found in the 94/95, 95/96, 96/97, 97/98, and 98/99 Analysis of Data and Annual Status Reports.

From February 20, 1991 to May 1999, a water quality monitoring program was implemented to address the objectives of First and Second Term Permits. This program consists of four elements: field screening, channel monitoring, harbor/bay monitoring, and sediment quality monitoring. Sampled waterbodies include natural creeks, streams, and rivers; constructed flood control facilities (channels and basins); and harbors and bays.

- The intent of field screening was to detect the presence of illegal discharges or illicit connections. Physical and chemical analyses are conducted in the field; positive tests for contamination were referred for source identification and possible enforcement action.

- Channel monitoring was conducted with automatic samplers to evaluate the average concentrations of nutrients and heavy metals in dry weather and stormwater discharges. From these average concentrations comparisons to applicable water quality guidance were made. Data from these samplings were also used to compute mass loads of pollutants and site mean event mean concentrations (EMCs).

- Harbor and bay monitoring provided information on the effects of tributary inputs to these receiving waters. These data were also compared to applicable water quality guidance.

- Sediment quality was evaluated prior and subsequent to the storm season to evaluate pollutant deposition through sedimentation or removal by scouring. These data were also compared to National Oceanographic and Atmospheric Administration (NOAA) screening levels and to results of biological testing conducted by the Dept. of Fish and Game (DF&G), the State Water Resources Control Board and others.

To support these elements of the monitoring program precipitation and streamflow data were obtained through the County's ALERT (Automated Local Evaluation in Real Time) flood detection system. The ALERT system consists of a network of precipitation and water level sensors throughout the County.

Rainfall accumulation or changes in water level are transmitted from these remote sites to the base station computer at Principal Permittee's Katella facility. The computer transforms these data into useable formats for flood forecasting, precipitation intensity evaluation, stream hydrographs, discharge calculations, etc. This report uses these hydrographic data for rainfall-runoff relationships, mass load calculations, and to evaluate sampling periods relative to rainfall in respective watersheds.

On July 15, 1997, a revised monitoring plan was submitted to the Regional Boards and finalized in May 1999. The final report entitled Orange County Water Quality Monitoring Program – Final Monitoring Plan is hereinafter referred to as the 99-04 Program. These revisions were made to more adequately address the objectives of the Second Term Permit. Some elements of this revised program were implemented during the 98/98 monitoring year while most of the others were implemented during 99/00 season.

4.2 Study Area

Under the First Term Permit, water quality monitoring could be characterized as areawide rather than focused to any specific area or areas. The field screening element was designed to be the most comprehensive with respect to numbers of monitoring sites and area encompassed. The 89 monitoring locations were chosen using watershed drainage area and land uses as primary selection criteria. Those channels designated by the County as "Regional Facilities" (watershed greater than 1 square mile in area) were chosen if the land uses in the watershed were residential, commercial, light industrial as opposed to open space or undeveloped). "Local Facilities" (watersheds less than 1 square mile) were also selected if the corresponding land use was primarily commercial or industrial. The stations and their locations can be found in **Table 4.1.**

The monitoring of channels with automatic samplers was more comprehensive than field screening with respect to monitoring duration for a specific event (e.g. storm) and the suite of chemical analyses. Most of the 34 sites which were originally chosen are in waterbodies that are designated in the First Term Permits as "Waters of the State." The others are major tributaries to the Huntington Harbour/Bolsa Bay Complex. A listing of these monitoring locations is provided in **Table 4.2**. Many of these watercourses have specific beneficial uses identified in the Basin Plans of the respective Regional Boards. For each watercourse, these beneficial uses can include one or more of the following: municipal water supply, agricultural water supply, non-contact recreation, groundwater recharge, warm water habitat, cold water habitat, wildlife refuge, spawning areas and habitats of rare and endangered species. See **Table 4.3** for a summary of the designated beneficial uses for each channel.

The land uses upstream of each of these channel locations are generally mixed. A land use characterization was performed for nine monitoring locations using data from 1990. A summary of the distributions is presented in **Table 4.4** and **Figure 4.1**. **Table 4.5** gives a more detailed description of the land uses included into each of the nine major categories. The predominant land use in the Huntington Harbour watershed is residential, whereas Lane Channel and Barranca Channels in the San Diego Creek watershed have high percentages of industrial activity. San Diego Creek upstream of Campus Drive in Irvine has significant Vacant Land (23%) and Farm & Ranch (10%) landuses. It should be noted that this watershed is still developing rapidly and from 1990 to present, some of the vacant land has been converted to residential and commercial land uses. Roads (streets, highways, freeways and easements) are a considerable influence in each watershed with percentages ranging from 22 to 36 percent.

Three Harbor/Bay complexes were monitored: Upper/Lower Newport Bay, Huntington Harbour/Bolsa Bay, and Dana Point Harbor. Monitoring sites were chosen based on (1) proximity of major tributaries (or storm drain) inputs, (2) location of commercial boat maintenance operations, and (3) areas of ecological significance. Other stations were selected to evaluate the influence of runoff during storms. **Table 4.6** describes the locations of these monitoring sites and **Table 4.3** contains a summary of the designated beneficial uses of the area surrounding the site.

4.3 Description of Monitoring Procedures

The following are brief descriptions of the procedures used during this reporting period. More detailed information is contained within the Orange County Water Quality Monitoring Program **(DAMP Appendix K)**.

4.3.1 Field Screening

Field screening consisted of physical and chemical evaluations on site. The annual evaluation of each station included two dry weather samplings, at least four hours apart, and one sampling of storm runoff. Physical measurements included electrical conductivity, temperature (air and water), pH, dissolved oxygen, and water discharge rate. These measurements were performed with electro-analytical instruments that were calibrated prior to field visits. Chemical tests included dissolved copper, hexavalent chromium, and zinc; free cyanide; total chlorine; total phenolic compounds; nitrate and hardness. The hardness test was titrametric while the others were colorimetric. A sample was also collected and analyzed in the Environmental Resources Laboratory for Chemical Oxygen Demand (COD). Other testing methods which were available but were not used routinely included Methylene Blue Active Substances (MBAS), tannin and lignin, ethlyene glycol, and dissolved sulfide. **Appendix 4.1** contains the database for Field Screening information.

4.3.2 Channel Monitoring

Channel monitoring is conducted using automatic samplers that consist of programmable pumps (peristaltic) which transport water from the channel to a collection reservoir in the autosampler base. The collection reservoir can be a single large composite bottle or a series of up to 24 bottles. The autosampler program can be modified to vary sample volumes and frequency of collection. In the monitoring program, 24 discrete sample bottles are used in each autosampler base.

For dry weather discharge evaluations, the automatic samplers are programmed to collect a discrete sample once an hour for a 24-hour period. During storms, sampling is initiated when the water level in the channel rises above a triggering device hardwired to the autosampler. The frequency of collection during the first hour of the storm is set at 1 sample/15 minutes. After the fifth sample is collected at the one-hour mark, the collection frequency is decreased to once every 2 hours. A storm event sampling spans approximately 96 hours to allow comparison of the data to 96-hour guidance criteria for chronic aquatic toxicity from the California Toxics Rule (CTR). Autosampler maintenance is performed periodically to change bottles, icepacks, and power supplies.

The first five samples collected during a storm are composited and represent the first flush. The concentrations of heavy metals in this sample can be compared to acute toxicity criteria. The remaining bi-hourly storm samples are composited using the stage hydrograph or by evaluating the electrical conductivities of the discrete samples. Using the hydrograph from the ALERT system, samples collected beyond the first flush and representing the storm peak and recession are composited into a single sample. In the absence of a streamgage hydrograph, the conductivity of each sample (in order of collection) is measured. Changes in conductivity usually denote the beginning or end of storm runoff. After the "first flush" of a storm, conductivities tend to immediately decrease during the rise of the storm hydrograph and slowly rise after the recession. Sample appearance (turbidity or fluvial sediment) can also be used in the compositing process. Composite samples are analyzed for pH, electrical conductivity, turbidity, nitrate, ammonia, total Kjehldahl Nitrogen (TKN), phosphate, total suspended and settleable solids; volatile suspended solids; and total recoverable and dissolved copper, chromium, lead, cadmium, zinc, silver and nickel (see **Appendix 4.2**). The frequency of channel monitoring is dependent on "Waters of the State" designation. "Waters of the State" are monitored monthly and during storms. Other channels in the network are monitored during storms only.

The Principal Permittee's precipitation and streamgaging network consists of recording and/or transmitting ALERT gages (see **Appendix 4.3**). Mechanical recording raingages are weighing bucket type. Accumulated rainfall is recorded in analog format on drum charts. The ALERT precipitation gages are tipping bucket type with dataloggers. Data are recorded and transmitted in digital format; sensitivity is 1 mm (0.04 inches) of accumulated rainfall.

The Principal Permittee uses several types of streamgages to monitor changes in water level. The oldest design is the stilling well with water level float; the newer types are manometer gages or pressure transducers. Data (water level versus time) are recorded on stripcharts. The ALERT interface to these gages consists of a connection from the recorder chart drive to an ALERT shaft encoder. ALERT information is recorded on a datalogger and transmitted to the Principal Permittee Katella yard base station in digital format. Sensitivity of the transmitted and recorded ALERT record is user-variable with the greatest sensitivity being a change in water level of 0.01 feet.

4.3.3 Harbor/Bay Monitoring

Harbor/bay monitoring is conducted semiannually and during storms (see **Appendix 4.4**). Monthly sampling in the Upper Newport Bay is also conducted to evaluate nutrient loading from the San Diego Creek. Monthly monitoring of nitrogen and phosphorus in the sediments was added in 99/00. The semiannual monitoring includes sampling for nutrients in the water column, and trace metals and organic contaminants in the sediments. Storm monitoring consists of surface water sampling for nutrient concentrations and depth-integrated sampling to evaluate the magnitude of heavy metal contamination in the water column.

4.3.4 Semiannual Sediment Sampling

On a semiannual schedule, sediment samples are collected from the channels designated as "Waters of the State" and several locations in the harbors and bays to evaluate concentrations of copper, chromium, cadmium, lead, zinc, silver, nickel, chlorinated hydrocarbon and organophosphate pesticides, herbicides, PCBs, and Polynuclear Aromatic Hydrocarbons (PAHs) (see **Appendix 4.5**).

4.4 Transition to 99-04 Program

The intent of the 99-04 Program is to focus monitoring resources to waterbodies that have high ecological significance or areas which had been shown, by past monitoring data or investigations, to have potential to cause impairment of beneficial uses.

In developing the 99-04 Program the waterbodies of Orange County were prioritized to form a list of Critical Aquatic Resources (CARs). Newport Bay and its watershed topped the list. A timeline for studying the top priority waterbodies was established. Although the initial focus of the CARs Program would be the Newport Bay and its watershed, a monitoring schedule was established for the other CARs to maintain their respective databases before the primary focus could be shifted to them.

A list of "Warm Spots" was generated from the complete NPDES (1991-1998) channel monitoring and sediment monitoring databases. A "Warm Spot" was defined as a waterbody or segment thereof where the mean concentration of a monitored constituent exceeded the Countywide mean by two standard deviations or three interquartile ranges above the third quartile. A power analysis was conducted on the database of each "Warm Spot" to determine the annual monitoring frequency and length of time needed to detect a significant change in the constituent causing the warm spot designation.

The Principal Permittee's Pollution, Notification, Investigation, and Response (PNIR) database was interrogated to identify channels or drainage areas that had high incidences of water pollution activity during the period from 1991 through 1998. From these database evaluations was created a priority list for reconnaissance and source evaluation studies.

The transition to the 99-04 Program was initiated during the 98/99 monitoring year. The revisions to the program as it was conducted during 1994-97 include discontinuation of the areawide field-screening program. This program, which was very labor intensive, detected only a few incidents of illegal discharges and illicit connections. The 99-04 Program includes a Reconnaissance and Source Identification component that targets areas that are known to exhibit unusually high levels of stormwater pollutants.

4.4.1 Incorporation of the Nutrient TMDL Regional Monitoring Program

The Regional Monitoring Program (RMP) for San Diego Creek Nutrient TMDL was initiated in February of 2000. The chemical monitoring for this program includes many of the same sites in the Newport Bay and watershed as the NPDES water quality monitoring program. Monitoring frequencies for some of the sites were increased above existing levels and orthophosphate was been added to the suite of nutrient analyses. The NPDES water quality monitoring program and the RMP are intended to complement each other. Therefore the chemical data from both programs will be included in this report.

Table 4.7 summarizes the intended annual frequencies of channel monitoring during the period from 94/95 to 98/99. **Table 4.8** shows the monitoring frequencies from 94/95 through 98/99 for all harbor/bay stations. **Table 4.9** shows the monitoring frequencies of the 99-04 Program with the Nutrient TMDL additions in bold letters.

4.5 Methods of Data Analysis

The stormwater system monitoring program objectives as stated in the First Term Permits were:

a. To define the type, magnitude (concentration and mass load), and sources of pollutants in the stormwater system discharges within each permittee's respective jurisdiction so that appropriate pollution prevention and correction measures can be identified;

b. To evaluate the effectiveness of pollution prevention and correction measures; and

c. To evaluate the compliance with water quality objectives established for the stormwater system or its components.

The objectives of the Receiving Water Program were to "assess the effects of pollutants from stormwater system discharges on receiving water bodies, and to evaluate compliance with water quality objectives of the receiving water bodies."

This report will present a compilation of the results that addressed these objectives from the Annual Analysis of Data and Annual Status Reports for monitoring years 94/95 through 98/99. These results include mass loads and event mean concentrations from sampled storms and comparison of stormwater data to applicable water and sediment quality objectives.

Acute and chronic aquatic toxicity criteria from the CTR were used as guidance to evaluate dissolved metals data collected from storm channels and harbors. Water quality criteria from the CTR and other sources are presented in **Table 4.10.**

Sediment quality criteria from the National Oceanographic and Atmospheric Administration's (NOAA) Effects Range database were used as guidance to evaluate the toxicity of sediments in the harbors and bays. The Southern California Coastal Water Research Project's (SCCWRP) iron normalization procedure was also used evaluate harbor sediment quality relative to statistically predicted anthropogenic amounts of trace metals. Beginning in the 97/98 season iron was added to the suite of sediment analyses to allow this assessment. A summary of the sediment guidance criteria is found in **Table 4.11**.

4.5.1 Comparison to Water Quality Guidance

California Water Code Section 13170 authorizes the State Water Resources Control Board (SWRCB) to adopt water quality control plans for waters where standards are required by the Federal Clean Water Act (CWA) and its 1987 amendments, the Water Quality Act (WQA). According to Section 303(c)(2)(B) of the CWA, these plans must contain water quality objectives for priority pollutants that could be reasonably expected to affect the beneficial uses of the waters of the State. In April 1991, the SWRCB adopted the Inland Surface Waters Plan (ISWP) and the Enclosed Bays and Estuaries Plan (EBEP).

On October 15, 1993, Sacramento Superior Court Judge James L. Long granted a temporary injunction holding the ISWP and EBEP in abeyance. In March of 1994, a final Superior Court decision concluded that the plans were not adopted pursuant to California law, and as a result, the SWRCB rescinded the plans in September of 1994. The USEPA is required to promulgate standards for states that have not complied with the CWA to adopt standards for toxic pollutants. Currently both EPA and the SWCRB are beginning a process to implement replacement standards for California. These related processes where EPA establishes the standards (California Toxics Rule) and the State adopts an implementation policy are not expected to be completed until late 2000.

On August 5, 1997 the USEPA published Proposed Rules establishing numeric water quality criteria for priority toxic pollutants (commonly referred to as the California Toxics Rule [CTR]) for the State of California. The CTR proposes criteria for dissolved heavy metals in freshwater that are based on water hardness. Criteria for saltwater are also proposed. Although the Proposed Rule has not been formally implemented, the dissolved metals data were compared to the acute and chronic criteria for guidance purposes. Hereinafter, the water quality objectives contained in the CTR are identified as guidance rather than objectives. **Table 4.12** presents these guidance criteria for freshwater relative to water hardness. The saltwater guidance criteria are found in **Table 4.10**.

It has been argued that the CTR criteria for dissolved metals in fresh and saltwater are more scientifically valid for evaluating potential impairment to aquatic life than the ISWP and EBEP criteria for total recoverable metals since dissolved metals are considered more biologically available to aquatic organisms. Some dissolved metals however can be made non-toxic by interaction with organic compounds and still remain in the dissolved state. Toxicity testing should therefore be used to confirm impairment.

If the time period to which the guidance applies is less than the length of the sampled period, a measured concentration greater than that guidance value will constitute an exceedance. For example, if the 1-hour guidance for lead (at a hardness of 100 mg/L as $CaCO_3$) is 65 µg/L, a concentration of 68 µg/L during a 24-hour period will be considered an exceedance of the guidance.

In computing the mean concentration during a sampled period with multiple composite samples, values below the detection limit were assumed to be zero. This assumption allows for a more consistent evaluation from year to year as detection limits lowered with alternative methods of analyses or new technology. The assumption also gives greater confidence to a designation of an exceedance of a guidance criterion as it reduces the likelihood that the exceedance was caused by an erroneous estimation of a non-detected value.

In the early years of the program, metals analyses were performed using Inductively Coupled Plasma Spectroscopy (ICP). In some cases one half of the detection limit of this method exceeded the ISWP or EBEP guidance. Later in the program, Graphite Furnace Atomic Absorption Spectrophotometry (GFAA) replaced ICP for some of the metals analyses. The resultant detection limits decreased almost ten-fold for some metals. In 1996/97 Inductively Coupled Plasma Mass Spectrometry (ICP-MS) was used for seawater samples to lower detection limits below the applicable guidance criteria. In the 99-04 program ICP-MS will be used for all metals analyses.

With respect to the saltwater guidance from the CTR, the average concentrations of dissolved metals in depth-integrated samplings from each 4-day storm monitoring of the Harbors and Bays were compared to the 4-day guidance criteria. The dissolved metals concentrations in each grab sample were compared to the 1-hr acute toxicity guidance criteria. There is no chronic guidance criterion for silver so only the acute criterion was used. Since total chromium was analyzed only the Chromium III criteria were used.

4.5.2 Mass Load Calculations

Mass loads were calculated using chemical and hydrographic data. **Appendix 4.3** contains watershed maps for all of the channels monitored to date, with automatic samplers. On each map, the watershed boundary upstream of the monitoring site, hydrographic (water level station) and representative precipitation station are shown. Water level records from streamgaging stations at or near the sampling site were processed using Western Hydrologic Software. Water levels from the station's continuous stripchart recorder were digitized and converted to discharge rates using stage-discharge relationships (channel ratings). The digitized streamflow record was converted to ASCII format and imported to a Microsoft Excel file. Graphs of time vs. water level stage are contained in **Appendix 4.6**. The total discharge in ac-ft during each sampled period was computed. By multiplying the total water discharge per sampled period by the pollutant concentration of the composite sample from the period and applying the proper conversion factors (acre-feet to lbs. of water), a mass load in pounds or tons of contaminant was calculated. For data reported as ND (non-detected), one-half of reported laboratory detection limits were used in the calculations. **Appendix 4.7** contains the mass load data from each monitored storm.

The use of 1/2 the detection limit in the load calculation is consistent with the recommendations of the Water Quality Monitoring Program audit performed by Larry Walker and Associates during the 1994/95 season.

4.5.3 Event Mean Concentrations (EMCs)

Event mean pollutant concentrations were calculated to produce a site mean EMC that would be used in the estimation of the mass loads from unsampled storms and for comparison to data from the National Urban Runoff Program. To calculate the EMC of a monitored storm the sum of the mass load from each composite sampling during a storm was divided by the total sampled volume of water during the same period. After applying the appropriate conversion factors, an event mean concentration in mg/L or µg/L was calculated. The site mean EMCs were updated each year with the EMC data from that year. **Appendix 4.8** contains the calculated EMCs of each monitored storm. **Table 4.13** contains a year by year summary of the changes to the EMCs at each station.

4.5.4 Statistical Methods

Site mean EMCs were used to estimate mass loads from unsampled storms. To estimate these mass loads, the site mean EMC for a stormwater contaminant from a particular station was multiplied by the total annual volume of water discharged during unsampled storms, and the appropriate conversion factors. The site mean EMC was calculated from the set of calculated EMCs from each sampled storm from the beginning of the NPDES program. Only EMCs in which the 75-120% of the total storm runoff volume was sampled were used in the calculation. Each year the site means were updated with the data from that year.

The distribution of each EMC dataset was first evaluated for normality using the W Test developed by Shapiro and Wilk (1965). The W statistic was compared to a tabled value for a given value of α. To calculate W, the data from each station was first ordered from smallest to largest to obtain the sample order statistics $x_1 \leq x_2 \ldots \leq x_n$. k was then calculated from n where

$$k = \frac{n}{2} \text{ if n is even or}$$

$$k = \frac{n-1}{2} \text{ if n is odd}$$

$$W = \frac{1}{d}\left[\sum_{i=1}^{k} a_i \left(x_{(n-i+1)} - x_i\right)\right]^2$$

where $$d = \sum_{i=1}^{n} (x_i - \bar{x})^2 = \sum_{i=1}^{n} x_i^2 - \frac{1}{n}\left(\sum_{i=1}^{n} x_i\right)^2$$

Values of a_i were found in Table A6[1]. If the calculated W was less than the tabled value at the a (0.05) significance level, the null hypothesis was rejected and the distribution was considered normal. If the distribution was not normal at the α significance level the data was log-transformed and the W test was repeated to test for log-normality. If the distribution was not lognormal, the dataset was inspected for possible outliers. The Dixon test (for $n < 25$) was used to determine if the suspected points were outliers to a normal distribution. The procedure was performed as follows:

The dataset was ordered from smallest to largest that is $X_1 < X_2 < X_3 < \ldots X_n$. The Dixon ratio r, which is a function of n was calculated.

Number of Points	**Ratio Calculated**
n = 3 to 7	r_{10}
n = 8 to 10	r_{11}
n = 11 to 13	r_{21}
n = 14 to 25	r_{22}

Depending on which point was suspected of being the outlier, the ratio was calculated in the following manner:

r	**If X_n is Suspect**	**If X_1 is Suspect**
r_{10}	$(X_n-X_{n-1})/(X_n-X_1)$	$(X_2-X_1)/(X_n-X_1)$
r_{11}	$(X_n-X_{n-1})/(X_n-X_2)$	$(X_2-X_1)/(X_{n-1}-X_1)$
r_{21}	$(X_n-X_{n-2})/(X_n-X_2)$	$(X_3-X_1)/(X_{n-1}-X_1)$
r_{22}	$(X_n-X_{n-2})/X_n-X_3)$	$(X3-X_1)/X_{n-2}-X_1)$

Using Table A.7[2], the calculated ratio was compared to the critical value at a confidence level of 95%. If the calculated value was greater than the tabled value the suspected point was rejected and the distribution was retested to confirm normality.

For normal distributions the mean is calculated as the arithmetic mean, that is

$$\bar{x} = \frac{1}{n}\sum_{i=1}^{n} x_i$$

the confidence limits for the mean of a normal distribution with unknown variance is given by

[1]Gilbert, Richard O. Statistical Methods of Environmental Pollution Monitoring, 1987. Van Nostrand Reinhold, p259.
[2]Taylor, John Keenan. Statistical Techniques for Data Analysis, 1990. Lewis Publishers, Inc., p168.

$$\bar{x} - t_{(1-\alpha/2,n-1)}\frac{s}{\sqrt{n}} \le \mu \le \bar{x} + t_{(1-\alpha/2,n-1)}\frac{s}{\sqrt{n}}$$

where s is the standard deviation of the dataset and $t_{(1-\alpha/2,n-1)}$ is from table A2[3]. Using $\alpha = 0.05$ the upper and lower limits are calculated. The true mean μ will occur outside of this range 5% of the time.

For lognormal distributions the arithmetic mean and standard deviation of the log-transformed data were first computed. The estimate of the mean is given by the minimum variance unbiased estimate μ_1 which is defined as

$$\mu_1 = [\exp(\bar{x})]\Psi_n\left(\frac{s^2}{2}\right)$$

where $\Psi_n(t)$ is the infinite series defined by

$$\Psi_n(t) = 1 + \frac{(n+1)t}{n} + \frac{(n+1)^3 t^2}{2!n^2(n+1)} + \frac{(n-1)^5 t^3}{3!n^3(n+1)(n+3)} + \frac{(n-1)^7 t^4}{4!n^4(n+1)(n+3)(n+5)} + \bullet\bullet\bullet$$

$\frac{s^2}{2}$ is substituted for t and values for Ψ_n are calculated using formulas in a Microsoft EXCEL 7.0 spreadsheet.

The lower confidence limit of the mean is given by

$$LL_\alpha = \exp\left(\bar{x} + 0.5s^2 + \frac{sH_\alpha}{\sqrt{n-1}}\right)$$

and the upper limit is given by

$$UL_{1-\alpha} = \exp\left(\bar{x} + 0.5s^2 + \frac{sH_{1-\alpha}}{\sqrt{n-1}}\right)$$

The values of H_α and $H_{1-\alpha}$ were found in Table A10 - A13[4]

The sample median of each normal distribution was calculated by first ordering the sample population from smallest to largest.

sample median = $x_{(n-1)/2}$ if n is odd

[3]Gilbert, Richard O. Statistical Methods of Environmental Pollution Monitoring, 1987. Van Nostrand Reinhold, p255.

[4]Gilbert, Richard O. Statistical Methods of Environmental Pollution Monitoring, 1987. Van Nostrand Reinhold, pp264-265.

$$= \frac{1}{2}\left(x_{(n/2)} + x_{(n+2)/2}\right) \text{ if n is even}$$

The true median of a lognormal distribution can be estimated by

$$M_2 = \exp(\bar{x})\Psi_n(t)$$

where $\Psi_n(t)$ is the infinite series described above. In this case the value of $t = -s^2/[2(n-1)]$.

4.5.5 Assessing Anthropogenic Influence in Harbor Sediments

The SCCWRP database for iron normalization[5] was used to determine the presence of anthropogenic enrichment in sediments collected from Orange County harbors. SCCWRP developed regression equations for the each relationship between a heavy metal and the percentage of iron in sediments collected from non-impacted sites in the Southern California Bight. 99% confidence limits (2 standard deviations) were calculated for each regression equation. Concentrations of heavy metals greater than the upper confidence limits are considered to be the result of anthropogenic enrichment.

4.6 Analysis of Data

4.6.1 Field Screening

The intent of the Field Screening program was to identify areas where illegal discharges were occurring or where illicit connections to the stormdrain system were present. The data from this monitoring period identified only one illegal discharge that occurred from a golf course in southern Orange County. Unusually high dissolved copper concentrations in a channel were traced to golf course that had used copper sulfate for algae control in one of its lakes. The golf course superintendent was informed that release of water containing copper in such high concentrations was not allowed and the maintenance practices of this facility were modified to prevent future occurrences.

Appendix 4.1 contains the data from the Field Screening Program. **Appendix 4.9** contains rainfall graphs showing the time of each Field Screening sampling of rainfall runoff. Wet weather screening was performed at 26 stations during the 96/97 season. The greatest concentration of dissolved metals were found during the sampling of the first storm of the season on October 30, 1996. The data from these samplings are shown below.

[5] Southern California Coastal Water Research Project. Annual Report, 1996. Southern California Coastal Water Research Project Authority, pp68-76.

Station No.	Channel Name	Cu µg/L	Zn µg/L
1	Coyote Creek @ Monte Vista	12	195
6	Loftus Diversion Channel	20	140
7	Imperial Channel @ Imperial Hwy	24	259
11	Carbon Creek @ Placentia	14	86
32	Carbon Creek Div Ch. @ Santa Ana River	21	75
37	Collins Channel @ Santa Ana River	15	120
41	Bitterbush Channel u/s Santa Ana River	36	386
42	SE Anaheim Channel @ Santa Ana River	21	75

4.6.2 Channel Monitoring

Using the methods described in Section 4.5 data from each sampled storm event were used to compute the EMC and mass pollutant load for that storm. **Appendix 4.7** contains a summary of the mass load of sampled pollutants for storms sampled during monitoring years 94/95 through 98/99. **Appendix 4.8** contains the EMCs of each storm during that same period. **Appendix 4.10** contains the annual measured and estimated (from site mean EMCs) stormwater loads at selected stations. The 96/97 monitoring year was the most productive with respect to percentage of total stormwater volume sampled. At 5 of the 9 sites more than 50% of the total stormwater runoff was sampled.

As expected the years generating the greatest stormwater loads also had the greatest rainfall and runoff. The greatest loads were observed during the El Niño year (97/98). **Figure 4.2** shows the annual precipitation totals at three raingages in north, central and south Orange County. **Figure 4.3** shows the accumulated total throughout the year at the Santa Ana gage for seasons 94/95 through 99/00. As can be seen by **Figure 4.2**, the 94/95 and 97/98 seasons produced nearly double the annual rainfall of other years. The 97/98 season produced three times the amount of rain as the 98/99 or the 99/00 seasons. **Figure 4.3** shows that the greatest month of rainfall during the 94/95 season was January while February produced the greatest rainfall in 97/98.

The annual loads of nitrate, TSS, copper, lead, and zinc from each of the ten channels are graphically shown in **Appendix 4.11**. As expected the greatest annual water discharge and loads were observed from San Diego Creek at Campus Drive. An interesting anomaly was found in the data from San Diego and Peters Canyon Wash. In both 97/98 and 98/99, the total nitrate load calculated for San Diego Creek at Campus Drive was less than the sum of the loads from the upstream tributaries of San Diego Creek at Harvard and Peters Canyon Wash at Barranca Parkway. However, the sum of the water discharges, and loads of TSS, phosphate, copper, lead, and zinc from the two upstream tributaries were less their respective loads at Campus Drive.

The nitrate anomaly may have arisen from the fact that the EMC database for San Diego Creek at Campus was initiated during the El Niño year whereas the Peters Canyon Wash and San Diego Creek at Harvard databases were initiated during the 93/94 season. The stormwater concentration of nitrate unlike TSS, phosphate, and metals decreases with increasing stormwater runoff. The El Niño season had storms of record magnitude. The mean EMC is a year-to-year running average concentration. The EMCs from fourteen storms were monitored at Campus Drive during the El Niño season; only four were included from the following year. The average nitrate EMC during the El Niño season was 14.4 mg/L. The average during the next season was 20.0 mg/L. The site mean EMC only increased to 15.9 mg/L.

Dissolved metals data from each composite sampling were compared to the acute (1-hr) toxicity CTR guidance criteria from **Table 4.12**. Events characterized by at least 3.5 days of sampling were compared to the chronic (4-day) toxicity guidance criteria. The receiving water of each channel was also considered in this evaluation. If the channel discharged to a salt water receiving water the CTR salt water guidance criteria were also used. For channels that discharge to San Diego Creek, the freshwater CTR guidance criteria was used with the average water hardness from San Diego Creek. **Table 4.14** is a summary of these comparisons for seasons 96/97 through 98/99. As can be seen from the results, the constituents of concern are copper and zinc in channels that discharge to the ocean or the harbors and bays.

The first flush of a storm tends to exhibit the poorest water quality with respect to concentrations of metals. Since water hardness is typically very high during this period the probability of exceedance of the CTR acute toxicity guidance criteria for metals in freshwater is about the same as during other periods of a storm. Since the CTR toxicity guidance criteria for saltwater is not a function of hardness first flush discharges pose a greater concern. **Appendix 4.12** is a compilation of all of the first flush data collected from 95/96 to 98/99. The data representing the first storm of each respective season is highlighted.

Of the 153 samplings for dissolved metals 31 exceeded the CTR acute toxicity guidance criteria for copper and 16 exceeded the criteria for zinc. Nearly all samples (96 of 97) from channels discharging to salt water exceeded the CTR salt water guidance criterion for copper and about a third (33 of 97) of the zinc concentrations exceeded the saltwater guidance criterion.

4.6.3 Harbor/Bay Monitoring

Beginning in monitoring year 97/98 dissolved metals analyses were conducted on depth integrated stormwater samples from the bays. The dissolved metals data from each storm were compared to water quality guidance criteria (acute and chronic toxicity) from the CTR. Values below detection limits were considered zero when calculating means. Means calculated from detection limit values are preceded by a ">" in **Appendix 4.3**. Nearly every sample contained copper above the acute toxicity guidance criterion of 3.1 µg/L. The four-day average concentrations at each site exceeded the chronic toxicity guidance criterion of 4.8 µg/L.

Time series plots of the tributary discharge, precipitation and tide stage during each monitored storm can be found in **Appendix 4.13**.

Newport Bay

On December 6 - 10, 1997 the runoff of a record storm was monitored in the Newport Bay. Nearly 7 inches of rain and a peak discharge of nearly 40,000-cfs in San Diego Creek were measured on December 6th.

On March 26-30, 1998, the bacteriological quality of the Newport Bay was monitored. Nearly an inch of rainfall and a peak discharge rate of approximately 5,000 cfs in San Diego Creek were recorded on the 25th. Approximately 0.5 inches of rainfall and a peak discharge of approximately 1,000 cfs were recorded on the the 28th. A summary of the results in MPN/100 ml are presented below.

Date	Analysis	UNBJAM	UNBSDC	UNBBCW	UNBNSB	UNBNDB
3/26	Total Coliform	≥160,000	≥160,000	≥160,000	160,000	≥160,000
	Fecal Coliform	17,000	11,000	5,000	14,000	160,000
3/28	Total Coliform	90,000	230	8,000	24,000	3,000
	Fecal Coliform	24,000	230	3,000	5,000	800
3/30	Total Coliform	5,000	7,000	3,000	1,700	5,000
	Fecal Coliform	500	300	230	230	110

The data show significant reduction in total and fecal coliform levels after the initial stormwater discharge.

The bacteriological quality in Newport Bay was monitored during two storms in 98/99. Samples for total fecal coliform were collected at the surface and mid-depth at each station in the Upper Bay on each day of storm sampling. **Figure 4.4** and **Figure 4.5** show the results of these samplings. Consulting these figures and the respective time series plots of rainfall, runoff and tide stage from Appendix 4.13 it can be seen that the bacteria levels decline significantly after two days of tidal flushing and no precipitation. From **Figure 4.4** the fecal coliform levels at all but the most upstream sampling location decreased to below the detection limit (200 MPN/100 ml) after 4 days of tidal flushing and no precipitation.

Huntington Harbour

In March of 1999 the influence of storm runoff into Huntington Harbour was monitored. As can be seen from these plots the total precipitation during the four days of sampling was approximately 0.55" and the discharge from the Bolsa Chica Channel peaked at approximately 700 cfs at about 2 PM on the first day of sampling. Bacteriological samples were collected from the surface at four sites in Huntington Harbour on the first day of sampling (March 25, 1999). The results of this sampling are presented below.

DATE	Analysis	HUNWAR	HUNCRB	HUNSUN	HUNBCC
3/25/99	Total Coliform	170	11,000	300	22,000
3/25/99	Fecal Coliform	170	5,000	170	4,000

The data show that bacterial levels are greatest nearest the discharge points of flood control channels. HUNBCC is near the outlet of the Bolsa Chica Channel and HUNCRB is near the outlet of the Sunset Channel.

4.6.4 Semiannual Sediment Sampling

Beginning in 97/98 analyses for iron concentration and particle size distribution were conducted on sediment samples collected from the bays and harbors. These additional analyses were added to provide information that could be used to explain differences between stations or between samplings at the same station.

Particle size distribution data from the basin downstream of Campus Drive show that the sediment after the El Nino season was predominately sand. Prior to the El Niño year the sediment was approximately 70% sand; three subsequent samples collected in the Summer of 1998, Fall of 1998, and Spring of 1999 show 97%, 96%, and 99% sand respectively. The data from UNBSDC in the Upper Newport Bay showed an interesting pattern of higher sand content prior to each of the last two storm seasons. These data are presented below.

Date	10/30/97	6/23/98	11/4/98	5/27/99
%Sand	64.1	5.4	57.7	15.3

SCCWRP's iron normalization procedure was again used to determine the presence of trace metal enrichment in the sediments from the bays and harbors. Using the regression equations and 99% prediction intervals (**Table 4.11**) it was determined that almost every site in Huntington Harbour and Dana Point Harbor was anthropogenically (caused by the actions of man) enriched with lead, copper, and zinc. The Rhine Channel showed similar results. The furthest upstream sampling point in the Upper Bay (UNBJAM) showed almost no anthropogenic influence. This observation may be due to limited sedimentation of finer stormwater particulates contaminated with metals or less influence by powered recreational boats in the area.

The database for harbor and bay sediments was evaluated using NOAA's guidance criteria for sediment toxicity. These criteria are used by SCCWRP in assessing the toxicity of sediments collected from the Southern California Bight. Concentrations of metals and organic compounds from Newport Bay, Bolsa Bay, Huntington Harbour and Dana Point Harbor were compared to NOAA's ER-Ms (Effects Range Median). An ER-M is a predicted concentration at which half of the test organisms in a toxicity test would show a toxic effect.

In the Rhine Channel of the Lower Newport Bay several exceedances of the ER-M for copper were found. Several exceedances of the ER-M for the DDT metabolite p,p' DDE were found in the samples collected from the Upper and Lower Newport Bays and Huntington Harbour (see **Appendix 4.5).** Other studies conducted in these harbors have found significant sediment toxicity or the same constituents of concern in the tissues of indicator organisms. These studies include the SWRCB's State Mussel Watch (SMW) and Toxic Substance Monitoring Program (TSMP); and the study conducted by NOAA, SWRCB and various other agencies, entitled "Chemistry, Toxicity, and Benthic Community Conditions in Sediments of Selected Southern California Bays and Estuaries." Data from these reports that were collected in Orange County waterbodies during the period of the permit (1991 - present) are presented in **Appendix 4.14**. The results of these studies were used to evaluate some of the impairments of the beneficial uses of the CARs.

5.0 MEASURING PROGRAM EFFECTIVENESS

5.1 Introduction

There are generally two accepted methodologies for assessing the performance of the BMP effectiveness: conventional monitoring (such as water quality monitoring) and non-conventional monitoring.

An accurate, quantifiable assessment of the cumulative effectiveness of current BMPs is difficult for a variety of reasons that include:

1. Non-structural BMPs began to be implemented prior to the stormwater mandate, meaning no "baseline" monitoring data representative of "pre-BMP" conditions can be identified;

2. The BMPs identified in the DAMP are being implemented incrementally on a countywide basis. Since, to date, no watershed has been uniquely subject to a single BMP, the influence of an individual BMP upon the overall surface water quality cannot be readily determined yet;

3. There is considerable variability in water quality data that complicates any statistical correlation of the data with storm frequency, storm length and intensity, land use, or land management practices. This is even more compounded by storm seasons in recent years that have varied much in their intensity, duration and volume;

4. Many of the BMPs identified in the DAMP are implemented to address the issues associated with a specific land use. However, since the land uses are so blended within the watersheds, it has not proven possible to characterize the effects of those specific BMPs; and

5. Factors other than chemical water quality may be more directly responsible for impairment of beneficial uses, yet all these factors combine in their effects and are difficult to separate one from another.

Assessing the cumulative effect of BMPs employed countywide on the water quality of receiving waterbodies may take a number of years. There are however, a number of programs that are currently contributing to the assessment of individual project BMP performance.

The Permittees will continue to assess and evaluate the data from these and other studies in order to try and determine the overall effectiveness of the implementation of the BMPs on the water quality within Orange County. The following sections discuss these methodologies and detail Permittee efforts in each.

Additional studies of the Newport Coast development have been proposed for the winter-spring period of 1999-2000 in Muddy Canyon. This initial data collection will provide baseline information on the storm runoff from Muddy Canyon and will likely be repeated as project build out occurs providing information on the impact of the development and the effectiveness of the BMPs implemented.

Newport Bay Watershed Nitrate Reduction

Newport Bay currently faces an eutrophication problem due primarily to the excessive use of nutrients in the watershed. The nutrient loads (nitrate) reaching Newport Bay reached a peak of approximately 1.6 million pounds in 1985-1986. At that point the nitrate loads reaching the bay began to decrease reaching an annual average of just over 0.8 million (50% reduction) from 1990 to 1997.

This reduction can be partially attributed to the use of drip irrigation on agricultural areas owned by The Irvine Company and increased runoff controls at the watershed's major nurseries. As additional measures to reduce the nitrate loading in the watershed are implemented by the watershed's stakeholders in the coming years, the total nitrate load and the eutrophication problem in the bay will also be reduced.

One project potentially contributing to a further reduction of nitrate is the San Joaquin Marsh Pond Demonstration Project. Installed and monitored by the Irvine Ranch Water District, these ponds have been supplied with water from San Diego Creek from June 1998 to the present. Total nitrogen reduction (difference between the influent total nitrogen and the pond effluent total nitrogen returned to the creek) has ranged from 7-10 mg N/l during the spring, summer and fall months to a reduction of 5mg n/l or less during January. The variability of nitrogen reduction was dependent upon temperature. Total nitrogen removal (difference in mass of total nitrogen entering the ponds and leaving the ponds) over the 405 day monitoring period was 51 tons. This equates to 46 tons annually, or 252 pounds of nitrogen removed per day.

In addition to the watershed actions pursued to date, the Co-permittees have initiated a program to study in greater detail the urban nutrient loading in this watershed and to identify additional BMPs for more intensive study (Newport Bay Watershed Urban Nutrient TMDL Technical Report, September 1999 and Newport Bay Watershed Urban Nutrient TMDL Compliance Evaluation, July 2000 **Appendix N**).

5.0 MEASURING PROGRAM EFFECTIVENESS

5.1 Introduction

There are generally two accepted methodologies for assessing the performance of the BMP effectiveness: conventional monitoring (such as water quality monitoring) and non-conventional monitoring.

An accurate, quantifiable assessment of the cumulative effectiveness of current BMPs is difficult for a variety of reasons that include:

1. Non-structural BMPs began to be implemented prior to the stormwater mandate, meaning no "baseline" monitoring data representative of "pre-BMP" conditions can be identified;

2. The BMPs identified in the DAMP are being implemented incrementally on a countywide basis. Since, to date, no watershed has been uniquely subject to a single BMP, the influence of an individual BMP upon the overall surface water quality cannot be readily determined yet;

3. There is considerable variability in water quality data that complicates any statistical correlation of the data with storm frequency, storm length and intensity, land use, or land management practices. This is even more compounded by storm seasons in recent years that have varied much in their intensity, duration and volume;

4. Many of the BMPs identified in the DAMP are implemented to address the issues associated with a specific land use. However, since the land uses are so blended within the watersheds, it has not proven possible to characterize the effects of those specific BMPs; and

5. Factors other than chemical water quality may be more directly responsible for impairment of beneficial uses, yet all these factors combine in their effects and are difficult to separate one from another.

Assessing the cumulative effect of BMPs employed countywide on the water quality of receiving waterbodies may take a number of years. There are however, a number of programs that are currently contributing to the assessment of individual project BMP performance.

The Permittees will continue to assess and evaluate the data from these and other studies in order to try and determine the overall effectiveness of the implementation of the BMPs on the water quality within Orange County. The following sections discuss these methodologies and detail Permittee efforts in each.

5.2 Conventional Monitoring

5.2.1 Water Quality Monitoring

Orange County has been implementing a water quality monitoring program since the Regional Boards approved its program in January 1991. In accordance with the requirements of the initial permit, one specific objective of this program is to evaluate the effectiveness of pollution prevention and correction methods. The channel monitoring element of the monitoring program discussed in Section 4.0 directly addresses this objective. Additional information on specific monitoring programs dealing with BMP implementation and effectiveness on individual development projects is discussed in Section 5.2.2.

Data from the channel monitoring program discussed in Section 4.0 highlights the broad spatial differences with regard to suspended/settleable solids, nutrient loading and potential for aquatic toxicity due to dissolved metals in channels draining predominantly urban watersheds. Aquatic toxicity guidance criteria were provided by the California Toxics Rule (CTR). The spatial variations in water quality may be interpreted as reflecting differences in watershed land uses, imperviousness and the very low hardness of rainwater draining off into flood control facilities.

In the context of stormwater quality management, the use of CTR criteria exceedances as an indicator of adverse impact will need to be validated since it now recognized that water quality is only one of many determinants that include water temperature, habitat, bank stability, etc., of beneficial use attainment.

5.2.2 Effectiveness of Pollution Prevention and Correction Measures

The paragraphs above have discussed the difficulty in assessing the cumulative effect of BMPs employed countywide on the water quality of receiving waterbodies. That assessment cannot be made for many years. There are however, a number of programs that are contributing to the assessment of individual project BMP performance. There are also monitoring programs in place that are intended to measure the quality of runoff from individual project sites. The following discussion provides information on some of these programs.

Las Flores Storm Water Quality Basins

The Las Flores community, located easterly of Mission Viejo, has two water quality basins that were constructed in the early 90's by the Santa Margarita Company to treat the first flush (1/2" of rain) effects of urban runoff from the 592 acre planned development. The conditions of approval for the development called for the developer to begin monitoring wet and dry weather runoff from the community once the tributary area to each basin was 50% complete.

The Northwest Water Quality Basin (8 ac-ft volume) has been treating wet and dry weather runoff from 189 acres of the development for the past three storm seasons. Analysis of grab samples taken from the inlet and outlet of the basin has thus far provided inconclusive results on the basin's effectiveness. In an effort to improve on the sampling techniques and obtain samples more representative of the water flowing in and out of the basin, automatic storm sampling equipment was used during the 1998-1999 storm season. Although this sampling is complete the results have not been made available. This might be attributed to an efficient source control BMP program that utilizes drought resistant plants, reduced applications of pesticides and fertilizers and public education.

The southerly portion of the development serviced by the Southwest Detention Basin, the larger of the two basins (16 ac-ft volume, 403 acres tributary), has reached 50% development and was scheduled to start monitoring during the 1997-1998 storm season. However, due to vandalism of the sampling equipment the sampling schedule was delayed and only one dry monitoring sequence was completed. Additional sampling was scheduled for 1998-1999. Up to now the basin has served primarily to intercept sediment from construction within the development which would naturally drain directly to Trabuco Creek, a natural creek.

Newport Coast Golf Course and Muddy Canyon Studies

In 1992, The Irvine Company initiated a water quality monitoring program to assess the runoff from Pelican Hills Golf Course as part of the condition of approval for the project. For the monitoring program, stations were located on land, in the surf zone and in the offshore subtidal areas. Additional stations were also located southerly of the golf course as reference control monitoring sites for comparison with the runoff stations. The monitoring program included chemical monitoring for nutrients (nitrate and phosphate) and a marine ecological component conducted in the ocean's waters in the 1995-1996 storm season to assess the runoff's impact on three indicator plants (Eisenia, Egregia and Phyllospadix) that are known to react quickly to increased nutrient levels by increasing their growth rates. The ecological study also evaluated animal epibionts living on these plants.

The general conclusions of the study found that the nutrient levels measured at the fresh water monitoring stations were reduced to such low concentrations by the time they reached the surf and subtidal stations that there were no significant differences between the runoff monitoring stations and the reference control stations. The low levels of nutrients from the golf course may be partially attributed to computer controlled fertilizer rates and efficient irrigation. In addition, the 1995-1996 marine ecological component of the study found that there were no statistical significant or detectable effects from storm water between the control stations and runoff stations on the three indicator plants studied.

Additional studies of the Newport Coast development have been proposed for the winter-spring period of 1999-2000 in Muddy Canyon. This initial data collection will provide baseline information on the storm runoff from Muddy Canyon and will likely be repeated as project build out occurs providing information on the impact of the development and the effectiveness of the BMPs implemented.

Newport Bay Watershed Nitrate Reduction

Newport Bay currently faces an eutrophication problem due primarily to the excessive use of nutrients in the watershed. The nutrient loads (nitrate) reaching Newport Bay reached a peak of approximately 1.6 million pounds in 1985-1986. At that point the nitrate loads reaching the bay began to decrease reaching an annual average of just over 0.8 million (50% reduction) from 1990 to 1997.

This reduction can be partially attributed to the use of drip irrigation on agricultural areas owned by The Irvine Company and increased runoff controls at the watershed's major nurseries. As additional measures to reduce the nitrate loading in the watershed are implemented by the watershed's stakeholders in the coming years, the total nitrate load and the eutrophication problem in the bay will also be reduced.

One project potentially contributing to a further reduction of nitrate is the San Joaquin Marsh Pond Demonstration Project. Installed and monitored by the Irvine Ranch Water District, these ponds have been supplied with water from San Diego Creek from June 1998 to the present. Total nitrogen reduction (difference between the influent total nitrogen and the pond effluent total nitrogen returned to the creek) has ranged from 7-10 mg N/l during the spring, summer and fall months to a reduction of 5mg n/l or less during January. The variability of nitrogen reduction was dependent upon temperature. Total nitrogen removal (difference in mass of total nitrogen entering the ponds and leaving the ponds) over the 405 day monitoring period was 51 tons. This equates to 46 tons annually, or 252 pounds of nitrogen removed per day.

In addition to the watershed actions pursued to date, the Co-permittees have initiated a program to study in greater detail the urban nutrient loading in this watershed and to identify additional BMPs for more intensive study (Newport Bay Watershed Urban Nutrient TMDL Technical Report, September 1999 and Newport Bay Watershed Urban Nutrient TMDL Compliance Evaluation, July 2000 **Appendix N**).

Newport Bay/San Diego Creek Sediment Reduction

The Newport Bay watershed, like the County of Orange, has transitioned from predominantly agricultural land uses to a more urban setting over the years. As a result of development, agriculture and land erosion, the amount of sediment discharged from the watershed created sediment deposition problems in Newport Bay.

To address the bay's sediment problems, a 208 Areawide Study Plan was completed in 1982. That plan recommended that foothill, in-channel and in-bay basins in Upper Newport Bay be constructed within the watershed to intercept sediment reaching Newport Bay. To date, as recommended by the report, foothill, in-channel and in-bay basins have been constructed and are achieving their intended function. There are three in-channel basins in San Diego Creek. In-channel basin 1 is located downstream of Campus Drive, while in-channel basins 2 and 3 are located upstream. In-channel basin 1 is currently maintained by the Irvine Ranch Water District and is being cleaned to design capacity. Basins 2 and 3 have greater than 50% catch capacity and do not currently require cleaning. With continued basin and channel maintenance, individual construction project BMPs, and other BMPs employed by the watershed's stakeholders, it is expected that the sediment load into the bay will continue to be significantly reduced in the coming years with the objective of meeting TMDL targets.

A new sediment monitoring program adopted by the Santa Ana Regional Water Quality Control Board on November 19, 1999 is designed to determine compliance with sediment TMDL land use allocations. The program will result in additional data collection in the Santa Ana-Delhi Channel in 1999-2000 and additional load monitoring stations being added in the subsequent two years.

Additional sediment analyses have recently been completed (Preliminary Sediment Load Allocation Analysis for San Diego Creek and Newport Bay, Tetra Tech 1999 and Hydraulic/Sediment Analysis for San Diego Creek Watershed, Tetra Tech, July 2000) that will form the basis for financing erosion and sediment control further during the next permit term.

In addition to the basins in the watershed, a special effort worth noting is the experimental program conducted at Round Canyon Detention Basin. The basin had the lower part of its outlet tower wrapped by filter fabric in an attempt to capture the finer sediment particles leaving the basin. It was felt that decreasing the openings at the lower part of the tower would prevent the finer sediment particles such as silt and clay from flowing out the basin. It was also felt that the filter fabric would increase the storm water detention time in the basin resulting in increased sediment deposition.

Capturing the finer particles is important because nutrients from the watershed may attach themselves to these particles as they leave the basin and find their way to Newport Bay. If the Bay's tidal exchange is unable to carry these particles into the ocean, the particles will end up as sediment deposition in the Bay. The preliminary results indicated an increase in the percentage of silt and clay captured. Based upon these results, the outlet tower at Bee Canyon was also wrapped with filter fabric. Both towers will remain wrapped in the future.

San Joaquin Hills Transportation Corridor Water Quality Basins

The Transportation Corridor Agencies have installed a number of water quality basins along the San Joaquin Hills Transportation Corridor to treat storm water runoff from the toll road. The water quality basins are open-aired, rectangular in shape, made of concrete and are divided into a number of different cells. Treatment of the storm water is through layers of compost material that acts as a filter. The treated water is removed from the basins by underdrain pipes surrounded by rock and filter fabric below the compost material.

To assess the treatment efficiency of these basins, Caltrans initiated a study of two basins during 1998-99. One basin was located in North Hollywood at a maintenance yard and the second basin was the Bonita Canyon basin located off the San Joaquin Hills Corridor in Orange County. The recently concluded study (Caltrans Compost Stormwater Filters Bonita Canyon & North Hollywood Maintenance Yard, Storm Water Monitoring 1997/1998 Wet Season, June 10, 1998) provides only one season's worth of monitoring but generally seems consistent with a similar type basin tested by Stormwater Management (manufacturer) in the early 1990's.

The results of the study for the five 5 storms monitored in 1997-98 show event mean concentration reductions for motor oil, diesel, and oil and grease ranging from 14 % to 64 %; fecal coliform (80%), Chemical Oxygen Demand (32%), metal removal (chromium, copper, lead, nickel and zinc) ranging from 33 to 72% and removal efficiencies of 72% for total suspended solids. The results also show that there was an increase in the effluent concentrations for total dissolved solids (24%) and nutrients (nitrate, nitrite, total phosphorous, total Kjeldahl nitrogen (TKN), dissolved phosphorous) ranging from 133% (TKN) to 1633% (dissolved phosphorous). The adverse reactions indicate that there were ongoing reactions in the basin that added to the effluent concentration of these water quality parameters. The original tests conducted by Stormwater Management also showed increases for nitrate nitrogen (145%) and dissolved phosphorous (197%) but not TKN and total phosphorous. However, the event mean effluent concentrations are still fairly small, 0.52mg/l for dissolved phosphorous and 3.46 mg/l for nitrate.

Additional information regarding these water quality basins has not been received.

Eastern Transportation Corridor Evaluation Monitoring Program

In contrast to the normal chemical monitoring program usually undertaken to assess storm water impacts, the monitoring program for the Eastern Transportation Corridor utilizes direct measurements of the receiving water quality in Newport Bay. While the project still utilizes conventional BMPs such as detention basins, erosion control measures, litter control and public education, it focuses on measuring the toxicity of the receiving waters to assess storm water impacts.

Preliminary studies conducted by Dr. Fred Lee, a consultant to the Transportation Corridor Agencies, showed a significant toxicity on the test organism, *Ceriodaphnia dubia*, in the runoff waters of San Diego Creek. A Toxicity Identification Evaluation (TIE) test found that a portion of the toxicity was attributed to the organophosphate pesticides Diazinon and Chlorpyriphos. These pesticides were found at levels below 1 ppb, but are very toxic to *Ceriodaphnia*. Since the initial study the project was expanded to include seven stormwater runoff events, four dry weather flow samples, the Santa Ana Delhi Channel and another test organism, *Americamysis bahia*.

The first phase of the study concluded that San Diego Creek stormwater runoff is toxic to *Ceriodaphnia* and mysids, primarily due to the organophosphate pesticides diaznon and chlorpyrifos and additional unknown constituents. The source of this toxicity is speculated to be urban residential use for lawn and garden pest control and commercial nurseries. The study suggests that the water quality significance of this toxicity primarily lies in the exposure to marine zooplankton that migrate into the mixed water lens formed at the interface of San Diego Creek and Upper Newport Bay. The report also concludes that further study is necessary to identify the water quality significance of the toxicity on marine zooplankton based upon exposure and migration patterns. In addition, it will be necessary to perform specific monitoring of a small residential subdivision defining organophosphate usage to determine if pesticides are a significant source of runoff toxicity.

City of Irvine Oil/Water Separators

The City of Irvine has installed two oil/water separators to treat water at their City Hall and Operations Support Fueling Facility. The results of two tests indicated that the oil/water separator is removing diesel fuel, gasoline and oil and grease to limits below detection where the initial amount was measurable. In addition, a new fueling system installed concurrently with the separators has reduced operator drive off with the pump engaged. The combination of the oil/water separators and the new fueling system has reduced contaminant levels to non-measurable amounts.

5.3 Non-Conventional Monitoring

The California Best Management Practices (BMP) Handbook defines "non-conventional monitoring" as the enumeration of some quantity other than water quality data to infer pollution reduction or water quality improvement. Examples cited include surveys of public opinion to demonstrate increasing environmental awareness, monitoring of the amount of used oil being delivered to household hazardous waste collection centers, etc.

Section 3.0 presents data on the extent of BMP implementation and the volume of potential pollutants that are being diverted from the storm drain system: pollutants that would otherwise contribute to water quality problems.

5.3.1 Public Opinion Survey

1994 Stormwater Pollution Prevention and Flood Awareness Survey

In 1994 the University of California at Irvine (UCI) conducted a public education survey on behalf of the NPDES Stormwater Program as a part of the Orange County Annual Survey. This survey was co-directed by Mark Baldassare and Cheryl Katz of the University of California, Irvine. The Stormwater Pollution Prevention and Flood Awareness Survey comprised 10 questions on topics such as awareness and knowledge. The intent of the survey was to gather information on the public's perception regarding storm water.

For this telephone survey, random samples of 1,000 Orange County adults were interviewed over the period August 19-29, 1994. The sampling error was three percent for the total sample. The key results of this survey were:

- Eighty-six percent say it is illegal to throw materials into the storm drain. However, nearly half of Orange county adults believe that the storm drain system and the sewer system are the same (44%) and that the water in storm drains is filtered and tested before it leaves the system (48%). Older Anglo, South County and higher socioeconomic status residents tend to know more about stormwater pollution.

- Thirty-three percent have seen public service announcements on television about dumping in storm drains, while 8 percent have seen brochures and 60 percent have noticed the "No Dumping" messages stenciled on curbs or storm drains. The study notes that, in general, exposure to announcements and warning signs on curbs lead to greater awareness of stormwater pollution prevention.

The main finding of the survey was that the public assumed that storm water was being treated. As a result of that finding, an effort was made to stencil storm water inlets with a uniform message throughout the county that informs the public that storm water drains directly to the ocean.

2000-2001 Public Opinion Survey

During 1998/99 the Permittees developed a long term NPDES public and business education strategy (Section 3.3). The strategy was finalized in September 1999 and began to be implemented in 1999/2000. The Permittees shall complete a public awareness survey by December 2001 to determine the effectiveness of the public and business education strategy to date and to provide direction to the overall program for the Third Term Permit period. The results of this survey will be available in the 2002 Annual Status Report.

5.3.2 Illegal Discharges

Section 2.4.1 presents information relating to the incidents involving hazardous materials to which the Principal Permittee and/or other Permittees responded. For FY 1999/00, **Figure 2.1** illustrates the sources of water pollution incident reports received by the Principal Permittee with the cities and the public constituting over 60% of the sources and **Figure 2.2** illustrates the types of materials involved **(Table 2.2).**

There was a marked increase in the number of water pollution incidents that were reported from 1990-1994 (808) and 1995-2000 (1872). This increase is likely due to the increased public and agency awareness regarding the problem of disposing or washing materials into the storm drains and that the storm drains flows directly to the ocean.

5.3.3 Public Agency Activities

It is recognized in the DAMP that there are many existing public agency activities that contribute to the control of urban stormwater pollution. Consequently, a major part of DAMP implementation involves instituting regular documentation of such activities for the purpose of non-conventional monitoring (see section 3.0). This report marks the seventh year of "full" DAMP implementation.

Over the second permit term, this data has yielded information on the extent of BMP implementation and the volume of specific pollutants that are being diverted from the storm drain system.

Drainage Facility Maintenance

From 1993 to 1999 the efforts to clean out the drainage facilities and the quantity of material removed have doubled. During FY 1999/00 twenty-eight Permittees reported the removal of 15,381 cubic yards and 23,907 tons of material from 218.8 miles of storm drains and 21,284 drain inlets. By removing this amount of material from the catch basin inlets and stormdrain system, the Permittees made a significant contribution in preventing problems downstream.

Household Hazardous Waste Collection

Orange County has an effective household hazardous waste collection program administered by the Integrated Waste Management Department (IWMD). The amount of material collected by these four sites has increased by over 400,000 pounds since 1994 (2,896,967 pounds of household hazardous waste in 1999/00 and 2,449,902 pounds of waste in 1994).

In addition, some Permittees also conduct special events such as waste oil or household hazardous waste roundups. In 1994 four Permittees reported conducting such events and in 1999/00 seven Permittees reported conducting similar events. These events resulted in the collection and proper disposal of an additional 190,905 pounds of household hazardous waste.

The increase in the amount of household hazardous waste collected and properly disposed of is encouraging since these materials can pose a serious threat to human health and the environment if disposed of incorrectly.

6.0 FISCAL ANALYSIS (DAMP Section 2.2.2)

6.1 Introduction

This Section provides a fiscal summary and analysis of the activities of the Permittees for 1999/00 and provides a trend analysis of program costs over the second term permit.

"Capital costs" refers to expenditures for land, large equipment, and structures. "Operations and Maintenance costs" refers to normal costs of operation including the cost of keeping equipment and facilities in working order.

Information on the funding sources for these expenditures are located in Section 6.4 of this report. The individual costs and funding sources for each Permittee for 1999/00 are summarized in **Tables 6.1 through 6.99** of this report. The six year summary is provided in **Table 6.100**.

6.2 Shared Costs

Shared costs are those that fund activities performed by the Principal Permittee, on behalf of the Permittees as established under the stormwater program's Implementation Agreement. Each municipality's contribution to the shared costs is determined by a formula established in the Implementation Agreement, based on the population and land area of each jurisdiction.

Program management activities handled by the Principal Permittee include development and execution of intergovernmental agreements, representation on the California Storm Water Quality Task Force, preparation of compliance reports, budgets and other program documentation, representation of the program before appropriate agencies such as the Regional Water Quality Control Boards and the State Water Resources Control Board, procurement and subsequent coordination of consultant studies and coordination with Permittee representatives.

Total shared cost expenditures have increased incrementally over the last five years from $748,980 in 1995/96 to a projected $1,089,397 in 2000/01. **Figure 6.1** illustrates this gradual increase.

6.3 Individual Costs

Individual costs are those incurred by each Permittee through implementation of the various Best Management Practices (BMPs) discussed in the DAMP. These BMPs, as discussed in Section 3.0, include a wide range of existing activities, such as street sweeping, litter control and emergency spill response, as well as new programs, such as facility inspection, drain inlet/catchbasin stenciling and dissemination of public education materials.

The individual costs incurred by each Permittee vary widely for each municipal activity identified as a BMP. This variation reflects a number of factors, including area, population and land use. These costs are detailed for each Permittee for FY 1999/00 in **Table 6.1 through 6.99** and are presented separately as costs incurred specifically to implement DAMP programs and as costs incurred for previously existing programs that meet DAMP objectives. Estimates of costs to be incurred in fiscal year 2000/01 are also included in **Tables 6.1 through 6.99.**

Total individual cost expenditures attributable to the DAMP have increased from $2,625,025 in 1996/97 to $6,924,985 in 1999/00. The most significant increase occurred last year; individual cost expenditures rose from $3,470,398 in 1998/99 to $6,924,985 in 1999/00. **Figure 6.1** illustrates these increases.

6.4 Funding Sources

Funding sources to implement DAMP programs and funding sources to implement previously existing programs that meet DAMP objectives include both general and specific funds, taxes, maintenance and user fees, and grants.

In 1999/00, General Funds were the most utilized funding source (66%) followed by Gas Taxes (9%), Sewer and Storm Drain Maintenance Fees (7%), Sanitation Fees (5%), Benefit Assessments (3%) and a Special District Fund (1%). This distribution has remained fairly consistent over the last five years. A breakdown of funding sources by Permittee is presented in specific tables throughout **Tables 6.1 through 6.99.**

In number of cases, certain DAMP elements were implemented by such groups as the Boy Scouts of America and Surfrider. No fiscal value is attributed to these volunteer contributions.

6. 5 Funding Changes Over the Second Term Permit Period

Over the last five years, the total cost of the activities undertaken by the Principle Permittee (shared costs) and the activities undertaken by the Permittees implementing those programs required specifically by the DAMP (Individual Costs attributable to the DAMP) increased from $3,434,627 in 1996/97 to$7,868,052 in 1999/00 **(Table 6.100).**

Similarly, the total reported cost of the municipal activities that contribute to nonpoint source pollutant control, identified in the subsequent tables as pre-existing programs, increased from $47,619,624 in 1996/97 to $88,256,559 in 1999/00. For 1999/00 the areas of greatest cost, based upon the information provided, in order of significance were:

1. Recycling
2. Street Sweeping
3. Drainage Facility Maintenance
4. Public Property & Street Chemical Spill Response
5. Program Administration

1 - 2000-01 figure is a budget projection

7.0 PROPOSED PLAN OF ACTIVITIES

The 2000 DAMP, which is being submitted as Volume 2 of 4 of the ROWD, represents the Permittees proposed plan of activities. The plan proposes a wide range of continuing and enhanced Best Management Practices (BMPs) which will be implemented over Third Term Permit period. Within each section of the DAMP, there is a discussion regarding the regulatory requirements, the development, implementation, modifications and performance commitments for the program element. In order to develop an effective NPDES Stormwater Program, careful consideration was given to the objectives and importance of each element.

REPRESENTATIVE PUBLIC EDUCATION MATERIALS

REPRESENTATIVE PUBLIC EDUCATION MATERIALS

COUNTY OF ORANGE

TRANSPORTATION AND HANDLING

- A maximum of 15 gallons or 125 pounds may be transported per vehicle, per trip (Department of Transportation regulation).
- Materials should be in original containers (except motor oil, fuels and antifreeze).
- All containers must have lids, be sturdy, non-leaking, and protected from breakage.
- Do not combine types of waste.
- Do not mix oil-base paint with latex paint.
- Dry out empty paint cans and discard in regular trash.
- If you wish to have a container returned (i.e. oil containers and boxes/crates used to transport materials), please notify the attendant in advance. Some containers may not be returnable.

WHY SHOP ' _ YOU DROP?

VISIT THE STOP & SWAP!

A unique and FREE program that allows you to drop off household, yard, and car care products you no longer need and pick up others you can use.

Currently available at the Anaheim and Irvine locations only. (Tuesday through Saturday, 9 a.m. to 1 p.m.)

FOR MORE INFORMATION ABOUT THE HOUSEHOLD HAZARDOUS WASTE COLLECTION PROGRAM AND THE STOP & SWAP CALL:

(714) 834-6752

Or see our webiste: www.oc.ca.gov/iwmd

DISPOSAL OF HOUSEHOLD HAZARDOUS WASTE

Household Hazardous Waste Collection Program

DID YOU KNOW?

- Most home, car, and yard care products can't be thrown in the trash?
- Paint, used motor oil, and most cleaning products are considered to be "hazardous waste"?
- If these products are put in the landfill they can contaminate our groundwater?

SO WHAT CAN YOU DO?

EASY AS 1-2-3!

1. Pack unwanted home, yard, and car care products in your car.
2. Drive to the Household Hazardous Waste Center closest to you.
3. Sit in your car and fill out a simple form while an attendant removes the unwanted products.

AND AWAY YOU GO!

LOCATIONS

Tuesday through Saturday
9 a.m. to 1 p.m.
except for rainy days and major holidays: Independence, Thanksgiving, Christmas and New Years Days)

STOP & SWAP*

ANAHEIM
1071 N. Blue Gum Street
(Located between the 91 and 57 Freeways on the corner of La Palma and Blue Gum)

STOP & SWAP*

HUNTINGTON BEACH
17121 Nichols Street
(Between Beach Blvd. and Gothard St. off Warner Ave. at Rainbow Recycling and Disposal. Use Gate 6.)

STOP & SWAP*

IRVINE
6411 Oak Canyon
(Off Sand Canyon between the 5 and 405 Freeways (next to the City Corporate Yard and Animal Shelter)

MATERIALS ACCEPTED

- Automotive products (antifreeze, motor oil, fluids)
- Batteries (home and car)
- Cosmetics
- Herbicides
- Hobby supplies
- Household cleaners
- Fuels
- Medicines
- Paints (latex and oil)
- Paint products
- Personal care products
- Pesticides
- Polishes and waxes
- Pool and spa chemicals
- Propane tanks from barbecues
- Unused road flares
- Wood preservatives

WASTE NOT ACCEPTED

Ammunition
Asbestos
Biological
Business-generated
Explosives
Radioactive
Compressed gas cylinders

* See reverse for Stop & Swap info!

GREEN WASTE ONLY

DO'S

- Grass
- Leaves
- Green Plants
- Weeds
- Garden Trimmings
- Tree Limbs
- Wood Chips
- Sawdust
- Small Wood Scraps

DON'TS

- Plastic Bags
- Pet Waste
- Palm Branches
- Soil
- Dirt
- Tree Stumps
- Painted Wood
- Treated Wood

TAKE ME

WM WASTE MANAGEMENT

Waste Management will discard your old trash can(s). Place this sticker on your trash can to be discarded and place at the curb on your trash collection day.

LARGE BIN SERVICE

For large household and yard projects, special bin rental service is available. Please call the Waste Management Customer Service Center at (949) 642-1191 or (714) 558-7761 for rates and information.

BULKY ITEM PICKUP

Each household is entitled to two free bulky item pickups each year. We will collect up to four large items or 20 plastic bags of refuse per pickup (bags not to exceed 50 pounds). Bulky items include large, hard-to-handle items such as furniture, major appliances, and other household items that require two individuals to move. To schedule your free bulky item pickup, please call the Waste Management Customer Service Center at (949) 642-1191 or (714) 558-7761.

HOUSEHOLD HAZARDOUS WASTE

The County of Orange operates regional household hazardous waste collection centers for homeowners to take and dispose of their paint, oil, pesticides, cleaners, solvents, etc. The two centers for South County residents are San Juan Capistrano and Irvine. For more information, call the County's Information Hotline at (714) 834-6752.

CHRISTMAS TREE RECYCLING

We will collect and recycle Christmas trees for the first two weeks following Christmas. Trees must be placed at the curb no later than Friday, January 7, 2000. Trees longer than six feet must be cut in half. Please remove all tinsel, metal ornaments and metal stands from trees. Flocked trees will be collected but not recycled.

HOLIDAY SCHEDULE

Waste Collection does not occur on the following holidays:

New Year's Day	Memorial Day
4th of July	Labor Day
Thanksgiving Day	Christmas Day

When any of these holidays is observed on a weekday, collections for the remainder of the week are delayed one day.

COUNTY OF ORANGE CALIFORNIA

Printed on recycled paper

WM WASTE MANAGEMENT

Your New Expanded Recycling Program

007334

Presented by The County of Orange and Waste Management of Orange County

Dear Resident:

Welcome to the County of Orange's new expanded recycling program. The County of Orange, like all cities and counties in California, is required by state law to reduce the waste it sends to landfills by 50 percent by the year 2000. We need your help to accomplish this goal.

Today Waste Management is beginning its new program by making it more convenient for you to recycle. We are doing this in three ways:

- *Providing you with a new cart that you will use for your trash*
- *Increasing recycling service from every other week to every week*
- *Beginning a new green waste (yard trimmings) recycling program for those customers who generate significant quantities of green waste*

Best of all there is no increase in rates.

We are excited about the expanded recycling program and are confident that you will find the program easy to use and convenient for your household. Please take a few minutes to review the information about the new program we have included in your Starter Kit. If you have any questions, please call the Waste Management Customer Service Center at (949) 642-1191 or (714) 558-7761.

Thank you for your help in assisting the County of Orange in reaching its recycling goals.

Sincerely,

Robert J. Coyle
Division President

YOUR NEW TRASH CART (BLUE LID)

Each resident with curbside trash service will receive a new trash cart that has a distinctive blue lid with "Trash" stamped on the lid to identify it. Based on the neighborhood you live in you will receive either a 64-gallon cart (equivalent to TWO regular 32-gallon trash cans) or a 96-gallon cart (equivalent to THREE regular trash cans.) If you need either a larger or smaller size after you have used the cart for a few weeks, please call our Customer Service Center at (949) 642-1191 or (714) 558-7761 and we will exchange your cart at no charge. The trash cart is for household waste that cannot be recycled.

Sorted recyclable materials whi will be made into new products

RECYCLABLES (GREEN OR GRAY LID)

Beginning next week you can put your recycling cart out every week. One of the biggest requests from County residents was that they wanted to recycle more items and they wanted more frequent service. The expanded recycling program provides a solution for both requests.

We are also expanding the list of material that you can recycle. You can now put the following materials in the recycling cart with the green or gray lid:

- Newspapers
- Cardboard
- Mixed Paper
- Junk Mail
  Cereal Boxes
- Plastic Bottles
- Magazines, Catalogs & Phone Books
- Aluminum Cans
- Steel/Tin Cans
- Glass Food & Beverage Containers

You no longer need to separate your newspapers within your recyclin cart. All recycling materials can now be mixed together. And rememb if it tears, recycle it.

To avoid contamination, please do not place liquid or food waste, pla bags or styrofoam in the recycling cart. <u>If you are not sure if a produ can be recycled please put it in the trash cart with the blue lid.</u>

GREEN WASTE. IT'S NEW!

The expanded recycling program also includes a new "Green Waste" service. Green waste is commonly referred to as yard trimmings, and includes the following:

- Grass/Leaves
- Tree Branches
- Wood Chips
- Garden Trimmings
- Green Plants/Weeds
- Sawdust/Small Pieces of Wood

How does it work? If you generate green waste, place the enclosed "Green Waste" stickers on your old trash can(s).* Please remember that green waste cans cannot exceed 35-gallons or weigh more than 50 pounds.

Green waste can be put out for collection every week. Plastic is a major contaminant of green waste. Do not place green waste in plastic bags. All of your green waste should be loose in the cans. Tree branches may be tied in 4-foot long bundles and placed next to your green waste cans.

*Note: The County of Orange and Waste Management of Orange County have identified some areas outside the designated green waste collection areas. If you did not receive "Green Waste" stickers, you are located outside the "Green Waste" service areas and you may place green waste in your trash cart.

REMINDER: Please place all items in the carts or cans. Cart lids must close to prevent spillage.

CR&R would like to advise the residence of Rossmoor that we acknowledge the following Holidays:

New Years Day
Memorial Day
4th of July
Labor Day
Thanksgiving
Christmas

If one of these Holidays falls during the week (Monday-Friday), your pick-up will be **delayed** one day. If these Holidays fall on the week end (Saturday or Sunday) your pick up day will **not** be changed.

Rossmoor Clean-up

CR&R will have our annual bulky item **clean-up** on October 23, 1999 at Rossmoor Park on Pemberton St. The clean-up program will give you the opportunity to dispose of unwanted bulky items. Please put all items inside the dumpsters. **Do not place items on the ground outside the trash boxes.**

Saturday October 23RD 8:00 AM to 2:00 PM

Proof of residence in the Community of Rossmoor must be provided

No hazardous waste: batteries, paint, paint thinners, tires or oil

MRF RESOURCE CENTER

MRF RESOURCE CENTER was a two year dream of the Environmental Education Team (made up of community members from Huntington Beach, Fountain Valley, and Rainbow Disposal).

MRF RESOURCE CENTER is made from about 500 pounds of recycled materials, items that were at one time, someone else's trash!

MRF RESOURCE CENTER is constructed from:

- Recycled aluminum
- Rumber (a recycled tire and recycled plastic composite)
- Recycled melamine
- Particle board (made from recycled wood product)
- Recycled Polyethylene Terephthalate (a plastic from which soda bottles are made)
- Recycled tin, and
- Recycled, expanded polyvinyl chloride.
- The featured garbage can holds more than 100 cubic feet of trash.

MRF RESOURCE CENTER artist/designer is **Rob Hardin**, owner/operator of **Innovative Design,** 17401 Nichols Street, Suite K, Huntington Beach, CA 92647.

The recycled promotional items inside the "garbage can" were generously donated by **Adapt Consulting – The Environmental Resource Experts,** 13618 Lemay Street, Van Nuys, CA 91401

MRF RESOURCE CENTER was made possible by a grant from the California Department of Conservation, Division of Recycling

WHERE ARE WE GOING TO THROW IT...

WHEN THERE IS NO MORE AWAY?

WASTE PREVENTION TIPS

WASTE PREVENTION TIPS

STOP TRASH BEFORE IT STARTS!

Many people believe that recycling is the only solution to the trash problem. While recycling can divert valuable materials from the landfill, it is only one part of an efficient Waste Management Program. Controlling waste, conserving landfill space and improving the environment requires the "3R's.

Lets start with *"Reduce"*

Californians generate 4.4 million tons of garbage each year. This equals 8 lbs. per person per day. Let's go one step further and think about how to reduce waste in the first place by going to the source.

THINK BEFORE YOU TOSS!!
IF YOU'RE NOT PREVENTING WASTE
YOU'RE WASTING RESOURCES!!
LOOK AT WHAT YOU BUY
AND WHAT YOU THROW AWAY!

FOLLOW THE "STOP BUYING TRASH" CHECK LIST!!

Did you know that packaging represents 30% of all waste?

- BUY RECYCLED PRODUCTS WHENEVER POSSIBLE
- SELECT PRODUCTS WITH MINIMAL PACKAGING
- BUY IN BULK, ECONOMY SIZES & CONCENTRATES
- AVOID DISPOSABLE DIAPERS, AND PAPER PRODUCTS SUCH AS ... PLATES, NAPKINS & TOWELS

- BUY REFILLABLE ITEMS SUCH AS PENS & RAZORS

Make something new from something old *"Reuse"*

- REPAIR DURABLE PRODUCTS
- BORROW, RENT OR SHARE ITEMS USED INFREQUENTLY
- USE REUSABLE PRODUCTS SUCH AS SPONGES, CLOTH TOWELS, DISHES, UTENSILS, CLOTH NAPKINS, CUPS & RAZORS

BE A PAPER SAVER

- USE BOTH SIDES OF THE PAPER
- USE GROCERY BAGS TO LINE HOUSEHOLD TRASH CANS
- MAKE NOTE PADS FROM USED PAPER

007349

Give it away, don't throw it away *"Recycle"*

Many schools and community groups could benefit from receiving your used:

- *CLOTHING*
- *TOYS*
- *BOOKS*
- *FURNITURE*
- *APPLIANCES & MORE*

- DONATE BOOKS TO LIBRARIES, MAGAZINES TO NURSING HOMES, SCHOOLS, & FRIENDS
- REUSE PACKAGING MATERIAL AGAIN – STYROFOAM PEANUTS, BUBBLE WRAP, WRAPPING PAPER ETC. FOR

ZERO WASTE LUNCH

- NO DISPOSABLES, USE LUNCH BOXES OR FABRIC BAGS & CLOTH NAPKINS

- NO PREPACKAGED SINGLE SERVING CONTAINERS FOR CHIPS, DRINKS FRUIT, ETC.
- USE TUPPERWARE OR RUBBERMAID TYPE DURABLE CONTAINERS.
- USE REFILLABLE THERMOS CONTAINERS

Recycling News

July 1, 1999 Volume VII, No 3

IMPORTANT NOTICE

NO DELAY IN TRASH COLLECTION THIS JULY 4TH

This year the Fourth of July falls on a Sunday. Currently the County landfills operate Monday through Saturday so you will not experience delay in trash service. On your normal collection day, please place your trash/recyclables out at the curb for collection.

PROPER DISPOSAL OF THE AMERICAN FLAG

As we celebrate America's Independence this Fourth of July we may notice that the flags we display have become torn or tattered beyond repair. This past year the editors of Recycling News received a letter from a World War II Veteran regarding proper disposal of an American Flag.

The Orange County Veterans will forward the flags to the American Legion Post where they will be Disposed of in conformance with tradition and local laws. Please mail your old American Flags to:

ORANGE COUNTY VETERANS
SERVICE CENTER OFFICE
1300 South Grand Avenue, building B
Santa Ana, CA 92705

TIPS TO REMEMBER WHEN YOU'RE AT THE BEACH OR PARK

Did you know that our oceans provide most of the planet's oxygen, moisture and weather patterns? Every year, the Center of Marine Conservation sponsors a nationwide 3-hour beach clean-up, which has proven to be extremely effective. In 1987, in Texas alone, volunteers collected: 31,773 plastic bags; 30,295 plastic bottles; 15,631 six pack rings; 28,450 plastic lids; and 1,914 disposable diapers. And around the nation, the volunteer clean-up crew collected close to 2 million pounds of debris in just 3 hours. So next time you go to the beach or the park, remember to bring a trash bag and before you leave try to spend a few minutes picking up any litter you find. If you are interested in beach clean-up activities, please contact the Center for Marine Conservation at (202) 429-5609 or the Surfrider Foundation at (800) 743-7873.

IMPORTANT Y2K INFORMATION

By December 31, 2000 your city will need to be in compliance with the regulations set forth by state law AB 939. As you are already aware, AB 939 is the state-mandated requirement for each City throughout California to divert 50% of their waste stream away from the landfill by the Year 2000. Over the past several years the Editors of *Recycling News* have been discussing the 50% goal and the importance of reducing your waste, recycling and buying recycled products. Over the next year, your city will evaluating the programs currently in place and will review new ideas to promote the goals or the state law. Keep up the good work!!!!

Holiday Collection Schedule

We will not pick-up on these holidays:
- New Years Day - Memorial Day - Independence Day - Labor Day - Thanksgiving Day - Christmas Day
However, trash collection will resume one day later.

TRASH FRIENDLY WEBSITES

Each quarter the editor of *Recycling News* will be reviewing website and e-mail addresses on the Internet that may be of interest to our readers. The sites examine ways to **reduce** waste, avenues to **reuse** unwanted materials (such as donations to non-profit organizations), lists of **recyclable** material and directions to **backyard composting**.

FIND A NEW USE FOR AN OLD ITEM

Have an old bike that needs fixing or a chair that is missing a leg? Or how about some other large item that needs some minor repairs? Before you throw that item away, why not give it to someone who could put it to good use? There are many organizations such as Goodwill Industries, Children's Hospital of Orange County (CHOC) and the Salvation Army that make it their business to bring new life to older, reusable items. In the spirit of goodwill and less waste, SOLAG Disposal, Inc. together with your City encourage you to contact these organizations before you throw a reusable item in the trash. For telephone numbers to these organizations, please look in the yellow pages under "Thrift Shops." Also remember that your contribution may also be tax deductible.

KEEP RECYCLING WORKING - AMERICA RECYCLES

On November 13, California cities will have the opportunity to participate in the second annual America Recycles Day - a national campaign designed specifically to reinforce public support of recycling. Your City, the County of Orange and SOLAG Disposal would like to "Keep Recycling Working." You can help by remembering to reduce, reuse, recycle and compost your waste, but most importantly... purchase products that contain recycled materials. By working together we can preserve our planet, promote a healthier environment and secure the future of recycling.

AMERICA RECYCLES DAY NOVEMBER 13, 1999

SPECIAL GIVEAWAY

To celebrate America Recycles Day, on Saturday, November 13 from 8:00 a.m. to 12:00 p.m. Tierra Verde Industries, a green waste recycling facility located in San Juan Capistrano, has offered to donate compost for use in your yard. Bring a shovel and a large container/bag to Federal Doc Loading, located on Alicia Parkway between Avila and Aliso Creek Road in the City of Laguna Niguel to collect the free compost material.

FIND A NEW USE FOR AN OLD ITEM

Have an old bike that needs fixing or a chair that is missing a leg? Or how about some other large item that needs some minor repairs? Before you throw that item away, why not give it to someone who could put it to good use? There are many organization such as Goodwill Industries, Children's Hospital of Orange County (CHOC) and the Salvation Army that make it their business to bring new life to older, reusable items. In the spirit of goodwill and less waste, SOLAG Disposal, Inc. together with your City encourage you to contact these organizations before you throw a reusable item in the trash. For telephone numbers to these or other non-profit organizations, please look in the yellow pages under "Thrift Shops," or you may contact Solag Disposal for more information. Also remember that your contribution may be tax deductible.

ENVIRONMENTAL AWARDS

The Cities of Dana Point, Laguna Niguel, San Clemente, San Juan Capistrano and the County of Orange would like to recognize the following businesses for their outstanding efforts to reduce waste and recycle in their community:

Doubletree Guest Suites, Dana Point • Flex Foot, Inc. • Trade Winds Motel
Unichem Industries, Inc. • Tall Mouse Arts & Crafts, Inc. • Auto Care
Launderland • Mission Yamaha, Inc. • Saturn of San Juan Capistrano

Each of these businesses are being recognized by their respective cities for their dedication to help keep our environment clean and their commitment to recycling and source reduction.

TRASH FRIENDLY WEBSITES

Solag Disposal - www.solag.com
www.choose2reuse.org - This website will give you valuable information and on-line resources to help in your efforts to re-use everyday items.

Dana Point - www.ci.dana-point.ca.us
Laguna Niguel - www.ci.laguna-niguel.ca.us
San Juan Capistrano - www.sanjuancapistrano.org
San Clemente - www.cty.org/san-clemente/
County of Orange - www.oc.ca.gov/iwmd/

IS YOUR TRASH WEIGHING YOU DOWN?

Items that are too large to fit in your container are considered bulky-items. As a customer of SOLAG Disposal you are entitled to two bulky-item pick-ups per calendar year, at no extra charge. Almost anything that can be managed by a two-person crew will be picked up as a bulky-item. This includes old furniture, appliances, carpet, mattresses, water heaters, etc. Loose items need to be bagged or bundled, and no liquids or drums of any kind will be accepted. Before you put out large items to be landfilled, consider donating these items to a non-profit organization. If you would like more information about bulky-item pick-ups or non-profit organizations willing to pick-up your reusable items, please contact one of the customer service representatives at (949) 240-0446, Ext. 1.

SEASONAL RECYCLING TIPS (Some thoughts)

During this Holiday season remember that one of the biggest gifts you can give your children is a clean environment. Here are some of the ways you can recycle and reuse holiday leftovers.

Types of things that can be recycled include:

Tin Jars	Wrapping Paper	Glass Containers	Cardboard Boxes/Packaging

Cannot be recycled:

Tinsel	Bows/Ribbons	Holiday Lights	Styrofoam Peanuts*

* = Clean Styrofoam packaging peanuts can be reused or are accepted at several packaging/delivering companies (such as Mail Boxes, Etc.), please check your local listings.

Some products may not be recyclable in our program, but that doesn't mean they should go in the trash!!! Many nonprofit organizations around the area can reuse your seasoned clothing, toys, exercise equipment, bicycles and other items. If you have any questions, please contact one of our customer service representatives at (949) 240-0446.

RECYCLING YOUR CHRISTMAS TREE IS AS EASY AS 1-2-3....

Can you believe that the Holiday Season is already behind us? Well it's time again to recycle your Christmas Trees. Depending on where you live, collection of your trees will take place on your normal collection day during a two week period shortly after Christmas or after the New Year. Just follow these three simple steps:

FIRST, please review the front of your bill for the dates of the curbside collection of your Christmas trees.

SECOND, Remove all decorations, tinsel and stands (wood or metal) from the tree before collection. If your tree is over 8feet in height, please cut the tree in half.

THIRD, Place your tree at the curb next to your container on collection day. **On trash day a separate collection vehicle will pick up your Christmas tree.**

NOTE: Flocked trees or trees with nails, stands or ornaments cannot be recycled, but will be picked up and disposed of at the landfill. Please do your part to help recycle your trees.

ITS NEVER TOO LATE TO RECYCLE OLD CHRISTMAS CARDS

For the past 20 years St. Jude's Ranch for Children has recycled holiday, birthday, get well and all other occasion cards. St. Jude's Ranch is a non-profit home for abused and homeless children located in Boulder City, Nevada. People from across the United States and around the world send used cards to the Ranch. In 1992 nearly one and a half million cards were collected. If you would like to recycle your Christmas cards, please send them to:

St. Jude's Ranch for Children
P.O. Box 60100
Boulder City, NV 89006

If sending by United Parcel Service, send to:
St. Jude's Ranch for Children
100 St. Jude Street
Boulder City, NV 89005

The Ranch requests that you send the front of cards only and please do not include cards that have writing or other markings.

Unwanted Computer Parts - Help Your Community Recycle

Recently there has been a lot of talk about the year 2000 (Y2K) and the potential of imbedded computer chips disabling thousands of appliances, electronic products, etc. While the editors of ***Recycling News*** can neither confirm nor deny these reports, we would like to request our customers' help to try and locate alternatives to disposing of these items in the landfill. If you or someone you know can direct us to a non-profit organization willing to accept these items or a remanufacturer that would be interested in securing this material, please contact our office in writing.

Recycling News

April 1, 2000 Volume VIII, No. 2

EARTH DAY CELEBRATION

Come celebrate Earth Day with students and residents from the surrounding communities. On Saturday, April 22, 2000 from 8:00 a.m. to 12:00 p.m. your city together with SOLAG Disposal, Inc. will be hosting an Earth Day celebration and Children's Invention & Art Fair in the City of Laguna Niguel.

INVENTION & ART FAIR:

Bring the entire Family for a fun-filled morning including an Easter Egg Hunt (for children ages 1-12), members of the local fire department, Environmental Booths, Invention and Art Displays by local elementary students.

Hey Kids: before you throw that object in the trash, think about other things you can do with it?

Every day hundreds of items are thrown into the trash that could have served a better or more useful purpose. Your City is sponsoring an Invention and Art Fair to determine the best way to reuse old items. Can you invent something that is used around the house, in the garage or at school? How about designing an art project that can be shared with your friends and family? We want you to be creative, serious or silly. Your idea could be anything from a floor mat, a napkin holder or thousand of other inventive ideas. Most important, we want you to have fun! Each entry in the Invention and Art Fair will be judged based on innovation, creativity and usefulness. The top three winners from each category (Kindergarten - Second, Third - Fourth and Fifth - Sixth) will receive an award. All children participating in the Inventions & Art Show will receive recognition in the June 2000 Issue of *Recycling News*. Once your project is complete, call Dan Batty at (949) 240-0446 to reserve a spot at Earth Day 2000. To receive a free T-shirt, you must RSVP no later than April 10, 2000.

SPECIAL GIVE-A-WAY

To celebrate Earth Day, on Saturday, April 22 from 8:00 a.m. to 12:00 p.m. Tierra Verde Industries, a green waste recycling facility located in San Juan Capistrano has offered to donate compost for use in your yard. Bring a shovel and large container or bag to the site of the Earth Day Celebration in the City of Laguna Niguel located on Golden Lantern and Camino Los Padres to collect the free compost material.

TRASH FRIENDLY WEBSITES

Each quarter the editor of ***Recycling News*** will be reviewing website and e-mail addresses on the internet that may be of interest to our readers. The sites examine: ways to reduce waste, avenues to reuse unwanted materials (such as donations to non-profit organizations), types of recyclable material and instructions for backyard composting.

SOLAG Disposal - www.solag.com
www.choose2reuse.org - This website will give you valuable information and on-line resources to help in your efforts to re-use everyday items.
ecoboard.cc - Alternative material for decks, playground equipment, outdoor furniture.

Dana Point - www.ci.dana-point.ca.us
Laguna Niguel - www.ci.laguna-niguel.ca.us
San Juan Capistrano - www.sanjuancapistrano.org
San Clemente - www.cty.org/san-clemente/
County of Orange - www.oc.ca.gov/iwmd/
www.inkbank.com - Ink cartridges

Holiday Collection Schedule

We will not pick-up on these holidays:
New Years • Memorial Day • Independence Day • Labor Day • Thanksgiving Day • Christmas Day
However, trash collection will resume one day later.

EARTHY SAYS,

The beginning of the millennium is upon us and we need your help. In 1989 (eleven short years ago) all cities in the state of California were mandated to divert 50% of their waste stream away from the landfill by the end of the year 2000 (Public Resources Code 40000 et. seq,, tter known as AB939). Your city has one of the most progressive programs available in the state of California, however it is more important now than ever before to stop and look at what items are being placed in your trash or recycling containers.

Over the past several years the Editors of *Recycling News* have been discussing the 50% goal and the importance of reducing your waste, recycling and buying recycled products. Over the next year, your city will be re-evaluating the programs currently in place throughout your City and will review new ideas to help us achieve the state-mandated goals. If you have questions about recycling or waste reduction, there is a detailed brochure that we would be happy to send to you (in English or Spanish) that will help explain the types of material that can be recycled. Earthy says, "Keep up the good work!"

WHAT DOES SOLAG DO WITH THE GREEN WASTE?

Once green waste is collected by SOLAG Disposal, it is taken to a composting facility. At the facility the yard waste is shredded, mixed with a balance of other organic material and placed in rows for composting.

HOW DOES GREEN WASTE BECOME COMPOST?

Compost requires four basic elements:

1. Green waste such as grass clippings.
2. Brown waste such as leaves and wood chips.
3. Air.
4. Water.

In an effective compost pile, micro-organisms and earthworms help to decompose the organic materials, thus heating the compost and accelerating the process. If the compost pile is turned regularly, the organic materials can become compost in 4 to 6 weeks. If left untouched, the material will decompose in 6 to 8 months.

WHAT IF I WOULD LIKE COMPOST MATERIAL FOR HOME USE?

Compost is a vital addition to all soils. It adds nutrients to the soil for planting and makes good top soil for most plants. At this time, the smallest quantity sold at most compost facilities is one cubic yard.

SOLAG DISPOSAL, INC.
P.O. Box 1100
San Juan Capistrano, CA 92693

GREEN WASTE RECYCLING PROGRAM

arting: July

New, Voluntary Service
Added To Curbside llection

GREEN WASTE RECYCLING PROGRAM

GREEN WASTE COLLECTION PROGRAM

In cooperation with the County of Orange, SOLAG Disposal, Inc. is offering a FREE, VOLUNTARY curbside green waste collection program.

For more information about the program, please contact SOLAG Disposal, Inc. at (949) 240-0446, Ext. 1.

WHY SHOULD WE PARTICIPATE?

Approximately 20% of Aliso Viejo's residential waste is green waste. By collecting this material separately to be composted and not landfilled, the residents are helping to meet the state-mandated waste reduction goal.

WHAT IS GREEN WASTE?

Green waste is almost all organic landscape waste materials. The most common types of green waste include:

- grass clippings
- wood scraps
- weeds
- branches (not to exceed 4' in length and 2" in diameter)
- plant materials
- garden trimmings
- leaves

WHAT IS NOT GREEN WASTE

The following items must be disposed of in the black container unless otherwise noted:

- animal waste
- diseased plants
- palm branches
- meat/fish or bones
- dairy products
- dirt/sod*
- construction materials

* Dirt, sod and construction materials cannot be disposed of in the automated program. Please call our office for details on disposal alternatives.

IS THERE A COST FOR THIS PROGRAM?

No. The County and SOLAG Disposal reached an agreement that would allow for this program at no additional charge to the resident.

HOW DOES THE PROGRAM WORK?

Residents are asked to put their green waste at the curb on their regular trash collection day. The green waste may be bagged, bundled, or placed in a container. Residential subscribers may place no more than 6 bags, bundles or containers of green waste generated from their homes at the curb for collection.

BAGS - The weight of any green waste item should not surpass the physical strength of the bag and not exceed 40 lbs.

BUNDLES - Trimmings and branches may be tied together in bundles with string only, not exceeding 2' x 4' and not to exceed 40 lbs.

CONTAINERS - Any standard trash container, up to 32-gallons and weighing less than 40 lbs. Only six (6) may be placed at the curb for weekly green waste collection.

WHAT ABOUT MY CHRISTMAS TREE?

Trees may be placed curbside, once the ornaments, garland, stakes and stands are removed. Collection of trees will take place on each of your normal collection days for the two weeks following New Years.

IS THIS PROGRAM AVAILABLE TO ALL RESIDENTS?

SOLAG Disposal has surveyed the Aliso Viejo residentia community and is initiating this program in th neighborhoods that generate large amounts of gree waste. The program will be monitored frequently t determine how the service area will be expanded o changed.

DO I HAVE TO PARTICIPATE IN THIS PROGRAM?

No. This is a voluntary program. Some residents like t recycle as much as possible and will place a containe curbside each week. For those residents whose yards require less maintenance, they may find that this progran is beneficial only when they do their major trimming.

WHEN DO I PUT MY GREEN WASTE OUT FOR COLLECTION?

The collection of your green waste is the same day as your regular trash day. The green waste will be collected manually using a separate truck in addition to the recycling and refuse collection vehicles.

WHERE SHOULD I PLACE THE GREEN WASTE?

The bundled/bagged/containerized green waste should be placed curbside before 7:00 a.m. to ensure collection. Remember to place the material at least 1' away from the recycling and trash containers.

REPRESENTATIVE PUBLIC EDUCATION MATERIALS

CITY OF ANAHEIM

RECYCLE ANAHEIM

VOLUME 10 AN ANNUAL RECYCLING NEWSLETTER FOR CITY OF ANAHEIM RESIDENTS WINTER 1999

Residents Approach 2000 with Recycling Success

Residents of Anaheim approach the new Millennium with recycling success. In 1999, your efforts helped the City of Anaheim recycle over 46,743,888 pounds of recyclable material.

As we draw near the turn of the century, we meet recycling challenges set by the state of California with great success. In 1989, Assembly Bill 939 mandated each city to reduce their amount of waste by 50 percent by the year 2000. By participating in ***Recycle Anaheim***, the city is poised to smoothly meet the state's challenge. But we should not stop there. With or without state mandated laws, the Earth's resources are still precious and landfill space is still limited. What can we do in addition to recycling to make our community healthier? We can take the next step in preserving our environment: we can focus on reuse.

Reuse vs. Recycle

There are subtle but important differences between reuse and recycle. Recycling means taking a product, such as a aluminum can, deconstructing it, and using the materials to remanufacture something new. Although this is greatly preferred over starting from scratch, it is clear that if you don't have to spend the time, energy, or resources deconstructing and remanufacturing a product, you are saving resources.

Reuse is the process of taking idle goods and materials and reemploying them in a manner that does not require altering their original form. Reuse can also mean just reusing something over and over again. Popular examples of reusable goods include cloth shopping bags; plastic insulated coffee mugs and eraser boards.

The Benefits of Reuse

The benefits of reuse are as plentiful as the diversity of reuse options. By reusing items instead of disposing of them, we are saving landfill space. But equally important, there is no need to spend energy or raw materials to manufacture new items. Reuse not only saves resources, but also puts materials into the hands of those in need like schools, community organizations, and businesses. Reuse allows us to save money and contribute to our community.

Recycling ... it works because of you!

County Sponsors New Landscape Performance Program

Today, more than one-third of landfill material is green waste. The organic material is ideal for recycling and reusing to improve the health and appearance of valuable landscapes. To combat the increasing amount of green waste, the County of Orange is sponsoring a new *Landscape Performance Certification Program*. The program is available to all businesses, public agencies, parks, schools and homeowner associations. "We will help every landscaper and property manager develop more efficient landscape practices and in turn, help reduce green waste for site owners," says Tom Ash, project coordinator and horticultural consultant. Getting started in the program is easy. Call Tom Ash at CTSI Corporation, (714) 669-4303 or send an e-mail to toma@ctsicorp.com.

Q & A

Q. What should I do if one of my containers gets damaged?

A. If your container is damaged, contact our Customer Service Department at 238-2444. Damaged containers will be repaired or replaced at no charge, unless the damage is due to negligence or abuse.

Q. If I have service questions, whom do I call?

A. For questions regarding your service, call our Customer Service Department at 238-2444. We are open Monday - Friday from 7:00 a.m. - 5:30 p.m., and Saturday, for phone calls only, from 7:00 a.m. to 3:00 p.m.

Q. How do I dispose of household hazardous waste?

A. The County of Orange operates a FREE household hazardous waste collection center at 1071 N. Blue Gum Street in Anaheim. Call the H.H.W. hotline for days and hours - (714) 834-6752.

Q. I have a hard time maneuvering my trash containers, can I get a smaller one(s)?

A. If it is difficult for you to maneuver your containers as a result of a physical disability or if you are a senior citizen, you may call our Customer Service Department at 238-2444 to arrange for assistance.

Used Oil Recycling Making a Difference One Drop at a Time

The improper disposal of used oil poses a threat to both the public and the environment. That's why it's illegal to throw used oil in the trash. Used oil can hurt our environment, family members, trash handlers and landfill workers. If used oil is poured into household drains or dumped into storm drains, it can upset operations at wastewater treatment plants and cause damage to local waterways and beaches. Recycling is the only safe and legal way to handle used motor oil.

Through funding from the California Integrated Waste Management Board, the Anaheim Fire Department has made recycling used motor oil and oil filters easy and convenient. Residents can have their used oil picked up from their doorsteps or take it to a local collection center FREE of charge! For a collection center near you call 1-800-CLEAN-UP, or for information on Anaheim's FREE residential services, call (714) 765-4154.

Experience the Environment at the Oak Canyon Nature Center

Don't throw away that egg carton or that paper cup...it can be art! Learn many different ways to use recyclable trash to create beautiful art projects at the Oak Canyon Nature Center.

The Oak Canyon Nature Center is a 58-acre natural park nestled in Anaheim Hills. It consists of three adjoining canyons, a year-round stream and four miles of hiking trails. Individuals and families are invited to see, hear and touch the natural environment. The center offers a wide variety of programs for all age groups throughout the year. The center is also home to a variety of seasonal events such as the annual Environmental Faire hosted by the City of Anaheim.

Bring the family to visit the Oak Canyon Nature Center! And while you're there, take a look at the three picnic benches located at the entrance. They are made out of recycled plastic and were donated by ***Recycle Anaheim***.

For location, park hours and program or event schedules, call (714) 998-8380.

Anti-litter Campaign Puts Kids to Draw

Recycle Anaheim co-sponsored an anti-litter campaign in the Jeffrey-Lynne neighborhood with the Anaheim Police Department's D.A.R.E. program. Elementary school children were asked to illustrate through drawings how they were helping to keep their neighborhood litter free.

The D.A.R.E. program was started in 1982 to help children learn ways to resist drugs. It has since expanded to teach gang and violence resistance, how to handle stress and peer pressure how to find alternatives to drugs and violence and conflict resolution as well as build self esteem.

The program is taught in 43 elementary schools citywide and includes visits to junior and senior high schools. More than 5,000 students are reached each year. Teachers and students can send D.A.R.E. questions to DARE@anaheim.net.

Jeffrey-Lynne Neighborhood Center's Ida Duran, Officer Jim Farley, Sgt. Kirt Robertson and Recycle Anaheim's Marcia Myers with anti-litter contest winners. The prizes - boom boxes, sports radios and a T.V. set were all made possible by generous donations from the following sponsors: Nobest, Inc., R.J. Noble Co., Shield Security, Inc., Anaheim Disposal and Zumar Industries.

Incidents of Scavenging on the Decrease

The city's Anti-Scavenging Enforcement Program continues to address complaints from citizens regarding individuals removing recyclables from the green recycle container. As a result, scavenging incidents have decreased.

The city asks for your continued assistance in reporting scavengers by calling the Code Enforcement Division at (714) 765-5158. You can also discourage scavenging by placing your green container out by 7:00 a.m. instead of the night before.

CHOOSE TO REUSE

AT HOME:

- Compost or grasscycle
- Rent or borrow machines, tools and sports equipment
- Repair broken appliances instead of replacing
- Use your local library

AT WORK:

- Use both sides of paper
- Reuse envelopes and folders
- Donate used magazines, journals and publications
- Sell or donate old furniture
- Bring your lunch in a reusable container

IN THE COMMUNITY:

- Shop at thrift stores
- Support local yard sales
- Coordinate a community rummage sale

Service Costs

HOLIDAY COLLECTION

Your regular pickup day for trash and recycling during the holidays will not change unless your collection day falls on one of only six holidays.

CHRISTMAS DAY: Saturday, December 25, 1999. Trash collection services will not be affected.

NEW YEAR'S DAY: Saturday, January 1, 2000. Trash collection services will not be affected.

MEMORIAL DAY: If your collection day falls on Monday, May 29, your trash will be collected on Tuesday, May 30. If your collection day falls on any other day than Monday, your service will not be affected.

INDEPENDENCE DAY: If your collection day falls on Tuesday, July 4, your trash will be collected on Wednesday, July 5. If your collection day falls on any other day than Tuesday, your service will not be affected.

LABOR DAY: If your collection day falls on Monday, September 4, your trash will be collected on Tuesday, September 5. If your collection day falls on any other day than Monday, your service will not be affected.

THANKSGIVING DAY: If your collection day falls on Thursday, November 23, your trash will be collected on Friday, November 24. If your collection day falls on Friday, November 24, your trash will be collected on Saturday. If your collection day falls on any other day than Thursday or Friday your service will not be affected.

Recycle Your Christmas Tree

To help divert waste from the landfill, the city asks you to recycle your Christmas tree. Just follow these three simple steps:

1. REMOVE the TREE STAND (wood or metal), decorations and tinsel from your tree.
2. TREES OVER SIX FEET TALL must be CUT IN HALF before they are placed out for collection. Also, please do not bag your tree.
3. ON YOUR COLLECTION DAY only, starting DECEMBER 27 until JANUARY 7, place your tree at curbside with your containers. Trees will be picked up separately by a special collection truck.

Waste Wise Holiday Greetings

Did you know that 2.65 billion Christmas cards sold each year in the U.S. could fill a football field 10 stories high? If we each sent one card less, we'd save 50,000 cubic yards of paper. Here are some good ideas to reduce the amount of waste from holiday cards.

- Send electronic greetings to family and friends who are on-line.
- Save yourself some time, money and hard feelings between friends – and reduce mail volume by updating and paring down your holiday mailing list.
- Be creative. Instead of buying placemats or table decorations, make your own. Cut old cards into shapes and press between two pieces of clear contact paper.
- Make gift tags from last years holiday cards, or use them as name tags for arranged seating at formal dinners.

WHAT WHERE?

Save this list of accepted recyclables (green can) and non-recyclables (black can) as a guide for separating your trash.

Non-recyclable...

- Animal waste
- Bathroom waste
- Carbon paper
- Carpet
- Car parts
- Cat litter
- Cigarette butts
- Dirt/cement/rock (do not fill more than 1/3 of container)
- Disposable diapers
- Drinking glasses
- Electronics
- Flooring
- Food waste
- Freezer/refrigerator food boxes
- Furniture
- Glass and ceramic plates/cups
- Liquid waste
- Light bulbs
- Mirrors
- Needles (sealed in thick plastic container)
- Old clothes/shoes
- Plastic toys
- Rags/sponges
- Tires
- Toothpaste tubes/pumps
- Soiled paper plates
- Waxed paper
- Window glass
- Yard waste (can be composted)

Recyclable...

- Aerosol cans (completely empty)
- Aluminum cans (do not crush)
- Aluminum foil
- Beverage cans
- Bottle caps
- Brochures
- Cardboard
- Cereal boxes (remove inner lining)
- Computer paper
- Drink boxes
- Egg cartons (cardboard and foam)
- Foam cups/plates (unsoiled)
- Food cans
- Frozen food boxes (no wax coating)
- Glass bottles/jars
- Juice cartons
- Junk mail/coupons
- Laundry bottles
- Ledger paper
- Magazines
- Metal coat hangers
- Milk type cartons
- Newspapers
- Paint cans (only empty, dry cans with lids off)
- Paper/paper tubes
- Phone books
- Pizza boxes
- Plastics (#1- 6)
- Plastic bottles (small mouthed)
- Plastic containers
- Plastic cups/plates
- Plastic utensils
- Plastic milk jugs
- Tin cans
- Used envelopes (includes plastic windows)
- Wrapping paper

TRAILS4ALL
An Organization for Everyone

Trails4All has helped organize hundreds of trail projects, helped clean up our creeks and watersheds, provided vital funds for new trail construction, and sponsored trail construction seminars. From urban trails to remote locations in the Cleveland National Forest, Trails4All has coordinated thousands of volunteers who have donated tens of thousands of hours of time to keep our trails open.

TRAILS4ALL
At the Forefront

Trails4All is at the forefront in helping repair trails, improving the environment and encouraging a spirit of cooperation among all trail users throughout Orange County.

Trails4All has undertaken ambitious projects to improve our environment and keep trails open.

- Cleaned Up Trabuco Canyon, removing more than 118,000 pounds of trash, recyclables and debris with the help of over 400 volunteers.
- Organizes and Hosts the Annual "(Non)-Coastal and Watershed Cleanup Day" held at 6 Regional and Wilderness Park locations resulting in the removal of tons of trash and recyclables from our creeks and streams.
- Helped reopen County Parks closed as a result of winter storm damage (including recent "El Nino" storms). Trails4All was instrumental in getting the volunteers out to repair the damage and get you back onto the trails.

TRAILS4ALL
Filling the Gap

Each year, our parks see more visitors and our trails get more use. Yet since 1992, the budget for the Orange County Park System has been reduced by over $50 Million, and is diminishing at $10 Million annually. In response, Trails4All is expanding its efforts to reach more locations, more parks and more trails. If you are using trails in Orange County, chances are, you are directly benefiting from Trails4All's efforts. Your help is vital to these efforts. Think about what it would be like if you couldn't use your favorite trail because no one maintained it. Whether you hike, trail run, mountain bike or ride horseback, Trails4All's efforts directly benefit you by keeping our trails open and our parks clean.

TRAILS4ALL
A Chance for You to Give Something Back

Your support of Trails4All has a direct benefit for our trails and parks. In 1998, over 87% of Trails4All's resources go directly to providing services to improve our trails and parks. Less than 13% was used for fundraising and administrative expenses. Yet, Trails4All can only survive if you support its mission. Your membership is the most effective way to keep Trails4All working for you. In addition to knowing that you are helping our parks, as a member you will be kept informed about upcoming trail projects and events. Please return your tax-deductible contribution with the attached application. Thank you in advance for *"sharing the responsibility!"*

Storm Drain and Sewer Maintenance
Swimming Pool and Spa Area

Water containing chlorine is harmful to aquatic life. Whenever possible, drain pool and spa water into the sewer system. There are established guidelines on the amount of residual chlorine, acceptable ph range, coloration, filter media and acid cleaning wastes when draining into the storm drain system, and some areas may require a permit. Check with your city or call the county at (714) 567-6363 for a copy of the guidelines.

Storm Water & Urban Runoff Pollution

Swimming Pool and Spa Area

It is our goal to maintain the City's network of 503 miles of sanitary sewer lines and 67 miles of storm drain lines in a clean and safe condition. To achieve this, the City's storm and sewer lines, pump stations, drain easements and other related facilities are cleaned and inspected for good operating and environmental condition. For more information, call (714) 765-6935 or e-mail us at CALLAN@anaheim.net.<>

Storm Drain and Sewer Maintenance

Sandbag Information

During inclement weather, the Streets & Sanitation Division will provide sandbags to residents for their use. The City provides a maximum of 10 bags for each single-family dwelling and 25 for multi-family or commercial complexes. They are available at two locations:

Streets and Sanitation Yard
400 E. Vermont Avenue
Monday - Thursday and every other Friday, 7 AM - 5 PM
Hours may be extended during severe weather conditions.
Call (714) 765-6860 for more information.

Anaheim City Hall
Engineering Public Counter, Second Floor
200 S. Anaheim Blvd.
Monday - Friday, 8 AM - 5 PM
(714) 765-5176

Proof of Anaheim residency or business ownership must be provided when picking up sandbags. Please note that only the bags are provided; fill materials are the responsibility of the recipient. If sand is not available, substitute dirt from your planters. Sandbags can also be purchased from major hardware stores and home centers.

Sandbags may be available at the Orange County Public Facilities and Resources yard at 10852 Douglass Road (714) 567-6300.

Sandbagging Information:

Fill the bag about ½ full. Use soil from your planter areas. Then after the storms, the soil can be returned to the planter and you will not have excess soil to discard.

Sandbags will rot in the sun. Placing them out too early in the storm season may cause more problems if the bags are rotting. Check the bags for rips or weak spots/seams.

Keep plastic sheeting available in case of an emergency.

Clean out your drains, roof gutters, down spouts, and any other water path that may be impeded. Check these frequently as debris will collect after each rain.

SOLID WASTE COLLECTION & DISPOSAL

Orange County Storm Water & Urban Runoff Prevention Program

STORM WATER & URBAN RUNOFF POLLUTION (SWURP) AND WHAT YOU CAN DO TO STOP IT

- Before you pour anything into the gutter or down the drain, stop and think! Storm Drains go directly into channels and creeks...and through wetlands and bays to the ocean.

- **DID YOU KNOW...**Anything we use in our home, car and business like motor oil, paint, pesticides, fertilizers and cleaners can wind up in the street.

- A little water from rain or a garden hose can carry automotive and household materials through the storm drain causing the pollution of bays, wetlands and the ocean. Storm drains are there to drain water off the street-not for disposal of hazardous materials.

- **WHERE DOES IT GO?**These pollutants flow together on a journey from the storm drain to the flood control channel where it can eventually empty into the ocean. This type of pollution is called Storm Water & Urban Runoff (SWURP) and is a serious threat to the beaches and ocean of Southern California.

- **WHAT IS STORM WATER & URBAN RUNOFF POLLUTION (SWURP)?** Storm water runoff refers to seasonal rainfall flows. It is very noticeable during a heavy rain storm when large volumes of water drain off paved areas. Urban runoff can happen anytime of the year when excessive water use from irrigation, car washing and other sources carries litter, lawn clippings and other urban pollutants into storm drains. Even an automobile leaking motor oil 20 miles inland can still pollute the ocean.

HOW IS IT DIFFERENT FROM OTHER FORMS OF WATER POLLUTION? SWURP can include anything that washes into the storm drain from the community. Unlike water pollution linked to factories or sewage treatment plants, SWURP can come from city streets, neighborhoods, farms, construction sites and parking lots.

STORM WATER & URBAN RUNOFF POLLUTION COMES FROM: Automotive leaks and spills. Disposal of used oil and other engine fluids down the storm drain. Metals in vehicle exhaust, paint, rust, metal plating and tires. Pesticides, herbicides and fertilizers from lawns, gardens and farms. Improper disposal of cleaners, paint and paint removers. Soil erosion and dust debris from landscape and construction activities. Litter, lawn clippings, animal waste and other organic matter. Oil stains on parking lots and paved surfaces.

STORM WATER & URBAN RUNOFF POLLUTION AND THE OCEAN SWURP may have a serious impact on water quality in Orange County. Pollutants from the storm drain system can harm marine life as well as coastal and wetland habitats. It can also

ANAHEIM WEB PAGE

degrade recreation areas such as beaches, harbors and bays.

THE OCEAN IS CLOSER THAN YOU THINK. THERE ARE WAYS TO REDUCE STORM WATER & URBAN RUNOFF POLLUTION (SWURP)

HOME MAINTENANCE

- Buy household products such as cleaners and furniture polish labeled "non toxic". Use small quantities and purchase only the amount you need.
- Properly use and store all toxic products, including cleaners, solvents and paints. Use up paint cleaners and other products or share leftovers with a neighbor.
- Take household hazardous materials and containers to a hazardous material collection center.
- Use kitty litter or other absorbent materials to clean spills. Depending on the substance, dispose absorbents in the trash can or at a hazardous materials collection center.
- Rinse water based paint brushes in the sink. Filter and reuse paint thinner or brush cleaners. Dispose of used thinner, oil and latex paint at a hazardous materials collection center.
- Recycle reusable materials. Throw litter into trash cans and keep cans tightly covered to prevent foraging by animals.
- Control erosion at construction and landscape sites to prevent dirt and debris from entering storm drains.

LAWN AND GARDEN

- Use pesticides, herbicides and fertilizers in accordance with label instructions. Do not apply before rain and dispose leftovers at a hazardous materials collection center.
- Use a broom rather than a hose to clean up garden clippings. Put leaves and clippings in a trash can or a compost pile.
- Divert rain spouts and garden hoses from paved surfaces onto grass to allow water to filter through the soil. Water only your lawn and garden. Caution! Do not use this suggested action in areas with steep slopes or landslide potential.
- Pick up animal waste and dispose in the trash can.

AUTOMOTIVE

- Take used motor oil and antifreeze to gas stations that accept recyclable automotive fluids, or to a hazardous materials collection center.
- Have your car maintained regularly to prevent oil, antifreeze and other fluid leaks.
- Reduce automotive emissions through routine auto maintenance, ride sharing and public transportation.
- Conserve water when washing your car and use biodegradable soap. Clean engines at a "Do It Yourself Car Wash" where the drainage is not connected to the storm drain.
- You can control SWURP by supporting city and county activities to keep your streets clean. You can help by participating in recycling, beach clean-ups, and the proper disposal of hazardous materials.
- Since many businesses and residents are unaware of the storm water & urban runoff problem, encourage neighbors and co-workers to be careful in not polluting the storm drain system.
- Together, you, your neighbors and city can make a difference in keeping the ocean and beaches clean for ourselves and wildlife. Contact the Storm Water Participant in your area to share ideas or ask questions on keeping storm drains clean.

DID YOU KNOW THAT DUMPING ONE QUART OF MOTOR OIL DOWN A STORM DRAIN CONTAMINATES 250,000 GALLONS OF WATER?

Storm Water Quality Management Programs have been developed by the Orange County Environmental Management Agency, local cities, and other agencies which participate in the National Pollutant Discharge Elimination System (NPDES). Their

responsibilities involve encouraging the public to help protect water quality, monitoring runoff in the storm drain system, managing the NPDES permit process for municipalities, investigating illegal disposal and maintaining storm drains.

REPRESENTATIVE PUBLIC EDUCATION MATERIALS

CITY OF COSTA MESA

Costa Mesa
SUMMER 2000
Community Report

The Costa Mesa Community Report is the official newsletter of the City of Costa Mesa. It is intended to aid in informing residents of programs, services and activities available to them. Editorial guidelines have been adopted regulating contents to ensure that the newsletter remains accurate and unbiased.

Annual FREE Large Item Collection Program

Single and small multi-family dwellings using curbside trash collection (not dumpsters) may participate in the Annual Large Item Collection Program. The program runs for ten weeks, beginning the week of June 19 and ending August 25. Residents have the opportunity to dispose of items too large or bulky for their trash containers. Water heaters, washers, dryers, refrigerators, carpeting and furniture will be collected, recycled and/or disposed of, at no additional cost to the resident.

Watch for your **bright yellow door hanger!** A notice will be hung at the door of your residence two weeks in advance of the collection date for your neighborhood.

In addition, residents are entitled to a one-time call in during the year for a large item pick up. To schedule your one-time pick up, call (949) 646-4617.

Factlet: Last year approximately 918,000 pounds of large items were collected. Appliances accounted for 172,800 pounds or 19% of the total.

FREE
Large Item Collection Program "Multi-Family Residences"

Residents living in apartment, condominium, duplex, and other multi-family complexes that utilize dumpster trash service will be able to participate in a large-item pick-up program offered in June. The City is offering this program for a limited time free of charge to residents. Your waste hauler will collect large items such as water heaters, washers, dryers, refrigerators, and furniture.

Additional information is available on the City of Costa Mesa's cable channel 74, the City's web page, from your waste hauler, or by calling the City at (714) 754-5024.

Update: Downtown Recreation Facility

Construction is in progress on the new Downtown Recreation Facility located in Lions Park. The facility will house a new gymnasium, meeting rooms and a 25-meter swimming pool. Pictures of the finished facility are posted at the construction site and can be viewed on the City's web page. (www.cityofcostamesa.com)

Construction is expected to be complete by March 2001. The existing Downtown Community Center will remain open during the construction.

Attention First Time Homebuyers!

You may qualify for down payment assistance of up to $35,000 or 15% of the purchase price, whichever is less, for the purchase of a home in the City of Costa Mesa. You must meet the following program requirements:

1. You have not had ownership interest in residential real estate within the last three (3) years, unless you are a 'displaced home maker.' (Please contact Agency for additional information on displaced home maker.)
2. Your total gross household income is less than 120% of the Area Median Income for the County of Orange:

Household Size	*Maximum Income
1	$58,450
2	$66,800
3	$75,150
4	$83,500
5	$90,200
6	$96,900

3. You have enough funds in savings to contribute 5% of the purchase price as your portion of the down payment plus cover closing costs for the purchase of a home.
4. You plan on purchasing a home in the City of Costa Mesa not to exceed *$252,700 in price.

To request an application, please call the City's Housing hotline at (714) 754-4892 and leave your name, address and telephone number. Applications will be processed on a first-come/first-served basis and are subject to funding availability.

*Housing purchase price and income limit guidelines are subject to change.

Residential Pick-up of Used Oil

The City of Costa Mesa and the Costa Mesa Sanitary District offer a "free" service for the pick up of used motor oil and oil filters from city residents. The used motor oil will be recycled into replacement fuel and/or re-refined motor oil. The used oil filters will be recycled into new metal products. This program is funded by a grant from the California Integrated Waste Management Board.

Residents can call 1-800-576-0041 to schedule the home pick-up. If you prefer to take your used motor oil and filters to a certified collection center in Costa Mesa, call the Used Oil Recycling Hotline at (714) 754-4861 for locations.

Telephone Book Recycling

New Pacific Bell yellow page directories are arriving between May 30 and June 7. Recycle your outdated books by dropping them off at one of our collection bins located in front of City Hall or at the Orange Coast College Recycling Center located on Adams between Harbor and Fairview. For more information, please call the Recycling Hotline (714) 754-5600

Factlet: In 1999, Costa Mesa residents recycled 23,500 telephone directories.

Recycling Hotline

Recorded information about current recycling programs in Costa Mesa is available 24 hours a day by calling (714) 754-5600. Recycling information is also available on the City's website: www.cityofcostamesa.com

Christmas Tree Recycling

Once again the City of Costa Mesa and the Costa Mesa Sanitary District will be providing the annual Christmas Tree Recycling Program. Residents are asked to remove the stands and all decorations from their trees and place them at the curb on their regular trash collection day.

Costa Mesa Disposal will be sending a special truck to pick up the trees from December 28 through January 8, 1999. The recycled trees are used for weed abatement and erosion control.

Residents and businesses who use a dumpster are advised to contact their own hauler (phone number is on you bin) and inquire about tree recycling at their location.

Factlet: *10,002 trees weighing 130 tons were collected and recycled in 1997.*

The Costa Mesa Fire Department wishes you

Happy Holidays

- ☆Place tree away from heat.
- ☆Use only noncombustible decorations.
- ☆Inspect lighting for frayed wire, broken plugs and sockets, etc.
- ☆Keep base of tree in water and check it daily.
- ☆Be sure to remove tree soon after the holidays, before needles get too dry.

Recycling Made Easy!

Did you know that the trash collected each week from your household is sorted and separated for the recyclables? All of the recyclables and trash are delivered to a large plant in Stanton that uses mechanical and manual sorting techniques. The recyclables are separated, baled, and shipped to manufacturers throughout the world. About 35% of the trash arriving at the plant is able to be be recycled. The leftover debris is landfilled within Orange County. For more information, call (714) 754-5307.

ABOP Collection Program for Household Hazardous Waste

ABOP? That's trash tech For antifreeze, auto Batteries, used oil, and Latex paint! Can't make it to one of the four County hazardous waste collection centers (714) 834-6752, then let us pick it up at your house for you! The Costa Mesa Sanitary District is funding a one year program to collect recyclable household hazardous waste. To schedule a FREE pickup at your home, call 800-HHW-PKUP. *Residents who use dumpsters are not eligible for this program.*

Holiday Schedule For Trash Collection

The collection for Friday, December 25 and January 1, will be picked up on *Saturday!*

Annual Large Item Collection Program

Single and small multi-family dwellings that use curbside trash collection (not dumpsters) may participate in the Annual Large Item Collection Program. The program runs for ten weeks, beginning late June and ending in August. Residents have the opportunity to dispose of items that are too large or bulky for their trash containers. Water heaters, washers, dryers, refrigerators, carpeting, and furniture will be collected, recycled and/or disposed, at no additional cost to the resident.

A notice will be hung on each resident's door two weeks in advance of the collection date for their neighborhood. Watch for your **bright yellow door hanger**! In addition, residents are entitled to a one-time call-in during the year for a large item pick up.

For additional information, call (949) 646-4617 or (714) 754-5307.

Factlet: Last year approximately 1.1 million pounds of large items were collected. Appliances accounted for 170,200 pounds or 16% of the total.

Telephone Book Recycling

New Pacific Bell yellow page directories are arriving! Recycle your outdated books by dropping them off at one of our collection bins located in front of City Hall or at the Orange Coast College Recycling Center located on Adams between Harbor and Fairview. For more information, please call the Recycling Hotline, (714) 754-5600.

Factlet: In 1998, Costa Mesa residents recycled 21,000 telephone directories.

Recycling Hotline

Recorded information about current recycling programs in Costa Mesa is available 24 hours a day by calling (714) 754-5600. Recycling information is also available on the City's website: www.cityofcostamesa.com.

Residential Pick-up of Used Oil

The City of Costa Mesa and the Costa Mesa Sanitary District offer a "free" service for the pick up of used motor oil and oil filters from City residents. The used motor oil will be recycled into replacement fuel and/or re-refined motor oil. The used oil filters will be recycled into new metal products. This program is being funded by a grant from the California Integrated Waste Management Board. Residents can call 1-800-576-0041 to schedule the home pick-up. If you prefer to take your used motor oil and filters to a certified collection center in Costa Mesa, call the City's Used Oil Recycling Hotline, (714) 754-4861 for locations.

Westside Specific Plan Update

Westside Specific Plan is a long-range strategic plan to improve and enhance the southwest portion of the community. The study area is bounded on the north by Fairview Park, on the east by Harbor and Newport Boulevards, and on the west by the Santa Ana River. Major issues to be addressed by the plan include revitalization of the West 19th Street commercial district and resolution of land use conflicts within the southwest industrial area.

The plan has been developed over the past year with input from members of the community through a series of public workshops and neighborhood meetings. The draft plan will be completed in December 1999 and ready for public hearings in early 2000. Please call the Planning Division at (714) 754-5245 if you would like additional information or if you would like to be placed on the mailing list for the upcoming public hearings.

Holiday Tree Recycling

The City of Costa Mesa and the Costa Mesa Sanitary District will be providing the annual Holiday Tree Recycling Program. Residents are asked to remove the stands and all decorations from their trees and place them at the curb on their regular trash collection Costa Mesa Disposal will be sending a special truck to pick up the trees from December 27, 1999, through January 9, 2000. The recycled trees are used for weed abatement and erosion control.

Residents and businesses who use a dumpster for their normal trash collection service are advised to contact their own hauler (phone number is on the bin) and inquire about tree recycling at their location.

Catch Basin Stenciling

In August, 1999, a two-man volunteer team from the Orange County Conservation Corp applied curb markers at each of the City's storm drain inlets. In an effort to preserve and protect the quality of our oceans and waterways, the inlets are being marked to discourage people from dumping and washing used motor oil and other contaminants down the storm drain inlet.

The curb markers are a 3-3/4 x 8 inch rectangle plastic tile with a clear protective urethane coating. The curb markers are permanently affixed to the concrete surface near the storm drain inlet. The curb markers are impact and theft resistant and will remain legible for up to ten years. The message on the curb marker reads "No Dumping, Drains to Ocean" in blue and green letters with a picture of a dolphin.

Used oil recycling grant funds from the California Integrated Waste Management Board were used to purchase and install the curb markers.

These curb markers have been installed throughout the City in an effort to discourage people from dumping and washing contaminants down the storm drain inlets, which drain to the ocean.

Scavenging is Illegal

Anyone going through your trash is a scavenger and is illegally stealing your recyclables. Scavenging is also a front for other crimes such as obtaining blank checks or discarded credit card receipts. Please report scavenging activity to the District at 714/754-5307.

Holiday Schedule For Trash Collection

Memorial Day, Monday, May 29

All week, trash collection will be one day late

Large Item Call-In

Our summertime Large Item Collection Program helps residents dispose of unwanted furniture and appliances. Watch for your bright yellow door hanger about two weeks before your neighborhood collection date between June and August.

In addition to the summer program, residents may call 949/646-4617 and arrange a FREE special large item pickup, one time during the calendar year.

Do You Have Any Of These Items At Your House?

Used oil, Batteries, Cleaning Products
Pesticides, Paint, Pool Chemicals
Propane Tanks, Road Flares
Fuels, Antifreeze, Paint Thinner
Polishes & Waxes

Most home, car and yard care products cannot be thrown into the trash. The Orange County Household Hazardous Waste Collection centers will accept your materials for FREE. Your nearest center is in Huntington Beach at 17121 Nichols Street, near Warner & Beach Blvd. For hours of operation and directions, call 714/394-6752.

Can't make it to the one of the four County hazardous waste collection centers, then let us pick it up at your house for you! To schedule a FREE pickup at your home, call 800-HHW-PKUP. This program is partially funded by the State of California, Integrated Waste Management Department.

Sharps Program

A FREE home generated sharps (syringes/needles) recycling program is available to Costa Mesa and Santa Ana Heights residents. Three local pharmacies, RiteAid at 3029 Harbor Blvd., Steven's Pharmacy at 1525 Mesa Verde Dr. East, and Ramsey Rexall at 2246 Newport Blvd. in Costa Mesa are participating in this unique program.

Residents who use needles at home are invited to visit the pharmacies and pick up a FREE quart-sized container. The containers hold approximately 100 used syringes. Residents may return filled containers to the pharmacies for collection, and will receive a new one in exchange. For more information, please call (714) 754-5307.

Watch Your Weight

Containers weighing more than 50 pounds can easily injure the waste collection workers. The District requires that the combined weight of the container and contents may not exceed 50 pounds. If in doubt, please separate the items into two containers or heavy-duty trash bags. Plastic and paper grocery bags are not acceptable containers. A maximum of 200 pounds per household can be collected each week.

Recycling Hotline

Recorded information about current recycling programs in Costa Mesa is available 24 hours a day by call (714) 754-5600. Recycling information is also available on the City's website www.cityofcostamesa.com

Household Hazardous Waste Collection Program

TRANSPORTATION AND HANDLING

- A maximum of 15 gallons or 125 pounds may be transported per vehicle, per trip (Department of Transportation regulation).
- Materials should be in original containers (except motor oil, fuels and antifreeze).
- Containers larger than 5 gallons in size will not be accepted.
- All containers must have lids, be sturdy, non-leaking, and protected from breakage.
- Do not combine types of waste.
- Do not mix oil-base paint with latex paint.
- Dry out empty paint cans and discard in regular trash.
- If you wish to have a container returned (i.e. oil containers and boxes/crates used to transport materials), please notify the attendant in advance. Some containers may not be returnable.

WHY SHOP TIL YOU DROP?

VISIT THE STOP & SWAP!

A unique and FREE program that allows you to drop off household, yard, and car care products you no longer need and pick up others you can use.

Currently available at the Anaheim, Huntington Beach and Irvine locations only. (Tuesday through Saturday, 9 a.m. to 1 p.m.)

FREE Home Pick-Up Program For Used Oil and Other Household Hazardous Waste!

How Does It Work?

1.) Resident Calls the HHW Hotline (800)-HHW-PKUP to Request a Collection: When a Resident calls our Household Hazardous Waste (HHW) Hotline at 1-800-449-7587 we ask for the caller's address, age and the type and amount of material available for collection.

2.) A Collection Date is Scheduled by Phone, and an HHW Kit is Shipped via UPS to the Home: A pickup date is scheduled over the phone based on the next available collection day. The program is fully explained and safety procedures reviewed. An HHW Kit is sent via UPS to the resident's home prior to the collection date. The kit can hold up to 75 pounds of the most hazardous chemicals.

3.) The HHW Material is Collected: On the scheduled date, our team will collect the eligible HHW directly from the resident's home. The program satisfaction survey card (included in the kit) should now be completed by the participant and mailed directly to the City to help track the program.

4.) HHW is Transported to the Appropriate Facility for Recycling or Disposal: Used oil will be transported by Safety-Kleen to its refinery in East Chicago, Indiana. There the oil will be refined into new lubricants. Other materials will be sorted and lab packed for recycling or proper disposal. Paint will be recycled into more usable paint. More than 90% of all materials collected Safety-Kleen/Curbside are recycled.

Don't Forget to Recycle Your Used Oil and Filters! Help to ensure clean land and water for the future. One gallon of oil pollutes one-million gallons of water. Also, a drained oil filter still retains up to 44% of its original capacity. That's 9 oz. of oil!

This program is made possible, in part, by a grant from the California Integrated Waste Management Board.

Don't dump used motor oil in the trash, down the storm drain, or on the ground . . .

Recycle your used motor oil at any of the Certified Collection Centers listed on the back of this brochure.

If you need more information regarding the City of Costa Mesa Used Oil Recycling Program, call the City's Used Oil Hotline:

714-754-4861

Recycle Used Motor Oil at NO CHARGE & Receive a $0.16 per Gallon REBATE!

007390

City of Costa Mesa Used Oil Recycling Guide

Presented by
City of Costa Mesa Public Services Department

Paid for by a grant from the
California Integrated Waste Management Board

Biggest Water Polluter? Used Motor Oil

Thousands of Costa Mesa's residents are changing their own used motor oil; but according to the Environmental Protection Agency, only 10% of all "Do-It-Yourselfers" (DIYers) properly dispose of this hazardous waste. Every year, more than 200 million gallons of used motor oil are being dumped into our environment by DIYers. That's more than 20 Exxon Valdez oil spills!

Illegally disposed DIY oil is the largest pollutant to our oceans and underground drinking water resources. One gallon of motor oil can contaminate one million gallons of water! Fortunately, this problem has a solution.

The State of California passed a Used Oil Recycling Enhancement Act to promote convenient recycling. The City of Costa Mesa is participating in this program and is pleased to announce the opening of sixteen (16) Certified Collection Centers (CCC's) where City residents can take their used motor oil for recycling AT NO COST. In fact, CCC's will pay you a $0.16 per gallon rebate for your used motor oil!

How to Recycle Used Motor Oil

1. Drain your car's motor oil before working on other parts of the engine. This will help prevent contamination of the oil.
2. Place used oil in clean, empty plastic containers with tight lids.
3. Do not place oil in metal containers or containers that once held paint, bleach, antifreeze or gasoline. The residues can contaminate the oil. **Do not mix any other substances with the oil.**
4. During regular business hours, take uncontaminated used oil to one of the Certified Collection Centers listed on the back of this brochure. Contaminated oil will not be accepted.
5. You may bring oil in containers no larger than 5 gallons. Call the Certified Collection Center[illegible] onfirm hours and amounts accepted.

Recycle Used Motor Oil

Because the Earth ca[illegible]t!

SPARKY THE FIRE DOG'S CYBERSURFARI

NFPA's Sparky the Fire Dog web site (www.sparky.org) will be among the featured destinations on this year's CyberSurfari, a free Internet treasure hunt sponsored by Lycos. CyberSurfari lets kids safely explore more than 100 educational web sites, solve clues, and win prizes. By exploring the exciting and safe destinations featured on this year's CyberSurfari, players will improve their deductive reasoning, Web savvy, and reading skills. Whatever your child's age, or surfing skill level, there is a division of play suitable for them. To prepare for an expedition, visit www.cybersurfari.org.

DID YOU KNOW...

THE HOUSEHOLD BATH IS THE MOST COMMON SITE FOR DROWNING IN THE FIRST YEAR OF LIFE?

POOL SAFETY

Each year hundreds of children needlessly succumb to drowning in swimming pools. Drowning is the leading cause of death and permanent brain damage among children ages one to five years old. The following considerations should be followed to help prevent an accidental drowning.

- Remove toys from around pool decking and on water surface. Brightly colored pool accessories add to the attraction children already have for pools.
- Surround pool with a fence at least five feet high with a self-closing, self-latching gate. Do not consider the house as part of the fence.
- Pool covers provide a false sense of security. Children can still drown, even with a pool cover. Follow the manufacturer's directions. Make sure the cover fits well and read any consumer product surveys before purchasing.
- Never leave a child unattended. Remember, it only takes seconds to drown.
- Know CPR if something does occur and activate 911 immediately.
- Teach children the danger of pools and how to swim as early as possible.

Remember, children can drown in as little as a gallon of water. Wading pools, buckets, and toilets are all potential dangers.

Follow these simple rules to prevent accidents at home, when vacationing, or leaving your child in someone else's care.

SUMMER SAFETY ISSUE

1. POOL SAFETY
2. Spotlight on Safety -- Who's EDITH?
3. DANGEROUS ASSUMPTIONS
4. SWURP – The ocean is closer than you think
5. SPARKLERS – What Parents Should Know

spotlight on safety

HOME ESCAPE PLANNING ON THE RISE

In 1997, the NFPA commissioned a national survey, which showed that only 16% of Americans had developed a "practiced" home fire escape plan. Earlier this year, another survey was conducted that showed a significant increase in the number of people who have participated in this life-saving activity. Use the following safety information to educate your family members and PRACTICE IT!

FIRE SAFETY For Your Family

Who's EDITH?

EDITH stands for EXIT DRILLS IN THE HOME, a standard approach to formulating escape plans recommended by NFPA, the National Fire Protection Association.

Every family should DRAW A FLOOR PLAN of their home, marking two ways out (including windows) of every room.

DISCUSS THE ESCAPE ROUTES with every member of the household.

PICK A MEETING PLACE outside the home where everyone can meet, so you can count heads and tell the Fire Department if anyone is trapped inside.

The most important element of any escape plan is to PRACTICE IT.

DANGEROUS ASSUMPTIONS

When the NFPA asked Americans, "How long do you have to escape from a fire in your home?", 58% said two minutes or more—and that includes 24% who estimated they have more than ten minutes to escape a home fire.

The truth is, you may have much less time to escape. A typical living-room fire can threaten the entire house in just a few minutes—producing life-threatening conditions in upstairs bedrooms less than two minutes after the smoke alarm sounds.

Storm Water & Urban Runoff Pollution (SWURP)

Even though you might live miles from the Pacific Ocean, you may be polluting it without knowing it.

Anything we use in our home, car and business like motor oil, paint, pesticides, fertilizers and cleaners can wind up in the street.

A little water from rain or a garden hose can carry automotive and household materials through the storm drain polluting bays, wetlands and the ocean. Storm drains are there to drain water off the street, not for disposal of hazardous materials.

Before you pour anything into the gutter or down the drain, stop and think! These pollutants flow together on a journey from the storm drain to the flood control channel where it can eventually empty into the ocean. This type of pollution is called Storm Water & Urban Runoff Pollution (SWURP). It is a serious threat to the beaches and ocean of Southern California. The July issue of *Fire Prevention News* will include ways to reduce SWURP.

Safety Tips

Sparklers

what every parent should know...

- Wood or metal core sparklers are illegal in California.
- Sparklers are the most frequent cause of injuries to children under age 10.
- Sparklers burn at temperatures as high as 1,800 degrees and can cause severe burns to children.
- Sparklers can also easily and quickly ignite children's clothing.
- Fireworks purchased in Mexico are illegal and can be even more deadly because manufacturing codes are non-existent.

SUMMER CERT CLASSES

Call Teri Durnall in the Fire Prevention Bureau at 714.327.7405 to schedule an upcoming class.

COSTA MESA EMERGENCY SERVICES EXPO

A GREAT SUCCESS

IT'S GOOD FOR THE CITY! AN ESTIMATED 5,000 PEOPLE ATTENDED THE MAY 21, 2000, EMERGENCY SERVICES EXPO AT FIRE STATION #4 THIS YEAR.

A BIG THANK YOU TO EMCEE BATTALION CHIEF JAMES ELLIS, CAPTAINS SCOTT BROUSSARD AND KIRK DOMINIC, AS WELL AS NUMEROUS OTHER INDIVIDUALS WHO PLANNED AND PREPARED FOR THIS EVENT. EVERYONE INVOLVED IN THIS YEAR'S EXPO DONATED COUNTLESS HOURS TO ENSURE THOSE WHO ATTENDED LEFT WITH A BETTER UNDERSTANDING OF EMERGENCY SERVICES PROVIDED BY THE CITY.

BESIDES INFORMATION AND EDUCATIONAL BOOTHS, THE FOLLOWING DEMONSTRATIONS WERE PROVIDED:

- AUTO EXTRICATION
- CSFA VINTAGE FIRE ENGINE, FOR PHOTOS AND NOSTALGIA BENEFITS
- FIRE DEPARTMENT HIGH-RISE RAPPELLING
- ISIS, SEARCH CANINE, PERFORMING "STOP, DROP, & ROLL"
- MAKESHIFT BUILDING USED FOR A "LIVE FIRE"
- POLICE CANINE APPREHENDING A PERPETRATOR
- MCDONNELL DOUGLAS FOAM DISPENSING UNIT
- MINIATURE TRAIN RIDES AND FIRE APPARATUS RIDES
- O. C. FIRE AUTHORITY EXTINGUISHMENT OF JET FUEL BY FOAM BLANKET

ORANGE COUNTY FAIR JULY 19-30, 2000

"Hot...Hot...Hot" We're spicing it up! is the theme for the millennium Orange County fair! Costa Mesa Fire Prevention Officers will be staffing the Fire Prevention Spanish Village booth on July 19th.

Make sure you stop by to say hello, play a Water Watchers game, find out "What's Hot, What's Not", and pick up a free safety electrical plug. We hope to see you all there!

CONVIERTA SU BASURA EN ABONO

ASI RECICLA LA NATURALEZA

CALIFORNIA INTEGRATED WASTE MANAGEMENT BOARD

¿QUE ES CONVERTIR BASURA EN ABONO (COMPOSTAJE) Y POR QUE HAY QUE HACERLO?

La manera como recicla la naturaleza, es decir, el compostaje, es la desintegración controlada de materias orgánicas tales como hojas, ramas, recortes de pasto y residuos de alimentos vegetales. El producto que resulta de esta descomposición se llama "compost" o abono orgánico.

El compostaje reduce la acumulación de grandes cantidades de materias orgánicas en nuestros basureros municipales y las convierte en un producto útil. Las materias orgánicas representan más de la mitad de la basura municipal de California. Por lo tanto, el compostaje en casa reduce los costos tanto del transporte de la basura como de la operación de los basureros municipales.

El abono o "compost" es excelente para los jardines y los prados. Además, usted ahorra dinero al no tener que comprar acondicionadores de suelo, paja y fertilizante.

EL COMPOSTAJE ES FACIL

El compostaje puede efectuarse en el patio de la casa en un recipiente fabricado para este propósito, o simplemente amontonando los desechos orgánicos (algunas ciudades requieren recipientes cerrados). Los negocios, las escuelas y otras instituciones también pueden transformar fácilmente los desechos en abono. Comuníquese con el gobierno del condado o de la ciudad para obtener información acerca de clases gratuitas sobre compostaje y de cómo adquirir recipientes gratis o a precio de descuento.

Los recipientes caseros se pueden construir con pedazos de madera, malla para gallineros, e incluso en recipientes viejos para basura (con agujeros perforados en los lados y en el fondo).

Los recipientes fabricados incluyen unidades de rotación, conos y unidades verticales formadas por varios recipientes; estos recipientes se pueden comprar en tiendas o a través del correo. Dedique suficiente tiempo a considerar sus opciones y luego seleccione el recipiente que mejor se ajuste a sus necesidades.

Para obtener una descripción sobre cómo construir su propio recipiente, o una lista de vendedores de recipientes pre-fabricados para compostaje casero, llame a California Integrated Waste Management Board al 1-800-553-2962.

METODO DE COMPOSTAJE

Se requieren cuatro ingredientes básicos en la elaboración de abono; nitrógeno, carbono, agua y aire. El método más sencillo consiste en:

- mezclar en capas, partes aproximadamente iguales de materiales verdes (ricos en nitrógeno) y materiales de color café o secos (ricos en carbono), formando una pila al aire libre o colocando los materiales en una estructura cerrada;
- agregar agua;
- revolver para que entre el aire; y
- permitir que los microorganismos e insectos desintegren los materiales con el transcurso del tiempo.

NITROGENO

Los materiales verdes tales como recortes de césped y desechos del jardín son fuentes ideales de nitrógeno (una vez que se secan se convierten en fuentes de carbono). Las cáscaras y trozos de fruta o verduras también pueden proporcionar nitrógeno. Para reducir la posibilidad de plagas o malos olores, es mejor evitar los residuos de carnes o productos lácteos y enterrar hasta el fondo de la pila otros residuos de alimentos.

CARBONO

El césped seco y los recortes de jardinería tales como hojas secas, ramas o heno pueden proporcionar el balance necesario de carbono a una pila de abono. Corte o desmenuce las piezas grandes a un tamaño de 12" o más pequeñas (las ramas gruesas con bastante madera, deben cortarse en pedazos pequeños, molerse o no usarse).

Las astillas de madera sin tratar y el aserrín son una fuente útil de carbono; pueden ser usados si la pila contiene demasiado nitrógeno.

AGUA

Su pila de abono debe tener la misma humedad que una "esponja exprimida". El contenido de humedad debe ser de 40 a 60 por ciento. Para verificar que existe la humedad adecuada, introduzca la mano en la pila de abono, tome un puñado de material y oprímalo; si escurren unas cuantas gotas de agua, probablemente contiene suficiente humedad, si no, agregue agua.

Al agregar agua es mejor introducir la manguera de manera que no se humedezca únicamente la parte de arriba de la pila. También puede humedecer la pila cuando la esté revolviendo. En clima seco, tal vez tenga que añadir agua con regularidad, además, quizás también sea necesario cubrir la pila. Una pila de abono debidamente construido elimina el exceso de agua.

INTEGRATED WASTE MANAGEMENT BOARD

ANTIFREEZE

What is Antifreeze?

Antifreeze, made up of mainly water and ethylene glycol, is added to radiator water in motor vehicles. Ethylene glycol lowers the freezing point and raises the boiling point of radiator fluid. In other words, it keeps the water from freezing on very cold days and boiling over on hot days.

Auto maintenance experts recommend that radiators should be flushed every 1-2 years. This presents a question of what to do with the radiator fluid. Care must be taken to store new antifreeze safely and also to dispose of used antifreeze properly.

What are the Hazards?

Antifreeze contains ethylene glycol, a hazardous chemical. Because ethylene glycol is a clear, colorless, and sweet-tasting liquid, it is very attractive to pets and small children. If swallowed, ethylene glycol may cause depression, followed by respiratory and cardiac failure, renal and brain damage.

According to the U.S. Consumer Product Safety Commission, between 1986 and 1988 more than 3,000 injuries related to antifreeze occurred.

Other hazardous chemicals found in used antifreeze could include a variety of elements such as gasoline, copper, zinc, and lead. These materials become trapped in and contaminate antifreeze over time in an operating vehicle.

Antifreeze, carelessly disposed of, such as poured into a storm drain or ditch, into a river or stream, onto the ground, or into the regular trash, presents a health threat to humans, animals and the environment. The hazardous chemicals may seep into the ground and contaminate the groundwater.

In addition, antifreeze should be stored properly to avoid accidents to children and pets attracted by its sweet smell and taste.

Can Antifreeze Be Recycled?

Used antifreeze can be recycled for use by the mining industry, which sprays it on coal to keep it from sticking together and the glycol industry, which uses it as an airplane de-icing solution. It is also used in cement grinding and brake fluid.

Call nearby radiator shops to find out if they collect used antifreeze for recycling or accept it for proper disposal.

Antifreeze should be stored properly to reduce accidents to children and pets

How do I Dispose of Antifreeze?

Follow these proper disposal and storage methods:

Store antifreeze in its original container away from children and pets. Children may mistake the antifreeze for beverages.

If the antifreeze is new, give it away to a friend or neighbor who could use it.

Take your used antifreeze to a household hazardous waste collection facility or save it for a collection event.

Call your local health department or the California Integrated Waste Management Board's Recycling Hotline at 1-800-553-2962 to find the location of a household hazardous waste collection program in your community.

INTEGRATED WASTE MANAGEMENT BOARD

AEROSOLS

What are Aerosols?

Aerosol cans contain propellants and active ingredients such as pesticides or paint. Propellants are gases under normal conditions, but when they are placed under pressure (as in aerosol containers), they liquify and occupy far less space. When the nozzle is pressed, pressure is released and the propellant quickly returns to its gaseous state, spraying into the air and carrying the product with it.

What are the Hazards?

Aerosol products include: Oven cleaners, tile cleaners, pesticides, disinfectants, hair sprays, room deodorizers, paints, and furniture polishes.

Hazards associated with aerosols vary greatly. For example, pesticides include toxic materials, while some oven cleaners contain corrosive chemicals. Since aerosol-propelled particles are very small, they are easily absorbed into the lungs and bloodstream. Many of the propellants used with these products, such as butane or propane, are flammable and may be explosive.

A variety of aerosol products still contain chlorofluorocarbons, which are harmful to the ozone layer (present approximately 70,000 feet above the earth's surface). The ozone layer provides a protective shield against harmful radiation.

How Do I Avoid Accidents?

The following safety rules should be observed when using aerosol products:

Never puncture or subject an aerosol can to sharp impact; a sudden puncture may cause an explosion.

Never leave or place an aerosol can near a high heat source such as a heater, direct sunlight, or fire. Heat causes the propellants to expand which may cause an explosion. Also, many propellants are flammable.

Never place an aerosol can in a trash compactor; the increased pressure may cause an explosion.

Never throw a full or partially-full aerosol can into the regular trash. Refuse collectors may be injured by exploding cans and/or be sprayed with hazardous chemicals.

Buy non-aerosol, pump-type sprays or powders

How Do I Dispose of Aerosols?

The following procedures should be observed when disposing of aerosols:

Use the product completely or give it away to a friend or neighbor who may be able to use it.

If the product cannot be given away for reuse or if the nozzle is broken, take it to a household hazardous waste collection facility or store it safely, away from heat, until a community collection day is held.

Empty aerosol cans (no product emits when nozzle is depressed) may be thrown away with the regular trash.

Buy non-aerosol, pump-type sprays or powders.

Call your local health department or the California Integrated Waste Management Board's Recycling Hotline at 1-800-553-2962 to find the location of a household hazardous waste collection program in your area.

NEWS

Winter 1999

P.O. Box 1200 • Costa Mesa • CA • 92628-1200

Congratulations!

50% of Your Trash is Being Recycled!

Our recycling program has accomplished its goal! Recycle 50% of your trash by the year 2000. How did it happen? In two easy steps!! Step one, take your containers to the curb. Step two, you're done. That's it! We sort and separate the recyclables from your trash, so you don't have to! Since we recycle for you, there is no need to sort your waste before placing it at the curb for collection.

All of the recyclables and trash are delivered to a large recycling plant that uses mechanical and hand sorting techniques. We recycle efficiently and can also easily adapt to changes in the science of recycling. Our recycler is currently diverting 50% of the total waste stream, all with no effort from residents.

WASTEWATER TREATMENT PROCESS

1.

. . . Sewer pipes carry the wastewater from homes, businesses, and factories to the TREATMENT PLANT. . .

2.

PRELIMINARY

. . . At the plant, the wastewater is first sent through a screen that collects and removes large objects — like rags, toys, and rocks. . .

3.

PRIMARY

. . . In primary treatment, heavy materials in the wastewater sink to the bottom of a tank and are removed.

The material that is removed is treated and sent to farms to help crops grow. . .

4.

SECONDARY

. . . In secondary treatment, good bugs (bacteria) eat the lighter material that is left in the wastewater. . .

5.

. . . the treated wastewater goes into a very large pipe that carries it far into the ocean where it mixes with seawater through hundreds of portholes.

Do You Know Where The Water In Your Storm Drain Goes?

This paper is made from 50% recycled content that includes 10% post-consumer waste

Es La Ley

El California Integrated Waste Management Act requiere que las ciudades reduscan las cantidades de basura, que se depòsitan en los basureros, por 50% para el año 2000. En California se genera mas de 29 millones de llantas usadas cada año. Pocos basureros aceptan llantas usadas por lo que tienden a flotar arriba de los basureros una vez que la basura es cubierta con tierra.

Millones de toneladas de llantas usadas son almacenadas en el estado de California, causando problemas de salud y seguridad. Llantas que son tiradas en las calles y callejones pueden causar incendios y depositar sustancias venenosas al ambiente.

Cerrando El Circulo

Llantas usadas se pueden procesar para sacarles el hule que se puede usar para construir carreteras y otros productos. Reciclando sus llantas usadas puede usted ayudar a la ciudad llegar alcanzar la meta de reducir la basura que se tiene que llevar a los basureros, y al mismo tiempo ayudar a que Costa Mesa sea un lugar mas limpio y saludable adonde vivir. Usted puede cerrar el circulo de reciclage al comprar productos que sean fabricados de materiales reciclados, como algunas mangueras de regar y alfombras para la puerta de su hogar. Para mayor informacion llame al 714/754-5043 o al 714/754-5024Para basura peligrosa que se genera en los hogares, llame al 714/834-6752

Simples Medidas Que Puede Tomar

Compre las llantas mas eficientes, que duren mas tiempo en gastarse y le ahorren gasolina a su vehiculo. Si todos los carros en Los Estados Unidos estuvieran equipados con llantas eficientes, se ahorrarian 400,000 barriles de aceite al dia.

Para incrementar la vida de sus llantas y reducir el consumo de gasolina de su carro asegurese que sus llantas esten infladas correctamente, balancee e intercambie sus llantas de posisión en el vehiculo, para que se desgasten igualmente, cada 6-8000 millas.

Se calcula que 50% a 80% de las llantas en los vehicules son usadas sin suficiente aire, lo cual reduce las eficiencia de se vehiculo por 5%. Mantenga sus llantas infladas correctamente y ayude a ahorrar al pais 2 billones de galones de gasolina al año.

Traiga sus llantas usadas a los eventos de coleccion de llantas o llevelas a los lugares donde venden llantas para que sean recicladas. En Costa Mesa hay dos lugares que acceptan llantas usadas sin cobrar or por una pequeña cantidad de dinero:

Just Tires	**Big O Tires**
3005 Harbor Blvd.	322 E. 17th St.

007402

TIRE RECYCLING

Costa Mesa Sanitary District

City of Costa Mesa

907403

Tire Recycling

IT'S THE LAW!

The California Integrated Waste Management Act requires cities to reduce the amount of waste disposed in landfills by 50% by the year 2000. Californian's generate over 29 million scrap tires per year. Fewer landfills are accepting tires for disposal because they tend to "float" to the landfill surface after being covered. Millions of tons of tires are stockpiled around the state, creating health and safety concerns. Tires illegally dumped in streets and alleys may catch fire and release toxins into the air

COMPLETING THE LOOP

Old tires are processed into crumb rubber, which can be used to make things like roadways and carpet padding. By recycling your used tires, you will be helping the City to meet reduction goals, and helping to make Costa Mesa a healthier place to live. You can complete the recycling loop by buying products made from recycled material, like soaker hoses and doormats.

Call For Further Information

714/754-5043 714/754-5024

Household Hazardous Waste Hotline 714/834-6752

Tire Recycling

SIMPLE THINGS YOU CAN DO

Purchase the longest lasting, most fuel efficient tires available. If all cars in the U.S. were equipped with the most efficient tires possible, the fuel savings would equal 400,000 barrels of oil a day.

To increase the life of your tires and improve your car's fuel efficiency make sure they are properly inflated, balanced and rotated every 6-8,000 miles.

It is estimated that 50-80% of tires are underinflated which decreases the car's fuel efficiency by 5%. Maintaining properly inflated tires could save Americans up to 2 billion gallons of gasoline per year.

Bring old tires to collection events or to businesses that sell tires to ensure they are recycled or properly disposed. Costa Mesa sites that accept tires for free or for a nominal fee are:

Just Tires	**Big O Tires**
3005 Harbor Blvd.	322 E. 17th St.

Support local and state efforts to recycle tires, to use more recycled rubber in tires, to purchase materials manufactured from recycled tires, and to convert discarded tires into energy.

RECICLAJE DE LLANTAS

Costa Mesa Sanitary District

City of Costa Mesa

WHAT IS CONSTRUCTION AND DEMOLITION DEBRIS?

C&D debris is material generated in the construction and demolition of buildings and roads. According to the California Integrated Waste Management Board, C&D debris makes up approximately 28% of the state's waste stream. Orange County businesses generate large quantities of C&D debris and could save money by diverting this material through reuse and recycling. Reducing the amount of C&D debris that is landfilled will also help Orange County cities meet the 50% diversion rate required by the California Integrated Waste Management Act of 1989.

Disposal rates are determined by the quality of material. Some processors will give estimates of disposal rates over the phone. Ultimately, the condition of the material will be determined upon delivery of the material.

Tips for managing your C&D debris for recycling:

- Develop a C&D waste management plan
- Assess the amounts and composition of your waste
- Assess the space available for separation of materials on site
- Assess the location of nearby recycling facilities

Educating employees, contractors, and sub-contractors about the benefits of recycling C&D debris will improve your bottom line and help your community conserve natural resources.

Printed on recycled content paper.

REPRESENTATIVE PUBLIC EDUCATION MATERIALS

CITY OF CYPRESS

• Use and Disposal

- Compost soiled bedding and manure for your own use, or give it away to local greenhouses, nurseries and botanical parks.
- Transport manure to topsoil companies or composting centers.
- Fertilize pastures, cropland and lawns with manure and soil bedding. Do not apply fertilizer just before or during rainstorms.

• Pesticide Alternatives

The "chemicals-only approach" to pest control is only a temporary fix. Intergrated pest management is a more common-sense approach for a long-term solution. Plan to use:

Physical controls, such as pheromone traps, tarps, bug zappers, fly-tight storage sheds.

Biological controls, such as swallows, bats and other insect-eating animals.

Chemical controls, such as pyrethrin-based insecticides, dehydrating dusts, insecticidal soaps and horticultural oils. If pesticides must be used:

- Rinse empty pesticide containers and use rinse water as you would the product. Dispose of empty rinsed containers in the trash.
- Dispose of unused pesticide at the Household Hazardous Waste Roundups, instead of dumping it into the sink, street, gutter or storm drain. Call (714) 834-6752.

Ocean Pollution Prevention: It's Up To Us

Cypess has two drainage systems: sewers and storm drains. The storm drain system was designed to prevent flooding by carrying excess rainwater away from city streets out to the ocean. Because the system contains no filters, it now serves the *unintended* function of carrying urban pollution straight to the ocean.

This pamphlet tells you how to prevent ocean pollution from "stormwater" or "urban runoff."

Rain, industrial and household water mixed with urban pollutants creates stormwater pollution. The pollutants include: oil and other automotive fluids, paint and construction debris, yard and pet wastes, pesticides and litter.

Urban runoff pollution flows to the ocean through the storm drain system which takes water and debris straight from the streets to the ocean. Each day 100 million gallons of polluted urban runoff enter the ocean untreated, leaving toxic chemical in our surf and tons of trash on our beaches.

Urban runoff pollution contaminates the ocean, closes beaches, harms aquatic life and increases the risk of inland flooding by clogging gutters and catch basins.

These Best Management Practices (BMPs) will ensure a cleaner city and ocean.

Animal Waste Problems

Animal waste contributes to ocean pollution when it is improperly stored or left uncovered near small streams and storm drains. During rainfall, it is washed into storm drains and flows untreated, directly into the ocean.

Animal waste contains some nutrients — phosphorus and nitrogen — as well as bacteria. The nutrients fertilize the aquatic plants causing their proliferation, which depletes oxygen in the water killing sea life. The high bacteria levels in the water can cause gastro-intestinal problems for swimmers.

Sediment is also a common pollutant washed from pastures and livestock facilities. It creates multiple problems once it enters the ocean. It harms sea life by clogging the gills of fish, blocking light transmission and increasing ocean water temperature.

Solutions

• Facilities Design

- Situate barns, corrals and other high-use areas on the portion of property that drains away from the nearest creek or stream.
- Install gutters that will divert runoff away from livestock areas.
- Design diversion terraces which drain into area with sufficient vegetation to filter the flow.
- Protect manure storage facilities from rainfall and surface runoff.

• Pasture Management

007409

- Confine animals in properly fenced areas except for exercise and gazing time.
- Corrals, stables and barns should be located on higher ground when possible and surrounded by pasture to act as a natural filtration sysytem.
- Use fencing to keep horses away from environmentally sensitive areas and protect stream banks from contamination.
- Use manure and soiled bedding sparingly to fertilize pastures and croplands.

• Grazing Management

- Establish healthy and vigorous pastures with at least 3 inches of leafy material present.
- Subdivide grazing areas into three or more units of equal size. Clip tall weeds and old grass.
- Rotate animals to clean pasture when grass is grazed down to 3-4 inches. Let pasture regrow to 8-10 inches before allowing regrazing.
- Keep animals away from wet fields if possible.
- During heavy rainfall, consider indoor feeding, a practice which keeps more manure under roof and away from runoff.

• Collection and Storage

Collect soiled bedding and manure on a daily basis from stalls and paddocks and place in temporary or long-term storage s. Store in sturdy, insect-resistant and seepage-free units.

• During Construction

- Cover catch basins and maintenance holes when applying seal coat, slurry seal, fog seal, etc.
- Use check dems, ditches or berms to divert runoff around excavations.
- Never wash excess materials from exposed aggregate concrete or similar treatments into a street, gutter or storm drain.
- Collect and recycle excess abrasive gravel or sand.
- Avoid over-application by water trucks during dust control.

• Spills

• Never hose down "dirty" pavement or surfaces. Clean up all spills and leaks using "dry" methods (with absorbent materials and/or rags), or dig up and remove contaminated soil. For disposal information contact the Orange County Hazardous Waste Hotline at (714) 288-2541.

Ocean Pollution Prevention: It's Up To Us

Cypess has two drainage systems: sewers and storm drains. The storm drain system was designed to prevent flooding by carrying excess rainwater away from city streets out to the ocean. Because the system contains no filters, it now serves the *unintended* function of carrying urban pollution straight to the ocean.

This pamphlet tells you how to prevent ocean pollution from "stormwater" or "urban runoff."

Rain, industrial and household water mixed with urban pollutants creates stormwater pollution. The pollutants include: oil and other auto-motive fluids, paint and construction debris, yard and pet wastes, pesticides and litter.

Urban runoff pollution flows to the ocean through the storm drain system which takes water and debris straight from the streets to the ocean. Each day 100 million gallons of polluted urban runoff enter the ocean untreated, leaving toxic chemical in our surf and tons of trash on our beaches.

Urban runoff pollution contaminates the ocean, closes beaches, harms aquatic life and increases the risk of inland flooding by clogging gutters and catch basins.

These Best Management Practices (BMPs) will ensure a cleaner city and ocean.

Roadwork and Paving Problems

Road paving, surfacing and pavement removal activities contribute to urban runoff pollution because they take place right in the street, where urban runoff contaminatoin can result from asphalt saw-cut slurry or excavated material.

Rain or runoff can carry these toxic substances to the ocean through the storm drain system, posing a hazard to human and sea life.

Extra planning is required to store and dispose of materials properly and guard against stormwater and ocean pollution. This brochure tells you how.

Solutions

Handling, storing, and disposing of materials properly can prevent pollutants from entering the storm drains.

• General Business Practices

- Keep materials out of the rain. Store them under cover, with temporary roofs or plastic sheets, protected from rainfall, runoff and wind.
- Plan excavation and grading for dry weather.
- Develop and implement erosion and sediment control plans for embankments.
- Recycle used oil, concrete, asphalt, etc.

007411

• Paint Removal

- Maintain all vehicles and heavy equipment. Inspect frequency for leaks.
- Conduct all vehicle/equipment maintenance and refueling at one location—away from storm drains.

- Perform equipment/ vehicle repairs and washing off-site.
- Do not use diesel oil to lubricate equipment or parts.

• Asphalt & Concrete Removal

- After breaking up paving, be sure to remove all chunks and pieces. Recycle them at a crushing company.
- Dispose of small amounts of dry concrete in the trash. Make sure broken pavement does not come in contact with rainfall or runoff.

- Shovel or vacuum saw-cut slurry and remove from the site.
- Cover or barricade storm drain openings during saw-cutting.

• Disposal Options

Use a crushing company to recycle cement, asphalt and porcelain rather than taking them to a landfill.

- When breaking up paving (cement or asphalt), be sure to pick up all the pieces. Recycle them at a crushing company.
- Dispose of small amounts of excess dry concrete, grout and mortar in the trash.
- Never bury waste material. Recycle or dispose of it as hazardous waste material.

Handling Materials & Wastes

- Practice source reduction—minimize waste when ordering materials. Ordering materials. Order only the amounts needed to complete the job.
- Use recycled and recyclable materials whenever possible.
- Recycle broken asphalt, concrete, wood, and cleared vegetation. Unrecycled materials must be taken to an appropriate landfill or disposed of as hazardous waste. Call the numbers on the back of this pamphlet for disposal information.

Disposal Options

Use a crushing company like to recycle cement, asphalt and porcelain rather than taking them to a landfill. To locate a crushing company near you contact the Integrated Waste Management Department by calling (714) 834-4000.

Ocean Pollution Prevention: It's Up To Us

Cypess has two drainage systems: sewers nd storm drains. The storm drain system was esigned to prevent flooding by carrying excess ainwater away from city streets out to the cean. Because the system contains no filters, t now serves the *unintended* function of arrying urban pollution straight to the ocean.

This pamphlet tells you how to prevent ocean ollution from "stormwater" or "urban runoff."

Rain, industrial and household water mixed ith urban pollutants creates stormwater ollution. The pollutants include: oil and other uto-motive fluids, paint and construction ebris, yard and pet astes, pesticides and itter.

Urban runoff pollution lows to the ocean through he storm drain system hich takes water and de-ris straight from the treets to the ocean. Each day 100 million allons of polluted urban runoff enter the ocean ntreated, leaving toxic chemical in our surf and ons of trash on our beaches.

Urban runoff pollution contaminates the cean, closes beaches, harms aquatic life and ncreases the risk of inland flooding by clogging utters and catch basins.

These Best Management Practices (BMPs) ill ensure a cleaner city and ocean.

Concrete & Mortar Application Problems

Fresh concrete and mortar activities are frequent sources of urban runoff pollution. Materials and waster blown or washed into a street, gutter or storm drain have a direct impact on the ocean.

Sediment is the most common pollutant washed from worksites. Sediment clogs the gills of fish, blocks light transmission and increases ocean water temperature, all of which harm sea life, disrupting the food chain upon which both fish and people depend.

Sediment carries with it other worksite pollutants such as cement wash, gravel, asphalt, pesticides, cleaning solvents, motor oil, grease and fuel. Poorly maintained equipment and vehicles leaking fuel and oil also contribute to ocean pollution.

Solutions

Handling, storing, and disposing of materials properly can prevent pollutants from entering the storm drains.

• General Business Practices

- Schedule projects for dry weather periods.
- Keep materials out of the rain. Store both dry and wet materials under cover, protected from rainfall and runoff. Also, protect dry materials from the wind.
- Secure open bags of cement to keep wind-blown cement powder away from streets, gutter, storm drains, rainfall and runoff.

• Cleaning Up

- When cleaning up after driveway or sidewalk construction, wash concrete dust onto dirt areas, not down the driveway or into the street or storm drain.
- Wash out concrete mixers and equipment only in designated wash-out areas, where the water flows into containment ponds or onto dirt.
- Recycle cement wash water by pumping it back into cement mixers for reuse.

- Never dispose of cement washout into driveways, streets, gutters, storm drains or ditches.

• During Construction

- Place erosion controls (berms or temporary vegetation) down-slope to capture runoff carrying mortar or cement before it reaches the gutter.
- Do not order or mix up more fresh concrete or cement than you will use.
- Set up and operate small mixers on tarps or heavy drop cloths.

Recycle oil and grease wastes. Never dump them down storm drains or on the ground. Look in the yellow for "renders" or call one of the disposal numbers listed in this brochure.

• Employee & Client Education

Include urban runoff training in employee orientations and reviews. Promote these Best Management Practices (BMPs):

Storage containers should be regularly inspected and kept in good condition.

• Place materials inside rigid, durable, watertight and rodent-proof containers with tight fitting covers.

• Store materials inside a building or build a covered area that is paved and designed to prevent runoff from entering storm drains.

• Place temporary plastic sheeting over materials or containers and secure the cover with ties and weighted objects. (Not appropriate for storing liquids.)

Post BMPs where employees and customers can see them. Showing customers you protect the ocean is good public relations.

Explain BMPs to other food businesses through you business associations or chamber of commerce.

Stencil catch basins near the workplace with a stencil that says "No Dumping: This drains to the ocean."

Ocean Pollution Prevention: It's Up To Us

Cypess has two drainage systems: sewers and storm drains. The storm drain system was designed to prevent flooding by carrying excess rainwater away from city streets out to the ocean. Because the system contains no filters, it now serves the *unintended* function of carrying urban pollution straight to the ocean.

This pamphlet tells you how to prevent ocean pollution from "stormwater" or "urban runoff."

Rain, industrial and household water mixed with urban pollutants creates stormwater pollution. The pollutants include: oil and other automotive fluids, paint and construction debris, yard and pet wastes, pesticides and litter.

Urban runoff pollution flows to the ocean through the storm drain system which takes water and debris straight from the streets to the ocean. Each day 100 million gallons of polluted urban runoff enter the ocean untreated, leaving toxic chemical in our surf and tons of trash on our beaches.

Urban runoff pollution contaminates the ocean, closes beaches, harms aquatic life and increases the risk of inland flooding by clogging gutters and catch basins.

These Best Management Practices (BMPs) will ensure a cleaner city and ocean.

Food Service Problems

The by-products of food-related businesses can harm the ocean and sea life if they enter the storm drain system. Food businesses can cause harm by putting food waste in leaky dumpsters, not cleaning up outdoor food or chemical spills, or by washing outdoor spills into the storm drain system.

Other routine activities such as cleaning oily vents and operating and maintaining delivery trucks are sourcs of pollution, unless proper precautions are taken. When it rains, motor oil that has dripped onto parking lot from business and customer vehicles is washed into the ocean via the storm drain system.

Oil and grease can clog fish gills and block oxygen from entering the water. Also, toxics found in oven and floor cleaners can, in high concentrations, harm aquatic life.

Solutions

• Keep Work Sites Clean

Handling, storing, and disposing of materials properly can prevent pollutants from entering the storm drains.

• Minimize Wastes

Use non-disposable products. Serve food on ceramic dishware rather than paper, plastic or styrofoam and use cloth napkins rather than paper ones. If you must use cloth napkins rather than paper ones. If you must use disposable products, use paper instead of styrofoam and look for recycled and recyclable containers.

Buy the least toxic products available.

- Look for "non-toxic," "non-petroleum based," "free of ammonia, phosphates, dye or perfume," or "biodegradable" on the label.
- Avoid chlorinated compounds, petroleum distillates, phenols and formaldehyde.
- Use water-based products.

• Parking Lot Drainage

Cover, repair or replace leaky dumpsters and compactors, and/or drain the pavement beneath them to the sewer. Rain can wash oil, grease, and substances into the storm drain system.

Wash greasy equipment such as vents and vehicles before storing outside and only in designated wash areas properly connected to the sewer system with an appropriate oil/water separator.

• Recycle Wastes

Purchase recycled products. By doing so, you help ensure a use for the recyclable materials that people collect and recycle.

Recycle the following: food waste (non-greasy, non-animal food waste can be composted); paper and cardboard, container glass, aluminum, and tin, pallets and drums; and oil and grease.

Separate wastes. Keep your recyclable wastes in separate containers according to the type of material. They are easier to recycle if separated

- Control surf runoff to reduce erosion, especially du..g excavation. Use drainage ditches to divert water flow.
- Use gravel approaches to reduce soil com paction and limit the tracking of sediments into streets,, where truck traffic is frequent.
- Prevent erosion by planting fast-growing annual and perennial grasses. These will shield and bind the soil.
- Do not remove trees or shrubs unnecessary. They help decrease erosion.

Handling Materials & Waste

- Practice source reduction—minimize waste when ordering materials. Order only the amounts needed to complete the job.
- Use recycled and recycled materials.
- Never bury waste or leave it in the street.
- Dispose of all waste properly. Many construction materials, including solvents, water-based paints, vehicle fluids, broken asphalt and concrete, wood, and cleared vegetation can be recycled. Unrecycled materials must be taken to an appropriate landfill or diposed of as hazardous waste.

Disposal Options

- Use a crushing company to recycle concrete, asphalt and porcelain rather than taking them to a landfill.

Ocean Pollution Prevention: It's Up To Us

Cypess has two drainage systems: sewrs and storm drains. The storm drain ystem was designed to prevent flooding by arrying excess rainwater away from city treets out to the ocean. Because the ystem contains no filters, it now serves the *nintended* function of carrying urban pollu-ion straight to the ocean.

This pamphlet tells you how to prevent cean pollution from "stormwater" or "urban unoff."

Rain, industrial and household water ixed with urban pollutants creates tormwater pollution. The pollutants nclude: oil and other automotive fluids, aint and construction debris, yard and pet astes, pesticides and litter.

Urban runoff pollution flows to the ocean hrough the storm drain system which takes ater and debris straight from the streets to he ocean. Each day 100 million gallons of olluted urban runoff enter the ocean ntreated, leaving toxic chemical in our surf nd tons of trash on our beaches.

Urban runoff pollution contaminates the cean, closes beaches, harms aquatic life nd increases the risk of inland flooding by logging gutters and catch basins.

These Best Management Practices BMPs) will ensure a cleaner city and cean.

General Construction Problems

Construction sites are common sources of urban runoff pollution. Materials and wastes blown or washed into a street, gutter or storm drain flow directly to the ocean.

Sediment is the most common pollutant washed from worksites, creating multiple problems once it enters the ocean. Sediment clogs the gills of fish, blocks light transmission and increases ocean water temperture, all of which harm sea life, disturbing the food chain upon which both fish and people depend.

Sediment also carries with it other worksite pollutants such as pesticides, cleaning solvents, cement wash, asphalt and car fluids like motor oil, grease and fuel. Thus, poorly maintained vehicles and heavy equipment leaking fuel and oil at the construction site also contribute to ocean pollution.

As a contractor, site supervisor, owner, of operator of a site, you may be responsible for the environmental demage cused by subcontractors or employees.

Solutions

Handling, storing, and disposing of materials properly can prevent pollutants from entering the storm drains.

• General Business Practices

- Cover and maintain dumpsters. Check frequently for leaks. Place dumpsters under a roof or cover with tarps or plastic sheeting. Never clean a dumpster by hosing it down on site.
- Keep pollutants off exposed surfaces. Put trash cans and recycling receptacles around the site.
- Keep materials out of the rain. Cover exposed piles of soil or construction materials with plastic sheeting or temporary roofs.
- Designate one area for auto parking, vehicle refueling and routine equipment maintenance. The area should be well away from gutters or storm drains. Make major repairs off site.
- Use as little reclaimed water as possible for dust control.

• Clean Up Spills

- Clean up leaks, drips and other spills immediately. This will prevent contaminated soil or residue on paved surfaces.
- Never hose down "dirty" pavement or impermeable surfaces wherefluids have spilled. Usedry cleanup methods (saw dust, cat litter, and/or rags).

• Planning to Prevent Pollution

An erosion control program, worked out before construction begins, prevents or minimizes problems.

- Train your employees and subcontractors. Make these brochures available to everyone working on site. Inform subcontractors about stormwater requirements and responsibilities.
- Schedule excavation and gr[illegible] activities for dry weather periods.

- Don't use diesel fuel to lubricate equipment or part.
- Use drip pans or drop cloths to catch drips and spill, if you drain and replace motor oil, radiator coolant or other fluids on site. Collect all used fluids, store in separate containers and recycle.

• Erosion Prevention

- After cleaning, grading or excavating, exposed soil poses a clear and immediate danger of stormwater pollution. Revegetation (permanent or temporary) is an excellent form of erosion control for any site.
- Avoid excavation or grading in wet weather.
- Construct diversion dikes to channel runoff around the site. Line channels with grass or roughened pavement to reduce runoff velocity.
- Cover stockpiles and excavated soil with secured tarps or plastic sheeting.
- Remove existing vegetation only when absolutely necessary. Large projects should be done in phases.
- Consider planting temporary vegetation for erosion control on slopes or where construction is not immediately planned.
- Plant permanent vegeation as soon as possible, once excavation and grading activities are complete.

Ocean Pollution Prevention: It's Up To Us

Cypess has two drainage systems: sewers and storm drains. The storm drain system was designed to prevent flooding by carrying excess rainwater away from city streets out to the ocean. Because the system contains no filters, it now serves the *unintended* function of carrying urban pollution straight to the ocean.

This pamphlet tells you how to prevent ocean pollution from "stormwater" or "urban runoff."

Rain, industrial and household water mixed with urban pollutants creates stormwater pollution. The pollutants include: oil and other automotive fluids, paint and construction debris, yard and pet wastes, pesticides and litter.

Urban runoff pollution flows to the ocean through the storm drain system which takes water and debris straight from the streets to the ocean. Each day 100 million gallons of polluted urban runoff enter the ocean untreated, leaving toxic chemical in our surf and tons of trash on our beaches.

Urban runoff pollution contaminates the ocean, closes beaches, harms aquatic life and increases the risk of inland flooding by clogging gutters and catch basins.

These Best Management Practices (BMPs) will ensure a cleaner city and ocean.

Heavy Equipment Operations Problems

Soil excavation and grading operations often contribute to urban runoff pollution. By loosening large amounts of soil and sediment, earthmoving activities can cause sediment to flow into gutters, storm drains and the ocean.

Sediment is the most common pollutant washed from worksites, creating multiple problems once it enters the ocean. Sediment clogs the gills of fish, blocks light transmission and increases ocean water temperture, all of which harm sea life, disturbing the food chain upon which both fish and people depend.

Sediment also carries with it other worksite pollutants such as pesticides, cleaning solvents, cement wash, asphalt and car fluids like motor oil, grease and fuel. Thus, poorly maintained vehicles and heavy equipment leaking fuel and oil at the construction site also contribute to ocean pollution.

Solutions

Handling, storing, and disposing of materials properly can prevent pollutants from entering the storm drains.

• General Business Practices

- Plan excavation and grading for dry weather.
- Use as little water as possible for dust control.

• Clean Up Spills

- Never hose down "dirty" pavement or impermeable surfaces where fluids have spilled. Use dry cleanup methods (saw dust, cat litter, and/or rags).

- Sweep up dry spilled materials immediately. Never attempt to bury them or "wash them away with water.
- Clean up spills on dirt areas by digging up and properly disposing of contaminated soil.
- Report significant spills to the appropriate spill response agencies immediately, listed on the back of this pamphlet.

• Vehicles & Equipment

- Maintain all vehicles and heavy equipment. Inspect frequently for leaks.
- Conduct all vehicle/equipment maintenance and refueling at one location away from storm drains.
- Perform major maintenance, repair jobs and vehicle/equipment washing off site.
- Use gravel approaches where truck traffic is frequent to reduce soil compaction and limit the tracking of sediment into streets.

Design [illegible]ing areas so that spills are contained and runoff cannot carry spills into storm drains. Slope the containment area toward drain connected to the sewer system. Equip the drain with a shutoff valve in the event of a large spill.

Keep absorbent materials on-site to allow prompt cleanup of all spills.

Post signs instructing people not to overfill gas tanks, which causes spills and gas fumes.

Recycle

Recycle what you must:

- Division 20 of the Health and Safety Code requires motor oil to be recycled.
- Section 66822 of the California Code requires lead acid batteries to be recycled.

Recycle what you can, including metal scraps, water-based paints, used tires, paper and cardboard, container glass, aluminum, and tin.

Call the referral numbers to the right for information.

Employee & Customer Education

Educate your employees. Include water quality training in new-employee orientations and conduct annual review sessions.

Educate your customers. Raise both employee and customer awareness by stenciling storm drains near the word place with the stencil: "No Dumping — This Drains to the Ocean."

Ocean Pollution Prevention: It's Up To Us

Cypess has two drainage systems: sewrs and storm drains. The storm drain sysem was designed to prevent flooding by arrying excess rainwater away from city treets out to the ocean. Because the sysem contains no filters, it now serves the *unntended* function of carrying urban polluion straight to the ocean.

This pamphlet tells you how to prevent cean pollution from "stormwater" or "urban unoff."

Rain, industrial and household water ixed with urban pollutants creates stormater pollution. The pollutants include: oil nd other automotive fluids, paint and contruction debris, yard and pet wastes, pestiides and litter.

Urban runoff pollution flows to the ocean hrough the storm drain system which takes ater and debris straight from the streets to he ocean. Each day 100 million gallons of olluted urban runoff enter the ocean ntreated, leaving toxic chemical in our surf nd tons of trash on our beaches.

Urban runoff pollution contaminates the cean, closes beaches, harms aquatic life nd increases the risk of inland flooding by logging gutters and catch basins.

These Best Management Practices BMPs) will ensure a cleaner city and cean.

Car Maintenance Problems

Many car maintenance routines, such as washing a car or pouring used motor oil into a gutter or storm drain, contribute to ocean pollution.

Water runoff from streets, parking lots and driveways picks up oil and grease dripped from cars, asbestos worn from brake linings, zinc from tires and organic compounds and metals from spilled fuels.

Chemicals drain into the ocean, harming sea life. Oil and grease, for example, clog fish gills and block oxygen from entering the water. If oxygen levels in the water are too low, aquatic animals die.

Solutions

Handling, storing, and disposing of materials properly can prevent pollutants from entering the storm drains.

• Cleaning Work Sites

Don't hose down your shop floor. It is best to sweep. Use non-toxic cleaners. For instance, baking soda mixed with a mild, biodegradable dishwashing soap works well on battery heads, cable clamps and chrome. For window, mix white vinegar or lemon juice with water.

• Spills

Prepare and use easy-to-fill spill containment and cleanup kits. Include safety equipment and cleanup materials appropriate to the type and quantity of materials that could spill. Pour kitty litter, sawdust or corn[illegible]l on spills.

• Fluids

007421

Your customers regular car maintenance prevents fluids from leaking onto streets and washing into storm drains. It is also good for business.

Change fluids carefully — use a drip pan.

Prevent fluid leaks by draining gas, transmission and hydraulic oil, brake and radiator fluid from vehicles or parts kept in storage.

Implement simple work practices to reduce spills. Use a funnel when pouring liquids (like lubricants or motor oil) and place a tray underneath to catch spills. Place drip pans under the spouts of liquid storage containers.

Clean up spills immediately.

• Washing Vehicles

Prevent oil and grease, suspended solids and toxics from washing into storm drains.

Wash vehicles with biodegradable phosphatefree detergent. Use a bucket (not a running hose) to wash and rinse the car to conserve water.

Designate a washing site where water drains to the sewer system. The area must be paved and well marked as a wash area. Post signs prohibiting oil changes and washing with solvents. Train all employees to use the designated area.

• Fueling Vehicles

Cover the fueling area to keep rain from washing away spilled materials. Extend the cover several feet beyond t[illegible] containment

- When stripping or cleaning building exteriors with high-pressure water, block storm drains. Wash water onto a dirt area, or into the sewer system.

Paint Cleanup

- Never clean brushes or rinse paint containers into a street, gutter, or sewer system.
- For water-based paints, paint out brushes to the extent possible, and rinse in the sink.
- For oil-based paints, paint out brushes to the extent possible. Clean with thinner, then filter and reuse thinner or solvent.

Disposal Options

- Reuse leftover paint for touch-ups.
- Recycle or use up excess paint. Call the Orange County House hold Hazardous Waste Hotline for disposal or recycling information at (714)834-6752.

Ocean Pollution Prevention: It's Up To Us

Cypess has two drainage systems: sewers and storm drains. The storm drain system was designed to prevent flooding by carrying excess rainwater away from city streets out to the ocean. Because the system contains no filters, it now serves the *unintended* function of carrying urban pollution straight to the ocean.

This pamphlet tells you how to prevent ocean pollution from "stormwater" or "urban runoff."

Rain, industrial and household water mixed with urban pollutants creates stormwater pollution. The pollutants include: oil and other auto-motive fluids, paint and construction debris, yard and pet wastes, pesticides and litter.

Urban runoff pollution flows to the ocean through the storm drain system which takes water and debris straight from the streets to the ocean. Each day 100 million gallons of polluted urban runoff enter the ocean untreated, leaving toxic chemical in our surf and tons of trash on our beaches.

Urban runoff pollution contaminates the ocean, closes beaches, harms aquatic life and increases the risk of inland flooding by clogging gutters and catch basins.

These Best Management Practices (BMPs) will ensure a cleaner city and ocean.

Painting

All paints, solvents, and adhesives contain chemicals that are harmful to wildlife and humans. That is why proper handling and disposal of these products is so important.

Toxic chemicals from liquid or solid products or from cleaning residues or rags may enter the ocean via storm drains.

It is especially important not to clean brushes in an area where paint residue can flow to a street, gutter or storm drain. Once residue enters the storm drain system, it flows directly to the ocean.

Solutions

Handling, storing, and disposing of materials properly can prevent pollutants from entering the storm drains.

• General Business Practices

- Keep all liquid paint products and wastes away from the street, gutter, and storm drains. Liquid residues from paints, thinners, solvents, glues and cleaning fluids are hazardous wastes. When thor oughly dry, used brushes, rags, drop cloths and empty paint cans (lids off), may be disposed of as trash.
- Use water-based paints instead of oil based paints. Look for the words "Latex" or "Clean up with water" on the label.

- Don't use paints over 15 years old. They may contain toxic levels of lead.
- Reuse paint thinner. Set used thinner aside in a closed jar to out paint particles. Then pour off clear liquid for future use. Wrap the residue in newspaper and dis pose of it in the trash.

• Paint Removal

- Chemical paint stripping residue is a hazardous waste. For disposal information call the Orange County Household Hazardous Waste Hotline at (714) 834-6752.
- Chips and dust from marine paints or paints containing lead or tributyl tin are hazardous wastes. Dry sweep and call the Orange County Household Hazardous waste Hotline at (714) 834-6752.

- Paint chips and dust from non-hazardous dry stripping and stripping and sand blasting may be swept up.

- Use organic or non-toxic fertilizers and pesticides. Do not fertilize or use pesticides near ditches, gutters or storm drains.
- Store pesticides, fertilizers, and other chemicals in a covered area to prevent runoff.
- Do not blow, sweep or rake leaves into the street, gutter or strom drain.
- Conserve water by using drip irrigation, soaker hoses, or micro-spray systems.

• Costruction

Sediment, from excavation and other construction projects, ist he most common pollutant washed from worksites. Sediment entering the ocean harms sea life and disrupts the food chain upon which both fish and people depend.

- Keep all construction debris away from street, gutter and storm drain. Look for and clean up material that may have traveled away from your property.
- Keep materials out of the rain by storing them indoors or outdoors with a secure cover.
- Plan grading and excavation for dry weather.
- Cover excavated material and stockpiles of asphalt, sand, etc., with plastic tarps.
- Prevent erosion by planting fast-growing annual and perennial grasses.
- Use a crushing company to recycle cement, asphalt and porcelain.

Ocean Pollution Prevention: It's Up To Us

Cypess has two drainage systems: sewers and storm drains. The storm drain system was designed to prevent flooding by carrying excess rainwater away from city streets out to the ocean. Because the system contains no filters, it now serves the *unintended* function of carrying urban pollution straight to the ocean.

This pamphlet tells you how to prevent ocean pollution from "stormwater" or "urban runoff."

Rain, industrial and household water mixed with urban pollutants creates stormwater pollution. The pollutants include: oil and other automotive fluids, paint and construction debris, yard and pet wastes, pesticides and litter.

Urban runoff pollution flows to the ocean through the storm drain system which takes water and debris straight from the streets to the ocean. Each day 100 million gallons of polluted urban runoff enter the ocean untreated, leaving toxic chemical in our surf and tons of trash on our beaches.

Urban runoff pollution contaminates the ocean, closes beaches, harms aquatic life and increases the risk of inland flooding by clogging gutters and catch basins.

These Best Management Practices (BMPs) will ensure a cleaner city and ocean.

• Household Hazardous Waste

Household toxics, such as common household cleaners, paint products and motor oil, can pollute the ocean and poison the groundwater if not disposed of as hazardous waste.

- Take your household chemicals and toxics to a local Household Hazardous Waste Roundup instead of dumping them on the ground, down the sink or into a gutter, street or storm drain.
- Call the Los Angeles County Household Hazardous Waste Department (714) 834-6752 to find out when a neighborhood roundup event will take place in your community.

• Concrete & Masonry

Fresh concrete and mortar application materials can wash down or blow into the street, gutter or storm drain, posing a hazard to sea life humans.

- Don't mix more cement than you will use.
- Store bags of cement and plaster under cover, protected from rainfall, runoff and wind, and away from gutters and storm drains.
- Never dispose of cement washout or concrete dust on driveways, streets, gutters or stormdrains.

• Painting

All paints and solvents contain chemicals that are harmful to sea life. Toxic chemicals can come from liquid or solid products or from cleaning residues on rags. It is especially important to prevent these chemicals from entering drains.

- Never clean brushes or rinse paint containers into a street, gutter or storm drain.
- For oil-based paints, paint out brushes to the maixmum extent possible. Clean with thinner and then filter and reuse thinner.
- For water-based paints, paint out brushes to the extent possible, then rinse in the sink.
- When thoroughly dry, used brushes, empty paint cans (lids off), rags and drop cloths may be disposed of as trash.
- Chemical paint stripping residue, including saturated rags, is a hazardous waste and should be taken to a household hazardous waste collection event.
- Chips and dust from marine paints or paints containing lead or tributyl tin are also hazardous wastes. Sweep them up and save them for a household hazardous waste collection event.
- Reuse leftover paint for touch-ups or recycle it at a local household hazardous waste collection event, where it will be recycled or donated to a local graffiti paint-out program.

• Landscaping & Gardening

Intensive gardening and landscaping increase the likelihood that garden chemicals and soil will wash into storm drains. Pesticides and herbicides not only kill garden invaders, they also harm insects, poison fish and contaminate ground and ocean water.

• Safe Substitutes

Garden aphids and mites: mix one tablespoon of liquid soap and one cup of vegetable oil. Add one teaspoon of this mixture to a cup of water and spray.

Catepillars: apply products containing Bacillus thuringiensis to leaves

Ants: place boric acid dust or hydramethylnon baits in problem areas. Be sure it is inaccessible to children and pets (it is a mild poison.)

Roaches: apply boric acid dust to cracks and entry points (see ants above.) Place bay leaves on pantry shelves.

• If You Must Use Pesticides

- Use a pesticide that is specifically designed to control your pest. The insect should be listed on the label. Use only as directed.

• Pesticide Disposal

- Rinse empty pesticide containers and use rinse water as you would the product. Dispose of empty rinsed containers in the trash.
- Orange County residents can dispose of unused household toxics at the House hold Hazardous Waste Roundups, instead of dumping them into the sink, street, gutter or storm drain. Call (714) 834-6752 for more information.

Ocean Pollution Prevention: It's Up To Us

Cypess has two drainage systems: sewers and storm drains. The storm drain system was designed to prevent flooding by carrying excess rainwater away from city streets out to the ocean. Because the system contains no filters, it now serves the *unintended* function of carrying urban pollution straight to the ocean.

This pamphlet tells you how to prevent ocean pollution from "stormwater" or "urban runoff."

Rain, industrial and household water mixed with urban pollutants creates stormwater pollution. The pollutants include: oil and other automotive fluids, paint and construction debris, yard and pet wastes, pesticides and litter.

Urban runoff pollution flows to the ocean through the storm drain system which takes water and debris straight from the streets to the ocean. Each day 100 million gallons of polluted urban runoff enter the ocean untreated, leaving toxic chemical in our surf and tons of trash on our beaches.

Urban runoff pollution contaminates the ocean, closes beaches, harms aquatic life and increases the risk of inland flooding by clogging gutters and catch basins.

These Best Management Practices BMPs) will ensure a cleaner city and ocean.

Landscaping Problems

Landscaping and garden maintenance activites can be major contribitors to ocean pollution. Soils, yard wastes, overwatering and garden chemicals become part of the urban runoff mix that winds its way through the streets, gutters and storm drains before entering the ocean. Poorly functioning sprinklers and overwatering, for example, waste water and increase the number of pollutants flowing into storm drains.

Fertilizers, pesticides and herbicides are washed off lawns and landscaped areas. These chemicals not only kill garden invaders, they also harm useful insects, poison fish and contaminate ground and ocean water.

Leaves, grass clippings and tree trimmings that are swept or blown into the street and gutter are also ocean polluters. These wastes clog catch basins, increasing the risk of flooding on your street, and carry garden chemicals into the ocean. As they decompose, they also absorb oxygen fish need to survive.

Solutions

• General Landscaping Practices

- Protect stockpiles and materials from wind and rain by storing them under tarps or plastic sheets.
- Plan grading adn excavation for dry weather.
- Use temporary check dams or ditches to divert runoff away from storm drains.

007427

- Prevent erosion by planting fast-growing annuals and perennial grasses. These will shield and bind the soil.

• Garden & Lawn Maintenance

- Conserve water by using drip irrigation, soaker, hoses or micro-spray systems.
- Do not blow or rake leaves into the street, gutter or storm drains.
- Use organic or non-toxic fertilizers.
- Do not overfertilize and do not fertiliize near ditches, streams or other water bodies.
- Store pesticides, fertilizers and other chemicals in a covered area to prevent runoff.

• Pesticide Alternatives

The "chemicals-only" approach to pest control is ony a temporary fix. A more common-sense approach is needed for a long-term solution, called "Intergrated Pest Management."

Physical pest control includes caulking holes, building barriers, hand picking pests and setting traps. Biological pest control includes purchasing and spreading predatory insects and bacterial insects. Chemical pest control, a last resort includes dehydrating dust, insecticidal soaps, boric acid, horticultural oils and pyrethrin based insecticides.

Problem

Over 60% of marine debris could be recycled now!

Get Involved Now!

In addition to recycling your marine debris you can participate on a larger scale by:

- starting a recycling program at your marina if one does not currently exist
- joining a beach or bay clean-up campaign
- supporting organizations actively working to protect the marine environment

For more information on recycling programs, contact:

RECYCLE MARINE DEBRIS

Design by Mark Hall Graphic Design, Copywriting by SDR Consulting, Illustration by Diane Varner Illustration. Printed on recycled paper.

007429

The Solution Is To Recycle

Marine Debris — A Preventable Sickness

The next time you are out on your boat or casually stroll down a dock, take a look around. Is the water clean, is the shoreline free of debris, is animal life abundant? The answer is probably no. The ocean is threatened. Threatened by a sickness that you can prevent—the dumping of your debris into the water.

The U.S. Coast Guard estimates that over 800 tons of garbage are dumped annually into U.S. waters. California marinas alone, generate 5 to 3,000 tons of garbage per marina each year.

Every time you toss your trash into the ocean you become part of the problem. Your trash could be responsible for the death of an animal, a boating accident, or a polluted beach.

There is a solution — something you can do — stow your trash and recycle it.

Four Easy Steps to Recycling

Successful marine debris recycling requires that you...

1. Stop dumping trash into the ocean. Whether you are on a boat or enjoying the ocean from shore, don't carelessly toss your debris. Every can, cigarette butt, and plastic bag hurts!

2. On shore or at sea, stow your trash and separate recyclable items. You can recycle newspaper, glass jars and bottles, some plastics, paper, aluminum and steel cans, cardboard, scrap metal, wood, oil, batteries, and more. Recent studies indicate that over 60% of a marina's garbage can be recycled. Dispose of your non-recyclable trash in an appropriate receptacle.

3. Take your recyclable items to a recycling center. Centers are available in most communities and many marinas have their own recycling program.

4. Purchase wisely. When you buy new products look for items packaged in recyclable materials, or better yet, purchase reusable items. The less you need to throw away or recycle, the better for the ocean, the environment, and your pocket book.

There are obvious reasons to recycle:

- *saves natural resources*
- *eliminates trash in the ocean*
- *provides an alternative to the use of landfills*

There are also some not so obvious reasons to recycle:

- *provides a cost-effective way to eliminate trash*
- *helps maintain a marina's waste management costs (which eventually come back to you, the consumer)*
- *provides positive PR for you, your vessel, and your marina*

USED MOTOR OIL

PROPER MANAGEMENT

Bring to service station, "quick lube" shop, drop-off location, or household hazardous waste collection for recyclir Inquire about curbside collection. D not mix with other automotive fluid

BENEFITS OF PROPER MANAGEMENT

Prevents:
- soil and water contamination:
- damage to septic systems an wastewater treatment facilitie

Can be rerefined and reused as fuel.

HAZARD PROPERTIES

Toxic

OIL FILTERS

GASOLINE

ANTIF

AUTO BATTERIES

ABOUT TIRES:

Nearly 200 million worn passenger tires are generated each year. Some are recycled into products like rubber mats or footwear, while others are burned as fuel or retreaded and sold again. Recycling and retreading keep millions of scrap tires out of landfills each year.

PROPER TIRE MANAGEMENT

- **Purchase retreaded tires!** Currently, approximately 400 million gallons of oil are saved each year due to the use of retreaded tires. Doing so, also reduces municipal tire procurement and disposal costs, and saves you money! For more information on retreaded tires, call the Tire Retread Information Bureau at (408) 372-1917.
- **Properly maintain tires!** This extends wear and increases the chance that they can be retreaded.
  1) Keep tires inflated at recommended inflation level. Underinflation can waste up to 5% of a car's fuel! Check every two weeks.
  2) Repair punctures; maintain alignment; rotate tires every 6,000 - 8,000 miles.
  3) Check tread wear indicators (on tires) periodically. When tire tread is worn to same height as tread wear indicator, retread or replace tire.

For more information on tire safety and maintenance, contact the Tire Industry Safety Council at (202) 783-1022.

HAZARD PROPERTIES:

Toxic: May cause injury or death upon ingestion, inhalation, or skin absorption (depends on dose, length of exposure).
Flammable: Can be ignited by a flame, spark, ignition source or hot surface, under almost all temperature conditions.
Corrosive: A chemical (or its vapors) that can burn or destroy living tissues at the site of contact, and deteriorate or wear away the surface of a material.

HOUSEHOLD HAZARDOUS WASTE

The County of Orange has four Household Hazardous Waste Collection Centers available FREE to Orange County citizens. (Proof of residency may be required.)

COLLECTION CENTER LOCATIONS

ANAHEIM REGIONAL COLLECTION CENTER

1071 N. BLUE GUM STREET
Located between the 91 & 57 Fwys
at the corner of La Palma Avenue
and Blue Gum Street in Anaheim
**Visit the Stop & Swap to obtain partially used household products at no charge.*

IRVINE REGIONAL COLLECTION CENTER

6411 OAK CANYON
Next to City of Irvine Corporate Yard.
From the (5) freeway take the Sand Canyon exit, go Southwest to Oak Canyon and turn right.
**Visit the Stop & Swap to obtain partially used household products at no charge.*

HUNTINGTON BEACH REGIONAL COLLECTION CENTER

17121 NICHOLS STREET
Next to Rainbow Recycling and Disposal.
Major cross streets are Beach Blvd.
and Warner Ave. in Huntington Beach.

SAN JUAN CAPISTRANO REGIONAL COLLECTION CENTER

PRIMA DESHECHA LANDFILL
From the (5) freeway take Ortega Hwy. (74),
east to La Pata Avenue, turn right and
follow road to Landfill entrance.

COLLECTION CENTER HOURS OF OPERATION:

Tuesday through Saturday
9:00 a.m. to 1:00 p.m.

Collection Centers are Closed:

Rainy Days; Christmas, Independence, New Years and Thanksgiving Days.

Hazardous waste is not accepted from businesses, schools, government agencies, churches, non-profit organizations.

Best Management Practices for Construction Activities

The following represents the minimum standards of good housekeeping which must be implemented on all construction sites regardless of size.

- Eroded sediments and other pollutants must be retained on site and may not be transported from the site via sheetflow swales, area drains, natural drainage courses or wind.
- Stockpiles of earth and other construction related materials must be protected from being transported from the site by the forces of wind or water.
- Fuels, oils, solvents and other toxic materials must be stored in accordance with their listing and are not to contaminate the soil and surface waters. All approved storage containers are to be protected from the weather. Spills must be cleaned up immediately and disposed of in a proper manner. Spills may not be washed into the drainage system.
- Excess or waste concrete may not be washed into the public way or any drainage system. Provisions shall be made to retain concrete waste on sites until they can be disposed of as solid waste.
- Trash and construction related solid wastes must be deposited into a covered receptacle to prevent contamination of rainwater and dispersal by wind.
- Sediments and other materials may not be tracked from the site by vehicular traffic. The construction entrance roadways must be stabilized so as to inhibit sediments from being deposited into the public way. Accidental depositions must be swept up immediately and may not be washed down by rain or other means.
- Any slopes with disturbed soils or denuded of vegetation must be stabilized so as to inhibit erosion by wind and water.
- Other

---

* The above Best Management Practices are detailed in the California Storm Water Best Management Practices Handbook March 1993.
* Questions regarding these practices should be directed to the Cypress Dept. of Public Works (714) 229-6752.

City of Cypress

Department of Public Works

GUIDELINES FOR CLEANING AUTOMOTIVE SERVICE FACILITIES

Steam/Pressure Washing of Vehicle Maintenance Areas & Fuel Dispensing Areas

* Block the storm drain and collect water/waste for disposal to the sanitary sewer (with the prior approval of the local sanitation district).

Pressure Washing Sidewalks, Parking Lots, Common Areas

* If soap or any other cleaning agent is used, block the storm drain and collect water/waste and discharge to the sanitary sewer (with the approval of the local sanitation district).

* If only tap water with no cleaning agent is used, then the following Best Management Practices (BMPs) must be implemented before pressure washing:

  ⇒ Prior to washing, clean and/or sweep all large debris from the area, and

  ⇒ Clean any oil/auto fluid spills with an appropriate dry method, such as kitty litter or other absorbent, and dispose of appropriately.

  ⇒ To the extent practicable, the wash water must be directed to vegetative or unpaved areas where it would percolate,

  ⇒ If visual observance of the wash water indicates contamination (cloudy, colored, presence of suspended solids), additional Best Management Practices such as temporary retention of wash water (sandbags around storm drain inlets) or filtration methods must be implemented prior to discharge.

◊ Questions regarding these practices should be directed to the Cypress Dept. of Public Works (714) 229-6752.

The Cypress Federal Little League Major All-Stars won the California District 29 tournament that took place July 1-19, and featured 15 different area league all-star teams. Cypress won the tournament with a come-from-behind victory in the 6th inning of the final game. The team now moves on to the California Sectional Tournament in Huntington Beach. Team members include (from left, front row) John Short, Matt Gras, Brett Ianos, Chad Colvin, Michael Raines, Jacob Novy, (middle) Jeff Fenoglio, Adam Wilk, Trey Meeker, Jordan Lara, Matt Sherren, Michael Morrison, Billy Swanson, Bradford Belote, (back) Coach Tom Gras, Coach Robin Rice, Coach Alan Meeker, Player Agent Lisa Morrison, Coach Frank Sherren and Manager Randy Ianos.

Cypress Stars Head to National Championships

A team of local baseball players from the Cypress area will be competing in the AAU National Championship Tournament in Peoria, Ariz., from July 28 to Aug. 5.

Participating players include, from Cypress High School, Steve Clark, Robert Hook, Andrew Lara, J.J. Lovejoy, Justin Masigila, Rusty Murray, Brian Parkhill, Rosel Samala and Richard Zarate; from Kennedy High School, Shawn Benevante, Kevin and Matthew Monahan.

Other players inclduе Steve Fabela, Doug Ford, Nick Henry, Kyle Stanley and A.J. Sappi.

They will be competing with teams from all over the nation for this title for 17-year-old players.

Many of the players have been playing tournament ball together for five years.

Team Needs Uniforms

The Cypress High School Girls Basketball Program is trying to purchase new uniforms and warm-up outfits for the upcoming 2000-2001 basketball season.

Donations of $100 are rewarded with recognition in the annual program; $500 donators will receive a complimentary team photo, a half-page recognition in the program and two complimentary admissions to all Cypress High School girls' basketball home games. For information, call (714) 746-1358 or 746-8336.

RECYCLE MOTOR OIL

Did you know that one gallon of used oil can pollute 1 million gallons of drinking water! So don't be a quack SEND IT BACK!!

THE RIGHT WAY!
- Change your oil
- Put used oil in sealable containers
- Bring to used oil collection center

THE QUACKED WAY! (THE WRONG WAY)
- Pour used oil down the storm drain
- Put used oil in the trash
- Dump oil into the ground
- Mix used oil with other products

THIS IS A FREE SERVICE TO THE PUBLIC

Olympic Teams to Compete in Los Al

By KENDRA KRAUSE
For the News-Enterprise

From June 29 to July 9, all of the world's Olympic water polo teams will be in Los Alamitos at the Water Polo National Aquatic Center on the Joint Forces Training Base, competing in two tournaments.

The men's Olympic team will engage in a fierce competition for the UPS Cup, from June 27 to July 2.

The women's teams will face, each other from July 4 to 9 for the Holiday Cup.

The opportunity to witness these competitions is one that, simply put, should not be passed up; it means watching Olympic athletes who are representing America.

"This is a great opportunity to test us, to see where we are as far as world water polo," said John Vargas, head coach of the men's team.

He recounted the medals that the team has won in recent Olympic years, also mentioning that the last gold medal came home in 1904.

He sees a great opportunity to bring one home this year.

According to the women's team captain, Julie Swail, "This is the last chance for the Olympic teams to get a look at one another."

It's a definite precursor to the Olympic games, especially since the six teams playing in this event are the same teams playing in Australia.

It's also just an amazing way to spend an evening.

The teams see a golden opportunity to educate the community about water polo, as well as garner some "home town support," which they may lack in Australia.

"The more people we can get, the better, to show what water polo is; it's good to have fans, especially when you're at home, but mostly we would like to teach people about water polo," said player Heather Petri.

Maureen O'Toole, who has seen six World Championships and who will retire after Sydney, sees the importance of fan support.

"When you play in Italy, the fans just go off, and the place is packed. We're proud to be at home and representing our country, and having a crowd would be helpful. We don't get to play at home very often," O'Toole said.

Fanna Fugua, not a member of the team but spending the summer practicing with them, has a unique view of the teams.

"Everyone knows what they want, and they pull themselves together for a common goal. They're all role models," she said.

And maybe that in itself is a valid reason to attend; good role models are sometimes hard to find.

So grab the youngsters and watch a game. For information, call (562) 430-1071.

Team USA Tournament Schedule

All games at 11200 Lexington Drive, off Farquhar in Los Alamitos.

Date	Opponent	Time
Men's UPS Cup		
Thursday, June 29	vs. Australia	8:30 p.m.
Wednesday, June 28	vs. Canada	8:30 p.m.
Thursday, June 29	vs. USA	8:30 p.m.
Friday, June 30	vs. Yugoslavia	8:30 p.m.
Saturday, July 1	vs. Italy	1:30 p.m.
Sunday, July 2	FINALS	12 or 3 p.m.
Women's Holiday Cup		
Tuesday, July 4	vs. Canada	7:00 p.m.
Wednesday, July 5	vs. Australia	8:30 p.m.
Thursday, July 6	vs. France	8:30 p.m.
Friday, July 7	vs. Kazakhstan	8:30 p.m.
Saturday, July 8	vs. Netherlands	3:30 p.m.
Sunday, July 9	FINALS	4 or 5 p.m.

Tickets:
$10 adults; $6 students with ID
Finals:
$12 adults; $8 students

U.S. Women's Olympic Water Polo team members, (from left) Brenda Villa, Courtney Johnson and Julie Swail, discuss the upcoming pre-Olympic tournaments to be held at the Joint Forces Training Base in Los Alamitos.

Australia Trip Proves Costly

The U.S Women's water polo national team returned home on June 18 from a productive two weeks of training in Australia, but two-meter defender Robin Beauregard injured her knee prior to the team's final match with the Aussies on Thursday, June 15.

Having played three test matches with the Aussies in Sydney, drawing two losses and a tie in the process, the U.S. was eager to cap off its trip in winning fashion. That opportunity came on Thursday night, June 15, in Kawana on Australia's Sunshine Coast.

The U.S. joined their hosts in an Olympic torch relay that night, with team members perched atop Harley Davidson motorcycles. The fanfare in the streets, however, would give way to the fourth contest in a week's time between the U.S. and Australia.

Unfortunately, it was a game marred by rain, shot clock problems and freak injuries. When the storm had calmed, the sunshine saw Australia coming out on top, 5-4.

The team's arrival at the pool was less than pleasant. As the team was walking across the rain-soaked pool deck, Beauregard slipped awkwardly, injuring her knee.

The U.S. misfortune snowballed after the game's first sprint, with the Aussies drawing first blood.

"Individually, we had some great performances," said USA coach Guy Baker. "Notably, Nicolle Payne in goal, Brenda Villa from the outside, and Ellen Estes and Gubba Sheehy out of set."

It is uncertain when Beauregard will be able to return.

The team will make its Holiday Cup debut at 7 p.m. on July 4 against Canada, which will be followed by a fireworks spectacular.

For information, visit www.holidaycup.com.

Tips to Keep Our Oceans Clea

Recent incidents of beaches being closed due to polluted waters should b concern to all of us. Not only do our beaches provide a recreational are southern California residents, they also serve as the home for marine Protecting our coastal waters begins with you.

To help protect our ocean waters, we need to eliminate the source pollution which enter the ocean via catch basins and storm drains. The phr "NO DUMPING - DRAINS TO OCEAN", which is stenciled on city cc basins, means just that - whatever enters goes directly to the ocean. paper cup or grass clippings you thought about tossing in the catch basin end up at the beach and will not be removed at a treatment facility as m people believe.

You can help keep our oceans clean by practicing the following:

- Place all litter in a trash receptacle. Do not throw trash on the grou because it could eventually end up in a catch basin and, subsequently, ocean.
- Follow manufacturer's instructions while applying fertilizers, herbicides, pesticides at your home. Excessive use may cause the material to run your lawn and into the gutter.
- If your automobile is leaking oil, have it repaired. Oil on the driveway street will enter the storm drain system with irrigation water or during rai weather.
- Be sure to pick up after your pets while taking them for walks around th neighborhood.
- Prevent construction materials, such as concrete, plaster, or paint, fror entering the storm drain system by using appropriate containment barrie when working with these materials.

For additional water quality information, please call the Department of Publi Works at (714) 229-6740. Remember, it is up to you to make sure that ou ocean waters remain safe for future generations.

Recycling In Cypress

When it comes to recycling, Cypress is right on track. Recycling has be[illegible] alive and well in the City for years. In 1989, the California S[illegible] Legislature passed recycling legislation that required every city a[illegible] county in California to divert 25% of its trash from landfills by 1995 and 50% by the year 2000. Cypress can proudly say that by 1995 the City had surpassed the State's year 2000 goal by diverting 63% of its trash from nearby landfills. To continue on this great endeavor of protecting the environment, here are some recycling tips:

- Shop carefully and buy only what you need. All too often we purchase products that we don't really need and end up never using.
- Don't use a bag if you're buying only one item or if you will be consuming or using the item as soon as you leave the store.
- Buy non-perishable products in large quantities or in bulk. One large container creates less garbage than several smaller ones.
- Reduce the amount of junk mail you receive.
- Use reusable containers with lids instead of aluminum foil, plastic bags, or plastic wrap.
- Say "NO" to items you're not going to use. If you don't need napkins, straws, plastic utensils or condiments, leave them behind at the restaurant or store.
- Buy appropriately packaged products. Packaging represents about 30% of all our waste, and much of the packaging isn't even needed to protect the product.

Recycling and reducing the amount of waste your household generates helps the environment and saves a variety of resources, including energy, water, minerals and trees. It also helps reduce pollution. Finally, by recycling you are helping the City continue to meet a state mandate [illegible] reduce waste.

Recycling in 2000

A special "Thank You" goes out to all Cypress residents for their participation in the City's curbside recycling program. Your outstanding participation resulted in less trash generated which means less trash hauled to the landfills. This is significant because it means that our local landfills will not reach capacity as early as originally predicted in the late 1980's and the City met the State requirement of diverting 25% of the waste stream away from the landfill. Recycling really does work!

The year 2000 is important for the City of Cypress as this is the year when the State required diversion of 50% must be met by all California cities and counties. Cypress residents are encouraged to continue practicing the three "R"s - Reduce, Reuse and Recycle - so that we can meet this goal. Only with your support can we meet these requirements.

To further demonstrate the benefits of recycling, here are some recycling facts:

- Recycling aluminum results in 95% less air pollution and 97% less water pollution than producing aluminum from natural resources.
- We save over a ton of resources for every ton of glass recycled - 1,330 lbs. of sand, 433 lbs. of soda ash, 433 lbs. of limestone and 151 lbs. of feldspar.
- If the Pilgrims had six-packs, we'd still have the plastic rings from them today. The long decomposition period of material such as plastic makes it even more important to recycle.

Recycling - it not only benefits you - it benefits all of us.

Prevent Water Pollution While Making Home Improvements

With summer right around the corner, many Cypress residents are thinking about making improvements to their homes to improve their appearance and property values. While making these improvements, keep in mind that the construction activity which takes place on your property can have a significant impact on water quality.

If your home improvements include things such as installation of a concrete driveway or walkway, brick wall or planter, re-stuccoing or painting the outside of your home, or even re-plastering your swimming pool, please be sure that you, or the contractor hired to do the work, take all the necessary steps to make sure that debris does not go into the gutter. Often times the City receives reports of discharges, such as concrete or plaster, which originated from a home improvement project, flowing down the gutter and into the storm drain. This debris can build up in a catch basin and damage the storm drain system. More importantly, it eventually flows into the ocean and poses a threat to water quality and sea life.

If you or your contractor are identified as the contributor to this illegal discharge, you will be required to clean up the impacted area and could be subject to a fine. This is why it is so important to prevent any debris resulting from home improvement projects from going into the gutter. Make sure that all debris gets properly disposed of in a trash container so we can protect the storm drain system and our coastal waters. We all like to make our homes look nice. Let's also do our part to make our oceans look nice too.

To obtain a brochure about the best management practices for home improvement projects, call the Department of Public Works at (714) 229-6740.

Lincoln Avenue Scheduled For Facelift

On September 28, 1998, the Cypress City Council approved the $4.3 million Lincoln Avenue Streetscape Project which includes construction of aesthetic improvements to the Lincoln Avenue Bridge across the Coyote Creek. Construction on this project began in October 1998 and is estimated to be completed in July 1999.

The construction of entrance monuments at the Lincoln Avenue bridge is only part of the major improvements scheduled for this street. Other improvements will include new roadway surface treatments, bridge and ornamental street lighting, landscape treatments at both ends of the bridge and parkway planter extensions located at major intersections. Also included is planting of several new street trees in conjunction with the reconstruction and relandscaping of medians. Finally, new storm drains and asphalt are planned for this major thoroughfare. All scheduled construction will occur between Valley View Street and Bloomfield Avenue.

The streetscape improvements to Lincoln Avenue are a major component of the Rediscover Lincoln Project. This is a multifaceted effort to revitalize the Lincoln Avenue corridor. Recognizing that a facelift is not enough, the City Council is working in partnership with the community to consider implementing land use and design standards for private development on Lincoln Avenue, including strategies for stimulating economic development.

1998 Business Appreciation Breakfast

On October 6, 1998, the Cypress City Council held its annual Business Appreciation Breakfast. This event was hosted in the Cypress Ballroom at the Courtyard Marriott. Approximately 50 business leaders attended representing many of the City's major corporations. The purpose of the breakfast is to recognize the efforts of the business community in preserving and promoting a stable tax base and healthy local economy for the City of Cypress.

The Mayor highlighted some of the major economic development activities which took place in the past year. During this time Home Depot, OfficeMax, Sizzlers and IHOP all opened their doors for business. Joining the roster of business park tenants were companies such as TDK, Johnson Controls, G-Tech and the Exhibit Group/Giltspur. Homestead Village arrived to service the growing demand for additional hotel rooms. In summary, a total of over one million square feet of new commercial, office and warehouse industrial space was approved during the past year, valued at over 30 million dollars.

The Mayor concluded by saying that the City is an active partner for economic development. By working in partnership with the business community, the City can continue to provide the high quality of life which has become the calling card for the City of Cypress.

Protecting Our Beaches and Environment

Guess where pollutants go when they are poured into the gutter or find their way into the storm drain? You guessed it, straight to the ocean. Although our community has no ocean-front property, the City of Cypress is only seven miles from the nearest beach.

The City of Cypress has a great record of recycling and properly disposing of hazardous materials. Protecting the environment for current and future generations is of utmost concern to the city. But, like most cities, Cypress has two drainage systems: sewers and storm drains. The storm drain system was designed to prevent flooding by carrying excess rainwater from our city streets to the ocean. Unlike the sewer system, the storm drain system contains no filters. So where the storm drains keep us safe from flooding, they can also serve the unintended and unfortunate function of carrying urban pollution straight to the ocean.

The most hazardous conditions arise when rain is mixed with industrial or household water containing pollutants, creating dangerous runoff pollution. These pollutants can include oil and other automotive fluids, paint and construction debris, yard fertilizers, pesticides and pet wastes.

Each day polluted urban runoff enters the ocean untreated, leaving toxic chemicals in our surf and trash on our beaches. Urban runoff pollution contaminates the ocean, closes beaches, harms aquatic life and increases the risk of inland flooding by clogging gutters and catch basins.

This can be a serious problem, but there are manageable solutions. If hazardous materials from the workplace, garage, or home are handled, stored and disposed of properly, pollution can be reduced dramatically. To do your part in protecting the environmental well-being of our city and nearby oceans, please follow these easy guidelines:

- Take cleaners, paints, thinners, automotive fluids and pesticides to a Hazardous Materials Collection Center. For locations and operating hours call the Household Hazardous Waste Hotline at (714)834-6752.
- Never clean brushes or rinse paint containers into a street, gutter or storm drain.
- Use organic or non-toxic fertilizers and pesticides and avoid dispensing them near ditches, gutters and storm drains.

Working together we can insure a beautiful clean future. For more information or a brochure on urban runoff pollution, please call the **Cypress Public Works Department at (714)229-6740.**

West-Comm Celebrates A Successful First Year

On October 1, 1998, West-Comm, the consolidated police communications center formed by the cities of Cypress, Los Alamitos and Seal Beach celebrated its first year of operation. The center was established as a three-city joint venture to provide state of the art public safety communications and cost savings.

In the first year of operation, West-Comm received 19,000 9-1-1 calls, 81,000 requests for service and handled an average of 163 incidents per day. West-Comm's first year in operation is considered a success and is well on its way to saving the three cities an estimated $500,000 during its first five years of operations.

REPRESENTATIVE PUBLIC EDUCATION MATERIALS

CITY OF DANA POINT

Recycle Now There's A Future For Us

Recycling News

October 1, 1999 Volume VII, No. 4

KEEP RECYCLING WORKING - AMERICA RECYCLES

On November 13, California cities will have the opportunity to participate in the second annual America Recycles Day - a national campaign designed specifically to reinforce public support of recycling. Your City, the County of Orange and SOLAG Disposal would like to "Keep Recycling Working." You can help by remembering to reduce, reuse, recycle and compost your waste, but most importantly... purchase products that contain recycled materials. By working together we can preserve our planet, promote a healthier environment and secure the future of recycling.

SPECIAL GIVEAWAY

To celebrate America Recycles Day, on Saturday, November 13 from 8:00 a.m. to 12:00 p.m. Tierra Verde Industries, a green waste recycling facility located in San Juan Capistrano, has offered to donate compost for use in your yard. Bring a shovel and a large container/bag to Federal Doc Loading, located on Alicia Parkway between Avila and Aliso Creek Road in the City of Laguna Niguel to collect the free compost material.

FIND A NEW USE FOR AN OLD ITEM

Have an old bike that needs fixing or a chair that is missing a leg? Or how about some other large item that needs some minor repairs? Before you throw that item away, why not give it to someone who could put it to good use? There are many organization such as Goodwill Industries, Children's Hospital of Orange County (CHOC) and the Salvation Army that make it their business to bring new life to older, reusable items. In the spirit of goodwill and less waste, SOLAG Disposal, Inc. together with your City encourage you to contact these organizations before you throw a reusable item in the trash. For telephone numbers to these or other non-profit organizations, please look in the yellow pages under "Thrift Shops," or you may contact Solag Disposal for more information. Also remember that your contribution may be tax deductible.

ENVIRONMENTAL AWARDS

The Cities of Dana Point, Laguna Niguel, San Clemente, San Juan Capistrano and the County of Orange would like to recognize the following businesses for their outstanding efforts to reduce waste and recycle in their community:

Doubletree Guest Suites, Dana Point • Flex Foot, Inc. • Trade Winds Motel
Unichem Industries, Inc. • Tall Mouse Arts & Crafts, Inc. • Auto Care
Launderland • Mission Yamaha, Inc. • Saturn of San Juan Capistrano

Each of these businesses are being recognized by their respective cities for their dedication to help keep our environment clean and their commitment to recycling and source reduction.

TRASH FRIENDLY WEBSITES

www.choose2reuse.org - This website will give you valuable information and on-line resources to help in your efforts to re-use everyday items.

Solag Disposal - www.solag.com
County of Orange - www.oc.ca.gov/iwmd/
City of Laguna Hills - www.ci.laguna-hills.ca.us/

Holiday Collection Schedule

We will not pick-up on these holidays:
New Years • Memorial Day • Independence Day • Labor Day • Thanksgiving Day • Christmas Day
However, trash collection will resume one day later.

IS YOUR TRASH WEIGHING YOU DOWN?

Items that are too large to fit in your container are considered bulky-items. As a customer of SOLAG Disposal you are entitled to two bulky-item pick-ups per calendar year, at no extra charge. Almost anything that can be managed by a two-person crew will be picked up as a bulky-item. This includes old furniture, appliances, carpet, mattresses, water heaters, etc. Loose items need to be bagged or bundled, and no liquids or drums of any kind will be accepted. Before you put out large items to be landfilled, consider donating these items to a non-profit organization. If you would like more information about bulky-item pick-ups or non-profit organizations willing to pick-up your reusable items, please contact one of the customer service representatives at (949) 240-0446, Ext. 1.

Dana Point tackles runoff in storm drains

■ The city is testing different filters to catch pollution. It hopes to set an example for other municipalities.

Eric C Sanitate
OUR TIMES

DANA POINT—The city is testing two types of storm drain filters as part of an urban runoff prevention program that water quality officials hope will spawn imitators in other Orange County coastal cities.

The filtration systems have been installed in 21 of the city's 300 catch basins and storm drain inlets. The city will monitor their effectiveness for several months before deciding whether to expand the program or purchase more of the filters.

"One of the things that we as an agency set out to do is clean up [pollution] into the creeks and streams and ocean," Robert Warren, public works director, said. "If we take a proactive stance and help shame our upstream neighboring cities to do something similar — then it's going to do a whole lot of good."

The city installed large, metal mesh baskets called DrainPacs in six storm drains near San Juan Creek, Salt Creek and Dana Point Harbor late last year. The baskets run the length of the drain to catch trash and debris that would otherwise wash into the ocean.

The DrainPacs were chosen because they were relatively inexpensive and easy to maintain, Warren said. The filters cost about $1,600 to install and will cost about $700 a year in upkeep.

Warren said the city will analyze the pollutants collected from the DrainPacs during routine maintenance and determine what sort of particles are being filtered out of the water.

"If they work well, we may buy a few more this next summer," Warren said. "How many more of those depends on how well they work."

South Coast Water District General Manager Michael Dunbar said the program could prove useful to other coastal cities that may look at Dana Point's field tests before implementing urban runoff prevention programs.

"I think it's an excellent way to look at two different techniques and kind of do a comparison test," Dunbar said. "That data can be used by other cities and agencies when looking at installing similar systems."

The city is also testing a more elaborate filter, similar to those found in swimming pools, to remove petroleum and other fluid pollutants from the runoff in 15 catch basins.

Those devices, called Fossil Filters, use highly absorbent material to soak up oil and grease while allowing water to pass through. The filters are housed in a structure that captures solid particles as well.

Because these filters are relatively new, the city has not determined the maintenance costs, Warren said.

Proper maintenance will be the key to the program's success, said Monica Mazur, spokeswoman for the Orange County Health Care Agency.

Although she applauded the city's efforts, Mazur warned that the filters could actually create problems around storm drains if they aren't cleaned regularly.

"They need to be maintained properly so they don't cause other problems, such as odors," she said.

Warren said every inlet in the city could feature some type of filtration device within the next five years if the filters being tested get city approval.

"We're in the process of trying to discover what products there are and which work best," he said. "Anything we can do is to our own benefit, particularly since we're at the end of the stream. We're the recipients of everyone else's waste."

JOIN us on TRASH AWARENESS DAY to make OUR neighborhood a cleaner place to live!

July 10, 1999

On Saturday, July 10th, we will be coming together as a neighborhood to clean up our streets and yards. A dumpster will be available for you to dump at the following site:

The red house on the corner of Violet Lantern and La Cresta.

Come join us on Saturday. The trash dumpster will be manned from 8am to 2pm. Trash bags will be provided at the dumpster site. If you can help for an hour or all day, please call 460-8108. This event is being sponsored by Lantern Village Association, Dana Point City, and Solag.

City News

GREEN WASTE COLLECTION PROGRAM

On November 4, 1996, Solag Disposal in cooperation with the City of Dana Point implemented Phase I of the Curbside Green Waste Collection Program. Residential subscribers may place green waste generated from their residence at the curb using any of the following methods: standard trash containers (up to 35 gallon), plastic bags or bundled trimmings/branches (not to exceed 2 ft., by 4 ft.). The maximum weight of the containers should not exceed the physical strength of the plastic bag or be over 50 pounds. This program is voluntary and there is not an additional fee for this service. Recycling green waste will assist Dana Point towards the 50% State mandated recycling goal by the year 2000.

Phase II of the program which encompasses all the private/gated communities was implemented May 1997. Solag must have the homeowner association's permission to bring a third truck on private streets. If you live in a private/gated community and would like to participate in the green waste collection program, request that your homeowners association call Solag.

Here is a list of green waste material, which will be collected:

- **Grass Clippings**
- **Wood Scraps**
- **Branches (not to exceed 4" in diameter and 4' in length)**
- **Leaves**
- **Weeds**
- **Plant Materials**
- **Garden Trimmings**

If you have any questions regarding the Green Waste Collection Program or would like to know if your area is included in the program, call Solag at **(949) 240-0446.**

STREET LIGHT REPAIRS

San Diego Gas & Electric (SDG&E) own and maintains the City's streetlights located within the public right-of-way. SDG&E has been providing this service since the City incorporated in 1989.

If you find a street light that is out, flickering or continuously on (day and night) you should either call SDG&E directly at 1-800-411-7343, or call Francisco Sanchez, City of Dana Point Public Works Department at (949) 248-3509. If you call the City we will log your call and notify SDG&E of the problem. When you call either number please leave the following information.

1. Approximate address of street light
2. Your name
3. Your phone number
4. Nature of the problem

This information will help to properly locate the troubled light and will help us to follow up to be sure the light has been repaired. Repairs are usually completed within a week, barring unforeseen circumstances such as inclement weather and local emergencies.

In case of an emergency, such as a light being damaged by a traffic accident, you should call 1-800-411-7343. This number can also be called for damaged electrical wires and utility poles.

NEIGHBORHOOD WATCHERS FALL OFF

Crime is down and so is the number of block captains for Dana Point's Neighborhood Watch program.

"Everyone is becoming complacent," said Scotty Smith, who as a member of Volunteers In Police Services spearheaded the program's growth over the past five years.

According to Smith and VIPS Program Director Peggy Nunes, the total Neighborhood Watch block captains fell in the last quarter of 1998 from a one-time high of 175 to 100.

"People get burned out and they want someone else to take over the job," Smith said. "But so far, we haven't found replacements."

Smith said in addition to block captains tiring of the commitment, media reports of falling crime rates have made some people believe that the program has done its job.

"People think they can just leave their doors open now and their home unattended," Smith said. "The criminals just love that."

Lt. Paul Ratchford, Chief of Dana Point Police Services agrees that despite the fact that crime is down, the Neighborhood Watch program is a vital weapon in the war against crime.

Ratchford said much of the successful police work done over the past few years was directly related to residents acting as extra eyes and ears for the police.

In fact, the Neighborhood Watch program was created to teach people how to protect themselves from crime and how to work with the Sheriff's Department. The goal of the program is crime prevention through community involvement.

Key elements of the program are the Neighborhood Watch meetings. During these meetings, neighbors gather at a home and become acquainted with the proper procedures in reporting possible crimes.

"Neighborhood Watch is based on the theory that if you know your neighbors, and they know you, you can keep the sheriff's (deputies) alert to suspicious activity," said Smith. "Hosting a Neighborhood Watch meeting in your home is simple."

According to Smith, to arrange for a meeting, call 248-3517/3585.

The program will then supply the resident with flyers to notify neighbors of the meeting, the time and address.

A Neighborhood Watch representative and a sheriff's deputy will speak at the meeting, addressing specific concerns in the area.

"Once the neighbors have met, talking about crime prevention is easier," said Smith. "Then people feel more comfortable reporting suspicious activity to the police. And your street will feel more like a community than just a place where you live."

Smith said the program is constantly looking for volunteers and block captains. For more information call the number above.

Registration on page 35

For registration see page 35

WHAT TO DO WITH BULKY ITEMS?

A bulky item is an item that cannot fit into the blue recycling or black trash containers, such as a chair or a couch. Other bulky items include any item that can be easily handled by a two- (2) man crew and may include the following: a refrigerator, washer, dryer, table and lawn furniture.

Each residential unit is entitled to two (2) free-of-charge bulky item pick-ups per year from Solag Disposal, a maximum of four (4) items per pick up; however, additional pick-ups can be arranged at a nominal fee per pick-up. Refrigerators and freezers can also be picked up. If you are interested in a bulky item pick-up, please call one of the Solag Disposal customer service representatives at (949) 240-0446. All items must be placed at curbside on the scheduled collection day by 6:30 a.m.

HOW DO I GET TO THE HOUSEHOLD HAZARDOUS COLLECTION CENTER?

Remember it is illegal to dispose of Household Hazardous Waste (HHW) through the automated residential program. There are four HHW Collection Centers in operation throughout Orange County. To ensure proper disposal of the HHW it must be disposed of at a certified collection center. The nearest collection centers are located at the Prima Deshecha landfill in San Juan Capistrano and in the City of Irvine (see maps above).

Prima Deshecha Landfill

6411 Oak Canyon

HOUSEHOLD HAZARDOUS WASTE INCLUDES, BUT IS NOT LIMITED TO:

- Motor Oil
- Batteries
- Cleaning Products
- Wood Preservative
- Road Flares
- Pool Chemicals
- Pesticides
- Paint
- Solvents

The hours of operation are Tuesday through Saturday, 9:00 a.m. - 1:00 p.m. and closed Sundays, Mondays, holidays and rainy days. A maximum of 15 gallons or 125 lbs. of hazardous materials may be brought to the collection center per vehicle, per visit. If you need directions to the additional HHW facilities located throughout the county, please call the Orange County Integrated Waste Management information line at (714) 834-6752.

POOL WATER DISCHARGES

This notice is to explain the regulatory issues regarding the discharge of pool water and the two methods by which it may be discharged.

1. Many pools are plumbed to allow the discharge to go directly to the sanitary sewer. This is an acceptable and preferred method of disposal.
2. Where the discharge of pool water to the sanitary sewer is not feasible, federal law allows the release of dechlorinated swimming pool water. In Orange County the guidance for such releases requires pool owners to ensure that the following criteria are met:

a The residual chlorine does not exceed 0.1 mg/L (parts per million)
b The pH is between 6.5 and 8.5
c The water is free of any unusual coloration
d There is no discharge of filter media
e There is no discharge of acid cleaning wastes; and
f Any pipe connection to the storm drain system has permits from the city or county having jurisdiction

Compliance with this guidance can be verified using a pool testing kit. Excess chlorine can be removed by removing the chlorine tablets for a couple of days prior to discharge or by purchasing dechlorinating chemicals from local pool supply companies.

By ensuring compliance with these criteria, you will make a significant contribution toward keeping pollutants out of Orange County's creeks, streams, and receiving waters and help protect organisms that are sensitive to pool chemicals.

DANA POINT SUMMER CONCERT SERIES

August 15	UPSTREAM - Calypso Music
August 22	PAM LOE & HIP SHOT - Western Music
August 29	COVINA CONCERT BAND - Marches, Show Tunes and Dixieland,

SPRING CLEANING
WHAT TO DO WITH BULKY ITEMS?

Spring is almost upon us and that means it will soon be time for "spring cleaning." For those items that are too large for the automated containers, call Solvang Disposal to arrange for a "bulky-item" pick up. Almost anything that can be managed by a two-man crew will be picked up as a bulky-item. This includes old furniture, appliances, carpet, mattresses, water heaters, etc. Items such as refrigerators, washers, dryers and water heaters (or white goods for short) are sent to a metal recycler, where the hazardous material is extracted and the remaining metal is melted down and reused. All other items are delivered to the landfill for disposal. Remember, before you put out large items to be landfilled, consider donating working appliances and reusable supplies to a non-profit organization. If you would like more information about bulky-item pickups or non-profit organizations willing to pick-up your reusable items, please contact Solag Disposal at (949) 240-0446, Ext. 1.

POOL WATER DISCHARGES

This notice is to explain the regulatory issues regarding the discharge of pool water and the two methods by which it may be discharged.

1. Many pools are plumbed to allow the discharge to go directly to the sanitary sewer. This is an acceptable and preferred method of disposal.
2. Where the discharge of pool water to the sanitary sewer is not feasible, federal law allows the release of dechlorinated swimming pool water. In Orange County the guidance for such releases required pool owners to ensure that the following criteria are met.
   - **(a) The residual chlorine does not exceed 0.1 mg/L (parts per million);**
   - **(b) The pH is between 6.5 and 8.5;**
   - **(c) The water is free of any unusual coloration;**
   - **(d) There is no discharge of filter media;**
   - **(e) There is no discharge of acid cleaning wastes; and**
   - **(f) Any pipe connection to the stormdrain system has permits from the city or county having jurisdiction.**

Compliance with this guidance can be verified using a pool testing kit. Excess chlorine can be removed by removing the chlorine tablets for a couple of days prior to discharge or by purchasing dechlorinating chemicals from local pool supply companies.

By ensuring compliance with these criteria, you will make a significant contribution toward keeping pollutants out of Orange County's creeks, streams, and receiving waters and help to protect organisms that are sensitive to pool chemicals.

Recycle Now There's A Future In It!

Recycling News

July 1, 1999 Volume VII, No 3

IMPORTANT NOTICE

NO DELAY IN TRASH COLLECTION THIS JULY 4TH

This year the Fourth of July falls on a Sunday. Currently the County landfills operate Monday through Saturday so you will not experience delay in trash service. On your normal collection day, please place your trash/recyclables out at the curb for collection.

PROPER DISPOSAL OF THE AMERICAN FLAG

As we celebrate America's Independence this Fourth of July we may notice that the flags we display have become torn or tattered beyond repair. This past year the editors of Recycling News received a letter from a World War II Veteran regarding proper disposal of an American Flag.

The Orange County Veterans will forward the flags to the American Legion Post where they will be Disposed of in conformance with tradition and local laws. Please mail your old American Flags to:

ORANGE COUNTY VETERANS
SERVICE CENTER OFFICE
1300 South Grand Avenue, building B
Santa Ana, CA 92705

TIPS TO REMEMBER WHEN YOU'RE AT THE BEACH OR PARK

Did you know that our oceans provide most of the planet's oxygen, moisture and weather patterns? Every year, the Center of Marine Conservation sponsors a nationwide 3-hour beach clean-up, which has proven to be extremely effective. In 1987, in Texas alone, volunteers collected: 31,773 plastic bags; 30,295 plastic bottles; 15,631 six pack rings; 28,450 plastic lids; and 1,914 disposable diapers. And around the nation, the volunteer clean-up crew collected close to 2 million pounds of debris in just 3 hours. So next time you go to the beach or the park, remember to bring a trash bag and before you leave try to spend a few minutes picking up any litter you find. If you are interested in beach clean-up activities, please contact the Center for Marine Conservation at (202) 429-5609 or the Surfrider Foundation at (800) 743-7873.

IMPORTANT Y2K INFORMATION

By December 31, 2000 your city will need to be in compliance with the regulations set forth by state law AB 939. As you are already aware, AB 939 is the state-mandated requirement for each City throughout California to divert 50% of their waste stream away from the landfill by the Year 2000. Over the past several years the Editors of *Recycling News* have been discussing the 50% goal and the importance of reducing your waste, recycling and buying recycled products. Over the next year, your city will evaluating the programs currently in place and will review new ideas to promote the goals or the state law. Keep up the good work!!!!

Holiday Collection Schedule

We will not pick-up on these holidays:
- New Years Day - Memorial Day - Independence Day - Labor Day - Thanksgiving Day - Christmas Day
However, trash collection will resume one day later.

Unwanted Computer Parts - Help Your Community Recycle

Recently there has been a lot of talk about the year 2000 (Y2K) and the potential of imbedded computer chips disabling thousands of appliances, electronic products, etc. While the editors of ***Recycling News*** can neither confirm nor deny these reports, we would like to request our customers' help to try and locate alternatives to disposing of these items in the landfill. If you or someone you know can direct us to a non-profit organization willing to accept these items or a remanufacturer that would be interested in securing this material, please contact our office in writing.

Recycling News

January 1, 2000 Volume VIII, No 1

SEASONAL RECYCLING TIPS (Some thoughts)

During this Holiday season remember that one of the biggest gifts you can give your children is a clean environment. Here are some of the ways you can recycle and reuse holiday leftovers.

Types of things that can be recycled include:

Tin Jars	Wrapping Paper	Glass Containers	Cardboard Boxes/Packaging

Cannot be recycled:

Tinsel	Bows/Ribbons	Holiday Lights	Styrofoam Peanuts*

* = Clean Styrofoam packaging peanuts can be reused or are accepted at several packaging/delivering companies (such as Mail Boxes, Etc.), please check your local listings.

Some products may not be recyclable in our program, but that doesn't mean they should go in the trash!!! Many nonprofit organizations around the area can reuse your seasoned clothing, toys, exercise equipment, bicycles and other items. If you have any questions, please contact one of our customer service representatives at (949) 240-0446.

RECYCLING YOUR CHRISTMAS TREE IS AS EASY AS 1-2-3....

Can you believe that the Holiday Season is already behind us? Well it's time again to recycle your Christmas Trees. Depending on where you live, collection of your trees will take place on your normal collection day during a two week period shortly after Christmas or after the New Year. Just follow these three simple steps:

FIRST, please review the front of your bill for the dates of the curbside collection of your Christmas trees.

SECOND, Remove all decorations, tinsel and stands (wood or metal) from the tree before collection. If your tree is over 8feet in height, please cut the tree in half.

THIRD, Place your tree at the curb next to your container on collection day. **On trash day a separate collection vehicle will pick up your Christmas tree.**

NOTE: Flocked trees or trees with nails, stands or ornaments cannot be recycled, but will be picked up and disposed of at the landfill. Please do your part to help recycle your trees.

ITS NEVER TOO LATE TO RECYCLE OLD CHRISTMAS CARDS

For the past 20 years St. Jude's Ranch for Children has recycled holiday, birthday, get well and all other occasion cards. St. Jude's Ranch is a non-profit home for abused and homeless children located in Boulder City, Nevada. People from across the United States and around the world send used cards to the Ranch. In 1992 nearly one and a half million cards were collected. If you would like to recycle your Christmas cards, please send them to:

St. Jude's Ranch for Children
P.O. Box 60100
Boulder City, NV 89006

If sending by United Parcel Service, send to:
St. Jude's Ranch for Children
100 St. Jude Street
Boulder City, NV 89005

The Ranch requests that you send the front of cards only and please do not include cards that have writing or other markings.

TRASH FRIENDLY WEBSITES

Each quarter the editor of ***Recycling News*** will be reviewing website and e-mail addresses on the Internet that may be of interest to our readers. The sites examine ways to **reduce** waste, avenues to **reuse** unwanted materials (such as donations to non-profit organizations), lists of **recyclable** material and directions to **backyard composting**.

County of Orange - www.oc.ca.gov/iwmd/
Dana Point - www.ci.dana-point.ca.us
San Juan Capistrano - www.sanjuancapistrano.org

For a "buy-back" or "drop-off" recycling center near you contact the Department of Conservation at 1-800-RECYCLE (1-800-732-9253) or the California Integrated Waste Management Board at 1-800-253-2687.

FIND A NEW USE FOR AN OLD ITEM

Have an old bike that needs fixing or a chair that is missing a leg? Or how about some other large item that needs some minor repairs? Before you throw that item away, why not give it to someone who could put it to good use? There are many organizations such as Goodwill Industries, Children's Hospital of Orange County (CHOC) and the Salvation Army that make it their business to bring new life to older, reusable items. In the spirit of goodwill and less waste, SOLAG Disposal, Inc. together with your City encourage you to contact these organizations before you throw a reusable item in the trash. For telephone numbers to these organizations, please look in the yellow pages under "Thrift Shops." Also remember that your contribution may also be tax deductible.

April 1, 2000 Volume VIII, No. 2

EARTH DAY CELEBRATION

Come celebrate Earth Day with students and residents from the surrounding communities. On Saturday, April 22, 2000 from 8:00 a.m. to 12:00 p.m. your city together with SOLAG Disposal, Inc. will be hosting an Earth Day celebration and Children's Invention & Art Fair in the City of Laguna Niguel.

INVENTION & ART FAIR:

Bring the entire Family for a fun-filled morning including an Easter Egg Hunt (for children ages 1-12), members of the local fire department, Environmental Booths, Invention and Art Displays by local elementary students.

Hey Kids: before you throw that object in the trash, think about other things you can do with it?

Every day hundreds of items are thrown into the trash that could have served a better or more useful purpose. Your City is sponsoring an Invention and Art Fair to determine the best way to reuse old items. Can you invent something that is used around the house, in the garage or at school? How about designing an art project that can be shared with your friends and family? We want you to be creative, serious or silly. Your idea could be anything from a floor mat, a napkin holder or thousa of other inventive ideas. Most important, we want you to have fun! Each entry in the Invention Art Fair will be judged based on innovation, creativity and usefulness. The top three winners from each category (Kindergarten - Second, Third - Fourth and Fifth - Sixth) will receive an award. All children participating in the Inventions & Art Show will receive recognition in the June 2000 Issue of *Recycling News*. Once your project is complete, call Dan Batty at (949) 240-0446 to reserve a spot at Earth Day 2000. To receive a free T-shirt, you must RSVP no later than April 10, 2000.

SPECIAL GIVE-A-WAY

To celebrate Earth Day, on Saturday, April 22 from 8:00 a.m. to 12:00 p.m. Tierra Verde Industries, a green waste recycling facility located in San Juan Capistrano has offered to donate compost for use in your yard. Bring a shovel and large container or bag to the site of the Earth Day Celebration in the City of Laguna Niguel located on Golden Lantern and Camino Los Padres to collect the free compost material.

TRASH FRIENDLY WEBSITES

Each quarter the editor of ***Recycling News*** will be reviewing website and e-mail addresses on the internet that may be of interest to our readers. The sites examine: ways to reduce waste, avenues to reuse unwanted materials (such as donations to non-profit organizations), types of recyclable material and instructions for backyard composting.

Holiday Collection Schedule

We will not pick-up on these holidays:
New Years • Memorial Day • Independence Day • Labor Day • Thanksgiving Day • Christmas Day
However, trash collection will resume one day later.

EARTHY SAYS,

The beginning of the millennium is upon us and we need your help. In 1989 (eleven short years ago) all cities in the state of California were mandated to divert 50% of their waste stream away from the landfill by the end of the year 2000 (Public Resources Code 40000 et. seq., better known as AB939). Your city has one of the most progressive programs available in the state of California, however it is more important now than ever before to stop and look at what items are being placed in your trash or recycling containers.

Over the past several years the Editors of *Recycling News* have been discussing the 50% goal and the importance of reducing your waste, recycling and buying recycled products. Over the next year, your city will be re-evaluating the programs currently in place throughout your City and will review new ideas to help us achieve the state-mandated goals. If you have questions about recycling or waste reduction, there is a detailed brochure that we would be happy to send to you (in English or Spanish) that will help explain the types of material that can be recycled. Earthy says, "Keep up the good work!"

Green Waste Collection Program

A Green Waste Collection Program is in effect for single and multi-family homes with curbside collection service. Regular weekly trash collection days are not altered in each neighborhood, however, a separate truck which collects only green waste comes before the regular trash truck.

The program uses "yellow stickers" which are to be placed on regular trash barrels, or other designated containers, to identify them as containing green waste. Plastic trash bags are not acceptable for this program, as plastic is not an acceptable material that can be introduced into the composting process and workers are not able to determine if disposed green waste is on the list of 'acceptable' items.

"Yard Waste Only" stickers and Recycle Fullerton brochures are available through MG Disposal or City Hall. Contact MG Disposal's Customer Service line at 238-3300 or the Planning/Environmental Programs office at 738-6884 for information. Items are also available at the Cashier's Desk at City Hall, where water and trash bills are paid in person.

Used Oil Collection Program

The City of Fullerton, in its commitment to protecting the environment, sponsors a Used Oil Collection Program aimed at encouraging residents to recycle their used motor oil. Under the program, residents may bring used motor oil to any of the following state-certified collection centers, where it is disposed of safely and properly. In addition, center operators offer residents 16 cents per gallon of used oil collected.

EZ Lube Inc. 4002 N. Harbor Blvd. 477-1223	North County Automotive 146-B W. Wilshire Ave. 870-9936

Reduce

Even with the good job Californians are doing of recycling, the landfills are filling up fast. Fortunately, there is something positive that every resident can do. If you, and your neighbors, help reduce the amount of garbage you generate, we can help keep our disposal bills, and our number of landfills, low at the same time.

State law requires that all cities cut their amount of garbage going to landfills in half by the year 2000. And that law is why we encourage you to reduce and reuse, then recycle and buy recycled. The fact is, over 75% of what we throw away can be reduced, reused or recycled. And it's easier than you think.

You can significantly reduce your garbage by selecting products with the least amount of packaging, buying items in bulk, and buying products that can be used over and over again.

Reuse

Learning to reuse is easy and after a little practice, it will become second nature. Here are some great ways to reuse our precious resources.

Reuse shopping bags or buy canvas bags and use them when you shop. Buy durable high quality goods for a longer life outside the landfill. Although durable goods may cost a little more at first, they will save you money and help save the environment in the long run.

Before throwing anything away, think about how each item can be reused. Donate clothing, furniture, and appliances to charity. Hospitals and nursing homes often accept old magazines and schools reuse many items in their art and theater classes. Almost all glass, plastic, and metal containers can be reused for storage in the kitchen or garage. Think before you toss.

Recycle

Recycling means collecting, processing, marketing, and ultimately using materials that were once discarded. For example, this morning's newspaper can be recycled into insulation, packing material, wrapping paper, and more newspaper. Plastic soda and milk jugs are recycled into lumber that is used for making durable playground equipment and park benches.

Many different materials can be recycled. Among these are aluminum cans, glass bottles and jars, plastics, tin cans, steel cans, brass, copper, car batteries, computer paper, office paper, corrugated cardboard, motor o[illegible] rap iron and steel, and tires.

Recycle Fullerton

The City does not have a "curbside" recycling program - where separate bins for recyclables are used. However, the City has chosen to implement a program known as ***"murfing"***, which involves processing of the waste stream at a Materials Recovery Facility (MRF) ***AFTER*** being picked up by our refuse company, MG Disposal.

At the MRF, items which are placed in the trash and which can be recycled are placed on a conveyer belt and processed by CVT Recycling. The City feels that sorting the trash this way makes sure that recyclable materials are retrieved and not taken to the landfills along with the regular trash.

There are some guidelines that residents and businesses should follow in order to assist the MRF in retrieving recyclable items from the waste stream. First of all, make sure all *non-recyclable* items are bagged tightly before being placed in your waste containers. All ***recyclable*** items should then be placed loosely in your containers and prepare as follows: wipe or lightly rinse all cans and make sure they are dry, fold newspapers into brown paper bags or bundle with string into one foot stacks, break down corrugated cardboard boxes, rinse plastic and glass containers and remove metal or plastic rims and lids. (If plastic is recyclable, it will [illegible]ve a number on the bottom of the c[illegible]ainer.)

Construction and Demolition Debris Facilities

Introduction...

The City of Fullerton takes a unique approach to waste disposal with ***Recycle Fullerton***, an innovative program that recovers recyclables from the waste stream and includes a separate yard waste program. In a joint effort by the City and MG Disposal, ***Recycle Fullerton*** is designed to reduce the volume of waste dumped in our local landfills and to conserve our natural resources.

By participating in ***Recycle Fullerton***, residents have the chance to significantly help decrease the amount of trash buried in local landfills and to help the City comply with the state's strict recycling laws. According to Assembly Bill 939, each city must reduce their waste by 50 percent by the year 2000. The ***Recycle Fullerton*** program allows the City to recycle many types and greater quantities of recyclable items and yard waste, instead of dumping it in the landfill. Recycling allows us to conserve our country's natural resources by providing alternative sources for aluminum, paper, glass, plastics and other recyclable items.

How It Works...

The ***Recycle Fullerton*** program was designed with you in mind and requires very little extra effort. The waste generated from residents and businesses is taken to the CVT Material Recovery Facility in Anaheim. There the waste travels through a system of conveyor belts, magnets and sifting devices and the recovered recyclable material is then manually sorted and bundled into bales for shipping.

The separated yard waste is collected from containers marked by the resident with "yard waste only" stickers. MG Disposal sends separate trucks to collect only yard waste. The yard waste is taken to the CVT Material Recovery Facility and prepared for compost, mulch or a variety of other uses. For your added convenience, regular household trash and yard waste will be collected on the same day each week.

To make ***Recycle Fullerton*** a success, please follow the guidelines outlined within this booklet and adopt the new disposal practices. Your participation and support of ***Recycle Fullerton*** is a big step towards solving our waste problems now and into the future. *Recycling... it works because of you!*

Bulky Item Collection

To aid in the disposal of large, bulky items such as furniture, stoves, and water heaters, MG Disposal provides a FREE bulky item pick up service. These special collections are provided on the same day of regular collection service. To inform MG Disposal of a bulky item pick up, call our Customer Service Department at (714) 238-3300. Please be prepared to list the items you need picked up. (A $31.00 charge is added for pick up of air conditioners and refrigerators due to special handling requirements of freon.)

Temporary Rental Bins

MG Disposal offers clean up solutions for the house, garage, or yard. Residents can rent bins in a variety of sizes on a daily, weekly, or monthly basis for a fee. Prompt delivery and pick up are available on a scheduled basis. For more information call MG Disposal's Customer Service Department at (714) 238-3300.

Household Hazardous Waste

Do your part to protect the environment. Dispose of old paint, pesticides, used motor oil, and household chemicals properly at a designated facility. Orange County residents can take "household hazardous waste" to a County Household Hazardous Waste Collection Center at 1071 N. Blue Gum St. in Anaheim. To locate additional FREE Collection Centers closest to you or for information call **(714) 834-6752.** To dispose only of used motor oil call the City's Used Oil Collection Program Hotline at **(714) 871-4OIL.**

1. What type of containers must be used?

Residents will use their own selected containers for trash and yard waste collection. Containers must not exceed a 40 gallon capacity. Residents should designate yard waste containers with the special "yard waste only" stickers provided by MG Disposal. Yard waste stickers should face the street where they are visible to the collection crew.

2. What should I do if I don't have enough trash containers for my trash?

MG Disposal will pick up an unlimited amount of trash left in household trash containers or tied plastic trash bags. If at times you have less yard waste and more trash, simply place the extra trash in your yard waste container with the sticker facing away from the street, so that it is not visible to the collection crew.

3. What should I do if I don't have enough yard waste stickers for my containers?

If you fill your yard waste containers and still have more yard waste, you should use additional containers. Group the containers with yard waste away from your regular trash. Place containers with yard waste stickers facing the street so that the stickers are visible to the collection crew. Yard waste cannot be collected if it is placed in plastic bags.

4. What should I do on collection day?

Place your containers in the street at curbside, near the corner of your driveway. All containers must be at curbside or alley by 7 AM or earlier on your collection day. Also, please check your containers before removing them from the curb, as the yard waste containers will be emptied by a separate truck.

Basura recicable

Estos pasos sensillos asistarán el recogimiento y el proceso de reciclables. Por favor úse estos pasos cuando tira su basura:

- **Periódico** — Coloquelos en una bolsa abierta en su recipiente de basura.

- **Papél mezclado/ cartón** — Coloquelos en una bolsa abierta o sueltos en su recipiente de basura.
- **Jarros de vídrio** — Tienen que estar vacío. No tiene que quitar los sellos.

- **Botes de aluminio** — Tiene que estar vacío. No tiene que estar aplastado.
- **Plástico** — Recipientes transparentes o de color de plástico tienen que estar vacíos.

- **Metál** — Recipientes y botes de metál tienen que estar vacíos. No tiene que quitar los sellos.

Basura que no puede ser reciclada

Estos artículos deberían de ser puestos en bolsas cellados ántes de colocarlos en los recipientes de basura.

- Desechos de baño

- Desechos de camas de gatos
- Desechos de alimentos

- Pañales desechables
- Ropa

- Papél de cera
- Jugetes de plástico

Desechos de Yarda

007466

Coloque las etiquetas engomadas que dicen "Yard Waste Only" en los recipientes que va usar para los desechos de yarda. Los desechos de yarda deberían estar sueltos en los recipientes designados para desechos de yarda. No se ponen en bolsas de plástico.

Desechos de yarda aceptable

- Zacate y hojas (suelto, no en bolsas)
- Ramas podadas y maleza
- Retoños y ramas pequeñas (Pueden ponerse en bulto, no mas de 4 pies o menos de largo y no exceder 16 pulgadas de diámetro.)

Desechos de yarda no aceptable

- Desechos de animales y de alimentos
- Residuos de construcción
- Tierra y piedras
- Hojas de palma
- Bolsas plásticas

Importante Puntos Claves - Desechos de Patios y Jardines

- Se consideran desechos de Patios y Jardines solamente la vegetación que crece en ellos (desecho "verde").
- Recorte las ramas podadas para ampliar la capacidad del recipiente.
- NO empaque el desecho de patios y jardines en bolsas plásticas de basura. Coloque una hoja de papel periódico en el fondo del recipiente, evitando así que el zacate se adhiera a éste.

¿Porqué Reciclar?...

El residente americano desecha un promedio de 4 1/2 libras de basura al día. Anteriormente, la mayor parte de esta basura era enterrada en terrenos de relleno. Hoy en día, esos terrenos se están llenando demasiado rápido. El reciclar es uno de los métodos más fáciles para reducir la cantidad de desechos destinados a los terrenos de relleno. A su vez, el reciclar ayuda a estabilizar las tarifas de colección de basura, pues controla el volúmen de desechos depositados en terrenos de desechos.

REPRESENTATIVE PUBLIC EDUCATION MATERIALS

CITY OF GARDEN GROVE

One person's trash could be another person's treasure! The next time you have clothes, furniture, or other household items to get rid of, give them to a thrift store rather than sending them to the landfill. By fostering the reuse of products, you help save resources and valuable landfill space, while providing inexpensive goods to people who want them. Some thrift stores even offer free collection service. In addition, circulars such as the Pennysaver, (800) 995-3333 and the Recycler, (714) 449-2900, offer free listings of services for private parties with merchandise under a certain value to sell (usually about $100).

This **Thrift Store Directory** is a public service, and is not an endorsement of stores by the City of Garden Grove or its departments.

This list of thrift stores will be up dated periodically. Please keep us informed of thrift stores that are not listed and would like to be included.

NATURE'S WAY TO RECYCLE

VOLUME 10 AN ANNUAL RECYCLING NEWSLETTER FOR CITY OF GARDEN GROVE SANITARY DISTRICT RESIDENTS WINTER 1999

Residents Approach 2000 with Recycling Success

Residents of Garden Grove Sanitary District approach the new Millennium with recycling success. In 1999, your efforts helped the City of Garden Grove Sanitary District recycle over 31,972,272 pounds of recyclable material.

As we draw near the turn of the century, we meet recycling challenges set by the state of California with great success. In 1989, Assembly Bill 939 mandated each city to reduce their amount of waste by 50 percent by the year 2000. By participating in ***Recycle Garden Grove Sanitary District***, the city is poised to smoothly meet the state's challenge. But we should not stop there. With or without state mandated laws, the Earth's resources are still precious and landfill space is still limited. What can we do in addition to recycling to make our community healthier? We can take the next step in preserving our environment: we can focus on reuse.

Reuse vs. Recycle

There are subtle but important differences between reuse and recycle. Recycling means taking a product, such as a aluminum can, deconstructing it, and using the materials to remanufacture something new. Although this is greatly preferred over starting from scratch, it is clear that if you don't have to spend the time, energy, or resources deconstructing and remanufacturing a product, you are saving resources.

Reuse is the process of taking idle goods and materials and reemploying them in a manner that does not require altering their original form. Reuse can also mean just reusing something over and over again. Popular examples of reusable goods include cloth shopping bags; plastic insulated coffee mugs and eraser boards.

The Benefits of Reuse

The benefits of reuse are as plentiful as the diversity of reuse options. By reusing items instead of disposing of them, we are saving landfill space. But equally important, there is no need to spend energy or raw materials to manufacture new items. Reuse not only saves resources, but also puts materials into the hands of those in need like schools, community organizations, and businesses. Reuse allows us to save money and contribute to our community.

Recycling ... it works because of you!

AT WORK:

- Use both sides of paper
- Donate unneeded clothes and toiletries
- Donate used magazines, journals and publications
- Sell or donate old furniture
- Bring your lunch in a reusable container

IN THE COMMUNITY:

- Shop at thrift stores
- Support local yard sales
- Coordinate a community rummage sale

Q & A

Q. What should I do if one of my containers gets damaged?

A. If your container is damaged, contact our Customer Service Department at 238-2444. Damaged containers will be repaired or replaced at no charge, unless the damage is due to negligence or abuse.

Q. If I have service questions, whom do I call?

A. For questions regarding your service, call our Customer Service Department at 238-2444. We are open Monday - Friday from 7:00 a.m. - 5:30 p.m., and Saturday, for phone calls only, from 7:00 a.m. to 3:00 p.m.

Q. How do I dispose of household hazardous waste?

A. The County of Orange operates a FREE household hazardous waste collection center at 1071 N. Blue Gum Street in Anaheim. Call the H.H.W. hotline for days and hours: (714) 834-6752.

Q. I have a hard time maneuvering my trash containers, can I get a smaller one(s)?

A. If it is difficult for you to maneuver your containers as a result of a physical disability or if you are a senior citizen, you may call our Customer Service Department at 238-2444 to arrange for assistance.

GRASSCYCLING
Simply a Terrific Idea

It seemed like a good idea at the time: attaching a grass catcher to your mower. But, as it turns out, leaving those clippings over the lawn is actually better for the lawn, the environment and you. For starters, it returns valuable nutrients back to the soil. Grass consists of 80-85 percent water, so essentially you get an irrigating effect too. Grasscycling conserves water and limited landfill space as well.

More good news. Grasscycling hands you a nifty refund in the form of time and money. It will take you less time to mow the lawn if you leave the clippings on the grass. Plus, with the nutrient benefits of the grass clippings, you'll spend less money on fertilizer and water.

So now that you are more familiar with the benefits of grasscycling, give it a try. For more information on how you can help the environment, call 1-800-CLEANUP.

Help Shopping Carts Find Their Homes

Help a stray shopping cart find its way back home. You can help reduce clutter in our neighborhood by reporting stray shopping carts that have been abandoned.

- If the cart has a label, call the telephone number provided.
- If the cart does not have a label or is not picked up within 24 hours from the time it was reported, call the City of Garden Grove's Shopping Cart Hotline at 741-5053.

STORM DRAINS & HOUSEHOLD HAZARDOUS WASTE
What's the Problem?

Did you know that water flowing down driveways and streets and into gutters goes into a storm drain which flows directly to a lake, river or the ocean? This water may pick up pollutants which are never treated. Most of the pollutants consist of Household Hazardous Waste, or H.H.W. Some common contaminants include motor oil, pesticides, pet wastes and paint. When these items are improperly disposed of into our storm drains, they can be harmful to our drinking water, recreational use and wildlife. But there are ways you can prevent storm water pollution. You can take your H.H.W. to a local FREE collection center. Call the County operated H.H.W. hotline for times and locations: (714) 834-6752.

FREE PICK UP SERVICE FOR USED OIL

Just one gallon of oil will pollute one million gallons of water

Recycling is the only environmentally safe and legal method to dispose of used oil. In Garden Grove, there are two ways to recycle used oil **FREE!** One of the easiest ways to recycle your used oil is through the **Residential Used Oil Collection Program**. This program allows you to have your used oil collected directly from your home. After you change your motor oil, simply pour the used oil into a plastic container with a secure cap. On the pre-scheduled day, place the container by your front or garage door. The used motor oil, container(s), used oil filters, and oily rags will be collected. There is a limit of five (5) gallons per home on each pick up, and pick ups will be available every two weeks. To schedule a convenient pick up day, call the **Used Oil Hotline:** (714) 289-7661.

Another easy and convenient way to recycle used oil is to take it to a State Certified Used Oil Collection Center right here in Garden Grove. These centers will accept used oil from the public during normal business hours. Call the center to confirm hours of operation and the amounts accepted. The service is **FREE!** In fact, a $.16 per gallon incentive will be offered. To locate the certified center nearest you, call (714) 289-7661.

Residents of Garden Grove Qualify for FREE Toilet Upgrades

The Metropolitan Water District of Orange County is currently offering an Ultra Low Flush Toilet (ULF) Retrofit Program. Under this program Garden Grove Sanitary District customers can recycle their old water-wasting toilet and get a brand new water efficient model at not cost (limit 3 per household).

Program Requirements:

- Participants must provide the dimensions from the wall to the toilet bolts and a current water bill.
- New toilets must be installed at the address designated on application - no exceptions (applications provided when toilets are delivered).
- Participants are responsible for installation (seniors, 65 and older, are eligible for two free installs).
- To avoid a $100 program cost charge, participants must return one old toilet for each new toilet received.
- Program sponsor reserves the right to verify installation through visual on-site inspections.

For more information on the Ultra Low Flush Toilet Retrofit Program, call 1-800-424-8538.

County Sponsors New Landscape Performance Program

The organic material is ideal for mulching, amending to improve the health and appearance of valuable land scapes. To combat the increasing amount of green waste the County of Orange is sponsoring a new Landscape Performance Certification Program. The program is available to all businesses, public agencies, parks, schools and home owner associations. We will help every landscape and property manager develop more efficient landscape practices and in turn, help reduce green waste for our owners, says Tom Ash, project coordinator and horticultural consultant. Getting started in the program is easy. Call Tom Ash at CTSI Corporation, (714) 669-4303 or send an e-mail to toma@ctsicorp.com.

Remember to Remove 'Em

By being a good neighbor and remembering to remove your trash and recycle containers on collection day, you will be helping to keep your neighborhood looking neat and clean.

Sanitary District Ordinance 3592 requires that after trash containers have been emptied, they are to be removed from the curb on the same day, and placed in an area not visible from the public street.

HOLIDAY COLLECTION

Your regular pickup day for trash and recycling during the holidays will not change unless your collection day falls on one of only six holidays.

CHRISTMAS DAY: Saturday, December 25, 1999.
Trash collection services will not be affected.

NEW YEAR'S DAY: Saturday, January 1, 2000.
Trash collection services will not be affected.

MEMORIAL DAY: If your collection day falls on Monday, May 29, your trash will be collected on Tuesday, May 30. If your collection day falls on any other day than Monday, your service will not be affected.

INDEPENDENCE DAY: If your collection day falls on Tuesday, July 4, your trash will be collected on Wednesday, July 5. If your collection day falls on any other day than Tuesday, your service will not be affected.

LABOR DAY: If your collection day falls on Monday, September 4, your trash will be collected on Tuesday, September 5. If your collection day falls on any other day than Monday, your service will not be affected.

THANKSGIVING DAY: If your collection day falls on Thursday, November 23, your trash will be collected on Friday, November 24. If your collection day falls on Friday, November 24, your trash will be collected on Saturday. If your collection day falls on any other day than Thursday or Friday your service will not be affected.

Recycle Your Christmas Tree

To help divert waste from the landfill, the city asks you to recycle your Christmas tree. You can easily recycle your tree ***in your brown "yard waste"*** *container. Just follow these three simple steps:*

1. REMOVE the TREE STAND (wood or metal), decorations and tinsel from your tree.
2. Please CUT UP your TREE* and PLACE IN your BROWN CONTAINER (no tree stands please). The pieces should fit easily in your container.
3. PLACE your BROWN CONTAINER AT THE CURB along with your other containers on your regular collection day.

*If you're unable to cut up your tree and put it in a brown container, place the tree at the curb for pick up on your regular collection day from December 27 until January 7. Trees over six (6) feet tall must be cut in half. Trees are picked up by a special collection truck.

Waste Wise Holiday Greetings

Did you know that 2.65 billion Christmas cards sold each year in the U.S. could fill a football field 10 stories high? If we each sent one card less, we'd save 50,000 cubic yards of paper. Here are some good ideas to reduce the amount of waste from holiday cards.

- Send electronic greetings to family and friends who are on-line.
- Save yourself some time, money and hard feelings between friends – and reduce mail volume by updating and paring down your holiday mailing list.
- Be creative. Instead of buying place mats or table decorations, make your own. Cut old cards into shapes and press between two pieces of clear contact paper.
- Make gift tags from last years holiday cards, or use them as name tags for arranged seating at formal dinners.

WHAT WHERE?

Save this list of accepted recyclables (green can) and non-recyclables (black can) as a guide for separating your trash.

Non-recyclable...

- Animal waste
- Bathroom waste
- Carbon paper
- Carpet
- Car parts
- Cat litter
- Cigarette butts
- Dirt/cement/rock (do not fill more than 1/3 of container)
- Disposable diapers
- Drinking glasses
- Electronics
- Flooring
- Food waste
- Freezer/refrigerator food boxes
- Furniture
- Glass and ceramic plates/cups
- Liquid waste
- Light bulbs
- Mirrors
- Needles (sealed in thick plastic container)
- Old clothes/shoes
- Plastic toys
- Rags/sponges
- Tires
- Toothpaste tubes/pumps
- Soiled paper plates
- Waxed paper
- Window glass
- Yard waste (can be composted)

Recyclable...

- Aerosol cans (completely empty)
- Aluminum cans (do not crush)
- Aluminum foil
- Beverage cans
- Bottle caps
- Brochures
- Cardboard
- Cereal boxes (remove inner lining)
- Computer paper
- Drink boxes
- Egg cartons (cardboard and foam)
- Foam cups/plates (unsoiled)
- Food cans
- Frozen food boxes (no wax coating)
- Glass bottles/jars
- Juice cartons
- Junk mail/coupons
- Laundry bottles
- Ledger paper
- Magazines
- Metal coat hangers
- Milk type cartons
- Newspapers
- Paint cans (only empty, dry cans with lids off)
- Paper/paper tubes
- Phone books
- Pizza boxes
- Plastics (#1- 6)
- Plastic bottles (small mouthed)
- Plastic containers
- Plastic cups/plates
- Plastic utensils
- Plastic milk jugs
- Tin cans
- Used envelopes (includes plastic windows)
- Wrapping paper

Where Can I Take My Old Tires?

Old tires cannot simply be thrown into the trash, or left in illegal stockpiles.

The following businesses and public landfill accept old tires for disposal. Remember, only four tires can be legally hauled without permits. Anyone hauling five or more tires must have the appropriate permits as issued by the State of California.

In Garden Grove and Area.....

Gordon Tire Company
7031 Garden Grove Blvd., Garden Grove
714/898-2696
$1.00 /Tire Disposal Fee
(maximum four tires)
$1.75/Tire Fee for pick-up

Ecology Tire CO
1881 Crystal St., Huntington Beach
714/848-8260
$2.00/Tire Disposal Fee

Brea Olinda Landfill
57 Freeway North

Where Can I Take Household Hazardous Waste?

For Orange County residents....

Anaheim Regional Collection Center
1131 Blue Gum Street
Located between the 91 & 57 Fwys at the corner of La Palma Avenue and Blue Gum Street in Anaheim

Huntington Beach Regional Collection Center
17121 Nichols Street
Located next to Rainbow Disposal at the cross streets Beach Blvd. and Warner in Huntington Beach

San Juan Capistrano Regional Collection Center
Prima Deshecha Landfill
Take the Ortega (74) Hwy exit from the 5 Fwy in San Juan Capistrano to La Pata Avenue.

Collection Centers will accept old paint, solvents, pesticides, pool chemicals, used motor oil and used automotive batteries at no cost. The Centers are open Tuesday - Saturday, from 9 a.m. to 1 p.m., and are closed on rainy days.

For more information, please call the County Hazardous Hotline at 714/834-6752.

Provided as a public service by the California Integrated Waste Management Board and the City of Garden Grove and is not an endorsement of stores by either party.

Winter Wonderland

See Some Snow, See Some Snow, See Some Snow

Atlantis Park will be transformed into a frosty funhouse when the Winterfest Carnival takes over on Saturday, December 4, from 10 a.m. to 3 p.m. Kids will delight in a snow play area, a snow hill for sledding, craft booths to make presents and ornaments, and games and contests. And, of course, Santa will be on hand taking requests.

This once-a-year event is $4 per person. Atlantis Park is located at 9301 Westminster Avenue. For more information, call Community Services at 741-5200.

Don't Trash That Tannenbaum

Pine Pick-Up As Easy As 1-2-3

To help divert waste from the landfills, recycle the holiday tree. Here's how:

1. Remove the stand, decorations and tinsel.
2. Cut up the tree and put it in your brown trash container. Trees over six feet need to be cut in half.
3. Put the brown container at the curb on your regular collection day.

If you're unable to cut up the tree, place it at the curb for pick-up on your regular collection day between December 27 and January 7.

Green Is Good

Keep That Tree The Tops

They're common sense safety tips, but they bear repeating, because, sadly, every year fires are caused by unattended tannenbaums. So, remember these:

- Keep water in it.
- Get the tree in the house late - get it out early.
- Keep candles away from it.
- Don't put it near heating vents.

Stick It!

In this issue, look for your complimentary Garden Grove bumper sticker. It comes courtesy of the Garden Grove Community Foundation - the non-profit fundraising arm for the Renaissance Garden Grove program - developed to promote the progress and spirit of the community.

If you'd like to contribute to the Foundation, look for the insert card inside this newsletter or call 741-5280.

'Tis The Last Season of The Century

The Holidays Are Here & Here Comes The Millennium!

December 31, 1999 ... 11:59 p.m... a memorable moment in history - a new century will be upon us. How will you commemorate this once-in-a-thousand-year's event and are you prepared for any technical glitches which may occur? Here's an answer to both of those questions.

Leave A Legacy

This holiday season, why not give a truly unique gift with real staying power. Want a clue? It's red, made of clay, weighs about five pounds and has a personal message on it which you wrote. Need another hint? Okay, you won't have to wrap it, and lots of people will walk on it, including generations of your family.

It's a brick, and for $125, you and your loved ones can become a permanent part of the community through the Brick Walkway Project. Clusters of personally-inscribed bricks will be placed at 32 areas along Main Street beginning in January, running the length of the historic shopping plaza.

To purchase one, call 741-5280.

Going to Great Heights

Buy a brick this holiday season, and during the next one, see the result of your contribution. In December, 2000, a Millennium Clock Tower (pictured left) will be dedicated in the Village Green Park at the point where Euclid and Main Streets meet. This Mission-era, steel-crafted, 45-foot landmark will forever mark the Year 2000 for residents and visitors of Garden Grove.

A seven-foot marble obelisk inscribed with the names of Garden Grove Community Foundation sponsors will sit at the base of the Clock Tower, which will be encircled with glazed, colorful, inscribed tiles, also available for sale for $500 each.

Y2K - You Ready?

Free Seminar

If you'd like some helpful hints to prepare you for the Year 2000, attend a free seminar hosted by the City of Garden Grove on November 17, at the Community Meeting Center, from 5:30 to 7:30 p.m.

Representatives from companies like Pacific Bell, Southern California Edison, Emergency Management Systems, and Garden Grove Hospital will be on hand to answer questions and detail their preparations.

For more information, call 741-5280.

New Program Has Parents Talking

Do you know the names and phone numbers of your children's friends? Or their parents? These are two questions that developers of a new citywide program say some day soon every parent in the community will be able to answer "yes" to.

"Parent Networks - Keeping Our Kids Safe" is a self-help parenting tool designed to open communication among moms, dads and guardians, so that all become more aware of their kids' activities outside of the home and classroom.

The program was initiated in an effort to stem the rising tide of youth-related crime and injuries. Sponsors include the City's Community Services and Police Departments, the Garden Grove Unified School District, the Girls and Boys Clubs of Garden Grove and the Garden Grove Unified Council of Parent/Teacher Students' Association.

For more information about Parent Networks, call Community Services at 741-5200.

DEVELOPMENT DETAILS

A Lowdown On What's Going Up

Higher Learning

The City's downtown is looking a lot more upscale with the near completion of the second Higher Education building. Nicknamed "Ed 2," this sequel is sure to be a top-seller with students seeking to extend their education this fall.

Tenants include the University of LaVerne and Concord Career College, both of which will offer Bachelor's and Master's degrees in business and medical-related fields. Enrollment is sure to get cooking when the building's third tenant, the California Culinary Academy, opens its doors. This Garden Grove site becomes just the second such culinary academy in the state.

Big Screen Debut

Movie-lovers get ready to celebrate this fall when the Regal Cinema's 16-screen theater complex makes its Garden Grove debut at the Garden Promenade Center at Brookhurst and Chapman. Stadium-style seating and a state-of-the-art sound system are sure to make this development a blockbuster hit.

Fund-Raisers

By the end of the millennium, Harbor Boulevard in Garden Grove should be home to six more hotels. That's 2,400 hotel rooms and suites catering to Disneyland tourists and business travelers. More guests to Garden Grove means more revenue, in the form of bed tax, for the City's General Fund, which pays for public safety, clean streets and parks, and much more.

The Crowne Plaza - Just broke ground

The Renaissance Suites - Ground breaking set for late summer

Hampton Inn - Opening doors late summer

Hilton Garden Inn - Also set to start business late summer

Homewood Suites - Construction underway

Embassy Suites - Construction starting in September

STICK IT!

In this issue, look for your complimentary Garden Grove bumper sticker. For more stickers, stop by City Hall - they're for sale for $2 each.

FIRE FACTS

Be Water Wiser

Just days after City Fire Departments and the County Fire Authority launched their annual Drowning Prevention Education campaign at the beginning of the summer, tragedy struck - two children drowned - one in just inches of a bucket of water, the other in a spa.

The Garden Grove Fire Department urges you to remember the simple, life-saving tips listed below, and not just during the summer months, but year-round. Look for more prevention pointers in the next issue of *Citywork*s or call the Injury Prevention Program at (714) 834-2228 for a free brochure.

Safeguard Pool/Spa

- Remove toys and chairs from area
- Gates and doors should be self-closing and self-latching
- Add safety covers on doors and windows leading to water
- Use a non-climbable 5-foot fence children can't squeeze through

Be Emergency Prepared

- Learn CPR
- Install a backyard phone
- Keep rescue equipment nearby and teach everyone to use it
- Ensure all household members know how to swim and dial 911

POLICE DETAIL

Another Set of Eyes

Going on a trip this summer? The Police Department has someone to watch over your house while you're away, thanks to their Vacation Home Check program. A daily inspection of your property will be provided by members of the Department's Volunteers-In-Policing.

To take advantage of this free service, call the Police Department at 741-5704 on the day of your departure, no earlier.

"JUST BEAUTIFUL" "SIMPLY DELICIOUS" "CAN'T WAIT TO SEE NEXT YEAR'S"

- Overheard at Tour & Tea Event

The rave reviews are still coming in from the over 250 attendees of the 1999 Garden Tour & Tea held in June. The seven distinctly unique and enchanting Garden Grove backyards showcased for the event definitely impressed the guests, as did the authentic Victorian Tea held at the Courtyard Center.

Mark your calendars for the next Tour & Tea, set for Saturday, June 10, 2000. If you'd like to volunteer your backyard for consideration or if you'd like to serve on a panel of volunteer judges selecting next year's gardens, call Administrative Services at 741-5280.

DON'T DUMP 'EM -

It's Illegal!

Did you know that pouring anything but clean water into a gutter or storm drain is against the law? The City adopted a water quality ordinance two years ago prohibiting the placement of a laundry list of items into these kinds of receptacles. They include:

- Clippings, soil, fertilizer
- Trash, animal waste, paint
- Oil, antifreeze, radiator fluid
- Pool chemicals, detergents, cleaners

REMEMBER, THE OCEAN IS JUST A STORM DRAIN AWAY.

And What You Can Do To Stop It!

TRANSPORTATION AND HANDLING

- A maximum of 15 gallons or 125 pounds may be transported per vehicle, per trip (Department of Transportation regulation).
- Materials should be in original containers (except motor oil, fuels and antifreeze).
- All containers must have lids, be sturdy, non-leaking, and protected from breakage.
- Do not combine types of waste.
- Do not mix oil-base paint with latex paint.
- Dry out empty paint cans and discard in regular trash.
- If you wish to have a container returned (i.e. oil containers and boxes/crates used to transport materials), please notify the attendant in advance. Some containers may not be returnable.

WHY SHOP 'TIL YOU DROP?

VISIT THE STOP & SWAP!

A unique and FREE program that allows you to drop off household, yard, and car care products you no longer need and pick up others you can use.

Currently available at the Anaheim and Irvine locations only. (Tuesday through Saturday, 9 a.m. to 1 p.m.)

CITY OF HUNTINGTON BEACH

NO DUMPING • THIS DRAINS TO OCEAN •

This booklet has been developed as a resource for all general contractors, home builders, and subcontractors working on construction sites.

GOOD NEWS ABOUT RECYCLING

It works!
Every newspaper, aluminum can, glass bottle or plastic product recycled saves pollution, landfill space and valuable natural resources. Recycling in our community is easy to understand, effective, and involves you.

SCAVENGING

Scavenging is illegal and poses many problems, such as invasion of personal privacy, neighborhood theft, speeding vehicles and strewn trash. Please help your City uphold the law! When you observe scavengers at work, please record:

- ✓ vehicle description and license plate number
- ✓ description of scavenger and goods taken
- ✓ area/address of incident
- ✓ date/time of incident
- ✓ your name, address & phone #

Then, call:

- **536-5271 (HB incidents)** or
- **965-4483 (FV incidents)**

The Huntington Beach and Fountain Valley environmental education partnership is dedicated to providing the latest information about recycling and related programs. To learn more, call the City environmental affairs representative.

WASTE PREVENTION TIPS

WHAT IS CONSTRUCTION AND DEMOLITION DEBRIS?

C&D debris is material generated in the construction and demolition of buildings and roads. According to the California Integrated Waste Management Board, C&D debris makes up approximately 28% of the state's waste stream. Orange County businesses generate large quantities of C&D debris and could save money by diverting this material through reuse and recycling. Reducing the amount of C&D debris that is landfilled will also help Orange County cities meet the 50% diversion rate required by the California Integrated Waste Management Act of 1989.

Disposal rates are determined by the quality of material. Some processors will give estimates of disposal rates over the phone. Ultimately, the condition of the material will be determined upon delivery of the material.

Tips for managing your C&D debris for recycling:

- Develop a C&D waste management plan
- Assess the amounts and composition of your waste
- Assess the space available for separation of materials on site
- Assess the location of nearby recycling facilities

Educating employees, contractors, and sub-contractors about the benefits of recycling C&D debris will improve your bottom line and help your community conserve natural resources.

Printed on recycled content paper.

TIPS FOR AN ENVIRONMENT FRIENDLY OIL CHANGE

...it is **easy** being green!

BE PREPARED! Have ground cloth, rags, funnel, tools, oil pan, and a CLEAN plastic container with secure lid ready (if you use a plastic milk jug with snap-on cap, tape down securely). Clearly label container as "Used Oil." Avoid working on grass or dirt.

DRAIN used oil filter for at least 12 hours. Both the used oil and the metal from the filter must be recycled.

PREVENT SPILLS. Use a funnel when pouring. Make sure the new oil filter is secure. Do not overfill. Check your vehicle owner's manual for oil specifications and amount.

CLEAN ALL SPILLS. On concrete/asphalt: soak up spilled oil with rags or cat litter; wash area with mild cleaner. On dirt/gravel: dig up visibly contaminated area. Call your local used oil coordinator or environmental agency for specific disposal information.

NEVER MIX USED OIL with any other liquids! Mixed automotive fluids *cannot* be recycled.

CLOSE THE LOOP!

RECYCLE OIL FILTER

RECYCLE USED OIL

RECYCLING USED OIL BENEFITS YOU, YOUR FAMILY, AND THE ENVIRONMENT!

Recycling used oil:

- Protects the water supply, including your drinking water, by keeping oil from seeping into the ground;
- Prevents oil pollution in recreational waterways—storm drains commonly lead to streams, bays, rivers, and oceans;
- Prevents plant, soil, surface water, and ground water contamination; and
- Helps you keep your communities' environment safe and clean.

More reasons to recycle used oil:

- Used oil can be re-refined for reuse. Purchasing re-refined motor oil saves natural resources and lessens US dependence on imported oil.
- **IT IS AGAINST THE LAW** to dump used oil—from vehicles, lawn mowers, etc.—on the ground, in the trash, down storm drains, or down the sink or toilet.
- Receive $0.16 for every gallon of used oil returned to a certified used oil collection center.

CITY OF LA HABRA

City Communicator

"A Caring Community"

CDBG Committee Vacancies

The La Habra City Council is currently accepting applications from residents who are interested in appointment to the Community Development Citizen Participation Committee. The primary purpose of the Committee is to identify needs, prioritize activities, and recommend to the City Council proposed use of Community Development Block Grant (CDBG) funds as allocated by the U. S. Department of Housing and Urban Development. Applicants must be residents of the incorporated area of the City of La Habra, and appointment shall be made on the basis of the interests of applicants. Members of the CDBG Committee serve a three-year term.

Applications and additional information is available in the City Clerk's Office, located in the Administration Building, 201 E. La Habra Boulevard, Monday through Thursday, 8:00 a.m. to 5:00 p.m., 562.905.9701. Applications must be filed with the City Clerk no later than November 22, 1999. The City Council will hold interviews during the month of December, 1999, and make appointments shortly thereafter.

Community Fair Seeks Vendors

Interested in selling your wares and crafts at the annual I Love La Habra Community Fair? Please call the Community Services Department now for an application!

Safely Dispose Hazardous Waste From Homes

Did you know that old paint cans, used motor oil, car batteries, and yard care products are considered "hazardous waste?" If dumped in our landfills or storm drains, these products can contaminate our groundwater and pollute our beaches.

The City of La Habra participates in a County-wide program to address this issue. Household Hazardous Waste Collection Centers are available to provide a safe, easy and free means to dispose of hazardous products stored in your home. Unwanted products can be easily disposed of at the Collection Center located at 1071 N. Blue Gum Street, Anaheim (located between the 91 and 57 Freeways on the corner of La Palma and Blue Gum). The Collection Center is open Tuesday through Sunday, 9:00 a.m to 1:00 p.m.; closed on rainy days and major holidays.

The City of La Habra has also implemented a Used Oil Recycling Program and has established the following four certified collection centers near you. Bring in all used motor oil to any one of these La Habra retailers during normal business hours:

- √ Firestone, 1071 S. Beach Boulevard
- √ Speedee Oil Change, 1580 W. Imperial Highway
- √ Pep Boys, 125 W. Imperial Highway
- √ Burch Ford, 201 N. Harbor Boulevard

Recycling used oil, paints and other hazardous products is a way to help preserve our environment. Plus it's safe, easy, and free! Let's all do our part and recycle today.

La Habra

FOR YOUR INFORMATION

New Number for Waste Management

Effective October 18, 1999, the trucks servicing the City of La Habra residences and commercial businesses will be operated from Orange County facilities. If you have service issues or questions, please call Waste Management's Customer Service at either 714-558-7761 or 562-694-3730. Customer Service hours are 7 a.m. to 7 p.m. Monday through Friday and 8 a.m. – Noon on Saturday.

Storm Water Pollutants

Even living miles away, you may be polluting the Pacific Ocean without even knowing it. Unlike the sewer system which carries water to a wastewater treatment plant, the storm drain system empties untreated water directly into channels, rivers and ultimately the ocean. If this water is polluted, it ultimately affects our ocean as was the case recently with the Orange County beach closures. Common storm drain pollutants are detergents and cleansers, paints, oil and other automotive fluids, swimming pool chemicals, yard waste, and outdoor trash and litter. Before you let anything go into the gutter or storm drain, stop and think! It's up to all of us working together and doing our part to make a difference by keeping gutters, storm drains and waterways free of pollutants. Yard waste and trash/ litter can be disposed of in your regular trash pick-up, while the other pollutants are considered hazardous and must be taken to a special collection center.

Where to dispose of old paints, batteries, detergents and chemicals, and used oil... The City of La Habra participates in a county-wide program to address hazardous waste disposal. Just pack your car with unwanted home, yard and car care products, drive up to the Household Hazardous Collection Center, and sit in your car and fill out a simple form while an attendant removes your unwanted products. The nearest collection center to La Habra is located at 1071 N. Blue Gum Street, Anaheim (located between the 91 and 57 freeways on the corner of La Palma and Blue Gum). the Center is open Tuesday - Saturday, from 9 a.m. to 1 p.m. and closed on rainy days and major holidays.

For more information, call (714) 834-6752 or access via the Internet at www.oc.ca.gov/IWMD

Pick up Free Recycled Material

The Household Hazardous Collection Center also recycles a large portion of the dropped off material. There's a "Stop and Swap" area at the Collection Center where you have the opportunity to obtain recycled products such as paint and cleaning products at no cost.

007517

Used Oil Recycling Program

Used Oil can also be dropped off here in the City of La Habra. The City has implemented a Used Oil Recycling program and has established the following four certified collection centers near you. Bring used motor oil to any one of these La Habra retailers during normal business hours.

Firestone, 1071 S. Beach Blvd. - (562) 691-1731
Speedee Oil Change, 1580 W. Imperial Highway - (562) 697-3513
Pep Boys, 125 W. Imperial Highway - (714) 447-0601
Burch Ford, 201 N. Harbor Boulevard - (562) 691-3225

Tree Trimming

City Tree Trimming services are contracted through West Coast Arborists, Inc. This past year, the contractor was able to trim over 2500 city trees. At this rate, the city anticipates each city tree will be trimmed on a cycle of every four years. The program also includes the replacement of trees. If you are interested in a parkway tree, please contact the Public Works - Parks and Landscape Division at (562) 905-9792 and your request will be placed on a waiting list. Once the tree is planted in the parkway area, we ask that the resident water the tree for at least two years until the tree roots are established at the site. The City already has a plot plan describing which tree species will be planted at your location.

Composting Classes

The Friends of the Fullerton Arboretum offer Saturday Home Composting Workshop classes held at 10 a.m. at the Fullerton Arboretum located at 1900 Associated Road, Fullerton. These 90-minute composting workshops demonstrate how to naturally recycle yard waste and food scraps and are sponsored by several cities including La Habra and MG Disposal. The following is a schedule of future workshops:

February 19, 2000 – Home Composting II Workshop (for those who have attended Home Composting I, this workshop builds on previous information)
April 8 – Home Composting Workshop
June 17 – Home Composting Workshop

The workshops are presented by Dr. Bill Roley, Applied Ecological Systems and Pat McNelly, Orange County Sanitation District. For more information, please contact (714) 278-3404.

"Go with the Flow"

Currently two options are available for La Habra residents to receive water-saving toilets

- La Habra residents can pick up a standard 12" or 10", white round ultra-flush toilet bowl with a $15 co-payment. Toilets can be picked up at the Toilet Program Warehouse located at CTSI Corporation, 2722 Walnut Ave., Tustin. Please bring current water bill and a photo identification.
- La Habra residents may receive a $65 rebate toward the purchase of a toilet of your choice.

Both programs are provided courtesy of the City of La Habra Public Works, Municipal Water District of Orange County, Orange County Sanitation District and Metropolitan Water District of Southern California. For more information, please call (800) 424-8538.

Cleaner Streets in La Habra

Street sweeping frequency increases throughout the city beginning March 2000. To better enhance and provide for a cleaner community, street sweeping will be performed weekly in your residential area the day following your refuse collection. Residential street sweeping will be cleaned by contractor Nationwide Environmental Services while the major arterial city streets will be swept three times per week by city staff. (see map next page)

FREE Household Hazardous Waste Disposal

Wet paint, used motor oil, and most cleaning products are considered to be hazardous waste and can't be thrown in the trash. If these products are placed in the landfill, they can contaminate our groundwater. For this public safety concern and to conserve our environment, drop these products off at the Household Hazardous Waste Center, located at 1071 N. Blue Gum Street, Anaheim. It's absolutely free.

New Greenwaste Container

The City of La Habra and Waste Management are pleased to announce an enhancement to the city's existing recycling program. Over 85% of the requests received by the city for a second trash container since the automated collection/recycling system began in 1998 are requests for space to contain and dispose of yard waste. Because of this need and the need to divert waste away from landfills, the residents of La Habra will be receiving a third 96-gallon container solely for yard waste. Instead of placing grass clippings, leaves and weeds in your gray trash container, this yard waste will be placed in these new green containers. Material in the green containers will be collected separately and recycled. We hope this new program set be begin **Summer 2000** will fulfill the need expressed by many residents to get rid of yard waste while simultaneously reduce the waste tonnage at the landfills and help our environment. For more information about this upcoming program, please call the Public Works Department at (562) 905-9792.

Composting Classes

Learn the tips and technique on how to turn your yard waste into productive material for your garden. Fullerton Arboretum will be hosting composting workshops **free** to La Habra residents. Attendees will receive a voucher good for $25 off an "Earth Machine" composting bin redeemable at James Hardware. The workshops will be held on Saturday at 10 a.m., April 8 and June 17 at the Fullerton Arboretum, 1900 Associated Road, Fullerton. No need to pre-register. Call (714) 278-4790 for more details.

Christmas Tree Recycling Program

The City of La Habra and Waste Management invite you to participate in the Christmas Tree Recycling Program. Waste Management of Orange County will collect and recycle Christmas Trees for three weeks immediately following Christmas, from December 27, 1999 through January 14, 2000. Trees must be free of metal ornaments and stands. Flocked trees will be collected but not recycled. Place your tree at the curbside on your regular collection day. Please remember to keep clear the refuse and recycling collection containers as any obstructions will interfere with regular collection.

For more information, please contact Waste Management of Orange County Customer Service Center at (562) 694-3730 or (714) 558-7761 Monday through Friday, from 7 a.m. – 7 p.m. and Saturday from 8 a.m. until 12 noon.

REPRESENTATIVE PUBLIC EDUCATION MATERIALS

CITY OF LAGUNA BEACH

- **Have your car inspected** and maintained regularly to avoid leaks. Don't spill oil when changing it.
- **Use kitty litter** or other absorbent materials to clean spills and dispose of it properly.
- **Eliminate septic tanks** where possible and tie into the City's sewer system.
- **Take unwanted household hazardous wastes,** such as motor oil, auto batteries, chemicals and paint, to County centers for safe disposal.
- **Report illegal dumping** into storm drains and any catch basins to the Police Department at (949) 497-0701 or call 1-(800)-69-TOXIC.
- **Purchase less toxic, biodegradable gardening and household products.** Use vinegar and baking soda as substitutes.
- **Dispose of pet waste** in the trash. Pet wastes, containing harmful bacteria, can be washed into the ocean whenever you water or when it rains.
- Start your own compost program or place yard waste in your trash. **Do not sweep debris into the streets or catch basins.** Keep streets cleared on street sweeping days.
- **Recycle and reuse** everything you can.
- **Control erosion** at construction and landscape sites to prevent dirt and debris from entering storm drains.
- **Conserve water** and keep it out of the gutter. Take your car to a car wash that recycles its water. **Do not overwater your lawn or garden.** Use a broom, not water, to sweep driveways and sidewalks.
- **Never pour anything down a storm drain** that you wouldn't want to swim in.

The Ocean Begins at Your Front Door

Runoff from Aliso Creek and Laguna Canyon is a key source of pollution at our beaches.

Things you can do to reduce storm water pollution

rash and household toxins dumped on the street go straight to the beaches. Unlike household sewer drains which lead to a sewage treatment plant, public storm drains and flood channels carry water, litter and toxic substances directly to the ocean.

Urban pollutants, such as **oil** and other **automotive fluids, paint, yard** and **pet wastes, construction debris, pesticides, fertilizers and cleaners** can wind up in the street.

A little water from rain or a garden hose can carry automotive and household toxic materials through the storm drains to the flood control channel and ocean.

Polluted urban runoff contaminates the ocean and beaches, harms aquatic life and increases the risk of flooding by clogging gutters and catch basins.

You can help control water contamination by being aware of the sources and the activities that contribute to storm water pollution.

This pamphlet provides information on the Laguna Canyon Flood Control Channel, Aliso Creek and tips on reducing pollution of storm water.

The Laguna Canyon Flood Control Channel and Aliso Creek collect water from **28,122** acres of watershed area and transport this runoff directly to the Pacific Ocean at Main Beach and at Aliso Beach.

These natural waterways and the connecting storm drain system are designed to prevent flooding by carrying excess rainwater from city streets to the ocean.

Unfortunately, **whatever enters these channels and storm drains ends up in the ocean.**

For this reason, storm water and urban runoff have become a focus of environmental and legislative action. Your assistance will ensure we protect our resources.

We must work together to keep Laguna Beach

clean and

pollution free!

HANDLING HOUSEHOLD HAZARDOUS WASTE

Residents can dispose of household hazardous wastes at County Collection Centers located at 6411 Oak Canyon Road in Irvine or at the Prima Deshecha Landfill off Ortega Highway and La Pata in San Juan Capistrano.

The centers are open from 9 a.m. to 1 p.m., Tuesday through Saturday, and are closed on rainy days and major holidays. There is no charge for residents to deposit household waste up to a maximum of 15 gallons or 125 pounds per visit. The County centers do not accept hazardous waste from businesses, schools, government agencies, churches and non-profit organizations.

To reach the **Irvine** center from Laguna, take 133 to I-5 north, exit Sand Canyon and go west to Oak Canyon and turn right. To reach the center located in **San Juan Capistrano,** take I-5 south, exit Ortega Highway (SR74) and go east 2½ miles to La Pata and turn right. The center is two miles down La Pata next to the landfill.

Also, Laguna Pete's Automotive, located at 890 South Coast Highway, accepts used motor oil free of charge! The Chevron station at South Coast Highway and Legion accepts used motor oil for a nominal charge.

TRANSPORTATION AND HANDLING

- A maximum of 15 gallons or 125 pounds may be transported per vehicle, per trip (Department of Transportation regulation).
- Materials should be in original containers (except motor oil, fuels and antifreeze).
- All containers must have lids, be sturdy, non-leaking, and protected from breakage.
- Do not combine types of waste.
- Do not mix oil-base paint with latex paint.
- Dry out empty paint cans and discard in regular trash.
- If you wish to have a container returned (i.e. oil containers and boxes/crates used to transport materials), please notify the attendant in advance. Some containers may not be returnable.

WHY SHOP [illegible] YOU DROP?

VISIT THE STOP & SWAP!

A unique and FREE program that allows you to drop off household, yard, and car care products you no longer need and pick up others you can use.

Currently available at the Anaheim and Irvine locations only. (Tuesday through Saturday, 9 a.m. to 1 p.m.)

DISPOSAL OF HOUSEHOLD HAZARDOUS WASTE

Household Hazardous Waste Collection Program

5. On the new filter, wet the rubber seal with oil, then spin it on. **Do not** use a filter wrench to tighten the new filter. Tighten it snugly with your fingers. Replace the oil pan plug and make sure it's tight. Add the new oil. Don't overfill! (Most cars take 4 or 5 quarts. Check the owner's manual.)

6. Start the engine. Be sure the area is well ventilated. The oil pressure warning light may be on; it should go out after a few seconds. Let the engine run a few seconds.

7. Turn the engine off and check the oil level. Also check around the filter and drain plug for leaks.

8. Pour the used oil into an empty **clean**, plastic screw-top container. Use a funnel if necessary.

WARNING! WARNING!

DO NOT MIX ANYTHING WITH THE USED OIL! WHEN MIXED WITH SOLVENTS, WATER, GASOLINE, THINNER, ANTIFREEZE, ETC., THE USED MOTOR OIL CANNOT BE RECYCLED.

9. Take the oil container to a used oil collection center for RECYCLING.

For your convenience, the following Used Oil Collection Centers will accept your used motor oil. Call to confirm hours of operation and amount accepted.

RECYCLE USED OIL

Each year millions of gallons of oil are dumped into our environment. The oil that pollutes our oceans, harms our wildlife and aquatic species and contaminates our groundwater comes from seemingly harmless drips that leak onto the street, and from do-it-yourselfers who dump oil in vacant lots, trash cans, or storm drains. These actions are not only harmful to the environment, they are also illegal.

You can help by disposing of your used motor oil properly. To make it easier and convenient for you to recycle your used oil, the California Integrated Waste Management Board and participating local businesses have joined together to establish collection centers throughout the community that will accept your used oil.

By taking your used oil to a State Certified Collection Center you not only help the environment, you are also rewarded 4¢ for each quart of oil recycled.

Knowing some facts about used oil helps us understand why recycling used motor oil is important but it is up to you to do your part and make sure the oil reaches a collection center.

1. Oil does not wear out, it simply gets dirty and can be re-refined and turned into a usable fuel for your vehicle or used as fuel for ships.

2. Over 1.3 billion gallons of used oils, lubricating and industrial, are generated each year in the U.S.

3. Less than 60% of the oil is recycled

4. Over 41 million gallons of oil are disposed of in an unknown manner in California.

5. One gallon of oil can ruin the taste of one million gallons of water.

6. A film of oil on the water surface prevents replenishment of dissolved oxygen, impairs the photosynthetic process and blocks sunlight needed by some organisms.

7. One in four households in California have a do-it-yourself oil changer.

RE-REFINED OIL

When adding or changing your car's oil, consider re-refined oil. Re-refined oil is the oil that is produced from the manufacturing process in which the water, metal contaminants and other impurities are taken out of the used oil. It is as good or better than virgin oil produced from a barrel of crude oil and helps conserve energy and natural resources. When you consider that it take 42 gallons of high quality crude oil to produce the same 2.5 quarts of base stock for lubricants that is produced from 1 gallon of recycled used oil, it makes sense to use re-refined oil.

OIL FILTERS

Oil filters can also be recycled to conserve our resources. Oil filters, which are made of 80% steel can be recycled to make rebar, utility covers and other products. The amount of oil contained in a used oil filter can be as much as 1 quart and can be recycled with ordinary used motor oil. Be sure to take used oil filters to a recycling facility so that they do not pollute our environment.

LAGUNA BEACH Recycling News

WM

MAY 2000

A publication of the City of Laguna Beach in cooperation with Waste Management of Orange County with funding provided by the California Integrated Waste Management Board

Printed on recycled paper.

Introducing FREE Pick-up of Household Hazardous Waste at Your Home!

Getting rid of your unwanted motor oil, oil filters, paint, batteries and other pesticides and chemicals is as easy as picking up the phone. From **May 15th** through **June 2nd** (excluding weekends) you can have your household hazardous waste picked up right at your doorstep. Just call **1-800-HHW-PKUP (1-800-449-7587)** and ask for the next available pick-up date in Laguna Beach.

The City's contractor, Curbside Inc., will send you a kit and instructions prior to your collection date. Eligible materials will be picked up between 8 a.m. and 5 p.m. Residents do not have to be home when materials are collected. Also, senior and disabled residents can request in-home assistance in gathering and packing their materials.

Explosives, ammunition, solid waste for landfill or recycling, tires, and biological and radioactive wastes cannot be accepted. Curbside Inc. recycles more than 90 percent of all materials it collects. Call by **May 26th** to schedule your free appointment.

Be a Good Neighbor! Place Your Carts Out of Public View

Please be kind to your neighbors - and your neighborhood. Make sure that your trash collection carts are put away following pick-up. Residential collection is from 7:00 a.m. to 6:00 p.m. You may set your carts out as early as the evening prior to your scheduled collection. Residents should remove empty carts on the same day trash is collected to an area not visible from the street. All of Laguna Beach thanks you for your cooperation.

Recycle Motor Oil Here

RECYCLE USED OIL

Located at 890 South Coast Highway at Thalia Street, Laguna Pete's Automotive will accept your used motor oil free of charge. Laguna Pete's is certified by the State of California and is a good neighbor providing this important service. For details, call 494-7408. For the locations of additional certified collection centers and other recycling information, call **1-800-CLEANUP** or visit **www.1800cleanup** on the web.

Commercial Recycling... It's Good Business!

About 30 percent of Laguna Beach's solid wastes come from the commercial sector, yet less than four percent of it is collected as recycling. To help boost this number, the Laguna Beach Commercial Recycling Program allows "commingled" collection, that is, all acceptable materials can be placed in the same container. This means businesses do not need to invest time or space separating recyclables to help cut down on the amount of waste we send to our overburdened landfills.

Recycling services are offered to any Laguna Beach business with a commercial trash account. Recycling containers can be emptied up to 3 times each week and it's free! To begin commercial recycling, call Waste Management of Orange County at **(949) 642-1191**. Your customers will appreciate it. Recycling sends a positive message that your company cares about the future and the environment.

Stop, Drop & Swap at County Collection Centers!

Popcorn, Peanuts... Crackerjacks

The dictionary defines crackerjack as "someone or something of marked excellence." Be a "crackerjack" yourself and take proper care of your popcorn and peanuts – packing materials, that is. Loose-fill, polystyrene packaging chips, often referred to as "peanuts" or "popcorn" because of their shape, are commonly used in mailing and shipping fragile items. Due to their small size and near weightlessness, such materials are difficult to recycle and can cause litter problems when placed loosely in dumpsters and trash carts.

If you need packing material, look for opportunities to take unwanted materials from local businesses. If you have extra packing material, consider donating your peanuts so others can reuse them. Canyon Box & Packaging (494-3523) and Mail Boxes Etc. (494-4420) will gladly accept and reuse your clean packing materials. If you must dispose of small packing materials, please place them in secured boxes or bags so they do not fly about when dumped into trash collection trucks.

Managing Your Waste Stream Keeps Our Waters Clean

City departments are working hard to improve our ocean water quality by reconstructing old sewer lines, by building additional facilities to capture runoff before it reaches beaches and the ocean, and by addressing pollution problems at its various sources. Many times, sewer line breaks and spills are caused by grease buildup and tree root invasion. You can help prevent system failures by keeping grease products out of the sink and by alerting the City when you clean or rod your laterals. Be aware of sources of contamination and choose to do something about it. To make a report, call Municipal Services at **497-0706**.

got vision?

Think about what you really love about Laguna Beach. Now imagine what would make Laguna Beach even better. Vision Laguna is a community based project designed to capture your dreams about the future of Laguna Beach and to cultivate an action plan to make these dreams come true. Kick-off events begin **May 12th** and **13th**. To learn more about public environmental programs in Laguna Beach, visit the Municipal Services Department booth at the Vision Fair on Saturday, **May 13th**, at Laguna Beach High School from 8:30 a.m. to 4:30 p.m. For more information about Vision

5 Easy Ways To Cut Your Trash In Half

For over a decade, you have been doing a great job recycling bottles, cans and newspapers. In the first year of the expanded recycling program, you've been equally enthusiastic about recycling green waste. Is there anything more you can do? Absolutely!

1 Recycle Beverage Containers at Home and On the Go

The increasing popularity of 20-oz. plastic bottles is contributing to a noticeable drop in the plastic beverage container recycling rate. These containers are recyclable, so whether you are on the road for business, vacation, or a weekend outing, deposit your empty beverage containers in a recycling bin. Look for new recycling containers at Main Beach this summer!

2 Grasscycle and Compost in Your Backyard

Mow without a bag and leave your grass clippings on the lawn to provide mulch and nutrients, save water, and save time. Composting yard waste and some food scraps make outstanding free topsoil. Check out the State's website **www.ciwmb.ca.gov** for great tips.

3 Xeriscape

In arid climates such as ours, xeriscaping, landscaping with plants that don't need much water, may help reduce your costs. In addition, drought-tolerant plants tend to be slower growing and require less maintenance. Mowing, watering, and fertilizing chores take less time and money, and yard waste and water runoff are minimized. With xeriscaping, you save water, you save landfill space, and you save the ocean from contamination – now that's integrated management!

4 Reduce Household Waste

Find a home for unneeded items. Give them to charity or have a yard sale. Buy in bulk and, like your mom said, eat your leftovers. Use cloth bags at the grocery store instead of paper or plastic. At home, use reusable containers to store leftovers and other items. Avoid overpackaged products.

5 Buy Recycled

Earth's resources are too precious to waste. For recycling to succeed we all need to check the labels and to buy products made with recycled content. Everything from clothes to carpeting, cans to comic books are made from recycled materials.

RECYCLE USED OIL

A HANDBOOK FOR DO-IT-YOURSELFERS!

WHY SHOULD WE RECYCLE USED MOTOR OIL?

Each year millions of gallons of used oil are dumped down storm drains, buried in backyards or emptied in trash dumpsters.

HOW YOU CAN HELP

If you change your car's oil be sure to recycle it and take it to one of the many certified collection centers located in the county. By doing so you not only protect the environment but you will also receive 4¢ per quart.

The following ten tips will help to eliminate hazardous used oil waste and protect our environment.

10 TIPS FOR THE DO-IT-YOURSELF OIL CHANGER

BEFORE YOU START, PROTECT YOURSELF BY WEARING APPROPRIATE GLOVES AND SAFETY GLASSES.

1. If possible, change the oil after the car has warmed up. The old oil will drain out more quickly.

2. Make sure the engine is off. Block the wheels and apply the parking brake before getting under the car. (Be careful the engine is not hot).

3. Use a clean container or pan and remove the drain plug on the bottom of the oil pan allowing the oil to drain into your drain pan.

4. Use a filter wrench to loosen the old filter, then spin it off. Invert the oil filter and drain all the used oil into the pan. If you're changing your oil filter, be sure it is completely drained, seal it in a leak-proof plastic zip-lock bag, and bring it to a collection center with your used oil. Not all centers accept oil filters. **Check first.** Call 1-800-553-2962.

5. Wet the rubber seal on the new filter with oil, then spin it on. **Do not** use a filter wrench to tighten the new filter. Tighten it snugly with your fingers. Replace the oil pan plug and make sure it's tight.

6. Add the new oil. Don't overfill! (Most cars take 4 or 5 quarts. Check the owner's manual.)

7. Start the engine. Be sure the area is well ventilated. The oil pressure warning light may be on; it should go out in a few seconds. Let the engine run a few seconds.

8. Turn the engine off and check the oil level. Also check around the filter and drain plug for leaks.

9. Pour the used oil from the pan into an empty clean, plastic screw-top container. Use a funnel if necessary.

10. Take the oil container to a used oil collection center for RECYCLING.

WARNING! WARNING! WARNING!

DO NOT MIX ANYTHING WITH THE USED OIL! WHEN MIXED WITH SOLVENTS, WATER, GASOLINE, THINNERS, ETC., THE USED MOTOR OIL CANNOT BE RECYCLED!

WHY SHOULD I RECYCLE USED MOTOR OIL?

- Certified collection centers will pay you 4¢ a quart to recycle oil.
- Used motor oil is a hazardous waste. It must be recycled properly.
- California state law prohibits the disposal of oil by dumping it in sewers or storm drains, putting it in the garbage, or pouring it on the ground.
- One quart can pollute 250,000 gallons of drinking water!
- Both conventional motor oil and synthetic motor oil can be recycled.

☐ **I am not eligible but will forward the application to another business.**

cut here

What is WRAP?

WRAP, the **Waste Reduction Awards Program,** is sponsored by the California Integrated Waste Management Board. CIWMB annually recognizes California businesses that make outstanding efforts to reduce waste and send less garbage to landfills.

Who can apply?

California businesses and nonprofit organizations that have taken effective measures to reduce the amount of nonhazardous waste they send to landfills can apply for a WRAP award. We encourage multi-year winners! Government agencies and public schools are not eligible.

How do you qualify for a WRAP award?

WRAP awards are given to businesses that reduce, reuse, recycle waste, purchase recycled products, and educate employees on waste reduction opportunities. Each business is evaluated on its efforts to reduce its OWN nonhazardous waste. For example, a recycling business is eligible based on activities that reduce its OWN waste, rather than recycling the waste of others.

How do you apply?

To request an application, simply do one of the following:

- ✉ Complete, stamp, and return the attached postcard.
- ☎ Leave a phone message at (916) 255-2497.
- ☎ Send a fax to CIWMB - (916) 255-4580.
- Send e-mail to lhenness@ciwmb.ca.gov.

You may also obtain a copy of the application through the Internet at: http://www.ciwmb.ca.gov/wrap. Once you receive the application, fill it out according to the directions and return it to CIWMB.

When is the deadline?

Your completed application must be received or postmarked by June 30.

What is the WRAP award?

Winners will receive an award from the State of California along with a WRAP WINNER logo. Previous WRAP winners have used the logo on their Web sites, in advertising, and on products such as telephone directories, beverage containers, and packaging.

CIWMB does not discriminate on the basis of disability in access to its programs. CIWMB publications are available in accessible formats upon request by calling the Public Affairs Office at (916) 255-2296. Persons with hearing impairments can reach CIWMB through the California Relay Service. 1-800-735-2929.

A successful business is measured by the bottom line.

Remember, **REDUCING WASTE INCREASES PROFIT!**

REPRESENTATIVE PUBLIC EDUCATION MATERIALS

CITY OF LAGUNA HILLS

THERE'S ONLY ONE WAY TO DISPOSE OF USED OIL

Recycling is the only environmentally safe and legal method to dispose of used oil. When used oil is dumped on the ground or sent to landfills, it works its way into streams, rivers and lakes. When dumped into storm drains, used oil flows to the ocean where it poisons marine life. Poured down sewers, used oil can damage sewage treatment plants and cause costly delays.

RECYCLING TIPS

- When you change your motor oil, drain the used oil into a clean plastic drain pan or container with a tight lid.
- Do not mix oil with other substances.
- Use a reusable container which holds five (5) gallons or less.
- Take your used oil to a Certified Used Oil Collection Center and give the container to an attendant during business hours.

Used motor oil is 100% recyclable and reusable. There is no practical limit to the number of times that used oil can be reused. The oil does not wear out; it just becomes dirty.

Once the oil is changed and is collected for recycling, the oil can be used in one of two ways. It can either be re-refined into neutral oil, a base with which to make other automotive lubricants, or it can be consumed as bunker fuel by ships.

The City of Laguna Hills has established State Certified Used Oil Collection Centers in the City. These public minded businesses will accept used oil from the public during normal business hours. The service is free. In fact, a $0.16 per gallon incentive will be offered. You can call the State Used Oil Hotline at 1-800 CLEAN UP to locate the Certified Used Oil Collection Center nearest you.

Contractors Working in the City of Laguna Niguel

Subject: Compliance Requirements for the Clean Water Act

The Clean Water Act, which the Regional Water Quality Board enforces through the County and the city members, prohibits certain discharges to the storm water drainage system. Any discharge, which is not composed entirely of storm water or which contains any pollutant, shall not be discharged to: the storm water drainage system; any upstream flow which is tributary to the storm water drainage system; river; stream; creek; wash; dry arroyo; wetlands; marsh; coastal slough/bay/harbor; or Pacific Ocean.

Only clean potable water can be dumped onto the street or into the gutter.

Any work that creates a slurry of asphalt or cement, such as saw cutting, must be picked up by vacuum and disposed of other than in the street or gutter.

Please inform your sub-contractors that it is an illegal discharge that can result in, large fines (and even prison) if they choose to ignore the law.

Thank you for your cooperation.

Sincerely,

Ken Montgomery
Director of Public Works/City Engineer

RE: Neighborhood Pride Clean Up Day
Saturday, March 11, 2000

Dear Lake Forest Resident:

The City of Lake Forest is coordinating efforts in your neighborhood for Neighborhood Pride Clean-up Day on Saturday, March 11, 2000, from 8:30 a.m. to 2:00 p.m. All residents are encouraged to join in and help one another with clearing out garages and moving or discarding old items.

Large items such as old furniture, mattresses, and appliances will be picked up if placed on your front curb by 8:00 a.m. on Saturday, March 11th.

Hazardous waste, such as used oil and paint, cannot be left at the curb for pick up. The City's Household Hazardous Waste Collection event will be held in the rear parking lot of El Toro High School on Saturday, May 6, 2000 from 9:00 a.m. to 1:00 p.m. While this service is provided free of charge, space is limited. Please call (949) 642-1191 to make an appointment.

Please note that each household is allocated two bulky item pick-ups per calendar year and a pick-up on Saturday, March 11, 2000, will count as one of the two allowable pick-ups for the year.

The City looks forward to a successful Neighborhood Pride Clean Up Day and we appreciate your cooperation and assistance.

Sincerely,
CITY OF LAKE FOREST

Kathy Lancaster

RE: Dia de Orgullo del Vecindario y Día de Limpeza
Sábado, el 11 de marzo 2000

Estimado Residente de Lake Forest:

La Ciudad de Lake Forest esta haciendo esfuerzos en su vecindario para el Dia de Orgullo del Vecindario y Dia de Limpeza, el sábado, 11 de marzo 2000, de 8: 30 de la mañana a 2: 00 de la tarde. Se pide a todo los residentes a unirse y ayudar el uno al otro en limpiar sus garajes mover y o votar artículos viejos.

Artículos grandes tal como mueble viejo, colchones, y aparatos electronicos se recojerán si lo pónen enfrente de su casa antes de las 8: 00 de la mañana el sábado, marzo 11.

Las cosas peligrosas, tal como aceite usado y pintura, no se recojerán este dia. El evento para recolectar estos materiales se sostendra en el parque de estacionamiento trasero de la escuela secundaria El Toro el sábado, 6 de mayo 2000 de 9: 00 de la mañana a 1: 00 de la tarde. Este servicio es gratis, y hay espacio limitado. Favor de llamar (949) 642-1191 para hacer su citar.

Favor de notar que cada casa pueda pedir que recogan artículo voluminoso dos veces al año. Articulos que se recojen el sábado, 11 de marzo 2000, contará como uno de estas veces.

La Ciudad espera un gran exito en el Dia de Orgullo del Vecindario y Dia de Limpieza y apreciamos su cooperación y ayuda.

Sinceramente,
CIUDAD DE LAKE FOREST

Kathy Lancaster

City of Lake Forest

NEIGHBORHOOD PRIDE CLEAN-UP DAY!

The City of Lake Forest is sponsoring a Neighborhood Pride Clean-Up Day in your neighborhood on Saturday, March 11, 2000. We encourage you to participate and support this effort by placing your unused bulky household items, such as refrigerators, water heaters, washer/dryer machines, and furniture, at your curb for pick up service prior to 8:00 a.m. on Saturday, March 11th. By taking advantage of this opportunity to dispose of your unused bulky items, you will be helping to improve the quality and appearance of your neighborhood.

Note: Paint, motor oil, chemicals or other hazardous household wastes <u>may not be discarded</u> at the curb. These items can be disposed of on May 6, 2000 at El Toro High School. Please see the enclosed flier for additional information.

Again, we encourage you to support this effort by doing some Spring-cleaning and remove all unused bulky items from your property.

If you have any questions concerning Neighborhood Pride Clean-Up Day, please contact Kathy Lancaster at 461-3474.

Neighborhood Pride Clean-Up Day

The residential neighborhoods bounded by Rockfield, Ridge Route, Muirlands and El Toro Road as well as the residential neighborhoods northeast of the railroad tracks bounded by Farthing, Ridge Route and Jeronimo will be the site of spring-cleaning activity on Saturday, March 11, 2000. Residents will join forces to clear out homes and garages of large unused furniture and appliances for bulky-item curbside pick-up.

Well-maintained neighborhoods are vital to a community's health, attractiveness and desirability as a place to live. Neighborhood Pride Clean-Up Day is intended to promote a sense of pride in our community and to encourage visual improvements. The older residential neighborhoods of Lake Forest have been targeted for this on-going program and annual clean-up days will be held in designated neighborhoods to help improve the appearance of our community.

For more information about this event, call the Community Preservation Technician at 461-3474. This event is coordinated and sponsored by the City and funded through Community Development Block Grants.

Volunteers

Here is your chance to work for your community. There is currently one vacancy on the Parks and Recreation Commission. As a Parks and Recreation Commissioner, the volunteer will advise the City on matters pertaining to the acquisition, development, and maintenance of public parks and recreational facilities. The Commission also advises the City Council on matters relating to recreational programs and provides advice to the Community Services Department.

Please call 461-3400 for an application or download the form from www.city-lakeforest.com.

Orange County Public Library

The Orange County Public Library has installed seventeen new computers and seven new printers in the El Toro Library at 24672 Raymond Way. The new computers will provide full access to the internet for library users, increasing access from the one internet terminal previously available. They will also provide access to Orange County Library databases, which include the catalog of the 2.5 million books and other items owned by the library, indexed full text articles from over 800 magazines and periodicals, and the text of selected encyclopedias, reference books, and other sources, and interactive patron services.

Children's access to the internet will be limited to "filtered" terminals which eliminate sites and materials which could be deemed inappropriate for minors; written permission must be provided by a parent or guardian for a child to access the unfiltered internet. The Library provides pathfinders to specially selected sites for children and also information for parents in guiding their children's web surfing.

Clean Sweep

The public residential and arterial streets in the City of Lake Forest, and the communities of Foothill Ranch and Portola Hills, are swept weekly by Sunset Property Services of Irvine, California. Sweeping day in your neighborhood occurs on the day after trash collection. If your trash is collected on Friday, sweeping will be done on Monday. As you know, when your trash collection day occurs on a holiday, collection is postponed by one day, with Friday collection sometimes moving to Saturday. Street sweeping day still remains the day after trash collection, which may mean that sweeping occasionally is done on Saturday. If your trash collection day is moved to Saturday due to a holiday, sweeping will be done on the following Monday.

The residential streets are swept between the hours of 7:00 a.m. and 5:00 p.m. The arterial routes through the City, such as Lake Forest Drive, El Toro Road and Trabuco Road, are swept between 10:00 p.m. and 7:00 a.m. Under normal circumstances, no residential sweeping is done on weekends, before 7:00 a.m. or after 10:00 p.m. Additional street sweeping may occur, occasionally, because of a special event, severe windstorm, or other unplanned occurrence.

Please help the street sweeping program by parking your vehicles off the street (in your garage or your driveway) on the designated sweeping day. Keeping debris out of the gutters helps the storm drains to accommodate rainfall and water from irrigation runoff. Your neighborhood's appearance will reflect your cooperation with this request! If you have questions or concerns, please feel free to contact Sunset Property Services directly at 551-5151, or the Public Works Department Street Sweeping Hotline at 461-3497.

Fair Housing Opportunity is the Law

The City of Lake Forest is committed to furthering fair housing practices in the community. If you or someone you know has a fair housing question or issue that needs to be addressed, please call the Community Development Block Grant Manager at 461-3471. The City cooperates with the Fair Housing Council of Orange County to eliminate discriminatory practices Countywide.

An impediment to fair housing opportunity is any policy or practice that denies or adversely affects the provision of housing to persons in any protected class.

CITY OF LAKE FOREST

Household Hazardous Waste (HHW) Collection Event!

On **Saturday, May 6, 2000**, Waste Management of Orange County will hold a free **HHW Collection Event** for Lake Forest residents at El Toro High School, 25255 Toledo Way (enter from Serrano Road through the student parking lot behind the school).

Residents must schedule an appointment by calling (949) 642-1191 before 5:00 p.m. on Thursday May 4th, and bring an I.D. and proof of Lake Forest residence to the appointment. This service is FREE to Lake Forest residents but HHW is limited to 5 gallons or 50 lbs. per vehicle.

What is HHW? HHW is materials and substances which cannot be safely sent to the landfill, such as paint, household cleaners, pesticides, pool supplies, and automotive products such as batteries, motor oil, antifreeze, etc.

If you are unable to attend the HHW Collection Event, you can dispose of HHW at County of Orange permanent Household Hazardous Waste Collection Centers. Please call (714) 834-6752 for more information.

Bulky Item Collection

Did you know that the residents of Lake Forest have free curbside bulky item collection service? Each single family residence is entitled to two free bulky item pickups each year (up to four items per pickup). Bulky items include large, hard-to-handle items such as sofas, furniture and appliances that can be lifted by two persons. Just contact our Customer Service Center at (949) 642-1191 to schedule a pickup.

Fiesta Days and Rodeo at Foothill Ranch!

CASA (Community Activities and Service Association) and the Lake Forest Chamber of Commerce have joined forces to present the Fiesta Days and Rodeo at Foothill Ranch in Lake Forest. The event will be held Thursday May 18th through Sunday May 21st at the corner of Portola Parkway and Glenn Ranch Road in Foothill Ranch.

And you are invited to participate!

Weekend activities include: Professional Rodeo Cowboys Association Competition, Business Expo, full carnival, live entertainment, food vendors and more. KIKFM will be airing their program live from the rodeo.

Admission is $3.00 for adults and $2.00 for children. Tickets for the rodeo are $13.00 for adults and $11.00 for children. You may save $3.00 on the rodeo by purchasing advance tickets from any Boot Barn, AIM Mail Center or De Nault's True Value Hardware.

Waste Management of Orange County will have a booth with Cycler the Robot. Come on down and join in the fun!

If you have any questions, please contact Marion Algier at the Lake Forest Chamber of Commerce at (949) 460-7942, or Janet Coe, Economic Development Manager, at the City of Lake Forest, (949) 461-3477.

Did you know that Lake Forest Recycles Used Motor Oil?

007560

RECYCLE USED OIL

Did you know that you can dispose of your used motor oil safely and easily at 12 convenient locations right here in Lake Forest?

If you have questions about used motor oil recycling or to find the center nearest you, please call the California Integrated Waste Management Board Recycling Hotline at (800) CLEAN-UP.

Park Recycling in Lake Forest

The City of Lake Forest is continuing recycling at various public parks for a simple reason: It's the right thing to do! When you go to throw out your trash, you will now find a container near the trash receptacle at most city parks for recycling glass, aluminum and plastic.

So, the next time you visit the park, please look for these recycling containers.

This program is funded by

CA Department Of Conservation

Source Reduction

Source Reduction means reducing waste at its source and preventing garbage from being created in the first place. This includes reducing unnecessary packaging of items, purchasing reusable and repairable items instead of disposable goods, purchasing in bulk, and making a conscious choice to create less garbage. Please join us in our e[illegible] to reduce, reuse and recycle!

KEEP THE FOREST in Lake Forest

Saturday, May 6th, 2000 - City of Lake Forest Household Hazardous Waste Collection Event

What is Household Hazardous Waste?

Household hazardous waste, or "HHW", is generated by everyone. HHW is materials and substances which cannot be safely collected with your refuse and sent to the landfill such as paint, automotive products (batteries, motor oil, antifreeze), pesticides, gasoline, pool chemicals, poisons, etc. When improperly discarded, HHW can pollute our landfills, contaminate the city's water supply or drain into the ocean.

Upcoming Lake Forest HHW Collection Event!

On Saturday, May 6th, Waste Management of Orange County will hold the 3rd Annual Lake Forest HHW Collection Day Event at El Toro High School, 25255 Toledo Way (enter from Serrano Road through the student parking lot behind the school).

This service is FREE to City of Lake Forest residents, but HHW is limited to 5 gallons or 50 lbs. per vehicle.

Call to Schedule an Appointment...

Residents must schedule an appointment by calling (949) 642-1191 before 5:00 p.m. on May 4th. You must bring an I.D. and proof of Lake Forest residence to the appointment!

If you are unable to attend the Waste Management HHW Collection Event, the County of Orange operates permanent HHW Collection Centers. The nearest center is located at 6411 Oak Canyon in Irvine (take the Sand Canyon exit off the 5 Freeway and go west). For more information, please call the Orange County HHW Hotline at (714) 834-6752.

For additional information and customer service, please call (949) 642-1191.

In the best interest of the health and well-being of students, employees and the general public, the Governing Board of the Saddleback Valley Unified School District is proud to provide a healthy, tobacco free environment. In accordance with California State Assembly Bill 816, board policy prohibits the use of tobacco products at any time on school district property. We therefore request that all people refrain from using any tobacco products while on or in school or district grounds, buildings or vehicles. We thank you for your cooperation.

WM WASTE MANAGEMENT

"JUST SAY NO" TO HOUSEHOLD HAZARDOUS WASTE!

Have you been meaning to check under your sink, in the garage, out in the storage shed and in secret hiding places throughout your home for "treasures" that no longer have any value? Did you ever wonder if there was a place that you could take these items? There is, it's called the Household Hazardous Waste Collection Center. Household Hazardous Waste (HHW) consists of materials and substances which cannot be safely sent to the landfill, such as paint, household cleaners, pesticides, antifreeze, batteries and motor oil.

Just call the HHW Hotline at (714) 834-6752 (press 2) for information about no-fee collection centers in Orange County. This Hotline also provides a complete list of what products are classified as HHW and may be helpful to you in gathering items for disposal.

VINTAGE PARK IMPROVEMENT UPDATE

The City of Lake Forest would like to thank you for your patience during the construction of the park improvements at Vintage Park. Because of ongoing concerns, the City felt that it was in the best interest of the community to terminate the contract with the original contractor. The process of selecting a replacement contractor must be adhered to in a strictly-defined legal manner, thus resulting in an unfortunate delay to the project and inconvenience to our residents. We are now anticipating that the project will be completed during July 2000. We hope that residents will use and enjoy Vintage and other City parks and their new additions.

HOME IMPROVEMENT AND REPAIR LOANS AVAILABLE THIS SUMMER

The City's CDBG (Community Development Block Grant) Rehabilitation Program continues to offer assistance to those who are in need of repairs to their home. Homeowners who are eligible can receive deferred 0% interest loans or 3% amortized loans for home improvements. Homeowners can receive up to $10,000 and mobile home owners can receive up to $5,000 for repairs. Eligible residents in Foothill Ranch and Portola Hills can now participate in the Lake Forest Program. Annual income cannot exceed 80% of the HUD median income (See chart below). Eligible items include painting, flooring, roofing, plumbing, heating, garage doors, driveways, and other common home improvement items. The City will be accepting applications for this Program during the months of July and August 2000. All applications will be reviewed after the application period has ended. For more information or to be put on the mailing list to receive an application when available, please call (949) 461-3473.

2000 HUD INCOME RESTRICTIONS

Combined gross household income may not exceed 80% of HUD median income. Income is adjusted annually.

Household Size	Income Limits for 0% Deferred Loan	Income Limits for 3% Loan
1	$24,350	$35,150
2	27,850	40,150
3	31,300	45,200
4	34,800	50,200
5	37,600	54,200
6	40,350	58,250
7	43,150	62,250
8	45,950	66,250

COMMUNITY SPIRIT SOARS

Neighborhood Pride Volunteer Paint Day

The efforts of 146 wonderful volunteers made a very successful second annual Neighborhood Pride Volunteer Paint Day. This year's event took place on April 8th and April 15th and volunteers assisted seven families with the exterior painting of their homes.

Sponsored by the City's Community Development Block Grant (CDBG) and coordinated through efforts of Code Enforcement and Parks and Recreation, the volunteer groups that participated in painting included: Saddleback Valley Foursquare Church, the Trabuco and Lake Forest Wards of the Chur[illegible] of Jesus Christ of Latter Day Saints, Wells Fargo [illegible] Foothill Corridor Area, the Kiwanis Club of Lake Forest, and the Promise Keepers Men's Group from Saddleback Church.

To qualify for painting at no cost, homes must be owner occupied, homeowners must income-qualify, and the home must be located in one of the City's CDBG Target Areas. A professional paint crew reviewed each home and all prep work was completed prior to the arrival of the volunteers. Volunteers masked all the required areas, painted the exterior walls and trim, and assisted with the necessary clean up.

This program also provides an opportunity for volunteer organizations to "adopt" the home that they painted and to provide further clean-up and rehab/repair/maintenance assistance throughout the year. One volunteer organization has already indicated they will "adopt" the home that they painted in April.

Many thanks to all whom participated in this year's event who will be honored at an upcoming City Council meeting. Paint Day helps to foster community pride and is instrumental in m[illegible]taining and improving the character of our n[illegible]borhoods. If you or your organization would like to volunteer for next year's Neighborhood Pride Volunteer Paint Day, or if your home could benefit from this program, please contact the City of Lake Forest Community Preservation Technician at 461-3474.

LAKE FOREST RECYCLES USED MOTOR OIL!

Used oil can contain such contaminants as lead, magnesium, copper, zinc, chromium, arsenic, chlorides, cadmium and chlorinated compounds. Oil poured down storm drains or onto the ground can work its way into our ground and surface waters and cause serious pollution. One gallon of used oil can foul one million gallons of drinking water!

Lake Forest has 10 State Certified Used Oil Collection Centers standing by to help you recycle your used motor oil. Recycling oil is easy. When you do an oil change, just drain your vehicle's old oil into a clean container, seal the container well with a lid and bring it to one of the 10 conveniently located State Certified Used Oil Collection Centers in Lake Forest. So don't throw good oil down the drain. Recycle now!

It's Easy! It's Free!

Did you know that you can dispose of your used motor oil safely and easily right here in Lake Forest? When you change your oil, drain your used motor oil into a container, seal the container well with a lid, and bring it to one of the conveniently located State Certified Used Oil Collection Centers in Lake Forest. Be sure that your motor oil is not mixed with other substances, such as antifreeze, solvents, gasoline or water.

Why Recycle Used Motor Oil?

Because it never wears out! Your used motor oil can be recycled, cleaned and used again. And that means you can conserve a natural resource. Motor oil which is poured into the ground, or your trash, can pollute the soil, groundwater, streams and rivers... your environment. When you take your used motor oil to a State Certified Used Oil Collection Center for recycling, you are protecting the environment and conserving a valuable resource. And, State Certified Used Oil Collection Centers will pay you $.04 for each quart you recycle.

Used Oil Recycling Tips

- When draining used oil, use a clean plastic oil pan or container with a tight lid.
- Reuse your used oil container, and store it safely, away from children and pets.
- Don't mix used oil with chemicals, gasoline, water or other substances.
- Use a reusable 5-gallon or smaller sized container.
- State Certified Used Oil Collection Centers will take between 5 and 20 gallons per day, per person.

Save time!

The average person spends less time on lawn care when they grasscycle. You save time and the hassle of raking, sweeping, bagging, and throwing out grass clippings.

Help the environment!

Grasscycling cuts the amount of green materials going to landfills. Grasscycling slows evaporation from the soil surface, enhancing your lawn's drought tolerance and conserving water. Grasscycling helps reduce fertilizer and water usage, which means less runoff from your lawn that can lead to surface and groundwater pollution. Grasscycling with electric mulching mowers also is better for the air.

Will grasscycling make my lawn look bad?

No! The key to maintaining a neat appearance is to cut the lawn often enough to produce short grass clippings. If you follow the 1/3 rule—mow often enough so that no more than 1/3 of the length of the grass is cut—the short clippings decompose quickly and will not cover the grass surface. Also remember to mow when the grass is dry to prevent grass clippings from clumping in piles on the lawn.

Does grasscycling cause thatch buildup?

No! Short grass clippings left on a lawn do not smother the grass underneath or cause thatch buildup. Research has shown that grass roots and stems are the primary cause of thatch, not grass clippings. Roots and stems contain large amounts of lignin (wood), a substance that decomposes very slowly. In contrast, grass clippings are approximately 80-85 percent water with only small amounts of lignin, and they decompose rapidly.

Is grasscycling always appropriate?

Grasscycling does not work in every situation. Prolonged wet weather, mower breakdowns, or infrequent mowing are situations where grass clippings should probably be bagged since a large number of clippings may be generated. But do not throw the clippings away! Add clippings to your compost pile, or use them as mulch around trees, flowerbeds, and shrubs.

Does grasscycling spread lawn disease?

No! Improper watering and fertilizing are the primary cause of turfgrass disease. If an environment for disease is present, it will occur whether clippings are left on the lawn or not. Most grasses in California need about 1 inch of water every 5 to 7 days in the growing season and much less during slow-growth months. Lawns watered too frequently tend to develop shallow root systems that may make them more susceptible to stress and disease. Overfertilization can also weaken a lawn by causing excessive top growth. It is better for the lawn to apply smaller quantities of fertilizer more frequently rather than larger amounts occasionally.

Does grasscycling require special equipment?

You may be able to use your existing mower to grasscycle. Refer to your owner's manual or contact a local lawnmower dealer to learn if you can grasscycle. You may need to purchase a retrofit kit, and your mower dealer can assist you with selecting the correct one.

Remember:

Grasscycling is faster, cheaper, and easier!

Saves time

(no more bagging)

Saves money

(less fertilizer is needed, no disposal fees)

Encourages a healthier lawn

(clippings contain valuable nutrients)

Benefits the environment

(conserves landfill space and water resources)

For more information about grasscycling, contact your local recycling coordinator or call the Waste Board at (916) 255-2708.

www.ciwmb.ca.gov/Organics/

The Integrated Waste Management Board (IWMB) does not discriminate on the basis of disability in access to its programs. IWMB publications are available in accessible formats upon request by calling the Public Affairs Office at (916) 255-2296. Persons with hearing impairments can reach the IWMB through the California Relay Service, 1-800-735-2929.

Pub# 443-99-011
Printed On Recycled Paper

Grass clippings make up a surprisingly large portion of California's waste stream. Increasingly, as California communities work to meet the State mandate to cut the amount of trash sent to landfills, they are looking at grasscycling to reduce the amount of green materials generated.

What is grasscycling?

Grasscycling is the natural recycling of grass by leaving clippings on the lawn when mowing. When you grasscycle with a mulching mower, the clippings stay in the chamber longer and are cut and recut before falling back to the soil. Once on the ground, the clippings decompose quickly, returning valuable nutrients back to the soil. Grasscycling is simple, easy, and it works!

Enjoy a healthier Lawn!

The valuable nutrients released through grasscycling make lawns greener and encourage a healthier stand of grass. Grass clipping decomposition enhances soil microbial activity and adds beneficial organic matter to the soil.

Save money!

Since grasscycling returns valuable nutrients to the soil, you can reduce the amount of fertilizer you purchase by 15 to 20 percent. In addition, even if your community has a green waste collection program, it is costly to collect this material and grasscycling can help keep garbage collection rates down.

It's best to be prepared!

Living in California means living with the reality that a major **earthquake** can hit at any minute. Preparing for such an event will help you get safely through a disaster.

We depend so much on household utilities for both comfort and security that it's hard to imagine living without them. But, putting all comfort aside, there's one household utility that offers more than simple comfort; it also protects your health and the environment around you. That household utility is your sewer system.

Knowing what to do if your sewer system becomes damaged or inoperable will not only help you get through a disaster such as an earthquake, it will also help protect your health and the environment.

NO ILLEGAL DUMPING TO SEWERS OR STORM DRAINS
PROTECT OUR ENVIRONMENT

Checklist for an EMERGENCY provisional toilet

- ☐ 5-gallon plastic bucket with a tight-fitting lid
- ☐ 2 boxes heavy-duty trash can liners (8-10 gallon size) with ties
- ☐ 1 gallon liquid chlorine bleach or other toilet disinfectant
- ☐ 2 boxes baking soda
- ☐ 2 large boxes heavy-duty trash can liners (30-gallon size) with ties
- ☐ 6-8 rolls toilet paper
- ☐ Hand sanitizer to clean and disinfect hands without water
- ☐ Feminine products
- ☐ Paper towels
- ☐ Moist towelettes or baby wipes

It's easy, so be prepared!

Hazardous waste: The Annual Waste Collection Day is today. Residents are encouraged to collect old paints, aerosols, flammable liquids, pesticides and corrosive materials and properly discard them from 9 a.m. to 2 p.m. at Unisys Corp., 24725 Jeronimo Road, between Los Alisos and Alicia Parkway. Last year, 1,500 people hauled 73,000 pounds of hazardous materials to the site.

Where Does the Water in Your Storm Drain Go?

Sewer drains and pipes lead to a sewage treatment plant, but storm drains are designed to prevent flooding by carrying excess rainwater from city streets to the ocean. If this urban runoff is polluted, it can contaminate the ocean and beaches, harm aquatic life, and increase the risk of flooding by clogging gutters and catch basins.

Common household pollutants poured into gutters flow to the ocean. Similarly, waste material washed from driveways, lawns, and grasslands flows to the sea. Recently, this drainage has increased levels of bacteria and other toxins along beaches where streams and storm drains empty, causing frequent closure of these southland recreational areas to surfers and swimmers.

Although some of this pollution may be the result of sewage leaks or industrial dumping, most of it appears to be caused by natural processes and individual carelessness or indifference. Together, you and your neighbors can make a difference to keep gutters, storm drains, and waterways clean.

You can help prevent polluted urban runoff from contaminating southland streams, oceans, and beaches by taking the following steps:

- Never pour anything down a storm drain that you would not want to swim in.
- Use absorbent material or kitty litter to clean up spills of oil or other similar toxic liquids and dispose of them in the trash.
- Dispose of unwanted paint and other toxic liquids at Mission Viejo's annual Household Hazardous Waste Roundup.
- Avoid overwatering your lawn. Runoff from lawn irrigation may contain fertilizer, pesticides, and/or animal waste.
- Clean patios, driveways, porches, and sidewalks with a broom, not a hose.
- Take your vehicle to a car wash that recycles water rather than washing it in your driveway.
- Flush pet waste down the toilet or place it in a plastic bag in the trash so that the harmful bacteria this waste contains will not be washed into streams and onto beaches.
- Control erosion at construction and landscape sites with sandbags or other devices to prevent dirt and debris from entering storm drains.

Even if you live miles from the Pacific Ocean you may be polluting it without knowing it. Before you let anything go into the gutter or the storm drain, stop and think!

Prepare for Medical Emergencies

The Orange County Fire Authority (OCFA) responds to a variety of situations, including fires, earthquakes, floods, and medical emergencies. In a medical emergency, it is essential that firefighter paramedics quickly assess the patient to determine his condition and decide upon proper stabilizing treatment.

Yet in situations of this kind, the patient may be unconscious or in shock and so not able to describe his general health, name the medications he is taking, or alert emergency responders regarding physical conditions like diabetes that may be cause for extra concern or require special care.

At times like these, a Medical Information Sheet may be a lifesaver. This sheet should be prepared before an emergency arises and should include the following information:

- A brief medical history that mentions all physical conditions, ailments, or diseases that may be cause for additional concern or require special care
- Prescription medications that are being taken regularly
- Allergies, especially those to medications
- Insurance carrier or health care provider along with group and/or policy numbers
- Name and telephone number for primary care physician
- Hospital preference
- Name of attorney in fact
- Name and telephone number for family member or friend who should be contacted in an emergency

For additional information call the OCFA Community Relations and Education Section at (714) 744-0496.

Critter Corner

During the past two years, the California legislature has passed several laws that will dramatically change the philosophies and daily operations of animal shelters throughout the state.

For example, Senate Bill 1785 (referred to as the Hayden Bill) requires all animal shelters, humane societies, and animal welfare groups to adhere to improved care, custody, animal adoption, and euthanasia standards for stray and homeless animals.

California animal shelters are now required to lengthen their animal holding periods and extend operating hours to allow working pet owners time to redeem their lost animals.

Shelters must spay and neuter all animals before they are released for adoption and collect fines (required by Food and Agricultural Code Section 30804.7) for all impounded dogs that have not been spayed or neutered.

Last year 1,958 animals were impounded by the Mission Viejo Animal Services center. Over 950 of these animals were adopted. Another 658 were reunited with their owners.

The Mission Viejo Animal Services Center is proud of its commitment to caring for stray and homeless animals and encouraged by this new legislation, which improves the standards for shelter operations statewide.

If you lose your pet or are interested in adopting a dog or cat, please contact the Mission Viejo Animal Services Center at 470-3045.

"Good News For A Change in Mission Viejo"

LOCAL NEWS

MISSION VIEJO OFFERS HOUSEHOLD HAZARDOUS WASTE COLLECTION DAY

The City of Mission Viejo is pleased to announce its annual Household Hazardous Waste Collection Event. This year's event is scheduled for Saturday, November [illegible] from 9:00 AM to 2:00 PM at the Unisys Corporation, [illegible] between Alicia Parkway and Los Alisos in Mission Viejo.

There is no charge for this service, and all Mission Viejo residents are invited to bring up to 15 gallons or 125 pounds of household hazardous waste, such as used motor oil, antifreeze, batteries, paint, paint thinner, pesticides, herbicides, pool acids, cleaning supplies and photo chemicals.

To minimize the potential for a delay, residents are invited to arrive between designated times according to first initial of last name, as follows:

A-I 9:00 AM to 10:30 AM; J-Q 10:30 AM to noon; R-Z noon to 2:00 PM.

For more information, please refer to the notice on BFI trash collection bill, the fall edition of City Outlook, or call (888)PICK-BFI.

GREAT NEW CHRISTMAS BOUTIQUE IN RANCHO

Santa Margarita Catholic High School will be holding its Tenth [illegible]ual Christmas Boutique to benefit Boys' Volleyball and Grad Night 2000. It will be held on Friday, November 5th from 6:00 p.m. to 10:00 p.m. and Saturday, November 6th from 9:00 a.m. to 4:00 p.m. in the Santa Margarita Catholic High School Moiso Pavilion at 22062 Antonio Parkway in Rancho Santa Margarita.

More than 160 vendors from throughout Southern California will offer hand-crafted and manufactured gifts, clothing, ceramics and holiday items. The boutique will also [illegible]ture

25 Ways You Can Help Save Our Planet

1. Buy products that feature the recycling mark.
2. Bring a lunch box to school instead of throwing out those paper lunch bags every day.
3. Use cloth instead of paper napkins and a sponge instead of paper towels.
4. Give outgrown toys and clothes to someone who can use them.
5. Bring a container filled with your favorite drink to lunch every day instead of individual cartons.
6. Avoid buying items that have excessive packaging.
7. Decorate a shoe box with old wrapping paper and use it to store small toys and other things.
8. Save used paper and use the clean side whenever you need scrap paper.
9. Refuse a paper bag when you buy something small.
10. Find out if there are any other uses before throwing things out.
11. Take shorter showers.
12. Be careful not to disturb plants and animals when outdoors.
13. Volunteer to work at the recycling center.
14. Save and reuse bubble and foam packing.
15. Turn off appliances when not in use.
16. Ride your bike instead of in the car.
17. Buy toys that are well made and last.
18. Get some friends and visit a local stream to collect trash.
19. Cut six-pack plastic rings.
20. Don't let the water run unnecessarily when brushing your teeth.
21. Build a bird house for the backyard.
22. Save empty cardboard containers for craft projects.
23. Pick up at least one piece of litter every day.
24. Leave grass clippings on the lawn.
25. Let grass grow taller in dry weather.

Ms. Karen Wiley
CITY OF MISSION VIEJO
25909 Pala, Suite 200
Mission Viejo, California 92691

Dear Ms. Wiley:

MSE Environmental, Inc. (MSE) wishes to thank you for the opportunity to assist in the management of your recent household hazardous waste program held November 6, 1999, in the City of Mission Viejo.

Enclosed please find a summary of all pertinent documentation organized in a booklet format. This year's event was a success servicing 1,120 residents. Almost 75,000 pounds of waste was collected with 78% of this material being recycled.

The MSE team looks forward to working with the City of Mission Viejo again on future programs. Should you have any questions or need additional information, please contact me at (805) 987-0217.

Sincerely,

MSE ENVIRONMENTAL, INC.

Scott Bauwens
HHW Program Coordinator, Southern California

Fall - 1999 A Quarterly Newsletter for Mission Viejo Residents and Businesses

Shops at Mission Viejo Open in September

The Shops at Mission Viejo - Gallery View

Attention, shoppers! Friday, September 10, marks the grand reopening of the Shops at Mission Viejo.

Festivities begin with a ribbon cutting at 9:30 a.m. in the new West Court. At 9:50 a.m., Orange County's newest Nordstrom store opens its doors.

Throughout the weekend, shoppers will be treated to music and will have hourly opportunities to win prizes worth at l[illegible] $1,000 or to walk o[illegible] ith the grand prize, an Infiniti I30.

New Mall Hours

Monday - Friday
10:00 a.m. to 9:00 p.m.
Saturday
10:00 a.m. to 7:00 p.m.
Sunday
11:00 a.m. to 6:00 p.m.

Built in the late 1970s, during the energy crisis, the Mission Viejo Mall had reached its twentieth year and was showing its age. Its sharp edges, dark woods, and enclosed feel reflected the pessimism of that period. And since 1999, its retail sales tax revenues had declined 20 percent.

The mall owner, Simon Property Group, invested $150 million in a major makeover that increased the mall's size by 400,000 square feet, attracted more than 60 new stores and restaurants, and transformed it into a regional shopping destination whose graceful curves, stately palm trees, and teal accents bespeak a casual elegance.

To fund construction of two parking structures with space for 2,500 cars, Mission Viejo's Community Development Agency issued bonds valued at $35 million.

According to projections, the cumulative effect of the Simon and Mission Viejo investments will be to generate retail [illegible] equal to that of the top 10 percent of super regional malls in the western United States and to increase Mission Viejo's retail sales tax revenues by more than $3 million annually over the next ten years.

The mall revitalization is important to Mission Viejo because the city derives one-third of its operating revenues from retail sales taxes.

Mission Viejo Considers City Hall Options

Mission Viejo does not have its own city hall. Instead, the city leases office space in a building located at 25909 Pala in the High Park business complex. Effective October 1, 1999, rent payments for this space will increase from $389,985 to $514,780 annually. The present lease expires on September 30, 2001.

The Mission Viejo City Council is responsible for ensuring that the city's [illegible]mployees have a safe and adequate space in which to do their jobs. The Council must decide whether to (1) renew the lease in the present building at a much higher rate, (2) begin the search for space to lease in another building in a very tight office space market, (3) purchase an existing building and remodel it to meet current access requirements and seismic codes, or (4) recommend construction of a new building on land the city already owns.

To evaluate these four options, the Council sought advice from Keyser Marston Associates, a firm specializing in the economic analysis of real estate transactions. **A summary of the report prepared by Keyser Marston appears as an insert in this issue of the Mission Viejo *City Outlook*.**

Under Construction

As a part of Mission Viejo's ongoing capital improvement program, changes will soon be made to the intersections of Alicia Parkway with Jeronimo Road and with Via Fabricante.

At Jeronimo, the roadway will be widened to accommodate dual left-turn lanes for all four legs of the intersection and designated right-turn lanes for three legs of the intersection. At Via Fabricante, dual left-turn lanes will be added for traffic eastbound on Alicia.

As a part of this project, the medians on Alicia Parkway will be reconstructed and relandscaped to feature more plant material in place of the current hardscape.

Construction will begin in September and be completed by the end of the year. To minimize the inconvenience to users of this busy arterial, much of the work will be performed at night.

Most of the funding for this $800,000 project will be provided by contributions from the Ladera Ranch development, now under construction east of the city.

For more information regarding Mission Viejo's capital improvement projects, visit the city's web site at ci.mission-viejo.ca.us.

Fifth Annual DAWG Walk Raises Money for Animal Shelter

The Dedicated Animal Welfare Group (DAWG) will hold its fifth annual DAWG Walk from 7:30 a.m. until 9:30 a.m. on Saturday, September 25, at the Market on the Lake, 27762 Vista del Lago in Mission Viejo.

This annual amble around Lake Mission Viejo benefits the Mission Viejo Animal Shelter and features a dog-owner look-alike contest and prize drawings with a chance to win theme park tickets, dinners for two, and a wide assortment of pet-related merchandise and services.

Grand marshal for this year's stroll is a blue merle Queensland heeler named Blue, who is an alumna of the shelter. When found abandoned, Blue had been hit by a car. Previous surgery apparently intended to help her had been unsuccessful, leaving her in pain and unable to walk. DAWG paid for the orthopedic surgery needed to correct the problem.

DAWG Walk registration forms are available at the Mission Viejo Animal Shelter, located at 28095 Hillcrest, one block south of the Crown Valley–Marguerite Parkway intersection. A $5 discount on the $20 entry fee is available to those who register in advance at the Pet and Wildlife Faire on Saturday, September 18, at the Animal Shelter.

The DAWG Walk is sponsored by Big Dog Sportswear, the Coach House, El Torito Grill, IAMS Company, Medix Ambulance Service, Mimi's Café, Morning Dove Farms, Six Flags, and Waste Management of Orange County.

The Mission Viejo Animal Services Center serves the communities of Mission Viejo and Laguna Niguel. Its purpose is to provide humane shelter for lost and homeless animals, to offer life-saving treatment for animals that are injured or ill, and to find homes for "orphaned" animals.

Since the center opened in October 1993, it has welcomed and cared for more than 10,000 lost pets, reuniting some with their grateful owners and finding families for others who needed new homes.

For more information about DAWG or the upcoming DAWG Walk, call 582-9332.

Walk Against Drugs Opens Red Ribbon Week

Mission Viejo's eleventh annual Walk Against Drugs is set for Saturday, October 23. Walkers will meet at 8:00 a.m. in the Mission Viejo High School football stadium, 25025 Chrisanta Drive, for a pep rally and then move east on La Paz Road to Oso Viejo Park for a fair.

Slated to last until noon, the fair will feature food, music, game booths, and informational displays provided by the Orange County Fire Authority and the Orange County Sheriff's Department.

First held in 1989, the Mission Viejo Walk Against Drugs coincides with Red Ribbon Week, a time set aside for communities nationwide to recall the death of federal drug agent Enrique Camarena in the line of duty and renew their no-tolerance pledges.

Household Hazardous Waste Round-up

Mission Viejo's annual Household Hazardous Waste Round-up will take place between 9:00 a.m. and 2:00 p.m. on Saturday, November 6, 1999, in the Unisys Corporation parking lot located at 25725 Jeronimo Road.

Sponsored jointly by the city and its residential waste-hauler, BFI, this convenient drive-through event offers Mission Viejo residents an opportunity to dispose safely and legally of toxic items with a limit of 5 gallons or 125 pounds per vehicle.

Participants must show proof that they are Mission Viejo residents, should place materials to be disposed of in the trunk of their vehicle, and are asked to arrive between the times indicated below based on the first letter of their last name.

A-I	9:00 a.m. to 10:30 a.m.
J-Q	10:30 a.m. to noon
R-Z	Noon to 2:00 p.m.

MISSION VIEJO TO OFFER HOUSEHOLD HAZARDOUS WASTE COLLECTION DAY

The City of Mission Viejo is pleased to announce its annual Household Hazardous Waste Collection Event. This year's event is scheduled for Saturday, November 6, 1999 from 9:00 a.m. to 2:00 p.m. at the Unisys Corporation, located at 24725 Jeronimo Road between Alicia Parkway and Los Alisos in Mission Viejo.

There is no charge for this service and all Mission Viejo residents are invited to bring up to 15 gallons or 125 pounds household hazardous waste such as used motor oil, antifreeze, batteries, paint, paint thinner, pesticides, herbicides, pool acids, cleaning supplies and photo chemicals.

To minimize the potential for a delay, residents are invited to arrive between designated times.

A-I 9:00 a.m. to 10:30 a.m.

J-Q 10:30 a.m. to Noon

R-Z Noon to 2:00 p.m.

For more information, please refer to the notice on BFI trash collection bill, the fall edition of City Outlook or call 1-888-PICK-BFI.

HOLIDAY TREE COLLECTION SERVICE EXTENDED BY BFI

Browning-Ferris Industries (BFI) has extended holiday tree collection services in Mission Viejo through Friday, January 15, 1999. Holiday trees should be placed out at the curb for pick up on your regular trash collection day. Trees over 6 feet need to be cut in half and should be free of ornaments and the tree stand. Flocked and fake holiday trees will be collected when a bulky item pick up is scheduled with BFI. Flocked trees are not recyclable but they may be cut and placed in the large blue trash container.

To dispose of a holiday tree after January 15, 1999, place the cut up tree in either the large blue trash container or the green waste recycling container.

For more information or to schedule a bulky item pickup, contact BFI at 1-888-742-5234.

THE RECYCLE CYCLE

MOBIUS Fun Book

REPRESENTATIVE PUBLIC EDUCATION MATERIALS

CITY OF NEWPORT BEACH

Your Wastes Become.

Since 1990, the City of Newport Beach has partnered with CR&R to process the City's residential waste stream at CR&R's Material Recovery Facility, or MRF, located in the City of Stanton. Designed to handle the recycling needs of cities with narrow streets and small lots like those in Newport Beach, the MRF has provided the City with effective recycling services by recycling a monthly average of 30% of the residential waste stream collected in Newport Beach. An added benefit is that waste diversion is achieved without the congestion, noise and pollution associated with the additional trucks needed to implement a conventional curbside recycling program. In addition, by utilizing the MRF, the City eliminates the need to continually educate a changing residential population of which approximately 42% are renters.

Newport Beach collection vehicles pick up commingled wastes from your residence. The contents of fully-loaded trucks are then transferred into specialized semi-trailers for shipment to CR&R's MRF. At the MRF, the waste is unloaded onto conveyor belts and transported into a recycling building which has a full acre under roof. In this building, materials that can be recovered for reuse are separated from non-recyclable wastes.

A giant rotating machine known as a trommel separates large materials, such as bundles of newspapers, from small materials such as dirt and grit. Once separated, the material is distributed to three sorting lines where additional machines and laborers pick out recyclable materials such as cardboard, steel and aluminum.

Useable Products

Recyclable materials then fall into huge storage containers. When the containers are full, the recyclables are hydraulically pushed onto another conveyor that sends them into a baler. Once baled, the materials become commodities that are shipped into the world marketplace where they are used to make new products.

Old cardboard becomes new boxboard; old newspapers are returned for reuse at the LA Times and Orange County Register; aluminum becomes new beverage containers; plastics are processed into carpet and made into fiberglass; and steel is used for new cars, refrigerators and steel cans.

Organic materials such as grass clippings and garden shrubs are also separated from the waste, through an additional mechanical process. This material is used as a daily cover for landfills and can be processed for use as a soil amendment known as compost.

Any material that cannot be recovered through this process is shipped to Orange County landfills for disposal.

R E C Y C L I N G

007602

do

- **Know what's recyclable**
  Newspaper, mixed paper (scrap paper, junk mail, cartons, etc.), cardboard, glass, plastic, metals and yard wastes are all recyclable.

do

- **Keep recyclable materials dry.** Recyclable materials become unmarketable when contaminated with food wastes, animal wastes, yard wastes and other wet wastes.

do

- **Use your in sink garbage disposal** for disposal of food wastes.

do

- **Use a plastic bag for any wet wastes,** diapers and animal wastes that you put in your trash. Bagging wet wastes helps keep recyclable materials dry and marketable.

do

- **Tie your newspapers in bundles.**

do

- **Put your yard wastes in a plastic bag.**

do

- **Scrape/rinse** glass, plastics, aluminum cans and other metals that you put in your trash. Clean recyclable materials increase their marketability.

- **Don't mix wet wastes with recyclable materials.** Contaminated recyclable materials usually end up in a landfill.

- **Don't put hazardous wastes in your trash.** Paints, oils, pesticides, home cleaning products, car batteries, etc. are all considered to be hazardous wastes and require special disposal.

  Call the County of Orange at (714) 834-6752 for the location of the nearest household hazardous waste collection center.

  Call the City of Newport Beach at (949) 644-3066 for all other refuse related questions.

PLEASE TEAR OFF AND SAVE

REGIONAL HAZARDOUS MATERIALS COLLECTION CENTERS

e County residents (proof of residency required) lispose of household hazardous materials (limit allons or 50 pounds per visit) at these locations:

ntington Beach Regional Collection Center
17121 Nichols

Irvine Regional Collection Center
6411 Oak Canyon

HOURS OF OPERATION:
9AM to 1PM
TUESDAY - SATURDAY
Closed on rainy days and holidays

• Wood Preservatives • Batteries • Auto ncts • Motor Oil • Antifreeze • Hobby and Supplies • Household Chemicals • Drain ners • Pesticides • Herbicides • Fertilizer

COMPOSTING & GRASSCYCLING

Compost consists of decomposed organic wastes that are ecologically recycled as a soil conditioner. In addition to air and water, carbon derived from newspaper, leaves, and twigs and nitrogen originating from manure, grass clippings, and kitchen wastes are key ingredients for nutrient-rich compost. Compost is beneficial because not only does it improve the soil fertility and air and water movement in soil but also saves landfill space and costs by recycling yard and kitchen wastes.

Grasscycling is the natural recycling of grass by leaving clippings on the lawn when mowing. Nutrients such as nitrogen released from the decomposition of grass clippings increase the biological activity near the soil surface, resulting in a healthier-looking lawn. Through grasscycling, the need for fertilizers decreases and yard waste is recycled and diverted from landfills.

Visit the Oasis Senior Citizen Center located at 5th and Marguerite Avenues in Corona del Mar to view active compost displays and to obtain helpful tips on creating your own backyard compost. Informative brochures on composting and grasscycling are available at the center.

REFUSE RECYCLING HAZARDOUS WASTE & YARD WASTE

INFORMATION

CITY OF NEWPORT BEACH

General Services Department

644-3066

7am to 4pm Monday-Friday

REFUSE COLLECTION

The following regulations should be observed in order to help us continue to provide you with high quality, efficient municipal refuse service.

Refuse is collected once each week.

Property owners must provide a sufficient number of containers to accommodate all refuse accumulated on the premises. Containers should be constructed of metal or plastic and equipped with handles and a tight fitting lid. Any one refuse container must not exceed 45 gallons and 50 pounds in weight, including contents. The use of sturdy, nonreturnable garbage plastic bags is highly recommended.

Containers should be placed for collection on the street side of the sidewalks, in the parkway, or in driveways next to the street. Containers should not be placed in the gutter or in the street. When the premises border an alley, containers should be placed at or next to the property line in the alley, but in no case shall the containers obstruct any vehicular travel through the alley. Refuse containers must be set out by 7 AM on collection days, but not earlier than 7 PM the night before. Emptied containers should be removed as soon as possible after collection, but no later than 7 AM of the day following collection.

Your cooperation in keeping alleys clear of parked cars will be greatly appreciated.

HOLIDAY SERVICE

Refuse collection services will not be provided on NEW YEAR'S DAY, MEMORIAL DAY, JULY 4th, LABOR DAY, THANKSGIVING, or CHRISTMAS. When a specified holiday falls on a week day, collections will be delayed one day for the remainder of the week.

Materials Accepted for Collection

- Food refuse such as meats and vegetables.
- Meat, game, or fish cleanings that are thoroughly drained and securely wrapped to prevent leakage, odor, and access to flies and animals.
- Paper, rags, cardboard, fiber, metals, glass, cartons, containers, boxes, bottles, jars, and other materials of similar nature normally discarded as household or business refuse.
- Newspapers and magazines that are tied into bundles which do not exceed 50 pounds in weight.
- Animal waste that is securely wrapped to prevent leakage, odor, and access to flies and insects.
- Vacuum cleaner sweepings, ashes, sawdust, or similar powdery materials that are securely wrapped so they will not spill or be inhaled when collected.
- Tree or shrub trimmings, limbs and branches, plants, and grass cuttings that are placed in bags and/or tied into bundles less than four feet long, 18 inches in diameter, and not to exceed 50 pounds in weight.

Materials Prohibited from Collection

Household hazardous materials; ammunition; explosives; industrial wastes; chemicals; pathological, toxic, and radioactive waste; acids; drugs; unwrapped human and animal waste; large pieces of metal; machine parts; logs; tree stumps; and building scraps such as lumber, shingles, plaster, bricks, stones, concrete, asphalt, and drywall.

Do NOT place those materials in the trash. Use a Hazardous Materials Collection Center or rent a disposal bin.

FREQUENTLY ASKED QUESTIONS

How do I sign up for refuse collection?
It is not necessary to sign up for collection since no disposal fees are collected; however, a recycling surcharge is included in your water billing.

Why are "Red Tags" placed on containers?
Red tags indicate non-compliance with refuse regulations.

May I rent a disposal bin from the City?
The City does NOT rent bins. Private refuse collection contractors who have such bins may be found in the Yellow Pages listed under *Rubbish Hauling*.

Does the City collect bulky items such as sofas, water heaters, etc., during normal weekly pickups?
The City does NOT provide this service except on those special pickup days which have been arranged by homeowners associations.

Where can I take my recyclables?
Charities and citizens are encouraged to redeem their recyclables at their local recycling center. To find a recycling center near you, call the Recycling Hotline at (800) 553-2962 or our General Services Dept. at 644-3066.

Recycle Today!

SOURCE REDUCTION

Source reduction is the design, manufacture, purchase, or use of materials to reduce the amount or toxicity of waste generated. Source reduction strategies include:

- Choose products that are recycled, reusable, refillable, repairable, reliable, and recyclable.
- Invest in reusable rather than disposable products. Use mugs, cloth towels, and reusable shopping bags.
- Buy products in bulk and with minimal packaging.
- Repair or donate appliances and clothing rather than discarding them.
- Adopt practices that reduce waste toxicity.
- Compost and grasscycle yard wastes.
- Avoid impulse shopping - buy only what you need

Do You Know Where The Water In Your Storm Drain Goes?

To The Ocean...

ALTE ATIVE CLEANERS

ALL PURPOSE HOUSEHOLD CLEANER

1 Quart Warm Water
1 Teaspoon Liquid Soap
1 Teaspoon Borax, or squeeze of lemon

GOOD FOR A MULTITUDE OF JOBS, INCLUDING COUNTER TOPS, FLOORS, WALLS, RUGS, AND UPHOLSTERY

DISINFECTANT

½ cup of Borax in one gallon of hot water. To inhibit mold and mildew, do not rinse off Borax Solution.

AIR FRESHENER

Leave open box of baking soda in places where odors are present. Open doors and windows for ventilation. Use flowers, herbs and spices. (Example: cinnamon in boiling water.)

GLASS CLEANER

¼ cup of vinegar in one quart of warm water. (Do not use as windshield wiper solution as it may damage pump.)

DRAINS

Never pour liquid grease down a drain. Mix one cup baking soda, one cup salt, ¼ cup of Cream of Tartar. Pour ¼ cup of mixture down the drain once a week.

ALTERNATI PESTICIDES

ANTS

Locate the place of entry, squeeze a lemon in path and leave the peel. Ants will also retreat from lines of talcum powder, chalk, damp coffee grounds, bone meal, charcoal, dust and cayenne pepper.

SILVERFISH

Traps can be made with a mixture of one part molasses to two parts vinegar. Place near cracks and holes where pests live.

COCKROACHES

Plug all small cracks along baseboards, wall shelves, cupboards, around pipes, sinks and bathtub fixtures. A light dusting of Borax around the refrigerator, stove and ductwork is effective in controlling cockroaches. For a trap, lightly grease the inner neck of a glass bottle and put a little stale beer or a raw potato inside.

HOUSE PLANT PESTS

Hot pepper spray will help to control pests on the leaves. Don't forget soap and water, be sure to rinse the plants with fresh water after treating.

TOXIC TIPS

DO'S

DO Remember that *most* storm drains in Newport Beach empty into the bay.

DO Remind those working on your property such as painters, masons, carpet cleaners and others that it is *illegal* to discharge any material other than clean water into the storm drain system.

DO Remember that you as property owner are ultimately responsible for spills caused by those who are employed to work on your property.

DO Reduce the amount of Hazardous Products you purchase by reading the labels and purchasing the least hazardous, also store all products in original containers.

DO Recycle leftover materials by offering unused paints to your church, school, theater group or neighbors.

DO Rinse water base paint brushes and rollers in the sink. Filter and reuse paint thinner and brush cleaners. Dispose of carpet cleaning solutions in sinks or toilet.

DO Dispose of old oil base paint by painting cardboard, plastic or waste wood and placing in trash container for pick-up when dry.

DO Dispose of used motor oil and antifreeze at a service station that is an approved collection site or take to a Hazardous Materials Collection Center.

DO Call the Household Hazardous Waste Disposal Hotline (714) 834-6752 for information on site locations, hours and materials accepted.

THIS SERVICE IS FREE TO ALL COUNTY – RESIDENTS

TOXIC TIPS

DON'TS

DON'T Throw products such as motor oil or paints into the trash. Dispose of properly.

DON'T Rinse paint brushes or rollers in the street *regardless* of whether latex or oil base paint was used.

DON'T Pour poisons or toxic chemicals down the drain.

DON'T Dump waste oil, flammable liquids or paint on the ground. Dispose of properly at a service station collection site or Hazardous Materials Collection Center.

DON'T Smoke while handling hazardous materials or store these products near any heat source.

DON'T Store or mix different hazardous product types together. Also, keep materials in original, labeled containers.

DON'T Allow commercial contractors, painters or carpet cleaners working on your property to dispose of waste water and cleaning solutions in the storm drain system.

DON'T Rinse garage floor cleaners and auto or motorcycle engine cleaning products into the storm drain system.

DON'T Dispose of swimming pool products such as acids and neutralizers in your household trash. It is *illegal* and the main cause of respiratory injuries to City of Newport Beach refuse personnel. Pool chemicals are accepted at your local Household Hazardous Waste Collection site, call (714) 834-6752 for information.

POLLUTER BEWARE

007607

Laws were developed to protect the life and safety of the public, and to prevent subsequent damage to the environment. By following the tips in this handout, you will be able to avoid hidden costs associated with accidental and illegal discharges of hazardous waste. Listed below are fines, penalties, and responsible party costs.

An incident involving a misdemeanor, for example, cleaning of latex paint brushes or rollers in the street, is punishable by up to a $1,000 fine and/or possibly up to one year in jail.

An incident involving a felony, for example, the willful discharge of crank case oil that enters the storm drain is punishable by up to a $25,000 fine and/or up to three years in state prison.

A violator will be responsible for costs associated with the clean-up of the spill or discharge. Violators shall be responsible for costs incurred by a responding agency, such as the fire department, public works, police, and/or any other required agency, and/or the combination of all agencies.

These costs will be based on the quantity of material spilled and hours spent cleaning up the spill. These costs may be paid to either the private firm or governmental agency that cleaned up the spill.

HOUSEHOLD HAZARDOUS WASTE

The County of Orange has four Household Hazardous Waste Collection Centers available FREE to Orange County citizens. (Proof of residency may be required.)

COLLECTION CENTER LOCATIONS

ANAHEIM REGIONAL COLLECTION CENTER

1071 N. BLUE GUM STREET
Located between the 91 & 57 Fwys
at the corner of La Palma Avenue
and Blue Gum Street in Anaheim
**Visit the Stop & Swap to obtain partially used household products at no charge.*

IRVINE REGIONAL COLLECTION CENTER

6411 OAK CANYON
Next to City of Irvine Corporate Yard.
From the (5) freeway take the Sand Canyon exit, go Southwest to Oak Canyon and turn right.
**Visit the Stop & Swap to obtain partially used household products at no charge.*

HUNTINGTON BEACH REGIONAL COLLECTION CENTER

17121 NICHOLS STREET
Next to Rainbow Recycling and Disposal.
Major cross streets are Beach Blvd.
and Warner Ave. in Huntington Beach.

SAN JUAN CAPISTRANO REGIONAL COLLECTION CENTER

PRIMA DESHECHA LANDFILL
From the (5) freeway take Ortega Hwy. (74),
east to La Pata Avenue, turn right and
follow road to Landfill entrance.

COLLECTION CENTER HOURS OF OPERATION:

Tuesday through Saturday
9:00 a.m. to 1:00 p.m.

Collection Centers are Closed:

Rainy Days; Christmas, Independence, New Years and Thanksgiving Days.

Hazardous waste is not accepted from businesses, schools, government agencies, churches, non-profit organizations.

Printed on recycled paper

In order to reach the State mandated recycling goal of 50% by 2000, the City transports all City collected solid waste to a Materials Recovery Facility (MRF) where the waste is sorted for recyclable materials. The MRF is equipped with conveyors and other mechanized systems which separate and process recyclables. This innovative recycling program seeks to maximize recycling while minimizing costs and inconvenience to residents.

A monthly recycling surcharge is included in your bi-monthly utility billing. This fee covers direct costs associated with the City's recycling program only and does not pay for refuse collection nor disposal costs.

Newport Beach surpassed the 1995 State goal of 25% by recycling over 30% of the residential waste stream between 1995-97.
Newport Beach Recycles!

What Can I Do To Help?

Although separation of refuse is not mandatory, please remember that all of your trash will be mechanically or manually sorted. In order to minimize contamination of recyclables materials, please *separate* the following items in bags, bundles, or a different container:

Newspapers
Yard and Food Waste
Animal Waste and Diapers

Residents are not asked to sort their refuse, but are reminded to seal wet refuse in bags to prevent contamination of newsprint.

With your continued support and conscious effort to recycle, Newport Beach will successfully meet its recycling challenge!

HOUSEHOLD HAZARDOUS MATERIALS

A material is hazardous when it exhibits corrosive, poisonous, flammable, and/or reactive properties and has the potential to harm human health and the environment. In fact, thousands are injured each year due to improper use or disposal of household hazardous materials, particularly refuse collectors who fall victims to fumes, spills, and explosions. Hazardous materials may also contaminate air and water sources through landfill seepage and introduction into storm and sewer drains.

TIPS ON TOXICS

Be an **INFORMED** consumer. Follow these guidelines for the **SAFE** storage, and disposal of household chemicals.

SAFE STORAGE:

- Separate and store like products together.
- Check label for storing instructions.
- Check expiration dates.
- Store out of reach of children and animals.

SAFE DISPOSAL:

- Do NOT pour products down drain, in storm drains, on ground , in trash, or in the street.
- Share unused products with others.
- Use Hazardous Materials Collection Centers.

CITY OF NEWPORT BEACH CALIFORNIA

RESIDENTIAL REFUSE, RECYCLING, & HAZARDOUS WASTE

INFORMATION

CITY OF NEWPORT BEACH

GENERAL SERVICES DEPARTMENT
REFUSE DIVISION
(949) 644-3066
7 am to 4 pm Monday-Friday

REFUSE COLLECTION

The following regulations should be observed in order to help us continue to provide you with high quality, efficient municipal refuse service:

1. Refuse is collected once each week.

2. Property owners must provide a sufficient number of containers to accommodate all refuse accumulated on the premises. Containers should be constructed of metal or plastic and equipped with handles and tight fitting lids. Any one refuse container must not exceed 45 gallons and 50 pounds in weight, including can weight. **The use of sturdy, nonreturnable garbage plastic bags is highly recommended.**

3. Containers should be placed for collection on the street side of the sidewalks, in the parkway, or in driveways next to the street. Containers should not be placed in the gutter or in the street. When the premises border an alley, containers should be placed at or next to the property line in the alley, but in no case shall the containers obstruct any vehicular travel through the alley. Refuse containers must be set out by 7 A.M. on collection days, but not earlier than 7 P.M. the night before. Emptied containers should be removed as soon as possible after collection, but no later than 7 A.M. of the day following collection.

4. Your cooperation in keeping alleys clear of parked cars will be greatly appreciated.

HOLIDAY SERVICE

Refuse collection services will not be provided on NEW YEAR'S DAY, MEMORIAL DAY, JULY 4th, LABOR DAY, THANKSGIVING, NOR CHRISTMAS. When a specified holiday falls on a weekday, collections will be delayed one day for the remainder of the week.

Materials Accepted for Collection

- Food waste such as meats and vegetables.
- Meat, game, or fish cleanings that are thoroughly drained and securely wrapped to prevent leakage, odor, and access to flies and animals.
- Paper, rags, cardboard, fiber, metals, glass, cartons, containers, boxes, bottles, jars, and other materials of similar nature normally discarded as household refuse.
- Newspapers and magazines that are tied into bundles which do not exceed 50 pounds in weight.
- Animal waste that is securely wrapped to prevent leakage, odor, and access to flies and insects.
- Vacuum cleaner sweepings, ashes, sawdust, or similar powdery materials that are securely wrapped so they will not spill or be inhaled when collected.
- Tree or shrub trimmings, limbs and branches, plants, and grass cuttings that are placed in bags and/or tied into bundles less than four feet long, 18 inches in diameter, and do not exceed 50 pounds in weight.

Non-Collectible Materials

Household hazardous materials; ammunition; explosives; industrial wastes; chemicals; pathological, toxic, and radioactive waste; acids; drugs; unwrapped human and animal waste; large pieces of metal; machine parts; logs; tree stumps; building scraps such as lumber, shingles, plaster, bricks, stones, concrete, asphalt and drywall. Bulky items such as water heaters, mattress and sofas. Unusually large amounts of refuse such as tree trimmings, house cleaning debris, packing boxes, etc. Sod, containers over 50 lbs.

Do NOT place these materials at the curb. Use a Hazardous Materials Collection Center or rent a disposal bin.

FREQUENTLY ASKED QUESTIONS

007610

How do I sign up for refuse collection?
It is not necessary to sign up for collection since no disposal fees are collected; however, a recycling surcharge is included in your utility billing.

Why are "Red Tags" placed on containers?
Red tags indicate non-compliance with refuse regulations and are a warning only.

May I rent a disposal bin from the City?
The City does NOT rent bins. The General Services Department has a list of licensed franchised haulers from whom you may contract bin services.

Where can I take my recyclables?
Charities and citizens are encouraged to redeem their recyclables at their local recycling center. To find a recycling center near you, call the Recycling Hotline at (800) 553-2962.

TRANSPORTATION AND HANDLING

- A maximum of 15 gallons or 125 pounds may be transported per vehicle, per trip (Department of Transportation regulation).
- Materials should be in original containers (except motor oil, fuels and antifreeze).
- All containers must have lids, be sturdy, non-leaking, and protected from breakage.
- Do not combine types of waste.
- Do not mix oil-base paint with latex paint.
- Dry out empty paint cans and discard in regular trash.
- If you wish to have a container returned (i.e. oil containers and boxes/crates used to transport materials), please notify the attendant in advance. Some containers may not be returnable.

WHY SHOP 'TIL YOU DROP?

VISIT THE STOP & SWAP!

A unique and FREE program that allows you to drop off household, yard, and car care products you no longer need and pick up others you can use.

Currently available at the Anaheim and Irvine locations only. (Tuesday through Saturday, 9 a.m. to 1 p.m.)

FOR MORE INFORMATION ABOUT THE HOUSEHOLD HAZARDOUS WASTE COLLECTION PROGRAM AND THE STOP & SWAP CALL:

DISPOSAL OF HOUSEHOLD HAZARDOUS WASTE

Household Hazardous Waste Collection Prog[illegible]

DID YOU KNOW?

- Most home, car, and yard care products can't be thrown in the trash?
- Paint, used motor oil, and most cleaning products are considered to be "hazardous waste"?
- If these products are put in the landfill they can contaminate our groundwater?

SO WHAT CAN YOU DO?

EASY AS 1-2-3!

1. Pack unwanted home, yard, and car care products in your car.
2. Drive to the Household Hazardous Waste Center closest to you.
3. Sit in your car and fill out a simple form while an attendant removes the unwanted products.

AND AWAY YOU GO!

LOCATIONS

Tuesday through Saturday
9 a.m. to 1 p.m.
except for rainy days and major holidays: Independence, Thanksgiving, Christmas and New Years Days)

(From the 5 Freeway, exit Ortega Highway, go east to La Pata and turn right.)

MATERIALS ACCEPTED

- Automotive products (antifreeze, motor oil, fluids)
- Batteries (home and car)
- Cosmetics
- Herbicides
- Hobby supplies
- Household cleaners
- Fuels
- Medicines
- Paints (latex and oil)
- Paint products
- Personal care products
- Pesticides
- Polishes and waxes
- Pool and spa chemicals
- Propane tanks from barbecues
- Unused road flares
- Wood preservatives

WASTE NOT ACCEPTED

Ammunition, Asbestos
Biological, Business-generated
Explosives, Radioactive
Compressed gas cylinders

* See reverse for Stop & Swap info!

CITY OF NEWPORT BEACH

RESTAURANT CLEANING AND MAINTENANCE GUIDE

August 7, 1998

TO ALL RESTAURANT OWNERS, MANAGERS AND STAFF

The City of Newport Beach has recently experienced several beach closures due to high bacteria counts in the Bay. Orange County Environmental Health Division's stormdrain bacteriological monitoring has indicated that this high bacterium count may be associated with Newport Beach Restaurants. During the course of cleaning equipment and facilities some materials, cleaning agents and/or rinse waters may migrate into the storm drain system and finally into the bay. In addition dumpsters provide a perfect incubator for bacteria and fluids may leak from the dumpster into the storm drain system. The storm drain system consists of the curb and gutter, catch basins and pipes, which carry rainwater from our streets into the bay.

The City seeks the support and assistance of all restaurant owners, managers and staff in eliminating the possibility of this type of occurrence. It is in our mutual best interest to maintain the recreational waters in Newport Beach to high standards in order to promote and facilitate the tourism that contributes to our local economy.

In order to eliminate potential undesirable material, dumpster effluent and cleaning agents from migrating into the storm drain system and bay, it is necessary that all cleaning and dumpster storage be confined to a dedicated area with a hard surface where any discharge is connected to the sewer system. This area must also have a cover to keep rain from entering the sewer connection. Any new connections to the sewer system will require a permit from the Building Department. Absolutely no material, dumpster effluent, cleaning agents and/or rinse waters should be allowed to migrate into the storm drain system. Allowing any material, dumpster effluent, cleaning agents and/or rinse waters to enter the storm drain system is a violation of numerous municipal, state and federal laws.

In addition it is important to periodically sweep your parking lot area in order to remove any potential contaminants. Sweeping of the parking lot should be conducted on a weekly basis, at a minimum.

You should also be aware the City will be increasing it's efforts to enforce these requirements and the fines can be severe, starting at $100.00 for the first occurrence.

Thank you for your support in making our community a better place to visit and dine in. If you have any questions please call the City's Code Enforcement Supervisor, Jim Sinasek, at (949) 644-3215 or the City's National Pollutant Discharge Elimination System Coordinator Stephen Luy, at (949) 644-3330.

Sincerely,

Don Webb
Public Works Director

TRANSPORTATION

CAUTION should be used when transporting hazardous waste to a Collection Center due to the potential for spillage and/or exposure.

- A maximum of 15 gallons or 125 pounds may be brought in per vehicle, per visit.
- Hazardous Waste must be in its original container (**except motor oil and antifreeze**).
- **Containers will NOT be returned**, except for oil containers in good condition (upon request).
- All containers must be sturdy, non-leaking and protected from breakage.
- Containers must have lids.
- Do NOT mix or combine Hazardous Waste (Exception: consolidate like paints — combine partial cans of oil-base paint with oil base paint, and combine partial cans of latex paint with latex or water-based paint).
- Dry out empty paint cans and discard in regular trash.
- **DO NOT MIX OIL-BASE PAINT WITH LATEX PAINT!!**

007617

It's best to be prepared!

Living in California means living with the reality that a major **earthquake** can hit at any minute. Preparing for such an event will help you get safely through a disaster.

We depend so much on household utilities for both comfort and security that it's hard to imagine living without them. But, putting all comfort aside, there's one household utility that offers more than simple comfort; it also protects your health and the environment around you. That household utility is your sewer system.

Knowing what to do if your sewer system becomes damaged or inoperable will not only help you get through a disaster such as an earthquake, it will also help protect your health and the environment.

NO ILLEGAL DUMPING TO SEWERS OR STORM DRAINS
PROTECT OUR ENVIRONMENT

Checklist for an EMERGENCY provisional toilet

- ☐ 5-gallon plastic bucket with a tight-fitting lid
- ☐ 2 boxes heavy-duty trash can liners (8-10 gallon size) with ties
- ☐ 1 gallon liquid chlorine bleach or other toilet disinfectant
- ☐ 2 boxes baking soda
- ☐ 2 large boxes heavy-duty trash can liners (30-gallon size) with ties
- ☐ 6-8 rolls toilet paper
- ☐ Hand sanitizer to clean and disinfect hands without water
- ☐ Feminine products
- ☐ Paper towels
- ☐ Moist towelettes or baby wipes

It's easy, so be prepared!

OCSD
Rev. 2/99

For additional information, contact the Orange County Sanitation District Communications Department at (714) 962-2411 or visit our website at www.ocsd.com

Orange County Sanitation District

EARTHQUAKE PREPAREDNESS

What to do if your sewer system becomes damaged or inoperable

Importance of your household sewer system

In the event of a major disaster such as an earthquake, the sewer system in your area may become damaged or inoperable. Damaged sewer systems are health hazards. It is important to get damaged septic tanks, cesspools, pits and leaching systems into service as soon as possible. Trained personnel from local environmental regulatory agencies can help with these problems.

If your local sewer system becomes inoperable, there are proper procedures you can use to temporarily replace your toilet and safely dispose of sewage while service is being restored. In our continuing effort to protect public health and the environment, the Orange County Sanitation District has prepared the following step-by-step plan to assist you if an earthquake or any other disaster causes your local sewer system to fail. We recommend that you keep these guidelines close at hand because you never know when you might need them.

How to create a provisional toilet

1 If sewage lines are broken but the toilet bowl is usable, place a trash can liner inside the bowl and follow the disinfectant procedures below.

If the toilet is completely backed up, use a bucket with a trash can liner and make a toilet seat out of two boards placed parallel to each other across the bucket. For greater comfort, you can remove the seat from your household toilet and place it on the bucket.

2 Every time you use the provisional toilet, pour or sprinkle a small amount of regular household disinfectant, such as chlorine bleach (**DO NOT** mix chlorine with other disinfectants as it can produce a dangerous chemical reaction), baking soda or laundry detergent to keep down odors and germs.

3 Cover the container tightly when not in use and replace the trash can liner when waste has accumulated. **NEVER use a provisional toilet that is not lined with a plastic bag!**

. . .and safely dispose of sewage

4 After using the provisional toilet, you will need another container to empty the contents for later disposal.

The second container should be lined with a 30-gallon size trash can liner. As bags from the provisional toilet fill up, they should be placed in the second container for safe disposal.

NEVER deposit human waste or garbage on the open ground. This will not only pollute the environment but it can also create a serious health hazard.

If you have **no other** alternative for disposal, it is safe to bury waste in trenches 24-30 inches deep.

HEALTH – SAFETY – ENVIRONMENT

TRASH AND RECYCLING COLLECTION SCHEDULE

The map above shows the general boundaries of each day's trash collection area for Monday through Friday. Please put your trash and recyclables at the curbside or other designated collection point by 6:00 a.m. on your scheduled day. Please remove your containers after pick up a soon as possible. If you have bulky items to discard, call Orange Disposal Service at 637-3010 to schedule. There is no charge for this service, but an appointment must be made. For replacement of recycling bins, or other pick up related questions, please call Orange Disposal Service at 637-3010.

For other questions relating to City business or programs, please call 532-6480. Thank you!

HOLIDAY SCHEDULE

Our curbside recycling and regular trash pickup service observes six holidays a year:

NEW YEAR'S DAY
OBSERVED MEMORIAL DAY
FOURTH OF JULY
LABOR DAY
THANKSGIVING DAY
CHRISTMAS DAY

If your collection day falls on one of these holidays, your service will be one day late. If your collection day does not fall on one of these six holidays, but is within a holiday week, place your containers at curbside on your regular trash collection day. Any other holidays other than those listed will have regularly scheduled service with no delays.

STREET SWEEPING INFORMATION

NOTICE

Street sweeping services are provided the day following your regular trash day. **Exception:** If your trash day is Thursday, your street sweeping day will be on Monday or Tuesday, as posted. (Friday's trash day is swept on Monday.)

NOTE: On inclement weather days, such as rain or high winds, there will be no street sweeping, and no makeups.

CITY OF ORANGE
SOLID WASTE DIVISION

General Information About Your Curbside Trash and Recycling Collection Services

DEPARTMENT OF PUBLIC WORKS
637 West Struck Avenue
Orange, CA 92867
(714) 532-6480

Rev. 4/98

Trash Collection Information:

- Refuse shall be in approved containers only and placed on the curb in the parkway (or alley) no earlier than noon of the day before, nor later than 6:00 a.m. the day of collection.
- Containers shall be removed by noon of the day after collection. Failure to comply will result in a violation notice, and /or a citation being issued.
- Approved containers include:
  - Sheet metal or plastic 20 - 45 gallon container with tight fitting lid.
  - Large plastic bags designed for exterior use, tied or secured in a closed position.
- Containers not approved for regular use:
  - Small plastic bags designed for interior use
  - 50 or 55 gallon drums
  - Cardboard boxes as regular containers
    Note: If used, boxes will be taken and not returned. (Corrugated cardboard boxes may be set out with recycling program if broken down and flattened.)
- Food wastes should be drained, and wrapped before placing in regular trash container.
- Wooden boxes and packing crates must be broken up or flattened before setting out.
- Brush, tree, and shrub trimmings shall not exceed 4 feet in length. Tie in bundles not over 2 feet in diameter. Limit 50 lbs per bundle.
- Refuse exceeding 60 lbs., including container, will not be removed by the City's contractor. Please keep containers within this limit for maximum service.
- **NO building or construction materials** sand, rock, gravel, broken concrete, dirt, sod, tree stumps, auto bodies, tires, animal droppings, used motor oil or other hazardous waste. *(for used oil pick up call 289-7661)*
  For the Household Hazardous Waste hotline: 834-6752 (County of Orange)
- It is unlawful to dump debris of any kind loosely in the streets, parkway or alley. Failure to comply will result in a violation notice and/ or a citation being issued.

Special Programs:

⇒ **Bulky Items** such as refrigerators stoves, washers, dryers, freezers, water heaters, and other general household furniture or appliances may be picked up at no charge by calling the City's contractor, Orange Disposal Service at 637-3010.
Please call at least 5 days in advance of your trash day to schedule.

⇒ **No lumber or construction** material will be picked up as bulky items. To dispose of these items, call 637-3010 to rent a commercial bin, or take mat-material to the Material Recovery Facility, 2050 N. Glassell or to a County Landfill. *(see information at right).*

⇒ **RECYCLING:**
The City's recycling program is with a three small basket container system. To obtain containers, call 282-0200
Recyclable material includes:

- **Orange Bin:**
  Newspapers, mixed waste paper, magazines, catalogs, phone books.
- **Green Bin:**
  Aluminum cans, and all steel or bi-metal cans. Plastics/ #1 or #2 only.
- **Yellow Bin:**
  Glass bottles and jars. No mirror, panes or ceramics.

For more information on the recycling program, please consult the Orange Recycles brochure, or call 282-0200

Scavenging of recyclable materials is illegal! If observed, call 532-6461

Do You Know Where The Water In Your Storm Drain Goes?

To The Ocean...

4 ways to save water in the Bathroom

- **Check your toilet for leaks.**
  Put a few drops of food coloring in your toilet tank. If the coloring begins to appear in the toilet bowl with out flushing, you have a wasteful leak that should be repaired at once.
- **Put a plastic bottle in your toilet tank.**
  Put an inch or two of sand or pebbles in the bottom of a quart bottle and fill the rest of the bottle with water. Then place the bottle in your toilet tank, safely away from the operating mechanism. The bottle will save water on each flush without impairing the efficiency of the toilet.
- **Take shorter showers.**
- **Check faucets and pipes for leaks.**

3 ways to save water in the kitchen and laundry.

- **Use your automatic dishwasher only for full loads.**
- **Use your automatic washing machine only for full loads.**
- **Keep a bottle of drinking water in the refrigerator.**
  This beats the wasteful habit of running tap water to cool it for drinking.

The Orange City Council and the Water Department Staff ask that you adopt a program of water conservation at home and at work.

100 cubic feet = 750 gallons

7 ways to save water outside.

- **Water your lawn only when it needs it.**
  Step on the grass. If it springs back when you take your foot off, it doesn't need water.
- **Deep-soak your lawn.**
  When you do water your lawn, water it just long enough to seep down to the roots where it is needed. A light sprinkling, which sits on the surface, will evaporate and be wasted.
- **Water during the cool parts of the day.**
  Early morning is better than dusk since it helps prevent the growth of fungus.
- **Don't water the gutter.**
  Position your sprinklers so that water lands on your lawn or garden, not on concrete or other paved areas. Also, avoid watering on windy days.
- **Use a broom instead of a hose to clean driveways and sidewalks.**
- **Don't run the hose while washing your car.**
- **Check for leaks in pipes, hoses faucets and couplings.**
  Leaks outside the house can be extremely wasteful, especially when they occur in your main water line. To check for hidden leaks in your pipes, shut off all faucets and taps around the house for 15 minutes. If the water meter shows some movement during that time, you have a leak.

Billing 714/744-2233
Engineering 714/288-2475

SOURCE OF SUPPLY

Approximately 75% of the City's supply is groundwater pumped from City-owned wells. About 22% is treated water purchased from the Metropolitan Water District which imports its water from the Colorado and the State Water Project. The remaining 3% is treated water Irvine Lake purchased from the Serrano Water District.

FIRE PROTECTION RATING

The Insurance Services Office, a national organization representing the insurance industry, performed a comprehensive study and analysis of the reliability of the water system to supply water for emergency fire fighting purposes. The City of Orange water system received a near perfect score and a Class 1 Water Utility Rating.

About your new waste services provider...

Waste Management of Orange.

We believe you'll be extremely happy with Waste Management of Orange's new automated service, expanded recycling collection program and flat rate structure.

If you have any further questions, please call the City of Orange at (714) 532-6480 or Waste Management of Orange's Customer Service Center at (714) 637-3010.

WASTE MANAGEMENT of ORANGE

Printed on recycled paper

ABOUT YOUR NEW WASTE COLLECTION SERVICE

On April 27, 1999, the City of Orange terminated its contract with Orange Disposal Service and hired Waste Management of Orange to be its new trash collection service provider. Since that time, the City has received numerous questions from residents who are concerned about how this changeover will affect them. You may have had some questions yourself.

To help ease any worries you may have about how trash service will be conducted under Waste Management of Orange, here are the answers to the questions we receive most often:

REMEMBER TO RECYCLE

Aluminum Cans
Glass Food and Beverage Containers
Steel/ Tin Cans
Plastic Food and Beverage Containers
Detergent Containers (#1 & #2 Plastics)
Newspaper
Mixed Papers
Junk Mail
Magazines, Catalogs and Phone Books
Corrugated Cardboard Boxes

WASTE MANAGEMENT of ORANGE

ORANGE RECYCLES!

Your Starter Kit Enclosed

ADDITIONAL SERVICES

BULKY ITEM COLLECTION

Each Orange Resident with curbside refuse collection is entitled to two free bulky item pick-ups each year, with up to four large items or 20 plastic bags of refuse permitted per pick-up. Bulky items include large, hard-to-handle items such as furniture, major appliances, and other household items that require two individuals to move. Call the Waste Management Customer Service Center at (714) 637-3010 to schedule your free bulky item pick-up.

HOUSEHOLD HAZARDOUS WASTE

The County of Orange operates free regional household hazardous waste collection centers for homeowners to take and dispose of their paint, automotive products, pesticides, cleaners, solvents, etc. The two closest centers for Orange residents are conveniently located in Anaheim at 1071 N. Blue Gum St. and in Irvine at 6411 Oak Canyon. For more information, call the County's Information Hotline at (714) 834-6752.

DISPOSAL OF USED MOTOR OIL

Orange residents can safely & easily dispose of used motor oil right here in Orange. Please refer to the Used Motor Oil Reference Card inclosed in the Starter Kit or contact the California Environmental Hotline at 1-800-CLEANUP to locate a State Certified Used Oil Collection Center near you.

CHRISTMAS TREE RECYCLING

We will collect and recycle Christmas trees for the first two weeks following Christmas on your regular trash day. Trees longer than six feet must be cut in half. Please remove all tinsel, metal ornaments and metal stands from trees. Flocked trees will be collected but not recycled.

HOLIDAY SCHEDULE

Waste collection does not occur on the following holidays:

New Year's Day	Labor Day
Memorial Day	Thanksgiving Day
4th of July	Christmas Day

When any of these holidays are observed on a weekday, refuse and recycling collections for the remainder of the week will be delayed one day. PLEASE NOTE: During holiday weeks when your refuse collection falls on a street sweeping day, place your carts on the curb or in your driveway, NOT IN THE STREET.

LARGE BIN SERVICE

For large household and yard projects, special bin rental service is available. Please call the Waste Management Customer Service Center at (714) 637-3010 for rates and information.

HOME COMPOSTING WORKSHOPS

available FREE to all residents of the City of Orange

SATURDAYS at 10:00 am

Under the Ash Tree

February 19 () April 8 () June 17

reservations not required

Plan to attend one of these 90 minute workshops. Learn how to naturally recycling your yard waste. Hands-on demonstrations about composting, mulching, "grasscycling", and more. Workshop participants will receive a voucher to purchase a compost bin for only $15.

All workshops are held at the

Fullerton Arboretum

Located at 1900 Associated Road, west of the 57 Freeway, off Yorba Linda Blvd.

The Community Compost Education Program is sponsored by the Fullerton Arboretum and various cities including Orange. All entry fees, donations, and balance due for backyard composting unit are paid for by the City of Orange. Any donation made individually by Orange residents to the Arboretum will help to further Arboretum programs.

For more information on other recycling programs for the City of Orange, call (714) 744-5563.

Groundwater Replenishment System

Providing High-quality Water for 200,000 Orange County Families

The Need for a Stable, Independent Water Supply

Orange County and much of the southwestern portion of the United States are short of water and dependent on increasingly less-reliable imported water supplies. Finding new sources of imported water holds little promise, in fact, federal watershed policy and court actions will probably lead to decreases in future imports. As Orange County experiences increased population growth, the supply of existing water will out distance the demand. One innovative approach to providing future high-quality water is the Groundwater Replenishment System.

The Groundwater Replenishment System

The Groundwater Replenishment System will take highly treated wastewater now sent to the ocean and treat it through highly advanced microfiltration and reverse osmosis processes to standards that will surpass all drinking water requirements. Reverse Osmosis is the same process used by many bottled water companies. Some of the purified water will then be naturally percolated into Orange County's large underground water basin where it will actually improve the overall quality of our groundwater. The remainder of the water will be used for irrigation, industrial use, and for protecting the groundwater basin from seawater intrusion.

Reverse Osmosis (RO) is the process in which water is forced through a membrane to filter out contaminants. The RO membrane is like a microscopic strainer that allows only the water molecules (H_2O) to pass through. Visualize the water molecules as the size of tennis balls, then relatively speaking, metal and inorganic compounds screened out would be the size of softballs; organic compounds soccer balls; viruses the size of a tractor-trailer truck; bacteria the size of a large office building; and a protozoa would be the relative size of a mountain.

Additional information on the Groundwater Replenishment System

Besides providing 100,000 acre-feet of new water, enough for 200,000 families, here is what the Groundwater Replenishment System will do: provide water for multiple uses including household, landscaping, industrial and prevention of seawater intrusion; make the County less dependent on more expensive, less-reliable imported water; free up water which can be used by agriculture and the environment; produce "drought-proof" water, easing the hardships of the next drought; improve the overall quality of our groundwater by adding this purified water; provide increased wastewater storm treatment capability; decrease the amount of discharge into the ocean; provide water that is more energy efficient and environmentally friendly than current sources; and provide water at a cost lower than or comparable to imported water. This proposed solution to the growing need for more local water comes from over 8 years of study by the joint project sponsors - The Orange County Water District (OCWD) and the County Sanitation Districts of Orange County (CSDOC). The people who will be operating the Replenishment System, recently won the California Water and Environment Association's Santa Ana River Basin "1997 Plant of the Year Award" recognizing their ability to run a safe, well-operated water production facility. Because the new System will be built on the property of the two agencies and use the Santa Ana River right-of-way for moving the water from Fountain Valley to the Anaheim percolation basins, there will be minimal impact on the community. Health and safety will be primary concerns with the new System – the water, treated beyond drinking water standards, will constantly be monitored by the producers as well as outside health and regulatory agencies. The water will actually be purified twice, the last time by natural groundwater absorption, the same process that purifies rainwater. This System actually improves on existing, similar water Systems already operating successfully in cities in Virginia, Texas and California.

Water Quality - Total Dissolved Solids (Salts)

Feedback on the Groundwater Replenishment System

We would like to hear from you concerning the Groundwater Replenishment System. If you have any ideas, thoughts or opinions on this new proposed System, please write the Orange County Water District (Attn: Tom Dawes) 10500 Ellis Ave., P.O. Box 8300, Fountain Valley, CA 92728 or contact us through our Internet homepage: www.ocwd.com, or call 714- 378-3351.

REPRESENTATIVE PUBLIC EDUCATION MATERIALS

CITY OF SAN CLEMENTE

TRANSPORTATION AND HANDLING

- A maximum of 15 gallons or 125 pounds may be transported per vehicle, per trip (Department of Transportation regulation).
- Materials should be in original containers (except motor oil, fuels and antifreeze).
- All containers must have lids, be sturdy, non-leaking, and protected from breakage.
- Do not combine types of waste.
- Do not mix oil-base paint with latex paint.
- Dry out empty paint cans and discard in regular trash.
- If you wish to have a container returned (i.e. oil containers and boxes/crates used to transport materials), please notify the attendant in advance. Some containers may not be returnable.

WHY SHOP [illegible] YOU DROP?

VISIT THE STOP & SWAP!

A unique and FREE program that allows you to drop off household, yard, and car care products you no longer need and pick up others you can use.

Currently available at the Anaheim and Irvine locations only. (Tuesday through Saturday, 9 a.m. to 1 p.m.)

FOR MORE INFORMATION ABOUT THE HOUSEHOLD HAZARDOUS WASTE COLLECTION PROGRAM AND THE STOP & SWAP CALL:

(714) 834-6752

DISPOSAL OF HOUSEHOLD HAZARDOUS WASTE

Household Hazardous Waste Collection Program

DID YOU KNOW?

- Most home, car, and yard care products can't be thrown in the trash?
- Paint, used motor oil, and most cleaning products are considered to be "hazardous waste"?
- If these products are put in the landfill they can contaminate our groundwater?

SO WHAT CAN YOU DO?

EASY AS 1-2-3!

1. Pack unwanted home, yard, and car care products in your car.
2. Drive to the Household Hazardous Waste Center closest to you.
3. Sit in your car and fill out a simple form while an attendant removes the unwanted products.

AND AWAY YOU GO!

LOCATIONS

Tuesday through Saturday
9 a.m. to 1 p.m.
except for rainy days and major holidays: Independence, Thanksgiving, Christmas and New Years Days)

STOP & SWAP*

ANAHEIM
1071 N. Blue Gum Street
(Located between the 91 and 57 Freeways on the corner of La Palma and Blue Gum)

HUNTINGTON BEACH
17121 Nichols Street
(Between Beach Blvd. and Gothard St. off Warner Ave. at Rainbow Recycling and Disposal. Use Gate 6.)

STOP & SWAP*

IRVINE
6411 Oak Canyon
(Off Sand Canyon between the 5 and 405 Freeways. Next to the City Corporate Yard and Animal Shelter.)

SAN JUAN CAPISTRANO
Prima Deseche Landfill
(From the 5 Freeway exit Ortega Highway, go east to La Pata and turn right)

MATERIALS ACCEPTED

- Automotive products (antifreeze, motor oil, fluids)
- Batteries (home and car)
- Cosmetics
- Herbicides
- Hobby supplies
- Household cleaners
- Fuels
- Medicines
- Paints (latex and oil)
- Paint products
- Personal care products
- Pesticides
- Polishes and waxes
- Pool and spa chemicals
- Propane tanks from barbecues
- Unused road flares
- Wood preservatives

WASTE NOT ACCEPTED

Ammunition
Asbestos
Biological
Business-generated
Explosives
Radioactive
Compressed gas cylinders

* See reverse for Stop & Swap info!

Honey, before you go shopping, please check the Stop & Swap for:

- ✔ Latex Paint
- ✔ Bug Spray
- ✔ Chlorine
- ✔ Cleaning products

Thanks!

COUNTY OF ORANGE

HOUSEHOLD HAZARDOUS WASTE PROGRAM

For free disposal of old paints, pesticides, and other household toxic products, call:

(714) 834-6752

County of Orange Stop and Swaps are funded by a Grant from the California Integrated Waste Management Board.

Printed on recycled paper.

Integrated Waste Management Department

Before you shop...

Stop! Drop! and Swap!

Household Hazardous Waste Collection Progr

The County of Orange Integrated Waste Management Department introduces a **FREE** program that will **SAVE** you time and money...

Stop & Swap

What is Stop & Swap?
A unique program that allows you to drop off household and car maintenance products you no longer need and pick up other products you can use in your home and yard.

How does it work?
It's simple, just

Stop

Drop &

Swap!

Stop

It's convenient!
Just stop at one of three Regional Household Hazardous Waste Collection Centers, Tuesday through Saturday, 9 a.m. to 1 p.m. (except rainy days and major holidays).

Drop

It's quick!
Drive through and drop off the household and car maintenance products you no longer need but can't throw in the trash.* While you wait in your car, an attendant removes the unwanted materials. These products will either be added to the Stop & Swap for someone else to use or be treated and disposed of in an environmentally friendly way.

* This includes cleaning products, old paint, used motor oil, pesticides, pool and hobby chemicals, and much more! Call our hotline: 714-834-6752 for more details.

Swap

It's easy!
Park your car and visit the Stop & Swap area. Select products you can use at home, complete a simple form telling us what you are taking, and away you go!

How much does it cost?
It's FREE! Not only is it free, you actually **SAVE** money when you take these products home instead of buying new ones!

Where is the nearest Stop & Swap?
Stop & Swaps are found at the following Household Hazardous Waste Collection Centers:

IRVINE
6411 Oak Canyon
(Next to the City of Irvine Corporate Yard. Off Sand Canyon between the 5 and 405 Freeways.)

ANAHEIM
COMING IN 1999!

HUNTINGTON BEACH
COMING IN 1999!

Although the San Juan Capistrano Center accepts household hazardous waste, it does not currently have a Stop & Swap.

- Sod/Dirt

Household HAZARDOUS WASTE?

It is illegal to dispose of Household Hazardous Waste (HHW) through the automated residential program. HHW must be disposed of at a certified collection center. The nearest collection center is located at the Prima Deshecha Landfill (see map below). Household Hazardous Waste includes but is not limited to:

- Used Motor Oil
- Solvents
- Batteries
- Cleaning Products
- Wood Preservative
- Old Paint
- Pesticides
- Pool Chemicals
- Printer Cartridges
- Unused Road Flares

Call the office of the Orange County Integrated Waste Management Department or SOLAG Disposal for the collection centers' hours of operation. A maximum of 15 gallons or 125 lbs. of hazardous materials may be brought to the collection center per vehicle, per visit. You must have a valid Drivers License Number.

CHRISTMAS TREE RECYCLING

Free curbside collection of your Christmas trees will take place on your normal collection day, the two weeks following New Years. Your trees need to be unflocked, free of any ornaments, nails or stands to be recycled. The trees should then be placed at the curb where they will be recycled.

BLACK CONTAINER # _____ BROWN / BLUE CONTAINER

GREEN CONTAINER # _____

SAN JUAN CAPISTRANO RECYCLING PROGRAM

ABOUT THE AUTOMATED SYSTEM

The reason for this new automated collection program is to meet the requirements of the California Integrated Waste Management Act of 1989, better known as AB 939. One of the main objectives of AB 939 is to get Californians to manage their solid waste stream and reduce production of solid waste on an individual basis (i.e. source reduction). This law requires that each city divert 50% of their waste stream away from the landfill by the year 2000.

Subscribers may select a set of three specially designed automated containers with an attached lid and wheels. A black container will be for regular trash, a brown or blue container for recyclable material and a green container for yard waste. You may choose a set of 35 or 67-gallon containers.

Approximately 70 percent of the residential waste stream is recyclable material. A list of the materials that can be recycled are provided on the back of this flyer. From time to time as markets are developed new recyclable may be added. If you are unsure as to whether or not an item is recyclable, please call a customer service representative to assist you.

TIPS FOR COLLECTION DAY

The automated solid waste and recycling collection program is an efficient means of collecting refuse, yard waste and recyclables, and offers long-term price stability to the consumer. The program requires the use of automated collection vehicles equipped with a robotic arm. The driver will use the robotic arm to pick-up and dump the contents of the container into the truck. Because of this, it is important that all materials are placed inside of, not around or on top of the automated containers.

HOW THE AUTOMATED SYSTEM WORKS

In order to improve efficiency, stabilize prices and ensure regular collection of the automated containers, SOLAG Disposal recommends that you remember the following on collection day:

1. The containers should be placed at curbside no later than 6:30 am on collection day.
2. The containers must be placed side-by-side approximately 1' foot apart and at least 3' from any obstruction. (i.e. fire hydrants, trees)
3. The containers should be placed with the handles & wheels facing towards your home.
4. Containers should be removed from curbside within 12 hours after service.
5. Items placed outside of the containers will not be collected.

BULKY ITEMS

SCHEDULE A BULKY-ITEM PICK-UP

Each residential customer is entitled to two (2) bulky-item pick-ups free-of-charge per calendar year from SOLAG Disposal. Please call a customer service representative to arrange for a pick-up of the bulky-items on your regular trash collection day. Additional bulky-item pick-up may be arranged for a nominal charge per collection.

WHAT ARE BULKY-ITEMS?

Items that cannot fit in your "black," "brown / blue," or "green" automated containers, such as a chair or a couch, are considered "bulky-items." The bulky-item is an object that can be handled by a two-person crew, and may include washers, dryers, refrigerators or other large materials.

NON-PROFIT ORGANIZATIONS

Before you put out large items to be landfilled, consider donating these items to a non-profit organization. If you would like more information about bulky-item pickups or the phone number of a non-profit organization willing to pick-up your reusable items, please contact a customer service representative at (714) 240-0446.

PROGRAMA DE RECICLAJE DE LA COMUNIDAD

BASURA RECICLABLE

PAPEL RECICLABLE

SI:

- Cartón corrugado
- Publicidad
- Revistas
- Directorios telefónicos
- Cartón para envases (cajas de galletas/cereales)
- Papel periódico
- Papel de computadora
- Papel blanco
- Papel mezclado

NO:

- Productos mixtos (metal y papel combinados)
- Envases encerados de leche
- Papel encerado
- Materiales de recubrimiento

METAL RECICLABLE

SI:

- Aerosoles vacíos
- Ganchos de alambre para ropa
- Latas de aluminio
- Hoja lata
- Latas de alimentos/jugos
- Latas vacías de pintura (se aceptan con pintura seca)
- Papel de estaño

NO:

- Productos mixtos (metal y papel combinados)
- Refacciones automotrices/ de plomería

VIDRIO RECICLABLE

SI:

- Botellas de alimentos/bebidas
- Jarros y frascos de vidrio
- Ventanas de la casa
- Botellas de licor, soda y jugo

NO:

- Cerámica/Pyrex
- Espejos
- Tubos fluorescentes
- Focos
- Vidrio de seguridad

PLASTICOS RECICLABLES

SI:

PET: (botellas de sodas, película fotográfica)

HDPE: (contenedores para detergente, contenedores de plástico para agua y leche, charolas, bolsas para camisetas)

PVC: (tubería para aspersores)

LDPE: (bolsas para botes de basura, celofán, bolsas de abarrotes)

PP: (recipientes para yogurt, maletas, popotes)

PS: (platos, tazas, contenedores para huevos y bandejas para comida de plástico)

OTROS: (contenedores de plástico mixtos y Tupperware®)

NO:

- Tapaderas de recipientes de plástico
- Productos mixtos (metal y plástico)
- Juguetes de plástico
- Macetas para flores/plantas

Nota: Por favor remueva líquidos, tapaderas y residuos alimenticios de todos los productos para reciclar antes de depositarlos en el contenedor "café/azul".

DESECHOS DE PATIO:

SI:

- Pasto cortado
- Plantas verdes
- Hojas secas
- Hojuelas de madera
- Recortes del jardín
- Yerbas
- Sobrantes de madera

NO:

- Desechos animales
- Ramas de palmas
- Plantas enfermas
- Carne/pescado/huesos
- Productos lácteos
- Zacate/tierra

DESECHOS DEL PATIO

Los residentes de San Juan Capistrano deben usar el contenedor automatizado verde.

Los residentes de la Ciudad de Dana Point pueden usar sus propios contenedores (hasta 35 galones), bolsas o pueden atar los desechos de jardín.

¿Desechos PELIGROSOS EN EL HOGAR?

Es ilegal deshacerse de Desechos Peligrosos en el Hogar (DPH) por medio del programa residencial automatizado. Los DPH deben depositarse en un centro de recolección certificado. El centro de recolección se encuentra en Prima Desecha Landfill (veáse mapa más adelante). Los Desechos Peligrosos en el Hogar incluyen, aunque sin limitarse:

- Aceite usado de automóvil
- Solventes
- Baterías
- Productos de limpieza
- Preservantes para madera
- Pintura vieja
- Pesticidas
- Productos químicos para alberca
- Cartuchos de impresoras
- Luces de bengala sin usar

Llame a la oficina del Departamento de Desechos Integrados del Condado de Orange o SOLAG para los horarios de operación de los centros de recolección. Se pueden depositar en el centro de recolección un máximo de 15 galones o 125 libras de materiales peligrosos por vehículo y por visita. Usted debe ser residente del Condado de Orange y tener licencia de manejo o tarjeta de identificación válidas para usar las instalaciones.

RECICLAJE DE ARBOLES DE NAVIDAD

La recolección en la banqueta de árboles de navidad se llevará a cabo en el día usual de recolección, durante las dos semanas después del año nuevo. Para poder ser reciclados los árboles no deben tener nieve artificial, esteras, clavos o bases. Se deben colocar en la banqueta de donde serán recogidos para ser reciclados.

PROGRAMA DE RECICLAJE DE LA COMUNIDAD

ACERCA DEL SISTEMA AUTOMATIZADO

La razón de este nuevo programa de recolección automatizada es el cumplimiento del Acta de Manejo Integrado de los Desechos de 1989, más conocida como AB 939. Uno de los principales objetivos del AB 939 es lograr que los californianos manejen los desechos sólidos y reduzcan la generación de desechos sólidos individual (por ejemplo, reducción del origen). Esta ley requiere que las ciudades canalizen 50% de sus desechos a otros lugares que no sean los basureros para el año 2000.

Los subscriptores en las Ciudades de Dana Point, San Clemente y San Juan Capistrano pueden seleccionar un juego de tres contenedores especialmente diseñados con tapas y ruedas. El contenedor negro será para los desechos comunes y el café o azul será para materiales reciclables. Los residentes de San Juan Capistrano pueden obtener un verde adicional para desechos del jardín. Usted puede escojer el juego de 35 o 67 galones.

Aproximadamente 70% del flujo de desechos residenciales consiste de materiales reciclables. Una lista de los materiales que pueden ser reciclados aparece al reverso de este volante. De vez en cuando , nuevos materiales reciclables se pueden añadir. Si no está seguro si un artículo es o no es reciclable, llame a un representante para ser auxiliado.

IDEAS PARA EL DIA DE RECOLECCION

El sistema de desechos sólidos y de reciclados es el modo mejor de recolectar basura y materiales reciclables y ofrece, estabilidad en el precio, a largo plazo para el consumidor.

Es importante para los residentes de la Ciudad de Dana Point que reciben servicio del vehículo de recolección de desechos del jardín que opera manualmente asegurarse que los desechos de jardín estén en bolsas o estén atados apropiadamente.

El programa requiere el uso de vehículos automatizados de recolección equipados con un brazo robotizado. El conductor usará el brazo robotizado para recoger y vaciar el contenido del contenedor en el camión. Debido a esto, es importante que todos los materiales se depositen dentro del contenedor automatizado y no fuera o encima del mismo.

COMO FUNCIONA EL SISTEMA AUTOMATIZADO

Para mejorar la eficiencia, estabilizar los precios y asegurar la recolección habitual de los contenedores automatizados, SOLAG Disposal recomienda que recuerde lo siguiente el día de recolección:

1. Los contenedores deben de colocarse en la orilla de la banqueta antes de las 6:30 a.m. el día de recolección.
2. Los contenedores deben de colocarse un lado a otro, con un pie de separación y 3 pies de obstrucción, (por ejemplo: hidrantes, árboles).
3. Los contenedores deben de colocarse con las asas y ruedas apuntando a su casa.
4. Los contenedores deben de removerse de la banqueta entre 12 horas después del servicio.
5. Los artículos colocados a fuera de los contenedores no serán recogidos.

ARTICULOS VOLUMINOSOS

PROGRAME LA RECOLECCION DE ARTICULOS VOLUMINOSOS

Cada cliente residencial tiene derecho a dos (2) recolecciones de artículos voluminosos sin costo al año por parte de SOLAG Disposal. Por favor llame a un representante para hacer arreglos de artículos voluminosos en el día usual de recolección de basura. Se pueden hacer arreglos para recoger artículos voluminosos con un pago nominal por cada recolección.

¿QUE SON ARTICULOS VOLUMINOSOS?

Los artículos que no caben en sus contenedores automatizados negro (basura), café/azul (reciclables) o verde (jardín) tal como una silla o un couch, se consideran "artículos voluminosos". El artículo voluminoso es un objeto que no puede ser manejado con un equipo de dos personas, pudiendo ser lavadoras, secadoras, refrigeradores o cualquier otro objeto grande.

ORGANIZACIONES NO LUCRATIVAS

Antes de que usted saque los artículos voluminoso para ser desechados, considere donarlos a una organización no lucrativa. Si desea más información sobre la recolección de artículos voluminosos o el número telefónico de alguna organización no lucrativa que esté dispuesta a recoger artículos usados, comuníquese con un representante (714) 240-0446.

Recycle Now There's A Future In It!

Recycling News

July 1, 1999 Volume VII, No 3

IMPORTANT NOTICE

NO DELAY IN TRASH COLLECTION THIS JULY 4TH

This year the Fourth of July falls on a Sunday. Currently the County landfills operate Monday through Saturday so you will not experience delay in trash service. On your normal collection day, please place your trash/recyclables out at the curb for collection.

PROPER DISPOSAL OF THE AMERICAN FLAG

As we celebrate America's Independence this Fourth of July we may notice that the flags we display have become torn or tattered beyond repair. This past year the editors of Recycling News received a letter from a World War II Veteran regarding proper disposal of an American Flag.

The Orange County Veterans will forward the flags to the American Legion Post where they will be Disposed of in conformance with tradition and local laws. Please mail your old American Flags to:

ORANGE COUNTY VETERANS
SERVICE CENTER OFFICE
1300 South Grand Avenue, building B
Santa Ana, CA 92705

TIPS TO REMEMBER WHEN YOU'RE AT THE BEACH OR PARK

Did you know that our oceans provide most of the planet's oxygen, moisture and weather patterns? Every year, the Center of Marine Conservation sponsors a nationwide 3-hour beach clean-up, which has proven to be extremely effective. In 1987, in Texas alone, volunteers collected: 31,773 plastic bags; 30,295 plastic bottles; 15,631 six pack rings; 28,450 plastic lids; and 1,914 disposable diapers. And around the nation, the volunteer clean-up crew collected close to 2 million pounds of debris in just 3 hours. So next time you go to the beach or the park, remember to bring a trash bag and before you leave try to spend a few minutes picking up any litter you find. If you are interested in beach clean-up activities, please contact the Center for Marine Conservation at (202) 429-5609 or the Surfrider Foundation at (800) 743-7873.

IMPORTANT Y2K INFORMATION

By December 31, 2000 your city will need to be in compliance with the regulations set forth by state law AB 939. As you are already aware, AB 939 is the state-mandated requirement for each City throughout California to divert 50% of their waste stream away from the landfill by the Year 2000. Over the past several years the Editors of *Recycling News* have been discussing the 50% goal and the importance of reducing your waste, recycling and buying recycled products. Over the next year, your city will evaluating the programs currently in place and will review new ideas to promote the goals or the state law. Keep up the good work!!!!

Holiday Collection Schedule

We will not pick-up on these holidays:
- New Years Day - Memorial Day - Independence Day - Labor Day - Thanksgiving Day - Christmas Day
However, trash collection will resume one day later.

Unwanted Computer Parts - Help Your Community Recycle

Recently there has been a lot of talk about the year 2000 (Y2K) and the potential of imbedded computer chips disabling thousands of appliances, electronic products, etc. While the editors of ***Recycling News*** can neither confirm nor deny these reports, we would like to request our customers' help to try and locate alternatives to disposing of these items in the landfill. If you or someone you know can direct us to a non-profit organization willing to accept these items or a remanufacturer that would be interested in securing this material, please contact our office in writing.

KEEP RECYCLING WORKING - AMERICA RECYCLES

On November 13, California cities will have the opportunity to participate in the second annual America Recycles Day - a national campaign designed specifically to reinforce public support of recycling. Your City, the County of Orange and SOLAG Disposal would like to "Keep Recycling Working." You can help by remembering to reduce, reuse, recycle and compost your waste, but most importantly... purchase products that contain recycled materials. By working together we can preserve our planet, promote a healthier environment and secure the future of recycling.

SPECIAL GIVEAWAY

To celebrate America Recycles Day, on Saturday, November 13 from 8:00 a.m. to 12:00 p.m. Tierra Verde Industries, a green waste recycling facility located in San Juan Capistrano, has offered to donate compost for use in your yard. Bring a shovel and a large container/bag to Federal Doc Loading, located on Alicia Parkway between Avila and Aliso Creek Road in the City of Laguna Niguel to collect the free compost material.

FIND A NEW USE FOR AN OLD ITEM

Have an old bike that needs fixing or a chair that is missing a leg? Or how about some other large item that needs some minor repairs? Before you throw that item away, why not give it to someone who could put it to good use? There are many organization such as Goodwill Industries, Children's Hospital of Orange County (CHOC) and the Salvation Army that make it their business to bring new life to older, reusable items. In the spirit of goodwill and less waste, SOLAG Disposal, Inc. together with your City encourage you to contact these organizations before you throw a reusable item in the trash. For telephone numbers to these or other non-profit organizations, please look in the yellow pages under "Thrift Shops," or you may contact Solag Disposal for more information. Also remember that your contribution may be tax deductible.

ENVIRONMENTAL AWARDS

The Cities of Dana Point, Laguna Niguel, San Clemente, San Juan Capistrano and the County of Orange would like to recognize the following businesses for their outstanding efforts to reduce waste and recycle in their community:

Doubletree Guest Suites, Dana Point • Flex Foot, Inc. • Trade Winds Motel
Unichem Industries, Inc. • Tall Mouse Arts & Crafts, Inc. • Auto Care
Launderland • Mission Yamaha, Inc. • Saturn of San Juan Capistrano

Each of these businesses are being recognized by their respective cities for their dedication to help keep our environment clean and their commitment to recycling and source reduction.

IS YOUR TRASH WEIGHING YOU DOWN?

Items that are too large to fit in your container are considered bulky-items. As a customer of SOLAG Disposal you are entitled to two bulky-item pick-ups per calendar year, at no extra charge. Almost anything that can be managed by a two-person crew will be picked up as a bulky-item. This includes old furniture, appliances, carpet, mattresses, water heaters, etc. Loose items need to be bagged or bundled, and no liquids or drums of any kind will be accepted. Before you put out large items to be landfilled, consider donating these items to a non-profit organization. If you would like more information about bulky-item pick-ups or non-profit organizations willing to pick-up your reusable items, please contact one of the customer service representatives at (949) 240-0446, Ext. 1.

RECYCLING YOUR CHRISTMAS TREE IS AS EASY AS 1-2-3....

Can you believe that the Holiday Season is already behind us? Well it's time again to recycle your Christmas Trees. Depending on where you live, collection of your trees will take place on your normal collection day during a two week period shortly after Christmas or after the New Year. Just follow these three simple steps:

FIRST, please review the front of your bill for the dates of the curbside collection of your Christmas trees.

SECOND, Remove all decorations, tinsel and stands (wood or metal) from the tree before collection. If your tree is over 8-feet in height, please cut the tree in half.

THIRD, Place your tree at the curb next to your container on collection day. On trash day a separate collection vehicle will pick up your Christmas tree.

NOTE: Flocked trees or trees with nails, stands or ornaments cannot be recycled, but will be picked up and disposed of at the landfill. Please do your part to help recycle your trees.

ITS NEVER TOO LATE TO RECYCLE OLD CHRISTMAS CARDS

For the past 20 years St. Jude's Ranch for Children has recycled holiday, birthday, get well and all other occasion cards. St. Jude's Ranch is a non-profit home for abused and homeless children located in Boulder City, Nevada. People from across the United States and around the world send used cards to the Ranch. In 1992 nearly one and a half million cards were collected. If you would like to recycle your Christmas cards, please send them to:

St. Jude's Ranch for Children
P.O. Box 60100
Boulder City, NV 89006

If sending by United Parcel Service, send to:
St. Jude's Ranch for Children
100 St. Jude Street
Boulder City, NV 89005

TRASH FRIENDLY WEBSITES

Each quarter the editor of *Recycling News* will be reviewing website and e-mail addresses on the Internet that may be of interest to our readers. The sites examine: ways to reduce waste, avenues to reuse unwanted materials (such as donations to non-profit organizations), types of recyclable material and directions to backyard composting.

http://www.epa.gov This website is an excellent source for businesses and individuals that have questions about waste prevention, water & air quality information & regulations.

HOUSEHOLD HAZARDOUS WASTE (Roundup Available Year-round)

To make proper disposal of "household hazardous material" convenient, the County of Orange operates four household hazardous waste (HHW) collection centers throughout the County. The closest facilities are located in San Juan Capistrano and in the City of Irvine. Each facility will accept your hazardous waste at no charge, upon proof of Orange County residency. Some common household hazardous materials are:

- Road Flares
- Toilet Bowl Cleaners
- Wood Preservatives
- Batteries
- Weed Killers
- Fertilizers
- Antifreeze
- Medicines
- Pool Chemicals
- Oil
- Bleach
- Paint

For proper disposal of these materials, we recommend that all items are in their original containers, are clearly marked as to their content, or are marked as "unknown material". A maximum of 15 gallons or 125 lbs. of hazardous materials may be brought to the collection center per vehicle, per visit.

The **Household Hazardous Waste Collection Facility** in San Juan Capistrano is located at the Prima Deshecha landfill off of Ortega Highway at the l of La Pata Avenue. Or the Irvine facility is located at 6411 Oak Canyon between the 5 and 405 off the Sand Canyon exit. Hours of operation are esday through Saturday, 9:00 a.m. - 1:00 p.m. They are closed Sundays, Mondays, major holidays and rainy days. ***For more information on the Stop, Drop & Swap Program at the Irvine Facility (which allows residents to select free products that can be used at home) call (714) 834-6752 or visit their website at: www.oc.ca.gov/iwmd/***

MORE DISPOSAL TIPS: Save a trip to the HHW Facility by using the hazardous materials completely. And remember products such as paint, stain or weed killers may be useful to friends or neighbors. For additional information please call the County of Orange trash and recycling hotline @ (714) 834-6752.

¡Es Fácil! ¡Es Gratis!

¿Sabe que Ud. puede deshacerse del aceite usado de motor aquí en Santa Ana? Cuando Ud. cambia el aceite de su motor, vacíelo en un recipiente, selle el recipiente con una tapa bien segura, y tráigalo a uno de los Centros Certificados de Recolección de Aceite Usado de Motor en Santa Ana. Estos Centros Certificados le pagarán $.04 por cada cuarto de aceite usado que usted recicle si así lo desea.

RECICLE ACEITE USADO

Este programa es traído a usted por la Ciudad de Santa Ana y es hecho posible con fondos del California Integrated Waste Management Board.

THU HỒI DẦU CŨ TẠI SANTA ANA!

RẤT DỄ DÀNG! MIỄN PHÍ!

Quý vị có biết là quý vị có thể bỏ dầu xe cũ của mình một cách an toàn và dễ dàng tại Santa Ana không? Khi thay dầu xe, đổ dầu xe cũ vào một thùng sạch, đóng kín nắp thùng lại, và đem dầu đến một trong các trung tâm Thu Hồi Dầu Cũ được tiểu bang chấp thuận tiện lợi trong Santa Ana. Và... các trung tâm Thu Hồi Dầu Cũ được tiểu bang chấp thuận sẽ trả $.04 cho mỗi quart dầu thu hồi.

TÁI CHẾ DẦU CŨ

Đây là một chương trình do Thành Phố Santa Ana cống hiến và được Hội Đồng Quản Lý Rác California tài trợ.

RECYCLE USED OIL

It's Easy! It's Free!

Santa Ana residents with curbside refuse service are eligible to have their used motor oil collected free of charge. Call (714) 558-7761 to have a used motor oil container delivered to your home. When you fill the container with used motor oil, call Great Western Reclamation and schedule a pickup for your next regularly scheduled refuse collection day. An empty container will be left for your next oil change.

RECICLE ACEITE USADO DE MOTOR

¡Es Fácil! ¡Es Gratis!

Los residentes de la Ciudad de Santa Ana que reciben servicio de recolección de basura al borde de la vereda/banqueta pueden reciclar el aceite de motor usado sin cargo! Llamen al telefono (714) 558-7761 para pedir que le envien un recipiente para recojer el aceite a su domicilio. Una vez que el recipiente este lleno, llamen a Great Western Reclamation y pidan que lo recojan la próxima vez que le recojen la basura. Al recojer el recipiente lleno le dejarán uno vacío para usar la próxima vez.

RECYCLE USED OIL

SPECIAL NOTICE!

As a reminder, the Santa Ana Municipal Code requires that all carts be placed at the curb no earlier than 4:00 p.m. the day prior to collection and must be removed and placed in a location out of public view before 12:00 a.m. (midnight) the day of collection. (Please note that a fine of $50 to $150 may be assessed if carts are not placed out of public view.) Your assistance in making Santa Ana a better place to live is greatly appreciated. (If you would like to report carts left in public view, please call Community Preservation at (714) 667-2780.)

¡NOTICIA ESPECIAL!

Por favor recuerden que el Código Municipal de la Ciudad de Santa Ana requiere que todos los recipientes sean ubicados en el cordón de la vereda despues de las 4:00 de la tarde del día anterior a la recolección, y se los debe guardar antes de las 12:00 de la medianoche del día de recolección. (Por favor tenga en cuenta que se les puede dar una multa de $50.00 a $150.00 si los recipientes no están fuera de la vista del público). Se les agradece con anticipación su esfuerzos para ayudar a mantener a Santa Ana a ser un lugar mejor para vivir. (Si Ud. quiere informar acerca de recipientes que no han sido guardados, por favor llame a Community Preservation al telefono (714) 667-2780.)

LƯU Ý ĐẶC BIỆT!

Xin lưu ý quý vị rằng luật thành phố chỉ cho phép để thùng rác ra lề đường sớm nhất là sau 4 giờ chiều ngày hôm trước, và thùng phải được cất kỹ khỏi tầm nhìn của công chúng trước nửa đêm ngày hôm sau (tức ngày đổ rác). Nếu vi phạm, quý vị có thể bị phạt từ $50 đô-la đến $150 đô-la. Xin cám ơn sự hợp tác của quý vị trong lãnh vực này. Trong trường hợp có những thùng rác không ai cất và bỏ ngoài lề đường quá hạn, xin quý vị thông báo về cơ quan Community Preservation ở số (714) 667-2780.

Santa Ana recycles

You make the difference!

RECYCLE USED OIL! IT'S EASY! IT'S FREE!

Did you know that you can dispose of your used motor oil safely and easily right here in Santa Ana? When you change your oil, drain your used motor oil into a container, seal the container well with a lid, and bring it to one of the conveniently located State Certified Used Oil Collection Centers in Santa Ana. And, State Certified Used Oil Collection Centers will pay you $.04 for each quart you recycle.

WHY RECYCLE USED MOTOR OIL?

Because it never wears out! Your used motor oil can be recycled and used again. And that means you can be conserving a natural resource. Motor oil which is poured into the ground can pollute the soil, groundwater, streams, and rivers... your environment. When you take your used motor oil to a certified center for recycling, you are protecting the environment and conserving a valuable resource. And, State Certified Used Oil Collection Centers will pay you $.04 for each quart you recycle.

USED OIL RECYCLING TIPS

- When draining used oil, use a clean plastic oil pan and a container with a tight lid.
- Never pour or drain oil in the gutter or storm drains. City storm drains empty to the ocean.
- Reuse your used oil container, and store it safely, away from children and pets.
- Don't mix used oil with chemicals, gasoline, water or other substances.
- Use a reusable 5-gallon or smaller size container.
- Call your nearest State Certified Used Oil Collection Center for hours of operation and amounts accepted.

¡ES FACIL! ¡ES GRATIS!

¿Sabe que Ud. puede deshacerse del aceite usado de motor aquí en Santa Ana? Cuando Ud. cambia el aceite de su motor, vacíelo en un recipiente, selle el recipiente con una tapa bien segura, y tráigalo a uno de los Centros Certificados de Recolección de Aceite Usado de Motor en Santa Ana. Estos Centros Certificados le pagarán $.04 por cada cuarto de aceite usado que Ud. recicle si usted así lo desea.

¿PORQUE RECILAR ACEITE USADO DE MOTOR?

¡Porque nunca se gasta! El aceite usado de motor puede ser usado nuevamente si se le limpian las impurezas. Haciendo ésto, conservamos nuestros recursos naturales. Si uno se deshace del aceite usado de motor tirándolo en un agujero en el jardín, se puede contaminar las tablas de agua bebible, los lagos y los ríos. Cuando Ud. lleva su aceite de motor usado a un Centro Certificado de reciclaje, Ud. está protegiendo al medio ambiente y conservando recursos naturales. Y los Centros Certificados de Recolección de Aceite Usado de Motor le pagarán $.04 por cada cuarto de aceite usado si Ud. así lo desea.

SUGERENCIAS ACERCA DEL ACEITE USADO DE MOTOR

- Cuando cambie el aceite de su motor use un recipiente que tenga una tapa segura y que esté limpio.
- Nunca tire el aceite usado de motor en la alcantarilla. Los desagües de la Ciudad de Santa Ana se desagotan en el océano.
- Vuelva a usar el recipiente original y guárdelo en un lugar fuera del alcance de los niños y animales.
- Nunca mezcle el aceite de motor con productos químicos, gasolina, agua, u otras sustancias.
- Use un recipiente con una capacidad de 5 galones y que se pueda volver a usar.
- Llame al Centro Certificado de Reciclaje de Aceite Usado de Motor más cerca a su domicilio para averiguar horas de operación y cantidad aceptada.

Santa Ana recycle
You make the difference

Santa Ana
Making A
ce.

WE ARE ALMOST THERE!

The City of Santa Ana is moving toward the 50% recycling goal set by the State of California for the year 2000. Approximately 40% of the waste generated at each home is now being recycled. Even with this success, the City continues to need your support and participation. So please review the points outlined below so that we may continue to increase the amount of clean recyclables collected and reach our 50% goal by the year 2000.

RECYCLING REMINDERS

- Place only recyclable materials in the recycling (gray) cart.
- Please refer to the decal on the cart lid for acceptable materials.
- When in doubt, please place materials in the refuse (burgundy) cart.
- Do not place any liquid or food waste in the recycling (gray) cart.
- Do not place recyclable materials in plastic bags.

GREEN WASTE REMINDERS

- Place all yard trimmings in the green waste (green) cart.
- Refer to the decal on the cart lid for acceptable materials.
- Do not place green waste in plastics bags.
- Only green waste can be placed in the green waste (green) cart. When in doubt, please place materials in the refuse (burgundy) cart.
- Animal waste cannot be placed in the green waste (green) cart. Place it in a plastic bag and in the refuse (burgundy) cart.

Bulky Item Pickup Service

Each resident with curbside refuse service is entitled to 2 free bulky item pickups eact year (not to exceed 4 items per pickup). Bulky items include large, hard-to-handl items such as sofas, furniture and appliances which can be lifted by two men.
Call Great Western Reclamation at (714) 558-7761 to schedule a pickup.

REPRESENTATIVE PUBLIC EDUCATION MATERIALS

CITY OF TUSTIN

Green Waste Recycling

Green waste is one of the largest components of Tustin's waste. The City of Tustin encourages all homeowners, homeowner associations, businesses and property management firms who contract for landscape maintenance services to ask your contractor to recycle all green waste. Green waste should not be disposed of in a landfill, if possible. The Sunset Environmental Material Recovery Facility in Irvine is one location that accepts green waste for a fee. These efforts will save landfill space and put a valuable resource to better use.

Backyard composting is another way to recycle your green waste and its also great for your garden. Local retailers such as Tustin Home Depot sell home inexpensive home composting units. Backyard composting is easy and an effective way to keep green waste out of the landfill.

For more information on how you or your landscape contractor can recycle green waste, please contact Sunset Environmental at (949) 451-2600.

Holiday Schedule 1999 - 2000

New Year's Day	Independence Day *
Labor Day	Thanksgiving Day
Memorial Day	Christmas Day

When one of these holidays is observed on a weekday, collections for the remainder of the week will be delayed one day. *Independence Day (4th of July) will be observed on Monday July 5, 1999.

City of Tustin Refuse and Recycling Program Information

What services does Great Western Reclamation provide to Tustin residents?

The following basic services are provided to all residents at no additional charge:

- ✓ Curbside refuse collection
- ✓ Bulky item collection
- ✓ Christmas tree recycling
- ✓ Customer Service Center Assistance

What do I do with my recyclables?

It is not necessary to separate your recyclables at home to participate in Tustin's residential recycling program. All refuse and recycling is collected together at the curb and then taken to Sunset Environmental, where the refuse is sorted and recyclables are removed.

What size containers can I use?

- ✓ No larger than 35 gallons in capacity
- ✓ No heavier than 50 pounds

Containers should be constructed of solid weather resistant materials. Great Western Reclamation will collect up to five containers on a weekly basis.

When do I place my trash out for collection?

- ✓ Prior to 6:0[illegible]n. on your collection day or the night before.

Bulky Item Collection

Great Western Reclamation provides for free bulky item pickups to each household. If you need to dispose of large, hard-to-handle furniture or appliances, contact our Customer Service Center at (714) 558-7761 to schedule a pickup.

Source Reduction

Source Reduction means reducing waste at its source and preventing garbage from being created in the first place. This includes reducing unnecessary packaging of items, purchasing reusable and repairable items instead of disposable goods, purchasing in bulk, and making a conscious choice to create less garbage. Please join us in our efforts to reduce, reuse and recycle!

Waste Disposal Center

Sunset Environmental, located at 16122 Construction Circle West in Irvine, is a transfer facility.

Rather than going to the landfill, come to Sunset Environmental! For hours of operation, please call (949) 451-2600.

Household Hazardous Waste

007662

What is HHW? HHW consists of materials which cannot be safely sent to the landfill. Some hazardous materials are paint, household cleaners, pesticide: pool chemicals, and automotiv products such as batteries, mote oil and antifreeze.

The County of Orange has permanent Househol Hazardous Waste Collection Centers. The neare center is located at 6411 Oak Canyon in Irvin (take the Sand Canyon exit off the 5 freeway an go west). For more information call th Household Hazardous Waste Hotline at (714) 834 6752.

Used motor oil is accepted by many servic stations. If you need to locate a state-certified use oil collection center in the Tustin area, call (800 CLEANUP.

TUSTIN RECYCLES USED MOTOR OIL!

IT'S EASY! IT'S FREE!

RECYCLING USED MOTOR OIL PRESERVES A VALUABLE NATURAL RESOURCE AND PROTECTS THE ENVIRONMENT!

Recycling Used Oil is Easy!

It's easy to recycle your used motor oil safely right here in Tustin. When you change your vehicle's oil, drain the used motor oil into a clean container, seal the container well with a lid, and bring it to one of the conveniently located State Certified Collection Centers. Be sure that your motor oil is not mixed with other substances, such as antifreeze, solvents, gasoline or water.

Why Recycle Used Motor Oil?

Because it never wears out! Your used motor oil can be recycled, cleaned and used again. That means you can help conserve a valuable natural resource, and help protect the environment. Used oil can contain such contaminants as lead, magnesium, copper, zinc, chromium, arsenic, chlorides, cadmium and chlorinated compounds. Oil poured down storm drains or on the ground can work its way into our ground and surface waters and cause serious pollution. One gallon of used oil can pollute one million gallons of drinking water!

When you take your used motor oil to a State Certified Used Oil Collection Center for recycling, you are protecting our planet and our future. So don't pour good oil down the drain!

How To Recycle Used Oil?

Tustin has 6 State Certified Used Oil Collection Centers standing by to help you recycle your used motor oil. Recycling oil is easy! When you do an oil change, just drain your vehicle's old oil into a clean container, seal the container well with a lid, and bring it to one of the 6 conveniently located State Certified Used Oil Collection Centers in Tustin. So don't throw good oil down the drain. Recycle now!

Used Oil Recycling Tips

007666

- When draining used oil, use a clean plastic oil pan or container with a tight lid.
- Use a reusable 5-gallon or smaller size container.
- Reuse your used oil container, and store it safely away from children and pets.
- Don't mix used oil with chemicals, gasoline, water or other substances.
- State Certified Used Oil Collection Centers will take up to 5 gallons per day, per person.
- You can take other hazardous household wastes, such as paint, pesticides, cleaners, solvents, etc., to a nearby County of Orange Collection Center: 32250 La Pata Ave., San Juan Capistrano or 6411 Oak Canyon, Irvine. Please call (714) 834-6752 for more information.

MIDWAY CITY SANITARY DISTRICT AND THE ENVIRONMENT
(KEEP FOR FUTURE REFERENCE)

This information is provided to assist you, our valued customer, in protecting the Environment and by doing so, help us keep your service fees the lowest in Orange County. We have accomplished this through cost efficient service and an aggressive trash recycling program. Here's how you can help.

RECYCLABLES: Plastics, styrofoam, glass bottles and jars, phone books, newspapers, magazines, junk mail, cardboard and most other paper products (dry only), tin and aluminum cans.

NON-RECYCLABLES: Wet paper, diapers, animal waste and kitty litter, food waste, grease, coffee grounds, old clothes. shoes, window glass, mirrors, yard waste (grass and tree trimmings).

BULKY ITEMS: (Call District office 893-3553 to arrange pick up on trash day). Two items per month including washers, dryers, hot water heaters, refrigerators and other appliances, furniture, and mattresses.

HOUSEHOLD HAZARDOUS WASTES: (DO NOT put in trash, take to Orange County Collection Centers at 17121 Nichols, in Huntington Beach or 1131 Blue Gum Ave. in Anaheim). Antifreeze batteries. pesticides, herbicides, clear solvents, motor oil and filters, paints, paint thinner are accepted at the center. Biological and radioactive waste, ammunition, explosives and asbestos are not accepted. Call County at 834-6752 for information.

SEWERS: Do not pour cooking oil, grease or coffee grounds down the sink. They plug up sewer lines, and increase service costs. They should be disposed of in closed containers and placed in the trash.

MOTOR OIL DISPOSAL: In addition to the County disposal sites, Westminster residents may telephone the City of Westminster for free pick service at the home (telephone 1 800 576-0041). Small quantities of used motor oil in covered containers may be taken to the District at 14451 Cedarwood Avenue in Westminster.

CHRISTMAS TREES: Strip off ornamentation and set out with trash on collection day. Do not place in barrels. They will be picked up by special trucks for two or three weeks after Christmas and recycled.

WHAT GOES WHERE?

007669

Periodically, we update the list of what is and is not recyclable. We are pleased to say that the list of recyclable items keeps growing! Here is a complete list of items that are and are not recyclable. The list can be clipped out of the newsletter for posting in your home. ■

Your Blue Container

RECYCLABLE

Aerosol cans (must be completely empty)
Aluminum cans (please do not crush)
Aluminum foil
Beverage cans
Bottle caps
Brochures
Cardboard
Cardboard 12-pack soda container boxes
Cereal boxes (remove the inner paper lining)
Computer paper
Coupons
Drink boxes
Egg cartons (cardboard and foam)
Foam cups and plates
Food cans
Glass bottles and jars
Glass cosmetic bottles (remove caps and lids)
Juice cartons
Junk mail
Laundry bottles
Ledger paper
Lids and container closures
Magazines
Metal coat hangers
Milk/half & half/cream cartons
Newspapers
Paper
Paper tubes
Phone books
Pizza boxes
All recyclable plastics

District Holiday Schedule - New Year's Day, Memorial Day, Fourth of July, Labor Day, Thanksgiving and Christmas Day.

Need Additional Information? Please telephone the District Office at (714) 893-3553 for details on the Recycle Midway City Sanitary District Program. Please note that all provided containers are property of the Midway City Sanitary District. Your cooperation in protecting containers from abuse or negligence will be appreciated. Remember, containers must be left behind if you move away.

As a reminder, if your street sweeping is scheduled the same day as refuse collection, please do not place your container in the street. Place the container on the sidewalk or parkway area with the wheels facing your home. If you do not have street sweeping on the same day, place the container at the curb. The new automated truck can service your container from those areas.

"GIVING EXCELLENT SERVICE AT THE LOWEST RATE IN ORANGE COUNTY"

Board of Directors

Grace P. Epperson
James V. Evans
Joy L. Neugebauer
Russell C. Paris
Margie L. Rice

General Manager

Del Boyer

MIDWAY CITY SANITARY DISTRICT EXCEEDS STATE RECYCLING REQUIREMENT!

The residents and businesses within the Midway City Sanitary District now recycle more than 50% percent of their waste. By recycling 53.9% percent of their waste, pending State approval, the District will exceed the Year 2000 State-mandated 50 percent recycling requirement. Congratulations and keep up the good work!

WE'RE IN THE MOVIES

We are shooting moving pictures (television pictures that is) of the inside of our sewer to determine their condition. Up to now we have televised approximately 25 miles of our 168-mile system and found broken sewers that will cost $775,000 to fix.

Fortunately for us, the Orange County Sanitation District established their Cooperative Services Program. Through this program, the Sanitation District gives matching funds for the repair of sewers. Our District applied for and received $347,500 in matching funds, which means we have to pay the remaining $427,500. The Midway City Sanitary District is paying their matching fund amount out of reserve funds that have been saved for this purpose. We project our televising and repair program for the whole District will take eight years.

YOUR SEWER NEEDS CARE

House grease should never be dumped into your drains. The grease builds up on the side of your sewer and can plug it. Save a plumber's service fee, put excess grease in a container and dispose of it in your black container.

YOUR RATES - LOWEST IN THE COUNTY

As a result of your efforts, the Midway City Sanitary District is proud to currently have the lowest rate for customer service in the County of Orange. The District is an independent special district providing refuse and sewer service in Westminster and Midway City.

GRASSCYCLING?

Grasscycling is the natural recycling of grass. Grass clippings left on the lawns after you mow decompose quickly and release valuable nutrients back into the soil. Grasscycling saves time (no more bagging), valuable landfill space, and money.

Grasscycling can be practiced with almost any mower. Just remove the collection bag and allow clippings to drop on the lawn. Retrofit kits can be purchased to convert lawnmowers that do not have a safety flap covering the opening where the bag fits into the chute.

You can also buy a special mower to recycle grass. Several lawnmower manufacturers have developed mulching or recycling mowers that cut grass into small pieces and force them into the soil. In fact, some are rechargeable, electric mowers that improve air quality while cutting your lawn. If you choose to grasscycle, always follow the "1/3 rule"; a lawn should be mowed so that no more than 1/3 of the length of the grass blade is cut in any one mowing. If a lawn is not cut frequently, the clippings will be too large to fall back to the soil and it will produce a "hay-like" look that can be unsightly.

ISSUE A BLANKET PURCHASE ORDER TO A	ROD HALLOCK	11/24/97	6/30/01	*
CONTRACTOR TO INSTALL AND SERVICE				
FOUR STORMWATER INLET FILTERS				

* THE PREVIOUS PLAN WAS TO INSTALL ONE LARGE CLARIFIER AND INSTALL NEW DRAIN LINES TO DIRECT RUN OFF TO THE CLARIFIER. WE DECIDED WE COULD CAPTURE AND FILTER A GREATER AMOUNT OF RUNOFF BY INSTALLING FILTERS IN ALL EXISTING STORM DRAIN INLETS. WE WERE IN CONTRACT NEGOTIATIONS WITH ONE DRAIN FILTER CONTRACTOR BUT THE CONTRACTOR COULD NOT DELIVER THE DEBRIS DISPOSAL SERVICE WE REQUESTED. WE ARE CURRENTLY PREPARING A SERVICE CONTRACT WITH A NEW DRAIN FILTER SERVICE CONTRACTOR.

Significant Issue (From Form 1): MATERIAL STORAGE - ASPHALT/DIRT - INSTALL CLARIFIER AND ASPHALT BERM

Objective and Target Date:
CONSTRUCT METAL ROOFING TO COVER BUNKERS 6/30/01

Action Items

Actions To Be Taken	Responsible Party	Projected Start Date	Projected Completion Date	Comments
CONSTRUCT METAL ROOFING TO COVER BUNKERS	HECTOR CRUZ	11/24/97	6/30/01	*

* WE HAVE DECIDED TO CONSTRUCT METAL ROOFING OVER THE MATERIALS BUNKERS TO PREVENT RUNOFF DURING STORMS. THIS PROJECT WAS DELAYED DURING 99/00 BECAUSE OTHER MODIFICATIONS TO OUR METAL BUILDINGS WERE IDENTIFIED AND WE WANT TO AWARD ALL THE NEW METAL STRUCTURE WORK ON ONE CONTRACT. WE STILL COVER OUR MATERIALS BUNKERS WITH TARPS DURING RAIN STORMS TO PREVENT RUN OFF UNTIL THE METAL ROOFING IS CONSTRUCTED. WE WILL STILL INSTALL STORM DRAIN INLET FILTERS (INSTEAD OF A CLARIFIER) IN ADDITION TO THE METAL ROOFING (WE WILL DO BOTH).

To: Automotive Service Managers

Subject: Automotive Service Center Maintenance - Control of Wash Water Runoff

Dear Sir or Madam:

This letter is being sent to automotive service businesses to draw the attention of service managers to the need to eliminate the discharge of pollutants in wash water runoff to the street and storm drain and to explain why these discharges are of concern to municipalities in Orange County.

In 1990, pursuant to the federal Water Quality Act, Orange County's municipalities received National Pollutant Discharge Elimination System (NPDES) permits. These NPDES permits require the municipalities to eliminate non-stormwater discharges to their storm drain systems and reduce the discharge of pollutants in stormwater runoff to the maximum extent practicable. As a consequence of these requirements, Orange County's municipalities must address the routine disposal of automotive service center wash water runoff to the street and storm drain.

Pressure washing or steam cleaning of areas used for automotive servicing results in runoff containing detergents, caustic cleaning agents, oils and grease, and heavy metals. Consequently, eliminating the discharge of these pollutants to the street or storm drain will make a significant contribution towards protecting the creeks, rives, streams and sensitive receiving waters that ultimately receive all runoff from the municipal storm drain system.

The proper management of this waste stream can also help ensure that regulatory intervention to protect sensitive receiving waters and the municipal storm drain system is avoided. The State Fish and Game Code, State Water Code and local Water Quality Ordinances enforced by this Department and the cities of Orange County all include provision that prohibit unpermitted disposal of wastes to the municipal storm drain system and surface waters.

A number of automotive service centers already use "zero discharge" cleaning services or have arranged with sewering agencies for the direct disposal of waste to the sanitary sewer. If you have not previously considered arranging for the safe disposal of facility wash water, the

attached guidelines prepared by this Department in collaboration with the Regional Water Quality Control Board (Santa Ana Region), should be helpful to you.

Please direct any questions regarding this letter to Karen Ashby at (714) 567-6297.

Very truly yours,

Chris Crompton, Manager

GUIDELINES FOR CLEANING AUTOMOTIVE SERVICE FACILITIES

Steam/Pressure Washing of Vehicle Maintenance Areas & Fuel Dispensing Areas

- Block the storm drain and collect water/waste for disposal to the sanitary sewer (with the prior approval of the local sanitation district).

Pressure Washing Sidewalks, Parking Lots, Common Areas

- If soap or any other cleaning agent is used, block the storm drain and collect water/waste and discharge to the sanitary sewer (with the approval of the local sanitation district).

- If only tap water with no cleaning agent is used, then the following Best Management Practices (BMPs) must be implemented before pressure washing:

  - Prior to washing, clean and/or sweep all large debris from the area, and

  - Clean any oil/auto fluid spills with an appropriate dry method, such as kitty litter or other absorbent, and dispose of appropriately,

  - To the extent practicable, the wash water must be directed to vegetative or unpaved areas where it would percolate,

  - If visual observation of the wash water indicates contamination (cloudy, colored, presence of suspended solids), additional Best Management Practices such as temporary retention of wash water (sandbags around storm drain inlets) or filtration methods must be implemented prior to discharge.

For further information, please contact:

Karen Ashby, County of Orange, PFRD/Stormwater Section. Tel. (714) 567-6297

MOBILE DETAILING AND THE WATER QUALITY ACT

This flyer has been prepared at the request of the mobile detailing industry to provide direction with regard to compliance with the federal Water Quality Act of 1987.

THE WATER QUALITY ACT: Controlling Storm Drain Pollution

Under the federal Water Quality Act of 1987, the County and cities of Orange County are obligated to control the discharge of pollutants into storm drain systems. Specifically, National Pollutant Discharge Elimination System (NPDES) Permits issued by the state in 1990 pursuant to the Act prohibit the public agencies of Orange County from accepting, with few exceptions, non-stormwater discharges into these systems.

According to EPA, exceptions to local regulation include water line flushing, landscape irrigation water, water from potable water sources, foundation drains, air conditioning condensation, irrigation water, water from crawl space pumps, footing drains, lawn watering, individual residential car washing, dechlorinated swimming pool discharges, street wash runoff and fire fighting runoff.

The County's NPDES Permits prohibit, with few exceptions, non-stormwater discharges into the storm drain system.

Mobile Detailing Procedures

Since commercial vehicle washing, including mobile detailing, is not exempted, the following procedures should be adopted by individuals performing this service:

1. When cleaning engines and/or vehicles using chemical additives such as soaps, solvents or degreasers.

   a. Service must be performed at a facility that has the equipment to properly process the contaminated wastewater runoff, or

   b. Service must be performed using a leak-proof ground cover device that will catch and contain all contaminated wastewater runoff for later disposal in a manner that complies with all city, county, state and federal codes.

2. When engine cleaning is not involved, the service may be performed using only deionized water, purified water, and/or tap water with no additives for wash and rinse purposes. This water may then be discharged to the storm drain systems provided there is no visible evidence of chemical contamination such as foams, odors, discoloration, etc.

   When chemical products must be used to perform this type of service, they must be used on a spot basis, and wiped off prior to rinsing.

3. Equipment, such as ground cover devices, shall be regularly inspected and maintained to ensure proper and effective functioning.

Before you allow anything to go into the gutter or storm drain, stop to think!

Storm drains run directly into channels and creeks, through wetlands and to the ocean.

Pool Maintenance and the Water Quality Act

July 2000

This brochure has been prepared to inform the public of the guidelines that have been established regarding the discharge of pool water in Orange County in order to protect storm drains, channels, creeks and bays.

Pool Maintenance and the Water Quality Act

This brochure is presented to you to explain the regulatory issues regarding the discharge of pool water and the two methods by which it may be discharged.

Many pools are plumbed to allow the discharge to go directly to the sanitary sewer. This is an acceptable and preferred method of disposal.

Where the discharge of pool water to the sanitary sewer is not feasible, federal law allows the release of dechlorinated swimming pool water. In Orange County the guidlines for such releases requires pool owners to ensure that all the following criteria are met:

- The residential chlorine does not exceed 0.1 mg/l (parts per million);
- The pH is between 6.5 and 8.5;
- The water is free of any unusual coloration;
- There is no discharge of filter media;
- There is no discharge of acid cleaning wastes; and
- Any pipe connection to the stormdrain system has permits from the city or county having jurisdiction.

Compliance with this guidance can be verified using a pool testing kit. Excess chlorine can be removed by removing the chlorine tablets for a couple of days prior to discharge or by purchasing dechlorinating chemicals from local pool supply companies.

By ensuring compliance with these criteria, you will make a significant contribution toward keeping pollutants out of Orange County's creeks, streams and receiving waters and help to protect organisms that are sensitive to pool chemicals.

Before you allow anything to go into the gutter or storm drain, stop to think.

Storm drains run directly into channels and creeks, through wetlands and to the ocean.

Remember the ocean begins at your front door.

GUIDELINES FOR RESTAURANT CLEANING OPERATIONS

General Cleaning Operations

- Clean floormats, filters and garbage cans in a mop sink, floor drain or contained area outside.
- Pour all washwater into a janitorial or mop sink.
- Keep dumpster area clean and closed, clean area following the guidelines listed below.

Steam/Pressure Washing of Dumpster Areas, Sidewalks and Common Areas

- Block the storm drain and collect all water/waste for disposal to the sanitary sewer (with the prior approval of the local sanitation district).

Hose Washing of Dumpster Areas, Sidewalks, Common Areas

- If hot water, soap or any other cleaning agent is used, block the storm drain and collect water/waste and discharge to the sanitary sewer (with the approval of the local sanitation district).
- If only cold tap water with no cleaning agent is used, then the following Best Management Practices (BMPs) must be implemented before washing:
  - Prior to washing, clean and/or sweep all large debris from the area, and
  - Clean any fluid spills with an appropriate dry method, such as kitty litter or other absorbent, and dispose of appropriately,
  - To the extent practicable, the wash water must be directed to vegetative or unpaved areas where it would percolate,
  - If visual observation of the wash water indicates contamination (cloudy, colored, presence of suspended solids), additional Best Management Practices such as temporary retention of wash water (sandbags around storm drain inlets) or filtration methods must be implemented prior to discharge.

p = precipitate formed when sample was mixed with colorimetric reagent; may be false positive

v = no visual color change detected, possible false positive

UTD = Unable to determine because of sample matrix interferences

ND = not detected; below the detection limit of the method

n = No Nitrate standard run

M = Measured

E = Estimated

[ ] = Exceeded the RWQCB Basin Plan Objective

[ ] = Exceeded the acute toxicity objective for hexavalent chromium from the California Toxics Rule (CTR)

Appendix 4.3:
Watershed Maps for Channels Monitored with Automatic Samplers

AGUA CHINON WASH

Location :	At Irvine Center Dr. and Pacifica Lat. 33-39-09 Long. 117-44-56
Channel :	F18
Storet Code :	ACWF18
Watershed Area :	approx. 7.2 sq.mi. (18.7 sq.km.)
Cities in Watershed :	Irvine, Lake Forest
Raingage :	Lambert Reservoir Alert #217

ALISO CREEK

Location :	At Pacific Coast Highway Lat. 33-31-10 Long 117-45-07
Channel :	JO1
Storet Code :	ABJ01
Watershed Area :	29.7 sq.mi. (76.9 sq.km.)
Cities in Watershed :	El Toro, Laguna Beach,Laguna Hills, Laguna Niguel, Lake Forest Mission Viejo
Raingage :	El Toro Alert #207, El Toro #176

ANAHEIM BARBER CITY CHANNEL

Location :	Downstream U.S. Gov. Railroad Bridge at Rancho Road Lat. 33-45-16 Long. 118-02-04
Channel :	CO3
Storet Code :	ABCC03
Watershed Area :	14.9 sq. mi. (38.6 sq. km.)
Cities in Watershed :	Anaheim, Garden Grove, Huntington Beach, Stanton, Westminster
Raingage :	Garden Grove Alert #1175, Garden Grove Fire Station #229
Gaging Station :	#232
Equipment :	Stevens A-71 Water-Stage Recorder with Nitrogen Bubbler and Mercury Manometer Alert Water Level Sensor and Rain Gage

BARRANCA CHANNEL

Location :	At Main St. Lat. 33-40-45 Long. 117-50-07
Channel :	FO9
Storet Code :	BC2FO9
Watershed Area :	approx. 2.7 sq.mi. (7.0 sq.km.)
Cities in Watershed :	Irvine, Santa Ana, Tustin
Raingage :	Santa Ana Engineering Alert #219, Santa Ana #121

BEE CANYON CHANNEL

Location :	At Alton and Pacifica Lat. 33-39-22 Long. 117-45-22
Channel :	F17
Storet Code :	BEEF17
Watershed Area :	11.2 sq.mi. (29.1 sq.km.)
Cities in Watershed :	Irvine
Raingage :	Lambert Reservoir Alert #217

BOLSA CHICA CHANNEL

Location :	At Bolsa Chica Road and Westminster Ave. Lat. 33-45-33 Long. 118-02-30
Channel :	CO2
Storet Code :	BCC02
Watershed Area :	10.0 sq. mi. (26.0 sq. km.)
Cities in Watershed :	Anaheim, Buena Park, Cypress, Garden Grove, Los Alamitos, Seal Beach, Stanton, Westminster
Raingage :	Garden Grove Alert #1175, Garden Grove Fire Station #229
Gaging Station :	#225
Equipment :	Stevens A-71 Water-Stage Recorder with Float Alert Water Level Sensor

BONITA CANYON CHANNEL

Location :	At San Diego Creek Confluence Lat. 33-39-05 Long. 117-51-38
Channel :	FO4
Storet Code :	BCFO4
Watershed Area :	approx. 5.0 sq.mi. (13.0 sq.km.)
Cities in Watershed :	Irvine, Newport Beach
Raingage :	San Diego Creek Alert #1125

COSTA MESA CHANNEL

Location :	At Westcliff Drive Lat. 33-37-23 Long. 117-53-57
Channel :	GO2
Storet Code :	CMCGO2
Watershed Area :	approx. 1.0 sq.mi. (2.6 sq.km.)
Cities in Watershed :	Costa Mesa, Newport Beach
Raingage :	Santa Ana Delhi Alert #1111, Newport Harbor Master #88

EAST GARDEN GROVE WINTERSBURG

Location :	At Gothard St. Lat. 33-42-58 Long. 117-59-57
Channel :	CO5
Storet Code :	EGWC05
Watershed Area :	20.8 sq. mi. (53.8 sq. km.)
Cities in Watershed :	Anaheim, Fountain Valley, Garden Grove, Huntington Beach, Orange Santa Ana, Westminster
Raingage :	Katella Yard Alert #223
Gaging Station :	#217
Equipment :	Stevens A-71 Water-Stage Recorder with Float Alert Water Level Sensor and Rain Gage

HICKS CANYON WASH

Location :	At Culver Blvd. Lat. 33-43-27 Long. 117-46-01
Channel :	F27
Storet Code :	HCWF27
Watershed Area :	approx. 7.5 sq.mi. (19.4 sq.km.)
Cities in Watershed :	Irvine
Raingage :	Lambert Reservoir Alert #217

LAGUNA CANYON CHANNEL

Location :	At Woodland Ave. Lat. 33-33-18 Long 117-46-33
Channel :	IO2
Storet Code :	LCWI02
Watershed Area :	8.3 sq.mi. (21.4 sq.km.)
Cities in Watershed :	Laguna Beach
Raingage :	Laguna Canyon Alert #1120
Gaging Staion :	#222
Equipment :	Stevens A-71 Water-Stage Recorder with Float Alert Rain Gage and Water Level Sensor

LANE CHANNEL

Location :	At McCabe Way, upstream FO8/FO5 confluence Lat. 33-40-41 Long. 117-50-34
Channel :	FO8
Storet Code :	LANFO8
Watershed Area :	approx. 4.6 sq.mi. (11.9 sq.km.)
Cities in Watershed :	Irvine, Santa Ana
Raingage :	Santa Ana Engineering Alert #219, Santa Ana #121

OSO CREEK

Location :	At Crown Valley Parkway Lat. 33-33-29 Long 117-40-33
Storet Code :	OSOL03
Watershed Area :	14.0 sq.mi. (36.2 sq.km.)
Cities in Watershed :	Laguna Hills, Laguna Niguel, Mission Viejo
Raingage :	Upper Oso Creek Alert #297, Trabuco Canyon #133
Gaging Station :	#218
Equipment :	Stevens A-71 Water-Stage Recorder with Float Alert Raingage and Water Level Sensor

PRIMA DESHECHA CHANNEL

Location :	At Calle Grande Vista Lat. 33-25-57 Long. 117-37-53
Channel :	MO1
Storet Code :	PDCMO1
Watershed Area :	7.0 sq.mi. (18.1 sq.km.)
Cities in Watershed :	San Clemente, San Juan Capistrano
Raingage :	San Juan Capistrano Alert #215

RATTLESNAKE CANYON WASH

Location :	At Bryan Ave. Lat. 33-42-30 Long. 117-45-00
Channel :	F26
Storet Code :	RCWF26
Watershed Area :	approx. 3.5 sq.mi. (9.1 sq.km.)
Cities in Watershed :	Irvine, Tustin
Raingage :	Lambert Reservoir Alert #217

PETERS CANYON CHANNEL

Location :	At Barranca Road Lat. 33-41-30 Long. 117-49-23
Channel :	FO6
Storet Code :	BARSED
Watershed Area :	45.2 sq.mi. (117.1 sq.km.)
Cities in Watershed :	Irvine, Santa Ana
Raingage :	Santa Ana Engineering Alert #219, Santa Ana #121
Gaging Station :	#230
Equipment :	Stevens A-71 Water-Stage Recorder with Float Alert Rain Gage and Water Level Float

SAN DIEGO CREEK AT CAMPUS

Location :	At Campus Dr. Lat. 33-39-20 Long. 117-50-41
Channel :	FO5
Storet Code :	SDMFO5
Watershed Area :	111.0 sq.mi. (287.5 sq.km.)
Cities in Watershed :	Irvine, Lake Forest, Orange, Santa Ana, Tustin
Raingage :	Lambert Reservoir Alert #217
Gaging Station :	#226
Equipment :	Stevens A-71 Water-Stage Recorder with Nitrogen Bubbler and Mercury Manometer Alert Rain Gage and Water Level Sensor

SAN DIEGO CREEK AT CULVER

Location :	At Culver Lat. 33-40-54 Long. 117-48-31
Channel :	FO5
Storet Code :	WYLSED
Watershed Area :	41.8 sq.mi. (108.3 sq.km.)
Cities in Watershed :	Irvine, Lake Forest
Raingage :	Lambert Reservoir Alert #217
Gaging Station :	#231
Equipment :	Stevens A-71 Water-Stage Recorder with Nitrogen Bubbler and Mercury Manometer

SAND CANYON CHANNEL

Location :	At Culver and University Lat. 33-39-30 Long. 117-49-40
Channel :	F15
Storet Code :	SCCF15
Watershed Area :	approx. 9.6 sq.mi. (24.8 sq.km.)
Cities in Watershed :	Irvine
Raingage :	San Diego Creek Alert #1125

SANTA ANA DELHI CHANNEL

Location :	Upstream Irvine Ave. Lat. 33-39-36 Long. 117-52-50
Channel :	FO1
Storet Code :	SADFO1
Watershed Area :	17.6 sq.mi. (45.6 sq.km.)
Cities in Watershed :	Costa Mesa, Irvine, Newport Beach, Santa Ana
Raingage :	Costa Mesa Alert #1150, Costa Mesa #165
Gaging Station :	#220
Equipment :	Stevens A-71 Water-Stage Recorder with Float Alert Rain Gage and Water Level Sensor

SEGUNDA DESHECHA CANNEL

Location :	At El Camino Real Lat. 33-25-58 Long. 117-37-51
Channel :	MO2
Storet Code :	SDCMO2
Watershed Area :	8.9 sq.mi. (23.1 sq.km.)
Cities in Watershed :	San Clemente
Raingage :	San Juan Capistrano Alert #215

SERRANO CREEK

Location :	At Alton and Muirlands Lat. 33-39-00 Long. 117-42-21
Channel :	F19
Storet Code :	SERF19
Watershed Area :	approx. 6.9 sq.mi. (17.9 sq.km.)
Cities in Watershed :	Irvine, Lake Forest
Raingage :	Lambert Reservoir Alert #217

WESTMINSTER CHANNEL

Location :	At Hazard Downstream Beach Blvd. Lat. 33-45-07 Long. 117-59-26
Channel :	CO4
Storet Code :	WMCC04
Watershed Area :	6.7 sq. mi. (17.3 sq. km.)
Cities in Watershed :	Garden Grove, Westminster
Raingage :	Garden Grove Alert #1175, Garden Grove Fire Station #229
Gaging Station :	#207
Equipment :	Stevens A-71 Water-Stage Recorder with Float Alert Water Level Sensor and Rain Gage

All organic compounds unless otherwise noted were below the detection limits of the laboratory.

Benzo (b) - Benzo(b) flouranthene Flranth - Flouranthene Dznon - Diazinon

Benzo(k) - Benzo(k)flouranthene Mthxy - Methoxychlor Endo I - Endosulfan I

ND - Not Detected (below detection limit of laboratory).

Appendix 4.11:
Annual Loads of Nitrate, Phosphate, TSS, Copper, Lead, and Zinc

Total Stormwater Discharge from Automatic Sampling Sites

Total Stormwater Nitrate Load from Automatic Sampling Sites

Total Stormwater Phosphate Load from Automatic Sampling Sites

Total Stormwater TSS Load from Automatic Sampling Sites

Total Stormwater Copper Load from Automatic Sampling Sites

Total Stormwater Lead Load from Automatic Sampling Sites

Total Stormwater Zinc Load from Automatic Sampling Sites

Appendix 4.12

Appendix 4.13:
Precipitation, Runoff and Tides during Harbors/Bays Sampling

Newport Bay Sampling during a March 1995 Storm

Newport Bay Sampling During a March 1995 Storm

Newport Bay Samping during a January-February 1996 Storm

Newport Bay Sampling during a February 1996 Storm

Newport Bay Sampling during a November 1996 Storm

Newport Bay Sampling during a December 1997 Storm

Note : Scales on primary and secondary y axes are different than for other Newport Bay samplings

Newport Bay Sampling during a February 1998 Storm

Newport Bay Sampling during a March 1998 Storm

Newport Bay Sampling during a January 1999 Storm

Newport Bay Sampling during an April 1999 Storm

Huntington Harbour Sampling during a November 1994 Storm

Bolsa Chica Discharge includes Anaheim Barber City and Westminster Channels

Huntington Harbour Sampling during a March 1995 Storm

Bolsa Chica Discharge includes Anah Jarber City and Westminster Channels

Huntington Harbour Sampling during a December 1995 Storm

Bolsa Chica Discharge includes Anaheim Barber City and Westminster Channels

Huntington Harbour Sampling during a March 1996 Storm

Bolsa Chica Discharge includes Anal Barber City and Westminster Channel

Huntington Harbour Sampling during a November 1996 Storm

Huntington Harbour Sampling during a January 1997 Storm

Huntington Harbour Sampling during a January 1998 Storm

Bolsa Chica discharge includes Anaheim Barber City and Westminster Channels

Huntington Harbour Sampling during a May 1998 Storm

Bolsa Chica Discharge includes Anah Barber City and Westminster Channels

Huntington Harbour Sampling during a March 1999 Storm

Bolsa Chica discharge includes Anaheim Barber City and Westminster Channels

STATE OF CALIFORNIA
STATE WATER RESOURCES CONTROL BOARD

ORDER: WQ 2000 - 11

In the Matter of the Petitions of
THE CITIES OF BELLFLOWER, ET AL., THE CITY OF ARCADIA, AND WESTERN STATES PETROLEUM ASSOCIATION
Review of January 26, 2000 Action of the Regional Board
and
Actions and Failures to Act
by both the
California Regional Water Quality Control Board,
Los Angeles Region and Its Executive Officer
Pursuant to Order No. 96-054,
Permit for Municipal Storm Water and Urban Run-Off Discharges Within
Los Angeles County
[NPDES NO. CAS614001]

SWRCB/OCC FILES A-1280, A-1280(a) and A-1280(b)

BY THE BOARD:

On July 15, 1996, the Los Angeles Regional Water Quality Control Board (Regional Water Board) issued a revised national pollutant discharge elimination system (NPDES) permit in Order No. 96-054 (permit) to the 85 incorporated cities and the county within Los Angeles County (the County).[1] The permit covers storm water discharges from municipal separate storm sewer systems throughout the County.[2]

[1] This was the second storm water permit adopted for Los Angeles County and its cities. The first permit was the subject of an earlier Order. (In the Matter of Natural Resources Defense Council, Inc., Order WQ 91-04). In this permit, the County is designated as the Principal Permittee, and each city is designated as a permittee. The County is required to submit various documents on behalf of all of the permittees.
[2] The Regional Water Board has since issued a separate permit for one city, Long Beach. The relevant provisions of the Long Beach permit are similar to those in Order No. 96-054.

The permit contains provisions for the regulation of storm water discharges from development planning and construction.[3] Pursuant to these provisions, the County was required to submit Standard Urban Storm Water Mitigation Plans (SUSMPs).[4] The SUSMPs are plans that designate best management practices (BMPs) that must be used in specified categories of development projects. The County submitted SUSMPs, but the Regional Water Board approved the SUSMPs only after making revisions. The Executive Officer issued the revised SUSMPs on March 8, 2000.[5]

On February 25, 2000, the State Water Resources Control Board (State Water Board or Board) received a petition for review of the actions and failures to act regarding the SUSMPs from a number of cities, the Building Industry Association of Southern California and the Building Industry Legal Defense Foundation (jointly referred to as Cities). A second petition was received from the City of Arcadia. And a third petition was received from the Western States Petroleum Association (WSPA). On April 7, 2000, the petitioners filed amendments to their petitions, concerning the March 8, 2000 issuance of the SUSMPs. The Cities' amendment also revised the list of cities included in the petition. The Cities' petition now includes 32 cities. The petitions are legally and factually related, and have therefore been consolidated for purposes of review.[6] The petitioners also requested a stay of the SUSMPs. This request was denied by letter, dated May 11, 2000.

[3] Permit, Part 2.III. These provisions focus more on post-construction impacts of development than on discharges from construction activities.
[4] Permit, Part 2.III.A.1.c.
[5] These are referred to herein as the Final SUSMPs. The Final SUSMPs also apply to Long Beach, even though it is subject to a separate permit.
[6] Cal. Code of Regs., tit. 23, section 2054.

On June 7 and 8, 2000, the Board held a hearing in Torrance. Several entities, including the petitioners, the Regional Water Board, and several environmental groups[7], were designated parties. The evidence from that hearing has been included in the record before the Board. The record for comments on the petition was kept open until the end of the hearing. The parties were allowed to submit post-hearing briefs.[8]

I. BACKGROUND

In prior Orders[9] this Board has explained the need for the municipal storm water programs and the emphasis on BMPs in lieu of numeric effluent limitations. The emphasis for preventing pollution from storm water discharges is still on the development and implementation of effective BMPs, but with the expectation that the level of effort will increase over time. In its Interim Permitting Approach[10], the United States Environmental Protection Agency (U.S. EPA) stated that first-round permits should include BMPs, and expanded or better-tailored BMPs in subsequent permits where necessary to attain water quality standards. Dischargers, consultants, and academic institutions in California and nationwide have conducted numerous studies on the effectiveness of BMPs and appropriate design standards. While many questions are still

[7] The environmental groups are Natural Resources Defense Council, Inc., Santa Monica BayKeeper, and Heal the Bay.

[8] There are several documents that were not timely received and, therefore, are not made a part of the record before the Board. The hearing notice specified that all evidence from parties must be received by May 31, 2000. The Regional Water Board submitted documents on June 6, 2000. The hearing notice specified that policy statements were due by the close of the hearing. Several comment letters were received June 12, 13, and 19, 2000. None of these submittals are a part of the record. The post-hearing briefs were subject to a 10-page limit. The environmental groups submitted objections to the post-hearing brief submitted by the Cities. First, the environmental groups challenge the length of the brief. All briefs were subject to a 10-page limit. The Cities submitted a 10-page brief, with a 22-page attachment showing extensive proposed revisions to the SUSMPs. This submittal violates the page limit, and only the brief is considered part of the record. Second, the environmental groups claim that an e-mail message referred to by the petitioners is subject to attorney-client privilege and should not have been used in this hearing. This e-mail message, from the Regional Water Board's counsel to one of its engineers, was placed in the Regional Water Board's administrative record and submitted to the State Water Board. Any privilege that may have attached to the message has been waived and no longer exists. Finally, the post-hearing brief from the City of Arcadia was received late and will not be considered. Documents submitted late for interim deadlines (such as the deadline for submitting responses to the petitions), have been included in the record.

[9] See, especially Orders WQ 91-03 (In the Matter of Citizens for a Better Environment et al.) and WQ 91-04.

[10] Interim Permitting Approach for Water Quality-Based Effluent Limitations in Storm Water Permits. (61 Federal Register 57425.)

outstanding, more is expected of municipal dischargers, and many are implementing more effective programs.

While storm water management plans are improving, our knowledge of the impacts is also growing. Urban runoff has been determined to be a significant contributor of impairment to waters throughout the state. In Los Angeles specifically, beach closures are sometimes associated with urban runoff. In adopting the SUSMPs, the Regional Water Board took note of the urgent need for preventing further pollution from urban runoff and storm water discharges.

It is important to emphasize the role of the SUSMPs within the totality of regulating storm water discharges, and the purpose of these particular control measures. The requirement to prepare SUSMPS was part of the development controls in the permit. In addition to development controls, the permit requires education, public outreach, programs to restrict illicit connections and discharges, and controls on public facilities. In the context of the entire effort required by the permit, the development controls can be seen as preventing the existing situation from becoming worse.

The Final SUSMPs include a list of mandatory BMPs for nine categories of development. There are provisions that are applicable to all categories and lists of BMPs for individual categories. Requirements applicable to all categories include provisions to limit erosion from new development and redevelopment, requirements to conserve natural areas, protection of slopes and channels, and storm drain stenciling. Examples of BMPs specific to categories of discharge include design of loading docks for commercial projects and design of fueling areas for retail gasoline outlets. In most respects, the Final SUSMPs were similar to those proposed by the County. The significant departures were the inclusion of a numeric design standard for structural or treatment control BMPs, and the inclusion of certain types of projects that were not

covered in the County's proposal. The design standard creates objective and measurable criteria for the amount of runoff that must be treated or infiltrated by BMPs.

The record indicates that the purpose of the development controls, including the SUSMPs, is not simply to prevent pollution associated with construction runoff. As the petitioners point out, construction discharges are already subject to this Board's Statewide Construction Permit. The development controls in the SUSMPs, on the other hand, focus on post-construction runoff. They are aimed at limiting not just the pollutants in runoff from the new development, but also the volume of runoff that enters the municipal storm sewer system. By limiting runoff from new development, the SUSMPs prevent increased impacts from urban runoff generally. There is adequate technical information in the record to show that by controlling the volume of runoff from new development, BMPs can be effective in reducing the discharge of pollutants in storm water runoff.

The Procedure for Adopting the SUSMPs

The permit requires a program for controls on Development Planning and Construction. It involved a number of submissions by the County in consultation with the Cities. The first step was submission of a checklist for determining priority projects and exempt projects. The checklist was due on January 30, 1998. A list of recommended BMPs for development projects was also due on that date. The SUSMPs were due within six months of approval of the BMP list, and were to incorporate BMPs for certain categories of development. Following approval of the SUSMPs, the cities and County were to implement development programs for priority projects, consistent with the BMP list and the SUSMPs.

The BMP list was not approved until April 22, 1999. Thereafter, the County submitted proposed SUSMPs on July 22, 1999. The Regional Water Board held a public workshop on

August 10, 1999. Following the workshop, the County submitted revisions to the SUSMPs on August 12, 1999. On August 16, 1999, the Regional water Board gave notice that it would discuss the SUSMPs in a public meeting on September 16, 1999. There was significant discussion at that meeting regarding the intent of the Executive Officer to approve the SUSMPs, but with revisions including a numeric design standard. At the conclusion of the meeting, the Regional Water Board members asked the Executive Officer to revise the SUSMPs and bring them back to another meeting. On December 7, 1999, the Executive Officer circulated revised SUSMPs for public review. This document incorporated a numeric design standard and made other revisions to the permittees' proposal. The Regional Water Board held a hearing on the SUSMPs on January 26, 2000. At that meeting, the Regional Water Board endorsed the SUSMPs revised by the Executive Officer, but directed him to make further changes. The Executive Officer issued the Final SUSMPs on March 8, 2000.

The Contents of the Final SUSMPs

The permit provides that the SUSMPs must incorporate the appropriate elements of the BMP list and, at a minimum, apply to seven development categories: 100-plus home subdivisions; 10-plus home subdivisions; 100,000-plus square foot commercial developments; automotive repair shops; retail gasoline outlets; restaurants; and hillside single-family dwellings.

The SUSMPs proposed by the County applied to these seven categories. Various BMPs applied to the different categories, and the SUSMPs contained narrative mitigation requirements for source control and treatment. The July proposals stated:

> "The development must be designed so as to mitigate (infiltrate and/or treat) the site runoff generated from impervious directly connected areas that may contribute pollutants of concern to the storm water conveyance system."

There were no numeric design criteria for mitigation. According to various participants, earlier County drafts had included design standards to mitigate flows from 0.6-inch storm events. But any numeric criteria had been removed from the version that was submitted.

In its revised SUSMPs, submitted on August 12, the County explained in its cover letter that the mitigation language did not mean that all runoff must be mitigated. Rather, the County's intent was to omit a numerical standard from the SUSMPs. The revised SUSMPs no longer referred to mitigation at all. Instead, the following language replaced the mitigation requirement:

> "The development must be designed so as to minimize, to the maximum extent practicable (MEP), the introduction of pollutants of concern that may result in significant impacts, generated from site runoff of directly connected impervious areas (DCIA), to the storm water conveyance system as approved by the building official."

The Final SUSMPs, as approved by the Executive Officer and the Regional Water Board, included several revisions from the County's submittal. The revision that is of greatest concern to the petitioners is the addition of Design Standards for Structural or Treatment Control BMPs.[11] The design standards require that developments subject to the SUSMPs shall be designed to mitigate storm water runoff (by treatment or infiltration) from one of the following:

> "1. The 85th percentile 24-hour runoff event determined as the maximized capture storm water volume for the area…, or
> 2. The volume of annual runoff based on unit basin storage water quality volume, to achieve 80 percent or more volume treatment…, or
> 3. The volume of runoff produced from a 0.75 inch storm event, prior to its discharge to a storm water conveyance system, or
> 4. The volume of runoff produced from a historical-record based reference 24-hour rainfall criterion for "treatment" (0.75 inch average for the Los Angeles County area) that achieves approximately the same reduction in pollutant loads achieved by the 85th percentile 24-hour runoff event."

[11] The Final SUSMPs also include the narrative language quoted from the County's August 22, 1999 proposal.

The Final SUSMPs also applied to two additional categories of development: parking lots over 5,000 square feet or with 25 or more spaces and exposed to storm water, and to developments in environmentally-sensitive areas. Other revisions included application to all projects in the categories instead of discretionary projects only and the definition of redevelopment.

II. CONTENTIONS AND FINDINGS[12]

Contention: The petitioners contend that the Regional Water Board erred in not complying with the Administrative Review Process within the permit, and acted arbitrarily and capriciously and in violation of the Clean Water Act and state law.

Finding: The permit required the County, in consultation with the cities subject to the permit, to submit SUSMPs. The permit includes some general minimum requirements for the SUSMPs.[13] The Executive Officer is granted authority to approve the SUSMPs.[14]

The permit also contains an administrative review process.[15] The permit states that the administrative review process "formalizes the procedure for review and acceptance of reports and documents" and "provides a method to resolve any differences in compliance expectations between the Regional Board and Permittees, prior to initiating enforcement action."[16] Following this introductory statement, the permit includes two procedures. The first is for review and approval or disapproval of reports and documents. The second is the dispute resolution section that must be followed prior to enforcement action.

---

[12] This Order does not address all of the issues raised by the petitioners. The Board finds that the issues that are not addressed are insubstantial and not appropriate for State Water Board review. (See *People v. Barry* (1987) 194 Cal.App.3d 158, [239 Cal.Rptr. 349], Cal. Code Regs., tit. 3, § 052.)
[13] Permit, Part 2, III.A.1.c.
[14] Permit, Part 2, III.A.2.
[15] Permit, Part 2, I.G.
[16] *Id.*

The process for review of documents that are subject to the Executive Officer's approval is that the Executive Officer will notify the permittees of the results of the review and approval or disapproval within 120 days. If the Executive Officer does not do so, the permittees must notify the Regional Water Board of their intent to implement the documents without approval. The Executive Officer then has 10 days to respond, or the permittees may implement the program and the Executive Officer may not make modifications.

The dispute resolution procedure is to be used when the Executive Officer determines that a permittee's storm water program is insufficient to meet the permit's provisions. The Executive Officer must send a "Notice of Intent to Meet and Confer" with the permittee. A meet and confer period then ensues, resulting in a written "Storm Water Program Compliance Amendment (SWPCA)." The permittee is provided time to comply with the SWPCA. The Executive Officer is not allowed to take enforcement action against a permittee until the Executive Officer notifies the permittee in writing that the administrative review process has been exhausted and that a violation exists warranting enforcement.

The petitioners contend that the Executive Officer failed to notify the permittees that their SUSMPs were inadequate within 120 days of its submittal. The petitioners also argue that, by revising the SUSMPs without pursuing the dispute resolution process, the Regional Water Board "violated" the terms of the permit.

The provision for review of documents, which clearly includes the SUSMPs, requires that the Executive Officer notify the permittees of the results of the review and approval or disapproval within 120 days. The County submitted the revised SUSMPs on August 12, 1999. Within 120 days, the Regional Water Board held a workshop where staff expressed their concerns with the SUSMPs. Also within 120 days the Regional Water Board itself held a public

meeting where there was extensive discussion and concern by board members that the SUSMPs did not include a numeric standard. And, prior to any notification by the permittees that they would proceed with implementing their SUSMPs, the Regional Water Board held a hearing January 26, 2000, where it directed the Executive Officer to issue the SUSMPs with revisions. The Executive Officer did so on March 8, 2000.

It is clear from the record that the Executive Officer, and the Regional Water Board itself, did inform the permittees that the SUSMPs were inadequate. There was no requirement for a specific form for expressing disapproval of documents. The extensive discussion and meetings on the need for revisions to the SUSMPs, and the Executive Officer's approval of revised SUSMPs, plainly refutes the allegation that the Regional Water Board never notified the permittees of its disapproval of the County's proposed SUSMPs.

The permittees also claim that the Regional Water Board "violated" the permit by failing to institute the meet and confer process.[17] The dispute resolution process, which includes meet and confer, did not apply to the decision to disapprove the proposed SUSMPs. That process is only required when the Regional Water Board ultimately takes an enforcement action against a permittee. It is separate from the process for review and approval or disapproval of documents, and does not even appear to relate to possible enforcement actions for submission of inadequate documents. This is illustrated by the fact that the provision regarding documents refers to submittals from both the Principal Permittee and the individual permittees, while the dispute resolution provision refers only to the permittees. This distinction is relevant because the County is charged with submitting the documents, while the individual permittees are responsible for compliance. A fair reading of the entire section on the administrative review process is that the

[17] We note that permits are issued to permittees to allow discharges to waters of the state. It is only permittees, and not Regional Water Boards, who can be charged with violating permits.

review and approval or disapproval of documents applies to submission of documents by the County on behalf of the cities, while the dispute resolution process applies to enforcement actions against any permittees for failing to implement adequate programs.

Contention: The petitioners contend that the Regional Water Board was not authorized to revise the SUSMPs to add more stringent requirements.

Finding: The petitioners contend that the mitigation standards in the SUSMPs are more stringent than the requirement in the permit to reduce pollutants in storm water runoff to the maximum extent practicable (MEP)[18]. The issue of what level of protection constitutes MEP will be discussed *Infra*, in the discussion of the reasonableness of the numeric standards. But the petitioners also make certain procedural claims on this point. They argue that in approving the BMP list, the Regional Water Board determined that those BMPs constituted MEP and that the Board could not add additional BMPs in the SUSMPs. They also contend the Regional Water Board itself had no authority to "usurp" the Executive Officer's role in reviewing the SUSMPs.[19] Finally, the petitioners contend that the Regional Water Board was not authorized to mandate a program for the permittees without amending the permit.

The permit requires the County to submit a list of BMPs for approval. The Regional Water Board approved this list. Following approval of the list, the County was required to submit the SUSMPs, which must "incorporate the appropriate elements of the recommended BMPs list."[20] The petitioners contend that by approving the list, the Regional Water Board determined that those BMPs constituted MEP, and that under the terms of the permit the Regional Water Board could not require additional BMPs.

---

[18] The technology-based standard for controls under municipal storm water permits is MEP. For a fuller discussion of this standard, see Order WQ 91-03.
[19] It is undisputed that, at its January 26, 2000 meeting, the Board directed the Executive Officer to make additional revisions to the SUSMPs.
[20] Permit, Part 2, III.A.1.c.

In addressing this contention, we face what appears to be a fundamental misunderstanding of the numeric design standards on the part of the petitioners. The design standards are objective criteria that developers must achieve in designing their BMPs. The design standards are not separate BMPs. The standards tell what magnitude of storm event the BMPs must be designed to treat or infiltrate. They do not specify the BMPs that must be employed.

The SUSMPs as submitted by the County specify BMPs for various categories of development. Many of these BMPs are designed to minimize the pollutants in storm water runoff, by reducing flow through infiltration or by treatment. Examples of BMPs proposed by the County include infiltration basins and trenches, oil/water separators, and media filtration. The County's proposed SUSMPs also included language requiring minimizing the introduction of pollutants to the storm water conveyance system. That language remains unchanged in the Final SUSMPs. The only significant difference between the two versions of the SUSMPs was that the Regional Water Board established numeric criteria for designing the BMPs.

In adopting the Final SUSMPs, the Regional Water Board based its decision on the MEP standard.[21] The Regional Water Board did not significantly revise the BMP list or specify further the actions that developers must take to comply with the SUSMPs. Thus, we find that the Regional Water Board did not inappropriately revise its determination of what constituted MEP.

The Regional Water Board is the political body responsible for water quality control in the Los Angeles region.[22] While the Regional Water Board may delegate specified powers and duties to its Executive Officer,[23] it can at any time act on its own behalf. The fact that the Board authorized its Executive Officer to approve the SUSMPs in the permit did not mean that the Board thereby denied itself the opportunity to provide direction to the Executive Officer in his

[21] Resolution R-00-02.
[22] Water Code sections 13200 and 13225.
[23] Water Code section 13223.

approval. Such an interpretation of its delegation authority would result in an improper failure of the Board to assume responsibility for water quality in the region.

We also find that the Regional Water Board was authorized to revise the SUSMPs to achieve compliance with the permit's requirements. The SUSMPs are a part of implementation of the permit. Because the permit regulates storm water discharges throughout the entire Los Angeles region and it is implemented by 85 cities and the County, it is obvious that the permit could not spell out every detail of the program for the five-year term of the permit. Instead, the implementation is through the submission, review and approval, and implementation of various programs, including the SUSMPs.[24] Where it receives a submission that it finds is not consistent with the requirements of the permit, it is reasonable for the Regional Water Board to be able to require revisions. The Regional Water Board is not required to amend the permit each time it approves a submittal or approves a submittal with revisions. On the other hand, if the Regional Water Board's action in requiring revisions is inconsistent with the terms of the permit, then the Board should not act without first amending the permit. While the Regional Water Board could have required the County to make the revisions rather than making them itself, we see no harm in the Regional Water Board's approach.

As will be discussed below, in most respects the Final SUSMPs are consistent with the permit. But there are some portions of the SUSMPs that are not consistent, and in those cases the SUSMPs provisions are further revised in this Order.

Contention: The petitioners make various procedural claims, including that they were denied due process, and that the Regional Water Board violated the Administrative Procedure

[24] A fuller discussion of the use of storm water management plans to incorporate a developing program is found in Order No. WQ 91-03.

Act, the California Environmental Quality Act (CEQA), and the California Constitution, Article XIII B, section 6 (regarding state mandates).

Finding: The petitioners point out that at the January 26, 2000 Regional Water Board hearing, there was some confusion over late changes to the SUSMPs and they contend they were not provided adequate opportunity to comment. There was significant discussion of the SUSMPs over several months. We do not agree with the petitioners that a program of this magnitude must necessarily take years to develop. But we are concerned that at the January 26, 2000 hearing, interested persons and permittees were not given adequate time to review late revisions or to comment on them. Given the intense interest in this issue, the Regional Water Board should have diverged from its strict rule limiting individual speakers to three minutes and conducted a more formal process. Such a process should provide adequate time for comment, including continuances where appropriate.[25] But to the extent the Regional Water Board's process caused any harm, this Board cured those harms. We held a two-day hearing in Los Angeles County, where all parties were allowed significant time to present their positions and testimony. In addition, we allowed the introduction of new evidence that had not been presented to the Regional Water Board. At this point, all parties have been afforded a full opportunity to review the Final SUSMPs, to present their positions and evidence, and to engage in cross-examination. The petitioners' due process rights have been protected.

The Board has already addressed the contentions regarding compliance with other laws in prior decisions. The Administrative Procedure Act exempts the adoption of permits from its requirements.[26] While the SUSMPs are not a permit, they are implementing documents for a

[25] For future adjudicative proceedings that are highly controversial or involve complex factual or legal issues, we encourage regional water boards to follow the procedures for formal hearings set forth in Cal. Code of Regs., tit. 23, section 648 et seq.

[26] Government Code section 11352; See, Order No. 95-4 (In the Matter of the City and County of San Francisco).

permit, and are therefore subject to the exemption. Moreover, they are relevant only to this permit, and are not a general rule of application. The constitutional provisions regarding state mandates also do not apply to NPDES permits.[27] As will be explained below, the SUSMPs as revised herein, are consistent with MEP and therefore are federally mandated. The provisions of CEQA requiring adoption of environmental documents also do not apply to NPDES permits.[28] Again, as an implementing document for the permit, there is no requirement for a separate CEQA analysis.[29]

Contention: The petitioners contend that the SUSMPs do not properly apply the maximum extent practicable standard.

Finding: The permit, consistent with Clean Water Act section 402(p)(3)(B)(iii), requires controls to reduce the discharge of pollutants to the maximum extent practicable, or MEP.[30] In approving the Final SUSMPs, the Regional Water Board acknowledged that one of the primary objectives of the municipal storm water program is the requirement to reduce the discharge of pollutants from storm water conveyance systems to the MEP.[31] While all parties appear to agree that the standard for the SUSMPs is MEP, they disagree about what level of effort is necessary to comply with that standard.

The petitioners approach this issue from two angles. First, they contend that the SUSMPs will not provide water quality benefits that reflect MEP. Second, they contend that there could be adverse impacts on groundwater quality that have not been adequately evaluated.

---

[27] See, Order No. WQ 90-3 (In the Matter of San Diego Unified Port District).
[28] Water Code section 13389.
[29] We do note with interest the environmental groups' comment that if the permittees believed it was necessary to comply with the APA and CEQA prior to adoption of the SUSMPs, then they themselves would have violated those acts in their submissions of the proposed SUSMPs.
[30] Permit, Finding 13.
[31] Final SUSMPs, at page 2; Resolution No. R-00-02, at page 3.

Storm Water Design Standards as MEP

In adopting the Final SUSMPs, the Regional Water Board found that many rivers and streams in Los Angeles County are impaired for pollutants found in storm water and urban runoff, and that storm water runoff carries pollutants from nearly all types of developed properties.[32] Pollutant loading from the aggregate of development in the basin results in impairments from sediments, metals, complex organic compounds, oil and grease, nutrients, and pesticides.[33] The Final SUSMPs reflect two goals: to reduce the amounts of these pollutants in runoff and to reduce the ability of runoff to act as a conveyance system to deliver more pollutants to receiving waters. The Final SUSMPs, which include lists of BMPs and design standards requiring treatment or infiltration, address these two goals.

Clean Water Act section 402(p)(3)(B)(iii), which sets forth the requirements for establishing MEP in municipal storm water permits, provides that such permits "shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants." The United States Environmental Protection Agency (U.S. EPA), in a guidance document, explains that BMPs should be used in first-round storm water permits, and "expanded or better-tailored BMPs in subsequent permits, where necessary, to provide for the attainment of water quality standards."[34] The Clean Water Act, as interpreted by U.S. EPA, does require that, in a second-round permit,[35] expanded BMPs may be appropriate. In light of the number of water

[32] Resolution No. R-00-02.
[33] *Id*.
[34] Interim Permitting Approach for Water Quality-Based Effluent Limitations in Storm Water Permits, 61 Federal Register 57425 (1996).
[35] The original permit was issued in 1990. The 1996 permit is a second-round permit.

bodies impaired by runoff in Los Angeles County, it was appropriate to expand the scope of BMPs during the permit term.

The regulations implementing section 402(p) specifically require municipalities to have controls to reduce the discharge of pollutants from their storm sewer systems that "receive discharges from areas of new development and significant redevelopment," including post-construction discharges.[36] Clearly, it was appropriate for the Regional Water Board to require BMPs for new development and significant redevelopment. The permittees, who submitted their own version of SUSMPs with listed BMPs for categories of development, appear to have no real quarrel with this general mandate.

This Board has already endorsed requirements to limit the flow of the "first flush" of storm water, which may contain more significant pollutants.[37] The permittees' own version of the SUSMPs required mitigation of storm water runoff by treatment or infiltration, thus conceding the propriety of these two approaches to lessening the impact of storm water discharges. The crux of the disagreement is that the Regional Water Board added numeric design standards to establish the amount of runoff that must be treated or infiltrated, and required the mandatory application of these standards to categories of development.

The addition of measurable standards for designing the BMPs provides additional guidance to developers and establishes a clear target for the development of the BMPs. The U.S. EPA guidance manual suggests the use of design criteria and performance standards for post-construction BMPs.[38] The numeric criteria the Regional Water Board adopted essentially

[36] 40 CFR section 122.26(d)(2)(iv)(A)(2).
[37] In the Matter of National Steel and Shipbuilding Company, et al., Order WQ 98-07, at slip opinion 7.
[38] Guidance Manual for the Preparation of Part 2 of the NPDES Permit Applications for Discharges from Municipal Separate Strom Sewer Systems, at page 6-4 (November 1992).

requires that 85 percent of the runoff from the development be infiltrated or treated.[39] In adopting these standards, the Regional Water Board based its decision on a research review of standards in other states and a statistical analysis of the rainfall in the area. The standard was set to gain the maximum benefit in mitigation while imposing the least burden on developers.[40] In light of the evidence of the use of this or more stringent standards in other states, the expert testimony supporting this standard, the endorsement by U.S. EPA in its comments, and the cost-effectiveness of its implementation (discussed below), the Regional Water Board acted appropriately in determining that the standards reflect MEP.[41]

We also find that the Regional Water Board appropriately applied these standards to seven of the categories listed in the SUSMPs: single-family hillside residences, 100,000 square foot commercial developments, automotive repair shops, restaurants, home subdivisions with 10 to 99 housing units, home subdivisions with 100 or more housing units, and parking lots with 5,000 square feet or more or with 25 or more parking spaces and potentially exposed to storm water runoff.[42] These categories, except for parking lots, were already targeted for special treatment in the permit. The evidence shows that each listed category can be a significant source of pollutants and/or runoff following development. It is appropriate that the design standards apply so that BMPs for these categories of development result in the infiltration or treatment of a significant about of the runoff.

---

[39] Four different methods of calculation are permitted, so the percentage of capture may vary slightly.

[40] At the hearing in this matter, Regional Water Board staff explained that the standard was set at the bottom of the "knee" of the curve where the benefits of the mitigation requirements decrease and the cost increases. Other states have set the standard higher along this curve, requiring 90 to 95 percent mitigation.

[41] This conclusion in no way departs from our acceptance of BMPs in lieu of numeric effluent limitations in storm water permits. (See, e.g., Order WQ 91-03 and Order WQ 91-04.) The numeric standard is a design standard for BMPs. It does not quantify or limit the pollutants in the effluent. It also does not specify which of the listed BMPs must be employed.

[42] As discussed below, this Board is revising the SUSMPs to delete the application of the design standards to retail gasoline outlets and to locations within or directly adjacent to or discharging directly to environmentally-sensitive areas.

Potential Impacts on Ground Water

The petitioners contend that infiltration of runoff may lead to ground water pollution, and that the Regional Water Board did not properly consider such potential impacts. The mitigation standards provide for a waiver where there is a risk of ground water contamination because a known unconfined aquifer lies beneath the land surface or an existing or potential underground source of drinking water is less than ten feet from the soil surface.[43] The Final SUSMPs also include a discussion on how to use infiltration so that the risk of contamination of groundwater is reduced, and where infiltration is not appropriate.[44]

The Regional Water Board did consider the potential impacts to groundwater from infiltration, and included appropriate limitations and guidance on its use as a BMP. These provisions will ensure adequate protection of groundwater from any adverse impacts due to infiltration.

Contention: The petitioners contend the Regional Water Board failed to show that the SUSMPs as adopted are cost-effective and that the benefits to be obtained outweigh the costs.

Finding: The petitioners refer to the Preamble to the Phase II storm water regulations[45] as the basis for their economic argument. The quoted language, however, does not wholly support the petitioners' contention. The Preamble states that President Clinton's Clean Water Initiative clarifies "that the maximum extent practicable standard should be applied in a site-specific, flexible manner, taking into account cost considerations as well as water quality effects."[46] It is clear that cost should be considered in determining MEP; this does not mean that

[43] Final SUSMP, page 14.
[44] *Id*., at page 15.
[45] 64 Federal Register 68722 and following. These regulations do not apply to the permit, but the general language on MEP is relevant to EPA's interpretation of the standard.
[46] 64 Federal Register 68722, 68732 (December 8, 1999).

the Regional Water Board must demonstrate that the water quality benefits outweigh the economic costs.

While the standard of MEP is not defined in the storm water regulations or the Clean Water Act, the term has been defined in other federal rules. Probably the most comparable law that uses the term is the Superfund legislation, or CERCLA, at section 121(b). The legislative history of CERCLA indicates that the relevant factors, to determine whether MEP is met in choosing solutions and treatment technologies, include technical feasibility, cost, and state and public acceptance.[47] Another example of a definition of MEP is found in a regulation adopted by the Department of Transportation for onshore oil pipelines. MEP is defined as to "the limits of available technology and the practical and technical limits on a pipeline operator . . . ."[48]

These definitions focus mostly on technical feasibility, but cost is also a relevant factor. There must be a serious attempt to comply, and practical solutions may not be lightly rejected. If, from the list of BMPs, a permittee chooses only a few of the least expensive methods, it is likely that MEP has not been met. On the other hand, if a permittee employs all applicable BMPs except those where it can show that they are not technically feasible in the locality, or whose cost would exceed any benefit to be derived, it would have met the standard. MEP requires permittees to choose effective BMPs, and to reject applicable BMPs only where other effective BMPs will serve the same purpose, the BMPs would not be technically feasible, or the cost would be prohibitive. Thus while cost is a factor, the Regional Water Board is not required to perform a cost-benefit analysis.

In reviewing the record, it is apparent that the Regional Water Board did evaluate the cost of the SUSMPs. While the petitioners claim there is no evidence in the record to show the

[47] 132 Cong. Rec. H 9561 (Oct. 8, 1986).
[48] 49 CFR section 194.5.

SUSMPs are necessary and cost effective, the opposite is true. The record is replete with documentation of costs of pilot mitigation projects, studies from similar programs in other states, and research studies. The Regional Water Board complied with the requirement to consider cost.

The Regional Water Board found that the cost to include BMPs that will meet the mitigation criteria will be one to two percent of the total development cost. This amount appears reasonable, especially in light of the amount of impervious surface already in Los Angeles County and the impacts on impaired water bodies. In considering the cost of compliance, it is also important to consider the costs of impairment. The beach closures in the Los Angeles region, well documented in the evidence, have reached critical proportions. These beach closures clearly have a financial impact on the area, and should be positively affected by the SUSMPs.

We do note that there could be further cost savings for developers if the permittees develop a regional solution for the problem. We recommend that the cities and the County, along with other interested agencies, work to develop regional solutions so that individual dischargers are not forced to create numerous small-scale projects. While the SUSMPs are an appropriate means of requiring mitigation of storm water discharges, we also encourage innovative regional approaches.[49]

Contention: The petitioners have raised contentions regarding details of the SUSMPs, including the amount of time allowed for inclusion of SUSMPs in local ordinances, and their application to both "discretionary" and "non-discretionary" projects. In addition, during the hearing certain ambiguities in the wording of the Final SUSMPs became apparent, including the provisions regarding redevelopment and environmentally-sensitive areas. In this portion of the

[49] We note that the SUSMPs as written do not in any way preclude the development of regional solutions approved by the Regional Water Board as a means to comply with the BMP and design standard requirements.

Order we address these issues and also the application of the design standards to retail gasoline outlets (RGOs) and the waiver funding requirements.

Finding: The testimony at the hearing in this matter revealed that there are specific provisions of the SUSMPs that create confusion as to the types of development projects subject to the mitigation design standards. The petitioners also contend that application of the standards to specific types of development either is unreasonable or is inconsistent with the terms of the permit. The specific requirements are discussed below.

Retail Gasoline Outlets

Petitioner WSPA contends that RGOs should be excluded from the SUSMPs. Its petition raised the same general contentions as the other petitioners, but at the hearing WSPA presented evidence specific to RGOs. In particular, WSPA raised questions about the propriety of applying the design standards for BMPs to RGOs. In considering this issue, we conclude that construction of RGOs is already heavily regulated and that owners may be limited in their ability to construct infiltration facilities. Moreover, in light of the small size of many RGOs and the proximity to underground tanks, treatment may not always be feasible, or safe. The mandatory BMPs that are included in the SUSMPs may be adequate to achieve MEP at RGOs, but the Regional Water Board should add additional mandatory BMPs, such as use of dry cleanup methods (e.g. sweeping) for removal of litter and debris, use of rags and absorbents for leaks and spills, restricting the practice of washing down hard surfaces unless the wash water is collected and disposed of properly, annual training of employees on proper spill cleanup and waste disposal methods, and the inclusion of BMPs to address trash receptacle areas and air/water supply

areas.[50] We conclude that because RGOs are already heavily regulated and may be limited in their ability to construct infiltration facilities or to perform treatment, they should not be subject to the BMP design standards at this time, and recommend that the Regional Water Board undertake further consideration of a threshold relative to size of the RGO, number of fueling nozzles, or some other relevant factor. This Order should not be construed to preclude inclusion of RGOs in the SUSMP design standards, with proper justification, when the permit is reissued.

.

Redevelopment Projects

The SUSMPs were written to apply to new development and to some types of redevelopment in nine categories of projects. The definition of "redevelopment" reflected the intent of the Regional Water Board to define the scope of redevelopment projects subject to the requirements. That definition[51], however, was somewhat confusing, and it was apparent from testimony at the hearing that the parties had different understandings of the scope of redevelopment subject to the SUSMPs. In their post-hearing briefs, the various parties appeared to agree on the actual intent of the Regional Water Board in including redevelopment in the SUSMPs. This intent was to include redevelopment that adds or creates at least 5,000 square feet of impervious surface to the original development and, where the addition constitutes less than 50 percent of the original development, to limit the application of the BMP design standards to the addition.

---

[50] These BMPs are from a list of BMPs in a publication of the California Storm Water Quality Task Force. (Best Management Practice Guide – Retail Gasoline Outlets. March 1997.) This publication includes BMPs in addition to those listed in the SUSMPs. All BMPs recommended in this publication should be mandated.

[51] The SUSMPs state: "Redevelopment" means, on an already developed site, the creation or addition of at least 5,000 square feet of impervious surfaces or the creation or addition of fifty percent or more of impervious surfaces or the making of improvements to fifty percent or more of the existing structure. Redevelopment includes, but is not limited to: the expansion of a building footprint or addition or replacement of a structure; structural development including an increase in gross floor area and/or exterior construction or remodeling; replacement of impervious surface that is not part of a routine maintenance activity; and land disturbing activities related with structural or impervious surfaces.

While some parties requested further requirements for development, it appears that the Regional Water Board's original intent was relatively simple to apply and results in a fair and appropriate application of the SUSMPs' requirements to redevelopment. Therefore, we will revise the definition in the SUSMPs accordingly.

Environmentally-Sensitive Areas

The permit required that the SUSMPs address at least seven development categories.[52] The final SUSMPs added two more categories: parking lots of 5,000 square feet or more or with 25 or more parking spaces and potentially exposed to storm water runoff; and location within or directly adjacent to an environmentally-sensitive area (ESA). The petitioners contend that the addition of ESAs was inappropriate because the permit refers only to "development categories"[53] and ESA is a location category.

Whether or not the Regional Water Board went beyond the permit's terms in including this category, we find a fundamental problem with the language of the SUSMPs regarding ESAs. All of the other categories are relatively simple to apply because they describe the types of development that fall within the category. For instance, the threshold for a commercial development is 100,000 square feet. If the development is smaller, it is not subject to the SUSMPs. But for developments within ESAs, the SUSMPs contain no threshold. This absence led to speculation by the petitioners that something as small as a new patio on a home in an ESA would make the SUSMPs applicable. The Regional Water Board, at the hearing and in its post-hearing brief, conceded that there should be some threshold. While the Regional Water Board

[52] The categories listed in the permit are: single-family hill residences, 100,000 square-foot commercial developments, automotive repair shops, retail gasoline outlets, restaurants, home subdivisions with 10 to 99 housing units, and home subdivisions with 100 or more housing units. Permit, Part 2, III.A.1.c.
[53] *Id*.

did recommend a specific threshold, we believe that it is inappropriate for this Board to add a threshold that has not been fully discussed by all interested persons.

While it may be appropriate to include more stringent controls for developments in ESAs, we also note that such developments are already subject to extensive regulation under other regulatory programs. Moreover, in light of the permit language limiting the SUSMPs to development categories, ESAs are not an appropriate category within the SUSMPs. The Regional Water Board may choose to consider the issue further when it reissues the permit.

Discretionary and Non-Discretionary, or Ministerial, Projects

The petitioners contend that the SUSMPs should apply only to projects that are considered "discretionary" within the meaning of California Environmental Quality Act (CEQA).[54] They argue that the inclusion of non-discretionary, or ministerial, projects is inconsistent with the terms of the permit.

The permit provisions on development projects do refer to "discretionary" projects in several places. The permittees are directed to develop a checklist for determining priority and exempt projects.[55] Priority projects are defined as development and redevelopment projects requiring discretionary approval, which may have a potential significant effect on storm water quality.[56] The permittees are also required to develop a BMP list.[57] In developing the SUSMPs, the permittees are required to incorporate appropriate elements of the BMP list.[58] Next, the permittees must develop a program on planning control measures for priority projects (which are limited to projects requiring discretionary approval), consistent with the list of BMPs and the

[54] Public Resources Code section 21000 *et seq*.
[55] Permit, Part 2, III.A.1.a.
[56] *Id*.
[57] Permit, Part 2, III.A.1.b.
[58] Permit, Part 2, III.A.1.c.

SUSMPs.[59] The permit further states that, in order to assure compliance with these requirements, the permittees must develop guidelines on preparing CEQA documents that link mitigation conditions to "local discretionary project approvals."[60]

Taken as a whole, the provisions of the permit appear to link the development requirements for SUSMPs to developments that receive discretionary approval by local governments, as defined in CEQA. The SUSMPs are an implementation tool for the permit and must be consistent with the permit. While the limitation of the SUSMPs to discretionary projects may not be sufficiently broad for an effective storm water control program, the Regional Water Board acted inappropriately in expanding the SUSMPs to include non-discretionary projects. The Regional Water Board may consider expanding the development controls beyond CEQA discretionary projects when it reissues the permit. But at this time, the SUSMPs must be revised so that they are limited to development projects requiring discretionary approval within the meaning of CEQA.[61]

Waiver Funding Requirement

Where a waiver is granted from the design standard requirements, the Final SUSMPs provide that the permittee must require the project proponent to transfer the cost savings to a storm water mitigation fund. The fund is to be operated by a public agency or a non-profit entity, to promote regional or alternative solutions for storm water pollution in the same storm watershed. The petitioners contend that the funding requirement will create an additional administrative burden.

---

[59] Permit, Part 2, III.a.2.
[60] Permit, Part 2, III.a.3.b.
[61] We note that the Final SUSMPs already include a definition of "discretionary project" consistent with the definition in the CEQA guidelines. Final SUSMPs at page 4 of 25; Title 14, California Code of Regulations, section 15357. Apparently this definition was inadvertently retained after the Regional Water Board decided to expand the SUSMPs beyond discretionary projects.

The concept of a mitigation fund or "bank" is a positive idea for obtaining regional solutions to storm water runoff. As a long-term strategy, municipal storm water dischargers should work to establish regional mitigation facilities, which may be more cost-effective and more technically effective than mitigation structures at individual developments. But at this point there are not sufficient resources in place to require all permittees to establish such funds or to find appropriate non-profit organizations. Before mandating funding, preliminary questions should be answered, including who will manage the fund, what types of projects it will be used for, what entities can legally operate such funds, and how permittees will determine the amount of the assessments. It would be appropriate for the County to consider developing a program with the appropriate flood control agency, or as a model for the separate cities to develop. There may be suitable agencies to administer such funds, but the development of programs may take some time. The Regional Water Board should consider adopting such a program when it reissues the permit, after consultation with the appropriate local agencies.

III. CONCLUSIONS

Based on the discussion above, the Board concludes that:

1. The Regional Water Board complied with the procedural requirements of the permit, including the Administrative Review Process, in approving the Final SUSMPs.
2. The Regional Water Board was authorized to revise the SUSMPs by including more stringent requirements than the permittees had proposed.
3. The Regional Water Board complied with did not violate the Administrative Procedure Act, CEQA, or the Constitutional provisions on state mandates. The petitioners' due process rights have been protected
4. The Regional Water Board considered the costs of the SUSMPs, and acted reasonably in requiring these controls in light of the expected benefits to water quality.

5. The Final SUSMPs reflect a reasonable interpretation of development controls that achieve reduction of pollutants in storm water discharges to the maximum extent practicable.
6. The SUSMPs include adequate protections of groundwater quality from any impacts from infiltration.
7. The SUSMPs will be revised to clarify the intent of the Regional Water Board and to make them consistent with the permit. Specifically, retail gasoline outlets should not be subject to the BMP design standards because they are already heavily regulated and may be limited in their ability to construct infiltration facilities or to perform treatment. Redevelopment projects should be subject to the SUSMPs only if they result in creation or addition of 5,000 square feet of impervious surfaces. Environmentally-sensitive areas should not be listed as a category in the SUSMPs. The SUSMPs should only apply to discretionary projects. The requirement for funding by project proponents who receive waivers should be deleted. The SUSMPs will be amended as shown in the attachment to this Order.
8. In light of the revisions of the SUSMPs made by this Order, and to allow the permittees adequate time to adopt implementing ordinances, the deadline for adopting ordinances will be revised to January 15, 2001, and the effective date of the Final SUSMPs will be revised to February 15, 2001.

IV. ORDER

IT IS HEREBY ORDERED that the Standard Urban Storm Water Mitigation Plans for Los Angeles County and Cities in Los Angeles County is revised consistent with the amendments attached hereto. In all other respects the petitions are dismissed.

CERTIFICATION

The undersigned, Administrative Assistant to the Board, does hereby certify that the foregoing is a full, true, and correct copy of an order duly and regularly adopted at a meeting of the State Water Resources Control Board held on October 5, 2000.

AYE: Arthur G. Baggett, Jr.
Mary Jane Forster
John W. Brown

NO: None

ABSENT: Peter S. Silva

ABSTAIN: None

/s/
Maureen Marché
Administrative Assistant to the Board

AMENDMENTS TO SUSMPS

[These amendments are to the Final SUSMP, as published March 8, 2000]

Page 3 of 25

First full paragraph:

All **discretionary development and redevelopment** projects that fall into one of ~~seven~~ **the following** categories are ~~identified in the Los Angeles County MS4 Permit as requiring~~ **subject to these** SUSMPs. These categories are:

- Single-family Hillside Residences
- 100,000 Square Foot Commercial Developments
- Automotive Repair Shops
- Retail Gasoline Outlets
- Restaurants
- Home Subdivisions with 10 to 99 housing units
- Home Subdivisions with 100 or more housing units
- **Parking lots 5,000 square feet or more or with 25 or more parking spaces and potentially exposed to storm water runoff**

Second full paragraph:

~~The Regional Board Executive Officer has designated two additional categories subject to SUSMP requirements for the Los Angeles County MS4 Permit. These categories are:~~

- ~~Location within or directly adjacent to or discharging directly to an environmentally sensitive area, and~~
- ~~Parking lots 5,000 square feet or more or with 25 or more parking spaces and potentially exposed to storm water runoff~~

Fourth full paragraph:

Permittees shall amend codes, if necessary, not later than ~~September 8, 2000~~ **January 15, 2001**, to give legal effect to the SUSMP requirements. The SUSMP requirements for projects identified herein shall take effect not later than ~~October 8, 2000~~ **February 15, 2001**.

Page 4 of 25

Delete definition of “Environmentally Sensitive Area”

Revise Definition of “Redevelopment”:

"Redevelopment" means, on an already developed site, the creation or addition of at least 5,000 square feet of impervious surfaces ~~or the creation or addition of fifty percent or more of impervious surfaces or the making of improvements to fifty percent or more of the existing structure~~. Redevelopment includes, but is not limited to: the expansion of a building footprint or addition or replacement of a structure; structural development including an increase in gross floor area and/or exterior construction or remodeling; replacement of impervious surface that is not part of a routing maintenance activity; and land disturbing activities related with structural or impervious surfaces. **Where redevelopment results in an increase of less than fifty percent of the impervious surfaces of a previously existing development, and the existing development was not subject to these SUSMPs, the Design Standards apply only to the addition, and not to the entire development.**

Storm Water Phase II Compliance Assistance Guide

Compliance Guide Notice

The statements in this document are intended solely as guidance to aid regulated entities in complying with the Storm Water Phase II final rule. The guidance is not a substitute for reading the regulation and understanding all its requirements as it applies to your facility. This guidance does not constitute rulemaking by the EPA and may not be relied on to create a substantive or procedural right or benefit enforceable, at law or in equity, by any person. EPA may decide to update this guide without public notice to reflect changes in EPA's approach to implementing Storm Water Phase II or to clarify and update text. To determine whether EPA has revised this document and/or to obtain copies, go to EPA's web site at www.epa.gov/owm/sw/phase2.

1.0 INTRODUCTION

After reading this introduction, you should know whether you need to use this guide, what the guide covers, and where to get the latest information on the regulation.

The U.S. Environmental Protection Agency (EPA) published the regulation entitled "National Pollutant Discharge Elimination System - Regulations for Revision of the Water Pollution Control Program Addressing Storm Water Discharges" (*Federal Register*, Volume 64, Number 235, pages 68722-68852) on December 8, 1999 as required by Section 402(p) of the Clean Water Act (CWA). This guide explains how to tell if you are subject to the regulation and what to do if you are required to comply.

1.1 Who should use this guide?

This new rule regulates storm water discharges from two categories:

First, the rule covers storm water discharges to certain ***municipal separate storm sewer systems*** (MS4s). Public entities which operate these MS4s, such as cities, counties, States, and the Federal government, could be regulated under this rule. MS4 operators should read section 4 for more information.

Second, the rule also covers storm water discharges from ***construction activity*** generally disturbing between 1 and 5 acres. A construction operator could include the site owner, developer, contractor, or subcontractor. Construction site operators should read section 5 for more information.

The storm water Phase II final rule also provide regulatory relief for certain ***industrial facilities*** (currently permitted under EPA's storm water regulations) where storm water runoff is not exposed to industrial activities. Operators of industrial facilities interested in the no exposure exclusion should read section 6.

1.2 What Does this Guide Cover?

The purpose of this guide is to help the regulated community comply with the Storm Water Phase II Rule. This guide answers the following basic questions:

- Why is the Storm Water Phase II Rule important?
- Am I subject to the Storm Water Phase II Rule?
- What must I do to comply with the Storm Water Phase II Rule?

1.3 How Do I Use this Guide?

This guide is organized into seven major sections plus three appendices.

Section 1.0 Introduces you to this guide and the Storm Water Phase II Rule. Describes basic types of entities regulated so you can determine if you are affected by the rule.

Section 2.0 Provides background on why the Storm Water Phase II Rule is needed. Topics such as the environmental impacts of storm water and why storm water should be controlled are discussed. The history of the NPDES Storm Water program is briefly described.

Section 3.0 Delivers an overview of the Storm Water Phase II requirements. The basic components of the program are described and schedules and timelines are highlighted.

Section 4.0 Gives step-by-step procedures for operators of small MS4s to determine if they are subject to the regulation and provides information on how to demonstrate compliance.

Section 5.0 Gives step-by-step procedures for operators of small construction activities to determine if they are subject to the regulation and provides information on how to demonstrate compliance.

Section 6.0 Provides a discussion of how the Rule affects industrial facilities, including which industrial facilities are covered, and an explanation of the No Exposure exclusion and how to determine if you qualify.

Section 7.0 Documents the Compliance Assurance Process - Discusses how EPA will determine compliance, what happens if you or EPA discovers noncompliance, and the legal status of the guide.

Appendices Provides additional references and where to go for more information on storm water.

1.4 Where Can I Get More Information on the Storm Water Phase II Rule?

Additional information on the NPDES storm water Phase II rule, including a series of fact sheets and a full copy of the final rule, can be found on EPA's web pages at http://www.epa.gov/owm/sw/phase2.

Compliance assistance will be covered in Section 7 of the guide. One source for compliance assistance and information on the rule is the Local Government Environmental Assistance Network (LGEAN). LGEAN is one of EPA's compliance

assistance centers and can be found on the web at www.lgean.org or contacted by phone at 1-877-TO-LGEAN.

2.0 BACKGROUND

After reading section 2, you should understand the environmental impacts of storm water and the history of the storm water program, including existing regulations to control storm water (Phase I).

2.1 What are the Environmental Impacts from Storm Water Discharges?

Storm water runoff from lands modified by human activities can harm surface water and, in turn, cause or contribute to an exceedance of water quality standards by changing natural hydrologic patterns, accelerating natural stream flows, destroying aquatic habitat, and elevating pollutant concentrations and loadings. Such runoff may contain high levels of contaminants, such as sediment, suspended solids, nutrients (phosphorus and nitrogen), heavy metals, pathogens, toxins, oxygen-demanding substances (organic material), and floatables (U.S. EPA. 1992. *Environmental Impacts of Storm Water Discharges: A National Profile*. EPA 841-R-92-001. Office of Water. Washington, DC). After a rain, storm water runoff carries these pollutants into nearby streams, rivers, lakes, estuaries, wetlands, and oceans. Individually and combined, these pollutants impair water quality, threatening designated beneficial uses and causing habitat alteration and destruction.

The 1996 305(b) Report (U.S. EPA. 1998. The National Water Quality Inventory, 1996 Report to Congress. EPA 841-R-97-008. Office of Water. Washington, DC), provides a national assessment of water quality based on biennial reports submitted by the States as required under CWA section 305(b) of the CWA. In the CWA 305(b) reports, States, Tribes, and Territories assess their individual water quality control programs by examining the attainment or

Figure 2-1. Pollutants and Sources in Surveyed River Miles (EPA, 1998)

nonattainment of the designated uses assigned to their rivers, lakes, estuaries, wetlands, and ocean shores. The 1996 Inventory indicated that approximately 40 percent of the Nation's assessed rivers, lakes, and estuaries are impaired.

The 1996 Inventory also found urban runoff/discharges from storm sewers to be a major source of water quality impairment nationwide. Urban runoff/storm sewers were found to be a source of pollution in 13 percent of impaired rivers; 21 percent of impaired lakes, ponds, and reservoirs; and 45 percent of impaired estuaries (second only to industrial discharges). See Figures 2-1 and 2-2 for an illustration of the pollutants and sources of pollution for both rivers and estuaries. In addition to these waterbodies, urban runoff was found to be the leading cause of ocean impairment for those ocean miles surveyed.

Figure 2-2. Pollutants and Sources in surveyed Estuaries (EPA, 1998)

Urbanization alters the natural infiltration capability of the land and generates a host of pollutants that are associated with the activities of dense populations, thus causing an increase in storm water runoff volumes and pollutant loadings in storm water discharged to receiving waterbodies (U.S. EPA, 1992). Urban development increases the amount of impervious surface in a watershed as farmland, forests, and meadowlands are converted into buildings with rooftops, driveways, sidewalks, roads, and parking lots with virtually no ability to absorb storm water. Storm water and snow-melt runoff wash over these impervious areas, picking up pollutants along the way while gaining speed and volume because of their inability to disperse and filter into the ground (see Figure 2-3 which illustrates the increased runoff resulting from increased impervious area). The resulting storm water flows are higher in volume, pollutants, and temperature than the flows in less impervious areas, which have more natural vegetation and soil to filter the runoff (U.S. EPA, 1997. *Urbanization and Streams: Studies of Hydrologic Impacts*.

EPA 841-R-97-009. Office of Water. Washington, DC).

Figure 1. Impacts of urbanization on stream flow (Schueler, 1987).

In addition to the pollutants picked up by storm water runoff before it enters a storm drain, studies have shown that discharges from a storm drain system often include wastes and wastewater from non-storm water sources, referred to as illicit discharges. These discharges are 'illicit' because municipal storm sewer systems are not designed to accept, process, or discharge such wastes. Sources of illicit discharges can include sanitary wastewater illegally connected to the storm drain system; effluent from septic tanks; car wash, laundry, and other industrial wastewaters; improper disposal of auto and household toxics, such as used motor oil and pesticides; and spills from roadways.

Illicit discharges enter the system through either direct connections (e.g., wastewater piping either mistakenly or deliberately connected to the storm drains) or indirect connections (e.g., infiltration into the MS4 from cracked sanitary systems, spills collected by drain outlets, and paint or used oil dumped directly into a drain). The result is untreated discharges that contribute high levels of pollutants, including heavy metals, toxics, oil and grease, solvents, nutrients, viruses and bacteria into receiving waterbodies.

2.2 Summary of EPA's Storm Water Program

In 1972, Congress amended the Federal Water Pollution Control Act (commonly referred to as the Clean Water Act (CWA)) to prohibit the discharge of any pollutant to waters of the United States from a point source unless the discharge is authorized by an NPDES permit. The NPDES program is designed to track point sources and require the implementation of the controls necessary to minimize the discharge of pollutants. Initial efforts to improve water quality under the NPDES program primarily focused on reducing pollutants in industrial process wastewater and municipal sewage. These discharge sources were easily identified as responsible for poor water quality.

As pollution control measures for industrial process wastewater and municipal sewage were implemented and refined, it became increasingly evident that more diffuse sources of water pollution were also significant causes of water quality impairment. Specifically, storm water runoff was found to be a major cause of water quality impairment.

In 1987, Congress amended the CWA to require implementation, in two phases, of a comprehensive national program for addressing storm water discharges. The first phase of the program, commonly referred to as “Phase I,” was promulgated on November 16, 1990 (55 FR 47990). Phase I requires NPDES permits for storm water discharge from a large number of priority sources including medium and large municipal separate storm sewer systems (“MS4s”) generally serving populations of 100,000 or more and several categories of industrial activity, including construction activity that disturbs five or more acres of land.

The Phase I permits for municipal separate storm sewer systems mostly covere larger cities, and require them to develop a storm water management program, track and oversee industrial facilities regulated under the NPDES storm water program, conduct some monitoring, and submit periodic reports.

The operators of construction activities disturbing greater than 5 acres have been required to obtain NPDES permit coverage since 1992. General permits for large construction activity require construction operators to develop and implement a storm water pollution prevention plan to control erosion, sediment and other wastes on the site.

The Phase I industrial storm water program also regulates the following industrial sectors:

- facilities subject to EPA storm water effluent guidelines, new source performance standards, or toxic pollutant effluent standards
- heavy manufacturing facilities
- mining/oil and gas
- hazardous waste faciliites
- landfills
- recycling facilities
- steam electric power
- transportation facilities
- sewage treatment plants
- construction activity (described above), and
- light manufacturing facilities.

The second phase of the storm water program, which this guide addresses, requires permits for storm water discharges from certain small municipal separate storm sewer systems and construction activity generally disturbing between 1 and 5 acres. See Figure 2-4 for a summary of the federal storm water permit requirements under Phases I and II.

Figure 2-4. Summary of Federal Permit Requirements Under the NPDES Storm Water Program

	Municipal Separate Storm Sewer Systems (MS4s)	Construction Activity	Industrial Activity
Requirements in Effect Now (Phase I)	**Medium and Large MS4s** (§ 122.26(d)) • Storm Water Management Program: - Public education and outreach - Public participation efforts - Illicit discharge detection and elimination program - Construction and post-construction runoff control program for all construction activity (no size threshold) - BMPs to reduce pollutants from industrial, commercial, and residential areas • Track/oversee industrial facilities regulated under the NPDES storm water program • Conduct analytical and visual monitoring of MS4 discharges • Submit periodic program assessment reports	**Category (x) Construction Activity (5+ Acres)*** CGP: • Storm Water Pollution Prevention Plan (SWPPP) - Site description - Description of BMPs for erosion and sediment, post-construction storm water management, and other controls - Self-evaluation and reporting **Category (x) is one of the categories of "storm water discharges associated with industrial activity." Temporarily excluded from permitting: Category (x) construction activity operated by a municipality of <100,000 (ISTEA moratorium).*	**Ten Categories of Industrial Activity (Categories (i)-(ix),(xi))*** MSGP: • SWPPP - Site evaluation -Description of appropriate storm water management BMPs - Self-evaluation, monitoring, and reporting • If discharging into a medium or large MS4, notify the MS4 operator **Temporarily excluded from permitting: Industrial activity operated by a municipality of <100,000, except for power plants, airports, and uncontrolled sanitary landfills (ISTEA moratorium).*
Requirements that Will Be in Effect by 2003 (Phase II)	**Regulated Small MS4s** (§ 122.34 outlined here, but may choose permit coverage under § 122.26(d) instead) • Storm Water Management Program: - Public education and outreach - Public participation efforts - Illicit discharge detection and elimination program - Construction runoff control program for construction activity disturbing 1 acre or greater - Post-construction runoff control program for construction activity disturbing 1 acre or greater - Good housekeeping/pollution prevention for municipal operations • Conduct assessment of identified BMPs and measurable goals for each minimum control measure • Submit annual program assessment reports	**Small Construction Activity (≤1 and <5 Acres)** • Expected to be similar to Category (x) Construction Activity requirements above **Category (x) Construction Activity Operated by a Municipality of < 100,000** • Same requirements as for Category (x) Construction Activity above	**Industrial Activity Operated by a Municipality of <100,000*** • Same requirements as for Ten Categories of Industrial Activity above **Does not include: Power plants, airports, and uncontrolled sanitary landfills*

3.0 REGULATION REQUIREMENTS

After reading section 3.0, you should understand the basic components and requirements of the Storm Water Phase II Rule and the rule's compliance schedule/timeline. This information is meant to serve as a basis for understanding the details of the Rule as discussed in further sections of this guidance.

3.1 What Does The Storm Water Phase II Rule Require?

This regulation can be divided into three main components, each with distinct requirements, affecting three types of entities. These components and the requirements for each are summarized below.

Regulated Small MS4s (see section 4.0)

A certain subset of operators of small MS4s (primarily those located in urbanized areas) are required to implement programs and practices to control polluted storm water runoff from the jurisdiction serviced by the MS4. The operator must design its storm water management program to satisfy applicable CWA water quality requirements and technology standards. The program must include the development and implementation of best management practices (BMPs) and measurable goals for the following six minimum measures, and include evaluation and reporting efforts:

- Public education and outreach,
- Public participation/involvement,
- Illicit discharge detection and elimination,
- Construction site runoff control,
- Post-construction runoff control, and
- Pollution prevention/good housekeeping for municipal operations.

Two waivers from coverage are available for small MS4s brought into the program by the Phase II regulation.

Small Construction Activity (see section 5.0)

All construction operators disturbing more than 1 acre and less than 5 acres are required to apply for an NPDES storm water permit for small construction activity. EPA already regulates construction activity disturbing more than 5 acres. A construction operator is usually the developer or landowner, but can also be the contractor or another party responsible for the operational control of erosion and sediment control practices on site.

Unlike the requirements for regulated small MS4s, the requirements for small construction activity (primarily activity disturbing between 1 and 5 acres of land) are not detailed in the Phase II regulation. Rather, the requirements are left to the discretion of the NPDES permitting authority when it develops the small construction activity permit. EPA expects the permit for small construction activity to be similar to the existing storm water general permits for large construction activity regulated under the Phase I program. EPA's existing Construction General Permit includes requirements to:

- Submit a Notice of Intent (NOI);
- Develop and implement a Storm Water Pollution Prevention Plan (SWPPP). The SWPPP includes erosion and sediment controls, controls on waste at the site, self-inspection/monitoring, and reporting efforts; and
- Submit a Notice of Termination (NOT) when permit coverage is no longer necessary.

Two waivers from coverage are available for small construction activity.

Industrial Activity (see section 6.0)

Eleven categories of industrial activity are regulated under Phase I of the NPDES Storm Water Program. Under the Phase II Rule, no new categories of industrial activity are designated into the storm water program. The Rule does, however, include a revised no exposure exclusion that is available to all regulated categories of industrial activity (except category (x) - large construction activity) if the facility operator can certify that storm water runoff is not exposed to industrial activities.

Also, this regulation further extends the deadline to obtain permit coverage for those industrial activities operated by municipalities with populations of less than 100,000 that were temporarily exempted from permitting under the Intermodal Surface Transportation Enforcement Act (ISTEA) of 1991.

3.2 What Is the Phase II Rule's Compliance Schedule/Timeline?

The Phase II Final Rule was published in the *Federal Register* on December 8, 1999 (64 *FR* 68722). The following table lists milestones for EPA, the NPDES permitting authorities, and the regulated community under this program.

Storm Water Phase II Program Compliance Timeline

ACTIVITY	DEADLINE
Conditional No Exposure Exclusion option available in States where EPA is the NPDES permitting authority	February 7, 2000
Submission of No Exposure Certification	Every 5 years
EPA issues a menu of BMPs for small MS4 programs	October 2000
EPA issues a model general permit for small MS4s	October 2000
EPA issues guidance on measurable goals for small MS4 programs	October 2001
NPDES permitting authority determines designation of small MS4s located outside of an urbanized area that serve a jurisdiction with a population of 10,000 and population density of 1,000	By December 9, 2002; or by December 8, 2004 if apply designation criteria on a watershed basis under a comprehensive watershed plan
NPDES permitting authority determines waivers for regulated small MS4s in urbanized areas	By December 9, 2002
NPDES permitting authority issues general permits for regulated small MS4s and small construction activity	By December 9, 2002
Operators of regulated small MS4s and small construction activity designated by the rule must obtain permit coverage	By March 10, 2003
Operators of regulated small MS4s and small construction activity designated by NPDES permitting authority must obtain permit coverage	Within 180 days of notice
Temporarily exempted municipal operators of industrial activity must obtain permit coverage (ISTEA moratorium)	By March 10, 2003
The NPDES permitting authority may phase in coverage for small MS4s serving jurisdictions with a populations less than 10,000 on a schedule consistent with a State watershed permitting approach	Completion of phase-in by March 8, 2007
The regulated small MS4s must fully implement their storm water management programs	By the end of the first permit term – typically a 5-year period
Re-evaluation of the Phase II small MS4 regulations by EPA	By December 2012
NPDES permitting authority determination on a petition for designation of a non-regulated storm water discharger	Within 180 days of receipt

4.0 REGULATED SMALL MS4S

After reading section 4.0, you should understand what an MS4 is, which operators of MS4s are subject to the Phase II small MS4 regulations (including who may be waived from coverage), the small MS4 permit options, and the permit requirements for a small MS4 storm water management program. The discussion of these elements concludes with a step-by-step review of the process for compliance with the small MS4 program and possible funding options. Special concerns regarding Federal and State-operated small MS4s are also addressed.

4.1 MS4 DEFINITIONS

EPA's National Pollutant Discharge Elimination System (NPDES) storm water permitting program labels municipal separate storm sewer systems (MS4s) as either "small," " medium," or "large" for the purposes of regulation. The definitions of each are included herein. The Phase I storm water program covers medium and large MS4s. The Phase II storm water regulation covers a certain subset of small MS4s, known as "regulated small" MS4s. Regulated small MS4 coverage under the rule is discussed in section 4.2.

4.1.1 What is an "MS4"?

What constitutes a municipal separate storm sewer system (MS4) is often misinterpreted and misunderstood. The term MS4 does not solely refer to municipally-owned storm sewer systems, but rather is a term of art with a much broader application that can include, in addition to local jurisdictions, State departments of transportation, universities, local sewer districts, hospitals, military bases, and prisons. An MS4 also is not always just a system of underground pipes – it can include roads with drainage systems, gutters, and ditches. The regulatory definition of an MS4 is provided in the text box below.

According to 40 CFR 122.26(b)(8), "***municipal separate storm sewer*** means a conveyance or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, or storm drains):

(i) Owned or operated by a State, city, town, borough, county, parish, district, association, or other public body (created by or pursuant to State law)...including special districts under State law such as a sewer district, flood control district or drainage district, or similar entity, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved management agency under section 208 of the Clean Water Act that discharges into waters of the United States.

(ii) Designed or used for collecting or conveying storm water;

(iii) Which is not a combined sewer; and

(iv) Which is not part of a Publicly Owned Treatment Works (POTW) as defined at 40 CFR 122.2."

4.1.2 What is a "large" MS4?

A ***large* MS4** is any MS4 located in an incorporated place or county with a population of 250,000 or greater as of the 1990 Census. The Phase II Final Rule revised the original large MS4 definition (found in the 1990 Phase I regulations) by freezing it as of the 1990 Census so that no new large MS4s could be automatically designated based on the 2000 Census, or any subsequent Census. Listings of incorporated places and counties with populations of 250,000 or greater as of the 1990 Census are included in the revised Appendices F and H to Part 122, found in the Phase II Final Rule.

4.1.3 What is a "medium" MS4?

A ***medium* MS4** is any MS4 located in an incorporated place or county with a population between 100,000 - 249,999 as of the 1990 Census. The Phase II Final Rule revised the original medium MS4 definition (found in the 1990 Phase I regulations) by freezing it as of the 1990 Census so that no new medium MS4s could be automatically designated based on the 2000 Census, or any subsequent Census. Listings of incorporated places and counties with populations between 100,000 - 249,999 as of the 1990 Census are included in the revised Appendices G and I to Part 122, found in the Phase II Final Rule.

Important Note: Many MS4s in areas below 100,000 in population have been individually brought into the Phase I program by NPDES permitting authorities. Such already regulated MS4s are considered Phase I MS4s and are not required to develop a Phase II program.

4.1.4 What is a "small" MS4?

A ***small* MS4** is any MS4 that is not already regulated under the Phase I storm water program. Unlike the definitions of medium and large MS4s, the definition of a small MS4: 1) is not dependant on a population threshold, and 2) includes Federally-owned systems, such as military bases and veterans hospitals.

4.2 COVERAGE: Who Is Subject to the Phase II Final Rule?

4.2.1 Are All Small MS4s Covered by the Phase II Final Rule?

No. The universe of small MS4s is quite large since it includes every MS4 except for the approximately 900 medium and large MS4s already regulated under the Phase I storm water program. Only a select sub-set of small MS4s, referred to as ***regulated* small MS4s**, are covered by the Phase II Final Rule, either through automatic nationwide designation by the rule or designation on a case-by-case basis by the NPDES permitting authority.

4.2.2 How Is A Small MS4 Designated as a Regulated Small MS4 under Phase II?

A *small* MS4 can be designated as a *regulated small* MS4, and thereby be subject to the Phase II rule, in any one of the three ways explained in the following subsections.

4.2.2.1 Automatic Nationwide Designation by the Rule

The Phase II Final Rule requires "automatic" nationwide coverage of all operators of small MS4s that are located within the boundaries of a Bureau of the Census-delineated “urbanized area” (UA) based on the latest decennial Census. This doesn't just include municipal operators of small MS4s, but also universities, highway departments, and any other operator of a storm sewer system that is located fully or partially within the UA. **Refer to section 4.3 for more information on how to determine if a particular small MS4 is located within a UA.**

> **Important Note:** Only the portion of the small MS4 that is located within the UA boundaries is regulated under Phase II. For example, if a county operates a small MS4 that serves the whole county but only half of the MS4 falls within the UA boundary, then the county must obtain permit coverage (and implement a storm water management program) only for the half of the MS4 in the UA.

Once a small MS4 is designated into the program based on the UA boundaries, it cannot be waived from the program if in a subsequent UA calculation the small MS4 is no longer within the UA boundaries. An automatically designated small MS4 remains regulated unless, or until, it meets the criteria for a waiver. See section 4.4 for more information on waivers from coverage for regulated small MS4s in urbanized areas.

An operator of a small MS4 located outside of a UA boundary may be designated as a regulated small MS4 if the NPDES permitting authority determines that the small MS4's discharges cause, or have the potential to cause, an adverse impact on water quality. See sections 4.2.2.2 and 4.2.2.3 below for more information on designations by the permitting authority.

Preamble of the Phase II Final Rule: Appendix 6

A listing of governmental entities that are located either fully or partially within a UA according to the 1990 Census can be found in Appendix 6 to the Preamble of the Phase II Final Rule. The list is a general geographic reference intended to help operators of small MS4s determine whether or not they are located in a UA and, consequently, required to comply with the regulation; it is not a list of all Phase II regulated MS4s and it may contain errors. For example, the list does not include small MS4 operators such as colleges and universities, Federal prison complexes, and State highway departments located within a UA.

4.2.2.2 Potential Designation by the NPDES Permitting Authority — Required Evaluation of 10,000/1,000 Areas

The Phase II Final Rule requires the NPDES permitting authority to develop a set of designation criteria and apply them, *at a minimum*, to all small MS4s located outside of a UA that serve a jurisdiction with a population of at least 10,000 and a population density of at least 1,000 people/square mile. The permitting authority is required to *evaluate* such small MS4s but is not required to *designate* them into the program unless they meet the designation criteria.

Recommended Designation Criteria

EPA recommends in the Phase II regulations that the NPDES permitting authority use a balanced consideration of the following designation criteria on a watershed or other local basis:

- ✔ Discharge to sensitive waters;
- ✔ High population density;
- ✔ High growth or growth potential;
- ✔ Contiguity to a UA;
- ✔ Significant contributor of pollutants to waters of the United States; and
- ✔ Ineffective protection of water quality concerns by other programs.

Preamble of the Phase II Final Rule: Appendix 7

A listing of governmental entities located outside of a UA that have a population of at least 10,000 and a population density of at least 1,000 people per square mile, can be found in Appendix 7 to the Preamble of the Phase II Final Rule. Similar to Appendix 6, the list is a geographic reference only – it is not a list of regulated entities and it may contain errors. Operators of small MS4s located within a listed area could be examined by their NPDES permitting authority for potential designation into the Phase II

program. Furthermore, the NPDES permitting authority reserves the right to designate for regulation any small MS4 that is contributing pollutants to waters of the United States, whether or not its jurisdiction is found in Appendix 7.

Deadline for Designation

The NPDES permitting authority is required to designate small MS4s meeting the designation criteria by December 9, 2002, or by December 8, 2004 if a comprehensive State watershed plan is in place and the criteria are being applied on a watershed basis.

4.2.2.3 Potential Designation by the NPDES Permitting Authority — Physically Interconnected

The Phase II Final Rule requires the NPDES permitting authority to designate any small MS4 located outside of a UA that contributes substantially to the pollutant loadings of a *physically interconnected* MS4 that is permitted by the NPDES storm water program. This means the other MS4 could be a large, medium, or regulated small MS4.

Small MS4s located right outside the boundary of an urbanized area are the ones most likely to meet this criterion for designation and, therefore, should make an effort to become aware of whether they discharge pollutants directly into a regulated MS4. The sooner a small MS4 operator is prepared for potential designation and implementation of the Phase II program, the better.

> ***Physically interconnected*** means that one MS4 is connected to a second MS4 in such a way that it allows for *direct* discharges into the second system.

Deadline for Designation

The final rule does not set a deadline for designation of small MS4s meeting this criterion.

4.3 URBANIZED AREAS: What Are They and How Does a Small MS4 Operator Determine If It Is Located in One?

As discussed in section 4.2, the Phase II Final Rule covers all small municipal separate storm sewer systems (MS4s) located within an “urbanized area” (UA). Based on the 1990 Census, there are 405 UAs in the United States that cover 2 percent of total U.S. land area and contain approximately 63 percent of the Nation’s population. These numbers include Puerto Rico — the only U.S. Territory with UAs.

UAs constitute the largest and most dense areas of settlement. UA calculations delineate boundaries around these dense areas of settlement and, in doing so, identify the areas of concentrated development. UA designations are used for several

purposes in both the public and private sectors. For example, the Federal Government has used UAs to calculate allocations for transportation funding, and some planning agencies and development firms use UA boundaries to help ascertain current, and predict future, growth areas.

4.3.1. What Is the Definition of an Urbanized Area (UA)?

The Bureau of the Census determines UAs by applying a detailed set of published UA criteria (see 55 *FR* 42592, October 22, 1990) to the latest decennial census data. Although the full UA definition is complex, the Bureau of the Census' general definition of a UA, based on population and population density, is provided below.

> An ***urbanized area*** (**UA**) is a land area comprising one or more places – central place(s) – and the adjacent densely settled surrounding area – urban fringe – that together have a residential population of at least 50,000 and an overall population density of at least 1,000 people per square mile. It is a calculation used by the Bureau of the Census to determine the geographic boundaries of the most heavily developed and dense urban areas.

UA Facts:

- The basic unit for delineating the UA boundary is the census block. Census blocks are based on visible physical boundaries, such as the city block, when possible, or on invisible political boundaries, when not. An urbanized area can comprise places, counties, Federal Indian Reservations, and minor civil divisions (MCDs - towns and townships).

- A UA can include governmental entities of every population size: 200; 7,000; 15,000; 30,000, 200,000; or 3 million! Entities with small populations are commonly found in the urban fringe of the UA.

- Before the time of permit issuance (by December 9, 2002), new UA calculations based on the 2000 Census should be published. The regulated small MS4 universe then will be based on these new calculations.

4.3.2. What Does A UA Look Like?

The drawing below (see Figure 4-1) is a simplified UA illustration that demonstrates the concept of UAs in relation to the Phase II Final Rule. This "urbanized area" includes within its boundaries incorporated places, a portion of a Federal Indian reservation, an entire MCD, a portion of another MCD, and portions of two counties. Any and all operators of small MS4s located within the boundaries of the UA are covered under the Phase II Final Rule, regardless of political boundaries. Operators of small MS4s located outside of the UA are subject to potential designation into the Phase II MS4 program by the NPDES permitting authority, as explained in section 4.2.

Figure 4-1

4.3.3 How Can An Operator of a Regulated Small MS4 Determine If It Is Located Within a UA?

Operators of small MS4s can determine if they are located within a UA, and therefore covered under the Phase II storm water program, through the following two steps:

— STEP 1 —

Refer to a listing of incorporated places, MCDs, and counties that are located entirely or partially within a UA. Such a listing, based on the 1990 Census and including only those entities not regulated under Phase I, can be found in Appendix 6 to the Preamble of the Phase II Final Rule. If a small MS4 is located in a listed incorporated place, MCD, or county, then the operator of the small MS4 should follow step (2) below. It is important to note that Appendix 6 is general guidance only and may contain errors. For this reason, even if a particular small MS4 isn't located in a listed area, EPA recommends that the small MS4 operator follow Step 2.

— STEP 2 —

Some operators of small MS4s may find that they are located within an

entity listed in Appendix 6 but not know if their systems are within the urbanized portion of the listed entity, or they are not on the list but want to confirm their status as recommended above. In such cases, they should contact one or more of the following institutions for more detailed information on the location of UA boundaries:

- **The State or NPDES Permitting Authority**

***Storm Water Coordinators*:** The NPDES permitting authority may be the State or the U.S. EPA Region. The Storm Water Coordinators for each U.S. EPA Region are listed in Section 8. These regional contacts can assist with UA information and provide the names of State storm water contacts.

***State Data Centers*:** Each State's Data Center receives listings of all entities that are located in UAs, as well as detailed maps and electronic files of UA boundaries. The Bureau of the Census web site includes a list of contact names and phone numbers for the Data Center in each State at www.census.gov/sdc/www.

***State Planning/Economic/Transportation Agencies*:** These agencies typically use UAs to assess current development and forecast future growth trends and, therefore, should have detailed UA information readily available to help determine the UA boundaries in any given area.

- **County or Regional Planning Commissions/ Boards**

As with State agencies, these entities are likely to have detailed UA data and maps to help determine UA boundaries.

- **The Bureau of the Census**

***Urbanized Areas Staff*:** 301 457-1099

***Web Site*:** www.census.gov
The site provides information on purchasing UA maps and electronic files for use with computerized mapping systems. Obtain free UA cartographic boundary files (Arc/Info export format) for Geographical Information System (GIS) use at: www.census.gov:80/geo/www/cob/ua.html.

***UA Maps*:** Detailed UA maps are available for purchase with a $25 minimum order ($5 per map sheet). Each map sheet measures 36 by 42 inches. For prices and a listing of UAs, visit www.census.gov/mp/www/geo/msgeo12.html. Order from the Department of Commerce, Bureau of the Census (MS 1921), P.O. Box 277943, Atlanta, GA 30384-7943 (Phone: 301 457-4100; Toll-free fax: 1-888-249-7295).

- **U.S. EPA**

EPA is currently modifying a web-based geographic program called *Enviromapper* for use in determining UA boundaries. This program will allow users to enter a location (by name, zip code, or street address) and see a map that will show if the location is within a UA boundary. EPA is committed to using Enviromapper to create a tool that, someday, will be the only tool necessary to determine the location of UA boundaries. Information about *Enviromapper* will be available at www.epa.gov/owm/phase2.

4.3.4 How Will the Year 2000 Census Affect the Determination of Status as a Regulated Small MS4?

The listing of incorporated places, MCDs, and counties located within UAs in the United States and Puerto Rico, found in Appendix 6, is based on the 1990 Census. New listings for UAs based on the 2000 Census are scheduled to be available by August of 2001. Once the official 2000 Census listings are published by the Bureau of the Census, operators of small MS4s located within the revised boundaries of former 1990 UAs, or in any newly defined 2000 UAs, become regulated small MS4s and must develop a storm water management program.

Any additional automatic designations of small MS4s based on subsequent census years is governed by the Bureau of the Census' definition of a UA in effect for that year and the UA boundaries determined as a result of the definition.

Once a small MS4 is designated into the Phase II storm water program based on the UA boundaries, it can not be waived from the program if in a subsequent UA calculation the small MS4 is no longer within the UA boundaries. An automatically designated small MS4 will remain regulated unless, or until, it meets the criteria for a waiver.

4.4 WAIVERS: Which Regulated Small MS4s May Obtain a Waiver From Coverage?

Two waiver options are available to operators of regulated small MS4s in urbanized areas if the NPDES permitting authority determines that their discharges do not cause, or have the potential to cause, water quality impairment.

> **Important Note:** The waivers are granted by the NPDES permitting authority, the operator of the regulated small MS4 can not determine for itself that it meets the waiver criteria. If the permitting authority is not proactive in assessing small MS4s for potential waivers, an operator may petition for a waiver assessment.

If a permitting authority decides to grant waivers, it is required to do so by December 9, 2002 to coincide with the expected date of the small MS4 permit issuance. The

permitting authority is also required to periodically review any waivers granted to small MS4 operators to determine whether any information required for granting the waiver has changed. Minimally, such a review needs to be conducted once every five years. The waiver options are described in the following two subsections.

Deadline for Waivers

The NPDES permitting authorities are required to make their waiver determinations by March 9, 2002 to coincide with the expected issuance of their small MS4 general permit. If the permit authority chooses to phase in permit coverage based on a comprehensive watershed plan (see section 4.5.2.2), then regulated small MS4s may be waived on the same schedule. The phase-in of permit coverage and waivers is to be completed no later than March 8, 2007.

4.4.1 Option 1: Less than 1,000 Population in a UA

The first waiver option applies where:

(1) the jurisdiction served by the system is less than 1,000 people;

(2) the system is not contributing substantially to the pollutant loadings of a physically interconnected regulated MS4; and

(3) if the small MS4 discharges any pollutants identified as a cause of impairment of any water body to which it discharges, storm water controls are not needed based on wasteload allocations that are part of an EPA approved or established "total maximum daily load" (TMDL) that addresses the pollutant(s) of concern.

> ***TMDLs*** are water quality assessments that determine the source or sources of pollutants of concern for a particular waterbody, consider the maximum amount of pollutants the waterbody can assimilate, and then allocate to each source a set level of pollutants that it is allowed to discharge (i.e., a "wasteload allocation"). Small MS4s that are not given a wasteload allocation would meet the third criterion above.

The third criterion of this waiver option <u>need only be met if</u> the small MS4 is discharging into a impaired water body and the discharge contains a pollutant or pollutants that are the cause of the impairment (i.e., the "pollutants of concern").

4.4.2 Option 2: Less than 10,000 Population in a UA

The second waiver option applies where:

(1) the jurisdiction served by the system is less than 10,000 people;

(2) an evaluation of all waters of the U.S. that receive a discharge from the system shows that storm water controls are not needed based on wasteload allocations that are part of an EPA approved or established TMDL that addresses the pollutant(s) of concern or an equivalent analysis; and

(3) it is determined that future discharges from the small MS4 do not have the potential to result in exceedances of water quality standards.

> ***Pollutants of Concern*** include biochemical oxygen demand (BOD), sediment or a parameter that addresses sediment (such as total suspended solids, turbidity or siltation), pathogens, oil and grease, and any pollutant that has been identified as a cause of impairment in any water body to which the MS4 discharges.

This waiver option differs from the first option in that: 1) it applies to a larger jurisdiction size (up to 10,000 rather than 1,000), 2) it requires a determination that the discharges are not affecting the receiving water body, whether the water body is impaired or not (in the first option an assessment is only necessary if the water body is impaired and the MS4 is discharging a pollutant of concern), 3) the determination must be based on a TMDL <u>or</u> an equivalent analysis (the first option does not allow for an equivalent analysis), and 4) an assessment of the impacts of future discharges must be performed (no such assessment is necessary under the first option).

4.5 PERMITTING OPTIONS: What Permitting Choices are Available?

The Storm Water Phase II Final Rule requires operators of a particular subset of small MS4s in urbanized areas to obtain National Pollutant Discharge Elimination System (NPDES) permit coverage because their storm water discharges are considered “point sources” of pollution. All point source discharges, unlike nonpoint sources such as agricultural runoff, are required under the Clean Water Act (CWA) to be covered by federally enforceable NPDES permits. Those MS4s already permitted under the NPDES Phase I storm water program, even MS4s serving less than 100,000 people, are not required to be permitted under the Phase II storm water program.

NPDES storm water permits are issued by an NPDES permitting authority, which may be an NPDES-authorized State or a U.S. EPA Region in non-authorized States. Once a permit application is submitted by the operator of a regulated small MS4 and a permit is obtained, the conditions of the permit must be satisfied (i.e., development and implementation of a storm water management program) and periodic reports must be submitted on the status and effectiveness of the program. This section addresses the flexible permit options the Phase II regulations allow for the regulated small MS4 operator, as well as for the permitting authority. The permit requirements are discussed in section 4.6.

4.5.1 For Regulated Small MS4 Operators

4.5.1.1 The Types of Permit Coverage Available

Unlike the Phase I program that requires individual permits for medium and large MS4s, the Phase II approach allows operators of regulated small MS4s to choose from as many as three permitting options as listed below. Each NPDES permitting authority reserves the authority to determine, however, which options are available to the regulated small MS4s in their jurisdiction.

1) General Permits

General permits are strongly encouraged by EPA. The Phase II program has been designed specifically to accommodate a general permit approach.

General permits prescribe one set of requirements for all applicable permittees. General permits are drafted by the NPDES permitting authority, then published for public comment before being finalized and issued.

A Notice of Intent (NOI) serves as the application for the general permit. The regulated small MS4 operator complies with the permit application requirements by submitting an NOI to the NPDES permitting authority that describes the storm water management plan, including best management practices (BMPs) and measurable goals. The operator has the flexibility to develop an individualized storm water program that addresses the particular characteristics and needs of its system, provided the requirements of the general permit are satisfied.

For general permit coverage, the regulated small MS4 operator must follow the Phase II permit application requirements (see section 4.6.2).

2) Individual Permits

Individual permits are required for Phase I medium and large MS4s, but not recommended by EPA for Phase II program implementation.

Individual permits prescribe a particular set of requirements for a particular permittee or a group of co-permittees. Individual permits require the submission of a more comprehensive permit application than an NOI that is submitted under a general permit. Once the permit application is received, an individual permit is drafted by the NPDES permitting authority, then published for public comment before being finalized and issued.

The Phase II rule allows a regulated small MS4 to submit an individual application for coverage under either the:

- Phase II MS4 regulation (see § 122.34 of the Phase II rule), or
- Phase I MS4 regulation (see 40 CFR §122.26(d)).

3) Modification of an Existing Phase I Individual Permit – A Co-Permittee Option with Medium and Large MS4s

The operator of a regulated small MS4 could participate as a limited co-permittee in a neighboring Phase I MS4's storm water management program by seeking a modification of the existing Phase I individual permit. As a limited co-permittee the small MS4 operator would be responsible for compliance with the permit's conditions applicable to its jurisdiction.

Note: A list of Phase I medium and large MS4s can be obtained from the EPA Office of Wastewater Management (OWM) or downloaded from the OWM web site.

The permittee must comply with the applicable terms of the modified Phase I individual permit rather than the minimum control measures in the Phase II Final Rule.

4.5.1.2 Co-permittee with Another Operator of a Regulated Small MS4

Section 4.5.1.1 explained the permitting option of a modification of an existing Phase I individual permit in order to be a co-permittee with a medium or large MS4. Regulated small MS4 operators may also choose to share responsibilities for meeting the Phase II program requirements with another regulated small MS4 operator under a general or individual permit. Those operators choosing to do so may submit jointly an NOI or individual permit application that identifies who will implement which minimum measures within the area served by the MS4s.

4.5.1.3 Relying on Another Entity to Satisfy One or More of the Minimum Control Measures

Under either a general or individual permit, the Phase II small MS4 permittee has the option of relying on other entities that are already performing one or more of the minimum control measures to implement the measure(s) on the permittee's behalf. This is only allowable where the existing control measure, or component thereof, is at least as stringent as the Phase II rule requirements (under § 122.34(b)) and the other entity has agreed to the arrangement.

For example, a county may already have an illicit discharge detection and elimination program in place and may allow an operator of a regulated small MS4 within the county's jurisdiction to rely on the county program instead of formulating and implementing a new program. In such a case, the permittee would not need to

implement the particular measure, but would still be ultimately responsible for its effective implementation. For this reason, EPA recommends that the permittee enter into a legally binding agreement with the other entity. If the permittee chooses to rely on another entity, they must note this in their permit application and subsequent reports.

> **Note:** Also, the other entity does not necessarily need to be a governmental entity. For example, a permittee could rely on a non-profit organization that is performing public education efforts on environmental issues to satisfy the public education and outreach minimum measure.

A Phase II permittee also has the option to rely on another entity to satisfy all of the permittee's small MS4 permit obligations – but only if the other entity is a governmental entity permitted under the NPDES storm water program. Should this option be chosen, the permittee must note this in its NOI, but does not need to file the otherwise required periodic reports on the status of the program. Again, it is important to note that the permittee would remain ultimately liable under the small MS4 permit. This option is particularly beneficial for operators that serve a low population, have limited resources or legal authority, or are surrounded by an NPDES regulated municipality. For example, let's assume a college campus or a veteran's hospital are operators of small MS4s and they are located in the middle of a Phase II regulated city. Negotiating with the city to implement the storm water management program for them in their jurisdictions could be a cost-effective and less burdensome option than for each to implement their own programs.

4.5.2 For the NPDES Permitting Authority

4.5.2.1 Alternative Options for Writing Permit Requirements

Two permitting options tailored to minimize duplication of effort by the regulated small MS4 permittee can be incorporated into the general or individual permit by the NPDES permitting authority:

1) Recognizing Another Governmental Entity's Program

The permitting authority can recognize in a small MS4 permit that another governmental entity is responsible under an NPDES permit for implementing any or all of the minimum control measures. In such a case, responsibility for implementation of the measure(s) would rest with the other governmental entity, thereby relieving the small MS4 permittee of its responsibility to implement that particular measure(s). See Table 4-1 for examples of both this option and the following option.

STORM WATER PHASE II RULE SMALL MS4 FLEXIBLE PERMITTING OPTIONS

	Referencing a QUALIFYING LOCAL PROGRAM (QLP)	RECOGNIZING an NPDES-Regulated Entity	RELYING on Another Entity	CO-PERMITTEE with an NPDES-Regulated Entity
NPDES PERMITTING AUTHORITY Responsibilities	• PA assesses local, State, and Tribal NPDES and non-NPDES programs to determine if their requirements are equivalent to one or more Phase II minimum measures for regulated small MS4s • PA chooses whether to reference a QLP in small MS4 permit. Requires permittee to follow requirements of QLP rather than new permit requirements. • PA does not need to notify the administrator of the QLP or obtain permission since referencing the QLP has no bearing/no affect on the administrator.	• PA assesses entities that are, or will be, performing the equivalent of 1 or more of the small MS4 minimum measures under an NPDES permit. • PA chooses whether to recognize such an entity in a small MS4 permit.	N/A	N/A
SMALL MS4 OPERATOR Responsibilities	• The operator should already be complying with any QLP referenced in the permit. • Compliance with the QLP is considered compliance with the NPDES permit; therefore operator held liable if doesn't comply with the QLP.	• Operator has no responsibility to perform the measure(s) that is being done by the recognized entity. • Not held liable if the other entity fails to perform the measure effectively; however, PA may then require the operator to implement the measure itself.	• Operator chooses, under its own permit, whether to rely on another entity to implement 1 or more minimum measure on its behalf – can be a non-NPDES regulated entity. • Operator notes in NOI or indiv. permit application that it is relying on another entity to implement a measure. • Remain liable if other entity fails to perform the measure effectively.	• Operator chooses whether to be a co-permittee with another regulated MS4 and submits a single NOI or individual permit application • The operators determine who will do what and include this information in the permit application
EXAMPLES	The QLP in the small MS4 permit could be a State program that requires MS4 operators to detect & eliminate illicit discharges into their systems.	A county doing educational outreach for the whole county under a Phase I NPDES permit could be recognized, thereby relieving all small MS4s in the county from having to have their own educational outreach programs.	1. An environmental group is doing educational outreach on the impacts of storm water runoff. 2. A county is already implementing a construction runoff control program under a Phase I NPDES permit.	

2) Referencing a Qualifying Local Program

The NPDES permitting authority can include conditions in a small MS4 permit that direct a permittee to follow the requirements of an existing qualifying local program rather than the requirements of particular minimum control measure(s). A qualifying local program is defined as a local, State or Tribal municipal storm water program that imposes requirements that are equivalent to those of the Phase II MS4 minimum measures (as found in § 122.34(b) of the rule). Unlike in Option 1 above, under this option the permittee remains responsible for the implementation of the minimum measure through its compliance with the qualifying local program.

4.5.2.2. Alternative Option for Permit Coverage: Phase-in Coverage for Regulated Small MS4s with Populations under 10,000

Permitting authorities may phase-in permit coverage for regulated small MS4s serving jurisdictions with a population under 10,000 on a schedule consistent with a State watershed permitting approach. Under this alternative option, the permitting authority must develop and implement a schedule to phase-in permit coverage for approximately 20 percent annually of all regulated small MS4s that qualify, completing the phase-in schedule in no more than five years. In such a case, the regulated small MS4 operators would be notified by the permitting authority concerning the operator's deadlines for permit coverage.

Deadlines for Phase-In

- Permitting authorities are required to have their phase-in schedule approved by the USEPA Regional Administrator no later than December 10, 2001.
- Under the phase-in option, all regulated small MS4s are required to have coverage under an NPDES permit no later than March 8, 2007.

4.6 REQUIREMENTS: What Requirements Are Regulated Small MS4s Subject To?

A regulated small MS4 operator is required to submit a permit application and obtain coverage under a NPDES storm water permit. Under the permit, the operator will be required to develop and implement a storm water management program that includes six minimum control measures, evaluation/assessment and reporting efforts, and recordkeeping, as described herein. This section begins by highlighting the standards an operator must meet to ensure compliance with the Phase II regulations.

4.6.1 Applicable Standards

A Phase II small MS4 operator must design a storm water management program so that it:

❑ Reduces the discharge of pollutants to the “maximum extent practicable”

(MEP);

- ❑ Protects water quality; and
- ❑ Satisfies the appropriate water quality requirements of the Clean Water Act.

The standard of MEP is the same standard applied to Phase I medium and large MS4 programs. There is no regulatory definition of MEP in order to allow the permitting authority and regulated MS4s maximum flexibility in their interpretation of it as appropriate.

Compliance with the technical standard of MEP requires the successful implementation of approved BMPs. The Phase II Final Rule considers narrative effluent limitations that require the implementation of BMPs and the achievement of measurable goals as the most appropriate form of effluent limitations to achieve the protection of water quality, rather than requiring that storm water discharges meet numeric effluent limitations.

EPA intends to issue Phase II NPDES permits consistent with its August 1, 1996, Interim Permitting Approach policy, which calls for BMPs in first-round storm water permits and expanded or better tailored BMPs in subsequent permits, where necessary, to provide for the attainment of water quality standards. In cases where information exists to develop more specific conditions or limitations to meet water quality standards, these conditions or limitations should be incorporated into the storm water permit. Monitoring is not required under the Phase II Rule, but the NPDES permitting authority has the discretion to require monitoring if deemed necessary.

4.6.2 Permit Application Requirements

The permit application requirements differ depending on the type of permit chosen. The following subsections describe the applicable requirements for each type of permit option allowable under the Phase II regulation.

Deadline for Submission of Permit Application

The deadline for submission of each type of permit application is the same – it must be done no later than March 10, 2003 unless the NPDES permitting authority chooses to phase-in permit coverage on a watershed basis and establishes other deadlines (see section 4.5.2.2).

4.6.2.1 General Permit Under Phase II Regulations

Operators of regulated small MS4s are required to submit in their NOI the following information:

- ❑ Best management practices (BMPs) for each of the six minimum control measures:

  ❶ Public education and outreach on storm water impacts
  ❷ Public participation/involvement
  ❸ Illicit discharge detection and elimination
  ❹ Construction site storm water runoff control
  Post-construction storm water management in new development/ redevelopment
  ❻ Pollution prevention/good housekeeping for municipal operations

- ❑ Measurable goals for each minimum control measure (i.e, narrative or numeric standards used to gauge program effectiveness);

- ❑ Estimated months and years in which actions to implement each measure will be undertaken, including interim milestones and frequency; and

- ❑ The person or persons responsible for implementing or coordinating the storm water program.

The operator of a regulated small MS4 has the flexibility to determine the BMPs and measurable goals, for each minimum control measure, that are most appropriate for the system. The chosen BMPs and measurable goals, submitted in the permit application, become the required storm water management program; however, the NPDES permitting authority can require changes in the mix of chosen BMPs and measurable goals if all or some of them are found to be inconsistent with the provisions of the Phase II Final Rule. Likewise, the permittee can change its mix of BMPs if it determines that the program is not as effective as it could be. Section 4.6.2 fully describes the minimum control measures, including sample BMPs and measurable goals for each, while section 4.6.3 describes the permit requirements concerning evaluation/assessment and recordkeeping activities.

4.6.2.2 Individual Permit Under the Phase II Regulation

For individual permit coverage under Phase II, the regulated small MS4 operator must follow the requirements of 40 CFR § 122.21(f) and the Phase II permit application requirements as described in section 4.6.2.1 above. The operator must also provide an estimate of the square mileage served by the system and any additional information requested by the NPDES permitting authority. A storm sewer map that satisfies the requirements of § 122.34(b)(3)(i) of the Phase II rule will satisfy the map requirements of § 122.21(f)(7).

4.6.2.3 Individual Permit Under the Phase I Regulation

For individual permit coverage under Phase I, the regulated small MS4 operator must follow the permit application requirements detailed at 40 CFR § 122.26(d). The operator must submit both Part 1 and Part 2 of the application requirements in §§ 122.26(d)(1) and (2) by March 10, 2003. The operator would not need to submit the information required by §§ 122.26(d)(1)(ii) and (d)(2) regarding legal authority unless it wanted the permitting authority to take that information into account when developing the individual permit.

4.6.2.4 Modification of an Existing Phase I Individual Permit

Under this permit option, the operator of a regulated small MS4 must follow Phase I permit application requirements in § 122.26(d), with some exclusions, rather than Phase II permit application requirements. The operator would not need to follow the application requirements of §§ 122.26(d)(1)(iii) and (iv) and (d)(2)(iii) – *discharge characterization*. The operator may satisfy the requirements in §§ 122.26(d)(1)(v) and (d)(2)(iv) – *identification of a management program* – by referring to the Phase I MS4's storm water management program.

EPA Recommendations

In referencing a Phase I's MS4's storm water management program, the operator should briefly describe how the existing plan will address discharges from the small MS4 or would need to be supplemented in order to adequately address the small MS4 discharges. The small MS4 operator should explain their role in coordinating storm water pollutant control activities in their MS4 service area and detail the resources available to accomplish the plan.

If a small MS4 is considering this option, it should find out when the Phase I MS4's permit is scheduled for renewal and become thoroughly familiar with the Phase I MS4's permit conditions. This co-permitting approach will be most successful if both MS4s have had thorough discussions of their storm water programs and if the small MS4 submits it’s application at the time that the Phase I MS4 is submitting its reapplication.

4.6.2 Program Requirements: The Six Minimum Control Measures

If coverage is obtained under a general permit or an individual permit under the Phase II regulations, the operator of a regulated small MS4 is required to implement a storm water management program that includes, at a minimum, the six minimum control measures described in the following subsections. As you read these subsections, keep in mind that the operator has a great deal of flexibility in determining the best management practices they will use to accomplish each measure. The rule allows the operators to chose the BMPs and measurable goals for each measure as appropriate for their particular MS4 service area – as long as the chosen BMPs and measurable goals result in effective control of pollutants in storm water runoff. Otherwise, the permitting authority may require changes in the chosen mix of BMPs and measurable goals to result in a more effective program.

4.6.2.1 Public Education and Outreach on Storm Water Impacts

Why Is Public Education and Outreach Necessary?

An informed and knowledgeable community is crucial to the success of a storm water management program since it helps to ensure the following:

Greater support for the program as the public gains a greater understanding of the reasons why it is necessary and important. Public support is particularly beneficial when operators of small MS4s attempt to institute new funding initiatives for the program or seek volunteers to help implement the program; and

Greater compliance with the program as the public becomes aware of the personal responsibilities expected of them and others in the community, including the individual actions they can take to protect or improve the quality of area waters.

What Is Required?

To satisfy this minimum control measure, the operator of a regulated small MS4 must:

- ❑ Implement a public education program to distribute educational materials to the community, or conduct equivalent outreach activities about the impacts of storm water discharges on local waterbodies and the steps that can be taken to reduce storm water pollution; and

- ❑ Determine the appropriate best management practices (BMPs) and measurable goals for this minimum control measure. Some program implementation approaches, BMPs (i.e., the program actions/activities), and measurable goals are suggested below.

What Are Some Guidelines for Developing and Implementing This Measure?

Three main action areas are important for successful implementation of a public education and outreach program:

❶ ***Forming Partnerships***
Operators of regulated small MS4s are encouraged to enter into partnerships with other governmental entities to fulfill this minimum control measure's requirements. It is generally more cost-effective to use an existing program, or to develop a new regional or state-wide education program, than to have numerous operators developing their own local programs. Operators also are encouraged to seek assistance from non-governmental organizations (e.g., environmental, civic, and industrial organizations), since many already have educational materials and perform outreach activities.

❷ ***Using Educational Materials and Strategies***

Operators of regulated small MS4s may use storm water educational information provided by their State, Tribe, EPA Region, or environmental, public interest, or trade organizations instead of developing their own materials. Operators should strive to make their materials and activities relevant to local situations and issues, and incorporate a variety of strategies to ensure maximum coverage. Some examples include:

Brochures or fact sheets for general public and specific audiences;

Recreational guides to educate groups such as golfers, hikers, paddlers, climbers, fishermen, and campers;

Alternative information sources, such as web sites, bumper stickers, refrigerator magnets, posters for bus and subway stops, and restaurant placemats;

A library of educational materials for community and school groups;

Volunteer citizen educators to staff a ***public education task force;***

Event participation with educational displays at home shows and community festivals;

Educational programs for school-age children;

Storm drain stenciling of storm drains with messages such as “Do Not Dump - Drains Directly to Lake;”

Storm water hotlines for information and for citizen reporting of polluters;

Economic incentives to citizens and businesses (e.g., rebates to homeowners purchasing mulching lawnmowers or biodegradable lawn products);and

Tributary signage to increase public awareness of local water resources.

❸ ***Reaching Diverse Audiences***

The public education program should use a mix of appropriate local strategies to address the viewpoints and concerns of a variety of audiences and communities, including minority and disadvantaged communities, as well as children. Printing posters and brochures in more than one language or posting large warning signs (e.g., cautioning against fishing or swimming) near storm sewer outfalls are methods that can be used to reach audiences less likely to read standard materials. Directing materials or outreach programs toward specific groups of commercial, industrial, and institutional entities likely to have significant storm water impacts is also recommended. For example, information could be provided to restaurants on the effects of grease clogging storm drains and to auto garages on the effects of dumping used oil into storm drains.

What Are Appropriate Measurable Goals?

Measurable goals, which are required for each minimum control measure, are intended to gauge permit compliance and program effectiveness. The measurable goals, as well as the BMPs, should reflect the needs and characteristics of the operator and the area served by its small MS4. Furthermore, they should be chosen using an integrated approach that fully addresses the requirements and intent of the minimum control measure. An integrated approach for this minimum measure could include the following measurable goals:

Target Date	Activity
1 year.....	Brochures developed (bilingual, if appropriate) and distributed in water utility bills; a storm water hotline in place; volunteer educators trained.
2 years.....	A web site created school curricula developed; storm drains stenciled.
3 years.....	A certain percentage of restaurants no longer dumping grease and other pollutants down storm sewer drains.
4 years.....	A certain percentage reduction in litter or animal waste detected in discharges.

4.6.2.2 Public Participation/Involvement

Why Is Public Participation and Involvement Necessary?

EPA believes that the public can provide valuable input and assistance to a regulated small MS4's municipal storm water management program and, therefore, suggests that the public be given opportunities to play an active role in both the development and implementation of the program. An active and involved community is crucial to the success of a storm water management program because it allows for:

Broader public support since citizens who participate in the development and decision making process are partially responsible for the program and, therefore, may be less likely to raise legal challenges to the program and more likely to take an active role in its implementation;

Shorter implementation schedules due to fewer obstacles in the form of public and legal challenges and increased sources in the form of citizen volunteers;

A broader base of expertise and ***economic benefits*** since the community can be a valuable, and free, intellectual resource; and

A conduit to other programs as citizens involved in the storm water program development process provide important cross-connections and relationships with other community and government programs. This benefit is particularly valuable when trying to implement a storm water program on a watershed basis, as encouraged by EPA.

What Is Required?

To satisfy this minimum control measure, the operator of a regulated small MS4 must:

- ❑ Comply with applicable State, Tribal, and local public notice requirements; and
- ❑ Determine the appropriate best management practices (BMPs) and measurable goals for this minimum control measure. Possible implementation approaches, BMPs (i.e., the program actions and activities), and measurable goals are described below.

What Are Some Guidelines for Developing and Implementing This Measure?

Operators of regulated small MS4s should include the public in developing, implementing, and reviewing their storm water management programs. The public participation process should make every effort to reach out and engage all economic and ethnic groups. EPA recognizes that there are challenges associated with public involvement. Nevertheless, EPA strongly believes that these challenges can be addressed through an aggressive and inclusive program. Challenges and example practices that can help ensure successful participation are discussed below.

Implementation Challenges

The best way to handle common notification and recruitment challenges is to know the audience and think creatively about how to gain its attention and interest. Traditional methods of soliciting public input are not always successful in generating interest, and subsequent involvement, in all sectors of the community. For example, municipalities often rely solely on advertising in local newspapers to announce public meetings and other opportunities for public involvement. Since there may be large sectors of the population who do not read the local press, the audience reached may be limited. Therefore, alternative advertising methods should be used whenever possible, including radio or television spots, postings at bus or subway stops, announcements in neighborhood newsletters, announcements at civic organization meetings, distribution of flyers, mass mailings, door-to-door visits, telephone notifications, and multilingual announcements. These efforts, of course, are tied closely to the efforts for the public education and outreach minimum control measure.

In addition, advertising and soliciting for help could and should be targeted at specific population sectors, including ethnic, minority, and low-income communities; academia and educational institutions; neighborhood and community groups; outdoor recreation groups; and business and industry. The goal is to involve a diverse cross-section of people who could offer a multitude of concerns, ideas, and connections during the program development process.

Possible Practices (BMPs)

There are a variety of practices that could be incorporated into a public participation and involvement program, such as:

Public meetings/citizen panels allow citizens to discuss various viewpoints and provide input concerning appropriate storm water management policies and BMPs;

Volunteer water quality monitoring gives citizens first-hand knowledge of the quality of local water bodies and provides a cost-effective means of collecting water quality data;

Volunteer educators/speakers who can conduct workshops, encourage public participation, and staff special events;

Storm drain stenciling is an important and simple activity that concerned citizens, especially students, can do;

Community clean-ups along local waterways, beaches, and around storm drains;

Citizen watch groups can aid local enforcement authorities in the identification of polluters; and

"Adopt A Storm Drain" programs encourage individuals or groups to keep storm drains free of debris and to monitor what is entering local waterways through storm drains.

What Are Appropriate Measurable Goals?

Measurable goals, which are required for each minimum control measure, are intended to gauge permit compliance and program effectiveness. The measurable goals, as well as the BMPs, would greatly depend on the needs and characteristics of the operator and the area served by its small MS4. Furthermore, they should be chosen using an integrated approach that fully addresses the requirements and intent of the minimum control measure. An integrated approach for this minimum measure could include the following measurable goals:

Target Date	Activity
1 year.....	Notice of a public meeting in several different print media and bilingual flyers; citizen panel established; volunteers organized to locate outfalls/illicit discharges and stencil drains.
2 years.....	Final recommendations of the citizen panel; radio spots promoting program and participation.
3 years.....	A certain percentage of the community participating in community clean-ups.
4 years.....	Citizen watch groups established in a certain percentage of neighborhoods; outreach to every different population sector completed.

4.6.2.3 Illicit Discharge Detection and Elimination

What Is An "Illicit Discharge"?

Federal regulations define an illicit discharge as "...any discharge to an MS4 that is not composed entirely of storm water..." with some exceptions. These exceptions include discharges from NPDES-permitted industrial sources and discharges from fire-fighting activities. Illicit discharges (see Table 4-2) are considered "illicit" because MS4s are not designed to accept, process, or discharge such non-storm water wastes. It is important to note that "illicit" does not mean "illegal." Not every illicit discharge is necessarily a prohibited illegal discharge.

Why Are Illicit Discharge Detection and Elimination Efforts Necessary?

Discharges from MS4s often include wastes and wastewater from non-storm water sources. A study conducted in 1987 in Sacramento, California, found that almost one-half of the water discharged from a local MS4 was not directly attributable to precipitation runoff. A significant portion of these dry weather flows were from illicit and/or inappropriate discharges and connections to the MS4.

Table 4-2

Sources of Illicit Discharges
Sanitary wastewater
Effluent from septic tanks
Car wash wastewaters
Improper oil disposal
Radiator flushing disposal
Laundry wastewaters
Spills from roadway accidents
Improper disposal of auto and household toxics

Illicit discharges enter the system through either direct connections (e.g., wastewater piping either mistakenly or deliberately connected to the storm drains) or indirect connections (e.g., infiltration into the MS4 from cracked sanitary systems, spills collected by drain outlets, or paint or used oil dumped directly into a drain). The result is untreated discharges that contribute high levels of pollutants, including heavy metals, toxics, oil and grease, solvents, nutrients, viruses, and bacteria to receiving waterbodies. Pollutant levels from these illicit discharges have been shown in EPA studies to be high enough to significantly degrade receiving water quality and threaten aquatic, wildlife, and human health.

What Is Required?

Recognizing the adverse effects illicit discharges can have on receiving waters, the final rule requires an operator of a regulated small MS4 to develop and implement an illicit discharge detection and elimination program. This program must include the following:

- ❑ A storm sewer system map, showing the location of all outfalls and the names and location of all waters of the United States that receive discharges from those outfalls;

- ❑ Through an ordinance, or other regulatory mechanism, a prohibition (to the extent allowable under State, Tribal, or local law) on non-storm water discharges into the MS4, and appropriate enforcement procedures and actions;

- ❑ A plan to detect and address non-storm water discharges, including illegal dumping, into the MS4;

- ❑ The education of public employees, businesses, and the general public about the hazards associated with illegal discharges and improper disposal of waste; and

- ❑ The determination of appropriate best management practices (BMPs) and measurable goals for this minimum control measure. Some program implementation approaches, BMPs (i.e., the program actions/activities), and measurable goals are suggested below.

Does This Measure Need to Address All Illicit Discharges?

No. The illicit discharge detection and elimination program does not need to address the following categories of non-storm water discharges or flows unless the operator of the regulated small MS4 identifies them as significant contributors of pollutants to its MS4:

- ❑ Water line flushing
- ❑ Landscape irrigation
- ❑ Diverted stream flows
- ❑ Rising ground waters
- ❑ Uncontaminated ground water infiltration
- ❑ Uncontaminated pumped ground water
- ❑ Discharges from potable water sources
- ❑ Foundation drains
- ❑ Air conditioning condensation
- ❑ Irrigation water
- ❑ Springs
- ❑ Water from crawl space pumps
- ❑ Footing drains
- ❑ Lawn watering
- ❑ Individual residential car washing
- ❑ Flows from riparian habitats and wetlands
- ❑ Dechlorinated swimming pool discharges
- ❑ Street wash water.

What Are Some Guidelines for Developing and Implementing This Measure?

The objective of the illicit discharge detection and elimination minimum control measure is to have regulated small MS4 operators gain a thorough awareness of their systems. This awareness allows them to determine the types and sources of illicit discharges entering their system, and establish the legal, technical, and educational means needed to eliminate these discharges. Permittees could meet these objectives

in a variety of ways depending on their individual needs and abilities, but some general guidance for each requirement is provided below.

The Map

The storm sewer system map is meant to demonstrate a basic awareness of the intake and discharge areas of the system. It is needed to help determine the extent of discharged dry weather flows, the possible sources of the dry weather flows, and the particular waterbodies these flows may be affecting. An existing map, such as a topographical map, on which the location of major pipes and outfalls can be clearly presented would demonstrate such an awareness.

EPA recommends collecting all existing information on outfall locations (e.g., review city records, drainage maps, storm drain maps), and then conducting field surveys to verify locations. It probably will be necessary to walk (i.e., wade through small receiving waters or use a boat for larger waters) the streambanks and shorelines for visual observation. More than one trip may be needed to locate all outfalls.

Legal Prohibition and Enforcement

EPA recognizes that some permittees may have limited authority under State, Tribal or local law to establish and enforce an ordinance, or other regulatory mechanism, prohibiting illicit discharges. In such a case, the permittee is encouraged to obtain the necessary authority, if at all possible. Otherwise, the NPDES permitting authority assumes responsibility for implementation of this component of the minimum measure, yet the permittee would remain ultimately responsible for the quality of its MS4 discharge. Model ordinances, including examples of amendments to local codes or existing ordinances, will be provided in the Phase II storm water guidance for regulated small MS4s, which is part of EPA's planned implementation "tool box" for the rule.

The Plan

The plan to detect and address illicit discharges is the central component of this minimum control measure. The plan is dependant upon several factors, including the permittee's available resources, size of staff, and degree and character of its illicit discharges. EPA envisions a plan similar to the one recommended for use in meeting Michigan's general storm water NPDES permit for small MS4s. As guidance only, the four steps of a recommended plan are outlined below:

❶ **Locate Problem Areas**
EPA recommends that priority areas be identified for detailed screening of the system based on the likelihood of illicit connections (e.g., areas with older sanitary sewer lines). Some methods that could be used to locate problem areas include: public complaints; visual screening; water sampling from manholes and outfalls during dry weather; and use of infrared and thermal photography.

❷ **Find the Source**
Once a problem area or discharge is found, additional efforts usually would be

necessary to determine the source of the problem. Some methods that could be used to find the source of the illicit discharge include: dye-testing buildings in problem areas; dye- or smoke-testing buildings at the time of sale; tracing the discharge upstream in the storm sewer; employing a certification program that shows that buildings have been checked for illicit connections; implementing an inspection program of existing septic systems; and using video to inspect the storm sewers.

❸ **Remove/Correct Illicit Connections**
Once the source is identified, the offending discharger should be notified and directed to correct the problem. Education efforts and working with the discharger can be effective in resolving the problem before taking legal action.

❹ **Document Actions Taken**
As a final step, all actions taken under the plan should be documented. Doing so would illustrate that progress is being made to eliminate illicit connections and discharges. Documented actions should be included in the required annual reports and include information such as: the number of outfalls screened; any complaints received and corrected; the number of discharges and quantities of flow eliminated; and the number of dye or smoke tests conducted.

Educational Outreach

Outreach to public employees, businesses, property owners, the general community, and elected officials regarding ways to detect and eliminate illicit discharges is an integral part of this minimum measure that will help gain support for the permittee's storm water program. Suggested educational outreach efforts include:

- Developing ***informative brochures, and guidances*** for specific audiences (e.g., carpet cleaning businesses) and school curricula;
- Designing a program to ***publicize and facilitate public reporting*** of illicit discharges;
- ***Coordinating volunteers*** for locating, and visually inspecting, outfalls or to stencil storm drains; and
- Initiating ***recycling programs*** for commonly dumped wastes, such as motor oil, antifreeze, and pesticides.

What Are Appropriate Measurable Goals?

Measurable goals, which are required for each minimum control measure, are intended to gauge permit compliance and program effectiveness. The measurable goals, as well as the BMPs, should reflect the needs and characteristics of the operator and the area served by its small MS4. Furthermore, they should be chosen using an integrated approach that would fully address the requirements and intent of the minimum control measure. An integrated approach for this minimum measure could

include the following measurable goals:

Target Date	Activity
1 year.....	Sewer system map completed; recycling program for household hazardous waste in place.
2 years.....	Ordinance in place; training for public employees completed; a certain percentage of sources of illicit discharges determined.
3 years.....	A certain percentage of: illicit discharges detected; illicit discharges eliminated; and households participating in quarterly household hazardous waste special collection days.
4 years.....	Most illicit discharge sources detected and eliminated.

The educational outreach measurable goals for this minimum control measure could be combined with the measurable goals for the Public Education and Outreach minimum control measure.

4.6.2.4 Construction Site Storm Water Runoff Control

Why Is The Control of Construction Site Runoff Necessary?

Polluted storm water runoff from construction sites often flows to MS4s and ultimately is discharged into local rivers and streams. Of the pollutants listed in Table 4-3, sediment is usually the main pollutant of concern. Sediment runoff rates from construction sites are typically 10 to 20 times greater than those of agricultural lands, and 1,000 to 2,000 times greater than those of forest lands. During a short period of time, construction sites can contribute more sediment to streams than can be deposited naturally during several decades. The resulting siltation, and the contribution of other pollutants from construction sites, can cause physical, chemical, and biological harm to our nation's waters. For example, excess sediment can quickly fill rivers and lakes, requiring dredging and destroying aquatic habitats.

Table 4-3

Pollutants Commonly Discharged From Construction Sites
Sediment
Solid and sanitary wastes
Phosphorous (fertilizer)
Nitrogen (fertilizer)
Pesticides
Oil and grease
Concrete truck washout
Construction chemicals
Construction debris

What Is Required?

The Phase II Final Rule requires an operator of a regulated small MS4 to develop, implement, and enforce a program to reduce pollutants in storm water runoff to their MS4 from construction activities that result in a land disturbance of greater than or equal to one acre. The small MS4 operator is required to:

- ❑ Have an ordinance or other regulatory mechanism requiring the implementation of proper erosion and sediment controls, and controls for other wastes, on applicable construction sites;

- ❑ Have procedures for site plan review of construction plans that consider potential water quality impacts;
- ❑ Have procedures for site inspection and enforcement of control measures;
- ❑ Have sanctions to ensure compliance (established in the ordinance or other regulatory mechanism);
- ❑ Establish procedures for the receipt and consideration of information submitted by the public; and
- ❑ Determine the appropriate best management practices (BMPs) and measurable goals for this minimum control measure. Suggested BMPs (i.e., the program actions/activities) and measurable goals are presented below.

What Are Some Guidelines for Developing and Implementing This Measure?

Further explanation and guidance for each component of a regulated small MS4's construction program is provided below.

Regulatory Mechanism

Through the development of an ordinance or other regulatory mechanism, the small MS4 operator needs to establish a construction program that requires controls for polluted runoff from construction sites with a land disturbance of greater than or equal to one acre. Because there may be limitations on regulatory legal authority, the small MS4 operator is required to satisfy this minimum control measure only to the maximum extent practicable and allowable under State, Tribal, or local law. If an operator is unable to establish an enforceable construction program due to a lack of legal authority, and is unsuccessful in trying to obtain the necessary authority, the NPDES permitting authority would then assume responsibility.

EPA intends to develop a model ordinance that a small MS4 operator could use as a basis for its construction program. Alternatively, amendments to existing erosion and sediment control programs, or other ordinances, can also provide the basis for the program.

Site Plan Review

The small MS4 operator is required to include in its construction program requirements for the implementation of appropriate BMPs on construction sites to control erosion and sediment, as well as waste at the site. To determine if a construction site is in compliance with such provisions, the small MS4 operator should review the site plans submitted by the construction site operator before ground is broken.

Site plan review aids in compliance and enforcement efforts since it alerts the small MS4 operator early in the process to the planned use or non-use of proper BMPs and provides a way to track new construction activities. The tracking of sites is useful not only for the small MS4 operator's recordkeeping and reporting purposes, which will be required activities under their NPDES storm water permit (see Fact Sheet 2.9), but also for members of the public interested in ensuring that the sites are in compliance.

Inspections and Penalties

Once construction commences, the BMPs should be in place and the small MS4 operator's enforcement activities should begin. To ensure that the BMPs are properly installed, the small MS4 operator is required to develop procedures for site inspection and enforcement of control measures to deter infractions. Procedures could include steps to identify priority sites for inspection and enforcement based on the nature and extent of the construction activity, topography, and the characteristics of soils and receiving water quality. Inspections give the MS4 operator an opportunity to provide additional guidance and education, issue warnings, or assess penalties. To conserve staff resources, one possible option for small MS4 operators could be to have these inspections performed by the same inspector that visits the sites to check compliance with health and safety building codes.

Information Submitted by the Public

A final requirement of the small MS4 program for construction activity is the development of procedures for the receipt and consideration of public inquiries, concerns, and information submitted regarding local construction activities. This provision is intended to further reinforce the public participation component of the regulated small MS4 storm water program and to recognize the crucial role that the public can play in identifying instances of noncompliance.

The small MS4 operator is required only to *consider* the information submitted, and may not need to follow-up and respond to every complaint or concern. Although some form of enforcement action or reply is not required, the small MS4 operator is required to demonstrate acknowledgment and consideration of the information submitted. A simple tracking process in which submitted public information, both written and verbal, is recorded and then given to the construction site inspector for possible follow-up would suffice.

What Are Appropriate Measurable Goals?

Measurable goals, which are required for each minimum control measure, are intended to gauge permit compliance and program effectiveness. The measurable goals, as well as the BMPs, should reflect the needs and characteristics of the operator and the area served by its small MS4. Furthermore, they should be chosen using an integrated approach that fully addresses the requirements and intent of the minimum control measure. An integrated approach for this minimum measure could include the following measurable goals:

Target Date	Activity
1 year.....	Ordinance or other regulatory mechanism in place; procedures for information submitted by the public in place.
2 years.....	Procedures for site inspections implemented; a certain percentage rate of compliance achieved by construction operators.
3 years.....	Maximum compliance with ordinance; improved clarity and reduced sedimentation of local waterbodies.
4 years.....	Increased numbers of sensitive aquatic organisms in local waterbodies.

Am I Correct in Thinking that Construction Sites Are Already Covered Under the NPDES Storm Water Program?

Yes. EPA's Phase I NPDES storm water program requires operators of construction activities that disturb five or more acres to obtain a NPDES construction storm water permit. General permit requirements include the submission of a Notice of Intent and the development of a storm water pollution prevention plan (SWPPP). The SWPPP must include a site description and measures and controls to prevent or minimize pollutants in storm water discharges. The Phase II Final Rule similarly regulates discharges from smaller construction sites disturbing equal to or greater than one acre and less than five acres.

Even though all construction sites that disturb more than one acre are covered nationally by an NPDES storm water permit, the construction site runoff control minimum measure for the small MS4 program is needed to induce more localized site regulation and enforcement efforts, and to enable operators of regulated small MS4s to more effectively control construction site discharges into their MS4s.

To aid operators of regulated construction sites in their efforts to comply with both local requirements and their NPDES permit, the Phase II Final Rule includes a provision that allows the NPDES permitting authority to reference a "qualifying State, Tribal or local program" in the NPDES general permit for construction. This means that if a construction site is located in an area covered by a qualifying local program, then the construction site operator's compliance with the local program would constitute compliance with their NPDES permit. A regulated small MS4's storm water program for construction could be a "qualifying program" if the MS4 operator requires a SWPPP, in addition to the requirements summarized in this fact sheet.

The ability to reference other programs in the NPDES permit is intended to reduce confusion between overlapping and similar requirements, while still providing for both local and national regulatory coverage of the construction site. The provision allowing NPDES permitting authorities to reference other programs has no impact on, or direct relation to, the small MS4 operator's responsibilities under the construction site runoff control minimum measure profiled in this fact sheet.

Is a Small MS4 Operator Required to Regulate Construction Sites that the Permitting Authority has Waived from the NPDES Construction Program?

No. If the NPDES permitting authority waives requirements for storm water discharges associated with small construction activity (see § 122.26(b)(15) of the Phase II rule), the small MS4 operator is not required to develop, implement, and/or enforce a program to reduce pollutant discharges from such sites.

4.6.2.5 Post-construction Storm Water Management in New Development/ Redevelopment

Why Is The Control of Post-Construction Runoff Necessary?

Post-construction storm water management in areas undergoing new development or redevelopment is necessary because runoff from these areas has been shown to significantly effect receiving waterbodies. Many studies indicate that prior planning and design for the minimization of pollutants in post-construction storm water discharges is the most cost-effective approach to storm water quality management.

There are generally two forms of substantial impacts of post-construction runoff. The first is caused by an increase in the type and quantity of pollutants in storm water runoff. As runoff flows over areas altered by development, it picks up harmful sediment and chemicals such as oil and grease, pesticides, heavy metals, and nutrients (e.g., nitrogen and phosphorus). These pollutants often become suspended in runoff and are carried to receiving waters, such as lakes, ponds, and streams. Once deposited, these pollutants can enter the food chain through small aquatic life, eventually entering the tissues of fish and humans. The second kind of post-construction runoff impact occurs by increasing the quantity of water delivered to the waterbody during storms. Increased impervious surfaces interrupt the natural cycle of gradual percolation of water through vegetation and soil. Instead, water is collected from surfaces such as asphalt and concrete and routed to drainage systems where large volumes of runoff quickly flow to the nearest receiving water. The effects of this process include streambank scouring and downstream flooding, which often lead to a loss of aquatic life and damage to property.

What Is Required?

The Phase II Final Rule requires an operator of a regulated small MS4 to develop, implement, and enforce a program to reduce pollutants in post-construction runoff to their MS4 from new development and redevelopment projects that result in the land disturbance of greater than or equal to 1 acre. The small MS4 operator is required to:

- ❑ Develop and implement strategies which include a combination of structural and/or non-structural best management practices (BMPs);

- ❑ Have an ordinance or other regulatory mechanism requiring the implementation of post-construction runoff controls to the extent allowable under State, Tribal or local law;

- ❑ Ensure adequate long-term operation and maintenance of controls;

- ❑ Determine the appropriate best management practices (BMPs) and measurable goals for this minimum control measure.

What Is Considered a "Redevelopment" Project?

The term "redevelopment" refers to alterations of a property that change the "footprint" of a site or building in such a way that the disturbance of equal to or greater than 1 acre of land results. The term does not include such activities as exterior remodeling. Because redevelopment projects may have site constraints not found on new development sites, the rule provides flexibility for implementing post-construction controls on redevelopment sites that consider these constraints.

What Are Some Guidelines for Developing and Implementing This Measure?

This section includes some sample non-structural and structural BMPs that could be used to satisfy the requirements of the post-construction runoff control minimum measure. It is important to recognize that many BMPs are climate-specific, and not all BMPs are appropriate in every geographic area. Because the requirements of this measure are closely tied to the requirements of the construction site runoff control minimum measure (see Fact Sheet 2.6), EPA recommends that small MS4 operators develop and implement these two measures in tandem. Sample BMPs follow.

❑ **Non-Structural BMPs**

- **Planning and Procedures**. Runoff problems can be addressed efficiently with sound planning procedures. Master Plans, Comprehensive Plans, and zoning ordinances can promote improved water quality by guiding the growth of a community away from sensitive areas and by restricting certain types of growth (industrial, for example) to areas that can support it without compromising water quality.

- **Site-Based Local Controls**. These controls can include buffer strip and riparian zone preservation, minimization of disturbance and imperviousness, and maximization of open space.

❑ **Structural BMPs**

- **Storage Practices**. Storage or detention BMPs control storm water by gathering runoff in wet ponds, dry basins, or multichamber catch basins and slowly

releasing it to receiving waters or drainage systems. These practices both control storm water volume and settle out particulates for pollutant removal.

- **Infiltration Practices**. Infiltration BMPs are designed to facilitate the percolation of runoff through the soil to ground water, and, thereby, result in reduced storm water quantity and reduced mobilization of pollutants. Examples include infiltration basins/trenches, dry wells, and porous pavement.

- **Vegetative Practices**. Vegetative BMPs are landscaping features that, with optimal design and good soil conditions, enhance pollutant removal, maintain/improve natural site hydrology, promote healthier habitats, and increase aesthetic appeal. Examples include grassy swales, filter strips, artificial wetlands, and rain gardens.

What Are Appropriate Measurable Goals?

Measurable goals, which are required for each minimum control measure, are intended to gauge permit compliance and program effectiveness. The measurable goals, as well as the BMPs, should reflect needs and characteristics of the operator and the area served by its small MS4. Furthermore, the measurable goals should be chosen using an integrated approach that fully addresses the requirements and intent of the minimum control measure. An integrated approach for this minimum measure could include the following goals:

Target Date	Activity
1 year.....	Strategies developed that include structural and/or non-structural BMPs.
2 years.....	Strategies codified by use of ordinance or other regulatory mechanism.
3 years.....	Reduced percent of new impervious surfaces associated with new development projects.
4 years.....	Improved clarity and reduced sedimentation of local waterbodies.

4.6.2.6 Pollution Prevention/Good Housekeeping for Municipal Operations

Why Is Pollution Prevention/Good Housekeeping Necessary?

The Pollution Prevention/Good Housekeeping for municipal operations minimum control measure is a key element of the small MS4 storm water management program. This measure requires the small MS4 operator to examine and subsequently alter own actions to help ensure a reduction in the amount and type of pollution that (1) collects on streets, parking lots, open spaces, and storage and vehicle maintenance areas and is discharged into local waterways; and (2) results from actions such as environmentally damaging land development and flood management practices or poor maintenance of storm sewer systems.

While this measure is meant primarily to accomplish the goal of improving or protecting the quality of receiving waters by altering the performance of municipal or facility operations, it also can result in a cost savings for the small MS4 operator, since proper and timely maintenance of storm sewer systems can help avoid repair costs from damage caused by age and neglect.

What Is Required?

Recognizing the benefits of pollution prevention practices, the rule requires an operator of a regulated small MS4 to:

- ❑ Develop and implement an operation and maintenance program with the ultimate goal of preventing or reducing pollutant runoff from municipal operations into the storm sewer system;

- ❑ Include employee training on how to incorporate pollution prevention/good housekeeping techniques into municipal operations such as park and open space maintenance, fleet and building maintenance, new construction and land disturbances, and storm water system maintenance. To minimize duplication of effort and conserve resources, the MS4 operator could use training materials that are available from EPA, their State or Tribe, or relevant organizations;

- ❑ Determine the appropriate best management practices (BMPs) and measurable goals for this minimum control measure. Some program implementation approaches, BMPs (i.e., the program actions/activities), and measurable goals are suggested below.

What Are Some Guidelines for Developing and Implementing This Measure?

The intent of this control measure is to ensure that existing municipal, State or Federal operations are performed in ways that will minimize contamination of storm water discharges. EPA encourages the small MS4 operator to consider the following components when developing their program for this measure:

Maintenance activities, maintenance schedules, and long-term inspection procedures for structural and non-structural controls to reduce floatables and other pollutants discharged from the separate storm sewers;

Controls for reducing or eliminating the discharge of pollutants from areas such as roads and parking lots, maintenance and storage yards (including salt/sand storage and snow disposal areas), and waste transfer stations. These controls could include programs that promote recycling (to reduce litter), minimize pesticide use, and ensure the proper disposal of animal waste;

Procedures for the proper disposal of waste removed from the separate

storm sewer systems and the areas listed in the bullet above, including dredge spoil, accumulated sediments, floatables, and other debris; and

Ways to ensure that new flood management projects assess the impacts on water quality and examine existing projects for incorporation of additional water quality protection devices or practices. EPA encourages coordination with flood control managers for the purpose of identifying and addressing environmental impacts from such projects.

The effective performance of this control measure hinges on the proper maintenance of the BMPs used, particularly for the first two bullets above. For example, structural controls, such as grates on outfalls to capture floatables, typically need regular cleaning, while non-structural controls, such as training materials and recycling programs, need periodic updating.

What Are Appropriate Measurable Goals?

Measurable goals, which are required for each minimum control measure, are meant to gauge permit compliance and program effectiveness. The measurable goals, as well as the BMPs, should consider the needs and characteristics of the operator and the area served by its small MS4. The measurable goals should be chosen using an integrated approach that fully addresses the requirements and intent of the minimum control measure. An integrated approach for this minimum measure could include the following measurable goals:

Target Date	Activity
1 year.....	Pollution prevention plan (the new BMPs and revised procedures) completed; employee training materials gathered or developed; procedures in place for catch basin cleaning after each storm and regular street sweeping.
2 years.....	Training for appropriate employees completed; recycling program fully implemented.
3 years.....	Some pollution prevention BMPs incorporated into master plan; a certain percentage reduction in pesticide and sand/salt use; maintenance schedule for BMPs established.
4 years.....	A certain percentage reduction in floatables discharged; a certain compliance rate with maintenance schedules for BMPs; controls in place for all areas of concern.

4.6.3 Program Requirements: Evaluation/Assessment & Reporting

If coverage is obtained under a general permit or an individual permit under the Phase II regulations, the operator of a regulated small MS4 is required to comply with the evaluation/assessment and reporting requirements summarized in this section.

Frequency of Reports

Reports must be submitted annually during the first permit term – permit terms are typically a 5-year period. For subsequent permit terms, reports must be submitted in years 2 and 4 only, unless the NPDES permitting authority requests more frequent reports. Reports do not need to be submitted if the operator of the regulated small MS4 is relying on another entity to satisfy all permit obligations (see section 4.5.1.3)

Required Report Content

The reports must include the following:

- ❑ The status of compliance with permit conditions, including an assessment of the appropriateness of the selected BMPs and progress toward achieving the selected measurable goals for each minimum measure;
- ❑ Results of any information collected and analyzed, including monitoring data, if any;
- ❑ A summary of the storm water activities planned for the next reporting cycle;
- ❑ A change in any identified best management practices or measurable goals for any minimum measure; and
- ❑ Notice of relying on another governmental entity to satisfy some of the permit obligations (if applicable – see section 4.5.1.3).

A Change in Selected BMPs

If, upon evaluation of the program, improved controls are identified as necessary, permittees should revise their mix of BMPs to provide for a more effective program. Such a change, and an explanation of the change, must be noted in a report to the NPDES permitting authority.

Recordkeeping Requirements

Records required by the NPDES permitting authority must be kept for at least 3 years and made accessible to the public at reasonable times during regular business hours. Records need not be submitted to the NPDES permitting authority unless the permittee is requested to do so.

4.7 SMALL MS4 PROGRAM COMPLIANCE PROCESS: What Do I Need to Do To Comply?

Sections 4.1 through 4.6 of this guidance have provided a details on who's covered and what's required under the Phase II regulations for regulated small MS4s. Now that you are familiar with the Phase II program, this section walks you through the process, from beginning to end, that an operator of a regulated small should take to comply with the regulation. This step-by-step "walk-through" references the appropriate sections of the

guidance along the way as a means for understanding how the information in sections 4.1 through 4.6 fits together.

The last page of this section includes a permitting decision tree to help operators of MS4s determine if they need an NPDES storm water permit. By starting in the upper left hand corner, an operator can follow the decision tree to determine if they fall under Phase I or Phase II, and if they are eligible for a waiver.

Step 1: Determine if you are an operator of an MS4 (see section 4.1.1).

Step 2: As an operator of an MS4, determine if you are an operator of a small MS4 (see section 4.1.4).

Step 3: As an operator of a small MS4, determine if you are an operator of a regulated small MS4 (see section 4.2). You need to find out if you are:

A. Automatically designated by the rule

- First, determine if your system is located partially or fully within an urbanized area (See section 4.3),
- Second, determine if you may qualify for a waiver (waivers are at the discretion of the permitting authority). If you qualify for a waiver, stop here. (See section 4.4)

B. Potentially designated by the NPDES permitting authority

- Determine if your system, located outside of a UA, may fit the criteria for potential designation. Since designations are at the discretion of the permitting authority, a final determination is made by the permitting authority and not the small MS4 operator. If designated, continue with Step 4.

Step 4: Read Phase II Rule and guidance materials to get a sense of the permitting options (see section 4.5) and program requirements (see section 4.6).

Step 5: Determine which neighbors are regulated as Phase I MS4s (refer to list on the EPA web site) or Phase II MS4s (refer to Appendix 6 and maps of your UA). This information will be used to base your decision as to whether to:

- Be a co-permittee with another regulated MS4. (See section 4.5.1.2)
- Rely on another regulated MS4 for partial or full implementation of the minimum measures on your behalf. (See section 4.5.1.3)

Step 6: Determine if programs similar to one or more of the minimum measures is already being performed by another entity. This information will be used to decide whether you wish to rely on another entity for partial implementation of the minimum measures on your behalf. (See section 4.5.1.3)

Step 7: Determine which permit option to choose (depends on which are made available by the your NPDES permitting authority) (See section 4.5.1)

- General permit under the Phase II regulation
- Individual permit under the Phase I or Phase II regulation
- Modification of a Phase I individual permit (Co-permittee with a large or medium MS4)

In determine which option to choose, think about...

— If you wish to be a co-permittee and share responsibilities based on information from Step 5

— If, instead of the co-permittee option, you wish to have own permit but rely on another entity for implementing a measure or measures based on information from Steps 5 & 6.

Step 8: Begin planning and development of your storm water management program

- Use menu of BMPs as a guide (provided by EPA or the permitting authority). The EPA web site will also have references and links to helpful guidance on every facet of a storm water management program for MS4s.

- Meet with staff who will be responsible for implementing the storm water management program (may be a multi-departmental team). Task them with:
  — Assessing the storm water management characteristics and needs of the area served by the regulated small MS4.
  — Determining appropriate BMPs and measurable goals
  — Determining who will be responsible for what under the program

- Form a citizen advisory panel to help develop the program and give them similar tasks as those given to the staff.

- Meet with local Phase I and Phase II MS4 operators to discuss co-permittee status or sharing of resources, such as: hiring one enforcement inspector for multiple areas, co-sponsoring household hazardous waste collection events, or sharing a street sweeper, recycling truck, illicit discharge detection cameras, or any other equipment. (Note: Nothing listed here is required by the Phase II rule -- they are only examples)

- Meet with other entities that you may rely on to implement one or more of the minimum measures to discuss the arrangement and any legal agreements.

Step 9: **A. Under a General Permit:**

1) Once a general permit is issued, read it carefully. You may not be

required to implement every minimum measure due to the permitting authority recognizing or referencing other similar programs (see section 4.5.2.1). For this reason, before the permit is issued (which is expected to be no later than December 9, 2002) follow Step 8 but only do a preliminary storm water management program until the final permit requirements are know. Once the permit is issued, if you have chosen this option you will need to make final decisions on the following issues and complete the development of your storm water management plan:

- Do you want to be a co-permittee with another regulated small MS4?
- Do you want to rely on another entity for some or all of the permit requirements?
- Which BMPs and measurable goals will you use for each minimum measure you will be implementing?

2) Fill out an NOI in accordance with the Phase II regulation. (See section 4.6.2.1)

B. Under an Individual Permit (new or modified):

If you have chosen one of the individual permit options (i.e., under Phase II, under Phase I, or modified existing Phase I), you will need to continue efforts in Step 8, as applicable, and complete development of your permit application in accordance with the Phase II regulation. (See sections 4.6.2.2 through 4.6.2.4)

Step 10: Submit your NOI under a general permit or your individual permit application to the NPDES permitting authority <u>by March 10, 2003</u>; unless your NPDES permitting authority phases-in permit coverage and establishes alternative deadlines (see section 4.5.2.2).

Step 11: Implement your storm water management program in accordance with applicable standards (see section 4.6.1). The Phase II rule allows you up to five years to fully implement your program, although the exact timeframe is at the discretion of the your NPDES permitting authority.

Step 12: Write annual reports in your first permit term assessing the effectiveness of BMPs and if measurable goals were met, and submit the reports to your NPDES permitting authority. You may change the mix of BMPs originally selected if you find that such a change is necessary to ensure a more effective program. This step, as required in the Phase II regulations at § 122.34(g) and described in section 4.6.3, is not applicable if you sought coverage under an individual permit under the Phase I regulations or under a modification of an existing Phase I MS4 permit.

Step 13: Be aware that you may need to take over implementation of a minimum control measure if you are relying on another entity for its implementation and the other entity fails to perform it effectively. This is why EPA encourages a legally-binding agreement when choosing to rely on another entity. Also, the permitting authority may chose to change your mix of BMPs and measurable goals as submitted in you permit application if it determines that your program is not effectively controlling pollutant discharges.

4.8 FEDERAL AND STATE-OPERATED REGULATED SMALL MS4S: Unique Program Implementation Issues

In addition to local government jurisdictions, small MS4s include certain Federal and State-operated MS4s. Federal facilities were not designated for regulation by the NPDES Phase I storm water program for MS4s. The Phase II Final Rule, however, includes the "United States" in the definition of a small MS4, thereby including Federal MS4 operators in the NPDES Phase II storm water program. Federal and State-operated small MS4s can include universities, prisons, hospitals, roads (i.e., departments of transportation), military bases (e.g., State Army National Guard barracks), parks, and office buildings/complexes.

The small MS4 program, largely designed with municipally-operated small MS4s in mind, raises a number of implementation issues for Federal and State operators of regulated small MS4s who must obtain an NPDES permit that requires the development and implementation of a storm water management program that includes the six minimum control measures. This section highlights potential implementation issues related to the minimum control measures, and then discusses the implementation options included in the rule that may help resolve these issues.

4.8.1 What Are Some Implementation Concerns?

This section profiles the three most common implementation issues raised in the public comments submitted regarding Federal/State implementation of the small MS4 program.

How Does the Final Rule Account for Unique Characteristics?

Federal and State small MS4s possess a number of characteristics that set them apart from their municipal counterparts. For example, whereas municipally-operated MS4s largely serve resident populations, many Federal or State-operated MS4s, such as medical clinics and departments of transportation (DOTs), do not. Other types of Federal and State MS4s, such as military bases, prisons, and State universities, serve populations that are different from a typical municipal population. Their unique characteristics might lead Federal or State MS4 operators to question either the need to implement the entire suite of minimum control measures or their ability to comply fully with their Phase II storm water permit. The flexibility within the minimum measures allows Federal and State MS4s to develop a storm water program that comprises the

minimum measures in a way that makes sense for their circumstances.

What If the Operator Lacks Legal Authority?

Three of the minimum control measures (illicit discharge detection and elimination, and the two construction-related measures) require enforceable controls on third party activities to ensure successful implementation of the measure. Some Federal and State operators, however, may not have the necessary legal regulatory authority to adopt these enforceable controls in the same manner as do local governments.

For example, a State DOT that is responsible for the portions of its roads running through urbanized areas may not have the legal authority to impose restrictions on, and penalties against, illicit (i.e., non-storm water) discharges into its MS4 if the source of the discharge is outside the DOT's right-of-way or jurisdiction. As in the case of local governments that lack such authority, State and Federal MS4s are expected to utilize the authority they do possess and to seek cooperative arrangements.

How Can the Program Be Implemented in Areas Where There Are Multiple Regulated Entities?
