New Development-Construction Inspection Program Evaluation

This season's early, significant storm event highlighted the need to continue to inspect all sites well ahead of the official beginning of the rainy season. Problems at a large inter-jurisdictional construction project during this early event also highlighted to need to maintain oversight for projects on or near City borders.

Lack of precise information about actual construction start dates for new sites has impacted effectiveness in the past. Building permit issuance allows, but doesn't require, start up of actual work. A recent addition to the building permit is a requirement for formal notification of the City prior to the actual start up date. The City's building plan approval database will also be used to identify upcoming construction sites earlier in the process.

The City's long-tenured storm water inspector retired near the end of the FY 04-05 rainy season. Familiarity with the program and the contractors and projects in the City will take some time to replace. The City's budget issues and hiring constraints led to a significant delay in filling the position, and coverage for storm water activities was strained during the transition. The program, while not neglected, was not maintained at the normal, proactive level and instead mostly responded to complaints and interdepartmental referrals during the non-rainy season. A City code enforcement officer was hired into the position and brings existing knowledge of the city, City procedures and code enforcement activities to the position. Training for the other aspects of the job is underway and should be well in place for the FY 05-06 rainy season.

An audit of the City's construction inspection program was conducted by Tetratech in April, 2005. While the audit report has not yet been received, the findings presented at the post-inspection conference were mostly positive. Areas for potential improvement included preparation of SOPs and improved record keeping. These two areas will be addressed in the coming fiscal year.

PUBLIC INFORMATION/PARTICIPATION (Provision C.4)

FY 2004-2005 Work Plan Self Evaluation Matrix

Item No.	Activity	FY04-05 Work Plan Tasks	FY 04-05 Accomplishments	Responsible Party
	Pesticide Outreach	1. Develop, prepare, and distribute appropriate outreach materials (fact sheets, brochures, etc.) regarding proper pesticide use and disposal and IPM techniques. 2. Attend community events and coordinate with local gardening and environmental groups to distribute materials. 3. Conduct residential IPM workshops. 4. Update City's Clean Bay website to provide information about and promote IPM techniques.	1. Ran three ads for IPM workshops and related information. 2. Attended 8 events such as Farmer's Markets, fairs and guest speaker programs. 3. 70 RWQCP service area residents attended less-toxic pest control workshops. Began holding workshops in RWQCP partner cities. 4. Ongoing.	Public Works Environmental Compliance
	Mercury Outreach	Continue public outreach/education on the hazards of mercury-containing products, proper disposal techniques, and alternative products.	1. Continued thermometer take back event at senior centers/municipal agencies. Partnered with Utilities Department on energy-efficient/no mercury thermostat exchange. Ads, utility inserts, partnership with SCVURPPP outreach.	Public Works Environmental Compliance
	Copper Outreach	Conduct outreach to Building/Planning staff and to developers on ban of copper roofs and gutters implemented in January 2003.	1. Created a stamp to notify residents regarding the copper ordinance that is stamped on all building permit plan sets approved by the Development Center.	Public Works Environmental Compliance

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2004-2005 ANNUAL REPORT

Municipality: City of Palo Alto

			2. Continued to contact the Development Center staff to ensure that residents are notified early in the permit process about this requirement.	
	School Outreach	Continue outreach to elementary, middle, and high schools, focusing on pesticides, mercury, and other pollutants of concern (school programs include "What's Bugging You?" and "Mercury: Past and Present")	In 2004-05, the Palo Alto's RWQCP school outreach program reached 4,370 students throughout the service area. All programs include a discussion of stormwater and pollution prevention. • 110 elementary school presentations and tours • 35 middle school presentations (includes hands-on lab) • 15 "Sewer Science" high school labs – a week-long hands-on water treatment unit Of the 160 total presentations, 76 were conducted in Palo Alto; 84 in RWQCP partner cities.	Public Works Environmental Compliance
	Vehicle Service Facility Recognition	Continue periodic recognition (newspaper advertisement and promotional materials) of vehicle service facilities that qualify for designation as Clean Bay Businesses.	Vehicle service facilities that qualify as "Clean Bay Businesses" receive promotional materials and are listed in full-page newspaper ads paid for by the RWQCP. Shops that have been Clean Bay Businesses for 10 consecutive years receive a special "Outstanding Achievement" plaque and other recognition materials	Public Works Environmental Compliance
	Watershed Education and Outreach	1. Develop City FY 05-06 PI/P workplan that is coordinated with the Program's Watershed Education and Outreach Campaign. 2. Implement PI/P FY 04-05 workplan.	1. Palo Alto participates in development and evaluation of the Program's Watershed Education and Outreach campaign. The City's PI/P workplan (a component of the annual Clean Bay Plan document) is coordinated with the overall Program effort. 2. Completed for FY 04-05.	Public Works Environmental Compliance & Engineering

Item	**RWQCB Comment**	**City Of Palo Alto Response**
N/A	N/A	N/A

Public Information/Participation Program Evaluation

Pesticide Outreach: Approximately 570 people have taken Bug Buster workshops to-date. A review of workshop evaluations through 2004 (for all previous years) revealed that 91% said they are more likely to look for less toxic products at local stores featuring the *Our Water Our World* logo. 83% said they are likely to try two or more IPM techniques they learned at the workshop.

Mercury Outreach: See evaluation in Mercury Program Section

Copper Outreach: The ordinance banning copper architectural materials has been effective at eliminating the installation of new copper roofs.

School Outreach: 71% of teachers returned a postage-paid evaluation postcard, with a cumulative rating of 4.9 out of 5 in both quality of program and clarity of presenter. 98% stated students' understanding of water pollution prevention and the difference between storm drain/sewer systems INCREASED.

Vehicle Service Facilities: Since inception of this program, the participation has increased to 98% of eligible facilities. Eighty-eight shops have participated in the Clean Bay program for at least 10 years.

PEST MANAGEMENT
(Provision C.9.d of the Permit)

FY 2004-2005 Work Plan Self Evaluation Matrix

Item No.	Activity	FY04-05 Work Plan Tasks	FY 04-05 Accomplishments	Responsible Party
	Municipal Pesticide Use	1. Report on use and justification for the use of OP pesticides and BMPs employed during pesticide use. 2. Provide annual training on IPM Policy, SOP's, BMPs, and IPM techniques to employees responsible for pesticide application. 3. Document and evaluate effectiveness of annual staff training. 4. Ensure that City contractors use pest control methods consistent with IPM Policy.	1. No OP pesticides used. 2. Implemented ground squirrel IPM pilot project in July '04. Provided ant and wasp IPM training to maintenance staff. 3. Structural pest management training for wasps and ants was effective in changing staff's approach for dealing with these pests–over 80% reduction in structural pesticides has been realized since 2001. The ground squirrel pilot project was successful and is scheduled to expand in FY 05-06. 4. Continuing to revise contracts to include language emphasizing IPM approach and discontinued use of products associated with water quality concerns. Staff's state training requirements are routinely checked via the annual pest management reporting process.	Public Works Environmental Compliance
	Public Education and Outreach	1. Develop, prepare, and distribute appropriate outreach materials (fact sheets, brochures, etc.) regarding proper pesticide use and disposal	1. Ran four Bug Buster workshop ads (in conjunction with the City's Recycling Program) and one utility bill insert.	Public Works Environmental Compliance

		and IPM techniques. 2. Attend community events and coordinate with local gardening and environmental groups to distribute materials. 3. Update City's Clean Bay website to provide information about and promote IPM techniques. 4. Contribute to BASMAA Regional Media Relations Campaign and pitch IPM stories to local media. 5. If possible, assist the Palo Alto Unified School District with creating an IPM Policy. 6. Conduct outreach to employees who do not apply pesticides during the course of their work. 7. Continue to implement IPM Partnership with hardware/garden supply stores in POTW service area. 8. Offer training to employees of IPM Partnership stores in POTW service area. 9. Document and report on number of residents reached through outreach and level of IPM Partnership participation.	2. Held four less-toxic pest control workshops (71 attendees) during FY 04-05 including expansion of workshops in RWQCP partner cities. This effort will continue in 2005-06. 3. Ongoing activity. 4. Active, regular participant in 2004-05. 5. Contacted teachers at Palo Alto High School regarding development of an IPM policy for the district. Will continue to pursue this option in 2005-2006. 6. Ongoing task. 7. Staff updated point of purchase information and continued to work closely with store personnel. 8. Coordinated through BASMAA. 9. Ads were targeted to reach all residents in our six-city service area. Ads promoting IPM receive approximately 32,877 gross impressions per ad. Utility inserts reached all Palo Alto residents (approx 18,000 homes).	

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2004-2005 ANNUAL REPORT

Municipality: City of Palo Alto

	Pest Control Operators	1. Support a regional PCO training and recognition program. 2. Require PCO's contracted for City pest control to comply with City IPM Policy through contract specifications. 3. Document and report on City use of PCO's and their pesticide usage.	**1.** RWQCP played a significant role in planning the 2005 Regional IPM Conference which draws PCOs. Recognition of PCOs has not yet occurred in the Santa Clara County permit area and needs to happen regionally. RWQCP staff will broach this as a possible SCVURPPP work plan item in July '05. **2.** Revising contract language is underway and happening incrementally as new contracts are renewed or sent out for bid. **3.** Ongoing as part of the City's annual IPM report. This year's focus was on simplified electronic reporting and converting data to a GIS format to target future pesticide reductions.	Public Works Environmental Compliance
	New Development	Document and report on pest-resistant landscaping measures incorporated into land development projects.	No changes in this activity. Emphasis is mainly on outreach and education. Still need to improve the effectiveness of this activity through the coordination of multiple ongoing programs (water conservation, pest management, and Water Resources Protection Collaborative's Guidelines and Standards for Land Uses Near Streams).	Public Works Environmental Compliance and Utilities Water Conservation
	Regional, State, and Federal Coordination	Continue active participation in the Urban Pesticide Committee, BASMAA Pesticide Work Group, and IPM Partnership to provide input and keep informed on latest pesticide management issues	Ongoing activities. New activities also include participation in Regional IPM Conference planning, UP3 IPM Exchange, and independent collaboration with other agencies.	Public Works Environmental Compliance

Item	**RWQCB Comment**	**City Of Palo Alto Response**
N/A	N/A	N/A

Pest Management Program Evaluation

1. The City's pesticide use has been markedly reduced over time by using IPM strategies. Revised contract specifications, in-house training and pilot projects are targeting the reduction of pesticides associated with eco-toxicity, such as pyrethroids.

2. Our Water, Our World (OWOW) regional campaign:
This period's evaluative instrument, rather than last year's program summary, was a survey of customers queried in the pest control aisles of selected Bay Area partner stores. Results included the findings that:

- Over 30 percent of respondents knew of the program and/or recognized program fact sheets or other branding.
- Of those respondents, 81.8 percent responded that program materials had helped them identify less-toxic products.
- On the day of the survey, 20.5 percent of respondents planned to buy a less-toxic product.

In the 2004 –2005 fiscal year, the program expanded its reach to all OSH stores state-wide, thus assuring an OWOW presence throughout the state.

3. Bug Buster workshops drew 70 people, and new workshops will be scheduled to serve the broader RWQCP service area.

4. Regional participation in the conference and workshop planning is leveraging collective regional knowledge to further IPM.

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2004-2005 ANNUAL REPORT

Municipality: City of Palo Alto

Mercury Pollution Prevention Program Evaluation
Since 2002, the RWQCP has replaced or removed 37 mercury switches (approximately 2.2 pounds) from the wastewater treatment plant. The City's mercury thermometer program continued from the previous year collecting almost 6,000 thermometers. This tremendous success is likely three-fold: (1) improved ease and level of interest of residents to receive a thermometer (rather than deal with a store coupon), (2) the number of convenient locations for the exchanges, and (3) the high-visibility advertising campaign. Due to success of the fluorescent lamp recycling program, the County obtained a state grant to expand the program throughout the county in November 2004. The Recycling Center also started collection of fluorescent lights and is heavily used.

COPPER ACTION PLAN/NICKEL ACTION PLAN
(Provision C.9.a & b of the Permit)

FY 2004-2005 Work Plan Self Evaluation Matrix

Item No.	Activity	FY04-05 Work Plan Tasks	FY 04-05 Accomplishments	Responsible Party
CB-1	Vehicle Washing Operations	• Distribute outreach materials on proper vehicle/equipment washing at City department counters and public events, and post on City web site. • Provide car wash kit to charity car wash organizers and educate on the use of the kits. • Submit data regarding vehicle washing outreach activities and effectiveness evaluation in annual reports. • Require source control measures for Group 1 new development and redevelopment projects that will conduct vehicle/equipment washing and maintenance activities (consistent with Permit Provision C.3.k). • Inspect auto businesses regarding car wash requirements, and prohibited storm drain discharge.	Within CB-1, Paragraphs 1,2,5,6,7 & 8 are ongoing programs which have been run by Palo Alto for a number of years, and which were run again successfully in FY 04-05. Paragraph 3 calls for an effectiveness evaluation regarding vehicle washing outreach. Utility bill stuffers, fliers, and special event displays have been used successfully to promote changes in vehicle washing practices as a means to protect storm water quality. Awareness of this issue has grown over the years, serving as a testament to the outreach program. Palo Alto does not do its own public opinion surveys, but rather relies on regional surveys to quantify and confirm the success of this and other behavior modifications. With respect to paragraph 4, neither of the two Group 1 projects approved to-date in Palo Alto include vehicle/equipment washing or maintenance activities.	Public Works Environmental Compliance Public Works Environmental Compliance Public Works Environmental Compliance Public Works Engineering Public Works Environmental Compliance

		• Inspect vehicle washing facilities as part of stormwater inspections for industrial and commercial businesses. • Continue to maintain car wash systems for City vehicles at the corporation yard and fire stations. • Encourage municipal staff to use certified mobile cleaners when contracting cleaning services. • Respond to training requests from mobile surface cleaners who desire initial BASMAA surface cleaning certification. Maintain list of individuals and dates of training. Provide training information to Program staff for reporting purposes. (Palo Alto, Sunnyvale, San Jose only)	With respect to Paragraph 9, no requests for mobile cleaner training were received in FY 04-05, undoubtedly due to the fact that the training is now available online.	Public Works Environmental Compliance Public Works Fleet Mgmt. & Fire Dept. Public Works Operations & Facilities Mgmt. Public Works Environmental Compliance
CB-3	Industrial Copper Control	• Continue Industrial Inspection program, including NOI sites such as plating and metal finishing facilities, vehicle service facilities, and other permitted sites.	All sites were inspected in FY 04-05.	Public Works Environmental Compliance
CB-4	Quantify Source Loadings of Copper	• Collect data on potential indicators of copper. Consider copper additions to water supply reservoirs	The copper data was collected and the potential indicators report was prepared as part of the 2005 Clean	Public Works Environmental

		and prepare fact sheet for reservoir managers. • Prepare and submit report on potential indicators as part of Clean Bay Plan.	Bay Plan. The Fact Sheet was deferred to the Bay-wide regional effort which is assuming responsibility for the Santa Clara Valley's Copper Action Plan activities.	Compliance
CB-6/7	Reducing Traffic Congestion/ Promoting Alternative Transportation	• Review the results of the Development Policies Comparison Project Report, particularly Section VI, Policies to Limit Auto Use/Promote Alternative Transportation, in the Policy, Code, and Ordinance Worksheet, and investigate updating local development rules to promote better transportation-related design practices and alternative modes of transportation.	No local development rule changes were made during FY 04-05 relative to this provision.	Public Works Engineering & Planning
CB-8	Watershed assessment and protection	• Revise City's General Plan, as needed, at next scheduled update, based on recommendations from the *Development Policies Comparison Project* and Provision C.3.l. • Review and implement guidance from SCVURPPP and San Jose on addressing water quality in the CEQA review process, as part of C.3.m. implementation.	No changes were made to the City of Palo Alto Comprehensive Plan during FY 04-05. Palo Alto has not yet revised its CEQA guidance documentation. This is a task that is needed regardless of the C.3 regulations, as the existing CEQA guidelines are outdated and inadequate. The guidance from SCVURPP and San Jose will be considered when the CEQA guidelines are updated.	Planning

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2004-2005 ANNUAL REPORT

Municipality: City of Palo Alto

CB-11	Street sweeping and storm drain O&M	• Follow Program guidance regarding the collection and reporting of street sweeping data. Provide data for Annual Report. • Evaluate need for improvement of current street sweeping and storm drain system O&M programs (within available budgets) in FY 04-05 Annual Report.	Program guidance is being followed. Palo Alto's sweeping program exceeds minimum frequencies, and further frequency increases were neither implemented nor deemed necessary.	Public Works Operations
CB-12	Outreach on pool, spa maintenance	• Assist Program develop and implement distribution plan for the updated pool brochure. • Distribute outreach materials at local public events; brochures at agency department counters and public places; and placement on City website.	The pool brochure has been completed with the assistance of Palo Alto and is being distributed to pool owners. Palo Alto staff distributed the new brochure at a meeting of the local pool maintenance association.	Public Works Environmental Compliance
CB-21	Use of architectural copper	• Perform plan checks for compliance with existing ban on copper on roofs, in roof shingles, and for gutters. • Distribute fact sheet on copper ban at building counter and on web site.	Palo Alto continued to conduct these tasks in FY 04-05	Public Works Environmental Compliance
NB-1	Measures to control nickel discharges from construction sites	• Continue to implement Construction Inspection Performance Standards (see Construction Inspection work plan section). • Continue to have inspectors attend Regional Board/Program workshops	Palo Alto continued to conduct these tasks during FY 04-05.	Public Works Environmental Compliance

		on construction site management and learn latest erosion/sediment control techniques • Continue to attend Program workshops on post-development stormwater BMPs (C.3.).		Public Works, Utilities, and Community Services

Regional Board Comments on Copper Action Plan/Nickel Action Plan FY 2003-2004 Annual Report

Item	RWQCB Comment	City Of Palo Alto Response
N/A	N/A	N/A

Copper Action Plan/Nickel Action Plan Program Evaluation

The Copper And Nickel Action Plan activities have become institutionalized and, for the most part, routine. An exception is the activities related to the C.3 development/redevelopment regulations. Compliance checking and maintenance verification inspections at completed C.3 projects will be starting in FY 05-06, causing Palo Alto to implement improved tracking procedures for construction sites. Palo Alto will use this opportunity to more fully coordinate building permit milestone dates (e.g. construction commencement & final project sign-off) with inspections conducted by Environmental Compliance Division staff.

Trash Inventory & Management Program Evaluation
The trash assessments and proposed action plans have been completed. This phase of the process went smoothly, with the more difficult steps ahead: finalizing and implementing action plans. Palo Alto envisions that the implementation phase may not go as smoothly, with an increasing need for careful coordination among implementing agencies, including Caltrans, the Valley Transportation Agency, and other agencies who are not SCVURPPP co-permitees.

PA08	6/24/2005	U.S. Route 101/Embarcadero Road Interchange	KAB	3	Litter from Vehicles, Wind	Learn about the Adopt-a-Highway program in the area (determine if it can be extended to the freeway exits). Determine the possibility of working with local McDonalds franchises and area managers on reducing litter by drive-thru customers. Learn about possibly incorporating area into DUI cleanup program.	Problem areas included EB Embarcadero before US 101 overpass, SB US 101 exit to Embarcadero EB junction, NB US 101 exit and SB 101 exit.
PA09	6/24/2005	Molley Stone's Supermarket at California & Park	KAB	1	Trash from Dumpsters, Litter	Continue to monitor throughout the summer 2005 to ensure that cleanliness is maintained. Possibly monitor just prior to collection times.	The dumpster area and site looks good.
PA10	6/24/2005	Albertsons Supermarket at West Bayshore and Embarcadero Road	KAB	3	Trash From Dumpsters, Litter	Try to confirm source of litter and brainstorm solutions with store manager. Inquire about having Albertsons clean their fence periodically. Determine if there is a Section 5 Municipal Code violation.	Litter was blowing off parking lot and collecting against nearby fence.
PA12	6/30/2005	Oregon Expressway from Waverley to Middlefield	KAB	2	Homeless Camps, Litter	Consider posting signs regarding proper cigarette disposal at problem locations. Determine appropriate agency to conduct street sweeping.	Many cigarette butts accumulating along median.
PA15	7/12/2005	Wet well at Matedero Creek Pump Station at West Bayshore	KAB	2	Accumulation from storm drain system	Continue to monitor throughout summer 2005.	One piece of floatable trash observed.
PA16	7/7/2005	Tributary to Arastradero Creek, along Arastradero Road on the preserve side, between Gates A and B.	KAB	2	Litter from roadway	Continue to monitor throughout summer 2005.	Minor trash visible from slow moving car.

San Francisquito Creek

PA01	7/7/2005	San Francisquito Creek; El Camino Real to El Palo Alto Park	RWQCB Version 7.0	30	Homeless Camping, Litter	Consider notifying police and Watershed Council of the homeless encampment problem. Consider starting discussions with Watershed Council regarding trash cleanup. Possibly work with police to discuss remedies to the graffiti problem (consider video surveillance?). Consider starting program to ensure the creek maintains levels of cleanliness.	Homeless encampments near the creek with scattered litter. Paint cans and other chemical hazards present. Large amount of gang graffiti.
PA02	7/1/2005	Small City-owned Parks on San Francisquito Creek at Webster and between Tasso & Cowper	RWQCB Version 7.0	25	Homeless Camping, Drinking	Consider notifying police and Watershed Council of the homeless encampment problem. Consider starting discussions with Watershed Council regarding trash cleanup. Consider establishing a neighborhood watch program in the area. Consider starting program to ensure the creek maintains levels of cleanliness.	Homeless litter observed on bank and items thrown off bank. Large pile of trash from homeless encampment in creek with chemical hazards present. Possible human health hazard for cleanup crew.
PA03	7/1/2005	San Francisquito Creek: Middlefield Road Bridge	RWQCB Version 7.0	74	Homeless Camping, Drinking, Graffiti	Work on identifying upstream sources and possible remedies. Consider consulting with the Watershed Council regarding additional volunteer cleanups (more frequently than biannually). Consider notifying police and Watershed Council of the graffiti and homeless encampment problem.	Trash appears to be accumulating from downstream transport. One tidy homeless encampment with no trash was observed. Golf balls found.
PA13	6/30/2005	Paulsen Lane and Lane 20 from Ramona to Waverley adjacent to University Avenue	KAB	2	Business Trash and Homeless Activity	Continue to monitor throughout summer 2005.	One recycling bin slightly overflowing. The site was clean.
PA14	6/30/2005	City Alley Connecting University and Hamilton between Ramona & Emerson	KAB	1	Trash From Dumpsters, Litter	Continue to monitor throughout summer 2005.	Clean and neat.
PA17	6/30/2005	Lanes from Bryant St. to Waverly St. between University Ave. and Lytton Ave. (Lane 20)	KAB	1	Business Trash and Homeless Activity	Continue to monitor throughout summer 2005.	Clean and neat.
PA18	6/30/2005	Mitchell Lane and University Ave	KAB	2	Homeless Activity	Possibly monitor after construction ends.	Evidence of past littering in bushes from homeless encampments.
PA19	6/30/2005	City Lane from Bryant St. to Waverly St. between Hamilton Ave. and University Ave. (Lane 21)	KAB	1	Business Trash and Homeless Activity	Consider graffiti removal. Continue to monitor throughout summer 2005.	Graffiti on dumpsters. The site is clean.
PA20	7/1/2005	San Francisco Creek at Manhattan Ave.	RWQCB Version 7.0	78	Illegal Dumping, Litter From Bus Stop	Site is within city of East Palo Alto. Consider monitoring to ensure that trash does not enter San Francisquito Creek.	Trash present on top of bank from bus stop. No trash was found in the creek or low on the bank.

Watershed Management Measures Program Evaluation
Stewardship Planning, Ecosystem Health Indicator Development, Upper Penitencia Creek Watershed Project Coordination, and Whitepaper & Fact Sheet Development were among this year's WMI highlights in which staff from the City of Palo Alto participated. The strength of the WMI is its consensus-based process and ability to bring stakeholders together. Looking ahead, a new focus for the WMI will be coordination, information sharing, training, and awareness-building among planners and developers with respect to stream protection (specifically centered on the Guidelines & Standards for Land Uses Near Streams developed by the Water Resources Protection Collaborative).

GLOSSARY 154

Executive Summary

The City is required to submit to the Regional Water Quality Control Board (Water Board) an Annual Report that documents the progress of the Urban Runoff Management Plan for the previous fiscal year. The Annual Report is prepared pursuant to provision C.6 of the City's National Pollutant Discharge Elimination System (NPDES) permit for stormwater discharge to the City's storm sewer system.

The Report includes sections for each of the program elements included in the Urban Runoff Management Plan as required in the permit. Each section is comprised of an update on the status of the work plan, an evaluation of various performance elements, responses to Water Board feedback received during the past year, and additional tables or information to demonstrate performance for a program element. Summaries are also provided for the array of outreach activities and municipal training sessions that are included in various program elements.

Most program elements contain requirements that affect more than one City department. The strategy for attaining compliance focuses on three different types of activities that the City conducts:

1) Enforcement and monitoring to detect and respond to incidents of illegal discharge to the storm sewer system;
2) Structural and business process changes to City operations and services; and
3) Education for municipal employees as well as the community at large.

The City also contributes to activities undertaken by the Santa Clara Valley Urban Runoff Pollution Prevention Program (Program); however, this report includes only activities performed by the City. An overview of the year for each program element follows.

Illicit Connection / Illegal Discharge Inspection (ICID)

The City's Environmental Services Department (ESD) responds to complaints regarding illegal discharges or threats of discharge to the storm sewer system. This year, the City responded to more than 800 cases, an increase from last year but within the five-year average. Residential incidents continue to be most frequent with vehicle-related sources being most common. Dumping of various materials was also a prevailing source. Construction related incidents are still notable but have declined over previous years as coordination of inspections across departments improves. ESD responds to all complaints with education and enforcement in partnership to achieve compliance and prevent future incidents.

In 2004-05, ESD conducted several preventative outreach and clean-up activities to address illegal discharges. Inspectors began attending preparation meetings in advance of outdoor events sponsored by the City to educate organizers on best management practices (BMPs) to prevent pollution. Inspectors conducted on-site trainings at selected multi-tenant businesses to educate them on pollution prevention practices. The City also responded to several complaints regarding litter in or along local creeks. Clean up activities were coordinated across departments through this and the Trash program elements.

Industrial & Commercial Discharges (IND)

Under this program element, ESD inspects more than 3,000 businesses per year to ensure that proper practices are employed to prevent stormwater pollution. How frequently a business is inspected depends on their potential for contributing pollutants as determined by previous inspection results. This method of assigning inspection frequencies has been effective in focusing limited inspection resources on high priority cases to best protect water quality. 70% of the businesses inspected are found to have no significant stormwater issues and thus do not warrant near-term re-inspection. When issues are identified, education and enforcement are used together to achieve compliance.

Approximately one third of the businesses inspected are restaurants or other food service facilities. These inspections address how a restaurant conducts cleaning practices, particularly outdoors. Increasingly, this program also addresses how a facility manages its oil and grease wastes. Such wastes pose a risk of clogging the sanitary sewer system, which can then result in illegal stormwater discharges. This year, the City produced a comprehensive outreach packet to focus on restaurants. This and other outreach efforts appear to be working. Among restaurants, inspectors note that housekeeping issues are improving but that oil and grease issues remain persistent.

Inspectors have been able to manage an increasing workload through prioritization and the sound use of technology. A City effort to encourage business licensing has resulted in a large influx of additional businesses to incorporate into the program. These newly licensed businesses are being phased in over a three-year period to effectively manage the workload. Inspectors continue to use the new Environmental Enforcement Data Management System (EEDMS) database and personal digital assistants (PDAs) to efficiently conduct inspections and manage information.

Monitoring (MON)

Monitoring activities required in the stormwater permit are generally implemented in collaboration with other agencies. The City continues to participate in monitoring activities area-wide, including Regional and Program-focused investigation of pollutants and sources to the storm drain system. The City also provides input and support to the Program's multi-year monitoring program, and reviews work products as various Program-level projects are designed and completed.

New and Redevelopment (NDC)

This program element is driven by provision C.3 (New and Redevelopment) of the permit, as amended in October 2001 and most recently in July 2005. This provision requires that development projects implement controls to address pollutant discharges and increased storm flows for the life of a project. The implementation of the new requirements for Group 1 projects (those that create one acre or more of impervious surface) began on October 15, 2003 and was expanded in February 2005 to include all Group 1 projects. This requirement was again expanded on May 17, 2005, to include Group 2A projects (those that create or replace 10,000 square feet or more of impervious surface and have a significant potential to contribute pollutants).

During the past year, the City has made significant strides in implementing this program. The City has revised administrative processes and updated relevant documents needed for implementation. The primary tools for implementation are the Municipal Code and the Council Policy on Post Construction Urban Runoff Management. Policy revisions were approved by City Council on February 15, 2005 and May 17, 2005. The City also remains an active partner in the Program's development of various guidelines and tools for implementation of the C.3 provisions. At the local level, the City now requires developers to submit a Stormwater Control Plan for all applicable projects to delineate clearly how stormwater requirements are being met for new development. This Plan is intended to expedite review and ensure that stormwater measures are tracked throughout the development cycle. The City also implemented an expansive training program to give staff the information and resources needed to effectively guide and review development applications. Among the training highlights was a four-session series focused on stormwater controls from design to maintenance to proper selection. Staff from five departments attended.

Generally, implementation of stormwater controls is easier on undeveloped, "greenfield" sites, such as Coyote Valley (at the southern tip of San Jose) because the land requirements for runoff treatment BMPs can be factored into the master plan and accommodated early in the development process. Implementing stormwater controls on smaller, infill sites in a developed urban area is much more difficult given limited land area, the high cost of land, and the City's policies that discourage sprawl and encourage increased densities. These policies have an associated water quality benefit as they reduce traffic congestion and the associated air pollution.

The City continues to emphasize site design and source control as the primary tactics for addressing stormwater on a project-by-project basis. The City has also continued to participate in efforts to develop analytical tools and outreach on a regional basis. Planning and Public Works continue to provide information about stormwater issues and new requirements to the public and the development community.

Construction Inspection (CON)

The City inspects activities at construction sites to prevent sediment and other pollutants from entering the storm sewer system. Inspectors from Public Works and Building review stormwater controls as part of their routine inspections. Environmental Services supplements this effort with limited inspection and broad enforcement follow-up. These departments also collaborate in providing outreach materials and training to the development community on appropriate best management practices.

In 2004-05, the City focused on staff training as a means of increasing inspector awareness of conditions that lead to stormwater pollution and improving coordination across departments. Public Works inspectors now regularly refer cases to ESD for follow-up and include detailed information on issues identified at a site to both ESD and Building. Inspectors also conducted on-site trainings at selected sites to educate project managers and subcontractors on BMPs.

While inspection efforts are improving, site conditions do still show stormwater issues need to be addressed. Overall, the need for enforcement decreased, but more than 300 verbal warnings were issued in addition to more than 70 written notices or citations.

Public Streets, Roads, & Highways (PSR)

This program element is pursuant to provision C.2.a of the permit and is one of several that address municipal activities. These program elements essentially consist of best management practices (BMPs) being incorporated into City operations such as street repair. Training plays a key role in ensuring that staff uses the proper techniques during the course of their duties to protect water quality. For 2004-05, this training was completed in May 2005. Session content centered on review of the Department of Transportation's BMPs and Standard Operating Procedures (SOPs) for O&M activities. Training content is directed by which work groups are present, and the training curriculum is revised when needed to reflect new practices. For example, a new training module specific to DOT electrical staff was developed and training conducted in June 2005. On average, 96% of the employees responded that the BMPs taught were appropriate for their work.

Training was also conducted for Rural Public Works BMPs in accordance with provision C.5, which requires that the City employ proper techniques when conducting maintenance activities in rural areas. This standard is integrated as part of the PSR program element. The City's departments of Parks, Recreation, and Neighborhood Services; General Services; and Transportation are responsible for managing rural public works maintenance and support activities.

Storm Drain System Operation & Maintenance (SDO)

Storm Drain System Operation and Maintenance is another municipal activity program element implemented in accordance with provision C.2.a of the permit. This program includes key maintenance activities that are conducted to ensure the proper function of the storm sewer system to collect and convey clean rainwater. Maintenance staff training is conducted to coincide with that of the PSR program element and was completed in May 2005.

DOT successfully implemented its annual storm drain inlet inspection and cleaning program, cleaning approximately 28,000 inlets. To date, the City has been able to achieve the more comprehensive Tier 2 level of inlet cleaning performance. Due to budget constraints anticipated for 2005-06, a modified implementation of Tier 2 may be needed. In 2004-05, new criteria were developed for inlet cleaning data collection, and training on the criteria was conducted for the cleaning crews prior to the start of the inlet cleaning program. The new data collection criteria worked well. Evaluation of the inlet cleaning data collected indicates that approximately five percent of the City's storm drain inlets and catch basins had a problem associated with them. The key problems for stormwater protection were cars parked on catch basins; high debris (leaves, lawn clippings, dirt and other natural materials); excessive garbage (paper, bottles, cans, and other man-made waste); and illicit pollution (concrete, antifreeze, oil, paint, etc. that appear to have been intentionally dumped into the inlet or catch basin). Maintenance staff is directed to contact Environmental Enforcement when illicit pollution is identified. Using this information, the City can direct resources to known problem areas.

Pesticide Management (PM)

This program element is required pursuant to provision C.9.d. of the permit. The purpose of the Pesticide Management program is to reduce the amount of pesticides in stormwater and landscape runoff. Activities include setting municipal policy, implementing proper techniques when selecting and applying pesticides on City property, staff training, public education, and City participation in regional efforts to influence regulations that affect pesticide management. In 2003, the Council adopted an IPM Policy, which calls for municipal operations to incorporate IPM techniques and to reduce, phase-out, and ultimately eliminate the use of pesticides that cause impairment of surface waters.

The City has incorporated the use of integrated pest management techniques for many years. Pesticide use on City of San José municipal property is based upon specific site needs. The decision to use a pesticide is determined by several factors, i.e., site evaluation, accurate identification of the pest, past history, monitoring of thresholds, review of alternative means of control, and selection of the most favorable and effective pesticide. The City also seeks to reduce the need for pesticide usage through alternate actions such as mulching, weed barriers, proper irrigation, and selection of disease resistant plants. In many instances, plant diseases and pest problems are tolerated rather than employing any pesticides. When pesticide use is necessary, the City strives to use products that are less toxic and safer for employees.

In 2004-05, the City implemented a new data management tool to compile and evaluate information on pesticide use on City property. This database includes information reported by City staff and contractors. While some issues remain with incomplete data from contractors, comparative data was reviewed for City staff applications and for golf courses. In general, City use of the two most common herbicides (Roundup and Pendulum) decreased despite an increase in total acreage maintained. In some cases, Gallery was used to replace Pendulum to address escape weeds and resistance to Pendulum. The use of diuron products was increased to maintain effective weed control along undeveloped rights-of-way and alleviate the need for repeated treatment. Golf course applications fluctuated to address specific infestations such as pink snow mold and dollar spot fungus. Golf course managers also began using a crystalline form of copper, as a test to determine whether it provides longer lasting algae control than the liquid form used previously.

Mercury (M)

This program element is implemented pursuant to provision C.9.c of the permit. The City has continued its efforts to reduce or eliminate mercury discharges in municipal operations. The City purchases, almost exclusively, low mercury-containing fluorescent lamps. Expired lamps are required to be recycled. A flyer was distributed to staff in various departments to ensure that lamps are stored, handled, and disposed properly. In 2004-05, the City recycled nearly 38,000 feet of mercury-containing lamps. Residential recycling of lamps is accomplished through the City's support of the Santa Clara County's Household & Small Business Hazardous Waste program. The City also conducts various outreach efforts at both the City and Program levels.

In addition, the City has operated and maintained a National Mercury Deposition Network (MDN) site since January 2000, collecting samples, recording data, and sending both to the national MDN laboratory. The City also continues its support of the San Francisco Bay Regional Monitoring Program, AB 982 TMDL Public Advisory Group, WMI Guadalupe River Mercury TMDL Workgroup, and the Clean Estuary Partnership. The City continues its commitment to work with the Water Board and stakeholders toward TMDLs that are technically defensible and feasible for implementation.

Water Utilities Operations & Maintenance (WUOM)

This program element addresses a municipal activity and is implemented in accordance with provision C.2.a. The program addresses operation and maintenance activities at the City's Municipal Water System. The key tools for implementing this program are the Water Utility Pollution Prevention Plan and staff training to ensure that proper techniques are employed during maintenance activities. The City's training program includes the development of a video demonstrating the implementation of BMPs for a specific work function. This year, the tank cleaning program was the focus of annual evaluation of SOPs and the review found that no changes in the current practice are needed.

Public Information / Participation (PIP)

This program is implemented in accordance with provision C.4 and includes general outreach, targeted outreach, educational programs, and public participation. Conducting outreach to the community and providing opportunities for participation in water quality protection activities are critical to evoking the behavior changes needed to manage stormwater quality. They are also important for garnering the support needed to continue and expand services and programs.

The City participates in and supports a wide variety of outreach and education activities, including many in collaboration with other agencies, such as through the Program or regional groups. Highlights for 2004-05 include continued stenciling of storm drain inlets throughout the City with the appropriate neighborhood creek name and 945-3000 hotline number; hosting creek clean-up sites; completion of a BMP packet aimed at restaurants; and participation in a Water Wizard Festival for 300 third grade children. Outreach continues to be a vital tool for enforcement inspectors, allowing for direct education of polluters and potential polluters. Educating the youth of San José continues to be a priority, with several different programs targeting both students and teachers with watershed education.

The City also actively supports Program-wide outreach and education activities, including IPM outreach, Mercury outreach, and the Watershed Watch campaign. Coordinating outreach activities with the Program and Bay Area-wide efforts enables the City to deliver some of its pollution prevention message more effectively and at reduced cost.

Municipal Compliance (MC)

This program element summarizes the City's efforts to train City staff on pollution prevention practices and to ensure that City facilities comply with stormwater requirements. In 2004-05, the City held more than 70 sessions on various topics to ensure that City staff received training on

procedures and issues related to stormwater programs. Some are part of well-established training regimens. Strong emphasis was maintained on "keeping mud out of the streets and storm drains" during the erosion and sediment control training for both City staff and developers. Best management practices were reviewed in detail with various operations and maintenance personnel. New trainings held this year addressed implementation of the C.3 (New and Redevelopment) requirements including a series of workshops addressing control measure selection and design.

To ensure stormwater compliance at City properties, Corporation Yards were routinely inspected for stormwater permit compliance. An annual inspection was conducted at each of the six yards during the first two quarters of 2005. Quarterly hazardous material inspections, which include stormwater issues, were also conducted in 2004-05. A Corporation Yards' Pollution Prevention Team (P2 Team) was formed in December 2004. The responsibilities of the team are to review and update Corp Yard Stormwater Pollution Prevention Plans (SWPPPs), assess the Corp Yards for current stormwater best management practices (BMPs) in use, determine if new BMPs should be included in the SWPPPs, and assist in implementing the SWPPPs (i.e., training). As a first task, the Main Yard SWPPP was revised in June 2005. The combination of site inspections and the semi-annual meetings appears to be working well. The Corp Yards' general appearances have improved over the last several years and the concerns identified in the inspection reports are usually minor and resolved swiftly.

Copper & Nickel Action Plans (CNAP)

This program element is implemented pursuant to provisions C.9.a and b of the permit, which incorporate Action Plans for copper and nickel to be implemented based on water quality monitoring results in the South Bay. The action plans include activities for which various agencies or entities assume responsibility. Only activities undertaken at the municipal level for stormwater are included in this report. Such activities have largely been integrated into other ongoing program elements but are reported as a summary for clarity. Copper and Nickel remain among the list of pollutants addressed by general and targeted outreach regarding stormwater pollution prevention.

In the City's Industrial and Commercial Inspection program, key activities have been implemented to address copper either exclusively or among the array of potential pollutants. A fact sheet regarding rooftop sources of copper pollution were previously distributed to industrial facilities. In 2004-05, ESD began a project to include additional rooftop inspections of select facilities in order to evaluate the degree of BMP implementation and the need for additional outreach or enforcement efforts. The project will continue through next year.

The City also completed its "NOI Filers" project. This activity was aimed at increasing awareness among industrial facilities of their obligations under the State's General Industrial Activities Stormwater Permit. Review of this information has already been successfully incorporated into routine inspections and the City reports to the Water Board a list of facilities that have not yet filed under the State permit. This year, the City also completed a mass mailing to prospective facilities to alert them to the requirements. This mailing will be repeated and the project evaluated next year.

Trash (TRA)

This program element is implemented pursuant to the Program's Trash Work Plan and provision C.1 of the permit. The purpose of the Trash program is to address the litter and illegal dumping that threatens to pollute urban waterways. The impetus for this program was the 2001 Water Board Staff Report recommending that all urban creeks, lakes, and shorelines be placed on a monitoring list due to the threat of trash impairment to water quality. Activities associated with the Trash program since its inception in FY 02-03 include a survey of San Jose's established trash management services and programs and identification of litter hotspots.

Trash assessments, hotspot prioritization, and enhancements to trash management practices were the focus of activities during 2004-05. The hotspot list is comprised of Antilitter Program sites, parks, and homeless encampments located throughout the City. This year assessments were performed at hotspots within the Coyote watershed using standard protocol selected by the Program. The assessments provided useful information regarding the type and potential sources of trash found in and around urban creeks and offered insight into the effectiveness of existing trash management practices. The trash assessments revealed that existing trash management activities are sufficient at many locations assessed, but that enhancements are needed in others. Preliminary efforts to enhance trash management practices at high priority locations and in general to address potential impacts to creeks began in 2004-05.

This year the City of San Jose and the Santa Clara Valley Water District (District) executed a Memorandum of Agreement (MOA) for Trash Prevention and Removal (Trash MOA). Both the City and the District have individually established programs that entail trash removal from creek areas. The purpose of the Trash MOA is to formalize the commitment of the City and District to coordinate resources, when feasible, to remove trash in and near creeks. Among other provisions, the MOA calls for up to three partnered cleanup projects each calendar year. The trash cleanup projects are intended to take place at locations that fall outside the normal scope of operations of the City and District. During this reporting period, one such project occurred in an area along Coyote Creek with a large in-creek trash accumulation. Two additional cleanups are scheduled to take place in 2005.

Certification Statement

City of San José
FY 2004-2005 ANNUAL REPORT

Certification Statement

"I certify, under penalty of law, that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted, is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

1. ICID: Illicit Connection / Illegal Discharge Inspection

1.A ICID Work Plan Self Evaluation Matrix

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
ICID 1	**Response to Complaints** The City of San José will respond to complaints regarding IC/ID dumping activities into the storm drain system and will ensure that the activity has ceased or is an allowable discharge**.**			
ICID 1.A.	Update database system to track IC/ID complaint information.	Done FY 02-03	Done FY 02-03.	ESD-WE
ICID 1.B.	Document to RWQCB annually the number of IC/ID complaints that City received, & that activity has ceased or is an allowable discharge.	Annually	Done. See 1.D ICID Summary Tables/Additional Information.	ESD-WE
ICID 1.C.	Document to the RWQCB annually follow-up activities from each IC/ID complaint response. (Table 1 in the Annual Report)	Annually	Done. See 1.D ICID Summary Tables/Additional Information.	ESD-WE
ICID 1.D.	Review effectiveness of standard operating procedures for responding to IC/ID complaints.	Annually	Done.	ESD-WE
ICID 1.E.	Work with SCVURPPP to refine administrative procedure for providing referrals to the Regional Board.	03/01/05	Pending activity by Program ICID AHTG. Anticipated new completion date: Spring 2006.	ESD-WE, Program
ICID 1.F.	Revise standard operating procedures to incorporate results of ICID 1E.	03/01/05	Pending completion of ICID 1E. Anticipated new completion date: Spring 2006.	ESD-WE, Program
ICID 2	**Investigations** The City of San José will conduct investigations of high priority areas. High Priority is defined as areas with a high potential for non-stormwater discharges to the City's collection system.			
ICID 2.A.	Identify high priority areas, primary types & sources of IC/ID pollution based on complaints, historical inspection records, inspector knowledge and monitoring information.	Annually	Done. Priority areas based on complaints received. All complaints are investigated.	ESD-WE
ICID 2.A.1	Perform GIS analysis on frequently occurring ICID sources and/or types.	FY 03-04	Done. See 1.D ICID Summary Tables/Additional Information.	ESD-UR
ICID 2.B.	Conduct investigations of high priority areas based on ICID 2A.	Ongoing	Done. See 1.D ICID Summary Tables/Additional Information. Additionally staff conducted outreach efforts in business areas that had consistent ICID complaints.	ESD-WE
ICID 2.C.	Document to the RWQCB that high priority areas have been conducted, per Table 2 in revised reporting format.	Annually	Done. See 1.D ICID Summary Tables/Additional Information.	ESD-WE
ICID 3	**Inspector Training** The City of San José will ensure that IC/ID inspectors are adequately trained in inspection procedures, documentation, and enforcement related to stormwater pollution prevention.			

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
ICID 3.A.	Conduct annual training for IC/ID inspectors.	Annually	Done. See 12.D: *Municipal Employee Training Summary* for details.	ESD-WE
ICID 3.B.	Provide and document on-the-job training and other training opportunities, such as inspection workshops.	Annually	Done. See 12.D: *Municipal Employee Training Summary* for details.	ESD-WE
ICID 3.C.	Review inspection training protocols to identify new training opportunities, approaches, and materials.	Annually	Done. During annual reviews and during the budget cycle ESD annually reviews the training and material needs for each inspector and the Watershed Enforcement section as a whole.	ESD-WE
ICID 4	**Outreach and Technology Transfer** The City of San José will distribute outreach and technology transfer material containing applicable control measures and/or BMPs to target parties responsible for IC/ID activities.			
ICID 4.A.	Develop and/or modify existing outreach material, as needed, based on report developed under ICID 4B	Ongoing, as needed.	Done. Six restaurant grease information sheets entitled 1) *Chemicals, Enzymes and Bacteria*, 2) *Power Operated Grease Removal Devices*, 3) *Grease Interceptor Maintenance*, 4) *Grease Trap Maintenance*, 5) *Maintenance Documentation Requirements* and 6) *Vapor/Ventilation Hood Cleaning* were printed in English. A poster entitled *Commercial Fats, Oils and Grease* was produced in English, Spanish and Vietnamese.	ESD-WE/Marcom
ICID 4.B.	Determine need for new outreach and technology transfer material by getting feedback from inspectors regarding 1) continuing problem activities 2) discharge types and 3) monitoring and complaint data, 4) usefulness of existing outreach and technology transfer material.	Ongoing	Done. Feedback from inspectors is collected during regular staff meetings. Needs are identified and responded to as priorities and budget allow. *Preventing Storm Drain Pollution* was translated into Spanish and Vietnamese. The *Draining Pools and Spas* brochure was reprinted in English.	ESD-WE and UR
ICID 4.C.	Document to RWQCB that outreach technology transfer material and/ or BMPs have been distributed; tracked in Urban Runoff database.	Annually	See 11.D: *PIP Activities* for a count of outreach and technology transfer materials distributed as part of inspection activities.	ESD-UR
ICID 4.D.	Develop and implement standard operating procedures to gather customer feedback on IC/ID services.	Development Done FY 02-03 Implementation Ongoing	Customer feedback cards are routinely distributed to ICID complainants. See Section 11 A, Item PIP 2.B 1 for details.	ESD-WE
ICID 5	**SOPs Effectiveness Evaluation** The City of San José's Watershed Enforcement staff will review and evaluate the effectiveness of its SOPs in responding to complaints regarding illicit connections and illegal discharge dumping activities into the storm drain system.			
ICID 5.A.	Document and evaluate effectiveness of SOPs	Annually	Done and ongoing. Outreach was added as a standard element to areas that have consistent ICID reports.	ESD WE
ICID 5.B.	In Annual Report, document and evaluate what worked well and what needs improvement.	Annually	See 1.B: ICID Program Evaluation.	ESD WE

1.B ICID Program Evaluation

Figure 1 illustrates the distribution of ICID incident types for Residential, Commercial, Industrial, Automotive, Food, Construction, and Public facilities.

The number of vehicle and equipment leaking incidents is up slightly to 137 from a total of 123 last year. This type of incident continues to be the leading incident type investigated in residential areas and residential areas lead in the total number of complaints at 371. (See Section 1.D ICID Summary Tables/Additional Information). In FY 05-06 staff will analyze geographically the residential complaint data and examine whether there are clusters of complaints originating from specific residential areas in the City. The Strong Neighborhoods Initiative (SNI) is a partnership between the City of San José, the Redevelopment Agency (RDA) and San José's residents and business owners to strengthen the City's neighborhoods by building clean, safe and strong neighborhoods with independent, capable and sustainable neighborhood organizations. SNI may be a good venue to engage the community about the ICID Program.

The number of construction related incidents was down significantly from 117 last fiscal year to 73 this year. Staff in ESD, PW, and PBCE all coordinated their efforts to more effectively prevent construction related incidents. Please see the CON section for details.

Targeted Outreach Efforts in FY 04-05

Staff focused on outreach this fiscal year and conducted a number of targeted outreach activities in an effort to reduce the number of ICID calls which reached a high of 1,437 cases in FY 99-00. Through targeted outreach activities, the number of ICID calls has been significantly reduced and staff continues to work towards further reducing the number of calls.

Outdoor Events Coordination

Over the last year, Watershed Enforcement has responded to a number of complaints regarding outdoor events and the lack of BMPs or illegal discharges to storm drains. In cooperation with the City's Office of Cultural Affairs, inspection staff now attends all "pre-event meetings" for outdoor events, in an effort to improve customer service and help prevent pollution through education. WE staff identify potential sources of stormwater contamination at events and recommend measures to alleviate them and also distribute outreach material relating to storm drain pollution prevention.

On-site Training at Kings Row Properties

Kings Row is an acronym given to an area of San José that has several Commercial/Industrial businesses on a private property off Kings Row (street). Over the last few years, this area had on-going issues with illegal discharges to the storm drains, with poor housekeeping practices by the businesses. As part of on-going monitoring and enforcement, Watershed Enforcement staff conducted an information/training meeting on April 28, 2005, with all the tenants to educate them on stormwater regulations and possible enforcement actions. The training was offered in response to requests from property owners and managers who felt that this kind of training from City staff would be effective in raising awareness among the business owners and operators.

Stormwater Training for Grand Century Mall

Watershed Protection staff provided an on-site training in Vietnamese at Grand Century Mall in San José to train the food-related tenants about best housekeeping practices to prevent storm drain pollution. This site has an ongoing history of illegal dumping of wash water to the storm drain and some grease related problems in the sanitary sewers. Grease related educational material was distributed at this training as well.

Significant clean ups

ESD Enforcement staff also cleaned up a number illegal non-hazardous dumping cases on both the Los Gatos and Coyote Creek and coordinated with other City departments to clean up a storm line on Leo Avenue and a suspected methamphetamine laboratory.

Los Gatos Creek Illegal Dumping Cleanup

Watershed Enforcement staff responded to a complaint about illegal dumping of possible auto fluids along the bank of Los Gatos Creek, at Home Street. Six, 5-gallon containers of waste oil were dumped onto the creek banks. Staff coordinated with the Fire Department (HIT) to remove the raw material. ESD contracted services to provide environmental remediation of the effected soil. The effort was also coordinated with DOT, which provided the services for removal and replacement of the barricades and fence at the end of the street, to provide access for the remediation work.

Coyote Creek Illegal Dumping Cleanup

Staff responded to a call from the Santa Clara Valley Water District about "blue" colored water in the Coyote Creek. ESD coordinated with DOT to pump the contaminated water out of the creek and into the sanitary sewer system. Investigation led the source to be possible dumping from charter buses that operate out of a shopping mall parking lot in East San José. Staff is in the process of identifying the responsible parties to pursue enforcement.

Coyote Creek Trail Cleanup

Watershed Enforcement received a concerned citizen complaint regarding trash accumulation and dumping along the Coyote Creek trail, south of Capitol Expressway. Upon investigation, it was found that the problem spanned the entire length of the trail and included several sources, including homeless encampments and large item dumping by vehicles driving onto the creek banks. ESD coordinated with PRNS, DOT and GSA to close breaches in the fences, pick-up trash and eliminate the homeless encampments. An onsite meeting on February 1, 2005, showed that majority of the trash has been eliminated. The complaining party had also been sent information about the City's Adopt-a-Creek program to encourage neighborhood participation in creek and trail maintenance.

Environmental Support for Illegal Drug Lab Cleanup

Watershed Enforcement staff provided support and environmental investigation services related to a suspected methamphetamine laboratory operation in South San José on May 20, 2005. The Santa Clara County Department of Environmental Health requested assistance at the site to investigate and sample for possible illegal dumping of chemicals into the sanitary or storm sewer related to the activities. Staff also answered questions from news reporters related to environmental activities involved with the investigation of the site.

Figure 1. Total Number of Incidents by Type

1.C ICID Response to Water Board Comments

No comments received from Water Board on this Program Element.

1.D ICID Summary Tables / Additional Information

Incident Types by Potential Source of Incident

Incident Type	Residential	Commercial	Industrial	Automotive Facility	Food Facility	Construction	Public Facilities & Utilities	Totals

2. IND: Industrial & Commercial Discharges

2.A IND Work Plan Self Evaluation Matrix

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
IND 1	**Notice of Intent (NOI) Filers** The City of San José will conduct inspections of those facilities that have filed an NOI with the State and appear on a list provided by the State.			
IND 1.A.	Annually, obtain NOI filer database from State with annual information, review information and identify new NOI facilities for inspection next year.	Annually	Done. List obtained and incorporated in 7/04.	ESD-WE
IND 1.B.	Conduct and document initial inspections of NOI Filers within one year using the inspector checklist form to determine exposure and assign a future inspection frequency to each facility accordingly. Document whether the facility had submitted an NOI, and whether a SWPPP and a SWMP were on site.	Ongoing	Done. See 2.D IND Summary Tables/Additional Information.	ESD-WE
IND 1.C.	Conduct & document annual inspections of facilities determined to have exposure in accordance with inspection frequency schedule.	Ongoing	Done. See 2.D IND Summary Tables/Additional Information.	ESD-WE
IND 1.D.	Collect information during inspections on the potential for stormwater pollution at industrial and commercial facilities in order to determine the appropriate inspection frequency for the various facilities.	Deleted FY 04-05	Work Plan item deleted FY 04-05; activity is ongoing under IND 1.B.	ESD-WE
IND 1.E.	Conduct & document inspections of facilities that need to file an NOI at least once every five years for facilities determined have exposure in accordance with inspection frequency schedule. Enter inspection information from the inspector facility audit form onto the database.	Ongoing	Done. See 2.D IND Summary Tables/Additional Information.	ESD-WE
IND 1.F.	Collect information during inspections on the potential for stormwater pollution at industrial and commercial facilities in order to determine the appropriate inspection frequency for the various facilities	Deleted FY 04-05	Work Plan item deleted FY 04-05; activity is ongoing under IND 1.E.	ESD-WE
IND 1.G.	Update the database to track the inspection information from the inspector checklist and to include all NOI filer SIC codes required by the Industrial Activities Storm Water General Permit	Ongoing	Done. Originally, the system had the capability to track and report multiple SIC categories for each facility which resulted in a difference between the total number of facilities inspected and the number of IND facilities categorized. In order to remedy this issue, staff defined primary SIC Codes for each facility. Facilities are categorized according to their assigned primary SIC Code and inspected accordingly. This refinement to inspection procedures and the database has successfully eliminated	ESD-WE

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
			duplication.	
IND 2	**Non-Filer Investigations** The City of San José will inspect industrial facilities that may be subject to general permit requirements but are not found on the NOI filer list provided by the State.			
IND 2.A.	Identify industrial facilities that conduct activities with the SIC codes listed in the IND SOPs.	Annually	Done July 2004: Determined the Inspection schedule for the year based on the IND SOP.	ESD-WE
IND 2.B.	Develop a list of facilities targeted for inspection during upcoming year that may be subject to general permit requirements for NOI based on business licenses, etc.	Annually	Done, July 2004: Determined the Inspection schedule for the year based on the IND SOP.	ESD-WE
IND 2.C.	Conduct and document initial inspections of industrial facilities with the SIC codes listed referenced in IND 2A, using the inspector checklist form to document whether the facility "has exposure" or "no washing/no service" facility, whether the facility had submitted an NOI, and whether a SWPPP and a SWMP were on site.	Ongoing	Done. See 2.D IND Summary Tables/Additional Information.	ESD-WE
IND 2.D.	Conduct & document annual inspections of facilities determined to be Significant Facilities in accordance with implementation schedule. Add the facility to appropriate database(s) and assign an inspection frequency. If the facility inspected is determined to need to file an NOI and is not able to provide an NOI, SWPPP or SWMP, refer to the RWQCB.	Ongoing	Done. See 2.D IND Summary Tables/Additional Information.	ESD-WE
IND 2.E.	Work with the Program's Industrial Inspection Ad Hoc TG on an Administrative procedure for providing referrals to the Regional Board and document providing referrals to the Regional Board for facilities with significant problems.	Pending Implementation by Program	Pending activity by Program IND AHTG. Anticipated new completion date: Spring 2006.	ESD-WE
IND 3	**City Regulated Facilities** The City of San José will conduct inspections of City Regulated facilities as identified below: Food Service Facilities: 2 or more AOCs* over a rolling three year time period - Every year 1 AOC over a rolling three year time period – Every two (2) years 0 AOCs over a rolling three year time period - Every three (3) years All other City-regulated Facilities: 2 or more AOCs* over a rolling five year time period – Every year 1 AOC over a rolling five year time period – Every two (2) years 0 AOCs over a rolling five year time period but have exposure – Every five (5) years 0 AOCs over a rolling five year time period with no exposure or potential for exposure – No further inspections Facilities for which a referral or ICID complaint is received: As soon as practicable for violations and every year until they meet the above criteria.			
IND 3.A.	Determine industrial/commercial facilities identified in the IND SOPs	Annually Q1	Done, July 2004: Determined the Inspection schedule for the year based on the IND SOP.	ESD-WE

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
IND 3.B.	Conduct and document inspections of City Regulated facilities, other than food service facilities, at least once every five (5) years in accordance with the inspection frequency schedule. If determined to have no impact or no potential for pollution, will not be scheduled for future inspection.	Ongoing	Done. See 2.D IND Summary Tables/Additional Information.	ESD-WE
IND 3.C.	Conduct and document inspections of City Regulated food service facilities at least once every three (3) years. Initial approved performance standards require inspections every three years. If determined to have no impact or no potential for pollution, will not be scheduled for future inspection.	Ongoing	Done. See 2.D IND Summary Tables/Additional Information.	ESD-WE
IND 3.D.	Conduct and document inspections for which a referral or complaint was received within one year. After the inspections, enter the information from the inspector facility inspection report onto the database.	Ongoing	Done. See 2.D IND Summary Tables/Additional Information.	ESD-WE
IND 3.E.	Develop a database to track the inspection information from the inspector facility inspection report.	Done FY 02-03	Done FY 02-03.	ESD-WE
IND 3.E.1.	Implement new Environmental Enforcement Data Management System.	Done FY 03-04	Done FY 03-04.	
IND 3.F.	Revise database to track inspection information from inspector facility inspection report and to include new industrial program categories.	Done FY 03-04	Done FY 03-04.	ESD-WE
IND 3.G.	For B, C, D, and E, collect information during inspections on the potential for stormwater pollution at City Regulated facilities in order to determine the appropriate inspection frequency for the various facilities.	Ongoing	Done. Areas of Concern (AOC) determine inspection frequency. AOCs are identified during inspection.	ESD-WE
IND 3.H.	Develop an inspection frequency plan to track frequency of inspections. Implement & update, as needed, the inspection frequency plan.	Done FY 01-02 Implementation Ongoing Updated as Needed	Done FY 01-02. Areas of Concern (AOC) determine inspection frequency. AOCs are identified during inspection.	ESD-WE
IND 4	**Compliance** The City of San José will conduct industrial/commercial inspections to determine the existence of discharges or threatened discharges, which are illegal under local ordinances. The facility operator will be notified of observed areas of concern to be corrected and/or if official action on violations is necessary, it will take place under local enforcement procedures.			
IND 4.A.	Document facilities that have enforcement actions, and the type of enforcement actions, conducted for the existence of discharges or threatened discharges that	Ongoing	Done. See 2.D IND Summary Tables/Additional Information.	ESD-WE

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
	are illegal under local ordinances.			
IND 5	**Training** The City of San José will ensure that industrial/commercial inspectors are adequately trained in inspection procedures, documentation, and enforcement related to stormwater pollution prevention.			
IND 5.A.	Develop training procedures.	Done	Done FY 04-05. A comprehensive training manual was developed for use along with the new database. Inspection procedures will be updated to reflect the use of the new database.	ESD-WE
IND 5.B.	Conduct initial training based on the training procedures for industrial/commercial inspectors.	As Needed	Done. See 12.D: *Municipal Employee Training Summary* for details.	ESD-WE
IND 5.C.	Provide on-the-job training and other training opportunities such as industrial/commercial inspection workshops.	Ongoing	Done. See 12.D: *Municipal Employee Training Summary* for details.	ESD-WE
IND 6	**Outreach** The City of San José will help develop and distribute outreach and technology transfer material containing applicable control measures and/or BMPs to industrial/commercial facility operators responsible for IND activities.			
IND 6.A.	Identify and list existing outreach and technology transfer material. Distribute applicable outreach and technology transfer material to industrial/commercial facility operators. Document to the RWQCB that outreach and technology transfer material and/or BMPs have been distributed, as needed, to industrial/commercial facility operators.	Annually Distribution Ongoing	Done. Outreach materials are listed in Appendix A of the City's URMP. See 11.D: *Outreach Materials Distributed* for a count of outreach and technology transfer materials distributed as part of Inspection activities.	ESD-UR
IND 6.B	Determine usefulness of outreach and technology transfer materials by obtaining feedback from industrial/ commercial facilities. Obtain feedback from inspectors about the effectiveness of existing outreach and technology transfer material.	As Needed	Done. Feedback from inspectors is collected during regular staff meetings. Needs are identified and responded to as priorities and budget allow.	ESD-UR
IND 7	**NOI Filers Effectiveness Evaluation** The City of San José's Watershed Enforcement staff will review and evaluate the effectiveness of its NOI Filers inspections procedures and database tracking system.			
IND 7.A.	In the Annual Report document and evaluate the effectiveness of NOI Filers inspections procedures.	Annually	Done. NOI filers are inspected in a similar manner as all facilities. These procedures were updated to include a better mechanism for determining whether a facility needs to file for an NOI if conditional.	ESD-WE
IND 7.B.	In the Annual Report document and evaluate the effectiveness of the NOI Filers database tracking system.	Annually	The NOI filer database tracking system identifies whether facilities are conditional or not and includes a special button for indicating if there is any potential for exposure.	ESD-WE

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
IND 7.C.	In the Annual Report document and evaluate what worked well and what needs improvement.	Annually	Done. See 2.D IND Summary Tables/Additional Information.	ESD-WE

2.B IND Program Evaluation

The goal of the IND Program Element is to reduce storm drain pollution from commercial and industrial facilities through inspection. The Environmental Enforcement Section of the Watershed Protection Division is primarily responsible for inspecting over 3,000 businesses in San José each year.

Business License Outreach

Due to the City's outreach program regarding business licenses, 3,500 new applicable businesses were identified. This constitutes an increase of new businesses by over 300%. In light of this large increase and the desire to keep facility inspections equitable annually and to avoid creating a peak year, inspections for these facilities were distributed over three years. This fiscal year, staff inspected approximately 800 of these new businesses. In FY 05-06, approximately 1,700 are scheduled for inspection and the remainder will be complete in FY 06-07. Although the business outreach effort resulted in very large increase in number of inspections and a growing caseload for inspectors, staff has successfully integrated these additional inspections with the existing workload.

SIC Codes and Database

In 2003, the new Environmental Enforcement Data Management System (EEDMS) was implemented. This system utilizes handheld personal digital assistant (PDAs) for field inspections and data collection. Originally, the system had the capability to track and report multiple SIC categories for each facility which resulted in a difference between the total number of facilities inspected and the number of IND facilities categorized. In order to remedy this issue, staff defined primary SIC Codes for each facility. Facilities are categorized according to their assigned primary SIC Code and inspected accordingly. This refinement to inspection procedures and the database has successfully eliminated duplication.

Food services

FY 04-05 marks the end of 3-year period of food service inspections. All of the food service facilities in San José have been inspected on schedule. This represents over 3,000 additional businesses that were inspected on time and on schedule. The first year of the program represented a large learning curve for food service operators in the City; however, by the end of the third year, most food service facilities inspected had a general awareness of stormwater issues related to their business type. Staff credits this awareness to successful outreach efforts to the industry.

Over the course of the past three years, staff found that housekeeping measures were generally well done. This could be largely in part due to frequent Health Department inspections and regulations. The major issue related to food service inspections was, not surprisingly, fats, oils and grease (FOG). As a result, staff has developed a toolkit for inspectors for food facilities which includes outreach materials on fats, oils and grease and grease management. Additionally, senior staff is refining the restaurant inspection to incorporate requirements of a sanitary sewer management plan (SSMP) and a FOG Program. A number of inspectors attended training specifically related to FOG.

2.C IND Response to Water Board Comments

No comments received from Water Board on this Program Element.

2.D IND Summary Tables / Additional Information

IND Summary Tables

Overall Facility Inspection Totals	04-05	03-04	02-03	01-02	00-01	Description of item
Facilities Subject to Inspection in database	6,164	4,991	3,943	3,924	3,031	All facilities in the database that require inspections to meet the performance standard, whether or not they are scheduled for inspection in the current year. This includes both city-regulated and GIASP facilities. This excludes facilities that the City has determined are not subject to future inspection based on a determination that there was no exposure, incorrect SIC, etc.
Facilities Scheduled for Inspection	3,020	3,022	2,500	1,743	2,501	All facilities that were determined to need inspection by existing schedule date and imports from business license, Harris Info, and NOI filers state listing for reporting year.
Facilities Inspected	3,029	2,872	2,210	1,720	2,172	All facilities subject to inspection that were inspected. Also described as number of cases.
Other City Regulated Facilities	51	26	30	43	63	These facilities had an Illicit Connection Illegal Dumping complaint filed against them, so now are scheduled to receive an industrial/commercial inspection as per IND 3D.
Facilities Scheduled for Inspection the following fiscal year	3,237	3,144	3,132	2,500	884	All facilities subject to inspection for the following fiscal year.

Status of GIASP Implementation	04-05	03-04	02-03	01-02	00-01	Description of item
Board Referrals						
New NOI Filers	4	20	9	260	665	Total industrial facilities in San José with new NOI filed according to Water Board Database as of July 2004. Prior to 02-03, data included all Active NOI filers; not just new ones.
New NOI Filers Inspected	4	17	9	N/A	N/A	Of the Facilities referred to the City by the Water Board, the number inspected during the fiscal year.
Inspections						
Potential NOI Facilities	746	521	544	N/A	N/A	Of the Facilities scheduled for inspection during the fiscal year, the number that may be subject to GIASP provisions
Have Filed	96	126	110	N/A	N/A	Of the Facilities inspected, the number that have filed.
SWPPP or SWMP on-site	87	149	108	N/A	N/A	Per IND 1B and IND 2C, the number of facilities having a SWPPP or SWMP on-site
Need to File	90	26	122	98	144	Of the Facilities inspected, the number determined to need to file in accordance with the GIASP. These facilities are listed in 2.D Companies Requiring NOI Based on SIC But Have Not Filed AND Companies Requiring NOI Based on Exposure But Have Not Filed.
Do Not Need to File (Conditional - No Permit Required)	560	279	164	465	665	All facilities that were determined to need an inspection per the GIASP with findings of no permit required.
Closed/Moved Facilities	248	521	447	N/A	N/A	NOI facilities no longer in operation.

Enforcement Actions Summary

TOTAL ENFORCEMENT ACTIONS TAKEN	04-05	03-04	02-03	01-02	00-01	DESCRIPTION OF ITEM
AOCs	2,591	2,624	1,790	1,069	701	Area of concern with a compliance date and any enforcement action activity.
BMPs Distributed	6,890	5,796	4,267	1,878	2,154	Number of BMPs issued as part of Enforcement.
Verbal Warning	1,280	1,927	753	N/A	N/A	Verbal warning providing information for corrective actions. An inspection report accompanies each verbal warning.
Official Warning Notice	384	162	77	N/A	N/A	Written letter providing information for corrective actions.
Administrative Action with Penalty &/or Fine	15	3	3	N/A	N/A	Administrative actions, including fines (In San José this is an Administrative Citation.)
Criminal Action	0	0	0	N/A	N/A	Legal actions
Referral for Enforcement	0	0	0	N/A	N/A	Refer case to agency with enforcement powers.
Referral for other reason	0	0	4	N/A	N/A	Refer case to internal or external agency for cleanup, information or jurisdictional reasons.

HIGHEST ENFORCEMENT ACTION TAKEN	04-05	03-04	DESCRIPTION OF ITEM
No Enforcement Action	780	835	Cases with no Enforcement Action taken
BMPs Distributed	939	850	Cases with BMPs Distributed as the highest Enforcement Action to achieve compliance
Verbal Warning	1,045	1,064	Cases with Verbal Notice as the highest Enforcement Action to achieve compliance
Warning Notice	255	120	Cases with Warning Notice as the highest Enforcement Action to achieve compliance
Administrative Citation	10	3	Cases with Administrative Citation as the highest Enforcement Action to achieve compliance
Criminal Action	0	0	Cases with Criminal Action as the highest Enforcement Action to achieve compliance
Total	3,029	2,872	All facilities subject to inspection that were inspected. Also described as number of cases.

INSPECTIONS REQ'D FOR COMPLIANCE	04-05	03-04	DESCRIPTION OF ITEM
One Inspection	2,132	2,057	Number of Cases requiring one inspection to achieve compliance
Two Inspections	675	535	Number of Cases requiring two inspections to achieve compliance
Three Inspections	162	158	Number of Cases requiring three inspections to achieve compliance
Four Inspections	45	59	Number of Cases requiring four inspections to achieve compliance
Five Inspections or More	15	63	Number of Cases requiring five inspections or more to achieve compliance
No Inspections	0	0	Number of Cases requiring zero inspections (These are duplicates and facilities determined to be non-existent by Business List and phone calls)
Total	3,029	2,872	All facilities subject to inspection that were inspected. Also described as number of cases.

IND Facility Categories for the City of San José

(Developed by AHTG to use for Program-wide Reporting, September 7, 2001 Memo's 17 categories + 3 City categories)

CATEGORY #	PROGRAM CATEGORY	CURRENT AHTG MUNICIPAL CATEGORY	SCHEDULED	ACTUAL
1	Automotive	Automotive sales, engine and body repair, gas stations, car washes, parking, vehicle services	488	497
2	Food Service	Eating and drinking establishments, including cafeterias, delis, bakeries, mobile food	1,590	1,573
3	Paint Facilities	Manufacturing and retailing	1	1
4	Dry Cleaners	Dry cleaners	52	56
5	Cleaning Services	Mobile washers, building cleaning, carpet cleaning	4	5
6	Pesticide Facilities	Manufacturing and retailing; pesticide applicators	3	3
7	Machine Shops	Industrial machinery and equipment	99	100
8	Metal Manufacturing	Metal fabricating, finishing, plating, metal work (40 CFR 413, 433)	59	59
9	Electric/Electrical Components	Manufacturing (40 CFR 469)	96	95
10	Construction/ Building	Retail, trade contractors, construction, landscape and garden businesses	9	9
11	Local Transit; Highway Transport	Electric, Gas and Sanitary Services, Trucking Industries	194	193
12	Recycling yards	Assembling, breaking up, sorting and wholesale distribution of scrap and waste materials. This includes auto wreckers engaged in dismantling automobiles for scrap.	21	21
13	Auto Dismantlers	Dismantling motor vehicles for the purpose of selling parts.	4	3
14	Concrete/Stone/Clay Products	Manufacturing cement, structural clay products, pottery, concrete and gypsum products, cut stone, abrasive and asbestos products, and other products from materials taken principally from the earth in the form of stone, clay and sand.	118	120
15	Corporation Yards	PG&E, Caltrans, School bus, VTA, Municipal	0	0
16	Landfills	Dumps; Garbage collecting, destroying and processing; Landfill; Rubbish collection and disposal.	10	10
17	Wood Furniture & Other Products	Manufacturing finished articles made entirely or mainly of wood or related materials.	18	17
18	Chemical Manufacturing	Manufacturing/producing basic chemicals, chemical products to be used in further manufacture (synthetic fibers, etc.) and finished chemical products to be used for ultimate consumption or as materials or supplies in other industries (such as cosmetics, soaps, fertilizers)	6	6
19	Misc. Manufacturing	Caskets, Furniture, Glass, Jewelry/Precious Metal, Manufacturing Industries-NEC, Medical, Office & Store Fixtures, Paper, Petroleum & Coal, Pharmaceuticals, Rubber & Plastics, Signs, Toys & Sports	127	128
20	Other	**Other includes:** Air Conditioning Services, Amusement Parks, Chiropractors, Commercial Areas, Florist, Hazardous Waste, Laboratories, Laundries, Medical and Dental Labs, Miscellaneous, Petroleum Pipelines, Petroleum Refining, Photographic/Printing, Property Management, Radiologists, Steam Electric Power Generation (per permit), Storage, Veterinarians, Welding/Iron Works, Welding Repair, Winery, and Underground Storage Tanks and unspecified SIC Code.	122	133
		TOTAL	3,020	3,029

MON 1.H.	Provide technology transfer information and training to industry and municipal inspectors.	Ongoing, See IND PS	Done. Remaining ongoing portions of MON 1 done as part of IND 6.	ESD
MON 1.H1	Identify facilities for general outreach/awareness programs.	Ongoing, See IND PS	Done. Remaining ongoing portions of MON 1 done as part of IND 6.	ESD
MON 1.H2	Develop educational materials for general outreach programs. Identify appropriate forum for outreach efforts.	Ongoing, See IND PS	Done. Remaining ongoing portions of MON 1 done as part of IND 6.	ESD
MON 1.H3	Train trade organizations in Industrial Activities Stormwater outreach programs. Conduct outreach.	5/02 Done	Done. Remaining ongoing portions of MON 1 done as part of IND 6.	ESD
MON 1.H4	Identify industrial facilities for focused BMP Development.	7/02 Done	Done FY 01-02.	ESD
MON 1.H5	Gain participation of trade organizations in identifying significant pollutant sources and developing appropriate BMPs.	9/02 Done	Done FY 01-02.	ESD
MON 1.H6	Conduct program to develop BMPs and measure effectiveness.	11/02	Done. Remaining ongoing portions of MON 1 done as part of IND 6.	ESD
MON 3	**First Flush Monitoring Program**			
MON 3.A.	Identify sampling sites based on land use, and suitability of the site for data collection.	Done 6/97	Done, prior to FY 01-02.	ESD
MON 3.B.	Train staff on sampling procedures, protocols and safety measures.	Done 9/97	Done, prior to FY 01-02.	ESD
MON 3.C.	Collect representative samples from first effective rainfall and every opportune rainfall event of the season.	Done 4/98 through 4/00	Done, prior to FY 01-02.	ESD
MON 3.D.	Analyze each season's data to characterize runoff constituents.	Done 6/98 through 6/00	Done, prior to FY 01-02.	ESD
MON 3.E.	Provide screen of analysis to further identify location and extent of pollutants for source control and outreach efforts.	Done 7/98 through 6/00	Done, prior to FY 01-02.	ESD

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
MON 3.F.	Based on analysis, provide information for targeting sampling.	Done 12/02	Done FY 02-03.	Program
MON 3.G.	Compare results with other sites, regional monitoring efforts, trends and other data to provide indication of relative magnitude of pollutant problem.	Done 9/02	Done FY 02-03.	Program
MON 3.H.	Explore modeling approaches to characterize water quality in the watershed and target additional monitoring efforts.	Done 9/02	Done FY 02-03.	Program
MON 3.I.	Provide data to SCVURPPP Program as part of 5-Year Monitoring Program.	Report 6/02	Done FY 02-03.	ESD

3.B MON Program Evaluation

Monitoring activities are conducted effectively at the Program level with participation from City staff to support collaboration with the Water Board (through the CEP) and to provide technical review of Program products.

3.C MON Response to Water Board Comments

No comments received from Water Board on this Program Element.

3.D MON Summary Tables / Additional Information

No tables or additional information.

4. NDC: New and Redevelopment

4.A NDC Work Plan Self Evaluation Matrix

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
NDC 1	**Legal Authority** The City of San José has and will continue to evaluate the adequacy of its legal authority to implement new development control measures as it considers modifications to its development plan review and approval procedures.			
			Done. The City currently has adequate legal authority to implement new development control measures. City Council approved revisions to the Council Policy on Post Construction Urban Runoff Management on February 15, 2005 and May 17, 2005. See 4.B NDC Program Evaluation for details.	PBCE, ESD, PW, RDA
NDC 2	**Guidance to Developers** The development community is provided with guidance on post construction measures as early in the application process as possible.			
NDC 2.A.	Draft necessary revision(s) to Guidance Manual on Selection of Stormwater Quality Control Measures to allow incorporation of hydraulic sizing design criteria and provide to developers.	Done FY 02-03	Done FY 02-03. In FY 04-05 the Guidance Manual on Selection of Stormwater Quality Control Measures was updated to include the revised Council Policy on Post Construction Urban Runoff Management. City staff intends to revise the Manual further to include Hydromodification Management Plan requirements.	PBCE, ESD, PW, RDA
NDC 2.B.	Provide development community with revised information and guidance materials concerning any adopted on site design, building permit requirements and hydraulic sizing design criteria and maintenance requirements for BMPs for stormwater treatment measures.	Done FY 02-03	Done FY 02-03 and Ongoing. Revised information is provided by 1) printed status bulletin information sheets distributed by e-mail to the development community and as handouts at public information counter and at developer roundtables; 2) webpage updates; 3) and inviting the development community to attend Program workshops and City sponsored Developers' Roundtables; 4) biweekly meetings with the engineering consulting	PBCE, ESD, PW, RDA

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
			community. See 11.D *PIP Activities*.	
NDC 2.B.1	Coordinate with development community on proposed hydraulic sizing criteria for structural stormwater treatment measures and any proposed revisions to Guidance Manual and policy through workshops and regular meetings.	Done FY 02-03	Done FY 02-03. See NDC 2.A. and 2.B. above.	PBCE, ESD, PW, RDA
NDC 2.B.2	Develop guidance material regarding maintenance responsibilities for any adopted structural stormwater treatment measures requirements.	Done FY 02-03	Done FY 02-03.	PBCE, ESD, PW, RDA, Program
NDC 3	**CEQA Requirements** Environmental documents required for those projects that fall under CEQA or NEPA review, such as EIRs, negative declarations, and initial study checklists, will address: 1) Stormwater quality impacts for land development during construction and after construction has been completed (both significant and cumulative); 2) Required permits, and 3) Specific mitigation measures related to stormwater quality.			
NDC 3.A.	Review and evaluate the City's Environmental Review procedures to improve the review for water quality impacts and identification of mitigation measures. (Provision C.3.m.)	Done FY 02-03	Done FY 02-03. The City uses the existing Office of Public Research initial study checklist questions. Separate guidance text developed in coordination with the Program for addressing water quality impacts and identification of mitigation measures is posted on the website.	PBCE, ESD, PW, RDA
NDC 3.A.1	Identify areas where new or additional water quality review processes and related documents or checklist questions are needed and propose schedule for revision.	Done FY 02-03	Done FY 02-03. See NDC 3.A.	PBCE, ESD, PW, RDA
NDC 3.A.2	Implement any necessary revisions to water quality questions and procedures, if needed.	Done FY 02-03	Done FY 02-03. See NDC 3.A.	PBCE, ESD, PW, RDA
NDC 3.B.	Report on revisions made to environmental review process.	Done FY 02-03	Done FY 02-03. See NDC 3.A.	PBCE, ESD, PW, RDA
NDC 4	**Project Mitigation Measures and Provision. C.3. design requirements implementation** Developers of projects with significant stormwater pollution potential will be required by the City of San José to mitigate stormwater quality impacts to the maximum extent practicable, through proper site planning and design techniques and/or addition of permanent stormwater quality control measures.			
NDC 4.A.	Propose revisions to current Policy on Post-Construction Urban Runoff Management as necessary to incorporate hydraulic sizing design criteria.	Done FY 03-04	Done FY 03-04. In FY 04-05, the policy was further revised on 02/15/05 and 05/17/05. See 4.B NDC Program Evaluation for details.	PBCE, ESD, PW, RDA, CAO
NDC 4.A.1	Revise policy as needed for Group 2 & HMP implementation.	Done FY 04-05	Done FY 04-05. The Policy was revised on February 15, 2005 to expand Group One implementation of hydraulic sizing requirements. The Policy was further revised on May 17, 2005 to incorporate hydraulic sizing criteria for Group Two projects. See 4.B NDC Program Evaluation for details.	PBCE, ESD PW, RDA, CAO
NDC 4.B.	Review and modify development permit approval procedures as necessary for adopted revisions.	Done FY 03-04	Done FY 03-04. In FY 04-05 development procedures were further modified to require a Stormwater Control Plan	PBCE, ESD, PW, RDA

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
			with each permit application. The Plan consolidates grading, drainage and landscape elements to provide a comprehensive picture of how stormwater is treated on site. Also, Public Works development review memos specify hydraulic sizing requirements in addition to a stormwater memo by Planning. See 4.B NDC Program Evaluation for details.	
NDC 4.B.1	Develop criteria & checklist to aid Department of Planning, Building & Code Enforcement & Department of Public Works planners & engineers in determining whether a development project should be required to incorporate post-construction treatment control measures & their related operation and maintenance requirements.	Done FY 02-03	Done FY 02-03.	PBCE, ESD, PW, RDA
NDC 4.B.2	Draft standard conditions of approval as necessary to ensure proper selection, design of and installation of structural stormwater treatment measures per Provision C.3.b., c., d.	Done FY 02-03	Done FY 02-03.	PBCE, ESD, PW, RDA
NDC 4.B.3	Draft standard conditions of approval as necessary to ensure proper maintenance of structural stormwater treatment measures. (Provision C.3.e.)	Done FY 02-03	Done FY 02-03.	PBCE, ESD, PW, RDA
NDC 4.B.4	Refine and modify development approval procedures as needed to accommodate HMP and Group 2 implementation.	Done FY 04-05	Done FY04-05. Policy 6-29 was updated on February 15, 2005 to expand Group One implementation and on May 17, 2005 to address phased Group Two implementation of hydraulic sizing requirements. Stormwater control plans are required for Group One and Group Two projects and Public Works memos comment on hydraulic sizing. Development procedures will be modified to reflect HMP requirements in FY 05-06. See 4.B NDC Program Evaluation for details.	PBCE, ESD, PW, RDA
NDC 4.C.	Implement any new adopted development conditions of approval, and procedures to developments with significant stormwater pollution potential. (Provision C.3.b.)	Done FY 02-03	Done FY 02-03. Approval procedures are implemented in accordance with Policy 6-29. See NDC 4.B.	PBCE, ESD, PW, RDA
NDC 4.D.	Collect data on the projects for enhanced annual reporting. Produce a list of projects and data tracked for the last two years and provide to SCVURPPP for analysis. (Provision C.3.c.)	Annually	Done. Data is compiled for San José's Annual Report. See Section 4.D: *Significant Development Projects Reviewed and/or Approved During July 1, 2004 – June 30, 2005.*	PBCE, ESD, PW, RDA
NDC 4.E.	Draft post-construction treatment BMP certification procedures. (Provision C.3.h)	Done FY 02-03	Done FY 02-03.	PBCE, ESD, PW, RDA
NDC 4.E.1	Evaluate implementing an alternative certification	Done FY 02-03	Done FY 02-03.	PBCE, ESD, PW,

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
	program and develop one if deemed necessary. (Provision C.3.h.)			RDA
NDC 4.G.	First report to City Council on Alternatives Program. (Provision C.3.g.)	Done FY 03-04	The City incorporated an Alternatives Program in its Post Construction Urban Runoff Pollution Prevention Policy, which City Council approved on 10/7/03.	PBCE, ESD, PW, RDA
NDC 4.H.	Develop list of Annual Reporting requirements from Provision C.3. Design data tracking needs and protocols.	Done FY 02-03	Done FY 02-03.	PBCE, ESD, PW, RDA
NDC 4.H.1	Compile a list of new development and redevelopment projects by name, type of project, site acreage, site acreage or square footage, square footage of new impervious surface, treatment BMPs and numeric sizing criteria used for applicable projects. Also, list the source control and pesticide reduction measures.	Annually	Done and ongoing. See Section 4.D: *Significant Development Projects Reviewed and/or Approved During July 1, 2004 – June 30, 2005*.	PBCE, ESD, PW, RDA
NDC 4.H.2	Track name and location of projects in the Alternatives Program, project type and size, percent impervious surface, reason for granting waiver, terms of waiver, equivalent benefit provided, alternative treatment project or regional project receiving the benefit and date of completion of the alternative treatment project or regional project.	Annually	Done. Implementation continues in accordance with Council Policy. In FY 04-05, no projects were approved under the Alternatives Program.	PBCE, ESD, PW, RDA
NDC 4.I.	Participate on SCVURPPP's Hydromodification Management Plan work group and develop procedures for limiting peak stormwater runoff discharge rates from development projects. (Provision C.3.f.)	Ongoing as Needed	Done FY 04-05 and ongoing as needed. City staff continued to participate on the Program's Hydromodification Management Plan work group and the Final Report was submitted to the Water Board in April 2005.	PBCE, ESD, PW, RDA
NDC 4.J.	Review the design standards and guidance for opportunities to make revisions that would result in reduced impacts to water quality and summarize how they were incorporated into approval procedures. Such revisions are listed in Provision C.3.j.	Done FY 03-04	Done FY 03-04. In FY04-05, planning staff continues to update and expand the design guidance information provided on its stormwater management web page. Project status letters that Planning staff provides to applicants refer to the guidance presented on the web page as a basis for project specific design comments and requests for design revisions. Staff is continuing to research and explore alternative design standards and methods that improve water quality and reduce erosion. See 4.B NDC Program Evaluation for details.	PBCE, ESD, PW, RDA
NDC 4.J.1	Identify and document existing site design standards	Done FY 03-04	Done FY 03-04.	PBCE, ESD, PW, RDA

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
	and guidance documents and policies.			
NDC 4.J.2	Compile a Report on Site Design Measures and Revised Standards: Identify areas where new or additional site design measures are needed and propose timeline for revision.	Done FY 03-04	Done FY 03-04.	PBCE, ESD, PW, RDA
NDC 4.J.3	Revise Site Design Measures and Standards, if necessary.	Done FY 03-04	Done FY 03-04. In FY 04-05, the Post-Construction Urban Runoff Management Policy (approved on October 7, 2003) was further revised on February 15, 2005 and May 17, 2005. The policy includes minimum BMPs to be incorporated in projects. City staff continues to work with the engineering community and consultants to explore street right-of-way widths and alternatives to curb and gutter requirements. Treatment BMPs and long-term maintenance solutions are also being discussed. See 4.B NDC Program Evaluation for details. Staff participated in the Water Resources Protection Collaborative workgroup and developed siting and site design standards for projects in proximity to streams and creeks. Stormwater and erosion protection requirements were also considered. Some of these standards can also be applicable to sites elsewhere in the City.	PBCE, ESD, PW, RDA
NDC 4.K.	Review the existing source control measures contained in site design standards, guidance documents and conditions of approval for opportunities to limit stormwater pollution. (Provision C.3.k.)	Done FY 03-04	Done FY 03-04 in coordination with the Program.	PBCE, ESD, PW, RDA
NDC 4.K.1	Identify and document existing source control measures, guidance documents, and conditions of approval.	Done FY 02-03	Done FY 02-03 in coordination with the Program and the WMI-LUS.	PBCE, ESD, PW, RDA
NDC 4.K.2	Compile a Report on Existing Source Control Measures: Identify areas where new or additional source control measures are needed and propose timeline for revision of conditions of approval and guidance.	Done FY 02-03	Done FY 02-03 in coordination with the Program.	PBCE, ESD, PW, RDA
NDC 4.K.3	Revise conditions of approval and guidance, if needed.	Done FY 02-03	Done FY 02-03.	PBCE, ESD, PW, RDA
NDC 4.L.	Review General Plan and revise as necessary to incorporate water quality and watershed protection principles and policies, and summarize revisions made. (Provision C.3.l.)	FY 02-03	Done FY 03-04. In FY 04-05, the Floor Area Ratio for development in North San José adjacent to the Guadalupe River and Guadalupe Transit corridor was increased to allow higher densities and Smart Growth development. Residential uses and pedestrian oriented design are	PBCE

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
			strongly encouraged in this area.	
NDC 4.L.1	Identify and document existing General Plan principles and policies. Compile a Report on Existing General Plan principles and policies.	FY 02-03	Done FY 02-03.	PBCE
NDC 4.L.2	Identify areas where new or additional General Plan principles or policies are needed and propose timeline for revision, if needed.	FY 02-03	Done FY 02-03.	PBCE
NDC 4.L.3	Make revisions to General Plan principles and policies, if needed, per work plan.	FY 02-03	Done FY 02-03. See NDC 4.L.	PBCE
NDC 4.M.	Develop & propose enhanced reporting format for documenting use of pesticide reduction measures at development sites. (Provision C.3.n. & C.9.ii.)	Done FY 02-03	Done FY 02-03.	PBCE, ESD, PW, RDA
NDC 4.M.1	Based on City's Pesticide Management Plan, establish criteria for tracking percentage of new development projects for which pesticide reduction measures were required & begin tracking. (Provision C.3.n. & C.9.d.ii)	Done FY 03-04 Implementation Ongoing	Done FY 03-04.	PBCE, ESD, PW, RDA
NDC 5	**Developer Conformance with State Requirements** Developers of projects that disturb a land area of one acre or more are required by the City to demonstrate conformance with the State General Construction Activity Storm Water Permit including filing of NOI, development of a SWPPP, et al.			
NDC 5.A.	Include as condition of approval for projects that disturb a land area of one acre or more, a requirement to demonstrate coverage under the State General Construction Activity Storm Water Permit.	Done FY 02-03	Done FY 02-03.	PBCE, PW, RDA
NDC 5.B.	Track the projects that contained above condition of approval.	Annual Report	Done FY 02-03 and ongoing.	PBCE, PW, RDA
NDC 5.C.	Review, evaluate, and modify, as necessary, existing Planning procedures & conditions of approval to incorporate change in applicable land area to one acre or more starting 01/03.	Done FY 02-03	Done FY 02-03.	PBCE
NDC 6	**Developer Erosion Control Plans** Developers of projects with potential for significant erosion and planned construction activity during the wet season are required by the City of San José to prepare and implement an effective erosion and/or sediment control plan or similar document prior to the start of the wet season.			
NDC 6.A.	Include as a condition of approval for applicable projects a requirement to prepare and implement an erosion and sediment control plan.	FY 02-03	Done FY 02-03 and ongoing.	PBCE, PW, RDA

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
NDC 6.B.	Track the projects that contained above condition of approval.	FY 02-03	Done FY 02-03 and ongoing.	PBCE, PW, RDA
NDC 7	**Operation and Maintenance for Structural Storm Water Controls** Developers of projects that include installation of permanent structural stormwater controls are required by the City of San José to establish and provide a method for operation and maintenance of such structural controls.			
NDC 7.A.	Work with SCVURPPP to develop guidance for implementing O&M Program.	Done FY 02-03	Done FY 02-03.	PBCE, ESD, PW, RDA
NDC 7.B.	Draft policy and procedures for an operation and maintenance verification program.	Done FY 02-03	Done FY 02-03. See 4.C NDC Response to Water Board Comments for details and 4.D: *SOP for BMP O&M Verification Program*.	PBCE, ESD, PW, RDA
NDC 7.C.	Draft summary of details of operation and maintenance verification program: organizational structure, evaluation, proposed improvements, inspections and follow-up, including criteria for setting priorities. (Provision C.3.e.)	Done FY 03-04	Done FY 03-04. See 4.C NDC Response to Water Board Comments for details and 4.D: *SOP for BMP O&M Verification Program*.	PBCE, ESD, PW, RDA
NDC 7.D.	Include as a condition of approval a requirement that developers of projects that include installation of permanent structural stormwater controls are required to establish and provide proof of operation and maintenance of such structural controls.	Done FY 03-04	Done FY 03-04.	PBCE, ESD, PW, RDA
NDC 7.D.1	Develop model permit conditions with fact sheets to include in use permits where appropriate.	Done FY 02-03	Done FY 02-03 in coordination with the Program.	PBCE, ESD, PW, RDA
NDC 7.D.2	In-ground BMPs	Done FY 02-03	Done FY 02-03 in coordination with the Program.	PBCE, ESD, PW, RDA
NDC 7.D.3	Landscape and all others	Done FY 03-04	Done FY 03-04 in coordination with the Program.	PBCE, ESD, PW, RDA
NDC 7.D.4	Compile a list of projects & responsible operators subject to C.3.e. provision.	FY 03-04 Annually thereafter	Done FY 03-04.	PBCE, ESD, PW, RDA
NDC 7.E.	Track and compile a list of priority properties inspected and inspection results. (Provision C.3.e.iii.)	Ongoing	Implemented with Group 1 Projects after October 15, 2003 and with Group 2 Projects after May 17, 2005 in accordance with Council Policy 6-29.	PBCE, ESD, PW, RDA
NDC 7.E.1	Revise criteria for setting priorities for inspection of structural stormwater treatment measures & inspection frequency.	Done FY 03-04	Done FY 03-04. Participated with Program criteria development. San José places its emphasis on maintenance verification as part of City's routine enforcement efforts. See 4.C NDC Response to Water Board Comments for details.	PBCE, ESD, PW, RDA
NDC 7.E.2	Revise local inspection program for verification of proper O & M.	Done FY 03-04	Done FY 03-04. Existing enforcement programs were revised and augmented to include verification of proper O&M. Until approved funding can be identified, maintenance verification will be done as part of the City's routine enforcement efforts. See 4.C NDC Response to Water Board Comments for details.	PBCE, ESD, PW, RDA

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
NDC 8	**Applicability to Public Projects** The City of San José will include stormwater quality control measures during and after construction, appropriate for each municipal capital improvement project, and that contractors comply with stormwater quality control requirements during construction activities.			
NDC 8.A.	Develop and implement a process to ensure that municipal capital improvement projects install structural stormwater quality control measures as necessary.	Done FY 02-03	In FY 04-05, the City dedicated one half of a full-time position to provide in-house consultation on BMPs for public projects and to conduct small group training on the design of stormwater controls (See NDC 9.A.).	PBCE, ESD, PW, RDA
NDC 8.A.1	Participate on SCVURPPP work group tasked with developing a technical guidance document for use by municipal staff to ensure that the document includes standard specifications and details, sizing methodologies, & model conditions of approval acceptable for use in City projects as necessary. (Provision C.3.b. & d.)	Done FY 02-03	Done FY 02-03. San José staff has participated and continues to participate in all Program work groups.	PBCE, ESD, PW, RDA
NDC 8.A.2	Review and revise Redevelopment Agency Project Request for Proposal procedures as necessary to comply with revised Provision C.3. requirements. (Provision C.3.c.)	Done FY 03-04	Done FY 03-04.	PBCE, RDA
NDC 8.A.3	Review and Revise Public Works Capital Improvement Project approval procedures and Road Improvement Project approval procedures as necessary to comply with revised Provision C.3. requirements. (Provision C.3.c.)	Done FY 02-03	Done FY 02-03. Procedures will be revised further as necessary to incorporate hydromodification controls.	PBCE, ESD, PW, RDA
NDC 8.B.	Review, evaluate, and modify the procedures, as necessary.	Done FY 03-04	Done FY 03-04 and ongoing. In coordination with the Program, planning procedures have been further modified to ensure selection, installation, and maintenance of appropriate BMPs. Procedures will be further revised as necessary to incorporate hydromodification controls.	PBCE, ESD, PW, RDA
NDC 8.C.	Begin tracking required data on the public projects subject to Provision C.3. hydraulic sizing criteria requirements for Annual Report.	Done FY 03-04	Done FY 03-04. Began tracking required data after 10/15/03 with implementation of Group 1 Projects and after 05/17/05 for Group 2 Projects in conformance with Council policy.	PBCE, PW, RDA
NDC 8.D.	Monitor development of City's Green Building program for opportunities to discourage architectural use of copper in development projects (Prov. C.9.a.) and to incorporate urban runoff considerations.	Ongoing	Ongoing. The City approved a policy in 2001 which requires new City buildings over 10,000 square feet in size to be designed to the LEED certified rating. ESD has a dedicated LEED certified staff person who reviews public projects and advises City staff on Green Building materials and techniques, including discouraging architectural use of copper.	PBCE, ESD, PW, RDA
NDC 9	**City Staff Training** Key City staff is trained on planning procedures, policies, design guidelines, and BMPs for stormwater pollution prevention annually.			

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
NDC 9.A.	Provide training to Planning and Public Works staff on planning procedures, policies, design guidelines, and BMPs for stormwater pollution prevention. (Provision C.3.a.vi.)	Ongoing	Done. The City added a senior engineering position to provide in-house consultation on BMPs and to conduct small group training in the design of stormwater controls. See 12.D: *Municipal Employee Training Summary* and 4.B NDC Program Evaluation for details.	PBCE, ESD, PW, RDA
NDC 9.B.	Provide training to Redevelopment Agency and Department of Transportation staff on planning procedures, policies, design guidelines, and BMPs for stormwater pollution prevention. (Provision C.3.a.vi.)	Ongoing	Done. See 12.D: *Municipal Employee Training Summary* and 4.B NDC Program Evaluation for details.	PBCE, ESD, PW, RDA, DOT
NDC 9.C.	Revise the training protocol to incorporate any newly adopted Provision C.3. permit requirements and related revised procedures.	As needed	Done FY 03-04 and ongoing in coordination with the Program.	PBCE, ESD, PW, RDA
NDC 9.D.	Train staff responsible for design review on pest-resistant landscaping techniques and model conditions of approval and the importance of minimizing pesticide use in runoff from development sites. (Provision C.3.n. and Provision C.9.d.ii)	Ongoing	Done and ongoing in coordination with the Program. See 12.D: *Municipal Employee Training Summary* for details.	PBCE, ESD, PW, RDA
NDC 10	**Development Plan Review and Approval Procedures Effectiveness Evaluation** The City of San José will review and evaluate the effectiveness of its development plan review and approval procedures.			
NDC 10.A.	Evaluate and incorporate any needed improvements in review and approval process.	Annually	Done. See 4.B NDC Program Evaluation.	PBCE, ESD, PW, RDA
NDC 10.B.	Document and evaluate what worked well and what needs improvement.	Annually	Done. See 4.B NDC Program Evaluation.	PBCE, ESD, PW, RDA

4.B NDC Program Evaluation

The City has made significant strides in implementing the New and Redevelopment program element. Accomplishments in 2004-2005 include revisions to expand implementation through Policy 6-29, the addition of a Stormwater Control Plan in the development permit plan set, robust training of City staff, and frequent interaction with the development community in order to successfully implement stormwater treatment control measure hydraulic sizing requirements. Site design and source control techniques also continue to be important tools for reducing stormwater impacts. Key program components are described in more detail below.

Policy 6-29 Revisions and Group 2 Implementation

Policy 6-29 (entitled "Post Construction Urban Runoff Management"), the City's primary implementation tool of stormwater requirements, was updated twice this fiscal year. Collectively, the policy revisions expand and intensify implementation of control measures in an effort to further enhance and protect water quality. On February 15, 2005, Policy 6-29 was significantly revised. The policy was completely reorganized to emphasize the applicability of stormwater BMPs to all projects regardless of size. The requirements for hydraulically sized treatment control measures was expanded to all Group 1 projects. Additionally, the revisions refined the criteria and reduced the scope of projects eligible for alternative compliance methods.

On May 17, 2005, the policy was again revised to address Group 2 requirements consistent with the Program's proposal for an alternative Group 2 proposal. After discussions with Water Board staff, the final policy included the expansion of the requirement for hydraulically sized treatment control measures to also include projects that create or replace 10,000 square feet or more of impervious surface if they are defined as Land Uses of Concern. Land Uses of Concern are identified as those uses that have significant potential to contribute pollutants; they include gas stations, auto wrecking yards, loading docks and surface parking lots. This implementation approach

was later codified by the Water Board in a July 20, 2005 amendment to the permit. Implementation of what is now termed Group 2A began on May 17, 2005, five months earlier than the required October 20, 2005 implementation date.

Stormwater Control Plan

In February 2005, a Stormwater Control Plan (SCP) was added to the list of required plans in development permit applications. This represents a significant change to the development review process. The SCP consolidates relevant stormwater information and includes numeric sizing calculations on one plan set sheet. The SCP is submitted in addition to the Stormwater Data Sheet which accompanies each permit application.

The SCP is expected to lead to improved data collection. Previously data was collected from approved permits, the Stormwater Data Sheet, the Site Plan, the Grading and Drainage Plan, and the Landscape Plan. It was very time-consuming for staff to look at all these sources. The SCP improves documentation of stormwater treatment controls in an effort to expedite compliance review and better ensure that stormwater requirements are readily tracked throughout the development process.

The SCP supplements the Grading and Drainage Plan and is required to show the following:

Sheet No. 4a - Stormwater Control Plan

a. All existing natural hydrologic features (depressions, names of watercourses, etc.) and significant natural resources.
b. Specify soil type(s).
c. Specify depth to groundwater.
d. 100-year flood elevation.
e. All existing and proposed topographic contours with drainage areas and sub areas delineated and arrows showing flow direction.
f. Separate drainage areas depending on complexity of drainage network. For each drainage area, specify types of impervious area (roof, plaza, sidewalk, streets, parking, etc) and area of each.
g. Location, size, and identification (including description), of types of water quality treatment control measures such as swales, detention basins, infiltration trenches, etc.
h. Details of all proposed water quality treatment control measures.
i. Location, size and identification of proposed landscaping/plant material.
j. Ensure consistency with Grading and Drainage Plan and Landscape Plan.
k. Supplemental Report :
    1. Calculations illustrating water quality treatment control measures meet numerical standards set forth in Post-Construction Urban Runoff Management Policy No. 6-29.
    2. Name and location of receiving water body.
    3. Identify pollutants and pollutant source areas, including loading docks, food service areas, refuse areas, outdoor processes and storage, vehicle cleaning, repair or maintenance, fuel dispensing.
    4. Water quality Treatment Control Measure maintenance requirements.
    5. Licensed certification that the specified Treatment Control Measures meet the requirements in Post-Construction Urban Runoff Management Policy No. 6-29.

Training

Training City staff about the hydraulic sizing requirements was a primary focus this fiscal year. Staff received training about the addition of the SCP in the plan set and its relevance. Public Works staff had weekly training sessions for the second half of the fiscal year and were educated about sizing criteria, methods to hydraulically size, policy changes, resources, changes to the development review process, and changes to standard memorandum language regarding stormwater requirements.

Public Works staff is responsible for the review of hydraulic sizing calculations. In response to staff demands for additional training on sizing methods, the City contracted with RBF Consultants, Inc for an informative training series on treatment control measures and sizing. The training was entitled "Post-Construction Stormwater Treatment Control Workshops" and was conducted over a period of five weeks. Staff from the departments of Public Works; Planning, Building and Code Enforcement; Transportation; General Services; and Environmental Services attended the series. Overall evaluations of the workshops were very positive.

The City also accepted presentations from six stormwater product vendors to provide information on their products to staff. The products varied from methods to reduce impervious surfaces to treatment and detention of stormwater. Porous concrete vendors as well as vendors of mechanical devices demonstrated how their products would work with an opportunity for City staff to ask questions on design, construction, cost, operation, and maintenance.

Outreach and training of the development and engineering community is also an essential and ongoing component of successful implementation of hydraulic sizing requirements. Staff was present at both Planning and Public Works engineering and development roundtables and kept the engineering and development community apprised of SCP requirements and training opportunities with SCVURPPP. Staff met biweekly with the engineering community to discuss stormwater designs in the context of the Evergreen Visioning Strategy Area. Solutions discussed in that setting are likely to have citywide implications.

Successes with Site Design

San José has very strong policies in the General Plan to encourage smart growth, infill development, and the reuse of existing infrastructure. As a result, San José has been successful in reducing the number of projects proposed outside the City boundaries on undeveloped land. By doing so, watersheds outside the urban service boundary remain in an undeveloped state. The General Plan already includes many of the suggestions in the EPA document *Protecting Water Resources with Smart Growth*.

The City has also strong site design policies for infill sites. As a result, most developments approved are at much higher densities than elsewhere in Santa Clara County and result in a smaller impervious surface per person ratio than traditional single-family development. The City also encourages the reuse of buildings for residential units and/or covered parking areas. By doing so, very little additional impervious surface area is added to the project site. For example, a recently approved project on a four-acre site in downtown San José reused two historic buildings and provided 262 living units with covered parking. The project did not create any additional impervious surface area.

Staff also strongly encourages the reduction of impervious surface area through better site design. For example, the following projects reported in Section 4.D: *Significant Development Projects* resulted in decreased impervious surface area compared to existing conditions:

- Chinese Baptist Church of San José
- Alberstons Store Remodel
- Stevens Creek Volkswagon
- Westgate Community Bible Church
- Donati Bascom Building
- CIM Group
- Hacienda Gardens
- Summerhill Homes
- Tamien Place
- Bernal Park Townhomes
- San Carlos Affordable Senior Apartments and Townhomes.

Additionally, City staff stress source control techniques including underground or covered parking and locating trash areas inside buildings.

Small Site Constraints

Over the course of project review, staff has found that the most difficult sites to incorporate treatment controls are small, infill sites with limited landscape areas. These types of sites result in less impervious surface per person because of high densities but prove difficult to incorporate landscape-based treatment measures. The local development community representatives and engineering consultants have expressed strong concern about introducing water near building footings and proximity of water to underground utilities. The City is also characterized by clay soils conditions that are not conducive to infiltration techniques. Staff is continuing to do research on treatment control techniques that lend themselves to high-density urban development.

4.C NDC Response to Water Board Comments

Item Reference	Water Board Comments	San José Response	Changes for FY 05-06 (if applicable)
	From Water Board comments on FY 03-04 Annual Report: **On page 31, San José states that a summary of details of operation and maintenance verification program: organizational structure, evaluation, proposed improvements, inspections and follow-up, including criteria for setting priorities, was completed during the reporting period. However, no details on these elements have been included in the Annual Report as required by Provision C.3.e. Please ensure that the required information listed in Provision C.3 is included in next year's Annual Report.**	The Operation and Maintenance Program for Group 1 and Group 2 projects is summarized in 4D: SOP for BMP O&M Verification Program. To date, no Group 1 or 2 projects have been constructed.	To date, no Group 1 hydraulically sized treatment BMPs have been constructed. To build experience with BMP inspection, the City will implement a pilot inspection program during FY 05-06 to inspect treatment BMPs that were constructed prior to numeric sizing requirements. The intention of the pilot program is to assess workload impacts, data tracking and collection methods, and funding for O&M programs and to use this information to revise the O&M Program. An ICID Inspector will be assigned to inspect treatment control measures that have been recently constructed during the rainy season. The inspector will use the inspection forms developed by SCVURPPP to record information and the data will be analyzed by City staff with a view to refining the existing O&M Program.

4.D NDC Summary Tables / Additional Information

Significant Development Projects[1] Reviewed and/or Approved During July 1, 2004 – June 30, 2005

Project File Number	Project Description	Project Location	Project Type	Site Size (Ac)	New Impervious Surface (Ac)	Project Status (Approval Date)
Private Development Projects						
CP03-065	**Chinese Baptist Church of San Jose** Conditional Use Permit to allow demolition of two single-family detached residences, allow site improvements, and construction of 17,136 square foot addition for church uses to an existing 12,850 square foot church on a 1.96 gross acre site.	North side of Curtner Avenue opposite of the terminus of Joseph Avenue.	Institutional	1.96	1.0	12/17/04
Site Design: Site design for church expansion project reconfigured existing church parking lot and replaced some of the existing paving with landscaping. Project resulted in a 880 sq. ft. net reduction in impervious surface. New parking areas were designed to drain into landscaping.	**Source Control:** Stenciled inlets, street sweeping, covered trash enclosures.	**Treatment BMPs:** Landscaping, swales.	**Numeric Criteria:** N/A, deemed complete 10/28/03.	**O&M Responsibility:** Property owner shall maintain treatment measures in conformance with Section 20.95.120 of the Zoning Ordinance.	**Pesticide Reduction Meas:** Pesticide reduction is done through education and outreach. The SCVURPPP C3 Handbook and the Landscape Maintenance Techniques for Pest Reduction Fact Sheet are posted on the City website.	
CP03-074	**Albertsons Store Remodel** Conditional Use Permit to (1) demolish an existing 23,237 square foot building; (2) construct a new 32,196 square foot building for grocery store use (Albertsons) with associated site improvements; (3) allow the off-site sale of alcoholic beverages; and (4) allow 24 hour operation of a grocery store.	Southwest corner of Minnesota Avenue and Bird Avenue.	Commercial	3.89	1.6	08/25/04
Site Design: Grocery store renovation project reconfigured existing store parking lot to increase amount of landscaped area. Existing paving is replaced with wider perimeter landscaped areas and the number and size of tree planters between parking stalls has been increased. Site design for the store expansion project ultimately results in a 3,034 sq. ft. net	**Source Control:** Stenciled inlets, door skirts at loading docks, covered trash enclosures, street sweeping.	**Treatment BMPs:** Inlet filters, landscaping.	**Numeric Criteria:** N/A, deemed complete 11/26/03.	**O&M Responsibility:** Property owner shall maintain treatment measures in conformance with Section 20.95.120 of the Zoning Ordinance.	**Pesticide Reduction Meas:** Pesticide reduction is done through education and outreach. The SCVURPPP C3 Handbook and the Landscape Maintenance Techniques for Pest Reduction Fact Sheet are posted on the City website.	

[1] Projects that 1) create or replace one acre or more of impervious surface area or 2) effective 5/17/05, create or replace 10,000 square feet or more of impervious surface area and are a Land Use of Concern.

PROJECT FILE NUMBER	PROJECT DESCRIPTION	PROJECT LOCATION	PROJECT TYPE	SITE SIZE (AC)	NEW IMPERVIOUS SURFACE (AC)	PROJECT STATUS (APPROVAL DATE)
decrease in impervious surface.						
CP04-014	**Stevens Creek Volkswagon** Conditional Use Permit to demolish two modular buildings and to construct a two-story 40,900 sq ft building to accommodate an automobile showroom/ sales offices, 30 repair and service bays, and car wash on a 2.95 gross acre site.	South side of Stevens Creek Boulevard on the east side of Palace Drive (4490 stevens Creek Blvd.)	Commercial	2.96	2.6	04/27/05
SITE DESIGN: Project reconfigured a portion of a site that is entirely paved and added substantial landscaping. Site plan resulted in an approximately 13,700 sq. ft. net decrease in impervious surface. Project includes provisions for bicycle and motorcycle parking.	**SOURCE CONTROL:** Covered trash enclosures, stenciled inlets, industrial waste required to be discharged into sanitary sewer system, all service work to occur within enclosed bays, floor drains inside shops plumbed to sanitary sewer system.	**TREATMENT BMPS:** Landscaping, swales, inlet filters.	**NUMERIC CRITERIA:** N/A, deemed complete 2/25/04.	**O&M RESPONSIBILITY:** Property owner shall maintain treatment measures in conformance with Section 20.95.120 of the Zoning Ordinance.	**PESTICIDE REDUCTION MEAS:** Pesticide reduction is done through education and outreach. The SCVURPPP C3 Handbook and the Landscape Maintenance Techniques for Pest Reduction Fact Sheet are posted on the City website.	
CP04-098	**Westgate Community Bible Church** Conditional Use Permit to construct 15,038 square feet for religious assembly uses to an existing church on a 3.38 gross acre site.	West side of Saratoga Avenue 500 feet southerly of Campbell Avenue.	Institutional	3.38	2.0	04/11/05
SITE DESIGN: Site design for church expansion project reconfigured an existing church parking lot, increased landscaped areas resulting in a substantial decrease in existing impervious surface.	**SOURCE CONTROL:** Covered trash enclosures, stenciled inlets, street sweeping.	**TREATMENT BMPS:** Landscaping, swales, retrofit existing inlets with inlet filters.	**NUMERIC CRITERIA:** N/A, deemed complete 10/5/04.	**O&M RESPONSIBILITY:** Property owner shall maintain treatment measures in conformance with Section 20.95.120 of the Zoning Ordinance.	**PESTICIDE REDUCTION MEAS:** Pesticide reduction is done through education and outreach. The SCVURPPP C3 Handbook and the Landscape Maintenance Techniques for Pest Reduction Fact Sheet are posted on the City website.	
SP04-064	**Hellyer Commons** Special Use Permit to allow for the construction of 16 industrial park buildings (total of approximately 97,200 sq.ft.) and off-site, alternating parking to serve an adjacent religious assembly use on a 7.4 gross acre site.	Southeasterly corner of Piercy Road and Hellyer Avenue.	Industrial	7.44	5.4	11/29/04
SITE DESIGN: Project minimizes required surface parking area by providing alternating parking for an adjacent church when industrial buildings are not in use. Substantial landscaping covers approximately 2.8 acres of the site. Bicycle and motorcycle parking areas provided.	**SOURCE CONTROL:** Stenciled inlets, street sweeping.	**TREATMENT BMPS:** Swales, inlet filters.	**NUMERIC CRITERIA:** N/A, deemed complete 9/8/02.	**O&M RESPONSIBILITY:** Property owner shall maintain treatment measures in conformance with Section 20.95.120 of the Zoning Ordinance.	**PESTICIDE REDUCTION MEAS:** Pesticide reduction is done through education and outreach. The SCVURPPP C3 Handbook and the Landscape Maintenance Techniques for Pest Reduction Fact Sheet are posted on the City website.	
H02-024	**Trans- Pac**	East side of Marburg Avenue approximately 500 feet southerly of	Industrial	9.9	1.5	02/18/05

Project File Number	Project Description	Project Location	Project Type	Site Size (Ac)	New Impervious Surface (Ac)	Project Status (Approval Date)
	Site Development Permit to construct 37,430 square foot of warehouse/storage building on a 9.90 gross acre site.	Las Plumas Avenue.				
Site Design: Project site design includes approximately 9,500 sq.ft. of landscaped area and a 100-foot riparian setback covering approximately 3.0 acres adjacent to Lower Silver Creek.	**Source Control:** Covered trash enclosures, stenciled inlets, street sweeping.	**Treatment BMPs:** Landscaping, inlet filters.	**Numeric Criteria:** N/A, deemed complete 5/9/02.	**O&M Responsibility:** Property owner shall maintain treatment measures in conformance with Section 20.95.120 of the Zoning Ordinance.	**Pesticide Reduction Meas:** Pesticide reduction is done through education and outreach. The SCVURPPP C3 Handbook and the Landscape Maintenance Techniques for Pest Reduction Fact Sheet are posted on the City website.	
H04-015	**Tully Office Building** Site Development Permit to construct two office buildings for a total of 32,352 square feet on a 1.88 gross acre site.	South side of Tully Road approximately 500 feet easterly of Monterey Road.	Office	1.9	1.1	11/19/04
Site Design: Disconnected impervious surface-substantial landscaped and turf areas (totaling approximately 0.8 acre) are distributed throughout the entire site. Provisions for bicycle and motorcycle parking.	**Source Control:** Covered trash enclosures, stenciled inlets, street sweeping.	**Treatment BMPs:** Swales, landscaping, In-line hydrodynamic devices. Disconnected Downspouts drain into landscaped areas.	**Numeric Criteria:** N/A, deemed complete 3/26/04.	**O&M Responsibility:** Property owner shall maintain treatment measures in conformance with Section 20.95.120 of the Zoning Ordinance.	**Pesticide Reduction Meas:** Pesticide reduction is done through education and outreach. The SCVURPPP C3 Handbook and the Landscape Maintenance Techniques for Pest Reduction Fact Sheet are posted on the City website.	
H04-019	**Venture Corporation** Site Development Permit to allow demolition of existing residential structures and the construction of approximately 67,660 square feet of industrial park uses on a 4.8 gross acre site.	North side of Piercy Road approximately 500 feet westerly of English Place.	Industrial	4.8	3.9	08/13/04
Site Design: Motorcycle and bicycle parking required.	**Source Control:** Covered trash enclosures, stenciled inlets.	**Treatment BMPs:** Swales, inlet filters.	**Numeric Criteria:** N/A, deemed complete 4/22/04.	**O&M Responsibility:** Property owner shall maintain treatment measures in conformance with Section 20.95.120 of the Zoning Ordinance.	**Pesticide Reduction Meas:** Pesticide reduction is done through education and outreach. The SCVURPPP C3 Handbook and the Landscape Maintenance Techniques for Pest Reduction Fact Sheet are posted on the City website.	
H04-034	**Donati Bascom Building** Site Development Permit to construct 24,300 square feet of retail/commercial (for a strip mall) on a 1.44 gross acre site.	East side of South Bascom Avenue approximately 250 feet north of Leon Drive.	Commercial	1.4	1.1	11/12/04
Site Design: Project design included 13,756 sq. ft. of landscaped area and ultimately resulted in a substantial reduction in impervious surface from the existing pre-project condition. Pedestrian pathway	**Source Control:** Covered trash enclosures, stenciled inlets, street sweeping.	**Treatment BMPs:** Swales, landscaping, inlet filters.	**Numeric Criteria:** N/A, deemed complete 7/15/04.	**O&M Responsibility:** Property owner shall maintain treatment measures in conformance with Section 20.95.120 of the Zoning Ordinance.	**Pesticide Reduction Meas:** Pesticide reduction is done through education and outreach. The SCVURPPP C3 Handbook and the Landscape Maintenance Techniques for Pest Reduction Fact Sheet are	

PROJECT FILE NUMBER	PROJECT DESCRIPTION	PROJECT LOCATION	PROJECT TYPE	SITE SIZE (AC)	NEW IMPERVIOUS SURFACE (AC)	PROJECT STATUS (APPROVAL DATE)
constructed of interlocking pavers provides pedestrian linkage through the site from Del Mar Avenue. to Bascom Avenue.					posted on the City website.	
H04-038	**CIM Group** Site Development Permit to construct 1,073,361 square feet of floor area for residential and commercial uses including (1) 335 single-family attached residences, (2) 68,267 square feet of ground-floor retail, and (3) above-and-below grade parking garages.	Southeast corner of South Second Street and San Fernando Street.	Residential & Commercial Mixed-Use	2.9	2.4	01/14/05
SITE DESIGN: Very high density mixed-use project in a multi-story high rise building located in the Downtown Core provides pedestrian linkages in close proximity to public transit as well as many other Downtown services and amenities. Project includes landscaped areas on a site that is fully paved resulting in a net reduction in impervious surface from the existing condition.	**SOURCE CONTROL:** Stenciled inlets, street sweeping, covered trash enclosures. Parking structure.	**TREATMENT BMPS:** Landscaping, groundwater remediation program.	**NUMERIC CRITERIA:** N/A, deemed complete 8/11/04.	**O&M RESPONSIBILITY:** Property owner shall maintain treatment measures in conformance with Section 20.95.120 of the Zoning Ordinance.	**PESTICIDE REDUCTION MEAS:** Pesticide reduction is done through education and outreach. The SCVURPPP C3 Handbook and the Landscape Maintenance Techniques for Pest Reduction Fact Sheet are posted on the City website.	
H04-041	**Newcastle Partners** Site Development Permit to construct 113,200 square feet of research and development facility uses on a 8.56 gross acre site.	South side of Piercy Road approximately 600 feet southwest of English Place.	Industrial R&D	8.56	6.4	11/24/04
SITE DESIGN: 100-foot riparian setback provided from Lower Silver Creek, downspouts drain into landscaped areas, designated bicycle and motorcycle parking areas.	**SOURCE CONTROL:** Stenciled inlets, covered trash enclosures, street sweeping.	**TREATMENT BMPS:** Landscaping, swales, inlet filters.	**NUMERIC CRITERIA:** N/A, deemed complete 8/31/04.	**O&M RESPONSIBILITY:** Property owner shall maintain treatment measures in conformance with Section 20.95.120 of the Zoning Ordinance.	**PESTICIDE REDUCTION MEAS:** Pesticide reduction is done through education and outreach. The SCVURPPP C3 Handbook and the Landscape Maintenance Techniques for Pest Reduction Fact Sheet are posted on the City website.	
HA01-002-01	**WTA Piercy LLC** Site Development Permit Amendment to allow an additional 90 parking spaces on a 7.22 gross acre site.	East side of Piercy Road approximately 450 westerly of English Place.	Industrial	7.22	4.8	02/05/05
SITE DESIGN: Disconnected impervious surfaces - substantial landscaped areas, totaling 2.4 acres, distributed throughout entire project site, motorcycle/bicycle parking facilities provided.	**SOURCE CONTROL:** Stenciled inlets, covered trash enclosures, street sweeping.	**TREATMENT BMPS:** Landscaping, swales, inlet filters.	**NUMERIC CRITERIA:** N/A, deemed complete 12/6/01.	**O&M RESPONSIBILITY:** Property owner shall maintain treatment measures in conformance with Section 20.95.120 of the Zoning Ordinance.	**PESTICIDE REDUCTION MEAS:** Pesticide reduction is done through education and outreach. The SCVURPPP C3 Handbook and the Landscape Maintenance Techniques for Pest Reduction Fact Sheet are	

Project File Number	Project Description	Project Location	Project Type	Site Size (Ac)	New Impervious Surface (Ac)	Project Status (Approval Date)
					posted on the City website.	
PD03-006	**Fairgrounds Family Housing** Planned Development Permit to construct 561 multi-family and single-family attached residences on a 11.63 gross acre site.	South side of Tully Road approximately 400 feet easterly of South Tenth Street.	100% Affordable Residential	11.4	8.5	03/09/05
Site Design: 100% affordable residential project. Minimized impervious surfaces. Project redeveloped an existing paved site used for a County fairgrounds parking lot with high-density affordable residential project. Site design includes up to four-story residential structure over a podium parking garage and includes substantial landscaped and open space areas and features narrow private streets.	**Source Control:** Stenciled inlets, street sweeping, covered trash enclosures Parking structure, bicycle/motorcycle parking accommodations.	**Treatment BMPs:** Landscaping, swales, off-site stormwater detention basins.	**Numeric Criteria:** N/A, deemed complete 1/16/03. 100% affordable residential project.	**O&M Responsibility:** Property owner shall maintain treatment measures in conformance with Section 20.95.120 of the Zoning Ordinance.	**Pesticide Reduction Meas**: Pesticide reduction is done through education and outreach. The SCVURPPP C3 Handbook and the Landscape Maintenance Techniques for Pest Reduction Fact Sheet are posted on the City website.	
PD03-038	**Hacienda Gardens** Planned Development Permit to allow 299 multi-family attached residences, approximately 168,184 square feet of commercial uses, and to allow an existing nightclub (Cardinal) and 24-hour uses (Cardinal, Rite-Aid and Albertson's) on a 20.86 gross acre site.	West side of Meridian Avenue on both sides of Foxworthy Avenue.	Residential & Commercial Mixed-Use	20.9	18.2	11/05/04
Site Design: Mixed use high-density residential project on infill site on podium over parking garage/ with adjacent commercial. Project design reduced the amount of paving from existing site condition by a minimum of 13% or 2.7-acres. Landscaped areas between parking, driveways and streets provides for substantial landscaped areas distributed throughout the site. Project preserves numerous existing trees and adds 600 new trees on site. Bicycle and motorcycle parking.	**Source Control:** Stenciled inlets, street sweeping, covered trash enclosures, parking structures, recycled construction materials.	**Treatment BMPs:** Swales, in-line hydrodynamic units, inlet filters.	**Numeric Criteria:** N/A, deemed complete 6/27/03.	**O&M Responsibility:** Property owner and Homeowners Association shall maintain treatment measures in conformance with Section 20.95.120 of the Zoning Ordinance.	**Pesticide Reduction Meas**: Pesticide reduction is done through education and outreach. The SCVURPPP C3 Handbook and the Landscape Maintenance Techniques for Pest Reduction Fact Sheet are posted on the City website.	
PD03-061	**Summerhill Homes** Planned Development Permit to construct 56 single-family detached residences on a 5.39 gross acre site.	Southeast corner of Woodglen Avenue and Campbell Avenue.	Residential	5.4	3.4	09/28/04

Project File Number	Project Description	Project Location	Project Type	Site Size (Ac)	New Impervious Surface (Ac)	Project Status (Approval Date)
Site Design: Minimize impervious surfaces. Project replaced existing hardscape areas at a former school site resulting in a 1.4 acre reduction in impervious surface from existing condition. Substantial open space provided. Project provides over 2 acres in private yards areas and provides additional space in common landscaped areas. Roofs drain into landscaped areas.	**Source Control:** Stenciled inlets, street sweeping.	**Treatment BMPs:** Landscaping, inlet filters.	**Numeric Criteria:** N/A, deemed complete 10/4/03.	**O&M Responsibility:** Homeowners Association shall maintain treatment measures in conformance with Section 20.95.120 of the Zoning Ordinance.	**Pesticide Reduction Meas:** Pesticide reduction is done through education and outreach. The SCVURPPP C3 Handbook and the Landscape Maintenance Techniques for Pest Reduction Fact Sheet are posted on the City website.	
PD03-062	**North Park** Planned Development Permit to construct 445 attached multi-family residences on a 7.6 gross acre site.	West side of Zanker Road between Tasman Road and River Oaks.	Residential	7.6	7.0	10/29/04
Site Design: Very high-density residential project on infill site. A seven-acre phase in a 44-acre planned high density mixed use project in proximity to Guadalupe Corridor Light Rail Transit and includes large expanses of open space areas, including a five acre park. This phase provides five story buildings on podium with parking below. Provides substantial landscaped areas in planter boxes on top of podium deck and additional perimeter landscaping at grade. Directly adjacent to Bonaventura Light rail station, design provides pedestrian pathways to Light Rail Transit.	**Source Control:** Stenciled inlets, street sweeping, covered trash enclosures, parking structures, decorative fountain lined and pool, parking garage and fountains all plumbed to sanitary sewer system.	**Treatment BMPs:** Landscaping.	**Numeric Criteria:** N/A, deemed complete 10/14/03.	**O&M Responsibility:** Homeowners Association shall maintain treatment measures in conformance with Section 20.95.120 of the Zoning Ordinance.	**Pesticide Reduction Meas:** Pesticide reduction is done through education and outreach. The SCVURPPP C3 Handbook and the Landscape Maintenance Techniques for Pest Reduction Fact Sheet are posted on the City website.	
PD03-064	**Almaden Subdivision** Planned Development Permit to construct 26 single-family detached residences on a 7.02 gross acre site.	Southeast corner of Almanden Road and Barnes Lane.	Residential	7.0	2.9	07/02/04
Site Design: Landscaping. Project design provides substantial area (4.10 acres) for private yards, open space and landscaping. Roof runoff drains into landscaped	**Source Control:** Stenciled inlets, street sweeping.	**Treatment BMPs:** Landscaping, swales in sideyards.	**Numeric Criteria:** N/A, deemed complete 10/15/03.	**O&M Responsibility:** Property owner shall maintain treatment measures in conformance with Section 20.95.120 of the Zoning Ordinance.	**Pesticide Reduction Meas:** Pesticide reduction is done through education and outreach. The SCVURPPP C3 Handbook and the Landscape Maintenance Techniques for	

Project File Number	Project Description	Project Location	Project Type	Site Size (Ac)	New Impervious Surface (Ac)	Project Status (Approval Date)
areas. Reduced street widths (44 - 48-foot wide rights-of-way) for internal public streets. Substantial tree plantings.					Pest Reduction Fact Sheet are posted on the City website.	
PD04-008	**Falk Development** Planned Development Permit to construct 159 single-family attached residences on a 2.3 gross acre site.	Southeast corner of Madden Avenue and Jackson Avenue.	Residential	2.3	1.1	08/13/04
Site Design: High density residential project in four-story building over podium parking on infill site along future BART alignment (within Jackson-Taylor pedestrian oriented Planned Community). Project includes ample common open space areas and dedicates a 0.31 acre for a public park. Wide sidewalks along public street frontages to encouarge walking.	**Source Control:** Stenciled inlets, covered trash enclosures, motorcycle/bicycle parking provided. Drains in parking structure and decorative fountains are plumbed to sanitary sewer system.	**Treatment BMPs:** Landscaping.	**Numeric Criteria:** N/A, deemed complete 2/09/04.	**O&M Responsibility:** Property owner and Homeowners Association shall maintain treatment measures in conformance with Section 20.95.120 of the Zoning Ordinance.	**Pesticide Reduction Meas:** Pesticide reduction is done through education and outreach. The SCVURPPP C3 Handbook and the Landscape Maintenance Techniques for Pest Reduction Fact Sheet are posted on the City website.	
PD04-019	**Bay Area Self-Storage** Planned Development Permit to construct 129,410 square feet of ministorage use, with outdoor storage for RVs and boats on a 9.91 gross acre site.	West side of South King Road approximately 800 feet south of Aborn Road.	Industrial	9.91	8.9	03/03/05
Site Design: The proposed indoor and outdoor storage facility involves large expanses of impervious surfaces. Porous concrete is used to help separate (disconnect) the impervious surface areas and substantial landscaping is placed around the perimeter of the site to collect additional stormwater runoff.	**Source Control:** Stenciled inlets, covered trash enclosures.	**Treatment BMPs:** Swales, porous concrete, in-line hydrodynamic device, inlet filters.	**Numeric Criteria:** N/A, deemed complete 3/19/04.	**O&M Responsibility:** Property owner shall maintain treatment measures in conformance with Section 20.95.120 of the Zoning Ordinance.	**Pesticide Reduction Meas:** Pesticide reduction is done through education and outreach. The SCVURPPP C3 Handbook and the Landscape Maintenance Techniques for Pest Reduction Fact Sheet are posted on the City website.	
PD04-021	**Tamien Place** Planned Development Permit to demolish existing bowling alley and office buildings and construct 240 single-family attached residences on a 3.18 gross acre site.	Northwest corner of Lick Avenue and Alma Avenue.	Residential	3.18	3.1	08/13/04
Site Design: High-density residential project in eleven-story structures and 12 townhouses on infill site adjacent to Tamien multi-modal transit	**Source Control:** Stenciled inlets and covered trash enclosures, street sweeping. Pool, decorative fountain and parking structure are plumbed to	**Treatment BMPs:** Inlet filters, landscaping.	**Numeric Criteria:** N/A, deemed complete 4/01/04.	**O&M Responsibility:** Homeowners Association shall maintain treatment measures in conformance with Section 20.95.120 of the Zoning	**Pesticide Reduction Meas:** Pesticide reduction is done through education and outreach. The SCVURPPP C3 Handbook and the Landscape

facilities (Tamien Station provides Cal Train, VTA light rail/bus, bicycle pathways, park and ride and pedestrian connections @ planned Guadalupe Hwy/Transit Corridor). Provides parking structure and bicycle/ motorcycle parking and pedestrian linkages, daycare and other amenities designed to support and encourage transit ridership. Project replaces an existing bowling alley and parking lot on a site almost entirely covered with impervious surface resulting in a 1,000 sq. ft. net reduction in impervious surface.	sanitary sewer system. All fountains and landscaping to use recycled water.			Ordinance.		Maintenance Techniques for Pest Reduction Fact Sheet are posted on the City website.	
PD04-024	**Venetian Terrace** Planned Development Permit to construct 170 single-family attached residences on a 4.76 gross acre site.		West side of Masonic Drive approximately 520 feet southerly of Canoas Avenue.	Residential	4.73	2.7	02/25/05
SITE DESIGN: High density residential project in six-story podium building over two-level underground parking garage on vacant infill site in proximity to Guadalupe Corridor Light Rail transit facilities. Project provides landscaping/open space including approximately 34,800 sq. ft. of perimeter landscaping and dedication of a 1.3 acre park site. Bicycle & motorcycle parking areas provided.	**SOURCE CONTROL:** Stenciled inlets, covered trash enclosures, street sweeping, parking structure drains and decorative fountain plumbed to sanitary sewer system.	**TREATMENT BMPS:** Inlet filters, landscaping.	**NUMERIC CRITERIA:** N/A, deemed complete 4/14/04.	**O&M RESPONSIBILITY:** Homeowners Association shall maintain treatment measures in conformance with Section 20.95.120 of the Zoning Ordinance.		**PESTICIDE REDUCTION MEAS**: Pesticide reduction is done through education and outreach. The SCVURPPP C3 Handbook and the Landscape Maintenance Techniques for Pest Reduction Fact Sheet are posted on the City website.	
PD04-027	**Bernal Park Townhomes** Planned Development Permit to construct 100 single-family attached residences on a 4.3 gross acre site.		Southwest corner of North Eighth Street and Hedding Street.	Residential	4.3	2.6	09/10/04
SITE DESIGN: Project replaces a site almost completely covered by impervious surface resulting in an approximately 1.7 acre net reduction in impervious surface. High Density Residential project on infill site within Jackson-Taylor	**SOURCE CONTROL:** Stenciled inlets, covered trash enclosures, street sweeping.	**TREATMENT BMPS:** Disconnected downspouts drain into landscaping, permeable paving.	**NUMERIC CRITERIA:** N/A, deemed complete 4/20/04.	**O&M RESPONSIBILITY:** Homeowners Association shall maintain treatment measures in conformance with Section 20.95.120 of the Zoning Ordinance.		**PESTICIDE REDUCTION MEAS**: Pesticide reduction is done through education and outreach. The SCVURPPP C3 Handbook and the Landscape Maintenance Techniques for Pest Reduction Fact Sheet are posted on the City website.

PD04-095	**Lands of Braddock and Logan Services Inc.** Planned Development Permit to construct 15 single-family detached residences on a 2.18 gross acres site.	Southwest corner of Story Road and Clayton Road.	Residential	2.18	1.2	03/18/05
Site Design: Project site layout designed to maximize use of existing roads for access, provides on new narrow private street.	**Source Control:** Stenciled inlets, street sweeping.	**Treatment BMPs:** Landscaping.	**Numeric Criteria:** N/A, deemed complete 12/22/04.	**O&M Responsibility:** Homeowners Association shall maintain treatment measures in conformance with Section 20.95.120 of the Zoning Ordinance.	**Pesticide Reduction Meas:** Pesticide reduction is done through education and outreach. The SCVURPPP C3 Handbook and the Landscape Maintenance Techniques for Pest Reduction Fact Sheet are posted on the City website.	
PD04-103	**San Carlos Affordable Senior Apartment and Townhome Development** Planned Development Permit to allow mixed use development including 95 senior apartments, 32 single-family attached residences and 4500 square feet of commercial uses on a 3.19 gross acre site.	North side of west San Carlos Street between north Buena Vista Avenue and North Willard Avenue.	Residential	3.19	1.1	08/25/04
Site Design: 2.1 acre reduction in impervious surface. Project replaced fully paved site with mixed-use high density affordable housing and commercial uses in proximity to Major Transit Corridor. Most parking provided in underground structure. Pedestrian oriented amenities, including plazas.	**Source Control:** Stenciled inlets, street sweeping, covered trash enclosures, recycled water for all landscape irrigation. Decorative fountain uses recycled water and plumbed to sanitary sewer system.	**Treatment BMPs:** Swales, inlet filters.	**Numeric Criteria:** N/A, deemed complete 5/10/04.	**O&M Responsibility:** Property owner shall maintain treatment measures in conformance with Section 20.95.120 of the Zoning Ordinance.	**Pesticide Reduction Meas:** Pesticide reduction is done through education and outreach. The SCVURPPP C3 Handbook and the Landscape Maintenance Techniques for Pest Reduction Fact Sheet are posted on the City website.	
PD05-006	**Autumn Terrace at Bonita** Planned Development Permit to construct 80 single-family detached residences on a 7.69 gross acre site.	Northeast corner of Bonita Avenue and Sunny Court.	Residential	8.0	5.7	06/15/05
Site Design: Project will apply soil remediation on a site formerly used for industrial purposes and will replace substantial expanses of impervious surfaces including industrial buildings, parking lots and outdoor storage tanks with new residential development and open space. Impervious surfaces currently occupies approximately 80% or eight acres of the site. New project provides compact site plan for single-family	**Source Control:** Stenciled inlets, street sweeping.	**Treatment BMPs:** Landscaping, interlocking unit pavers on pedestrian paths, roof downspouts drain into landscaped areas and extensive tree plantings.	**Numeric Criteria:** N/A, deemed complete 1/27/05.	**O&M Responsibility:** Homeowners Association shall maintain treatment measures in conformance with Section 20.95.120 of the Zoning Ordinance.	**Pesticide Reduction Meas:** Pesticide reduction is done through education and outreach. detached product on infill site, and includes narrow private streets with private yards, substantial landscaping and a 0.9-acre public park.						
PD05-008	**Lago De Como Villas** Planned Development Permit to demolish two single-family detached residences and related accessory structures to construct 26 single-family attached residences on a 1.7 gross acres site in the A (PD) Planned Development Zoning District.	South side of Hillsdale Avenue approximately 450 feet east of Highway 87.	Residential	1.7	1.1	04/08/05
Site Design: High density residential project on a small infill site provides a 30-foot riparian setback from Canoas Creek and includes riparian revegetation using species that originate from Los Gatos Creek Watershed. Site design includes narrow private streets and substantial landscaping.	**Source Control:** Stenciled inlets, street sweeping.	**Treatment BMPs:** Landscaping, roof downspouts drain into landscaped areas, unit pavers in pedestrian pathways.	**Numeric Criteria:** N/A, deemed complete 2/1/05.	**O&M Responsibility:** Homeowners Association shall maintain treatment measures in conformance with Section 20.95.120 of the Zoning Ordinance.	**Pesticide Reduction Meas:** Pesticide reduction is done through education and outreach. The SCVURPPP C3 Handbook and the Landscape Maintenance Techniques for Pest Reduction Fact Sheet are posted on the City website.	
PD05-011	**Altura at Campbell Avenue** Planned Development Permit to construct 220 single-family attached residences and associated improvements on a 10.1 gross acres site.	Northeast corner of Newhall Street and Campbell Avenue.	Residential	10.1	6.5	06/09/05
Site Design: High Density development on infill site in proximity to future BART alignment and planned BART station. Project replaces site mostly covered by impervious surfaces, including an old industrial building and parking lot. New residential project provides 2.26 acres in landscaped areas and dedicates a 1.4 acre park. Provides narrow private internal streets and includes permeable pedestrian pathways.	**Source Control:** Stenciled inlets, street sweeping.	**Treatment BMPs:** Landscaping, in-line underground (CDS) units.	**Numeric Criteria:** N/A, deemed complete 2/4/05.	**O&M Responsibility:** Homeowners Association shall maintain treatment measures in conformance with Section 20.95.120 of the Zoning Ordinance.	**Pesticide Reduction Meas:** Pesticide reduction is done through education and outreach. The SCVURPPP C3 Handbook and the Landscape Maintenance Techniques for Pest Reduction Fact Sheet are posted on the City website.

Swale, disconnected downspouts.	Landscaping, covered trash, stenciled inlets, street sweeping.	Vegetated Swale.	N/A. Funded prior to 10/15/03, but includes swales sized to 0.2 in/hr flow intensity.	Swales are maintained by City during routine site maintenance.	Pesticide reduction is done via the City's Integrated Pest Management Policy.	
CIP 1310	**Hillview Branch Library** Construction of new 21,035 square foot branch library.	Hopkins Drive between Evelyn and Simon.	Institutional	2.5	1.6	01/25/05
Site Design: Swale, disconnected downspouts.	**Source Control:** Landscaping, covered trash, stenciled inlets, street sweeping.	**Treatment BMPs:** Vegetated Swale.	**Numeric Criteria:** N/A. Funded prior to 10/15/03, but includes swales sized to 0.2 in/hr flow intensity.	**O&M Responsibility:** Swales are maintained by City during routine site maintenance.	**Pesticide Reduction Meas:** Pesticide reduction is done via the City's Integrated Pest Management Policy.	
CIP 1311	**Cambrian Branch Library** Replacement of existing branch library with new 27,800 square foot facility.	Hillsdale Ave. between Ross and Manda.	Institutional	1.5	1.6	12/15/04
Site Design: Swale, disconnected downspouts, porous concrete.	**Source Control:** Landscaping, covered trash, stenciled inlets, street sweeping.	**Treatment BMPs:** Vegetated Swale.	**Numeric Criteria:** N/A. Funded prior to 10/15/03, but includes swales sized to 0.2 in/hr flow intensity.	**O&M Responsibility:** Swales are maintained by City during routine site maintenance.	**Pesticide Reduction Meas:** Pesticide reduction is done via the City's Integrated Pest Management Policy.	
PD03-077	**Zone 3 Reservoir and Pipeline Project** Planned Development Permit to construct 2 reinforced concrete recycled water tanks, pipelines, and an access road on a 17.16 gross acre site.	Northeast corner of Yerba Buena Road and Old Yerba Buena Road.	Institutional	17.16	5.7	03/09/05
Site Design: Landscaping/minimize land disturbance. Project will construct two water tanks, an underground pipeline and an approximately 3,000 linear foot access road. Approximately 11.5 acres to remain as undisturbed open space.	**Source Control:** Street sweeping.	**Treatment BMPs:** Landscaping.	**Numeric Criteria:** N/A. Funded prior to 10/15/03.	**O&M Responsibility:** Routine maintenance by City.	**Pesticide Reduction Meas:** Pesticide reduction is done via the City's Integrated Pest Management Policy.	

Development Activity Map

Standard Operating Procedure
BMP O&M VERIFICATION PROGRAM

Overview

The City of San Jose's New and Redevelopment (NRD) Post-Construction BMP Operation and Maintenance Verification Program is a multi-department effort. The Departments of Environmental Services (ESD) and Planning, Building & Code Enforcement (PBCE) work together to verify that maintenance of Post-Construction BMPs is conducted as required by Provision C.3 of the stormwater permit. The key components of this program include BMP Tracking, Inspection, Enforcement and Follow Up, and Reporting.

PBCE is responsible for BMP Tracking and supports escalated enforcement if needed to achieve compliance. ESD's Watershed Enforcement section is responsible for receiving BMP Tracking information, conducting inspections on a subset of BMPs, and performing enforcement and follow up as needed. ESD's Urban Runoff Section is responsible for compiling program data and reporting results annually to the Water Board.

BMP Tracking

Information on BMPs required by Provision C.3 is collected throughout the Development Review process. Final information on BMPs is available when construction is complete.

Table 1 : Procedure for BMP Data Compilation

STEP	RESPONSIBILITY	ACTION
1	PBCE – Planning Division Planners	1. Collect and document information on BMPs required for NRD Program. Information must include description of BMP, location, BMP owner, responsible party for maintenance and any available contact info, O&M requirement mechanism, and any additional conditions imposed related to BMP O&M.
2	PBCE – Planning Division Urban Runoff Coordinator	2. Compile annually (each July) and provide to ESD a data file of all BMPs and projects which have completed construction during the previous fiscal year.

Inspection

ESD selects sites for inspection based on complaints received. All complaints are investigated; and inspection and follow up procedures are consistent with the City's ICID Program. All post-construction BMP complaints are investigated within five days of the initial complaint in keeping with ICID procedures.

Table 2 summarizes the procedure for inspection of BMPs under this program. The Watershed Enforcement Section of the Watershed Protection Division has one environmental inspector assigned to responding to treatment BMP complaints.

Table 2: Procedure for BMP Inspection

STEP	RESPONSIBILITY	ACTION
1	ESD - Clerical	1. Answer call and address as an ICID complaint. See ESD Environmental Enforcement Division policies and procedures "ICID Complaint Intake" dated 02/03/99 Section Number 2410.00.
2	ESD -	1. Address complaints on post-construction BMPs as an ICID incident. See ESD

STEP	RESPONSIBILITY	ACTION
	Environmental Inspector	Watershed Enforcement Section polices and procedures "ICID Complaint Investigation" dated 01/01/04 revised 02/05/04, section number 5420 with the following additional requirements: 2. Visually inspect treatment BMP using SCVURPPP Standard Stormwater BMP Inspection Data Collection Form and refer to SCVURPPP Table 2 Potential Inspection Results with Definitions to record inspection results. a. If immediate threat to storm sewer system or creek, follow Watershed Enforcement Response Plan (WERP). b. If BMP is functional and maintained, record inspection results. Distribute BMP Maintenance Fact Sheet from C3 Handbook and schedule follow-up inspection if necessary. c. If BMP is non-functional, record inspection results. Follow Watershed Enforcement Response Plan (WERP) and proceed to Step 2.3. 3. Conduct Permit research and determine whether an approved land use permit with enforceable BMP O&M conditions is recorded against the property. a. If the property has an approved land use permit proceed to Table 3 below. b. If there is no enforceable land use permit, distribute BMP Maintenance Fact Sheet from C3 Handbook and continue to follow WERP. 4. Log inspection information as Post-Construction Treatment BMP Incident Type.

Enforcement and Follow Up

Table 3 summarizes the enforcement procedures for BMP Inspections. ESD's Watershed Enforcement is the first tier of enforcement with PBCE Code Enforcement involved to employ the land use permit as the basis for enforcement.

Table 3

STEP	RESPONSIBILITY	ACTION
1	ESD - Environmental Inspector (EI)	1. Develop Notice of Violation to Responsible Person including description of violation, corrective actions required and compliance date. 2. Re-inspect after compliance date. a. If violations corrected, deadfile case and following Reporting Procedures b. If violation continues, proceed to Step 3
2	ESD - Environmental Inspector	1. Within 48 hours, refer violation via e-mail to Code Enforcement Administrator including the following: a. Field Inspection Notes b. Notice of Violation c. Planning Permit Condition Violation Number d. Digital picture of initial violation and re-inspection e. Signed Photo Evidence Affidavit f. Recommended Compliance Timeline
3	PBCE - Code Enforcement Administrator	1. Within 24 hours, review referral for completeness. Contact EI if indicated. 2. If complete, open case in Code Enforcement System (CES) within 24 hours.

STEP	RESPONSIBILITY	ACTION
	(CEA)	3. Within 48 hours, Issue Compliance Order to Responsible Person(s) including compliance date. Send electronic copy to EI.
4	ESD - Environmental Inspector	1. After compliance date, re-inspect for compliance. a. If compliance achieved, advise CEA to deadfile case in CES. Follow reporting requirements. b. If Compliance is not achieved, document violation (See Step 2.1.a,d, and e) and notify CEA.
5	PBCE - Code Enforcement Administrator (CEA)	1. Within 5 working days, develop Notice of Hearing and notify Responsible Person(s). 2. Schedule issue before the Appeals Hearing Board. 3. Notify EI to attend AHB to provide testimony.

Reporting

Table 4 summarizes the reporting procedures for the O&M Verification Program for BMPs. The Environmental Inspector logs the inspection information on both the SCVURPPP Standard Stormwater Treatment BMP Inspection Data Collection Form and enters the incident type in the EEDMS database.

Table 4

STEP	RESPONSIBILITY	ACTION
1	ESD - Environmental Inspector	1. Log inspection information using SCVURPPP Standard Stormwater Treatment BMP Inspection Data Collection Form. 2. Log inspection information as "Post-Construction Treatment BMP" Incident type in EEDMS database.
2	ESD - UR	1. Collect completed SCVURPPP Standard Stormwater Treatment BMP Inspection Data Collection Form. 2. Compile all "Post-Construction Treatment BMP" incidents annually through EEDMS reporting and report in ICID Summary Tables and cross reference in NRD section of Annual Report.

This page intentionally left blank.

5. CON: Construction Inspection

5.A CON Work Plan Self Evaluation Matrix

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
CON 1	**Site Housekeeping** The City ensures through a construction inspection program that construction contractors properly store, use, and dispose of construction materials, chemicals, and wastes at construction sites and prevent illicit discharges to storm drains and watercourses.			
CON 1.A.	PB&CE Building Division Inspectors develop SOPs to address housekeeping measures at construction sites.	Done FY 03-04	Done FY 03-04.	ESD, PBCE
CON 1.B.	Develop hand-off procedure for transferring project information and status to ensure Building Inspectors are informed of project site data collected by Public Works Inspectors.	Done FY 03-04	Done FY 03-04.	ESD, PW, PBCE
CON 1.C.	Track & document incidents of housekeeping issues at construction sites	Ongoing	Done. Inspectors from ESD, PW, and PBCE Building tracked and documented incidents of housekeeping issues at construction sites during FY 04-05 and these records are on file for review. At the private development projects, PW inspectors found housekeeping issues at 53 of 126 sites inspected. Issues included no cover on dirt stockpile/dumpsters, inadequate inlet protection, maintenance of gravel construction entrances, maintenance of perimeter protection, improper installation of perimeter protection, tracking of dust and mud on public streets.	ESD, PW, PBCE
CON 2	**Local Ordinance** For development projects with significant erosion potential and planned construction activity during the wet season, the City ensures, through a construction inspection program, that erosion and/or sediment control measures are implemented in accordance with local ordinances and project conditions of approval and maintained as needed during construction.			
CON 2.A.	Review existing legal authority to conduct and enforce construction site inspections, if necessary revise.	Done FY 02-03	Done FY 02-03.	
CON 2.B.	Identify needed ordinance changes 1. Identify timeline for revised grading ordinance	Done FY 02-03	Done FY 02-03.	
CON 2.C.	Develop SOPs & conduct training for inspection of construction sites requiring erosion control plans before wet season. Include enforcement (see Environmental Engineering Enforcement Procedures)	Annually	Done. SOPs were developed during FY 03-04. Training on existing SOPs was held by PBCE Building Inspection on 9/14/04, 10/20/04 and 11/09/04. ESD Watershed Enforcement Inspection held training on existing SOPs 7/12/04 – 7/16/04. See Section 12D: *Municipal Employee Training Summary*	ESD, PW

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
CON 3	**Construction Inspection Frequency** The City inspects construction sites for adequacy of stormwater control measures. The frequency of inspections for active sites is at least once per month, or more frequently based on size of project, site conditions, precipitation, & project's potential impact on stormwater quality.			
CON 3.A.	Review construction inspection procedures to incorporate performance standards requirements for monthly inspections into SOPs.	Done FY 02-03	Done FY 02-03.	
CON 3.B.	Document inspections of active construction sites.	Annually	Done. ESD and PW documented inspections of active construction sites during FY 04-05 at active construction sites. These records are on file for review. Inspections included: ESD 272 PW (TDS) 562 ESD inspections are lower for FY 04-05 (272) than for FY 03-04 (570) because in 04-05, ESD only inspected sites that were referred to them from PW and PBCE or sites that had a previous enforcement history. In contrast, ESD inspected all sites during FY 03-04. Last year's report incorrectly listed the number of PW inspections as 981; this number should have been 658. In FY 04-05, this number reduced to 562. In addition to the inspections listed above, PBCE Building inspectors also include stormwater issues in their inspections. Currently, stormwater inspections are done during the course of routine building inspections. The outcomes are tracked only if an inspection results in a stormwater issue identified that warrants follow-up. Based on a workload review of building inspections conducted during FY 04-05, an estimated 2,600 inspections were conducted by Building inspectors to include a review of stormwater issues.	ESD, PW, PBCE
CON 3.B.1	Evaluate use of Amanda system for tracking inspection information.	6/30/04	Done FY 03-04.	ESD, PW, PBCE
CON 3.C.	Evaluate the effectiveness of the construction inspection program and make improvements, as necessary.	Ongoing	Done. The coordination meetings among Building, ESD, and Public Works inspectors that began in FY 03-04 continued during FY 04-05. These meetings plus the citywide training conducted 10/13/2004-10/15/2004 improved the communications and coordination amongst inspectors in all three departments.	ESD, PW, PBCE
CON 4	**Wet Season Preparation** Prior to the beginning of the wet season each year, the City inspects all sites requiring erosion and/or sediment control plans, to ensure that measures have been taken to minimize erosion and discharges of sediment from disturbed areas.			

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
CON 4.A.	Review and revise, as needed, procedures for Public Works staff regarding wet season construction requirements.	As Needed	Done. Procedures for wet season preparation were reviewed and found to be adequate with no changes identified. Public Works project managers continued to implement language in Section 10-2, Storm Water Pollution Prevention for public projects.	PW
CON 4.B.	Document pre-season inspection of construction sites to ensure adequate implementation of winterizing BMPs, prior to the wet season.	Annually	Done. The City documented pre-season inspection of construction sites to ensure adequate implementation of winterizing BMPs, prior to the wet season during FY 04-05. Pre-season inspections were performed by Public Works for 46 private development projects. PBCE Building inspectors delivered notices to all active construction sites identified by Public Works. ESD Watershed Enforcement inspectors conducted 57 pre-season inspections before 10/01/04.	PW
CON 5	**Inspection and Site Evaluation Follow-up** Construction sites with inadequate erosion/sediment controls are given verbal and/or written notice of the inadequacies, according to the City's enforcement procedures, and followed up with action(s) commensurate with the risk of pollutants entering City storm drains or waterways. Written notices and follow-up actions are tracked and summarized in the City's Annual Report to the Regional Board.			
CON 5.A.	Draft and implement procedures for follow-up actions and graduated levels of enforcement, to be used on construction sites.	Done FY 02-03	Done FY 02-03.	ESD, PW
CON 5.B.	Track and summarize notices and follow-up actions for annual reports.	Annually	Each of the implementing departments follows a procedure for escalated action depending on the outcomes of an inspection. Public Works issued 197 Verbal Warnings. 36 sites received more than one Verbal Warning. 17 Written Notices were issued. 2 sites received more than one Written Notice. 12 referrals were made to ESD. Building Inspectors issued a total of 79 notices to construction sites either requiring adjustments to the superintendent's performance or noting compliance with guidelines after a previous notice was delivered. Currently, stormwater inspections are done during the course of routine building inspections. The outcomes are tracked only if an inspection results in a stormwater issue identified that warrants follow-up. ESD Watershed Enforcement inspectors investigated 68 active construction sites for a total of 272 inspections. Throughout the season, ESD issued 124 Verbal Warnings, 47 Written Notices, and 14 Administrative Citations (fines).	ESD, PW, PBCE

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
CON 5.C.	Evaluate the feasibility of increasing the # of staff with the authority to issue enforcement actions.	FY 03-04	Done FY 03-04.	ESD, PW
CON 6	**Municipal Training** The City provides training annually to its construction inspection staff on inspection procedures, documentation, and enforcement related to stormwater pollution prevention. All inspectors receive training on the latest construction-related stormwater pollution prevention techniques and appropriate follow up actions at least once every two years. The City keeps documentation that inspectors have received training.			
CON 6.A.	Revise training curriculum to incorporate revised notice and follow-up requirements and graduated levels of enforcement Develop training materials to address wet season construction and housekeeping Develop training materials to address dry season construction and housekeeping	Done FY 02-03	Done FY 02-03.	ESD, PW
CON 6.B.	Develop training schedule and staff feedback plan regarding inspection procedures.	Done FY 02-03	Done FY 02-03.	ESD, PW
CON 6.C.	Conduct training for Public Works, ESD, and Building Inspection staffs on new standard operating procedures for erosion control plan review inspection process (at least once every 2 years) Conduct training of Planning, Building & Code Enforcement-Building Division inspectors regarding housekeeping BMPs Train DPW & PBCE inspectors on new SOPs for inspection during wet season Train DPW & PBCE inspectors on new SOPs for inspection during dry season	Ongoing	Done. See Section 12.D: *Municipal Training Summary*	Program, Regional Water Quality Control Board, ESD, PW, PBCE
CON 6.D.	Track and document that inspectors have received training.	Annually	Done. See Section 12.D: *Municipal Training Summary*	ESD
CON 6.E.	Evaluate the training curriculum and frequency and improvements, as necessary.	Annually	The training curriculum and frequency were satisfactory. More than 14 sessions were held on construction inspection. Strong emphasis on "keeping mud out of the streets" was again stressed during the training of city construction inspectors.	ESD, PW, PBCE
CON 7	**Outreach** The City provides outreach materials to contractors, developers, and municipal staff on construction BMPs and compliance with the State General Construction Activity Storm Water Permit.			
CON 7.A.	Review outreach/technology transfer materials and make improvements, as necessary	Annually	Done. Construction BMP information tri-folds in Spanish and Vietnamese were printed and distributed as needed in trainings and in permanent displays in City Hall.	ESD

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
			Distribution quantities are captured in 11.D: *Outreach Materials Distributed*. References to the General Construction Activities Stormwater Permit were updated to reflect the new requirement that project sites that disturb a total of 1 acre or more need to apply (reduced down from 5 acres).	
CON 7.A.1	Develop outreach materials to address wet season construction.	Done FY 02-03	Done FY 02-03.	
CON 7.B.	Review SOPs for distributing outreach/technology transfer material by inspectors.	Done FY 02-03	Done FY 02-03.	ESD
CON 7.C.	Conduct outreach sessions to development community.	Ongoing, Q2	Done and continuing Annually. See 11.D: *PIP Activities* for details.	ESD, PW
CON 7.D.	Document outreach to development community.	Annually	Done. DPW and ESD inspectors continued to distribute BMPs to the development community during construction site inspections. Outreach materials were also given to development community representatives at training sessions on 8/31/2004 and 9/14/2004, and at permit service counters. See 11.D: *PIP Activities* for details.	ESD
CON 7.E.	Evaluate outreach program and make improvements, as necessary.	Annually	The City's outreach program is sufficient. With inspections, meetings, and training sessions, the outreach for this program element includes significant face-to-face contact. Inspectors also distribute materials to developers and contractors as part of inspection. During FY 04-05 "Clean Bay Blueprint" was formatted and updated. It will be printed and distributed to developers and city inspectors in FY 05-06. The City also plans on producing signs to be displayed at construction site with the "No Dumping and 945-3000 Telephone Hotline" message for site employees and the public to see. Signs will be procured and distributed to developers during FY 05-06. The City will review key BMP materials and make changes as needed in FY 05-06.	ESD, PW, PBCE
CON 8	**Public Works Projects** The City will develop and implement a process to ensure that contractors hired to construct public works projects have adequate erosion control plans and use appropriate Best Management Practices (BMPs) adopted by the Department of Public Works.			
CON 8.A.	Develop & conduct training for Public Works capital improvement project staff (Architectural Engineering Design & Construction and Streets, Bridges & Sewers Design and Construction) on contract language & enforcement.	Done FY 02-03 Annually	Done. Training was developed and conducted on 12/09/04. See Section 12.D: *Municipal Employee Training Summary*	ESD, PW
CON 8.B.	Track the number of Public Works projects with these requirements.	Annually	Done. Tracked number of Public Works capital improvement projects to ensure erosion and sediment	ESD, PW

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
			control language was included. Records are on file.	
CON 9	**Construction Inspection Effectiveness Evaluation** The City of San José will review and evaluate effectiveness of its construction inspection SOPs and BMPs.			
CON 9.A.	Evaluate and incorporate any needed improvements in construction inspection SOPs and BMPs.	Annually	Done FY 03-04.	ESD, PW
CON 9.B.	Document and evaluate what worked well and what needs improvement.	Annually	The communications and cooperation amongst Public Works, PBCE Building, and ESD Watershed Enforcement inspectors worked well. The citywide construction inspector's trainings held October 13-15, 2004, and the monthly citywide construction supervisors meetings played a big part in this improvement. The City will continue to conduct the inspector's training and hold supervisors meetings during FY 05-06. PW (TDS) inspectors continue to observe housekeeping problems at private development sites. Some of the problems include: • No cover on dirt stockpile/dumpsters • Inadequate inlet protection • Inadequate maintenance of gravel construction entrances • Inadequate maintenance of perimeter protection • Tracking of dust and mud on public streets City inspectors will continue to work with developers to ensure effective BMPs are implemented to prevent these housekeeping issues.	ESD, PW, PBCE

5.B CON Program Evaluation

Several things worked well during the construction inspection process for FY 04-05. Included below is a list of activities the City implemented to improve the construction inspection program.

First, the City retained a consultant to design and deliver erosion and sediment control training for city construction inspectors. Approximately 113 inspectors attended the October 13-15, 2004 training from PBCE Building, Public Works (for both private development and public projects) and ESD Watershed Enforcement. The training emphasized effective BMPs contractors/developers should implement to prevent stormwater runoff pollution at construction sites. The trainer showed pictures contrasting effective and ineffective BMPs. Also, the City's Standard Operating Procedure on Construction Inspections was discussed in detail by ESD staff. The training was very successful based on feedback from City staff that attended.

Second, ESD assigned inspectors to a specific region of the City to handle the larger grading projects. Communications between inspectors from ESD, PW, and Building was much better, resulting in improved transfer of information as construction projects moved from one phase to the next.

Third, Public Works Roads and Bridges instituted a practice of including a separate pay item in bids for erosion and sediment control. Contractors are now paid for implementing erosion and sediment control BMPs. This has proven to be highly effective for motivating contractors to implement BMPs at construction sites.

Fourth, prior to the early start of the rainy season ESD inspectors conducted pre-season inspections on 15 public and 24 private construction sites. The sites were selected based upon the size of the project, past history of compliance, potential for impact on nearby streams, and project location limitations that could compromise erosion and sediment control.

Implementation of BMPs by contractors, and education and enforcement by City inspectors are considered adequate. Inspectors continue to be vigilant in observing site conditions for erosion and sediment control problems. In spite of these efforts some problems continue to exist. For example, PW (TDS) inspectors found the following housekeeping issues during FY 04-05: no cover on dirt stockpile and dumpsters; inadequate inlet protection; improper maintenance of gravel construction entrances; improper maintenance of perimeter protection; improper installation of perimeter protection; and tracking of dust and mud on public streets. City inspectors will continue to work closely with contractors to reduce these types of problems during FY 05-06.

5.C CON Response to Water Board Comments

No comments received from Water Board on this Program Element.

5.D CON Summary Tables

Permits for Significant Development Projects Reviewed and/or Approved July 1, 2004 – June 30, 2005

Project Name	Project Type	Site Size (Ac or s.f.)	Area of Land Disturbed (Ac)	Project Status	Storm Water Control Measures Included in Project	Requirement Mechanism
Department of Public Works, Airport Division						
Public Projects						
Runway 30L Extension	Runway	16 Ac	16 Ac	Completed	Standard Construction Best Management Practices (BMPS) including sediment and erosion control	Silt fencing, sandbags, filter fabric, etc.
North Concourse – Package One	Terminal	7.5 Ac	3.9 Ac	Ongoing	Standard Construction Best Management Practices (BMPS) including sediment and erosion control	Silt fencing, sandbags, filter fabric, etc.
Department of Public Works, Transportation & Development Services Division						
Private Projects						
COURT YARD GRADING	Non-Residential	6.25 Ac	0.43 Ac	Construction not Started	Standard BMPs	Planning/grading permits, Follow BMPs
CONSTRUCT 3,870 S.F. ENCLOSED TEST TOWER	Non-Residential	5.20 Ac	0.28 Ac	Construction not Started	Standard BMPs	Planning/grading permits, Follow BMPs
RUSSO COURT TOWNHOMES	Residential	0.96 Ac	0.96 Ac	Under Construction (Grading Completed)	Standard BMPs	Planning/grading permits, Follow BMPs
GRADING FOR A TENANT IMPROVEMENT	Commercial	2.00 Ac	0.25 Ac	Construction Completed	Standard BMPs	Planning/grading permits, Follow BMPs
100 CONDO UNITS	Residential	4.30 Ac	4.30 Ac	Grading On-going	Stabilized construction entrance, fiber rolls, inlet protection,	Planning/grading permits, Follow SWPPP & Erosion Control Plan, Applicant/developer/consultant/contractor attend PW Erosion/Sediment Controls Training
VENETIAN TERRACE - INTERIM GRADING FOR C-LOMR	Residential	4.76 Ac	0.72 Ac	Construction not Started	Standard BMPs	Planning/grading permits, Follow SWPPP & Erosion Control Plan, Applicant/developer/consultant/contractor attend PW Erosion/Sediment Controls Training

PROJECT NAME	PROJECT TYPE	SITE SIZE (AC OR S.F.)	AREA OF LAND DISTURBED (AC)	PROJECT STATUS	STORM WATER CONTROL MEASURES INCLUDED IN PROJECT	REQUIREMENT MECHANISM
TO DEMOLISH A 22,000 SF BUILDING AND REPLACE WITH SURFACE PARKING AND NEW LANDSCAPING	Non-Residential	17.70 Ac	0.80 Ac	Construction not Started	Standard BMPs	Planning/grading permits, Follow BMPs
CONSTRUCTION OF 107 SINGLE FAMILY DETACHED RESIDENCES.	Residential	13.70 Ac	13.70 Ac	Grading On-going	Stabilized construction entrance, fiber rolls, inlet protection,	Planning/grading permits, Follow SWPPP & Erosion Control Plan, Applicant/developer/consultant/contractor attend PW Erosion/Sediment Controls Training
ON SITE GRADING FOR 53 SINGLE FAMILY UNITS	Residential	8.60 Ac	8.60 Ac	Grading On-going	Stabilized construction entrance, fiber rolls, inlet protection,	Planning/grading permits, Follow SWPPP & Erosion Control Plan, Applicant/developer/consultant/contractor attend PW Erosion/Sediment Controls Training
ALMADEN RD APTS.	Residential	4.96 Ac	4.96 Ac	Grading On-going	Standard BMPs	Planning/grading permits, Follow SWPPP & Erosion Control Plan
GRADING FOR (N) RETAINING WALL LEVELING	Non-Residential	0.63 Ac	0.63 Ac	Construction not Started	Standard BMPs	Planning/grading permits, Follow BMPs
FOR TEMPORARY HELIPAD AREA ONLY.	Temporary Helipad	0.50 Ac	0.50 Ac	Under Construction (Grading Completed)	Standard BMPs	Planning/grading permits, Follow BMPs
NEW 12,624 SF WAREHOUSE WITH OFFICE	Non-Residential	0.54 Ac	0.54 Ac	Construction not Started	Standard BMPs	Planning/grading permits, Follow BMPs
ON-SITE GRADING ADJACENT TO ALEXANDER AVENUE	Cemetery	1.65 Ac	0.25 Ac	Under Construction (Grading Completed)	Standard BMPs	Planning/grading permits, Follow BMPs
NEW HOUSE ON VACANT LOT	Residential	0.25 Ac	0.10 Ac	Under Construction (Grading Completed)	Standard BMPs	Planning/grading permits, Follow BMPs
INDUSTRIAL BUILDINGS	Non-Residential	11.55 Ac	11.55 Ac	Grading On-going	Stabilized construction entrance, concrete blocks wrapped in fabric at drain gate, fiber rolls, drop inlet sediment traps	Planning/grading permits, Follow SWPPP & Erosion Control Plan, Applicant/developer/consultant/contractor attend PW Erosion/Sediment Controls Training

Project Name	Project Type	Site Size (Ac or s.f.)	Area of Land Disturbed (Ac)	Project Status	Storm Water Control Measures Included in Project	Requirement Mechanism
GRADING FOR PROPOSED TARGET STORE & COMMERCIAL /RETAIL BLDGS.	Commercial	14.20 Ac	14.00 Ac	Under Construction (Grading Completed)	Stabilized construction entrance, fiber rolls, inlet protection,	Planning/grading permits, Follow SWPPP & Erosion Control Plan, Applicant/developer/consultant/contractor attend PW Erosion/Sediment Controls Training
GRADING FOR A COMMERCIAL BUILDING	Commercial	0.53 Ac	0.50 Ac	Under Construction (Grading Completed)	Standard BMPs	Planning/grading permits, Follow BMPs
PHASE II B GRADING	Non-Residential	8.80 Ac	1.32 Ac	Construction Completed	Standard BMPs	Planning/grading permits, Follow SWPPP & Erosion Control Plan
ON SITE GRADING FOR A 148 UNIT APARTMENT COMPLEX	Residential	1.99 Ac	1.99 Ac	Under Construction (Grading Completed)	Stabilized construction entrance, fiber rolls, inlet protection,	Planning/grading permits, Follow SWPPP & Erosion Control Plan, Applicant/developer/consultant/contractor attend PW Erosion/Sediment Controls Training
PARTIAL SITE GRADING FOR SOIL REMEDIATION	Residential	0.60 Ac	0.60 Ac	Under Construction (Grading Completed)	Standard BMPs	Planning/grading permits, Follow BMPs
GRADING FOR 3 SINGLE FAMILY DETACHED RESIDENCES ON 0.827 GROSS ACRE SITE.	Residential	0.82 Ac	0.41 Ac	Under Construction (Grading Completed)	Standard BMPs	Planning/grading permits, Follow BMPs
CONSTRUCT ENGINEERED FILL FOR FUTURE SWIMMING POOL AT FRONT OF SINGLE FAMILY RESIDENCE. EXIST. RET WALL TO BE DEMOLISHED AND REPLACED WITH A FILL SLOPE.	Residential	1.76 Ac	0.11 Ac	Grading On-going	Standard BMPs	Planning/grading permits, Follow BMPs
GRADING ON PARCEL 1 FOR COMMERCIAL BUILDINGS	Commercial	4.90 Ac	4.90 Ac	Under Construction (Grading Completed)	Stabilized construction entrance, fiber rolls, inlet protection,	Planning/grading permits, Follow SWPPP & Erosion Control Plan, Applicant/developer/consultant/contractor attend PW Erosion/Sediment Controls Training
REMOVAL OF CONTAMINATED SOIL FROM SITE AND DISPOSAL AT NINE PAR LANDFILL.	Non-Residential	1.88 Ac	0.40 Ac	Project Accepted	Standard BMPs	Planning/grading permits, Follow BMPs

6. PSR: Public Streets, Roads, & Highways

6.A PSR Work Plan Self Evaluation Matrix

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
PSR 1	**Implementation of BMPs** The City of San José will implement Best Management Practices (BMPs) for street, road, and highway operation and maintenance (O&M) activities to reduce pollutants in stormwater and eliminate illicit discharges to the maximum extent practicable.			
PSR 1.A.	Identify BMPs currently used by staff as well as areas where BMPs still need to be developed per baseline model.	Done	Done prior to FY 02-03.	DOT, ESD
PSR 1.B.	Audit areas beyond the scope of the baseline model.	Done	Done prior to FY 02-03.	DOT, ESD
PSR 1.C.	Develop additional BMPs based on audit results as needed.	Done	Done prior to FY 02-03.	DOT, ESD
PSR 1.D.	Develop SOPs based on BMPs.	Done	Done prior to FY 02-03.	DOT, ESD
PSR 1.E.	Create plan to integrate BMPs and SOPs into training program.	Done	Done prior to FY 02-03.	DOT, ESD
PSR 1.F.	Deleted	Deleted	Deleted prior to FY 02-03.	DOT, ESD
PSR 1.G.	Update BMPs as indicated.	Annually	Done. During DOT annual training, conducted in May 2005, BMPs were reviewed - no updates were found to be necessary. The list of BMPs reviewed included: 1. SOP & BMP Annual Effectiveness Reviews 2. Catch Basin Cleaning 3. Spill Response 4. Infrastructure Maintenance Storm Drain System Problem Area Reporting 5. Street Sweeping 6. Resurfacing, Sealing, & Patching 7. Sawcutting 8. Pavement Marking and Legend Removal 9. Landscape Chemical Application 10. Roadway Irrigation System Repair.	DOT, ESD

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
PSR 1.G.1	1. Review PSR and SDO SOPs and augment as needed.	6/30/05	Done. PSR and SDO SOPs were reviewed in FY 04-05. Several SOPs need to be revised and/or new SOPs written in FY 05-06: • Sidewalk/Plaza Maintenance: Cleaning, concrete installation and replacement, surface removal and repair; • Bridge and Structure Maintenance: Painting and paint removal, repair work, and graffiti removal; • Median and Road Embankment Maintenance (SOPs exist for PRNS; expand to DOT); • Storm Drain Line Cleaning; • Management of Storm Drain System Solid Waste; • Pump Station Inspection and Cleaning; • Drainage Ditch Cleaning	DOT, ESD
PSR 2	**Contractor Use of BMPs** The City of San José will develop & implement a process to ensure that contractors employed to perform street, road, & highway O&M activities use appropriate BMPs adopted by the agency.			
PSR 2.A.	Contract managers for public street, road, and highway O&M contracts will be trained on related stormwater BMPs annually.	Done FY 02-03 Annually	Done. Training was conducted for DOT contract managers in June 2005. The City received no complaints regarding contractors conducting PSR O&M activities for the City.	DOT, ESD
PSR 2.B	Develop standard contract language for PSR maintenance activities.	6/30/05	Done. Staff drafted stormwater standard contract language for general POs and contracts; POs and contracts which contain pest management activities; and POs and contracts which contain PSR, RPW, and SDO operation and maintenance activities. The language is currently under review by the implementing departments and the City Attorney's Office.	DOT, ESD
PSR 3	**City Staff Annual Training** The City of San José will provide annual training to its municipal staff in the use of appropriate BMPs. The City will also provide a mechanism for obtaining feedback from staff on the implementation and effectiveness of the BMPs and Control Measures.			
PSR 3.A.	Identify training goals by reviewing level of use of BMPs by staff.	Done	Done prior to FY 02-03.	DOT, ESD
PSR 3.B.	Identify training opportunities.	Annually	Done. Training opportunities were identified in April 2005.	DOT, ESD
PSR 3.C.	Create training modules for affected City staff and contractors formatted for available training opportunities.	Done FY 01-02 As needed	Done. A new training module was created and implemented for the DOT electrical crews in June 2005.	DOT, ESD
PSR 3.D.	Create collateral material based on training modules.	Done FY 01-02 As needed	Done. Collateral material, *Pesticide Safety Training – Product Information Summaries*, was created for the DOT electrical crew training. On occasion, DOT electrical crews have a need to use pesticides in the course of conducting their work – working on electrical boxes, street	DOT, ESD

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
			lights, or underground vaults. The City's IPM policy requires that any employee using a pesticide in the course of conducting their work must receive training on that pesticide. *Pesticide Safety Training – Product Information Summaries* were created for the two pesticide products that the DOT electrical crews use. Training on these two products was included in the July 9, 2005, DOT Electrical Crew training.	
PSR 3.E.	Schedule training with affected supervisors.	Annually	Done. DOT inlet cleaning crews training was scheduled with supervisors in August 2004. DOT electrical crews training was scheduled with supervisors in May 2005. Training for DOT street maintenance crews was scheduled with supervisors in April 2005.	DOT, ESD
PSR 3.E.1	Improve the focus of the training on the specific BMPs used by a section.	Done FY 03-04 Ongoing as Needed	Done. Using feedback received from the FY 03-04 trainings, two new training modules were developed and implemented in FY 04-05. These modules were tailored to two specific work groups – the DOT inlet cleaning crews and the DOT electrical crews. Existing training for DOT street maintenance crews was scheduled by section, but open to all affected personnel to accommodate individual schedules. At the beginning of each class, the trainer asks staff present which sections they are from and tailors the training to those present.	DOT, ESD
PSR 3.E.2	Develop and implement a new training module specifically for DOT electrician staff.	6/30/05	Done. The new DOT electrical staff training module was developed in May 2005. The training was first implemented in June 2005.	DOT, ESD
PSR 4	**Notification of Public Agencies** The City of San José will inform other parties (e.g., CalTrans, the County of Santa Clara, and public utilities) conducting street, road, and highway O&M activities within its jurisdiction of the requirements to implement BMPs and Control Measures to reduce pollutants in stormwater to the maximum extent practicable and eliminate illicit discharges.			
PSR 4.A.	Identify conditions under which another agency will be notified of City O&M operations.	Done	Done prior to FY 02-03. The City notifies other agencies conducting street, road, and highway O&M activities within its jurisdiction of the requirements to implement BMPs and Control Measures on a complaint driven basis. When a complaint is received, a Watershed Enforcement Inspector investigates the complaint and educates the agency on proper BMPs and Control Measures; a citation is issued if necessary. For each complaint the City received involving other agencies in FY 04-05, Watershed Enforcement investigated the complaint and educated the agency contacts on proper BMPs and control measures to be used when conducting PSR O&M activities within the City. No citations were warranted.	ESD

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
PSR 4.B.	Draft notification procedure.	Deferred	Deleted. No separate notification procedure needed.	ESD
PSR 4.C.	Review and comment from internal and external stakeholders.	Deferred	Deleted.	ESD
PSR 4.D.	Distribute final policy to internal & external organizations & agencies.	Deferred	Deleted.	ESD
PSR 5	**BMP Effectiveness Reviews** As part of the annual review process, the City of San José will review and evaluate the effectiveness of its BMPs in reducing pollutants in stormwater and eliminating illicit discharges.			
PSR 5.A.	Draft procedure for annual effectiveness reporting, including sub-procedures for gathering feedback from affected supervisors and for modifications to BMPs & SOPs as necessary.	Done FY 01-02	Done FY 01-02.	DOT, ESD
PSR 5.A.1.	Review procedures for annual effectiveness evaluation. Consider obtaining feedback from supervisors on how to assess BMP effectiveness and the use of training sessions with staff as an opportunity to evaluate BMPs and SOPs.	FY 04-05 Annually	Done. The annual DOT Stormwater BMP and SOP training was conducted in May 2005. Both DOT crews and supervisors attended the training conducted in May. PSR & SDO BMPs and SOPs were reviewed and feedback was requested during the training sessions. Written evaluations for the training were also distributed. Feedback received from both sources indicated that the existing BMPs and SOPs are effective and no modifications were necessary in FY 04-05. See 6.B PSR Program Evaluation for the summary of training evaluation data.	DOT, ESD
PSR 5.B.	Review and comment on draft procedure from stakeholders.	Done FY 01-02	Done FY 01-02.	DOT, ESD
PSR 5.C.	Distribute final procedure to stakeholders.	Done FY 01-02	Done FY 01-02.	DOT, ESD
PSR 6	**Rural Public Works Maintenance and Support Activities** The City will extend its control measure strategy for PSR to address water quality impacts resulting from public works maintenance and support activities in rural areas.			
PSR 6.A.	Identify City-owned properties that are applicable under the RPW performance standard.	Done FY 02-03	Done FY 02-03. The initial list of rural public works facilities under the jurisdiction of the City of San José was compiled to include the largest City parks, which were reviewed for the following criteria: 1. Not serviced by an integrated municipal storm drain system; and 2. Not serviced by curbs and gutters; and 3. Contains roads or trails that are intended to be passable for a maintenance vehicle (i.e. 1/2 ton pick up truck or larger)	ESD, PRNS, DOT, GS
PSR 6.A.1	Re-evaluate the feasibility of using GIS information to	6/30/06	First evaluated in 03-04 and found infeasible using	PRNS, GS, DOT, ESD

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
	identify additional applicable properties, if any.		available data and resources. This task will be re-evaluated in FY 05-06.	
PSR 6.B.	Develop or adapt Standard Operating Procedures (SOPs) and Best Management Practices (BMPs) for rural public works activities.	Done FY 03-04	Done FY 03-04.	PRNS, GS, DOT, ESD
PSR 6.C.	Provide annual training on appropriate SOPs/BMPs to City staff that perform rural public works operations & maintenance activities.	Annually	Done. Training on the RPW SOPs was conducted in October 2004 for City PRNS staff conducting RPW O&M activities.	PRNS, GS, DOT, ESD
PSR 6.D.	Through contract specifications, require contractors hired by the City to use appropriate SOPs/BMPs when performing rural public works construction or maintenance.	6/30/05	Done. Training was conducted for DOT contract managers in June 2005. The City received no complaints regarding contractors conducting RPW O&M activities for the City.	PRNS, GS, DOT, ESD
PSR 6.E.	Annually conduct an evaluation of the effectiveness of the rural public works program, report the results in the Urban Runoff Annual Report. Identify items for continuous improvement.	Begin w/ FY 03-04 Annually	The RPW BMPs and SOPs training was conducted in October 2004. Feedback was requested during the training, and evaluations were distributed. The feedback indicated that no modifications to the BMPs and SOPs were necessary. See 6.B PSR Program Evaluation for the summary of training evaluation data.	PRNS, GS, DOT, ESD

6.B PSR Program Evaluation

ITEM NO.	ACTIVITY	FY 04-05 EVALUATION	CHANGES FOR FY 05-06 (IF APPLICABLE)
PSR 3	Annual training of municipal staff in the use of appropriate BMPs. Provide a mechanism for obtaining feedback from staff on the implementation and effectiveness of the BMPs and Control Measures.	Annual municipal staff training was held in May 2005 for the PSR and SDO program elements. Participants were given an evaluation form to fill out. Of the 161 staff that participated in the training, 97 evaluations were completed and returned. Results of the completed evaluations are summarized below: ➢ 96% responded that the training subjects taught are appropriate to their work ➢ 95% responded that the BMPs/SOPs described match their work practices ➢ 94% responded that the training adequately described the relationship of BMPs/SOPs to compliance with the City's Stormwater NPDES permit ➢ 94% responded that the training adequately explained how they, City staff, can help the City maintain compliance with the Stormwater NPDES permit Specific training was held for the DOT electrical crews on June 9, 2005. Participants were given an evaluation form to fill out. Of the 16 staff that participated in the training, 14 evaluations were completed and returned. Results of the completed evaluations are summarized below: ➢ 86% responded that the training subjects taught are appropriate to their work ➢ 100% responded that the BMPs/SOPs described match their work practices ➢ 100% responded that the training adequately described the relationship of BMPs/SOPs to compliance with the City's Stormwater NPDES permit ➢ 100% responded that the training adequately explained how they, City staff, can help the City maintain compliance with the Stormwater NPDES permit	Add specific components from DOT Electrical Crew module to the General DOT Street Crew module in FY 05-06. These components include: asphalt/concrete removal, concrete installation and repair, and mercury lamp recycling and/or disposal.
PSR 5	Annually the City will review and evaluate the effectiveness of its BMPs in reducing pollutants in	BMP effectiveness is evaluated using staff feedback gathered from training sessions. See evaluation	The City anticipates expanding the areas in which parking restrictions are enforced for street sweeping

ITEM NO.	ACTIVITY	FY 04-05 EVALUATION	CHANGES FOR FY 05-06 (IF APPLICABLE)
	stormwater and eliminating illicit discharges.	above. In addition, the City received no complaints regarding contractors conducting PSR O&M activities for the City. The City conducts an extensive Street Sweeping program. The program includes the sweeping of the Central Business District; Arterials, Collectors, and Bicycle Lanes; and Residential Streets. The City is continuing to expand the areas in which parking restrictions are enforced to improve the effectiveness of the street sweeping program. In FY 04-05, the enforcement area was broadened from 120 to 160 curb miles. In FY 04-05, 9,819 tons of material was collected during all street sweeping operations.	by 40 curb miles in FY 05-06.
PSR 6	Annually conduct an evaluation of the effectiveness of the Rural Public Works program.	Training was held in October 2004 in order to train the PRNS staff that had been unable to attend the earlier March 2004 training. Participants were generally positive about the content and relevance of the training session. Of the 29 staff that participated in the training, 23 evaluations were completed and returned. Results of the completed evaluations are summarized below: ➢ 91% responded that the training subjects taught are appropriate to their work ➢ 91% responded that the BMPs/SOPs described match their work practices ➢ 91% responded that the training adequately described the relationship of BMPs/SOPs to compliance with the City's Stormwater NPDES permit ➢ 91% responded that the training adequately explained how they, City staff, can help the City maintain compliance with the Stormwater NPDES permit	RPW training will be scheduled in the Fall each year to better coordinate with PRNS staff schedules.

6.C PSR Response to Water Board Comments

No comments received from Water Board on this Program Element.

6.D PSR Summary Tables / Additional Information

Parks Included in the Rural Public Works Performance Standard

Name of Park	Location	Acreage	Type of Park
Almaden Lake Park	Almaden Expwy & Coleman	64.9	Regional
Alum Rock Park	Alum Rock & Penitencia Creek	718.0	Regional
Emma Prusch Farm Park	Story & King	43.5	Regional
Guadalupe River Park	Between Hwy 880 and 280 along Guadalupe River in downtown San José	205.0	Regional
Kelley Park	Senter & Story	138.0	Regional
Lake Cunningham Park/Raging Waters	Capitol & Tully	202.0	Regional
Montgomery Hill Park	Yerba Buena & Murillo	59.6	Neighborhood
Overfelt Gardens	Education Park & McKee	32.6	Regional

7. SDO: Storm Drain System Operation & Maintenance

7.A SDO Work Plan Self Evaluation Matrix

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
SDO 1	**O&M BMP Implementation** The City of San José will implement best management practices (BMPs) for the storm drain system operation and maintenance (O&M) to reduce pollutants in stormwater to the maximum extent practicable. Specific BMPs for each type of O&M activity will be those listed in the City's Work Plan BMPs and Control Measures (Section 3).			
SDO 1.A.	Audit BMPs.	Annually	Done. During DOT annual training, conducted in May 2005, BMPs were reviewed - no updates were found to be necessary. The list of BMPs reviewed included: 1. SOP & BMP Annual Effectiveness Reviews 2. Catch Basin Cleaning 3. Spill Response 4. Infrastructure Maintenance Storm Drain System Problem Area Reporting 5. Street Sweeping 6. Resurfacing, Sealing, & Patching 7. Sawcutting 8. Pavement Marking and Legend Removal 9. Landscape Chemical Application 10. Roadway Irrigation System Repair	DOT, ESD
SDO 1.B.	Implement an annual inspection and cleaning work plan to achieve a Tier 2 level review.	Done Ongoing	Done. For inlet cleaning, DOT schedules and implements the inspection and cleaning schedule annually. To date, the City has been able to achieve a Tier 2 level review with a modified implementation timeframe. In FY 05-06, the City's intent is to continue the Tier 2 level review. However, due to budget constraints, the extended window for implementation of Tier 2 may be needed. In FY 04-05, over 28,000 inlets were cleaned between 09/12/2004 and 01/03/2005.	DOT
SDO 1.C.	Create procedure for collecting data on Problem Areas from City field personnel.	Done	Done FY 01-02.	DOT, ESD
SDO 1.D.	Review and revise procedure for collecting data on Problem Areas from City field personnel.	Done FY 01-02	Done FY 01-02.	DOT, ESD
SDO 1.E.	Create plan for coordinating data tracking between ICID & Storm Drain Management System databases. Include analysis of data to identify trends for targeting solutions.	Done FY 01-02	Done FY 01-02.	DOT, ESD
SDO 1.F.	Review and revise plan for coordinating data tracking	Done FY 01-02	Done FY 01-02.	DOT, ESD

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
	between ICID & Storm Drain Management System databases. Include analysis of data to identify trends for targeting solutions.			
SDO 1.G.	Develop SOPs based on BMPs.	Done	Done 12/00.	DOT, ESD
SDO 1.G.1	Staff will review PSR and SDO SOPs and augment as needed.	6/30/05	Done. See comments in PSR 1.G.1.	DOT, ESD
SDO 1.H.	Create any additional required BMPs, including structural controls.	Ongoing as Needed	Done 12/00.	DOT, ESD
SDO 1.I.	Develop SOPs based on BMPs and other programs or solutions identified by database analysis including revision of Problem Area list.	Ongoing as Needed	Done 12/00.	DOT, ESD
SDO 1.J.	Create plan integrating BMPs and SOPs into training program.	Ongoing as Needed	Done 12/00.	DOT, ESD
SDO 1.K.	~~*Allocate appropriate resources for supporting work plan*~~	Deleted FY 03-04	Deleted.	N/A
SDO 2	**Problem Tracking and Process Improvement** The City of San José will develop and implement processes for tracking problem areas and ensuring that appropriate BMPs and SOPs will be implemented for storm drain operation and maintenance activities.			
SDO 2.A.	Determine reporting requirements, including tracking Problem Areas.	Done	Done. DOT compiles a Problem Area Report annually.	DOT, ESD
SDO 2.B.	Create criteria for collecting data from City field personnel for the purposes of determining Problem Areas.	Done	Done. In FY 04-05, the inlet cleaning data collection form was revised. Specific criteria were included in order to obtain more quantifiable data from the cleaning crews. Training on the new form and criteria was conducted on September 8, 2004, prior to the crews starting the inlet cleaning program.	DOT, ESD
SDO 2.C.	Develop procedures for documenting frequency, nature, and type of recurring problem. Coordinate the data from ICID & Storm Drain Management System databases.	Done	Done prior to FY 02-03.	DOT, ESD
SDO 2.D.	Create procedure for data reports to be used to update Problem Area list. Include process and criteria for analyzing ICID trends.	Done FY 01-02	Done FY 01-02.	DOT, ESD
SDO 2.E.	Revise documentation and problem area reporting procedure to improve reporting performance.	As Needed	Done. In September 2004, new data collection criteria were developed for the Storm Inlet Cleaning Form. The new criteria were as follows: ➢ High Debris in excess of 3' in depth – This amount of debris can include leaves, lawn clippings, dirt and other natural debris ➢ Garbage in excess of a grocery shopping bag – This includes paper, bottles, cans, and other man-made waste.	DOT, ESD

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
			➢ Illicit pollution – concrete, oil, antifreeze, paint etc. that appear to have been intentionally dumped into the inlet ➢ Any other abnormality that crews felt should be noted. Using GIS, the data collected was mapped and reviewed for trends and improvements to the inlet cleaning program for FY 05-06.	
SDO 2.F.	Produce Problem Area report.	Annually	Done. The FY 04-05 Infrastructure Maintenance Division Storm Drain System Problem Area Report (IMSPAR) was produce in March 2005.	DOT
SDO 2.G.	Create plan for addressing Problem Areas through ICID enforcement/ education activities, additional BMP development, program development or retrofit.	Done FY 02-03	Done FY 02-03. See 7.B SDO Program Evaluation for FY 04-05 Problem Area report evaluation.	DOT, ESD
SDO 2.H.	~~*Implement work plan*~~	Deleted FY 03-04	Deleted.	N/A
SDO 3	**Contractor Use of BMPs** All City SDO O&M is conducted in-house, and City staff receives BMP/SOP training annually. The only time storm drain maintenance might be contracted out would be for a rare flood emergency situation. The City has standard specifications that cover storm drain BMPs for construction activities.			
SDO 3.A.	Contract managers for storm drain construction contracts will be trained on related stormwater BMPs annually.	Annually	Done. Training was conducted for DOT contract managers in June 2005. The City received no complaints regarding contractors conducting SDO O&M activities for the City.	DOT, ESD
SDO 4	**Staff Training and BMP Feedback** The City of San José will provide annual training to its municipal staff in use of appropriate BMPs and/or Control Measures. The City will also provide a mechanism for obtaining feedback from staff on implementation and effectiveness of BMPs and Control Measures.			
SDO 4.A.	Identify training goals by reviewing training needs of other performance standards.	Done	Done prior to FY 01-02.	DOT, ESD
SDO 4.B.	Provide training prior to the rainy season.	Annually	Done. DOT Stormwater BMP and SOP training was conducted in May 2005.	DOT, ESD
SDO 4.B.1	Improve the focus of the training on the specific BMPs used by a section.	Done FY 03-04 Ongoing as Needed	Done. Using feedback received from the FY 03-04 trainings, two new training modules were developed and implemented in FY 04-05. These modules were tailored to two specific work groups – the DOT inlet cleaning crews and the DOT electrical crews. Existing training for DOT street maintenance crews was scheduled by section, but open to all affected personnel to accommodate individual schedules. At the beginning of each class, the trainer asks staff present which sections they are from and tailors the training to those present.	DOT, ESD
SDO 4.C.	Create training modules for affected City staff formatted for available training opportunities.	Ongoing as Needed	Done. A new training was conducted for the new storm inlet cleaning data collection criteria on September 8, 2004.	DOT, ESD

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
SDO 4.E.	Produce schedule for training.	Annually	Done. DOT inlet cleaning crews training was scheduled with supervisors in August 2004. DOT electrical crew training was scheduled with supervisors in May 2005. Training for DOT street maintenance crews was scheduled with supervisors in April 2005.	DOT, ESD
SDO 5	**Data Analysis** As part of the annual review process, the City of San José will evaluate data regarding cleaning activities and unusual flows observed during inspection. The review and evaluation will include consideration of storm drain structural retrofit.			
SDO 5.A.	Draft procedure for annual review and evaluation of data.	Done FY 01-02	Done FY 01-02.	DOT, ESD
SDO 5.A.1	Provide specific training to inlet cleaning crews on IMSPAR data collection in advance of inlet cleaning program implementation in FY 04-05.	9/04	Done. Training specific to inlet cleaning crews on IMSPAR data collection was conducted on September 8, 2004, prior to the start of the FY 04-05 storm inlet cleaning program.	DOT, ESD
SDO 5.A.2	Investigate the feasibility of collecting data on the amount of materials removed during inlet cleaning.	6/30/05	Done. The feasibility of collecting data on the amount of materials removed during inlet cleaning was investigated. In August 2004, new data collection criteria were developed for the Storm Inlet Cleaning Form to provide more quantitative information. The new criteria are as follows: ➢ High Debris in excess of 3' in depth – This amount of debris can include leaves, lawn clippings, dirt and other natural debris ➢ Garbage in excess of a grocery shopping bag – This includes paper, bottles, cans and other man-made waste. ➢ Illicit pollution – concrete, oil, antifreeze, paint etc. that appear to have been intentionally dumped into the inlet ➢ Any other abnormality that crews felt should be noted. In FY 04-05, the Storm Inlet Cleaning Program removed approximately 1,183 cubic yards of material from the City's storm inlets and catch basins.	DOT, ESD
SDO 5.B.	Include provisions for monitoring of trash as a part of routine outfall inspection.	Evaluated FY 02-03	Done Evaluated in FY 02-03.	DOT, ESD
SDO 5.C.	Review and comment from stakeholders.	Done FY 01-02	Done FY 01-02.	DOT, ESD
SDO 5.D.	Distribute final procedure to stakeholders.	Done FY 02-03	Done FY 02-03.	DOT, ESD
SDO 6	**BMP Effectiveness Reviews** As part of the annual review process, the City of San José will review and evaluate the effectiveness of its BMPs in reducing pollutants in stormwater and eliminating illicit discharges.			
SDO 6.A	Review with supervisors to get feedback and	Done FY 03-04	Done. DOT supervisors attended annual training, where	DOT, ESD

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
	information on how to assess BMP effectiveness.	Annually	evaluations were distributed, to elicit information on BMP effectiveness. Feedback received indicates that the BMPs and SOPs are effective and no modifications were necessary in FY 04-05.	
SDO 6.B	Use annual training sessions with staff as an opportunity to evaluate the effectiveness of BMPs & SOPs.	Annually	Done. DOT Stormwater BMP and SOP training was conducted in May 2005. Both DOT crews and supervisors attended the training conducted in May. PSR & SDO BMPs and SOPs were reviewed and feedback was requested during the training sessions. Written evaluations for the training were also distributed. Feedback received from both sources indicated that the BMPs and SOPs are effective and no modifications were necessary in FY 04-05. See 7.B SDO Program Evaluation for the summary of training evaluation data.	DOT, ESD

7.B SDO Program Evaluation

ITEM NO.	ACTIVITY	FY 04-05 EVALUATION	CHANGES FOR FY 05-06 (IF APPLICABLE)
SDO 4	Annual training of municipal staff in the use of appropriate BMPs and/or Control Measures. Provide a mechanism for obtaining feedback from staff on the implementation and effectiveness of the BMPs and Control Measures.	See 6.B PSR Program Evaluation, Item No. PSR 3.	Add specific components from DOT Electrical Crew module to the General DOT Street Crew module in FY 05-06. These components include: asphalt/concrete removal, concrete installation and repair, and mercury lamp recycling and/or disposal.
SDO 5	As part of the annual review process, the City of San José will evaluate data regarding cleaning activities and unusual flows observed during inspection. The review and evaluation will include consideration of storm drain structural retrofit.	The City reviews data on cleaning activities via the Infrastructure Maintenance Division Storm Drain System Problem Area Report (IMSPAR). The new data collection criteria developed in FY 04-05 for the Storm Inlet Cleaning program worked well. This was the first year that quantifiable data was collected by the inlet cleaning crews. Evaluation of the FY 04-05 IMSPAR data indicates that approximately 5% of the City's storm drain inlets and catch basins had a problem associated with them. The key problems for urban runoff were: 1. Cars parked over catch basins (~1.7%) – crews could not reach the catch basin to clean it. During review, the City considered options for minimizing parked cars but concluded that sign posting would be cost prohibitive at this time. Currently staff return to these catch basins at least once for subsequent cleaning attempts.	Upon review of the IMSPAR data, the City identified several potential changes for FY 05-06. Cars on Catch Basins – In response to the IMSPAR report, the City will further evaluate how follow up is conducted by crews when this issue is identified in order to better understand to what extent parked cars are a barrier to cleaning. Garbage/High Debris – The City will evaluate how to integrate the results of the IMSPAR report into scheduling additional cleaning for FY 05-06 and subsequent years. While budget constraints are an important driver for defining the level of effort practicable, the IMSPAR report can focus City efforts in areas where additional inlet cleaning can do the most good. In FY 05-06, the City will also propose to employ hand held devices to collect data during catch basin cleaning and potentially other maintenance

ITEM NO.	ACTIVITY	FY 04-05 EVALUATION	CHANGES FOR FY 05-06 (IF APPLICABLE)
		2. High Debris (~1.1%) – debris (leaves, lawn clippings, dirt and other natural materials) in excess of 3 feet deep in catch basin. 3. Garbage (~1.0%) – volume of garbage (paper, bottles, cans, and other man-made waste) in excess of a full grocery bag. 4. Illicit pollution (~0.1%) – materials such as concrete, antifreeze, oil, paint, etc. that appear to have been intentionally dumped into the catch basin. Maintenance staff are directed to contact Environmental Enforcement when this issue is identified. Other problems encountered included roots, construction, silt sacks, and no access to catch basin (grate could not be opened).	activities. Implementation would likely not be completed until FY 06-07.
SDO 6	As part of the annual review process, the City of San José will review and evaluate the effectiveness of its BMPs in reducing pollutants in stormwater and eliminating illicit discharges.	BMP effectiveness is evaluated using staff feedback gathered from training sessions. See evaluation above in SDO 4. The City received no complaints regarding contractors conducting SDO O&M activities for the City.	No changes anticipated in FY 05-06.

7.C SDO Response to Water Board Comments

No comments received from Water Board on this Program Element.

7.D SDO Summary Tables / Additional Information

No additional information.

8. PM: Pesticide Management

8.A PM Work Plan Self Evaluation Matrix

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
PM 1	**Integrated Pest Management** The City will adopt an Integrated Pest Management (IPM) policy and/or ordinance requiring use of IPM techniques in the agency's operations; and, minimization of pesticide use, particularly organophosphate and copper-based pesticides, by agency staff and contractors.			
PM 1.A.	Develop a section stating City IPM policy for inclusion in Pesticide Management Plan.	Done FY 02-03	Done FY 02-03. Pollution Prevention Policy adopted June 24, 2003.	ESD
PM 2	**Pesticide Management Plan** The City will develop and implement a Pesticide Management Plan that will minimize pesticide use and reduce the amount of pesticides in stormwater and landscape runoff to the maximum extent practicable.			
PM 2.A.	Draft a City of San José Pesticide Management Plan.	Done FY 01-02	Done FY 01-02.	ESD
PM 2.B.	Submit plan for City Manager approval.	Done FY 01-02	Done FY 01-02.	ESD
PM 2.C.	Publish City Management Plan in URMP.	Done FY 01-02	Done FY 01-02. The City's Pesticide Management Plan was incorporated into the March 2002 URMP as the Pesticide Management Work Plan.	ESD
PM 3	**IPM SOPs and BMPs** The City will develop and implement standard operating procedures (SOPs) and best management practices (BMPs) for implementing the IPM Policy			
PM 3.A.	Develop a list of pest specific SOPs & BMPs for implementing IPM policy.	Done FY 01-02	Done FY 01-02.	GS, DOT, ESD
PM 3.B.	For each type of pest problem identified, seek model SOPs and BMPs from published literature.	Done FY 01-02	Done FY 01-02.	GS, DOT, ESD
PM 3.C.	Incorporate or develop appropriate IPM measures into City SOPs & BMPs.	Done FY 02-03	Done FY 02-03. The Pesticide Management Committee (PMC) developed SOPs & BMPs that incorporate IPM measures.	GS, DOT, ESD
PM 3.D.	Update City URMP to incorporate model Pest Management Performance Standard, including description of legal authority (IPM policy & contract language), work plan elements, BMPs, & SOPs needed for implementation.	Done FY 02-03	Done FY 02-03.	ESD
PM 4	City Employee Training The City will ensure that employees receive pest management training by implementing the following: 1. Employees who apply pesticides for the City will obtain the appropriate training as required by County Ag. Commissioner and State Department of Pesticide Regulation (DPR); 2. Employees within departments responsible for pesticide application will receive annual training on appropriate portions of City IPM Policy, SOPs, and BMPs, and latest IPM techniques; 3. Employees who are not authorized to apply pesticides will be annually trained not to use over-the-counter pesticides at workplace, consistent with IPM Policy.			

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
	4. Annual internal outreach will be conducted to employees, who do not necessarily purchase or apply pesticides during their course of work, on less toxic pest control and to encourage employees to use IPM techniques away from work.			
PM 4.A.	Ensure that employees who apply pesticides for the agency obtain appropriate training required by County Ag. Commissioner & State DPR.	Annually	Done. DOT, GS, and PRNS staff received safety training in January 2005 on the specific pesticides used during the course of their work. Training meets State DPR requirements. Additional training is done throughout the year for new employees prior to using pesticides or if new pesticides, which were not covered in the annual training, are introduced. Training is provided annually. See 12.D: *Municipal Employee Training Summary* for summary of attendance.	GS, DOT
PM 4.B.	Provide annual training on IPM Policy, SOPs, and BMPs, and latest IPM techniques to employees within departments responsible for pesticide application. Include in training, annually informing employees who are not authorized / trained to apply pesticides not to use over-the-counter pesticides at workplace, consistent with IPM Policy.	Annually	Done. Training for DOT, GS and PRNS staff was held in January 2005. Training topics included safety, City IPM Policy, SOPs, and BMPs. Notification that untrained staff are not to utilize over-the-counter pesticides in the workplace was provided at the training and in a June 2005 staff notice. IPM policy training was originally developed and incorporated into pesticide applicator training in FY 03-04. The presentation was updated and included in the January 2005 annual applicator training session. See 12.D: *Municipal Employee Training Summary* for summary of attendance.	GS, DOT, ESD
PM 4.B.1	Develop and integrate an IPM policy (approved June 2003) training into pesticide applicator training.	Done FY 03-04	Done FY 03-04.	GS, DOT, ESD
PM 4.C.	**Monitoring Mechanism I.B.1.** Document and evaluate effectiveness of staff training conducted each year in annual report.	Annually	Done. The training required for certificates and licenses is reviewed and approved for Continuing Education Units (CEUs) by the Department of Pesticide Regulation (DPR) – this ensures it is valuable and effective for applicators. In FY 04-05, an evaluation/survey for class participants was updated and used for IPM training conducted in January 2005. The results were compiled and will be used to implement improvements for the next training. See 8.B PM Program Evaluation for a summary of evaluation results.	GS, DOT, ESD
PM 4.C.1	Develop and implement a class evaluation/survey for IPM training classes conducted by City staff.	Done FY 03-04	Done FY 03-04.	GS, DOT, ESD
PM 4.D.	Public Education & Outreach Task II.A.14 Conduct internal outreach on less toxic pest control to employees who do not necessarily purchase or apply pesticides during the course of their work (to encourage employees to use IPM techniques away from work).	Annually	This message was included in the January 2005 IPM training and the May 2005 DOT Stormwater BMP and SOP training. Approximately 300 employees combined attended the trainings. IPM was the focus of a pollution prevention article that	ESD

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
			appeared in the Spring 2005 "ESD Connections" newsletter. The article focused on personal responsibility, and offered several ways for City employees to prevent pollution at home and at work. ESD also hosted a Brown Bag presentation on IPM safer alternatives to pesticide use (See 12.D: Municipal Employee Training Summary). GS issued email to facility contacts as a reminder that untrained personnel are not allowed to use over the counter pesticides and provided IPM tips for pest control and prevention.	
PM 5	**Contractor Pesticide Management Requirements** The City will develop and implement a process to ensure that contractors employed to conduct pest control and pesticide application on municipal property engage in pest control methods consistent with City IPM Policy. Specifically, the City will require contractors to: ▪ follow City IPM policy, BMPs, and SOPs; ▪ provide evidence of current IPM training, when feasible; and provide documentation of pesticide use on City property to the City in a timely manner.			
PM 5.A.	Develop and implement a process to ensure contractors employed to conduct pest control/pesticide application on municipal property engage in methods consistent with City IPM policy.	Ongoing	Done. Process initially developed for structural pest control contracts in FY 02-03 with implementation beginning in FY 03-04. Specifications for structural pest control contracts written in FY 03-04 and FY 04-05 required IPM methods to be used on City property in a manner consistent with the City's IPM policy. Requests for Quotations (RFQs) released for services to be provided in FY 05-06 also included copies of the City's IPM policy, SOPs and BMPs. Compliance is monitored through review of monthly reports and communication with contractors. Current landscape contractors have been provided with copies of the City IPM policy, SOPs, and BMPs. Compliance is monitored by inspection and monthly reports. Future requests for proposals/quotations will include relevant specifications and the SOPs, BMPs, and the IPM policy as attachments.	GS, DOT, ESD, PRNS, PW, RDA
PM 5.B.	Develop a list of all contractors employed by the City who perform pest application work.	Done FY 01-02	Done FY 01-02.	GS, DOT, ESD, PRNS, PW, CAE, RDA
PM 5.B.1	Review and update list of contractors.	Annually	Done. Contractor list was updated in FY 04-05.	GS, DOT, ESD, PRNS, PW, CAE, RDA
PM 5.C.	Implement a procedure to provide to each contractor a copy of the City IPM policy developed in Activity 2.A. above	Done FY 02-03	Done FY 02-03. Implementation is ongoing.	GS, DOT, ESD, PRNS, PW, CAE, RDA
PM 5.D.	Identify pest specific SOPs and BMPs, developed in Activity 3.B above, that are appropriate in each contractor's case.	Ongoing	Existing structural pest control and landscape maintenance contractors were provided copies of pest specific SOPs and BMPs.	GS, DOT, ESD, PRNS, PW, CAE, RDA

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
PM 5.D.1	For agreements prior to FY 04-05 contract managers will request and review contractor BMPs and SOPs for conformance with City standards.	Begin FY 04-05 Ongoing	one. Structural pest control contract managers have provided contractors with City SOPs and BMPs and requested that contractors notify the contract manager if they are unable to comply. To date, no contractor has indicated an inability to comply. Contract managers did not request and review contractor BMPs and SOPs as planned due to the resources required to carryout the task. Contract managers intend to continue to request that contractor's self-certify their compliance with the City SOPs and BMPs for agreements established prior to FY 04-05 rather than perform a full review of contractor BMPs and SOPs.	GS, DOT, ESD
PM 5.D.2	Contractors will be supplied with copies of pest specific BMPs and SOPs. If contractors want to use their own BMPs and SOPs, they must submit them in writing to the contract manager. The contract manager must then review and approve the contractor's BMPs and SOPs for conformance with the City's IPM policy, BMPs and SOPs.	Begin FY 04-05 Ongoing	Structural and landscape maintenance contractors were provided with copies of the pest specific BMPs and SOPs. No contractor has indicated an inability to comply with City SOPs and BMPs. Nor has any contractor submitted a request to use their own BMPs and SOPs.	GS, DOT, ESD
PM 5.E.	Require City contracted PCOs to implement appropriate BMPs through contract specifications.	Deleted FY 04-05 See PM 5.F	Deleted FY 04-05.	GS
PM 5.F.	Require through contract specifications that PCOs contracted for municipal applications to: a) follow City IPM policy, BMPs, and SOPs; b) provide evidence of current IPM training, when feasible; and c) provide documentation of pesticide use on City property to the City in a timely manner.	Ongoing	Ongoing. IPM language is included in City PCO contract specifications – however, contract language is not uniform among the contracts. In FY 04-05, all PCO contracts required documentation of pesticide use on City property in a timely manner. To remedy this, in FY 04-05, the Pesticide Management Committee developed standard content for contract/specification language. Pending approval, standard content will be included in landscape and pest control RFQs in FY 05-06.	GS
PM 5.G.	**Monitoring Mechanism III.A.1.** Document numbers of PCOs receiving presentations and/or training on pesticide use by PCOs on municipal property.	Annually	Done. In FY 04-05, the City retained two PCOs for the City's facilities/structural pest control needs. One PCO attended the Regional IPM Conference. The other PCO has management staff within the County IPM Board.	GS, ESD
PM 6	**Pesticide Management Outreach** The City will identify outreach activities it will conduct consistent with Program Pesticide Management Plan. Work plan elements will address outreach to residential and commercial pesticide users, pesticide retailers, and special districts. Information will be provided on less-toxic pest control practices, proper disposal of pesticides, and the City's own IPM practices, as applicable.			
PM 6.A.	Increase awareness of IPM so target audiences recall less toxic pest management messages and adopt IPM	Annually	Done. See 11.D: *PIP Activities* for details.	ESD

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
	behaviors. Target audiences include residential pesticide users, professional pest control businesses, customers of professional pest control businesses, pesticide retailers, school districts, and other special districts.			
PM 6.B.	Prepare IPM stories and press releases to local media.	Annually	This activity is typically done in collaboration with the Program or BASMAA, but was not done in FY 04-05. BASMAA planned to issue an IPM press release but decided to postpone until a significant media worthy issue arises, such as the Diazinon and Toxicity TMDL. BASMAA Media Relations plans to do a press release in FY 05-06.	ESD
PM 6.C.	In conjunction with Program, provide information on less toxic pest control (e.g., IPM techniques, municipal IPM policies, model contract language, training opportunities, etc.) to neighboring special districts (e.g., VTA, sanitary and utility districts, open space districts, vector control districts, and school districts) as appropriate.	Pending Implementation by Program	Done FY 04-05. Implemented at Program level. Program sent information regarding IPM to special districts during FY 04-05.	ESD
PM 6.D.	Create & provide fact sheets & materials to pesticide retailers to facilitate point-of-purchase outreach to support IPM Store Partnership Program.	Ongoing	Done through Program. See 11.D: *PIP Activities* for details.	ESD
PM 6.E	Identify, develop and implement education programs that target commercial businesses.	Ongoing	The following programs included IPM education to target businesses: • An article was published in the Spring 2005 issue of the Tributary Tribune providing tips for selecting a pest control operator. • IPM was included in the April 2005 Industrial Users Academy. • A letter was mailed to 92 selected retailers regarding the stop sell of Diazinon. See 11.D: *PIP Activities* and Program Annual Report for details.	ESD
PM 6.F	**Monitoring Mechanism:** Document or estimate numbers of residents reached by outreach efforts, including events, web promotion, municipal employee outreach, and media advertising. Monitor responses to outreach efforts by documenting calls to the Program's general and watershed campaign hotlines.	Annually	Done. See 11.D: *PIP Activities Table* for evaluation of outreach activities.	ESD
PM 6.G	**Monitoring Mechanism IV.A.1.** Document outreach efforts targeting businesses, recommended in the work	Annually	Done. See 11.D: *PIP Activities* and Program Annual Report for details.	ESD

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
	plan, to be developed by the Program. Implement evaluation component of the work plan.			
PM 7	**HHW Pesticide Disposal** The City will coordinate with household hazardous waste (HHW) collection agencies to support, enhance, and help publicize programs for proper pesticide disposal.			
PM 7.A.	Work with HHW collection agencies to support, enhance, and publicize programs for pesticide disposal.	Annually	This work is done at the Program level. See Program Annual Report for details.	ESD
PM 7.B.	Verify that adequate pesticide disposal services exist for residents and conditionally exempt small quantity commercial generators.	Annually	Done. Adequate pesticide disposal services were available during FY 04-05. No customers were turned away and appointments were scheduled in a timely manner.	ESD
PM 7.C.	Provide hazardous waste disposal information to residents, through distribution of materials (e.g., utility bill insert, city newsletter, community events, etc.) or advertising in local media.	Annually	Done. Hazardous waste disposal information is provided on the City's website along with a link to the Santa Clara County HHW Program's website. The City's Integrated Waste Management (IWM) outreach includes the Santa Clara County HHW Program's hotline.	ESD
PM 7.D.	**Monitoring Mechanism V.A.1.** Document that HHW collection programs adequately serve residents and businesses and that any exchange programs do not exchange organophosphate or banned pesticides.	Annually	Done. The Santa Clara County HHW Program served 3.26% of the City's households in FY 04-05. There was no wait in order to schedule an appointment and no customers were turned away. The HHW Program does not exchange organophosphate or banned pesticides.	ESD
PM 8	**City Pesticide Use Tracking** The City will develop and implement a process for tracking pesticide use on municipally-owned property.			
PM 8.A	Develop and implement a pilot pesticide tracking process for Diazinon and Chlorpyriphos products.	Done FY 01-02	Done FY 01-02. City staff does not purchase, use or write recommendations for the use of Diazinon or Chlorpyriphos. It is also written into contract specifications for structural pest control that these pesticides (and clopyralid) cannot be used on City property.	GS, DOT, ESD
PM 8.B	As part of the PMP, develop and implement a process for tracking pesticide use on municipally owned property. Include reporting and justification for use of OP pesticides and BMPs employed during OP pesticide use.	Done FY 02-03 Ongoing	Done. Neither the City nor its contractors purchased, used, or wrote recommendations for the use of OP pesticides on municipal property. Contracts for structural pest control include requirements for reporting and justification of use of OP pesticides and BMPs employed during OP pesticide use in the contract specifications.	GS, DOT, ESD
PM 8.B.1	Evaluate feasibility of implementing electronic data management system for pesticide use.	12/31/04	Done FY 04-05. A database was developed and implemented to track pesticide use on municipal property by City staff and contractors. The database will help the City more effectively track pesticide usage from one year to the next. In addition, an electronic form was developed	GS, DOT, ESD

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
			to provide a standard format on which City contractors can submit data to the City.	
PM 8.C	**Monitoring Mechanism I.A.1.** Use pesticide tracking process to document pesticide use in annual reports.	Annually	Done. Monthly pesticide use reports submitted by contractors were compiled and reviewed. See 8.B PM Program Evaluation.	GS, DOT, ESD, PRNS, PW, RDA, CAE
PM 9	**City Pesticide Inventory Search** The City will conduct periodic citywide search of its chemical inventory for pesticides no longer legal for application per EPA, State, and/or local requirements. These pesticides, if found, will be properly disposed pursuant to appropriate waste disposal regulations.			
PM 9.A.	All departments conduct citywide search of chemical storage areas for pesticides no longer legal for application per EPA, State, and/or local requirements. Properly dispose of any such pesticides pursuant to appropriate waste disposal regulations.	Annually	GS and DOT conducted search in June 2005. DOT found one container of expired Embark growth regulator. The chemical was disposed as a hazardous material.	GS, DOT
PM 10	**Pesticide Management Plan / IPM Policy Review** As part of annual reporting process, the City will review and evaluate, with input from municipal staff, the effectiveness of its Pest Management Plan and IPM Policy in achieving the goals of the Plan to the maximum extent practicable.			
PM 10.A.	Review and continuously improve goals, actions, and monitoring mechanisms of the work plan considering results of self-evaluations, comments from Regional Board staff and other interested parties, and results of local performance review meetings if any.	Annually	See 8.B PM Program Evaluation.	GS, DOT, ESD
PM 10.B.	**Monitoring Mechanism IX.A.1.** Complete revised work plan that incorporates continuous improvement items, and report on completion of work plan tasks.	Annually	Done (between 05-06 Work Plan and this Annual Report).	ESD
PM 10.C.	**Monitoring Mechanism VII.A.1.** Summarize types of pesticide reduction measures required (such as by conditions of approval) for new development & significant redevelopment projects, & percentage of new development/ significant redevelopment projects for which pesticide reduction measures were required. (Draft Permit Provision C.3.n.)	Annually	See Item No. NDC 4.M in Section 4.A NDC Work Plan Self Evaluation Matrix.	ESD

8.B PM Program Evaluation

Integrated Pest Management

The City continues to pursue opportunities to resolve pest problems with less toxic and non-chemical, integrated pest management techniques. This year staff anticipated a problem with Tussock moth infestation during Spring 2005 due to an extended period of hot weather. Rather than rely upon chemical controls to address the problem, the City secured a vendor specializing in biological controls to manage the pest should infestation occur. In addition, Parks continued its ongoing mulching program to help alleviate the need for pre-emergent herbicide use. San José's residential yard trimmings contracts include the provision of 1,500 tons of finished products in the form of compost, mulch, and woodchips for City use. The mulching program is effective, resulting in reduced need for pesticide, water use, etc. In FY 05-06, the City will begin the process of Green Business Certification for parks and landscape right-of-ways. Green Business certification has a pollution prevention element that includes integrated

pest management. Applicants must demonstrate practices such as appropriate plant selection and placement, landscaping to minimize waste, reduced pesticide and water use, etc.

All median islands constructed in FY 04-05 were constructed according to current City landscape specifications, which call for 4 inches of decorative gravel. This greatly reduces the emergence of weeds and associated maintenance required by Department of Transportation (DOT) Landscape Maintenance. Landscape specifications are currently under revision and will soon include a weed fabric barrier placed between the soil and rock. All roadside landscapes have a 3" layer of wood mulch and will also include a weed barrier in the future. It is anticipated that these changes will suppress weed growth and decrease herbicide use.

DOT Special Districts has actively implemented practices to ensure that the right plants are placed in the right environment as a way to prevent disease from occurring. DOT has discontinued severe pruning and reduced irrigation water usage to reduce incidents of disease and root rot. DOT works closely with its contractors to ensure that non-chemical alternatives have been considered before pesticide use occurs. The City's Special Districts Arborist thoroughly reviews alternatives with contractors to determine whether non-chemical solutions are possible.

The City's Los Lagos Golf Course has been certified as an Audubon International Cooperative Sanctuary since 2002. In order to become a Cooperative Sanctuary, a golf course must be certified in several categories including environmental planning, water conservation, water quality management, and chemical use reduction. In addition, the superintendent for Los Lagos Golf Course received distinguished recognition by the Golf Course Superintendents Association of America/Golf Digest Chapter for Environmental Leaders. Only nine public courses nationwide met the standards for such recognition.

Data Tracking

In FY 04-05, a database was developed and implemented to track pesticide use on municipal property by City staff and contractors. The database will help the City more effectively track pesticide usage from one year to the next. In addition, an electronic form was developed to provide a standard format on which City contractors can submit data to the City. The electronic format will help ensure that contractors know what information to submit and will allow for automatic upload of information into the database. Prior to implementation of the database and development of the reporting form, all data was manually entered and tracked.

While the database and electronic reporting form represent significant progress toward more accurate and efficient data entry and tracking from this year forward, some data challenges remain. All pesticide use data received from City applicators and contractors (Golf Courses, Facilities and Special Districts) during FY 04-05 was entered into the pesticide database. However, due to Special Districts and Facilities contractors not providing complete information, comparative data is not yet available. The City will continue to work with contractors in FY 05-06 to resolve outstanding reporting and data issues.

Pesticide Use

City staff applications of Gallery (isoxaben), a pre-emergent herbicide with a broad spectrum of weed control, increased this past year because it was used by DOT as a substitute for Pendulum (pendimethalin). The substitution was necessary due to problems with escape weeds and resistance of some weeds to pendimethalin. The use of isoxaben reduced the need for DOT staff to go back and retreat areas. The use of diuron also increased in FY 04-05 due to DOT's more focused approach for maintaining effective weed control on undeveloped right-of-ways to alleviate the need to retreat areas or manually remove weeds with limited resources. In general, the use of Roundup (glyphosate) and Pendulum (pendimethalin), the two herbicides most commonly used by City staff, has declined substantially (21% and 49%) despite an increase in acreage to maintain.

Golf course maintenance mangers increased use of several chemicals including PCNB, copper sulfate, and chlorothalonil, and notably decreased use of zinc ion and manganese bisdithiocarbamate. Additional applications of PCNB were needed in FY 04-05 to address an increase in the occurrence of pink snow mold. Golf course maintenance began using copper sulfate crystals and decreased use of a liquid form of copper. While the liquid form of copper is more potent, the heavier copper sulfate crystals break down more slowly and were used in FY 04-05 as a test to determine whether they would provide longer lasting control of lake algae. The crystals were effective for the most part, but were unable to control the algae during a prolonged heat wave, during which one application of the liquid copper sulfate was needed. Copper sulfate is limited to use in golf course lakes. Chlorothalonil was used in greater quantities this year to control an increase in dollar spot fungus. Managers alternate use of zinc ion and manganese bisdithiocarbamate with use of chlorothalonil to control resistance. Some of the mold and fungus problems experienced this year are due to the very wet weather experienced this year.

Contracts

Standard contract language was drafted in FY 04-05 in an effort to ensure that all contracts issued for structural pest control services and landscape management include consistent requirements related to reporting and compliance with the City IPM Policy, SOPs, and BMPs. The draft language is currently undergoing department and attorney review and, if approved, will be incorporated into all new contracts for pest control services and landscape maintenance.

The City requested that landscape contractors submit monthly pesticide use reports for City applications, but has faced challenges receiving the information from some contractors since the requirement is not specified in their long-standing current contracts. The intent is to remedy the problem by including the appropriate specifications in the RFQ and/or contract. Full implementation may take several years as many landscape maintenance agreements and structural pest control contracts are issued with the option to renew for multiple years. Until then, the City will continue to work cooperatively with contractors to obtain the information needed.

In accordance with the City's URMP, all pest control and landscape maintenance contractors were provided with copies of the City IPM Policy, SOPs, and BMPs. However, the City did not request and review contractor BMPs and SOPs for agreements executed prior to FY 04-05 due to the resources required to carryout the task. Instead, contractors were asked to review the City SOPs and BMPs and to confirm compliance. Contract managers intend to continue to request that contractor's self-certify their compliance with the City SOPs and BMPs for agreements prior to FY 04-05, rather than perform a full review of contractor BMPs and SOPs.

Training

The City held its annual training for staff responsible for applying pesticides in January 2005.

Participants were given an evaluation form to fill out. Of the 134 staff that participated in the training, 72 evaluations were completed and returned. Results of the completed evaluations indicate that:

- 93% thought that the training subjects taught are appropriate to their work
- 82% thought the training adequately described the City's IPM policy
- 83% thought that the BMPs/SOPs described match their work practices
- 80% thought that the training adequately described the relationship of BMPs/SOPs to compliance with the City's Stormwater NPDES permit
- 83% thought that the training adequately explained how they, City staff, can help the City maintain compliance with the Stormwater NPDES permit

This information will be used to improve the training for next year. In FY 05-06, contractors will be invited to participate in the training workshop.

8.C PM Response to Water Board Comments

No comments received from Water Board on this Program Element.

8.D PM Summary Tables / Additional Information

Active Ingredient Use Comparison: FY 03-04 & FY 04-05

9. M: Mercury

9.A M Work Plan Self Evaluation Matrix

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
M 1	**Municipal Use of Mercury –Containing Products** The City will eliminate all unnecessary municipal use of mercury-containing products and establish proper disposal methods for products that cannot be eliminated.			
M 1.A.	Complete and report results of survey of mercury-containing products used by City departments.	Done FY 02/03	Done FY 02-03.	ESD
M1.A.1	Conduct a follow-up mercury-containing product survey	Done FY 03-04	Done FY 03-04	ESD
M 1.B.	Develop a mercury policy requiring the virtual elimination of mercury from controllable sources in urban runoff from agency operations.	Done FY 02-03	Done FY 02-03. Pollution Prevention Policy adopted June 24, 2003.	ESD, GS, DOT
M 1.C.	Implement SCVURPPP guidelines for mercury-containing products reduction and management. These guidelines will include a schedule for the timely phase-out of mercury-containing products identified for virtual elimination as well as reporting requirements, possibly to track recycling, replacement, and reduction in use of mercury-containing products.	Ongoing	Done FY 04-05 and Ongoing. Updated current management options for mercury-containing lamps used by the City. See 9.D: *Mercury-Containing Product Management Practices* for a list of management options. The City purchases, almost exclusively, low mercury fluorescent lamps. The City recycled more than 37,970 feet of mercury-containing lamps in FY 04-05 through its Lamp Recycling Program. On August 18, 2004 a memo with information on the collection and recycling requirements for fluorescent lamps was distributed to all General Services employees and contractors who change fluorescent bulbs, as well as to departments that change their own bulbs. The same memo was given to the Corporation Yard Masters who handle hazardous waste issues on June 24, 2005.	ESD, GS
M 1.D.	Monitoring Mechanism I. Document completion of tasks in annual reports. Use mercury-containing product reporting guidelines (to be developed).	Annually	Done. See 9.D*: Mercury Containing Product Management Practices* for a summary of management options identified and/or implemented to date.	ESD
M 2	**Household Hazardous Waste Collection** The City will provide mercury-containing product disposal services through household hazardous waste (HHW) collection programs for residents and small businesses, and encourage use of these programs.			
M 2.A.	Provide mercury-containing products disposal services for residents and small businesses.	Ongoing	Ongoing. The City supports the County of Santa Clara Department of Environmental Health's (DEH) Household and Small Business Hazardous Waste program. County DEH hosts weekly household and small business hazardous waste collection events. This service is provided to residents and small businesses in the county	ESD-IWM

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
			to collect and properly dispose of hazardous wastes, including mercury-containing products. If FY 04-05, The County HHW Program collected 25,000 pounds of household batteries and 155 pounds of elemental mercury (from thermostats, thermometers and other products). See County Annual Report for details.	
M 2.B.	Work with HHW collection agencies to develop and help publicize fluorescent light recycling program to ensure maximum recycling.	Ongoing	Done and Ongoing. The City supports the County of Santa Clara Department of Environmental Health's (DEH) Household and Small Business Hazardous Waste Program. As of June 2005 the County has collected 166,000 feet (41,597 pounds) of lights (or 4' lamps). The City and the Program also worked with the County to assist with the implementation of its Universal Waste Grant. The Program developed and implemented the "Got Bulbs?" media campaign designed to encourage residents to take their spent fluorescent lamps to any of 13 drop-off locations funded by the Universal Waste grant. In FY 04-05 a total of 17,591 feet of fluorescent lamps were collected at the five drop-off locations in San José.	ESD, Program
M 3	**Monitoring and Science** The City will participate in coordinated monitoring efforts to support mercury TMDL development and implementation, including assessment of air pollution sources of mercury and concentrations of mercury in sediment.			
M 3.A	Continue financial support of the Regional Monitoring Program (RMP), including the Mercury Deposition Network Pilot Study. Continue to actively participate in the RMP steering committee and technical review committee.	Ongoing	Ongoing. The City continues to support the RMP financially and through in-kind services operating the Mercury Deposition Network Pilot Study station number CA76. (see M 3.B)	ESD
M 3.B	The City of San José will continue to provide in-kind services for the maintenance of the Mercury Deposition Network site near San José.	Ongoing 12/31/2005	Done and Ongoing. The City has operated and maintained the National Mercury Deposition Network site #CA72 since January 2000. The City collects samples, records data, and sends both to the national MDN contract laboratory for analysis. The City also sends records to SFEI for inclusion in SF Bay RMP analyses. Weekly sample collection and data reporting is scheduled to continue at this time. Information on the National MDN program (including pictures of collection apparatus) is found at: http://nadp.sws.uiuc.edu/mdn/. The City is evaluating whether to continue this activity past 12/05.	ESD
M 4	**Regional, State, and Federal Coordination** Actively participate in regional, state, and federal coordination efforts to achieve a reduction in the amount of mercury in urban runoff and air emissions.			
M 4.A.	Collaborate in technical studies to support TMDL development and implementation including the Santa Clara Basin WMI Guadalupe River Mercury TMDL	Ongoing	Ongoing. The City participates in and supports programs to reduce mercury in stormwater runoff and air emissions, including the San Francisco Bay Regional Monitoring	ESD

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
	Workgroup.		Program, National Mercury Deposition Network, AB 982 TMDL Public Advisory Group, WMI Guadalupe River Mercury TMDL Workgroup, and the Clean Estuary Partnership.	
M 4.B.	Support and participate in WMI Watershed Action Plan development.	Ongoing	Ongoing. The Watershed Management Initiative (WMI) continues to work on implementing the Watershed Action Plan, through the actions of its subgroups and cooperative efforts with other collaborative groups, such as the Water Resources Protection Collaborative. In February 2005, the San José City Council and the Santa Clara Valley Water District Board of Directors adopted the recommendations of the Upper Penitencia Creek/King Road Bridge Stakeholder Group (a WMI short-term workgroup led by City staff). In May 2005, the WMI published its programmatic report card, which evaluated the WMI's progress on implementing the various components of the Action Plan, and established a suite of watershed health indicators. The City remains active in the WMI Core Group, most of the subgroups, and is contributing in-kind staff time for the WMI project coordinator position.	ESD
M 5	**Public Education and Outreach** Increase awareness of proper disposal of mercury-containing products and available non-mercury containing alternatives. Target audiences include residential, commercial, and industrial users and municipal employees.			
M 5.A.	Work with Program to develop and begin to implement a fluorescent light recycling outreach program to educate residential users and encourage proper disposal of fluorescent lights.	Done FY 03-04 & Ongoing	Done FY 03-04, with some work continued into FY 04-05. Program posted mercury-related information for residents on the watershedwatch.net website. During the "Got Bulbs?" Campaign, a total of 636 visits generating 752 views were recorded on the Watershed Watch Mercury Education page. Mercury and/or Household Hazardous Waste messages were also included at the Home Show event. See Section 11.D: *PIP Activities.*	ESD
M 5.B.	Work with Program to develop and begin to implement a fluorescent light recycling outreach program to educate small businesses and conditionally exempt small quantity generators and encourage proper disposal of fluorescent lights.	Done FY 03-04 & Ongoing	Done in FY 03-04. In FY 04-05 City staff attended meetings of the Regional Universal Waste workgroup. This informal group of Stormwater, Solid and Hazardous Waste agencies discussed strategies for handling universal waste collection, funding, outreach and education. When the Universal Waste rules take effect in February 2006, implementation will commence.	ESD
M 5.C.	Coordinate with municipal inspectors to integrate mercury outreach to industrial businesses into their existing routine pretreatment, source control, and/or hazardous materials inspection processes.	Ongoing	Done FY 04-05 and Ongoing. Information on the proper handling and disposal of mercury-containing products was presented to industrial businesses attending the Industrial Users Academy. (See 11.D: *PIP Activities*) Copies of the	ESD

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
			Department of Toxic Substances Control brochure, *Mercury in the Environment*, are available for distribution by inspectors, as needed. The City has postponed printing the DTSC fact sheet on Universal Waste until after the February 2006 deadline for Residential Compliance with Universal Waste rules, and pending updated information from the DTSC. The City published an article in the Spring 2005 Tributary Tribune with information on fluorescent lamp recycling requirements. See 11.D: *PIP Activities.*	
M 5.D.	Develop and distribute "tailgate safety meeting cards" about mercury to inspectors and other municipal employees. (The Program will first review the product developed by the Fairfield-Suisun Sewer District when it is made available to the Bay Area Pollution Prevention Group (BAPPG).)	TBD	Tailgate Safety Meeting Cards did not meet City needs. Instead, the City distributed a memo to City Departments with information about mercury lamp disposal. A newsletter article was submitted & published in the ESD department newsletter about the hazards of improper mercury disposal and how to properly dispose of mercury-containing products.	ESD
M 5.E.	Attend community events and distribute outreach materials.	Ongoing	Done FY 04-05 and Ongoing. Messages regarding proper disposal of fluorescent tubes is included whenever the Household Hazardous Waste program is promoted, e.g. the Home Show. See 11.D: *PIP Activities* for details.	ESD
M 5.F.	**Monitoring Mechanism V.B.** In the Annual Report, document and evaluate each outreach activity, including the target audience and number of residents and/or businesses reached.	Annually	See Program report and 11.D: *PIP Activities* for evaluation of outreach activities.	ESD, Program

9.B M Program Evaluation

Mercury-containing lamps continue to be the focus of City efforts to reduce the impact of mercury from City operations. The City purchases, almost exclusively, and encourages the use of low mercury fluorescent lamps. The City recycled more than 37,970 feet mercury-containing lamps and over 205,000 pounds of electronic waste in FY 04-05 through its recycling programs. The City took the Program-developed "Got Bulbs?" poster and modified it for internal use to reinforce the City's SOP of recycling all fluorescent lamps. Distribution to all City Departments and sections that change fluorescent lamps will occur in the beginning of FY 05-06. Questions regarding mercury content and alternative products are part of the City's Request for Quotation Forms. The Universal Waste Rule for residential mercury disposal requirements starts in February 2006, and the City will continue to work with solid and hazardous waste collection agencies to address the requirements laid out in the Rule.

The City continues its commitment to work with the Water Board and stakeholders toward a TMDL that is technically defensible and feasible for implementation. City staff participates in mercury TMDL efforts by providing comments on the Baywide Mercury TMDL Report and Basin Plan Amendment, and serves as the WMI Watershed Assessment and Monitoring Subgroup representative to the Guadalupe Mercury TMDL project. The City expects to actively participate in the development of both TMDLs in the next fiscal year. In addition, the City supports SCVURPPP, the CEP, RMP, BASMAA and BACWA as these agencies conduct technical studies to address uncertainties regarding mercury in the watershed.

9.C M Response to Water Board Comments

No comments received from Water Board on this Program Element.

9.D M Summary Tables / Additional Information

Mercury-Containing Product Management Practices

Mercury-Containing Products	Not Found	MO #1: Replace with Alternative	MO #2: Alternative upon Failure	MO #3: Reduce Use	MO #4: Recycle	MO #5: Hazardous Waste	Comments
LAMPS:							
Compact Source Lamp					I		Recycled through City's Lamp Recycling Program
Spectral Lamp	NF						
Fluorescent Lamp (Tubes)			I		I		Replacing existing tubes with low Hg tubes (ALTOs) upon failure. City operations under review to ensure that all ALTOs are also recycled through City's Lamp Recycling Program.
Metal halide Lamp					I		Recycled through City's Lamp Recycling Program
High pressure sodium Lamp					I		Recycled through City's Lamp Recycling Program
Mercury Vapor Lamps					I		Recycled through City's Lamp Recycling Program
Cold Cathode Lamp	NF						
Neon Lamp	NF						
THERMOSTAT PROBES (ALSO KNOWN AS FLAME SENSORS OR GAS SAFETY VALVES):							Have limited information from Municipal Surveys. Will continue data collection in 04-05.
Furnaces							
Water heaters							
Ranges, ovens							
Space heaters							
TILT SWITCHES AND RELAYS:							Have limited information from Municipal Surveys. Will continue data collection in 04-05.
e.g., Wetted reed relay							
WPCP LAB MATERIALS							
Thermometers	NF						Lab uses alcohol-based thermometers and other traditionally mercury-containing apparatus
Mercury-containing Samples						I	Spent samples treated as Hazardous Waste and picked up by hauler every 2-3 months

Status Key:
No Action: No action identified for implementation
ID: Actions have been identified; implementation has not begun
B: Began process of implementation
I: Management option identified has been fully implemented
NF: product was not found in municipal inventory to date

Management Options Key:
MO #1: Replace with an alternative product when the product is identified, if an alternative exists.
MO #2: Replace upon failure, with an alternative product if an alternative exists.
MO #3: Reduce the use where possible
MO #4: Recycle when no longer in use
MO #5: When appropriate, dispose of as hazardous waste

10. WUOM: Water Utilities Operations & Maintenance

10.A WUOM Work Plan Self Evaluation Matrix

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
WUOM 1	**Inventory of O&M Activities** The City of San José's Municipal Water System will conduct an inventory of all-key operations and maintenance activities, and identify routine and unplanned non-stormwater discharges from these activities. This inventory will be conducted every three years and evaluated at least once a year.			
WUOM 1.A.	Review current procedures for operations and maintenance	Annually	Done FY 04-05. The current procedures have been reviewed and no change is recommended at this time.	ESD-Muni
WUOM 1.B.	Three-year update of list	3/06 Every 3 years Next Due 3/06	Completed 3/03. Next inventory not due until 3/06.	ESD-Muni
WUOM 2	**Implementation of WUPPP** The City of San José's Municipal Water System will implement the pollution control measures identified in the Water Utility Pollution Prevention Plan (WUPPP) to manage chlorine, biocides, and algaecides and prevent erosion and sedimentation.			
WUOM 2.A.	Implement WUPPP/Report on activities	Annually	Done FY 04-05. WUPPP was implemented in 2000. Muni Water staff and their contractors comply with the BMPs and SOPs included in the WUPPP.	ESD-Muni
WUOM 3	**Staff Training and Contractor WUPPP Compliance** The City of San José's Municipal Water System will conduct annual training for municipal staff and coordinate WUPPP elements with water utility project planning, including WUPPP elements (BMPs, conditions, specifications, etc., in contract and services agreements).			
WUOM 3.A.	Develop training program	Done 11/98	Done FY 98-99.	ESD-Muni
WUOM 3.B.	Implement training program	Annually	Done FY 04-05. See 12.D: *Municipal Employee Training Summary.*	ESD-Muni
WUOM 4	**WUPPP Effectiveness Evaluation** The City of San José's Municipal Water System will evaluate the effectiveness of the WUPPP annually. Maintain accurate documentation and revise the WUPPP as necessary.			
WUOM 4.A.	Develop evaluation program	Annually	Done FY 04-05. Muni Water has developed an evaluation program, which includes evaluating one of the SOPs annually. See 10.B WUOM Program Evaluation	ESD-Muni
WUOM 4.B.	Provide progress and update report to Santa Clara Valley Urban Runoff Pollution Prevention Program	Annually	Done FY 04-05.	ESD-Muni

10.B WUOM Program Evaluation

The evaluation program that Muni Water has developed consists of reviewing one SOP or BMP from start to finish on an annual basis. This effort is combined with the training program. As part of the training program, Muni Water staff creates a training video of a single SOP. Staff and others involved in the process view the video for training. The paperwork process is discussed and then the forum is opened up for discussion. Individuals who perform the activity share their thoughts on what works and what does not work. The facilitator (typically, a designated supervisor) writes down the comments and suggestions. If possible, the procedure is revised to incorporate the results of the discussion.

In December 2004, Muni Water conducted an evaluation of the tank cleaning program. A training video was made according to the SOP outlined in the "Water Utility Operation and Maintenance Discharge Pollution Prevention Plan." Staff and a responsible representative of Muni Water's contractor attended the training session and viewed the video. After viewing the video, staff discussed the pros and cons of the procedure. Staff found the procedures to be satisfactory and effective for meeting the goals of the URMP. No changes were recommended at this time.

Contractor performance for Muni Water is monitored by staff inspection. If the contractor fails to follow the BMP, the Muni Water inspector on the job will notify the contractor. In addition, Muni Water may receive complaints from other parties; however, this is not typical since the inspector usually resolves the issue right away.

10.C WUOM Response to Water Board Comments

No comments received from Water Board on this Program Element.

10.D WUOM Summary Tables / Additional Information

No additional information (Updated inventory of O&M activities not due until 2006).

11. PIP: Public Information / Public Participation

11.A PIP Work Plan Self Evaluation Matrix

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
PIP 1	**Public Awareness** The City of San José will promote general citizen awareness regarding the functions of the storm drain system, pathways and sources of urban runoff pollution to the South Bay watershed, behaviors that adversely affect water quality, what a watershed is, and activities citizens can participate in to learn about and benefit the watershed.			
PIP 1.A	Identify, support and participate in appropriate community events to further general public awareness.	n/a	Done. See 11.D: *PIP Activities.*	ESD
PIP 1.A 1	Work with Program events work group, and WE&O ad hoc Task Group.	Ongoing	Ongoing. City staff participated in both AHTGs. San José staff served as Chair of WE&O AHTG in FY 04-05. City staff participated in events by providing staffing and material support where appropriate.	ESD, Program
PIP 1.B	Support, and/or develop and implement school and youth education programs. Projects include:			
PIP 1.B.1	Participate in WE&O Schools work group.	Ongoing	Ongoing. Participated in developing schools work plan and activities for Urban Runoff Program and Watershed Watch campaign. City Staff participated in both WE&O Ad Hoc Task Group and Schools and Youth Work group meetings, and serve as Chair of both groups. Direct implementation takes place through the Urban Runoff Program staff and the Watershed Watch Contractor. Through the City's Youth Watershed Education Team (YWET) staff collaborated to update and promote City's middle school curriculum.	ESD, Program
PIP 1.B.2	Participate in the Alviso Education Center work group.	Ongoing	Ongoing. City staff participated in work group meetings. Program Staff administered the SCVURPPP Ed Center Grant. See Program Annual Report for details.	ESD, Program
PIP 1.B.3	Participate in City Education programs such as the Youth Watershed Education Team, Rangers in Schools, etc.	Ongoing	Ongoing. See 11.D: *PIP Activities.*	ESD, PRNS
PIP 1.C	Give presentations upon request that focus on stormwater messages to elementary through college grade levels, neighborhood groups, etc.	As Needed	Ongoing. See 11.D: *PIP Activities.*	ESD
PIP 1.D	Participate in WMI Outreach, and coordinate WMI outreach with Watershed Watch and Program efforts.	Ongoing	Ongoing. City staff supported coordination of WMI and Program messages in the Watershed Watch campaign through WE&O AHTG and attended WMI COS workgroup meetings to keep WMI staff informed of activities.	ESD, WMI, Program

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
PIP 1.D 1	Participate in Watershed Watch campaign.	Ongoing	Ongoing. City staff assists with planning and implementation through WE&O AHTG. See Program Annual Report for complete campaign annual report.	ESD, Program
PIP 2	**Targeted Outreach** The City of San José will develop and implement targeted residential outreach and education campaigns, based on identification of up to two high priority pollutants, to effectively reduce pollutant-causing behaviors and promote Best Management Practices.			
PIP 2.A	Identify general residential practices contributing to stormwater pollution. Identify reasonable alternatives to pollutant causing behavior.	n/a	Done. Addressing messages through the Watershed Watch Campaign.	ESD, Program
PIP 2.A 1	Review surveys and applicable reports.	Ongoing	Ongoing. Target audiences have been based on Program survey and are documented in the Watershed Watch strategy. San José tailors its outreach to compliment Program and regional outreach efforts, which include periodic surveys to evaluate products and outcomes.	ESD
PIP 2.A 2	Review 945-3000 hotline calls information.	Ongoing	Ongoing. How complainants hear about ICID services is tracked. See *1.D: Complainant Source Summary*.	ESD
PIP 2.A 3	Meet with inspectors to discuss and document residential outreach needs.	Ongoing	Ongoing. Outreach staff attend monthly Inspectors' meeting. Outreach needs are identified and incorporated into work plans as needed.	ESD
PIP 2.A 4	Prepare report identifying residential outreach needs and tasks.	Annually	Done. Outreach staff submits a report to Watershed Protection Management on projected outreach needs and recommendations.	ESD
PIP 2.B	Identify ICID practices and target audience(s) contributing to pollution.	n/a	Done. ICID Feedback cards are regularly distributed to complainants. How complainants hear about ICID services is also tracked. See *1.D: Complainant Source Summary*.	ESD
PIP 2.B 1	Review ICID reports.	Ongoing	Ongoing. 169 feedback cards were distributed to complainants. 91 were returned, of which 67 had viable data. 70% felt their complaint had been resolved, 67% felt their complaint had been resolved in a timely manner, and 61% felt their complaint had been resolved to their satisfaction. 70% rated the City's service as excellent or good, and 30% rated it as fair or needs improvement. How complainants heard about ICID services is also tracked. See 1.D: *Complainant Source Summary* for details.	ESD
PIP 2.B 2	Review 945-3000 hotline calls information.	Ongoing	Ongoing. How complainants hear about ICID services tracked. See 1.D: *Complainant Source Summary*.	ESD
PIP 2.B 3	Meet with ICID inspectors to discuss and document outreach needs.	Ongoing	Ongoing. Outreach staff attend monthly Inspectors' meeting. Outreach needs are identified and incorporated into work plans as needed.	ESD

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
PIP 2.B 4	Prepare report identifying ICID outreach needs and tasks.	Annually	Done FY 04-05. Outreach staff submits a report on projected outreach needs and recommendations.	ESD – Marcom
PIP 2.C	Promote selected residential and ICID messages through regional activity (e.g. Program PIP, BASMAA PIP, BAPPG Spanish radio ad messages, Media Relations PSAs)			
PIP 2.C 1	Report on targeted residential and ICID outreach activity.	Annually	Done FY 04-05. See 11.D: *PIP Activities.*	ESD – Marcom
PIP 2.C 2	Participate in the Program's HHW ad hoc task group.	Ongoing	Ongoing. Staff participated in AHTG and collaborated with regional HHW efforts that are focusing on Universal Waste requirements. See Program Annual Report.	ESD, Program
PIP 3	**Citizen Involvement Programs** The City of San José will support and/or develop and implement citizen involvement programs designed to increase citizen understanding and appreciation of the South Bay watershed.			
PIP 3.A	Support and/or develop involvement opportunities for San José residents			
PIP 3.Aa	Participate in creek cleanups on a bi-annual basis through in-kind staff support for the Creek Connections Action Group.	n/a	Done FY 04-05. Coordinated with Parks, Recreation, and Neighborhood Services.	ESD, PRNS
PIP 3.A1	Fall creek cleanup.	Coastal Cleanup Day Q1 FY 04/05	Done FY 04-05. See 11.D: *PIP Activities.*	ESD, PRNS
PIP 3.A2	Spring creek Cleanup.	National Rivers Day Q4 FY 04/05	Done FY 04-05. See 11.D: *PIP Activities.*	ESD, PRNS
PIP 3.B	Promote WMI's Public Participation Opportunities list.			
PIP 3.B 1	Report on actions promoting Public Participation Opportunities list.	Annually	Done FY 04-05. Public Participation Opportunities List is posted on the City's web site and is available for distribution at events. See 11.D: *PIP Activities.*	ESD
PIP 4	**Outreach Evaluation** The City of San José will develop and implement evaluation and feedback mechanism(s) to determine the effectiveness of outreach and education campaigns and evaluate changes in citizen awareness and understanding.			
PIP 4.A	Implement selected evaluation tools.	n/a	See 11.B PIP Program Evaluation.	ESD
PIP 4.A.1	Work with Program, WMI, and Watershed Watch AHTG to Plan for Program's Watershed watch campaign follow –up survey.	Triennially FY 06/07	Not scheduled for FY 04-05.	ESD, Program
PIP 4.A.2	Report on survey and evaluation activity during the report period	Annually	In FY 04-05, the City conducted a set of two focus groups in order to elicit feedback regarding the City's environmental programs. See 11.B PIP Program Evaluation for details.	ESD
PIP 4.B	Annually review, modify and report on outreach plans based on effectiveness results.	n/a	Done FY 04-05. Work plans are evaluated and modified as needed based on evaluation results.	ESD
PIP 4.B 1	Produce written report on effectiveness of outreach activities conducted in prior fiscal year.	Annually	Done FY 04-05. See 11.D: *PIP Activities.*	ESD

11.B PIP Program Evaluation

San José conducts the bulk of its general outreach through the Program's Watershed Watch Campaign, the BASMAAA Regional Ad Campaign workgroup, and the Regional Media Relations workgroup. The City supplements the Program's efforts with funding and staffing support. See Program Annual Report for details. The City continues to reach out to the general public at selected community events that the Watershed Watch Campaign does not attend. These events are good venues to reach San José citizens.

FY 04-05 marked the third year the City contracted with the San José Conservation Corps to stencil storm drain inlets with the No Dumping message and a phone number to report incidents. Storm drain stencils are placed in locations that are highly visible to residents. Including the neighborhood creek name gives residents specific information about how their actions tie in to the local environment.

FY 04-05's targeted efforts focused on pesticides and IPM; fats, oils, and grease (FOG); and construction-related pollution. Additional targets included sediment, copper, nickel, mercury, and general pollution prevention. For pesticides, San José has been able to direct successfully a variety of messages to a wide array of audiences through in-store events, training workshops, and direct mailing at the local level, as well as collaborative efforts at the regional level. Targeted outreach has been the most difficult to implement at the Program-wide level, primarily because of prioritization and staffing constraints. The Program's targeted outreach focus has been, appropriately, readying the co-permittees' staff for implementation of C.3. For FOGs, San José developed a new restaurant package with messages in three languages, and began distribution of the package in 04-05. Targeted outreach supplements tasks done in other elements of the URMP, such as Illicit Connection/Illegal Dumping, the Industrial/Commercial Dischargers, Construction Inspection, Pesticide Management, Mercury, and the Copper and Nickel Action Plans.

The City participated in three cleanup events, as well as a Bike to Work Day, designed to promote participation and stewardship in the citizens of San José. Tying cleanup days to pre-existing events such as Coastal Cleanup Day and the Great American Pick-up is a good way to maximize promotion. Advertising paid for by regional entities is a useful for raising awareness locally. The City's Urban Runoff Program continued working with the Anti-Litter Program on FY 04-05 to tie watershed objectives in with existing successful effort.

Education continues to be a vital component of San José's pollution prevention plan. The City actively contributes to education both as a City and through the Program. San José commits significant resources to youth education with the goal of instilling a sense of stewardship for the environment. San José employs both in-class education and train-the-trainer approaches to outreach. In-class presentations are more expensive per student reached, but lend themselves better to evaluation. The City's Water Awareness Program reached 293 students in the targeted grades of fifth, sixth, and seventh. This is down 472 from FY 04-05. The City will evaluate this decline, and make changes to the program in FY 04-05 accordingly. Train-the-trainer methods have the potential to reach many more students, but it is extremely difficult to measure the effectiveness of this potential. Youth Watershed Education Grants provide funding for groups and educators to implement their own programs, which in turn accomplish the City's education goals.

In FY 04-05, the City conducted a set of two focus groups, one of restaurateurs and the other of office property managers, in order to elicit feedback regarding the City's environmental programs. The goal of this effort was to improve ESD's contribution to business retention and attraction by better serving businesses in the context of the City's regulatory mission. Five restaurateurs and nine property managers participated in the focus groups. Some highlights from the focus groups:

- Participants noted that grease interceptors required in newer facilities were significantly larger and more costly to operate than those in older facilities.
- Participants expressed concern regarding new stormwater retention regulations for new development. Although most of participants did not directly deal with new development, they had perception that new regulations were targeting new development and would only deal with small increment of runoff problem overall, so they questioned the efficacy of this approach.

The City will use the data collected in these focus groups, and other sources of evaluation information, to help guide future strategies and work plans.

11.C PIP Response to Water Board Comments

No comments received from Water Board on this Program Element.

11.D PIP Summary Tables / Additional Information

PIP Activities

Outreach Type:

❍ = General Outreach ◎ = Targeted Outreach ✋ = Citizen Involvement ✎ = Education

04-05 Work Plan ID#	URMP Reference	Activity	Outreach Type	FY 04-05 Status	Evaluation
1	n/a	Storm Drain Stenciling	❍	The San José Conservation Corps stenciled approximately 4,000 storm drain inlets throughout the City with "No Dumping Flows to Neighborhood Creek" and the 945-3000 hotline number.	This was the third year field crews have stenciled inlets under a contract agreement with the City. The Corps has now stenciled approximately 24,000 inlets over the past three years. Storm drain stencils are placed in locations that are highly visible to residents. Including the neighborhood creek name gives residents specific information about how their actions tie in to the local environment.
3	PIP 1.A. PIP 2.C. CB-1.C.	Classic Car Wash Promotion	❍	The Watershed Watch campaign partnered with Classic Car Wash to host four (4) half-price events in September and October 2004. San José staff assisted with the event. Less polluting methods of car washing were emphasized. Discount car washes were available through December 2004 with the Watershed Watch card.	See Program Annual Report for details.
4	PIP 1.A. PIP 2.C. CB-1.C.	Quality Tune-Up Promotion	❍	The Watershed Watch campaign partnered with Quality Tune-up and Smog Centers to offer discounted oil change services.	See Program Annual Report for details.
4	PIP 1.A.	Harvest Festival at Prusch Park Farm	❍	October 2, 2004. Watershed Watch booth with games and Pollution Prevention information.	See Program Annual Report for details.
4	PIP 1.A.	Pumpkins in the Park at Discovery Meadow	❍	October 9, 2004. Watershed Watch booth with games and Pollution Prevention information. San José prepared and displayed a Scarecrow with Anti-Litter messages. The Scarecrow won First Prize in the	Approximately 10,000 people attended. See Program Annual Report for more details.
4	PIP 1.A.	YSI Wildlife Festival	❍	October 17, 2004. Watershed Watch booth with games and Pollution Prevention information.	See Program Annual Report for details.
5	PIP 1.A. PIP 2.C.	Water Awareness web page	❍	This ESD web page highlights several water issues, including Pollution Prevention, Storm Drain vs. Sanitary Sewer, IPM, Household	The Water Awareness web page is updated quarterly with seasonally pertinent information about a variety of water-related issues. A total of 473 visits and 506 views were

04-05 Work Plan ID#	URMP Reference	Activity	Outreach Type	FY 04-05 Status	Evaluation
	PM 6.A. PM 6.F. M 2.B.			Hazardous Waste, Automotive Fluids, Anti-Litter Program, etc. Links to watershedwatch.net and the County's Household Hazardous Waste program are also included.	recorded on the City's Water Awareness web page.
5	N/A	Website Revisions	❍	After reviewing the current Watershed Protection website, ESD Staff decided a major overhaul of the entire website was needed, above and beyond the revisions called for in this work plan. ESD Staff have identified goals and objectives for the website, and are building the website around them. The overhaul will be completed in FY 05-06.	Ongoing. The City will track site views once major changes are uploaded. The City is also considering holding site functionality focus groups to solicit feedback.
N/A	PIP 1.A. PIP 1.B.3 PIP 1.D.1	Watershed Watch sign at Happy Hollow Park and Zoo	❍	A pollution prevention interpretive sign, installed in FY 03-04, features a photo montage of beneficial uses of creeks and the Bay, along with four pollution-prevention messages: keep your car tuned to avoid oil leaks, avoid pesticide use, especially before rains, proper disposal of household hazardous wastes, and no dumping into storm drains.	In FY 04-05, approximately 317,000 visitors attended Happy Hollow Park and Zoo. The sign is located at the bottom of the entrance walkway into the Zoo. Every visitor to the zoo passes by the sign entering and leaving.
N/A	PIP 1.A. PM 6.A.	Community Festival – Council District 1	❍	September 11, 2004. San José hosted booth. Messages included IPM and solid/hazardous waste disposal.	The "Wheel of Fortune" game, featuring a spinning wheel and a quiz question about pollution prevention, attracted many families with small children. Approximately 150 attendees visited the tent and were especially interested in literature on ants and mosquitos.
N/A	PIP 1.A. PM 6.A.	Community Festival – Council District 2	❍	September 18, 2004. San José hosted booth. Messages included IPM, urban runoff, and solid/hazardous waste disposal.	Approximately 100 adults and children visited the tent and took away copies of "Grow It", "Bay Begins", "Ants", and "Mosquitoes". There is a large interest in mosquito control this year due to West Nile Virus.
N/A	PIP 1.A. PM 6.A.	Community Festival – Council District 5	❍	September 25, 2004. San José hosted booth. Messages included IPM, solid/hazardous waste disposal.	This event has a large Spanish-speaking attendance. This year there was interest in "Grow Its", "Ants", and "Mosquitoes". Approximately 100 people visited the tent.
N/A	PIP 1.A. PM 6.A.	Community Festival – Council District 7	❍	October 2, 2004. San José hosted booth. Messages included IPM, solid/hazardous waste disposal.	This event has a large Vietnamese-speaking attendance. The "Wheel of Fortune" game attracted many families. Again, with the West Nile Virus, there was a large interest in "Mosquitoes". "Ants" and "Grow Its" also went over well.

04-05 Work Plan ID#	URMP Reference	Activity	Outreach Type	FY 04-05 Status	Evaluation
Overall Assessment of General Outreach Activities			❍	San José conducts the bulk of general outreach through the Program's Watershed Watch Campaign. The City supplements the Program's efforts with funding and staffing support. See Program Annual Report for details. The City also routinely hosts a number of community events and includes pollution prevention information in them. The City continues to reach out to the general public at selected community events the Watershed Watch Campaign does not attend. The City is currently reviewing the list of events it considers attending, and plans on evaluating the overall benefit and effectiveness of attending events in FY 05-06.	
2	PIP 2.C. M 5.F.	Regional Media Relations	◎: Media	Three pitches were pursued in FY 04-05: mercury TMDL, household hazardous waste, and pesticides. Media Relations began the process of working with meteorologists to incorporate water pollution prevention messages into their broadcasts. Placements include media outlets that serve San José residents, including the San José Mercury News, the Associated Press, KRON-TV, KTVU-TV, KGO-TV, and other local-serving print, web and radio outlets.	Regional partnership and coordination of media relations allows cities to pool their messages and resources into one consistent effort. Overall, 36 articles and broadcast stories were covered by the media in FY 04-05, including 9 print articles, 7 television, 7 radio stories, and 10 web stories and 3 wire stories. These results were achieved despite the fact that two planned pitches were not pursued because of the lack of a project manager; a third pitch on new development was not pursued after the project manager determined that there were no new regulations in place to warrant a story; and, a final pitch on the BASMAA advertising campaign on trash was not pursued because post-campaign survey results did not provide a strong enough hook to warrant a media pitch. See Regional Media Relations Campaign Final Report in the Program's Annual Report for full details.
7	IND 6.A.	Print "Preventing Storm Drain Pollution" BMP in two languages	◎: Industrial	In FY 04-05 "Preventing Storm Drain Pollution" was translated into Spanish and Vietnamese. The process took longer than expected, so print runs of both pieces was delayed until July 2005.	Distribution of the pieces will be tracked beginning in FY 05-06.
8	PIP 1.A. PM 6.A. PM 6.F.	Home and Garden Show	◎: Home-owners	April 15-17, 2005. San José provided booth space. Booth Staffed by SCVURPPP staff, co-permittees, and San José staff. See Program report for details.	See Program Annual Report for details. Booth location was poor this year, and traffic was below expectations. City will work with the Program to look for an alternative event to reach this audience.
9	IND 6.A. PIP 1.A. PM 6.E. PM 6.G. M 5.F. CB-3.D.	Industrial Users Academy	◎: Industrial	April 27, 2005. Stormwater issues discussed include: facility inspections, GIASP/NOI requirements, IPM, Mercury, Trash, and General NPDES information.	25 attendees. 22 submitted evaluations. 91% agreed or strongly agreed that the workshop was useful. 86% indicated an increase in understanding for the big picture of water regulations.

04-05 Work Plan ID#	URMP Reference	Activity	Outreach Type	FY 04-05 Status	Evaluation
10	CON 7.C.	Conduct outreach sessions to development community	◎: Developers	August 31, 2004. Department of Public Works and ESD staff conducted training on erosion and sediment control for private developers of Type 2 projects.	13 private developers of Type 2 projects attended. Four topics were covered; 1) Overview of erosion and sediment control requirements in the City; 2) Friends of the SF Estuary video "Keep it Clean – Preventing Pollution from Construction Sites;" 3) the City's stormwater permit; and 4) the City's enforcement procedures.
10	CON 7.C.	Conduct outreach sessions to development community	◎: Developers	September 15, 2004. Erosion Control Meeting. Training was given on Best Management Practices and SWPPP implementation.	30 developers and 1 City employee attended. The developers were reminded of BMPs for erosion and sediment control at construction sites in preparation for the rainy season that started October 15, 2004. In addition they were shown some of the latest products to prevent stormwater runoff from construction sites by vendors. Annual trainings plus "Round Table Meetings" such as this are helping to improve communications between City staff and developers as to erosion and sediment control requirements and expectations.
10	CON 7.C	Conduct outreach sessions to development community	◎: Developers	October 12, 2004. Construction Site Planning and Management for Compliance with NPDES Requirements.	14 private developer representatives attended this training, sponsored by the Water Board and hosted at San Jose's Leninger Center.
10	CON 7.C PIP 1.C	Conduct outreach sessions to development community	◎: Developers	February 16, 2005. Pre-Construction Training on San José Airport – North Concourse Project	Project Managers requested Stormwater BMP training for contractors and other stakeholders. Over 30 people attended.
10	NDC 2.B	Conduct outreach sessions to development community	◎: Developers/ Consultant Engineers	Meetings held by PW on August 5, 2004, October 7, 2004, December 2, 2004, February 3, 2005, and April 7, 2005 with consulting engineers; bi-weekly meetings held with Evergreen Specific Plan consulting engineers; and meetings hosted by PBCE on August 12, 2004, October 8, 2004, December 10, 2004, February 11, 2005, March 25, 2005, and April 22, 2005 for developers and development consultants. Fact sheets were distributed June 2005.	Approximately 6-10 attendees were present at each meeting. Staff finds these meetings a very effective way to educate the engineering and development industry about hydraulic sizing requirements for structural stormwater treatment measures and Policy 6-29 revisions. Additionally, SCVURPPP and ESD staff made presentations on the HMP and consulting engineers and developers were asked for comments on the draft, revised, and Final HMP Reports as they were released for public review.
11	PM 6.D.	Create & provide fact sheets & materials to pesticide retailers to facilitate point-of-purchase outreach to support IPM Store Partnership Program	◎	There are nine stores in San José participating in the IPM store partnership. This work is done at the Program level.	See Program Annual Report for details.

04-05 Work Plan ID#	URMP Reference	Activity	Outreach Type	FY 04-05 Status	Evaluation
11	PIP 1.A. PM 6.A. PM 6.F.	IPM Outreach at Orchard Supply Hardware stores	◎: Home-owners	San José staff assisted Program staff with events, and provided fact sheets when needed.	Although the fact sheets are always available in the store, customers and store personnel may not take the time to read them. Holding in-store events from time to time draws attention to the fact sheet rack and the IPM messages. See Program Annual Report for additional details.
13	M 5.C. PIP 2.C. TRA 6	Tributary Tribune	◎: Industrial	Newsletter published for industrial users permitted to the Water Pollution Control Plant. The Fall 2004 Tribune featured contact information for reporting spills to the storm drain. The Spring 2005 Tribune featured an insert with information on fluorescent lamp recycling, trash management, and pesticide management.	Tributary Tribune was published three times in FY 04-05. It goes to every Industrial User permitted to the San José/Santa Clara Water Pollution Control Plant (approximately 330). The Tributary Tribune web page generated 178 views from 154 visits in FY 04-05.
13	PIP 2.C.1 M 5.E.	Mercury Outreach	◎	San José and Program staff assisted County with Mercury-related outreach for the County's Universal Waste grant activities.	See Program Annual Report for details.
23	PIP 2.C.1 PM 6.A. PM 6.B.	Pesticide Outreach	◎	Participated in regional IPM campaign (Our Water Our World) through BACWA/BAPPG and SCVURPPP/BACWA. Pesticide messages delivered through Watershed Watch Campaign ads (Got Bugs? Campaign).	See Program Annual Report for details.
N/A	n/a	Storm Drain Stenciling	◎: Commercial	City staff provided approximately 39 stencils to developers and private businesses for stenciling approximately 250 storm drain inlets. In addition, 109 English, 62 Spanish, and 24 Vietnamese "No Dumping! Flows To Bay" stencils were distributed by ESD Inspectors to commercial and industrial businesses.	Storm drain stencils are placed in locations that are highly visible to employees. Including the neighborhood creek name gives residents specific information about how their actions tie in to the local environment. Developers are required as a condition of the permitting process to stencil all storm drains inlets on a development.
N/A	PIP 1.A. PIP 2.C. PM 6.F. M 5.A. CB-11	Curbside Courier web page and newsletter	◎: Residential	Web page and newsletter focused on solid waste issues. Newsletter mailed to city recycling customers. The Spring 2005 feature article was on composting and it's benefits to the Watershed. Secondary article focused on Diazinon and how to properly dispose of it. National Rivers Cleanup Day was highlighted, as was Spring in Guadalupe Gardens and the Great American Litter Pick-up. A hyperlink to OWOW fact sheets and to watershedwatch.net was included on the website version.	The Curbside Courier is published twice a year as a Recycle Plus utility bill insert, reaching approximately 185,000 single-family households. Additionally, 2272 pageviews of the online version of the Curbside Courier were recorded from March through June 2005.

04-05 Work Plan ID#	URMP Reference	Activity	Outreach Type	FY 04-05 Status	Evaluation
N/A	TRA 6	Anti-Litter Program bill insert	◎: Residential	A bill insert was created and distributed to San Jose residents in FY 04-05. It drew the connection between trash and creeks, listed BMPs for preventing trash from getting into creeks, and highlighted four "Adopt-a-spot" litter hotspots in creeks that need volunteers to help keep them clean. It was mailed out as part of the Municipal Water billing cycle in Winter 2004, and went to approximately 20,000 single-family and multi-family dwellings.	The flier prompted residents to call the City's Anti-litter Program (ALP). ALP did not formally track calls, but anecdotally the program received more calls after the flier went out. ALP requested any unused fliers, so they can use them for their outreach. The City altered the flier and used it again in July-August 2006. That activity will be reported in the FY 05-06 URMP Annual Report.
N/A	IND 6 CB-1.B.	Mobile Surface Cleaner Training Workshops	◎: Commercial	Training available upon request.	Training available upon request. Companies requesting training are first referred to BASMAA's online training and offered live training if online version does not meet their needs.
N/A	IND 6 ICID 4 CB-3.B.	Roof Vent BMP for metal finishers and printed circuit board facilities	◎: Metal Finishers and PCB Manufac-turers	Distributed Roof Vent BMP along with a contact letter informing select businesses that their roofs may also be inspected as part of their scheduled stormwater inspection.	Letter sent to 102 facilities. Inspections started in Spring 05 and will continue through December 2005. An evaluation of the effort will be conducted at that time.
N/A	PIP 2.A. CB 11 TRA 6	Street Sweeping bill insert and web page	◎: Residential	Bill insert included in the November-December billing cycle for Recycle Plus bills. Insert includes information on how street sweepers work, what they remove, and gives tips on how to maximize the effectiveness of street sweeping, such as moving vehicles off of the street on sweeping days.	Recycle Plus bill inserts reach approximately 185,000 single-family households. Additionally, 23 pageviews of the online version of the insert were recorded from August 2004 through June 2005.
N/A	PIP 2.C.1 PM 6.A. PM 6.B.	Diazinon stop-sale contact letter	◎: Pesticide Retailers	Contact letter sent to the owners and managers of stores that may sell Diazinon products. Letter reminds retailers of the USEPA's stop-sale date for all diazinon outdoor non-agricultural use products. Letter directs stores to contact their distributors for buy-back information, and instructs them not to dump Diazinon down the drain, gutter or garbage.	Sent to 92 drug stores and small pesticide retailers in San José. These stores were targeted because of their small size, and due to the chance that their main business (which is not the sale of pesticides) would suggest they may have been missed by the larger USEPA mailing.
N/A	PIP 1.C	Franklin-McKinley School District SWPPP Training	◎: School Custodial	Lecture, BMPs and discussion with School District employees about SWPPP implementation given by Watershed Enforcement.	15 attendees. The presentation was well received. Brochures on SWPPP-related BMPs and pollution prevention were distributed.

04-05 Work Plan ID#	URMP Reference	Activity	Outreach Type	FY 04-05 Status	Evaluation
			Staff		
Overall Assessment of Targeted Outreach activities			◎	FY 04-05's targeted outreach efforts focused on getting tailored messages out to a specific target audience, e.g. the Diazinon contact letter for small pesticide retailers, developers workshops, etc. The goal was to reach specific audiences that are missed with general outreach, to get pertinent information to those that need it, and to explore different methods of reaching different audiences. Targeted outreach in FY 04-05 used a variety of means to get the message out, from direct mailings to one-on-one training to media campaigns to training workshops. Face to face training, either singly or in groups, offers the greatest opportunity to connect with the target audience. But the number of people reached is small, and the investment of time and resources to reach those people is great.	
14	PIP 3.B.	Coastal Cleanup Day	✋	September 18, 2004. Promoted event in the ESD newsletter and on the City web site.	Over 1,100 volunteers at 33 sites. Over 30,800 pounds of trash and over 6400 pounds of recyclables removed. 16 out of 33 cleanup sites were located in San José. Volunteers surveyed after the event. See the Santa Clara Valley Water District's Annual Report for details.
N/A	PIP 1.A.	Mayor's Volunteer Recognition Faire	✋	October 7, 2004. Event held to recognize and thank everyone who volunteered in the City the previous year	WMI Public Participation Opportunities list and HHW Disposal information distributed.
N/A	PIP 1.A. PIP 3.A.1	Great American Pick Up	✋	April 23, 2005. ESD, DOT, PBCE, Mayor' Office, City Manager's Office, Council Offices and PRNS planned & coordinated event in San José.	30 cleanup sites, 3 per Council District. Post-event recognition party had information from Cal Trans' "Don't Trash California" campaign, and City literature about litter in creeks. 370 volunteers participated, despite the rainy weather. The City plans to continue doing this event in future years.
15	PIP 3.A.1	National Rivers Cleanup Day	✋	May 21, 2005. Promoted event in the ESD newsletter, in a Recycle Plus bill insert to all San José residents, and on the City web site.	682 volunteers at 28 sites. Over 15,000 pounds of trash and 1,400 pounds of recyclables removed. 17 out of 28 cleanup sites in the County were in San José. Volunteers surveyed after the event. See the Santa Clara Valley Water District's Annual Report for details.
N/A	PIP 3.A.	National Bike to Work Day	✋	May 6, 2005. City hosted five "energizer stations" with drinks, give-aways and information to give out to bikers.	An estimated 218 people rode by or stopped at the City's energizer stations, a slight increase from last year's event. Both stormwater and air quality benefit from the reduced number of cars on the road. Encouraging people to use alternative modes of transportation highlights this benefit and encourages public participation.
	PIP 3.B.1	Public Participation Opportunities List	✋	Webpage download with a list of sixty groups and organizations which offer residents and businesses the opportunity to get involved with their Watershed.	No views or visits were recorded on the Public Participation Opportunities List download page. The City will look into different ways to promote this information.
	PIP 1.A	Anti-Litter Campaign	✋	City initiative to expand litter awareness and	Provided free supplies for 23 group cleanups. Also, 895 new

04-05 Work Plan ID#	URMP Reference	Activity	Outreach Type	FY 04-05 Status	Evaluation
				encourage litter cleanups in San José.	Pick Up San José and Anti-Litter Volunteers were recruited.
Overall Assessment of Citizen Participation Outreach Activities				Tying efforts to pre-existing events such as Coastal Cleanup Day and National Rivers Week is a good way to maximize promotion. Advertising paid for by regional entities is a useful for raising awareness locally. Worked more closely with City's Anti-Litter campaign in FY 04-05, and plan on continuing that interdepartmental partnership.	
17	PIP 1.B.	Wacky Watersheds Workshops		October 30, 2004. Presented South Bay Water Connections curriculum to middle school educators within San José/Santa Clara Water Pollution Control Plant service area. The educators were also given a tour of the Don Edwards San Francisco Bay National Wildlife Refuge.	12 attendees. The City is working closely with the Schools and Youth Workgroup to develop a stipend program, to encourage greater attendance and to elicit greater feedback from teachers and generate long-term use of the curriculum.
18	PIP 1.B. PIP 1.C.	Water Awareness Program		Presentations focusing on Pollution Prevention. *It's Wet It's Wild It's Water!* Curriculum distributed to teachers. See 11.D: *FY 04-05 San José School Outreach* for details.	2893 people reached. 293 students in targeted grades 5-7 reached.
19	PIP 1	Slow the Flow		Grant to Don Edwards Alviso Environmental Education Center to host 9 different types of events: special events, interpretive programs, teacher orientation, field trips, in-class presentations, outreach presentations, workshops, special visits and interpretive displays.	Slow the Flow program(s) reached 11,969 people during the year (21,196 including visits to the Center for self-guided tours and/or viewing the static exhibits.) There is an increase in interest from college groups as well as out-of-area groups. This year the program had an appearance at NASA for the week long Jason (Disappearing Wetlands) Project. This even drew over 6000 students and teachers. The game at this event was voted among the visitor's favorites. The Program's previous coordinator submitted an article on how the Slow the Flow program promotes watershed stewardship. It was published in the U.S. Fish and Wildlife Service's December 2004 edition of *Endangered Species Bulletin.* From a presentation standpoint, the program continues to get very high evaluations from both teachers and students. Almost 40% of those attending are repeat customers. From a content standpoint between 93 and 100% of those questioned in exit exams recalled key messages of the presentations.
20	PIP 1.B.	Youth Watershed Education Grants		13 Grants awarded in FY 04-05. Seven Schools and six non-profits received grants. A total of $43,538 was given in grants ranging from $800 to $5,000 each.	This year's grant cycle saw a steep decline in the number of grant applications and approvals. 13 grants were awarded in FY 04-05, as opposed to 4 in FY 03-04. Grant projects are ongoing, and will be evaluated at the end of the grant cycle.

04-05 Work Plan ID#	URMP Reference	Activity	Outreach Type	FY 04-05 Status	Evaluation
21	N/A	High School Activities		The City's Youth Watershed Education Team (YWET) chose to focus on wastewater messages for it's high school outreach in FY 04-05. With the production of the Oakland Museum of California watershed topographic maps in FY 05-06, YWET will partner with the Program to develop and pilot a package of materials for use at the High School level.	
22	N/A	Additional ZunZun Presentations		The City applied for a California Coastal Commission grant to fund fifty additional ZunZun presentations. Unfortunately the City did not win this grant.	
N/A	PIP 1.C.	Village School Science Fair Enviroscape Presentation		May 25, 2005. Stormwater presentation with Enviroscape watershed model presented at school's Science Fair.	Over 200 students and adults reached.
N/A	PIP 1.A. PIP 1.B. PIP 1.C.	Water Wizard Festival		May 27, 2005. Water education festival for 300 3rd graders from Summerdale, Taylor, Willow Glen and Bishop Elementary Schools in San José and Sunnyvale. The purpose of the Children's Water Wizard Festival was to increase the awareness of the importance of water and promote stewardship of water as a resource. ESD taught 2 activities related to our mission concerning water and watershed issues. The messages taught were: Pollution Prevention (P2), Difference between Storm and Sanitary Sewer Systems, Value of Recycled Water, Value of Treatment Plant, Importance of Soil and the Value of composting	300 students from San José public schools. Pre- and post-testing of each student showed knowledge increases in all areas: Up 7% in knowing that the water we use at home affects our rivers. (54% to 61%) Up 3% in knowing polluted water is not good to drink. (93% to 96%) Up 2% in knowing all living things need water. (96% to 98%) Up 38% in knowing that we live in a watershed. (28% to 66%)
		Overall Assessment of Education Outreach Activities		Education continues to be a vital component of San José's pollution prevention plan. The City actively contributes to education both as a City and through the Program. San José commits significant resources to youth education with the goal of instilling a sense of stewardship for the environment. San José employs both in-class education and train-the-trainer approaches to outreach. In-class presentations are more expensive per student reached, but lend themselves better to evaluation. Train-the-trainer has the potential to reach many more students, but it is extremely difficult to measure the effectiveness of this potential. Youth Watershed Education Grants provide funding for groups and educators to implement their own programs that accomplish the City's education goals. The increase in demand for Youth Watershed Education Grant services was offset by a decrease in the number of students reached with other City education programs. The City will look into partnering with the Anti-Litter Program's education efforts to increase the number of students who receive pollution prevention messages.

12. MC: Municipal Compliance

12.A MC Work Plan Self Evaluation Matrix

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
MC 1	**Municipal Training** Municipal Training is a critical function of the City's NPDES Permit. Municipal compliance is dependent on the level and quality of the training provided.			
MC 1.A	Identify training needs	Annually	Done FY 04-05. NPDES C.3 technical training related to hydraulic sizing of post-construction treatment BMPs and inlet cleaning data collection were among the training needs identified.	ESD
MC 1.B	Develop curricula	As Needed	Done FY 04-05 for training noted in MC 1.A.	ESD
MC 1.C	Conduct training	Annually Ongoing	Done FY 04-05. See 12.D: *Municipal Employee Training Summary*.	ESD
MC 2	**Municipal Facilities Assessment and Compliance** Municipal facilities are required to comply with stormwater regulations. Efforts to reduce contaminated discharges from City facilities must be similar to those required of private businesses. While many elements for permit compliance are in place, the City requires a systematic approach to City facilities compliance at the level of effort required in the URMP.			
MC 2.A	Conduct Corp Yard assessments and inspections	Annually	Done. Annual Corp Yard stormwater inspections were completed in the first two quarters of 2005. In January 2005, a new Stormwater Inspection form was developed for the Corp Yard inspections. The new form lists general areas of concern, which are common to Corp Yards, to be inspected and includes sections for response/action taken to correct a concern, who took the action and the date the action was completed. Quarterly Hazardous Material inspections at the Corp Yards and Municipal Garage, which include stormwater issues, were conducted in FY 04-05.	ESD-UR, GS, DOT
MC 2.A.1	Conduct Citywide meeting to discuss Hazardous Material, Safety, and Stormwater issues for City corporation yards (up to two times per year).	Annually	Done. Citywide Hazardous Materials Management meetings were conducted on October 5, 2004 and June 24, 2005. These meetings are conducted in order to provide staff with information and training on the correct handling and storage of hazardous materials, safety procedures, and stormwater best management practices.	GS, ESD, DOT, Fire, Police
MC 2.B	Municipal Facilities SWPPPs	Annually	Done. In FY 04-05, one corporation yard SWPPP – the Main Yard– was chosen to be the pilot for full revision which included the reformatting of the written SWPPP and the SWPPP maps. This revision was completed in June 2005 and is currently under review. In FY 04-05, electronic SWPP maps were developed for the Main	ESD, GS, DOT

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
			Corporation Yard, with the intent to develop maps for the remaining yards next year. In FY 05-06, a work plan will be developed for placing the remaining corporation yard SWPPPs onto the new format.	
MC 2.C	Develop and formalize policies to develop proper disposal of mercury containing products.	Deleted FY 03-04	Deleted. Superceded by Mercury Work Plan.	
MC 3	**Integrated Pest Management** Assist with development of performance standards for integrated pest management for municipal use and comply with requirements developed.			
MC 3.A	Assist with performance standard development	Done FY 01-02	Done FY 01-02.	
MC 3.B	Coordinate implementation of performance standard.	Deleted FY 03-04	Deleted. Superceded by PM Work Plan.	
MC 3.C	Create and update existing policies and ordinances.	Deleted FY 03-04	Deleted. Superceded by PM Work Plan.	

12.B MC Program Evaluation

ITEM NO.	ACTIVITY	FY 04-05 EVALUATION	CHANGES FOR FY 05-06 (IF APPLICABLE)
MC 1	Municipal Training	During FY 04-05, the City conducted municipal training for all required Program Elements. See 12D: Municipal Employee Training Summary. Staff training continues to be an integral component in San José's program. Highlights from this year's training include: 1) The City contracted with RBF Consulting to conduct a series of NPDES C.3 technical training workshops over the course of five weeks. The in-depth training covered technical topics related to hydraulic sizing of post-construction treatment BMPs. It also included overviews of various types of post-construction treatment measures. Staff attended from five departments including Planning, Building and Code Enforcement; Public Works; Transportation; General Services; and Environmental Services. Approximately 61 staff attended. 2) The City contracted with Storm Water Compliance Specialists Consulting to conduct a three-day training workshop for construction inspectors citywide. The training covered effective BMPs that contractors/developers should implement at construction cites. ESD staff discussed City Standard Operating Procedures on Construction Inspections. Approximately 116 inspectors from Public Works, PBCE Building, and ESD Watershed Enforcement attended. 3) ESD staff conducted training for Department of Transportation field crews. The training covered stormwater BMPs and SOPs for PSR and SDO O&M activities including topics such as storm drain inlet and catch basin cleaning, electrical work, and street repair and marking. Approximately 160 DOT staff attended the training.	
MC 2	Municipal Facilities Assessment and Compliance	Annual Corp Yard stormwater inspections were completed in the first two quarters of 2005. The new Stormwater Inspection form for Corp Yards proved to be more organized and easier to use than the previous inspection report format. The new form also makes it easier to track staff responses to the concerns captured in the inspection report and whether further follow up is necessary. The form needs to be revised to address confusion on whether a listed area of concern is not applicable (activity and/or equipment not present at the facility) or is applicable (present at the facility) but not inspected during the inspection. Quarterly Hazardous Material inspections, which include stormwater issues, were conducted in FY 04-05. Two Citywide meetings to discuss Hazardous Material, Safety, and Stormwater issues were held on October 5, 2004 and June 24, 2005 – the semi-annual meetings have proven to be effective in improving the coordination between GS staff, ESD staff and Corp Yard representatives. The combination of an annual stormwater assessment inspection, including stormwater concerns in the quarterly hazardous material inspections, and the semi-annual meetings which include stormwater issues appears to be working well. The Corp Yards' general appearances have improved over the last several years and the concerns identified in the inspection reports are usually minor and resolved swiftly; concerns that are	The Corp Yard inspection form will be revised. Using the Main Yard revised SWPPP pilot process as a template. The City anticipates completion of full revisions for the 5 remaining Corp Yard SWPPPs over the next two years. Training on revised Corp Yard SWPPP BMPs will be conducted in FY 05-06 for all yards based on that developed for the pilot SWPPP at the Main Yard.

ITEM NO.	ACTIVITY	FY 04-05 EVALUATION	CHANGES FOR FY 05-06 (IF APPLICABLE)
		more significant are less frequently noted as the program is becoming part of the institution of the Corp Yards.	

12.C MC Response to Water Board Comments

No comments received from Water Board on this Program Element.

13. CNAP: Copper / Nickel Action Plans

13.A CNAP Work Plan Self Evaluation Matrix

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
CB-1	**Vehicle Washing Operations**			
CB-1.A.	Have member of San José team trained to lead mobile cleaners certification seminar.	Done FY 02-03	Done FY 02-03. City staff are available to train as needed.	ESD
CB-1.B.	Support Program in providing training to mobile surface cleaners.	Done FY 03-04 Next FY 05-06	Done FY 03-04. BASMAA now has training available online. City now refers requests for training to the BASMAA website.	ESD
CB-1.B.1	Promote list of certified mobile cleaning service providers.	Ongoing	Done FY 04-05. A link to the database of BASMAA-trained Recognized Mobile Surface Cleaners is posted on the City's website.	ESD
CB-1.C.	Distribute coupons in support of Program partnership with Western Car Wash Association.	Done FY 03-04 Continue in FY 04-05 pending implementation by Program.	Done FY 04-05. Watershed Watch campaign partnered with Classic Car Wash to provide discounted car washes with the Watershed Watch card. See 11.D: *PIP Activities* for details.	ESD
CB-1.D.	Develop and distribute charity car wash outreach material.	Done FY 02-03	Done FY 02-03.	
CB-3	**Industrial Discharges**			
CB-3.A.	Work with Program to discuss results of CSJ outreach efforts and potentially develop improvements to the IND Performance Standard.	6/30/05	Done FY 04-05. Outreach efforts were presented to the IND AHTG. It was determined that no changes needed to be made to the Performance Standard based on outreach efforts. The Management Committee approved the revised IND Performance Standard in February 2005.	
CB-3.B.	Publish BMP info on copper from roof vents.	Done FY 01-02	Done FY 01-02.	ESD
CB-3.C.	Continue distribution of info regarding copper from roof vents. Develop BMP for distribution and mail to permitted industries.	Done FY 03-04 Distribution Ongoing	Done FY 03-04 and distribution is ongoing. Information is available on ESD website. The Roof Vent BMP was also distributed to pertinent Industrial Users in San José, along with a cover letter informing IUs of the potential for roof inspections at their facilities. See CB-3.C.1 for details.	ESD
CB-3.C.1	Follow up with pertinent dischargers to evaluate need for additional effort.	6/30/05	Done. Pertinent dischargers were identified using *1997 Industrial Stormwater Monitoring Pilot* study. A program to inspect the roofs of pertinent dischargers began in FY 04-05 and will continue into FY 05-06. The need for additional effort will be evaluated once the inspection program is complete.	ESD-WE
CB-3.D.	Continue NOI Filers project.	Ongoing	Done. See IND section. NOI requirements are taught at Industrial User Academy. Watershed Enforcement	ESD-WE

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
			inspectors check for NOI status as part of routine facility inspections and educate as needed. A package of BMPs and information on the GIASP was sent to 178 pertinent dischargers in San José in May 2005.	
CB-6	**Reduce Traffic Congestion**			
CB-6.A.	Summarize San José efforts that address traffic congestion management.	Done FY 03-04	Done FY 03-04.	ESD PBCE Planning
CB-8	**Watershed Assessments and New Development**			
	See NDC section for details on San José implementation of C.3 permit provisions.		See NDC section for details on San José implementation of C.3 permit provisions.	
CB-11	**Street Sweeping and Storm System O&M**			
CB-11.A.	Track quantitative data on the tons of material removed and disposed and other relevant street sweeping program data.	Annually	Done. Residential street sweeping frequency is once per month. In FY 04-05, the area in which parking restrictions are enforced was again broadened from 120 curb miles in to 160 curb miles in FY 04-05, double what it was 2 years ago. The intent has been to maximize the cost effectiveness of the program. In FY 04-05, approximately 9,819 tons of debris were collected during all street sweeping operations. See *6.B: PSR Program Evaluation* for more information on street sweeping activities. The City also has a comprehensive storm sewer inlet cleaning program, where a Vactor removes debris from all of the City's inlets. In FY 04-05, approximately 1,183 cubic yards of debris were removed. See 7.A: SDO Work Plan Self Evaluation Matrix for details.	ESD-IWM, DOT
CB-12	**Pools and Spas**			
CB-12.A.	Work with SCVURPPP to develop outreach material directed at pool owners.	Done FY 02-03	Done FY 02-03.	ESD, Program
CB-12.B.	Work with SCVURPPP to develop and implement distribution plan for the pool materials.	Done FY 03-04	Done FY 03-04.	ESD
CB-12.C.	Distribute outreach materials at events, public counters, and post on City website.	Ongoing	Done. See Section 11.D: *PIP Activities.*	ESD
CB-21	**Architectural use of copper**			
CB-21.A.	Continue to discourage architectural use of copper during Planning application review.	Ongoing	Ongoing. As projects undergo review, comments, discouraging architectural use of copper in development projects are given. Projects have been revised to reduce the use of copper and direct runoff to landscaped areas. See NDC 8.D.	ESD, PBCE-Planning, PW, RDA
CB-21.B.	Continue to monitor progress of San José Green Building program to identify opportunities for	Ongoing	Ongoing. ESD has a dedicated LEED certified staff person who reviews public projects and advises City staff	ESD, PW, RDA, PBCE-Planning

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
	discouraging architectural use of copper.		on Green Building materials and techniques, including discouraging architectural use of copper.	
NB-1	**Discharges from Construction Sites**			
NB-1.A.	See NDC and CON program elements for activities that address erosion control.	Ongoing	Ongoing. See NDC and CON program elements for activities that address erosion control.	

13.B CNAP Program Evaluation

Measures to control copper discharges that require implementation at the Co-permittee level have been integrated into ongoing program elements. Copper and Nickel remain among the list of pollutants addressed by general and targeted outreach regarding stormwater pollution prevention. In addition to the activities described above, the City also actively participates in semi-annual meetings with the Water Board and other stakeholders to review implementation of the Copper and Nickel Action Plans. Additionally, the City provides the monitoring and data analysis used to evaluate water quality trigger levels associated with the Copper and Nickel Action Plans.

In FY 04-05, the City's Watershed Enforcement Program began a project to include additional rooftop inspections of select facilities. The purpose is to evaluate the degree of BMP implementation with respect to rooftop sources of pollution. Facilities were selected by SIC code based on the 1998 *Industrial Stormwater Quality Monitoring Pilot* Project's recommendations of facilities with a potential for significant contribution to polluted stormwater runoff. Contact letters and the Roof Vent BMP Fact Sheet were mailed to the selected facilities. Inspections will continue into FY 05-06, and the project will be evaluated in the FY 05-06 Annual Report.

The City completed its NOI Filers Project in FY 04-05. Select facilities were contacted and encouraged to comply with the State's General Industrial Activities Stormwater Permit (GIASP). The Contact letter included a checklist to help determine if the facility needed to be covered by the GIASP, a flow chart detailing the development and implementation of a SWPPP, and a reprint of a previously published Tributary Tribune article with information about the GIASP and the Storm Water Enforcement Act of 1998 (AB 2019). The City sent the contact package to 178 facilities in San José. These facilities were selected based on the following criteria:

- Facilities listed in Watershed Enforcement's Industrial and Commercial database (EEDMS).
- Facilities with a GIASP Category of 8 or 10 (Based on SIC Code)
- Facilities documented by Watershed Enforcement Inspectors as either needing to file NOI or no determination made. (Facilities identified as not needing to file or found to have already filed were not contacted.)

Initially the contact package was to be sent out to all facilities with the above criteria AND with the SIC code identified in the 1998 *Industrial Stormwater Quality Monitoring Pilot Project*. However, the City decided to send the information to all facilities in our database which may be subject to the GIASP.

In response, three calls and one letter were received from facilities requiring additional information. The letter was given to that facility's Inspector, and the facility is on the FY 05-06 schedule for IND Inspections. Two callers stated they had already filed their NOI and wished to know if there were additional requirements. The City referred them to the Water Board for further information. The third used the Checklist and self-determined that they had no exposure. The City told them that the GIASP only applied to facilities in Categories 8 and 10 (of which this facility was, see criteria above) with exposure, and that Watershed Enforcement Inspectors also make exposure determination as part of their stormwater inspection. The City plans to repeat this outreach program to facilities in FY 05-06 as it evaluates the effectiveness of the mailer on business compliance with GIASP NOI requirements.

Watershed Enforcement Inspectors are trained in GIASP requirements. They evaluate each facility for applicability of the GIASP, and make recommendations to the facility owners/operators based upon their findings. These activities are fully integrated into the standard operating procedures for Watershed Enforcement inspections. Facilities found to need to file are reported to the Water Board annually in the City's URMP Annual Report. *See 2.D: Companies Requiring NOI Based on SIC But Have Not Filed* and *2.D Companies Requiring NOI Based on Exposure But Have Not Filed* for this information.

13.C CNAP Response to Water Board Comments

No comments were received from the Water Board on this Program Element.

13.D CNAP Summary Tables / Additional Information

No additional information for this Program Element.

14. TRA: Trash

14.A TRA Work Plan Self Evaluation Matrix

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
TRA 1	**Inventory, Document and Evaluate Trash Management Practices**			
TRA 1.A.	Complete Program survey of existing trash management practices.	Done FY 02-03	Done FY 02-03.	ESD
TRA 2	**Document and Map Known Trash Problem Areas**			
TRA.2.A	Identify data sources and information showing the location of known trash problem areas (e.g., trash complaints/ incidents and eradication efforts.)	Done FY 03-04	Done FY 03-04.	ESD
TRA 2.B	Compile trash problem location data/information and submit to Program for conversion to coordinates for GIS mapping.	Done FY 03-04	Done FY 03-04.	ESD
TRA 3	**Conduct Trash Evaluations**			
TRA 3.A.	Work with Program to select trash evaluation methodology.	Done FY 03-04	Done FY 03-04.	ESD
TRA 3.B.	Assist Program with planning and organizing of training workshop for municipal staff.	Done FY 03-04	Done FY 03-04.	ESD
TRA 3.C.	Participate in the Training Workshop.	5/31/04	Done. Training was held on July 16,2004. Two representatives from the City of San José participated. The morning session covered the Rapid Trash Assessment methodology and in the afternoon session covered the Keep America Beautiful assessment methodology.	ESD
TRA 3.D.	Identify which entities will conduct trash evaluations (e.g. municipal staff, volunteer groups, etc.).	Done FY 03-04	Done FY 03-04.	ESD
TRA 3.E.	Conduct trash evaluations and submit to Program staff:	--	--	ESD
TRA 3.E.1	Coyote Watershed	12/31/04	Done. Assessments of litter hotspots were completed at the 18 litter hotspots identified in the Coyote Watershed. The Rapid Trash Assessment was used at 3 locations and the KAB Litter Index was used at the remaining 16 sites. Accessibility limited the sites at which RTA could be used. See 14.D: *Trash Problem Area Activity Report.*	ESD
TRA 3.E.2	Remaining San José locations	FY 05-06	Scheduled for FY 05-06.	ESD
TRA 4	**Develop Standardized Documentation and Reporting Format**			
TRA 4.A.	Work with Program to develop a reporting format to document trash management activities in Annual Reports.	Done FY 03-04	Done FY 03-04.	ESD

ITEM NO.	ACTIVITY	COMPLIANCE DATE	FY 04-05 STATUS	RESPONSIBLE PARTY
TRA 5	**Document and Analyze Evaluation Results; Identify and Prioritize Trash Problem Areas**			
TRA 5.A.	Assist Program staff with the documentation and analysis of trash evaluation results.	12/31/04	Done FY 04-05 and ongoing. The City submitted trash assessment data to Program for compilation. Participated in meetings with other co-permittees to discuss next steps based on initial assessments.	ESD
TRA 5.B.	Identify high priority trash areas using trash evaluation results:	--	--	ESD
TRA 5.B.1	Coyote Watershed	12/31/04	Done FY 04-05. Classified sites with a KAB Litter Index score of 3 (littered) or 4 (extremely littered) were included on the list of high priority areas. All sites with trash in creek waters were included on the high priority list.	ESD
TRA 5.B.2	Remaining San José locations	FY 05-06	Scheduled for FY 05-06.	ESD
TRA 6	**Identify and Implement Trash Management Practices**			
TRA 6.A.	Identify reasonable trash management practices to address high priority areas (in TRA 5B).	Ongoing (Start 7/31/04)	Done FY 04-05. The assessment for each site includes a listing of existing and recommended trash management practices. See TRA 14.D: *Trash Problem Area Activity Report.*	ESD, PRNS, GS
TRA 6.B.	Begin implementation or refinement of trash management practices at high priority areas to the maximum extent practicable.	Ongoing (Start 1/31/05)	Ongoing. Partnered with District to cleanup a significant in-creek trash accumulation at one of the high priority trash sites (SJ27). Supported NRCD efforts at site SJ28. Provided general outreach to solicit volunteers for Anti Litter Program hotspots located near or along creeks. See 11.D: *PIP Activities*	ESD, PRNS, GS
TRA 6.C.	Document and report implementation of trash management actions.	7/31/05	See TRA 14.D: *Trash Problem Area Activity Report.*	ESD
TRA 7	**Review and Update Performance Standards Relevant to Trash Management**			
TRA 7.A.	Assist with the review and update of existing standards that address BMPs or control measures relevant to trash management.	4/30/05	Pending Program implementation.	ESD

14.B TRA Program Evaluation

Trash assessments, hotspot prioritization, and maximizing trash management practices were the priority activities for FY 04-05. Trash assessments of the Coyote Watershed hotspots were completed using both the Keep America Beautiful (KAB) Litter Index and the EPA Rapid Trash Assessment (RTA) methodologies. The original intent was to use the KAB methodology only in areas outside the immediate vicinity of the creek. However, due to safety concerns and access limitations it was necessary to use the KAB to assess most creek area trash hotspots. The RTA was successfully used at 3 trash hotspot locations on the Coyote Creek. Seven “high priority” hotspots were designated based the presence of trash in the creek bed and/or a score of 3 (littered) or 4 (extremely littered) on the KAB Litter Index.

The assessment exercise provided useful information regarding the type and potential sources of trash and offered insight into the effectiveness of existing trash management practices. The most commonly found items at litter hotspots include assorted convenience food wrappers and cups, bottles (plastic and glass), plastic bags,

and packing foam pieces. In many cases, the trash appeared to have been transported by wind or air to the trash hotspots. Most assessed sites showed evidence of vehicular and pedestrian sources of litter. Illegal dumping and homeless encampment refuse were identified at a lesser number of locations.

The trash assessments revealed that existing trash management activities are sufficient at most locations assessed, but that enhancements are needed in others. Only 4 of the 15 sites assessed using the KAB methodology earned a scored of 3 (littered) or 4 (extremely littered), indicating a need for improvement. These sites were placed on the high priority list for follow up action. The trash management practices at the remaining 11 sites appeared to be working well based on observations at the time of the assessment. Ten sites on the trash hotspot list are included in the City's Anti-Litter Program litter spots list and are adopted by community members and/or cleaned periodically by City crews. A majority of the Anti-Litter sites were found in good condition, scoring 1 (no litter) or 2 (slightly littered) indicating that the Anti Litter Program efforts are effective. There were a few exceptions, however, where ALP sites scored 3 or 4. The RTA assessment methodology was applied at 3 sites (See TRA 14.D: *Trash Problem Area Activity Report*), which were also listed as high priority.

The City began efforts began to refine trash management practices at high priority locations and in general to address potential impacts to creeks. The City and Santa Clara Valley Water District (District) partnered to cleanup a large in-creek trash accumulation at one of the designated high priority locations (See 14.D: Trash Summary Tables). Following this initial cleanup, the City and District executed a Trash Memorandum of Agreement that represents a formal commitment for the agencies to coordinate where possible to achieve the common goal of cleaner creeks. The MOA provisions include up to three partnered cleanup projects per year. Cleanups under this MOA are not limited to sites on the hotspot list. During the week of June 21, 2005, a heavily trashed stretch of bank along the Coyote Creek, not included on the hotspot list, was cleaned as part of the Trash MOA yielding approximately 4.5 tons of garbage. Additional, partnered cleanup projects will occur over the summer months. Trash management enhancement efforts were also focused on expanding the reach of the Anti-Litter Program as its efforts are instrumental in preventing litter from entering storm drains and reaching the waterways. This was accomplished primarily through outreach, but also through partnering with the Anti-Litter Program to retain a collection vehicle. Staff attempted to maximize public outreach opportunities to raise awareness about the connection between litter on the streets and pollution of creeks and the Bay and to encourage the public not to litter and to participate in creek cleanup activities. (See 11.D: *PIP Activities*).

In FY 05-06 the City's strategy is to continue trash assessments of hotspots and efforts to maximize trash management practices at high priority sites. Assessments will be repeated at the high priority sites in the Coyote Watershed to track change over time. In addition, initial assessments will be done at the remaining San José locations on the trash hotspot list. ESD will continue to work with PRNS, GS and community partners to find solutions for persistent litter hotspots. The City will continue to participate in Program efforts to address the issue of trash, and is evaluating a number of additional activities for FY 05-06 and beyond including outreach and structural controls.

14.C TRA Response to Water Board Comments

No comments were received from the Water Board on this Program Element.

14.D TRA Summary Tables / Additional Information

Trash Problem Area Activity Report

#	Date	Site ID	Watershed	Location	Assessment Method	Trash Source	Score	Trash Management Action	Comments
1.	9/23/04	SJ03	Coyote	Santa Clara between 17thSt and 20th St.	KAB	TNC	3	▪ Consider general outreach and education to the neighboring community. ▪ This location is on the Anti Litter Program hotspot list and has been adopted.	▪ Litter observed on creek bank at bridge at Roosevelt Park. ▪ Litter receptacles are present in park. ▪ Santa Clara is a busy street, so vehicular litter may contribute to the problem.
2.	9/22/04	SJ04	Coyote	North side of Suncrest Dr from Perie Ln to Colonial Ln.	KAB	TNC	1	▪ Area is posted with signs indicating $1,000 fines for littering. ▪ This location is on the Anti Litter Program hotspot list and has been adopted.	▪ This location is very clean. Almost no litter visible. ▪ Area did not appear to be close to a creek area. ▪ Not recommended for future assessment.
3.	9/24/05	SJ05	Coyote	Summer between Dobern Av and dead end along Hwy 680	KAB	TNC	2	▪ Submitted request to have "Flows to Bay" stencils repainted. ▪ "No littering" signs are posted. ▪ Consider what measures Cal Trans can take to address the litter on their property around storm drain inlet. ▪ This location is on the Anti Litter Program hotspot list, but has not been adopted. City crews periodically clean un-adopted sites.	▪ A noticeable amount of litter is visible at the location. ▪ Paint had worn and was unreadable on storm drain stencil located at the corner of Summer and Dobern. ▪ Cal Trans storm drain inlet is located at the bottom of slope, behind fenced area adjacent to 680.
4.	10/1/04	SJ07	Coyote	Penitencia Creek near Creekland Circle to Mabury Road	RTA	TCA	86/45	▪ Consider placement of a garbage receptacle along the trail to help deter littering. ▪ This location is on the Anti Litter Program hotspot list, but has not been adopted. City crews periodically clean un-adopted sites. ▪ Consider additional practices after future assessment.	▪ The site appeared relatively clean so maintenance efforts in place are somewhat effective. ▪ Removed trash while at the site. Found a number of discarded beverage containers.
5.	9/22/04	SJ08	Coyote	Penitencia Creek between Gateview Dr and Jackson Av on north side of Mossdale	KAB	TCA	1	▪ Trash and recyclables receptacles are placed at the trailhead. ▪ Boulders are placed to prevent access for illegal dumping. . ▪ A group of community volunteers	▪ Volunteers have received support from the City Trails Program, County Parks and Water District. This walkway connects residential area and Light Rail Station.

#	Date	Site ID	Watershed	Location	Assessment Method	Trash Source	Score	Trash Management Action	Comments
								actively maintains the pathway. ▪ Consider additional fencing along certain areas to further deter illegal dumping. ▪ This location is on the Anti Litter Program hotspot list and has been adopted.	▪ No trash was observed in creek. The area was very clean with the exception of one incident of illegal dumping. Focus of assessment was on trail, so used KAB rather than RTA.
6.	9/23/04	SJ09	Coyote	East side of King Rd (between Chopin and Enesco Av)	KAB	TNC	1	▪ Consider general anti litter outreach. ▪ This location is on the Anti Litter Program hotspot list and has been adopted.	▪ Area appeared mostly litter free. Noticed only a few litter items on the road and some in flood control area.
7.	9/24/04	SJ10	Coyote	680 Pedestrian overpass (at Sunset and Lavonne Av)	KAB	TNC	2	▪ Consider follow up with Cal Trans regarding maintenance of the area. ▪ This location is on the Anti Litter Program hotspot list and has been adopted.	▪ This location appears to be Cal Trans property. ▪ This area does not appear to be very near a creek. ▪ Litter was not visible on lot at the foot of the bridge. Along the back fence were illegally dumped bags of garbage. Some litter found in the walkway.
8.	9/23/04	SJ12	Coyote	Thompson Creek Area from Aborn Rd to Quimby Rd	KAB	TCA	1	▪ Water District placed boulders to block access to illegal dumpers. ▪ Abandoned cart reported to City for pick up. ▪ This location is on the Anti Litter Program hotspot list and has been adopted.	▪ Entered area at Pelly and Scottsdale. ▪ Area appeared very clean. Anti Litter Program effort seems effective. ▪ Identified an abandoned shopping cart in the area. ▪ Future assessment probably not needed.
9.	9/23/04	SJ13	Coyote	South side of Aborn Rd from Kettman Rd to White Rd	KAB	TNC	1	▪ This location is on the list of Anti Litter Program hotspot list, but has not been adopted. City crews maintain un-adopted locations.	▪ Current efforts seem to be effective. Area along Aborn looked very clean. Did not see any litter. ▪ This location does not appear to be near a creek. Not recommended for future assessment.
10.	9/24/04	SJ22	Coyote	Capitol Park located at Peter Pan and Bambi Ln	KAB	TNC	1	▪ Consider outreach to the adjacent Mildred Goss Middle School. ▪ Consider better signs around dumpster enclosure to help to deter illegal dumping. ▪ Consider targeted outreach to the neighborhood. ▪ This park is on the Adopt a Park list and has been adopted.	▪ Park was very clean at the time of assessment; however, the parks maintenance staff reported that the park is trashed on a regular basis. ▪ Some illegal dumping occurs on site. Park staff sometimes receives help from the General Assistance program labor.

#	Date	Site ID	Watershed	Location	Assessment Method	Trash Source	Score	Trash Management Action	Comments
11.	9/23/04	SJ11	Coyote	East end of Yerba Buena Park along Yerba Buena Rd to Villa Vista Av	KAB	TCA	2	▪ Consider advertising need for litter cleanup volunteers and/or outreach at Evergreen Community College. ▪ Consider placing garbage receptacles along this area. ▪ This location is on the Anti Litter Program hotspot list but has not been adopted. City crews periodically maintain un-adopted locations.	▪ Evaluated 100 ft creek area running from the creek to the roadside. Accessibility prevents use of RTA. ▪ Trash was visible in creek near path. Some evidence of illegal dumping. Area is somewhat hidden. Cars park in this area. ▪ Some pedestrian foot traffic. ▪ Steep bank would make clean up difficult.
12.	10/1/04	SJ23	Coyote	Evergreen Park located at Yerba Buena Rd and San Felipe Road	RTA	TNC	60/135	▪ Consider contacting the Longs Drugs Store located near the park to remove shopping carts stolen from their business on an ongoing basis. ▪ Consider recruiting stores at the nearby strip mall to help spread the anti litter message. ▪ Consider placing garbage/recycling containers near the pedestrian bridge. ▪ Consider outreach at Evergreen Community College. ▪ This park is on the Adopt a Park list and has been adopted.	▪ Unable to access most of west bank due to poison oak and thick brush. ▪ Found lots of items from nearby restaurants including Panda Express, McDonalds, Starbucks, and Jamba Juice. ▪ No water in creek bed at time of assessment.
13.	9/22/04	SJ24	Coyote	Fernish Park located at Fernish and Rubion	KAB	TNC	1	▪ Consider outreach to neighboring schools (Mt. Pleasant Elementary School and middle school) to help curb littering. ▪ Consider contacting park supervisor to determine whether park is typically as clean as observed. ▪ This park is on the Adopt a Park list and has been adopted.	▪ This location was clean and does not seem close enough to a creek to have an impact. ▪ The very small amount of litter identified was likely generated by path users. ▪ The area at the Guluzzo/ Questa side of park had a very small amount of garbage, mostly wrappers. ▪ Parks maintenance staff reported this site as a problem.
14.	9/23/04	SJ26	Coyote	Watson Park located at E. Jackson St and 22nd St	KAB	TNC	2	▪ Several trash receptacles are placed in the main park area. ▪ Consider placing additional trash receptacles closer to the trail area to help limit littering. ▪ This park is on the Adopt a Park list and has been adopted.	▪ The evaluation included general park area above creek bank and walkway. ▪ Lots of newspaper, plastic and bottles were found. ▪ Homeless and daytime park users are the likely litter generators. ▪ This site was reported by parks maintenance as a litter problem area.

#	Date	Site ID	Watershed	Location	Assessment Method	Trash Source	Score	Trash Management Action	Comments
15.	9/14/04	SJ27	Coyote	Coyote Creek between Berryessa Rd and Mabury Rd (south side of Flea Market)	KAB	TCA	4	▪ City and Water District conducted a cleanup of a large trash accumulation during week of 9/13/04. District crews trimmed the vegetation causing the trash accumulation. City provided disposal of garbage removed from the creek. ▪ Consider additional practices after future assessment.	▪ RTA was not used at this location because it is not a wadable area. ▪ A community member reported site as a problem area.
16.	9/14/04	SJ28	Coyote	Coyote Creek at Julian Street Bridge near San José Academy	KAB	TCA	3	▪ Consider how to remove the illegally dumped items and prevent future illegal dumping. ▪ Consider investigating opportunities to partner with community groups to maintain the area. ▪ Consider targeted outreach to San José Academy.	▪ This location is along a somewhat busy roadway and is next to the San José Academy. ▪ A significant amount of litter and some illegal dumping was observed in the area. ▪ RTA not possible due to access limitations. ▪ A community member reported this area as a litter problem area.
17.	9/23/04	SJ30	Coyote	Coyote Creek at Upper Penitencia Creek (confluence and areas adjacent to flea market)	KAB	TCA	3	▪ Consider partnering with Flea Market to do anti litter outreach and address trash management practices. ▪ Consider additional practices after future assessment.	▪ At the time of the assessment no litter was observed in the waterway. ▪ Some litter was visible on banks, especially opposite fence surrounding parking. ▪ Limited accessibility prevented use of RTA. ▪ A community member reported this site as a litter problem area. ▪ Need to confirm ownership of creek area. Flea Market may only own one side.
18	10/7/04	SJ29	Coyote	Coyote Creek at Watson Park between Lower Silver confluence and Mabury Rd bridge	RTA	TCA	39/162	▪ Consider placement of additional trash receptacles closer to the creek. ▪ Consider and pursue options for removing the shopping carts and mesh fencing from the creek bed. ▪ This park is included on the Adopt a Park list and has been adopted.	▪ Lots of trash was wrapped around trees at high water mark. ▪ Homeless appear to be active in the area. ▪ Access limited on the bank opposite park due to steepness. ▪ A community member reported this site.

Keep America Beautiful (KAB) Litter Index ratings are: 1-No litter, 2- slightly littered, 3- Littered, 4- extremely littered

Rapid Trash Assessment (RTA) scores range from 0 (worst) to 120 (best). Scores are expressed above as overall numeric score/quantity of trash counted.

TNC = Trash not in creek (but may contribute to creek); TCA = Trash in creek from accumulation (either waterborne or windborne); TCID = Trash in creek from illegal dumping.

URBAN RUNOFF POLLUTION PREVENTION PROGRAM

FY 2004-05 ANNUAL REPORT

September 15, 2005

Santa Clara
All-America City
2001

Street Department

September 15, 2005

Ms. Loretta K. Barsamian
Regional Water Quality Control Board
San Francisco Bay Region
1515 Clay Street, Suite 1400
Oakland, CA 94612

Subject: City of Santa Clara Urban Runoff Management Program
FY 2004–2005 Annual Report

Dear Ms. Barsamian:

This report is submitted by City of Santa Clara in conjunction with the Santa Clara Valley Urban Runoff Pollution Prevention Program's Annual Report, pursuant to provision C.6.a. of the Program's reissued municipal storm water NPDES Permit (Order No. 01-024). The report summarizes activities performed during FY 2004-2005 in accordance with the City of Santa Clara's Urban Runoff Management Plan (URMP) submitted to the Regional Board on September 1, 1997 and updated in January 2004, and the performance standards contained therein.

Contents of Report

The goals of this Annual Report are to: 1) concisely document implementation of our URMP and FY 03-04 Work Plan during the past fiscal year; 2) evaluate program results for continuous improvement; 3) comply with permit requirements; and 4) share this information with other Co-permittees, municipal decision-makers, and the public. To accomplish these goals, the report contains the following sections:

- Certification Statement
- IC/ID Elimination Activities
- Industrial/Commercial Discharger Control Program
- Public Agency Activities
    - Public Streets, Roads and Highways O&M (including Corporation Yards)
    - Rural Public Works O&M
    - Storm Drain O&M
    - Water Utility O&M
- New Development Planning Procedures
- Construction Inspection
- Public Information and Participation
- Pesticide Management Activities
- Mercury Pollution Prevention Activities
- Copper Action Plan/Nickel Action Plan
- Trash Inventory and Management
- Staff Training Summary Table
- Performance Standard Certification Statement

Program Highlights and Accomplishments

The City of Santa Clara has been active in the Program elements and very active at the Co-permittee element level. IC/ID activity reported 175 incidents, down from 179 last year. IND/COM inspections totaled 251. Construction inspections totaled 482 (27 SWPPP inspections and 455 windshield inspections) with 47 violations as compared to 39 inspections with 12 violations last fiscal year. The increase in violations is contributed to the large number of windshield inspections conducted and an increase in construction permit value. Public Agency activity, IPM, Mercury/Copper and Trash elements have been steady and consistent.

Analyzing / detection of trends at the Co-permittee level continues to improve with each Annual Report. The City is alert to the various reporting information that is collected and has developed a history of adapting its resources to minimize storm water pollution.

The City, as in FY 03/04 continues to retain EOA Inc. to assist with the planning and implementation of the C.3. Provisions. The assistance provided by EOA has been valuable in supporting staff on site specific C.3. Provision questions.

Continuous Improvement Activities

The City of Santa Clara takes pride in our Urban Runoff Management Program and the quality of storm water. In the IC/ID element it was identified, as in past years, that concrete contractors are the primary violators. To address this continuing problem, the City has not only continued its focus on the industry, but has increased education efforts to the residents hiring these contractors. The IND/COM element continues to be dynamic in identifying industries with reoccurring violations. To this end, the City has identified, as in past years, automotive and food service facilities. The City's goal is to reduce storm water pollution to the maximum extent practicable through education, targeted inspection on identified hot spots and if necessary, through vigorous enforcement of our Storm Drain Ordinances.

The City has assumed an aggressive stance with repeat violation facilities by issuing Pre-Citation / Administrative Citations instead of repetitive violation notices. The occurrence of verbal notices to repeat offenders, as indicated in FY 03-04 Annual Report, continue to be replaced with violation notices and citations as are warranted by the situation.

Thank you for your review of this FY 04-05 Annual Report. If you have any questions regarding the materials submitted, please contact Rick Mauck at 408-615-2099.

Very truly yours,

Richard J. Mauck
Director of Streets and Automotive Services

FY 04- 05 Annual Report

IC/ID Elimination Activities

CITY OF SANTA CLARA
FY 2004-05 ANNUAL REPORT
ICID ELIMINATION ACTIVITIES

1. **What type of incident causes the most problem?**

   The type of incident that causes the most compliance issues are cement related washouts from smaller concrete and masonry contractors. Cement related incidents totaled 71 out of 175 (refer to page 4 "breakdown of top five violators for level of enforcement action"). Enforcement actions and BMPs are continuously distributed to cement related contractors due to the high rate of violations. The potential reason for this problem is unlicensed contractors and the belief that these individuals do not stress to their employees storm water protection.

2. **Is a particular location or source a large part of the problem?**

   The locations where most of these types of incidents occurred were in residential neighborhoods. Residential cement related incidents total 115 out of 175 total incidents (see attached chart titled "ICID Elimination Activities Violation Percentage").

3. **Might it be getting better or worse?**

   The total number of incidents for FY 2004-05 is less than FY 2003-04 (60 as compared to 98).

4. **What might be the causes?**

   The cause is BMP information not being received from smaller cement related businesses. The cement related businesses, given their transient nature, are either not receiving the outreach or are not passing the information on to all their employees. Unlicensed contractors are further compounding the issue because the permit process is often not completed, circumventing the distribution of BMP material.

5. **What, if anything, will you do differently next year?**

   In FY 2003-04, the City featured an article in the City newspaper (mailed to all residents quarterly) concerning cement in storm drains. The article was designed to educate our residents who hire cement related contractors. In this current year, the article will be

featured on our City website. It is unlikely that the additional effort, over what is already occurring, will better educate all cement related contractors. In spite of storm drain inlets having the "NO Dumping" stencils, and through word-of-mouth not to dump into storm drains, the best solution is to continue to educate our residents.

"…the best solution is to educate our residents"

CITY OF SANTA CLARA

City of Santa Clara

FY 04- 05 Annual Report

Industrial/Commercial Discharger Control Program

CITY OF SANTA CLARA
FY 2004-05 ANNUAL REPORT
INDUSTRIAL/COMMERCIAL DISCHARGE CONTROL PROGRAM

The City of Santa Clara's Industrial/Commercial Discharge element has become well-established and efficient in monitoring and enforcing the businesses of concern within the City. The City's NPS Inspector has five years experience working with the many elements of the City's storm water pollution prevention program. Continuity in this position has provided greater efficiency, better communication within other departments and the insight to identify trends over time.

During the FY 2004-05, the City's NPS Inspector conducted a total of two hundred fifty one IND/COM mandatory and non-mandatory inspections (see attached chart titled "FY 04/05 IND/COM Number of Inspections by Category") as compared to two hundred two for FY 03-04, an increase of twenty five percent. Forty-seven mandated inspections were conducted for FY 2004-05. Mandated inspection facilities are typically inspected bi-annually or sooner as determined by SIC code. Non-mandated inspections required in the FY 04-05 Work Plan vary from year to year. For example, in the FY 2003 Work Plan there were ten facility categories inspected resulting in two hundred two mandated and non-mandated inspections. In the FY 04-05 Work Plan there were nine facility categories inspected with two hundred fifty one inspections. The inspections conducted at these facilities resulted in a total number of violations detailed in the following graph. Note that the total number of inspections includes both initial inspections and re-inspections as necessary to confirm compliance.

"The City of Santa Clara's Industrial/Commercial Discharge element has become well established and efficient in monitoring and enforcing the businesses of concern within the City."

FY 04-05 IND/COM
MANDATED AND NON-MANDATED OCCURING VIOLATIONS AS COMPARED TO NO VIOLATIONS

Note: A non-mandatory inspection is an inspection that occurs at a facility type designated in the current work plan. A mandatory inspection is the result of a pre-determined inspection frequency based upon SIC code.

A total of one hundred ten violations were found in FY 04-05. Thirty five of those violations were found during mandatory inspections and seventy five violations during non-mandatory inspections. This represents a fifty nine percent increase in violations from FY 2003-04 violation numbers. The greater frequency of violations as compared, to FY 2003-04 violation numbers, can be partly contributed to an increase in inspections. An example of this is food facilities, which in FY 2004-05 had 25% more inspections as compared to FY 2003-04.

All IND/COM violations in the City of Santa Clara received follow up inspections and were corrected timely as dictated by conditions. All IND/COM inspections conducted in the City are documented on a Non-Point Source IND/COM inspection sheet and kept on file.

When violations are found as a result of our numerous inspections, proper BMPs are distributed and a follow up inspection is conducted. When a violation is minor, a letter stating that corrective action has been completed from the facility contact person with supporting dated pictures is an acceptable means of compliance.

Refer to the below table for detail of the type of violations found for each respective category.

FY 2004-05
STATUS OF INSPECTIONS AND VIOLATIONS BY FACILITY CATEGORY

Mandatory Inspections

Category	Description	Status/Common Violations Found	# of Inspections	# of Violations
1	**Automotive Facilities:**	Inspected FY 02-03.	0	0
3	**Paint Facilities:**	Inspections scheduled FY 05-06.	0	0
4	**Dry Cleaners:**	Inspected FY 02-03.	0	0

Non Mandatory Inspections

2	**Food Facilities:**	Tallow bin dumpster area condition/ improper wash water disposal/ oven. roof vent leaking food grease onto roof	204	75
		Total	**251**	**110**

FY 2004-05 IND/COM
Number of Inspections by Facility Category

Total number of Industrial/Commercial Inspections: 251

For FY 2004-05 there were seven metal manufacturing inspections conducted resulting in eight violations. This resulted in a high rate of violations to inspections of 114%. For FY 2004-05 there were two hundred four food facilities inspections resulting in seventy-five violations. The food facility category had the greatest number of violations (75 out of a total of 247). The rate of violations to inspections for food facilities was 38%.

For FY 2004-05 and prior years, the violation to inspection ratio of the automotive facility (specifically dismantlers), and food service facility categories had the highest number of violations and repetitive violations. There are five automotive dismantlers in the City. In FY 2004-05, this facility type received a violation upon each inspection. The automotive facility category has been an ongoing enforcement problem, prompting the City to increase enforcement on repeat violators by increasing/accelerated enforcement actions. There are four hundred thirty four food service facilities in the City. Employee turn-over and the resulting loss in stormwater pollution control education has caused this facility category to have a higher than desired violation to inspection ratio. For the food service category, the City is issuing pre-citation notices or administrative citations to facilities immediately rather than issuing repetitive violation notices.

This year and prior year inspection/violation data has shown that the majority of facilities with reoccurring violations continue poor storm water practices despite prior education. For these facilities, warnings are not effective and as a result pre-citations and administrative citations have been increasingly used. Pre-citation and administrative citations demand their attention and in many cases result in monetary damages. Through the issuance of pre-citations and administrative citations, NPS inspectors have had prompt violation correction and less reoccurring violations as compared to FY 2003-04.

“Pre-citation and administrative citations demand their attention and in many cases result in monetary damages.”

The City will continue to target facilities in our yearly workplans that have the highest rate of violations fore each to inspection.

A improved inspection form covering all seventeen facility categories in greater detail has been created and is currently in use by inspectors.
The new form was a product of the Performance Review conducted in February 2005. This enhanced form is helping inspectors conduct more thorough inspections and giving facility owners a better reference tool to train employees listing each violation or potential violation in detail for each category. A copy of the form is provided to each facility being inspected.

“A new inspection form covering all seventeen facility categories in greater detail has been created and is now in use by inspectors.”

Corporation Yard Inspections

The Storm Water Pollution Prevention Plans (SWPPP) have been complete for the various Corporation Yards throughout the City (Street, Electric, Water/Sewer and Parks).

A performance review was conducted by Tetra-Tech in February 2005 at the Street, Water/Sewer and Electric yards. The inspector comments for this review element were positive with only minor corrections being noted. To confirm compliance with the SWPPP, Storm Water Inspectors inspect the various Corporation Yards twice a year.

Rural Public Works Operation and Maintenance

CITY OF SANTA CLARA
FY 2004-05 ANNUAL REPORT
PUBLIC AGENCY ACTIVITIES

Rural Public Works Operation and Maintenance

Rural roads within the City are the responsibility of the Parks Department. One exception is the creek trails that have been/are being constructed along San Tomas-Aquino Creek. Reach 1 (Hwy 237 to Agnew) was completed in early 2004 and Reach 2 (Agnew to Scott Blvd.) will be complete in late 2005. Reach 3 (Scott Boulevard to Monroe Street) is currently in design. These improvements, as they are completed, are/will be maintained by the Street Department.

In this Annual Report, seven (7) Performance Standards (RPWM 1 – RPWM 7) were evaluated. The City, for FY 04-05, partially constructed approximately 1.5 miles of new rural roads along San Tomas Aquino Creek. For other locations, such as City parks and the golf course, no new construction activity occurred in fiscal year 2004-05.

As with other elements, staff knowledge is monitored and education on Storm Water Pollution Prevention BMP's is provided. For current and future contracted projects, BMP's are contractual required and enforced by on-site inspectors and/or Storm Water Inspectors.

General Comment: The City has a total park area of 187.5 acres, 39,375 linear feet of 8-foot wide trails, 21,600 linear feet of 12-foot wide golf trails, nearly 3 miles of paved creek trails (1.5 miles partially constructed only) and 1.25 acres of concrete lined ponds/fountains.

City of Santa Clara

FY 04- 05 Annual Report

Public Streets, Roads, and Highways Operation and Maintenance

CITY OF SANTA CLARA
FY 2004-05 ANNUAL REPORT
PUBLIC AGENCY ACTIVITIES

Public Streets, Roads & Highways Operation and Maintenance

The Street Department is responsible for the maintenance of approximately 240 miles of streets within the City of Santa Clara. It should be noted that the following streets are not within the jurisdiction of the City:

- Central Expressway (County)
- Lawrence Expressway (County)
- San Tomas Expressway (County)

In addition, some boundary streets are shared with other jurisdictions – most notably Stevens Creek Boulevard (primarily with San Jose). BMP's observed include, but are not limited to, protection of storm drain inlets, collection of sawcut slurry and routine sweeping of City streets. Contractors completing work within the City streets are contractually required to follow BMP's. Street Department staff is trained to report poor contractor activity to the Non Point Source Fire Inspectors and/or the Storm Drain Foreperson.

BMP effectiveness has been good mainly due to a constant City presence and contractual responsibilities. Staff and City contractors are well educated on BMP use. The City policy on residential street sweeping is bi-weekly guaranteed (typically done every week), industrial/commercial sweeping is done every 11-12 days. This is not a change over previous years activities.

For fiscal year 2004-05, there were 43 verbal warnings, etc. required to contractors working for the City on public streets.

Sweeping

The City of Santa Clara employs (3) full-time Street Sweeper Operators to sweep all of its streets, which consist of 367 residential route miles and 181 industrial route miles. The City utilizes three Schwarze A7000 regenerative air sweepers as its front-line sweepers. A Schwarze A4000 regenerative air sweeper and a Johnston suction sweeper serve as back-ups. The regenerative sweepers are very effective at collecting fine sediments.

"The regenerative sweepers are very effective at collecting fine sediments."

Residential streets are scheduled to be swept the day following the assigned garbage/recycling collection day. Residential streets are swept on a weekly basis about 70% of the time. The City guarantees bi-weekly residential street sweeping. Residential streets were swept on a bi-weekly basis 100% of the time in FY 2004-05. The City relies upon voluntary cooperation from residents to remove their vehicles from the street on their assigned street sweeping day. There are some areas in the City that are often parked in and cannot be swept. The Street Department posts temporary "No Parking" signs in these areas a few times a year to efficiently clean the gutterline.

The City has twenty-four (24) industrial routes that are swept on a continuous basis. Each Street Sweeper Operator is responsible for eight (8) routes. Each operator completes one industrial route, prior to sweeping the assigned residential route for the day. Industrial routes are typically swept twice per month. In total, 27,202 miles of sweeping occurred in fiscal year 2004-05 as compared to 26,383 miles in fiscal year 2003-04 and 6,888 yards of debris was collected. This included both residential and industrial sweeping. The industrial sweeping route map is attached for reference.

"In total, 27,202 miles of sweeping occurred…"

The City, beginning in fiscal year 2003-04, no longer hires contractors to perform street sweeping services during leaf season or to cover employee-scheduled absence due to budgetary constraints.

Leaf Collection

Typically, November marks the beginning of the Leaf Collection Program. For this program, the City utilizes two leaf vacuums (10 yard boxes) that are manned by a 2-man crew covering 10 routes. This program typically, depending on weather, operates for 2 months and is done in conjunction to the normal street sweeping operation. For fiscal year 2004-05, this program collected 2,183 cubic yards as compared to 1,260 cubic yards in fiscal year 2003-04. Ground crews manually rake leaves around obstacles, allowing the leaf vacuums easier access to the leaves. Litter is generally removed prior to vacuuming. Leaves collected are treated as green waste at the landfill.

Residents also deposit leaves in their green waste container. It is not possible to distinguish between the types of green waste collected (branches, lawn clippings and leaves). For reference, 11,365 tons of green waste was picked up in fiscal year 2004-05.

City of Santa Clara

FY 04- 05 Annual Report

Storm Drain Operation and Maintenance

CITY OF SANTA CLARA
FY 2004-05 ANNUAL REPORT
PUBLIC AGENCY ACTIVITIES

Storm Drain System Operation and Maintenance:

1. Which BMP's were evaluated formally or informally this year?

    - BMP's for Storm Drain System Operation and Maintenance have become well established and are routinely used by the Storm Drain Division. Most efforts of the Storm Drain Division are focused on line/inlet cleaning and support of any clean-up efforts required of IC/ID and construction events. Placing of "No Dumping – Flows To Bay" placards are part of the Storm Drain Division responsibilities. For greater effectiveness, placards are enameled metal or thermoplastic. This Division also is first response support for hazardous materials spills. For these efforts, BMP's to isolate the event are for each situation. All Storm Drain Divison personnel are trained in confined space to implement BMP's as required.

2. Does your process for tracking hot spots appear to be working?

    - Storm Drain personnel carry plat books that map out the entire City of Santa Clara's storm drainage system. Hot spots are indicated on these maps, periodically monitored and coordinated with the Fire Department (Hazardous Materials Unit) as events occur.

3. What were your major hot spots during the fiscal year, and how has that changed from previous years?

    - The City's major hot spots were locations that received significant localized flooding during major storm events. Maintenance crews are well trained to respond and maintain those locations. Due to a relatively dry winter season, there were few areas of localized flooding for FY 2004-05.

4. What evidence do you have that contractors are/aren't fully implementing BMP's?

    - Storm drain inlets and catch basins are cleaned twice yearly. Debris collected from those structures indicates the type of activity causing the build-up. As indicated in the IC/ID element, cement contractors continue to be the major contractor causing violation. Overall, contractor violation events are recognized and cleaned up before entering the Storm Drain System. In instances where this is not the case, all efforts are made to track the debris back to the violator for enforcement action.

5. Which agencies and/or staff are receiving training and which are not?

    - The City's Street Maintenance and Storm Drain Maintenance Divisions are trained on maintenance of the storm drain system and any illegal dumping into the storm drain. Please refer to the staff training summary table at the back of this report. City Utility Departments (Water, Sewer & Electric) have also been trained that only rainwater is to go down the drain. When substances other than rainwater is observed, these departments are outstanding in reporting the event to the Storm Water Division.

6. What feedback has staff given about the effectiveness of BMP's?

    - The implementation of BMP's has become standard operating procedure. Current efforts have been to increase effectiveness/ease of use for the BMP's. An example would be using sandbags made of UV resistant long life bags.

			Compare/contrast with monthly Street Dept. report.		Complete	
SDOM 7	New Device Testing	2004 URMP	Montior project (Pump Station / Outfall) where an interceptor device would be practicable.	A Vactor Clean Out Station has been constructed at Highway 237 and Lafayette Street. The site has storm and sanitary clean out facilities. Each facility utilizes a sand/gravel media prior to a sedimentation tank for dewatering the debris bunker. This facility has been working very well.	Complete	Street Dept.

City of Santa Clara

FY 04- 05 Annual Report

Water Utility Operation and Maintenance

CITY OF SANTA CLARA
FY 2004-05 ANNUAL REPORT
PUBLIC AGENCY ACTIVITIES

Water Utility Operation and Maintenance

The Water/Sewer Department is responsible for maintenance of City's water distribution system. Key O&M activities, potentially affecting storm water quality, include line flushing, hydrant exercising and water meter testing. These scheduled activities have all discharges tested and treated (if needed) prior to release. Contractors working for the Water Department are contractually required to follow BMP's. Water Department staff report poor contractor activity to the Non Point Source Inspectors and/or the Storm Drain Foreperson.

The effectiveness of the Water Department in minimizing storm water pollution is good. Required staff have been trained in testing/treating of planned discharges. Only emergency/unscheduled discharges go without treatment. For these events, the storm drains are protected as quickly as possible and the discharge stopped.

City of Santa Clara

FY 04- 05 Annual Report

New Development Planning Procedures

City of Santa Clara
FY 2004-2005 Annual Report
NEW DEVELOPMENT PLANNING PROCEDURES

1. Self-Evaluation Matrix (based on C.3. FY 04-05 Work Plan) -- enclosed

2. NDC Summary Table – Significant Development (Group 1) Projects Approved During July 1, 2004 through June 30, 2005 -- enclosed

3. Response to Regional Board Comments on the New Development Section of the FY 03-04 Annual Report (submitted in Attachment A to the SCVURPPP Response to RWQCB FY 03-04 Annual Report Comments, letter to RWQCB dated 6/3/05).

> Regional Board Comment:
> "Santa Clara's Table of Group 1 Projects lists the Sobrato Development on 445 El Camino Real as a transit-oriented infill site creating 250,000 ft^2 of new impervious surface. Even though it meets the definition of a Group 1 project, it is not listed as such. **Within 8 weeks of the date of this correspondence, please submit to the Executive Officer clarification on whether this facility is being regulated as a Group 1 project. If it is not, please explain the reasons it has been exempted.**"
>
> Response:
> This project was erroneously listed as exempt but has been reviewed and approved as a Group 1 project. The project includes construction and post-construction BMPs in accordance with the Program requirements. The project represents an approximately 10% net reduction in impervious surface on this transit-oriented development site and more than 50% reduction in the overall site (combined with the adjoining Santa Clara University baseball stadium as replacement of the original site development). BMP measures include paved area runoff to landscaped swales.

4. Evaluation of This Element

The focus of effort in this element of the City's urban runoff program during FY 04-05 was continued implementation of the C.3. provisions for the first Group 1 projects. There were five Group 1 projects approved this year (two of the projects reduced impervious surface such that they were below the Group 1 threshold).. Description of the site design, source control and treatment control requirements for these projects are provided in the enclosed NDC Summary Table. Review of these projects provided an opportunity to test and fine tune the changes to the development review process for C.3. The City also required site design measures (e.g., parking lot, driveway, and roof drainage routed to landscaping) at other sites that were below the Group 1 size threshold.

The City of Santa Clara is well prepared to implement C.3. site design, source control, and treatment requirements for Group 1 projects. Staff have implemented changes to the development application review process, and have incorporated these changes into the Standard Operating Procedures of the Planning Procedures Performance Standard in the City's URMP. A number of tools and forms have been developed to assist City staff with C.3. implementation.

On April 27, 2005, the City participated in an MS4 Program Evaluation conducted by Tetra Tech and Water Board staff that focused on implementation of the C.3. provisions and other program elements. Tetra Tech staff comments were generally positive, and the City was commended for the materials developed to assist planning staff and the development community in complying with C.3. The City is awaiting receipt of the final Program Evaluation Report and plans to address any recommendations in the report during FY 05-06.

More detailed information about the City's accomplishments on C.3.-related tasks during FY 04-05 are provided in the Self-Evaluation Matrix.

P.S. I.D.	**Activity**	**C.3. Work Plan Task**	**FY 2004-05 Tasks**	**Status / Comments**	**Due Date**	**Responsible Party**
PPPS 8.	BMP O&M Reporting	e.6.	Report on the City's treatment BMPs O&M verification program in each annual report, including organizational structure, evaluation of effectiveness, and planned improvement to the program. Include a list or summary of treatment BMPs inspected during the year, inspection results, and any required follow-up and correction.	**In Progress --** Since C.3. implementation began, no Group 1 projects have completed construction, so there are no BMPs that need inspection. The Building Dept. conducts inspections at completion of construction and provides data on installed BMPs to Street Dept. for inspection. No BMPs needed inspection during FY 04-05. It is too early to summarize inspection results, evaluate effectiveness, or plan improvements.	Annually	Street Dept.
PPPS 5.d.	HMP	f.2.	Review Program guidance to the Co-permittees on implementation of the HMP as part of requirements for Group 1 projects that may cause increased erosion or other related impacts.	**Update –** The final HMP Report was completed in April 2005 and contains an implementation chapter. Additional Program guidance is being developed. Task will be completed in FY 05-06 (see Task f.3.).	FY 05-06	Planning and Street Dept.
PPPS 5.d.	HMP	f.3.	Upon adoption by the Regional Board, begin implementation of HMP requirements for Group 1 projects that may cause increased erosion or other related impacts. Before adoption, encourage early implementation of likely elements of the HMP where possible.	**Update –** Task will be completed in FY 05-06. Key provisions of the SCVURPPP HMP Report were adopted on July 20, 2005 (Order R2-2005-0035). The Order requires implementation of HMP requirements by October 20, 2005. City is encouraging site design and treatment measures that provide flow control.	FY 05-06	Planning and Street Dept.

City of Santa Clara - NDC Summary Tables / Additional Information

Significant Development Projects[1] Approved During July 1, 2004 Through June 30, 2005

Project File Number	Project Description	Project Type	Site Size (Ac)	New Impervious Surface (Ac)	Project Status (Approval Date)
PLN2004-04317	5301 Stevens Creek Boulevard – Agilent Technologies Development Agreement and Rezoning for Campus Master Plan involving the addition of 560,000 square feet of office/R&D space to an existing 835,000 square feet of office/R&D/manufacturing space.	Commercial/ Industrial	55.0 acres	19.2 acres of redeveloped area (net loss of imprv area)	07/12/05
Site Design: Redevelop existing parking lots as new buildings and parking structures, with landscaping improvements; net reduction in impervious surface area under new master plan, but exact numbers to be determined, as final design plans are not prepared.	**Source Control:** SWPPP required. Stenciled stormwater catch basins; Microretention techniques, such as tree well filters in parking and landscaping areas; Disconnected downspouts, covered dumpster, trash and storage areas.	**Treatment BMPs:** Bioswales, landscape swales, or vegetated filters in new landscape and surface parking areas; Design landscape areas to be lower in elevation than surrounding paved areas.	**Numeric Criteria:** Details to be provided with architectural approvals of phasing plans.	**O&M Responsibility:** Owner/developer responsible for records for inspection per City O&M agreement due with architectural approvals.	**Pesticide Reduction Meas:** Use of landscape species that minimize irrigation, runoff, pesticide and fertilizer application.
PLN2004-04479	1490 Lincoln Street – Santa Clara Lumber Site Redevelopment Demolish existing lumberyard; retain existing office; construct 19 townhomes and 1 single family residence; voluntary compliance measures as impervious area is less than 1.0 acre	Residential/ Commercial	1.08 acres	0.85 acres	03/08/05
Site Design: Existing buildings and pavement are replaced with attached residences with landscaped areas to absorb stormwater runoff; net reduction in site impervious area.	**Source Control:** SWPPP required. Disconnected downspouts directed to landscape area drains; Stenciled stormwater catch basins.	**Treatment BMPs:** Landscape swales in common yard areas.	**Numeric Criteria:** Not required as site is less than 1 acre in impervious area; Site change from 100% impervious existing development to 20% landscaped area.	**O&M Responsibility:** HOA responsible to maintain landscape drainage areas and records for inspection per City O&M agreement to be completed prior to occupancy.	**Pesticide Reduction Meas:** Use of landscape species that minimize irrigation, pesticide and fertilizer application.
PLN2004-04688	801-865 Franklin Street – Jesuit Living Center Remove existing parking lot and construction 32-unit housing project with underground and surface parking; includes relocation of historic residence to site as part of development.	Residential	1.12 acres	0.7acres	03/08/05
Site Design: Remove existing open paved parking area; construct courtyard style residence with underground parking	**Source Control:** SWPPP required. Minimize surface parking areas; Disconnected downspouts directed to landscape area swales and drains; Stenciled stormwater catch basins. Trash area covered.	**Treatment BMPs:** Landscape swales for surface lot runoff treatment. (open curb) Sweeping of surface parking area.	**Numeric Criteria:** Project result in only 30,684 sq ft of impervious ,area (0.7 acre)	**O&M Responsibility:** Santa Clara University is responsible to maintain landscape drainage areas	**Pesticide Reduction Meas:** Use of landscape species that minimize irrigation, pesticide and fertilizer application.

[1] Projects that create or replace one acre or more of impervious surface area; also includes projects disturbing more than 1 acre. All projects deemed complete in FY 2004-05.

Project File Number	Project Description	Project Type	Site Size (Ac)	New Impervious Surface (Ac)	Project Status (Approval Date)
PLN2004-04699	735 Franklin Street – Santa Clara University Off-site parking facilities Construction of surface parking facilities and landscape improvements on various properties	Institutional (parking)	1.96 acres	1.63 acres	03/08/05

Site Design:	Source Control:	Treatment BMPs:	Numeric Criteria:	O&M Responsibility:	Pesticide Reduction Meas:
Replacement of existing buildings, driveway and parking and landscaped areas with new surface parking and landscaping	SWPPP required. Litter control. Stenciled stormwater catch basins.	Landscape swales for surface lot runoff treatment. (open curb) Sweeping of surface parking area. Inlet filters in some paved areas.	Existing site is 94% impervious; new development is reduced to 83.3% total impervious area	Santa Clara University is responsible to maintain landscape drainage areas and records for inspection per City O&M agreement to be completed prior to occupancy.	Use of landscape species that minimize irrigation, pesticide and fertilizer application.

PLN2004-04707	3600 Pruneridge Avenue – Diamond Properties Planned Development rezoning for the demolition of existing office complex and construction of 35-unit small-lot single family subdivision	Residential	2.43 acres	1.57 acres	03/22/05

Site Design:	Source Control:	Treatment BMPs:	Numeric Criteria:	O&M Responsibility:	Pesticide Reduction Meas:
Remove existing office complex with surface parking and landscape features; construct 35 residences on individual lots with private yard areas and a private roadway	SWPPP required. Disconnected downspouts directed to landscape area drains; Stenciled stormwater catch basins.	Landscape swales in private yard areas for flow based treatment. May include yard area percolation trenches. Installation of hydrodynamic device and water quality filter in an in-line system of private storm drain outfall to City storm drain.	Existing site is 70.6% impervious; new development is reduced to 64.5% total impervious area. New development runoff required to be treated is 0.36 cfs.	HOA and individual homeowners responsible to maintain landscape drainage areas. HOA responsible for records for inspection per City O&M agreement to be completed prior to occupancy.	Use of landscape species that minimize irrigation, pesticide and fertilizer application. Education materials to be provided to buyers by developer.

City of Santa Clara

FY 04- 05 Annual Report

Construction Inspection

CITY OF SANTA CLARA
FY 2004-05 ANNUAL REPORT
CONSTRUCTION INSPECTION

1. **Do pre-rainy season inspections appear effective in getting all construction sites to install proper BMP's before October 15?**

Pre-rainy season inspections have been effective in enforcing construction site SWPPP's prior to October 15 by insuring compliance before the first rain. The City inspected ten construction sites both prior to October 15th. These ten sites were the total number of sites under construction prior to October 15 that were considered to have the greatest potential to pollute. Each site for these inspections was given a copy of the construction inspection form and proper/adequate BMP usage (see attached form) was confirmed. If a site had a violation, a Non Point Source Violation Notice was issued with a re-inspection for compliance occurring timely. For the ten inspections conducted, nine violations were issued. All sites were in compliance prior to the first rain event near October 15.

2. **Do you think your inspection coverage of construction sites is adequate: why or why not?**

The City has very adequate coverage of construction sites. All construction sites are inspected before, during and after the rainy season. In addition, due to the limited number of construction sites, each are inspected during and after major rain events. For FY 2004-05 there was a total of 455 inspections conducted at twenty-one sites. On average twenty-two inspections were completed per construction site.

"On average twenty-two inspections were completed per construction site."

Inspections include pre-rainy season SWPPP review, pre-rain event, rain event, and post rain event. All inspections are documented on an inspection form. Pre-rain SWPPP inspections include the review of site-specific SWPPP requirements. These inspections ensure that BMP's required of the SWPPP are timely implemented on site. Pre-rain event,

rain event, and post rain event inspections are supplemented by windshield inspections. For windshield inspections the inspector drives through and around the site, already being knowledgeable of the SWPPP requirements and confirms BMP compliance. Typically, windshield survey inspections for proper BMP's implementation are not documented on an inspection form unless a violation is found. Individual windshield surveys and inspections are recorded on a construction site spreadsheet. When no violations are discovered, only the date of the inspection is entered.

City employees not normally responsible for inspections, such as building inspectors, are knowledgeable of our storm water program and report any violations they may see directly to the Non Point Source Inspector. City Building Department inspectors are trained regarding proper storm water practices and contact the NPS Inspector as violations occur or most appropriately, prior to discharge. NPS inspectors also attend preconstruction meetings for City projects to inform the contractor that the City will be inspecting the site for proper storm water BMP management.

3. Did your City take an unusually large or small number of enforcement actions this year, and what are the possible reasons?

In FY 2003-04 the City conducted eleven SWPPP inspections and forty-two windshield inspections, for a total for fifty-three inspections. A SWPPP inspection is where the SWPPP site is reviewed and a walk-through inspection takes place. For FY 2003-04 there were twenty-six violations. For FY 2004-05 the City conducted twenty-seven SWPPP inspections and four hundred and fifty-five windshield inspections. For FY 2004-05 there were forty-seven violations. The increase in violations for FY 2004-05 as compared to FY 2003-04 is due in large part to more frequent windshield inspections (see attached graph titled "FY 2003-04 and FY 2004-05 Construction Inspection Comparison").

In FY 2003-04 there were $247,000,000 in construction permits active in the City of Santa Clara. In FY 2004-05 there were $351,000,000 in active permits. A second possible reason for the increase in violations was the increased value of construction.

4. **How are verbal warnings followed up to determine whether compliance is achieved?**

Verbal and written warnings are given for all violations and are followed up by a re-inspection of the site. Any time a warning is given, a follow up inspection was always conducted. If the violation was not corrected, a written violation or pre-citation notice was issued. Weekly windshield inspections are conducted during the rainy season and include inspections of all areas of concern. If a violation was found, the site construction superintendent was notified immediately and a full SWPPP inspection was conducted. A total of twenty-one SWPPP inspections were conducted. For these twenty-one sites, a total of eighteen re-inspections were required and completed.

5. **Are there specific contractors who need repeated warnings?**

Yes, there have been some contractors that have required repeated warnings. If a verbal warning was given to a contractor and the potential violation was not corrected, a violation notice was issued. If the violation was corrected and a different violation is found during a later inspection, a pre-citation notice was issued. If the contractor continues to be out of compliance, administrative citations are issued. Escalating enforcement occurred several times at Fire Station Six building project. For this site, four administrative citations, one pre-citation and two violation notices were issued within a short period of time. Both the four administrative citations and one pre-citation were found during windshield inspections.

"Both the four administrative citations and one pre-citation were found during windshield inspections."

6. **Are the contractors on Public Works projects doing a good job in**

erosion/sediment control?

Contractors engaged in public works projects are contractually required to follow all appropriate BMP's. Engineering Department-Field Services Division personnel are fully aware of our URMP program and do not hesitate to notify a Non Point Source Fire Inspector as violations are seen. For most projects, inspectors are able to identify potential discharges prior to there being an event.

At the Fire Station Six building project the City had reoccurring issues with the Contractor not following the required BMP's. As mentioned prior, the site was given several administrative citations, several verbal and written warnings in a short period of time. To help avoid the issue of ongoing repeating offenses, the City's NPS Inspector has met with building inspectors responsible for City construction projects and reinforced timely and proper BMP practices. To this end, NPS Inspectors also attend preconstruction meetings for City projects to educate contractors.

7. Are BMP's being used in your City adequately, or do you see a lot of substandard controls like sand bags and hay bails?

BMP's are being used adequately within the City. All twenty-one-construction sites had the required BMP's in place either before or immediately after inspection per their approved Storm Water Pollution Prevention Plans. The prompt issuance of violations and reinspections for compliance has insured that all BMP's are in place. No hay bales or sand bags were used as a primary source of storm water protection. The City is no longer using the "Earth-Moving Activities" Brochures that advocate the use of hay bales. (2002 Performance Review Comment). The type of BMP's the City encourages include those that stress controlling erosion at the source - for example, stabilizing dirt slopes, covering stockpiles of materials, proper storage of materials and education. Protection of inlets alone is not considered adequate.

8. Does outreach to contractors or City staff need to be improved?

The City continuously educates and monitors City staff and contractors regarding storm water pollution prevention protection. This in part is completed by frequent inspections and distribution of BMP pamphlets specifying construction storm water protection. Improvement can always be made and additional emphasis has been given to make sure contractors, when applying for permits, are given all applicable BMP information

"NPS Inspectors also attend preconstruction meetings for City projects to educate contractors."

FY 03-04 and 04-05 Construction Inspection Comparison

Note: The increase in violations found in FY 04-05 as compared to FY 03-04 is due primarily to the increased frequency of windshield inspections done at the various construction sites. Forty-two windshield surveys were conducted in FY 03-04 as compared to four hundred fifty-five in FY 04-05. The increase in inspections led to an increase in enforcement actions.

This element was reviewed in the 2005 performance review by Tetra-Tech. During the review, Tetra-Tech questioned the value of windshield inspections. Clarification was provided that these inspections are conducted only after a thorough initial walk-around inspection has been completed. Once the site is known by the inspector, the windshield inspection focuses on areas of concern to whatever detail is necessary to confirm compliance.

Initial inspections of construction sites are done with the site superintendent and the SWPPP is reviewed. If a violation is found, the appropriate enforcement action is given to the superintendent and frequent re-inspections as are necessary are conducted to eliminate further violations. The City's NPS inspector and Storm Drain Foreperson perform at a

minimum a windshield inspection before, during, and after a rain event. Any violations found are documented on an inspection form or the date is logged on an Excel spreadsheet if no violation is found.

CONSTRUCTION INSPECTION – NEW DEVELOPMENT						
Performance Standard Identification	**Activity**	**Continuous Improvement Source Item**	**FY 2004-05 Tasks**	**Status / Comments**	**Due Date**	**Responsible Party**
CSI 1	Construction Inspections	2004 URMP	Develop and implement a Field Inspector checklist for inspection of storm water pollution prevention requirements.	To date, Building Inspectors refer storm water issues to the Non-Point Source Fire Inspectors and/or the Storm Drain Foreperson. The referral system is working well. Building Inspectors typically do not check for a SWPPP but will forward problems they see to the Street Dept. Prior/during construction the Street Dept. is inspecting the site for storm water/SWPPP compliance.	Ongoing	Street Dept. Planning Dept. Building
CSI 1	Construction Inspections	2004 URMP	Improve coordination with Building Department to require efficient updating of active construction sites.	Some minor projects are ongoing without the knowledge of the Non-Point Source Inspector and are found by chance. This is not acceptable to this element	Complete	Street Dept. Planning Dept. Building
CSI 2	Wet Weather Inspection	2004 URMP	Inspect construction sites during weather events.	In FY 04-05 there were 27 SWPPP inspections made on 21 sites prior to the wet weather events, and 455 windshield inspections were conducted during wet weather events.	Ongoing	Street Dept.

City of Santa Clara

FY 04- 05 Annual Report

Public Information and Participation

CITY OF SANTA CLARA
FY 2004-05 ANNUAL REPORT
PUBLIC INFORMATION AND PARTICIPATION

The City of Santa Clara provides information to the public in four basic ways- during mandatory and non-mandatory inspections, IC/ID events, public events and providing BMP literature for distribution at City facilities. Measuring the effectiveness of how this information is used by the public is difficult.

In past Annual Reports our IND/COM and IC/ID elements have analyzed the number of repeat violations. The City has seen repeat violations as an indicator to poor education (not utilizing BMP information). This is open to interpretation. Some industries/businesses are volatile by nature, have high employee turnover and/or are improperly managed. These are all considerations that affect BMP education effectiveness.

Public events are a great opportunity to distribute BMP literature and interact directly with citizens in an informal way. Although a large number of BMP pamplets are distributed, they are received by a public that may or may not be a target audience. As a result, BMP effectiveness can only be inferred.

The City of Santa Clara is committed to educating its businesses and residents in stormwater pollution prevention. Our participation in program activities will continue, as will our commitment to identify problem businesses for specialized inspection/distribution of specific BMP's.

CITY OF SANTA CLARA URBAN RUNOFF POLLUTION PREVENTION PROGRAM
FY 2004-05 ANNUAL REPORT

PIP ACTIVITY TABLE			
PI/P Activity	**Type of Outreach**	**Level of Implementation (Description/Dates)**	**Evaluation of Effectiveness**
Libraries: Central & Mission Branch, Community Centers & various locations throughout the City.	General / Educational	BMP's: Bay Begins at Your Front Door, Pest Bugging You?, Clean It!, Grow It!, Home Maintenance Tips, Home Repair & Maintenance, Pool/Spa, Painting, and Concrete and Mortar Application. Distribution continuously.	Works well in terms of numbers distributed; difficult to measure effectiveness. Provides good exposure to Storm Water Pollution Prevention, but does not provide the opportunity for interaction.
New Resident Information	General	City calendar and annual report distributed – contains information on City meetings and events for the year. Provided yearly.	Sent to approx. 49,000 residents and businesses. Well received for general information. Informs residents of upcoming events (Disposal Days, Household Hazardous Waste Drop Offs, etc.). Includes suggestion/comment card that allows for feedback, but very few returned last year.
Public Events	General	City staff helped staff booths at events. Migratory Bird Day, May 14, 2005 Spring in Guadalupe Gardens, April 23, 2005	Both events provided opportunity to educate public. Much larger turnout for Spring in Guadalupe Gardens event.

PIP ACTIVITY TABLE			
PI/P Activity	**Type of Outreach**	**Level of Implementation (Description/Dates)**	**Evaluation of Effectiveness**
Household Battery Disposal/ Information on TV/computer monitor disposal	General	Article in December utility bill insert, Mission City Scenes Fall 2004 article in City newspaper, Inside Santa Clara	Well-received program. Residents comment on convenience factor (no appointment necessary). Increased requests for "battery bucket" pickup.
Storm Drain Maintenance update & URPPP tips, hints, offer for info.	General / Educational	"Falling Leaves" article in September utility bill insert, Mission City Scenes Fall 2004 article in City newspaper, Inside Santa Clara Winter 2004 article in City newspaper, Inside Santa Clara, "Keep Grease out of Stormdrains" (resolutions) Spring 2004 article in City newspaper, Inside Santa Clara, "Keep Construction Debris Out of Storm Drain"	Mission City Scenes sent to approx. 45,000 residents. Timed for wet weather. Does help reduce number of blocked storm drains due to clogged leaves, debris, etc. Phone number for the Street Department is listed to provide additional information. Few calls are received. Inside Santa Clara sent to approx 49,000 residents and businesses.
Street Sweeping Leaf Vac Program	General	February utility bill insert, Mission City Scenes, article. Provided yearly. "Falling Leaves" article in September utility bill insert, Mission City Scenes	Approx. 49,000 residents. Provides residents with information on street sweeping schedule so they are able to remove cars from the street on street sweeping days. Compliance and phone calls to the Street Department are increased after article appears.

CITY OF SANTA CLARA URBAN RUNOFF POLLUTION PREVENTION PROGRAM
FY 2004-05 ANNUAL REPORT

PIP ACTIVITY TABLE			
PI/P Activity	**Type of Outreach**	**Level of Implementation (Description/Dates)**	**Evaluation of Effectiveness**
Camellia Show	General / Educational	Advertised in January utility bill insert, Mission City Scenes February 26th & 27th, 2005	Approx. 300 attended. Article in Utility insert. Brochures "Grow It, Pests, Pool, Home Maintenance" distributed at show. Audience shows interest in the above BMPs –good match of PIP activity and information provided.
City Clean-Up Campaign	General / Educational	April 4, 2005 – April 29, 2005 Spring 2004 article in City newspaper, Inside Santa Clara Program Outreach Information (POI)): Distributed info regarding proper disposal & alternative uses to pesticides & household cleaners.	Total of 9,376 tons gross weight collected with a significant amount of hazardous materials also collected. Very effective in terms of removing potential storm water pollution from the City and increasing awareness.
Free Disposal Days	General	September 19, 2004 January 9, 2005	Total of 654 residents participated in the September event, and 219 in January. Effective in terms of removing potential storm water pollution from the City. Very well received by residents.

CITY OF SANTA CLARA URBAN RUNOFF POLLUTION PREVENTION PROGRAM

N/A	General Activity	2004 URMP	Evaluate the effectiveness of PI/P Projects by direct or indirect means as appropriate.	Often difficult to find direct relationship. Effort is put into analyzing I/CD/IC/ID and other element data to find relationship, if any, of incidents versus outreach accomplished.	Ongoing	Street Dept.

CITY OF SANTA CLARA
SCHEDULED PIP EVENTS*

EVENT	DATE
Camellia Show	February 26 & 27, 2005
Citywide Clean Up Campaign	April 4 – 29, 2005
Art and Wine Festival	September 18 & 19, 2005
Free Disposal Days	September 19, 2004 & February 11, 2005
Arbor Day/Earth Day	April 15, 2005
Fish Derby	April 23, 2005
Household Hazardous Waste Events	Continuous (69 events for FY 2004-05)

***Each event has a purpose separate than PIP, however many of the events produce an outstanding opportunity for Staff to set up interactive games for children, a visual computer display for adults and to distribute BMPs.**

City of Santa Clara

FY 04- 05 Annual Report

Pesticide Management Activities

CITY OF SANTA CLARA
FY 2004-05 ANNUAL REPORT
PESTICIDE MANAGEMENT AND USE REPORT

The City of Santa Clara has adopted the major components of an Integrated Pesticide Management Program. These components have included prevention, pest and symptom identification, regular surveying for pests, action thresholds and guidelines and the sound application of cultural/mechanical/physical/biological/chemical controls. The City of Santa Clara Street Department employs full time, two Pest Control Advisors (PCA) and eleven qualified Applicator Certificate personnel. The Parks Department employs full time three Pest Control Advisors (PCA), one qualified Applicator License and 36 qualified Applicator Certificate personnel. Application of pesticides by these individuals is regulated by the Department of Pesticide Regulation (DPR) and the State Agricultural Department. Chemical control is considered the last and least preferable method to control pests. When chemical control is required, the chemical with the least toxicity and potential to degrade storm water quality is always selected. Of the four toxicity categories defined, Danger I, Warning II, Caution III, and Caution IV, the City has typically limited its use to Caution III or Caution IV – the categories with the least toxicity.

Goal

Minimize pesticide use, particularly organophosphate pesticides, and reduce the amount of pesticides in storm water and landscape runoff to the maximum extend practicable.
These objectives apply equally to City of Santa Clara employees and contract personnel. Educate other pesticide users within the City about less toxic pest control methods and disposal requirements.

Results

Of the (34) major types of pesticides/herbicides used by the City, (12) had reduced quantities used in FY 04-05 as compared to FY 02-03. Reductions totaled approximately 8,139 ounces of material; gains in the other 9 types totaled 13,708 ounces with the balance (12) types having no change. Increases were to less toxic materials. The total

increase of material is estimated to be approximately 5,569 ounces. Dursban was again not used in FY 04-05.

"Reductions totaled approximately 8,139 ounces of material, gains in the other 9 types totaled 13,708 ounces with the balance (12) types having no change."

As noted in last year's report, weather plays a role in pesticide application. This year there was an increase in some herbicides but there was also a reduction in others whether they were herbicides or pesticides. Currently, Parkways & Boulevards is using up current pesticide inventory and will be replacing them with safer, more effective chemicals, if available.

License Status:

All employees who have applied herbicides in the past, but did not have a Qualified Applicators License (Q.A.C.), are currently testing for this license. In the past, those employees worked under a "Recommendation" from a Q.A.C. Employees with a Q.A.C. are required to attend continuing education classes and additional training to maintain their license.

Improved IPM Methods:

Toxic baits are currently not being used in heavy foot traffic areas. The Street Department is using traps. Gopher traps are scented with garlic as an attractant to the trap and rat traps are being baited with peanut butter. Trap sites are monitored daily and cleaned.

Overhead spraying of pesticides continues to be reduced by the use of soil injection. In this process, the affected shrubs or trees are injected at the base of plant instead of spraying over the top, limiting the controlled chemical to the targeted site. The Parkways & Boulevards and Tree Divisions are currently using this practice since 1996. In addition, soil injection and soil drenching have a longer affect on pest control. As a result, a significant reduction in spraying pesticides has been achieved.

"Soil injection and soil drenching have a longer affect on pest control. As a result, a significant reduction in spraying pesticides has been achieved."

For FY 2004-05, the Parkways & Boulevards Division used tighter matting mulches to prevent weeds. In addition, pre-emergence application was better timed resulting in the reduction of post-emergence herbicides. Drip Irrigation Systems replaced conventional Bobbler Systems at locations. Better irrigation management has resulted in the reduction of weeds and the potential of irrigation runoff into the storm drain.

The Parkways & Boulevards Division has been trained to recognize plants that have become infested with pests and to trim off infected areas as soon as possible. If pesticide treatment is reduced, the method of application has been through soil drenching, soil injection or fertilizing with fertilizers that contain systemic pesticides. These practices have reduced the need for overhead spraying and have kept the pesticide on site without the possibility of drift or run-off. For FY 2004-05, our inventory was reduced to safer

less toxic material (on-going). All landscape personnel are encouraged to participate by observation and contributing their thoughts and ideas to assist in better pesticide management.

The City of Santa Clara IPM Policy requires the following:

- The purchase of any pesticides/herbicides by staff is prohibited unless directed by a City Pest Control Adviser.

- A weekly storage and annual inventory is conducted to remove and dispose of any chemicals that are unwanted or that are prohibited from City use by the IPM policy. These chemicals will be disposed through the City's Hazardous Waste Program.

- Mulch is used to control weed growth.

- Drip systems installation is recommended to prevent water over spray that can promote weed growth.

- City staff, who manage pest problems and who apply pesticides as a part of their job, must be trained according to Department of Pesticide Regulation requirements.

- All City staff who apply pesticides will maintain pest management and pesticide application records using the Daily Use and Monthly City Pesticide Use Record. Contractors are required to send copies of Monthly Contractor Pesticide Use Record detailing their use. Detailed records will be maintained by each Division using pesticides and kept with that Division. All records will be made available to the public upon request.

- By July 1 of each year, the Annual Pesticide Report for the preceding calendar year shall be made available to interested members of the public. A list of interested persons shall be maintained.

- Training will be provided by staff who apply, prescribe, or supervise pesticide application. Training will include: DPR pesticide training requirements as outlined in the California Code of Regulations Title 3, Division 6 for pesticide applicators and advisors. Annual IPM training for all staff who apply any pesticides on the job.

- Submit California State Monthly Summery Pesticide Use reports to County Agricultural Department.

See attached table titled "Fiscal Year 2004/05 IPM Pesticide Usage" and "01/02, 02/03, 03/04 and 04/05 Pesticide Usage Comparison"

*** = Training specific to IPM**
**** = State mandated training**

General Comment:

All PAPA seminars are mandated by D.P.R. in order for employees to maintain their Q.A.C. . These classes contain continued education hours and provide IPM training as well. Information in the use of mulches, foam solutions made of sugar extract from coconut and corn for weed control, new pesticide products that provide lower risks and less residual build up are also introduced.

The County of Santa Clara IPM Program was developed to assist public agencies, private industry and anyone concerned with pesticide usage on a countywide level. Discussions on different methods of pesticide use and reduction are discussed to reach a common goal. These classes are voluntary by those attending.

FY 04- 05 Annual Report

Mercury/Copper/Nickel Pollution Prevention Activities

CITY OF SANTA CLARA
FY 2004-05 ANNUAL REPORT
MERCURY/COPPER/NICKEL POLLUTION PREVTION ACTIVITIES

In the 2004 URMP update, the Mercury Reduction and Copper/Nickel Reduction Activities were combined into one element. The City of Santa Clara has a program to replace mercury-containing products on an ongoing basis. The City Building Department routinely replaces, as needed due to burnout, mercury-containing lights tubes with low mercury and no mercury light tubes. As the mercury containing light tubes fail, the Building Department replaces the tubes and failed tubes are brought to the Street Corporation Yard's hazardous materials storage bins located at 1700 Walsh Avenue. The used tubes are collected by a licensed recycling vendor. Failed mercury switches, thermostats, and other mercury-containing products are also held at the Street Corporation Yard hazardous material storage bins and recycled by a licensed vendor.

Mercury containing thermostats/switches that are in operation, are utilized indoors and have little or no potential of getting into the storm system. When replacements of these types of parts are needed, a priority to mercury free products is maintained.

The City participates with the countywide Hazardous Materials Collection events. The following pie chart is a breakdown of mercury-containing products collected:

Mercury Containing Products Collected April 2005
(Identified by the type and quantity.)

CITY OF SANTA CLARA
FY 2005-05 ANNUAL REPORT
MERCURY/COPPER/NICKEL POLLUTION PREVENTION ACTIVITIES

Copper

The City of Santa Clara has in previous workplans aggressively inspected automotive facilities and metal plating facilities. This occurred in FY 2001-02 & FY 2002-03 for automotive and FY 2002-03 & FY 2004-05 for metal plating. These facilities are inspected once every two years due to their SIC code but inspection frequency are accelerated if repetitive violations are found. As a result, outreach to these types of facilities has been thorough and well documented. Our street sweeping program mandates bi-weekly sweeping of all residential streets and twice monthly of industrial streets. Use of architectural copper is discouraged and is being eliminated from design in new public buildings.

Nickel

The City of Santa Clara, through our construction inspection element, has documented construction best management practices activity within the City for many years. In FY 2004-05 twenty-seven construction inspections occurred on ten sites. Inspectors also conducted four hundred fifty five windshield inspections of all construction sites. Emphasis has been on preventing storm water pollution at the source.

Trash Inventory and Management

CITY OF SANTA CLARA
FY 2004-05 ANNUAL REPORT
TRASH INVENTORY AND MANAGEMENT

In the City of Santa Clara the NPS inspector and/or Storm Drain Foreperson and/or Solid Waste Foreperson respond to trash complaints. Initial response, depending on the nature of the event, may be responded to by other City personnel.

A trash "hot spot" list was generated based on the data received from complaints and catch basin cleaning crew findings. A survey was conducted using the KAB litter index and documented on a spreadsheet. This information is updated every year. Locations that appear on our "hot spot" list on more than one occasion receive further investigation to find a source of the litter. Facilities that can be found responsible for the trash receive a violation notice for a first offence, pre-citation notice for the second, and administrative citation for the third. Regardless of the source, trash is typically picked up within one week or sooner depending on the potential to enter the storm drain.

Attached is the table of the City's trash "hot spots" relative to the watershed affected if the trash entered the storm drain system.

Santa Clara (City)

Calabazas Creek							
ID #	**Date**	**Location of Trash Problem Areas**	**Assessment Tool**	**Score**	**Trash Sources**	**Evaluation Results**	**Comments**
SC01	4/14/2005	French Street at Agate	KAB	2	Illegal dumping – not in waterway (likely from the residents in the adjacent apartments during move outs)	Area has been fenced off. Some trash and litter is still dumped in adjacent cul-de-sac.	Illegal dumping of furniture and trash. Trash seems to be coming from Lawrence Expressway and nearby area.
SC10	4/14/2005	Pomeroy Avenue between Calabazas and Benton Street	KAB	1.75	Illegal dumping-not in water way (during the clean-up campaign)	Will continue to inspect and compare previous scores to determine if location can be removed from list.	Some litter found.
SC11	4/14/2005	3700 El Camino Real	KAB	3	Litter (nearby stores)	Stores may be the trash source. Will conduct another inspection to verify. If true, BMP materials will be handed out to each store in the area.	Paper from nearby stores.

Guadalupe River							
ID #	**Date**	**Location of Trash Problem Areas**	**Assessment Tool**	**Score**	**Trash Sources**	**Evaluation Results**	**Comments**
SC04	4/14/2005	Bellomy Street, Lafayette Street, Washington Street, and Alviso Street by Santa Clara University.	KAB	1	Santa Clara University students littering - over filled garbage containers.	Will continue to inspect and compare previous scores to determine if location can be removed from list.	Little to no litter found.
SC12	4/14/2005	Clyde/Haig/Lafayette	KAB	2.5	Litter (surrounding apartments)	Trash from surrounding apartments. If area is not clean by next inspection, BMPs will be given to apartment owners.	Paper and trash throughout entire area.
SC13	4/14/2005	4767 Lafayette	KAB	3.25	Litter (stores and possible homeless encampment)	Continue to inspect area and determine litter source. If litter source is nearby stores, BMPs will be given to owners. Possible homeless encampment.	Excessive amounts of paper and litter is accumulating in back of property.
SC14	4/14/2005	Lafayette/Yerba Buena	KAB	3	Litter (motorists)	Continue to inspect area. Caltrans right of way. Will contact Caltrans if the problem continues.	Trash may be coming from Highway 237.
SC15	4/14/2005	Martin/De La Cruz	KAB	2.75	Unknown	Will continue to inspect and find trash source.	Litter throughout area.

San Tomas Aquino Creek							
ID #	**Date**	**Location of Trash Problem Areas**	**Assessment Tool**	**Score**	**Trash Sources**	**Evaluation Results**	**Comments**
SC16	4/14/2005	Bowe Ave	KAB	3.75	Litter (nearby stores)	Stores may be the trash source. Will conduct another inspection to verify. If true, BMP materials will be handed out to each store in the area.	Paper from nearby stores.
SC17	4/14/2005	Bellomy in front of 1995 Bellomy	KAB	1.5	Some litter (may be coming from auto shop.)	Will continue to inspect and compare previous scores to determine if location can be removed from list.	Little to no litter found.
SC18	4/14/2005	583 Saratoga	KAB	1.5	Litter (nearby businesses)	Will continue to inspect and compare previous scores to determine if location can be removed from list.	Little to no litter found.

SC19	4/14/2005	Martin/Richard	KAB	1.25	Litter (may be coming from catering trucks.)	Will continue to inspect and compare previous scores to determine if location can be removed from list.	Small amount of litter was found.

N/A	General Activity	Trash Ad Hoc Work Group	Trash hot spots are generated from complaints, cleaning crew findings, and prior lists. A KAB litter survey is conducted, a source is identified and enforcement action is taken. "Hot Spots" which have a low KAB score from FY to FY will be removed from the list.	KAB litter surveys were implemented in April 2005. A full year of tracking will be useful in determining the effectiveness of this program.	Ongoing	Street Dept./ Solid Waste

City of Santa Clara

FY 04- 05 Annual Report

Staff Training Summary Table

CITY OF SANTA CLARA
FY 2004-05 ANNUAL REPORT
STAFF TRAINING EVALUATION

Participation

This year the City of Santa Clara has made an effort to increase the number of employees who attend training that highlights stormwater pollution prevention. This year a total of 40 employees attended various seminars and classes, with 35% attending more than two events, 8% attending three events and an additional 8 % attending four or more classes. The number of employees attending multiple seminars/classes has increased from last year, but the total number of attendees is down. This should not indicate that the City is relaxing its training efforts. Many staff continue to be informally educated and, with the assistance of EOA, Inc., trained in house (Planning C.3. Provisions).

Evaluation

Evaluating the effectiveness of staff training is at best subjective. The approach of the City is to provide training in a timely, focused manner. Participation rates may not indicate that the training is being received at the right time by the right individual. To this end, management within each City department responsible for stormwater pollution prevention is expected to support their employee training. In this regard the City is effective in training.

Mr. Bruce Wolfe
Regional Water Quality Control Board
San Francisco Bay Region
1515 Clay St., Suite 1400
Oakland, CA 94612

Subject: West Valley Community Specific Urban Runoff Management Program
FY 2004-2005 Annual Report

Dear Mr. Wolfe:

This report is submitted by the West Valley Cities of Campbell, Monte Sereno, Saratoga, and the Town of Los Gatos, in conjunction with the Santa Clara Valley Urban Runoff Pollution Prevention Program's Annual Report, pursuant to provision C.6.a. of the Program's reissued municipal storm water NPDES Permit (Order No. 01-024). The report summarizes activities performed during FY 2004-2005 in accordance with the West Valley Communities' Urban Runoff Management Plan (URMP) submitted to the Regional Board on September 1, 2004 and the performance standards contained therein.

Contents of Report

The goals of this Annual Report are to: 1) concisely document implementation of our URMP and FY 04-05 work plan during the past fiscal year; 2) evaluate program results for continuous improvement; 3) comply with permit requirements; and 4) share this information with other Co-permittees, municipal decision-makers, and the public. To accomplish these goals, the report contains the following sections:

Table of Contents
Cover Letter
Certification Statements
List of Acronyms

Program Elements:

1. IC/ID Elimination Activities
2. Industrial / Commercial Discharger Control Program
3. Public Agency Activities
    - Storm Drain O & M
    - Corporation Yards & Street Sweeping

- Rural Public Works

4. New Development: Planning Procedures
5. Construction Inspection
6. Public Information & Participation
7. Pesticide Management Activities
8. Mercury Pollution Prevention Activities
9. Copper Action Plan / Nickel Action Plan
10. Trash Inventory & Management
11. Water Quality Monitoring & Permit Re-application

No comments regarding the West Valley Communities FY03-04 Annual Report require a response, as listed in the San Francisco Bay Regional Water Quality Control Board letter to Mr. Dave Chesterman dated April 8, 2005.

Program Highlights and Accomplishments

During FY04-05, the West Valley Communities of Campbell, Los Gatos, Monte Sereno, and Saratoga continued efforts to implement their URMPs to the maximum extent practicable. The activities that were implemented for each element of each Community's URMP are described in Chapter 14 of the Santa Clara Valley Urban Runoff Pollution Prevention Program's URMP. Highlights of the West Valley Communities accomplishments in various program elements are described below.

Industrial/Commercial Discharger Control Program. During FY04-05, the three West Valley Communities of Campbell, Los Gatos, and Saratoga continued to implement their Industrial/Commercial Inspection Program. The goal is that all identified facilities will be inspected each year. The City of Monte Sereno has no industrial or commercial facilities operating within the City and therefore does not participate in this activity. In Campbell, 285 of 311 facilities were inspected (92%), 104 of 113 facilities were inspected (92%) in Los Gatos, and 8 out of 8 facilities in Saratoga were inspected (100%). Inspection reports by facility type and noted violations are included in the IND section of the Program Annual Report. Discharge violations decreased slightly over the past year from 25 to 20 facilities. Of the 20 violations, 13 were auto repair facilities. The West Valley Clean Water Program began a pilot program to target auto repair facilities during FY 01-02 with additional inspections and education. The pilot inspection program was instrumental in getting two automotive facilities to install car wash waste water capture systems. Each facility is given an initial on-site inspection with multiple drive-by inspections. All facilities inspected were in compliance by the end of the fiscal year. This is once more a testament to the benefits of increased scrutiny and education. Due to the success of this targeted outreach to and inspection of auto repair facilities, the pilot was adopted permanently as the West Valley Auto Shop Inspection Program. The procedures and accomplishments were shared with co-permittees in a presentation given by the West Valley Inspector at SCVURPPP's Industrial & Commercial Inspector training on April 5, 2005.

Public Information/Participation Program. In FY 04-05, the West Valley Clean Water Program continued to expand its quest for effective public education and outreach. WVCWP pursued media coverage on six topics: safe disposal of mercury-containing products, household hazardous waste, copper pollution prevention, creek clean-up events, trash cleanup and monitoring by students, a student's science project and his campaign to keep residential pollutants (pesticides and copper) out of the storm drain. Six stories were covered by local community newspapers in FY04-05, including a Saratoga News cover story about local students cleaning up and monitoring trash. The WVCWP was advertised on national television on 10-7-04. CNN interviewed David Marash-Whitman, a student who found the West Valley Clean Water Program via its website. David, at age 12, worked with WVCWP to determine the scope of his award-winning science project, "Ecotoxicology of Stormwater Pollution in our Aquatic Communities." David was chosen as one of top 40 Young Scientists and traveled to Washington D.C. to compete in Discovery Channel's "Challenge". David continues volunteer for the West Valley Clean Water Program and will be mentioned again in the annual report for FY05-06. WVCWP has been pleased to receive extensive media coverage in these stories, which would be beyond its budget scope if purchased as advertising space.

In FY 04-05 a new *Mercury* page was uploaded to *Cleancreeks.org*, two creek cleanup events were advertised on the Home page and new links were added to the *Links* page. A few months into FY 03-04, the West Valley Clean Water Program changed its website host in order to optimize tracking ability for the web site, www.cleancreeks.org. In the twenty-one month period ending on June 30th 2005, visitors averaged about 141 views per month totaling 2,962 Web Page views. This was a substantial increase from the website's 30 hits during its first month of operation.

The West Valley Clean Water Program strives to maximize student involvement at every opportunity. Staff developed a script incorporating fresh messages on pesticides, copper, mercury and trash for its new Coastal Enviroscape and revised the script for the Uplands & Wetlands Enviroscape model. Offering a second Enviroscape station allows West Valley Clean Water staff to teach 20 students every 25 minutes, rather than 10 students. The two fifth grade classes who tried this requested the same presentations for next year. The second Enviroscape allowss staff to elaborate on topics that would initiate changes in behavior. Messages apparently stuck with the students: while participating at a soil infiltration station, a student told the science docent not to empty the waste water near the storm drain.

Illicit Connection and Illegal Dumping Elimination Activities. The IC/ID program is working phenomenally well for all four West Valley Communities. The inspector not only responded to 82 discharge incidents over the year (see the IC/ID section for the number and types of incidences), but conducted 105 proactive and follow-up inspections. Each of these inspection opportunities adds to the business community's knowledge of storm water pollution and prevention issues. As part of the inspection process, the inspector distributes appropriate educational materials. Significantly, the West Valley Clean Water Program's Stormwater Inspector provided 790 brochures and other educational materials to industrial and commercial facilities in FY04-05.

C.3 Implementation. In July and August, 2004 the West Valley Clean Water Program updated all sections of each municipal URMP. A consultant met with staff in each city to review any remaining challenges with C.3 implementation. This year the cities each made progress in preparing for upcoming requirements such as HMP and Group 2 deadlines. In fact, the cities were each prepared to implement requirements on all tiers of Group 2 projects by April 15, 2005.

Pesticide Activities. The most realistic way to implement pesticide management is to provide meaningful training to municipal staff and the public. The WVCWP, in FY03-04 and FY 04-05 utilized significant staff time and resources to offer in-depth, hands-on workshops on specific pests and beneficial predators. WVCWP staff researched speakers, selecting presenters who could offer the optimum learning experience. In FY03-04 more than twenty attendees participated and gave positive feedback. In FY 04-05, thirty-seven municipal staff and stakeholders, such as school district personnel, golf course superintendents and pest control contractors attended; 15 earned Continuing Education Credits at the workshop.

Each of the four municipalities adopted two new Integrated Pest Management plans, one on armored scales and one on soft scales. Additionally, the West Valley Clean Water Program and the Program collaborated on events with a former partner, *Summer Winds Garden Center* in Campbell and began to promote a partnership with *Orchard Supply Hardware,* bordering Saratoga and Campbell. Customers were enthusiastic about IPM samples and materials handed out by WVCWP staff at the OSH "Tax-Free Day" events. The store responded positively to these efforts, which complement their goal of personalized customer service.

Continuous Improvement Activities

Public Information/Participation. The West Valley Clean Water Program received feedback from schools indicating that teachers are inundated with paper promotional products. At the end of FY 04-05 the WVCWP produced a CD/DVD music video/slide show of volunteers, especially featuring students, at local creek cleanup and trash monitoring events. The CD was dubbed with music, including the words: "With my own two hands I can change the world." While WVCWP has not obtained permission to use the music or all of the photos at this point, the CD has already entertained a few students and teachers. Schools will continue to be a primary focus of the West Valley Clean Water Program's outreach efforts over the coming year. In FY 05-06 The West Valley Clean Water Program will enhance its relationship with school teachers, principals and students to involve more participation in trash monitoring and school cleanup events.

Staff Training. The West Valley Communities place a strong emphasis on training. The Annual Reports reflect this with numerous references to the Staff Training Summaries; these Summaries are located at the end of each Element section in the Annual Reports. In FY 05-06 training will be expanded by use of a video camera to tape various trainings, so that additional staff can later receive the same information.

In July and August, 2004 the West Valley Clean Water Program updated all sections of each municipal URMP. In the Streets Maintenance and Storm Drain Maintenance sections, at least two continuing improvement items were identified: efficient training on community-specific storm water BMPs was needed for <u>all</u> maintenance staff. WVCWP held two round-table trainings in January 2005 and in June 2005, where a consultant provided presentations on streets, parks, and rural public works BMPs that were applicable to the West Valley Communities.

By Agreement, storm drain maintenance for the West Valley Communities has been handled by the West Valley Sanitation District since the late 1990s. In the course of updating the URMPs some potential gaps were identified due to an assumed understanding of the Agreement. All staff agreed that they wanted an opportunity to clarify the roles of each signatory to the Agreement. In June 2005, the West Valley Clean Water Program offered a forum for this discussion as part of the annual Storm Drain Supervisor's meeting. A consultant gave a slide show on BMPs for storm drain maintenance and for rural public works, and facilitated a discussion of the Agreement that left everyone on the same page as far as understanding the terms. The West Valley Clean Water Program will continue to prioritize better communication between WVCWP staff and municipal staff and to host effective workshops that are convenient for staff to attend.

Thank you for your review of this Annual Report. If you have any questions regarding the materials submitted, please contact me at 408.354.4734.

Very truly yours,

Cheryl C. Donnelly

ILLICIT CONNECTION & ILLEGAL DUMPING ELIMINATION ACTIVITIES

FY 2004-2005 Work Plan Self Evaluation Matrix

Source	Work Plan Activity	Work Plan Tasks	Accomplishments	Responsible Party
Update Perf. Standard	ICID Performance Standards	Work with Program staff to update Performance Standards, via Ad hoc task group & Management Committee participation. As available, review and provide comments on the applicability of the updated performance standards.	Saratoga and WVCWP staff updated the IC/ID PS in the City's URMP (Sept 2004). The City's Associate Engineer attended a training discussion, led by the WVCWP Manager, to review the completed revisions to the IC/ID PS on 2-8-05.	SCVURPPP, WVCWP Inspector & WVCWP Manager Municipality to assist
URMP	Response Program	Continue implementation of response program	During FY 04-05, the WVCWP inspector responded to 11 reports of potential or actual stormwater violations in the City of Saratoga. He also revisited 1 former residential construction site that had been a problem and found it to be in compliance. Potential incidents are reported to WVCWP by SCC Fire Dept, the SCV Water District, and SCC DEHS, citizens, and WVCWP or Municipal staff.	WV Inspector
Work Plan	Enhanced Reporting	Report on incidents using expanded categories consistent with SCVURPPP Program. Document follow-through to point of resolution or referral for enforcement action (penalty or fine).	FY 04-05 is the first year that the WVCWP Inspector has kept 2 databases for inspections. When the WVCWP Inspector first started in FY 01-02, he responded to incident reports. Over the next two years he piloted and then implemented two proactive inspection programs, the Restaurant Inspection Program and the Vehicle Shop Inspection Program. With the broadened number and type of inspections, the SCVURPPP Program found it necessary to separate the WVCWP's data in the existing IC/ID database (FY 03-04) into two databases (FY 04-05). 1. The IC/ID database contains reported incidents or incidents noted by the Inspector during his daily drive-bys.	WV Inspector

			2. The IND database consists of incidents that are discovered as a result of the Inspector's pro-active inspections related to his Restaurant Program or his Vehicle Body Shop Program.	
CI Item	Restaurant Inspection Program	Continue implementation of inspection program, targeting medium to large-scale restaurants as per FY 03 - 04 Annual Report. *Medium to large-scale* is defined as, restaurants with 6 or more employees and/or restaurants that routinely handle large quantities of grease.	In order to keep reporting data consistent with the other Co-permittees Program-wide, procedural revisions were made to data reporting for WVCWP's Restaurant Inspection Program. Pro-active restaurant inspections are now considered an IND task and are reported in the IND / Commercial Inspection section of Saratoga's report.	WV Inspector
CI Item	Auto Shop Inspection Program	The West Valley Clean Water Program will continue expansion of the auto body pilot targeting auto repair facilities in the West Valley area and providing additional inspection and education on storm water issues.	In order to keep reporting data consistent with the other Co-permittees Program-wide, procedural revisions were made to data reporting for WVCWP's Vehicle Shop Inspection Program. Pro-active vehicle shop inspections are now considered an IND task and are reported in the IND / Commercial Inspection section of Saratoga's report.	WV Inspector
URMP	Education	Distribute BMP materials during routine inspections. Distribute follow up education information for businesses cited for potential stormwater violations.	During FY 04-05, the WVCWP Inspector distributed ninety-eight (98) IC/ID and IND brochures and fact sheets in Saratoga, as part of his outreach and education program. The Fire Dept hands out a stormwater compliance packet to new commercial /industrial business owners or management.	SCC Fire and WVCWP Inspector
Work Plan comments RWQCB	Staff Training	WVCWP Inspector to conduct round table training & evaluation meetings with City staff.	The Inspector has started conducting informal round table meetings with municipal public works and building inspectors. In Los Gatos we have seen a big improvement in coordination between staff resulting in timely inspections and reporting. Saratoga's Associate Engineer participated in WV training meetings on 2-8-05 and 4-26-05 where the Inspector discussed a positive break-through (car wash kit being used by citizens) and a review of the IC/ID inspection	Public Works Analyst; Building Official; WV Inspector to co-ord

			program. At the end of FY 04-05 the Inspector made tentative plans to meet with Saratoga Building Official about coordinating inspection efforts between the City and the WVCWP.	

Saratoga Illegal Connection/ Illegal Dumping Incidents

Type of Incident 04-05	Incident Source	General Location	Report Source	Follow-up Action
• 1 Saw Cut Slurry • 2 Tracking Soil • 1 Concrete Residue • 1 Vehicle and Equipment Leaking • 5 Pools/Spas/Fountains • 1 Unhardened Cement **Total 11 for FY 04-05**	• 5 Construction Site • 6 Residential	• 3 Commercial • 8 Residential	• 5 Interdepartmental • 2 Other Agency • 4 Citizen Complaint	• 5 Educational • 3 Verbal Notice • 3 Written Notice One Follow-up from 03-04 • 1 Resolved Incident Status • 12 Resolved

IC/ID Program Evaluation

Implementation of IC/ID Performance Standards

WVCWP further implemented enhanced reporting standards by splitting the IC/ID database into two separate databases. The IC/ID database contains reported incidents or incidents noted by the Inspector during his daily drive-bys. The IND database consists of incidents that are discovered as a result of the Inspector's pro-active inspections related to his Restaurant Program or his Vehicle Body Shop Program.

IC/ID Evaluation Of Trends

The recent separation of IC/ID and IND data makes it difficult to comment on trends over the past 2 years. Out of eleven (11) reported incidents in Saratoga during FY 04-05, five (5) *Pool & Spa Discharges* accounted for the most common incident type, compared to four (4) *Pool & Spa Discharges* out of a total of twenty (20) incidents in FY 03-04.

Solution for Pool and Spa Discharges in Saratoga

The WVCWP Inspector responded to pool water discharge calls five times between August 24th and October 27th in 2004. The incidents were each similar. By the time the Inspector arrived at the site, no one was there and the discharge was stopped. Each time he responded to a pool water call, he would knock on the door but nobody would answer. Then he would distribute the WVCWP door hangers, "Dumping into Storm Drains is Illegal…and it has occurred in your neighborhood."

After checking the *Pool and Spa Water* box on the back of the door hanger , the Inspector would put it under door mats up and down the street. Saratoga has an ordinance against hanging door hangers in residential areas.

When he responded to the fourth pool water discharge call, the Inspector found a pool maintenance employee leaving the site. He issued an NTC (*Notice to Comply)* and noticed that the employee drove a truck from *Aqua Blu Pools*. Two weeks later the Inspector went out on another call and found a different pool maintenance employee driving a truck from the same pool maintenance company. The Inspector looked up the address for the company (in San Jose) and drove to the business office with about five Pool & Spa brochures. He told the Manager about the problem and that the City of Saratoga has staff on the watch for such incidents. The Manager agreed to deliver the brochures to the maintenance staff and tell them to use a sanitary sewer clean-out. Saratoga (predominately residential) will most likely continue to turn up more pool & spa discharges but after the Inspector's visit to the business office, there weren't any more reports of that type through the end of FY 04-05.

Evaluation of Predominant Incident Types :Four (4) construction site incidents were reported during FY 04-05 compared to eight (8) construction site incidents reported in FY 03-04. The data shows a 50% improvement in that incident source category. Finally, four (4) dumpster (food facility) violations were reported in the IND section of this report. This actually involves only 2 dumpsters because three restaurants share one dumpster. This represents little change from the three (3) food facility incidents reported in FY 03-04.

Note: The WVCWP Inspector's notes show that for several incidents *No Action* was listed as the enforcement action. There are three possible definitions for *No Action* in his records. 1) The Fired Dept or other agency reported the incident and took action, such as putting down absorbent; 2) the incident was corrected immediately and the Inspector provided some education or educational materials; or 3) *No Action* was taken because it was a *non-incident* or an *accident* where the person causing the problem was already informed. This also can account for referrals from other agencies being listed as *No Action;* The Fire Dept or other agency inspector gives a copy of the potentia*l violation notice* to the facility owner/ manager. When the WVCWP inspector arrives to conduct the follow up inspection, the owner has had time to complete cleanup or repairs to bring the facility into compliance.

Procedural Changes for Reporting

One half-time IC/ID Inspector serves the four West Valley communities. The inspector follows up on all reports of potential incidents, including ones observed during his routine drive-bys. His pro-active investigations of restaurants & vehicle shops may lead to further need for education or enforcement. SOPs are discussed and adjusted each year, usually right after compiling the Annual Report. During data evaluation it becomes obvious which changes are necessary.

It is important to have standardized categories, but it has resulted in some awkward reporting modifications (splitting the IC/ID incident data base) for WVCWP staff. Previously all WVCWP inspections were included in one table, making it easier to identify trends. In the West Valley some of the IND program is part of the IC/ID program. Some of the pro-active IND inspections lead to a discovery of a violation. Then the incident is processed in exactly the same way as an IC/ID incident. This creates likelihood for mislabeled data or duplicate reporting. WVCWP staff is working on clearer internal procedures for categorization.

WVCWP Pro-Active Vehicle Shop and Restaurant Inspections are reported in the IND section of this report.

SARATOGA

IC/ID Inspections Annual Report FY0405

Tracking Soil

#	ICID Date	Contact Name	Incident Address	Report Source	Incident Source	Incident Type	Enforcement Action	Notes - 1	Incident - Status	Follow-up Notes	Compliance Date
1	8/3/2004	Barry Swenson, Builder	Fruitvale, Saratoga	Interdepartmental	Construction Sites	Tracking soil	Verbal Notice	Dirt tracking on Fruitvale, between Hwy 9 and Allendale. Construction project on roadway. I spoke to a Mr. Rodriguez, Proj. Mgr. Street sweeper will be there today between 1:00 and 2:00 pm. Went by again next day, all AOK.	Incident - Resolved	All OK now.	03-Aug-04
2	3/18/2005	House under construction	12916 Pierce Rd., Saratoga	Other	Construction Sites	Tracking soil	No Action	Dirt tracking in roadway. Told them to put down rock where trucks enter and leave site. They complied right away.	Incident - Resolved	All OK now.	18-Mar-05

Discharge

#	ICID Date	Contact Name	Incident Address	Report Source	Incident Source	Incident Type	Enforcement Action	Notes - 1	Incident - Status	Follow-up Notes	Compliance Date
1	3/8/2005	Brian Sterling	11860 Brookglen Dr., Saratoga	Other	Residential	Un-hardened cement discharge	Verbal Notice	Contractor was washing morter into SD. Made him stop.	Incident - Resolved	All OK now.	08-Mar-05

Training Summary: Illegal Connections & Illegal Dumping

Training Description	Date	Attendees
IC/ID Training for Town of Los Gatos Presenter: WVCWP Stormwater Discharge Inspector **Topics:** • Chain of communication in case of violations found • Proper documentation of violations • Options for enforcement • Options for enforcement, continuing non-compliance • Educational materials available • Stormwater Inspector's role in education • Review of previous violators; need for follow-up • Change in contract with WVSD	**July 1, 2004**	**Los Gatos (5)** Senior Engineering Inspector Engineering Inspector Senior Engineering Technician Senior Civil Engineer Code Compliance Officer
NPDES – IC/ID Training for Town of Los Gatos Presenter: WVCWP Stormwater Discharge Inspector **Topics:** • NPDES Stormwater Discharge Permit • C.3 Requirements • Handling C.3 Requirements (i.e. Conditions of Approval, BMP selection matrix, etc.) • CEQA Review • Construction Requirements (NOI, SWPPP, etc.) • Discharge from Existing Uses (Town Code, Problem areas, Restaurants, Auto-related) • Handling Problems – Education, Enforcement • Improving Problem Handling – WVCWP outreach, Work with problem businesses, Revise Town Code	**Oct. 18 , 2004**	**WVCWP Inspector met with Los Gatos (6)** Town Manager Town Attorney Director of Parks & Public Works Town Engineer Senior Engineering Inspector Senior Engineering Technician

Training Summary: Illegal Connections & Illegal Dumping

Training Description	Date	Attendees
IC/ID Training for Town of Los Gatos Presenter: WVCWP Stormwater Discharge Inspector **Topics:** • Handling Problem Sites: • Construction • Car Wash • Ensuring Compliance	**Oct. 19, 2004**	**WVCWP Inspector met with Los Gatos (2)** Senior Engineering Inspector Senior Engineering Technician
Lawyers, Gunk & Money: Proving it in Court Sponsor: CWEA Speaker: John Fioretta, Santa Clara County District Attorney **Topics:** Environmental Offenses Enforcement Role of Regulator & Prosecutor Environmental Offenses Investigation Initial Case Assessment Evidence Collection Who to Contact	**March 1, 2005**	**WVCWP (2)** Program Manager, Program Assistant **Campbell (1)** Senior Civil Engineer
IC/ID & the new Administrative Citation Ordinance for Town of Los Gatos Speaker: Lance Baer, JD **Topics:** • Review of new Ordinance in relation to Stormwater Discharge violations • Citing grading violators • Citing Stormwater discharge violators	**May 10, 2005**	**Los Gatos (6)** Police Sergeant Police Lieutenant Code Compliance Officer Senior Building Inspector Senior Engineering Inspector Senior Engineering Technician

INDUSTRIAL/COMMERCIAL DISCHARGER CONTROL PROGRAMS

FY 2004-2005 Work Plan Self Evaluation Matrix

Source	Work Plan Activity	Work Plan Tasks	FY 04-05 Accomplishments	Responsible Party
URMP Perf Stds	Commercial/ Industrial Performance Standards	Work with Program staff to revise/ implement the Performance Standards, via Ad hoc task group & Management Committee participation. As available, review and provide comments on the applicability of the new performance standards.	Saratoga has implemented the Program's model Revised IND Performance Standard. Saratoga's Associate Engineer attended a discussion led by the WVCWP Manager on the newly approved IND PS at the WVCWP meeting on March 8, 2005.	SCVURPPP; WVCWP Manager and Inspector; and Inspectors from SCC Fire Dept
URMP	DEH Inspections of Retail Food Facilities	Continue joint inspection program w/ DEH. Approximate number of *food handling* facilities in Saratoga is 103. All facilities will be inspected at a minimum once per year. WVCWP Discharge Inspector will conduct follow-up and distribute BMP materials as needed per DEH referrals. Continue to evaluate data management and reporting for desirable improvements or updates.	In FY04-05, 103 food-handling facilities were inspected at least once in the City of Saratoga by the SCC DEH. Saratoga's Farmer's Market Stalls accounted for eighteen (18) of these inspections and all were found to be in compliance. See Evaluation section DEH provides additional inspections at most food service locations on a pro-active basis. During FY 04-05 the number of DEH food facility inspections and re-inspections totaled 198 in Saratoga.	Insp'ns conducted by SCC DEH; Annual Mtg co-ord by WVCWP.
Work Plan comments RWQCB	Food Facility Inspection Training & Evaluation	Conduct annual joint meeting/training w/ Cupertino & SCC DEH to evaluate program and confirm distribution of materials. Annual meeting per agreement; typically scheduled for Spring each yr.	The Annual training took place at the WVCWP office on April 27, 2005. The inspection packet letter and BMP checklist were updated at this meeting to give to restaurant owners and managers. See Evaluation section.	WVCWP to co-ord. w/ Cupertino, DEH and County of SC
CI Item	WVCWP Restaurant Inspection Program	Continue implementation of inspection program, targeting medium to large-scale restaurants. *Medium to large-scale* is defined as, restaurants with 6 or more employees and/or restaurants that	This task was originally part of the WVCWP IC/ID Inspector's Restaurant Pilot and was reported in the IC/ID section of Campbell's FY03-04 Annual Report. In FY 04-05 the WVCWP Inspector visited 4 restaurants in	WV Inspector

		routinely handle large quantities of grease.	the City of Saratoga; three of these facilities were inspected three different times. All four restaurants are now clean and in compliance. Odor is gone, which shows improved dumpster conditions and better grease containment. The West Valley Inspector's Restaurant Inspection Program accounted for a total of 10 pro-active inspections in Saratoga during FY04-05.	
URMP	Fire Dept Inspections of Designated Facilities	By Agreement with Fire Dept, continue joint inspection program. Number of identified commercial Industrial facilities in Campbell is 311. The inspection frequency goal for FY04-05 is 100%. The total number of facilities by business category inspected in FY04-05 will be included in the annual report.	In the City of Saratoga eight (8) commercial facilities were inspected by the Fire Dept, meeting 100% of the inspection goal. Saratoga does not have any Industrial sites in the City. Of the 8 facilities inspected all are active. The Fire Dept referred one (1) potential carwash violation to the WVCWP Inspector. The follow-up inspection will be reported in FY04-05, the year it took place. See Evaluation section.	Insp'ns conducted by SCC Fire
Work Plan comments RWQCB	Fire Dept Inspector Training and WVCWP/ Fire Dept Meeting & Evaluation	SCC Fire to conduct annual industrial, commercial inspection training of inspectors. WVCWP to arrange joint meeting/training w/ SCC Fire to evaluate inspection reporting and confirm distribution of materials.	The WVCWP Manager and Inspector attended the SCVURPPP Workshop, "*Conducting Stormwater Inspections of Industrial and Commercial Facilities",* which was held in Cupertino on April 5, 2005. The Fire Dept's Sr Haz Mat Specialist, who administers the inspection Agreement between the Fire Dept and the WV cities and provides training to inspectors, attended this training with two Haz Mat specialists. The Fire Dept's annual staff training was provided to their inspectors during June, 2005. The Inspectors noted that they have plenty of handout materials; most businesses have received all of the educational material during prior inspections. See evaluation below.	Annual Mtg arranged by WVCWP Manager and WVCWP Inspector w/ Sr. Haz Mat Specialist
CI Item	WVCWP Vehicle Shop Inspection Program	The West Valley Clean Water Program will continue expansion of the Vehicle Shop Inspection Program, targeting auto repair facilities in the West Valley area and providing additional inspection and education on storm water issues.	The WVCWP Inspector did not re-inspect any automotive facilities in Saratoga during FY04-05, but will report an inspection (in early FY05-06) for *Classic Car Wash* on Prospect Avenue, Saratoga. There are only 4 automotive facilities in Saratoga; including two gas stations, one tire retail shop and one carwash. The Fire Dept inspects these sites annually. The WVCWP's half-time Inspector (during	WV Inspector

			FY03-04) was successful in encouraging *Classic Car Wash* in Saratoga to purchase a wastewater capture system to bring the facility into compliance. Per a Fire Dept referral, the site will need to be re-inspected regarding inadequate secondary containment. The WVCWP's half-time Inspector spent several days and weekends during FY 04-05, promoting and facilitating the use of the *WVCWP's Car Wash Kit* at local school and non-profit fundraisers (See Copper section of this report).	
2001 Perform. Review	NOI Filers	Provide updated list of NOI Filers to SCC Fire.	The list of NOIs was sent electronically to the Fire Dept on 7-30-2004. Of the two (2) sites listed in Saratoga, both were wineries; one is in the County's unincorporated area; and the other is on a private restaurant and is not inspected by the Fire Dept. However, there have been no new industrial NOIs added to the list since 2001.	WVCWP Inspector

Industrial/Commercial Program Evaluation

Dept of Env Health Consumer Protection Division Inspections

It is important to note that DEH Inspectors look at all facilities that handle food. While gas station snack bars, *See's* Candy stores and video rental stores are not necessarily where we will find most stormwater violations, it does provide a helpful broad-ranged first look at commercial facilities. In Saratoga, Farmer's Market stalls accounted for 18 of DEH's food facility inspections.

Annual Food Facility Inspection Training Meeting

Alternately each year, the objective of this meeting is 1) to train and get feedback from DEH inspectors or 2) for inspection program administrators to review and adjust procedures as necessary. In FY04-05, two of DEH Consumer Protection Division's Supervising Health Specialists, Cupertino's Environmental Programs Manager, the County of SC's NPS Coordinator, the WVCWP Manager, the WVCWP Inspector, and the Director of Operations from the WV Sanitation District (WVSD), participated in a very productive meeting. Peter Sevcik, of the WVSD, initiated a discussion on the District's Fats, Oils, and Grease (FOG) Program. During a round table discussion participants suggested ways to incorporate FOG objectives into existing restaurant inspections. It was generally agreed that inspectors could, at a minimum, ask restaurants for grease trap cleaning records. Based on the records being readily available or not, the inspectors could refer a food facility to the municipal inspector for follow-up. In the West Valley this referral would go to the WVCWP Inspector. The WVCWP Inspector met with Sanitation District staff following the DEH meeting to gain more background information on implementing the FOG Program.

Other topics and action items at this meeting included

- updating the introductory letter and BMP check list for restaurant owners;
- a review of inspection procedures with discussion on glitches in the system and possible resolutions;
- a review of the effectiveness of outreach & educational handouts and the inclusion of pesticide reduction fact sheets specifically for restaurants,
- a discussion on training needs for inspectors in FY05-06,
- updated contact information.

As a result of this meeting, DEH, Consumer Protection Division's Supervising Health Specialist agreed to implement revised annual reporting procedures to

ensure accurate tracking and follow-up for potential and actual violations. This implementation will strengthen coordination between DEH and municipal staff.

The Inspection Program for West Valley Communities continues to run more efficiently each year. The key reasons for this are believed to be 1) increased communication with other agency staff and 2) industrial & commercial facility owners who are becoming accustomed to NPDES requirements (BMPs) and the WVCWP Inspector's frequent educational visits.

West Valley Restaurant Inspection Program

The West Valley IC/ID Inspector continues to manage the West Valley Restaurant Inspection Program, by visiting a subset of mid-to large-size facilities in each WV community every 2 -3 years. This year four (4) restaurants were visited one or more times, for a total of 10 inspections in the City of Saratoga. These visits provide an opportunity to educate restaurant owners and managers on the City's NPDES requirements and to introduce the West Valley Clean Water Program.

DEH inspectors or supervisors meet annually with the WVCWP Inspector and Manager to review stormwater quality concerns and objectives. DEH Inspectors refer potential violations to the WV Inspector. Once a food facility has been at risk for a violation, the WVCWP Inspector will revisit the facility until all potential and actual problems have been resolved. After resolution, the facility will remain on the Inspector's list to be re-checked a minimum of once annually depending on the nature of the incident.

Food Facility Inspections Evaluation

During FY04-05 there were four (4) dumpster discharges violations noted for the City of Saratoga. For FY04-05 trends were evaluated based on incidents reported in both the IND and IC/ID sections. In Saratoga's case there were not any additional food service reports for possible violations noted in the IC/ID section. In FY 04-05 there were four (4) *Dumpster Discharges* compared to three (3) food facility incidents in FY03-04. Of four dumpster violations reported in this fiscal year, there were actually only 2 dumpsters. One dumpster is shared by three restaurants. Therefore to keep a close watch on the situation the WVCWP Inspector visited this dumpster area three times during FY04-05.

None of the restaurants are above concern when it comes to potential grease problems and sewage backups due to grease blockages. To help combat the grease challenge surrounding food facilities, the WVCWP has noted a procedural addition to the checklist for all future pro-active inspections. Restaurants will be required to present grease trap cleaning records to the WVCWP inspector. If a facility does not have available cleaning records, the site will be referred to the West Valley Sanitation District Dir of Operations for follow up inspection(s).

Feedback on Program-Wide Standardized Reporting Categories

One comment from West Valley staff on the standardized reporting categories is that a separate *incident type* category for *secondary containment* would be useful. During pro-active investigations for West Valley Municipalities, secondary containment problems are relatively common.

Industrial/ Commercial Inspector Training Sponsored by SCVURPPP

The first joint WVCWP/Fire Dept meeting for FY 04-05 was held at the Fire Dept on August 6, 2004. As a result of this meeting the Sr Haz Mat Specialist revised the FD's referral form for potential violations to include only the data required by the inspector and the WVCWP (for reporting purposes). This form will be discussed and may be edited again at the annual meeting in FY05-06. The WVCWP Manager and Inspector work closely with the Sr. Haz Mat Specialist each year to review procedures for West Valley inspections and make adjustments as needed.

The Program's Industrial & Commercial Inspector training took place on April 5, 2005. In order to benefit from the Program's all day workshops, a Haz Mat Specialist, and the WVCWP Inspector and Manager, participated in planning meetings to select topics which addressed specific questions or concerns for the West Valley Program. The WVCWP Inspector gave his presentation on the ***Body Shop/Vehicle Repair Shop Program in West Valley Communities***. The Sr. Haz Mat Specialist coordinates inspector training each year; this year he held sessions starting in June 2005, allowing him to incorporate material from the Program's workshop. The Program's workshop was successful in answering most of the questions which had not been resolved during prior WVCWP meetings with the Sr. Haz Mat Specialist.

West Valley Vehicle Shop Inspection Program

The West Valley IC/ID Inspector continues to manage the West Valley Vehicle Shop Inspection Program by visiting vehicle facilities in each WV community, at least every 2 – 3 years depending on the number of facilities in the city and the risk for potential violations. This program mirrors the Restaurant Inspection Program and results in the same benefits.

Saratoga is predominately residential, with very few commercial businesses other than the food facilities mentioned above. In addition the City has only four (4) facilities that would be categorized as vehicle or automotive shops, including two gas stations, one commercial tire retail shop, and one car wash. The WVCWP Inspector periodically checks car washes but generally only inspects the gas stations upon referral. The follow up for the car wash referral from the Fire Dept will be reported in FY 05-06 data, the year it took place. The Fire Dept inspects all of Saratoga's identified automotive facilities annually. In FY 04-05 there was only one incident related to vehicles, a secondary containment problem at *Classic Car Wash*, noted by the Fire Dept. This is compared to two (2) vehicle related incidents during FY 03-04. One runoff problem from vehicle washing at the car wash (now corrected) and one vehicle leaking incident when a hydraulic fluid line burst on a garbage truck. The incidents remain down but WVCWP education for residential vehicle owners continues with the promotion of the *Car Wash Kit* and educational presentations in schools, which provide visual lessons about good water quality practices related to oil changes and car washing.

SARATOGA

IND Inspections Annual Report FY0405

Restaurants

#	Date	Facility Name	Facility Address	Enforcement Actions	**Food Service Facility Inspection Notes**	Notes - 2
1	9/3/2004	Gervais Restaurant	14560 Big Basin Way, Saratoga	Level 1	Dumpster area problem. Issued NTC#1032.	OK now.
2	9/3/2004	The Basin Restaurant	14572 Big Basin Way, Saratoga	Level 1	Dumpster problem. Issued NTC#1033.	All OK now.
3	9/3/2004	Viaggio Restaurant	14550 Big Basin Way, Saratoga	Level 1	Dumpster area horrible. Odor, food scrapes etc. Unsanitary. Dumpster area is shared with Gervais and Basin restaurants. Sent a letter to all three. They got it cleaned up right away. Issued NTC#1031.	Now OK. Have gone back many times, still clean. Good.
4	10/13/2004	3 Restaurants, Dumpster area (Viaggo, Basin, Gervaisi)	Big Basin Way, Saratoga	No Action	Proactive visit to dumpster area. Great improvement. No problem now.	All OK now.
5	11/30/2004	Viaggio, Gervais, & Basin Restaurants	Big Basin Way, Saratoga	No Action	They all share the same dumpster area. Problems in past. So much better. No odor. No cleanup needed. All AOK.	All OK now.
6	12/10/2004	Chef Wong Restaurant	12172 Saratoga-Sunnyvale Rd., Saratoga	No Action	Proactive follow up visit. Problems in past. All OK now. All clean. Good.	All OK.

PUBLIC AGENCY ACTIVITIES
Storm Drain Operations and Maintenance
FY 2004-2005 Work Plan Self Evaluation Matrix

Source	04-05 Work Plan Activity	FY04-05 Work Plan Tasks	FY 04-05 Accomplishments	Responsible Party
	URMP	Annual Storm Drain Cleaning Continue contract w/ WVSD. Continue schedule/cycle for cleaning and maintenance of storm drain system (two year cycle for residential & one year cycle for commercial/industrial); High leaf drop and other noted areas cleaned more frequently and as needed.	WVSD performs systematic storm drain cleaning and inspection annually. Saratoga is on a biennial cycle. City crew assisted sweeper in heavy leaf pick up in December in residential area 3. Crew picked up approx. 24 yards of leaves. This also took place in October and November '04 but exact amount of leaves removed is not known.	Pub Works Dir contract: Streets Supervisor co-ord in-field operations
	CI Item	Thermoplastic Storm Drain Stencil Pilot Continue to evaluate thermo-plastic storm drain stencils on curbless storm drains. Observe deterioration, durability, practicality, & cost effectiveness.	Continued to monitor the resiliency of storm drain stencils on curbless storm drains. While two of the West Valley cities purchased and installed additional thermo-plastic stencils this year, Saratoga did not. (See evaluation section). During monthly WVCWP training sessions the Associate Engineer has continued to provide feedback from the Street Maintenance Supervisor and strategize with the other cities regarding the most effective way to sign storm drain basins. Storm drain catch basins with the City are all appropriately signed.	Streets Supervisor & WV Inspector
	URMP	Training - Annual WVSD/ Oper. & Maint. Meeting Annual WVSD / Operations & Maint. Supervisors meeting - evaluate status of annual storm drain cleaning and provide training on maintenance issues.	The WV Storm Drain Op & Maint. Supervisor's workshop was held June 2, 2005. Saratoga's Street Maintenance Supervisor, Lead Maintenance Worker, Parks Supervisor & Lead Parks Worker all attended, along with staff from WVSD, WVCWP, and the other WV Communities. Topics included:	Mtg lead by WVSD; Attend by Streets Supervisor, Hosted by WVCWP

			• Clarification/ review of roles and tasks of City and WV Sanitation District staff to prevent gaps • Review of Emergency Response Procedures for SD overflow • Power Point Presentation review of BMPs for Streets, Rural Public Works and Storm Drain Maintenance • Working together to proactively prevent storm drain problems due to Fats, Oils and Grease (FOG) See details in evaluation at end of this section and Staff Training table attached in this section	

Storm Drain Operations and Maintenance Evaluation

Storm Drain Stencils: Saratoga's on-going monitoring of thermoplastic stencils has shown that they are not superior enough in quality to merit their large additional expense. This is especially true now, while municipalities are dealing with severe staff shortages due to budget cuts. The difficulty of installation is also a consideration; they require a two-step application process, and the use of torching equipment. On the positive side, the City notes that the thermo-plastic stencils are durable in heavy traffic and are reflective, which provides visibility at night. Unlike the metal plates previously installed by the City, they adhere well to coarse and uneven surfaces, have not peeled, and do not have sharp edges that bend, creating a potential to injure pedestrians or bicyclists. The City's Streets Maintenance Supervisor elected to paint the stencils, and does not have any plans to purchase more of the thermoplastic stencils because of the comparative cost.

SDOM Training: WV Storm Drain Op & Maint Supervisor's workshop was held June 2, 2005. The cities participated in a round table discussion and compared maintenance practices. WV Sanitation staff distributed a summary of maintenance activities completed for each city, showcasing the District's new automated system for tracking inspections. WVSD can print out a history of the debris they've found in a storm drain line. This will be useful if history shows that the same lines have debris during each cycle. The cities/town may want to increase maintenance for those spots/lines to an annual rather than biennial schedule. The WVSD report also includes a list of construction deficiencies such as missing bike straps etc. Additional TV tracking of potential problem areas may be conducted by the WVSD at the request and cost of the city.

SD Op & Maint: Photos were passed around at the SD maintenance workshop on June 2, 2005, of debris that was pulled out of the SD lines in the early 90's when WVSD began cleaning the cities' storm drains. Now the work is primarily preventative maintenance and the program is running smoothly. All other aspects of the storm drain operation and maintenance program are working well.

Saratoga

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2004-2005 ANNUAL REPORT

Street Sweeping/ Pavement Management

Source	04-05 Work Plan Activity	FY04-05 Work Plan Tasks	FY 04-05 Accomplishments	Responsible Party
URMP	Street Sweeping Program	By contract – residential, arterials and commercial areas swept monthly. High leaf drop and other noted areas cleaned more frequently and as needed (i.e., construction zones - swept by responsible party).	All streets get swept once a month in Saratoga. This includes 65 curb miles of arterial streets and 210 curb miles of residential streets for a **total of 3,495 curb miles annually**. The City **collected** an annual total of approx. **705 cu. yards of debris during FY04-05. See note in evaluation below.** Residents and businesses are also given large recycling receptacles for yard waste as part of the required solid waste service. Yard waste is not allowed in streets but waste from receptacles is picked up weekly. **A total of 10,939 tons of yard waste was recycled** in Saratoga during FY 04-05.	Streets Supervisor
NPDES Permit	Street Sweeping Data Collection	Review types of street sweeping data currently collected and provide data to SCVURPPP.	Data was collected quarterly and provided to the Program at end of the fiscal year.	PW Analyst & Streets Supervisor to collect data
Work Plan comments RWQCB	Training	Provide training meetings, on collection of street sweeping data, to appropriate municipal staff.	Collection on the specific requirements and need for Street Sweeping Data was covered at the June 2, 2005 SDOM workshop.	Streets Supervisor & WVCWP

STREET SWEEPING/ PAVEMENT MANAGEMENT EVALUATION

The streets are generally swept monthly in Saratoga. However, Saratoga has faced a challenge in trying to report on the amount of debris collected by residential versus commercial area. **Note: ***Debris collected is the total for all areas swept. The City of Saratoga is predominantly residential. Commercial areas exist as scattered pockets among residential areas. Arterials are also lined mainly by residential areas. Therefore, curb miles are separated by residential and arterial, and it is not possible to separate materials collected by area. In June 2005, Saratoga was taking steps to change the City's Street Sweeping Contractor. The street sweeping data collection requirements will be reviewed with the new contractor so that consistent data will be collected and reported in FY05-06.

One continuous improvement item identified at the end of FY04-05 was the potential need to discuss, with street sweeping contractors, why the City tracks this

data. This will help sweepers to become more aware of the importance of street cleaning as it relates to water quality.

As is often the case with residents, it is not obvious why sediment and runoff (for example from car washing) is a problem for creeks and the Bay. WVCWP staff have noticed that if others are aware of the reasons and benefits of street cleaning and tracking the results, they are generally more eager to support the activity including taking time to collect accurate data. At the end of FY04-05 the WVCWP Program manager was laying the groundwork for a meeting with Saratoga staff and the City's street sweeping contractor.

CORPORATION YARD

Source	04-05 Work Plan Activity	FY04-05 Work Plan Tasks	FY 04-05 Accomplishments	Responsible Party
URMP	SWPPP	Implement BMPs.	Saratoga's Street Maintenance Spvsr reviewed and updated the City's SWPPP. It was approved by the Public Works Dir. in February 2005.	Streets Supervisor
URMP	Staff Training	Annual Review and evaluation of BMPs w/ Corp-Yard walk-thru	Saratoga's Street Maintenance Spvsr held a Corp Yard walk-thru and SWPPP staff training on 5-26-05. Fifteen of the City's Maintenance Workers from Parks and Streets attended. Training covered during the walk-thru included: Review of revised municipal plan for Storm Water Pollution Prevention (SWPPP), Reminder to staff on where the SWPPP is kept so that they can refer to it as needed, An Opportunity for staff to provide feedback on how the SWPPP is working	Streets Supervisor

Corporation Yard Evaluation

T Staff is aware of the SWPPP. Feedback is that BMPs are working well and have become part of every day procedures. For more detail see the Public Agency Staff Training Table (attached).

RURAL PUBLIC WORKS ACTIVITIES

Rural PW PS[1]	Rural PW PS	Performance Standard Continue implementation of Rural PW PS[1]	The model Performance Standard has been implemented. Current SOPs were updated in August 2004 as part of the City's revised Urban Runoff Management Plan, submitted in September 2004.	Streets Maintenance Supervisor WVCWP assist
Rural PW PS	Rural PW PS	Evaluate the effectiveness of Rural PW PS implementation and report on it in the FY04-05 Annual Rpt	No Rural Public Works construction took place this year. When future construction of Rural Public Works takes place, measures will be implemented for erosion prevention and sediment control:	Streets Maintenance Supervisor
Rural PW PS	FY04-05 Work Plan, RWQCB comments	Hold Training meetings for appropriate Public Works staff on the use of current BMPs and SOPs, as noted in the performance standard.	Saratoga's Street Maintenance Spvsr and Lead Maint. Worker attended the WVCWP workshop on June 2, '05. The Workshop included a customized presentation for the WVCs by Jenny Fire, P.E. reviewing the requirements and use of BMPs for local Rural Public Works. For more information see Pub Agency Staff Training Table at end of this section.	Streets Maintenance Supervisor and Street Maint staff to attend WVCWP to host workshop

Rural Public Works Program Evaluation

Stormwater BMPs are discussed in pre-construction meetings with contractors; the City inspects all contracted rural public works in its jurisdiction and ensures the use of stormwater quality and erosion control BMPs.

Potential erosion and sedimentation problems on existing rural roads include sloughing of banks above roadway onto road surface, and erosion of banks below roadway surface, due to run-off from surface of roadway. These problems will be reviewed for improvement if/when any upgrade takes place on an existing road.

[1] Rural Public Works Maintenance and Support Performance Standard.

PLANNING PROCEDURES

FY 2004-2005 Work Plan Self Evaluation Matrix

Source	Work Plan Activity	Work Plan Tasks	Accomplishments	Responsible Party
C.3.b Development Project Approval Process -- Planning Procedures				
Implement Ordinance, Policy or COAs	Permit C.3.b, C.3.c.i and C.3.c.ii	Expand C.3 Implementation Ordinance, Policy, Procedures and Conditions of Approval will be implemented on all development projects to incorporate the requirements of provision C.3.	Saratoga's Municipal Code states that all new development and redevelopment projects are subject to the requirements of the City's current NPDES permit. Due to protracted negotiations regarding the Group 2 definition, the City decided to require C.3 compliance for Group 1 and *all* Group 2 projects, in accordance with Permit CAS029718 (as it stood before Order R2-2005-00035 was adopted on 7-20-05). This City requirement went into effect on April 15, 2005 for Group 1 and Group 2 projects not deemed complete prior to that date. See Notice to Developers (Attachment B).	Com Dev Dir and Associate Engineer
C.3.c. Requirements for Group 1 and Group 2 Projects				
URMP: Planning Procedures Performance Std	C.3.c.6.	Continue implementation of Planning Procedures to comply with revised (FY03-04) Performance Standard in local URMP.	In August 2004, the City revised and updated all sections of its URMP, with a special focus on providing more specific details to the City's Planning Procedures PS. Additional sections on BMP O&M Inspection and Verification were added to this PS. During 04-05, Saratoga continued to implement the PPPS.	Com Dev Dir & Associate Engineer
C.3.e Operation and Maintenance of Treatment BMPs				
BMP Inspection Program O&M Verification	Permit C.3.e	Implement local inspection program for treatment BMPs on all projects, to verify that proper O&M is being performed by the responsible party. (Program to assist in defining which BMPs are priorities for	Saratoga did not have any Group 1 or Group 2 projects this year. However, during FY-04-05 the City Engineer tracked the maintenance of permanent S/W treatment BMPs on a retirement community project which was deemed complete	Pub Works Dir co-ord & Com Dev Dir & WV Inspector

		inspection).	before 10-15-03. Permanent BMPs include a large detention pond w/ raised overflow inlet, and a small parking lot with cuts in curb allowing water to run into a grassy swale with a raised overflow inlet. Pond is designed as an amenity in a visible area, w/ large cattails. Natural vegetation and trees preserved. The Owner provides for routine maintenance on all BMPs. The detention pond has a potential to fill with silt so it is cleaned at least once a year. The City Associate Engineer requested an annual maintenance schedule. For more details see the *Maintenance of BMPs Letter,* dated 9-23-04 (Attachment 4A) regarding BMP maintenance at Saratoga Retirement Community.	
O&M Verification Program Reporting	Permit C.3.e.iii	Operation & Maint Verification Reporting In Ann Rpt provide a description of organizational structure; evaluation of program effectiveness; summary of any planned improvements; and list of results for all treatment BMPs inspected in FY03-04 and 04-05.	When Saratoga has Group 1 or Group 2 projects, all stormwater treatment BMPs will be inspected annually by the Public Works Inspector. The Inspector will contact each site owner/manager by telephone to arrange a mutually agreeable inspection appointment. A hard copy file of the inspection forms and results will be kept for each project. Also, the Associate Engineer will maintain a list of Group 1 and Group 2 projects in an electronic format, including the stormwater BMPs and the annual inspection results. See Evaluation section below.	Associate Engineer to co-ord with Public Works Director WVCWP to write report
Work Plan	O & M Training & Evaluation	Train inspectors and data managers on O&M verification program. Include evaluation of effectiveness and planned improvement to the program	Three (3) of Saratoga's building inspectors attended the SCVURPPP Workshop titled "Conducting Stormwater Treatment BMP Maintenance and Inspections" on June 9, 2005. The WVCWP Manager and WVCWP Inspector also attended the training and video-taped most of the presentations for WV municipal staff who could not attend. WVCWP staff has had a few delays in transferring the video to DVD for distribution. DVDs are expected to be made and distributed to WVCs during FY05-06. See Staff training table (Attachment 4C) for other training sessions.	Associate Engineer & Building Inspectors

Saratoga

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2004-2005 ANNUAL REPORT

C.3.f Hydromodification Management Plan				
Hydromodification Mngmnt Plan	Work Plan task	Review and provide comments on the HMP products.	HMP comments were provided on behalf of Saratoga via the WVCWP Manager. The WVCWP manager attended SCVURPPP review meetings on progress of HMP and provided comments from West Valley meetings on the same subject. Saratoga submitted a map to SCVURPPP showing undeveloped land parcels to help determine the percent of impervious surface within its local watersheds, San Tomas Aquino and Calabazas.	Com Dev Dir, Pub Works Dir; Associate Engineer WVCWP Mgr to assist
HMP Implementation	C.3.f.viii.5 and C.3.f.i. and C.3.c.i.	Implement HMP, which shall include the requirements of provision C.3.f. Prior to approval of the HMP by the Regional Board, encourage early implementation measures likely to be included in the HMP. Summarize the Progress of incorporating treatment measures, in the Annual Report.	The HMP had not yet been approved by the Water Board during FY04-05. There were no sites applicable for early HMP implementation in Saratoga.	Com Dev Dir & Pub Works Dir
HMP Training	FY04-05 Work Plan RWQCB comments	<u>Training</u> Attend Program workshops on HMP and provide in-house training as appropriate.	On 5-24-05 City Associate Engineer and Saratoga's newly appointed WV Storm Water Rep attended a WV round table discussion / training on likely HMP requirements and exemptions and possible methods for early implementation City staff will attend SCVURPPP sponsored workshop(s) on the approved HMP during FY05-06.	SCVURPPP; City staff & WVCWP to attend
C.3.g Waiver and Compensatory Mitigation Program				
Waiver Program Staff training and reporting	C.3.g.3 (Permit C.3.g.v.)	If a waiver & compensatory mitigation program is adopted, document in each annual report, all waivers granted according to permit provision C.3.c.g for Group 1 and Group 2 projects. Include: project name, location, type, percent impervious surface, reasons for and terms of waiver, and the alternative benefit project and completion date.	A waiver program was not adopted during FY 04-05 and none is anticipated in the near future. All Group 1 and Group 2 Projects must meet NPDES requirements for stormwater treatment measures.	Com Dev Dir WVCWP to assist

Saratoga

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2004-2005 ANNUAL REPORT

C.3.h Alternate Certification				
Alternate Certification reporting	(Permit C.3.h)	If alternate certification is used, list the Group 1 and Group 2 projects certified by someone other than City Staff.	The City will require proof that each certifier has been adequately trained on BMP design for water quality. The City will not provide this certification.	Comm Dev Dir & Pub Works Dir WVCWP to report
C.3.j Site Design Measures Guidance and Standards Development				
Site Design Measures Guidance and Standards Revision	(Permit C.3.j.)	Implement revised local site design standards and guidance, according to Permit C.3.j. by 9/15/04 (Report on progress in Sept. '04 AR) Reference: City's 9/15/03 submittal labeled *Site Design Standards and Guidance Review, from* SCVURPPP (on CD); "Development Policies Comparison Report" worksheet, from SCVURPPP (on CD, 4/2003); Notes and information from the SCVURPPP Site Design Dialogues & Workshop (FY03-04)	The following are site design policies or practices that have changed or been modified since Saratoga submitted a site design update in the FY03-04 Annual Report. Saratoga's residential projects are allowed a maximum of sixty percent (60%) impervious surface (including pools). Saratoga has a standard condition of approval for new or substantially remodeled construction, which requires <u>all</u> storm water runoff to be maintained /retained on site. In an effort to reduce parking requirements (impervious surface) in the downtown "Village" area, the minimum parking ratio for a professional office building was being reviewed and was still in progress on 6/30/05. Parking requirements were reduced during FY04-05 on a case-by-case review, based on a conditional use permit process. The City allows shared parking through a conditional use permit. Parking lot runoff – Saratoga requires that parking areas provide a <u>minimum</u> of fifteen percent (15%) landscaping. Saratoga requires a minimum buffer width (from top of creek bank) to be at least 75 feet. (City Code 15-20.050) Now, through Conditions of Approval, Saratoga often requires home owner associations to manage open space. Bioswales are being encouraged through Conditions of Approval	Com Dev Dir. SCVURPPP (guidance from C3 task group)

Saratoga

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2004-2005 ANNUAL REPORT

C.3.k Source Control Measures				
Implementation of Source Control Measures	C.3.k.3 (Permit C.3.k. last paragraph)	Implement source control measures requirements by including appropriate conditions of approval in Group 1 and 2 projects. Stormwater pollutant source control measures will be encouraged for projects of all sizes where practicable.	No changes to source control requirements in FY04-05. In a discussion with other West Valley Cities, it was discovered that Saratoga Planning staff always requires a roof for outdoor trash enclosure; and sanitary sewer connections are required for all enclosures at restaurants, gas stations, and car washes etc. Measures to reduce pollutants in runoff, such as not allowing outdoor storage of supplies, materials, and equipment or store product, continue to be handled through "Conditions of Approval".	Com Dev Dir & Pub Works Dir
C.3.m Water Quality Review Processes				
CEQA Review	C.3.m.1	Dischargers shall evaluate water quality effects & identify mitigation measures when conducting Env Review Process for all projects. Report on changes to the Environmental Review process, if any.	The City of Saratoga ensures that the environmental documents required for projects that fall under CEQA review address both significant and cumulative stormwater quality impacts during the life of the project, and specific mitigation measures related to stormwater management. There were no changes to the CEQA review process in FY '04-'-05	Com Dev Dir
C.3.n Reporting Requirements				
Source Control Measures Reporting	Permit C.3.n.i. (C.3.c.)	<u>Reporting on Source Control Measures</u> Use the Planning Procedures Performance Standard Reporting Form to provide detail in annul reports, on implementation of Source Control Measures for all Group 1 & Group 2, new and redevelopment projects: --project name, location, type (per C.3.c.), size (ac. or sq. ft.), and impervious surface area. For redevelopment projects, include area of land disturbance.	Saratoga did not approve any Group 1 or Group 2 projects this year.	Com Dev Dir & Pub Works Dir to collect data WVCWP to prepare report

Treatment Measures Reporting	Permit C.3.n.ii. (C.3.d.and C.3.e.)	Reporting For Projects That Must Implement Treatment Measures, report which treatment BMPs were used and numeric-sizing criteria employed, the operation and maintenance responsibility mechanism including responsible party, site design measures used, and source control measures required.	There were no Group 1 or Group 2 projects approved during FY '04-'05.	Com Dev Dir & Public Works Dir to collect data WVCWP to prepare report
Pesticide Control Measures Reporting	Permit C.3.n.iii.	Reporting on Pesticide Reduction Measures Collect information and report a summary of types of pesticide reduction measures required for development Group 1 & Group 2 projects and the percentage of projects for which pesticide reduction measures were required.	Projects requiring landscape plans must comply with the following conditions of approval. • efficient irrigation to reduce runoff and promote surface infiltration; • landscaping that treats runoff by incorporating elements that collect, detain and infiltrate runoff; • pest-resistant plants as part of an approved landscape plan, and where water is detained, plants that are tolerant of saturated soil conditions; • plant materials which are appropriate to site specific characteristics, i.e., soil type, topography, climate, amount of sunlight, rainfall, air movement, ecological consistency, & plant interactions, to ensure plant establishment; • existing native, trees and/ or ground cover incorporated into the landscape plan. • Proper maintenance with minimal pesticide use shall be the responsibility of the property owner. SCVURPPP's *Landscape Maintenance Techniques for Pest Reduction* is given to property owners during the dev approval process.	Com Dev Dir & Pub Works Dir PW Analyst to collect data WVCWP to report

C.3 Training & Evaluation

Staff Training	FY03-04 Work Plan, RWQCB comments	Training Train appropriate staff (i.e. planning, building, and engineering divisions) on new policies, procedures, & C3 provision requirements listed above (may include SCVURPPP workshops).	(See training item in C.3.e,above)	Com Dev Dir, WVCWP & SCVURPPP, as appropriate

Planning Procedures Evaluation

The City's Associate Engineer took on the role of Storm Water Rep until a new SW Rep was hired in May 2005. The City of Saratoga was recovering from layoffs and staff shortages in FY04-05. The West Valley Stormwater Representative for the City, as well as the Assistant Planner who had been working on C.3 implementation, and the Community Development Director, each left their positions at the City during FY04-05. T By the end of FY04-05 the City had promoted a Planner to Community Development Director and had started the process of hiring a new Associate Planner.

The City Engineer provided the following comments, articulating Saratoga's zeal for ensuring maximum water quality protection during FY04-05.

Each grading permit application was reviewed by Saratoga's Grading/ Drainage Plan Examiner. The Plan Examiner, even for projects smaller than 10,000 sq ft, was careful to ensure that each project incorporated site design and source control measures.

Staff was very thorough and evaluated all projects to ensure that post project runoff would not exceed estimated pre-project runoff rates whenever possible. When necessary, City staff required design revisions to preserve water quality and to prevent erosion and siltation of creeks and waterways.

City staff closely examined all proposed storm water measures to ensure optimum maintenance and inspection access, and a minimum of future maintenance problems.

Evaluation of BMP O&M Inspection & Verification Program

Although each WV municipality has assigned staff to conduct storm water treatment BMP O&M verification inspections, the biggest challenge, for the City of Saratoga will be to find staff time to carry out annual inspections. At the West Valley Clean Water Program's follow-up session to SCVURPPP's work-shop on BMP O&M Verification, Campbell's Rep asked the WVCWP Manager to explore an alternative means of conducting West Valley BMP O&M inspections, i.e., hiring a consultant to work for all of the West Valley Communities on an "as-needed" schedule to perform annual O&M inspections. The consultant would have sufficient engineering experience to recognize potential maintenance problems and be well-trained in stormwater quality requirements. Saratoga and two other WV municipalities may be interested in jointly hiring a consultant to perform inspections and write inspection reports, especially during FY 05-06, as Group 1 and Group 2 projects are approved. The WVCWP Manager, agreed to work toward a resolution to this challenge; the topic of hiring a consultant will be considered during a round-table discussion among the WV Stormwater Reps in September or October 2005.

Iveta Harvancik
Associate Engineer
City of Saratoga
Re: Storm Drain Maintenance

September 23, 2004

Dear Iveta,

Thank you for your prompt response in providing me with the information I requested on city required storm drain maintenance.

Our proposed maintenance program for the storm drains, retention ponds and runoff areas will be comprised of the following:

1. All curb drains and retention ponds will be inventoried and placed into our computerized maintenance program for scheduled maintenance inspections.
2. Preventive Maintenance specifications will be developed for each site specific location.
3. All curb drains will be monitored on a monthly basis to ensure that the grate is clear and that sediment has not built up to inhibit the outflow of storm water and runoff.
4. The retention ponds will be monitored on a quarterly basis. We will inspect sediment buildup and plant growth to ensure that the outflow pipe is clean and functioning properly. We would prefer to keep the natural look (cattails) of the ponds as long as it does not cause any problems with the designed performance.
5. The grassy area near the parking lot will be maintained by our Landscaping service provider. I will meet with them to ensure that the area is maintained on a scheduled basis to meet your requirements for functionality and our requirements for aesthetics.
6. If for any reason during the maintenance inspection we determine that the storm drain system is not performing as designed, we will make the necessary repairs in an expedient manner.
7. In addition the storm drain system will be monitored during and after periods of heavy rain to ensure that it is functioning correctly.

Please contact me if you have any comments or questions. Once I have completed writing the text for the preventive maintenance inspections I will forward it to you for your review.

Sincerely,

Scott Richardson

NOTICE
to
Developers & Contractors

State of California
STORMWATER REGULATION CHANGES

This Notice is to inform you of changes to existing **Stormwater Quality Regulations.**

NPDES Construction General Permit

All construction projects **disturbing an area of one (1) acre** or more are required to comply with:

State of California
"General National Pollutant Discharge Elimination System (NPDES) Permit for Discharges Associated with Construction Activities" ("Construction General Permit")

Compliance with this permit requires ALL of the following:

- submitting a Notice of Intent (**NOI**) and annual payment to:
  State Water Resources Control Board
- preparation of a Storm Water Pollution Prevention Plan (**SWPPP**)
- use of City Approved Best Management Practices (**BMP**s) to control storm water runoff,
- Daily BMP inspection and maintenance by applicant to determine adequacy and maintenance

For copies of the Construction General Permit, the NOI, and additional permit information consult the State Water Resources Control Board website: www.swrcb.ca.gov/stormwtr/construction.html

STORMWATER QUALITY REGULATIONS
Amended Development Project BMP Requirements

1. In order to comply with the City's State-issued **NPDES permit, No. 01-119**, Saratoga & other public agencies in the Santa Clara Valley are required to place additional Conditions of Approval related to storm water quality control on certain development projects. **As of April 15, 2005, non-exempt projects creating or replacing 10,000 sq. ft. or more of impervious surface**, including roof area, **must incorporate design, control, and engineered treatment measures** to prevent pollutants from being washed into creeks and streams by stormwater runoff from new and re-development sites.
2. Conditions of approval will include the use and maintenance of BMPs for site design and storm water treatment, which must be designed per approved numeric sizing criteria. Owners of properties with treatment BMPs will be required to certify on-going operation and maintenance.
3. Fill out impervious surface data form
4. Design criteria for BMPs: Flow control formula or volume control formula- use:

   CASQA Storm Water BMP Handbook (www.cabmphandbooks.com)

   and C.3 Stormwater Handbook - May 2004 (www.scvurppp.org) -- link to "Reports & Products 2003-2004" and find "Guidance Manual"
5. Each project will also require a Certification of the required Engineered Stormwater Management Plan, in compliance with Council Policy.
6. Owners of properties with treatment BMPs will be required to certify on-going operation and maintenance on an annual basis.

CONSTRUCTION INSPECTIONS

FY 2004-2005 Work Plan Self Evaluation Matrix

Source	04-05 Work Plan Activity	FY04-05 Work Plan Tasks	FY 04-05 Accomplishments	Responsible Party
	URMP	Staff Training Participate in and support SCVURPPP sponsored workshops/ info sessions on erosion control and construction BMPs; support distribution of related materials.	On October 12th WVCWP IC/ID Inspector and Manager attended the Water Board's Construction Site Management and Erosion Control BMPs Workshop and purchased the videos, "**Hold onto your Dirt**" and "**Keep it Clean**", to use in training sessions within each city. Last year on 9-30-03 (FY03-04) eleven (11) Saratoga staff members, including Building Inspectors, Plan Check Engineers and Planning staff, participated in an in-house training session featuring both videos. In '04-'05, due to considerable staff turnover and staff reductions, Saratoga relied on the WVCWP Inspector and Manager to attend the erosion control workshop and review highlights during the monthly WV training meeting.	WVCWP to co-ord City staff to attend
	URMP	Construction Inspections Continue construction site inspections for stormwater issues (i.e., mudtracking, mat'l storage, housekeeping, etc.).	During FY04-05, in Saratoga had 310 construction projects including 18 grading projects, 32 new single family dwellings, 154 major additions to single family dwellings, and 2 new commercial buildings. This also included new garages, swimming pools & demolition projects. Projects that were problematic received daily drive-by spot checks by City inspectors. Projects that were clearly well controlled were inspected at least every 2 weeks during the rainy season. .	Pub work Dir & Building Official
	Program	Construction Inspection Performance Standards Continue implementation of model C.I. Performance Standards and incorporate any revisions in the City's URMP	In summer 2004, as part of revising Saratoga's URMP, WVCWP and City staff updated the documentation of SOPs in the City's Construction Inspection Performance Standard. The Water Board's Performance Review questions for Saratoga, from December 2003, and the City's responses	City Building Official and Inspectors, with WV Inspections by referral

			were added to the URMP for reference. This addition took place after the Sept 2004 URMP submittal	

Construction Inspection Evaluation

Construction Site evaluation of trends:

FY04-05		Previous Year - 03-04	
Tracking Soil	2	Tracking Soil (dirt runoff from landscape & sprinkler)	1
Vehicle and Equipment Leaking	1	Landscape Material Dumping (dirt pile in road)	1
Unhardened Cement discharge	1	Dewatering (rain water pumped from under house to street)	1
Complaint not found (in compliance, saw slurry being vacuumed)	0	Misc Incidents (sediment: concrete debris; sandy substance) (in roadway/street/gutter)	3
Misc. Incident (a proactive follow up from previous year)	0		
Total Number of Incidents	4		6

Coordinated efforts between the City's building inspectors and the WVCWP Inspector are working well. Potential incidents reported by other agency staff or citizens, are inspected and re-inspected through to final resolution, by the WV Inspector. This year the WVCWP Inspector went out on 5 potential incident reports, and made one proactive site visit. All sites that have been issued a Notice to Comply and then have been resolved are revisited, pro-actively, during the following year. See the Construction Site Incident table following this section.

The number of incidents is about the same as the previous year. Tracking soil accounted for 2 incidents this year and only 1 last year. Last year the majority of incidents (3) were attributed to miscellaneous incident types but all were related to construction debris or sediment in the roadway. Last year's actual violations totaled 6 and this year's actual violations totaled only 4. In general the number of incidents remained about the same, with some minor improvement. Most Construction Site incidents are related to dirt tracking or sediment/construction debris in the roadway. Inspectors will continue to educate the contractors and visit the sites more often. It is possible that the majority of the construction related incidents are the result of smaller jobs (new driveways etc) that do not need a permit. Public Outreach to residents and educational visits from the WVCWP Inspector will reduce the number of residential violations.

Challenges to attending Construction Site Erosion Workshops, October is the worst month to attend a construction / erosion control workshop. Construction inspectors are rushing to meet the October 15th deadline to be prepared for the rainy season. Saratoga would not be able to send staff, as they are working 24 hours a day in order to finish preparations. Construction / Erosion workshops in October and November are not practical for WV municipal staff. Resolution – WVCWP arranged with a Planner from the SF Estuary Project to hold the Santa Clara Construction/ Erosion Control Workshop on Dec 8, 2005, at Campbell's Community Center.

The Construction Inspection Program currently works well – Continued public outreach efforts and further training or communication between municipal inspection staff and the WV Stormwater Inspector will only serve to strengthen the Program.

FY 2004-2005 ANNUAL REPORT

Note:

In order to prevent redundancy, the PI/P table has been created as one table for all four WV Communities.

Activities sponsored by an individual community are noted where appropriate.

PI/P activities for the WVC tend to be attended by residents from several WV communities, and many of the PI/P tasks are handled by WVCWP for all communities at once. In addition, a number of schools serve residents from more than one community.

A. SCV Program Projects/Support				
SCV Program PMP (II.A.1)	General Outreach	a. Watershed Education and Outreach Campaign Support multi-year watershed education and outreach campaign. WVCW Pgm Mgr assists via WEO Ad hoc Task Group. Participate in campaign development and special projects. Campaign will include funding for educational programs at the Alviso Ed Center and funding for ZunZun performances in local schools. Continue establishing partnerships with local recreational attractions to promote watershed messages. (i.e. Happy Hallow Zoo and Bonfante Gardens) See SCVURPPP Project Work Plan for details.	WV Communities (WVC) support the multi year Watershed Education Outreach (WEO) campaign. Program Mgr is active in the WEO AHTG and in the Schools & Youth Education Outreach Subgroup. **Zun Zun Assemblies** Letters and emails were sent to several local WVC Elementary schools informing them about the free sponsored ZunZun Assemblies available to their students. All schools which participated received two (2) vocabulary lists (one for K-2 and one for 3-6) and an information sheet about the assembly content for teachers to refer to. Teachers were asked to familiarize the students with the vocabulary words prior to the assembly. Three (3) WVC schools participated in the assembly. Castlemont Elementary, Campbell **742 students**	WVCWP Staff

NPDES Permit, PMP (II.A.12)	Targeted Outreach	b. Pesticide User Outreach Project Provide funding and participate in implementing IPM Store Partnership and Household Chemical Management Projects. Project scope will include items in program's Pesticide Management Plan based on provision c.9.d. of the Permit for outreach to residents, commercial businesses, and pest control operators.	WVCWP continues to partner with the ***Summer Winds Nursery*** in Campbell in educating the general public on less-toxic methods to control pests. This year a seminar was held for all employees (Feb. 2nd) with speaker Annie Joseph. Topics included less toxic pest management and child and pet-safe solutions for homes and gardens. Employees will be able to relay this information to their customers.	WVCWP Staff
CI, Discretionary Project	Educational Outreach	c. Schools Outreach and Watershed Education Continue a pilot study on Wacky Watershed's, 6th - 8th grade curriculum, consistent with state required education standards and current watershed campaign messages. Evaluate effectiveness and appeal by providing training to teachers and soliciting their evaluations.	In previous years, WVCWP made numerous attempts to meet with 6th - 8th grade science teachers concerning "Wacky Watersheds" but did not receive responses. WVCWP then took a new approach which has proven very successful: since the **Calif. 5th grade** curriculum addresses "Keeping Water Clean" and "Pollutants Travel" in its Water Unit, WVCWP developed an Enviroscape-based 5th grade curriculum addressing these topics. Wacky Watersheds' messages have been incorporated into this curriculum. One rotation station features the Wacky Watersheds video "It's Wet, It's Wild, It's Water". WVCWP gained teacher invitations to present this curriculum to five different 5th grade classes in FY 04-05 (appx. 145 students participated). **Teachers' evaluations state** "Thanks for coming!" and consider that the program *"very much"* helped students learn about watersheds, learn to avoid residential runoff	WVCWP Staff

URMP	Targeted Outreach	2.B.a Distribute materials Provide pesticide management materials to: 1) nurseries and hardware stores for distribution at point-of-sale; 2) pest control operators and landscapers, and 3) municipal employees.	Summer Winds Garden Center in Campbell maintains an IPM materials literature holder for which WVCWP provides some of the outreach material. 50 Grow-It Guides were distributed here in FY 04-05; distribution was delayed by the store's recent change in management, and changing requests for type of display rack (floor vs. wall-mounted). Orchard Supply Hardware (bordering Saratoga & Campbell) allowed WVCWP to place an IPM basket display "Grow-It Guides" in their checkout area; 50 Grow-It Guides & 20 "A Child's Garden" coloring books were part of the display. Pest Control Contractors and Landscape Contractors for all WVC were contacted with information/invitations for the March 2005 free IPM training sponsored by WVC through WVCWP. CEUs for Pesticide Applicators and Nursery Professionals were offered. 1 Pest Control Contractor and 1 independent Landscape Contractor attended.

EVALUATION

IPM Materials: The "Soil Matters" 32 page booklet was very-well received by the AgroEcology science class at Los Gatos High school, and will be kept as class reference material and incorporated into the curriculum for that class.

The "Grow-It Guide" continues to be the most popular IPM literature. Although WVCWP and the cities/town make available a variety of IPM materials at public places and community events, it is most common for residents to pick up only the Grow-It Guides. Among the IPM fact sheets, residents seem most interested in the Roses sheet and the Beautiful Lawns sheet.

Items for children are also popular – see 2.B.k "Coordinate Watershed Education with schools" below. One of the most popular items has been the "Our Water Our World" picture frame magnet. While the magnet doesn't give actual IPM advice, it features the web site address, and it is hoped that residents will visit the web site (partially funded by SCVURPPP) as it is an excellent resource. The "Kids Guide to Backyard Bugs" is always popular, but supplies are very limited, so these are distributed sparingly. Many more would be taken, if they were available.

WVCWP has had the most success in providing IPM material to the Master Gardeners classes at the Campbell Community Center, since these supplement the instructor's information, and attendees have an interest in gardening (see Pesticide Mgmt Section for details). It appears that there would be an interest in at least basic IPM info in any of the gardening classes in this series. In FY 05-06 a more concerted effort will be made to get some IPM materials to each of these classes, rather than just distributing to the Pest Management class, as was done this year.

In the WVC, it appears that quite a bit of residential landscape care is handled by very small landscape businesses. WVCWP continues to search for a means of reaching residents who use these services and who could request a change in pesticide use from their contractors. Discussions with Licensed PCOs indicate that residents call them after the small (probably unlicensed) contractors spray a variety of chemicals without successful results. This means that not only are residents resorting to pesticide spraying, they are ending up with more spraying than is actually needed, if the work was initially done correctly. It would be helpful to have material which could simply and quickly educate residents on this matter.

Household Hazardous Waste / Copper – Nickel / Mercury / *Other:*

Staff created a variety of flyers this year focusing on Mercury, especially the need to recycle Fluorescent Light Bulbs – See" New Creations by WVCWP" below for details.

WVCWP staff created a colorful outreach piece related to Copper (aimed at Car Wash Fundraisers --see" New Creations by WVCWP" below), but see a need for a general piece on Car Washing which would explain the reasons to avoid car wash runoff into storm drains. This would be especially helpful if the appearance appealed to a high school/ young adult age group who might be likely to wash at home rather than using a car wash. In addition, staff usually receive questions about copper water pipes when trying to explain the copper/brake pad/water pollution issue. Based on this, and the same questions related to architectural copper, it appears that some sort of outreach piece on copper would be useful. Staff have not yet found any outreach pieces which would serve as good models on these subjects, but will continue looking into possibilities. The Car Wash Kit flyer will be distributed to schools in FY 05-06.

			(Construction Tri-folds are given out by all municipal offices to grading/construction permit applicants, and prospective applicants; counter staff do not document number of tri-folds distributed.) **IC/ID material distributed - Totals by City:** **Campbell:** **348 pieces (including business cards)** **Los Gatos:** 323 pieces (including business cards) Los Gatos Street Sweeping staff distributes a doorhanger with IC/ID info when appropriate; number distributed is not documented. **Monte Sereno:** **21 pieces (including business cards)** **Saratoga:** **98 pieces (including business cards)**	

EVALUATION

The Stormwater Discharge Inspector has found that the best outreach item for restaurants is the “Good Cleaning Practices for Restaurants poster, which incorporates 6 pictures of proper cleaning BMPs. The piece is 12”x36” and can be hung either horizontally or vertically; the paper has a greaseproof coating. Unfortunately, WVCWP only has 8 of these left, and they have been distributed very sparingly, depending upon need and interest. SCVURPPP does not have any available on request. The poster was originally part of a 6 piece packet. WVCWP will investigate whether there might be any means/interest/funding for re-printing the poster alone.

The Discharge Inspector also sees a need for a simple piece on Car Washing which would explain the reasons to avoid car wash runoff into storm drains (as discussed above in "Materials Distribution – HHW/ Copper-Nickel"). Los Gatos has had good results with a doorhanger carried by the streetsweeper. When evidence of potential runoff pollution problems are encountered (such as grass clippings in the gutter) the resident receives notification/education through use of the doorhanger.				
New Creations by WVCWP / WVCWP Materials Distribution				
	General Outreach	.B.a WVCWP: Creation of new outreach materials **not part of Work Plan – additional activity**	**Created "With Your Own 2 Hands" – digital music video/ slide show** This DVD highlights Creek Clean-up volunteers and water pollution prevention. It shows *Creek Keepers Volunteers* with trash grabbers and clipboards as they clean creek sites and conduct trash monitoring, along with the creeks' natural beauty, and creek trash problems. WVCWP created this piece as outreach to encourage participation in Creek Clean-ups and to increase awareness of the problems of trash in creeks. WVCWP is discussing potential methods of having teachers and youth group leaders view the video to encourage schools/ scout troops, etc. to partner with WVCWP in Creek Clean-ups. This activity was chosen as an alternative to creation of a WVCWP newsletter this year (see 2.B.h below). The show was created at no extra cost, using existing computer software and existing photos from WVCWP

			creek clean-ups.	
	Educational Outreach	.B.a WVCWP: Creation of new outreach materials **not part of Work Plan – additional activity**	**Created Ground Water Pollution Lesson – High School level** Distributed to Los Gatos High School Science teachers and Youth Science Institute staff (see 2.B.k "Coordinate Watershed Education with schools")	WVCWP Staff
	Educational Outreach	.B.a WVCWP: Creation of new outreach materials **not part of Work Plan – additional activity**	**Created 5th Grade Science – Water Curriculum "Pollutants Travel" & "Keeping Water Clean"** – 2x 20 minute presentations, 1 for Coastal Region Watershed Model, 1 for Upland Region Watershed Model. (see 2.B.k "Coordinate Watershed Education with schools")	WVCWP Staff
	General Outreach	.B.a WVCWP: Creation of new outreach materials **not part of Work Plan – additional activity**	**Created Pet Waste Pollution Poster** WVCWP was able to arrange for a free digital/ printable poster with WVCWP logo through "Earth 911". The poster has a humorous, eye-catching look and WVCWP has been using it with good response during school Enviroscape presentations. Text includes: "If you think picking up dog poop is unpleasant, try drinking it… Pet Waste washes into storm drains, polluting our rivers, lakes and drinking water sources. Get the scoop." Staff is discussing additional means of putting the poster to use, and obtaining posters on other topics.	
	General	.B.a WVCWP: Creation of new outreach	**Created "HHW – Mercury" Display:**

	Outreach	materials **not part of Work Plan – additional activity**	Color posters highlighting fluorescent light bulbs as HHW were created and attached to 3 tier literature racks. Flyers advertising the free WV HHW Drop-off event were created; these also highlighted proper disposal for Mercury products. Additional material in the displays included the SC County HHW brochure, and WVCWP's "Keep Your Family & Water Safe from Mercury". At least 1 display was placed in each WV community at a library &/or community center or post office.	
	General Outreach	.B.a WVCWP: Creation of new outreach materials **not part of Work Plan – additional activity**	**Created 2 new Mercury Flyers (from Mercury Ad and Mercury article – LA Times)** **"Would You Eat It?"** highlights dangers of mercury in the environment, sources of mercury and where to recycle products (list of local participating hardware stores), and fish to avoid due to mercury contamination. An article from the LA Times (detailing a recent study on mercury in the environment and links to autism) was reprinted and distributed with the Would You Eat It? flyer. These were well-received when distributed at the LG Farmers' Market. All 15 were taken and more could have been given out, if available.	
	Targeted Outreach	.B.a WVCWP: Creation of new outreach materials **not part of Work Plan – additional**	**Created Car Wash Kit Flyers** WVCWP created a Flyer for each City/Town, including reference to the relevant Municipal Code for Stormwater.	WVCWP Staff

		activity	The flyer directs residents to contact WVCWP for free use of the Car Wash Kit whenever a fundraiser car wash will be conducted. The flyer is available at Municipal offices for residents who might ask about any necessary permits for their fundraiser. WVCWP has also initiated distribution of the flyer to schools. See Copper Section Attachment A	

EVALUATION

The new curriculums for the 2 Enviroscapes appeared to appeal to the students; students remained very engaged when they participated in their 2nd Enviroscape station and no one expressed any frustration that the 2 presentations were similar. Staff worked hard to create activities that would be unique to each model, and also to stress a few similar but important points in both models. WVCWP will continue to use the 2 presentations together when space at a school allows for this.

WVCWP continues to discuss creation of some type of material which could be distributed to classrooms when the Enviroscape is presented. However, since students bring home so many papers from school, it is felt that any piece would need to appear unique. While the calendar produced last year was unique, useful and popular, the current budget situation does not allow for printing of new calendars each year, and has never allowed for printing enough for the calendars to be 'take home' material.

The curriculum on infiltration and pesticide pollution, created for the Ground Water Flow Model, was a very effective teaching tool, according to the High School Science teacher. The presentation has been requested for the 05-06 school year.

The Mercury Warning flyer (see "Mercury Ad – Attachment A" in Mercury Section) was handed out with an article on Mercury & Autism, reprinted from the LA Times. Residents appeared to be very interested in both pieces. 15 of each were printed for a trial at Los Gatos Beautiful; all were taken, and many more could have been distributed.

The Car Wash Kit flyers were created to meet a need for getting this information to the public. The Town of Los Gatos web site's Public Works page had some of this information, and WVCWP has received a number of calls based upon this page. The flyer was created as a means to easily get the information to schools; it has also been posted in municipal offices. It generated a call from one Los Gatos school district, which is now looking into setting up its own car wash kit. It will be distributed widely in FY 05-06 and will be posted on the WVCWP web site.

URMP, PMP (II.A.4.)	General Outreach	b. Participate in Community Events Promote watershed messages by participating in community events (e.g., farmers market, festivals, creeks clean-ups, etc.). Conduct or participate in local activities that are coordinated with the Watershed Education & Outreach campaign, including outreach events targeted at pesticide users.	WVCWP partnered with the local Sierra Club chapter & Audubon Society to feature a table at Audubon's annual October "Wildlife Education Fair". The table featured: the Enviroscape hands-on watershed model demonstrating various types pollution in runoff, a display on dangers of diazinon for birds, and IPM materials. The Sierra Club distributed California Golden Poppy seeds to promote pest-resistant planting. Attendance at the fair was a bit lower this year, due to rain. However, the table attracted appx. 25 children, some of whom stayed for 2-3 presentations. Parents watched the presentations from behind their children. The City of Campbell conducted outreach through its Arbor Day activity (April 19th) and Community Clean Up Day (April 23rd – 95 participants) and distributed a variety of materials, including IPM & HHW. The Town of Los Gatos conducted outreach through its Farmer's Market /Los Gatos Beautiful Celebration (April 2005). WVCWP staffed booths at the event and distributed a variety a materials. The City of Saratoga conducted outreach through its Building Bridges event (October 2004) and its Mustard Walk (Feb. 2005). A variety of materials was distributed by City staff at both events. WVCWP organized a Creek Clean-up Event with Sacred Heart School in Saratoga (students from all WVC). Appx 60 students and 5 parents participated. The beginning of	WVCWP Staff

FY99-00 Annual Report, PMP (II.A.10)	d. Press Releases	WVCWP will prepare press releases, feature articles and/or PSAs for local media on topics such as proper disposal of HHW, pesticides, copper, mercury and trash.	The WVC Trash Monitoring/Creek Clean-up program received excellent press coverage due to a Press Release submitted to the Saratoga News weekly paper. An extensive article on the clean-up ran on the front page, coinciding with Earth Day April 2005. The article highlighted WVCWP's Trash Monitoring activities, schoolyards as 'Trash Hot Spots', the problems of trash flowing to the SF Bay, the Clean Water Act and more. It included student interviews and photos. (See Trash Management Section for a reprint of this article). A Press Release/Article on mercury toxicity, fluorescent light disposal, and the upcoming HHW WV Drop-off event, was submitted to the SJ Mercury News and the 3 WV weekly newspapers. Several papers shortened the article	WVCWP Staff

			and ran it (October 2004). A Press Release/Article on a Saratoga student's award-winning Residential Runoff/ "No Dumping-Flows to Creek" science project was submitted to the SJ Mercury News and the 1 WV weekly newspaper. The SJ Mercury shortened the article and ran it (October 2004). WVC received national TV coverage in relation to the above article. The press release had been sent in reference to the student and his project appearing on the television news channel "CNN", as a winner in a national science contest. The student appeared on CNN with a large version of the WVCWP stormdrain stencil and a version of his science project "No Dumping – Flows to Creek". A Press Release on the upcoming IPM Training for WVC Parks staff, and the WVC focus on use of IPM, was submitted to the gardening columnist for 3 WV weeklies (March 2005). Two "Letters to the Editor" concerning architectural copper were submitted to 2 local weekly papers in response to a letter from the 'Copper Development Assn'. The Saratoga News weekly printed an article on local vineyards' efforts to meet Water Quality regulations by preventing erosion and pesticide runoff (a conference on the issue was held at a Saratoga Vineyard).

Public Information/Participation Program Evaluation

Educational Outreach

The West Valley Clean Water Program will continue to build on the success of the existing public education program, with one of the main activities being outreach through schools.

WVCWP piloted 2 new programs for public schools this year: A "Coastal Watershed" Enviroscape (to supplement the "Uplands Watershed") and a Ground Water Pollution Model activity & curriculum.

WVCWP purchased a new and different (Coastal) *Enviroscape* specifically for targeting students. New outreach materials and activities were developed for this model. It was piloted with a middle school class as 1 of 3 stations relating to "Keeping Water Clean" & "Pollutants Travel". Students appeared to enjoy the opportunity to use the 2 different Enviroscapes, and to learn about different issues with each. The teacher expressed appreciation for an excellent program. It is anticipated that this system (3 stations using 1 video and 2 Enviroscapes) will be the standard WVCWP presentation for 5th grade students.

The WVCWP's Enviroscape/ Water Unit presentation in general is well-received and appears to be an effective educational tool. Students participated enthusiastically in these hands-on activities. Students came up with very good pollution solutions and identified their local watershed at the end of the presentations.

From the Youth Science Institute, WVCWP borrowed a Ground Water Flow Model. It was piloted in a 5th grade classroom and a high school science classroom. It appeared to fit best into the high school science class. An activity and curriculum were developed, focusing on pesticide pollution of groundwater. The new 32 page booklet "Soil Matters" served as an excellent supplement to the presentation. Topics from the presentation were included in the year-end final exam.

PUBLIC INFORMATION/PARTICIPATION

FY 2004-2005 Work Plan Self Evaluation Matrix

Source	04-05 Work Plan Activity	FY04-05 Work Plan Tasks	FY 04-05 Accomplishments	Responsible Party

The high school teacher expressed appreciation for an excellent classroom activity, and requested a presentation for the coming year. YSI requested copies of the curriculum, and will use it with the model when appropriate; they mentioned that they did not currently have a high school level curriculum to use with the model.

Focusing on schools, teachers and students has proven to be a successful means of conveying information about Stormwater Pollution and Pollution Prevention. The calendar created by WVCWP in FY 03-04 continued to provide an attractive & fun method of keeping Stormwater pollution messages in the public eye throughout the year – calendars are hanging in classrooms, teachers' lounges, Senior Citizen Centers, Community Centers and municipal offices; a new message is displayed each month.

Creek Clean-Up/ Trash Monitoring Outreach

In terms of generating student participation in Creek Clean-ups, WVCWP will try 2 new avenues in FY 05-06. Participation at the spring Westmont High Cleanup was low because the information did not get from the school secretary to the person handling the "morning announcements". WVCWP has found 2 ways to inform the students more directly: the PTSA at Westmont High School will be contacted in order to post the information on their web site. The information will also be featured in the school's daily "e-mail bulletin". Contact names have already been obtained for this. In addition, Creek Clean-up flyers will be distributed to other schools in the area. The new music video "With Your Own 2 Hands" will also be a means of generating interest; WVCWP is investigating ways of letting teachers know about the video.

Additional evaluations have been included in several sections of the PI/P Table above.

Outreach on Pollutants of Concern

Additional outreach information is presented in specific Sections, such as the Copper Section, the Mercury Section and the Pesticide Management Section, within this report.

Note: **In order to prevent redundancy, the PI/P table has been created as one table for all four WV Communities;** activities sponsored by an individual community are noted where appropriate. PI/P activities for the WVC tend to be attended by residents from several WV communities, and many of the PI/P tasks are handled by WVCWP for all communities at once. In addition, a number of schools serve residents from more than one community.

URMP: Pest Managemt Performance Std		Continue implementation of Planning Procedures to comply with revised (FY03-04) Performance Standard in local URMP.	In August 2004, the City revised and updated the URMP, including its Pest Management PS. During 04-05, Saratoga continued to implement the PMPS. Pest Specific IPM Plans for Armored Scale and Soft Scale were developed in FY 04-05.	Parks Maintenance Spvr w/ Streets Maint. Spvr, Facilities Maint. Spvr & WVCWP staff
	PMP Plan (I.A.1.)	<u>Summary of Use</u> Track and report use of OP and other high use pesticides on municipally owned property. Include in reporting, justification for the use of OP pesticides and BMPs employed during OP pesticide use (if applicable).	A total of 64 oz. of Diazinon were sprayed in 2 applications by Saratoga's licensed Pest Control contractor to eliminate an aphid infestation on deodar cedar trees along an arterial road (Fruitvale Ave.). Diazinon was diluted in appx. 100 gallons of water to treat a number of very large trees. The contractor was careful to ensure that there was no runoff, and that conditions were conducive to avoiding any drift. Diazinon was used due to a combination of a difficult-to–treat tree (thick, shaggy bark) and an escalating situation of the pest weakening large trees in the median of a narrow, but heavily traveled road. Parks Supervisor and PC contractor were concerned that the trees would be weakened by the aphids to a degree where borers would attack, which could cause large branches to drop off posing a traffic safety hazard. The aphid infestation had been on-going, but was exacerbated by an unusually long, wet spring. The thick shaggy bark of the host tree makes it difficult to control	Pub Works Analyst to co-ord w/ Parks Maint Supervisor & WVCWP to write Ann Rpt

Source	04-05 Work Plan Activity	FY04-05 Work Plan Tasks	FY 04-05 Accomplishments	Responsible Party
			aphids with other means. Parks Supervisor will continue to investigate less-toxic methods which could prove successful in this situation.	
	PMP Plan (I.A.3.) PS #3	Implement BMPS and SOPS Continue to use standard operating procedures and best management practices for implementing the IPM policy.	Staff have attended trainings on IPM and are implementing IPM practices for control of pests, as practicable. "Standard Operating Procedures for Pesticide Management" are being followed by staff and contractors. PC contractor and 3 Landscaping Contractors signed for receipt of City's SOPs and agreed to adhere to the IPM Plan.	Parks Maint Supervisor
	PMP Plan (I.A.6.)	Banned Pesticides Inventory Conduct an agency-wide search of chemical storage areas for pesticides no longer legal for application per EPA, State, and/or local requirements, and properly dispose of any such pesticides pursuant to appropriate waste disposal regulations.	All storage areas are cleaned annually, and any pesticides that are no longer legal or no longer used are disposed of according to State regulations.	Parks Maint Supervisor
	PMP Plan (I.B.1.) PS#5.a	Training for Applicators Ensure that employees who apply pesticides for the agency obtain the appropriate training as required by the County Agricultural Commissioner and the State Department of Pesticide Regulation (DPR)	Any staff and/or contractors who apply pesticides meet all requirements of the County and the State. **DPR Continuing Education Units** were awarded to **6 Saratoga Parks staff members** at WVCWP's March IPM training in accordance with DPR certification requirements. Parks & Public Works staff attended Annual Safety Training conducted by outside contractor. Training included avoiding drift, and proper disposal. (see	Parks Maint Supervisor

FY 2004-2005 ANNUAL REPORT

Source	04-05 Work Plan Activity	FY04-05 Work Plan Tasks	FY 04-05 Accomplishments	Responsible Party
	(II.A.4.) PMP Plan (II.A.5.)	Identify and attend community events and distribute outreach materials regarding less toxic pest control. <u>Community Groups</u> Coordinate with local community groups and distribute information via libraries, civic and community centers, and other points of social interest.	Education Fair" (located on the border between Saratoga & Cupertino). Table featured: Enviroscape hands-on watershed model demonstrating pesticide pollution in runoff, a display on dangers of diazinon for birds, and IPM materials; Sierra Club distributed California Golden Poppy seeds to promote pest-resistant planting. Saratoga distributed quantities of IPM material at the "Mustard Walk" (Saratoga City Hall & Heritage Orchard, Feb. 2005) and the "Building Bridges" event (WV Cmmty College, Oct. 2004). WVCWP distributed IPM material at additional community events which Saratoga residents attend: Los Gatos Beautiful Celebration (April 2005), Orchard Supply Garden Center "No Tax Days" (Saratoga/Campbell, Oct. 2004). Through WVCWP, much IPM outreach has been directed at educational activities in the local schools. Students learn about pesticide runoff and the need to use less-toxic pest management strategies. See PI/P Section, "Citizen Participation" & "General Outreach"	WVCWP
	PMP Plan (II.A.6.)	<u>Web Site</u> Update and publicize web sites to promote IPM and reduce pesticide use.	WVCWP created 2 direct links from its website "Clean Creeks.org" to IPM Fact Sheets in PDF format on the the Program's *Watershed Watch website*. The City's web site featured an Earth Day ad which included a link for proper pesticide disposal. The ad was also e-mailed city-wide.	WVCWP Staff
	PMP Plan (II.A.7.)	<u>Coordinate with the Master Gardeners program</u> Use their services to train	1 local UC Extension staff member attended the WVCWP IPM Workshop in March 2005. Campbell's Master	WVCWP Staff

Source	04-05 Work Plan Activity	FY04-05 Work Plan Tasks	FY 04-05 Accomplishments	Responsible Party
		residents. Provide IPM training and information on water quality impacts of pesticide use to Master Gardeners as needed.	Gardener teacher registered, but had a family emergency so received the training materials at a later date. Master Gardeners conducted 6 gardening classes for local residents, at Campbell Commty Ctr, incorporating IPM, including 1 on Pest Management for over 40 WV residents. WVCWP coordinated with these classes to provide IPM outreach materials to class participants. Approximately **45** students received 10 different materials (= 450 IPM pieces distributed); extra materials were available for class members to share with friends/neighbors.	
	PMP Plan (II.A.9.)	<u>Media Relations</u> Continue to fund BASMAA Regional Media Relations Campaign[2] featuring pitches to Bay Area media and responses to breaking news on pesticide-related topics	See PI/P Section "General Outreach"	WVCWP Staff
	PMP Plan (II.A.10.)	<u>Media Relations</u> Prepare and pitch IPM stories and press releases to local media, as appropriate.	Gardening Columnist for 3 local weekly papers received a press release/invitation to attend the March 2005 WVCWP IPM Workshop on "IPM for Pests of Trees & Shrubs". San Jose Mercury News (9/24/0)4 printed an article on the Master Gardeners' classes for local residents at Campbell Community Center. All classes include aspects of IPM, with one class specifically addressing Pest Management. Press release sent to several papers re Saratoga	WVCWP Staff

[2] Funded by all Co-permittees each year.

			student's winning science project, which included impacts of residential pesticide use on Stormwater. Article ran in the SJ Mercury News 10/14/04. The weekly "Saratoga News" featured an article on the "Farm Water Quality "course held at a Saratoga vineyard for 28 Bay Area vineyards. Coverage included a quote on limiting pesticide use.	
	PMP Plan (II.A.12.)	"Pesticide User Outreach" project[3] Continue to assist with implementation of local aspects of the project as appropriate. (see Program's FY 04-05 Work Plan).	WVCWP Program Manager participates in the IPM Ad Hoc Task Group. WVCWP staff joined in the project's IPM Outreach events; 2 staff distributed IPM materials at the "How To Fair" in San Jose, May 14 & 15. See PI/P Section "General Outreach"	WVCWP Staff
	PMP Plan (II.A.13.)	Special Districts Provide information on less toxic pest control (e.g., IPM techniques, municipal IPM policies, model contract language, training opportunities, etc.) to neighboring special districts (e.g., Valley Transportation Authority, sanitary and utility districts, open space districts, vector control districts, and school districts) as appropriate.	WVCWP held a free training on *Less Toxic Control of Pests of Trees & Shrubs* in March 2005. Extensive outreach was conducted to all local school districts, Special Districts (Mid-Peninsula Regional Open Space District and WV Sanitation District) and private golf courses. Superintendent of Saratoga's private golf course attended. (Saratoga's golf course was also notified of the SF Urban IPM Conf. with "Organic Golf Courses" & "Green" Golf Tour.) Local nurseries (including Yamagami's and SummerWinds, in Cupertino bordering Saratoga) were also contacted about the free Workshop including Pesticide Applicator and Nursery Professional CEUs. Information about the training was e-mailed to staff	WVCWP Staff

[3] Funded by all Co-permittees in FY 04-05.

			members and followed up by phone calls. **DPR Continuing Education Units** were awarded to 1 Saratoga Golf Course Superintendent at WVCWP's March IPM training in accordance with DPR certification requirements. (see Training Summary for additional information)	
	PMP Plan (II.A.14.)	Conduct internal IPM outreach Target staff who do not necessarily purchase or apply pesticides during the course of their work (to encourage employees to use IPM techniques away from work). Email announcements as appropriate & display IPM materials at City Hall.	IPM material is available for pick-up by employees at the City Offices. Employees have been notified by e-mail concerning the need for cleanliness to avoid attracting pests in City facilities. The City's web site featured an Earth Day ad which included a link for proper pesticide disposal. The ad was also e-mailed city-wide.	Parks Maint Supervisor to distribute as appropriate/ WVCWP to provide material
	PMP Plan (II.B.2.)	IPM Partnership Program Provide IPM fact sheets and other materials to pesticide retailers to facilitate point-of-purchase outreach. Visit stores as necessary to determine ongoing participation. Document material distribution.	WVCWP coordinates IPM point-of-purchase displays with Summerwinds Garden Center in Campbell. WVCWP investigated purchase of a wall-mounted holder for fact sheets, as per Summerwinds' request. Summerwinds decided to re-institute use of their floor-based literature rack. WVCWP then re-supplied the IPM materials. WVCWP staff distributed IPM material at Orchard Supply Hardware Store special event (bordering Campbell). See PI/P Section "General Outreach"	WVCWP Staff
	PMP Plan (III.A.1)	Pest Control Operators Develop a database of licensed structural and landscape maintenance PCOs.	A general overview of Pest Control Operators based within the WVC showed that approximately 75% of them are based in the City of Campbell. Those based in Campbell have been compiled into a list. Discussion is underway concerning database development (information	WVCWP

Source	04-05 Work Plan Activity	FY04-05 Work Plan Tasks	FY 04-05 Accomplishments	Responsible Party
			fields). Additional local PCOs will be determined and placed in the database, along with Campbell PCO data, during FY05-06.	
	PMP Plan (III.A.4)	PCO Training/Reporting Document the numbers of PCOs receiving IPM training; pesticide use by PCOs; and implementation of BMPs, through contract specifications on municipal property.	Saratoga's Pest Control Contractor was unable to attend the IPM training due to other business commitments. Pesticide use by PCOs is reported annually to WVCWP along with City pesticide use reporting. PCOs are required to operate according to the Pesticide Management Standard Operating Procedures and Saratoga	Parks Maint Supervisor to assist WVCWP
	PMP Plan (III.B.2) PS#6	Municipal contractor's (PCOs) Require PCOs contracted by municipality to implement BMPs through contract specifications	PCOs are required to operate according to the Pesticide Management Standard Operating Procedures.	Parks Maint Supervisor WVCWP to assist
	PMP Plan (IV.A.2.)	Commercial Business Education Continue ICID Inspector's education program that targets commercial businesses. Distribute *Don't Set a Table for Pests.* Document efforts.	WVCWP Inspector distributes outreach material *("Don't Set a Table for Pests")* when conducting Restaurant Inspection. Pilot visits; **66** were given to restaurant management staff (in Campbell, Los Gatos & Saratoga) in FY04-05. **66** brochures which include pesticide reduction in landscaping info ("*Water Quality Protection Guidelines for Food Handling Facilities"*) were distributed by the WV Inspector.	WVCWP Staff
	PMP Plan (V.A.)	HHW Collection Ensure that adequate pesticide disposal services exist for residents and conditionally exempt small quantity	Pesticide disposal services are handled by SC County Household Hazardous Waste. A HHW drop-off event is held annually for the West Valley; other drop-off events are held throughout the year	PW Analyst WVCWP to assist

Source	04-05 Work Plan Activity	FY04-05 Work Plan Tasks	FY 04-05 Accomplishments	Responsible Party
		commercial generators.	in neighboring communities.	
	PMP Plan (V.A.3.) PS#8	Publicize HHW Collection Work with HHW collection agencies to support, enhance, and help publicize programs for proper pesticide disposal (PS #7).	SC County Household Hazardous Waste holds an annual HHW drop-off event for the West Valley. WVCWP alerts the local press to the upcoming event (3 local weekly papers and San Jose Mercury News). WVCWP also placed display stands in local libraries with color pictures and flyers publicizing the event, including pesticide disposal. The City website features a direct link to the County HHW info which includes info on Pesticide Disposal and Recycling	PW Analyst to assist WVCWP
	PMP Plan (VII.A.2) NPDES Permit Provision C.9.d.ii.	New Development/ IPM Planning Procedures Consider pest-resistant landscaping & design features in the design, landscaping, and environmental reviews of proposed development projects.	The City of Saratoga' Zoning Regulations contain provisions and criteria which promote native, pest-resistant landscaping, including the following requirements: In Article 15-47 WATER EFFICIENT LANDSCAPES: "Protection and preservation of native species and natural areas is encouraged wherever it is consistent with the other provisions of this Article." In Article 15-20 Residential-Open Space Districts: "Landscaping. In the selection of new landscaping, preference shall be given to natural, indigenous and drought resistant plants and materials in accordance with City Xeriscape Standards. Non-indigenous landscaping shall be limited to the immediate area around the house. The total of non-native landscaped area including the allowable impervious coverage shall not exceed twelve thousand square feet."	Comm Dev Dir

	NPDES Permit Provision C.9.d.ii.	Municipal Staff Training Education programs or training meetings (relevant to PMP Plan VII.A, above) will be conducted with City staff responsible for environmental reviews of new development projects.	The West Valley training meeting (December 21, 2004) included a review of required IPM practices and work plan tasks. Stormwater representatives were advised to deliver handout materials and provide additional review to appropriate municipal staff.	Comm Dev Dir w/ WVCWP to assist

Pesticide Management Activities Evaluation

Pest Specific IPM Plans for Armored Scale and Soft Scale were developed in FY 04-05. This is consistent with the WVC strategy of developing 2 Pest Specific Plans per year to help incorporate IPM into municipal pest control procedures. Staff received training in some of these methods at the annual WVCWP IPM Training.

Saratoga is implementing IPM in the following situations:

PESTICIDE USAGE REDUCTION MEASURES – Pest Specific

1) APHIDS: 2 trees had aphid problems – downtown with lots of foot traffic – injected with a systemic pesticide to reduce environmental impact.

2) YELLOWJACKETS:

Saratoga uses traps as the main means of control.

Source	04-05 Work Plan Activity	FY04-05 Work Plan Tasks	FY 04-05 Accomplishments	Responsible Party

Parks staff tries to clean off picnic tables every Monday to prevent attracting wasps & ants. The Parks Dept will be ordering plastic tables which are easier to keep clean and should serve to attract fewer wasps.

NO new nests

Only if above steps don't work, and a public health problem develops, is Wasp Freeze used.

3) WEEDS:

Saratoga used free mulch from tree service contractor; this mulch is used for weed control wherever possible. Wood chips were dumped and spread as mulch on the unlandscaped medians on Fruitvale Ave (a major arterial). This action resulted in NO spraying on a half mile stretch of median which would otherwise be a problem area.

Saratoga borrowed Campbell's tractor with boom mower for a weed abatement trial. It was used once but was found to be too small for the work it was required to do, so will probably not be an option in the future. The Street Maintenance Dept. did hire a landscape company to cut down roadside weeds twice this year instead of spraying; this cut pesticide applications from 4 to 2 for that task.

Hand hoeing/pulling of weeds where possible. Weekly walk-through with lots of hand weeding; Round-up used when weeds begin to get out of control, such as springtime – the emphasis is on catching the problem early in an attempt to avoid having to spray larger areas later.

4) RODENTS: A contractor is engaged to trap rodents in order to avoid poisonous baits; this is done when there is an outbreak of a number of rodents at once.

ANTS: Based upon BMPs presented at a WVCWP IPM training, the city ended use of PCO spraying for ants. Ants are vacuumed up; trails are cleaned away with soapy water. If ant problem persists, last resort is ant bait stations with fipronil, placed indoors.

MEDIAN LANDSCAPING: Policy is to install pest resistant shrubs and landscaping and avoid high-maintenance, low-pest resistance turf and greenery.

MICROSPRAY IRRIGATION: Microspray irrigation systems have been installed in the Heritage Orchard and computerized irrigation systems in medians, to reduce any possible runoff which could carry pesticides. Installations are on-going as budget allows; 50% are now computerized. Main medians on major arterials have all been completed.

HAKONE GARDENS (15.5 acre City park, leased to the Hakone Foundation, maintained by Japanese Garden Specialist/Certified Pesticide Applicator)

Hakone garden is also a wildlife habitat and is completely maintained using an IPM program:

All weeding is done by hand.

The garden is mulched with composted wood chips to reduce weeding and improve the clay soil with organic amendments. It also helps with water infiltration and

Source	04-05 Work Plan Activity	FY04-05 Work Plan Tasks	FY 04-05 Accomplishments	Responsible Party

conservation.

Saratoga is borrowing the tractor with boom mower from City of Campbell for roadside removal of weeds, to avoid spraying.
Rat traps are used for the occasional problem of rodents going into the house in winter.

Yellowjackets: traps with pheromone attractant are used.

Saratoga experienced staff turnover in positions related to pesticide use decisions (Facilities Maintenance Supervisor and Parks Maintenance Supervisor) in early FY 04-05. Implementation of any major IPM-related changes have been postponed while new staff develops an overview.

Results of Pesticide Use Review FY 04-05:

Although Saratoga was able to eliminate use of any OP pesticides in 03-04 & 02-03, 64 oz of diazinon was sprayed by the City's contractor for aphid control in FY 04-05. Although the City tries to avoid use of OPs, through implementation of IPM practices and through seeking out less toxic pesticides, in this instance the contractor was not able to find an alternative. The aphid infestation involved a type of tree (deodar cedar) with a very shaggy bark which protected the aphids so they had proven resistant to less-toxic management efforts and it appeared that the infestation could weaken the trees to the degree where they would pose a traffic safety hazard.

The City is making an effort to stress prevention (prevent weed growth, prevent pest infestations) where possible. Saratoga is moving into use of IPM and engineered, rather than chemical, controls as much as possible given budget and staff limitations.

In City facilities, sanitation is being stressed as a means to prevent pest infestations (ants, mice, etc.) so that chemical controls will not be needed.

Over the past several years, the Public Works Dept. has worked on landscape design and improved irrigation systems which will reduce need for perticide/heribicide use, and reduce any potential runoff which could carry pesticides.

Natural insect controls include use of traps for wasp control, and soapy water for ant control.

Through these types of efforts, Saratoga is progressively reducing chemical pesticide use.

Section 1.01 MERCURY POLLUTION PREVENTION ACTIVITES

Section 1.02

FY 2004-2005 Work Plan Self Evaluation Matrix

Source	04-05 Work Plan Activity	FY04-05 Work Plan Tasks	FY 04-05 Accomplishments	Responsible Party
	Mercury Plan (I.D.)	Mercury Policy Implement mercury policy or ordinance requiring the virtual elimination of mercury from controllable sources in urban runoff from agency operations.	Saratoga was operating on an administrative Mercury policy and adopted a formal mercury policy in September 2004 and continues to implement the policy. At the beginning of FY 04-05 Saratoga's new Facilities Maintenance Supervisor received training from WVCWP on implementation of a mercury policy.	WVCWP to assist Eng Div.
	Mercury Plan (I.F.)	Guidelines Continue implementing the Guidelines for Mercury-Containing Products Reduction and Management The quantities of mercury containing devices disposed of will be reported in the FY 04-05 Annual Report.	Guidelines are being implemented; extensive reduction of mercury-containing products is limited by a lack of alternatives. Research on alternatives to mercury-containing products has been conducted and implemented when possible, but few alternatives have been found. Saratoga does reduce mercury by using green-tipped fluorescent bulbs, made with a reduced amount of mercury; the bulbs are removed for recycling by the City's HHW contractor.	WVCWP to assist Eng Div.
	Mercury Plan (II.D.)	Reporting HHW Disposal Continue documenting and reporting quantities of mercury-containing products disposed of by City buildings and departments at hazardous waste collection facilities in FY 04-05.	Although tracking quantities of mercury products disposed of by the City over the past year is not required by the Permit, the City did initiate attempts to track quantities. However, it was found that it was too costly in terms of staff time, especially with current staffing cutbacks. 100% of all mercury-containing items are removed via a private HHW contractor.	SCVURRPP (guidance), WVCWP to assist Eng Div.
	Mercury Plan (V.A.)	Fluorescent Light Recycling Program Implement an outreach program to	The City of Saratoga promoted Apple Computer's Earth Day "Electronic Waste Recycling" event on the City's web site. The web site also initiated a new "Electronics	SCVURRPP (guidance), WVCWP to co-ord w/ HHW staff

		educate small businesses and conditionally exempt small quantity generators about recycling fluorescent lights. Coordinate educational outreach with fluorescent light recycling events sponsored by HHW.	Recycling Directory" page. A WVCWP-created display was placed at the Saratoga Library and at the City's booth during the "Building Bridges" event at WV College. The display included: ▪ a small, color poster ▪ flyer advertising the WV HHW Drop-off in Saratoga ▪ HHW brochures ▪ "Keep Your Family Safe from Mercury" flyers See PI/P "Materials Distribution" Section. A "Claire Water" cartoon strip on recycling Fluorescent Lights and items with Mercury was printed in "The Saratogan" newsletter. Small Business Outreach was investigated by contacting the Saratoga Chamber of Commerce. WVCWP was told that the on-line Chamber newsletter can be used to distribute a short informational mercury disposal article to businesses in the future. Advertising on proper Mercury disposal was handled through placement of a "Mercury" ad. Space was purchased in the 3 weekly newspapers serving the West Valley. The Mercury ad ran 2 times in each of the 3 newspapers. When the ad was printed out as a flyer and distributed at the Los Gatos Beautiful booth, it was very well-received – residents appeared to find the graphic appealing, and the information to be useful. See Mercury Attachment A. A Press Release/Article on mercury toxicity, fluorescent light disposal, and the upcoming HHW WV Drop-off event, was submitted to the SJ Mercury News and the 3 WV weekly newspapers. Several papers shortened the article and ran it (October 2004). WVCWP's website was revised to include a Mercury link	

			on the home page. The link connects to a new Mercury web page which includes information on free local fluorescent light disposal, free cell phone recycling and mercury and runoff pollution. See See Mercury Attachment B. See PI/P Section for additional outreach related to Mercury	

Mercury Pollution Prevention Activities Evaluation

All WVC have participated in several trainings/round table discussions about mercury policies and mercury product disposal in WVCWP meetings. All WVC have procedures in place to ensure safe disposal of mercury-containing products. When municipal staff purchase or replace mercury-containing products, they select products that contain less mercury; Saratoga has made strides in this area by switching to low-mercury green-tipped fluorescent lights. The mercury policies have been adopted without any setbacks or challenges.

The WVC have also conducted extensive outreach on Mercury issues in FY-4-05. Outreach was conducted through web sites, distribution of a variety of information at various sites, classroom presentations, municipal newsletter articles, and newspaper advertising.

Outreach has included posting a small mercury poster on the WVCWP website home page, linked to a page devoted to mercury issues, including assorted recycling information. The City of Saratoga web site featured an informational flyer on Electronic Waste and encouraged recycling at the Apple Computer Drop-off event April 23rd.

WVCWP has also incorporated discussion of mercury and fluorescent light bulbs into the 5th grade classroom interactive presentations; the topic seems to generate strong interest from teachers and the students – reference to fluorescent lights usually causes students to look up at their overhead lights, and they make an immediate connection about behavior changes that can be included in their lives.

Additional outreach information is listed in the PI/P Section of this report.

COPPER ACTION PLAN/NICKEL ACTION PLAN

FY 2004-2005 Work Plan Self Evaluation Matrix

Activity	Source	FY04-05 Work Plan Tasks	FY 04-05 Accomplishments	Responsible Party
Vehicle Washing Operations	CB-1	Continue to distribute outreach materials on proper vehicle/equipment washing at Municipal counters/Post Offices/Libraries and public events, and post on WVCWP website.	WVCWP created a *Car Wash Kit flyer* to inform residents of the need to use the Kit for Car Wash fund-raisers. The flyer is posted at the City offices; it will be distributed to schools in FY05-06. The flyer incorporates information on the Municipal Code for Stormwater, and information on copper's affect on aquatic life. (see Copper Attachment A) A brochure on proper vehicle washing was distributed at car wash fundraisers by the Stormwater Discharge Inspector, in conjunction with instructing on use of the Car Wash Kit.	WVWCP staff
Vehicle Washing Operations	CB-1	Partner with Nova High School teacher & students to make presentations to Campbell, Los Gatos and Saratoga High School classes, topics will include car washing and proper draining of Pools & Spas.	This year, car washing, pool draining and copper issues were incorporated into WVCWP's Enviroscape presentations given to 5th graders at Foothill Elementary School and Rolling Hills Middle School. Appx. 150 students learned about sources of copper, copper's affect on aquatic life, draining pools to sanitary sewer outlets (photos of an outlet were shown) and proper car washing.	WVWCP staff
Vehicle Washing Operations	CB-1	Provide car wash kit & education to charity car wash organizers. Provide educational brochures/materials where applicable. Track and document occasions for use in Annual Report.	The WVCWP Inspector set up the Car Wash Kit at 4 Car Wash Fundraisers in the WVC in FY 04-05. He provided instruction on how to use it and explained the need to keep car wash water out of storm drains. <u>July 28, 2004 Muscular Dystrophy Adult Support Group fundraiser Car Wash</u> held at Ace Hardware in Los Gatos (bordering Campbell). Also:	WVWCP staff

Activity	Source	FY04-05 Work Plan Tasks	FY 04-05 Accomplishments	Responsible Party
			Oct. 30, 2004 Student Exchange Program & Italian Club of LG High School fundraiser Car Wash held at Van Meter School, LG Blvd. 20 students participated; appx. 95 vehicles were washed. April 2005 – LG Union School Dist. Education Foundation - fundraiser Car Wash held at Van Meter Elem. School, LG. April 2005 – Girl Scout Troop 630 Los Gatos - fundraiser Car Wash held at Union 76 gas station at Blossom Hill Rd., LG. 50 copies each of "Cars Pollute Too" and "Washing Cars" were distributed during car wash events.	
Vehicle Washing Operations	CB-1	Submit data regarding vehicle washing outreach activities. Provide an effectiveness evaluation in Annual Reports.	The Stormwater Discharge Inspector distributes several vehicle washing pieces during pro-active inspections and in relation to any actual or suspected IC/ID incident. This means of outreach is very effective and the Inspector is able to answer questions and offer suggestions. See "Inspect Auto Businesses" below. WVCWP staff created a *Car Wash Kit* outreach flyer, including reference to each WVC's Municipal Code for Stormwater and information on copper's toxicity to aquatic life. The flyer is available at the respective municipal offices. 50 copies each of "Cars Pollute Too" and "Washing Cars" were distributed during car wash events. See "Evaluation" below.	WVWCP staff
Vehicle Washing Operations	CB-1	Require source control measures for Group 1 new development and redevelopment projects that will conduct vehicle/equipment washing and maintenance activities (consistent with	The WVC did not have any new Group 1 projects that would conduct vehicle/equipment washing and maintenance activities during FY 04-05.	WVCWP staff w/ Municipal Staff

West Valley Communities
Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2004-2005 ANNUAL REPORT

Activity	Source	FY04-05 Work Plan Tasks	FY 04-05 Accomplishments	Responsible Party
		Permit Provision C.3.k).		
Vehicle Washing	CB-1	Inspect auto businesses regarding car wash requirements, and prohibited storm drain discharge.	The WVCWP Inspector conducted 18 pro-active auto repair and vehicle facility shop inspections in Los Gatos (Monte Sereno and Saratoga have no auto service businesses). He distributed his fact sheet, providing information on wastewater capture systems to automotive facilities. The fact sheet was designed to provide small-scale automotive facilities (those that find installing a full-fledged wash rack cost prohibitive) with examples of inexpensive treatment technologies and distributor information. Problems at shops in previous years generally appear to have been corrected, due to Inspector's outreach efforts.	WVWCP ICID Inspector
Vehicle Washing Operations	CB-1	Maintain and inspect car wash systems for City vehicles at the corporation yard	Staff continue to follow the suggested practices and to ensure that the Corp Yard systems function correctly.	WVWCP ICID Inspector / Pub Works Supt
Vehicle Washing Operations	CB-1	Encourage municipal staff to attend SCVURPPP's "Mobile Cleaning Workshop".	Saratoga staff attended a BMP training at the Maintenance Supervisors Assn. meeting; Los Gatos staff received BMP training through WVCWP and a consultant in FY 04-05 (see Training Summary – Public Agency Activities). Monte Sereno does not have a Corp Yard or City vehicles.	WVWCP ICID Inspector / Pub Works Supt/ Bldg Maint Supvr
Industrial Copper Control	CB-3	Continue Industrial Inspection program, including NOI sites and other industrial sites such as plating and metal finishing facilities, vehicle service facilities, and other sites.	The WVC have an agreement with the SCC Fire District to conduct urban runoff inspections for machine shops and metal manufacturing facilities. 4 of these types of facilities are in Los Gatos and were inspected this year; there were no violations. ▪ 1 out of 1 Machine Shop ▪ 2 out of 2 Misc. Mfg	SCVC Fire Dept./ WV ICID Inspector

West Valley Communities
Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2004-2005 ANNUAL REPORT

Activity	Source	FY04-05 Work Plan Tasks	FY 04-05 Accomplishments	Responsible Party
			1 out of 1 Welding/Iron Monte Sereno and Saratoga have no industry which fall into these categories. See CB-1 "Inspect auto businesses" above for vehicle service facilities. See IND Section	
Reducing Traffic Congest'n Promoting Alternative Transport-ation	CB-6/7	Complete revision of and implement revised development site design standards related to transportation per Permit Provision C.3.j Encourage and promote better transportation-related design practices and alternative modes of transportation.	The WVC endorse and support Santa Clara Valley Transportation Authority's *Best Practice Principles* for integrating public transportation and land use[1]. Principles promote: designing for pedestrians i.e. public connection to paths and sidewalks and tree covered sidewalks which provide comfortable pedestrian spaces. Providing a diverse mix of land use and focusing growth around transit stops reduces the need for residents to drive.	WVCWP w/ Municipal Staff
Water-shed assessm't and protection	CB-8	Revise City's General Plan, as needed, at next scheduled update, based on recommendations from the *Development Policies Comparison Project* and Provision C.3.l.	Where practicable, recommendations from the *Development Policies Comparison Project* will be considered in the WVC's next General Plan revisions. Town of Los Gatos' next revision is scheduled for 2010. Monte Sereno is currently working on a General Plan revision. Saratoga is starting work on a General Plan revision.	Community Dev. Dir.
Water-shed assessm't and protection	CB-8	Continue to implement guidance from SCVURPPP on addressing water quality in the CEQA review process, as part of C.3.m. implementation.	The WVC have adopted the CEQA review guidance from SCVURPPP, as documented in the June 2004, *C.3 Stormwater Handbook*, to address water quality as part of the C.3.m implementation.	Municipal Staff

[1] *Community Design & Transportation: a Manual of Best Practices for Integrating Transportation and Land Use* (copyright 2003 Santa Clara Valley Transportation Authority)

West Valley Communities
Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2004-2005 ANNUAL REPORT

Activity	Source	FY04-05 Work Plan Tasks	FY 04-05 Accomplishments	Responsible Party
Water-shed assessm't and protection	CB-8	Participate in the Water Resources Protection Collaborative and implement any agreed upon guidelines and standards for watershed protection.	The WVC have staff attending the Collaborative on a regular basis (with the exception of Monte Sereno which has part-time staff in the City Engineering Dept.). All WVC provide data as requested by the Collaborative and are working to implement any guidelines which may be established.	Municipal Staff
Street sweeping & stormdrain O&M	CB-11	Continue following Program guidance regarding the collection and reporting of street sweeping data. Provide data in accordance with schedule for Annual Report.	WVC staff and contractors have worked closely with WVCWP to collect all necessary street sweeping data. Street Sweeping data was collected and was provided to the SCVURPPP at the end of FY 04-05 for all street sweeping activities. The Town of Los Gatos is currently placing a different employee in the street sweeping staff position; the City of Saratoga is working on the bidding process for a new contractor: all new staff will be trained on gathering the required data.	WVCWP staff w/ Municipal Staff
Street sweeping & stormdrain O&M	CB-11	Implement (as appropriate) identified improvements to current street sweeping and storm drain system O&M programs (within available budgets). Provide effectiveness evaluation in FY 04-05 Annual Report.	The street sweeping program is effective in that efficient, predictable routes are maintained, and sweeping days do not conflict with trash pickup days. Street sweeping information/schedules are available on WVC websites. Los Gatos is improving its street sweeping program with the purchase of new street sweeping equipment. A variety of street sweepers were tested in order to determine which could best handle the Town's requirements. Monte Sereno's street sweeping is handled by Los Gatos. Saratoga is undertaking a bidding process for a new street sweeping contractor and envisions a need to increase the budget in order to maintain the current level of service. Annual evaluation of maintenance for the WVC's storm drain system is conducted at the annual storm drain operations and maintenance supervisor's (superintendent's) meeting.	WVCWP staff w/ Municipal Staff

			See Public Agency Activities – "Street Sweeping and Storm Drain O&M" Sections.	
Outreach on pool, spa maint'nce	CB-12	Continue to distribute outreach materials at local public events; brochures at agency department counters and public places; and placement on WVCWP website.	All municipal offices have the new Pool Draining brochure available for residents. Street maintenance staff in Los Gatos and Saratoga carry the Pool Draining brochure for distribution as needed. WVCWP is currently designing a "Copper" page for the web site which will include the Car Wash Kit flyer and the Pool brochure. The Town of Los Gatos' web site "Public Works page" includes 2 paragraphs of information on proper pool draining.	WVCWP staff w/ Municipal Staff
Outreach on pool, spa maint'nce	CB-12	Continue to distribute outreach materials and brochures as part of ICID WVC inspections.	See CB-1 "Submit data regarding vehicle washing outreach activities" above.	WV Inspector
Use of architect-ural copper	CB-21	Encourage limiting use of copper on roofs, in roof shingles, and for gutters.	WVCs discourage the use of architectural copper. The Town of Los Gatos requested, and received, a briefing paper from WVCWP on for Town Planning reference. The paper covered the history of copper issues in the South Bay, and current standards and recommendations. The Planning Commission refers to this when dealing with building project applicants. Monte Sereno: City staff discourages the use of architectural copper in the planning and design stages. If an applicant desires architectural copper, Planning & Engineering staff point out the water quality issues and suggest use of alternatives. The City of Saratoga does not allow the use of	Municipal staff

Copper/Nickel Action Plan Evaluation

Car Wash Outreach Evaluation:

The Car Wash Kit for car wash fundraising events has been a success; it was used at 4 events in FY 04-05 year and is estimated to have prevented runoff from several hundred cars. The WVCWP's newly-created Car Wash Kit flyer will be distributed through more avenues in FY 05-06, in an effort reach potential users and to reduce car wash event discharges.

The Car Wash Kit flyer was posted at municipal offices in spring 2005, but WVCWP has not yet received calls from any groups resulting from the flyer. All calls so far have been triggered by car wash information on the Town of Los Gatos Public Works web page. In Summer and Fall of FY 05-06, the flyer will be distributed to schools in WVC, in hopes of increasing public awareness of the Car Wash Kit. The flyer will also be posted on the WVCWP website.

Since car washes are sometimes held at gas stations and churches, some form of efficient outreach to these locations is also being discussed. The best approach might be to contact youth sports teams and scout groups, who may hold car washes but perhaps aren't affiliated with a school. In FY 04-05, WVCWP began assembling a *Scouts and Sports Team Contacts* list; in FY05-06, additional contacts will be added and staff will investigate means of distributing the flyer to the appropriate contact people.

Copper Outreach Evaluation:

The WVCWP will continue to provide outreach on car washing, vehicle maintenance, alternative transportation, and pool maintenance during in-class presentations and partnerships with teachers and students in local schools. WVCWP incorporated messages about activities that can prevent copper runoff as part of the 5th grade Enviroscape curriculum.

The WVCs continued their street sweeping programs and were able to collect accurate data for submittal for FY 04-05.

The WVCWP Inspector's Vehicle Shop Inspection Program continues to be a strong addition to efforts to reduce copper runoff from car washing. See IND

West Valley Communities
Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2004-2005 ANNUAL REPORT

Activity	Source	FY04-05 Work Plan Tasks	FY 04-05 Accomplishments	Responsible Party
Section.				
www.cleancreeks.org , offers a *Take Action* page which encourages people to:				
•Take cars to a commercial car wash (where the dirty water will flow to a Treatment Plant), or wash it on a non-paved surface.				
•Drain pools and spas into a sanitary sewer outlet, NEVER into a street				
•Drive less! Walk, ride a bike or a bus, or carpool.				
WVCWP is working on design of a "Copper" page for its website, featuring outreach pieces on residential car washing, use of the Car Wash Kit, and pool draining.				
The Town of Los Gatos web site features excellent outreach material on car washing and pool draining, along with general information on avoiding stormwater runoff pollution. The site's link to the WVCWP site and the WV Stormwater Inspector's e-mail allows LG residents to easily contact WVCWP concerning car wash fundraiser events. This has triggered implementation of the Car Wash Kit at 4 car washes in FY 04-05; use of the kit avoided runoff pollution from several hundred cars and allowed for education of numerous residents during the car wash activities.

West Valley Clean Water Program *(WVCWP)*

The *State Water Board* requires municipalities to prevent Car Wash Event runoff from flowing into Storm Drains.
(Saratoga Municipal Code 6-15.070)

All Car Wash Events should use the ***Car Wash Kit***, which keeps runoff out of Storm Drains.

To schedule pick-up & training on use of the Car Wash Kit,
e-mail WVCWP at: inspector@cleancreeks.org or phone 408-354-5385

- Copper is toxic to aquatic life - and it washes off of brake pads
- Oil, coolant & other pollutants are also carried in car wash runoff
- The Car Wash Kit drains runoff into the Sanitary Sewer lines, rather than into the Storm Drains (which flow untreated into our creeks)

TRASH INVENTORY & MANAGEMENT

FY 2004-2005 Work Plan Self Evaluation Matrix

Source	04-05 Work Plan Activity	FY04-05 Work Plan Tasks	FY 04-05 Accomplishments	Responsible Party
Trash Work Plan	Strategy and Goals	Use Program guidance to develop a strategy to conduct trash evaluations in watersheds.	The WVCWP Manager and Inspector participated in the Program's Trash Ad Hoc Group and developed goals for the West Valley Communities, which the WVCs approved in FY 03-04. These goals include: • Prioritizing inspections for trash dumpster areas at local restaurants. See IND – Restaurant Inspection Program of each municipality's annual report. • Educate local businesses about the need for dumpster cleanliness and encourage BMPs • Evaluate trash condition of urban creeks through drive-by monitoring and when feasible, rapid trash assessments. • Educate local teachers, students and principals by featuring trash problems and solutions in our interactive school presentations. • Evaluating the progress made on goals in each Ann Rpt	WVCWP to coordinate, WV Stormwater Reps to provide municipal input and feedback
Trash Work Plan	Evaluations	Conduct trash evaluations in a subset of trash problem areas.	The WVCWP staff conducted the following KAB litter index assessments for the identified problem spots for each WV community during FY04-05. See attached reports for detail. For: • Campbell's thirteen (13) identified problem areas, 23 assessments were conducted. • Los Gatos' eight (8) identified problem areas, 12 assessments were conducted. • Monte Sereno's one (1) identified problem areas, 3 assessments were conducted. • Saratoga's four (4) identified problem areas, 6	WVCWP to sponsor events Municipality to identify problem areas

			assessments were conducted. The WVCWP also sponsored three (3) trash cleanup events, where citizen volunteers performed monitoring which is very similar to the Water Board's RTA method.	
Trash Work Plan	Identify Control Measures & Begin Implementation	Identify and begin implementation of trash control measures, as appropriate, to address trash problem areas within high priority areas	The West Valley Cities have successfully implemented all of the strategic trash goals listed in item 1 above.	Municipal Storm Reps to determine Strategic Goals and WVCWP to assist with implementation
Trash Work Plan	Report on Trash Mgmt Practices Implemented	Provide Program staff with information on trash management practices implemented, using standardized reporting format.	Program staff was provided with all trash assessment information for FY 04-05 except for the data that was collected as part of the WVCWP citizen participation program, *Creek Keepers*, mentioned below.	WVCWP Staff
FY01-02 Work Plan	Monitoring/Citizen Participation	Continue to promote citizen participation program to monitor trash in local creeks (element of *Creek Keeper's* Program).	Three public participation events were held in FY04-05 for trash cleanup and monitoring near local creeks. All three event sites were near schools so that WVCWP staff efforts would accomplish three things. 1) Trash monitoring 2) Creek area cleanup and 3) teaching students about a citizen's responsibility to keep trash out of our watersheds. The method used by volunteers at these events resembles the RTA method closely enough that it is possible to take individual trash assessment forms from the participants and put the data almost directly into the RTA forms. Lack of staff time prevented WVCWP from transferring all the data for FY04-05. However data was transferred to the RTA format for the site on Wildcat Creek. See the Program's Trash Activities report. Also see attached data sheets, and the press release for the Wildcat Creek event, and the front-page story from the Saratoga Community Newspaper (Silicon Valley Community Newspaper Group) 4-27-05.	WVCWP Staff

FY04-05 Work Plan, RWQCB comments	Training	Conduct PI/P training meetings on implementation of volunteer creek and school site clean ups. Evaluate effectiveness of volunteer trash monitoring and success of clean-up events	On July 16, 2004, the WVCWP Manager and the half-time Public Outreach Assistant attended the following workshop: Regional Board Trash Rapid Assessment Training Presenters: Water Board Staff for the session on the Rapid Trash Assessment method; (RTA); and SCVURPP Program Staff for the session on the Keep America Beautiful (KAB) method of assessment	WVCWP Staff

Trash Inventory & Management Evaluation

The West Valley Communities have made good progress on each of their strategic goals for trash reduction.

Prioritizing Dumpster Area Inspections & Educating local businesses

The WVCWP Inspector patrols the downtown areas of each community to look for signs of illegal dumping or debris from dumpsters (especially those with open lids) and providing educational chats as needed. Monte Sereno is the exception; being strictly residential, the City does not have many dumpsters. See the IND and ICID section of this report for details.

Evaluate the Trash Condition of Urban Creeks by conducting Drive-by Monitoring of Identified Problem Areas

WVCWP staff conducted *Keep America Beautiful Litter Index* method assessments at all identified problem areas in the West Valley Communities, for a total of 44 assessments. Some new potential problem areas were identified and other, like the *Los Gatos Creek Trail,* which is cleaned up monthly by a local group of University Women, will not remain on the list. Although it is very heavily traveled it is also constantly monitored by residents. WVCWP staff finds that once the patrolling or monitoring has become routine (especially using the simple KAB method) the task is relatively easy to accomplish. WVCWP staff is becoming more familiar with the local watersheds, which makes it easier to identify areas which present potential problems.

Conduct Educational Outreach to Students and Teachers in Local Schools

WVCWP staff will respond to every opportunity to partner with schools and teachers on educating the students. The WVCWP has been particularly successful, in FY 04-05 and F Y03-04 in recruiting student volunteers for creek cleanups and the task of creek monitoring. The WVCWP's own method of trash assessing is very similar to the RTA method except that it is simplified for young students and for the needs the West Valley area. Refer to the combined results of the trash monitoring at three volunteer events, attached. WVCWP events during FY 04-05 all took place in the San Tomas Aquino Watershed. This is partly because choosing a site and recruiting volunteers is time intensive, and it becomes easier as the site is established and volunteers are more familiar with the site and the routine procedures for the event. Sacred Heart School next to Wildcat Creek contacted WVCWP this year to see if staff would sponsor another creek cleanup event. In FY05-06 WVCWP staff will investigate other areas in the West Valley to try to establish an on-gong site in the Guadalupe Watershed (the other West Valley Watershed).

Saratoga Gardening Guerillas

A group of Saratoga Volunteers have been cleaning the streets and sidewalks of the City (sometimes on hands and knees) for the last year. See article attached.

Volunteers met with a hurdle when the Saratoga decided that the City would be liable for the safety of the citizens while they were working. This demonstrates the enthusiasm of the volunteers in West Valley Communities and the set backs that the WVCWP sometimes encounters in encouraging and accepting citizen volunteer services. See attached article (*Gardening Guerillas)* from the Silicon Valley Community Newspaper, *Saratoga News.* Having to walk this fine line is a part of any idea which involves citizens working on municipal property e.g., students applying storm drain stencils or participants in a creek cleanup (especially if volunteers intend to enter the creek to facilitate the cleanup) or even a participation in a holiday parade (public outreach). The WVCWP tries to take advantage of every public participation opportunity without leaving the Municipality vulnerable to potential liability issues.

West Valley Press Release April 19, 2005 – Trash

From: Cheri Donnelly [mailto:cheri.westvalley@comcast.net]
Sent: Tuesday, April 19, 2005 1:38 PM
To:'ltoth@svcn.com'
Subject: Sacred Heart Students Clean a Creek April 20th

Hi Lisa,

Sacred Heart School children and a few parent volunteers will be cleaning Wildcat Creek, behind their school grounds on Wednesday afternoon (April 20) from 1 to 2:30 pm. They have a **permit from the SCV Water District** to open the normally locked gate and pick up debris that came to the creek from the school lunch/ field area, the streets, or from other yards.

We are beginning to see the spring weather and notice that trash has settled in the creeks. We first approached Sacred Heart's Principal two years ago to see if she would allow the West Valley Clean Water Program staff to enter the creek area behind the school and pick up the trash that volunteers couldn't get to on National River (Creek) Clean up Day.

The Principal not only invited us onto the property but allowed us to hold a watershed assembly at the school to encourage the students to volunteer for the cleanup event. We were surprised when 80 students and parents turned out for the creek protection event. The principal confided to us that in preparation for Clean Water staff's visit to their school, the students combed the school grounds for trash a few days prior to the creek cleanup event.

School grounds and their surrounding areas are well known among creek and Bay environmentalists as a major source of beverage-container and food-wrapper trash. All of which ends up in our local creeks, streams and finally the Bay. We might look around the West Valley and say we don't have a trash problem but all our upstream food and beverage debris is carried by heavy rains to an unmanageable buildup of trash that is choking creeks in downstream areas.

This year the school called us to request that we help them sponsor another cleanup event. We are delighted to provide the gloves and trash bags and guidelines to keep this a safe event. The SCV Water District staff came out and cleared a path to prevent the students from coming into contact with poison oak. After the event the Water District will haul away the bags of collected trash.

We have cute photos of the previous event if you are interested. The student volunteers are from grades K-8. About 45 students have signed up thus far. I wish every school would celebrate Earth Day this way.

Best Regards,

Cheri Donnelly, Program Manager

Education

Sacred Heart School seventh-graders Lynn Vo (left) and Lucija Stimach participate in a Wildcat Creek cleanup day on April 20 behind the school grounds.

Students doing something about litter

By Lisa Toth

Students at Sacred Heart School may be litterbugs, but they're doing something about it.

More than 65 students in grades four to eight volunteered to clean up Wildcat Creek, which runs behind the Saratoga school's grounds. They were permitted by the Santa Clara Valley Water District to open a normally locked gate to gain access to the creek and they worked for more than two hours on April 20.

The zealous students, parent volunteers and representatives from the sponsoring organization, West Valley Clean Water Program, picked up debris that had been blown into the creek from the school lunch area, streets and school yard. The garbage had been carried into the creek by winter rain storms.

"It's gross," said seventh-grader Elizabeth Carte, picking up trash near the fence line of

the school property. "This shows you how the trash grows. One little piece from everyone becomes a big amount."

Armed with clipboards and pencils, students tracked each piece of trash they picked up, such as random bolts and screws or more common potato chip bags, candy wrappers and beverage containers.

The creek monitoring trash activity will help water program officials determine where the majority of the trash comes from and what behaviors are contributing to the trash. The students were also given gloves, bags for recyclable items and long-handled grippers to pick up hard-to-reach rubbish.

Parent volunteer Georgia Ellenikiotis, the school's Christian service commissioner, said the students received two community service hours for the activity. Each grade level is required to complete a different amount of community service, which includes activities such as playing bingo with senior citizens, assisting at homeless shelters or organizing food drives. Even though the creek cleanup was optional, Ellenikiotis said she was pleased the event had a high turnout. This was the school's third year participating in the creek cleanup event.

"It's fun to be cleaning up with all your friends," said Marianne Gera, a seventh-grader who also serves as the safety and ecology commission officer for the school. "It's helping the environment instead of trashing it."

Before beginning the trash cleaning expedition, students were instructed by Cheri Donnelly, West Valley Clean Water Program's manager, about safety rules, how to avoid poison oak and how to not disrupt the creek's natural habitat. She also showed students photographs of concentrated levels of garbage that can accumulate farther downstream if not prevented or remedied through volunteer cleanup efforts.

Wildcat Creek flows into the San Tomas Aquino Creek and then into Moffet Channel. From there, the water travels through Guadalupe Slough before entering the lower San Francisco Bay, according to Donnelly.

"It's an eye opener for these kids to realize what comes from their own backyard--plastic straws, food wrappers, chip bags, snack bags, bottle caps, water bottles," Ellenikiotis said.

Before the students were allowed to go through the locked gate and head down the steel embankment to access the creek, they had to comb the grounds and collect all the trash that had piled up along the fence line. Kathy Ottenberg, an assistant with the water program, said she hoped the students would take away a sense of responsibility and awareness about not littering in Saratoga.

"We're all partners of the larger community, and our actions and caring about the creek do make a difference," she said. "The creek is part of their campus, but they probably

don't notice it on a daily basis."

Marianne pointed out that much of the trash on the school campus and in the creek was the result of carelessness. She added that the school has implemented a recycling program in the classrooms, and classes are also required to periodically clean up the school yard. Sacred Heart students have been studying topics in their science classes like erosion, pollution and how animals can be affected by trash. In addition, the creek cleanup day also tied into national river cleanup day coming up on May 21 and fell close to Earth Day on April 22.

Donnelly also stressed the importance of the creek cleanup as a savings for taxpayers. In the Los Angeles area, a severe trash problem has resulted in the need for costly filters and trash inserts in storm drain pipes to catch the trash before it can run downstream, she said.

While Santa Clara County isn't listed as having an impaired trash problem and isn't being required to use such filters, representatives like Donnelly are preparing for the possibility of it occurring. The county must adhere to Clean Water Act standards.

"School grounds and their surrounding areas are well-known among creek and Bay environmentalists as a major source of beverage container and food wrapper trash, which ends up in our local creeks, streams and finally the Bay," Donnelly said. "We might look around the West Valley and say we don't have a trash problem, but all of our upstream food and beverage debris is carried by heavy rains to an unmanageable buildup of trash that is choking creeks in downstream areas."

Donnelly added she wished everyone would celebrate Earth Day like Sacred Heart students--by not being litterbugs.

Gardening Guerillas do their work in jungles of downtown Saratoga

By Kaustuv Basu

They call themselves the Gardening Guerillas. And it's the mission of these guerillas to clean the sidewalks of downtown Saratoga, get rid of weeds, plant flowers and make the area more attractive to visitors.

Leading the group is Jill Hunter, planning commissioner and president of the Saratoga Business Development Council, recently renamed the Saratoga Village Development Council.

Hunter and her team meet at a downtown coffee shop once a week.

On the rain-drenched morning of March 29, only a handful of people showed up at the International Coffee Exchange for the weekly meeting.

"This is only the beginning. The rain has kept people away," said Hunter.

She hopes that as news about the group spreads, more and more people will sign up.

"Some people have told me that they do not like our name. We might call ourselves the Saratoga Gardeners," Hunter said.

Armed with some improvised garden shears, Hunter and Dr. John Marian of Big Basin Chiropractic walked around, talking to business owners and pulling overgrown weeds and plants from flowerbeds near the sidewalk. They were

joined by Dorothy, Marian's mother.

In a few weeks, the guerillas will be wearing matching aprons as they walk about downtown Saratoga. Other plans include decorating some of the Village alleyways with arches. "We might buy some overhanging flower-pots," Hunter said.

Hunter has ambitious plans for the Village. "It's easy to criticize the city or knock the Village. My first priority is to have no negativity," she said.

Barely an hour before the meeting at the International Coffee Exchange, Hunter had presided over the meeting of the Saratoga Business Development Council, at which the group decided to rename itself the Saratoga Village Development Council and concentrate on business development in downtown Saratoga.

At the meeting, Hunter said that the group would soon request the city to put up a sign near Highway 85 that indicated a historic downtown with shops and restaurants in the vicinity.

Bill Cooper of the Bella Saratoga restaurant said that he hopes to have some of the faded American flags removed from the Village and replace them with spring flags.

"I know that the city has spring flags available," he said.

Cooper is working with other Village merchants so that they can ask the city to fund the Village shuttle program again. The program started last year and took concert-goers from the Village to Montalvo for free for those dining at a city restaurant or staying at a Village hotel.

For more information on the Gardening Guerillas, call Jill Hunter at 408.741.1213.

Gardeners cleaning up Village, but city council has concerns

By Kaustuv Basu

The Saratoga Gardeners, a group of volunteers who have been gathering in the Village every week to clean sidewalks and plant flowers, have run into a hurdle.

At its meeting on April 20, the Saratoga City Council asked Jill Hunter to register her group of volunteers with the city or ask the Saratoga Chamber of Commerce for help.

Hunter is the chairwoman of the Saratoga Village Development Council and also serves on the city's planning commission.

"We're asking them to do this because of liability issues," said Mayor Kathleen King.

King also said since the Village sidewalks are owned by Caltrans, they might also decide to ask for some liability insurance.

"We love what you are doing in the Village. But SVDC is like an unincorporated club. It is a legal non-entity. And all of you are working on public property," said Vice Mayor Norman Kline.

Kline said it would not be advisable for the Saratoga Gardeners to hang flower pots from poles or work on alleyways until some kind of liability insurance was guaranteed.

Councilwoman Ann Waltonsmith suggested that the Saratoga Gardeners try to find common cause with the Chamber. "It might be too cumbersome to work with the city," she said.

After the meeting, Hunter said that she will try to work out an amicable solution that will please everyone.

"We are getting some momentum," she said.

Hunter said almost 20 volunteers have attended the meetings, held every Tuesday morning at the International Coffee Exchange in downtown Saratoga.

"A lady from Beijing who was visiting Saratoga donated $100 to us when she saw us on our hands and knees cleaning the Village sidewalks," Hunter said.

She asked the council if it would be possible to install a sign near the Saratoga Avenue exit of Highway 85 that indicated the presence of a historic downtown in the area.

At the meeting, Hunter also said turning on the sprinklers and watering spigots in the Village would help the new shrubs and plants. The sprinklers in the Village have not been used for many years.

John Cherbone, the city's public works director, said some of the sprinkler nozzles might need some upgrading. "They should work. We can fund it as long as the cost is below $5,000," he said.

In other city business, the council directed staff to review the parking standards downtown.

"We have very strict parking rules in the Village. We need to loosen them up," Kline said.

Kline, who with King is part of the Village ad-hoc committee, said relaxing parking requirements might stimulate more business activity in the downtown.

Businesses on Big Basin Way have to buy parking spaces depending on their gross floor areas. For example, restaurants are required to buy one space for each 75 square feet of gross floor area.

Lori Tinfow, assistant city manager, said that the matter would come up for a public hearing soon.

City volunteers were honored at the April 20 council meetings as part of the Saratoga Volunteer Appreciation Week. More than 127 residents volunteered for the city between July 2004 and April 2005 and worked a total of 5,118 hours.

NPDES Permit	South Bay Watershed Management Initiative	Support and participate in development of Core Group activities and the WMI Watershed Action Plan[1]. See SCVURPPP work plan for detailed activities.	The West Valley Communities supports and participates in the WMI through the SCVURPP Program	WVCWP coordinate with SCVURPPP
	Additional Staff Training	Attend staff training on monitoring for NPS pollutants	Feb. 28, 2005 – WVCWP staff attended CA Water Environment Association (CWEA) Conference presentation on Fecal Indicator Bacteria: A Tiered Approach to Source Tracking Speaker: Ali Boehm, Stanford University Topic: Successful & Unsuccessful methods of tracking non-point source pollutants	**WVCWP** Program Manager, Program Assistant

Permit Reapplication

NPDES Permit	NPDES Permit Reapplication and URMP Revision & Submittal	Submit a compilation of all annual Urban Runoff Management Plan revisions, in addition to annual URM Plan revisions. This submittal shall serve as part of the reapplication for the next Permit.	The West Valley Communities submitted their complete, revised/ updated URMPs in Sept 2004.	WVCWP staff to update URMP Municipal staff to assist by providing info on internal procedures and practices

[1] On behalf of the City of Campbell, SCVURPPP is signatory to the WMI and participates in the Core Group and subgroups.

West Valley Communities

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2004-2005 ANNUAL REPORT

NPDES Permit Provision C.14	Permit Reapplication Process	1) Track progress of NPDES Permit reapplication, due February 2005, via briefings to the Management Committee. 2) Participate in permit negotiations, as appropriate.	1) WVCs also approved and signed the Program MOA prior to submittal the Program's NPDES Permit reapplication (February 2005). 2) During 04-05 the WVCWP Manager attended several trainings and meetings related to the proposed Regional Permit, which is now in the process of being developed.	WVCWP Manager to track progress and implement action items via MC and other Program mtgs Municipal staff to assist at municipal level via tasks conveyed at WVCWP training meetings.

Training Summary: NPDES Permit Re-application

Training Description	Date	Attendees
Upcoming Activities, Priorities & Fate of the RWQCBs Sponsor: CWEA Speaker: Bruce Wolfe, SF Bay RWQCB	**Feb. 28, 2005**	**WVCWP (1)** Program Manager
Future Issues in Managing Bay-Delta Water Quality Sponsor: CWEA Speaker: Sam Luoma, USGS	**Feb. 28, 2005**	**WVCWP (2)** Program Manager, Program Assistant
Environmental Advocate's Perspective Sponsor: CWEA Speaker: Michael Lozeau, Attorney	**Feb. 28, 2005**	**WVCWP (2)** Program Manager, Program Assistant
Learning from the Past, Restoring for the Future Sponsor: CWEA Speaker: Steve Ritchie, S Bay Salt Pond Restoration	**Feb. 28, 2005**	**WVCWP (2)** Program Manager, Program Assistant
Progress of the Monterey Bay Area Stormwater Joint Permit Sponsor: CWEA Speaker: Jennifer Gonzalez, City of Monterey; Jennifer Bitting, Central Coast RWQCB	**March 1, 2005**	**WVCWP (1)** Program Assistant
Chloride Source Control in the Santa Clarita Valley Sponsor: CWEA Speaker: Ann Heil, LA County Sanitation Districts	**March 1, 2005**	**WVCWP (1)** Program Manager
Water Softener Controversy in Fillmore Sponsor: CWEA	**March 1, 2005**	**WVCWP (1)** Program Manager

Training Summary: NPDES Permit Re-application

Training Description	Date	Attendees
Speaker: Bert Rapp, City of Fillmore

Santa Clara Valley Urban Runoff Pollution Prevention Program
Attachment B
FY 2004-2005 Annual Report
Municipality: Sunnyvale

1) Self Evaluation Matrix

P.S. Id.	Activity	CI Item Source[1]	FY 04-05 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
	Illicit Connection & Illegal Dumping Elimination Activities					
	Effectiveness Evaluation of Enhanced Illicit Connection/Illegal Discharge (ICID) Reporting	Permit Prov. c.6.a.ii	Evaluate results recorded on the IC/ID standard reporting form for Type of Incident and Source of Incident. Use this information to identify new or improve current public outreach efforts in problem areas that are identified. Continue to collect data for enhanced IC/ID reporting. Report results in the Annual Report.	The Pretreatment Program continues to review IC/ID reports on a monthly basis during staff tailgate meetings. The reports are reviewed to discuss trends and identify areas that will require public outreach or enforcement. • IC/ID reports identified "sanitary spills" as a problem area, with increased incidences for the year 04/05. The increase of incidences is attributed to more education and outreach to the City Sewer Department, resulting in enhanced reporting of blockages and overflows to the Pretreatment Program. • The Pretreatment Program is working on a Sanitary Sewer Overflow (SSO) project to identify high density residential areas to target public outreach regarding grease disposal BMPs. •The SSO program is also working closely with the Fats / Oil / and Grease Program, which will target restaurants more so than residential for enforcement and outreach. • The program continues to receive calls regarding pool and spa discharges, more calls are regarding questions on how to	Annually Report 09/05	Dave Grabiec, Laboratory/Pretreatment Mgr.

[1] Place where continuous improvement item is identified: e.g. Urban Runoff Management Plan (URMP); **WP 04-05** (last year's Sunnyvale work plan); **Permit Provision** from Order No. 01-024 and Revised Order No. 01-119; Program Work Plan (**PWP**) task number submitted to the Regional Board and identified for inclusion into co-permitees in work plans; or **Program** (task approved by the Management Committee for all co-permittees). The **P.S. Id.** column refers to the specific performance standard in the Sunnyvale URMP.

Santa Clara Valley Urban Runoff Pollution Prevention Program
Attachment B
FY 2004-2005 Annual Report
Municipality: Sunnyvale

P.S. Id.	Activity	CI Item Source[1]	FY 04-05 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
				drain pools properly than calls reporting illegal discharges. • IC/ID reporting also has identified construction site discharges of un-hardened concrete as increased incidents. This increase in calls can be attributed to an increased public awareness due to an article in the citywide Quarterly Newsletter regarding proper handling of construction waste.		
ICID-3a	Annual Training	URMP	Continue annual training for staff regarding IC/ID storm water inspection procedures, enhanced reporting requirements for ICID incidents, effectiveness evaluation and public outreach.	• The Pretreatment Program supervisors continue to review IC/ID reports on a monthly basis to identify training needs for staff on inspection reports, and database effectiveness. For the reporting year 04/05, Pretreatment Program staff have made improvements to the IC/ID database and created a streamlined process involving support services and data entry and storage, to track IC/ID reports. • A new database has been created to track sanitary sewer blockages and overflows. The database collects information such as date and location of blockage, and what caused the blockage. The Pretreatment Program hopes to see a decrease in the amount of blockages and overflows as outreach and enforcement become more effective. • See Attachment M for other staff training received	Annually Report 09/05	Dave Grabiec, Laboratory/Pretreatment Mgr.

P.S. Id.	Activity	CI Item Source	FY 04-05 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
ICID-3.b	Restaurant IC/ID Reporting	URMP	Continue to study the effectiveness of Restaurant BMP materials. Note problem practices observed. Follow up with appropriate changes to educational materials and/or enforcement actions, as needed.	During the reporting year 04/05 staff noted that restaurant managers and staff were responding positively to the latest BMPs provided in Spanish, and Chinese. Restaurant personnel indicated that having more languages would benefit a greater target audience, and the Pretreatment Program is currently looking into obtaining Restaurant BMPs in Indian, Tagalog, Japanese, Korean, and Vietnamese. The number of IC/ID's at food service facilities has decreased during the latest reporting year. The Pretreatment Program attributes this to an increased awareness of the BMPs due to training and increased inspection frequencies.	Annually	Dave Grabiec, Laboratory/Pretreatment Mgr.
ICID-5a	Effectiveness Evaluation	URMP	Evaluate customer service/ responses to incidents/complaints. Determine effectiveness of program and suggestions for improvement through customer interviews and reviews of responses.	All incidents of customer complaints were responded to within 2 business days of the complaint. In most cases, where contact information was provided, a follow up call was made to the caller regarding the Program's response to the complaint. The Pretreatment Program has received positive feedback from external customers, as well as internal departments regarding incident responses. The Sewer Department and the Pretreatment Program have been working closely regarding effectively identifying and responding to grease blockages and overflows. The Program has met all Performance Standards submitted in the latest Sunnyvale URMP revision dated September 1, 2004.	Annually Report 09/05	Dave Grabiec, Laboratory/Pretreatment Mgr.

P.S. Id.	Activity	CI Item Source1	FY 04-05 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
ICID-5b	Performance Standard revision	URMP	Review the IC/ID Performance Standards with staff. Draft new performance standards, as necessary, to meet the needs identified in the effectiveness evaluation of the enhanced IC/ID program. Implement changes, as needed.	All incidents of customer complaints were responded to within 2 business days of the complaint. In most cases, where contact information was provided, a follow up call was made to the caller regarding the Program's response to the complaint. The Pretreatment Program has received positive feedback from external customers, as well as internal departments regarding incident responses. The Sewer Department and the Pretreatment Program have been working closely regarding effectively identifying and responding to grease blockages and overflows. The Program has met all Performance Standards submitted in the latest Sunnyvale URMP revision dated September 1, 2004.	Annually Report 09/05	Dave Grabiec, Laboratory/Pre treatment Mgr.

2) Reporting Data (See Enhanced Reporting Tables for IC/ID Incidents in Attachment C, Appendix 1.)

- *Number of incidents:*

25 separate incidents were reported to the Pretreatment Program in FY 04-05. Multiple calls were received for some incidents which were recorded as separate incidents in the ICID Enforcement Action Summary by incident source in Attachment C, Appendix 1 giving a total of 35 incidents for the City on that table.

- *Types of pollutants and pollutant sources:*

  The majority of the sources of the incidents were from residential and construction sites. A smaller number of incidents came from food service facilities, industrial sources, and automotive facilities. The most common types of pollutants were sanitary wastewater overflows and un-hardened concrete.

- The program identified improvement in the number of oil/grease incidents from restaurants due to an effective campaign to inspect food service facilities on an annual frequency with an emphasis on education and best management practices literature. The program identified an improvement in residential homes that was linked to pool water discharges to the street due to the "Draining Pools and Spas" literature campaign.
- The increase in construction site incidents is related to an increase in the amount of new and re-development within the City of Sunnyvale, and a heightened awareness due to public outreach campaigns highlighting stormwater issues in construction.
- An increase in sanitary sewer spill incidents in residential neighborhoods indicates the need for outreach in those areas where there is a higher concentration of high density residential complexes. It also reflects on the increased communication and reporting from the City Sewer Department to the Pretreatment Program.
- The other types of discharge categories were very random without any type of connection from the potential sources.

- *General locations (certain industrial areas or neighborhoods where incidents occurred or were incidents randomly spread out?)*
  Most incidents were randomly spread out through the city with no clusters identified from the data. The sanitary sewer spills were mostly in high density residential areas within the City.

- *Number of incidents reported by citizens or employees:*
  There were 16 complaints reported by citizens, 16 complaints reported by City of Sunnyvale employees, and 3 incidences reported by other agencies or found by inspectors

Follow-up actions:

- *Number of investigations:*
  - 19 incidents where the discharge required a correction be made were followed up with an inspection to ensure compliance.
  - 7 of the incidents were either resolved onsite or did not require follow up.

- *Which enforcement actions were taken and to what level?*
  - Of the verbal notices, all 19 were corrected at the time of the inspection or within the amount of time given to correct the violations. The majority of verbal notices were issued to residents regarding construction activity were resulting from contractors working at a site and not following the City's BMPs. All received outreach BMPs and corrected the violations in a timely manner.

- For the two warning notices issued, follow up inspections within 30 days confirmed correction of the violation. One was issued to a construction site and the other to a residential project.

- Two notices of violation were issued. One notice was given to a residential discharge of grey water to the storm drain when the resident did not comply with a previous verbal notice. One Notice of Violation was issued to a restaurant that did not maintain their sewer pipes and resulted in a blockage and overflow through the interceptor. The restaurant made necessary plumbing repairs and maintains the interceptor per requirements.

3) Response to Regional Board Comments on ICID section of FY 03-04 Annual Report.

No comments were received.

4) Evaluation of ICID Program in FY 04-05:

How well did ICID program work?
The Sunnyvale Pretreatment Program response to ICID incidents exceeded expectations based on the performance standard requirement for ICID response time. There was a slight decrease in the number of ICID incidents from the past year linked to public outreach to food service facilities and residences that own pools. Through program training, the inspectors have generated improvements on the inspection report and complaint response forms that promote the effectiveness of the program.

The program continues to improve on the "response complaint form" and educating the answer point personnel at the Corporation Yard and the Water Pollution Control Plant. This effort continues to be very effective in helping inspectors with the identification of the source of the incident, its location, and any educational tools/information that could be provided to the party causing the violation.

Increased communications with City Sewer Department lead to more reports of sanitary sewer spills. In reality there were probably not more spills, but more are being reported to the Pretreatment Program. This is based on a review of the Sewer Crew logbooks since 2002, which showed a steady number of blockages and overflows, but now it appears that more of them are being reported to the Pretreatment Program. The increased coordination will aid the program in developing and implementing its' Sanitary Sewer Overflow Control Program.

Santa Clara Valley Urban Runoff Pollution Prevention Program
Attachment B
FY 2004-2005 Annual Report
Municipality: Sunnyvale

What caused the most trouble?
The Pretreatment Program focused on continuing the education of food service facility staff do to the high turnover in those facilities and to increased outreach efforts to residents performing home improvement activities. In addition, residential construction projects seem to be on the rise, with contractors performing most of the work. In some cases the incidents were reported after the fact, and when the inspections were conducted there was no one there to take responsibility and no obvious source to link the pollutant to. Encouraging residents to report incidents as they are occurring would make this situation occur less.

Is there a particular geographical area that causes the most problems?
High density to medium density residential areas seemed to have a greater incidence of sanitary sewer spills. Outreach will be targeted to those areas regarding proper fats, oils, and grease disposal.

Are problems getting better or worse?
The problems are improving with the public outreach efforts.

Describe some potential causes:
With the high turnover rate and language barriers of food service facility locations and managers, public outreach needs to be on an annual basis for education and inspections to keep up with the loss of knowledge through job turnover and new facilities. The increase in other sources such as sanitary sewer overflows and residential construction activity discharges can be attributed to an increased awareness in the public and within City departments as to what to look for and how to report. The Pretreatment Program and Environmental Outreach departments both have links on their websites on how to report illegal discharges / connections.

What, if anything will we do differently in the next FY?
BMPs in more languages are being explored as an option for food service facilities. Restaurants will continue to be inspected annually, but with more emphasis placed on grease interceptor operation and maintenance in addition to BMPs. Outreach will be provided to high density residential areas regarding proper disposal of fats, oils, and greases from home cooking, in order to reduce the sanitary sewer spills occurring in the City.

Additional public outreach to home contractors/home owners with "do-it-yourself" types of construction projects will be considered.

City of Sunnyvale

FY 04- 05 Annual Report

Attachment C

Industrial/Commercial Discharger Control Program

Santa Clara Valley Urban Runoff Pollution Prevention Program
Attachment C
FY 2004-2005 Annual Report
Municipality: Sunnyvale

1) Self Evaluation Matrix

P.S. Id.	Activity	CI Item Source	FY 04-05 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
Industrial/Commercial Discharger Control Programs						
ICD-3(a-d)	General Industrial Permit Facilities	URMP	Complete inspection of all industries regulated under Industrial Permit.	All facilities permitted with a General Industrial Permit were inspected in the reporting year 04-05.	Annually Report 09/05	Dave Grabiec, Laboratory/Pretreatment Mgr.
ICD-4	Field Investigation	URMP and Program Task	Review SWID location lists from SCVWD and facility inspections by Sunnyvale staff. Evaluate known SWIDs for potential pollutant sources that could impact groundwater.	One SWID was identified in reporting year 04-05. The SWID was evaluated for potential pollutant sources, and determined not to have any potential for impacting groundwater. The SWID receives runoff from a driveway located at a kennel facility. There are no industrial activities or processes occurring that would result in polluted stormwater runoff into the SWID. The SWID will be reported as outlined in the URMP.	Annually Report 09/05	Dave Grabiec, Laboratory/Pretreatment Mgr.
ICD-7.a	Record Keeping	URMP	Continue efforts to improve record keeping activities. Discuss progress at staff meetings.	The Pretreatment Program continues to review inspection reports and database information on a monthly basis. An ongoing project is the evaluation and revision of inspection forms and the database to reflect program standards and document effectiveness and trends more efficiently.	Annually Report 09/05	Dave Grabiec, Laboratory/Pretreatment Mgr.

Santa Clara Valley Urban Runoff Pollution Prevention Program
Attachment C
FY 2004-2005 Annual Report
Municipality: Sunnyvale

Industrial/Commercial Discharger Control Programs (cont.)						
ICD-7.a	Performance Standard revision	URMP	Review existing performance standards and draft new performance standards, as necessary, to meet the needs identified in the effectiveness evaluation of enhanced ICD discharge reporting.	The Pretreatment Program did not make any changes to the Performance Standards in FY 04-05. The latest revisions to the Sunnyvale URMP were submitted to the Regional Board on 9/1/04. Current projects that will affect performance standards, SOPs and BMPs in the future include updated Wastewater Discharge Permit Applications for ICDs, increased inspection frequencies for some ICDs, and internal reviews of ICD inspection reports. These future changes will be reflected in updated SOPs, to be included in revisions to the URMP.	Report 09/05	Dave Grabiec, Laboratory/Pretreatment Mgr.
ICD-7.a	Annual Training	URMP	Continue annual training for staff regarding industrial/commercial storm water inspection procedures, enhanced reporting requirements for ICD inspections, effectiveness evaluation and public outreach.	Inspectors attended Stormwater training at the 2005 CWEA Annual P3S Conference. Pretreatment staff attended several SCVURPPP training sessions regarding stormwater requirements for new and redevelopment projects. Pretreatment Program supervisors continue to evaluate IC/ID and IND reports and database information to identify training needs. See attachment M for specific training completed by City personnel.	Annually Report 09/05	Dave Grabiec, Laboratory/Pretreatment Mgr.
	Enhanced Industrial/Commercial Discharger (ICD) Reporting	Permit Prov. C.6.a.i	Collect data for enhanced ICD reporting. Discuss results of enhanced reporting with staff.	Enhanced reporting data submitted to the SCVURPPP. See Appendix 1 of this attachment for IND report information. IND report information is discussed at weekly tailgate meetings by the Pretreatment Program, to assess outreach or enforcement needed and program effectiveness.	Annually Report 09/05	Dave Grabiec, Laboratory/Pretreatment Mgr.

Santa Clara Valley Urban Runoff Pollution Prevention Program
Attachment C
FY 2004-2005 Annual Report
Municipality: Sunnyvale

2) Reporting Data

- ***Number of inspections conducted, grouped by category of industry/commercial business:***

Automotive	Construction/ Building	Dry Cleaner	Electric/ Electr. Components	Food Service	Machine Shop	Cleaning Services	Other	**Total**
65	12	10	3	357	11	1	88	**547**

See Attachment C, Appendix 1 for IND inspection summary report from the Program.

- ***How many problems were found during inspections?***
  Of the 547 inspections completed, there were 26 (Level 1) verbal notices given and, 2 written Warning Notices.

- ***Describe the kinds of problems found:***

  6 Verbal warnings were issued to Automotive facilities for violations such as lacking secondary containment for used oil, excessive oil spots on the ground, used car parts uncovered laying outside on the ground, and air compressor condensate draining to the outside on the ground. 2 verbal warnings were issued to construction sites for soil tracking and improper BMP use. One verbal warning was given to a machine shop for air compressor condensate draining to the outside on the ground. There were 17 verbal warnings issued to food service facilities for violations such as mop water being dumped outside, mat rinsing outside, spilled or leaking dumpsters or tallow bins, and mostly in places with high turnover. Two written Warning Notices were issued to restaurants that had previously been issued verbal warnings for leaking dumpsters and wash water being discharged to storm drains

- ***Numbers of inspections that were the result of citizen complaints or employee tips?***

  None.

- ***How many of the problems received follow up actions?***
  All the warning notice violations received a follow up inspection within 30 days to validate compliance. Of the 2 warning notice violations, all were corrected within the time frame of 30 days. Restaurants with known repetitive issues receive drive by inspections at a greater frequency to check up on stormwater issues.

- ***Describe enforcement actions that occurred and at what level:***
  There were no enforcement actions taken beyond the written notices this year.

- ***Were enforcement actions spread evenly throughout the categories or were they focused in certain areas?***
  The enforcement actions were focused on the automotive and food service facilities. Primarily this was due to the high number of inspections that were concentrated in these categories.

- ***How many problems were resolved?***
  All problems were resolved within 30 days.

3) Response to Regional Board Comments on ICID section of FY 03-04 Annual Report.
No comments were received.

4) Evaluation of IND Program in FY 04-05:

Provide comments/bullets in the following areas:
Where were the most violations found?
Most violations were found outside of the maintenance bays at automotive facilities and the areas around the grease interceptor and/or tallow bin at food service facilities.

Is there a particular location or industry that is troublesome?
Based on the data, there was no single location or industry that was troublesome. Automotive and food service facilities in general were recorded as having most of the infractions during stormwater inspections. There is no specific geographical area within the City's jurisdiction where more problems were noted than in any other.

Santa Clara Valley Urban Runoff Pollution Prevention Program
Attachment C
FY 2004-2005 Annual Report
Municipality: Sunnyvale

Are things getting better or worse?
Based on the data, public outreach has gradually improved the automotive and food service facilities approach to stormwater protection.

What are potential causes for the improvement or the problems?
The main focus of improvement is due to public outreach efforts. The Pretreatment Program conducts food service facility inspections annually to create a partnership through education and learning and enforcement as the situation deems necessary.

Are the enforcement actions effective? Why or why not?
The Pretreatment Program has been successful with the type of enforcement issued to facilities that violated stormwater regulations. The main focus of the Pretreatment Program is building a solid relationship with commercial businesses by promoting a partnership in protecting the receiving waters through education and workshops that bring together the community and multiple agencies that facilitates communication and understanding of all aspects of stormwater protection.

What will we do differently next year?
The Pretreatment Program will focus outreach efforts on the areas that were identified as having enforcement activities and to look for trends that will help facilitate future public outreach efforts. Restaurant BMPs in other languages such as Hindi, Tagalog, Japanese, Korean and Vietnamese are being explored for possible outreach as they have proven effective with Chinese and Spanish languages.

What priority industries or industrial/commercial zones will be targeted for next year?
The Pretreatment Program will focus the majority of their effort on the automotive and food service facilities. In addition, the Pretreatment Program (working with the P/IP Outreach Staff) will spend time evaluating residential needs for stormwater pollution prevention information related to home construction activities and sanitary spills and developing information packets for distribution at street fairs or other venues.

FY 04- 05 Annual Report

Attachment D-1

Public Streets, Roads, and Highways Operation and Maintenance

Santa Clara Valley Urban Runoff Pollution Prevention Program
Attachment D-1 Public Agency Activities: Public Streets, Roads and Highways and Corp Yard Operations
FY 2004-2005 Annual Report
Municipality: Sunnyvale

1) Self Evaluation Matrix

P.S. Id.	Activity	CI Item Source	FY 04-05 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
	Public Streets, Roads, and Highways Operation and Maintenance					
ST-1	Use of O&M Pollution Control Measures	URMP	Continue full implementation of O&M measures. Report on implementation in Annual Report.	O&M Measures were implemented on a daily basis. Results of City street sweeping activities in FY 04-05 are included in Appendix 1 of this section.	Annually Report 09/05	Tony Pineda, Street Mnt. Sup.
ST-2	Record Keeping	URMP	Continue to track incidents that Street Maintenance staff responds to. Notify Pre-treatment Program of ICID incidents that may impact storm drains or water quality. Include staff training on enhanced ICID reporting requirements.	One incident was reported by Field Services staff to Pretreatment staff to investigate during FY 04/05. Annual training on incident reporting process was conducted on 6/21/05. (See Attachment M for staff training details.)	Annually Report 09/05	Tony Pineda, Street Mnt. Sup. & Dave Grabiec, Lab. /Pretreat. Mgr.
ST-6	Streets and Roads O&M	URMP	Annually review and evaluate effectiveness of O&M pollution control measures and BMPs.	Streets and Roads O&M measures/BMPs for storm water pollution prevention were discussed at tailgate meetings. SOPs/ BMPs were not modified this fiscal year.	Annually Report 09/05	Tony Pineda, Street Mnt. Sup.

2) Response to Regional Board Comments on Streets and Roads/Corp Yard section of FY 03-04 Annual Report:
No comments were received on this section from the Regional Board.

3) Evaluation of Streets & Roads Activities in FY 04-05:

- *List BMPs from the performance standard that were evaluated this year and who evaluated them*
  BMPs were not evaluated this year, since they were evaluated for the URMP submitted to the Regional Board in September 2004.

- *Describe the evidence that shows that contractors were or were not fully implementing BMPs (list sources: e.g., citizen complaints, staff drive-by inspections, other?)*
  No evidence was found (e.g., citizen complaints or staff inspections) there were problems with the implementation of BMPs by City contractors for Corp Yard or Streets and Roads projects.

- *Which staff are receiving training and who does not receive it?*
  All personnel in Streets received training on BMPs and SOPs. See Attachment M for training details.

City of Sunnyvale

FY 04- 05 Annual Report

Attachment D-1 – Appendix 1

Street Sweeping Data Collected for FY 04-05

Santa Clara Valley
Urban Runoff
Pollution Prevention Program

Record Keeping Form- Street Sweeping
Section D-1 Appendix 1

Year: FY 04/05

Agency: City of Sunnyvale

Completed by: Tony Pineda/ Valeria Rose **Date:** 7/5/05

STREET SWEEPING	Volume of material collected (cubic yards)	Miles swept* (curb miles)
1. Sweeping		
Residential Areas:		
Broom		
Regenerative Air	6,069	10,478
Vacuum		
Commercial Areas:		
Broom		
Regenerative Air	1,773	4,290[1]
Vacuum		
Industrial Areas:		
Broom		
Regenerative Air		(1)
Vacuum		
Other Areas Swept: (e.g., parking lots, major arterials)		
Broom		
Regenerative Air		(1)
Vacuum		
TOTAL		14,768

2. Have there been any changes in your street sweeping program?
(efforts to have parked cars removed, changed sweeping frequency, new equipment, significant downtime, etc.)
Sweeping schedule is once a month in residential areas, more frequently in commercial areas. When requested, City staff will post "No Parking" signs to remove parked cars in problem areas. Frequency is increased during heavy leaf drop season, and returned to reduced schedule during other seasons.

LEAF REMOVAL

Volume of leaves removed by City/Town crews: 3,942 cubic yards

Leaves bagged by residents and picked up by your City/Town: N/A bags

Check box if you do not have a leaf removal program other than routine street sweeping: ☐

* Report total miles covered by sweepers including areas operated in tandem or repeated.

[1] These areas are all swept together, no individual numbers are available.

City of Sunnyvale

FY 04- 05 Annual Report

Attachment D-2

Rural Public Works Operation and Maintenance

Santa Clara Valley Urban Runoff Pollution Prevention Program
Attachment D-2 Public Agency Activities: Rural Public Works
FY 2004-2005 Annual Report
Municipality: Sunnyvale

1) Self Evaluation Matrix

P.S. Id.	Activity	CI Item Source	FY 04-05 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
	Rural Public Works					
	Rural Public Works Activities	Permit Prov. C.5	Implement applicable Rural Public Works Performance standards and BMPs.	• Initial staff training on Rural PW performance standards occurred on 7/20/04. • No rural PW activities took place this year. • Included staff training on Rural PW Performance Standards and BMPs in other streets and roads annual training. (See Attachment M).	Ongoing Report 09/05	Kristy McCumby, Environmental Specialist, Parks / Rec. (TBD) & Public Works (Tony Pineda)

2) Response to Regional Board Comments on Rural Public Works section of FY 03-04 annual report:
No comments were received on this section from the Regional Board.

3) Evaluation of Rural Public Works Activities for FY 04-05:

- ***Evaluate where this element applies to your jurisdiction and what activities have been identified as being subject to the Performance Standard?***

Only the limited portion of the San Francisco Bay Trail that is maintained by the City of Sunnyvale has been identified as an area where the Rural Public Works performance standards apply. Since the City is virtually built out, there are no longer rural areas (unpaved or paved streets without curbs and gutters) where these requirements may apply. The only area identified that the City maintains is the Bay Trail from the border of the Lockheed Property in the West to Baylands Park in the East.

No maintenance was performed on the trail in FY 04-05.

Santa Clara Valley Urban Runoff Pollution Prevention Program
Attachment D-2 Public Agency Activities: Rural Public Works
FY 2004-2005 Annual Report
Municipality: Sunnyvale

- ***What are the biggest erosion and sedimentation problems under this program element?***

No significant erosion or sedimentation problems have been noted for this area where the performance standards apply. Most work is done to level the trail surface due to settlement and brush cutting along the sides to prevent overgrowth.

- ***Were any rural roads designed and constructed this FY?***

No Rural Roads were designed or constructed in FY 04-05.

- ***Which employees have received training regarding the BMPs and Performance Standards this FY and who will receive the training in FY 04-05?***

All Public Works Streets and Roads staff as well as supervisors at Parks and Rec., and Public Works received training in FY 04-05. Discussion of the Rural Public Works performance standards is included in the annual training provided regarding the storm water program for Public Works – Field Services staff.

City of Sunnyvale

FY 04- 05 Annual Report

Attachment D-3

Storm Drain Operation and Maintenance

Santa Clara Valley Urban Runoff Pollution Prevention Program
Attachment D-3 Public Agency Activities: Storm Drain O & M
FY 2004-2005 Annual Report
Municipality: Sunnyvale

1) Self Evaluation Matrix

P.S. Id.	Activity	CI Item Source	FY 04-05 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
Storm Drain System Operation and Maintenance						
SD-5	Storm Drain O&M	URMP	Annually review and evaluate effectiveness of O&M pollution control measures	Storm Drain O&M activities reviewed and evaluated with senior staff. Existing O&M (revised last fiscal year) is adequate, no changes made or suggested. Staff is considering reviewing and updating the Corp Yard Storm Water Pollution Prevention Plan during FY 05-06 if time permits.	Annually Report 09/05	Jim Craig, Superintendent of Field Services
SD-3	Effectiveness Evaluation	URMP	Include O&M Performance Standard Implementation discussion in staff training; summarizing feedback in written form.	Effectiveness was evaluated with staff during O&M review. No suggested improvements to current standards.	Annually	Jim Craig, Superintendent of Field Services
SD-2	Reporting of Observed ICID Evidence	URMP and Permit Prov. C.6.a.ii	Train maintenance staff on procedures to notify Pretreatment Inspectors about observed ICID incidents and assist with the collection of data needed for enhanced reporting.	PW Environmental Division staff reviewed enhanced ICID reporting requirements with Maintenance Staff on June 22, 2005. IC/ID Notification cards were distributed to staff who needed them (didn't receive them in previous training or were new staff).	Annually Report in 09/05	Dave Grabiec, Laboratory/ Pretreatment Mgr. & Jim Craig, Superintendent of Field Services

2) Response to Regional Board Comments on Storm Drain O&M section of FY 03-04 Annual Report:
No comments were received from the Regional Board on this section.

3) Evaluation of Storm Drain O&M Activities in FY 04-05:
Describe BMPs that were evaluated this year. (See performance standard for BMP lists)

- The Department Supervisor evaluated the Storm Drain O&M BMPs. The Catch Basin Inspection and Cleaning BMP were reviewed and associated SOPs have been brought up-to-date with current practices, equipment available, and staff requirements. Updated information is included in the 2004 Sunnyvale URMP submitted in September 2004.

City of Sunnyvale

FY 04- 05 Annual Report

Attachment D-4

Water Utility Operation and Maintenance

Santa Clara Valley Urban Runoff Pollution Prevention Program
Attachment D-4 Public Agency Activities: Water Utility O&M
FY 2004-2005 Annual Report
Municipality: Sunnyvale

1) Self Evaluation Matrix

P.S. Id.	Activity	CI Item Source	FY 04-05 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
Water Utility Operation and Maintenance						
WU-1	Inventory of Key O&M Activities	URMP	Inventory all key water utility O&M activities to identify routine and unplanned non-storm water discharges	Inventory is to be performed every three years. Key O&M activities were reviewed last fiscal year, and revised SOPs were issued. Staff plans to update SOPs for recycled water during FY 05/06.	Report O9/05	Val Conzet, Public Works Supervisor
WU-3	Staff Training	URMP	Provide staff training on the regulatory requirements of the URMP and the use of the WUPPP.	Staff training is performed annually. Staff continuously reviews requirements during tailgate meetings. See Table M for staff training details.	Report 09/05	Val Conzet, Public Works Supervisor
WU-5	WUPPP	URMP	Annually review and evaluate effectiveness of Water Utility Pollution Prevention Plan. Use both staff and contractor (if appropriate) feedback.	Updated staff information reported to the Env. Spec. No other changes required.	Annually Report 09/05	Val Conzet, Public Works Supervisor

2) Response to Regional Board Comments on Water Utility O&M section of FY 03-04 Annual Report:

No comments were received from the Regional Board on this section.

3) Evaluation of Water Utility O&M Activities in FY 04-05:

- ***What key O&M activities did you inventory for routine and unplanned discharges as per Performance Standard #1?***

Water Utility staff reviews all activities on an annual basis and determine which routine and unplanned O&M activities would result in non-stormwater discharges.

- ***Describe the evidence you have that contractors are or aren't fully implementing the BMPs (e.g., staff, drive by complaints, others?)***

There were no problems with contractors as monitored by Project Administration related to Water Utility activities this past year. See Attachment F Table 1 (Construction Inspection – Public Projects) for information on any problems with BMP implementation on public projects.

- ***Summarize the results of your evaluations of BMP effectiveness.***

BMPs continued to be effective. SOPs to implement BMPs were updated and included in the 2004 URMP revision. In addition, we found that an SOP needed to be developed to deal with line breaks from Recycled Water pipes or sprinklers. This is still under development due to changes in management. Completion is anticipated in FY 05-06.

City of Sunnyvale

FY 04- 05 Annual Report

Attachment D-5

Public Agency Activities: Corp Yard

Santa Clara Valley Urban Runoff Pollution Prevention Program
Attachment D-5 Public Agency Activities: Corp Yard

P.S. Id.	Activity	CI Item Source	FY 04-05 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
Corporation Yards Operation and Maintenance (Including Parks Division)						
Corp Yard SWPP	Staff Training	URMP	Hold annual Public Works staff training regarding the SWPPP for Corporation Yard.	A one-hour training session was provided by Meredith Durant (Kennedy Jenks) to all Field Services staff on 4/11/05. Meredith also reviewed any operational improvements made based on her facility inspections. (See Attachment M for staff training details.)	Annually Report 09-05	Jim Craig, Superintendent of Field Services
Corp Yard SWPP	Annual Meetings with O&M Supervisor	URMP	Meet annually with URMP Coordinator /staff and CY supervisors on progress and problems in implementing BMPs at the Corporation Yard.	A meeting was held in 2004 between PW Environmental Division staff and Field Services supervisors to prepare for the upcoming wet season. Suggestions from PW Environmental Division to update sections of the Corp Yard SWPPP were provided in April 2005. Updating of SWPPP (minor revisions) is planned for FY 05-06.	Annually	Jim Craig, Superintendent of Field Services

2) Response to Regional Board Comments on Streets and Roads/Corp Yard section of FY 03-04 Annual Report:
No comments were received on this section from the Regional Board.

3) Evaluation of Corp Yard Activities in FY 04-05:

- *List BMPs from the performance standard that were evaluated this year and who evaluated them*
  All BMPs and SOPs were reviewed as a part of the URMP update Submitted in September 2004. These were reviewed by the Public Works staff in the Field Services Division who is responsible for their implementation. A review of the Corp Yard SWPPP in the spring of 2005 identified some minor updates that need to be incorporated into the SWPPP.

Santa Clara Valley Urban Runoff Pollution Prevention Program
Attachment D-5 Public Agency Activities: Corp Yard
FY 2004-2005 Annual Report
Municipality: Sunnyvale

- *Describe the evidence that shows that contractors were or were not fully implementing BMPs (list sources: e.g., citizen complaints, staff drive-by inspections, other?)*
  No evidence was found (e.g., citizen complaints or staff inspections) there were problems with the implementation of BMPs by City contractors for Corp Yard projects.

- *Which staff are receiving training and who does not receive it?*
  All Corp Yard staff received training on BMPs and SOPs. And See Attachment M for training details.

- *Describe the feedback that staff have given about the effectiveness of the BMPs*
  No specific comments were received from the Corp Yard staff about the effectiveness of the BMPs.

P.S. Id.	Activity	CI Item Source	FY 04-05 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
New Development and Construction Controls -- Planning Procedures						
PL-2	Site Design Guidance to Developers	URMP	Provide information and guidance material to developers early in the project development process regarding site design requirements for stormwater pollution prevention and treatment.	• Staff Continue to provide BMP Guidance materials and refer developers to the City's web site where information and links are available. The City's website was updated to provide more information on the process and access to the Stormwater management Guidance Manual. The link is:http://sunnyvale.ca.gov/Departments/Community+Development/Planning+Division/Commercial-Industrial+Planning/Stormwater+Requirements.htm • Additional handouts were developed to provide clarity on the transition in requirements from the Group 1 projects to the Group 2 projects.	Ongoing Report 09/05	Jamie McLeod, Assoc. Planner. Support: Kristy McCumby, Env. Spec.
PL-10	Staff Training	URMP	Provide staff training (PW and CDD) on policies, design guidelines, and pre- and post construction BMPs and control measures.	Staff includes information on Stormwater Management as part of the application requirements. Staff reviews related issues as they arise during the bi-weekly Pre-Project Review Committee (pre-PRC) meetings. The stormwater requirements for projects are reviewed during the Pre-PRC meetings, prior to the project being deemed complete. Training on Project reviews has occurred on a case by case basis with CDD staff as applications for projects come in. Environmental Division staff provided training on policies, applicability of requirements, and HMP to Planners at several staff meeting. See Attachment M for other staff training activities.	Annually Report 09-05	Jamie McLeod, Assoc. Plan. Support: Kristy McCumby, Env. Spec.

	C.3.f Hydromodification Management Plan					
	Implementation of HMP as required for Group 1 projects	Order 01-119 PWP C.3 f.3	Review program guidance for HMP management practices, rules, BMP selection and design guidance to protect stream channels downstream of development areas as they apply to Sunnyvale situations. Begin implementation of HMP for Group 1 projects that may cause increased erosion or other related impacts as determined, for Sunnyvale projects that meet the criteria.	The HMP was approved by the Regional Board in July 2005. Currently staff is preparing amendments to SMC 12.60 to incorporate the HMP requirements as they apply to areas of Sunnyvale. With the help of a consultant, the City has prepared a map that identifies down to the lot number, those areas of the City storm drainage system that discharge into Stevens Creek and portions of Calabazas Creek where the HMP applies. Changes to the City's BMP Guidance Manual are under way and staff training on the HMP requirements has been initiated and will continue in FY 05-06.	Begin after Regional Board Approval, Ongoing Report 09/05	Lead: Planning/PW/ PW Env. and PW Env. div. staff
	C.3.g Waiver and Compensatory Mitigation Program					
	Local waiver program	Order 01-119 PWP C.3 g.2	Continue tracking information on any projects with a Compensatory Mitigation Program approved by the City. Include project name, location, type, percent impervious surface, reasons for and terms of the waiver, and the alternative benefit project and completion date	No alternative compliance approvals were issued for projects in FY 04-05. The City is in the process of revising its municipal code to modify the Impracticability Criteria of SMC 12.60.280 to not include the value of land in the calculation of the project cost.	Ongoing Report 09/05	Lead: Planning, and PW Staff (TBD) Support: Lorrie Gervin/PW Env. Div. staff
	C.3.j Site Design Measures Guidance and Standards Development					
	Modify local project approval process	Order 01-119 PWP C.3 j.4	Summarize the status of review, revision and implementation of site design guidance and standards changed as a part of the City's project approval process to address the Development Policy - Compare and Contrast document. Use the Program's table (to be provided after January 2004) to help with revisions and updates of the City's site design measures guidance and standards.	• Changes have been incorporated into staff recommendations. Staff continues to work on steps necessary to revise approval process (Council Study Issues process). • The items to be revised include: prohibiting ornamental copper, street and sidewalk designs, etc. • See Appendix 1 of this Attachment for an updated table on the status of outstanding items to revise the City's site design measures guidance and standards.	Ongoing Report 09/05	Lead: Jamie McLeod, Assoc. Planner Support: PW engineering, PW Env. Div.

	C.3.h Alternate Certification					
	Identify projects that have been certified by other parties	Order 01-119 PWP C.3.h	Summarize those stormwater management plans certified by a firm listed on the Qualified Consultants List the City developed.	• See Table 1, Group 1 and 2, Part 2 sections for more information on BMPs required for each project approved, sizing methods used and site design measures incorporated to reduce imperviousness. • Examples of BMPs and site design measures include: - Underground retention and treatment (Hydrodynamic device) - Bioswales - Vortex Separator - Permeable/porous pavement - Reduction of directly connected impervious areas – rooftop drainage treatment in vegetated areas. - Baker Tank to treat groundwater prior to discharge	Ongoing Report 09/05	Lead: Jamie McLeod, Assoc. Planner Support: PW engineering, PW Env. Div.
	C.3.k Source Control Measures					
	Implement conditions of approval for Group 2 projects	Order 01-119 PWP C.3 k.3	Begin implementation of source control measure requirements by requiring appropriate conditions for approval of Group 2 projects starting 04/15/05. Report status and provide examples of the application of these conditions in annual reports.	The Public Works director approved a memorandum in May 2005 to incorporate the Group 2 requirements into the City's BMP Guidance Manual. The City began requiring site design and treatment control sizing requirements to the maximum extent practicable for projects that add or replace 10,000 square feet of impervious area at that time. See attached Tables 1 & 2 for information on any projects approved in FY 04-05 for private projects approved. No Group 2 public projects were deemed complete during this reporting period. 	C.3.l Update General Plans					
	Update General Plans	Order 01-119 PWP C.3 l.3	Review current General Plan policies regarding watershed protection and water quality. Identify changes or additional policies that need to be developed in order to implement the C.3 provisions of the permit.	Current Surface Runoff Sub Element of the City's General Plan does not need any change in order to begin implementation of C.3 provisions. A revision of the current Surface Runoff Sub Element is not yet scheduled.	Revise after 10/15/04 at next scheduled time	General Plan Workgroup: Hira Raina, Vivian Wong, Jamie McLeod, OCM and OCA reps (as needed) and Lorrie Gervin, Env. Div. Mgr.
	C.3.m Environmental Review Process					
	Environmental Review Process	Order 01-119 PWP C.3. m	Summarize revisions to the Environmental Review process, if any are made.	To date, legal review has not identified any additional changes needed to the existing process. The internal CEQA guidance to the checklist was revised in FY 03-04.	Annually Report 09/05	Lead: Jamie McLeod, Assoc. Planner. Support: Hira Raina/Vivian Wong
	C.3.n Reporting Requirements					
	Reporting Requirements	Order 01-119 PWP C.3 n.1	Provide information described in Table 1 in annual reports (Annual and One-time Reporting Requirements) of provision C.3) based on guidance received from the Program.	Projects approved in FY 04-05 are listed in Table 1, parts 1 and 2 in this section.	Annually Report 09/05	Lead: Jamie McLeod, CDD, (PW) Hira Raina/ Nasser Fakih Reports: Kristy McCumby, Env. Spec.
	Reporting Requirements	Order 01-119 PWP C.3 n.4	Collect and report the following for all projects that must implement treatment measures: -BMPs -Site design -Source control measures used -sizing criteria -O&M responsibility mechanism -O&M responsible party	Information is collected by CDD and PW Staff for private and public projects. Projects approved in FY 04-05 are reported in Table 1, parts 1 & 2 in this section.	Ongoing Report 09/05	Lead: Jamie McLeod, Assoc. Planner, Hira Raina/ Nasser Fakih Support: Public Works Env. Div. Staff (report writing)

C.3.n Reporting Requirements (cont.)						
	Reporting Requirements	Order 01-024 C.9.d.1 & Order 01-119 PWP C.3. n.5	- Ensure consideration of the use of pest-resistant landscaping and design features in the design, landscaping, and environmental review of development projects -Train staff on pest-resistant landscaping techniques and importance of minimizing pesticides in potential runoff from development sites -Collect and report a summary of pesticide reduction measures that are required for development projects and the percentage of projects that required pesticide reduction measures as conditions for their approval.	Pesticide reduction measures are reported for each project deemed complete in FY 04-05 in Table 1, Part 2 in this section. All applicants for Group 1 and now Group 2 projects are provided with pest control measure educational hand-outs. This is being incorporated into the projects Storm Water Management Plans (which are required as conditions of approval) for Group 1 and now Group 2 projects.	Ongoing Report 09/05 and annually thereafter	Lead: Jamie McLeod, Assoc. Planner Support: Leonard Dunn, Urban Landscape Supervisor

2) Response to Regional Board Comments on New Development Planning Procedures Section of FY 03-04 Annual Report:

No comments were received from the Regional Board on this section.

3) Evaluation of New Development Planning Procedures Activities in FY 04-05;

- *How well is the program going this year?*

The program is proceeding well. BMPs have been incorporated into the several large projects reviewed this past year. This program has provided the opportunity to include stormwater management measures into the design of the projects to a level that would not otherwise been realized.

Staff is learning more about stormwater management issues and becoming more comfortable with the requirements, though staff looks forward to more opportunities in the coming year for additional training, especially for the newly hired staff. Staff is also considering undergoing a process improvement cycle in the fall of 2005 to look for additional learning and streamlining opportunities.

Santa Clara Valley Urban Runoff Pollution Prevention Program
Attachment E- Planning
FY 2004-2005 Annual Report
Municipality: Sunnyvale

- *Describe any strengths or weaknesses of the program.*

One of the benefits of the program is that it provides a mechanism to ensure better stormwater management for projects. The challenges include having to incorporate the requirements into the review process of a wide variety of staff with many different backgrounds. It has been challenging to enforce the Group 2 requirements with some developers who have projects in multiple cities as not all cities are on the same timetable for implementation of the Group 2 projects.

- *Describe what actions/activities you will emphasize for next year.*

In FY 05-06, staff plans on undertaking a process improvement cycle to ensure a smooth delivery of services. Revisions and updates to the GIS layer map to assist staff with the implementation of the HMP requirements will also be completed. Staff training on the changes and refinements to the program will continue (these changes will depend, in part, on the availability of IT resources for technical support).

The emphasis will also include post-construction inspection procedures and reporting. Since many of the first projects approved under the Group 1 criteria are under construction at the present time, it is likely they will be completed in the current reporting year. Post-construction inspections by Pretreatment Program staff will begin after construction is complete and the occupancy permits are issued.

- *Describe where help is needed at the Program or Regional Board level.*

Timely reviews of and submission of comments on the annual reports and work plans that are submitted would be appreciated. It is difficult to know if the City is providing the information needed to assess the effectiveness of our permit implementation when feedback is limited and is received after work plans for upcoming fiscal years have been developed and submitted.

Group 1 Projects (Part 1)
Significant Development Projects[1]
Reviewed and/or Approved July 2004 – June 2005

Project Name	Project Type[1]	Site Size (ac. or sq.ft.)	New Impervious Surface (sq. ft.)[3]	Area of Land Disturbed (sq. ft.)[2]	Project Status	Project Storm Water Control Measures
Private Projects – Group 1						
1-1) Residential Project at 1485 Sunnyvale-Saratoga Rd Project No.: 2004-0505 Description: Construction of 25 New Houses.	Significant Redevelopment	2.02 acres	56,753 sq. ft (1.3 acres)	2.02 acres	Approved by Planning Commission on 8/09/04	- Storm Water Treatment Measures - Source Control Measures - Site Design Measures
1-2) Residential Project at 545 E Weddell Drive Project No.: 2004-0603 Description: Construction of 130 townhomes and 1 common recreational building.	Significant Redevelopment	6.56 acres	207,153 sq.ft (4.76 acres)	6.56 acres	Approved by Planning Commission on 9/27/04	- Storm Water Treatment Measures - Source Control Measures - Site Design Measures

[1] For projects from July 2004 through June 2005, report projects with new impervious surface area greater than 10,000 sq. ft. (Group 1 and 2).
[2] As defined in C.3.c If the site is a "significant redevelopment", list the area of land disturbance.
[3] "New" is defined as impervious surface added, created, or replaced.

Group 1 Projects (Part 2)
Storm Water Control Measures for Group 1
Reviewed and/or Approved July 2003 – June 2004

Project Name	Treatment BMPs	Numeric Sizing Criteria Used	O&M Responsibility Mechanism and Responsible Party	Site Design Measures*	Source Control Measures	Pesticide Reduction Measures*
Private Projects – Group 1						
1-1) Residential Project at 1485 Sunnyvale-Saratoga Rd Project No.: 2004-0505 Description: Construction of 25 New Houses.	Bioswales and Vortex Separator	Flow Hydraulic Design Basis using methodology of Appendix D of the CASQA Storm Water Quality BMP Handbook (2003), using local rainfall data.	3rd Party Certification of Storm Water Management Plan (SMWP) SWMP must be recorded with the property deed. The property owner is responsible for maintaining the stormwater BMPs	- Minimize impervious surfaces - Beneficial use of landscaping	- Site maintenance (e.g. litter clean up and landscape maintenance) - Covered dumpster area	- Education – IPM flyer included in Sunnyvale BMP Guidance Manual and Storm Water Management Plan (SWMP) preparation guidance.
1-2) Residential Project at 545 E Weddell Drive Project No.: 2004-0603 Description: Construction of 130 townhomes and 1 common recreational building.	Bioswales and Vortex separator	Flow and Volume hydraulic Design Basis using methodology of Appendix D of the CASQA Storm Water Quality BMP Handbook (2003), using local rainfall data.	3rd Party Certified Stormwater Management Plans must be recorded with the property deed. The owner is responsible for maintaining the stormwater BMPs	- Minimize impervious surfaces - Beneficial use of landscaping	- Site maintenance (e.g. litter clean up and landscape maintenance) - Covered dumpster area	-Education – IPM flyer included in Sunnyvale BMP Guidance Manual and Storm Water Management Plan (SWMP) preparation guidance.

Attachment E, Appendix 1
Santa Clara Valley Urban Runoff Pollution Prevention Program
Policy, Code & Ordinance Worksheet for the City of Sunnyvale - Updated Table
FY 04-05 Annual Report
Municipality: City of Sunnyvale

Site Design Question		Answer	Comments and Recommendations from Development Policies Comparison Project	Site Design Measure(s) Addressed	Sunnyvale Actions
Section II: Policies to Limit Site Imperviousness and to Incorporate Post-Construction BMPs into Development Projects					
Section II: Subsection A: Site Design – All Types of Development					
II.1 Setbacks and Building Footprints					
3	b. Are there more stringent setback requirements for developments adjacent to creeks/sensitive areas?	Partial	**Comments: Industrial Design Guidelines IV. Landscaping – General A. 10:** Sites adjacent to creeks and canals shall give special attention to landscape, fence, and wall design in order to enhance natural features or minimize development impacts. Recommendations: Review current setback requirements and determine if they need revision to help protect creeks or sensitive areas.	Preservation and/or restoration of riparian areas and wetlands as project amenities.	The Santa Clara Valley Water District's Stream Protection Ordinance 83-2 is currently in place for waterways within the City's boundaries. Staff continues to participate in the Water Resources Protection Collaborative with the SCVWD and other co-permittees in the development of guidelines and standards for streambank protection. The City is participating in a pilot project with the SCVWD in which a District representative attends City Project Review Committee meetings and provides input on projects under development to address SCVWD concerns. No District concerns about ongoing projects have evolved thus far. ***• The initial version of the Guidelines and Standards for Projects near streams has been finalized by the Collaborative and Sunnyvale staff will work to bring the proposed changes before the City Council for ratification in 2006. Meanwhile, staff advises applicants with projects along streams that they should consult with the Water District prior to project completion and obtain a permit, as necessary.***
II.3 Rooftop Runoff					
10	b. Is the use of benign roof materials promoted?	Partially: Formal design standards under consider-ation	**Comments: City- Wide Design Guidelines. II. Building Design – Roof E. 8:** Standing seam metal mansard roof design is strongly discouraged. **Erin Walters, personal communication, 2002:** Staff is currently developing policies promoting benign roof materials. **Recommendations:** Review new policies and update form.	Lot-level design measures.	***• The City-Wide Design Guidelines have not yet been revised (Council did not rank study issue high enough to be reviewed this year). Staff will again propose the study issue for December 2005 issue ranking. Meanwhile, staff continues to encourage the use of benign roof materials.***

FY 04-05 Annual Report
Municipality: City of Sunnyvale

II.5 Street Width					
Section II: Subsection C: Parking					
II.9 Parking Ratios					
25	a. Are parking requirements set as maximum or median (rather than minimum) requirements?	~~No~~ Partially Changes to standards under consider-ation	**Comments: Municipal Code Title 19. Zoning Chapter 19.48 Off Street Parking and Loading 19.48.080 Parking Spaces - General Offices (a)** For freestanding general office buildings, except within M-S and M-3 zoning districts and as regulated by Section 19.48.110, one parking space shall be provided for every two hundred twenty five square feet of gross floor area. Up to fifty percent of such required parking spaces may be compact spaces. **Recommendations:** Consider revising parking requirements to set standards as maximums or medians rather than minimums. If standards are kept as minimums, consider requiring an area equal to that displaced by the difference between the two methods of computing parking ratios to be paved using permeable pavement concepts.	Parking area design standards.	Parking standards are set at minimums in order for commercial and residential projects to provide adequate parking. Development practice and trends show that commercial and residential projects do not tend to exceed the minimum parking requirements due to other site development requirements and associated land costs. However development practice shows that industrial uses do tend to exceed minimum parking standards- that is why the Sunnyvale Municipal Code provides a maximum and minimum range for parking standard for industrial uses. The Moffett Park Specific Plan has a project review and design guidelines that state the following under Sustainable Design and Green Building Techniques: 2. Impervious surfaces, including parking areas, shall be kept to the minimum amount necessary to adequately serve the use. The one exception was a higher ratio for corporate offices, which typically require high peak demand. 4. Impervious surface design shall incorporate methods to reduce impacts such as heat island effect and stormwater runoff. Use of light colored materials, vegetation, permeable pavement, tree shading, phasing of parking, are examples of methods to address the negative impacts of impervious surfaces. 5. Parking lot design shall allow for phased implementation as necessitated by on-site demand. Overflow parking or underutilized periphery spaces shall emphasize ecological design techniques. The City-Wide Design Guidelines include a guideline under III. Parking and Circulation- General, which states, A2. When surface parking is unavoidable, cluster parking spaces into small parking areas, dispersed around the site, to avoid large paved expanses. ***• The City Council did not rank study issue high***

Attachment E, Appendix 1
Santa Clara Valley Urban Runoff Pollution Prevention Program
Policy, Code & Ordinance Worksheet for the City of Sunnyvale - Updated Table
FY 04-05 Annual Report
Municipality: City of Sunnyvale

					enough to be reviewed this year. Staff will again propose the study issue for December 2005 issue ranking. Meanwhile, staff continues to encourage the use of permeable pavement material for overflow parking areas. One such example is the Lowes project, which included approximately 24,000 sq. ft. of overflow parking that used grass-crete, to allow for greater on-site permeability.
26	b. Is the minimum parking ratio for a professional office building (per 1,000-sq. ft. of gross floor area) less than 3.0 spaces?	~~No~~ Partially Changes to standards under consider-ation	**Comments: Municipal Code Title 19. Zoning Chapter 19.48 Off Street Parking and Loading 19.48.080 Parking Spaces - General Offices (a)** For freestanding general office buildings, except within M-S and M-3 zoning districts and as regulated by Section 19.48.110, one parking space shall be provided for every two hundred twenty five square feet of gross floor area. Up to fifty percent of such required parking spaces may be compact spaces. (> 4 spaces/1000 sq. ft.) Recommendations: Consider reducing required parking ratios subsequent to setting standards as maximums or medians.	Parking area design standards.	See response for 25a. above. ***• The City Council did not rank study issue high enough to be reviewed this year. Staff will again propose the study issue for December 2005 issue ranking.***
27	c. Is the minimum required parking ratio for shopping centers (per 1,000-sq. ft. gross floor area) 4.5 spaces or less?	Partially-Changes to standards under consider-ation	**Comments: Municipal Code Title 19. Zoning Chapter 19.48 Off Street Parking and Loading 19.48.155 (d)** The amount of parking to be provided by shopping centers shall be as follows: (1) Shopping centers containing less than twenty thousand square feet of gross floor area shall provide at least one parking space per one hundred eighty square feet of gross floor area. (5.6 spaces/ 1000 sq. ft.) (2) Shopping centers containing twenty thousand square feet of gross floor area but less than fifty thousand square feet of gross floor area shall provide at least one parking space per two hundred square feet of gross floor area. (5 spaces/1000 sq. ft.) (3) Shopping centers containing 50,000 square feet of gross floor area or more shall provide at least one parking space per two hundred twenty five square feet of gross floor area. (4.4 spaces/1000 sq. ft.) **Recommendations:** Consider reducing required parking ratios subsequent to setting standards as maximums or medians.	Parking area design standards.	See response for 25a. above. ***• The City Council did not rank study issue high enough to be reviewed this year. Staff will again propose the study issue for December 2005 issue ranking.***

Attachment E, Appendix 1
Santa Clara Valley Urban Runoff Pollution Prevention Program
Policy, Code & Ordinance Worksheet for the City of Sunnyvale - Updated Table
FY 04-05 Annual Report
Municipality: City of Sunnyvale

28	d. Is the minimum required parking ratio for single family homes (per home) less than or equal to 2.0 spaces?	~~No~~ Partially Changes to standards under consider-ation	**Comments: Municipal Code Title 19. Zoning Chapter 19.48 Off Street Parking and Loading 19.48.030 Parking Spaces - Single family detached and two-family dwellings and mobile home park. (a)** Each new single family detached and two-family dwelling shall have at least two covered parking spaces **(b)** Each single family detached and two family dwelling shall have a driveway with minimum dimensions of twenty feet in length and seventeen feet in width to provide sufficient parking for two vehicles outside the sidewalk area. **Recommendations:** Consider reducing required parking ratios subsequent to setting standards as maximums or medians.	Parking area design standards.	See response for 25a. above. ***• The City Council did not rank study issue high enough to be reviewed this year. Staff will again propose the study issue for December 2005 issue ranking.***
II.11 Parking Lots					
35	d. Are at least 30% of the spaces at larger commercial parking lots required to have smaller dimensions for compact cars?	~~No~~ Partially Changes to standards under consider-ation	**Comments: Municipal Code Title 19. Zoning Chapter 19.48 Off Street Parking and Loading 19.48.080 Parking Spaces - General Offices (a)** For freestanding general office buildings, except within M-S and M-3 zoning districts and as regulated by Section 19.48.110, one parking space shall be provided for every two hundred twenty five square feet of gross floor area. Up to fifty percent of such required parking spaces may be compact spaces. **19.48.090 Parking spaces - Restaurants with bars, restaurants without bars, fast food restaurants, bars and nightclubs. (e)** Compact parking spaces may be used to provide up to ten percent of the required parking spaces for all of the above uses, provided that at least fifty percent of the compact spaces are sited on the periphery of the parking area. **19.48.155 Parking Spaces - Retail (e)** Up to ten percent of parking spaces provided for all retail uses may be compact spaces, provided that; (1) At least 50% of such compact spaces are located along the periphery of the lot, or are farthest from storefront entrances, and are designated as employees' compact parking; and (2) The remaining percentage of compact	Parking area design standards.	Currently SMC parking requirements allow 10% of required commercial parking spaces to be compact. ***• The City Council did not rank study issue high enough to be reviewed this year. Staff will again propose the study issue for December 2005 issue ranking.***

Attachment E, Appendix 1
Santa Clara Valley Urban Runoff Pollution Prevention Program
Policy, Code & Ordinance Worksheet for the City of Sunnyvale - Updated Table
FY 04-05 Annual Report
Municipality: City of Sunnyvale

			spaces provided are interspersed throughout the lot. **Recommendations:** Consider reviewing the SMC parking design standards to include greater minimums for compact car parking.		
II. 14 Residential Driveways					
39	a. Is the minimum driveway width specified in the community 9 feet or less (one lane) or 18 feet (two lanes)?	Partially Changes to standards under consider-ation	**Comments: Standard Specifications For Public Works Construction 2000 Edition and Standard Details For Public Works Construction 2000 Edition. Residential Driveway Approach in Monolithic Curb, Gutter and Sidewalk:** Note 1. Driveway width. Single 10'-0" minimum, 15'-0" maximum, double 17'-6" minimum, 25' -0" maximum. **Recommendations:** Consider decreasing the minimum standard for single lane driveways to 9 feet or less to promote reductions in impervious surface areas.	Lot-level design measures. Minimize impervious surface.	The SMC currently requires 10 feet in width for a one car residential driveway and 10 feet for single car driveway approaches. In order to maintain consistency between the driveway approach and the driveway width the 10 foot dimension shall be maintained in order to maintain safety and appropriate maneuvering areas. The SMC requires that the *parking area* shall not cover more than fifty percent of any required front yard and that the parking area be on a stabilized permanent surface approved by the director of community development. ***• The City Council did not rank study issue high enough to be reviewed this year. Staff will again propose the study issue for December 2005 issue ranking.***
Section III: Requirements for Drainage Designs					
Stormwater Outfalls and Drainage Design					
44	a. Is storm water required to be routed through a filtration or infiltration device to improve its quality prior to discharge	~~Partially~~ Yes	**Recommendations: Meet the requirements of Provision C.3 of SCVURPPPs NPDES Permit**	Minimize impervious surfaces. Improve storm water quality.	SMC Chapter 12.60 added in September 2003 to require appropriately sized treatment devices for Group 1 projects. ***• Implementation for Group 2-sized projects began 4/15/05 and the SMC 12.60 will be amended as of 10/20/05 to apply treatment and sizing requirements to projects that add or replace 10,000 sq. ft of impervious area... Stormwater treatment and minimization of directly connected impervious surfaces are encouraged for reviewed projects that require City permits.***
45	c. Does the municipality promote limiting runoff to pre-development levels (e.g. through detention or retention, limits on impervious surface area, etc.)?	Yes	**City-Wide Design Guidelines. I. Site Design - Setting A.5:** Minimize paved areas for curb cuts and parking on the street frontage of projects to maintain a continuous and attractive streetscape. **Recommendations:** Consider providing more specific guidance on and promotion of limiting runoff to pre-development levels, protection of streams from the hydrologic impacts of development (especially for residential and	Minimize impervious surface. Reduce effects of hydromodification, as needed. Lot-level design measures.	***• City has participated in the development of the HMP with the Program that was submitted to the Regional Board in April 2005. The City's NPDES Permit was amended on July 20, 2005, requiring the adoption of the Key Provisions of the HMP by October 20, 2005.The City is amending SMC 12.60 to include the HMP provisions for projects that occur in areas where hydromodification may occur to natural streams, as identified by the location of storm drainage outfalls in those***

FY 04-05 Annual Report
Municipality: City of Sunnyvale

Section V: Natural Resource Protection/Restoration					
Section V: Subsection A: Stream Buffers					
50	a. Is there a stream buffer ordinance/policy/guidelines in the community?	Partially	**Comments: Industrial Design Guidelines IV. Landscaping - General A.10:** Sites adjacent to creeks and canals shall give special attention to landscape, fence, and wall design in order to enhance natural features or minimize development impacts. **General Plan. Surface Runoff Sub-Element. Community Conditions. Fundamentals of Hydrology and Surface Runoff Design Criteria. Plan for Improvement** The following describes various BMPs being implemented by SCVURPPP as well as other BMPs, which may improve storm water quality. Stream/Channel /Ditch Land Buffers: the presence of vegetative land buffers adjacent to watercourses minimizes the discharge of pollutants to watercourses. In addition to reducing the direct discharge of pollutants, vegetative buffers may stabilize banks and add to the riparian habitat. **Recommendations:** Consider developing a more formal policy (e.g. internal planning dept. policy) addressing riparian issues in those areas that are not built out in case of staff turnover. Consider long term planning for stream and canal buffers that could come into being during property turnover.	Preservation and/or restoration of riparian areas and wetlands as project amenities.	***• Work is being done to provide a stream buffer, based on the proposed Guidelines and Standards developed by the Water Protection Collaborative. The City will consider adopting appropriate policies or ordinances and the guidelines and standards in 2006, as revised from the development of a new SCVWD ordinance to replace Ordinance 83-2 for stream buffer areas.***
51	b. If so, is the minimum buffer width (*from top of bank*) 75 feet or more?	Not Specified	**Comments:** Not specified in the General Plan or Municipal Ordinance. **Recommendations:** Consider review or revision of Plans/ Ordinance to include buffers for specific creeks.	Preservation and/or restoration of riparian areas and wetlands as project amenities.	***• The City will consider adopting appropriate policies or ordinances once the SCVWD/Collaborative pilot project is complete and the guidelines and standards, as revised from the development of a new SCVWD ordinance to replace Ordinance 83-2 for stream buffer areas, are established.***

Attachment E, Appendix 1
Santa Clara Valley Urban Runoff Pollution Prevention Program
Policy, Code & Ordinance Worksheet for the City of Sunnyvale - Updated Table
FY 04-05 Annual Report
Municipality: City of Sunnyvale

52	c. Is expansion of the buffer to include freshwater wetlands, steep slopes or the 100-year floodplain required?	Not Specified	**Comments:** Not specified in the General Plan or Municipal Ordinance. **Recommendations:** Consider review or revision of Plans/Ordinance to include buffers for freshwater wetlands, steep slopes, or 100-year flood plain.	Preservation and/or restoration of riparian areas and wetlands as project amenities.	The City has little grade and no steep slopes. Public Works Engineering, and CDD-Planning to review and consider feasibility of including buffers for freshwater wetlands or the 100-year flood plain in either the next revision of the General Plan or in an ordinance. Since the City is over 98% built out, the potential for significant benefit to water quality by implementing these recommendations will be limited. ***• The City will consider adopting appropriate policies or ordinances once the SCVWD/Collaborative pilot project is complete and the guidelines and standards, as revised from the development of a new SCVWD ordinance to replace Ordinance 83-2 for stream buffer areas, are established.***
SECTION V: Subsection B: Open Space					
V.3 Cluster / Open Space Design					
57	b. Is land conservation, impervious cover reduction, or other types of water quality protection a major goal or objective to the open space design guidance?	~~Partially~~ Yes Changes to standards under consider-ation	**Comments: City-Wide Design Guidelines. I. Site Design - Open Space C.1:** Design every project site for maximum utility of open space for ventilation, sunlight, recreation and views for both new and existing buildings. **(Industrial Design Guidelines I. Site Design - Open Space C.1)** **Recommendations:** Consider including water quality or impervious cover reduction as an objective in the City-Wide and Industrial Design Guidelines for open space.	Preserve high-quality open space.	NPDES permit requirements have already been incorporated into our storm water ordinance (SMC Section 12.60) and referenced in appropriate sections of our Zoning Code (Title 19 of the Sunnyvale Municipal Code). We will add the appropriate storm water references to our City-Wide Design and Industrial Guidelines to ensure consistency between all of these documents. ***Staff proposed a modification to the City-Wide Design Guidelines for the December 2004 Study Session by City Council; however, the issue was not ranked high enough to be included in the FY 2005/2006 Study Issue calendar. Staff will re-submit the study issue materials to the City Manager for consideration. This would encourage more pervious surface coverage for new and redevelopment projects.***

City of Sunnyvale

Construction Inspection

Santa Clara Valley Urban Runoff Pollution Prevention Program
Attachment F- Construction Inspection
FY 2004-2005 Annual Report
Municipality: Sunnyvale

1) Self Evaluation Matrix

P.S. Id.	Activity	CI Item Source	FY 04-05 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
New Development and Construction Controls – Construction Site Inspection						
CI-1-4	Construction Inspection Performance Standards	URMP	Conduct annual staff review of performance measures in order to evaluate their effectiveness.	A written evaluation on the implementation of the performance standards was submitted to the Environmental Division Manager. All performance standards are being implemented and are effective. Staff provides outreach materials to contractors and developers by attaching copies of construction tri-folds "Preventing Pollution, It's up to Us" or the "Sunnyvale Blueprint for a Clean Bay" to plans and/or job card before permits are issued. 30 written Erosion/sediment Control Correction Notices and Re-inspection Notices were issued in FY 04-05 by CDD Building Inspection staff.	8/05	Gordon Blancher, Building Inspector /Coordinator
CI-2 - CI-5	Inspection of sites with significant erosion potential and construction planned for the wet season	URMP	Conduct inspection of sites (public and private) with significant erosion potential and/or construction planned during the wet season to ensure that erosion and sediment control measures are implemented in accordance with SMC and any conditions of approval for the project.	Inspections of projects (public and private) were done to ensure that the project's erosion and sediment control measures are maintained, as needed, during construction. Enforcement for compliance with Sunnyvale Municipal Code requirements was done, as needed.	Ongoing Report 09/05	Gordon Blancher, Building Inspector /Coordinator Nasser Fakih, PW Inspector
CI-4	Effectiveness Evaluation: Private Development and Public Works Inspection Program	URMP	Annually review and evaluate effectiveness of inspection programs using staff/contractor feedback	CDD- Building Division: Staff and contractor feedback indicate that the inspection programs are effective and meeting goals. Using the "FIELD INSPECTION – BMP" notices helps with documenting violations and corrective actions.	Annually Report 09/05	Gordon Blancher, Building Inspector /Coordinator Nasser Fakih, PW Inspector

New Development and Construction Controls – Construction Site Inspection (cont.)						
	Implement Revised Construction Inspection Performance Standards	Permit Prov. C.3.a. (vi)	Annually train Construction Inspection staff (both Community Development and Public Works) on current Construction Inspection Performance Standards and changes to BMPs and SOP's. Also include training on construction inspection procedures, documentation, and enforcement. Every two years, all inspectors will receive training on the latest construction BMPs and techniques. Implementation of BMPs and SOP's will be discussed, as needed, at regular staff meetings.	CDD – Building Division: Staff received annual training on Performance Standards, BMPs and SOPs in the URMP in addition to documentation/enforcement procedures for inspections. See Attachment M for staff Training in FY 04-05. Public Works CI- Staff attended training provided by Santa Clara County. (See Attachment M for staff training information.)	Annually, before October 1 Report 09/05	Gordon Blancher, Building Inspector /Coordinator Nasser Fakih, PW Inspector
	Erosion and Sediment Control Plans by Contractors for Public Projects	Permit Prov. C.3.a. (iv)	CDD Building Inspection staff and PW Construction staff to ensure that developers/contractors of projects with significant erosion potential and planned construction during the wet season have prepared an effective erosion and/or sediment control plan prior to the start of the wet season.	CDD- Building Division: Compliance and enforcement of potential erosion and/or sediment control plans prior to the start of the wet season was done with good cooperation from developers and contractors. Public Works CI- Inspections of projects prior to the rainy season (September/Early October) resulted in 7 BMP correction directions given to construction site operators. Re-inspection of the sites indicated the problems were addressed.	Report 09/05	Gordon Blancher, Building Inspector /Coordinator Nasser Fakih, PW Inspector
	Municipal capital improvement project stormwater quality control measures	Permit Prov. C.3.a. (v)	Perform and document inspections of contractors on capital improvement projects to ensure their compliance with stormwater quality control requirements during construction and maintenance activities. Initiate enforcement actions, as needed. Report annually on results of inspection program.	This summary was prepared and is included in Table 1 of this section of the report.	Ongoing Report 09/05	Hira Raina, Nasser Fakih

2) Response to Regional Board Comments on this section of the FY 03-04 Annual Report
No comments were received on this section.

Santa Clara Valley Urban Runoff Pollution Prevention Program
Attachment F- Construction Inspection
FY 2004-2005 Annual Report
Municipality: Sunnyvale

3) Evaluation of Construction Inspection Activities in FY 04-05

CDD: Pre-rainy season inspections continue to be an effective way to make sure proper BMPs are installed before October 15. Staff continues to inspect BMPs as a regular part of their site inspections. Verbal warnings work well, especially when followed up by a site inspection. Once corrections are made, they are documented in the daily diaries and in progress meeting minutes. If not corrected a notice of non-compliance is issued and the contractor is required to comply immediately. If compliance is achieved, it will be noted in the file. If the contractor fails to comply, the City will issue a stop work notice. No Stop Work notices were issued in FY 04-05. Staff did not note any specific contractors that needed multiple verbal warnings for the same item. If a verbal warning did not work, then written notice was given, followed by an appropriate additional enforcement, as needed.

Fewer Correction Notices for private projects (30 - of which 21 were Correction Notices and 9 re-inspections) were written in FY 04-05 than in FY 02-03 (approximately 86) and FY 03-04 (approximately 45). This continued downward trend in numbers of Correction Notices may be due to continued better education and outreach for contractors through both Regional Board and SCVURPPP training that has been held locally over the past five years, since City staff inspection efforts continued at a similar level each year.

Construction BMP trifolds and copies of the "Sunnyvale Blueprint for a Clean Bay" are made available to the public in the Building Division office at City Hall.

PW: Public works inspection staff monitors compliance with SWPPP requirements throughout the year. Staff requires all contractors to submit water pollution control plans for approval prior to start of construction regardless of the size and the type of the project. Once approved, the staff discusses the requirements with the contractor prior to commencing the work. During the work, staff monitors compliance and verbally informs the contractor of any violations. Staff also performs pre-rainy season inspections and pre storm inspections. Any potential violations are communicated to contractors for correction. For this year, all contractors complied with the staff's verbal notifications. This is documented in the daily dairies and in the minutes of the weekly progress meetings. Were the contractor not to comply, a notice of non-compliance would be issued and the contractor would be required to comply immediately. If compliance is achieved, it will be noted in the inspector's daily dairies. If the contractor fails to comply, the City will issue a stop work notice for the area affected by the noncompliance.

No Stop Work notices were issued in FY 04-05. Only the contractor on the Borregas Avenue Sewer Line Replacement needed multiple verbal warnings in FY 04-05.

Of the 16 Public projects under construction in FY 04-05, only one had deficiencies noted. Contractors are generally very aware of the water pollution requirements and are generally prepared to comply with required BMPs.

Municipality: Sunnyvale

1) Self Evaluation Matrix

P.S. Id.	Activity	CI Item Source[1]	FY 04-05 Tasks	*Status / Comments	Due Date (mo/yr)	Responsible Party
Public Information / Participation						
PIP-1	Identification of pollution issues/problems	URMP	Continue to discuss water pollution prevention, conservation, and watershed education with regional co-permittees, pretreatment staff, and urban runoff staff to determine current issues and pollutants of concern.	This is an ongoing process and the projects selected for FY 04-05 reflect Sunnyvale's response to those discussions. See attached Table 1 - Detailed PIP Activities and Self-Evaluation for FY 04-05.	Ongoing Report 9/05	Sally Personett, Environmental Outreach Coordinator
PIP-2	Implementation of strategy to address issues	URMP	To insure efficient and effective use of resources, continue to select projects that automatically send behavior change messages to the greatest number of people without requiring staff to be present.	Projects include on-screen theater ads, media ads/articles, web site updates, utility bill inserts, email message blitz, etc. See attached Table 1 for detailed PIP activities and the self-evaluation for FY 04-05.	Ongoing Report 9/05	Sally Personett, Environmental Outreach Coordinator
PIP-3	Dissemination of outreach/education materials	URMP	Continue to make materials available through school and youth programs, corporate environmental fairs, speakers bureau presentations, community requests/events, city distribution points, plant tours, regional events, etc.	The inventory of outreach materials is regularly tracked for quantity, reviewed for accuracy, and updated with new information. New materials are developed as needed, and disseminated via a variety of methods. See PIP-2 above and Table 1 for a more detailed list of PIP activities.	Ongoing Report 9/05	Sally Personett, Environmental Outreach Coordinator

PIP-4 & C.9	Municipal Employee Training	URMP and Permit	Provide additional training to Community Development, Parks and Recreation, and Public Works Department staff related to URMP Performance Standards and Watershed Outreach and Education campaign. (See also Pest Management Plan & Mercury Control Plan training tasks)	Environmental Division staff continued to provide training on the Urban Runoff program, storm water pollution prevention, and how to report illegal discharges to the City's Storm Drain to City staff. The Storm Water Illegal Discharge Response Card and the City's Urban Runoff Pollution Prevention Plan, including the sections specific to the various departments/divisions were provided to Public Works and Parks and Rec. staff. Training was provided to CDD, Public Works, and Pretreatment Inspectors regarding implementation of the C.3 Provisions and post-construction BMPs to minimize impacts to storm water. Training was provided to Parks staff regarding the City's IPM. Attachment M includes information on training provided by Environmental Division Staff to City employees. PIP staff included new outreach activities developed by the Program and the WEO campaign in messages to municipal employees.	Ongoing Report 09/05	Kristy McCumby, Environmental Specialist and Dave Grabiec, Lab/Pretreat-ment Mgr.

Public Information / Participation (cont.)						
PIP-5	Evaluation of effort and strategy	URMP	Use various feedback methods to determine 1) level of satisfaction and 2) level of knowledge to measure effectiveness of selected projects.	Evaluation forms are distributed after school presentations and recreation summer camps, and feedback is used to adjust and fine tune the learning level of material presented, add or delete activities, and/or modify the presentation in order to optimize the educational experience of the targeted audience. This approach was designed to determine the level of knowledge obtained and satisfaction with the presentation. It was not a measure of difference in usage patterns or behavior change.	Ongoing Report 9/05	Sally Personett, Environmental Outreach Coordinator
PIP-6	Work Plan Revision	URMP	As a result of ongoing evaluation and discussions as listed in PIP 1, determine projects to be continued, deleted or added.	Outreach continued to provide a wide-range of education to targeted and general audiences through participation in various events and activities in Sunnyvale, through media promotions, and in project collaborations with other agencies and partners both regional and local. Projects Added: Teacher Resource Fair, Sunnyvale Pancake Breakfast, Quality Tune-up, Earth Day event, Thermometer Exchange, Grow Your Own Gardening Conference. Projects Deleted: Ad in SJ Mercury News Projects Continued: See P/IP Table 1 for a detailed listing of activities and the self evaluation for FY 04-05	Ongoing Report 9/05	Sally Personett, Environmental Outreach Coordinator

PIP-7	Mercury Outreach	Permit Prov. C.9.c (Mercury wrkplan)	In coordination with the Program and County-wide efforts, continue to implement a residential outreach program to inform the community about opportunities to recycle fluorescent lights, the proper disposal of other mercury-containing products, and the availability of non-mercury containing alternatives. Monitor and document results in the Annual Report.	- GOT BULBS? A "Keep Mercury out of the Environment" utility bill insert was developed and sent to Sunnyvale residents and businesses. - KSUN, the Sunnyvale community channel, aired an announcement regarding proper disposal of fluorescent bulbs during Pollution Prevention Week - A "P2" tip regarding pollution from mercury was sent out to all City employees with access to a computer - An article ran in the City of Sunnyvale employee newsletter regarding proper disposal of fluorescents at work and at home - An ad regarding proper disposal of mercury thermometers was placed in the Sunnyvale Sun. - A thermometer exchange event was conducted at the Earth Day Celebration. - A "Dispose of Mercury Properly" advertisement aired on theater billboards - Collaboration and participation in the Got Bulbs? Campaign coordinated by HHW - A flyer regarding mercury thermometers was produced and distributed at the Sunnyvale Farmers Market. - Information regarding proper disposal of fluorescent bulbs is published on the City of Sunnyvale Solid Waste Recycling website, referring residents and businesses to HHW for drop-off events in the City. ***(See Table 1 for activities conducted in FY 04-05.)***	Ongoing Report 09/05	Sally Personett, Environmental Outreach Coordinator and HHW/SMaRT station staff

PIP-8	Integrated Pest Management Outreach	Permit Prov. C.9.d (Pesticide workplan)	Continue to provide local public outreach on proper use and disposal of pesticide products and use of less toxic pest control methods in cooperation with Program IPM activities. This includes local IPM Store Partnership activities and participation in Regional outreach events. (Also see Water Quality Provisions of Order No. 01-024: Control Program for Pesticides for additional Outreach tasks.)	• Sunnyvale outreach staff has been active in all aspects of the Our Water Our World (OWOW) campaign both locally and regionally by writing and publishing articles in local community and employee newsletters, editing and producing PSAs, reviewing website development, organizing local events and staffing regional events, presenting school and summer camp programs, and designing promotional material used as collateral and for airing on community TV and theater advertisement screens. • Supported the Program's outreach requirements to the retail sector in continuing to implement the Pesticide Plan to the two participating retail stores in Sunnyvale, and regionally in Santa Clara Co. Participating stores in Sunnyvale have literature racks that regularly distribute the Program's IPM literature and promotional materials to consumers. The Summerwinds Nursery in Sunnyvale is a newly recruited campaign partner, in support of the Our Water, Our World campaign and Greening Your Green Thumb workshops. Sunnyvale also contributed by staffing a booth at several regionally organized IPM events. • IPM material and Watershed Watch kits are regularly distributed at Sunnyvale's Farmers Market which attracts 2 – 3,000 visitors each week, and at other regionally organized events which attract over 25,000 in combined attendance. • See Attachment H Pest Management for additional outreach efforts and activities	Ongoing Report 09/05	Sally Personett, Environmental Outreach Coordinator

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2004-2005 Annual Report
Municipality: Sunnyvale

See Table 1 for the PI/P Outreach audiences assigned to each activity and the evaluation of that activity as accomplished in FY 04-05. The audience types are listed below:
General Outreach: Outreach of a general nature that does not fit any of the categories listed below. Effectiveness evaluations of General Outreach activities are included in Table 1.
Targeted Outreach: Outreach to municipal staff, targeted industries, commercial entities, and to citizens that targets a specific pollutant or behavior. Effectiveness evaluations of targeted outreach activities either individually or as a whole are included in Table 1.
Educational Programs: Outreach to schools and other activities, as appropriate. Effectiveness of educational activities is included in Table 1.
Citizen Participation: Sunnyvale's support/interaction with citizen Advisory committees, Creek Groups, citizen monitoring, and creek and trash clean up activities. Effectiveness of citizen participation activities is included in Table 1.

2) Response to Regional Board Comments on Public Information and Participation section of FY 03-04 Annual Report:

No comments were received from the Regional Board on this section that needs to be addressed.

3) Include any new brochures/flyers/graphics or outreach material created in FY 04-05.

The following Sunnyvale outreach pieces created in FY 04-05 are included at the end of this attachment:

Mercury Disposal - Harbinger March/April 2005
Bay Restoration Project Begins - Harbinger Sept/Oct 2004
Draining Pools and Spas – Sunnyvale Quarterly Report – summer 2005
Celebrate Earth Day at Sunnyvale's Plaza Del Sol - Quarterly Report – spring 2005

PI/P Activity[1]	Type of Outreach [1]	Level of Implementation (Description/Dates)	Evaluation of Effectiveness [2]
Community			
Theater Billboards (on screen advertising) Watershed protection campaign slides aired on all 20 AMC screens in Santa Clara Mercado Shopping Center.	Targeted and General - promotion	July 04 to December 04 *Mother Nature Wants You* *Prevent Litter* *Keep our Creeks and the Bay Clean* *Keep our Water and Wildlife Healthy* January to May – 05 *Let's Keep our Watershed Healthy, Clean and Beautiful* *Please don't litter* *Dispose of Mercury Properly*	Screen slides were shown 3.1 times (every 4.8 minutes) for 8 seconds each during the 15 minutes prior to the feature film. For our agency, this has proven to be a cost effective method to continually repeat a variety of specific pollution prevention behaviors to a wide audience without the need to commit staff resources outside of the office.
KSUN – PSAs aired on Community Cable TV targeted to Sunnyvale residents	Targeted and General – promotion	September 20 – 26, 2004 *Help Prevent Pollution Tips:* *Carwash* *Less toxic pest control* *Fluorescent bulbs* *Leaves and yard clippings* The above slides were aired on the community cable channel during P2 Week. August – September 04 A "Fight the Bite" video supplied by Santa Clara County Vector Control was aired on KSUN for community education about West Nile Virus.	KSUN reaches approximately 20,000 Sunnyvale residents with cable TV of whom about 20% watch KSUN at least once a month.

[1] Reference FY 04-05 PI/P Work Plan
[2] Include numbers of participants/audience reached, materials distributed, etc.

PI/P Activity[1]	Type of Outreach[1]	Level of Implementation (Description/Dates)	Evaluation of Effectiveness[2]
Community (cont.)			
National Pollution Prevention Week - annual event coordinated by the Dept. of Toxic Substances Control about P2 general. WPCP promoted water pollution prevention messages.	General - promotion	September 19-25 2004 Posters promoting general awareness were placed at five citywide info distribution points. Specific tips about water pollution prevention were e-mailed each day during the week to SV City staff. Ads were rotated to viewers of KSUN community channel showing ways to help prevent water pollution of storm drains.	Any person living, working, or going to school in Sunnyvale who used the library, community center, senior center, or city hall (two locations) could see posters. Approx. 1000 SV City staff with access to e-mail could read the specific behaviors requested. KSUN reaches approx. 20,000 Sunnyvale residents with cable TV of whom about 20% watch KSUN at least once a month
Leadership Sunnyvale Environmental Issues Day – Annual event conducted to provide an overview to current and potential civic leaders about how City departments such as Public Works are managed, giving them an idea about the issues faced by cities and how residents can participate in the process of governing.	Citizen participation - event	Group toured the Water Pollution Control Plant and the SMaRT Station. A variety of brochures and other informational items was distributed. Apr/05	This event provides the opportunity for one-on-one discussion with Sunnyvale civic leaders and residents about local groundwater and shallow groundwater cleanup issues, the sanitary sewer project, public education and HHW information, and environmental issues relating to water quality in the sanitary sewer and storm drain systems. This year, 20 community members participated in this event.
Columbia Neighborhood Health and Safety Fair – Annual event conducted by Columbia Neighborhood Association and city of Sunnyvale.	Targeted and general - event	Outreach conducted 10 Enviroscape demonstrations at this event, advising adults and youth about watersheds, storm drains, and water pollution problems caused by human activities. Literature distributed included Clean-Its, Grow-Its, Pests Bugging You, Dirty Dozen brochures and IPM fact sheets. May 05	This event, in the form of an activity and exhibit fair, brings residents of Sunnyvale together with Public Safety, Neighborhood/Community Services, and Public Works to receive a broad range of health, safety, pollution prevention, and community service information. 60 adults visited our exhibit and watched the presentation. Feedback from the crowds indicated the presentations were engaging, interesting, and fun.
Farmers' Markets – IPM outreach opportunity to promote less toxic alternatives indoor and outdoor for gardening and housekeeping. The market draws 2-3,000 people each Saturday during the peak months from March – Oct from Sunnyvale and neighboring communities to buy organic produce.	Targeted – event	Exhibitor booth features the "Where Does Your Water Go" outreach message. Literature distribution includes: Clean Its, Grow Its, Pests Bugging You, and Dirty Dozen brochures, as well as individually requested IPM fact sheets. One Saturday each month from 9 a.m. to 1 p.m. July 04 – June 05	An effective way to interface with shoppers in a setting that promotes healthy food and pesticide free gardening. Of those who stop at the booth (up to 100 per event,) about half are already informed about less toxic products and their benefits, but want to know more or share information. A minimum of 10 exhibit events are staffed per FY

Municipality: Sunnyvale

PI/P Activity[1]	Type of Outreach[1]	Level of Implementation (Description/Dates)	Evaluation of Effectiveness[2]
Community (cont.)			
Organic Garden Tours Tours were conducted in partnership with the Foundation for Global Community and Valley of the Heart's Delight program	General - event	Two tours were organized for Saturday, June 18 to view 4 local organic gardens. Information included year-round gardening tips, drip irrigation for minimal water usage, home produced compost for rich soil amendment, organic garden tips, and gardening for beneficial insects. June 05	With the knowledge that conventional farming practices pollute the water and deplete the soil, the goal of the program was to open up new opportunities for local, organically grown food production, in order to restore the fertility of the soils and reduce the reliance on pesticides, fertilizers and fuels that pollute the environment. Participants met the gardeners, asked questions and shared information.
Grow Your Own Conference	General - event	Presented by the City of Sunnyvale, and the Valley of Hearts Delight, the conference offers workshops, networking, and information sharing opportunities for organic garden enthusiasts. A display area was provided for exhibitors providing information and vendors selling related products. Feb 05	250 people attended this event and approximately 50 individuals visited the booth for IPM information and questions about the outreach program.
Earth Day	General - event	Outreach conducted 8 Enviroscape demonstrations at this event, advising adults and youth about watersheds, storm drains, and water pollution problems caused by fertilizers, pesticides, pet waste, car washing, auto fluids and litter. Literature distributed included Clean-Its, Grow-Its, Pests Bugging You, Dirty Dozen brochures and IPM fact sheets. April 05	This was an extremely successful event with excellent community turnout. Exhibits featured local organizations offering environmentally-friendly education, services and products. Approximately 400-500 adults and 200 children attended the event.

FY 2004-2005 Annual Report
Municipality: Sunnyvale

PI/P Activity[1]	Type of Outreach[1]	Level of Implementation (Description/Dates)	Evaluation of Effectiveness[2]
Community (cont.)			
Thermometer Exchange	Targeted and general - event	Coordinated in collaboration with HHW, a thermometer exchange event was conducted at the Earth Day Celebration. Flyers were distributed at the Farmers Market, at business events, and other locations around the city. An email was sent to city employees advising them of the issue with mercury thermometers and notifying them of the event. An ad to advise the community was placed in the Sunnyvale Sun one week prior to the event. April 05	Conducting the thermometer exchange event in conjunction with the Earth Day Celebration offered an effortless, convenient opportunity for residents and city employees to exchange their household mercury thermometer for a non-mercury thermometer. About 45 mercury thermometers were turned in during the 4-hour event.
Pancake Breakfast	General - event	Outreach conducted 10 Enviroscape demonstrations at this event, discussing watersheds, storm drains, and water pollution problems caused by fertilizers, pesticides, pet waste, car washing, auto fluids, and litter with individuals from the community. Literature distributed included Clean-Its, Grow-Its, Pests Bugging You, Dirty Dozen brochures and IPM fact sheets. October 05	Over 1,000 breakfasts were served at this popular community event. The water pollution demonstration was extremely popular. Parents accompanied their children during the demonstrations and approximately 25 adults learned about preventing water pollution through change in human activities and behaviors.
Plant Tours – Educate groups of adults, youth, business, industry, and technical wastewater professionals about our Plant and the sewage treatment process.	General - event	Teach the environmental impact of discharging to the Bay and watershed stewardship. Explain the differences between storm drains and sewer systems. Explain beneficial reuse of wastewater treatment byproducts. Ongoing	A cost-effective way to reach a wide age range of students and other general audiences. Number of individuals in each group range from 8 to 60. Total number of tour participants this year = 448 Adults (65) High school students ((128) College students (140) Elementary school students (73) Scouting troops (42)

The Harbinger newsletter – Monthly newsletter available electronically to about 1000 City of Sunnyvale employees with access to a computer.	Targeted – promotion	Article titles and publication dates: March/April 2005 – *Mercury Disposal* Sept/Oct 2004 – *Bay Restoration Project Begins*	Cost-effective way to reach all City of Sunnyvale staff with specific water pollution information and suggestions for behavioral change that could be useful both on the job and at home.
Sunnyvale Quarterly – this Sunnyvale community Newsletter is mailed quarterly to residents and businesses. Contents include Council information and current affairs in city government, library updates, neighborhood news, environmental outreach and community calendar.	Targeted – promotion	Outreach topics included: copper, environmental events, storm drain pollution from litter, pesticides, auto fluids, yard debris, and sanitary sewer pollution from chemicals in cleaning products. *Draining Pools and Spas* – summer 05 *Celebrate Earth Day* – spring 05 *Earth Day Pollution Prevention Tips* – spring 05 *Storm Drains-No Dumping Flows to Bay* – winter 04 *Storm Drains and Yard Debris* – fall 04	The Quarterly Report is mailed to approximately 60,000 Sunnyvale residents and businesses each quarter. In addition, 2000 copies of the report are distributed to reception and outreach areas in Sunnyvale. The Quarterly Report has proven to be a cost effective way to reach people who live, work, and/or go to school in Sunnyvale with information on water pollution, water conservation, and watershed stewardship. General topics include water quality, tips on behavioral changes to prevent water pollution, and the differences between storm drains and sanitary sewer.
Utility Bill Insert – Mailed to all Sunnyvale rate payers on a two-month billing cycle	Targeted – promotion	Topics included: mercury (proper disposal of fluorescents) litter, and watershed education *Got Bulbs? May/June 05* *The Environmental Impact of Litter* – Jan/Feb 05 *What is a Watershed?* – Nov/Dec 04	Cost-effective way to reach 30,000 utility accounts in Sunnyvale. Mailing of utility bills is staggered over a two-month timeframe.
WPCP Web Site – Includes specific pages for business BMPs and general tips on water pollution prevention, water conservation, and watershed stewardship.	General – promotion	Information and graphics on the WPCP portion of the City of Sunnyvale main website is updated as needed with new information. Ongoing	There is no "counter" on our site so no way of determining number of hits.
Participation in Stevens & Permanente Creek Watershed Council development	Citizen Participation	Staff attended 5 meetings of the Stevens & Permanenete Creeks Watershed Council in FY 04-05. Staff provided technical knowledge and a place for the group to meet for several meetings Staff encouraged other neighboring municipalities to participate in the group. Ongoing	Participation in this group continues to be a good way to reach citizens who have an interest in watershed protection and enhancement in the Stevens Creek area of the City. Approximately 15 to 30 Stevens Creek area residents attended each meeting. It provided a good venue for resource and information exchanges about Stevens Creek issues. watershed issues.

Municipality: Sunnyvale

PI/P Activity[1]	Type of Outreach[1]	Level of Implementation (Description/Dates)	Evaluation of Effectiveness[2]
Business and Industry			
Hotel Water Conservation – Hotels/Motels offer their guests tips on conserving water during hotel stay.	Targeted, Educational, and Citizen Participation - promotion	Outreach continued to survey the General Managers of Sunnyvale hotels to offer free tent cards with water conservation tips for the bathroom counters in hotel rooms. Explained the possible cost benefits in terms of savings on water utility bills. Ongoing	Many facilities (of the 30 in Sunnyvale) have already implemented a water conservation program using in-room signage of one sort or another because of their corporate policies. For this reporting period - (5) hotels have requested replacement cards or have joined the program as new participants. Outreach will continue to follow-up with hotels to place new tent cards or to replace tent cards that are missing or broken.
Lockheed Employee Environmental Faire.	Targeted, Educational - event	In partnership with the Environmental Dept. at Lockheed, Outreach set up and staffed an exhibit promoting the differences between storm drains and sanitary sewers, and water pollution from pesticides and auto fluids. Literature distributed included Grow-Its, Clean-Its, Dirty Dozen, and Pests Bugging You brochures. May 05	Environmental health and safety event organized by Lockheed. Recycling, clean air, water pollution and other environmental issues are promoted and discussed with Lockheed staff. The event generally attracts between 700 and 1000 employees, and approximately 150 individuals visited the booth.
Network Appliance Environmental Fair Display booths and exhibits from a variety of organizations and agencies showcasing environmental topics.	Targeted, Educational - event	The event was held during lunch hours in the company cafeteria so employees could attend the event during lunch. The outreach exhibit displayed the difference between storm drains and sanitary sewers, and water pollution from pesticides and auto fluids. Distribution of literature included Grow-Its, Clean-Its, Dirty Dozen, and Pests Bugging You brochures. April 05	This event is designed for Network Appliance employees to learn about issues facing the environment such as recycling, clean air, HHW, and other environmental issues. Approximately 100 employees attended the event and about 20 employees visited the outreach booth for IPM information.
Schools and Youth			
Summer Camps – Partnership with SV Parks and Recreation Department to teach environmental games as a part of their regular summer camps.	Targeted, Educational - event	Outreach conducts environmental presentations, plays both indoor and outdoor games, and conducts arts and crafts activities that teach water pollution prevention, water conservation, and watershed stewardship messages to the kids. June – Aug 04 and June 05	A fun, hand-on, engaging and memorable way to help youth understand the impact of their daily activities on the environment, and to teach them methods of water conservation and how to prevent water pollution. Staff conducted 19 environmental activities this reporting year, reaching 552 youth. Evaluation forms from camp counselors indicate the children enjoyed the environmental games and activities, but reported it was not clear if it increased their understanding of water pollution problems.

PI/P Activity[1]	Type of Outreach[1]	Level of Implementation (Description/Dates)	Evaluation of Effectiveness[2]
Schools and Youth			
Earth Day	Targeted and Targeted - event	Exhibits featured local organizations offering environmentally-friendly education, services and products. The children's area included a parade for the earth, Wildlife Rescue, face painting, environmental arts and crafts, interactive activities and water pollution demonstrations. April 05	This event, held during school spring break, was designed to promote environmental citizenship and to raise awareness about the need to continue protecting our environment. Decorated with environmental exhibits from local businesses, governmental agencies, and non-profit organizations, the event was open to the general public. Approximately 200 children from the community were in attendance. Outreach conducted 8 Enviroscape demonstrations, advising adults and youth about watersheds, storm drains, and water pollution problems caused by fertilizers, pesticides, pet waste, car washing, auto fluids and litter.
Pancake Breakfast	Targeted and General – event	Outreach conducted 10 Enviroscape demonstrations at this event, discussing watersheds, storm drains, and water pollution problems caused by fertilizers, pesticides, pet waste, car washing, auto fluids, and litter with both youths and adults. Literature distributed included Clean-Its, Grow-Its, Pests Bugging You, Dirty Dozen brochures and IPM fact sheets. October 04	The water pollution demonstrations were conducted to improve children's understanding of watersheds, storm drains, and water pollution caused by human activities. Feedback from the crowds indicated the presentations were engaging, interesting and fun. One boy was so enthralled he watched the demonstration 3 times. This event proved to be an excellent opportunity and our exhibit was popular among the kids. Over 80 youth learned about preventing water pollution through change in human activities and behaviors.
Columbia Neighborhood Health and Safety Fair – Annual event conducted by Columbia Neighborhood Association and city of Sunnyvale.	Targeted and General – event	Outreach conducted 10 Enviroscape demonstrations at this event, advising adults and youth about watersheds, storm drains, and water pollution problems caused by human activities. Literature distributed included Clean-Its, Grow-Its, Pests Bugging You, Dirty Dozen brochures and IPM fact sheets. May 05	This event, in the form of an activity and exhibit fair, brings residents of Sunnyvale together with Public Safety, Neighborhood/Community Services, and Public Works to receive a broad range of health, safety, pollution prevention, and community service information. About 80 kids visited our exhibit and watched the presentation. Feedback from the crowds indicated the presentations were engaging, interesting, and fun. At the completion of each demonstration, the children and adults were asked a relevant question about water pollution. Approximately 97% answered the question correctly.

Santa Clara Valley Urban Runoff Pollution Prevention Program
Attachment G- Public Information and Participation (PI/P) Table 1

Municipality: Sunnyvale

PI/P Activity[1]	Type of Outreach[1]	Level of Implementation (Description/Dates)	Evaluation of Effectiveness[2]
Schools and Youth			
Classroom presentations	Targeted, Educational - events	Water pollution education provides an interactive program correlated to the State of California's curriculum standards for the earth sciences. Students learn the forms of water, how the water cycle works, how water is polluted, where polluted water goes, what a watershed is, how to prevent water pollution, how to conserve water and be a watershed steward. The program and lesson plans are appropriate for fifth grade students. September 03 - April 04	Outreach conducted 25 classroom presentations this school year, and 12 teachers returned the evaluation form. Evaluations indicated teachers felt the visual aids were excellent and the information greatly improved student understanding of watersheds, storm drains, and water pollution caused by human activities. Written feedback indicated the presentations were engaging, interactive and fun. Teachers felt the program reinforced and supplemented their own curriculum and are interested in scheduling future presentations.
Bay Care Badge – Merit Badge and Patch Program for youth groups. Youth earn a patch after completing an activity relating to water such as pollution prevention, water conservation, plant and animal identification, and watershed stewardship.	Targeted, Educational - promotion	Groups are provided with a brochure (created by WPCP) listing four sections (Water Pollution Prevention, Water Conservation, Plant and Animal Identification, and Watershed Stewardship) with related activities. Individuals may complete one section or choose two activities (total eight) from each section to earn the badge/patch. Ongoing all year	Plant tours teach youth about the function of wastewater treatment, water pollution prevention, and water conservation. When scouting troops take a tour of the plant, it completes their badge requirement. 4 scouting troops, 31 kids took part in the Bay Care Badge program this reporting year.
Water Pollution Control Plant Tours are conducted for school groups K-12, college students, scouting/youth groups, and other youth oriented groups as requested. Tours are arranged on a reservation basis and each tour concludes with a special goodie bag distributed to each student.	Targeted, Educational Event	Plant tours focus on the importance of wastewater treatment in protecting the Bay, the value of recycled water, the importance of water conservation, and pollution prevention. Additionally, tours at the wastewater treatment plant highlight Plant operations and processes, the differences between storm and sanitary, etc. Ongoing during the school year	Plant tours teach youth about the function of wastewater treatment, water pollution prevention, and water conservation. Oftentimes, the tour is a supplement to a water study module in the classroom, and approximately 50% are repeat tours scheduled year after year by teachers. Students are curious and genuinely interested, and ask many questions about wastewater processing. WPCP conducted 25 student tours this year, reaching 383 youth.

Schools and Youth			
Teachers Resource Fair	Targeted - event	In partnership with Santa Clara County Office of Education and NOVA, this back-to-school event for teachers featured vendor exhibits and products from science, art, museums cultural centers, theater and environmental agencies. September 04	The event offered the opportunity to promote Sunnyvale's environmental outreach program to teachers. About 150 teachers from schools in Santa Clara County attended the event to learn about classroom resource opportunities and vendor products. The outcome was that this event is not a productive outreach opportunity because few (if any) Sunnyvale teachers attended. 12 SSC teachers stopped by the booth for information.
Groundhog Job Shadow Career Day	Targeted - Educational	In partnership with Junior Achievement of Silicon Valley and NOVA, students from local high schools investigate career options in order to prepare to match the required skills and educational requirements while in college. February 05	Job shadowing allows students to experience the job duties and education requirements of a particular job of interest, allowing them to make informed career and college study decisions. The student assigned to WPCP was interested in the sciences and learned about testing water in the Lab.
Creek Education - "Water" and "Structures of Life"	Targeted, Educational – Grade 3 event	In partnership with the Cupertino Public Works Department, the Creek Education program provides watershed, urban runoff, water pollution prevention, storm water, creek education, and wastewater information to Sunnyvale students at schools in the Cupertino School District. Sep 04 – Jun 05	After studying water and structures of life course in class, students take a creek education trip to McClellan Ranch Park as a supplement to the water studies course. This reporting year Sunnyvale provided funding to cover the transportation cost of (5) buses, reaching (11) full classes and (4) half classes for a total of (390) students.
Environmental Education Materials, Books and Videos.	Targeted, Educational – K-12 and various youth organizations and adults - promotion	A four-color brochure is mailed on request to market the various resources WPCP has for youth educators. Books and videos are suitable for various ages including adults. Ongoing all year	Useful tool that provides a summary of the resources as well as a synopsis of each video and book in the Outreach Library. See individual activities listed above for a summary of materials distributed per event. Materials distributed by phone request:

PI/P Activity[1]	Type of Outreach[1]	Level of Implementation (Description/Dates)	Evaluation of Effectiveness[2]
Regional			
Watershed Education and Outreach Campaign (WE&O) (SCVURPPP) - Watershed Watch events, brochures, and media promotion	Targeted (audiences in Santa Clara County per strategy developed from a survey) – promotion and events	Sunnyvale Outreach has been a contributing member and active in all aspects of the campaign from the recruitment of the consultant to editing scripts, approving media plans and promotions, supporting and attending events, suggesting ideas, reviewing brochures, contributing to web site development, etc. during its 5-year campaign Ongoing all year	Co-permittes and the Program, in coordination with the media consulting firm, have done an excellent job to date with campaign efforts. All parties meet on a regular basis to confer, plan, organize and launch various Watershed Watch promotions. One of the more successful outcomes of these meetings is that co-permittees disclose individual campaigns which provide an opportunity to share information on outreach efforts, literature development, and campaign strategies for other members to replicate. The media consulting firm is in contact with the Program and provides program updates and campaign strategies on a regular basis. Evaluation of projects is ongoing.
Zun Zun performances (Part of WE&O campaign) – A musical presentation to teach watershed stewardship and pollution prevention.	Targeted – (elementary school assemblies) - events	Through a loose story line and elaborate stage props, the performers wove environmental messages into the songs and dances. WE&O promoted availability and schools book appearances. Ongoing all school year	The Zun Zun program and performance is reviewed and reported on a regular basis and suggestions to fine tune the performances are incorporated. Feedback surveys are conducted after each performance and both teachers and students alike quote the program as highly engaging and effective. This reporting year two elementary schools in Sunnyvale booked performances.
Integrated Pest Management (IPM) known as the "Our Water, Our World" outreach campaign.	General – promotion and events	Supported the Program's outreach requirements to continue implementing the Pesticide Plan to the two participating retail stores in Sunnyvale and regionally in Santa Clara Co. Sunnyvale participated in the IPM Plan by staffing a booth at several regional IPM oriented events. Annual campaign Mar-May 05	• Participating stores in Sunnyvale have literature racks that regularly distribute the Program's IPM literature and promotional materials to consumers. • The Summerwinds Nursery in Sunnyvale is a newly recruited campaign partner, in support of the Our Water, Our World campaign and Greening Your Green Thumb workshops. • IPM material and Watershed Watch kits are regularly distributed at Sunnyvale's Farmers Market which attracts 2 – 3,000 visitors each week, and at other regionally organized events which attract over 25,000 in combined attendance.

Classic Car Wash – a community outreach event conducted at several Classic Car Wash locations in Santa Clara County. In support of the Watershed Watch Campaign, the event invites consumers to take advantage of a discount on a car wash.	General – event	Co-permittees and the Program partnered by staffing a booth and outreach exhibit at Classic Car Wash promotion events in four different locations. Exhibit included the message *Where Does Your Water Go* and *Cars Pollute Water* Too display. WW Watch Kits, *The Bay Begins at Your Front Door*, *Keeping it all in Tune* and *Cars Pollute Water Too* brochures were distributed. October 2004	Partners in this annual event include Classic Car Wash, KRTY, and Watershed Watch. The event offers the general public 50% off car wash services during a two-hour period. Drawing consumers in through deep discounts greatly increases the number of customers at the car wash and provides the opportunity to reach customers with literature and discussions about CAP water pollution. Additionally, KRTY promoted the Watershed Watch message to over 1,374.500 (gross impressions) listeners during 100 on-air message spots.
Quality Tune Up – a community outreach event conducted at several Quality Tune-up locations in Santa Clara County. In support of the Watershed Watch Campaign, the event invites consumers to take advantage of a discount on automotive oil changes.	Targeted – event	Outreach staffed a booth at the Quality Tune-up event location in Sunnyvale. On event day, KUFX conducted a live remote performance on-site at Quality Tune-up in order to draw consumers to the event, thereby providing the opportunity to reach customers with Watershed Watch kits, *Keeping it all in Tune* and *Cars Pollute Water Too* literature, and discussion about water pollution and automotive fluids issues. September 04	This community outreach program is conducted through a combined partnership with Quality Tune-up, Watershed Watch, and KUFX. Through 100 free promotional on-air message spots, KUFX helped promote the Watershed Watch message to 1,747,333 (gross impression) Santa Clara County listeners during the August/September 2004 campaign.
Spring in Guadalupe Gardens	General – event	The Spring in Guadalupe Gardens offers attendees a fun and activity filled gardening event. Activities at the event include plant sales, food and entertainment, tours, garden advice, alternative energy information, compost instructions, and garden accessory sales. This is an environmentally focused event targeted to Bay Area families. April 05	Outreach collaborated with the Program at this event and participated by staffing an exhibit booth with the *Watershed Watch* and *Where Does Your Water Go* display. Collateral distributed at this event included Watershed Watch kits and IPM outreach material. Youth attending the event were invited to play the bean bag game.

Prusch Farms Harvest Festival	General - event	The Prusch Farms Harvest Festival celebrates the area's rich diversity and bountiful harvest. The day includes entertainment, folkloric dancing, ethnic foods, a pumpkin contest, master gardeners, environmental education and gardening information. October 04	Outreach collaborated with the Program at this event and participated by staffing an exhibit booth with the *Watershed Watch* and *Where Does Your Water Go* display. Collateral distributed at this event included Watershed Watch kits and IPM outreach material. Youth attending the event were invited to play the bean bag game. Approximately 6,000 people attend this event and outreach distributed 71WW Kits and 1,040 pieces of other related literature such as brochures and promotional material.

Examples of Outreach Materials Developed for Sunnyvale

National Volunteer Week

National Volunteer Week (April 17 – 23) is the time of year America sets aside to say "thank you" to the millions of people who volunteer in communities across the nation. Sunnyvale will host a reception to honor our City volunteers on Tuesday, April 19th, 5 p.m. – 6:30 p.m. at the Senior Center Orchard Pavilion. The Mayor, City Councilmembers, and department directors will highlight the service commitment and achievements of our City volunteers.

Inspire by Example
NATIONAL VOLUNTEER WEEK
April 17-23, 2005

What can you do to thank your special volunteers in April?

- Encourage them to attend the reception and plan to meet them there.
- Write a note or card of thanks. Be specific. Tell them exactly how their efforts have saved you time, helped you complete a project, or made a difference to your program, division, or department.
- Host a coffee break with your work team and your volunteer – 10 minutes to relax, have a snack and get to know one another just a little better.
- Get personal: take time to demonstrate your personal interest.
- Involve the volunteer in a staff or other significant meeting.
- Leave a flower or helium balloon at the volunteer's work space.
- Above all, let your volunteer know how much you appreciate his or her contributions.

For more recognition ideas, contact **Romie Georgia**, volunteer resources manager, at 730-7536.

Mercury Disposal

In order to function properly, fluorescent lamps contain a small amount of mercury, a toxic pollutant. When fluorescent lamps are improperly disposed of and then break, this toxic pollutant can be transported by air or runoff from rain and deposited in our creeks and the Bay.

City employees should never dispose of fluorescent lamps in the trash. Facilities Management follows a program that guides safe replacement and disposal of fluorescent lamps in our municipal buildings. They collect spent lamps at multiple areas throughout the City, repackage them for protection, and deliver them to the County of Santa Clara for proper disposal/recycling via the Household Hazardous Waste Program.

It is unsafe to dispose of such hazardous waste with regular trash. At home, help prevent mercury pollution by recycling used fluorescent lamps and other mercury products at your local hazardous waste collection center. For employees living in Santa Clara County (except Palo Alto and Sunnyvale), you can dispose of used fluorescent lamps and other household hazardous waste at disposal events organized by Santa Clara County's Household Hazardous Waste Program. Call (408) 299-7300 or visit *www.hhw.org* to schedule an appointment. Employees who live in Sunnyvale can visit *www.sunnyvalerecycles.org* or call (408) 730-7262 for disposal information. Palo Alto residents can call (650) 496-6980 or visit *www.city.palo-alto.ca.us/hazwaste/househaz*.

Bay Restoration Project Begins

On July 19, Sunnyvale was home to the start of one of the most ambitious environmental projects in the nation. Tidal gates were opened to allow bay waters to merge with the salt evaporation ponds located along the shoreline of Sunnyvale and Mountain View. State, federal and local officials, as well as project stakeholders, individuals from the community, curious onlookers and members of the news media were on hand to record this historic event.

The opening of the tidal gates is just one step in a 30-year effort to restore large portions of former Cargill salt ponds back to wetlands and tidal marshes. Resource agencies, including the U.S. Fish and Wildlife Service, the Coastal Conservancy and the California Department of Fish and Game, have been working on a five-year plan for all the ponds. Preliminary studies are under way to determine specific details for the project, including how best to restore the ponds, which levees to strengthen or remove, what types of habitat to create and where to allow public recreation. The South Bay Salt Pond Restoration Project is the largest wetlands restoration ever undertaken on the West Coast, akin only to the restoration of the Florida Everglades and Louisiana's coastal marshes.

Blending the water from the salt ponds with bay water must be done in a gradual fashion. Ponds with the lowest salinity are among the first scheduled to be released. Ponds with water up to four times more saline will be released gradually during this year and next. Ponds with the highest salt content must continue to be diluted before being released over the next five years.

The salt ponds project begins an exciting new phase in the restoration of the San Francisco Bay to an important ecological area where dozens of species of birds, fish and mammals can thrive in harmony with Bay Area residents.

SUGGESTION AWARDS RETURN

Thanks to a dedicated group of City of Sunnyvale employees, a subcommittee was formed at the direction of City Council to review and update our Employee Suggestion Award Program. They spent many hours combing over the Program, improving it substantially. City Council approved the program with the FY 2004/2005 budget and now City employees are utilizing the program again. Many thanks to **John Addeo**, **Jeff Sorrick** and **Bobbie Parr** from Public Works and **Robin Montano** from Finance for their contributions.

The Suggestion Award Program was developed to recognize and reward City employees who contribute workable solutions for the improvement of City operations. It provides the opportunity and incentive for employees to submit suggestions which will result in increase efficiency, improving safety and/or opportunities to save money. If you have an idea you think will save money, increase revenue, improve methods or strengthen morale, complete a suggestion form and submit it to Mindy Vargas in Human Resources. After a review process it will go to the Personnel Board, which determines which suggestions are awardable. Awards range from $50 to a maximum of $500.

Quarterly REPORT Summer 2005

Draining Pools and Spas

Keep Pool, Spa and Fountain Water Out of Our Storm Drains, Creeks and the Bay

Clean water is vital to the health of fish, plants, animals and humans, but many human chores and activities can lead to water pollution. Common culprits are swimming pools and spas, which must be drained properly to ensure chemicals don't enter storm drains where water flows untreated to our local creeks and Bay. Copper is used as an algaecide in pools, spas and fountains, and copper pipes are commonly used in pool plumbing. Draining pools, spas and fountains to storm drains can pollute our creeks and Bay with copper, chlorine, sediments, and other contaminants. A properly maintained pool, spa or fountain may reduce the need for draining.

Maintaining your pool, spa or fountain

- Minimize algae buildup to prevent the need for toxic algaecides
- Clean regularly, maintain proper chlorine levels, and maintain water filtration and circulation.
- Manage pH and water hardness to minimize copper pipe corrosion that can stain your pool and end up in our creeks and the Bay.
- Ask your pool maintenance service for help resolving persistent algae problems without using copper algaecides.

Cleaning

- Never clean a filter in the street, gutter, or storm drain.
- Rinse cartridge filters onto a dirt area and spade filter residue into the soil.
- Keep backwash discharges out of the street and storm drain. Backwash sand and diatomaceous earth filters onto a dirt area. Dispose of spent filter materials in the trash.

Draining

- Don't drain to a street, gutter, or storm drain. Instead, discharge water to a sanitary sewer clean-out.
- To report a pool in your neighborhood draining to the street, or for information about locating your sanitary sewer clean-out call the Sunnyvale Water Pollution Control Plant at (408) 730-7260.

What does a sanitary sewer clean-out look like?

- Look on your property for a small concrete or metal cover marked "sewer." Clean-outs are often located under them.
- Look for a small circular cap on a pipe, with a raised square on it, sticking out of your house or out of the ground. These caps often cover clean-outs.
- In either case, remove the cap and place the hose in the pipe to drain. To prevent backflow, keep the end of the hose from touching the bottom of the sewer pipe while draining.

Tips for finding your clean-out:

- If your kitchen or bathroom is on an exterior wall of your house, look outside along that wall for a clean-out.
- Stand on the sidewalk looking toward your house. Line up the main water sources in your house: bathrooms, kitchen, washers, etc. The clean-out is often located on that line, in front of or behind your house.
- Look for an "S" stamped into the curb or sidewalk near your house. It marks where the sewer line is. Your clean-out may be along it.
- Look for a slight linear depression in your yard between your house and the street. This may indicate the location of a sewer line, and your clean-out may be on it.

Residents of Sunnyvale can dispose of pool chemicals at a hazardous waste drop-off event. For more information call Sunnyvale Solid Waste and Recycling at (408) 730-7262 or visit *www.sunnyvalerecycles.org*.

For information about how to protect our creeks and bay, call (866) WATERSHED or visit the Watershed Watch Web site at *www.watershedwatch.net*.

035131

Quarterly REPORT Spring 2005

Celebrate Earth Day at Sunnyvale's Plaza del Sol

10 a.m. - 2 p.m., Friday, April 22

If live music, great exhibits, displays of local art and interactive entertainment sound like fun, you should plan to attend the 35th anniversary of Earth Day. The event will be held Friday, April 22, in Plaza del Sol, 200 W. Evelyn Ave., in downtown Sunnyvale.

You'll find plenty of fun for kids, including crafts, face painting and clowns. Get your kids excited about caring for the Earth with plenty of eco-friendly information and entertainment at this midday festival. Festival-goers of all ages may visit exhibits such as Wildlife Rescue and Hidden Villa.

Exhibits from the business community will highlight environmentally-friendly services and products, and non-profit exhibitors will provide ideas to help celebrate and protect the Earth. Learn about local environmental resources and City programs. You may also recycle your unwanted cell phones and enter the environmentally-friendly prize drawings.

Sunnyvale's environmental achievements will be recognized, as will Sunnyvale businesses that have been certified as "green businesses" by the Santa Clara County Environmental Resources Agency.

"We want to let the community know that we appreciate their efforts in protecting the Earth," said Marvin Rose, Sunnyvale Director of Public Works. "We also want to show how we can continue to reduce our impact on the Earth's resources through the choices that we make in our daily lives. Earth Day is an opportunity to focus on what's important and share our successes."

Music and entertainment for the event will be provided by artists with an environmental focus, including Ben James, EarthCapades and ZunZun.

So walk, bike or use convenient nearby public transportation to get to Plaza del Sol. The plaza area is served by Caltrain and VTA lines 54, 53 and 32. Bring your lunch, or pick up a bite to eat at one of the many restaurants in downtown Sunnyvale and enjoy the show.

Wrap up your Earth Week activities by shopping during Sunnyvale's Garage Sale Day, Saturday April 23. For more information and a complete list of Earth Week activities, including birding and biking, visit *www.sunnyvalerecycles.org* or *www.sunnyvale.ca.gov*, or contact Dorlene Russell with the Recycling Program at (408) 730-7278, TDD (408) 730-7501. The Earth Day event schedule will be posted on the City's Web site in April.

BIKE TO WORK DAY

The City will celebrate the 11th annual Bike to Work Day May 19. Bicycling to work helps improve air quality and is a healthy alternative to driving.

The City will host three energizer stations to reward and encourage those who bike to work. The energizer stations will be located at:

- Mary Avenue and Maude Avenues
- Wolfe Road/Fremont Avenue and El Camino Real
- Sunnyvale Multimodal Transit Station

For more information, call (408) 730-2713, TDD (408) 730-7501, or e-mail *dcogill@ci.sunnyvale.ca.us*.

035132

EARTH DAY POLLUTION PREVENTION TIPS

With Earth Day right around the corner, there is no better time to think about ways to protect our watershed from pollution. The watershed includes our foothills, roadways, lawns and storm drains, all of which drain runoff from rain and over-watering to our local creeks and San Francisco Bay.

Common pollutants such as pesticides, fertilizers, auto fluids and litter that accumulate on streets, sidewalks, driveways and parking lots are carried by runoff to the storm drain system. By taking a few easy steps when performing chores and activities, you can affect the health of our watershed in a positive way. Make every day an Earth Day. By using some of the suggestions below, we can work together to protect our watershed and our environment for the future.

In the Home

You don't need harsh cleaning products to clean your home, and there are many good reasons to make a switch. Some commercial household cleaning products can be hazardous to your family's health. Hazards can come from chemical fumes, improper mixing of products or from being swallowed by small children. Try to purchase the most environmentally-friendly products, and when you purchase cleaning supplies, don't buy more than you need. Make your own products whenever possible. Vinegar can make windows sparkle and lemons remove greasy fingerprints on windows. Baking soda is a good all-purpose cleaner. In fact, baking soda and water can be used in place of ammonia-based all-purpose cleaners. Instead of purchasing a drain cleaner, mix 1/4 cup baking soda with 1/4 cup vinegar, then flush the drain with boiling water. Unclogging your drains with chemical drain cleaners adds pollutants to waste water that can leave a harmful residue in water discharged to the Bay.

Do you have ants in the house but want to avoid using a pesticide indoors? Clean up lines of ants with a vacuum, or spray ants with soapy water and wipe up with a sponge. Soap washes away the chemical trail that ants follow. To repel ants, use red chili pepper, paprika, dried peppermint or cinnamon.

Finally, help conserve water by turning off the faucet when you brush your teeth, and only run full loads in the washing machine or dishwasher.

In the Garden

Try using an integrated pest management (IPM) approach in the garden. IPM is an ecologically-based strategy of using natural methods to overcome plant disease and pest problems. Using IPM creates a system that keeps the good bugs alive in the garden, while avoiding the undesirable effects of chemicals in pesticides and fertilizers. If you have bugs, grow plants whose pollen and nectar provide food that attract beneficial insects like ladybugs, lacewings, ground beetles, dragonflies and spiders. Beneficial insects help control pests by feeding on a wide variety of insects and mites. Consider pesticides only after other natural pest-control methods have been employed.

If you do use chemical controls in the garden, be sure to read the label and choose fertilizers and pesticides containing less-toxic products. Signal words like caution, warning, danger and poison on the label indicate the products level of toxicity. Use pesticides and fertilizers sparingly and according to label directions. Do not apply when rain is predicted or when watering the lawn or garden. Sunnyvale residents may safely dispose of unwanted or outdated insecticides by taking them to a scheduled household hazardous waste drop-off event.

Automobiles

Runoff washes vehicle pollutants such as tailpipe exhaust, zinc from automotive engine oil, copper from brake pad dust, cadmium, lead and automotive fluids off roads and streets into storm drains. These pollutants threaten water quality and the health of wildlife in our waterways. To conserve gasoline, reduce harmful emissions and avoid leaking auto fluids, keep your car well-tuned and in good repair. If your car does leak oil onto your driveway or the street, soak it up by sprinkling the oil with cat litter, then sweep it up and put it in the garbage. Never pour oil on the ground; it can contaminate groundwater supplies. Instead, dispose of used motor oil, oil filters and antifreeze at a household hazardous waste drop-off event. To protect plant and animal wildlife in our creeks and Bay, wash your car on a grassy area or unpaved surface, or use a commercial car wash. Dirty, soapy water from washing cars on the driveway flows to the storm drain and pollutes our creeks and Bay.

Everyone can do his or her part to help sustain water quality. Encourage others by letting them know what they can do to help prevent pollution in our watershed.

Storm Drains

The City of Sunnyvale is asking for your help to keep flooding to a minimum. Storm drains are designed to prevent flooding by draining excess rainwater away from streets. But they can also be a key source of both water pollution and flooding.

Pollutants from washing cars or over-fertilizing lawns can pollute our local creeks and Bay. Paint products, automobile fluids, pesticides, litter,

pet waste, golf balls, dirty diapers and dead animals are found in storm drain systems on a daily basis. While storm drains are designed to handle normal storm water flow, debris dumped into storm drains or washed down by rainfall not only pollutes the creeks and Bay, but clogs storm drain systems as well.

Operation, maintenance and repair of water, sewer and storm drain systems in Sunnyvale are the responsibility of the Field Services Division of the Department of Public Works. Crews generally service the storm drains in the fall, and as needed through the winter. While their efforts provide a high level of service, flooding may still occur during heavy rain. That's where you come in.

How can you help?

Flooding in neighborhoods is often the result of heavy rainfall in a very short time period, but flooding problems increase when trash and other debris block and clog the storm drain. If you see debris blocking a storm drain, you can help by removing it before the next rainfall. To prevent street flooding from leaf-clogged drains, please do not pile or sweep debris, leaves or tree branches into the street or storm drain. Instead, put leaves and yard trimmings in your yardwaste cart or a compost bin.

Dispose of household hazardous waste such as paint, motor oil and pesticides at a Sunnyvale household hazardous waste drop-off event. For more information call Sunnyvale Solid Waste and Recycling at (408) 730-7262, TDD (408) 730-7501, or visit *www.sunnyvalerecycles.org.*

Community organizations, service groups and clubs can help by adopting a project to paint or refresh the "NO DUMPING—FLOWS TO BAY" stencil on storm drain inlets. By fostering this effort, you are helping to remind co-workers, friends and neighbors that nothing except rainwater should enter the storm drains. Stencils are availab by calling (408) 730-7717, TDD (408) 730-7501.

To Report Problems

To report a storm drain that i flooding or clogged with debris, (408) 730-7510, TDD (408) 730-7 Please provide the address, near cross street, your name, daytime telephone number and any othe information you believe will he locate the problem. Repair crew will be dispatched. During time extraordinarily heavy rains, storr drains may overflow even when clogged. This is expected, but th water should subside as the rain subsides.

By working together, we can minimize the damage that future storms may have on our commu our neighborhoods and our cree and the Bay.

035134

Wastewater Issues

Summer's breeze has ended, and in its place is the crisp, cooler air of fall. The evenings are shorter, and backyard barbecues have been replaced by pots of steaming soup and warm bread. Winter and cold weather bring rainstorms, blowing leaves and debris about the neighborhood and into the streets and gutter. There is no better time than the present to protect our watershed.

A watershed is a land area that drains water into a creek, river, wetland or bay. Our watershed includes our foothills, roadways, lawns and storm drains, all of which drain water directly into our local creeks and the San Francisco Bay. By preparing your house and yard for harsher weather, you can help protect the watershed.

- Sweep debris from sidewalks and driveways rather than power-washing it away. This will help prevent storm drain pollution and save water.
- Rake up grass clippings and leaves. Yard trimmings should be disposed of by either composting or placing in the yard cart for collection.
- Do not allow yard debris to wind up in the street or gutter. During heavy winds or rain, the debris could be washed into the storm drain. Yard debris in the storm drain goes straight to the nearest creek, and eventually the Bay. Once in the creeks and Bay, grass and leaves biodegrade, robbing the water of valuable oxygen. When oxygen is depleted, it can kill fish and other aquatic life.
- Avoid over-watering your yard or watering the streets and sidewalks. Poorly adjusted sprinklers can lead to storm water pollution by carrying garden pesticides and fertilizers into our creeks and the Bay.
- Lawn maintenance can help make a beautiful home. But what we do to maintain our lawns could be detrimental to the environment around us. Consider natural alternatives to pesticides and fertilizers.
- Keep trash contained, so it can't enter the storm drain, and prevent street flooding by checking and unclogging storm drains.

Remember, debris and urban runoff mixed with wind and rain become storm water pollution. Responsible management of house and garden activities makes us good stewards of our creeks and Bay.

To learn more about water pollution, visit the Water Pollution Control Plant Web site at *wpcp.sunnyvale.ca.gov*, or call Environmental Outreach at (408) 730-7717, TDD (408) 730-7501.

Celebrate Earth Day at the Plaza del Sol In Sunnyvale

(near downtown & train station)

Friday, April 22, 2005
10 a.m. – 2 p.m.

Listen to Live Music • Enjoy Entertainment • See Exhibits

Also Featuring:

- Art and photography exhibit by local artists
- Collection of unwanted cell phones for recycling
- Lots of activities for kids
- Drawing for earth-friendly prizes
- Coffee grounds giveaway for your garden
- A Community Parade

Come have a great time and learn about protecting our environment!

Take a Break for the Earth!

The plaza area is served by Caltrain and VTA. Bring a lunch, or get a bite to eat at one of the many restaurants in downtown Sunnyvale and enjoy the show.
visit www.sunnyvalerecycles.org,

Recycling Program (408) 730-7278, TDD (408) 730-7501

This Earth Day get mercury out of your home and our environment at the Earth Day Festival

Thermometer Exchange Event

The Problem

Some household thermometers contain mercury, a toxic pollutant harmful to fish, wildlife and humans. Keep your family and the environment safe by disposing of mercury thermometers correctly.

Bring your mercury thermometer in its case and enclosed in a plastic ziploc bag to the Thermometer Exchange Event and receive a FREE non-mercury thermometer in return (while supplies last.)

Or, for additional information on safe disposal of mercury thermometers, contact Hazardous Waste Recycling & Disposal for

This Earth Day get mercury out of your home and our environment

Thermometer Exchange

The Bad News:

Some household thermometers contain mercury, a nerve toxin that can cause brain damage, birth defects, & environmental harm.

The half-gram of mercury in a thermometer is enough to pollute 5 million gallons of Bay water.

Break a thermometer and that mercury is on its way into our environment, where it can poison people & wildlife.

The Good News:

There are mercury-free thermometers that are just as accurate as the mercury ones.

Come to this thermometer exchange with your mercury thermometer in its case and enclosed in a **plastic ziploc type bag** and receive a FREE non-mercury thermometer in return (while supplies last).

SUNNYVALE WATER POLLUTION CONTROL PLANT

THE CITY OF SUNNYVALE • WATER POLLUTION CONTROL PLANT •

A Healthy Bay – It's Good Business

Indoor Drains Flow to Plant

Water draining from showers, sinks, and toilets is called wastewater, and it flows through the sanitary sewer system to the Water Pollution Control Plant. When wastewater arrives at the Plant, the task is to clean it of ordinary pollutants such as detergent, food waste, paper products and human waste, so the resulting effluent is safe enough to discharge to the San Francisco Bay.

Industries that work with hazardous materials on-site are required to treat their process water before discharging it to the sanitary sewer. The Pretreatment Program works directly with commercial businesses and industrial facilities to prevent industrial waste from getting into wastewater or storm drains, which may cause damage to the sewer system, interfere with Plant operations, or compromise public health or the environment.

Treating municipal wastewater before discharge to the bay protects the health of people, property, and the environment.

Storm Drains Flow to Bay

When rain or other water is washed from parking lots, driveways, or streets, pollutants such as pesticides, paints, solvents, chemicals, grease, oil, and dirty bucket water are carried along with the water to storm drains in the parking lot or street. In Sunnyvale, storm drains were built only to control flooding, and water that enters the storm drain system is not treated before flowing to our local creeks and the bay.

Increasing Environmental Awareness

To learn about the Best Management Practices and Standard Operating Procedures your business can apply to reduce or eliminate pollution flowing to the bay, call the Pretreatment Program at 408-730-7260. To learn more about water pollution prevention in your community, call Environmental Outreach at 408-730-7738. For information about the Water Pollution Control Plant and its programs, visit our web site at *wpcp.sunnyvale.ca.gov.*

What is a Watershed?

A watershed is the area of land that drains into a body of water such as a river, pond, lake, ocean or bay. Hills and mountains form the boundaries between watersheds. Wherever you are, wherever you live – you are in a watershed!

Protect Our Watershed

Rain and water runoff from urban activity (car washing or overflow from sprinklers) flows over land and streets and can pick up whatever is on the ground – auto fluids, litter and cigarette butts, as well as toxic residues from pesticides and fertilizers. The polluted water then drains into our local creeks – Calabazas Creek and Stevens Creek – and ultimately into San Francisco Bay.

Let's keep our watershed healthy, clean and beautiful.

To learn more about how to help prevent watershed pollution, call the Water Pollution Control Plant at (408)730-7717 or visit our Web site at *wpcp.sunnyvale.ca.gov*

The Environmental Impact of Litter

Litter is more than just an eyesore – it creates environmental problems in our watershed. Water polluted with litter and debris can be deadly to plants, wildlife and fish through physical disruption of habitat and impacts to water quality.

Water runoff from rain and over-sprinkling enters storm drains, carrying pollutants such as litter, debris, motor oil, pesticides and fertilizers to our local waterways, often distributing this pollution far downstream from its original source. Blockage of the storm drain from litter and debris may lead to flooding – requiring expensive clean-up and repair. The most common litter items thrown or blown onto streets and sidewalks include:

- Bags/food wrappers
- Plastic/glass bottles
- Fast food containers
- Beverage cans
- Cigarette butts
- Plastic/styrofoam cups

What can you do to help?

- Always dispose of trash in a proper receptacle.
- Carry a litterbag in your vehicle and never throw anything out of the window.
- Pick up trash after your event or activity.

LET'S KEEP OUR WATERSHED HEALTHY, CLEAN AND BEAUTIFUL

To learn more about how to help prevent pollution in our watershed, call the Water Pollution Control Plant at (408) 730-7717 or visit our Web site at *wpcp.sunnyvale.ca.gov*

THE CITY OF SUNNYVALE WATER POLLUTION CONTROL PLANT

Remember, a watershed is all the land that drains into a body of water.

CITY OF SUNNYVALE CALIFORNIA

GOT BULBS?

Keep Mercury out of the Environment

Fluorescent lamps are an excellent choice to provide long-life performance and reduce energy consumption. Please be aware that these products do contain a small amount of mercury, a toxic pollutant.

When mercury-containing products are disposed of improperly or break, this toxic pollutant can be transported by air or runoff from rain and deposited in our creeks and bay. Help us in efforts to contain, reduce and eventually eliminate mercury in the environment.

How can you help?

- Never dispose of mercury products in the sink, the trash, in storm drains or on the ground.
- Prevent pollution of our environment by recycling mercury products such as fluorescent bulbs, button batteries, thermometers, thermostats and some types of switches, relays and sensors.
- Bring products that contain mercury to one of the monthly Household Hazardous Waste drop-off events in Sunnyvale.

Household Hazardous Waste

Environmental Presentations
Kidstuff Summer Camp 2005

	Date	Activity	Lesson	Counselor Assistance
Session 1	June 28	Enviroscape (demonstration)	How pollution from different sources in the community can pollute water that flows in the storm drain to our creeks and Bay.	Most kids can't help themselves from reaching out and touching the "community" so I could use the help of a counselor to gently dissuade the children from touching and disrupting the presentation for others.
Session 2	July 12	Outdoor Game (team game using a large ball)	Recall and review the water pollution lesson from the previous week. Organize and play a team game "pushing" the pollution out of the water.	Help me organize two teams. Strongest child paired against similar strongest, tallest, shortest, most shy, most aggressive, etc all paired with similar partner to make playing against one another "fair"
Session 3	July 26	Craft Project (insect mobiles)	Many insects are natural enemies of pests and how "beneficial" insects are useful in the garden. Stress that using pesticides not only disrupts natural controls but also pollutes storm drain water	May need the help of a counselor to assist kids as they assemble their project. Also, distract the kids that finish their project early while others are still working
Session 4	August 9	Enviroscape (demonstration)	How pollution from different sources in the community can pollute water that flows in the storm drain to our creeks and Bay.	Most kids can't help themselves from reaching out and touching the "community" so I could use the help of a counselor to gently dissuade the children from touching and disrupting the presentation for others.

Water Pollution Presentation
5th Grade Script

Introduction

- We already know that water is one of Earth's most important resources
  - We know that all forms of life on Earth – plants, animals, fish, humans - need water to live

So how much water is available?

- So let's talk a little bit about how much water there is on earth.
  - Did you know that the Earth is covered in water – but of all the water covering the Earth, 98% of the water is saltwater?
  - And that another 2% of the water on earth is frozen in ice or glaciers? So if 98% is saltwater, and 2% is frozen in ice (so far that makes 99%), can anyone guess how much water is left for our use?
  - That's right. Just 1%. Can you believe of all the water on Earth, we only have 1% available for our use.

Forms of water

- Let's talk a little bit about the different forms water can take.

  LIQUID - When we think of water, we usually think of liquid, because liquid is the most common form of water. When it rains, water fills our lakes, rivers, streams and oceans.

  SOLID - Water can also be found in solid form, in the form of ice or snow. Water changes to solid form in very cold places, where the temperature changes and falls below 32 degrees F, causing water to freeze.

  GAS or VAPOR - Gas or vapor is the form water takes when it evaporates. Water evaporates at the boiling point of 212 degrees F, or when it is left open to the air. In these forms it can be seen as steam or clouds in the sky.

The water cycle

- Did you know that the water we have today is the same water we've had for centuries? Never more and never less - and it's the very same water the dinosaurs drank.

- That's because of the water cycle. Let's look at the way water moves through the water cycle in its different forms:

  - **EVAPORATION** - Most of the water in the atmosphere comes from surface water like oceans, lakes, and rivers. The warmth from the sun turns water into vapor that rises into the air. When liquid water turns to vapor, its called evaporation.

  - **CONDENSATION** - When the vapor rises, it cools and turns into droplets that collect into clouds in a process called condensation. It can also be seen in this form as fog on windows and mirrors, or on the side of a cold drink.

  - **PRECIPITATION** - The droplets in the clouds grow in size until they become heavy enough to fall to Earth as rain. If the temperature is low enough, the droplets freeze on the way down and become snow or hail. When that happens, it's called precipitation.

What is a watershed?

Has anyone ever heard the word **watershed?**

- When rain falls over the land, it rains on the tops of hills and mountains, and it rains over the valleys. So, all of the land that drains the rain and water to its lowest point is called a watershed. Everyone lives in a watershed. Our watershed in Santa Clara County is bordered by the Santa Cruz Mountains and Mt. Hamilton.

- Where do watersheds drain the rain and water? Most of the water that falls to the Earth is drained in a watershed and collects above the ground in rivers, lakes and oceans. This water is known as surface water.

- But where does the water and rain drain when it rains on buildings and houses in a community? The rain and water that flows off the houses and buildings is Known as urban runoff, and it flows down the streets in the gutter. The urban runoff is draining to its lowest point in the street, usually the storm drain.

VIDEO

Let's take a few minutes to watch a video. It's about some students doing a community project, and what they learn about water that drains in Storm Drains.

Sewers and Storm Drains

In the video, the students reported that the water inside of houses and buildings drains to the sewer, and the wastewater in the sewer flows in pipes to the sewer treatment plant. At the sewer treatments plant, the water is treated, or cleaned, before it is released out to the Bay.

But, the students also reported on what happens to storm drain water, the urban runoff that flows down the street in the gutter to the storm drain.

How many of you have ever seen a storm drain? (Show the graphic of the storm drain)

What happens to that water? As the water flows it carries all the pollution from litter, auto fluids, pesticides, dog waste, yard clippings with it, straight to the creeks and Bay without being cleaned. To demonstrate, I brought a learning tool called the Enviroscape. It is going to show us how storm drain water can pollute our lakes, rivers, creek and Bay.

Introduce the Enviroscape
Explain how the Enviroscape represents different areas of a community

ENVIROSCAPE DEMONSTRATION – Student interactive

Residential
- Household products both indoor and outdoor
- Hazardous waste
- Pet waste

Construction
- Sediment
- Oil and grease

Golf course
- Pesticides
- Fertilizers

Forest area
- Sediment

Industry
- Chemicals
- Oil and grease

Farming

- Fertilizers
- Manure
- Sediment

Wastewater treatment plant

- What is a wastewater treatment plant?
- What does it do?

Pollution Prevention

- What can we do to prevent storm water pollution?
  - Only storm water should go to the storm drain

- Water pollution prevention
  - Properly dispose of chemicals and hazardous materials by taking them to HHW collection event.
  - Prevent littering – pick up trash
  - Wash car on the lawn or on soil
  - Name the pollutant and ask students to suggest pollution prevention tips

- Water conservation suggestions?
  - Ask students for suggestions of water conservation tips

Close

- Protecting our water quality is a serious issue
- Water quality should be a priority
- Preventing pollution is everyone's responsibility
- Look for ways you can help

Wrap-up

- Hand out the goodie bags
  - Activities
  - Freebies
  - Stickers

Healthy Watersheds
Kindergarten Presentation

Establishing Fact

Water is all over the earth. It's in rivers, lakes and oceans. When rain falls from the clouds to the earth, all the rain is collected in our creeks, rivers, lakes and oceans.

Why is water important?

Who can think of some ways we use water?

All living things (people, plants and animals) need water to live.
- Fish live in water.
- Plants need to be watered.
- People drink water every day.

What happens if we forget to drink water? (We are thirsty). When we are thirsty, our bodies are reminding us to drink water.

So, if water is all over the earth, and humans, plants, and animals need water to live, what do you think happens if water becomes **polluted**? Can plants and animals live in polluted rivers and streams?

What do you think of when you hear the word "pollution?"

Today we are going to talk about how water becomes polluted, and I brought my Enviroscape to show you:

- How people in this neighborhood live and how their actions might pollute the environment
- The pollution can get into our creeks and Bay and harm animals and fish that live in or near the water.

The Environment

What do you see in this neighborhood environment?
- Do you see a farm?
- Do you see a golf course?
- Do you see houses with cars in the driveway?

On the farm there are lots of farm animals, a barn, tractors and fences. All of these things are part of the "environment "of the farm.

What about the golf course? Do you see flags? Do you see lawn? All of these things are part of the "environment" on the golf course.

Let's look at the environment of this classroom. Are there posters and chalkboards? How about chairs and desks? These are all things that are part of the "environment" of your classroom.

So, your "environment" is everything that's around you.

- It's where you live and who you live with.
- It's your family, your house, your school, your neighborhood.
- Our environment has people, plants and animals and things
- It has ground, air and water.

Watershed

When it rains, the rain falls from the sky to the land - and the ground area drains the water. *Start Demo of the watershed –make it "rain" and point out how the water is draining.*

Watch how the water is draining off the land. As it rains on this hillside, where is the water draining? How about at the factory? Where does the rain water drain from the factory? At this farm, when it rains on the farmer's field, where is the water draining?

A land area that drains the rain is called a **watershed**. And like we saw in this neighborhood - the water will always drain downhill, off the land to the nearest creek, river, or lake. In this neighborhood, we saw that the in the end, the creeks drained into the Bay.

Storm drains also carry water to the creeks and Bay.

Storm Drains

Does anyone know what a storm drain is? All neighborhoods have storm drains.

- You can find them in your street and they usually have a marking on them like this – Hold up picture of storm drain in the street
- Storm drains are built so the water is drained off the streets and the ground. Rain drains to a storm drain so the water doesn't collect and flood the street.

Spray the water on the neighborhood and point our how the water is going into the storm drain.

- After the water goes into the storm drain, it flows in a pipe under the street, and the pipe empties the water into the creeks, and the creeks flow to the bay.

Start the Enviroscape Demonstration

Neighborhood
Some neighborhoods have lots of pollutants on the streets, and in the grass, or in the yard. See the cars parked in this neighborhood? Some cars leak oil, and sometimes people change the oil in their car at home (sprinkle oil) And, when people wash their car in the driveway, soapy water gets washed off the car and it flows into the street (sprinkle dishwashing soap)

See this dog in the neighborhood? Some families have pets. Most of the time when people take their dogs for a walk, they pick up the dog poop. But not everyone picks up after their pets, and sometimes the dog poop is left in the yard or on the sidewalk (sprinkle dog waste)

Litter in the street
Sometimes people throw litter and trash on the ground or out of their car window when they are driving on freeways. Now there is litter on the street and in this neighborhood. (Sprinkle litter)

Golf Course
Over at the golf course, the owners want to make sure the grass grows strong and is free of weeds, so they apply a chemical fertilizer on the lawn to make it nice and green. (Sprinkle fertilizer)

Industrial
At the factory, they had a bad oil spill. They tried to clean it up but they did not do a very good job. Some of the oil is spilled on the ground near the creek. (Sprinkle oil)

Farm
At the farm, the farmer grows fruits and vegetables. He sprays the crops with pesticides that have chemicals in them to keep the bugs off the plants, and he fertilizes the soil to help grow strong plants. Also, when he plowed his field the soil was very loose. (Sprinkle with pesticides and soil)

What do you think will happen when it rains in this neighborhood? What will happen when the rainwater drains to the creeks and the Bay?

Make it rain. Have the kids take turns spraying water on the Enviroscape.

Look how the rain carries the pollutants to the storm drain. See how it's draining to the creeks and the bay and changing the color of the water in the stream? Is the water dirty (polluted) now?

What's the problem with having pollution in the water?

Most pollution is caused by people, and pollution can cause many types of problems for humans, plants and animals. When pollution like oil and chemicals like fertilizers and pesticides get into our creeks and the Bay, it can harm plants, fish, and wildlife, and can make the water undrinkable for animals. If there is a bad oil spill, birds get oil on their bodies and their wings, then they can't fly.

Once the water is dirty with pollution, can we make it clean again?

Let's think of some things that people can do so our environment and our water is not polluted.

- Don't throw litter on ground – put it in garbage or recycle it
- Keep car tuned-up so oil doesn't leak
- Don't wash the car at home, take it to a car wash
- Pick up dog waste
- People can use products in their yard or garden that don't have chemicals in them

Conclusion

Since plants, animals and people need good, clean water, it's important that we all work very hard **together** to keep it clean and free from pollution. We should take care of our water and our environment.

Any questions?

Report types and quantities used in Annual Report for the previous calendar year. Track the top five pesticides used (in quantity) by the City and report on the quantities and locations used.	See Table 1 of Appendix 1 in this Attachment for details on quantities applied of the most frequently used pesticides on City property by City Staff and contractors in calendar year 2004. Some Diazinon was applied in 2004 at the Golf Course and the justification for the application is included in Appendix 1, per the requirements of the City's IPM policy.	Annually Report 09/05	Kristy McCumby Env. Spec.
	Pest Management Plan/Policy Implementation	Permit Prov. C.9.d	Train staff who apply pesticides as a regular part of their job duties as to the requirements of the Plan and Policy. Provide information and training on the contents of the plan to all City employees	City staff (Public Works and Parks and Recreation/Golf Course staff all received refresher training on the City's IPM policy on April 28, 2005. The IPM policy is available to all City employees on the City's Intranet (Jasmine) website. An e-mail was sent to all employees during National Pollution Prevention Week in September 2004, reminding them that the City has an IPM policy, where to find it, and that the City's pest control contractor (who has IPM training) is to be notified when there is a pest problem.	Annually Report 09/05	Kristy McCumby Env. Spec.
	Pest Management Plan/Policy Implementation	Permit Prov. C.9.d	Modify Pest Control Vendor's contracts with the City as they come up for renewal, to include requirements that they 1) Follow the City's IPM Plan/Policy, BMPs and SOPs. 2) Provide evidence of current IPM training for contractor employees working on City property. 3) Contractors to annually provide copies of State of California Monthly Summary Pesticide Use Report (Form PR-ENF-060 Rev. 4/92) to City staff responsible for their contract management.	•No Pest Control contractors were used for Parks and Rec or the Golf Course in FY 04-05. •The Structural Pest Control Vendor contract was renewed in May 2005. The contract included the requirement to follow the City's IPM policy and that vendor will provide the information needed on pesticides applied to City – owned property. (See Appendix 1 for the pesticide usage on City-owned property.) Vendor has supplied documentation of training on IPM as provided by Santa Clara County in 2004.	Annually Report 09/05	Kristy McCumby Env. Spec. and Elaine Wesley, Finance Manager

Santa Clara Valley Urban Runoff Pollution Prevention Program

Municipality: Sunnyvale

Control Program for Pesticides (cont.)						
	Pest Management Plan/Policy Implementation	Permit Prov. C.9.d	Inform any new leaseholders of the City's IPM policy	A flyer regarding the City's IPM policy was prepared in FY 03-04 and was distributed to inform new leaseholders regarding the City's policy in FY 04-05, as well. Ten new leaseholders received the information.	Annually Report 09/05	Kristy McCumby, Env. Spec. & Mike Chan, City Property Manager
	Pest Management Plan/Policy Implementation	Permit Prov. C.9.d	Document training of all city staff who apply pesticides to ensure compliance with training requirements established by the County Agriculture Commissioner and the State Department of Pesticide Regulation. Provide annual training to staff who apply pesticides on the City's Pest Management Plan, IPM Policy, SOPs, BMPs, and the latest IPM techniques appropriate to the pests	Information as to IPM training and other pesticide application training received by City staff is included in Attachment M.	Annually Report 09/05	Lead: Kristy McCumby Env. Spec. Support: Bill Fosbenner (Public Works) and Scott Morton, (Parks)
	Pest Management Plan/Policy Implementation	Permit Prov. C.9.d	Document training on the City's IPM Plan/Policy for staff who do not apply pesticides and on the prohibition for use of over-the-counter pesticides by untrained staff in and around the workplace (consistent with the City's IPM Plan/Policy). Report on activities/ numbers reached in Annual Report.	An e-mail was sent to all City employees (over 600) during National Pollution Prevention week, reminding them that the City has an IPM policy and that they should contact Facilities Management for assistance from the City's pest control contractor to deal with pest problems in office areas. They should not be initiating pest control actions on their own.	Annually Report 09/05	Kristy McCumby Env. Spec. Support: Sally Personett, Environmental Outreach Coord.

FY 2004-2005 Annual Report
Municipality: Sunnyvale

Control Program for Pesticides (cont.)						
	Pest Management Plan/Policy Implementation	Permit Prov. C.9.d	Evaluate effectiveness of training. Report on progress in Annual Report.	•Staff who apply pesticides as part of their normal job understand the importance of the IPM policy and their role in helping to implement its requirements. Annual training helps to keep IPM focused as a standard way of dealing with pest problems. Verbal feedback from staff attending the training has been positive. •It is more difficult to assess the effectiveness of outreach efforts to the workers who do not apply pesticides as a normal part of job duties; similar to the way it is difficult to assess success of outreach efforts to the general public. However, employees are making pest referrals to the structural pest control contractor, who uses IPM techniques rather than trying to deal with the problems on their own.	Annually Report 09/05	Kristy McCumby Env. Spec.
	Pest Management Plan/Policy Implementation	Permit Prov. C.9.d	Conduct annual citywide search of chemical storage areas for pesticides that are no longer legal for application per EPA, State, and/or local requirements. Properly dispose of any such pesticides pursuant to appropriate waste disposal regulations.	• No pesticides that are no longer legal for application were found by Parks and Rec staff. • Public Works – Landscape Boulevards inventoried their pesticides and found some diazinon, Dursban, and Killmaster products that are no longer being used. Arrangements are being made to properly dispose of these pesticides as hazardous wastes. Hazardous waste disposal contractors have been contacted for bids to remove the pesticides.	Annually Report 09/05	(Report) Kristy McCumby, Env. Spec. (Support) Bill Fosbenner, PW, Scott Morton (Parks & Rec.), Gary Carls, (Golf)

Control Program for Pesticides (cont.)						
	Pest Management Plan/Policy Implementation	Permit Prov. C.9.d	Continue to assist with local implementation of the Watershed Education and Outreach (WE&O) Campaign to send messages about less toxic pest control methods and proper disposal techniques to the general public.	Outreach has been active locally in all aspects of implementing the campaign. Various methods have been deployed such as: - Writing and publishing articles - Sending an email blitz to Sunnyvale employees - Attending and staffing general public and community events - Presenting demonstrations, discussions and activities at local elementary schools and summer camps regarding IPM. See PIP activities, Attachment G, Table 1 for specific activity details.	Annually Report 09/05	Sally Personett, Environmental Outreach Coordinator
	Pest Management Plan/Policy Implementation	Permit Prov. C.9.d	Update City's web page as needed with information on the City's IPM Plan and Policy. Also, include updates on IPM techniques for pests as they become available.	The Water Pollution Control Plant web page is updated with IPM information when needed and includes the City's IPM policy. It can be found at wpcp.sunnyvale.ca.gov	Annually Report 09/05	Sally Personett, Environmental Outreach Coordinator
	Pest Management Plan/Policy Implementation	Permit Prov. C.9.d	Continue to provide at least one story on IPM practices/ successes and/or the City's Pest Management Plan and IPM Policy to local newspapers and/or citywide newsletters.	A message reminding staff about IPM and use of less-toxic pesticide was emailed to city employees September 04 The following article discussing the IPM approach was published in the Sunnyvale Quarterly: • Earth Day Pollution Prevention Tips Spring 05 See PIP activities, Attachment G, Table 1 for additional and more detailed descriptions of activities. Control Program for Pesticides (cont.)						
	Pest Management Plan/Policy Implementation	Permit Prov. C.9.d	1) Continue to assist with the local components of a "Pesticide User Outreach" as proposed by the program. Target residential and commercial users. 2) Based on recommendations from the Program's research reports and surveys of business pesticide usage, develop and implement education that will target specific businesses.	Outreach continues to support the program consultant in providing literature to participating hardware stores and nurseries. Two retail stores in Sunnyvale have racks that distribute the Program's IPM literature. Outreach participated in two environmental events presented by major corporations to benefit their employees. An ad was placed in the Chamber of Commerce Directory that informs new businesses and residents about the dangers of pesticides in stormwater. See PIP activities, Attachment G, Table 1 for additional and more detailed descriptions of activities.	Annually Report 09/05	Sally Personett, Environmental Outreach Coordinator
	Pest Management Plan/Policy Implementation	Permit Prov. C.9.d	Continue to provide information on less toxic pest control (e.g., IPM techniques, municipal IPM policies, model contract language, training opportunities) to neighboring special districts (e.g., open space districts, vector control districts, and school districts) as appropriate.	Sunnyvale doesn't have any "special districts" other than school districts within its jurisdiction. Promotion to school districts was conducted in program year FY02-03. See PIP activities, Attachment G, Table 1 for additional and more detailed descriptions of activities. The City Parks Division has maintenance agreements for outside grounds with some schools within the City's jurisdiction. All pertinent laws are followed regarding posting, public notifications, and types of pesticides that are used.	Annually Report 09/05	Sally Personett, Env. Outreach Coordinator

Prov. C.9.d	Pest Management Plan/Policy Implementation	Permit Prov. C.9.d	Track and/or estimate the numbers of Sunnyvale residents and staff reached through outreach efforts (including advertising) regarding the City's IPM policy, pesticide use reduction, and related topics.	Outreach to city residents occurs through the city website listed above as well as through articles in the Sunnyvale quarterly that is mailed to all residents. Staff also provides information at various public outreach events in the Sunnyvale area. See Table 2 in Appendix 1 for details on estimates of numbers reached by event.	Annually Report 09/05	John Pilger, Com Officer & Sally Personett, Env. Outreach Coordinator

2) Response to Regional Board Comments on Pesticide Management Activities section of FY 03-04 Annual Report:

No comments were received from the Regional Board on this section.

3) Summary of How Pesticide Usage has changed in FY 04-05.

The City continues to try to reduce, as much as possible, the use of pesticides containing Diazinon or Chlorpyrifos, as described in the Sunnyvale IPM Policy. The Public Works, Parks and Recreation Department, and Golf division continue to reduce their product inventories and try to order products on as a-needed basis as much as possible. Due to budget constraints, contracts for turf and grounds pest control and pesticide applications by contractors were not renewed in FY 04-05. The City has one structural pest control contractor that handles all city building facilities. Information as to the types and quantities of structural pesticides applied is included in Table 1 in Appendix 1 at the end of this section. At the end of the table there is a discussion of the City's program show how the City's pesticide use is changing.

All products used by the Parks division are Category III (caution). IPM methods are continually taught and implemented. Some examples include:

- Wood chips/mulch usage – Over 400 cubic yards were spread (much by volunteers).
- Irrigation controls – Continual monitoring, adjustment, and repair to prevent under or over watering, which are conducive to weed growth.
- Manual methods – Removal of weeds by hand using volunteers and seasonal staff.

The City's current budget difficulties have an effect on amounts of pesticides used. Parks has had a 20% labor reduction since 2002, which has caused a greater use of chemicals, particularly in situations where manual removal of weeds had been used before. In other cases, the reduction in funds available for outside contractors has decreased the amount of pesticides used.

Pesticide Use and Integrated Pest Management Policy Implementation in the City of Sunnyvale

Quantities of Diazinon and Chlopyrifos-Containing Compounds Applied:

- No pesticides containing Diazinon were applied on City of Sunnyvale Properties from 2001 through 2004
- In 2001 and 2002, two products that contained Chlorpyrifos were used by City staff in very small amounts. In 2003, no chlopyrifos-containing pesticides were used.
- In July of 2004 1.5 gallons (45.1 oz of active ingredient chlorpyrifos) of Dursban Pro/Dow Chemicals were applied to putting greens at Sunnyvale Golf Course to treat for cutworms. While every effort was made to avoid using chemical treatments, there was really no alternative means to eliminate the cutworm problem. The cutworm levels were beyond a threshold to the point where the birds were destroying turf on the putting greens in their efforts to feed on the cutworms. While this is acceptable in other turf areas of the golf course it is unacceptable on putting greens because it creates an uneven surface for play. The product was used at the recommended rates, sprayed it at night and watered in per label instructions. None of the greens are in locations where the product could runoff to other water sources.

Pesticide Removals:

- Employees were informed in the employee newsletter of the IPM policy and the proper procedures for dealing with pest problems on site. Outreach at staff meetings continues as needed, and employees are reminded periodically of the IPM policy which is posted on the City's intranet website.

Santa Clara Valley Urban Runoff Pollution Prevention Program
Attachment H – Appendix 1 – Tables 1a-1j
FY 2004-2005 Annual Report
Municipality: Sunnyvale

- Annual searches of pesticide storage areas in Public Works, Parks and Recreation, and the Golf Course did not turn up any pesticides that were prohibited for current use. Some pesticides containing Diazinon, Dursban, and chlorpyrifos were found by Public Works staff that were no longer being used by trained staff. These were flagged for proper disposal and arrangements are in process with a hazardous waste contractor to remove and properly dispose of these chemicals in FY 05-06.

Sunnyvale's IPM Policy:

- A copy of the IPM Policy that was placed in the City's Administrative Policy Manual (APM) and is available to all staff for viewing on the City's intranet website. It is also available to the public through the Water Pollution Control Plant website at http://wpcp.sunnyvale.ca.gov

- Outreach to the City's trained/licensed pesticide application staff about the IPM policy continued in FY 04-05 (See Attachment M for staff training information.) Outreach continued to all City staff about the IPM policy through an e-mail to all City staff during Pollution Prevention week.

Contractors and the City's IPM Policy:

- Pest Control Companies who had contracts with the City to apply agricultural pesticides/herbicides to City properties in FY 01-02 and FY 02-03 did not use any Diazinon or Chlorpyrifos-containing compounds in calendar years 2001, 2002, or 2003. Due to budget constraints, contracts for Parks and Recreation agricultural pesticide/herbicide application contractors were not renewed for FY 03-04. Parks and Recreation certified pesticide applicators performed all applications to City-owned property themselves in FY 04-05. No contractors were engaged due to budget limitations.

- The City employs one structural pest control contractor, who is required to abide by the IPM policy in their contract that became effective July 1, 2003 and was renewed in 2005. Data on types and quantities of pesticides used in structural pest control activities from July 2003 – December 2003, and calendar year 2004 are included in Table 1 above. The current structural pest control contractor uses a very limited number of "caution" labeled products and follows IPM practices such as monitoring and pest identification prior to application of a pesticide. Traps and baits are often used prior to the use of pest control sprays or granular materials. Copies of their IPM training received are kept on file and provided to the City upon request. Contractor staff received 7.5 hours of IPM training in 2004 offered by Santa Clara County.

IPM and City Property Leaseholders:

- Lease holders were notified of the City's IPM policy in 2003 by the City's property manager.

- A new property manager was contracted to manage City properties in August 2004. A flyer was prepared for the property manager to distribute to new leasees that provides information about the City's IPM policy and where information can be found about selecting less toxic options for pest problems.

- Flyer and information on City's IPM policy were distributed to 10 new leaseholders in FY 04-05.

Municipality: Sunnyvale

Sunnyvale Targeted Outreach for the Pest Management Plan			
Pest Management Plan/Policy Implementation	Track and/or estimate the numbers of Sunnyvale residents and staff reached through outreach efforts (including advertising) regarding the City's IPM policy, pesticides use reduction, and related topics.	Sunnyvale Quarterly Report	The Quarterly Report is mailed to approximately 60,000 Sunnyvale residents and businesses each quarter. In addition, 2000 copies of the report are distributed to reception areas at the Sunnyvale Library, City Hall, Community Center, Senior Center, Public Safety and Columbia Neighborhood Center. The Quarterly Report is also available on our Web site at: wpcp.sunnyvale.ca.gov
		E-mail promotion National Pollution Prevention Week	IPM and less toxic pesticide use was one of several pollution prevention messages sent via e-mail to over 1000 Sunnyvale staff during Pollution Prevention Week.
		Sunnyvale Utility Bill Insert	Utility bill inserts reach approx. 30,000 house holds and businesses in Sunnyvale staggered over a two-month timeframe.
		Sunnyvale Farmers Market	The Farmers Market draws 2-3,000 people each Saturday, and approximately 75-100 individuals visit the IPM Outreach exhibit on display once per month.
		Sunnyvale Schools Outreach	25 classrooms from seven different schools in Sunnyvale requested classroom presentations. Over 614 students and 25 teachers received IPM and water pollution prevention information.
		Sunnyvale Pancake Breakfast	Over 1,000 breakfasts were served at this popular event. During exhibit presentations, 80 students and 25 adults learned about water pollution prevention through reduction in pesticide use.
		Network Appliance Earth Day event	Approximately 26 individuals visited the IPM exhibit booth during this lunch hour event.

Attachment H – Appendix 1 – Table 2
PI/P Pesticide Management Activities – Estimated Numbers Reached
FY 2004-2005 Annual Report
Municipality: Sunnyvale

Pest Management Plan/Policy Implementation	Track and/or estimate the numbers of Sunnyvale residents and staff reached through outreach efforts (including advertising) regarding the City's IPM policy, pesticides use reduction, and related topics	Lockheed Environmental Fair	This was a successful event for the purpose of reaching employees of the Lockheed community. Attendance by Lockheed employees was very strong. Approx. 135 individuals visited the booth seeking information about IPM
		Earth Day	This was an extremely successful event with excellent community turnout. Exhibits featured local organizations offering environmentally-friendly education, services and products. Children's activities included interactive exhibits, arts and crafts and water pollution demonstrations. Approximately 400-500 adults and 150 children attended the event.
		Summer Camps	The indoor/outdoor games and activities allow kids to learn about water pollution prevention (includes pesticides), water conservation, and watershed stewardship. Evaluation forms from camp counselors indicate the children enjoyed the environmental games and activities, but reported it was not clear if it increased their understanding of water pollution problems. Outreach staff conducted 19 environmental activities, reaching 552 youth this reporting year.
		Grow Your Own Conference	Presented by the City of Sunnyvale, and the Valley of Hearts Delight, this conference offers workshops for garden enthusiasts. 250 people attended this event and approximately 50 individuals visited the booth for IPM information.
		Organic Garden Tours	In partnership with the Foundation for Global Community and Valley of the Heart's Delight, tours of 4 local organic gardens were conducted for the purpose of participant networking and information sharing about gardening.

FY 2004-2005 Annual Report
Municipality: Sunnyvale

Pest Management Plan/Policy Implementation	Track and/or estimate the numbers of Sunnyvale residents and staff reached through outreach efforts (including advertising) regarding the City's IPM policy, pesticides use reduction, and related topics	Columbia Health and Safety Fair	At this activity and exhibit fair, the community receives a broad range of health, safety, pollution prevention, and community service information. The demonstration presented by Outreach provided 60 adults and at least 80 children with information on water pollution. Feedback from the crowds indicated the presentations were engaging, interesting, and fun.
		Advertisement in the Sunnyvale Chamber of Commerce Business and Residential Directory	10,000 copies of the Sunnyvale Chamber Directory are mailed to Chamber members, major businesses, and newcomer residents. Copies of the Directory are included in Chamber business packets and are distributed at hotels, City Hall, Sunnyvale Community Resource Center, and through realtors and banks. Directories are also available on request.
		IPM information via Sunnyvale website.	The City of Sunnyvale does not have the ability to count number of hits to the website

Mercury Pollution Prevention Activities

Santa Clara Valley Urban Runoff Pollution Prevention Program
Attachment I
FY 2004-2005 Annual Report
Municipality: Sunnyvale

1) Self Evaluation Matrix

P.S. Id.	Activity	CI Item Source	FY 04-05 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
Control Program for Mercury						
Hg Work Plan I.A	Mercury Plan Development	Permit Prov. C.9c	Sunnyvale staff to continue to work with SCVURPPP Mercury Pollution Prevention Plan work group	Staff continued to attend the work group and education/outreach group meetings in FY 04-05. Staff shared the flyer produced for outreach to small businesses on fluorescent lamp disposal BMPs with other group members. Staff also was able to coordinate a thermometer take-back event with County HHW in the spring of 2005.	Ongoing Report 09/05	Kristy McCumby Env. Specialist
I.D &, I.F	Mercury Plan Implementation	Permit' Prov. C.9c	Sunnyvale Mercury Work Group to continue to meet and determine how Program-provided guidelines for the "virtual" elimination of mercury in urban runoff will be implemented to address controllable City sources.	• Outreach to City staff (by both Public Works Environmental Division and Public Works Solid Waste Division) regarding the Environmentally Preferable Purchasing policy continued. Meetings were held in November 2004 and again in April 2005 to discuss the best way to incorporate EPP language as related to mercury-containing products and wastes into City contracts and bid documents. Standard language to include in Requests for Quotes/Proposals was developed. Purchasing and Public works staff agreed to include the draft language in new contracts to help reduce the amount of mercury-containing products purchased wherever feasible. • A series of outreach events at city department staff meetings is scheduled for Oct. and Nov. 2005 to remind staff about the City's EPP Policy.	Ongoing Report 09/05	K. McCumby & Sunnyvale Mercury Work Group (PW, Parks and Rec., Admin. Serv, Public Safety reps.)

Santa Clara Valley Urban Runoff Pollution Prevention Program
Attachment I
FY 2004-2005 Annual Report
Municipality: Sunnyvale

Control Program for Mercury (Cont.)						
I.F & MM 1	Mercury Plan Implementation	Permit Prov. C.9.c	Continue improving current recycling programs for fluorescent lamps and Hg-containing products, as needed. Other products (e.g., thermometers/thermostats) may be included as appropriate to a particular City Department.	•The quantities collected /shipped for recycling in the City in FY 04-05 are reported in Appendix 1 of this Attachment. • A new area near the hazardous waste storage area in the Corporation Yard was designated for storage of burned-out lamps until a sufficient number is ready for pick up. • PW Field Services contracted with Onyx Electronics to dispose and recycle lamps, after Onyx provided documentation proving that the business complies with all applicable laws and regulations.	Ongoing Report 09/ 05	Kristy McCumby, Environmental Specialist & Sunnyvale Mercury Work Group
II.B	Mercury Plan Implementation	Permit Prov. C,9.c	Continue with existing Hg-containing product disposal services offered through the City's Household Hazardous Waste collection program, through support of the Santa Clara County HHW program.	Current Sunnyvale program provides HHW (including Hg- containing wastes) to City residents and small businesses that are Conditionally Exempt Small Quantity Generators (CESQGs). The City will continue to contribute to the County HHW collection efforts.	Ongoing Report 09/ 05	Kristy McCumby, Env. Spec. and Rich Gurney, HHW Collection Program
II.C	Mercury Plan Implementation	Permit Prov. C.9.c	Annually document quantities disposed or recycled by the City divisions/ departments.	Information as to quantities of fluorescent lamps and other mercury containing devices/products that were recycled by the City is reported in Table 1 at the end of this section.	Ongoing, Report 09/05	Kristy McCumby Env. Spec. with support from Larry Iaquinto, Jim Craig, & Curtis Black

Santa Clara Valley Urban Runoff Pollution Prevention Program
Attachment I
FY 2004-2005 Annual Report
Municipality: Sunnyvale

Control Program for Mercury (Cont.)						
II.C	Mercury Plan Implementation	Permit Prov. C.9.c	Collect and report information on quantities of fluorescent lamps collected by City HHW collection program at the SMaRT Station from residential customers. Provide this information to the Program, as needed, to add to County data for HHW collected from residents and CESQG business collection programs.	See Table 1 at the end of this attachment for quantities of lamps collected and shipped for recycling by the City in FY 04-05.	Ongoing Report 09/05	Kristy McCumby Env. Spec. and Rich Gurney, Recycling Coordinator
II.F	Mercury Plan Implementation	Permit Prov. C.9.c	Continue working with HHW programs in cities/County to develop and help publicize fluorescent lamp and other mercury-containing product recycling programs.	• In collaboration with HHW and other supporting cities, Sunnyvale participated in the roll-out of the 04 -05 mercury program by contributing to the development of radio scripts, decals, posters and transit ads for the Got Bulbs collection campaign. • GOT BULBS? A "Keep Mercury out of the Environment" utility bill insert was developed and sent to Sunnyvale residents and businesses explaining proper disposal of fluorescents at HHW events. •During Pollution Prevention Week, KSUN (the Sunnyvale community channel) aired a PSA regarding proper disposal of fluorescent bulbs - A "P2" tip regarding pollution from mercury and advising proper disposal was sent via email to all City employees with access to a computer • In collaboration with County HHW, the City conducted a mercury -thermometer exchange event in conjunction with the Earth Day Celebration. (See Attachment G, Table 1 for details of the event.)	Ongoing	Sally Personett, Env. Outreach Coordinator and Rich Gurney, SW Recycling Coordinator

Santa Clara Valley Urban Runoff Pollution Prevention Program
Attachment I
FY 2004-2005 Annual Report
Municipality: Sunnyvale

Control Program for Mercury (Cont.)						
III.A	Mercury Plan Implementation	Permit Prov. C.9.c	Continue financial support of Regional Monitoring Program through SCVURPPP funding.	The City continues funding of the RMP through financial contributions to SCVURPPP programs.	Ongoing	Lorrie Gervin, Env. Div. Mgr.
IV.C	Mercury Plan Implementation	Permit Prov. C.9.c	Support and participate in the development and implementation of the WMI Watershed Action Plan.	City staff continues to participate in the SCBWMI as co-chair of the group. In addition, staff participates in many of the subgroups that are tasked to implement the aspects of the Watershed Action Plan. The City provides some funding in support of the Watershed Assessment and Monitoring Subgroup.	Ongoing	Lorrie Gervin, Env. Div. Manager
V.A.3	Mercury Plan Implementation	Permit Prov. C.9.c	Pretreatment Inspectors will continue to integrate distribution of Mercury Outreach materials and provide outreach to industries and businesses when doing routine inspections of facilities for source control measures	•Pretreatment inspectors continue to include Mercury Outreach materials, such as the brochure prepared in FY 03-04 for distribution to businesses and industries during routine inspections. • Another brochure is under development "Is Mercury Hiding in your Construction or Demolition Project?" and will be available later this FY. This was done at the request of Public Works and Building staff and can be distributed at the City's One-stop permit counter, as well as distributed by Pre-treatment program staff, when appropriate.	Ongoing activity Report 09/05	Robert Gallo, Sen. Insp. Pretreatment Program

Santa Clara Valley Urban Runoff Pollution Prevention Program
Attachment I
FY 2004-2005 Annual Report
Municipality: Sunnyvale

Control Program for Mercury (Cont.)						
V.B	Mercury Plan Implementation	Permit Prov. C.9.c	Document and evaluate each outreach activity, including the target audience and number of businesses and/or residents reached.	- An article was published in the Harbinger (City of Sunnyvale) employee newsletter regarding proper disposal of fluorescents at work and at home - An article was published in the Poop Scoop (WPCP) employee newsletter reminding staff about the BMPs for recycling spent lamps. - A "Dispose of Mercury Properly" fluorescents advertisement aired on theater billboards at the Mercado Theater - Information regarding proper disposal of fluorescent bulbs is published on the City of Sunnyvale Solid Waste and Recycling website and refers residents and businesses to HHW for drop-off events in the City. • See Table 1 in the PI/P Self Evaluation Matrix (Attachment G in this report) for details on target audiences and numbers reached in the Mercury related activities conducted in FY 04-05 that are discussed above.	Annually Report 09/04	Sally Personett, Env. Outreach Coord. & Rob. Gallo, Sr. Ind. Waste Insp.
V.C	Mercury Plan Implementation	Permit Prov. C.9.c	Assist with the survey of local attitudes and behaviors to evaluate the success of the outreach efforts and saturation of outreach messages as coordinated with the Watershed Watch Campaign Survey	During FY02-03, a questionnaire was developed to target disposal from residential, and the survey was implemented in a short-term effort. • The Watershed Watch Campaign did not conduct a survey of local attitudes in FY 03-04 or FY 04-05. When it is initiated City staff will assist with WWC survey, as directed by the Program.	To be deter-mined Report 09/05	Sally Personett, Env. Outreach Coord.

Santa Clara Valley Urban Runoff Pollution Prevention Program
Attachment I
FY 2004-2005 Annual Report
Municipality: Sunnyvale

2) Response to Regional Board Comments on Mercury Plan Activities section of FY 03-04 Annual Report:

No comments were received from the Regional Board on this section.

3) Summary of How Mercury-containing Product Usage and Handling Changed in FY 04-05

- Staff attended a training seminar in March 2005 entitled "How to specify Environmentally Preferable Lighting Equipment" sponsored by Pacific Gas and Electric. The seminar provided a number of ideas regarding language and specifications that could be included in bid specs for public projects that would help to encourage the use if mercury-containing product alternatives and identify mercury-containing products in HVAC equipment that is repaired or replaced on City buildings. The suggested language will be incorporated into building specifications for new projects per discussions with City engineering staff.

- Field Services staff requested quotes on lower-mercury-containing lamps, but found that the lamps are 2 to 3 times more expensive than the regular ones. Since life expectancy of the lower-mercury lamps was not much higher than the ones currently in use, it was decided to wait until more competition develops and prices for the new lamps go down before purchasing them. Staff continues to recycle existing lamps with the higher mercury content.

- City Departments/Divisions continue to improve their individual recycling programs for fluorescent and other mercury-containing lamps. Outreach will continue to remind staff of the appropriate BMPs to use when collecting and recycling lamps.

Santa Clara Valley Urban Runoff Pollution Prevention Program
Attachment I – Table 1
FY 2004-2005 Annual Report
Municipality: Sunnyvale

Table 1:
Quantities of Hg-containing wastes recycled from City Facilities in FY 04-05.

CITY DEPARTMENT/ LOCATION	TYPE OF WASTE	QUANTITY OF WASTE
SMaRT Station (Wastes from residences and small businesses, and Facilities Management/ Administrative Services for City-owned Buildings)	Fluorescent Lamps (4 ft or less length) (> 4 ft length)	2,240 each 272 each
Water Pollution Control Plant (City-owned property)	Fluorescent Lamps (4 ft length) Misc. shaped lamps and HID, Metal Halide Hg-containing wastes (thermometers, switches, and laboratory chemical compounds)	318 each 46 each 163 lbs
Corp Yard - Public Works (City-owned Property	HID, metal halide, & Mercury vapor lamps (shipped)	553 lamps

Total Fluorescent Recycled/collected (all sized tubes): **2830 lamps**
Total HID, Mercury Vapor, & Metal Halide: **559 lamps**
Other Hg-containing wastes: **163 lbs**

Copper Action Plan/Nickel Action Plan

Santa Clara Valley Urban Runoff Pollution Prevention Program
Attachment J
FY 2004-2005 Annual Report
Municipality: Sunnyvale

1) Self Evaluation Matrix

P.S. Id.	Activity	CI Item Source	FY 04-05 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
	Copper/Nickel Baseline Activities					
CB-1 (1 &4)	Measures to reduce copper discharges from vehicle washing operations	Permit Prov. C.9.a (CAP)	Distribute materials (brochures and other information) at city offices, public places, and events. Advertise in various media, e.g. The Quarterly, KSUN, website, theater ads, and utility bill inserts. Conduct mass mailout of outreach materials regarding disposal of pool water.	1) Actions for public outreach related to vehicle washing in FY 04-05 are described below: MEDIA Outreach "Earth Day Pollution Prevention Tips" article in the Sunnyvale Quarterly Community Newsletter discussed storm drain pollution related to runoff from vehicles -Spring 05 "Storm Drains - No Dumping - Flows to Bay" article was published in the Sunnyvale Quarterly discussing water pollution caused by washing cars and automobile fluids - Winter 05 "What is a Watershed/Protect Our Watershed" pollution from auto fluids message was conveyed to Sunnyvale businesses and residents in a utility bill stuffer – November 04 A PSA advertising the problems of car washing and storm drain pollution was aired on KSUN community TV during National Pollution Prevention Week in September 04 An e-mail blitz with a message about pollution resulting from washing cars in	Ongoing Report 09/05	Sally Personett PW Env. Outreach Coord.

				driveways was sent to Sunnyvale employees during National Pollution Prevention Week – September 04. PUBLIC Outreach At the following community events "Cars Pollute Water Too" and "The Bay Begins at Your Front Door" automotive brochures were distributed and Enviroscape demonstrations showing storm drain pollution from car washing and automotive fluids was presented: • Pancake Breakfast – October 04 • Columbia Health and Safety Fair May 05 • Earth Day Community Event April 05 SCHOOLS Outreach This reporting year Outreach was invited to present the Enviroscape presentation to 25 classes in Sunnyvale Elementary Schools. A large portion of the demonstration is devoted to storm drain pollution from car washing and automotive fluids. REGIONAL Outreach Outreach staff participated extensively with the Program on the Watershed Watch promotional campaign encouraging vehicle owners to help reduce copper discharges from vehicle washing activities by using commercial car wash establishments. Classic Car Wash event – Outreach		

				staffed a booth at two car wash events presented in partnership with KRTY and Classic Car Wash. Quality Tune-up – Outreach staffed a booth at one Quality Tune-up event presented in partnership with KUFX and Quality Tune-up. Other vehicle pollution prevention activities and their effectiveness evaluations are included in Table 1 of Attachment G of this report. **2)** The Pretreatment program continues to inspect commercial/industrial facilities to ensure that BMPs for vehicle washing are employed by utilizing revised inspection reports, program literature and data collection for effectiveness evaluation. The City additionally ensures that any community car wash events operating within the City adhere to BMPs required, by collecting wash water and discharging to sanitary instead of storm.		
CB-1 (1 &4)	Measures to reduce copper discharges from vehicle washing operations	Permit Prov. C.9.a (CAP)	Require source control measures for Group 1 new and redevelopment projects that conduct vehicle/equipment washing and maintenance activities (Consistent with Provision C.3.k)	Conditions of Approval (COAs) for Group 1 (and now Group 2) New and Redevelopment Projects have been identified. These are incorporated as COAs for projects as determined appropriate by CDD and Pretreatment staff at project review committee meetings. No Group 1 projects deemed complete in FY 04-05 included vehicle washing as an activity that would occur on the project site.	Ongoing Report 09/05	CDD staff (to be determined) and Pretreatment staff (to be determined)

Santa Clara Valley Urban Runoff Pollution Prevention Program
Attachment J
FY 2004-2005 Annual Report
Municipality: Sunnyvale

	Copper/Nickel Baseline Activities cont.					
CB-1 (2 & 4)	Measures to reduce copper discharges from vehicle washing operations	Permit Prov. C.9.a (CAP)	• Continue to inspect commercial/ industrial facilities that have vehicle washing activities occur on site (this includes auto-related businesses). • Ensure BMPs for vehicle washing are employed. • Provide an effectiveness evaluation of inspection/compliance with BMPs. • Continue to inspect vehicle-washing areas for City vehicles at the Corp Yard.	• The Pretreatment program continues to inspect commercial/industrial facilities to ensure that BMPs for vehicle washing are employed by utilizing revised inspection reports, program literature and data collection for effectiveness evaluation. • The City additionally ensures that any community car wash events operating within the City adhere to BMPs required, by collecting wash water and discharging to sanitary instead of storm.	Ongoing Report 09/05	Robert Gallo, Sr. Ind. Waste Insp.
CB-1 (3 & 4)	Measures to reduce copper discharges from vehicle washing operations	Permit Prov. C.9.a (CAP)	• Continue to provide training (as needed) to new mobile cleaners. • Provide bi-annual re-certification training to cleaners who have already been certified. • Evaluate effectiveness of the training program. • Encourage municipal staff to use certified mobile cleaners when contracting for cleaning services. • Respond to training requests from mobile surface cleaners that want certification and provide training as needed. Maintain records on who has been trained. Report on numbers trained in the annual report.	• Staff maintains the Surface Cleaners Training Kit developed by the Program to provide training to new mobile cleaners when requested. • No new training events were held during the reporting year 04/05 as most recertification training was done in FY 03/04. • New training requests were referred to BAASMA website for online training and testing. • Requests for certified cleaners were referred to BAASMA's list of certified surface cleaners.	Ongoing Report 09/05	Robert Gallo, Sr. Ind. Waste Insp.

Santa Clara Valley Urban Runoff Pollution Prevention Program
Attachment J
FY 2004-2005 Annual Report
Municipality: Sunnyvale

	Copper/Nickel Baseline Activities cont.					
CB-3	Measures to control copper discharges to storm water from targeted industrial sources	Permit Prov. C.9.a (CAP)	• Industrial Waste Inspection staff will continue specific outreach to older printed circuit board manufacturers and metal plating facilities using copper (if any continue to do business in Sunnyvale) for inspections related to potential copper discharges into storm water. Distribute and discuss BMPs/information to minimize copper discharges. • Continue Industrial Inspection program, including NOI sites such as plating, metal finishers, vehicle service, and other permitted sites	All printed circuit board manufacturers, electroplaters and metal finishers that use copper products on site were inspected during FY05/05 and provided specific outreach literature that addresses copper discharges into storm water. Industrial Waste Inspectors distributed outreach materials including BMPs to implement area-wide "Measures to control copper discharges from targeted industrial sources" during inspections of metal platers and older printed circuit board manufacturers.	Ongoing Report 09/05	Robert Gallo, Sr. Ind. Waste Insp.
CB-6/7	Reducing Traffic Congestion/ Promoting Alternative Transportation	Permit Prov. C.9.a (CAP)	Continue implementation of site design standards related to transportation to meet the requirement of C.3.j of the permit. Report on significant projects where traffic congestion reductions were included in design plans.	•Project Administration reported no new road projects, other than grinding and resurfacing of existing paved roads within their Right of Way. • The City continues to promote alternative transportation through the restriping of various streets to provide bike lanes and connect with existing bike pathways. Two such projects were underway in FY 04-05 as Public Works projects.	Report 09//04 and annually thereafter	PW Project Admin. Staff and Planning staff (to be determined)
CB-8	Measures to classify and assess watersheds and to improve institutional arrangements for watershed protection	Permit Prov. C.9.a (CAP)	• Address implementation of Hydromodification Management Plan in review of new and redevelopment projects after plan has been approved by the Regional Board. • Continue to review EIRs and complete CEQA reviews to ensure watershed protection is considered in CEQA actions.	• City staff participated in the HMP work group and provided comments on the final document... The City will implement the HMP requirements as applicable to Sunnyvale projects upon approval by City Council of amendments to SMC 12.60. • City has reviewed its General plan and	Ongoing Report 09/05	Lorrie Gervin, Env. Div. Manager and Kristy McCumby, Env. Spec.

Santa Clara Valley Urban Runoff Pollution Prevention Program
Attachment J
FY 2004-2005 Annual Report
Municipality: Sunnyvale

			• Continue participation in SCBWMI activities as it moves toward implementation of the Watershed Action Plan. • Revise Sunnyvale's General Plan (Surface Water Sub Element), as needed, at the next scheduled update. Include recommendations based on the review of the Development Policies Comparison Project and Provision C.3.I of Order 01-119 as determined to be appropriate. • Continue participation in the Water Resources Protection Collaborative and implement guidelines and standards that are agreed upon by the group to the extent feasible and appropriate the City.	CEQA review documents to ensure they address watershed protection. Projects are reviewed using "Appendix G" questions to evaluate the impacts to water quality when environmental reviews are conducted. • City participates in SCBWMI as Co-chair and on many Sub groups) such as WAS, WAG, COS, etc.). (See Attachment N for details of the City's SWBWMI involvement. • The City's revision of the Surface Water Sub Element of the General Plan is not yet scheduled. • Sunnyvale participated in the Collaborative in FY 04-05 and provided reviews and comments on the Guidelines and Standards under development.		

Santa Clara Valley Urban Runoff Pollution Prevention Program
Attachment J
FY 2004-2005 Annual Report
Municipality: Sunnyvale

Copper/Nickel Baseline Activities cont.						
CB-11	Measures to improve street sweeping controls and storm water system operation and maintenance	Permit Prov. C.9.a, (CAP)	• Implement (as appropriate) improvements identified for current sweeping program and storm drain system O&M (within available City Budgets). • Evaluate the effectiveness of street sweeping and storm drain O&M in the annual report (See Streets and Roads and Storm Drain sections of this work plan)	• There was no additional funding of capital expenditures for improvements to the street sweeping during FY 04/05. Regular (according to budget cuts) sweeping schedule was maintained. • Storm water catch basins staff continued with their annual cleanout schedule and on an as-needed basis to prevent flooding. More frequent cleaning is unlikely to occur until budget increases. • Collected materials are disposed of as solid waste at the SMaRT Station.	Ongoing Report 09/05	Tony Pineda, PW Supv. & Jim Craig, Field Services Superint.
CB-11	Measure to Track Street Sweeping Data	Permit Prov. C.9.a (CAP)	Continue to follow Program guidance regarding the collection and reporting of street sweeping data. Provide information periodically to the program. Information for reporting includes: quantity of waste collected (cubic yards), number of miles swept, and frequency of sweeping as required.	Information was tabulated from PW Streets maintenance daily logs. City continued to report number of miles of road swept and quantity of debris collected. (See Attachment D-1 for information on miles swept and quantities of debris disposed of.)	Ongoing Report 09/05	Tony Pineda/ PW Supv. & Kristy McCumby, Env. Spec.
CB-12	Measures to Control Copper Discharges from Pools and Spas	Permit Prov. C.9.a, (CAP)	Distribute materials (brochures and other information) at city offices, public places, and events. Advertise in various media, e.g. The Quarterly, KSUN, website, theater ads, and utility bill inserts. Conduct mass mailout of outreach materials regarding disposal of pool water.	1) The pool and spa brochure has proven to be a popular informational hand out, prompting many questions and phone calls from residents about locating the sanitary sewer clean-out on their property. This reporting year the brochure was distributed at the following community and business events where the environmental outreach theme was The Difference Between Sanitary Sewers and Storm Drains: • Columbia Health and Safety Fair • Network Appliance Env. Fair	Ongoing Report 09/05	Sally Personett, Outreach Coord.

Santa Clara Valley Urban Runoff Pollution Prevention Program
Attachment J
FY 2004-2005 Annual Report
Municipality: Sunnyvale

				• Lockheed Env. Fair As an alternative method of distribution, an article entitled "Draining Pools and Spas" was published for community viewing in the Sunnyvale Quarterly newsletter. Summer 05 2) During the year Parks and Rec, Golf Division used copper-based products several times to treat land-locked, man-made ponds at Sunnyvale Golf Course for algae blooms. The algae blooms are aesthetically unacceptable due to visual and odor problems. Copper-containing products are used only as directed by the labels and there are no outflows from any of the ponds to any other water sources on or off of City property. Golf Division staff have tried other treatments to try and minimize the use of these products. Other treatments include increased use of pond aerators to increase circulation and the use of gypsum. These alternatives met with some success, but are not effective during hot weather. Golf staff is investigating the use of barley straw as an alternative treatment but have not located a local supplier at this time. Golf staff has also used pond dye whenever possible to decrease the sunlight in the ponds, which has met with some success until hot weather occurs.

Attachment J
FY 2004-2005 Annual Report
Municipality: Sunnyvale

	Copper/Nickel Baseline Activities cont.					
CB-21	Measures to Discourage the Architectural Use of Copper	Permit Prov. C.9.a (CAP)	• The ornamental/architectural use of copper in building designs is discouraged, but not prohibited by Sunnyvale ordinance. • After careful review, those policies or codes that need change in order to comply with provision C.3.j and C.9.a will be adopted into the local project approval process so that they will be implemented by the September 15, 2004 date required in Order 01-119.	• It is the Planning staff's policy to continue to discourage the ornamental and architectural use of copper in new building designs. • Policies or codes that have been identified for potential change, but must go through the City's code amendment process. The City will consider limiting the use of copper on roofs, in roof shingles, and for gutters through code changes	Ongoing Report 09/05and annually thereafter	Jamie McLeod, Assoc. Planner and Kristy McCumby, Env. Spec
NB-1	Measures to Implement Metals Controls Measures: Erosion 1) Implement perf. Stds for Const. Inspect. Erosion 2) Participate in region-wide training and certification of site inspectors	Permit Prov. C.9.b (NAP)	• Continue to implement Construction Inspection Performance Standards • Continue to have Inspectors attend Regional Board/Program workshops on Construction Site Management and erosion controls to learn the latest in erosion and sediment control techniques. • Continue to attend Program-sponsored workshops on post-development storm water control BMPs	• Performance standards continue to be implemented. • Staff continues to participate in training opportunities as provided by SCVURPPP and the Regional Board. As additional training becomes available, staff will be encouraged to attend it, if appropriate. Annual training on City's URMP requirements occurred. • See Construction Inspection (Attachment F) of this report for information about staff inspections and enforcement activities.	Ongoing Report 09/05	Gordon Blancher, Building Insp./ Coord. Hira Raina/ Nasser Fakih

Trash Investigations and Plan Development (cont.)						
	Trash Investigations and Plan Development	Program Task RWQCB Letter	Conduct trash evaluations in a subset of trash problem areas identified within Sunnyvale's jurisdiction	Trash evaluations were conducted in 21 locations in Sunnyvale with the assistance of a city resident volunteer. Staff assisted with 4 in-stream assessments in Stevens Creek, along with the Cities of Mountain View, Cupertino, the SCVWD and representatives from the Stevens Creek Watershed Council. Three new sites were added, based on input from Public Works staff and site visits and were assessed using the KAB method. Two in-stream sites in Sunnyvale East and Sunnyvale West Channels added since they area adjacent to a section of Caribbean Drive, which was included as a problem area last year. Some sites from the problem areas list may be dropped after a third inspection has shown that litter is no longer a problem at the sites. Details on the results of the Evaluations are included in Appendix 1.	Begin July 04 Report 09/05	Kristy McCumby/ Env. Specialist
	Trash Investigations and Plan Development	Program Task RWQCB Letter	Identify and begin implementation of trash control measures, as appropriate to address high priority trash problem areas within Sunnyvale's jurisdiction,	Chronic problem areas are identified in Appendix 1 of this chapter. Staff has taken some actions that were identified and will be doing more in the upcoming year as more targeted outreach opportunities are found.	Begin July 04 Report 09/05	Kristy McCumby/Env. Spec & Solid Waste Division staff (TBD)

P.S. Id.	Activity	CI Item Source	FY 04-05 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
Trash Investigations and Plan Development (cont.)						
	Trash Investigations and Plan Development	Program Task RWQCB Letter	Provide Program staff with trash management practices information from within Sunnyvale's jurisdiction, using a standardized reporting format.	Standard reporting format was used and submitted to the Program. See Appendix 1 of this section for completed reporting templates.	Begin July 04 Report 09/05	Kristy McCumby/ Env. Specialist

2) Response to Regional Board Comments on Trash Inventory and Management Activities section of FY 03-04 Annual Report:

No comments were received from the Regional Board on this section.

3) Response to Regional Board comments for a performance review (when applicable):

No performance review by the Regional Board was done for this activity in FY 04-05.

- *Give brief evaluation comments, such as conclusions about trash sources or pollutant types and whether the activities will continue, change, or be curtailed.*

The information gathered for the trash problem areas investigation completed by Sunnyvale is included in the Program's Trash Inventory and Management Activities Section of the FY 04-05 Annual Report and more detailed assessment activities are included in Appendix 1 to this section. Sunnyvale was fortunate to have a community volunteer assist with the trash investigations, which allowed us to do more assessments this last year than anticipated. Sunnyvale staff will continue assessments of problem areas identified in FY 05-06 as outlined in the work plan. Three new sites were added this year, based on input from Public Works staff. A few sites will likely be removed next year, if no trash is observed in the next round of assessments, since they will not have had trash accumulations in three years of observation.

In addition to the PI/P trash prevention-related outreach activities listed in Attachment G (Table 1) of this report, the City's Solid Waste Division continues with its activities to reduce waste and provide environmentally sound options for waste disposal. See the City's website at http://sunnyvale.ca.gov/Departments/Public+Works/Solid+Waste+and+Recycling/ for a listing of waste disposal options (e.g., extra dump days, household hazardous waste collections/drop-off, and code enforcement).

Santa Clara Valley Urban Runoff Pollution Prevention Program
Attachment K
FY 2004-2005 Annual Work Plan
Municipality: Sunnyvale

Public Works street sweeping frequency in FY 04-05 remains on the reduced schedule due to budgetary constraints (see Attachment D-1 for details on street sweeping frequency). In areas where litter is more common due to high traffic and pedestrian numbers (e.g., City parking lots/Murphy Street) or type of activity (e.g., main access roads to SMaRT Station) the frequency of street cleaning/litter pick up will remain the same (weekly).

As a part of the Trash Assessment actions, the City will continue looking for potential sources and options for targeted outreach or other appropriate actions to help minimize trash problems in these areas in the future. We have initiated some actions as described in Attachment K, Appendix 1.

ATTACHMENT K TABLE 1

Sunnyvale

Calabazas Creek

ID #	Date	Location of Trash Problem Areas	Assessment Tool	Score	Trash Sources	Evaluation Results	Comments
SU02	11/2/2004	Helen Avenue, Alley off of El Camino	KAB	1.5	Illegal dumping- not in a waterway (Occasional overflowing dumpsters and accumulation of trash from apartments)	Very little litter visible but a number of shopping carts from nearby businesses. Continue to monitor and determine if specific actions are needed.	Contacted PW staff and notified them about the shopping carts. PW will contact business owners to get them removed.
SU03	11/2/2004	Tamarack Lane, Various apartments (Between Helen Ave. and Miramar Way)	KAB	1.5	Illegal dumping- not in a waterway (Overflowing dumpsters, accumulation of trash)	Very little litter visible but a number of shopping carts from nearby businesses. Continue to monitor and determine if specific actions are needed.	Contacted PW staff and notified them about the shopping carts. PW will contact business owners to get them removed.
SU04	11/2/2004	1034 E. El Camino Real - Alleyway behind business.	KAB	1.5	Trash accumulation due to overflowing dumpster.	Very little litter visible in parking lot. Dumpster is full but contained in enclosure. Continue to monitor and determine if it should be removed from the list.	No additional actions needed at this time.
SU06	11/2/2004	1053 E. El Camino Real - Alleyway behind business.	KAB	1.75	Trash accumulation due to overflowing dumpster.	Alleyway behind business had very little litter. Continue to monitor and determine if it should be removed from the list.	Dumpster and alleyway are gated to prevent unauthorized dumping. No additional actions are needed at this time.
SU09	11/2/2004	1131 Lawrence Expressway	KAB	1.5	Trash accumulation due to overflowing dumpster.	Very little litter visible. No overflowing dumpsters. Continue to monitor and determine if it should be removed from the list.	Small amount of litter observed. Litter may be from cars parked at strip mall.
SU10	10/28/2004	911 Duane Ave. - Alleyway behind business.	KAB	1.5	Trash accumulation due to overflowing dumpster.	Alleyway behind business had very little litter. Continue to monitor and determine if it should be removed from the list.	Dumpster and alleyway are gated to prevent unauthorized dumping. No additional actions are needed at this time.
SU12	10/26/2004	Lawrence Expressway and Highway 237 intersection - on ramps and exits	KAB	3	Litter from motorists and windborne accumulations of trash against fences. Occasional illegal dumping - not in a waterway.	Area is under Cal Tran's jurisdiction. City is responsible for areas along Caribbean Drive but not on-ramps and exits. Area is periodically picked up by Cal Trans but becomes littered fairly quickly due to heavy traffic.	Consider working with Cal Trans through SCVURPPP to address all highway-related trash hot-spots within the City of Sunnyvale.
SU13	10/26/2004	Willow Ave. and Aster Ave. intersection to Agate Dr. (in Santa Clara) - Area under Lawrence Expressway Overpass and CalTrain Station.	KAB	3	Litter (pedestrians, roadway above, and periodic homeless encampment)	Most of the litter was on the overpass embankment, which is under County jurisdiction. Continue to monitor for homeless encampment activity.	One abandoned "homeless" cart observed. Need to determine litter jurisdictions in area between County and City of Sunnyvale.
SU20	11/22/2004	Wildwood Drive and Lawrence Expressway	KAB	2	Trash accumulation from litter by pedestrians and nearby road way.	City-owned ROW that is currently monitored for trash accumulation by PW staff. Consider adding to hot spot list for future monitoring and clean up activities, as needed.	This site was identified as a "hot spot" after the preliminary identification work was done last year. It should be included in future monitoring activities.

Sunnyvale East

ID #	Date	Location of Trash Problem Areas	Assessment Tool	Score	Trash Sources	Evaluation Results	Comments

SU01	11/1/2004	600 Block, Grand Fir and Bellflower Ave.	KAB	1	Illegal dumping- not in a waterway (Occasional trash dumping from apartment complexes on a cul-de-sac)	No litter visible. No illegal dumping. Consider removing from list.	Continue to monitor site. If no problems present, consider removing from list.
SU05	11/2/2004	594 E. El Camino Real - Alleyway behind business.	KAB	1	Trash accumulation due to overflowing dumpster. Possible illegal dumping, not in a waterway next to the dumpster.	No litter visible in alleyway behind business. No illegal dumping. Consider removing from list.	Continue to monitor site. If no problems present, consider removing from list.
SU07	11/1/2004	1675 Hollenbeck Ave - Alleyway behind business.	KAB	1	Trash accumulation due to overflowing dumpster. Possible illegal dumping, not in a waterway, next to the dumpster.	No litter visible in alleyway behind business. No illegal dumping. Consider removing from list.	Continue to monitor site. If no problems present, consider removing from list.
SU08	11/1/2004	727 Sunnyvale-Saratoga Road - Alleyway behind business.	KAB	3	Trash accumulation due to overflowing dumpster. Possible illegal dumping, not in a waterway next to the dumpster.	Most of the litter comes from the grocery operation in the mall. Dumpsters were not enclosed and some were overflowing.	Continue monitoring the site. Contacted City solid waste staff who will work with Neighborhood Preservation to bring the problems to attention of the business and require clean up of the area.
SU11	11/1/2004	Matilda Ave. and Highway 101 intersection - on ramps and exits.	KAB	2.75	Litter from motorists and wind borne accumulations of trash against fences	Area is under Cal Tran's jurisdiction. City is responsible for areas along Caribbean Drive but not on-ramps and exits. Area is periodically picked up by Cal Trans but becomes littered fairly quickly due to heavy traffic.	Consider working with Cal Trans through SCVURPPP to address all highway-related trash hot-spots in the City of Sunnyvale.
SU14	11/1/2004	Angel Ct. Parking Lot, under Matilda Ave. overpass, near CalTrain Depot.	KAB	1.5	Litter (pedestrians and cars in parking lot - local teenage hangout)	City-owned parking lot and part of ROW near Cal Train ROW are monitored monthly for trash and shopping cart accumulation by PW staff.	Will continue to monitor site. Should consider removing from the list due to PW maintenance activities.
SU15	10/26/2004	Victory Village Park and Fair Oaks Overpass	KAB	2.3	Litter (pedestrians and "casual" labor waiting for work near local hardware store)	Litter from business parking lot entering onto City ROW. Most coming from day laborers who frequent the area while waiting for jobs.	Work with PW Boulevard Landscaping staff to determine best options for the site. Options may include placement of trash cans, posting of signs or increased enforcement actions.
SU16b	10/29/2004	100 feet north of the Caribbean Drive bridge	RWQCB Version 7.0	59	Litter from trucks/vehicles on their way to the SMaRT station on Carl Road, not in a waterway.	Trash may be coming from upstream or adjacent land uses (road used by vehicles transporting trash to the SmaRT Station and Sports playing fields).	Work with Solid Waste staff who manages the contract for SmaRT station operations to ensure roadway litter pick up actions are done according to contract requirements (weekly). Continue monitoring to determine other sources of debris found in channel.
SU17	11/1/2004	California Ave on ramp to Central Expressway	KAB	2	Litter from vehicles, wind borne trash accumulation.	Most debris appears to be windblown from vehicles. Will need to determine the jurisdictional boundaries between Cal Trans, County and City of Sunnyvale.	Continue to monitor site and investigate jurisdictional boundaries for potential future clean up actions.

SU19	11/22/2004	Wolf Road Overpass, access from Evelyn Ave.	KAB	2	Occasional homeless use of area - leaving debris behind. Occasional illegal dumping of debris.	Area under overpass owned by City and monitored monthly by Public Works staff for illegal dumping and homeless encampments. Consider adding to Hot spot list for future monitoring activities and clean up actions, as needed.	This site was identified as a "hot spot" after the preliminary identification work was done last year. It should be included in future monitoring activities.
SU21	11/22/2004	Persian Drive Roadway strip (blocks 190-400)	KAB	2	Trash from vehicles and possibly pedestrians. Occasional illegal dumping.	City-owned ROW that is currently monitored for trash accumulation by PW staff. Consider adding to hot spot list for future monitoring and clean up activities as needed.	This site was identified as a "hot spot" after the preliminary identification work was done last year. It should be included in future monitoring activities.
				Sunnyvale West			
ID #	**Date**	**Location of Trash Problem Areas**	**Assessment Tool**	**Score**	**Trash Sources**	**Evaluation Results**	**Comments**
SU16a	10/28/2004	100 ft north of Sunnyvale West Channel Crossing Caribbean Drive	RWQCB Version 7.0	81	Litter from vehicles and trucks transporting wastes to the SMaRT Station.	Trash may be coming from upstream or adjacent land uses (road used by vehicles transporting trash to the SmaRT Station and Sports playing fields).	Work with Solid Waste staff who manages the contract for SmaRT station operations to ensure roadway litter pick up actions are done according to contract requirements (weekly). Continue monitoring to determine other sources of debris found in channel.
SU16c	10/26/2004	Caribbean Drive between Lawrence Expy and Matilda Ave.	KAB	2	Litter from vehicles and trucks transporting wastes to the SMaRT Station.	Some litter visible. Talked with PW staff managing the SmaRT Station contract and discussed the need for litter pick up in accordance with contract requirements. Weekly litter pick up is supposed to occur.	Continue monitoring site. Work with SmaRT station staff to ensure contractor complies with contract conditions. Continue monitoring the area and provide feedback to Solid waste staff.

ATTACHMENT K TABLE 2

Collaboration

ID #	Date	Location of Trash Problem Areas	Assessment Tool	Score	Trash Sources	Evaluation Results	Comments
Baylands							
CL01	11/15/2004	La Avenida Stevens Creek Trailhead, 100 Ft South of island in creek	RWQCB Version 7.0	46	Most trash accumulation-waterborne with some potential trash coming from pedestrians along nearby trail.	Shoreline Park Rangers patrol the area daily and pick up trash on the trail, but not in the creek. Past clean-ups have occurred at this location. Site will continue to be monitored in cooperation with Stevens and Permanente Creeks Watershed Council volunteers.	Most trash was caught on overhanging willow branches into the west channel of the creek. Very little trash was visible on the east channel side.
Stevens Creek							
CL02	11/15/2004	El Camino Real Bridge crossing, 100 ft north	RWQCB Version 7.0	52	Some trash accumulation is waterborne, other is from debris/ shopping carts being thrown from the El Camino Bridge.	Area downstream of a homeless encampment but only some debris from that source present. Several shopping carts had been pushed from the bridge. Past volunteer cleanups have occurred in this area. The area will continue to be monitored and kept on the clean up list.	Site accessed through gated SCVWD trail, adjacent to the Kelly More Paint store. Area totally fenced off from public. However, kids/graffiti artists still decorate the concrete on the bridge supports.
CL03	11/19/2004	McClellan Ranch, Trailhead access area, 50 ft upstream and 50 ft downstream of the trailhead sign	RWQCB Version 7.0	112	Minor amounts of trash from trail users.	Very small amount of litter along side of trail access area. Site is cleaned at least 2x per year during creek clean up events. Site will continue to be monitored and assessed for trash periodically.	Large blocks of concrete on western bank, used for stabilization purposes many years ago (very overgrown). Historical metal pipes present were used for pumping water from the creek when the site operated as a farm/ranch.
CL04	11/19/2004	Moss Rock, on Stevens Creek Canyon Road, 100 ft downstream of the north end of the rock.	RWQCB Version 7.0	104	Small amounts of trash coming from occasional users of the site for "parties" or as a local youth hang out.	Small quantity of trash present due to area being a local "party" spot. Mostly alcoholic beverage bottles and cans present. Site is monitored and cleaned up at least 2x per year during creek clean up events. Baseline site for RWQCB. Site will continue to be monitored and assessed for trash periodically.	Significant amount of graffiti where moss is not present on the rock. Large 4x4 wood post, embedded metal piece, and red brick left behind.

I. Site Information

1. **Site ID#** SU 01 **Watershed:** Sunnyvale East Channel **Location:** 600 Block, Grand Fir and Bellflower Ave.

II. Assessment Information

1. Which assessment tool was used? (Check one)
   - ☐**Creek**-RWQCB Version 7.0 ☐**Non-Creek**-Windshield Survey
   - ☒**Non-Creek**-KAB Litter Index ☐Other _____
2. **Total Score** (RWQCB Version 7.0 or KAB Litter Index) [1]
3. Windshield Survey Results-Trash Priority: ☒**NA** ☐**High** ☐**Medium** ☐**Low**
4. What percentage or length of the area is impacted with trash (e.g. 5%, five feet, etc.)? 0%
5. This assessment is ☒**Initial** ☐**Follow-up** (Check one)
6. If applicable, how many follow-up assessments have been conducted at this site? _____

III. Trash Information

1. Describe trash type (Check five most prevalent types):
   - ☐Rubber products ☐Metal products ☐Construction debris
   - ☐Plastic bags ☐Cigarette butts ☐Fabric and cloth
   - ☐Styrofoam products ☐Plastic/Synthetic items ☐Toxic substances
   - ☐Aluminum cans ☐Tires ☐Appliances
   - ☐Bottles (plastic and glass) ☐Woody debris ☐Furniture
   - ☐Convenience/Fast Food wrappers ☐Yard waste ☐Biohazards
   - ☐Man-made wood products ☐Batteries ☐Other _____
2. Potential trash source (Check all that apply):
   - ☐Trash accumulation (water-borne) ☐Homeless encampments ☐Outfall _____
   - ☐Trash accumulation (wind-borne) ☐Illegal dumping ☐Other _____
   - ☐Litter-Vehicular ☐Litter-Dumpster/Receptacle (describe) _____
   - ☐Litter-Commercial business (name) _____
   - ☐Litter-School/Institution (name) _____
   - ☐Litter-Other (describe) _____
3. Was trash observed near (Check one): ☐**Storm drain inlets** ☐**Storm drain outfalls** ☐**Creek**☒ **N/A**
4. Identify adjacent land uses to the trash areas assessed (if possible): Residences/ apartment complexes

IV. Trash Management Actions

1a. Are trash management actions planned for the site? **Yes** ☐ **No** ☒
1b. If trash was removed, provide total weight or volume (if known): _____
1c. Photographic documentation: **Yes** ☒ **No**☐
2a. Other Trash Management Actions Taken (describe): _____
3a. Follow-up action needed: **Yes** ☐ **No** ☒
3b. Future trash management actions needed (Please describe): Site should be assessed again, then considered as a candidate for removal from the hot spots list..
3c. Is trash routinely removed from this site? **Yes**☒ **No** ☐ If yes, at what frequency City street sweeping (monthly
3d. Is a future assessment needed? **Yes**☒ **No** ☐

3e. If Yes, which tool? ☐**Creek**-RWQCB Version 7.0 ☐**Non-Creek**-Windshield Survey
☒**Non-Creek**-KAB Litter Index ☐Other _____

Notes: No litter visible at the site this day. Dumping has occurred here in the past, but does not appear to be and issue at present

I. Site Information

1. **Site ID#** SU 06 **Watershed:** Calabazas Creek **Location:** 1053 E. El Camino Real- Alleyway behind business

II. Assessment Information

1. Which assessment tool was used? (Check one)
   - ☐**Creek**-RWQCB Version 7.0
   - ☐**Non-Creek**-Windshield Survey
   - ☒**Non-Creek**-KAB Litter Index
   - ☐Other _____
2. **Total Score** (RWQCB Version 7.0 or KAB Litter Index) 1.75
3. Windshield Survey Results-Trash Priority: ☒**NA** ☐**High** ☐**Medium** ☐**Low**
4. What percentage or length of the area is impacted with trash (e.g. 5%, five feet, etc.)? 30%
5. This assessment is ☒**Initial** ☐**Follow-up** (Check one)
6. If applicable, how many follow-up assessments have been conducted at this site? _____

III. Trash Information

1. Describe trash type (Check five most prevalent types):
   - ☐Rubber products
   - ☐Plastic bags
   - ☐Styrofoam products
   - ☐Aluminum cans
   - ☐Bottles (plastic and glass)
   - ☐Convenience/Fast Food wrappers
   - ☐Man-made wood products
   - ☐Metal products
   - ☐Cigarette butts
   - ☐Plastic/Synthetic items
   - ☐Tires
   - ☐Woody debris
   - ☐Yard waste
   - ☐Batteries
   - ☐Construction debris
   - ☐Fabric and cloth
   - ☐Toxic substances
   - ☐Appliances
   - ☐Furniture
   - ☐Biohazards
   - ☒Other paper
2. Potential trash source (Check all that apply):
   - ☐Trash accumulation (water-borne)
   - ☒Trash accumulation (wind-borne)
   - ☐Litter-Vehicular
   - ☐Homeless encampments
   - ☐Illegal dumping
   - ☐Litter-Dumpster/Receptacle (describe) _____
   - ☐Outfall _____
   - ☐Other _____
   - ☒Litter-Commercial business (name) _____
   - ☐Litter-School/Institution (name) _____
   - ☐Litter-Other (describe) _____
3. Was trash observed near (Check one): ☐**Storm drain inlets** ☐**Storm drain outfalls** ☐**Creek** ☒ **N/A**
4. Identify adjacent land uses to the trash areas assessed (if possible): Small businesses in a strip mall.

IV. Trash Management Actions

1a. Are trash management actions planned for the site? **Yes** ☐ **No** ☒
1b. If trash was removed, provide total weight or volume (if known): _____
1c. Photographic documentation: **Yes** ☒ **No**☐
2a. Other Trash Management Actions Taken (describe): None at this time.
3a. Follow-up action needed: **Yes**☐ **No**☒
3b. Future trash management actions needed (Please describe): Site should be monitored in the future to see if it sti should remain on the hot spot list. Very little litter debris was observed on on this visit
3c. Is trash routinely removed from this site? **Yes** ☒ **No** ☐ If yes, at what frequency unknown
3d. Is a future assessment needed? **Yes** ☒ **No** ☐

3e. If Yes, which tool? ☐**Creek**-RWQCB Version 7.0 ☐**Non-Creek**-Windshield Survey ☒**Non-Creek**-KAB Litter Index ☐Other _____

Notes: Dumpster in alleyway is gated, so no outside dumping can occur. Minimal amount of litter/ trash is visible.

II. Assessment Information

1. Which assessment tool was used? (Check one)
   ☐**Creek**-RWQCB Version 7.0 ☐**Non-Creek**-Windshield Survey
   ☒**Non-Creek**-KAB Litter Index ☐Other _____
2. **Total Score** (RWQCB Version 7.0 or KAB Litter Index) 1
3. Windshield Survey Results-Trash Priority: ☒**NA** ☐**High** ☐**Medium** ☐**Low**
4. What percentage or length of the area is impacted with trash (e.g. 5%, five feet, etc.)? 0%
5. This assessment is ☒**Initial** ☐**Follow-up** (Check one)
6. If applicable, how many follow-up assessments have been conducted at this site? _____

III. Trash Information

1. Describe trash type (Check five most prevalent types):

☐Rubber products	☐Metal products	☐Construction debris
☐Plastic bags	☐Cigarette butts	☐Fabric and cloth
☐Styrofoam products	☐Plastic/Synthetic items	☐Toxic substances
☐Aluminum cans	☐Tires	☐Appliances
☐Bottles (plastic and glass)	☐Woody debris	☐Furniture
☐Convenience/Fast Food wrappers	☐Yard waste	☐Biohazards
☐Man-made wood products	☐Batteries	☒Other paper

2. Potential trash source (Check all that apply):
   ☐Trash accumulation (water-borne) ☐Homeless encampments ☐Outfall _____
   ☒Trash accumulation (wind-borne) ☐Illegal dumping ☐Other _____
   ☐Litter-Vehicular ☐Litter-Dumpster/Receptacle (describe) _____
   ☐Litter-Commercial business (name) _____
   ☐Litter-School/Institution (name) _____
   ☐Litter-Other (describe) _____
3. Was trash observed near (Check one): ☐**Storm drain inlets** ☐**Storm drain outfalls** ☐**Creek** ☒**N/A**
4. Identify adjacent land uses to the trash areas assessed (if possible): Grocery and Drugstore complex with parking lots.

IV. Trash Management Actions

1a. Are trash management actions planned for the site? **Yes** ☐ **No** ☒
1b. If trash was removed, provide total weight or volume (if known): _____
1c. Photographic documentation: **Yes** ☒ **No**☐
2a. Other Trash Management Actions Taken (describe): _____
3a. Follow-up action needed: **Yes** ☐ **No** ☒
3b. Future trash management actions needed (Please describe): Monitor site again, but consider removing from Hot spot list since there does not appear to be an accumulation of debris or litter here.
3c. Is trash routinely removed from this site? **Yes** ☒ **No** ☐ If yes, at what frequency unknown
3d. Is a future assessment needed? **Yes** ☒ **No** ☐
3e. If Yes, which tool? ☐**Creek**-RWQCB Version 7.0 ☐**Non-Creek**-Windshield Survey
☒**Non-Creek**-KAB Litter Index ☐Other _____

Notes: Very few pieces of litter visible. Looks like it may have been recently cleaned. Few loose shopping carts present but belong to the businesses in the complex.

☐Man-made wood products	☐Batteries	☒Other cardboards, paper

2. Potential trash source (Check all that apply):
   - ☐Trash accumulation (water-borne)
   - ☐Homeless encampments
   - ☐Outfall _____
   - ☒Trash accumulation (wind-borne)
   - ☐Illegal dumping
   - ☐Other _____
   - ☐Litter-Vehicular
   - ☒Litter-Dumpster/Receptacle (describe) over flowing dumpsters
   - ☒Litter-Commercial business (name) Multiple businesses in the strip mall
   - ☐Litter-School/Institution (name) _____
   - ☐Litter-Other (describe) _____
3. Was trash observed near (Check one): ☐**Storm drain inlets** ☐**Storm drain outfalls** ☐**Creek** ☒ **N/A**
4. Identify adjacent land uses to the trash areas assessed (if possible): _____

IV. Trash Management Actions

1a. Are trash management actions planned for the site? **Yes** ☐ **No** ☒
1b. If trash was removed, provide total weight or volume (if known): _____
1c. Photographic documentation: **Yes** ☒ **No** ☐

2a. Other Trash Management Actions Taken (describe): Contacted City Solid Waste staff who will work with Neighborhood Preservation to bring problems to the attention of the business and require clean up of the area.
3a. Follow-up action needed: **Yes** ☒ **No** ☐
3b. Future trash management actions needed (Please describe): Continued monitoring of the site should occur.

3c. Is trash routinely removed from this site? **Yes** ☐ **No** ☐ If yes, at what frequency _____
3d. Is a future assessment needed? **Yes** ☒ **No** ☐

3e. If Yes, which tool? ☐**Creek**-RWQCB Version 7.0 ☐**Non-Creek**-Windshield Survey ☒**Non-Creek**-KAB Litter Index ☐Other _____

Notes: Most of the debris in the alley appeared to come from the grocery operation in the mall. However other businesses had overflowing dumpsters. Numerous wood pallets, shopping carts, display racks, and other light plastic wrap, paper, cardboard, and packing material was observed outside the dumpster or any enclosed area.

☒Trash accumulation (wind-borne)	☐Illegal dumping	☐Other _____
☒Litter-Vehicular	☐Litter-Dumpster/Receptacle (describe) _____	

   ☐Litter-Commercial business (name) _____
   ☐Litter-School/Institution (name) _____
   ☒Litter-Other (describe) _____
3. Was trash observed near (Check one): ☐**Storm drain inlets** ☐**Storm drain outfalls** ☐**Creek** ☒**N/A**
4. Identify adjacent land uses to the trash areas assessed (if possible): Cal Train ROW, City-owned parking lot and Businesses

IV. Trash Management Actions

1a. Are trash management actions planned for the site? **Yes** ☐ **No** ☒
1b. If trash was removed, provide total weight or volume (if known): _____
1c. Photographic documentation: **Yes** ☒ **No**☐
2a. Other Trash Management Actions Taken (describe): _____
3a. Follow-up action needed: **Yes** ☐ **No** ☒
3b. Future trash management actions needed (Please describe) Will continue to monitor as litter seems to appear periodically. May be a candidate for removal from the hot spot list if litter continues to be there in low amounts.
3c. Is trash routinely removed from this site? **Yes** ☒ **No** ☐ If yes, at what frequency Monthly, by City crews
3d. Is a future assessment needed? **Yes** ☒ **No** ☐
3e. If Yes, which tool? ☐**Creek**-RWQCB Version 7.0 ☐**Non-Creek**-Windshield Survey
☒**Non-Creek**-KAB Litter Index ☐Other _____

Notes: City owned parking lo under Matilda Ave and strip of land adjacent to Cal Train ROW on Hendy Street. Area is monitored by City PW department and cleaned up as needed or on a monthly basis. Occasional shopping carts appear in the area as well.

I. Site Information

1. **Site ID# SU 15 Watershed:** Sunnyvale East Channel **Location:** Victory Village Park and Fair Oaks overpass

II. Assessment Information

1. Which assessment tool was used? (Check one)
   ☐**Creek**-RWQCB Version 7.0 ☐**Non-Creek**-Windshield Survey
   ☒**Non-Creek**-KAB Litter Index ☐Other _____
2. **Total Score** (RWQCB Version 7.0 or KAB Litter Index) 2.3
3. Windshield Survey Results-Trash Priority: ☒**NA** ☐**High** ☐**Medium** ☐**Low**
4. What percentage or length of the area is impacted with trash (e.g. 5%, five feet, etc.)? 30%
5. This assessment is ☒**Initial** ☐**Follow-up** (Check one)
6. If applicable, how many follow-up assessments have been conducted at this site? _____

III. Trash Information

1. Describe trash type (Check five most prevalent types):

☐Rubber products	☒Metal products	☐Construction debris
☐Plastic bags	☐Cigarette butts	☐Fabric and cloth
☐Styrofoam products	☐Plastic/Synthetic items	☐Toxic substances
☒Aluminum cans	☐Tires	☐Appliances
☒Bottles (plastic and glass)	☐Woody debris	☐Furniture
☐Convenience/Fast Food wrappers	☐Yard waste	☐Biohazards
☐Man-made wood products	☐Batteries	☒Other paper cups, paper

2. Potential trash source (Check all that apply):
   ☐Trash accumulation (water-borne) ☐Homeless encampments ☐Outfall _____
   ☐Trash accumulation (wind-borne) ☐Illegal dumping ☐Other
   ☐Litter-Vehicular ☐Litter-Dumpster/Receptacle (describe) _____
   ☐Litter-Commercial business (name) _____
   ☐Litter-School/Institution (name) _____
   ☒Litter-Other (describe) Most litter from day laborers waiting at the site for a job.
3. Was trash observed near (Check one): ☐**Storm drain inlets** ☐**Storm drain outfalls** ☐**Creek N/A**
4. Identify adjacent land uses to the trash areas assessed (if possible): Right of way next to Home Depot parking lot – an area where day-laborors congregate while waiting for jobs.

IV. Trash Management Actions

1a. Are trash management actions planned for the site? **Yes** ☐ **No** ☒
1b. If trash was removed, provide total weight or volume (if known): _____
1c. Photographic documentation: **Yes** ☒ **No** ☒
2a. Other Trash Management Actions Taken (describe): _____
3a. Follow-up action needed: **Yes** ☐ **No** ☒
3b. Future trash management actions needed (Please describe): Maybe put a 'trash can' for the day workers to use and post a "no littering" sign. Work with Home Depot and City Public Works staff to reduce the problem.
3c. Is trash routinely removed from this site? **Yes** ☒ **No** ☐ If yes, at what frequency PW Streets and Boulevards maintenance staff routinely pick up debris at the site (quarterly) or as requested.
3d. Is a future assessment needed? **Yes** ☒ **No** ☐
3e. If Yes, which tool? ☐**Creek**-RWQCB Version 7.0 ☐**Non-Creek**-Windshield Survey
☒**Non-Creek**-KAB Litter Index ☐Other _____

Notes: Actions to control litter will need to be done in cooperation with the business and city PW staff.

5. This assessment is ☒**Initial** ☐**Follow-up** (Check one)
6. If applicable, how many follow-up assessments have been conducted at this site? _____

III. Trash Information

1. Describe trash type (Check five most prevalent types):

☐Rubber products	☐Metal products	☐Construction debris
☒Plastic bags	☐Cigarette butts	☐Fabric and cloth
☐Styrofoam products	☒Plastic/Synthetic items	☐Toxic substances
☐Aluminum cans	☐Tires	☐Appliances
☒Bottles (plastic and glass)	☐Woody debris	☐Furniture
☒Convenience/Fast Food wrappers	☐Yard waste	☐Biohazards
☐Man-made wood products	☐Batteries	☒Other paper

2. Potential trash source (Check all that apply):
   ☐Trash accumulation (water-borne) ☐Homeless encampments ☐Outfall _____
   ☒Trash accumulation (wind-borne) ☐Illegal dumping ☐Other _____
   ☐Litter-Vehicular ☐Litter-Dumpster/Receptacle (describe) _____
   ☐Litter-Commercial business (name) _____
   ☐Litter-School/Institution (name) _____
   ☒Litter-Other (describe) Park/walking trail – litter dropped in place from use
3. Was trash observed near (Check one): ☐**Storm drain inlets** ☐**Storm drain outfalls** ☒**Creek**☐ **N/A**
4. Identify adjacent land uses to the trash areas assessed (if possible): _____

IV. Trash Management Actions

1a. Are trash management actions planned for the site? **Yes** ☐ **No** ☒
1b. If trash was removed, provide total weight or volume (if known): Less than a quart volume and less than ½ lb
1c. Photographic documentation: **Yes** ☒ **No**☐
2a. Other Trash Management Actions Taken (describe): _____
3a. Follow-up action needed: **Yes** ☐ **No** ☒
3b. Future trash management actions needed (Please describe): Continued monitoring of area is suggested
3c. Is trash routinely removed from this site? **Yes** ☒ **No** ☐ If yes, at what frequency Spring and Fall creek clean ups
3d. Is a future assessment needed? **Yes** ☒ **No** ☐
3e. If Yes, which tool? ☒**Creek**-RWQCB Version7.0 ☐**Non-Creek**-Windshield Survey
☐**Non-Creek**-KAB Litter Index ☐Other _____

Notes: Large Blocks of concrete on west bank for Bank Stabilization. Large Metal Pipe(historical artifact)

II. Assessment Information

1. Which assessment tool was used? (Check one)
   ☒**Creek**-RWQCB Version 7.0 ☐**Non-Creek**-Windshield Survey
   ☐**Non-Creek**-KAB Litter Index ☐Other _____
2. **Total Score** (RWQCB Version 7.0 or KAB Litter Index) 52
3. Windshield Survey Results-Trash Priority: ☒**NA** ☐**High** ☐**Medium** ☐**Low**
4. What percentage or length of the area is impacted with trash (e.g. 5%, five feet, etc.)? About 25%
5. This assessment is ☒ **Initial** ☐**Follow-up** (Check one)
6. If applicable, how many follow-up assessments have been conducted at this site? _____

III. Trash Information

1. Describe trash type (Check five most prevalent types):

☐Rubber products	☐Metal products	☐Construction debris
☒Plastic bags	☐Cigarette butts	☒Fabric and cloth
☐Styrofoam products	☒Plastic/Synthetic items	☐Toxic substances
☐Aluminum cans	☐Tires	☐Appliances
☐Bottles (plastic and glass)	☐Woody debris	☐Furniture
☐Convenience/Fast Food wrappers	☐Yard waste	☐Biohazards ☒Metal pieces
☐Man-made wood products	☐Batteries	☒Other glass pieces

2. Potential trash source (Check all that apply):
   ☒Trash accumulation (water-borne) ☒Homeless encampments -upstream ☐Outfall _____
   ☒Trash accumulation (wind-borne) ☐Illegal dumping ☐Other _____
   ☒Litter-Vehicular ☐Litter-Dumpster/Receptacle (describe) _____
   ☐Litter-Commercial business (name) _____
   ☐Litter-School/Institution (name) _____
   ☐Litter-Other (describe) _____
3. Was trash observed near (Check one): ☐**Storm drain inlets** ☐**Storm drain outfalls** ☒**Creek**
4. Identify adjacent land uses to the trash areas assessed (if possible): Gated access through SCVWD property- El Camino Real highway to north, Kelly Moore Paint Store and Kragen Auto Parts to the west. No development on east bank, very steep.

IV. Trash Management Actions

1a. Are trash management actions planned for the site? **Yes** ☐ **No** ☐
1b. If trash was removed, provide total weight or volume (if known): Approx. 200 lbs with shopping cart and manhole cover, otherwise it was about 20-25 lbs and took up 2-3 cubic feet of space.
1c. Photographic documentation: **Yes** ☒ **No** ☐
2a. Other Trash Management Actions Taken (describe): Removed all debris except for embedded metal
3a. Follow-up action needed: **Yes** ☒ **No** ☐ Notify SCVWD to pickup shopping carts and heavy metal
3b. Future trash management actions needed (Please describe): Past volunteer creek cleanups have been conducted at this site by a local volunteer group. The site will be considered for future cleanup events.
3c. Is trash routinely removed from this site? **Yes** ☐ **No** ☐ If yes, at what frequency _____
3d. Is a future assessment needed? **Yes** ☒ **No** ☐
3e. If Yes, which tool? ☒**Creek**-RWQCB Version 7.0 ☐**Non-Creek**-Windshield Survey
☐**Non-Creek**-KAB Litter Index ☐Other _____

Notes: Graffiti was observed on concrete walls under the bridge. It appeared that shopping carts were thrown over the guard railing of the El Camino Crossing. No obvious homeless encampments in the area, but some are located upstream.

Attachment L

Water Quality Monitoring

Santa Clara Valley Urban Runoff Pollution Prevention Program
Attachment L
FY 2004-2005 Annual Report
Municipality: Sunnyvale

1) Self Evaluation Matrix

No Water Quality Monitoring Activities were identified in the FY 04-05 Work Plan for the City of Sunnyvale to undertake on its own. All activities supported those found in the Program's Water Quality Monitoring Section of the Annual Report.

- City staff assisted the Program in collection of water samples from Calabazas Creek subsequent to storm events in FY 04-05.

2) Response to Regional Board Comments on monitoring for Sunnyvale in the FY 03-04 Annual Report:

No comments were received from the Regional Board on this section of the report and there was not a separate section for the City, apart from what was submitted by the Program.

STAFF TRAINING BY DEPARTMENT/DIVISION FOR FY 04-05

1) Staff Training Table

TRAINING DATE	SUBJECT	APPROXIMATE NUMBER OF STAFF ATTENDING
PW - Street Maintenance		
7/20/2004	URMP additions- Rural Roads Perf. Std, BMPs, SOPs	24
9/14/2004	Stormwater Pollution Prevention and Watershed Protection required in the URMP (Enviroscape)	24
10/12/2004	Daily logs, records, SOP, BMP for street sweeping	23
3/29/ 2005	URMP, washrack refresher	27
4/11/2005	Non-Point Source, Hazardous Wastes, Corp Yard SWPPP and storm drains, Roads Operation and Maintenance	30
6/212005	URMP- Performance Standards, BMPs and SOPs, including IC/ID reporting and City's IPM policy	38
PW - Corp Yard & Public Works Field Services: Water, Sewer, and Stormwater		
9/15/2004	Stormwater Pollution Prevention and Watershed Protection required in the URMP (Enviroscape)	34
3/30/2005[1]	URMP, washrack refresher	17
4/11/2005	Non-Point Source, Hazardous Wastes, URMP and storm drains, Roads Operation and Maintenance	20
6/22/2005	URMP- Performance Standards, BMPs and SOPs, including IC/ID reporting and City's IPM policy	20
Public Works - Street Trees and Boulevard Landscaping		
6/17/2004	Pesticide training topics included: Safe Handling & Use, Review city IPM Policy (1 hour), Storage, Worker Protection (5 hours)	13
7/28/2004	PAPA Pesticide Appl. Seminar (8.5 hours) IPM Training (Using Botanicals in an IPM program 1 hour)	3
10/16/2005	Stormwater Pollution Prevention and Watershed Protection required in the URMP (Enviroscape)	18
11/25/2004	Cleaning spray rig and wash rack review (1 hour)	16
1/28/2005	NCTLC Mtg. Santa Clara pesticide training (6.5 hours) IPM (1 hour) New technology for Organic Hot foam weed control (1 hour) Bay Friendly Landscaping	5
1/29/2005	NCTLC Mtg. Santa Clara pesticide training (3 hours) IPM (1 hour) Keeping Trees Beautiful and Pest and Disease Free	5
2/17/2005	Pesticide training topics included: Safe Handling & Use, Review city IPM Policy (1 hour), Storage, Worker Protection (5 hours)	18
3/29/2005	Wash Rack Refresher (1hour)	40
4/14/2005	Non Point Source/MSDS (1hour)	40

[1] As of March 28, 2005 Streets, Sewer, and Storm Water staff had their training together.

2) Response to Regional Board Comments on previous year's annual report:
None received.

3) Summarization of staff feedback, planned changes, and any other evaluation comments:
Staff feedback is not collected by the City from training presented by SCVURPPP or other agencies. SCVURPPP reports general feedback in the Program's section of the annual report.

Feedback is not formally collected from in-house training that occurs at Department meetings for City staff. The evaluation of the effectiveness of in-house staff training is determined by the Environmental Division of the Public Works Department, which has oversight for the development of the annual work plan and annual report preparation for the City's NPDES Stormwater Discharge Permit. If no problems are noted during the

preparation of these documents, then that is an indication that staff has been trained and knows their responsibilities under the permit and URMP requirements. If problem areas are identified, then additional staff training is provided to those specific groups who need it.

The City will continue to take advantage of training opportunities provided by the Program and other agencies, as they become available. Additional training on the implementation of the C.3 provisions and the Hydromodification Management Plan implementation as it pertains to Sunnyvale locations will be provided. More post-construction BMP inspection training is also anticipated.

City of Sunnyvale

FY 04- 05 Annual Report

Attachment N

Watershed Management Activities

Santa Clara Valley Urban Runoff Pollution Prevention Program
Attachment N
FY 2004-2005 Annual Report
Municipality: Sunnyvale

1) Self Evaluation Matrix

P.S. Id.	Activity	CI Item Source	FY 04-05 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
Watershed Management						
	Watershed Management-Watershed Assessment	Permit Prov. C.10	City staff will continue to work through the Santa Clara Basin Watershed Management Initiative (SCBWMI) to develop a priority listing of watersheds to be assessed and a schedule for conducting assessments.	•City Environmental Division Manager continued as a SCBWMI co-chair and other staff continued as chairperson of the Watershed Assessment and Monitoring Sub Group in FY 04-05. •Staff also participated in Sub Groups such as the Wetlands Advisory Group, Watershed Stewardship Advisory Group, Land Use Sub Group, Communications and Outreach Sub Group and the Indicators Work Group. •The WMI has not initiated new watershed assessments itself, but has worked through other assessment efforts on behalf of SCVURPPP and the SCVWD, through their Watershed Stewardship program. • City staff also participated in the Watershed Protection "Collaborative" sponsored by the Santa Clara Valley Water District.	Ongoing Report 09/05	Lorrie Gervin, Environmental Division Manager

2) Response to Regional Board Comments on Watershed Management Assessment section of FY 03-04 Annual Report:

No comments were received on this section of the FY 03-04 Annual Report.

City of Sunnyvale

FY 04- 05 Annual Report

Attachment O

PCB Plan Development Activities

Santa Clara Valley Urban Runoff Pollution Prevention Program
Attachment O
FY 2004-2005 Annual Report
Municipality: Sunnyvale

1) Self Evaluation Matrix

P.S. Id.	Activity	CI Item Source	FY 04-05 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
	PCB Plan Development					
	PCB Plan Development	Permit Prov. C.9.e	City staff will continue to work with Program Staff through the Monitoring Ad hoc committee as Program PCB plan is implemented and monitoring results are available for review.	Staff continues to participate in the Monitoring Ad hoc committee. No new information related to areas within Sunnyvale's jurisdiction was reported this past FY.	Ongoing Report 09/05	Kristy McCumby, Env. Specialist
	PCB Monitoring Plan Actions	Permit Prov. C.9.e	City staff to review any new data results from PCB monitoring studies completed by SCVURPPP. If study results indicate a need for case study development for sites within Sunnyvale, the City will initiate case studies, as needed.	No sites have been identified within Sunnyvale that warrant case study development thus far.	If case study sites are identified Report 09/05	Lorrie Gervin, Environmental Division Manager
	PCB -TMDL Development for SF Bay		Review and provide comments on Bay - PCB TMDL-related documents, as they become available from the Regional Board.	Sunnyvale provided comments on the January 2004 RWQCB Project Report. Sunnyvale staff reviewed the March 2004 SCVURPPP- PCB report... No additional documents have been available for review and comment this past FY. The City continues efforts to reduce sediment (and the subsequent discharge of other particle-bound pollutants of concern like PCBs) from entering the storm drain system. This is done by requiring SWPPPs and through inspection of construction projects by city inspectors.	TBD Report 09/05	Kristy McCumby, Env. Specialist & Lorrie Gervin, Environmental Division Manager

Mr. Bruce H. Wolfe
Executive Officer
Regional Water Quality Control Board
San Francisco Bay Region
1515 Clay St., Suite 1400
Oakland, CA 94612

Subject: COUNTY OF SANTA CLARA CLEAN WATER PROGRAM: FY 05 ANNUAL REPORT

Dear Mr. Wolfe:

This report is submitted by the County of Santa Clara, in conjunction with the Santa Clara Valley Urban Runoff Pollution Prevention Program's Annual Report, pursuant to provision C.6.(a). of its reissued municipal storm water discharge National Pollutant Discharge Elimination System Permit (Orders No. 01-024, and 01-119).

This report summarizes activities performed during FY 05, in accordance with the County's Urban Runoff Management Plan (URMP), which was submitted to the Regional Board in September 1997 and updated subsequently, the performance standards contained therein, and the 2001 NPDES Storm Water Discharge Permit.

Goals and Contents of the Report

The goals of this Annual Report are to: 1) document implementation of the URMP and the FY 05 work plan during the past fiscal year; 2) evaluate program results for continuous improvement; 3) comply with NPDES Storm Water Discharge Permit requirements; and 4) share this information with other Co-permittees, jurisdiction decision-makers, and the public. A table of contents is included with the report.

Program Highlights

1). The County's Clean Water Program continues to be funded directly from the County General Fund. As was stated in previous annual reports, the storm water fee that supported Clean Water Program activities was eliminated by the effects of Proposition 218, in 1997. The County Clean Water program is staffed by one Senior Management Analyst. Departmental staff members coordinate compliance activities within each involved department.

2). The involved departments include Capital Programs (now a part of the Fleet and Facilities Department under the County Executive), the Department of Roads and

Board of Supervisors: Donald F. Gage, Blanca Alvarado, Pete McHugh, James T. Beall, Jr., Liz Kniss
County Executive: Peter Kutras, Jr.

Airports, the Department of Parks and Recreation, the Department of Planning and Development (Planning Office, Development Services Office, Surveying), the Department of Environmental Health (Consumer Protection, Hazardous Materials, Solid Waste, Household Hazardous Waste, Vector Control), Agriculture and Resource Management (Integrated Waste Management /Pollution Prevention/Graffiti and Litter Abatement/Green Business Program), and the County Executive's Office (Special Construction Projects, Integrated Pest Management).

3). The County continues to move forward with implementation of the 2001 NPDES Permit. Some C3. eligible private projects have been proposed. Some C3. eligible public projects have been constructed.

4). County staff members from the various involved departments have been active this fiscal year in attending informational presentations regarding implementing the requirements of the NPDES Permit and preventing storm water pollution.

Continuous Improvement Activities

1) The County Planning Office continues to participate in the Water Collaborative, regarding an area wide approach to Land Use Regulations near streams.

2) The Department of Environmental Health continues to provide enhanced reporting for IC/ID and IND/COMM activities in the unincorporated area.

3) Involved County departments continue to take direct responsibility for implementation and reporting of NPDES Permit requirements to the Clean Water Program Coordinator.

4). Attendance at training events has been very good for the involved departments.

5). The name of the County's program has been changed from the "Nonpoint Source Pollution Control Program" to the "Clean Water Program", for improved identification by the public.

Thank you in advance for your review of this Annual Report. If you or your staff members have any questions regarding the materials submitted, please contact me at (408) 299-5737.

Sincerely,

Steve Homan

DEPARTMENT OF ENVIRONMENTAL HEALTH (DEH) (IC/ID)

- **Solid Waste Local Enforcement Agency (SW-LEA)**

The Solid Waste Program approaches the goals of storm water pollution prevention to the maximum extent practicable very pragmatically. Every complaint received and investigated is approached considering what is is needed to remove the threat of pollution. This often leads to a referral to another agency having jurisdiction over the cause of the polluting responsibble party

In many cases, the solid waste program confirms the threat and issues an order to abate the violation. Usually the threat of legal action leads to abatement of the violation, but occasionally cases are referred to the District Attorney's Environmental Crimes Unit for legal action.

The complaint investigations are widely varied in scope, but are nonetheless related to preventing pollution of the environment and are backed by the County Ordinances relating to yard waste, refuse accumulations, illegal dumping, refuse collection vehicles, and the septage or grease pumper vehicles.

Abatement of facilities that are routinely inspected, include vehicle storage yards and solid waste facilities, operations such as landfills, transfer stations, composting facilities, and closed landfills. These facilities are under the jurisdiction of state laws and the state-designated local enforcement program.

This section inspects all large facilities that generate medical or bio-hazardous wastes and ensure that their waste stream handling does not result in bio-hazardous waste contamination of the storm water systems near such facilities. It is stressed at SW-LEA staff meetings and in training that one of the principal goals of our inspections is to identify and investigate any and all critical control points of the programs promoting clean water. The SW-LEA program is effective in reducing or eliminating storm water pollution because it keeps illegally dumped materials out of the storm water system and therefore out of watersheds.

Training: In addition to the Industrial/Commercial SCVURPPP Inspector Workshop earlier this year, the solid waste staff participated in training on May 11, 12 & 13, 2005. Solid waste staff attended a CIWMB/LEA conference promoting coordination between various state oversight boards, such as air, water and solid waste. The topics centered around solid waste facilities and how the public and the environment can be better protected from the impacts of these facilities and the improper or illegal disposal of solid waste. There were presentations relating to illegal dumping abatement as well as coordinating efforts with the RWQCBs, since local inspectors are their eyes and ears out in the field. The solid waste staff gained valuable information from several topics

covered relating to storm water pollution prevention.

Attendees from DEH included Chris Rummel and Stan Chau, Senior Environmental Health Specialists, Solid Waste Program; Danielle Lin, Environmental Health Specialist, Solid Waste Program; Nicole Pullman, Program Manager for Solid Waste, LOP and CUPA Programs; and Ben Gale, Director of Department of Environmental Health.

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 05 Annual Report

Attachment C - Industrial/Commercial Discharger Control Program (IND/COMM)

County of Santa Clara
Clean Water Program
DEVELOPMENT SERVICES OFFICE
DEPT. OF PLANNING AND DEVELOPMENT
70 West Hedding St., 7th Floor East Wing
San Jose, CA 95110

DEPARTMENT OF ENVIRONMENTAL HEALTH (DEH) (IND/COM)

- **Consumer Protection Division (CPD) (Commercial Inspection Activities)**

As part of the Department of Environmental Health's ongoing commitment to participate in storm water pollution prevention activities, CPD Environmental Health Specialist inspection staff continues to look for relevant violations within the unincorporated area, as part of the food facility inspection and complaint investigation programs.

In addition to staff conducting routine food facility inspections and complaint investigations, activities also include interviewing business owners and managers regarding the proper disposal of waste and the utilization of approved cleaning practices. Any water pollution violations found are noted, referred as required, and always followed up on. Enforcement action is initiated as needed for non-compliance.

Food facility owners and mangers are given a SCVURPPP BMP packet at time of ownership change or upon the opening of a new food facility. The packet includes a letter outlining the Program, a checklist of best cleaning practices, and a BMP poster to hang up for easy employee reference.

Training: CPD inspection staff members who work in the unincorporated area participate in training every other year with the West Valley Cities' Clean Water Program (CWP) Coordinator, the CWP Coordinator for the City of Cupertino, and the County CWP Coordinator. On alternate years, the staff training occurs at a meeting with the CPD Supervisors.

DEH continues to track food facility inspections and complaints using a database. The data is transmitted quarterly to SCVURPPP and annually to the County Clean Water Program Coordinator. This program is considered very effective since (1) the number of inspections far exceeds the inspection frequency targeted in the County's Urban Runoff Management Plan, (2) very few violations have been found, and (3) new businesses receive educational information regarding storm water pollution prevention.

- **Hazardous Materials Control Division (HMCD) (Industrial Inspection Activities)**

Program Evaluation: In general, the industrial sector seems to be well informed about storm drain pollution issues. The primary storm drain issue seems to relate to accidental releases, but businesses are typically prepared to respond to spills. It appears that more and more people are becoming aware that only discharges of storm water are allowed into the storm drain systems. Inspections, program handouts and other related information have appeared to greatly increase the knowledge and requirements of the program in the industrial sector.

The Hazardous Materials Unit is constantly looking for opportunities to become more consistent and develop better methods to improve inspection effectiveness. Training this past year went a long way in establishing the importance of this program. Ongoing training that provides detailed program issues and methods of resolution would greatly assist the field inspectors. The changes to our inspection form, checklists and existing database have made data collection easier and improved inspection documentation. Use of the SCVURPPP database has made data reporting and transfer much easier. All complaints and inspections (hazardous materials and solid waste) in the unincorporated areas are documented in this database. The programis effective in preventing storm drain pollution, since it prevents hazardous materials from entering the storm water system and therefore out of watersheds.

Training:
The training that the Hazardous Materials Specialists received during FY 05 directly related to the protection of surface water or storm water quality was the Commercial / Industrial Inspector SCVURPPP workshop.

Hazardous Materials Specialists (HMS's) received on-going training in a variety of hazardous materials program areas that indirectly are related to the Clean Water Program. The first Tuesday of every month the Santa Clara County Fire Chief's Hazardous Materials Subcommittee provides a training forum for inspectors from different programs and geographic areas. This past year this Subcommittee has provided training in the following areas:

Inspection Report Writing:	Presented by the State Department of Toxics Substances Control
Enforcement:	Legal aspects of digital photography, presented by the District Attorneys Office
	Citation process, presented by the District Attorneys Office
Industry Specific Training:	Auto Body Refinishing
	Mobile Spray Operations
	LP Gas Systems
	UST Monitoring systems
	UST Installation Requirements and Issues (Plan Checking)
Inspector Roundtable:	Variety of issues related to use, storage, and disposal of hazardous materials

In addition, the HMS's attended an annual week-long training conference on a variety of related programs. The Unified Program Training Conference serves several vital purposes, all of which promote regulatory compliance, assist regulated communities, and enhance the professionalism of the regulators and businesses. The conference offers a four-day training program with over 60 technical sessions presented by 150 experts, providing the latest information polices, programs, and practices affecting the local hazardous materials programs. Training is provided in different tracks ranging from enforcement to technical programs (underground tank, hazardous material business plan, Cal ARP, universal waste, hazardous waste, etc.).

Staff also participated in roundtable discussions where state, federal and local regulators scrutinize current practices and propose improvement on how the laws and regulations can be implemented. Because of the wide range of program responsibilities, HMS staff receives a significant amount of training in areas that overlap with programs like the Clean Water Program.

Memorandum

August 2, 2005

To: Stormwater/Urban Runoff P2 Staff

From: Rob D'Arcy, Hazardous Materials Program Manager

Re: FY 05 HHW Program Update

Participation
The HHW Program served 24,927 residents from July 1, 2004 through June 30, 2005, representing a 6% increase in participation from the previous year. In addition, over 2 million pounds of hazardous waste was managed safely and legally. There were 64 collection events for residents at three permanent facilities and six temporary events strategically located throughout the County. In addition, the Program served almost 400 small businesses.

Paint
Latex paint accounted for 652,000 pounds and other paint related materials (including oil paint) accounted for approximately 384,000 pounds. Together, paint represents 50% of the hazardous waste collected.

Pesticides
Although the grant award to conduct public education about Dursban and diazinon has ended, we continued to manage 4200 pounds of these two pesticides. Over 213,000 pounds of poisons were managed.

Batteries
The HHW Program recycled almost 25,000 pounds of household batteries

UNIVERSAL WASTE
MERCURY GRANT OVERVIEW

The County of Santa Clara Department of Environmental Health Household Hazardous Waste Program provides residents with opportunities to recycle mercury-containing products (fluorescent lights, batteries, thermostats and thermometers) at retail locations, community centers and special outreach events. These products contain varying amounts of mercury, a heavy metal, which is a U.S. Environmental Protection Agency waste minimization priority chemical. A community-based collection system is convenient, cost-effective and combined with an aggressive educational outreach program, will increase awareness and participation. Outreach includes the use of consistent educational messages through the media and the development and distribution of brochures, flyers and posters as well as literature and event attendance. The **Mercury Education Project** is funded by a grant from the California Integrated Waste Management Board.

Mercury containing products collected in FY 2004/2005

Recycling partners were established at retail and community drop-off locations. These partners agreed to allow customers to drop-off Universal Waste, such as batteries and fluorescent lamps. To date 15 retail stores serve as fluorescent lamp drop-offs and 12 community centers serve as battery drop-offs. The HHW Program picks up th waste and recycled it for them. In addition, the HHW Program has established five drop-off locations for mercury-containing thermostats. Thermostats are dropped off for recycling by heating, air conditioning and ventilation contractors at five electrical wholesalers

Elemental Mercury- 155 pounds (Includes thermostats, thermometers and other products)
Fluorescent Lights – 166,000 feet 41,597 pounds
450 mercury-containing thermometers

Public Outreach
10 Thermometer Exchanges – residents exchange their mercury-containing thermometers for a free digital thermometer.

HHW participated in 34 community events.

Hazardous Waste Recycling & Disposal FOR SANTA CLARA COUNTY

Battery and Bulb Recycling (County Operated Facilities)(Fleet and Facilities & Office of Safety and Environmental Compliance)

During FY 05, the County Office of Safety and Environmental Compliance (OSEC) collected and sent for recycling a total of 3348 pounds of alkaline and rechargeable batteries.

During FY 05, the County Office of Safety and Environmental Compliance (OSEC) collected and sent for recycling a total of 1318 Universal Waste bulbs that were individual pieces (not fluorescent tubes), and 41,162 linear feet of fluorescent light tubes.

Proposed Permanent Storm Water Treatment BMP
Operation and Maintenance Inspection Program

1). The County Departments that install permanent BMPs for County-owned facilities are responsible for inspecting and maintaining the BMPs, as well as for record keeping. These Departments are Parks and Recreation, Roads and Airports, and Capital Programs--Fleet and Facilities.

2). For private projects, the County Department of Planning and Development will require a recordable written agreement signed by the property owner and/or developer. The agreement shall run with the land, and be recorded with the County Recorder.

3). The Agreement will specify the frequency of required inspections and the necessity of providing timely maintenance. The inspection frequency will be based on the type of BMP, with more frequent inspections for proprietary devices and less frequent inspections for landscape based BMPs.

4). Inspections shall be performed by a private Registered Civil Engineer who is registered to practice in California.

5). The County Clean Water Program will provide inspection forms and reference material from SCVURPPP.

6). It is planned that the requirements of this program will be included in an amendment to the County Ordinance Code that will be proposed to the Board of Supervisors during Fall, 2005. The purpose of the ordinance amendment will be to adopt Section C3 Group 1 and Group 2 storm water treatment requirements and the Hydrograph Modification Plan requirements.

County of Santa Clara
Clean Water Program
DEVELOPMENT SERVICES OFFICE
DEPT. OF PLANNING AND DEVELOPMENT
70 West Hedding St., 7th Floor East Wing
San Jose, CA 95110

COUNTY OF SANTA CLARA
Department of Roads and Airports

Self-Evaluation Document for the FY 05 NPS Program Annual Report

The County Department of Roads and Airports participates in the Clean Water Program in a number of ways:

1) The department follows Maintenance Yard and field work BMPs, and has adopted SOPs.

2) Storm Water Pollution Prevention Plans (SWPPPs) have been written and are referenced in the departmental maintenance yards. (The East and West Yards are within the Phase I NPDES Permit zone.)

3) The department is using NPDES Permit C3. requirements to design storm water treatment for C3.-eligible new and replacement impervious areas, such expressway widening within the NPDES Phase I Permit area.

4). The department is utilizing additional water quality questions in CEQA review, as required by the NPDES Permit.

5) The department is working with the County IPM Coordinator to reduce and eliminate pesticides where practicable, including in new landscaping and roadside vegetation management. No pesticides or herbicides are applied without the prescription of a Licensed Pest Control Operator. None are purchased without approval of the County IPM Program Coordinator.

6) NOIs and SWPPPs are prepared and filed when the disturbed area of a proposed project will be 1 acre or more.

7) The department is planning for 10/20/05 and thereafter, when the C3. Group 2A requirements are reduced to 10,000 square feet of new or replacement impervious area. Projects vary, but each project is carefully evaluated as to whether or not C3 requirements apply. FY05 projects have not involved adding significant amounts of new impermeable surfaces.

8) The department is observing the Rural Public Works Performance Standards and with the assistance of the NPS Coordinator did develop specific SOPs.

9) Litter and trash are removed from public rights of way to a permitted sanitary landfill. Observed illegal dumping problems when not in the public right of way are referred to the DEH.

10) Departmental data certification is now provided for the NPS Annual Report.

11) Street sweeping and storm drain maintenance records have been maintained for many years. These records are now made available annually in the form of a spread sheet.

12) The department provides water quality related training for its employees.

13) The department coordinates between design, construction, and maintenance to ensure Section C3 mitigations are properly monitored and maintained. The first C3 mitigation improvements are still under construction, and are expected to pass from the contractor to department maintenance in FY06.

Summary and Evaluation:

The Department of Roads and Airports believes that its staff members and their actions are effective in preventing storm water pollution in both the maintenance yard and construction site environments.

Managers, engineers, and maintenance staff have an increasing awareness of the need to prevent storm water pollution, the BMPs necessary to support that goal, and also of the C3 requirements for storm water treatment for certain impervious areas.

The department is pleased to work cooperatively toward these goals with the County Clean Water Program Coordinator and the County IPM Coordinator. It is understood that continuous improvement in these areas is expected, to the maximum extent practicable.

The department has benefited from a variety of training resources, but especially appreciates the SCVURPPP-sponsored workshops.

In FY06, the department looks forward to implementing monitoring and maintenance of C3 mitigations that will be installed as a part of the Montague Expressway project.

City of Saratoga	275	3,495	705 yd^3	0.20 yd^3/miles	10,939[14] tons 24[15] yd^3
County of Santa Clara[2]	232	16,171	3,403 yd^3	0.21 yd^3/miles	
Santa Clara Valley Water District[16]					
TOTALS[18]	**8,492 miles**	**201,910 miles**	**75,298 yd^3**		**184,060 tons** **7,980 yd^3**
TOTAL MILES		**201,946 miles**			
AVERAGE[18]		**15,532 miles**	**5,792 yd^3**	**0.37 yd^3/miles**	

Notes:
1. Leaf litter included in material removed.
2. No leaf removal program other than routine street sweeping.
3. The selected streets were swept on a monthly basis. The trash swept from the streets were tree leaves and branches.
4. Los Altos Hills does not quantify street sweeping data.
5. Street sweeping totals for November 2004 are not included.
6. The volume of material collected does not include leaves. Leaf removal program is effective in November and December 2004. The City of Milpitas does not keep track of the volume of leaves removed since leaf bags are picked up by solid waste garbage trucks.
7. This figure is a combined figure that includes the weight of the material tabulated above PLUS the leaves collected by our autumn leaf pushing and pickup program. Since all of the material (both street sweeping and debris and leaves gathered by leaf pusher trucks) is combined and hauled to the landfill in garbage compactor trucks, there is no way to provide a separate figure for leaf removal.
8. This figure is the total weight of the material collected by the City of Palo Alto Yard Trimmings Pickup Program. Material collected includes leaves, grass clippings, tree trimmings, etc. The City of Palo Alto does not have the ability to separate out the weight or volume of leaves alone.
9. Starting July 1, 2004, the City of San Jose started reporting the yard trimmings collected by the City's Yard Trimmings Program. Leaf litter is co-mingled within yard trimmings. As a result, the Yard Trimmings Program is keeping a large amount of leaves out of the storm drain system.
10. The percentage of leaves within yard trimmings during quarters 1,3 and 4 ranges from 15 to 20 percent. However, the percentage of leaves within yard trimmings during quarter 2 (heavy leaf drop period) is estimated at 65 percent.
11. Approximately seven days of street sweeping were cancelled due to rain.
12. Leaf litter is removed by leaf vacuum crews. A total of 1,373 curb miles were completed during FY 04-05.
13. Street sweeping frequency is increased during heavy leaf drop season. The frequency is returned to a reduced schedule during other seasons.
14. Residents and businesses are provided large yard waste receptacles for leaves and other yard waste. This figure is the total weight of yard waste collected within each city during FY 04-05. The weight or volume of leaves is included in the total weight.
15. Volume of leaves collected from an extra leaf drop cleanup conducted in December 2004. Leaf litter was collected without a street sweeper.
16. Does not conduct street sweeping.
17. The City of San Jose collects and reports the amount of material removed in tons rather than cubic yards. During FY 04-05, the City removed 9,818 tons of material. To determine the total volume of material removed in cubic yards, it is necessary to convert tons to cubic yards. It is estimated that the average density of street sweeping material is 750 pounds per cubic yard (0.375 tons per cubic yard) assuming equal volume of materials are collected during dry and wet weather (Source: Woodward Clyde Consultants, August 1993,*Street Sweeping Status and Recommendation (Draft Report).* Prepared for Santa Clara Valley Nonpoint Source Control Program). Therefore, a value of 26,181 cubic yards is calculated when 9,818 tons is converted over to cubic yards.
18. Total and average does not include 36 miles swept by the Town of Los Altos Hills.
19. Includes total weight of yard trimmings collected by individual Co-permittees. Leaf litter is co-mingled with yard trimmings. Co-permittees do not have the ability to separate the weight or volume of leaves from this waste stream.

Attachment D3 - Rural Public Works O & M

Note: A Sr. Civil Engineer from the Department of Roads and Airports and a Sr. Project Manager from the Department of Parks and Recreation both actively participated in the committee that wrote the jointly authored SCVURPPP/RWQCB Rural Public Works Performance Standard.

The two involved departments, Roads and Parks, have since adopted and incorporated the Performance Standard into their maintenance routines.

The Standard Operating Procedures (SOPs) for this performance standard have been written by both of the involved departments. No difficulties have been reported by the involved departments in implementing the standards.

Subject: County Nonpoint Source Pollution Control Annual Report FY04
Parks and Recreation Department Self Evaluation

The County of Santa Clara Parks and Recreation Department (Department) is pleased to offer this brief summary of our process toward the goal of storm water pollution prevention as it has been implemented thus far into our operations.

In addition to extensive staff training detailed in a separate training summary, the Department has initiated and reinforced several program elements to assure that potential sources of storm water pollution are reduced to the maximum extent possible.

Daily Maintenance Operations

All large-scale maintenance activities involving heavy equipment, parts cleaning and repairs have been consolidated to our Central Yard facility. There, most major activities take place indoors and every effort is made to eliminate any discharges to the environment that could reach or affect storm water. The equipment wash pad utilizes covered zero discharge wastewater recycling technology. Filters are changed regularly and oil is skimmed and collected for recycling.

The parts washer was recently upgraded to a closed loop, hot water and detergent based system, and solvents were eliminated from the parts cleaning process on a department wide basis. Based on the results of a recent storm water inspection, a new large capacity spill cleanup station was added adjacent to the fuel dispensing inlands, new filter fabric was installed on the storm drain that serves the central parking lot area of the facility, and the storage of materials outdoors, always limited, has been further decreased with some additional clean up. The result of this latter effort has allowed more covered area for material storage. The most recent improvements includes, but not limited to, re-painting "Flow to Bay" signs on all storm water drains, installation of 10' rock strip for oil collection before reaching parking lot and budgeting for a cover of the gas pumps.

The Rural Public Works Performance Standards have been shared and embraced by the Department's field staff, who now bring storm water pollution prevention strategies to assigned tasks as one of the "tools of the trade" necessary for being a Parks professional.

Project Planning and Construction:"

Careful consideration is given to all environmental impacts that could be created or impacted by project related activities. As stewards of the land, the Department is serious and proud of its roles related to resource conservation and preservation, In particular, effort are made to

minimize grading, integrate tree planting, preserve heritage trees, utilize drip irrigation systems, and assume that remediation and new trail construction conform to modern standards. Some of those trails standards include out sloping, rolling dips and using bio-technical methods for erosion control.

During project construction, the Department complies with RWQCB guidelines for soil erosion and stability, continuously monitors all construction activities, and has no current C3 qualified projects budgeted which reflects our focus on open space in project design over impervious surfacing wherever possible.

Community Involvement

Working with the San Jose Conservation Corps and our Volunteer Program, the department is involved in creek clean up activities, including garbage removal from parklands and streams, to enhance the natural experience and promote cleaner waterways. As part of our Volunteer Program, the Department has instituted an "Adopt a Trail" program, which employs the aforementioned trail management techniques. For every trail adopted under this program there is a "volunteer crew lead" assigned and head volunteer must go through a rigorous training program to learn the proper techniques for trail building and maintenance. Careful attention is given in these training programs to learning about he to protect our waterways and these volunteer crew leads impart this information to the "Adopt-a-Trail" volunteers. It's a win-win community model that helps to accomplish the objectives for protecting our water resources.

The Santa Clara County Parks and Recreation Department is an active partner in protecting streams, creeks and waterways. We are proud of the efforts we undertake on a daily basis to minimize impacts to the environment, while we protect and preserve the lands that the public entrusts us to maintain, on their behalf, for current and future enjoyment.

Should you have any additional comments or questions on this report, please feel free to contact me at (408) 355-2208 or Bill Grimes, Environmental Health & Safety Compliance Specialist, at (408) 355-2273.

Respectfully Submitted,

Mohamed Assaf, Sr. Facilities Engineer
Construction Division Manager

From: Ken Rado
Manager, Facilities and Fleet Capital Programs Division

Subject: **NPS ANNUAL REPORT**

This report is written to meet the annual reporting requirements of the County's Phase I NPDES Storm Water Discharge Permit.

I have provided, as Attachment 1, "C.3" Reporting Requirements information. This chart is little-changed from last year, although I have updated the timeline for construction commencement for our New Crime Lab project at Hedding and Guadalupe streets, and our Valley Health Center at Fair Oaks (Sunnyvale) project. We have initiated no new projects subject to the NPDES permit.

Capital Programs Division continues to emphasize compliance with the NPDES requirements, and the need for controlling storm water contamination from construction activity. In the area of training, several of my staff attended a one-day seminar in July 2005 entitled "Current Issues in Storm Water Regulation," taught by Lorman Education Services. I have also personally provided staff training in the area of monitoring Construction Contractor compliance with our contract requirements for submission of a SWPPP.

In addition to staff training Capital Programs is now using a very comprehensive SWPPP specification for all of our construction projects. This specification is provided as Attachment 2 to this report.

My staff are being vigilant in reviewing and critiquing Contractor SWPPP plans and monitoring Contractor compliance with their plans. We are being good stewards of the environment, especially considering our major role in managing the design and construction of County facilities.

Attachment 1: C.3 report
Attachment 2: Capital Programs SWPPP specification

Board of Supervisors: Donald F. Gage, Blanca Alvarado, Pete McHugh, James T. Beall Jr., Liz Kniss
County Executive: Peter Kutras, Jr.

SECTION 01570
STORM WATER POLLUTION PREVENTION PLAN (SWPPP)

[DESIGN CONSULTANT SHOULD DETERMINE IF SWPPP WILL BE REQUIRED. IF NOT REQUIRED, DELETE SECTION 01570 IN ITS ENTIRETY]

PART 1 - GENERAL

1.01 SUMMARY

.A This Section includes:

.1 Part 1 – General

.a 1.01 – Summary

.b 1.02 – Related Documents and Sections

.c 1.03 - Definitions

.d 1.04 - SWPPP Requirements

.e 1.05 - Submittals

.2 Part 2 – Products (Not Used)

.3 Part 3 – Execution (Not Used)

.4 Part 4 – Forms (Not Used)

1.02 RELATED DOCUMENTS AND SECTIONS

.A Document 00700.3.19, “Water Pollution Control”

.B Section 01330, "Submittal Procedures."

.C Section 01450, “Contractor’s Quality Control (QC) System”

1.03 DEFINITIONS

.A **NOI** - Notice of Intent

.B **SWPPP -** Storm Water Pollution Prevention Plan

.C **NOT -** Notice of Termination

1.04 SWPPP REQUIREMENTS

.A The project will comply with the NPDES General Construction Activity Storm Water Permit administered by the Regional Water Quality Control Board.

.B Prior to construction grading for the proposed land uses, the Owner will file a “Notice of Intent” (NOI) to comply with the General Permit.

.C The Contractor must prepare and maintain and implement, for the entire construction period, a Storm Water Pollution Prevention Plan (SWPPP) which addresses measures to minimize and control construction and post-construction storm water runoff.

.D Comprehensive SWPPP requirements are provided as Appendix A at the end of this section. At a minimum, the following measures must be included in the SWPPP:

.1 Burlap bags filled with drain rock will be installed around storm drains to route sediment and other debris away from the drains.

.2 Earthmoving or other dust-producing activities will be suspended during periods of high winds.

.3 All exposed or disturbed soil surfaces will be watered at least twice daily to control dust.

.4 Stockpiles of soil or other materials that can be blown by the wind will be watered or covered.

.5 All trucks hauling soil, sand, and other loose materials will be covered and maintain at least two feet of freeboard

.6 All paved access roads, parking areas, staging areas and residential streets adjacent to the construction sites will be swept daily (with water sweepers).

.E Contractor must submit five (5) copies of the draft SWPPP to the Owner for review. The Owner must accept the SWPPP before the Contractor starts any work on site which might cause storm-water contamination.

.F The Contractor must maintain the Owner-accepted SWPPP, along with any revisions, at the Project Site, and the SWPPP must be updated to reflect current site conditions.

.G When Milestone completion of the entire Project is achieved the Contractor shall prepare necessary documentation to allow the Owner to file a Notice of Termination (NOT) for the General Permit for Construction with the Regional Water Quality Control Board and applicable Governmental Agency. The NOT will document that all elements of the SWPPP have been executed, construction materials and waste have been properly disposed of, and a post-construction storm water management plan is in place as described in the SWPPP for the site.

1.05 SUBMITTALS

.A Submit the Storm Water Pollution Prevention Plan (SWPPP) in accordance with Section 01300, "Submittal Procedures."

.B Submit four (4) copies of the Notice of Termination (NOT) documentation to the Owner

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

PART 4 - FORMS`

Appendix A: STORM WATER POLLUTION PREVENTION PLAN

1. Objectives

   The Contractor shall develop and submit for Owner acceptance, a Storm Water Pollution Prevention Plan (SWPPP). The Contractor shall certify the SWPPP in accordance with the signatory requirements of section C, Standard Provision for Construction Activities of the Phases I and II of the National Pollution Discharge Elimination System (NPDES) requirements. The SWPPP shall be developed and amended or revised, when necessary, to meet the following objectives:

   a. Identify all pollutant sources including sources of sediment that may affect the quality of storm water discharge associated with construction activity (storm water discharges) from the construction site;

   b. Identify non-storm water discharges;

   c. Maintain Best Management Practices (BMPs) to reduce similar pollutants in storm water discharges and authorized non-storm water discharges from the construction site during construction;

   d. Identify a sampling and analysis strategy, and sampling schedule for discharges, from construction activity which discharge directly into water bodies listed on Attachment 3 of the Clean Water Act Section 303(d) [303{d)] Water Bodies listed for Sedimentation; and

   e. For all construction activity, identify a sampling and analysis strategy, and sampling schedule, for discharges that have been discovered through visual monitoring to be potentially contaminated by pollutants not visually detectable in the runoff.

2. Implementation Schedule

   a. The SWPPP shall be developed prior to the start of soil-disrupting activity in accordance with this Section and shall be implemented concurrently with commencement of soil-disturbing activities.

3. Availability

   The SWPPP shall remain on the construction site while the site is under construction during working hours, commencing with the initial construction activity and ending with termination of coverage under the General Permit.

4. Required Changes

   The Contractor shall amend the SWPPP whenever there is a change in construction or operations which may affect the discharge of pollutants to surface waters, ground waters, or a municipal separate storm sewer system (MS4). The SWPPP shall also be amended if the Contractor violates any condition of the General Permit, or has not achieved the general objective of reducing or eliminating pollutants in storm water discharges. If the Owner determines that the discharge is in violation of the Genera1 Permit, the SWPPP shall be amended and implemented in a timely manner, but in no case more than 14-calendar days after notification by the Owner. All amendments should be dated and directly attached to the SWPPP.

5. SWPPP Contents

The SWPPP shall include: (a) project information; and (b) pollutant source identification, combined with an itemization of those BMPs specifically chosen to control the pollutants listed.

a. Project information

(1) The SWPPP shall include a vicinity map locating the project site with respect to easily identifiable major roadways, geographic features, or landmarks. At a minimum, the map must show the construction site perimeter, the geographic features surrounding the site, and the general topography.

(2) The SWPPP shall include a site map(s) which shows the construction project in detail, including the existing and planned paved areas and buildings.

(a) At a minimum, the map must show the construction site perimeter; existing and proposed buildings, lots, roadways, storm water collection and discharge points; general topography both before and after construction; and the anticipated discharge location(s) where the storm water from the construction site discharges to a municipal storm sewer system or other water body.

(b) The drainage patterns across the project area must clearly be shown on the map, and the map must extend as far outside the site perimeter as necessary to illustrate the relevant drainage areas. Where relevant drainage areas are too large to depict on the map, map notes or inserts illustrating the upstream drainage areas are sufficient.

(c) Temporary on-site drainages to carry concentrated flow shall be selected to comply with local ordinances, to control erosion, to return flows to their natural drainage courses, and to prevent damage to downstream properties.

(3) Information presented in the SWPP may be represented either by narrative or by graphics. Where possible, narrative descriptions should be plan notes. Narrative descriptions which do not lend themselves to plan notes can be contained in a separate document which must be referenced on the plan.

b. Pollutant Source and BMP Identification

The SWPPP shall include a description of potential sources which are likely to add pollutant(s) to storm water discharges, or which may result in nonstorm water discharges from the construction site. Discharges originating from off-site which flow across or through areas disturbed by construction that may contain pollutants should be reported to the Owner.

The SWPP shall:

(1) Show drainage patterns and slopes anticipated after major grading activities are completed. Runoff from off-site areas should be from flowing through areas that have been disturbed by construction unless appropriate conveyance systems are in place. The amount of anticipated storm water run-on must be considered to determine the appropriateness of the BMPs chosen. Slow all calculations for anticipated storm water run-on, and describe all BMPs

implemented to divert off-site drainage described in section A.5.a. (2) {c) around or through the construction project.

(2) Show the drainage patterns into each on-site storm water inlet point or receiving water. Show or describe the BMPs that will protect operational storm water inlets or receiving waters from contaminated discharges other than sediment discharge, such as, but not limited to: storm water with elevated pH levels from contact with soil amendments such as lime or gypsum; slurry from saw cutting of concrete or asphalt ;washing of exposed aggregate concrete; concrete rinse wager; building washing operations; equipment washing operations; minor street washing associated with street delineation; and/or sealing and paving activities occurring during rains.

(3) Show existing site features that, as a result of known past usage, may contribute to storm water- (e.g., toxic materials that are known co have been treated, stored, disposed, spilled, or leaked onto the construction site). Show or describe the BMPs implemented to minimize the exposure of storm water to contaminated soil or toxic materials.

(4) Show areas designated for the (a) s t o r age of soil or waste; (b) vehicle storage and service areas; (c) construction material loading, unloading, and access areas; and (d) equipment storage, cleaning and maintenance areas.

(5) Describe the BMPs for control of discharges from waste handling and disposal areas and methods of on-site storage and disposal of construction materials and construction waste. Describe the BMPs designed to minimize or eliminate the exposure of storm water to construction materials, equipment, vehicles, waste storage areas, or service areas. The BMPs described shall be in compliance with Federal, State, and local laws, regulations, and ordinances.

(6) Show the locations of direct discharge from the construction site into a Section 303(d) listed water body. Show the designated sampling locations in the receiving waters, which represent the prevailing conditions of the water bodies upstream of the construction site discharge and immediately down stream from the last point of discharge.

(7) Show the locations designated for sampling the discharges identified above. Samples shall be taken should visual monitoring indicate that there has been a breach, malfunction, leakage, or spill from a BMP which could result in the discharge in storm water of pollutants that would not be visually detectable, or if storm water comes into contact with soil amendments or other exposed materials or contamination and is allowed to he discharged. Describe the sampling procedure, location, and rationale for obtaining the uncontaminated sample of storm water.

(8) The SWPFP shall include a construction activity schedule which describes all major activities such as mass grading, paving, lot or parcel improvements at the sire and the proposed time frame to conduct those activities.

c. Additional Information

(1) The SWPPP shall include a narrative description of pollutant sources and BMPs that cannot be adequately communicated or identified on the site map. In addition, a narrative description of preconstruction control practices (if any) to

reduce sediment and other pollutants in storm water discharges shall be included.

(2) The SWPPP shall include an inventory of all materials used and activities performed during construction that have the potential contribute to the discharge of pollutants other than sediment in storm water. Describe the BMPs selected and the basis far their selection to eliminate or reduce b e pollutants in the storm water discharges.

(3) The SWPPP shall include the following information regarding the construction site surface area: the size (in acres or square feet), the runoff coefficient before and after construction, and the percentage that is impervious (e.g., paved, roofed, etc.) before and after construction.

(4) The SWPPP shall list the name and telephone number of the qualified person(s) who have been assigned responsibility for pre-storm, post-storm, and storm event BMP inspections; and the qualified person assigned responsibility to ensure full compliance with the permit and implementation of all elements of the SWPPP, including the preparation of the annual compliance evaluation and the elimination of all unauthorized discharges.

d. Erosion Control

(1) At a minimum, the Contractor must implement an effective way to retain soil and sediment control on all disturbed areas during the rainy season. These disturbed areas include tough graded roadway, slopes, and building pads. Until permanent vegetation is established soil cover is the most cost-effective and expeditious method to protect soil particles from detachment and transport by rainfall. Temporary soil stabilization can be the single-most important factor in reducing erosion at .construction sites. The Contractor shall consider measures such as covering with mulch, temporary seeding, soil stabilizers, rolls or blankets, temporary vegetation, permanent seeding, and a variety of other methods.

(2) The SWPP shall include a description of the erosion control practices including a time schedule, to be implemented during construction to minimize erosion on disturbed areas of a construction site. The discharger must consider the full range of erosion control BMPs. The Contractor must consider any additional site-specific and seasonal conditions when selecting and implementing appropriate BMPs. The above listed erosion control measures are examples of what should be considered and not exclusive of new or innovative approaches currently available or being developed.

(3) Include an outline of the areas of vegetative soil cover or native vegetation on site which will remain undisturbed during the construction project.

(4) Include an outline of all areas of soil disturbance including cut or fill areas which will be stabilized during the rainy season by temporary or permanent erosion control measures, such as seeding, mulch or blankets, etc.

(5) Include an outline of the areas of soil disturbance, cut, or fill which will be left exposed during any part of the rainy season, representing areas of potential soil erosion where sediment control BMPs are required to be used during construction.

(6) Include a proposed schedule for the implementation of erosion control measures.

e. Sediment Control

(1) The SWPPP shall include a description or illustration of BMPs which will be implemented to prevent a net increase of sediment load in storm water discharge dative to preconstruction levels. Sediment control BMPs are required at appropriate locations along the sire perimeter and at all operational internal inlets to the storm drain system at all rimes during the rainy season. Sediment control practices may include filtration devices and barriers (such as fiber rolls, silt fence, straw bale barriers, and gravel inlet filters) and/or settling devices (such as sediment traps or basins). Effective filtration devices, barriers, and settling devices shall be selected, installed and maintained properly. A proposed schedule for deployment of sediment control BMPs shall be included in the SWPPP. These are the most basic measures to prevent sediment from leaving the project site.

(2) During the non-rainy season, the Contractor is responsible for ensuring that adequate sediment control materials are available to control sediment discharges at the downgrade perimeter and operational inlets in the event of a predicted storm. The Contractor shall consider a full range of sediment controls, in addition to the controls listed above, such as straw bale dikes, earth dikes, brush barriers, drainage swales, check darns, subsurface drain, sandbag dikes, fiber rolls, or other controls. At a minimum, the Contractor must implement an effective combination of erosion and sediment control on all disturbed areas during the rainy season.

If the Contractor chooses to rely on sediment basins for treatment purposes, sediment basins shall, or a minimum, be designed and maintained as follows:

Option 1: Pursuant to local ordinance for sediment basin design and maintenance, provided that the design efficiency is as protective or more protective of water quality than Option 3.

OR

Option 2: Sediment basin(s), as measured from the bottom of the basin to the principal outlet, shall have at least a capacity equivalent to 3,600 cubic feet of storage per acre draining into fie sediment basin. 'The length of the basin shall be more than twice the width of the basin. The Length is determined by measuring the distance between the inlet and the outlet and the depth must not be less than three feet nor greater than five feet for safety reasons and for maximum efficiency.

f. Stabilization

(1) All disturbed area of the construction site must be stabilized. Final stabilization for the purposes of submitting a NOT is satisfied when:

All soil disturbing activities are completed AND EITHER OF THE TWO FOLLOWNG CRITERIA ARE MET:

(a) A uniform cover with 70 percent coverage has been established OR:

(b) equivalent stabilization measures have been employed. These measures include the use of such BMPs as blankets, reinforced channel liners, soil cement, fiber matrices, geotextiles, or other erosion resistant soil coverings or treatments.

(2) Where background native vegetation covers less than 100 percent of the surface, such as in arid areas, the 70 percent coverage criteria is adjusted as follows: If the native vegetation covers 50 percent of the ground surface, 70 percent of 50 percent (.70 X .50=.35) would require 35 percent total uniform surface coverage.

COUNTY OF SANTA CLARA CLEAN WATER PROGRAM

Activity	Permit Item Source	FY 05 Tasks	Comments	Status	Responsible Party
C.3.b Development Project Approval Process -- Planning Procedures					
Ordinance Revision	C.3.b.2	Develop new ordinance incorporate C3. requirements	Amend existing NPS ordinance to include Numeric Sizing Criteria requirements for Group 1,2 projects.	Delayed so that ordinance can include HMP material, planned for Fall 05	CWP Prgm. Coord., Planning Office, County Counsel, Land Development Engineering.
Staff Training	C.3.b.3	Provide training opportunities for County staff in the planning office, building inspection office, and land development engineering with training on the C.3. provisions including SCVURPPP sponsored and RWQCB sponsored workshops	Written guidance, staff meetings and SCVURPPP workshops.	Ongoing	CWP Prgm. Coord., Planning, Building, FAF, LDE
C.3.c. Requirements for Group 1 and Group 2 Projects					
Guidance Manual	C.3.c.4	Review Guidance Manual developed by Program and, if needed, customize for Group 1 projects.	Guidance Manual may be general enough to be used locally with only minor changes, if any.	Done	CWP Coord., Planning, Building, LDE
Group 2 Alternative Project Size	C.3.c.8	Conduct analysis of alternative project size and prepare proposal for submittal to Regional Board. (Initial submittal to be handled by SCVURPPP/EOA Inc.	Continue to assist Program with data collection and analysis, as requested. Plan on implementing Group 2A on 10/20/05	Ongoing	Building Inspection, Planning Office, CWP Prgm. Coord.
Guidance Manual Update	C.3.c.9	Update Guidance Manual and Performance Standard for Group 2 projects as needed.	Assist Program with development and review, as requested.	As requested	

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2003-2004 Work Plan: New and Redevelopment Requirements

COUNTY OF SANTA CLARA

Activity	Permit Item Source	FY 05 Tasks	Comments	Status	Responsible Party
C.3.e Operation and Maintenance of Treatment BMPs					
Data Form and Staff Training	C.3.e.1	Log information about treatment BMPs installed at approved Group 1 projects and maintain a list or database of properties, treatment BMPs, and responsible operators.	Review data collected and evaluate need to modify data collection method and need for additional staff training on tracking information.	Ongoing for AR	CWP Prgm. Coord., Planning, Building, LDE
BMP O&M Agreement Mechanism	C.3.e.2	Adapt model O&M agreement language to meet agency-specific needs and requirements and incorporate into the project review and approval process.	Will incorporate recorded maint. agreement into NPS Ord. C3. Revision Fall 05	Now planned for Fall 05	CWP Program Coord., Planning, County Counsel
BMP Inspection Program	C.3.e.5	Develop local programs for inspection of a subset of prioritized treatment BMPs to verify that proper O&M is being performed by the responsible party (Program to assist in defining which BMPs are priority for inspection.)	For Group 1 projects, County to develop written BMP inspection priority criteria and inspection and enforcement forms and procedures. (County will require private PE or LLA inspection)	Now planned for Fall 05 and to include HMP BMPs as well	LDE, CWP Prgm. Coord.
Reporting	C.3.e.6	Report on the County's treatment BMPs O&M verification program in each annual report, including organizational structure, evaluation of effectiveness, and planned improvement to the program. Include a list or summary of treatment BMPs inspected during the year, inspection results, and any required follow-up and correction.		Ongoing for AR	CWP Prgm. Coord., Planning, Building, LDE

COUNTY OF SANTA CLARA

Activity	Permit Item Source	FY 05 Tasks	Comments	Status	Responsible Party
C.3.f Hydromodification Management Plan					
Staff training	C.3.f.3	Upon adoption by the Regional Board, begin implementation of HMP as part of requirements for Group 1 projects that may cause increased erosion or other related impacts.	Where applicable, HMP to be integrated into existing programs for development, review, construction inspection and BMP operations and maintenance. County staff to receive incremental training in HMP requirements.	*Training now planned for FY 05/06, due to HMP adoption*	LDE, Building, Planning, FAF, Roads, Parks, CWP Prgm. Coord.
C.3.g (Waiver) Compensatory Mitigation Program					
Model Waiver Program for SCVURPPP	C.3.g.1	Develop a model waiver program.	Assist SCVURPPP by reviewing documents.	*Ongoing*	CWP Coord., Planning Dir., Building Official, County Counsel, GSA, Parks Dir., Roads, Dir.,.
Local Waiver Program (Compensatory Mitigation)	C.3.g.2	Consider developing local waiver program, perform legal review, and incorporate waiver provisions in project review process. (If model program has not been adopted by Regional Board, consider developing interim waiver program per C.3.g.vi.). Provide info on waivers granted, if any.	Currently this is a very low priority. With large lot and parcel sizes, there is currently no perceived need for a local waiver program.	No local waiver program planned	CWP Coord., Planning Dir., Building Official, County Counsel, FAF, Parks Dir., Roads, Dir.,

COUNTY OF SANTA CLARA

Activity	Permit Item Source	FY 05 Tasks	Comments	Status	Responsible Party
				9/15/04	
Staff training and reporting	C.3.g.3	Begin tracking information for reporting on waivers granted, including project name, location, type, percent impervious surface, reasons for and terms of waiver, and the alternative benefit project and completion date.	If County adopts waiver program, responsible County staff will be trained on its implementation. Currently, developing a local waiver program is a very low priority.	As needed	CWP Coord., Planning Dir., Building Official, County Counsel, FAF, Parks Dir., Roads.
C.3.j Site Design Measures Guidance and Standards Development					
Policy and standards review	C.3.j.2	Review existing local design standards and guidance, and compare them to the list of areas to address in provision C.3.j. and other references such as "Start at the Source" and the "Development Policies Comparison" work sheet. Prepare and submit an analysis of local standards, identified opportunities for revision, and proposed revisions. (Program to prepare guidance for Co-permittees on this work product.)	County will focus on making sure BMP list is updated to be consistent with revised General Plan, any new ordinance requirements, C3. Numeric Sizing Criteria and the latest technical guidance documents such as the upcoming HMP, SCVURPPP "Guidance Manual," the "Using Start at the Source" manual. and the revised California BMP Handbooks.	Ongoing	CWP Prgm. Coord., LDE, Planning, Roads, Fire Marshall, Parks, FAF
Standards Revisions	C.3.j.4	Incorporate any revised standards and guidance into local project approval process and "fully implement" the revised standards and guidance.	Any modification to required design standards will be done with input from Planning, Fire Marshall's Office, and other affected local agencies.	Ongoing	LDE, Fire Marshall, FAF, Roads, Parks

COUNTY OF SANTA CLARA

Activity	Permit Item Source	FY 05 Tasks	Comments	Status	Responsible Party
			(Reduced road width and other design standards (pervious paving, etc) are not the highest priority on large parcel single site SFD development with ample existing infiltration area and BMP installation areas available.		
C.3.k Source Control Measures					
Reporting	C.3.k.3	Implement source control measures requirements by including appropriate conditions of approval. Report status and provide examples of application of conditions in annual reports.	Report on source control BMPs required for particular projects. (The NPDES Permit seems to indicate that C3. items apply only to Group 1 and Group 2 projects; however, use of source control BMPs is appropriate for all projects.	Ongoing	Planning, Building, CWP Coord., Roads, FAF, Parks, DEH
C.3.l Update General Plans					
General Plan Review	C.3.l.1	Review current General Plan policies related to water quality and watershed protection and incorporate additional policies as needed to implement C.3.	Depending on the content of the HMP, the County may need to modify the General Plan to incorporate new goals and policies. (Planning Office is continuing to work on a Riparian Protection Ordinance)	[Next sche-duled revision]	Planning Office, CWP Prgm. Coord.

COUNTY OF SANTA CLARA

Activity	Permit Item Source	FY 05 Tasks	Comments	Status	Responsible Party
C.3.m Water Quality Review Processes					
CEQA Review	C.3.m.1	Review CEQA initial study checklists and other environmental review documents and modify documents as needed to include questions that sufficiently address water quality impacts of projects.	With guidance from the Reg. Board & Program, once additional guidance is obtained, provide staff training on completing the revised Initial Study checklist.	Ques-tions revised 11/02, Parks CEQA review also modified GSA uses Planning Office for CEQA review.	Planning Office
C.3.n Reporting Requirements					
Reporting	C.3.n.1	Provide information described in Table 1 of Provision C.3. in annual reports (SCVURPPP to provide guidance for each annual report).		9/15/04 AR and ongoing	CWP Prgm. Coord.
Reporting	C.3.n.3	Collect and report the following for all Gr 1,2 new and redevelopment projects: --project name, location, type (per C.3.c.), size (ac. or sq.ft.), and impervious surface area. For redevelopment projects, include area of land disturbance.		9/15/04 AR and ongoing	LDE, Planning, Building, CWP Prgm. Coord.
Reporting	C.3.n.4	Collect and report the following for all projects that must implement treatment measures: BMPs, site design, and source control measures used, sizing criteria, O&M		Ongoing And 9/15/04 AR	LDE, Planning, Building, CWP Prgm. Coord.

COUNTY OF SANTA CLARA

Activity	Permit Item Source	FY 05 Tasks	Comments	Status	Responsible Party
		responsibility mechanism and responsible party.			
Pesticide Control Measures	C.3.n.5	Collect information and report a summary of types of pesticide reduction measures required for development projects and the percentage of projects for which pesticide reduction measures were required.	Lic. Landscape Architect Certification for Grp. 1,2 Projects.	Ongoing	Planning, Building, LDE, CWP Prgm. Coord.

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 05 Annual Report

Attachment F - Construction Inspection

County of Santa Clara
Clean Water Program
DEVELOPMENT SERVICES OFFICE
DEPT. OF PLANNING AND DEVELOPMENT
70 West Hedding St., 7th Floor East Wing
San Jose, CA 95110

COUNTY OF SANTA CLARA
CLEAN WATER PROGRAM
ANNUAL REPORT FY 05

CONSTRUCTION INSPECTION

The following report is based on the County Performance Standard for Construction Inspections:

1) The County ensures through a construction inspection program that construction contractors properly store, use, and dispose of construction materials, chemicals, and wastes at construction sites and prevent illicit discharges to storm drains and watercourses.

Building and grading inspectors include these items in their inspection routine. Referrals are made to DEH--HMCD as appropriate.

2) For development projects with significant erosion potential and planned construction activity during the wet season the County ensures, through a construction inspection program, that erosion and/or sediment control measures are implemented in accordance with local ordinances and project conditions of approval and maintained as needed during construction.

The County Grading ordinance and Construction Inspectors require winterization and implementation of erosion control BMPs of projects that will continue into or start in the rainy season (10/15 each year). Ongoing inspections evaluate the effectiveness of control measures, and require changes and/or additions to BMPs where needed. Throughout the past winter, inspectors continued to monitor construction sites, and shut down any projects where erosion control measures were inadequate. Grading violators are also required to "winterize" their illegally graded sites.

3) The County inspects construction sites for adequacy of storm water quality control measures on a regular basis, with the frequency of inspections based on the size of the project and its potential impact on storm water quality.

Grading Inspectors continue to inspect all projects on a continuing basis, and endeavor to inspect sites with a high potential for erosion more frequently.

4) Prior to the beginning of the wet season each year, the County inspects all sites requiring erosion and/or sediment control plans, to ensure that measures have been taken to minimize discharges of sediment from disturbed areas.

This is the normal procedure for grading inspectors, and they have continued to require this throughout the past rainy season.

5) During the wet season of each year, the County inspects all construction sites requiring erosion and/or sediment control plans following each major storm event or series of events.

Grading inspectors try to inspect each active site with high erosion potential frequently, which includes the days following any major storm. In cases where they cannot get to every site, they prioritize and inspect those sites with the greatest erosion potential as soon after the rain as possible.

6) The County provides training annually to its construction inspection staff on inspection procedures, documentation, and enforcement related to storm water pollution prevention.

The County's Clean Water Program staff has worked closely with the grading inspectors and their supervisor, and problems are discussed as they arise. The inspectors are familiar with the goals of the NPS Program and refer problems to the NPS inspector when appropriate, and carry out enforcement action where necessary. The Construction Inspectors meet informally several times per week with the CWP Program Coordinator regarding enforcement needs and problems. Construction Inspectors have attended several erosion prevention and law enforcement classes.

7) The County provides outreach materials to contractors, developers, and County staff on construction BMPs and compliance with the State General Construction Activity Storm Water Permit.

Blueprint for a Clean Bay is available to applicants for building permits, and a county-prepared handbook on erosion control measures is available from the CWP office. Tri-folds for individuals and the construction trades are available near the building counter. NOI filing information and forms is available at the Planning and Building Counters.

8) The County investigates and follows up thoroughly on grading violations, especially those with a high potential for erosion and sediment transport.

In FY 05, fifteen properties were cited with grading violations. Official notices were sent to the property owners as orders to abate the violation, and notices of violation were recorded with the County Recorder.

9) Official Notice Forms

New official notice forms for grading violations, grading warnings, and erosion violations were developed, for review during the Tetra Tech program revisit.

COUNTY OF SANTA CLARA
CLEAN WATER PROGRAM
ANNUAL REPORT FY 05

COUNTY GALA PROGRAM

This report summarizes Graffiti and Litter Abatement (GALA) Program activities from July 2004 through June 30, 2005.

Eradication
The Sunday Route Program, a collaborative effort between Integrated Waste Management and the Juvenile Probation Department, has been successful this past year in both graffiti and litter removal. GALA Program staff administers the program and funds an extra help group counselor from the Juvenile Probation Department for a crew leader to supervise a team of probationers in the removal of graffiti and litter each Sunday. In FY 05, the Sunday Route crew painted out a total of 53 graffiti tags, accounting for 1,073 square feet removed. Additionally, the crew collected 1,134 bags of litter and 240 bags of recyclable materials from County roads. As a result of this program, 302 probationers were able to perform their community service hours. The Sunday Route Program, coupled with the swift response from the Roads and Airports Department, continues to provide the appropriate level of service needed to meet current graffiti trends.

Clean Up Events
On September 11, 2004 Integrated Waste Management (IWM) staff picked up seven bags of litter and three bags of recyclable materials in the Lexington Hills area while residents cleaned out their garages and backyards, dumping 25.41 tons of items in eight debris boxes provided by Green Waste Recovery. This event served 1,180 homes in the Lexington Hills area.

A similar event was held September 18, 2004 in the Southside Drive area of District Two. IWM staff and Deputy District Attorney JoAnne McCracken led seven truant youth through neighborhoods, picking up 23 bags of litter and two bags of recyclable items as residents filled 30 debris boxes provided by Green Valley. Three hundred eighty-five households disposed of an amazing 84.95 tons of garbage. A member of Supervisor Alvarado's staff was on hand to greet constituents and assist residents with loading up the bins.

On October 23, 2004, IWM staff was again leading seven habitually truant youth through the Burbank area of District Four, collecting 32 bags of litter and recyclable materials. Nine hundred households were served and residents filled 30 debris boxes with nearly 71 tons of garbage.

On March 26, 2005, IWM staff supervised five youth in picking up nine bags of litter and two bags of recyclable items in the Story and White area of District Two. Forty-five tons were collected and 385 households served by Green Valley Disposal.

Another event was held on April 16, 2005 in the McKee/Gion neighborhood. Staff supervised six youth who collected seven bags of trash and 2 bags of recyclables. Green Valley collected 57.8 tons from 360 households.

The Great American Litter Pick Up took place on April 23, 2005. Forty-four participants picked up 34 bags of litter and recyclable items in Alum Rock, Burbank and San Martin. The Great American Litter Pick Up is an annual event coordinated by a multi-jurisdictional task force that includes Santa Clara County Integrated Waste Management Division, Santa Clara County Office of the District Attorney, Caltrans, the Valley Transportation Authority, the City of San Jose and the City of Campbell.

On May 21, 2005 a clean up event was held in the Cambrian neighborhood of District Four. Staff supervised five youth who collected eight bags of litter and recyclable items while neighborhood residents filled 26 debris boxes with 72 tons of material.

Per the franchise agreement, South County residents are provided with 12 yard waste vouchers and one disposal voucher per year. There is also an annual "recycling days" event in which residents may bring unlimited quantities of wood and metal items to be recycled.

Upcoming Clean Up Events
There are clean up events scheduled for the Golf/Toyon area and Lexington Hills in early fall. Staff will be available to supervise youth and volunteers and will coordinate with Board offices to confirm dates.

Enforcement
Staff continues to maintain a database of graffiti tags and shares information with the Sheriff's Office and the District Attorney's Office when requested. There has been a marked decrease in graffiti over the past year.

Interdepartmental Partnerships
Staff continues to work with the District Attorney's Office, the Probation Department and the Roads and Airports Department.

The District Attorney's Office has received a federal Weed and Seed grant for the Burbank community to weed out criminal activity and seed the area with resources and services to benefit the community. Staff serves on the Weed and Seed Steering Committee and attends bi-monthly meetings.

The partnerships with the Probation Department and the Roads and Airports Department continue to be the most efficient way of abating graffiti and litter in unincorporated pocket areas. The Roads and Airports Department is responsive to calls for service and the Sunday Route Program provides abatement services on a weekly basis.

Status of Performance Goals
1. Coordinate six graffiti and litter abatement events.
Coordinated seven clean up events.

2. Coordinate 300 participants for graffiti and litter abatement.
Coordinated 444 participants.

3. Abate 5,000 square feet of graffiti.
Abated 2,755 square feet.

4. Abate 375 graffiti tags.
Removed 54 tags.

5. Collect 650 bags of litter and recycled materials.
Collected 1,702 bags of litter and recycled materials.

Performance goals for FY are:
1. Coordinate six graffiti and litter abatement events.
2. Coordinate 400 participants for graffiti and litter abatement.
3. Abate 2,000 square feet of graffiti.
4. Abate 100 graffiti tags.
5. Collect 1,500 bags of litter and recycled materials.

County Integrated Waste Management Division Activities Related to Reduction of Nonpoint Source Pollution FY 2005

Type of Activity	Description
Residential Garbage Collection Services	Weekly garbage collection services were provided to 19,699 unincorporated area households and all unincorporated area businesses.
Residential Recycling Collection Services	Provided weekly (13,854 households) or bi-weekly (4,902 households) recycling collection services. Recycling services provided to unincorporated area businesses vary per customer request.
Residential Yard Waste Services	Provided weekly yard wastes collection services to 13,854 households and bi-weekly services to 1,691 households. In South County unincorporated area, 3,211 residences received yard waste vouchers to provide for monthly drop off of yard wastes at San Martin Transfer Station.
Residential used oil & used oil filter collection	Collected used oil & used oil filters at curbside on a weekly basis from all unincorporated area neighborhoods (19,699 households served).
On-call disposal days	12,149 households were offered 2 days per year to set out extra waste or yard waste for collection at no added cost; 3,211 households received a voucher for one no cost drop-off at San Martin Transfer Station.
Special Cleanup Services and Events	4,110 households were served by special community cleanup events in their neighborhoods (different neighborhoods are served by this program each year). A total of 299 tons of waste and recyclable metals were collected. South County residents are now provided with vouchers foron free drop-off at the San Martin Transfer Station annually.
Public Outreach Campaigns	A number of countywide public outreach campaigns were conducted.
Public Outreach Events	Information on waste prevention, recycling, household hazardous waste management, home composting, and other environmental topics was provided at many local public outreach events.

Public Outreach Information	The Countywide Recycling Hotline (1-800-533-8414) and Recycling Website (ReduceWaste.org) provided a wide range of waste reduction and recycling information to the public.
Newsletters	Unincorporated area residents received quarterly newsletters providing information on a variety of waste and recycling-related topics.
Litter	Litter reduction and management information and tips are provided through various outreach materials. Additionally, IWM has an agreement with the Juvenile Probation department to pick up litter on a weekly basis. More detailed information is provided in the attached report.

SANTA CLARA COUNTY POLLUTION PREVENTION PROGRAM • FY 05 ACCOMPLISHMENTS

Initiative/Activity	Partners	Accomplishments	Next Steps
Green Business Program	San Jose, Palo Alto, Gilroy, Morgan Hill, County of Santa Clara, SCVWD, PG&E, ABAG, DTSC	• 26 businesses certified in FY 05 bringing total to 65. • 12 newly enrolled businesses in FY05. • Total enrolled, working towards certification is 29. • Participants have undertaken numerous actions to reduce energy and water use, buy recycled, prevent waste and pollution. **Local Accomplishments:** • Participating businesses are influencing employees, vendors and clients, members and children. • Public agencies certified: Santa Clara Valley Water District, City of San Jose Environmental Services. Department, City of Sunnyvale Fleet Services, City of Sunnyvale Senior Center, County of Santa Clara Department of Agriculture – South County. • In June 2005, the Technical Advisory Committee to the Recycling and Waste Reduction Commission voted to expand the program to include ALL cities in Santa Clara County, making it a truly countywide program. **Regional Accomplishments:** • Participated in San Francisco Green Festival. • Hired marketing firm to develop outreach strategy. • Over 500 businesses/other organizations certified. • Expansion underway within Bay Area and to other areas within EPA Region 9, including development of a database that will allow for better qualitative data tracking. • Held recognition of all certified Public Agencies in the Bay Area **Pollution Prevention:** Assessments identified potential pollution sources and ways to reduce use of toxic materials. Businesses stenciled ***no dumping flows to bay*** on storm drain inlets on their property.	**Incorporate Strategic Priorities** • Leverage regional resources to enhance local efforts • Conduct research on factors motivating business participation to support development of outreach and recruitment strategies • Enhance website resources 1) Simplify/streamline Green Business certification process 2) Continue to build partnerships with cities, regulatory agencies, etc. to assist in implementation and business certifications **Implementation Priorities** 1) Increase the number of enrolled and certified businesses countywide. 2) Develop/conduct local outreach to educate the public on the GBP and the importance of patronizing certified green businesses.

Electronic Product Waste	15 Cities, DEH, Private Industry	**What all have we done?**	Continue to participate in local & regional stakeholder discussions to identify potential solutions and develop local ordinance.
Sustainable Silicon Valley - Environmental Management System Development	SVMG, SVTC, Cal/EPA, BAAQMD, SVEP, P2 Committee, other community groups	• This partnership is lead by Cal/EPA in association with local business groups. • IWMD is a partner is this effort. • IWMD staff has provided the partnership input regarding identification of priority environmental issues affecting the county and residents. • Participated in design of a strategic plan, outreach and website. • Provided input on design of and internet based system to conduct the survey to obtain the broadest possible response.	• Review and assist in implementing strategic plan • Select industries to target for implementation of plan.

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 05 ANNUAL REPORT: Public Information and Participation PI/P
COUNTY OF SANTA CLARA CLEAN WATER PROGRAM

Program Work Plan Task	Activity	FY 05Tasks	Comments	Status	Responsible Party
	WE&O Outreach	Support WEO in SCVURPPP budget		Ongoing	CWP Prgm. Coord.
	WMI Core Group, LUSG	Monitor WMI meeting minutes and materials: Core Group, Land Use Sub-Group		Ongoing	CWP Prgm. Coord.; Planning Office
Public Information / Participation					
PI/P	On-going public Information program	Staff will continue to use a variety of outreach avenues to educate the variety of audiences in the County. See following PI/P table for detail of activities.	Green business program is ongoing. IWM and P2 and GALA have been included within the Dept. of Agriculture and Resource Management	Ongoing	IWM Coord., P2 Coord., GALA Coord., DEH, CWPPrgm. Coord.

General Outreach

Activity	Communication Vehicle	Goal
NPS literature distribution to the general public at County facilities: • Govt. Center • Planning/ Building Dept. counter • Events, i.e. Earth Day, County Safety Day Seminar	**CWP Literature:** Pests Bugging You?, Home Maintenance Tips, eight construction tri-folds, Blueprint For a Clean Bay booklet, IPM pest-specific fact sheets, Grow-It!, pool water brochure. **HHW Prgm literature:** HHW brochures, small business hazardous waste brochure, (and any new Mercury-products literature as it becomes available)	Ongoing-- Keep stocked in view of public
HHW Collection Events	Handouts	Ongoing

		throughout the year
Website: Include new information in County NPS Prgm. website. Include NPS Ordinance C3. changes when adopted.	County web site	Ongoing
Watershed Education & Outreach Campaign: Conduct or participate in local activities that are coordinated with the Watershed Education & Outreach campaign. Evaluate the effectiveness of PI/P projects by direct or indirect means as appropriate.	Any ed. materials developed by the WE&O campaign. Continue handing out Watershed Watch packets until gone.	TBA

Targeted Outreach

Activity	Communication Vehicle	Goal
County staff: • Building inspectors • Construction Inspectors and Engineer/Plan Checkers • Planning Office: Planners • Maint. Yard& Roads Maint. staff • Roads staff and GSA staff managing facilities pesticide spraying contract • County employees for general info on less-toxic alternatives for their	NPS literature, as appropriate In-house and Program trainings E-mails	Internal training at least once/yr, for each listed group of employees (except the general County employee info on IPM) In addition, building inspectors, construction inspectors, planners, engineers are encouoraged to attend SCVURPPP-sponsored training events.

own home use, and info on not using pesticides on the job, if unauthorized (detail in the Pesticide Workplan)		
County Contractors: Require PCOs, contracted for work on County facilities, to use pest control methods consistent with our IPM policy and demonstrate adequate training (IPM Coord.) (See Pesticide workplan for details.)	Contract specifications. IPM Ordinance. SCVURPPP sponsored IPM workshops as they occur.	Adequate contract specifications. Appropriate contractor & GSA staff attendance at Program workshops. (IPM Coord., Parks, Roads, GSA)

Auto Repair Shops	Education of shop mgrs. during tri-annual inspections by DEH; use SCVURPPP lit., when necessary	Ongoing
Restaurant education	Restaurant poster distr. at inspections by County health inspectors as needed, when not present in facility, when wall space allows.	Posters left at restaurants at routine inspections by DEH as appropriate.
Development community	Literature distr. at Planning/Bldg Lobby *Blueprint for a Clean Bay* manual; eight construction tri-folds; storm drain stencils are available.	Restock as needed, checked regularly
Problem contractors in the field	Outreach letter to problem contractors (40 on database—warning letters sent in the past to all). Illegal dumping of soil: targeted letters to swimming pool contractors. Verbal and Written notices and follow up. Improve written notices for erosion	Postponed until Fall 05

	problems.	Constr Insp. Perf. Std.
Residents living near creeks	Water District's Stream Care Guide	Display, restocked as needed
Gardening community—IWM Coord. contacts and coordinates with local gardening clubs to provide them with IPM info. through composting program	IPM fact sheets from SCVURPPP and others	As opportunities arise. (IWM Coord.)
Outreach to local restaurants (working with DEH inspectors) to encourage less-toxic control (Program Pesticide Workplan for details.)		Ongoing -- Arrange for distribution as the new materials become available. (DEH--CPD)

Public Participation

Activity	Communication Vehicle	Goal
Encourage participation in regional creek cleanup event. Help publicize cleanup.	Email, hang posters in Govt. Center	Involve public and county work force

School/Education Outreach

Activity	Communication Vehicle	Goal
Public Schools N/A [Students primarily attend schools within the incorporated cities; therefore this is not a priority for the County]	Via Cities' existing and planned outreach	Present storm water pollution prevention message to youth

Administration

HLUET−CE01 081805

Prepared by: Naresh Duggal
Program Manager

DATE: August 18, 2005

TO: Supervisor Don Gage, Chairperson
Supervisor Pete McHugh, Vice−Chairperson
Housing, Land Use, Environment, & Transportation Committee (HLUET)

FROM: Gary A. Graves
Chief Deputy County Executive

SUBJECT: Integrated Pest Management and Pesticide Use Ordinance − Quarterly Status Report for the period of June'05− August'05

RECOMMENDED ACTION

Forward a favorable recommendation to the Board of Supervisors for the acceptance of the quarterly status report on the progress of implementation of the Integrated Pest Management and Pesticide Use Ordinance.

FISCAL IMPLICATIONS

There are no fiscal implications associated with acceptance of this report.

CONTRACT HISTORY

Not applicable.

REASONS FOR RECOMMENDATION

Budget Strategies for Implementation of IPM Technology

In order to include the use of IPM tools & techniques in on−going departmental activities, long−term strategies are necessary to promote transfer of existing funding to environmentally friendly technologies. While there are short−term start−up costs for any new technology, in the long run IPM has often proven to be more cost−effective than a strictly chemical control program. Development, review and implementation of landscape planning and facility design should include evaluation of IPM components and cost analysis in accordance with the requirements of the IPM ordinance. Consideration should be given to:

- Landscape and facility design and construction criteria and standards that promote cost−effective and ecologically sound management of landscape vegetation and pests.
- Inclusion of an implementation timetable, strategy and costs of the IPM component of the landscape and facility design.

The County IPM Manager is currently in discussion with the Department IPM Coordinators and Managers to plan ahead for FY06/FY07 on the issues facing them. Possible areas of activity include use of recommendations consulting professionals to project designs and incorporation of projects in capital project planning.

Status Report on Implementation Priorities

A. Pest Management and Facility Maintenance: Proactive & Preventive facility maintenance is critical to mitigate chronic pest problems. Control measures such as sanitation, and building maintenance and modifications are strong elements of a structural IPM project. Eliminating or reducing sources of food, water, and harborage that are available to pests, and limiting pest access into and throughout buildings needs close attention. The Facility Managers and/or Department IPM Coordinators should review and follow up on the inspection reports and recommendations on pest activity and related sanitation, housekeeping and maintenance issues. "IPM Guide for Facility Managers", a companion manual to "SCC IPM Administrative Guidelines & Procedures" is now available as reference. The purpose of the guide is to present

a sampling of techniques and procedures to illustrate the facilities management approach to pest control. All of the methods cited have been tried previously, and all have proved successful in real−world situations.

Pest monitoring, reduced risk control treatments & related occupant education are also underway in the facilities with reoccurring infestations. The County IPM Manager is closely monitoring the efficacy of control strategies to ensure that pest free environment is maintained for building occupants. The County IPM Manager is also conducting site−specific inspections, addressing issues related to sanitation, housekeeping, and building & landscape maintenance to mitigate pest problems. On going chronic activity may warrant limited use of restricted (under the SCC IPM Ordinance) pesticides. However, no exemption has been given to date.

B. Ecological Urban Landscape Planning:

The key to successful and economical IPM in landscapes is preventing pest problems, mostly by carefully planning, designing and managing healthy plant care (PHC). Many PHC methods and principles are included within IPM as well. PHC emphasize managing a healthy plant ecosystem and working with nature to provide a flourishing landscape. The excellent results achieved by applying PHC principles often eliminate pest problems entirely. Rather than accepting pest attack as inevitable, progressive landscape management sees a pest problem as a sign that there is an underlying plant health problem they need to address.

Factors to consider in designing or improving a landscape:

- o Soil conditions, including fertility, drainage, pH and organic matter
- o Facility design, such as planters and beds, irrigation systems, walkways that prevent weed growth, pest harborage, breeding
- o Plant selection, for cultivars resistant to pests and adapted to the climate and site taking into account sun and shade conditions, winter temperatures, winds and patterns of use
- o Plant diversity, by choosing a variety of plant families, species and cultivars; this avoids monocultures, which are more likely to suffer pest outbreaks
- o Plant care, such as transplanting methods, spacing, watering, fertilizing, pruning, staking, aeration, dethatching, mowing practices

Most Santa Clara County facilities already have established landscapes. Once immediate pest problems have been dealt with, the department landscape managers should be looking for

ways to correct the underlying conditions that led to the problem. This might mean developing a long−term plan to replace problem plants, rebuild ground, redesign planters or make other changes. The process of "designing in" good growing conditions should be implemented. In order to begin, the existing landscapes need to be evaluated, determine project life cycle costs, and a budgeting and implementation plan needs to be developed. Preliminary discussions on the subject were held on July 19, 2005 at the IPM−TAG meeting. The County IPM Manager is now initiating the project planning process with individual user departments.

A pilot demonstration using non−chemical approaches to Urban Turf & Landscape maintenance is under consideration. A site at least one acre in size, if possible located at the County Administration building, is being sought. This demonstration will provide a real world example comparing current practices to maintenance through alternative practices. The project will also assist in assessing potential cost.

C. Posting of Pesticide Use: Land signs will be used for posting any pesticide applications on turf & landscape. Delays have been experienced due to getting quotes. The existing supplier does not entertain quotations for small quantities and the project is on hold until an alternative is found. Two thousand dollars ($2000.00) in one−time funds are available for this project. Departments will buy the signs on as needed basis.

D. Pest Management & Pesticide Use − Record Keeping (PUR) & Reporting: Pesticide use data (Departmental summaries) for the first & second quarter of 2005 are now available for review. Records of each application reside with the departments and the contractors and are available upon request on case−by−case basis. Quarterly comparative analysis is on hold, since it requires a central database and uniform data entry. It will be made available once the web based electronic PUR database is fully developed and functional. ISD has moved the estimated launch to October 2005 or December 2005 based on staff availability.

E. Pesticide Use Exemption: While we have achieved significant progress since the adoption of the IPM Ordinance, continued efforts are needed based on our experiences during the last three years. One pesticide use exemption per Section B28−5 was granted as follows:

1. Health & Hospital Department for a specific use exemption under Section B28−5(c): use of the following pesticides applications to control subterranean termites at the San

Martin Clinic location:

First Line GT (Sulfuramid) Bait − approved for specific use

Tim−Bor (Disodium Octaborate Tetrahydrate) − approved for specific use

Cy−Kick (Cyfluthrin) − approved for specific use

Premise (Imidacloprid) − approved for specific use

Termidor (Fipronil) − approved for specific use purpose.

2. Department of Parks & Recreation, for a Specific Use/Emergency use exemption under Section B28−5(c): "Wasp Freeze" Wasp & Hornet Killer (d−trans Allethrin 0.129%). This product will be used in case of emergency response to stinging insects in Regional Parks.

One pesticide use exemptions per Section B27−5 is under consideration:

1. Request for exemption by the Fleet and Facilities Department for Termidor (Fipronil 0.006%) liquid spray application to control argentine ants is still under consideration on a case−by−case basis. This subject has already been discussed at several IPM−TAG meetings. IPM−TAG members representing Pesticide Alternatives of Santa Clara County (PASCC) have expressed their reservations to the exemption. To date, no exemption has been granted. Insecticide baiting using low impact/ least toxic baits and residual application of Rosemary Oil based EPA exempt insecticide will continue be the primary method of control. The facility managers have been informed of conditions conducive to pest attraction, breeding and harborage such as landscape / sanitation/housekeeping & maintenance. Close attention on correcting these conditions by the facility management & building occupants will help to minimize reliance on chemical alternatives to control ants. The County IPM Manager will continue to provide on−site−inspections, evaluate and address preventive and proactive alternatives & solutions on case−by−case basis.

F. IPM Web site: The IPM web page design has been finalized. ISD is assisting in the web development. Creation of this website will help in dissemination of necessary IPM awareness and education to all user groups and the public. Anticipated launch date is now moved to October 2005, in conjunction with the launch of Pesticide Use Reporting Database. ISD project manager will provide the update on launch accordingly.

G. IPM Projects & Demonstrations aiming at Pesticide Use Reduction: The IPM projects & demonstrations reported earlier are now being implemented, providing sites where hands−on

education about IPM is coupled with a relevant, "real−world" example.
The reports on each site visit are available to interested parties.

1. Use of Matran (Clove Oil formulation); Radiant Heat & Weed Flamer torches in post emergent vegetation control: A large scale cost efficacy trial started in late January 2005 at Ed Levin Park by the Department of Parks and Recreation in partnership with EcoSmart Technologies. The company provided the product (250 gallons) and will provide technical service support at no charge over the two−season trial. The project is underway. The landscape maintenance contractor and Fleet & Facilities ground maintenance have also started using Matran (Clove oil formulation) a post emergent herbicide on urban landscapes, a significant achievement compared to earlier practice of scheduled applications of conventional herbicides on urban landscapes throughout the county facilities. The on going unusual weather & record rainfall has resulted in slight set back in this project. Unsightly weed growth in certain areas of the county landscapes is anticipated as we undergo this transition and learn about optimizing logistics and protocols. It is highly unlikely to find one technology or product (conventional herbicide or alternative) as a panacea of all. An integrated approach including variety of tools & techniques is necessary and should be appropriately designed and implemented within the overall management of urban ecosystem. For example, to supplement clove oil post emergent vegetation control at Health & Hospital facilities, the landscape contractor (TruGreen Landcare) is also using radiant heat and weed flamers. The Fleet & Facilities department has also been encouraged to explore & integrate such technologies into their operations, including principles of plant health care (PHC), radiant heat, weed flamers, use of mulch, weed fabric, plant selection, and design improvements etc. A meeting is planned in August 2005 with the Fleet & Facilities management team to discuss the same in the broad spectrum of vegetation management in urban landscapes. The Clove Oil project will continue in the upcoming 2005−06 season to determine optimum time of product application and protocol. The users departments should plan for purchase and use the product in the upcoming season.

The County IPM Manager met the EcoSmart Technologies management team on February 15, 2005 to discuss avenues for reduction of the product cost, increasing the economic viability of its use. The desired outcome is to provide a convincing, viable alternative to minimize the use of conventional herbicides on right of ways on county's landscapes, roads, airports & parks. It will effectively minimize the runoff pollution concerns from

conventional pesticides into our streams & waterways, thus preserving the environment.

2.Yellow Jacket Abatement Control: Last year (2004) was extremely challenging for the Department of Parks & Recreation with regard to yellow jacket control. Unfortunately, there is no abatement chemical/product registered in California that can successfully intercept this pest early in the season. However, research projects are underway in some institutions. The County IPM Coordinator has been successful in negotiating a collaborative research work with scientists from the University of California, Riverside. The project was implemented in May 2005 at Santa Teresa, Vasona and Uvas Canyon parks covering approx. 150 acres. The study will continue until late October in 2005 and will continue in the May−October 2006 timeframe.

The desired outcome of this project is the registration of insecticide bait that will be effective in the elimination of Yellow Jacket nests, and in Yellow Jacket traps and a strategic service/abatement protocol for the user groups. A successful project will potentially help alleviate this vexing problem in 27 regional parks of Santa Clara County, covering 50,000 acres, and could be expanded to urban turf & landscape areas in County owned complexes. It will also benefit other public agencies & public at large throughout California & even throughout the United States, if a successful Integrated Pest Management protocol and effective abatement strategy is developed with the registration of effective bait & lure traps.

3.Rights of Way vegetation management by use of Hydro−Mechanical Obliteration (HMO) and hydro seeding/Hydromulching technology: One potential vegetation management plan is use of HMO to remove existing vegetation followed by hydro seeding of desired vegetation or coverage of the soil with mulch. The process appears ideal for certain segments of Rights−of−way vegetation management. If used consistently, it can reduce the ongoing vegetation maintenance costs in the long run. The HMO technology uses high−pressure water to shear unwanted vegetation. During the last quarter, demonstrations were organized to understand the technology and its adaptability in right of way vegetation management. Initial observations & comments by Department of Roads & Airport and Department of Parks & Recreation management indicate a promising & desired performance. However, like other new technologies or concepts, its use, equipment design, service protocol, user adaptability and cost economics needs further investigation. A small−scale (1/6 linear acre on Chaparral Ranch Road at Ed Levin Park)

performance trial started in late January 2005 and at the playgrounds at Vasona Park, in partnership with Cameron Colson Corporation. The County IPM Manager met Mr. Cameron Colson on February 15, 2005 to discuss the economic viability of its use, protocol and logistics. The subject was also discussed in subsequent meetings with the IPM−TAG on April 19, 2005 and the Department of Roads & Airport on May 4, 2005. The Department of Roads & Airport has agreed to implement a pilot project at selected expressway sites (medians & intersections). The County IPM Manager will explore this subject with the Santa Clara County Department of Agriculture and University of California. The desired outcome may provide a paradigm shift or a turning point towards non−chemical approach to right of way vegetation management.

H. IPM Awareness, Education & Interactive Application:

1.Annual Regional IPM Conference: Lack of training is often cited as an obstacle to the wider adoption of IPM methods, where each individual has to understand their role and participate to promote pest prevention and minimize pesticide use. Establishment of a collaborative IPM training program and conference, inclusive of several bay area agencies, has been a long−term goal of the program. A jointly produced and attended event allows education and outreach to a greater community, addresses issues that go beyond city or county boundaries, as well as an efficient use of scarce resources. Funding for conference costs can be contributed by each agency, and all participants benefit from sharing the cost of one conference. Santa Clara County has taken a leadership role in forming the IPM Regional Alliance.

The second Regional IPM Conference was held on June 14, 2005 in Marriott City Center, Oakland, CA. It was a great success and staff received numerous compliments. The conference had a broad agenda providing IPM awareness and technical education to a diverse audience. Throughout the day, seventeen (17) IPM subject matter specialist speakers, kept the audience engaged with their interactive and informative talks. More than 400 participants from approximately 300 plus public agencies & private businesses benefited through this IPM education & outreach. One hundred and four (104) participants were from Santa Clara County. Twenty−eight (28) organizations provided displays. Forty−Seven (47) organizations or groups provided support financially or through alternative, in kind, or technical contributions. The County IPM Manager was also successful in compiling & editing the 2nd Edition of "Regional IPM Resource Manual".

Approximately five hundred (500) CD−ROM copies were developed and distributed to the participants and other interested parties.

2.Subject Matter Specific Training Modules: The County IPM Manager has recently produced a training video titled "Sanitation, Maintenance and Housekeeping−Role of Facility Managers and Building Occupants in Preventing Pest Problems". The video production is a collaborative effort of the County IPM Program and Orkin Exterminating Inc., which currently provides the Structural IPM services for the County. The County IPM Manager has also written an accompanying "IPM Guidance Manual for the Facility Managers". Copies of the video (in VHS & DVD format) and the "IPM Guidance Manual" will be distributed to all departments/facility groups, so that it can be viewed/referenced periodically during their staff meetings to refresh each individual's role in pest management. The training through this media is capable of reaching all 16,000 county employees. We are also planning to disseminate the same to other interested public agencies and the pest control industry.

The County IPM Manager is also exploring collaborations with public agencies and industry for development of other subject matter specific on−the−job training modules (audio−video formats). This will enable education & outreach to IPM practitioners including County employees, who are responsible for pest management activities in their respective trades. Other plans include purchase of already existing IPM educational videos and exploration of grants & funding opportunities for training & education.

3. Safety Coordinator's IPM & Precautionary Principles Awareness: The IPM program is participating in the upcoming OSEC Safety Conference. IPM−Precautionary Principles & their role will be discussed with the participants.

4. Occupant/Tenant Awareness & Training: Two training programs for year 2005 are planned to educate building occupants/tenants on practices such as good sanitation, housekeeping, and maintenance. These awareness training will help to mitigate several pest management problems. The method of delivery (educational workshop versus staff meetings) for large audience is under discussion. The County IPM Coordinator is currently working with the Departments to plan the training agenda & schedules accordingly. The dates will soon be posted on the SCC IPM website.

5. Public Awareness: One brochure & one PSA (public service announcement) will be developed to promote the county s IPM efforts. These brochures will introduce the concept of IPM to a diverse audience. The description about IPM, its components and its advantages will be written in house by the County IPM coordinator. Six thousand dollars ($6000.00) are available for this project from the one−time funds allocated to the IPM program. The project is on hold due to time limitation and engagements with other IPM priorities.

BACKGROUND

On May 21, 2002, Board adopted the Integrated Pest Management (IPM) and Pesticide Use Ordinance. The IPM Ordinance went into effect on June 20, 2002. As required by the ordinance, staff is to provide a quarterly status report to the Housing, Land Use, Environment, and Transportation Committee and then to the full Board for their review and comment. The Technical Advisory Group (TAG) has previously agreed to proceed on the implementation priorities summarized in this report.

CONSEQUENCES OF NEGATIVE ACTION

Not applicable

STEPS FOLLOWING APPROVAL

Staff will incorporate any comments or direction into a follow−up transmittal to the full Board of Supervisors.

cc: Peter Kutras, Jr.

ATTACHMENTS

•

Attachment H. Pesticide Management Activities

The County of Santa Clara maintains an Integrated Pest Management (IPM) Program for County buildings and properties.

The County employs a full time IPM Coordinator. The IPM Coordinator is active in coordinating regional IPM educational programs.

The County Board of Supervisors has adopted an IPM Ordinance. The County was the first jurisdiction in Santa Clara County to do so. The ordinance requires the least toxic approach to pest management, and certain pesticides are banned.

The IPM Ordinance may be viewed or downloaded at the following URL:

http://www.sccgov.org/scc/assets/docs/scc_ordinance/TOC074.HTM

COUNTY OF SANTA CLARA CLEAN WATER PROGRAM

Program Work Plan Task	Task Description	Comments	Status	Responsible Party
I. Municipal Pesticide Use ***Goal I.A.*** *Eliminate all unnecessary municipal pesticide use (particularly organophosphate (OP) pesticide use) and implement Integrated Pest Management (IPM) techniques.*				
I.A.1	Track pesticide use on County owned property. (PS #9). The results are reported in the AR.		Ongoing	County IPM Program Coordinator in County Exec's Office, FAF
I.A.3	Continue to refine and implement SOPs and BMPs for implementing the IPM policy. (PS #3).		Ongoing	County IPM Coord., FAF
I.A.4	Update URMP with Pest Mgmt. changes.		Ongoing IPM Ord.	CWP Prgm Coord.
I.A.5	Continue to ensure that any contractor employed to conduct pest control and pesticide application on County property engages in pest control methods consistent with the IPM policy adopted by the agency (PS #6).		Ongoing	County IPM Coordinator, FAF
I.A.6	Arrange annual, County facility search of chemical storage areas for pesticides no longer legal for application, and properly dispose of them. (PS #10)		Conducted once. Now ALL pesticide purchase goes through IPM	County IPM Coord.

COUNTY OF SANTA CLARA CLEAN WATER PROGRAM

Program Work Plan Task	Task Description	Comments	Status	Responsible Party
			Prgm. Coord.	
MM I.A.1.	Document completion of tasks in annual reports. Use pesticide-tracking process to document pesticide use.		Ongoing	County IPM Coord.

Program Work Plan Task	Task Description	Comments	Status	Responsible Party
Goal I.B. *Raise awareness of all municipal employees and train employees who apply pesticides for the jurisdictiony about the IPM Policy and/or IPM techniques as appropriate.*				
I.B.1	Ensure that employees who apply pesticides for the agency continue to obtain the appropriate County Ag and DPR- required training (PS #5a).		Annually	County IPM Coord. GSA, Parks, Roads
I.B.2	Provide for annual training on the IPM Policy, SOPs, and BMPs, and the latest IPM techniques to employees within departments responsible for pesticide application (PS #5b).		Annually	County IPM Coordinator
I.B.3	Annually inform employees who are not authorized to apply pesticides, that they cannot use over-the-counter pesticides in the workplace (PS #5c)		Annually, by e-mail or county newsletter	County IPM Coordinator
MM I.B.1.	Document and evaluate effectiveness of annual staff training.	Quarterly HLUET Committee reports also.	Annually for AR	County IPM Coordinator

Program Work Plan Task	Task Description	Comments	Status	Responsible Party
II. Public Education and Outreach *Goal II.A. Increase awareness of IPM so target audiences recall less toxic pest management messages and adopt IPM behaviors. Target audiences include residential pesticide users, professional pest control businesses, customers of professional pest control businesses, & pesticide retailers, school districts(PS # 7).*				
II.A.1	Assist with local implementation of the Watershed Education & Outreach (WE&O) Campaign[1], which will target the general public and include messages about less-toxic pest control and proper disposal. Support SCVURPPP as requested		FY 02 through FY 05	CWP Prgm. Coord.
II.A.2	Assist SCVURPPP in developing targeted messages regarding proper pesticide use and disposal, effects on water quality, and IPM.		Review of new pieces as developed by SCVURPPP	CWP Prgm. Coord.
II.A.4	Identify and attend local community events and distribute outreach material. Distribute literature at Backyard Compost or Master Composter workshops.		Ongoing	IWM Prgm. Coord., P2 Coord.
II.A.5	Maintain contact with local gardening groups and offer them literature.		Ongoing	IWM Prgm Coord., P2
II.A.9	Continue to support BASMAA Regional Media Relations Campaign featuring pitches to Bay Area media and responses to	SCVURPPP funds BASMAA baseline projects, including Regional Media Relations Campaign.	Ongoing	NPS Prgm. Coord.

Program Work Plan Task	Task Description	Comments	Status	Responsible Party
	breaking news on pesticide-related topics.			
II.A.10	IPM coord. to provide IPM-related press releases to local media as appropriate—using SCVURPPP generated materials when appropriate		Ongoing	IPM Coord.
II.A.12	Continue to assist with implementation of local components of a "Pesticide User Outreach" project targeting residential and commercial users	Will assist as needed.	As requested by SCVURPPP	CWP Prgm. Coor., IPM Coord.
II.A.14	Internal outreach on IPM to encourage employees to use IPM techniques away from work: Distribute IPM fact sheets electronically to involved County employees through e-mail or web site or newsletter.		Intermittently	IPM Prgm. Coord., IWM Coord.
MM II.A.1.	Document or estimate numbers of residents reached by outreach efforts and media advertising		Annually, for AR	IPM Prgm. Coord., IWM Coord.
Goal II.B. *Educate pesticide retailers and consumers about less toxic pest control products and promote the sale of such products.*				
II.B.1	Continue to fund and participate in the BASMAA Regional IPM Partnership	SCVURPPP funds BASMAA baseline projects, including Regional IPM Partnership.	Ongoing	CWP Prgm. Coord.
II.B.2	Continue to support the IPM Store	Support through SCVURPPP	Ongoing	CWP Prgm.

Program Work Plan Task	Task Description	Comments	Status	Responsible Party
	Partnership Program. (Nurseries)			Coord.
II.B.3	Assist Program to offer IPM training opportunities to pesticide retailer employees (nurseries) through coordination with Master Gardener-taught educational programs.	Task eliminated. SCVURPPP coordinating nursery outreach in cities.		SCVURPPP
MM II.B.1.	Assist Program in documenting number of participating stores, materials distributed, employees trained, and cost-effectiveness of the IPM Store Partnership Program.		Annually	SCVURPPP

Program Work Plan Task	Task Description	Comments	Status	Responsible Party
III. Pest Control Operators (PCOs)				
Goal III.A. *Minimize pesticide use by PCOs contracted for structural pest control and landscape maintenance.*				
III.A.4	Require PCOs contracted for municipal applications to use pest control methods consistent with the County's IPM policy (through contract specifications). Specifically, require contractors to: a) follow the agency's IPM policy, BMPs,	IPM-specific specifications are included in the contracts.	Ongoing	Maint. Yard Supervisor & Parks, FAF

Program Work Plan Task	Task Description	Comments	Status	Responsible Party
	and SOPs; b) provide evidence of current IPM training, when feasible; and c) provide documentation of pesticide use on agency property to the agency in a timely manner (PS#6).			IPM Prgm. Coord.
MM III.A.1.	Document pesticide use by PCOs on County property.		Avail. on request	IPM Prgm. Coord., FAF
Goal III.B. *Require all PCOs to implement Best Management Practices (BMPs).*				
III.B.2	Require PCOs contracted by County to implement BMPs through contract specifications.		Ongoing	Roads and Airports Fleet and Ops Mgr. Parks Sr. Env. Compliance Specialist Park & Rec IPM Prgm. Coord.
MM III.B.1.	Document efforts to complete the above actions.		In the Annual Report	Roads and Airports Fleet and Ops Mgr. Parks Sr. Env. Compliance Specialist Park & Rec IPM Prgm.

Program Work Plan Task	Task Description	Comments	Status	Responsible Party
IV. Commercial Businesses ***Goal IV.A.*** *Determine the extent of commercial business employees' use of pesticides (i.e., pesticide applications not performed by a licensed PCO) and conduct appropriate outreach regarding less toxic pest management.*				
IV.A.2	Assist as requested in implementation of education programs that target commercial businesses, per recommendations developed in SCVURPPP work plan.		Ongoing	SCVURPPP, DEH--CPD
MM IV.A.1.	Document outreach efforts targeting businesses.		Annually in AR	SCVURPPP , IPM Coord., DEH
V. Household Hazardous Waste Collection ***Goal V.A.*** *Provide pesticide disposal services through household hazardous waste (HHW) collection programs for all residents and small businesses, and encourage use of these programs.*				
V.A.1	Ensure that adequate pesticide disposal services exist for residents and conditionally exempt small quantity commercial generators.		Ongoing	DEH--HHW, Ag. Commis-sioner's Office
V.A.3	Support, enhance, and help publicize programs for proper pesticide disposal (PS #7).		Ongoing	DEH, Ag. Commis-sioner's Office
V.A.5	Provide hazardous waste disposal information to residents through DEH		Ongoing	DEH—HMCD,

Program Work Plan Task	Task Description	Comments	Status	Responsible Party
	website and handouts at collection centers.			DEH--HHW

Program Work Plan Task	Task Description	Comments	Status	Responsible Party
MM V.A.1.	Document that household hazardous waste collection programs adequately serve residents and businesses and that any exchange programs do not exchange organophosphate or banned pesticides.		Annually	DEH--HHW
VII. New Development ***Goal VII.A*** *Minimize pesticide use at new and redevelopment sites.*				
VII.A.2	Consider pest-resistant landscaping and design features in the design, landscaping, and environmental reviews of proposed development projects. (C.9.d.ii.)	Certification will required for Grp. 1 Projects	Ongoing	CWP Prgm. Coord., Planning Office, Office of Developmen t Services
VII.A.4	Collect information and report a summary of types of pesticide reduction measures required for development projects and the percentage of projects for which pesticide reduction measures were required. (C.3.n.5)	County to require LLA certification for Grp. 1 projects. No Grp. 1 projects yet.	Ongoing	CWP Prgm. Coord., Planning Office, Office of

Memorandum

August 2, 2005

To: Stormwater/Urban Runoff P2 Staff

From: Rob D'Arcy, Hazardous Materials Program Manager

Re: FY 05 HHW Program Update

Participation
The HHW Program served 24,927 residents from July 1, 2004 through June 30, 2005, representing a 6% increase in participation from the previous year. In addition, over 2 million pounds of hazardous waste was managed safely and legally. There were 64 collection events for residents at three permanent facilities and six temporary events strategically located throughout the County. In addition, the Program served almost 400 small businesses.

Paint
Latex paint accounted for 652,000 pounds and other paint related materials (including oil paint) accounted for approximately 384,000 pounds. Together, paint represents 50% of the hazardous waste collected.

Pesticides
Although the grant award to conduct public education about Dursban and diazinon has ended, we continued to manage 4200 pounds of these two pesticides. Over 213,000 pounds of poisons were managed.

Batteries
The HHW Program recycled almost 25,000 pounds of household batteries

UNIVERSAL WASTE
MERCURY GRANT OVERVIEW

The County of Santa Clara Department of Environmental Health Household Hazardous Waste Program provides residents with opportunities to recycle mercury-containing products (fluorescent lights, batteries, thermostats and thermometers) at retail locations, community centers and special outreach events. These products contain varying amounts of mercury, a heavy metal, which is a U.S. Environmental Protection Agency waste minimization priority chemical. A community-based collection system is convenient, cost-effective and combined with an aggressive educational outreach program, will increase awareness and participation. Outreach includes the use of consistent educational messages through the media and the development and distribution of brochures, flyers and posters as well as literature and event attendance. The **Mercury Education Project** is funded by a grant from the California Integrated Waste Management Board.

Mercury containing products collected in FY 2004/2005

Recycling partners were established at retail and community drop-off locations. These partners agreed to allow customers to drop-off Universal Waste, such as batteries and fluorescent lamps. To date 15 retail stores serve as fluorescent lamp drop-offs and 12 community centers serve as battery drop-offs. The HHW Program picks up th waste and recycled it for them. In addition, the HHW Program has established five drop-off locations for mercury-containing thermostats. Thermostats are dropped off for recycling by heating, air conditioning and ventilation contractors at five electrical wholesalers

Elemental Mercury- 155 pounds (Includes thermostats, thermometers and other products)
Fluorescent Lights – 166,000 feet 41,597 pounds
450 mercury-containing thermometers

Public Outreach
10 Thermometer Exchanges – residents exchange their mercury-containing thermometers for a free digital thermometer.

HHW participated in 34 community events.

Hazardous Waste Recycling & Disposal FOR SANTA CLARA COUNTY

C3. Battery and Bulb Recycling (County Operated Facilities)

During FY 05, the County Office of Safety and Environmental Compliance (OSEC) collected and sent for recycling a total of 3348 pounds of alkaline and rechargeable batteries.

During FY 05, the County Office of Safety and Environmental Compliance (OSEC) collected and sent for recycling a total of 1318 Universal Waste bulbs that were individual pieces (not fluorescent), and 41,162 linear feet of fluorescent bulbs, or approximately 10,000 four foot bulbs.

DEH - CPD Training FY 05

Training: CPD inspection staff members who work in the unincorporated area participate in training every other year with the West Valley Cities' Clean Water Program (CWP) Coordinator, the CWP Coordinator for the City of Cupertino, and the County CWP Coordinator.

On alternate years, the staff training occurs at a meeting with the CPD Supervisors, the West Valley Cities' Clean Water Program (CWP) Coordinator, the CWP Coordinator for the City of Cupertino, and the County CWP Coordinator. FY 05 was the year for this meeting. (Please see next page).

Cupertino • West Valley • DEH • County of Santa Clara • WV Sanitation District
Food Facility Inspection Program
April 27, 2005
Meeting Summary

Attendees:
Steve Homan, County of Santa Clara
Lavenia Millar, City of Cupertino
Arlette Kerley, Dept of Environmental Health Consumer Protection Division
Humphrey Karioki , Dept of Environmental Health Consumer Protection Division
Cheri Donnelly, West Valley CWP
Jack Lovell, West Valley CWP
Peter Sevcik, WV Sanitation District

1. Introductions & Update Contact Information

2. Update Cover Letter to Restaurant Owners & Managers

Cover Letter and Best Practices Checklist: The group provided comments for an updated version to be included in DEH Inspector handout packets for new restaurant owners or managers.

➔ **Action Item**: Update contact information and incorporate comments into a revised cover letter and best practices checklist, obtain signatures from SCVURPPP and DEH representatives, and work with SCVURPPP to get copies printed for inspector's handout packets.

Note: The Best Practices Checklist covers most of the material in the *Water Quality Protection Guidelines for Food Handling Facilities* booklet discussed in agenda item #5.

3. Evaluation of Inspection Program

The Inspection Program is working well. The *Dept of Environmental Health Consumer Protection Division* inspects each food facility 2 or 3 times per year. Violations are very few since education, verbal warnings, and official notices, motivate the responsible party to correct potential violations immediately. Potential storm drain discharge violations are documented by DEH inspectors and referred to the municipal IC/ID Inspector for follow up. The municipal IC/ID Inspector provides educational outreach and introduces restaurant owners or managers to the local inspection program.

Problems and challenges

- When dumpsters are "shared" between two or more businesses it is difficult to enforce compliance. Both businesses point the finger at the other. WVCWP Inspector has followed through with the property manager as well as the facility owner to resolve "shared" violations. Cupertino finds out who leases the dumpster and holds that person responsible for compliance. DEH has a permit category for *facilities held in common*. DEH Inspectors will have the facility manager or owner show the permit to determine who is responsible for the dumpster. Most often the facility manager will take care of the problem before it gets to that point.

4. Referring Potential and Actual Violations

Violations from the previous year and procedures for handling repeat violations were reviewed and discussed. If an inspection doesn't uncover any potential violations then the inspection is not reported to the individual municipalities until fiscal year-end. If there is a reason that the

facility may be at risk for non-compliance, the report is forwarded to the municipality's IC/ID Inspector. The IC/ID Inspector will conduct as many inspections as it takes to ensure compliance. A facility that has been referred to the IC/ID Inspector for follow up is also targeted for more frequent routine inspections in the future.

The County DEH inspectors ultimately have the authority to write citations in the unincorporated areas. Therefore, the County NPS Coordinator is not notified unless the problem is significant or requires unusual enforcement action. Some violations are for issues such as food safety that are not related to water quality. Only the water quality issues will be referred to municipal inspectors.

Problems and challenges

- At the end of last fiscal year West Valley requested that a year-end report from DEH, detailing the documented potential violations. West Valley double checked to make sure that each potential violation had been inspected by the WVCWP Inspector. Cupertino did not receive the same report. DEH is using the new enhanced data reporting forms, which don't leave room for extensive comments.

➔ **Action Item**: Review and modify data reporting procedures to ensure that Cupertino and West Valley get year-end reports detailing all actual or potential violations discovered during inspections.

5. Distributing Public Education Materials

handout "*Water Quality Protection Guidelines for Food Handling Facilities*

The group briefly reviewed the WVCWP food handling guidelines booklet to determine its usefulness. The WVCWP borrowed the booklet from Palo Alto before 1999 and made a reprint using West Valley contact information. Since supply is very low, the group considered looking into another reprint. This handout is very popular with restaurant owners, DEH inspectors, and the WVCWP Inspector. However, it was noted that some of the contact information is not valid and some of the BMP information should be updated. Most of the booklet information is covered in the *Best Practices Checklist* that the group revised as part of agenda item #2. A reprint of the booklet will not be pursued at this time. If funding is available it might be considered as a work plan task for FY 06-07.

Don't Set a Table for Pests, is an IPM related handout for food facilities. The Cupertino and West Valley municipal IC/ID inspectors are distributing them during their inspections. All agreed that DEH inspectors should hand these brochures out as part of the inspection packet as long as the supply lasts. Until supply can be verified with SCVURPPP, DEH inspectors will hand them out to restaurants in Cupertino and West Valley.

➔ **Action Item**: WVCWP will check with SCVURPPP to see how many of these handouts are available and DEH will find out how many are needed for the handout packets.

6. Training Needs for Next Year

On alternate years the West Valley, Cupertino, and County restaurant inspection meeting includes staff training for inspectors. We use this opportunity to coordinate the requirements and procedures of the municipalities with the County of Santa Clara. Next year the County would like to see if we can obtain a training video. We have training videos for construction inspections but to our knowledge there aren't any for commercial facilities or restaurant inspections.

7. West Valley Sanitation District – Fats Oils & Grease (FOG) Program

The State Water Board has put some regulations in place so that the Sanitation District is under more stringent reporting requirements. The Sanitation District and other sewer agencies nation-wide must create a Fats, Oils and Grease (FOG) control program. They will have to control how much grease is actually getting into the sanitary sewer system. Grease causes a large percentage of sewer overflows. When a sewer backs up, in most cases it backs up in urbanized areas and ends up in a storm drain or in the creek if they don't catch it. WVSD is thinking about partnering with the WVCWP IC/ID Inspector to control grease backups and sewer overflows.

In addition to looking at whether they are washing their equipment and mats outside, the WVSD would like stormwater discharge inspectors to look at how often the restaurants are pumping their grease traps. The WVSD is not sure who is looking into that right now. The requirements are in place for the building inspectors to make sure grease traps were put in. After that, unless there is an issue, the traps don't get checked regularly.

The restaurant inspection meeting is a good opportunity for the Sanitation District to find out if there are common issues that inspectors can address when they are looking at food facilities for cleanliness and water quality compliance. The WVSD wants to make sure that the grease traps are being maintained adequately. The IC/ID inspectors could check to see if pumping records are available. Restaurants are required to keep them for three years. If the facility can't produce the records they should be given a notice of violation. It sends up a red flag and the WVSD should be notified.

Currently inspections are conducted from a cleanliness standpoint. Grease traps would not be addressed unless someone sees an overflow. Outside of a full scale program, the WVSD would like to be notified if the inspector comes across a restaurant that is not cooperating. The WVSD has a fairly big hammer that they can use, such as fines of as much as $10,000 per day. This is under the food facility's sewer connection permit. Cupertino has had grease problems in the past because backups flow into the storm drain. Cupertino's building inspection department would help out on this type of problem. It doesn't appear that anyone is addressing this on a pro-active basis. The WVCWP Inspector would need some training if he were to incorporate this facet into his program.

➔ **Action Item**: The WVCWP Inspector will meet with the WVSD Director of Engineering to discuss how it might fit into the West Valley Restaurant Inspection Program. If the WVCWP incorporates this step successfully for a year then it is a possibility that the additional inspection step would be added to the DEH inspector training next year.

8. Other

DEH wanted to revisit a West Valley request from two years ago. At one time West Valley asked if DEH inspectors would distribute pool brochures during their commercial pool inspections. It was noted that the new pool brochure was really geared for private pool owners. The brochure was sent to all private pool and spa owners in the SCVURPPP agencies' jurisdiction. Commercial pools are taken into account in the West Valley Sanitation District's permit. They discharge to a sanitary sewer. It was decided that the Sanitation District should provide appropriate educational outreach to commercial pool owners.

➔ **Action Item**: check on number of pool brochures available with the Program to see how many might be given to DEH to hand out on an as appropriate basis. Some of the information is valuable for commercial pool owners as well as private owners.

- Gave 8 Pool & Spa brochures to DEH as samples

DEH SW-LEA TRAINING

Training: In addition to the Industrial/Commercial SCVURPPP Inspector Workshop earlier this year, the solid waste staff participated in training on May 11, 12 & 13, 2005. Solid waste staff attended a CIWMB/LEA conference promoting coordination between various state oversight boards, such as air, water and solid waste.

The topics at the CIWMB/LEA conference centered around solid waste facilities and how the public and the environment can be better protected from the impacts of these facilities and the improper or illegal disposal of solid waste. There were presentations relating to illegal dumping abatement as well as coordinating efforts with the RWQCBs, since local inspectors are often their eyes and ears out in the field. The solid waste staff gained valuable information from several topics covered relating to storm water pollution prevention.

Attendees from DEH included Chris Rummel and Stan Chau, Senior Environmental Health Specialists, Solid Waste Program; Danielle Lin, Environmental Health Specialist, Solid Waste Program; Nicole Pullman, Program Manager for Solid Waste, LOP and CUPA Programs; and Ben Gale, Director of Department of Environmental Health.

DEH-HMCD Training

Training:
The training that the Hazardous Materials Specialists received during FY 05 directly related to the protection of surface water or storm water quality was the Commercial / Industrial Inspector SCVURPPP workshop.

Hazardous Materials Specialists (HMS's) received on-going training in a variety of hazardous materials program areas that indirectly are related to the Clean Water Program. The first Tuesday of every month the Santa Clara County Fire Chief's Hazardous Materials Subcommittee provides a training forum for inspectors from different programs and geographic areas. This past year this Subcommittee has provided training in the following areas:

Inspection Report Writing:	Presented by the State Department of Toxics Substances Control
Enforcement:	Legal aspects of digital photography, presented by the District Attorneys Office Citation process, presented by the District Attorneys Office
Industry Specific Training:	Auto Body Refinishing Mobile Spray Operations LP Gas Systems UST Monitoring systems UST Installation Requirements and Issues (Plan Checking)
Inspector Roundtable:	Variety of issues related to use, storage, and disposal of hazardous materials

In addition, the HMS's attended an annual week-long training conference on a variety of related programs. The Unified Program Training Conference serves several vital purposes, all of which promote regulatory compliance, assist regulated communities, and enhance the professionalism of the regulators and businesses. The conference offers a four-day training program with over 60 technical sessions presented by 150 experts, providing the latest information polices, programs, and practices affecting the local hazardous materials programs. Training is provided in different tracks ranging from enforcement to technical programs (underground tank, hazardous material business plan, Cal ARP, universal waste, hazardous waste, etc.).

Staff also participated in roundtable discussions where state, federal and local regulators scrutinize current practices and propose improvement on how the laws and regulations can be implemented. Because of the wide range of program responsibilities, HMS staff receives a significant amount of training in areas that overlap with programs like the Clean Water Program.

Dear Mr. Homan,

The storm water oversight plan for Stanford University has been managed by the City of Palo Alto as agreed in our February 13, 1996 letter to your office. The areas reviewed included those already monitored by the Industrial Waste program as well as the other areas identified in the letter. Enclosed you will find a checklist of all the dates and areas visited since June of 2004. The following outline indicates the areas specified for oversight.

I. General
   A. Annual review of SU's SWPPP
   B. Maintenance of a separate RWQCP binder for updates
   C. Standing agenda item for bi-monthly meetings. Minutes in binder.
   D. Running list of areas inspected and problems found and resolved.

II. Facilities Monitored
   A. Semi-Annual industrial waste inspections
      1. Chemistry Department
      2. Science and Engineering Quadrangle
      3. Center for Integrated Systems
      4. Stanford Hospital
      5. Hoover Hospital
      6. Central Energy Facility
      7. School of Medicine
   B. Vehicle Service Facilities
      1. Fleet Services
      2. Golf Course Maintenance
   C. Peninsula Sanitary Service Inc. (Household Recycling Facility)
   D. Food Service Facilities (By County Program)
   E. Red Barn (Equestrian Facility)
   F. Construction Sites
   G. Golf Course
   H. Environmental Health and Safety Facility (Incinerator)

P.O.Box 10250
Palo Alto, CA 94303

III. General Grounds
   A. Campus divided into thirds.
   B. Each toured each three years.
   C. Tours prior to the rainy season

If you would like to discuss this report further please call myself at 329-2285 or Brad Eggleston at 329-2104.

Sincerely,

Phil Bobel, Manager
Environmental Compliance Division

cc: Marty Laporte, Stanford

Stanford University Storm Water Review (Inspections Conducted by the City of Palo Alto POTW Staff, FY 05

Date	Event	Location	Report Source	Findings	Actions Taken	Date Resolved	Responsible Party
7/17/05	Bimonthly Meeting	RWQCP	Brad	• Discussed San Francisquito Creek long-term monitoring program and new web site to display data.			
4/29/05	Inspection	Fleet Services, Golf Course Maintenance	Margaret	• No storm drain issues identified.			
12/14/04	Semiannual Inspection	CIS Loading Dock Purified Water Area	Brad	• Deionized water canisters and an AquaMedia tank have drain lines that are directed to a sump and trench drain in the purified water area. The area is outdoors but is covered. Please determine whether the drains in this area flow to the storm drain or sanitary sewer system.	Stanford Response: The drains were determined to flow to the storm drain system. The drain from the influent reservoir tank that is directed into the adjacent storm trench is an emergency overflow drain line. Effluent from this line would be a minimal amount of domestic water. The two drain lines originating from the polishing unit are also for emergency discharge purposes. The gray poly lines are normally kept closed. The white poly lines could backflow if a tank is removed improperly or malfunctions. Any discharge from these lines into the storm system would be highly filtered water, unpolished R/O treated water. This area will be revisited during the 2005 one-third of campus storm water inspection.	pending	Tracy
12/3/04	Construction Inspection	Maples Pavilion, Arrillaga	Roberto	• Arrillaga Center: A vacuum sweeper or hand sweeping should be used to	Letter detailing findings sent to Stanford on 12/10/04.	12/10/04	LeeAnn

Date	Event	Location	Report Source	Findings	Actions Taken	Date Resolved	Responsible Party
		Center, CSLI, Lucas, Bakewell		avoid spreading tracked mud onto the street. BMPs should be provided for the closed inlets when the impervious material is removed and the inlets are opened. • CSLI Site: Loose soil running along the western fence and gutter at the site needs to be removed and covered. The drain inlet on the northwest site needs to be maintained. • No issues identified at other sites visited.			
11/30/04	Bimonthly Meeting	RWQCP	Brad	• Discussed status of campus construction sites and scheduling for construction site visits.			
10/18/04	Inspection	PSSI	Margaret	• No storm drain issues identified.			
10/1/04	Construction Inspection/ Tour	Sand Hill Road Widening Project	Brad/Ken	• The Sand Hill Road project was toured with the onsite inspector, contractor representatives, and a Stanford Land Management Company representative to verify that adequate BMPs were in place. • Several suggestions were made and implemented for improving existing BMPs and addressing minor issues prior to the onset of rain.			
9/14/04	Bimonthly	RWQCP	Brad	• Discussed follow-ups to			

Date	Event	Location	Report Source	Findings	Actions Taken	Date Resolved	Responsible Party
	Meeting			6/15/04 EHS Facility storm water inspection and 8/26/04 "one-third of campus" storm water inspection. • Discussed San Francisquito Creek long-term monitoring program for upcoming rainy season.			
8/26/04	Storm Water Inspection: One-Third of Campus	Enchanted Broccoli Forest Housing	Brad	• The loading dock drain is not labeled, but appears to be a storm drain. Please verify whether the drain is connected to the storm drain or to the sanitary sewer, and label it accordingly. Mop buckets and kitchen mats were present in the area adjacent to the drain. There was no outdoor hose. If the loading dock drain is connected to the storm drain system, please ensure that no cleaning or rinsing takes place outside. In addition, an unlabeled five-gallon bucket that appeared to contain oil was being used as a doorstop. Please properly dispose of the bucket.	The loading dock drain was determined to be connected to the storm drain system and was labeled as such. Staff and students working in the kitchen were reminded that non-storm water rinsing into any storm drain is prohibited. The five-gallon bucket was removed and disposed of properly.	9/29/04	LeeAnn
8/26/04	Storm Water Inspection: One-Third of Campus	Kappa Alpha	Brad	• A paved area in back of the building by the laundry room had a hose present. The hose may be placed there for car washing. Please remind the students	The garden hose was removed. Stanford will remind all returning students of Stanford's policy to prohibit the washing of vehicles in locations not designated as wash areas, i.e. offsite car washing locations.	9/29/04	LeeAnn

Date	Event	Location	Report Source	Findings	Actions Taken	Date Resolved	Responsible Party
				of Stanford's policy regarding car washing, and remove the hose if appropriate. (Car wash water in this location would drain into landscaping.)			
8/26/04	Storm Water Inspection: One-Third of Campus	Roble Hall	Brad	• A cast iron pipe exits the basement under a staircase, and does not appear to be a fire sprinkler water drain. Please determine the source of the pipe and whether anything is discharged through it. The back entrance area of the Hall has a hose faucet, but no hose present. You may wish to address this faucet in Stanford's program of capping outdoor faucets to prevent car washing.	The cast iron pipe was identified as a sprinkler system drain. Stanford will consider capping the hose faucet after consulting with Housing and Roble Hall staff.	9/29/04	LeeAnn
8/26/04	Storm Water Inspection: One-Third of Campus	Roble Dining	Brad	• The loading dock area has a sloped pad that drains to an unlabeled sanitary sewer connection. The area adjacent to the sloped pad drains to a stenciled storm drain inlet. There is a hose outside with a hot and cold water faucet. A person working in the kitchen stated that they do washing outside to the sanitary sewer drain. A small amount of washwater had left the sloped pad area and entered the storm drain inlet. As a follow-up to the	Stanford Response: Stanford's policy for kitchen/dining equipment cleaning dictates that staff use designated indoor areas, i.e. mop sink, kitchen sinks, or floor drains, for kitchen wastewater disposal. An outdoor drain that is bermed or graded and dedicated to the sanitary sewer system may also be used for wastewater disposal when great care is used to prevent any non-storm water runoff from entering an adjacent storm drain inlet. Formal storm water training for all campus dining/housing staff has been scheduled for October 2004. Stenciling of the few sanitary sewer inlets is under consideration given the multiple	9/29/04	LeeAnn

Date	Event	Location	Report Source	Findings	Actions Taken	Date Resolved	Responsible Party
				2001 inspection of this area, Stanford stated that Roble kitchen staff had been instructed that all washing was to take place inside the building. Please verify and describe the procedures that are in place for washing. If washing is to take place outside, the kitchen staff must be certain that no washwater will enter the storm drain inlet. In addition, please label the sanitary sewer drain.	considerations.		
8/26/04	Storm Water Inspection: One-Third of Campus	Avanti/Middle Earth Housing	Brad	• An outside sink has a faucet with a very long hose attached to it that may be there for car washing. Please remind the students of Stanford's policy regarding car washing, and remove the hose if appropriate.	Stanford will remind all returning students of Stanford's policy to prohibit the washing of vehicles in locations not designated as wash areas, i.e. offsite car washing locations.	9/29/04	LeeAnn
8/26/04	Storm Water Inspection: One-Third of Campus	Student Housing Areas	Brad	• Storm drain catchbasins in many student housing areas were unstenciled. Please ensure that catchbasins in these areas, especially those in the vicinity of loading docks and kitchen areas, are stenciled.	All identified storm drain inlets were stenciled.	9/29/04	LeeAnn
8/26/04	Storm Water Inspection: One-Third of Campus	Lyman/Sterling Quad	Brad	• Four gallons of paints and four unlabeled one gallon containers that appear to contain antifreeze were present in the garbage area.	All of the containers were disposed of properly.	9/29/04	LeeAnn

Date	Event	Location	Report Source	Findings	Actions Taken	Date Resolved	Responsible Party
				Please dispose of these items appropriately.			
8/26/04	Storm Water Inspection: One-Third of Campus	Roble Gym	Brad	• A six-inch iron pipe exiting the building wall and daylighting next to the "hypochlorite shack" had a constant dripping of liquid. Please determine the source of the liquid.	The iron pipe exiting the Roble Gym northwest wall was found to contain a steam pressure relief valve for steam exhaust. The drip is the result of a faulty valve. Stanford Athletics Department initiated a project to alter the plumbing of the questioned line. This will involve the termination of the relief valve line inside the building in order to plumb the flow to the sanitary sewer.	9/29/04	LeeAnn
8/26/04	Storm Water Inspection: One-Third of Campus	Water Yard Paving Area	Brad	• Four five-gallon buckets of oil were stored outside without secondary containment. Please move the containers indoors or place them in secondary containment.	The five-gallon oil buckets were moved indoors.	9/29/04	LeeAnn
8/26/04	Storm Water Inspection: One-Third of Campus	CCSR Loading Area	Brad	• The storm drain catchbasins in this area require stenciling.	The storm drain catchbasins were stenciled.	9/29/04	LeeAnn
6/15/04	Storm Inspection	EHS Facility	Brad	• Three five-gallon containers were stored outside without secondary containment. One of the containers contained a resin compound and two were unlabeled.	The three containers were disposed of as hazardous waste.	6/30/04	Craig
6/15/04	Storm Inspection	EHS Facility	Brad	• The storm drain valve serving the EHS facility loading area was tested during the inspection visit. The valve was visually observed to close when activated. It is	Stanford's 6/30/04 response to the inspection letter stated that testing would be scheduled within the next 90 days, and that an appropriate ongoing preventative maintenance program would be developed if needed.	9/14/04	Craig

Date	Event	Location	Report Source	Findings	Actions Taken	Date Resolved	Responsible Party
				recommended that the integrity of the valve be periodically tested to assure that it is not leaking.	During the 9/14/04 bimonthly meeting, Stanford confirmed that the valve had been tested and was found to be water tight.		
6/15/04	Storm Inspection	EHS Facility	Brad	• While discussing the incinerator area plumbing with a Stanford Utilities representative, it was discovered that one of the two sump pumps serving the below-grade incinerator area is connected to the storm drain system. In previous discussions, Stanford representatives stated that both sump pumps were connected to the sanitary sewer system. Use of the sump pumps during incinerator burns has likely caused discharges to the storm drain system of incinerator scrubber wastewater with high metals concentrations.	Stanford Response: During the 9/00 and 2/02 incinerator runs following the August 1999 agreement with the PARWQCP regarding use of the sump, no water has been discharged to either the sanitary sewer or the storm sewer during operational periods, or at the conclusion. In each case the water from the scrubber tank was not sewerable, the contents were emptied into the sump, and all the contents in the sump was removed by waste contractors. To prevent any possibility of discharging process water to the storm sewer, we have labeled each pump control with "Storm Sewer" or "Sanitary Sewer" as appropriate. The control switch for the storm sewer pump will remain off during the dry season. The RWQCP collected a grab sample from the sump for metals analysis on 7/14/04 to evaluate the likelihood that contaminated water had been pumped to the storm drain system during the previous wet season. Metals concentrations were found to be typical of urban storm water.	6/30/04	Craig

SANTA CLARA VALLEY WATER DISTRICT
URBAN RUNOFF ANNUAL REPORT FOR FY 2003-04

INTRODUCTION

This is the Santa Clara Valley Water District (District) Urban Runoff Program's Fiscal Year (FY) 04-05 Annual Report (Annual Report). This Annual Report is prepared to comply with section *C.6* of Regional Board Order 01-024 and section *n* of Regional Board Order 01-119[1]. In their entirety these two Regional Board Orders comprise the Municipal Stormwater Permit (Permit). This Annual Report is to demonstrate and describe District compliance with the Permit.

The 2004-2005 Annual Report describes the actions taken to comply with the requirements of the Municipal Stormwater Permit. The Annual Report is formatted per instructions and template received from Regional Board staff.

Annual Report (AR)

The Regional Board has established a cycle of regulatory submittals that includes the District's annual Urban Runoff Work Plan (Work Plan) that is to be submitted by March 1 of each year. The Work Plan describes planned urban runoff activities for the upcoming fiscal year. The Annual Report provides a description of completed Work Plan elements and must be submitted by September 15 each year.

The Santa Clara Valley Water District's (District) Urban Runoff Pollution Prevention Program (DURP) completed several vital tasks during the 2004-2005 fiscal year (FY 04-05). The Stream Water Quality Unit this year focused on five main objectives; 1) the study of mercury and methyl mercury processes in the Guadalupe watershed, 2) Sampling of Lake Almaden, Coyote, Calero, Chesbro, Uvas, Guadalupe, Stevens Creek, Lexington, and Almaden Reservoirs for ammonia, sulfate, nitrate, phosphorous, mercury, and methyl mercury; 3) Completion of trash assessments on more than 50% of the hot spots identified by the District in the previous year; 4) the continued Hydromodification (HMP) studies in several watersheds in the county and; 5) Pilot study of the application of a Water Quality Indicators protocol to rate the water quality at 11 locations in the Guadalupe watershed. Items 1, 2, 4 and 5 are above and beyond the tasks identified in the FY 04-05 Work Plan.
The DURP includes both an area-wide component and an agency specific component. The area wide component is achieved through participation in the Santa Clara Valley Urban Runoff Pollution Prevention Program (Program) which is a collaborative effort by 15 agencies, including the District, to implement pollution prevention measures on an area-wide scale irrespective of the jurisdictional boundaries of the individual participating agencies. The agency specific component of the Urban Runoff Program targets District activities and facilities that are potential sources, or potential receptors, of non-point source pollution. These activities include construction of capital improvements for flood control and water supply, channel maintenance, facility maintenance, and water utility operation and maintenance. Other sources of stormwater pollution, which are not associated with District activities, include illicit connections to storm drains, and illegal or accidental dumping or discharges on District facilities and waterways

Santa Clara Valley Water District Organization

The mission of the District is a healthy, safe and enhanced quality of living in Santa Clara County through watershed stewardship and comprehensive management of water resources in a practical, cost-effective and environmentally sensitive manner.

[1] Regional Board Order 01-119 revises section *C.3* (regarding runoff from new and redevelopment projects) of Regional Board Order 01-024.

Readers are encouraged to read last year's FY03-04 AR for further information about the District.

Structure of Report
The Annual Report follows the format and instructions received from the Regional Board. The report includes two sections that describe 1) Program Highlights and Accomplishments and 2) Summary of Continuous Improvement Activities. A third section presents a series of attachments. Each attachment is consistent with the Work Plan submitted in March 2004. The attachments include a Self-Evaluation Matrix and supporting information. The outline of the Annual Report is as follows:

- Certification Statement
- Program Highlights and Accomplishments
- Summary of Continuous Improvement Activities
- Attachments
  - ICID Elimination Activities
  - Public Agency Activities
    - Rural Public Works
    - Storm Drain System Operation & Maintenance
    - Water Utility Pollution Prevention Plan/Operation & Maintenance
  - New Development Planning Procedures
  - Construction Inspection
  - Public Information and Participation Activities
  - Pesticide Management Activities
  - Mercury Pollution Prevention Activities & Copper/Nickel Action Plan
  - Trash Inventory and Management
  - Other Water Quality and Watershed Management Requirements
    - Facility SWPPPs-Corporation Yard
    - Flood Control/Channel Maintenance Activities
    - Monitoring
    - Sediment Control
    - Watershed Measures
  - Staff Training Matrix

PROGRAM HIGHLIGHTS AND ACCOMPLISHMENTS

The District's Urban Runoff Pollution Prevention Program accomplished several vital tasks during the 2004-2005 Fiscal Year. The details of these accomplishments are included in the attachments to this Annual Report. Some of the Program highlights are summarized below. The full description of the activity can be found by referencing the section number with the attachment.

1.1 Illicit Connection/Illegal Dumping (IC/ID) Elimination Activities (Attachment 1.1)

Emergency Response
The District continues to focus significant staff resources in support of the ICID program. Key elements of the District's ICID program include a 24-hour, 7-day per week Pollution Prevention Hotline (1-888-510-5151); enforcement of District Ordinance 83-2; Hazardous material removal; and staff training.

The Stream Water Quality Unit has continued internal outreach efforts. Stream Water Quality Unit staff attend various District unit staff meetings to personally inform District staff of the Emergency Response Pollution Prevention Hotline number and services provided. Field Maintenance staff, Water Utility Discharge staff and Construction Administration Unit staff were re-informed of the Hotline number at their respective annual training events. Staff from many of the field operations units as well as staff who work with the public have been provided with red 4"x1" stickers with the Emergency Response/Pollution Prevention Hotline number boldly displayed for placement on clipboards or in vehicles.

The District received and responded to a total of 113 emergency response reports during fiscal year 2004-2005. The data from the emergency response reports indicates that Guadalupe River was the waterway with the greatest number of incidents with a total of 9 reports. Los Gatos Creek had 8 incident reports, Coyote Creek had 7, San Tomas Creek and Calabazas Creek both had 6. The predominant contaminants were "Hydrocarbons" and "Chemical" with 24 and 23 reports respectively, each of them representing 21% of the total incidents. Trash was the third most common contaminant that occurred in 14 of the incidents, which represents 12% of all cases. Sewage was the fourth most common contaminant.

Who made the reports? 60% (68) of the reports to the Hotline were from District staff, 29% (33) of the reports were from citizens and 8% (9) were from other agency staff (co-permittees, county communications, etc).

The majority of incidents (43) this year occurred within the limits of the City of San Jose. The City of Los Gatos had the second highest number of responses with 21, followed by the City of Santa Clara and the Town of Campbell with 8 each. The District records every response it receives. The District may forward the report information to other cities and the cities may be the actual responder but the District still logs the report for our records. It is important for the District to be able to accurately track the number of reports. The Regional Board should be aware of the fact that the total countywide number of reports from all co-permittees may be artificially elevated due to the possibility of redundant reporting.

83-2 Ordinance Enforcement

The ordinance 83-2 program has been hampered due to a lack of staff and funding. The position that resided in the Community Projects Review Unit was vacated by the retirement of an individual and the position was temporarily removed due to the reduction of District funds by California's diverting of $51 million dollars in District property tax revenue to the State Education Revenue Augmentation Fund in Fiscal Years 2004-2005 and 2005-2006. However the Coyote Watershed Division which oversees the Community Projects Review Unit does intend to reevaluate the Ordinance Enforcement Program this year and hire staff to resurrect the program.

Training and Education

The District continued ICID training of District staff, other response agencies and the public. The District has made inroads, as part of the Urban Runoff workshops, to inform District field maintenance crews and other District staff of the pollution prevention hotline. Field crews continue to be provided with "Pollution Hotline" stickers (that include the hotline phone number) to be placed in District vehicles and on clipboards.

1.2 Public Agency Activities (Attachment 1.2)

This category focuses on the District's access roads, levees, and storm drain systems. This category is also responsible for tracking of Water Utility facilities operation and maintenance. Key elements of the District's Activities include:

1. Rural Public Works
2. Storm Drain Operation & Maintenance
3. Water Utility Pollution Prevention Plan/Operations & Maintenance

Rural Public Works
The District has continued to emphasize to staff the importance of woody debris in the creeks for habitat to facilitate the reduction of potential erosion and sediment challenges at various facilities.

Storm Drain System Operations & Maintenance
Storm drain inspections and cleaning work orders continue to be distributed via the District's Maximo Preventative Maintenance program. Each month some facility maintenance staff automatically receive a computer generated work order to inspect all storm drains at their facility and have them cleaned as needed.

Due to the previous years limited attendance for the SWPPP and Storm Drain O&M training it was determined to postpone the 04-05 training to the late summer of 05, at which time the training will be provided at each facility to ensure greater attendance by responsible District staff and to provide more focused guidance on inspections and data collection at each facility. In June of 2005 this program modification was developed to provide site specific Storm Drain Operations and Maintenance training at each District facility. This new site specific training was developed as a way to increase inspection frequency at various facilities. This training will begin in August 2005.

Water Utility Pollution Prevention Plan/Operations & Maintenance
Annual refresher training was held on June 30, 2005 for fourteen District staff members who work with discharges. Participants included staff from the following District units: Operations, Planning & Analysis, Utility Maintenance, Process Engineering, Stream Water Quality, Water Quality Infrastructure Planning, and Environmental Planning. Workshop topics included: Why Pollution Prevention Matters (Environmental Impacts, Potential Pollutants and Sources, Regulatory Requirements, District Performance Standards), Water Utility Discharge Pollution Prevention Guidance Manual Overview, Roles and Procedures, BMP Implementation, Dechlorination, and Reporting and Tracking.

In July 2005, program evaluation questionnaires were sent to 50 District staff members responsible for water utility O&M. 18% (9) were returned completed. From those questionnaires received, control measures and BMPs are being implemented properly during all discharges and are functioning effectively.

This program's planned and unplanned notification policies and practices with the Regional Board have been so successful that the Regional Board has recommended that San Francisco Public Utilities Commission follow the same notification policy and practice that is used by the District.

1.3 New Development Planning Procedures (Attachment 1.3)

Hydromodification Plan (HMP)

Thompson Creek

1. Collected three years of continuous flow data (at 15 minute interval) on Thompson Creek. Other than the USGS gage on Coyote Creek, this is the longest period of continuous flow recorded on the eastern watersheds of Santa Clara County. This length of record will be used to recalibrate the HEC-HMS model. The initial calibration was to the first half year of data.

Upper Penitencia Creek

1. Installed gages on Upper Penitencia Creek for continuous flow measurement for hydrologic and sediment transport modeling

2. Geomorphic Survey, Sediment Transport Model (SIAM) and Channel Stability Assessment
    a. Completed longitudinal profile and cross-sectional survey of Upper Penitencia Creek from Dorel Avenue to Berryessa Industrial Park which is just upstream of confluence with Coyote Creek
    b. Completed pebble count, pavement and sub-pavement particle size analysis
    c. Collected suspended solids and bed load transport data for one winter to develop suspended sediment and bed load rating curves. This data will have to be collected for two more winters.

Geomorphic data and sediment transport model are necessary elements for designing future flood flow conveyance channels and erosion protection on this creek. The Upper Penitencia Creek also provides significant length of stable reference channels.

Berryessa Creek

1. The effort is similar to Upper Penitencia Creek. District staff have installed gages on Berryessa Creek for continuous flow measurement

2. Geomorphic Survey for Sediment Transport Model (SIAM) and Channel Stability
    a. Completed longitudinal profile and cross-sectional survey of Berryessa Creek from the step pool section beginning 1000 feet upstream of Old Piedmont Road to the beginning of the concrete lined channel located downstream of Berryessa Park.
    b. Completed pebble count, pavement and sub-pavement particle size analysis
    c. Collected suspended solids and bed load transport data for one winter to develop suspended sediment and bed load transport data. This data will have to be collected for two more winters.

Adobe Creek

The effort has focused on the development of a design for Upper Reach 5 that is stable, maximizes natural elements and can be accommodated to the best extent possible within the limited easement. The data collected and the models developed apply to all future stream stabilization projects that the District may undertake between 280 and El Camino Real.

1. Collected geomorphic data on stable reference reaches to provide a basis for repairing all failing reaches (Reaches 4 to 10). Stable reference reaches were identified along Hidden Villa Ranch and between Manresa and Burke Roads.
2. Collected longitudinal profile and cross-sectional data in Hidden Villa and from Okeefe to Foothill Expressway.
3. Installed continuous flow gage on Adobe Creek at Middlefield Road (ISCO 4150) to develop and calibrate HEC-HMS model continuous flow runoff model.

Future data requirements for Upper Reach 5 design include pavement and sub-pavement sampling to specify stream bed material for Upper Reach 5. This information will also be applicable to restoration efforts on other reaches. Also, the longitudinal profile and cross-sectional data will have to be collected from Foothill Expressway to El Camino Real for future SMP erosion repair and Capital projects that may be conducted downstream of Foothill Expressway. This is best done in a joint effort with City of Palo Alto where the District and City resources are pooled to collect the data. This data and detailed methodology will improve the reliability of District projects. The savings generated from subsequent repairs and redesigns will exceed the cost of data collection.

Stevens Creek

The project team has undertaken the development of a design through the Blackberry Farm area that realigns the creek to remove the fish barriers and hardscape, and provide the District credit for restoration of several thousand feet of creek. This credit is an element of the FAHCE agreement. Work completed includes; 1) Conducted geomorphic survey from upstream of Deep Cliff Golf Course to downstream of Blackberry farm. This includes longitudinal profile and cross-sectional measurements; 2) Conducted a Log Pearson III analysis of data through this section to determine a flow-frequency curve (flows at different return intervals, including the bankfull flow return interval) for the creek in this reach. The Log Pearson III was based on 25 years of continuous flow gage data downstream of Stevens Creek reservoir. Based on this, we have determined the skew coefficient for stream influenced by reservoir release. This skew coefficient is 0.24, which is substantially lower than regional skew coefficient of 0.6 used by the District for streams without reservoirs. 3) Determined the bankfull flow and its frequency; 4) Currently analyzing the data to determine channel sizing and shape; 5) Will determine channel relocation alternatives and provide information to City of Cupertino to complete CEQA documents

Ross Creek

Developing a stream restoration and erosion repair design for 500 feet of creek downstream of Kirk Road. The analysis for the design included application of geomorphology data collected during the HMP project and later, the HEC-HMS model developed, the HEC-RAS and shear stress model.

Some of the challenges facing Ross Creek are the limited bankfull flood plain width at the existing location. The original creek was a meandering channel adjacent to the existing location. It was moved into a trapezoidal channel in the 1950s. Since its construction, the watershed has urbanized significantly, with the percent impervious area changing from less than 10 percent to over 40 percent. This has resulted in two conditions: the flows are substantially higher at the 1 to 10 year period than the original design and channel size; the bridges are undersized for the hydromodified flows and cause a constriction and exacerbate erosion downstream.

The project has adopted new techniques such as elimination of one access road to allow for increase in the width and allow for creation of a bankfull flood plain, creation of a bankfull channel within the trapezoidal channel, riffle and bends to increase the stability, and vegetation of the bankfull plus channel. It is the first stream restoration under the SMP permit that takes a comprehensive look at geomorphology, hydrology and channel stability.

HMP – Stream Impact Master Plan Elements

1. Developed, tested and presented method and computations for determining allocation of costs for in-stream Regional Solutions to SCVURPPP and Cities. In-stream regional solution is an alternative for those new developments and existing developments whose impacts are addressed only partially through on-site or off-site means.
2. Identified Most Downstream Limit (MDL) of erosion along creeks in watersheds in Northern Santa Clara County. The MDL is a reach where the stream is at its threshold of stability at the upstream end of the MDL reach and has exceeded the threshold of stability within the MDL reach. To qualify for classification as a MDL reach, the reach must show a minimum of 200 feet of active erosion. This helps distinguish it from local erosion or scouring that may occur as a result of discharge from an outfall or through a constricted bridge. The erosion observed is the result of cumulative amount of impervious area added in the watershed, in addition to other changes that may have taken place.
3. Allocated costs of in-stream regional solutions in the Thompson and Lower Silver watershed upstream of the MDL to existing and future developments. Total cost allocated to each development is the sum total of costs allocated for instream solutions between consecutive junctions along a creek. Costs allocated between consecutive junctions is based on the fraction of impervious area contributed by each development as compared to the total impervious area, measured upstream of the junction.
4. Planning on extending the computation and cost allocation to other watersheds upstream of MDL.

Shear Stress and SMP Design Toolkit

1. Developed a toolkit for SMP design based on geomorphic, hydraulic and shear stress analysis.
2. Publishing a protocol for geomorphic survey
3. Developed a shear stress and restoration computational model

Published elements of the toolkit and shear stress model

1.4 Construction Inspection (Attachment 1.4)

The District continued to use the monthly inspection sheet developed FY 02-03 to facilitate compliance and follow up inspections. The Stream Water Quality Unit continued to meet with the Construction Inspectors in the field to go over SWPPP implementation at construction sites. These field meetings proved very successful for several projects and will continue in FY 05-06.

Construction Administration Unit continues to use the Incident Response/Pollution Prevention Hotline to contact Stream Water Quality Unit staff to report construction sites that are creating sediment discharges.

In FY 04-05, the District had 9 Capital Improvement Projects (CIP) under construction that included 5 flood protection/channel improvement projects, the addition at Vasona Pumping

Plant, and 3 water treatment plant projects. SWQU assisted with review of CIP SWPPPs as requested.

Construction Inspection Training for 23 District staff was completed on March 15, 2005. The training was opened up this year to include staff from the District's Capital Programs Units. Four staff from the Construction Engineering Unit (80%), 14 staff from the Construction Inspection Unit (93%), one person from the Environmental Planning Unit, and 4 Engineers from various Capital Program Units (Process, Structural, and Hydraulic) attended the training. Additionally, 12 contract staff for the Lower Silver Creek project received the training on February 10, 2005.

Effectiveness evaluation questionnaires were distributed prior to the annual training. Seven respondents encouraged SWQU to continue monthly email reminders, provide resources to enforce non-compliance and continue to assist with review of project SWPPPs as requested.

1.5 Public Information and Participation (PIP) Activities (Attachment 1.5)

The District serves a community of 1.7 million countywide and has excellent outreach programs to many sectors of the community. Key elements of the District's PIP Program include the Adopt-A-Creek Program providing outreach to creekside residents, creek clean up events supporting citizen participation, attendance at community events targeting the general public, numerous workshops presented by the Water Conservation Unit, and the School Outreach Program.

GENERAL OUTREACH

The District attended 27 community events during FY 04-05. A complete listing of all events is included in this section.

Creek Care was mailed to over 30,000 streamside residents in August 2004. The mailer provided information on keeping creeks clean and the Adopt-A-Creek program. The brochure included the same article in Chinese, Spanish and Vietnamese.

ValleyWater News quarterly issue for April-June 2004 was sent to more than 4,000 businesses and residents. This issue contained an article on using water wisely.

The District's website continues to be improved to provide continual updates to the community. During the winter season, the District's home page featured a link to flood-related information, the District's efforts to protect the waterways in the event of a flood, and sandbag distribution sites. Our on-line maintenance request form empowers citizens to report dumping or waterway-related problems, and allows them to send messages to the appropriate watershed staff. The site also includes a link to the Santa Clara Valley Urban Runoff Pollution Prevention Program.

TARGETED OUTREACH

Workshops

In October 2004, the District's Water Quality, Groundwater Management, Vegetation Management and Water Use Efficiency Units worked together with the Loma Prieta

Resource Conservation District, the University of California Cooperative Extension and the United States Department of Agriculture Natural Resource Conservation Service to conduct the fourth annual Stewardship for Small Acreages – A Series of Workshops on Land Management for Clean Water. The goal was to provide rural landowners with the resources needed to protect both surface and ground water quality on and off their property. A total of 131 people attended the four sessions.

In March 2005, the Water Use Efficiency Unit conducted a four-part Water Efficient Landscaping Workshop Series. A total of 190 people attended the four sessions: Selecting Plants for Your Water-Wise Garden, Water-Wise Garden Design, Water Efficient Irrigation Design, and Gardening with Natives. In April, the District co-sponsored the Third Annual Going Native Garden Tour, which spotlighted 30 homes in the South Bay providing examples of bird and butterfly friendly residential gardens that are both water-efficient and easy to maintain.

In June 2005, the District conducted two Irrigation Seminars for Landscapers. One session was held in English and the other in Spanish. Topics included basic hydraulics of an irrigation system, increasing distribution uniformity and common mechanical and electrical problems. A total of 50 people attended the two sessions.

Media Campaign

The District conducted two campaigns during FY 04-05: one on flood awareness/safety and the other on water conservation. Both campaigns included the District's website where people could get urban runoff information. The campaigns included the use of frequent targeted public service announcements on radio stations, targeted grassroots mailing to residents, community-based print media placement, theater slides, and 10-second sponsored traffic radio spots prior to and/or during a storm. The District's web site, news media relations and community events were utilized to extend the reach of the campaign.

The District continued to rotate various messages into our on-hold telephone announcements. Three new announcements were developed this year:

- May is water awareness month, but the Santa Clara Valley Water District works every day to ensure there is enough water for Santa Clara County homes, businesses and the environment. Water – our mission for 75 years.
- It's time for a little spring cleaning! Slip on your gloves, wear some sturdy shoes and get ready for National River Cleanup Day on Saturday, May 21. The event kicks off at 9 am and ends at noon. Cleanups benefit our local waterways with the removal of trash and pollutants. Head out o any one of 32 locations from Palo Alto to Gilroy. Go to www.valleywater.org to find out more.
- Be part of the solution to creek pollution during Coastal Cleanup Day. Volunteers are needed on Saturday, September 18 at 9 am to help keep our Santa Clara County waterways clear of trash and debris. Participants are asked to wear long pants, sturdy shoes and sunscreen. Cleanup supplies and refreshments will be provided. Go to www.valleywater.org to find out more.

The District also rotated in the message developed last year aimed at keeping our creeks clear of trash and debris, reminding listeners of their responsibilities and to call us or join the Adopt-A-Creek Program.

Flood Hazard Notification 2005 was mailed in January 2005 to over 100,000 flood plain residents. Although the mailer's main focus is flood preparedness and safety, it also contained articles on illegal dumping and keeping trash and debris out of creeks. There were five versions of the mailer, containing the map of the resident's specific watershed: Lower Peninsula, West Valley, Guadalupe, Coyote, and Uvas/Llagas.

AquaFacts, the District's employee newsletter, continued this year as an online publication. Quarterly hard copy issues were still published.

An all employee Pollution Prevention Week email campaign was conducted September 20 through 24, 2004. Five emails were sent providing pollution prevention tips. Topics included: general pollution prevention week information, watershed protection, pollution prevention on the road, preventing mercury pollution, and pesticide reduction. In addition, a Pollution Prevention Week Brown Bag was conducted on September 20. Two videos, "Secrets of the Bay" and "After the Storm" were shown. Numerous requests for brochures were received from the employees, as well as many comments on the campaign. This continues to be a good method to present pollution prevention ideas to District employees.

EDUCATIONAL OUTREACH

The District's educational outreach program serves a diverse population and responds to the needs of the schools throughout the County. Programming is consistent with State standards and regularly integrates messages and issues of other District communication programs. The District's School Outreach Program visited 207 public and private schools and reached 32,688 students and 2,628 educators during FY 04-05; 61 classes were conducted in Spanish, 35 classes were new to the program this year, and 18 teachers workshops were held. The District offers a comprehensive education outreach program for early childhood, elementary, middle school, high school, and college-aged students to establish a foundation for understanding and appreciation of water resources. The program provides age-appropriate classroom presentations, teacher in-service training in water education, and tours in order to help children understand and appreciate their local water resources.

One issue of AquaCycles (teacher's newsletter) was published and distributed to all teachers in Santa Clara County. In January 2005, AquaDrops eNews, an electronic teacher's newsletter was developed and teachers can request to be added to the mailing list.

The Coyote Creek Outdoor classroom encompasses land alongside Coyote Creek and includes a covered gazebo classroom for students and teachers, as well as a platform overlooking the creek where students can study the stream's natural habitat. A groundwater monitoring well on site enables students to observe and evaluate the underground water table and understand how surface and groundwater interact. The site features two planting areas – one site close to the creek planted with native trees and shrubs to improve the stream's wildlife habitat, and a "high terrace" or upland area landscaped with oaks, grasses and other native plants to demonstrate drought-tolerant gardens. During the 2004-05 school year, the program provided 1 class tour for 27 students and 4 teacher in-services for 12 teachers.

Morley Park Outdoor Classroom in the City of Campbell provides the opportunity to teach students about the purpose of wetlands, urban runoff and the value of percolation ponds. During the 2004-05 school year, the program provided 6 tours for 118 students and 3 teacher in-services for 12 teachers.

CITIZEN PARTICIPATION

The District established the Adopt-A-Creek Program in 1994 to encourage residents of Santa Clara County to take an active role in helping to preserve the health and beauty of our local creeks. In FY 04-5, 7 new permits and 32 renewal permits were issued and 33 creek clean up events were conducted. The program currently has 150 active participants.

The District participated in two creek cleanup events: the 20th Annual Coastal Cleanup Day on September 18, 2004 and National River Cleanup Day on May 21, 2005. During Coastal Cleanup Day, over 1,100 volunteers collected more than 30,800 pounds of trash at 33 sites. On National River Cleanup Day, 675 volunteers collected 15,000 pounds of trash at 29 countywide sites.

In 2001, the Board initiated a pilot grant program, Grant-In-Aid, to partner with community-based, non-profit organizations engaged in watershed stewardship efforts to enhance ecosystem health, water supply and water quality in Santa Clara County. These community-based organizations were awarded grants to help accomplish the watershed stewardship mission of the District.

In 2003, the pilot program was re-named Watershed Stewardship Grant Program (Program) and its purpose was expanded to include developing and strengthening local community partnerships; protecting public health and restore local watersheds; and enhancing community identity and quality of life in Santa Clara County.

To date, the Program's collaborative partnerships have resulted in awarding 52 watershed stewardship grant projects, totaling approximately $943,000 in grant awards. In FY04-05 the Board awarded 19 grants totaling nearly $394,000.

- The grant projects that were funded are identified in Attachment 1.5.

PROGRAM EVALUATION

The District uses numerous methods to conduct outreach, including written brochures, radio, newspaper, website, theater slides, community events and workshops. The wide variety of methods increases the probability that the messages are being received and understood. Combining all these different methods is very effective at meeting our public education goals. The variety of methods also ensures that many segments of the Santa Clara Valley population are being reached, including residents, businesses, students, as well as people from other locations. The District evaluates the different outreach methods and continuously seeks to improve messages and outreach methods. We work collaboratively with many other agencies and organizations to conduct outreach and will continue these partnerships in the future.

GENERAL OUTREACH

The District feels that attendance at community events is an effective public outreach method. The individual contact made at the events allows staff to answer specific questions and deliver more extensive messages. A wide variety of information can be distributed and the games and displays are a good way to attract event participants.

TARGETED OUTREACH

The District's targeted outreach efforts provide in-depth training and information to a small, targeted audience with the opportunity to answer specific questions from individuals in the group. This method allows the District to assist targeted groups to meet regulatory requirements, change behaviors that impact water quality, and provide the knowledge needed for the group to solve any water quality problems they may be experiencing. The District plans to continue this outreach method as we feel it is a valuable service to these targeted audiences and can positively impact water resources.

EDUCATIONAL OUTREACH

The District feels that the educational outreach program is a cost-effective method for educating children, teachers, and indirectly, parents.

CITIZEN PARTICIPATION

The Adopt-A-Creek program and the creek cleanup events are very effective at creating and increasing stewardship and individual responsibility for the county's water resources.

1.6 Pesticide Management Activities (Attachment 1.6)

The District uses pesticides as one of the tools for pest management on its properties and facilities. The primary category of pesticides used is herbicides. Insecticides and rodenticides are used in small quantities. In all cases, pesticide products are used only after an assessment has been made regarding environmental, economical, and public health aspects of each of the alternatives. The District has always been proactive and conservative in the use of pesticides.

The District continues to implement a pesticide policy and an "Approved Pesticide List." Except for three products, the District's Approved Pesticide List met the criteria established in the District's Pesticide Policy for water quality, environmental and public health hazards. The District's policy states "Category I and II pesticides may only be used if required to meet health and safety concerns or if mandated to maintain regulatory compliance such as dam safety." The three "Toxicity Category I" products, one herbicide and two rodenticides, were exempted from meeting the toxicity restriction due to the following factors:

1. They are integral in meeting the structural engineering requirements of the District's levee systems and dam safety program
2. There are no practical alternatives at this time
3. The toxicity and hazard exposure of these products applies only to the applicator at the time of application. These hazards are mitigated with protective clothing and eye protection which minimize the exposure hazard to the maximum extent.

The District believes that use of the less toxic products is beneficial to the environment and the health and safety of employees. The District's annual pesticide use summary report for calendar year 2004 is included in this section as Table 5.1.

The District began implementation of the arundo mitigation program in 2002. The eradication program has increased the District's use of some pesticides. The cut stump method of application minimizes the potential for environmental impacts. The District currently has a program for monitoring the water quality impacts of this work type.

The District is also continuing the program in South County to control vegetation on levee roads, in right-of-ways, and on the top of banks. The District has designated FY 02-03 as the baseline year for measuring pesticide reduction in the future. A comparison of 2002-03 usage to 2003-04 usage shows the following decreases and increases (Table 5.2):

Product	Reduction	Product	Increase
Rodeo	100.00%	Surflan	210.01%
Telar	100.00%	Pro-Spreader	70.07%
Transline	96.61%	Aquamaster	56.52%
Garlon 4	20.68%	Roundup Pro	45.18%
Pendulum	8.31%	Gallery	40.39%

One pesticide, Garlon 3A, was not used in FY 02-03 but was used in small quantities in FY 04-05 (see Table 5.1). R-11 was not used in FY 2004-05, but will remain on the list of approved pesticides for possible use in the future.

ALTERNATIVE PEST MANAGEMENT PRACTICES

The District continued to integrate mechanical harvesting and non-toxic dye colorants with the use of algaecides and herbicides to manage algae at percolation ponds.

TRAINING/CERTIFICATION

Continuing education (CE) is required to maintain certification. Employees can obtain CEs through seminars sponsored by Pesticide Applicators Professional Association (PAPA), California Association of Pest Control Advisors (CAPCA), manufacturers and universities. CEs are tracked by PAPA/CAPCA and records can be obtained from their websites. All District employees prepare an Employee Performance Plan and County Agricultural Commissioner and the State Department of Pesticide Regulations certification and training requirements are included in individual Performance Plans. Performance Plan evaluations are conducted every January for all employees. Employees not meeting certification and training requirements contained in their Performance Plan may face disciplinary action or termination of employment.

1.7 Mercury Pollution Prevention Activities & Copper/Nickel Action Plan (Attachment 1.7)

Mercury Pollution Prevention Activities

Between March and September 2004, the District implemented a Data Collection Plan that included seven elements, each of which was intended to address specific questions and hypotheses developed by the public stakeholder group. The data from Sampling Elements 1

through 4 resulted in the estimation of wet season loads of total, dissolved, and methyl mercury within the watershed and from Guadalupe River to the Bay. These data are expected to be the core of the Regional Board's TMDL regarding loads and load allocations. The sampling elements to develop these load estimates were as follows:

- Sampling Element 1 collected data to estimate the contribution of mercury in runoff from the tributaries to the reservoirs, providing estimates of the "background" mercury load (defined as the sum of atmospheric deposition and local un-mined geologic sources) and the relative increased load due to mercury in tributaries draining the mining district (identified as "mines" on Figure 3). Background loads of total mercury to Almaden, Calero and Guadalupe Reservoirs range from 13.9 to 27.5 grams per season. The background load to Lexington Reservoir is estimated to be 112 grams per season, comparatively larger due to its much larger watershed. Similarly, methyl mercury from the mining district sources is higher than background sources.

- Sampling Element 2 collected data to estimate the contribution of mercury in runoff from in-stream mobilization of bank and bed sediment in Alamitos, Guadalupe and Calero Creeks. The total mercury load appears to decrease in Guadalupe Creek with distance downstream of Guadalupe Reservoir, with about 61% of the load retained in the creek and behind the Alamitos Drop Structure. The total mercury load appears to increase significantly in Alamitos Creek between Almaden Reservoir and its confluence with Calero Creek (indicating in-stream mobilization of sediment as a source of mercury in the water column), with about 31% of the load retained in Alamitos Creek, Lake Almaden and behind the Alamitos Drop Structure. The total mercury load appears to decrease in Calero Creek with distance downstream of Calero Reservoir, with about 33% of the load retained in the creek. Methyl mercury loads behave similarly.

- Sampling Element 3 provided data to estimate the contribution of mercury in urban runoff. The data show that, for most urban drainages, the contribution of total and methyl mercury in urban runoff is about the same order of magnitude as the contribution from background sources.

- Sampling Element 4 provided data to determine what happens to the mercury as it reaches the main stem of the Guadalupe River and how much is discharged to the Bay. The estimated total mercury load to the Bay (9956.3 grams per season) is about 12 times higher than the estimated loads into the River from all sources (821.4 grams per season), indicating in-stream mobilization of sediment as a source of total mercury in the water column. The methyl mercury load to the Bay (26.7 grams per season) is over 3 times higher than the estimated loads into the River from all sources (7.4 grams per season).

- Sampling Element 5 provided information regarding the mercury content of bank and bed sediments in Guadalupe River, Guadalupe Creek, and Alamitos Creek. The data show that mercury concentrations decrease with distance from the mining district, ranging from 40 mg/kg above the Alamitos Drop Structure to 0.3 mg/kg at Highway 237. The data show that Lake Almaden and the Alamitos Drop Structure are obstacles to the transport of bed load sediment from the most contaminated creeks to Guadalupe River.
- Sampling element 6, conducted during the dry season of 2004, was made possible by collaboration between the District and EPA. The District had the necessary permits and staff resources to collect fish from the creeks below the reservoirs. EPA provided the

equipment and staff (supplemented with District biologists) to collect fish from Lake Almaden and from Almaden, Calero, Guadalupe, and Lexington Reservoirs, and for laboratory analyses of the fish samples. District staff collected fish from Los Gatos, Alamitos, and Guadalupe Creeks, and from Guadalupe River.

- Sampling element 7, conducted during the dry season of 2004, was a focused study to evaluate the production of methyl mercury in Almaden and Guadalupe Reservoirs over the dry season. Methyl mercury is the chemical form of mercury most directly linked to uptake by biota. An understanding of methylation processes in reservoirs is needed to develop the linkage between mercury in the water column and mercury in fish. Elevated methyl mercury concentrations were measured in the hypolimnion and epilimnion of the reservoirs in the Synoptic Survey, but the zone of production of the methyl mercury is not known.

The detailed report on the results of this sampling is available on the District's web site.

Mercury Removal Projects and Programs Completed and Underway

Lower Guadalupe River Capital Project

The Lower Guadalupe River capital project construction began in 2003 and was completed in 2004. An estimated 52,000 cubic yards were excavated in the reaches from the Union Pacific railroad tracks (Alviso) to Montague Expressway. The average concentration of mercury in these excavated materials was 1.25 mg/kg, which results in an estimated 88 kg of mercury removed from the Guadalupe River. Note that this average concentration is less than half that estimated in the Bay TMDL to be entering the Bay from the Guadalupe River.

Also for this project, an estimated 38,000 cubic yards was excavated from the reaches above Montague Expressway to Highway 101 and disposed off-site. Mercury in these sediments average 5 mg/kg, for an estimated removal of 257 kg of mercury. These materials are higher in mercury concentration due to the larger particle size of sediments in these reaches.

The ten-year projected maintenance in the reaches above Montague Expressway to Highway 101 will excavate and dispose off-site 100,000 cubic yards of bed sediment. If these sediments also contain mercury at 5 mg/kg (as existing data indicate) these activities will remove an estimated 677 kg of mercury from the Guadalupe River.

In summary, over the next ten years, nearly 1000 kg of mercury will be removed from the Lower Guadalupe River near its confluence with San Francisco Bay, more than double the load reduction called for this time period in the Bay TMDL.

Downtown and Lower Guadalupe River Capital Projects

Several sedimentation studies were conducted to support the planning and design of the flood protection projects constructed in 2004 from the Union Pacific railroad tracks (Alviso) to Interstate 280. The studies indicate that the river is sediment starved in these reaches, due to dams and urbanization upstream that has reduced the input of sediment to the river. The source of sediment being mobilized through these reaches is primarily erosion of the bed and banks of the river in an incision process. The projects being constructed were designed according to the models that predicted that the channel would be stable upstream of Trimble

Road, and that aggradation of sediment would occur below this reach in the tidal influenced reaches. This aggradation would result from both watershed derived sediment and Bay sediments transported upstream on incoming tides. In order to maintain design flood capacity, periodic sediment removal will be needed in these lower reaches (see Lower Guadalupe River Capital Project above). The models also estimate that the average annual sediment load reaching the Union Pacific railroad tracks (Alviso) will be 33.6M kilograms of sediment (essentially entirely composed of silts and clays), under completed project conditions. Compared to the average annual sediment load estimate in the Bay TMDL of 44M kilograms, these models indicate the load of sediment exiting the Guadalupe River at Alviso has now been reduced by approximately 24 percent.

In summary, existing models using the most recent data indicate that the average annual sediment load exiting the Guadalupe River at Alviso has now been reduced by approximately 24 percent. This effectively reduces the Bay TMDL mercury load reduction for the Guadalupe River from 90 to 69 kg per year.

Stream Maintenance Program

In 2001, the District obtained a ten-year permit to conduct countywide routine stream maintenance with the primary objectives of maintaining flood carrying capacity and protection of property. A large component of the program is comprised of sediment removal and erosion control projects. In 2001, 2002 and 2003, over 184,000 cubic yards of sediment were excavated from drainages to San Francisco Bay and disposed off site, resulting in a removal of 243 kg of mercury. Of these amounts, nearly 20,000 cubic yards of sediment and 197 kg of mercury were from the Guadalupe River watershed. It is noted here that a grant-funded project partnership between the District and the Regional Board on Alamitos Creek that resulted in the removal of nearly 3400 cubic yards of sediment containing 138 kg of mercury is included in these data.

In summary, routine sediment removal maintenance over the three year period from 2001 through 2003 resulted in an average reduction of urban runoff mercury load of about 15 kg per year, or about 75 percent of the load reduction of 21 kg per year in the Bay TMDL for urban runoff. In addition, 197 kg of mercury, or approximately 43 percent of the Guadalupe River load reduction required over the next ten years for the Bay TMDL, was removed from the watershed as a result of the sediment removal projects in the Guadalupe River watershed.

In 2004, routine sediment removal maintenance resulted in the disposal of 34,595 cubic yards of material, with 2,811 of this total from the creeks in the upper portion of the Guadalupe River Watershed. The total mercury removed from the system was 45 kg, with 41 kg from the Guadalupe River Watershed.

Mercury Reduction Summary

In 2004, 390 kg of mercury was removed from tributaries to San Francisco Bay:

- 345 kg of mercury was removed from the Guadalupe River as a result of the construction of the Lower Guadalupe River flood protection project;
- 41 kg of mercury was removed from the upper portion of the Guadalupe River Watershed as a result of stream maintenance;
- 4 kg of mercury was removed from other urban creeks outside of the Guadalupe River Watershed

In addition, completion of the Downtown and Lower Guadalupe River flood protection projects is estimated to reduce sediment (and mercury) loading to the Bay by 24 percent.

Monitoring

In May 2005, the District initiated a monitoring program to evaluate water quality in Lake Almaden, Almaden Reservoir, Calero Reservoir, Guadalupe Reservoir and Stevens Creek Reservoir. Biweekly depth profile measurements of temperature, pH, conductivity, and dissolved oxygen were conducted in May and June 2005. In addition, water samples were collected from the epilimnion and hypolimnion for analyses of total and dissolved mercury, total and dissolved methyl mercury, ammonia, nitrate/nitrite, sulfate and phosphorus. Samples were also collected from the epilimnion for analyses for chlorophyll a. The purpose of this monitoring is to establish existing water quality conditions and seasonal variability prior to the implementation of management changes to reservoir operations.

Mercury Control Program

In March 2005, following completion of the District Guadalupe River Watershed Mercury Study, the District initiated three projects to control mercury in the Guadalupe River Watershed: Jacques Gulch Restoration, Reservoir Oxygenation, and Lake Almaden Aeration.

Jacques Gulch Restoration

Jacques Gulch is a tributary to Almaden Reservoir that drains approximately one-third of the reservoir watershed. A portion of this drainage includes a small tributary that drains a portion of the former New Almaden Mining District, which is now Almaden-Quicksilver County Park. The project will remove, cap, or control erosion of extensive mercury deposits in the tributary above its confluence with Jacques Gulch, and in Jacques Gulch above its confluence with Almaden Reservoir. This project will require planning, permitting and construction, and is scheduled for completion in 2011. In 2005, the District initiated the process for securing consultant services for planning and design of the project.

Reservoir Oxygenation

The Guadalupe River Watershed Mercury Study identified reservoirs as a significant source of methyl mercury that bioaccumulates in fish within the reservoirs and in downstream creeks. The study also demonstrated a correlation between the seasonal development of anoxia in the hypolimnion and increased methyl mercury concentrations. In 2005, the District secured consultant services to develop a preliminary design for an oxygenation system for Calero Reservoir. The District intent is to install and operate a pilot oxygenation system to evaluate the multiple water quality benefits that would potentially be realized, including reduced methyl mercury production, improved fisheries, reduced ammonia and hydrogen sulfide production, improved water clarity, and improved taste and odor (Calero is source water for the District's drinking water treatment plant). Design and planning are scheduled to be completed in 2006, with installation of a pilot system scheduled for 2007.

Lake Almaden Aeration

Lake Almaden is a former quarry that lies at the confluence of Guadalupe Creek and Los Alamitos Creek that drain Guadalupe and Almaden Reservoirs, respectively. Below this confluence is the Guadalupe River. This lake provides recreational amenities to the community, including swimming, boating, and fishing. The Guadalupe River Watershed Mercury Study identified the lake as a significant source of methyl mercury that bioaccumulates in fish within the lake and in fish downstream. In 2005, the District initiated a monitoring and sampling program to establish baseline water quality and fish tissue concentrations, and a project to design an aeration system for the lake. The District intent is to install and operate a pilot aeration system to improve water quality to evaluate the multiple water quality benefits that would potentially be realized, including reduced methyl mercury production, improved fisheries, reduced ammonia and hydrogen sulfide production, and improved water clarity.

Copper/Nickel Action Plan

The District enacted a policy several years ago to have District vehicles washed and vacuumed at the existing covered wash rack that discharges through a clarifier to the sanitary sewer system. The District is very proactive in attempting to reduce traffic and pollutants caused by traffic. The district provides, free to employees, bicycle lockers, and reimburses staff for use of public transit for business purposes.

1.8 Trash Inventory and Management (Attachment 1.8)

The District continues to focus a significant amount of resources on trash removal from the watersheds and the property within the District's jurisdiction. The Stream Water Quality Unit also conducted a focused study of trash hotspots using the Regional Boards SWAMP assessment protocols this past year. The District had identified 35 hotspots to be evaluated using the Regional Water Quality Control Board Rapid Trash Assessment Protocol. In FY 04-05, 26 of these hotspots were evaluated using the above mentioned protocol. Scores ranged from 63 to 11. The average score was 43.35 (Marginal). The District continues to include litter prevention training in its school outreach programs as well as other outreach efforts associated with youth group field trips, etc. Please see the attached charts in Attachment 1.8 for further clarification of the trash data set.

The District employs maintenance crews to provide routine creek cleanup for trash, debris, and sediment that accumulates in District waterways. Some of this material is deposited in creek channels and constitutes illegal dumping but is not reported to District hazmat or code enforcement staff due to the inability to establish an individual source or responsible party. During FY 04-05, The District's Clean, Safe Creeks Natural Flood Protection Program, Good Neighbor component removed and disposed of approximately 10,002.5 cubic yards of trash and debris from county waterways. Last year a total 6,231 cubic yards of trash and debris was removed. The increase in volume is probably not due to increased dumping but rather due to improved removal techniques as well as more focused attention associated with homeless encampments and other hot spots. The breakdown by watershed is as follows; Guadalupe watershed 3,154 cubic yards (32%), Lower Peninsula watershed 2851 cubic yards (28%), Coyote watershed 1,391.5 cubic yards (14%), West Valley watershed 1381 cubic yards (14%), and Uvas Llagas had 1225 cubic yards (12%). The Guadalupe watershed Good Neighbor Program continues to conduct monthly homeless encampment clean up activities. The Good Neighbor Program coordinates with the Santa Clara County Department of Corrections to utilize

inmate labor for some of the creek cleanup activities. The Adopt-A-Creek program is highlighted in the PIP activities and also pertains to this section.

Last years breakdown by watershed was for comparison was; Guadalupe watershed 2,047 cubic yards (33%), West Valley watershed 1,494 cubic yards (24%), Coyote watershed 1,185 cubic yards (19%), the Lower Peninsula 928 cubic yards (15%) and Uvas Llagas had 576 cubic yards (9%). The Guadalupe watershed Good Neighbor Program continues to conduct monthly homeless encampment clean up activities. The Good Neighbor Program coordinates with the Santa Clara County Department of Corrections to utilize inmate labor for some of the creek cleanup activities. The Adopt-A-Creek program is highlighted in the PIP activities and also pertains to this section.

1.9 Other Water Quality and Watershed Management Requirements (Attachment 1.9)

This section captures other pollution prevention activities, many of which are unique to the District. These activities include:

1. Facility SWPPPs – Corporation Yard
2. Flood Control/Channel Maintenance Activities
3. San Francisquito Creek Sediment Project

Facility SWPPPs – Corporation Yard

BMPs were formally inspected quarterly during non-stormwater observations at all District facilities except Coyote and Pacheco Pump Stations. The pump stations do not warrant non-stormwater observations due to the low potential for these types of discharges to occur. The Corporation Yard culvert inlet protection device was evaluated and performs well at containing sediment. Other BMPs are working effectively, as noted on the non-stormwater observation forms submitted. All three water treatment plants have been under construction during some time in the past fiscal year and two have been operating under the contractor's SWPPP.

Due to the previous years limited attendance for the SWPPP and Storm Drain O&M training it was determined to postpone the 04-05 training to the late summer of 05, at which time the training will be provided at each facility to ensure greater attendance by responsible District staff and to provide more focused guidance on inspections and data collection at each facility.

Flood Control/Channel Maintenance Activities

The District maintains over 700 miles of stream channels to provide flood protection for the Santa Clara County communities. Under the Multi-Year Stream Maintenance Program (SMP) the District removes sediment, provides for erosion protection, and conducts vegetation management activities. Minor maintenance activities include trash removal, fence and access repair, maintenance of revegetation sites, and removal of downed trees or other blockages from the streams. During FY 04-05, the District removed 58,644 cubic yards of sediment and completed bank protection projects totaling 4,567 linear feet.

Annual SMP archeology awareness and BMP training was conducted in June 2005 and 87% of District employees from the Watershed Field Operations Units, Watershed Program Support Units, Ecological Services Unit, and Regulatory Compliance Unit received the training (67

employees). In addition, 20 staff from the Stream Water Quality, Construction Inspection, Hydraulic Engineering, Hydrologic Engineering, Structural Engineering, Vegetation Management, and Watershed Business Management Units also attended.

BMP training evaluation forms were distributed during the training session and attendees were asked to complete them before leaving. Forty-nine evaluations were returned. Of the respondents, 98% felt the training was valuable. Suggestions for improving the training will be incorporated into next year's training.

The annual Lessons Learned meeting with the regulatory agencies and stakeholders was held in February 2005. Internal lesson learned meetings were held prior to the February regulatory meeting. Recommendations for changes to one BMP and a new BMP were submitted and approved by the regulatory agencies.

BMP inspection checklists continued to be used for sediment removal and bank protection projects and for chemical and non-chemical vegetation management activities. The checklists provide documentation of BMP implementation at the SMP projects, inspection of the BMPs, and track any adjustments made to BMP implementation. Several issues relating to the checklists were discussed during the annual effectiveness evaluation meeting and changes were made to improve the forms.

San Francisquito Creek Sediment Project

During fiscal year 2004-2005 the District has been sponsoring an Aquatic Habitat and Limiting Factors Assessment (AHALFA) of San Francisquito Creek as a follow up to the "San Francisquito Creek Watershed Sediment Analysis Final Report" and "San Francisquito Creek Watershed Existing Conditions Analysis Final Report" that were completed the prior year. The goal of the AHALFA is to determine what, if any, factors limit current Steelhead habitat and, if so, what linkages may or may not be made to the creek's designation as impaired by sediment under Clean Water Act Section 303(d).

Specifically, through both literature review and field work the AHALFA project has considered potential limiting factors to (1) Adult Upstream Migration, (2) Spawning and Incubation, (3) Early Rearing, (4) Juvenile Rearing, (5) Smolting and Outmigration. Due to resource constraints the geographic scope of the study has been limited to the lower main stem of San Francisquito Creek and the Los Trancos Creek subwatershed within Santa Clara County. The tributaries of the upper San Francisquito Creek watershed and the Bear Creek Watershed within San Mateo County are not part of the geographic scope of this study.

The study itself has progressed through the following stages: (1) formation of an Expert Advisory Panel (EAP); (2) Completion of a Literature Review and Data Gaps Analysis; (3) Development and Execution of a Field Survey Plan; and (4) Reporting. The EAP is composed of experts from academia, regulatory agencies, and environmental interests and has been presented data and invited to comment on technical memos that mark major stages of the project (Literature Review/Data Gaps; Field Survey Plan). The literature Review and Data Gaps Analysis was utilized to identify the most effective use of field work - avoiding redundant investigation except where necessary to establish habitat trends. Primarily the Field Survey Plan distinguished between riffles, runs, and pools as it focused on the following habitat characteristics that are most influenced by sedimentation: (1) juvenile outmigration barrier and flow analysis; (2) spawning and incubation habitat characteristics such as gravel permeability

and embeddedness; and (3) characteristics such as temperature, dissolved oxygen, flow, pool filling, bank condition, and macroinvertebrate food supply that variously affect both incubation, early rearing, and juvenile rearing developmental stages. Field work has been conducted in all four seasons to determine both low flow and high flow habitat conditions. Completion of the limiting factors analysis and reporting is scheduled for November 2005.

Water Quality Index

In the fall of 2004 the Stream Water Qualtiy Unit implemented a study of general water quality monitoring in the Guadalupe Watershed to compare the watershed to other studies taking place in the country. This study has just completed the collection of the second of three rounds of sample collection at 8 sites. At one of the sites both a high tide and a low tide sample are collected.

The results of the District WQI pilot project to date are summarized in the Figure 9-1. The water quality was of good to excellent quality in the two rounds of sampling. The sample results from the spring sampling are higher scoring than those for the fall. This is what we would expect especially considering the significant rainfall experienced this year in the South Bay. The District looks forward to continueing this study over the next year to complete two full cycles of sampling to identify the usefulness of this form of analysis to rate in a simplified manner the water quality within other watersheds in Santa Clara County.

1.10 Staff Training Matrix (Attachment 1.10)

Numerous staff attended various training opportunities as detailed in the Training Section. The District feels it has met the training requirements.

1.11 Last Year's Continuous Improvement Activities and Status

Contractor SWPPP Implementation

Finalize the procedure to inform District managers, contractor offices and the Regional Board of continued non-compliance with construction site SWPPPs.

Response-This task is complete, a chain of command protocol has been developed and utilized on construction sites to facilitate compliance at the rare construction site that present a challenge for storm water control implementation.

Updating and Maintenance of the District's Comprehensive Best Management Practices List

The Stream Water Quality Unit has recently been assigned the task of maintaining the Quality Environmental Management System's "Best Management Practices-A comprehensive list, September 2003". This document is a agency wide compilation of the Best Management Practices (BMP) the District uses in the process of daily work activities which includes structural and administrative BMP's as well as the checklist that staff utilize to document BMP compliance.

Response-The compilation portion of this task is nearly complete. This task currently is being completed by a collaborative of District Units.

Hydrograph Modification Management Plan Implementation and continued studies

As an extension of the Hydrograph Modification Management Plan (HMP), District continues to perform detailed geomorphic assessment following the University of Colorado's method to improve the current design methodologies for Stream Maintenance Program projects and Capital Improvement Projects to reduce erosion and enhance natural habitat for existing and future conditions. These geomorphic assessments, hydrologic and hydraulic modeling will be incorporated in to the District's Regional Storm Water Management Plan.
Response- This program continues as indicated in the previous sections of this summary as well as more thoroughly in Attachment section 1.3.

SUMMARY OF CONTINUOUS IMPROVEMENT ACTIVITIES

District SWPPP inspection implementation at some facilities

The Stream Water Quality Unit has identified the need to encourage more frequent inspections and monitoring of Storm Drain systems at some District facilities. Changes have been made to the training program and we look forward to reporting our improved inspection frequency next year.

SWPPP updates

The Stream Water Quality Unit has identified that several of the facility SWPPP's are in need of updates as some of the Roles and Responsibilities have changed over the last few years.

Subject: Submittal of FY 2005-2006 Annual Report

Dear ~~Mr. Wolfe~~ Bruce:

I am pleased to submit the Annual Report for implementation of the Santa Clara Valley Urban Runoff Pollution Prevention Program's (SCVURPPP's) Urban Runoff Management Plan (URMP) during fiscal year 2005-2006. Submittal of this Annual Report fulfills Provision C.6 of NPDES Permit No. CAS029718 (Order 01-024 as amended). The report provides documentation of the SCVURPPP's and the Co-permittees' activities; evaluation of the effectiveness of these activities; and measures for continuous improvement toward achieving the SCVURPPP goals. In addition, a summary of Co-permittee responses to RWQCB comments dated July 26, 2006 on the Program's *FY 04-05 Annual Report* (dated September 15, 2005) are included within Appendix A-9 of this Annual Report.

Sections 1 and 2 of the Annual Report describe activities conducted by the SCVURPPP on behalf of the Co-permittees, in the areas of program management, permit management and continuous improvement. Section 3 contains information on the Program's local and regional public information/participation program including the Watershed & Outreach efforts coordinated with the Santa Clara Basin Watershed Management Initiative (SCBWMI). Section 4 contains information on the Program's two pronged monitoring approach covering: environmental monitoring and assessment, and programmatic monitoring for FY-05-06. Section 5 covers the Program's watershed management measures including the work that Program and Co-permittees have conducted to both support the SCBWMI and integrate both efforts. Section 6 covers the Program's pesticide management activities to comply with Provision C.9.d.and Section 7 contains a report of the Program's Mercury Pollution Prevention Activities conducted during FY 05-06 per Provision C.9.c

Section 8 describes the Program's efforts during FY 05-06 to assist Co-permittees in addressing and controlling development and re-development as it relates to stormwater quality and flow through the development project planning, review and approval process, per Provision C.3. Section 9 contains the Co-permittees' IND and IC/ID Summary Tables for FY 05-06. Co-permittee summary tables are also included in each Co-permittee Annual Report and contain similar information to what is found within Section 9 of the Program's *FY 04-05 Annual Report*.

699 Town & Country Village • Sunnyvale, CA 94086 • tel: (408) 720-8811 • fax: (408) 720-8812

1-800-794-2482

Section 10 (bound in two separate volumes) contains the Co-permittees' FY 05-06 Annual Reports, prepared in accordance with the Water Board staff document entitled *Suggested SCVURPPP Co-permittee Annual Report Format* (Draft) dated May 29, 2003. Each Co-permittee Annual Report includes a cover letter summarizing local program highlights, accomplishments and continuous improvement items; and a certification statement.

On September 7, 2006, we were notified that the Program received the EPA's 2006 Clean Water Act Recognition Award, First Place, for a Municipal Stormwater Management Program. We appreciate the mention of this award at the September 13, 2006 Water Board meeting.

Please contact me if you have any comments or questions. We look forward to working with you to successfully address new challenges during FY 06-07.

Very truly yours,

Adam

Adam W. Olivieri, Dr. P.H., P.E.

CREDITS

This Annual Report was a collaborative effort of the fifteen agencies participating in the Santa Clara Valley Urban Runoff Pollution Prevention Program (Program). EOA, Inc., as the Program management consultant, coordinated and compiled the Annual Reports submitted by the fifteen Co-permittees, wrote Sections 1 through 9, and was responsible for the overall preparation of the Program's Annual Report. The Program expresses its appreciation to all those who contributed to this sixteenth Annual Report.

Management Committee

Palo Alto -- Joe Teresi

Campbell – Al Oxonian

Milpitas – Paramjit Uppal/Marilyn Nickel

Saratoga – John Cherbone

San Jose – Melody Tovar/Steve Osborn

Cupertino -- Lavenia Millar

Santa Clara -- Rick Mauck/Roger Lee

Los Altos – Larry Lind

Sunnyvale – Lorrie Gervin/Kristy McCumby

Los Altos Hills – Richard Chen

Monte Sereno – Brian Loventhal

Mountain View -- Eric Anderson

Santa Clara County -- Steve Homan

Los Gatos – John Curtis

West Valley Communities – Cheri Donnelly

Santa Clara Valley Water District – Dave Chesterman, Chair/Roger Narsim

SECTION 1

INTRODUCTION

1. INTRODUCTION

BACKGROUND

Program Description

The Santa Clara Valley Urban Runoff Pollution Prevention Program ("Program") is an association of thirteen cities and towns in Santa Clara Valley, the County of Santa Clara, and the Santa Clara Valley Water District ("Co-permittees") that share a common permit to discharge stormwater to South San Francisco Bay. The Program incorporates regulatory, monitoring and outreach measures aimed at reducing pollution in urban runoff to the "maximum extent practicable" to improve the water quality of South San Francisco Bay and the streams of Santa Clara Valley. The Program is organized, coordinated, and implemented in accordance with a Memorandum of Agreement (MOA) signed by the Co-permittees in 1990, 1999, 2005 and 2006. The MOA covers the responsibilities of each Co-permittee and a cost-sharing formula for joint expenditures.

In June 1990, the San Francisco Bay Regional Water Quality Control Board (Water Board or RWQCB) issued the Program its first NPDES permit.[1] The permit was reissued in 1995[2] and 2001.[3] On October 17, 2001, the Water Board amended the permit[4] to include expanded requirements for controlling pollutants from new and redevelopment activities (Provision C.3.). On July 20, 2005, the Water Board approved a second amendment which revised Provisions C.3.c. and C.3.f.[5]

The Program's Management Committee, consisting of one designated representative from each Co-permittee, is the official decision-making body for the Program. At the inception of the Program, the Santa Clara Valley Water District took the lead responsibility for management of the Program. In September 1997, the Management Committee retained EOA, Inc. to provide Program management services. On July 1, 2005, the City of Sunnyvale became the Program's new fiscal agent.

The Program's Urban Runoff Management Plan

The Program and Co-permittees submitted a *Storm Water Management Plan* (SWMP) as part of the application for its 1995 NPDES permit renewal. The 1995 Permit required the Program to develop performance standards[6] for various stormwater control measures and incorporate them in a revised management plan by September 1, 1997. The revised plan, called the *Urban Runoff Management Plan* (URMP) because of its focus on stormwater pollution prevention efforts in urban areas, was completed and submitted to the Water Board on September 1, 1997 and subsequently approved by Water Board staff (7/10/98 and 12/14/98 letters). In addition, the URMP is incorporated into the urban runoff permit. In 2000 and 2005, updated URMPs were submitted to the Water Board as part of permit renewal applications.

---

[1] NPDES Permit No. CAS029718, Order No. 90-094.
[2] NPDES Permit No. CAS029718, Order No. 95-180 (as amended 7/21/99).
[3] NPDES Permit No. CAS029718, Order No. 01-024 (2/21/01).
[4] NPDES Permit No. CAS029718, Order No. 01-119, Amendment Revising Provision C.3. (10/17/01).
[5] NPDES Permit No. CAS029718, Order No. R2-2005-0035, Amendment Revising Order 01-119 (7/20/05).
[6] Performance standards are defined as "the level of implementation necessary to demonstrate control of pollutants in stormwater to the maximum extent practicable."

The URMP consists of an area-wide plan and individual Co-permittee plans describing what the fifteen Co-permittees will do, collectively and individually, to reduce urban runoff pollution. The URMP describes the goals and objectives of the Program and its various elements, including monitoring and watershed management measures.

The URMP also contains model performance standards that may be modified as appropriate to fit local conditions and are implemented by the Co-permittees. These include:

- Illicit Connection and Illegal Dumping (IC/ID) Elimination Activities
- Industrial/Commercial Discharger (IND) Control Program
- Public Streets, Roads, and Highways Operation and Maintenance
- Storm Drain System Operation and Maintenance
- Water Utility Operation and Maintenance
- Planning Procedures for New Development and Redevelopment
- Construction Inspection
- Pest Management
- Rural Public Works Maintenance and Support

In addition, the URMP presents a framework for the relationship between Program area-wide and Co-permittee specific Public Information/Participation (PI/P) activities that the Program and Co-permittees use to develop and conduct PI/P tasks.

In early FY 04-05, Program staff updated the URMP to include the new and revised model performance standards and other Management Committee-approved multi-year plans (e.g., Guidelines for Reduction and Management of Mercury-Containing Products, revised Multi-Year Receiving Waters Monitoring Plan, Pesticide Management Work Plan, sediment assessment Work Plan, CAP/NAP approach, Trash Work Plan and goals statement, Watershed Education and Outreach strategy, etc.). The revised Program URMP was part of the NPDES permit reapplication package submitted to the Water Board on February 24, 2005.

The Program implements watershed management through its participation in the Santa Clara Basin Watershed Management Initiative (SCBWMI). The SCBWMI was established (by the EPA, State Water Resources Control Board and Water Board) to manage water resources within the Santa Clara Basin watersheds. Stakeholders that include local, state and federal government agencies; business, agriculture and industry associations; and environmental and civic groups guide the SCBWMI. The Program has been an active participant in the SCBWMI Core Group and its subgroups. The Program is working through the SCBWMI to: 1) identify and assess beneficial uses in the watershed within the urban area; and 2) identify and prioritize reasonable urban runoff control strategies.

Co-permittee Urban Runoff Management Plans

Each Co-permittee has developed an URMP tailored to its local characteristics. The Co-permittee URMPs contain strategies for local urban runoff controls, covering each of the Program elements (Industrial/Commercial Discharger Control, New Development and Construction, etc.) that are applicable to local conditions. The Co-permittee URMPs include:

- Performance standards (using the Program URMP's model performance standards as a template);
- Work Plans to implement performance standards;

- Description of the Co-permittee's legal authority;
- Best management practices (BMPs); and
- Standard operating procedures (SOPs) that detail how control measures will be carried out from day-to-day.

The Co-permittees also have responsibilities to conduct local PI/P programs, properly maintain corporation yards, conduct staff training and participate in Program and SCBWMI activities as appropriate.

The general relationship between the NPDES Permit, the Program's URMP and the Co-permittees' URMPs is shown on Figure 1-1.

In accordance with Permit Provision C.2.b., all Co-permittees updated their URMPs and submitted the revisions to the Water Board on September 1, 2004. The updated Co-permittee URMPs, which were part of the NPDES permit reapplication package submitted to the Water Board on February 24, 2005, included a summary table indicating what changes were made and/or what sections were added to the URMP's since the last version was updated in October 2000.

Program Work Plan

By March 1 of each year, the Program submits to the Water Board a draft Work Plan for implementation of the Program's URMP for the coming fiscal year, in accordance with NPDES Permit Provision C.6.b. The Work Plan includes clearly defined tasks, responsibilities and schedules to be implemented by the Program and Co-permittees. It also includes development of new, or modification of existing performance standards (Provision C.2.b), provides the Work Plan for implementing Provision C.3, describes planned monitoring activities (Provision C.7), describes pollutant-specific requirements (Provision C.9) and defines the Program's role relative to Watershed Management efforts (Provision C.10).

The Work Plan builds on the baseline efforts conducted by the Program and Co-permittees through a "continuous improvement" process, in which the Program seeks new opportunities to control stormwater pollution. The continuous improvement process contained in the URMP is illustrated on Figure 1-2. The Work Plan includes a discussion of continuous improvement tasks that were identified, in part, during individual Co-permittee performance reviews, effectiveness evaluations in previous annual reports, and cooperative efforts between the Program and groups that include the Bay Area Stormwater Management Agencies Association (BASMAA), SCBWMI, Regional Monitoring Program (RMP) and Clean Estuary Partnership (CEP).

On March 1, 2005, the Program's *FY 05-06 Work Plan* was submitted to the Water Board, and no comments have been received on that submittal. On March 1, 2006, the Program's *FY 06-07 Work Plan* was submitted to the Water Board. No comments were received on that submittal.

Program Annual Report

In accordance with NPDES Permit Provision C.6.a., the Program must submit an Annual Report by September 15 of each year. In addition, the Annual Report serves as an important internal Program tool in the cycle of planning, implementation, evaluation and continuous improvement. The Annual Report is the mechanism for documenting the status of planned activities,

evaluating the effectiveness of those activities and identifying potential improvements. An additional evaluation mechanism is holding local program performance review meetings with each of the Co-permittees. These meetings serve as external evaluations, while the Annual Report is a self-evaluation by the Program. The results of the Annual Report and the performance reviews are used to assist the Program and Co-permittees in revising their Work Plans for the following year, as part of the Program's continuous improvement process. During FY 05-06, Water Board staff did not conduct performance review meetings.

On September 15, 2005, the Program's *FY 04-05 Annual Report* was submitted to the Water Board. On July 26, 2006, the Program received Water Board comments on the *FY 04-05 Annual Report*. The Water Board staff review focused only on the New and Redevelopment section. A response to Water Board staff comments on the *FY 04-05 Annual Report* is included within the individual New and Redevelopment sections of Co-permittee FY 05-06 Annual Reports. In addition, the Program has summarized these responses, which are provided within Appendix A-9.

The goals of this *FY 05-06 Annual Report* are to: 1) meet specific permit requirements for reporting; 2) provide an efficient mechanism for reporting and self-evaluation without duplicating information in the work plan or urban runoff management plans (URMPs); and 3) identify areas for continuous improvement.

ORGANIZATION OF REPORT

The *FY 05-06 Annual Report* consists of two volumes and one appendix placed in three-ring binders. Volume I will contain Program's activities and Volume II will consist of Co-permittees' activities. Each section contains relevant tables at the end of the section.

Following Section 1, Volume I of the *FY 05-06 Annual Report* describes the implementation of *FY 05-06 Work Plan* activities in the following sections:

FY 05-06 Annual Report	FY 05-06 Work Plan
Section 2 – Program Management	Program FY 05-06 Budget Performance Standard Revisions Program Continuous Improvement Tasks
Section 3 – Public Information/Participation (PI/P) Activities	FY 05-06 PI/P Work Plan
Section 4 – Monitoring	Multi-Year Year Receiving Waters Monitoring Plan FY 05-06 Annual Monitoring Plan
Section 5 – Watershed Management Measures	FY 05-06 Monitoring Plan (activities undertaken with/for the SCBWMI)
Section 6 – Pesticide Management	FY 05-06 Pesticide Management Work Plan
Section 7 – Mercury Pollution Prevention Activities	FY 05-06 Mercury Pollution Prevention Work Plan
Section 8 – New and Redevelopment Control Measures	FY 05-06 C.3. Work Plan

Section 9 contains the Co-permittees' IND and IC/ID Summary Tables for FY 05-06. Each Co-permittee summary table provides information on the required categories as described in the Industrial/Commercial Discharger Control Program and Illicit Connection & Illegal Dumping Elimination Activities Performance Standards. Co-permittee summary tables are also included in each Co-permittee Annual Report and will contain similar information to what is found within Section 9 of the Program's *FY 05-06 Annual Report*. Each Co-permittee includes a breakdown of the levels of enforcement action taken for each IND inspection.

Section 10 contains the Co-permittees' FY 05-06 Annual Reports. Each Co-permittee report includes a cover letter summarizing local program highlights, accomplishments and continuous improvement items; and a certification statement. Co-permittees have prepared and submitted the following information (with appropriate attachments) in accordance with the Water Board's document entitled *Suggested SCVURPPP Co-permittee Annual Report Format* (Draft) dated May 29, 2003:

- IC/ID Elimination Activities
- Industrial/Commercial Discharger Control Program
- Public Agency Activities
  - Public Streets, Roads and Highways O&M (including Corporation Yards)
  - Rural Public Works O&M
  - Storm Drain O&M
  - Water Utility O&M
  - Other Public Agency Activities (Golf Courses, Parks, Ponds, etc.)
- New Development Planning Procedures
- Construction Inspection
- Public Information and Participation
- Pesticide Management Activities
- Mercury Pollution Prevention Activities
- Copper Action Plan/Nickel Action Plan
- Trash Inventory and Management
- Water Quality Monitoring
- Staff Training Summary Table

Other elements that do not fall under the above categories (e.g., PCB Control Program (C.9.e.), Control Program for Sediment (C.9.f.) and Watershed Management (C.10.)) are provided by each respective Co-permittee conducting the activity.

Figure 1-1. Program Implementation

Figure 1-2
Continuous Improvement

SECTION 2

PROGRAM MANAGEMENT

2. PROGRAM MANAGEMENT

PROGRAM BUDGET

FY 05-06 Budget

The FY 05-06 Program Budget is summarized in Table 2-1. A budget of $3,287,400 represents the same amount of funding as the FY 04-05 budget. The Program budget has been able to remain flat over the past four years while more work has been accomplished and additional fees and collaboration contributions (i.e., annual permit fee, BASMAA, RMP, CEP) have been paid. It is important to note that the Program funds collected from the Co-permittees represent only what is spent on Program-wide activities. It does not include what the Co-permittees are spending to implement controls within their jurisdictions.

FY 06-07 Budget

During FY 05-06, the FY 06-07 Budget was prepared by Program staff, reviewed and approved by the Budget Ad Hoc Task Group and the Management Committee, and submitted as part of the *FY 06-07 Draft Work Plan*. The total budget for FY 06-07 is $3,287,618. The Management Committee is concerned that permit fees and collaborative resource demands are increasing and are a significant percentage of the overall budget. As a result, these demands as well as the increased need for in-kind resources to participate in various regulatory programs will continue to reduce the overall operating budget. Further, Co-permittees have the limited ability to increase current funding sources. The Management Committee is concerned that potential new permit requirements, as part of the Municipal Regional Permit (MRP), will be costly. This prioritization is key to the success of the MRP.

GENERAL PROGRAM MANAGEMENT ACTIVITIES

Management Committee Meetings

The Management Committee continues to meet monthly, on the third Thursday of the month from 9:00 a.m. to 12 noon, to discuss and make decisions regarding Program business. Agendas and supporting information were mailed and posted on the Program's website (www.scvurppp.org) approximately one week in advance of each meeting and handouts were presented at each meeting. The meeting agendas were posted at Sunnyvale City Hall at least 72 hours prior to each meeting and meetings were held in the City of Sunnyvale's West Conference Room. A list of current Management Committee representatives is provided as Appendix A-1 and is on the Program's website.

Ad Hoc Task Group and Work Group Meetings

In order to effectively manage the area-wide activities required by the NPDES permit, Ad Hoc Task Groups are formed by the Management Committee to address specific Program elements or major work items. These are groups of Co-permittee representatives and Program staff with expertise in the issue at hand. Once the Ad Hoc Task Group's assignment is completed to the satisfaction of the Management Committee, the group is disbanded. The Management Committee reviews the need for Ad Hoc Task Groups on a quarterly basis. Ad Hoc Task Groups may form smaller work groups with subsets of their members to focus on specific issues

in more detail. The work groups bring information back to the overseeing Ad Hoc Task Group for decision making.

A Program management organizational chart showing current Ad Hoc Task Groups and work groups is provided on the Program's website. Ad Hoc Task Groups and work groups generally meet on an as-needed basis, although some establish a regular meeting schedule.

Table 2-2 presents a list of the FY 05-06 Ad Hoc Task Groups, their members and their accomplishments. These groups worked with Program staff to provide products or recommendations to the Management Committee. There were a total of 29 Ad Hoc Task Group (AHTG) and work group meetings held during the fiscal year. In addition, task group and work group products were often distributed for review and comment via electronic mail ("virtual meetings"), thus minimizing the number of actual meetings.

The Watershed Education and Outreach (WE&O) Ad Hoc Task Group defines the final work plans for and oversees the implementation of FY 05-06 PI/P projects. An evaluation of PI/P projects conducted during FY 05-06 is provided within Section 3, Table 3-1. In addition, two work groups (e.g., the HMP Implementation Phase Work Group and the BMP O&M Verification Work Group) formed under the C.3 Provision Oversight (C3PO) AHTG were active during FY 05-06, as described in Section 8.

Program Management Activities

Program management activities provided by Program staff during the period July 1, 2005 through June 30, 2006 are summarized in Table 2-3. These tasks, which are discussed within the Annual Report, are separate from the permit management and technical support provided by Program staff. General types of activities completed during FY 05-06 include the following:

- Responded to calls on the Program's and Watershed Watch toll-free numbers and distributed materials to the public;
- Facilitated and supported Management Committee and Ad Hoc Task Group meetings;
- Developed the FY 06-07 Program Budget and tracked expenditures;
- Communicated with and assisted the Program's legal counsel;
- Prepared and submitted the Program's *FY 04-05 Annual Report, FY 06-07 Draft Work Plan* and other permit-required submittals;
- Provided guidance to Co-permittees on technical and Program-related issues;
- Conducted and/or assisted with four workshops relating to how development and creeks affect each other; the connection between development and water resources; construction site planning and management; and constructing, maintaining and inspecting stormwater treatment BMPs.
- Oversaw development and implementation of the Watershed Education & Outreach Campaign;
- Represented the Program at external organization meetings;
- Continued to oversee and/or assist with implementation of the Pesticide User Outreach and Mercury Pollution Prevention Outreach Plans;
- Participated in the Regional Media Relations, Regional IPM Partnership and Regional Advertising Campaign projects (through BASMAA); and
- Retained Hilton, Farnkopf & Hobson, LLC to review Program's Management services.

During FY 05-06, a significant amount of Program staff time was devoted to preparation of permit-required submittals, additional Water Board submittals and other Program-related work

products. These activities are discussed in Section 2, Permit Management Activities. Additional details on completed Program management activities are provided in the memorandum entitled *Review of FY 05-06 Program Management Services* within Appendix A-2.

External Organization Meetings

Program staff represented the Program at 211 external organization meetings during FY 05-06. These included meetings of the following organizations (Program staff positions indicated in parentheses):

- Bay Area Stormwater Management Agencies Association (BASMAA) – Executive Board (Vice Chair), - New Development Committee, Regional IPM Partnership, Media Relations Committee, and Regional Advertising Campaign;
- Municipal Regional Permit Work Groups– New Development, Monitoring, Municipal Maintenance, Mercury/PCBs, Mercury and Steering Committee;
- Regional Monitoring Program Technical Review Committee, Steering Committee, Contaminant Fate Work Group and Sources, Pathways and Loadings Work Group;
- Clean Estuary Partnership Technical Committee, Mercury Risk Reduction Work Group and PCBs Work Group;
- Urban Pesticide Committee (UPC);
- BASMAA/Water Board PCB Stakeholders Work Group;
- California Stormwater Quality Association (CASQA) – Board of Directors and Executive Program Committee;
- Bay Area Macro-invertebrate Bioassessment Information Network.

In addition, Program staff participated in 44 meetings relating to the Santa Clara Basin Watershed Management Initiative (SCBWMI). These included meetings of the following organizations:

- Core Group
- Watershed Assessment and Monitoring Subgroup (including Guadalupe Stakeholder Work Group);
- Land Use Subgroup;
- Bay Monitoring and Modeling Subgroup (including Copper/Nickel TMDL and Copper Action Plan Work Groups).
- Work Group "I" (Environmental Indicator and Scorecard Development)

Program staff prepared meeting summaries for the Management Committee highlighting items of interest and required action items. Summaries are routinely included in Management Committee mail-out and handout packets and posted on the Program's website. Tables listing all internal and external meetings attended during FY 05-06 are attached to the memorandum entitled *Review of FY 05-06 Program Management Services* within Appendix A-2.

Evaluation of Effectiveness

During FY 05-06, Program staff continued to implement policies and procedures related to consideration of funding requests, subcontracting, budget tracking and other improvements in Program management identified in past years. A significant amount of staff time during FY 05-

06 was devoted to preparation of permit-required submittals, additional Water Board submittals and other Program-related work products. Despite these resource needs, Program staff completed the general Program management tasks on schedule. The Program budget development and mid-year and year-end reviews were completed within a reasonable timeframe.

The "Work Plan" for many of the Program management activities is the scope of work in EOA's contract for Program management services. Each year, Program staff prepares a self-audit report on Program management services, including significant accomplishments, continuous improvement for existing program elements and feedback regarding Program status, as required by Section 200.5 of the Program Bylaws. A draft of this year's report, *Review of FY04-05 Program Management Services,* was submitted to the Management Committee on March 15, 2006 and approved by the Management Committee on April 20, 2006. The final version of the *Review of FY05-06 Program Management Services* is provided in Appendix A-2.

The results of the Program Cost Allocation Review indicated that the Program is more rigorously managed than any other of the five programs surveyed in California; and that the Program has management controls, self-audit procedures, budget monitoring and reporting requirements not found in any of the other programs. Based on various benchmark comparisons, the Program is in line with other Bay Area programs. This is noteworthy since it is the most heavily scrutinized (i.e., two State and Federal audits in the past two years) and exercises the strongest management controls.

Continuous improvement items related to Program management are normally identified from three sources: the Program's performance review with Water Board staff; Water Board staff comments on the prior year's Annual Report; and/or Management Committee comments on the draft *Review of Program Management Services* memorandum submitted each year. There were no continuous improvement items identified through these sources for FY 05-06. An update and plan of action for continuous improvement items remaining from previous years are presented within Table 2-4 of this Annual Report. Comments and recommendations for continuous improvement of Program Management during FY 05-06 and beyond are provided within the *FY 05-06 Review of Program Management Services* memorandum.

To satisfy Bylaws Section 200.4, Program staff prepared an *Annual Budget Review Compilation Report* ("ABC Report") that was submitted to the Management Committee as an addendum to the report on Program management services. The addendum contained the FY 04-05 budget, periodic budget status reports, mid-year budget reconciliation, final budget closeout balance sheet and other supporting documentation. The FY 04-05 Annual Budget Review Compilation Report ("ABC Report") was posted on the website. An e-mail providing a username and password was distributed to the MC on December 9, 2005. The MC approved the ABC Report on December 15, 2005.

PERMIT MANAGEMENT ACTIVITIES

This section describes tasks related to permit management (i.e., compliance with permit requirements and Co-permittee guidance) completed by Program staff during FY 05-06.

Reporting Requirements

In addition to the Program's Annual Report and Annual Work Plan[1], the Program completed the following permit-required items during FY 05-06:

1. *Copper and Nickel Action Plan FY 04-05 Accomplishments and FY 05-06 Work Plan*, submitted September 15, 2005, per POTW order 00-109 and permit provisions C.9.a and b.
2. *SCVURPPP FY04-05 Watershed Monitoring and Assessment Summary Report*, submitted September 15, 2005, per permit provision C.10.b.
3. *Upper Penitencia Creek Limiting Factor Analysis Technical Report* (Peer Review Draft), permit provision C.9.f.iii, submitted December 8, 2005.
4. *Copper and Nickel Action Plan FY 06-07 Work Plan and Reporting Tables (Final)*, submitted March 1, 2006, per POTW order 00-109 and permit provisions C.9.a and b.
5. *FY 06-07 Annual Receiving Waters Monitoring Plan and Watershed Management Measures Work Plan* submitted March 1, 2006, per permit provisions C.7.c and C.10.
6. *Upper Penitencia Creek Limit Factor Analysis Technical Report (Final)*, per permit provision C.9.f.iii, submitted September 15, 2006.

Additional submittals to the Water Board included:

- Submitted FY 04-05 Co-permittee Street Sweeping Activity Summary on September 15, 2005 (as part of the Program's *FY 04-05 Annual Report*).
- Submitted Summary of Co-permittee Street Sweeping Activities and estimated Mean Pollutant Load Reduction for Copper and Nickel- FY 2004- 2005 on September 15, 2005 (as part of the Program's *FY 04-05 Annual Report*).
- Submitted Summary of Co-permittee Street Sweeping Activities and estimated Mean Pollutant Load Reduction for Lead and Zinc- FY 2004- 2005 on September 15, 2005 (as part of the Program's *FY 04-05 Annual Report*)..
- Submitted Preliminary Draft Multi-Year Receiving Waters Monitoring Quality Assurance Project Plan (QAPP) on September 15, 2005 (as part of the Program's *FY 04-05 Annual Report*).
- Submitted letter entitled Transmittal of Responses to FY 04-05 Program Evaluation Report for Milpitas, Palo Alto, Santa Clara and Santa Clara County Programs on November 3, 2005. The responses were developed by the Cities of Milpitas, Palo Alto and Santa Clara in response to the FY 04-05 Program Evaluation Report provided by the RWQCB on October 3, 2005.
- Submitted letter entitled Summary of Co-permittee Ordinances and Policies for Implementation of Permit Provision C.3. to RWQCB on November 15, 2005. This letter includes a table which summarizes the status of Co-permittee ordinances and policies for implementing Provision C.3, particularly changes regarding Group 2 projects and the key provisions of the HMP.
- Submitted Executive Summary- FY 2004-2005 Annual Report to RWQCB on November 16, 2005.
- Submitted technical memorandum entitled Watershed Characterization and Sampling Design Rationale for Coyote Creek Watershed to RWQCB on March 1, 2006 (as part of the Program's *FY 06-07 Work Plan*).
- Response to RWQCB comments dated March 6, 2006 on the Program's technical report entitled *Upper Penitencia Creek Limiting Factor Analysis Technical Report (Draft)* dated

[1] As of August 1, 2006, no comments have been received from the Water Board on the Program's *FY 05-06 Work Plan*.

on December 7, 2005 (submitted to RWQCB on August 23, 2006); and
- Response to RWQCB comments dated July 26, 2006 on the Program's *FY 04-05 Annual Report (*submitted to RWQCB on September 15, 2006 as part of the Program's *FY 05-06 Annual Report,* Appendix A-9).

A summary of the Program's permit-required submittals, Water Board staff comments, Program responses, and Water Board staff approvals during the past several years (beginning with the most recent submittals) is included within Appendix A-3.

Guidance to Co-permittees

The Program sponsored four workshop sessions to educate Co-permittee staff and others about important issues and program requirements, as described below. The workshop flyers, agendas, attendance lists, and evaluation summaries for listed workshops are presented in Appendices A-4 through A-7.

How Development Affects Creeks- How Creeks Affect Development

On December 7, 2005, the Program, in collaboration with the Land Use Subgroup, planned and held the workshop entitled "How Development Affects Creeks – How Creeks Affect Development". Presentations were given on stream geomorphology and aquatic ecology; and on low-impact design techniques to protect water quality and beneficial uses. The presentations were followed by a walking tour of a nearby segment of Coyote Creek. The workshop attracted 115 participants. Evaluation forms showed that the vast majority of participants gave the workshop high remarks (see evaluation summary within Appendix A-4.)

Construction Site Planning and Management for Compliance with Phase I and II NPDES Requirements

Each year, the Program works with Water Board staff to coordinate training of agency staff on construction site management with the Water Board's training for developers and contractors. On December 9, 2005, the Program, in cooperation with the San Francisco Estuary Project, Water Board and Friends of the Estuary sponsored an extra training day for municipal agency staff. The workshop attracted 82 participants and covered construction regulations and responsibilities, erosion and sediment control BMPs, non-stormwater discharge prevention, examples of good and bad construction site management practices and demonstration of erosion and sediment control products by vendors. Evaluation forms showed that the workshops were successful in educating attendees (see evaluation summary within Appendix A-5).

Development and Water Resources: Making the Connection

On May 3, 2006, the Program, in collaboration with the Land Use Subgroup, planned and held the workshop entitled "Development and Creeks – Making the Connection". Presentations focused on how humans have altered the landscape and water resources of the Santa Clara Basin, and how understanding historical ecology can improve future land use decisions and site designs. The presentations were followed by a walking tour of the Guadalupe River. The workshop attracted 41 participants. Evaluation forms showed that the vast majority of participants found the workshop content to be very useful or useful (see evaluation summary within Appendix A-6.)

Constructing, Maintaining and Inspecting Stormwater Treatment BMPs

On June 9, 2006, the Program conducted a one-day workshop to assist Co-permittees with implementation of Provision C.3.e., Operation and Maintenance of Treatment BMPs. The workshop, which attracted 117 participants, covered recent changes to the SCVURPPP permit; examples of treatment control BMPs recently implemented within certain cities; proper design, construction, and maintenance of biofiltration BMPs; examples of treatment BMPs; standardized approach to conducting BMP O&M inspection programs; lessons learned from a post-construction inspection (City of Sunnyvale); and mosquito management. The workshop also featured exhibits for five stormwater control measure vendors. The agenda and evaluation summary for the workshop are presented in Appendix A-7.

Other Workshops

Program staff and Co-permittees also participated in the following workshops conducted by other agencies:

- Floodplain Managers Association Conference, Sacramento, CA, September 8, 2005 — Jill Bicknell gave a presentation entitled "Hydromodification Management Plan for Santa Clara Valley".
- CASQA Conference, Ontario, CA, October 3, 2005 —Jill Bicknell gave a presentation entitled "Development of a Hydromodification Management Plan for the Santa Clara Valley- Guidance for Local Implementation".
- Bay Area Macroinvertebrate Bioassessment Information (BAMBI) Workshop, January 31, 2006 – Chris Sommers gave a presentation entitled "Benthic Index of Biotic Integrity (IBI) for San Francisco Bay Area Creeks-Project Update".
- CASQA General Membership Meeting, San Jose, CA, May 12, 2006—Chris Sommers gave a presentation entitled "Assessing Stormwater Impacts on Receiving Waters".

DEVELOPMENT OF NEW OR REVISED MODEL PERFORMANCE STANDARDS

The Program developed model performance standards (PS) in 1996. Model PS were accepted by the Water Board in June 1997. Co-permittees adopted the model PS that applied to their specific conditions. The PS were incorporated into the September 1, 1997 Urban Runoff Management Plan (URMP) and into the Co-permittees' local URMPs. The Program and local URMPs were updated by October 2000 to include revisions to performance standards for Industrial/Commercial Discharger Control, Illicit Connection/Illegal Dumping Elimination and Storm Drain Operation and Maintenance.

Priorities for recent efforts to revise or create new performance standards have been driven by the requirements in the Program's NPDES permit and/or continuous improvement tasks. All new or revised PS required by the permit have been completed. Future efforts to revise or update existing PS will be identified as part of the permit re-issuance.

The Water Utility Operation and Maintenance Performance Standard is the last original performance standard needing revision. Issues which need to be addressed include changes in methods of disinfection of potable water supplies and the appropriate BMPs for discharges of these waters to storm drains. During FY 06-07, Program staff will work with BASMAA and Water Board staff on the Municipal General Permit to address any modifications and future expectations for the Water Utility Operation and Maintenance Performance Standard.

LOCAL PROGRAM PERFORMANCE REVIEWS

As part of the Program's continuous improvement process (as described in the 2004 URMP), the Program, Water Board staff and interested outside parties conduct on-site performance reviews of the Co-permittees' local urban runoff management programs. Performance reviews in recent years have focused on one element of the Co-permittees' local programs in detail.

During April 26-28, 2005, Tetra Tech, Inc. provided an independent third party evaluation of certain elements of the Cities of Milpitas, Palo Alto, Santa Clara and Santa Clara County stormwater programs, under the direction of Water Board staff. The following elements were included within the evaluation: ICID/IND inspections and enforcement, municipal maintenance, new development/redevelopment and construction inspection. The Program Evaluation Report was provided to the Program and Co-permittees on October 3, 2005. The report recommended improvements to the construction, illicit discharge, and industrial inspection programs for some of the cities, and stated that Santa Clara County had made the improvements recommended during the December 2003 program evaluations. In response to these comments, the Program submitted a letter entitled *Transmittal of Responses to FY 04-05 Program Evaluation Report for Milpitas, Palo Alto, Santa Clara and Santa Clara County Programs* (Appendix A-8) on November 3, 2005. Co-permittee improvements planned or made in response to the comments are described in their individual annual reports.

Water Board staff did not conduct any other performance reviews during FY 05-06.

CONTINUOUS IMPROVEMENT MEASURES

In its annual Work Plans and Annual Reports, the Program presents a list of continuous improvement items to be addressed at the Program level and an approach for implementing them. As discussed earlier under Program Management, continuous improvement items are normally identified from three sources: the Program's performance review with Water Board staff; Board staff comments on the prior year's annual report; and Management Committee comments on the *Review of Program Management Services* memorandum and other Program staff products.

Internal CI tasks identified include updating and maintaining the Program's web site (www.scvurppp.org) to ensure the effective distribution and review of draft and final products; and internal communication with the MC and other interested parties. In July 2005, Program staff released an updated version of the Program's website. The updated version allows easier navigation and location of final work products and other relevant information. In addition, Program staff has focused both technical and legal resources on working with Water Board staff (through the Municipal Regional Permit Work Groups and Steering Committee) on developing a Municipal Regional Permit that will address the Program's permit re-issuance.

Finally, there are a few remaining lower priority continuous improvement tasks from previous years. Their status and updated schedules are provided within Table 2-4 of the *FY 05-06 Annual Report*. Program staff will continue to complete these items during FY 06-07. There were no new continuous improvement items identified for FY 06-07.

PERMIT PROVISION C.1. COMPLIANCE SUMMARY TABLE

The State of California's and USEPA's 303(d) water quality list, approved in 1999, identifies several "pollutants of concern" in the Lower South San Francisco Bay for which urban runoff is

listed as a potential source. Consistent with Provision C.1 of its NPDES Permit, the Program has prepared a "C.1. Table" which summarizes the urban runoff controls being implemented to address these pollutants of concern. Although not required by Provision C.1, Table 2-5 provides an update to Table 2-5 contained in the *FY 03-04 Annual Repor*t and, as required, addresses the direction received from Water Board staff with regard to certain items.

Table 2-5 provides an updated summary of the Program's current and proposed (i.e., FY 06-07) BMPs/programs for the "pollutants of concern" and "pollutants of potential concern" in the Lower South San Francisco Bay for which urban runoff is listed as a potential source. Although urban runoff is listed as a potential source, in reality urban runoff is the transport vehicle and not the actual source. Therefore, key urban sources of the "pollutants of concern" and "pollutants of potential concern" are identified in Table 2-5.

As noted in Table 2-5, additional information on the Program's controls/programs can be found in the following documents:

- Program and Co-permittee 2004 *Urban Runoff Management Plans*
- 1997 *Metals Control Measures Plan*
- Past Annual Report and Work Plans
- Pollutant-specific technical reports (www.scvurppp.org)

In addition, the Program intends to incorporate updates to the summary table as part of the Program's continuous improvement process where new controls/programs will be identified and reported in the Program's Annual Work Plan.

Table 2-1
SCVURPPP Total FY 05-06 Budget

Budget Summary

Item	Budget
Operational Group	
1. Program Management/Administration (EOA)	$454,168
2. Permit Management (EOA)	$481,408
3. Technical Program Management (EOA)	$143,000
4. Legal Services (MOFO)	$87,818
5. Fiscal Agent (City of Sunnyvale)	$50,000
6. RMP Contribution (SFEI) (see Collaborative Budget)	
Subtotal Operational Group	**$1,216,394**
Projects Group	
7. Monitoring Projects (EOA/Subs)	$735,000
8. HMP Technical Assistance/Guidance/Workshops	$234,797
9. PI/P & WEO budget	$378,200
10. Project Monitoring Special Study (10% per MOA – moved to Collaborative Group)	
11. NPDES Permit Renewal	$75,000
Sub-total Project Group	**$1,422,997**
Collaborative Group	
A. Program Monitoring Special Studies	$80,000
B. WE&O - Watershed Support Fund	$0
C. CASQA Dues (Regional Collaboration)	$15,000
D. TMDL CEP Participation (Regional Collaboration)	$97,000
E. RMP Fee (Regional Collaboration)	$168,480
F. BASMAA Fee (Regional Collaboration)	$85,000
G. WERF Dues	$8,000
H. MOA Review	$25,000
Subtotal Collaborative Group	**$478,480**
NPDES Permit fee	**$169,529**
TOTAL FY 05-06 BUDGET	**$3,287,400**

Table 2-2
FY 05-06 Ad Hoc Task Groups and Accomplishments

NAME/PURPOSE	MEMBERS	START DATE	DISBAND DATE	ACCOMPLISHMENTS
Budget – Close-out old budgets; review and approve proposed budgets; review and provide direction to the MC on budget & policy issues. Permit Provision: Program Management	Lorrie Gervin, Sunnyvale – Chair Randolph Shipes, San Jose (former member) Melody Tovar, San Jose Steven Osborn, San Jose Rick Mauck, Santa Clara Cheri Donnelly, West Valley Communities Dave Chesterman, SCVWD Roger Narsim, SCVWD Jill Bicknell, Program staff Adam Olivieri; Program Staff	10/16/97		Reviewed and approved FY 06-07 budget; conducted mid-year FY 05-06 budget review and recommended adjustments to the MC. Hired a consultant to do a review of the Program's MOA and cost allocation; reviewed and approved the report. Reviewed and approved the Program Manager's Self-Audit Report.
Monitoring* - Review & approve monitoring project priorities and products for consistency with Program and WMI goals, and with NPDES permit requirements. * Meets quarterly in concert with SCBWMI WAMS meetings. Permit Provision: C.7.	Marilyn Nickel, Milpitas Dave Grabiec, Sunnyvale Kristy McCumby-Hyland, Sunnyvale Chris Sommers, Program staff Jim Ervin, San Jose James Downing, San Jose Steven Osborn, San Jose Jan O'Hara, RWQCB Brett Calhoun, SCVWD Kate Slama, SCVWD Dave Chesterman, SCVWD Adam Olivieri; Program Staff	6/19/97		Met jointly with WMI Watershed Assessment and Monitoring Subgroup (WAMs) to provide input on FY 06-07 Receiving Waters Monitoring Plan, FY 04-05 Monitoring Results, and SSI and MDDB updates.

*No longer a member of the group

Table 2-2
FY 05-06 Ad Hoc Task Groups and Accomplishments

NAME/PURPOSE	MEMBERS	START DATE	DISBAND DATE	ACCOMPLISHMENTS
Municipal Employee Training Protocols – develop stormwater BMP training curriculum with modules for different activities that can be customized by each co-permittee. Permit Provision: C.2.	Kristy McCumby-Hyland, Sunnyvale Melody Tovar, San Jose Eric Anderson, Mountain View Roger Lee, Santa Clara John Fusco, Program Staff Kate Slama, SCVWD Cheryl Dayley, San Jose Cheri Donnelly, West Valley	4/15/99		Did not meet in FY 05-06.
PI/P and WEO – Develop list of proposed Program PI/P activities for annual work plan using process outlined in the PI/P Strategy, and work with Program staff and consultant to develop work plans for and implement the Watershed Education and Outreach (WEO) Campaign. Permit Provision: C.4. **(Work Groups under PIP/ WEO are:** Scripts Review Schools Outreach Alviso Education Program IPM Pesticide Outreach Mercury P2 Outreach Pool Pump Magnet/Sticker	Mary Morse, San Jose – Chair Cheri Donnelly, West Valley Communities Delia Romero, West Valley Communities Bruce Frisbey, San Jose Eric Anderson, Mountain View Karin Hickey, Santa Clara Sally Personett, Sunnyvale Lorrie Gervin, Sunnvyale Joanne Johnson, Milpitas Julie Weiss, Palo Alto Trish Mulvey, CLEAN South Bay Roxan Nasiri, Cupertino Vishakha Atre, Program Staff Kate Slama, SCVWD	Reformed 5/18/00		Reviewed, approved and implemented the following Watershed Education and Outreach projects: • Watershed Watch Campaign • Watershed Watchers Program at the Don Edwards San Francisco Bay Wildlife Refuge • ZunZun School Assemblies Issued a RFP and selected a new consultant for the Watershed Watch Campaign.

Table 2-2
FY 05-06 Ad Hoc Task Groups and Accomplishments

NAME/PURPOSE	MEMBERS	START DATE	DISBAND DATE	ACCOMPLISHMENTS
Industrial Inspection – Revise performance standard/guidance to include recommendations for enhanced reporting, implement and review results. Permit Provision: C.6.a.i.	John Fusco, Program Staff Eric Anderson, Mountain View Dave Grabiec, Sunnyvale Anastazia Aziz, San Jose Mary Morse, San Jose (former member) Bhavani Yerrapotu, San Jose Jack Lovell, West Valley Brett Calhoun, SCVWD Roger Lee, Santa Clara Chris Fujimoto, Palo Alto	2/6/01		Did not meet in FY 05-06.
Mercury Pollution Prevention – Assist Co-permittee and Program staffs to implement Mercury P2 Plan tasks. Permit Provision: C.9.c.	Kristy McCumby-Hyland, Sunnyvale Melody Tovar, San Jose Sharon Newton, San Jose James Downing, San Jose Dave Drury, SCVWD Steve Homan, Santa Clara County Rob D'Arcy, SC County HHW Program Kristin Kerr, Program Staff Mary Morse, San Jose Eric Anderson, Mountain View Cheri Donnelly, West Valley Communities Julie Weiss, Palo Alto	10/18/01		Developed mercury-containing product use survey, and model guidelines and virtual elimination policy for implementing the Mercury Pollution Prevention Plan. Did not meet in FY 05-06
Pest Management Performance Standard - Develop new performance standard to address Permit Provision C.9.d. and to assist Program staff to implement Program tasks. Permit Provision: C.9.d.	Phil Bobel, Palo Alto (Chair) Julie Weiss, Palo Alto Melody Tovar, San Jose Sharon Newton, San Jose Cheryl Dayley, San Jose Jean La Duc, San Jose Kate Slama, SCVWD Kristy McCumby-Hyland, Sunnyvale John Mendoza, Santa Clara Jill Bicknell, Program Staff	8/17/00	10/21/04	Developed, reviewed and finalized the Pest Management Performance Standards in FY 01-02 and FY 02-03. Did not meet in FY 05-06

Table 2-2
FY 05-06 Ad Hoc Task Groups and Accomplishments

NAME/PURPOSE	MEMBERS	START DATE	DISBAND DATE	ACCOMPLISHMENTS
Watershed Analysis – Assist with conduct and review of work plan tasks to conduct watershed analysis and management practice assessment in "other creeks" which may be impaired by sediment. Permit Provision: C.9.f.iii	Brett Calhoun, SCVWD Kristy McCumby-Hyland, Sunnyvale Steve Homan, Santa Clara County Larry Lind, Los Altos Jim Ervin, San Jose James Downing, San Jose (former member) Neil Van Keuren, San Jose Chris Sommers, Program Staff Paul Randall, Program Staff Jae Abel, SCVWD (former member)	6/20/02		Conducted Limiting Factors Analysis (LFA) in the Upper Penitencia Creek Watershed. The final LFA technical report was finalized in August 2006.
Trash – Develop Trash Work Plan, coordinate trash-related activities, and assist Program Staff to implement Program tasks. Permit Provision: C.1.	Dave Staub, Santa Clara Cheri Donnelly, WVCWP Kristy McCumby-Hyland, Sunnyvale Brett Calhoun, SCVWD Skip LaCaze, San Jose Sharon Newton, San Jose Melody Tovar, San Jose Phil Bobel, Palo Alto Chris Rummel, County DEH Steve Homan, Santa Clara County Lisa Rose, County GALA Trish Mulvey, CLEAN South Bay Jan O'Hara, RWQCB John Fusco, Program Staff Paul Randall, Program Staff Chris Fujimoto, Palo Alto Roxan Nasiri, Cupertino Larry Lind, Palo Alto	12/20/01		Revised RWQCB Rapid Trash Assessment (RTA) Protocol (Version 7.0) to improve the assessment of trash-impacted sites in urban streams. The Program's Urban RTA (Version 1.0) was used to evaluate trash problem areas during FY 05-06. Revised format for reporting trash evaluation results. Revisions will improve consistency of Co-permittee responses and enhance interpretation and reporting of information.

Table 2-2
FY 05-06 Ad Hoc Task Groups and Accomplishments

NAME/PURPOSE	MEMBERS	START DATE	DISBAND DATE	ACCOMPLISHMENTS
C.3. Provision Oversight (C3PO) – Develop approach to implementing Permit Provision C.3.requirements for new and redevelopment and review Program work products. **(Work Groups under C3PO are:** HMP HMP Implementation Phase BMP O&M Verification Infiltration) <u>Permit Provision</u>: C.3.	Joe Teresi, Palo Alto Paramjit Uppal, Milpitas Cheri Donnelly, WVCWP Sandy Baily, Los Gatos Trish Duarte, Los Gatos Kevin Riley, Santa Clara Roger Lee, Santa Clara Mike Campbell, HMH Anastazia Aziz, San Jose Joe Vafa, San Jose Calvin Matsui, San Jose Ebrahim Sohrabi, San Jose Maria Angeles, San Jose Timm Borden, San Jose Laurel Prevetti, San Jose Jenny Nusbaum, San Jose Dipankar Sen, SCVWD Roger Narsim, SCVWD Jill Bicknell, Program staff Sue Ma, RWQCB Kristy McCumby-Hyland, Sunnyvale Erin Walters, Sunnyvale (former member) Christine Cannizzo, Sunnyvale (former member) Liliana Price, Sunnyvale (former member) Eric Anderson, Mountain View Genevieve Fire, Cupertino Curtis Banks, Los Altos Therese Schmidt, Saratoga Kristen Borel, Saratoga Al Oxonian, Campbell Steve Homan, Santa Clara County	11/15/01		Received updates on C.3. and HMP issues and projects; reviewed fact sheets and updates to C.3. Handbook; planned annual workshop; shared information on implementation of C.3.

NAME/PURPOSE	MEMBERS	START DATE	DISBAND DATE	ACCOMPLISHMENTS
Waiver Provision – Develop proposed model waiver. Permit Provision: C.3.g.	Randolph Shipes, San Jose (former member) Mollie Dent, San Jose Counsel Anthony Bennetti, SCVWD Counsel Blair King, Milpitas Darryl Wong, Milpitas Donna Scott, Sunnyvale Counsel Shelley Emerson, Mountain View Counsel Bob Reid, West Valley Communities Adam Olivieri, Program Staff Robert Falk, Program Counsel	11/15/01	10/21/04	Completed revised model alternative compliance program during FY 02-03 and accepted it as internal guidance. Did not meet in FY 05-06.
WORK GROUP INFORMATION **(PIP & WEO Work Groups)**				
Script Review – To review scripts created for media use related to the Watershed Watch Campaign (on a short turn around basis), oversee development of Watershed Watch web site and review page content. Permit Provision: C.4.	Roxan Nasiri, Cupertino Sally Personett, Sunnyvale Cheri Donnelly, WVCWP Bruce Frisbey, San Jose Mary Morse, San Jose Kate Slama, SCVWD Julie Weiss, Palo Alto Vishakha Atre, Program Staff	12/99		Provided input on a number of radio scripts and print ads with a short turnaround time.

Table 2-2
FY 05-06 Ad Hoc Task Groups and Accomplishments

NAME/PURPOSE	MEMBERS	START DATE	DISBAND DATE	ACCOMPLISHMENTS
Pesticide User Outreach – To help Program staff develop work plans for and implement pesticide user outreach tasks from the Program's Pesticide Management Work Plan. This project combines elements of the IPM Store partnership Work Group and the Household Chemical Management Work Group. It builds on the relationships developed with independent nurseries and hardware stores developed during the previous years of the IPM Store Partnership project. The work group also reviews the Program's Work Plan for pesticide outreach and participates in outreach events. Permit Provision: C.9.d.	Joanne Johnson, Milpitas Roxan Nasiri, Cupertino Julie Weiss, Palo Alto Larry Lind, Los Altos Paramjit Uppal, Milpitas Eric Anderson, Mountain View Bruce Frisbey, San Jose Sharon Newton, San Jose Cheryl Dayley, San Jose Mary Morse, San Jose Kristy McCumby-Hyland, Sunnyvale Sally Personett, Sunnyvale Kate Slama, SCVWD Cheri Donnelly, WVCWP Rob D'Arcy, Santa Clara Co. Rosemary Lombard, Palo Alto Vishakha Atre, Program Staff	Reformed 8/02		Reviewed and approved detailed FY 05-06 Work Plan; provided input to Program staff on Regional IPM issues; reviewed and approved materials for the fall advertising campaign, planned, conducted and staffed IPM outreach related events; conducted outreach to stores.
Mercury P2 Outreach – To help Program staff, develop work plans for and implement mercury outreach tasks. Permit Provision: C.9.c.	Julie Weiss, Palo Alto (Chair) Roxan Nasiri, Cupertino Mary Morse, San Jose Sally Personett, Sunnyvale Kristy McCumby-Hyland, Sunnyvale Kate Slama, SCVWD Marilyn Nickel, Milpitas Joanne Johnson, Milpitas Zakk Devine, County IWM Division Rob D'Arcy, CoHHW Program Cheri Donnelly, WVCWP Vishakha Atre, Program Staff Sharon Newton, San Jose	12/02		Reviewed and approved the detailed FY 05-06 work plan; reviewed and approved materials for the fall advertising campaign.

Table 2-2
FY 05-06 Ad Hoc Task Groups and Accomplishments

NAME/PURPOSE	MEMBERS	START DATE	DISBAND DATE	ACCOMPLISHMENTS
Schools Outreach – To plan for and oversee school outreach activities coordinated with the WEO Campaign (e.g. ZunZun performances), coordinate Co-permittee school outreach efforts and identify gaps in outreach for watershed/stormwater education. Identify a program for conducting outreach at the middle-school level. Permit Provision: C.4.	Mary Morse, San Jose – Chair Roxan Nasiri, Cupertino Julie Weiss, Palo Alto Jan Raissle, Palo Alto Bruce Frisbey, San Jose Trish Mulvey, CLEAN South Bay Cheri Donnelly, West Valley Kate Slama, SCVWD Vishakha Atre, Program Staff Sally Personett, Sunnyvale	12/99		Provided input for conducting 50 ZunZun school assemblies.
Alviso Education Program – To periodically evaluate and provide input to S.F. Bay Wildlife Refuge staff regarding educational programs funded by SCVURPPP. Permit Provision: C.4.	Kate Slama, SCVWD Bob Chessman, San Jose Bruce Frisbey, San Jose Roxan Nasiri, Cupertino Sally Personett, Sunnvyale Mary Morse, San Jose Genie Moore, S.F. Bay Wildlife Refuge Laurie McEwen, S.F. Bay Wildlife Refuge Trish Mulvey, CLEAN South Bay Vishakha Atre, Program Staff Cheri Donnelly, WVCWP	12/99		Reviewed work done in FY 05-06; discussed improvements and approved work plan for FY 06-07.

Table 2-2
FY 05-06 Ad Hoc Task Groups and Accomplishments

NAME/PURPOSE	MEMBERS	START DATE	DISBAND DATE	ACCOMPLISHMENTS
C3PO Work Groups				
Hydromodification Management Plan (HMP) Work Group - Review task and approve products, final HMP, and co-permittee guidance. Permit Provision: C.3.f.	Joe Teresi, Palo Alto Dipankar Sen, SCVWD Roger Narsim, SCVWD Jenny Nusbaum, San Jose (former member) Anastazia Aziz, San Jose Ebrahim Sohrabi, San Jose Maria Angeles, San Jose Joe Vafa, San Jose Calvin Matsui, San Jose Melody Tovar, San Jose Cheri Donnelly, WVCWP Fariborz Heydari, Milpitas Trish Mulvey, CLEAN South Bay Kristy McCumby-Hyland, Sunnyvale Lorrie Gervin, Sunnyvale Jan O'Hara, RWQCB Jill Bicknell, Program Staff Paul Randall, Program Staff	4/22/02		Did not meet in FY 05-06 (replaced by HMP Implementation Phase Work Group).
BMP Operations & Maintenance Verification Work Group -- Review model O&M documentation and develop guidance for conducting verification programs and reporting inspection data. Permit Provision: C.3.e.	Dipankar Sen, SCVWD Patti Joki, Milpitas Paramjit Uppal, Milpitas Jenny Nusbaum, San Jose Brett Calhoun, SCVWD Cheri Donnelly, WVCWP Dan Cloak, DCE (former)	4/22/02		Developed an approach to use standardized data fields to track treatment BMPs and relevant inspection results; completed the Standard Stormwater Treatment BMP Inspection Data Collection Form and guidance on annual reporting of data;

Table 2-2
FY 05-06 Ad Hoc Task Groups and Accomplishments

NAME/PURPOSE	MEMBERS	START DATE	DISBAND DATE	ACCOMPLISHMENTS
	Eric Anderson, Mountain View Genevieve Fire, Cupertino Trish Duarte, Los Gatos Jack Lovell, West Valley Communities Jamie Matthews, San Jose Jan O'Hara, RWQCB (former) Kristy McCumby-Hyland, Sunnyvale Lavenia Millar, Cupertino Maria Angeles, San Jose Melody Tovar, San Jose Anastazia Aziz, San Jose Rafles Warnars, San Jose Ray Ho, San Jose Robert Gallo, Sunnyvale Roger Narsim, SCVWD Chris Fujimoto, Palo Alto John Fusco, Program Staff Paul Randall, Program Staff			helped plan workshop on BMP inspection; coordinated with County Vector Control District.
HMP Implementation Phase Work Group	Melody Tovar, San Jose Kristy McCumby-Hyland, Sunnyvale Mike Campbell, HMH Engineers Larry Lind, Los Altos Dipankar Sen, SCVWD Roger Narsim, SCVWD Dave Chesterman, SCVWD Den Thap, Program Staff (former member) Kristin Kerr, Program Staff Jill Bicknell, Program Staff Joe Teresi, Palo Alto Anastazia Aziz, San Jose			Received updates on HMP issues and projects, permit status, and activities of other programs; provided input on implementation tools needed; reviewed fact sheets and updates to the C.3. Handbook; reviewed and sent an RFQ for qualified consultants to design HMP controls; shared information on implementation of HMP requirements on

Table 2-2
FY 05-06 Ad Hoc Task Groups and Accomplishments

NAME/PURPOSE	MEMBERS	START DATE	DISBAND DATE	ACCOMPLISHMENTS
	Joe Vafa, San Jose Maria Angeles, San Jose Julia Nguyen, San Jose Christine Mohanna, San Jose Fariborz Heydari, Milpitas Trish Mulvey, Clean South Bay			development projects.
Infiltration Work Group - To develop guidance to Co-permittees on design of Stormwater infiltration measures to protect groundwater quality. Permit Provision: C.3.i	Yaping Liu, SCVWD Larry Lind, Los Altos Mike Campbell, RBF Consulting Jenny Nusbaum, San Jose (former member) Anastazia Aziz, San Jose Kelly Rohlfs, Stanford (former member) Kristy McCumby-Hyland, Sunnyvale Jill Bicknell, Program Staff Roger Narsim, SCVWD Paul Randall, Program Staff Bill Scott, San Jose (former member) Tracy Ingebritsen, Stanford	1/22/03		Did not meet in FY 05-06.

Table 2-3
Performance of FY 05-06 Program Management Tasks

Task Description	Work Items	Work Completed / Comments
	1.0 Program Management/Administration	
Task 1.1 - Administrative Assistance	• Provide general administrative assistance • Maintain toll-free numbers for both SCVURPPP and the Watershed Watch Campaign. • Distribute materials to the public	• Continuing • Responded to 37 calls in FY 05-06. Database of requests is regularly updated and will be distributed to Co-permittees. • Sent materials to all 29 callers who requested materials. Responded to 46 requests from the Watershed Watch website for Watershed Watch kits. •
Task 1.2 - Management Committee and Ad Hoc Task Group (AHTG) Support	• Facilitate and support up to 12 MC meetings* • Facilitate and support up to 40 AHTG meetings (includes Work Group meetings)*	• Completed 15 meetings (12 regular and three special) in FY 05-06. • Facilitated 22 AHTG meetings. AHTG meetings include: Budget AHTG (5); C3 Provision Oversight AHTG (5); Trash AHTG (3); Watershed Analysis Work Plan AHTG (1); Watershed Education & Outreach AHTG (8). • Program Staff also facilitated 7 Work Group meetings: Alviso Work Group (1); BMP O&M Verification Work Group (1); HMP Instream Projects Work Group (1); HMP Implementation Phase (HIP) Work Group (4).

* Includes: develop/distribute agendas, comply with Brown Act, update mailing lists, do copying, reserve meeting places, facilitate meetings, draft/finalize minutes, and organize/conduct follow-up.

Table 2-3
Performance of FY 05-06 Program Management Tasks

Task Description	Work Items	Work Completed / Comments
		Note: Program staff helped reduce the number of actual meetings by using electronic mail for review of work products and other correspondence.
Task 1.3 - Program Budget Administration	• Develop subsequent year's budget	• Total Program budget distributed to Budget AHTG (BATG) and MC on 1/20/06; budget approved by BATG at their 1/26/06 meeting (BATG recommended approval by MC at 2/16/06 meeting); budget approved by MC on 2/16/06.
	• Track expenditures and prepare quarterly reports to Management Committee	• Continued tracking system developed in FY 97-98. Submitted budget updates in September 2005, December 2005 and March 2006.
	• Identify and apply for grant opportunities as directed by Management Committee	• Program staff assisted City of San Jose in preparing a concept proposal for a grant under the State Water Board Consolidated Grants Program. The grant related to the implementation of trash controls. The concept proposal was not selected for further consideration. • Supported the City of San Jose in applying for a grant from the SWRCB to fund the City's Public Works Urban Runoff Design Elements Project.
Task 1.4 - Coordination with Fiscal Agent	• Track Program Fund receipts/expenditures; obtain budget status information	• Continued to receive updated information on revenues and expenditures monthly from the City of Sunnyvale and directed the City

Table 2-3
Performance of FY 05-06 Program Management Tasks

Task Description	Work Items	Work Completed / Comments
		to pay invoices. This process worked effectively.
Task 1.5 - Coordination with Legal Consultant	• Communicate with and provide assistance to legal counsel.	• Held one closed session with the Management Committee (8/25/05). • Coordinated with legal counsel on other permit issues (e.g., MRP, TMDLs and HMP).
Task 1.6 – Coordinate Program Representation	• Communicate with and report information provided by Co-permittees representing Program at external meetings.	• Program staff attends external meetings requiring Program representation. See report under Task 2.3. Co-permittees normally do not represent the Program at external meetings. An exception is that several Co-permittees represent themselves at the San Francisquito Creek Watershed Council meetings regarding sediment control studies. (Program staff is not involved).
Task 1.7 – Develop and Manage PI/P Program	• Conduct long-range planning for Program PI/P activities	• Managed the implementation of the Watershed Watch Campaign; including development of the Watershed Watch Mid-year Campaign Report, Teacher Evaluation Mid-year and Final Reports, and Final Campaign Final Report; reviewed products by consultants; conducted an RFP and interview process to select a consultant for the next phase of the Watershed Watch Campaign; coordinated campaign with other PIP goals and activities.

Table 2-3
Performance of FY 05-06 Program Management Tasks

Task Description	Work Items	Work Completed / Comments
	• Manage development of PI/P work plan for FY 06-07	• Developed FY 06-07 PI/P Work Plan with input from Budget and WEO AHTGs. Updated pollutant/PIP materials matrix and developed recommendations and strategies for FY 06-07 projects. • Throughout the year, oversaw development of work plans for and/or management of PI/P projects.
	• Miscellaneous Outreach Tasks	• Program Fact Sheets. Developed and distributed Program-specific fact sheets on the following topics: Watershed Education and Outreach; Water Quality Monitoring and Watershed Assessment; Sediment Impact and Management Practice Assessments; General Program; and Trash Evaluation and Management. • Award Applications. Prepared and submitted award applications for the following awards: United States Environmental Protection Agency Clean Water Act Recognition Award- Stormwater Management Excellence (submitted June 23, 2006); CASQA Stormwater Research Project of the Year (submitted July 14, 2006); and National Association of Flood and Stormwater Management Agencies-Excellence in Communication Awards (submitted August 15, 2006).
	• Provide support to Co-permittee's requests for public education assistance	• Ongoing support to Co-permittee requests; coordinated reprints of materials and

Table 2-3
Performance of FY 05-06 Program Management Tasks

Task Description	Work Items	Work Completed / Comments
		distribution of Watershed Watch kits; staff outreach events, as needed; kept PI/P contacts informed about local and regional activities through email. • Coordinated with BASMAA Regional Ad Campaign.
	2.0 Permit Management	
Task 2.1 - Report Preparation & Submittal	• Prepare Program Annual Report and submit to Water Board by Sept. 15 of each year.	• FY 04-05 Annual Report prepared and submitted on September 15, 2005. Continued the streamlined reporting format to reduce Co-permittee effort while satisfying Water Board requirements. Prepared guidance to Co-permittees and reviewed Co-permittee submittals for completeness and consistency. • Executive Summary- FY 2004-2005 Annual Report. Distributed at the November 16, 2005 Water Board meeting and posted on the Program's website. Additional copies were provided to Co-permittees for distribution to interested parties within their agencies.
	• Prepare FY 06-07 Draft Work Plan and submit to Water Board by March 1	• FY 06-07 Draft Work Plan prepared and submitted on March 1, 2006. Work Plan contained the following: the Program Continuous Improvement Plan, Future Performance Standard Revisions, PI/P Work Plan, FY 06-07 Annual Receiving Water Monitoring Plan, FY 06-07 Copper/Nickel Work Plan, Watershed

Table 2-3
Performance of FY 05-06 Program Management Tasks

Task Description	Work Items	Work Completed / Comments
		Management Measures, Status of ongoing Pesticide Management Plan tasks, Mercury Pollution Prevention efforts and Work Plan, New and Redevelopment (C.3.) Work Plan and Program FY 06-07 Budget and Co-permittee FY 06-07 Work Plan Summary Tables.
Task 2.2 - Internal Co-Permittee Liaison	• Develop guidance as directed by MC. May include guidance documents, evaluation methods and effectiveness indicators.	• Developed guidance on the Annual Report, Work Plan, C.3 implementation, Copper Action Plan Work Plan, street sweeping tracking and evaluation, submittal of trash problem area evaluation data and submittal of IND and IC/ID inspection data. Provided additional guidance to Co-permittees in response to telephone and email requests.
	• Conduct local program reviews	• During April 26-28, 2005, Water Board staff, in cooperation with EPA's contractor Tetra Tech, Inc. conducted performance reviews of selected Co-permittee (i.e., Cities of Milpitas, Palo Alto, Santa Clara and Santa Clara County) stormwater programs. An evaluation report was provided to Program and Co-permittee staff on October 3, 2005. Program staff submitted a letter entitled *Subject: Transmittal of Responses to FY 04-05 Program Evaluation Report for Milpitas, Palo Alto, Santa Clara and Santa Clara County Programs* on November 3, 2005. The responses were developed by the Cities of Milpitas, Palo Alto and Santa Clara.

Table 2-3
Performance of FY 05-06 Program Management Tasks

Task Description	Work Items	Work Completed / Comments
	• Conduct up to 4 training workshops; may include educational outreach to businesses.	• Planned, conducted, assisted with, and/or co-sponsored the following workshops: 1) How Development Affects Creeks: How Creeks Affect Development (December 7, 2005) - attracted 115 participants. 2) Construction Site Planning and Management for Compliance with Phase I and II NPDES Requirements" (December 9, 2005) - attracted 82 participants. 3) Development and Water Resources: Making the Connection (May 3, 2006) - attracted 41 participants. 4) Conducting Stormwater Treatment Best Management Practices (BMP) Maintenance and Inspections (June 6, 2006) - attracted 117 participants. Gave presentations on behalf of the Program at workshops/conferences planned by others: 1) Floodplain Managers Association Conference, Sacramento, CA, presentation by Jill Bicknell on "Hydromodification Management Plan for Santa Clara Valley", September 8, 2005; 2) CASQA Conference, Ontario, CA, presentation by Jill Bicknell on "Development of a Hydromodification Management Plan for the Santa Clara Valley- Guidance for Local Implementation", October 3, 2005; 3) Bay Area

Table 2-3
Performance of FY 05-06 Program Management Tasks

Task Description	Work Items	Work Completed / Comments
		Macroinvertebrate Bioassessment Information (BAMBI) Workshop, presentation by Chris Sommers on "Benthic Index of Biotic Integrity (IBI) for San Francisco Bay Area Creeks-Project Update", January 31, 2006; and 4) CASQA General Membership Meeting, San Jose, CA, presentation by Chris Sommers on "Assessing Stormwater Impacts on Receiving Waters", May 12, 2006.
Task 2.3 - External Organization Liaison	• Identify regulatory issues, prepare comments, and represent Program at meetings.	• Distributed information to MC on following issues: revisions to 303(d) list and TMDL priorities; mercury, diazinon, pesticides, PBDE's and copper/nickel TMDL studies and action plans; issues discussed at Municipal Regional Permit work group and stakeholder meetings; legislation of concern; other items of interest from the RWQCB, BASMAA and CASQA. Program staff served on the PCB TMDL Stakeholder Group and Mercury TMDL Work Group (no meetings so far), commented and prepared TMDL study products, helped update and report progress on the Copper Action Plan, and assisted Water Board staff with preparation of Basin Plan amendments related to mercury.
	• Represent Program at up to 77 external organization meetings (RWQCB, BASMAA, CASQA, CEP, RMP, others) as directed by MC.	• Attended 211 external organization meetings (see separate summary table – not including WMI and Program Data Coordination meetings); prepared

Table 2-3
Performance of FY 05-06 Program Management Tasks

Task Description	Work Items	Work Completed / Comments
		summaries for MC distribution; prepared and/or distributed full meeting notes for most meetings.
		• Program staff served on the BASMAA Executive Board (Vice Chair), CASQA Board of Directors and CASQA Executive Program Committee; and represents BASMAA on the RMP Steering Committee, RMP Technical Committee, Municipal Regional Permit Steering Committee and three Municipal Regional Permit Work Groups.
	• Represented Program at WMI Core Group and Subgroup meetings.	• Attended 44 WMI meetings, including: Land Use Subgroup (8); BAMBI Workshop (1); Bay Area Macroinvertebrate Discussion Group (1); LUS Workshop/Walking Tour of Coyote Creek Planning Meeting (2); LUS Workshop/Walking Tour of Coyote Creek (1); SCBWMI Core Group (8); SCBWMI Watershed Assessment and Monitoring Subgroup (6); SCBWMI Retreat (1); SCBWMI Workgroup I- Indicator Development (9); SCBWMI Chair Meeting (1); SCBWMI Guadalupe Stakeholder Work Group (1); Work Group I Report Card Subgroup (5).
	• Obtain updates to State NOI database.	• Continued to place updated NOI lists on SCVURPPP website on a quarterly basis.

Table 2-3
Performance of FY 05-06 Program Management Tasks

Task Description	Work Items	Work Completed / Comments
Task 2.4 – Permit Renewal	• Coordinate development of permit with WMI via Regulatory Subgroup	• Coordinated with Water Board staff. MC direction contained in work plan and budget for FY 05-06.
	• Present to Water Board at regular Board meeting	• N/A- At direction of the Management Committee, Program staff attended and made presentations at Water Board meetings.
		• Program staff worked with Water Board staff on two Tentative Orders, released in December 2004 and May 2005, the latter of which was adopted by the Water Board in July 2005. Program staff conducted extensive review of the draft Orders, provided written comments to Water Board staff and negotiated revisions on behalf of the Management Committee.
		• Program staff, at direction of MC, is participating in the Municipal Regional Permit (MRP) development process. During FY 05-06, Program staff has attended 60 MRP meetings, including: Monitoring Work Group (11); New Development Work Group (10); Municipal Maintenance Work Group (8); Mercury Work Group (1); Mercury/PCBs Work Group (8); Steering Committee (4); and special BASMAA Board Meetings (18). (as well as conducted numerous e-mail review of products).

Table 2-3
Performance of FY 05-06 Program Management Tasks

Task Description	Work Items	Work Completed / Comments
Task 2.5 – Implement Continuous Improvement Items	• Investigate, develop implementation plans, and implement items for Program continuous improvement identified in Co-permittee reviews, work plan, and annual report	• Table 1-1 of the *FY 06-07 Draft Work Plan* and Table 2-4 of the *FY 05-06 Annual Report* presented the progress of continuous improvement tasks. There were no new continuous improvement items identified for FY 05-06.
	• Summarize for Program Annual Report	• The status of continuous improvement items was presented in the *FY 06-07 Draft Work Plan,* and is updated in the *FY 05-06 Annual Report.*
	3.0 Technical Program Management	
Task 3.1 - Prepare RFPs and Manage Contractors	• Develop RFPs, scopes of work, and contracts for up to 4 projects/services; assist with advertisement and selection; oversee contracted work.	• Prepared scopes of work for monitoring projects for FY 05-06; continue to oversee contracted work. (All contractors are now subcontractors to EOA, Inc., per the Program's "Procedures for Contracting Outside Services", 5/15/98).
		• Coordinated CEP Work Group investigating PCBs and Hg in the Bay and managed contractor finishing PCB case study investigations. Worked via CEP to develop RFPs and manage contractors.
		• Developed scopes and contracts; and managed contractors conducting Multi-year Receiving Waters Monitoring Plan, sediment assessment and bioassessment scopes of work (Contractors were selected by MC and are assisting the Program with implementing

Table 2-3
Performance of FY 05-06 Program Management Tasks

Task Description	Work Items	Work Completed / Comments
		the Multi-year Plan in accordance with the permit). • Managed the following regional project: Introduction to Dioxins for Bay Areas Stormwater Management Agencies (BASMAA task of regional benefit). • Developed scope and contract; and managed WE&O contractor (TRG and Associates and Carl & Manor- both selected previously via RFP process). • Developed scopes and contracts and managed two outreach contractors, the ZunZun performance group and the San Francisco Bay Wildlife Society's Environmental Education Center in Alviso. • Developed scope and contract for and managed contractor to complete Phase I of the BASMAA Task of Regional Benefit – BMP Sizing Tool Project (AEI-CASC).
Task 3.2 - Provide Technical Review	• Provide technical review of work products of contractors and provide recommendations to MC regarding acceptability/modifications.	• Reviewed all consultant products related to C.3. HMP, Multi-year Receiving Waters Monitoring Plan, sediment and bioassessment work.

Table 2-3
Performance of FY 05-06 Program Management Tasks

Task Description	Work Items	Work Completed / Comments
Task 3.3 - Develop Additional Performance Standard	• Assist MC in developing or improving one performance standard.	• Starting in FY 05-06, Program staff will work with BASMAA and Water Board staff on the Municipal General Permit to address any modifications and future expectations for the Performance Standards.

Table 2-4
Program Continuous Improvement (CI) Tasks

Tasks	Updated Schedule	Status[1]
New Development and Redevelopment		
1. Develop design guidance containing stormwater control opportunities for small road modifications.	June 2007	**Update** – The Program's permit requirements were made consistent with other Bay Area permits, which exempt road reconstruction (within the same footprint) from C.3. However, the C3PO AHTG members have expressed interest in the development of stormwater control design guidance for small road and right-of-way modifications and other tight spaces. This was a lower priority than other C.3. tasks in FY 05-06, and will be addressed in FY 06-07.
Program Management		
1. Conduct a workshop for municipal staff based on the municipal training protocols being developed by an ad hoc task group. (Priority – Medium)	June 2007	**Update** – Five Power Point presentations have been developed on BMPs for corporation yards, storm drain O&M, road maintenance, pest management and mercury pollution prevention. Program staff will repackage each training protocol into smaller, focused modules. This approach will allow Co-permittees to train municipal staff on certain key municipal elements in shorter blocks on time (e.g., 15 minutes). This task was delayed until FY 06-07 due to Program staff focus on higher priority items.
2. Consider developing, with the help of an ad hoc task group, a fact sheet addressing common construction BMP problems, like drain inlet protection and dewatering. (Priority – Medium)	June 2007	**Update** – Management Committee approved having the Program adapt an existing brochure on dewatering (created by Palo Alto, Mountain View and San Jose) for the other Co-permittees' use. The C3PO AHTG confirmed its interest in this project at its September 26, 2005 meeting, but it was a lower priority than other C.3. tasks. Will be completed in FY 06-07.
3. Look into providing storm water training to building officials through the Peninsula Chapter of Building Officials monthly training sessions. (Priority –Low)	June 2006	**Completed** – The C3PO AHTG confirmed its interest in this task at its September 26, 2005 meeting. Program staff contacted the Peninsula Chapter of Building Officials, who said that a presentation could be scheduled at a future meeting. However, a survey of Co-permittee building inspection staffs indicated that they would prefer "in-house" training, and thus the C3PO AHTG directed Program staff to address their training needs at the June 6, 2006 workshop.

[1] Tasks reported as completed in the FY 04-05 Annual Report have been removed from the list.

Table 2-5
SCVURPPP Current and Proposed BMPs for Pollutants of Concern Prepared in Compliance with NPDES Order 01-024

CHEMICAL	WATER-BODY	KEY URBAN SOURCES[i]	URBAN RUNOFF CONTROLS (ONGOING PROGRAM CONTROLS)[ii]	FY 05-06 ADDITIONAL URBAN RUNOFF CONTROLS/PROGRAMS PROPOSED TO REDUCE POLLUTANTS[iii]	CONTINUOUS IMPROVEMENT (IDENTIFICATION & ASSESSMENT OF NEW URBAN RUNOFF CONTROLS/PROGRAMS)
Pollutants of Concern [iv]					
Metals (particulate form)	**Lower South Bay**	**All Urban Sources**	Performance standards[v]: • Illicit Discharge and Illegal Dumping Elimination • Industrial/Commercial Discharger Control • Public Streets, Roads and Highways O&M • Storm Drain Systems O&M • Water Utility O&M • New Development and Construction Control Measures-Planning Procedures • New Development and Construction Control Measures-Construction Inspections • Rural Public Works Maintenance and Support	Performance Standard Improvements: Implement & Track Performance (see Section 2 and 6 of Work Plan and changes to Work Plan contained in Annual Report): PI/P Work Plan: Implement and Track Watershed Education & Outreach Strategy (see Section 3 of Work Plan, Tables 2-2 and 3-1 for specific Program projects and Co-permittee Work Plans) Monitoring Program: Implement and Track monitoring projects. (See Section 4 of Work Plans). See Annual Report Section 4 for a summary of specific projects. Watershed Measures: Implement and Track watershed measures (see Sections 4 and 5 for details). Five areas of effort include: • Characterizing watersheds and stormwater discharges; • Assessing existing or potential adverse impacts to beneficial uses; • Identifying potential sources of pollutants of concern; • Aiding in developing and implementing strategies for controlling adverse impacts of beneficial uses; and • Assessing the effectiveness of pollutant prevention/control	Evaluate the need for additional BMPs to reduce discharges of "pollutants of concern".

Table 2-5
SCVURPPP Current and Proposed BMPs for Pollutants of Concern Prepared in Compliance with NPDES Order 01-024

CHEMICAL	WATER-BODY	KEY URBAN SOURCES[i]	URBAN RUNOFF CONTROLS (ONGOING PROGRAM CONTROLS)[ii]	FY 05-06 ADDITIONAL URBAN RUNOFF CONTROLS/PROGRAMS PROPOSED TO REDUCE POLLUTANTS[iii]	CONTINUOUS IMPROVEMENT (IDENTIFICATION & ASSESSMENT OF NEW URBAN RUNOFF CONTROLS/PROGRAMS)
				measures. See SCVURPPP Watershed Monitoring and Assessment Summary Report (September 15, 2006) and revised MY-RWMP (July 1, 2004) per permit condition C7b and C9. See Watershed Integration report (June 29, 2001) prepared per condition C10a. Program is a key player in the CEP and RMP efforts and is involved in various technical advisory committees. The Program provides funding to the CEP and the RMP to investigate key issues related to the health of the Bay; and assists the RWQCB in meeting TMDL mandates. Develop guidance for the implementation of Permit Provision C3, which is indirectly related to the control of many of the pollutants of concern.	
Copper	**Lower South Bay**	**Brake pads & Industrial sources** (approximately 46% of total copper load to Lower South Bay)	Same as above for general metals, plus copper specific controls: AUTO-1 *Support Brake Pad Partnership efforts to promote reformulation of friction materials in brake pads.* AUTO-2 *Participate in educating the storm water community about the significance of metals loading from brake pads* AUTO-3 *Participate in educating the public about the significance of metals*	See Permit Provision C9a. Same as above for metals, plus baseline copper specific controls described in Table 4-1 (reviewed and approved by BMM/RS on August 23, 2000) of the Lower South San Francisco Bay- Copper Action Plan (June 2000). See CAP table attached to Permit. Refer to the FY 06-07 Copper/Nickel Work Plan and FY 05-06 Reporting Tables (see Appendix C-3) for specific	• Evaluate the results of Table 4-1 control activities. • Develop Bay-wide stormwater Copper Management Strategy through the MRP development process. • Continue to actively track activities of Brake Pad Partnership

Table 2-5
SCVURPPP Current and Proposed BMPs for Pollutants of Concern Prepared in Compliance with NPDES Order 01-024

CHEMICAL	WATER-BODY	KEY URBAN SOURCES[i]	URBAN RUNOFF CONTROLS (ONGOING PROGRAM CONTROLS)[ii]	FY 05-06 ADDITIONAL URBAN RUNOFF CONTROLS/PROGRAMS PROPOSED TO REDUCE POLLUTANTS[iii]	CONTINUOUS IMPROVEMENT (IDENTIFICATION & ASSESSMENT OF NEW URBAN RUNOFF CONTROLS/PROGRAMS)
			loading from brake pads AUTO-4 *Monitor, and respond to research reports that could lead to an effective methodology for prioritizing cleaning of "hot spot" catch basins* INDUSTRY-1 *Assist industry, on a pilot program basis, to develop storm water sampling and analysis protocols and conduct independent spot-checking to verify SWRCB industrial data. -Completed* INDUSTRY-2, *Collaborate with targeted industry (i.e., electroplating) to investigate potential pathways and develop appropriate BMPs*. Developing a pilot education and outreach effort in San Jose and Sunnyvale and evaluating best approach to update Program performance standard.	activities planned and completed during FY 05-06. See semi-annual meeting notes for BMM review meetings (November 11, 2003 and April 22, 2005) and relative to implementing CAP and semi-annual review reports prepared by Program. See summary of CAP and NAP implementation contained in Annual Report. A summary of FY 04-05 and FY 05-06 activities are contained in the FY 06-07 Copper/Nickel Work Plan and FY 05-06 Reporting Tables (see Appendix C-3). CEP approved and funded a project to measure the loading of a variety of contaminants (e.g., mercury, copper, nickel and PCBs) from the Guadalupe River to the Bay.	
Nickel	**Lower South Bay**	**Industrial sources, tailpipe emissions & construction erosion** (Major nonpoint source is erosion of native soils, approximately	Same as above for general metals and copper, plus nickel specific controls connected with sediment control activities: • Support RWQCB's Annual Workshops for contractors and municipal staff on construction site management and erosion/sediment controls. EROSION-1 *Implement performance standards for construction inspection.* EROSION-2 *Participate in development of region-wide training and certification*	See Permit Provision C9b. Same as above for metals and copper, plus nickel specific controls connected with sediment control activities: • BASMAA media relations campaign topic, • Construction Tri-folds, • "Start at the Source" manual and workshops, • Construction site management workshops, and • Mobile polluter database project.	• Evaluate the results of Table 4-1 control activities, and • Evaluate the need for Phase 1 and Phase II control activities (see August 2000 Nickel Action Plan and Table 4-2 reviewed and approved by the BMM/RS on August 23, 2000).

[i] The SCVURPPP Metals Control Measures Plan (MCMP) contains an updated loads assessment and source evaluation, environmental significance evaluation, and identification and evaluation of existing and new source controls for metals in the particulate form (WWC/EOA, 1997). The analysis was conducted consistent with NPDES Permit provision C.6, and the results and measures have been incorporated into the approved SCVURPPP 1997 Urban Runoff Management Plan (URMP). Estimated loads are taken from MCMP.
[ii] Complete descriptions of all controls can be found in the 1997 URMP and the FY 98-99 and FY 99-00 Work Plans. Controls identified as AUTO, INDUSTRY and EROSION were developed as part of Metals Control Measures Plan and are contained in 1997 URMP.
[iii] Complete description of controls can be found in the Annual Work Plans submitted on March 1 of each year to the RWQCB and the final additions to the Work Plan contained in the Annual Report dated submitted each year to the RWQCB on September 15.
[iv] For South San Francisco Bay, urban runoff/storm sewers are identified on the 303(d) list as contributing to the discharge of the following pollutants that may be causing impairment: copper and nickel.
[v] Performance Standards describe a specific result, or level of effort, which constitutes the "maximum extent practicable", based on current technical knowledge, available resources and local conditions (see the SCVURPPP 1997 Urban Runoff Management Plan). Co-permittee URMPs contain community specific performance standards, standard operating procedures and best management practices. The URMPs also contain annually updated Workplans including specific actions and milestones.
[vi] Freshwater streams in the Santa Clara Valley where urban runoff/storm sewers are identified on the 303(d) list as contributing to the discharge of diazinon that may be causing or contributing to impairment include: Calabazas Creek, Coyote Creek, Guadalupe Creek, Guadalupe River, Los Gatos Creek, Matadero Creek, San Francisquito Creek, Saratoga Creek, and Stevens Creek.
[vii] Based on draft San Francisco Bay RWQCB Urban Creeks Diazinon TMDL Workplan (January 28, 1999).
[viii] In addition, sedimentation/siltation is a pollutant of concern from nonpoint sources in San Francisquito Creek and is being addressed by various cities in San Mateo County with involvement from two SCVURPPP Co-permittees (i.e., SCVWD and the City of Palo Alto).

SECTION 3

PUBLIC INFORMATION/PARTICIPATION

3. PUBLIC INFORMATION/PARTICIPATION

INTRODUCTION

The goals of the PI/P element of the Program are to identify and change behaviors that adversely affect water quality, and to increase the understanding and appreciation of streams and the Bay. The Program's FY 05-06 PI/P Work Plan provided a strategy to achieve these education and public participation goals with specific projects funded in the Program's FY 05-06 budget.

A number of ad hoc task groups (AHTGs) and work groups, comprised of Co-permittee representatives and Program staff, continued to meet and communicate via email to implement PI/P projects. A summary of the work groups' accomplishments is provided in Table 2-2.

Highlights of the accomplishments of FY 05-06 PI/P projects and ongoing projects from previous years are described below, along with an evaluation of the effectiveness of activities and measures for continuous improvement. Table 3-1 presents a summary of the projects and the effectiveness evaluation.

FY 05-06 PI/P PROJECTS

FY 05-06 PI/P Work Plan

The Program conducts its public education and outreach through three projects: Watershed Education and Outreach, Pesticide User Outreach and Mercury Pollution Prevention Outreach. In FY 04-05, the Program completed all tasks planned for these projects under the current permit. During FY 05-06, ongoing tasks were implemented.

The Management Committee approved the PI/P Work Plan and budget for specific projects, and the work plan was submitted as part of the Program's FY 05-06 Work Plan, submitted on March 1, 2005. No comments on the FY 05-06 Work Plan were received from the Water Board.

FY 05-06 PI/P projects included:

- Watershed Education and Outreach (WEO) Campaign (this includes funding for Watershed Watch Campaign, ZunZun School Assemblies and the Watershed Watchers Program at the Alviso Education Center, Don Edwards San Francisco Bay National Wildlife Refuge).
- Pesticide User Outreach
- Mercury Pollution Prevention Outreach
- Schools and Youth Education Outreach
- Regional Coordination (participation in BASMAA PI/P Work Groups, described at the end of Section 3),
- Program Supplies/Materials Reprinting

Scopes of work for these projects were included in Section 3 of the Program's FY 05-06 Work Plan. The FY 05-06 PI/P Work Plan also includes ongoing PI/P support activities, such as support of the toll-free information hotlines, mailing brochures and Watershed Watch kits on request, etc.

Watershed Education and Outreach Campaign

The Program's Watershed Education and Outreach Campaign included funding for the Watershed Watch Campaign, the Watershed Watchers program at the San Francisco Bay National Wildlife Refuge Environmental Education Center in Alviso ("Wildlife Refuge") and ZunZun assemblies at elementary schools in Santa Clara County.

Watershed Watch Campaign

The Watershed Watch Campaign completed 5 years of implementation (and four years of advertising) in FY 04-05. The WEO AHTG recommended that FY 05-06 should be a "planning" year and include limited implementation of outreach activities. Based on this recommendation, outreach tasks (e.g., media advertising and attending community events) were conducted in the first half of the fiscal year. The second half focused on planning Campaign implementation in future years to meet the requirements in the new Permit.

TRG & Associates completed five successful years as Campaign consultants in FY 04-05. The WEO AHTG recommended issuing a RFP for the next phase of the Campaign to other consultants in accordance with the policies of some of the Co-permittees. Based on this recommendation, the Program issued a RFP in June 2005. The selection process consisted of evaluating written proposals and conducting two rounds of interviews. Following this selection process, the committee selected Carl and Manor Advertising as the new Campaign consultant.

The Watershed Watch Campaign tasks completed in FY 05-06 are described below.

Media Advertising

A media campaign consisting of print, radio and transit advertising was conducted in September and October 2005. Transit advertising was funded by the County Integrated Waste Management group. The media campaign used the popular "Got Bugs" and "Got Paint" ads. The media buys included 10 paid print ads (plus five free ads), 462 paid radio ads (plus 200 free ads) and 75 transit (bus taillight poster) ads. The *San Jose Mercury News* and KRTY/KLIV cross-promoted an enter-to-win contest featuring messages pertaining to the proper disposal of mercury-containing fluorescent light bulbs. Media support included five free quarter-page ads in the *San Jose Mercury News* and 120 promotional announcements airing on KRTY and KLIV. During the four-week contest period nearly 400 entries were received for a chance to win a customized professional sporting package for two. The net advertising budget for media was $40,800; the media partners provided a total added value package of benefits and resources of $70,415. Additional details on the media campaign are included in Appendix B-1.

Event Participation

Program, consultant and Co-permittee staff used the Watershed Watch booth and distributed the Watershed Watch kit and IPM materials at three events. Additional details are included in Appendix B-1.

Partner Development

The consultants continued development of the partner database and conducted numerous meetings with potential partners. A list of current Campaign partners is included in Appendix B-4

Focus Group Study

One of the main tasks of FY 05-06 was to evaluate the Watershed Watch Campaign and develop a long term plan for the next phase of the Campaign to meet the requirements in the new Permit.

Campaign consultants Carl and Manor Advertising developed a series of advertisements, designed a new Campaign logo and recommended a new name for the Campaign. To obtain input from the general public on these materials, two focus groups were conducted in March 2006. The first group was comprised of English speaking, Santa Clara County residents. Participants were college-educated homeowners between 34-54 years old. The second focus group was comprised of Hispanic / Spanish-speaking Santa Clara County residents. Participants were a mix of homeowners and renters. Their ages ranged from 22-49 years.

The following concepts were tested:

- Two logos: "Clean Water Way" and "Watershed Watch"
- Two print campaigns: "Toxic Pesticides" and "Mercury Pollution"
- Four taglines:
  - Watershed Watch, Protect our creeks and bay
  - Watershed Watch, Do it the clean water way
  - Do it the clean water way, For clean waterways
  - Do it the clean water way, Protect our creeks and bays

Highlights from the focus group study are described below:

- Both focus groups preferred the Watershed Watch logo over the Clean Water Ways logo.
- The English focus group preferred the "Watershed Watch, Protect our creeks and Bay" tagline.
- The Spanish focus group preferred the "Do it the clean water way, Protect our creeks and Bay" tagline. This was mainly because the words "Watershed Watch" were not translated into Spanish.
- They liked the idea of adding "A coalition of your local government agencies" to the ads as this brings more credibility to the messages. However, they felt that the SCVURPPP name is too long.
- The groups recommended including the Watershed Watch website and phone number on all ads. They also recommended using the numbers (i.e., 1-866-927-3774) that represent 1-866-WATERSHED.
- The recommended that the ads should include specific information on where to buy less-toxic pesticides or where to dispose of fluorescent light bulbs.
- They recommended that the website www.WatershedWatch.net should be changed to www.WateshedWatch.org . They felt that .net or .com websites are too "commercial".

The major change implemented in FY 05-06, based on the focus group feedback, was to change the website address from www.WatershedWatch.net to www.MyWatershedWatch.org. Other focus group recommendations included:

- Increase the frequency of messages. Information needs to be there when the need arises; it should be widely available and serve as constant reminder to the public.

- The messages should be clear, crisp and simplified (e.g., bullet points). The messages should answer questions like why, what and how, and stress convenience (easy to do). Messages that indicate that "it is the right thing to do" are not motivating enough.
- Messages should include specific tips/information whenever possible (e.g., how to get rid of pests, where to take fluorescent light bulbs for proper disposal).
- Messages should include a sentence mentioning SCVURPPP sponsorship. It makes the ads more credible and more motivating.

A detailed report on the focus group study and recommendations is included in Appendix B-2. Campaign consultants used these recommendations to develop new creative for the Campaign and to prepare the Watershed Watch Campaign Conceptual Plan (included in Appendix B-3).

Watershed Watch Conceptual Plan

The consultants developed the Watershed Watch Campaign Conceptual Plan using focus group feedback. The Conceptual Plan provides: key strategies, target audience(s) and message focus, partnership and resource opportunities, and evaluation and reporting procedures for implementing the next phase of the Campaign. The Conceptual Plan is included in Appendix B-3.

Watershed Watch Website

Program and consultant staff continued to maintain and update the Watershed Watch website. During FY 05-06, the web site had an average of 321 page views per day compared to 342 page views per day in FY 04-05. While this is a decrease, it is apparent that the website is gaining popularity and people are visiting it in large numbers even when it is not being advertised. Only one advertising campaign was conducted this year, and of the ads used, only the "Got Bugs" ads promoted the Watershed Watch website. The "Got Bulbs" ads promoted the County HHW Program website. The detailed website statistics report is included in Appendix B-5.

Evaluation of Effectiveness

The FY 05-06 Watershed Watch Campaign focused on planning future outreach efforts and included limited implementation. Program staff and consultants successfully completed the implementation of FY 05-06 tasks. In addition, unanticipated activities (e.g., focus groups) were successfully completed. The focus group feedback indicated that the general public likes the Campaign logo, tagline and messages; and Campaign materials are effective in conveying the Program's messages. In addition, in spite of conducting limited outreach in the first half of the fiscal year, and not conducting any advertising in the second half, the Watershed Watch website continued to receive many visitors. The Watershed Watch fall media campaign was also a success as seen by the large number of gross impressions (20,420,100), and value-added resources from partners ($70,415).

<u>The Watershed Watchers Program at the Don Edwards San Francisco Bay Wildlife Refuge, Alviso ("Wildlife Refuge")</u>

The Wildlife Refuge Environmental Education Center (EEC) offers trails and access to wildlife viewing for the public to gain first-hand knowledge of the value of Bay habitats. Visitors to the EEC can view a storm drain model and receive copies of Program materials, including the Watershed Watch kits and pesticide reduction brochures and fact sheets.

Evaluation of Effectiveness

As part of their "Watershed Watchers" Program, EEC staff conducted 105 programs that attracted 6,856 participants. Topics discussed at the workshops included watershed protection, wildlife in the watershed, gardening without chemicals, and the public's role in urban runoff pollution. The EEC's Fourth Quarter Report, including a summary of FY 05-06 accomplishments, is provided in Appendix B-7.

Pesticide User Outreach

A detailed FY 05-06 Pesticide User Outreach Work Plan was developed by Program staff and approved by the Pesticide User Outreach Work Group on December 16, 2005. The Pesticide User Outreach Work Plan included the following tasks:

- IPM store partnership program
- Media advertising
- IPM outreach events

The accomplishments of this project are described below:

Integrated Pest Management (IPM) Store Partnership Program

Background

The IPM Store Partnership Program, also known as the Our Water Our World (OWOW) program, was in its eighth year in FY 05-06. The goal of the OWOW program is to reduce toxicity caused by pesticides in stormwater, creeks and the Bay by:

- Developing partnerships with retailers who can educate the general public about water quality problems related to residential pesticide use while promoting the sales and use of less toxic alternatives; and
- Through the partnerships with retailers, educate the public about effective less-toxic pest control strategies, the value of the IPM approach to home and garden pest control and safe use and disposal of pesticides.

The Program contributes funding to and participates in the Regional IPM (OWOW) program, which is administered through BASMAA. The Regional Program, with input from IPM experts and participating stormwater programs, has developed fact sheets, promotional materials, training sessions, display materials for stores and an alternative products list. The Program and Co-permittees are responsible for recruiting stores, arranging training sessions for store employees, in-store display set-up, display maintenance and on-going contact with participating stores.

FY 05-06 Activities

During FY 05-06, the Program continued to support participating stores within the Program's jurisdiction. Program staff visited all the participating 31 stores at regular intervals and updated the display racks and shelf talkers, as needed.

Outreach material purchased for the Stores Partnership Program included IPM fact sheets, shelf talkers and literature rack material (side decals, headers and property tags).

The Program also continued to use the services of Ms. Annie Joseph, an experienced IPM consultant, to provide training to store employees on selling less-toxic products. Ms. Joseph is also a consultant to BASMAA for the Pesticide Distributor Outreach Project (now funded through a Prop 13 grant to Marin County). The purpose of the Pesticide Distributor Project is to increase the amount and variety of less-toxic products on store shelves by working through the product distributors and educating the distributor sales force. This is a valuable complimentary program to the OWOW program as it helps to ensure that the products OWOW promotes will be available to support consumer choices. Ms. Joseph's presence at stores through this project made them more receptive to the local Store Partnership Program and increased the likelihood of attending the trainings.

Past Program experience with training stores indicated that employees were not amenable to attending off-site trainings. In FY 05-06, the Program continued to offer trainings as in-the-aisle trainings during working hours or on-site after-hour trainings. Approximately 112 employees representing 13 stores were trained this year. Employees were also requested to fill out evaluations. The list of participating stores, their training status and a summary of evaluations received are provided within Appendix B-8.

Evaluation of Effectiveness

The IPM Store Partnership (OWOW) program continued to be a success in FY 05-06. The store managers and employees were enthusiastic about the program and extremely receptive to having the OWOW display in stores. Feedback on the trainings was also very positive, as indicated in the evaluation summary included in Appendix B-8. A few highlights of the evaluation are:

- 97% of the respondents agreed that the training information was useful;
- 65% agreed that the information changed their attitude about pesticides;
- 90% agreed that the information will help them sell less-toxic products; and
- 95% agreed that they would recommend the training to co-workers.

Media Advertising

The Program's Watershed Watch Campaign used the "Got Bugs" radio and print ads in its fall advertising campaign. Details of the media campaign are included in the Watershed Watch Fall Campaign and Media Report attached as Appendix B- 1.

Evaluation of Effectiveness

The "Got Bugs?" print and radio ads caused a sharp increase in the number of web page views and hot line calls. Website visits increased significantly during the advertising phase, reaching a peak of 397 page views per day in November 2005. The OWOW IPM fact sheets were mailed to people requesting information on less-toxic pest control. Additional information is available in the Watershed Watch Fall Campaign and Media Report (Appendix B-1).

IPM Outreach to Restaurants

The Program continued to provide copies of the "Don't Lay a Table for Pests" poster to County Health inspectors for distribution to food facilities. This poster has been incorporated into the "Final Construction" packet of information that is distributed to new and remodeled food facilities. In addition, these posters were also provided to Co-permittees for distribution during routine stormwater inspections. The Program will consider printing more posters in FY 06-07.

Evaluation of Effectiveness

During FY 05-06, County Health inspectors distributed 465 posters and will continue to distribute posters to restaurants during FY 06-07.

IPM Outreach Events

Program staff and Co-permittees staffed five events at which IPM outreach was conducted. To reduce staffing requirements, five events were coordinated with Watershed Watch outreach. Outreach events in FY 05-06 included:

- Guadalupe River Park & Gardens Grand Opening Event – September 10, 2005
- Pumpkins in the Park – October 8, 2005
- Happy Hollow Park & Zoo Halloween Event – October 30, 2005
- San Jose Spring Home and Garden Show, San Jose Convention Center, San Jose – May 5 – May 7, 2006;
- OSH How To Fair, Santa Clara Convention Center, May 20 – May 21, 2006.

In addition to talking to the general public about less-toxic pest control methods, event staff distributed fact sheets; "Grow It" guides, "Backyard Bugs" brochures, "Pests Bugging You" brochures and other IPM related brochures and giveaways. The beanbag game for children was also used at most of the events.

Evaluation of Effectiveness

Overall, the five outreach events were successful in providing opportunities for educating the public about less-toxic pest control methods. Event staff distributed more than 4,000 IPM fact sheets, brochures and, giveaways (pencils, activity books, magnets, etc.).

The Program also provided support for promotion of the Going Native Garden Tour held on April 30, 2006. Approximately 3,000 people attended the tour. The tour featured 46 gardens that demonstrated environmentally sensitive gardening practices which include the use of native plants, water conservation, landscaping to prevent urban runoff, reducing pesticide and fertilizer use, etc. The final report for the Going Native Garden Tour is included in Appendix B-9.

Mercury Pollution Prevention Outreach Project

The Program's mercury outreach continued to focus on educating Santa Clara Valley residents on the proper disposal of fluorescent lamps. The Program coordinated its outreach with the Santa Clara County Household Hazardous Waste Program (County HHW Program).

FY 05-06 Work Plan tasks

In FY 05-06, the County HHW Program partnered with approximately 17 retail stores to provide free fluorescent bulb drop-off locations for residents. The Program's outreach focused on promoting these drop-off locations and educating people about mercury pollution.

The Program's Mercury Outreach Pollution Prevention Work Plan included the following tasks:

- Development of Signage Materials – The Program developed posters to inform people about the availability of free fluorescent bulb drop-off locations. The posters were placed in participating stores and in community locations like libraries, city halls etc.

- Implementation of a Media Campaign –The fall Watershed Watch Campaign used the Watershed Watch 'Got Bulbs" ad to educate people on the proper disposal of hazardous wastes (e.g., fluorescent lamps). The advertising campaign ran in September-October 2005. The Program provided funding for radio and print advertising and the Santa Clara County Integrated Waste Management Division provided funding for transit advertising. In addition, radio station KRTY offered, at no cost, an "enter-to-win" contest promoting the drop-off locations. Both KRTY and the *San Jose Mercury News* provided free advertising to support this promotion. Listeners/readers were encouraged to participate in the contest by either dropping-off their used fluorescent bulbs at participating stores or by submitting the "pledge to dispose of mercury properly" contest entry form available online and within the *San Jose Mercury News*.

Copies of all mercury outreach materials are included in Appendix B-10.

Evaluation of Effectiveness

The mercury outreach media campaign included free promotional print ads, live promotional announcements, web site exposure and a sports event contest package from KRTY, third party sponsor Posters. Contest boxes and floor decals were featured at participating hardware stores within Santa Clara County. Bus signs were also visible throughout the County and featured a four-week override.

Nearly 400 Got Bulbs contest entries were received by KRTY, mostly from the web site and the *San Jose Mercury News* ad.

During FY 05-06, the CoHHW Program collected 277,000 feet (67,943 pounds[1]) of fluorescent bulbs at 18 retail drop-off locations within Santa Clara County[2] .This is a significant increase from FY 04-05. In FY 04-05, the CoHHW Program collected 166,000 feet (41,597 pounds) of fluorescent bulbs.

It is estimated that approximately 0.803 kilograms of total mercury was diverted (i.e., discharge to the environment was avoided) to recycling from fluorescent lamps collected by the CoHHW Program[3] in FY 05-06. In addition, the HHW Program also collected 231 mercury-containing

[1] Since fluorescent light bulbs come in different sizes, quantities are reported in terms of the total length (feet) of tubes collected.
[2] Information regarding the collection of mercury containing products (e.g., fluorescent bulbs, thermostats, thermometers and other products) during FY 05-06 obtained from a memorandum *entitled Fiscal Year 2005/2006 HHW Program Update* (dated July 21, 2006). This memorandum was prepared by Rob D'Arcy, Santa Clara County Hazardous Materials Program Manager.
[3] Based on a 1999 National Electrical Manufacturers Association survey entitled *Environmental Impact Analysis: Spent Mercury-Containing Lamps, January, 2000 (Fourth Edition)*, the average four-foot fluorescent lamp contains about 11.6 milligrams (mg) of mercury. For the sake of estimating the amount of mercury sent for recycling, approximately 69,250 four-foot fluorescent lamps

thermometers, 425 pounds of elemental mercury (includes thermostats, thermometer and other products) and 51,050 pounds of household batteries during FY 05-06.

Schools and Youth Education Outreach

The following tasks were accomplished under this project:

General Outreach to Schools

The Program and its Co-permittees conduct various school outreach programs individually and through the Program. These activities are described in detail in the tables provided in Appendix B-11.

Outreach to Elementary Schools

Each year, the Program's Schools and Youth Education and Outreach Work Group provide a list of schools for ZunZun to contact. In addition to schools with high Hispanic populations, the Work Group continued to extend outreach to schools with high Asian/Pacific Islander populations. The Program's Schools and Youth Outreach Work Group researched demographics of Santa Clara County and generated a list of 103 schools for ZunZun to contact. The ZunZun performances use physical comedy, audience participation and musical instruments to educated teachers and children about watersheds and stormwater pollution prevention. ZunZun continued to distribute the two vocabulary lists (one for grades K-2 and the other for grades 3-6) of terms used in the presentation. These lists were mailed to every school prior to the presentation.

Evaluation of Effectiveness

During FY 05-06, ZunZun conducted 50 assemblies reaching 14,059 students in grades K-5 at 26 schools in eight cities. Assemblies were evaluated using postage-paid evaluation cards that were distributed to all teachers present at the performances. The Program received completed evaluation cards from 183 teachers. Overall, the feedback has been very positive and indicates an increase in the students' knowledge about watersheds and pollution prevention. A few highlights of the evaluation are:

- Thirty-seven teachers (out of the 183 that sent completed evaluation cards) indicated that 50 percent of their students know what a watershed is; 61 teachers indicated that 75 percent of their students know what a watershed is and 26 teachers indicated that 100 percent of their students know what a watershed is.

- Nineteen teachers indicated that 50 percent of their students could name a way to prevent pollution in the watershed; 58 teachers indicated that 75 percent of their students can name a way to prevent pollution in the watershed; and 95 teachers indicate that 100 percent of their students can name a way to prevent pollution in the watershed.

Overall, teachers had positive comments on the presentation.

were collected. As a result, 0.803 kilograms of total mercury diverted (i.e., discharge to the environment was avoided) to recycling is a rough estimate.

ZunZun's Final Report and the Teachers' Evaluation Report are included in Appendix B-6. Highlights of the teachers' evaluations are presented on page 3 of the Teachers' Evaluation Report. Comments on the effectiveness evaluation of Co-permittee schools outreach are included within Appendix B-11.

Outreach to Middle Schools

In response to a request by Water Board staff, the Program conducted a gap analysis study in FY 03-04 to identify gaps in school outreach conducted by the Program and its Co-permittees.

The objective of the study was to conduct a detailed review and analysis of the data to guide further school outreach. Data collected from Co-permittees was analyzed and GIS maps were developed to present the data. The final Schools Outreach Gap Analysis Report was submitted to the Water Board within the FY 03-04 Annual Report. The study identified some geographic gaps in outreach and gaps at the middle school level, and recommended that the Program and Co-permittees develop Program-wide outreach that targets the middle/intermediate school level. In addition, it was recommended that outreach increase to underserved and underrepresented communities.

The Work Group evaluated various methods for targeting outreach to this grade level and identified a teachers training program as the best means of maximizing outreach with limited resources. After considering several options, the work group decided to use the City of San Jose's South Bay Water Connections "Wacky Watersheds" teachers training workshop. Currently, the workshop is structured as a full-day Saturday workshop offered to all teachers within the San Jose POTW service area. In FY 03-04, the Work Group selected three Project WET lessons plans on watershed education at the middle school level for inclusion in the "Wacky Watershed" binder, and contracted with an educator to correlate the lesson plans to California State Standards.

In July 2005, the Work Group purchased tote bags for teachers for packaging the workshop materials (binder, video tapes and a map). The Work Group also recommended that teachers should be offered stipends as incentives to increase attendance at the workshop. Teachers will receive the stipend only after the Work Group receives documented completion of their proposed watershed project. In FY 05-06, the Wacky Watershed workshop staff held 4 workshops and trained 40 teachers.

Work group members are also trying to coordinate with their school districts so this workshop can be made available to middle school teachers at their "in-service" training days. Currently, this workshop is available only a few times a year on Saturdays.

Other Program PI/P Support Activities

Program's Toll-Free Telephone Numbers

The Program maintained two toll free telephone numbers, the Program's information number (800-794-2482) and the Watershed Watch hotline (866-WATERSHED), for calls from the general public and requests for information. Program staff responded to about 37 calls during FY 05-06 and sent information materials to about 29 of these callers.

PI/P Material Reprints and Supplies

The Program purchased and coordinated Co-permittee orders for reprinting the following materials:

- "Draining Pools and Spas" brochure
- "Blue Print for a Clean Bay" booklets
- "Pest or Pal" Activity Books
- Storm Drain Stencils

ONGOING PI/P PROJECTS

Creek Clean-ups

In FY 05-06, the Creek Connection Action Group sponsored two creek clean-up events: Coastal Clean-up Day on September 17, 2005 and National Rivers Clean-up Day on May 20, 2006. The Program provided financial support for one of the events (National Rivers Clean-up Day). A total of 1,458 volunteers participated in cleaning 55 sites and removed approximately 39,730 pounds of trash from the creeks during the two events.

Results by clean-up event for FY 05-06 are as follows:

	Coastal Clean-up Day Sept. 17, 2005	National Rivers Clean-up Day May 20, 2006	Total
Number of sites	28	27	55
Number of volunteers	808	650	1,458
Pounds of recyclables	3,325	785	4,110
Pounds of trash	18,077	11,171	29,248
Pounds of material (trash plus recyclables)	21,402	11,956	33,358

Evaluation of Effectiveness

To evaluate the effectiveness of the two annual creek clean-up events, data from the past eight years of events were compiled and reviewed. The table below presents the total numbers of sites, numbers of volunteers, and pounds of materials collected each year.

Summary Results of Creek Clean-up Events[4], September 1998 – May 2006

	FY 98-99	FY 99-00	FY 00-01	FY 01-02	FY 02-03	FY 03-04	FY 04-05	FY 05-06	Annual Average	Total
No. of sites	35	35	41	37	48	56	61	55	46	368
No. of volunteers	1,877	1,586	1,745	1,742	2,091	1,943	1,618	1,458	1,758	14,060
Lbs. of recyclables				13,750	8,071	6,537	7,890	4,110	5,045	40,358
Lbs. of trash	84,582	43,475	58,108	59,340	44,883	36,718	39,730	29,248	49,511	396,084
Total lbs. collected	84,582	43,475	58,108	73,090	52,954	43,255	47,620	33,358	54,555	436,442

Beginning in FY 01-02, some site managers implemented a procedure for separating out recyclable materials from trash prior to weighing it. Thus, the total pounds of material collected are the sum of the recyclables and trash quantities. According to the Santa Clara Valley Water District, this procedure is done more frequently at Coastal Clean-up Event sites than at National Rivers Day sites. Since this procedure is not done at all sites, it is more appropriate to compare the total quantities of materials collected rather than the individual components.

The total amount of trash and recyclables collected during the two creek cleanup events each year are plotted in the figure below:

[4] The data presented in this table represent the total quantities from the two major creek cleanup events in Santa Clara County. The data do not include quantities of trash that may have been collected by the Santa Clara Valley Water District (SCVWD) or by other volunteer groups during other times of the year. The SCVWD has an "Adopt-a-Creek" program in which community groups (e.g., scout troops and schools) agree to care for a certain section of creek. Care includes trash pickup at least twice during the year. These groups are not required to report the amount of trash they collect. A section of creek that is regularly cleaned may not be included as one of the sites involved in the two major creek cleanup events.

From the data in the table and figure, it can be concluded that the total amount of trash and recyclables collected shows a decreasing trend over the past eight years. The number of volunteers has remained almost constant, while the number of sites has increased. This reduction in trash and recyclables is likely due in part to the success of outreach being conducted to the general public about not dumping trash in creeks, rivers and storm drains. It may also be due to the increase in Adopt-a Creek and other trash reduction programs encouraging trash pickup during other times of the year (see footnote on previous page).

Restaurant BMP Materials

In FY 99-00, a work group comprised of Program staff, representatives of the California Restaurant Association and Santa Clara County Department of Environmental Health (DEH), and Co-permittee stormwater inspectors developed a strategy of targeting food handling facility personnel with one simple message and continuously reinforcing the message over a three-year period. The focus for the first three-year period is on the improper discharge of wash water.

In FY 00-01, a restaurant wash water BMPs kit (letter, list of BMPs and a poster) was created for County Health Inspectors to hand out to restaurant managers during inspections (see FY 00-01 Annual Report). The Santa Clara County Department of Environmental Health inspectors (Consumer Protection Division) have been distributing this kit to every newly constructed and remodeled food facility in the County. In FY 02-03, one of the signatories of the cover letter was changed. The letter was updated for distribution in FY 03-04. In FY 04-05, the BMP list was updated and signatories changed. In FY 05-06, the kit was distributed to 465 food facilities.

REGIONAL COLLABORATION

Bay Area Stormwater Management Agencies Association (BASMAA) PI/P Committee

The BASMAA PI/P Committee has not met for some time, due to the Committee's interest in focusing its efforts on three active work groups: Media Relations, Regional IPM Store Partnership Program and Regional Advertising Campaign. Program staff participated in the Media Relations and Regional IPM Partnership Program, and the Program benefited from regional PI/P activities, as described below.

Media Relations Campaign

Program staff participated in the development and implementation of the sixth year of the joint Media Relations effort supported by BASMAA and the Bay Area Clean Water Association (BACWA). The primary goals of the campaign are to develop long-term relationships with the media and to generate media coverage that would encourage individuals to adopt behavior changes to prevent water pollution. The Program contributed funding (approximately $9,000) to the campaign as part of its baseline budget contribution to BASMAA.

A copy of the BASMAA/BACWA Regional Media Relations Campaign Final Report is included in Appendix B-12. Campaign accomplishments included the following:

- During FY 05-06 the media covered 37 articles and broadcast stories, including 14 print articles, 6 television, 12 radio stories, and 5 web stories
- The total value of the coverage is estimated at $93,950. The figure is 20% more than the coverage value in FY 04-05.

- The campaign received greater television coverage this yea, including coverage by KTSF-TV and Univision, two of the premier foreign language stations. The campaign was also bolstered by two home section cover stories on the pitch to convince residents to not burn gift wrap during the holiday season. Overall, print coverage was notable this year for being extremely well-rounded in terms of reach to the entire region.

Regional IPM Work Group

The IPM Store Partnership Program, also known as the Our Water Our World (OWOW) program, completed its eight year in FY 05-06. The Program contributed funds and participated in the Regional Program, which is administered through BASMAA (the Program's contribution for FY 05-06 was approximately $5,000). The Regional Program, with input from IPM experts and participating stormwater programs, provides fact sheets, promotional materials, training sessions, display materials for stores, and an alternative products list. The Program and Co-permittees are responsible for recruiting stores, arranging training sessions for store employees, in-store display set-up, display maintenance, and on-going contact with participating stores.

In FY 05-06, the OWOW Program completed the translation of all fact sheets into Spanish. A regional print run of fact sheets and promotional materials was also conducted.

The customer intercept survey conducted in FY 04-05 indicated a very low awareness among residents about the OWOW program. To increase awareness, the OWOW program conducted an advertising campaign in FY 05-06. Details of the advertising campaign are below:

Orchard Supply Hardware – OSH ran a full page ad in their weekly mailer that ran during the week of March 13. OSH is continuing to use the Our Water, Our World program logo next to less-toxic products in most of their weekly ads this year.

Sunset magazine – The OWOW advertisements were placed in three issues of Sunset magazine. The OWOW Program is also listed in their Resources section: http://www.sunset.com/sunset/marketplace/article/0,20633,919812,00.html.

Bay Nature magazine –This is a quarterly San Francisco Bay Area publication (baynature.com). Although the readership is only about 15,000, it is a high-value publication that is used by schools and others as a reference. The OWOW ad was placed in 4 issues of this magazine.

Copies of the advertisements are included in Appendix B- 13

Pesticide Distributors Outreach Project

During FY 02-03, the Program contributed $5,000 to a BASMAA Task of Regional Benefit known as the Pesticide Distributors Outreach Program, an expansion of the IPM Store Partnership concept to target distributors of pesticide products to retail stores. The purpose of the program is to increase the amount and variety of less-toxic products on store shelves by working through the product distributors and educating the distributor sales force. This is a valuable complimentary program to the OWOW program as it helps to ensure that the products OWOW promotes will be available on the shelves to support consumer choices and makes stores more willing to participate in the OWOW program. The Distributors Outreach Program achieved significant success and translated into more stores wanting to participate in the OWOW program in the future. In May 2003, Marin County received a Proposition 13 grant from the State to expand this program into State Water Board Regions 1 (North Coast) and 3

(Central Coast) and create a website for the program (www.ourwaterourworld.org). The Pesticide Distributors Outreach Project for Region 2 was also continued through this grant funding.

The Program continued to support this project by offering staff to help with tabling or training events conducted within Santa Clara County stores. Program and Co-permittee helped staff the outreach booth at the OSH How to Fair at the Santa Clara Convention Center, May 20 – May 21, 2006.

BASMAA Regional Ad Campaign

In FY 03-04, the Program's WEO AHTG recommended participating in the Regional Ad Campaign for FY 04-05. During FY 02-03, FY 03-04, the Regional Ad Campaign (RAC) Committee implemented the "Beautiful Watersheds" advertising campaigns for increasing the public's awareness about watersheds. In FY 04-05, a new ad focusing on problems caused due to littering was developed and used. The Program contributed $50,000 to the RAC in FY 05-06. However, due to contractual difficulties, advertising could not be conducted in FY 05-06. The RAC Committee will implement the next advertising campaign in FY 06-07.

Caltrans "Don't Trash California Campaign"

In FY 05-06, as part of its anti-littering outreach campaign, Caltrans developed television Public Service Announcements (PSAs) in English and Spanish. Many Co-permittees obtained copies of these PSAs for airing on their local public cable access television stations. The following table includes the number of times the PSAs were aired in Program cities.

Name of Community	Name of TV Station	Area Served	Number of Airings
Palo Alto, East Palo, Atherton, Menlo Park, Stanford	The Media Center, Channels 27, 28, 30	Palo Alto, East Palo, Atherton, Menlo Park, Stanford	English – 223 Spanish - 86
City of Cupertino	The City Channel	Cupertino	English – 125
City of Santa Clara	City of Santa Clara, Channel 15	Santa Clara	English – 900
City of San Jose	Civic Center TV	San Jose	English - 25

Program Information Fact Sheets

In FY 05-06, Program staff developed fact sheets describing several Program elements. The fact sheets aim to provide a brief non-technical overview of Program activities. Fact sheets on the following topics were developed and distributed:

- Water Quality Monitoring and Watershed Assessment
- Sediment Impact and Management Practice Assessments
- Watershed Education and Outreach
- General Program
- Trash Evaluation and Management

All fact sheets have been posted on the SCVURPPP website at www.scvurppp.org. They are also included in Appendix B-15 of this Annual Report.

Other External Coordination

Program staff tracked PI/P activities and attended meetings (as needed) conducted by the following local and regional programs in FY 05-06:

- California Stormwater Quality Association, PIPP Forum
- Santa Clara County Household Hazardous Waste Program
- Bay Area Pollution Prevention Group
- Watershed Management Initiative's Outreach Subgroup
- Urban Pesticide Committee.

Continuous Improvement

The status of PI/P continuous improvement tasks, identified during the evaluation of projects in previous years, is presented in Table 2-4 of Section 2. There were no PI/P continuous improvement tasks identified in FY 05-06. Program staff will obtain input from Co-permittees on continuous improvement items for FY 05-06 and document any agreed upon items in the Program's FY 06-07 Work Plan submittal (March 1, 2006).

Future Tasks

Section 3 of the Program's FY 06-07 Work Plan (submitted March 1, 2005) describes the PI/P activities planned for FY 06-07.

Table 3-1
Evaluation of PI/P Projects Conducted During FY 05-06 (New and Ongoing)

Project Title	Project Description[1]	Type of Outreach[2]	Summary of Evaluation of Effectiveness[3]
Watershed Education and Outreach Campaign	This project included funding for conducting year five of the Watershed Watch Campaign, ZunZun Schools Assemblies and the Watershed Watchers Program at the Alviso Education Center (San Francisco Bay Wildlife Refuge), and educational assemblies at elementary schools by the musical group ZunZun	G,T,P,C	**Effective**- Some measures of the success of the FY 05-06 Watershed Watch Campaign include: the number of new campaign partners (3); value-added resources from partners ($70,415); Watershed Watch events (3); gross impressions from advertising (20,420,100); average of 321 page views a day at the Watershed Watch website; and the positive feedback on Campaign materials from the focus groups. **Alviso Ed Center** – 105 programs were conducted and 6,856 people participated. **ZunZun Assemblies** – ZunZun conducted 50 assemblies at 26 schools reaching 14,059 students and their teachers
Pesticide User Outreach – "Household Chemical Management" and "Local IPM Store Partnership Program"	Implementation of the following tasks: • Conduct media advertising on less-toxic pest control methods • Implement the local store partnership program • Conduct IPM outreach at events • Conduct IPM workshops • Conduct IPM outreach to businesses • Other outreach as needed	G,T,P,C	**Effective** – • The Watershed Watch Campaign advertising used the "Got Bugs" print and radio ads in September to October 2005. Website visits increased significantly during the advertising phase. • The local IPM Store Partnership Program continued to be a success in FY 05-06. Ms. Annie Joseph, who is also a consultant to BASMAA on the Pesticide Distributors Outreach project, was contracted to provide training on selling less-toxic products to store

[1] For detailed project descriptions, see FY 01-02 Annual Report, Section 3, and FY 02-03 Work Plan, Section 3.
[2] Type of outreach codes: G = General, T = Targeted, P = Public Education, C = Citizen Participation
[3] Please refer to text in Section 3 for more detailed effectiveness evaluations and recommendations for improvement.

Table 3-1
Evaluation of PI/P Projects Conducted During FY 05-06 (New and Ongoing)

Project Title	Project Description[1]	Type of Outreach[2]	Summary of Evaluation of Effectiveness[3]
			employees. Ms. Joseph's presence at stores through the Pesticide Distributors project (this project is now being funded through a Prop 13 Grant) made them more receptive to the local Store Partnership Program and willing to attend trainings. Ms. Joseph trained approximately 112 employees representing 13 stores. Program staff maintained all 31 participating stores (set-up, restocking of fact sheets, etc.) during FY 05-06. This ensured regular maintenance of stores and helped build an ongoing relationship with the stores. • IPM outreach was conducted at five events. Event staff distributed more than 4,000 IPM fact sheets, brochures and giveaways (pencils, activity books, magnets, tattoos etc.). • The Program continued to provide copies of the "Don't Lay a Table for Pests" poster to County Health Inspectors for distribution to newly constructed or remodeled food facilities. County Health inspectors distributed 465 posters during FY 05-06. • The Program contributed funds for promoting the Going Native Garden Tour 2006. The tour was held on April 30, 2006 and attracted approximately 3,000 people. The tour featured 46 gardens. Featured gardens demonstrate environmentally sensitive gardening practices that include the use of native plants, water conservation, landscaping to prevent urban runoff, reducing pesticide and fertilizer use, etc.

Table 3-1
Evaluation of PI/P Projects Conducted During FY 05-06 (New and Ongoing)

Project Title	Project Description[1]	Type of Outreach[2]	Summary of Evaluation of Effectiveness[3]
Mercury Pollution Prevention Outreach Project	The Program worked closely with the Santa Clara County Household Hazardous Waste Program in developing the outreach plan. Outreach activities implemented during FY 05-06 include the following: • Development of In-store Signage Materials – The Program developed posters to inform people about the availability of free fluorescent bulb drop-off locations. • Implementation of Media Campaign – The fall Watershed Watch Campaign used the Watershed Watch 'Got Bulbs" ad to educate people on the proper disposal of hazardous wastes (e.g., fluorescent bulbs). The advertising campaign ran in September to October 2005. The Program provided funding for radio and print advertising and the Santa Clara County Integrated Waste Management Division provided funding for transit advertising. In addition, radio station KRTY offered, at no cost, an "enter-to-win" contest promoting the drop-off locations. Both KRTY and the *San Jose Mercury News* provided free advertising		**Effective** – Total gross impressions from mercury and pesticides media advertising were 20,420,100. The total added value of bonus spots, public service announcements and promotions for the various media partners is estimated at $70,415. Nearly 400 Got Bulbs contest entries were received by KRTY, mostly from the web site and the *San Jose Mercury News* ad. Additional details are included in Appendix B-1. The CoHHW Program collected 277,000 feet (67,943 pounds) of fluorescent lamps at 18 retail drop-off locations within Santa Clara County[4]. It is estimated that approximately 0.803 kilograms of total mercury was diverted (i.e., discharge to the environment was avoided) to recycling from fluorescent lamps collected by the CoHHW Program[5]. In addition, the HHW Program also collected 231 mercury-containing thermometers, 425 pounds of elemental mercury (includes thermostats, thermometer and other products) and 51,050 pounds of household batteries during FY 05-06. It is estimated that approximately 0.155 kilograms of total mercury was diverted (i.e., discharge to the environment was avoided)

[4] Information regarding the collection of mercury containing products (e.g., fluorescent lamps, thermostats, thermometers and other products) during FY 04-05 and the weight of a four-foot fluorescent lamp was obtained from a memorandum *entitled Fiscal Year 3005/2006 HHW Program Update* (dated June 21, 2006). Rob D'Arcy, Santa Clara County Hazardous Materials Program Manager, prepared this memorandum.
[5] Based on a 1999 National Electrical Manufacturers Association survey entitled *Environmental Impact Analysis: Spent Mercury-Containing Lamps, January, 2000 (Fourth Edition)*, the average four-foot fluorescent lamp contains about 11.6 milligrams (mg) of mercury. For the purpose of estimating the amount of mercury sent for recycling, approximately 69,250 four-foot fluorescent lamps were collected. As a result, 0.803 kilograms of total mercury diverted (i.e., discharge to the environment was avoided) to recycling is a rough estimate.

Table 3-1
Evaluation of PI/P Projects Conducted During FY 05-06 (New and Ongoing)

Project Title	Project Description[1]	Type of Outreach[2]	Summary of Evaluation of Effectiveness[3]
	to support this promotion. Listeners/readers were encouraged to participate in the contest by either dropping-off their used fluorescent bulbs at participating stores or by submitting the "pledge to dispose mercury properly" contest entry form available online and within the *San Jose Mercury News*.		to recycling from mercury-containing thermometers collected by the CoHHW Program[6].
Schools and Youth Outreach Work Group	In FY 02-03, the Watershed Action Fund was reformed as the Schools and Youth Outreach Work Group. The group aimed to accomplish the following tasks: • Provide input for conducting 50 ZunZun school assemblies and report on activities conducted individually by Co-permittees. • Identify a program for increasing outreach to middle schools	T,P,C	**Effective**- During FY 05-06, ZunZun performed at 26 schools reaching 14,059 children. The teacher evaluations of the performances indicate they were successful in increasing the children's knowledge about watersheds and pollution prevention activities (see Appendix B-6). In FY 02-03, the Work Group collected data on outreach (conducted in FY 01-02) from all Co-permittees and completed the gap analysis study. The study indicated that 47 percent of all schools in Santa Clara Valley receive outreach from the Program and/or Co-permittees. The study identified a gap in outreach at the middle school level and recommended targeting outreach to this level. In FY 03-04, the Work Group identified an existing teachers training program at the City of San Jose for addressing gaps in outreach. To include additional information on watersheds, the Work Group identified three lesson plans for this program. In FY 04-05, the Work Group

[6] As stated in the Powerpoint presentation entitled *Lighting & Recycling: National Energy Star Lighting Partner Conference - April 5, 2005* (presenter: J.G. Howley)), the typical mercury-containing thermometer contains about 500 milligrams (mg) of mercury. For the purpose of estimating the amount of mercury sent for recycling, approximately 231 mercury-containing thermometers were collected. As a result, 0.155 kilograms of total mercury diverted (i.e., discharge to the environment was avoided) to recycling is a rough estimate.

Table 3-1
Evaluation of PI/P Projects Conducted During FY 05-06 (New and Ongoing)

Project Title	Project Description[1]	Type of Outreach[2]	Summary of Evaluation of Effectiveness[3]
			purchased tote bags for teachers for packaging the workshop materials (binder, video tapes and a map). The Work Group also recommended that to increase attendance at the workshop, teachers should be offered stipends as incentives. In FY 05-06, the Wacky Watershed workshop staff held 4 workshops and trained 40 teachers
Program Supplies	Conduct reprints of materials for Program use and order supplies as necessary.	G,T,P,C	**Effective**- The Program Supplies budget was used toward printing storm drain stencils, "Draining Pools and Spas" brochure, "Blue Print for a Clean Bay" booklets, "Pest or Pal" activity books, and storm drain stencils.
Program Toll Free Number	Answer the Program's toll free number (1-800-794-2482) and the Watershed Watch Campaign's toll free number, 1-866-WATERSHED, and respond to requests for information.	G,P	**Effective**- Both phone numbers are being used to contact the Program and request materials. Phones are answered and messages are checked daily. During, FY 05-06, Program staff responded to approximately 37 calls and sent information materials to approximately 29 callers
Creek Cleanup Events	Work with Creek Connections Action Group to organize and fund two creek cleanup events per year.	G,C	**Effective**- Provided support for advertising for one event. A total of 1,458 volunteers participated in cleaning 55 sites and removed nearly 36,442 pounds of trash. The quantities of trash and recyclables have shown a decreasing trend since 1998, which is likely due in part to the success of public outreach about not dumping trash in creeks, rivers and storm drains.
Restaurant BMP	Distribute a restaurant wash water BMP packet for County Health Inspectors to hand out to restaurant managers via County Health Inspectors at the time of their inspections	T,P	**Effective** - In FY 05-06, County Health inspectors distributed the wash water BMPs and the poster to 465 newly constructed and remodeled food facilities in the County.

Table 3-1
Evaluation of PI/P Projects Conducted During FY 05-06 (New and Ongoing)

Project Title	Project Description[1]	Type of Outreach[2]	Summary of Evaluation of Effectiveness[3]
Regional Collaboration	Participate in the following BASMAA PI/P work groups and tasks of regional benefit. Attend meetings as needed, participate in review of products, and obtain input from Co-permittee representatives. • Media Relations Work Group • Regional IPM Store Partnership Program Work Group • Pesticide Distributors Outreach Project • Regional Ad Campaign	 G,P G,P G,P T	**Effective**- See Media Relations Campaign Final Report in Appendix B-12. **Effective**- Contributions to BASMAA helped fund IPM fact sheet reprints, translation of remaining fact sheets into Spanish and implementation of the OWOW advertising campaign. The Program budgeted $50,000 for the Regional Ad Campaign (RAC) in FY 05-06. BASMAA did not conduct the RAC in FY 05-06. It will be conducted in FY 06-07. Co-permittees obtained copies of the Caltrans "Don't Trash California" Public Service Announcements (PSAs) for airing on local cable access television. The PSAs were aired by the following cities: City of Palo Alto – 223 times (English), 86 times (Spanish) City of Santa Clara – 900 times (English) City of Cupertino – 125 times (English) City of San Jose – 25 times (English)

Table 3-1

Project Title	Project Description[1]	Type of Outreach[2]	Summary of Evaluation of Effectiveness[3]
Program Fact Sheets	Develop non-technical fact sheets to describe Program activities. Program specific fact sheets on the following topics were developed and distributed: • Water Quality Monitoring and Watershed Assessment Fact Sheet • Sediment Impact and Management Practice Assessments Fact Sheet • Watershed Education and Outreach Fact Sheet • General Program • Trash Evaluation and Management Fact Sheet	G,T,P	

SECTION 4

MONITORING ACTIVITIES

4. MONITORING ACTIVITIES

INTRODUCTION

During FY 05-06, a considerable amount of water quality data and information were gathered and/or assessed by the Program through the direct implementation of and active participation in monitoring-related activities in the San Francisco Bay Area. The Program's monitoring resources were primarily spent preparing permit-required submittals, continuing to implement the Program's Revised Multi-Year Receiving Waters Monitoring Plan (Revised Multi-Year Plan), participating in regional monitoring-related programs, conducting special studies and implementing pollutant-specific control programs.

This section provides a brief background of the Program's monitoring and assessment program and summarizes significant monitoring-related activities conducted during FY 05-06. The activities described in this section are consistent with Provisions C.7 and C.9 of the Program's NPDES Permit. Each summary includes the following information, to the extent possible:

1) A description of the relationship to NPDES Permit requirement(s) and management question(s) the study was designed to address;
2) A brief description of subtasks and status of project/activity;
3) A brief description of the results;
4) A summary of findings to-date and recommendations (where feasible); and
5) A description of lessons learned and planned/recommended follow-up activities.

In addition, summaries of management activities conducted through the implementation of the Program's Pollutant of Concern (POC) Control Plans are provided for those POCs that do not have separate Annual Report sections (e.g., PCBs, Copper/Nickel and Dioxins). An effectiveness assessment of current monitoring activities is also provided at the end of the chapter.

The findings of many technical reports are briefly described within this section. To ensure public access to completed reports, work products and environmental data, the Program has placed the majority of its reports and work products on its website (www.scvurppp.org). The website is continually updated to include the latest reports and work products, data inventory sets and other pertinent Program information. When viewing the website, a large majority of the reports and work products are linked to downloadable documents. Reports and work products not available through the website may be obtained by submitting a request form to Program staff.

BACKGROUND

Multi-Year Receiving Waters Monitoring Plan

Consistent with Provision C.7.b and C.9 of its Permit, the Program developed (and submitted to the Water Board), a Multi-Year Receiving Waters Monitoring Plan (Multi-Year Plan) on March 1, 2002 that identifies Program monitoring activities in Santa Clara Basin Watersheds over an eight-year period. As new monitoring priorities were established, the Multi-Year Plan was revised in FY 03-04 (Revised Multi-Year Plan). This Revised Multi-Year Plan can be found

under the Environmental Monitoring and Assessment Measures link on the Program's website (www.scvurppp.org).
The Revised Multi-Year Plan contains the following information: watershed location (prioritized based on SCBWMI and Program assessment priorities), data type (chemical, biological and physical), number and frequency of sampling events, fiscal years (eight years starting with FY 02-03 through FY09-10), rationale and lead agency. The information on data type uses a tiered monitoring approach discussed by the Water Board staff in its Regional Monitoring and Assessment Strategy (RMAS) memo (Draft Monitoring Design in Water Board-lead Pilot Watersheds, spring 2001) dated February 8, 2001. The following monitoring categories were included within the memorandum: screening level, detailed investigation, and status and trends. The field and analytical methods used in the Revised Multi-Year Plan are described in the Program's Draft Quality Assurance Project Plan (QAPP), which is consistent with the Water Board's Surface Waters Ambient Monitoring Program (SWAMP) Quality Assurance Project Plan.

The Revised Multi-Year Plan incorporates specific data needs that have been identified in Program activities relevant to watershed assessment and monitoring. For example, the Revised Multi-Year Plan incorporates future monitoring activities that will be implemented for sediment-related studies in Stevens and Upper Penitencia Creek watersheds. Tasks associated with these monitoring activities are identified in the Program's Work Plan entitled *Workplan for Conducting Watershed Analysis and Management Practice Assessment in Other Creeks Potentially Impaired by Sediment from Anthropogenic Activities* (dated August 30, 2002). A clear identification of the specific monitoring activities planned for each year is included as part of the Program's Annual Monitoring Plan submitted to the Water Board every March 1.

Annual Monitoring and Watershed Management Measures Work Plans and Watershed Characterization Memorandum

During FY 04-05, the Program developed the *FY 05-06 Annual Monitoring and Watershed Management Measures Work Plan* (FY 05-06 Monitoring Plan). The FY 05-06 Monitoring Plan was included in the Program's *FY 05-06 Draft Work Plan* (submitted March 1, 2005). The FY 05-06 Monitoring Plan identified monitoring and watershed assessment activities for six sites in the Permanente Creek watershed, eight sites in Stevens Creek watershed, three sites in the Matadero/Barron Creek watershed, four sites in the Calabazas Creek watershed, and two sites in the Sunnyvale East/West Channel watersheds. The selection of these watersheds is consistent with the Program's *Watershed Management and Urban Runoff Management Integration Report* (dated June 29, 2001). The data type and sampling frequency were identified for each sampling site and accompanied by maps showing proposed sampling locations. The monitoring schedule is consistent with the sampling design presented in the Revised Multi-Year Plan (i.e., two sampling events per year representing different hydrological cycles). Information collected during implementation of the FY 05-06 Monitoring Plan is described in this Annual Report.

In preparation for Program-led receiving waters monitoring in FY 06-07, the Program developed the *FY 06-07 Annual Monitoring and Watershed Management Measures Work Plan* (FY 06-07 Monitoring Plan) in FY 05-06. The FY 06-07 Monitoring Plan was submitted to the Water Board on March 1, 2006 as part of the Program's *FY 06-07 Draft Work Plan*. Similar to past annual monitoring plans, the FY 06-07 Monitoring Plan describes planned monitoring that will be conducted during FY 06-07 in Permanente and Stevens Creek (year two) and Coyote Creek mainstem (year one). To provide additional details on the rationale for the selecting sampling site locations and parameters, the Program supplemented the FY 06-07 Monitoring Plan with a

watershed characterization technical memorandum. This memorandum includes a summary of existing data and information resources; descriptions of the relevant watershed attributes; and lists key issues relevant to the development of the proposed sampling design for Coyote Creek mainstem that will be implemented in FY 06-07.

SUMMARIES OF FY 05-06 MONITORING AND ASSESSMENT ACTIVITIES

A summary of FY 05-06 monitoring and assessment activities is provided within Appendix C-1 and Table 4-1. Appendix C-1 provides a historical summary of all monitoring and assessment activities conducted by the Program. The following summaries highlight the objectives, results and conclusions of specific monitoring-related projects conducted during FY 05-06. Monitoring activities were generally aimed at developing and implementing programs/projects designed to assess the condition of water bodies using practical, implementable indicators and protocols. The implementation of these indicators and protocols are a necessary step toward establishing a sound regulatory basis for locally based watershed management.

Monitoring activities presented within this section, involve multiple tasks, subtasks, or coordinated activities that may take place over multiple years and at varying geographical scales (i.e., regional or sub-watershed). In addition, it is important to note that monitoring and assessment activities described within this section are not entirely independent from activities described in Section 5 – Watershed Management Measures. Information gained from conducting studies and implementing activities/measures described in both sections have been used (and will continue to be used) in concert to meet objectives outlined in Permit Provisions C.7, C.9, and C.10, which include; (1) characterizing watersheds and stormwater discharges; (2) assessing existing or potential adverse impacts to beneficial uses; (3) identifying potential sources of pollutants of concern; (4) aiding in developing and implementing strategies for controlling adverse impacts on beneficial uses; and (5) assessing the effectiveness of pollutant prevention/control measures.

SCVURPPP Receiving Waters Monitoring and Assessment

In accordance with Provision C.10 (b), the Program developed a *Watershed Monitoring and Assessment Summary Report* (Summary Assessment Report) that summarizes the results and analyses of baseline data collected during the implementation of the Program's FY 05-06 Annual Monitoring and Watershed Management Measures Work Plan (FY 05-06 Monitoring Plan). The FY 05-06 Monitoring Plan included ambient surface water quality monitoring; and physical habitat assessment studies and bioassessment studies for the following watersheds:

- Permanente Creek;
- Stevens Creek;
- Matadero/Barron Creeks;
- Calabazas Creek; and
- Sunnyvale East/West Channels

The Summary Assessment Report provides information on possible beneficial use impacts to the extent possible (based on the study design and available data) and suggests next steps for monitoring/assessments and developing strategies to control potential impacts. The following paragraphs provide a brief synopsis of the information found within the Summary Assessment Report that is included within Appendix C-2.

City of Palo Alto Creek Monitoring

San Francisquito Creek Long Term Monitoring and Assessment Plan (LTMAP)

In addition to environmental monitoring conducted by the Program, the City of Palo Alto operates a water quality sampling station on San Francisquito Creek (at Newell Road) as part of the Long Term Monitoring and Assessment Plan (LTMAP). The Newell Road station is located in the lower portion of the watershed and therefore receives runoff from nearly the entire San Francisquito watershed, including most of the urbanized portion.

At the Newell Road location, flows are intermittent, with flow beginning during the rainy season and tapering off in the late spring or early summer. During each water year, five to six rainfall events are sampled using a time-integrated sampling regime. Samples are analyzed for total metals (including low level mercury, dissolved mercury, and methylmercury), nutrients, pesticides (organochlorine, organophosphate, and pyrethroids) and suspended solids. One sample each year is analyzed for dioxins. Stanford University, Stanford Linear Accelerator Center and Jasper Ridge Biological Preserve operate three additional LTMAP sampling stations in the upper watershed. Additional information on the LTMAP and data can be found at www.city.palo-alto.ca.us/cleanbay/creeks/index.html.

Volunteer Creek Monitoring Program

The City of Palo Alto's volunteer creek monitoring program was developed after a November 2002 fish die-off within the Palo Alto Flood Control Basin. Since April 2003, approximately six volunteers and Regional Water Quality Control Plant staff monitor twenty-one sites, twice a month, on Adobe, Barron and Matadero Creeks; and the Palo Alto Flood Control Basin. A YSI multi-meter probe is used to take measurements of temperature, conductivity, dissolved oxygen and pH. The volunteer program has collected three years of data that allow evaluation of water quality overtime within the creeks and flood basin. This data is useful in making policy decisions with respect to managing adequate dissolved oxygen levels within the flood control basin.

Regional Collaborative Monitoring Activities

Regional Monitoring Program for Water Quality (RMP)

The Regional Monitoring Program for Water Quality in the San Francisco Estuary (RMP) is a collaborative effort between the San Francisco Estuary Institute (SFEI), the Water Board and the regulated discharger community (including SCVURPPP). The RMP's goal is to collect scientifically valid information that allows movement towards understanding contaminant impacts on beneficial uses of the Bay. The RMP focuses on determining spatial patterns and long term trends through sampling of water, sediment, bivalves, and fish; effects on sensitive organisms; and chemical loading to the Bay. To provide the most complete assessment possible of chemical contamination in the Bay, the RMP seeks to synthesize RMP data with data from other sources.

The RMP is based on management questions and program objectives that are updated by the Water Board, RMP staff, RMP Technical Review Committee (TRC) and RMP Steering Committee (SC) every five years. The RMP recently updated its management questions and objectives in January 2005 (www.sfei.org/rmp/RMPproginfo.htm). The current RMP objectives are:

1. Describe the distribution and trends of pollutant concentrations in the Estuary;
2. Project future contaminant status and trends using best understanding of ecosystem processes and human activities;
3. Describe sources, pathways, and loading of pollutants entering the Estuary;
4. Measure pollution exposure and effects on selected parts of the Estuary ecosystem (including humans);
5. Compare monitoring information to relevant benchmarks, such as TMDL targets, tissue screening levels, water quality objectives, and sediment quality objectives; and,
6. Effectively communicate information from a range of sources to present a more complete picture of the sources, distribution, fate, and effects of pollutants and beneficial use attainment or impairment in the Estuary ecosystem.

The Program actively participated and contributed approximately $168,480 to SFEI for FY 05-06 expenditures on the RMP. This funding to SFEI is in addition to funding provided by the three south Bay public owned treatment works (POTWs), which are also Co-permittees. In addition, Program staff actively participated on a variety of RMP committees and work groups that included the RMP Steering Committee; Technical Review Committee; Sources, Pathways and Loadings Work Group (SPLWG); and, Contaminant Fate Workgroup. In addition, a City of San Jose staff member currently serves as the chair of the RMP TRC. In FY 06-07, the Program will continue to provide financial support for the RMP and actively participate in committees and workgroups.

The RMP budget is generally broken into two monitoring programs: Status and Trends; and Special and Pilot Studies. The following paragraphs provide a brief overview of these programs.

Status and Trends Monitoring Program

The Status and Trends Monitoring Program is the long-term contaminant-monitoring component of the RMP that was initiated as a pilot study in 1989. The Status and Trends Monitoring Program is comprised of four program elements that collect data to address the RMP objectives:

1. The *Status and Trends Monitoring Program* consists of long-term contaminant monitoring to characterize the status and trends for contaminants in water, sediment and biota (bivalves) in the Estuary (Objectives 1,3, and 4);
2. The *Sport Fish Contamination Study* is a triennial screening of fish tissue for contaminants of concern to human health (Objectives 1,3, and 4);
3. The *Episodic Toxicity Monitoring* component investigates potential toxic effects in Estuary tributaries (Objectives 1 and 2); and,
4. The *USGS* conducts two long-term monitoring efforts partially funded by the RMP, including monthly water quality measurements in the deep channels of the Estuary (from the Lower South Bay to the confluence of the Sacramento and San Joaquin Rivers), and sediment transport monitoring and modeling in the northern Estuary.

The summaries provided within this section focus on the latest information available from the Status and Trends Monitoring Program (i.e., 2004). The 2004 information was the third year that the Status and Trends Monitoring Program collected water and sediment samples using EPA's Environmental Monitoring Program (EMAP) Generalized Random Tessellation Stratified (GRTS) sample design. This type of design is appropriate for addressing the RMP objective (Objective 1) to describe the spatial and temporal patterns of contamination in the Estuary.

Monitoring data are available for downloading via the RMP website using the *Status and Trends Monitoring Data Access Tool* at www.sfei.org/rmp/data.htm.

Pilot and Special Studies

The RMP also conducts Pilot and Special Studies. Pilot Studies usually are designed to investigate and develop new monitoring measures related to anthropogenic contamination or contaminant effects on biota in the Estuary. Special Studies address specific scientific issues that the TRC, SC, or Water Board identify for further study. These additional studies are developed through an open application process, which starts with an applicant submitting a study idea to the RMP Program Manager for discussion at a TRC quarterly meeting.

Summaries of the most pertinent Pilot and Special Studies conducted in FY 05-06 are provided under each summary of pollutant-specific monitoring activities within this section. A summary of past Pilot and Special Studies conducted by the RMP is available on the RMP website (www.sfei.org/rmp/). In addition to providing funding for these studies, Program and Co-permittee staff provided in-kind support on the development, analysis of results and conclusions of each study summarized.

Clean Estuary Partnership

On August 6, 2001, a Memorandum of Understanding (MOU) regarding development of: 1) a Water Quality Attainment Strategy for San Francisco Bay-Delta and Tributaries; and 2) TMDLs for 303(d) pollutants (including mercury) was entered into by the Water Board, Bay Area Clean Water Agencies (BACWA) and Bay Area Stormwater Management Agencies Association (BASMAA). This group is referred to as the Clean Estuary Partnership (CEP).

The mission of the Clean Estuary Partnership (CEP) is to use sound science, adaptive management, and public collaboration to develop and implement technically valid and cost-effective strategies (including TMDLs) that result in identifiable, sustainable water quality improvements for San Francisco Bay. As a member agency of BASMAA, the Program contributed $97,000 to the CEP in FY 05-06. In addition, Program staff participated in CEP Executive Management Board (EMB) meetings, CEP Technical Committee (TC) meetings, pollutant-specific workgroup meetings and CEP Mercury Risk Reduction Work Group meetings. A City of San Jose staff member also serves as chair of the CEP TC.

FY 05-06 accomplishments included (but were not limited to) the development of a variety of technical reports and projects. Summaries of information collected during these studies are included under each summary of pollutant-specific monitoring activities provided below. In addition to the SCVURPPP providing funding for these studies, Program and Co-permittee staff provided in-kind support on the design, analysis of results and development of conclusions for each study summarized.

Program participation is tentative for FY 06-07, as the CEP is currently undergoing review and redesign.

BASMAA Monitoring Committee

The purpose of the BASMAA Monitoring Committee (MC) is to discuss and coordinate monitoring activities conducted by the Bay area urban runoff management programs. In FY 05-06, the main emphasis for BASMAA MC representatives, including Program and Co-permittee staff, was to participate in development of the monitoring and pollutant of concern-related

sections of the Municipal Regional Permit (MRP). The MRP is anticipated to replace the Program's NPDES permit and other Bay Area Phase I municipal stormwater permits. During FY 06-07, the Program will continue to actively participate in the BASMAA MC.

Mercury Monitoring Activities (Provision C.9.c)

Permit Provision C.9.c. requires the Program to develop and implement a mercury pollution prevention plan. In response, the Program developed a Mercury Pollution Prevention Plan (Mercury Plan) consistent with the Provision. The Mercury Plan was submitted to the Water Board on March 1, 2002 as part of the Program's *FY 02-03 Work Plan*. The Mercury Plan identifies actions that will be implemented at the Program level, municipality level, or both; and provides the schedule for initiation and/or completion of Program-level actions. The details of municipality actions and schedules are included in the individual Co-permittee Work Plans and/or Annual Reports, as appropriate.

During FY 05-06, a variety of mercury-related monitoring activities occurred including sampling and analysis of total and methylmercury in water, sediment, air and biota in the Estuary and the Guadalupe River watershed; and water quality monitoring conducted by the Program in accordance with the Revised Multi-Year Plan. In addition, a conceptual model of mercury in the San Francisco Bay was completed. The following summaries briefly describe the results and conclusions of these efforts. A more detailed description of FY 05-06 accomplishments and the prominent mercury pollution prevention activities planned for FY 06-07 are provided within Section 7 - Mercury Pollution Prevention Activities.

Watershed Monitoring

In FY 05-06, the Program continued to analyze water samples collected in Santa Clara creeks through the implementation of its Revised Multi-Year Plan. Water samples were collected as screening level indicators of water quality at a variety of creek sites draining urban and rural land use areas. As described in the Program's Revised Multi-Year Plan, grab samples were collected during two seasons (wet and dry).

Mercury concentrations detected in Santa Clara creeks in FY 05-06 ranged between 5.0 ng/L and 9.2 ng/L, below the four-day average mercury water quality objective (25 ng/L) for freshwater bodies in the San Francisco Bay region. A full description of methods, results and conclusions are presented in the Summary Assessment Report (see Appendix C-2).

Mercury Atmospheric Deposition Monitoring

One pathway of pollutants to the Estuary is atmospheric deposition, which was examined in the RMP Atmospheric Deposition Pilot Study. One study site (i.e., San Jose) remains from this pilot effort. RMP and City of San Jose in-kind funding were used in FY 05-06 to continue mercury deposition monitoring. The following objectives were used:

- Evaluate concentrations of mercury in rainwater as part of TMDL refinement; and
- Contribute to the national database to evaluate contributions of mercury from large urban areas and long-range aerial transport from outside the region to surface waters.

The latest results (2004 and 2005) were not available at the time of this report, but will be summarized in the Program's FY 06-07 Annual Report. Once available, results can also be

accessed at www.sfei.org/rmp/rmp_data_access.html. Current plans call for the RMP and the City of San Jose to continue to fund the San Jose monitoring station in FY 06-07.

Pollutant Loads from the Sacramento and San Joaquin Rivers

This study's primary objective is to estimate sediment and associated pollutant loads (including mercury, PCBs, chlorinated pesticides and PAHs) to San Francisco Bay from the Sacramento and San Joaquin Rivers, which drain the Central Valley. In FY 05-06, the RMP continued to collaborate with the USGS to monitor suspended solid concentrations at Mallard Island. Ten years of continuous sediment data are now available when combined with data collected by the USGS from 1994-98. The RMP also collected mercury and other sediment-related pollutant concentrations at Mallard Island for the purpose of developing statistical relationships between concentrations and optical backscatter turbidity measurements. These relationships can be used to estimate time-continuous concentration data, and when combined with estimates of discharge, allow estimation of pollutant loads from the Central Valley.

The most recent data analyzed during this study are from Water Years (WY) 2002 and 2003. Total mercury was measured in 30 water samples collected during these years. Total mercury concentrations ranged from 4 to 14 ng/L, whereas dissolved mercury concentrations in seven samples ranged from 0.8 to 1.6 ng/L. Despite dissolved mercury concentrations making up between 11 to 24 percent of the total mercury concentrations, a linear relationship was observed between instantaneous SSC and total mercury. The linear relationship allowed for estimation of annual loads for WY 2002 and WY 2003, which were 58(±20) and 97(±33) kg for total mercury. Extrapolation of mercury data (from WY 2002 and WY 2003) over a nine year period (WY 1995 to WY 2003) using SSC data resulted in long-term average annual load of 201(±68) kg total mercury entering the Estuary from the Sacramento and San Joaquin Rivers.

Data collection at Mallard Island continued during WYs 2004 and 2005. In December 2005, routine wet season sampling was completed during the first flush of WY 2006. In January 2006, following RMP Technical Review Committee approval, RMP contingency funds were expended to sample during a large flood event (approximately 7-year return frequency). This storm resulted in much higher flows compared to any previous RMP sampling episodes at Mallard Island. This data is currently being compiled and analyzed for future reporting. One goal is to compare long-term trends in mercury loads to TMDL Waste Load Allocations (WLAs) assigned to the Central Valley region. This will determine if required load reductions are met. The RMP has approved funding for continuation of this study through 2009.

Guadalupe River Pollutant Loading Study

This long-term monitoring study aims to measure sediment and associated pollutants loads to the Estuary from the Guadalupe River watershed; and demonstrates methods that could be used to estimate loads from other small tributaries to San Francisco Bay. Water samples and turbidity data are collected at a station near the bottom of the watershed. Three years of fieldwork and analysis are complete (WY 2003, 2004 and 2005) and field data from a fourth year (WY 2006) is currently being compiled and analyzed. Analytes include suspended sediment concentration (SSC), mercury, PCBs and a suite of metals. Beginning with year three of the study, PBDEs and methyl mercury were added and organochlorine pesticides were discontinued.

Sediment loads have decreased each year of the study. This appears to be related to climatic variation, and pollutant loads show similar trends. In WYs 2003, 2004, and 2005, the loads of

total mercury were estimated to be 116 ± 36 kg, 15 ± 4.5 kg, and 8 ± 2.5 kg, respectively. The Program funded mercury bed load measurements during year three of the study. The data indicated that bed load comprised about 1 percent of the total mercury load for WY 2005.

All observations to-date support the hypothesis that the majority of total mercury transported in the system is derived from out-of-channel sources in the New Almaden historic mining district. Other mercury sources (e.g., runoff and channel erosion in urban areas, erosion from Lake Almaden, atmospheric deposition, and channel erosion in the Alamitos Creek and Guadalupe Creek mainstems) appear to be subordinate given the observation of relatively high mercury concentrations on the falling stages when sediments primarily originate from the upper watershed. Controlled releases from the Guadalupe and Almaden reservoirs did not appear to increase mercury concentrations. Particle concentrations of metals associated with urban runoff (e.g., copper and lead and organics (PCBs and PBDEs) were elevated on the rising stages when flood waters are derived mainly from urban runoff.

The RMP Sources, Pathways and Loading Work Group provides study oversight and believes the study should be continued since the data set is still short relative to climatic variability in the Bay Area,. Funding for a fifth year has not yet been secured.

Guadalupe River TMDL for Mercury

The Santa Clara Basin Watershed Management Initiative (SCBWMI) is serving as the stakeholder forum for the development of the Guadalupe River TMDL Report for Mercury. The Guadalupe River Watershed encompasses parts of San Jose, Los Gatos, Campbell, Monte Sereno and the unincorporated Santa Clara County. The Program is a stakeholder in the Guadalupe River TMDL. The Santa Clara Valley Water District (SCVWD) is taking a lead role in the TMDL development process by funding a $900,000 study of mercury sources, fate and transport, and is participating as Co-Chair of the TMDL Work Group and Stakeholder Group. Program staff is also participating in the TMDL process. In addition, the SCVWD entered into a Memorandum of Understanding (MOU) with the Water Board for Phase I and Phase II studies which were funded by the SCVWD.

Since FY 02-03, Program staff, along with other Co-permittee staff, have attended Work Group meetings and reviewed draft technical memoranda developed by the consultant (i.e., Tetra Tech). During July and August 2003, a synoptic survey and preliminary field sampling effort was conducted. The results of the synoptic survey were incorporated into the *Draft Conceptual Model Report* (Tetra Tech, October 2, 2003). Based on the information collected for the conceptual model, a *Data Collection Plan* (Tetra Tech, February 20, 2004) was developed. Sampling in the Guadalupe River watershed, which began in February 2004, included an element to compare total and methyl mercury in creeks draining urban watersheds unaffected by mining (Ross, Canoas and Los Gatos Creeks) to those affected by mining (Alamitos, Guadalupe, Arroyo Calero, Canoas, Randol Creeks and Guadalupe River). Under a contract with the Water Board, the consultant has incorporated the data collection results into the *Final Conceptual Model Report* (Tetra Tech, May 22, 2005). A summary of the findings in this report were provided in the Program's *FY 04-05 Annual Report*.

Building on the information presented in the conceptual model report, Water Board staff released a TMDL Project Report in January 2006 that describes the estimated loads from source categories, TMDL targets and load and wasteload allocations, and preliminary implementation actions. Program, City of San Jose and SCVWD staff presented oral comments to Water Board staff during the SCBWMI TMDL Stakeholder Workgroup meeting on May 14,

2006. The purpose of the meeting was to obtain Workgroup input on the TMDL Implementation Plan.

Public notice of the release of the Basin Plan Amendment (BPA) package is currently scheduled for December 2006, with Water Board hearings scheduled for February and April 2007. Program and Co-permittee staff will continue to participate in the development of the Guadalupe River Watershed TMDL for mercury by attending meetings and reviewing/commenting on future TMDL reports.

Pesticide Monitoring Activities (Provision C.9.d)

In response to Provision C.9.d of the Program's NPDES Permit, the SCVURPPP developed a Pesticide Management Plan consistent with the Provision. The Pesticide Management Plan, which has many components, is described in Section 6 of the Annual Report. Pesticide-related monitoring activities conducted during FY 05-06 are described below.

Organophosphate Pesticides and Pesticide Related-Toxicity

Watershed Monitoring Activities
During FY 05-06, the Program continued to analyze water samples collected in Santa Clara creeks through the implementation of its Revised Multi-Year Plan. Water samples were collected as screening level indicators of water quality at a variety of creek sites draining urban and rural land use areas. Specific to pesticides, creek water was analyzed for organophosphate pesticide concentrations and aquatic toxicity. As described in the Program's Revised Multi-Year Plan, grab samples were collected during two seasons (wet and dry).

Organophosphate pesticides were detected in only one of the eighteen samples collected from seven creeks in the Santa Clara Valley in FY 05-06. Specifically, the diazinon at site BAR010 during the dry season event was 0.0344 ug/L, below the diazinon TMDL target of 0.100 ug/L.

Results from three species chronic toxicity testing also indicated very few problems in Santa Clara Valley creeks. Five sites were sampled two times (wet and dry seasons) during FY 05-06. No significant acute toxic effects (i.e., reduced survival) were observed in the ten samples. Growth/Reproduction (i.e., chronic effects) of test organisms *Ceriodaphnia dubia* and/or *Pimephales promelas* was slightly inhibited in two of ten samples analyzed. Growth of the green algal *Selenasturm capricornutum* was inhibited in two of ten samples analyzed.

A full description of methods, results and conclusions are presented in the Summary Assessment Report (see Appendix C-2). In future years, the Program will continue to coordinate pesticide and toxicity monitoring activities with regional monitoring efforts (e.g., BASMAA and RMP) to ensure that useful and adequate information is being collected. This information should assist the Program in determining the impacts of pesticides on local water bodies.

Legacy Pesticide Monitoring

Guadalupe River Pollutant Loading Study
Background information for this study was described earlier in this section (see Mercury Monitoring Activities). A report that included legacy pesticide monitoring results was completed in July 2005. In WY 2003, the loads of DDT, chlordane, and dieldrin to the Estuary from the Guadalupe River watershed were estimated at 1100 ± 270 grams, 790 ± 13 grams, and 82 ± 17

grams, respectively. In WY 2004, the loads were estimated at 700 ± 210 grams, 550 ± 140 grams, and 54 ± 13 grams, respectively. This project discontinued monitoring for legacy pesticides after WY 2004.

Copper and Nickel Control Measures (Provisions C.9.a and b)

Management Activities

Copper Action Plan and Nickel Action Plan Reviews
In FY 05-06, Program staff, in consultation with Water Board staff, decided that the SCBWMI Bay Modeling and Monitoring (BMM) Subgroup did not need to conduct semi-annual reviews of the Copper Action Plan (CAP) and Nickel Action Plan (NAP) due to the pending related activities of the Clean Estuary Partnership (CEP) and Water Board regarding the Municipal Regional Permit (MRP).

Limited discussions about how the transition would likely occur to a bay-wide Copper Management Strategy (CMS) occurred within the MRP Work Groups. MRP development related activities were considered higher priority by Water Board staff than CAP/NAP activities during most of FY 2005-2006. Ambient monitoring and trigger criteria were revisited to move towards a consistent and equivalent level of effort expended North and South of the Dumbarton Bridge. The proposed approach North of the Dumbarton Bridge is to rely on RMP data that is collected once per year versus the monthly dry season data collected south of the Dumbarton Bridge. The City of San Jose prepared a report entitled *Re-evaluation of San Francisco Bay Triggers fro Copper and Nickel* (dated April 2006) that evaluated alternative strategies for a consistent bay-wide approach. The report results were presented to Water Board and SFEI staff. The City of Palo Alto continued to offer to convert its Copper Indicators Report to a model for a bay-wide indicators report, if provided the necessary information. New funding mechanisms will need to be identified for on-going implementation of these bay-wide CMS components (stormwater and POTW annual reporting, indicators reporting and ambient monitoring). The Basin Plan Amendment adopting the North of Dumbarton Bridge Copper/Nickel (Cu/Ni) site-specific water quality objectives (SSOs) and the CMS are currently scheduled for adoption in early 2007.

Implementation of CAP/NAP Baseline Activities
The majority of baseline actions are implemented at the Program level (except for those assigned to San Jose, Sunnyvale and Palo Alto), and are included in the Program's Annual Reports and Work Plans. In mid-2003, the Program identified the following copper control activities that were deemed appropriate to implement at the Co-permittee level:

- CB-1: Measures to reduce copper discharges from vehicle washing operations;
- CB-3: Measures to control copper in discharges of stormwater in targeted industrial sources;
- CB-6, 7: Measures to reduce traffic congestion/promote alternative transportation;
- CB-8: Measures to classify and assess watersheds and improve institutional arrangements for watershed protection;
- CB-11: Measures to improve street sweeping controls and stormwater system operation and Maintenance;
- CB-12: Measures to control copper discharges from pools and spas;
- CB-21: Measures to discourage architectural use of copper; and
- NB-1: Measures to control nickel discharges from construction sites (sediment).

The *FY 06-07 Copper/Nickel Work Plan* and summary of FY 05-06 accomplishments are provided within Appendix C-3. Currently, the Copper/Nickel Work Plan contains twenty-one copper and seven nickel baseline actions. During FY 05-06, some specific accomplishments included:

- Distributed approximately 2,000 English and Spanish Watershed Watch (WW) campaign brochures that included outreach on car washing (aimed at reducing copper and nickel; and other pollutant inputs to stormwater). In addition, the Program distributed Watershed Watch campaign brochures at public events, ZunZun assemblies and through website and hotline requests (CB-1);
- The City of San Jose conducted additional rooftop inspections of selected facilities that may be potential sources of copper. Contact letters and the stand-alone roof vent BMP information (prepared by the City of San Jose) were mailed to the selected facilities (CB-3);
- The City of Palo Alto prepared the fifth annual Copper Action Plan Report (CB-4.3);
- Continued to actively support the Brake Pad Partnership (BPP) (CB-5), providing resources to fund and advocate BPP through BASMAA, actively tracking activities of BPP and efforts under the Proposition 13 grant;
- Continued to work with and support the Land Use Subgroup (LUS). Tasks included conducting two workshops (December 2005 and May 2006) relating to impacts on water quality. CB-6 and CB-7);
- Implemented the fourth year of the Multi-Year Monitoring Plan (Included specific water quality and sediment sampling and analyses for all metals including copper and nickel.) (CB-8.4);
- Continued to implement Co-permittee street sweeping and catch basin cleaning programs consistent with performance standards (aimed at reducing discharges of pollutants, including copper and nickel, to storm drains and receiving waters). Summarized the amount of material collected and miles swept within the Program's jurisdiction (CB-11);
- Continued distributing the updated brochure entitled Keep Pool, Spa and Fountain Water Out of Storm Drains, Creeks, and the Bay (aimed at reducing discharges of pool water, which can contain copper and nickel, to storm drains and receiving waters.) (CB-12);
- The City of San Jose continued to monitor dissolved copper and nickel during the dry season (in Lower South San Francisco Bay) as part of their ambient monitoring program (additional information provided below).

Lower South Bay Ambient Monitoring

In February 1997, the City of San Jose, on behalf of all local agencies in the South Bay, began sampling total and dissolved copper and nickel concentrations at ten stations in the Lower South San Francisco Bay (LSSB). In October 1997, two fresh water stations were added, one each in the lower reaches of Coyote Creek and the Guadalupe River, bringing the total number of stations to twelve (Figure 4-1). The sampling design from the CAP/NAP requires monthly compliance sampling. Ten locations in South San Francisco Bay are monitored to compare mean dry season dissolved copper and nickel concentrations to respective trigger levels. Results from monthly monitoring at ten stations show ambient concentrations continuing to be well below the adopted SSOs of 6.9 ug/L and 11.9 ug/L for copper and nickel, respectively. Ambient concentrations have remained consistent (no upward or downward trend) and below the stringent Action Plan trigger values (established as NPDES permit requirements in 2000) of 4.0 ug/L and 6.0 ug/L for copper and nickel, respectively. The monitoring results are located on the City of San Jose's Environmental Services Department website (www.sanjoseca.gov/esd/pub_res.htm).

Figure 4-1: Map of monitoring station locations in LSSB (City of San Jose)

Future CAP/NAP Approach

Since 2003, the BMM Subgroup determined that further efforts at fine-tuning the CAP baseline activities would likely be unproductive due to certain remaining inherent challenges with the original CAP/NAP language. To assist in the identification of key baseline copper control activities that are most effective in the removal of copper, the Program helped fund preparation of a Clean Estuary Partnership document entitled *Copper Sources in Urban Runoff and Shoreline Activities: Information Update*. This report was prepared as part of North of Dumbarton Cu/Ni SSOs project funded through the CEP and finalized in November 2004.

The CEP also funded a follow-up project to prepare a reporting template and guidance on how the top priority stormwater CMS activities should be implemented and how the effectiveness of those activities should be assessed. The first source assessed was architectural copper in the CEP report entitled *Copper Management Strategy Development Resources, Element 1: Architectural Copper.* The report was reviewed at a Work Group meeting in December 2005. The CEP funded a follow-up report entitled *Copper Management Strategy Development Resources, Version 1* that addressed brake pads, copper pesticides and marine antifouling compounds. Other sources of copper in urban runoff are proposed to be addressed through existing permit requirements and public outreach.

The Cities of Palo Alto and San Jose continued funding efforts to develop a proposed BACWA sponsored bay-wide POTW CMS Annual Performance Summary Report which would consist in part of influent, effluent, and loading time series graphs. These graphs are designed to provide simple visual documentation of continued reasonable levels of pollution prevention and treatment plant performance by each POTW.

Monitoring Activities

Watershed Monitoring

During FY 05-06, the Program continued to analyze water samples collected in Santa Clara creeks through the implementation of its Revised Multi-Year Plan. Water samples were collected as screening level indicators of water quality at a variety of creek sites draining urban and rural land use areas and analyzed for total recoverable copper and dissolved copper

concentrations. As described in the Program's Revised Multi-Year Plan, grab samples were collected during two seasons (wet and dry).

In FY 05-06, total recoverable copper concentrations ranged from 0.68 to 20 ug/L in eighteen samples collected from seven creeks in Santa Clara County. At the same sites, dissolved copper concentrations ranged from 0.59 – 12.0 ug/L. Site BAR010 (Barron Creek at Park Blvd.) exhibited the highest total recoverable (20 ug/L) and dissolved (12 ug/L) copper concentrations for both the dry and wet season sampling events. The median total recoverable copper concentration for all sites during dry season sampling event was 1.6 ug/L (n=18), as opposed to wet season sampling event median of 2.3 ug/L (n=18).

Dissolved copper concentrations were adjusted for hardness and compared to copper water quality standards for freshwater described in the California Toxics Rule (CTR). Analytical results indicated that only one of eighteen samples (site BAR010) exceeded the Continuous Concentration Criterion (CCC) for copper. A full description of methods, results and conclusions are presented in the Summary Assessment Report within Appendix C-2.

Brake Pad Partnership

The Brake Pad Partnership (BPP) is a multi-stakeholder effort to understand the environmental impacts of automobile brake pad wear debris (which contains copper). Manufacturers, regulators, stormwater management agencies (e.g., SCVURPPP) and environmentalists are working together to understand these impacts. BPP efforts are aimed at developing an approach for evaluating potential impacts of copper (from brake pad debris) affecting water quality in the South San Francisco Bay. Brake pad manufacturers have committed to adding this evaluation approach (to existing practices) for designing products that are safe for the environment while meeting performance requirements.

To understand the fate and transport of copper from automobile brake pad wear debris, the Program (through BASMAA) continued to financially support the BPP in conducting a set of interlinked laboratory, environmental monitoring and environmental modeling studies. The BPP efforts include the following three environmental modeling studies:

- Air Deposition Modeling—To predict how much brake pad wear debris is released and deposited in the study watershed (Castro Valley);

- Watershed Modeling—To estimate how much copper from the deposited wear debris washes into the storm drainage system and eventually reaches the waters of the South San Francisco Bay; and.

- Bay Modeling—To determine whether and, if so, to what extent copper from brake pad wear debris affects short- and long-term concentrations of copper in the Bay.

In support of these modeling efforts, the BPP is conducting additional studies to develop accurate input data for the models. An air deposition monitoring effort will provide data necessary for comparison of the model results with the data values as a part of the air deposition model evaluation. Stormwater monitoring data is being collected to help calibrate and validate the watershed modeling. In addition, the BPP is conducting physical and chemical characterization analyses to determine model parameters specific to brake pad wear debris.

In FY 05-06, the BPP again made substantial progress in its work on air deposition monitoring; generation and characterization of a representative sample of brake pad wear debris; estimating

the amount of copper released to the watershed from brake and non-brake sources; water quality monitoring; and watershed modeling. The status and/or findings of each project can be found at www.suscon.org/brakepad/documents.asp.

PCBs and Dioxin Compounds Control Program (Provision C.9.e)

Provision C.9.e. of the Program's NPDES permit requires development of a control program to reduce or eliminate discharges of polychlorinated biphenyls (PCBs) and dioxin-like compounds from urban runoff conveyance systems from controllable sources (if any). As part of the PCBs/Dioxins Control Program, monitoring activities were conducted by the Program during FY 05-06. In addition, PCBs/Dioxins related management activities are described.

Polychlorinated Biphenyls (PCBs)

The Water Board has placed high priority on addressing PCBs in the Bay and is currently developing a PCBs TMDL. A recent report prepared by the CEP (*PCBs in San Francisco Bay: Impairment Assessment/Conceptual Model Report, February 2006*) provides a comprehensive discussion of issues related to PCBs in San Francisco Bay. This report is described below.

The Program has provided leadership to Bay Area storm water management agencies in their efforts to assist the Bay PCBs TMDL. This included leading a regional study that characterized the distribution of PCBs concentrations in storm water conveyance sediments in Bay Area watersheds. The Program also performed PCBs case studies in selected areas where elevated concentrations of PCBs were found during the regional study and coordinated similar case studies by other Bay Area storm water management agencies. The case studies were aimed at identifying PCBs sources and controls. The Program also prepared work plans for the above regional and local field studies. The work plans included a preliminary list of known sites where PCBs were used, stored and/or released in Santa Clara County. To facilitate regional coordination, the Program led a work group of representatives from BASMAA and Water Board staff and provided a staff to represent BASMAA on the CEP PCBs workgroup.

The Program also completed a report on efforts to develop methods of controlling discharges of PCBs from Bay Area urban runoff conveyances. The study describes 1) past, current and planned efforts to identify PCBs control options in the Bay Area, 2) management practices currently implemented by Bay Area storm water management agencies that may reduce discharges of PCBs from urban runoff conveyances, and 3) potential additional PCBs storm water control options and some of their advantages, limitations and cost factors.

During FY 05-06, the Program continued to work with other Bay Area dischargers and Water Board staff through BASMAA, the CEP and the RMP to coordinate and plan activities related to PCBs and other pollutants of concern. Efforts included providing funding to these organizations, participating in selected stakeholder meetings, committees and work groups and, as appropriate, reviewing and commenting on relevant documents prepared by the CEP, RMP and Water Board staff. Program staff continued to represent BASMAA on the RMP TRC, RMP SPLWG and CEP PCBs Work Group. Summaries of CEP projects related to PCBs are provided below. Full reports are available at www.cleanestuary.org.

PCBs Concentrations of Nearshore Sediments and Assessment of Data Quality
The primary objective of this project was to determine if existing data was sufficient to quantify PCB concentrations in the nearshore sediments of central and south San Francisco Bay that are not directly impacted by local PCBs sources (i.e., the project aimed to quantify PCB

concentrations in nearshore sediments impacted primarily by regional or Bay-wide sources). Various statistical approaches were applied but did not yield definitive results. Many issues with the study approach were raised by external scientific peer reviewers; however, the CEP decided that resolving the issues was not currently a high priority. A final project report was released and the comments from the peer reviewers were attached as appendices (*Final Report, Existing Data on PCB Concentrations of Nearshore Sediments and Assessment of Data Quality, October 2005*).

PCBs TMDL Implementation Plan Development

The objective of this project was to develop essential information needed during the development of an implementation plan for the Bay PCBs TMDL. Pertinent project topics included identification and prioritization of PCB sources; control strategies; and regulatory oversight and responsibility. One focus was municipal roles and responsibilities in the cleanup of PCBs sites, including on–land spill sites and accumulated sediments with PCBs in storm water conveyances. A final project report was recently released (*PCB TMDL Implementation Plan Development, May 2006*).

Conceptual Model / Impairment Assessment Report on PCBs in San Francisco Bay

During FY 05-06, the CEP completed *PCBs in San Francisco Bay: Impairment Assessment/Conceptual Model Report, February 2006*. The CMIA report had several objectives, including:

- Evaluate the current level of impairment of beneficial uses, including descriptions of standards or screening indicators and relevant data;
- Develop a conceptual model than describes the current state of knowledge for the pollutant of concern, including sources, loads, and pathways into and out of the Estuary and its water, sediment, and biota; and
- Identify potential studies that might reduce uncertainties associated with the report's conclusions.

The impairment assessment portion of the CMIA reviewed the information that led the USEPA to determine that sport fishing in San Francisco Estuary was impaired by PCBs. The assessment also used the most recent available data on concentrations of legacy pesticides in fish tissue, water, sediments, Bay harbor seals and bird eggs to evaluate whether sport fishing or other beneficial uses are impaired. The assessment compared the data to screening values and other criteria derived from regulatory standards and scientific literature to determine whether the weight of evidence indicates:

- **No impairment:** The available data demonstrates no negative effect on beneficial uses of the Bay, and there is sufficient information to make the finding.
- **Impairment unlikely:** The data indicate that legacy pesticides cause no impairment to the Bay. However, there is some uncertainty, due to lack of sufficient information or disagreement about how to interpret the data.
- **Possible impairment:** There is some suggestion of impairment, but the uncertainties preclude making a definitive judgment.
- **Definite impairment:** The data clearly demonstrate a negative effect on the beneficial uses of the Bay.
- **Unable to determine impairment:** There is insufficient information to make any determination.

The assessment found that some beneficial uses of San Francisco Estuary are or may be impaired by PCBs. In particular, fish tissue monitoring data indicate impairment of the Sport Fishing beneficial use. In addition, several sources of information indicate that PCB concentrations in the Bay may be high enough to adversely affect wildlife, including rare and endangered species.

The conceptual model portion of the CMIA provides a framework for optimizing management decisions and actions for reducing contamination by PCBs in San Francisco Bay. The conceptual model:

- Presents a simple one-box model of the Bay;
- Synthesizes information on the sources and pathways of PCBs to the Bay;
- Estimates total PCB loads to the Bay;
- Describes the chemical characteristics of PCBs and the dominant processes that determine their fate within the Bay; and
- Uses the one-box model to facilitate understanding responses within the Estuary and estimating recovery rates.

Sources of PCB loads to the Bay include 1) urban runoff; 2) Central Valley (Delta outflow); 3) buried sediment; 4) in-Bay localized areas with elevated PCBs; 5) dredging and dredged material disposal; 6) wastewater effluent; and 7) non-urban runoff. Urban runoff, the Central Valley, erosion of buried sediment, and in-Bay localized areas with elevated PCBs likely represent the largest pathways. Localized areas with elevated PCBs in the Bay are likely a major contributor of PCBs to the Bay food web and are also not well quantified. These areas are known to cause increased PCB bioaccumulation on a local scale, and are suspected to contribute to bioaccumulation on a regional scale.

The database on temporal trends in PCB concentrations over the past forty years is very fragmented. PCB concentrations in shiner surfperch, a key indicator species, declined from 832 ng/g wet in 1965 to 217 ng/g wet in 2003. Regular sport fish monitoring conducted from 1994 to 2003 has shown no clear pattern of decline. Transplanted mussels at northern Estuary locations have shown declines from approximately 4,000 ng/g lipid in 1982 to 1,000 ng/g lipid in 2003. For the southern Estuary locations, concentrations have declined from approximately 6,000 ng/g lipid in 1982 to 2,000 ng/g lipid in 2003. Data from the top of the Bay food web also indicate that PCB concentrations have declined over the past twenty years.

The conceptual model also identifies information gaps that limit the ability of scientist and managers to evaluate management alternatives and estimate recovery rates. Priority information needs at present relate to:

- Understanding the sources, magnitude of loads, and effectiveness of management options for urban runoff;
- The regional influence of localized areas with elevated PCBs;
- Remobilization of PCBs from buried sediments in the Bay;
- *in-situ* degradation rates of PCBs;
- Reliable recovery forecasts under different management scenarios;
- The spatial distribution of PCBs in soils and sediments; and
- The biological effects of PCBs in interaction with other stressors.

Future projects will develop additional data regarding the sources, pathways, loadings, transport fate and effects of PCBs in the Estuary.

San Francisco Bay Food Web Model
This project expanded an existing Bay food web model to include sensitive wildlife species as endpoints. The expanded model predicts the maximum concentration of PCBs in Bay sediments that result in safe levels of PCBs in Bay wildlife, in addition to the model's capability of predicting sediment concentrations associated with safe levels of PCBs in edible fish tissue for human consumption. These data may assist Water Board staff select numeric targets for PCBs in sediments for the Bay TMDL. A final project report was released following scientific peer review (*San Francisco Bay PCB Food Web Bioaccumulation Model, Final Technical Report, July 2005*).

Multibox Bay PCBs Fate and Transport Model and Multi-year Sediment Sampling Program
This project is a multi-year program, building on model development efforts already underway, to construct a mechanistic model that will advance our understanding of pollutant behavior in the Estuary and provide a new tool for water quality management. The project goals include: 1) developing a better tool for predicting future pollutant concentrations and testing potential management actions; 2) clarifying the uncertainty of existing model predictions; 3) identifying key areas where fieldwork can reduce uncertainties; and 4) conducting key fieldwork, including sediment coring in the Bay to improve estimates of the PCB inventory and historic loads and tracer experiments to quantify flushing. During FY 05-06, the model was independently tested. The results are documented in *Results of Independent Testing of SFEI's Multibox Model for PCB Fate and Transport, September 2005*. Recommendations included:

- Updating and improving the model documentation;
- Reviewing and modifying the input data sets used by the model since some historical data sets are incomplete and should be populated;
- Evaluating possible impacts of sea level rise at the Golden Gate on PCB flushing from the Bay within the 21st century (the time frame of the forecast period);
- Analyzing the effects of overestimating suspended solid concentrations in the lower layers of the model's boxes on PCB transport;
- Evaluating the effects of the spin-up period to determine if PCB transport was influenced during the hindcast and forecast period; and
- Examining issues related to the model generally over-predicting the amount of PCBs in the Bay's water and sediment.

Dioxins

All segments of San Francisco Bay were listed as impaired by certain dioxin compounds in the 1998 and 2002 Clean Water Act Section 303(d) lists. The Water Board opposed the 1998 listing of dioxins in the Bay but was overruled by the USEPA. The 2002 303(d) list designates the TMDL priority for dioxins in the Bay as low, and a schedule for performing a TMDL is not included. The Program understands that the Water Board does not plan to perform a TMDL for dioxins in the Bay. A recent report prepared by the CEP (*Dioxins in San Francisco Bay: Conceptual Model/Impairment Assessment, January 2005*) provides a comprehensive discussion of issues related to dioxins in San Francisco Bay.

The Program has developed and implemented three work plans related to dioxins. In March 2002, the Program submitted an initial work plan. This work plan specified reviewing readily available data on methods used to characterize dioxins in storm water runoff and surface waters

and concentrations typically found in the Bay Area and other areas. The completed review revealed that dioxins have been found in urban runoff in the Bay Area and other locations, and in sediments in the Bay and other estuaries. It was concluded that existing data are not sufficient to characterize the distribution in urban runoff among Bay Area land uses or calculate loadings to the Bay. The second work plan was completed in March 2004 and described the Program's collaboration with other Bay area storm water management agencies to develop an introductory report on dioxins. The completed report emphasized issues related to urban runoff in the Bay area, including regulatory context, impacts, sources, pathways, review of relevant Bay Area, national and international studies, and qualitative review of potential storm water controls. The third work plan was completed in March 2004. It specified that Program Staff will track regional, state and federal efforts to address dioxins and encourage Co-permittees to track, understand, and participate in these programs, as appropriate. A memorandum documenting the results of this tracking was completed in FY 04-05.

Dioxins Control Program- FY 05-06 Activities

During FY 05-06, Program staff surveyed the Co-permittees regarding dioxins pollution prevention actions they currently implement and any related formal policies, resolutions or ordinances already adopted. The survey revealed that Co-permittees currently implement a wide range of activities that may help prevent formation of dioxins. In particular, the survey revealed most Co-permittees are taking measures that may help address what are the potentially the largest contemporary sources of dioxins in the Bay Area: residential wood burning, diesel exhaust and use of the pesticide 2,4-D. Program staff also continued to track regional, state and federal efforts to address dioxins.

The A memorandum entitled *Dioxin Control Program - FY 2005-2006 Activities* (Attachment C-4) documents the results of the survey. It also describes programs by the Association of Bay Area of Governments (ABAG), California Environmental Protection Agency and USEPA to address dioxins within the Bay Area environment. In particular, the memorandum describes dioxins pollution prevention options developed by ABAG's Bay Area Dioxins Project in the context of potential implementation by municipalities. Municipal pollution prevention demonstration projects conducted by the Bay Area Dioxins Project are also described. The demonstration projects developed tools and resources intended to facilitate municipal implementation of practices that reduce the use of diesel fuel vehicles, chlorine bleached paper and PVC building materials.

The memorandum recommends that Co-permittees review their dioxin pollution prevention efforts, activities conducted by other Co-permittees and regional efforts (e.g., ABAG's Bay Area Dioxins Project). The information provided in the memorandum is intended to facilitate such a review. The memorandum states that based upon the results of the review, Co-permittees may wish to consider expanding existing efforts or implementing new dioxin pollution prevention activities as feasible within current fiscal constraints, with priority given to addressing residential wood burning, diesel exhaust, and use of the pesticide 2,4-D.

Sediment Control Program (Provision C.9.f)

San Francisquito Creek Sediment TMDL

In response to a listing of impairment by sediment under section 303(d) of the Clean Water Act and a need to provide information for a TMDL assessment, two separate (but coordinated) projects have been developed. These projects are the San Francisquito Creek Watershed Analysis and Sediment Reduction Plan (Plan), administered by the San Francisquito Creek

Joint Powers Authority (JPA); and the Aquatic Habitat Assessment and Limiting Factors Analysis (AHALFA), managed by the Santa Clara Valley Water District (SCVWD). The Plan fulfills Permit Provisions C.9.f.i and C.9.f.ii of the Program's NPDES permit.

The primary issues driving the TMDL are flooding and degradation of habitat, impacting steelhead trout and other threatened aquatic species. The approach adopted by the JPA and SCVWD in these projects is to assess factors limiting the threatened aquatic species, including but not confined to those related to excessive sedimentation caused by human land use activities. Project products are intended to produce information that will assist the Water Board to confirm or reject the validity of the sediment impairment listing and help identify other causes of impairment to aquatic species and their habitats in San Francisquito Creek.

There were two main objectives for developing the Sediment Reduction Plan. The first objective was to understand the erosion, transport and deposition of sediment in the San Francisquito Creek watershed, focusing on human-related activities that modify hydrology, alter erosion rates or trap sediment. The second objective was to review existing sediment management policies and practices and recommend management measures to effectively reduce erosion and sediment transport in the watershed. The specific tasks for this project are:

1) *Historical Conditions Analysis:* Analyze historical conditions in the San Francisquito watershed, particularly sediment supply, transport, and deposition as they relate to stream and water character;
2) *Existing Conditions Analysis:* Analyze land use, biological resources, stream management and maintenance and designated beneficial uses;
3) *Watershed Sediment Analysis:* Develop a rapid sediment budget for the watershed, detailing sediment sources, sediment sizes, storage and sediment yield;
4) *Assessment of Existing Management Practices:* Assess existing policies and regulations that provide erosion control or channel protection, identified deficiencies and recommended improvements; and
5) *Watershed Analysis and Sediment Reduction Management Plan:* Incorporate all analyses completed in previous tasks and makes recommendations for measures to manage erosion of the identified human-related sediment sources and estimate reduction of sediment load from these measures.

The Watershed Analysis and Sediment Reduction Management Plan (Final Report) was completed in May 2004. The sediment study was funded under a Proposition 13 grant and administered by the JPA. This report can be found at www.cityofpaloalto.org/jpa/references.html.

The *Aquatic Habitat Assessment and Limiting Factors Analysis* (AHALFA) is intended to characterize channel and habitat conditions with respect to factors that limit the steelhead population in the San Francisquito Creek watershed. Information for this analysis came both from direct data collection and analysis and from studies that have already been performed. Data collection and analysis evaluated stressors that limit: (1) aquatic habitat, (2) steelhead (*Oncorhyncus mykiss*), and (3) development of individuals in specific steelhead life history stages within the lower San Francisquito Creek watershed. The study area includes the lower mainstem of San Francisquito Creek and the Los Trancos Creek subwatershed within Santa Clara County.

The AHALFA Final Report was released on June 12, 2006. The study concluded the following:

1. Suitable winter refuge in pools and other habitats is the key limiting factor limiting smolt production within the study area. The primary cause for lack of overwintering habitat appears to be disconnection of upstream sources of material and loss of material due to hydraulic simplification of the watershed. Existing evidence suggests that overwintering habitat was likely to be historically a limiting factor for steelhead in the lower San Francisquito Creek watershed.
2. Juvenile summer rearing and spawning habitat was determined to be degraded in the study area; however increases in quality and quantity of these habitat features would not likely increase smolt production with commensurate increases in winter rearing habitat.
3. Steelhead outmigration success is limited by seasonal drying of the channel, which may be exacerbated when habitat connectivity is interrupted by passage impediments.
4. Limited available water temperature data suggests that temperatures are generally suitable for steelhead in Los Trancos Creek and unsuitable during the summer months in the San Francisquito Creek mainstem.

The Final Report identified key information needs and future studies to extend the temporal and geographic data sources; and to increase the certainty of the analysis. Some of the key recommendations include:

1. Extend the analysis into the upper reaches of the watershed in San Mateo County, with emphasis on the San Francisquito Creek mainstem, Bear Creek subwatershed and Corte Madera Creek subwatershed.
2. Document the location and carrying capacity of critical steelhead habitat for the entire watershed.
3. Conduct smolt outmigrant trapping and determine the timing and magnitude of flows necessary for downstream passage by smolts.
4. Monitor juvenile steelhead populations in established reaches once (fall) or twice (fall and spring) annually.

During FY 06-07, the Program will continue to follow and participate in the sediment-related activities within the San Francisquito watershed.

Upper Penitencia Creek Watershed Analysis

The Program developed a *Work Plan for Conducting a Watershed Analysis and Management Practice Assessment in Other Creeks Potentially Impaired by Sediment from Anthropogenic Activities* (Work Plan) in fulfillment of Permit Provision C.9.f.iii paragraph 2. The Work Plan identifies a two-phased approach to assess watersheds previously identified by the Program as high priority for watershed analysis due to the potential for anthropogenic sediment impairment.

Phase I includes conducting a Limiting Factors Analysis (LFA) and sediment management practices assessment. Phase II includes conducting a rapid sediment budget, which will only be conducted when the Phase I study results indicate that excessive sediment from anthropogenic sources is impacting beneficial uses in the watershed.

The Upper Penitencia Creek watershed was identified as a high priority watershed to conduct a watershed analysis focused on sediment. An LFA was initiated in the Upper Penitencia Creek watershed in FY 04-05. The final Upper Penitencia Creek LFA report is included within

Appendix C-5. The results, conclusions and recommended next steps presented in report are summarized below.

Summary of Upper Penitencia Creek LFA Results and Conclusions

The primary focus of the Upper Penitencia Creek LFA was to characterize the nature and degree of potential sediment-related effects on a selected indicator species (i.e., Steelhead Trout). The objectives of the LFA were to identify and fill information gaps related to physical and biological factors controlling population dynamics of steelhead and to determine to what degree human-related sediment impacts are key factors limiting steelhead production. Based on the available information and reconnaissance surveys, several focused studies were developed to test hypotheses on potential limiting factors for steelhead. The focused studies addressed the following factors: fish passage barriers, gravel permeability, pool filling, overwintering habitat, and summer rearing and growth. The LFA was conducted using a weight of evidence approach that was based on best available information and the results from each of the focused studies. The findings of the Upper Penitencia Creek LFA include:

1. No barriers to upstream migration below natural waterfalls in Upper Penitencia Creek and Arroyo Aguague were identified. However, a passage impediment in Alum Rock Park may limit passage opportunities at some flow levels;
2. Seasonal low flows in the downstream reaches may limit steelhead outmigration success in some years, especially if channel drying occurs before the end of the outmigration period (typically March–May);
3. Gravel permeability is low but not likely limiting smolt production due to habitat limitations at other life stages;
4. Pool filling is low, indicating high transport capacity of fine sediment relative to supply;
5. Preliminary analysis suggests that overwintering habitat is likely the key limiting factor for steelhead prior to smolt outmigration;
6. Potential limitations to steelhead density and fish growth may exist in Upper Penitencia Creek due to low stream flows and warm water temperatures during the summer period.

These findings indicate that factors associated with juvenile rearing, especially winter habitat conditions, are likely to have the greatest influence on the steelhead population in the Upper Penitencia creek watershed. Sediment dynamics in Upper Penitencia Creek are directly related to juvenile rearing capacities by the embedding of coarse substrate (i.e., cobble and boulders). However, existing information is not sufficient to differentiate current anthropogenic sediment inputs from what is likely a naturally high sediment yield from the watershed. Additional uncertainty remains regarding the potential effects on smolt production of seasonal low flows and elevated water temperatures during the outmigration and summer rearing periods. Important data gaps and information needs were identified to reduce uncertainty associated with development and testing of the key hypotheses investigated in this study.

Next Steps

To address the findings presented in the Upper Penitencia LFA report and meet the intent of Permit Provision C.9.f.iii paragraph 2, the Program intends to conduct an Upper Penitencia Creek watershed sediment management practices assessment in FY 06-07. The assessment is intended to meet the following three objectives: 1) document current sediment management practices in the watershed; 2) assess the effectiveness of these practices in preventing excess sediment reaching Upper Penitencia Creek and its tributaries; and 3) recommend improvements to existing practices and/or recommend new practices that are within or outside of the Program's jurisdictional boundaries. The Program is not planning to conduct a sediment source assessment (i.e., rapid sediment budget) at this time because (a) the upper watershed land

area that drains to the rearing habitat is entirely non-urban, and (b) it is not clear that the relevant sediment inputs are anthropogenic and distinct from those naturally occurring in the upper watershed. Fieldwork conducted during the sediment management practices assessment will seek to identify relatively large sources of sediment within and outside the Program boundaries to the extent possible; and recommend management actions to the appropriate entities that could be implemented to reduce sediment impacts to steelhead rearing habitat. Completion of Sediment Management Practices Assessment Report will be coordinated through the Program's Watershed Analysis AHTG in FY 06-07.

Saratoga Creek Water Body Assessment

Following Upper Penitencia Creek, Saratoga Creek (upstream of the San Jose Water Company diversion) is the next highest priority creek scheduled for investigation of potential sediment impairment due to anthropogenic activities. In FY 05-06, Program staff began conducting a water body assessment in Saratoga Creek to:

- Evaluate potential sediment impacts to fish/habitat;
- Evaluate Beneficial Use attainment; and,
- Identify data gaps and additional monitoring needs.

In FY 05-06, the Program used the Unified Stream Assessment (USA) method (developed by the Center for Watershed Protection in 2004) on Saratoga Creek to evaluate instream and riparian corridor conditions and associated stressors. In addition, fish population surveys were conducted in fall 2005 and spring 2006 to assess the current population of cold water fisheries within the watershed. An assessment report that summarize results, findings and recommendations based on all the Program's survey data for Saratoga Creek will be released for public comment in FY 06-07.

Trash Characterization and Management Activities

On November 14, 2001, the Water Board released the document entitled *Proposed Revisions to Section 303(d) List of Priorities for Development of Total Maximum Daily Loads for the San Francisco Bay Region* Report. This report states that "between now and the next 303(d) listing cycle, municipalities will be expected to assess trash impairments in their jurisdiction …", Water Board staff will review information concerning trash in the next listing cycle to determine whether specific water bodies warrant 303(d) listing. In a proactive response to the 303(d) Staff Report, the Program's Management Committee formed a Trash AHTG (first meeting on February 21, 2002). The Trash AHTG developed a Work Plan (submitted March 1, 2003) to identify a strategy for addressing trash problem areas that occur in or near urban streams and waterways of the Santa Clara Basin.

During FY 03-04, the Program assisted Co-permittees in completing the following Work Plan tasks: 1) document existing trash management practices implemented by municipalities and agencies within the Program's jurisdiction; 2) identify and map high priority trash problem areas and sources of trash in Santa Clara Basin watersheds; 3) develop a strategy to conduct trash evaluations in or near creeks; 4) sponsor a training workshop on how to use existing trash assessment tools (i.e., RWQCB Rapid Trash Assessment Protocol (Version 7.0) and Keep America Beautiful (KAB) Litter Index); and 5) develop standardized reporting format for documenting and evaluating trash management and monitoring activities.

During FY 04-05, Co-permittee staff and volunteers from watershed stakeholder groups conducted a total of 189 trash evaluations, including 146 trash evaluations using the KAB Litter Index (i.e., non-creek sites) and 43 trash evaluations using the RWQCB Rapid Trash Assessment Protocol (Version 7.0) (i.e., creek sites). A summary of the trash evaluation results was provided in the Program's *FY 04-05 Annual Report*.

During FY 05-06, the Program revised the RWQCB Rapid Trash Assessment Protocol (Version 7.0) to improve the effectiveness of the evaluation tool to better assess trash problem areas in urban streams. The revised Urban Rapid Trash Assessment (RTA) Protocol (Version 1.0) was implemented by Co-permittees for trash evaluations of creek sites. In addition, the Program revised the format for reporting trash evaluation results to improve consistency of Co-permittee responses and to enhance the analysis of trash assessment data on a Program-wide basis. Summary results from Co-permittee trash evaluations conducted during FY 05-06 are provided within a technical memorandum entitled *Trash Problem Area Evaluation Results- FY 05-06* (see Appendix C-6). The table entitled *Trash Evaluation Area Results by Watershed*, which is attached to the memorandum, provides the following information: ID #, date, location of trash problem area, assessment tool, score, existing management actions, recommended management actions and/or future evaluations. The approximate physical location, score (for both KAB and Urban RTA trash evaluations) and major watershed boundaries within the Santa Clara Basin are provided within Figures 1 through 6 of the memorandum. A summary of the trash evaluation results and conclusions are discussed below.

Summary Results

Co-permittees conducted a total of 233 trash evaluations, including 206 trash evaluations using the KAB Litter Index (i.e., non-creek sites) and 27 trash evaluations using the Urban RTA Protocol (Version 1.0) (i.e., creek sites). *Table 1: Summary Results of FY 05-06 Trash Evaluations* provides scores (for both KAB and RTA trash evaluations) by watershed. A total of 149 unique sites were assessed. The KAB Litter Index was used at 128 sites and the Urban RTA Protocol at 19 sites. A combination of the KAB and Urban RTA Protocol was used at two sites. Nine of the sites evaluated were new sites (i.e., not previously listed in the memorandum entitled *Trash Problem Area Survey Results* dated May 10, 2004).

Seventy-two sites were evaluated more than once (i.e., two to five times), typically during different seasonal time periods (i.e., late fall/winter and spring/ early summer). The re-assessed sites included 66 non-creek sites and six creek sites. Subsequent evaluations at non-creek sites indicated that there was no change in score for fifty percent of the sites, higher scores occurred at twenty-five percent of the sites (i.e., conditions degraded) and lower scores occurred at twenty-five percent of the sites (i.e., conditions improved). Subsequent evaluations at creek sites indicated that over 80 percent of the sites (n=5) exhibited higher scores (i.e., conditions improved) and about 20 percent of the sites (n=1) exhibited no change in score. Improved trash conditions during subsequent evaluations may be related to trash being removed by Co-permittee staff during the first trash evaluation.

Seventy percent of the trash evaluations were conducted in the Guadalupe River (n=64), San Tomas Aquino Creek (n=45), Calabazas Creek (n=29) and Sunnyvale East Channel (n=26) watersheds.

Evaluation scores for each assessment tool (i.e., Urban RTA Protocol (Version 1.0) and KAB Litter Index) are provided within the table entitled *Trash Problem Area Evaluations Results by Assessment Tool* (see Appendix C-7). The following results were observed during FY 05-06:

KAB Litter Index – Non-Creek Sites

The KAB Litter Index uses a four-point scoring system to estimate the presence of litter within a specific area. To ensure consistent KAB Litter Index scoring between Co-permittees, Co-permittee staff reviewed materials developed by Keep America Beautiful. These materials included written descriptions (on how to score), photographs (which show conditions) and a training video (which detail how to conduct an evaluation). Several Co-permittees increased the resolution of the original KAB litter scale by assigning scores as fractions. The following describes the modified scoring system of the KAB Litter Index: 0 – 1.0 ("no litter"); 1.1 – 2.0 ("slightly littered"); 2.1 – 3.0 ("littered"); and 3.1 – 4.0 ("extremely littered").

- Seventy-eight percent of the sites were scored as "no litter" or "slightly littered";
- Eighteen percent of the sites were scored as "littered". Only four percent were scored as "extremely littered";
- Guadalupe River and San Tomas Aquino Creek watersheds had the greatest number of sites, twenty-four and eighteen respectively, that were scored as "no litter" or "slightly littered";
- Guadalupe River, Calabazas Creek and Sunnyvale East watersheds had the greatest number of sites, seven, five and three, respectively, that were scored as "littered"; and
- Guadalupe River and San Tomas Aquino Creek watershed had five and two "extremely littered" sites, respectively. (**Note**: Guadalupe River is the second largest watershed in the Santa Clara Basin and contained the greatest number of sites (n=34) and evaluations (n=64) compared to all other watersheds. As a result, Guadalupe watershed exhibited a wide range of trash conditions).

The majority of trash problem areas in non-creek areas occurred adjacent to roadways (28%), commercial areas (22%) and residential homes (16%) and apartments (12%). Seventy-five percent of the most prevalent trash items reported by Co-permittees during KAB evaluations (n=259) were biodegradeable/paper (41%) and plastic/Styrofoam (35%). Approximately twenty percent of the reported trash items observed during these evaluations were a combination of miscellaneous items (includes cigarette butts), glass and metal (**Note**: the actual number of trash items was not recorded). Sixty-three percent of the suspected trash sources reported by Co-permittees during KAB evaluations (n=242) included litter from both pedestrians (32%) and vehicular traffic (31%). Approximately thirty percent of the remaining trash sources reported was from a combination of litter at commercial areas, illegal dumping, homeless encampments, litter at schools and dumpsters.

The most common recommended management actions reported by Co-permittees (n=130) include the following : referral to agency staff (e.g., public works, solid waste and police); coordinate with Cal Trans; inclusion into existing clean up programs; and conduct public education outreach to businesses and schools. Fifty percent of the responses recommended future assessments. However, sixteen percent of the responses (n=21) indicated no trash problem and recommended removal of the trash problem area from the list. Over twenty-five percent of the responses indicated that existing management actions were adequate at the site.

During FY 05-06, a higher number of trash evaluations were conducted in non-creek areas (n=206) compared to FY 04-05 (n=146). Trash scores were very similar for both years with seventy-five (FY 04-05) and seventy-eight percent (FY 05-06) of all sites scored as "no litter" or "slightly littered". Similar to FY 04-05, there was no consistent pattern in changes of trash condition over time at non-creek sites. In addition, KAB assessment results did not indicate any spatial relationships between littered non-creek sites and creek sites with poor/marginal trash

condition. The KAB assessment results were not conclusive for identifying and prioritizing trash problem areas that are sources of litter in the creeks.

SCVURPPP Urban Rapid Trash Assessment (RTA) – Creek Sites

The Urban Rapid Trash Assessment consists of six assessment parameters (with narrative descriptions) that qualitatively rate the trash condition of each parameter on a scale of 0 – 120. The range of scores for each parameter is divided into four categories: "poor", "marginal", "suboptimal" and "optimal". The total site score represents the summation of the six individual parameter scores. For the purposes of this analysis, the total site score was divided into the same four categories: 0 – 30 ("poor"); 31 – 60 ("marginal"); 61-90 ("suboptimal"); and (91 – 120: "optimal").

- Ninety-five percent of the sites were scored as "optimal" or "suboptimal";
- Five percent of the sites were scored as "marginal"; no sites were scored as "poor";
- Nine sites identified as optimal (scores of 91 to 120) were located in lower reaches of San Francisquito Creek (n=3); middle reaches of Stevens Creek (n=3), and middle or lower areas of Calabazas Creek, Adobe Creek and Sunnyvale West Channel watersheds (one site within each watershed);
- Eleven sites identified as suboptimal (scores of 61 to 90) were located in the middle and lower reaches of six different watersheds or within the Baylands (n=2);
- One site scored as marginal (scores of 31 to 60) occurred in Coyote Creek; and
- Volume of trash removed during an Urban RTA evaluation typically ranged from a partially filled garbage bag (less than one cubic foot) to two filled garbage bags (32 gallon size or about three cubic feet).

The majority of trash problem areas in creek areas occurred adjacent to roadways (28%), residential (23%) and park/trail land uses (20%). Fifty-four percent of the most prevalent trash items reported by Co-permittees (n=56) during Urban RTA evaluations were plastic/Styrofoam (34%) and biodegradeable/paper (20%) (**Note:** trash items are classified and enumerated for a 100 foot section of stream). Over forty percent of the remaining trash items reported, in order of most frequent, were a combination of glass, miscellaneous, construction materials and metal. Over seventy percent of the suspected trash sources reported by Co-permittees (n=51) during Urban RTA evaluations included litter from pedestrians (31%); upstream/stormdrain catchment (18%); and litter from vehicular traffic (12%) and recreational areas (10%). Approximately thirty percent of the remaining trash sources reported was from a combination of litter at commercial areas, illegal dumping, homeless encampments, litter at schools and dumpsters.

A majority of the sites were reported to have ongoing clean up efforts related to channel maintenance activities. The most common recommended management actions reported (n=21) by Co-permittees include the following: increase enforcement or police patrols; support volunteer clean up programs; conduct public education outreach to homeowners associations and schools; and install new BMPs (i.e., fences along roadway). Over fifty percent of the responses recommended future assessments, in some cases to evaluate effectiveness of upstream management actions. A small number of responses (n=3) indicated that existing management actions were adequate.

During FY 05-06, a fewer number of trash evaluations were conducted in creeks (n=27) compared to FY 04-05 (n=43). This was partly due to unseasonably high flows during spring and early summer 2006. The SCVWD is planning to conduct trash assessments at creek sites during fall 2006. Overall trash scores for creek sites evaluated in FY 05-06 were generally

much higher (i.e., better condition) than creek sites evaluated in FY 04-05. Ninety-five percent of the creek sites evaluated in FY 05-06 were scored "optimal" or suboptimal", while twenty-three percent of the creek sites evaluated in FY 04-05 were scored "optimal" or suboptimal". The higher overall scores in FY 05-06 may have been the result of the following conditions: 1) fewer creek assessments, with many new sites that were not previously identified as trash problem areas; 2) revisions to the Water Board RTA Protocol (Version 7.0) that were incorporated into the Urban RTA Protocol implemented in FY 05-06; and 3) large storms resulting in high stream flows during winter and spring season of FY 05-06. This may have resulted in more flushing of litter and debris out of previously identified trash problem areas and redistributing the material in other locations downstream.

Conclusions

KAB trash evaluation results for non-creek sites indicate that a majority of the trash problem areas have no or limited amounts of litter (i.e., seventy-eight percent). A majority of these sites occurred in roadways, commercial and residential land uses. The prevalent trash items observed during evaluations was biodegradable/paper and plastic/Styrofoam. Sources of trash were reported to be primarily from littering by pedestrian and vehicular traffic. Preliminary analysis of sites evaluated more than once indicated that there was no consistent pattern in changes of trash condition over time. In addition, KAB site locations and assessment scores did not appear to have any spatial correlation with location and severity of trash problem areas in creeks. As a result, current implementation of the KAB assessment tool does not appear to be useful approach for identifying potential sources of litter in creeks.

Urban Rapid Trash Assessment evaluation results for creek sites indicate that the majority of the trash problem areas were scored as "optimal" or "suboptimal" (i.e., ninety-five percent). A majority of these sites occurred in roadways, residential and park/trail land uses. These sites contained primarily plastic/Styrofoam and biodegradeable/paper items, which are highly mobile litter easily transported by wind and water. Sources of trash were reported to be primarily from littering by pedestrians and vehicle traffic, upstream/stormdrain catchments and recreational areas. There were no apparent spatial patterns for trash conditions in creeks (i.e., optimal and suboptimal sites were located in upper, middle and lower reaches of watersheds). Preliminary analysis of sites evaluated more than once indicated that there was improvement in trash condition over time. Improved trash conditions during subsequent evaluations may be related to trash being removed by Co-permittee staff during the first trash evaluation. Overall trash scores for creek sites evaluated in FY 05-06 were generally much higher (i.e., less impacted) than creek sites evaluated during FY 04-05. These results may be due to the limited number of creek assessments conducted at trash problem areas during FY 05-06 and revisions made to the RTA protocol between the two assessment years.

Next Steps

Co-permittees have identified the following tasks in the FY 06-07 Work Plan: 1) identify high priority areas to continue conducting trash evaluations; 2) identify and begin to implement or refine existing trash control measures, as appropriate, to address these areas; and 3) implement pilot demonstration project using structural best management practices. The Trash AHTG will continue to meet on a quarterly basis to continue discussing the results of trash evaluations and potential implementation strategies.

Summary of Co-permittee Street Sweeping Results

A summary of street sweeping activities conducted by Co-permittees is provided within the table entitled *Summary of Co-permittee Street Sweeping Activities- FY 2005-2006* (see Appendix C-8). During FY 05-06, Co-permittees swept approximately 204,625 miles of paved streets and removed approximately 82,717 yd^3 or 53,725 tons of material[1]. Approximately 8,039 yd^3 of leaf litter was removed[2] by Co-permittees who have leaf removal programs other than routine street sweeping. In addition, approximately 149,617 tons of yard waste (which includes large amounts of leaves) was routinely collected by Co-permittees. As a result, yard waste pick-up programs are keeping large amounts of leaves out of Co-permittee storm drain systems.

Evaluation of Effectiveness

One way to measure street sweeping effectiveness is to determine what solids and associated pollutants are collected within street sweeping debris. A typical unit of measure is the total volume of the pollutant removed by the sweeper relative to the curb length swept (e.g., yd^3/curb mile). This unit is typically referred as the removal rate. During FY 04-05, the average Co-permittee removal rate was 0.41 yd^3/curb mile (see Appendix C-8). The Co-permittee removal rate ranged from 0.20 yd^3/curb mile (City of Los Altos) to 0.65 yd^3/curb mile (City of Palo Alto). During FY 04-05, the average Co-permittee removal rate was 0.38 yd^3/curb mile. The effectiveness of street sweeping depends upon a number of factors including accumulation rates of pollutants, the relationship between rainfall and sweeping frequencies, particle size, pavement condition and automobile parking controls[3].

Many studies have shown that street sweeping removes significant quantities of dirt and debris from street surfaces[4]. However, results also demonstrate that the coefficient of variation of copper values and other metals (e.g., lead and zinc) in street sweeping debris is quite high[5]. To illustrate the effectiveness of street sweeping activities for pollutant removal, Program staff estimated the mean pollutant reduction for the following four metals: copper, nickel, lead and zinc. These estimates are provided within the tables entitled *Summary of Co-permittee Street Sweeping Activities and estimated Mean Pollutant Load Reduction for Copper and Nickel- FY 2005- 2006* and *Summary of Co-permittee Street Sweeping Activities and estimated Mean Pollutant Load Reduction for Lead and Zinc- FY 2005- 2006*. Both tables are provided within Appendix C-8. To determine the estimated pollutant load reduction (in pounds), the volume of material collected (in cubic yards) for each Co-permittee land use type (i.e., residential, commercial and industrial) was determined. This value was then multiplied by the mean concentration of trace metal content for street sweeping samples collected in the study entitled *Chemical and Physical Characteristics of Street Sweeping Sediments in Tampa, Florida, May*

---

[1] To determine the total volume of material removed in tons, it is necessary to convert cubic yards to tons. It is estimated that the average density of street sweeping material is 1,299 pounds per cubic yard (0.6495 tons per cubic yard) (Source: EOA, Inc., October 1996, Estimation of Copper Collected Through Street Sweeping Efforts. Prepared for San Mateo Countywide Stormwater Pollution Prevention Program). A value of 53,725 tons is calculated when 82,717 cubic yards is converted over to tons (82,717 cubic yards* .6495 tons/cubic yard= 53,725 tons).

[2] An additional 2,205 tons of leaf litter was collected by the City of Palo Alto. However, this figure is a combined figure that included the weight of the material collected from street sweeping plus the leaves collected by our autumn leaf pushing and pickup program. Since all of the material (both street sweeping debris and leaves gathered by leaf pusher trucks) is combined and hauled to the landfill in garbage compactor trucks, there is no way to provide a separate figure for leaf removal.

[3] Source: Woodward Clyde Consultants, December 1994. *Street Sweeping Literature Review/Storm Inlet Modification*, Prepared for Alameda County Urban Runoff Clean Water Program.

[4] Source: Sartor, J. and G. Boyd, 1972. *Water Pollution Aspects of Street Surface Contaminants*. Prepared for United States Environmental Protection Agency, Washington, DC.

[5] Source: EOA, Inc, October 1996. *Estimation of Copper Collected Through Street Sweeping Efforts*: Final Report. Prepared for San Mateo Countywide Stormwater Pollution Prevention Program.

1999 and converted over to pounds of pollutant removed. These mean concentration values and the algorithm used to calculate the pounds of pollutant removed are provided within the tables. The estimated mean pollutant load reduction values for each land use type were summed. During FY 05-06, it is estimated that Co-permittees street sweeping activities resulted in the following pollutant load reductions for copper, nickel, lead and zinc:

Land Use Type	Estimated Mean Pollutant Load Reduction (Pounds)			
	Copper	Nickel	Lead	Zinc
Residential	1108	2191	2140	3842
Commercial	513	1016	2338	2028
Industrial	306	59	208	105
Total	**1927**	**3266**	**4686**	**5975**

It is important to note that there is uncertainty with these estimates since certain assumptions were made regarding the exact volume of material collected from a particular land use type.

EVALUATION OF EFFECTIVENESS

The success (i.e., effectiveness) of a stormwater management program can be measured using many different assessment methods. Effectiveness assessment is defined as the process that managers use to evaluate whether their programs are resulting in desired outcomes, and whether these outcomes are being achieved efficiently and cost-effectively. The specific approach to be used in assessing effectiveness depends on a variety of factors including the type of program element or activity being evaluated and the stage of program development (i.e., planning, implementation, completion). Effectiveness assessments fall into two general categories:

- Implementation Assessment - Provides managers feedback on the effectiveness of their programs in achieving targeted objectives. This type of assessment is essential in determining whether priority sources of pollution are being effectively addressed. Implementation assessment may include any of three levels of analysis: the overall program, the elements that comprise the program (construction sources, municipal sources, etc.), or the specific activities that are conducted within these program elements. These may range in complexity from simple activities (e.g., verifying the completion of activities) to more sophisticated techniques (e.g., assessing the probable or actual locations of these activities and the significance of their spatial distribution).
- Water Quality Assessment - is the use of sampling data and related information to evaluate the condition of non-stormwater or stormwater discharges and the water bodies that receive these discharges. This can include a variety of chemical, biological, and physical parameters or outcomes. In instances where water quality assessment is used to draw conclusions about overall program effectiveness, results are usually very general and require extended periods of analysis.

Ideally, the two types of assessments should be linked together to create an integrated

assessment, which is process of evaluating whether program implementation is resulting in the protection or improvement of water quality. In this process, relationships between program activities and water quality improvements are explored and refined. Due to the number and variety of BMPs and control programs being implemented at any given time, and because data is limited, establishing these relationships is difficult.

Efforts to date often include speculative or hypothetical exercises aimed at better understanding likely program outcomes and potential relationships to water quality. Quantitative "cause and effect" relationships will increasingly be sought in the future. This is a critical linkage because implementation assessment is, in many cases, simpler and less costly than water quality assessment. In addition, the time frame needed to see measurable results is shorter for implementation assessments. Over time, correlating water quality improvement to programmatic results will assist the Program in identifying the most expedient and cost-effective approaches to planning and assessing their programs. In the interim, the effectiveness of Program monitoring and assessment activities will continued to be assessed using an implementation assessment approach (i.e., were monitoring objectives met). As a result, the collection of data through environmental indicators continues to inform us about the condition of water bodies in the Santa Clara Valley and allows resources to be focused on the most pressing problems. The implementation of these indicators is a necessary step toward establishing a sound regulatory basis for locally based watershed management described in Section 5.

Effectiveness of FY 05-06 Monitoring and Assessment Activities

In FY 05-06, the Program effectively met all obligations stated in its FY 05-06 Monitoring Program and Watershed Management Measures Work Plan. Monitoring and assessment activities were implemented through a variety of programs and projects which include the following: 1) baseline water quality monitoring described in the Program's Annual Monitoring Plan and Watershed Management Measures Work Plan; 2) regional collaborative efforts (e.g. RMP and CEP); and 3) active participation in TMDL development. In addition, the Program continued to address the following monitoring program objectives (as stated in the Program's NPDES Permit): (1) characterization of representative drainage areas and stormwater discharges; (2) assessment of existing or potential adverse impacts on beneficial uses caused by pollutants of concern in stormwater discharges; (3) identification of potential sources of pollutants of concern found in stormwater; and (4) evaluation of effectiveness of representative stormwater pollution prevention of control measures. The following paragraphs briefly describe the effectiveness of monitoring activities described in this Annual Report in addressing these objectives.

1) Characterization of Representative Drainage Areas and Stormwater Discharges

- Coyote Creek Watershed Characterization Memorandum –This memorandum was developed as part of the Program's FY 06-07 Monitoring and Watershed Management Measures Workplan; and was intended to assist the Program in developing the appropriate sampling design for Coyote Creek mainstem that will be implemented in FY 06-07. To develop this design, existing data and information resources were collected and reviewed; descriptions of the relevant watershed attributes were developed; and key issues relevant to these watersheds were identified. From a Program staff perspective; the memorandum was an effective "first cut" at: 1) describing watershed characteristics that may affect the quality of stormwater discharges in these creeks; 2) identifying known issues in the watershed; and 3) guiding the selection of indicators and sampling sites that will yield useful data.

- Trash Characterization and Management Activities – During FY 05-06, the Co-permittees conducted a second year of trash evaluations at a subset of trash problem areas to establish baseline levels of trash. Seventy-two sites were evaluated more than once to evaluate changes in trash conditions over time and to determine the effectiveness of existing trash management practices (i.e., rate of trash accumulation following clean up activities). The re-assessed sites included 66 non-creek sites and six creek sites. Subsequent evaluations at non-creek sites indicated that there was no change in score for fifty percent of the sites, higher scores occurred at twenty-five percent of the sites (i.e., conditions degraded) and lower scores occurred at twenty-five percent of the sites (i.e., conditions improved). Subsequent evaluations at creek sites indicated that over 80 percent of the sites exhibited higher scores (i.e., conditions improved) and about 20 percent of the sites exhibited no change in score. Improved trash conditions during subsequent evaluations may be related to trash being removed by Co-permittee staff during the first trash evaluation. During the initial trash evaluations, Co-permittee staff, where feasible, identified potential management actions to address trash problem areas (e.g., educational outreach to businesses and schools). During FY 06-07, trash evaluations will be conducted at selected locations over time to determine the effectiveness of both existing and planned trash management actions.

2) *Assessment of Existing or Potential Adverse Impacts on Beneficial Uses Caused by Pollutants of Concern in Stormwater Discharges*

- Receiving Water Monitoring – SCVURPPP water quality monitoring and assessments continue to yield baseline information on the condition of water bodies in the Santa Clara Basin. Potential impacts to beneficial uses were identified in the FY 05-06 Summary Assessment Report. Recommended next steps were also outlined to better define the potential issues or management actions that can be implemented.
- Legacy Pesticides Conceptual Model/Impairment Assessment Reports –The Bay was first listed as impaired by these pollutants of concern in 1998. Since 1998, a significant amount of data and information has been collected by the RMP and other stakeholders. Therefore, the CEP revisited the data originally used to justify an impairment listing and also assessed more recent data in an attempt to determine if the Bay is still impaired by legacy pesticides. Although, the impairment assessment report did not concretely state that impairment does or does not exist, the completion of the CMIA report should be considered successful. The report summarizes existing information into a single document, which allows all stakeholders to discuss possible management and regulatory actions from a level playing field.
- Upper Penitencia Creek Watershed Analysis – The Limiting Factors Analysis (LFA) conducted in the Upper Penitencia Creek watershed directly assessed the factors limiting steelhead trout (i.e., a cold water use). Key limiting factors that are directly attributable to natural conditions and anthropogenic activities were identified along with potential management actions.
- Saratoga Creek Water Body Assessment – The Program made progress in analyzing two years of screening level monitoring data collected during FY 03-04 and FY 04-05 in the Saratoga Creek watershed. SCVURPPP monitoring data will be evaluated with other available data sources to evaluate attainment of aquatic life and recreational uses in the watershed. The study will also assess potential effects of excessive sediment deposition on the existing trout population and aquatic habitat. It is scheduled for completion in FY 06-07.

3) *Identification of Potential Sources of Pollutants of Concern Found in Stormwater*

- Mercury Atmospheric Deposition Monitoring – Wet and dry atmospheric deposition monitoring was again conducted in San Jose to assess the mass of mercury entering Bay Area watersheds from air sources. This study was successful in continuing the development of a long-term data set for the Bay Area.
- Urban Runoff BMP Evaluation for Pollutants of Concern – In FY 04-05, SFEI was awarded a Proposition 13 grant to evaluate the effectiveness BMPs in reducing POCs in urban runoff. During FY 05-06, BASMAA member agencies (including SCVURPPP) played an active role in providing direction for this study and participated in stakeholder and technical advisory committee meetings. Results from the project will likely assist the Program in further evaluation of the effectiveness of control measures for sediment associated POCs.
- Estimating Pollutant Loads from the Sacramento and San Joaquin Rivers – In FY 05-06, the RMP continued conducting field work to estimate the loading of sediment-associated pollutants from the Sacramento and San Joaquin Rivers. This data collection contributes to a long term data collection efforts equipped to assess trends in loads from a relatively large source of mercury to San Francisco Bay.
- Guadalupe River Loading Study – Through the RMP, field work was again conducted to estimate the loading of sediment-associated pollutants from the Guadalupe River watershed. This data collection contributes to a long term data collection efforts equipped to assess trends in loads from another relatively large source of mercury to San Francisco Bay.

4) Evaluation of Effectiveness of Stormwater Pollution Prevention and Control Measures

- Urban Runoff BMP Evaluation for Pollutants of Concern – In FY 04-05, SFEI was awarded a Proposition 13 grant to evaluate the effectiveness BMPs in reducing POCs in urban runoff. During FY 05-06, BASMAA member agencies (including SCVURPPP) played an active role in developing the scope and participated in technical advisory committee meetings. Results from the project will likely assist the Program in further evaluation of the effectiveness of control measures for POCs.
- Survey of Dioxins Pollution Prevention Actions – In FY 05-06, Program Staff surveyed the Co-permittees regarding dioxins pollution prevention actions currently implemented and any related formal policies, resolutions or ordinances already adopted. The survey revealed that Co-permittees currently implement a wide range of activities that may help prevent formation of dioxins. In particular, the survey revealed most Co-permittees are taking measures that may help address the potentially largest contemporary sources of dioxins in the Bay Area: residential wood burning, diesel exhaust and use of the pesticide 2,4-D. Recommendations were also provided to Co-permittee to: 1) review dioxin pollution prevention efforts, activities conducted by other Co-permittees, and regional efforts (e.g., ABAG's Bay Area Dioxins Project); and 2) consider expanding existing efforts or implementing new dioxin pollution prevention activities, as feasible within current fiscal constraints.

Title/Subtitle	Category/ Monitoring Priority (MP)[2]/ Permit Provision	Origin	Capsule Scope	SCVURPPP Participation	Product(s)[3]	Status Schedule
FY 05-06 Receiving Waters Monitoring and Assessment	Permit Provision C.7(c)	Permit	Conduct watershed/water quality monitoring and assessment activities in Santa Clara Basin watersheds to meet Program and Permit monitoring objectives.	Conducted by SCVURPPP	*FY 05-06 Watershed Monitoring and Assessment Summary Report*[4a,b]	Complete-9/15/06
FY 06-07 Annual Monitoring Program Work Plan	Permit Provision C.7(c)	Permit	Develop an annual monitoring plan that identifies Program monitoring activities in Santa Clara Basin watersheds that will be implemented in FY 06-07.	Developed by SCVURPPP	*FY 06-07 Annual Monitoring Plan and Watershed Management Measures Work Plan*[4b]	Completed-3/1/06

[1] Projects reviewed and approved by Budget Ad Hoc Table Group for inclusion in Work Plan.
[2] Monitoring Priorities (updated at Monitoring AHTG meeting November 8, 1999):
1) New projects needed to implement the results, and achieve the goals, of current projects.
2) New projects that implement continuous improvement items identified through the annual review process.
3) Projects that support the Santa Clara Basin Watershed Management Initiative in one of the following ways:
a) Investigate Beneficial Uses and Causes of Impairment (including field work)
b) Review and Compile Environmental Data and Make it Accessible
c) Develop Strategies for Controlling Impacts of Land Use on Beneficial Uses
d) Facilitate and Support WMI Subgroups (including coordination with other agencies)
4) Projects identified through participation in regional monitoring collaborative efforts, including the Regional Monitoring Program and BASMAA

SECTION 5

WATERSHED MANAGEMENT MEASURES

5. WATERSHED MANAGEMENT MEASURES

INTRODUCTION

During FY 05-06, the Program conducted a variety of watershed-related management measures and activities. They included conducting watershed assessment activities and special studies, and participating in and coordinating with the Santa Clara Basin Watershed Management Initiative (SCBWMI) sub- and core groups. Activities described in this section are consistent with Provision C.10 (i.e., Watershed Management) of the Program's NPDES Permit.

The Program's watershed management strategy (pursuant to NPDES Permit Provision C.10) is to integrate its watershed management efforts with the SCBWMI. Activities that include implementing environmental monitoring and assessment measures are necessary components needed to fully integrate our efforts. Therefore, it is important to note that watershed management measures described in this section are not entirely independent from activities described in Section 4 – Monitoring Activities. Information gained from conducting studies and implementing activities/measures described in both sections have been used (and will continue to be used) in concert to meet objectives outlined in Permit Provisions C.7, C.9, and C.10. They include: (1) characterizing watersheds and stormwater discharges; (2) assessing existing or potential adverse impacts to beneficial uses; (3) identifying potential sources of pollutants of concern; (4) aiding in developing and implementing strategies for controlling adverse impacts on beneficial uses; and (5) assessing the effectiveness of pollutant prevention/control measures.

BACKGROUND

The Water Board started the SCBWMI in 1996. The first meetings of the SCBWMI's Core Group and subgroups were held in 1997. During FY 98-99, SCBWMI stakeholders formally joined in a signatory document outlining the SCBWMI's mission, goals and objectives. The Santa Clara Valley Water District and the Cities of San Jose, Sunnyvale and Palo Alto committed additional funds and other resources to the SCBWMI. A Report Preparation Team (RPT) consisting of staff from these agencies developed a plan, schedule, and outline for a Watershed Assessment Report (WAR). The RPT and the SCBWMI subgroups began preparing sections of the WAR soon after.

In late 1999, the Program prepared *Watersheds 2000: A Vision of the Santa Clara Valley Urban Runoff Program's Role in Watershed Management and the Santa Clara Basin Watershed Management Initiative*. This document outlines the Program's long-term vision, roles and responsibilities with regard to the SCBWMI and provides a monitoring/continuous improvement and outreach strategy.

The Program's involvement in the SCBWMI is organized by the concept of continuous improvement, as described in the Program's Urban Runoff Management Plan (URMP). The SCBWMI identifies specific watershed issues and recommendations that are brought to the Program's Management Committee for consideration and action as appropriate. In addition, results from SCVURPPP studies related to watershed monitoring, assessment and management are frequently distributed, presented and discussed with SCBWMI subgroups. This approach creates an informed and coordinated partnership between the Program and SCBWMI.

FY 05-06 SCVURPPP ACCOMPLISHMENTS

1. Bay Area Macroinvertebrate Bioassessment Information Network (BAMBI)

The increased interest in bioassessment within the Bay Area spawned the formation of the Bay Area Macroinvertebrate Bioassessment Information Network (BAMBI) in February 2002. BAMBI is a network of scientists, watershed managers, regulators and community members interested in using biological communities as indicators (i.e., benthic macroinvertebrates) of stream health in the San Francisco Bay Area. The goal of BAMBI is to maximize the utility of aquatic bioassessment in the Bay Area by developing a programmatic and analytical framework for the collection, sharing, analysis and use of bioassessment data. Specific activities conducted by BAMBI in FY 05-06 are presented below. Additional information on BAMBI is provided at www.bayareabugs.org.

BAMBI 2006 Annual Meeting

Since 2002, Program staff has helped coordinate an Annual BAMBI meeting where bioassessment data and analyses can be presented from a local, regional or state perspective. On January 31, 2006, the fourth annual BAMBI meeting was held. Presentations included an update on the development of the Index of Biotic Integrity (IBI) for San Francisco Bay Area creeks, long-term variability of bioassessment data and the effects of urbanization on BMIs. Presenters included UC Berkeley PhD candidates and Program staff. The meeting agenda for the January 31 meeting is included within Appendix D-1.

Index of Biotic Integrity (IBI) for San Francisco Bay Area Creeks

In collaboration with Alameda Countywide Clean Water Program and Water Board staff, Program staff developed a draft Work Plan to outline tasks that should be completed during the development of a Benthic Macroinvertebrate Index of Biotic Integrity (B-IBI) for creeks in the San Francisco Bay Area. An IBI serves as an easy-to-use scorecard for determining the condition of water quality and stream habitat (i.e., stream health) using biological communities. The IBI approach is designed to maximize detection of degradation by controlling for natural variation in biological communities. The San Francisco Bay Area IBI Work Plan was included in the Program's *FY 04-05 Annual Report*.

The Work Plan has six main tasks listed in sequential order:

1. Form Technical Advisory Group;
2. Compile Existing BMI Data from Participating Agencies/Organizations;
3. Standardize Datasets and Import into Database;
4. Develop Reference Conditions;
5. Select Metrics for the IBI; and
6. Develop, Validate and Refine IBI.

During FY 05-06, Program staff contributed substantial in-kind services towards the completion of tasks 1 through 4. The following are status summaries for these tasks:

Task 1: Technical Advisory Group (TAG) - A Technical Advisory Group (TAG) was formed in 2006. The TAG consists of Program, California Department of Fish and Game (CDFG) and USGS staff, UC Berkeley graduate students and other Bay Area municipal stormwater program staff. On June 21, 2006, the TAG met to discuss the initial steps in developing reference

conditions for Bay Area creeks. A meeting agenda is included within Appendix D-1. The TAG will likely meet again in late 2006.

Task 2 – Compile Existing Data – In FY 05-06, Program staff spent a substantial amount of time collecting and compiling existing benthic macroinvertebrate data from eight Bay Area counties. Data sources included the Water Board, municipal stormwater programs and volunteer monitoring programs. Data from approximately 350 sites has been compiled. It will be available on the World Wide Web in 2007.

Task 3: Standardize Datasets and Import into Database – Datasets compiled in Task 2 were standardized into a format that could be imported to the California Ecological Data Application System (Cal EDAS), which is currently housed at SCVURPPP. All bioassessment data collected through Spring 2005 was placed in Cal EDAS. Program staff will begin generating data outputs needed to complete Tasks 4-6.

Task 4: Develop Reference Conditions – The development of biological reference conditions for Bay Area creeks is an integral step in completing the B-IBI. Reference conditions provide a way for comparing biological data from a potentially impacted site to a "least disturbed" site. They are also used to determine the degree of impact of a site. On June 21, 2006, the TAG met to begin discussing reference conditions development. As a next step, supplemental physical habitat data is being compiled by Bay Area stormwater programs to objectively define reference condition attributes used to test and select appropriate biological metrics used to develop the B-IBI.

In FY 06-07, Program staff plans to continue supporting and actively participating in BAMBI activities, with specific objectives to complete a Draft Provisional B-IBI for San Francisco Bay Area creeks.

2. Stream Studies Inventory

The Watershed Assessment and Monitoring Subgroup (WAMS), an entity within the SCBWMI, has a mission to provide the SCBWMI with a solid scientific foundation for watershed planning. One of WAMS's tasks is to coordinate the SCBWMI's data collection and data management efforts with stream monitoring studies within the Basin. The *Inventory of Santa Clara Basin Stream Studies* (SSI) is a result of this task and was initially prepared by the Program in November 1998. The purpose of the SSI is to promote inter-agency awareness of environmental investigations within riparian corridors and to facilitate coordination of related data collection and management. It also describes stream-related multi-stakeholder studies and projects that were in-progress in the Santa Clara Basin. The SSI was updated, revised and reissued in February 2000 (Version 2.0), July 2001 (Version 3.0), August 2002 (Version 4.0), November 2003 (Version 5.0) and June 2005 (Version 6.0).

On September 15, 2006, the Program finalized the *Inventory of Santa Clara Basin Stream Studies (Updated Version 7.0)*. This version describes twenty-nine related multi-stakeholder studies and projects that recently started or are in-progress within the Santa Clara Basin. Information for seven new studies was added to the updated version and twenty-two ongoing projects were updated with current information. Eight projects listed in the SSI Version 6.0 Report were determined to be complete or discontinued. As a result, they are not included within the updated SSI Version 7.0. Information describing the completed studies was archived into the Program's metadata database. Updated SSI Version 7.0 is provided within Appendix D-2.

3. Watershed Data Management

To comply with its NPDES permit, the Program compiles, develops and analyzes a variety of data sets and reports. Most of this data is collected and generated as part of the Program's environmental monitoring and assessment activities. A majority of the information collected and used by the Program originates from different municipalities and agencies that conduct studies within Program jurisdictional boundaries.

The Program developed a relational database as an initial task to systematically describe and document data used for its activities. The intent of the database is to demonstrate its usefulness of how to systematically and efficiently collect and document all of the relevant data used in the Program's activities. In addition, the database was designed to explore the feasibility of eventually expanding and coordinating its maintenance and use with other agencies and organizations in the Program.

The SCVURPPP metadata database currently stores information on watershed studies described in the updated SSI Version 7.0 as well as archived information from previous versions of the SSI. The database was also developed to produce a report listing current project information in a format similar to previous SSI Reports. The project summaries of the 2003 SSI report were produced from the database. In addition, the Program database provides querying capabilities for watershed information listed in both the SSI and SCBWMI's Metadata Database.

The SCVURPPP Metadata Database guidance manual entitled *SCVURPPP Metadata Database Program User Documentation* is also available. The manual describes software and hardware requirements, installation procedures, data entry procedures and querying techniques for watershed information listed in both the SSI and SCBWMI's Metadata Database. The *SCVURPPP Metadata Database Program User Documentation* can be found on the Program's website (www.scvurppp.org).

4. SCBWMI Indicators Work Group (Work Group "I")

Within the 2003 Watershed Action Plan, the Santa Clara Basin Watershed Management Initiative (SCBWI) identified a goal of developing and using environmental indicators to characterize progress toward the protection of watershed health. The effort to develop environmental indicators for the Santa Clara Basin is referred as the "State of the Santa Clara Basin" Project. The goal of this project is to provide a suite of environmental indicators that can be used to periodically assess the status and trends of stream and riparian systems and management actions within the Santa Clara Basin. In addition, the project is intended to: (1) evaluate the effectiveness of environmental programs, policies and projects; (2) improve environmental planning; and (3) adaptively manage emerging issues within watersheds.

During January 2005, the development of indicators began with the initiation of the WMI Phase I Indicators Work Group (Work Group "I"). At the same time that Workgroup I was being formed, the Water Resources Protection Collaborative and the Water District decided to develop a suite of environmental indicators to report on stream ecosystem health. These efforts were integrated into a single scope of work for Workgroup I. Therefore, the original scope of work for Workgroup I included objectives to both develop a suite of environmental indicators and to develop an environmental indicators report card.

During FY 05-06, SCBWMI Workgroup I developed a suite of environmental indicators and a prototype environmental "scorecard" for Coyote Creek (mainstem channel). The scorecard

reports on the health of Coyote Creek by evaluating environmental indicators that measure the current condition of Coyote Creek in comparison to a best existing condition. The indicators in the prototype scorecard are riparian habitat, water quality, benthic macroinvertebrates, fish assemblages, aquatic habitat and stream channel condition. Program staff, at the direction of the Management Committee, assisted SCBWMI Workgroup I with preparation of the report card. The Program and SCBWMI Core Group plan to approve the report card in FY 06-07.

5. Develop Strategies for Controlling Impacts of Land Use on Beneficial Uses

During FY 05-06, the Program collaborated with the SCBWMI Land Use Subgroup on the following activities:

- On December 7, 2005, the Program, in collaboration with the Land Use Subgroup, planned and held the workshop entitled "How Development Affects Creeks – How Creeks Affect Development". Presentations were given on stream geomorphology and aquatic ecology; and on low-impact design techniques to protect water quality and beneficial uses. The presentations were followed by a walking tour of a nearby segment of Coyote Creek. The workshop attracted 115 participants. Evaluation forms showed that the vast majority of participants gave the workshop high remarks (see evaluation summary within Appendix A-4).
- On May 3, 2006, the Program, in collaboration with the Land Use Subgroup, planned and held the workshop entitled "Development and Creeks – Making the Connection". Presentations focused on how humans have altered the landscape and water resources of the Santa Clara Basin, and how understanding historical ecology can improve future land use decisions and site designs. The presentations were followed by a walking tour of the Guadalupe River. The workshop attracted 41 participants. Evaluation forms showed that the vast majority of participants found the workshop content to be very useful or useful (see evaluation summary within Appendix A-6.)
- At the June 7, 2006 LUS meeting, Program staff presented information regarding the connection between transportation and water quality from the following two sources:
  - State Air Resources Board and the State Water Resource Board Joint Workshop on Atmospheric Deposition and Water Quality (February 9, 2006)
  - USEPA report entitled Protecting Water Resources with Higher-Density Development (January 2006).

SECTION 6

PESTICIDE MANAGEMENT

6. PESTICIDE MANAGEMENT ACTIVITIES

INTRODUCTION

The goals and objectives of the Program's Urban Runoff Management Plan (URMP) include: effectively prohibiting non-storm water discharges to storm drains and watercourses; reducing pollutants in storm water discharges to the "maximum extent practicable" (MEP); and not causing or contributing to violations of water quality standards, as required by the Program's NPDES permit. The Program's approach to meeting these goals and objectives focuses on the use of best management practices (BMPs) for source control and pollution prevention.

The Program's approach to pesticide management has a similar focus on source control and pollution prevention. Program BMPs for pesticide management have included significant outreach efforts to residents, businesses, and municipal staff to provide education and achieve behavior changes relative to uses of pesticides and less toxic pest control methods. Outreach efforts have been supplemented by monitoring studies to define the problem; participation in regional monitoring and organizations to address pesticide issues; and development of performance standards and local pest management plans.

BACKGROUND

Diazinon and chlorpyrifos have been identified in recent studies as causing toxicity in local creeks and wastewater treatment plant effluent. In May 1999, the U.S. Environmental Protection Agency (USEPA) listed San Francisco Bay and 35 Bay Area urban creeks as impaired by diazinon under Section 303(d) of the Clean Water Act (CWA). The 303(d) listing triggered the need for USEPA and the State to develop Total Maximum Daily Loads (TMDLs) for the impaired waterbodies. The San Francisco Bay Regional Water Quality Control Board developed a draft TMDL work plan that calls for an urban creeks diazinon TMDL to be developed by June 2002, followed by an Implementation Plan by June 2003.

The Program's NPDES Permit Provision C.9.d. includes specific requirements for a pesticide control program. The Program and Co-permittees must develop and implement a pesticide control plan that addresses municipal uses of pesticides, including diazinon and other lower priority banned pesticides (e.g., chlordane, dieldrin, and DDT) and the use of these pesticides by others within municipal jurisdictions. The permit provision also requests that the Program continue to work with the Urban Pesticide Committee, BASMAA, and the California Stormwater Quality Association Pesticide Committee to assess impacts of pesticide use and encourage actions by other state and federal agencies.

As required by Permit Provision C.9.d., the Program developed a Pesticide Management Work Plan (Pesticide Plan) and submitted it to the Water Board on June 26, 2001. The submittal to the Water Board included a preliminary draft Pest Management Performance Standard and municipal pesticide use surveys completed by each Co-permittee. After receiving comments from Water Board staff, the final Pesticide Plan and Pest Management Performance Standard were provided in the Program's *FY 02-03 Work Plan* (dated March 1, 2002).

The purpose of the Pesticide Plan is to control pesticide-related toxicity in urban runoff, by minimizing pesticide use and reducing the amount of pesticides in storm water and landscape runoff to the maximum extent practicable. The Plan identifies the goals of each work plan element, actions, monitoring mechanisms and schedules. The Plan also identifies whether

actions will be implemented at the Program level, municipality level, or both. The details of municipality actions and schedules were provided in individual Co-permittee pest management plans submitted with the Co-permittees' FY 00-01 Annual Reports.

All scheduled Pesticide Plan tasks were completed in FY 04-05 and no new tasks were identified for FY 05-06. The Program continued to implement ongoing Pesticide Plan tasks. This Annual Report provides information on the progress of these ongoing tasks.

PAST PESTICIDE MANAGEMENT ACTIVITIES

The Program has, since its inception, actively participated in a number of activities aimed at understanding water quality problems in creeks and San Francisco Bay and reducing pollutants, including pesticides, to the MEP. The Program's earlier Work Plans and Annual Reports have presented the history of the Program's and Co-permittee's pesticide-related activities in the areas of monitoring and science, outreach and education, URMP implementation and correspondence with Water Board staff regarding these activities.

IMPLEMENTATION OF FY 05-06 PESTICIDE MANAGEMENT TASKS

Table 6-1 presents the status of the FY 05-06 ongoing pesticide management tasks. The table references tasks in the SCVURPPP Pesticide Plan (rev. 2/15/02) and the related performance standard and/or permit provision. More details on the accomplishments for and effectiveness of some of the key elements of the Pesticide Plan are provided below.

Outreach and Education

Highlights of Program PI/P activities specifically related to pesticide use that were accomplished in FY 05-06 include:

- Watershed Watch Campaign – Messages about less-toxic pest control were woven into the campaign advertising and materials. The popular "Got Bugs" ads were used in the media flight from September to October 2005. Additional details on the media campaign are included within Section 3 and Appendix B-1 of this Annual Report.
- Pesticide User Outreach – The various elements of pesticide user outreach are described below:
  - IPM Store Partnership Program – The Program contributed funds to and participated in the Regional IPM Program and implemented the local IPM Partnership Program in 31 stores. The participating stores had in-store "Our Water Our World" displays and IPM fact sheets and stocked less-toxic products. Program staff routinely visited the participating stores for restocking literature racks and updating shelf-talkers. The Program contracted with Ms. Annie Joseph for store employee training. Ms. Joseph trained approximately 112 employees representing thirteen stores. More details on the trainings are included within Appendix B- 8 of this Annual Report
  - Media Advertising – Advertising was conducted in coordination with Watershed Watch Campaign. The popular "Got Bugs" ad was used in the media campaign which ran in September to October 2005.
  - Outreach at Events – Program, Co-permittee and Watershed Watch staff conducted IPM outreach at five events. More than 4,000 IPM fact sheets, brochures and, giveaways (pencils, activity books, magnets, etc.) were distributed to the public.

Monitoring and Science

Monitoring and TMDL-related activities that were accomplished in FY 05-06 include:

- Continued to fund the Regional Monitoring Program ($168,480) and participate in the Regional Monitoring Program (RMP) steering and technical committees to focus RMP resources on 303(d) problem pollutants (including pesticides);
- Attended the Urban Pesticide Committee meetings and participated in discussions on development of the diazinon TMDL;
- Participated in the Clean Estuary Partnership's Diazinon/Toxicity Workgroup;
- Supported actions by the California Stormwater Quality Association (CASQA) to comment on and assist with USEPA's pesticide risk assessments. The Program's dues helped fund the CASQA consultant contract covering comment letters on risk assessments and other pesticide-related tasks.
- Completed fourth year of sampling for the Program's Multi-Year Receiving Waters Monitoring Program. Conducted organophosphate pesticide analyses of samples collected at two sites in the Matadero/Baron Creek watershed; two sites in the Sunnyvale East/West Channel watersheds; one site in the Calabazas Creek watershed; two sites in the Stevens Creek watershed; and two sites in the Permanente Creek watershed. Conducted three species toxicity testing in one site in Matadero/Baron Creek watershed; two sites in the Stevens Creek watershed; and two sites in the Permanente Creek watershed.

Additional information on monitoring and science activities, including results, are provided within Section 4 and the *SCVURPPP FY 05-06 Summary Assessment Report* included within Appendix C-2.

URMP Implementation

Pest Management Performance Standard

The Program's 2004 Urban Runoff Management Plan (URMP) contains a model Pest Management Performance Standard (PMPS) approved by Water Board staff that: 1) limits the use of pesticides that are known to cause or contribute to impairment of receiving waters; 2) requires use of least-toxic pest control methods by municipal employees at municipally-owned facilities; and 3) meets other requirements of NPDES Permit Provision C.9.d. The PMPS includes guidance to Co-permittees on work plan tasks and legal authority needed to implement the standard, and BMPs for protecting water quality if pesticides must be used after implementing an IPM program. The Co-permittees have updated their local URMPs to include the PMPS and have been implementing the PMPS since FY 01-02.

Local Pest Management Plans

Co-permittees completed their local pest management work plans and submitted them as part of their FY 00-01 Annual Reports (September 15, 2001). Implementation of these work plan tasks began in FY 01-02. Efforts to date are described in Co-permittees FY 05-06 Annual Reports.

EVALUATION OF EFFECTIVENESS

Outreach and Education

Outreach and education tasks related to pesticide reduction are evaluated in Section 3 and Table 3-1.

Monitoring and Science

The Program and Co-permittee staff completed all environmental and programmatic monitoring tasks that were planned for FY 05-06. This included conducting, funding and/or participating in local and regional monitoring activities. A full description of these activities and an assessment of how effective these activities were in meeting monitoring program objectives are included in Section 4 – Monitoring Activities.

URMP Implementation

Program staff successfully worked with the Pest Management AHTG, Water Board staff and other interested parties to complete a revised version of the Pest Management Performance Standard (PMPS) that was acceptable to all parties involved. The Co-permittees are now in the process of implementing the PMPS. The Co-permittees have evaluated their local pest management efforts during FY 05-06 in their individual Annual Reports.

Task[1]	Updated Schedule	Status
I. Municipal Pesticide Use		
I.A.1 Develop and implement a process for tracking pesticide use on municipally owned property (PS#8). Include in the process reporting and justification for the use of OP pesticide and BMPs employed during OP pesticide use.	Annual Reporting	**Completed/Ongoing** – The Pest Management Performance Standard includes a suggested reporting process, which the Co-permittees implemented for the FY 01-02 Annual Report. The first year was focused on reporting use of organophosphate pesticides, particularly chlorpyrifos and diazinon. For the FY 02-03 Annual Report, Water Board staff requested Co-permittees to submit pesticide use summaries and not actual data. This practice was continued for the FY 05-06 Annual Report.
Monitoring Mechanism 1.A.1 Document completion of tasks in annual reports. Use pesticide-tracking process to document pesticide use.	Annually	**Completed/Ongoing** – Pesticide use summaries are included in Co-permittee FY 05-06 Annual Reports.
II. Public Education and Outreach		
II.A.1 Implement the Watershed Education & Outreach (WE&O) Campaign targeting the general public and include messages about less-toxic pest control and proper disposal. The Campaign will include extensive media campaign with South Bay English- and Spanish-language TV and radio stations.	Began development FY 00-01; Ongoing through 05-06.	**Completed/Ongoing** – The popular "Got Bugs" ads ran in September and October 2005.
II.A.2 Develop simple, effective, targeted messages regarding proper pesticide use and disposal, effects on water quality, and IPM.	Ongoing as needed	**Completed/Ongoing** —Website visits and hotline calls showed an increase during the "Got Bugs" media campaign. Additional details are included within Section 3 of this Annual Report.

[1] The status of the complete set of Program Pesticide Plan tasks is presented in Table 6-1 of the Program's *FY 03-04 Annual Report*.

Table 6-1, continued
Status of FY 05-06 Pesticide Management Tasks

Task[1]	Updated Schedule	Status
II.A.3 Prepare appropriate outreach materials (e.g., fact sheets or a consumer guide regarding pest control services) to address target groups.	Ongoing as needed	**Completed/Ongoing** -- Developed through BASMAA participation. The Program continues to participate in BASMAA's Regional IPM Partnership and Media Relations efforts to develop new IPM fact sheets and press releases. The Program purchased and distributed large quantities of the fact sheets.
II.A.4 Identify and attend community events and distribute outreach materials. (Program will attend events strategic to the WE&O Campaign.)	Annually	**Completed/Ongoing** -- Program staff, Co-permittee representatives and Watershed Watch consultant staff conducted IPM outreach at five events during FY 05-06. The IPM display was used at some events. OWOW fact sheets and brochures (e.g., "Grow It!" Guides,"Backyard Bugs" and "Pests Bugging You?") were distributed. (See Section 3 of this Annual Report for details).
II.A.6. Create, update, and publicize web sites to promote IPM and reduce pesticide use.	Completed 6/02; Update as needed.	**Completed/Ongoing** -- The Watershed Watch website was launched in September 2001 and is continually updated. The website directs browsers to call the toll-free number to the Program office for information on less-toxic pest control. A web page specifically for IPM was completed in June 2002 and is updated regularly. The web page also includes many pages in Spanish and links to other sites with information on IPM.
II.A.7 Coordinate with the Master Gardeners program and use their services to train residents. Provide IPM training and information on water quality impacts of pesticide use to Master Gardeners as needed.	Ongoing as appropriate	**Completed/Ongoing** – Since FY 01-02, Program staff has worked with Master Gardeners and San Jose Community Garden staff to conduct IPM training programs for community gardeners. From FY 02-03 to FY 04-05, the Program conducted community IPM workshops in coordination with Watershed Watch, United Neighborhoods, Guadalupe Gardens, the

Table 6-1, continued
Status of FY 05-06 Pesticide Management Tasks

Task[1]	Updated Schedule	Status
		Santa Clara County Household Hazardous Waste Program and Master Gardeners.
II.A.8 Create and/or publicize existing IPM demonstration gardens (such as the garden at the San Francisco Bay Wildlife Refuge in Alviso).	Began FY 01-02; Ongoing	**Completed/Ongoing** – Since FY 01-02, the Watershed Watch Campaign has partnered with the Don Edwards San Francisco Bay Wildlife Refuge at Alviso. The Alviso site has a pesticide-free native plant demonstration garden. Workshops at this location are promoted on the Watershed Watch website. Since FY 03-04, the Program has been providing promotional support for the Going Native Garden Tour. In FY 05-06, approximately 3,000 people attended the tour which featured 46 gardens. Featured gardens demonstrate environmentally sensitive gardening practices which include the use of native plants, water conservation, landscaping to prevent urban runoff, reducing pesticide and fertilizer use, etc.
II.A.9 Continue to fund BASMAA Regional Media Relations Campaign featuring pitches to Bay Area media and responses to breaking news on pesticide-related topics.	Ongoing.	**Completed/Ongoing** – SCVURPPP funded this campaign as part of its BASMAA baseline dues for FY 05-06. Program staff participated in meetings of the work group and reviewed draft products. (See Section 3 of this Annual Report for additional details)

Table 6-1, continued
Status of FY 05-06 Pesticide Management Tasks

Task[1]	Updated Schedule	Status
II.A.11 Identify consumer and business publications that could include articles about IPM or less toxic pest management, submit articles or letters to the editor, and encourage them to print them.	Ongoing	**Completed/Ongoing** -- An article describing impacts of pesticide use on water quality and containing hints for pesticide-free pest control was developed in December 2004 and sent to select publications. The article was included in the April 2005 issue of the *Tideline* magazine and was also placed on the Friends of Guadalupe Gardens website in October 2004. No articles were published in FY 05-06.
II.A.12 Implement a "Pesticide User Outreach" project targeting residential and commercial users.	FY 01-02 through FY 05-06	**Completed/ Ongoing** -- A Pesticide User Outreach Work Plan is developed and implemented each year, as Program budget allows. Tasks implemented include the media advertising campaign (as part of the Watershed Watch Campaign), local IPM Store Partnership Program, restaurant outreach, IPM workshop, IPM outreach at events, IPM outreach to special districts and development of an outreach article.
II.A.13 Provide information on less toxic pest control (e.g., IPM techniques, municipal IPM policies, model contract language, training opportunities, etc.) to neighboring special districts (e.g., Valley Transportation Authority, sanitary and utility districts, open space districts, vector control districts, and school districts) as appropriate.	FY 01-02 through FY 04-05	**Completed** – VTA, open space and vector control district staff were invited to the Program's IPM Workshop in March 2003 and provided copies of the Program's Pest Management Performance Standard. In January 2005, a letter explaining the impact of pesticide use on urban runoff was developed and mailed (along with IPM fact sheets) to all special districts within the Co-permittees' jurisdiction. The cover letter and list of special districts were included in the FY 04-05 Annual Report.
Monitoring Mechanism II.A.1. Document or estimate numbers of residents reached by outreach efforts, including events, web site promotion, municipal employee	Annually	**Completed/Ongoing** -- See Section 3 of this Annual Report.

Table 6-1, continued
Status of FY 05-06 Pesticide Management Tasks

Task[1]	Updated Schedule	Status
outreach, and media advertising. Monitor responses to outreach efforts through documentation of calls to the Program's general and watershed campaign hotlines.		
Monitoring Mechanism II.A.2. Survey local public attitudes and behavior to evaluate the success of outreach efforts and the saturation of outreach messages. (Program will conduct countywide survey as part of evaluation of WE&O Campaign. Program may also conduct surveys to evaluate effectiveness of specific projects.)	FY 03-04 and FY 04-05	**Completed/Ongoing** – A Countywide survey was conducted to evaluate the success of the WE&O Campaign. The evaluation report was included in the Program's *FY 03-04 Annual Report*. Some of the survey questions tracked the publics' knowledge about various pollutants (including pesticides), which affect the water quality in San Francisco Bay. Nineteen percent of the respondents in 2003 say that pesticides affect the water quality of the Bay compared to seven percent in 1991. Approximately 23 percent of residents say that they use less-toxic ways to control pests in their home and garden. Details of the stores partnership program evaluation and IPM outreach events are described in Section 3. In October and November 2004, the BASMAA Regional IPM Committee conducted a customer intercept survey to evaluate the OWOW Store Partnership Project. The survey included interviewing 375 customers at 5 stores in Santa Clara County. The evaluation indicates that: • Overall, 31% of the people interviewed were aware of the Our Water Our World promotion. • The fact sheet garnered the highest recognition of the four items (16%), followed by the logo (15%). • Of the people who had identified at least one of the promotional items in Q3 (n=104), 82 percent

Table 6-1, continued
Status of FY 05-06 Pesticide Management Tasks

Task[1]	Updated Schedule	Status
		said that these items helped them identify less-toxic products or methods. The detailed survey report was included in the FY04-05 Annual Report.
II.B.1 Continue to fund and participate in the BASMAA Regional IPM Partnership.	Ongoing	**Completed/Ongoing** -- SCVURPPP funded this program as part of its BASMAA baseline dues for FY 05-06. Program staff participated in meetings of the work group and reviewed draft products. See Section 3 for details.
II.B.2 Continue to implement cost-effective elements of the IPM Store Partnership Program, as identified in the work plan developed for Action Item II.A.12. Create and provide fact sheets and other materials to pesticide retailers to facilitate point-of-purchase outreach. Visit stores as necessary to ensure ongoing participation.	Ongoing	**Completed/Ongoing** – The Program continued to implement the IPM store partnership program in 31 stores in Santa Clara Valley. Training on selling less-toxic products was provided to 112 employees at thirteen stores. A summary of evaluations received is included within Appendix B-8 of this Annual Report
II.B.3 Offer IPM training opportunities to pesticide retailer employees through coordination with Master Gardener-taught educational programs. (See Action II.A.7.)	Ongoing	**Completed/Ongoing** – The Program contracted with Ms. Annie Joseph to provide training on selling less-toxic products to store employees (See Tasks II.A.12 and Section 3).
Monitoring Mechanism II.B.1. Document number of participating stores, materials distributed and employees trained. Evaluate the cost-effectiveness of the IPM Store Partnership Program each year. Implement the evaluation component of the Pesticide User Outreach work plan each year.	Annually	**Completed/Ongoing** -- See Section 3 and Table 3-1 of this Annual Report.

Table 6-1, continued
Status of FY 05-06 Pesticide Management Tasks

Task[1]	Updated Schedule	Status
III. Pest Control Operators (PCOs)		
III.B.1. Identify and work with PCO trade organizations to develop industry standards for BMPs to protect water quality, through participation in UPC and BASMAA.	Ongoing	**In Progress** – Program will work with the UPC and a consultant to accomplish this task.
IV. Commercial Businesses		
IV.A.1 Research reports and surveys of commercial business pesticide use and other stormwater programs' and POTWs' efforts to address this issue. Develop recommendations and a work plan (including an evaluation component) to provide outreach on less toxic pest control to target businesses in the South Bay, as appropriate and cost-effective.	FY 02-03 through FY 04-05	**Completed/Ongoing** – The SCVURPPP IPM Work Group decided to use San Francisco's "Setting a Table for Pests" poster for outreach to restaurants. This item was approved by the Santa Clara County Department of Environmental Health inspectors for inclusion in their new food facilities packet for distribution to new or remodeled food facilities during routine inspections. Copies of this poster are being provided to County Health Inspectors since FY 02-03.
IV.A.2 Develop and implement education programs that target commercial businesses, per recommendations from Action IV.A.1	Ongoing;	**Completed/Ongoing** – As described above, the Program is distributing the "Don't Lay a Table for Pests" poster to new or remodeled food facilities through County Health Inspectors. Beginning FY 03-04, the Program has also focused on educating employees at local hardware stores and nurseries on selling less-toxic products to consumers.
Monitoring Mechanism IV.A.1. Document outreach efforts targeting businesses, as recommended in the work plan to be developed by the Program. Implement the evaluation component of the work plan.	Ongoing	County Health Inspectors distributed approximately 465 copies of the "Don't Set a Table for Pests" poster during FY 05-06

Table 6-1, continued
Status of FY 05-06 Pesticide Management Tasks

Task[1]	Updated Schedule	Status
V. Household Hazardous Waste Collection		
V.A.3 Work with HHW collection agencies to support, enhance, and help publicize programs for proper pesticide disposal (PS #7).	Ongoing; began FY 00-01	**Ongoing** – In FY 05-06, the Watershed Watch Campaign continued to educate consumers on proper pesticide disposal through outreach events and distribution of educational material. The County HHW Program collected 2,250 pounds of dursban and diazinon in FY 05-06. In addition, the County HHW Program also managed over 201,000 pounds of other poisons. The Program also contacted all participating stores to ensure that employees were aware of the stop-sale date for diazinon. This follow-up indicated that all stores were aware of the stop-sale date and had taken diazinon off their shelves for proper disposal.
Monitoring Mechanism V.A.1. Document that household hazardous waste collection programs adequately serve residents and businesses and that any exchange programs do not exchange organophosphate or banned pesticides.	Annually	County HHW -- No residents were turned away with the exception of those who brought munitions, explosives or radioactive waste. Collection facilities and events have expanded in number. The County does operate a material reuse program that allows residents to take usable items (e.g., paint, left by other residents). This program does not include banned pesticides exchange. Palo Alto – No Palo Alto residents were turned away. Palo Alto does not have an exchange for the items brought for disposal.

Table 6-1, continued
Status of FY 05-06 Pesticide Management Tasks

Task[1]	Updated Schedule	Status
Monitoring Mechanism V.A.2. Document quantities of pesticide disposal at household hazardous waste collection facilities (only possible on a county-wide basis at present).	Annually	County HHW – Although the grant award to conduct public education about dursban and diazinon has ended, the HHW Program collected 2,250 pounds of these two pesticides in FY 05-06 Palo Alto -- 56,875 pounds of pesticides were collected from residents during FY 05-06. This represents a substantial increase from FY 04-05 (28,091 pounds were collected in FY 04-05).
VI. County Agricultural Commissioners – All Tasks Completed		
VII. New Development		
VII.A.4 Develop and propose enhanced reporting format for documenting use of pesticide reduction measures at development sites. (Draft Permit Provision C.3.n.)	Annual Reports	**Completed/Ongoing** -- A section for documenting pesticide reduction measures required of project applicants is included in the Program's model data collection form for collecting other development project data prior to implementing C.3. (i.e., impervious surface area). The reporting form included in the Planning Procedures Performance Standard for annual reporting of information on Group 1 projects allows Co-permittees to more specifically list the pesticide reduction measures required.

Table 6-1, continued
Status of FY 05-06 Pesticide Management Tasks

Task[2]	Updated Schedule	Status
VIII. Monitoring and Science		
VIII.A.1. Continue financial support of the Regional Monitoring Program (RMP). Continue to actively participate in the RMP advisory and technical committees to focus RMP resources on 303(d) problem pollutants, including OP pesticides.	Annually	**Completed/Ongoing** – The Program contributed $168,480 to the RMP in FY 05-06. Same amount has been budgeted for FY 06-07. Program staff attends the RMP Technical Review Committee meetings and prepare meeting summaries for Management Committee.
VIII.A.2. Work with Water Board staff to refine the problem statement for the diazinon TMDL and determine data needs, with assistance from the BASMAA Pesticide Work Group.	FY 01-02 and beyond	**In Progress** – Program staff attend the Urban Pesticide Committee meetings at which the diazinon TMDL has been discussed. Program staff is also working on the TMDL with Water Board staff as part of the Clean Estuary Program (CEP).
VIII.A.3. Participate in a coordinated regional plan to collect data for the diazinon TMDL, as defined in the RWQCB/BACWA/BASMAA MOU.	FY 01-02 and beyond	**Ongoing** – Program staff are participating in a regional data collection plan as SCVURPPP is a member of the CEP (formerly the TMDL MOU). The Program contributed $97,000 to the CEP in FY 05-06 and will contribute the same amount in FY 06-07.
Monitoring Mechanism VIII.A.1. Submit monitoring data and reports to the Regional Water Quality Control Board and other interested parties (such as USEPA) per the reporting schedule in the Program's Multi-Year Receiving Waters Monitoring Program.	FY 02-03 and beyond	**Completed/Ongoing** – The Program completed and submitted its fourth Watershed Monitoring and Assessment Summary Report in September 2006 (See Appendix C-2 of the *FY 05-06 Annual Report*).

[2] The status of the complete set of Program Pesticide Plan tasks is presented in Table 6-1 of the Program's *FY 03-04 Annual Report*.

Table 6-1, continued
Status of FY 05-06 Pesticide Management Tasks

Task[3]	Updated Schedule	Status
IX. Regional, State, and Federal Coordination		
IX.A.1. Support actions by the California Stormwater Quality Task Force (now California Stormwater Quality Association) Pesticide Committee to comment on and assist with USEPA's pesticide risk assessments.	Ongoing	**Completed/Ongoing** – SCVURPPP provided funding to CASQA's consultant contract that funded Geoff Brosseau's and Kelly Moran's efforts to review risk assessments and provide comments on behalf of the CASQA member agencies.
IX.A.2. Through participation in the UPC and CASQA, work with the U.S.EPA, the California Department of Pesticide Regulation, and the pesticide industry to eliminate uses of pesticides likely to enter surface water from those listed on product labels.	Ongoing	**Ongoing** – Program staff regularly participates in the UPC and CASQA and support efforts to eliminate uses of pesticides that cause risk to water quality. The CASQA General Meeting in July 2005 focused on the topic of pesticide use, monitoring, and regulation, and the CASQA Pesticide Subcommittee provides regular updates to the CASQA members
Monitoring Mechanism IX.A.1. Document correspondence with U.S. EPA and the California Department of Pesticide Regulation and successes in achieving changes in registered uses and labeling that protect water quality.	Annually	**Completed/Ongoing** – Copies of correspondence sent by the CASQA Pesticide Committee, with support from SCVURPPP, are provided to the Management Committee and the Water Board. Successes related to protection of water quality were the banning of chlorpyrifos, limiting uses of diazinon and convincing EPA that its Offices of Pesticides and Water needed to coordinate their efforts.
IX.B.1. Participate in the activities of the Bay Area Stormwater Management Agencies Association, the California Storm Water Quality Association, and the Urban Pesticide Committee and communicate Program efforts.	Annually	**Completed/Ongoing** – Program staff regularly attended BASMAA, CASQA (General and Executive Committee) and UPC meetings to communicate Program efforts (see Appendix A-2 for list of meetings attended during FY 05-06).

[3] The status of the complete set of Program Pesticide Plan tasks is presented in Table 6-1 of the Program's *FY 03-04 Annual Report*.

Table 6-1, continued
Status of FY 05-06 Pesticide Management Tasks

Task[3]	Updated Schedule	Status
IX.B.2. Collaborate in technical studies to support TMDL development and implementation. (See Action VIII.A.3.)	As Needed.	**Completed/Ongoing** – Program staff are participating in a regional effort to develop TMDLs. SCVURPPP is a member of the CEP (formerly the TMDL MOU).
Monitoring Mechanism IX.B.1. Document attendance by Program staff at regional and statewide meetings and completion of regional and statewide efforts.	Annually	**Completed/Ongoing** – Appendix A-2 contains a list of meetings attended by Program staff during FY 05-06. Meeting summaries are provided within Management Committee packets.
X. Review and Revision of Work Plan		
X.A.1. Review and continuously improve the goals, actions, and monitoring mechanisms of the work plan considering results of self-evaluations, comments from Water Board staff and other interested parties, and results of local performance review meetings if any.	Annually- As Needed	**Completed/Ongoing** – The Pesticide Plan was revised twice in FY 01-02 based on comments from Water Board staff and interested parties (specifically RWQCB letters dated 8/15/01 and 12/21/01) and submitted to the Water Board on October 15, 2001 and March 1, 2002, respectively. The Plan will be updated at the beginning of the next permit cycle to correspond to the reissued permit requirements. Task evaluations are provided in Sections 3, 6, and 8 of this Annual Report.
Monitoring Mechanism IX.A.1. Complete revised work plan that incorporates continuous improvement items, and report on completion of work plan tasks.	Annually	**Completed/Ongoing** – See response to Action X.A.1. above and Section 6 of this Annual Report.

035630

SECTION 7

MERCURY POLLUTION PREVENTION ACTIVITIES

7. MERCURY POLLUTION PREVENTION ACTIVITIES

INTRODUCTION

Mercury has been found in sediments in South San Francisco Bay and the Guadalupe River Watershed. Some types of fish caught in the Bay contain mercury and other pollutants at concentrations that may threaten the health of humans consuming those fish. In response, the California Office of Environmental Health and Hazard Assessment issued an interim fish consumption advisory. The U.S. Environmental Protection Agency (EPA) has listed the Bay and the Guadalupe River Watershed (including the Guadalupe River, Alamitos Creek, Guadalupe Creek, Calero Reservoir, and Guadalupe Reservoir) as impaired by mercury under Section 303(d) of the Clean Water Act. In accordance with Section 303(d), the Water Board is required to establish a Total Maximum Daily Load (TMDL) for mercury in the South San Francisco Bay and the Guadalupe River Watershed.

Permit Provision C.9.c. requires the Program to address the impairment by developing and implementing a mercury pollution prevention plan. The Program developed a Mercury Pollution Prevention Plan (Mercury Plan) consistent with this Provision. The Mercury Plan was submitted to the Water Board on March 1, 2002 as part of the Program's FY 02-03 Work Plan. This section describes and evaluates Mercury Plan tasks completed during FY 05-06.

MERCURY POLLUTION PREVENTION PLAN

The Mercury Plan is based on the premise that a Bay area-wide approach (and coordination) in addressing mercury pollution prevention will be most successful. For this reason, many of the actions identified in the Mercury Plan are for Program-level participation in regional efforts. These efforts are supplemented by countywide and local efforts.

The Mercury Pollution Prevention Plan addresses five general goals:

I. **Municipal Use of Mercury-Containing Products** – Eliminate all unnecessary municipal use of mercury-containing products and establish proper disposal methods for products that cannot be eliminated.

II. **Household Hazardous Waste Collection** – Provide mercury-containing product disposal services through household hazardous waste (HHW) collection programs for residents and small businesses, and encourage use of these programs.

III. **Monitoring and Science** – Participate in coordinated monitoring efforts to support mercury TMDL development and implementation, including assessment of air pollution sources of mercury and concentrations of mercury in sediment.

IV. **Regional, State, and Federal Coordination** – Actively participate in regional, state and federal coordination efforts to achieve a reduction in the amount of mercury in urban runoff and air emissions.

V. **Public Education and Outreach** –Increase awareness of proper disposal of mercury-containing products and available non-mercury containing alternatives.

The Mercury Plan identifies actions that will be implemented at the Program level, municipality level, or both; and provides the schedule for initiation and/or completion of Program-level actions. The details of municipality actions and schedules are included in the individual Co-permittee work plans and/or annual reports, as appropriate.

FY 05-06 MERCURY POLLUTION PREVENTION ACTIVITIES

The status of the Program's FY 05-06 Mercury Plan tasks is summarized in Table 7-1. Highlights of Program accomplishments, as developed and/or implemented by the Mercury P2 Plan AHTG, PIP AHTG, Program staff and municipalities are provided below.

Guidelines for Reduction and Management of Mercury-Containing Products

During FY 02-03, the Mercury P2 Plan AHTG and Program staff developed guidelines for the reduction and management of mercury-containing products identified for virtual elimination. The goals of the *Guidelines for Mercury-Containing Products Reduction and Management* are to work towards the virtual elimination of mercury from controllable sources that may affect urban runoff due to agency operations; and establish proper recycling and disposal methods for products that cannot be eliminated due to technological, safety or economic factors. Co-permittees continued implementing the *Guidelines for Mercury-Containing Products Reduction and Management* in FY 05-06.

Mercury Pollution Prevention Outreach Workgroup

In December 2002, Program staff established a new Work Group called the Mercury Pollution Prevention Outreach Work Group. This Work Group implements the Public Education and Outreach elements of the Mercury Plan by organizing a public education, outreach and participation program designed to reach residential and commercial users of mercury-containing products.

FY 05-06 Tasks

In March 2006, Santa Clara County Household Hazardous Program (CoHHW Program) staff completed implementing (with SCVURPPP) the outreach requirements of a $300,000, three-year California Integrated Waste Management Board (CIWMB) grant, specifically the store partnership program for collecting spent fluorescent bulbs.

During FY 05-06, the CoHHW Program partnered with approximately eighteen retail stores to provide free fluorescent bulbs drop-off locations for residents. The Program's outreach focused on promoting these drop-off locations and educating people about mercury pollution.

The Program's FY 05-06 Mercury Outreach Pollution Prevention Work Plan included implementation of the following tasks:

- Development of Signage Materials – The Program developed posters to inform people about the availability of free fluorescent bulbs drop-off locations. The posters were displayed in participating stores and at community locations (libraries, city halls etc.)

- Conduct Media Advertising – The fall Watershed Watch Campaign used the "Got Bulbs" advertisement to educate people on the proper disposal of fluorescent bulbs. The advertising campaign ran for four weeks in September – October 2005. The Program
