To reduce the possibility of a spill or leak caused by a malfunction of a component of the City's sanitary sewer system, the City conducts routine maintenance of the system. Routine inspection and maintenance of the sanitary sewer system works to reduce the

potential for a spill or sanitary sewer overflows (SSOs) and also helps prevent the infiltration of seepage from the sanitary sewer system to the City's MS4.

### 4.5.2 Source Characterization

The City maintains a system of public sanitary sewer pipes to convey wastewater from the City to be treated. The sanitary sewer system, as one complete entity, is included on the City's high TTWQ municipal inventory (Appendix A.3).

### 4.5.3 Best Management Practices

The City implements BMPs from the CASQA Municipal Handbook, as described in the City's JURMP, during sanitary sewer maintenance. There have been no changes to these BMPs during 2010/2011. The City inspects and maintains the sanitary sewer system as part of regular wastewater activities. The City clears blockages and repairs leaks as needed.

### 4.5.4 Program Implementation

The City seeks to eliminate seepage from the sanitary sewer system to the MS4 by routine preventative maintenance of both systems. Routine maintenance of both systems allows the City to find areas that are likely to become problems in the future and make the necessary repairs/replacements before any larger issues arise. Approximately 400 linear feet of pipe were repaired or replaced during the reporting year. The City also continued to conduct flow metering throughout its sanitary sewer system to monitor for evidence of potential problems. A total of 2,050 man-hours were spent maintaining a total of 442,150 linear feet of sanitary sewer line during 2010/2011. Silt and grease were listed as the most common items removed from sanitary sewer lines during maintenance activities. A total of 2,400 linear feet of sanitary sewer line was televised during 2010/2011 to determine if areas of the sanitary sewer were in need of maintenance or repair.

The City has also developed a Fats, Oils, and Grease (FOG) program that targets grease-producing facilities, such as eating establishments. The goal of the program is to reduce grease buildup in the sanitary sewer system, which can cause or contribute to SSOs.

The City maintains a Sanitary Sewer Management Plan (SSMP) which establishes procedures for responding to an SSO. Detailed information about the City's SSO spill response plan is included in the City's JURMP. No SSOs or other significant spills occurred during 2010/2011.

## 4.6 Mobile Municipal Activities, Including Power Washing

### 4.6.1 Background

The City conducts a variety of different mobile municipal activities, typically involving infrastructure maintenance, landscape maintenance, and graffiti removal.

### 4.6.2 Source Characterization

Power washing is no longer used by the Graffiti Removal sector of Neighborhood Services during graffiti removal activities. Therefore, graffiti removal was changed from the only high priority municipal activity on the inventory to a medium TTWQ in 2010/2011 (Appendix A.3). Infrastructure maintenance and landscape maintenance are also listed on the City's medium TTWQ municipal inventory.

### 4.6.3 Best Management Practices

The City implements BMPs for mobile activities as described in the City's JURMP and as applicable to the activity. City personnel are trained to implement BMPs for the specific activity in which they are involved. A more detailed discussion of BMPs for specific mobile activities is included in the City's JURMP; there were no updates to the BMPs implemented during mobile activities during 2010/2011.

### 4.6.4 Program Implementation

During 2010/2011, City personnel continued to implement BMPs during mobile municipal activities such as graffiti removal and landscape maintenance. This year the City continued to paint for graffiti removal instead of using power washing methods, reducing the threat to water quality. Since this change from power washing to painting for graffiti removal is a permanent one, the TTWQ status for graffiti removal has been changed from high to medium. However, if power washing is conducted in the future, City personnel will collect any water generated and dispose of it properly, and the inventory will be updated to reflect the high TTWQ of power washing activities.

One annual routine inspection of graffiti removal activities was conducted during the 2010/2011 reporting period. The City's inspection approach, as described in the JURMP, was implemented for all municipal inspections conducted in 2010/2011, including the inspection of graffiti removal activities. There were no instances of non-compliance relating to mobile municipal activities, and no corrective actions were required based on the inspection of graffiti removal activities during 2010/2011 (see Table 4-4).

## 4.7 Special Events

### 4.7.1 Background

As detailed in the City's JURMP, a variety of different special events are hosted within the City. Notably, the City's largest special event is an annual July 4th celebration.

### 4.7.2 Source Characterization

As required by the Municipal Permit, special events are included on the City's high TTWQ municipal inventory (Appendix A.3).

### 4.7.3 Best Management Practices

As detailed in the City's JURMP, the City has selected BMPs for special events hosted in the City. In general, the goal of the City's special event BMPs are to properly manage trash and litter generated by the event, keep catch basins and other nearby MS4 facilities free of litter/debris from the event, and raise storm water awareness among the vendors and patrons of the event, as applicable. In Kimball Park, for example, the City always requires and charges the event holder for the use of a litter fence to prevent debris from entering the nearby channel. BMPs for special events did not change during 2010/2011.

### 4.7.4 Program Implementation

The City hosted several special events during 2010/2011, including various one-time celebrations and recurring events. Several special events were inspected to ensure the proper implementation of required BMPs, as detailed in the City's JURMP. If any special events do not finish clean up at the time of the inspection, staff requires the remaining housekeeping issues to be resolved within a timely manner. Inspections conducted at special events are tracked using the Microsoft Access database.

There were no notable instances of non-compliance at inspected events that required enforcement. Follow up was conducted as necessary to ensure appropriate housekeeping BMPs were implemented.

## 4.8 Public Reporting of Illicit Discharges and Connections

**Reporting and Response**

Public and municipal reporting is crucial to preventing and eliminating illicit connections and illegal discharges (IC/IDs) from the storm water conveyance system. The Storm Water Hotline provides an effective means for individuals in the City to report suspected IC/IDs. The hotline number is also listed on the City's website and in distributed storm water educational material. Storm water complaints may also be reported through the City's website. All complaints received through the hotline and website are logged into a spreadsheet for documentation and tracking. Each logged

complaint is investigated by City personnel to determine if an IC/ID is present. Responsible parties for any confirmed IC/ID are sought out and educated and/or cited as necessary and required to stop any and all illegal discharges.

Complaints received by the City during the 2010/2011 reporting period and the City's response to each are listed in Table 4-5 at the end of this section. A total of 14 complaints were documented this year.

**Enforcement**

As previously stated, complaints received via the Storm Water Hotline or City website, are included in Table 4-5 at the end of this section. The table also includes a description of how each complaint was resolved during the reporting period. Resolutions to investigated complaints included issuing warnings, corrective actions, and/or citations. Table 4-3, below, summarizes the enforcement actions taken in response to complaints received.

**Table 4-3**
**Enforcement Actions Resulting from Documented Complaints**

| Type | Verbal/Written Warning | Stop Work Order | Administrative Citation | NOV |
|---|---|---|---|---|
| Commercial | 2 | 0 | 2 | 1 |
| Industrial | 1 | 0 | 1 | 1 |
| Mobile | 0 | 0 | 0 | 0 |
| Municipal | 0 | 0 | 0 | 0 |
| Residential | 0 | 0 | 0 | 0 |
| Construction | 1 | 0 | 0 | 0 |

## 4.9 Spill Reporting, Response, and Prevention

The City has documented procedures for preventing and responding to sanitary sewer overflows. As discussed earlier in this section, preventative maintenance is regularly conducted on the City's sanitary sewer system. Additionally, video inspections and sewer surveys are regularly conducted to monitor the condition of the public sanitary sewer lines and to determine the necessity of maintenance. Private lateral lines do not receive preventative maintenance, but the City assists in the containment and cleanup of sewer spills if the spill could potentially reach the City's MS4.

Individuals in the City are encouraged to report any SSOs to the City's Storm Water Hotline. No SSOs or other significant spills occurred during 2010/2011.

## 4.10 Education and Outreach

During 2010/2011, the City continued to educate municipal personnel regarding proper BMP implementation and other storm water and watershed concepts. For example, in June 2011 a training packet that covered general storm water BMPs and emergency procedures for City staff was distributed. Also, a training session regarding the new

Hydromodification requirements for development projects (adopted in January 2011) was conducted in February 2011 for employees in development services. Information regarding the education and outreach conducted for City personnel is described in Section 8 of this Annual Report.

## 4.11 Municipal Component Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

## 4.12 Program Modification and Review

The City's JURMP was updated in March 2008. No changes to the City's municipal component were made during 2010/2011.

**Table 4-4**
**Municipal Inspection Results**

| # | Facility Name | Facility Address | TTWQ | Inspection Date | Corrective Actions Needed |
|---|---|---|---|---|---|
| 1 | Butterfly Park | East 22nd Street and Palm Avenue | High | 3/24/2011 | • Keep parking lots, sidewalks and streets free of excessive sediment and debris. |
| 2 | El Toyon Park | 2005 East 4th Street | High | 3/29/2011 | • Employ adequate erosion prevention measures (e.g., vegetation or physical stabilization). |
| 3 | Graffiti Removal (Mobile Activity) | Kimball Skate Park, 16th Street | High | 3/23/2011 | • No corrective actions |
| 4 | Kimball Park | 12th Street & D Avenue | High | 3/24/2011 | • Keep discharge locations free of excessive sediment and debris.<br>• Keep the trash/recycling area free of litter and debris. |
| 5 | Las Palmas Municipal Pool | 1800 East 22nd Street | High | 3/23/2011 | • Provide storm water training for appropriate employees.<br>• Maintain a current log of employees who have participated in storm water training.<br>• Keep the trash/recycling area adequately covered (closed lids or permanent overhead cover).<br>• Keep the trash/recycling area free of litter and debris. |
| 6 | Las Palmas Park | 1800 Newell Street | High | 3/23/2011 | • Keep parking lots, sidewalks and streets free of excessive sediment and debris.<br>• Employ adequate erosion prevention measures (e.g., vegetation or physical stabilization).<br>• Keep the trash/recycling area adequately covered (closed lids or permanent overhead cover).<br>• Keep the trash/recycling area free of litter and debris. |
| 7 | National City Municipal Golf Course | 1439 Sweetwater Road | High | 3/24/2011 | • Keep discharge locations free of excessive sediment and debris.<br>• Provide storm water training for appropriate employees.<br>• Maintain a current log of employees who have participated in storm water training.<br>• Properly store material and waste stockpiles to prevent transport in runoff.<br>• Keep the trash/recycling area adequately covered (closed lids or permanent overhead cover).<br>• Keep the trash/recycling area free of litter and debris.<br>• Store outdoor materials that pose a threat to water quality appropriately (covered and/or in closed containers).<br>• Maintain a written spill response plan. |

**Table 4-4 (Continued)**
**Municipal Inspection Results**

| # | Facility Name | Facility Address | TTWQ | Inspection Date | Corrective Actions Needed |
|---|---|---|---|---|---|
| 8 | Paradise Creek Educational Facility | West 19th Street and Coolidge Avenue | High | 3/24/2011 | • Keep the site free of excessive litter and debris using dry methods.<br>• Keep discharge locations free of excessive sediment and debris. |
| 9 | Public Works East Yard | 2100 Hoover Ave | High | 3/23/2011 | • Keep the site free of excessive litter and debris using dry methods.<br>• Store outdoor materials that pose a threat to water quality appropriately (covered and/or in closed containers).<br>• Equip liquid storage containers/tanks with secondary containment. |
| 10 | Public Works West Yard | 2100 Hoover Ave | High | 3/23/2011 | • Keep the site free of excessive litter and debris using dry methods.<br>• Keep the trash/recycling area free of litter and debris. |
| 11 | Sweetwater Heights Park | Cagle Street and Stockman Street | High | 3/24/2011 | • Keep exposed parking areas free of significant spills and leaks. |

**Note:** Roads, streets, highways, and parking lots; the MS4; and the sanitary sewer system were inspected via the maintenance effort described earlier in this section.

**Table 4-5**
**Summary of Documented Public Complaints**

| # | Date | Complaint Type | Origin of Complaint | Location | Nature of Complaint | Investigation Results |
|---|---|---|---|---|---|---|
| 1 | 7/1/2010 | Commercial | Fire Dept | Bush Power Brakes 25 E 17th St | Water running in gutter. | Owner was washing parking lot and water discharged to gutter. Discharge was stopped during inspection. |
| 2 | 8/18/2010 | Residential | Police Dept | Division St & Harbinson Ave | Large truck dumping into storm drain. | Investigation could not confirm complaint. |
| 3 | 9/20/2010 | Commercial | Citizen | 1900 E Plaza Blvd | Trash along banks of channel behind the Old Jimmy's restaurant. | Public Works cleaned the channel. |
| 4 | 9/24/2010 | Commercial | Citizen | M & N Furniture 125 W 22nd St | Small discharge of cleaning water from property. | Discharge was stopped. Business was educated about proper disposal of wash water. The business was added to the schedule for routine inspections and had no violations when visited in October 2010. |
| 5 | 10/5/2010 | Commercial | Public Works Dept | Laundromat 1206 E 18th St | Sewer lateral leak due to a lint clog | Public Works deployed staff, flusher, and crew trucks to capture the leaked material and unclog the lateral. Tenant was billed. |
| 6 | 10/19/2010 | Residential | Public Works Dept | 2421 1st St | Oil flowing off driveway with rain water. | Public Works inspected the site and observed minimal flow to grassy area. No significant source noted. No further actions necessary. |
| 7 | 11/10/2010 | Commercial | Engineering Division | McDonalds 1630 Highland Ave | Employees washing out the property's drive-through with a hose & soap in the morning. | Discharge was stopped prior to inspection. Manager on site reported that new employee was unaware of storm water regulations and would be properly trained. Educational materials were distributed and a verbal warning was issued. |
| 8 | 12/15/2010 | Residential/ Construction | Building Division | 2127 O Ave | Accumulation of materials in yard. | Materials outside were stored in a manner that did not pose a significant threat to storm water quality. Tenant was instructed to contain a small oil bucket underneath car. |

**Table 4-5 (Continued)**
**Summary of Documented Public Complaints**

| # | Date | Complaint Type | Origin of Complaint | Location | Nature of Complaint | Investigation Results |
|---|---|---|---|---|---|---|
| 9 | 12/22/2010 | Construction | Sweetwater Authority | 2100 Highland Ave | Mud running off of property. | Inspector indicated the proper BMPs to be implemented on site to control sediment transport. Follow-up inspections were conducted and additional monthly inspections continued during the wet season while construction was active to ensure compliance. |
| 10 | 2/3/2011 | Municipal | Citizen | CalTrans District 11 - Inside fenceline under W-54/S I-5 interchange | Excessive sprinkler water draining into Sweetwater River. | CalTrans was contacted since the sprinklers are in their jurisdiction. |
| 11 | 3/17/2011 | Construction | Citizen | 901 Euclid Ave | Uncovered excavated soil in parking lot trenching site. | Inspector verified no discharge of sediment occurred. Contractor implemented effective BMPs to contain sediment while inspector was on site. |
| 12 | 5/16/2011 | Commercial | Citizen | 2525 Southport Way, Suite 7 | Sewage going into storm drain. | Discharge was stopped and sewage contained within the inlet. Public Works used vac truck to remove and dispose of sewage (approximately 25 gallons). An administrative citation (#4284) and a NOV were issued on 5/17/2011. Business was also held responsible for Public Works cost recovery. |
| 13 | 6/1/2011 | Commercial | Public Works Dept | 3400 East 8th St | Grease backflow from clean-out on site parking lot. | Discharge was stopped. Rescue Rooter plumber removed blockage due to grease and Public Works vacuumed and disposed of all loose grease and sewage. An administrative citation (#4285) and a NOV were issued on 6/8/2011. Business was also held responsible for Public Works cost recovery. |
| 14 | 6/8/2011 | Construction | Building Division | 1540 E Plaza Blvd | BMPs not properly implemented. | Inspector indicated the proper BMPs to be implemented to prevent any potential sediment transport. BMPs were implemented and additional inspections will be conducted while the site is active to ensure compliance. |

# 5.0 INDUSTRIAL AND COMMERCIAL

## 5.1 INTRODUCTION

During 2010/2011, the City continued to implement a program to mitigate urban runoff pollution from the areas and activities of industrial and commercial businesses. Through various aspects of the industrial and commercial program, the City aims to reduce the amount of pollutants discharged from these facilities.

### 5.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the industrial and commercial component during the 2010/2011 reporting period are presented in the following bulleted list. The following subsections of this section provide more details on how the City complied with the Municipal Permit during the reporting period.

- The City met the Municipal Permit requirement of inspecting at least 25 percent of its stationary industrial and commercial inventory.
- The City met the Municipal Permit requirement of inspecting 100 percent of its inventoried high TTWQ industrial and commercial facilities.
- The City sent 328 inspection report mailings to both businesses and property owners detailing corrective actions.
- The City conducted 81 follow-ups at industrial and commercial businesses to verify corrective actions had been taken and ensure compliance.
- The City conducted pollutant discharge potential assessment (PDPA) scoring at inspections to aid in source identification efforts.

## 5.2 STATIONARY INDUSTRIAL AND COMMERCIAL SITES / SOURCES ELEMENT

### 5.2.1 BACKGROUND

The City's industrial and commercial inventories, which can be found in Appendix A.4 and A.5, respectively, include all stationary and mobile businesses known to be operating in the City that are required to be included on the City's inventories. Stationary facilities in the City include, but are not limited to, manufacturing facilities, auto repair shops, restaurants, wholesalers, and contractors. As discussed in the following subsections, the City requires industrial and commercial businesses to implement pollution prevention measures and designated minimum BMPs to mitigate the impacts of business' activities on water quality.

### 5.2.2 SOURCE CHARACTERIZATION

The City's industrial and commercial inventories are included as Appendix A.4 and A.5, respectively. The inventories include both stationary and mobile businesses, as required by the Municipal Permit. The inventories were updated in 2010/2011.

Information on how the City prioritizes the industrial and commercial inventories based on TTWQ is discussed in detail in the City's JURMP. The City considers factors including those listed below when prioritizing the inventories:

- Results from previous inspections and institutional knowledge
- Presence of significant exposed outdoor storage or activities
- Consideration of downstream water body and whether the business is likely to discharge pollutants for which the water body is impaired
- Proximity to the receiving water body
- Facility size
- Industrial Permit subjectivity

The City's updated inventories include a total of 863 stationary industrial and commercial facilities.

### 5.2.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

Industrial and commercial businesses in the City are required to implement pollution prevention methods and other BMPs to reduce or potentially eliminate the generation of pollutants from business areas/activities. The City has established a set of minimum BMPs based on the CASQA Industrial and Commercial Handbook. The requirements include BMPs applicable to all facilities as well as activity-specific BMPs. The City's BMP requirements are described in more detail in the City of National City Best Management Practice Manual, which is an attachment to the City's JURMP. The City's BMP requirements for industrial and commercial businesses did not change during 2010/2011.

### 5.2.4 PROGRAM IMPLEMENTATION

**Industrial and Commercial Inspections**

During 2010/2011, the City conducted storm water compliance inspections at selected stationary industrial and commercial facilities; Table 5-1 provides a summary of the industrial and commercial site visits. The purpose of the inspections is to confirm that the City's minimum BMPs are being implemented at stationary industrial and commercial facilities.

Table 5-1, below, provides a summary of the industrial and commercial site visits. All of the high TTWQ sites were selected for inspection, and additional facilities were also selected for routine inspection based on compliance history, TTWQ, and the length of time since the last inspection visit.

**Table 5-1**
**Summary of Industrial and Commercial Inspections**

| Facility Category | Full Inspections Conducted | Percentage of Total Inventory |
|---|---|---|
| High TTWQ Sites* | 77 | 9%<br>(100% of high TTWQ sites) |
| Additional Sites | 139 | 16% |
| **All Stationary Inventoried Sites** | **863** | **25%** |

* All high TTWQ sites were visited during 2010/2011; if the business had moved out a full inspection was not necessary and the inventory was updated for future inspection efforts.

Facility inspections were conducted in accordance with the protocol set forth in the City's JURMP. Inspections involved a thorough examination of the facility and all outdoor activities. BMP deficiencies and corrective actions were discussed with facility personnel present during the inspection and recorded on the City's industrial and commercial inspection form (Attachment 5.1).

During 2010/2011, the City continued to use the standard inspection form and associated inspection reports that were updated in 2009/2010. Facility personnel at inspected businesses had reported that many of the corrective actions on the inspection report were related to shared areas or areas maintained by the property owner or property management company, the inspection form was updated to collect information regarding areas where responsibility for BMP implementation may be shared. Check boxes indicating "shared responsibility" were added to the form for each BMP assessment item on the form. These boxes were checked whenever the facility personnel present during the inspection reported that the BMP was a shared responsibility between the individual business, other tenants in a multi-suite complex, and/or the property management company/property owner. Note that the information collected is whether or not the responsibility is reportedly shared, not a determination of whether or not legally the responsibility is shared. In some cases the business may report that the responsibility is shared, but other parties, such as the property owner, may not agree.

The inspection reports were also updated to group the types of corrective actions listed on the inspection report into the following categories, which were described in a cover letter accompanying the inspection report:

- **Business Corrective Actions**, which included corrective actions specific to business activities.
- **Specific Action(s) Required by the Business to Comply with the Requirements of the General Industrial Permit**, which included corrective actions relating to

the State of California General Industrial Permit (State Water Resources Control Board Order No. 97-03-DWQ).

- **Shared or Communal Area Corrective Actions**, which included corrective actions that are related to shared or communal areas and may not be solely the responsibility of the individual business.

When any corrective actions regarding a shared or communal area are included on the inspection report, a copy of the same inspection report was also provided to the property owner. A slightly different cover letter that explains why the property owner or manager is receiving the report is included with these letters. The property owner/manager cover letter explains the different types of corrective actions, described above, and explains that deficiencies listed under the "Shared or Communal Area Corrective Actions" heading are deficiencies that may not be the responsibility of the individual business and are being provided to both the property owner and the business to ensure that action is taken by the appropriate party. This updated method of inspection result notification is more straightforward and easier for the business representatives to understand, which increases the chance that the corrective actions will be implemented in a timely manner. Additionally, notifying property owners of corrective actions observed in communal areas should also contribute to BMPs being implemented in a timely manner.

The City also assesses PDPA scores during the inspections as part of an additional data collection effort. The PDPA scores are marked on the City's inspection form in Attachment 5.1. More information about the results of this process is presented in Section 12 of this JURMP Annual Report.

During the inspection process, the City also checked Industrial Permit compliance status when applicable. Businesses observed to be in violation of the Industrial Permit are included in Table 5-2. Table 5-3, at the end of the section, summarizes the results of the 321 site visits conducted during 2010/2011. A total of 216 full inspections were completed as part of the City's 2010/2011 routine industrial and commercial inspection program. The remainder of the sites were visited, but during the visit were found to have moved, be duplicates of other businesses, be mobile businesses, be out of the City's jurisdiction, be inactive and difficult to contact, or not to be conducting activities for which inclusion on the City's inventory is necessary.

Facilities indicated to have an "in progress" resolution status in the 2009/2010 JURMP Annual Report were inspected and all issues were resolved before the end of 2010. Facilities that were recommended for follow-up this year are noted in the table. The City conducted 81 follow-up inspections in 2010/2011, and the resolution status of these follow-ups is included with the routine inspection results in Table 5-3. The City provided copies of inspection results to each facility that received a full inspection in 2010/2011. The inspection report included the findings of the inspection and all required corrective actions recorded by the inspector.

The City did not rely on third party inspections to satisfy its industrial and commercial inspection requirements during the reporting period. The City does not presently maintain a third party inspection program.

**General Industrial Permit**

Industrial Permit compliance status was evaluated during the industrial and commercial inspection process. If the business was new and had not previously been inspected, or if the business had recently changed activities, the inspector gathered information about the business activities that occur on site and assigned or reassigned the business's standard industrial classification (SIC) code(s). The inspector then determined Industrial Permit subjectivity based on SIC code. Violations of any aspect of Industrial Permit requirements were recorded on the standard industrial and commercial inspection form and are presented in Table 5-2. The table includes businesses directed to file a Notice of Intent (NOI) and develop a Storm Water Pollution Prevention Plan (SWPPP) and monitoring program, as well as businesses that had filed an NOI but had failed to develop a SWPPP and monitoring program. The table also includes facilities that could potentially gain exemption from Industrial Permit requirements by completing notice of non-applicability/no exposure certification (NONA/NEC) paperwork. Each business was notified of any Industrial Permit-related non-compliance by the inspector.

**Education and Outreach**

In addition to checking for compliance with the City's requirements and the Industrial Permit, inspections provide a venue to provide site-specific one-on-one education regarding storm water concepts and BMPs. Educational materials were provided as applicable to businesses, including the City's Restaurant/Food Industry BMP Fact Sheet (Attachment 5.2) and the Industrial and Commercial "Preventing Urban Runoff Pollution" Trifold (Attachment 5.3).

Additionally, the City sent 362 notifications of the City's JURMP BMPs for industrial and commercial businesses by March 7, 2011, to ensure that all businesses that had not been inspected since the JURMP Update in March of 2008 would be notified of the updated requirements.

**Enforcement**

Several industrial and commercial facilities were observed to be out of compliance with the City's municipal storm water ordinance and/or the Industrial Permit during inspections conducted in 2010/2011. Additionally, the City received complaints through the City's storm water hotline. Details of the industrial and commercial complaint investigations are included in the Summary of Documented Public Complaints in Section 4 of this Annual Report. The City issued the following enforcement actions in response to BMP deficiencies during inspections and other complaints:

- 328 inspection report mailings sent to businesses and property owners
- 22 NOVs

- 16 Administrative citations
- 3 Verbal warnings

There were no instances of noncompliance found to present a significant threat to human health or the environment observed at stationary businesses during 2010/2011, so none were reported to the RWQCB.

## 5.3 MOBILE SOURCES

### 5.3.1 BACKGROUND

Due to the nature of activities of most mobile businesses, a major area of concern tends to be illegal discharges. In general, mobile businesses can be hard to identify, as many may not have City business licenses. Additionally, because the activities of mobile businesses do not occur in one fixed location, inspections of such businesses are impractical.

### 5.3.2 SOURCE CHARACTERIZATION

Known mobile industrial and commercial businesses, as described in the City's JURMP, are included on the City's inventory and are marked as mobile. During 2008/2009, the Regional Industrial and Commercial Workgroup also developed a web-based mobile business database for use by all Copermittees. The goal of developing this database is to allow Copermittees to share information about mobile businesses, which may be active in more than one jurisdiction. The City contributed its mobile business inventory for upload to the regional database in 2009/2010.

### 5.3.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

BMPs for stationary industrial and commercial facilities, as discussed earlier in this section, are required to be implemented for mobile activities, as applicable. BMPs for mobile businesses, including key principles such as proper collection and disposal of any discharge, are discussed in the City's JURMP.

During 2009/2010, the Regional Industrial and Commercial Workgroup, in which the City was an active participant, adopted regional mobile business BMP standards. These standards were devised to create a uniform set of minimum BMPs for mobile businesses operating within the region. The Workgroup is still developing a mobile business BMP notification template that Copermittees may choose to use to notify mobile businesses operating their jurisdiction.

### 5.3.4 PROGRAM IMPLEMENTATION

While mobile businesses are not as straightforward to inspect as fixed industrial and commercial facilities, the City has in place a program of education and enforcement to regulate mobile activities.

**Education and Outreach**

All businesses conducting mobile activities within the City's jurisdiction are required to apply for and maintain a business license with the City of National City, regardless of where the business may be based. The Industrial and Commercial "Preventing Urban Runoff Pollution" Trifold is provided to each person applying for a business license in the City, including mobile businesses. The trifold brochure, included in Attachment 5.3 of this Annual Report, clearly prohibits the discharge of wash water and provides a list of required BMPs applicable to industrial and commercial businesses. Mobile businesses maintaining a City business license are included on the Commercial Inventory in Appendix A.5. No known mobile businesses conduct industrial activities in the City at this point in time. To aid in tracking mobile businesses that may conduct activities within its jurisdiction in the future, the City also collaborates with other jurisdictions in the County of San Diego in maintaining a county-wide list of mobile businesses.

Additionally, the City sent 362 notifications of the City's JURMP BMPs for industrial and commercial businesses by March 7, 2011, to ensure that all businesses that had not been inspected since the JURMP Update in March of 2008 would be notified of the updated requirements. In many cases, those businesses that had not been visited were mobile businesses.

**Reporting and Enforcement**

In addition to regulation through business licenses, City staff are trained to report inappropriate mobile business activities to the City's storm water hotline. The City responds to all calls to the City's storm water hotline regarding mobile businesses. Notably, there were no complaints made to the City's storm water hotline regarding mobile businesses during 2010/2011.

There were no instances of noncompliance of mobile businesses that were believed to present potential threats to human health or the environment observed during 2010/2011, so none were reported to the RWQCB.

## 5.4 Industrial and Commercial Component Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

## 5.5 Program Review and Modification

No modifications were made to the City's industrial and commercial component during 2010/2011.

**Table 5-2**

# 6.0 RESIDENTIAL

## 6.1 INTRODUCTION

Land use in the City of National City is largely residential. Due to the large residential area, activities that take place, these areas have the potential to impact the quality of receiving waters. Residential activities such as vehicle washing, over-irrigation, and home maintenance can potentially contribute pollutants to the City's MS4 if BMPs are not implemented. Additionally, household hazardous waste (HHW) can contribute pollutants to the City's MS4 if not disposed of properly. Pollutants of concern include sediment, pesticides, herbicides, fertilizers, surfactants, oil and grease, and metals. The City has worked to implement a range of programs to address these residential activities with the goal of reducing pollutant loads associated with such activities. The City recognizes the need for educational efforts and opportunities designed specifically for residents and residential activities.

The following sections present activities conducted during this reporting period. These activities are associated with the residential component of the JURMP and include conducting ongoing HHW collection events, distributing educational materials, and participating in community events.

### 6.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the residential component during the 2010/2011 reporting period are presented in the following bulleted list. The following subsections of this section provide more details on how the City complied with the Municipal Permit during the reporting period.

- The City began to develop a 2012 Calendar through a storm water art contest at local schools. The calendar will be distributed in both English and Spanish in 2011/2012 and informs residents about preventing pollution in San Diego Bay and neighboring waterways.
- The City collaborated with the cities of Chula Vista and Imperial Beach to make HHW disposal events available to residents. The total amount of HHW collected from residents of all three cities was 315,470 pounds. Door-to-door pick up service was available for the disabled and senior communities.
- The City hosted three large item disposal events. The event allowed residents to dispose of large household items (not including HHW), such as unwanted furniture and large appliances.
- At least 146 code violations related to storm water quality were addressed in residential areas and corrected by the City's Code Enforcement staff.

## 6.2 SOURCE CHARACTERIZATION

The City has identified high TTWQ residential areas within its jurisdiction and has designated various high TTWQ residential activities. To reduce pollutant discharges from these high TTWQ areas and activities, the City designated specific BMPs in the 2008 JURMP. These BMPs did not change during 2010/2011.

### 6.2.1 HIGH TTWQ ACTIVITIES

During the 2010/2011 reporting period, as outlined in the City's JURMP, the City continued to identify the following activities as high TTWQ:

- Automobile repair and maintenance
- Automobile washing
- Automobile parking
- Home and garden care activities and product use, including disposal
- Disposal of trash and pet waste

### 6.2.2 HIGH THREAT TO WATER QUALITY AREAS

In addition to these activity-based priorities, the City has noted several residential areas that pose higher threats to water quality. High priority residential areas are designated by considering complaint investigations, institutional knowledge, Dry Weather Monitoring data, and criteria as defined in the Municipal Permit. The list of high priority residential areas is subject to re-evaluation based on new observations and data collected during the reporting period.

The following five residential areas have been designated as high TTWQ:

**Division Avenue Area**
The residential area located near Division Street, east of Highland Avenue, including residences located on East 2nd Street, Melrose Street, Eta Street, Fig Court, and Scott Drive. See Figure 6-1. Past dry weather monitoring programs have detected elevated levels of ammonia and detergents just downstream of these residential areas.

**Paradise Creek Area, between F and L Avenues**
The residential area that runs along the Southern side of Paradise Creek between F and L Avenues, including residences located along East 12th Street, East 13th Street, and East 14th Street. See Figure 6-2. Past dry weather monitoring programs have detected elevated bacteria, ammonia, and oil and grease levels.

**East 8th Street Area**
The residential area along East 8th Street, including residences on East 8th Street and East 9th Street, between L Avenue and N Avenue. See Figure 6-3. This area borders Paradise Creek and has been found to have the same elevated constituents as the areas between F and L Avenues.

**Grove Avenue Area**
The residential area surrounding Grove Avenue, including residences along East 14th Street, Grove Avenue, Stancrest Lane, and Orange Street. See Figure 6-4. This area has been identified during previous dry weather monitoring programs as a source of trash, ammonia, and detergents.

**Arcadia Place Area**
The residential area surrounding Arcadia Place, including residences west of Harbison Avenue along East 11th Street, East 10th Street, and East Plaza Boulevard. See Figure 6-4. This area has been identified during previous dry weather monitoring programs as a source of ammonia and detergents.

No new residential areas were added during 2010/2011. However, if future residential complaints, Dry Weather Monitoring Program results, or observations made by City staff indicate evidence of significant high TTWQ activities in these or other areas of the City, they will be designated as high TTWQ.

## 6.3 Best Management Practice Requirements

The City has continued to provide information regarding the implementation of pollution prevention measures, such as good housekeeping practices, for residential areas and activities. Section 5 of the City's BMP Manual includes lists of general residential BMP requirements and BMP requirements for specific residential activities. The manual is included in Appendix C of the City's JURMP. General residential BMPs include erosion control; non-storm water discharge management, including elimination of IC/IDs; and good housekeeping measures, such as sweeping rather than hosing off driveways and sidewalks. Specific BMPs for the high priority activities outlined above are also included in the City's BMP Manual Section 5.

## 6.4 Program Implementation

The City's residential program has been designed to ensure that adequate City enforcement, complaint investigation, and complaint reporting is conducted in residential areas. This ensures that pollutants associated with residential activities and areas are minimized. Additionally, the residential program implements an education component so that residents are made aware of appropriate BMPs, including pollution prevention methods that should be used during certain activities. During 2010/2011 the City also continued to participate in the Regional Residential Education Program.

### 6.4.1 Training, Education, and Outreach

The City has continued to conduct training, education, and outreach activities for residents, which are described below. For additional information on the City's educational efforts and the educational materials distributed to its residents please refer to Section 8 of this Annual Report.

**Distribution of Educational Material**

The City began to develop a 2012 Storm Water Calendar after selecting the winners of a local art contest at elementary schools within the City. The calendar will be distributed in 2011/2012 in both English and Spanish and informs residents about pollutants found in San Diego Bay and neighboring waterways. It describes that pollutants such as fertilizers, pesticides, metals, paints, oil and grease and other debris can be transported from residential areas to the ocean. The theme for the calendar is "By Keeping Our Community Clean, We Can Keep The Ocean Clean" and each month will highlight a child's winning entry from the art contest.

**Website**

Additional information regarding the City's storm water program, pollution prevention measures, and BMPs is posted and continually updated on the City of National City's website (http://www.nationalcityca.gov/). Storm water-related information can be found under the Development Services Department tab in the Engineering Division section. The direct link to the City's storm water page is http://www.nationalcityca.gov/index.aspx?page=164.

**Household Hazardous Waste Disposal Program**

The City continues to work with the City of Chula Vista to allow City residents to drop off HHW at Chula Vista's Household Hazardous Waste Collection Facility. The Household Hazardous Waste Collection Facility is the primary location for hazardous waste collection in the South Bay, receiving HHW from the City of National City, the City of Imperial Beach, and the City of Chula Vista. Curbside pickup was made available to the disabled and elderly communities. The amount of waste collected only from the 123 participating residents of National City is not available; however, the total amount of HHW collected from residents of all three cities is 315,470 pounds from 2,834 participants.

**Other Waste Disposal Programs/Activities**

In addition to proper HHW disposal, the City encourages residents to recycle used oil. The City maintains several Certified Used Oil Recycling Centers for residential oil disposal. The volume of used oil dropped off at the collection centers is not available.

The City's Public Works Department held three trash collection events (one in November and two in June) during this reporting period in conjunction with EDCO Disposal Company. Information about the trash collection events was sent out to all residents with their trash bills. During these events, residents were encouraged to dispose of any unwanted large items from their homes, such as furniture and appliances. In total, 1,916 vehicles dropped off over 826 tons of waste during these events.

In addition, the National City Chamber of Commerce hosted a free electronics waste collection event at Westfield Plaza Bonita Mall on April 9 and 10, 2011. Residents and businesses were encouraged to bring a variety of electronics waste for proper disposal.

### 6.4.2 Compliance and Enforcement

**Public Complaints**

The City continues to implement compliance and enforcement measures by identifying potential sources of pollutants in residential areas from Dry Weather Monitoring Program data, complaints received by the Storm Water Hotline, and observations made by the City's municipal personnel. If a potential threat to water quality is present, the City provides a verbal warning, written warning, notice of correction, and/or NOV as applicable. The City received and addressed three residential-related complaints during this reporting period. Complaints were submitted through the Storm Water Hotline or internally through the City's Development Services or Public Works departments. All residential complaints were promptly resolved as detailed in the Summary of Documented Public Complaints in Section 4 of this Annual Report.

**Code Enforcement**

In addition to complaints to the storm water hotline, City code enforcement staff spend time in residential areas, checking for compliance with the City's Municipal Code. The correction of at least 146 residential code violations relating to potential threats to water quality in 2010/2011 had potential direct or indirect benefits for receiving waters. Violations corrected included seven cases of abandoned materials, 12 cases of dumping, 44 cases of trash accumulation deemed a public nuisance, 73 cases of prohibited junk storage, nine cases of littering, and one case of illegal auto repair. Enforcement is used as necessary to correct the violation. For example, one NOV was issued to a resident with a leaky vehicle.

## 6.5 Residential Component Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

## 6.6 Program Review and Modification

The City's JURMP was last updated in March 2008. No changes to the City's residential component have been made since that time.

**Figure 6-1**

# 7.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION

## 7.1 INTRODUCTION

In accordance with the September 10, 2008 RWQCB adoption of Addendum No. 2 to Order No. R9-2007-0001, the City will submit the 2010/2011 Illicit Discharge Detection and Elimination section and attachments to the RWQCB no later than December 15, 2011.

# 8.0 EDUCATION COMPONENT

## 8.1 INTRODUCTION

During 2010/2011, the City continued to provide education and outreach to a variety of audiences within the City. The City's education program targets municipal personnel, industrial and commercial businesses, construction site owners and operators, residents, and underserved communities. The City aims to reduce storm water pollution by increasing awareness about storm water and promoting the implementation of pollution prevention measures and BMPs. Through education and outreach, the City works to foster change in both the attitude and behaviors of the regulated community.

### 8.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the education component during the 2010/2011 reporting period are presented below. The following subsections of this section provide more details on how the City complied with the Municipal Permit during the reporting period.

- On-site education regarding storm water issues and site-specific BMPs was provided to several municipal employees during routine facility inspections.
- The "Construction Site Best Management Practices" handout was distributed with all construction-related permits issued, including building permits, during the 2010/2011 reporting year.
- Restaurant and food industry personnel were educated on proper site-specific BMPs and provided a BMP handout on storm water issues common to food-related facilities.
- All businesses, including mobile businesses, applying for a new business license during the 2010/2011 reporting year received the "Preventing Urban Runoff Pollution" BMP Trifold.
- San Diego County's Negocio Verde Environmental Justice Task Force held an Automotive Body and Repair Free Bilingual Compliance Workshop in the City.
- The City made an estimated 10,370 impressions through educational outreach material and activities.

## 8.2 STAFF TRAINING ELEMENT

During 2010/2011, the City provided training and educational outreach to its municipal personnel. In February 2011, a training session on the Hydromodification requirements adopted in January 2011 was attended by seven development services employees. The training reviewed hydromodification concepts and discussed the new requirements along with implementation and applicability concerns. In April 2011, a training session

was given on general SUSMP requirements for all priority and non-priority development projects. This general SUSMP training was provided to several Development Services staff members in the Engineering, Building, and Planning Divisions. Additionally, in June 2011 a training packet that covered general storm water BMPs and emergency procedures for City staff was distributed. Municipal personnel were encouraged to report any IC/IDs observed to the appropriate City staff and to educate other municipal personnel and the general public about storm water pollution prevention.

The City's Storm Water Compliance Inspector previously completed the California Environmental Protection Agency Basic Inspector Training Course and used those skills to coordinate compliance within the various components of the City's storm water program during 2010/2011. During routine municipal inspections, the City's Consultant provided site-specific education to several Parks Division, Public Works, and Graffiti Abatement staff.

## 8.3 EDUCATIONAL OUTREACH ELEMENT

In addition to municipal staff, the City has continued to provide education and outreach to industrial and commercial businesses, construction site owners and developers, residential areas, and underserved audiences. These efforts promote storm water awareness and BMP implementation.

### 8.3.1 INDUSTRIAL AND COMMERCIAL BUSINESSES

As required by the Municipal Permit, the City inspects its inventoried businesses to evaluate compliance with the City's BMP requirements and provides site-specific education outreach to business owners and operators. Violations of the City's BMP requirements are corrected through enforcement actions as necessary. Site-specific information relating to the facility's activities was discussed with businesses personnel during inspections. The "Everything that flows down into a storm drain" brochure (Attachment 8.1) was also provided during most inspections of industrial and commercial businesses.

All businesses that applied for a business license in the City received the Industrial and Commercial "Preventing Urban Runoff Pollution" Trifold, as seen in Attachment 5.3. In this way, even businesses that were not slated for inspection during 2010/2011 received storm water education.

Again this year, the City made an additional effort to educate restaurant and food industry personnel on proper BMPs. A double-sided fact sheet was distributed to all food-related businesses and highlighted the six most common issues at food-related facilities (Attachment 5.2). In addition, long-term solutions to prevent costly and ineffective cleanup of grease spills was presented. Contact information for the City's compliance inspector and for the Storm Water Hotline was also included.

The City of National City worked with the County of San Diego and other members of the Negocio Verde Environmental Justice Task Force to host an Automotive Body and Repair Free Bilingual Compliance Workshop on September 22, 2010. The workshop presented ways to be in compliance with air pollution, hazardous material, and storm water regulations. City code enforcement staff made a presentation and was on hand to explain the City ordinances.

#### 8.3.1.1 Mobile Businesses

Mobile businesses, specifically mobile car detailers or power washers, are considered a high TTWQ due to the nature of the business activities and the likelihood of prohibited non-storm water discharges. Mobile businesses are not confined to a single area and many do not have City business licenses, making them difficult to identify. The City will continue to respond to complaints regarding mobile businesses and provides one-on-one verbal BMP education and literature during the complaint investigation as applicable. All businesses, including mobile businesses, applying for a new business license during the 2010/2011 reporting year received the "Preventing Urban Runoff Pollution" Trifold. This pamphlet includes minimum BMPs for three commonly mobile professions: power washing, car washing, and landscaping services. Information about the storm drain conveyance system and BMPs applicable to mobile business activities were also made available during 2010/2011 on the City's website. Additionally, the City sent 362 notifications of the City's JURMP BMPs for industrial and commercial businesses by March 7, 2011, to ensure that all businesses that had not been inspected since the JURMP Update in March of 2008 would be notified of the updated requirements.

### 8.3.2 Construction Site Owners and Developers

Due to the nature of their activities, construction sites have the potential to discharge many types of pollutants to receiving waters if not managed properly. Many construction site owners, contractors, and developers visit the City's Engineering Division to apply for necessary permits. Through this interaction with City staff, owners and developers are able to gain insight on watershed concepts, potential pollutants, and required BMPs. Information about the storm drain conveyance system and BMPs applicable to construction activities were also made available during 2010/2011 on the City's website.

The City provided various construction site-specific educational materials targeting storm water concepts during the 2010/2011 reporting year. The distributed educational materials are described below.

- The Construction Site BMP Fact Sheet or "Blue Sheet" (Attachment 3.1) describes specific BMPs for construction activities including soil stabilization and erosion prevention, sediment containment, materials and equipment management, non-storm water discharge control, and drainage control. This sheet was distributed

with all permits issued, including building permits; implementing the BMPs listed on the sheet is a condition of the permits.

- The National Pollutant Discharge Elimination System (NPDES) Project Applicability Form or "SUSMP Checklist" (Attachment 2.1) was completed by all projects applying for construction and building permits. Once submitted, the City reviewed the checklist and prioritized the projects. Requirements to ensure compliance with the Municipal Permit and General Construction Permit were presented to the applicant and further discussed to ensure the applicant was educated on the process.
- A copy of JURMP Appendix C, which contains a list of required construction BMPs, is made available upon request for proponents of construction activities within the City. All JURMP BMPs are also posted on the City's website.

### 8.3.3 Residential Areas

Since the City is mainly composed of residential areas, it is important to reach this particular audience through educational outreach programs. The City continued to make a variety of flyers, brochures, website postings, and other educational material available to its residents.

**Storm Water Calendar**

The City began to develop a 2012 Storm Water Calendar that will be distributed to schools and residents in 2011/2012. The calendar will present information in both English and Spanish and informs residents about pollutants found in San Diego Bay and neighboring waterways, and describes that pollutants such as trash, HHW, and bacteria from pet waste can be transported from residential areas to the ocean. The calendar will also provide the dates of the 9th Annual Creek to Bay Cleanup event and the Coastal Cleanup Day. See Section 9 of this Annual Report for a more detailed description of these events.

During 2010/2011, an art contest was arranged for 3rd graders in the City, which will again provide images for the calendar. Contest announcement flyers for teachers (Attachment 8.2) and for 3rd grade students and their families (Attachment 8.3) were distributed to provide information about the contest as well as the City's storm water program. More information about the development of the 2012 calendar is included in the Public Participation Component Section 9 of this Annual Report.

**School Education and Outreach**

The 2012 Storm Water Calendar art contest was held in conjunction with a lesson about storm water concepts for third grade elementary school students throughout the City. The resulting 2012 calendar will provide year round education on the connection between our communities' activities and the health of the oceans.

**City Website**
The City's website (http://www.nationalcityca.gov/) is another way in which City residents can become familiar with the design and intended use of the storm drain system, HHW, alternatives to hazardous household products, find information regarding volunteer opportunities, and applicable City contact information.

### 8.3.4 UNDERSERVED COMMUNITIES

The City is a growing community that is diverse in culture. According to a door-to-door storm water survey held in April and May of 2009, one third of the 373 residents encountered in the high TTWQ residential areas preferred to speak in Spanish. A small fraction spoke Tagalog as their preferred language. To address the unique demographics of the City, the City's Storm Water Hotline accepts all reports of illegal discharges, regardless of language.

The City further provides educational materials both in English and Spanish to better serve Spanish speaking community members. These bilingual brochures may be found at various locations throughout the City, such as the Chamber of Commerce, the public library, public recreational centers, and the storm water display area at the City's Engineering Department. The bilingual educational handout entitled "Everything that flows down into a storm drains goes untreated directly to our creeks, lagoons, and San Diego Bay" is also included in mail-based correspondence (i.e. NOV, notice of corrective action, etc.) to residents and industrial and commercial businesses in the City.

### 8.3.5 COMPLAINT INVESTIGATIONS

To further aid the process of identifying illicit discharges, the City encourages the public and City staff to report IC/IDs. The City's Storm Water Compliance Inspector follows up on all complaints made to the hotline. If a representative for the targeted business, residential area, or construction site is present, the inspector will provide site-specific information regarding storm water issues including applicable educational materials.

## 8.4 OUTREACH COMPONENT EFFECTIVENESS ASSESSMENT

The estimated number of impressions made by the City's education and outreach efforts during 2010/2011 is presented and described below. Please refer to Section 11 of this JURMP Annual Report for the remainder the effectiveness assessment for this program component.

**Impressions Made**
The City continues to provide residents and businesses with storm water-related education through inspections, distribution, and mailing of educational materials, and various events throughout the year. The City calculates an estimate of impressions based on the number and type of educational materials distributed. Estimates of the numbers of impressions generated by the City's efforts allow for a more realistic evaluation of the effectiveness of the NPDES storm water program.

The estimated number of impressions was generated by multiplying each effort by the number of impressions thought to be generated by that particular effort. For example, inspections have been presumed to generate three impressions, with the exception of municipal inspections. Municipal inspections generally involve more people and are assumed to generate five impressions. Training sessions and cleanup events have been assumed to generate a number of impressions equal to four times the number of attendees, because it is likely that the attendees will discuss the content with others after the training session or cleanup event. Printed educational materials distributed in mass numbers are assumed to generate three impressions each. Table 8-1 details the number of impressions made by the City during this reporting year.

**Table 8-1**
**Impressions Made by the City**

| Impression Type | Estimated Count | Unit | Estimated Impressions Generated |
|---|---|---|---|
| Municipal Inspections | 11 | Inspection | 55 |
| Construction Inspections | 71 | Inspection | 213 |
| Construction Inspection Reports | 21 | Notice | 63 |
| Industrial/Commercial Inspections | 297 | Inspection | 891 |
| Industrial/Commercial Inspection Reports for Business and Property owners | 328 | Letter | 984 |
| Notification of JURMP BMP Requirements | 362 | Letter | 1086 |
| Complaints Investigated | 14 | Investigation | 42 |

| ***Total*** | | | ***10,370*** |

## 8.5 PROGRAM REVIEW AND MODIFICATION

The City's JURMP was updated in March 2008. No changes to the City's education component have been made since that time.

# 9.0 PUBLIC PARTICIPATION COMPONENT

## 9.1 INTRODUCTION

The City encourages public participation in the City's JURMP as a means to foster storm water awareness and improve water quality. Public participation includes, but is not limited to, cleanup events, special community projects, reporting observed IC/IDs, and participating in City-hosted waste disposal events. Collaboration between the City and the community helps to encourage a sense of shared responsibility in protecting water quality both locally and regionally. The City has encouraged public participation through the programs discussed in this section.

### 9.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the public participation component during the 2010/2011 reporting period are presented below. The following subsections of this section provide more details on how the City complied with the Municipal Permit during the reporting period.

- The City collaborated with the California Coastal commission to host two sites for the Coastal Cleanup Day in September 2010. A total of 251 volunteers collected 10,827 pounds of trash and recyclables at the Paradise Creek Education Park and Sweetwater River sites.
- The City collaborated with ILACSD to host the Paradise Creek Education Park and Sweetwater River sites for the Creek to Bay Cleanup event in April 2011. A total of 110 volunteers participated to collect over 1,915 pounds of trash and recyclables.
- The City held an art contest during 2010/2011 for the 2012 storm water calendar. A total of forty five 3rd grade classrooms participated in the contest and were provided with storm water educational handouts.
- The City continued to collaborate with the cities of Chula Vista and Imperial Beach to provide HHW disposal for residents of the City of National City. Approximately 123 residents of National City participated.
- The City held three large-item disposal events during the months of November and June, which allowed residents to dispose of large items (not including HHW). Over 826 tons of large-item waste was collected from 1,916 vehicle loads during these events.
- The City continued to operate its Storm Water Hotline to receive complaints from businesses and residents in the City.

## 9.2 PUBLIC PARTICIPATION ACTIVITIES

**Cleanup Events and Programs**

During 2010/2011, the City hosted cleanup events at various locations in the City. These events provide a direct benefit to water quality and provide an opportunity for the City to inform event volunteers of storm water issues. The City participated in the California Coastal Commission sponsored Coastal Cleanup Day on September 25, 2010 (Figure 9-1). Fifty-one volunteers cleaned one mile of Sweetwater River and collected 6,200 pounds of trash and 127 pounds of recyclables. In addition, 200 volunteers at Paradise Creek Education Park collected 4,500 pounds of trash during the half-mile cleanup. In total, Coastal Cleanup Day volunteers collected 10,827 pounds of trash and recyclables and cleaned a mile and a half of park.

**Figure 9-1. Coastal Cleanup Day Event**

The City continued to collaborate with ILACSD and sponsored the Paradise Creek Education Park and Sweetwater River sites for the Creek to Bay Cleanup event on April 30, 2011. Eighty volunteers collected 450 pounds of trash and debris (Figure 9-2) from Paradise Creek. An additional 30 volunteers cleaned three miles of Sweetwater River and collected 1,440 pounds of trash and 25 pounds of recyclables. In total, 110 volunteers collected over 1,915 pounds of trash and recyclables and cleaned 3.5 miles of park in National City.

**Figure 9-2. Creek to Bay Cleanup Event**

**2012 Calendar Development**

As previously mentioned, during 2010/2011, the City began to develop the 2012 storm water program calendar. Similar to previous calendars, the City worked to involve the public in the development of the 2012 edition. An art contest was held in June for the 3rd grade students of all 10 public elementary schools within the City. The 12 winning images will be included for each month of the upcoming calendar.

The theme of the contest was "By Keeping Our Community Clean, We Can Keep The Ocean Clean." Each of the 45 participating classrooms were provided with educational presentation material by the school district representative, and teachers were given contest guidelines to share with their students (Attachment 8.2). This presentation addressed watershed concepts, the storm water conveyance system, pollutants of concern, and how to eliminate pollutants in urban runoff. The provided presentation also included past examples of submitted student work. An informational flyer that outlined the rules of the contest and presented some storm water concepts was given to about 845 students to take home (Attachment 8.3). Winners were selected in 2010/2011 and will be honored in the 2011/2012 reporting period. The contest, which was sponsored by EDCO, will provide prizes, such as gift cards, to the contest winners. As in previous contests, applicants were encouraged to place more of an emphasis on community by including images of known landmarks or elements specific to their neighborhoods.

**Hazardous Waste Collection and Used Oil Recycling Program**

The City's Hazardous Waste Collection and Used Oil Recycling Program encourage City residents and business owners to properly dispose of HHW. Residents have access to proper disposal facilities for HHW at the Chula Vista Household Hazardous Waste Collection Facility. This facility is open on Wednesdays and Saturdays from 9:00 a.m. to

1:00 p.m. and accepts up to 15 gallons or 125 lbs of waste per household for a small co-payment. An example informational ad for this program is included as Attachment 9.1. This service is also available to residents in the cities of Chula Vista, Coronado, and Imperial Beach. During the 2010/2011 reporting year, 2,834 participants brought over 315,470 pounds of hazardous waste. Of that total, 123 people were residents of National City. Door-to-door pick up was available for disabled or elderly communities for a small fee.

The City's website also informs residents of what is considered HHW and how and where to properly dispose of it.

**Other Waste Disposal**

The City continued to hold large item trash collection events for bulky items such as furniture and appliances at the EDCO Recovery and Transfer Facility. The City coordinated with EDCO Recycling and Waste Collection Services to host one event in November and two events in June. Almost 295 tons of waste was collected from 762 vehicle loads on November 13, 2010. On June 11, 2011, the facility collected 251 tons of waste from 547 vehicles and then an additional 280 tons from 607 vehicles the following Saturday, June 18, 2011. The City encouraged the public to bring their debris (not including HHW) for proper disposal. Door-to-door pick up was provided for disabled or senior residents.

In addition, the National City Chamber of Commerce hosted a free electronics waste collection event at Westfield Plaza Bonita Mall on April 9 and 10, 2011. Residents and businesses were encouraged to bring a variety of electronics waste for proper disposal.

**Public Reporting**

As discussed in Section 4, complaints are received through the City's Storm Water Hotline and online website reporting system. The residential, industrial and commercial, construction, and municipal communities are encouraged to use the hotline to report IC/IDs. The City investigates each complaint and tracks the complaint and follow-up actions, as applicable. The hotline number is available on various brochures distributed by the City, on printed Storm Water Hotline business cards, as well as on the City's website. This reporting period there were 14 complaints received by the City. All complaints reported during 2010/2011 were investigated immediately and resolved appropriately by City staff. See Table 4-5 for details on documented public complaints.

**Public Workshops**

Workshops, information, and training sessions are necessary to provide the public with the tools and knowledge to participate effectively in the City's storm water program. In September 2010, San Diego County's Negocio Verde Environmental Justice Task Force, provided an Automotive Body and Repair Free Bilingual Compliance Workshop in National City, which targeted automotive shop owners and employees of National City and Chula Vista. This workshop discussed environmental and storm water regulation compliance and is discussed in further detail in Section 8 of this Annual Report.

Figure 9-3 – A participant at the Automotive Body and Repair Compliance Workshop

## 9.3 Public Participation Component Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

## 9.4 Program Review and Modification

The City's JURMP was updated in March 2008. No changes to the City's public participation component have been made since that time.

# 10.0 FISCAL ANALYSIS

The sources of funding for this program listed in the City's JURMP have not been changed during this reporting period. During 2009/2010, a fiscal analysis reporting template was developed collectively by the Copermittees. The City has used this template to report the 2010/2011 expenditures in this JURMP Annual Report.

**San Diego County Copermittees Fiscal Analysis Report for Urban Runoff Management Programs**

**EXPENDITURE SUMMARY**

| JURISDICTIONAL COMPONENTS | |
|---|---|
| Administration | $26,631 |
| Development Planning | $45,782 |
| Construction | $34,036 |
| Municipal | $431,089 |
| Industrial and Commercial | $69,623 |
| Residential | $11,149 |
| IDDE | $36,033 |
| Education | $16,359 |
| Public Participation | $6,363 |
| Special Investigations | $12,089 |
| Non-Emergency Firefighting | $0 |
| | |
| **Jurisdictional Total** | **$689,154** |

| WATERSHED | |
|---|---|
| Watershed 1 – San Diego Bay | $165,002 |
| | |
| **Watershed Total** | **$165,002** |

| REGIONAL | |
|---|---|
| Annual Permit Fee to Regional Board | $13,499 |
| Copermittee Cost Share of Regional Budget | $48,428 |
| | |
| **Regional Total** | **$61,927** |

| TOTAL COSTS | $916,083 |
|---|---|

**Watershed Urban Runoff Management Program (WURMP)**

| | Watershed 1 – San Diego Bay |
|---|---|
| Administration (1) | $11,011 |
| Cost Share Contribution | $0 |
| Watershed Activities | $153,991 |
| Other | $0 |
| ***TOTAL*** | **$165,002** |

(1) Administration – includes Watershed strategic planning, management, mapping, assessment, and reporting.

**Regional Urban Runoff Management Program (RURMP)**

| Regional Programs | Jurisdictional Cost Share Amount |
|---|---|
| Administration (1) | $387 |
| Cost Share Contribution | $48,041 |
| Other (2) | $0 |
| ***TOTAL*** | **$48,428** |

(2) Administration – includes assessment, reporting, management, etc.
(3) Other – examples include regional and special studies.

# 11.0 EFFECTIVENESS ASSESSMENT

## 11.1 INTRODUCTION

Implementation of the City's JURMP is intended to reduce discharges of urban runoff related pollution to the MEP. The City regularly evaluates its program to make it as effective as possible. The overall structure of the City's storm water program is composed of three primary components:

- Program Planning
- Program Implementation
- Effectiveness Assessment

The process typically proceeds from planning to implementation to assessment, although in practice all three may be in progress at the same time. The initial step is program planning, which requires identifying potential pollutant sources, establishing BMP requirements, and establishing targeted outcomes and ways to measure those outcomes. Next the program developed during the planning step is implemented. Program implementation is assessed each year using the methods developed in the program planning stage and reported in JURMP annual reports. The conclusions from these assessments are used during the next round of program planning to incorporate improvements to the program and refine the assessment technique.

Based on participation in regional efforts and its experience implementing its JURMP, the City has identified a variety of metrics to assess progress toward targeted outcomes. At the end of each reporting year, the City uses selected metrics to assess the effectiveness of its program implementation. Example metrics were provided in Section 13 of the City's 2008 JURMP.

The effectiveness assessment approach developed by the Copermittees during the last permit cycle includes six different levels of targeted outcomes. Each successive level represents a step up from more easily measured, activity-based outcomes to more difficult to measure, quality-based outcomes. The levels are listed below.

Level 1: Compliance with Activity-Based Permit Requirements
Level 2: Changes in Knowledge/Awareness
Level 3: Behavioral Change/BMP Implementation
Level 4: Load Reductions
Level 5: Changes in Discharge Quality
Level 6: Changes in Receiving Water Quality

## 11.2 EFFECTIVENESS ASSESSMENT RESULTS

The Municipal Permit requires the City to assess the effectiveness of each significant activity for each program component, for each program component as a whole, and for the storm water program as a whole. Level 1, Level 5, and Level 6 outcomes are

discussed in the text below. At this time the City is not able to assess Level 5 or Level 6 outcomes for individual program activities or individual programs. As has been noted in the CASQA effectiveness assessment guidance document, methods for integrated assessment—assessment that combines both monitoring data and programmatic data—are still under development at regional and statewide levels (CASQA, 2007).

### 11.2.1 OUTCOME LEVEL ASSESSMENTS

**Level 1**

Level 1 outcomes essentially are measures of permit compliance. The component-specific sections in this JURMP Annual Report provide details of programmatic actions taken to comply with the applicable Municipal Permit requirements. Appendix B of this JURMP Annual Report also includes a checklist that matches the Municipal Permit's annual reporting requirements with the section(s) or appendix of this report that addresses each requirement.

**Levels 2 and 3**

See the tables 11-1 through 11-8 at the end of this section for discussions of Level 2 and Level 3 outcomes for significant activities within each program component. Please note that the number of hotline calls and Dry Weather Monitoring Program results are used in the assessments for other program components besides illicit discharge detection and elimination. Those numbers are taken from the work done within the period from July 1, 2009 through June 30, 2010 to be comparable with previous years' assessments and data. Also note that only a Level 1 assessment applies to fiscal analysis, so no table for fiscal analysis is included.

**Level 4**

The tables at the end of this section provide information for Level 4 assessments where feasible. Assessment of Level 4 outcomes is feasible for some programs that directly measure the amounts of pollutant removal, such as MS4 cleaning. For most other programs reliable load estimation methods have not yet been developed.

**Level 5**

The Dry Weather Monitoring Program is the City's primary mechanism of measuring the quality of discharges. The City began collecting MS4 monitoring data in 2008/2009; however, the data gathered at this time is insufficient to provide substantive information about discharge quality.

Graphs demonstrating historical Dry Weather Monitoring results are provided at the end of this section as Figures 11-3 through 11-5. Ammonia, one of the constituents with the longest historical data record, has shown a decreasing trend over time. Also, since they have been analyzed, the exceedance frequencies of oil and grease and fecal indicator bacteria have decreased with time.

**Level 6**

No Regional Monitoring Program water quality monitoring stations are located within the City of National City. The Sweetwater Mass Loading Station is located just outside

the southeastern border of the City, but only a very minimal portion of the City would drain to that site. Some sediment sampling has been completed in the Sweetwater River flood control channel along southern side of the City as part of the regional Ambient Bay and Lagoon Monitoring Program. The results of that program have been relatively inconclusive to date. The RWQCB contracted Southern California Coastal Waters Research Project (SCCWRP) to conduct some wet weather monitoring in Paleta Creek (Seventh Street Channel) in support of a pending TMDL. At this point, the amount of data collected at these sites is not sufficient to determine any positive or negative trends for water quality at the site. Typically several years of data are needed before any trends become apparent. The City will continue to work with the San Diego Bay WURMP workgroup and TMDL stakeholder workgroups to improve the quality of water bodies in and around the City of National City.

### 11.2.2 OVERALL COMPONENT ASSESSMENTS

**Development Planning**

The City's review process for development projects has effectively required higher removal efficiency BMPs for all projects approved in 2010/2011. The City continued to work with parties responsible for maintenance of treatment control BMPs, achieving compliance through cooperation or escalating enforcement. City enforcement resulted in the installation of missing BMPs and a 100 percent installation rate for projects completed during the reporting period. Fluctuations in maintenance rates from the 2008/2009 to the 2010/2011 reporting period may be attributed on one hand to generally increasing awareness of the need for regular treatment control BMP maintenance and on the other hand various ongoing changes in project ownership.

**Construction**

The available data indicate that on the whole the City's construction program effectively requires BMP implementation. The City conducted dry season inspections for high and medium priority construction sites to require continued implementation of required BMPs in preparation for the wet season. Any BMP deficiencies noted are remedied promptly. The City's approval process continues to notify all construction projects that will disturb soil of the City's BMP requirements before a permit is issued. This process has helped bring about better BMP implementation at small projects that otherwise might not be aware of the BMP requirements.

**Municipal**

The City's municipal staff are regularly trained on storm water issues, and the City's MS4 cleaning and street sweeping programs meet or exceed minimum Municipal Permit frequency requirements. In particular, the City sweeps its streets more often than the permit requirements to aid in WURMP efforts. As another part of WURMP efforts, the City continued to hire a contractor in 2010/2011 to do biweekly inspections and remove any observed trash from Paradise Creek.

**Industrial and Commercial**

The City continued to implement a comprehensive inspection program. During 2010/2011 the City used recently updated inspection notification methods to better communicate corrective actions to both property owners and inspected businesses, as needed. The City has found that this method of inspection result notification plus a significant decrease in follow-up inspection turnaround time yields increased rates of implementation.

**Residential**

The City's residential component mainly achieves BMP implementation through complaint response, education, and routine monitoring to detect IC/IDs. Complaints received about residential areas and/or activities by the Storm Water Hotline are documented, investigated, and appropriate actions are taken to resolve the reported issue.

**IDDE**

The RWQCB adoption of Addendum No. 2 to Order No. R9-2007-0001 has extended the reporting period for the IDDE component of the City's program, so a full assessment of the program's effectiveness cannot be provided at this time. Some initial metrics are presented in Table 11-6.

**Education**

During 2010/2011, the City provided educational outreach to various communities in the City. Most notably the City sent a mailing to notify all inventoried businesses that had not been inspected recently, including mobile businesses, of the City's JURMP BMP requirements. The City also started development of a 2012 calendar that presents various storm water concepts. This calendar will be distributed to school children and during various public events.

**Public Participation**

The City continued to host clean-up events in the City, including the California Coastal Cleanup and the Creek to Bay Cleanup. There was a 40 percent increase in volunteers participating in clean-up events within the City during 2010/2011 compared to 2009/2010, and more than twice as many as in 2008/2009. The City also continued to ensure its own staff and the public are aware of the hotline and when to call it.

## 11.3 Program Review and Modification

No significant changes to the effectiveness assessment approach presented in the City's March 2008 JURMP have been made since the submittal of that document.

**Table 11-1**
**Development Planning Component Assessment Measures**

| Significant Activity | Level 2 | Level 3 | | Level 4 | |
|---|---|---|---|---|---|
| Review and approve project plans | External<br>A relatively small number of projects submitted reports during 2010/2011. Based on meetings with applicants and BMPs proposed, it appears that the level of knowledge is increasing.<br>Internal<br>The City's storm water consultant and the City's Storm Water Program Manager worked with engineers in the City to improve their level of understanding of the SUSMP program. City personnel also attended training sessions—see Section 8. The City's consultant reviews SWMPs submitted to the City. | Overall project submittal approval rate during reporting period | 17% | Percent of projects proposing BMPs besides filter inserts | 100% |
| | | Number of projects requiring three or more reviews prior to SWMP approval | 2 (of 2) | Percent of approved projects implementing BMPs with high or medium removal efficiencies for key pollutants of concern | 100% |
| Verify proposed BMPs are implemented | External<br>N/A, knowledge is evaluated by appropriate implementation of BMPs as shown in Level 3<br>Internal<br>The City's NPDES Storm Water Compliance Inspector provided training to the inspector responsible for verifying BMPs prior to occupancy. | Percent of projects completed in 2010/2011 implementing all proposed BMPs | 100% | Proper BMP implementation is likely to have reduced pollutant loading. | |
| | | Resolution status of enforcement actions | See Section 2 | | |
| Verify BMPs are properly maintained | External<br>Annual maintenance verification letters were sent out in 2010/2011 and NOVs were issued to non-responders<br>Internal<br>The City contracts with a qualified consultant to perform treatment control BMP inspections. | Percent of inspected sites properly maintaining all BMPs | 39% | Proper BMP maintenance is likely to have reduced pollutant loading. | |
| | | Resolution status of enforcement actions | See Section 2 | | |
| | | Percent of sites responding to verification letters | 100% | | |
| Maintain an accurate inventory | N/A, data management only | N/A, data management only | | N/A, data management only | |

**Notes:** Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

**Table 11-2**
**Construction Component Assessment Measures**

| Significant Activity | Level 2 | Level 3 | | Level 4 |
|---|---|---|---|---|
| Review proposed plans and BMPs | External<br>Projects submit plans for construction BMP implementation for their projects; the level of awareness of construction BMP requirements is fairly high.<br>Internal<br>Training for City staff is described in Section 8. City staff are familiar with relevant construction BMPs. | BMPs proposed for construction projects generally meet requirements; no significant problems have been noted. | | Proper pre-project planning is likely to have reduced pollutant loading. |
| Verify proposed BMPs are implemented | External<br>Grading projects implement BMPs as required by their permits, and contractors are familiar with the City's requirements.<br>Internal<br>Training for City staff is described in Section 8. City staff are familiar with relevant construction BMPs, and the City's consultant conducts routine inspections of high and medium TTWQ construction sites. | Percent of BMP deficiencies resolved by City follow-up within the reporting period | 100% | Proper BMP implementation is likely to have reduced pollutant loading. |
| | | Resolution status of enforcement actions | See Section 3 | |
| | | Number of dry weather monitoring exceedances traced to construction sources | 0<br>(2010 dry weather season) | |
| Maintain an accurate inventory | N/A, data management only | N/A, data management only | | N/A, data management only |

**Notes:** Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

**Table 11-3**
**Municipal Component Assessment Measures**

| Significant Activity | Level 2 | Level 3 | | Level 4 | |
|---|---|---|---|---|---|
| Verify proposed BMPs are implemented at facilities | City staff are regularly trained on BMP implementation; see sections 4 and 8. | Percent of inspected facilities/activities requiring a follow-up visit | 0% | Proper BMP implementation is likely to have reduced pollutant loading. | |
| | | Resolution status of sites requiring follow-up inspections | N/A | Number of pet waste bags distributed | 5200 bags |
| | | Number of dry weather monitoring exceedances traced to municipal sites | 0 (2010 dry weather season) | Amount of pet waste removed through pet waste bag use* | 1,040 pounds |
| Sweep streets and parking facilities | | N/A, streets and parking facilities are swept as often as directed by management. | | Amount of sediment and debris removed (weight or volume) | 980 tons |
| | | | | Amount of sediment and debris removed per length of street swept (weight or volume per curb mile) | 120 lbs/ curb mile |
| Maintain and clean out MS4 | | N/A, MS4 structures are maintained as often as directed by management. | | Amount of sediment and debris removed (weight or volume) | 21.5 tons |
| Maintain sanitary sewer system | | N/A, the sanitary sewer system is maintained as often as directed by management. | | Total volume of SSO discharge to MS4 (gallons) | 0 |
| Maintain municipal treatment control BMPs | | N/A, treatment control BMPs are maintained as often as directed by management. | | Amount of sediment and debris removed from treatment control BMPs | 194 pounds |
| Maintain an accurate inventory | N/A, data management only | N/A, data management only | | N/A, data management only | |

**Notes:** Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable
*Based on studies conducted by the County of San Diego, approximately 0.2 pounds of pet waste is collected per bag used. A separate literature search performed by the San Diego County Regional Airport Authority found a figure of 0.25 pounds per bag (San Diego Bay Copermittees, 2010). To be conservative, the estimate in this table is based the smaller of the two numbers.

**Table 11-4**
**Industrial and Commercial Component Assessment Measures**

| Significant Activity | Level 2 | Level 3 | | Level 4 | |
|---|---|---|---|---|---|
| Require BMP implementation | External<br>Knowledge assessment scores indicated approximately half of the personnel present during inspections lacked any understanding of relevant storm water concepts. See Figure 11-1 on the following page for a score distribution. See Section 8 for more detail on educational materials and other outreach efforts.<br>Internal<br>The City contracts with a qualified consultant to perform industrial and commercial inspections. | Percent of inspected sites requiring a follow-up visit | 32% | Proper BMP implementation is likely to have reduced pollutant loading. | |
| | | Resolution status of enforcement actions | See Section 5 | | |
| | | Number of dry weather monitoring exceedances traced to industrial or commercial sources | 1<br>(2010 dry weather season) | Number of IC/IDs eliminated (inspections and complaint investigations) | 19 |
| | | Consistent with the intentional selection of sites with the highest TTWQ potential, many sites had a lower BMP score. However, the most common score was three. See Figure 11-2 on the following page for a score distribution. | | | |
| Maintain an accurate inventory | N/A, data management only | N/A, data management only | | N/A, data management only | |

**Notes:** Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

**Figure 11-1**
**Industrial/Commercial Knowledge Assessment Scores**

**Figure 11-2**
**Industrial/Commercial BMP Implementation Scores**

**Table 11-5**
**Residential Component Assessment Measures**

| Significant Activity | Level 2 | Level 3 | | Level 4 |
|---|---|---|---|---|
| Require BMP implementation | External<br>See sections 6 and 8 for details of this and other education.<br>Internal<br>The City's Storm Water Program Manager and other City staff involved in the program have a good understanding of the goals of the storm water program. | Number of residential incidents reported to storm water hotline | 3 | Resolution of residential incidents reported to the hotline likely resulted in a decrease in pollutant loading through improved BMP implementation. |
| | | Resolution of enforcement actions | See Sections 4 and 6 | |
| | | Number of dry weather monitoring exceedances traced to residential sources | 0 (2010 dry weather season) | |
| Maintain an accurate inventory | N/A, data management only | N/A, data management only | | N/A, data management only |

**Notes:** Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

**Table 11-6**
**Illicit Discharge Detection and Elimination Component Assessment Measures***

| Significant Activity | Level 2 | Level 3 | Level 4 |
|---|---|---|---|
| Conduct Dry Weather Monitoring Program | The City contracts with a qualified consultant to perform its Dry Weather Monitoring Program. | N/A, personnel conduct monitoring as directed by management. | No significant, long term IC/IDs were identified for elimination, so a reliable estimate of load reduction cannot be made. |
| Respond to incidents reported to storm water hotline | The City's Storm Water Program Manager trains City staff as needed. See sections 4 and 8. City staff were responsible for many of the reports made to the hotline, as shown in Section 4. | N/A, personnel respond to incidents as directed by management. | Resolution of the incidents reported to the hotline and listed in Section 4 are likely to have resulted in a pollutant loading reduction. |
| Respond to and clean up SSOs | City staff are thoroughly trained on how to respond to SSOs. | See Section 4 for details. | There were no SSOs during the reporting period. |

**Notes:** Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable
*Although the overall IDDE component is to be submitted in December 2011, a preliminary assessment of the component's effectiveness is provided here.

**Table 11-7**
**Education Component Assessment Measures**

| Significant Activity | Level 2 | | Level 3 | Level 4 |
|---|---|---|---|---|
| Provide storm water education to the public | External<br>The City actively educates the various audiences in its jurisdiction. See Section 8 for details. | | See Level 3 outcomes for other program components for information about behavior change. | Sufficient data to estimate load reductions due to educational efforts is not available for 2010/2011. |
| | Estimated number of impressions made | 10,370 | | |

**Notes:** Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

**Table 11-8**
**Public Participation Component Assessment Measures**

| Significant Activity | Level 2 | Level 3 | | Level 4 | |
|---|---|---|---|---|---|
| Involve the public in activities that relate to storm water protection | External<br>The City and City partners put on a number of opportunities for the public to participate, including operation of the Storm Water Hotline. See Section 9 for details. | Number of attendees at events (Cleanup event volunteers and disposal event participants) | 2,400 | Amount of trash, debris, and recyclables collected at cleanup events | 12,742 pounds |
| | | Number of calls received to the storm water hotline | 14 | Amount of large item waste collected at disposal events | 826 tons |

**Notes:** Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

**Figure 11-3**

**Figure 11-5**
**City of National City, Detergents, 1996-2011**

# 12.0 SPECIAL INVESTIGATIONS

During the reporting period the City undertook two additional programs: the Clean Community Program and a pollutant discharge potential assessment component during industrial and commercial inspections.

## 12.1 CLEAN COMMUNITY PROGRAM

Results from trash assessments in previous years have indicated that litter and illegally dumped items tend to consist of household trash and large household items, likely from residents in the City. During 2010/2011, the City continued to implement its Clean Community Program. This program is designed to foster a sense of shared responsibility in keeping the community of National City clean and free of pollutants that may otherwise be carried to local receiving water bodies.

The theme of the 2012 Storm Water Calendar Art Contest was "By Keeping our Community Clean, We can Keep the Ocean Clean!" Each month of the 2012 calendar will feature artwork by local third grade students illustrating the theme. By integrating public participation into the development of the 2012 calendar, the City increased attention to the "By Keeping our Community Clean, We Can Keep the Ocean Clean" message. This 2012 calendar will be distributed to schools, municipal staff and other City residents.

As part of WURMP efforts that are beyond minimum required MS4 maintenance, the City hired a contractor in 2008/2009 to do biweekly inspections and remove any observed trash from Paradise Creek. These cleanups continued in 2010/2011.

Also in 2010/2011, ILACSD independently organized a Neighborhood Clean Watch program that combined frequent community cleanups, four large item disposal events, and elementary school presentations. Through their efforts there were 99,315 pounds of debris removed or collected, 375 volunteers performing Paradise Creek cleanup activities, and 2,300 students educated. Information about this program is available on the ILACSD website (http://www.ilacsd.org/).

## 12.2 POLLUTANT DISCHARGE POTENTIAL ASSESSMENT

During 2010/2011, the City conducted pollutant discharge potential assessments (PDPA) at industrial and commercial facilities that received a full inspection; the purpose of the assessment is to assist in source identification. The assessment is intended to be a semi-quantitative tool to identify which sites are major sources of the principal pollutants of concern for storm water. For each of several main categories of pollutants, a numeric pollutant discharge potential (PDP) on a scale from 0 (not present) to 5 (severe) is assigned. PDPA scores are recorded on the standard inspection form in Attachment 5.1.

Table 12-1 shows the overall average PDP scores assigned for each pollutant during routine inspections at all of the industrial and commercial facilities visited in 2010/2011.

Note that pH indicates substances likely to cause either an abnormally low (acidic) or abnormally high (basic) pH.

**Table 12-1**
**Pollutant Discharge Potential Score Averages, By Category**

| Pollutant Category | Average PDP Score |
|---|---|
| Sediment | 2.4 |
| Nutrients | 1.4 |
| Aluminum | 1.1 |
| Iron | 1.4 |
| Heavy Metals | 2.2 |
| Organics | 1.3 |
| Trash | 2.4 |
| Oxygen Demanding | 2.1 |
| Oil & Grease | 2.7 |
| Bacteria | 2.1 |
| Pesticides | 1.0 |
| pH | 1.6 |

Sediment, heavy metals, trash, and oil and grease were observed to be the largest issues during the industrial and commercial inspections conducted during 2010/2011. The City uses this information to help target businesses for inspection. Figure 12-1, on the following page, shows the distribution of PDP scores for each pollutant on the PDPA table.

**Figure 12-1**
**PDPA Score Distribution for Facilities Inspected in 2010/2011**

# 13.0 NON-EMERGENCY FIRE FIGHTING

Please reference Section 3 of the City's most recent JURMP for information about BMPs and procedures associated with non-emergency fire fighting activities.

# 14.0 JURMP REVISIONS

The City's JURMP was rewritten in the spring of 2008 in response to new Municipal Permit requirements. Section 14 of the updated JURMP document includes a list of the changes made to the JURMP at that time. Any other changes to the JURMP made since the overall JURMP update in the spring of 2008 are discussed in the individual "Program Review and Modification" subsections in the preceding sections in this JURMP Annual Report.

# 15.0 CONCLUSIONS AND RECOMMENDATIONS

During the 2010/2011 reporting period the City of National City continued to implement the programs in its JURMP, updated in March 2008. The City continues to work with other Copermittees to facilitate sharing of information about how best to run these programs and to provide regional guidance on standardized implementation where applicable. The City of National City will work collaboratively as a member of the various regional workgroups in this process and continue to refine its program implementation as needed to improve its ability to reduce or eliminate pollutant discharges and meet regulatory requirements. The City will also continue its efforts related to the pending TMDL for Seventh Street Channel.

**Notes**

TTWQ – Threat to Water Quality

L = Likely, PO = Possible, UL= Unlikely

[1]Likely Source – Has a pollutant discharge potential of "Likely" for one or more of the pollutants of concern associated with the receiving water.

* Discharge of heavy metals and oil and grease is possible if the facility has on-site parking

** Sediment and oxygen demanding substances are possible pollutants for earthen or natural conveyances. Bacteria, but generally not viruses and other pathogens, may regrow in MS4s under certain conditions. While other pollutants may be discharged from the MS4, the MS4 itself is not a direct source of those pollutants.

***The sanitary sewer system is only a potential source of pollutants in the event of sewer line breaks or SSOs.

**Notes**

TTWQ – Threat to Water Quality

SIC – Standard Industrial Classification Code

Pollutants Potentially Generated – Where a facility has a "Likely" pollutant discharge potential for a specific pollutant, a "Yes" is placed in the appropriate column.

Likely Source – Has a pollutant discharge potential of "Likely" for one or more of the pollutants of concern associated with the receiving water. A pollutant of concern is one for which the receiving water is impaired according to the Clean Water Act section 303(d) list. At the beginning of 2010/2011, the Clean Water Act section 303(d) list indicated that pollutants of concern for Seventh Street Channel (HSA 908.31) included heavy metals and organics due to an impairment for "sediment toxicity" and "benthic community effects".

**Notes**

TTWQ – Threat to Water Quality

SIC – Standard Industrial Classification Code

Pollutants Potentially Generated – Where a facility has a "Likely" pollutant discharge potential for a specific pollutant, a "Yes" is placed in the appropriate column.

Likely Source – Has a pollutant discharge potential of "Likely" for one or more of the pollutants of concern associated with the receiving water. A pollutant of concern is one for which the receiving water is impaired according to the Clean Water Act section 303(d) list. At the beginning of 2010/2011, the Clean Water Act section 303(d) list indicated that pollutants of concern for Seventh Street Channel (HSA 908.31) included heavy metals and organics due to an impairment for "sediment toxicity" and "benthic community effects". Due to the nature of mobile businesses, it is possible that work may be performed in any portion of the City. Therefore, if a business has a pollutant discharge potential of "Likely" for one or more pollutants of concern associated with any receiving water within the City of National City, they will be marked as a Likely Source.

# APPENDIX B

# JURMP ANNUAL REPORT REQUIREMENTS CHECKLIST

**Appendix B**
**JURMP Annual Report Requirements Checklist**

## Development Planning Component

| Permit Annual Reporting Requirement—Section J.3.a.(3).(a) | Location in Report |
|---|---|
| i. A description of any amendments to the General Plan, the environmental review process, development project approval processes, or development project requirements. | 2.2, 2.3 |
| ii. Confirmation that all development projects were required to undergo the Copermittee's urban runoff approval process and meet the applicable project requirements, including a description of how this information was tracked. | 2.4.4.2 |
| iii. A listing of the development projects to which SUSMP requirements were applied. | Table 2-1 |
| iv. Confirmation that all applicable SUSMP BMP requirements were applied to all priority development projects, including a description of how this information was tracked. | 2.4.4.2 |
| v. At least one example of a priority development project that was conditioned to meet SUSMP requirements and a description of the required BMPs. | 2.4.4.2 |
| vi. A listing of the priority development projects which were allowed to implement treatment control BMPs with low removal efficiency rankings, including the feasibility analyses which were conducted to exhibit that more effective BMPs were infeasible. | 2.4.4.2 |
| vii. An updated treatment control BMP inventory. | Appendix A.1 (inventory) |
| viii. The number of treatment control BMPs inspected, including a summary of inspection results and findings. | 2.4.4.3, Table 2-2 and Table 2-4 |
| ix. A description of the annual verification of operation and maintenance of treatment control BMPs, including a summary of verification results and findings. | 2.4.4.3 |
| x. Confirmation that BMP verification was conducted for all priority development projects prior to occupancy, including a description of how this information was tracked. | 2.4.4.2, Table 2-3 |
| xi. A listing of any projects which received a SUSMP waiver. | 2.4.4.2 |
| xii. A description of implementation of any SUSMP waiver mitigation program. | 2.4.4.2 |
| xiii. A description of Hydromodification Management Plan (HMP) development collaboration and participation. | 2.4.4.2 |
| xiv. A listing of development projects required to meet HMP requirements, including a description of hydrologic control measures implemented. | 2.4.4.2 |
| xv. A listing of priority development projects not required to meet HMP requirements, including a description of why the projects were found to be exempt from the requirements. | 2.4.4.2 |

## Development Planning Component

| **Permit Annual Reporting Requirement—Section J.3.a.(3).(a)** | **Location in Report** |
|---|---|
| xvi. A listing of development projects disturbing 50 acres or more, including information on whether Interim Hydromodification Criteria were met by each of the projects, together with a description of hydrologic control measures implemented for each applicable project. | 2.4.4.2 |
| xvii. The number of violations and enforcement actions (including types) taken for development projects, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance. | 2.4.4.3, Table 2-4 |
| xviii. A description of notable activities conducted to manage urban runoff from development projects. | 2.1 and throughout section |

## Construction

| **Permit Annual Reporting Requirement—Section J.3.a.(3).(b)** | **Location in Report** |
|---|---|
| i. Confirmation that all construction sites were required to undergo the Copermittee's construction urban runoff approval process and meet the applicable construction requirements, including a description of how this information was tracked. | 3.5 |
| ii. Confirmation that a regularly updated construction site inventory was maintained, including a description of how the inventory was managed. | 3.2 |
| iii. A description of modifications made to the construction and grading ordinances and approval processes. | 3.3 |
| iv. Confirmation that the designated BMPs were implemented, or required to be implemented, for all construction sites. | 3.5 |
| v. Confirmation that a maximum disturbed area for grading was applied to all applicable construction sites. | 3.5 |
| vi. A listing of all construction sites with conditions requiring advanced treatment, together with confirmation that advanced treatment was required at such construction sites. | 3.5 |
| vii. For each construction site within each priority category (high, medium, and low), identification of the period of time (weeks) the site was active within the rainy season, the number of inspections conducted during the rainy season, and the number of inspections conducted during the dry season, and the total number of inspections conducted for all sites. | 3.5, Appendix A.2 (inventory) |
| viii. A description of the general results of the inspections. | 3.5 |
| ix. Confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance. | 3.5 |
| x. The number of violations and enforcement actions (including types) taken for construction sites, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance. | 3.5.3, 3.5.4 |
| xi. A description of notable activities conducted to manage urban runoff from construction sites. | 3.1 and throughout section |

## Municipal

| Permit Annual Reporting Requirement—Section J.3.a.(3).(c) | Location in Report |
|---|---|
| i. Any updates to the municipal inventory and prioritization. | Appendix A.3 (inventory) |
| ii. Confirmation that the designated BMPs were implemented, or required to be implemented, for municipal areas and activities, as well as special events. | 4.2.4, 4.3.4, 4.4.4, 4.5.4, 4.6.4, 4.7.4 |
| iii. A description of inspections and maintenance conducted for municipal treatment controls. | 2.4.4.3, Table 2-4 |
| iv. Identification of the total number of catch basins and inlets, the number of catch basins and inlets inspected, the number of catch basins and inlets found with accumulated waste exceeding cleaning criteria, and the number of catch basins and inlets cleaned. | 4.4.4 Table 4-2 |
| v. Identification of the total distance (miles) of the MS4, the distance of the MS4 inspected, the distance of the MS4 found with accumulated waste exceeding cleaning criteria, and the distance of the MS4 cleaned. | 4.4.1, 4.4.4, Table 4-2 |
| vi. Identification of the total distance (miles) of open channels, the distance of open channels inspected, the distance of open channels found with anthropogenic litter, and the distance of open channels cleaned. | 4.4.1, 4.4.4, Table 4-2 |
| vii. Amount of waste and litter (tons) removed from catch basins, inlets, the MS4, and open channels, by category. | 4.4.4, Table 4-2 |
| viii. Identification of any MS4 facility found to require inspection less than annually following two years of inspection, including justification for the finding. | N/A for 2010/2011 |
| ix. Confirmation that the designated BMPs for pesticides, herbicides, and fertilizers were implemented, or required to be implemented, for municipal areas and activities. | 4.2.3, 4.2.4 |
| x. Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating the highest volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways. | 4.3.4, Table 4-1 |
| xi. Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating moderate volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways. | 4.3.4, Table 4-1 |
| xii. Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating low volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways. | 4.3.4 |

## Municipal

| **Permit Annual Reporting Requirement—Section J.3.a.(3).(c)** | **Location in Report** |
|---|---|
| xiii. Identification of the total distance of curb-miles swept. | 4.3.4 |
| xiv. Identification of the number of municipal parking lots, the number of municipal parking lots swept, and the frequency of sweeping. | 4.3.4, Table 4-1 |
| xv. Amount of material (tons) collected from street and parking lot sweeping. | 4.3.4, Table 4-1 |
| xvi. A description of efforts implemented to prevent and eliminate infiltration from the sanitary sewer to the MS4. | 4.5.4 |
| xvii. Identification of the number of sites requiring inspections, the number of sites inspected, and the frequency of the inspections. | 4.2.4, 4.6.4, 4.7.4, Table 4-4 |
| xviii. A description of the general results of the inspections. | Table 4-4 |
| xix. Confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance. | 4.2.4, 4.6.4, 4.7.4 |
| xx. The number of violations and enforcement actions (including types) taken for municipal areas and activities, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance. | 4.2.4, 4.6.4, 4.7.4 |
| xxi. A description of notable activities conducted to manage urban runoff from municipal areas and activities. | 4.1 and throughout section |

## Industrial and Commercial

| **Permit Annual Reporting Requirement—Section J.3.a.(3).(d)** | **Location in Report** |
|---|---|
| i. Any updates to the industrial and commercial inventory. | 5.2.2 (stationary), 5.3.2 (mobile), appendices A.4 and A.5 (inventory) |
| ii. Confirmation that the designated BMPs were implemented, or required to be implemented, for industrial and commercial sites/sources. | 5.2.4, 5.3.4 |
| iii. A description of efforts taken to notify owners/operators of industrial and commercial sites/sources of BMP requirements, including mobile businesses. | 5.2.4, 5.3.4 |
| iv. Identification of the total number of industrial and commercial sites/sources inventoried and the total number inspected. | 5.2.2, 5.3.2; 5.2.4, 5.3.4; Table 5-1 |
| v. Justification and rationale for why the industrial and commercial sites/sources inspected were chosen for inspection. | 5.2.4 |
| vi. Confirmation that all inspections conducted addressed all the required inspection steps to determine full compliance. | 5.2.4 |
| vii. Identification of the number of third party inspections conducted. | N/A, 5.2.4 |
| viii. Identification of efforts conducted to verify third party inspection effectiveness. | N/A, 5.2.4 |
| ix. A description of efforts implemented to address mobile businesses. | 5.3.4 |
| x. The number of violations and enforcement actions (including types) taken for industrial and commercial sites/sources, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance. | 5.2.4, 5.3.4 |
| xi. A description of steps taken to identify non-filers and a list of non-filers (under the General Industrial Permit) identified by the Copermittees. | 5.2.4, Table 5-2 |
| xii. A description of notable activities conducted to manage urban runoff from industrial and commercial sites/sources. | 5.1 and throughout section |

## Residential

| **Permit Annual Reporting Requirement—Section J.3.a.(3).(e)** | **Location in Report** |
|---|---|
| i. Identification of the high threat to water quality residential areas and activities that were focused on. | 6.2 |
| ii. Confirmation that the designated BMPs were implemented, or required to be implemented, for residential areas and activities. | 6.4 |
| iii. A description of efforts implemented to facilitate proper management and disposal of used oil and other household hazardous materials. | 6.4.1 |
| iv. Types and amounts of household hazardous wastes collected, if applicable. | 6.4.1 |
| v. A description of any evaluation of methods used for oversight of residential areas and activities, as well as any findings of the evaluation. | 6.4 (see discussion in JURMP) |
| vi. The number of violations and enforcement actions (including types) taken for residential areas and activities, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance. | 6.4.2 |
| vii. A description of collaboration efforts taken to develop and implement the Regional Residential Education Program. | 6.4 |
| viii. A description of notable activities conducted to manage urban runoff from residential areas and activities. | 6.1 and throughout section |

## IDDE*

| Permit Annual Reporting Requirement—Section J.3.a.(3).(f) | Location in Report |
|---|---|
| * Section 7, the Illicit Discharge Detection and Elimination component, of the 2010/2011 Annual Report, will be submitted to the RWQCB no later than December 15, 2011. | |

## IDDE—Additional Dry Weather Monitoring Program Requirements*

| Permit Annual Reporting Requirement—Attachment B and Receiving Waters Monitoring and Reporting Program No. R9-2007-0001, Section II.B.3.c,d | Location in Report |
|---|---|
| * Section 7, the Illicit Discharge Detection and Elimination component, of the 2010/2011 Annual Report, will be submitted to the RWQCB no later than December 15, 2011. | |

## Education

| Permit Annual Reporting Requirement—Section J.3.a.(3).(g) | Location in Report |
|---|---|
| i. A description of education efforts conducted for each target community. | 8.3 |
| ii. A description of how education efforts targeted underserved target audiences, high-risk behaviors, and "allowable" behaviors and discharges. | 8.3 |
| iii. A description of education efforts conducted for municipal departments and personnel. | 8.2 |
| iv. A description of education efforts conducted for the new development and construction communities. | 8.3 |
| v. A description of jurisdictional education efforts conducted for residents, the general public, and school children. | 8.3 |

## Public Participation

| Permit Annual Reporting Requirement—Section J.3.a.(3).(h) | Location in Report |
|---|---|
| i. A description of public participation efforts conducted. | 9.2 |

## Effectiveness Assessment

| Permit Annual Reporting Requirement—Section J.3.a.(3).(i) | Location in Report |
|---|---|
| i. An assessment of the effectiveness of the Jurisdictional Urban Runoff Management Program which meets all requirements of section I.1 of this Order. | 11 |

## Fiscal Analysis

| Permit Annual Reporting Requirement—Section J.3.a.(3).(j) | Location in Report |
|---|---|
| i. A fiscal analysis of the Copermittee's urban runoff management programs which meets all requirements of section G of this Order. | 10 |

## Special Investigations

| Permit Annual Reporting Requirement—Section J.3.a.(3).(k) | Location in Report |
|---|---|
| i. A description of any special investigations conducted. | 12 |

## Non-Emergency Firefighting

| **Permit Annual Reporting Requirement—Section J.3.a.(3).(l)** | **Location in Report** |
|---|---|
| i. A description of efforts conducted to reduce pollutant discharges from non-emergency fire fighting flows. | 4.2.3, 13 |

## JURMP Revisions

| **Permit Annual Reporting Requirement—Section J.3.a.(3).(m)** | **Location in Report** |
|---|---|
| i. A description of any proposed revisions to the JURMP. | 14 and each program component section |

# ATTACHMENT 2.1

# NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM PROJECT APPLICABILITY FORM (NPDES CHECKLIST)

City of National City
1243 National City Blvd.
National City, CA 91950
(619) 336-4580

# National Pollutant Discharge Elimination System (NPDES) Project Applicability Form

***No project will be accepted by the City without this form completed in its entirety***

Project Name: _____ Project Area: _____ acres/sq ft

Project Address: _____

APN: _____ Proposed Impervious Area:_____ acres/sq ft

Description of Project: _____

Description of Location: _____

## *Section 1 – Permanent Storm Water BMP Requirements:*

**Part A: Determine Subjectivity to SUSMP Requirements**

*Is the project new development?* ☐ *Yes* ☐ *No*

*Is the project redevelopment that adds/replaces/creates 5,000 ft$^2$ of impervious surface[1]?* ☐ *Yes* ☐ *No*

If both of the above answers are "no", go to Part B. If either of the above answers is "yes," answer the questions below (check all that apply).

*Is the project…*

*1. Residential development resulting in the disturbance of one acre or more of land or comprised of 10 or more attached or detached dwelling units?* ☐ *Yes* ☐ *No*

*2. Commercial development resulting in the disturbance of one acre or more of land?* ☐ *Yes* ☐ *No*

*3. Industrial development resulting in the disturbance of one acre or more of land?* ☐ *Yes* ☐ *No*

*4. Automotive repair shop?* ☐ *Yes* ☐ *No*

*5. Restaurant greater than 5,000 square feet?* ☐ *Yes* ☐ *No*

*6. Steep (slope of 25% or more) hillside development that will create greater than 5,000 square feet of impervious surface?* ☐ *Yes* ☐ *No*

*7. Located such that it is within or directly adjacent to (within 200 feet) or directly discharges to an Environmentally Sensitive Area (ESA) and creates at least 2,500 square feet of impervious area or increases impervious area to 10% or more of its naturally occurring condition?* ☐ *Yes* ☐ *No*

*8. Parking lot greater than or equal to 5,000 square feet of impervious surface OR with at least 15 parking spaces and potentially exposed to urban runoff?* ☐ *Yes* ☐ *No*

*9. Streets, roads, highways, and freeways which would create a new paved surface that is 5,000 square feet or greater?* ☐ *Yes* ☐ *No*

*10. Retail gasoline outlets 5,000 square feet or more or with a project Average Daily Traffic (ADT of 100 or more vehicles per day* ☐ *Yes* ☐ *No*

*11. All other pollutant generating development projects that result in the disturbance of one acre or more of land.[2]* ☐ *Yes* ☐ *No*

*1* See the City's SUSMP Manual for more detail on the definition of "significant redevelopment."

*2* Generally all projects which include impervious surfaces and/or introduce landscaping that requires routine use of fertilizers and pesticides are considered pollutant generating above background levels.

Limited exclusion: trenching and resurfacing work associated with utility projects are not considered Priority Development Projects. Linear pathway projects that are for infrequent vehicle use, such as emergency or maintenance access, or for pedestrian or bicycle use, are not considered pollutant generating above background levels if they are built with pervious surfaces or if they sheet flow to surrounding pervious surfaces. Parking lots, buildings and other structures associated with utility projects are Priority Development Projects if one or more of the criteria in Part A is met.

If any of the answers to Part A is "Yes", your project is a "Priority Development Project" and must meet the requirements of the City's Standard Urban Storm Water Mitigation Plan (SUSMP) Manual.

**Is this a Priority Development Project that requires a SUSMP submittal?** ☐ **Yes** ☐ **No**

If the answer is "Yes," see also the flow chart at the end of this checklist to determine applicability of Hydromodification Management Plan (HMP) requirements. HMP applicability must be discussed in the SUSMP report and all requirements must be met as part of the SUSMP Report approval process.

If all answers to Part A are "No", continue to PART B.

If any of the answers to Part A is "Yes", skip PART B and go to Section 2.

**Part B: Determine Non-SUSMP Standard Permanent Storm Water BMP Requirements**

*Does the project require any of the following permits or approvals?* ☐ *Yes* ☐ *No*

- *Discretionary: Conditional use permit (including modification or extension); Coastal development permit; Parcel map (and modifications); Reclamation plan; Planned development permits; Planned unit development permits; Planning commission approval of plans; Site plan review; Tentative map (and amendments to conditions of approval or time extension); Tentative parcel map; or Variance OR*
- *Ministerial: Administrative clearing permit; Lot line adjustment; Final map modification; Grading plan (including modification or renewal); Improvement plan (including modification); Landscape plan; Building permit; Construction right-of-way permit; Encroachment permit; Excavation permit; On-site wastewater system permit; Underground tank permit; or Well permit*

*Will the project include exterior construction beyond signs, façade work, or other incidental construction to an existing structure?* ☐ *Yes* ☐ *No*

If all answers to Part A are "No" and any answer to Part B is "Yes", your project is subject to the City's Standard Permanent Storm Water Best Management Practice (BMP) requirements as listed in Municipal Code Chapter 14.22.

**Is this project subject to the Standard Permanent Storm Water BMP requirements?** ☐ **Yes** ☐ **No**

If every question in both Parts A and B is answered "No", your project is exempt from non-SUSMP Standard Permanent Storm Water requirements.

☐ **This project is for interior improvements only and is not subject to non-SUSMP Standard Permanent Storm Water BMP requirements.**

Verified by: _____ Division: _____ Date: _____

## *Section 2 – Construction Requirements:*

General Construction Permit

*If your project disturbs at least one acre of land, you are subject to the State General Construction Permit.* A Notice of Intent (NOI), Storm Water Pollution Prevention Plan (SWPPP), and other documents must be prepared for your project and filed electronically with the State Water Resources Control Board (SWRCB).

**Is this project subject to the General Construction Permit?** ☐ **Yes** ☐ **No**

If your project disturbs less than one acre of land, you are subject to the City's minimum construction BMPs, included in the City's BMP Manual.

Construction Threat to Water Quality Prioritization

See the attached flow chart for guidance in determining the construction prioritization.

**This project is prioritized as a** ☐ **HIGH** ☐ **MEDIUM** ☐ **LOW** **threat to water quality.**

## *Section 3 – Operating Requirements:*

After your project is complete, certain water quality protection requirements may apply to the facility. The facility owner and operator should be made aware of these requirements.

All municipal, industrial, commercial, and residential sites in the City of National City are required to implement storm water BMPs to reduce the amount of pollution discharged to the Maximum Extent Practicable (MEP). See Appendix C of the City's Jurisdictional Urban Runoff Management Plan (JURMP) for further details.

Some industrial facilities are also subject to the State General Industrial Permit for Storm Water Discharges (Industrial Permit). To find out if your project may be required to obtain coverage under the Industrial Permit after it begins operations, visit the State Water Resources Control Board web site at http://www.swrcb.ca.gov/water_issues/programs/stormwater/industrial.shtml.

## *Section 4 – Certification:*

Name and Title of person completing form: _____ _____

Telephone number: (_____) _____–_____ Fax number: (_____) _____–_____

E-mail Address: _____ (optional)

**I understand that as a condition of my permit, I am required to prevent construction-generated and related pollutants from discharging from the project site. All construction projects within the City of National City are required to implement Best Management Practices (BMPs). I have received a copy of the Construction Site BMP handout.**

Signature of responsible party: _____ Date: _____

***For City of National City Use Only***

☐ **Planning Division** **OR** ☐ **Community Development Commission** *Initial:* _____

☐ **Building Division** *Initial:* _____ ☐ BMP information distributed

## SUSMP REVIEW FLOW CHART

## CONSTRUCTION THREAT TO WATER QUALITY PRIORITIZATION FLOW CHART

*Sites with a low or medium TTWQ can be given a higher threat prioritization based on additional factors, such as project type, non-storm water discharge potential, or if there is a history of non-compliance with storm water regulations at the site.

**CWA 303(d) waterbodies:** Seventh Street Channel, La Paleta Creek, San Diego Bay, and Sweetwater River
**ESA waterbodies:** Paradise Marsh, Paradise Creek, and Sweetwater Marsh National Wildlife Refuge

## HYDROMODIFICATION MANAGEMENT PLAN (HMP) APPLICABILITY FLOW CHART

See the Regional Final Hydromodification Management Plan (HMP) for specific requirements, definitions, and details. The Final HMP is available in Appendix E of the City's SUSMP Manual or online at http://www.projectcleanwater.org/html/wg_susmp.html

# ATTACHMENT 3.1

# CONSTRUCTION BMP FACT SHEET (BLUE SHEET)

# Construction Site Best Management Practices

As a condition of your permit, you are required to prevent construction generated or related pollutants from discharging from your project site. All construction projects within the City of National City are required to implement at least one of the Best Management Practices (BMPs) from each category and subcategory listed below, where applicable. Property owners and/or permit holders will be responsible for the selection, installation and maintenance of proper BMPs in accordance with industry recommended standards such as the Caltrans or California Storm Water BMP handbooks or in accordance with the California General Permit for Construction. Depending on site-specific information such as project scope and potential associated discharges. Additional BMPs may be required where appropriate. Project proponents will need approval from the City prior to installation of any alternate BMPs not listed below.

**Minimum BMPs for Construction Activities:**

1. **Planning and Scheduling**
   Planning and scheduling BMPs such as minimizing grading are required where feasible to help reduce the amount and duration of soil exposure.
   a. Preservation of natural hydrologic features
   b. Preservation of riparian buffers and corridors
   c. Minimization of areas that are cleared and graded to only the portion of the site necessary for construction
   d. Minimization of exposure time of disturbed soil areas
   e. Minimization of grading during the wet season and correlation of grading with seasonal dry weather periods
   f. Temporary stabilization and reseeding of disturbed soil areas as rapidly as feasible
   g. Employee and Subcontractor Training

2. **Soil Stabilization and Erosion Prevention**
   Physical Stabilization BMPs such as vegetation, landscaping or structural methods are required to prevent erosion from exposed slopes.
   a. Planning and Scheduling
   b. Preservation of Existing Vegetation
   c. Physical Stabilization
      - Hydraulic Mulch
      - Hydro-seeding
      - Soil Binders
      - Straw Mulch
      - Geo-textiles, Plastic Covers, and Erosion Control Blankets/Mats
      - Wood Mulching
      - Earth Dikes/Drainage Swales and Lined Ditches
   d. Site Drainage
      - Outlet Protection/Velocity Dissipation
      - Slope Drains
   e. Permanent re-vegetation or landscaping as early as feasible

See reverse side

3. **Sediment Containment**

Sediment containment controls should be used to supplement erosion prevention methods not as a substitute for erosion control. Sediment controls act to contain sediment that has been previously eroded and may get carried on-site and/or discharged from the site in sheet flow or from tracking by equipment and vehicles.

a. Perimeter Protection
   - Silt Fencing
   - Gravel Bag Berm
   - Fiber Rolls

b. Sediment Capture
   - Storm Drain Inlet Protection
   - Sediment Trap
   - De-silting Basins designed in accordance with industry standards such as Caltrans, California Storm Water BMP manual. If the project is five acres or greater the de-silting basin must be designed in accordance with the State General Construction Permit, Order DWQ 99-08.
   - Gravel bag Barrier

c. Sediment Tracking
   - Stabilize Construction Entrances and Exits
   - Construction Road Stabilization
   - Entrance/ Outlet Tire Wash
   - Street Sweeping

4. **Materials and Equipment Management**

Pollution Prevention measures are required were applicable to prevent the contamination of storm water from waste materials, construction materials, vehicles, and equipment stored on-site. Each site must evaluate the potential pollutants on-site, which may be discharged during construction activities.

a. Materials Management
   - Material Delivery and Storage
   - Material Use
   - Stockpile Management
   - Spill Prevention and Control

b. Vehicle and Equipment Operations
   - Vehicle and Equipment Cleaning
   - Vehicle and Equipment Fueling
   - Vehicle and Equipment Maintenance

c. Waste Management
   - Solid
   - Liquid
   - Sanitary
   - Concrete
   - Hazardous
   - Contaminated Soil

5. **Non-Storm Water Discharge and Drainage Control**

Management of non-storm water discharges involves pollution prevention methods as well as drainage control. Project managers must implement appropriate drainage control methods to divert, contain and properly discharge drainage generated by construction activities.

a. General
   - Paving and Grinding Operations

b. Non-storm water discharges
   - Water Conservation Practices
   - Dewatering Operations
   - Potable Water/Irrigation and Flushing

**For additional information, call Barbara Tipton, Storm Water Compliance Inspector at (619) 336-4583 or Btipton@ci.national-city.ca.us**

## STORM WATER COMPLIANCE INSPECTION FOR CONSTRUCTION ACTIVITIES

Inspector Name/ Title_____

Signature_____ Date____/_____/____ Time_____am/pm

Reason for Inspection: ☐ Routine Inspection ☐ Follow-up Inspection ☐ Complaint Investigation

**Weather Information:**

Storm Start Date and Time:_____ Storm Duration:_____hours

Time Since Last Storm: ☐ < 24 hrs ☐ 24 – 72 hrs ☐ > 72 hrs Rainfall:_____inches

## I. GENERAL INFORMATION

Site Prioritization: ☐ High ☐ Medium ☐ Low

Project Name:_____

Project Location:_____

## II. INITIAL OBSERVATIONS

Approximate % of site covered by construction activities: _____%

Approximate % impervious surface of this area: _____%

Types of outdoor construction activity:

☐ grading ☐ concrete/asphalt work

☐ building construction ☐ landscaping

☐ excavation ☐ demolition

☐ drainage infrastructure work ☐ none

## III. BMP ASSESSMENT

| BMP | No Corrections Required | | Corrections Required | | Comments |
|---|---|---|---|---|---|
| | N/A | Fully Implemented | Partially Implemented | Not Implemented | |
| **Soil Stabilization and Erosion Prevention** | | | | | |
| Prevent erosion from exposed graded areas. | | | | | |
| Prevent erosion from exposed areas of soil not relating to grading activities. | | | | | |
| Keep discharge locations (drainage swales, ditches, etc.) free of sediment and debris. | | | | | |
| **Sediment Control/Containment** | | | | | |
| Adequately contain the perimeter of site to prevent sediment transport. | | | | | |
| Prevent sediment discharge to inlets on site (using filter inserts, gravel bags, fiber rolls, etc.). | | | | | |
| Equip entrance/exit with adequate tracking controls. | | | | | |

| BMP | No Corrections Required | | Corrections Required | | Comments |
|---|---|---|---|---|---|
| | N/A | Fully Implemented | Partially Implemented | Not Implemented | |
| **Materials and Equipment Management** | | | | | |
| Store materials and wastes in a manner that minimizes or eliminates the potential to discharge these materials to the storm drain system. | | | | | |
| Store liquid materials in a contained area. | | | | | |
| Cover and contain material stockpiles. | | | | | |
| Park heavy equipment and vehicles in areas with permeable surface. | | | | | |
| Keep appropriate spill response and containment measures on site. | | | | | |
| Provide secondary containment for portable toilets. | | | | | |
| Provide timely service and removal to prevent waste containers and sanitary facilities from over flowing. | | | | | |
| **Non-Storm Water Management** | | | | | |
| Keep site free of evidence of illegal connections and illicit discharges. | | | | | |
| **Other** | | | | | |
| Ensure the SWPPP is kept on site, accessible to site personnel. | | | | | |
| Are there any other potential storm water pollution issues or concerns? If yes, explain below. | | | | | |

**Additional Corrective Actions:**

_____

_____

_____

## IV. RESULTS

**Violation observed, immediate corrective action required**

- ☐ Illegal discharge(s) of pollutants into the MS4 or receiving waters
  Description: _____
- ☐ Illegal connection(s) to the MS4
  Description: _____
- ☐ Improper implementation of BMPs
- ☐ Littering

**No violation noted at time of inspection/investigation**

- ☐ However, corrective actions recommended
- ☐ No corrective actions at this time

**Implement corrective actions within _____ consecutive days of the date of this report.**

## Storm Water Quality Inspection for Municipal Facilities

Inspected by D-MAX Engineering, Inc.

Inspector Name _____

Date____/____/_____Time_____AM / PM Type of Inspection: ☐ Routine ☐ Follow-up ☐ Complaint Investigation

## A. CONTACT INFORMATION

Facility Name_____

Street Address_____ Mailing Address_____

_____ _____

Manager/Operator(s)_____

Telephone # (_____) _____ - _____ ext._____ Fax # (_____) _____ - _____

Manager/Operator(s) Email:_____

Facility Personnel Present_____

## B. FACILITY/SITE INFORMATION

Principal activity:_____

JURMP Classification_____

New JURMP Classification?_____

Does facility maintain SWPPP/BMP Plan? ☐ Yes ☐ No

If yes, what is the date of last SWPPP/BMP Plan revision?_____

If yes, does the SWPPP/BMP Plan include applicable minimum BMPs from the JURMP? (if no, describe in Section E) ☐ Yes ☐ No

If yes, does the SWPPP/BMP Plan include a current list of individuals Responsible for implementing BMPs at the site? ☐ Yes ☐ No

Does facility have a map/sketch of the site with flow lines and storm drains? ☐ Yes ☐ No

## C. INITIAL OBSERVATIONS

Nearest conveyances or water bodies: _____ Hydrologic Area: _____

Approximate distance to water bodies: ☐ < 200 ft. ☐ 200 – 1000 ft. ☐ > 1000 ft.

Sensitivity of receiving waters: ☐ Sensitive (ESA, 303(d), or other) ☐ Non-sensitive

Discharge points along perimeter: _____

_____

Discharge observed: ☐ Yes ☐ No

If yes, describe: _____

Approximate area covered by industrial or commercial activities:_____ square feet

Approximate % impervious surface of this area_____ %

Exposed areas of intensive outdoor activity: _____

## D. BMP ASSESSMENT

| BMPs | N/A | Yes | No | Comments |
|---|---|---|---|---|
| **D.1 General** | | | | |
| Is the site free of excessive litter and debris? | | | | |
| Are discharge locations free of excessive sediment and debris? | | | | |
| Are parking lots, sidewalks and streets free of excessive sediment and debris? | | | | |
| Are roof downspouts directed away from areas of potential pollutants? | | | | |
| Is wash water from pressure washing / hosing managed appropriately? | | | | |
| Are employees trained in storm water management? | | | | |
| Does the facility have a current log of employees who have participated in training? | | | | |
| **D.2 Landscaping** | | | | |
| Are adequate erosion prevention measures employed? (vegetation or physical stabilization) | | | | |
| Are irrigation systems programmed to minimize over-watering and runoff? | | | | |
| If reclaimed water is used for irrigation, is the site free of evidence of irrigation water entering the storm drain? | | | | |
| Are stockpiles of soil or landscape waste covered when feasible and equipped to prevent runoff transport? | | | | |
| Are pesticides, herbicides, and fertilizers managed in accordance with the JURMP BMPs? | | | | |
| **D.3 Materials and Wastes** | | | | |
| Are adequate trash containers provided? | | | | |
| Are adequate recycling containers provided? | | | | |
| Is the trash/recycling area adequately covered (closed lids or permanent overhead cover)? | | | | |
| Is the trash/recycling area free of litter and debris? | | | | |
| Is timely service and removal provided to prevent waste containers and sanitary facilities from overflowing? | | | | |
| Are outdoor materials that pose a threat to water quality stored appropriately (covered or in sealed containers)? | | | | |
| Are outdoor storage containers properly labeled? | | | | |
| Is there an accessible, appropriate spill response kit? | | | | |
| Is there a written spill response plan? If so, please provide to inspector. (NA if no significant materials to spill) | | | | |
| Are liquid storage containers/tanks equipped with secondary containment? | | | | |
| Is secondary containment free of spills and rainwater? | | | | |
| Are loading and unloading areas free of spills and debris? | | | | |
| Is water from pools and/or fountains disposed of properly? | | | | |
| **D.4 Equipment and Vehicles** | | | | |
| Are exposed parking areas free of significant spills and leaks? | | | | |

# City of National City

## Storm Water Quality Inspection for Municipal Facilities

Inspected by D-MAX Engineering, Inc.

| BMPs | N/A | Yes | No | Comments |
|---|---|---|---|---|
| Are vehicle maintenance activities conducted within contained areas when feasible (garage, canopy, work shop)? | | | | |
| Are equipment and vehicles inspected daily for leaks and repaired as necessary? | | | | |
| Are storm drain inlets near vehicle-fueling areas protected from spills and leaks? | | | | |
| Is vehicle washing preformed in a designated area where runoff does not enter the MS4? | | | | |
| Are biodegradable soaps used when appropriate? | | | | |
| **D.5 Building Repair/Construction** | | | | |
| Are adequate erosion prevention measures employed throughout the site? (vegetation or physical stabilization) | | | | |
| Are adequate sediment control BMPs employed throughout the site? (sandbags, gravel bags, inlet filters) | | | | |
| Are impervious areas free of debris and spills from painting, scraping, and/or sandblasting activities? | | | | |
| **D.6 Structural BMPs** | | | | |
| Are structural BMPs adequately maintained? (NA if no structural BMPs at facility) | | | | |
| **D.7 Non-Storm Water Management** | | | | |
| Is the site free of evidence of illicit connections and illegal discharges? | | | | |
| Is the site free of evidence of unauthorized releases to storm drains? | | | | |
| If not, have the appropriate authorities been notified? | | | | |
| **D.8 Other** | | | | |
| Are appropriate signs/stenciling present at the facility? | | | | |
| Are there any other potential storm water pollution issues or concerns? If yes, explain below. | | | | |

**E. ADDITIONAL COMMENTS**
(describe any additional deficiencies not represented above and/or notable BMP improvements)

# City of National City
## Storm Water Quality Inspection for Municipal Facilities
Inspected by D-MAX Engineering, Inc.

### F. CORRECTIVE ACTION

Is corrective action needed? ☐ Yes ☐ No (If **BMP-related** corrective action is required, describe below.)

Operator has been notified of recommended corrective actions both verbally and by: ☐ Hand ☐ Mail ☐ Fax ☐ E-Mail

### G. VIOLATIONS

☐ No violations have been noted at this time

☐ No violations have been noted, but recommend taking corrective action described in Section F.

☐ Violation of City Ordinance(s):

- ☐ Illegal discharge(s) of pollutants to the storm drain system or to receiving waters
  Description_____
- ☐ Illegal connection(s) to the storm drain system
  Location_____
- ☐ Littering
- ☐ Failure to properly implement required BMPs

☐ Other Violation_____

**SPECIFIC ACTION(S) REQUIRED TO CORRECT THE VIOLATION DESCRIBED ABOVE:**

☐ Implement the recommended corrective actions listed in Section F.

Additional actions required:

### H. ADDITIONAL RECOMMENDED CITY ACTIONS*

*Recommended City Actions listed at the time of inspection are subject to change based on later review by office staff

**Does this facility require a follow-up inspection?** ☐ **Yes** ☐ **No**

**ASSESSMENT**

| | | | | | |
|---|---|---|---|---|---|
| Level of knowledge regarding storm water issues: | ☐ 1 | ☐ 2 | ☐ 3 | ☐ 4 | ☐ 5 |
| Level of cleanliness, BMP implementation, orderliness of site: | ☐ 1 | ☐ 2 | ☐ 3 | ☐ 4 | ☐ 5 |

## POLLUTANT DISCHARGE POTENTIAL ASSESSMENT

Site Name:_____

| Pollutant | PDP | Sources Needing More BMPs | | | | | | | Recommended BMPs (check if applicable) | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | Trash Area | Material Storage | Prkng Lot | Load/ Unload | Land-scape | Veh/Eqp Maint | Exposed Work Area | Emp. Training | House-keeping | Minor Struct. | Major Struct. |
| Sediments | | | | | | | | | | | | |
| Nutrients | | | | | | | | | | | | |
| Aluminum | | | | | | | | | | | | |
| Iron | | | | | | | | | | | | |
| Heavy Metals | | | | | | | | | | | | |
| Check if evidence indicates specific metals may have significant PDPs: ☐ Copper ☐ Cadmium ☐ Lead ☐ Zinc ☐ Mercury | | | | | | | | | | | | |
| Organic Compounds | | | | | | | | | | | | |
| Check if evidence indicates there may be historical soil contamination associated with any of the following: ☐ PCBs ☐ PAHs ☐ Chlordane ☐ DDT | | | | | | | | | | | | |
| Trash & Debris | | | | | | | | | | | | |
| Oxygen Demanding | | | | | | | | | | | | |
| Oil & Grease | | | | | | | | | | | | |
| Bacteria & Viruses | | | | | | | | | | | | |
| Pesticides | | | | | | | | | | | | |
| Check if evidence indicates the following are used on site: ☐ Diazinon ☐ Chlorpyrifos | | | | | | | | | | | | |
| Acid/Base (pH effects) | | | | | | | | | | | | |
| Others (list): | | | | | | | | | | | | |

"RW 303(d)" = Receiving water impairments, as listed in the most recent 303(d) list
"WS COC" = High priority watershed constituents of concern (COC), as listed in the most recent WURMP Annual Report
"PDP" = pollutant discharge potential.
"Emp. Training" = employee training activities focused on storm water pollution prevention
"Housekeeping" = standard good housekeeping BMPs, such as sweeping, regular trash pickup, etc.
"Minor Struct." = minor structural BMPs that do not require building permits, such as covering with tarps or building berms
"Major Struct." = major structural BMPs that require a building permit or are especially expensive, such as detention basins, oil/water separators, grease interceptors, overhead coverage for storage areas, etc.

Criteria

0 - no appreciable quantity observed on site
1 - very small potential for pollutant discharge; monitoring results* are well below the EPA benchmark
2 - Small potential for pollutant discharge; monitoring results* are close to the EPA benchmark but still below it
3 - Moderate potential for pollutant discharge; monitoring results* are at or slightly above the EPA benchmark
4 - Large potential for pollutant discharge; monitoring results* above the EPA benchmark but are within an order of magnitude
5 - Severe potential for pollutant discharge; monitoring results* exceed the EPA benchmark by an order of magnitude or more

Principal activity: _____

Assigned SIC Code(s): _____ _____ _____

Does assigned SIC Code best represent principal activity: ☐ Yes ☐ No

**Existing SIC Code(s):** _____ _____ _____ ☐ Food Attachment ☐ Industrial Attachment

**Status Update** (if no longer active in City or does not need an inspection): ☐ Moved/Out of Business ☐ Duplicate
☐ Not Inventoried ☐ Out of Jurisdiction

Is facility subject to CA Statewide General Industrial Permit? ☐ Mandatory ☐ Conditional ☐ No

Does facility have a Notice of Non-Applicability (NONA/NEC)? ☐ Yes ☐ No

Has facility filed a Notice of Intent (NOI) to obtain coverage? ☐ Yes ☐ No WDID: 9 37I0_____

Has facility filed a Notice of Termination (NOT) for the above WDID#? ☐ Yes ☐ No Approval date: _____

## C. INITIAL OBSERVATIONS

Discharge points: _____
_____

Approximate area covered by industrial or commercial activities: _____ square feet

Approximate % impervious surface of this area: _____%

Exposed areas of significant outdoor activity or storage? ☐ Permanent ☐ Occasional ☐ No

## D. BMP ASSESSMENT

| BMPs | N/A | Fully Implemented | Partially Implemented | Not Implemented | Comments | Shared Resp |
|---|---|---|---|---|---|---|
| **D.1 General** | | | | | | |
| Keep site free of litter, debris, and sediment using dry methods | | | | | | |
| Keep drains on site free of litter and debris | | | | | | |
| Keep loading and unloading areas, including drains, free of debris | | | | | | |
| Keep outdoor areas free of spills and leaks | | | | | | |
| Collect water from pressure washing or hosing and dispose of appropriately | | | | | ☐ Unknown | |
| Collect and dispose of cleaning water appropriately | | | | | | |
| Clean floor mats in locations that do not drain to storm drain system | | | | | | |
| **D.2 Landscaping** | | | | | | |
| Employ adequate erosion prevention measures (vegetation, physical stabilizer) | | | | | | |
| Eliminate over watering/over-irrigation | | | | | | |
| Properly store and dispose of green waste | | | | | ☐ Unknown | |
| Properly manage pesticides/fertilizer; use IPM when feasible | | | | | ☐ Unknown | |
| **D.3 Materials and Wastes** | | | | | | |
| Protect trash area from contact with storm water | | | | | | |
| Keep trash area free of litter and debris, liquids, powders, sediment | | | | | | |
| Adequately cover materials stored outside | | | | | | |
| Prevent run-on from contacting materials stored outdoors | | | | | | |
| Properly label outdoor storage containers | | | | | | |
| Equip liquid storage containers with secondary containment | | | | | | |
| Keep secondary containment free of spills and rainwater | | | | | | |
| Properly store and dispose of hazardous materials | | | | | | |
| Provide an accessible, functional spill response kit | | | | | | |
| Dispose of water generated by processing activities appropriately | | | | | | |
| Dispose of pool, spa, fountain, and filter backwash water properly | | | | | ☐ Unknown | |
| **D.4 Equipment, Vehicles, and Outdoor Activities** | | | | | | |
| Conduct outdoor activities within contained areas (under canopy, bermed) | | | | | | |
| Use drip pans to collect leaks/spills | | | | | | |
| Perform vehicle/equipment washing in a contained area where runoff does not enter the MS4 | | | | | | |

| BMPs | N/A | Fully Implemented | Partially Implemented | Not Implemented | Comments | Shared Resp |
|---|---|---|---|---|---|---|
| **D.5 Other** | | | | | | |
| Manage animals and animal waste in a manner that prevents animal waste from being transported in runoff | | | | | | |
| Identify and eliminate illicit connections and illegal discharges | | | | | | |
| Provide storm water training for appropriate employees | | | | | | |

| D.6 Additional Questions | Comments/Results |
|---|---|
| Are there any treatment control BMPs on site? | ☐ Filter insert ☐ Hydrodynamic separator ☐ Debris screen ☐ Sewer diversion ☐ Vegetated swale ☐ Vegetated filter strip ☐ Biofiltration ☐ Detention/ sedimentation basin ☐ Containment and evaporation or reuse ☐ Filtration |
| Are treatment control BMPs regularly maintained? | ☐ Yes ☐ No ☐ Unknown ☐ N/A |
| If any illicit connections and/or illegal discharges were identified have the appropriate authorities been notified? | ☐ Yes ☐ No ☐ N/A |
| If any illicit connections and/or illegal discharges were identified, were they eliminated during the site visit? | ☐ Yes ☐ No ☐ N/A |
| Were any non IC/ID related corrective actions implemented during the site visit? | ☐ Yes ☐ No ☐ N/A |
| Were any educational materials distributed? | NOI NONA/NEC Calendar Food BMPs |

- ☐ Compliance Activity Schedule (procedures to conduct annual site compliance evaluation)
- ☐ Employee Training
- ☐ Accessible to staff
- ☐ Storm Water BMPs

*SWPPP Review Comments*:

## STORM WATER MONITORING PROGRAM

Does this facility have a storm water monitoring program? ☐ Yes ☐ No

Was appropriate monitoring conducted during the most recent wet season? ☐ Yes ☐ No

*Monitoring Result Review Comments:* ☐ Copy of results attached

# ATTACHMENT 5.2

# RESTAURANT AND FOOD INDUSTRY BMP FACT SHEET

CITY OF NATIONAL CITY – DEVELOPMENT SERVICES DEPARTMENT
1243 NATIONAL CITY BLVD., NATIONAL CITY, CA 91950

# City of National City Storm Water Program

## Restaurant and Food Industry

**Your facility can help protect our water quality**

### Long-Term Compliance Solutions

Several properties and businesses in National City have already taken initiative to ensure long-term compliance with the minimum requirements of City's storm water program. In doing so they minimize the need for costly and ineffective cleanup of grease spills by employees. Three proactive solutions[1] include:

1. Storing waste grease in securely sealed indoor containers[2] until pickup

2. Permanent cover and containment of outdoor grease disposal areas[3], such as a roof and berm

3. Installation of an indoor oil management system[2] that changes oil and collects waste

[1] These solutions are not required by the City of National City, but they would likely facilitate staying in compliance with minimum storm water requirements. See the other side of this sheet for requirements commonly applicable to the restaurant and food industry.
[2] The City of National City does not require or endorse the use of any specific brand or product.
[3] Note that installation of outdoor structures should follow National City building codes and permitting requirements.

For more information about staying in compliance with the City's Storm Water Program requirements, call the City's compliance inspection contractor, D-Max Engineering, Inc.: (858) 586-6600 ext. 23.

# Restaurant and Food Industry

## Best Management Practices

### Your facility can help protect our water quality

**The following are six requirements commonly applicable to businesses that produce and/or sell food products, such as bakeries, food producers/distributors, grocery stores, and restaurants.**

| | | | |
|---|---|---|---|
| 1. Keep outdoor waste oil containers and surrounding areas free of grease stains and spills. | | 4. Pour wash water into a indoor janitorial or mop sink. Don't pour it outside into a storm drain or onto a parking lot, alley, sidewalk, or street. | |
| 2. Use dry sweeping or absorbent material for oil and grease spill cleanup instead of hosing. If wet cleanup methods are used, collect all water and take it indoors for disposal. | | 5. Clean floor mats, filters, and garbage cans in a mop sink, over an indoor floor drain, or on landscaping where water will not run off. Don't wash them in a parking lot, alley, sidewalk, or street. |  |
| 3. Keep dumpster area clean and lid closed. Don't fill it with liquid waste or hose it out. Repair or replace leaky dumpsters. | | 6. Recycle grease and oil. Don't pour it into sinks, floor drains, or onto a parking lot or street. Pouring grease and food scraps down drains can clog pipes and back up sewers. | |

## Laws and Enforcement

See National City Municipal Code Section 14.22, Storm Water Management and Discharge Control, for a full list of all storm water requirements applicable to businesses. Direct or indirect discharge of pollutants to the storm water conveyance system, even in rain water, is against the law.

**Violations can result in civil penalties up to $10,000 or fines up to $25,000 per violation, per day.**

To help report a spill or discharge to the storm drain, call the City of National City Storm Water Hotline: (619) 336-4389

# ATTACHMENT 5.3

# INDUSTRIAL AND COMMERCIAL
# "PREVENTING URBAN RUNOFF POLLUTION" TRIFOLD

## What's the difference?

### Sanitary Sewer vs. Storm Drain System

The water that drains down a sink or toilet in a home or business flows to the sanitary sewer and is treated by the City of San Diego at a wastewater treatment plant.

The storm drain system, on the other hand, is designed to carry rainwater from City streets and driveways to prevent flooding. This water does not receive any treatment. It flows directly to creeks and rivers – and eventually to San Diego Bay!

Unfortunately, as rainfall flows over the ground it picks up debris and pollutants and deposits them into our water bodies.

**Certain industrial businesses require coverage under the General Industrial Permit. For more information go to the State of California's Stormwater website at:**

http://www.waterboards.ca.gov/water_issues/programs/stormwater/industrial.shtml

## Preventing Urban Runoff Pollution

### A Guide for Commercial and Industrial Businesses

**Urban storm water runoff is the largest contributor to water pollution in San Diego County.**

**Your business is required to prevent urban runoff pollution by implementing Best Management Practices (BMPs).**

**The City will be conducting inspections to ensure that BMPs are being used and water quality is protected.**

CALIFORNIA
NATIONAL CITY
1887
INCORPORATED

## Pollutants of Concern

Water that enters the City of National City storm drain system eventually flows into San Diego Bay. The following lists several main pollutants of concern for San Diego Bay.

- Sediments
- Metals (copper, zinc)
- Pesticides (diazinon)
- Bacteria and Viruses

**B**est **M**anagement **P**ractices (**BMPs**) are required to be used at all industrial and commercial businesses, where applicable, to reduce urban runoff pollution in our streams and waterways.

## Maintenance & Good Housekeeping

- Major cleaning of exterior surfaces (such as power washing) must include capturing all wash water and disposing of it into the sanitary sewer in compliance with local regulations. Wash water is not allowed to enter the street gutter or storm drains.
- Regularly sweep exterior paved areas. **Do Not use a hose!** Place debris in the dumpsters.
- If you must use water for cleaning, use a mop and bucket. Dispose of wash water into the sanitary sewer (sink or toilet).
- Regularly inspect and maintain storm drain inlets and surface drains on your property.

## Landscaping

- Time sprinklers to avoid over watering and aim them to avoid causing runoff.
- Minimize use of pesticides, herbicides, and fertilizers, which are harmful to animals downstream.
- Hand pull weeds instead of using herbicides
- Do not use pesticides that eliminate beneficial insects
- Only irrigate during early morning or late evening to avoid evaporation.

## Outdoor Material Storage

- Store all material indoors or under a covered area not exposed to rain. Include secondary containment for liquid materials.
- Have a spill response kit (dry absorbent, rags, and/or hydrophobic mops are useful) available to clean up potential spills.
- Keep lids closed on all outdoor storage containers and ensure containers are labeled.

**Unacceptable**

**Acceptable**

## Waste Management

- Keep all outdoor garbage and dumpster areas free of trash, sediment and debris.
- Keep lids closed on dumpsters and trash cans and never wash down dumpsters.
- Fix any leaks in garbage cans or dumpsters.
- Schedule extra pick-ups when regular waste collection does not meet demand.

## Vehicle & Equipment Washing and Maintenance

- Wash vehicles at a commercial car wash when possible. (Commercial car washes drain to the sanitary sewer and not to the storm drain).
- Wash vehicles over a pervious (absorbent) surface such as dirt, gravel or grass to prevent runoff.
- Minimize the use of soap and water.
- Car wash water is not allowed to enter storm drains. Wash water must be collected and disposed of to a pervious area (such as landscaping) or to the sanitary sewer system if allowed by local sewer agency.
- Perform all vehicle maintenance indoors when possible.
- Use drip pans to collect fluids from leaky vehicles
- Clean up spills with a spill kit and properly dispose of the used kit contents.

**Unacceptable**

**Acceptable**

## Loading Areas & Operations

- Load and unload in designated areas.
- Regularly sweep loading and unloading areas; do not hose them down.
- If possible, cover loading areas.
- Divert rain water away from all loading and unloading areas.
- Check shipments and trucks for leaks and spills.
- Clean up spills/leaks immediately and dispose of them properly.

# ”EVERYTHING THAT FLOWS DOWN INTO A STORM DRAIN” BROCHURE

# City of National City

Office of the Public Works/Engineering Director
1243 National City Blvd. National City, CA 91950-4397
(619) 336-4580, Fax (619) 336-4397 www.ci.national-city.ca.us

**Everything that flows down into a storm drain goes *untreated* directly into our creeks, lagoons, and San Diego Bay.** When it rains o when water flows out of yards, it flows directly into storm drains. Many people think that everything that flows into a storm drain gets treated at the Point Loma Sewage Treatment Plant, just like wastewater in the sewer system, but these two systems are not connected.

The sources of pollution that must be controlled and eliminated result from urbanization and the choices that are made every day by residents, businesses and industry alike. For example, detergents, oil, grease, and other pollutants have been shown to be toxic to wildlife in local streams and San Diego Bay. **Recycling** of oil, antifreeze, glass, plastic, and other materials can prevent their improper disposal into the stormwater drainage system. **Proper landscaping practices** include minimization of the use of herbicides, pesticides and fertilizers together with conservation of water to minimize runoff of pollutants from landscaped areas, lawns, golf courses, etc.

**The City of National City's Stormwater Management & Discharge Control of the National City Municipal Code Chapter 14.22, prohibits non-stormwater discharges, such as car washwater, pesticides, fertilizers, pet waste, litter, oil, and other automobile fluids, to run into the City's storm drain system.** This ordinance is based on regulations set forth by the State Regional Water Quality Control Board and the U.S. Environmental Protection Agency in connection with the State and Federal Clean Water Acts.

Your help is needed, and by doing your part, by changing your washwater and trash disposal practices, you will help reduce the pollution problems in the community where you and your family live, work and play. Please call **Storm Drain Hotline** at **(619) 336-4389** if you have **any questions** regarding this matter and **to report any illegal discharges and /or dumping.**

# City of National City

Office of the Public Works/Engineering Director
1243 National City Blvd. National City, CA 91950-4397
619) 336-4580, Fax (619) 336-4397 www.ci.national-city.ca.us

**Todo lo que desemboca en las alcantarillas no esta tratado y va a parar directamente a nuestras lagunas, esteros y Bahia de San Diego.** Cuando llueve o cuando escurre agua de algun patio, desemboca directamente a las alcantarillas. Mucha gente piensa que todo lo que desemboja en una alcantarilla es tratado en la planta de Tratamiento de Agua Negras en Point Loma, como las aguas negras del sistema de drenaje, pero estos dos sistemas **no** estan conectados.

Las causas de contaminacion que tienen que ser controladas y eliminadas resultan de la urbanizacion y las elecciones que hacen todos los dias los residentes, negocios y la industria. Por ejemplo, detergentes, aceite, grasa, ya otros contaminantes se ha visto que son toxicos para la vida silvestre en nuestros arroyos locales y Bahia de San Diego. **Reciclando** el aceite, antifreeze, vidrio, plastico y otros productos que sean desechados de un modo inadecuado llegen a parar al sistema de alcantarillado de la ciudad. **Los metodos de mantener el jardin**, como usar menos los herbicidas, pesticidas y fertilisantes.Tambien como conservar el agua para que esa agua con contaminantes de los jardines, pastos, canchas de golf, etc.

**El Codigo Municipal No. 14.22 de las aguas pluviales de la Ciudad de National City, prohibe aguas que no sean pluviales como las aguas negras, pesticidas, fertilisantes, basura, aceite y otros liquidos de carros que sean depositadas en el sistema de alcantarillado de la ciudad.** Esta regla esta basada en las regulaciones puesta por "State Regional Water Quality Control Board" y "U.S. Environmental Protection Agency" en conneccion con "State and Federal Clean Water Acts."

Su ayuda es necesaria, y haciendo su parte como cambiar el modo de tirar su basura, usted ayudara a reducir la contaminacion en la comunidad donde usted y su familia viven, trabajan y juegan.

Por favor llame a la linea de **"Storm Drain Hotline"** al **(619) 336-4389**, si tiene **alguna pregunta** si quiere **reportar un desague ilegal**.

# CALENDAR ART CONTEST INFORMATION FOR TEACHERS

City of National City

# Storm Water Program
# Third Annual Calendar Art Contest

## Guidelines for Teachers

The City of National City invites all third grade students attending public schools in the City to participate in this fun and educational art contest. We are asking students to provide original art pieces for the upcoming 2012 National City Storm Water Program Calendar. The theme of this year's contest is **"By Keeping Our Community Clean, We Can Keep the Ocean Clean"**.

Similar to previous years, the City plans to select 12 original art pieces to feature in the 2012 National City Calendar. The goal of the contest is to promote understanding of the local natural environment in National City and to educate students on ways they can help protect local waterways. The contest provides a way for children to share their ideas on ways to protect our creeks and oceans with the entire National City community.

We encourage teachers to relate this contest to various aspects of the third grade curriculum. Please encourage students to include National City landmarks in their drawings, such as Paradise Creek, the Sweetwater River, their school, favorite park, etc. Students can also incorporate native plants and animals. Ideally, a contest entry will show how to protect water quality AND how National City benefits from having a clean community.

Contest Rules

**Guidelines:**

- **Media:** Paint, color pencils, marker, or crayon.
- **Paper:** White paper, 8 1/2 inches by 11 inches in landscape format.
- **Text:** Drawings can include text and original slogans, however, names will not be allowed on front of the drawing. The artist's first name and school will be printed below the drawing in the calendar. All words must be spelled correctly. If preferred, text can be typed on a computer, printed, and then pasted to the drawings.

**Submittals:**

- All participants must submit a release form with their name, school, room number, teacher's name, and parent or guardian signature.
- The student's name, school, and teacher must also be taped to the back of the artwork on a piece of paper or index card.

(Continued on Back)

**Deadline:**

- The deadline for students will be **June 3, 2011**. Please note that this is a Friday, and the City offices will not be open. Teachers should submit their students' artwork to City Hall no later than **June 13, 2011.** If you cannot submit entries directly to City Hall, you can contact Barby Tipton (see bottom of page) to arrange for a pick up. Note that for teachers with Combination classes (2nd and 3rd grades), we encourage 2nd graders to participate, but only 3rd grade work should be submitted to the City for entry into the contest.

**Judging:**

- Drawings will be judged by various City officials and representatives involved in the City's Storm Water Pollution Prevention Program. 12 winners will be chosen based on originality and representation of the contest's theme. At least one winner will be chosen from each participating school.

**Prizes:**

- Teachers can hand out personalized participation certificates (to be filled out by the teacher) to all participating students when artwork is submitted in class.
- Winning art pieces will be featured in the 2012 National City Storm Water Program Calendar. Winners will be honored at a National City Council Meeting in the fall and will receive additional prizes.

**Contact Information:**

- If you have additional questions about how you can integrate this contest into your 3rd grade curriculum, please contact:
  Stephanie Maxin Phone: (619) 336-8306
  Email: stephanieb@national.k12.ca.us
- If you would like to contact a representative at the City, please contact:
  Barbara Tipton, National City Storm Water Compliance Inspector
  Phone: (619) 336-4583 Email: btipton@nationalcityca.gov

# CALENDAR ART CONTEST INFORMATION FOR STUDENTS AND FAMILIES

Storm Water Program

# 3rd Grade Art Contest

## THEME: BY KEEPING OUR COMMUNITY CLEAN, WE CAN KEEP THE OCEAN CLEAN!

Deadline: June 3, 2011

**Winning drawings will be featured in National City's 2012 Storm Water Program Calendar!**

### DO YOU GO TO THE BEACH WHEN IT'S RAINING?

Probably not, but pollution does! When it rains, pollutants like litter and oil are carried from our streets and sidewalks to our local creeks and ocean. Pollution can hurt plants and animals and can also make water unhealthy for humans.

### BY KEEPING OUR COMMUNITY CLEAN, WE CAN KEEP THE OCEAN CLEAN!

## Rules:

- Drawings should show how you and your friends, family, and neighbors can help prevent pollution in creeks, rivers, and oceans. We encourage you to include locations within National City in your drawing, such as your school, Paradise Creek, Sweetwater River, or your favorite park!
- Drawings must be on white 8 1/2 inch by 11 inch paper, in landscape format.
- Only color drawings made with markers, colored pencils, crayons, or paint will be accepted. Bright colors are best.
- Do NOT write your first or last name on the front of your drawing.
- Use original artwork only. Slogans and messages are OK, but all words must be spelled correctly. Text can also be typed on the computer, printed, and pasted onto the drawing.
- Drawings must be submitted to your teacher by June 3, 2011 with a completed entry form (on the back of this flyer) signed by a parent or guardian.
- Your name, teacher, and school must be on a piece of paper or card taped to the back of the artwork.
- Winners will be notified in the fall. All winners will be featured in the 2012 National City Storm Water Program Calendar. Winners will also receive a prize and be honored at a future City Council Meeting!

YOU CAN BE A CLEAN WATER SUPERSTAR!

- ☆ Don't litter
- ☆ Never put anything into the storm drain
- ☆ Pick up after your pets

Programa de Aguas Pluviales

# Concurso de Arte de Estudiantes de Tercer Grado

## TEMA: ¡AL MANTENER NUESTRA COMUNIDAD LIMPIA, PODEMOS MANTENER LIMPIO EL OCÉANO!

**Fecha límite: 3 de junio del 2011**

**¡Las ilustraciones ganadoras aparecerán en el Calendario del Programa de Aguas Pluviales del 2012 de National City!**

### ¿VAS A LA PLAYA CUANDO LLUEVE?

Probablemente no, ¡pero la contaminación sí! Cuando llueve, nuestras calles y aceras transportan contaminantes como basura y aceite al océano y a nuestros arroyos locales. La contaminación puede dañar plantas y animales y hacer que el agua sea mala para la salud de los seres humanos.

**¡AL MANTENER NUESTRA COMUNIDAD LIMPIA, PODEMOS MANTENER LIMPIO EL OCÉANO!**

## Reglas del concurso:

- Las ilustraciones deben mostrar cómo tú y tus familiares, vecinos y amigos pueden ayudar a evitar la contaminación de arroyos, ríos y océanos. ¡En tu dibujo puedes incluir lugares de National City como tu escuela, el arroyo "Paradise Creek", el Río Sweetwater o tu parque favorito!
- Debes hacer tu ilustración en una hoja de papel blanco de 8 ½ x 11 pulgadas, en formato horizontal.
- Sólo se aceptarán dibujos hechos con plumones, lápices de colores, crayones o pintura. Los colores brillantes son más atractivos.
- NO escribas tu nombre ni tu apellido en el lado del dibujo.
- Tu ilustración debe ser original. Se acepta que le pongas un lema o mensaje, pero todas las palabras deben estar bien escritas. También puedes escribir el texto en la computadora e imprimirlo y pegarlo al dibujo.
- Debes entregar tu dibujo a tu maestro(a) para el 3 de junio de 2011, y el reverso de esta hoja debe estar llenado y haber sido firmado por uno de tus padres o tutores.
- Debes escribir tu nombre, el de tu maestro o maestra y el de tu escuela en un trozo de papel o en una tarjeta y pegarlo atrás del dibujo.
- En el otoño se notificará a los ganadores. ¡Todos los ganadores aparecerán en el Calendario del Programa de Aguas Pluviales de National City, recibirán un premio y se les hará un reconocimiento en una futura junta del cabildo del Ayuntamiento Municipal!

**¡TÚ PUEDES SER UN SUPERESTRELLA DEL AGUA LIMPIA!**

- ☆ No tires basura.
- ☆ No eches cosas al drenaje pluvial.
- ☆ Recoge los desechos de tus mascotas.

## CERTIFICATION STATEMENT

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete.

I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Stephen Manganiello
City Engineer

Date: 9/26/12

Telephone Number: (619) 336-4380

# EXECUTIVE SUMMARY

The City of National City (City) has been actively developing and implementing storm water pollution prevention measures since 1990. The City's current Jurisdictional Urban Runoff Management Program (JURMP) was prepared in March 2008 in response to San Diego Regional Water Quality Control Board (RWQCB) Order No. R9-2007-0001 (Municipal Permit). The Municipal Permit was jointly issued to 18 municipalities in San Diego County, including the City, the County of San Diego, the San Diego County Regional Airport Authority, and the San Diego Unified Port District (collectively referred to as "Copermittees").

At the end of each fiscal year, the City is required to report a summary of its JURMP implementation activities to the RWQCB. This JURMP Annual Report presents the City's activities during the 2011/2012 fiscal year, which began on July 1, 2011 and ended on June 30, 2012. Each section of this JURMP Annual Report discusses how the City's efforts during 2011/2012 met the requirements of the Municipal Permit. Key actions taken for the major components of the City's storm water program are summarized below.

**Development Planning Component**

During 2011/2012, the City continued to oversee development activities occurring in the City in order to mitigate potential threats to water quality due to such activities. The City continued to require all development projects to submit applicability checklists to determine subjectivity to the City's Standard Urban Storm Water Mitigation Plan (SUSMP) requirements. All SUSMP submittals were also reviewed with respect to Hydromodification Management Plan applicability and requirements. The City implemented its treatment control BMP operation and maintenance verification program, which included the utilization of a Microsoft Access treatment control BMP database to track information and prepare the maintenance verification letters distributed to responsible parties. The City also conducted BMP inspections at 18 sites with approved treatment control BMPs and exceeded Municipal Permit inspection frequencies.

**Construction Component**

During 2011/2012, a total of 66 construction storm water compliance inspections were completed at inventoried construction sites, not including inspections for building permits, which also include a brief check for storm water BMPs. The City checked all construction projects for applicability to the maximum disturbed area limitation and guidelines for advanced treatment. The City's plan check process provided permit applicants with construction BMP fact sheets, and the inspection program required projects to comply with the City's minimum BMP requirements.

**Municipal Component**

The City inspected all high TTWQ municipal fixed facilities and continued its rigorous street sweeping and MS4 maintenance programs. A total of 985 tons of sediment and

debris were removed from street sweeping activities, and 15.1 tons of debris were removed from standard MS4 maintenance. The City continued to maintain and repair or replace sanitary sewer lines, as needed, to decrease the potential for a sanitary sewer overflow (SSO). No public SSOs occurred during 2011/2012. The City received and appropriately addressed all complaints received by the City's Storm Water Hotline, the City website, and other City departments.

**Industrial and Commercial Component**

During 2011/2012 the City met the Municipal Permit requirement to inspect at least 25 percent of the City's industrial and commercial inventory, including 100 percent of its high threat to water quality (TTWQ) sites. During the inspections conducted in 2011/2012, the City reminded industrial and commercial businesses of the City's BMP requirements through the City's inspection program. Inspectors also assessed each facility's compliance with the General Industrial Permit (Industrial Permit). The City also continued to collect additional data to assess the pollutant discharge potential at each site.

**Residential Component**

The City uses various methods to provide storm water education to its residents. Third grade students in local schools participated in the Storm Water Art Contest to provide art for the 2013 Storm Water Calendar. During 2011/2012, a special evaluation of multi-family residential complexes assessed pollutant discharge potential and BMP implementation, while providing educational materials to property managers. The City continued to collaborate with the cities of Chula Vista and Imperial Beach to encourage residents to dispose of household hazardous waste (HHW) appropriately at a facility available to the public. The City also continued to host large item waste disposal events in fall and spring, as well as respond to calls made to the City storm water hotline regarding residential areas.

**Illicit Discharge Detection and Elimination Component**

On September 10, 2008, the RWQCB adopted Addendum No. 2 to the Municipal Permit. This addendum requires the City to wait to submit the illicit discharge detection and elimination (IDDE) section of its JURMP Annual Report until the report for the 2012 Dry Weather Field Screening and Analytical Monitoring Program is finalized. The 2011/2012 section must be submitted to the RWQCB no later than December 15, 2012.

**Education Component**

As a means to raise storm water awareness in various communities in the City, the City continued to conduct education and outreach activities throughout 2011/2012. The City's efforts resulted in an estimated 29,539 impressions. The City distributed the 2012 Storm Water Program Calendar and also began development of the 2013 calendar. To better serve the City's diverse population the calendars present storm water concepts in English as well as Spanish, similar the City's many other bilingual educational materials.

**Public Participation Component**

During 2011/2012, the City provided a variety of opportunities for individuals to participate in the City's storm water program. Activities included cleanup events, which have a direct effect on water quality, as well as outreach activities, through which the City works to increase general knowledge and awareness regarding storm water issues. Third grade students in local schools participated in the Storm Water Art Contest in May 2012 to provide art for the 2013 Storm Water Calendar. In addition, 592 volunteers participated in the Coastal Cleanup Day and Creek to Bay cleanups at two different sites in the City. Also, City residents continued to participate in routine large item and HHW waste disposal events.

**Fiscal Analysis Component**

The City continued to fund its storm water program as discussed in the City's JURMP. During 2009/2010, a fiscal analysis reporting template was developed collectively by the Copermittees. The City used this template to report the 2011/2012 program budget in this JURMP Annual Report.

**Effectiveness Assessment Component**

The City continued to evaluate the effectiveness of its storm water program based on the approach presented in the City's JURMP. The City has identified significant activities within each program component and metrics to assess each one. Standard tables to report this information have been created and included in Section 11 of this JURMP Annual Report. The City has seen some encouraging signs of the effect of its program, such as decreasing median concentrations of pollutants in runoff during its Dry Weather Field Screening and Analytical Monitoring Program (Dry Weather Monitoring Program) in recent years.

**Special Investigations**

The City continued its Clean Community Program which promotes shared responsibility within communities to keep National City and local receiving water bodies clean and free of pollution. The City also assessed pollutant discharge potential of industrial and commercial businesses; oil and grease, trash, oxygen-demanding substances, and bacteria had the highest average pollutant discharge potential scores.

**Conclusions and Recommendations**

The City will continue to implement the new and updated programs in its JURMP during 2012/2013; it is anticipated that some program refinements will be made as implementation progresses. The City will also continue to collaborate with the other Copermittees to improve the efficiency of its program.

# 1.0 INTRODUCTION

## 1.1 BACKGROUND

This Jurisdictional Urban Runoff Management Program (JURMP) Annual Report presents an activity summary for the City of National City (City) during the 2011/2012 fiscal year. The JURMP Annual Report preparation and submission are required by San Diego Regional Water Quality Control Board (RWQCB) Order No. R9-2007-0001 (Municipal Permit).

### 1.1.1 REGULATORY BACKGROUND

The 1987 amendments to the Federal Water Pollution Control Act, also known as the Clean Water Act (CWA), established a framework for regulating Municipal Separate Storm Sewer System (MS4) discharges under the National Pollutant Discharge Elimination System (NPDES). In 1990, the RWQCB issued the first regional NPDES permit for municipalities in the San Diego Region, followed by a revised permit in 2001. RWQCB Order No. 2001-01 was replaced by the current Municipal Permit in 2007.

In 2002, the City, like all regulated municipalities in the San Diego region (collectively referred to as Copermittees), developed and submitted a JURMP to the RWQCB. The City then submitted an updated JURMP, as required by the Municipal Permit, in March 2008. The JURMP explains management measures for different sectors, including municipal, industrial, commercial, construction, and significant development and re-development activities.

Annual reports documenting the implementation of the JURMP are required to be submitted to the RWQCB by September 30. This JURMP Annual Report presents data from the 2011/2012 fiscal year, which extended from July 1, 2011, to June 30, 2012.

No Total Maximum Daily Loads (TMDLs) have been adopted for water bodies within or downstream of the City of National City at this time.

### 1.1.2 CITY SETTING

The City of National City is located in southwest San Diego County, surrounded by the City of San Diego, Chula Vista, and unincorporated portions of San Diego County. The City itself covers approximately nine square miles and has an estimated population size of approximately 61,000 residents. Land use within the City is primarily residential, although a large industrial area can be found along San Diego Bay. Commercial development is restricted to businesses and shopping centers along the main roadways. Land use is broken down by area and percentage of total in Table 1-1 and illustrated in Figure 1-1.

**Table 1-1**
**City of National City Land Use Breakdown**

| Land Use | Total Area (Acres) | Percentage |
|---|---|---|
| Single Family Residential | 1,216 | 30% |
| Transportation | 1,149 | 29% |
| Commercial | 490 | 12% |
| Industrial | 251 | 6% |
| Multi-Family Residential | 215 | 5% |
| Open | 202 | 5% |
| Public Facilities and Utilities | 174 | 4% |
| Vacant | 115 | 3% |
| Parks | 114 | 3% |
| Other Residential | 41 | 1% |
| Office | 22 | 1% |
| Water | 20 | <1% |
| Construction | 6 | <1% |
| Recreation | 2 | <1% |
| **Total** | **4,016** | **100%** |

Source: 2007 San Diego Association of Governments (SANDAG) land-use data

The City of National City lies entirely within the San Diego Bay Watershed and constitutes approximately 1.6 percent of its total area. More specifically, the City is located within two sub-watersheds: Sweetwater and Pueblo San Diego. The majority of the southern part of National City drains to the Sweetwater River and ultimately discharges into San Diego Bay. La Paleta Creek (also known as 7th Street Channel) drains the northern part of the City and also discharges into San Diego Bay, while a very small western portion of the City drains directly to the San Diego Bay shoreline. Nearly all areas of the City that drain directly to San Diego Bay are within the San Diego Unified Port District. Lastly, the central portion of the City drains to Paradise Creek, a small salt marsh creek, which then discharges into the Sweetwater River. Watersheds in the City are shown in Figure 1-2.

San Diego Bay is listed in the 2008 CWA Section 303(d) for polychlorinated biphenyls (PCBs) based on fish tissue analyses. The shorelines at 7th Street Channel and at the 24th Street Marine Terminal are listed as impaired for benthic community effects and sediment toxicity. La Paleta Creek is listed as impaired for copper and lead. Paradise Creek is listed as impaired for selenium. Finally, Sweetwater River is listed as impaired for *Enterococcus,* fecal coliform, phosphorus, selenium, total dissolved solids, total nitrogen as N, and toxicity. Environmentally Sensitive Areas (ESAs) are also shown on Figure 1-2.

Note: Marsh boundaries based on land use data from SANDAG. The portion of the marsh west of I-5 and south of the Sweetwater River is not in the City's Jurisdiction. Base Data Sources: City of National City, SANDAG, SanGIS, Port of San Diego

0 0.5 1 Miles

## 1.2 Purpose and Objectives

The City's JURMP presents strategies to reduce the discharge of pollutants from the MS4 to the maximum extent practicable (MEP). The JURMP describes various programs intended to minimize or eliminate the effects of urban runoff from the City on receiving water bodies. This JURMP Annual Report has been prepared to document the implementation of the City of National City's JURMP during the 2011/2012 reporting period.

## 1.3 Report Organization

This report follows the standard reporting outline jointly developed by the Copermittees and submitted to the RWQCB in July 2007. The following sections are included in the JURMP Annual Report.

| | |
|---|---|
| **Section 1** | **Introduction** |
| **Section 2** | **Development Planning Component** |
| **Section 3** | **Construction Component** |
| **Section 4** | **Municipal Component** |
| **Section 5** | **Industrial and Commercial Component** |
| **Section 6** | **Residential Component** |
| **Section 7** | **Illicit Discharge Detection and Elimination Component** |
| **Section 8** | **Education Component** |
| **Section 9** | **Public Participation Component** |
| **Section 10** | **Fiscal Analysis Component** |
| **Section 11** | **Effectiveness Assessment Component** |
| **Section 12** | **Special Investigations** |
| **Section 13** | **Non-Emergency Fire Fighting** |
| **Section 14** | **JURMP Revisions** |
| **Section 15** | **Conclusions and Recommendations** |
| **Section 16** | **References** |

Each section includes all components required by the standard JURMP Annual Report format. In some cases, additional subsections within the standardized sections have been added to provide a more detailed explanation of the City's activities during the reporting period. For example, in this introduction section, the standard reporting format only includes subsections 1.1 and 1.2. Background, subsection 1.1, has been divided into Regulatory Background, subsection 1.1.1, and City Setting, subsection 1.1.2, for clarity.

# 2.0 DEVELOPMENT PLANNING COMPONENT

## 2.1 INTRODUCTION

The development planning component of the City's JURMP aims to improve overall storm water quality by reducing the discharge of pollutants from development projects to the MEP and by managing the increases in runoff from development projects that have the potential to negatively affect downstream water bodies. During the 2011/2012 fiscal year, the City accomplished these goals through implementation of its JURMP document.

### 2.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the development planning component during the 2011/2012 reporting period are presented in the following bulleted list. The remainder of this section provides more detail about the City's implementation of this component of its storm water program.

- Distributed the City's development requirements checklist to projects applying for permits.
- Continued to utilize the City's SUSMP database to track Priority Development Projects within the City's jurisdiction and the parties responsible for BMP maintenance.
- Obtained verification of BMP maintenance from completed Priority Development Projects on the City's treatment control BMP inventory.
- Conducted maintenance inspections of treatment control BMPs at 18 completed development projects in the City.

A list of development projects subjected to SUSMP requirements in 2011/2012 is available in Table 2-1. A comparison of the number of inspections performed and the requirements of the Municipal Permit can be found in Table 2-2. SUSMP projects that were completed after inspection and maintenance verification actions had been performed for the 2011/2012 inventory are listed in Table 2-3. Details of treatment control BMP inspections and related follow-up actions are provided in Table 2-4.

## 2.2 LAND USE PLANNING

### 2.2.1 BACKGROUND

The City's General Plan was last updated in 2011 and contains water quality and watershed protection principles in its Conservation and Sustainability Element. The comprehensive principles established in 1996 and updated in 2011 provide an ample

framework for implementing the requirements of the current Municipal Permit, and no changes to these policies were necessary during the reporting period.

### 2.2.2 Source Characterization

The City's General Plan contains established restrictions on the types of new development projects based on their planned land uses to ensure public safety and limit negative impacts to the surrounding environment. No changes to development restrictions in the City's General Plan for storm water purposes were implemented during the reporting period.

### 2.2.3 Best Management Practice Requirements

Please refer to the City's updated JURMP document for a list of the water protection policies included in the City's General Plan. These policies remained the same throughout the reporting period.

### 2.2.4 Program Implementation

The City implemented its water protection-related land use policies during the reporting period mainly through the City's Municipal Code. The City last updated its SUSMP Manual, a formatted guidance manual based on the regional Model SUSMP document, in January 2011. The City's SUSMP Manual is an uncodified appendix to Chapter 14.22 of its Municipal Code. The updates made at that time were consistent with the regional Hydromodification Management Plan (HMP) document, prepared by the Copermittees and adopted by the RWQCB in July 2010, and the updated Model SUSMP. The regional HMP document was also added as an appendix to the City's SUSMP Manual. The updated City of National City SUSMP Manual is available on the City's website (http://www.nationalcityca.gov/) on the Storm Water section of the Engineering Division webpage.

Details on how the City implemented its established water protection policies through its environmental review process and its development project approval and verification processes during the reporting period are provided in Sections 2.3 and 2.4 of this JURMP Annual Report document.

## 2.3 Environmental Review Process

The City's current environmental review process is detailed in the City's updated JURMP. The overall structure of the review process remains the same as in previous reporting years. No changes to the City's environmental review process have been made since the submittal of the updated JURMP.

## 2.4 Development Project Approval and Verification Process

### 2.4.1 Background

The approval and verification process implemented during 2011/2012 followed the process described in the City's updated JURMP. Details on the different aspects of the process are described in the sections below.

### 2.4.2 Source Characterization

The different priority pollutants, sources, and activities associated with development projects within the City are addressed through the implementation of the City's SUSMP Manual, which contains the City's SUSMP regulations. The City's SUSMP Manual derives its authority from Municipal Code Chapter 14.22. Projects subject to SUSMP regulations are identified by completion of applicability checklists. More detail about this process is provided in Section 2.4.4.2.

### 2.4.3 Best Management Practice Requirements

The City last updated its SUSMP requirements for development projects in January 2011, as described in Section 2.2.4 above. The BMP requirements for development projects did not change during 2011/2012.

### 2.4.4 Program Implementation

During the 2011/2012 fiscal year, the City required implementation of its BMP requirements for all development projects through education, a comprehensive development project approval process, and the treatment control BMP inspection and maintenance verification program.

#### 2.4.4.1 Outreach and Staff Training

The City trains staff involved in the planning and review of development projects within the City and works closely with the development community to communicate its development requirements throughout the entire approval process. Details on trainings conducted and educational materials developed and distributed related to new development during the reporting period can be found in Section 8 of this JURMP Annual Report document. In addition, based on results from the first years of the program, distribution of maintenance verification letters to parties responsible for maintenance of treatment control BMPs at completed projects seems to be increasing the level of knowledge of regulated parties.

#### 2.4.4.2 URBAN RUNOFF APPROVAL PROCESS FOR DEVELOPMENT PROJECTS

All development projects that required City permits were subject to the City's urban runoff approval process as detailed in the City's JURMP. Forms completed by project applicants are kept with the project's file at the City for future reference. As discussed in the City's JURMP, the City required all developers applying for construction and building permits to complete a "National Pollutant Discharge Elimination System (NPDES) Project Applicability Form" (NPDES Checklist) that guides project applicants to submit proper documents to the City for review. The checklist was last updated during the 2010/2011 reporting period at the same time as the BMP Manual. The current NPDES Checklist is included with this report as Attachment 2.1.

All development projects determined to be Priority Development Projects after completing the SUSMP Checklist were required to prepare a Storm Water Management Plan (SWMP) or Water Quality Technical Report (WQTR) to meet the City's SUSMP requirements. As part of the JURMP update, the City also developed a SWMP self checklist to be used by the SWMP preparer, which was included as an attachment to the updated JURMP. In the past, the majority of deficiencies found in document reviews were missing information or sections not having enough detail about proposed BMPs. Table 2-1 lists the development projects subject to the City's SUSMP requirements during the 2011/2012 reporting period, the number of document reviews for each project, and the current approval status of each. Public Priority Development Projects are marked as Capital Improvement Projects (CIP) in the table.

**Table 2-1**
**Development Projects Subject to SUSMP Requirements During 2011/2012**

| # | Project Name | Location | Project Type | Number of Reviews during 11/12 | Approved during 11/12 |
|---|---|---|---|---|---|
| 1 | 8th Street Smart Growth Revitalization Project (CIP) | 8th Street, between Harbor Drive and Highland Avenue | Priority | 1 | Yes |
| 2 | Addisyn Park Apartments | 844-846 Palm Avenue | Priority | 2 | No |
| 3 | Coolidge Avenue Pedestrian Improvements (CIP) | Coolidge Avenue from Plaza Boulevard to 18th Street and along 18th Street from Harding Avenue to Hoover Avenue | Priority | 2 | Yes |
| 4 | Costco CWI | 1001 West 19th Street | Priority | 2 | Yes |
| 5 | D Ave and East 12th St Roundabout | D Ave and East 12th St Roundabout | Priority | 1 | No |
| 6 | Fresh and Easy | Plaza Boulevard and N Avenue | Priority | 2 | No |
| 7 | Park Lofts | East 16th Street and National City Boulevard | Priority | 1 | No |
| 8 | Plaza Boulevard Center | Intersection of Plaza Boulevard and Palm Avenue | Priority | 2 | Yes |

Note: After the initial review, some subsequent reviews were quicker informal checks to verify that the required corrections were made.

No projects were granted waivers from SUSMP requirements, and the City does not anticipate granting waivers in the future. The City makes every effort to encourage development projects to select treatment controls with high and medium pollutant removal efficiencies and does not expect to approve any projects with low removal efficiency BMPs. However, if projects proposing a low removal efficiency treatment control BMP with a defensible infeasibility analysis are approved, details of those projects and their feasibility analyses will be reported as required in future JURMP annual reports. None of the approved projects were allowed to propose low removal efficiency BMPs.

The Plaza Boulevard Center development is one example of a Priority Development Project that was conditioned to meet SUSMP requirements in 2011/2012. The project proponent had originally proposed vegetated swales as treatment measures and had failed to account for some areas of the site. Through the City's rigorous review process, and over the course of at least five submittals spanning multiple fiscal years, the project proposed bioretention facilities and directed all onsite runoff to the BMPs.

**Hydromodification Management Plan**

During the reporting period the Copermittee Land Development Workgroup met to discuss HMP implementation issues and provide updates on the status of consultant work products. The City of National City continued participation in the workgroup meetings. The City incorporated the final regional HMP requirements into its local development requirements in January 2011, as mentioned in subsection 2.2.4 above. The City posted information about the new HMP requirements on its website to educate project proponents.

All of the projects approved during 2011/2012 were redevelopment projects that reduced impervious area and did not increase flow rates to any discharge point; therefore they were not subject to HMP requirements. All projects currently under review are subject to the existing hydromodification requirements unless they qualify for one of the exemption categories. This will be evaluated during review and reported in the applicable reporting period.

**BMP Installation Verification**

During the course of the 2011/2012 reporting period, after maintenance verification letters had been sent out during the summer of 2011, the City identified recently completed Priority Development Projects within the City's jurisdiction to be added to the treatment control BMP inventory. When a project is completed, the City checks for BMPs prior to occupancy using the site's plans and a BMP inspection form generated after the WQTR is approved, assigns the project a Threat to Water Quality (TTWQ) priority, and then adds it to the inventory of projects subject to the City's inspection and annual maintenance verification program the following fiscal year. This process helps the City focus its inspection resources on sites more likely to have maintenance deficiencies, as maintenance deficiencies are generally less likely at sites with recently installed BMPs. A table of the projects identified after distribution of verification letters is presented in Table 2-3 at the end of this JURMP Section. These projects will be added to the City's treatment control BMP inventory in 2012/2013.

### 2.4.4.3 Treatment Control BMP Inspection and Maintenance Verification Program

**2011/2012 Annual Maintenance Verification Program**

The Municipal Permit requires annual verification of operation and maintenance of treatment control BMPs installed within the City's jurisdiction.

Using the property owner names and addresses recorded in the City's BMP database, BMP maintenance verification forms were mailed to all the private projects included in the City's BMP database in early 2011/2012, prior to the start of the wet season. Maintenance verification forms were also completed for all municipal treatment controls at CIP projects on the City's inventory. Through this process, the City updated contact information that was no longer accurate due to transfer of ownership and provided additional guidance on how to properly maintain BMPs, as needed. The City completed

research to update contact information and worked with management companies to educate them on the requirements. Because not all of the projects' responsible parties responded promptly, the City sent out follow-up correspondences, two Notices of Violation (NOV) and one citations during this process as necessary to achieve compliance. Through the City's maintenance verification efforts, responses were received from all projects.

**Operation and Maintenance Inspections**

During the 2011/2012 fiscal year, the City conducted inspections of projects with treatment control BMPs in accordance with the inspection frequencies outlined in the Municipal Permit. Table 2-2 provides a summary of the number of inspections performed and how these met the requirements of the Municipal Permit; also note that all high TTWQ sites were inspected prior to October 1, 2011.

**Table 2-2**
**2011/2012 Inspection Numbers versus Municipal Permit Requirements**

| Site Class | Number of Sites | Full BMP Assessments | Percent Inspected | Permit Requirement | Requirement Met |
|---|---|---|---|---|---|
| All Inventoried Sites | 33 | 18 | 55% | 20% | **Yes** |
| Sites with Drainage Inserts | 22 | 12 | 55% | 50% | **Yes** |
| High TTWQ sites | 8 | 8 | 100% | 100% | **Yes** |

The City continued to use BMP inspection forms and the treatment control BMP tracking database. During the reporting period, location coordinates were also collected for the BMPs inspected, and this location information was added to the electronic database. Table 2-4 at the end of this section lists the development projects inspected during the reporting period, a brief description of inspection findings, and, if applicable, any follow-up actions taken. During 2011/2012, the City issued a total of eight NOVs and two administrative citations to development projects and worked with responsible parties as necessary to achieve compliance. The BMP types proposed at these sites and the sites' TTWQ priorities are included in the City's treatment control BMP inventory, which is included in Appendix A.1 of this JURMP Annual Report.

During the 2011/2012 reporting period no sites were observed to present a significant threat to human health or the environment during inspections, so none were reported to the RWQCB.

## 2.5 Development Planning Component Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

## 2.6 Program Review and Modification

After the development of the 2011/2012 treatment control BMP inventory, the prioritization process was re-evaluated and revised. The revised process was used to prioritize the recently completed projects shown in Table 2-3. The entire inventory will be reprioritized during the next reporting period. Figure 2-1, on the next page, shows a flow chart used for water quality threat prioritization of sites with treatment control BMPs. Page 4-15 of the City's JURMP was revised accordingly.

**Figure 2-1**
**Water Quality Threat Prioritization of Sites with Permanent Treatment Control BMPs**

**Table 2-3**
**SUSMP Projects Completed After Establishment of 2011/2012 Inventory**

| # | Project Name | Project Address | Development Type | BMPs | Receiving Water body | Year Completed | TTWQ |
|---|---|---|---|---|---|---|---|
| 1 | Bible Baptist Church | 2432 E 18th Street | Commercial | Bioretention facilities and infiltration facilities | Lower Sweetwater River | 2011/2012 | Medium |
| 2 | Centro Condominiums | 45 East 12th Street | Residential | Hydrodynamic separator | Paradise Creek | 2011/2012 | Low |
| 3 | Centro Condominiums Public Street (CIP) | A Avenue at 12th Street | Residential | Filter insert | Paradise Creek | 2011/2012 | Medium |
| 4 | Costco CWI | 1001 W 19th Street, Suite B | Commercial | Media filter | La Paleta Creek/ 7th Street Channel | 2011/2012 | Low |
| 5 | Plaza Boulevard Center | 1540 E Plaza Blvd | Commercial | Bioretention facilities | Paradise Creek | 2011/2012 | Low |

**Table 2-4**
**2011/2012 Treatment Control BMP Inspections and Follow-Up Actions**

| # | Project | Inspection Date | Inspection Findings | Follow Up | Resolution Status |
|---|---|---|---|---|---|
| 1 | 940 W 19th Street | 8/22/2011 | Vegetated swale was observed to need maintenance. | Communicated issues to responsible party, who submitted photographs to verify maintenance. | Resolved |
| 2 | Jack In The Box | 10/18/2011 | One insert was missing rubber gasket on one side; other side of insert missing half of rubber gasket, creating a gap between catch basin wall and insert. | A NOV was sent to the responsible party with a description of deficiencies, and a follow-up visit was conducted in 12/2011 where corrections were verified. | Resolved |
| 3 | Marina Gateway (Hotel) | 8/22/2011 | Hydrodynamic separator was observed to need maintenance. The condition of the vegetated swales was adequate. | Communicated issues to responsible party, who hired contractor to conduct appropriate maintenance. Maintenance report provided. | Resolved |
| 4 | Paradise Village | 8/22/2011 | Hydrodynamic separator was observed to need maintenance. | Communicated issues to responsible party, who hired contractor to conduct appropriate maintenance. Maintenance report provided. | Resolved |
| 5 | Plaza Bonita Mall Expansion | 8/22/2011 | One hydrodynamic separator was observed to need maintenance. Two filter inserts were observed to need maintenance and one filter insert was missing. The condition of the bioretention facility was adequate. | A NOV was sent to the responsible party with a description of deficiencies. The responsible party hired a contractor to conduct appropriate maintenance and the filter insert was replaced. Maintenance report provided. | Resolved |
| 6 | Hanson's National City Batch Plant | 9/12/2011 | One filter insert was missing. The condition of the retention ponds was adequate. | Communicated issue to responsible party, who submitted photos to verify installation of the insert. | Resolved |

| # | Project | Inspection Date | Inspection Findings | Follow Up | Resolution Status |
|---|---|---|---|---|---|
| 7 | Paradise Creek Park | 9/12/2011 | The condition of the filter insert was adequate. | NA | NA |
| 8 | Penske Truck Leasing | 9/12/2011 | The condition of all filter inserts was adequate. | NA | NA |
| 9 | WalMart | 9/12/2011 | The condition of the hydrodynamic separator was adequate. | NA | NA |
| 10 | AutoZone | 9/13/2011 | The condition of the filter inserts and media filters was adequate. | NA | NA |
| 11 | Pacific View Estates | 9/13/2011 | Hydrodynamic separator was observed to need maintenance. | Communicated issues to responsible party, who hired contractor to conduct appropriate maintenance. Maintenance report provided. | Resolved |
| 12 | Plaza City Apartments | 9/13/2011 | The condition of the hydrodynamic separator was adequate. | NA | NA |
| 13 | Walgreens | 9/13/2011 | Two drainage inserts were observed in need of maintenance. | Communicated issues to responsible party and conducted a follow-up inspection in 11/2011 where corrections were verified. | Resolved |
| 14 | WestAir Gases | 9/13/2011 | All BMPs (i.e. filter insert, bioretention facility, and vegetated swale) were observed in need of maintenance. | Communicated issues to responsible party, who provided photographs to verify maintenance. The most recent follow-up inspection (6/29/2012) and maintenance records indicated issues were resolved. | Resolved |

**Table 2-4 (Continued)**
**2011/2012 Treatment Control BMP Inspections and Follow-Up Actions**

| # | Project | Inspection Date | Inspection Findings | Follow Up | Resolution Status |
|---|---|---|---|---|---|
| 15 | Harbor View Condominiums | 9/15/2011 | Filter insert was observed in need of maintenance. The condition of the media filters and infiltration facility was adequate. | Communicated issues to responsible party, who submitted maintenance verification certifying BMP replacement. | Resolved |
| 16 | Mariposa Walk | 9/15/2011 | One filter insert was missing and some were observed in need of maintenance. | Based on the most recent inspection (August 2012) one BMP was replaced. City is reviewing options for replacing existing BMPs with a more effective BMP. | In Progress |
| 17 | Paradise Walk Townhomes | 9/15/2011 | Eight filter inserts were observed in need of maintenance. | Communicated issues to responsible party. The most recent follow-up inspection (6/29/2012) and maintenance records indicated that issues were resolved. | Resolved |
| 18 | Sweetwater Town & Country Mall | 9/15/2011 | Three filter inserts were observed in need of maintenance. | Communicated issues to responsible party, who demonstrated that the ongoing cleaning program would conduct appropriate maintenance. Maintenance report provided. | Resolved |

# 3.0 CONSTRUCTION

## 3.1 INTRODUCTION

The construction component of the City's JURMP aims to improve overall storm water quality by reducing the discharge of sediment and other pollutants from construction activities to the MEP. During the 2011/2012 fiscal year, the City accomplished these goals through implementation of its JURMP document.

### 3.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the development planning component during the 2011/2012 reporting period are presented below. The following subsections of this section provide more details on how the City complied with the Municipal Permit during the reporting period.

- Distributed storm water requirements applicability checklists to all development projects in the City's jurisdiction.
- Conducted plan checks of erosion control plans and Storm Water Pollution Prevention Plans (SWPPPs) to ensure construction projects planned to comply with the City's minimum BMP requirements.
- Distributed copies of the Construction BMP Fact Sheet with all approved grading permits.
- Conducted 66 construction inspections in 2011/2012 per the frequency in the updated JURMP.
- Issued 28 written warnings, two NOVs, and two citations to construction sites in response to BMP deficiencies with respect to the City's minimum BMP requirements.
- Conducted pre-construction meetings with all large project developers.

## 3.2 SOURCE CHARACTERIZATION

An inventory of active construction projects during the reporting period is presented in Appendix A.2 of this JURMP Annual Report document. The City's inventory was maintained throughout the reporting period by entering permit data into the City's online database and updating the inventory table on a continuous basis. New construction projects were added to the inventory at the start of construction, and projects were removed from the inventory after construction was completed. Since construction projects were continually being added and removed throughout the fiscal year, inventory updates were usually performed more frequently than the minimum once per month.

## 3.3 Updates to Ordinances and Approval Processes

No changes were made to the City's Grading Ordinance during the reporting period that would affect storm water requirements. Details on any changes to the City's approval process during the reporting period are discussed in Section 3.5 of this document.

## 3.4 Best Management Practice Requirements

The City's construction and grading requirements have not changed since the recent update to the City's JURMP document. A complete list of required construction BMPs is included in the City's BMP Manual, which is an attachment to the City's JURMP. The City continued to assess the implementation and effectiveness of required BMPs at construction sites in 2011/2012.

## 3.5 Program Implementation

The City implemented the construction component of its JURMP throughout the reporting period through education and staff training, its comprehensive construction and grading approval process, and its construction inspection program, as detailed below.

### 3.5.1 Education and Staff Training

Education and staff training implemented during the 2011/2012 fiscal year focused on reinforcing the changes made to the City's construction requirements at the time of the City's JURMP update to both City staff and to the construction community. Construction site supervisors and City staff are familiar with the current General Construction Permit (effective July 1, 2010). Construction project proponents were educated in BMP requirements during the approval process described below. Please see Section 8 of this JURMP Annual Report document for details on training and educational materials related to construction and grading activities.

### 3.5.2 Construction and Grading Approval Process

During the reporting period, City personnel verified that all construction projects planned to implement the City's minimum BMP requirements prior to issuing any building or grading permits. The City conducted its grading approval process as described thoroughly in Section 5 of the City's updated JURMP. The City requires grading construction projects to submit erosion control plans that indicate what BMPs are to be used at the site. These erosion control plans are reviewed by the City to ensure the site plans meet the City's minimum construction BMP requirements. The City also reviews SWPPPs for sites greater than one acre that are required to obtain coverage under the State of California Construction General Permit, 2009-0009-DWQ (Construction General Permit). Additionally, the City arranged pre-construction

meetings with all developers of large projects to ensure an understanding of construction BMP requirements. Approved forms and documents completed by project proponents are kept with each project's file at the City for reference. A Construction BMP fact sheet, known as the "Blue Sheet" within the City because the copies printed are on blue paper, was also distributed with all construction permits issued (Attachment 3.1). Proper implementation of the minimum BMPs listed on the fact sheet was a condition of approval for all permits issued by the City during the 2011/2012 fiscal year.

During the reporting period, none of the City's active construction sites were larger than 17 acres; therefore the maximum disturbed area limitation did not apply. However, all construction sites were still required to limit exposed cleared or graded areas to a size that could be protected prior to a rain event, as prescribed in the City's seasonal BMP requirements.

Criteria for determining when advanced treatment is required are detailed in the City's JURMP. During the reporting period, the City's minimum BMP requirements were adequate at controlling sediment discharges at all of the active construction sites within the City's jurisdiction, and advanced treatment methods were not required at any construction sites.

### 3.5.3 Inspection of Construction Sites

Appendix A.2 of this JURMP Annual Report contains a list of construction projects that were active during the reporting period, along with their assigned TTWQ priorities, the number of weeks the site was active within the rainy season, the numbers of inspections conducted during the wet and dry seasons, the number of follow-up inspections and complaint investigations, and the total number of inspections for each site. In total, 66 construction inspections were performed at 12 construction sites during 2011/2012.

Construction inspections conducted during the reporting period were performed as described in the City's updated JURMP. Key components of the inspections include checks for coverage under the General Construction Permit during the initial inspection and assessments of compliance with the City's BMP and discharge requirements during all inspections. Responsible parties at the sites are educated as needed during inspections. Copies of the inspection forms are kept on file at the City. A copy of the City's construction site information and inspection form is available as Attachment 3.2.

During the wet season, the City conducted bi-weekly inspections at high TTWQ construction sites and at least monthly inspections at medium TTWQ sites. Low TTWQ sites were inspected on an as needed basis. Typically, storm water only inspections are not conducted at low TTWQ sites unless City staff note compliance problems or a complaint is called into the City's storm water hotline. Construction inspectors have been trained in the City's minimum construction BMP requirements, and they check BMP implementation at low TTWQ construction sites during their inspections. Any sites found to have problems with BMP implementation are forwarded to the City's Storm Water Compliance Inspector. During the reporting period, two low TTWQ

construction sites, Costco Optical Lab and Hilltop View Homes, were inspected as needed to verify changes in activity. These sites are indicated on the City's inventory in Appendix A.2.

When any violations were noted during routine, follow-up, or complaint investigation inspections, these violations were noted on the project's inspection form, and the sites were given a list of corrective actions necessary to fix the observed violation. During 2011/2012 there were 28 instances of non-compliance observed where enforcement action needed to be taken. In many cases, these issues were resolved while the inspector was still on site. When necessary, appropriate enforcement actions were taken, and City staff followed up with the site until compliance was achieved. Details on the enforcement actions taken for construction sites during the implementation period are described below.

### 3.5.4 Enforcement Measures

Table 3-1 includes the number of violations and enforcement actions taken during the reporting period in response to violations of the City's minimum construction BMP requirements. Enforcement actions are administered in an escalating manner as described in the City's updated JURMP. Again this year, the City sent inspection results by email to the responsible party with attached photos of improper BMP implementation. This provided clearer and quicker communication between the inspector and offsite construction site managers or owners and allowed for quicker resolution of observed deficiencies.

**Table 3-1**
**Summary of Construction Enforcement Actions Taken**

| Written Warnings | Notices of Violation | Administrative Citations | Stop Work Orders |
|---|---|---|---|
| 28 | 2 | 2 | 0 |

No Stop Work Orders were issued in 2011/2012, but the City's JURMP notes that if a Stop Work Order is issued, the Regional Board will be notified within five working days. During the reporting period, only one complaint was received by the City's storm water hotline regarding construction site activities. Further details regarding complaint investigations and all enforcement actions taken during the reporting period can be found in Section 4 of this document.

None of the violations observed at construction sites during the reporting period were found to endanger human health or the environment. The City was able to address these violations through the City's established enforcement process, and it was not necessary to report any of these sites to the RWQCB.

## 3.6 Construction Activities Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

## 3.7 Program Review and Modification

No modifications were made to the City's construction component during 2011/2012.

# 4.0 MUNICIPAL COMPONENT

## 4.1 INTRODUCTION

Throughout 2011/2012, the City of National City continued to manage municipal areas and activities to reduce discharges of pollutants to the MS4 to the MEP. As discussed in detail in the City's JURMP, the City owns and operates a variety of municipal facilities and activities. The majority of municipal areas in the City are comprised of administrative buildings, fire stations, public parks, and recreation and public works facilities. Municipal activities conducted by the City include, but are not limited to, graffiti abatement, building maintenance, landscaping activities, street sweeping, street and sidewalk repair, and MS4 and sanitary sewer system maintenance. Information about the City's prioritized street sweeping program can be found in Table 4-1, and information about the City's MS4 maintenance program can be found in Table 4-2.

### 4.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the municipal component during the 2011/2012 reporting period are presented below. The following subsections of this section provide more details on how the City complied with the Municipal Permit during the reporting period.

- The City inspected all high TTWQ fixed municipal facilities.
- The City removed a total of 985 tons of sediment and debris from street sweeping activities.
- The City removed a total of 12.6 tons of trash, sediment, and other debris from standard MS4 cleaning activities.
- The City spent 1,931 man-hours maintaining sanitary sewer lines.
- The City inspected several special events that occurred in the City during 2011/2012 to ensure appropriate BMP implementation and clean up.
- The City continued operating a Storm Water Hotline to receive and address complaints. Enforcement actions resulting from complaint investigations received through the Storm Water Hotline, City website, and other City departments are noted in Table 4-3.

## 4.2 FIXED FACILITIES

### 4.2.1 BACKGROUND

The City owns and operates a variety of fixed municipal facilities. As mentioned in the City's JURMP, fixed municipal facilities have been grouped under one category, fixed

facilities. This is because these facilities receive routine inspections as part of the City's municipal program, making program implementation generally similar.

### 4.2.2 Source Characterization

All fixed facilities are included on the City's municipal inventory, which is included as Appendix A.3. The designations of pollutants potentially generated by municipal facilities on the inventory are based on the pollutant loading potentials shown in Table 6-1 of the City's JURMP. TTWQ prioritizations are assigned via the process laid out in the flow chart shown in Figure 6-1 of the City's JURMP.

### 4.2.3 Best Management Practice Requirements

The City continues to implement and assess the effectiveness of BMPs at all fixed municipal facilities. As mentioned in the City's JURMP, the City uses the California Stormwater Quality Association (CASQA) Municipal BMP Handbook to establish appropriate BMPs for fixed municipal facilities. Table 6-2 in the City's JURMP describes the CASQA fact sheets that are used for specific facility types.

The City continues to implement strict minimum BMP requirements for the use and management of pesticides, herbicides, and fertilizers, as described in the City's JURMP. The BMP requirements have not been changed since the City's JURMP was updated in March 2008.

As described in the City's JURMP, City public works employees, fire station employees, and employees at other fixed facilities in the City continue to implement BMPs appropriate to the facility type. City fire response personnel continue to be trained in implementing BMPs for non-emergency fire fighting activities as described in Section 3 of the City's JURMP. There were no changes in BMP requirements for any fixed facilities during 2011/2012.

### 4.2.4 Program Implementation

As mentioned above, the City's BMP requirements for fixed facilities have not changed since the development of the revised JURMP. Some notable examples of implementation of those BMPs are provided below.

**Parks and Recreational Facilities**
During 2011/2012, the City used fertilizers, herbicides, and pesticides sparingly at parks and other City-owned landscaped areas. All chemicals are used and stored in accordance with the City's JURMP BMPs. The City routinely cleans parks each Monday after weekend use.

**Public Works Facilities, Fire Stations, Other Fixed Facilities**
As previously mentioned, City personnel continued to implement appropriate BMPs for municipal fixed facilities as described in the City's JURMP. BMPs are also implemented during regular maintenance activities at fixed facilities (i.e., landscaping, building

maintenance, etc.) as necessary. Parking facilities associated with fixed municipal facilities were swept quarterly during 2011/2012, and the large paved areas at the City's Public Works Yard were swept weekly. Public Works employees continued to proactively implement a SWPPP at the Public Works Yard, though it is not a requirement. Public Works employees also continued to maintain the BioClean filter inserts on the property as needed.

**Municipal Inspections**

All high TTWQ fixed municipal facilities received an annual routine inspection in 2011/2012. The City's inspection approach, as described in the JURMP, was implemented for all municipal inspections conducted in 2011/2012. The City's municipal inspection form is included as Attachment 4.1. All inspections conducted at municipal facilities are tracked using a Microsoft Access database. Table 4-4 at the end of this section lists all high TTWQ municipal fixed facilities requiring inspection in 2011/2012, the date the inspection was performed, and recommended corrective actions from the inspection. Only minor corrective actions were noted, and no follow-up inspections were necessary to make corrections.

In addition to one annual inspection by other City personnel, public works personnel inspect both the Public Works Yard East and Public Works Yard West weekly; street crew personnel inspect the Public Works Yard West and the equipment maintenance crew inspects the Public Works Yard East. Inspection forms are completed and submitted to the City's Storm Water Compliance Inspector.

## 4.3 Roads, Streets, Highways, and Parking Facilities

### 4.3.1 Background

The City conducts regular maintenance of roads, streets, and parking facilities in the City to control pollutants such as sediment, metals, litter, and debris. Note that there are no highways within the City's jurisdiction.

### 4.3.2 Source Characterization

Roads and streets are included as one entity on the City's municipal inventory, which is included in Appendix A.3.

### 4.3.3 Best Management Practices

Street sweeping is the City's primary BMP for roads, streets, and parking facilities. Other BMPs are chosen as needed based on the CASQA Municipal Handbook. The City's sweeping frequency is outlined in the JURMP and described in the following subsection. There were no changes to the BMPs implemented for roads, streets, and parking facilities in 2011/2012.

### 4.3.4 PROGRAM IMPLEMENTATION

During 2011/2012, the City swept a total of 15,124 curb miles, removing approximately 985 tons of debris. Per the requirements of the Municipal Permit, high priority streets in the City are swept at least every two weeks, and medium priority streets in the City are swept at least monthly. The City has not designated any streets in the City as low priority. The City does not maintain any stand-alone parking facilities that are not associated with municipal facilities. Seventeen parking facilities that are associated with municipal facilities are maintained and swept during regular maintenance activities at the respective municipal facility, and are considered part of the municipal facility on the inventory. Table 4-1, below, describes the areas assigned high and medium priorities, and the associated sweeping frequency. The table also includes the sweeping frequency for areas of fixed municipal facilities and the associated parking lots.

As a means to address priority pollutants in the San Diego Bay Watershed, the City continued to conduct additional sweepings of all streets in the City. High priority streets were actually swept between daily and weekly during 2011/2012; medium priority streets were actually swept every two weeks during 2011/2012.

**Table 4-1**
**Street Sweeping Prioritization and Frequency**

| Category | Description | Approximate Mileage of Route | Sweeping Frequency |
|---|---|---|---|
| High | 8th Street, National City Boulevard, Highland Avenue, Plaza Boulevard | 11.8 miles | At least every two weeks |
| Medium | All other streets in the City | 98.2 miles | At least once per month |
| Fixed Facilities | 17 Parking lots associated with municipal fixed facilities | N/A* | Quarterly |
| Fixed Facilities – Parks | Parking lots associated with parks | N/A* | Every two weeks |
| Fixed Facilities – PW Yard | Public Works Operation Center | N/A* | Weekly |
| **Total Amount of Debris Collected from Street Sweeping Activities: 985 tons** | | | |

* Mileage data is not available for the swept area of parking facilities associated with municipal facilities, and the PW Yard. Mileage accrued while sweeping these facilities is included in the total mileage.

**Inspections**

Because trash, debris, and sediment that have accumulated on City streets are identified and cleaned up via street sweeping, additional inspections beyond this effort are not necessary.

## 4.4 MS4

### 4.4.1 Background

The City's extensive storm water conveyance system is designed to collect and convey surface runoff to receiving waters to prevent flooding during a rain event. The City's MS4 consists of approximately 19 miles of inlets, pipes of varying materials, natural channels, concrete channels, culverts, and 751 catch basins and inlets.

### 4.4.2 Source Characterization

The City's MS4 as one complete entity is included on the City's high TTWQ municipal inventory (Appendix A.3).

### 4.4.3 Best Management Practices

The City maintains a strict MS4 maintenance and cleaning schedule. Maintenance and cleaning are conducted to keep the MS4 in good operating condition and remove any trash or debris that may otherwise be carried to receiving waters. As described in the City's JURMP, BMPs for MS4 maintenance activities are chosen based on the CASQA Municipal Handbook and did not change during 2011/2012.

### 4.4.4 Program Implementation

Throughout 2011/2012 the City has implemented a thorough MS4 inspection and cleaning schedule. The City continues to track municipal activities, such as MS4 channel cleaning, in a Microsoft Access database. MS4 maintenance logs are used to allow for the recording of detailed information regarding the various types of debris removed. The City inspected and cleaned all MS4 cleanout locations and open channel segments in 2011/2012, as described in Table 4-2, on the following page.

**Table 4-2**
**MS4 Maintenance Data**

| MS4 Structure | Percent inspected and/or cleaned* | Percent of open channels found with anthropogenic litter | Amount of debris removed from cleaning activities |
|---|---|---|---|
| Catch Basins / Self-Cleaning MS4 Facilities | 100% | N/A | 16,582 pounds |
| Open Channels | 100% | 100% | 20.92 cubic yards (8,368 pounds) |
| Drainage Inserts | 100% | N/A | 186 pounds |
| **Total Debris Removed From MS4 Maintenance Activities: 12.6 tons** | | | |

* No structures were observed at least 33% of capacity during the reporting period. However, the City cleans out any structures, including self-cleaning structures, in which trash and debris is observed at the time of inspection.
** The weight of the material removed during channel maintenance activities was not recorded. Since trash was the most common item removed, a conversion factor of 400 pounds per cubic yard was used to estimate the total weight of the material removed.

The City's cleanout locations are access points to various sections in the City's MS4, so no additional pipe beyond the cleanout location is typically cleaned. The City uses a vactor truck to clean the MS4 line in the event of a spill. For example, during 2011/2012, a spill of paint and wash water was reported and successfully intercepted at the curb and gutter before reaching inlets to the City's MS4. See Table 4-5 for details.

During 2011/2012, the City continued to inspect the open channels in the City and remove trash and debris as necessary by hand. If litter or debris is observed during the routine inspections, it is removed immediately. Of debris removed from open channels, approximately 9,371 pounds of trash, 1,339 pounds of sediment, and 2,677 pounds of organic matter were removed over the course of the fiscal year. The total length of the channel segments inspected and cleaned by City staff is approximately 25,950 linear feet. Additionally, as part of Watershed Urban Runoff Management Program (WURMP) efforts that are beyond minimum required maintenance, the City continued to hire a contractor to do biweekly inspections and remove any observed trash from Paradise Creek by hand.

## 4.5 Sanitary Sewer System

### 4.5.1 Background

To reduce the possibility of a spill or leak caused by a malfunction of a component of the City's sanitary sewer system, the City conducts routine maintenance of the system. Routine inspection and maintenance of the sanitary sewer system works to reduce the

potential for a spill or sanitary sewer overflows (SSOs) and also helps prevent the infiltration of seepage from the sanitary sewer system to the City's MS4.

### 4.5.2 Source Characterization

The City maintains a system of public sanitary sewer pipes to convey wastewater from the City to be treated. The sanitary sewer system, as one complete entity, is included on the City's high TTWQ municipal inventory (Appendix A.3).

### 4.5.3 Best Management Practices

The City implements BMPs from the CASQA Municipal Handbook, as described in the City's JURMP, during sanitary sewer maintenance. There have been no changes to these BMPs during 2011/2012. The City inspects and maintains the sanitary sewer system as part of regular wastewater activities. The City clears blockages and repairs leaks as needed.

### 4.5.4 Program Implementation

The City seeks to eliminate seepage from the sanitary sewer system to the MS4 by routine preventative maintenance of both systems. Routine maintenance of both systems allows the City to find areas that are likely to become problems in the future and to make the necessary repairs/replacements before any larger issues arise. Approximately 70 linear feet of pipe were repaired or replaced during the reporting year. The City also continued to conduct flow metering throughout its sanitary sewer system to monitor for evidence of potential problems. A total of 1,931 man-hours were spent maintaining sanitary sewer lines during 2011/2012. Silt, grease, roots, and debris were the most common items removed from sanitary sewer lines during maintenance activities. A total of 19,803 pounds of such waste were removed from the sewer during 2011/2012. A total of 2,100 linear feet of sanitary sewer line was televised during 2011/2012 to determine if areas of the sanitary sewer were in need of maintenance or repair.

The City has also developed a Fats, Oils, and Grease (FOG) program that targets grease-producing facilities, such as eating establishments. The goal of the program is to reduce grease buildup in the sanitary sewer system, which can cause or contribute to SSOs.

The City maintains a Sanitary Sewer Management Plan which establishes procedures for responding to an SSO. At the end of 2011/2012 and into 2012/2013, the City's Public Works Department updated its SSO spill response procedures as part of an overall Sanitary Sewer Management Plan update process. During 2011/2012, three private lateral sewage discharges were reported to the State Water Resources Control Board (SWRCB); no sewage reached storm drain inlets.

## 4.6 Mobile Municipal Activities, Including Power Washing

### 4.6.1 Background

The City conducts a variety of different mobile municipal activities, typically involving infrastructure maintenance, landscape maintenance, and graffiti removal.

### 4.6.2 Source Characterization

Power washing is no longer used by the Graffiti Removal sector of Neighborhood Services during graffiti removal activities. Therefore, graffiti removal was changed from the only high priority municipal activity on the inventory to a medium TTWQ in 2010/2011 (Appendix A.3). Infrastructure maintenance and landscape maintenance are also listed on the City's medium TTWQ municipal inventory.

### 4.6.3 Best Management Practices

The City implements BMPs for mobile activities as described in the City's JURMP and as applicable to the activity. City personnel are trained to implement BMPs for the specific activity in which they are involved. A more detailed discussion of BMPs for specific mobile activities is included in the City's JURMP; there were no updates to the BMPs implemented during mobile activities in 2011/2012.

### 4.6.4 Program Implementation

During 2011/2012, City personnel continued to implement BMPs during mobile municipal activities such as graffiti removal and landscape maintenance. In 2010/2011, the City continued to paint for graffiti removal instead of using power washing methods, reducing the threat to water quality. Since painting for graffiti removal is now the standard practice, the TTWQ status for graffiti removal was changed from high to medium last year. However, if power washing is conducted in the future, City personnel will collect any water generated and dispose of it properly, and the inventory will be updated to reflect the high TTWQ of power washing activities.

## 4.7 Special Events

### 4.7.1 Background

As detailed in the City's JURMP, a variety of different special events are hosted within the City. Notably, the City's largest special event is an annual July 4th celebration.

### 4.7.2 Source Characterization

As required by the Municipal Permit, special events are included on the City's high TTWQ municipal inventory (Appendix A.3).

### 4.7.3 BEST MANAGEMENT PRACTICES

As detailed in the City's JURMP, the City has selected BMPs for special events hosted in the City. In general, the goal of the City's special event BMPs are to properly manage trash and litter generated by the event, keep catch basins and other nearby MS4 facilities free of litter/debris from the event, and raise storm water awareness among the vendors and patrons of the event, as applicable. In Kimball Park, for example, the City always requires and charges the event holder for the use of a litter fence to prevent debris from entering the nearby channel. BMPs for special events did not change during 2011/2012.

### 4.7.4 PROGRAM IMPLEMENTATION

The City hosted several special events during 2011/2012, including various one-time celebrations and recurring events. Several special events, including the July 4th celebration, Cinco de Mayo, and Taste of National City, were inspected to ensure the proper implementation of required BMPs, as detailed in the City's JURMP. If any special events do not finish clean up at the time of the inspection, staff requires the remaining housekeeping issues to be resolved within a timely manner. Inspections conducted at special events are tracked using the Microsoft Access database.

There were no notable instances of non-compliance at inspected events that required enforcement. Follow up was conducted as necessary to ensure appropriate housekeeping BMPs were implemented.

## 4.8 PUBLIC REPORTING OF ILLICIT DISCHARGES AND CONNECTIONS

**Reporting and Response**

Public and municipal reporting is crucial to preventing and eliminating illicit connections and illegal discharges (IC/IDs) from the storm water conveyance system. The Storm Water Hotline provides an effective means for individuals in the City to report suspected IC/IDs. The hotline number is also listed on the City's website and in distributed storm water educational material. Storm water complaints may also be reported through the City's website. All complaints received through the hotline and website are logged into a spreadsheet for documentation and tracking. Each logged complaint is investigated by City personnel to determine if an IC/ID is present. Responsible parties for any confirmed IC/ID are sought out and educated and/or cited as necessary and required to stop any and all illegal discharges.

Complaints received by the City during the 2011/2012 reporting period and the City's response to each are listed in Table 4-5 at the end of this section. A total of 9 hotline complaints were documented this year, as compared to 14 complaints last year. In addition to public complaints, the City's Neighborhood Services Division employs Code Enforcement staff who address property complaints that are frequently overlap with storm water concerns. Attachment 4.2 lists municipal code violations observed during

2011/2012, approximately 100 of which may have posed a potential threat to water quality, such as accumulation of trash, junk, and debris.

**Enforcement**

As previously stated, complaints received via the Storm Water Hotline or City website, are included in Table 4-5 at the end of this section. The table also includes a description of how each complaint was resolved during the reporting period. Resolutions to investigated complaints included issuing warnings, corrective actions, and/or citations. Table 4-3, below, summarizes the enforcement actions taken in response to complaints received.

**Table 4-3**
**Enforcement Actions Resulting from Documented Complaints**

| Type | Verbal/Written Warning | Stop Work Order | Administrative Citation / Cost Recovery | NOV |
|---|---|---|---|---|
| Commercial | 1 | 0 | 1 | 1 |
| Industrial | 0 | 0 | 0 | 0 |
| Mobile | 0 | 0 | 0 | 0 |
| Municipal | 0 | 0 | 0 | 0 |
| Residential | 3 | 0 | 2 | 0 |
| Construction | 1 | 0 | 0 | 0 |

## 4.9 Spill Reporting, Response, and Prevention

The City has documented procedures for preventing and responding to sanitary sewer overflows. As discussed earlier in this section, preventative maintenance is regularly conducted on the City's sanitary sewer system. Additionally, video inspections and sewer surveys are regularly conducted to monitor the condition of the public sanitary sewer lines and to determine the necessity of maintenance. Private lateral lines do not receive preventative maintenance, but the City assists in the containment and cleanup of sewer spills if the spill could potentially reach the City's MS4.

Individuals in the City are encouraged to report any SSOs to the City's Storm Water Hotline. No significant spills occurred during 2011/2012, but three private lateral sewage discharges were reported to the SWRCB where no sewage reached storm drain inlets.

## 4.10 Education and Outreach

During 2011/2012, the City continued to educate municipal personnel regarding proper BMP implementation and other storm water and watershed concepts. For example, in November 2011 City staff watched the instructional video "What We Can Do As Municipal Employees" and answered follow up questions regarding storm water pollution, emergency procedures, and the importance of implementing BMPs to prevent

its impacts on our waterways. Information regarding the education and outreach conducted for City personnel is described in Section 8 of this Annual Report.

## 4.11 Municipal Component Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

## 4.12 Program Modification and Review

The City's JURMP was updated in March 2008. No changes to the City's municipal component were made during 2011/2012.

**Table 4-4**
**Municipal Inspection Results**

| # | Facility Name | Facility Address | TTWQ | Inspection Date | Corrective Actions Needed |
|---|---|---|---|---|---|
| 1 | Butterfly Park | East 22nd Street and Palm Avenue | High | 4/11/2012 | • Keep the site free of excessive litter and debris using dry methods.<br>• Ensure timely service and removal to prevent waste containers and sanitary facilities from overflowing. |
| 2 | El Toyon Park | 2005 East 4th Street | High | 4/11/2012 | • No corrective actions. |
| 3 | Kimball Park | 12th Street & D Avenue | High | 4/11/2012 | • Keep discharge locations free of excessive sediment and debris.<br>• Employ adequate erosion prevention measures (e.g., vegetation or physical stabilization). |
| 4 | Las Palmas Municipal Pool | 1800 East 22nd Street | High | 4/12/2012 | • No corrective actions. |
| 5 | Las Palmas Park | 1800 Newell Street | High | 4/12/2012 | • Keep the trash/recycling area adequately covered (closed lids or permanent overhead cover).<br>• Keep the trash/recycling area free of litter and debris.<br>• Keep exposed parking areas free of significant spills and leaks. |
| 6 | National City Municipal Golf Course | 1439 Sweetwater Road | High | 4/11/2012 | • Properly store material and waste stockpiles to prevent transport in runoff.<br>• Keep the trash/recycling area adequately covered (closed lids or permanent overhead cover).<br>• Store outdoor materials that pose a threat to water quality appropriately (covered and/or in closed containers). |
| 7 | Paradise Creek Educational Facility | West 19th Street and Coolidge Avenue | High | 4/11/2012 | • Keep the site free of excessive litter and debris using dry methods.<br>• Keep discharge locations free of excessive sediment and debris.<br>• Keep parking lots, sidewalks and streets free of excessive sediment and debris.<br>• Keep the trash/recycling area adequately covered (closed lids or permanent overhead cover). |
| 8 | Public Works East Yard | 2100 Hoover Ave | High | 4/11/2012 | • Keep discharge locations free of excessive sediment and debris.<br>• Store outdoor materials that pose a threat to water quality appropriately (covered and/or in closed containers). |
| 9 | Public Works West Yard | 2100 Hoover Ave | High | 4/11/2012 | • Keep the trash/recycling area free of litter and debris. |

**Table 4-4 (Continued)**
**Municipal Inspection Results**

| # | Facility Name | Facility Address | TTWQ | Inspection Date | Corrective Actions Needed |
|---|---|---|---|---|---|
| 10 | Sweetwater Heights Park | Cagle Street and Stockman Street | High | 4/11/2012 | • Keep the site free of excessive litter and debris using dry methods. |

**Note:** Roads, streets, highways, and parking lots; the MS4; and the sanitary sewer system were inspected via the maintenance effort described earlier in this section.

**Table 4-5**
**Summary of Documented Public Complaints**

| # | Date | Complaint Type | Origin of Complaint | Location | Nature of Complaint | Investigation Results |
|---|---|---|---|---|---|---|
| 1 | 9/14/2011 | Construction | Citizen | 1540 E Plaza Blvd | Sediment tracking into the street. | Inspector indicated the proper BMPs to be implemented to prevent any potential sediment transport. BMPs were implemented and additional inspections were conducted while the site was active to ensure compliance. |
| 2 | 10/3/2011 | Residential | Public Works | 1023 E 7th Street | Paint discarded into street and hosed down into curb and gutter. | Paint was observed on the sidewalk, driveway, and in the curb and gutter. No paint or water reached a storm drain. Public Works cleaned up the area and the tenant was billed for cost recovery. |
| 3 | 10/7/2011 | Residential | Engineering Division | Plaza Boulevard and D Avenue (northeast corner) | Vehicle leaking transmission fluid. | Vehicle left scene prior to investigation. Approximately one quart of transmission fluid was observed in the curb and gutter. No transmission fluid reached a storm drain. Public Works cleaned up the area. |
| 4 | 10/19/2011 | Residential | Citizen | Kimball Avenue at 14th Street | Trash accumulation. | Trash was observed on site, likely due to a homeless encampment and neighboring businesses. Public Works cleaned up the area. |
| 5 | 11/14/2011 | Residential | Citizen | 1916 Harding Avenue | Vehicle leaking oil. | Motor oil was observed in the curb and gutter and as a trail along the street. No oil reached a storm drain. The vehicle was parked at this location for repairs. Public Works cleaned up the area. Code enforcement issued an administrative citation to the vehicle owner. |
| 6 | 2/8/2012 | Commercial | Code Compliance | 3007 Highland Avenue | Dumping soapy water | Code compliance officer observed that containers of soapy water had been dumped, causing an illegal discharge to the storm drain. A NOV and administrative citation were issued to the property. |
| 7 | 4/10/2012 | Residential | Citizen | Hoover Avenue between 8th and 9th Streets | Waste oil in curb and gutter. | Approximately two quarts of waste oil was observed in the curb and gutter. No oil reached a storm drain. Public Works cleaned up the area. |
| 8 | 4/24/2012 | Residential | Citizen | Eta Street dead end | Trash accumulation. | Trash was observed in the curb and gutter. Public Works cleaned up the area. |

**Table 4-5 (Continued)**
**Summary of Documented Public Complaints**

| # | Date | Complaint Type | Origin of Complaint | Location | Nature of Complaint | Investigation Results |
|---|---|---|---|---|---|---|
| 9 | 5/8/2012 | Commercial | Citizen | 1508 Hoover Avenue | Illegal discharge. | Investigation could not confirm complaint. No evidence of illegal discharge. |

Note: See also Attachment 4.2 which shows municipal code violations relating to storm water that were addressed by Code Enforcement staff.

# 5.0 INDUSTRIAL AND COMMERCIAL

## 5.1 INTRODUCTION

During 2011/2012, the City continued to implement a program to mitigate urban runoff pollution from the areas and activities of industrial and commercial businesses, including those subject to the State of California Industrial General Permit, Order No. 97-03-DWQ (Industrial Permit). Through various aspects of the industrial and commercial program, the City aims to reduce the amount of pollutants discharged from these facilities.

### 5.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the industrial and commercial component during the 2011/2012 reporting period are presented in the following bulleted list. The following subsections of this section provide more details on how the City complied with the Municipal Permit during the reporting period.

- The City met the Municipal Permit requirement of inspecting at least 25 percent of its stationary industrial and commercial inventory.
- The City met the Municipal Permit requirement of inspecting 100 percent of its inventoried high TTWQ industrial and commercial facilities.
- The City sent 415 inspection report mailings to both businesses and property owners detailing corrective actions.
- The City conducted 55 follow-ups at industrial and commercial businesses to verify corrective actions had been taken and ensure compliance.
- The City conducted pollutant discharge potential assessment (PDPA) scoring at inspections to aid in source identification efforts.

## 5.2 STATIONARY INDUSTRIAL AND COMMERCIAL SITES / SOURCES ELEMENT

### 5.2.1 BACKGROUND

The City's industrial and commercial inventories, which can be found in Appendix A.4 and A.5, respectively, include all stationary and mobile businesses known to be operating in the City that are required to be included on the City's inventories. Stationary facilities in the City include, but are not limited to, manufacturing facilities, auto repair shops, restaurants, wholesalers, and contractors. As discussed in the following subsections, the City requires industrial and commercial businesses to implement pollution prevention measures and designated minimum BMPs to mitigate the impacts of business' activities on water quality.

### 5.2.2 SOURCE CHARACTERIZATION

The City's industrial and commercial inventories are included as Appendix A.4 and A.5, respectively. The inventories include both stationary and mobile businesses, as required by the Municipal Permit. The inventories were updated in 2011/2012.

Information on how the City prioritizes the industrial and commercial inventories based on TTWQ is discussed in detail in the City's JURMP. The City considers factors including those listed below when prioritizing the inventories:

- Results from previous inspections and institutional knowledge
- Presence of significant exposed outdoor storage or activities
- Consideration of downstream water body and whether the business is likely to discharge pollutants for which the water body is impaired
- Proximity to the receiving water body
- Facility size
- Industrial Permit subjectivity

The City's updated inventories include a total of 782 stationary industrial and commercial facilities.

### 5.2.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

Industrial and commercial businesses in the City are required to implement pollution prevention methods and other BMPs to reduce or potentially eliminate the generation of pollutants from business areas and activities. The City has established a set of minimum BMPs based on the CASQA Industrial and Commercial Handbook. The requirements include BMPs applicable to all facilities as well as activity-specific BMPs. The City's BMP requirements are described in more detail in the City of National City Best Management Practice Manual, which is an attachment to the City's JURMP. The City's BMP requirements for industrial and commercial businesses did not change during 2011/2012.

### 5.2.4 PROGRAM IMPLEMENTATION

**Industrial and Commercial Inspections**

During 2011/2012, the City conducted storm water compliance inspections at selected stationary industrial and commercial facilities; Table 5-1 provides a summary of the industrial and commercial site visits. The purpose of the inspections is to confirm that the City's minimum BMPs are being implemented at stationary industrial and commercial facilities.

Table 5-1, below, provides a summary of the industrial and commercial site visits. All of the high TTWQ sites were selected for inspection, and additional facilities were also selected for routine inspection based on compliance history, TTWQ, and the length of time since the last inspection visit.

**Table 5-1**
**Summary of Industrial and Commercial Inspections**

| Facility Category | Full Inspections Conducted | Percentage of Total Inventory |
|---|---|---|
| High TTWQ Sites* | 81 | 10%<br>(100% of high TTWQ sites) |
| Additional Sites | 117 | 15% |
| **All Stationary Inventoried Sites** | **782** | **25%** |

* All high TTWQ sites were visited during 2011/2012; if the business had moved out a full inspection was not necessary and the inventory was updated for future inspection efforts.

Facility inspections were conducted in accordance with the protocol set forth in the City's JURMP. Inspections involved a thorough examination of the facility and all outdoor activities. BMP deficiencies and corrective actions were discussed with facility personnel present during the inspection and recorded on the City's industrial and commercial inspection form (Attachment 5.1).

During 2011/2012, the City continued to use the standard inspection form and associated inspection reports that were updated in 2009/2010. Since facility personnel at inspected businesses had reported that many of the corrective actions on the inspection report were related to shared areas or areas maintained by the property owner or property management company, the inspection form was updated to collect information regarding areas where responsibility for BMP implementation may be shared. Check boxes indicating "shared responsibility" were added to the form for each BMP assessment item on the form. These boxes were checked whenever the facility personnel present during the inspection reported that the BMP was a shared responsibility between the individual business, other tenants in a multi-suite complex, and/or the property management company/property owner. Note that the information collected is whether or not the responsibility is reportedly shared, not a determination of whether or not legally the responsibility is shared. In some cases the business may report that the responsibility is shared, but other parties, such as the property owner, may not agree.

The inspection reports were also updated to group the types of corrective actions listed on the inspection report into the following categories, which were described in a cover letter accompanying the inspection report:

- **Business Corrective Actions**, which included corrective actions specific to business activities.
- **Specific Action(s) Required by the Business to Comply with the Requirements of the General Industrial Permit**, which included corrective actions relating to

the State of California General Industrial Permit (State Water Resources Control Board Order No. 97-03-DWQ).

- **Shared or Communal Area Corrective Actions**, which included corrective actions that are related to shared or communal areas and may not be solely the responsibility of the individual business.

When any corrective actions regarding a shared or communal area are included on the inspection report, a copy of the same inspection report was also provided to the property owner. A slightly different cover letter that explains why the property owner or manager is receiving the report is included. The property owner/manager cover letter explains the different types of corrective actions, described above, and explains that deficiencies listed under the "Shared or Communal Area Corrective Actions" heading are deficiencies that may not be the responsibility of the individual business and are being provided to both the property owner and the business to ensure that action is taken by the appropriate party. This updated method of inspection result notification is more straightforward and easier for the business representatives to understand, which increases the chance that the corrective actions will be implemented in a timely manner. Additionally, notifying property owners of corrective actions observed in communal areas should also contribute to BMPs being implemented in a timely manner.

The City also assesses PDPA scores during the inspections as part of an additional data collection effort. The PDPA scores are marked on the City's inspection form in Attachment 5.1. More information about the results of this process is presented in Section 12 of this JURMP Annual Report.

During the inspection process, the City also checked Industrial Permit compliance status when applicable. Businesses observed to be in violation of the Industrial Permit are included in Table 5-2. Table 5-3, at the end of the section, summarizes the results of the 309 site visits conducted during 2011/2012. A total of 198 full inspections were completed as part of the City's 2011/2012 routine industrial and commercial inspection program. The remainder of the sites were visited, but during the visit were found to have moved, be duplicates of other businesses, be mobile businesses, be out of the City's jurisdiction, be inactive and difficult to contact, or not to be conducting activities for which inclusion on the City's inventory is necessary.

Facilities indicated to have an "in progress" resolution status in the 2010/2011 JURMP Annual Report were inspected and all issues were resolved before the end of 2011. Facilities that were recommended for follow-up this year are noted in the table. The City conducted 55 follow-up inspections in 2011/2012, and the resolution status of these follow-ups is included with the routine inspection results in Table 5-3. The City provided copies of inspection results to each facility that received a full inspection in 2011/2012. The inspection report included the findings of the inspection and all required corrective actions recorded by the inspector.

The City did not rely on third party inspections to satisfy its industrial and commercial inspection requirements during the reporting period. The City does not presently maintain a third party inspection program.

**General Industrial Permit**

Industrial Permit compliance status was evaluated during the industrial and commercial inspection process. If the business was new and had not previously been inspected, or if the business had recently changed activities, the inspector recorded information about the business activities that occur on site and assigned or reassigned the business's standard industrial classification (SIC) code(s). The inspector then determined Industrial Permit subjectivity based on SIC code. Violations of any aspect of Industrial Permit requirements were recorded on the standard industrial and commercial inspection form and are presented in Table 5-2. The table includes businesses directed to file a Notice of Intent (NOI) and develop a SWPPP and monitoring program, as well as businesses that had filed an NOI but had failed to develop a SWPPP and monitoring program. The table also includes facilities that could potentially gain exemption from Industrial Permit requirements by completing notice of non-applicability/no exposure certification (NONA/NEC) paperwork. Each business was notified of any Industrial Permit-related non-compliance by the inspector.

**Education and Outreach**

In addition to checking for compliance with the City's requirements and the Industrial Permit, inspections provide a venue to provide site-specific one-on-one education regarding storm water concepts and BMPs. Educational materials were provided as applicable to businesses, including the City's Restaurant/Food Industry BMP Fact Sheet (Attachment 5.2) and the Industrial and Commercial "Preventing Urban Runoff Pollution" Trifold (Attachment 5.3).

**Enforcement**

Several industrial and commercial facilities were observed to be out of compliance with the City's municipal storm water ordinance and/or the Industrial Permit during inspections conducted in 2011/2012. Additionally, the City received complaints through the City's storm water hotline. Details of the industrial and commercial complaint investigations are included in the Summary of Documented Public Complaints in Section 4 of this Annual Report. The City issued the following enforcement actions in response to BMP deficiencies during inspections and other complaints:

- 415 inspection report mailings sent to businesses and property owners
- 9 NOVs
- 8 Administrative citations

There were no instances of noncompliance found to present a significant threat to human health or the environment observed at stationary businesses during 2011/2012, so none were reported to the RWQCB.

## 5.3 MOBILE SOURCES

### 5.3.1 BACKGROUND

Due to the nature of activities of most mobile businesses, a major area of concern tends to be illegal discharges. In general, mobile businesses can be hard to identify, as many may not have City business licenses. Additionally, because the activities of mobile businesses do not occur in one fixed location, inspections of such businesses are impractical.

### 5.3.2 SOURCE CHARACTERIZATION

Known mobile industrial and commercial businesses, as described in the City's JURMP, are included on the City's inventory and are marked as mobile. During 2008/2009, the Regional Industrial and Commercial Workgroup also developed a web-based mobile business database for use by all Copermittees. The goal of developing this database is to allow Copermittees to share information about mobile businesses, which may be active in more than one jurisdiction. The City has contributed its mobile business inventory for upload to the regional database.

### 5.3.3 BEST MANAGEMENT PRACTICE REQUIREMENTS

BMPs for stationary industrial and commercial facilities, as discussed earlier in this section, are required to be implemented for mobile activities, as applicable. BMPs for mobile businesses, including key principles such as proper collection and disposal of any discharge, are discussed in the City's JURMP.

During 2009/2010, the Regional Industrial and Commercial Workgroup, in which the City was an active participant, adopted regional mobile business BMP standards. These standards were devised to create a uniform set of minimum BMPs for mobile businesses operating within the region. The Workgroup is still developing a mobile business BMP notification template that Copermittees may choose to use to notify mobile businesses operating their jurisdiction.

### 5.3.4 PROGRAM IMPLEMENTATION

While mobile businesses are not as straightforward to inspect as fixed industrial and commercial facilities, the City has in place a program of education and enforcement to regulate mobile activities.

**Education and Outreach**

All businesses conducting mobile activities within the City's jurisdiction are required to apply for and maintain a business license with the City of National City, regardless of where the business may be based. The Industrial and Commercial "Preventing Urban Runoff Pollution" Trifold is provided to each person applying for a business license in the City, including mobile businesses. The trifold brochure, included in Attachment 5.3 of this Annual Report, clearly prohibits the discharge of wash water and provides a list

of required BMPs applicable to industrial and commercial businesses. Mobile businesses maintaining a City business license are included on the Commercial Inventory in Appendix A.5. No known mobile businesses conduct industrial activities in the City at this point in time. To aid in tracking mobile businesses that may conduct activities within its jurisdiction in the future, the City also collaborates with other jurisdictions in the County of San Diego in maintaining a county-wide list of mobile businesses.

**Reporting and Enforcement**

In addition to regulation through business licenses, City staff are trained to report inappropriate mobile business activities to the City's storm water hotline. The City responds to all calls to the City's storm water hotline regarding mobile businesses. Notably, there were no complaints made to the City's storm water hotline regarding mobile businesses during 2011/2012.

There were no instances of noncompliance of mobile businesses that were believed to present potential threats to human health or the environment observed during 2011/2012, so none were reported to the RWQCB.

## 5.4 Industrial and Commercial Component Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

## 5.5 Program Review and Modification

No modifications were made to the City's industrial and commercial component during 2011/2012.

**Table 5-2**
**Violations of the Industrial Permit**

| # | Business Name | Street Address | Inspection Date | Industrial Permit Subjectivity | SIC Code(s) | Notes | Action to Correct Violation | | | | |

# 6.0 RESIDENTIAL

## 6.1 INTRODUCTION

Land use in the City of National City is largely residential. Therefore, residential activities that take place in these areas have the potential to impact the quality of receiving waters. Residential activities like vehicle washing, over-irrigation, and home maintenance can potentially contribute pollutants to the City's MS4 if BMPs are not implemented. Additionally, household hazardous waste (HHW) can contribute pollutants to the City's MS4 if not disposed of properly. Pollutants of concern typically include sediment, pesticides, herbicides, fertilizers, surfactants, oil and grease, and metals. The City has worked to implement a range of programs to address these residential activities with the goal of reducing pollutant loads associated with such activities. The City recognizes the need for educational efforts and opportunities designed specifically for residents and residential activities.

The following sections present activities conducted during this reporting period. These activities are associated with the residential component of the JURMP and include conducting ongoing HHW collection events, distributing educational materials, and participating in community events.

### 6.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the residential component during the 2011/2012 reporting period are presented in the following bulleted list. The following subsections of this section provide more details on how the City complied with the Municipal Permit during the reporting period.

- A multi-family residential property evaluation was conducted throughout National City to assess the discharge potential of pollutants of concern, to educate property managers and residences, and to bring about BMP improvements at multi-family residences.
- The City began to develop the 2013 Storm Water Calendar through a storm water art contest at local schools. The calendar will be distributed in both English and Spanish in 2012/2013 and informs residents about preventing pollution in San Diego Bay and neighboring waterways.
- The City collaborated with the cities of Chula Vista and Imperial Beach to make HHW disposal events available to residents. The total amount of HHW collected from residents of all three cities was 341,868 pounds. Door-to-door pick up service was available for the disabled and senior communities.
- The City hosted three large item disposal events. The event allowed residents to dispose of large household items (not including HHW), such as unwanted furniture and large appliances.

- At least 80 code violations related to storm water quality were addressed at 58 properties in residential areas and corrected by the enforcement of the City's Code.

## 6.2 SOURCE CHARACTERIZATION

The City has identified high TTWQ residential areas within its jurisdiction and has designated various high TTWQ residential activities. To reduce pollutant discharges from these high TTWQ areas and activities, the City designated specific BMPs in the 2008 JURMP. These BMPs did not change during 2011/2012.

### 6.2.1 HIGH TTWQ ACTIVITIES

During the 2011/2012 reporting period, as outlined in the City's JURMP, the City continued to identify the following activities as high TTWQ:

- Automobile repair and maintenance
- Automobile washing
- Automobile parking
- Home and garden care activities and product use, including disposal
- Disposal of trash and pet waste

### 6.2.2 HIGH THREAT TO WATER QUALITY AREAS

In addition to these activity-based priorities, the City has noted several residential areas that pose relatively higher threats to water quality. High priority residential areas are designated by considering complaint investigations, institutional knowledge, Dry Weather Monitoring data, and criteria as defined in the Municipal Permit. The list of high priority residential areas is subject to re-evaluation based on new observations and data collected during the reporting period.

During 2011/2012, a reassessment of the high priority residential areas was conducted. Based on the reassessment some previously designated high TTWQ residential areas were removed since high TTWQ activities were not observed. High TTWQ residential areas removed include Paradise Creek Area between F and L Avenues, East 8th Street Area, Grove Avenue Area, and Arcadia Place Area. Also, as a result of field evaluation, twelve residential complexes have been added to the list of high TTWQ residential areas.

The following residential areas have been designated as high TTWQ:

**Division Avenue Area**
The residential area located near Division Street, east of Highland Avenue, including residences located on East 2nd Street, Melrose Street, Eta Street, Fig Court, and Scott

Drive. See Figure 6-1. Past dry weather monitoring programs have detected elevated levels of ammonia and detergents just downstream of these residential areas.

**Residential Complexes**

The following 12 residential complexes have been identified as a priority for education and further evaluation since high priority activities and/or pollutants were noted. Figure 6-2, at the end of this section, displays their locations.

- 1205-1343 Fig Court
- 1545 Q Avenue
- 1802 E 12th Street
- 1810-1832 J Avenue
- 2111-2125 E 7th Street
- 2111-2125 E 7th Street
- 2215 Lanoitan Avenue
- 2700 E 8th Street
- 630 R Avenue
- 932 E 18th Street
- 999 Division Street
- E 8th Street & Arcadia Avenue

## 6.3 Best Management Practice Requirements

The City has continued to provide information regarding the implementation of pollution prevention measures, like good housekeeping practices, for residential areas and activities. Section 5 of the City's BMP Manual includes lists of general residential BMP requirements and BMP requirements for specific residential activities. The manual is included in Appendix C of the City's JURMP. General residential BMPs include erosion control; non-storm water discharge management, including elimination of IC/IDs; and good housekeeping measures, such as sweeping rather than hosing off driveways and sidewalks. Specific BMPs for the high priority activities outlined above are also included in the City's BMP Manual Section 5.

## 6.4 Program Implementation

The City's residential program has been designed to ensure that adequate City enforcement, complaint investigation, and complaint reporting is conducted in residential areas. This ensures that pollutants associated with residential activities and areas are minimized. Additionally, the residential program implements an educational component so that residents are made aware of appropriate BMPs, including pollution prevention methods that should be used during certain activities. During 2011/2012 the City also continued to participate in the Regional Residential Education Program.

**Multi-Family Residential Property Evaluation Program**

The City initiated the Multi-Family Residential Property Evaluation Program as a 2011/2012 watershed activity to assess the discharge potential of high priority watershed

constituents, to educate property managers, and to bring about BMP improvements at multi-family residences. These areas were chosen as the focus of a watershed activity because shared areas at multi-tenant commercial developments, which have a similar dynamic of a property manager responsible for maintaining common areas, have been found to be sources of watershed pollutants of concern like bacteria, sediment, and trash due to poor BMP implementation. Occasionally, past Dry Weather Monitoring Program results have also linked constituent exceedances to multi-family housing complexes.

The evaluation program confirmed that multi-family residences are potential sources of pollutants of concern, and provided some education materials to property managers/owners. Development of more effective educational materials and outreach programs for property managers/owners is planned for future reporting periods.

### 6.4.1 Training, Education, and Outreach

The City has continued to conduct training, education, and outreach activities for residents, which are described below. For additional information on the City's educational efforts and the educational materials distributed to its residents please refer to Section 8 of this Annual Report.

**Distribution of Educational Material**

The City began to develop the 2013 Storm Water Calendar after selecting the winners of a local art contest at elementary schools within the City. The calendar will be distributed in 2012/2013 in both English and Spanish and informs residents about pollutants found in San Diego Bay and neighboring waterways. It describes how pollutants such as fertilizers, pesticides, metals, paints, oil and grease and other debris can be transported from residential areas to the ocean. The theme for the calendar is "By Keeping Our Community Clean, We Can Keep The Ocean Clean" and each month will highlight a child's winning entry from the art contest.

**Website**

Additional information regarding the City's storm water program, pollution prevention measures, and BMPs is posted and continually updated on the City of National City's website (http://www.nationalcityca.gov/). The website calendar informs residents of upcoming events. Storm water-related information can be found under the Development Services Department tab in the Engineering Division section. The direct link to the City's storm water page is:
http://www.nationalcityca.gov/index.aspx?page=164.

**Household Hazardous Waste Disposal Program**

The City continues to collaborate with other cities to allow City residents to drop off HHW at the South Bay Regional Household Hazardous Waste Collection facility in Chula Vista. The Household Hazardous Waste Collection Facility is the primary location for hazardous waste collection in the South Bay, receiving HHW from the cities of National City, Imperial Beach, Coronado, and Chula Vista. Curbside pickup was made available to the disabled and elderly communities. The amount of waste collected

only from residents of National City is not available; however, the total amount of HHW collected from residents of all cities was 341,868 pounds from 3,430 participants.

**Other Waste Disposal Programs/Activities**

In addition to proper HHW disposal, the City encourages residents to recycle used oil. National City cooperates with the South Bay Regional Used Oil Program, and several Certified Used Oil Collection Centers are available for residential oil disposal within the City. The volume of used oil dropped off at the collection centers is not available.

The City's Public Works Department held three trash collection events (one in November and two in June) during this reporting period in conjunction with EDCO Disposal Company. Information about the trash collection events was sent out to all residents with their trash bills. During these events, residents were encouraged to dispose of any unwanted large items from their homes, such as furniture and appliances. In total, 1,756 vehicles dropped off almost 623 tons of waste during these events.

### 6.4.2 Compliance and Enforcement

**Public Complaints**

The City continues to implement compliance and enforcement measures by identifying potential sources of pollutants in residential areas from Dry Weather Monitoring Program data, complaints received by the Storm Water Hotline, and observations made by the City's municipal personnel. If a potential threat to water quality is present, the City provides a verbal warning, written warning, notice of correction, and/or NOV as applicable. The City received and addressed six residential-related complaints during this reporting period. Complaints were submitted through the Storm Water Hotline or internally through the City's Development Services or Public Works departments. All residential complaints were promptly resolved as detailed in the Summary of Documented Public Complaints in Section 4 of this Annual Report.

**Code Enforcement**

In addition to complaints to the storm water hotline, City code enforcement staff spend time in residential areas, checking for compliance with the City's Municipal Code. The correction of at least 80 residential code violations relating to potential threats to water quality in 2011/2012 had potential direct or indirect benefits for receiving waters. Violations corrected included 33 cases of prohibited junk or vehicle storage, 39 cases of dumping or trash accumulation, and seven cases of illegal auto repair. Enforcement is used as necessary to correct the violation. For example, citations were issued to three residents with accumulation of junk materials on their property that posed a potential threat to water quality.

## 6.5 Residential Component Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

## 6.6 PROGRAM REVIEW AND MODIFICATION

The City's JURMP was last updated in March 2008. No changes to the City's residential component have been made since that time.

**Figure 6-1**
**Division Street High TTWQ Residential Area**

**Figure 6-2**
**High TTWQ Residential Properties**

# 7.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION

## 7.1 INTRODUCTION

In accordance with the September 10, 2008 RWQCB adoption of Addendum No. 2 to Order No. R9-2007-0001, the City will submit the 2011/2012 Illicit Discharge Detection and Elimination section and attachments to the RWQCB no later than December 15, 2012.

# 8.0 EDUCATION COMPONENT

## 8.1 INTRODUCTION

During 2011/2012, the City continued to provide education and outreach to a variety of audiences within the City. The City's education program targets municipal personnel, industrial and commercial businesses, construction site owners and operators, residents, and underserved communities. The City aims to reduce storm water pollution by increasing awareness about storm water and promoting the implementation of pollution prevention measures and BMPs. Through education and outreach, the City works to foster change in both the attitude and behaviors of the regulated community.

### 8.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the education component during the 2011/2012 reporting period are presented below. The following subsections of this section provide more details on how the City complied with the Municipal Permit during the reporting period.

- On-site education regarding storm water issues and site-specific BMPs was provided to several municipal employees during routine facility inspections.
- Twenty municipal employees watched a storm water BMP training video and took a written test.
- The "Construction Site Best Management Practices" handout was distributed with all construction-related permits issued, including building permits, during the 2011/2012 reporting year.
- Restaurant and food industry personnel were educated on proper site-specific BMPs and provided a BMP handout on storm water issues common to food-related facilities.
- All businesses, including mobile businesses, applying for a new business license during the 2011/2012 reporting year received the "Preventing Urban Runoff Pollution" BMP Trifold.
- The City made an estimated 29,539 impressions through educational outreach material and activities.

## 8.2 STAFF TRAINING ELEMENT

During 2011/2012, the City provided training and educational outreach to its municipal personnel. In November 2011, a training packet that included the storm water instructional video "What We Can Do As Municipal Employees" along with follow up questions was distributed to City staff. Staff watched the video and submitted their answers to test questions by February 2012 to verify that training had occurred. The

video reviewed sources of storm water pollution and why it is important to prevent such pollution. It also discussed how to manage storm water complaints and addressed BMP implementation as it related to particular municipal positions. Municipal personnel were trained to report any IC/IDs observed to the appropriate City staff and to educate other municipal personnel and the general public about storm water pollution prevention.

The City's Storm Water Compliance Inspector has completed the California Environmental Protection Agency Basic Inspector Training Course and uses those skills to coordinate compliance within the various components of the City's storm water program. During routine municipal inspections, the City's storm water consultant provided site-specific education to several Parks Division and Public Works staff.

## 8.3 EDUCATIONAL OUTREACH ELEMENT

In addition to municipal staff, the City has continued to provide education and outreach to industrial and commercial businesses, construction site owners and developers, residents, and underserved audiences. These efforts promote storm water awareness and BMP implementation.

### 8.3.1 INDUSTRIAL AND COMMERCIAL BUSINESSES

As required by the Municipal Permit, the City inspects its inventoried businesses to evaluate compliance with the City's BMP requirements and provides site-specific education outreach to business owners and operators. Violations of the City's BMP requirements are corrected through enforcement actions as necessary. Site-specific information relating to the facility's activities was discussed with businesses personnel during inspections. The "Everything that flows down into a storm drain" brochure (Attachment 8.1) was also provided as necessary during inspections of industrial and commercial businesses.

All businesses that applied for a business license in the City received the Industrial and Commercial "Preventing Urban Runoff Pollution" Trifold, as seen in Attachment 5.3. In this way, even businesses that were not slated for inspection during 2011/2012 received storm water education.

Again this year, the City made an additional effort to educate restaurant and food industry personnel on proper BMPs. A double-sided fact sheet was distributed to all food-related businesses as necessary and highlighted the six most common issues at food-related facilities (Attachment 5.2). In addition, long-term solutions to costly and ineffective cleanup of grease spills were presented. Contact information for the City's compliance inspector and for the Storm Water Hotline was also included.

#### 8.3.1.1 MOBILE BUSINESSES

Mobile businesses, specifically mobile car detailers or power washers, are considered a high TTWQ due to the nature of the business activities and the likelihood of prohibited

non-storm water discharges. Mobile businesses are not confined to a single area and many do not have City business licenses, making them difficult to identify. The City will continue to respond to complaints regarding mobile businesses and provides one-on-one verbal BMP education and literature during the complaint investigation as applicable. All businesses, including mobile businesses, applying for a new business license during the 2011/2012 reporting year received the "Preventing Urban Runoff Pollution" Trifold. This pamphlet includes minimum BMPs for three commonly mobile professions: power washing, car washing, and landscaping services. Information about the storm drain conveyance system and BMPs applicable to mobile business activities were also made available during 2011/2012 on the City's website.

### 8.3.2 Construction Site Owners and Developers

Due to the nature of their activities, construction sites have the potential to discharge many types of pollutants to receiving waters if not managed properly. Many construction site owners, contractors, and developers visit the City's Engineering Division to apply for necessary permits. Through this interaction with City staff, owners and developers are able to better understand watershed concepts, potential pollutants, and required BMPs. Information about the storm drain conveyance system and BMPs applicable to construction activities were also made available during 2011/2012 on the City's website.

The City provided various construction site-specific educational materials targeting storm water concepts during the 2011/2012 reporting year. The distributed educational materials are described below.

- The Construction Site BMP Fact Sheet or "Blue Sheet" (Attachment 3.1) describes specific BMPs for construction activities including soil stabilization and erosion prevention, sediment containment, materials and equipment management, non-storm water discharge control, and drainage control. Approximately 147 sheets were distributed with permits issued, including building permits; implementing the BMPs listed on the sheet is a condition of the permits.
- The National Pollutant Discharge Elimination System (NPDES) Project Applicability Form or "SUSMP Checklist" (Attachment 2.1) was completed by all projects applying for construction and building permits. Once submitted, the City reviewed the checklist and prioritized the projects. Requirements to ensure compliance with the Municipal Permit and General Construction Permit were presented to the applicant and further discussed to ensure the applicant was educated on the process.
- A copy of JURMP Appendix C, which contains a list of required construction BMPs, is made available upon request for proponents of construction activities within the City. All JURMP BMPs are also posted on the City's website.

### 8.3.3 Residential Areas

Since the City is mainly composed of residential areas, it is important to reach this particular audience through educational outreach programs. The City continued to make a variety of flyers, brochures, website postings, and other educational material available to its residents.

**Storm Water Calendar**

The City began to develop a 2013 Storm Water Calendar that will be distributed to schools and residents in 2012/2013. The calendar will present information in both English and Spanish and informs residents about pollutants found in San Diego Bay and neighboring waterways, and describes that pollutants such as trash, HHW, and bacteria from pet waste can be transported from residential areas to the ocean. The calendar will also provide the dates of the 10th Annual Creek to Bay Cleanup event and the Coastal Cleanup Day. See Section 9 of this Annual Report for a more detailed description of these events.

During 2011/2012, the third annual Storm Water Art Contest was arranged for 3rd graders in the City, which will provide images for the calendar. Contest announcement flyers for teachers (Attachment 8.2) and for 3rd grade students and their families (Attachment 8.3) were distributed to provide information about the contest as well as the City's storm water program. More information about the development of the 2013 calendar is included in the Public Participation Component Section 9 of this Annual Report.

**School Education and Outreach**

The 2013 Storm Water Calendar art contest was held in conjunction with a lesson about storm water concepts for third grade elementary school students throughout the City. The resulting 2013 calendar will provide year round education on the connection between our communities' activities and the health of the oceans.

**City Website**

The City's website (http://www.nationalcityca.gov/) is another way in which City residents can become familiar with the design and intended use of the storm drain system, HHW, alternatives to hazardous household products, find information regarding volunteer opportunities, and applicable City contact information.

### 8.3.4 Underserved Communities

The City is a growing community that is diverse in culture. According to a door-to-door storm water survey held in April and May of 2009, one third of the 373 residents encountered in the high TTWQ residential areas preferred to speak in Spanish. A small fraction spoke Tagalog as their preferred language. To address the unique demographics of the City, the City's Storm Water Hotline accepts all reports of illegal discharges, regardless of language.

The City also provides educational materials both in English and Spanish to better serve Spanish speaking community members. These bilingual brochures may be found at various locations throughout the City, such as the Chamber of Commerce, the public library, public recreational centers, and the storm water display area at the City's Engineering Department. The bilingual educational handout entitled "Everything that flows down into a storm drains goes untreated directly to our creeks, lagoons, and San Diego Bay" is also included in mail-based correspondence (i.e. NOV, notice of corrective action, etc.) to residents and industrial and commercial businesses in the City.

### 8.3.5 Complaint Investigations

To further aid the process of identifying illicit discharges, the City encourages the public and City staff to report IC/IDs. The City's Storm Water Compliance Inspector follows up on all complaints made to the hotline. If a representative for the targeted business, residential area, or construction site is present, the inspector will provide site-specific information regarding storm water issues including applicable educational materials.

## 8.4 Outreach Component Effectiveness Assessment

The estimated number of impressions made by the City's education and outreach efforts during 2011/2012 is presented and described below. Please refer to Section 11 of this JURMP Annual Report for the remainder the effectiveness assessment for this program component.

**Impressions Made**

The City continues to provide residents and businesses with storm water-related education through inspections, distribution and mailing of educational materials, and various events throughout the year. The City calculates an estimate of impressions based on the number and type of educational materials distributed. Estimates of the numbers of impressions generated by the City's efforts allow for a more realistic evaluation of the effectiveness of the NPDES storm water program.

The estimated number of impressions was generated by multiplying each effort by the number of impressions thought to be generated by that particular effort. For example, inspections have been presumed to generate three impressions, with the exception of municipal inspections. Municipal inspections generally involve more people and are assumed to generate five impressions. Training sessions and cleanup events have been assumed to generate a number of impressions equal to four times the number of attendees, because it is likely that the attendees will discuss the content with others after the training session or cleanup event. Printed educational materials distributed in mass numbers are assumed to generate three impressions each. Table 8-1 details the number of impressions made by the City during this reporting year.

**Table 8-1**
**Impressions Made by the City**

| Impression Type | Estimated Count | Unit | Estimated Impressions Generated |
|---|---|---|---|
| Treatment Control BMP Inspections | 11 | Inspection | 33 |
| Treatment Control BMP Inspection Reports | 11 | Letter | 33 |
| Construction Inspections | 66 | Inspection | 198 |
| Construction Inspection Reports | 66 | Letter | 198 |
| Construction BMP "Blue Sheet" | 147 | Flyer | 441 |
| Municipal Inspections | 10 | Inspection | 50 |
| Municipal Storm Water Training Video and Quiz | 20 | Session | 80 |
| Complaints Investigated | 9 | Investigation | 27 |
| Industrial/Commercial Inspections | 252 | Inspection | 756 |
| Industrial/Commercial Inspection Reports for Business and Property owners | 422 | Letter | 1266 |
| NONA/NEC Paperwork | 15 | Flyer | 45 |
| NOI Paperwork | 6 | Flyer | 18 |
| Everything that flows down the storm drain…. | 905 | Brochure | 2715 |
| "Preventing Urban Runoff Pollution" Trifold | 545 | Brochure | 1635 |
| Restaurant/Food Industry BMP Fact Sheet | 90 | Flyer | 270 |
| FOG Inspections | 92 | Inspection | 276 |
| FOG Letter | 11 | Flyer | 33 |
| FOG Fact Sheet | 18 | Flyer | 54 |
| FOG Templates | 27 | Flyer | 81 |
| Activity/Event Attendees | 1692 | Attendee | 6768 |
| Storm Water Ordinance 14.22 | 20 | Document | 60 |
| 2012 Storm Water Program Calendar Art Contest Information Flyers | 770 | Flyer | 2310 |
| National City Storm Water Calendar (2012) | 3925 | Calendar | 11775 |
| Regional Storm Water Calendar (2012) | 31 | Calendar | 93 |
| Regional Storm Water Coloring Book | 108 | Book | 324 |
| **Total** | | | **29,539** |

## 8.5 PROGRAM REVIEW AND MODIFICATION

The City's JURMP was updated in March 2008. No changes to the City's education component have been made since that time.

# 9.0 PUBLIC PARTICIPATION COMPONENT

## 9.1 INTRODUCTION

The City encourages public participation in the City's JURMP as a means to foster storm water awareness and improve water quality. Public participation includes, but is not limited to, cleanup events, special community projects, reporting observed IC/IDs, and participating in City-hosted waste disposal events. Collaboration between the City and the community helps to encourage a sense of shared responsibility in protecting water quality both locally and regionally. The City has encouraged public participation through the programs discussed in this section.

### 9.1.1 SUMMARY OF NOTABLE ACCOMPLISHMENTS

Some notable achievements for the public participation component during the 2011/2012 reporting period are presented below. The following subsections of this section provide more details on how the City complied with the Municipal Permit during the reporting period.

- The City collaborated with the California Coastal commission to host two sites for the Coastal Cleanup Day in September 2011. A total of 459 volunteers collected 1,900 pounds of trash and recyclables at the Paradise Creek Education Park and Sweetwater River sites.
- The City collaborated with I Love A Clean San Diego (ILACSD) to host the Paradise Creek Education Park and Sweetwater River sites for the Creek to Bay Cleanup event in April 2012. A total of 133 volunteers participated to collect approximately 3,000 pounds of trash.
- The City held the third annual art contest during 2011/2012 for the 2013 Storm Water Calendar. A total of forty-four 3rd grade classrooms provided with storm water educational handouts to participate in the contest.
- The City continued to collaborate with other cities to provide HHW disposal for residents of the City of National City. Residents of National City properly disposed of HHW at the South Bay Regional Household Hazardous Waste Collection facility in Chula Vista.
- The City held three large-item disposal events during the months of November and June, which allowed residents to dispose of large items (not including HHW). Nearly 623 tons of large-item waste was collected from 1,756 vehicle loads during these events.
- The City continued to operate its Storm Water Hotline to receive complaints from businesses and residents in the City.

## 9.2 PUBLIC PARTICIPATION ACTIVITIES

**Cleanup Events and Programs**

During 2011/2012, the City hosted cleanup events at various locations in the City. These events provide a direct benefit to water quality and provide an opportunity for the City to inform event volunteers of storm water issues.

The City participated in the California Coastal Commission sponsored Coastal Cleanup Day on September 17, 2011 (Figure 9-1). Two hundred volunteers cleaned a 1.5 miles of Sweetwater River and collected 1,200 pounds of trash and 150 pounds of recyclables. In addition, 259 volunteers at Paradise Creek Education Park collected 550 pounds of trash in the two-mile cleanup area. In total, Coastal Cleanup Day volunteers collected 1,900 pounds of trash and recyclables and cleaned 3.5 miles along receiving water bodies.

**Figure 9-1. Coastal Cleanup Day Event**

The City continued to collaborate with ILACSD and sponsored the Paradise Creek Education Park and Sweetwater River sites for the Creek to Bay Cleanup event on April 28, 2012. Sixty-eight volunteers collected 700 pounds of trash and debris (Figure 9-2) from Paradise Creek. An additional 65 volunteers cleaned three miles of Sweetwater River and collected 2,300 pounds of trash.

In total, 133 volunteers collected approximately 3,000 pounds of trash and cleaned 3.5 miles of park in National City.

**Figure 9-2. Creek to Bay Cleanup Event**

**2013 Calendar Development**

As previously mentioned, during 2011/2012, the City began to develop the 2013 Storm Water Calendar. Similar to previous calendars, the City worked to involve the public in the development of the 2013 edition. The third annual art contest was held in May 2012 for the 3rd grade students of all 10 public elementary schools within the City. The 12 winning images will be included for each month of the upcoming calendar.

The theme of the contest was "By Keeping Our Community Clean, We Can Keep The Ocean Clean." Forty-four classrooms were provided with educational presentation material by the school district representative, and teachers were given contest guidelines to share with their students (Attachment 8.2). The presentation addressed watershed concepts, the storm water conveyance system, pollutants of concern, and how to eliminate pollutants in urban runoff. The provided presentation also included past examples of submitted student work. An informational flyer that outlined the rules of the contest and presented some storm water concepts was given to about 871 students to take home (Attachment 8.3). Winners were selected in 2011/2012 and will be honored at a National City Council Meeting in the 2012/2013 reporting period. Children were encouraged to depict keeping their community clean and include images of known landmarks or elements specific to their neighborhoods.

**Hazardous Waste Collection and Used Oil Recycling Program**

The City's Hazardous Waste Collection and Used Oil Recycling Program encourage City residents and business owners to properly dispose of HHW. Residents have access to proper disposal facilities for HHW at the South Bay Regional Household Hazardous Waste Collection facility in Chula Vista. This facility is open on Wednesdays and

Saturdays from 9:00 a.m. to 1:00 p.m. and accepts up to 15 gallons or 125 lbs of waste per household for a small co-payment. An example informational ad for this program is included as Attachment 9.1. This service is also available to residents in the cities of Chula Vista, Coronado, and Imperial Beach. During the 2011/2012 reporting year, 3,430 participants brought over 341,868 pounds of hazardous waste. Door-to-door pick up was available for disabled or elderly communities for a small fee.

The City's website also informs residents of what is considered HHW and how and where to properly dispose of it.

**Other Waste Disposal**

The City continued to hold large item trash collection events for bulky items like furniture and appliances at the EDCO Recovery and Transfer Facility. The City coordinated with EDCO Recycling and Waste Collection Services to host one event in November and two events in June. Almost 267 tons of waste was collected from 801 vehicle loads on November 5, 2011. On June 9, 2012, the facility collected over 160 tons of waste from 551 vehicles and then an additional 196 tons from 404 vehicles the following Saturday, June 16, 2012. The City encouraged the public to bring their debris (not including HHW) for proper disposal. Door-to-door pick up was provided for disabled or senior residents.

**Public Reporting**

As discussed in Section 4, complaints are received through the City's Storm Water Hotline and online website reporting system. The residential, industrial and commercial, construction, and municipal communities are encouraged to use the hotline to report IC/IDs. The City investigates each complaint and tracks the complaint and follow-up actions, as applicable. The hotline number is available on various brochures distributed by the City as well as on the City's website. This reporting period there were 9 complaints received by the City. All complaints reported during 2011/2012 were investigated immediately and resolved appropriately by City staff. See Table 4-5 for details on documented public complaints.

## 9.3 Public Participation Component Effectiveness Assessment

Please refer to Section 11 of this JURMP Annual Report for the assessment of program effectiveness.

## 9.4 Program Review and Modification

The City's JURMP was updated in March 2008. No changes to the City's public participation component have been made since that time.

# 10.0 FISCAL ANALYSIS

The sources of funding for this program listed in the City's JURMP have not been changed during this reporting period. During 2009/2010, a fiscal analysis reporting template was developed collectively by the Copermittees. The City has used this template to report the 2011/2012 expenditures in this JURMP Annual Report.

**San Diego County Copermittees Fiscal Analysis Report for Urban Runoff Management Programs**

**EXPENDITURE SUMMARY**

| JURISDICTIONAL COMPONENTS | |
|---|---|
| Administration | $25,478 |
| Development Planning | $63,174 |
| Construction | $40,492 |
| Municipal | $318,856 |
| Industrial and Commercial | $61,566 |
| Residential | $26,379 |
| IDDE | $36,470 |
| Education | $34,005 |
| Public Participation | $13,504 |
| Special Investigations | $17,890 |
| Non-Emergency Firefighting | $0 |
| | |
| **Jurisdictional Total** | **$637,814** |

| WATERSHED | |
|---|---|
| Watershed 1 – San Diego Bay | $31,201 |
| | |
| **Watershed Total** | **$31,201** |

| REGIONAL | |
|---|---|
| Annual Permit Fee to Regional Board | $18,196 |
| Copermittee Cost Share of Regional Budget | $44,617 |
| | |
| **Regional Total** | **$62,813** |

| TOTAL COSTS | $731,828 |
|---|---|

**Watershed Urban Runoff Management Program (WURMP)**

| | Watershed 1 – San Diego Bay |
|---|---|
| Administration (1) | $8,443 |
| Cost Share Contribution | $0 |
| Watershed Activities | $22,758 |
| Other | $0 |
| ***TOTAL*** | **$31,201** |

(1) Administration – includes Watershed strategic planning, management, mapping, assessment, and reporting.

**Regional Urban Runoff Management Program (RURMP)**

| Regional Programs | Jurisdictional Cost Share Amount |
|---|---|
| Administration (1) | $474 |
| Cost Share Contribution | $44,143 |
| Other (2) | $0 |
| ***TOTAL*** | **$44,617** |

(1) Administration – includes assessment, reporting, management, etc.
(2) Other – examples include regional and special studies.

# 11.0 EFFECTIVENESS ASSESSMENT

## 11.1 INTRODUCTION

Implementation of the City's JURMP is intended to reduce discharges of urban runoff related pollution to the MEP. The City regularly evaluates its program to make it as effective as possible. The overall structure of the City's storm water program is composed of three primary components:

- Program Planning
- Program Implementation
- Effectiveness Assessment

The process typically proceeds from planning to implementation to assessment, although in practice all three may be in progress at the same time. The initial step is program planning, which requires identifying potential pollutant sources, establishing BMP requirements, and establishing targeted outcomes and ways to measure those outcomes. Next, the program developed during the planning step is implemented. Program implementation is assessed each year using the methods developed in the program planning stage and reported in JURMP annual reports. The conclusions from these assessments are used during the next round of program planning to incorporate improvements to the program and refine the assessment technique.

Based on participation in regional efforts and its experience implementing its JURMP, the City has identified a variety of metrics to assess progress toward targeted outcomes. At the end of each reporting year, the City uses selected metrics to assess the effectiveness of its program implementation. Example metrics were provided in Section 13 of the City's 2008 JURMP.

The effectiveness assessment approach developed by the Copermittees during the last permit cycle includes six different levels of targeted outcomes. Each successive level represents a step up from more easily measured, activity-based outcomes to more difficult to measure, quality-based outcomes. The levels are listed below.

Level 1: Compliance with Activity-Based Permit Requirements
Level 2: Changes in Knowledge/Awareness
Level 3: Behavioral Change/BMP Implementation
Level 4: Load Reductions
Level 5: Changes in Discharge Quality
Level 6: Changes in Receiving Water Quality

## 11.2 EFFECTIVENESS ASSESSMENT RESULTS

The Municipal Permit requires the City to assess the effectiveness of each program component, the significant activities for each within each component, and the storm water program as a whole. Level 1, Level 5, and Level 6 outcomes are discussed in the

text below. At this time the City is not able to assess Level 5 or Level 6 outcomes for individual program activities or individual programs. As has been noted in the CASQA effectiveness assessment guidance document, methods for integrated assessment—assessment that combines both monitoring data and programmatic data—are still under development at regional and statewide levels (CASQA, 2007).

### 11.2.1 OUTCOME LEVEL ASSESSMENTS

**Level 1**

Level 1 outcomes essentially are measures of permit compliance. The component-specific sections in this JURMP Annual Report provide details of programmatic actions taken to comply with the applicable Municipal Permit requirements. Appendix B of this JURMP Annual Report also includes a checklist that matches the Municipal Permit's annual reporting requirements with the section(s) or appendix of this report that addresses each requirement.

**Levels 2 and 3**

Tables 11-1 through 11-8 at the end of this section provide discussions of Level 2 and Level 3 outcomes for significant activities within each program component. Please note that Dry Weather Monitoring Program results are used in the assessments for other program components besides illicit discharge detection and elimination. Data is from the 2011 Dry Weather Monitoring Program conducted within the period from July 1, 2011 through June 30, 2012, which is comparable with previous years' assessments and data. Also note that only a Level 1 assessment applies to fiscal analysis, so no table for fiscal analysis is included.

**Level 4**

The tables at the end of this section provide information for Level 4 assessments where feasible. Assessment of Level 4 outcomes is feasible for some programs that directly measure the amounts of pollutant removal, such as MS4 cleaning. For most other programs reliable load estimation methods have not yet been developed.

**Level 5**

The Dry Weather Monitoring Program is the City's primary mechanism of measuring the quality of discharges. The City began collecting MS4 monitoring data in 2008/2009; however, the data gathered at this time is insufficient to provide substantive information about discharge quality.

Graphs displaying historical Dry Weather Monitoring results are provided at the end of this section as Figures 11-3 through 11-5. Ammonia-nitrogen, one of the constituents with the longest historical data record, has shown a decreasing trend in concentration over time. Median and average fecal coliform indicator bacteria counts have also decreased over time. No nitrate-nitrogen exceedances have been measured since 1996; no oil and grease exceedances have been recorded since 2002.

**Level 6**

No Regional Monitoring Program water quality monitoring stations are located within the City of National City. The Sweetwater Mass Loading Station is located just outside the southeastern border of the City, but only a very small portion of the City would drain to that site. Some sediment sampling has been completed in the Sweetwater River flood control channel along southern side of the City as part of the regional Ambient Bay and Lagoon Monitoring Program. The results of that program have been relatively inconclusive to date. The RWQCB contracted Southern California Coastal Waters Research Project (SCCWRP) to conduct some wet weather monitoring in Paleta Creek (Seventh Street Channel) in support of a pending Total Maximum Daily Load (TMDL) in response to 303(d) listings for Sediment Toxicity and Benthic Community Degradation. Recently the RWQCB has indicated that it desires to move forward and adopt this TMDL sometime before the end of 2012. At this point, the amount of data collected at these sites is not sufficient to determine any positive or negative trends for water quality at the site. Typically several years of data are needed before any trends become apparent. The City will continue to work with the San Diego Bay WURMP workgroup and TMDL stakeholder workgroups to improve the quality of water bodies in and around the City of National City.

### 11.2.2 Overall Component Assessments

**Development Planning**

The City's review process for development projects has effectively required higher removal efficiency BMPs for all projects approved in 2011/2012. The City continued to work with parties responsible for maintenance of treatment control BMPs, achieving compliance through cooperation or escalating enforcement. City permitting procedures resulted in a 100 percent installation rate for projects completed during the reporting period. Fluctuations in maintenance rates from the 2008/2009 to the 2011/2012 reporting period may be attributed on one hand to generally increasing awareness of the need for regular treatment control BMP maintenance and on the other hand various ongoing changes in project ownership.

**Construction**

The available data indicate that on the whole the City's construction program effectively requires BMP implementation. The City conducted dry season inspections for high and medium priority construction sites to require continued implementation of required BMPs in preparation for the wet season. Any BMP deficiencies noted were remedied promptly. The City's approval process continues to notify all construction projects that will disturb soil of the City's BMP requirements before a permit is issued. This process has helped bring about better BMP implementation at small projects that otherwise might not be aware of the BMP requirements.

**Municipal**

The City's municipal staff are regularly trained on storm water issues, and the City's MS4 cleaning and street sweeping programs meet or exceed minimum Municipal Permit

frequency requirements. In particular, the City sweeps its streets more often than the permit requirements to aid in WURMP efforts. As another part of WURMP efforts, the City continued to hire a contractor in 2011/2012 to do biweekly inspections and remove any observed trash from Paradise Creek.

**Industrial and Commercial**

The City continued to implement a comprehensive inspection program. During 2011/2012 the City used continued to communicate corrective actions to both property owners and inspected businesses, as needed. The City has continued to decrease follow-up inspection turnaround time, including allowing business representatives to e-mail photographs of corrections, leading to quicker improvements in BMP implementation.

**Residential**

The City's residential component mainly achieves BMP implementation through complaint response, education, and routine monitoring to detect IC/IDs. Complaints received about residential areas and/or activities by the Storm Water Hotline are documented, investigated, and appropriate actions are taken to resolve the reported issue. In addition, multi-family residential complexes with shared areas were evaluated for pollutant discharge potential, and educational outreach specific to property managers was initiated.

**IDDE**

The RWQCB adoption of Addendum No. 2 to Order No. R9-2007-0001 has extended the reporting period for the IDDE component of the City's program, so a full assessment of the program's effectiveness cannot be provided at this time. Some initial metrics are presented in Table 11-6.

**Education**

During 2011/2012, the City provided educational outreach to various communities in the City. Most notably the City met with property managers of multi-family residential complexes to discuss BMP requirements and implementation, as discussed above. The City also started development of a 2013 calendar that presents various storm water concepts. This calendar will be distributed to school children and during various public events.

**Public Participation**

The City continued to host clean-up events in the City, including the California Coastal Cleanup and the Creek to Bay Cleanup. There was a 60 percent increase in volunteers participating in clean-up events within the City during 2011/2012 compared to 2010/2011, and more than five times many as in 2008/2009. The City also continued to ensure its own staff and the public are aware of the hotline and when to call it.

## 11.3 Program Review and Modification

No significant changes to the effectiveness assessment approach presented in the City's March 2008 JURMP have been made since the submittal of that document.

**Table 11-1**
**Development Planning Component Assessment Measures**

| Significant Activity | Level 2 | Level 3 | | Level 4 | |
|---|---|---|---|---|---|
| Review and approve project plans | External<br>A relatively small number of projects submitted reports during 2011/2012. Based on meetings with applicants and BMPs proposed, it appears that the level of knowledge is increasing.<br>Internal<br>The City's storm water consultant and the City's Storm Water Program Manager worked with engineers in the City to improve their level of understanding of the SUSMP program. City personnel also attended training sessions—see Section 8. The City's consultant reviews SWMPs submitted to the City. | Overall project submittal approval rate during reporting period | 31% | Percent of projects proposing BMPs besides filter inserts | 100% |
| | | Number of projects requiring three or more reviews prior to SWMP approval | 1 (of 4) | Percent of approved projects implementing BMPs with high or medium removal efficiencies for key pollutants of concern | 100% |
| Verify proposed BMPs are implemented | External<br>N/A, knowledge is evaluated by appropriate implementation of BMPs as shown in Level 3<br>Internal<br>The City's NPDES Storm Water Compliance Inspector provided training to the inspector responsible for verifying BMPs prior to occupancy. | Percent of projects completed in 2011/2012 implementing all proposed BMPs | 100% | Proper BMP implementation is likely to have reduced pollutant loading. | |
| | | Resolution status of enforcement actions | See Section 2 | | |
| Verify BMPs are properly maintained | External<br>Annual maintenance verification letters were sent out in 2011/2012 and NOVs were issued to non-responders<br>Internal<br>The City contracts with a qualified consultant to perform treatment control BMP inspections. | Percent of inspected sites properly maintaining all BMPs | 28% | Proper BMP maintenance is likely to have reduced pollutant loading. | |
| | | Resolution status of enforcement actions | See Section 2 | | |
| | | Percent of sites responding to verification letters | 100% | | |
| Maintain an accurate inventory | N/A, data management only | N/A, data management only | | N/A, data management only | |

**Notes:** Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

**Table 11-2**
**Construction Component Assessment Measures**

| Significant Activity | Level 2 | Level 3 | | Level 4 |
|---|---|---|---|---|
| Review proposed plans and BMPs | External<br>Projects submit plans for construction BMP implementation for their projects; the level of awareness of construction BMP requirements is fairly high.<br>Internal<br>Training for City staff is described in Section 8. City staff are familiar with relevant construction BMPs. | BMPs proposed for construction projects generally meet requirements; no significant problems have been noted. | | Proper pre-project planning is likely to have reduced pollutant loading. |
| Verify proposed BMPs are implemented | External<br>Grading projects implement BMPs as required by their permits, and contractors are familiar with the City's requirements.<br>Internal<br>Training for City staff is described in Section 8. City staff are familiar with relevant construction BMPs, and the City's consultant conducts routine inspections of high and medium TTWQ construction sites. | Percent of BMP deficiencies resolved by City follow-up within the reporting period | 93% | Proper BMP implementation is likely to have reduced pollutant loading. |
| | | Resolution status of enforcement actions | See Section 3 | |
| | | Number of dry weather monitoring exceedances traced to construction sources | 0<br>(2011 dry weather season) | |
| Maintain an accurate inventory | N/A, data management only | N/A, data management only | | N/A, data management only |

**Notes:** Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

**Table 11-3**
**Municipal Component Assessment Measures**

| Significant Activity | Level 2 | Level 3 | | Level 4 | |
|---|---|---|---|---|---|
| Verify proposed BMPs are implemented at facilities | City staff are regularly trained on BMP implementation; see sections 4 and 8. | Percent of inspected facilities/activities requiring a follow-up visit | 0% | Proper BMP implementation is likely to have reduced pollutant loading. | |
| | | Resolution status of sites requiring follow-up inspections | N/A | Number of pet waste bags distributed | 12,000 bags |
| | | Number of dry weather monitoring exceedances traced to municipal sites | 0 (2011 dry weather season) | Amount of pet waste removed through pet waste bag use* | 2,400 pounds |
| Sweep streets and parking facilities | | N/A, streets and parking facilities are swept as often as directed by management. | | Amount of sediment and debris removed (weight or volume) | 985 tons |
| | | | | Amount of sediment and debris removed per length of street swept (weight or volume per curb mile) | 130 lbs/ curb mile |
| Maintain and clean out MS4 | | N/A, MS4 structures are maintained as often as directed by management. | | Amount of sediment and debris removed (weight or volume) | 12.6 tons |
| Maintain sanitary sewer system | | N/A, the sanitary sewer system is maintained as often as directed by management. | | Total volume of SSO discharge to MS4 (gallons) | 0 |
| Maintain municipal treatment control BMPs | | N/A, treatment control BMPs are maintained as often as directed by management. | | Amount of sediment and debris removed from treatment control BMPs | 186 pounds |
| Maintain an accurate inventory | N/A, data management only | N/A, data management only | | N/A, data management only | |

**Notes:** Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable
*Based on studies conducted by the County of San Diego, approximately 0.2 pounds of pet waste is collected per bag used. A separate literature search performed by the San Diego County Regional Airport Authority found a figure of 0.25 pounds per bag (San Diego Bay Copermittees, 2010). To be conservative, the estimate in this table is based the smaller of the two numbers.

**Table 11-4**
**Industrial and Commercial Component Assessment Measures**

| Significant Activity | Level 2 | Level 3 | | Level 4 | |
|---|---|---|---|---|---|
| Require BMP implementation | External<br>Knowledge assessment scores indicated approximately half of the personnel present during inspections lacked any understanding of relevant storm water concepts. See Figure 11-1 on the following page for a score distribution. See Section 8 for more detail on educational materials and other outreach efforts.<br>Internal<br>The City contracts with a qualified consultant to perform industrial and commercial inspections. | Percent of inspected sites requiring a follow-up visit | 27% | Proper BMP implementation is likely to have reduced pollutant loading. | |
| | | Resolution status of enforcement actions | See Section 5 | | |
| | | Number of dry weather monitoring exceedances traced to industrial or commercial sources | 1<br>(2011 dry weather season) | Number of IC/IDs eliminated (inspections and complaint investigations) | 5 |
| | | Consistent with the intentional selection of sites with the highest TTWQ potential, many sites had a lower BMP score. However, the most common score was three. See Figure 11-2 on the following page for a score distribution. | | | |
| Maintain an accurate inventory | N/A, data management only | N/A, data management only | | N/A, data management only | |

**Notes:** Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

**Figure 11-1**
**Industrial/Commercial Knowledge Assessment Scores**

**Figure 11-2**
**Industrial/Commercial BMP Implementation Scores**

**Table 11-5**
**Residential Component Assessment Measures**

| Significant Activity | Level 2 | Level 3 | | Level 4 |
|---|---|---|---|---|
| Require BMP implementation | External<br>See sections 6 and 8 for details of this and other education.<br>Internal<br>The City's Storm Water Program Manager and other City staff involved in the program have a good understanding of the goals of the storm water program. | Number of residential incidents reported to storm water hotline | 9 | Resolution of residential incidents reported to the hotline and other code violations likely resulted in a decrease in pollutant loading through improved BMP implementation. |
| | | Number of storm water-related code violations resolved | 80 | |
| | | Resolution of enforcement actions | See Sections 4 and 6 | |
| | | Number of dry weather monitoring exceedances traced to residential sources | 4 (2011 dry weather season) | |
| Maintain an accurate inventory | N/A, data management only | N/A, data management only | | N/A, data management only |

**Notes:** Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

**Table 11-6**
**Illicit Discharge Detection and Elimination Component Assessment Measures***

| Significant Activity | Level 2 | Level 3 | Level 4 |
|---|---|---|---|
| Conduct Dry Weather Monitoring Program | The City contracts with a qualified consultant to perform its Dry Weather Monitoring Program. | N/A, personnel conduct monitoring as directed by management. | No significant, long term IC/IDs were identified for elimination, so a reliable estimate of load reduction cannot be made. |
| Respond to incidents reported to storm water hotline | The City's Storm Water Program Manager trains City staff as needed. See sections 4 and 8. City staff were responsible for many of the reports made to the hotline, as shown in Section 4. | N/A, personnel respond to incidents as directed by management. | Resolution of the incidents reported to the hotline and listed in Section 4 are likely to have resulted in a pollutant loading reduction. |
| Respond to and clean up SSOs | City staff are thoroughly trained on how to respond to SSOs. | See Section 4 for details. | There were no SSOs during the reporting period. |

**Notes:** Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable
*Although the overall IDDE component is to be submitted in December 2012, a preliminary assessment of the component's effectiveness is provided here.

**Table 11-7**
**Education Component Assessment Measures**

| Significant Activity | Level 2 | | Level 3 | Level 4 |
|---|---|---|---|---|
| Provide storm water education to the public | External<br>The City actively educates the various audiences in its jurisdiction. See Section 8 for details. | | See Level 3 outcomes for other program components for information about behavior change. | Sufficient data to estimate load reductions due to educational efforts is not available for 2011/2012. |
| | Estimated number of impressions made | 29,539 | | |

**Notes:** Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

**Table 11-8**
**Public Participation Component Assessment Measures**

| Significant Activity | Level 2 | Level 3 | | Level 4 | |
|---|---|---|---|---|---|
| Involve the public in activities that relate to storm water protection | External<br>The City and City partners put on a number of opportunities for the public to participate, including operation of the Storm Water Hotline. See Section 9 for details. | Number of attendees at events (Cleanup event volunteers and disposal event participants) | 2,348 | Amount of trash, debris, and recyclables collected at cleanup events | 4,900 pounds |
| | | Number of calls received to the storm water hotline | 9 | Amount of large item waste collected at disposal events | 826 tons |
| | | | | Amount of HHW collected at the South Bay Regional Household Hazardous Waste Collection facility | 341,868 |

**Notes:** Level 2 - Changes in Knowledge/Awareness; Level 3 - Behavioral Change/BMP Implementation; Level 4 - Load Reductions; N/A – Not Applicable

**Figure 11-3**
**Historical Dry Weather Monitoring Data: Action Level Exceedance Rates**

* Dry weather action levels for bacterial indicators were revised in 2010. Exceedances were counted with respect to action levels in effect at the time of sampling. During 1996-2009, the action level was 50,000 MPN/100 mL for total coliforms, 20,000 MPN/100 mL for fecal coliforms, and 10,000 MPN/100 mL for Enterococci. During 2010-2011, the action level was 130,000 MPN/100 mL for total coliforms, 13,000 MPN/100 mL for fecal coliforms, and 7,000 MPN/100 mL for Enterococci.

# 12.0 SPECIAL INVESTIGATIONS

During the reporting period the City undertook two additional programs: the Clean Community Program and a pollutant discharge potential assessment component during industrial and commercial inspections.

## 12.1 CLEAN COMMUNITY PROGRAM

Results from trash assessments in previous years have indicated that litter and illegally dumped items tend to consist of household trash and large household items, likely from residents in or around the City. During 2011/2012, the City continued to implement its Clean Community Program. This program is designed to foster a sense of shared responsibility in keeping the community of National City clean and free of pollutants that may otherwise be carried to local receiving water bodies.

The theme of the 2013 Storm Water Calendar Art Contest was "By Keeping our Community Clean, We can Keep the Ocean Clean!" Each month of the 2013 calendar will feature artwork by local third grade students illustrating the theme. By integrating public participation into the development of the 2013 calendar, the City increased attention to the "By Keeping our Community Clean, We Can Keep the Ocean Clean" message. This 2013 calendar will be distributed to schools, municipal staff and other City residents.

As part of WURMP efforts that are beyond minimum required MS4 maintenance, the City hired a contractor in 2008/2009 to do biweekly inspections and remove any observed trash from Paradise Creek. These cleanups continued in 2011/2012.

## 12.2 POLLUTANT DISCHARGE POTENTIAL ASSESSMENT

During 2011/2012, the City conducted pollutant discharge potential assessments (PDPA) at industrial and commercial facilities that received full inspections; the purpose of the assessment is to assist in source identification. The assessment is intended to be a semi-quantitative tool to identify which sites are major sources of the principal pollutants of concern for storm water. For each of several main categories of pollutants, a numeric pollutant discharge potential (PDP) on a scale from 0 (not present) to 5 (severe) is assigned. PDPA scores are recorded on the standard inspection form in Attachment 5.1.

Table 12-1 shows the overall average PDP scores assigned for each pollutant during routine inspections at all of the industrial and commercial facilities visited in 2011/2012. Note that pH indicates substances likely to cause either an abnormally low (acidic) or abnormally high (basic) pH.

**Table 12-1**
**Pollutant Discharge Potential Score Averages, By Category**

| Pollutant Category | Average PDP Score |
|---|---|
| Sediment | 2.4 |
| Nutrients | 1.0 |
| Aluminum | 1.0 |
| Iron | 1.3 |
| Heavy Metals | 2.2 |
| Organics | 1.2 |
| Trash | 2.8 |
| Oxygen Demanding | 2.7 |
| Oil & Grease | 2.9 |
| Bacteria | 2.5 |
| Pesticides | 1.0 |
| pH | 1.9 |

Oil and grease, trash, oxygen demanding substances, and bacteria were observed to be the pollutants with relatively higher discharge potential during the industrial and commercial inspections conducted during 2011/2012. The City uses this information to help target businesses for inspection. Figure 12-1, on the following page, displays the distribution of PDP scores that make up the averages for each pollutant in the above table.

**Figure 12-1**
**PDPA Score Distribution for Facilities Inspected in 2011/2012**

# 13.0 NON-EMERGENCY FIRE FIGHTING

No procedural changes were made during 2011/2012. Please reference Section 3 of the City's most recent JURMP for information about BMPs and procedures associated with non-emergency fire fighting activities.

# 14.0 JURMP REVISIONS

The City's JURMP was rewritten in the spring of 2008 in response to new Municipal Permit requirements. Section 14 of the updated JURMP document includes a list of the changes made to the JURMP at that time. Any other changes to the JURMP made since the overall JURMP update in the spring of 2008 are discussed in the individual "Program Review and Modification" subsections in the preceding sections in this JURMP Annual Report.

# 15.0 CONCLUSIONS AND RECOMMENDATIONS

During the 2011/2012 reporting period the City of National City continued to implement the programs in its JURMP, updated in March 2008. The City continues to work with other Copermittees to facilitate sharing of information about how best to run these programs and to provide regional guidance on standardized implementation where applicable. The City of National City will work collaboratively as a member of the various regional workgroups in this process and continue to refine its program implementation as needed to improve its ability to reduce or eliminate pollutant discharges and meet regulatory requirements. Also, the RWQCB has recently indicated that it desires to move forward and adopt the Seventh Street Channel TMDL before the end of 2012. The City will continue its efforts related to the pending TMDL for Seventh Street Channel.

**Notes**

TTWQ – Threat to Water Quality

L = Likely, PO = Possible, UL= Unlikely

[1]Likely Source – Has a pollutant discharge potential of "Likely" for one or more of the pollutants of concern associated with the receiving water. A pollutant of concern is one for which the receiving water is impaired according to the Clean Water Act section 303(d) list. During 2011/2012, San Diego Bay was listed in the 2008 CWA Section 303(d) for polychlorinated biphenyls (PCB) based on fish tissue analyses. The shorelines at 7th Street Channel and at the 24th Street Marine Terminal were listed in the 2008 CWA Section 303(d) for benthic community effects and sediment toxicity. La Paleta Creek is listed as impaired for copper and lead. Paradise Creek is listed as impaired for selenium. Finally, Sweetwater River is listed as impaired for *Enterococcus*, fecal coliform, phosphorus, selenium, total dissolved solids, total nitrogen as N, and toxicity.

* Discharge of heavy metals and oil and grease is possible if the facility has on-site parking

** Sediment and oxygen demanding substances are possible pollutants for earthen or natural conveyances. Bacteria, but generally not viruses and other pathogens, may regrow in MS4s under certain conditions. While other pollutants may be discharged from the MS4, the MS4 itself is not a direct source of those pollutants.

***The sanitary sewer system is only a potential source of pollutants in the event of sewer line breaks or SSOs.

**Notes**

TTWQ – Threat to Water Quality

SIC – Standard Industrial Classification Code

Pollutants Potentially Generated – Where a facility has a "Likely" pollutant discharge potential for a specific pollutant, a "Yes" is placed in the appropriate column.

Likely Source – Has a pollutant discharge potential of "Likely" for one or more of the pollutants of concern associated with the receiving water. A pollutant of concern is one for which the receiving water is impaired according to the Clean Water Act section 303(d) list. During 2011/2012, San Diego Bay was listed in the 2008 CWA Section 303(d) for polychlorinated biphenyls (PCB) based on fish tissue analyses. The shorelines at 7th Street Channel and at the 24th Street Marine Terminal were listed in the 2008 CWA Section 303(d) for benthic community effects and sediment toxicity. La Paleta Creek is listed as impaired for copper and lead. Paradise Creek is listed as impaired for selenium. Finally, Sweetwater River is listed as impaired for *Enterococcus*, fecal coliform, phosphorus, selenium, total dissolved solids, total nitrogen as N, and toxicity.

**Notes**

TTWQ – Threat to Water Quality

SIC – Standard Industrial Classification Code

Pollutants Potentially Generated – Where a facility has a "Likely" pollutant discharge potential for a specific pollutant, a "Yes" is placed in the appropriate column.

Likely Source – Has a pollutant discharge potential of "Likely" for one or more of the pollutants of concern associated with the receiving water. A pollutant of concern is one for which the receiving water is impaired according to the Clean Water Act section 303(d) list. During 2011/2012, San Diego Bay was listed in the 2008 CWA Section 303(d) for polychlorinated biphenyls (PCB) based on fish tissue analyses. The shorelines at 7th Street Channel and at the 24th Street Marine Terminal were listed in the 2008 CWA Section 303(d) for benthic community effects and sediment toxicity. La Paleta Creek is listed as impaired for copper and lead. Paradise Creek is listed as impaired for selenium. Finally, Sweetwater River is listed as impaired for *Enterococcus*, fecal coliform, phosphorus, selenium, total dissolved solids, total nitrogen as N, and toxicity. Due to the nature of mobile businesses, it is possible that work may be performed in any portion of the City. Therefore, if a business has a pollutant discharge potential of "Likely" for one or more pollutants of concern associated with any receiving water within the City of National City, they will be marked as a Likely Source.

# APPENDIX B

# JURMP ANNUAL REPORT REQUIREMENTS CHECKLIST

**Appendix B**
**JURMP Annual Report Requirements Checklist**

## Development Planning

| **Permit Annual Reporting Requirement—Section J.3.a.(3).(a)** | **Location in Report** |
|---|---|
| i. A description of any amendments to the General Plan, the environmental review process, development project approval processes, or development project requirements. | 2.2, 2.3 |
| ii. Confirmation that all development projects were required to undergo the Copermittee's urban runoff approval process and meet the applicable project requirements, including a description of how this information was tracked. | 2.4.4.2 |
| iii. A listing of the development projects to which SUSMP requirements were applied. | Table 2-1 |
| iv. Confirmation that all applicable SUSMP BMP requirements were applied to all priority development projects, including a description of how this information was tracked. | 2.4.4.2 |
| v. At least one example of a priority development project that was conditioned to meet SUSMP requirements and a description of the required BMPs. | 2.4.4.2 |
| vi. A listing of the priority development projects which were allowed to implement treatment control BMPs with low removal efficiency rankings, including the feasibility analyses which were conducted to exhibit that more effective BMPs were infeasible. | 2.4.4.2 |
| vii. An updated treatment control BMP inventory. | Appendix A.1 (inventory) |
| viii. The number of treatment control BMPs inspected, including a summary of inspection results and findings. | 2.4.4.3, Table 2-2 and Table 2-4 |
| ix. A description of the annual verification of operation and maintenance of treatment control BMPs, including a summary of verification results and findings. | 2.4.4.3 |
| x. Confirmation that BMP verification was conducted for all priority development projects prior to occupancy, including a description of how this information was tracked. | 2.4.4.2, Table 2-3 |
| xi. A listing of any projects which received a SUSMP waiver. | 2.4.4.2 |
| xii. A description of implementation of any SUSMP waiver mitigation program. | 2.4.4.2 |
| xiii. A description of Hydromodification Management Plan (HMP) development collaboration and participation. | 2.4.4.2 |
| xiv. A listing of development projects required to meet HMP requirements, including a description of hydrologic control measures implemented. | 2.4.4.2 |
| xv. A listing of priority development projects not required to meet HMP requirements, including a description of why the projects were found to be exempt from the requirements. | 2.4.4.2 |

## Development Planning

| **Permit Annual Reporting Requirement—Section J.3.a.(3).(a)** | **Location in Report** |
|---|---|
| xvi. A listing of development projects disturbing 50 acres or more, including information on whether Interim Hydromodification Criteria were met by each of the projects, together with a description of hydrologic control measures implemented for each applicable project. | N/A in 2011/2012 |
| xvii. The number of violations and enforcement actions (including types) taken for development projects, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance. | 2.4.4.3, Table 2-4 |
| xviii. A description of notable activities conducted to manage urban runoff from development projects. | 2.1 and throughout section |

## Construction

| **Permit Annual Reporting Requirement—Section J.3.a.(3).(b)** | **Location in Report** |
|---|---|
| i. Confirmation that all construction sites were required to undergo the Copermittee's construction urban runoff approval process and meet the applicable construction requirements, including a description of how this information was tracked. | 3.5 |
| ii. Confirmation that a regularly updated construction site inventory was maintained, including a description of how the inventory was managed. | 3.2 |
| iii. A description of modifications made to the construction and grading ordinances and approval processes. | 3.3 |
| iv. Confirmation that the designated BMPs were implemented, or required to be implemented, for all construction sites. | 3.5 |
| v. Confirmation that a maximum disturbed area for grading was applied to all applicable construction sites. | 3.5 |
| vi. A listing of all construction sites with conditions requiring advanced treatment, together with confirmation that advanced treatment was required at such construction sites. | 3.5 |
| vii. For each construction site within each priority category (high, medium, and low), identification of the period of time (weeks) the site was active within the rainy season, the number of inspections conducted during the rainy season, and the number of inspections conducted during the dry season, and the total number of inspections conducted for all sites. | 3.5, Appendix A.2 (inventory) |
| viii. A description of the general results of the inspections. | 3.5 |
| ix. Confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance. | 3.5 |
| x. The number of violations and enforcement actions (including types) taken for construction sites, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance. | 3.5.3, 3.5.4 |
| xi. A description of notable activities conducted to manage urban runoff from construction sites. | 3.1 and throughout section |

## Municipal

| **Permit Annual Reporting Requirement—Section J.3.a.(3).(c)** | **Location in Report** |
|---|---|
| i. Any updates to the municipal inventory and prioritization. | Appendix A.3 (inventory) |
| ii. Confirmation that the designated BMPs were implemented, or required to be implemented, for municipal areas and activities, as well as special events. | 4.2.4, 4.3.4, 4.4.4, 4.5.4, 4.6.4, 4.7.4 |
| iii. A description of inspections and maintenance conducted for municipal treatment controls. | 2.4.4.3, Table 2-4 |
| iv. Identification of the total number of catch basins and inlets, the number of catch basins and inlets inspected, the number of catch basins and inlets found with accumulated waste exceeding cleaning criteria, and the number of catch basins and inlets cleaned. | 4.4.4 Table 4-2 |
| v. Identification of the total distance (miles) of the MS4, the distance of the MS4 inspected, the distance of the MS4 found with accumulated waste exceeding cleaning criteria, and the distance of the MS4 cleaned. | 4.4.1, 4.4.4, Table 4-2 |
| vi. Identification of the total distance (miles) of open channels, the distance of open channels inspected, the distance of open channels found with anthropogenic litter, and the distance of open channels cleaned. | 4.4.1, 4.4.4, Table 4-2 |
| vii. Amount of waste and litter (tons) removed from catch basins, inlets, the MS4, and open channels, by category. | 4.4.4, Table 4-2 |
| viii. Identification of any MS4 facility found to require inspection less than annually following two years of inspection, including justification for the finding. | N/A for 2011/2012 |
| ix. Confirmation that the designated BMPs for pesticides, herbicides, and fertilizers were implemented, or required to be implemented, for municipal areas and activities. | 4.2.3, 4.2.4 |
| x. Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating the highest volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways. | 4.3.4, Table 4-1 |
| xi. Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating moderate volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways. | 4.3.4, Table 4-1 |
| xii. Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating low volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways. | 4.3.4 |

## Municipal

| **Permit Annual Reporting Requirement—Section J.3.a.(3).(c)** | **Location in Report** |
|---|---|
| xiii. Identification of the total distance of curb-miles swept. | 4.3.4 |
| xiv. Identification of the number of municipal parking lots, the number of municipal parking lots swept, and the frequency of sweeping. | 4.3.4, Table 4-1 |
| xv. Amount of material (tons) collected from street and parking lot sweeping. | 4.3.4, Table 4-1 |
| xvi. A description of efforts implemented to prevent and eliminate infiltration from the sanitary sewer to the MS4. | 4.5.4 |
| xvii. Identification of the number of sites requiring inspections, the number of sites inspected, and the frequency of the inspections. | 4.2.4, 4.6.4, 4.7.4, Table 4-4 |
| xviii. A description of the general results of the inspections. | Table 4-4 |
| xix. Confirmation that the inspections conducted addressed all the required inspection steps to determine full compliance. | 4.2.4, 4.6.4, 4.7.4 |
| xx. The number of violations and enforcement actions (including types) taken for municipal areas and activities, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance. | 4.2.4, 4.6.4, 4.7.4 |
| xxi. A description of notable activities conducted to manage urban runoff from municipal areas and activities. | 4.1 and throughout section |

## Industrial and Commercial

| **Permit Annual Reporting Requirement—Section J.3.a.(3).(d)** | **Location in Report** |
|---|---|
| i. Any updates to the industrial and commercial inventory. | 5.2.2 (stationary), 5.3.2 (mobile), appendices A.4 and A.5 (inventory) |
| ii. Confirmation that the designated BMPs were implemented, or required to be implemented, for industrial and commercial sites/sources. | 5.2.4, 5.3.4 |
| iii. A description of efforts taken to notify owners/operators of industrial and commercial sites/sources of BMP requirements, including mobile businesses. | 5.2.4, 5.3.4 |
| iv. Identification of the total number of industrial and commercial sites/sources inventoried and the total number inspected. | 5.2.2, 5.3.2; 5.2.4, 5.3.4; Table 5-1 |
| v. Justification and rationale for why the industrial and commercial sites/sources inspected were chosen for inspection. | 5.2.4 |
| vi. Confirmation that all inspections conducted addressed all the required inspection steps to determine full compliance. | 5.2.4 |
| vii. Identification of the number of third party inspections conducted. | N/A, 5.2.4 |
| viii. Identification of efforts conducted to verify third party inspection effectiveness. | N/A, 5.2.4 |
| ix. A description of efforts implemented to address mobile businesses. | 5.3.4 |
| x. The number of violations and enforcement actions (including types) taken for industrial and commercial sites/sources, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance. | 5.2.4, 5.3.4 |
| xi. A description of steps taken to identify non-filers and a list of non-filers (under the General Industrial Permit) identified by the Copermittees. | 5.2.4, Table 5-2 |
| xii. A description of notable activities conducted to manage urban runoff from industrial and commercial sites/sources. | 5.1 and throughout section |

## Residential

| **Permit Annual Reporting Requirement—Section J.3.a.(3).(e)** | **Location in Report** |
|---|---|
| i. Identification of the high threat to water quality residential areas and activities that were focused on. | 6.2 |
| ii. Confirmation that the designated BMPs were implemented, or required to be implemented, for residential areas and activities. | 6.4 |
| iii. A description of efforts implemented to facilitate proper management and disposal of used oil and other household hazardous materials. | 6.4.1 |
| iv. Types and amounts of household hazardous wastes collected, if applicable. | 6.4.1 |
| v. A description of any evaluation of methods used for oversight of residential areas and activities, as well as any findings of the evaluation. | 6.4 (see discussion in JURMP) |
| vi. The number of violations and enforcement actions (including types) taken for residential areas and activities, including information on any necessary follow-up actions taken. The discussion should exhibit that compliance has been achieved, or describe actions that are being taken to achieve compliance. | 6.4.2 |
| vii. A description of collaboration efforts taken to develop and implement the Regional Residential Education Program. | 6.4 |
| viii. A description of notable activities conducted to manage urban runoff from residential areas and activities. | 6.1 and throughout section |

## IDDE*

| Permit Annual Reporting Requirement—Section J.3.a.(3).(f) | Location in Report |
|---|---|
| * Section 7, the Illicit Discharge Detection and Elimination component, of the 2011/2012 Annual Report, will be submitted to the RWQCB no later than December 15, 2012. | |

## IDDE—Additional Dry Weather Monitoring Program Requirements*

| Permit Annual Reporting Requirement—Attachment B and Receiving Waters Monitoring and Reporting Program No. R9-2007-0001, Section II.B.3.c,d | Location in Report |
|---|---|
| * Section 7, the Illicit Discharge Detection and Elimination component, of the 2011/2012 Annual Report, will be submitted to the RWQCB no later than December 15, 2012. | |

## Education

| Permit Annual Reporting Requirement—Section J.3.a.(3).(g) | Location in Report |
|---|---|
| i. A description of education efforts conducted for each target community. | 8.3 |
| ii. A description of how education efforts targeted underserved target audiences, high-risk behaviors, and "allowable" behaviors and discharges. | 8.3 |
| iii. A description of education efforts conducted for municipal departments and personnel. | 8.2 |
| iv. A description of education efforts conducted for the new development and construction communities. | 8.3 |
| v. A description of jurisdictional education efforts conducted for residents, the general public, and school children. | 8.3 |

## Public Participation

| Permit Annual Reporting Requirement—Section J.3.a.(3).(h) | Location in Report |
|---|---|
| i. A description of public participation efforts conducted. | 9.2 |

## Effectiveness Assessment

| Permit Annual Reporting Requirement—Section J.3.a.(3).(i) | Location in Report |
|---|---|
| i. An assessment of the effectiveness of the Jurisdictional Urban Runoff Management Program which meets all requirements of section I.1 of this Order. | 11 |

## Fiscal Analysis

| Permit Annual Reporting Requirement—Section J.3.a.(3).(j) | Location in Report |
|---|---|
| i. A fiscal analysis of the Copermittee's urban runoff management programs which meets all requirements of section G of this Order. | 10 |

## Special Investigations

| Permit Annual Reporting Requirement—Section J.3.a.(3).(k) | Location in Report |
|---|---|
| i. A description of any special investigations conducted. | 12 |

## Non-Emergency Firefighting

| **Permit Annual Reporting Requirement—Section J.3.a.(3).(l)** | **Location in Report** |
|---|---|
| i. A description of efforts conducted to reduce pollutant discharges from non-emergency fire fighting flows. | 4.2.3, 13 |

## JURMP Revisions

| **Permit Annual Reporting Requirement—Section J.3.a.(3).(m)** | **Location in Report** |
|---|---|
| i. A description of any proposed revisions to the JURMP. | 14 and each program component section |

# ATTACHMENTS

# ATTACHMENT 2.1

# NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM PROJECT APPLICABILITY FORM (NPDES CHECKLIST)

City of National City
1243 National City Blvd.
National City, CA 91950
(619) 336-4580

# National Pollutant Discharge Elimination System (NPDES) Project Applicability Form

***No project will be accepted by the City without this form completed in its entirety***

Project Name: _____ Project Area: _____ acres/sq ft

Project Address: _____

APN: _____ Proposed Impervious Area:_____ acres/sq ft

Description of Project: _____

Description of Location: _____

## *Section 1 – Permanent Storm Water BMP Requirements:*

**Part A: Determine Subjectivity to SUSMP Requirements**

*Is the project new development?* ☐ *Yes* ☐ *No*

*Is the project redevelopment that adds/replaces/creates 5,000 ft$^2$ of impervious surface[1]?* ☐ *Yes* ☐ *No*

If both of the above answers are "no", go to Part B. If either of the above answers is "yes," answer the questions below (check all that apply).

*Is the project…*

*1. Residential development resulting in the disturbance of one acre or more of land or comprised of 10 or more attached or detached dwelling units?* ☐ *Yes* ☐ *No*

*2. Commercial development resulting in the disturbance of one acre or more of land?* ☐ *Yes* ☐ *No*

*3. Industrial development resulting in the disturbance of one acre or more of land?* ☐ *Yes* ☐ *No*

*4. Automotive repair shop?* ☐ *Yes* ☐ *No*

*5. Restaurant greater than 5,000 square feet?* ☐ *Yes* ☐ *No*

*6. Steep (slope of 25% or more) hillside development that will create greater than 5,000 square feet of impervious surface?* ☐ *Yes* ☐ *No*

*7. Located such that it is within or directly adjacent to (within 200 feet) or directly discharges to an Environmentally Sensitive Area (ESA) and creates at least 2,500 square feet of impervious area or increases impervious area to 10% or more of its naturally occurring condition?* ☐ *Yes* ☐ *No*

*8. Parking lot greater than or equal to 5,000 square feet of impervious surface OR with at least 15 parking spaces and potentially exposed to urban runoff?* ☐ *Yes* ☐ *No*

*9. Streets, roads, highways, and freeways which would create a new paved surface that is 5,000 square feet or greater?* ☐ *Yes* ☐ *No*

*10. Retail gasoline outlets 5,000 square feet or more or with a project Average Daily Traffic (ADT of 100 or more vehicles per day* ☐ *Yes* ☐ *No*

*11. All other pollutant generating development projects that result in the disturbance of one acre or more of land.[2]* ☐ *Yes* ☐ *No*

1 See the City's SUSMP Manual for more detail on the definition of "significant redevelopment."

2 Generally all projects which include impervious surfaces and/or introduce landscaping that requires routine use of fertilizers and pesticides are considered pollutant generating above background levels.

Limited exclusion: trenching and resurfacing work associated with utility projects are not considered Priority Development Projects. Linear pathway projects that are for infrequent vehicle use, such as emergency or maintenance access, or for pedestrian or bicycle use, are not considered pollutant generating above background levels if they are built with pervious surfaces or if they sheet flow to surrounding pervious surfaces. Parking lots, buildings and other structures associated with utility projects are Priority Development Projects if one or more of the criteria in Part A is met.

If any of the answers to Part A is "Yes", your project is a "Priority Development Project" and must meet the requirements of the City's Standard Urban Storm Water Mitigation Plan (SUSMP) Manual.

**Is this a Priority Development Project that requires a SUSMP submittal?** ☐ **Yes** ☐ **No**

If the answer is "Yes," see also the flow chart at the end of this checklist to determine applicability of Hydromodification Management Plan (HMP) requirements. HMP applicability must be discussed in the SUSMP report and all requirements must be met as part of the SUSMP Report approval process.

If all answers to Part A are "No", continue to PART B.

If any of the answers to Part A is "Yes", skip PART B and go to Section 2.

**Part B: Determine Non-SUSMP Standard Permanent Storm Water BMP Requirements**

*Does the project require any of the following permits or approvals?* ☐ *Yes* ☐ *No*

- *Discretionary: Conditional use permit (including modification or extension); Coastal development permit; Parcel map (and modifications); Reclamation plan; Planned development permits; Planned unit development permits; Planning commission approval of plans; Site plan review; Tentative map (and amendments to conditions of approval or time extension); Tentative parcel map; or Variance OR*
- *Ministerial: Administrative clearing permit; Lot line adjustment; Final map modification; Grading plan (including modification or renewal); Improvement plan (including modification); Landscape plan; Building permit; Construction right-of-way permit; Encroachment permit; Excavation permit; On-site wastewater system permit; Underground tank permit; or Well permit*

*Will the project include exterior construction beyond signs, façade work, or other incidental construction to an existing structure?* ☐ *Yes* ☐ *No*

If all answers to Part A are "No" and any answer to Part B is "Yes", your project is subject to the City's Standard Permanent Storm Water Best Management Practice (BMP) requirements as listed in Municipal Code Chapter 14.22.

**Is this project subject to the Standard Permanent Storm Water BMP requirements?** ☐ **Yes** ☐ **No**

If every question in both Parts A and B is answered "No", your project is exempt from non-SUSMP Standard Permanent Storm Water requirements.

☐ **This project is for interior improvements only and is not subject to non-SUSMP Standard Permanent Storm Water BMP requirements.**

Verified by: _____ Division: _____ Date: _____

## *Section 2 – Construction Requirements:*

General Construction Permit

*If your project disturbs at least one acre of land, you are subject to the State General Construction Permit.* A Notice of Intent (NOI), Storm Water Pollution Prevention Plan (SWPPP), and other documents must be prepared for your project and filed electronically with the State Water Resources Control Board (SWRCB).

**Is this project subject to the General Construction Permit?** ☐ **Yes** ☐ **No**

If your project disturbs less than one acre of land, you are subject to the City's minimum construction BMPs, included in the City's BMP Manual.

Construction Threat to Water Quality Prioritization

See the attached flow chart for guidance in determining the construction prioritization.

**This project is prioritized as a** ☐ **HIGH** ☐ **MEDIUM** ☐ **LOW** **threat to water quality.**

## *Section 3 – Operating Requirements:*

After your project is complete, certain water quality protection requirements may apply to the facility. The facility owner and operator should be made aware of these requirements.

All municipal, industrial, commercial, and residential sites in the City of National City are required to implement storm water BMPs to reduce the amount of pollution discharged to the Maximum Extent Practicable (MEP). See Appendix C of the City's Jurisdictional Urban Runoff Management Plan (JURMP) for further details.

Some industrial facilities are also subject to the State General Industrial Permit for Storm Water Discharges (Industrial Permit). To find out if your project may be required to obtain coverage under the Industrial Permit after it begins operations, visit the State Water Resources Control Board web site at http://www.swrcb.ca.gov/water_issues/programs/stormwater/industrial.shtml.

## *Section 4 – Certification:*

Name and Title of person completing form: _____ _____

Telephone number: (_____) _____–_____ Fax number: (_____) _____–_____

E-mail Address: _____ (optional)

**I understand that as a condition of my permit, I am required to prevent construction-generated and related pollutants from discharging from the project site. All construction projects within the City of National City are required to implement Best Management Practices (BMPs). I have received a copy of the Construction Site BMP handout.**

## SUSMP REVIEW FLOW CHART

## CONSTRUCTION THREAT TO WATER QUALITY PRIORITIZATION FLOW CHART

*Sites with a low or medium TTWQ can be given a higher threat prioritization based on additional factors, such as project type, non-storm water discharge potential, or if there is a history of non-compliance with storm water regulations at the site.

**CWA 303(d) waterbodies:** Seventh Street Channel, La Paleta Creek, San Diego Bay, and Sweetwater River
**ESA waterbodies:** Paradise Marsh, Paradise Creek, and Sweetwater Marsh National Wildlife Refuge

## HYDROMODIFICATION MANAGEMENT PLAN (HMP) APPLICABILITY FLOW CHART

See the Regional Final Hydromodification Management Plan (HMP) for specific requirements, definitions, and details. The Final HMP is available in Appendix E of the City's SUSMP Manual or online at http://www.projectcleanwater.org/html/wg_susmp.html

# ATTACHMENT 3.1

# CONSTRUCTION BMP FACT SHEET (BLUE SHEET)

# Construction Site Best Management Practices

As a condition of your permit, you are required to prevent construction generated or related pollutants from discharging from your project site. All construction projects within the City of National City are required to implement at least one of the Best Management Practices (BMPs) from each category and subcategory listed below, where applicable. Property owners and/or permit holders will be responsible for the selection, installation and maintenance of proper BMPs in accordance with industry recommended standards such as the Caltrans or California Storm Water BMP handbooks or in accordance with the California General Permit for Construction. Depending on site-specific information such as project scope and potential associated discharges. Additional BMPs may be required where appropriate. Project proponents will need approval from the City prior to installation of any alternate BMPs not listed below.

**Minimum BMPs for Construction Activities:**

1. **Planning and Scheduling**
   Planning and scheduling BMPs such as minimizing grading are required where feasible to help reduce the amount and duration of soil exposure.
   a. Preservation of natural hydrologic features
   b. Preservation of riparian buffers and corridors
   c. Minimization of areas that are cleared and graded to only the portion of the site necessary for construction
   d. Minimization of exposure time of disturbed soil areas
   e. Minimization of grading during the wet season and correlation of grading with seasonal dry weather periods
   f. Temporary stabilization and reseeding of disturbed soil areas as rapidly as feasible
   g. Employee and Subcontractor Training

2. **Soil Stabilization and Erosion Prevention**
   Physical Stabilization BMPs such as vegetation, landscaping or structural methods are required to prevent erosion from exposed slopes.
   a. Planning and Scheduling
   b. Preservation of Existing Vegetation
   c. Physical Stabilization
      - Hydraulic Mulch
      - Hydro-seeding
      - Soil Binders
      - Straw Mulch
      - Geo-textiles, Plastic Covers, and Erosion Control Blankets/Mats
      - Wood Mulching
      - Earth Dikes/Drainage Swales and Lined Ditches
   d. Site Drainage
      - Outlet Protection/Velocity Dissipation
      - Slope Drains
   e. Permanent re-vegetation or landscaping as early as feasible

See reverse side

3. **Sediment Containment**

Sediment containment controls should be used to supplement erosion prevention methods not as a substitute for erosion control. Sediment controls act to contain sediment that has been previously eroded and may get carried on-site and/or discharged from the site in sheet flow or from tracking by equipment and vehicles.

a. Perimeter Protection
   - Silt Fencing
   - Gravel Bag Berm
   - Fiber Rolls

b. Sediment Capture
   - Storm Drain Inlet Protection
   - Sediment Trap
   - De-silting Basins designed in accordance with industry standards such as Caltrans, California Storm Water BMP manual. If the project is five acres or greater the de-silting basin must be designed in accordance with the State General Construction Permit, Order DWQ 99-08.
   - Gravel bag Barrier

c. Sediment Tracking
   - Stabilize Construction Entrances and Exits
   - Construction Road Stabilization
   - Entrance/ Outlet Tire Wash
   - Street Sweeping

4. **Materials and Equipment Management**

Pollution Prevention measures are required were applicable to prevent the contamination of storm water from waste materials, construction materials, vehicles, and equipment stored on-site. Each site must evaluate the potential pollutants on-site, which may be discharged during construction activities.

a. Materials Management
   - Material Delivery and Storage
   - Material Use
   - Stockpile Management
   - Spill Prevention and Control

b. Vehicle and Equipment Operations
   - Vehicle and Equipment Cleaning
   - Vehicle and Equipment Fueling
   - Vehicle and Equipment Maintenance

c. Waste Management
   - Solid
   - Liquid
   - Sanitary
   - Concrete
   - Hazardous
   - Contaminated Soil

5. **Non-Storm Water Discharge and Drainage Control**

Management of non-storm water discharges involves pollution prevention methods as well as drainage control. Project managers must implement appropriate drainage control methods to divert, contain and properly discharge drainage generated by construction activities.

a. General
   - Paving and Grinding Operations

b. Non-storm water discharges
   - Water Conservation Practices
   - Dewatering Operations
   - Potable Water/Irrigation and Flushing

**For additional information, call Barbara Tipton, Storm Water Compliance Inspector at (619) 336-4583 or Btipton@ci.national-city.ca.us**

## STORM WATER COMPLIANCE INSPECTION FOR CONSTRUCTION ACTIVITIES

Inspector Name/ Title_____

Signature_____ Date____/_____/____ Time_____am/pm

Reason for Inspection: ☐ Routine Inspection ☐ Follow-up Inspection ☐ Complaint Investigation

**Weather Information:**

Storm Start Date and Time:_____ Storm Duration:_____hours

Time Since Last Storm: ☐ < 24 hrs ☐ 24 – 72 hrs ☐ > 72 hrs Rainfall:_____inches

## I. GENERAL INFORMATION

Site Prioritization: ☐ High ☐ Medium ☐ Low

Project Name:_____

Project Location:_____

## II. INITIAL OBSERVATIONS

Approximate % of site covered by construction activities: _____%

Approximate % impervious surface of this area: _____%

Types of outdoor construction activity:

☐ grading ☐ concrete/asphalt work

☐ building construction ☐ landscaping

☐ excavation ☐ demolition

☐ drainage infrastructure work ☐ none

## III. BMP ASSESSMENT

| BMP | No Corrections Required | | Corrections Required | | Comments |
|---|---|---|---|---|---|
| | N/A | Fully Implemented | Partially Implemented | Not Implemented | |
| **Soil Stabilization and Erosion Prevention** | | | | | |
| Prevent erosion from exposed graded areas. | | | | | |
| Prevent erosion from exposed areas of soil not relating to grading activities. | | | | | |
| Keep discharge locations (drainage swales, ditches, etc.) free of sediment and debris. | | | | | |
| **Sediment Control/Containment** | | | | | |
| Adequately contain the perimeter of site to prevent sediment transport. | | | | | |
| Prevent sediment discharge to inlets on site (using filter inserts, gravel bags, fiber rolls, etc.). | | | | | |
| Equip entrance/exit with adequate tracking controls. | | | | | |

| BMP | No Corrections Required | | Corrections Required | | Comments |
|---|---|---|---|---|---|
| | N/A | Fully Implemented | Partially Implemented | Not Implemented | |
| **Materials and Equipment Management** | | | | | |
| Store materials and wastes in a manner that minimizes or eliminates the potential to discharge these materials to the storm drain system. | | | | | |
| Store liquid materials in a contained area. | | | | | |
| Cover and contain material stockpiles. | | | | | |
| Park heavy equipment and vehicles in areas with permeable surface. | | | | | |
| Keep appropriate spill response and containment measures on site. | | | | | |
| Provide secondary containment for portable toilets. | | | | | |
| Provide timely service and removal to prevent waste containers and sanitary facilities from over flowing. | | | | | |
| **Non-Storm Water Management** | | | | | |
| Keep site free of evidence of illegal connections and illicit discharges. | | | | | |
| **Other** | | | | | |
| Ensure the SWPPP is kept on site, accessible to site personnel. | | | | | |
| Are there any other potential storm water pollution issues or concerns? If yes, explain below. | | | | | |

**Additional Corrective Actions:**

_____

_____

_____

## IV. RESULTS

**Violation observed, immediate corrective action required**

- ☐ Illegal discharge(s) of pollutants into the MS4 or receiving waters
  Description: _____
- ☐ Illegal connection(s) to the MS4
  Description: _____
- ☐ Improper implementation of BMPs
- ☐ Littering

**No violation noted at time of inspection/investigation**

- ☐ However, corrective actions recommended
- ☐ No corrective actions at this time

**Implement corrective actions within _____ consecutive days of the date of this report.**

## D. BMP ASSESSMENT

| BMPs | N/A | Yes | No | Comments |
|---|---|---|---|---|
| **D.1 General** | | | | |
| Is the site free of excessive litter and debris? | | | | |
| Are discharge locations free of excessive sediment and debris? | | | | |
| Are parking lots, sidewalks and streets free of excessive sediment and debris? | | | | |
| Are roof downspouts directed away from areas of potential pollutants? | | | | |
| Is wash water from pressure washing / hosing managed appropriately? | | | | |
| Are employees trained in storm water management? | | | | |
| Does the facility have a current log of employees who have participated in training? | | | | |
| **D.2 Landscaping** | | | | |
| Are adequate erosion prevention measures employed? (vegetation or physical stabilization) | | | | |
| Are irrigation systems programmed to minimize over-watering and runoff? | | | | |
| If reclaimed water is used for irrigation, is the site free of evidence of irrigation water entering the storm drain? | | | | |
| Are stockpiles of soil or landscape waste covered when feasible and equipped to prevent runoff transport? | | | | |
| Are pesticides, herbicides, and fertilizers managed in accordance with the JURMP BMPs? | | | | |
| **D.3 Materials and Wastes** | | | | |
| Are adequate trash containers provided? | | | | |
| Are adequate recycling containers provided? | | | | |
| Is the trash/recycling area adequately covered (closed lids or permanent overhead cover)? | | | | |
| Is the trash/recycling area free of litter and debris? | | | | |
| Is timely service and removal provided to prevent waste containers and sanitary facilities from overflowing? | | | | |
| Are outdoor materials that pose a threat to water quality stored appropriately (covered or in sealed containers)? | | | | |
| Are outdoor storage containers properly labeled? | | | | |
| Is there an accessible, appropriate spill response kit? | | | | |
| Is there a written spill response plan? If so, please provide to inspector. (NA if no significant materials to spill) | | | | |
| Are liquid storage containers/tanks equipped with secondary containment? | | | | |
| Is secondary containment free of spills and rainwater? | | | | |
| Are loading and unloading areas free of spills and debris? | | | | |
| Is water from pools and/or fountains disposed of properly? | | | | |
| **D.4 Equipment and Vehicles** | | | | |
| Are exposed parking areas free of significant spills and leaks? | | | | |

# City of National City

## Storm Water Quality Inspection for Municipal Facilities

Inspected by D-MAX Engineering, Inc.

| BMPs | N/A | Yes | No | Comments |
|---|---|---|---|---|
| Are vehicle maintenance activities conducted within contained areas when feasible (garage, canopy, work shop)? | | | | |
| Are equipment and vehicles inspected daily for leaks and repaired as necessary? | | | | |
| Are storm drain inlets near vehicle-fueling areas protected from spills and leaks? | | | | |
| Is vehicle washing preformed in a designated area where runoff does not enter the MS4? | | | | |
| Are biodegradable soaps used when appropriate? | | | | |
| **D.5 Building Repair/Construction** | | | | |
| Are adequate erosion prevention measures employed throughout the site? (vegetation or physical stabilization) | | | | |
| Are adequate sediment control BMPs employed throughout the site? (sandbags, gravel bags, inlet filters) | | | | |
| Are impervious areas free of debris and spills from painting, scraping, and/or sandblasting activities? | | | | |
| **D.6 Structural BMPs** | | | | |
| Are structural BMPs adequately maintained? (NA if no structural BMPs at facility) | | | | |
| **D.7 Non-Storm Water Management** | | | | |
| Is the site free of evidence of illicit connections and illegal discharges? | | | | |
| Is the site free of evidence of unauthorized releases to storm drains? | | | | |
| If not, have the appropriate authorities been notified? | | | | |
| **D.8 Other** | | | | |
| Are appropriate signs/stenciling present at the facility? | | | | |
| Are there any other potential storm water pollution issues or concerns? If yes, explain below. | | | | |

**E. ADDITIONAL COMMENTS**

(describe any additional deficiencies not represented above and/or notable BMP improvements)

# City of National City
## Storm Water Quality Inspection for Municipal Facilities

| Check if evidence indicates specific metals may have significant PDPs: ☐ Copper ☐ Cadmium ☐ Lead ☐ Zinc ☐ Mercury | | | | | | | | | | | | |
| Organic Compounds | | | | | | | | | | | | |
| Check if evidence indicates there may be historical soil contamination associated with any of the following: ☐ PCBs ☐ PAHs ☐ Chlordane ☐ DDT | | | | | | | | | | | | |
| Trash & Debris | | | | | | | | | | | | |
| Oxygen Demanding | | | | | | | | | | | | |
| Oil & Grease | | | | | | | | | | | | |
| Bacteria & Viruses | | | | | | | | | | | | |
| Pesticides | | | | | | | | | | | | |
| Check if evidence indicates the following are used on site: ☐ Diazinon ☐ Chlorpyrifos | | | | | | | | | | | | |
| Acid/Base (pH effects) | | | | | | | | | | | | |
| Others (list): | | | | | | | | | | | | |

"RW 303(d)" = Receiving water impairments, as listed in the most recent 303(d) list
"WS COC" = High priority watershed constituents of concern (COC), as listed in the most recent WURMP Annual Report
"PDP" = pollutant discharge potential.
"Emp. Training" = employee training activities focused on storm water pollution prevention
"Housekeeping" = standard good housekeeping BMPs, such as sweeping, regular trash pickup, etc.
"Minor Struct." = minor structural BMPs that do not require building permits, such as covering with tarps or building berms
"Major Struct." = major structural BMPs that require a building permit or are especially expensive, such as detention basins, oil/water separators, grease interceptors, overhead coverage for storage areas, etc.

Criteria

0 - no appreciable quantity observed on site
1 - very small potential for pollutant discharge; monitoring results* are well below the EPA benchmark
2 - Small potential for pollutant discharge; monitoring results* are close to the EPA benchmark but still below it
3 - Moderate potential for pollutant discharge; monitoring results* are at or slightly above the EPA benchmark
4 - Large potential for pollutant discharge; monitoring results* above the EPA benchmark but are within an order of magnitude
5 - Severe potential for pollutant discharge; monitoring results* exceed the EPA benchmark by an order of magnitude or more

Responsible Person(s) _____

Business Telephone # (_____) _____ - _____ ext. ____

Business Fax # (_____) _____ - _____

**APN:** _____

**E-Mail:** _____

Potentially Shared Areas: ☐ w/ Other Tenants ☐ w/ Property Mgmt/Owner ☐ None

Was current business license provided during inspection? ☐ Yes ☐ No #_____ Exp._____

Facility personnel present: _____

## B. FACILITY/SITE INFORMATION

Principal activity: _____

Assigned SIC Code(s): _____ _____ _____

Does assigned SIC Code best represent principal activity: ☐ Yes ☐ No

**Existing SIC Code(s):** _____ _____ _____ ☐ Food Attachment ☐ Industrial Attachment

**Status Update** (if no longer active in City or does not need an inspection): ☐ Moved/Out of Business ☐ Duplicate ☐ Not Inventoried ☐ Out of Jurisdiction

Is facility subject to CA Statewide General Industrial Permit? ☐ Mandatory ☐ Conditional ☐ No

Does facility have a Notice of Non-Applicability (NONA/NEC)? ☐ Yes ☐ No

Has facility filed a Notice of Intent (NOI) to obtain coverage? ☐ Yes ☐ No WDID: 9 37I0_____

Has facility filed a Notice of Termination (NOT) for the above WDID#? ☐ Yes ☐ No Approval date: _____

## C. INITIAL OBSERVATIONS

Discharge points: _____

_____

Approximate area covered by industrial or commercial activities: _____ square feet

Approximate % impervious surface of this area: _____%

Exposed areas of significant outdoor activity or storage? ☐ Permanent ☐ Occasional ☐ No

## D. BMP ASSESSMENT

| BMPs | N/A | Fully Implemented | Partially Implemented | Not Implemented | Comments | Shared Resp |
|---|---|---|---|---|---|---|
| **D.1 General** | | | | | | |
| Keep site free of litter, debris, and sediment using dry methods | | | | | | |
| Keep drains on site free of litter and debris | | | | | | |
| Keep loading and unloading areas, including drains, free of debris | | | | | | |
| Keep outdoor areas free of spills and leaks | | | | | | |
| Collect water from pressure washing or hosing and dispose of appropriately | | | | | ☐ Unknown | |
| Collect and dispose of cleaning water appropriately | | | | | | |
| Clean floor mats in locations that do not drain to storm drain system | | | | | | |
| **D.2 Landscaping** | | | | | | |
| Employ adequate erosion prevention measures (vegetation, physical stabilizer) | | | | | | |
| Eliminate over watering/over-irrigation | | | | | | |
| Properly store and dispose of green waste | | | | | ☐ Unknown | |
| Properly manage pesticides/fertilizer; use IPM when feasible | | | | | ☐ Unknown | |
| **D.3 Materials and Wastes** | | | | | | |
| Protect trash area from contact with storm water | | | | | | |
| Keep trash area free of litter and debris, liquids, powders, sediment | | | | | | |
| Adequately cover materials stored outside | | | | | | |
| Prevent run-on from contacting materials stored outdoors | | | | | | |
| Properly label outdoor storage containers | | | | | | |
| Equip liquid storage containers with secondary containment | | | | | | |
| Keep secondary containment free of spills and rainwater | | | | | | |
| Properly store and dispose of hazardous materials | | | | | | |
| Provide an accessible, functional spill response kit | | | | | | |
| Dispose of water generated by processing activities appropriately | | | | | | |
| Dispose of pool, spa, fountain, and filter backwash water properly | | | | | ☐ Unknown | |
| **D.4 Equipment, Vehicles, and Outdoor Activities** | | | | | | |
| Conduct outdoor activities within contained areas (under canopy, bermed) | | | | | | |
| Use drip pans to collect leaks/spills | | | | | | |
| Perform vehicle/equipment washing in a contained area where runoff does not enter the MS4 | | | | | | |

| BMPs | N/A | Fully Implemented | Partially Implemented | Not Implemented | Comments | Shared Resp |
|---|---|---|---|---|---|---|
| **D.5 Other** | | | | | | |
| Manage animals and animal waste in a manner that prevents animal waste from being transported in runoff | | | | | | |
| Identify and eliminate illicit connections and illegal discharges | | | | | | |
| Provide storm water training for appropriate employees | | | | | | |

| D.6 Additional Questions | Comments/Results |
|---|---|
| Are there any treatment control BMPs on site? | ☐ Filter insert ☐ Hydrodynamic separator ☐ Debris screen ☐ Sewer diversion ☐ Vegetated swale ☐ Vegetated filter strip ☐ Biofiltration ☐ Detention/ sedimentation basin ☐ Containment and evaporation or reuse ☐ Filtration |
| Are treatment control BMPs regularly maintained? | ☐ Yes ☐ No ☐ Unknown ☐ N/A |
| If any illicit connections and/or illegal discharges were identified have the appropriate authorities been notified? | ☐ Yes ☐ No ☐ N/A |
| If any illicit connections and/or illegal discharges were identified, were they eliminated during the site visit? | ☐ Yes ☐ No ☐ N/A |
| Were any non IC/ID related corrective actions implemented during the site visit? | ☐ Yes ☐ No ☐ N/A |
| Were any educational materials distributed? | NOI NONA/NEC Calendar Food BMPs |

| D.7 Additional Required Actions | |

## INDUSTRIAL FACILITY ATTACHMENT

Inspected by D-MAX Engineering, Inc.

## STATE GENERAL INDUSTRIAL PERMIT COMPLIANCE

### SPECIFIC ACTION(S) REQUIRED TO CORRECT AN OBSERVED VIOLATION

- ☐ File a Notice of Intent (NOI) with the State Water Resources Control Board (SWRCB)
  - ☐ For "Conditional" facilities only: this site may be able to qualify for exemption from obtaining Industrial Permit coverage. Please contact the RWQCB for details.
- ☐ Develop and implement a Storm Water Pollution Prevention Plan (SWPPP)
- ☐ Develop and implement a storm water monitoring program
- ☐ Complete Notice of Non-Applicability (NONA) and accompanying No Exposure Certification (NEC).

*Additional notes and/or actions required*:

## SWPPP REVIEW

Does facility maintain a SWPPP/BMP Plan: ☐ Yes ☐ No ☐ Unknown ☐ Not Available

Was SWPPP Reviewed? ☐ Yes ☐ No

**SWPPP Components:**

- ☐ Site Map/Description
- ☐ Materials List
- ☐ Significant Spills/Leaks
- ☐ Pollution Prevention Team (identification of current team members)
- ☐ Industrial Activities
- ☐ Pollutant Sources/Risks
- ☐ Compliance Activity Schedule (procedures to conduct annual site compliance evaluation)
- ☐ Employee Training
- ☐ Accessible to staff
- ☐ Storm Water BMPs

*SWPPP Review Comments*:

## STORM WATER MONITORING PROGRAM

Does this facility have a storm water monitoring program? ☐ Yes ☐ No

Was appropriate monitoring conducted during the most recent wet season? ☐ Yes ☐ No

*Monitoring Result Review Comments:* ☐ Copy of results attached

# ATTACHMENT 5.2

# RESTAURANT AND FOOD INDUSTRY BMP FACT SHEET

CITY OF NATIONAL CITY – DEVELOPMENT SERVICES DEPARTMENT
1243 NATIONAL CITY BLVD., NATIONAL CITY, CA 91950

# City of National City Storm Water Program

## Restaurant and Food Industry

**Your facility can help protect our water quality**

### Long-Term Compliance Solutions

Several properties and businesses in National City have already taken initiative to ensure long-term compliance with the minimum requirements of City's storm water program. In doing so they minimize the need for costly and ineffective cleanup of grease spills by employees. Three proactive solutions[1] include:

1. Storing waste grease in securely sealed indoor containers[2] until pickup

2. Permanent cover and containment of outdoor grease disposal areas[3], such as a roof and berm

3. Installation of an indoor oil management system[2] that changes oil and collects waste

[1] These solutions are not required by the City of National City, but they would likely facilitate staying in compliance with minimum storm water requirements. See the other side of this sheet for requirements commonly applicable to the restaurant and food industry.
[2] The City of National City does not require or endorse the use of any specific brand or product.
[3] Note that installation of outdoor structures should follow National City building codes and permitting requirements.

For more information about staying in compliance with the City's Storm Water Program requirements, call the City's compliance inspection contractor, D-Max Engineering, Inc.: (858) 586-6600 ext. 23.

# Restaurant and Food Industry

## Best Management Practices

### Your facility can help protect our water quality

**The following are six requirements commonly applicable to businesses that produce and/or sell food products, such as bakeries, food producers/distributors, grocery stores, and restaurants.**

| | | | |
|---|---|---|---|
| 1. Keep outdoor waste oil containers and surrounding areas free of grease stains and spills. | | 4. Pour wash water into a indoor janitorial or mop sink. Don't pour it outside into a storm drain or onto a parking lot, alley, sidewalk, or street. | |
| 2. Use dry sweeping or absorbent material for oil and grease spill cleanup instead of hosing. If wet cleanup methods are used, collect all water and take it indoors for disposal. | | 5. Clean floor mats, filters, and garbage cans in a mop sink, over an indoor floor drain, or on landscaping where water will not run off. Don't wash them in a parking lot, alley, sidewalk, or street. |  |
| 3. Keep dumpster area clean and lid closed. Don't fill it with liquid waste or hose it out. Repair or replace leaky dumpsters. | | 6. Recycle grease and oil. Don't pour it into sinks, floor drains, or onto a parking lot or street. Pouring grease and food scraps down drains can clog pipes and back up sewers. | |

## Laws and Enforcement

See National City Municipal Code Section 14.22, Storm Water Management and Discharge Control, for a full list of all storm water requirements applicable to businesses. Direct or indirect discharge of pollutants to the storm water conveyance system, even in rain water, is against the law.

**Violations can result in civil penalties up to $10,000 or fines up to $25,000 per violation, per day.**

To help report a spill or discharge to the storm drain, call the City of National City Storm Water Hotline: (619) 336-4389

# INDUSTRIAL AND COMMERCIAL
# "PREVENTING URBAN RUNOFF POLLUTION" TRIFOLD

# What's the difference?

## Sanitary Sewer vs. Storm Drain System

The water that drains down a sink or toilet in a home or business flows to the sanitary sewer and is treated by the City of San Diego at a wastewater treatment plant.

The storm drain system, on the other hand, is designed to carry rainwater from City streets and driveways to prevent flooding. This water does not receive any treatment. It flows directly to creeks and rivers – and eventually to San Diego Bay!

Unfortunately, as rainfall flows over the ground it picks up debris and pollutants and deposits them into our water bodies.

**Certain industrial businesses require coverage under the General Industrial Permit. For more information go to the State of California's Stormwater website at:**

http://www.waterboards.ca.gov/water_issues/programs/stormwater/industrial.shtml

# Preventing Urban Runoff Pollution

## A Guide for Commercial and Industrial Businesses

**Urban storm water runoff is the largest contributor to water pollution in San Diego County.**

**Your business is required to prevent urban runoff pollution by implementing Best Management Practices (BMPs).**

**The City will be conducting inspections to ensure that BMPs are being used and water quality is protected.**

CALIFORNIA
NATIONAL CITY
1887
INCORPORATED

## Pollutants of Concern

Water that enters the City of National City storm drain system eventually flows into San Diego Bay. The following lists several main pollutants of concern for San Diego Bay.

- Sediments
- Metals (copper, zinc)
- Pesticides (diazinon)
- Bacteria and Viruses

**B**est **M**anagement **P**ractices (**BMPs**) are required to be used at all industrial and commercial businesses, where applicable, to reduce urban runoff pollution in our streams and waterways.

## Maintenance & Good Housekeeping

- Major cleaning of exterior surfaces (such as power washing) must include capturing all wash water and disposing of it into the sanitary sewer in compliance with local regulations. Wash water is not allowed to enter the street gutter or storm drains.
- Regularly sweep exterior paved areas. **Do Not use a hose!** Place debris in the dumpsters.
- If you must use water for cleaning, use a mop and bucket. Dispose of wash water into the sanitary sewer (sink or toilet).
- Regularly inspect and maintain storm drain inlets and surface drains on your property.

## Landscaping

- Time sprinklers to avoid over watering and aim them to avoid causing runoff.
- Minimize use of pesticides, herbicides, and fertilizers, which are harmful to animals downstream.
- Hand pull weeds instead of using herbicides
- Do not use pesticides that eliminate beneficial insects
- Only irrigate during early morning or late evening to avoid evaporation.

## Outdoor Material Storage

- Store all material indoors or under a covered area not exposed to rain. Include secondary containment for liquid materials.
- Have a spill response kit (dry absorbent, rags, and/or hydrophobic mops are useful) available to clean up potential spills.
- Keep lids closed on all outdoor storage containers and ensure containers are labeled.

**Unacceptable**

**Acceptable**

## Waste Management

- Keep all outdoor garbage and dumpster areas free of trash, sediment and debris.
- Keep lids closed on dumpsters and trash cans and never wash down dumpsters.
- Fix any leaks in garbage cans or dumpsters.
- Schedule extra pick-ups when regular waste collection does not meet demand.

## Vehicle & Equipment Washing and Maintenance

- Wash vehicles at a commercial car wash when possible. (Commercial car washes drain to the sanitary sewer and not to the storm drain).
- Wash vehicles over a pervious (absorbent) surface such as dirt, gravel or grass to prevent runoff.
- Minimize the use of soap and water.
- Car wash water is not allowed to enter storm drains. Wash water must be collected and disposed of to a pervious area (such as landscaping) or to the sanitary sewer system if allowed by local sewer agency.
- Perform all vehicle maintenance indoors when possible.
- Use drip pans to collect fluids from leaky vehicles
- Clean up spills with a spill kit and properly dispose of the used kit contents.

**Unacceptable**

**Acceptable**

## Loading Areas & Operations

- Load and unload in designated areas.
- Regularly sweep loading and unloading areas; do not hose them down.
- If possible, cover loading areas.
- Divert rain water away from all loading and unloading areas.
- Check shipments and trucks for leaks and spills.
- Clean up spills/leaks immediately and dispose of them properly.

# ATTACHMENT 8.1

# "EVERYTHING THAT FLOWS DOWN INTO A STORM DRAIN" BROCHURE

# City of National City

Office of the Public Works/Engineering Director
1243 National City Blvd. National City, CA 91950-4397
(619) 336-4580, Fax (619) 336-4397 www.ci.national-city.ca.us

**Everything that flows down into a storm drain goes *untreated* directly into our creeks, lagoons, and San Diego Bay.** When it rains or when water flows out of yards, it flows directly into storm drains. Many people think that everything that flows into a storm drain gets treated at the Point Loma Sewage Treatment Plant, just like wastewater in the sewer system, but these two systems are not connected.

The sources of pollution that must be controlled and eliminated result from urbanization and the choices that are made every day by residents, businesses and industry alike. For example, detergents, oil, grease, and other pollutants have been shown to be toxic to wildlife in local streams and San Diego Bay. **Recycling** of oil, antifreeze, glass, plastic, and other materials can prevent their improper disposal into the stormwater drainage system. **Proper landscaping practices** include minimization of the use of herbicides, pesticides and fertilizers together with conservation of water to minimize runoff of pollutants from landscaped areas, lawns, golf courses, etc.

**The City of National City's Stormwater Management & Discharge Control of the National City Municipal Code Chapter 14.22, prohibits non-stormwater discharges, such as car washwater, pesticides, fertilizers, pet waste, litter, oil, and other automobile fluids, to run into the City's storm drain system.** This ordinance is based on regulations set forth by the State Regional Water Quality Control Board and the U.S. Environmental Protection Agency in connection with the State and Federal Clean Water Acts.

Your help is needed, and by doing your part, by changing your washwater and trash disposal practices, you will help reduce the pollution problems in the community where you and your family live, work and play. Please call **Storm Drain Hotline** at **(619) 336-4389** if you have **any questions** regarding this matter and **to report any illegal discharges and /or dumping.**

**Todo lo que desemboca en las alcantarillas no esta tratado y va a parar directamente a nuestras lagunas, esteros y Bahia de San Diego.** Cuando llueve o cuando escurre agua de algun patio, desemboca directamente a las alcantarillas. Mucha gente piensa que todo lo que desemboja en una alcantarilla es tratado en la planta de Tratamiento de Agua Negras en Point Loma, como las aguas negras del sistema de drenaje, pero estos dos sistemas **no** estan conectados.

Las causas de contaminacion que tienen que ser controladas y eliminadas resultan de la urbanizacion y las elecciones que hacen todos los dias los residentes, negocios y la industria. Por ejemplo, detergentes, aceite, grasa, ya otros contaminantes se ha visto que son toxicos para la vida silvestre en nuestros arroyos locales y Bahia de San Diego. **Reciclando** el aceite, antifreeze, vidrio, plastico y otros productos que sean desechados de un modo inadecuado llegen a parar al sistema de alcantarillado de la ciudad. **Los metodos de mantener el jardin**, como usar menos los herbicidas, pesticidas y fertilisantes.Tambien como conservar el agua para que esa agua con contaminantes de los jardines, pastos, canchas de golf, etc.

**El Codigo Municipal No. 14.22 de las aguas pluviales de la Ciudad de National City, prohibe aguas que no sean pluviales como las aguas negras, pesticidas, fertilisantes, basura, aceite y otros liquidos de carros que sean depositadas en el sistema de alcantarillado de la ciudad.** Esta regla esta basada en las regulaciones puesta por "State Regional Water Quality Control Board" y "U.S. Environmental Protection Agency" en conneccion con "State and Federal Clean Water Acts."

Su ayuda es necesaria, y haciendo su parte como cambiar el modo de tirar su basura, usted ayudara a reducir la contaminacion en la comunidad donde usted y su familia viven, trabajan y juegan.

Por favor llame a la linea de **"Storm Drain Hotline"** al **(619) 336-4389**, si tiene **alguna pregunta** si quiere **reportar un desague ilegal**.

# CALENDAR ART CONTEST INFORMATION FOR TEACHERS

City of National City

# Storm Water Program
# Third Annual Calendar Art Contest

## Guidelines for Teachers

The City of National City invites all third grade students attending public schools in the City to participate in this fun and educational art contest. We are asking students to provide original art pieces for the upcoming 2013 National City Storm Water Program Calendar. The theme of this year's contest is **"By Keeping Our Community Clean, We Can Keep the Ocean Clean"**.

Similar to previous years, the City plans to select 12 original art pieces to feature in the 2013 National City Calendar. The goal of the contest is to promote understanding of the local natural environment in National City and to educate students on ways they can help protect local waterways. The contest provides a way for children to share their ideas on ways to protect our creeks and oceans with the entire National City community.

We encourage teachers to relate this contest to various aspects of the third grade curriculum. Please encourage students to include National City landmarks in their drawings, such as Paradise Creek, the Sweetwater River, their school, favorite park, etc. Students can also incorporate native plants and animals. Ideally, a contest entry will show how to protect water quality AND how National City benefits from having a clean community.

Contest Rules

**Guidelines:**

- **Media:** Paint, color pencils, marker, or crayon.
- **Paper:** White paper, 8 1/2 inches by 11 inches in landscape format.
- **Text:** Drawings can include text and original slogans, however, names will not be allowed on front of the drawing. The artist's first name and school will be printed below the drawing in the calendar. All words must be spelled correctly. If preferred, text can be typed on a computer, printed, and then pasted to the drawings.

**Submittals:**

- All participants must submit a release form with their name, school, room number, teacher's name, and parent or guardian signature.
- The student's name, school, and teacher must also be taped to the back of the artwork on a piece of paper or index card.

(Continued on Back)

**Deadline:**

- The deadline for students will be **Monday May 21, 2012**. Teachers should submit their students' artwork to City Hall no later than **Thursday May 24, 2012.** Please note that on Fridays the City offices will not be open. If you cannot submit entries directly to City Hall, you can contact Barby Tipton or Crystal Kaplan (see bottom of page) to arrange for a pick up. Note that for teachers with Combination classes (2nd and 3rd grades), we encourage 2nd graders to participate, but only 3rd grade work should be submitted to the City for entry into the contest.

**Judging:**

- Drawings will be judged by various City officials and representatives involved in the City's Storm Water Pollution Prevention Program. 12 winners will be chosen based on originality and representation of the contest's theme. At least one winner will be chosen from each participating school.

**Prizes:**

- Teachers can hand out personalized participation certificates (to be filled out by the teacher) to all participating students when artwork is submitted in class.
- Winning art pieces will be featured in the 2013 National City Storm Water Program Calendar. Winners will be honored at a National City Council Meeting in the fall and will receive additional prizes.

**Contact Information:**

- If you have additional questions about how you can integrate this contest into your 3rd grade curriculum, please contact:

  **Stephanie Maxin** Phone: (619) 336-8306
  E-mail: stephanieb@national.k12.ca.us

- If you would like to contact a representative at the City, please contact:

# CALENDAR ART CONTEST INFORMATION FOR STUDENTS AND FAMILIES

Storm Water Program

# 3rd Grade Art Contest

## THEME: BY KEEPING OUR COMMUNITY CLEAN, WE CAN KEEP THE OCEAN CLEAN!

Deadline: Monday, May 21, 2012

**Winning drawings will be featured in National City's 2013 Storm Water Program Calendar!**

**DO YOU GO TO THE BEACH WHEN IT'S RAINING?**

Probably not, but pollution does! When it rains, pollutants like litter and oil are carried from our streets and sidewalks to our local creeks and ocean. Pollution can hurt plants and animals and can also make water unhealthy for humans.

**BY KEEPING OUR COMMUNITY CLEAN, WE CAN KEEP THE OCEAN CLEAN!**

## Rules:

- Drawings should show how you and your friends, family, and neighbors can help prevent pollution in creeks, rivers, and oceans. We encourage you to include locations within National City in your drawing, such as your school, Paradise Creek, Sweetwater River, or your favorite park!
- Drawings must be on white 8 1/2 inch by 11 inch paper, in landscape format.
- Only color drawings made with markers, colored pencils, crayons, or paint will be accepted. Bright colors are best.
- Do NOT write your first or last name on the front of your drawing.
- Use original artwork only. Slogans and messages are OK, but all words must be spelled correctly. Text can also be typed on the computer, printed, and pasted onto the drawing.
- Drawings must be submitted to your teacher by Monday, May21, 2012 with a completed entry form (on the back of this flyer) signed by a parent or guardian.
- Your name, teacher, and school must be on a piece of paper or card taped to the back of the artwork.
- Winners will be notified in the fall. All winners will be featured in the 2013 National City Storm Water Program Calendar. Winners will also receive a prize and be honored at a future City Council Meeting!

YOU CAN BE A CLEAN WATER SUPERSTAR!

- ☆ Don't litter
- ☆ Never put anything into the storm drain
- ☆ Pick up after your pets

Programa de Aguas Pluviales

# Concurso de Arte de Estudiantes de Tercer Grado

## TEMA: ¡AL MANTENER NUESTRA COMUNIDAD LIMPIA, PODEMOS MANTENER LIMPIO EL OCÉANO!

**Fecha límite: lunes, 21 de mayo del 2012**

**¡Las ilustraciones ganadoras aparecerán en el Calendario del Programa de Aguas Pluviales del 2013 de National City!**

### ¿VAS A LA PLAYA CUANDO LLUEVE?

Probablemente no, ¡pero la contaminación sí! Cuando llueve, nuestras calles y aceras transportan contaminantes como basura y aceite al océano y a nuestros arroyos locales. La contaminación puede dañar plantas y animales y hacer que el agua sea mala para la salud de los seres humanos.

**¡AL MANTENER NUESTRA COMUNIDAD LIMPIA, PODEMOS MANTENER LIMPIO EL OCÉANO!**

## Reglas del concurso:

- Las ilustraciones deben mostrar cómo tú y tus familiares, vecinos y amigos pueden ayudar a evitar la contaminación de arroyos, ríos y océanos. ¡En tu dibujo puedes incluir lugares de National City como tu escuela, el arroyo "Paradise Creek", el Río Sweetwater o tu parque favorito!
- Debes hacer tu ilustración en una hoja de papel blanco de 8 ½ x 11 pulgadas, en formato horizontal.
- Sólo se aceptarán dibujos hechos con plumones, lápices de colores, crayones o pintura. Los colores brillantes son más atractivos.
- NO escribas tu nombre ni tu apellido en el lado del dibujo.
- Tu ilustración debe ser original. Se acepta que le pongas un lema o mensaje, pero todas las palabras deben estar bien escritas. También puedes escribir el texto en la computadora e imprimirlo y pegarlo al dibujo.
- Debes entregar tu dibujo a tu maestro(a) para el lunes, 21 de mayo de 2012, y el reverso de esta hoja debe estar llenado y haber sido firmado por uno de tus padres o tutores.
- Debes escribir tu nombre, el de tu maestro o maestra y el de tu escuela en un trozo de papel o en una tarjeta y pegarlo atrás del dibujo.
- En el otoño se notificará a los ganadores. ¡Todos los ganadores aparecerán en el Calendario del Programa de Aguas Pluviales de National City, recibirán un premio y se les hará un reconocimiento en una futura junta del cabildo del Ayuntamiento Municipal!

**¡TÚ PUEDES SER UN SUPERESTRELLA DEL AGUA LIMPIA!**

- ☆ No tires basura.
- ☆ No eches cosas al drenaje pluvial.
- ☆ Recoge los desechos de tus mascotas.

# EXECUTIVE SUMMARY

## ES.1 Introduction

This document was prepared by the City of Oceanside (City) pursuant to the California Regional Water Quality Control Board, San Diego Region (SDRWQCB), Order No. 2001-01, NPDES No. CAS0108758, Waste Discharge Requirements for Discharges of Urban Runoff from the Municipal Separate Storm Sewer Systems (MS4s) Draining the Watersheds of the County of San Diego, the Incorporated Cities of San Diego County, and the San Diego Unified Port District, referred to in this document as the Municipal Permit. Pursuant to Part I.1.of the Municipal Permit, this Jurisdictional Urban Runoff Management Program (Jurisdictional URMP) Annual Report describes the activities relating to the Municipal Permit that the City conducted during the 2006-2007 annual reporting period (July 1, 2006 – June 30, 2007).

## ES.2 Report Organization

Section I of the Municipal Permit defines the requirements for the Jurisdictional URMP Annual Report and states that each Jurisdictional URMP Annual Report shall, at a minimum, contain the following:

| | | **Annual Report Section** |
|---|---|---|
| 1. | A comprehensive description of all activities conducted by the Copermittee in order to meet all of the requirements detailed in each component of the Municipal Permit's Jurisdictional URMP section. | See Below |
| | Existing Development Component (Including Municipal, Industrial, Commercial, Residential, and Education) | Sections 2-5 and Section 9 |
| | Land-Use Planning for New Development and Redevelopment Component | Section 6 |
| | Construction Component | Section 7 |
| | Illicit Discharge Detection and Elimination Component | Section 8 |
| | Education Component | Section 9 |
| | Public Participation Component | Section 10 |
| | Assessment of Jurisdictional URMP Effectiveness Component | Section 11 |
| | Fiscal Analysis Component | Section 12 |
| 2. | An accounting of all: | |
| | Reports of illicit discharges (i.e. complaints) and how each was resolved (indication referral source); | Section 8 |

| | | Annual Report Section |
|---|---|---|
| | Enforcement actions taken; and | Section 8 |
| | Education efforts conducted. | Section 9 |
| 3. | Public participation mechanisms utilized during the Jurisdictional URMP Implementation process. | Section 10 |
| 4. | Proposed revisions to the Jurisdictional URMP. | Section 11 |
| 5. | A summary of all urban runoff related data not included in the annual monitoring report (e.g. special investigations). | See San Luis Rey Watershed URMP and Carlsbad Watershed URMP |
| 6. | Budget for the upcoming year. | Section 12 |
| 7. | Identification of management measures proven to be ineffective in reducing urban runoff pollutants and flow. | Section 11 |
| 8. | Identification of water quality improvements or degradation. | Section 11 |

Pursuant with the Municipal Permit this document contains all of the required information with the exception of number 5, which is included in the San Luis Rey and Carlsbad Watershed Urban Runoff Management Programs (Watershed URMP).

## ES.3 Program Highlights

Below is a summary of each section which describes the Clean Water Program activities appearing in this annual report. Please refer to the individual section for more detailed information.

### ES.3.1 Municipal Component

The City of Oceanside Clean Water Program utilized its 2005-06 municipally owned inventory and inspected 141 municipal areas to ensure these facilities are in compliance with City Code. A total of 65.5 tons of waste was removed from the storm drain system, and 2,480 tons of waste, by street sweeping operations, was prevented from entering the City's storm drain system. City-sponsored volunteer cleanup events removed approximately 28 tons of waste from creeks, rivers, and beaches.

### ES.3.2 Industrial Component

The City of Oceanside Clean Water Program utilized its 2005-06 industrial business inventory during this reporting period, and inspected 234 industrial businesses to ensure these facilities are in compliance with City Code.

### ES.3.3 Commercial Component

The City of Oceanside Clean Water Program utilized its 2005-06 commercial business inventory during this reporting period, and inspected 127 commercial businesses to ensure these facilities are in compliance with City Code. In addition, a total of 5 hotline complaints and 28 Code Enforcement calls from residents were made regarding a potential urban runoff violation from a commercial business.

### ES.3.4 Residential Component

The City of Oceanside Clean Water Program received 14 complaints on the hotline and the Code Enforcement Program received 229 phone complaints from residents regarding potential urban runoff violations from residential areas and activities. Extensive educational efforts were made to help Oceanside residents understand watersheds, water quality and urban runoff impacts. Details of education efforts are provided in Section 9 Education Component.

### ES.3.5 Land-Use Planning for New Development and Significant Redevelopment

The City of Oceanside Clean Water Program continued to implement SUSMP and Runoff Assessment Report requirements for particular development and redevelopment projects. No revisions to the Engineering SUSMP standard conditions or the Storm Water Mitigation Plan and the Operations and Maintenance Plan requirements were made during this reporting period.

### ES.3.6 Construction Component

The City of Oceanside Clean Water Program updated the Jurisdictional URMP to include a new inventory of construction sites operating in Oceanside. During the reporting period, the Clean Water Program inspected all construction sites to ensure these sites are in compliance with City Code.

### ES.3.7 Illicit Discharges Detection and Elimination Component

The City of Oceanside Clean Water Program conducted the Dry Weather Monitoring Program and initiated several illicit discharge/illicit connection investigations.

### ES.3.8 Education Component

The City of Oceanside Clean Water Program continues to host and update a comprehensive and interactive website at www.oceansidecleanwaterprogram.org. The website features information from the following menu: Commercial, Development, Events, Industrial Businesses, Just For Kids, Water Quality Laws, Other Websites, Clean Water Projects, Report Violations, Residential/General, Just for Educators, and

Waterbodies. Specific presentations were given to numerous audiences on the impacts and sources of urban runoff, source control, and implementation of Best Management Practices. In addition, the Clean Water Program continues to disseminate and develop numerous informational materials for various audiences either on the impacts and sources of urban runoff, appropriate pollution prevention Best Management Practices, and/or hotline information.

- ✓ BMP posters for restaurants and automotive repair facilities
- ✓ Residential informational Doorhanger
- ✓ Click-Message Pens
- ✓ Storm Drains Lead to Ocean Poster
- ✓ Urban Runoff Guidelines for Residents Brochure
- ✓ Pollution Prevention Tips for Gardening Activities Brochure
- ✓ Urban Runoff Guidelines for Commercial Business Brochure
- ✓ Urban Runoff Guidelines for Construction Projects Handout
- ✓ Clean Water Program Newsletter
- ✓ Urban Runoff Guidelines for Powerwashers
- ✓ "Speak Water-ese" Pollutant Fact Sheets for High School students
- ✓ Guide to Oceanside Waterbodies Booklet
- ✓ Adventures of Oceanside Creek Friends coloring book
- ✓ Clean Water Program Hotline and website magnets

### ES.3.9 Public Participation Component

The Clean Water Program hosted a total of four cleanup events: one at Loma Alta Creek, one at Buena Vista Creek, one at the San Luis Rey River, and three Oceanside beach cleanups. An approximate cumulative total of 657 volunteers participated in the events, removing a more than 28 tons of trash, debris, appliances, household items, furniture, construction materials, and other unwanted items.

### ES.3.10 Assessment of Jurisdictional URMP Component

The San Diego Copermittes developed a new framework assessment program which focuses on the development of Assessment Levels 1-6. The Clean Water Program continued to utilize this approach to programmatic assessment in the annual report. Due to inadequate long-term information available at this time, the Clean Water Program was unable to assess the Program's effectiveness on all levels, but an attempt was made to assess the information available.

### ES.3.11 Fiscal Component

The City of Oceanside Clean Water Program continues to receive funding from various sources. The Projected 2006-2007 budget will increase from the2005-2006 budget, which results from the necessary growth in the program.

# SECTION 1: INTRODUCTION

This document was prepared by the City of Oceanside (City) pursuant to the California Regional Water Quality Control Board, San Diego Region (SDRWQCB), Order No. 2001-01, NPDES No. CAS0108758, Waste Discharge Requirements for Discharges of Urban Runoff from the Municipal Separate Storm Sewer Systems (MS4s) Draining the Watersheds of the County of San Diego, the Incorporated Cities of San Diego County, and the San Diego Unified Port District, referred to in this document as the Municipal Permit. Pursuant to Part I.1.of the Municipal Permit, this Jurisdictional Urban Runoff Management Program (Jurisdictional URMP) Annual Report describes the activities relating to the Municipal Permit that the City conducted during the 2006-2007 annual reporting period (July 1, 2006 – June 30, 2007).

In the interests of communicating consistent messages to the community regarding the most efficient and effective means of reducing storm water and urban runoff pollution, and as directed under Part N of the Municipal Permit, this document was developed following the standardized format developed and agreed upon by the Copermittees. For the most part, compliance with the Municipal Permit was undertaken by the Copermittees through the development and implementation of the Jurisdictional URMP, therefore this Annual Report is organized similar to the Jurisdictional URMP.

## 1.1 Background Information

### History of Urban Runoff Regulation

The Federal Clean Water Act was amended in 1987 to address urban runoff. Municipalities throughout the United States were directed to obtain National Pollutant Discharge Elimination System (NPDES) permits for discharges of urban runoff from their MS4s by specified dates. In response to the Clean Water Act amendment (and the pending federal NPDES regulations which would implement the amendment), the SDRWQCB issued an “early” municipal storm water permit, Order No. 90-42, in July 1990 to various jurisdictions for their urban runoff discharges.

As the name implies, this “early” permit was issued prior to the November 1990 promulgation of the final federal storm water regulations. Although Order No. 90-42 contained the “essentials” of the then-proposed 1990 regulations, the requirements were written in very broad terms. Municipal Storm Water Permit Order No. 2001-01 (Municipal Permit) is the re-issuance of Order No. 90-42. The Municipal Permit address the basic requirement in federal law for a program that reduces pollutants discharged from municipal storm sewers to the maximum extent practicable, and also includes the specific program elements required by federal regulations. The Municipal Permit exceeds federal specification by also directing municipal storm water dischargers to meet water quality standards; by directing structural post-construction treatment best management practices (BMPs) of a specified size for new development and significant redevelopment without limitation by the MEP standard; and by directing the San Diego Copermittees to develop and implement watershed-based programs.

The Municipal Permit was issued to the following jurisdictions:

| | | |
|---|---|---|
| *City of Carlsbad* | *City of Imperial Beach* | *City of San Marcos* |
| *City of Chula Vista* | *City of La Mesa* | *City of Santee* |
| *City of Coronado* | *City of Lemon Grove* | *City of Solana Beach* |
| *City of Del Mar* | *City of National City* | *City of Vista* |
| *City of El Cajon* | *City of Oceanside* | *County of San Diego* |
| *City of Encinitas* | *City of Poway* | *Unified Port District* |
| *City of Escondido* | *City of San Diego* | |

Under the Municipal Permit, each Copermittee is required to address the following principal elements (SDRWQCB, 2001):

Establish and maintain adequate legal authority to control pollutant discharges into and from its municipal separate storm sewer systems.

Develop and implement a Jurisdictional Urban Runoff Management Program, which will reduce discharges of pollutants and runoff flow during each major phase of urban development (i.e., planning, construction, and use or operation phases) within its jurisdiction.

Collaborate with other San Diego Copermittees within its watershed(s) to develop and implement a Watershed Urban Runoff Management Program, which will identify and address the highest priority water quality issues/pollutants in their respective watershed(s).

Collaborate with all other San Diego Copermittees to address common issues, promote consistency, and plan and coordinate urban runoff activities.

Develop and implement a Receiving Waters Monitoring Program, which shall focus on the collection of monitoring data to be used for the achievement of water quality policies and the protection of beneficial uses.

Submit various reports describing the measures it is undertaking to meet the requirements of the Municipal Permit.

This Annual Report responds to the last of these elements, which is detailed in Section I of the Municipal Permit.

### 1.2 Jurisdictional URMP Annual Report Requirements

Section I of the Municipal Permit defines the requirements for the Jurisdictional URMP Annual Report and states that each Jurisdictional URMP Annual Report shall, at a minimum, contain the following:

| | Annual Report Section |
|---|---|
| 1. A comprehensive description of all activities conducted by the Copermittee in order to meet all of the requirements in each component of the Municipal Permit's JURMP section. | See Below |
| Existing Development Component (Including Municipal, Industrial, Commercial, Residential, and Education) | Sections 2-5 and Section 9 |
| Land-Use Planning for New Development and Redevelopment Component | Section 6 |
| Construction Component | Section 7 |
| Illicit Discharge Detection and Elimination Component | Section 8 |
| Education Component | Section 9 |
| Public Participation Component | Section 10 |
| Assessment of Jurisdictional URMP Effectiveness Component | Section 11 |
| Fiscal Analysis Component | Section 12 |
| 2. Each Copermittee's accounting of all: | |
| Inspections Conducted | Section 2-5 |
| Reports of illicit discharges (i.e. complaints) and how each was resolved (indication of referral source) | Sections 8 |
| Enforcement actions taken | Section 8 |
| Education efforts conducted | Section 9 |
| 3. Public participation mechanisms utilized during the Jurisdictional URMP Implementation process. | Section 10 |
| 4. Proposed revisions to the Jurisdictional URMP. | Section 11 |
| 5. A summary of all urban runoff related data not included in the annual monitoring report (e.g. special investigations). | See San Luis Rey WURMP |
| 6. Budget for the upcoming year. | Section 12 |
| 7. Identification of management measures proven to be ineffective in reducing urban runoff pollutants and flow. | Section 11 |
| 8. Identification of water quality improvements or degradation. | Section 11 |

## 1.3 Prohibitions

Section B.3 of the Municipal Permit requires Copermittees, within 365 days of adoption of the Municipal Permit, to identify non-storm water discharges not to be prohibited and Best Management Practices (BMPs) required for treatment of discharges not prohibited.

The City of Oceanside developed this information and submitted it to the SDRWQCB in February 2002, within the City's Jurisdictional URMP Document. As detailed in the Jurisdictional URMP, the City updated the urban runoff regulations in their Municipal Code in order to comply with the Municipal Permit. Pursuant to City Code Section 40.2.2, the following seventeen categories of non-storm water discharges are allowable as long as pollutants in the discharges are reduced to the MEP:

Diverted stream flows.

Rising groundwaters.

Uncontaminated groundwater infiltration [as defined in 40 CFR 35.2005(20)] to MS4.

Uncontaminated pumped groundwater.

Foundation drains.

Springs.

Water from crawl space pumps.

Footing drains.

Air conditioning condensation.

Flows from riparian habitats and wetlands.

Water line flushing.

Landscape irrigation.

Discharges from potable water sources other than main breaks.

Irrigation water.

Lawn watering.

Individual residential vehicle washing.

Dechlorinated swimming pool discharges.

## 1.4 Legal Authority

Section D.1 of the Municipal Permit requires Copermittees, within 180 days of adoption of the Municipal Permit, to provide the SDRWQCB a statement certified by its chief legal counsel that the Copermittee has adequate legal authority to implement and enforce the requirements of the Municipal Permit. The City of Oceanside provided this statement to the SDRWQCB on August 15, 2001. Pursuant with the Municipal Permit, the statement included:

1. Identification of all departments within the jurisdiction that conduct urban runoff related activities, and their roles and responsibilities under the Municipal Permit.

Include an up to date organizational chart specifying these departments and key personnel.

2. Citation of urban runoff related ordinances and the reasons they are enforceable.
3. Identification of the local administrative and legal procedures available to mandate compliance with urban runoff related ordinances and therefore with the conditions of the Municipal Permit.
4. Description of how these ordinances are implemented and appealed.
5. Description of whether the municipality can issue administrative orders and injunctions or if it must go through the court system for enforcement actions.

# SECTION 2: MUNICIPAL (EXISTING DEVELOPMENT) COMPONENT

This section documents the activities conducted by the City of Oceanside during the 2006-2007 reporting period to meet the requirements of Section F.3.a of the Municipal Permit. The foremost activity conducted by the City of Oceanside during the reporting period that responds to the requirements of this section of the Municipal Permit was the implementation and fine-tuning of the Municipal (Existing Development) Component within the City's Jurisdictional Urban Runoff Management Program (Jurisdictional URMP), which includes continued development and implementation of a comprehensive Storm Water Pollution Prevention Plan (SWPPP) for the City Operations Center (COC).

The City continues to use the Municipal Urban Runoff Procedures Manual, prepared as part of the Jurisdictional URMP. The Municipal Manual contains BMP requirements and related guidance for City facilities and employees. This manual was circulated to relevant City staff and has been a useful reference document for training and educational programs.

**Order 2001-01 Compliance Summary**

**F.3.a Municipal (Existing Development)**

| | |
|---|---|
| F.3.a(1)<br>Pollution Prevention | See Section 2.1 of this Annual Report |
| F.3.a(2)<br>Source Identification | See Section 2.2 of this Annual Report |
| F.3.a(3)<br>Threat to Water Quality Prioritization | See Section 2.3 of this Annual Report |
| F.3.a(4)<br>BMP Implementation | See Section 2.4 of this Annual Report |
| F.3.a(5)<br>Maintenance of MS4 | See Section 2.5 of this Annual Report |
| F.3.a(6)<br>Management of Pesticides, Herbicides, and Fertilizers | See Section 2.6 of this Annual Report |
| F.3.a(7)<br>Inspection of Municipal Areas and Activities | See Section 2.8 of this Annual Report |

## 2.1 Pollution Prevention

The City's Municipal Component includes specifications for pollution-prevention methods for Municipal Areas and Activities that occur within the City. These methods are activity and site-specific and are described in the Municipal Manual. Municipal facilities and activities are required to meet BMP requirement A.2.1 (BMP A.2.1), which states that all "Dischargers shall implement those Urban Runoff pollution prevention practices that are generally recognized in that Discharger's industry or business, or for that Discharger's activity, as being effective and economically advantageous." Examples of pollution-prevention practices are provided throughout the Municipal Manual, to provide guidance for personnel responsible for the identification and implementation of those practices.

Implementation of pollution prevention was facilitated during the reporting period through continuing educational activities for municipal employees discussed in Section 9. Pollution

prevention is also implemented through other activities, such as municipal inspections, SWPPPs, implementation of the Municipal Manual, and storm drain maintenance.

City employees are encouraged to recycle a variety of products used every day. Municipal offices provide easily accessible bins throughout for recycling paper, aluminum, glass and plastic. The City also recycles inkjet and toner cartridges through a charity program administered by the Police Department and household batteries are collected for proper disposal. Recycled paper is purchased. The City also promotes recycling by providing eye-catching recycling containers throughout their facilities. Photos of two of the fun recycling containers are shown in the previous annual report.

The COC implements an aggressive pollution prevention/recycling program, including: purchasing re-refined oils, and recycling used oils, fuel filters, antifreeze, used tires, batteries and oil filters. The City also owns and operates a System I solvent tank where solvents are distilled on site. Scrap metals are contained and covered until they are picked up by a commercial metal recycling company.

Over 3,688 Oceanside households utilized the household hazardous waste disposal facility, disposing or recycling 130.7 tons of hazardous materials (including universal waste) during the reporting period. An additional 153 Oceanside households recycled 115.2 tons of E-waste in the same reporting year.

800 gallons of used oil and three barrels of used oil filters were collected at the Harbor for proper disposal from boaters that are harbor slip renters.

## 2.2 Source Identification

The Municipal Permit requires the City to develop, and update annually, a watershed-based inventory containing the name, address (if applicable), and description of all municipal land use areas and activities that may generate pollutants. During the 2006-2007 reporting period the 2005-06 municipal inventory was used. An updated inventory will be provided with the Updated JURMP, due to the Regional Water Quality Control Board in March 2008. See Table 2-1 at the end of this section for a copy of this inventory.

## 2.3 Threat to Water Quality Prioritization

Part F.3.a.(3) of the Municipal Permit requires the City to prioritize its inventory of areas and activities by threat to water quality. The Municipal Permit also requires that the prioritization be updated annually. During the 2006-2007 reporting period the 2005-06 municipal inventory was used. An updated inventory will be provided with the Updated JURMP, due to the Regional Water Quality Control Board in March 2008. See Table 2-1 at the end of this section for a copy of the inventory.

During the 2002-2003 reporting period, the City revised the priority of some of the areas and activities previously identified in the Municipal Inventory during JURMP development. During the subsequent reporting periods, the City confirmed during inspections that the revised prioritizations are appropriate. None of the prioritizations were changed during the 2006-2007 reporting period.

## 2.4 BMP Implementation

As required by the Municipal Permit, the City designated a minimum set of BMPs for High, Medium, and Low Priority Municipal Areas and Activities. These BMPs were described in the Municipal Manual, which was distributed to municipal employees through educational activities described in Section 9 of this report. Each municipal area and facility is required to implement BMPs in compliance with the applicable BMP requirements, according to the priority designation of the area or facility.

The City currently has 425 storm drain inlet markers in place throughout its jurisdiction. During this reporting period additional markers were ordered for installation on all remaining storm drain inlets. These markers will be installed during the next fiscal year in conjunction with the annual cleaning of City maintained storm drain inlets. Labeling is a mandatory BMP for new and existing private developments, and is detailed in the Construction, Commercial, and Industrial Manuals. See below for a photo of the storm drain inlet marker.

The City conducted a feasibility analysis of retrofitting structural flood control devices pursuant to Part F.3.a.(4).i of the Municipal Permit. The feasibility analysis was included as Attachment 2-A of the Jurisdictional URMP in 2003-2004. Based on the analysis, the City did not identify any areas of the City's MS4 where retrofitting was necessary. However, the City does recognize the long-term benefits of retrofitting, both as a backup to source-control strategies and as an alternative to extensive cleaning programs.

As implementation of the Jurisdictional URMP continues, the City further evaluated retrofitting opportunities which resulted in the application for funding to install CDS units in its MS4 at 7 different coastal outfall drainage systems. The City did not receive grant funding for this project. The city will continue with the annual cleaning of all city-maintained storm drain inlets.

The City evaluated retrofitting the San Luis Rey WWTP to capture the first flush from the parking lot and directing it back to the plant. After extensive evaluation it was determined that this project was cost prohibitive. The SLR WWTP does have several BMPs in place to reduce polluted runoff including gravel bags at each storm drain inlet, covered slopes with straw mats and straw waddles, and chemical containers are stored indoors and/or on secondary containment structures. Also, the storm drain inlets are cleaned annually and before the start of the rainy season.

**Bacterial Reduction Pilot Program – Oceanside Harbor Boat Wash Outfall Study**

Oceanside Harbor has over 40 storm drains that carry flows a short distance to the harbor. From 2003 to present, 14 drains have been fitted with storm drain filters and 7 have been fitted with separator vaults. The vaults are designed to remove debris, sediment and hydrocarbons from the stormwater, with some secondary bacterial removal due to some bacteria being removed in the sediment and debris. The one drain with historical bacterial exceedance receives flows from the harbor boat wash and a sewage dump for recreational vehicles (RV) via a separator vault. Refer to Attachment 2-A for an aerial photograph of the location of the vaults, the boat wash, and the RV dump.

The Bacterial Reduction Pilot Program at Oceanside Harbor is considered an important activity in the San Luis Rey Watershed because it will reduce bacteria loads into the Oceanside Harbor. The objectives of the program are to:

Reduce bacterial concentrations that are discharged into the Oceanside Harbor.

Determine the effectiveness of the BMPs in the pilot studies to evaluate their use in other storm drain vault locations that experience high concentrations of bacteria.

The City of Oceanside conducted a pilot study in FY 2005/06 with Attitude Technologies to fit the vault at the Harbor boat wash with XTEX AM antimicrobial fabric to reduce bacterial levels. The end result of the study, which lasted from October 2005 to September 2006, was that the product did not display long-term effectiveness, possibly the result of added hydrocarbons and sediment load in the runoff.

In FY 2006/07, another pilot project was instated at the Harbor boat wash outfall. Storm drain cleaning had been conducted periodically at this outfall, and reductions in bacterial counts had been observed after each cleaning, indicating that re-growth in the pipe may be a contributing factor to the exceedances. The Clean Water Program staff worked with Harbor Maintenance to increase the cleaning of the conveyance at the boat washes and RV sewage dump to once per month. This pilot study began in February 2007, continued through the end of the fiscal year and is currently ongoing.

The previous pilot project assessing the effectiveness of an antimicrobial fabric installed in the separator vault of the boat wash/RV sewage dump outfall was ongoing through the end of the fiscal year 2005/06 into September 2006. The outfall was cleaned, as part of the previous schedule, on 8/30/06. Monthly cleaning of the conveyance began in February 2007: 2/7/07, 3/3/07, 5/10/07, and 6/8/07.

Point source contributions from the RV dump have been identified as a major culprit in water quality exceedances. In an effort to reduce bacterial load contributions before they reach the outfall, the Clean Water Program implemented two tasks during 2006-2007. These include the development of a spill response plan in conjunction with Harbor Maintenance Staff for future spills into the Boat Wash drain system and installing additional educational signage at the Boat Wash and RV dump locations. The installation of paved berms around the RV dump area to prevent cross contamination into the Boat Wash Drain was determined to be potentially ineffective and would create other drainage problems. The installation of a video surveillance system to assist in identifying future violations was considered to be too cost prohibitive at this time. Being considered for the 2007-08 reporting period is the installation of a Modular Wetlands Vault to utilize plants to uptake pollutants prior to reaching the harbor receiving water.

For more information on this special study, please refer to Attachment 2-A.

**Loma Alta Creek Ultraviolet Treatment Facility**

The City submitted a proposal to the State Water Resources Control Board Prop. 40 Clean Beaches Initiative for the Loma Alta Creek Ultraviolet Treatment Facility and was awarded $5,000,000 in December 2006. The project involves the construction of a filtration and ultraviolet radiation (UV) stormwater treatment facility to be located adjacent to the Loma Alta Creek outlet at Buccaneer Beach in the City of Oceanside, at the existing La Salina Wastewater Treatment Facility. One hundred percent of the dry weather creek flows (averaging 1,000 gallons per minute) will be intercepted at the outlet and diverted to the UV storm water treatment facility, located on the northern bank of the creek. The treatment facility will be housed within a reinforced masonry building.

The overall project, once completed, will capture up to1,000 gallons per minute of urban runoff, treat it, and discharge it through a pipe that will extend along the existing section of rip-rap that runs along the north side of the Loma Alta creek outlet at Buccaneer Beach. During wet weather months (December through April), the lagoon would be opened to allow free flow to the ocean and the UV system would be bypassed. The project will not only protect the beach water quality, but eliminate the added flow into the Ocean Outfall.

The project is based on the following design elements:

Minor streambed modifications needed to improve the inlet conditions to the screening facility.
A new screening and inlet pump structure.
Filtration.
Chemical storage and pumps (if needed to meet filtration goals).
Ultraviolet (UV) irradiation disinfection.
A discharge pipeline across Pacific Avenue to a beach discharge.
A building to house the electrical controls and UV reactors.
A screen wall at the south end of the plant.
A connection to the sewer or other point for filter backwash disposal.
Electrical service.
Connection to the La Salina Wastewater Treatment Plant Supervisory Control and Data Acquisition system.

The City hired Carollo Engineers to undertake design and permitting for the project in the 2005-2006 reporting period. Request for Professional Services was disseminated and a contract was executed with Carollo Engineering during the 2006-07. Construction is scheduled to begin during the 2007-2008 reporting period. The facility is expected to be in operation in 2008. Additional information on the project will be included in future annual reports.

**Lower San Luis Rey River Bacterial Source Tracking Study**

The City of Oceanside continued to seek funding to implement a study to identify sources of bacterial contamination in the Lower San Luis Rey River (LSLR) and San Luis Rey River (SLR) mouth and recommend appropriate actions and activities to eliminate the input of those bacterial sources. A proposal submitted to the State Water Resource Control Board (SWRCB) Proposition 50 Clean Beaches Initiative awarded funding to conduct this study. Titled the Lower San Luis Rey Bacteria Source Tracking Project, the City was awarded $554,375 with an executed grant agreement expected in fall 2007. Grant applicants were required to provide

matching and in-kind dollars to the project. The San Luis Rey River Joint monitoring program between the City of Oceanside and the County of San Diego will be used as match for the project in addition to in-kind matches from representatives serving on the Technical Advisory Committee (TAC), including an additional stakeholder, the City of Vista.

The goals of this project are to:

- Identify point and non-point sources of bacteria contamination in the lower San Luis Rey River and at the River mouth during dry and wet weather.
- Estimate the dry, wet, and annual bacterial loading in the lower San Luis Rey River and at the River mouth.
- Recommend Best Management Practices (BMP) to reduce and eliminate bacterial sources.

Multi-tiered genetic microbial testing methods will be used to identify bacteria sources in the Lower San Luis Rey River. This multi-tiered approach includes bacterial concentration assessment using traditional measurements of fecal indicator bacteria to determine the flux of bacteria in the river and river mouth, and genetic microbial source tracking methods which will be approved by the Technical Advisory Committee.

The sampling and analysis study will include, at a minimum:

- A comprehensive visual observation program will be conducted to identify point and non-point source runoff.
- Collection and analysis of flow data to be utilized in bacteria loading estimates from the sources identified.
- Dry and wet weather sampling events will be conducted to identify sources and quantify wet, dry, and annual bacterial loading estimates.
- Multi-tiered genetic microbial testing in the Lower San Luis Rey River and the river mouth at the Pacific Ocean outlet. The sample site selection process will include appropriate sites for tracking TMDL implementation progress.
- Recommendations for potential Best Management Practices to reduce and eliminate bacterial sources in the Lower San Luis Rey River and at the river mouth will be developed.

For more information on this special study, please refer to Attachment 2-B.

The City has continued to implement projects in Loma Alta Creek as part of the Loma Alta Creek Watershed Management Plan. The City has a number of projects identified as actions items in process. Some of the projects and status updates are highlighted below:

**Loma Alta Creek Flood Control Detention Basins** – This project was designed to improve the level of flood control and water quality in the Loma Alta Watershed by constructing detention basins. The project was completing construction toward the end of this reporting period. Updates will be provided in future annual reports.

**Myers Property Restoration and Erosion Control Project** - The City of Oceanside (City), in coordination with the Carlsbad Watershed Network (CWN) and the San Diego Regional Water Quality Control Board (RWQCB), was awarded Proposition 13 grant funding to create a locally led, community-based habitat restoration and erosion control project on the Myers property in the City of Oceanside. The City's Loma Alta Creek Watershed Management Plan (WMP) (MEC 2003) and its umbrella document, the Carlsbad Hydrological Unit WMP (Carlsbad WMP) (City of Carlsbad et al. 2003), identified the Myers property as a source of

sedimentation posing a threat to Loma Alta Creek's water quality and, ultimately, to the water quality of Loma Alta Slough, which is a Section 303(d) impaired coastal water body (RWQCB 2006). The desired outcome of this project is to improve water quality in the Loma Alta Creek watershed by removing sediment-laden discharges at the source utilizing soil and erosion control BMPs.

Technology Associates International Corporation (TAIC) was awarded the contract to mange the restoration project. Restoration and erosion control on the Myers Property was achieved by implementing temporary bio-engineered erosion control methods in and along the tributary and revegetation with coastal sage scrub on the unauthorized trails and barren areas on the property. Water quality and Bioassessment baselines were established through pre-restoration samples in Loma Alta Creek. Based on these data, a restoration and erosion control plan was prepared, accompanied by construction documents (plans and specifications). Installation of restoration and erosion control measures commenced in the fall of 2006 and was completed in January 2007.

Following restoration, water quality monitoring was completed in Loma Alta Creek in addition to bioassessment and habitat monitoring. Throughout the project, a public awareness campaign was conducted, including several publications by the City of Oceanside (website, newsletter, and Oceanside Magazine), stakeholder education through the Carlsbad Watershed Network, two workshops and one public site visit. Long-term monitoring and maintenance of the site are essential to maintain the native coastal sage scrub vegetation community, control invasive species, monitor sediment load in the creek, and control site access. The City of Oceanside has committed $17,000 annually to monitor and maintain the site.

A copy of the complete final report is available upon request and will be made available on the Clean Water Program Webpage.

**Other City Projects with Water Quality Benefits**

Below is an overview of other restoration projects in the City that can provide water quality benefits. All of these projects have been completed and five-year monitoring and maintenance plans will be implemented on all of these projects.

**Collins Property Wetlands Revegetation** – This project removed many of the exotic (non-native) plant species that have naturalized themselves along the Collins property wetlands, located on the north side of Oceanside Boulevard and west of Corporate Center Drive. Exotic and invasive plants were removed and replaced with native plants.

**San Luis Rey Recreation Trail Revegetation -** This project, located between I-5 and the north/south Amtrak rail line, removed many of the exotic (non-native) plant species that had naturalized themselves along the San Luis Rey River, and adjacent recreation trail. Exotic and invasive plants were removed and replaced with native plants.

**Foss Lake Revegetation -** This project removed many of the exotic (non-native) plant species that had naturalized themselves along the Foss Lake wetlands, near Douglas Drive and west of Vandegrift Avenue. Exotic and invasive plants were removed and replaced with native plants.

**Storm Water Pollution Prevention Plan for City Operations Center**

The City has developed a Storm Water Pollution Prevention Plan (SWPPP) for the City Operations Center (COC) which was implemented in the fall of 2002. The COC includes the following areas: employee parking lot, COC main building (offices, storage and fleet maintenance), traffic control lot, back lot, city vehicle parking lot, large vehicle equipment lot, fueling area, waste disposal area, wash facilities, general use yard, west corner lot and temporary housing of Fire Station #8. The SWPPP has the following objectives: identify and evaluate sources of pollutants from the facility that may affect the quality of urban runoff discharge and identify and implement site-specific best management practices to reduce or prevent pollutants in urban runoff discharges. The SWPPP outlines BMPs to be implemented at each of the respective areas. A comprehensive training program was also developed and implemented in concert with the COC SWPPP.

A number of the BMPs discussed in the SWPPP were being implemented prior to the SWPPP development. Since implementation of the SWPPPS began, one of the improvements that required changes in procedures was the implementation of proper erosion and sedimentation control measures, including regular sweeping. Through the training, which emphasized the importance of the program, transition to SWPPP BMPs was effective and the BMPs are being implemented properly.

The new main wash facility at the COC, constructed in 2002-2003, continues to be utilized by all City Departments. The main wash facility is a completely contained area, surrounded on all sides by berms and curbs. The entire area drains to the eastern corner of the pad where it enters a grated inlet that leads to a clarifier and then the sewer. An overflow is available if the drain to the sewer is clogged or the volume of water exceeds its capacity, however, this is not anticipated to happen frequently because the drain is maintained daily. The main wash facility is used for washing large vehicles and equipment, and collection of street sweeper and vactor truck contents.

The Public Works Department installed two BioClean filters at the only two outlets which drain runoff from the City Operations Center in the last reporting year: one on the south side of the COC where a 36” box outlet discharges directly into Loma Alta Creek, and one at the 12” pipe which discharges onto Oceanside Blvd. These filters are regularly inspected and maintained.

In response to issues that were recognized during the inspections, structural BMPs that were added in 2005-2006 include a garage cover built to cover drums in storage area, an area was designated to hold all wrecked vehicles from police department and secondary containment installed, and all slopes on property were stabilized with mulch, straw blankets, and fiber rolls.

The City uses a combination of education, inspection, coordination with City departments and “open eyes and ears”, (Oceanside Eyes) to ensure that BMPs are implemented for municipal areas and activities.

## 2.5 Maintenance of MS4s

As required by Section F.3.a.(5) of the Municipal Permit, the City has implemented a schedule of maintenance activities for the City’s entire MS4, including any structural controls designed to reduce pollutant discharges to or from its MS4s and related drainage structures. As defined by the Municipal Permit, the City’s MS4 consists of streets, curbs, catch basins, inlets, natural creeks and streams, pipes (varying materials), rock lined channels, concrete channels, culverts, desilting basins, and detention basins.

### 2.5.1 Inspection and Maintenance Activities

The City's schedule of inspection and maintenance activities are described below. There have been no significant changes to the existing programs during the reporting period.

**Public Streets and Curbs**

Every Monday, Wednesday, and Friday, the downtown commercial areas and other high uses areas are swept using regenerative air vacuum street sweepers. These areas include the medians on Mission Avenue, Canyon Drive, and the Civic Center Drive Bridge, Wisconsin Avenue to Pacific Street to Ditmar Street, the Strand, and all downtown parking lots. In addition the downtown core and beach areas, and Coast Highway Highway 101) are swept five times per week, Monday through Friday.

The majority of all other public streets, not included in the areas listed above, are swept every other week. In some low use residential and commercial areas, the streets may be swept monthly.

As necessary, sweepers or other clean up crews will respond to public or municipal staff reports to collect debris and/or sweep.

Inspection of streets and curbs for cleaning is continuous. City employees are encouraged to identify areas that should be cleaned and to call the municipal employee reporting line, Oceanside Eyes. Residents are encouraged to call the Public Works Maintenance Hotline.

**Creeks, Catch Basins, Channels, Drainages, and Basins**

The City has determined, through historical knowledge and records, the locations within the MS4 that require regular waste removal and those areas that are less likely to require any waste removal. The City has developed a comprehensive Flood Control Annual Maintenance Program which includes a list of the high priority areas, divided into zones, which are to be inspected annually using an inspection checklist. Approximately 110 sites are inspected and maintained annually.

**May 1 through September 30 programs:**

All catch basins and curb inlets in the following locations will be cleaned of trash, sediment, and other debris:

- All of the City west of Interstate 5
- The Crown Heights neighborhood
- The East Side neighborhood

All catch basins and curb inlets will be inspected and cleaned as necessary

All channels, basins, creeks, and other drainage facilities will be inspected and cleaned as necessary

**Year round programs are as follows:**

At least one public clean-up event will be held at the San Luis Rey River, Loma Alta Creek, and Buena Vista Creek.

Clean catch basins and curb inlets annually.

Removal of trash and debris from channels, basins and other storm drain facilities annually.

Removal of silt accumulation from creeks, desilting basins, detention basins and rock and concrete lined channels annually.

Flow line vegetation maintenance, as allowed to avoid habitat destruction, of creeks, desilting basins, detention basins and concrete and rock lined channels.

### 2.5.2 Inspection and Maintenance Results

Inspections and maintenance activities were conducted throughout the reporting period as described in the previous section. Street sweeping activities resulted in the collection of 2,480 tons of waste during the reporting period. These results are comparable with the 2,283 tons collected in 2005-06, the 2,538 collected in 2004-2005 and the 2,604 tons collected during 2003-2004 reporting. In order to inspect and clean storm drains as described above during the May through September period, the City contracted with United Storm Water Inc. A total of 3,252 structures (catch basins, manholes, inlets, outlets, etc.) were inspected and cleaned during the reporting period. A total of 65.5 tons of waste was removed. The waste generally consisted of trash, green waste, dirt, sand, roots, solids, rocks, and silt. During the inspections, it is also noted whether or not the drain is labeled. Approximately 45% of the structures that were inspected were labeled. No inlets were labeled during this reporting period.

The Public Works, Street Division, performs ongoing inspection and cleaning of storm drains and flood control facilities, as well as annual maintenance of all major facilities such as creeks, desilting basins, detention basins and rock and concrete lined channels. In response to inspections, the City cleaned approximately 10,000 feet of storm drain during the reporting period. In addition, City crews addressed and cleaned approximately 50 privately owned catch basins and also cleared approximately 100 concrete and earthen channels. The total linear footage of storm drains, catch basins, and concrete and earthen channels that were cleaned was approximately 49,395. The storm drain maintenance activities are recorded on monthly logs and in a Work Order database at the City Operations Center. In addition, the Street Division performs annual maintenance/cleaning in September, October, and November for all major MS4 facilities. The results of this work are recorded on an Annual Maintenance List that is also available at the City Operations Center.

During this reporting period the City inspected and cleaned, as necessary, 313.6 miles (1,655,818 feet) of sanitary sewer. None of the sewer lines were slip-lined during this time, though there are 5,352 feet of sewer line scheduled to be slip-lined during the next reporting period. Since the beginning of the 2005-06 reporting period the City has slip-lined a total of 5,979 linear feet of sewer.

The City hosts a number of cleanup events throughout the year. Such events assist the Street Division in the maintenance and removal of debris along Oceanside's waterways. During the reporting period, the cleanup events had 657 volunteers that removed over 28 tons (57,200

pounds) of trash, debris, furniture, appliances, shopping carts and other unwanted materials river and creek beds and adjacent areas. For more information about the Community Cleanups Events, please refer to Section 9: Education Component or Section 10 Public Participation Component in this annual report. Table 2-2 shows a summary of the cleanup events hosted during the reporting period:

**Table 2-2 2006-2007 City of Oceanside Clean-Up Events**

| Date | Event | Number of Participants | Pounds/Tonnage of Waste Removed |
|---|---|---|---|
| 7/5/2006 | Morning After Mess | 141 | 1,200 pounds |
| 9/16/2006 | Buena Vista Creek & Oceanside Beach Cleanup | 247 | Not Tracked |
| 11/11/2006 | Oceanside Beach Cleanup | 122 | Not Tracked |
| 4/28/2007 | Loma Alta Creek & Buccaneer Beach Cleanup | 147 | 56,000 pounds |

## 2.6 Management of Pesticides, Herbicides, and Fertilizers

As required by Section F.3.a.(6) of the Municipal Permit, the City has selected BMPs to implement at Municipal Areas and Activities to reduce the contribution of pollutants associated with the application, storage, and disposal of pesticides, herbicides and fertilizers. Areas and activities of concern are municipal facilities, public rights-of-way, parks, recreational facilities, golf courses, landscaped areas, etc. The BMPs are detailed in the Municipal Manual.

Pesticides, herbicides and fertilizers are seldom used directly by the City, as it contracts out the majority of work involving these substances. To facilitate compliance with this Section of the Municipal Permit, the City has reviewed its landscaping contract and has integrated BMP requirements into the conditions of the contract.

## 2.7 Fire Fighting

The City has identified the locations of the fire department facilities and has included them in the municipal facilities inventory. As a part of the fire-fighting program, the City has designated a minimum set of BMPs for fire fighting facilities and activities. The BMPs are detailed in the SWPPP for the COC and the City's Municipal Manual and are required to be implemented at all fire fighting facilities and activities with the exception of emergency fire fighting activities. The inspection procedures and frequencies that are described in Section 13.4 of the Jurisdictional URMP were not altered during the 2006-2007 reporting year. The City is currently adhering to the Jurisdictional URMP and inspecting the Fire Station facilities in accordance with the SWPPP. The City utilizes the enforcement procedures described in Section 13.5 of the Jurisdictional URMP and action is taken when deemed necessary. During the reporting period no enforcement actions were necessary. The City implemented an aggressive education program coincident with the development and implementation of the SWPPP and believes that the strong focus on education contributed to the low number of enforcement actions required.

In December 2002, the Fire Chief authorized all fire personnel the option of using the new COC car wash facility for all Oceanside Fire Department vehicles. The memo also reiterated that the washing of all vehicles must comply with runoff standards. Details of the COC wash area are in Section 2.4 of this report. However, the long-term plan for the Fire Department is the relocation of Fire Station 7 and construction of an exclusive wash facility for fire vehicles and hoses. Construction of this new facility commenced during this reporting period.

The Oceanside Fire Department implemented a pilot project and replaced impervious pavement with pervious pavement at Fire Station 5 at the vehicle washing area during reporting period 2005-06. The product is called Drivable Grass by Soil Retention Products. If the project is deemed successful, in future years other fire station vehicle washing areas will be converted to pervious pavement.

## 2.8 Inspections

The municipal inspection program implemented by the City in accordance with part F.3.a.(7) of the Municipal Permit is described in Section 2.7 of the Jurisdictional URMP and is also detailed in the Municipal Manual. Pursuant to the Municipal Permit, the City's program requires annual inspection of high priority municipal areas and activities. The City is committed to conducting proper inspections of municipal facilities as required by the permit. A summary of some of the municipal inspections follows. Documentation of all of the inspections is included in the Municipal Inventory and Prioritization database, in Table 2.1, found at the end of this section. A copy of the inspection reports is available upon request.

Parking Lots

The City's parking lots were clean and showed no significant concerns in regards to urban runoff pollution during the inspections. From the results of the inspections, it appears that the City's street sweeping schedule is effective. In cases where additional maintenance/cleaning were needed, the parking lot maintenance schedule was increased to three times weekly and daily Monday through Friday, in some cases.

Parks

During the park inspections, there were very few potential violations noted. The only issue in the parks was the need to clean leaves and trash from gutters and ditches. Park supervisors were notified of the recommendations and follow-up actions were taken.

Fire Stations:

All fire stations were inspected during the reporting period with minor potential violations noted. The recommendations included: keeping storm drain inlets free of debris, proper storage, containment and labeling of containers filled with liquid, and the need to have fiber rolls placed around wrecked vehicles that are temporarily stored on site. Vehicles continue to be washed at the washing facility at the COC or the pervious pavement washing area at Fire Station 5. Fire Station 7, currently under construction, will have a state-of-the-art vehicle washing facility available for use by all fire stations.

Closed Landfills:

The City of Oceanside owns and operates two closed landfills (Maxson Street Landfill, WDID 9375005695 and Mission Avenue Landfill, WDID 9375005696). Both facilities are inspected quarterly per permit requirements and an annual report is prepared each for submittal to the Regional Water Quality Control Board. If potential storm water discharges are identified, appropriate BMPs are implemented to prevent pollutants from entering MS4.

City Operations Center

During the COC Inspection potential violations were identified. Recommendations included:

Large 40-yard roll-off disposal bins not covered when not in use.
Cover scrap metal and place materials on pallets or off ground.
Check fiber rolls on slopes and replace where needed.
Add gravel bags around inlet areas for additional containment.
Store all 55 gallon drums and buckets on secondary containment and under cover.

Through a second follow-up inspection and discussions with COC staff, it was verified that the issues above had been corrected.

Inspection Follow up Activities

Table 2-1 includes all inspections of municipal sites with recommendations where storm water BMPs needed maintenance or improvement. In cases where recommendations were made, (33 of 141 sites) inspectors followed up the recommendations with further contact with the facilities to ensure that the improvements were completed as requested. All sites where recommendations were made complied with the recommendations under the guidance of the City of Oceanside.

Follow-up activities by the Clean Water Program staff included:
13 post-inspection follow-up contacts with facility's supervisors.
2 follow-up site visits.

Follow-up activities by Code Enforcement Officers included:
No site visit follow-ups were needed during this reporting period.

## 2.9 Enforcement

Pursuant to Section F.3.a(8) of the Municipal Permit, the City enforces its ordinances at all Municipal Areas and Activities following the program discussed in Section 2.8 of the Jurisdictional URMP. An enforcement action typically occurs as a result of an inspection or in response to a report by the public or a municipal staff member. The City employs several enforcement mechanisms and penalties to ensure compliance with its ordinances, as discussed in the Jurisdictional URMP. No municipal enforcement actions were necessary during the reporting period.

# SECTION 3: INDUSTRIAL (EXISITING DEVELOPMENT) COMPONENT

This section documents the activities conducted by the City of Oceanside during the 2006-2007 reporting period to meet the requirements of Section F.3.b of the Municipal Permit. The foremost activity conducted by the City of Oceanside during the reporting period that responds to the requirements of this section of the Municipal Permit was the continued implementation of an industrial inspection program that not only served to educate industrial business owners and operators about their obligations under federal, state and local regulations, but to detect and eliminate polluting and potential activities and/or discharges to the MS4.

As part of the Jurisdictional URMP, the City distributed an Industrial Urban Runoff Requirements Manual (Industrial Manual). The Industrial Manual contains BMP requirements and related guidance for industrial businesses located in the City. This manual has been distributed to businesses through mail, workshops, inspections, the Clean Water Program website, and copies are also available at City Hall. This document will be reviewed and revised where needed during the upcoming reporting period and will be included with the new JURMP, which is due to the Regional Water Quality Control Board in March 2008.

**Order 2001-01 Compliance Summary**

| F.3.b.(1)<br>Pollution Prevention | See Section 3.1 of this Annual Report |
| F.3.b.(2)<br>Source Identification | See Section 3.2 of this Annual Report |
| F.3.b.(3)<br>Threat to Water Quality Prioritization | See Section 3.3 of this Annual Report |
| F.3.b.(4)<br>BMP Implementation | See Section 3.4 of this Annual Report |
| F.3.b.(5)<br>Monitoring of Industrial Sites | See Section 3.5 of this Annual Report |
| F.3.b.(6)<br>Inspection of Industrial Sites | See Section 3.6 of this Annual Report |
| F.3.b.(7)<br>Enforcement Measures for Industrial Sites | See Section 3.7 of this Annual Report |
| F.3.b.(8)<br>Reporting of Non-Compliant Sites | See Section 3.8 of this Annual Report |

## 3.1 Pollution Prevention

The City's Jurisdictional URMP Industrial Component requires the implementation and maintenance of applicable pollution prevention Best Management Practices (BMPs) by industrial owners and/or operators pursuant to City Code. In order to ensure industrial owners and operators are informed and understand the applicable pollution prevention BMPs to be implemented and/or maintained, site-specific pollution prevention methods for industrial areas and activities, located within the City, are specified in the Industrial Manual.

The City has conducted notable efforts to ensure industrial business owners and/or operators have received a copy of the Industrial Manual either through an annual inspection, at the City Hall Business License counter, a response to a complaint or concern reported through the Urban Runoff Hotline number (Hotline), or through a direct mailing. In addition, copies of the

Industrial Manual are available on the Clean Water Program website. Extensive education for industrial businesses has been conducted during the reporting period and can be reviewed in Section 9: Education Component of this annual report.

Code Enforcement officers ensure the applicable pollution prevention activities are implemented by industrial owners and/or operators through an annual inspection or through calls received from the Hotline. All industrial businesses visited, through the annual inspection program or by complaint call acknowledged on the Hotline, receive follow-up visits until the industrial business is deemed in-compliance with City Code. All documentation pertaining to site visits are available from the Code Enforcement division.

### 3.2 Source Identification

The Municipal Permit requires the City to develop, and update annually, a watershed-based inventory containing the name, address, and description of all industrial sites within its jurisdiction, regardless of site ownership. The original inventory was prepared in February 2002 and was provided in the Jurisdictional URMP document. The inventory was updated during the 2005-2006 reporting period and was used again during this reporting period.

The City has implemented a system that will ensure accurate information is recorded on all industrial and commercial inventories and threat prioritizations. Since January 2002, all business license applicants have been requested to complete an urban runoff information form to provide additional information about the business and its specific activities that have the potential to contribute to polluted runoff. The City will use this information to supplement the information in its business license database and will refer to it when needed.

Based on the current inventory, the City contains approximately 388 businesses that are classified as industrial. Table 3-2 provides a summary of the number of industrial businesses inventoried in the City according to the watershed in which the business is located.

**Table 3-2 Industrial Businesses in the City by Watershed**

| Watershed | Number of Industrial Business |
|---|---|
| San Luis Rey | 130 |
| Loma Alta | 232 |
| Buena Vista | 26 |
| Agua Hedionda | 0 |
| **Total** | **388** |

### 3.3 Threat to Water Quality Prioritization

Part F.3.b.(3) of the Municipal Permit requires the City to prioritize inventoried industrial sites with regard for the potential threat that the site may have on the water quality from urban runoff. The Municipal Permit also requires that the prioritization be updated annually. The original prioritization of inventoried areas and activities was prepared in February 2002 and was provided in the Jurisdictional URMP document with the inventory. An updated prioritization of inventoried areas and activities is included provided in Table 3.1 and will replace the original

prioritization in the Jurisdictional URMP document. A summary of the prioritizations is provided in Table 3.3.

**Table 3.3 Industrial Businesses in the City by Priority**

| Priority | Number of Industrial Business |
|---|---|
| High[a] | 82 |
| Medium[a] | 170 |
| Low | 136 |

a. All industrial businesses that are conditionally subject to the General Industrial Storm Water Permit are included as Medium Priority Industrial Businesses since a determination has not been made as to their applicability to the permit. Therefore, the number of High Priority Industrial Businesses shown in this table may increase, and the number of Medium Priority may decrease, as additional information becomes available, or the revised General State Industrial Permit goes into effect.

This reporting period represents the fourth full year of implementation of this program and has helped the City to develop an accurate inventory to prioritize the facilities. The program has also increased awareness of the City's Clean Water Program to the business owners and operators.

### 3.4 BMP Implementation

The City's Jurisdictional URMP Industrial Component requires the implementation and maintenance of applicable Best Management Practices (BMPs) by industrial owners and/or operators pursuant to City Code. In order to ensure industrial owners and operators are informed and understand the applicable BMPs to be implemented and/or maintained for their business' priority status, site-specific BMPs are outlined in the Industrial Manual disseminated in various ways as previously noted.

Code Enforcement officers ensure the applicable BMPs are implemented by industrial owners and/or operators through an annual inspection or through calls received on the Hotline. Every industrial business visited, through the annual inspection program or by complaint call acknowledged on the Hotline, received follow-up visits until the industrial business was deemed in-compliance with City Code. All documentation pertaining to these site visits are available from the Code Enforcement division.

### 3.5 Monitoring

Pursuant to Section F.3.b(5) of the Municipal Permit, monitoring is required by the City for each High Priority Industrial Business. Monitoring requirements are detailed in the Industrial Manual which is made available to industrial owners and operators through the annual inspection process, at the City Hall Business License counter, through a direct mailing, attendance of a workshop, or on the Clean Water Program website.

Many of the City's industrial facilities determined to be High Priority are subject to the Statewide General Storm Water Permit for Industrial Activities (Industrial Permit) and monitoring

requirements are required under the jurisdiction of the Regional Water Quality Control Board. Per the Jurisdictional URMP, businesses that conduct monitoring in accordance with the requirements of the Statewide General Storm Water Permit for Industrial Activities meet the City's monitoring requirements. Those High Priority facilities not subject to the Industrial Permit were required to demonstrate "no exposure" during annual inspections, or be required to file for coverage under the Industrial Permit. Copies of the annual inspection reports are available from the Code Enforcement Division.

### 3.6 Inspection

Section 3.6 of the Jurisdictional URMP document describes the City's program for conducting inspections of industrial businesses. This program was developed and implemented in accordance with part F.3.b.(6) of the Order. The major activities and accomplishments undertaken by the City for this requirement during the reporting period included:

Completion of 234 site inspections of industrial businesses during the reporting period.

Completion of 82 required annual inspections of high priority industrial businesses during the reporting period.

Completion of 152 required annual inspections of medium priority industrial businesses during the reporting period.

Completion of 0 inspections of low priority industrial businesses during the reporting period.

Completion of 20 follow-up visits either in response to the initial inspection or response to a complaint.

Dissemination of the Industrial Manual to help industrial owners and/or operators become aware of the City Code requirements for BMP implementation, and information on applicable BMPs for specific industrial businesses and activities.

Ensuring proper and continuing training of the Code Enforcement officers dedicated to the Clean Water Program.

Responding to 5 concerns/complaints reported through the Hotline number in response to an Industrial Business.

The Clean Water Program started a new approach to inspecting businesses during the 2005-06 reporting period. When Code Enforcement officers conduct inspections, they often target a whole commercial and/or industrial complex, rather than individual businesses located sporadically throughout a complex. By inspecting all the businesses in an area, owners and/or operators are made aware of their BMP requirements and can work with their neighbors to implement BMPs or solve drainage problems as a team, rather than as individuals. As a result of these mixed inspections, medium and low priority businesses are also inspected in the mix. Copies of inspection reports are available from the Code Enforcement Division.

### 3.7 Enforcement

Section 3.7 of the Jurisdictional URMP document describes the City's program for enforcement of ordinances at an industrial site. This program was developed in accordance with part F.3.b.(7) of the Order. An accounting of all enforcement actions, taken by Code Enforcement Officers, is shown in the Table 3-7.

**Table 3-7 Accounting of Industrial Code Enforcement Actions for 2006-2007 Reporting Year**

| Action Type | Follow-up Phone Call | Follow-up Site Visit | Follow-up Office Visit | Written Notice | Letter Sent | Inspection Report | Admin. Warning | Administrative Monetary Citation | Referral to Other Dept. | Stop Work Notice |
|---|---|---|---|---|---|---|---|---|---|---|
| # of Actions | 18 | 234 | 2 | 4 | 61 | 1 | 8 | 2 | 1 | 0 |

### 3.8 Reporting of Noncompliant Sites

The City is required to provide notification to the RWQCB of noncompliant sites located in the City that are determined to pose a threat to human or environmental health. Verbal notification is required within 24 hours of the discovery of noncompliance and a written report should be submitted to the RWQCB within five days of the incident. A site is considered to be noncompliant if one or more violations of local ordinances, permits, plans, or the Order exist at the site.

Events of noncompliance are evaluated according to the following criteria to determine whether the events pose a threat to human or environmental health:

The event of noncompliance resulted in a spill or discharge of hazardous materials, pollutants, or pollutant laden runoff that affected a receiving water.

The quantity and/or concentration of the pollutants in the spill or discharge affecting the Receiving Water was such that it may cause or contribute to an exceedance in water quality objectives as specified in the San Diego Basin Plan.

Other events that require reporting include the following:

Any unanticipated bypass that exceeds any effluent limitation in the Order.

Any discharge of treated or untreated wastewater, including reclaimed or recycled wastewater, resulting from pipeline breaks, obstruction, surcharge or any other circumstance.

Any discharge or spill of raw or potable water not authorized by the Order or resulting from pipeline breaks, obstruction, surcharge or any other circumstance.

Any upset which exceeds any effluent limitation in the Order.

Any spill or discharge of non-storm water not authorized by the Order. Non-storm water discharges not prohibited by the City do not need to be reported under the reporting requirements of this section.

Any violation of the Order.

In addition to the above criteria, City personnel evaluating the case of noncompliance may make a conclusion based on other specific circumstances.

No notifications to the RWQCB were made by the City during the reporting period concerning a commercial business.

# SECTION 4: COMMERCIAL (EXISTING DEVELOPMENT) COMPONENT

This section documents the activities conducted by the City of Oceanside during the 2006-2007 reporting period to meet the requirements of Section F.3.c of the Municipal Permit. The foremost activities conducted by the City of Oceanside during the reporting period, that responds to the requirements of this section of the Municipal Permit, was the continued implementation of an inspection and education program geared towards commercial businesses on urban runoff impacts and appropriate BMPs to be implemented.

As part of the Jurisdictional URMP, the City also distributed the Urban Runoff Requirements Manual for Commercial Businesses (Commercial Manual). The Commercial Manual contains BMP requirements and related guidance for Commercial businesses located in the City. This manual has been distributed to businesses during inspections and/or visits by Code Enforcement officers, via the City's web page, and copies made available at City Hall. This document will be reviewed and revised where needed during the upcoming reporting period and will be included with the new JURMP, which is due to the Regional Water Quality Control Board in March 2008.

**Order 2001-01 Compliance Summary**

| | |
|---|---|
| F.3.c.(1)<br>Pollution Prevention | See Section 4.1 of this Annual Report |
| F.3.c.(2)<br>Source Identification | See Section 4.2 of this Annual Report |
| F.3.c.(3)<br>BMP Implementation | See Section 4.4 of this Annual Report |
| F.3.c.(4)<br>Inspection of Commercial Sites and Sources | See Section 4.5 of this Annual Report |
| F.3.c.(5)<br>Enforcement of Commercial Sites and Sources | See Section 4.6 of this Annual Report |

## 4.1 Pollution Prevention

The City's Jurisdictional URMP Commercial Component requires the implementation and maintenance of applicable pollution prevention Best Management Practices (BMPs) by commercial business owners and/or operators pursuant to City Code. In order to ensure commercial business owners and operators are informed and understand the applicable pollution prevention BMPs to be implemented and/or maintained, site-specific pollution prevention methods for commercial areas and activities, located within the City, are specified in the Commercial Manual.

The City has conducted notable efforts to ensure commercial business owners and/or operators have received a copy of the Commercial Manual, either through an inspection by Code Enforcement, at the City Hall Business License counter, or a response to a complaint or concern reported through the Urban Runoff Hotline (Hotline) number. In addition, copies of the Commercial Manual are available on the Clean Water Program website. Extensive education for commercial businesses has been conducted during

the reporting period and can be reviewed in Section 9: Education Component of this annual report.

Code Enforcement officers ensure the applicable pollution prevention activities are implemented by commercial owners and/or operators through calls received on the Hotline and outside observations. All calls received on the Hotline generate a case file in which Code Enforcement officers visit the facility and conduct follow-up visits until the commercial business is deemed in-compliance with City Code. All documentation pertaining to site visits are available from the Code Enforcement division.

During the reporting period, the City of Oceanside continued to assist commercial and industrial businesses by distributing stencils for storm drain and dumpster area labeling. Stencils were distributed to businesses through regular inspection or through the Water Utilities Department counter.

### 4.2 Source Identification

The Municipal Permit requires the City to develop, and update annually, a watershed-based inventory containing the name, address (if applicable), and description of all commercial businesses within its jurisdiction, regardless of site ownership. The original inventory was prepared in February 2002 and was provided in the Jurisdictional URMP document. The inventory was updated during the 2005-2006 reporting period and was used during this reporting period.

The City has implemented a system that will ensure accurate information is recorded on all industrial and commercial inventories and threat prioritizations. Since January 2002, all business license applicants have been requested to complete an urban runoff information form to provide additional information about the business and its specific activities that have the potential to contribute to polluted runoff. The City will use this information to supplement the information in their business license database and refer to when needed. The requirement of the urban runoff forms has also helped to increase awareness of the City's Clean Water Program to business owners.

Based on the current inventory, the City contains approximately 629 businesses that are classified as High Priority Commercial Businesses. Table 4-2 provides a watershed-based summary of the number of commercial businesses and High Priority Commercial Businesses inventoried in the City.

**Table 4-2 Commercial Businesses and High Priority Commercial Businesses in the City by Watershed**

| Watershed | High Priority Commercial Businesses |
|---|---|
| San Luis Rey | 244 |
| Loma Alta | 255 |
| Buena Vista | 114 |
| Agua Hedionda | 16 |
| **Total** | **629** |

## 4.3 Threat Prioritization

Part F.3.c.(2) of the Municipal Permit requires the City to prioritize inventoried commercial businesses with regard for the potential threat that the site may have on the water quality of urban runoff. The Municipal Permit also requires that the prioritization be updated annually. The original prioritization of inventoried areas and activities was prepared in February 2002 and was provided in the Jurisdictional URMP document with the inventory. An updated prioritization of inventoried areas and activities is provided in Table 4.1 and will replace the original prioritization in the Jurisdictional URMP document.

The City has implemented a system that will ensure accurate information is recorded on all industrial and commercial inventories and threat prioritizations. Since January 2002, all business license applicants have been requested to complete an urban runoff information form to provide additional information for the business. The City will use this information to supplement the information in their business license database when conducting the inventories and threat prioritizations.

## 4.4 BMP Implementation

The City's Jurisdictional URMP Commercial Component requires the implementation and maintenance of applicable Best Management Practices (BMPs) by commercial business owners and/or operators pursuant to City Code. In order to ensure commercial business owners and operators are informed and understand the applicable BMPs to be implemented and/or maintained, site-specific BMPs for commercial areas and activities, located within the City, are specified in the Commercial Manual. As stated previously the Commercial Manual is distributed to businesses during inspections and/or visits by Code Enforcement officers, via the City's web page, and copies made available at City Hall

Code Enforcement officers ensure the applicable BMPs are implemented by commercial owners and/or operators through calls received on the Hotline and outside observations. All commercial business related calls received on the Hotline generated a case file in which Code Enforcement officers visited the facility and conducted follow-up visits until the commercial business was deemed in-compliance with City Code. All documentation pertaining to these site visits are available from the Code Enforcement division.

During the reporting period, the City of Oceanside continued to assist commercial and industrial businesses by distributing stencils for storm drain and dumpster area labeling. Stencils were distributed to businesses through regular inspection or through the Water Utilities Department counter.

## 4.5 Inspections

Section 4.5 of the Jurisdictional URMP document describes the City's program for conducting inspections of commercial businesses. This program was developed and implemented in accordance with part F.3.b.(6) of the Order. As detailed in the Jurisdictional URMP, inspections of High and Low Priority Commercial Businesses are conducted as deemed necessary by the Code Enforcement personnel. Some inspections are initiated in response to a public or municipal staff report, an illicit discharge source investigation, or as a follow up to a previous inspection.

The major activities and accomplishments undertaken by the City for this requirement during the reporting period included:

343 eating and drinking establishments were inspected at least once for the proper implementation and maintenance of grease control devices. The inspector forwarded all facilities that were not in compliance with stormwater regulations to Code Enforcement Officers.

One inspection of each of the twenty-two agricultural operations within the City of Oceanside was conducted for compliance to urban runoff regulation City Code Chapter 40.

One Hundred Twenty Seven (127) inspections of high priority commercial businesses within the City of Oceanside, excluding restaurants and agricultural operations, were inspected.

Ensuring proper and continuing training of the Code Enforcement Officers dedicated to the Clean Water Program.

During the 2003-2004, 2004-2005, and 2006-07 reporting periods, all eating and drinking establishments were inspected for compliance to the City's urban runoff regulations and adequate implementation and maintenance of BMPs. The initial inspection served to educate eating and drinking establishment owners and/or operators of their storm water and grease control BMP responsibilities by inspection of current BMPs, distribution of the Commercial Manual, and distribution of a BMP poster, booklet, and video to educate employees. During the 2006-07 reporting period all restaurants were raised to high priority and were inspected at least one time during the reporting period. If any restaurants were not in compliance follow-up inspections were conducted until they were in compliance per City Code.

Clean Water Program staff inspected 22 agricultural operations. A quick site inspection of the facilities revealed few had illegal discharges and/or inadequate BMPs. Staff informed the owners and/or managers of the any corrective actions which needed to be taken to be in-compliance with City Code. Follow-up inspections were conducted to ensure BMP implementation and elimination of illegal discharges. All operations were deemed in-compliance after follow-up inspections.

In addition, 127 commercial businesses were inspected. When Code Enforcement Officers conduct inspections, they often target whole commercial and industrial complexes. Often these business areas contain a mix of industrial and commercial operations. Rather than simply inspect the High Priority industrial businesses located in these parks, Code Enforcement officers inspect all businesses in the area to ensure owners and/or operators understand their BMP requirements and can work with their

neighbors to implement BMPs or solve drainage problems. Therefore, some commercial businesses are inspected in the process.

Code Enforcement officers received calls on the Hotline concerning potential violations at a commercial business, including the third follow-up inspection conducted at non-compliant restaurants. All calls on the Hotline generated a case file in which Code Enforcement officers visited the facility and conducted follow-up visits until the commercial business was deemed in-compliance with City Code. Copies of inspection reports are available from the Code Enforcement Division.

### 4.6 Enforcement

Section 4.5 of the Jurisdictional URMP describes the City's program for enforcement of ordinances at commercial sites. This program was developed in accordance with part F.3.b.(7) of the Order. The major activities and accomplishments undertaken by the City for this requirement during the reporting period included:

One Hundred Twenty Seven (127) commercial businesses were inspected within the City of Oceanside, excluding agricultural operations and eating/drinking establishments.

One inspection of each of the twenty-two agricultural operations within the City of Oceanside was conducted for compliance to urban runoff regulation City Code Chapter 40.

Enforcement actions by Code Enforcement Officers for commercial facilities begin with a referral from another department, a site visit, or by a complaint lodged by phone. Depending on the severity of the violation, follow up activities may include phone calls, site visits, written correction notices with specified timeframes, or administrative warnings. If these actions do not produce the required improvements, administrative citations (starting at $100, with a $1,000 maximum fine) are given. An accounting of all enforcement actions, taken by Code Enforcement Officers, is shown in the following table.

**Table 4-4 Accounting of Commercial Code Enforcement Actions for 2005-2006 Reporting Year**

| Action Type | Follow-up Phone Call | Follow-up Site Visit | Follow-up Office Visit | Written Notice | Letter Sent | Inspection Report | Admin. Warning | Administrative Monetary Citation | Referral to Other Dept | Stop Work Notice |
|---|---|---|---|---|---|---|---|---|---|---|
| # of Actions | 15 | 127 | 1 | 0 | 9 | *1* | 31 | 5 | 0 | 0 |

Copies of inspection reports and notices are available on request for further information

## 4.7 Reporting of Noncompliant Sites

The City is required to provide notification to the RWQCB of noncompliant sites in the City that are determined to pose a threat to human or environmental health. Oral notification is required within 24 hours of the discovery of noncompliance and a written report should be submitted to the RWQCB within 5 days of the incident. The criteria established for determining when a site is noncompliant and poses a threat to human or environmental health is described in Section 3.8 of this report.

The Regional Water Quality Control Board received complaints from private citizens regarding the following two projects:

Eternal Hills Cemetery Expansion

North County Transit District sprint Rail project.

The Regional Water Quality Control Board conducted their own site visits of these two operations during this reporting period.

## SECTION 5: RESIDENTIAL (EXISTING DEVELOPMENT) COMPONENT

This section documents the activities conducted by the City of Oceanside during the 2006-2007 reporting period to meet the requirements of Section F.3.d of the Municipal Permit. The foremost activity conducted by the City of Oceanside during the reporting period that responds to the requirements of this section of the Municipal Permit was the continued implementation of an enforcement program that responded to and monitored potential violation calls received on the Oceanside Urban Runoff Hotline (Hotline).

As part of the Jurisdictional URMP, the City also developed an Urban Runoff Requirements Manual for Residents (Residential Manual). The Residential Manual contains BMP requirements and related guidance for residents of the City. This manual has been distributed to residents through the City's web page and City Hall counters.

**Order 2001-01 Compliance Summary**

| | |
|---|---|
| F.3.d.(1)<br>Pollution Prevention | See Section 5.1 of this Annual Report |
| F.3.d.(2)<br>Threat to Water Quality Prioritization | See Section 5.2 of this Annual Report |
| F.3.d.(3)<br>BMP Implementation | See Section 5.3 of this Annual Report |
| F.3.d.(4)<br>Enforcement of Residential Areas and Activities | See Section 5.4 of this Annual Report |

### 5.1 Pollution Prevention

The City's Jurisdictional URMP Residential Component requires the implementation and maintenance of applicable pollution prevention Best Management Practices (BMPs) by residents pursuant to City Code. In order to ensure residents are informed and understand the applicable pollution prevention BMPs to be implemented and/or maintained, site-specific pollution prevention methods for residential areas and activities, located within the City, are specified in the Residential Manual.

The City has conducted notable efforts to ensure residents have either received a copy of the Residential Manual or pollution prevention BMP information, either through an inspection by Code Enforcement, information distributed at City Hall counters, through a direct mailing, or through a homeowners association or apartment complex management company. In addition, information pertaining to residential BMPs and copies of the Residential Manual are available on the Clean Water Program website. Extensive residential education has been conducted during the reporting period and can be reviewed in Section 9: Education Component of this annual report.

Code Enforcement officers ensure the applicable pollution prevention activities are implemented by residents through calls received on the Hotline and outside observations. All calls received on the Hotline generated a case file in which Code Enforcement officers visited the area of the complaint and conducted follow-up visits until the situation was deemed in-compliance with City Code. All documentation pertaining to site visits are available from the Code Enforcement division.

## 5.2 Threat to Water Quality Prioritization

Pursuant to Section F.3.d.(2) of the Order, the City identified High Priority Residential Areas and Activities in the Jurisdictional URMP. The following residential activities have been identified by the City to be High Priority Activities:

Automobile or boat repair and maintenance.

Automobile washing.

Automobile parking.

Home and garden care activities and product use.

Disposal of household hazardous waste.

Disposal of pet waste.

Disposal of green waste.

Any other residential activity that contributes a significant pollutant load to the MS4.

The City has also identified residential areas of High Priority. These areas include the following:

Residential areas located within 200 feet of an Environmentally Sensitive Area (ESA).

Residential areas where the discharges, storm water or non-storm water, are conveyed to an ESA without commingling with any other discharges or flows.

Residential areas tributary to a 303(d) listed water body and that involve (uses, generates, disposes, etc.) the pollutant for which the water body is listed

Without consideration of any BMPs, the area or activity involves pollutants in a quantity, manner, and location that results in or may result in a violation of water quality objectives in a receiving water.

## 5.3 BMP Implementation

The City's Jurisdictional URMP Residential Component requires the implementation and maintenance of applicable Best Management Practices (BMPs) by residents pursuant to City Code. In order to ensure residents are informed and understand the applicable BMPs to be implemented and/or maintained, BMPs for residential areas and activities, located within the City, are specified in the Residential Manual.

The City has conducted notable efforts to ensure residents have either received a copy of the Residential Manual or BMP information, either through an inspection by Code Enforcement, information distributed at City Hall counters, through a direct mailing, or through a homeowners association or apartment complex management company. In addition, information pertaining to residential BMPs and copies of the Residential Manual are available on the Clean Water Program website. Code Enforcement officers ensure applicable BMPs are implemented by residents through calls received on the Hotline and outside observations. All calls received on the Hotline generate a case file in which Code Enforcement officers visit the area of complaint and conduct follow-up visits until the situation is deemed in-compliance with City Code. All documentation pertaining to site visits are available from the Code Enforcement division.

## 5.4 Enforcement

Section 5.4 of the Jurisdictional URMP describes the City's program for enforcement of ordinances in residential areas. This program was developed in accordance with part F.3.d.(4) of the Order. The major activities and accomplishments undertaken by the City for this requirement during the reporting period included:

Code Enforcement response to 150 urban runoff related cases, related to residential areas and activities, during the reporting period.

An accounting of all residential enforcement actions, taken by Code Enforcement Officers, is shown in the following table.

**Table 5-4 Accounting of Residential Code Enforcement Actions for 2006-2007 Reporting Year**

| Action Type | Follow-up Phone Call | Follow-up Site Visit | Follow-up Office Visit | Written Notice | Letter Sent | Inspection Report | Admin. Warning | Administrative Monetary Citation | Referral to Other Dept. | Stop Work Notice |
|---|---|---|---|---|---|---|---|---|---|---|
| # of Actions | 157 | 229 | 6 | 39 | 34 | 0 | 28 | 5 | 2 | 0 |

# SECTION 6: LAND-USE PLANNING FOR NEW DEVELOPMENT AND SIGNIFICANT REDEVELOPMENT COMPONENT

This section documents the land use planning for new development and redevelopment activities performed by the City of Oceanside during the reporting period of July 1, 2006 to June 30, 2007. In order to satisfy the requirements set forth by Section F.1 of the SDRWQCB Order 2001-01 (Municipal Permit), the City continued implementation and refinement - of the comprehensive Land-Use Planning for the New Development and Redevelopment Component within the City's Jurisdictional Urban Runoff Management Program (JURMP). A directory of the subsections within the Order's Section F.1 and corresponding Annual Report compliance sections are listed in Table 6.1, below.

**Table 6.1: Order 2001-01 Compliance Summary**

| | |
|---|---|

## 6.1 General Plan

During the development and implementation of the JURMP, the City performed an assessment of the General Plan with respect to water quality. It was determined that policies exist in the General Plan which direct decisions for the protection of the natural environment and require implementation measures to protect the environment during land development stages as well as post-development. In an effort to bolster these policies, the City considered amendments to the General Plan which would establish specific water quality and watershed land use policies for the community.

Pursuant to the Municipal Permit, City Council adopted water quality and watershed protection concepts into the City's General Plan as amendments in June of the 2002-2003 reporting period. The revised General Plan continued to be implemented during the reporting period. There were no additional changes to the General Plan during 2006-2007, besides project specific land use amendments made in regards to North County Transit District rail projects.

## 6.2 Development Project Approval Processes

To address water quality issues, the City's development project approval process was modified during previous reporting periods, specifically to address the development project requirements and conditions of approval. During this reporting period, the City made no revisions to the Engineering SUSMP standard conditions to address the Storm Water Mitigation Plan (SWMP), Runoff Assessment Report (RAR), and Operation and Maintenance (O&M) Plan requirements.

The City strictly enforces its stormwater development requirements as part of the development plan process for discretionary projects and prior to issuing permits for ministerial projects. As applicable, a project is not considered for approval at the Planning stage without approval of a SWMP or RAR and grading plans are not approved at the Engineering stage until an O&M Plan has been approved and until the grading plans identify the precise locations and extent of any BMPs required by the SWMP/RAR. Additionally, all projects conditioned for the submission of a SWMP and O&M Plan must have an approved Storm Water Facilities Maintenance Agreement (SWFMA) and security posted (amount determined in the approved O&M Plan cost estimate) prior to obtaining approval for the grading plans. The City requires that the SWFMA be recorded along with the project property at the County Recorder in order to ensure long-term implementation of the stormwater plans, even beyond any change of ownership in the property.

The City implemented the requirement of submission of a RAR in December of 2002 in order to address water quality impacts from certain new development and redevelopment projects requiring discretional approval but which were slightly smaller than those which trigger the SUSMP requirements. As part of this program, a RAR guidance document was prepared to assist document preparers. During the 2006-2007 reporting period, 11 development projects triggered the RAR submittal requirements; these 9 initial project submittals collectively resulted in 5 additional re-submittals and subsequent reviews with 7 of the 11 project RARs being approved during the period. As well, 77 applicable development projects triggered the SWMP submittal requirements and these 77 initial project submittals collectively resulted in 61 additional re-submittals for review; 17 of these documents were approved. See Table 6-1 for more detail on project submittals and review results.

RARs were approved once comprehensive Site Design BMPs and Source Control BMPs were proposed at the project site while SWMPs required the same approach but with additional Treatment Control BMPs incorporated into the plan; review comments are sent to the document preparer for plans that are not approved. Examples of types of approved Treatment Control BMPs include vegetated swales, extended detention basins, infiltration trenches/basins, sand filters, and select proprietary devices and all of these proposed BMPs are required to meet specific design standards to ensure proper function and performance.

Once the SWMP is approved, an O&M Plan, a SWFMA and a security deposit (security) for the long term operation and maintenance of the BMPs are required to be submitted and approved prior to issuance of grading permits. The O&M Plan is reviewed with the grading plans to make sure that the grading plans incorporate all the BMPs, as identified in the SWMP and O&M Plan. During this reporting period a total of 39 O&M Plans and Agreements were submitted initially; 26 documents were re-submitted for review and 24 were approved.

The City maintains a philosophy of requiring a combination of treatment control BMPs to obtain acceptable pollutant removal efficiencies. Additionally, the City calls for implementation of treatment control BMPs above the Maximum Extent Practicable (MEP) standard if the receiving water is listed on the CWA 303-d List as impaired for pollutants which are also anticipated to be generated from the project ("primary pollutants of concern").

The SWMP submittal and review process continues to be tracked in a database. The City's electronic database for SWMP/O&M Plan and RAR tracking has been enhanced and includes: file number, name of the project, APN, type of development, site size, watershed, project owner, O&M approval status, amount of security required, maintenance agreement and contact information for the fiscally responsible party, and types of BMPs implemented on the site.

The City is in the process of updating its SUSMP guidance documents, including a SWMP template to address the requirements of the new Municipal Permit (Order R9-2007-0001). These updates should streamline document preparation and subsequent review process. Once in place, these documents will enhance the existing guidance manual. The City is also cataloguing its structural BMP locations by project APN to meet the new Municipal Permit requirements; the City is considering the incorporation of this data in its GIS mapping database for tracking accuracy. Any of these updates will be included in future Annual Reports as they are developed and implemented. Additionally, the City continues to participate in San Diego County Copermittee workgroups focused on improving and sharing effective resources in the implementation of the SUSMP requirements.

### 6.3 Environmental Review Processes

Pursuant to Municipal Permit Section F.1.c, the City has modified the Standard Environmental Checklist that is used to determine the environmental impacts of a project. The City continues to use the updated Environmental Checklist to evaluate the environmental impacts of proposed projects.

### 6.4 Education Efforts Focused on New Development and Redevelopment

The City has developed internal and external education programs to educate the municipal staff, planning boards, project applicants, developers, contractors, property owners and community planning groups of water quality issues. The City plans to provide a training seminar for the City Planning Commission in regards to adaptive watershed management and local government opportunities. The City's education programs are described further in the Section 9 Education Component of this document.

### 6.5 SUSMP Post Construction BMP Maintenance

The City of Oceanside has implemented a program to track and inspect projects that are subject to SUSMP requirements after construction to verify the correct implementation and maintenance of the approved BMPs for that project. During the 2006-2007 reporting year, 31 completed construction projects were inspected for post-construction BMP maintenance. This program will be continued in future reporting years and will include an improved tracking mechanism as part of WURMP activities.

# SECTION 7: CONSTRUCTION COMPONENT

The program described in this section was developed pursuant to Section F.2 Order 2001-01 (Municipal Permit) and contains the information required, as specified in Section H.1.a.(1) of the Order.

A large portion of the Construction Component of the City's JURMP is described in Chapter 40 of the City Code, the City's Grading and Erosion Control Ordinances, and the City's *Construction Urban Runoff Requirements Manual* (Construction Manual). This section primarily discusses those portions of the Construction Component that are not contained within these documents and references these documents for additional information where appropriate. The Construction Manual was developed by the City to provide construction projects with guidance in order to comply with the City Code and its ordinances. The Construction Manual is a living document and will change with time to ensure an effectively implemented program. Updated versions of the manual will be made available whenever modifications have been proposed and approved by the City.

## 7.1 Pollution Prevention

The City's Construction Component includes specifications for pollution-prevention methods that must be used by construction site owners, developers, contractors, and other responsible parties. These methods are described in the Construction Manual. Construction site owners, developers, contractors, and other responsible parties are subject to BMP requirement A.2.1 (BMP A.2.1), which states that all "Dischargers shall implement those Urban Runoff pollution-prevention practices that are generally recognized in that Discharger's industry or business, or for that Discharger's activity, as being effective and economically advantageous." Examples of pollution-prevention practices are provided throughout the Construction Manual to provide

guidance for responsible parties conducting construction activities that must identify and implement those practices. Implementation of pollution-prevention methods by responsible parties for construction sites is verified by the City through an inspection program summarized in Section 7.7 and also described in the Construction Manual. Inspectors use a checklist for their inspections that includes an item for pollution prevention methods. All pollution prevention BMPs listed in the JURMP were implemented or required to be implemented in the 2005-2006 reporting year. In the City of Oceanside, the majority of the construction projects are large-scale and all BMPs listed in the JURMP are needed and required by the City on each site. The City enforces the implementation of these methods pursuant to the City Code, as described in Section 7.8 and the Construction Manual. In some cases, the City may require the project proponent to implement advanced construction BMPs beyond those listed in the construction manual if a threat to runoff water quality is perceived and the current minimum BMPs seem insufficient. One such example is the Morro Hills Master Plan Development off Vandergrift Boulevard, where the City required the developer of this project to cover all barren slopes with straw blankets during the rainy season until groundcover plants could be established.

## 7.2 Grading Ordinance Update

The City is required by the Order to review and update its grading ordinances as necessary for compliance with the Order. On February 6, 2002 the City Council adopted an ordinance revising its grading and erosion control ordinances. The adopted ordinance made the necessary amendments to comply with the Order.

Significant amendments to the grading and erosion control ordinances are summarized below:

An erosion control plan must be developed for all grading projects

Necessary BMPs must be implemented on all grading projects to prevent erosion and sediment travel

Grading must be minimized during the wet season

The specific BMPs presented in Section F.2.b of the Order are required on all grading projects

Erosion control must be utilized as the primary method of preventing sediment from leaving the site

The areas to be cleared and graded must be limited to only those areas necessary for construction

Exposure time of cleared soils must be minimized, and areas must be re-vegetated as early as feasible

All slopes must be stabilized

Sites covered by the General Construction Storm Water Permit must provide proof of coverage prior to issuance of a grading permit

Discharges of sediment or other construction pollutants are prohibited

The City reserves the right to implement necessary BMPs to stop any prohibited discharge from a site at the permittee's expense

The City reserves the right to issue a Stop Work Order if the erosion control plan has not been implemented

The City reserves the right to revoke the grading permit until such time as the erosion control plan is properly installed and implemented.

## 7.3 Modification of the Construction and Grading Approval Process

The City is required by the Municipal Permit to make modifications to the City's construction and grading approval process as necessary to ensure that pollutants from the site will be reduced to the maximum extent practicable, to ensure that pollutants from the site will not cause or contribute to an exceedance of water quality objectives, and to ensure that all grading and construction activities (referred to by the City as projects) are in compliance with applicable ordinances, regulations, and the Municipal Permit.

Modifications to the City's approval process for construction and grading projects are supported by four actions taken by the City:

Amendments to the City's Grading and Erosion Control Ordinances (described in Section 6.2)

Revisions to the City's Planning Commission Standard Conditions of Approval

Amendments to Chapter 40 of the City Code

Implementation of a Construction Manual.

These actions, except for the amendments to the City's Grading and Erosion Control Ordinances that are described in Section 7.2, are described in the following sections. The approval process last underwent comprehensive updates and amendments in 2002 and has continued to be implemented successfully since then without further updates. The process will again be reviewed and amended, as necessary, in the following year in response to the implementation of the new Municipal Permit; any future changes will be provided in the revised JURMP or reported in the Annual Report, as appropriate.

### 7.3.1 Revisions to the City's Planning Commission Standard Conditions of Approval

Conditions attached to resolutions approved by the Planning Commission for proposed projects include measures that must be met and demonstrated by project proponents prior to the approval of grading and building permits. The standard conditions of approval for proposed projects have been revised to include more specific requirements related to protection of Urban Runoff. Prior to issuance of grading and building permits, the project applicant must demonstrate that they have complied with these requirements. Measures taken to comply with the requirements will be reviewed and approved by the Engineering and Building Departments as appropriate. The standard conditions of approval are listed in Attachment 6-A.

### 7.3.2 Amendments to Chapter 40 of the City Code

Chapter 40 of the City Municipal Code has been amended to include submittal requirements for those project requiring discretionary or ministerial approvals by the City. All such projects must demonstrate compliance with the general Urban Runoff requirements of the City Code through submittal of appropriate plans and other applicable information. Submitted information will be

reviewed by appropriate City staff to determine compliance of the project prior to issuance of grading and building permits.

The amendments to the City Code also incorporate the Construction Manual, which is provided to assist project proponents in complying with the requirements of the City Code. As described in the following section, the Construction Manual provides guidance to project proponents as to the appropriate level of information required for submittal when applying for grading and building permits. It also assists project proponents in selecting the appropriate BMPs to demonstrate that pollution prevention of Urban Runoff will be implemented on the project.

### 7.3.3 Implementation of a Construction Urban Runoff Requirements Manual

As described in the Construction Manual all construction projects that involve the disturbance of soil or pose a significant threat to Urban Runoff water quality must prepare an Urban Runoff Control Plan (URCP) and implement minimum BMPs. The City's standard submittal requirements for construction projects have been modified to require the proponent to assess the threat that the project poses to the quality of Urban Runoff, assign a threat to runoff water quality of High, Medium, or Low to the project, and prepare an applicable URCP. The threat prioritization process is summarized in Section 7.5 below and is presented to the project proponent through the issuance of the Construction Manual. Based on the assigned threat, the proponent must prepare one of two types of erosion control plans incorporating minimum BMPs. Low Priority Construction Projects will be required to submit a Low Priority URCP. The Low Priority URCP is described in the Construction Manual. Projects with a Medium or High Priority are required to submit a SWPPP prepared in accordance with the Caltrans *SWPPP and Water Pollution Control Program Preparation Manual,* the *California Stormwater Quality Association SWPPP* (available online at www.cabmphandbooks.com), or other approved format. In addition to the SWPPP, projects subject to the General Construction Storm Water Permit must provide proof of coverage under that permit and are required to comply with the regulations of that permit. Construction projects that do not involve the disturbance of soil or pose little or no threat to discharge pollutants can be relieved of these requirements through the submittal of a Statement of Understanding for Exempt Projects form. An example of the form is included in the Construction Manual.

The applicable URCP and the assigned threat category will be reviewed through the standard plan check process. If the plan is determined inadequate or should municipal staff performing the check determine that additional BMPs are necessary to ensure compliance with applicable codes and ordinances, the proponent will be required to modify and resubmit the plan. Pursuant to the grading ordinance and the City Code, the applicable permit will only be issued following a satisfactory review and approval of the project URCP.

## 7.4 Source Identification

The Order requires the City to develop, and update annually, a watershed-based inventory of all construction sites within the City's jurisdiction. The process described below has been developed by the City to develop this inventory and update it annually.

### 7.4.1 Inventory Process

The City's inventory process for construction sites is based on information collected from construction projects when they are applying for a grading or building permit. When the permit is approved, this information is then entered into a database developed by the City. If a permit was previously issued for a project, then the database is updated to reflect the most up-to-date

information. Capital improvement projects (CIPs) are also included in this database. CIPs are entered into the database by the City upon initiation of a project and the CIP project manager is responsible for providing all relevant information pertaining to the project. Completed construction projects are removed from the database when the City closes the permit or a CIP project is complete. The database is intended to facilitate with updates or additions to the inventory of construction projects and to track other Urban Runoff information related to those projects, such as inspections and enforcement actions. Although the City's inventory process is an ongoing one, prior to the rainy season, the database is reviewed to ensure that it is up-to-date and cross-referenced with any other applicable databases to ensure completeness.

### 7.4.2 Existing Inventory

The City has developed an existing watershed based inventory of all the construction projects in the City. The current inventory of construction projects is provided as Table 7-1, at the end of this section.

## 7.5 Threat to Water Quality Prioritization

The City is required under the Order to prioritize its inventory of construction sites with regard to the potential threat that each site may have on the water quality of Urban Runoff. The following section describes a process consistent with the Order to conduct the threat prioritization. The next section summarizes the results of the prioritization of the existing construction site prioritization

### 7.5.1 Threat Prioritization Process

As required by the Order, inventoried construction sites must be classified as High, Medium, or Low Threat to water quality with the consideration of many factors including: soil erosion potential, site slope, project size and type, sensitivity of Receiving Water bodies, proximity to Receiving Water bodies, non-storm water discharges, and any other relevant factors. The information for determining the project priority will be provided by the individual project proponents as described below.

Prior to submitting a project for a grading or building permit the project proponent should obtain a Construction Manual along with other submittal requirements for the appropriate project. The manual will provide information outlining discharge prohibitions under the City's storm water and grading ordinances, and provide the necessary information for the proponent to develop and implement an erosion control plan that complies with the City's requirements. CIP projects will be evaluated by the project manager prior to project initiation in accordance with the guidance provided in the Construction Manual.

As part of the development of the erosion control plan, the manual requires the proponent to prioritize the project with regard to the potential threat that the site may have on the water quality. The manual includes a worksheet titled the Project Storm Water Threat Assessment Form, and a matrix to assist the proponent with prioritizing the proposed project as a High, Medium, or Low Threat to water quality. The Project Storm Water Threat Assessment Form, with the proposed prioritization, will be submitted with the application for a building or grading permit. The information on the worksheet and the proposed prioritization is reviewed and evaluated for accuracy through the standard plan check process. A final prioritization is then recorded on the form.

The project prioritization process presented in the Construction Manual is based on the project size, the presence of significant erodible slopes, project type, proximity to sensitive water bodies, and potential to produce harmful non-storm water discharges. Project proponents are prompted to identify the size of the proposed project and then to respond to the following questions on the Urban Runoff Threat Assessment Form:

Item 1: Are you grading or otherwise disturbing soil over more than 1 acre?

Item 2: Will the project involve grading or soil disturbance?

Item 3: Is the project tributary or adjacent to environmentally sensitive water bodies within the City?

Item 4: Does the project include significant erodible slopes?

Item 5: Does the project have the potential to produce non-storm water discharges or pollutants?

Item 6: With the project will more than 5,000 sq. ft. of impervious surface area?

The project proponent is then directed to reference a prioritization matrix to determine the priority of the project. An example of the matrix is provided in Table 7.2. The matrix is used by first locating the appropriate row in the matrix according to the size of the project, then moving across the row; the proponent should refer to the answers given to the five questions above. If "Yes" was responded to a question, the corresponding box in the matrix provides the priority for the project.

The use of this matrix was developed consistent with the requirements of the Order. Under this process, construction sites that meet either of the following conditions must be classified as High Priority:

The construction site is greater than 50 acres and grading will occur during the wet season (October 1 through April 30)

The construction site is five acres or more and tributary to a CWA section 303(d) water body impaired for sediment or is within or directly adjacent to or discharging directly to a coastal lagoon or other Receiving Water within an ESA.

Should the project proponent find that the proposed site does not meet the mandatory High Priority criteria listed above, then the project is evaluated on additional characteristics such as significant erodible slopes, project type, proximity to sensitive water bodies, and potential to produce harmful non-storm water discharges to determine if it is High Priority.

In general, Medium Priority Construction Sites are those that are between one and five acres, and are not tributary to a CWA Section 303(d) water body impaired for sediment or within or directly adjacent to or discharging directly to a coastal lagoon or other Receiving Water within an ESA. In addition, Medium Priority Sites include sites less than one acre that have additional features that may adversely effect urban storm water quality or contribute to degradation of a sensitive water body. These features would include such items as the presence of significant erodible slopes, project type, proximity to sensitive water bodies, and potential to produce non-storm water discharges.

Low priority Sites are limited to sites of less than one acre. In addition, the sites must not be tributary to a CWA Section 303(d) water body impaired for sediment or within or directly

adjacent to or discharging directly to a coastal lagoon or other Receiving Water within an ESA and do not have a significant potential to adversely affect urban storm water quality.

### 7.5.2 Existing Threat Prioritization

Each of the construction sites subject to drainage control and inspection is prioritized through the process presented above. The results of the threat prioritization of existing construction sites subject to drainage control and inspection are provided in the inventory in Table 7-1, provided at the end of this section. The threat prioritization is updated annually and included in the Annual Report.

## 7.6 BMP Implementation

The Order requires the City to designate minimum BMPs for each of the three threat categories. For each of the threat categories, the Construction Manual presents the minimum BMPs that must be incorporated into the project's URCP or SWPPP and implemented on the site. The manual references the Caltrans *Storm Water Quality Handbooks Construction Site BMP Manual* and the City will use this manual as the standard by which BMPs are implemented and maintained. Another accepted BMP Reference for Construction is the California Stormwater Quality Association (CASQA) Construction BMP Handbook, which can be downloaded and printed from the website, www.cabmphandbooks.com. Through the City Code and the Construction Manual, each project proponent is required to implement the minimum BMPs outlined in the project's URCP or SWPPP.

In addition to the standard minimum BMPs specified in the Construction Manual for each threat category, the City will reserve the right to require any additional BMPs that it determines necessary to adequately comply with the Order. If a standard minimum BMP is infeasible at a specific site, the project proponent will be required to implement an alternative BMP that is the equivalent, or more stringent than the BMP for which it is being substituted. The particular BMPs for each threat category are included in the Construction Manual in Table 5-1.

## 7.7 Inspection of Construction Sites

The Order requires that the City develop and implement an inspection program to ensure that each construction site properly complies with the City's relevant ordinances, permits, and the Order. This section describes the City's program for inspections of construction sites developed in accordance with Part F.2.g of the Order.

Each project will be assigned a storm water inspector who is tasked with conducting inspections at the site throughout the construction phase of the project. All storm water inspectors have been educated in the requirements of the Order and through in-house training and seminars, and/or construction-specific certificate training seminars offered by the Building Industry Association on the proper items to inspect. Furthermore, the City is in the process of improving inspection forms in anticipation of the upcoming Order renewal.

### 7.7.1 Inspection Frequency

Initial inspection of High Priority Construction Sites are conducted immediately following the commencement of work, daily during the wet season, and as deemed applicable by the inspector during the dry season. Low and Medium Priority Construction Sites are initially inspected immediately following commencement of work, at least twice during the wet season, and as deemed applicable during the dry season.

### 7.7.2 Inspection Procedures

Inspections of construction sites are conducted by a designated storm water/erosion control engineering inspector and inspections are tracked using the construction projects database. This section describes the procedures that inspectors follow to conduct inspections.

**Step 1: Pre-inspection Preparation**

Each inspector becomes familiarized with the project's URCP or SWPPP. During the review of the plan, the inspector reviews the proper installation and maintenance procedures for each of the site BMPs. The inspector also prepares an Urban Runoff inspection package for the site. The inspection package includes an inspection record and an erosion control site plan depicting the location of each required physical BMP.

**Step 2: Initial Site Inspection**

Immediately following the commencement of work, the assigned inspector visits the project site and meets with the designated water pollution control manager. The inspector reviews the URCP or SWPPP with the designated water pollution control manager, and verifies that the manager has a complete and thorough knowledge of the requirements and procedures outlined in the plan. The inspector and manager then perform an inspection of the site to confirm that the required BMPs have been properly installed and review the maintenance schedule and procedures for each BMP. At the conclusion of the inspection, the inspector will note the condition and installation of each BMP on the inspection record.

**Step 3: Follow-Up Inspections**

Follow-up inspections are conducted per the frequencies presented in Section 7.7.1. During each follow-up inspection the inspector reviews the URCP or SWPPP with the water pollution control manager and verifies that the scheduled installation and/or maintenance of the required BMPs are being adhered to. The inspector also evaluates the effectiveness of the BMPs, and verifies if additional BMPs are necessary to ensure pollutants have been reduced to the MEP. The inspector then reviews the inspection record with the storm water quality manager and informs the manager of any discrepancies or deficiencies found during the inspection.

## 7.8 Enforcement of Construction Sites

The City is required to enforce its ordinances at all construction sites. Currently, if an inspector determines that a construction site is out of compliance with applicable ordinances, a "Stop Work" order may be issued. If further enforcement actions are warranted, the inspector contacts the Code Enforcement Department and a Code Enforcement officer visits the site and issues the proper enforcement action. An enforcement action would typically occur as a result of an inspection or in response to a public or municipal staff reporting. The City employs several enforcement actions and penalties to ensure compliance with its ordinances. The levels of enforcement and associated penalties are typically issued at the discretion of the Code Enforcement officer with consideration of relevant circumstances regarding the violation.

The general process for applying enforcement to construction sites for Urban Runoff related violations is as follows:

The initial phase (pre-code enforcement officer involvement) of construction site enforcement actions includes inspections, meetings, and correction or stop-work notices. Initial enforcement actions proceed as follows: The inspector will initially verbally tell the site supervisor the issues that need improvement at the time of the site inspection, as well as give a copy of the inspection

report describing the problems to the supervisor. If a follow-up inspection shows that site is still not in compliance, a correction notice is given to the site supervisor. The correction notice specifies the deficiencies as well as the required actions, which have to be done in 24 hours. The inspector returns within 24 hours. If the site has not been brought into compliance, a stop work notice is given and Code Enforcement is notified to move forward with administrative notices.

A summary of the initial phase of enforcement actions is shown in Table 7.2, below. Copies of inspection forms and notices are on file at the City.

**Table 7.2: Accounting of Initial Phase of Construction Inspection and Enforcement Actions for the 2005-2006 Reporting Period**

| | Construction Sites Requiring Inspections | Routine and Follow-up Site Inspections | Meetings or Calls w/ Site Contact | Correction Notices | Stop-Work Notices | Cases Forwarded to Code Enforcement for Further Action |
|---|---|---|---|---|---|---|
| **High Priority Sites** | 27 | 1300 | 777 | 56 | 4 | 7 |
| **Medium Priority Sites** | 19 | 780 | 255 | 22 | 0 | 10 |
| **Low Priority Sites** | 31 | 604 | 350 | 35 | 0 | 3 |
| **Total** | 77 | 2684 | 1382 | 113 | 4 | 20 |

Enforcement actions by Code Enforcement Officers for construction sites begin with a referral from another department, a site visit, or by a complaint lodged via phone. Depending on the severity of the violation, follow up activities may include phone calls, site visits, written correction notices with specified compliance timeframes, or administrative warnings. If these actions do not produce the required improvements, administrative citations (starting at $100, with a $1,000 maximum fine) and/or stop-work notices are given.

## 7.9 Reporting of Noncompliant Sites

The City is required to provide notification to the RWQCB of non-compliant sites in the City that are determined to pose a threat to human or environmental health. Verbal notification is required within 24 hours of the discovery of non-compliance and a written report should be submitted to the RWQCB within 5 days of the incident. The criteria established for determining when a site is not compliant and poses a threat to human or environmental health is described in Section 3.8 of the Industrial Component. No such sites were identified this reporting period and thus no relevant notifications were sent to the RWQCB.

## 7.10 Education on Construction Activities

The City is required by the Order to implement education programs in order to inform the construction community, as well as municipal staff as to the effects that sediment and other construction discharges have on the quality of receiving waters. The City has developed various education programs to meet the objectives of the Order and hosted and/or participated in several workshops to educate the construction community this reporting period. Summaries of these programs and events are presented in Section 9: Education Component of this document.

## SECTION 8: ILLICIT DISCHARGES DETECTION AND ELIMINATION COMPONENT

This section documents the activities conducted by the City of Oceanside during the 2006-2007 reporting period to meet the requirements of Section F.5 of the Municipal Permit. The foremost activity conducted by the City of Oceanside during the reporting period that responds to the requirements of this section of the Municipal Permit was the continued implementation of a comprehensive Illicit Discharge Detection and Elimination Component within the City's Jurisdictional Urban Runoff Management Program (Jurisdictional URMP).

### 8.1 Illicit Discharges and Connections

The City has several programs that actively seek and eliminate illicit discharges to the MS4 including inspection, enforcement, monitoring, and community outreach activities. Inspection and enforcement of municipal, industrial, commercial, residential, and construction activities contribute to the identification of illicit discharges and the elimination of those detected by focusing on the source of illicit discharges. Often, when an illicit discharge is detected during one of these programs, it can be eliminated before it affects the receiving waters.

The City participates in and conducts regional and jurisdictional monitoring programs to detect illicit discharges within the MS4 and their receiving waters. The City contributes to the regional urban runoff monitoring program required by the Order and reviewed in detail in the San Diego County Copermittees' Urban Runoff Monitoring Report. This program monitors the receiving waters within the City. The City also participates in the Coastal Storm Drain Monitoring Program which is part of the regional monitoring requirements, but implemented by City staff. Discharges to the ocean can be identified

immediately and eliminated. The jurisdictional Dry Weather Field Screening and Analytical Monitoring Program is the main monitoring program that identifies illicit connections and illicit discharges (IC/IDs) to the MS4 during the summer, dry months. This program is discussed in more detail in Section 8.2.

Community support is an important resource for identifying illegal discharges. Residents and city staff are the best source for timely detection and identification of potential threats to the MS4 and its receiving waters. Residents of the City are encouraged to call the Urban Runoff Hotline to report any possible violations or problems.

Monitoring programs and community reports often detect the illegal discharges, however the source of the discharge is not always immediately evident and, therefore, elimination can be difficult. The City implements investigational source identification procedures within these programs to track down the sources and eliminate the discharge.

Elimination of an illegal discharge often requires some level of enforcement and/or abatement action. The Oceanside City Code grants the City power to enforce its regulations pertaining to illicit discharges. In addition, the Code provides the City the ability to require a responsible party to conduct abatement activities to eliminate an illicit discharge, or for the City to conduct those activities itself, at the cost of the responsible party.

The activities conducted by the City during the reporting period that fall under the illicit discharge detection and elimination effort are described in various locations within this document. The following sections discuss some of those activities that are not described within the other sections of this document. Specific IC/ID incident sheets are included in Attachment 8-A

## 8.2 Dry Weather Analytical Monitoring

In February 2001, the San Diego Regional Water Quality Control Board issued Order No. 2001-01 to the communities of San Diego County. As part of Order 2001-01, the City of Oceanside was required to develop and implement a Dry Weather Field Screening and Analytical Monitoring Program. The purpose of the program was to detect and eliminate illicit connections and illegal discharges (IC/IDs) to the storm drain system, minimizing the negative impacts of human activities on receiving water bodies. Information collected from the dry weather monitoring is also used to characterize dry weather discharges in the storm drain system and identify conveyances that are discharging elevated levels of pollutants. Follow-up studies and source investigations are conducted as necessary, to detect and eliminate the sources of these pollutants. A summary of the 2007 Dry Weather Field Screening and Analytical Monitoring Program results are included in this section. The full report is included in Attachment 8-B.

Of the 100 sites in the historical dry weather monitoring program, 93 sites were accessible and visited in 2007. Thirty six sites had measurable flowing water and 25 sites were ponded with enough water to sample, combining for a total of 61 sites where initial field screening was conducted. Eighteen of these sites were chosen for laboratory testing for chemistry and microbiology parameters.

The field screening techniques consisted of qualitative field observations, flow measurement, and field analyses of selected water quality parameters. Field screening

was conducted at all sites with flowing or ponded water. Additional laboratory analysis was conducted on 30% of the field screening sites.

At each site with ponded or flowing water, water samples were collected and analyzed in the field for the following constituents:

- Temperature
- pH
- Nitrate-N
- Ammonia-N
- Reactive Phosphorus (orthophosphate-P)
- Specific Conductance
- Turbidity
- Dissolved Oxygen
- Salinity

Additional water samples were collected at eighteen sites for laboratory analysis of the following constituents:

- Total Hardness
- Surfactants (MBAS)
- Oil and Grease
- Cadmium (Dissolved)
- Copper (Dissolved)
- Lead (Dissolved)
- Zinc (Dissolved)
- Enterococcus Bacteria
- Total Coliform Bacteria
- Fecal Coliform Bacteria
- Chlorpyrifos
- Diazinon

Each station was visited at least once during the dry weather season (May 1st to September 30th). When field measurements and/or laboratory analysis showed an exceedance of established action levels, the site was revisited to confirm the initial results. The action levels used for the 2007 dry weather monitoring period are presented in Table 8-1. If the initial results were confirmed and an exceedance continued, an upstream investigation was initiated. In addition, any potential illicit connections/illicit discharges (IC/IDs) found visually or with any other evidence of gross contamination, an IC/ID investigation was pursued immediately (e.g., substantial petroleum sheen, excessive turbidity, extremely high ammonia concentration, evidence of sewage release, etc.).

**Table 8-1. 2007 Dry Weather Monitoring Action Levels**

| Analyte | Action Level |
|---|---|
| **Field Measurements** | |
| pH | 6.5-9.0 pH units |
| Conductivity | N/A |
| Turbidity | N/A |
| Dissolved Oxygen | N/A |
| Temperature | N/A |

| | |
|---|---|
| Salinity | N/A |
| Ammonia Nitrogen | 1.0 mg/L |
| Nitrate as N | 10.0 mg/L |
| Orthophosphate | 2.0 mg/L |
| **Laboratory Measurements** | |
| Surfactants (MBAS) | N/A |
| Oil and Grease | 15 mg/L |
| Total Hardness | N/A |
| Cadmium (Dissolved) | California Toxics Rule (CTR) |
| Copper (Dissolved) | California Toxics Rule (CTR) |
| Lead (Dissolved) | California Toxics Rule (CTR) |
| Zinc (Dissolved) | California Toxics Rule (CTR) |
| Total Coliform Bacteria | 50,000 MPN/100mL |
| Fecal Coliform Bacteria | 20,000 MPN/100mL |
| Enterococcus | 10,000 MPN/100mL |
| Chlorpyrifos | 0.5 µg/L |
| Diazinon | 0.5 µg/L |

Table 8-2 lists the monitoring sites visited during the 2007 Dry Weather Monitoring Program, their conveyance type, land use, and any action levels that were initially exceeded.

**Table 8-2 2007 Dry Weather Monitoring Site IDs, Descriptions, and Action Level Exceedances.**

Sites that exceeded one or more action level were revisited and resampled to confirm the initial result. If the confirmation result also exceeded an action level, an IC/ID investigation was initiated. Twenty eight sites had one or more action level exceedances that required confirmation and/or an IC/ID investigation.

The most common exceedance was for ammonia; 15 sites had an initial exceedance. This was common in ponded water where organic matter breakdown would cause higher levels of ammonia. Where upstream investigations were possible and flowing water was sampled, the ammonia concentration would often decrease below the action level. The action level for orthophosphate-P was exceeded at 12 sites during the initial screening. The majority of these sites were also ponded. Nine of the 18 sites that were initially sampled for laboratory analysis exceeded one or more of the fecal indicator bacteria action levels. The prevailing source for ponded and flowing water was from residential and park over-irrigation. Over 1500 letters targeting areas in the City where the various exceedances occurred were sent out to residents. Meetings were also held with Park maintenance staff and contractors to work together on reducing runoff from the City's parks. Section 8.10 contains a detailed description of the confirmation and IC/ID investigations at each site and the actions that were taken to reduce contaminants.

The 2007 monitoring season also brought about a review of the past six years of dry weather monitoring data. Exceedance trends and basic analysis was completed. In addition, variation in monitoring locations were identified and incorrectly reported nitrate results from previous years were identified.

The first review was of the monitoring sites and possible variation from year to year. Eighteen sites of the 100 listed to visit in 2007, have had some type of variation between the past six years of sampling. During one or more monitoring seasons, a different storm drain was visited than the previous years, but labeled the same drain. For example, at Site L033, the picture of the site visited in 2006 appears to be different than the pictures taken the other five years, but it was still labeled and results recorded as L033. The majority of these sites with variation have been dry and so do not affect historical data. However, the sites have been identified in the Site Descriptions Section and Sampling History sheets have been created.

The second major review was of nitrate results from the previous monitoring reports. It has been identified that for monitoring years 2005 and 2006, the nitrate results were reported as $NO_3$ as opposed to $NO_3$-N. This resulted in values that were erroneously high and some were falsely reported as exceedances. The 2002 and 2003 monitoring years appear to have followed the same procedure; however no notes or discussions have been found to verify this. The historical data may be updated and re-submitted for the Regional Urban Runoff Program to use.

After these corrections were made, it appears that nitrate exceedances are consistent through the past six years, with only two or three sites exceeding the action levels. However, ammonia and orthophosphate exceedances were up in 2007, likely due to a higher number of ponded sites being sampled. Indicator bacteria exceedances have been decreasing since 2005. In the 2005 monitoring year 100% of lab sites exceeded the action level for one or more indicator bacteria; in 2006, 63% of lab sites exceeded the action level for one or more indicator; in 2007, 50% of lab sites exceeded the action level for one or more indicator.

Follow-ups continue to be conducted and ongoing monitoring and BMP selection are being analyzed at sites that have continued exceedances.

### 8.3 Investigation/Inspection and Follow-up

Source investigations are conducted by the City when an illicit discharge is detected or suspected, and the source of the illicit discharge is not readily identifiable. The purpose of source investigations is to locate the source of an illicit discharge so that all necessary measures required to eliminate the illicit discharge can be implemented.

Jurisdictional URMP source investigations are initiated when appropriate information suggests a reasonable potential for the existence of an illicit discharge. Such instances may include the following:

- Dry weather monitoring field screening produces constituent measurements which meet or exceed action criteria
- Dry weather monitoring laboratory analysis produces constituent measurements which meet or exceed action criteria
- Professional judgment of monitoring personnel determines that there is a reasonable potential for an illicit discharge to exist due to observations and measurements
- A public or City staff report indicates the possibility of an illicit discharge with an unknown source
- Results from the Receiving Waters Monitoring programs indicate the possibility of an illicit discharge

Investigations during the 2006-2007 reporting period are summarized in Section in 8.10.

### 8.4 Elimination of Illicit Discharges and Connections

Depending on the type of illicit discharge detected, the City implements various procedures to immediately eliminate the discharge. Illicit discharges that are the City's responsibility are immediately eliminated by contacting the appropriate supervisor who

oversees the activities resulting in a discharge. If the party responsible for the illicit discharge is one other than the City, the Code Enforcement personnel will ensure that the discharge is immediately eliminated. However, sometimes, due to the source and nature of the report, the fire department or the streets department may respond to an illicit discharge. Both of these departments are trained to immediately eliminate the discharge, however, documentation of these activities may not always be recorded. During the reporting period, Code Enforcement responded to 279 urban runoff related cases.

## 8.5 Enforce Ordinance

The City employs several enforcement mechanisms and penalties to ensure the compliance with its ordinances. The levels of enforcement and associated penalties are typically issued at the discretion of the Code Enforcement officer with consideration of relevant circumstances regarding the violation.

During the reporting period, Code Enforcement responded to 279 urban runoff related cases.

## 8.6 Prevent and Respond to Sewage Spills and Other Spills

### 8.6.1 Spill Prevention

**City Sanitary Sewers**

The City's preventive and corrective sewer maintenance programs consist of a variety of components provided for the operation, maintenance, repair and replacement of sewer mains, manholes, and pump stations. The programs provide for the routine monitoring, inspection, cleaning, and related maintenance of all components of the collection system in order to reduce the potential of sanitary sewer overflows (SSO) and other structural failures. Potential problems are noted and maintenance schedules adjusted accordingly. If necessary, repairs are initiated by City maintenance crews. Larger more complex projects are referred for inclusion in the CIP process for planning, design and construction.

When system malfunctions do occur, such as SSO main stoppages, electrical outages, and mechanical breakdowns, the cause of the problem is investigated and analyzed. Maintenance schedules are then adjusted accordingly. If appropriate, the infrastructure component is referred for repair or replacement by maintenance crews.

A revised main cleaning strategy has been implemented during the past years. Cleaning schedules are analyzed and adjusted for proper scheduling. The remaining portions of the system are being assigned to routine inspection and cleaning schedules.

**Private Sewer Laterals and Septic Systems**

The City requires that private sewer laterals and septic systems be designed and operated in accordance to industry standards. The City also requires the proper maintenance of these facilities in order to avoid spills, breakages, and failures.

**Other Spills**

The City prevents spills of other pollutants through the implementation of BMPs, secondary containment, and other mechanisms to prevent and avoid spills.

Spills from private businesses and residents are reduced through required BMPs, education, and enforcement of relevant regulations for the storage and usage of hazardous materials.

### 8.6.2 Spill Notification

The City operates a notification hotline under its Public Works Department to receive notification of spills during business hours. After hours, holidays and on weekends, these calls are answered through the Oceanside Police Department.

### 8.6.3 Spill Response

Responses to sewer spills are conducted in accordance to the City's Sewer Overflow Response Plan. During the 2006-2007 reporting period, the City responded to 14 sewer spills, only one spill reached receiving water. Of the 11 sewer spills, three were from private spills, and six were listed with grease as the primary cause. In response to the number of grease related SSO, the Clean Water Program has published educational material in Oceanside Magazine, distributed flyers inserted in utility bill mailings, and is developing bilingual educational materials regarding grease contributions to SSO for additional residential distribution. Notifications of these spills are submitted to the RWQCB through quarterly reports. A summary of SSO overflows during 2006-2007 is included in Table 8-3.

Responses to other spills are conducted by the Fire Department or qualified personnel in the Public Works Department, as appropriate to the situation. Both small and large spills are handled following HAZMAT Incident Response Team (HIRT) Policies and Procedures as issued by the Unified San Diego County Emergency Services Organization.

## 8.7 Public Reporting of Illicit Discharges and Connections

The City maintains the public Clean Water Program Hotline for urban runoff related reports and complaints through its Water Utilities Department. The hotline is answered during business hours by City staff. Bilingual staff is available to handle calls by Spanish speakers. After hours, the hotline is forwarded to Police Dispatch.

The hotline is publicized in the *Oceanside Community Magazine*, the *North County Times* newspaper, the City's website, the Clean Water Program website, informational literature for public distribution, and at local community events and meetings. In addition, education to the public stresses the importance of reporting discharges and describes the critical role that the public plays in the identification and elimination of Urban Runoff pollution related problems.

City staff is also encouraged to report urban runoff related violations and problems through an incentive program implemented by the City. Staff is provided with their own incentive based reporting hotline called Oceanside Eyes, which allows them to earn credit towards certain awards for each report that they phone in.

During the 2006-2007 reporting year, the city received 14 calls to the Clean Water Program Hotline, and 279 calls to the Code Enforcement Hotline. Detailed information concerning responses may be obtained from the different responding departments, primarily the Streets Division and Code Enforcement.

### 8.8 Disposal of Used Oil and Toxic Materials

The City received funds from the California Integrated Waste Management Board to establish a permanent household hazardous waste (HHW) collection facility for its residents. The City's objective was to make the collection of HHW materials easy for residents. This facility is currently open Monday through Friday for used oil, paint, and antifreeze disposal and every Saturday for HHW collection of the following materials:

| | | |
|---|---|---|
| Aerosols | Drain opener | Rubber cement |
| All purpose cleaners | Furniture polish | Rug/upholstery cleaner |
| Ammonia | Gasoline | Scouring powder |
| Antifreeze | Glass cleaner | Silver polish |
| Automobile cleaners | Herbicides | Toilet bowl cleaner |
| Barbecue lighter fluid | Mothballs | Transmission fluid |
| Batteries | Motor oil | Tube and tile cleaner |
| Brake fluid | Oven cleaner | Turpentine varnish |
| Chlorine bleach | Paint | Water sealant |
| Detergents | Paint thinner | Wood finish |
| Disinfectants | Pesticides | |

The HHW collection facility is periodically promoted by the City through the *Oceanside Community Magazine*, the *North County Times* newspaper, on the Clean Water Program website and at local community events and meetings where literature is distributed. There is also literature available to the public at the City offices.

The City also provides information to the public on used motor oil recycling and identifies the local state certified collection centers in the City. Furthermore, as part of the City's collection program, a 1,500-gallon used oil collection receptacle is provided at the City's harbor.

During the 2006-2007 reporting period, over 3,668 Oceanside households utilized the household hazardous waste disposal facility, disposing or recycling 130.7 tons of hazardous materials (including universal waste) during the reporting period. An additional 153 Oceanside households recycled 115.2 tons of E-waste in the same reporting year.

### 8.9 Limiting Infiltration from Sanitary Sewer to MS4

The City's program for the routine maintenance and surveys of the sanitary sewer system is described in Section 8.6.1. These procedures will limit the amount of leakage that may occur from the sewer. Routine maintenance and surveys of the City's MS4 is described in Section 2.5.

For the most part, infiltration from the sanitary sewer to the MS4 is not viewed as a substantial problem because of the comprehensive surveying and maintenance programs implemented by the City for both systems. In addition, the Dry Weather Monitoring Program implemented by the City will readily identify leaks from the sanitary sewer system to Receiving Waters.

# SECTION 9: EDUCATION COMPONENT

This section documents the education activities conducted by the City of Oceanside during the 2006-2007 reporting period to meet the requirements of Section F.4 of the Municipal Permit. The foremost activity conducted by the City of Oceanside during the reporting period that responds to the requirements of this section of the Municipal Permit was the continued implementation of a comprehensive Education Component within the City's Jurisdictional Urban Runoff Management Program (Jurisdictional URMP).

One of the most powerful tools for improving water quality is education. An informed public is the key behind acceptance of activity behavior changes, in regards to urban runoff pollution prevention. As reflected in the projects and programs developed and implemented thus far, the City of Oceanside is committed to continuing a strong education program for all target audiences listed in the Municipal Permit.

**Order 2001-01 Compliance Summary**

| | |
|---|---|
| F.4.a<br>Education for All Target Communities | See Entire Section 9 of this Annual Report |
| F.4.b<br>Education for Municipal, Construction, Industrial, Commercial, and Quasi-Governmental Communities | See Sections 9.1, 9.2, 9.3, 9.4, and 9.6 |
| F.4.c<br>Residential, General Public, School Children Communities | See Section 9.5 of this Annual Report |

## 9.1 Municipal Departments and Personnel

Education of municipal staff is a priority of the City of Oceanside, ensuring compliance to Jurisdictional URMP and Municipal Permit requirements. Departments with direct involvement in the Clean Water Program have received overall urban runoff education and job specific recommendations/guidelines for compliance to Jurisdictional URMP requirements. Job related Best Management Practices are discussed and the Municipal Manual distributed.

Table 9-1, beginning on the following page, lists the municipal education efforts conducted between July 2006 - June 2007.

**Table 9-1 Municipal Education Activities**

| Date | Training/Department | Focus |
|---|---|---|
| 03/06 | Water Utilities Department – Weese Filtration Plant | Urban Runoff impacts; Jurisdictional URMP requirements; BMPs for specific activities |
| 3/06/2006 | Parks and Recreation Department Administration | Urban Runoff impacts; Jurisdictional URMP requirements; BMPs for specific activities |
| 3/7/2006 | Parks and Recreation | Urban Runoff impacts; Jurisdictional |

| Date | Training/Department | Focus |
|---|---|---|
| | Contracted Landscaping – TruGreen Landcare | URMP requirements; BMPs for specific activities |
| 3/16/2006 | Engineering Department – Construction Inspectors | Construction site BMPs; Urban Runoff impacts; Jurisdictional URMP requirements; BMPs for specific activities; SWPPP implementation |
| 03/29/2006 | Building Department – Building Inspectors | Construction site BMPs; Urban Runoff impacts; Jurisdictional URMP requirements; BMPs for specific activities; SWPPP implementation |
| 3/29/2006 | Public Works Department – Parking Enforcement | Municipal Permit requirements; Inspection procedures; BMP implementation and maintenance |
| 3/29/2006 | Water Utilities Administration | Stormwater Ordinances, BMPs, pollutants of concern |
| 3/29/2006 | La Salina Wastewater Treatment Plant Operators | Stormwater Ordinances, treatment plant/industrial BMPs, SWPPP |
| 4/18/2006, 5/04/2006 | San Luis Rey Wastewater Treatment Plant Operators | Stormwater Ordinances, treatment plant/industrial BMPs, SWPPP |
| 4/28/2006 | Public Works Department - Fleet Maintenance - City Operations Center | Municipal Permit requirements; Inspection procedures; BMP implementation and maintenance |
| 5/9/2006 | Public Works Department – Traffic Control - City Operations Center | Urban Runoff impacts; Jurisdictional URMP requirements; BMPs for specific activities |
| 5/09/2006 | Parks and Recreation Department – Park Maintenance | Urban Runoff impacts; Jurisdictional URMP requirements; BMPs for specific activities |
| 5/09/2006 | Public Works Department – Streets and Storm drain Maintenance - City Operations Center | Urban Runoff impacts; Jurisdictional URMP requirements; BMPs for specific activities |
| 5/16/2006 | Police Department – Dispatch | Urban Runoff impacts; Jurisdictional URMP requirements |
| 5/16/2006 | Finance Department – Business License | Urban Runoff impacts; Jurisdictional URMP requirements; BMPs for specific activities |
| 5/18/2006 5/23/2006 5/25/2006 | Police Department – Dispatch | Urban Runoff impacts; Jurisdictional URMP requirements |
| 5/18/2006 | Harbor and Beaches Department – Harbor Police | Urban Runoff impacts; Jurisdictional URMP requirements; BMPs for specific activities |
| 6/2006 | Fire Department – Fire Personnel | Urban Runoff impacts; Jurisdictional URMP requirements; BMPs for specific activities |
| 6/15/2006 | Waste Management, Inc. | Urban Runoff impacts; Jurisdictional URMP requirements; BMPs for specific activities |

| Date | Training/Department | Focus |
|---|---|---|
| 6/23/2006 | Engineering – Capital Improvement Project | Land Use Planning; Municipal Permit requirements; Jurisdictional URMP; Development Requirements |
| 6/28/2006 | Harbor and Beaches Department – Lifeguards | Urban Runoff impacts; Jurisdictional URMP requirements; BMPs for specific activities |
| 6/28/2006 | Engineering, Building and Planning Departments | Land Use Planning; Municipal Permit requirements; Jurisdictional URMP; Development Requirements |

## 9.2 Construction Site Owners and Developers

As a rapidly growing city, the multitude of construction projects within the City of Oceanside can have an adverse effect on the sedimentation and siltation of local waterways if developers are not properly educated about erosion and sediment control. Therefore, the City of Oceanside has initiated a program to educate developers about current urban runoff regulations. For years, the City of Oceanside Engineering Department has educated developers, with projects in process for approval, about erosion control and wet-weather urban runoff regulations through pre-construction conferences. The pre-construction conferences provide the developer with the information that will be required from various city departments to get the project built. In regards to urban runoff regulations developers and contractors are informed of the threat priority for their project, inspection frequency, potential BMPs to incorporate into the project, and Clean Water Program requirements in hopes that less enforcement actions will be necessary.

### Construction Education Activities

The Clean Water Program regularly meets with engineering inspectors and developers for pre-construction meetings. During the meeting, storm water regulations are explained and the project is discussed with reference to specific areas and activities on the construction site that need to be addressed.

During regular construction site inspections, engineering inspectors distribute construction BMP brochures. Engineering inspectors conduct inspections while underground infrastructure is being installed. This is a time when a significant amount of soil can be exposed and a lot of waste is generated by various development activities. The brochure provides a simple graphic of a construction site describing various BMPs that can be implemented to reduce or eliminate polluted runoff: Some BMPs listed and described in this brochure include tracking controls, washout areas and perimeter controls.

In addition, the Clean Water Program continued to distribute a booklet via the Building Department, which provides a detailed look of BMPs for different construction activities. The booklet, titled Urban Runoff Requirements for Building Projects, is available in both English and Spanish and is given to all building permit applicants. Approximately 100 were distributed during the reporting period.

## 9.3 Industrial Owners and Operators

Many of the activities conducted by Industrial businesses can have an affect on the health of receiving waters if business owners, managers and staff are not properly educated about current urban runoff regulations and BMP implementation/maintenance. The City of Oceanside recognizes the need to provide specialized education for industrial businesses. Many owners, managers, and/or operators were educated about current storm water regulations, the Statewide General Industrial Storm Water Permit, and necessary BMPs.

Table 9-2 lists education efforts conducted for industrial businesses between July 2006 and June 2007:

**Table 9-2 Industrial Education Activities**

| Date | Event or Activity | Materials Distributed |
|---|---|---|
| Ongoing | Industrial inspections | Brochures, handouts, materials with hotline numbers, City of Oceanside Industrial Manual |
| Ongoing | Business License Application | Business License Urban Runoff Information Form |

In order to assist commercial and industrial businesses comply with the requirement for mandatory employee education, the City of Oceanside developed and distributed stencils for storm drain and dumpster area labeling. Stencils were distributed to businesses through regular inspection or through the Water Utilities Department counter.

The City of Oceanside, additionally, has been active on the Regional level assisting in the development of programs and materials targeted toward industrial businesses. Through the Copermittee regional education workgroup and the North County Storm Water Program, the City of Oceanside continues to be an active participant in the development/implementation of literature and programs to assist industrial and commercial businesses in environmental compliance efforts.

## 9.4 Commercial Owners and Operators

A significant target audience, in terms of size, is the commercial sector. With 629 high priority commercial businesses in Oceanside, broad based education is an important component to ensuring compliance to urban runoff regulations.

Table 9-3 lists education efforts conducted between July 2006 and June 2007:

**Table 9-3 Commercial Business Education Activities**

| Date | Event or activity | Materials Distributed |
|---|---|---|
| ongoing | Grease and storm water requirements for Oceanside Eating and Drinking Establishments | Brochures; City of Oceanside Commercial Manual; restaurant requirements handbook, training video, posters |
| ongoing | Business License Urban Runoff Information Form. Used as education and awareness of City regulations. | |

In order to assist commercial and industrial businesses comply with the requirement for mandatory employee education, the City of Oceanside developed and distributed stencils for storm drain and dumpster area labeling. Stencils were distributed to businesses through regular inspections.

Additionally, the Clean Water Program, in conjunction with the Collections Division, created and co-sponsored a Grease and Urban Runoff Requirements Program for all Oceanside Eating and Drinking Establishments. The Program, accompanied by a new City ordinance, requires Oceanside restaurants to not only prevent grease from entering the sewer system, but mandates employee training on both grease and storm water BMPs. During inspections all restaurants were given a BMP booklet, two posters (one for grease and one for storm water), and an English/Spanish training video. Approximately 300 copies of the videos, posters, and booklets were distributed during the reporting period.

## 9.5 Residential Community, General Public and School Children

General public awareness has been the focal point of the City of Oceanside's education program, as all target audiences are reached through broad-based general education. A multitude of education programs have been developed and implemented for residents, students and the general public. General public awareness and education has been an ongoing program in Oceanside since the issuance of Municipal Permit 90-14. However, in the past few years, education efforts have increased and expanded with the development of the Oceanside Clean Water Program. To date, the Oceanside Clean Water Program has one of the most recognizable education campaigns in the State of California having won a Helen Putnam Award for Excellence in Public Service for the Environmental Quality and Planning Category. The City of Oceanside's education program is constantly growing and expanding to meet the needs of Oceanside residents and Municipal Permit requirements.

Table 9-4 lists community events and schools that Oceanside Clean Water Program representatives attended and distributed information about urban runoff issues:

**Table 9-4 Community Events and Schools Attended**

| Date | Event | | Materials Distributed | #'s Reached |
|---|---|---|---|---|
| 4/15/2007 | Pepper Tree Day | | Brochures; materials/promo items with hotline numbers; pet waste surveys & bags on board dispensers | 250 est. |
| 4/26/2007 | Genentech Earth Day | Adults & Children | Brochures; materials/promo items with hotline numbers | 150 est. |
| 5/14/2007 | King Middle School | 6th | Brochures; materials/promo items with hotline numbers, teaching materials | 105 |

To increase Oceanside residents' stewardship toward our local waterways, the Clean Water Program hosts annual cleanup events at the following major waterways in Oceanside: Buena Vista Creek, Loma Alta Creek, San Luis Rey River. Oceanside also hosts several beach cleanup events throughout the year. Each cleanup averages anywhere between 100 to 300 participants. During the 2006-2007 reporting period, approximately 657 volunteers removed over 28 tons of trash, debris, appliances, furniture, and other unwanted material from Oceanside waterways. All volunteers are placed on a mailing list and periodically receive Clean Water Program updates, allowing them a sense of ownership and responsibility toward the Program.

Table 9-5 lists cleanup events held during the reporting period:

**Table 9-5 Cleanup Events Held**

| Date | Event | Estimated Number in Attendance | Materials Distributed |
|---|---|---|---|
| 7/5/2006 | Morning After Mess | 141 | Brochures; materials/promo items with hotline numbers, T-shirts |
| 9/16/2006 | Oceanside Beach and Buena Vista Creek Cleanup | 247 | Brochures; materials/promo items with hotline numbers, T-shirts |
| 11/11/2006 | San Luis Rey River Cleanup | 122 | Brochures; materials/promo items with hotline numbers, T-shirts |
| 4/28/2007 | Loma Alta Creek Cleanup | 147 | Brochures; materials/promo items with hotline numbers, T-shirts |

The City of Oceanside has additionally developed and implemented many campaigns and resources to increase water quality and urban runoff pollution awareness.

**Clean Water Program Website**

Clean Water Program has a dedicated Webpage on the City Website for all target audiences to receive general urban runoff and compliance information:

www.oceansidecleanwaterprogram.org. The website features the following menu of information:

*Commercial Businesses
*Development
*Events
*Industrial Businesses
*Just for Kids
*Water Quality Laws
*Other Websites
*Clean Water Projects
*Report Violations
*Residential/General
*Just for Educators
*Waterbodies

The website contains all informational literature developed by the Clean Water Program, as well as all compliance manuals, state and local requirements, links to important websites, interactive games, a calendar of events, and information about water quality and Oceanside watersheds. During the 2006-2007 reporting period, the hit counter recorded 45,627 unique hits to the site.

**Newsletter**

A bi-annual Clean Water Program Newsletter is developed for distribution to the public. Each newsletter highlights information about the connection between urban runoff and water quality, BMPs to reduce urban runoff pollution, cleanup opportunities, and other Clean Water Program projects. During the reporting period, the Clean Water Program distributed two newsletters, one in August 2006 and one in March 2007. Approximately 45,000 copies of each newsletter are distributed to Oceanside businesses and households, 42,000 of which are mailed with water utility bills. Additionally newsletters are distributed at City Hall counters, community events and to groups participating in cleanup events. A copy of each newsletter is provided in Attachment 9-A.

**Magazine Advertisements**

The City of Oceanside implemented two components of the “Erase the Waste” campaign developed by the State Water Resources Control Board: “Pick up after your pet” and “Improve you home without harming your community”.

An article was placed in the City of Oceanside Clean Water Program newsletter titled “Improve your home without harming your community”. This article provided homeowners with tips on how to properly store, handle and dispose of materials generated from home improvement projects. This newsletter was distributed to 42,000 Oceanside households with the water utility bills. In the same newsletter, a, article was included addressing the topic of pet waste. The article encouraged homeowners to cleanup after their dog to keep neighborhoods and waters clean, healthy and pollution free. See Attachment 9-A for a copy of the newsletter.

A pet waste advertisement was placed on the inside back cover of the winter issue of the Oceanside Magazine. The advertisement asks people to cleanup after their dog to keep

neighborhoods and waters clean, healthy and pollution free. 87,000 issues are printed and distributed to every household in Oceanside (42,000), every licensed business in Oceanside, and thousands of copies are distributed on Camp Pendleton, at City and school district facilities, and at hundreds of local businesses including all major hotels and the California Welcome Center in Oceanside. A copy of the advertisement is provided in Attachment 9-B.

## Educational Signs

A variety of educational signs were created and installed during previous reporting periods. Anti-litter signs were created to highlight the name of each watershed the sign was located near. Each watershed had three signs placed along areas of high pedestrian foot traffic. In addition, 52 pet waste signs were created and placed in each park and along the San Luis Rey River bike path. During this reporting period three additional pet waste signs were installed along the San Luis Rey River bike path during this reporting period.

## Materials Distributed

Materials are regularly developed and updated to provide residents, students and the general public about urban runoff, water quality, BMPs, Clean Water Program projects, and the urban runoff hotline number. A copy of these materials was provided in the 2005-06 annual report.

Table 9-7 lists the educational materials distributed during the 2006-2007 reporting period.

**Table 9-7 Educational Materials Developed and/or Distributed**

| Education Material | Description |
|---|---|
| Urban Runoff Guidelines for Residents Brochure | Provides information about urban runoff and the connection to water quality, as well as typical impacts resulting from residential activities, BMPs to prevent urban runoff pollution, hotline for potential violations, and website address for more information. Distributed approximately 250 during the reporting period, not including downloads from the website. |
| Pollution Prevention Tips for Gardening Activities Brochure | Provides information about urban runoff and the connection to water quality, as well as typical impacts resulting from gardening activities, BMPs to prevent urban runoff pollution, hotline for potential violations, and website address for more information. Distributed approximately 150, not including downloads from the website. |
| Urban Runoff Guidelines for Commercial Businesses Brochure | Provides information about urban runoff and the connection to water quality, as well as typical impacts resulting from commercial and industrial business activities, BMPs to prevent urban runoff pollution, |

| | |
|---|---|
| | hotline for potential violations, and website address for more information. Distributed approximately 200, not including downloads from the website. |
| Urban Runoff Guidelines for Construction Projects handout | Provides information about urban runoff and the connection to water quality, as well as typical impacts resulting from home-improvement activities, BMPs to prevent urban runoff pollution, hotline for potential violations, and website address for more information. Distributed approximately 250, not including downloads from the website. |
| Urban Runoff Guidelines for Powerwashers | Provides information about urban runoff and the connection to water quality, as well as typical impacts resulting from powerwashing activities, BMPs to prevent urban runoff pollution, hotline for potential violations, and website address for more information. Distributed approximately 25, not including downloads from the website. |
| "Speak Water-ese" Fact Sheets for High School students | A suite of fact sheets informing high school students about water quality impairment situations and/or pollutants, and sources. Fact sheets explain the science behind the impairment situations/pollutant and are intended to supplement Chemistry and Earth/Environmental Science curriculum. Pollutants fact sheets include: Turbidity/Total Suspended Solids, Biochemical Oxygen Demand, Eutrophication, pH Levels, Total Dissolved Solids, and Bacteria. Distributed approximately 50 sets. |
| Guide to Oceanside Waterbodies Booklet | A colorful introduction to the waterbodies in Oceanside. The Guide is intended to help residents develop a sense of stewardship, as well as provide information about local creeks, rivers, lakes, wetlands, and lagoons, the history behind each waterbody, and stakeholder information. In addition, the Guide includes a description of a watershed and current monitoring programs implemented to test recreational water quality. Distributed approximately 250, not including downloads from the website.   |
| Adventures of Oceanside Creek Friends coloring book | Clean Water Program mascots, Surfing Sam, Marina, and Simon appear in a coloring/story book about Marina's mysterious illness and their adventure in discovering the source: urban runoff pollution. The book features information for children about the effect of urban runoff on water quality, why it is important to protect our waterbodies, and activities they can do to prevent urban runoff pollution. Distributed five (5), not including downloads from the website.   |
| Clean Water Program Hotline and website magnets | Magnets were developed with the Clean Water Program logo, hotline, and website address. Distributed approximately 500. |
| Poop Pollutes magnets | Magnets were developed to remind residents to pick up their pet's waste. Distributed approximately 500. |
| Poop Pollutes Pet Waste Bag Dispensers | Pet waste bag dispensers were purchased. The Poop Pollutes education message was attached as a sticker. Distributed |

| | |
|---|---|
| | approximately 150. |
| Protect Our Water bags | These 14 inch x 12 inch bags display a list of residential BMPs, Clean Water Program address and hotline number, and the Program tagline "You are the solution to water pollution." Distributed approximately 150. |
| Click Message Pen | Each pen has the 1-800-CLEANUP.org website listed, as well as the following text, "Protect our Waterways, Improve water quality: sweep sidewalks, reduce pesticide use, recycle motor oil and filters, eliminate water runoff, pickup pet waste, and pickup litter and cigarette butts." Distributed approximately 500. |

**Oceanside Update Show**

Clean Water Program staff appear regularly on the Oceanside Update Show broadcast through Oceanside Channel KOCT. Each spot allows staff to spend three to five minutes discussing specific storm water pollution programs, pollution prevention, and BMPs to reduce impacts. The show is broadcast twice daily at 7:00 a.m. and 7:00 p.m. Topics are varied with every taping of Oceanside Update, therefore the viewing audience learns about a multitude of BMPs. While KOCT is unable to determine the actual number of residents who watch Channels 17 and 18 regularly or for any length of time, both channels broadcast to approximately 50,000 Oceanside households. Table 9-8 summarizes topics discussed each month in which the Clean Water Program aired a spot:

**Table 9-8 Summary of Oceanside Update Topics by Month**

| Date | Topic Discussed |
|---|---|
| August 2006 | Beach pollution and storm drains |
| September 2006 | Storm Drain Maintenance |
| November 2006 | Residential BMPs for wet weather |
| December 2005 | Landslide prevention – slope erosion control, drainage maintenance and water conservation |
| January 2007 | Oceanside's watersheds |
| May 2007 | Home Improvement without harming waterways |

## 9.6 Quasi-Governmental Agencies

The City of Oceanside works closely with a multitude of quasi-governmental agencies. Education for these entities is an on-going, often informal, process. Clean Water Program staff met with representatives of Oceanside Unified School District and Vista Unified School District on separate occasions to communicate the City's stormwater regulations, pollutants of concern, and to promote the proper use of BMPs on school property.

# SECTION 10: PUBLIC PARTICIPATION COMPONENT

This section documents the activities conducted by the City of Oceanside during the 2006-2007 reporting period to meet the requirements of Section F.6 of the Municipal Permit. The foremost activity conducted by the City of Oceanside during the reporting period that responds to the requirements of this section of the Municipal Permit was the continued implementation of a comprehensive Public Participation Component within the City's Jurisdictional Urban Runoff Management Program (Jurisdictional URMP).

In order to ensure success with any City-wide program, the public must be involved. Stewardship and participation by the general public will increase the acceptance and willingness to comply with new regulations. The City of Oceanside has actively pursued public involvement in the Clean Water Program through the implementation of various programs and feedback mechanisms.

**Order 2001-01 Compliance Summary**

| | |
|---|---|
| F.6<br>Public Participation Component | See Entire Section 10 of this Annual Report |

## 10.1 Local Public Participation Opportunities

City of Oceanside encourages its residents to become involved in the Clean Water Program. Through the establishment of the Urban Runoff Hotline (Hotline), (760) 435-5800, the public can report violations related to pollution of the City's receiving waters. The Hotline is promoted through a variety of media, including announcement on local television stations, placement on brochures, magnets, pencils and other program promotional "give-aways," publication in local newspapers, and advertisement on the City's website and the Clean Water Program website. During the reporting period, 14 calls were received by residents concerning potential urban runoff violations. In addition, Code Enforcement Officers received over 279 calls from residents regarding potential urban runoff violations.

City Staff is encouraged to participate in the Clean Water Program through the use of a special City Enhancement Hotline specifically for Oceanside employees called "Oceanside Eyes." This hotline is call incentive driven and promoted internally.

To increase Oceanside residents' stewardship toward our local waterways, the Clean Water Program hosts annual cleanup events at every major waterway in Oceanside including Buena Vista Creek, Loma Alta Creek, and the San Luis Rey River, and also hosts several beach cleanup events throughout the year. Each cleanup averages anywhere between 100 to 300 participants. During the 2006-2007 reporting period, approximately 657 volunteers remove over 28 tons of trash, debris, appliances, furniture, and other unwanted material from Oceanside waterways. All volunteers are placed on a mailing list and periodically receive Clean Water Program updates, allowing them a sense of ownership and responsibility toward the Program.

Table 10-1 lists cleanup events held between July 2006 and June 2007 to encourage community participation and education of the effects of urban runoff:

**Table 10-1 Cleanup Events Held**

| Date | Event | Number of Participants | Pounds/Tonnage of Waste Removed |
|---|---|---|---|
| **Date** | **Event** | **Estimated Number in Attendance** | **Materials Distributed** |
| 7/5/2006 | Morning After Mess | 141 | Brochures; materials/promo items with hotline numbers, T-shirts |
| 9/16/2006 | Oceanside Beach and Buena Vista Creek Cleanup | 247 | Brochures; materials/promo items with hotline numbers, T-shirts |
| 11/11/2006 | San Luis Rey River Cleanup | 122 | Brochures; materials/promo items with hotline numbers, T-shirts |
| 4/28/2007 | Loma Alta Creek Cleanup | 147 | Brochures; materials/promo items with hotline numbers, T-shirts |

In addition, the Clean Water Program Staff participated independently and in conjunction with other cities in the North County Storm Water Program in participating in several community events in Oceanside and north San Diego County. The Clean Water Program staff talked to residents, handed out educational materials, and responded to questions and concerns.

Table 10-2 lists community events attended between July 2006 and June 2007 to encourage community participation and education of the effects of urban runoff:

**Table 10-2 Community Events**

| Date | Event | Participants (estimated) | |
|---|---|---|---|
| 4/15/2007 | Pepper Tree Day | Brochures; materials/promo items with hotline numbers; pet waste surveys & bags on board dispensers | 250 est. |
| 4/26/2007 | Genentech Earth Day | Brochures; materials/promo items with hotline numbers | 150 est. |

Other opportunities for local public participation during the reporting period included:

*Daily Activities*. The daily activities of the public, at home, work, and within the City, have a substantial impact on the success of implementation of the Jurisdictional URMP. The Jurisdictional URMP provides guidance in reducing pollutants discharging to the surrounding community by recycling, carpooling, reducing vehicular trips, reducing use of pesticides and other chemicals, eliminating off-site drainage, reducing pollution within the City right-of-way, and through implementation

of numerous additional BMPs outlined in the Residential Manual. Implementation of appropriate BMPs by the public will reduce pollutants that are generated throughout the City and are the best way for the general public to participate in the implementation of the Jurisdictional URMP.

*Interpublic Education.* The City has developed programs to educate the public and various target communities of the Jurisdictional URMP and the numerous ways the public can contribute to reducing pollution of the City's waterways and Receiving Waters. However, the City recognizes that no matter how many educational programs it implements, there will always be additional information to distribute and additional people that it needs to be distributed to. Therefore, "spreading the word" is another significant effort that the public will be encouraged to participate in that will substantially contribute to the success of the Jurisdictional URMP.

*The Public Watchdog*. The public is encouraged to become involved in the Jurisdictional URMP, take ownership of the City's MS4, and report violations. The City's Clean Water Program Hotline has been established specifically to receive reports of violations related to the pollution to the City's Receiving Waters. All appropriate reports submitted by the public through the hotline will be responded to. During the 2005-2006 reporting period, the hotline received 68 calls from residents regarding potential violations.

*Public Feedback.* The City encourages the public to provide comments on the implementation of the various Jurisdictional URMP components. Comments can be provided to the City through the Clean Water Program Hotline and through other forums such as informational meetings, City Council hearings, Clean Water Program website and Code Enforcement officers.

*City Staff Activities*. City staff is the public at work. Staff is encouraged to report violations and provide feedback on the implementation of the Jurisdictional URMP. City staff is the eyes and ears of the City, and can provide valuable information on which components and programs are working and provide suggestions or recommendations on improving the programs. The City staff is provided an incentive based hotline called Oceanside Eyes. The hotline is for reporting violations and other problems that require remediation. In addition, City staff will be provided ongoing opportunities to provide feedback through training sessions, information meetings, and by direct contact with the Jurisdictional URMP Manager.

## 10.2 Regional Public Participation Opportunities

This section describes those mechanisms available, at the regional level, for the public to participate in to assist in the implementation of regional Jurisdictional URMP related programs and to provide feedback to the Copermittees and contribute to the continuing development of the numerous Jurisdictional URMPs in effect around the County:

*Project Clean Water*. The City actively participates in the County's Project Clean Water subcommittees. Participants to date represent a wide variety of experts, including representatives of federal, state and local agencies, industry representatives, environmental groups, consulting firms, and academic and research institutions.

*Copermittee Meetings.* Similar to Project Clean Water, the Copermittees meetings provide opportunities for public participation. Attendees include a wide variety of experts, including representatives of federal, state and local agencies, industry

representatives, environmental groups, consulting firms, product vendors, general public, and academic and research institutions. Throughout the meeting, local municipality representatives are provided the opportunity to share recent water quality events. The meeting provides a venue to discuss the latest issues facing the various Copermittees and provides valuable insight into the current regional Urban Runoff issues. Public participation helps promote conversation and education on evolving industry standards.

*Regional Hotlines.* The regional hotlines provide a direct connection for public participation. Historically, the hotlines have worked well and should continue to increase in use as more people are educated of the hotline and the types of issues to report. The City will encourage reporting through its local hotlines, however, the regional hotlines will serve as an alternative to the local hotlines and also provide an opportunity for reporting by visitors to the City, from other areas in the County, who are not familiar with the local hotlines.

*San Diego Association of Governments (SANDAG).* SANDAG meetings regularly address items which impact the City's MS4 and ultimately the Receiving Waters. Often, meetings include public hearings, which encourage public participation on the related item. The City is an active participant with SANDAG and continually works with elected officials and SANDAG staff. The communication and associated policy and programs include significant public participation.

*Media.* Outreach to the public through the media serves as a widespread public education BMP. These messages also promote public participation and further stewardship of the City's MS4. Numerous articles and news briefs include information and details on how citizens can get involved. Additionally, editorials provide a venue for residents to present their views on water quality issues. Media is an important element of public participation and keeps communication open between government staff and the public.

# SECTION 11: ASSESSMENT OF JURISDICTIONAL URMP EFFECTIVENESS COMPONENT

This section documents the activities conducted by the City of Oceanside during the 2006-2007 reporting period to meet the requirements of Section F.7 of the Municipal Permit. The foremost activity conducted by the City of Oceanside during the reporting period that responds to the requirements of this section of the Municipal Permit was the implementation of an Assessment of the Jurisdictional URMP Effectiveness Component within the City's Jurisdictional Urban Runoff Management Program (Jurisdictional URMP).

**Order 2001-01 Compliance Summary**

| | |
|---|---|
| F.7.a<br>Develop Long-Term JURMP Effectiveness Strategy | See Section 11.1 of this Annual Report |
| F.7.b<br>Assess JURMP Effectiveness | See Sections 11.2, 11.3, 11.4, and 11.5 of this Annual Report |

## 11.1 Overview

This component assesses the progress of the City's program towards the overall goal of reducing pollutants associated with urban runoff. The objectives of the assessment component are to evaluate the performance of the Clean Water Program, review the programs effectiveness at improving receiving water quality, and identify changes that will increase the effectiveness of the program.

The City has begun adopting an assessment strategy, based on a guidance document prepared by the Copermittees entitled *"A Framework for Assessing the Effectiveness of Jurisdictional Urban Runoff Management Programs*. This guideline presents a comprehensive assessment strategy that initially focuses on programmatic assessments and moves toward water quality-based assessments to determine program effectiveness. More specifically, it addresses six levels of assessment:

1. Compliance with Activity-based Permit Requirements.
2. Changes in Knowledge/Awareness.
3. Behavioral Changes.
4. Load Reductions.
5. Changes in Discharge Quality.
6. Changes in Receiving Water Quality.

In this year's assessment, the levels of assessment have been combined into three rather than six because of the programs early stage of development. Level 1, Compliance with Activity-based Permit Requirements, includes modified assessment tables from the Jurisdictional URMP. Level 2 and 3 are combined and discuss the program strengths (accomplishment and outcomes) for each component. Level 4: Load Reductions, is not addressed this year. Level 5 and 6 are combined to attempt presenting a water quality assessment.

The strategy uses both quantitative and qualitative measures of program effectiveness. Assessment Forms presented in the Jurisdictional URMP have been modified in the Level 1 assessment to more closely reflect the appropriate activities performed for each activity and the

data from the forms is presented below. This approach provides a means to track the program performance and effectiveness.

## 11.2 Level 1: Compliance with Activity-Based Permit Requirements

Table 11.1 summarizes the activities tracked by the Clean Water Program to demonstrate compliance with the requirements of Order No. 2001-01. Narratives explaining each of these activities can be found in the individual sections of this annual report.

## 11.3 Levels 2&3: Changes in Knowledge/Awareness and Behavioral Changes

This section is broken into each component of the Jurisdictional URMP and presents a summary of the changes in knowledge/awareness and behavior changes. Each section discusses the accomplishments for the component and discusses future improvements.

### Municipal Component

Program Strengths: Clean Water Program staff conducted 29 presentations reaching 349 municipal employees focusing on urban runoff sources and impacts, as well as job-related Best Management Practices (BMPs). Pollution prevention measures are taken City-wide, such as commingled, paper, inkjet, toner cartridges, used oil, tires, batteries, and scrap metal recycling programs, and purchasing of recycled paper and re-refined oils. A total of 141 municipal facilities were inspected for potential violations. The inspections resulted in two outcomes: first, municipal facilities with inadequate BMPs were identified, notified, and the violation was corrected; and second specific departments began conducting the required storm water inspections on their facilities, thus holding them accountable for their own compliance. The SWPPP for the City Operations Center continued to be implemented in order to ensure compliance and pollution prevention. Street sweeping operations were able to remove 2,480 tons of waste from the MS4, and storm drain cleaning activities removed 65.5 tons of waste. City-sponsored volunteer cleanup events removed over 28 tons of waste from creeks, rivers, and beaches.

Improvement Areas: Clean Water Program strived to increase the number of municipal employees educated during this annual reporting period. Thirty-three municipal employee presentations were conducted reaching 141 employees. The City feels that these presentations are important in educating all employees, no matter there daily job task, because they are the eyes and ear sof the City. Presentations are tailored to the type of tasks for the targeted department such as administrative, industrial, or planning and development. each annual reporting period, The Clean Water Program will strive to increase the number of employees reached in subsequent years through these presentations with the eventual goal of reaching employees in each department. In addition, staff will improve the education process for sub-contractors working for the City. Clean Water Program staff's goal is having each department conduct the necessary inspection of their facility without the presence of a Clean Water Program staff member.

### Industrial Component

Program Strengths: A total of 234 industrial businesses were inspected during the reporting period, with subsequent follow-up inspections. During the inspections, each business was provided a copy of the industrial manual and given an explanation of the state and local BMP requirements. In order to thoroughly inspect businesses that impact Oceanside receiving

waters, 2003-2004's new inspection strategy was employed. Rather than targeting simply high priority facilities, which are often times isolated from other businesses, inspections of entire industrial areas were conducted. By using this strategy, all businesses within an area were held accountable to understand and implement their responsibilities. This allowed property management companies greater understanding of their roles in compliance, and gave businesses an opportunity to work together in the implementation of group BMPs.

Improvement Areas: For the next reporting period, Clean Water Program staff will continue to inspect as many industrial businesses as possible using the strategy described above. During these next inspections, staff will increase the dissemination of education materials for business employees and evaluate each inspected businesses SIC Code to ensure the proper listing.

**Commercial Component**

Program Strengths: Of the 127 commercial inspections were conducted during the reporting period, with subsequent follow-up inspections. This was in addition to 343 eating and drinking establishment inspections of the grease control devices. The grease control inspector forwarded all cases not found to be in compliance with stormwater regulations to Code Enforcement Officers. Throughout the City there has been a notable increase in the number of BMPs implemented by commercial businesses. During the inspections, each business was provided a copy of the commercial manual and given an explanation of the state and local BMP requirements. In order to thoroughly inspect businesses that impact Oceanside receiving waters, the inspection strategy introduced in 2003-2004 was employed. Rather than targeting simply high priority industrial facilities, which are often times isolated from other businesses, inspections of entire industrial/commercial areas were conducted. By using this strategy, all businesses, regardless of industrial or commercial status, within an area were held accountable to understand and implement their responsibilities. This allowed property management companies greater understanding of their roles in compliance, and gave businesses an opportunity to work together in the implementation of group BMPs.

Improvement Areas: For the next reporting period, Clean Water Program staff will continue to inspect as many commercial businesses as possible using the strategy described above. As reported in the 2005-06 annual report, the City paid particular attention to eating and drinking establishments and greenhouses and nurseries by inspecting all of these businesses during this reporting period. During these next inspections, staff disseminated education materials for business employees and evaluated each inspected businesses SIC Code to ensure the proper listing.

**Residential Component**

Program Strengths: The City of Oceanside provides a wide-range of programs for its residents to allow for convenient implementation of pollution prevention activities. These programs consist of aggressive curbside recycling programs, greenwaste collection, oil recycling, and household hazardous waste collection. Education of the public is a priority for the Clean Water Program, so the development of many outreach materials and interactive tools (e.g. website) were developed, disseminated, and advertised to the public through television, bill inserts, internet, direct mailing, and newspaper articles. A total of 14 calls concerning potential residential violations were received on the Clean Water Program hotline and 237 calls were received by Code Enforcement during the reporting period

Improvement Areas: For the next reporting period, the Clean Water Program will continue to educate Oceanside residents as much as possible through local media, and respond to received complaints on the Hotline.

**Land-Use Planning for New Development Component**

Program Strengths: During the 2003-2004 reporting period, the City adopted a local Standard Urban Storm Water Mitigation Plan (SUSMP) program based on the regional model SUSMP. The City of Oceanside's local SUSMP was incorporated into City Code and adopted December 4, 2002. The City reviewed its General Plan and amended language in the Land Use Element to include BMP implementation and water quality protection. The revision was passed by City Council on June 4, 2003. In addition, a Runoff Assessment Report (RAR) was developed requiring identified smaller scale projects submit a report detailing BMP implementation. The Building Department was educated about their role and responsibilities in the program and has developed materials and educated staff about SUSMP and RAR submittals from developers.

Improvement Areas: Greater streamlining between the Planning, Engineering, and Building Departments will be a key area of focus for the Clean Water Program, in the implementation of development requirements, during the next reporting period.

**Construction Component**

Program Strengths: All construction sites were inspected for BMP implementation, at the frequency described in the Jurisdictional URMP during the reporting period. During the 2005-06 reporting period, , the Public Works Department realigned the inspector's duties and made all inspectors responsible for BMP implementation and inspection of their assigned construction sites. This realignment meant each site was visited frequently and developers educated about their responsibilities. In addition, City staff completed the SUSMP Operational and Maintenance Plan for distribution to developers. In addition, Clean Water Program staff met with developers during two on-site meetings to educate developers about BMPs implementation.

Improvement Areas: Clean Water Program staff streamlined the inspection process with the Building Department, thereby eliminating the need for current staff to also visit building sites. By creating department specific training programs, the building department inspection staff was provided with specific details allowing teach staff person in the department to conduct effective BMP inspections while conducting traditional building inspections. This program proved successful during the 2006-07 reporting period with inspectors providing constructive feedback to developers on BMP maintenance during their routine inspections.

**Illicit Discharge Detection and Elimination Component**

Program Strength: The Clean Water Program continued efforts to maintain and respond to complaints and referrals in the IC/ID program. The dry weather monitoring program was conducted by City Staff, with samples taken from 61 sites in which ponded or flowing water was observed. Dry weather monitoring locations that exceeded action levels were assessed and investigated when possible. Additionally, during the reporting period, City staff organized all monitoring data according to watershed. This organization will help staff to begin spatial and temporal analysis of water quality data.

Improvement Areas: Dry weather monitoring locations that exceeded action levels were further investigated. In addition, over 700 exceedance letters were mailed to residential

households detailing the type of pollutant detected in discharge water and the appropriate BMPs to be implemented by residents to eliminate the polluted runoff.

**Education Component**

Program Strength: The Clean Water Program has developed a strong education component that has reached a wide variety of target audiences through a broad range of educational tools. The Clean Water Program targeted specific audiences including municipal employees, commercial/industrial businesses, developers, and residential/general public with brochures, posters, newsletters, television PSAs, a website, water utility bill inserts, magazine and newspaper articles, booklets, magnets, t-shirts, pens, and community cleanup events.

Improvement Areas: Due to the overwhelming efforts conducted to educate each target audience, the Clean Water Program does not have any recommendations for future improvement, other than to continue expanding education efforts to the Oceanside community.

**Public Participation**

Program Strength: The public is given an opportunity to interact with the Clean Water Program on a daily basis through the Hotline and website. During the reporting period the Clean Water Program hosted four cleanup events, which attracted over 650 volunteers from the community. Staff participated in two community-based education events.

Improvement Areas: Due to the overwhelming efforts conducted to solicit participation in the Clean Water Program efforts, the Clean Water Program does not have any recommendations for future improvement, other than to continue expanding public participation opportunities for Oceanside's general public.

### 11.4 Level 4: Load Reductions

Load reductions have not been calculated by the program.

### 11.5 Levels 5&6: Changes in Discharge and Receiving Water Quality

The Clean Water Program will begin to look at monitoring data to better understand the priority problems and assess the program's effectiveness at improving receiving water quality. Data available for this type of analysis includes dry weather monitoring data and coastal storm drain data. Wet weather monitoring is performed for the region as part of the Core Monitoring Program. This monitoring program includes one mass loading station in the City on the San Luis Rey River. This data is evaluated in the regional program and in the watershed program.

#### 11.5.1 Dry Weather Monitoring Data

**2007 Summary**

Of the 100 sites included in the 2007 dry weather monitoring program, 93 sites were accessible and visited. Thirty six sites had measurable flowing water and 25 sites were ponded with enough water to sample, combining for a total of 61 sites where initial field screening was conducted. Eighteen of these sites were chosen for laboratory testing for chemistry and microbiology parameters.

Twenty eight of the 61 sites initially screened had one or more field or laboratory parameter exceedance. The most common exceedance was for ammonia; 15 sites had an initial exceedance. This was common in ponded water where organic matter breakdown would cause higher levels of ammonia. Where upstream investigations were possible and flowing water was sampled, the ammonia concentration would often decrease below the action level. The action level for orthophosphate-P was exceeded at 12 sites during the initial screening. The majority of these sites were also ponded.

Nine of the 18 sites that were initially sampled for laboratory analysis exceeded one or more of the fecal indicator bacteria action levels. The total coliform action level was exceeded at nine sites; the fecal coliform action level was exceeded at four sites; and the enterococcus action level was exceeded at two sites. Bacterial indicators were the only laboratory parameter that exceeded action levels within the City of Oceanside. There were no exceedances for MBAS, dissolved metals, oil and grease, or pesticides.

**2006 Summary**

Of the 99 sites included in the 2006 dry weather monitoring period, 61 sites had measurable flowing water or were ponded. Due to safety or access constraints only 54 of the 61 sites were sampled.

Out of the 54 sampled sites ammonia, reactive phosphorus, and nitrate were detected at each site. Ammonia exceeded the action level at eight sites, reactive phosphorus exceeded the action level at six sites, and exceeded the action level at nine sites.

Nineteen sites were chosen for laboratory analysis and twelve sites exceeded one or more of the action levels established for bacteria. Each of the twelve sites exceeded the action level for total coliform. Five sites exceeded two action levels for bacteria, and one site exceeded all three action levels for bacteria.

**2005 Summary**

Of the 100 sites included in the 2005 dry weather monitoring period, 64 sites had measurable flowing water or were ponded. Due to safety or access constraints only 44 of the 64 sites were sampled.

Out of the 44 sampled sites ammonia was detected at each site and exceeded the action level at four sites. Reactive phosphorus was detected at 43 sites and exceeded the action level at eight sites. Nitrate was detected at all 44 sites and exceeded the action level at eight sites.

Seventeen sites were chosen for laboratory analysis and all seventeen sites exceeded one or more of the action levels established for bacteria. Each of the seventeen sites exceeded the action level for total coliform. Three sites exceeded all three action levels and two sites exceeded two action levels for bacteria.

**2004 Summary**

Of the sixty-eight sites included in the 2004 dry weather monitoring program, 46 had measurable flowing water or were ponded and a field sample was taken from only the 18 sites which had flowing water.

Out of the 18 sampled sites ammonia was detected at seventeen sites and exceeded the threshold at seventeen sites. Reactive phosphorus was detected at 17 sites and exceeded the threshold at two sites.

Nineteen lab tests were taken and eleven sites exceeded one or more of the action levels established for bacteria. Two sites had exceedance above all three action levels, one site had exceedance of two action levels and the remaining sites exceeded the action level for total coliform.

**2003 Summary**

Of the 99 sites included in the 2003 dry weather monitoring program, 56 sites had measurable flowing water or were ponded and a field sample was taken.

Out of the 56 sampled sites ammonia was detected at fifty-five sites and exceeded the threshold at forty-nine sites. Nitrate was detected at fifty-six sites and exceeded the threshold at twelve sites. Reactive Phosphorus was detected at fifty-five sites and exceeded the threshold at fourteen sites. Chlorine was detected at 56 sites and all sites tested below the threshold.

Sixteen lab tests were taken and two sites exceeded the action level for enterococcus. The lab test also identified one site that exceeded in cadmium and four that exceeded the maximum concentration for lead.

**2002 Summary**

Of the 290 sites included in the 2002 dry weather monitoring program, 56 sites had measurable flowing water or were ponded and a field sample was taken.

Out of the 56 sampled sites ammonia was detected at 54 sites and exceeded the threshold at 50 sites. Nitrate was detected at 56 sites and exceeded the threshold at eleven sites. Reactive Phosphorus was detected at 47 sites and exceeded the threshold at eleven sites. Chlorine was detected at 55 sites and all sites tested below the threshold.

Eleven lab tests were taken and four sites exceeded the action level for total coliform and one site exceeded for fecal coliform. Lead was tested at twenty seven sites and exceeded the maximum concentration for lead at twenty-two sites.

**Result Comparison**

The majority of exceedances from the 2001 Permit Cycle are nutrients (nitrate, orthophosphate, and ammonia) and bacterial indicators (total coliform, fecal coliform, and Enterococcus). Table 8 provides a summary of the previous six years of dry weather monitoring including the number of sites monitored and the number of exceedances of these specific field and laboratory analytes.

**Table 1. 2002-2007 Dry Weather Monitoring Report Data Comparison.**

| Monitoring Year | 2007 | 2006 | 2005 | 2004 | 2003 | 2002 |
|---|---|---|---|---|---|---|
| **No. of Sites with Flowing or Ponded Water** | 61 | 61 | 64 | 46 | 56 | 56 |
| **No. of Sites Sampled for Initial Field Screening** | 61 | 54 | 44 | 18 | 56 | 56 |
| **No. of Sites Exceeding Nitrate Action Level*** | 3 | 9 | 8 | NS | 12 | 11 |
| **No. of Sites Exceeding Orthophosphate Action Level** | 12 | 6 | 8 | 2 | 14 | 11 |
| **No. of Sites Exceeding Ammonia Action Level** | 15 | 8 | 4 | 17 | 49 | 50 |
| **No. of Sites Sampled for Laboratory Analysis** | 18 | 19 | 17 | 19 | 16 | 11 |
| **No. of Sites Exceeding Total Coliform Action Level** | 9 | 12 | 17 | 11 | 0 | 4 |
| **No. of Sites Exceeding Fecal Coliform Action Level** | 4 | 5 | 4 | 2 | 0 | 1 |
| **No. of Sites Exceeding Enterococcus Action Level** | 2 | 2 | 4 | 3 | 2 | 0 |

*Number of exceedances taken from previous reports. Nitrate reported in monitoring years 2002, 2003, 2005 and 2006 may have been reported as $NO_3$, as opposed to $NO_3$-N. Without converting to the appropriate form of nitrate to compare to the set action levels, the number of exceedances may be erroneously high. See discussion below.

During the 2001 Permit Cycle, the number of sites visited with flowing or ponded water has not changed dramatically, even with an impending drought. The number of sites sampled over the years has fluctuated. In 2004, only the flowing sites were sampled, therefore reducing the number to 18. Due to safety and accessibility constraints, a reduced number of the flowing and/or ponded sites were screened in 2005 and 2006. In 2007, the inaccessible sites were not visited and therefore it could not be determined if they were flowing and/or ponded.

Nitrate exceedances were reduced in 2007. This brought a review of the previous years' nitrate results. Based on the test kits used and discussion with previous samplers, in 2004 and 2005, the nitrate results were reported as $NO_3$, but compared to action levels for nitrate as N ($NO_3$-N). The field results should have been divided by 4.43 to convert from $NO_3$ to $NO_3$-N. Because this was not done, nitrate as N results for those two years are erroneously high and some falsely reported as exceedances. For monitoring years 2002 and 2003, it is assumed the same procedure occurred, however, no notes or discussions have been found to verify this. In correcting these reported formats, the following would stand as the correct number of nitrate ($NO_3$-N) exceedances:

| Monitoring Year | 2007 | 2006 | 2005 | 2004 | 2003 | 2002 |
|---|---|---|---|---|---|---|
| **No. of Sites Exceeding Nitrate Action Levels** | 3 | 3 | 2 | NS | 3 | 11* |

*Could not be determined.

The number of sites with orthophosphate and ammonia exceedances was higher in 2007. This could be due to a greater number of ponded sites sampled. It should also be noted that in

2005, the City of Oceanside implemented a new method for ammonia analysis which gives more accurate results as well as minimizes the chance for false positives.

The sites sampled for laboratory analysis have had consistent exceedances for bacterial indicators. However, there has been a decrease from 2005 to 2006 to 2007. In the 2005 monitoring year 100% of lab sites exceeded the action level for one or more indicator bacteria; in 2006, 63% of lab sites exceeded the action level for one or more indicator; in 2007, 50% of lab sites exceeded the action level for one or more indicator.

### 11.5.2 Coastal Water Quality

The Pacific Ocean and the Oceanside Harbor are considered to be the ultimate receiving water for the City although there are other intermediate receiving waters, such as San Luis Rey River, Loma Alta Creek, Buena Vista Creek, and Calavera Creek. To measure the quality of the coastal waters and assess the Jurisdictional URMP effectiveness, the City has monitored coastal and lagoon storm drain outfalls as part of the Coastal Storm Drain Monitoring (CSDM) Program. Another measure of water quality in the City is the number of beach postings due to elevated bacteria from storm drains or waterbodies discharging to the ocean.

**Coastal Storm Drain Monitoring (CSDM) Program**

The CSDM Program was designed to meet the 2001 Municipal Storm Water Permit by monitoring bacteria levels in urban runoff from coastal and lagoon outfalls, and evaluating the relationship between storm drain discharges and exceedances of bacteriological water quality standards in the coastal receiving waters. This program included sampling of both storm drains and adjacent receiving waters at coastal beaches and in lagoons.

In monitoring year 2006-07, of the 20 coastal sites routinely monitored by Oceanside, only six sites were observed to have intermittent flow during the reporting period. Of these six sites, a total of 16 paired samples were collected, including six during the wet season and ten during the dry season. Four unpaired samples were collected. Three of the storm drains were observed to be flowing to the receiving water during sampling events, and the remaining three storm drains were not observed flowing to the receiving water.

There were no coastal receiving water exceedances during the 2006-07 monitoring year. Four storm drains over the year did exceed the 95$^{th}$ percentile storm drain criteria calculated annually for the CSDM program. The receiving water sampling point in Buena Vista Lagoon did have three exceedances of AB411 criteria over the course of the year. One of the two storm drains monitored, BV Lagoon 1, exceeded the total coliform action level eight times, the fecal coliform action level five times, and the Enterococcus action level once.

Two sites have been under investigation for several years. Coast 8 at the Harbor Boat Wash outfall and Coast 20-1 at the Buena Vista Lagoon outfall have had increased sampling during the monitoring year. Exceedances at Coast 8 have been linked to improper practices observed at the Recreational Vehicle sewage dump adjacent to the Harbor Boat Wash. Increased educational material as well as increased outfall cleaning were put in place in monitoring year 2006-07 and have reduced the number of exceedances. In monitoring year 2005-06, Coast 8 had 13 exceedances for total coliforms, seven for fecal coliforms, and 3 for Enterococcus. In 2006-07, Coast had only four exceedances for total coliforms, four for fecal coliforms and none for Enterococcus. All monitoring was performed by Clean Water Program staff, and the data is

presented in the Coastal Storm Drain and Lagoon Monitoring 2006-2007 Annual Report, Appendix A to the Regional Monitoring Report.

Beach Posting Data

The County Department of Environmental Health has monitored beach water quality for bacteria since the 1950's. This sampling is used to assess the health of the beaches. When bacteria levels exceed State standards, the County posts the beaches with signs warning and advises the public not to enter the water. In 2000, there was a significant change in protocol as a result of the passage of AB411, which required additional testing, incorporating testing for enterococcus, and required the beach be posted when only one sample exceeded the standard.

During the reporting period, four beaches were posted and/or closed. An advisory sign was posted at the San Luis Rey River outlet for a total of 24 days. The Oceanside Pier area had an advisory posted for four days at the end of October 2006. A portion of the beach at the end of Wisconsin Street had a precautionary posting for the flushing of the storm drain outlet for a total of five days. The beach at the mouth of Loma Alta Creek had advisory postings for six days beginning on October 19, 2006 and nineteen days beginning on November 2, 2006. The outlet was closed due to a sanitary sewer overflow event of untreated sewage for three days beginning December 11, 2006. The status was then changed to an advisory posting for the following six days. On December 31, 2006, there was a sanitary sewer line break with secondary treated sewage overflow which caused a closure of the beach for four days. The total of beach advisory/closure days for the 2006-07 monitoring period was 71, down from 106 the previous year.

# SECTION 12: FISCAL ANALYSIS COMPONENT

This section documents the activities conducted by the City of Oceanside during the 2006-2007 reporting period to meet the requirements of Section F.8 of the Municipal Permit. The foremost activity conducted by the City of Oceanside during the reporting period that responds to the requirements of this section of the Municipal Permit was the implementation of a comprehensive Fiscal Analysis Component within the City's Jurisdictional Urban Runoff Management Program (Jurisdictional URMP).

**Order 2001-01 Compliance Summary**

|---|---|
| F.8<br>Fiscal Analysis Component | See Entire Section 12 of this Annual Report |

## 12.1 Introduction

Effective programs require adequate funding to implement planned activities. The first step in securing adequate funding for the Jurisdictional URMP is to provide a strategy for effectively conducting a fiscal analysis of the Jurisdictional URMP in its entirety. The fiscal analysis will include an evaluation of the expenditures (such as capital, operation and maintenance, education, and administrative expenditures) necessary to accomplish the activities described in the Jurisdictional URMP. The Water Utilities Department and the Public Works Department have completed analyses. Other departments have not yet needed to conduct such analyses and will operate within their existing budgets for the time being.

## 12.2 Municipal Departments Budgets

The City has numerous departments within its organization. As a part of the budgeting process, each department manager is required to submit a draft budget to the City Manager to be included in a comprehensive City-wide budget for City Council review and approval. The departments include, but are not limited to, City Manager's Office, Parks and Recreation, Public Works, Water Utilities, Planning, Economic Development and Redevelopment, Business License, Police, and Fire.

As previously mentioned, only the Water Utilities and Public Works Departments have completed analyses and secured funding for Jurisdictional URMP implementation. This is primarily because these departments have the greatest responsibilities under the Jurisdictional URMP. It is anticipated that the other departments can operate within their existing budgets to implement the Jurisdictional URMP and they will do so unless future assessments indicate that there is a problem.

The Jurisdictional URMP budgeting for the Water Utilities and Public Works Departments is described in the following sections and are summarized in the following table. The table includes six full-time positions for Jurisdictional URMP implementation:

One full-time Clean Water Program/Jurisdictional URMP Coordinator.

Two full-time Environmental Specialists (focusing on administration, water quality monitoring, and education programs).

Two full-time Code Enforcement Officers.

One full-time Assistant Engineer (for Construction Component Implementation).

One full-time Engineering Inspector.

**Table 12-1 JURMP Budgeting for Water Utilities and Development-Related Programs in Public Works Department**

| Department | Item | Fiscal Year 2006-2007 | Projected 2007-2008 |
|---|---|---|---|
| Water Utilities | Personnel (including Code Enforcement) | $305,045 | $410,830 |
| | Miscellaneous Expenses (including consultant fees) | $226,634 | $726,576 |
| Engineering | Personnel | $260,000 | $260,000 |
| | Miscellaneous Expenses (including consultant fees) | $120,000 | $120,000 |
| | Total | **$911,679** | **$1,517,406** |

### 12.2.1 Water Utilities Department

To comply with the Municipal Permit and as an incentive to reduce pollutants entering the storm drain system through water conservation, Water Utilities staff proposed that costs for implementation and maintenance be financed through a surcharge collected specifically for a new Clean Water Program to be established in the Water Utilities Fund. In 2002, a new storm/clean water rate based on customers' water consumption was implemented to fund the annual estimated costs for the Clean Water Program. This amount is equal to an additional 0.7% of the average water/wastewater rate and equates to $.02 per unit of water used.

The rate is listed as a separate line item on Oceanside customers' utilities bills to clearly delineate the additional items for the Clean Water Program in the Water Utilities section of the bill. Any extra revenues collected above the cost of the program are placed in a separate rate stabilization reserve account to offset possible future increases to manage the program. The rate increase provided four new positions including one full-time Environmental Specialist to handle education and program administration, two full-time Code Enforcement Officers, and 75% of a Storm/Clean Water Program Coordinator position. Public Works (reorganized into Transportation/Development Engineering) is responsible for the remaining 25%. This revenue also pays for the required regional wet-weather monitoring program and laboratory testing.

### 12.2.2 Public Works Department

The Municipal Permit requires an increased focus and effort in development-related review and inspection. The estimated costs to implement the program were $300,000 for one-time start up costs and $550,000 on an annual basis. The positions funded include one full-time additional plan check engineer, two additional field inspectors, one full-time administrative support person and 25% of the program coordinator position. The development community requiring the service will pay the costs for the increased

services. The City collected approximately $1.7 million in 2005 in grading plan check and inspection fees, however, these fees are expected to decrease in 2006 due to development patterns. The $550,000 includes the on-going costs of $500,000 and $50,000 per year for six years to offset the $300,000 one-time general fund costs. In addition to the personnel listed above, the City is also planning to add one full time Environmental Specialist with focus on water quality monitoring and inspections.

In addition to the money budgeted, above, for the development-related aspect of the City's stormwater efforts, Table 12-2 documents the budget for other Public Works programs.

**Table 12-2 JURMP Budgeting for Non-Development Programs in Public Works Department**

| Title | Fiscal Year 2006-07 | Projected 2007-08 |
|---|---|---|
| Street & Median Maintenance:<br>Storm Drain Cleaning Contract | $191,200 | $300,000 |
| Flood Control<br>Supported by Water Utilities on a cost-share basis | $834,116 | $861,524 |
| Solid Waste<br>Street Sweeping Program, Public Property Cleanup and Landfill Maintenance and Operations. | $2,550,000 | $2,557,624 |
| Storm Drain Improvements | $1,506,965 | $834,214 |
| CIP Drainage Programs/Storm Water Pollution Compliance Programs | $12,771 | $89,318 |
| **Total** | **$5,095,052** | **$4,342,680** |

## SECTION 13: CONCLUSIONS AND RECOMMENDATIONS

This document was prepared consistent with the Municipal Permit, specifically Part I.1, by the City of Oceanside to provide a written account to the RWQCB of the City's Jurisdictional URMP activities that it has conducted during the 2006-2007 reporting period. The document is complete and contains information for all of the required components.

All revisions to the Jurisdictional URMP document have been provided in the appropriate component section of this annual report. Areas for improvement are included in Section 11 Assessment of Jurisdictional URMP Effectiveness Component.

# ATTACHMENT 2-A

## Bacterial Reduction Pilot Program
## Oceanside Harbor Boat Wash Outfall Study

## Bacterial Reduction Pilot Program – Oceanside Harbor Boat Wash Outfall Study

Oceanside Harbor has over 40 storm drains that carry flows a short distance to the harbor. From 2003 to present, 14 drains have been fitted with storm drain filters and 7 have been fitted with separator vaults. The vaults are designed to remove debris, sediment and hydrocarbons from the stormwater, with some secondary bacterial removal due to bacteria being removed in the sediment and debris. The one drain with historical bacterial exceedance receives flows from the harbor boat wash and a sewage dump for recreational vehicles (RV) via a separator vault. Figure 1 presents an aerial photograph displaying the location of the vaults, the boat wash and the RV sewage dump.

**Figure 1. Oceanside Harbor Boat Wash and RV Sewage Dump.**

The Bacterial Reduction Pilot Program at Oceanside Harbor is an important activity in the San Luis Rey Watershed because it will reduce bacteria loads into the Oceanside Harbor.
The objectives of the program are to:

> Reduce bacterial concentrations that are discharged into Oceanside Harbor.
> Determine the effectiveness of the BMPs in the pilot studies and assess their potential for storm drain vault locations that experience high concentrations of bacteria.

The City of Oceanside conducted a pilot study in FY 2005/06 with Attitude Technologies to fit the vault at the Harbor boat wash with XTEX AM antimicrobial fabric to reduce bacterial levels.

While initial results were promising, the product did not display long-term effectiveness, possibly the result of added hydrocarbons and sediment in the runoff.

In FY 2006/07, another pilot project was instated at the Harbor boat wash outfall. Storm drain cleaning had been conducted periodically at this outfall, and reductions in bacterial counts had been observed after each cleaning, indicating that re-growth in the pipe may be a contributing factor to the exceedances. The Clean Water Program staff worked with Harbor Maintenance to increase the cleaning of the conveyance at the boat washes and RV sewage dump to once per month. This pilot study began in February 2007, continued through the end of the fiscal year and is currently ongoing.

The previous pilot project assessing the effectiveness of an antimicrobial fabric installed in the separator vault of the boat wash/RV sewage dump outfall was ongoing through the end of the fiscal year 2005/06 into September 2006. The outfall was cleaned, as part of the previous schedule on 8/30/06. Monthly cleaning of the conveyance began in February 2007: 2/7/07, 3/3/07, 5/10/07, and 6/8/07. Table 1 provides the bacteria results from the Coastal Storm Drain Monitoring (CSDM) Program taken from the harbor boat wash/RV sewage pump outfall.

**Table 1. Bacteria Results from Harbor Boat Wash Outfall in FY 2006/07.**

| Date Sampled | Total Coliforms | Fecal Coliforms | Enterococcus |
|---|---|---|---|
| 07/10/06 | **500000** | **30000** | 2970 |
| 07/24/06 | **1600000** | **80000** | **54800** |
| 08/07/06 | **900000** | **30000** | 1750 |
| 08/21/06 | 23000 | 500 | 990 |
| 09/05/06 | **500000** | 2800 | 1400 |
| 09/18/06 | **1600000** | **>160000** | **50000** |
| 09/18/06 | **900000** | **160000** | 11000 |
| 10/02/06 | **900000** | **28000** | 1590 |
| 11/20/06 | 50000 | 3000 | 580 |
| 12/20/06 | 110000 | 2800 | 2190 |
| 02/26/07 | 11000 | 110 | 107 |
| 03/20/07 | 110000 | 1700 | <10 |
| 05/07/07 | 80000 | 1400 | 120 |
| 05/21/07 | 23000 | 40 | <10 |
| 06/11/07 | 130000 | 3000 | 100 |
| 06/25/07 | **900000** | **50000** | 1782 |

**Bold/red** results indicate an exceedance of CSDM action levels.

There were fewer exceedances in the wet weather months and following the end of the previous pilot study. Because of the variability in summer and winter use and wet and dry weather, the results are inconclusive. Monthly cleaning will be continued through the summer of 2007 and

reevaluated for its effectiveness. Point source contributions from the RV dump have been identified as a major culprit in water quality exceedances. Additional educational signage at the RV dump station is being planned and will be installed in FY 2007/08.

CITY OF OCEANSIDE
CLEAN WATER PROGRAM

# LOWER SAN LUIS REY RIVER AND RIVER MOUTH BACTERIA SOURCE IDENTIFICATION STUDY PROSPECTUS

**CITY OF OCEANSIDE, CLEAN WATER PROGRAM**

August 9, 2007

## Executive Summary

The City of Oceanside has been awarded a Clean Beaches Initiative (CBI) Proposition 50 grant to identify sources of bacterial contamination in the Lower San Luis Rey River (LSLR) and San Luis Rey River (SLR) mouth. The project will also assess bacterial loading and recommend potential Best Management Practices (BMPs) and Management Measures (MMs) to effectively target sources of bacteria in the River.

The study will answer the following key management questions:

- What is the bacterial loading in the LSLR River during dry and wet weather?
- What are the contributing sources of bacteria in the LSLR and at the SLR River mouth during dry and wet weather?
- What potential BMPs and/or MMs would eliminate the anthropogenic sources of bacteria into the LSLR River?

## Introduction

The shoreline at the outlet of the SLR River mouth, located in the City of Oceanside, California is visited by thousands of people each year for a number of recreational activities. The river mouth discharges into the Pacific Ocean adjacent to the South Harbor Jetty, at a stretch of coastline with ample parking and attractive sand beaches, making it one of the City's most popular places for aquatic recreation.

However, elevated levels of indicator bacteria (total coliform, fecal coliform, and enterococcus) have affected water quality in the river mouth and the adjacent shoreline. For a number of years, the beach has had significantly more beach postings and closures as a result of elevated bacterial levels than other beaches in the City. In 2005, this beach was posted due to bacterial exceedances for 218 days; 185 days were during one consecutive stretch. As a result of exceedances, the river mouth and one-half mile of shoreline is listed as an impaired water body under Section 303(d) of the CWA for exceedances of indicator bacterial standards.

A major objective of the SLR Watershed Urban Runoff Management Program (WURMP) lead by the City of Oceanside is to identify sources of the bacterial exceedances at the river mouth. As directed by the WURMP, the City of Oceanside and the County of San Diego have jointly sampled the San Luis Rey River since March 2004 to determine if the river is the source of the bacterial exceedances. Thus

300 NORTH COAST HIGHWAY, OCEANSIDE, CA 92054 TELEPHONE 760-435-5800 FAX 760-435-5814

far, the results are inconclusive and recommend focused sampling in the lower river and at the river mouth.

**Bacterial Identification Study**

To address this issue, the City of Oceanside proposes to conduct the LSLR River and River Mouth Bacteria Source Identification Study. The objective of this study is to identify the sources and quantify the loading of bacterial contamination in the LSLR River and River Mouth. Multi-tiered genetic microbial testing methods will be used to identify bacteria sources in the Lower San Luis Rey River. This multi-tiered approach includes bacterial concentrations assessment using traditional measurements of fecal indicator bacteria to determine the flux of bacteria in the river and river mouth, and genetic microbial source tracking methods which will be determined by the Technical Advisory Committee.

The sampling and analysis study will include, at a minimum:

Multi-tiered genetic microbial testing in the Lower San Luis Rey River and the river mouth at the Pacific Ocean outlet. The sample site selection process will include appropriate sites for tracking TMDL implementation progress.

A comprehensive visual observation program will be conducted to identify point and non-point source runoff.

Collection and analysis of flow data to be utilized in bacteria loading estimates from the sources identified.

Dry and wet weather sampling events will be conducted to identify sources and quantify wet, dry, and annual bacterial loading estimates.

Recommendations for potential Best Management Practices to reduce and eliminate bacterial sources in the Lower San Luis Rey River and at the river mouth will be developed.

A Technical Advisory Committee (TAC) will be established for the purpose of offering oversight and guidance in the development of the approach, in addition to the implementation and reporting of the project study. The TAC will meet at a minimum of three times:

1) During the project development. The TAC will identify a framework to answer the key management questions. A more detailed Scope of Work will be created to guide the consultant(s) in developing and implementing the study.
2) Implementation. The TAC will be available to oversee the implementation of the project and discuss any issues that may arise.
3) Post-Implementation. The TAC will have input in the reporting of the final data to the State Water Board.

**Conclusion**

Identifying the sources of elevated bacterial levels in the Lower San Luis Rey River and river mouth is a high priority for the City and the primary focus of this study. The potential to identify sources of bacterial contamination and to determine potential BMPs and MMs to eliminate the input of those sources can greatly benefit the water quality of the river and shoreline. This can result in the decrease of beach

Surfer at Shoreline of San Luis Rey River Mouth

closures, as well as enhance the public enjoyment of our coastline.

| Camp Pendleton | IC/ID 2006/07 | 7/11/2006 |
|---|---|---|

**Site Summary:**

Outfall off of Harbor Drive under the I-5 overpass. Drain maintained by Camp Pendleton.

**Investigatory Actions:**

| Date | Action | Staff |
|---|---|---|
| 7/7/2006 | Leak initially reported to the main gate at Camp Pendleton | Steve Plyler |
| 7/11/2006 | Site revisited; leak continued. Chlorine was analyzed and flow calculated:<br>Chlorine: 1.4 to 1.5 ppm<br>Flow: 200 to 250 gpm<br>Area of detection was near the mitigated site south of the main gate.<br>The facility maintenance supervisor was called and the crew shut off the main valve within the hour. | Lahsaie, Sabelis, Plyler |

| Buena Vista Foam | IC/ID 2006/07 | 11/28/2006 |
|---|---|---|

**Site Summary:**
This site is west of College Boulevard and north of Marron Road in Buena Vista Creek behind the Kohls.

**Investigatory Actions:**

| Date | Action | Staff |
|---|---|---|
| 11/28/2006 | Resident complaint of foam behind Kohl's in Buena Vista Creek and at falls upstream. Resident concerned homeless encampments may be a source. | Lahsaie |
| 11/29/2006 | Site visited by Code Enforcement. Two transients arrested, one cited for illegal camping. Associated trash removed as follow-up. | Tinant, Ericson |

**Investigatory Status:**

As reported last year, foam is common in Buena Vista Creek after the first major storm event. The foam seems to originate form east of the Oceanside City Limits. Previous analytical tests taken from the flow and from the foam have resulted in high microorganism counts, but no true source has been identified. It is suspected that the source is something in the geology of the area, including the portion of Agua Hedionda Watershed. Ongoing investigations are being conducted to pinpoint the cause of the foam.

| Fire Station Runoff | IC/ID 2006/07 | 3/21/2007 |
|---|---|---|

**Site Summary:**
Fire Station #3 at the intersection of El Camino Real and Oceanside Boulevard.

**Investigatory Actions:**

| Date | Action | Staff |
|---|---|---|
| 3/22/2007 | Resident reported discharge of soapy water from the Fire Station. | Lahsaie |
| 3/23/2007 | Follow-up with shift supervisor. Firefighters were draining a charged hose and washing apparatus. Clean Water Program staff reminded them of the IC/ID regulations and the Fire Station will get gravel/sand bags to berm the curb. | Lahsaie |

**Investigatory Status:**

Discharge was identified and activity corrected.

| S006 | Dry Weather 2007 | 5/29/2007 |
|---|---|---|

**Site Summary:**

Site S006 is a 36-inch corrugated metal pipe (CMP) located under I-5. S006 drains the interstate and the residential community to the northeast of the San Luis Rey River and I-5.

**Investigatory Actions**

| Date | Action | Staff |
|---|---|---|
| 5/29/2007 | Initial investigation conducted. Field and laboratory screening showed the following exceedance for orthophosphate:<br>Orthophosphate-P: 2.30 mg/L | Witheridge |
| 5/31/2007 | Follow-up investigation conducted. Field screening was conducted and orthophosphate results were below the action level:<br>Orthophosphate-P: 1.40 mg/L | Witheridge |

**Investigatory Status**

Initial screening of L040 resulted in an action level exceedance of orthophosphate. The follow-up visit found decreased orthophosphate results below the action level.

| S072 | Dry Weather 2007 | 7/19/2007 |
|---|---|---|

**Site Summary:**

Site S072 is a 60-inch RCP with a flap gate installed. It is located on the north side of the San Luis Rey River off of River Tree Drive. S072 conveys flows from the residential community, including a City park to the north of the outlet.

**Investigatory Actions**

| Date | Action | Staff |
|---|---|---|
| 7/19/2007 | Initial investigation conducted. Field and laboratory screening of the ponded water showed the following exceedances:<br>Ammonia-N: 1.0 mg/L<br>Orthophosphate-P: 2.75 mg/L | Witheridge |
| 7/20/2007 | Follow-up investigation conducted. Field screening was conducted and the ammonia and orthophosphate results continued to be below the action levels:<br>Ammonia-N: 2.0 mg/L<br>Orthophosphate-P: 2.85 mg/L | Witheridge |
| 7/20/2007 | Upstream investigation was initiated. Next upstream inlet is a grate south of Marlado Park. There was evidence of runoff, but no flow. The next manhole was part of a curb inlet structure. It had ponded water with anaerobic black mud at the bottom. A sampling pole was used and the water sampled was turbid.<br>Ammonia-N: 4.5 mg/L<br>Orthophosphate-P: 4.65 mg/L<br>The other connecting MS4 inlets and structures were dry. There was also overland flow coming from park just upstream of the curb inlet. While there was no flow during sampling, there was also evidence of overland flow coming from the residential community up River Tree to the north. | Witheridge |

**Investigatory Status**

Initial screening of ponded water at site S072 resulted in action level exceedances of ammonia and orthophosphate. The follow-up visit found continued exceedances of ammonia and orthophosphate. The upstream investigation found ponded water in the curb inlet on River Tree. The remaining MS4 system was dry. Overland flow was

coming from a sprinkler in the park, just upstream of the inlet. Overland flow has also since been seen coming from the residential area to the north. Due to quick evaporation, no one source was identified.

To reduce and/or eliminate the residential flow, educational material about dry weather runoff and pollution prevention was distributed to the residences on October 25, 2007. The City of Oceanside's water conservation program also reached this area through the local public television station's service announcements in August and October on smart irrigation. The Clean Water Program also teamed up with the Water Utilities' Meter Readers in August and began a residential door hanger program. The Meter Readers will be placing door hangers on residences that they find to have water flowing from their property. The door hangers have tips for good irrigation practices and a link to the City's website for more information.

To reduce and/or eliminate the runoff from the City's parks, several meetings by phone and in person were held in September and October with Clean Water Program staff and Parks' Department staff and their contractors. The Parks' maintenance staff visually inspects the City's parks weekly. Any irrigation problems are prioritized and fixed. Fertilizer is applied depending on the use of the park and the season. A slow-release fertilizer is used in the summer and best management practices are always used to keep fertilizer and grass clippings in the park and out of the storm drains and water ways. De-thatching is completed annually and aeration bi-annually to improve drainage in all of the parks. The Clean Water Program is working continuously with the Park's Department to keep BMPs in place and up-to-date in addition to seeking out funding for smart irrigation controls to improve water conservation efforts.

**Attachments**

Overland flow from Marlado Park

| S103 | Dry Weather 2007 | 6/22/2007 |
|---|---|---|

**Site Summary:**

Site S103 is a concrete outfall located south of the San Luis Rey River. Access to the site is from Gooseberry Way. The outlet drains a residential areas south of the site outlet drains a residential areas south of the site

**Investigatory Actions**

| Date | Action | Staff |
|---|---|---|
| 6/22/2007 | Initial investigation conducted. Field Screening of the flowing water showed the following exceedances:<br>Ammonia: 6.0 ppm<br>Orthophosphate-P: 4.15 ppm | Witheridge |
| 6/27/2007 | Follow-up investigation conducted. Field Screening was conducted and showed ammonia levels within acceptable limits and Orthophsphate-P levels lower, but exceeding the acceptable limits:<br>Ammonia: 0.3 ppm<br>Orthophosphate-P: 2.0 ppm | Witheridge |
| 6/27/2007 | An up-stream investigation was conducted. The catch basins upstream did not contain enough water to sample, but there was ponded water on the curb that was sampled. The results for ammonia and Orthophoste-P were within the acceptable limits:<br>Ammonia: 0.8 ppm<br>Orthophosphate-P: 1.15 ppm<br>The runoff was followed further upstream and the majority was coming from a residence at 5381 Gooseberry Drive. | Witheridge |

**Investigatory Status**

Follow-up investigations showed a continued exceedance of Orthophosphate-P levels. The contributing drainage area consists of residential land-use; one point contribution was identified during neighborhood observation. Educational materials were distributed to the contributing residential area to inform residents of their potential impact on local water quality issues.

| S106 | Dry Weather 2007 | 5/29/2007 |
|---|---|---|

**Site Summary:**

Site S106 includes four 36-inch plastic pipes at the intersection of North River Road and Sleeping Indian Road on the north side of the San Luis Rey River. The outlet drains an agricultural area immediately north of the site. Access to the site is from North River Road.

**Investigatory Actions**

| Date | Action | Staff |
|---|---|---|
| 5/29/2007 | Initial investigation conducted. Field Screening and laboratory results showed an exceedance for nitrate:<br>Nitrate-N: 35.6 mg/L | Witheridge |
| 6/6/2007 | Follow-up investigation conducted. Results show continued exceedance for nitrate:<br>Nitrate-N: 68.8 mg/L | Witheridge |
| 7/2/2007 | Follow-up investigation continued. Results show continued exceedance for nitrate:<br>Nitrate-N: 44.0 mg/L<br>Upstream investigation conducted. The drainage ditch was sampled upstream of the outfall, but downstream of the intersection of Sleeping Indian Road and Las Tunas road where the drainage crosses under Sleeping Indian Road. Nitrate results were below the action levels:<br>Nitrate-N: 7.9 mg/L | Witheridge |

**Investigation Status**

Nitrate loading from the agricultural area around Sleeping Indian has been an on-going issue. Clean Water Program staff began a special investigation in the summer of 2006 to assess agricultural contribution to nitrate exceedance. Several agricultural outfalls were identified that consistently contribute egregious nitrate water quality exceedances to the Sleeping Indian Outlet. The City of Oceanside is currently working with contributing agricultural parties to voluntarily implement appropriate BMP's to effectively manage agricultural runoff. In addition, due to possible drought conditions, agriculture facilities are coming under a mandatory 30% decrease in water usage. The Clean Water Program continues to maintain a good working relationship with these facilities and will be conducting more site visits and monitoring during the wet weather season in effort to show the facilities what their contribution is and providing ways they can eliminate and/or reduce their runoff and nitrate contribution.

| S109 | Dry Weather 2007 | 6/14/2007 |
|---|---|---|

**Site Summary:**

Site S109 is an 18-inch RCP located on the south side of the San Luis Rey River. The site conveys the runoff from the residential area immediately south of the outlet.

**Investigatory Actions**

| Date | Action | Staff |
|---|---|---|
| 6/14/2007 | Initial investigation conducted. Field Screening results showed exceedances for the following parameters:<br>Ammonia-N: 1.5 mg/L<br>Orthophosphate-P: 3.70 mg/L<br>Dissolved Oxygen: 1.05 mg/L<br>Turbidity: 95 NTU | Witheridge |
| 6/19/2007 | Follow-up investigation conducted. Results show continued exceedances for ammonia and orthophosphate:<br>Ammonia-N: 1.5 mg/L<br>Orthophosphate-P: 5.45 mg/L<br>Dissolved Oxygen: 5.46 mg/L<br>Turbidity: 41 NTU | Witheridge |
| 6/19/2007 | An upstream investigation was initiated. The next upstream sampling point is from a manhole at a curb inlet in the residential area at the intersection of Harding and Andrew Jackson. Evidence of irrigation was present, but no ponded water the sample. Leaf debris was found in the catch basin. | Witheridge |

**Investigation Status**

To reduce and/or eliminate the residential flow, educational material about dry weather runoff and pollution prevention was distributed to the residences on October 25, 2007. The City of Oceanside's water conservation program also reached this area through the local public television station's service announcements in August and October on smart irrigation. The Clean Water Program also teamed up with the Water Utilities' Meter Readers in August and began a residential door hanger program. The Meter Readers will be placing door hangers on residences that they find to have water flowing from their property. The door hangers have tips for good irrigation practices and a link to the City's website for more information. In addition, Public Works cleans all the catch basins in the City annually prior to the wet weather season.

| S110 | Dry Weather 2007 | 6/14/2007 |
|---|---|---|

**Site Summary:**

Site S110 is located on the north side of the San Luis Rey River. S110 is a 30-inch RCP with a flap gate installed. Access to Site S110 is from Douglas Drive to the access road on the north side of the River

**Investigatory Actions**

| Date | Action | Staff |
|---|---|---|
| 6/14/2007 | Initial investigation conducted. Field Screening results showed exceedances for the following parameters:<br>pH: 9.93<br>Dissolved Oxygen: 19.31 mg/L<br>The sample was taken at 10:50am on a very hot day (water temperature = 28.1 C) | Witheridge |
| 6/19/2007 | Follow up investigation conducted; field screening results showed ph and DO within acceptable parameters.<br>pH: 8.20<br>Dissolved Oxygen: 8.66 mg/L | Witheridge |

**Investigatory Status**

The initial visit of S110 was on a hot day in the middle of June. The very small amount of ponded water had elevated pH, DO, and temperature results. The follow-up was conducted in the morning and pH and DO results were within acceptable parameters.

| S111 | Dry Weather 2007 | 6/8/2007 |
|---|---|---|

**Site Summary:**

Site S111 is a concrete channel adjacent to Fireside Park, east of the San Luis Rey River. The channel drains the residential area east of the site.

**Investigatory Actions**

| Date | Action | Staff |
|---|---|---|
| 6/8/2007 | Initial investigation conducted. Field Screening results showed an exceedance for pH:<br>pH 9.68 | Witheridge |
| 6/11/2007 | Follow-up investigation conducted. Results show continued exceedance for pH:<br>pH 9.62<br>Less water present. | Witheridge |
| 6/19/2007 | Another follow-up and upstream investigation was planned; however the ponded water had dried up. No flow upstream. | Witheridge |

**Investigation Status**

Site S111 had an exceedance for pH, most likely due to leaching from the concrete channel. The summer created drier conditions and the ponded water evaporated.

S111 on June 19, 2007

| L002 | Dry Weather 2007 | 9/12/2007 |
|---|---|---|

**Site Summary:**

Site L002 is a 66-inch RCP located near North Avenue and Vista Pacific Drive, north of Loma Alta. It drains the industrial and commercial area to the north of the creek and east of North Avenue.

**Follow-up Actions**

| Date | Action | Staff |
|---|---|---|
| 9/12/2007 | Initial investigation conducted. Field screening of the ponded water showed exceedances for the following parameters:<br>Dissolved Oxygen: -1.5 mg/L<br>Because of the high ponded water, access to the actual outfall was not possible. While there was not direct flow to Loma Alta, there was some seepage downstream. Dissolved oxygen readings were collected at this point to see what the levels were as the water entered the channel:<br>Dissolved Oxygen: 5.0 mg/L | Witheridge |

**Investigatory Status**

The low DO was most likely due to the ponded nature of the water where the site was sampled. Four feet closer to the receiving water, the dissolved oxygen levels were within acceptable levels.

| L007 | Dry Weather 2007 | 9/7/2007 |
|---|---|---|

**Site Summary:**

Site L007 is a 48-inch RCP located off of North Avenue and Seasons Road, south of Loma Alta Creek. It drains the residential area to the south of North Avenue.

**Follow-up Actions**

| Date | Action | Staff |
|---|---|---|
| 9/7/2007 | Initial investigation conducted. Field screening of the ponded water showed exceedances for the following parameters:<br>Ammonia-N: 1.0 mg/L<br>Dissolved Oxygen: 0.99 mg/L | Witheridge/ Mallett |
| 9/12/2007 | Follow-up investigation conducted. Field screening results continued to exceed action levels for the following parameters.<br>Ammonia-N: 1.0 mg/L<br>Dissolved Oxygen: -1.88 mg/L<br>The next upstream manhole on the south side of North Avenue was visited and the ammonia results were under action levels:<br>Ammonia-N: 0.8 mg/L | Witheridge |
| 9/14/2007 | Follow-up investigation continued. The upstream manhole visited on 9/12/2007 was sampled for dissolved oxygen:<br>Dissolved Oxygen: -1.30 mg/L<br>This catch basin had approximately 3 feet of standing water in it.<br>The next access point is a manhole on Bliss Circle. There was not enough water to sample. Some overland flow was observed and tracked to area drains from private residences. | Witheridge |

**Investigatory Status**

The ammonia exceedances and low DO results are likely from the ponded nature of the outfall. Leaf debris and algae were present and the decay of both can contribute to these levels. Public Works was contacted and made aware of the ponded water in the upstream portion of the system. In addition, education materials regarding dry weather runoff and water conservation were distributed to the residential community.

| L013 | Dry Weather 2007 | 9/12/2007 |
|---|---|---|

**Site Summary:**

Site L013 is a manhole upstream of a 42-inch RCP located behind ReMax in the southwest corner of the shopping center at the intersection of Oceanside Boulevard and College Boulevard. The outlet is surrounded by dense vegetation and a fence and is therefore not accessible. This outlet drains the commercial and residential area to the north of Oceanside Boulevard.

**Follow-up Actions**

| Date | Action | Staff |
|---|---|---|
| 9/12/2007 | Initial investigation conducted. Field screening showed an exceedance for the following parameter:<br>Orthophosphate-P: 2.10 mg/L | Witheridge |
| 9/14/2007 | Follow-up investigation conducted. Field screening result for orthophosphorous were under the action level:<br>Orthophosphate-P: 0.95 mg/L | Witheridge |

**Investigatory Status**

The orthophosphate result from the follow-up investigation was under the action level.

| L019 | Dry Weather 2007 | 8/30/2007 |
|---|---|---|

**Site Summary:**
Site L19 is a 48-inch RCP, located south of the Corporate Centre and Oceanside Boulevard intersection, north of Loma Alta Creek. The outlet drains the commercial and open space areas located on the hill north of Oceanside Boulevard. Access to the site is from Oceanside Boulevard

**Investigatory Actions**

| Date | Action | Staff |
|---|---|---|
| 8/30/2007 | Initial investigation conducted. Field and laboratory results of the ponded water showed exceedances for the following parameters:<br>Ammonia-N: 1.0 mg/L<br>Total Coliforms: 50,000 MPN/100mL | Witheridge |
| 8/31/2007 | Follow-up investigation conducted. Field screening result for ammonia were under the action level:<br>Ammonia-N: 0.8 mg/L | Witheridge |
| 10/1/2007 | Follow-up investigation for bacteria was conducted. Laboratory results were below the bacteria action levels:<br>Total Coliforms: 3,000 MPN/100mL<br>Fecal Coliforms: 80 MPN/100mL<br>Enterococcus: 96 MPN/100mL<br>An upstream sample was also collected on the northeast corner at the intersection of Corporate Center and Oceanside Blvd. The bacteria levels here were also below the bacteria action levels:<br>Total Coliforms: 8,386 MPN/100mL<br>Fecal Coliforms: 1,100 MPN/100mL<br>Enterococcus: 85 MPN/100mL | Witheridge |

**ICID**

| | | |
|---|---|---|
| 10/1/2007 | While investigating the upstream area at the corner of Corporate Center and Oceanside Blvd, discharge from landscaping and/or construction at the corner was observed. A hose was attached to the irrigation system, but was leaking water at the connection, picking up sediment, and heading directly into the storm drain. The crew was made aware of the problem and immediately turned off the water and repaired the connection. | Witheridge |

**Investigation Status**
The ponded water at this site was collected and sampled. Generally, the water has a slight trickle over the banks to the receiving water of Loma Alta. Ammonia and bacteria levels decreased to levels below the action limits upon follow-up visits.

An ICID was observed on October 1, 2007 and was remedied immediately. A landscaping contractor had a poor connection with a water pipe. Water from the bad connection was spraying onto the dirt, picking up fine sediments and washing them directly into the storm drain. The contractor immediately turned off the water and fixed the connection on the hose.

Poor hose connection next to the storm drain inlet.

| L029 | 3060 Industry Way | 8/23/2007 |
|---|---|---|

**Site Summary:**

Site L029 is a manhole on the north side of Loma Alta Creek. Access to the outfall is not available. The first accessible sampling point is at a curb inlet that begins the storm drain system in front of 3060 Industry Way. The outlet drains the commercial and industrial area south of Oceanside Boulevard.

**Investigatory Actions**

| Date | Action | Staff |
|---|---|---|
| 8/23/2007 | Initial investigation conducted. Field screening of the ponded water showed the following exceedances:<br>Ammonia: 7.0 ppm | Witheridge |
| 8/31/2007 | Follow-up investigation conducted. Field screening was conducted and showed ammonia levels continued to exceed the acceptable limits:<br>Ammonia: 4.0 ppm<br>Public Works was contacted. There is a tree growing in the outlet which is currently inaccessible. | Witheridge |

**Investigatory Status**

Follow-up investigations showed the ammonia exceedance to most likely be caused by leaf debris in the ponded water in the manhole. The sources of water are most likely irrigation and storm runoff. The cause of the blockage is from tree roots growing at the end of the pipe which is inaccessible to the Public Works department. Public Works has been made aware of the exceedance and are working on gaining access to the outlet to correct the problem.

| L040 | Dry Weather 2007 | 8/30/2007 |
|---|---|---|

**Site Summary:**

Site L040 is an open concrete channel north of Loma Alta Creek just east of I-5. Access to the outfall is not available. Theoutlet drains the commercial and residential areas east of I-5 and north and south of Oceanside Blvd.

**Investigatory Actions**

| Date | Action | Staff |
|---|---|---|
| 8/30/2007 | Initial investigation conducted. Laboratory screening of showed the following exceedance for total coliforms:<br>Total Coliforms: 50,000 MPN/100mL | Witheridge |
| 10/1/2007 | Follow-up investigation conducted. Laboratory screening was conducted and showed total coliform levels to be under the action level:<br>Total Coliforms: 30,000 MPN/100mL<br>A sample was also collected upstream in the channel, above the vegetation. The results upstream were also below action levels:<br>Total Coliforms: 8,000 MPN/100mL | Witheridge |

**Investigatory Status**

Initial screening of L040 resulted in an action level exceedance of total coliforms. Upon a follow-up visit, the total coliform levels were below the action levels. An upstream investigation was initiated on the follow-up day and bacteria levels upstream of the vegetated portion of the channel were a log lower.

Upstream sampling point.

| L052 | Dry Weather 2007 | 8/16/2007 |
|---|---|---|

**Site Summary:**

Site L052 is a 36-inch RCP outlet on the south side of Loma Alta Creek just west of I-5. Access to the outfall is from Cavalier Mobile Estates through the channel. The outlet drains the residential area on the east side Cavalier Estates.

**ICID**

| Date | Action | Staff |
|---|---|---|
| 8/16/2007 | Deposit of wet, fine sediment at the outfall. Not enough flow to sample, but appeared something had been washed down. Went upstream to a construction site in Cavalier Mobile Park. No flow or activities on going, but the ground was wet and a hose was uncoiled. Referred to Code Enforcement. | Witheridge |
| 8/17/2007 | Code Enforcement visited the site. Construction activities from a fire inside a shed had been completed. Management was made aware of the findings. | Witheridge |

**Investigatory Status**

An area to the east of the Cavalier Mobile Estates office was being cleared from a fire that had started in a shed near the pool. The sediment deposit found in the outfall was likely a one-time incident on the final day of construction. Park management was made aware of the regulations and it is not expected that this will occur again.

Sediment in outfall.

| L054 | Dry Weather 2007 | 8/30/2007 |
|---|---|---|

**Site Summary:**

Site L054 is a 16-inch RCP outlet on the south side of Loma Alta Creek west of I-5. Access to the outfall is from Cavalier Mobile Estates through the channel. The outlet drains the residential area to the south and Marshall Park.

**Investigatory Actions**

| Date | Action | Staff |
|---|---|---|
| 8/30/2007 | Initial investigation conducted. Field screening of the flowing water showed the following exceedances:<br>Nitrate-N: 10.5 ppm | Witheridge |
| 8/31/2007 | Follow-up investigation conducted. Field screening was conducted and showed nitrate levels continued to exceed the acceptable limits:<br>Nitrate-N: 10.6 ppm<br>An upstream investigation was conducted and the flow tracked to an upstream inlet at the northwest corner of Port Marshall Park. Two main flows were found; one from the MS4 system upstream (Flow #1) and the other from a small PVC pipe coming from the east (Flow #2). Field screening for nitrate was conducted:<br>Flow #1: Nitrate-N = 6.1 ppm<br>Flow #2: Nitrate-N = 11.85 ppm<br>Flow #2 was tracked upstream to a small PVC pipe from a gated area in Cavalier Mobile Estates that drains overland to a grate and then flows to the second PVC pipe that flows to the storm drain inlet. A neighbor said that this flow is from continuous groundwater pump to avoid flooding in the trailer park. | Witheridge |
| 9/12/2007 | Field screening was conducted directly from the PVC groundwater pump pipe:<br>Nitrate-N: 10.6 ppm | Witheridge |
| 9/14/2007 | The manager of Cavalier Mobile Estates was contacted and options about recycling and/or diverting the water was discussed. | Witheridge/ Lahsaie |

**Investigatory Status**
Flow was tracked upstream from Loma Alta Creek to an inlet in the northwestern corner of Marshall Park. Flow from a sump pump in Cavalier Mobile Estate was found to the main source of flow and nitrate. Cavalier Mobile Estates constructed a set of three sump pumps to continuously pump groundwater to the storm drain system eight years ago to avoid flooding. Most likely a combination of natural seepage (from being built on a wetland) and over-irrigation from the residential area and park to the south caused continuous flooding of the mobile home park. Nitrate exceedances are likely from natural sources and/or fertilizers used in the park and residential areas to the south.

View from the trailer park to Marshall Park

Sump pump pipe flowing into storm drain.

Initial discussions of ways to reduce and eliminate this source of water included the possibility of reusing it as irrigation for the mobile home park or diverting it to sewer. Discussion with mobile home park management showed that the park doesn't have enough landscaping to reuse the amount of water that is being pumped. In addition, the amount combined with the nitrate levels are too much for the local sewer plant to handle.

Oceanside's Parks Department was contacted and agreed to stop watering Marshall Park for over a week while flow and nitrate tests were conducted. While flow remained approximately the same, nitrate levels did seem to decrease. The water was turned back on. It was discovered that the park was fertilized with a 39-0-0 sulfur based slow-release fertilizer the day before the irrigation system was turned back on. However, the Parks Department agreed to halt further fertilization for four months while field test are conducted bi-weekly.

Results of the initial field testing are shown below:

Directly from sump pump outfall:

| Date | Time | Nitrate-N (mg/L) | Flow (gpm) | pH | Water Temp (C) | Turb (NTU) | Cond (mS/cm) | DO (mg/L) | Total Chlorine (ppm)* |
|---|---|---|---|---|---|---|---|---|---|
| 9/12/2007 | 14:00 | 10.6 | N/S | 6.96 | 23.6 | 0 | 2.72 | 5.84 | |
| 9/17/2007 | 14:00 | 11.5 | 6 | | | | | | |
| 9/25/2007 | | Water shut off in Marshall Park | | | | | | | |
| 10/1/2007 | 7:00 | 10.6 | 5.7 | 6.74 | 20.4 | 0 | 2.76 | 6.19 | |
| 10/4/2007 | 13:00 | 8.9 | 5.9 | | | | | | |
| 10/4/2007 | | Fertilizer used on Park | | | | | | | |
| 10/5/2007 | | Water turned back on | | | | | | | |
| 10/12/2007 | 11:15 | 10.8 | 5.5 | 6.89 | 21.1 | 0 | 2.74 | 5.99 | 1 |

*Total Chlorine approximated by field test strip.

Monitoring will continue at the outfall of the sump pump and discussions of ways to reduce and/or eliminate this source are ongoing. It is a priority for the City of Oceanside to find a solution that will halt exceedance levels of nitrate from going into the storm drain, while also protecting the residents and their homes in the trailer park from flooding.

| L103 | Dry Weather 2007 | 8/23/2007 |
|---|---|---|

**Site Summary:**

Site L103 is a 72-inch RCP located west of Corporate Center, north of Loma Alma Creek. The outlet drains the commercial and open space areas located north of Oceanside Boulevard off of Corporate Center Drive.

**Investigatory Actions**

| Date | Action | Staff |
|---|---|---|
| 8/23/2007 | Initial investigation conducted. Field screening of the flowing water showed the following exceedances:<br>Orthophosphate-P: 2.55 mg/L | Witheridge |
| 8/31/2007 | Follow-up investigation conducted. Immediate follow-up was not possible due to rain and the 72-hour waiting period. Field screening was conducted and showed orthophosphate levels to be below the acceptable limits:<br>Orthophosphate-P: 1.75 mg/L | Witheridge |

**Investigatory Status**

Orthophosphate levels at L103 were above the action level during the initial visit. There was measurable rain over 0.10-inch in Oceanside over the weekend so the follow-up for the site was conducted the following Friday. Results for orthophosphate were below the action levels.

| L105 | Dry Weather 2007 | 8/14/2007 |
|---|---|---|

**Site Summary:**
Site L105 is a manhole located on Industry Way, north of Loma Alta Creek. The outlet within the manhole drains the residential and commercial area located north of Industry Way.

**Investigatory Actions**

| Date | Action | Staff |
|---|---|---|
| 8/14/2007 | Initial investigation conducted. Field screening of the flowing water showed the following exceedances:<br>Ammonia-N: 1.0 mg/L<br>Orthophosphate-P: 2.35 mg/L | Witheridge |
| 8/15/2007 | Follow-up investigation conducted. Field screening was conducted and ammonia and orthophosphate results continued to exceed the action levels:<br>Ammonia-N: 1.0 mg/L<br>Orthophosphate-P: 4.65 mg/L | Witheridge |
| 8/15/2007 | Upstream investigation was conducted. The next upstream manhole on Oceanside Blvd across from Edgehill Lane was sampled using a pole. There was low flow and the water was turbid. Results for phosphate continued to be above action levels:<br>Orthophosphate-P: 5.10 mg/L<br>Although the MS4 system begins in two places: the bottom of Edgehill Lane and at the intersection of Foussat and Oceanside Blvd, there was overland flow going into both curb inlets.<br>Overland flow was tracked upstream on Foussat. A sample was taken from a storm drain that was on Foussat, south of Mesa coming from Island Drive. Investigations of the residential area lead to a car being washed.<br>Field screening showed results below action levels:<br>Ammonia-N: 0.4 mg/L<br>Orthophosphate-P: 1.85 mg/L<br>The upstream investigation of Edgehill Lane lead to what seemed to be a groundwater seep at the entrance to Arbor Hills gated condo complex. Field screening was conducted | Witheridge |

| | | |
|---|---|---|
| | using a syringe and results for orthophosphate were overrange of the meter:<br>Ammonia-N: 0.6 mg/L<br>Orthophosphate-P: OR | |
| 9/12/2007 | Upstream site at Arbor Hills was revisited. Less water was seeping from cracks in the asphalt and a sample could not be collected even using a syringe. | Witheridge |

**Investigatory Status**

Ammonia and orthophosphate levels at L105 were above the action level during the initial visit. An upstream investigation the following day indicated that ammonia exceedances were likely caused by leaf debris and occasional ponding in the MS4 system. The upstream investigation lead to two sources of overland flow; the first up Foussat, the second up Edgehill Lane. The flow from Foussat did not have orthophosphate exceedances. The flow on Edgehill was tracked to the entrance of Arbor Hills gated residential community. Groundwater was seeping from the asphalt with orthophosphate levels above the range of the field meter. On a return visit, the groundwater seep had lessened and sampling was not feasible. The flow was not making it to the storm drain down Edgehill Lane. This site will continue to be monitored. If flow increases, sampling will be conducted to verify the orthophosphate results.

8/15/2007 Arbor Hills Entrance

8/15/2007 Groudwater Seepage at Arbor Hills

9/12/2007 Groundwater Seepage at Arbor Hills

| B001 | Dry Weather 2007 | 8/30/2007 |
|---|---|---|

**Site Summary:**

Site B001 is a 48”-RCP located east of the Pacific Coast Highway at the Buena Vista Nature Center. The outlet drains the commercial and residential areas northeast of the Nature Center.

**Investigatory Actions**

| Date | Action | Staff |
|---|---|---|
| 8/30/2007 | Initial investigation conducted. Field and laboratory screening showed exceedances for the following parameters:<br>Ammonia-N: 2.0 mg/L<br>Total Coliforms: ≥1,600,000 MPN/100mL<br>Fecal Coliforms: ≥1,600,000 MPN/100mL | Witheridge/ Mallett |
| 8/31/2007 | Follow-up investigation conducted. Field screening results continued to show an exceedance for the following parameter:<br>Ammonia-N: 3.0 mg/L | Witheridge |
| 9/10/2007 | The mouth of Buena Vista Lagoon was opened. | Public Works |
| 9/17/2007 | Follow-up investigation continued. Laboratory screening results were below the bacteria action levels:<br>Total Coliforms: 23,000 MPN/100mL<br>Fecal Coliforms: 5,000 MPN/100mL | Witheridge |
| 10/1/2007 | Because initial bacteria values were extremely high, an additional confirmation event was completed. Field and laboratory screening showed an exceedance for ammonia, total coliforms, and fecal coliforms:<br>Ammonia-N: 3.0 mg/L<br>Total Coliforms: 70,000 MPN/100mL<br>Fecal Coliforms: 22,000 MPN/100mL | Witheridge |
| 10/1/2007 | An upstream investigation was conducted. The three manholes upstream of B001, but south of Eaton Street were visited. The downstream two manholes had ponded water. The third catch basin had ponded water with a trickle going downstream, but the upstream pipe was dry. The ponded water in the third catch basin was sampled. Results for total and fecal coliforms were below the | Witheridge |

<table>
<tr><td></td><td>action levels:
<table>
<tr><td>Ammonia-N</td><td>2.0 mg/L</td></tr>
<tr><td>Total Coliforms</td><td>17,000 MPN/100mL</td></tr>
<tr><td>Fecal Coliforms</td><td>220 MPN/100mL</td></tr>
</table>
A passerby did mention that he has seen raccoons going in and out of storm drains in the drainage area.</td><td></td></tr>
</table>

**Investigatory Status:**
During the initial visit, the outfall was completely submerged. The mouth was scheduled to be opened by Public Works because of rising lagoon levels. The bacteria results were received the day after the lagoon was opened and flushing was assumed to have occurred. Follow-up bacteria sampling showed the coliform levels to have decreased below action limits. Exceedances in ammonia levels are likely due to decay in the ponded water. Additional follow-up sampling was conducted and total and fecal coliform levels were once again exceeding action levels. Upstream of the outfall, the water was ponded up to the third catch basin, but no water was flowing into it. This ponded water was sampled and results for bacteria were below all action levels. It does not appear that bacteria exceedances are caused by upstream actions or runoff. It is still unclear why the initial bacteria levels were so high.

B001 on August 30, 2007

**Investigatory Actions**

| Date | Action | Staff |
|---|---|---|
| 8/30/2007 | Initial investigation conducted. Field Screening and laboratory results showed an exceedance for the following parameter:<br>Total Coliforms — 130,000 MPN/100mL | Witheridge |
| 9/17/2007 | Follow-up investigation conducted in conjunction with Coastal Storm Drain sampling. Total coliform results were under the action level.<br>Total Coliforms — 8,000 MPN/100mL | Witheridge |

**IC/ID**

| Date | Action | Staff |
|---|---|---|
| 7/3/2007 | In response to exceedances for Coastal Storm Drain Monitoring, an upstream investigation was conducted. The results for the outfall are shown below:<br>Total Coliforms — 23,000 MPN/100mL<br>Fecal Coliforms — 1,700 MPN/100mL<br>Enterococcus — 640 MPN/100mL<br>Results for the upstream investigation at the manhole above commercial activity, but below the residential area are shown below:<br>Total Coliforms — 2,300 MPN/100mL<br>Fecal Coliforms — 130 MPN/100mL<br>Enterococcus — 30 MPN/100mL | Witheridge |
| 7/30/2007 | Again upstream sampling was conducted in an attempt to determine if the bacterial exceedances were coming from upstream of the commercial area, or in the portion of storm drain that runs below Interstate 78. The results for the outfall are shown below:<br>Total Coliforms — 50,000 MPN/100mL<br>Fecal Coliforms — 11,000 MPN/100mL<br>Enterococcus — 346 MPN/100mL | Witheridge |

| | | |
|---|---|---|
| | Results for the upstream investigation at the manhole above commercial activity, but below the residential area are shown below:<br>Total Coliforms: 3,000 MPN/100mL<br>Fecal Coliforms: 20 MPN/100mL<br>Enterococcus: 30 MPN/100mL | |

**Investigatory Status**

This site has historically been monitored under the Coastal Storm Drain Monitoring Program, in addition to the Dry Weather Program. With inconsistent exceedances, monitoring has been increased and this site is now sampled bi-monthly. Previous investigations have shown bat populations living in the storm drain under Interstate-78. An upstream investigation in July showed that bacteria levels were roughly a log lower in the manhole upstream of the commercial area and above the bat population.

There is also a suspicion that septic systems still in use in some residences on Fire Mountain, upstream in the MS4 system, may be having an affect on bacteria levels. Optical brighteners assays conducted during the dry weather season in 2006 were positive at the outfall and inconclusive in the upstream manhole. Optical brighteners are used in many households and indicate an anthropogenic source in runoff. These assays will be re-run in October as part of the ongoing investigation into random exceedances throughout the year.

| B022 | Dry Weather 2007 | 8/1/2007 |
|---|---|---|

**Site Summary:**

Site B022 is a 48-inch RCP built into the Buena Vista Creek channel wall east of the Thunder Drive Bridge. The outlet drains the residential areas north of Buena Vista Creek. Access to the site is from within Buena Vista Creek channel.

**Investigatory Actions**

| Date | Action | Staff |
|---|---|---|
| 8/1/2007 | Initial investigation conducted. Field Screening and laboratory results showed exceedances for the following parameters:<br>Total Coliforms: 300,000 MPN/100mL<br>Fecal Coliforms: 110,000 MPN/100mL<br>Enterococcus: >24,196 MPN/100mL<br>To note, a diaper was found at the outfall during sampling. | Witheridge |
| 8/20/2007 | Follow-up investigation conducted. Total coliform results were under the action level, however fecal coliform and enterococcus results continued to exceed the action levels:<br>Total Coliforms: 50,000 MPN/100mL<br>Fecal Coliforms: 50,000 MPN/100mL<br>Enterococcus: 27,551 MPN/100mL<br>An upstream investigation was conducted. Two upstream manholes were found in the apartment complex north of the outfall, but were unable to be opened. An inlet north of the apartment complex was found in a commercial area, but the inlet was not flowing, although the concrete was wet. No overland flow was found. Cut grass was found in the outfall. | Witheridge |

**Investigatory Status**

Follow-up investigations did not find any point sources for bacterial exceedances. Residential behavior may be the source of runoff and bacterial contamination as a diaper and cut grass were observed in and near the outfall. Educational material was distributed to the residences regarding dry weather runoff and pollution prevention on October 25, 2007.

| B023 | Dry Weather 2007 | 7/20/2007 |
|---|---|---|

**Site Summary:**

Site B023 is a 36-inch RCP located west of the intersection of Lake Boulevard and Thunder Drive south at 3524 Lake Blvd. The outlet drains the residential areas south of Lake Boulevard.

**Investigatory Actions**

| Date | Action | Staff |
|---|---|---|
| 7/20/2007 | Initial investigation conducted. Field screening results showed conductivity levels to be high:<br>Conductivity: 7.10 mS/cm | Witheridge |
| 7/23/2007 | Follow-up investigation conducted. Field screening showed conductivity levels to be higher than other parts of the City:<br>Conductivity: 7.85 mS/cm | Witheridge |
| 7/23/2007 | An upstream investigation was conducted. The results from the next upstream manhole were similar:<br>Conductivity: 7.22 mS/cm<br>Across Lake Boulevard, the flow was tracked and tested and results were higher:<br>Conductivity: 10.1 mS/cm<br>The outfall off Mira Monte was tested and conductivity levels continued to climb:<br>Conductivity: 12.5 mS/cm<br>The inlet to the east of Mira Monte was dry. It seemed the runoff was groundwater seepage. | Witheridge |
| 7/26/2007 | Clean Water Program staff and Public Works staff revisited the upstream site off Mira Monte to confirm groundwater seepage. A closer inspection of the joints in the storm drain showed mineral growth. In addition, the pavement at the low point of the street was wet with seepage. | Witheridge/ Sabelis |

**Investigatory Status**

Follow-up investigation showed that this runoff is from groundwater seepage. Also to note, the upstream site off of Mira Monte had several shopping carts in the drainage area. This seems to be a historical problem. These carts were removed during the Buena Vista Creek Clean-Up in conjunction with California Coastal Clean-Up Day on September 15, 2007.

| Date | Action | Staff |
|---|---|---|
| 7/20/2007 | Initial investigation conducted. Field showed exceedances for the following parameters:<br>Ammonia-N: 2.0 mg/L<br>Orthophosphate-P: 2.95 mg/L | Witheridge |
| 7/23/2007 | Follow-up investigation showed that the field screening results continued to exceed action levels for the following parameters:<br>Ammonia-N: 1.0 mg/L<br>Orthophosphate-P: 2.95 mg/L<br>An upstream investigation began, however all of the manholes for this branch of the MS4 system were in the middle of College Blvd. | Witheridge |
| 7/26/2007 | The follow-up investigation was continued with multiple field screening samples taken. The following is a record of sample locations and results:<br>Upstream #1: North of Lake Blvd intersection<br>Ammonia-N: 0.4 mg/L<br>Orthophosphate-P: 2.80 mg/L<br>Upstream #2: North of Oceanside/Carlsbad City line<br>Orthophosphate-P: 2.20 mg/L<br>Upstream #3: Manhole south of Oceanside/Carlsbad line. This manhole had two flows. This sample was taken from flow coming from the east.<br>Orthophosphate-P: 2.75 mg/L<br>Upstream #4: Manhole south of Oceanside/Carlsbad line. This manhole had two flows. This sample was taken from flow coming from the west.<br>Orthophosphate-P: 2.05 mg/L<br>The City of Carlsbad was notified. | Witheridge/ Sabelis |

<table>
<tr>
<td>8/3/2007</td>
<td>Follow-up investigation continued with City of Carlsbad. Field screening at the outfall showed continued exceedances for the following parameters:
<table>
<tr><td>Ammonia-N</td><td>4.0 mg/L</td></tr>
<tr><td>Orthophosphate-P</td><td>4.35 mg/L</td></tr>
</table>
Less flow was observed. The only flow that was able to be sampled was upstream of Upstream #3 in a brow ditch below the private residences. The results for ammonia and orthophosphate were below action levels:
<table>
<tr><td>Ammonia-N</td><td>0.4 mg/L</td></tr>
<tr><td>Orthophosphate-P</td><td>1.75 mg/L</td></tr>
</table>
</td>
<td>Witheridge/ Hartman</td>
</tr>
</table>

**Investigatory Status**

Follow-up investigations showed ammonia levels to decrease below action levels when sampled upstream of the ponded water. The ammonia exceedances were likely due to decay in the ponded water. Although the orthophosphate results upstream in the City of Carlsbad were below action levels during the final investigation, Carlsbad distributed education material pertaining to dry weather runoff to the residential areas east and west of College Blvd that are part of the drainage area for sampling sites Upstream #3 and #4.

| B027 | Dry Weather 2007 | 8/8/2007 |
|---|---|---|

**Site Summary:**

Site B027 is a 54-inch box outlet located off of Haymar on Hanson Aggregate property. It drains the commercial and residential areas to the north of Interstate 78.

**Follow-up Actions**

| Date | Action | | Staff |
|---|---|---|---|
| 8/8/2007 | Initial investigation conducted. Field screening showed an exceedance for ammonia: | | Witheridge |
| | Ammonia-N | 3.0 mg/L | |
| 8/14/2007 | Follow-up investigation conducted. Field screening results within acceptable parameters. | | Witheridge |
| | Ammonia-N | 0.4 mg/L | |

**Investigatory Status**

The follow-up investigation of B027 found ammonia results to be under the action levels. This flow is trickling, but there are also pools of stagnant water. The original exceedance is likely due to decay of leaf debris in ponded water.

| B103 | Dry Weather 2007 | 8/14/2007 |
|---|---|---|

**Site Summary:**

Site B103 is located at the end of Lagoon View Drive, north of the Buena Vista Lagoon. The outlet drains commercial areas north of SR-78.

**Investigatory Actions**

| Date | Action | | Staff |
|---|---|---|---|
| 8/14/2007 | Initial investigation conducted. Field Screening showed an exceedance for the following parameters: | | Witheridge |
| | Nitrate-N | 10.8 mg/L | |
| 8/15/2007 | Follow up investigation conducted. Field screening results were below action levels: | | Witheridge |
| | Nitrate-N | 7.45 mg/L | |

**Investigatory Status**

The follow-up investigation resulted in lower nitrate levels.

| A004a | Dry Weather 2007 | 8/1/2007 |
|---|---|---|

**Site Summary:**

Site A004a is 48-inch RCP located below Spinnaker Ridge adjacent to the pump station off of Cannon Road. The outlet drains the residential areas north and south of the outlet.

**Investigatory Actions**

| Date | Action | Staff |
|---|---|---|
| 8/1/2007 | Initial investigation conducted. Field Screening showed exceedances for the following parameters:<br>Ammonia-N: 5.0 mg/L<br>Orthophosphate-P: 3.55 mg/L<br>Total Coliforms: 300,000 MPN/100mL<br>Enterococcus: 14,136 MPN/100mL | Witheridge |
| 8/3/2007 | Follow-up investigation conducted. Field screening results within acceptable parameters.<br>Ammonia-N: 0.8 mg/L<br>Orthophosphate-P: 1.45 mg/L | Witheridge |
| 8/20/2007 | Follow-up laboratory samples collected and field screening samples were collected at the outfall. Results showed exceedances for the following parameters:<br>Ammonia-N: 3.0 mg/L<br>Orthophosphate-N: 4.30 mg/L<br>Total Coliforms: ≥1,600,000 MPN/100mL<br>Fecal Coliforms: 110,000 MPN/100mL<br>Enterococcus: 26,996 MPN/100mL | Witheridge |
| 8/20/2007 | Went upstream on the south fork of the line. The next manhole that was accessible upstream was at the end of Milissi Road. There was not enough flow to sample from the manhole, but there was overland flow which was sampled. Results are shown below:<br>Ammonia-N: 0.4 mg/L<br>Orthophosphate-N: 3.10 mg/L<br>Total Coliforms: 300,000 MPN/100mL<br>Fecal Coliforms: 30,000 MPN/100mL<br>Enterococcus: 6,473 MPN/100mL | Witheridge |

<table>
<tr><td></td><td>The overland flow was tracked upstream to area drains from private residences. Field test kits were used at two drains at the end of Tolo Road:<table><tr><td>Orthophosphate-P Drain #1</td><td>3.10 mg/L</td></tr><tr><td>Orthophosphate-P Drain #2</td><td>2.95 mg/L</td></tr></table></td><td></td></tr>
<tr><td>8/20/2007</td><td>Went upstream on the north fork of the line. The next accessible manhole upstream was in a brow ditch southwest of the residences on Nighthawk Lane. A sampling pole was used and it was difficult to get a clean sample. The sample was turbid with debris and sediment.<table><tr><td>Ammonia-N</td><td>1.0 mg/L</td></tr><tr><td>Orthophosphate-P</td><td>3.70 mg/L</td></tr><tr><td>Total Coliforms</td><td>900,000 MPN/100mL</td></tr><tr><td>Fecal Coliforms</td><td>17,000 MPN/100mL</td></tr><tr><td>Enterococcus</td><td>6,815 MPN/100mL</td></tr></table>The next two manholes upstream are on Nighthawk. All of these manhole covers are bolted. Overland flow was observed and sampled using field test kits:<table><tr><td>Orthophosphate-P</td><td>2.00 mg/L</td></tr></table>Again, the overland flow was tracked back to private residence area drains.</td><td>Witheridge</td></tr>
</table>

**Investigatory Status**

Investigations into the two forks of this MS4 line both continued to show exceedances for orthophosphate and fecal indicator bacteria. In both instances, the source of the flowing water seemed to be from residential over-irrigation and/or natural groundwater flow. Fertilizer or decaying leaf debris on the curbs and in curb inlets may be the cause for orthophosphate exceedances. Birds were observed bathing in the overland flow in addition to decaying leaf debris and other possible wildlife sources of bacteria in the storm drain.

To stop the overland flow and reduce the runoff, an educational letter about storm drain pollution was distributed to both neighborhoods, with approximately 150 homes targeted, on October 25, 2007. In addition, on the local public television station, the Water Utilities Oceanside Update service announcement for August and October concentrated on water conservation and smart irrigation practices. The Clean Water Program also teamed up with the Water Utilities' Meter Readers in August and began a residential door hanger program. The Meter Readers will be placing door hangers on residences that they find to have water flowing from their property. The door hangers have tips for good irrigation practices and a link to the City's website for more information.

| A013 | Dry Weather 2007 | 8/1/2007 |
|---|---|---|

**Site Summary:**

Site A013 is a 36-inch RCP located at the intersection of Lake Boulevard and Alameda Drive, south of Agua Hedionda Creek. The outlet drains the residential areas immediately south of the site.

**Follow-up Actions**

| Date | Action | Staff |
|---|---|---|
| 8/1/2007 | Initial investigation conducted. Field and Laboratory screening showed exceedances for the following parameters:<br>Ammonia-N: 1.0 mg/L<br>Total Coliforms: 220,000 MPN/100mL<br>Fecal Coliforms: 22,000 MPN/100mL | Witheridge |
| 8/3/2007 | Follow-up investigation conducted. Field screening results within acceptable parameters.<br>Ammonia-N: 0.6 mg/L | Witheridge |
| 8/20/2007 | Follow-up investigation showed an exceedances for total coliforms, but fecal coliforms and ammonia were within acceptable parameters:<br>Ammonia-N: 0.8 mg/L<br>Total Coliforms: 170,000 MPN/100mL<br>Fecal Coliforms: 13,000 MPN/100mL | Witheridge |
| 8/20/2007 | Followed flow upstream. Next accessible upstream manhole did not have enough flow to sample. Some overland flow from private residence area drains was observed. | Witheridge |

**Investigatory Status**

This site was investigated in 2006 for the same tan foam, low pH, and total coliform exceedances. The same characteristic foam and lower pH were noted at neighboring Dry Weather site A015, as well. An investigation in the MS4 system and reports of similar foam and unique geologic crystalline formations were noted in a natural channel along Shadow Ridge Road, as well as an open space area near Calaveras Lake.

At this time all investigations indicate that natural geologic and ground water phenomena in the Agua Hedionda region are responsible for the low pH and foam deposition seen at A013. More information on the possible presence of iron bacteria will be researched, as well.

In addition, because overland flow was observed, educational material about dry weather runoff and pollution prevention will be distributed to the residences. The City of Oceanside's water conservation program will also reach this area through the local public television station's service announcements in August and October on smart irrigation. The Clean Water Program also teamed up with the Water Utilities' Meter Readers in August and began a residential door hanger program. The Meter Readers will be placing door hangers on residences that they find to have water flowing from their property. The door hangers have tips for good irrigation practices and a link to the City's website for more information.

| A015 | Dry Weather 2007 | 8/1/2007 |
|---|---|---|

**Site Summary:**
Site A015 is a 48-inch RCP located south of Lake Park, off of Lake Boulevard, south of Agua Hedionda Creek. The outlet drains the residential areas east along Lake Boulevard Drive. Access to the site is from Lake Boulevard Drive.

**Investigatory Actions**

| Date | Action | Staff |
|---|---|---|
| 8/1/2007 | Initial investigation conducted. Field and laboratory screening showed exceedances for the following parameters:<br>Total Coliforms — 80,000 MPN/100mL | Witheridge |
| 10/1/2007 | Follow up investigation showed total coliform levels to continue to exceed the action levels:<br>Total Coliforms — 80,000 MPN/100mL | Witheridge |
| 10/1/2007 | An upstream investigation was initiated, but there were no accessible upstream manholes on Lake to sample. However, at the intersection of Canon and Lake, evidence of groundwater seepage was found in the asphalt. A white color and what appeared to be work done to the street was evident along with moist asphalt as well as discolored brinks in the median. | Witheridge |

**Investigatory Status**
A015 has been subject to an ongoing investigation to locate the source of persistent white foam in runoff since 2004. Total coliform exceedances and low pH also seem to be a common characteristic in this area. In 2006, the white foam was traced back through the MS4 system to a french drain from a hillside in a residential development. Other investigations show similar depositions of foam as well as unique geologic crystalline formations in the watershed. The visual upstream investigation in 2007 found groundwater seepage in the intersection of Lake and Canon with a similar white color which supports the hypothesis that the discharge and exceedances may be naturally occurring.

This area will continue to be monitored and investigated. An optical brightener study will be conducted here in October to determine if anthropogenic detergents are a possible cause.

Revisit on Oct. 1, 2007

Intersection of Canon and Lake.
Groundwater seepage with white stains

| A016 | Dry Weather 2007 | 8/1/2007 |
|---|---|---|

**Site Summary:**

Site A016 is a 36-inch RCP located east of Amigos Court, south of Lake Boulevard, and north of Calavera Creek at the border of Oceanside and Carlsbad. The outlet drains the residential areas to the north and south of Lake Boulevard.

**Investigatory Actions**

| Date | Action | Staff |
|---|---|---|
| 8/1/2007 | Initial investigation conducted. Field Screening and laboratory results showed the exceedances for the following parameters:<br>Total Coliforms: 900,000 MPN/100mL<br>Fecal Coliforms: 22,000 MPN/100mL | Witheridge/ Mallett |
| 8/20/2007 | Follow-up investigation conducted. Laboratory results found fecal coliforms to be within acceptable parameters, but total coliform action levels were exceeded:<br>Total Coliforms: 900,000 MPN/100mL<br>Fecal Coliforms: 5,000 MPN/100mL<br>During this investigation, the small flow was tracked upstream. Four manholes were visited and none had enough water to sample. | Witheridge |

**IC/ID**

| Date | Action | Staff |
|---|---|---|
| 8/8/2007 | A resident contacted the City of Carlsbad about "soapy water" flowing from a pipe at Serena Avenue and Amigos Court. City of Carlsbad forwarded this onto the City of Oceanside. Code Enforcement and Clean Water Program staff visited the site. Heavy flow was coming out of this storm drain, A016, and then stopped while staff was present. It was tracked upstream to Rancho Calevera Mobile Home Park. The Park had drained their manmade lake using pumps and discharging into the storm drains. By the time staff arrived at the Park, the work was complete. | Witheridge/ Erickson |
| 8/15/2007 | Clean Water Program Coordinator, Mo Lahsaie, visited the office manager of Rancho Calevera Mobile Home Park. She stated this was the first time they have completely drained the pond after 35 years to construct a concrete-lined bottom. The pond had not been | Lahsaie |

| | | |
|---|---|---|
| | chlorinated. It appeared that they did not now that these kinds of discharges are prohibited under the stormwater municipal permit. The manager was educated about possible pollutants, including bacteria, and the impacts to surface waters. She was given options for future discharges including possible use of the pond water to irrigate their landscaped area. | |

**Investigatory Status:**
Follow-up investigations showed continued exceedance in Total Coliform levels. Because the flow is very small (0.2 gpm), sampling for bacteria levels upstream is not possible from the manholes. The drainage area is residential, and the flow is likely from private residences. The total coliform exceedances may be associated with historical pond maintenance activities. Rancho Calevera Mobile Home Park has been made aware that they may not discharge any of their pond water to the municipal storm drains. Periodic inspections may be made to ensure their compliance. Previous reports also link possible bacteria exceedances with leaf debris in the outfall. Although minimal amounts of debris were seen at the outfall, the inspection upstream found leaf debris in two of the inlets. These inlets are cleaned annually prior to the wet weather season.

Hose connecting the pump and storm drain

Pump at the lake

| A019 | Dry Weather 2007 | 7/9/2007 |
|---|---|---|

**Site Summary:**

Site A019 is a 24 inch RCP located in Oak Riparian Park off of Lake Boulevard, north of Agua Hedionda Creek. The outlet drains the residential and park areas north and south of Lake Boulevard.

**Investigatory Actions**

| Date | Action | Staff |
|---|---|---|
| 7/9/2007 | Initial investigation conducted. Field Screening from the ponded water showed exceedances for the following parameters:<br>Ammonia-N: 2.0 mg/L<br>Orthophoshate-P: 3.9 mg/L | Witheridge |
| 7/17/2007 | Follow up investigations from the ponded water continued to show exceedances for the following parameters:<br>Ammonia-N: 5.0 mg/L<br>Orthophoshate-P: 2.75 mg/L | Witheridge |
| 7/17/2007 | An upstream investigation was conducted. The next two upstream manholes were inaccessible. The following two manholes were curb inlets for the residential area north of Lake Blvd. These two inlets did not have running water, but the concrete was wet.<br>An investigation of the park showed ponded water near sprinkler heads and wet grass during mid-day. | Witheridge |

**Investigatory Status**

Initial screening of ponded water at site A019 resulted in action level exceedances of ammonia and orthophosphate. The follow-up visit found continued exceedances of ammonia and orthophosphate Ammonia exceedances are likely due to leaf debris breakdown in stagnant water. The source of the water may be from both residential runoff and park irrigation.

To reduce and/or eliminate the residential flow, educational material about dry weather runoff and pollution prevention was distributed to the residences on October 25, 2007. The City of Oceanside's water conservation program also reached this area through the local public television station's service announcements in August and October on smart irrigation. The Clean Water Program also teamed up with the Water Utilities' Meter

Readers in August and began a residential door hanger program. The Meter Readers will be placing door hangers on residences that they find to have water flowing from their property. The door hangers have tips for good irrigation practices and a link to the City's website for more information.

To reduce and/or eliminate the runoff from the City's parks, several meetings by phone and in person were held in September and October with Clean Water Program staff and Parks' Department staff and their contractors. The Parks' maintenance staff visually inspects the City's parks weekly. Any irrigation problems are prioritized and fixed. Fertilizer is applied depending on the use of the park and the season. A slow-release fertilizer is used in the summer and best management practices are always used to keep fertilizer and grass clippings in the park and out of the storm drains and water ways. De-thatching is completed annually and aeration bi-annually to improve drainage in all of the parks. The Clean Water Program is working continuously with the Park's Department to keep BMPs in place and up-to-date in addition to seeking out funding for smart irrigation controls to improve water conservation efforts.

Oak Riparian Park irrigation runoff

| A021 | Dry Weather 2007 | 7/23/2007 |
|---|---|---|

**Site Summary:**

Site A021 is a RCP located east of Sky Haven Lane, south of Lake Boulevard, and north of Lake Calavera at the border of Oceanside and Carlsbad. The outlet drains the residential areas surrounding Sky Haven Lane south of Lake Boulevard.

**Investigatory Actions**

| Date | Action | Staff |
|---|---|---|
| 7/23/2007 | Initial investigation conducted. Field Screening showed exceedances for the following parameters:<br>Ammonia-N: 2.0 mg/L<br>Orthophosphate-P: 2.45 mg/L | Witheridge |
| 7/26/2007 | Follow-up investigation conducted. Field screening results continued to show an exceedances for the following parameters:<br>Ammonia-N: 2.5 mg/L<br>Orthophosphate-P: 3.25 mg/L<br>An upstream investigation was initiated. The next upstream manhole had small flow with both ammonia and orthphoshate levels over the range of the test kit. However, a clean sample was not collected due to low flow and minerals and particulates from the vault contaminating the sample. The next accessible manhole on Serena Lane was sampled. The results also exceeded screening levels:<br>Ammonia-N: 2.0 mg/L<br>Orthophosphate-P: 2.50 mg/L | Witheridge |
| 7/30/2007 | The follow-up investigation was continued. Field screening results from the outfall continued to show an exceedances for the following parameters:<br>Ammonia-N: 1.5 mg/L<br>Orthophosphate-P: 3.00 mg/L<br>Upstream manholes were opened. Flow was too small to sample, but animal scat was found in one. The flow was tracked up water on the curb in front of two private residences on Serena Lane. Visual evidence pointed to groundwater seepage. | Witheridge/ Sabelis |

| | | |
|---|---|---|
| | This water was sampled and the results also exceed action levels:<br>Ammonia-N: 2.5 mg/L<br>Orthophosphate-P: 3.10 mg/L<br>The Water Utilites Department was called and no water line was being done in that area. Water Utilities followed-up a few days later and the pavement was dry. | |

**IC/ID**

**Investigatory Status:**
Follow-up investigations indicated that the runoff is likely due to groundwater seepage upstream on Serena Lane in addition to period residential run-off from car washing, over-irrigation, etc. In addition, ammonia exceedances are common in ponded water with leaf debris breakdown.

Pooled water in curb on Serena Lane

Pavement of Serena Lane with water seeping out of the pavement.

## WELCOME TO THE OCEANSIDE CLEAN WATER PROGRAM NEWSLETTER!

Due to the expanding programs and service opportunities our Oceanside Clean Water Program offers, we have designed a bi-yearly newsletter to keep you informed of the latest activities and water quality information. As an Oceanside resident, you will continue to receive fliers in your water utility bill about upcoming community cleanup events, as well as this newsletter. If you wish to be a part of the Oceanside Clean Water Program mailing list, or know others interested, please contact us and we will add the name(s) promptly. We hope you find this newsletter valuable.

## Improve your home...

When completing a painting project, many residents wash off paintbrushes under an outdoor faucet. Toxic paint products rinsed or dumped outside can result in a health threat to your neighborhood and waters. These products can run off into storm drains, leading to pollution of your community and local waterways. When cleaning up after a painting project, prevent pollution by following the steps listed at right.

- **Never dump paint or related products into the street, gutter or storm drain.**
- **Clean water-based paint from brushes in any sink, never outside with a hose.**
- **Clean oil-based paint from brushes with paint thinner, which can be filtered and reused.**
- **Donate used paint to local anti-graffiti organizations or reuse it for touch-ups.**
- **Empty paint cans can be recycled in curbside recycling bins if lid is off and all paint is dried up.**
- **Take unwanted paint or related products to a Household Hazardous Waste (HHW) collection site.**
- **Oceanside residents can call 760-439-2824 to schedule a HHW drop-off appointment.**

## ...without harming your community.

Oceanside residents can visit the following website for more information about proper household hazardous waste disposal:

www.ci.oceanside.ca.us

City Departments/Public Works/Solid Waste Recycling Services and HHW

To learn more ways to keep your neighborhood and waters healthy and clean visit

# Loma Alta Creek Cleanup
# April 28, 2007
# 10 am - Noon

Celebrate Earth Day by participating in the fifth annual Creek to Bay Cleanup event on April 28, 2007. The City of Oceanside, together with I Love a Clean San Diego, and 1-800-GOT-JUNK, will be hosting a cleanup along the banks of Loma Alta Creek, as well as at Buccaneer Park, where the creek enters the Pacific Ocean.

Volunteers can choose from four sites:

- Buccaneer Park at Pacific and Morse Streets (1500 South Pacific Street)
- Behind VONS on Oceanside Boulevard and I-5 (1737 Oceanside Boulevard)
- Mesa Drive between El Camino Real and Rancho Del Oro Drive
- Behind commercial buildings at 1629 Ord Way (Off Oceanside Boulevard between College Boulevard and Temple Heights Drive

Join us while we remove unwanted materials from the creek and beach and help to improve Oceanside water quality. Volunteers will receive free parking, refreshments, community service hours, and a free T-shirt.

The Clean Water Program hosts a variety of cleanups every year along every major watershed in Oceanside. For more information call 760-435-5807.

# DID YOU DROP SOMETHING?

Dog waste left on the ground can wash into storm drains, polluting your local waterways and the ocean. Dog owners can help prevent pollution by taking these simple steps:

- Pick up after your pet - *every single time*.
- Throw away pet waste in the garbage; never wash it into the gutter or storm drain.
- Carry extra bags in your car, so you are prepared when you travel with your pet.

# Report a Violation

The Oceanside Clean Water Program has a hotline for residents to call if they see a violaton or potential violation of urban runoff pollution occurring in the City of Oceanside. Help protect our local waterways and call the Clean Water Program hotline.

VACTOR RECOVERING ON SITE UNTIL REPAIR IS MADE. | N | Y | OPEN FLOOD CHANNEL | LOMA ALTA CREEK | |
| 067003 | 10/09/06 1421 | 10/07/06 2150 | 10/07/06 2220 | 80 | 0 | 80 | 1325 N HARBOR DRIVE | PRIVATE CLEAN OUT AND GREASE TRAP STRUCTURE | GREASE | Grease trap overflowed and caused a blockage in the private lateral of the restaurant. | Private lateral was cleared by Flow Master Plumbing using a snake at 10:20 pm on October 7, 2006. The line was jetted out at 9:00 am on October 8, 2006 by Flow Master Plumbing to clear the line. Restaurant said they have established a contract for Minute Man Plumbing to jet out the lateral every other month and for Darling Delaware to service the grease trap every week on Thursdays. On October 10, 2006 Darling Delaware cleaned the grease trap and cleaned the storm drain filter installed in the parking lot down gradient from the grease trap structure. On October 10, 2006, our Stormwater Code Enforcement Officer issued a $100 citation to the restaurant for discharge into the harbor and required the restaurant to prevent any further spills, clean the storm drains and parking lot (full recovery), and replace the filter system in the storm drain. The City will inspect the restaurant as part of our grease trap program. Corrective actions will be issued as required. | Y | Y | STORM DRAIN | OCEANSIDE HARBOR | |
| 067004 | 12/11/06 0725 | 12/10/06 0920 | 12/10/06 1030 | 700 | 0 | 700 | 562 HOOVER ST | MANHOLE | OTHER | CONTRACTOR WORKING ON CITY LINE LEFT SANDBAGS IN CHANNEL OVER THE WEEKEND CAUSING CITY LINE TO BACK-UP AND SPILL. | WHILE IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO REMOVE DOWNSTREAM PROTECTIVE DEVICES LIKE SANDBAGS, THE CITY INSPECTORS HAVE BEEN TOLD TO MAKE SURE THE CONTRACTOR REMOVES THESE IN THE FUTURE. | Y | Y | LOMA ALTA CREEK | PACIFIC OCEAN | |

# 1 INTRODUCTION

## 1.1 Program Summary

In February 2001, the San Diego Regional Water Quality Control Board issued Order No. 2001-01 to the communities of San Diego County. As part of Order 2001-01, the City of Oceanside was required to develop and implement a Dry Weather Field Screening and Analytical Monitoring Program. The purpose of the program was to detect and eliminate illicit connections and illegal discharges (IC/IDs) to the storm drain system, minimizing the negative impacts of human activities on receiving water bodies. Information collected from dry weather monitoring is used to characterize dry weather discharges in the storm drain system and identify conveyances that are discharging elevated levels of pollutants. Follow-up studies and source investigations are conducted as necessary to detect and eliminate the sources of these pollutants. This report presents the results of the City of Oceanside's 2007 Dry Weather Field Screening and Analytical Monitoring Program.

In 2007 the San Diego Regional Water Quality Control Board issued a new five-year permit for Receiving Waters and Urban Runoff Monitoring and Reporting, Order No. 2007-0001. The Copermittees in San Diego County are required, as part of their Jurisdictional Urban Runoff Management Program (JURMP), to update their Dry Weather Program to meet or exceed the requirements of Order No. 2007-0001. The City of Oceanside's Dry Weather Program was reviewed and updated and the details of the new program are including in the City of Oceanside JURMP Update. The new program will be implemented during the 2008 dry weather season.

## 1.2 City of Oceanside Drainage Summary

The City of Oceanside lies on the northern coast of San Diego County, 35 miles north of the City of San Diego and 83 miles south of the City of Los Angeles. The City is bounded to the west by the Pacific Ocean, the north by Camp Pendleton Marine Corps Base, the east by unincorporated areas of the County of San Diego and the City of Vista, and the south by the City of Carlsbad. The City covers approximately 42 square miles with a population of just over 173,000 people. California's main highway, Interstate 5, runs through the City, as does Highway 78, which provides southeast access to Interstate 15. Highway 76, which runs northeast, also provides access to Interstate 15.

The City's boundaries include two major watersheds; the San Luis Rey Watershed, which includes the San Luis Rey River and the Carlsbad Hydrologic Unit, which includes Loma Alta Creek, Buena Vista Creek, and Agua Hedionda Creek.

### 1.2.1 San Luis Rey Watershed

#### 1.2.1.1 San Luis Rey River

The San Luis Rey Watershed is the northernmost watershed within the City of Oceanside. It is approximately 558 square miles and extends inland to encompass a large portion of the northern unincorporated areas of the County of San Diego. The San Luis Rey River

is the primary watercourse of the watershed and discharges to the Pacific Ocean near the northern border of the City of Oceanside. While the San Luis Rey Watershed is the largest hydrologic unit in the San Diego region, 92.5% of the watershed lies within the unincorporated part of the County, and not within the City of Oceanside. However, a wide floodplain is prominent through the City, including levees on either side of the river, to protect the surrounding developments, adjacent to or within the historical floodplain, from future storm events. In 2007, the Pacific Street Bridge Project broke ground to restore the river mouth to its natural open state. The current "Arizona crossing," a land berm and large culvert intended to wash out during large storm events, will be removed after completion of the new bridge which is being constructed just west of Highway 101 and the railroad tracks.

The one named tributary within the City's boundaries is Pilgrim Creek, which drains a relatively undeveloped portion of the City with some residential areas and a municipal golf course in addition to an undeveloped area of Camp Pendleton. The remaining drainage areas within the City include areas of agricultural, residential, and some industrial land uses.

### 1.2.2 Carlsbad Watershed

#### 1.2.2.1 Loma Alta Creek

Loma Alta Creek is the northernmost watershed in the Carlsbad Hydrologic Unit. It flows alongside Oceanside Boulevard, beginning as a rising spring just west of Melrose Drive in the City of Vista and ending at Buccaneer Beach Park where it enters the Pacific Ocean. Approximately 5 percent of the Loma Alta Creek Watershed is in the City of Vista, and the remaining portion is entirely in the City of Oceanside. Loma Alta Creek is over seven miles long and encompasses nearly 6,300 acres of land, 70 percent of which is developed. Almost 90% of the land within the watershed is privately owned.

Several tributaries drain into Loma Alta Creek, however, the only named tributary is Garrison Creek, located along Garrison Street west of El Camino Real. Much of the creek has been modified throughout the years, with the use of fully or partially concrete-lined channels to stabilize the creek-bed slopes. Loma Alta winds through a highly industrial area towards the western portion of the creek. Other land uses include residential and commercial.

#### 1.2.2.2 Buena Vista Creek

The Buena Vista Watershed extends approximately 10.6 miles inland from the coast, totaling 14,437 acres and draining 21 square miles. The Watershed begins on the western slopes of the San Marcos Mountains, flows through areas of the County of San Diego and the Cities of Vista, Carlsbad, and Oceanside, turns into a lagoon and then ends at the Pacific Ocean. A weir was built in 1940 to stop tidal flow at the mouth and the lagoon now functions as a freshwater lake.

In the City of Oceanside, Buena Vista Creek parallels Highway 78. The Lagoon is located south of Highway 78 and west of Jefferson Street. The upper and western basins of the Buena Vista Watershed are primarily in the City of Vista, the southeastern portions

are primarily in the San Diego County jurisdiction, and the lower basin is straddled between the Cities of Carlsbad and Oceanside as the Creek weaves its way between the two cities. Approximately 80% of the Buena Vista Watershed is developed, primarily with commercial and residential land uses. Because of the intense development in the watershed, large sections of Buena Vista Creek have been concrete-channelized to reduce the chance of flooding private property. Some agricultural activities also exist in the watershed.

#### 1.2.2.3 Agua Hedionda Creek

A small portion of the City of Oceanside lies within the watershed of a tributary of Agua Hedionda Creek, called Calavera Creek. Beginning in an undeveloped portion of land just west of Highway 78, Calavera Creek's headwaters start in Vista, proceed through a pocket of San Diego County unincorporated area, head into Oceanside, and then eventually drain to Lake Calavera. Lake Calavera was created with the building of a dam in the 1940s. While the creekbed downstream of the lake is typically dry, the creek reforms in wet weather to wind its way through Carlsbad and joins the major artery of Agua Hedionda Creek. A project to restore dam pumps and controls will begin in 2007/2008, according to the City of Carlsbad. Near the Pacific Ocean, Agua Hedionda Creek opens up into a lagoon. The entire Calavera Creek Basin is approximately 3,770 acres. The primary land use in the portion of the Agua Hedionda Watershed that lies within the City of Oceanside's boundaries is residential.

# 2 SAMPLING LOCATIONS

## 2.1 Site Selection

Storm drain outfalls throughout the City of Oceanside were identified on a map of the City's municipal separate storm sewer system (MS4). The City selected 100 monitoring sites from the approximately two hundred potential sites that it had previously inventoried. The sites were selected based on numerous factors, including the following:

Accessibility (physical access and safety)
Results of previous monitoring
Results of recent visual observations
Presence of permanent flow
Size of drainage area and land uses within that area
Quality of receiving waters or other downstream issues (i.e. degraded habitat, scour, etc.)
Contribution to WURMP monitoring efforts

Due to Sprinter Railway Construction in the Loma Alta Watershed, Pacific Street Bridge construction in the San Luis Rey Watershed, and a few other accessibility and safety concerns, 93 monitoring sites were visited during the 2007 Dry Weather Program in the City's watersheds: San Luis Rey (31 of 33 sites), Loma Alta (36 of 41 sites), Buena Vista (17 sites), and Agua Hedionda (9 sites).

## 2.2 Site Descriptions

Site visits were conducted at 93 locations within the City in 2007. In addition to construction activity and safety issues at some of the sites, others were found to have some misinformation and variation from previous years. This section will include a description of the historical monitoring site and explain any variation in the past five years. The sampling history of sites with storm drain variation over the past five years is included in Appendix A.

The site identification numbers are not arranged by location (for example, from east to west) because over the course of the Dry Weather Program, sites have been eliminated and added to best represent the City's MS4. The site identification numbers do either start with an S, B, L or A which corresponds with the San Luis Rey River (S), Buena Vista Creek (B), Loma Alta Creek (L) or Agua Hedionda Creek (A). For example, Site S112 would have been sampled from San Luis Rey River at location 112. The site locations are shown in Figure 1 and described below. The site identification numbers, descriptions, GPS coordinates, and conveyance structure types are listed in Table 1. Photos of each site visited are included as Appendix B.

### 2.2.1 San Luis Rey Site Descriptions

**S006**
Site S006 is a 36-inch corrugated metal pipe (CMP) located under Interstate 5. Access to Site S006 is from Carmelo Drive. Site S006 conveys flows from the residential area south of Camp Pendleton and east of Interstate 5 to the north side of the trail under I-5. Field screening samples and analytical lab samples were collected from the flowing water.

**S013**
Site S013 is located on the north side of State Route (SR) 76 where North Canyon Road intersects SR-76. The site is located adjacent to the bike path on the south side of the San Luis Rey River. Site S013 is a 48-inch reinforced concrete pipe (RCP) that appears to be a Caltrans drain for SR-76. No dry weather flows were observed.

**S018**
Previous site descriptions for Site S018 stated its location to be on the south side of the San Luis Rey River at the "lower pond" area pictures from the past years have shown different drains each year. It was an outlet with a 24-inch RCP with a flapper gate installed. Public Works states that the 24-inch flapper gate outfall has been abandoned and removed and was never connected to the lower pond. No other outfalls were found, therefore, this site was not visited.

**S025**
Site S025 is located on the north side of the San Luis Rey River on West Airport Road across from a junkyard. S025 is a 24-inch RCP in a headwall that drains the junkyard located just north of the outlet. No dry weather flows were observed.

**S032**
Site S032 is a 36-inch RCP with a flap gate installed and is located on the south side of the San Luis Rey River. The S032 outlet conveys flows from the residential, commercial, and open space areas located on the south side of SR-76. Access to the site is from Foussat Road to the access road that runs parallel to the River on the south side. There was a small amount of ponded water with no flow or source upstream. Field screening samples were collected.

**S035**
Site S035 is located on the south side of the San Luis Rey River. Site S035 is a 42-inch RCP with a flap gate installed. Access to the site is from Douglas Drive to the access road south of the San Luis Rey River. No dry weather flows were observed.

**S041**
Site S041 includes two 100-inch RCPs with flap gates installed and is located on the south side of the San Luis Rey River. Access to Site S041 is from Douglas Drive to the access road on the south side of the San Luis Rey River. No dry weather flows were observed.

**S043**
Site S043 is a 30-inch RCP with a flap gate installed and is located on the south side of the San Luis Rey River under the College Boulevard Bridge. The site collects dry weather flows from the residential area immediately south of the outlet. Access to the site is via College Boulevard to the access road on the south side of the River. No dry weather flows were observed.

**S044**
Site S044 is an open channel located on the south side of the San Luis Rey River. It conveys flows from residential and commercial areas. Access to the site is at Frazee Road and Oleander Drive. Construction on the northwest side of Oleander necessitated sampling upstream of the historical sampling point. A steep bank required sampling using a pole and flow could not be measured. Field screening samples were collected.

**S045**
Site S045 is at the outfall of three 4-foot by 6-foot boxes on the south side of the San Luis Rey River. S045 conveys flows from the residential areas south of Frazee Road to the River. Access to the site is via Frazee Road. Field screening samples were collected from the flowing water.

**S047**
Site S047 is a 24-inch RCP located in a commercial park off of Mission Avenue. The pipe conveys flows from surrounding residential and commercial areas to an open channel that runs parallel to SR-76 and ultimately to the San Luis Rey River. Dry weather flows were not observed.

**S048**
Site S048 is located within an open channel adjacent to SR-76. S048 is a CMP that collects dry weather flows from commercial developments on the south side of SR-76. Access to S048 is from Mission Avenue. Dry weather flows were not observed.

**S052**
Site S052 is a 42-inch RCP located on the north side of the San Luis Rey River at the intersection of North River Road and Leon Street. Site S052 conveys flows from the residential area and park located immediately north of the outlet. Access to the site is from North River Road. Dry weather flows were not observed.

**S065**
Site S065 is located within the open channel of Pilgrim Creek prior to confluence with the San Luis Rey River. Access to the site is from the San Luis Rey Wastewater Treatment Plant via North River Road to the access road located on the north side of San Luis Rey River. Site S065 conveys dry weather flows from a municipal golf course, residential, agricultural, parks, and open areas located to the north to the San Luis Rey River. Dry weather flows were not observed.

**S072**
Site S072 is a 60-inch RCP with a flap gate installed and is located on the north side of the San Luis Rey River. Access to the site is from River Tree Drive at Marlado Park. Site S072 conveys dry weather flows to the River from the park and residential community located north of the outlet. Field screening samples from the ponded water were collected.

**S075**
Site S075 is a 24-inch RCP in a headwall located on the north side of the San Luis Rey River. Access to the site is from the access road that runs parallel to the River between Benet and Foussat Roads. Site S075 conveys dry weather flows from the new residential developments north of the San Luis Rey River. Field screening samples from the flowing water were collected.

**S077**
Site S077 is an open channel south of SR-76 and upstream of Guajome Lake. Access to the site is from Hitching Post Drive. The runoff consists primarily of residential and commercial flows from east of the outlet. Samples are collected where the channel is concrete. Downstream of the sampling point, the channel is a natural swale that leads to Guajome Regional Park. Field screening samples were collected from the flowing water.

*Variation:* In 2003, the site is pictured as a storm drain and not an open channel. The storm drain location was not identified. From 2004 to 2007, the same channel has been sampled.

**S078**
Site S078 is a 24-inch RCP located at the intersection of Melrose Drive and North Santa Fe Avenue. S078 conveys residential flows, in a northwesterly direction, to Guajome Regional Park. No dry weather flows were observed.

*Variation:* Four different storm drains have been photographed for this site, but it has never been sampled and therefore has not field or analytical data associated with it.

**S085**
Site S085 includes two 24-inch RCPs located at North Santa Fe Avenue and Champlain Street. The outlet drains into a concrete channel south of the San Luis Rey River. S085 conveys the dry weather flows from the residential area to the south of North Santa Fe Avenue. Access to the site is from North Santa Fe Avenue. Field screening samples were collected from the ponded water.

**S088**
Site S088 is a 36-inch RCP located at the intersection of Mesa Drive and North Santa Fe Avenue. The site is located west of the Guajome Regional Park and south of the San Luis Rey River. Site S088 conveys dry weather flows from the residential area to the west into Guajome Regional Park. Access to the site is via North Santa Fe Avenue. Field screening samples were collected of the ponded water.

**S102**
Site S102 is located north of SR-76 between North Santa Fe Road and Guajome Lake Road, south of the San Luis Rey River. It is a 24-inch RCP that drains a residential area immediately east. Access to the site is from SR-76 and requires entering private property; therefore, access is limited. Field screening samples were collected of the ponded water.

*Variation:* A different site was visited in 2006, but no field screening was conducted. 2007 was the first year field samples have been collected for this site.

**S103**
Site S103 is located south of the San Luis Rey River. Access to the site is from the park east of 5396 Gooseberry Way. The outlet drains the residential and park areas in the neighborhood to the south. Field screening samples were collected of the flowing water..

**S104**
Site S104 in a 24-inch RCP located south of the San Luis Rey River. Access to the site is from park east of 5476 Gooseberry Way. The outlet drains the residential area south of the site. Field screening samples were collected of the ponded water.

*Variation:* This site has had three storm drains associated with it and it was sampled in 2003, 2006 and 2007. The 2003 and 2007 sites are the same. The drain sampled in 2006 appears to be S102.

**S105**
Site S105 includes two 36-inch corrugated metal pipes located on the north side of the San Luis Rey River. The outlet drains an agricultural area immediately north of the site. Access to the site is from North River Road. Dry weather flows were not observed.

**S106**
Site S106 includes four 36-inch plastic pipes at the intersection of North River Road and Sleeping Indian Road on the north side of the San Luis Rey River. The outlet drains the agricultural and residential area immediately north of the site. Access to the site is from North River Road. Field screening samples and analytical lab samples were collected from the flowing water.

**S107**
Site S107 is a natural channel that crosses under North River Road on the north side of the San Luis Rey River. The channel drains the agricultural area immediately north of the site. Access to the site is from North River Road. Field screening samples were collected.

**S108**
Site S108 is a natural channel that crosses under Via Puerta del Sol on the north side of the San Luis Rey River. The channel drains residential areas and agricultural areas in the

immediate vicinity. Access to the site is at the intersection of Via Puerta del Sol and Big View Road. Field screening samples and analytical lab samples were collected from the flowing water.

**S109**
Site S109 is an 18-inch RCP located on the south side of the San Luis Rey River. The site conveys the runoff from the residential area immediately south of the outlet. Access to the site is from the access road to the east of College Boulevard. Field screening samples were collected from the ponded water.

**S110**
Site S110 is located on the north side of the San Luis Rey River. S110 is a 30-inch RCP with a flap gate installed. Access to Site 110 is from Rainier Way east of Douglas Drive. Field screening samples were collected from the ponded water.

**S111**
Site S111 is a concrete channel adjacent to Fireside Park, east of San Luis Rey River. The channel drains residential and commercial areas east of the site. Access to the site is from Fireside Street. Field screening samples were taken from the ponded water.

**S112**
Site S112 is a 24-inch RCP outlet located between Pacific Street and the Metro Link tracks. The outlet collects runoff flows from the residential community on the west side of the railroad tracks and south of the San Luis Rey River. This area was not accessible in 2007 due to construction of the new Pacific Street Bridge. The area and storm drain line were located within the construction area and therefore this site was not sampled.

**S113**
Site S113 is located off of Capistrano Drive across from Capistrano Park. The site conveys flows from Camp Pendleton and from Capistrano Park south to the San Luis Rey River. Dry weather flows were not observed.

**S114**
Site S114 is a 24-inch RCP south of the auto auction parking lot and north of the San Luis Rey. The site is a flap gate between a retention basin and the river. Access to the site is from the bike path from College Boulevard. Dry weather flows were not observed.

### 2.2.2 Loma Alta Creek Site Descriptions

**L001**
Site L001 is a 48-inch RCP located at the intersection of North Avenue and Vista Pacific Drive, north of Loma Alta Creek. The outlet drains the industrial areas south of North Avenue. Access to the site is via North Avenue. Field screening samples and analytical lab samples were collected from the flowing water.

**L002**

Site L002 is a 66-inch RCP located northwest of the intersection of North Avenue and Vista Pacific Drive, north of Loma Alta Creek. The outlet drains the industrial areas east of the outlet. Access to the site is from a walking path off of North Avenue. Field screening samples were collected from the ponded water.

**L003**
Site L003 is a 48-inch RCP located off of North Avenue and east of Autumn Drive, south of Loma Alta Creek. The outlet drains the residential area southeast of North Avenue. Access to the site is via North Avenue. Field screening samples were collected from the flowing water.

**L004**
Site L004 includes three 24-inch RCPs located east of the intersection of North Avenue and Autumn Drive. Two of the outlets are located on the south side and one outlet is located on the north side of Loma Alta Creek. The outlets drain the residential areas on the south side of North Avenue and the areas under construction on the north side of Loma Alta. Access to the site is from North Avenue. Two of the three outlets were dry. One had a small amount of ponded water, but not enough to sample.

**L005**
Site L005 includes two 24-inch RCPs and one 36-inch RCP located at the intersection of North Avenue and Autumn Drive. Two of the outlets are located on the south side and one outlet is located on the north side of Loma Alta Creek. The outlets drain the construction areas on the north and the residential area to the south side of North Avenue. Access to the site is from North Avenue. Dry weather flows were not observed.

**L006**
Site L006 is a 36-inch RCP located at the intersection of North Avenue and Season Road, south of Loma Alta Creek. The outlet drains the residential areas on the hillside south of North Avenue. Access to the site is from North Avenue. Field screening samples were collected from the ponded water.

**L007**
Site L007 is 48-inch RCP located north of North Avenue west of Seasons Road, south of Loma Alta Creek. The outlet drains the residential areas on the hillside south of North Avenue. The outlet is partially submerged with ponded water. Access to the site is from North Avenue. Field screening samples were collected from the ponded water.

**L008**
Site L008 is a 40-inch RCP located on the corner of Westridge Drive and Quailridge Drive, north of Loma Alta Creek. The outlet drains the residential areas on the hillside north of Oceanside Boulevard. Access to the site is from Westridge Drive. Field screening samples were collected from the ponded water.

**L009**

Site L009 is under College Boulevard at the Loma Alta Creek crossing. Three box culverts are present and drain the residential and commercial areas east of College Boulevard. Access to the site is via College Boulevard. Field screening samples and analytical lab samples were collected from the flowing water.

**L010**
Site L010 are two 36-inch RCP located west of College Boulevard near the railroad tracks. This site historically has been located south of the tracks, but is no longer accessible there. The storm drain now runs under the tracks and disharges to Loma Alta Creek. The outlet drains the residential areas on the hillside south of Loma Alta Creek adjacent to College Boulevard. Access to the site is from College Boulevard. Field screening samples were collected from the flowing water.

**L013**
Site L13 is a 42-inch RCP located south of the shopping center on the corner of Oceanside Boulevard and College Boulevard, north of Loma Alta Creek. The outlet is no longer accessible due to overgrown vegetation, but the manhole upstream of the outlet was sampled. Access to the site is from parking lot behind ReMax. Field screening samples were collected from the flowing water.

**L014**
Site L014 has historically been described as a 36-inch CMP located south of the Golden State Fence Company at 4051 Oceanside Boulevard, north of the Loma Alta Creek. However, this site has not been accessible for the last five years, including 2007.

**L016**
Site L016 is a 36-inch RCP within a manhole located on Rancho del Oro south of Loma Alta Creek. The outlet within the manhole drains the residential area located on the hill south of Rancho del Oro. Access to the site is from Rancho del Oro. Due to Sprinter line construction, this site was not accessible in 2007.

**L019**
Site L019 is a 48-inch RCP, located south of the intersection of Corporate Centre Drive and Oceanside Boulevard, north of Loma Alta Creek. The outlet drains the industrial and commercial areas located north of Oceanside Boulevard. Access to the site is from Oceanside Boulevard. Field screening and lab samples were collected from the ponded water.

**L020**
Site L020 is a 36-inch RCP located east of the intersection of Corporate Centre and Oceanside Boulevard, north of Loma Alta Creek. The outlet drains the commercial areas located north of Oceanside Boulevard. Access to the site is from Oceanside Boulevard. Field screening samples were collected from the flowing water.

**L024**

Site L024 is a 36-inch RCP located south of Oceanside Boulevard at the west end of the Evergreen Nursery. The outlet drains the commercial and open space area located north of Oceanside Boulevard. Access to the site is from Oceanside Boulevard. Field screening samples were collected from the flowing water.

*Variation:* In 2006, a different site was visited. However, 2007 was the first year field screening was conducted.

**L025**
Site L025 is a 24-inch RCP with a headwall located north of Oceanside Boulevard and north of Loma Alta Creek. The outlet drains the open space area located north of Oceanside Boulevard. Access to the site is from Oceanside Boulevard. Dry weather flows were not observed.

*Variation:* In 2005, a different site was visited. However, the site has always been dry and never been sampled.

**L027**
Site L027 has historically been sampled at the intersection of Garrison Street and Industry Way, north of Loma Alta Creek, where Garrison Creek flows in a concrete channel. That location was not accessible and L027 was sampled upstream at the intersection of Garrison Street and Oceanside Boulevard where the creek is flows through an earthen channel. The channel drains the residential and commercial areas located northeast of Oceanside Boulevard. Access to the site is from Garrison Street. Field screening and laboratory samples were collected from the flowing water.

**L029**
Site L029 is a catch basin within a manhole located near 3060 Industry Way, north of Loma Alta Creek. All manholes and the outlet downstream are inaccessible. This manhole is the beginning of this storm drain line. The line drains the industrial and commercial area near the site. Field screening samples were collected from the ponded water.

**L030**
Site L030 was originally located west of El Camino Real, north of Loma Alta Creek off of Industry Way. While the 2005 and 2006 descriptions were different from this, the site was not sampled due to inaccessibility. The original outfall was visited in 2007, but was inaccessible due to Sprinter rail construction. Upstream manholes were catch basins with small lines appearing to empty into this main line and were dry.

**L031**
Site L031 is an open trapezoidal concrete channel located south of Industry Way, north of the Loma Alta Creek. The channel drains the residential and commercial area located north of Industry Way. Access to the site is from Industry Way. Dry weather flows were not observed at this site.

**L032**
Site L032 is a 64-inch RCP located south of the intersection of Camelot Drive and Industry Way, north of Loma Alta Creek. The outlet drains the industrial and commercial area north of Industry Way. Access to the site is through a private business from Industry Way. The City's gate was blocked by the business and the outlet was inaccessible. Public Works was still working with this company to clear the area. Access should be available during the next dry weather season.

**L033**
Site L033 is a 36-inch RCP located at the left turn of Industry Way east of Waste Management, north of the Loma Alta Creek. The outlet drains the residential and commercial areas located north of Industry Way. Access to the site is from Industry Way. There was not enough ponded water to sample.

*Variation:* Different site visited in 2006. Has been dry every year and not sampled.

**L034**
Site L034 is a 24-inch RCP located between Waste Management and a self storage lot south of Oceanside Boulevard. Dry weather flows were not observed.

*Variation:* Appears to be a different site every year, but has always been dry and never sampled.

**L036**
Site L036 is located adjacent to the intersection of Skylark Drive and Downs Street, south of the Loma Alta Creek. The outlet is now in the Sprinter rail right of way, so the manhole upstream of the outlet was visited. The outlet drains the residential area north of Loma Alta Creek. Access to the site is via Skylark Drive. There was not enough ponded water to conduct field screening.

**L037**
Site L037 is an earthen channel south of Loma Alta Creek. The channel drains the commercial area south of Loma Alta Creek. The site is at the east end of South Oceanside Boulevard. Field screening samples were collected from the ponded water.

*Variation:* Different site sampled in 2005. Field and/or laboratory samples were collected in 2005, 2006, and 2007. Samples collected in 2006 and 2007 were from the same monitoring location. The site sampled in 2005 appears to be of the main channel of Loma Alta Creek.

**L039**
Site L039 is a 42-inch RCP located south of Loma Alta Creek under the I-5 overpass. The outlet was originally thought to drain the residential areas to the south, but is a Caltrans outlet for I-5. This site also has a large homeless population in the area and was unsafe for the sampler. For these reasons, this site was not visited.

**L040**
Site L40 is an open concrete trapezoidal channel north of Loma Alta Creek. The outlet drains the commercial and residential areas located adjacent and to the north of Oceanside Boulevard. Access to the site is through the Vons parking lot off of Oceanside Boulevard. Field screening and laboratory samples were collected from the channel.

**L043**
Site L043 is a 48-inch RCP constructed in the abutment that supports the Coast Highway Bridge over Loma Alta Creek. L043 conveys run off flows from Coast Highway south of Loma Alta Creek. Dry weather flows were not observed at this site.

**L045**
Site L045 is a 16-inch RCP located adjacent to the Metro Link railroad bridge. The outlet drains the runoff from the trailer park to the north. Access to the site is from Coast Highway to a pedestrian path that runs parallel with Loma Alta Creek. Dry weather flows were not observed at this site.

**L046**
Site L046 is a 24-inch RCP constructed in the north wall of the Loma Alta Creek channel just east of the Coast Highway Bridge. This outfall conveys flow from commercial and residential area north of Loma Alta Creek. Access to the site is from Coast Highway. Field screening samples were collected from the ponded water.

**L050**
Site L050 is a 24-inch RCP constructed in the north wall of the Loma Alta Creek channel. The outlet drains the Casitas Trailer Park located north of the Loma Alta Creek. Access to the site requires going into Loma Alta Creek channel. Dry weather flows were not observed at this site.

*Variation:* Different site visited in 2006. No field or laboratory samples have been collected at this site over the past five years.

**L051**
Site L051 is a 24-inch RCP constructed in the south wall of Loma Alta Creek. The outlet drains the trailer park located south of the creek. Access to the site requires going into Loma Alta Creek channel. Dry weather flows were not observed at this site.

*Variation:* Different site visited in 2006. No field or laboratory samples have been collected at this site over the past five years.

**L052**
Site L052 is a 36-inch RCP located just west of the I-5 overpass on the south side of Loma Alta. The outlet drains Cavalier Trailer Park. Access to the site requires going into Loma Alta Creek channel. There was a small flow, but an insufficient amount to sample.

**L054**
Site L054 is a 24-inch RCP constructed in the south wall of Loma Alta Creek. The outlet is located southwest of the intersection of Hillside and Evergreen Lane. Site L054 drains the trailer park, Marshall Park, and the residential area to the south. Access to the site requires entering the Loma Alta Creek channel. Field screening and laboratory samples were collected from the channel.

**L101**
Site L101 is a 30-inch RCP located east of the intersection of North Avenue and Seasons Road, north of Loma Alta Creek. The outlet drains the areas on the north side of Loma Alta Creek that are currently under construction. Access to the site is from North Avenue. Dry weather flows were not observed.

**L102**
Site L102 is a 36-inch RCP within a manhole located on Esperanza Way, south of Loma Alta Creek. The outlet within the manhole drains the residential area located within the immediate area of Esperanza Way. Access to the site is from Esperanza Way. Ponded water was observed however there was insufficient volume to conduct field screening.

**L103**
Site L103 is a 72-inch RCP located west of Corporate Centre, north of Loma Alta Creek. The outlet drains the industrial and commercial areas located north of Oceanside Boulevard off of Corporate Centre. Access to the site is from Corporate Centre. Field screening samples were collected from the flowing water.

**L104**
Site L104 is a 24-inch RCP located west of Corporate Centre, north of Loma Alta Creek. The outlet drains the industrial and commercial areas located north of Oceanside Boulevard. Access to the site is from Corporate Centre. Ponded water was observed however there was insufficient volume to conduct field screening.

**L105**
Site L105 is a manhole located on Industry Way, north of Loma Alta Creek. The outlet within the manhole drains the residential and commercial area located north of Industry Way. Access to the site is from Industry Way. Field screening samples were collected from the flowing water.

*Variation:* It is possible that some variation has occurred at this site. However, the pictures from the previous reports are of the inside of the manhole and it cannot be determined if they are the same from year to year. 2007 was the first year this site has been sampled for field screening.

**L107**
Site L107 has historically been a 36-inch RCP outlet located on the north side of Loma Alta Creek near the intersection of Crouch Street and Oceanside Boulevard. Due to Sprinter rail construction and other changes to the channel walls, the site was moved

upstream to a manhole at the corner of Crouch and Oceanside Boulevard. The storm system drains the commercial and residential areas located north of Oceanside Boulevard. Ponded water was observed however there was insufficient volume to conduct field screening.

### 2.2.3 Buena Vista Creek Site Descriptions

**B001**
Site B001 is a 48-inch RCP located at the Buena Vista Nature Center at 2202 Coast Highway, west of Buena Vista Lagoon. The outlet drains the residential and commercial areas along Coast Highway. Access to the site is from Coast Highway. Field screening and laboratory samples were collected from the ponded, submerged outlet.

**B002**
Site B002 is a 72-inch RCP located on Lagoon View Drive, north of the Buena Vista Lagoon. The outlet drains the commercial and residential areas north of SR-78. Access to the site is via Lagoon View Drive. Field screening and laboratory samples were collected from the flowing water.

**B003**
Site B003 includes two 36-inch RCPs located east of Haymar Bridge which crosses over Buena Vista Creek. The outlets drain the commercial areas north of SR-78. Access to the site is from Haymar Drive. Dry weather flows were not observed at this site.

**B022**
Site B022 is a 48-inch RCP constructed in the north side of the Buena Vista Creek channel wall, east of the Thunder Drive Bridge. The outlet drains the residential area north of Buena Vista Creek. Access to the site is from within the Buena Vista Creek channel. Field screening and laboratory samples were collected from the flowing water.

**B023**
Site B023 is a 36-inch RCP located west of 3524 Lake Boulevard south of Buena Vista Creek. The outlet drains the residential areas southeast of Lake Boulevard. Access to the site is from Lake Boulevard. Field screening samples were collected from the flowing water.

*Variation:* In 2005 and 2006, this site was sampled upstream of the original monitoring location. This site was sampled for field screening in 2003, 2006, and 2007.

**B024**
Site B024 is a 36-inch RCP located on the southwest corner of College Boulevard Bridge on the south side of Buena Vista Creek. The outlet drains the residential areas east and west of College Boulevard south of the creek. Access to the site is from College Boulevard. Field screening samples were collected from the ponded water.

**B026**

Site B026 is a 48-inch RCP located south of the Tri-City Crossroads Plaza off of Plaza Drive on the north of Buena Vista Creek. The outlet drains the commercial areas around Plaza Drive. Access to the site is from Tri-City Crossroads Plaza or the open lot to the east of the plaza. Field screening samples were collected from the flowing water.

**B027**
Site B027 is a 54-inch box located off of Haymar Drive at South Coast Material yard north of Buena Vista Creek. The outlet drains the residential and commercial areas north of SR-78. Access to the site is from Haymar Drive. Field screening samples were collected from the flowing water.

**B029**
Site B029 is located within a sewer easement south of SR-78 and north of Buena Vista Creek. Site is located across from AAA and Rancho Del Oro Drive. Field screening samples were collected from the ponded water.

**B030**
Site B030 is a 36-inch RCP located within a sewer easement south of SR-78, west of AAA and north of Buena Vista Creek. The outlet drains the residential areas north of SR-78. Access to the site is from the sewer easement road. Dry weather flows were not observed at this site.

*Variation:* This site was sampled for initial field screening in 2003, 2005 and 2006. The outlet in 2003, 2004, and 2005 appears different than the one visited in 2006 and 2007, however, it may have been improved and a concrete outlet replaced the metal pipe.

**B031**
Site B031 includes four 54-inch RCPs located between Haymar Drive and SR-78, across from Camino Real County Club, and north of Buena Vista Creek. The western-most outfall is sampled. This outlet drains the golf course, commercial, and residential areas north of SR-78. Access to the site is via Haymar Drive. Field screening samples were collected from the flowing water.

*Variation:* This site was sampled in 2003 and 2007. In 2005 and 2006 the site was not accessible due to excessive vegetation, or the sampler was at the wrong site. In 2007, the sample was collected from the western-most flowing pipe. In 2003, the ponded water was most likely sampled, which is the main channel of Buena Vista Creek.

**B032**
Site B032 includes two 60-inch RCPs located between Haymar Drive and SR-78, across from Carlsbad Plaza, north of Buena Vista Creek. Both pipes are from the same source. The outlet drains the golf course and commercial areas north of SR-78. Access to the site is from Haymar Drive. Field screening samples were collected from the flowing water.

**B033**

Site B033 is a 42-inch RCP located north of SR-78 behind the Black Angus restaurant, north of Buena Vista Creek. The outlet drains the commercial areas north of SR-78. Access to the site is from SR-78. Field screening samples were collected from the flowing water.

*Variation:* This site was sampled for initial field screening in 2003, 2005, 2006 and 2007. There are two main drainages that flow into the catch basin, which holds ponded water. It is not clear what was sampled each year. In 2007, the largest drainage area outfall was sampled.

**B034**
Site B034 is a 36-inch RCP located north of SR-78 behind Burger King at the Jefferson Street exit. The outlet drains the commercial areas north of SR-78. Access to the site is from SR-78. Field screening samples were collected from the flowing water.

**B101**
Site B101 is a catch basin with a 36-inch RCP located within a sewer easement south of SR-78 and north of Buena Vista Creek. The outlet is a Caltrans drain for SR-78. Dry weather flows were not observed during 2007.

*Variation:* There has been some variation for this site. There are three different drains associated with this site ID. This site was sampled in 2003 and 2005 at two different storm drains for initial field screening. The site sampled in 2005 appears to be what the storm drain labeled B029 in 2007.

**B102**
Site B102 is a 36-inch CMP located within a sewer easement south of SR-78 and north of Buena Vista Creek. The outlet drains the residential and commercial areas north of SR-78. Access to the site is from the sewer easement road. Field screening samples were collected from the flowing water.

**B103**
Site B103 is located at the end of Lagoon View Drive, north of the Buena Vista Lagoon. The outlet drains the commercial areas north of SR-78. Access to the site is via Lagoon View Drive. Field screening samples were collected from the ponded water.

### 2.2.4 Agua Hedionda Site Descriptions

**A002**
Site A002 is a 74-inch RCP located at the end of Cannon Road. The outlet drains the residential areas along Cannon Road. Access to the site is from Cannon Road. Field screening and laboratory samples were collected from the flowing water.

**A004a**
Site A004a is a 48-inch RCP located below Spinnaker Ridge adjacent to the pump station off of Cannon Road. The outlet drains the residential areas south and east of the outlet.

Access to the site is from Cannon Road to the pump station access road. Field screening and laboratory samples were collected from the flowing water.

**A004b**
Site A004b is a brow ditch located below Spinnaker Ridge adjacent to the pump station off of Cannon Road. The concrete drainage ditch drains the irrigated areas on the slope behind the residences on Spinnaker Ridge. Access to the site is via Cannon Road to the pump station access road. Field screening and laboratory samples were collected from the flowing water.

**A013**
Site A013 is a 36-inch RCP located at the intersection of Lake Boulevard and Alameda Drive, south of Agua Hedionda Creek. The outlet drains the residential areas south of the site. Access to the site is from Lake Boulevard. Field screening samples were collected from the flowing water.

**A014**
Site A014 is a 36-inch RCP located east of the intersection of Lake Boulevard and Alameda Drive, north of Agua Hedionda Creek. The outlet drains the school and residential areas north of Lake Boulevard. Access to the site is from Lake Boulevard. Field screening samples were collected from the ponded water.

**A015**
Site A015 is a 48-inch RCP located south of Lake Boulevard and south of the creek. The outlet drains the residential areas south and east along Lake Boulevard. Field screening and laboratory samples were collected from the flowing water.

**A016**
Site A016 is a 36-inch RCP located southeast of the intersection of Amigos Court and Serena Lane, south of Lake Boulevard. The outlet drains the residential areas north across Lake Boulevard. Access to the site is through open space off of Lake Boulevard. Field screening and laboratory samples were collected from the flowing water.

**A019**
Site A019 is a 36-RCP located in Oak Riparian Park off of Lake Boulevard, north of Agua Hedionda Creek. The outlet drains the residential and park areas north and south of Lake Boulevard. Access to the site is from the parking lot off of Lake Boulevard. Field screening samples were collected from the ponded water.

**A021**
Site A021 is a 36-inch RCP located off of Sky Haven Lane, north of Agua Hedionda Creek. The outlet drains the residential areas to the north of the outfall. Access to the site is from a residential driveway and down a steep embankment in the middle of a densely vegetated area. Field screening samples were collected from the ponded water.

# 3 METHODS

The Urban Runoff Permit requires that each Copermittee conduct analytical and field screening monitoring between May 1st and September 30th of each year. The Copermittees are required to perform field screening at each identified site at least once during the monitoring season. Each Copermittee is also required to collect a grab sample for laboratory analysis at a minimum of 25% of the sites where ponded or flowing water is observed.

The following describes the City of Oceanside's Dry Weather Program components including field site visits, laboratory analysis of water samples, and IC/ID investigations. The general site description and atmospheric conditions were recorded on a field data sheet for each site visit whether or not runoff was observed (Appendix C). A photograph was also taken at each site (Appendix B). Monitoring was not conducted during any rain event or within 72 hours of the end of any rain event greater than one tenth of an inch.

## 3.1 Qualitative Observations

Qualitative field observations were made during each site visit where ponded or flowing water was observed and sampled. These observations were intended to provide a general assessment of the runoff and include parameters such as odor, water clarity, and the presence of floatables, visible deposits, stains and aquatic life. These descriptions were recorded on the field data sheet.

## 3.2 Flow Measurement

Flow measurements can be used to estimate pollutant mass loading, prioritize storm drains for future investigations, or to identify significant changes in flow that may be indicative of an illegal release upstream. Since a majority of sample locations lack a permanent flow measurement installation, several field methods were employed to estimate flow rates for different flow types such as an open channel, outfall, or drainage pipe. These methods have been adapted from the County of San Diego's Dry Weather Monitoring Program Quality Assurance Project Plan[1].

**Velocity-area method -** This method requires the physical measurement of the velocity (V), depth (D), and width (W) of flowing water. Discharge is determined as follows:

$$\text{Discharge} = V \times D \times W \qquad \text{Eq. (1)}$$

Where the water depth was adequate, a Global Flow Probe was used to get the average velocity in feet per second. Stream depth and width were recorded on the field data sheet and the discharge in cubic feet per second (cfs) was calculated using Eq. (1).

Where the flow was too slow or the water too shallow to measure the velocity using the probe, the velocity was estimated by timing the travel of a piece of floating debris (e.g., a

[1] County of San Diego. 2004. Quality Assurance Project Plan for the County of San Diego's Dry Weather Monitoring Program. April 2004.

leaf). The velocity was calculated by dividing the travel distance (feet) by the recorded travel time (second).

**Fill a bottle method -** If the flowing water was able to be captured, such as from a raised pipe, the fill-a-bottle method was used. The time it took to fill a known volume was recorded. Discharge was calculated by dividing the volume by the time and converting that value into cubic feet per second.

## 3.3 Field Screening

Water physicochemical properties (e.g., pH, conductivity, turbidity, dissolved oxygen (DO), and temperature) are important indicators of water quality. The Horiba U-10 6-parameter probe was used to measure:

- pH.
- Conductivity.
- Turbidity.
- Dissolved oxygen (DO).
- Water temperature.
- Salinity.

If the water was deep enough, the probe was placed horizontally in the water column, facing upstream. If water was shallow, a syringe or cup was used to collect water and transfer into a container and then the properties were measured. Due to the sampling process involved, DO measurements in a beaker may be different from *in situ* measurements. The Horiba U-10 was calibrated daily prior to use in the field using the standard calibration solution as well as a three-point pH calibration.

At each site with ponded or flowing water, water samples were collected and analyzed in the field for:

- Ammonia ($NH_3$).
- Nitrate as N ($NO_3$-N).
- Orthophosphate ($PO_4$-P).

Ammonia, nitrate, and orthophosphate were measured in the field using CHEMetrics field test kits. Each test kit contained a sample mixing container, necessary reagent-filled ampoules, the appropriate color standards for colorimetric analysis, filters for photometric analysis, and instructions for each kit. The procedures instructed by CHEMetrics were followed.

## 3.4 Laboratory Water Quality Analyses

Laboratory samples were collected at a minimum of 25% of the sites with flowing or ponded water. Samples were submitted to the San Luis Rey Wastewater Treatment Plant Laboratory (City of Oceanside) and EnviroMatrix Analytical, Inc. for analysis of the following constituents:

- Surfactants (MBAS)
- Oil and Grease
- Total Hardness
- Cadmium (Dissolved)
- Copper (Dissolved)
- Lead (Dissolved)
- Zinc (Dissolved)
- Enterococcus Bacteria
- Total Coliform Bacteria
- Fecal Coliform Bacteria
- Chlorpyrifos
- Diazinon

All samples were analyzed using Standard Methods or EPA Methods by the laboratories.

## 3.5 IC/ID Investigations

Each station is visited at least once per dry weather season, if accessible and safe. When field measurements and/or laboratory analysis showed an exceedance of established action levels, the site was revisited to confirm the initial results. The action levels used for the 2007 dry weather monitoring period are presented in Table 2. If the initial results were confirmed and an exceedance continued, an upstream investigation was initiated. In addition, any potential IC/IDs found visually or with any other evidence of gross contamination, an IC/ID investigation was pursued immediately (e.g., substantial petroleum sheen, excessive turbidity, extremely high ammonia concentration, evidence of sewage release, etc.).

In general, IC/ID investigations include identifying pollution sources and correcting or eliminating them. Various methods can be used for source identification, for example, observation by following flows or discharges upstream, field measurements or laboratory analysis of water samples. The correction and elimination of identified sources may be achieved by outreach/education, best management practices (BMPs) implementation, and enforcement when necessary.

**Table 2. 2007 Dry Weather Monitoring Action Levels**

| Analyte | Action Level |
|---|---|
| **Field Measurements** | |
| pH | 6.5-9.0 pH units |
| Conductivity | N/A |
| Turbidity | N/A |
| Dissolved Oxygen | N/A |
| Temperature | N/A |
| Salinity | N/A |
| Ammonia Nitrogen | 1.0 mg/L |
| Nitrate as N | 10.0 mg/L |
| Orthophosphate | 2.0 mg/L |
| **Laboratory Measurements** | |
| Surfactants (MBAS) | N/A |
| Oil and Grease | 15 mg/L |
| Total Hardness | N/A |
| Cadmium (Dissolved) | California Toxics Rule (CTR) |
| Copper (Dissolved) | California Toxics Rule (CTR) |
| Lead (Dissolved) | California Toxics Rule (CTR) |
| Zinc (Dissolved) | California Toxics Rule (CTR) |
| Total Coliform Bacteria | 50,000 MPN/100mL |
| Fecal Coliform Bacteria | 20,000 MPN/100mL |
| Enterococcus | 10,000 MPN/100mL |
| Chlorpyrifos | 0.5 µg/L |
| Diazinon | 0.5 µg/L |

# 4 RESULTS

The dry weather monitoring program was conducted from May 1, 2007 through September 30, 2007. Of the 100 sites that were attempted, 93 monitoring stations were visited in 2007. Seven sites were not visited due to Sprinter Railway construction, the Pacific Street Bridge construction, or a few other accessibility and safety concerns. These limitations are detailed by site in Section 2. Sixty one of the sites were either flowing or ponded with enough runoff to sample. Eighteen of the 61 sites were also sampled for laboratory analysis.

The results of the qualitative observations, flow measurements, field measurements and laboratory measurements are presented in the following sections.

## 4.1 Qualitative Observations

Qualitative observations are a routine and important part of the field screening program. Weather conditions were recorded at each site and any evidence of dry weather flows were documented. Visual observations of the sample water and the vicinity of the sampling location such as odor, color, clarity, floatable materials, vegetation and biological organisms were also recorded. Observations are summarized below and presented in Table 3.

**Light Conditions**
Sixty six of the 93 sites visited had sunny conditions during site visits. Seven sites had overcast conditions, and 20 sites had partly cloudy conditions. No sites were visited during foggy conditions.

**Odor**
Thirty three of the sites with water had no distinguishable odor associated with the storm drain outlets. Twenty three sites had a musty odor, one site had a sewage odor, one site had a chemical odor, and four sites smelled of rotten eggs.

**Color**
Thirty nine of the sites with water had no observed color. Twenty sites had a yellow color and three sites had a brown color.

**Clarity**
Forty six of the sites with water were clear with negligible suspended particles observed. Thirteen of the sites sampled were slightly cloudy and three of the samples were opaque.

**Floatable Materials**
The categories of floatable materials were trash, bubbles/foam, sheen, fecal matter, and other and each site had the potential to have multiple categories of floatable materials listed. Six sites were observed to have no floatable materials. Fifty two sites were observed to have trash in or near the sampling location. Fourteen sites were observed to have bubbles and/or foam. Seven sites had a visible sheen. Seven sites observed had floatable materials outside of the categories listed; those materials, for the most part, were leaf debris.

**Deposits**
The categories of deposits were coarse particulates (sediment/gravel), fine particulates, stains, oily deposits, and other. Multiple types of deposits could have been identified at each site. Fifty four sites did not have any deposits at the sampling site. Eleven sites had course particulate deposits of sediment and/or gravel. Three sites had fine particulate deposits. Three sites had some type of stain at the sampling point. One site had an oily deposit.

**Vegetation**
The categories for amount of vegetation present at and around the sampling area were none, limited, normal, and excessive. Twenty nine sites and no vegetation present. Three sites had limited vegetation growth, usually signifying some type of eradication program. Thirty two sites observed had normal vegetation growth. Seven sites had excessive vegetation growth around the sampling area.

**Biology**
The categories for types of life present at the sites were insects, algae, fish, snails, and mussels/barnacles. Multiple types of life could have been identified at each site. Thirty seven of the sites had algae present; 28 of those sites also having some other type of life present. Twenty nine sites had snails present. Twenty three sites had insects present. Seven sites had fish present. Eleven sites had some "other" type of life present; usually crawfish. Fourteen sites did not have any visible life present at the sampling site.

## 4.2 Field Water Quality Results

Field analyses were conducted at all sites with flowing or ponded water. The field analyses were conducted using a Horiba U-10 and CHEMetrics field test kits. A summary of the initial screening results from field analysis is presented in Table 4. If action levels were exceeded, the site was revisited to confirm the initial results and an IC/ID investigation was initiated. Follow-up investigations are presented in Section 4.4.

**Flow Rate**
Twenty five of the 61 sites that were sampled were ponded. The flow rates at sites with measurable flow ranged from 0.2 gpm at A016 to 403 gpm at L027 (Loma Alta Creek).

**Table 4. 2007 Initial Screening Field Measurement Results.**

| Station ID | Date | Time | Flow Rate (gpm) | pH (Units) | EC (mS/cm) | Turbidity (NTU) | DO (mg/L) | Temperature (˚C) | Salinity (%) | NH3-N (mg/L) | NO3-N (mg/L) | PO4-P (mg/L) |

| NS – Not sampled/collected. | | | | | | | | | | | | |

**Water Temperature**
Water temperature was measured in the field immediately upon sample collection at each site with flowing or ponded water. Temperature readings ranged from 17.2˚C at S106 on May 29, 2007 to 30.5˚C at L040 on August 30, 2007. The average temperature during field screening was 22.7˚C degrees Celsius with a standard deviation of 2.62˚C.

**pH**
pH is a term used to indicate the alkalinity or acidity of a substance as ranked on a scale from 1.0 to 14.0. Acidity increases as the pH gets lower. Figure 2 presents the pH of some common liquids.

**Figure 2. pH of Selected Liquids.**

pH affects many chemical and biological processes in the water. For example, different organisms flourish within different ranges of pH. The largest varieties of aquatic animals prefer a range of 6.5-8.0. pH outside this range reduces the diversity in the stream because it stresses the physiological systems of most organisms and can reduce reproduction. Low pH can also allow toxic elements and compounds to become mobile and "available" for uptake by aquatic plants and animals. This can produce conditions that are toxic to aquatic life. Changes in acidity can be caused by atmospheric deposition (acid rain), surrounding rock, and certain wastewater discharges. An unusually high pH reading could be an indicator of an industrial discharge in the sample area; therefore, pH is used as an indicator of illicit discharges.

The pH values taken from the ponded or flowing water ranged from 6.6 at A013 to 9.2 at S110. The average pH value observed during the field screening was 7.81 with a standard deviation of 0.64. The three sites that were outside of the acceptable range were S111, S110, and L040. All are associated with concrete channels or pipes and both S111 and S110 were ponded. Concrete is known to be basic and have high pH values associated with the cement components. This may be a cause of the high pH values.

**Conductivity**
Conductivity is a measure of the ability of water to pass an electrical current. Conductivity in water is affected by the presence of inorganic dissolved solids such as chloride, nitrate, sulfate, and phosphate anions (ions that carry a negative charge) or sodium, magnesium, calcium, iron, and aluminum cations (ions that carry a positive charge). Organic compounds

like oil, phenol, alcohol, and sugar do not conduct electrical current very well and therefore have a low conductivity when in water. Conductivity is also affected by temperature: the warmer the water, the higher the conductivity. In addition, discharges to streams can also change the conductivity depending on their make-up. A failing sewage system would raise the conductivity because of the presence of chloride, phosphate, and nitrate; an oil spill would lower the conductivity. The conductivity values ranged from 1.01mS/cm at S110 to 7.1 mS/cm at B023. The average conductivity value observed during field screening was 3.13 mS/cm.

**Salinity**

Salinity is the measure of dissolved salts in water and is therefore linked to conductivity. Salinity is expressed in percent or parts per trillion (ppt). The ocean, on average, has a salinity of 35 ppt or is made up of about 3.5% salt. Freshwater streams usually have salinity between 0 and 3 ppt or 0 and 0.3%. The salinity values during the 2007 dry weather monitoring season ranged from 0.04% and 0.38%. The average salinity observed was 0.15%.

**Turbidity**

Turbidity is a measure of water clarity, how much the material suspended in water decreases the passage of light through the water. Suspended materials include soil particles (clay, silt, and sand), algae, microbes and other substances. Turbidity can affect the color of the water.

Higher turbidity increases water temperatures because suspended particles absorb more heat. This, in turn, reduces the concentration of dissolved oxygen because warm water holds less dissolved oxygen than cold. Higher turbidity also reduces the amount of light penetrating the water, which reduces photosynthesis and the production of dissolved oxygen. Suspended materials can clog fish gills, reducing resistance to disease in fish, lowering growth rates, and affecting egg and larval development. As the particles settle, they can blanket the stream bottom, especially in slower waters, and smother fish eggs.

Turbidity can be useful as an indicator of the effects of runoff from construction, agricultural practices, logging activity, discharges, and other sources. Turbidity often increases sharply during a rainfall, especially in developed watersheds, which typically have relatively high percentages of impervious surfaces. The flow of storm water runoff from impervious surfaces rapidly increases stream velocity, which increases the erosion rates of stream banks and channels. Turbidity can also rise sharply during dry weather if earth-disturbing activities are occurring in or near a stream without erosion control practices in place. The turbidity values ranged from 1 to 114 NTU. The average turbidity value observed during field screening was 16 NTU.

**Dissolved Oxygen**

Dissolved oxygen analysis measures the amount of gaseous oxygen dissolved in an aqueous solution. Oxygen gets into water by diffusion from the surrounding air, by aeration, and as a waste product of photosynthesis.

Adequate dissolved oxygen is necessary for good water quality. Oxygen is a necessary element to all forms of life. Natural stream purification processes require adequate oxygen

levels in order to provide for aerobic life forms. As dissolved oxygen levels in the water drop below 5.0 mg/L, aquatic life is put under stress. The lower the concentration, the greater the stress is on aquatic life. Oxygen levels that remain below 1-2 mg/L for a few hours can result in large fish kills. The dissolved oxygen values ranged from -1.5 mg/L at L002 to 19.31 mg/L at S110. The average dissolved oxygen value observed during field screening was 6.85 mg/L. All of the sites that had DO levels less than 4.0 mg/L were ponded and frequently had high turbidity and ammonia levels, indicating nutrient breakdown.

**Ammonia**

Ammonia is a common indicator of pollution from decomposing organic matter, agricultural or household fertilizer runoff, or the presence of sewage. Ammonia occurs naturally in the environment, however, in higher quantities it can become toxic to fish and other organisms. The ammonia values range from 0.1 to 7.0 mg/L. The average ammonia value observed during the field screening was 0.92 mg/L with a standard deviation of 1.3 mg/L. Ten of the 15 sites that exceeded the action level for ammonia were ponded and were likely caused by decaying organic matter in the ponded water.

**Orthophosphate-P**

Both phosphorus and nitrogen are essential nutrients for the plants and animals that make up the aquatic food web. Since phosphorus is the nutrient in short supply in most fresh waters, even a modest increase in phosphorus can, under the right conditions, set off a whole chain of undesirable events in a stream including accelerated plant growth, algae blooms, low dissolved oxygen, and the death of certain fish, invertebrates, and other aquatic animals.

There are many sources of phosphorus, both natural and human. These include soil and rocks, wastewater treatment plants, runoff from fertilized lawns and cropland, failing septic systems, runoff from animal manure storage areas, disturbed land areas, drained wetlands, water treatment, and commercial cleaning preparations. The Orthophosphate-P values ranged from 0.05 mg/L to 4.15 mg/L. The average orthophosphate-P value observed during field screening was 1.25 mg/L.

**Nitrate-N**

Nitrate is the most readily available form of nitrogen for plant uptake and is a limiting factor in plant growth. Nitrates are naturally occurring in soil and rocks, but are also added to watersheds from anthropogenic sources such as fertilizers, failing septic systems, and animal waste. The nitrate-N values from the 2007 dry weather monitoring season ranged from 0.68 mg/L at L001 to 35.6 mg/L at S106. The average nitrate-N value was 2.28 mg/L with a standard deviation of 4.7 mg/L. The nitrate levels at S106 were three times greater than the next highest levels of just over 10 mg/L at L054 and B103.

## 4.3 Laboratory Water Quality Results

Laboratory analysis was conducted at 18 sites, representing 30% of the sites with ponded or flowing water. Laboratory chemistry results are summarized and presented in Table 5 and microbiology results in Table 6. If action levels were exceeded, the site was revisited to confirm the initial results and an IC/ID investigation was initiated. Follow-up investigations are presented in Section 4.4.

## Surfactants (MBAS)

Surfactants are analyzed to detect detergent pollution from residential, commercial, or industrial washing activities. Surfactants were not detected at any of the dry weather sites.

## Oil and Grease

Oil and grease analysis is used to detect hydrocarbon pollution from a variety of sources including parking lots and streets, washing activities, illegal discharges, and automobile repair facilities. Oil and grease was not detected at any of the dry weather sites.

## Total Hardness

Total hardness measures the amount of polyvalent cations in water. It generally represents calcium and magnesium ions in a water sample because they are the most common cations. Results are expressed in mg/L of $CaCO_3$. The California Toxics Rule (CTR) applies hardness-based water quality objectives to dissolved metals. Increasing hardness has the effect of decreasing the toxicity of metals[2]. The hardness values ranged from 289 mg/L of $CaCO_3$ at L040 to 1910 mg/L of $CaCO_3$ at A016 with an average of 940 mg/L of $CaCO_3$ and a standard deviation of 514 mg/L of Ca $CO_3$.

[2] US Environmental Protection Agency. 2002. National Recommended Water Quality Criteria. November 2002. EPA-822-R-02-047

**Dissolved Metals**
Metal concentrations in the environment can originate from a variety of sources including automobiles, automobile repair facilities, car washing, and industrial activities, as well as natural geologic processes. The laboratory samples collected during the 2007 Dry Weather Monitoring Program were analyzed for the presence of dissolved cadmium, copper, lead, and zinc. Results were compared to the hardness-based CTR CMC (1-hour) criterion. Dissolved cadmium results were all below laboratory detection limits. Dissolved copper was detected at five sites, but they were all below the CTR criterion. Dissolved lead results were below the laboratory detection limits at all sites. Dissolved zinc was detected at seven of the sites, but they were all below the CTR criterion.

**Chlorpyrifos and Diazinon**
Chlorpyrifos and diazinon are organophosphate pesticides used to control insects, fleas and ticks. As of December 31, 2004, it became unlawful to sell diazinon outdoor, non-agricultural products. Chlorpyrifos can now only be used for nursery production, golf courses and road medians. Neither chlorpyrifos nor diazinon was detected at any of the laboratory sampling sites.

**Total Coliform Bacteria**
Total coliform bacteria are mostly harmless bacteria that are ubiquitous in the environment living in soil, water, and mammalian digestive tracts. Water samples are analyzed for total coliform bacteria to indicate the presence of other more harmful pathogenic (disease causing) organisms that are associated with coliform but are difficult to test for because they are present in much smaller quantities. During the dry weather monitoring period total coliform results ranged from 1300 MPN/100mL at S006 to ≥1,600,000 MPN/100 ml at B001.

**Fecal Coliform and Enterococcus**
Members of two bacteria sub-groups, fecal coliforms and enterococcus, are used as indicators of possible sewage contamination because they are specifically found in human and animal digestive tracks. Although they are generally not harmful themselves, they indicate the possible presence of pathogenic bacteria, viruses, and protozoans that also live in human and animal digestive systems. Since it is difficult, time-consuming, and expensive to test directly for the presence of a large variety of pathogens, these fecal indicator bacteria are used. Sources of fecal contamination to surface waters include wastewater treatment plants, on-site septic systems, domestic and wild animal manure, and storm water runoff.

In addition to the possible health risk associated with the presence of elevated levels of fecal bacteria, they can also cause cloudy water, unpleasant odors, and an increased oxygen demand. Fecal coliform results ranged from <20 MPN/100mL at S006 to ≥1,600,000 MPN/100 ml at B001. Enterococcus results ranged from 10 MPN/100mL at L019 to >24,196 MPN/100mL at B022.

## 4.4 IC/ID Investigations

Sites that exceeded one or more action level were revisited and resampled to confirm the initial result. If the confirmation result also exceeded an action level, an IC/ID investigation was initiated. Twenty eight sites had one or more action level exceedances that required confirmation. Eighteen of those sites, upon confirmation, required an IC/ID investigation

The most common exceedance was for ammonia; 15 sites had an initial exceedance. This was common in ponded water where organic matter breakdown would cause higher levels of ammonia. Where upstream investigations were possible and flowing water was sampled, the ammonia concentration would often decrease below the action level. The action level for orthophosphate-P was exceeded at 12 sites during the initial screening. The majority of these sites were also ponded. Nine of the 18 sites that were initially sampled for laboratory analysis exceeded one or more of the fecal indicator bacteria action levels. Appendix D contains a detailed description of the confirmation and IC/ID investigations at each site and the actions that were taken to reduce contaminants.

The prevailing source for ponded and flowing water was from residential and park over-irrigation. To reduce and/or eliminate the residential flow, educational material was distributed to the residences on October 25, 2007. Over 700 letters where sent out across the City, each identifying the pollutant of concern in their area and what they could do to help eliminate it. The City of Oceanside's water conservation program also reached this area through the local public television station's service announcements in August and October on smart irrigation. The Clean Water Program also teamed up with the Water Utilities' Meter Readers in August and began a residential door hanger program. The Meter Readers will continue to place door hangers on residences that they find to have water flowing from their property either from over-irrigation or an IC/ID. The door hangers have tips for good irrigation practices and a link to the City's website for more information.

To reduce and/or eliminate the runoff from the City's parks, several meetings by phone and in person were held in September and October with Clean Water Program staff and Parks' Department staff and their contractors. The Parks' maintenance staff visually inspects the City's parks weekly. Any irrigation problems are prioritized and fixed. Fertilizer is applied depending on the use of the park and the season. A slow-release fertilizer is used in the summer and best management practices are always used to keep fertilizer and grass clippings in the park and out of the storm drains and water ways. De-thatching is completed annually and aeration bi-annually to improve drainage in all of the parks. The Clean Water Program is working continuously with the Park's Department to keep BMPs in place and up-to-date in addition to seeking out funding for smart irrigation controls to improve water conservation efforts.

# 5 DISSCUSION

## 5.1 2007 Dry Weather Summary

Of the 100 sites in the historical dry weather monitoring program, 93 sites were accessible and visited in 2007. Sprinter Railway construction in the Loma Alta Watershed and Pacific Street Bridge construction in the San Luis Rey Watershed, in addition to a few other safety concerns, limited access to the remaining seven sites. Thirty six sites had measurable flowing water and 25 sites were ponded with enough water to sample, combining for a total of 61 sites where initial field screening was conducted. Eighteen of these sites were chosen for laboratory testing for chemistry and microbiology parameters.

Twenty eight of the 61 sites initially screened had one or more field or laboratory parameter exceedance. The most common exceedances for field screening were ammonia and orthophosphate. The majority of these were from ponded water where organic matter was breaking down. This causes a rise in ammonia as nitrogen fixation occurs. The prevailing source for ponded and flowing water with ammonia and/or orthophosphate exceedances was from residential and park over-irrigation. The irrigation water is also likely to carry fertilizer and may be a source of the orthophosphate exceedances. Nitrate action levels were exceeded at three sites. One of these exceedances was below the action level upon confirmation. The other two sites are part of on-going BMP selection and monitoring detailed in Appendix D. There were three pH exceedances all associated with concrete channels. Components of concrete are known to be basic and may be having an affect on ponded water in concrete channels.

Bacterial indicators were the only laboratory parameter that exceeded action levels within the City of Oceanside. There were no exceedances for MBAS, dissolved metals, oil and grease, or pesticides. The total coliform action level was exceeded at nine sites; the fecal coliform action level was exceeded at four sites; and the enterococcus action level was exceeded at two sites. There were no bacterial exceedances in the San Luis Rey watershed and confirmation of the two exceedances in the Loma Alta watershed resulted in bacteria quantities below the action levels. Possible sources in the Buena Vista and Agua Hedionda watersheds were either over-irrigation or an unknown source. One exceedance in Agua Hedionda may have been related to an illegal discharge that was identified and resolved.

Over 700 letters targeting areas in the City where the various exceedances occurred were mailed to residents. These letters focus on educating residents on the path of the storm drain system, what common pollutants come from residential areas, and suggestions and alternatives to reduce the flow of water and pollutants entering the City's water bodies.

In 2007, there were no action levels for the qualitative observations of floatable materials, biology, deposits, or vegetation. Trash and algae were the most commonly observed materials at the monitoring sites. Fifty two of the sites monitored identified trash in or near the monitoring location. Under Permit Order 2007-0001 trash will be monitored and assessed in more detail beginning with the 2008 Dry Weather Monitoring season. Type and possible sources of the trash will be recorded. Algae, an indication of nutrients in the runoff, was identified at 37 of the sites monitored.

## 5.2 Historical Data Comparison

In February 2001, the San Diego Regional Water Quality Control Board issued Order No. 2001-01 to the communities of San Diego County. As part of Order 2001-01, the City of Oceanside was required to develop and implement a Dry Weather Field Screening and Analytical Monitoring Program. The Dry Weather Program under this order was implemented in the 2002 Dry Weather season. This section provides a comparison of the last six years of dry weather data.

The majority of exceedances from the 2001 Permit Cycle are nutrients (nitrate, orthophosphate, and ammonia) and bacterial indicators (total coliform, fecal coliform, and Enterococcus). Table 8 provides a summary of the previous six years of dry weather monitoring including the number of sites monitored and the number of exceedances of these specific field and laboratory analytes.

**Table 7. 2002-2007 Dry Weather Monitoring Report Data Comparison.**

| Monitoring Year | 2007 | 2006 | 2005 | 2004 | 2003 | 2002 |
|---|---|---|---|---|---|---|
| **No. of Sites with Flowing or Ponded Water** | 61 | 61 | 64 | 46 | 56 | 56 |
| **No. of Sites Sampled for Initial Field Screening** | 61 | 54 | 44 | 18 | 56 | 56 |
| **No. of Sites Exceeding Nitrate Action Level*** | 3 | 9 | 8 | NS | 12 | 11 |
| **No. of Sites Exceeding Orthophosphate Action Level** | 12 | 6 | 8 | 2 | 14 | 11 |
| **No. of Sites Exceeding Ammonia Action Level** | 15 | 8 | 4 | 17 | 49 | 50 |
| **No. of Sites Sampled for Laboratory Analysis** | 18 | 19 | 17 | 19 | 16 | 11 |
| **No. of Sites Exceeding Total Coliform Action Level** | 9 | 12 | 17 | 11 | 0 | 4 |
| **No. of Sites Exceeding Fecal Coliform Action Level** | 4 | 5 | 4 | 2 | 0 | 1 |
| **No. of Sites Exceeding Enterococcus Action Level** | 2 | 2 | 4 | 3 | 2 | 0 |

*Number of exceedances taken from previous reports. Nitrate reported in monitoring years 2002, 2003, 2005 and 2006 may have been reported as $NO_3$, as opposed to $NO_3$-N. Without converting to the appropriate form of nitrate to compare to the set action levels, the number of exceedances may be erroneously high. See discussion below.

During the 2001 Permit Cycle, the number of sites visited with flowing or ponded water has not changed dramatically, even with an impending drought. The number of sites sampled over the years has fluctuated. In 2004, only the flowing sites were sampled, therefore reducing the number to 18. Due to safety and accessibility constraints, a reduced number of the flowing and/or ponded sites were screened in 2005 and 2006. In 2007, the inaccessible

sites were not visited and therefore it could not be determined if they were flowing and/or ponded.

Nitrate exceedances were reduced in 2007. This brought a review of the previous years' nitrate results. Based on the test kits used and discussion with previous samplers, in 2004 and 2005, the nitrate results were reported as $NO_3$, but compared to action levels for nitrate as N ($NO_3$-N). The field results should have been divided by 4.43 to convert from $NO_3$ to $NO_3$-N. Because this was not done, nitrate as N results for those two years are erroneously high and some falsely reported as exceedances. For monitoring years 2002 and 2003, it is assumed the same procedure occurred, however, no notes or discussions have been found to verify this. In correcting these reported formats, the following would stand as the correct number of nitrate ($NO_3$-N) exceedances:

| Monitoring Year | 2007 | 2006 | 2005 | 2004 | 2003 | 2002 |
|---|---|---|---|---|---|---|
| **No. of Sites Exceeding Nitrate Action Levels** | 3 | 3 | 2 | NS | 3 | 11* |

*Could not be determined.

The number of sites with orthophosphate and ammonia exceedances was higher in 2007. This could be due to a greater number of ponded sites sampled. It should also be noted that in 2005, the City of Oceanside implemented a new method for ammonia analysis which gives more accurate results as well as minimizes the chance for false positives.

The sites sampled for laboratory analysis have had consistent exceedances for bacterial indicators. However, there has been a decrease from 2005 to 2006 to 2007. In the 2005 monitoring year 100% of lab sites exceeded the action level for one or more indicator bacteria; in 2006, 63% of lab sites exceeded the action level for one or more indicator; in 2007, 50% of lab sites exceeded the action level for one or more indicator.

# 6 CONCLUSIONS

The City of Oceanside's boundaries include two major watersheds; the San Luis Rey Watershed, which includes the San Luis Rey River, and the Carlsbad Hydrologic Unit, which consists of Loma Alta Creek, Buena Vista Creek, and Agua Hedionda Creek. As part of Order 2001-01, the San Diego Regional Water Quality Control Board required all Copermittees to develop and implement a Dry Weather Field Screening and Analytical Monitoring Program. The purpose of the program was to detect and eliminate illicit connections and illegal discharges (IC/IDs) to the storm drain system, minimizing the negative impacts of human activities on these water bodies. This report summarizes the results of the 2007 dry weather monitoring season in detail and reviews the historical data and trends from the 2001 Permit Cycle.

Of the 100 sites in the historical dry weather monitoring program, 93 sites were accessible and visited in 2007. Thirty six sites had measurable flowing water and 25 sites were ponded with enough water to sample, combining for a total of 61 sites where initial field screening was conducted. Eighteen of these sites were chosen for laboratory testing for chemistry and microbiology parameters.

Twenty eight of the 61 sites initially screened had one or more field or laboratory parameter exceedance. The most common exceedances for field screening were ammonia and orthophosphate. The majority of these samples were from ponded water where organic matter breakdown may be causing the nutrient exceedances. Bacterial indicators were the only laboratory parameter that exceeded action levels. The prevailing source for ponded and flowing water was from residential and park over-irrigation. Over 700 letters targeting areas in the City where the various exceedances occurred were mailed to residents. Meetings were also held with Park maintenance staff and contractors to work together on reducing runoff from the City's parks.

Because the 2007 monitoring season concludes the 2001 permit cycle, a brief review of the past six years of dry weather monitoring data was conducted, including exceedance trends. In addition, variations in monitoring locations were found and incorrectly reported nitrate results from previous years were identified.

Eighteen sites of the 100 listed to visit in 2007, have had some type of variation between the past six years of sampling. During one or more monitoring seasons, a different storm drain was visited from the previous years, but labeled the same drain. For example, at Site L033, the picture of the site visited in 2006 appears to be different than the pictures taken the other five years, but it was still labeled and results recorded as L033. The majority of these sites has been dry and so do not affect historical data.

It has also been identified that for monitoring years 2005 and 2006, the nitrate results were reported as $NO_3$ as opposed to $NO_3$-N. This resulted in values that were erroneously high and some were falsely reported as exceedances. The 2002 and 2003 monitoring years appear to have followed the same procedure; however no notes or discussions have been found to

verify this. The historical data may be updated and re-submitted for Regional Urban Runoff Program use.

After these corrections were made, it appears that nitrate exceedances are consistent through the past six years. However, ammonia and orthophosphate exceedances were up in 2007, likely due to a higher number of ponded sites being sampled. Indicator bacteria exceedances have been decreasing since 2005. In the 2005 monitoring year 100% of lab sites exceeded the action level for one or more indicator bacteria; in 2006, 63% of lab sites exceeded the action level for one or more indicator; in 2007, 50% of lab sites exceeded the action level for one or more indicator.

Follow-ups continue to be conducted and ongoing monitoring and BMP selection are being analyzed at sites that have continued exceedances.

San Diego Stormwater Copermittees

# Land Use Types for Dry Weather Monitoring

**(Adopted by the Dry Weather Monitoring Workgroup, April 20, 2004)**

1. **Residential**

   **Residential** (general)
   Single- and multi-family homes, mobile home parks, etc.

   **Rural residential** (For the County of San Diego and other appropriate Copermittees)
   Single family homes located in rural areas with lot sizes of approximately 1 to 10 acres. Rural residential estates may have small orchards, fields or small storage buildings associated with the residential dwelling unit, etc.

2. **Commercial**

   Offices, schools, shopping centers, auto dealerships, government/civic centers, cemeteries, churches, libraries, post offices, fire/police stations, military use, jails, prisons, border patrol holding stations, dormitories, hotels, motels, resorts, and casinos, etc.

3. **Agricultural**

   Orchards, vineyards, nurseries, greenhouses, flower fields, dairies, livestock, poultry, equine ranches, row crops and grains, pasture, fallow, etc.

4. **Industrial**

   Shipbuilding, airframe, aircraft manufacturing, industrial parks, manufacturing uses such as lumber, furniture, paper, rubber, stone, clay, and glass; auto repair services/recycling centers; warehousing, wholesale trade; mining, sand and gravel extraction, salt evaporation; junkyard, dumps/landfills; auto wrecking/dismantling and recycling centers, etc.

5. **Parks**

   Recreation areas and centers, neighborhood parks, wildlife and nature preserves, golf courses, accessible sandy areas along the coast or major water bodies allowing swimming and picnicking, etc.

6. **Open**

   Vacant and undeveloped lands, etc.

## Jurisdictional Urban Runoff Management Program

## 2007-08 Annual Report

Prepared for:
San Diego Regional Water Quality Control Board

September 30, 2008

CITY OF OCEANSIDE
WATER UTILITIES DEPARTMENT

**DATE:** **September 29, 2008**

**RE:** **STATEMENT OF CERTIFICATION**
**CITY OF OCEANSIDE JURISDICTIONAL URMP**

I certify under penalty of law that the Jurisdictional Urban Runoff Management Program Annual Report for 2007-2008 was prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for knowingly submitting false information, including the possibility of fine and imprisonment for knowing violations.

M. A. Lahsaiezadeh

**SIGNATURE:**

**NAME:** Mo Lahsaiezadeh
**TITLE:** Clean Water Program Coordinator
**JURISDICTION:** City of Oceanside

# ES EXECUTIVE SUMMARY

## Introduction

This document was prepared by the City of Oceanside (City) pursuant to the California Regional Water Quality Control Board, San Diego Region (SDRWQCB), Order No. 2007-0001, NPDES No. CAS0108758, Waste Discharge Requirements for Discharges of Urban Runoff from the Municipal Separate Storm Sewer Systems (MS4s) Draining the Watersheds of the San Diego Copermittees. Pursuant to Part J.3.a.of the Municipal Permit, this Jurisdictional Urban Runoff Management Program (JURMP) Annual Report provides a comprehensive description of the activities conducted by the City to meet the requirements of Section D of the Permit during the 2007-2008 annual reporting period (July 1, 2007 – June 30, 2008).

## Report Organization

Section J of Municipal Permit 2007-0001 defines the requirements for the Jurisdictional Urban Runoff Management Program (JURMP) Annual Report and states that each JURMP Annual Report shall, at a minimum, contain a comprehensive description of all activities conducted by the Copermittee for each required component. The table below presents these components and the section in which they are discussed.

| Municipal Permit 2007-0001 Components | Annual Report Section |
|---|---|
| Development Planning Component | Section 2.0 |
| Land-Use Planning | Section 2.2 |
| Environmental Review Process | Section 2.3 |
| Development Project Approval and Verification Process | Section 2.4 |
| Construction Component | Section 3.0 |
| Municipal Component | Section 4.0 |
| Industrial and Commercial Component | Section 5.0 |
| Residential Component | Section 6.0 |
| Illicit Discharge Detection and Elimination Component | Section 7.0 |
| Education Component | Section 8.0 |
| Public Participation | Sections 9.0 |
| Fiscal Analysis Component | Section 10.0 |
| Effectiveness Assessment Component | Section 11.0 |
| Special Investigations | Section 12.0 |
| Non-Emergency Fire Fighting | Section 13.0 |
| JURMP Revisions | Section 14.0 |
| Conclusions and Recommendations | Section 15.0 |

Pursuant with the Municipal Permit this document contains all of the required information.

## Program Highlights

Below is a summary of each section which describes the Clean Water Program activities appearing in this Annual Report. Please refer to the individual section for more detailed information.

### Section 2.0 Development Planning Component

All new development and redevelopment projects are subject to the priority project or standard project provisions in the City's Interim SUSMP. During this reporting period the City adopted an Interim SUSMP which includes revisions that conform to the requirements of the Municipal Permit. Minimum storm water BMP requirements are part of the City's standard conditions of approval and are required of all projects receiving discretionary permits. The City will not support the entitlement of a project or issue development permits until the appropriate documents are reviewed by City staff and approved by the City Engineer. Information of the SUSMP document reviews were performed during the 2007-2008 reporting period. The City evaluated its established environmental review process for all development projects to determine compliance with the new Municipal Permit and determined that the current environmental review process adequately addresses the requirements of the Municipal Permit.

### Section 3.0 Construction Component

The City of Oceanside Clean Water Program provided an updated inventory of construction sites with the 2008 JURMP. During the reporting period, the Clean Water Program inspected the 50 construction sites to ensure they were in compliance with City Code.

### Section 4.0 Municipal Component

The City of Oceanside Clean Water Program utilized its 2007-08 municipally owned inventory and inspected 230 municipal areas to ensure these facilities are in compliance with City Code. A total of 2,358 tons of waste was removed as a result of street sweeping and a total of 65.5 tons of waste was removed from the storm drain system (MS4) as part of the annual cleaning. Seven thousand two hundred and fifty two (7,252) feet of City sewer lines were slip lined and manholes pressure grouted and sealed in the Loma Alta watershed.

### Section 5.0 Industrial and Commercial Component

The City of Oceanside Clean Water Program utilized its industrial and commercial business inventory submitted with the 2008 JURMP. Two hundred forty one (241) industrial businesses and 846 commercial businesses were inspected during this reporting period, to ensure these facilities are in compliance with City Code.

### Section 6.0 Residential Component

The City of Oceanside has developed an extensive program that aims to reduce pollutant runoff from residential areas and activities to the maximum extent practical (MEP). The City of Oceanside Clean Water Program received 55 complaints on the Urban Runoff Hotline and Code Enforcement Program received 190 complaints from residents regarding potential urban runoff violations from residential areas and activities. Extensive educational efforts were made to help Oceanside residents understand watersheds, water quality and urban runoff impacts through presentations on a local television channel, Clean Water Program newsletters mailed to each household, and through information available on the Clean Water Program Website.

### Section 7.0 Illicit Discharges Detection and Elimination Component

This section is intended to document the activities conducted by the City of Oceanside during the 2007-2008 reporting period to manage illicit discharges. In accordance with the September 10, 2008 Regional Water Quality Control Board adoption of Addendum No. 2 to Order No. R9-2007-0001, the City will submit the entire FY 2007-08 Illicit Discharge Detection and Elimination Component, including the 2008 Dry Weather Field Screening and Analytical Monitoring, no later than December 15, 2008.

### Section 8.0 Education Component

The City of Oceanside Clean Water Program continued to use a variety of avenues to educate various audiences about the Clean Water Program and the requirements of Municipal Permit Order 2007-0001. These outreach activities included municipal staff training, CWP newsletters, staffing community booths, conducted watershed education presentations, implementation of a 5$^{th}$ grade curriculum titled Project SWELL and targeting under-served audiences with educational materials.

### Section 9.0 Public Participation Component

The Clean Water Program continued to sponsor beach and creek cleanup events and supported private groups who wanted to coordinate their own cleanup events. During this reporting period a total of 1,904 volunteers participated in these events, removing more than seven tons of trash, and debris, from the local waterways. In addition the City participated in regional education events including staffing a stormwater booth at the San Diego County.

### Section 10.0 Fiscal Component

The City of Oceanside Clean Water Program continued to acquire funding from various sources to implement programs to meet Municipal Permit Order 2007-08. To secure adequate funding, the Water Utilities Department collects a Clean Water Program surcharge that is delineated on the utility bills for each household and is based on the customer's water consumption. During this reporting period an increase in surcharge was secured in order to cover significant increases in costs due to additional requirements under Municipal Permit Order 2007-001, Investigation Orders, and TMDLs. Approximate expenditures for the 2007-08 fiscal year are provided as well as the budget for the 2008-09 reporting period.

### Section 11.0 Effectiveness Component

The City implemented an effectiveness assessment program to assist the City in determining which programs, and program components, are effectively improving water quality or leading to water quality improvement. The City gathered and evaluated data for some of the program components for assessment during this reporting period. This data will be valuable for incorporation into long-term effectiveness evaluation on a jurisdictional level.

### Section 12.0 Special Investigations

The City of Oceanside received funding from two sources to implement two water quality related projects: the San Luis Rey Bacteria Source Tracking Study and the Loma Alta Creek Ultraviolet Treatment Facility.

*Lower San Luis Rey Bacteria Source Tracking*

As part of the Proposition 50 Clean Beaches Initiative, the City of Oceanside was awarded $554,375 to track the sources of bacteria in the Lower San Luis Rey River. This study project has a goal to identify the sources and quantify the loading of bacterial contamination in the lower San Luis Rey River using a tiered approach. This approach will permit prioritization for mitigation of microbial contaminants and appropriate actions will be recommended to eliminate sources of bacterial contamination.

*The Loma Alta Creek Ultraviolet Treatment Facility*
The City was awarded a $5,000,000 Proposition 40 Clean Beaches Initiative (CBI) grant by the State Water Resources Control Board to construct an ultraviolet (UV) light treatment facility at the existing La Salina Wastewater Treatment Facility. The anticipated project goal is to eliminate beach closures during the dry months at Buccaneer Beach in Oceanside, California. This will be achieved by diverting the flow from the Loma Alta Lagoon through a UV treatment facility prior to discharging the flow onto the shoreline.

### Section 13.0 Non-Emergency Fire Fighting

Non-emergency fire fighting BMPs and educational methods for reducing the discharge of pollutants from non-emergency flows to the MEP are described in Section 113.

### Section 14.0 JURMP Revisions

Since the submittal of the City's 2008 JURMP in March 2008 there have been no changes or revisions to the document. It is anticipated that there will be changes during the next reporting period, fiscal year 2008-09.

# 1.0 INTRODUCTION

This document was prepared by the City of Oceanside (City) pursuant to the California Regional Water Quality Control Board, San Diego Region (SDRWQCB), Order No. 2007-0001, NPDES No. CAS0108758, Waste Discharge Requirements for Discharges of Urban Runoff from the Municipal Separate Storm Sewer Systems (MS4s) Draining the Watersheds of the County of San Diego, the incorporated Cities of San Diego County, the San Diego Unified Port District, and the San Diego County Regional Airport Authority (Copermittees) referred to in this document as the Municipal Permit (Municipal Permit). Pursuant to Part J.3.a.of the Municipal Permit, this Jurisdictional Urban Runoff Management Program (JURMP) Annual Report provides a comprehensive description of the activities conducted by the City to meet the requirements of Section D of the Permit during the 2007-2008 annual reporting period (July 1, 2007 – June 30, 2008).

This Municipal Permit is based on the Federal Clean Water Act (CWA), the Porter–Cologne Water Quality Control Act, applicable state and federal regulations, all applicable provision of statewide Water Quality control Plans and Polices adopted by the State Water Resources Control Board (SWRCB), the Water Quality control Plan for the San Diego Basin adopted by the Regional Water Quality Control Board (RWCQB), the California Toxics Rule, and the California Toxics Rule Implementation Plan. This Annual Report addresses the renewed NPDES Permit No. CAS0108758, which was first issued on July 16, 1990 (Order No. 90-42), and then renewed on February 21, 2001 (Order No. 2001-01).

In the interests of communicating consistent messages to the community regarding the most efficient and effective means of reducing storm water and urban runoff pollution, and as directed under Part J.5 of the Municipal Permit, this document was developed following the standardized format developed and agreed upon by the Copermittees. For the most part, compliance with the Municipal Permit was undertaken by the Copermittees through the development and implementation of the JURMP; therefore this Annual Report is organized in a similar format as the 2008 JURMP.

## 1.1 Background

Urban development typically involves conversion of natural space to developed areas that includes impervious surfaces such as streets, buildings, and parking lots. With the increase in human population and impervious surfaces associated with developed areas there tends to be higher runoff volume and velocity due to the impervious area's incapacity to absorb and hold rainwater. Also, human use of developed areas is associated with a number of pollutants that can be conveyed to the municipal separate storm sewer system (MS4) by a rain event or non-storm water discharges. This is called non-point source pollution. Non-point source pollution, such as urban runoff discharges to the MS4, is a large source of pollutants to receiving water bodies in the San Diego region and throughout the United States. Pollutants commonly associated with urban runoff include sediments, pesticides, fertilizers, herbicides, trash, oil and grease, and heavy metals. Such pollutants are generated by everyday activities such as construction, landscaping and vehicle use and maintenance.

Pollutants that reach receiving water bodies, such as streams, lakes, bays, lagoons, and the ocean, have the potential to significantly impact human and environmental health as well as wildlife that utilize these water bodies and surrounding habitat for survival. Notably, environmentally sensitive areas (ESA) are especially threatened by urban development because such areas tend to have lower capacities to withstand pollutants entering the area.

## 1.2 Purpose and Objectives

The purpose of this annual report is to present the activities the City conducted during the Fiscal reporting period of July 1, 2007 through June 30, 2008 to reduce the discharge of pollutants from the MS4 to the maximum extent practicable (MEP). The activities involved implementing, and improving where needed, existing programs and developing new programs intended to minimize or eliminate the effects of urban runoff from the City on receiving water bodies. Improving the quality of the discharge from the MS4 should have beneficial effects on the local receiving water bodies.

Table 1-1 presents the organization of the City's JURMP Annual Report and a summary of the corresponding permit requirement in Order No. 2007-0001. Some Report sections and permit requirements overlap and will therefore found in multiple locations throughout the document.

**Table 1-1. City of Oceanside 2007-08 Annual Report Compliance Summary.**

# 2.0 DEVELOPMENT PLANNING COMPONENT

## 2.1 Introduction

The development of urban areas has the potential to negatively impact the surrounding environment. The addition of impervious surfaces can alter the natural drainage patterns of the area, and development can facilitate the introduction of pollutants to the environment resulting from human activities. Accordingly, the City has developed measures to limit the potential for urban development to negatively impact the environment through careful land use planning and thoughtful design of development projects. Development projects are defined by the Municipal Permit as new development or redevelopment with land disturbing activities, structural development including construction or installation of a building or structure, the creation of impervious surfaces, public agency projects, and land subdivision. Through the implementation of the City's development planning component the City will reduce the discharge of pollutants from development projects to the Maximum Extent Practicable (MEP), protect receiving water bodies while managing increases in runoff that have the potential to increase erosion in streams or rivers.

This section documents the City Jurisdictional Urban Runoff Management Program (JURMP) Development Planning activities performed by the City of Oceanside during the reporting period of July 1, 2007 to June 30, 2008. The City has continued to implement the comprehensive Land-Use Planning component of the JURMP in order to satisfy the provisions of Section D.1 of the San Diego RWQCB Order No. R9-2007-0001, which is also referred to as the Municipal Permit. A directory of the subsections within the Municipal Permit Section J.3.a and corresponding Annual Report compliance sections are listed in Table 2.1, below.

## 2.2 Land Use Planning

### 2.2.1 Background

The development planning component focuses on efforts to mitigate erosion and reduce pollutant discharges in urban runoff resulting from new development and redevelopment projects to the MEP through land use planning and development process that includes project review, approval, and verification.

The Land Use Element of the General Plan was amended in 2003 to include a number of water quality and watershed protection measures. The primary focus of the measures was to provide a more balanced relationship between the needs of the community and development interests, while managing finite natural resources. There were no water quality related amendments adopted into the General plan during this 2008 reporting period. The specific policies are detailed in Section 4.2.3 of the 2008 Jurisdictional Urban Runoff Management Program.

### 2.2.2 Source Characterization

Source characterization is an important component of any urban runoff program. Various land use types and activities are known to generate different combinations of pollutants that have the potential to negatively affect the surrounding environment, including the receiving waters.

The Interim SUSMP identifies ten (10) separate "Project Categories", which are cited as anticipated or potential sources of storm water pollution based upon a particular land use and specific site conditions. By identifying pollutant sources and the impairments to the receiving waters; a project may effectively mitigate storm water impacts, to the Maximum Extent Practicable (MEP) through the implementation of Low Impact Development (LID) practices and the appropriate application of a combination of Source Control, Site Design, and Treatment Control BMPs. Project Categories and General Pollutant Categories appear in Table 3 of the Interim SUSMP.

### 2.2.3 Best Management Practice Requirements

There are established minimum design requirements for all development projects, which are discussed in Section 4.4.3 of the 2008 JURMP. In addition, the Land Use Planning Element of the General Plan contains policies to protect water quality that are reflected in Section 4.2.3 of the 2008 JURMP. During the latter part of this reporting period (i.e. March 2008), the City adopted an Interim SUSMP which contains several new storm water requirements. The BMP requirements were influenced by the inclusion of the LID practices and the phased introduction of the Hydromodification Plan (HMP) as part of the Municipal Permit.

LID practices are included in the Site Design BMP discussion of the Interim SUSMP. The addition of LID practices lends direct support to the HMP component by providing a broad spectrum of design concepts aimed at minimizing the introduction of pollutants and offsetting the conditions of concern associated with impacts to the hydrologic regime.

The Interim SUSMP also includes Treatment Control BMP discussion which provides a direct correlation to pollutant types and physical characteristics that enable transport. This information assists the design professional in developing an effective BMP "treatment train" and facilitates the pursuit of the MEP standard. The Interim SUSMP is available at the City of Oceanside – Engineering Division counter or may be downloaded from the City website at http://www.oceansidecleanwaterprogram.org/pdf/OceansideSUSMP.pdf

### 2.2.4 Program Implementation

The General Plan has been adopted by the City Council and is a legally binding document; the City of Oceanside is required to abide by its policies. In addition to the General Plan, the City addresses water pollution through implementation of its Municipal Code. Chapter 40 of the

Municipal Code is the Urban Runoff Management and Discharge Control Ordinance and is commonly referred to as the Storm Water Ordinance. The Ordinance contains multiple references to the SUSMP. The City first adopted the SUSMP in 2002 as a condition of the governing Municipal Permit. The document was based on a regionally developed Model SUSMP. More recently, the SUSMP was revised to conform to the 2007 Municipal Permit and was adopted in March 2008 as the Interim SUSMP.

All new development and redevelopment projects will be subject to the priority project or standard project provisions in this Interim Local SUSMP, subject to the lawful prior approval provisions of the Municipal Permit. Development projects deemed not to be a threat to storm water quality, per the City's Urban Runoff Assessment form and on a case-by-case basis, may be exempt from SUSMP requirements. The Interim SUSMP was developed to address post-construction urban runoff pollution from various types of development projects. Certain categories of development projects were deemed more likely to discharge pollutants and are defined as Priority Development Projects (Priority Project) and are subject to additional storm water requirements. As part of the design process, Priority Projects must submit post-construction BMP plans, known as Storm Water Mitigation Plans (SWMPs). These SWMPs must list the BMPs proposed to address the potential pollutants likely to be generated by the development and conditions of concern typically associated with the type of development.

Details on the completed and planned SUSMP updates may be found in Section 4.4.4.4 of the 2008 JURMP. In addition, information pertaining to the legal authority to implement a storm water program is located in Section 2 of the 2008 JURMP.

## 2.3 Environmental Review Process

The City has evaluated its established environmental review process for all development projects to determine compliance with the new Municipal Permit. The City guides the developers through the filing necessary documents and identifies which reports are required to be submitted and approved before development may begin. The current environmental review process places emphasis on the evaluation of water quality impacts and related issues that may result from the project development.

The Planning Division and Engineering Division of the Development Services Department are responsible for reviewing development projects for conformance with storm water requirements. The City will continue to assess all development and redevelopment projects for compliance with the California Environmental Quality Act (CEQA) by reviewing the Environmental Initial Study checklist completed by each project applicant. A copy of this checklist is included in Appendix D of the 2008 JURMP. The checklist contains questions to evaluate potential negative impacts on receiving water bodies. Projects which are determined to have "potentially significant impacts" to the surrounding environment and receiving waters are required to prepare Environmental Impact Reports (EIRs) for City review. Development projects that do not need to prepare EIRs are allowed to proceed to the next phase of the approval process.

During the development of the 2008 JURMP the City evaluated its current established environmental review process for all new development and redevelopment projects to determine compliance with the new Municipal Permit. The City determined that the current environmental

review process adequately addresses the requirements of the Municipal Permit. While the specific requirements evaluated during the environmental review process are expected to change periodically, the basic review structure did not require revision during this reporting period. Details of the current environmental review process are provided in Section 4.3 of the City's 2008 JURMP update.

## 2.4 Development Project Approval and Verification Process

### 2.4.1 Background

The City has an established administrative and discretionary approval processes that provide multiple reviews by the Planning and Engineering Divisions. The Planning Division is responsible for determining acceptable land uses, development constraints, and identifying environmental issues. The Engineering Division is composed of various disciplines (i.e., Engineering Improvements, Grading and Drainage, Water and Sewer Utilities, Hydrology, Geotechnical, Storm Water, Traffic, and Landscape), which perform a coordinated review of all project applications. In addition, the Building Division coordinates with Storm Water Document Review to ensure that new development, remodeling projects, additions, or demolitions are reviewed for compliance with storm water regulations. The Fire Department also performs multiple reviews and notifies the appropriate division in the event of a discrepancy or nonconformance. The coordinated involvement of all Divisions and disciplines provides an elevated degree of assurance that all projects are subjected to thorough scrutiny as part of the normal review process. Particulars surrounding the project approval and process verification are discussed in the following sections.

### 2.4.2 Source Characterization

Understanding and identifying pollutant sources is a basic component in developing a comprehensive storm water mitigation program. Sufficient data exists to support the claim that a particular land use will generate, or potentially generate, certain types of pollutants.

Table 3 of the Interim SUSMP identifies ten (10) individual "Project Categories" that are known to contribute pollutants based upon land use type. The pollutants associated with various land uses are categorized as being anticipated or potential; depending on site specific conditions. All projects, i.e. Priority Development and Standard Development Projects, are required to identify "Pollutants of Concern from the Project Area" as part of the SWMP or Runoff Assessment Report (RAR). Once identified, the project shall implement appropriate BMPs to mitigate the pollutants generated by the project area. The Project Categories and General Pollutant Categories appear in Table 3 of the Interim SUSMP.

### 2.4.3 Best Management Practice Requirements

The Municipal Permit dictates minimum BMP requirements for all new development and redevelopment projects. The requirements are included in the City Storm Water Ordinance and Interim SUSMP and shall include, but not be limited to, the implementation of the following BMPs and LID practices by the project proponent:

- Source control BMPs that reduce storm water pollutants of concern in urban runoff, including storm drain stenciling and signage, properly designed outdoor material storage

areas, properly designed trash storage areas, and implementation of efficient irrigation systems;

- Low Impact Development (LID) BMPs where feasible to maximize infiltration, provide retention, slow runoff, minimize impervious footprint, direct runoff from impervious areas into landscaping, and construct impervious surfaces to minimum widths necessary;

- Buffer zones for natural water bodies, where feasible. Require the project proponent to implement other types of buffers such as trees or access restrictions where conventional setbacks are not feasible;

- Measures to mitigate discharges of pollutants that result during grading or construction activities as specified in the Section D.2 of the Municipal Permit; and

- Submittal of a mechanism under which ongoing long-term maintenance of all structural post-construction BMPs will be conducted.

These minimum storm water BMP requirements are an integral part of the City standard conditions of approval and are required of all projects receiving discretionary permits. The City will not support the entitlement of a project or issue development permits until the appropriate Interim SUSMP documents are reviewed by City staff and approved by the City Engineer. Any subsequent changes that affect the approved BMPs will be subject to an amendment process that includes review by City staff and approval by the City Engineer.

## 2.4.4 Program Implementation

### 2.4.4.1 SUSMP Revision

During this reporting period the City adopted an Interim SUSMP which includes revisions that conform to the requirements of the Municipal Permit. In addition, a permanent full-time staff member was added to the Engineering Division; assigned with the task of reviewing SUSMP documents for conformance with the Interim SUSMP and for ensuring that related engineering plans are consistent with the approved SUSMP documents.

The most significant changes to the SUSMP are related to LID practices and the Hydromodification Plan (HMP). At present, the City is collaborating with the other Copermittees to adopt a detailed Hydromodification Plan (HMP) by participating in shareholder meetings and sessions of the HMP TAC. The final HMP is not expected to be complete until the middle of 2009; however, the City has established and will continue to implement Interim Hydromodification Criteria until the final HMP is approved.

There are provisions in the Interim SUSMP that require the project to evaluate the conditions of concern as determined in a drainage study report. The drainage study report considers the project location with respect to the entire watershed, topography, soil and vegetation conditions, percent impervious area, natural and infrastructure drainage features, and other relevant hydrologic and environmental factors. The drainage study report is also required to discuss watershed conditions based upon field observations and provide an evaluation of future impacts based upon the findings and the proposed development.

The drainage study report shall compute rainfall runoff characteristics from the project area including, at a minimum, peak flow rate, velocity, time of concentration, and total runoff volume or detention volume. These characteristics shall be developed for the 2- year, 10-year, and 100-year frequency, six-hour or 24-hour, Type I storm for the coastal areas of San Diego County (as described in the San Diego County Hydrology Manual, September 2002). The largest peak flow shall be included in the drainage study report.

There are existing provisions in the SUSMP which parallel the HMP requirements for demonstrating that no adverse impacts to the downstream habitats or channels will occur as a result of development. These SUSMP provisions remain in effect for all projects during this interim period. Currently, all Priority Projects disturbing 50 or more acres are required to comply with the Interim Hydromodification Criteria, except for those sites that are considered exempt as described in Section D.1(6) of the Municipal Permit. There are no active projects in the City of Oceanside that are disturbing more than 50 acres during this reporting period. The City Interim Hydromodification Criteria and a time table for development of the HMP are located in Sections 4.4.3.1 and Section 4.4.4.4, respectively, of the 2008 JURMP.

The Municipal Permit includes LID practices. The addition of LID practices lends direct support to the HMP component by providing a broad spectrum of design concepts aimed at minimizing the introduction of pollutants and offsetting the conditions of concern associated with impacts to the hydrologic regime. LID practices are included in the Site Design BMP discussion of the Interim SUSMP.

Another inclusion from the Municipal Permit to the Interim SUSMP is a Treatment Control BMP discussion which provides a direct correlation to pollutant types and physical characteristics that enable transport. This information assists the design professional in developing an effective BMP "treatment train" and facilitates the pursuit of the MEP standard. The Interim SUSMP is available at the City of Oceanside – Engineering Division counter or may be downloaded from the City website at http://www.oceansidecleanwaterprogram.org/pdf/OceansideSUSMP.pdf

#### 2.4.4.2 SUSMP Document Review

Each new development and redevelopment project is required to complete the Urban Runoff Threat Assessment Form – Attachment D of the Interim SUSMP. The form and associated development plans provide staff with information to perform a SUSMP determination. SUSMP determinations are performed on a case-by-case basis. A SUSMP determination typically places the vast majority of projects into a Priority Development or Standard Development category.

A very limited number of projects are not required to submit a SUSMP document and are noted as SUSMP exemptions. A SUSMP exemption differs from a SUSMP wavier of infeasibility. The City has never granted a waiver of infeasibility to a Priority Project and does not anticipate granting waivers in the future; however, if waivers are necessary, the City may elect to develop a waiver mitigation program. The waiver mitigation program would collect funds from projects that receive waivers and use the funds on programs to improve water quality in the project watershed.

A project with a SUSMP exemption is not categorized as a Priority or Standard Project; is not subject to permanent storm water requirements, and does not have a greater than "low" threat to water quality construction prioritization, pursuant to Section 1, Part A and Part B of the Urban Runoff Threat Assessment Form. Projects which are granted a SUSMP exemption typically involve incidental construction with negligible ground disturbance. Examples include the addition of an antenna to an existing cellular tower or interior tenant improvements to an existing building.

The overwhelming majority of new development and redevelopment projects are subject to the provisions of the Interim SUSMP. Projects are identified as Priority Development or Standard Development projects based upon land use categories and applicability of permanent storm water BMPs pursuant to Section 1 of the Urban Runoff Threat Assessment Form.

#### 2.4.4.3 Priority Projects

Priority Projects are required to obtain an approved Storm Water Mitigation Plan (SWMP) as part of the entitlement process. The items required in a SWMP are described in Section 2.2.2 of the Interim SUSMP. In summary, Priority Projects must determine the Primary Pollutants of Concern based upon source characterization and impacts to the 303(d) impaired receiving waters. This category of development is required to provide Source Control BMPs while implementing LID practices and Site Design BMPs. The project must incorporate Structural Treatment Control BMPs into the site development. The selected Treatment Control BMPs must have a medium to high removal efficiency for the identified Primary Pollutants of Concern. The Treatment Control BMPs with low pollutant removal efficiencies are not permissible in the City of Oceanside.

Priority Projects must also have an approved Operation and Maintenance Plan (O&M Plan) and enter into a Storm Water Facilities Maintenance Agreement (SWFMA) to ensure the long-term maintenance and operation of the Treatment Control BMPs. The City Engineer will not consider Priority Project structural Treatment Control BMPs "effective," and therefore will not accept storm water BMPs as meeting the MEP standard, unless a mechanism is in place that will ensure ongoing long-term maintenance of all structural BMPs. This mechanism shall be proposed by the project proponent as part of the SWMP and will be refined though the City's review process until satisfactory verification of maintenance is provided to the City Engineer. Such verification may include but is limited to covenants, legal agreements, maintenance agreements, and/or conditional use permits. A security may be required.

#### 2.4.4.4 Priority Project Example

An example of a Priority Project is the Camino Town & Country Shopping Center (South) (Discretionary Permit No. P-4-07 and D-3-70REV.05). The project represents a commercial redevelopment site and encompasses a 4.4 acre watershed. The site is divided into two distinct drainage basins based upon restaurant and parking lot land uses. The project Site Design BMPs include minimizing impervious area, maximizing rainfall interception, and minimizing directly connected impervious areas.

The project incorporates a number of Source Control BMPs which include prohibitive dumping signage and stenciling, outdoor and trash storage areas designed to reduce pollutant introduction. The Center also incorporates an efficient irrigation system and landscape design.

The Treatment Control BMPs are designed to mitigate the nutrients and bacteria indicators. The restaurant component is isolated from the surrounding watershed by a trench drain. Low-flows are captured in the drain and conveyed to a proprietary underground detention facility. The detained flows represent the 85$^{th}$ percentile volume for the restaurant watershed. Runoff contained in the detention facility is conveyed to a proprietary self-contained wetland Treatment Control BMP marketed under the trade name "StormTreat™". The treated flows are directed by underground private storm drain to an existing grated curb inlet. The grated curb inlet captures flows from the upstream parking lot. The combined parking lot and treated restaurant flows are conveyed by private storm drain to a "Nutrient Separating Baffle Box™"; a proprietary linear hydrodynamic separator. The treated flows form a confluence with an MS4 which conveys runoff from the larger area-wide watershed to a stable, established outfall location on the northern bank of the Buena Vista Creek.

#### 2.4.4.5 Standard Projects

Standard Projects are required to obtain an approved Runoff Assessment Report (RAR). The items required in a RAR are listed in Section 2.2.2 of the Interim SUSMP. Standard Projects must also identify the anticipated and potential pollutants based upon land use. The projects are required to implement Source Control and Site Design BMPs, and LID practices. Standard Projects are not required include Treatment Control BMPs. As such, the projects are not required to provide an O&M Plan or enter into a SWFMA.

#### 2.4.4.6 Adequacy of Proposed Plans

The City Engineer will review submitted SUSMP documents and other relevant plans for compliance with the applicable SUSMP requirements. The City Engineer may approve proposed alternatives to the BMP requirements in the City's SUSMP if they are determined to be applicable and equally or more effective. Additional analysis or information may be required to enable staff to determine the adequacy of proposed BMPs and will be requested as part of a staff review cycle. The SWMP or RAR will be deemed complete when the City Engineer determines that the project complies with the Interim SUSMP. Project status is tracked by database and confirmed by hardcopy records.

#### 2.4.4.7 Inspection

The City has compiled Treatment Control BMP information for all approved Priority Projects. All installed Treatment Control BMPs are regularly inspected by City inspectors to ensure intended function and proper maintenance. Inspection frequencies are based on the project's assigned Threat to Water Quality (TTWQ) as determined by Interim SUSMP Attachment D, the Urban Runoff Threat Assessment form. The Municipal Permit dictates that high priority sites shall be inspected annually and medium priority sites are to be inspected every two-years. Low priority site are inspected as needed. In addition, the Municipal Permit requires a minimum of 20% of the total number of projects with approved Treatment Controls and a maximum of twice the average number of projects with Treatment Control BMPs approved per year will be inspected annually. The Municipal Permit dictates 50% of all medium priority sites with

drainage inserts will be inspected annually. City Inspection staff performed a total of 41 SUSMP inspections during this reporting period.

It is the responsibility of the inspection staff to ensure that all BMPs proposed for the project have been built according to the construction plans before signing off on each stage of construction. The inspectors will use the project's plans to identify any missing or incorrectly installed structural BMPs and deny approval for sites with observed problems. City Staff inspected all Priority Projects subject to SUSMP requirements prior to occupancy to ensure that all LID, Source Control, and Treatment Control BMPs proposed for the project have been constructed in compliance with all approved plans and City permits and ordinances. Inspections of Priority Project sites prior to occupancy allows the City to verify that all BMPs are in place before any anticipated pollutants associated with the occupied use of the site are generated.

Since installation of structural BMPs will be closely inspected and signed off during regular grading and building inspections, the City does not expect major deficiencies in BMP installation to be found once construction is completed. However, some Treatment Control BMPs, such as filter inserts, are usually installed post-construction and thus may not be checked during grading and building inspections. To address this, correct BMP installation is also examined during the final project inspection, and building inspectors sign off on the final "red line" drawings that include any approved changes that were made to the plans during the course of construction. This provides City personnel with the ability to check the constructed project against the approved storm water documents. If any BMP, including filter inserts, is noted to be missing or incorrectly installed by City inspectors during or upon completion of construction, the City will require project to correct BMP deficiencies.

Inspections will include examination of all Treatment Control BMPs at the site to verify that each Treatment Control BMP is in working order, being maintained properly, and is in compliance with all applicable City ordinances and permits. Inspection findings will be documented by the inspector using the City of Oceanside Treatment Control BMP Inspection form in Appendix D of the 2008 JURMP. Deficiencies in Treatment Control operation and maintenance are noted during the inspection, the responsible party is notified and appropriate enforcement actions take place as described in Section 4.4.4.9 of the 2008 JURMP, in order to achieve compliance. Inspection findings and follow-up actions for Treatment Control inspections are included in the City Treatment Control BMP tracking database.

The City will require annual verification of proper maintenance of all treatment control BMPs by the responsible party for maintenance prior to the start of the rainy season. The City requires all Priority Projects to include Operation and Maintenance checklists and a self-inspection log for the site's Treatment Control BMPs found in the project SWMP. The City will require these forms to be completed by the site's responsible party and be submitted to the City annually. The annual maintenance verification of Treatment Controls by the party responsible for maintenance is unlike any current program within the City. Due to this circumstance, the City anticipates re-evaluation its annual maintenance verification procedure to conform to current Municipal Permit requirements.

The City will use a variety of enforcement methods to ensure storm water requirements for all development projects within the City's jurisdiction are implemented. Enforcement measures will escalate with continued violations as necessary. A detailed description of the different enforcement measures used by the City of Oceanside to enforce its storm water regulations can be found in Section 2 of the 2008 JURMP.

The current plan check process includes steps to enforce the implementation of development requirements during construction. Since all Treatment Control BMPs are required to be shown on the project's plans, inspectors check to make sure these BMPs have been correctly installed during their routine inspections. Errors in BMP installation are noted during plan checks. Projects are required to promptly correct errors until BMP installation is consistent with the approved plan.

Enforcement of post-construction BMP maintenance after occupancy will include verbal and written warnings and monetary penalties. All enforcement actions will be documented appropriately in the development project's database file. If a development site receives frequent citations or is not responsive to previously issued enforcement actions, more severe actions, such as court actions, will be used as necessary. Details surrounding the City Treatment Control BMP inspection program may be found in Section 4.4.4.7 of the 2008 JURMP.

#### 2.4.4.8 2007-2008 SUSMP Document Submittal and Review Summary

Numerous SUSMP document reviews were performed during the 2007-2008 reporting period. There were 184 Priority Project SWMP submittals which prompted 374 reviews with a total 36 projects receiving approval. Projects which Amended previously approved SWMPs from this reporting period and others; totaled 26 project Amendment submittals resulting in 53 reviews and yielding 22 approved SWMP Amendments.

There were a total of 12 Standard Projects which submitted RARs during the reporting period. The project submittals generated a total of 19 reviews; resulting in 4 projects receiving an approved RAR.

During the reporting period there were 27 Priority Projects that submitted O&M plans as part of the final engineering component. There were a total of 67 reviews performed with a total of 18 O&M Plans receiving approval. The SWMFA is typically submitted with O&M Plan. Some projects elect to "trail" the SWFMA submittal. During this reporting period 16 SWFMAs were submitted, prompting 30 reviews, resulting in 9 approved agreements.

All projects are subject to a SUSMP Determination. The determination process places the majority of developments into Priority Projects or Standard Projects. A small number of projects were found to be exempt from SUSMP requirements. Projects which are granted a SUSMP exemption typically involve incidental construction with negligible ground disturbance. Examples of projects that are eligible to receive an exemption include interior tenant improvements to an existing structure or the addition of an antenna to an existing cellular tower.

A SUSMP exemption differs from a SUSMP wavier of infeasibility. The City has never granted a waiver of infeasibility to a Priority Project and does not anticipate granting waivers in the future; however, if waivers are necessary, the City may elect to develop a waiver mitigation

program. The waiver mitigation program would collect funds from projects that receive waivers and use the funds on programs to improve water quality in the project watershed. There were no SUSMP waivers of infeasibility granted during this reporting period. See Table 2-1 for more detail on project submittals and review results.

**Table 2-1. 2007-2008 SUSMP Document Submittal and Review Summary**

#### 2.4.4.9 Outreach and Staff Training

City officials involved in planning and review of development projects received a comprehensive training on storm water requirements during this reporting period. See Table 2-2 for the departments and city officials that were provided training. Training topics during this reporting period focused on general water quality concepts, specific SUMSP requirements, LID components that can be recommended for specific projects, implementation procedures and minimal information about future HMP components.

**Table 2-2. Staff Training during the 2007-2008 Reporting Period.**

| Department/Commission | Training Date | Number in Attendance |
|---|---|---|
| Planning Commission | April 7, 2008 | 7 |
| Planning Department Staff | June 10, 2008 | 10 |
| Engineering Inspectors | June 12, 2008 | 10 |
| Building Division | July 30, 2008 | 12 |

## 2.5 Development Planning Component Effectiveness Assessment

See Section 11.0 for an assessment of the development planning component of the City's JURMP.

## 2.6 Program Review and Modification

The Development Planning components of this Report, the City JURMP, and the SUSMP will be revised as necessary to conform to the future requirements of the Municipal Permit. Major revisions to the Development Planning component will be cited in Section 14 of the City JURMP.

# 3.0 CONSTRUCTION COMPONENT

## 3.1 Introduction

Construction and grading activities have the potential to impact neighboring water bodies due to the presence of disturbed soils and building materials. It is important that construction sites take appropriate measures to prevent potential pollutants from entering the storm drain system.

The purpose of the construction component section of the City's JURMP is to provide guidance in order to limit the negative impact that construction and grading activities can have on receiving water bodies. The information in this section of the annual report describes how the City of Oceanside met the minimum requirements outlined in Section D.2 of the Municipal Permit Order 2007-0001 to reduce the release of pollutants into the storm drain system to the Maximum Extent Practicable (MEP) (Table 3-1).

**Table 3-1: Order 2007-0001 Compliance Summary**

| | |
|---|---|
| D.2.a<br>Ordinance Update and Approval Process | See Section 3.3 of this Annual Report |
| D.2.b<br>Source Identification | See Section 3.2 of this Annual Report |
| D.2.c<br>BMP Implementation | See Section 3.4 and 3.5 of this Annual Report |
| D.2.d<br>Inspection of Construction Sites | See Section 3.5.2 of this Annual Report |
| D.2.e<br>Enforcement of Construction Sites | See Section 3.5.3 of this Annual Report |
| D.2.f<br>Reporting of non-compliant sites | See Section 3.5.3 of this Annual Report |

A large portion of the Construction Component of the City's JURMP is described in three documents:

- Chapter 40 of the City Code or Ordinances
- City's Grading Regulations Manual
- City's *Construction Urban Runoff Requirements Manual* (Construction Manual).

All of these documents are available on-line via the City's website.

This section of this annual report primarily discusses those portions of the Construction Component that are not contained within these documents and references these documents for additional information where appropriate. The information presented in this section was developed pursuant to Section D.2 of the Municipal Permit.

The Construction Manual was developed by the City to provide construction projects with guidance in order to comply with the City Code and its ordinances. The Construction Manual is a living document and will change with time to ensure an effectively implemented program. Updated versions of the manual will be made available whenever modifications have been proposed and approved by the City. During this reporting period some changes were made to the Construction Manual which are detailed below.

- Exempt projects and low priority SWPPP forms are no longer used since specific criteria are now referenced to determine if a project is required to develop a SWPPP. For updated language that complies with Permit Order 2007-0001 refer to Section 3.1 of the Construction Manual submitted as Appendix C.1 with the City's 2008 JURMP.
- Added requirement that all employees working at the construction site should be aware of the BMPs for the site.
- New BMPs have been added to meet Municipal Permit requirements. The BMP table has been altered to include a single set of BMPs required for all Regulated Construction Sites. The Manual states that these BMPs will be implemented "as applicable", which provides enough flexibility for sites of all priorities to implement only those BMPs necessary to meet the City's MEP standard.
- Updated construction site inspection frequencies in Chapter 6 to meet requirements for Permit Order 2007-0001.
- Maximum Disturbed Area limit and the Advance Treatment Methods have been added.
- Added a definition for the new Municipal Permit in the Definitions section.

## 3.2 Source Characterization

### 3.2.1 Site Inventory

The City has compiled a watershed-based inventory of all active construction sites within its jurisdiction. The inventory includes details on each construction site, including project name, location, and threat to water quality (TTWQ) as determined by the process described in Section 5.2.1.1 of the 2008 JURMP

The City's inventory process for construction sites is based on information collected from construction projects when they are applying for a grading or building permit. When the permit is approved, this information is then entered into a database developed by the City. If a permit was previously issued for a project, then the database is updated to reflect the most up-to-date information. Although the City's inventory process is an ongoing one, prior to the rainy season, the database is reviewed to ensure that it is up-to-date and cross-referenced with any other applicable databases to ensure completeness. A spreadsheet of active construction projects in the City's jurisdiction as of June 30, 2008 can be found at the end of this section as Table 3-2.

### 3.2.2 Construction Site Prioritization

All construction sites within the City's jurisdiction are assigned a priority of high, medium, or low TTWQ. Following are criteria used to determine the level of TTWQ.

Construction sites that meet any of the following criteria are considered a **High** TTWQ:

- A site 50 acres or more in size where grading will occur during the wet season.
- A site one acre or more and tributary to a CWA section 303(d) water body segment impaired for sediment or within, directly adjacent to, or discharging directly to a receiving water within an ESA.
- A site that has been determined by the City or the RWQCB to pose a significant threat to water quality.

Sites that are greater than one acre but do not meet any of the above criteria are considered a **Medium** TTWQ.

Sites less than one acre and are not determined to be a significant threat to water quality are considered a **Low** TTWQ. See Table 3-2 at the end of this section for a list of active construction sites and their assigned TTWQ.

Construction projects determine their TTWQ priority by completing the City's Urban Runoff Threat Assessment Form (Appendix D of the 2008 JURMP Update). This form contains information from the City's Construction Urban Runoff Requirements Manual (Construction Manual) on how to evaluate a construction site's TTWQ. The City's full Construction Manual can be found in Appendix C of the 2008 JURMP Update. The Urban Runoff Threat Assessment form requires all construction sites to respond to the following questions when assigning priority:

- Item 1: Are you grading or otherwise disturbing soil over more than one acre?
- Item 2: Will the project involve grading or soil disturbance?
- Item 3: Is the project tributary or adjacent to environmentally sensitive water bodies within the City?
- Item 4: Does the project include significant erodible slopes?
- Item 5: Does the project have the potential to produce non-storm water discharges or pollutants?
- Item 6: Will the project result in more than 5,000 square feet of impervious surface area?

All project proponents are directed to reference a prioritization matrix to determine the priority of the project. An example of the matrix is provided as Table 3-3 below. The matrix is used by first locating the appropriate row in the matrix according to the size of the project, then moving across the row. The proponent should refer to the answers given to the five questions above. If "Yes" was responded to a question, the corresponding box in the matrix provides the priority for the project. The use of this matrix was developed consistent with the requirements of the Permit Order 2007-0001. Under this process, construction sites that meet either of the following conditions must be classified as High Priority. An inventory of Development Projects with approved Treatment Control BMPs and its associated TTWQ are included as Table 3-2 at the end of this section.

**Table 3-3. Construction Project TTWQ Prioritization Matrix.**

| Project Size | Item 2 | Item 3 | Item 4 | Item 5 | Item 6 | Default Priority |
|---|---|---|---|---|---|---|
| Greater than 50 acres | High | High | High | High | High | Medium |
| 5□50 acres | □ | High | High | High | High | Medium |
| 1□5 acres | □ | High | Medium | Medium | Medium | Medium |
| Less than 1 acre | □ | Medium | Medium | Medium | Medium | Low |

## 3.3 Updates to Ordinances and Approval Processes

During this reporting period there were no updates to the City's ordinances or approval process. Storm water compliance requirements for construction activities are included in the City's Construction Manual found in Appendix C of its 2008 JURMP.

Once the City revises its SUSMP, the Construction Manual will again be reviewed and changes will be made appropriately. In addition, ordinances will be reviewed to make sure they reflect the information in the SUSMP and allow for LID components to be implemented into development projects.

## 3.4 Best Management Practice Requirements

The City has a set of minimum Best Management Practices (BMPs) that must be implemented at all construction sites regardless of TTWQ priority including implementing and maintaining general site management BMPs and erosion and sediment control BMPs to reduce, retain, and manage pollutant discharges to the MEP. Table 5-2 of the City's 2008 JURMP (pp. 5-4 and 5-5) outlines the minimum construction BMPs required by the City along with the reference to corresponding current fact sheets obtained from the Caltrans Storm Water Quality BMP Handbook and California Stormwater Quality Association (CASQA) for Construction Sites.

A Construction BMP brochure titled "A Pollution Prevention Guide for the Construction Industry" is provided to the developer during pre-development meetings. This brochure provides a sample drawing that illustrates the minimum BMPs that must be used at all construction sites to protect storm drains and minimize pollution. See Attachment 3-A for a copy of this brochure. This brochure is also available at both the Engineering and Building Department counters of the City. During this reporting period this brochure was reviewed, revised and reprinted.

## 3.5 Program Implementation

All construction sites are required to select, install, and maintain BMPs that meet or exceed the City's minimum BMP requirements listed in Section 5.4.1 of the 2008 JURMP and in the City's Construction Manual. Additionally, a construction site over one acre where grading will occur is subject to the National Pollutant Discharge Elimination System (NPDES) General Construction Permit and is required to file a Notice Of Intent (NOI) and develop a Storm Water Pollution Prevention Plan (SWPPP). SWPPPs are required to include a list of BMPs that will be implemented during each phase of construction to reduce pollution discharges to the MEP.

### 3.5.1 Education and Staff Training

#### Site owner/developer education and training

The City provides all appropriate parties involved with construction activities with training and informational materials regarding storm water quality, as applicable. These parties include but are not limited to City employees and project proponents, which can include contractors, subcontractors, developers, property owners, and superintendents. Education and training of the development community in Oceanside is typically done on a project-by-project basis during a mandatory pre-construction meeting with the City and during construction site inspections.

Prior to the issuance of permits, construction site owners and developers meet during a –pre-construction meeting with City staff and developer staff and or contractors, subcontractors and superintendents. During these meetings City staff from various departments review what is expected of the project proponent in order to develop the project. At least one engineering inspector and Code Enforcement officer trained in conducting storm water inspections are present at these meetings. Topics covered during these meetings specific to storm water pollution prevention include:

- Grading - Reference to the City of Oceanside Grading Regulations manual and the BMP Construction manual (both available on the City's website).
- Site Plan review for storm water inlets and associated BMPs
- Review of site-specific BMPs more applicable to the site and associated with the potential pollutants that could be generated from the proposed business operations
- Inspection Requirements and Frequency – Unannounced and upon call-outs from the public
- Expectations of BMPs during dry and wet seasons
- Construction BMP Brochure is provided

Prior to wet season, all currently permitted construction sites will be contacted to remind site owners and developers to assess, repair and update their sites BMPs to reduce erosion potential and prevent storm water pollution. Site owners and developers are also advised to update their erosion control plans and SWPPPs that are applicable to the site.

#### Municipal Staff Training

City staff directly involved with development and construction sites are provided training on a departmental basis. For further details on topics covered during the City's construction educational program, please refer to Sections 10.2.2 and 10.3.1 of the City's 2008 JURMP. During this reporting period four groups were provided training in regards to erosion control and BMP installation and maintenance for construction sites. See Table 3-4 below for those who received training.

**Table 3-4. Municipal Staff Training.**

| Department Commission | Training Date | Number in Attendance |
|---|---|---|
| Planning Commission | April 7, 2008 | 7 |
| Planning Department Staff | June 10, 2008 | 10 |
| Engineering Inspectors | June 12, 2008 | 10 |
| Building Division | July 30, 2008 | 12 |

### 3.5.2 Inspection of Construction Sites

Permit Order2007-0001 requires that the City develop and implement an inspection program to ensure that each construction site properly complies with the City's relevant ordinances, permits, and the Permit Order2007-0001. This section describes the City's inspection program for 2007-08 of construction sites developed in accordance with Part F.2.g of the Permit Order2007-0001.

Each project was assigned a storm water inspector who was tasked with conducting inspections at the site throughout the construction phase of the project. All storm water inspectors have been

educated in the requirements of the Permit Order2007-0001 and through in-house training and seminars, and/or construction-specific certificate training seminars.

During this reporting period the Urban Runoff Construction Site Inspection Report form for construction sited used by inspectors was revised and reprinted. A copy of this revised form is provided as Attachment 3-B.

#### 3.5.2.1 Initial Site Inspections

Upon commencement of work at a construction site, a City inspector will visit the site and perform the following:

- Where applicable, a check for proof of coverage under the General Construction Permit.
- A review of the SWPPP (where applicable) and erosion control plans with the appropriate project proponent on site.
- A check for proper implementation of the BMPs outlined in the projects plans.
- A review of the maintenance schedule and procedures for each BMP.

All construction sites in the City's construction site inventory receive initial site inspections regardless of TTWQ priority. If any required documents or BMPs are found to be missing or deficient, the City may issue a stop work notice until the deficiencies are corrected.

#### 3.5.2.2 Routine and Follow-Up Inspections

Once an initial site inspection is performed, additional routine inspections will be performed. The frequency of these routine inspections depends on the site's assigned TTWQ. The criteria used to determine a construction site's TTWQ presented in Section 5.2.1.1 were developed to correspond to the routine inspection frequencies required by the new Municipal Permit. Table 3-5 presents the different TTWQ categories and their corresponding minimum inspection frequencies for the wet (October 1 through April 30) and dry (May 1 through September 30) seasons.

**Table 3-5. Construction Site Inspection Frequency**

| Construction Site TTWQ | Wet Season Inspection Frequency | Dry Season Inspection Frequency |
|---|---|---|
| High | Every two weeks | As needed |
| Medium | Monthly | |
| Low | As Needed | |

### 3.5.3 Enforcement Measures for Construction Sites

The City will be responsible for enforcement of applicable local ordinances and permits at all construction sites in its jurisdiction. When violations are observed and documented during a site inspection, the City will implement appropriate enforcement measures based on the severity of the violation. Enforcement can range from written warnings to more severe enforcement such as stop work notices. Stronger enforcement measures will be used as necessary if proper corrective actions are not implemented during the allotted time frame or if the severity of the violation warrants stricter enforcement.

The typical progressive enforcement steps that the City will implement include the following:

- Written warnings
- Enforcement of contracts (Municipal projects)
- Stop work notices
- Administrative citations
- Denial or revocation of permits
- Civil and/or criminal court actions

A summary of the initial phase of enforcement actions is shown in Table 3-6 below. Copies of inspection forms and notices are on file at the City.

**Table 3-6. Accounting of Initial Phase of Construction Inspection and Enforcement Actions for the 2007-2008 Reporting Period.**

| | Construction Sites Requiring Inspections | Routine and Follow-up Site Inspections | Meetings or Calls w Site Contact | Correction Notices | Stop-Work Notices | Cases Forwarded to Code Enforcement for Further Action |
|---|---|---|---|---|---|---|
| **High Priority Sites** | 23 | 1,416 | 420 | 57 | 6 | 9 |
| **Medium Priority Sites** | 18 | 1,110 | 726 | 39 | 8 | 8 |
| **Low Priority Sites** | 9 | 561 | 210 | 21 | 15 | 8 |
| **Total** | 50 | 3,087 | 1,356 | 117 | 29 | 25 |

Enforcement actions by Code Enforcement Officers for construction sites begin with a referral from another department, a site visit, or by a complaint lodged via phone. Depending on the severity of the violation, follow up activities may include phone calls, site visits, written correction notices with specified compliance timeframes, or administrative warnings. If these actions do not produce the required improvements, administrative citations (starting at $100 with a $1,000 maximum fine) and/or stop-work notices are given.

A summary of enforcement actions conducted for construction sites by Code Enforcement Officers is included in Table 3-7. More details about enforcement actions during this reporting period are available on file at the City.

The City is required to provide notification to the RWQCB of non-compliant sites in the City that are determined to pose a threat to human or environmental health. Verbal notification is required within 24 hours of the discovery of non-compliance and a written report should be submitted to the RWQCB within 5 days of the incident. The criteria established for determining when a site is not compliant and poses a threat to human or environmental health is described in Section 3.8 of the Industrial Component. No such sites were identified this reporting period and thus no relevant notifications were sent to the RWQCB.

**Table 3-7. Summary of Construction Site Code Enforcement Actions for 2007-2008 Reporting Period.**

| | Follow-up Phone Call | Follow-up Site Visit | Follow-up Office Visit | Written Notice | Letter Sent | Inspection Report | Admin. Warning | Administrative Monetary Citation | Referral to Other Dept | Stop Work Notice |
|---|---|---|---|---|---|---|---|---|---|---|
| **Number of Actions** | 16 | 53 | 1 | 0 | 0 | 0 | 5 | 6 | 0 | 0 |

## 3.6 Construction Activities Effectiveness Assessment (Optional)

See Section 11.0 for an assessment of the Construction Component of the City's JURMP.

## 3.7 Program Review and Modification (Optional)

The Clean Water Program will continue to review and modify the construction component as needed. Staff will work with other City departments and their data tracking systems to ensure that the details of inspections, complaints, and follow-ups will be tracked appropriately to be included in future annual reports as discussed further in Section 15.

# 4.0 MUNICIPAL COMPONENT

## 4.1 Introduction

This section documents the activities conducted by the City of Oceanside at its municipally owned, leased and/or managed facilities during the 2007-2008 reporting period to meet the requirements of Section D.3 of Municipal Permit Order 2007-0001. The City of Oceanside owns and/or maintains a variety of municipal facilities including public parks, administration buildings, fire stations, a fire training facility, industrial facilities, potable reservoirs, sewage pump stations, wastewater treatment facilities, public roads, streets and parking facilities and other miscellaneous facilities. Additionally, the City conducts activities that have a high threat to water quality such as power washing, street and sidewalk repair, painting, graffiti removal, parking meter maintenance, MS4 maintenance, and regular upkeep of the sanitary sewer system to prevent overflows and leaking.

Order 2007-0001 Compliance Summary

| | |
|---|---|
| D.3.a Municipal (Existing Development) | Section 4 of this Annual Report |
| D.3.a(1)<br>Source Identification | See Section 4.1.1 of this Annual Report |
| D.3.a(2)<br>BMP Implementation | See Section 4.2.3, 4.3.3, 4.4.3,4.5.3, 4.6.3, and 4.8.3 of this Annual Report |
| D.3.a(3)<br>Maintenance of MS4 | See Section 4.4 of this Annual Report |
| D.3.a(4)<br>Management of Pesticides, Herbicides and Fertilizers | See Section 4.3.3 of this Annual Report |

| D.3.a(7) & (8)<br>Inspection and Enforcement of Municipal Areas and Activities | See Sections 4.2.5,4.3.3, 4.4.2, 4.5.3, 4.6.4, and 4.7.3 of this Annual Report |

To comply with the Municipal Permit, the City of Oceanside has developed a comprehensive program designed to reduce the amount of pollutants that are transported in urban runoff from municipal areas and municipal activities. Some of the prominent activities include street sweeping, inspections of municipal facilities, installation of BMPs at the City Operations Centers and educational efforts geared toward municipal personnel.

The City continues to use its Municipal Urban Runoff Procedures Manual (Municipal) as a useful reference document for training staff and developing and implementing educational programs. The Municipal Manual contains BMP requirements and related guidance for City facilities and employees and was circulated to relevant City staff directly involved with the Municipal NPDES Permit. This manual was first prepared as part of the JURMP in 2002 and updated and provided with the 2008 JURMP. See Appendix C.3 of the 2008 JURMP for this manual. Changes made to this manual during this reporting period are detailed below.

- General Changes
  - References to BMPs for specific priorities of municipal facilities were removed or changed – BMPs should be based on activity or facility type and not priority.
  - Background information was updated to include new Municipal Permit information (See Comment 1)
- Chapter 3, formerly "General Requirements for High Priority Municipal Areas and Activities" was removed entirely. All information from this section was moved to Chapter 2, "Requirements of All Municipal Areas and Activities". Information from Chapter 3 was moved because BMPs detailed in that section should be implemented by all municipal areas and activities, when applicable.
- Chapter 3 now includes activity-specific BMPs. The areas and activities discussed in this chapter are the high threat to water quality areas and activities designated by the Municipal Permit. BMPs for those that were the same in the last Municipal Permit are the same, but some areas and activities have been added. See Comments throughout Chapter 3 as some things were re-arranged. Typically, nothing was added to this section except where comments note and addition was made.
- Besides chapter numbers the Inspections, Enforcement, and Reporting and the Definitions have not been changed.

During this reporting period the Municipal Inspection Form was revised to add the municipal Permit Order Number 2007-0001. See Attachment 4-A for a copy of this form.

### 4.1.1 Source Identification

As required in Section D.3.a(1) of Permit Order 2007-0001, the City of Oceanside has developed a prioritized, watershed-based inventory of municipal properties and activities. The City of Oceanside maintains a number of municipal facilities, including parks, administrative buildings, fire stations, and public works yards. The inventory of municipal facilities, including areas and activities, will be updated annually. The inventory used for this fiscal year was submitted in the 2008 JURMP as Attachment B.3. An updated inventory will be submitted with subsequent annual reports. Table 4-1 provides a summary of the facility categories within the City's inventory.

**Table 4-1. Summary of Municipal Facilities by Category.**

| Facility Category | Number of Facilities |
|---|---|
| Park and Recreation Facilities | 45 |
| Public Works Operations Facilities | 3 |
| Municipal Landfills | 2 |
| Marinas | 3 |
| Municipal Airport | 1 |
| Potable Water Facilities | 13 |
| Wastewater Facilities | 37 |
| Police and Fire Facilities | 14 |
| Other Fixed and Leased Facilities | 34 |
| Roads, Streets, Highways and Parking Facilities | 33 |
| Parks and Recreation Facilities | 45 |
| **Total Facilities** | **230** |

## 4.2 First Municipal Element - Roads, Streets, Highways, and Parking Facilities

### 4.2.1 Background

Roads, streets, highways, and parking facilities are an integral part of any functional City. These facilities can collect a variety of pollutants due to routine vehicle use and have a tendency to collect litter and debris from neighboring areas and activities. Regular maintenance is necessary to control the level of pollutants, such as sediment, metals, litter, and debris on roads, streets, highways, and parking facilities. Other City activities include building new roads, resurfacing existing roads, and similar construction-related activities. All construction-related activities conducted by the City will continue to be conducted under the requirements of the construction component, which is described in detail in Section 3 of this document.

### 4.2.2 Source Characterization

The City of Oceanside maintains approximately 571 miles of public roads and streets throughout the City. The length of public roads was calculated in 2008 for inclusion in this annual report. A parking facility is defined as a stand-alone parking facility, which is a parking facility that is not associated and/or adjacent to other inventoried municipal facilities. Parking facilities that are associated and/or adjacent to municipal facilities will continue to be included in regular maintenance activities of the associated municipal facility. Roads, streets, highways, and parking facilities are included in the City's municipal inventory, which is included as Appendix B.3 on the City's 2008 JURMP.

### 4.2.3 Best Management Practice Requirements

Similar to municipal fixed facilities, the City will continue to utilize the City-developed Municipal BMP Manual to choose applicable BMPs to implement for public roads, streets, parking facilities and operational facilities within the City.

Street sweeping and cleaning continues to be the main BMP that is implemented for roads, streets, and parking facilities. The frequency of cleaning takes into account the following: variations in climate conditions, surrounding land use, design of existing structures, traffic volume, frequency and quantity of accidental spills and leaks, and areas with historical trash and/or debris problems. Treatment control BMPs will be used for road sections subject to SUSMP.

The City will continue to implement an aggressive street sweeping program to reduce the amount of pollutants discharged from roads, streets, and parking facilities in the City with a particular focus on facilities that drain to environmentally sensitive areas (ESAs). If in the future negative impacts to ESAs associated with runoff from roads, streets, highways, or parking facilities are noted, the City will take the measures necessary to mitigate the negative impacts.

### 4.2.4 Program Implementation

As an effort to reduce the pollutant load entering local receiving water bodies, the City continued to implement a sweeping schedule for roads, streets, highways, and parking facilities to meet the

requirements of the Municipal Permit. There have been no significant changes to the existing programs during the reporting period.

Roads, streets, and highways that have been observed as generating relatively high volumes of trash, sediment, and debris are included as high priority and will continue to be swept at least twice per month; medium priority streets are streets in the City that generate moderate volumes of trash, sediment, and debris and will continue to be swept at least monthly. Low priority streets have been observed as generating relatively low volumes of trash, sediment, and debris and will continue to be swept as needed, but not less than once per year. In the event of a National Holiday, sweeping is made up in a timely manner, usually by the next working day. Due to the City's proximity to the Pacific Ocean and as a means to target watershed constituents of concern, the City typically sweeps all streets within the City above baseline jurisdictional activity standards. Additional program details can be found in Section 6.3 of the 2008 JURMP.

All public streets in the City of Oceanside are swept at least monthly. There is a total of 571 miles of public streets that are swept regularly per the frequency outlined below. Double this length to accommodate for both east/west and north/south directions giving a total of 1,142 curb miles. Some streets are swept more frequently than others. During upcoming reporting periods these additional, curb length miles that are swept more than monthly will be calculated for a total curb mile length.

- Every Monday, Wednesday, and Friday, the downtown commercial areas and other high use areas are swept using regenerative air vacuum street sweepers. These areas include the medians on Mission Avenue, Canyon Drive, and the Civic Center Drive Bridge, Wisconsin Avenue to Pacific Street to Ditmar Street, the Strand, and all downtown parking lots.
- The majority of all other public streets, not included in the areas listed above, are swept every other week. In some low use residential areas, the streets may be swept monthly.
- As necessary, sweepers or other clean up crews will respond to public or municipal staff reports to collect debris and/or sweep.
- Inspection of streets and curbs for cleaning is continuous. City employees are encouraged to identify areas that should be cleaned and to call the municipal employee reporting line, Oceanside Eyes. Residents are encouraged to call the Public Works Maintenance Hotline.

## 4.2.5 Inspection and Maintenance Results

### 4.2.5.1 Inspections

Inspections and maintenance activities were conducted throughout the reporting period as described in the previous section. Following is a review of the results form inspection and maintenance.

There are 33 facilities in the Roads, Streets, highway and Parking Facilities categories. During this reporting period all 33 of these facilities were inspected by CWP staff. No violations were noted din these facilities during annual inspections. There was note of some debris and sediment near storm drain inlets that were taken care of immediately. Due to the fact that many of these parking facilities are swept very regularly, debris and sediment are removed on a very frequent basis.

#### 4.2.5.2 Maintenance

Street sweeping activities resulted in the collection of over 2,358 tons of waste during the reporting period. These results are comparable with the 2,283 tons collected during the 2006-07 reporting period, the 2,538 collected during the 2004-2005 and the 2,604 tons collected during 2003-2004 reporting period. This data shows a promising trend in the reduction of street waste in the City.

### 4.2.6 Roads, Streets, Highways, and Parking Facilities Element Effectiveness Assessment

See Section 11.0 for an assessment of the Municipal component of the City's JURMP.

## 4.3 Second Municipal Element - Parks and Recreational Facilities

### 4.3.1 Background

The City of Oceanside is committed to providing the highest quality of service to its residents by providing the opportunity for them to enjoy a variety of recreational activities at both outdoor parks and indoor recreational facilities. Operating and maintaining 45 community attractions from public pools, beaches, parks and community centers, the City of Oceanside works hard every day to maintain the high level of service. The inspection and maintenance of these facilities in regards to storm water is important because of the number of facilities throughout the city and the public exposure that these facilities receive.

### 4.3.2 Source Characterization

The City regularly inspects, cleans and maintains 45 Parks and Recreational Facilities. Because of high public use these facilities have the potential to generate a variety of pollutants including trash and debris, organic material and sediment. See Table B.3-1 of the City's 2008 JURMP for the Parks and Recreational Facilities inventory.

### 4.3.3 Program Implementation

The City has selected BMPs to implement at Parks and Recreational Facilities to reduce the contribution of pollutants associated with the application, storage, and disposal of pesticides, herbicides and fertilizers. These BMPs are detailed in the Municipal Manual. All 45 facilities were inspected during this reporting period with no violations noted.

Pesticides, herbicides and fertilizers are seldom used directly by the City, as it contracts out the majority of work involving these substances. To facilitate compliance with this Section of the Municipal Permit, the City has reviewed its landscaping contract and has integrated BMP requirements into the conditions of the contract.

## 4.4 Third Municipal Element  Municipal Separate Storm Sewer System

### 4.4.1 Background

As required by Section D.3.a.(3) of the Municipal Permit, the City has implemented a schedule of maintenance activities for the City's entire Municipal Separate Storm Sewer System (MS4),

including any structural controls designed to reduce pollutant discharges to or from its MS4s and related drainage structures. The City has determined, through historical knowledge and records, the locations within the MS4 that require regular waste removal and those areas that are less likely to require any waste removal. The City has developed a comprehensive Flood Control Annual Maintenance Program which includes a list of the high priority areas, divided into zones, which are to be inspected annually using an inspection checklist. Approximately 110 sites are inspected and maintained annually.

### 4.4.2 Source Characterization

The Public Works, Street Division, performs ongoing inspection and cleaning of storm drains and flood control facilities, as well as annual maintenance of all major facilities such as creeks, desilting basins, detention basins and rock and concrete lined channels. There is approximately 10,000 feet of storm drain and 104 feet of concrete and earthen channels that are inspected and maintained throughout the city. Over 49,000 linear feet of storm drains, catch basins, and concrete and earthen channels are maintained on at least an annual basis. In addition, the Street Division performs annual maintenance/cleaning in September, October, and November for all major MS4 facilities. The results of this work are recorded on an Annual Maintenance List that is also available at the City Operations Center.

### 4.4.3 Best Management Practices

In order to inspect and clean storm drains as described above, during the May through September period, the City contracted with United Storm Water Inc. A total of 3252 structures (catch basins, manholes, inlets, outlets, etc.) were inspected and cleaned during the reporting period. 2,972 by United Storm Water and 280 were cleaned by City maintenance crews. A total of 65.5 tons of waste was removed. The waste generally consisted of trash, green waste, dirt, sand, roots, solids, rocks, and silt. During the inspections, it is also noted whether or not the drain is labeled. Out of the 2972 catch basins that were cleaned, 1,399 were labeled with a placard stating: “No Dumping – Drains to Creek” in both English and Spanish. During this reporting period 1,000 new drain markers were ordered for installation during Fiscal year 2008-09. See the photo below for a copy of the storm drain placard installed.

## 4.5 Fourth Municipal Element - Sanitary Sewer

### 4.5.1 Background

The City of Oceanside Sewer Division maintains the sanitary sewer system within the jurisdictional boundaries which includes sewer lines, lift stations, sewage treatment plants. This sanitary sewer system uses pipes to remove human waste from homes and businesses and

transport that waste to one of two waste water treatment plants in the City. The two treatment plants are operated by city crews.

### 4.5.2 Source Characterization

The City regularly inspects, cleans and maintains thousands of feet of sanitary sewer pipe, 31 sewer lift stations and two sewage treatment plants. See Table B.3-1 of the City's 2008 JURMP for the Wastewater Facilities inventory.

### 4.5.3 Best Management Practices

Since the City owns and operates the sewage system, these facilities are regularly inspected and maintained for proper operation and maintenance, and to ensure that BMPs are in place for the protection of receiving waters that may be impacted from the system. The City's preventive and corrective sewer maintenance programs consist of a variety of components provided for the operation, maintenance, repair and replacement of sewer mains, manholes, and pump stations.

In order to ensure that the sanitary sewer lines do not leak, the city has a long term plan to slip line the sewer pipes throughout the City. In June and July of 2008 (crossing two reporting periods), 7,252 feet of City sewer lines were slip lined and manholes pressure grouted and sealed in the Loma Alta watershed. The slip lining project was estimated to cost approximately $700,000.Since the 2005-06 reporting period the City has slip-lined a total of 13,231 feet of sewer. The City also inspected and cleaned 312 miles (1,649,702 feet) of sanitary sewer.

## 4.6 Fifth Municipal Element - City Operations Center

### 4.6.1 Background

The City Operations Center (COC) is a municipally owned and operated facility that houses several departments or divisions for the City including Public Works, fleet maintenance, road maintenance, parks and recreation maintenance and others. Because of the diverse activities of these departments and divisions, the City developed a Storm Water Pollution Prevention Plan (SWPPP) for the COC in the fall of 2002.

The COC includes the following areas: employee parking lot, COC main building (offices, storage and fleet maintenance), traffic control lot, back lot, city vehicle parking lot, large vehicle equipment lot, fueling area, waste disposal area, wash facilities, general use yard and west corner lot. The SWPPP has the following objectives:

- Identify and evaluate sources of pollutants from the facility that may affect the quality of urban runoff discharge and to identify and
- Implement site-specific best management practices to reduce or prevent pollutants in urban runoff discharges.

The SWPPP outlines BMPs to be implemented at each of the respective areas. A comprehensive training program was also developed and has been implemented in concert with the COC SWPPP.

### 4.6.2 Source Characterization

Due to the nature of the various activities form the departments and divisions it was determined that there are various activities that generate pollutants and have the potential to reach storm

water conveyance systems. Some of these activities include vehicle washing, disposal of street sweeping debris, temporary storage of wrecked vehicles, and storage of various materials, including paints, solvents, metal piping and infrastructure materials. In addition steep hillside landscaped areas can be a potential pollutant source if BMPs are not managed properly.

### 4.6.3 Best Management Practices

Since the implementation of the SWPPP at the COC some permanent BMPs have been installed and continue to be used for protection of receiving waters. Following is a brief description of the BMPs in place at the COC and any new BMPs installed during this reporting period.

#### 4.6.3.1 Wash Facility

The main wash facility is used for washing large vehicles and equipment, and collection of street sweeper and vactor truck contents. The main wash facility is a completely contained area, surrounded on all sides by berms and curbs. The entire area drains to the eastern corner of the pad where it enters a grated inlet that leads to a clarifier and then the sewer. An overflow is available if the drain to the sewer is clogged or the volume of water exceeds its capacity, however, this is not anticipated to happen frequently because the drain is maintained daily.

#### 4.6.3.2 Storm Drain Filters and other inlet BMPs

*BMPs in place before reporting period*

During previous reporting periods the Public Works Department installed two BioClean filters at the only two outlets which drain runoff from the City Operations Center: one on the south side of the COC where a 36” box outlet discharges directly into Loma Alta Creek, and one at the 12” pipe which discharges onto Oceanside Blvd. These filters were inspected and repaired as necessary during the late summer/early fall, spring and prior to forecast storms. Also a brushless filter was added to the 36” box outlet during prior reporting periods.

*BMPs installed or changed during Fiscal Year 2007-08*

During fiscal year 2007-08 three broom gate were installed at the COC. The outlets where these broom gates were installed at the COC are located at the southern property line next to the SDGE easement, Loma Alta Creek and Sprinter RXR. See the photo below for an example of the broom gate installed. During the next reporting period the effectiveness of the debris removal and the maintenance of these broom gates will be assessed.

During fiscal year 2007-08 the BioClean filter that was installed on the 12" pipe that discharges to Oceanside Blvd was removed due to constant clogging and replaced with fiber rolls around the inlet. This drainage area will be checked regularly to remove debris collected around the fiber rolls and to ensure that the fiber rolls in proper working order.

#### 4.6.3.3 Structural BMPs

*BMPs in place before reporting period*
BMPs installed in FY 2005-2006 included a garage cover built to cover drums in the storage area, and an area was designated to hold all wrecked vehicles from police department with secondary containment installed around wrecked vehicles contain any fluid runoff from the vehicles.

*BMPs installed or changed during Fiscal Year 2007-08*
The water utilities department installed two structural covers to prevent rain from reaching these metal materials and causing rusting and deterioration. Metal materials that are subject to rusting and deterioration when exposed to the elements, including scrap metal are contained and covered until used or disposed of through a licensed commercial metal recycling company.

#### 4.6.3.4 Pollution Prevention and Recycling

*BMPs in place before reporting period*
The COC continues to implement an aggressive pollution prevention/recycling program including: purchasing re-refined oils, recycling used oils, oil filters, fuel filters, antifreeze, used tires, and batteries. In addition solid waste recycling bins are located throughout the facility for collection of bottles, cans, glass and mixed paper. During

*BMPs installed or changed during Fiscal Year 2007-08*
Additional solid waste recycling bins were installed throughout the COC including ones outside of the facility so field crews can easily deposit their recyclable when cleaning the interior of their vehicles. Also, each vehicle driver was provided with a convenient recycling basket to sue in their vehicle for easy collection of their recyclables.

### 4.6.4 Program Implementation

#### 4.6.4.1 Facility Inspection

A thorough walk through inspection of the COC Facility was conducted by the operation manager of the facility and staff form the Clean Water Program. Table 4-2 presents the inspection results and recommended solutions. Through a second follow-up inspection and discussions with COC staff, it was verified that the issues below had been corrected. Also, the facility operation manager was provided with an annual inspection list for his staff to regularly monitor and inspect the COC facility. This will provide for more regular maintenance of BMPs. Annual storm water inspections will continue to be done by CWP staff in addition to the more frequent inspections by the facility operation manager.

**Table 4-2. City Operations Center Facility Inspection Results.**

| COC Area | Corrections Required | Solutions |
|---|---|---|
| Police Evidence Area | Gasoline container in fenced storage area | Remove container |
| | 55 gallon drums on ground | Place secondary containment underneath all drums or hazardous materials |
| East Gate | Pile of sand without perimeter control | Place fiber rolls around base of pile; when rain is predicted cover with tarp and secure with gravel bags |
| Wrecked Vehicles | Absorbent socks around vehicles are not connected | Place absorbent socks completely around all wrecked vehicles to ensure vehicle fluids to not pass the perimeter controls; these should be in place at all times while vehicles are in storage at COC |
| Roll-off bin disposal area | Broken fiber rolls in landscape area | Replace old/damaged fiber rolls |
| | Pile of sawdust without perimeter control | Sweep and remove sawdust; or store in area with fiber rolls placed around base of pile |
| | Broken asphalt curb pieces | Dispose of broken pieces |
| Water Utilities Training Area | Rill/soil erosion occurring in dirt area with fiver rolls in place | Replace broken/damaged fiber rolls; Add more fiber rolls in middle of slope for additional erosion control |
| Water Utilities Storage Area | Old parts behind covered sheds | Recycle old parts or store under cover |
| | Diesel generator behind sheds | Dispose/recycle generator or store under cover |
| | Creosote poles stored outside | Remove or cover by storing indoors or under tarp. |
| Back lot □ Soil storage area | Containers with liquid used by street maintenance division | Secondary containment good, replace absorbent socks for per miter control |
| | Concrete wash out area not properly designed to avoid potential runoff | Use visquin on bottom of cleanout area; dispose of all waste material regularly |
| | Soil storage bins have damaged berms in front of bins | Repair asphalt berms to provide complete perimeter control |
| Electrical Storage Area | Street poles exposed and debris on ground | Any metal material that can rust should be covered; Dispose of debris on ground |
| Sewer Department Storage Area | 5 gallon drums on ground □ some full some empty | Place all filled drums on pallets; dispose of empty ones |

| | | |
|---|---|---|
| | Metal parts on ground | All metal parts that can rust should be placed on pallets/off ground and covered |
| Fire Hydrant | Evidence of concrete wash out with no containment | Only use the designated concrete wash out area. |
| Lower Lot | Dumpster lids open | Keep dumpster lids closed at all times when not in use |
| | Random drums on ground throughout area and behind storage bins | All drums and containers should be on secondary containment and stored indoors and under cover; check behind all storage bins for buckets and drums not stored properly |
| | Paint trays on ground near eyewash area | Remove all paint trays and store indoors |
| | Metal poles/stakes exposed outside (Parks Dept.) | Keep under cover at all times |
| | Buckets on ground (Sewer division area) | Store indoors or under cover |
| | Fast food trash and debris throughout area (Water division area, streets area) | All employees to properly dispose of trash **at all times**. Do not throw trash on the ground. Place trash containers around site if necessary. |
| | Buckets on ground (Water division area) | Store indoors or under cover |
| | Storm drain  gravel bags not providing protection; filer insert is full of debris; leaf litter on top of grate | Surround storm drain with gravel bags; replace filter insert with a new one; Clean or vactor storm drain |
| | Large Tractor/vehicles  some evidence of fluid leaking from vehicles | Place drip pans under leaking vehicles; repair leaking vehicles ASAP |
| | Drums and buckets in SE corner area  some not stored properly | All drums and buckets should be stored off ground on secondary containment and under cover |
| Solid Waste/Parks Area (near gas pumps) | Metal parts and pumps exposed | Cover all metal parts or store indoors |
| | Miscellaneous parts strewn about | Recycle, dispose or store parts properly (under cover) |
| | Trash debris and leaf litter | Sweep up leaf liter and dispose of trash |

## 4.7 Sixth Municipal Element - Other Facilities

### 4.7.1 Background

The City of Oceanside owns and operates two closed landfills (Maxson Street Landfill, WDID 9375005695 and Mission Avenue Landfill, WDID 9375005696). The City also operates and maintains eight fire fighting facilities including one fire fighting training facility.

### 4.7.2 Source Characterization

The two closed landfills maintained by the City have the potential to generate pollutants that can negatively impact receiving waters. If potential storm water discharges are identified, appropriate BMPs are implemented to prevent pollutants from entering MS4.

Also fire fighting stations have the potential to generate pollutants such as trash and debris, organic materials and fluids and wash water from fire fighting vehicles. The two closed landfills and the fire fighting facilities are included in the City's municipal inventory, which is included as Appendix B.3 of the City's 2008 JURMP.

### 4.7.3 Program Implementation

Closed Landfills

Both closed landfills are inspected quarterly per permit requirements and an annual report is prepared each for submittal to the Regional Water Quality Control Board. See Attachment 4-B for copies of the 2007-08 Annual Report for Storm Water Discharges Associated with Industrial Activities for these two landfills.

Fire Stations:

All fire stations were inspected during the reporting period. During the station inspections no violations or potential violations were noted.

## 4.8 Seventh Municipal Element - Power Washing

### 4.8.1 Background

The City conducts a number of activities which are not designated and/or confined to a specific location. Because such activities are not confined to a fixed facility, where BMPs may be permanently implemented, BMPs must actively be implemented during all mobile municipal activities.

### 4.8.2 Source Characterization

Mobile activities include:

- Power Washing

Infrastructure Maintenance

- Street and sidewalk repair
- Street striping
- Waste removal
- Traffic light maintenance
- Parking meter maintenance

Landscape/Right-of-Way Maintenance

### 4.8.3 Best Management Practice Requirements

As previously mentioned, the City will continue to implement good housekeeping and general pollution prevention measures during municipal activities including the mobile activities listed above. City personnel will continue to be trained to collect all water generated by power washing activities. City personnel continue to use the City's Municipal BMP Manual to choose applicable BMPs to implement for municipal areas and activities. Pesticide, herbicide, and fertilizer management BMPs similar to those discussed in Section 6.2 will continue to be implemented during landscaping of City right of way such as medians.

### 4.8.4 Program Implementation

City field crews will continue to be actively trained to implement BMPs during all mobile activities including how to properly contain, control, and capture any discharge generated by power washing (or any other discharge-generating activities). The City uses fiber rolls, geo logs, silt fencing, check dams, gravel bags, and filter inserts during mobile activities, where applicable. City personnel involved in mobile activities are trained to be aware of Illicit Connections/Illicit Discharges and report them to the appropriate City staff promptly. More information about the City's education program, including municipal training activities, is included in Section 10 of this document.

## 4.9 Municipal Component Effectiveness Assessment

See Section 11.0 for an assessment of the municipal component of the City's JURMP.

## 4.10 Program Modification and Review

The Clean Water Program will continue to implement its SWPPP at the City Operations Center and continue its ongoing inspection and maintenance program for the facilities listed in the Municipal Inventory. Any changes to the program will be reported in the next annual report.

# 5.0 INDUSTRIAL AND COMMERCIAL COMPONENT

## 5.1 Introduction

Industrial and commercial operations have the potential to contribute pollutants to the MS4. The City of Oceanside continues to implement a comprehensive program that aims to reduce and prevent industrial and commercial pollution discharges to and from the MS4 to the maximum extent practicable (MEP) to protect local receiving water bodies and to comply with the Municipal Permit. This section documents the activities conducted by the City of Oceanside during the 2007-2008 reporting period to meet the requirements of Section D.3.b of the Municipal Permit.

**Order 2007-0001 Compliance Summary**

| | |
|---|---|
| D.3.b<br>Implement Industrial and commercial program | See Section 5.2.1 of this Annual Report |
| D.3.b (1)<br>Source Characterization | See Section 5.2.2 of this Annual Report |
| D.3.b (2)<br>BMP Implementation | See Section 5.2.3 of this Annual Report |
| D.3.b (3)<br>Inspections | See Section 5.2.4 of this Annual Report |
| D.3.b (4)<br>Regulation of Mobile Businesses | See Sections 5.3 |

The City has compiled a list of industrial and commercial sources and developed BMP requirements, including pollution prevention measures, for each source and activity. Implementation of these requirements will be accomplished through education, inspection, and enforcement.

During this reporting period the City of Oceanside increased its number of employees in the Clean Water Program to ensure compliance with the inspection frequency requirements specific to the new Municipal Permit. Thus, in addition to Code Enforcement conducting industrial/commercial inspections, two Clean Water Program (CWP) staff conducted inspections and disseminated educational outreach materials where needed.

## 5.2 Stationary Industrial and Commercial Sites Sources Element

### 5.2.1 Background

Section 7 of the City's 2008 JURMP, titled Industrial and Commercial Component, requires the implementation and maintenance of applicable pollution prevention Best Management Practices (BMPs) by industrial owners and/or operators pursuant to City Code to minimize or eliminate the impacts of industrial and commercial activities on receiving waters and other sensitive environmental resources. The City uses a variety of ways to educate and ensure that BMPs are implemented at industrial and commercial facilities including dissemination of the City's industrial and commercial BMP manuals, site inspections and enforcement.

### 5.2.2 Source Characterization

The City annually updates its watershed-based industrial/commercial inventory which contains the name, address, and description of all industrial sites within its jurisdiction, regardless of site ownership. The original inventory was prepared in February 2002 and was provided in the 2002 JURMP document. The commercial and industrial inventories used for this reporting period were updated during this reporting period and can be referenced in Appendix B of the 2008 JURMP

All of the inventoried industrial and commercial businesses were categorized according to the watershed in which the business is located. This table does not include mobile businesses that have City of Oceanside business licenses. See section 5.3 of this report for mobile business information. See Tables 5-1 and 5-2 below for a summary of the number of industrial and commercial businesses inventoried in the City according to watershed location.

**Table 5-1. Industrial Businesses in the City by Watershed.**

| Watershed | Number of Industrial Business |
|---|---|
| San Luis Rey | 95 |
| Loma Alta | 141 |
| Buena Vista | 5 |
| Agua Hedionda | 0 |
| **Total** | **241** |

**Table 5-2. Commercial Businesses in the City by Watershed.**

| Watershed | Number of Commercial Businesses |
|---|---|
| San Luis Rey & Harbor | 331 |
| Loma Alta | 338 |
| Buena Vista | 151 |
| Agua Hedionda | 6 |
| Not Verified | 10 |
| **Total** | **836** |

Based on the 2008 inventory, the City contains approximately 241 industrial businesses. Each of these businesses was prioritized on their threat to water quality. Table 5-3 provides a summary of the prioritization for industrial businesses.

**Table 5-3. Industrial Businesses in the City by Priority.**

| Priority | Number of Industrial Business |
|---|---|
| High | 52 |
| Medium | 45 |
| Low | 144 |
| **Total** | **241** |

Based on the 2008 inventory, the City contains approximately 836 commercial businesses. Each of these businesses was prioritized on their threat to water quality. Table 5-4 provides a summary of the prioritization for industrial businesses.

**Table 5-4. Commercial Businesses in the City by Priority.**

| Priority | Number of Commercial Business |
|---|---|
| High | 94 |
| Medium | 449 |
| Low | 293 |
| **Total** | **836** |

### 5.2.3 Best Management Practice Requirements

#### BMP Manuals

Two manuals originally developed in 2001, *Industrial Urban Runoff Requirements Manual* and *Commercial Urban Runoff Requirements Manual,* detail requirements of industrial and commercial businesses to comply with the City's Urban Runoff Management and Discharge Control Regulations. In order to ensure industrial and commercial owners and operators are informed and understand the applicable pollution prevention BMPs to be implemented and/or maintained, site-specific pollution prevention methods for industrial and commercial areas and activities located within the City, are specified in these two manuals.

The manuals were first produced in FY 2001-02 as a result of requirements under Municipal Permit Order No. 2001-01 and were revised in 2004 to include additional state requirements. These manuals were again reviewed and revised during this reporting period to ensure compliance with the new Municipal Permit Order No. R9-2007-0001. The main changes were the additional of categories and a list of specific BMPs for those industrial and commercial activities. Inspections, enforcement, and reporting and the definitions have not been changed.

#### Industrial Manual changes

Three BMP Categories were added to Table 1 of the Industrial Manual, Summary of Industrial Facility and Activity BMP Requirements, and provides specific BMPs applicable to that category:

- Building Materials Retail and Storage
- Animal Facilities
- Power Washing

Section 3.2 was added to the Industrial manual. This section was added to target High Priority Industrial Businesses and it provides the minimum BMP requirements for industrial businesses

#### Commercial Manual Changes

One category was updated in the Commercial Manual to include additional businesses activities. The Eating or Drinking Establishments category now includes Food Markets.

Three BMP Categories were added to the Commercial Manual and provides specific BMPs applicable to that category:

- Building Materials Retail and Storage

- Animal Facilities
- Power Washing

An additional section was added to the Commercial Manual titled "Additional Controls." Following is the text for this new section.

> There are a number of Environmentally Sensitive Areas (ESAs) within the City. These areas are sensitive to impacts from Urban Runoff that may degrade water quality and harm aquatic life.
>
> In addition to the general requirements required for Regulated Commercial Facilities and Activities, the City may require that additional BMPs beyond the minimum BMPs for a specific area, such as ESAs, and/or activity be implemented.

The City conducted efforts to ensure industrial and commercial business owners and/or operators have received a copy of the Industrial Manual either through an annual inspection or a response to a complaint or concern reported through the Urban Runoff Hotline. In addition, copies of the Industrial Manual are available on the Clean Water Program website.

### 5.2.4 Program Implementation

Annual inspections of commercial and industrial businesses are conducted by Clean Water Program inspectors, Code Enforcement officers and a private contractor to ensure that applicable pollution prevention activities are implemented by industrial and commercial business owners and/or operators. In addition, inspections are conducted based on calls received on the Urban Runoff Hotline. All industrial and commercial businesses visited, through the annual inspection program or by complaint call acknowledged on the Hotline, receive follow-up visits until the industrial business is deemed in-compliance with City Code. All documentation pertaining to site visits are on file at the City. City staff conducted a total of 596 inspections during the 2007-2008 reporting year of industrial and commercial businesses.

#### 5.2.4.1 Inspections of Industrial Businesses

Section 7.2.4.3 of the City's 2008 JURMP describes the City's program for conducting inspections of industrial businesses. This program was developed and implemented in accordance with part D.3.b.(3) of Permit Order 2007-0001. The major activities and accomplishments undertaken by the City for this requirement during the reporting period included:

- Completion of 127 site inspections of industrial businesses during the reporting period.
- Completion of 52 required annual inspections of high priority industrial businesses during the reporting period.
- Completion of 75 required annual inspections of medium and low priority industrial businesses during the reporting period.
- Completion of eight follow-up visits either in response to the initial inspection or response to a complaint.

- Dissemination of the Industrial Manual to help industrial owners and/or operators become aware of the City Code requirements for BMP implementation, and information on applicable BMPs for specific industrial businesses and activities.
- Ensuring proper and continued training of the Code Enforcement officers and Clean Water Program compliance inspectors dedicated to the Clean Water Program.

#### 5.2.4.2 Enforcement of Industrial Businesses

Section 7.2.4.3 of the City's 2008 JURMP describes the City's program for enforcement of ordinances at an industrial site. This program was designed in accordance with part D.3.b.(3) of Municipal Permit Order 2007-0001. Table 5-5 presents the actions taken by Code Enforcement officers on industrial businesses within the City for this reporting year. The major activities and accomplishments undertaken by the City for this requirement during the reporting period included 86 inspections by Code Enforcement officers and 41 inspections by Clean Water Program inspectors. Therefore, the City conducted a total of 127 industrial business inspections during this reporting period.

**Table 5-5. Accounting of Industrial Code Enforcement Actions for the 2007-2008 Reporting Year.**

| Action Type | Follow-up Phone Call | Follow-up Site Visit | Follow-up Office Visit | Written Notice | Letter Sent | Inspection Report | Admin. Warning | Administrative Monetary Citation | Referral to Other Dept. | Stop Work Notice |
|---|---|---|---|---|---|---|---|---|---|---|
| of Actions | 8 | 131 | 0 | 4 | 15 | 86 | 1 | 3 | 1 | 0 |

#### 5.2.4.3 Inspections of Commercial businesses

Section 7.2.4.3 of the City's 2008 JURMP describes the City's program for conducting inspections of commercial businesses. This program was developed and implemented in accordance with part D.3.b.(3) of the Municipal Permit Order 2007-0001. As detailed in the JURMP, inspections of High and Low Priority Commercial Businesses are conducted as deemed necessary by the Code Enforcement personnel. Some inspections are initiated in response to a public or municipal staff report, an illicit discharge source investigation, or as a follow up to a previous inspection.

The major activities and accomplishments undertaken by the City for this requirement during the reporting period included:

- Three hundred seventy one (371) eating and drinking establishments were inspected at least once for the proper implementation and maintenance of storm water BMPs and grease control devices. The inspector forwarded all facilities that were not in-compliance with storm water regulations to Code Enforcement Officers.
- Ninety four (94) inspections of high priority commercial businesses were inspected, excluding restaurants and agricultural operations

- One hundred three (103) inspections of medium and low priority commercial businesses were inspected, excluding restaurants and agricultural operations
- One inspection of each of the 28 nursery and greenhouse operations within the City of Oceanside was conducted for compliance to urban runoff regulation City Code Chapter 40.
- Ensuring proper and continuing training of the Code Enforcement Officers and Clean Water Program inspectors dedicated to the Clean Water Program.

During the 2007-08 reporting periods, all eating and drinking establishments were inspected for compliance with the City's urban runoff regulations and adequate implementation and maintenance of BMPs. The initial inspection served to educate eating and drinking establishment owners and/or operators of their storm water and grease control BMP responsibilities by inspection of current BMPs, distribution of the Commercial Manual and BMP poster, when needed, to educate employees. During the 2006-07 reporting period all restaurants were raised to high priority and will continue to be high priority throughout the duration of Municipal Order Permit No. 2007-0001. If any restaurants were not in compliance during initial inspections, follow-up inspections were conducted to determine compliance per City Code.

When CWP Inspectors and Code Enforcement Officers conduct inspections at high priority areas, they target the entire commercial/industrial complex, because these areas often contain a mix of industrial and commercial operations. Rather than just focus on the High Priority businesses located in these areas, CWP Inspectors and Code Enforcement officers inspect all businesses in the complex to ensure owners and/or operators understand their BMP requirements and can work collaboratively with their neighbors to implement BMPs or solve drainage problems.

Code Enforcement officers inspected 28 nursery and greenhouse operations according to the City's Business Licensing Department. However, only sixteen of the sites were in operation and were determined to be a priority under storm water regulations. These sites, along with the larger agricultural facilities that are annually inspected by the County Weights and Measures Department, are visited several times a year by City staff due to the evolving nature of their business. With constant plowing and crop rotation, CWP staff not only complete annual inspections, but also complete a pre-rain event inspection and visit the agricultural areas frequently during the rainy season as well as during rain events. The City has also maintained its cooperative relationship with the U.S. Department of Agriculture NRCS for assisting the agricultural community in Oceanside in design and implementation of BMPs.

In addition to calls received from the Urban Runoff Hotline concerning potential violations at a commercial business, Code Enforcement Officers also conducted the third follow-up inspection for non-compliant restaurants. All calls received from the Urban Runoff Hotline generated a case file in which Code Enforcement officers visited the facility and conducted follow-up visits and/or used enforcement mechanisms until the commercial business was deemed in-compliance with City Code. Copies of inspection reports are available from the Code Enforcement Division.

If enforcement actions did not produce the required improvements, administrative citations (starting at $100, with a $1,000 maximum fine) are given. An accounting of all enforcement actions, taken by Code Enforcement Officers, is shown in Table 5-6.

**Table 5-6. Accounting of Commercial Code Enforcement Actions for the 2007-2008 Reporting Year.**

| Action Type | Follow-up Phone Call | Follow-up Site Visit | Follow-up Office Visit | Written Notice | Letter Sent | Inspection Report | Admin. Warning | Administrative Monetary Citation | Referral to Other Dept | Stop Work Notice |
|---|---|---|---|---|---|---|---|---|---|---|
| of Actions | 40 | 167 | 4 | 2 | 10 | 52 | 18 | 5 | 0 | 0 |

#### 5.2.4.4 Reporting of Noncompliant Sites

The City is required to provide notification to the RWQCB of noncompliant sites in the City that are determined to pose a threat to human or environmental health. Oral notification is required within 24 hours of the discovery of noncompliance and a written report should be submitted to the RWQCB within five days of the incident.

The Regional Water Quality Control Board was notified of businesses or operations that were not compliant after follow-up visits from CWP staff or code enforcement officers, or for operations that were not enforceable by City staff (Camp Pendleton). Following is a list of these businesses and operations.

- Eternal Hills Cemetery Expansion Project
- North County Transit District's Sprinter Rail project.
- Evergreen Nursery nutrient discharge into Loma Alta Creek.
- Camp Pendleton housing development sediment discharge to Oceanside Harbor.

### 5.2.5 Stationary Industrial and Commercial Sites Sources Effectiveness Assessment

See Section 11.0 for an assessment of the Industrial and Commercial Component of the City's JURMP.

## 5.3 Mobile Sources Element

### 5.3.1 Background

Due to the lack of a stationary location for proper disposal of potentially hazardous liquids and materials, there is a major area of concern about where mobile businesses discharge water used in their line of work. Due to the nature of their activities, mobile businesses will continue to be regulated differently than other businesses. Mobile businesses can be difficult to identify because they may not have a City business license, they go out of business on a relatively regular basis and, though they may have a home base, they can cross jurisdictional lines to operate their

business. For the reasons regular inspections of mobile businesses will be challenging and tiem consuming in the future.

### 5.3.2 Source Characterization

The mobile businesses known to operate within the City's jurisdiction are noted on the City's commercial inventory. The following business types are addressed by the mobile sources element of the City's industrial and commercial program.

- Mobile automobile or other vehicle washing
- Pest control services
- Mobile carpet, drape or furniture cleaning
- Mobile construction trades
  - Painting and coating
  - Cement mixing or cutting
  - Masonry
  - Other contractors
- Landscaping
- Pool and fountain cleaning
- Power washing services

Because not all mobile businesses have obtained business licenses in the City or have a base of operations in the City, the City expects that a continual process of refining and updating its inventory will be needed. Sources for such inventory updates will include reported incidents, general observations by City staff, and available business licenses. The City intends to participate if and when a regional inventory and/or tracking system for mobile businesses is developed. The inventory of Mobile Commercial Businesses is available in Appendix B.5 of the City's 2008 JURMP as part of the Commercial Inventory.

### 5.3.3 Best Management Practice Requirements

The City updated its Commercial Urban Runoff Requirements Manual during this reporting period, and now contains information on the required BMPs for both mobile and stationary sources. This updated manual can be referenced in Appendix C of the City's 2008 JURMP. One example of a BMP included in the updated manual is for outside vehicle washing and the BMP explains how to capture and contain the rinse water so that it does not enter the storm drain system. Regardless of where the activity occurs, the City categorically prohibits illegal discharges from mobile businesses.

### 5.3.4 Program Implementation

#### 5.3.4.1 Education Outreach

Because a specific element of the industrial and commercial program for mobile businesses is being newly developed, it is anticipated that some mobile businesses are not aware of storm water requirements and that education will need to be a significant portion of the program. The City of Oceanside will notify the owner/operator of each inventoried mobile business of applicable BMP requirements within the first three years of implementation of the City's 2008 JURMP.

#### 5.3.4.2 Inter-Jurisdictional Cooperation

An inter-jurisdictional program for the regulation of mobile businesses will be developed amongst the co-permittees during future years of this permit cycle, of which the City will be involved. The program may include creation of a regional inventory of mobile businesses, standardization of BMP requirements across jurisdictions, sharing of enforcement action information, and/or the development and distribution of standardized educational materials.

#### 5.3.4.3 Staff Training

Code Enforcement Division Officers and Clean Water Program Compliance Inspectors are responsible for conducting storm water compliance inspections and enforcement of mobile sources. Officers and inspectors are trained annually on inspection and enforcement procedures and BMP implementation as they relate to mobile businesses. City staff is encouraged to report potential illegal discharges from mobile businesses when working in the City to the storm water hotline.

#### 5.3.4.4 Inspections

During this reporting period, inspection of mobile businesses was conducted on an as needed basis. The most common triggers for these inspections were from incident reports received over the Urban Runoff Hotline and direct visual observations by City staff.

#### 5.3.4.5 Enforcement

During this reporting period Code Enforcement officers responded to complaint calls regarding mobile businesses that were allowing water to enter the storm drain system. During the site visit, depending on the nature of the complaint, Code Enforcement officers issued notices to comply and/or educated the operator on the proper BMPs that should be in place during their operation and provided them with the power washing brochure.

## 5.4 Industrial and Commercial Component Effectiveness Assessment

See Section 11.0 for an assessment of the Industrial and Commercial Component of the City's JURMP.

## 5.5 Program Review and Modification

The Clean Water Program will continue to review and modify the Industrial and Commercial component as needed. Staff will work with other City departments and their data tracking systems to ensure that the details of inspections, complaints, and follow-ups will be tracked appropriately to be included in future annual reports as discussed further in Section 15.

# 6.0 RESIDENTIAL COMPONENT

## 6.1 Introduction

A total of 35 percent of the City's 26,983 acres is designated as either multi- or single-family residential. Since residential land use comprises such a large area of the City, residential activities can have a considerable effect on the quality of receiving waters in and around the City. The City of Oceanside has developed an extensive program that aims to reduce pollutant runoff from residential areas and activities to the MEP.

This section documents the activities conducted by the City of Oceanside during the 2007-2008 reporting period to meet the requirements of Section D.3.c of the Municipal Permit. The City continued the implementation of an enforcement program that responds to and monitors potential violation calls received on the Oceanside Urban Runoff Hotline (Hotline).

**Order 2007-0001 Compliance Summary**

| | |
|---|---|
| D.3.c<br>Residential Program | See Section 6 of this Annual Report |

The City also utilizes its revised Urban Runoff Requirements Manual for Residents (Residential Manual) that contains BMP requirements and related guidance information for residents of the City. This manual has been made available to residents through the City's Clean Water Program Website. Changes to the Residential Manual during this reporting period were as follows:

- Pool water disposal BMPs
- Reference to new Municipal Permit Order 2007-0001
- Rearrangement of some chapter numbers and names

A copy of this manual can be found in Appendix C of the City's 2008 JURMP.

## 6.2 Source Characterization

Residential neighborhoods can be the source of a variety of pollutants depending on the activities conducted in residentially developed areas. Pursuant to Section D.3.c.(1) of the Permit Order 2007-0001, the City identified High Priority Residential Areas and Activities in the JURMP. The following residential activities have been identified by the City to be High Priority Activities:

- Automobile or boat repair and maintenance.
- Automobile washing.
- Automobile parking.
- Home and garden care activities and product use.
- Disposal of household hazardous waste.
- Disposal of pet waste.
- Disposal of green waste.
- Any other residential activity that contributes a significant pollutant load to the MS4.

The City has also identified residential areas of High Priority. These areas include the following:

- Any residential area tributary to a CWA section 303(d) impaired water body, where the residence generates pollutants for which the water body is impaired

- Any residential area within or directly adjacent to or discharging directly to a coastal lagoon or other receiving waters within an ESA

## 6.3 Best Management Practice Requirements

The City's JURMP Residential Component requires the implementation and maintenance of applicable pollution prevention Best Management Practices (BMPs) by residents pursuant to City Code. In order to ensure residents are informed and understand the applicable pollution prevention BMPs to be implemented and/or maintained, site-specific pollution prevention methods for residential areas and activities, located within the City, are specified in the Residential Manual. This manual is found in Appendix C of the City's 2008 JURMP.

Education and outreach aimed at residents helps facilitate the implementation of BMPs, including pollution prevention methods. A detailed discussion of the City's education program can be found later in Section 10 of the 2008 JURMP. Details on education outreach to the residential community can be found in Sections 8 and 9 of this annual report.

## 6.4 Program Implementation

### 6.4.1 Outreach

The most efficient way to encourage pollution prevention and BMP implementation and to restrict polluting practices is to educate residents on how to carry out their daily activities in ways that have the smallest potentials to discharge pollutants to the MS4. During this reporting period the Clean Water Program provided educational information and training to residents, in the following ways:

- Residential BMP Manual
- Cleanup events
- Booths at public events
- Public television notices
- Mailers
- Presentations
- Website

Further outreach program details for this reporting period can be found in the Education and Public Participation, section 8 and Section 9, of this document.

### 6.4.2 Household Hazardous Waste

The City continued to facilitate the proper management and disposal of used oil, toxic materials, and all other HHW to the residential audience. Residents have the opportunity to take used oil to approximately 12 private auto parts stores within the jurisdiction. In addition Waste Management, Inc., the City's franchise trash hauler, accepts HHW at its Oceanside facility. Residents may bring up to five gallons per day of used motor oil, used oil filters, and anti-freeze, Tuesday through Saturday from 8 a.m. to 4 p.m. without an appointment. HHW may be brought on Saturdays by appointment only. Details of the locations mentioned above can be found in Section 8.4.2 of the City's 2008 JURMP.

During the 2007-2008 reporting period, 3,430 Oceanside households utilized the household hazardous waste disposal facility, disposing or recycling 142.8 tons of hazardous materials (including universal waste) during the reporting period. An additional 119.9 tons of E-waste was recycled in the same reporting year.

Furthermore, as part of the City's collection program, a 1,500-gallon used oil collection receptacle is provided at the City's harbor. This receptacle is available for residents who live on the boats in the Marina as well as for those boat owners and operators who rent a harbor slip to conveniently recycle the used motor oil and oil filters generated from the boats.

### 6.4.3 Clean Water Program Newsletters

Twice per year, educational newsletters are mailed to all homes in the City that receive water utility bills. Topics in the newsletters explain storm water pollution, effects on water quality, pollutants of concern, illegal discharges, BMP implementation, and special events.

During this reporting period two Clean Water Program Newsletters were distributed to over 42,000 households. An overview of topics in these two are listed below. A copy of these two newsletters is included in Attachment 6-A this annual report.

*Fall 2007*

- Water conservation and urban runoff (20 Gallon Challenge campaign promoted by the San Diego County Water Authority)
- Buena Vista Creek and Oceanside Beach Cleanup

*Spring 2008*

- Grease and sewer blockages
- Pool water draining tips
- Proper disposal of landscape trimmings
- Loma Alta Creek cleanup event
- Cleanup events calendar for 2008

### 6.4.4 Oceanside Update

In addition to printed media, the City's community television station, KOCT, airs thirty-minute public service announcements with three-minute presentations from various City departments. Those households in the City who have access to the KOCT local channel are able to view this show. During this reporting period the Clean Water Program provided seven three-minute presentations. Table 6-1 provides an overview of the topics covered during each taping.

**Table 6-1. Summary of 2007-08 Oceanside Update Topics by Month**

| Date | Topic Discussed |
|---|---|
| August 2007 | Water conservation & irrigation runoff |
| September 2007 | Proper hookup for RV sewage dumping at RV dump station in Oceanside harbor |
| November 2007 | Water conservation & irrigation runoff |
| December 2007 | Irrigation runoff & its connection to polluted runoff |
| February 2008 | BMPs for residents during rainy season |

| Date | Topic Discussed |
|---|---|
| April 2008 | Loma Alta Creek Cleanup |
| June 2008 | Storm drains are different than sewer systems |

### 6.4.5 Website

The Clean Water Program maintains its own Website providing convenient electronic access to program information for residents and the general public. The address for this website is www.oceansidecleanwaterprogram.org. This Website provides the opportunity to learn about storm water pollution, the sources of this pollution, and what can be done to eliminate these pollutants from entering the storm drain system, thereby improving water quality in receiving waters. During this reporting period there were 38,146 hits to the Clean Water Program website. This number does not account for traffic from within the Oceanside network.

Specific web pages available on the Clean Water Program Website are as follows:

- Commercial Business
- Development
- Events
- Industrial Business
- Just for Kids
- Water Quality Laws
- Other Websites
- Landslide Prevention
- Clean Water Projects
- Report Violations
- Residential/General
- Just for Educators
- Waterbodies

The residential web page offers the following information:

- An overview of pollutants in receiving waters and how those pollutants get there
- The difference between the storm drain system and the sewer system
- Links to pollutant factsheets in PDF format
- Links to brochures in PDF format, including the Storm Water Pollution prevention Tips for Residents
- Links to past Clean Water Program Newsletters in PDF format
- Link to the Residential Urban Runoff Requirements Manual

The Website address is disseminated to the public in a variety of ways:

- Listed in all Clean Water Program Newsletters
- Mentioned during each Oceanside Update Taping and shown at the bottom of the screen
- Listed on promotional items
- Listed on Clean Water Program staff business cards

### 6.4.6 Hotline

The City will continue to encourage public reporting of illicit discharges and illegal dumping through the City's Urban Runoff Hotline, which is run by the Water Utilities Department. The Hotline phone number is (760) 435-5800. All calls related to potential urban runoff violations were documented and forwarded to Code Enforcement.

The Urban Runoff Hotline was promoted through a variety of media during this reporting period, including announcements on local television stations, placement on brochures, click-message pens, pencils, and other promotional "give-aways", advertisement on the City's Clean Water Program webpage and in Clean Water Program newsletters. During the reporting period, fifty-five (55) calls were received on the Urban Runoff Hotline by residents concerning potential urban runoff violations. This is a significant increase from the 14 calls received during the 2006-07 reporting period (a 392% increase in call volume).

### 6.4.7 Enforcement

Section 8.4.4 of the JURMP describes the City's program for enforcement of ordinances in residential areas. The major activities and accomplishments undertaken by the City during this reporting period included:

- Code Enforcement response to 190 urban runoff related cases, related to residential areas and activities, during the reporting period.
- An accounting of all residential enforcement actions, taken by Code Enforcement Officers, is shown in the following table.

See Table 6-2 for an accounting of Code Enforcement Actions during 2007-08.

**Table 6-2. Accounting of Residential Code Enforcement Actions for the 2007-2008 Reporting Year.**

| Action Type | Follow-up Phone Call | Follow-up Site Visit | Follow-up Office Visit | Written Notice | Letter Sent | Inspection Report | Admin. Warning | Administrative Monetary Citation | Referral to Other Dept | Stop Work Notice |
|---|---|---|---|---|---|---|---|---|---|---|
| of Actions | 140 | 219 | 7 | 26 | 32 | 10 | 28 | 4 | 1 | 0 |

## 6.5 Residential Component Effectiveness Assessment

See Section 11.0 for an assessment of the education component of the City's JURMP.

## 6.6 Program Review and Modification

During this reporting period it was noted that improvements in information tracking is needed to more easily gather and assess data. The City will investigate opportunities to better track data collected from Hotline calls.

Also, with the increase in phone calls to the Urban Runoff Hotline reporting parties will be asked where they learned of the Hotline phone number. Gathering this information can allow better assessment of the residential outreach programs by determining which specific program components are reaching residents more than others.

# 7.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION COMPONENT

This section is intended to document the activities conducted by the City of Oceanside during the 2007-2008 reporting period to manage illicit discharges and meet the requirements of Sections D.4 and J.3.a.(3)(f) of the 2007 Municipal Permit.

In accordance with the September 10, 2008 Regional Water Quality Control Board adoption of Addendum No. 2 to Order No. R9-2007-0001, the City will submit the entire FY 2007-08 Illicit Discharge Detection and Elimination Component, including the 2008 Dry Weather Field Screening and Analytical Monitoring, no later than December 15, 2008.

# 8.0 EDUCATION COMPONENT

## 8.1 Introduction

Education is an important step in working towards improving receiving water quality both locally and regionally. By increasing public awareness and encouraging a change in both the attitude and the behavior of the general public and the regulated community, the City may reduce or eliminate storm water pollution caused by common daily activities.

The City of Oceanside will continue to provide a comprehensive storm water education program to achieve the following objectives:

- Measurably increase the knowledge of target communities regarding MS4s, impacts of urban runoff on receiving waters, and BMP solutions for the target audience.
- Measurably change the behavior of target communities, and thereby reduce pollutant releases to MS4s and the environment.

Educational programs and activities are tailored to meet the needs of the following target audiences:

- Municipal departments and personnel.
- Construction site owners and developers.
- Industrial and commercial owners and operators.
- Residential community, general public, and school children.
- "Underserved" target audiences, where applicable.

Many education outreach efforts are conducted on an ongoing basis, such as direct interaction during inspections, pre-construction meetings, or when taking calls from the City's Urban Runoff Hotline. Educational materials are also available throughout the year at special events and at the City's Water Utilities Department counter. Targeted mailings, focused training sessions, and other educational efforts are provided when found to be necessary through monitoring programs, records of complaints, and other similar factors.

## 8.2 Staff Training Element

City personnel are the eyes and ears of the City, and can provide valuable information on storm water related discharges and potential violations that may be occurring within the City. The City presents general storm water educational content, which is described in Section 10.3 of the 2008 JURMP, to all City departments. The City primarily educates its municipal personnel through classroom training, on-the-job training sessions, and the Municipal BMP Manual (Appendix C of the 2008 JURMP). Customized training programs are designed for personnel targeting fieldwork-related departments such as storm water compliance inspectors, building/engineering inspectors, public works, planning department staff, and park and recreation personnel. General informational storm water training sessions are provided for municipal personnel in other departments to review storm water regulations in the City, impacts of urban runoff and BMPs to be implemented to reduce or eliminate runoff.

During this reporting period twenty-one (21) departments or divisions were provided a training on storm water related issues. In addition one division from the solid waste and recycling trash

hauler for the City was provided with storm water training. A total of 298 City staff and 70 staff from the trash hauler attended storm water trainings.

During this reporting period one of two Storm Water Pollution Prevention Education Programs developed by a private company, EXCAL Visual, were used for municipal staff trainings. These programs include a 15-20 minute video and a quiz specific to the video.

Prior to the start of these training sessions using the programs mentioned above a multiple choice quiz was given to each participant to complete to establish a baseline of knowledge for that individual. The quiz was used as the sign-in sheet for each training session. After the completion of the video additional storm water related details were provided depending on the department or division being trained. Time is allotted for questions and answers toward the end of the training session. Prior to the end of the training session the same multiple choice quiz was given to each participant. 293 municipal employees took both a pre and post-quiz during a municipal training session. For more information on the effectiveness of these training programs based on the pre- and post-quiz scores see Section 11.0 of this report.

One program titled "Storm Water Pollution Prevention - Strom Warnings" covers Everyday Best Management Practices for Industrial Facilities. Specific BMPs are covered to address the following issues related to industrial facilities:

- Good Housekeeping
- Materials Management
- Spill Response
- Equipment Fueling & Repair
- Outdoor Manufacturing
- Preventive Maintenance
- Waste Management
- Dust Producing Processes

Departments or Divisions that received this training were:

- Water Distribution - Reverse Osmosis Plant
- Water Distribution – Operations
- Water Distribution – Maintenance
- Sewer Collections – La Salina Waste Water Treatment Plant
- Sewer Collections – San Luis Rey Waste Water Treatment Plant
- Sewer Collections – Field Staff
- Water Distribution – Weese Plant (Drinking Water Treatment Plant)

The other program titled "Municipal Storm Water Pollution Prevention – Storm Watch" covers everyday BMPs for other municipal staff activities such as Parks and Recreation and fleet maintenance. Specific BMPs covered in this course are as follows:

- Good Housekeeping and Spill Prevention
- Vehicle and Equipment Washing
- Vehicle and Equipment maintenance
- Spill Reporting and Response

- Street Maintenance
- Outdoor Storage of Materials and Wastes
- Landscaping and Lawn Care

Departments or Divisions that received this training were:

- Streets Division – Street Repair and Maintenance
- Streets Division – Street Sweepers
- Streets Division – Parking Enforcement
- Parks and Recreation Maintenance
- Fleet Maintenance
- Water Utilities Administration
- Water Meter Services
- Harbor Division – Maintenance Staff
- Harbor Division - Harbor Police
- Police Department – Police Dispatch

Other Departmental staff received customized training because of their need for specific education that was not covered in these two programs or information covered in these programs was not needed to convey to these groups due to the nature of their work as municipal employees. The following departments were trained using a customized Power Point Presentation and an interactive format to allow for questions and answers throughout the training program:

- Planning Department
- Engineering Department – Engineering Inspectors
- Building Department – Building Inspectors
- Business Licensing, Revenue and Utility Billing

Waste Management is the solid waste and recycling company that services residential and commercial/industrial businesses in the City of Oceanside. Though they are not a department division of the City, they are an important entity to target with storm water related education programs due to the nature of their business. During this reporting period one department of Waste Management was targeted with storm water education. A customized power point presentation was used to emphasize the importance of proper handling of solid waste during servicing of trash cans and dumpsters and how to report potential storm water violations to Oceanside's Clean water Program staff..

- Waste Management – Trash, Recycling and Green Waste Truck Drivers

During the training sessions two departments requested additional information to reference during their daily work activities. The Harbor Police Department requested a quick reference guide for officers to use while in the field. This reference guide provides the storm water related City code and a brief description of the violation related to that code number. Also, the Police Dispatch operators requested a Clean Water Program Phone and Code Reference List to be placed in their "Call-out" binder. This binder is used by police dispatch operators to more easily reference codes and violations. See Attachment 8-A at the end of this section for a copy of the guide provided to Harbor Police and Police Dispatch operators.

## 8.3 Educational Outreach Element

Residential areas make up a large portion of the land use in the City, and therefore even small pollutant discharges can be magnified significantly and have the potential to affect the quality of the receiving waters. Activities such as residential car washing and over irrigation are harmful to receiving water bodies by contributing pollutants such as heavy metals, detergents, and nutrients. Providing residents with appropriate educational materials may help to increase overall awareness, and encourage residents to change harmful behaviors and subsequently reduce the potential for pollutants to enter the storm drain system and reach receiving water bodies.

### Media

Twice per year, educational newsletters are mailed to all homes in the City with water utility bills. Topics in the newsletters explain storm water pollution, effects on water quality, pollutants of concern, illegal discharges, BMP implementation, and special events.

During this reporting period two Clean Water Program Newsletters were distributed to over 42,000 households. An overview of topics in these two newsletters are as follows:

- Fall 2007: Water conservation and urban runoff (20 gallon challenge)
  Buena Vista Creek and Oceanside Beach Cleanup

- Spring 2008: Grease and sewer blockages
  Pool water draining tips
  Proper disposal of landscape trimmings
  Loma Alta Creek cleanup event
  Cleanup events calendar for 2008

A copy of these two newsletters is included in Attachment 6-A this annual report.

### Website

The City's Clean Water Program website also offers electronic copies of a variety of storm water fact sheets covering topics such as proper pesticide and fertilizer use, trash disposal, pet waste and lawn waste disposal, proper chlorine and other swimming pool chemical disposal, sedimentation, effects of soaps and detergents on receiving waters, and other storm water-related topics. During this reporting period there were 38,146 hits to the Clean Water Program website. This number does not account for traffic from within the Oceanside network.

### Oceanside Update

In addition to printed media, the City's community television station, KOCT, airs thirty-minute public service announcements with three-minute presentations from various City departments. During this reporting period the Clean Water Program will provided seven three-minute presentations. Table 8-1 provides an overview of the topics covered during each taping.

**Table 8-1. Summary of 2007-08 Oceanside Update Topics by Month**

| Date | Topic Discussed |
|---|---|
| August 2007 | Water conservation & irrigation runoff |
| September 2007 | Proper hookup for RV sewage dumping at RV dump station |
| November 2007 | Water conservation & irrigation runoff |
| December 2007 | Irrigation runoff & its connection to polluted runoff |

| Date | Topic Discussed |
|---|---|
| February 2008 | BMPs for residents during rainy season |
| April 2008 | Loma Alta Creek Cleanup |
| June 2008 | Storm drains are different than sewers |

### Community Events – Booths and Outreach Activities

The Clean Water Program Staff participated independently and in conjunction with other cities in the North County Storm Water Program by staffing booths at several community events in Oceanside and north San Diego County. The Clean Water Program staff talked to residents, handed out educational materials, and responded to questions and concerns.

Table 8-2 lists community events attended between July 2007 and June 2008 to encourage community participation and education of the effects of urban runoff:

**Table 8-2. 2007-08 Community Events.**

| Date | Event | Participants (estimated) |
|---|---|---|
| 03/30/2008 | North County Earth Day at the Mission | 3,000 |
| 04/20/2008 | Fallbrook Avocado Festival | 50,000 |
| 6/19/2008 | Sunset Market - Oceanside | 1,000 |

### School Education

Educating the City's youngest residents is important in two ways: ideally the good habits/behaviors learned will be carried into adulthood, and secondly, children may educate their families and friends around them with the information they have learned. Children are impressionable at a young age, and are therefore more likely to act upon the knowledge given to them now and throughout their life.

The City continued its outreach to school age children through the use of the watershed model during presentations. A total of ten presentations were conducted reaching 165 school-age children and 36 adults. Table 8-3 provides a list of groups and classrooms who were educated about storm water pollution via these presentations.

**Table 8-3. 2007-08 School Age Children Watershed Presentations.**

| Date | Group | Children | Adults |
|---|---|---|---|
| 03/10/2008 | Cub Scouts | 10 | 7 |
| 03/26/2008 | Girl Scout Troop 1215 | 7 | 2 |
| 5/07/2008 | Girl Scout Troop 1370 | 8 | 3 |
| 5/14/2008 | Garrison Elementary (2nd Grade) | 17 | 2 |
| 5/14/2008 | Garrison Elementary (2nd Grade) | 18 | 2 |
| 5/14/2008 | Garrison Elementary (5th Grade) | 25 | 3 |
| 5/14/2008 | Garrison Elementary (4th Grade) | 33 | 2 |
| 5/14/2008 | Garrison Elementary (Kinder.) | 15 | 1 |
| 5/15/2008 | Girl Scout Troop 4099 | 12 | 4 |
| 5/15/2008 | Boy Scout Pack 756 | 20 | 10 |
| | **Totals** | **165** | **36** |

Project SWELL (SWELL = Stewardship: Water Education for Lifelong Leadership)

The City is collaborating with the City of San Diego, the San Diego Unified School District, and San Diego CoastKeeper to customize and implement grade level specific curricula that integrates environmental topics into the science curriculum in the Oceanside Unified School District (OUSD). This curriculum provides students with knowledge of water resources in San Diego County, watershed functions, water conservation, the effects of polluted urban runoff, and how students can help prevent water pollution. Project SWELL, a water-based science curriculum, has been customized and implemented in fifth grade classes of the OUSD. The City will work with its collaborators to move forward in customizing and implementing the 6th grade curriculum, as well as additional grade level curricula in future years.

During this reporting period details specific to the northern watersheds of San Diego County were compiled and submitted in a table format for use in the 6th grade curriculum. See the Table 8-4 below for the watershed information gathered for the curriculum. The curriculum writer and editor will continue to develop the 6th grade curriculum during the 2008-09 reporting period with anticipation of implementing the curriculum in fall 2009.

**Table 8-4. SWELL Oceanside 6th Grade Curriculum Watershed Information Tables**

| San Luis Rey Watershed | |
|---|---|
| Major Water Bodies: | San Luis Rey River, Guajome Lake, Lake Henshaw |
| CWA 303(d) List: | Indicator Bacteria (Pacific Ocean Shoreline at river mouth), Chloride and Total Dissolved Solids (San Luis Rey River) and Eutrophic (Guajome Lake) |
| Areas of Concern: | Indicator Bacteria cause beach postings and closures during winter months at the shoreline; A landfill is proposed to be sited adjacent to he river just east of Interstate 15; Significant development projects, including residential, commercial and industrial land uses, are being proposed at the I-15 and Highway 76 interchange; An approved quarry began operation in 2008 and is permitted for operation for 30 more years; |
| Sources of Problems: | Urban Runoff/Storm Sewers, nonpoint and point source (Chlorides) Nonpoint/Point Source (Guajome Lake) |
| Human Population: | 115, 371 (1990); 146,383 (2000); 178,341 (2010 Forecast); 219,353 (2020 Forecast); 249,673 (2030 Forecast) |
| Cities in Watershed: | Oceanside (4.4□), County of San Diego (95.2 □), Vista (0.2□) Escondido (0.00014□ □52 acres), Riverside County (0.2□) |
| Important hydrologic resources: | Lake Henshaw at the eastern end of the watershed is a reservoir managed by Vista Irrigation District that provides drinking water to Vista and parts of Escondido and San Marcos. Water is diverted downstream of the dam from the San Luis Rey River to reservoirs in the San Dieguito Watershed; |
| Major Issues/Problems: | The shoreline at the mouth of the San Luis Rey River has elevated levels of indicator bacteria during winter months causing beach postings discouraging body contact with water. A bacteria source identification project began in 2008 to identify source of the bacteria. |
| Land Use: | The predominant land uses in the watershed are undeveloped (50□), Agriculture (37□), Residential and Parks/Recreation (10□) |

| | |
|---|---|
| Other Facts: | This is a 558 square mile watershed with San Luis Rey River serving as the major tributary that begins 50 miles inland at Lake Henshaw.<br><br>Prior to the 1960□s the SLR River only flowed on rare occasions when there was above normal precipitation. During this time groundwater withdrawals from the San Luis Rey Basin exceeded recharge to the basin which resulted in lowering of groundwater levels with these levels decreasing to 43 feet below sea level by 1953. This allowed a trough of seawater to extend for a distance of two to six miles inland from the coast. |
| **Carlsbad Watershed<br>Entire Watershed Management Area (WMA)<br>See below for details on specific Hydrologic Areas (HAs) within the Carlsbad WMA** | |
| Major Water Bodies: | Buena Vista Lagoon; Agua Hedionda Lagoon, Batiquitos Lagoon, San Elijo Lagoon; Loma Alta Creek, Buena Vista Creek, Agua Hedionda Creek, Encinas Creek, San Marcos Creek, Escondido Creek |
| CWA 303(d) List: | Ammonia as Nitrogen, Bacterial Indicators, DDE , DDT , Eutrophic, Manganese, Nutrients, Nitrate, Nitrite, Sedimentation/Siltation, Sediment Toxicity, Selenium, Sulfates, Total Dissolved Solids, Phosphate, Phosphorous |
| Sources of Problems: | Animal Facilities, Botanical/Zoological Gardens, Eating and Drinking Establishments, Landscaping |
| Human Population: | 511,306 (2000 Census), 596,738 (2010 Forecast), 651,840 (2020 Forecast), 700,119 (2030 Forecast) |
| Cities in Watershed: | Carlsbad (18□), Encinitas (9□), Escondido (13□), Oceanside (8□), San Marcos (11□), Solana Beach (1□), County of San Diego (32□) |
| Important hydrologic resources: | The Loma Alta Slough and creek is an important wildlife corridor and supports several threatened and endangered species. |
| Major Issues/Problems: | Surface water quality degradation, beach closures, sedimentation, habitat degradation and loss, invasive species, eutrophication, benthic alterations |
| Land Use: | Residential (32□), Freeways and Roads (10□), Agricultural (6□), Commercial/Industrial (13□), Open Space (11□), Vacant/undeveloped (18□), Other (10□). (2006 data) |
| Other Facts: | 211 square miles; Formed by six individual watersheds; Reaches inland nearly 24 miles with a maximum elevation of 2,400 feet.. |
| **Carlsbad Watershed - Loma Alta HA (904.1)** | |
| Major Water Bodies: | Loma Alta Creek, Loma Alta Slough |
| CWA 303(d) List: | Indicator Bacteria (Pacific Ocean Shoreline and Loma Alta Slough) and Eutrophic (Loma Alta Slough) |
| Areas of Concern: | Benthic community degradation |
| Sources of Problems: | Nonpoint sources (Loma Alta Slough) |
| Cities in Watershed: | Oceanside (95□); Vista (5□) |
| Important hydrologic resources: | The Loma Alta Slough and creek is an important wildlife corridor and supports several threatened and endangered species. |
| Major Issues/Problems: | Eutrophication in Loma Alta Slough, Indicator bacteria at Pacific |

| | |
|---|---|
| | Ocean Shoreline (Buccaneer Beach) |
| Land Use: | 6,300 acres comprising 5□ of Carlsbad Hydrologic unit. The predominant land uses in the watershed are residential, industrial/commercial and vacant undeveloped land |
| Other Facts: | Vacant undeveloped land occurs in the middle of the watershed most of which is planned for future development. |
| **Carlsbad Watershed -Buena Vista Creek HA (904.2)** | |
| Major Water Bodies: | Buena Vista Creek, Buena Vista Lagoon |
| CWA 303(d) List: | Sediment Toxicity (BV Creek), Indicator Bacteria, Nutrients, Sedimentation/Siltation |
| Areas of Concern: | Sedimentation |
| Sources of Problems: | Unknown sources (BV Creek), Nonpoint/point sources (BV Lagoon) |
| Cities in Watershed: | Oceanside (26□), Carlsbad (19□), Vista (45□), County of San Diego (11□) |
| Important hydrologic resources: | The Buena Vista Lagoon is a fresh water lagoon that provides important habitat and fishing opportunities; El Salto Falls is located just west of the College Boulevard crossing; The Native American Heritage Commission recently registered the El Salto Falls as a sacred site - testimony to the long term use of this area by Native Americans. |
| Major Issues/Problems: | Surface water quality degradation and sedimentation of the Buena Vista Lagoon; There have been discussions to return Buena Vista Lagoon into a tidally flushed lagoon. A weir located west of Interstate 5 does not allow ocean water to tidally flush the lagoon providing fresh water areas for fishing. |
| Land Use: | The predominant land uses in the watershed are urban/residential and commercial. |
| Other Facts: | As sediment reaches the Buena Vista Lagoon it falls out and provides more shallow area for tulles to expand, thereby covering the surface water. Neighbors want the tulles to be controlled to keep the surface water viewable from surrounding properties. |
| **Carlsbad Watershed - Agua Hedionda HA (904.3)** | |
| Major Water Bodies: | Agua Hedionda Creek, Buena Creek, Letterbox Canyon, Agua Hedionda Lagoon |
| CWA 303(d) List: | Manganese, Selenium, Sulfates, Total Dissolved Solids (Calavera Creek), Indicator Bacteria and Sedimentation/Siltation (Agua Hedionda Lagoon) |
| Areas of Concern: | Urban growth and the resulting loss of permeable soil has led to the degradation of the Agua Hedionda Watershed. Recent growth and anticipated future development mean that a watershed that is already impaired could get even worse. Already, notable bank undercutting, and bank erosion characterize creeks in the Agua Hedionda Watershed. |
| Sources of Problems: | Calavera Creek: Unknown sources for manganese, selenium and sulfates; Urban runoff/storm sewers for Total Dissolved Solids. Agua Hedionda Lagoon: Nonpoint/Point sources for indicator bacteria and sedimentations/siltation |
| Cities in Watershed: | Carlsbad (41□), Vista (24□), County of San Diego (24□); |

| | |
|---|---|
| | Oceanside (6□), San Marcos (5□) |
| Important hydrologic resources: | |
| Major Issues/Problems: | The Development of a Watershed Management Plan for this HA is scheduled for completion in 2008. The goal of the plan is to have |
| Land Use: | |
| Other Facts: | Third largest Hydrologic Area in the Carlsbad Hydrologic Unit (CHU); Extends approximately 10.6 miles inland from the coast; 18,800 acres in area; comprises 14□ of the CHU; |
| **Carlsbad Watershed □Encinas (904.4)** | |
| Major Water Bodies: | Encinas Creek |
| CWA 303(d) List: | N/A |
| Areas of Concern: | Invasive Plants |
| Sources of Problems: | Animal Facilities; Eating and Drinking Establishments; Landscaping |
| Cities in Watershed: | Carlsbad (100□) |
| Important hydrologic resources: | Encinas Creek |
| Major Issues/Problems: | Invasive plants along Encinas Creek |
| Land Use: | 3,400 acres in size; Industrial and commercial |
| Other Facts: | Extends 2.4 miles inland from coast with the highest elevation at 430 feet above mean sea level (MSL); Second smallest within the Watershed Management Area (WMA); The HA begins behind a small industrial area where it is immediately channelized. I continues through industrial and office parks associated with Palomar Airport; Drains directly to the Pacific Ocean. |
| **Carlsbad Watershed - San Marcos HA (904.5)** | |
| Major Water Bodies: | San Marcos Creek; Encinitas Creek (tributary of San Marcos Creek); Batiquitos Lagoon; Cottonwood Creek (sub-basin drains a portion of Encinitas directly into pacific Ocean at Moonlight Beach) |
| CWA 303(d) List: | San Marcos Creek: DDE, Phosphorous, Sediment Toxicity;<br>San Marcos Lake: Ammonia as Nitrogen, Nutrients, Phosphorous |
| Areas of Concern: | Lake San Marcos is |
| Sources of Problems: | Animal Facilities; Eating and Drinking Establishments; Landscaping |
| Cities in Watershed: | Carlsbad (29□), Encinitas (15□), Escondido (5□), San Marcos (33□), County of San Diego (19□) |
| Important hydrologic resources: | Batiquitos Lagoon is 610 acres with a drainage basin of about 55,000 acres with its primary freshwater tributaries being San Marcos Creek from the east and Encinitas Creek which flows north along Green Valley, entering the lagoon under El Camino Real and La Costa Avenue, respectively. |
| Major Issues/Problems: | Accumulated silt has been filling up Batiquitos Lagoon, and the lagoon was expected to fill up. A large dredging and enhancement project was begun in 1994 to open the lagoon to the ocean's tidal changes and flows, thus slowing down the filling of the lagoon with silt. This project, completed in 1997, was funded by the Port of Los Angeles. |
| Land Use: | 36,000 acres in size (28□ of WMA). |
| Other Facts: | Second largest within the Hydrologic Area (HA); Extends 14.1 miles inland from the costs originates on the western slopes of Merriam |

| | |
|---|---|
| | Mountains in discharges to the ocean via Batiquitos Lagoon; Highest elevation is approximately 1,540 feet above mean sea level; |
| **Carlsbad Watershed - Escondido Creek (904.6)** | |
| Major Water Bodies: | Escondido Creek; Reidy Canyon; San Elijo lagoon; Lake Wohlford (reservoir); Dixon Lake (reservoir) |
| CWA 303(d) List: | DDT, Bacteria, Manganese, Phosphate, Selenium, Sulfates, Total Dissolved Solids, Turbidity |
| Areas of Concern: | Bacteria, Nutrients, |
| Sources of Problems: | Animal Facilities; Eating and Drinking Establishments; Landscaping |
| Cities in Watershed: | County of San Diego (55□); Escondido (29□), Encinitas (11□); San Marcos (4□), Solana Beach (1□) |
| Important hydrologic resources: | The San Elijo Lagoon is part of the San Elijo Lagoon Ecological Reserve, a county and state regional park of nearly 1,000 acres of diverse habitat including six plant communities: coastal strand, salt marsh, brackish/freshwater marsh, riparian scrub, coastal sage scrub and mixed chaparral which can accessed over seven miles of trails via eight trailheads. |
| Major Issues/Problems: | Four pollutants occur at high frequencies including TDS, turbidity, total coliform, and fecal coliform; invasive plants within the lagoon and upstream riparian areas; |
| Land Use: | 54,100 acres in area (40□ of WMA). |
| Other Facts: | Largest and most complex system in the WMA; Extends 24.6 miles inland from the coast; Escondido Creek originates in Bear Valley in north central San Diego county and discharges to the Pacific Ocean via San Elijo Lagoon.; Elevations on the ridges above Bear Valley are 2,420 feet above MSL |
| **San Dieguito Watershed** | |
| Major Water Bodies: | San Dieguito River, San Dieguito Lagoon, Lake Hodges (Reservoir) |
| CWA 303(d) List: | Pacific Ocean Shoreline □Indicator Bacteria |
| Areas of Concern: | Surface water quality degradation, habitat degradation and loss, invasive species, and increased imperviousness |
| Sources of Problems: | Urban runoff, agricultural runoff, and domestic animals |
| Human Population: | 129,776 (2000); 181,698 (2010 Forecast); 224,491 (2020 Forecast); 241,357 (2030 Forecast) |
| Cities in Watershed: | Del Mar, Escondido, Poway, San Diego, Solana Beach |
| Important hydrologic resources: | 55-mile long, 80,000 acre San Dieguito River Park; 150 acre San Dieguito Lagoon; Five (5) water storage reservoirs including Lake Hodges, Lake Sutherland, and Lake Poway. |
| Major Issues/Problems: | The Pacific Ocean at the mouth of the San Dieguito River is listed as a 303(d)-impaired water body for elevated coliform bacteria. In the absence of a comprehensive watershed planning effort, large-scale future development may exasperate current water quality problems and create additional beneficial use impairments. The San Dieguito Lagoon is especially sensitive to the effects of pollutants and oxygen depletion due to restricted or intermittent tidal flushing. |
| Land Use: | Vacant/ undeveloped (54□), parks/ open space (29 □), and urban (18□). Nearly half of the vacant land area is open to future |

| | |
|---|---|
| | development, most of which is zoned for residential usage. |
| Other Facts: | |

### Other Education Outreach opportunities

Communities Alive in Nature, a local non-profit organization, implements education outreach programs to local school districts in San Diego County. One component of their education outreach program is to educate high school age students about water quality and how to assess water quality based on water chemistry and the biological community of benthic macroinvertebrates living within the streams. The Clean Water Program was invited to participate in a hands-on field training for these students to demonstrate how to properly use field test kits for water quality analysis and the proper protocols for collection of benthic macroinvertebrates. Clean Water Program staff participated in two training sessions for 9th grade students who attend Pacific Ridge School, a local private school. These two events were held on March 6 and March 13, 2008 at Dawson Reserve and Green Oaks Ranch respectively, both located in Vista along Agua Hedionda Creek. 42 students and ten adults participated in the training.

## 8.3.1 Targeting Underserved Communities

Underserved communities are communities the City has determined may require increased educational efforts. The City targeted the following underserved communities and high-risk behaviors.

### Mobile Businesses

Due to their nature, mobile businesses are typically not inspected during the routine industrial and commercial inspection program; therefore they may not be receiving the same educational material as other industrial and commercial businesses. The City plans to identify mobile businesses and develop educational outreach materials and information dissemination procedures appropriate for these businesses. Code Enforcement did respond to complaint calls related to mobile businesses.

### Spanish-speaking population

The City will continue to target the large Spanish-speaking population in the City by offering a number of educational brochures and handouts, including the Green Wrench Guide and Integrated Pest Management tip cards in both English and Spanish. Additional Spanish language education outreach materials will be developed in future years.

### Agricultural/Nursery/Greenhouse Operations

Due to the amount of agricultural land use in the City, the City distributed a number of printed educational materials to agricultural/nursery/greenhouse site owners and operators. The City also worked closely with the Natural Resources Conservation Service to provide technical assistance to these businesses with installing and maintaining BMPs specific to their operation. City staff promoted and distributed information on two regional workshops during the reporting period that targeted the agricultural community. On September 27, 2007, the San Diego County Farm Bureau sponsored the Ag Water Outlook for 2008 were attendees learned from water experts what to expect in 2008 to plan for water cuts while managing production. On March 27, 2008, the City of Oceanside sponsored the Water Quality Runoff Management & Agricultural

Waiver Workshop for Nurseries & Agricultural Businesses. This workshop was designed to help attendees better understand water quality runoff management and how the irrigated agricultural waiver would affect their operations.

### Over-Irrigation

Water meter reader personnel are trained to document and respond to IC/IDs and over-irrigation issues as they come across such activities during their normal activities. Informational door hangers about storm water runoff, including over irrigation, were left at residences and/or businesses noted to have runoff due to over-irrigation. These colorful door hangers also provide specific information about storm water runoff, how pollutants can reach local waterways, the affects of these pollutants on the waterways and what types of activities and materials can pollute waterways. Addresses of such residences and/or businesses were documented and may be used later to target problematic areas of the City. In addition, dry weather exceedance letters were sent to areas of the City determined to be a source for exceedances of nitrate, ammonia, phosphorus, and bacteria which, when found in elevated levels, are typically attributed to over-irrigation.

### Residential Car Washing

Residents continued to be encouraged to use professional car washes or to implement BMPs at their homes to prevent water produced by residential car washing from entering the storm water conveyance system. Dry weather exceedance letters were sent to areas of the City determined to be a significant source of detergents. In the future, the City may target areas that continue to be a problem with additional educational materials.

### Educational Signs – Pet Waste

During this reporting period it was determined that there was a need for informational signs regarding the proper removal and disposal of pet waste. The Clean Water Program received complaint calls from the public stating that in common areas and trails there are people who walk dogs and do not pickup the waste left behind. Past signs installed stated “Please pick up your pet’s waste – Poop pollutes our parks, rivers, and beaches. The City Code was also listed on the sign.

It was determined this year to install signs that were more direct about how poop pollutes our rivers creeks and streams. Signs installed during this reporting period state, “Pet waste transmits disease. Leash and clean up after your pet. Let’s keep this area clean. Up to $1,000 fine.” See the photo below for a picture of one of the signs installed.

During this reporting period five (5) signs were installed in two areas of the City. Since installation of these signs complaints regarding pet waste not picked up in these two areas have not occurred. See Table 8-5 for locations and numbers of signs installed.

**Table 8-5. Pet Waste Signs Installed in the City during the 2007-08 Reporting Year.**

| Date Installed | Sign Location | Number of Signs | Brief Description |
|---|---|---|---|
| 12/24/2007 | 3903 Waring Road | 2 | Grass area between sidewalk and curb where people walk their dogs |
| 6/24/2008 | Peacock Blvd. | 3 | Median area in neighborhood where people walk their dogs. |
| | **Total Signs Installed** | **5** | |

In previous reporting periods, 52 pet waste signs were installed in each City park and along the San Luis Rey River bike path. A photo of these signs is shown.

### Education Materials Distributed

Materials are regularly developed and updated to provide residents, the general public, and students with information about urban runoff, water quality, BMPs, Clean Water Program projects, and the Urban Runoff Hotline number. These materials include brochures and promotional items that are distributed upon request and during community events where the Clean Water Program staff a booth. No significant changes were made to any of the brochures during this reporting period. Copies of these brochures were submitted with previous annual reports. Table 8-6 lists the educational materials distributed during the 2007-2008 reporting period.

**Table 8-6. Educational Brochures and Promotional Items Developed and/or Distributed.**

| Education Material | Description | Number Distributed |
|---|---|---|
| **Educational Brochures** | | |
| Urban Runoff Guidelines for Residents Brochure | Provides information about urban runoff and the connection to water quality, as well as typical impacts resulting from residential activities, BMPs to prevent urban runoff pollution, hotline for potential violations, and website address for more information. | 250 |
| Pollution Prevention Tips for Gardening Activities Brochure | Provides information about urban runoff and the connection to water quality, as well as typical impacts resulting from gardening activities, BMPs to prevent urban runoff pollution, hotline for potential violations, and website address for more information. | 150 |
| Urban Runoff Guidelines for Commercial Businesses Brochure | Provides information about urban runoff and the connection to water quality, as well as typical impacts resulting from commercial and industrial business activities, BMPs to prevent urban runoff pollution, hotline for potential violations, and website address for more information. | 150 |
| Urban Runoff BMPs for Construction Projects handout | Provides information about urban runoff and the connection to water quality, as well as typical impacts resulting from home-improvement activities, BMPs to prevent urban runoff pollution, hotline for potential violations, and website address for more information. | 350 |
| Urban Runoff Guidelines for Powerwashers | Provides information about urban runoff and the connection to water quality, as well as typical impacts resulting from powerwashing activities, BMPs to prevent urban runoff pollution, hotline for potential violations, and website address for more information. | 100 |
| Guide to Oceanside Waterbodies Booklet | A colorful introduction to the waterbodies in Oceanside. The Guide is intended to help residents develop a sense of stewardship, as well as provide information about local creeks, rivers, lakes, wetlands, and lagoons, the history behind each waterbody, and stakeholder information. In addition, the Guide includes a description of a watershed and current monitoring programs implemented to test recreational water quality. | 300 |
| | **Total number of educational brochures distributed during this reporting period.** | **1,300** |
| **Promotional Items** | | |
| Urban Runoff Hotline and Website magnets | Magnets were distributed with the Clean Water Program logo, website address and Urban Runoff Hotline. | 500 |
| Poop Pollutes magnets | Magnets were developed to remind residents to pick up their pet's waste. | 500 |

| | | |
|---|---|---|
| Poop Pollutes Pet Waste Bag Dispensers | Pet waste bag dispensers were distributed at community events. The Poop Pollutes education message was attached as a sticker. | 50 |
| Protect Our Water bags | These 14 inch x 12 inch bags display a list of residential BMPs, Clean Water Program address and hotline number, and the Program tagline "You are the solution to water pollution." Distributed approximately 500. | 500 |
| Click Message Pen | Each pen has Oceanside's Urban Runoff Hotline phone number as well as the following text, "Protect our Waterways: sweep sidewalks, reduce pesticide use, recycle motor oil and filters, eliminate irrigation runoff, pickup pet waste, and pickup litter and cigarette filters." | 1,042 |
| Pencils made from recycled money and denim | Each pencil has Oceanside's Urban Runoff Hotline phone number. | 2,500 |
| Decals | These static cling decals have Oceanside's Urban Runoff Hotline phone number and can be placed on the windshield for quick reference to report potential storm water violations. | 250 |
| Letter opener | These letter openers have Oceanside's Urban Runoff Hotline phone number and were distributed to City employees only during municipal training sessions. | 250 |
| Stress Earth Ball | These squeezable earth balls have Oceanside's Urban Runoff Hotline phone number and were distributed to City employees during municipal training sessions as well as at community events. | 500 |
| Gel Pen | These gel pens have Oceanside's Urban Runoff Hotline phone number and were distributed to City employees only during municipal training sessions. | 300 |
| Goodie Bags | These vinyl bags have ten ways to protect our water and Oceanside's Urban Runoff Hotline and were distributed to school and scout troops (filled with other promotional items) and handed out at community event booths. | 1,000 |
| Tote Bags | These reusable tote bags are made from recycled plastic and have Oceanside's Urban Runoff Hotline phone number and Oceanside's Recycling Hotline phone number. They were distributed to employees during municipal storm water training sessions and as give-away option for beach and creek cleanup volunteers. | 500 |
| Bracelets | These translucent blue bracelets state "I Love Clean Water City of Oceanside Clean Water Program" and were distributed to children during community events and in goodie bags for classroom presentations. | 500 |
| Flashlights | These flashlights have the Clean Water Program name on them and were provided as a raffle item during municipal training sessions. | 25 |
| | **Total number of promotional items distributed during this reporting period.** | **8,417** |

**Figure 8-1. Promotional Items Distributed During Reporting Year 2007-08.**

## 8.4 Outreach Component Effectiveness Assessment (Optional)

See Section 11.0 for an assessment of the education component of the City's JURMP.

## 8.5 Program Review and Modification (Optional)

### Staff Training

The Clean Water Program will continue to implement its comprehensive municipal staff training program, including the implementation of pre- and post-test quizzes. The scores from the pre- and post-quizzes will continue to be assessed to determine the effectiveness of the training programs. If specific divisions or departments are in need of educational materials or reference materials related to storm water, the Clean Water Program staff will assist in the development of these materials to provide to those departments or divisions for dissemination or reference.

During the next reporting period all brochures will be reviewed for content and updated and reprinted with revised information, where needed.

# 9.0 PUBLIC PARTICIPATION COMPONENT

In order to ensure success with any City-wide program, the public must be involved. Stewardship and participation by the general public will increase the acceptance and willingness to comply with new regulations. The City of Oceanside has actively pursued public involvement in the Clean Water Program through the implementation of various programs and feedback mechanisms. This section documents the activities conducted by the City of Oceanside during the 2007-2008 reporting period to meet the requirements of Section D.6 of the Municipal Permit.

**Order 2007-0001 Compliance Summary**

| | |
|---|---|
| D.6 - Public Participation Component | See Entire Section 9 of this Annual Report |

## 9.1 Local Public Participation Opportunities

The City of Oceanside encourages its residents to become involved in the Clean Water Program in various ways. The variety of ways the public can participate in the Clean Water Program include reporting potential violations to the Urban Runoff Hotline, beach and creek cleanup events, and community events.

### 9.1.1 Urban Runoff Hotline

With the establishment of the Urban Runoff Hotline, (760) 435-5800, the public can report potential violations that could pollute the City's receiving waters. The Urban Runoff Hotline was promoted through a variety of media during this reporting period, including announcements on local television stations, placement on brochures, click-message pens, pencils, and other promotional "give-aways", and advertisement on the City's Clean Water Program webpage.
During the reporting period, fifty-five (55) calls were received on the Urban Runoff Hotline by residents concerning potential urban runoff violations. This is a significant increase from the 14 calls received during the 2006-07 reporting period (a 392% increase in call volume). In addition, Code Enforcement Officers received over 190 calls from residents regarding potential urban runoff violations.

### 9.1.2 Oceanside Eyes

In addition to the Urban Runoff Hotline City Staff is encouraged to participate in the Clean Water Program through the use of a special City Enhancement Hotline specifically for Oceanside employees called "Oceanside Eyes." This hotline is call incentive driven and promoted internally. During storm water classes for municipal staff, this hotline is mentioned as an alternative for calling the Urban Runoff Hotline.

### 9.1.3 Cleanup Events

*City Sponsored events*
To increase Oceanside residents' stewardship toward our local waterways, the Clean Water Program hosts annual cleanup events at every major waterway in Oceanside including Buena Vista Creek, Loma Alta Creek, San Luis Rey River and also hosts several beach cleanup events throughout the year. Each cleanup averages anywhere between 100 to 300 participants. During the 2007-08 reporting period, approximately 1,039 volunteers removed approximately 11.11 tons

of trash, debris, appliances, furniture, shopping carts and other unwanted material from Oceanside waterways.

*Private group sponsored events*
Also, private groups regularly approach the city to coordinate their own beach cleanup. The city of Oceanside including the Clean Water Program, Lifeguard division and the harbor maintenance staff support these groups by providing them guidance on what areas to target for cleanup, supplies for their event (bags and gloves) and safety instructions for the group. During this reporting period six private groups coordinated their own beach cleanup event in Oceanside. A total of 865 volunteers removed 485 pounds form Oceanside beaches.

One event coordinated by I Love A Clean San Diego included an aerial art photograph opportunity. This event titled Kids Ocean Day Cleanup was held on June 6, 2008 at the Oceanside City Beach, just south of the pier. This event alone had 800 participants who removed 100 pounds of trash from the beach and then arranged themselves for an aerial photograph taken by a hovering helicopter. See Figure 9-1 below for a picture of the aerial photo.

**Figure 9-1. June 6, 2008 Kids Ocean Day Cleanup and Aerial Photo.**

Between the City sponsored and private group sponsored events, 1,904 volunteers removed 15,705 pounds of trash and debris from Oceanside City beaches and the three waterways that traverse the City of Oceanside including, the San Luis Rey River, Loma Alta Creek and Buena Vista Creek. Table 9-1 lists cleanup events held between July 2007 and June 2008 to encourage community participation and education of the effects of urban runoff:

**Table 9-1. Cleanup Events Held during the 2007-08 Reporting Year.**

| Date | Event | Number of Participants | Pounds Tonnage of Waste Removed |
|---|---|---|---|
| **City Sponsored Cleanup Events** | | | |
| 7/5/2007 | Morning After Mess | 60 | 463 pounds |
| 9/15/2007 | Buena Vista Creek Cleanup | 130 | 5,500 pounds |
| 9/15/2007 | Oceanside Beach Cleanup | 300 | 257 pounds |

| Date | Event | Number of Participants | Pounds Tonnage of Waste Removed |
|---|---|---|---|
| 11/10/2007 | San Luis Rey River Cleanup | 136 | 1,000 pounds |
| 4/26/2008 | Loma Alta Creek Cleanup | 413 | 8,000 pounds |
| | **Total City Sponsored Events** | **1,039** | **15,220 pounds** |
| **Private Group Sponsored Events** | | | |
| 01/10/2008 | Oceanside High School Environmental Club | 10 | 10 pounds |
| 02/23/2008 | Oceanside High School Baseball Players | 52 | 260 pounds |
| 4/05/2008 | Pacific Kiwanis High School Students | 25 | 50 pounds |
| 4/07/2008 | Vista High School Key Club | 5 | 10 pounds |
| 4/19/2008 | Black Student Union Cal State San Marcos | 33 | 55 pounds |
| 6/06/2008 | Kid's Oceanside Beach Cleanup | 800 | 100 pounds |
| | **Total Private Group Events** | **865** | **485 pounds** |
| | **Grand Totals** | **1,904** | **15,705 pounds** |

*Cleanup event mailing lists*

During this reporting period and in previous years all volunteers were placed on a mailing list and were periodically mailed fliers with event information allowing them a sense of ownership and responsibility toward the Program. See Attachment 9-A for 2007-08 reporting year fliers mailed to past participants. In order to become more environmentally conscious and use less paper, during the next reporting period, the Clean Water Program will create an email distribution list as a way to inform interested parties about upcoming cleanup events. This will save time for staff to update mailing labels and eliminate the postage and printing costs for mailing these fliers.

### 9.1.4 Oceanside Update Show

Clean Water Program staff appear regularly on the Oceanside Update Show broadcast through Oceanside Channel KOCT. Each spot allows staff to spend three to five minutes discussing specific storm water pollution programs, pollution prevention, and BMPs to reduce impacts. The show is broadcast twice daily at 7:00 a.m. and 7:00 p.m. Topics are varied with every taping of Oceanside Update, therefore the viewing audience learns about a multitude of BMPs. While KOCT is unable to determine the actual number of residents who watch Channels 17 and 18 regularly or for any length of time, both channels broadcast to approximately 50,000 Oceanside households. Table 9-2 summarizes topics discussed each month in which the Clean Water Program aired a spot:

**Table 9-2. Summary of Oceanside Update Topics by Month.**

| Date | Topic Discussed |
|---|---|
| August 2007 | Water conservation & irrigation runoff |
| September 2007 | Proper hookup for RV sewage dumping at the Oceanside Harbor RV dump station |
| November 2007 | Water conservation & irrigation runoff |
| December 2007 | Irrigation runoff & its connection to polluted runoff |
| February 2008 | BMPs for residents during rainy season |
| April 2008 | Loma Alta Creek Cleanup |
| June 2008 | Strom drains are different that sewers |

### 9.1.5 Additional Public Participation Opportunities

Other opportunities for local public participation during this reporting period are discussed below.

*Interpublic Education.* The City has developed programs to educate the public and various target communities of the JURMP and the numerous ways the public can contribute to reducing pollution of the City's waterways and Receiving Waters. However, the City recognizes that no matter how many educational programs it implements, there will always be a need for ongoing outreach to various audiences. Therefore, "spreading the word" is another significant effort that the public will be encouraged to participate in that will substantially contribute to the success of the JURMP. When speaking with the public about urban runoff issues, they are encouraged to speak with neighbors about how everyday activities can potentially pollute local waterways.

During this reporting period the Clean Water Program was contacted by a city resident living in a neighborhood with a Homeowners Association. This resident requested informational brochures that could be distributed to households in the neighborhood that address urban runoff and water conservation information. Brochures and information provided to the resident for distribution were as follows:

- Urban Runoff Guidelines for Residents – 125 each
- Pollution Prevention Tips for Gardening Activities - 125
- Pollution Prevention Tips for Landscape Contractors – 5
- Miscellaneous promotional items

The City will continue to provide homeowners associations with informational brochures for distribution throughout their communities.

*City Staff Activities*. City staff is the public at work. Staff is encouraged to report violations and provide feedback on the implementation of the JURMP. City staff is the eyes and ears of the City, and can provide valuable information on which components and programs are working and provide suggestions or recommendations on improving the programs. The City staff is provided an incentive based hotline called Oceanside Eyes for reporting potential runoff violations as well as other problems that require remediation, such as road repair or infrastructure maintenance needs. In addition, City staff provides feedback during municipal training sessions, information meetings, and by direct contact with the Clean Water Program Manager and staff. Comments are discussed and if changes can be made to better improve the program, then they are planned and implemented.

## 9.2 Regional Public Participation Opportunities

This section describes those mechanisms available, at the regional level, for the public to participate in to assist in the implementation of regional JURMP related programs and to provide feedback to the Copermittees and contribute to the continuing development of the numerous JURMPs in effect around the County:

### 9.2.1 Media

Outreach to the public through the media serves as a widespread public education BMP. These messages also promote public participation and further stewardship of the City's MS4 and receiving waters. Press releases for cleanup events were sent to local media outlets to request placing information in the publications. Media is an important element of public participation and keeps communication open between government staff and the public.

During Fiscal year 2007-08 three events were covered in the following publications:

- September 15, 2007 Coastal Cleanup Day – Article in The Coast News providing an overview of the event.
- November 10, 2007 San Luis Rey River Cleanup Event – Article in North County Times; front page of local section
- April 26, 2008 Loma Alta Creek Cleanup Event – Advertisement in local publication titled *Kids Stuff*.

Copies of the media coverage are located in Attachment 9-B.

### 9.2.2 Regional Events

*San Diego County Fair* The San Diego Regional Storm Water Copermittees sponsored the San Diego County Fair (Fair) in 2008 as an education and outreach activity. The sponsorship was a joint effort between the City of San Diego's Think Blue program and the regional Copermittees with each entity contributing approximately half towards the overall cost. The Fair was selected as a regional event due to its unique ability to potentially reach more than one million San Diegans and convey a strong environmental message. The Residential Sources and Outreach Workgroup (Outreach Workgroup) was responsible for overseeing sponsorship activities with the City of San Diego leading the coordination and implementation efforts.

The 2008 Fair was held June 14th through July 6th, spanning two fiscal years and will be included in both the FY 07/08 and FY 08/09 annual reports. The attendance for the fair was estimated at 1,235,698 persons for the 21 days the event occurred. Sponsorship for the Fair included staffing an outreach booth for 11 days, in which the majority of the jurisdictions provided staffing support. Two staff people from the City of Oceanside's Clean Water Program staffed the booth on June 21, 2008.

The outreach booth served as the primary method for educating the public about watershed protection and pollution prevention. The Outreach Workgroup elected to promote Integrated Pest Management (IPM) as the primary theme and collaborated on the distribution of IPM materials in both English and Spanish. Individual jurisdictions were invited to distribute their own materials in addition to the IPM materials. The Copermittees received credit as both a Flower & Garden Show sponsor and an Enviro-Fair sponsor.

Think Blue was designated as the brand for the Copermittees' during the event and signage demarking the symbol included banners, planter box displays and recycle bin stickers, which were visible at over 500 locations throughout the Fair. Media exposure included TV, radio and press releases. The sponsorship was printed in both the Fair program and included on the Fair map. Other promotions included newspaper advertisements, electronic messaging over the Jumbo Tron, website logos and links, and PA system announcements in both English and Spanish.

Think Blue, City of San Diego developed an event survey for the purposes of assessment. Over 1,200 survey cards were completed during the 11 days the booth was staffed. The questions focused on general storm water knowledge and awareness. The results are being tabulated and will be reported in FY 08/09.

*Copermittee Meetings.* Similar to Project Clean Water, the Copermittees meetings provide opportunities for public participation. Attendees include a wide variety of experts, including representatives of federal, state and local agencies, industry representatives, environmental groups, consulting firms, product vendors, general public, and academic and research institutions. Throughout the meeting, local municipality representatives are provided the opportunity to share recent water quality events. The meeting provides a venue to discuss the latest issues facing the various Copermittees and provides valuable insight into the current regional Urban Runoff issues. Public participation helps promote conversation and education on evolving industry standards.

*Regional Hotlines.* The regional hotlines provide a direct connection for public participation. Historically, the hotlines have worked well and should continue to increase in use as more people are educated of the hotline and the types of issues to report. The City will encourage reporting through its local hotlines, however, the regional hotlines will serve as an alternative to the local hotlines and also provide an opportunity for reporting by visitors to the City, from other areas in the County, who are not familiar with the local hotlines.

# 10.0 FISCAL ANALYSIS COMPONENT

The City of Oceanside acquires the funds necessary to facilitate the City's storm water program through four departments or divisions in the City: Water Utilities, Public Works, Engineering and Code Enforcement. Much of City's storm water program falls under the responsibility of these four departments/divisions. Funds obtained for use in implementing the City's storm water program are utilized for a number of different programs, including jurisdictional, watershed, and regional programs. This section documents the activities conducted by the City of Oceanside during the 2007-2008 reporting period to meet the requirements of Section G of the Municipal Permit Order 2007-0001.

**Order 2007-0001 Compliance Summary**

| | |
|---|---|
| G: Fiscal Analysis Component | See Entire Section 10 of this Annual Report |

Effective programs require adequate funding to implement planned activities. The first step in securing adequate funding for the JURMP is to provide a strategy for effectively conducting a fiscal analysis of the JURMP in its entirety. This year's fiscal analysis included an evaluation of the expenditures (such as capital, operation and maintenance, education, and administrative expenditures) necessary to accomplish the activities described in the JURMP and required under investigation orders and Total Maximum Daily Loads (TMDLs).

## 10.1 Fiscal Analysis Methods

### 10.1.1 Program Funding

As previously mentioned, the City secures funding for the implementation of the storm water program through the Water Utilities, Public Works, Engineering and Code Enforcement departments/divisions in the City. To secure adequate funding, the Water Utilities Department collects a Clean Water Program surcharge. The surcharge is based on the customer's water consumption, so the surcharge is also designed as an incentive for individuals to conserve water. During this reporting period an increase in the surcharge was secured in order to cover significant increases in costs due to additional requirements under Permit Order 2007-001, Investigation Orders, and TMDLs. This amount is equal to $.07 per unit of water used.

The Land Use Planning and Development department secures funding from development-related programs. The Engineering Division receives funding through fees assessed on developers for grading plan checks and inspections. Funding for Public Works departments is obtained through general allocations to the department.

### 10.1.2 Urban Runoff Management Programs

The City's storm water budget is used to support the following expenditure categories:

- Administration of the City's Clean Water Program
- Development Programs
- Capital Improvement Projects/Storm Water Pollution Compliance Programs
- Storm Drain Improvements

- Solid Waste
- Flood Control
- Street and Median Maintenance

Personnel from various City divisions/departments are involved in the implementation of the City's storm water program. Refer to Section 2 and the City's certification letter in Appendix A of the City's 2008 JURMP for further detail regarding the responsibilities of various departments. Other program expenditures include watershed and regional storm water activities.

### 10.1.3 Expenditure and Budget Reporting

Following are the expenditures for fiscal year 2007-08 as well as a proposed budget for the next fiscal year. The fiscal year expenditures are presented in tabular format with separate rows for different expenditure categories and the associated budget. The budget for the next fiscal year is presented in the same table.

The JURMP budgeting for the Water Clean Water Program which includes various departments is described in the following sections and summarized in Table 10-1 at the end of this section. During this reporting year two full-time positions were added under the Clean Water Program. These two positions were added to address the significant increase of inspection requirements for the industrial/commercial component. Currently there are eight staff people dedicated to the City's Clean Water Program.

- One full-time Clean Water Program/JURMP Coordinator
- Two full-time Environmental Specialists (focusing on water quality monitoring, education outreach, and program administration)
- Two full-time Code Enforcement Officers
- Two full-time CWP inspectors (new staff additions this year)
- One full-time Engineering Assistant (focusing on SUSMP and future HMP)

#### 10.1.3.1 Water Utilities Department

The surcharge rate described above under Program Funding is listed as a separate line item on Oceanside customers' utility bills. This allows for the clear delineation of the revenue being secured for the Clean Water Program in the Water Utilities section of the utility bill. The costs to administer the Clean Water Program during Fiscal Year 2007-08 totaled $1,367,346. It is anticipated that the Water Utilities Department will expend $1,124,987 during Fiscal year 2008-09.

#### 10.1.3.2 Public Works

The overall cost of the City's street sweeping program is estimated at $907,000 during this reporting period. This includes $442,000 for equipment costs and $465,000 for staff costs. With a total of 1,142 miles of public streets maintained in the City at a cost of $907,000, this averages out to $794.22 per mile. This cost does not account for the additional curb miles swept more frequently than others within the City and does not account for the parking lots swept. During future reporting periods, the city will develop a more refined length of curb miles to accommodate for the streets that are swept more than once monthly.

The cost for inspection and maintenance of the MS4 was $351,910 during this reporting period. These costs are expected to increase to $360,580 during fiscal year 2008-09. During Fiscal year 2007-08 the Public Works Department spent approximately $1,323,910. It is anticipated that the Public Works Department will expend $1,369,580 during Fiscal year 2008-09.

#### 10.1.3.3 Engineering

Municipal Permit Order 2007-001 requires an increased focus and effort in development-related review and inspection, development of a Hydromodification Plan and revisions to the Standard Urban Storm Water Mitigation Plan. The approximate costs to implement this program during Fiscal year 2007-08 totaled $272,510. It is anticipated that Engineering Department will expend $275,006 during Fiscal year 2008-09.

#### 10.1.3.4 Overall Clean Water Program Costs

During Fiscal Year 2007-08 approximately $2,963,766 was expended amongst four departments (including Code Enforcement) for the implementation of the Clean Water Program. It is anticipated that the total program costs for Fiscal Year 2008-09 will total $2,769,573. This reduction is due to the fact that the majority of the costs for the Lagoon TMDL Investigation Order was appropriated during the first year of the two year program.

**Figure 10-1. JURMP Budgeting for Water Utilities, Public Works and Engineering Departments/Divisions.**

| Department | Item | Fiscal Year 2007-2008 | Projected Fiscal Year 2008-2009 |
|---|---|---|---|
| **Water Utilities** | Personnel (including Code Enforcement) | 410,330 | 588,767 |
| | Misc. office supplies, postage, uniforms | 2,000 | 3,200 |
| | Print Materials | 0 | 30,000 |
| | Monitoring Programs including lab materials, supplies and services | 17,191 | 103,000 |
| | Other Misc Cleanups and booths | 73,000 | 34,500 |
| | Consultant Fees Investigation Order, TMDL and Regional Monitoring Programs | 730,440 | 151,678 |
| | Independent Contractors | 0 | 39,000 |
| | Permits | 135,000 | 25,000 |
| | Dues, Travel, Advertising | 9,400 | 16,450 |
| | Equipment | 2,000 | 20,000 |
| | Regional URMP Activities | 16,815 | 51,615 |
| | Watershed URMP Activities | 41,521 | 47,180 |
| | Regional Education | 10,656 | 11,082 |
| | Effectiveness Assessment | 3,256 | 3,515 |
| **Water Utilities** | **Total** | **1,367,346** | **1,124,987** |
| **Public Works** | Street Sweeping (Equipment) | 442,000 | 460,000 |
| | Street Sweeping (staffing and /or contract costs) | 465,000 | 484,000 |
| | Conveyance System Cleaning (Contracted Work and City Staff | 351,910 | 360,580 |
| | Personnel for CWP Monitoring | 65,000 | 65,000 |
| **Public Works** | **Total** | **1,323,910** | **1,369,580** |
| **Engineering** | Personnel | 250,000 | 260,000 |
| | Hydromodificaiton Plan | 22,510 | 15,006 |
| **Engineering** | **Total** | **272,510** | **275,006** |
| | | | |
| | **Grand Total** | **2,963,766** | **2,769,573** |

# 11.0 EFFECTIVENESS ASSESSMENT COMPONENT

## 11.1 Introduction

Effectiveness assessment is an important component of the JURMP because it can assist the City in determining which programs, and program components, are effectively improving water quality or leading to water quality improvement. The San Diego County Copermittees developed two guidance documents to assist in the assessment of the JURMP components as well as the jurisdictions overall JURMP program. These two documents are titled *A Framework for Assessing the Effectiveness of Jurisdictional Urban Runoff Management Programs* and the *Baseline Long-term Effectiveness Assessment* (BLTEA). The City participated in regional efforts to develop these documents in anticipation of the requirement to assess their JURMP programs.

The City gathered and evaluated data for some of the program components for assessment during this reporting period. This data will be valuable for incorporation into long-term effectiveness evaluation on a jurisdictional level. In future reporting years the issue of standardized assessment metrics and procedures will be addressed by the Copermittees. The City anticipates participation in the further development of these work products.

Implementation of the City's JURMP is intended to reduce discharges of urban runoff related pollution to the MEP. The City regularly evaluates its program to make it as effective as possible. The overall structure of the City's storm water program is composed of three primary components:

- Program Planning
- Program Implementation
- Effectiveness Assessment

The process typically proceeds from planning to implementation to assessment, although in practice all three may be in progress at the same time. The initial step is program planning, which requires identifying potential pollutant sources, establishing BMP requirements, and establishing targeted outcomes and ways to measure those outcomes.

Next the program developed during the planning step is implemented. Program implementation is assessed each year using the methods developed in the program planning stage and reported in JURMP annual reports. The conclusions from these assessments are used during the next round of program planning to incorporate improvements to the program and refine the assessment technique. The effectiveness assessment approach developed by the Copermittees during the 2005-06 permit cycle includes six different levels of targeted outcomes. Each successive level represents a step up from more easily measured, activity-based outcomes to more difficult to measure, quality-based outcomes. The levels are listed below.

- Level 1: Compliance with Activity-Based Permit Requirements
- Level 2: Changes in Knowledge/Awareness
- Level 3: Behavioral Change/BMP Implementation

- Level 4: Load Reductions
- Level 5: Changes in Discharge Quality
- Level 6: Changes in Receiving Water Quality

The establishment of measurable outcomes is necessary for both incremental program component improvements and as a basis for future establishment of relationships between implementation and water quality improvement outcomes.

## 11.2 Effectiveness Assessment Results

The Municipal Permit Order 2007-0001 requires the City to assess the effectiveness of each significant activity for each program component, for each program component as a whole, and for the storm water program as a whole. Levels 1, 2, 3, 4, 5, and 6 outcomes are discussed in the text below. As has been noted in the recently released CASQA effectiveness assessment guidance, methods for integrated assessment—assessment that combines both monitoring data and programmatic data—are still under development at regional and statewide levels (CASQA, 2007).

### 11.2.1 Outcome level assessments

**Level 1 – Compliance with Activity-Based Permit Requirements: Documenting Activities**

Compliance with Activity-based permit requirements is intended to provide a quantitative assessment that reflects the regional long-term effectiveness assessment framework through targeted outcomes for the City based on various components of the Municipal Permit. Level 1 outcomes take the form of a simple yes or no answer basically answering "Was the control measure completed?" or it may provide feedback that may be quantified, counted, or tracked over time to demonstrate effort or progress. This may take the look of the number of tasks completed

**Level 2 – Changes in Knowledge/Awareness: Raising Awareness**

An important goal of stormwater programs is to increase the level of knowledge and awareness among target audiences such as residents, businesses, and municipal employees. Level 2 outcomes provide program managers feedback on how effective the various control measures have been in raising awareness and changing attitudes of the target audience.

**Level 3 – Behavioral Change/BMP Implementation: Changing Behavior**

A key focus of the stormwater management program is to effect changes in behavior. By building increases in knowledge and awareness (Level 2), level 3 outcomes provide program managers with feedback on how effective the program elements and control measures have been in motivating target audiences to change their behaviors and implement appropriate BMPs.

**Level 4 – Load Reductions: Reducing Loads from Sources**

Many control measures are intended to reduce the loading of pollutants from targeted sources. Load reductions should, in turn, result in improvements to discharge and

receiving water quality. Assessment of Level 4 outcomes is feasible for some programs that directly measure the amounts of pollutant removal, such as MS4 cleaning.

**Level 5 – Changes in Discharge Quality: Improving Runoff Quality**
A primary focus of stormwater management programs is to reduce pollutants in stormwater to the maximum extent practicable, and to ensure that these discharges do not cause or contribute to violations of water quality standards in receiving waters. At this level baseline measurements of runoff quality are measured to allow comparison. Measurable changes requirements frames of a year or greater. And, multi-year data sets are needed in order to have any confidence in the measured change.

**Level 6 – Changes in Receiving Water Quality: Protecting Receiving Water Quality**
The ultimate objective of stormwater management programs is the protection of water bodies. At level 6, program mangers will focus on outcomes such as compliance with water quality standards, protection of biological integrity, and beneficial use attainment.

**Summary**
Program elements and control measures will typically have outcomes at more than one of the levels described above and not all outcome levels will necessarily be applicable to all activities. The information submitted with this report will address levels 1, 2, 3 and 4. Section 7 of this report, IDDE, will be submitted prior to December 15 and will address level 5.

## 11.2.2 Overall Component Assessments

### 11.2.2.1 Development Planning

The City's review process for development projects is effectively requiring higher removal efficiency BMPs. Based on some interaction with responsible parties after the end of the reporting period and the results of the treatment control inspections, it appears that there is a consistent desire by developers to include just structural BMPs instead of a combination of structural and treatment controls BMPs. The City will work with the parties responsible for maintenance of treatment control BMPs to address this issue during 2008/2009. The following information highlights the Development Component of the City's JURMP. Table 11-1 presents the level 1 effectiveness assessment.

*Revised SUSMP Manual*
The City of Oceanside Interim Local SUSMP is based on the Interim Model SUSMP developed collectively by the Copermittees to address post-construction urban runoff pollution from new development and redevelopment projects that fall under both "priority project" and "standard project" categories. The general goal of the SUSMP is to develop and implement practicable policies to ensure to the maximum extent practicable that development does not increase pollutant loads from a project site and urban runoff flow rates, volumes, velocities, and durations. This goal may be achieved through site-specific controls and/or drainage area-based structural treatment controls. The City's Interim Local SUSMP identifies appropriate BMPs for certain designated project types to achieve this goal. Projects that fall identified as priority projects are required to prepare a Stormwater Mitigation Plan (SWMP). Development projects not qualifying as priority projects will be required to prepare a Runoff Assessment Report (RAR) as specified in

this SUSMP. The RAR will require the applicant to incorporate LID concepts, site design BMPs, and source control BMPs in the project design, but no structural treatment control BMPs will be required. The manual is available on the Clean Water Program website.

*Interdepartmental Coordination*
The City's SUSMP and development review process includes multiple departments and divisions throughout the City. The City has taken necessary steps to maintain compliance with SUSMP requirements through the coordination of these multiple departments and divisions.

*Dedicated Storm Water Management Program*
The City established the Clean Water Program (CWP) in 2001 under the Water Utilities Department. The CWP program in conjunction with the Engineering Department provides the necessary oversight for all management components of the SUSMP. During this reporting period the Engineering Department hired a full time storm water plan check reviewer.

**Table 11-1. Development Planning – Level 1: Compliance with Activity-Based Permit Requirements: Documenting Activities.**

| Permit Section | Activity Source Type | Targeted Outcome | Actual | Measures of Success | |
|---|---|---|---|---|---|
| Development Planning D.1.e | Development Projects | Projects needing SWMP | Projects completing SWMP | Actual/Target | Percent ( ) Completion |
| | Priority Projects (Required SWMP) | 36 | 36 | 36/36 | 100 |
| | | Sites needing RAR | Sites completing RAR | Actual/Target | |
| | Standard Projects (Require RAR) | 4 | 4 | 4/4 | 100 |
| | SUSMP Inspections | Sites targeted for Inspection | Sites Inspected | Actual/Target | |
| | High, Medium and Low Priority Sites (Total 41) | 41 | 41 | 41/41 | 100 |

As the City continues to grow and evolve, challenges associated with data management emerges such as tracking of post-construction BMPs, maintenances agreements, and associated documents. It is important to update available tools with up-to-date information. This will be an issue to address during the next reporting period.

#### 11.2.2.2 Construction

The construction component of the City's JURMP continues to be effectively implemented through inspection and enforcement, education and training and BMP

maintenance (Table 11-2). As construction activities continue, the City will maintain the level of performance established from past years, and continue to meet the regulatory standards mandated in the Municipal permit.

**Table 11-2. Construction – Level 1: Compliance with Activity-Based Permit Requirements: Documenting Activities.**

| Permit Section | Activity Source Type | Targeted Outcome | Actual | Measures of Success | |
|---|---|---|---|---|---|
| Development Planning D.2.d | Construction Projects | sites targeted for Inspection | sites inspected | Actual/Target | Percent ( ) Completion |
| | High Priority Sites | 20 | 20 | 20/20 | 100 |
| | Medium Priority | 29 | 29 | 29/29 | 100 |
| | Low Priority Sites | 26 | 26 | 26/26 | 100 |

### 11.2.2.3 Municipal

The municipal component of the City's JURMP continues to provide a well-rounded approach and will continue to implement a comprehensive education program along with inspections of municipal facilities, MS4 maintenance, sanitary sewer slip-lining and street sweeping (Table 11-3).

**Table 11-3. Municipal – Level 1: Compliance with Activity-Based Requirements; Level 4 - Load Reductions: Reducing Loads from Sources.**

| Permit Section | Activity Source Type | Targeted Outcome | Actual | Measures of Success | |
|---|---|---|---|---|---|
| Municipal D.3.a | Municipal Facilities | of sites to be inspected | of sites actually inspected | Actual/Target | Percent ( ) Completion |
| | (High, Medium and Low priority facilities) | 230 | 230 | 230/230 | 100 |
| | MS4 | of catch Basins to be cleaned | of catch Basins actually cleaned | Actual/Target | Percent ( ) Completion |
| | Catch basins cleaned | 3,252 | 3,252 | 3,252/3,000 | 100 |
| | Sanitary Sewer | of feet to be slip-lined | of feet actually slip-lined | Actual/Target | Percent ( ) Completion |
| | Feet of sewer slip-lined | 5,352 | 7,252 | 7,252/5,352 | 135 |
| | Street Sweeping | of miles of streets to be swept | of miles of streets actually swept | Actual/Target | Percent ( ) Completion |
| | Miles of street swept | 571 | 571 | 571/571 | 100 |

In addition the City implemented a training program that provided pre- and post-quizzes to assess the effectiveness of the training course specific to each department or division. During the 2007-08 reporting year, 298 City staff was trained on the City's storm water program requirements. Pre- and post- tests were given to assess the level of knowledge before and after each training session. Depending on the nature of the employee's department, the employee's were given a 15 or a 20 questions test. One training program and its associated quiz targeted staff who work at and maintain industrial facilities. The other training programs targeted City staff that worked in various departments including fleet maintenance, parks and recreation and street maintenance. The average City pre-test score was 64% percent of the questions correct. The average City post-test score was 98% percent of the questions correct. Figure 11-1 presents the pre- and post-test scores by City department.

**Figure 11-1. Municipal – Level 2: Changes in Knowledge/Awareness: Raising Awareness.**

### 11.2.2.4 Industrial and Commercial

The City implements a comprehensive inspection program for industrial and commercial facilities including all restaurants and nursery and greenhouse operations. Table 11-4 provides an assessment for the inspections.

**Table 11-4. Industrial and Commercial Component - Level 1: Compliance with Activity-Based Requirements.**

| Permit Section | Activity Source Type | Targeted Outcome | Actual | Measures of Success | |
|---|---|---|---|---|---|
| Municipal D.3.b | Industrial Facilities | of sites to be inspected | of sites actually inspected | Actual/Target | Percent ( ) Completion |
| | High, priority facilities) | 52 | 52 | 52/52 | 100 |
| | Industrial Facilities | of sites to be inspected | of sites actually inspected | Actual/Target | Percent ( ) Completion |
| | Medium and Low priority facilities | As Needed | 75 | N/A | N/A |
| | Commercial Facilities | of sites to be inspected | of sites actually inspected | Actual/Target | Percent ( ) Completion |
| | High priority facilities - Restaurants | 371 | 371 | 371/371 | 100 |
| | Commercial Facilities | of sites to be inspected | of sites actually inspected | Actual/Target | Percent ( ) Completion |
| | High priority facilities Other than restaurants | 94 | 94 | 94/94 | 100 |
| | Commercial Facilities | of sites to be inspected | of sites actually inspected | Actual/Target | Percent ( ) Completion |
| | Medium and Low priority facilities | As needed | 104 | N/A | N/A |
| | Nursery and Greenhouses | of sites to be inspected | of sites actually inspected | Actual/Target | Percent ( ) Completion |
| | All High Priority | 28 | 28 | 28/28 | 100 |

During inspections of industrial, commercial, and nursery and greenhouse operations, City staff and contractors rated the overall level of storm water knowledge and the level of BMP implementation while completing the inspection. The knowledge assessment ratings were designed to gauge awareness of storm water pollution prevention and implementation of effective BMPs. Table 11-5 presents the basis for the ratings.

**Table 11-5. Description of Effectiveness Assessment Levels for Inspections.**

| Overall Level of Knowledge | |
|---|---|
| **Level** | **Description** |
| 5 | Individual demonstrated an in depth knowledge of the storm water program and BMPs consistent with the facility's activities and operations. |
| 4 | Individual has a clear understanding of BMPs but may not have a clear awareness of the connection between pollution prevention and water quality. |
| 3 | Individual has a general understanding of storm water issues ("*I've heard something about that*"), but not specific storm water requirements or BMPs required for the facility. |
| 2 | Individual has a general awareness of water quality issues, but does not understand the requirements of the storm water program, BMPs, or pollution prevention. |
| 1 | Individual has never heard of the storm water program, requirements, or BMPs. This individual does know what BMPs are or understand how to implement them. |
| **Overall BMP Assessment** | |
| 5 | All BMPs implemented effectively. No violations noted during the inspection. |
| 4 | BMPs implemented effectively, however minor violations associated with communal areas or good housekeeping practices (i.e., dumpsters open, leaves in the parking lot, etc.) were noted during the inspection. |
| 3 | BMPs have been implemented throughout the site, but not properly or adequately maintained. Violations were noted during the inspection and a verbal notice was issued. A detailed inspection report or written Warning Notice may follow. |
| 2 | BMPs have not been implemented. Several violations were noted during the inspection, however an illegal discharge was not observed. A detailed inspection report and/or written warning was issued. |
| 1 | **An illegal discharge was noted during the inspection**. Enforcement actions (NOV, citation, etc.) required. |

During the 2007-08 reporting year, the majority of ratings for overall level of storm water knowledge was a Level 3 based on Table 11-5 above. This indicates that the facility manager or responsible party had a general understanding of storm water issues, but not specific storm water requirements of BMPs required for the facility. Figure 11-2 presents the overall level of knowledge assessment for 2007-08 industrial and commercial inspections with the levels shown by facility type.

The majority of ratings for overall BMP assessment were also a Level 3 based on Table 11-5 above (Figure 11-3). This indicates that BMPs have been implemented throughout the site, but not properly or adequately maintained. However, there were more Level 4 and Level 5 ratings indicating a high level of effective BMP implementation in all types of facilities.

**Figure 11-2. Industrial and Commercial – Level 2: Changes in Knowledge/Awareness: Raising Awareness.**

**Figure 11-3. Industrial and Commercial – Level 2: Changes in Knowledge/Awareness: Raising Awareness.**

Comparison between the two questions shows that the inspected facilities of all types show a higher rating of BMP implementation than overall storm water knowledge, except for the nurseries and greenhouses. These facilities have a higher knowledge of general storm water pollution prevention practices than the industrial, commercial, and restaurant facilities.

#### 11.2.2.5 Residential

The City's residential component achieves BMP implementation through complaint response, education, and routine monitoring to detect IC/IDs. The City is also conducting additional monitoring studies to help identify and mitigate residential sources of pollution more effectively. Although fewer households participated in dropping off household hazardous waste during this reporting period, more quantity of household hazardous waste was collected for proper disposal (Table 11-6).

**Table 11-6. Residential Component - Behavioral Change/BMP Implementation Changing Behavior.**

| Permit Section | Activity Source Type | Targeted Outcome | Actual | Measures of Success | |
|---|---|---|---|---|---|
| Residential D.3.e | Household Hazardous Material | Quantity of waste targeted | Quantity of waste collected | Actual/Target | Percent ( ) Completion |
| | | 130.7 tons | 142.8 tons | 142.8/130.7 | 109 |
| | Households Participating in Program | of households targeted | of households participating | Actual/Target | Percent ( ) Completion |
| | | 3,688 | 3,430 | 3,430/3,688 | 93 |

#### 11.2.2.6 IDDE

An assessment of this component will be provided in Section 7 when the City submits the entire FY 2007-08 Illicit Discharge Detection and Elimination Component, including the 2008 Dry Weather Field Screening and Analytical Monitoring, no later than December 15, 2008.

#### 11.2.2.7 Education and Public Participation

The City implements a comprehensive education outreach program for both municipal staff and the public as well as a comprehensive public participation program (Table 11-7). See 11.2.2.3 above for an assessment of the Municipal training program. The City prides itself on educating children within its jurisdiction through the use of a watershed model.

**Table 11-7. Education and Public Participation Component - Compliance with Activity-Based Permit Requirements: Documenting Activities.**

| Permit Section | Activity Source Type | Targeted Outcome | Actual | Measures of Success | |
|---|---|---|---|---|---|
| Municipal D.3.g | Student Presentations | of presentations targeted | of presentations completed | Actual/Target | Percent ( ) Completion |
| | | 10 | 10 | 10/10 | 100 |
| | CWP Newsletters | of newsletters targeted for completion | of newsletters completed | Actual/Target | Percent ( ) Completion |
| | | 2 | 2 | 2/2 | 100 |
| | Oceanside Update Tapings | of tapings planned | of tapings completed | Actual/Target | Percent ( ) Completion |
| | | 6 | 7 | 7/6 | 116 |
| | Pet Waste Signs | of signs targeted for installation | of signs installed | Actual/Target | Percent ( ) Completion |
| | | 5 | 5 | 5/5 | 100 |
| | CWP Website | of targeted hits | of actual hits | Actual/Target | Percent ( ) Completion |
| | | 45,000 | 38,146 | 38,146/45,000 | 84.7 |

## 11.3 Program Review and Modification

No changes to the effectiveness assessment approach presented in the City's March 2008 JURMP have been made since the submittal of that document.

# 12.0 SPECIAL INVESTIGATIONS

## 12.1 Lower San Luis Rey Bacteria Source Identification Project

### 12.1.1 Overview

As part of the Proposition 50 Clean Beaches Initiative, the City of Oceanside has been awarded a grant to track the sources of bacteria in the Lower San Luis Rey River. The shoreline at the outlet of the San Luis Rey (SLR) River mouth in Oceanside, California is visited by thousands of people each year. Elevated levels of fecal indicator bacteria (FIB) have affected water quality in the river mouth and the adjacent shoreline. In 2007, this beach was posted due to bacterial exceedances for 54 days; in 2006, it was posted for 71 days; in 2005, this beach was posted for 209 days and 186 of those days were during one consecutive stretch. As a result of the exceedances, the river mouth and one-half mile of shoreline is listed as an impaired water body under section 303(d) of the Clean Water Act for exceedances of indicator bacterial standards. The beach is also listed as a Clean Beach Task Force priority beach.

A major objective of the San Luis Rey Watershed Urban Runoff Management Program (WURMP) lead by the City of Oceanside is to identify sources of the FIB at the river mouth. As directed by the WURMP, the City of Oceanside and the County of San Diego have jointly sampled the San Luis Rey River since March of 2004 to determine if the river is the source of the high concentrations of FIB at the river mouth. Thus far, the results are inconclusive and indicate the need for focused sampling in the lower river and at the river mouth.

To address this issue, the City received $554,375 from the SWQCB and, with the assistance of other stakeholders, will match $141,750 to implement the source identification project in the lower river and river mouth. The City awarded MACTEC Engineering and Consulting, Inc. (MACTEC) and their team of leading scientist in the field the lead contract for the organization and completion of the two-year study.

The overall goal of the proposed study is to identify the sources and quantify the loading of bacterial contamination using a tiered approach. The project will analyze for FIB to identify "hot spots" and to assess bacterial flux. Based on these results, genetic microbial and viral analyses on selected samples will be conducted to pinpoint potential sources and identify potential public health risks. The suite of analyses include *Bacteroides spp,* ESP gene quantification, enterovirus analyses using quantitative PCR (QPCR), sequencing of the enterovirus from the field samples, community based bacterial analyses, and *Enterococcus* speciation. In addition, the joint monthly monitoring program between the City of Oceanside and the County of San Diego will continue and the bacteria monitoring data will be collected and utilized throughout the duration of the project.

This approach will permit prioritization for mitigation of microbial contaminants and appropriate actions will be recommended to eliminate sources of fecal contamination. The three following objectives will be accomplished to achieve the overall goal set forward above:

- Identify point and non-point sources of bacteria contamination in the Lower San Luis Rey River and at the river mouth during the dry and wet season,
- Estimate the bacterial loading from tributaries and along the main stem of the San Luis Rey River during the dry and wet season, and
- Recommend Best Management Practices (BMPs) to reduce and/or eliminate bacterial sources.

### 12.1.2 Activities completed during this reporting period

#### Establishment of a TAC

The first TAC meeting was held on November 1, 2007 from 9:30 to noon. Members included six representatives from the Regional Water Quality Control Board, County of San Diego, City of Vista, and San Diego CoastKeeper in addition to three representatives from the City of Oceanside. An overview of the project and historical data was presented for the benefit of the stakeholders. The role of the TAC was discussed. The TAC will be involved in all aspects of the project, including final approval of the project approach and oversight of the monitoring and reporting. The meeting was concluded with a tour of the mouth of the San Luis Rey to orient members with the complexity of the river. A final list of the TAC was submitted to the SWRCB on January 10, 2008.

A second TAC meeting was held on February 4, 2008 with six representatives from the Regional Water Quality Control Board, County of San Diego, City of Vista, and San Diego CoastKeeper in addition to two representatives from the City of Oceanside. The MACTEC project team presented the proposed project approach to the TAC. The approach was discussed and the TAC made recommendations to be included in the Monitoring Plan and QAPP.

#### Consultant Selection

A Request for Proposals (RFP) was sent out on November 8, 2007 to solicit proposals from interested and experienced consultants to perform a bacteria source tracking project on the San Luis Rey River. Proposals were due to the City of Oceanside by December 4, 2007 and a subcommittee of the TAC reviewed the proposals on December 7, 2007. MACTEC Engineering and Consulting, Inc. was officially awarded and given a notice to proceed by City Council on February 20, 2008.

#### Monitoring Plan and Quality Assurance Project Plan Approval

Other important work included the development and approval by the SWRCB of the Monitoring Plan and Quality Assurance Project Plan (QAPP) by the MACTEC project team with input from the TAC. The consultants and members of the TAC and City staff participated in a conference call to discuss the draft Monitoring Plan and QAPP on March 28, 2008. These documents were reviewed by the SWRCB and revised based upon their comments. The SWRCB approved the Monitoring Plan and QAPP on June 19, 2008.

#### First Monitoring Event

The first dry season monitoring event took place on June 18 and 19, 2008. Dr. Rachel Noble traveled to San Diego to prepare for the first event with the project team and participate both days of monitoring. The project team collected bacteria samples and flow measurements at six

monitoring locations in the Lower San Luis Rey River. The bacteria samples were analyzed for fecal indicator bacteria and the remaining sample volume was filtered and frozen for molecular analysis. The river mouth was not sampled, as planned, due to construction of the new Pacific Street Bridge but will be sampling in the wet season and the dry 2009 season.

The City of Oceanside and the County of San Diego implemented the changes to the joint monthly monitoring program during the June 2008 monitoring event. The program will continue using SWAMP protocols throughout the remainder of the source identification project allowing the bacteria data from monthly monitoring to supplement the dry and wet weather event data.

## 12.2 Loma Alta Creek Ultraviolet Light Treatment Facility

### 12.2.1 Overview

Loma Alta Creek Lagoon and Buccaneer Beach, located in the City of Oceanside, are currently impacted by high levels of bacteria. This is a family beach adjacent to a park with a large parking area, showers and an eating establishment that sees large crowds during the dry months. The City has determined that a key source of bacteria and nutrients in Loma Alta Creek is urban runoff that discharges into the creek. The source of water for Loma Alta Creek is from storm drain flows and hillside seepage from the Loma Alta watershed, which drains approximately 6,400 acres, and flows through densely developed residential, commercial, and industrial land uses.

Just over eight acres of the Loma Alta Slough are included on Section 303(d) of the federal Clean Water Act list of impaired water bodies for bacterial indicators and eutrophication within the and for 1.1 miles of coastline at the opening. The increased presence of bacteria and pathogens in the watershed poses a threat to REC-1 and REC-2 beneficial uses and directly impacts the ocean water quality at Buccaneer Beach. The bacteria that are present in Loma Alta Creek have resulted in numerous beach closures and postings at Buccaneer Beach. Historically, Buccaneer Beach was subject to closures that last the entire summer season. To reduce the bacterial loading on Buccaneer Beach, the City will allow the lagoon opening to sand closed as the south swell arrives in May and divert 100% of the dry weather flow through an ultraviolet light treatment facility then discharge the treated water at the high tide line into the ocean. The project, once completed, will capture up to 1,000,000 gallons per day of urban runoff

### 12.2.2 Project Scope

The City was awarded a $5,000,000 Proposition 40 Clean Beaches Initiative (CBI) grant by the State Water Resources Control Board to construct an ultraviolet (UV) light treatment facility at the existing La Salina Wastewater Treatment Facility. One hundred percent of the dry weather creek flows (averaging 300 to 700 gallons per minute) will be intercepted in the lagoon and diverted to the UV treatment facility, located on the northern bank of the creek. The treatment

facility consists of piping flows from an exiting diversion structure by gravity from the lagoon through a 2 micron fine screen to a wet well where the flow is pumped into two large sand filters followed by two UV disinfection units housed in a reinforced concrete building. The treated water is discharged through a pipe extended along the existing section of rip-rap that runs along the north side of the Loma Alta creek outlet at Buccaneer Beach. During wet weather months (November through April), the lagoon would be opened to allow free flow to the ocean and the UV system would be bypassed.

### 12.2.3 Progress Milestones Achieved Schedule

The California Coastal Commission approved Permit No. 6-06-152 for construction of the outfall pipe associated with the UV treatment facility on June 14, 2007. Loma Alta Creek UV Treatment Facility project entered into the construction phase on August 13, 2007 when the official Notice to Proceed was issued to Orion Construction Corporation. The project is expected to be completed in August 2008.

### 12.2.4 Project Outcomes Effectiveness Benefits

The anticipated project goal is to eliminate beach closures during the dry months at Buccaneer Beach in Oceanside, California. This will be achieved by diverting the flow from the Loma Alta Lagoon through a UV treatment facility prior to discharging the flow onto the shoreline. The City will monitor the UV treated storm drain outlet and the surf zone for bacteria for the 2008 AB411 period. The approved Monitoring Plan and Quality Assurance Project Plan developed for this project will be implemented.

# 13.0 NON-EMERGENCY FIRE FIGHTING

Emergency fire fighting flows (flows necessary for the protection of life or property) are allowed by the Municipal Permit and do not require implementation of BMPs. Non-emergency fire fighting BMPs and educational methods for reducing the discharge of pollutants from non-emergency flows to the MEP are described below.

**Order 2007-0001 Compliance Summary**

| | |
|---|---|
| J.3.a(3)(1)iv<br>Non-Emergency Fire Fighting | See Entire Section 13 of this Annual Report |

## 13.1 Best Management Practices

The City developed and implemented a program to reduce pollutants from non-emergency fire fighting flows, in accordance with Section B.3 of Permit Order 2007-0001. BMPs were implemented when the following activities were conducted:

- Regular Maintenance of Fire and Emergency Vehicles and Equipment
- Training Exercises
- Facilities Maintenance
- Post-Emergency Rehabilitation of Response Equipment

These activities were conducted in a way to either minimize or eliminate the discharge of pollutants to the MS4. Detailed descriptions of BMPs are given for each activity below:

**Regular Maintenance of Fire and Emergency Vehicles and Equipment**

- Vehicles and equipment were cleaned where runoff was directed to either the sanitary sewer system or to a drain with an oil/water separator system.
- Vehicles and equipment were cleaned where runoff would pond and evaporate and/or where runoff would filter through landscaped areas.
- Sewer drains in a vehicle cleaning area were outfitted with a hydro screen fabric barrier to collect debris.
- Spill kits were available to promptly cleanup and contain leaking or spilled vehicle fluids.
- Use of soaps, cleaners, and detergents were minimized, and general cleaning solutions were disposed of into the sanitary sewer system.

**Training Exercises**

- Water used in training exercises was directed to landscaped areas whenever possible, and runoff from the training exercises was not allowed to discharge to the MS4.
- Live fire training activities were pre-planned to allow integration of barriers to off-site runoff that could contribute to non-storm water discharges.

**Facilities Maintenance**

- Impervious areas such as apparatus floors, maintenance bays, driveways, patios, and walkways were swept to remove debris. Debris was placed in the trash.
- Landscaped areas were maintained as required to reduce the introduction of leaves and other landscape waste into the MS4.
- Irrigation systems were monitored and maintained as required to reduce irrigation water from going off-site.

- Spills were cleaned up using spill kits provided at the work site, and disposal of spilled material was in accordance with applicable regulations.
- Spills that required a cleanup beyond the ability of the on-site employees were reported to the City's Public Works Department for assistance with appropriate resources.
- Maintenance and repair of structures were conducted using methods that do not contribute pollutants to the MS4.

**Post-Emergency Rehabilitation of Response Equipment**
Tools, fire hoses, ladders, and other equipment utilized at the scene of an emergency were restored to a response-ready state in a manner that does not delay the ability of the apparatus to be available for another emergency response. The use of water that could contribute to storm water discharges was used unless another practical and immediately available method was identified, and was performed in a manner that minimized discharges to the MEP.

## 13.2 Educational Methods

During live fire fighting training exercises all fire fighters were educated about the requirement to not allow water flows to enter the MS4. Fire fighters in attendance for training sessions about how to use high pressure fire fighting hoses were educated on how to direct the water to percolation basins that are permanently in place at the training grounds. Water that is directed to these basins was allowed to infiltrate into the soil.

Prior to building structures at the training grounds being set on fire, perimeter controls were put in place to ensure that water from the non-emergency training session did not reach the MS4. Fire fighters in attendance were educated on the proper type and installation protocol of perimeter controls. These perimeter controls were also used for training sessions related to vehicle fires.

# 14.0 JURMP REVISIONS

Since the submittal of the City's 2008 JURMP in March 2008 there have been no changes or revisions to the document. It is anticipated that there will be changes during the next reporting period, fiscal year 2008-09.

# 15.0 CONCLUSIONS AND RECOMMENDATIONS

## 15.1 Introduction

This document was prepared by the City of Oceanside (City) pursuant to the California Regional Water Quality Control Board, San Diego Region (SDRWQCB), Order No. 2007-0001, NPDES No. CAS0108758, Waste Discharge Requirements for Discharges of Urban Runoff from the Municipal Separate Storm Sewer Systems (MS4s) Draining the Watersheds of the San Diego Copermittees. Pursuant to Part J.3.a.of the Municipal Permit, this Jurisdictional Urban Runoff Management Program (JURMP) Annual Report provides a comprehensive description of the activities conducted by the City to meet the requirements of Section D of the Permit during the 2007-2008 annual reporting period (July 1, 2007 – June 30, 2008).

## 15.2 Conclusions

This annual report presents the activities the City conducted from July 1, 2007 through June 30, 2008 to reduce the discharge of pollutants from the MS4 to the maximum extent practicable (MEP). The activities involved implementing, and improving where needed, existing programs and developing new programs intended to minimize or eliminate the effects of urban runoff from the City on receiving water bodies. Improving the quality of the discharge from the MS4 should have beneficial effects on the local receiving water bodies.

As detailed in the Program Effectiveness Assessment Component, the City met all of the development planning targets and met or exceeded the municipal targets. While the City fell slightly short on the targeted number of households to utilize the Household Hazardous Waste Program in the residential component, the target for the amount of household hazardous waste collected was exceeded. Long-term effectiveness assessment is an ongoing and iterative process and the City will continue to use this process to further improve its storm water program.

## 15.3 Recommendations

### 15.3.1 Database Tracking System for various departments and divisions

Many components of the new 2007 Municipal Permit require detailed information from across departmental boundaries and, therefore, across various data collection systems within the City. As part of the March 2008 Integrated Water Utilities Master Plan, the Information Technology component provided several key strategies which will focus on integrating reporting requirements and, therefore, collection systems across businesses and operations. As the Urban Runoff Hotline is utilized more, the Clean Water Program will be integrating information from Hotline calls into the main Water Utilities database. This will ensure complaints and inquires are tracked as they are distributed through Water and Sewer Maintenance Divisions, Code Enforcement Division and the Clean Water Program and will provide more detailed information for reporting purposes.

As land use development continues in the City, challenges associated with data management, such as tracking of post-construction BMPs, maintenances agreements, and associated documents, as emerged. It is important to update available tools with up-to-date information. This will be an issue to address during the next reporting period. The Clean Water Program will

also be working with other City departments to ensure that the details of inspections, complaints, and follow-ups will be tracked appropriately to be included in future annual reports.

### 15.3.2 Assessment of Educational Outreach Materials

The Clean Water Program has developed several educational materials in the past that will be assessed, revised and re-printed where needed. The City will consider using Community Social Based Marketing tool to determine the effectiveness of disseminating these brochures or if another educational outreach toll may be more effective. Table 15-1 provides a list of brochures already produced, its description and whether the document is planned for revision and/or reprinting.

**Table 15-1. Educational Materials Planned for Revision and Reprinting.**

| Education Material | Description |
|---|---|
| Urban Runoff Guidelines for Residents Brochure | This brochure will be reviewed and revised where necessary to address pollutants of concern and topics. |
| Pollution Prevention Tips for Gardening Activities Brochure | This brochure will be reviewed and revised, if necessary and re-ordered. |
| Urban Runoff Guidelines for Commercial Businesses Brochure | This brochure will be revised to better reflect the requirements of Permit Order 2007-0001. |
| Urban Runoff Guidelines for Powerwashers | The San Diego county co-permittees will be working on the development of education outreach materials for this target audience. While in development, the City of Oceanside will seriously consider revising this brochure to educate this target audience about the BMP requirements for power washing business operations. |
| Guide to Oceanside Water bodies Booklet | This brochure was reprinted during this reporting period. It will be revised and updated with current information, updated GIS maps and additional details. |
| Poop Pollutes Pet Waste Bag Dispensers | Pet waste bag dispensers will be re-ordered for an anticipated Pick up your Pet Waste Campaign to be impelemtend during Fiscal year 2008-09 along the San Luis Rey River Trail. |
| Click Message Pen | These click message pens will be re-ordered in Fiscal Year 2008-09. The six messages on the pens will be reviewed and possibly revised based on pollutants of concern relative to Oceanside watersheds. |

### 15.3.3 Underserved Target Audience Outreach - Including Mobile Businesses and Spanish Speaking Population

Underserved target audiences will be targeted with revised information during reporting period 2008-09. The two main audiences in this category are mobile businesses and the Spanish speaking population.

# ATTACHMENT 3-A

# A Pollution Prevention Guide for the Construction Industry

## Water Quality Regulations for Construction Sites

In 1972, the Environmental Protection Agency developed regulations to control water pollution. As a result, the National Pollutant Discharge Elimination System (NPDES) Permit was created. NPDES permits are issued to municipalities as well as construction sites. In addition to complying with local regulations, which are governed by our municipal NPDES permit, you may be required to obtain a permit through the State of California under the State General Construction Permit (99-08-DWQ). All construction sites over one acre are required to obtain coverage under this permit.

Construction sites can contribute pollutants, such as sediment, metals, and chemicals, to our local creeks, rivers, lakes, lagoons, and ocean. These pollutants make their way down our streets and into storm drains, eventually discharging to the nearest body of water.

All construction sites are required to implement Best Management Practices (BMP) to prevent storm water pollution. This brochure is intended to assist your construction site in understanding BMP requirements.

Each municipality has one or more persons dedicated to ensuring that all construction sites are in compliance with state and local storm water control regulations. Contact your local municipality for further information.

## Right-of-Way Permitting

We understand that there are times when space on construction sites is limited. If at any point, you (as a contractor or subcontractor) need to use the public right-of-way in order to work or store materials, you must apply for a special permit. This permit allows you to use the City's right-of-way areas, and describes what is required to prevent illegal contaminants from entering local storm drains. For more information or to obtain a permit application contact your local jursidiction.

## Inspection and Enforcement Program

Each jurisdiction has established an enforcement program to ensure that all businesses operate in compliance with all appropriate storm water laws and other City requirements. Contractors, site supervisors and property owners can be held responsible for violations, which may lead to a civil penalty of up to $10,000 per day and/or reimbursing the local jurisdiction for all expenses associated with clean up.

## Best Management Practices

Construction materials such as paint, dirt and trash often find their way into our storm drains, polluting the environment and jeopardizing our creeks, rivers, lakes, lagoons, and ocean.

The NCSWP is working with contractors to implement what are known as Best Management Practices (BMPs) on all construction sites. That is, methods used to keep pollution out of our storm drains and off public property, such as sidewalks, streets, parkways and alleys. Carrying out and maintaining these BMPs on the construction site is critical to protecting our ocean and lagoons.

The following is a list of BMPs and pollution prevention measures that shall be implemented at all construction sites:

1. **Conduct daily site cleanings.**
2. **Develop spill response and containment procedures.**
3. **Educate employees and subcontractors about BMPs.**
4. **Develop an erosion control plan for wind and rain.**
5. **Regularly maintain all BMPs at project site.**

## Water Quality Regulations for Construction Sites

Dear Contractor,

The North County Storm Water Program (NCSWP) is a collective of jurisdictions in northern San Diego County working together to protect our watersheds. We believe that reducing pollution is critical to maintaining our communities' way of life.

It is our hope that this brochure will help you identify activities that are recognized to cause water pollution and implement appropriate Best Management Practices (BMPs) to minimize their impact. By providing you with these tools, we hope to make your job easier while keeping our waterways clean.

Each jurisdiction will be inspecting their construction sites to ensure the protection of water quality. We look forward to seeing the BMPs presented in this brochure implemented at your sites.

Together we have the ability to preserve and improve the quality of life in our communities.

Sincerely,

*The North County Storm Water Program*

# North County Storm Water Program

Carlsbad • Del Mar • Encinitas • Oceanside • San Marcos • Solana Beach • Vista

Only Rain in the Storm Drain

## Materials Storage

All building materials and fuel stored on the site must be contained and covered. It is illegal for contractors to wash out paint brushes in the street or dump any residues in the storm drain. Paint brushes and spray guns must be contained and disposed of properly.

## Perimeter controls

Gravel bags, silt fences, and straw wattles are acceptable perimeter controls, and must be used to surround the entire site to control run-on and run-off. Avoid running over perimeter controls with vehicles or heavy equipment, as they can damage the materials. Keep extra absorbent materials and/or a wet/dry vacuum on site to quickly pick up unintended spills. Sites must also be checked and maintained daily.

## Building materials/staging areas

Construction materials must be stored on site at all times unless a right-of-way permit has been obtained. Building materials should always be covered when not in use to prevent run-off caused by wind or rain. To apply for a right-of-way permit, contact the appropriate department of your local jurisdiction.

## Dumpsters/Port-a-Potty

Always cover dumpsters with a rollback tarp. Areas around dumpsters should be swept daily. Perimeter controls should also surround dumpsters and all Port-a-Potties. If dumpsters or Port-a-Potties are kept on the street, right-of-way permits are needed.

**These guidelines are generalized. Please check specific requiren**

STATE OF CALIFORNIA
STATE WATER RESOURCES CONTROL BOARD
**2007-2008 ANNUAL REPORT**
FOR STORM WATER DISCHARGES ASSOCIATED
WITH INDUSTRIAL ACTIVITIES

Reporting Period July 1, 2007 through June 30, 2008

**An Annual Report is required to be submitted to your local Regional Water Quality Control Board (Regional Board) by July 1 of each year.** This document must be certified and signed, under penalty of perjury, by the appropriate official of your company. Many of the Annual Report questions require an explanation. Please provide explanations on a separate sheet as an attachment. **Retain a copy of the completed Annual Report for your records.**

Please circle or highlight any information contained in Items A, B, and C below that is new or revised so we can update our records. Please remember that a Notice of Termination and new Notice of Intent are required whenever a facility operation is relocated or changes ownership.

If you have any questions, please contact your Regional Board Industrial Storm Water Permit Contact. The names, telephone numbers, and e-mail addresses of the Regional Board contacts, as well as the Regional Board Offices addresses are indicated below.

# ANNUAL REPORT

***SPECIFIC INFORMATION***

## MONITORING AND REPORTING PROGRAM

D. SAMPLING AND ANALYSIS EXEMPTIONS AND REDUCTIONS

1. For the reporting period, was your facility exempt from collecting and analyzing samples from **two** storm events in accordance with sections B.12 or 15 of the General Permit?

   ☐ **YES** Go to Item D.2 ☒ **NO** Go to Section E

2. Indicate the reason your facility is exempt from collecting and analyzing samples from **two** storm events. Attach a copy of the first page of the appropriate certification if you check boxes ii, iii, iv, or v.

   i. ☐ Participating in an Approved Group Monitoring Plan **Group Name:** _____

   ii. ☐ Submitted **No Exposure Certification (NEC)** Date Submitted: _____

   Re-evaluation Date: _____

   Does facility continue to satisfy NEC conditions? ☐ YES ☐ NO

   iii. ☐ Submitted **Sampling Reduction Certification (SRC)** Date Submitted: _____

   Re-evaluation Date: _____

   Does facility continue to satisfy SRC conditions? ☐ YES ☐ NO

   iv. ☐ Received Regional Board Certification Certification Date: _____

   v. ☐ Received Local Agency Certification Cetification Date: _____

3. If you checked boxes i or iii above, were you scheduled to sample **one** storm event during the reporting year?

   ☐ **YES** Go to Section E ☐ **NO** Go to Section F

4. If you checked boxes ii, iv, or v, go to Section F.

E. SAMPLING AND ANALYSIS RESULTS

1. How many storm events did you sample? 0 If less than 2, **attach explanation** (if you checked item D.2.i or iii. above, only attach explanation if you answer "0").

2. Did you collect storm water samples from the first storm of the wet season that produced a discharge during scheduled facility operating hours? (Section B.5 of the General Permit)

   ☐ **YES** ☒ **NO, attach explanation** **(Please note that if you do not sample the first storm event, you are still required to sample 2 storm events)**

3. How many storm water discharge locations are at your facility? 1

4. For each storm event sampled, did you collect and analyze a sample from each of the facilitys' storm water discharge locations? ☐ YES, go to Item E.6 ☒ NO

5. Was sample collection or analysis reduced in accordance with Section B.7.d of the General Permit? ☐ YES ☒ NO, **attach explanation**

   If "YES", **attach documentation** supporting your determination that two or more drainage areas are substantially identical.

   Date facility's drainage areas were last evaluated _____

6. Were all samples collected during the first hour of discharge? ☐ YES ☒ NO, **attach explanation**

7. Was all storm water sampling preceded by three (3) working days without a storm water discharge? ☐ YES ☒ NO, **attach explanation**

8. Were there any discharges of stormwater that had been temporarily stored or contained? (such as from a pond) ☐ YES ☒ NO, go to Item E.10

9. Did you collect and analyze samples of temporarily stored or contained storm water discharges from two storm events? (or one storm event if you checked item D.2.i or iii. above) ☐ YES ☐ NO, **attach explanation**

10. Section B.5. of the General Permit requires you to analyze storm water samples for pH, Total Suspended Solids (TSS), Specific Conductance (SC), Total Organic Carbon (TOC) or Oil and Grease (O&G), other pollutants likely to be present in storm water discharges in significant quantities, and analytical parameters listed in Table D of the General Permit.

    a. Does Table D contain any additional parameters related to your facility's SIC code(s)? ☐ YES ☒ NO, Go to Item E.11

    b. Did you analyze all storm water samples for the applicable parameters listed in Table D? ☐ YES ☐ NO

    c. If you did not analyze all storm water samples for the applicable Table D parameters, check one of the following reasons:

       _____ In prior sampling years, the parameter(s) have not been detected in significant quantities from two consecutive sampling events. **Attach explanation**

       _____ The parameter(s) is not likely to be present in storm water discharges and authorized non-storm water discharges in significant quantities based upon the facility operator's evaluation. **Attach explanation**

       _____ Other. **Attach explanation**

11. For each storm event sampled, attach a copy of the laboratory analytical reports and report the sampling and analysis results using **Form 1** or its equivalent. The following must be provided for each sample collected:

- Date and time of sample collection
- Name and title of sampler.
- Parameters tested.
- Name of analytical testing laboratory.
- Discharge location identification.
- Testing results.
- Test methods used.
- Test detection limits.
- Date of testing.
- Copies of the laboratory analytical results.

## F. QUARTERLY VISUAL OBSERVATIONS

1. **Authorized Non-Storm Water Discharges**
Section B.3.b of the General Permit requires quarterly visual observations of all authorized non-storm water discharges and their sources.

a. Do authorized non-storm water discharges occur at your facility?

☒ **YES** ☐ **NO** Go to Item F.2

b. Indicate whether you visually observed all authorized non-storm water discharges and their sources during the quarters when they were discharged. **Attach an explanation for any "NO" answers.** Indicate "N/A" for quarters without any authorized non-storm water discharges.

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| July -September | ☒ **YES** | ☐ **NO** | ☐ **N/A** | October-December | ☒ **YES** | ☐ **NO** | ☐ **N/A** |
| January-March | ☒ **YES** | ☐ **NO** | ☐ **N/A** | April-June | ☒ **YES** | ☐ **NO** | ☐ **N/A** |

c. Use **Form 2** to report quarterly visual observations of authorized non-storm water discharges or provide the following information.

i. name of each authorized non-storm water discharge
ii. date and time of observation
iii. source and location of each authorized non-storm water discharge
iv. characteristics of the discharge at its source and impacted drainage area/discharge location
v. name, title, and signature of observer
vi. **any** new or revised BMPs necessary to reduce or prevent pollutants in authorized non-storm water discharges. Provide new or revised BMP implementation date.

2. **Unauthorized Non-Storm Water Discharges**
Section B.3.a of the General Permit requires quarterly visual observations of all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources.

a. Indicate whether you visually observed all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources. **Attach an explanation for any "NO" answers.**

| | | | | | |
|---|---|---|---|---|---|
| July -September | ☒ **YES** | ☐ **NO** | October-December | ☒ **YES** | ☐ **NO** |
| January-March | ☒ **YES** | ☐ **NO** | April-June | ☒ **YES** | ☐ **NO** |

b. Based upon the quarterly visual observations, were any unauthorized non-storm water discharges detected?

☒ **YES** ☐ **NO** Go to item F.2.d

c. Have each of the unauthorized non-storm water discharges been eliminated or permitted?

☐ **YES** ☒ **NO** **Attach explanation**

d. Use **Form 3** to report quarterly unauthorized non-storm water discharge visual observations or provide the following information.

i. name of each unauthorized non-storm water discharge.
ii. date and time of observation.
iii. source and location of each unauthorized non-storm water discharge.
iv. characteristics of the discharge at its source and impacted drainage area/discharge location.
v. name, title, and signature of observer.
vi. **any** corrective actions necessary to eliminate the source of each unauthorized non-storm water discharge and to clean impacted drainage areas. Provide date unauthorized non-storm water discharge(s) was eliminated or scheduled to be eliminated.

G. MONTHLY WET SEASON VISUAL OBSERVATIONS

Section B.4.a of the General Permit requires you to conduct monthly visual observations of storm water discharges at all storm water discharge locations during the wet season. These observations shall occur during the first hour of discharge or, in the case of temporarily stored or contained storm water, at the time of discharge.

1. Indicate below whether monthly visual observations of storm water discharges occurred at all discharge locations. **Attach an explanation for any "NO" answers.** Include in this explanation whether any eligible storm events occurred during scheduled facility operating hours that did not result in a storm water discharge, and provide the date, time, name and title of the person who observed that there was no storm water discharge.

| | YES | NO | | YES | NO |
|---|---|---|---|---|---|
| October | ☒ | ☐ | February | ☒ | ☐ |
| November | ☒ | ☐ | March | ☒ | ☐ |
| December | ☒ | ☐ | April | ☒ | ☐ |
| January | ☒ | ☐ | May | ☒ | ☐ |

2. Report monthly wet season visual observations using **Form 4** or provide the following information.

   a. date, time, and location of observation
   b. name and title of observer
   c. characteristics of the discharge (i.e., odor, color, etc.) and source of any pollutants observed.
   d. **any** new or revised BMPs necessary to reduce or prevent pollutants in storm water discharges. Provide new or revised BMP implementation date.

## ANNUAL COMPREHENSIVE SITE COMPLIANCE EVALUATION (ACSCE)

H. ACSCE CHECKLIST

Section A.9 of the General Permit requires the facility operator to conduct one ACSCE in each reporting period (July 1-June 30). Evaluations must be conducted within 8-16 months of each other. The SWPPP and monitoring program shall be revised and implemented, as necessary, within 90 days of the evaluation. The checklist below includes the minimum steps necessary to complete a ACSCE. Indicate whether you have performed each step below. **Attach an explanation for any "NO" answers.**

1. Have you inspected all potential pollutant sources and industrial activities areas? ☒ YES ☐ NO
   The following areas should be inspected:

   - areas where spills and leaks have occured during the last year.
   - outdoor wash and rinse areas.
   - process/manufacturing areas.
   - loading, unloading, and transfer areas.
   - waste storage/disposal areas.
   - dust/particulate generating areas.
   - erosion areas.
   - building repair, remodeling, and construction
   - material storage areas
   - vehicle/equipment storage areas
   - truck parking and access areas
   - rooftop equipment areas
   - vehicle fueling/maintenance areas
   - non-storm water discharge generating areas

2. Have you reviewed your SWPPP to assure that its BMPs address existing potential pollutant sources and industrial activities areas? ☒ YES ☐ NO

3. Have you inspected the entire facility to verify that the SWPPP's site map, is up-to-date? The following site map items should be verified: ☒ YES ☐ NO

   - facility boundaries
   - outline of all storm water drainage areas
   - areas impacted by run-on
   - storm water discharges locations
   - storm water collection and conveyance system
   - structural control measures such as catch basins, berms, containment areas, oil/water separators, etc.

4. Have you reviewed all General Permit compliance records generated since the last annual evaluation? ☒ YES ☐ NO

The following records should be reviewed:

- quarterly authorized non-storm water discharge visual observations
- monthly storm water discharge visual observation
- records of spills/leaks and associated clean-up/response activities
- quarterly unauthorized non-storm water discharge visual observations
- Sampling and Analysis records
- preventative maintenance inspection and maintenance records

5. Have you reviewed the major elements of the SWPPP to assure compliance with the General Permit? ☒ YES ☐ NO

The following SWPPP items should be reviewed:

- pollution prevention team
- list of significant materials
- description of potential pollutant sources
- assessment of potential pollutant sources
- identification and description of the BMPs to be implemented for each potential pollutant source

6. Have you reviewed your SWPPP to assure that a) the BMPs are adequate in reducing or preventing pollutants in storm water discharges and authorized non-storm water discharges, and b) the BMPs are being implemented? ☒ YES ☐ NO

The following BMP categories should be reviewed:

- good housekeeping practices
- spill response
- employee training
- erosion control
- quality assurance
- preventative maintenance
- material handling and storage practices
- waste handling/storage
- structural BMPs

7. Has all material handling equipment and equipment needed to implement the SWPPP been inspected? ☒ YES ☐ NO

## I. ACSCE EVALUATION REPORT

The facility operator is required to provide an evaluation report that includes:

- identification of personnel performing the evaluation
- the date(s) of the evaluation
- necessary SWPPP revisions
- schedule for implementing SWPPP revisions
- any incidents of non-compliance and the corrective actions taken.

Use **Form 5** to report the results of your evaluation or develop an equivalent form.

## J. ACSCE CERTIFICATION

The facility operator is required to certify compliance with the Industrial Activities Storm Water General Permit. To certify compliance, both the SWPPP and Monitoring Program must be up to date and be fully implemented.

Based upon your ACSCE, do you certify compliance with the Industrial Activities Storm Water General Permit? ☒ YES ☐ NO

If you answered "NO" **attach an explanation** to the ACSCE Evaluation Report why you are not in compliance with the Industrial Activities Storm Water General Permit.

# STATE WATER RESOURCES CONTROL BOARD

## E-2. SAMPLING AND ANALYSIS

**FIRST STORM EVENT OF THE SEASON THAT PRODUCED A DISCHARGE OCCURRED DURING NON WORKING HOURS.**

## STATE WATER RESOURCES CONTROL BOARD

## E-6. SAMPLING AND ANALYSIS

**NO SAMPLES WERE COLLECTED DURING THE REPORTING PERIOD OF 07 – 08. ALL STORM WATER DISCHARGES OCCURRED BEFORE OR AFTER WORKING HOURS, AND WERE NOT PRECEEDED BY 3 WORKING DAYS.**

## STATE WATER RESOURCES CONTROL BOARD

## E-7. SAMPLING AND ANALYSIS

**NO SAMPLES WERE COLLECTED DURING THE REPORTING PERIOD OF 07 – 08. ALL STORM WATER DISCHARGES OCCURIED BEFORE OR AFTER WORKING HOURS, AND WERE NOT PROCEDED BY 3 WORKING DAYS.**

## ATTACHMENT SUMMARY

Answer the questions below to help you determine what should be attached to this annual report. Answer NA (Not Applicable) to questions 2-4 if you are not required to provide those attachments.

| | | | |
|---|---|---|---|
| 1. Have you attached Forms 1,2,3,4, and 5 or their equivalent? | ☒ YES (Mandatory) | | |
| 2. If you conducted sampling and analysis, have you attached the laboratory analytical reports? | ☒ YES | ☐ NO | ☐ NA |
| 3. If you checked box II, III, IV, or V in item D.2 of this Annual Report, have you attached the first page of the appropriate certifications? | ☐ YES | ☐ NO | ☒ NA |
| 4. Have you attached an explanation for each "NO" answer in items E.1, E.2, E.5-E.7, E.9, E.10.c, F.1.b, F.2.a, F.2.c, G.1, H.1-H.7, or J? | ☒ YES | ☐ NO | ☐ NA |

## ANNUAL REPORT CERTIFICATION

I am duly authorized to sign reports required by the INDUSTRIAL ACTIVITIES STORM WATER GENERAL PERMIT (see Standard Provision C.9) and I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those person directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Printed Name: BRYAN FORWARD

Signature: [illegible] Date: 6·26·08

Title: ORDINANCE ENFORCEMENT SUPERVISOR

## *DESCRIPTION OF BASIC ANALYTICAL PARAMETERS*

The Industrial Activities Storm Water General Permit (General Permit) requires you to analyze storm water samples for at least four parameters. These are pH, Total Suspended Solids (TSS), Specific Conductance (SC),and Total Organic Carbon (TOC). Oil and Grease (O&G) may be substituted for TOC. In addition, you must monitor for any other pollutants which you believe to be present in your storm water discharge as a result of industrial activity and analytical parameters listed in Table D of the General Permit. There are no numeric limitations for the parameters you test for.

The four parameters which the General Permit requires to be tested are considered *indicator* parameters. In other words, regardless of what type of facility you operate, these parameters are nonspecific and general enough to usually provide some indication whether pollutants are present in your storm water discharge. The following briefly explains what each of these parameters mean:

**pH** is a numeric measure of the hydrogen-ion concentration. The neutral, or acceptable, range is within 6.5 to 8.5. At values less than 6.5, the water is considered acidic; above 8.5 it is considered alkaline or basic. An example of an acidic substance is vinegar, and a alkaline or basic substance is liquid antacid. Pure rainfall tends to have a pH of a little less than 7. There may be sources of materials or industrial activities which could increase or decrease the pH of your storm water discharge. If the pH levels of your storm water discharge are high or low, you should conduct a thorough evaluation of all potential pollutant sources at your site.

**Total Suspended Solids (TSS)** is a measure of the undissolved solids that are present in your storm water discharge. Sources of TSS include sediment from erosion of exposed land, and dirt from impervious (i.e. paved) areas. Sediment by itself can be very toxic to aquatic life because it covers feeding and breeding grounds, and can smother organisms living on the bottom of a water body. Toxic chemicals and other pollutants also adhere to sediment particles. This provides a medium by which toxic or other pollutants end up in our water ways and ultimately in human and aquatic life. TSS levels vary in runoff from undisturbed land. It has been shown that TSS levels increase significantly due to land development.

**Specific Conductance (SC)** is a numerical expression of the ability of the water to carry an electric current. SC can be used to assess the degree of mineralization, salinity, or estimate the total dissolved solids concentration of a water sample. Because of air pollution, most rain water has a SC a little above zero. A high SC could affect the usability of waters for drinking, irrigation, and other commercial or industrial use.

**Total Organic Carbon (TOC)** is a measure of the total organic matter present in water. (All organic matter contains carbon) This test is sensitive and able to detect small concentrations of organic matter. Organic matter is naturally occurring in animals, plants, and man. Organic matter may also be man made (so called synthetic organics). Synthetic organics include pesticides, fuels, solvents, and paints. Natural organic matter utilizes the oxygen in a receiving water to biodegrade. Too much organic matter could place a significant oxygen demand on the water, and possibly impact its quality. Synthetic organics either do not biodegrade or biodegrade very slowly. Synthetic organics are a source of toxic chemicals that can have adverse affects at very low concentrations. Some of these chemicals bioaccumulate in aquatic life. If your levels of TOC are high, you should evaluate all sources of natural or synthetic organics you may use at your site.

**Oil and Grease (O&G)** is a measure of the amount of oil and grease present in your storm water discharge. At very low concentrations, O&G can cause a sheen (that floating "rainbow") on the surface of water (1 qt. of oil can pollute 250,000 gallons of water). O&G can adversely affect aquatic life and create unsightly floating material and film on water, thus making it undrinkable. Sources of O&G include maintenance shops, vehicles, machines and roadways.

If you have any questions regarding whether or not your constituent concentrations are too high, please contact your local Regional Board office. The United States Environmental Protection Agency (USEPA) has published stormwater discharge benchmarks for a number of parameters. These benchmarks may be helpful when evaluating whether additional BMPs are appropriate. These benchmarks can be accessed at our website at http://www.swrcb.ca.gov. It is contained in the Sampling and Analysis Reduction Certification.

Section D (pages 5-6) of the General Permit.

- Quarterly visual observations are required to observe current and detect prior unauthorized NSWDs.
- Quarterly visual observations are required during dry weather and at all facility drainage areas.
- Each unauthorized NSWD source, impacted drainage area, and discharge location must be identified and observed.
- Unauthorized NSWDs that can not be eliminated within 90 days of observation must be reported to the Regional Board in accordanc with Section A.10.e of the General Permit.
- Make additional copies of this form as necessary.

STATE OF CALIFORNIA
STATE WATER RESOURCES CONTROL BOARD
**2007-2008 ANNUAL REPORT**
FOR STORM WATER DISCHARGES ASSOCIATED
WITH INDUSTRIAL ACTIVITIES

Reporting Period July 1, 2007 through June 30, 2008

**An Annual Report is required to be submitted to your local Regional Water Quality Control Board (Regional Board) by July 1 of each year.** This document must be certified and signed, under penalty of perjury, by the appropriate official of your company. Many of the Annual Report questions require an explanation. Please provide explanations on a separate sheet as an attachment. **Retain a copy of the completed Annual Report for your records.**

Please circle or highlight any information contained in Items A, B, and C below that is new or revised so we can update our records. Please remember that a Notice of Termination and new Notice of Intent are required whenever a facility operation is relocated or changes ownership.

If you have any questions, please contact your Regional Board Industrial Storm Water Permit Contact. The names, telephone numbers, and e-mail addresses of the Regional Board contacts, as well as the Regional Board Offices addresses are indicated below.

**REGIONAL BOARD INFORMATION:**

San Diego Region
9174 Sky Park Court, Suite 100
San Diego, CA 92123

2007-2008

# ANNUAL REPORT

***SPECIFIC INFORMATION***

## MONITORING AND REPORTING PROGRAM

D. SAMPLING AND ANALYSIS EXEMPTIONS AND REDUCTIONS

1. For the reporting period, was your facility exempt from collecting and analyzing samples from **two** storm events in accordance with sections B.12 or 15 of the General Permit?

   ☐ **YES** Go to Item D.2 ☒ **NO** Go to Section E

2. Indicate the reason your facility is exempt from collecting and analyzing samples from **two** storm events. Attach a copy of the first page of the appropriate certification if you check boxes ii, iii, iv, or v.

   i. ☐ Participating in an Approved Group Monitoring Plan **Group Name:** _____

   ii. ☐ Submitted **No Exposure Certification (NEC)** Date Submitted: _____

   Re-evaluation Date: _____

   Does facility continue to satisfy NEC conditions? ☐ YES ☐ NO

   iii. ☐ Submitted **Sampling Reduction Certification (SRC)** Date Submitted: _____

   Re-evaluation Date: _____

   Does facility continue to satisfy SRC conditions? ☐ YES ☐ NO

   iv. ☐ Received Regional Board Certification Certification Date: _____

   v. ☐ Received Local Agency Certification Cetification Date: _____

3. If you checked boxes i or iii above, were you scheduled to sample **one** storm event during the reporting year?

   ☐ **YES** Go to Section E ☐ **NO** Go to Section F

4. If you checked boxes ii, iv, or v, go to Section F.

E. SAMPLING AND ANALYSIS RESULTS

1. How many storm events did you sample? 0 If less than 2, **attach explanation** (if you checked item D.2.i or iii. above, only attach explanation if you answer "0").

2. Did you collect storm water samples from the first storm of the wet season that produced a discharge during scheduled facility operating hours? (Section B.5 of the General Permit)

   ☐ **YES** ☒ **NO, attach explanation** **(Please note that if you do not sample the first storm event, you are still required to sample 2 storm events)**

3. How many storm water discharge locations are at your facility? 1

4. For each storm event sampled, did you collect and analyze a sample from each of the facilitys' storm water discharge locations? ☐ YES, go to Item E.6 ☒ NO

5. Was sample collection or analysis reduced in accordance with Section B.7.d of the General Permit? ☐ YES ☐ NO, **attach explanation**

   If "YES", **attach documentation** supporting your determination that two or more drainage areas are substantially identical.

   Date facility's drainage areas were last evaluated _____

6. Were all samples collected during the first hour of discharge? ☐ YES ☒ NO, **attach explanation**

7. Was all storm water sampling preceded by three (3) working days without a storm water discharge? ☐ YES ☒ NO, **attach explanation**

8. Were there any discharges of stormwater that had been temporarily stored or contained? (such as from a pond) ☐ YES ☒ NO, go to Item E.10

9. Did you collect and analyze samples of temporarily stored or contained storm water discharges from two storm events? (or one storm event if you checked item D.2.i or iii. above) ☐ YES ☐ NO, **attach explanation**

10. Section B.5. of the General Permit requires you to analyze storm water samples for pH, Total Suspended Solids (TSS), Specific Conductance (SC), Total Organic Carbon (TOC) or Oil and Grease (O&G), other pollutants likely to be present in storm water discharges in significant quantities, and analytical parameters listed in Table D of the General Permit.

    a. Does Table D contain any additional parameters related to your facility's SIC code(s)? ☐ YES ☒ NO, Go to Item E.11

    b. Did you analyze all storm water samples for the applicable parameters listed in Table D? ☐ YES ☐ NO

    c. If you did not analyze all storm water samples for the applicable Table D parameters, check one of the following reasons:

    _____ In prior sampling years, the parameter(s) have not been detected in significant quantities from two consecutive sampling events. **Attach explanation**

    _____ The parameter(s) is not likely to be present in storm water discharges and authorized non-storm water discharges in significant quantities based upon the facility operator's evaluation. **Attach explanation**

    _____ Other. **Attach explanation**

11. For each storm event sampled, attach a copy of the laboratory analytical reports and report the sampling and analysis results using **Form 1** or its equivalent. The following must be provided for each sample collected:

- Date and time of sample collection
- Name and title of sampler.
- Parameters tested.
- Name of analytical testing laboratory.
- Discharge location identification.
- Testing results.
- Test methods used.
- Test detection limits.
- Date of testing.
- Copies of the laboratory analytical results.

F. QUARTERLY VISUAL OBSERVATIONS

1. **Authorized Non-Storm Water Discharges**
Section B.3.b of the General Permit requires quarterly visual observations of all authorized non-storm water discharges and their sources.

a. Do authorized non-storm water discharges occur at your facility?

☒ **YES** ☐ **NO** Go to Item F.2

b. Indicate whether you visually observed all authorized non-storm water discharges and their sources during the quarters when they were discharged. **Attach an explanation for any "NO" answers.** Indicate "N/A" for quarters without any authorized non-storm water discharges.

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| July -September | ☒ **YES** | ☐ **NO** | ☐ **N/A** | October-December | ☒ **YES** | ☐ **NO** | ☐ **N/A** |
| January-March | ☒ **YES** | ☐ **NO** | ☐ **N/A** | April-June | ☒ **YES** | ☐ **NO** | ☐ **N/A** |

c. Use **Form 2** to report quarterly visual observations of authorized non-storm water discharges or provide the following information.

i. name of each authorized non-storm water discharge
ii. date and time of observation
iii. source and location of each authorized non-storm water discharge
iv. characteristics of the discharge at its source and impacted drainage area/discharge location
v. name, title, and signature of observer
vi. **any** new or revised BMPs necessary to reduce or prevent pollutants in authorized non-storm water discharges. Provide new or revised BMP implementation date.

2. **Unauthorized Non-Storm Water Discharges**
Section B.3.a of the General Permit requires quarterly visual observations of all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources.

a. Indicate whether you visually observed all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources. **Attach an explanation for any "NO" answers.**

| | | | | | |
|---|---|---|---|---|---|
| July -September | ☒ **YES** | ☐ **NO** | October-December | ☒ **YES** | ☐ **NO** |
| January-March | ☒ **YES** | ☐ **NO** | April-June | ☒ **YES** | ☐ **NO** |

b. Based upon the quarterly visual observations, were any unauthorized non-storm water discharges detected?

☐ **YES** ☒ **NO** Go to item F.2.d

c. Have each of the unauthorized non-storm water discharges been eliminated or permitted?

☐ **YES** ☐ **NO** **Attach explanation**

d. Use **Form 3** to report quarterly unauthorized non-storm water discharge visual observations or provide the following information.

i. name of each unauthorized non-storm water discharge.
ii. date and time of observation.
iii. source and location of each unauthorized non-storm water discharge.
iv. characteristics of the discharge at its source and impacted drainage area/discharge location.
v. name, title, and signature of observer.
vi. **any** corrective actions necessary to eliminate the source of each unauthorized non-storm water discharge and to clean impacted drainage areas. Provide date unauthorized non-storm water discharge(s) was eliminated or scheduled to be eliminated.

G. MONTHLY WET SEASON VISUAL OBSERVATIONS

Section B.4.a of the General Permit requires you to conduct monthly visual observations of storm water discharges at all storm water discharge locations during the wet season. These observations shall occur during the first hour of discharge or, in the case of temporarily stored or contained storm water, at the time of discharge.

1. Indicate below whether monthly visual observations of storm water discharges occurred at all discharge locations. **Attach an explanation for any "NO" answers**. Include in this explanation whether any eligible storm events occurred during scheduled facility operating hours that did not result in a storm water discharge, and provide the date, time, name and title of the person who observed that there was no storm water discharge.

| | YES | NO | | YES | NO |
|---|---|---|---|---|---|
| October | ☒ | ☐ | February | ☒ | ☐ |
| November | ☒ | ☐ | March | ☒ | ☐ |
| December | ☒ | ☐ | April | ☒ | ☐ |
| January | ☒ | ☐ | May | ☒ | ☐ |

2. Report monthly wet season visual observations using **Form 4** or provide the following information.

   a. date, time, and location of observation
   b. name and title of observer
   c. characteristics of the discharge (i.e., odor, color, etc.) and source of any pollutants observed.
   d. **any** new or revised BMPs necessary to reduce or prevent pollutants in storm water discharges. Provide new or revised BMP implementation date.

## ANNUAL COMPREHENSIVE SITE COMPLIANCE EVALUATION (ACSCE)

H. ACSCE CHECKLIST

Section A.9 of the General Permit requires the facility operator to conduct one ACSCE in each reporting period (July 1-June 30). Evaluations must be conducted within 8-16 months of each other. The SWPPP and monitoring program shall be revised and implemented, as necessary, within 90 days of the evaluation. The checklist below includes the minimum steps necessary to complete a ACSCE. Indicate whether you have performed each step below. **Attach an explanation for any "NO" answers.**

1. Have you inspected all potential pollutant sources and industrial activities areas? ☒ YES ☐ NO
   The following areas should be inspected:

   - areas where spills and leaks have occured during the last year.
   - outdoor wash and rinse areas.
   - process/manufacturing areas.
   - loading, unloading, and transfer areas.
   - waste storage/disposal areas.
   - dust/particulate generating areas.
   - erosion areas.
   - building repair, remodeling, and construction
   - material storage areas
   - vehicle/equipment storage areas
   - truck parking and access areas
   - rooftop equipment areas
   - vehicle fueling/maintenance areas
   - non-storm water discharge generating areas

2. Have you reviewed your SWPPP to assure that its BMPs address existing potential pollutant sources and industrial activities areas? ☒ YES ☐ NO

3. Have you inspected the entire facility to verify that the SWPPP's site map, is up-to-date? The following site map items should be verified: ☒ YES ☐ NO

   - facility boundaries
   - outline of all storm water drainage areas
   - areas impacted by run-on
   - storm water discharges locations
   - storm water collection and conveyance system
   - structural control measures such as catch basins, berms, containment areas, oil/water separators, etc.

4. Have you reviewed all General Permit compliance records generated since the last annual evaluation? ☒ YES ☐ NO

The following records should be reviewed:

- quarterly authorized non-storm water discharge visual observations
- monthly storm water discharge visual observation
- records of spills/leaks and associated clean-up/response activities
- quarterly unauthorized non-storm water discharge visual observations
- Sampling and Analysis records
- preventative maintenance inspection and maintenance records

5. Have you reviewed the major elements of the SWPPP to assure compliance with the General Permit? ☒ YES ☐ NO

The following SWPPP items should be reviewed:

- pollution prevention team
- list of significant materials
- description of potential pollutant sources
- assessment of potential pollutant sources
- identification and description of the BMPs to be implemented for each potential pollutant source

6. Have you reviewed your SWPPP to assure that a) the BMPs are adequate in reducing or preventing pollutants in storm water discharges and authorized non-storm water discharges, and b) the BMPs are being implemented? ☒ YES ☐ NO

The following BMP categories should be reviewed:

- good housekeeping practices
- spill response
- employee training
- erosion control
- quality assurance
- preventative maintenance
- material handling and storage practices
- waste handling/storage
- structural BMPs

7. Has all material handling equipment and equipment needed to implement the SWPPP been inspected? ☒ YES ☐ NO

## I. ACSCE EVALUATION REPORT

The facility operator is required to provide an evaluation report that includes:

- identification of personnel performing the evaluation
- the date(s) of the evaluation
- necessary SWPPP revisions
- schedule for implementing SWPPP revisions
- any incidents of non-compliance and the corrective actions taken.

Use **Form 5** to report the results of your evaluation or develop an equivalent form.

## J. ACSCE CERTIFICATION

The facility operator is required to certify compliance with the Industrial Activities Storm Water General Permit. To certify compliance, both the SWPPP and Monitoring Program must be up to date and be fully implemented.

Based upon your ACSCE, do you certify compliance with the Industrial Activities Storm Water General Permit? ☒ YES ☐ NO

If you answered "NO" **attach an explanation** to the ACSCE Evaluation Report why you are not in compliance with the Industrial Activities Storm Water General Permit.

# STATE WATER RESOURCES CONTROL BOARD

## E-2. SAMPLING AND ANALYSIS

**FIRST STORM EVENT OF THE SEASON THAT PRODUCED A DISCHARGE OCCURRED DURING NON WORKING HOURS.**

# STATE WATER RESOURCES CONTROL BOARD

## E-6. SAMPLING AND ANALYSIS

**NO SAMPLES WERE COLLECTED DURING THE REPORTING PERIOD OF 07 – 08. ALL STORM WATER DISCHARGES OCCURRED BEFORE OR AFTER WORKING HOURS, AND WERE NOT PRECEEDED BY 3 WORKING DAYS.**

## STATE WATER RESOURCES CONTROL BOARD

## E-7. SAMPLING AND ANALYSIS

**NO SAMPLES WERE COLLECTED DURING THE REPORTING PERIOD OF 07 – 08. ALL STORM WATER DISCHARGES OCCURIED BEFORE OR AFTER WORKING HOURS, AND WERE NOT PROCEDED BY 3 WORKING DAYS.**

## ATTACHMENT SUMMARY

Answer the questions below to help you determine what should be attached to this annual report. Answer NA (Not Applicable) to questions 2-4 if you are not required to provide those attachments.

| | | | |
|---|---|---|---|
| 1. Have you attached Forms 1,2,3,4, and 5 or their equivalent? | ☒ YES (Mandatory) | | |
| 2. If you conducted sampling and analysis, have you attached the laboratory analytical reports? | ☒ YES | ☐ NO | ☐ NA |
| 3. If you checked box II, III, IV, or V in item D.2 of this Annual Report, have you attached the first page of the appropriate certifications? | ☐ YES | ☐ NO | ☒ NA |
| 4. Have you attached an explanation for each "NO" answer in items E.1, E.2, E.5-E.7, E.9, E.10.c, F.1.b, F.2.a, F.2.c, G.1, H.1-H.7, or J? | ☒ YES | ☐ NO | ☐ NA |

## ANNUAL REPORT CERTIFICATION

I am duly authorized to sign reports required by the INDUSTRIAL ACTIVITIES STORM WATER GENERAL PERMIT (see Standard Provision C.9) and I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those person directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Title: ORDINANCE ENFORCEMENT SUPERVISOR

## *DESCRIPTION OF BASIC ANALYTICAL PARAMETERS*

The Industrial Activities Storm Water General Permit (General Permit) requires you to analyze storm water samples for at least four parameters. These are pH, Total Suspended Solids (TSS), Specific Conductance (SC),and Total Organic Carbon (TOC). Oil and Grease (O&G) may be substituted for TOC. In addition, you must monitor for any other pollutants which you believe to be present in your storm water discharge as a result of industrial activity and analytical parameters listed in Table D of the General Permit. There are no numeric limitations for the parameters you test for.

The four parameters which the General Permit requires to be tested are considered *indicator* parameters. In other words, regardless of what type of facility you operate, these parameters are nonspecific and general enough to usually provide some indication whether pollutants are present in your storm water discharge. The following briefly explains what each of these parameters mean:

**pH** is a numeric measure of the hydrogen-ion concentration. The neutral, or acceptable, range is within 6.5 to 8.5. At values less than 6.5, the water is considered acidic; above 8.5 it is considered alkaline or basic. An example of an acidic substance is vinegar, and a alkaline or basic substance is liquid antacid. Pure rainfall tends to have a pH of a little less than 7. There may be sources of materials or industrial activities which could increase or decrease the pH of your storm water discharge. If the pH levels of your storm water discharge are high or low, you should conduct a thorough evaluation of all potential pollutant sources at your site.

**Total Suspended Solids (TSS)** is a measure of the undissolved solids that are present in your storm water discharge. Sources of TSS include sediment from erosion of exposed land, and dirt from impervious (i.e. paved) areas. Sediment by itself can be very toxic to aquatic life because it covers feeding and breeding grounds, and can smother organisms living on the bottom of a water body. Toxic chemicals and other pollutants also adhere to sediment particles. This provides a medium by which toxic or other pollutants end up in our water ways and ultimately in human and aquatic life. TSS levels vary in runoff from undisturbed land. It has been shown that TSS levels increase significantly due to land development.

**Specific Conductance (SC)** is a numerical expression of the ability of the water to carry an electric current. SC can be used to assess the degree of mineralization, salinity, or estimate the total dissolved solids concentration of a water sample. Because of air pollution, most rain water has a SC a little above zero. A high SC could affect the usability of waters for drinking, irrigation, and other commercial or industrial use.

**Total Organic Carbon (TOC)** is a measure of the total organic matter present in water. (All organic matter contains carbon) This test is sensitive and able to detect small concentrations of organic matter. Organic matter is naturally occurring in animals, plants, and man. Organic matter may also be man made (so called synthetic organics). Synthetic organics include pesticides, fuels, solvents, and paints. Natural organic matter utilizes the oxygen in a receiving water to biodegrade. Too much organic matter could place a significant oxygen demand on the water, and possibly impact its quality. Synthetic organics either do not biodegrade or biodegrade very slowly. Synthetic organics are a source of toxic chemicals that can have adverse affects at very low concentrations. Some of these chemicals bioaccumulate in aquatic life. If your levels of TOC are high, you should evaluate all sources of natural or synthetic organics you may use at your site.

**Oil and Grease (O&G)** is a measure of the amount of oil and grease present in your storm water discharge. At very low concentrations, O&G can cause a sheen (that floating "rainbow") on the surface of water (1 qt. of oil can pollute 250,000 gallons of water). O&G can adversely affect aquatic life and create unsightly floating material and film on water, thus making it undrinkable. Sources of O&G include maintenance shops, vehicles, machines and roadways.

If you have any questions regarding whether or not your constituent concentrations are too high, please contact your local Regional Board office. The United States Environmental Protection Agency (USEPA) has published stormwater discharge benchmarks for a number of parameters. These benchmarks may be helpful when evaluating whether additional BMPs are appropriate. These benchmarks can be accessed at our website at http://www.swrcb.ca.gov. It is contained in the Sampling and Analysis Reduction Certification.

Section D (pages 5-6) of the General Permit.

- Quarterly visual observations are required to observe current and detect prior unauthorized NSWDs.
- Quarterly visual observations are required during dry weather and at all facility drainage areas.
- Each unauthorized NSWD source, impacted drainage area, and discharge location must be identified and observed.
- Unauthorized NSWDs that can not be eliminated within 90 days of observation must be reported to the Regional Board in accordanc with Section A.10.e of the General Permit.
- Make additional copies of this form as necessary.

# WATER UTILITIES COMPLAINT FORM

TO: Teresa, Glenn, Robert, Tom

FROM: Judy

SUBJECT: water running down street

DATE/TIME: 1-ish 2/21/08

REPORTING PARTY NAME: Clark

REPORTING PARTY ADDRESS: None given

REPORTING PARTY PHONE NUMBER: 760-685-2615

REPORTING PARTY PHONE NUMBER 2:

SITE OF COMPLAINT ADDRESS: Cranberry St between Pacesetter & Edgewater

REFERRED TO: above

CONCERN/COMPLAINT: complaint was made once before and Water responded by turning off water. Landscapers turned water back on and said the problem would be too expensive to fix, so they are letting the water run down the street. HOA involved is Guajome Meadows. Caller contacted Board of HOA but doen't think anything was done with landscapers.

DISPATCHED VIA: this record only
(NEXTEL, 800MGH, PHONE)

# CITY OF OCEANSIDE clean water program

Volume 5, Issue 2

## WELCOME TO THE OCEANSIDE CLEAN WATER PROGRAM NEWSLETTER!

Due to the expanding programs and service opportunities our Oceanside Clean Water Program offers, we have designed a bi-yearly newsletter to keep you informed of the latest activities and water quality information. As an Oceanside resident, you will continue to receive fliers in your water utility bill about upcoming community cleanup events, as well as this newsletter. If you wish to be a part of the Oceanside Clean Water Program mailing list, or know others interested, please contact us and we will add the name(s) promptly. We hope you find this newsletter valuable.

The 20 Gallon challenge
Save Water Now

The City of Oceanside and the San Diego County Water Authority have a challenge for you - the 20 Gallon Challenge. Historic dry conditions in California, coupled with legal and regulatory constraints on water imported from northern California, make it essential for residents and businesses to increase water conservation immediately. It is more important than ever to conserve water during hot, dry summer months. If every person can save 20 gallons of water a day, that will significantly help the region by allowing more water to stay in storage to meet future demands.

Saving water is easier than you think. A few simple changes can make a big difference in your water usage. For ideas on how to meet the 20 Gallon Challenge look at the table on the 2nd page of this newsletter.

Keep in mind that 60 percent of urban water use in San Diego County is used for outside of the home. Outdoor landscaping alone in San Diego County takes up about half of all residential water use. That's more than 58 billion gallons of water every year. Unfortunately a lot of that water use is from overwatering landscaping, and much of it ends up running down the gutter and into our creeks to the ocean. Overwatering not only damages the vegetation that you are trying to keep healthy, but also allows pollutants, like fertilizers and pesticides, to enter storm drains which leads to our creeks, rivers, and coastline.

By practicing good water conservation strategies, you will not only ensure that there's enough water for everyone, but also help protect the quality of our creeks, rivers, lakes and beaches.

## Buena Vista Creek and Oceanside Beach Cleanup

**September 15, 2007**
**9:00 - Noon**

Celebrate California Coastal Cleanup Day by participating in the seventh annual Buena Vista Creek Cleanup and Oceanside Pier Beach Cleanup. The City of Oceanside, together with I Love a Clean San Diego, Coastkeeper, and 1-800-GOT-JUNK will be hosting a cleanup along the banks of Buena Vista Creek, as well as a beach cleanup south of Oceanside Pier on September 15th, from 9 a.m. to 12:00 p.m. Volunteers will receive free refreshments, community service hours, and a free T-shirt. Call the Clean Water Program Event Information Line for more details at 760-435-5536.

### Cleanup sites

- Behind Chicks Sporting Goods at Plaza Drive and College Boulevard (3514 College Boulevard)
- North of fire station #4 located at Thunder Drive and Lake Boulevard.
- Behind Kohl's store at College Boulevard and Marron Rd.
- South side of Oceanside Pier

Volume 6, Issue 1

## Loma Alta Creek Cleanup
## April 26, 2008
## 9 am - 12 pm

Celebrate Earth Day by participating in the Sixth Annual Creek to Bay Cleanup event on April 26, 2008. The City of Oceanside, together with I Love a Clean San Diego and 1-800-GOT-JUNK, will be hosting a cleanup along the banks of Loma Alta Creek and at two sites on the Pacific Ocean.

Volunteers can choose from five sites:

- Buccaneer Park at Pacific and Morse Streets (1500 South Pacific Street)
- Behind VONS on Oceanside Boulevard and I-5 (1737 Oceanside Boulevard)
- Mesa Drive between El Camino Real and Rancho Del Oro Drive
- Behind commercial buildings at 1629 Ord Way (Off Oceanside Boulevard between College Boulevard and Temple Heights Drive)
- South side of the Oceanside Pier

Join us while we remove unwanted materials from the creek and beach and help to improve Oceanside water quality. Volunteers will receive free parking, refreshments, community service hours, and a free T-shirt.

For more information about cleanup events call 760-435-5536 or 760-435-5807.

## In This Issue

- 2008 river and creek cleanup events
- Grease down your drain causes sewer blockages
- Pool water draining tips to protect the environment
- Sweeping landscape trimmings into street causes pollution

## 2008 River and Creek Cleanup Events

Please join the Clean Water Program staff and citizen volunteers to assist in removing trash and debris from our local beaches, rivers, and creeks.

Event Times: 9:00 a.m. - 12:00 p.m.
Event Details: 760-435-5536

- April 26, 2008: Loma Alta Creek Cleanup
- July 5, 2008: Morning After Mess - City Beaches
- September 20, 2008: California Coastal Cleanup Day - Buena Vista Creek Cleanup
- November 8, 2008: San Luis Rey River Cleanup

## Grease Down the Drain Causes Sewer Blockages

### Your help is needed!

It is very difficult to remove grease and oil from sewer pipes. The use of sewer clean-out snakes will only create a small hole through the grease that has built up on the inside of the pipe.

**Remember these simple grease disposal tips:**

- Never pour grease down sink drains or toilets.
- Pour grease into a non-flammable container, let harden, and place in trash.
- Wipe excess grease from pots and pans with a paper towel.
- Washing grease down the drain with warm water won't prevent clogs; grease will still harden in pipes.

# Pool Water Draining Tips
## to protect the environment

As the summer rapidly approaches, many Oceanside residents will turn to their swimming pools to beat the heat. Pool owners are preparing to remove the old pool water that has been sitting all winter. Draining pool water to the street is a common practice but it can be detrimental to the environment.

To most people, pool water does not seem environnmentally damaging. When pool water is drained into the street it picks up other pollutants and carries them down the storm drain to the nearest creek, river, lake or to the ocean. And, if not properly treated first, pool water can contain harmful additives and chemicals.

**Follow these steps for proper pool water disposal and environmental protection:**

- De-chlorinate your pool before emptying:
  - Allow water to sit for a few days in the sun to naturally de-chlorinate.
  - Purchase and use a de-chlorination kit.
- Drain pool water into your landscape or sanitary sewer.
- Rinse cartridge filters or diatomaceous earth (DE) filters onto a dirt, grassy or other pervious area. With DE, simply scoop up the residue and throw it in the trash.

With your help you can enjoy your pool and still protect the environment.

# Urban Runoff Hotline

Help protect our local waterways

Call the Clean Water Program Urban Runoff Hotline if you see anyone dumping anything down a storm drain or anything other than rain water entering the storm drain. Remember...

"Only Rain in the Storm Drain".

**760-435-5800**

# Did You Know That...

the City of Oceanside provides each residential home with a convenient wheeled cart for collection and disposal of green waste. When placed in this container, the green waste will be composted at the local composting facility in Oceanside.

## Sweeping and blowing grass clippings, leaves and other landscape trimmings into the street causes water pollution

If residents sweep grass and leaves into the street the green waste can go down the storm drain and reach our local waterways. You might think, "What's wrong with that?" When the green waste starts to decompose in the water, it can cause the following problems:

- Ammonia levels increase, creating a hostile environment for the animals and creatures that use the waterways.
- If picked up by the street sweeper, the green waste goes to the landfill instead of to the composting facility.

Follow these tips to make sure your green waste is composted and doesn't go to the landfill or pollute our local waterways:

- Place only grass clippings, leaves, weeds, and other prunings out for collection.
- Prunings and branches must be tied into 4-foot sections and tied into bundles not to exceed 18 inches in diameter.
- Please do not use wire for bundles.
- Place green waste cart on the curb by 6 a.m. the same day as your regular trash collection.
- Do not place green waste in plastic bags. Green waste in plastic bags will not be collected.

For more information call the Solid Waste and Recycling Hotline at 760-435-5015.

## Oceanside City Codes Related to Storm Water/Urban Runoff

### Animal Waste Removal

4.16.2 Animal waste removal – fail, refuse or neglect to clean up feces

### Chapter 40: City of Oceanside Urban Runoff Management, and Discharge Ordinance

**40.2.1 – Discharge Prohibitions (Illegal Discharges)**

40.2.1 (a) *Illegal discharges* - Discharge of pollutants or non-storm water into storm water conveyance system or receiving water; see exemptions under 40.2.2.

40.2.1 (b) *Illegal connection* - Illegal connection to storm water conveyance system even if connection was pursuant to a city permit at time of construction.

Updated July 2008

**40.2.1 – Discharge Prohibitions (Illegal Discharges), continued**

40.2.1 (c) *Liability for illegal discharge* – liability is responsibility of person causing, contributing, or responsible for illegal discharge.

40.2.1 (c) *Litter, dumps, or stockpiles* – Deposition of materials on public or private lands that may result in illegal discharge.

40.2.1 (e) Violation of NPDES permit – Any discharge that would violate NPDES permit for Oceanside is prohibited.

**40.2.2 – Discharges exempted from discharge prohibitions (Legal Discharges)**

40.2.2 (a) Separately permitted discharges – Discharges permitted under a valid-specific NPDES permit or facility are exempt from discharge prohibitions.

40.2.2 (b) Categorically allowed discharges subject to section 40.2.3 – The following categories of non-storm water discharges are exempt from discharge prohibitions and are subject to Section 40.2.3.:

- Discharges from potable water sources other than water main breaks
- Diverted stream flows (with required permits)
- Flows from riparian habitats and wetlands
- Foundation drains
- Individual residential washing of vehicles in driveway (prohibited in street)
- Irrigation water including recycled water used for irrigation
- Landscape irrigation
- Lawn watering
- Rising ground water
- Swimming pool discharges (if dechlorinated to less than one PPM chlorine)
- Uncontaminated ground water infiltration to storm drains
- Uncontaminated pumped ground water
- Water from crawl space pumps
- Water from footing drains

40.2.2 (c) Categorically allowed discharges not subject to section 40.2.3 – The following categories of non-storm water discharges are exempt from discharge prohibitions and are not subject to Section 40.2.3.

- Air conditioning condensation
- Flows from emergency fire fighting activities
- Springs
- Water line flushing

**40.2.3 – Best management practice requirements and general requirements applicable to all dischargers**

40.2.3 (a) Applicable requirements – All dischargers must comply with applicable prohibitions in sections 40.1 through 40.2 and must comply with other pars oft his Chapter.

40.2.3 (b) Minimum best management practices for all dischargers – All dischargers in the city must install, implement and maintain the following minimum BMPs:

40.2.3 (b)(1) Eroded soils - Prior to rainy season, dischargers must remove or secure significant accumulations of eroded soils from slopes previously disturbed by clearing or grading, if those eroded soils could otherwise enter the storm water conveyance system or receiving waters during the rainy season.

40.2.3 (b)(2) Pollution prevention - Dischargers employing ten or more persons on a full-time basis shall implement those storm water pollution prevention practices that are generally recognized in that discharger's industry or business as being effective and economically advantageous.

40.2.3 (b (3) Prevention of illegal discharges - Illicit connections must be eliminated and illegal discharge practices eliminated.

40.2.3 (b)(4) Slopes - Completed slopes that are more than five (5) feet in height, more than two hundred fifty (250) square feet in total area, and steeper than 3:1 (run-to-rise) that have been disturbed, shall be protected from erosion prior to the first rainy season, and continuously thereafter.

40.2.3 (b)(5) Storage of materials and wastes. All materials and wastes with the potential to pollute urban runoff shall be stored in a manner that either prevents contact with rainfall and storm water, or contains contaminated runoff for treatment and disposal.

40.2.3 (b)(6) Use of materials - All materials with the potential to pollute urban runoff (including but not limited to cleaning and maintenance products used outdoors, fertilizers, pesticides and herbicides, etc.) shall be used in accordance with label directions. No such product may be disposed of or rinsed into receiving waters or the storm water conveyance system.

# Volunteers pitch in for Coastal Cleanup Day

By Promise Yee

OCEANSIDE — In a countywide effort, more than 5,000 volunteers hit San Diego beaches and inland areas Sept. 15 for the 23rd annual Coastal Cleanup Day organized by I Love a Clean San Diego and San Diego Coast Keeper. Oceanside City Beach and Buccaneer Beach were two of the 60 sites that received a cleanup.

Volunteers came to Oceanside City Beach from as far away as Simi Valley to participate and families, high school students and Boy Scouts armed with trash bags and gloves pitched in during the cleanup. "Our pack does it twice a year," said Oceanside resident Michael Walls, who picked up trash with Cub Scouts and his 3-year-old son Benjamin Walls.

Michael Walls said the cleanup provides valuable lessons for scouts. "It's teaching them keep the environment clean."

Young volunteer Hailey Haynes of Oceanside knows some of the dangers of pollution. "The sea creatures could eat something and die and it could pollute the ocean," Hailey said.

According to Cynthia Mallott of the city of Oceanside Clean Water Program, a data card used to record trash pickup during the event helped volunteers realize that a lot of trash travels from shipping barges and sewer systems to the beach. "Our goal is to educate people on where the pollution comes from," she said.

For information on trash pickup and volunteer opportunities log on to www.cleanupday.org.

1. Kimberly Aguilar, her father Mike Martin and daughter Hailey Haynes carry their trash bags up the beach.
2. Hailey said she picks up trash to beautify our beaches and protect marine animals.
3. Oceanside City Beach was one of 60 sites in San Diego County for trash pickup on Coastal Cleanup Day. Benjamin Walls of Oceanside, 3, is learning early to do his part to keep beaches clean.

## AROUND NORTH COUNTY

# Saturday will be busy day in O'side

The San Luis Rey River flows through Oceanside, when it has enough water to flow.

J. STRYKER MEYER

Regardless of whether the water is flowing or not, hundreds of pounds of rubbish and trash get dumped in the riverbed throughout the year. On Saturday, the city of Oceanside is teaming with 1-800-GOT-JUNK to host the seventh annual cleanup from 9 a.m. until noon.

City officials said previous efforts have taken hundreds of pounds of trash and garbage from the river and they are hoping to exceed previous years collection totals.

"With the rainy season approaching, it is important to remove accumulated debris from the river bed which can be washed downstream to the ocean, creating possible public health risks and an awful mess," said **Cynthia Mallett**, an environmental specialist for the city.

The San Luis Rey River begins east of Palomar Mountain and collects water for more than 550 square miles of North County tributaries during its 50-mile travel to the ocean near Oceanside Harbor.

There will be four locations for litter removal on Saturday:

- Benet Road on the north side of Highway 76 and Airport Road;
- Fousatt Road on the north side of Highway 76 near the bike path;
- Douglas Drive and North River Road, near the bike path; and
- College and Vandegrift boulevards on the north side of the Maj. Gen. Ray Murray Bridge.

Mallett said the Fousatt Road site will need additional people this year because of the amount of debris in dumped in the area, including old barbecues and household trash. Call (760) 435-5536.

**BUSY SATURDAY** — At 7 a.m. Saturday, registration will begin for the postponed

# Man pleads not guilty to pipe bomb

## Discovery of explosives along I-5 led to road closures Frida

TERI FIGUEROA

ESCONDIDO — After a quarter-century running one of the few old-fashioned horse ranches in Escondido, Dixie Bernard is facing the prospect of becoming homeless and jobless at the age of 83.

Country Club Ranch, on the western outskirts of the city in Eden Valley, has been Bernard's home and livelihood since shortly after he moved from Kentucky to San Diego County 24 years ago.

But a new owner is slated to take over the 10-acre ranch this month, and she said Tuesday that she was planning some dramatic renovations and upgrades that don't include Bernard.

"I'm scared and worried," Bernard said during a Tuesday morning interview at the ranch. "I've been trying to make a living out of this place, but I won't be able to do that any more. I'll have nothing when I walk away from here."

Longtime custo lied around Bernar came aware of the about two weeks owner, Michell Kin open to the possibi continuing to live a Kimball explained no longer capable ranch or living alon

# Volunteers Wanted!!!

## The City of Oceanside Clean Water Program

wants to make our waters clean for all residents and visitors. We need your help in order to improve water quality. There are several cleanup events throughout the year that get people outdoors and in touch with our environment. A big Thank You goes out to all volunteers who take the time out of their busy schedules to help with these important cleanup events. The 2008 there are currently four events scheduled.

**2008 Oceanside Cleanup Event Schedule**

All events are held from 9:00 a.m. – Noon

**April 26, 2008**

Creek to Bay Cleanup Event along Loma Alta Creek

**July 5, 2008** – Morning After Mess; Oceanside Harbor and beaches

**September 20, 2008** – California Coastal Cleanup Day along Buena Vista Creek and Oceanside beaches

**November 8, 2008** – San Luis Rey River Clean Up Event

All volunteers receive cleanup supplies, including bags and gloves, refreshments and a T-shirt. For more information on staging sites and event details call **760-435-3695.**

# 7.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION COMPONENT

This section documents the activities conducted by the City of Oceanside during the 2007-2008 reporting period to manage illicit discharges and meet the requirements of Sections D.4 and J.3.a.(3)(f) of the 2007 Municipal Permit.

## 7.1 Introduction

Illicit connections and illicit discharges (IC/IDs) can result in unauthorized discharges of pollutants to MS4s. IC/IDs can be defined as the following:

- An ***illicit connection*** is a connection that conveys an illicit discharge to the MS4 (pipe, drain, channel, catch basin, grated inlet, junction box, etc.).
- An ***illicit discharge*** is the act of disposing of any pollutant that is prohibited by the City either intentionally or unintentionally to the MS4. This does not include non-storm water exemptions and discharges resulting from emergency fire fighting activities. A list of non-prohibited, non-storm water discharges is provided in Chapter 3 of the City's JURMP Update (2007).

The main objective of the illicit discharge, detection, and elimination (IDDE) component of the City's storm water program is to seek and eliminate IC/IDs into the MS4. Eliminating IC/IDs helps minimize potentially negative impacts of human activities on receiving water bodies.

The City uses its municipal personnel to assist in actively seeking, identifying, and reporting IC/IDs during their daily activities. Detection and prevention of IC/IDs is achieved by:

- Operating a public complaint hotline,
- Inspecting local businesses and municipal facilities,
- Conducting dry weather field screening and analytical monitoring,
- Maintaining municipal MS4 and sewer systems, and
- Educating the local community.

The City investigates, inspects, and follows-up on every IC/ID that is reported or detected, to identify the source or sources of the discharge. Voluntary compliance and escalating enforcement mechanisms are implemented to immediately eliminate the IC/ID once the source has been identified when appropriate. Educational materials are distributed to help prevent future IC/ID occurrences. In addition, the City is in the process of developing MS4 outfall and source identification monitoring programs as part of a regional and jurisdictional effort to aid in identifying IC/IDs.

## 7.2 Public Reporting of Illicit Discharges and Connections

To aid the process of identifying illicit discharges, the City encourages the public and City staff to report illicit discharges and connections. A public complaint hotline specifically for urban runoff has been developed, and is currently operated by the Water Utilities Department:

Oceanside Urban Runoff Hotline
(760) 435-5800

The hotline is answered during business hours by City staff. Bilingual staff is available to handle calls by Spanish speakers. For after hours, holidays and weekend calls, callers needing immediate assistance are referred to the Oceanside Police and/or Fire Departments and the remaining are prompted to leave a message. Maintenance and operations staff are also trained to promptly refer potential storm water violations observed in the field to the Hotline (details of municipal staff training are in Section 10.2). City staff is provided with their own incentive based reporting hotline called *Oceanside Eyes*, which allows them to earn credit towards certain awards for each report that they phone in.

In addition to the Urban Runoff Hotline, IDDE related public complaints are also reported to Code Enforcement:

Code Enforcement
(760) 435-3944

Once a complaint is received, it is logged into a database for documentation and tracking purposes. The complaint is then forwarded to either a Clean Water Program Inspector or a Code Enforcement Officer. City personnel investigate every complaint logged through the hotline to determine if pollutants are in fact being discharged to the MS4. If investigators find evidence of a violation or other IC/ID, every effort is made to find the responsible party and inform them of the complaint or issue a violation.

A total of 54 public complaints were received through the Urban Runoff Hotline during the 2007-2008 reporting period compared to 14 calls in the previous reporting period. Figure 7-1 is a summary of the nature of calls made to the Urban Runoff Hotline. The Code Enforcement Hotline reported 190 calls for storm water/Clean Water Program complaints compared to 279 calls in the previous reporting period. However, due to tracking procedures, the 279 reported complaints may have included additional code enforcement inspections related to urban runoff issues. A revised tracking policy is planned for upcoming years to glean detailed information from each call.

**Figure 7-1. Summary of Urban Runoff Hotline Calls during the 2007-2008 Reporting Year.**

The Urban Runoff Hotline is publicized in the *Oceanside Community Magazine*, the *North County Times* newspaper, the City's website, the Clean Water Program website, on a monthly locat TV program called KOCT Oceanside Update, informational literature for public distribution, and at local community events and meetings. In addition, education to the public stresses the importance of reporting discharges and describes the critical role that the public plays in the identification and elimination of Urban Runoff pollution related problems.

## 7.3 Spill Reporting, Response, and Prevention

The City implements spill reporting, spill response, and spill prevention mechanisms to prevent, respond to, contain, and clean up all sewage and other spills that discharge to its MS4 from any source.

### 7.3.1 Spill Prevention

#### 7.3.1.1 Sanitary Sewers

The City's preventive and corrective sewer maintenance programs consist of a variety of components provided for the operation, maintenance, repair and replacement of sewer mains, manholes, and pump stations. The programs provide for the routine monitoring, inspection, cleaning, and related maintenance of all components of the collection system in order to reduce the potential of sanitary sewer overflows (SSO) and other structural failures. Potential problems are noted and maintenance schedules adjusted accordingly. If necessary, repairs are initiated by City maintenance crews. Larger more complex projects are referred for inclusion in the capitol improvement projects (CIP) process for planning, design, and construction.

When system malfunctions do occur, such as SSO main stoppages, electrical outages, and mechanical breakdowns, the cause of the problem is investigated and analyzed. Maintenance schedules are then adjusted accordingly. If appropriate, the infrastructure component is referred for repair or replacement by maintenance crews.

Cleaning schedules are analyzed and adjusted for proper scheduling. During the 2007-08 reporting year, 312 miles (1,649,702 feet) of sanitary sewer were cleaned.

Additionally, in June and July of 2008 (crossing two reporting periods), 7,252 feet of City sewer lines were slip lined and manholes pressure grouted and sealed in the Loma Alta watershed. The slip lining project cost approximately $700,000.

A large CIP in the planning stage during the 2007-08 reporting year, is the land outfall replacement project replacing 6,200 feet of sewer lines in the Loma Alta watershed. The existing land outfall was constructed in 1972 and consists of approximately 34,000 linear feet of 24-inch ductile iron pipe. Currently the land outfall transports around 10 MGD (million gallons per day) of flow. Several failures of the existing land outfall have occurred recently along Oceanside Boulevard, therefore a 6,200 linear foot segment is currently being replaced. This segment is parallel to the centerline of Oceanside Boulevard and the limits of the pipeline replacement are from approximately 1200 feet west of Vine Street to approximately 200 feet west of Hoover Street. This project should be completed in the spring of 2009 and is estimated to cost over $4,000,000.

**Private Sewer Laterals and Septic Systems**

The City requires that private sewer laterals and septic systems be designed and operated in accordance to industry standards. The City also requires the proper maintenance of these facilities in order to avoid spills, breakages, and failures.

#### 7.3.1.2 Other Spills

The City prevents spills from private businesses and residents through required BMPs, education, and enforcement of relevant regulations for the storage and usage of hazardous materials.

The City also received funds from the California Integrated Waste Management Board to establish a permanent household hazardous waste (HHW) collection facility for its residents. The City's objective was to encourage a convenient, proper disposal and collection of HHW materials for its residents. This facility is currently open Monday through Friday for used oil, paint, and antifreeze disposal and every Saturday for collection of the following materials:

- Aerosols
- All purpose cleaners
- Ammonia
- Antifreeze
- Automobile cleaners
- Barbecue lighter fluid
- Batteries
- Brake fluid
- Chlorine bleach
- Detergents
- Disinfectants
- Drain opener
- Furniture polish
- Gasoline
- Glass cleaner
- Herbicides
- Mothballs
- Motor oil
- Oven cleaner
- Paint
- Paint thinner
- Pesticides
- Rubber cement
- Rug/upholstery cleaner
- Scouring powder
- Silver polish
- Toilet bowl cleaner
- Transmission fluid
- Tube and tile cleaner
- Turpentine varnish
- Water sealant
- Wood finish

The HHW collection facility is periodically promoted by the City through the *Oceanside Community Magazine*, the *North County Times* newspaper, on the Clean Water Program website and at local community events and meetings where literature is distributed. There is also literature available to the public at the City offices.

During the 2007-2008 reporting period, 3,430 Oceanside households utilized the household hazardous waste disposal facility, disposing or recycling 142.8 tons of hazardous materials (including universal waste) during the reporting period. An additional 119.9 tons of E-waste was recycled in the same reporting year. Compared to the 2006-07 reporting period, the number of households utilizing the program is down from 3,668, but more waste is being disposed of; up from 130.7 tons. The amount of E-waste dropped off for recycling has also increased from 115.2 tons.

The City provides information to the public on used motor oil recycling and identifies the local state certified collection centers in the City. Furthermore, as part of the City's collection program, a 1,500-gallon used oil collection receptacle is provided at the City's harbor for use by

harbor slip renters. During FY 2007-08, 600 gallons of oil were recycled along with one barrel of oil filters.

#### 7.3.1.3 Prevention of Fugitive Trash

In addition to spills from sewer overflows or hazardous waste dumping activities, the City is also addressing the prevention of trash getting into our receiving waters.

As discussed in detail in Section 4 of the 2007-2008 Annual Report, 571 miles of public streets in the City of Oceanside are swept at least monthly. Double this length to accommodate for both east/west and north/south directions giving a total of 1,142 curb miles. In addition, a total of 3,252 structures (catch basins, manholes, inlets, outlets, etc.) were inspected and cleaned during the reporting period. A total of 2,972 structures were cleaned by United Storm Water and 280 structures were cleaned by City maintenance crews. A total of 65.5 tons of waste was removed. The waste generally consisted of trash, green waste, sediment, roots, solids, and rocks.

In addition, because cigarettes and their associated trash, including wrappers and cartons, are the most littered item in America and the world, during FY 2007-08 the Oceanside Harbor Maintenance Department purchased and began installation of cigarette butt collection boxes. Cigarette Pollution Solutions, a private company with its own special cigarette filter receptacle, called the Butts Only Box, was determined to be an ideal design for placement in the harbor and near the beach areas. The Box is designed to accept cigarette and cigar butts and keep them from being exposed to rain and irrigation water until they are collected for proper disposal. It features a stainless steel construction that resists the salt weather environment at the coast and has a removable inner basket for easy servicing.

During Fiscal Year 2007-08 the Department of Harbors and Beaches purchased 23 Butts Only Boxes at a cost of $375 each and installed 20 of them throughout the Harbor and along Oceanside beaches. Thirteen of these boxes were installed in the harbor area near restaurants, docks, and bathrooms. Seven Boxes were installed along the heavily walked road that parallels the beach called The Strand and at the top of the municipal pier (Figure 7-2).

**Figure 7-2. Butts Only Boxes in Oceanside Harbor and along the Strand.**

Cigarette Pollution Solutions also provides a disposal and tracking service with a monthly statement of the amount of cigarette filters collected from all of the Boxes. The boxes were phased in throughout the spring and summer of 2008. Table 7-1 provides a summary of the amount of cigarette butts collected from March through July of 2008.

**Table 7-1. Number and Weight of Cigarette Butts Collected in FY 2007-08.**

| Date | Time period covered | Number of butts collected |
|---|---|---|
| 3/14/2008 | 2/11-3/13/08 | 435 |
| 4/16/2008 | 3/14-4/16/08 | 577 |
| 5/17/2008 | 4/17-5/17/08 | 539 |
| 6/17/2008 | 5/18-6/17/08 | 1,753 |
| 7/26/2008 | 6/18-7/22/08 | 3,715 |
| | **Total butts collected** | **7,019** |
| | **Weight** | **2.78 pounds** |

Future instillations may include the sport fishing industry out of Oceanside Harbor. The sport fishing boats that launch from Oceanside Harbor have been approached about installing a version of the Butts Only Boxes on their boats. Two have expressed interest and the City will be receiving statements summarizing the installation and use of those boxes.

## 7.3.2 Spill Reporting

### 7.3.2.1 Public Reporting of Spills

Spills entering the MS4 may be discovered during routine maintenance activities, scheduled monitoring, or observed and reported to the City by citizens. Citizens may use the Urban Runoff Hotline, Code Enforcement, or Oceanside Police Department phone numbers to report spills. Any reports by the public or City staff are referred to the Wastewater Division of the Water Utilities Department.

### 7.3.2.2 City Spill Reporting

The City complies with the sewage spill reporting requirements outlined in Table 7-2 and detailed in Section 9 of the JURMP Update:

**Table 7-2. Summary of Sewage Spill Reporting Requirements**

| Spill Volume | Criteria | Agency Receiving Report | Reporting Period |
|---|---|---|---|
| Any | Spills to waters of the State | SWRCB online<br>RWQCB<br>DEH | 3 days (initial)<br>24 hours<br>Immediate |
| Any | Municipal Permit non-compliance threatening human or environmental health | RWQCB<br><br>SWRCB online | 24 hours verbal and 5 days written<br>3 days (initial) |
| Any | Mitigated spills (absorbed, cleaned up, or captured) | DEH | 24 hours |

| Spill Volume | Criteria | Agency Receiving Report | Reporting Period |
|---|---|---|---|
| Any | Unmitigated spills to areas with potential public contact | DEH | Immediate |
| Any | Unmitigated spills to areas without potential public contact | DEH | 24 hours |
| >1000 gallons | Anywhere | OES<br>RWQCB<br>DEH<br>SWRCB online | Immediate<br>24 hours<br>Immediate<br>3 days (initial) |

County of San Diego Department of Environmental Health (DEH)
State Office of Emergency Services (OES)
Regional Water Quality Control Board (RWQCB)
State Water Resources Control Board (SWRCB)

### 7.3.3 Spill Response

Responses to sewer spills are conducted in accordance to the City's Sewer Overflow Response Plan and the responsible agencies are summarized in Table 7-3.

**Table 7-3. Responsible Agency for Sewage Spills**

| Source | Responsible Agency |
|---|---|
| Leaks and spills from publicly owned collection system | City of Oceanside |
| Private residence (failing septic systems) | County DEH |
| Any spill reaching MS4 | City of Oceanside |

During the 2007-2008 reporting period, the City responded to 15 sewer spills, four of which were privately owned. Only three spills reached the receiving water and only 20% of the total amount of total overflow volume for the year was released to the environment. Quick response times and the use of City vactor trucks and inlet protection devices assisted in the decrease in spill volume for the reporting year. Grease and roots were the most common causes of the blockages. The Clean Water Program and the Wastewater Division of the Water Utilities Department continued the public outreach effort initiated in the last reporting year for residential contribution of grease in the sanitary sewer. As a result, there were fewer spills this year with grease as the primary cause. Notifications of these spills are submitted to the RWQCB through quarterly reports. A summary of SSO overflows during 2007-2008 is presented in Table 7-4.

Responses to other spills are conducted by the Fire Department or qualified personnel in the Public Works Department, as appropriate to the situation. Both small and large spills are handled following HAZMAT Incident Response Team (HIRT) Policies and Procedures as issued by the Unified San Diego County Emergency Services Organization. The Oceanside Fire Department responded to all of the non-sewer related spills during the 2007-2008 permit year. A summary of the 21 spills is presented in Table 7-5. The majority of the spills were small fuel spills from leaking vehicles.

**Table 7-4. Summary of SSO Overflows during the 2007-2008 Fiscal Year.**

| Overflow Start Date Time | Overflow End Date Time | Total Overflow Volume (gal) | Overflow Volume Released to Environment (gal) | Overflow Cause | Did the SSO Enter a Storm Drain? | Did the SSO Reach Other Surface Waters? | Initial Secondary Receiving Waters | Prevention Corrective Measures |
|---|---|---|---|---|---|---|---|---|
| 7/18/07 10:20 | 7/18/07 10:40 | 100 | 100 | Grease | No | No | N/A | Routine cleaning the following month. |
| 8/21/07 7:50 | 8/21/07 8:11 | 420 | 420 | Grease | Yes | Yes | Buena Vista Creek/Buena Vista Lagoon | Rodder broke stoppage and rodded the line. |
| 8/28/07 19:59 | 8/28/07 21:00 | 61 | 61 | Roots | Yes | No | N/A | Next day removal of roots. |
| 9/23/07 12:40 | 9/23/07 13:40 | 30 | 30 | Roots | Yes | No | N/A | TV to inspect root issue. |
| 10/18/07 10:10 | 10/18/07 10:30 | 100 | 0 | Roots | Yes | No | N/A | TV to inspect root issue. |
| 10/23/07 11:37 | 10/23/07 11:48 | 550 | 0 | Other - Dog hair/toys | No | No | N/A | TV to inspect. Talk with Humane Society about traps/screens for dog hair |
| 11/4/07 11:40 | 11/4/07 12:47 | 335 | 230 | Grease | Yes | Yes | San Luis Rey River | Rodder broke stoppage. Jet area and drop chlorine. |
| 12/3/07 12:10 | 12/3/07 12:35 | 500 | 150 | Grease, Roots, Rags | Yes | No | N/A | Extend maintenance schedule to include this line. |
| 1/1/2008 Unknown | 1/1/08 8:40 | 600 | 0 | Unknown - Private | No | No | N/A | Code Enforcement citation. |
| 1/8/08 11:45 | 1/8/08 13:15 | 720 | 160 | Roots, Rags | Yes | No | N/A | TV line. Increase to monthly cleaning schedule. |
| 2/2/08 7:00 | 2/2/08 9:20 | 105,000 | 21,000 | Line Break | Yes | Yes | Loma Alta Creek/Pacific Ocean | City accelerated replacement of 6,200 feet of 36in PVC pipeline with emergency funds. |
| 3/5/08 9:40 | 3/5/08 10:20 | 200 | 50 | Unknown - Private | Yes | No | N/A | City crews remained onsite until stoppage was cleared by plumber. |
| 3/26/08 19:10 | 3/26/08 20:00 | 450 | 0 | Blockage - RV Dump hose | Yes | No | N/A | Entry to free hose from pipe. |
| 5/9/08 10:40 | 5/9/08 10:50 | 100 | 100 | Unknown - Private | Yes | No | N/A | City crews remained onsite until stoppage was cleared by plumber and grease trap cleaned. |
| 6/12/08 8:00 | 6/12/08 8:20 | 300 | 50 | Debris, Rags, Roots | Yes | No | N/A | TV line to identify source of rags. |

**Table 7-5. Summary of Non-SSO Spills during the 2007-2008 Fiscal Year.**

| Fire Dept. Arrival Date Time | Last Unit Cleared Date Time | Incident Number | Substance reported spilled | Amount of spilled substance | Primary Action Taken | Secondary Action Taken | Description |
|---|---|---|---|---|---|---|---|
| 8/2/2007 12:20 | 8/2/2007 12:25 | 0009250 | Gasoline | 1 gallon | Hazardous materials leak control & containment | N/A | Interstate-5 SB gasoline or other flammable liquid spill. Plugged fuel line and contained spill. |
| 9/21/2007 11:34 | 9/21/2007 12:00 | 0011449 | Fuel | 1/2 gallon | Hazardous materials spill control and confinement | Hazardous materials leak control & containment | Fuel leak on pavement below parked vehicle. Fuel leaked plugged. |
| 9/25/2007 21:16 | 9/25/2007 21:35 | 0011661 | Fuel | N/A | Investigate | Hazardous materials leak control & containment | Contain fuel leak from vehicle in parking area. |
| 10/2/2007 15:18 | 10/2/2007 15:20 | 0011953 | Fuel | N/A | Investigate | N/A | Possible fuel running down alley where subjects were working; liquid in alley was water. |
| 10/6/2007 10:30 | 10/6/2007 10:40 | 0012119 | Natural Gas | N/A | Investigate | N/A | Odor of natural gas. Referred to SDG&E. Lines being purged; utility investigated. |
| 10/17/2007 15:20 | 10/17/2007 16:45 | 0012589 | Gasoline | 1 gallon | Hazardous materials leak control & containment | Remove hazard | Report of a strong gasoline odor from neighboring apartment. Gained entry found van leaking gas from rotten fuel line. Once the line was repaired, the gas dried on its own. |
| 10/24/2007 20:22 | 10/24/2007 20:59 | 0012960 | Fuel | 0 | Investigate | Establish safe area | Abandoned 5 gallon bucket of racing fuel approximately half full with the cap missing. No obvious spill or leak. Projects bagged, drummed and secured. |
| 11/6/2007 18:45 | 11/6/2007 19:04 | 0013534 | Diesel Fuel | 5 gallons | Establish safe area | Hazardous materials spill control and confinement | Diesel fuel leak spread adjacent to fuel pump at gas station. Fuel covered with absorbent; owner to dispose. OPD present. |
| 11/28/2007 12:59 | 11/28/2007 13:16 | 0014525 | Formaldehyde | 500cc | Investigate | Hazardous condition, other | Accidental spill of formaldehyde on floor of business. Spill was contained and cleaned up by on-site personnel previous to arrival of FD. County Health Dept was contacted relative to disposal of material and cloth used for absorption. |

| Fire Dept. Arrival Date Time | Last Unit Cleared Date Time | Incident Number | Substance reported spilled | Amount of spilled substance | Primary Action Taken | Secondary Action Taken | Description |
|---|---|---|---|---|---|---|---|
| 12/10/2007 16:57 | 12/10/2007 17:32 | 0015141 | Mercury | 1cc | Remove hazard | N/A | Small amount of mercury found in parking lot and placed in an air tight container to dispose. |
| 12/18/2007 16:13 | 12/18/2007 16:25 | 0015500 | Oil | Undetermined | Cancelled enroute | N/A | Responded to a reported oil spill however upon arrival EMI Environmental was in the process of cleaning up the mess. There was no water runoff. |
| 12/26/2007 11:22 | 12/26/2007 11:46 | 0015825 | Gasoline | Undetermined small amount | Hazardous materials spill control and confinement | N/A | Small gasoline spill from leak in fuel tank - secured leak and had vehicle towed to repair facility. |
| 2/1/2008 8:05 | 2/1/2008 8:12 | 0001342 | Gasoline | Undetermined | Investigate | N/A | Found truck in parking lot dripping gasoline from underneath. The clamp to the fuel filter was loose. Fire Dept tightened clamp, put down Sorball and advised owner to call tow truck. |
| 2/13/2008 17:39 | 2/13/2008 17:43 | 0001850 | Transmission Fluid | Undetermined small amount | Investigate | Hazardous materials spill control and confinement | Small amount of transmission fluid was slowly running down gutter. Reporting party states that a tow truck recently picked up a car, shoveled some dirt on the fluid and left. Fire Department used absorbent on the remaining fluid and disposed it properly. |
| 2/16/2008 13:14 | 2/16/2008 17:34 | 0001971 | Water and gasoline mix | Undetermined | Establish safe area | Control traffic | Single vehicle accident with driver losing control. Vehicle damaged the gas meter, electrical meter, water line to the house and punctured the vehicle's gas tank. Flowing water mixed with gas was running down street as police approached. OPD began diking of flow and called Public Works to assist in diversion and cleanup. Water was then shut off. |
| 2/27/2008 14:48 | 2/27/2008 15:08 | 0002459 | Fuel | Undetermined | Investigate | N/A | Investigate fuel leak in a parking lot. Small amount of fuel leaked from a car that was being worked on. Leak stopped on it's own. Advised owner to get towed. |

| Fire Dept. Arrival Date Time | Last Unit Cleared Date Time | Incident Number | Substance reported spilled | Amount of spilled substance | Primary Action Taken | Secondary Action Taken | Description |
|---|---|---|---|---|---|---|---|
| 3/2/2008 12:21 | 3/2/2008 12:30 | 0002589 | Fuel | 2 gallons | Investigate | Remove hazard | Two gallon fuel spill at gas pump. Used absorbent to clean up and disposed of properly per 7-11 policy. |
| 3/7/2008 18:26 | 3/7/2008 18:55 | 0002820 | Gasoline | 1.2 gallon | Hazardous materials leak control & containment | N/A | Vehicle fuel leak after running over an object. Stopped leak; owner made arrangements to have vehicle towed. |
| 3/11/2008 22:43 | 3/11/2008 22:59 | 0003006 | Fuel | Unable to determine | Hazardous materials spill control and confinement | N/A | Upon arrival, found two small areas approx. 2x2 with fuel already absorbing into asphalt. Person who reported the incident found two individuals syphoning gas from his work truck. Spread small amount of cat litter on ground to absorb remaining fuel. |
| 3/26/2008 16:49 | 3/26/2008 18:34 | 0003631 | Fuel/seawater mix | 15 gallons | Investigate | Establish safe area | 28 foot fishing boat at the fuel dock had approx. 15 gallons of unleaded fuel and sea water mixture in bilge. Applied class B foam and the boat towed to hoist dock to be repaired. |
| 4/16/2008 13:41 | 4/16/2008 14:22 | 0004491 | Fuel | 2 gallons | Establish safe area | N/A | Response to a report of gas leaking from vehicle. Stopped leak and absorbed the two gallons of spilled fuel with cat litter. Tow truck arrived to transport vehicle. |
| 4/24/2008 9:41 | 4/24/2008 10:38 | 0004792 | Diesel Fuel | 8 gallons | Investigate | Provide manpower | Diesel fuel spill about eight gallons. Helped employee on scene clean up and contain. |

## 7.4 Urban Runoff Monitoring

The Urban Runoff Monitoring Program includes MS4 Outfall Monitoring, Source Identification Monitoring, and the Dry Weather Field Screening and Analytical Monitoring Program.

### 7.4.1 MS4 Outfall Monitoring and Source Identification Monitoring

The new MS4 Outfall Monitoring Program and the Source Identification Monitoring Program workplans were submitted to the RWQCB on July 1, 2008 for review. The Copermittees developed the proposed regional guidance and will begin implementing both programs in the 2008-2009 reporting year. For permit compliance, the City and County of San Diego did begin sampling for the MS4 outfall monitoring program in 2007-2008 prior to program approval.

### 7.4.2 Dry Weather Field Screening and Analytical Monitoring

The updated requirements of the Dry Weather Monitoring Program component in the 2007 Municipal Permit (Order 2007-001) built upon the requirements of the previous Municipal Permit (Order 2001-01). The dry weather analytical and field screening monitoring components consist of 1) field observations (site description and qualitative observations), 2) field screening monitoring (testing of sample while at site and flow estimation), and 3) analytical monitoring on a subset of sites (performing further tests of sample later at a laboratory). The new Municipal Permit also added a trash assessment component and now requires follow-up investigations to be conducted within two business days of receipt of results.

The City's complete 2008 Dry Weather Monitoring Report is provided as Attachment 7-A to this submission. This report includes:

- Reporting of all dry weather field screening and analytical monitoring results.
- Dry weather field screening and analytical monitoring report.
- Corrections for the Dry Weather Monitoring stations.
- The number and brief description of any IC/IDs found and eliminated during Dry Weather Monitoring.
- Description of activities conducted to manage IC/IDs found during Dry Weather Monitoring.

Below is a summary of the findings.

Dry weather monitoring is conducted at each site at least once between May 1st and September 30th each year. During the 2008 monitoring season, 67 primary sites were visited. Five of those sites were inaccessible and an additional nine were dry. Eighteen alternate sites were visited and two new sites with flowing or ponded water were added to the alternate list inventory. Nineteen of the ponded or flowing sites had additional analysis completed in the lab for chemistry and microbiology (29%).

When field measurements and/or laboratory analysis showed an exceedance of established action levels, the site was revisited within two business days to confirm the initial results. When follow-up sampling confirms continued exceedance of action levels, the City conducted further investigations to identify the source of the exceedance.

Thirty three sites required confirmation for an initial field screening exceedance. Of those, 19 required an IC/ID investigation. The most common exceedance was for orthophosphate. Of the 19 sites chosen for laboratory analysis, only one site had an exceedance for chemistry results. A015 exceeded the action levels for dissolved zinc. There is an ongoing investigation into the source; groundwater is suspected. There were seven exceedances for total coliforms, two for fecal coliforms, and two for Enterococcus. None of the fecal coliform or Enterococcus confirmation samples exceeded the action levels and therefore did not required an IC/ID investigation. Five of the seven total coliform exceedances required an upstream investigation.

In an historical comparison of action level exceedances, orthophosphate exceedances have increased gradually over the past several years, however, ammonia exceedances have decreased. In addition, bacteria levels continue to decrease and fewer sites are exceeding action levels.

The prevailing source for exceedances of field screening analytes was ponded water. The prevailing source of ponded and flowing water was from residential over-irrigation. With the additional push for water conservation in light of changing water availability, several avenues are being implemented to reach the general public about water conservation which will in turn reduce dry season runoff and improve water quality. These efforts include more face-to-face outreach by two new Clean Water Program Compliance Inspectors hired in February of 2008 who have responded to reports of over-irrigation in residential neighborhoods and at commercial and industrial facilities. In addition to the two new inspectors, the Water Utilities Department has hired an outreach coordinator specifically for water conservation education. Outreach avenues include information inserts in water bills, presentations on the local public access channel, and sponsoring workshops for the agricultural community and HOAs. And, as mandated by the State, the City is preparing for the impending drought and has adopted a revised drought ordinance as of July 9, 2008.

During the first year of the trash assessment, approximately 65% of the sites were either “optimal”, “suboptimal”, or “marginal” and did not require the detailed trash evaluation which identifies potential routes and sources. Twenty seven percent of the sites were “submarginal” and 7% of the sites were “poor”. The San Luis Rey Watershed had the highest percentage of “submarginal” and “poor” sites (46%). The majority of the trash found at the sites that required further trash evaluation was either food packaging or household waste. These items were most commonly at the sites via littering or from upstream. And, the most common sources of the food packaging and household wastes were households and transients.

Follow-up investigations continue to be conducted at sites with ongoing exceedances. Water conservation and urban runoff education outreach, as well as beach and creek clean-up events are on-going year-round as the City continues the effort to detect and eliminate illicit discharges to the storm drain system.

The City did not make any changes to the MS4 map during the 2007-08 fiscal year. To address MS4 inaccuracies and update the GIS layer of the MS4 map in the future, the City began researching hand-held GIS data collection units to be used collaboratively between Public Works, Engineering, and the Water Utilities Departments. Between June and August of 2008, the City purchased two Trimble GeoXH units. One of the many uses of these units is to verify

the accuracy of the MS4 map and relay the information gathered in the field to the Engineering Department to update the GIS layer. During FY 08/09, the City will be creating the data dictionary needed to collect consistent and necessary data for the storm drain system update and will roll out the field effort in the Spring and Summer of 2009.

## 7.5 Follow-up and Enforcement

The City implements and enforces its ordinances, orders, or other legal authority to prevent illicit discharges and connections to its MS4. Enforcement mechanisms are implemented on an escalating scale to enforce compliance, and follow-up inspections are conducted to ensure compliance has been achieved.

The administrative and judicial tools listed below are used as necessary to eliminate IC/IDs:

- Written warnings
- Enforcement of contracts
- Stop work notices
- Public nuisance abatement
- Denial or revocation of permits
- Civil and/or Criminal Court Actions
- Additional penalties or fines

The nature of the City's enforcement approach is determined on a case-by-case basis and is based on factors such as the severity of the violation, the threat to human or environmental health, site-specific circumstances, and past compliance history.

Code Enforcement recorded 375 cases potentially related to the requirements of the Municipal Permit. A total of 66 of these cases were related to potential IC/IDs. Table 7-6 presents a summary of the IC/ID investigations by Code Enforcement officers initiated during the 2007-2008 reporting year. The summary includes a brief description and the number of follow-ups and enforcement actions taken to achieve compliance. More detailed information on select IC/ID investigations by the Clean Water Program that were not a part of the Dry Weather Program are presented in Attachment 7-B.

Table 7-6. Summary of 07/08 IC/ID Investigations by Code Enforcement Officers

| Case Number | Occupancy Status | Date Received | Nature of Complaint | Actions Taken | First Contact | Last Contact | Site Visits | Office Visits | Phone Contacts | Written Notices | Letters Sent | Stop Work Notices | Administrative Citations | Criminal Citation | Case Closed? |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| 07-2851 | Residential | 7/5/2007 | OIL RUNNING DOWN DRIVEWAY | Site Visit, unable to validate complaint. Phone call to reporting party left message | 7/10/2007 | 7/10/2007 | 1 | 0 | 1 | 0 | 0 | 0 | 0 | 0 | Yes |
| 07-3150 | Residential | 7/20/2007 | ILLEGAL DISCHARGE - DIRT | Site visit. Spoke with property owner about tracking dirt into roadway. Met with contractor. Issuec Admin cite 9173 to contractor for illegal discharge and cleanup of road. | 7/20/2007 | 7/21/2007 | 2 | 0 | 1 | 0 | 0 | 0 | 1 | 0 | Yes |
| 07-3209 | Residential | 7/25/2007 | ININTIAL ODOR; WASHING ANIMAL FECES INTO GUTTERLINE | Several site visits and phone calls with nothing observed. 7/28/08 received another phone call. 7/30/08 Sive visit: Property owner (PO) has connected dog run into sewer clean out. We had PO run water thru surface drain in rear yard observed feces and strong smell of urine flowing into street. po states was unaware that these drains were the problem and thought they had corrected the problem by eliminating the dog run from the rear yard surface drains. Informed property owner to get the drains cleared and not to use for cleaning out around aviary area. Asked PO to call when drains are cleared. PC to RP. | 08-2269 | Commercial | 5/14/2008 | ILLEGAL DISCHARGE | Site visit. Observed soapy water discharge from property. Spoke with general manager. Vehicles i rear of business being washed. Issued Admin Cite 9190 to business. Explained alternative methods of BMP usage. Business in compliance on Follow up. | 5/14/2008 | 7/15/2008 | 4 | 0 | 1 | 0 | 0 | 0 | 1 | 0 | Yes |
| 08-2286 | Industrial | 5/15/2008 | DISPOSING OF SPOILED LIQUIDS IN DUMPSTER | Site Visit, met with P.Yosuico and BO discussed different ways of disposing of spent material. BO will be contacting waste management to get green waste totes. | 5/14/2008 | 5/15/2008 | 1 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | Yes |
| 08-2364 | Residential | 5/22/2008 | POWER WASHING STREET INTO L A C | Site Visit, Photos Taken, Admin warning 12517 issued to po. Stopped washing street while on-site. Informed po either hire a street sweeper or clean up by other means of dry sweep. | 5/22/2008 | 5/22/2008 | 1 | 0 | 0 | 0 | 0 | 0 | 1 | 0 | Yes |
| 08-2365 | Residential | 5/22/2008 | WATER RUNNING INTO STORMDRAIN | Site Visit, this area has a sump pump at the top of the hill towards Skyhaven at the retiremen community that keeps this water flowing continuously into the Right of Way. PC to RP to explain situation. RP appreciated info. | 5/22/2008 | 5/26/2008 | 1 | 0 | 1 | 0 | 0 | 0 | 0 | 0 | Yes |
| 08-2479 | Residential | 6/4/2008 | ILLEGAL STORMWATER DISCHARGE | Observed MA power washing roof of dwelling on the property; residue was observed to be runnin into gutter and street, and flowing west towards Elm Tree Dr. storm drain. Admin warning for discharge and expired business license. Discharge cleaned. Follow up on business license - no action; two admin cites. Compliance was achieved. | 6/4/2008 | 7/29/2008 | 3 | 0 | 2 | 0 | 0 | 0 | 2 | 2 | Yes |
| 08-2495 | Residential | 6/6/2008 | CEMENT DEBRIS, WASHING PAINT BRUSHES DOWN DRAIN | Site Visit, observed brick and sand stored in Right of Way to be placed in driveway. Informed worker this is normally not permitted but because it was to be placed in driveway and it is not a busy or thru street to hurry and get material placed and clean up all residual dirt in street and gutter line. Follow up - area clean. | 6/6/2008 | 6/10/2008 | 2 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | Yes |
| 08-2511 | Residential | 6/9/2008 | DUMPING MOTOR OIL IN WATER MOTOR BOX EXCESSIVE OIL | Site visit, Notice of Violation sent w / photos. | 6/5/2008 | 8/20/2008 | 1 | 0 | 0 | 1 | 0 | 0 | 0 | 0 | No |
| 08-2638 | Residential | 6/11/2008 | HAZARDOUS WASTE | Phone call from Chip (public Works). Observed containers of spent oil and e waste along parkwa in front of residence. Issued Warning cite 9191 to property owner for proper disposal. Follow up showed compliance. | 6/11/2008 | 6/12/2008 | 2 | 0 | 1 | 0 | 0 | 0 | 1 | 0 | Yes |
| 08-2705 | CS | 6/18/2008 | ILLEGAL DISCHARGE INTO HARBOR | Camp Pendleton discharging mud. Referred to RWQCB. Went on base and noticed two workers ir a storm drain inlet installing filter systems. They had removed the BMP's that was holding back the residual mud creating the discharge. Hunt Corp. job superintendent stating the workers had mistakenly removed the BMP's in the inlets and has since replaced them to prevent any further discharge. They will be using a vactor to remove any sediment before removing BMP's | 6/13/2008 | 6/16/2008 | 1 | 0 | 5 | 0 | 0 | 0 | 0 | 0 | Yes |

## 7.6 Illicit Discharge, Detection, and Elimination Component Effectiveness Assessment

Effectiveness assessment is an important component of the JURMP because it can assist the City in determining which programs, and program components, are effectively improving water quality or leading to water quality improvement. The San Diego County Copermittees developed two guidance documents to assist in the assessment of the JURMP components as well as the jurisdictions overall JURMP program. These two documents are titled *A Framework for Assessing the Effectiveness of Jurisdictional Urban Runoff Management Programs* and the *Baseline Long-term Effectiveness Assessment* (BLTEA). The City participated in regional efforts to develop these documents in anticipation of the requirement to assess their JURMP programs.

The effectiveness assessment approach developed by the Copermittees during the 2005-06 permit cycle includes six different levels of targeted outcomes. Each successive level represents a step up from more easily measured, activity-based outcomes to more difficult to measure, quality-based outcomes. The levels are listed below:

- Level 1: Compliance with Activity-Based Permit Requirements
- Level 2: Changes in Knowledge/Awareness
- Level 3: Behavioral Change/BMP Implementation
- Level 4: Load Reductions
- Level 5: Changes in Discharge Quality
- Level 6: Changes in Receiving Water Quality

The establishment of measurable outcomes is necessary for both incremental program component improvements and as a basis for future establishment of relationships between implementation and water quality improvement outcomes.

This section discusses the effectiveness assessment of the IDDE components of the JURMP. Overall program effectiveness assessment is discussed in Section 11 of the 2007-2008 City of Oceanside JURMP Annual Report submitted September 30, 2008.

A large effort of the IDDE element is the City's Dry Weather Monitoring Program. The City revised the historical program to meet the 2007 Municipal Permit requirements and implemented the new program between May 1 and September 30, 2008. Table 7-7 provides a summary of the Level 1 activity-based compliance assessment of the program. This was the first year the City used a replacement program for dry or inaccessible sites. While there were 67 sites on the primary site list, fourteen were either dry or inaccessible. An additional 18 sites were visited to find ponded or flowing water. Although staff thought that all dry sites were replaced, the City fell one site short of the original number of sites, resulting in a 99% completion rate. This will be addressed in the next monitoring year. The City continued laboratory sampling at more sites than required which resulted in a 112% completion rate. All initial site exceedances of action levels were confirmed within two business days and all sites, even those without ponded or flowing water, that were accessible were assessed for trash extent and amount.

**Table 7-7. Dry Weather Monitoring Component - Level 1: Compliance with Activity-Based Requirements.**

| Permit Section | Activity Source Type | Targeted Outcome | Actual | Measures of Success | |
|---|---|---|---|---|---|
| IDDE D.4 | Site Visits | Primary Dry Weather Sites Listed | Primary & Alternate Dry Weather Sites Visited | Actual/Target | Percent ( ) Completion |
| | | 67 | 85 | 85/67 | 127 |
| | Field Screening | Primary Dry Weather Sites Listed | Number of Sites Screened with Flowing/Ponded Water | Actual/Target | Percent ( ) Completion |
| | | 67 | 66 | 66/67 | 99 |
| | Laboratory Analysis | Number of Sites Required for Lab Analysis | Number of Sites Sampled for Lab Analysis | Actual/Target | Percent ( ) Completion |
| | | 17 | 19 | 19/17 | 112 |
| | Follow-Ups (Within Two Business Days) | Number of Sites Requiring Confirmation | Number of Site Follow-up within Two Business Days | Actual/Target | Percent ( ) Completion |
| | | 33 | 33 | 33/33 | 100 |
| | Trash Assessment | Number of Dry Weather Sites Accessible | Number of Trash Assessments Conducted | Actual/Target | Percent ( ) Completion |
| | | 81 | 81 | 81/81 | 100 |

The City's Dry Weather Monitoring program was first implemented in 2002. Although the program has evolved and the number of sites and location of sites has varied, some assessment of discharge water quality can be made (Level 5 assessments). Figure 7-3 provides a summary of the percent of action level exceedances for select field screening parameters from 2002 through 2008. Nitrate action level exceedances have remained the same. Orthophosphate exceedances vary and do not show any trends, but have stayed under 25% since 2002. Ammonia exceedances for 2002, 2003, and 2004 occurred in over 80% of the sites. The 2005 Dry Weather Report indicates that these exceedances were likely due to false positives with the method being used. The methods were changed in 2005 and ammonia exceedances were increasing slightly until the 2008 monitoring year. In the 2008 dry weather season, ammonia exceedances were below 2006 levels.

Figure 7-4 provides a summary of the microbiology results from 2002 through 2008. Bacterial exceedances have been on a decreasing trend since 2005. Total coliform exceedances have fallen from 100% of the samples, to 37% of the samples analyzed. Fecal coliform exceedances comprised just over 20% of the samples in 2005, 2006, and 2007, and fell to 11% in 2008. Enterococcus results have remained stable at 11% over the last three years.

In 2004, nitrate was not analyzed in field screening samples. In 2002, the results for nitrate were likely reported as Nitrate ($NO_3$) as opposed to Nitrate as N ($NO_3$-N). Not converting the results to the appropriate action level format creates a larger number of exceedances, than should be. Reporting years 2003 through 2006 were corrected, but documentation was not available to definitively clain that this was the case for 2002. Therefore, the results were omitted from this assessment.

**Figure 7-3. Dry Weather Monitoring – Level 5: Changes in Discharge Quality. Summary of Field Screening Action Level Exceedances from 2002 - 2008.**

**Figure 7-4. Dry Weather Monitoring – Level 5: Changes in Discharge Quality. Summary of Bacteriological Action Level Exceedances from 2002 - 2008.**

## 7.7 Program Review and Modification

Two recommendations for the IDDE component of the Municipal Permit are suggested. As discussed in Section 15 of the JURMP Annual Report, a database tracking system has been recommended and is being researched to better track the inter-departmental effort to gather data related to the requirements of the 2007 Municipal Permit. Specific to the IDDE Component, the Clean Water Program is working with the Engineering Department and Public Works to update the MS4 map utilizing GIS technology.

### 7.7.1 Database Tracking System for various departments and divisions

Public reporting of potential IDDEs, in addition to staff investigations across the Water Department, Public Works, and Code Enforcement require detailed information from across departmental boundaries and, therefore, across various data collection systems within the City. As part of the March 2008 Integrated Water Utilities Master Plan, the Information Technology component provided several key strategies which will focus on integrating reporting requirements and, therefore, collection systems across businesses and operations. As the Urban Runoff Hotline is utilized more, the Clean Water Program will be integrating information from Hotline calls into the main Water Utilities database. This will ensure complaints and inquires are tracked as they are distributed through Water and Sewer Maintenance Divisions, Code Enforcement Division and the Clean Water Program and will more easily gather and provide detailed information for reporting purposes.

As land use development continues in the City, challenges associated with data management, such as tracking of post-construction BMPs, maintenances agreements, and associated documents, as emerged. It is important to update available tools with up-to-date information. This will be an issue to address during the next reporting period. The Clean Water Program will also be working with other City departments to ensure that the details of inspections, complaints, and follow-ups will be tracked appropriately to be included in future annual reports.

### 7.7.2 Maintenance of MS4 Maps using GIS Technology

To address MS4 inaccuracies and update the GIS layer of the MS4 map in the future, the City began researching hand-held GIS data collection units to be used collaboratively between Public Works, Engineering, and the Water Utilities Departments. Between June and August of 2008, the City purchased two Trimble GeoXH units. One of the many uses of these units is to verify the accuracy of the MS4 map and relay the information gathered in the field to the Engineering Department to update the GIS layer. During FY 08/09, the City will be creating the data dictionary needed to collect consistent and necessary data for the storm drain system update and will roll out the field effort in the Spring and Summer of 2009.

# 1 INTRODUCTION

## 1.1 Program Summary

In February 2001, the San Diego Regional Water Quality Control Board issued Order No. 2001-01 to the communities of San Diego County. As part of Order 2001-01, the City of Oceanside was required to develop and implement a Dry Weather Field Screening and Analytical Monitoring Program. The purpose of the program was to detect and eliminate illicit connections and illegal discharges (IC/IDs) to the storm drain system, minimizing the negative impacts of human activities on receiving water bodies. Information collected from dry weather monitoring is used to characterize dry weather discharges in the storm drain system and identify conveyances that are discharging elevated levels of pollutants. Follow-up studies and source investigations are conducted as necessary to detect and eliminate the sources of these pollutants.

In 2007 the San Diego Regional Water Quality Control Board issued a new five-year permit for Receiving Waters and Urban Runoff Monitoring and Reporting, Order No. 2007-0001. The Copermittees in San Diego County are required, as part of their Jurisdictional Urban Runoff Management Program (JURMP), to update their Dry Weather Program to meet or exceed the requirements of Order No. 2007-0001. The City of Oceanside's Dry Weather Program was reviewed and updated and the details of the new program are included in the City of Oceanside 2007 JURMP Update.

This report presents the results of the City of Oceanside's 2008 Dry Weather Field Screening and Analytical Monitoring Program which includes the revisions to the program required by Order No. 2007-0001. The key changes to the new Municipal Permit were adding a trash assessment component and requiring follow-up investigations to be conducted within two business days of receipt of results. Details of the program are presented in Section 3.

## 1.2 City of Oceanside Drainage Summary
